CANADA

GEORGE W. YATES,
ASSISTANT DEPUTY MINISTER

OFFICE OF ASSISTANT DEPUTY MINISTER
OTTAWA, ONT.

March 1, 1935.

78

Dear Mr. Meighen,

Re Senator Casgrain's inquiry respecting the port of Churchill, Manitoba:

This is to advise you that this matter has been cleared so far as this department is concerned, and the the answers have been supplied to the Secretary of State, who, I am informed, has heard also from the Department of Marine, but still awaits some information from the Department of National Revenue, which has wired its Winnipeg representatives asking that the matter be expedited. The delay, so far as this department is concerned, was unavoidable, certain of the information having had to be secured from Churchill.

The reply, being a composite one, will of course reach the Senate through the Secretary of State.

Yours faithfully,

Geo. W. Yates

Assistant Deputy Minister
and Secretary.

Right Honourable
Arthur Meighen, K.C., P.C.,
Leader of the Senate,
Ottawa.

March 28th, 1935.

OPEN LETTER

Col. V.I. Smart,
Deputy Minister of Railways and Canals,
Ottawa, Ont.

Dear Colonel Smart:

Before dealing with the general situation may I at this time express my appreciation for the many courtesies and assistance that you have been kind enough to render me during my tenure of office as General Manager of the Canadian National Steamships.

My forced retirement from this position is due, according to advise given me by Judge Fullerton on the afternoon of the 27th instant, and which retirement became effective today, to my lack of co-operation with the Trustees.

When the Trustees were oppointed and took over in 1934, I was advised by the Chairman of the Board that I was expected to keep him posted as regards all matters in connection with the ships, and I pointed out to him at that time, which he no doubt will refute as I am sorry to say the gentleman has not a particularly good memory, that it was impossible for me to run the organization and keep him posted of all details, but that I would be glad to advise him of any matters of moment that might arise. I would also like to point out at this meeting I was informed that in future, the Canadian National Steamships, amongst other subsidiaries of the System, would report direct to the Chairman and not the President. I was somewhat surprised to receive this information as according to the Act, this appeared to me to be somewhat beyond the authority granted under such Act.

Col. V.I. Smart, March 28th, 1935.

However, in view of these instructions, I naturally had to abide by same, but felt assured at that time in view of the onerous duties of the Chairman, I could not possibly consult him as regards all the details of the business, and it had not been the custom in the past to do so nor is it the practice in a privately organized Company to consult the Directors in relation to the actual management of the ships.

The first difficulty that I ran up against was the appointment of an Engineer-in-Chief which you will no doubt recall I recommended in a report to the former Board of Directors in 1932. My anxiety to make such anappointment was due to the fact that the ships had been allowed to run down to such an extent that when sales took place, we were forced to accept prices much below what should have been secured for vessels of an age under fifteen years. The reports in respect to the various steamers have just about been completed at this time, and by reviewing same, it will be noted that the condition of the fleet other than the new passenger vessels is deplorable and is entirely due to inefficiency and lack of proper supervision in the early years of their life.

It was only after three or four months that I was authorized to make such an appointment.

Might I also bring to your attention the report issued by me to the former Board of Directors under date of March 22nd, 1932, copy of which was distributed to each of the Directors and the Executive. Not one recommendation in this entire report was dealt with by the old Board. In the early part of the Trustees' regime, Iwas asked for a similar report, showing the activities of and all matters pertaining to the fleet. This was supplied and sent to the Chairman under date of January 29th, 1934. Similarly, not one item of this report has been acted upon as yet with the exception of the appointment of a Superintendent Engineer, The condition of the ships of the fleet which has been revealed since the appointment of this gentleman, has necessitated large expenditures of money which is reflected in the Annual Balance Sheet of 1934. This work was entirely necessary to bring the vessels to an operating standard of efficiency. For the combined fleets, the expenditure in 1933 was $302,461.00 representing $2.23 per deadweight ton in operation, and in 1934, $464,000.00 representing $3.39 per deadweight ton in operation. In other words, the cost of bringing the fleet to the proper standard of efficiency insofar as it lies within human power after what has been allowed to go on in the past, simply means practically the entire operating deficit in 1934 figures is represented by the expenditure of money in this work which would not have been necessitated had the fleet been properly taken care of in the past.

Col. V.I. Smart, Montreal, March 28th, 1935.

Another matter for which I am being criticised is the re-appointment of a Policeman in the city of Halifax by the name of Michael O'Malley, an Irish Roman Catholic who was discharged for insobriety. Pressure was brought to bear by various interests in Halifax on the Minister of Railways and after an investigation which I held personally, I was satisfied the man had been harshly dealt with in view of his twelve years service, and therefore suspended him for two weeks and reinstated him as watchman without reduction in pay. It appears that I should have consulted the Trustees before making such reinstatement.

Again there is the question of not consulting the Trustees in regards to the drydocking of the "Canadian Highlander" and "Canadian Britisher" at the port of Saint John. It is perfectly true this matter was not taken up with the Board as I did not consider it essential so to do.

In ordinary steamship practice and as a matter of fact legally, the diversion of one of these steamers into the port of Saint John would have been entirely foreign to the proper procedure and would not have received consideration from any private line for one moment for the following reasons: (1) It is a diversion from the ship's advertised schedule, and such diversion would immediately abrogate all cargo insurance and throw the onus of responsibility for the value of the cargo on board the vessel on the Steamship owners not only until delivery in Canada by the steamer, but until delivery at whatever destination is shown on the Bills of Lading, and which in the instances of one or two commodities is the West Indies. It has been ruled in Court of Law such diversion absolutely abrogates cargo insurance policies, and that anything whatever which may transpire not only due to such diversion, but to any other cause whatever, the Steamship owners are responsible. (2) Both the "Canadian Highlander" and "Canadian Britisher" on their regular itinerary call at the port of New York. A drydock was available there and the work was completed at a cheaper cost than even would have been possible at their terminal port, Halifax. Diversion to Saint John would not only have put the onus of responsibility on the shoulders of the ships' owners insofar as cargo is concerned, but would have cost an additional sum of money for the diversion and transference of the ship to Halifax.

I have always presumed, and have endeavoured to operate the organization on a basis similar to a private line, and still do not feel, notwithstanding all that has transpired, that I had any justification for diverting these steamers into Saint John. Had I done so or had the Trustees acted on their own authority and agreed to such diversion, and anything happened to the steamer, I think the Government of Canada would have been justified in such instance, in dispensing with all of our services.

Col. V.I. Smart, Montreal, March 28th, 1935.

We are operating the Australian - New Zealand Service with eight ships, and it is only by the closest supervision that it has been possible for us to sail these ships anywhere near their advertised dates, and if we did not adhere to the advertised date as closely as possible, we would naturally have complaints from Canadian exporters. It has been our endeavour to hold all Canadian traffic to Canadian ports. Shippers in Canada, particularly automobile shippers, can route as easily via New York - in fact easier with far better service than they can secure from us during the winter months.

The exception taken by Saint John in regards to not being allowed to do this work at a Canadian yard and the routing of newsprint paper to Portland rather than Halifax is, I am assured, instigated not primarily on these points but largely on the general attitude of the System in favouring Halifax as compared with Saint John. In both these instances I suppose they had rather good excuses to take exception to what transpired in Saint John on the Chairman's visit last autumn, and also the interview granted a delegation from Saint John at McGill Street last fall. The residents of that City were entirely dissatisfied with the System activities as a whole and the definite decision that the steamers on the Australian - New Zealand Service would not terminate at the port of Saint John during the coming winter.

One's record and past performance and what I have been successful in carrying out with the hearty co-operation of practically the entire personnel of this organization is reflected in the figures which I give you in the attached statement, and which I am prepared to stand by, and I am also definitely satisfied in my own mind that they are above criticism.

I joined the service as Assistant General Manager in July 1929 and therefore feel I am entitled to take some credit for the actual reduction of expenses prior to my actually taking charge in 1932. Reference to back figures can be secured at any time if desired, but I would like to point out insofar as the Merchant Marine is concerned, the Operating result has improved by approximately $200,000.00 and in the West Indies fleet, by $165,000.00 since I took charge, and that expenses have been reduced by $170,000.00 in connection with the C.G.M.M. with little change insofar as the West Indies Service is concerned. I must also mention in justice to the organization that these improved results have taken place during the worst three periods of the depression when revenues were very materially lower than they had been in the past.

One of the primary reasons which prevented me from passing on all matters of detail to the Chairman was the fact that when I came into

this organization, there was a Vice President with a salary of $15,000.00, a General Manager with the same salary and two Assistants to the General Manager with salaries of $8,000.00 each per year. Today I have the organization to run alone.

I frankly feel that I have personally been penalized. I do not think with the records mentioned herein that I need amplify my case.

With kindest regards and once more expressing my thanks and appreciation for the many kindnesses you have extended to me in the past,

I am,

Yours very truly,

Dear Mr. Allan:

I have your letter of 3rd and have read same along with enclosures very carefully. It is impossible not to be impressed with the substance of these letters.

I really do not know what it would be in my power to do. My duties here are confined to the Senate and I can undertake no more because my obligations at Toronto will not permit. Some mutual friends had spoken to me on the subject of your dismissal earlier and it may possibly be that in co-operation with them I can be of some service.

Yours very truly,

Arthur Meighen.

My dear Senator,

I am taking the liberty of writing you in view of the very many complimentary remarks which my relatives have made concerning you and I therefore feel that through this association I may take the liberty of trespassing on your kindness.

Due to a difference of opinion between myself and the Trustees of the Canadian National Railways I was notified that my services were dispensed with on the 27th ult.

I can state without qualification that I have served the Steamship Company since I joined late in 1929 to the very best of my ability and have been successful in reducing the operating loss from $1,357,000.00 in 1930 to $223,000.00 in 1934.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 187)

PUBLIC ARCHIVES

with very fair prospects of an operating profit this year. This without subsidy from Canada I think is a situation noone ever anticipated.

My difficulty with the Trustees is I think fully explained in the attached letter of March 28th to the Deputy Minister of Railways & Canals and I am taking the liberty of attaching two copies of telegrams despatched (entirely unsolicited and unknown to me until today).

Naturally I feel I have been unjustly dealt with. I have been advocating for some time past for a separate Board of Directors for the Steamship Co. in order that we might, after due investigation, receive the full support of said Directors rather than what I may justifiably state has been adverse criticism for the last year. The Chairman on more than one occasion has stated in no uncertain

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

009022

terms his wish to get rid of the Steamship Co. and all its ramifications.

May I trespass on your kind offices to assist me at the moment, reinstate me in my former position and if it is not possible at this time to appoint a separate Directorate for the Steamship Co. to transfer the control to the Department of Railways & Canals.

Please believe that I have hesitated and given serious thought to the general situation before writing you in connection therewith.

Yours faithfully,

A. H. Allan

Have just learned of removal of Canadian National Steamships' General Manager stop We consider his removal a decided loss to the Government service and protest his removal as Canadians of his ability and familiarity of sea-faring interests and fairness to Canadian labor are difficult to obtain stop We further consider charges launched against him are unfair and actuated from personal motives and not from any neglect or inefficiency or inability on his part and therefore personal differences by any St. John interests or others should not be used to deprive the Government of a valued service stop I am following this up with a letter more fully setting forth intricate conditions which no doubt have inspired the movement of the St. John Board of Trade who may not be interested outside St. John.

General Secretary,
Canadian Industrial Traffic League,
Room 042, Union Station,
Toronto, Ont.

Dear Sir:

I am in receipt of your letter of 7th February, enclosing for my consideration copy of a communication addressed by yourself on behalf of the Industrial Traffic League to the Honourable the Minister of Transport, transmitting a Resolution passed with respect to the Railway situation.

This Resolution I have read carefully, and I want to say to you frankly that I consider it one of the most foolish resolutions which have come to my attention in many a long day. The Resolution recites that the method of operation recommended by the Duff Railway Commission in 1932 and put into effect by the Canadian National-Canadian Pacific Act of 1933 has "so far failed to effect important economies." It then goes on to deplore the failure of these economies and to recommend the appointment of another Commission, the new one to be "a non-partisan body" to make a further survey with a view to bringing into effect certain savings by means of co-operation along several specified lines.

It would be difficult indeed for the plan of operation recommended by the Duff Railway Commission to be effecting economies after the plan has been totally abandoned. It was totally abandoned immediately the present Government took office, and the Canadian National-Canadian Pacific Act of 1933, of whose results you complain, was in every important essential repealed. It was only in operation one full year and nine months, enabling the Board of Trustees appointed under it to report but for a single complete fiscal year. In that very brief period of time, insufficient to test out any method, gratifying economies were effected, with results probably as favourable as could have been expected in the period of general depression which then prevailed. Your League has been careful to make no criticism of the repeal above outlined, so hastily effected by the present Administration--indeed your Resolution assumes that there was no such repeal.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 187)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

MG 9028

Your Resolution further makes no criticism at all of the scrapping of the Duff Report, which provided as effective means as could be devised for economies along the very lines suggested by yourselves. I have never heard the Duff Commission attacked as a partisan Commission. It would be impossible so to attack it, and interesting indeed if the League could suggest the name of a new body which would be less subject to such a criticism. It is surely time this country was calling for action instead of for Commissions.

Yours truly,

AM/E. Arthur Meighen.

REPRESENTATIONS FROM THE CANADIAN INDUSTRIAL TRAFFIC LEAGUE DEALING WITH THE PROPOSED FEDERAL TRANSPORT BILL

OL 9031

The Canadian Industrial Traffic League composed of Traffic Managers, Directors of Traffic or other officials charged with the responsibility of directing the traffic policies of the companies they represent throughout Canada from the Atlantic to the Pacific Oceans, being a national organizationof the users of transport, desire to submit the following suggestions in reference to the forthcoming Federal Transport Bill:

1. Re Federal Board of Transportation Commissioners.

The present Board should be retained as the nucleus of a new Board with additions made to the present personnel of men having adequate knowledge of the various forms of Transport that are to be brought under the regulation of the Transport Board.

2. Transportation by Water.

(a) That due to the great diversity of operation required for the coastal and intercoastal trade, these types of operation should be given careful consideration in any proposed regulations.

(b) That bulk cargo movement, involving different methods of transportation by water than that of package freight be left unregulated.

(c) We are sympathetic to the regulation of package freight, provided same can be done without undue restrictions being imposed on the free and adequate movement of these services.

3. Transportation by Highway.

In view of the present investigation by the Ontario Royal Commission of the Highway Transport situation, it is submitted that nothing should be done in regard to this particular form of transportation until such time as the Ontario Royal Commission has submitted to the Ontario Government its findings and recommendations and action taken thereon by the Ontario Government.

4. Harbour Tolls.

We have no specific observation to make in regard to the above except to state that as a matter of equity it is our view that where goods are discharged from one vessel to another, overside without handling through wharves or warehouses, there should be a lower charge for harbour dues or tolls than would be required if such shipment requires the use of the entire conveniences, facilities and or services of the various harbours under the control or direction of the Department of Transport.

5. Agreed Charges.

We are strongly opposed to the incorporation in the economy of Canada of any provisions permitting the introduction and application of these as a feature of our transportation services, believing same to be a retrograde step and we are opposed to same for the following reasons:

(a) There is no necessity for making provision for these in Canada as the present provisions of the Railway Act, as found in Sections 328, 329, now contain provisions for the making of:

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 187)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

009032

1. Standard Freight Tariffs
2. Special Freight Tariffs
3. Competitive Freight Tariffs

and these give to the users of transportation in Canada as well as the Canadian Transportation Companies, all the freedom and liberty required for the establishing of fair, just and reasonable rates and rate making conditions that are necessary.

(b) Further, by the provisions of sections 330, 331 and 332, the Rail Transportation Companies are provided with all the powers required for the proper exercise of their privilege of meeting all forms of competition in an open, fair, just and reasonable way, subject to filing with the Railway Board by specified procedure and in a manner that gives adequate and proper notice to all concerned, thus providing all the necessary machinery required without further addition.

(c) We would further point out that section 344 of the Railway Act gives very wide powers to Transportation Companies even where the competitive factor does not enter to make adequate arrangements to foster trade and commerce where such development is not contrary to the public interest or in contravention of the Railway Act.

(d) In the introduction of these experimental agreed charges in the United Kingdom (a small, compact, densely populated country of short distances) it does not follow that successful operation there, even if proven, would be similarly successful in Canada, covering as it does immense areas of sparsely settled country and small communities.

6. <u>General Provisions:</u>

It is now submitted that nothing should be done or any procedure created that would in any degree restrict or destroy the inherent advantages that pertain to each form of Transport within their proper sphere, and all should be free as those are now who are subject to the direction of the Railway Board to continue to carry on their rate making facilities in the proper legal manner prescribed by the Board and subject to objection where considered necessary by any interests concerned therewith.

Any provisions in the Bill should be stated in such clear and comprehensive language, and in such definite terms as to remove any possible doubt as to the intent of same, and should not be susceptible to misinterpretation by the users of the various forms of transport, thus eliminating possibility of litigation on behalf of the shipping and receiving public.

Provision should also be made for the following:

The various forms of transport may arrange for the issuance of joint through rates, collection and remittance of charges for transportation, and all the other necessary matters involved in connection therewith as may be prescribed by the Board of Transport Commissioners, including the issuance of uniform bills of lading applicable to all forms of transport, and to the movement of goods over one or more of such forms of transport whether by rail or otherwise.

legislation, a plan that will provide the utmost economy in operating the railway systems of Canada. Such non-partisan body should seriously consider among others the following economies:

(a) Joint terminals and facilities wherever possible.
(b) Joint express service.
(c) Joint telegraph service.
(d) The abolition of all ticket offices except at stations.
(e) Elimination of duplicate services facilities and trackage wherever possible.
(f) Reciprocal interchange of running rights.
(g) Joint publication of tariffs.
(h) Pooling of passenger transportation.

File 108-12-2

Sir:

The Canadian Industrial Traffic League, which includes in its membership the traffic officials of the leading commercial and industrial enterprises in Canada, assembled in annual general meeting in the City of Montreal, February third, nineteen hundred and thirty-eight, endorsed the following resolution which is respectfully submitted for your consideration:

WHEREAS the Canadian Industrial Traffic League recognizes that the Railways of Canada must continue, as far as can be foreseen, as the basic integral part of Canada's transportation system; and

WHEREAS we view with continued alarm the steadily mounting increases in the national debt which have been augmented by the annual deficit of the C.N.R., which have amounted, since 1923, in excess of $960,000,000; and

WHEREAS these cash deficits are continually mounting, averaging over a million dollars a week; and

WHEREAS the method of operation of the C.N. and C.P. Railways recommended by the Duff Royal Commission in 1932 and put into effect by the Canadian National-Canadian Pacific Act of 1933, has so far failed to effect important economies (amounting to little over a million and a half dollars per annum as against thirty millions estimated by the Commission); and

WHEREAS the state of our national finances is such that notwithstanding some improvement in railway revenue, as a result of increased traffic, we agree with responsible business, and regulative and investigating bodies that every safeguard against avoidable dissipation of railway revenues demands a satisfactory solution of our railway problem.

BE IT RESOLVED that the Canadian Industrial Traffic League in Annual Meeting assembled in Montreal joins with other bodies in deprecating the continuance of the present situation and urges upon the Government of Canada the paramount necessity for further consideration of the Railway situation by the appointment of a non-partisan body to make a further survey with the object of bringing into effect, ultimately by

Hon. C. P. Beaubien,
84 Notre Dame St. West,
Montreal, Que.

My dear Senator Beaubien:

I have your letter of 14th. You can depend upon it I will make a speech when you bring up the subject of settlement of our Railway problem. Just the other day I read over the one I made in justification of my vote against Mr. Howe's legislation in 1936. I have been exceedingly glad since that I, myself, took a directly antagonistic stand to that legislation. I am now sending you a copy of a letter on the same subject, which I wrote to the Canadian Traffic League the other day.

Sincerely yours,

AM/E.
Encl.

THE SENATE
CANADA

Office of the Hon.C.P. Beaubien,
84, Notre-Dame St. West.

Montreal, February 14, 1938.

Rt. Hon. Arthur Meighen, K.C., P.C.,
President,
Canadian General Securities,
320 Bay Street,
Toronto, Ont.

My dear Leader:-

I think the time has come when a determined effort should be made to force the Government to settle the C.N.R. problem.

Public opinion is ripe for a demand that this should be done. It has, no doubt, been influenced by constant propaganda and, still more, by ever recurring disastrous results.

The Senate, in 1925, proposed, after a long and full investigation, and in accordance with the best advice available, a formula which experience has demonstrated to be the only really effective one to remedy present conditions.

This suggestion was made by the Senate unanimously, by both parties and without one dissenting voice. If, at the conclusion of the debate that will follow upon my submission of the motion before the House, the Senate should overwhelmingly adopt the motion, it might impress the Government but surely would stimulate public opinion in the right direction.

These considerations bring me to ask for your mighty help in the discussion. If you strike out with your usual vigour, the immense majority of the House will rise with you and demand that the Government should, no longer, shirk its duty and should, at last, face its responsibilities.

A determined effort may bring action on its part for, with his ear to the ground, Mr. King must hear the growing clamor for immediate settlement, now

THE SENATE
CANADA

Rt. Hon. Arthur Meighen.

voiced by the majority of newspapers in the country. If the Government still elects to procrastinate, it will be brought face to face with its responsibility before the whole country.

I venture to suggest that a word from you to a dozen or so of our friends in the Senate would induce them to take part in the debate and to voice the opinion of the different sections of the country, which they represent. This would add considerable authority to the resolution, if adopted.

Very sincerely yours,

C. J. Mackenzie

FOR CANADA

D 19039

OFFICE OF THE SECRETARY
OTTAWA

March 11th, 1938.

#9

Dear Sir,-

I take pleasure in sending you herewith, for your information, a copy of a summary of the activities of the Board of Railway Commissioners for Canada in connection with its Annual Report for the year ended December 31st, 1937, which was tabled in the House of Commons and in the Senate a few days ago.

I subscribe myself,

Yours very truly,

P. F. BAILLARGEON

Secretary, B.R.C.

Hon. Arthur Meighen, P.C.,
The Senate,
OTTAWA, ONT.

009040

# THIRTY-THIRD REPORT OF THE BOARD OF RAILWAY COMMISSIONERS FOR CANADA FOR THE YEAR ENDED DECEMBER 31, 1937.

---

During the year covered by the period from the 1st of January, 1937, to the 31st December, 1937, the Board held 44 public sittings at which 111 applications were heard. The number of public sittings held in the various Provinces were as follows:

| PROVINCES | NUMBER |
|---|---|
| Ontario..... | 19 |
| Quebec..... | 10 |
| Manitoba..... | 2 |
| Saskatchewan..... | 4 |
| Alberta..... | 3 |
| British Columbia..... | 4 |
| Nova Scotia..... | 0 |
| New Brunswick..... | 2 |
| Prince Edward Island..... | 0 |
| Total..... | 44 |

The number of matters dealt with by the Board without hearings as distinguished from matters heard at public sittings constitutes a considerable percentage of the total applications and complaints dealt with, that is to say, out of a total of 2,204 applications and complaints received and dealt with by the Board, 111 were set down for formal hearing, and 94.96 per cent were disposed of without the necessity of formal hearing. These complaints that are dealt with and settled without the necessity of a hearing in many instances entail a con-

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 187)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

W L 9041

siderable amount of enquiry and consideration on the part of the Board's officers, and cover a wide range of subjects, from matters of a more or less trivial nature to matters of general public interest affecting the community as a whole.

In connection with these matters it might be noted that the total number of miles travelled by the Board and its officers during the year amounted to in round figures 531,490 and the time taken up in formal hearings and the necessary travelling in connection therewith equalled 35 out of every 100 working days.

These applications included a variety of matters falling within the jurisdiction of the Board, from the complaint of a private individual to more important matters of general public interest such as freight rates, etc.

The number of General Orders issued by the Board was 7 and the number of General Circulars issued under the Board's direction to all railway companies subject to its jurisdiction was 2. The total number of Orders issued by the Board for the year was 1,556. The General Orders as distinguished from other Orders issued by the Board are those immediately affecting all railway companies subject to its jurisdiction.

General Orders and Orders of general public interest are published in a semi-monthly pamphlet issued on the 1st and 15th of each month. Also published in this pamphlet are all judgments and rulings rendered by the Board, summaries of all Orders issued by the Board which are not of general interest, as well as circular letters addressed to all railway companies

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 187)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119042

under the Board's jurisdiction, monthly reports of highway crossing accidents, and other matters of less importance.

The above mentioned pamphlet may be secured by communicating with the King's Printer in Ottawa.

Railway freight rates and express rates are constantly being revised or new rates established, such changes being necessitated by the establishment of new industries, new products, new sources of supply, new forms of competition and a variety of other reasons. During 1937 the Traffic Division of the Board received, recorded and filed rate schedules (local, joint and international) from railway, express, telephone, telegraph and international bridge companies, as follows:-

| | |
|---|---|
| Freight..... | 38,733 |
| Passenger..... | 7,894 |
| Express..... | 2,282 |
| Telephone..... | 1,493 |
| Telegraph..... | 13 |
| Sleeping & Parlour Car..... | 40 |
| Bridge Tolls..... | 7 |
| Total..... | 50,462 |

The filing averaged approximately 170 schedules for each working day of the year. With respect to a great many commodities, for example, forest products, the rates for different territorial application, such as within the territory covered by the Maritime Freight Rates Act, eastern Canada outside of the territory just referred to, between points on the prairies, between points in B.C., from B.C. and the prairies to eastern Canada, from various parts of Canada to the United States, and to the ports for export, are contained in numerous separate tariffs. To facilitate compliance with enquiries for rates, it is necessary to maintain a very complete

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 187)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

commodity card index of the tariffs in effect showing name of the company, the number of the tariff, the commodity, the territorial application of the tariff, etc., in addition to the filing and recording already referred to.

Canadian railway companies are also required to file, with each separate tariff or supplement which changes rates or regulations, a statement showing the number of the tariff or supplement, effective date, commodity affected, points from, to or between which rates apply, present and proposed rates in cents and a concise statement of the reasons for the change. During 1937, 5,065 such freight rate change advices were received, checked and recorded.

During 1937, there were received in the Traffic Division, 155 new files with respect to applications and complaints made to the Board concerning rates and practices of railway, express, telephone, telegraph and bridge companies, involving investigation and report to the Board.

Under the provisions of the Maritime Freight Rates Act, 1927, with respect to the companies operating in the territory covered thereby, (except the Canadian National Railways), the Board is required to certify to the Minister of Transport the amount of the difference between the tariff tolls and the normal tolls which, but for the Act, would have been effective. This requires reports being made to the Traffic Division showing each individual shipment that

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 187)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

moves in the Maritimes, the rate charged and what would be the normal rate. Every shipment is checked as to freight classification, weight, rate and also the extensions. During the period July, 1936, to June, 1937, inclusive, there were filed 18,968 abstract sheets which involved the checking of 1,403,632 rates, 701,816 extensions, and the addition of 18,968 columns of figures. This required the issuance of 3,494 corrections. As a result of this check, it was found the railways claimed $740,893.53, but the amount allowed was $737,160.29, or a net deduction of $3,733.26.

During this period 191 Orders were issued approving tariffs of rates and certifying the normal tolls. The number of outgoing letters in connection with the administration of the Act was 816.

Sections 345, 346 and 347 deal with reduced rates and free transportation. The Act requires the companies to make periodical returns to the Board in respect thereof, verified by affidavit, and it is the duty of the Board to examine such returns with a view to seeing that the law has been observed. Fifty-four railway, express, telephone, telegraph and bridge companies filed such returns with the Traffic Division during the year 1937.

In the administration of the Traffic Division of the Board, during 1937, the total number of communications to railways, express, telephone, telegraph and international bridge companies in connection with complaints, proper interpretation of tariffs or classifications and filing of same, also with respect to free or reduced rate transportation, etc., was 2,198. Memoranda and reports to the Board numbered 1,059 and communications to others 395 - Total 3652.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 187)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

There were issued 75 traffic Orders and 4 general traffic Orders as a result of hearings and investigating applications and complaints before the Board; proper interpretation of classification ratings; approval of applications from railway companies with respect to the publication and filing of tariffs, etc. There were also issued 125 Orders approving traffic connecting agreements and contracts between telephone companies.

The work of the Engineering Department has been particularly heavy during the last year. The Engineering Department handles all matters pertaining to allocations of funds voted by Parliament for contribution by the Board and during the last year recommended commitments to a total amount of over a million dollars. In addition to works which were not completed under funds voted by Parliament in previous years to provide for protection, safety and convenience of the public in respect to highway crossings and for the relief of unemployment, a great number of works were undertaken early in the construction season under Special Supplementary Vote 357. The allotment as between the different Provinces of the special funds has been based for each Province on a population proportion, and the desire has been that the fund should be distributed for the protection of as many crossings as possible rather than to provide expensive grade separations in a few localities. It can well be understood, therefore, that these wide distributions of smaller protection projects has occasioned varied inspections and reports, and the need to travel to widely scattered locations. It is necessary that a fair division of costs should be made between interests concerned and this involves careful negotiations and much correspondence.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 187)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

EM/

Faster trains, liberalization of vehicular speed laws and constantly increased mileage of improved highways have combined to make more serious the problem of grade crossing protection. Investigations have been made in connection with new types of grade crossing protection devices outside of Canada and a number of inventions have been presented to the Engineering Department for examination. While many of these presented have little merit, encouragement is given to all proposed protective devices, which through development, may have possibilities of future usefulness.

Improved track conditions, new equipment, and high speed trains on the part of the Railways have necessitated improved safety features of protection with respect to crossings of different railway lines and has resulted in numerous changes and improvements to interlocking plants. Heavier equipment has also brought about the reconstruction of a great number of railway bridges. These matters have all been dealt with by the Engineering Department in addition to the routine work, such as farm crossing complaints, drainage complaints, investigation of railways out of repair, investigation of accidents, and inductive interference, and the handling of numerous and varied engineering matters brought to the attention of the Board.

During the year 1937 the Operating Department of the Board carried out investigations throughout all parts of the Dominion in connection with accidents to passengers, railway employees, highway crossing victims and others using the railway.

The number of accidents investigated totalled 2,138, involving 2,689 casualties, of which number 340 persons were

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 187)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119047

killed and 2,349 were injured. This is a reduction from the previous year of 718 cacualties, and in view of the railways' increase of 1,873,636 train miles, a larger number of men employed, and more passengers carried than for the previous year, the reduction in casualties indicates a marked improvement. Major train accidents on all railways in Canada dropped from 68 in 1936 to 49 in 1937, shewing a reduction of this class of accident of 27.94% from the previous year.

Accidents at highway crossings for the year totalled 286, with 114 killed and 411 injured. Of this number 52 accidents occurred at crossings where there were protective devices, divided as follows:

| Protection | Accidents | Killed | Injured |
|---|---|---|---|
| Gates | 6 | 1 | 12 |
| Lightning Flash Signal | 1 | 1 | 3 |
| Electric Bell | 13 | 8 | 21 |
| Bell and Wigwag | 27 | 11 | 38 |
| Watchman | 5 | 1 | 10 |
| Total (at protected crossings) | 52 | 22 | 84 |

In addition to the above there were 234 accidents at unprotected crossings, resulting in 92 killed and 327 injured, making a total of 286 accidents, with 114 persons killed and 411 injured. One hundred and sixty nine of these accidents occurred in daytime and 117 at night. Of this number, 101 accidents with 10 persons killed and 187 injured were caused by motor vehicles running into the sides of trains, and a further analysis shews that of these, 29 ran into the sides of trains in daylight and 72 at night. The number of accidents at night would indicate that auto drivers are out-driving their headlights, and are paying little or no attention

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 187)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES

E1/

to the Provincial Statutes governing the speed or operation of autos when approaching and passing over highway crossings.

Every public highway crossing where an accident occurred during the year was personally inspected by an officer of the Department, and where the conditions warranted it, improvements, protection, or additional protection by means of automatic or manual devices were recommended and effected.

During the year the usual inspection of locomotive boilers, safety appliances on rolling stock, etc., were made, as well as numerous investigations regarding train and station services, approval of new, or additions to, stations, removal or appointment of station agents, and all other features pertaining to train operation.

During the year 1937 a new feature was injected into the activities of the Board in the exercise of its powers to require railway companies to file with the Board applications and plans for approval in connection with the installations of plants on, or adjacent to, railway property for the handling and storage of liquified petroleum gases, consisting of Methane, Ethane and Propane.

A comprehensive study and research has been made and considerable data assembled, with the view to preparing regulations for the handling and storage of Liquified Petroleum gases in the interest of safety to the public. Proposed regulations are now under review and it is anticipated will issue in due course.

There has been a marked increase in their use for domestic, commercial and industrial applications, and extent of which may be gained by a comparison of the production figures for the United States, which have increased from about

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 187)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

D19049

EM/

one million gallons in 1917 to approximately one hundred million gallons in 1937.

The extensive development of the Gasoline and Oil Industry has greatly increased the number of installations for the handling and storage of Inflammable Liquids on or adjacent to railway property. There are approximately 4,091 installations located on or adjacent to railway property for the handling and storage of inflammable liquids, dependent upon railway service. These cover refineries, distilleries, manufacturing and processing plants, marine loading and unloading terminals served by a railway, storage tanks, loading and unloading racks, warehouses and pipe lines. The hazard involved as to handling and storage of inflammable liquids is that of exposure from burning liquid escaping from tanks, drums, barrels and pipe lines; flow of such liquids to other properties through rupture or, in the case of crude petroleum, boil over and the possibility of explosions from vapors which may be liberated. A number of such accidents occur annually and are investigated and reported upon. There are many accidents of this character mainly due to the continued and increased development of the gasoline and oil industry.

The record of Railway Fires for the year 1937 compares favourably with that of any during the past 25 years. In comparison with previous years, the number of fires reported caused by railways is the third lowest on record, with the second lowest acreage and third lowest monetary loss.

One hundred and eighty fires attributed to railways are reported to have originated on lines in districts classified as forested throughout the Dominion. These fires burned 1,012 acres of young forest growth, 236 acres of merchantable timber,

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 187)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

009050

EM/

366 acres of slashing or old burned lands not restocking, and 718 acres of non-forested lands.

Under the co-operative arrangements inaugurated in 1912, with the various Dominion and Provincial Forest Services, 199 officers and men of such services were under appointment as ex-officio officers of the Board.

During the fire season of 1937 fire protective appliances were inspected on a total of 5,811 locomotives in connection with railway fire prevention.

The Railways maintained special fire patrols prescribed by the Board on 7,664 miles of railway lines passing through forested territory.

Five thousand four hundred and eighty miles of fire-guards were constructed or maintained on railway lines in the Prairie Provinces.

During the year 1937, 108 accidents causing fires, personal injuries or property loss were reported to the Board as having occurred in the transportation of dangerous articles by freight, one person being killed and three injured with a total property loss amounting to $111,601.00. Of the above accidents, 80 resulted from the transportation of inflammable liquids, chiefly gasoline, with one person killed and one injured, and caused 99.5 per cent of the total monetary loss; 20 accidents were due to acids and corrosive liquids, injuring two persons; inflammable solids and oxidizing materials were responsible for six accidents, and compressed gases two accidents.

Dear Mr. Morris:

I have your letter of 10th.

What has been done is to establish a Senate Committee which would hear evidence on the subject of our Railway situation. Probably the evidence will be from the appropriate officers of each Railway. There will be no organization that I know of established by the Committee.

I would think that Ventures would be about the best place you could expect to excite interest with regard to any good base metal proposition.

Yours very truly,

Arthur Meighen.

Rt. Hon, Arthur Meighen, K. C.,
The Senate,
Ottawa.

Dear Senator Meighen:

My last contact with you was in the form of a congratulatory letter from you with respect to a 1933 forecast of mine on the business and market outlook at that time.

Last week I was in Toronto on mining business and had hoped to have the pleasure of seeing you. Now I note with great interest your announcement about Canada's railway situation - a problem which I recall harping on myself even back in college days about 1919 or 1920.

The point of my letter is that I wish to go on record as being vitally interested in doing something tangible about this railroad mess and should your plans develop along lines where my capacities would be of possible use to you I would like to hear further from you.

Of course politically I have no experience and have no inclination to seek a career in that direction but I do have publicity and research experience as well as fairly well developed economic understanding.

Meanwhile I am nursing this young but highly promising base metal mining enterprise through its early stages. We have a zinc-silver-copper property of distinct merit in the Eastern Townships. Anything you can do or suggest towards facilitating the financing of our company would be appreciated - I already have Aird, MacLeod and Ventures quite interested.

With kind personal regards,

Very truly yours,

R M Morris

Mr. Ellison Young,
Editor,
Windsor Daily Star,
Windsor, Ont.

Dear Mr. Young:

I had a chance to read, on my arrival this morning, the very generous editorial in your issue of 11th March. I may say to you personally that I have been rather surprised at the attention given this speech, because I did not think a very great deal of it myself and did not bother revising or correcting it. However, on reading it now, it seems to contain about what I wanted to say.

I do not know whether you have read one I made two years ago when they broke in on the Canadian National-Canadian Pacific legislation and re-established the system which exists today. Copy is enclosed herewith.

I am also sending you an editorial from the Winnipeg Free Press, which is about what one would expect. It mis-states the contents of the speech and makes a direct appeal to the non-tax-paying masses "against" the interests"--just such an appeal as has prevailed all through the years. By "non-tax-paying masses" I mean those who no doubt pay some taxes but do not know they are paying them, and are always happy over anything that injures business.

Yours very truly,

AM/E.

Dear Mr. Hayrs:

I have your letter of 10th. Am afraid it will not be possible for me to get the time to read Mr. Lesslie Thomson's book, valuable as I know it will be—That is I will not be able to while the Senate Committee is doing its work. It might, however, be considered advisable to have Mr. Thomson appear before the Committee, and I am quite certain if he would care to come, that the Committee would be glad to hear him. I, however, shall not be Chairman.

The Committee would also be glad to hear from him by letter on any subject affecting the purpose of the Committee, on which he would care to express his views.

Kindest regards,

Very truly yours,

Arthur Meighen.

Mr. Hugh Hayrs,
The Macmillan Co. of Canada,

THE MACMILLAN COMPANY OF CANADA LIMITED
ST. MARTIN'S HOUSE – 70 BOND STREET
TORONTO 2
CABLE ADDRESS, MACMILCO, TORONTO

MR. EAYRS'S OFFICE

March 10th, 1938.

Dear Mr. Senator:

I notice in this morning's paper the likelihood of a committee of the Senate being appointed to survey the whole matter which all of us call the Canadian railway problem, and it occurred to me at once to write to you.

This Company will shortly publish here, and Macmillan & Co. Ltd., in London, and The Macmillan Company in New York, a book to be known as THE CANADIAN RAILWAY PROBLEM. Its author is Mr. Lesslie Thomson of Montreal whose work on the Economics of the St. Lawrence you may know. The book will be published in one very large volume at probably $10.00, and, as far as I can see it now, publication will be about early May. The book is an extremely large and long one, for it is a comprehensive survey of the whole situation from the very beginning of things that have made the problem what it is today, and therefore the publication date is not guaranteed.

It occurred to me to suggest, however, that you would like to see at this time a contents table, and I therefore enclose that with this letter. Moreover, if we can be of service to you in so doing we shall be glad to furnish you with galley proofs of all the material set to date which, I should say, would comprise about three-quarters of the book.

I may perhaps be allowed to make one other suggestion. Mr. Lesslie Thomson is, as you will know, a consultant engineer living in Montreal, and it may well be that before or during your perusal of his material you would wish to confer with him. I have no reason for thinking such conference would be impossible.

If you will let me know if my Company can be of help in the way I suggest I shall be glad to send the galley proofs on to you. In the meantime, with kind regards, I am

Yours very truly,

The Rt. Hon. Arthur Meighen, M.P.,
The Senate,
Ottawa, Canada.

Dear Mr. Fairbairn:

I have yours of 22nd and thank you for the interest you are taking. Had not seen the statement which you attribute to Mr. Bennett.

It is not at all impossible that before a great length of time there will be unification of the Railways, but under the Government. This, however, is a consummation to which I cannot look forward with enthusiasm. I have seen too much of the vagaries and terrible extravagance of Government operation.

Whatever Committee investigates the Railway situation this Session will confine itself to the Railway problem only.

Yours very truly.

Mr. Rhys D. Fairbairn,
National Club,
Toronto, Ont.

March
22nd
1938.

Senator,
The Right Hon. Arthur Meighen,
The Senate,
Ottawa, Ontario.

Dear Mr. Meighen:

From Ottawa press reports, we are informed of the proposed investigation by the Senate into alleged political pressure now being used re appointments made by the management of the Canadian National Railway.

The general public is behind such an investigation.

This party machine pressure strikes at the heart of our Canadian life and all political parties.

From personal observation I find that organized labour of the railways are fully co-operating with the management so that the seniority rule of advancement of the staff of workers

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 187)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

D 19076

is well observed and this is the best possible co-operation to get good results in the operation of the systems. Political interference is fatal.

You have expressed some doubt as to the advisability of the Dominion Government's absorbition of the Canadian Pacific Railway. In this I would humbly disagree with you. With motor competition we have reached the point where one railway company is enough for Canada. We must have railway and water hauls for long distance travel and freight.

Under a carefully prepared plan there need be very little disruption of workers-every man now employed should be retained but would in many cases have different work.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 187)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119077

Political pressure would be fatal to any plan of merger.

The Right Hon. R. B. Bennett has astonished the country by his admission of the fact that the Bank of Canada when organized during his term of office was not made a Dominion public ownership plan as at first arranged, because of this same political pressure by party machines.

He was in an excellent position to see the evils of party machine domination of Government and I am sorry to say he did not meet it and beat it.

Would it be possible to include the Post Office Department in your investigation? One case of political pressure came to my knowledge - a small contract which for years was advertised, in 1937 there were no tenders called for and the award was

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 187)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119078

given to a Liberal, displacing a Conservative.

I wrote the Post Office Department and received a most unsatisfactory reply. I would be glad to submit details of this case.

Would it not be as well to have the Railway Board of the Senate investigate this matter of the Canadian National rather than a special committee? This would ensure full publicity and thereby create public confidence.

Sincerely yours,

Rhys D'Fairbairn

Dear Mr. Smith:

I have yours of 24th and very much appreciate the reasonable and impressive way in which you put your argument.

I am by no means as hopeful as you are about the future of the Canadian National Railways. The capitalization has got to such an astronomical figure, mainly through sheer waste and too much politics, that under present competitive conditions with other methods of transport, it is bound to be a tremendous burden.

Yours very truly,

Arthur Meighen.

Right Hon.Arthur Meighen
Ottawa,

Sir:

There is very little I can add to what has already been said, pro and con, on the Railway question, but as a consistent and loyal supporter of yours, I feel that you will bear with me while I review certain features which I fear may be overlooked.

Before doing so may I advise that I am a C.N.R. employee, willing nevertheless to submit to any measure which I believe to be genuinely and permanently of benefit to the Dominion, and warranted by conditions.

Distracted by the magnitude of present problems, are our legislators overlooking the major cause while giving undue consideration to its effect, If the effort expended on the Railway controversy over the past fifteen years had been spent on a bold and practical immigration scheme, not only would the Railway problem have righted itself, but the problem of a top-heavy government machine might also have been considerably relieved.

The urgency of a larger population to solve these and other problems of this vast Dominion is obvious.

One of your confreres contends that the labor problem of unification of the Railroads would take care of itself by a natural diminution of 5% annually. He does not visualise the utterly hopeless position of so many of the youth of our country when the doors of the largest employers of labor remain closed to them for years and years ahead. Of the two alternatives I, personally, would sooner hold out some hope to youth, should unification materialize, by ruthlessly cutting the staffs to the minimum once and for all, in order to hasten the time when diminution will require replacement by the rising generation.

[ 19081 ]

Right Hon.Arthur Meighen:

I am opposed to unification of the Railways, in any form, for the reasons stated and because I am of the opinion that in five years, which time proponents agree it would take to effect it, the National Railway should normally cease to require assistance from the public purse.

I am opposed to it for the reason that I believe the transportation problem is of less importance than, and is a direct result of, the alarming lack of population.

There are several other features favourable and unfavourable of which, I know, you are fully informed.

I hope shortly, with your indulgence, to place before you a definite outline of an immigration plan which I think will be free of some of the objections at present held against it.

Yours very truly,

J.R. Smith

For Mr. Meighen

P.A.C. M. 19086

To show the waste of duplicate rly service suggest a map for the Senate Committee - showing:-

1- A tracing of the transcontinental main lines - C.P.R. and C.N.R.

2 And at a given hour, say Noon on a given day the thro passenger trains between Halifax and Vancouver, their exact location at and between Stations.

3 (a) Type of Motive power (b) number of cars, types of cars, number of passengers and employes, on each train.

4 Such numbers to be printed on the map at the point where the above trains are shown

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 187)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119087

5 Also the capacity of the passenger carriages so shown, to be included in the figures given, as described on the map.

6 Supplementary figures to be shown giving cost in aggregate of the trains shown per mile, inclusive of material used and wages, also terminal costs such as inspection, supplies renewals, Etc.

7 Likewise figures of actual revenue to compare with potential revenue if cars were filled to an approximate capacity.

Notes - possibly an operating executive of a railway might suggest more items

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 187)

ARCHIVES PUBLIQUES
CANADA

119088

of an informative and comparative nature.

There should be no difficulty in arranging this plan as outlines, and then transferring it to a map, the eastbound and westbound trains being designated in different colors.

The whole should give a typical cross-section of cost (and waste) due to a lack of cooperation or unification. Such a map would hit the eye of the committee in pronounced fashion.

April 4, 1938.

April 2nd, 1938.

Right Honourable Arthur Meighen,
The Senate,
Ottawa, Ontario.

Dear Mr. Meighen:

I read your recent contribution to the Senate discussion of the railway situation with great delight and with great encouragement.

I felt that when Senator Beaubien introduced the subject he was on the way to create a new and solid chapter of history. I felt doubly sure of this when your support followed.

I feel confident that the Senate Committee will evolve an education and stimulation of public opinion which will lead to an enforcement of action on the part of the House of Commons.

I look upon a solution of the railway situation as the key to our economic salvation, which must begin with tax relief.

With warmest personal regards,
Sincerely and cordially yours,

A. A. Murphy.

O t t a w a,
April 5, 1938.

Dear Mr. Sparks:

I thank you very much for your letter and its enclosures. These I have read very carefully indeed, and one cannot help but be impressed by the significance of the whole situation which you present.

One of the handicaps of Democracy is its incapacity, in Canada anyway, to deal in any spirit of fairness where one side is thoroughly organized and the other is not. I really despair of being able to get anywhere.

Yours sincerely,

Mr. R. P. Sparks,
140 Wellington St.,
Ottawa, Ont.

#9

April 4, 1938.

Rt. Hon. Arthur Meighen, K.C., P.C., B.A.,

The Senate of Canada,

Ottawa, Ont.

Dear Mr. Meighen,

In view of the proposed investigation into the railway situation by a Senate committee, I thought you might be interested in some studies on railway wages which I made a couple of years ago, which are embodied in enclosed memorandum. I am also enclosing a memorandum on the relationship of railway wages to farm income.

The results of the first of these studies may be summarized by stating that the excessive hourly rates of wages paid to railway workers resulted in a wage bill which was approximately sixty-five million dollars greater than it would have been had railway workers been paid at an hourly rate comparative to the wages paid similar classes of workers in private employment. A reasonable wage scale would in itself solve the railway problem.

The other study indicates that the average net income of farmers is substantially less than $1.00 per day, whereas the crew of a freight train which carries the farmers' products to market is paid an average rate of $1.00 per hour. I think in some way these facts should be put before the committee. These memoranda were prepared for a private client, and have never been made public.

The year 1931 was used because it was the year the last Census was taken, and had more facts in regard to wages than is available for any other year. However, the general situation has not substantially changed.

If you are interested in the matter, I would be glad of an opportunity of discussing the steps which might be taken to get these facts before the committee.

Yours respectfully,

R. P. Sparks

RAILWAY WAGES

D 19093

The serious financial position of the Government of Canada as revealed by a heavy dificit in the budget of the Minister of Finance makes it imperative that the citizens and taxpayers of Canada should give the closest scrutiny to the reasons for this condition.

The large losses resulting from the operation of the Canadian National Railway is one of the major causes of a succession of unbalanced budgets. Public discussion of the railway question has largely been resolved around the suggestions for unification of the two main railway systems. Apart altogether from the question of unification or cooperation between the railways, there is a definite reason why our railways are unprofitable and that is the excessively high wage scales paid to railway workers. The fact that the deficits of the Canadian National Railways, caused largely by excessive wage rates, are met by taxation to which all other workers in Canada contribute, makes railway wages a proper subject for discussion.

Railway wages have always been high as compared with wages of other classes of workers. In a general way, railway wages in Canada have been governed by conditions in the United States. The famous "McAdoo Award", and the passing of the Adamson Act, resulted in very high wage rates in both the United States and Canada during and immediately after the war. There was some justification for this, as commodity prices had also reached exceptionally high levels. The hourly earnings of railway employees reached their peak in 1921. Commodity prices reached their highest point in 1920. Since that time there has been only a slight decline in railway wages, whereas commodity prices have greatly declined as shown on Table No. 1. This disparity cannot continue, as a sound national economic structure can only be maintained by a reasonable parity between wages and prices.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 187)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119094

Table No. 1

| | Index Number of Commodity Prices in Canada | Index Number of Hourly Earnings of Railway Employees, in Canada |
|---|---|---|
| 1913 | 100 | 100 |
| 1920 | 245.5 | 259.9 |
| 1921 | 171.8 | 263.6 |
| 1922 | 152.0 | 239.7 |
| 1923 | 153.0 | 236.8 |
| 1924 | 155.2 | 238.4 |
| 1925 | 160.3 | 238.8 |
| 1926 | 156.2 | 238.8 |
| 1927 | 152.6 | 247.0 |
| 1928 | 150.6 | 248.3 |
| 1929 | 149.3 | 251.8 |
| 1930 | 136.3 | 247.8 |
| 1931 | 112.6 | 260.9 |
| 1932 | 104.2 | 244.2 |
| 1933 | 104.8 | 235.8 |
| 1934 | 111.8 | 230.1 |
| 1935 | 112.6 | 241.4 |

It will be noted that in 1935 commodity prices were only 12.6% higher than they were in 1913, whereas the hourly earnings of railway employees were more than 141% above the 1913 level. If we consider the decline from the 1920/21 peak, it will be noted that the index number of commodity prices have declined from 245.5 to 112.6, or 130.9 points, whereas the decline in railway earnings has only been from 263.6 to 241.4, or a decline of 22.2 points. Practically all other classes of workers have experienced much greater reductions in earnings. This applies particularly to farmers, whose condition in many parts of the country is desperate.

It is true, of course, that railway workers and other industrial workers have suffered through unemployment and short time, but any intelligent study of the true relationship between wages and the prices of primary products such as the farmer produces must be based upon hourly earnings. Short time and unemployment among railway workers and in some other industries is directly due to the fact that labour unions have been able to maintain high hourly rates. It is not total earnings, but hourly rates, which determine the cost of production in any industry, including the transportation industry. Hourly rates of railway and other industrial workers must bear

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 187)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119095

some reasonable relationship to the prices of the products of agriculture and other primary products.

In Canada railway wages have been fixed by arbitration under the Industrial Disputes Act. The purpose of this Act was to protect the public against the consequences of strikes or lockouts. It has achieved this purpose. It was never intended that it should be used by highly organized and monopolistic groups of wage earners and employers to fix rates of wages which were inequitable and unjust in the burden they imposed on the users of railway transportation by unnecessarily high freight rates. The fallacy upon which this method of collective bargaining is based is that the interests of the wage earner and the company which pays him his wages are the only interests concerned, and that these interests are equal. It is submitted that if wages are to be determined by arbitration, such arbitration should be carried on between the wage earner and the final consumer, which includes the whole community.

If any group is entitled to arbitrated wage scales, the same applies to any other group, whether they work for wages or not. The result of the present method of fixing the wages of railway workers has created a condition in which the wages of these workers are completely out of line with the wages of practically all other workers in Canada. This is clearly revealed in the tables attached hereto as an appendix.

The effects of these high rates of wages have been disastrous to railway workers themselves. High wages compelled the railways to increase the use of mechanical power and other labour saving devices. Larger locomotives and bigger freight cars have greatly increased the ton miles of freight to each worker. Railway employment reached the peak in 1920 and declined after that fairly steadily until the beginning of the boom which reached a climax in 1929. The decline in employment since 1929 is, of course, in part due to the general decline in business. It should be noted,

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 187)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119096

however, that even during the height of the recent boom milway employment never got as high as the peak of 1920. The serious loss of employment of milway workers due to improved mechanical equipment is illustrated by the following table which shows the total revenue ton miles of freight carried and the total number of employees in these years.

Table No. 2

| Year | Number of Milway Employees | Revenue Ton Miles (000,000 omitted) |
|---|---|---|
| 1915 | 139,061 | 17,661 |
| 1916 | 156,000 | 22,196 |
| 1917 | 168,175 | 31,184 |
| 1918 | 165,488 | 31,029 |
| 1919 | 163,892 | 26,980 |
| 1920 | 185,177 | 31,894 |
| 1921 | 137,487 | 20,621 |
| 1922 | 130,688 | 30,587 |
| 1923 | 174,160 | 34,087 |
| 1924 | 165,888 | 30,513 |
| 1925 | 161,585 | 31,985 |
| 1926 | 169,085 | 34,155 |
| 1927 | 171,889 | 34,901 |
| 1928 | 179,581 | 41,610 |
| 1929 | 176,168 | 35,085 |
| 1930 | 168,134 | 29,604 |
| 1931 | 144,365 | 23,707 |
| 1932 | 126,786 | 23,157 |
| 1933 | 111,769 | 21,090 |
| 1934 | 122,405 | |

The high rates of milway wages and in consequence the high freight and passenger rates have tended to drive business to other competitive forms of transportation. While there is no doubt that the use of buses and trucks as agencies in transportation would have come in any event, the exorbitant hourly rates paid to milway workers has facilitated and encouraged the development of this new form of transportation. In a country such as Canada it is absolutely essential that there should be efficient land transportation at the lowest possible cost. Products of the farm, forest, fisheries, and mines, which are the basis of our national wealth, must reach their ultimate markets at the lowest possible cost. This cannot be accomplished under the present wage scales paid by the railways of Canada.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 187)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119087

Railway wages at the present time are approximately 10% less than they were in 1931. However, wages of other classes of workers have declined as much or more. Furthermore, the railway unions have demanded that the 1931 wage rates be restored, and have threatened to strike if their demands are not granted.

The accompanying appendix shows the hourly rates of wages paid to railway workers as compared with hourly rates paid to workers in the same or similar occupations. The year 1931 has been used as a basis, as this was the year in which the Census was taken, which permits the use of wage information collected at that time.

These tables show that railway employees engaged in the transportation end of the railway business are paid more than double the hourly wage rates paid to workers similarly engaged in other industries. If railway wages for this group, which in 1931 amounted to nearly eighty million dollars, were put on the same basis as wages of other workers, a savings of approximately forty million dollars per year could be made.

These tables also show that the employees engaged in maintenance of equipment are being paid hourly rates of wages approximately 50% in excess of skilled mechanics in other branches of employment. As this group received nearly $52,000,000 in wages, reductions to bring their wages in line with similar skilled mechanics in other occupations would mean a savings of more than $15,000,000. It is probable that another $10,000,000 could be saved by bringing wages or salaries of employees engaged in the "Miscellaneous" group (which includes executives), and in maintenance of way, into line with other employees in similar occupations, making a total savings of perhaps $65,000,000.

In 1931, which is the year under review, the total revenue from freight was $260,000,000. Apparently, therefore, without injustice to any employees, a proper wage structure would permit a reduction of 25% in the total charges for the carrying of freight on all the railroads of Canada. It is not suggested that savings effected by wage reductions should be utilized for a flat percentage reduction in all freight rates. More effective use could doubtless be made of the reduced operating costs in lowering freight rates on commodities the movement of which at low rates is essential

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 187)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119098

to our general economic well-being. Insofar as the Canadian National Railways are concerned, some of such savings might be utilized to reduce the deficits which must be met out of the public revenue, but it is suggested that a substantial reduction in freight rates on certain basic commodities would be an important step towards ending the present depression. Lower freight rates would increase the employment of railway workers, and would tend to stimulate general business from one end of Canada to the other.

The enormous losses of the Canadian National Railways and the vital importance of cheap and efficient land transportation to the economy of this continent make it imperative that the conspiracy of silence regarding railway operating expenses be broken. Without proper consideration of this factor there can be no solution to the problem. The foundation of all successful commercial enterprise is to be found in the policy of operating a business for the benefit of its customers. We should turn the management of the railways back to the railway managers to be operated for the benefit of the public at large. It is more than probable that they and they alone can give us a land transportation structure which will serve the interest of the whole of the people of this country rather than the interest of a comparatively small group of railway employees.

## APPENDIX

There are three sources from which figures used in these tables have been obtained.

(1) A report on "Wages and Hours of Labour in Canada", which is issued annually by the Department of Labour.

(2) A report on "Statistics of the Steam Railways of Canada", issued annually by the Dominion Bureau of Statistics.

(3) A preliminary bulletin covering "Wages among Wage Earners for Canada and the Provinces, 1931", issued by the Dominion Bureau of Statistics, giving information in regard to wages collected at the time the Census for 1931 was taken.

In order that the Census figures might be utilized for this study, rates for 1931 have been used as a basis for comparison in Tables 3, 4, and 5. Since 1931 there has been a reduction in wages of railway workers of approximately 10%, but a study of the hourly rates paid in other classes of employment indicates that there has been even a greater reduction. Another reason for using the 1931 figures is that the railway workers' unions have demanded that the 1931 rates be restored. It seems unlikely that there will be in the near future a similar increase in hourly rates paid to other workers, so that in the event of the railway unions being successful in their demands, the disparity between hourly rates paid to workers in the railways and other workers will be even greater.

As these three sets of figures were taken by different agencies, they are not strictly comparable in all respects.

The wage information published by the Department of Labour is compiled from reports of representative employers and of trade unions, secured annually, and also from union agreements. These reports are supplemented by figures obtained by officers of the Department and by resident correspondents of the LABOUR GAZETTE in the principal industrial centres. It is generally agreed that these hourly rates of wages are above the average actual wages paid throughout Canada. That this is so is confirmed by the Census figures.

The hourly earnings sheet for railway workers, taken from the report on "Statistics of the Steam Railways of Canada", are absolutely correct. They are obtained by

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 187)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

dividing the number of hours worked into the total amount of money received [illegible] are much more accurate figures than can be obtained by using the basic rates shown by the Department of Labour, as in the case of the running trades, these are on a mileage basis.

In regard to the rates of wages as given in the report of the 1931 Census, These are not shown in the report as hourly wages. This report shows the total earnings, total weeks, average earnings, and average weeks. Hourly rates are obtained by taking the average hours per week as shown by the Report of the Department of Labour for each particular trade, and dividing that into the average weekly earnings as shown in the Census report.

Railway employees are divided into four general classifications. The first and largest group, covered by Table No. 3, deals with "Transportation". This group in 1931 was paid $79,162,906.83 in total salaries and wages, the largest amounts being paid to the running trades, including engineers, firemen, conductors, and brakemen.

The second group, covered by Table No. 4, deals with "Maintenance of Equipment", and includes a number of different types of skilled mechanics. This group received $31,072,965.15 in total salaries and wages.

The third group, covered by Table No. 5, deals with "Maintenance of Way and Structures". This group received $40,998,321.36 in total salaries and wages, about 80% of which was paid to section foremen, sectionmen, and labourers.

The fourth group covers "General and Miscellaneous", which includes executives and office workers. This group received $39,965,727.12 in total salaries and wages. No figures are available which would permit a comparison of wages or salaries paid to this group with wages or salaries of employees in other similar classes of employment.

This tabulation deals only with hourly rates of wages, and not with earnings. The cost of transportation is governed by the hourly rates paid. No consideration is here given to the question of short-time, which has been common to all industries during recent years.

Table No. 1 shows hourly rates paid to railway employees engaged in the running trades. There is also shown the hourly rates paid to engineers and firemen employed in other industries, and also the hourly rates paid to employees in other types of transportation as reported by the Department of Labour, and also by the 1931 Census. It will be noted that the average hourly rates paid to the running trades are more than double the rates paid to the other classes of workers whose hourly rates are shown.

- - - - - - - - - - - -

Table No. 4 shows comparative hourly rates of classes of workers employed in the maintenance of equipment. Where comparative rates in other industries are available, they are shown. Railway Statistics show each trade separately, whereas both the Labour Department and the Census in some cases group workers of the same general classes. In Table No. 4 is also shown certain classes of workers engaged in maintenance of equipment for which exactly comparable figures are not available. It will be noted that the average hourly rate of 80¢ per hour paid to certain classes of mechanics employed by the railways is nearly 50% above the hourly rate of 56¢ paid to the same classes of mechanics employed outside of the railways.

- - - - - - - - -

Table No. 5 deals with the three principal groups of employes engaged in maintenance of way. Eighty-five per cent of the number of employees are covered by the three classes shown. Approximately 80% of all maintenance of way employees are sectionmen. It will be noted that the average wages paid by the railways for workers on maintenance of way is 51¢ per hour, nearly one third higher than the average hourly rate of 31¢ paid to labourers and unskilled workers in other classes of outdoor employment, and nearly 10% higher than the average for factory labour, 36¢ per hour. The average wages paid to labourers in 34 cities, 41¢ per hour, is exactly the same as the average paid by the railways. It is well known that civic labourers are more highly paid than labourers in any other class of employment.

## RAILWAY WAGES and FARM INCOME

In a former memorandum a comparison was made between the hourly earnings of railway workers and workers in comparable occupations. This showed that the earnings of railway workers engaged in the running trades were about double the earnings of workers engaged in other types of transportation. It also showed that in the case of skilled mechanics employed by railways in maintenance of equipment, the hourly earnings of the employees of railways were about 50% in excess of hourly earnings of the same class of workers employed in private industry. Based onofficial comparative figures, it was shown that if the wages of railway workers were brought in line with workers in other comparable occupations, there would be a saving in operating costs of all Canadian railways of about sixty-five million dollars per year.

The chief purpose of this memorandum is to make a comparison between the earnings of railway employees and those engaged in agriculture. The chief source of statistical information in regard to agriculture is found in the Census of 1931. These figures are used because there is a great deal more information in regard to farm operations made available in the decennial census than in any other year. While the Dominion Bureau of Statistics gathers certain information in regard to farm operations each year, much of such information is based upon estimates. The 1931 figures, however,are accurat

As farm income depends upon the sale of farm products, and as conditions both in regard to the nature of the products and to the prices at which they are sold vary greatly, it is impossible to determine accurately the farmer's actual income either by way of cash or its equivalent. The best that can be done is to work out averages based upon the annual value of agricultural production.

The gross value of commodities produced on Canadian farms in 1931 is calculated by the Dominion Bureau of Statistics at $839,881,000. In that year there were 728,623 occupied farms. These figures indicate that the average total gross value of production per farm was approximately $1,150. This includes products consumed on the farm as well as products sold.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 187)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

The following table shows the number of workers on the 728,623 farms, and the cost of hired labour:

CANADA - FARM WORKERS - 1931

| | | |
|---|---|---|
| Members of the family, male | - | No. 1,003,763 |
| " " " " female | - | 89,620 |
| Permanent hired help, male | - | 64,130 |
| Temporary hired help, male | - | 464,153 |
| Weeks of hired labour | - | 7,368,671 |
| Costs of labour (including cash and board) | - | $ 100,425,980 |
| Average costs of labour per week | - | $ 13.63 |
| Farms reporting hired help | - | No. 281,044 |

As shown above, cost of hired labour including cash and board amounted to $100,425,980. If we deduct this from the gross value of commodities produced on the farms of Canada, we find that the owners of the farms had a total gross production for their own use or for sale valued at $739,455,020, or an average gross value of production of $1,015 per farm. Members of farm families who worked numbered 1,093,383, of whom about 8% were female. Dividing the number of family workers into the total gross production (less cost of hired labour), it will be seen that the average value of gross production per annum for each member of the farm families who worked was $676.30. It should be kept in mind that this amount does not represent a cash income for products sold, but includes these portions of the crops used for seed and for feed for livestock, as well as the products used for consumption by the farm family and hired labour.

A much closer estimate of farm income can be made by taking the net value of production rather than the gross value. The net value of agricultural production for the year under review is estimated by the Dominion Bureau of Statistics at $556,621,000. This net value is calculated by deducting the value of those portions of the crops used for seed and for feed for livestock from the gross value, and represents the value of products raised on the farm which are available for sale off the farm or for consumption by the farm family and hired labour. This figure does not represent gross cash income, nor have any deductions been made for farm expenses or for living expenses. As shown above, farm labour expenditure alone amounted to $100,425,980. Deducting this from the net production, we have a net value of agricultural production

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 187)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

of $456,195,020 to be divided amongst the 1,093,383 members of the farm families who worked, or an average amount for each person of $417.23.

Even this amount cannot all be regarded as income. There are certain fixed charges and running expenses of the farm apart from hired labour which must be provided for. Taxes alone in the year under review amounted to $54,134,640, or an average of about $75 per farm. In making a comparison of farm income with the income of railway employees or other industrial workers, it may be said that they also must pay taxes out of their income. There is a difference, however, in the case of the farmer. The taxes he pays are on the property, without which he could not earn any income. In the case of the railways, the taxes on the property out of which the railway worker earns his income are paid by the Railway Company. There are other expenses such as maintenance of buildings and farm implements, fertilizers, etc., which must be paid if the farmer is to have any income, and while it is impossible to say precisely what the average income of the Canadian farmer is, an estimate for the year 1931 of $365.00 per year, or $1.00 per day, would seem to be reasonable, and certainly not excessive. No allowance is made for return on invested capital.

Now let us look at the income of railway workers. The following table shows the hourly earnings of railway workers in the running trades in 1931:

HOURLY EARNINGS, RAILWAY TRANSPORTATION, 1931

| | Engineers Per Hour | Firemen Per Hour | Conductors Per Hour | Brakemen Per Hour |
|---|---|---|---|---|
| | $ | $ | $ | $ |
| Road Passenger | 1.51 | 1.18 | 1.16 | .85 |
| Road Freight | 1.16 | .87 | 1.01 | .78 |
| Yard | .87 | .68 | .84 | .77 |
| Average | 1.18 | .91 | 1.00 | .80 |

Source: "Steam Railways of Canada", Bureau of Statistics.

The above figures show that employees engaged in the hauling of freight received wages averaging very close to $1.00 an hour. As a matter of fact they probably actually received more than $1.00 an hour on the average, as they were paid for time spent in excess of eight hours a day at the rate of

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 187)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

D.1.9.1.0.7.

time and a half. To state the matter briefly, therefore, the situation is that the farmers of this country received for their labour an average of $1.00 per day, and the men who hauled their products to market when shipped by railway received $1.00 per hour. The railway man worked an 8 hr. day or a 48 hr. week, whereas the average farmer's working hours per week were probably twice 48. This was the situation in 1931.

The Dominion Bureau of Statistics estimates the value of gross production on Canadian farms in 1936 at $1,061,624,000. No official figures are available as to the number of occupied farms, cost of hired help, etc., but assuming that these have not substantially changed, the following table shows comparative figures for the years 1931 and 1936.

COMPARISON OF FARM INCOME, 1931 and 1936

| | | 1931 | | 1936 |
|---|---|---|---|---|
| Total Value of Gross Production | | $839,881,000 | | $1,061,624,000 |
| Number of Farms | | 728,623 | | 728,623 |
| Value of Gross Production per Farm | | $ 1,150 | | $ 1,457 |
| Cost of Hired Help | | 100,425,980 | | 100,425,980 |
| Total Value of Gross Production less cost of Hired Help | | 739,455,020 | | 961,198,020 |
| Value of Gross Production less cost of Hired Help, per Farm | | 1,015 | | 1,319 |
| Members of Farm Families who worked | No. | 1,093,383 | No. | 1,093,383 |
| Value of Gross Production less cost of Hired Help, per Member of Family working | $ | 676.30 | | 878.28 |
| Total Value of Net Production | | 556,621,000 | | 681,077,000 |
| Total Value of Net Production less cost of Hired Help | | 456,195,020 | | 580,651,020 |
| Value of Net Production less cost of Hired Help per Member of Family working | | 417.23 | | 531.06 |

It will be noted that the average value of net production for each member of the farm families engaged in agriculture has increased from $417.23 in 1931 to $531.06 per annum, in 1936, or an annual increase of approximately $114 per year. As the farmer must work to a certain extent seven days a week, this shows average increased earnings of approximately 31¢ per day for each farm family worker.

In 1932, basic railway wage rates were reduced 10%. There does not appear to be a reduction of 10% in the actual earnings as shown in the following table, which shows the hourly earnings of railway workers in the running trades in 1935:

Source: "Steam Railways of Canada", Bureau of Statistics.

The railway unions recently demanded a return of this cut in their wages, and have been successful in forcing an agreement on the railways which means that they will have regained the previous high rates. This means an increase of about twenty million dollars a year in the cost of operating the railways of Canada.

Even the increased earnings of farmers due to higher prices for farm products make the farmers daily earnings little if any in excess of the hourly earnings of, say a passenger conductor. Railway statistics show that the average number of passengers per passenger train in 1935 was forty-four persons, so that the principal duties of a railway passenger conductor is to collect forty-four tickets. For this, he is paid an average of $1.13 per hour. He has, of course, other duties to perform, but much of his time is spent comfortably seated on a cushioned seat. Nevertheless, his average earnings per hour are approximately equal to the earnings per day of the average Canadian farmer, even under the improved conditions resulting from higher prices for farm products.

There has been complaint on behalf of the railways and railway workers that trucks are taking an increasing volume of freight traffic which had formerly gone to the railways. This is not to be wondered at. According to the Census of 1931, the average hourly earnings of truck drivers was 37¢ per hour. Farmers, like many other shippers, are patronizing a form of transportation which is cheaper and in many respects more convenient. It might be expected that if two types of workers offer their services, one at $1.00 per hour and the other at 37¢ per hour, that the shippers will avail themselves

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 187)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119109

of the services of those who can give them the cheapest service. It may be said that the wages of truck drivers are too low, but they are far in excess of the earnings of farmers. One of the results of this situation is that in 1920 there were 185,177 railway employees. In 1935, the last year for which figures are available, this had fallen to 127,526, a reduction of nearly one-third in fifteen years. This reduction in the number of railway workers is almost entirely due to excessive wage rates.

In spite of the obvious facts of the situation, railway workers are very likely to ask for even higher wages in the very near future. Already a demand has been made in the United States for an increase of 20¢ per hour. At all arbitration proceedings of recent years, Canadian railway workers have taken the position that when railway wages are increased in the United States they are entitled to an equivalent increase in Canada.

In 1935, the last year for which complete statistics are available, the railways of Canada handled about eighteen million tons of freight traffic, originating on the farms of Canada, made up as follows:

| | | |
|---|---|---|
| Agricultural Products | - | 15,716,120 Tons |
| Animal Products | - | 2,211,197 Tons. |

In addition to the above, farmers paid freight on a great variety of products which they purchased, including such items as agricultural implements, fertilizers, building materials, etc., etc. There are no detailed figures as to the amount of money which farmers have contributed to the gross revenue of the railways, but it runs into many millions of dollars. The high cost of transportation is an important factor in fixing the amount which the farmer received for his products, and therefore is an important contributing factor to the low income received by farmers. There were authentic records submitted to the Price Spreads Committee in 1934 which showed that in certain cases in western Canada when farmers shipped livestock to the Winnipeg market, the amount received when such livestock was sold was insufficient even to pay freight and

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 187)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

109110

stock-yard charges, leaving no return whatever to the farmer. This is an extreme example, but it demonstrates that the whole railway wage structure is completely out of line and cannot be maintained if agriculture is to prosper.

It is generally agreed that the progress ofCanada economically is largely dependent upon a solution of our railway problem. The above figures appear to indicate that the only true solution will be found in a wage structure reasonably in line with the wages of other types of Canadian workers, and bearing some fair and equitable relationship to farm income.

A further memorandum will be submitted shortly, showing the relationship between farm income and industrial wages generally.

Mr. Robt. P. Hastey,
6027 Cottage Grove Ave.,
Chicago, Ill.

Dear Mr. Hastey:

I have your letter of 2nd.

The Government will not answer questions on the Order Paper respecting the management of the Canadian National Railways. When we were in power they raised Cain because we took the stand that the National Railways was not a Government Department, and, therefore, not subject to question and answer in the House. Now they take exactly the stand which they then reviled.

Yours very truly,

AM/E.

Arthur Meighen.

Honorable Authur Meighn
Parliment Buildings
Ottawa Ontario, Canada

Dear Mr. Meighn:

I have been endeavoring for the past year and a half to secure some of the Canadian National Railway coal business, but to date have been unsucessful. I have submitted bids and have received nothing but curt replies. I have gone to the trouble of submitting all the desired information required of the Fuel Agent in Montreal. I have never been able to obtain the price that was finally paid when the bids were open or who the business was given to, also I have made many efforts to do so. It is customary to acquint the bider with the names and firms biding and prices submitted. I feel sure that you agree with me on this point.

I formally lived in Ottawa Canada as you know and my father was President of the Conservative Association in Ottawa for a great many years and it has been my pleasure to meet and talk with you although you may not remember me at this time. I was on the staff of the House of Commons when you were a member of the chamber and Sir Robert Borden was Prime Minister of Canada. I served over-seas with the Canadian army. On my return to Canada I was unable to get located in any satisfactory business so I moved to this country. I pay considerable taxes as a holder of real estate in Ottawa at the present time and I certainly feel that I should have been given more consideration from the officials of the Canadian National Railway.

I am wondering if I would be asking too much of you to endeavor to secure for me the following information. The names of all parties submitting bids for locomotive coal, said bids having been received by the Fuel Agent on March 14, 1938. The price of the bids finally accepted, the name of the mine from which the coal came from and over which railroad the coal was shipped before it reached the Canadian National line in the United States, also the successful bider for the coal supply to the Canadian National power plant at Elsdon, Illinois. The bids for this inquiry were opened on March 21 or 22, 1938. I trust that in making this request of you that I am not asking too much and shall appreciate hearing from you at your earliest convenience and trusting that you shall be successful in obtaining this information.

Yours very truly,

Robt. Nastey

Dear Senator:

The task that lies before yourself, and your fellow members of the cooperation committee of the two railway systems is a stupendous undertaking indeed.

May I respectfully offer my services as Investigating Accountant through you , to your committee, as one qualified by training and experience in similar matters, to produce "the facts back of the figures".

Am a Chartered Accountant (Ontario 1925), and recently resigned from a six year engagement with large New York firm ,in order to return to Canada, in order to take some part in worth-while Canadian investigations.

Am engaged on system survey work , right here in Montreal, and could arrange to obtain all the figures required for examination from the offices of the two big railroads, tactfully , completely, and with all details necessary in order to provide material for a thorough study of problem, from all angles.

Will sincerely appreciate the privilege and opportunity involved, and can assure you, sir , of my ability to cooperate , and produce both figures and facts- Reference Mr. Alden R Taylor,President of the William L. Barrell Company, 52 Chauncy Street, Boston,Mass. -(I have functioned for the last six years as Mr. Taylor's "figure-fact man".)

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 187)

I can also quote as reference any of the well known Chartered Accountants, such as Mr. George Edwards, F.C.A. , Mr. Henry James Welch, F.C.A.., Mor Colonel A.E. Nash, F.C.A. etc. ; Mr. Hugh D. Paterson of the Dominion Income Tax Department,will, I know, be able to vouch for my ability to perform.

Twenty years' experience in heavy corporation and professional work , specializing in mergers and consolidations, with large firms, in both Canada, and the United States , will prove an asset in such a capacity I sincerely believe.

Believe me to be, sir,

Yours , respectfully and sincerely,

ADH.

Senator,
The Right Hon. Arthur Meighen,
Senate House,
Ottawa, Canada.

Dear Mr. Meighen:

Further to your letter of April 4th re investigation now under way.

I do not want to pester you with a lot of correspondence as I know you are a very busy man, but I would like to say my main concern is to stop "patronage dangers in political" control.

While the House of Commons have introduced a bill to correct election abuses I am still of the opinion that a public investigation

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119120

by the Seanate would be of untold benefit to Canada as a whole.

Personally, I have had many years experience in Toronto observing the Conservative Party Machine and its various manipulations from the City Hall onward and it is a great calamity that a small group of men should control the Canadian Political Parties.

Again thanking you for your kindness in this matter, I am,

Yours sincerely,

Rhys D Fairbairn

Ottawa,
April 4, 1938.

Dear Mr. Fairbairn:

I have yours of 31st. Now that a quotation is given from Mr. Bennett's speech, I do not see any inconsistency in it at all with what he said on a previous occasion. One of the reasons given previously was that the Bank should be free from political control. The reason he now gives is that the evidence of the patronage dangers in political control became at a very early stage only too manifest. He does not say that there were not other reasons or that the other reasons which he previously gave were not still valid. The fact is that in Mr. Bennett's original Act establishing the Bank of Canada, absolutely complete control was taken, but under that measure of private management which would insure against political patronage.

Yours very truly,

Arthur Meighen.

## Mr. Bennett and the Bank of Canada

Rt. Hon. R. B. Bennett made a somewhat surprising speech in the Commons the other day with respect to Canada's Central Bank. He said that his own government, in bringing this bank into being in 1934, had intended to organize it as a publicly owned institution. "But"—this is the explanation Mr. Bennett now gives—"so strong did the pressure of patronage become before the bank had assumed form and before the statute was passed, and so many were the clamorous demands upon the various members of the House and upon the government to find positions for innumerable people, that we reluctantly provided that this should be a privately owned institution."

Mr. Bennett's words are of particular interest to The Star, because this paper contended at the time that the government was making a mistake in not establishing the bank as a publicly owned concern. And we recall the explanation then made by Mr. Bennett, which is somewhat different from that which he makes now. Speaking against an amendment which called for national ownership of the bank, he said in 1934:

"There are three reasons why the government is not prepared to accept this amendment: First, the experience of the world indicates that such a proposal would be bad. Secondly, it is essential that the bank should be free from political control. Third, all the profits of the bank except $225,000 accrue to the people, to the country, and to all intents and purposes the bank itself is a publicly owned bank, for (a) the provisional directors are named in the bill, and (b) the governor, the deputy governor and the by-laws must be approved by the government of the day."

So in 1934 Mr. Bennett gave the patronage reason as only the second of three. The first was that he regarded real public ownership as inherently bad. The third was that he claimed his own scheme was "to all intents and purposes" public ownership. But what does Mr. Bennett say now? He regards public ownership as inherently good. He drops the pretence that the bank, as his government organized it, was "to all intents and purposes" publicly owned. And he even

TORONTO DAILY STAR, TUE

attacks the King government for half measures in nationalizing the bank, because it got control by issuing new stock, instead of doing a real job by "taking over the private holdings, by expropriation, if necessary."

It is a pity that Mr. Bennett did not carry out what he now says was his original intention in 1934, namely, to organize the bank as a publicly owned institution. The picture he draws of his administration's retreat from that position rather than face the unpleasantness of dealing with patronage-seekers is not an attractive one. And his speech of 1937 is in peculiar contrast to his speeches in 1934.

SIR THOMAS TAIT

762 SHERBROOKE STREET, WEST.

MONTREAL

25th April, 1938.

The Honourable Arthur Mien,
The Senate,
Ottawa, Ontario.

Dear Mr. Mien,

I have been away at White Sulphur Springs, West Virginia, and only returned at the end of last week.

I note that a Committee of the Senate has been appointed to enquire into the Canadian Railway problem. I do not know that it will be of any particular use to this Committee or any of its members, but I send you herewith a pamphlet, which I was vain enough to entitle "A Solution of the Canadian Railway Problem", suggested by me in April 1917, together with a copy of a Memorandum supplementary to this pamphlet, written by me in May 1921. Lord Shaugnessy, and, indeed, at the time, Sir Edward Beatty were good enough to say that next to their scheme the solution suggested by me was the best that had come under their knowledge.

The scheme which the Canadian Pacific had in mind at that time would, I am quite sure, not be acceptable to the Government or Parliament, and probably largely on this account it has been very much modified by Sir Edward Beatty.

There may at least be some matter in my pamphlet or memorandum which will be of use to the Senate Committee.

Yours very truly,

Thos Tait

Rt. Hon. Arthur Meighen, P.C.,
The Senate,
Ottawa, Ont.

My dear Senator:

Re Railway Inquiry

I enclose a copy of a memorandum I have made with regard to the proceedings before the Senate Committee. As appears from it, I met Senators Beaubien and Graham together and discussed with them the course of procedure which would probably be most convenient, and they tentatively approved my suggestions as to the order in which certain subjects might be dealt with.

If you and Senator Dandurand would like to give me any further instructions before the Committee meets, I shall be available at any time on Tuesday which is convenient to you.

Yours very truly,

BMC

**MEMORANDUM**

**RAILWAY INQUIRY**

1. I hope to have by Wednesday morning a good deal of statistical material connecting that contained in the Duff Commission report with the figures for the six years 1932 to 1937. I have also had discussions on the subject of co-operation with the members of the Joint Co-operative Committee (the technical committee) and have also discussed the activities of the Joint Executive Committee with Mr. Hungerford and Sir Edward Beatty, who have taken part in these. As a point of departure for the Committee's consideration of this subject I have obtained the joint statement by the Chairmen of the two Sections of the Joint Co-operative Committee. A similar joint statement may be made by the two Presidents with respect to the work of the Joint Executive Committee. If so, the disposition of the question of co-operation will probably be much simplified. Finally, Mr. Hungerford and Sir Edward Beatty agreed that the latter should first submit to the Committee any proposals he may have for the future and that any witnesses from the Canadian National on the subject of future action should follow on afterwards.

2. I met the Joint Chairmen of the Senate Committee in Montreal last Wednesday and it was then tentatively arranged that the best course to pursue would be for me on Wednesday next to lay before the Committee the fresh statistical information available and any joint statements on the subject of co-operation, that the Committee might then proceed on Thursday to obtain from witnesses such further information as to co-operation as seems to it desirable to obtain, and that when the question of co-operation has been exhausted, Sir Edward Beatty should be invited to develop his unification proposals. Sir Edward and I agreed that the marshalling of the Canadian Pacific's evidence on this subject was the Canadian Pacific's responsibility, but I have asked him to let me have in advance a list of any witnesses he desires to have heard with an indication of the subjects with which each of them is competent to deal. The analysis of his proposals before the Committee will no doubt take some time.

3. Mr. Hungerford was somewhat concerned that any criticism of Sir Edward Beatty's proposals should not be volunteered by members of the staff of the Canadian National but should be drawn from them. He agreed, however, that they alone had the necessary knowledge and experience necessary as a basis for useful criticism. Since it is likely that any criticism by railway witnesses will have to come from Mr. Hungerford himself and from one or two of his principal subordinates, I am not sure that in the result it matters very much whether or not the Canadian National as such undertakes to meet whatever case the Canadian Pacific may make. From the point of view of procedure, however, the point is not without importance.

4. It is obvious that, acting as I am for the whole Committee, I cannot adopt the attitude which might be adopted by counsel briefed to support or oppose any particular course of future action, and I do not suppose that the Committee desires to hear counsel retained on each side. If I am right in this, I assume that such questions as I may direct to witnesses on either side must be such as might

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 187)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119133

properly be asked by a judge presiding at a trial, that is, questions directed to elucidating and giving precision to the proposals or criticisms which any witness puts forward and to obtaining appropriate explanations of any differences there may be between the evidence given by particular witnesses before the Committee and the statements made by them on previous occasions.

5. The subject under inquiry is however one upon which some members of the Committee have already formed at least tentative opinions. Some of these on each side may consider that I am not sufficiently aggressive in support of either one view or the other. It seems to me, however, that in the absence of separate counsel on each side, this difficulty, if it exists, can be overcome only by members of the Committee who entertain strong views in either one sense or the other assuming the function of pressing the witnesses for answers in support of their respective views.

6. It will no doubt be useful to consider well in advance the question of what, if any, witnesses, other than railway witnesses, it may be desirable to call. The possible witnesses fall into different categories, as follows:

(1) Former officers of the Canadian National Railways: There are no former officers of the Canadian Pacific so far as I know, but it has been suggested that it would be useful to call the Hon. Mr. Fullerton and Mr. Gerard Ruel.

(2) Bankers: Presumably it would not be proper to call Mr. Towers, and it is difficult to select a prominent officer of any of the commercial banks. Mr. Wilson, of the Royal, has been suggested in this connection but the fact that he is a director of the Canadian Pacific might affect the weight of his evidence.

(3) Academic students of the railway situation: There are a number of these. Mr. Jackman, Professor of Political Science at Toronto University, was mentioned at one of the early meetings of the Committee. Mr. McDougall, Assistant Professor of Political and Economic Science at Queen's, is said to have made a special study of the railway situation, and the same is true of Mr. McQueen, Professor of Political Economy at the University of Manitoba. I have inquired from these three gentlemen whether, if the Committee decided to ask them to give evidence, they would be available for the purpose in the latter part of May.

In addition there is Mr. Leslie Thomson, an engineer in Montreal, who has a book on the railway situation in press and who is said to have made some years ago a very useful study of the St. Lawrence waterway proposals. So far as I know he has no affiliations with either the Canadian Pacific or the Canadian National, and I have asked him to advise me as to his availability as a witness.

Mr. Glazebrook, Associate Professor in History at the University of Toronto, has just recently published

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 187)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119134

a historical review of the Canadian railway situation, and I inquired orally from him what, if any, evidence he could give. He tells me that he has not given any consideration to the question of the future and does not think he could be of assistance.

Finally, there is Professor Leslie Fournier of Princeton, who has been recommended as having a wide knowledge of the Canadian railway situation. As to how recently he has been in touch with it, I have no information.

(4) Trade organizations: Their studies of the railway situation have, as I understand, been made by the Canadian Manufacturers' Association and the Toronto Board of Trade. This may also be true of the Canadian Chambers of Commerce, and it is possible that officers of organizations of this kind might make useful witnesses.

April 30, 1936.

## Local Conference Committee

27

Right Honourable
A. Meighen, P. C.
House of the Senate,
Ottawa, Ont.

*Vancouver, B. C.* May 3rd 1938 *193*

Dear Sir :-

The following resolution in support of the stand against the amalgamation, co-ordination or unification of the Canadian railways, was recently passed by a meeting of the delegates of the various locals of the Standard Railway Brotherhoods in Vancouver; together with instructions to forward copy to you for your information and interest :-

" Whereas, there is open public discussion throughout Canada on the Railway Question; and, also a campaign has been instituted by the financial interests, in the Senate, in the Press and over the Air, to create a sentiment that amalgamation, co-ordination or unification of the railways of Canada would be benificial to the country by effecting a saving of about $75,000,000. a year :

" And whereas, this designed saving of $75,000,000 is not planned to come out of the enormous fixed and interest charges, but is to be derived out of curtailed services, labor costs and materials, such saving would be at the expense of not only the railway workers, but also of the people generally both in the towns and the country-side, and at the price of the industrial, commercial and domestic life of the country, as affected by the consequent elimination of railway services to communities; bringing a loss of the necessary economic facilities upon which depend the living of the productive people, who have actually built up the country; many of whom have toiled constructing these railways, and are now operating the services and industries of our country; such a loss will change our communities into ghost towns, with loss of workers and farmers' homes, and will increase the unemployed and relief recipients throughout Canada, and in such manner would every part of our Dominion be disintregrated, and the prosperity natural to our Canada further stunted by monopoly ;

Continued :-

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 187)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119136

"And, whereas, for such good reason the people throughout the Dominion voted decisively against amalgamation in the 1935 elections;

"Further, whereas, the Canadian National - Canadian Pacific Act 1933, reads in part:

' 27. Nothing in this Act shall be deemed to authorize the amalgamation of any railway company which is comprised in National Railways with any railway company which is comprised in Pacific Railways nor to authorize the unified management and control of the Railway system which forms part of National Railways with the railway system which forms part of Pacific Railways.'

" Therefore be it RESOLVED :

' That this Standard Railway Unions' Local Conference Committee join with all other organizations and the people generally to support our Brotherhood Officers and our Government in a stand against amalgamation, co-ordination or unification of the Canadian Railways.' "

Respectfully submitted,

Yours truly

Secretary.

COPY.

Rt. Hon. Mackenzie-King,

House of Commons,

Ottawa, Ont.

April 28th. 1938.

We are unalterably opposed to any attempt at unification of the Canadian National and Canadian Pacific railways on such inequitable terms as are set out in recent press statements.(Stop)Consider this as a barefaced attempt to unload on the Government the liabilities of the C.P.R. while that company retains its assets.(Stop) Also condemn the proposal to incorporate a separate company to effect unification.(Stop)The activities of those who favour unification are clearly designed for the benefit of the C.P.R. and not the taxpayers of the Dominion.(Stop)Curtailment of services would work great hardship on Western agriculturists, prevent development of natural resources and dangerously reduce or wipe out operating profit of C.N.R.(Stop) Solution of railway problem requires first revaluation of Canadian National assets in line with presentday use and productive values,which would enable it to operate at a good profit;second,an appraisal of the assets of the C.P.R. on a similar basis by a committee appointed by the Government for that specific purpose in readiness for inclusion of C.P.R.in the national system whenever the necessity may arise.

Frank Eliason,

Secretary United Farmers of Canada Sask.SectionLtd.

Hon. Arthur Meighen, Senator,
Ottawa,
Canada.

Sen Beaubien

Dear Senator;-

In response to your esteemed favour of the 5th instant, I wish to state that I not expect to ever require any of the documents contained in my letter of the 4th instant, all of which were submitted in order to enable to grasp the frightful manner in which E. R. Decary has sabotaged the purchase of the properties alleged to be needed for building the C.N.R. Montreal Terminal, in which he had cate Blanche to rob the Canadian public.

I may add that the statement sent you listing the properties purchased by Decary was prepared by myself at the request of Ald. J. M. Savignanc in order to support his charges of extravagance against the Thornton administration.

Now then, it seems to be that every extravagant purchase of properties or every enterprise that registers a loss should properly be subject to the investagtion that is being conducted into the affairs of the C. N. R., and where such losses occur, radical means should be adopted to terminate the same, irrespective of party consideration, although the Liberal Government is solely responsible for appointing Thornton.

In Montreal, there is a multiplicity of CNR. telegraph office, which are operated at a loss, and might wisely be closed( No revenue to justify continuation of same) The same obtains in the express branch, where the chauffeurs. for the most part, do not speak a word of French, which they should. There is a lot of deadwood in C.N.R. Staff.

Bearing in mind the enormous annual losses of the C. N. R., which is operated as a political machine by the Liberals, amouting to almost one million dollars per week, we, as Canadians, must strive to terminate promptly this shameful waste of public funds.

Many thanks for the attention you have given to this nationanl question, and many Canadians, like myself, rely on your zeal and ability to bring about the reforms needed on the C. N. R. management.

Enclosed herewith please find a copy of the late Gouin's speech in the House on Mar 16th, 1922, which indicates that he was a small Canadian.

I may write you more at large Re Decary in the near future, If I deem it advisable,

In the meantime, believe me to be,

Faithfully yours,

Thos. P. Mazurette.

Thos. P. Mazurette.

# GOUIN DENIES CHARGES PREFERRED BY MEIGHEN AGAINST QUEBEC "BLOC"

## House Listened Eagerly To Masterly Reply—Former Quebec Premier Detects Racial Subterfuge In Title Assigned To Him "Master of Administration" — Calls Leader of Opposition Bad Loser

PRESS GALLERY, House of Commons, Ottawa, March 17.—(By R. W. Lipsett, Star Staff Correspondent.)—Another niche was cut in the sparsely populated Federal hall of fame Wednesday. It is cut to receive a sphinx-like and portly figure—the figure of Sir Lomer Gouin. In hardly more than twenty minutes Wednesday he carved his way unfalteringly through the criticisms and insinuations, which have deluged him since Parliament opened to a secure position as one of the outstanding figures in the national life of Canada. Not for many years has the mastery of condensation, the breadth of thought and incisiveness of utterance which marked his speech been brought together in Parliament.

While his personality was holding the rapt attention of the House and crowded galleries, his voice laid bare attacks upon Quebec and upon himself. There was, he declared, no attempt at domination by Quebec or by "Big Interests" of Montreal. The force which wiped out the Meighen administration was the will of the people of Canada and nothing else. The Government sought only such a solution of the railway problem as would be satisfactory to the interests of Canada in general. Not an iota of favor had been shown Quebec in the order-in-council passed respecting fisheries in that Province. Quebec desired no favors and would receive none. Sir Lomer recalled the fact that every single order-in-council passed by the late Government and tested in the courts had been found ultra vires.

Referring to the charge that he (Sir Lomer), was the master of the administration he said that it was advanced not to annoy him but to accentuate the unfortunate differences which have existed for too long between certain Provinces and Quebec.

There was only one chief in the Liberal party and that was the Prime Minister, Mr. King, who held the loyal support of every Liberal in the House and in Canada as well. As for Sir Lomer, he was simply a man of good will striving to fulfill one ambition, which was to be permitted to serve his country in his own modest way, striving to give effect to the spirit to which he had directed his life, the spirit of unity which is so essential to the prosperity of Canada and the happiness of Canadians.

### TOMMY CHURCH KEEPS HOUSE TWO HOURS EAGERLY WAITING FOR SIR LOMER GOUIN

Sir Lomer could have had no better stage setting if the arrangements had been in his own hands. For two solid hours the late Mayor of Toronto, Thomas Church, kept the House in eager anticipation of the first speech of the new Minister of Justice. Mr. Church spoke of hydro electric and of national and private ownership. He had some floral tributes to lay at the feet of private initiative but he was infinitely more an apostle of public ownership. Just what he had to say will not be known until Hansard has been revised.

Except for "in the midst of life we are in death" chant he recalled Parliament's good friend Dr. Blake who went down to defeat in the last election in North Wentworth because he would not advocate the throwing of the immigration barriers down to all Europe. Mr. Church speaks two hundred words a minute, has a sonorous voice and never stumbled against a period in his life except the final one. The semicolon, the colon, the dash and the comma look like a Chinese laundry ticket to him.

Before he had finished it was understood that Hansard has advertised in Toronto for some shorthanders who understood the language of that city. He had the local staff looped, "Adam Beck" and "Trawnta" were about the only words they could assemble.

In the interval, through 120 minutes, a crowded house was waiting to hear from the "Mystery Man" of Quebec. On the floor and in the galleries impatience was general when Mr. Church finally concluded. The contrast between his "Tennyson's Brook" contribution to the debate and the firm, studied, concise expression of the late Premier of Quebec was startling in itself.

Sir Lomer came to Ottawa with the idea paramount in Quebec minds from other sections of the Dominion that he was a much-over-estimated man. He had been a dictator in a hive of his own kind, his critics said. Was he until he met those as trained as himself in parliamentary ways, those not affected by the glamor of his reputation, they said.

### STRIKING SPEECH

Well, everyone waited, and last night the verdict was unanimous in all camps. Sir Lomer's address and its delivery was a masterpiece. It lacked the studied grace of a Lemieux, the personal warmth of a Lapointe, but it was a trip-hammer effort in which every word carried sincerity and which stirred not only the Government but also Progressive benches to riotous enthusiasm.

Though a veteran of public life it was Sir Lomer's maiden speech in the House of Commons and it is only fair to his opponents in politics to say that they granted him the new member's historic courtesy of declining to heckle or interrupt him.

Four or five times Mr. Meighen was at the point of interrogation but he kept his peace, but, knowing Mr. Meighen, it will be remarkable if Sir Lomer's charge that he is a bad loser does not precipitate one of the fireworks before this session is ended.

The Opposition did not attempt a response to Sir Lomer yesterday. There was a rumor that Hon. Harry Stevens, Vancouver Centre, who is probably the most aggressive and effective scraper in the Opposition apart from Mr. Meighen, would reply. If there was any plan to that effect it was abandoned and Sir Henry Drayton, late Minister of Finance, is scheduled for the next big Opposition effort. He is scheduled to appear today, but Sir Henry is a pleasant chap who prefers pleasantries and platitudes to internecine strife.

The Progressives had another strenuous innings and last night the wipe reported that they were just getting used to the sound of their own voices and rather like it. The debate may run on well into next week though there are still hopes of terminating it before adjournment this evening.

### CHURCH SPEAKS

OTTAWA, March 17.— (Canadian Press).—When the House opened yesterday afternoon, T. L. Church, (Toronto North), continuing his speech on the address, said Canada was very much behind the times in the matter of good roads. He advocated co-operation between the federal Government, the provincial government and the municipalities to improve roads. On the railway situation, Mr. Church remarked that when we were told how much private ownership of railways had done for the country, it was well to remember what the country had done for private ownership.

Mr. Church referred to the Minister of Railways to the Drayton-Acworth report for advice on railway consolidation. He referred to the railways being in politics and said the greatest politicians in the country were the presidents and general managers of the roads. The Canadian Pacific Railway always supported the Government of the day.

Mr. Church said that the United Farmers' Organization had become unpopular in Ontario because it had not carried out its promises. Otherwise Mr. Crerar would have been called upon to form a government, and then he would have found the Canadian Pacific Railway wishing itself upon him whether he wanted it or not. Lord Shaughnessy was for co-ordination of the Government roads with the Canadian Pacific Railway. If he (Lord Shaughnessy) had his way the Canadian Pacific Railway would own the whole country, the heavens above and the waters under the earth.

He hoped that before long, Hon. W. C. Kennedy, Minister of Railways, would indicate what he was going to do about it. Co-ordination indicated in the Speech from the Throne should not take long. When the United States entered the war the director general of railways had co-ordinated the three hundred American roads in twenty-four hours.

The management of the National Railways must be given a free hand.

It would be a good thing for the Government to bring down a bill providing for the reorganization of the Railway Commission. Mr. Church was opposed to a commission with such powers as the present one. He criticized the last freight rate increase granted by the Commission on the ground that it was based on figures by the Canadian Pacific Railway and not investigated. He also voiced his disapproval of the last two telephone rate increases.

Rural depopulation was not explained by either free trade or protection, for it was world-wide. The real explanation was lack of transportation and of good roads. This need could not be supplied, in Mr. Church's opinion, by the motor truck. Radial railways had done much to meet it in the United States, and the farmers of Ontario wanted them because it was believed that they would also solve the problem in Ontario.

Mr. Church declared himself in favor of protection and of Senate reform. He would like to see radical changes in the method of appointing to the Senate.

There was an agitation in this country to loosen the ties between Canada and the Motherland. It was impossible to please those who would abolish appeal to the Imperial Privy Council. Canada did not need an Ambassador at Washington or even a High Commissioner.

Hon. P. C. Larkin, Canadian High Commissioner at London, now that he had received his appointment should, like the Speaker, forget his party politics.

### GOUIN'S SPEECH

Hon. Sir Lomer Gouin in addressing the house said:

"Mr. Speaker, I had no intention of taking part in this debate, and I would not now rise to address the House were it not that the Right Hon. the leader of the Opposition in the course of a speech, thought it proper to refer to the manner in which he did to my attitude during the last electoral campaign.

"I crave the attention of hon. members for a short time, and I also crave their indulgence, for though I may count myself as one of the veterans in our public life, yet as a newcomer to this House I must confess in all candor and sincerity that I feel exactly as does the young deputy who rises for the first time to address his fellow members.

"Listening to the oft-repeated reminiscences of the right hon. leader of the Opposition (Mr. Meighen) to the declarations that I made during the last general election, and also to the declaration which he says I may have made, I could not help thinking that my right hon. friend should be exceedingly grateful to me for having sought and won the confidence of the electors of Laurier-Outremont, had I not been elected for that constituency much of the best efforts of his great speech would have been lost.

"I repeat, Mr. Speaker, that I do not intend to detain the House for any length of time, by attempting to answer all the statements which have been made about myself by my right hon. friend. For many years I sat in another legislature and I have always avoided what might be construed as an attempt to impose my personal views on my colleagues in respect to any subject, and I have never tried to defend myself against personal attacks. I do not intend to depart from that rule on this occasion.

"I gladly accept this opportunity, Mr. Speaker, to add my most sincere congratulations to those which have already been so happily and so justly extended to you by those hon. members who have preceded me. I am glad also on this occasion to most heartily congratulate the proposer and seconder of the address in reply to the Speech from the Throne on their remarkably eloquent addresses.

### ELECTION QUOTATIONS

"My right hon. friend, the leader of the Opposition, has endeavored to put me in a contradictory position by quoting a paragraph from the Speech from the Throne, in which it is stated: 'Our Dominion has not escaped the world-wide economic disturbance and industrial depression, but has suffered less from it than other countries. Keen observers of the business barometer feel that the worst is about over and that at an early date we may look for a substantial revival of activities.' My right hon. friend has contrasted with that paragraph certain opinions which I expressed during the late general election to the effect that our country was passing through a most serious crisis, and the picture I then drew of her economic, commercial and industrial condition was no darker than that drawn by the right hon gentleman himself at that time. Indeed, were I to trespass on the time of hon. gentlemen by quoting newspaper clippings to the extent that he did, I could very easily convince the House that on this point I hardly exceeded any of the statements of the right hon. leader of the Opposition himself.

"With regard to the statement quoted by him that I told the electors of Montreal or Three Rivers, (I do not remember which exactly), that the population of Canada was declining, he should at least, it seems to me, have given me credit for sufficient knowledge to believe that I could never make such a declaration. I did say more than once that our customs revenues were decreasing, and that is borne out by the official returns of the Treasury. I stated also, and rightly, that our foreign trade was falling off, and I do not suppose that any hon. member will pretend that I misled the people of my province when I stated that our national debt was increasing to an alarming extent. No, Mr. Speaker none of my declarations during that campaign were exaggerated; all and each of them were strictly in accord with our economic condition and the state of mind of the people at that time. In a word, there is no contradiction between any of my modest speeches and this Speech from the Throne.

### RENEWED CONFIDENCE

"I would remind the right hon. leader of the Opposition that circumstances have changed in this country since the dissolution of the last Parliament. Great and important changes have happened in the interim and I make bold to say that this feeling of security which already is so noticeable in our people and their confidence in a general revival in business are due to a large extent to that confidence which the nation reposes in the new government which they chose last December.

"My right hon. friend has referred to my standing on the tariff question and, if I understand him aright, he even insinuated that that stand was inspired by certain interests which he holds responsible for the defeat of his party and the triumph of the Liberal party. My views on the tariff question have never changed during the last twenty-five years.

"For fifteen years I have followed, approved, endorsed, the Laurier-Fielding tariff policy. During the last election I advocated that policy and I told the electors of Laurier-Outremont and other parts of the Province of Quebec that if the Liberal party secured their confidence and were returned to power, they would remain true to that policy and carry it into effect through a revision of the tariff to meet the necessities which have arisen since the last revision, taking into account the interests of the consumer as well as the interests of the farmer, whose industry we have always regarded as the basic industry of this country, and the interests of the manufacturers in general. That policy I advocated before the general election, at a dinner given in the City of Quebec and at which the right hon. leader of the Opposition himself was a speaker. On that occasion, Sir, he applauded my declaration and made no such insinuations as those he made this evening.

"The hon. member for Marquette (Mr. Crerar) in his speech the other day, quoted from the Montreal Gazette certain remarks that I made at a dinner held in connection with a convention of the shoemakers of Canada. The hon. member seems to have based on my remarks a declaration tending to the increase of duties on shoes imported into Canada. I am surprised that he made such a discovery, and if he has the patience to read that speech—or re-read it, if he has not already done so—he will find that all I said may be summed up in the affirmation that it was the revision of the tariff of 1907 which gave to the shoe manufacturers of Canada the chief assistance to some 70,000 of our people—I reminded them that what they had of prosperity they owed to the Laurier-Fielding tariff policy.

### MEIGHEN'S SUSPICION

"The hon. leader of the Opposition, speaking on the railway question, endeavored to convey the impression that some mysterious power had inspired those hon. members who have expressed the opinion that they do not believe in state ownership. My right hon. friend has come out categorically in favor of the nationalization of our railways. His sincere in his views, I know; but why should he cast suspicion on those of his colleagues who do not share his opinion with regard to that matter. As the Prime Minister declared in his speech, there are on this side of the House, as there are on the other side, members who do not look upon state ownership or state operation of railways as practicable and profitable for the country. But we own our system of railways and the Government has decided to give the system a fair trial under the best possible conditions. But I cannot understand why my right hon. friend should suspect the good faith of the Government or of any of its members in that matter. The question is not one which concerns Montreal, Toronto, Winnipeg, Vancouver or any city in particular; it concerns Canada as a whole, and the solution which we seek is a solution which shall be satisfactory to the interests of our country generally.

"The right hon. leader of the Opposition has stated, and he has repeated the assertion several times, that his Government was defeated by the big interests of Montreal. The interests that defeated my right hon. friend's Government are the Liberals, Mr. Speaker, who voted to a man against the late administration and its followers, joined as they were by the majority of the Conservative electors of this country, who by their vote and through their newspapers declared that they did not believe in the Liberal-Conservative-National Government. The power which defeated the late administration was the will of the Canadian people.

### ORDERS IN COUNCIL

"Referring to the remarks of the hon. member for North Winnipeg (Mr Murray), who had declared that the time had come when we should have responsible Government in Canada, and should cease administering the public affairs by orders-in-council, the right hon. leader of the Government said: 'Every one of the orders-in-council that we passed were necessary for the good government of this country.' He went on to say, 'You have a new administration; you have already passed an order-in-council by which you deprive the Canadian Government of certain of its rights.' Mr. Speaker, there were many orders-in-council passed by the Government presided over by my right hon. friend, by which we deprived the Canadian Government of certain of its rights. Many of these orders-in-council were passed for the proper administration of our public affairs, in every case where such orders-in-council were necessary for the public good they declared illegal and ultra vires, and the Government was condemned.

"It is not an order-in-council of that kind that the Government of Canada has passed with regard to the administration of fisheries in the Province of Quebec. We have passed that order-in-council, Mr. Speaker, only to conform with a judgment of the Privy Council; and I wish to state here that in passing such an order-in-council the Federal Government has not abandoned an inch of its territory nor recognized a shadow of right in the favor of the Province of Quebec. My right hon. friend of the Opposition allows himself to be blinded by his bitterness against the City of Montreal, and against the Province of Quebec, and he is wrong in leading other Provinces of the Confederation to believe by that order-in-council the Government has granted a favor to the Province of Quebec, because that Province never asked for any favor, and never received any, from this Government.

"My right hon. friend ended his speech by asking my colleagues what had been the verdict of the last general election. I will be very frank, and I will tell him that I could not altogether analyze the vote which was cast at that election. It would be very, very difficult to find the determining vote; but there is one thing certain, that the people of Canada, by an immense majority, voted against the continuance in office of the Meighen Government, who suffered in that election such a defeat as no other government has experienced since Confederation.

### MEIGHEN CRITICISED

"As to my right hon. friend who leads the Opposition, I wish to be allowed to say that I admire his high attainments. He is a very eloquent speaker, he is a good fighter, but I regret to have to say that he is not a good loser. He now has the right place to learn. In his present seat he will have an opportunity to learn, and I hope that some day we will be in a position to say that he is as good a loser as he is a fighter.

"Another word, Mr. Speaker, before I resume my seat. My right hon. friend has taken pleasure, particular pleasure, in designating me as "the Master of the Administration." This is an old game which has been played before in this House by some of my right hon. friend's predecessors, and there is one thing I regret, it is that it is resorted to today not so much to annoy me, as to accentuate the unfortunate differences which have existed for too long between certain Provinces of the Confederation and the Province of Quebec. Mr. Speaker, the Liberal Party has one chief and one chief only. That chief is the Prime Minister of Canada, the present leader of this House. He has, and he can depend upon, the loyal support of all his colleagues, of each and every one of the Liberal members of this House, and of every Liberal in Canada.

"As for myself, Mr. Speaker, I am nothing but a man of good will. I hope that I will be long enough in this House to convince all my fellow-members, Conservatives and Progressives as well as Liberals, that I have only one ambition in coming here; it is simply to be permitted to serve my country in my own modest way, and to try and give full expression to that spirit towards which I have directed all the efforts of my life for twenty-five years in another field, the spirit of unity. Mr. Speaker, which is so necessary for the prosperity of our country and the happiness of our citizens."

There were prolonged Liberal cheers as Sir Lomer resumed his seat.

### LAURIER TARIFF

D. M. Kennedy (Progressive, Edmonton West), observed that Sir Lomer Gouin had told the House that the Government was going to give the country the Laurier tariff. Mr. Kennedy would be quite satisfied if that tariff were framed in the temper of

## ST. PATRICK'S DAY

Shall ancient feud and rankling hate
'Twixt kinsmen be perpetuate,
And this fair land of ours run red
With brothers' blood by brothers shed ?—

No; no; true patriots let us stand,
For Erin's fate is in our hand,
Finding in Love and Tolerance meed
More precious far than sect or creed !

—Geo. R. Ewing.

### HON. SIR LOMER GOUIN

Who made a notable speech in the House of Commons last night.

the cost whereas the tariff was only $3.00). It was estimated that half of the amount collected in duties was required to meet the cost of operating the tariff machinery. It took nearly $4.00 collected in duty to put $1.00 into the Federal treasury.

There was a great need of remedial farm legislation. Lower freight rates, lower duties on agricultural implements and a check on speculation in western grain were vital needs.

Mr. Carmichael said the "Merchants Bank scandal," which had caused the loss of millions of dollars should be investigated. The banking committee of the House or a special committee should be empowered to enquire into this and into banking conditions generally. He did not wish to venture an opinion as to the nationalization of banks, but thought this also should be investigated by the committee.

### PRAISES MEIGHEN

J. A. McKelvie, (Conservative, Yale) said the Minister of Justice had twisted the utterances of Mr. Meighen in order to find a basis for the charge that the leader of the Opposition had widened the division between the different parts of Canada. Not a single sentence could be quoted from Mr. Meighen to justify such a charge. Mr. McKelvie denied that Mr. Meighen's speech had shown him to be a bad loser, and he asserted that Mr. Meighen had the respect and affection of those who sat behind him. (Continuative cheers.)

Thomas Vien, (Liberal, Lotbiniere) —The remnant.

Mr. McKelvie—There is at times a remnant that is a saving remnant, the leaven that leavens the whole lump.

The Prime Minister had called the Conservative party Tories. The old crusted Tory was as dead as the dod; but Mr. McKelvie was proud to belong to the Liberal-Conservative party, which had made a great deal of history of Canada. He was a strong believer in adequate protection, both for industry and agriculture. His constituency was a concrete instance of the value of protection. In 1914-15 the apple business of British Columbia was in danger of destruction owing to United States competition. The case was laid before the Government of the day. The duty was raised. The industry was saved.

The national railroads were as an infant left upon a doorstep. But they would develop in health and strength. If they did not prosper, it would indicate that there might be some foundation for the allegations that the Government would not give them a fair trial.

If immigration was not carefully selected "our last condition would be worse than our first." The Doukhobor colony in the constituency of Yale was an example. These people should have been permitted to enter Canada and at their best they were "a pest and a nuisance."

Nine out of every twelve males in British Columbia was an Oriental. One former white fishing village on the Fraser river was now almost wholly Japanese. The East and the West could never meet in this respect, and if Japanese were absolutely barred in the future their natural increase would be sufficient to constitute a tremendous problem. It was necessary for the East to give British Columbia adequate assistance in guarding the western portals against the further influx of a class of people who could never be considered any-

## IN PARLIAMENT

### HOUSE OF COMMONS.

Debate continued by T. L. Church, (Conservative, North Toronto); Sir Lomer Gouin, (Liberal, Outremont); D. M. Kennedy, (Progressive, Edmonton W.); A. J. Lewis, (Progressive, Swift Current); A. M. Carmichael, (Progressive, Kindersley); J. A. McKelvie, (Conservative, Yale) and A. W. Neill, (Independent, Comox-Alberni).

### IN THE SENATE.

Sir George Foster moved for production of Order-in-Council appointing Hon. P. C. Larkin, High Commissioner in London; Senator Bradbury asked for information regarding Arctic Exploration; Senator McMeans gave notice of amendment to Criminal Code respecting appeals. Tributes to deceased Senators by party leaders.

thing but detrimental to the national life.

British Columbia also intended to interject herself into any conference dealing with the return of the control of the natural resources of the Prairie Provinces to those provinces.

The House adjourned till 3 p.m. today.

### BUSINESS IN SENATE.

OTTAWA, March 17.—(By Canadian Press).—In the Senate yesterday Sir George Foster asked for the production of Orders-in-Council appointing Hon. P. C. Larkin to the High Commissionership in London and designating his powers.

Senator Bradbury called the attention of the Government to the activities of the Danish explorer, Rasmussen, in the Canadian Arctic where he is said to be giving Danish names to various bays and capes in Canadian territory.

Senator McMeans gave notice of a bill to amend the Criminal Code providing for appeals in criminal cases.

Since the last session eight senators have been removed by death. They were Senators Power, Domville, Edwards, Nicholls, Crothers, Boyer, Beith and Milne. Senator Dandurand, Government leader and Sir James Lougheed, leader of the Opposition, paid eloquent tribute to the late senators, reviewing their political and business careers and expressing the sympathy of the House to their bereaved families.

The Senate adjourned until today.

### REPARATIONS AND CENSUS.

OTTAWA, March 17.—(By Canadian Press).—Senator R. F. Green has filed a question of the Ministry in the Senate asking if any payment has been received from the Canadian Government, through the British authorities from the German Reparation Commission, and if so, what the amount is. Senator Green also asks what amount is conceded to be due to Canada from that source.

Senator David asks whether the Government, before fixing representation of the provinces in the Dominion Parliament, will have the census corrected and rectified where it is presumed as established, that it has been improperly and irregularly made. Senator David also requests the approximate number of women inscribed on the electoral lists of the different provinces and the approximate number who voted.

Montreal, Que.

Dear Mr. Mazurette:

I duly received your letters--one undated and the other dated 4th May--together with enclosures. I am keeping these on my files in case I may be able to make use of them. However, the scope of the present investigation is, I fear, hardly wide enough to enable me to do so.

If you should desire me to return the material, please let me know.

Yours very truly,

AE/E.

Arthur Meighen.

Honourable Senator Meighen,

Senate Building,

Canada,

Re: Investigation of purchase by a member of the Board of management of the C. N. R. of properties alleged to be need for the construction of the Central Terminal Station at Montreal, namely, E. R. Decary, as chairman of the Title Trust & Guarantee Co.

Honorable Sir:-

At this time, I deem it imperative to inject into discussion of the Joint Committee investigating the C.N.R., the purchase of the properties by E. R. Decary, the notorious Chairman of the Title Gurantee and Trust Co. of Montreal listed on the herein enclosed (5) page statement drawn up by myself indicating the Cad. No. of each property purchased, the City of Montreal valuation of such properties, and the prices paid for the same, most of the deeds of sale were drawn up on E. R. Decary's own notarial office known as Decary, Joron and Barlow , wnerein Decary made an frightful killing.

In most cases, Decary proceeded in the following manner.: Dr. Kennedy, a dentist who owned a dwelling on Dorchester Street was approached by Decary and told that if he obtained $40,000.00 for his property, would he give a $10,000 cheque for his service in the transaction, to which Dr. Kennedy assented. Then Dr.Kenndy give him a post dated cheque for $10,000. and then Decary bought his property at around $40,000. although such property was valued by the City of Montreal at $21,000.

In order to reveal the rascality of this man Decary, every person who sold proerty to the Decary clan, must be questioned judiciously in order to prouve the misconduct and breach of trust of Decary. By studying the statement in question carefully, you will be amazed at the difference in the Mun. Valuation and prices paid for each property listed therein.

You will also recall that in spite of the opposition of the City Council of Montreal, the Board of Railway Com. approved the plans of the C. T. Station at Montreal submitted by the C. N. R. management under Henry Thornton, who was not even an Engineer, but the greatest American fakir that ever came acres the border to double Cross the Canadian people, with the aid of the King Gouvernment.

Fullerton Hungerford are following the Henry Thorton's same programme of extravagance. Neither of these eaver earned the $35.000 they received and receive as salary.

In order to establish the purchase of a residence for the late Henry Thornton by Seguin, an employee of E. R. Decary, I supplied the late Dr. Peter McGibbon with all the deeds covering this shady transaction at a cost of over $14.00, which has never been reapid by the late Doctor.

You will also recall that Decary was appointed on the Board of Management of the C.N. R. by the late Walter Mitchell.

I may state that I am at your service for any further information I may be able to submit concerning the properties listed in the said statement.

Faithfully yours,
Thos. P. Magdrette

I also enclosed an affidavit signed by a number of persons

## Taschereau Promises Swift Action on Alleged Collection Racket

A probe into alleged illegal activities of collection agencies, adjusters and ambulance chasers by provincial detectives has revealed deplorable conditions which should be immediately stopped and which will soon be remedied by adequate legislation, Premier Taschereau said in a brief interview at local Provincial Government offices today.

This action follows a request of the Montreal Bar Association, several delegates calling upon provincial authorities last week and requesting a stop to such conditions which are described by many as a costly "racket." Premier Taschereau is of the opinion that the adjusters' business needs adjusting, he stressed, in such a manner as to restrict operations to bona fide collection agencies.

**PROBE MADE**

"The delegation came to Quebec. The entire situation was well outlined. We decided to do our best to

# C.N.R. DISCLAIMS ACT OF EXECUTIVE

## Residence of Late Sir Henry Thornton Again in Limelight

A transaction by which the Canadian National Railway Company provided for the late Sir Henry Thornton an official residence on Pine avenue, at one time the subject of an investigation by a special committee of the House of Commons, today came under the scrutiny of Mr. Justice de Lorimier in the Superior Court. Although the action concerns only a claim for two months' rent of the premises, the litigation involves also the wider issue of the legality of the transaction in which, it is claimed E. R. Decary, was a moving spirit, at a time when he was a director of the railway company.

The action is taken by the Montreal Trust Company, against the Canadian National Railway Company and Georges Henri Seguin, an employe in the office of Decary's notarial firm, mis-en-cause. In claiming the arrears of rent the Montreal Trust Company explained that when the purchase of the Beardmore property on Pine avenue was financed, it loaned to Seguin $185,000 for a term of 10 years, taking a first mortgage on the property. Also by the con-

# COLLECTOR IS ROBBED OF $57.69 ON STREET

## Old Change Trick Worked Again

When Roger Rioux, a collector for the Dominions Stores branch at 200 Maplewood avenue, stopped to give a man change for a $1 on Deon street at 7 o'clock on Saturday evening, he was robbed of $57.69 by the man who stopped him. He has given a good description of the man to the police.

During the week-end in the absence of G. R. McColl, 4046 Gage road, for the week-end a burglar broke the glass in the back door and stole a watch and chain valued at $100, a gold cigarette holder valued at $100 and a $25 necklace.

Climbing a pole in the backyard of the home of J. D. Deauilleau, 1847 Dufresne street, a burglar broke the padlock on an adjacent shed and stole $200 worth of tools.

Edgar Jobin, 1487 St. Joseph boulevard, Apt. 3, reported to police that his front door was forced open and jewelry worth $155 was stolen.

## OFFERS RECEIVED FOR OLD STATION

Tenders were opened at the City Hall this morning for the leasing of the old No. 10 fire and police station on St. Catherine street, west of Guy street. Two bids were received, one by A. Fleming, who desires to turn it into an apartment building. He guarantees $15,000 worth of repairs, and will lease it for 20 years at $4,000 per year.

The other tenderer, H. Vineberg, Mornled Realty Co., offers a 20-year lease for a total sum of $81,000, payable $3,000 per year for the first five years, $3,600 the second five years, $4,200 and $5,400 for the two following periods. He seeks an option of purchase for $80,000 and guarantees $20,000 of repairs.

**ADVISES MORE PUBLICITY.**

HULL, England—(C. P.)—A vast publicity scheme during the King's Jubilee celebrations to accelerate trade recovery is advocated by Sir John Bilsus, who says every section of the state should embark on a radical advertising campaign.

# A HELPING HAND

To the Editor, The Daily Star:—

Sir,—Having for some time had intimate relations with several of the very worthy charity organizations of the City in their endeavours to mitigate the distress and suffering of many classes, I have been most favorably impressed by the wonderful devotion of the people who are supporting and carrying on our benevolent organizations, but it has seemed to me at times that a deserving class is being overlooked, not through cold indifference or hard-heartedness, but simply because they are restrained, perhaps by feelings of diffidence, from asserting themselves, preferring to struggle and suffer in silence.

Arising from these observations has come an urge to attempt to provide to some extent for some of the deficiency. Are there any young ladies who, not for pay but for the thrilling delight of helping to assuage grief and anxiety, would become voluntary almoners if they had a favorable opportunity? A certain amount of money will be supplied for work of this nature if the right kind of helpers can be secured,—those who would love it.

The editor of The Star, who has assured himself of the bonafides of this proposal, is willing to sponsor it to the extent of vouching for the respectability of the writer. If any young woman between 20 and 30 feels drawn to the proposal, she is asked to write in absolute confidence in care of The Montreal Star to

Yours Truly,
A HELPING HAND.

# BOOKS WITHHELD, WITNESS REPORTS

## Accountant Refused Access to Documents Sought in Smuggling Case

A chartered accountant of the firm of Price Waterhouse and Co. asked by the Crown to go to 1430 Peel St. and get from the books of companies there information wanted in connection with the Federal Government's $5,000,000 liquor smuggling case, came to court this afternoon and reported that he had been unable to get access to these books. He had approached Dave Costley, whom he understood to be custodian of these books, and the latter had refused him access to these books and refused to answer any questions "on advice of counsel."

Disclosing that the Mounted Police acted "within the limits of their rights", Judge Desmarais rejected objections raised last week by the defence to production of certain documents taken by the police from a safety box rented by F. S. Blair, one of the defendants.

**H. G. NORMAN CALLED**

As soon as the court resumed this afternoon H. G. Norman was called to the stand and asked by J. J. Penverne: I asked you last week to get certain information from the records of the companies you audited. Did you get that information?

A. I went to 1430 Peel street and asked for the records, but I did not see them.

Q. To whom did you speak? A. To Mr. David Costley.

Q. Why did you not see them? A. He told me that under advice from counsel he had nothing to say.

Q.—Is there anyone else who is custodian of these documents? A.—Not that I am aware of.

Q.—Who was working with Mr. Costley on the books? A.—I don't know, are you speaking of the past?

Q.—Yes. A.—I think Mr. Costley did practically all the work on those books.

Witness furnished the court with a list of the names of employes of

(Continued on Page 27)

# MAYOR THREATENS TO QUIT HIS JOB

## Says He Will Resign if Government Does Not Take Over Relief

"If we cannot balance the budget with the taxation now before the legislature, and put the burden of unemployment relief into the hands of the Federal Government, where it belongs, then I will resign," declared Mayor Camillien Houde today during a lengthy speech in defence of the city administration before the Canadian Club of Montreal in the Windsor Hotel.

The Mayor placed the issue as one purely of taxation to meet a devastating deficit, which he felt was the only normal way to reduce the rate of interest on the city's huge indebtedness. "If we do not get the taxation it means not only 8 and one-half millions but 26 millions per year, not because of over-expenditure but because the question of direct relief is not settled, and someone has to pay in the meantime," he said.

**GREAT DRAIN**

The great drain of direct relief should be borne by the Federal Government, he continued. "In Ottawa they have passed legislation about unemployment insurance, taking their authority from Geneva, and I think if they have to go to the League of Nations in consideration of unemployment problems they should look after direct relief before municipalities go bankrupt."

Terming the relief situation as "crucial," His Worship referred to Mr. Bennett's statement that no more direct relief would be given out by the Federal Government after March 31. Following the public works expenditures between 1930 and 1932 to relieve unemployment it was found that this method of relief was too expensive, and then provincial Premiers met and decided on the dole. "Now they are so uncertain

# FIRE LIEUTENANT HURT IN FALL DURING BLAZE

## Week-end Was Busy For Firemen

A fire lieutenant was injured in a fall from a shed while fighting a fire Saturday evening. Two serious outbreaks yesterday and several calls for minor fires kept fire apparatus bouncing over rutted streets during the week-end.

Lieut. O. Decarie, No. 6 Station, suffered severe injuries to the back when he fell off the roof of a shed while playing a stream onto a fire in a vacant house at 3637 De Bullion street Saturday evening. He was treated at St. Luke's Hospital and returned to his home. He will be off duty for some days, doctors report. Considerable damage was caused by the fire, which started in a clothes closet and spread through two rooms.

A vacant flat at 272 Demontigny street was gutted by a fire of unknown origin, which resulted in six lower and nearby dwellings being damaged by fire, water or smoke, early yesterday morning. Firemen worked for three hours to bring the flames under control. Six families in flats at 272a, 270, 270a, 274, 268 and 278 Demontigny street were temporarily driven from their homes by fire or water. The fire, the cause of which is unknown, broke out in the empty third floor flat, shortly after 1 o'clock in the morning.

The kitchen of Murray's Restaurant, University Tower building, was slightly damaged by a fire that started from some blazing grease yesterday. When firemen arrived they found that building employes had two streams on the blaze and had practically extinguished it.

# *Grief Precedes Follies*

## *Someone Steals Musical Show's Receipts and Management Forced to Deny False Reports on Ticket Sale*

THE Ziegfeld Follies have come to town, but quite a lot of grief preceded them. And if there is any doubt about it, ask the manager of His Majesty's Theatre. Last week the rumor was spread around that no more tickets were available for tonight's performance—the opening night—and the management had to issue an advertisement referring to "Unprincipled gyps" who despite the vigilance of the management secured a few tickets, and thereupon circulated a "deliberate canard" thereby hoping to unload their tickets at exorbitant prices. And they further informed the public that there were good seats available today.

**SAFE ROBBED**

And then came the second grief. Somebody who knew how to get into the theatre, and also knew the combination of the safe in the manager's office entered the office and took $2,200 early Sunday.

He might have thought that smaller pickings than anticipated, or he may not have felt like lingering, but had he only opened the door of the inner safe he would have got at least as much again.

When Laurier Thomas, the manager, went down to the theatre at noon, things looked normal till he got into his own office, and then he saw that the safe door was open about a foot. He called up the police at 1.15 and told Lieutenant Parker of No. 10 station that the safe had been robbed, and the report of the police to detective headquarters was that "the place had apparently been entered by means of false keys and the safe was opened by using the combination, which was not forced."

Mr. Thomas stated this morning that the thief might have gained access through one window which was partly opened, but he was positive that the safe had been securely locked by the combination when the box office closed at 6 o'clock on Saturday night. William Adams, the night watchman told the police that when he made his final rounds at 6.15 there was nobody else in the building and everything was in good order.

This morning Detective Scallon and others from headquarters were at His Majesty's Theatre questioning employes and others, and searching for fingerprints.

The loss is covered by insurance, which is one bright spot in the affair.

# 'MeanestMan'Robs Charity Kitchen

MONTREAL'S meanest man apparently has not yet been brought to book, but the police are looking for him.

Today, he is richer by $44 in cash and $25 in cheques, as the result of a visit, by means of skeleton keys, to the Jewish charity kitchen, managed by P. Mahram, at Mount Royal avenue west, during Saturday night.

# Provincial Constable Dismissed And Faces Two Theft Charges

CONSTABLE Conrad Provencher, of the Provincial Police Force, who was arrested 10 days ago in provincial police headquarters on two charges of theft of money from seized slot machines and was later dismissed from the force, will appear in court tomorrow morning for preliminary hearing.

Constable Provencher, who was in charge of the information desk at provincial police headquarters, was arrested by Detectives Forest and Robert, who claim that they saw Provencher enter the storeroom where they were hidden each night for four nights and work on the slot machines. They claim that they finally arrested him on the fifth night when they caught him in the act of sneaking into the storeroom and going to one of the machines. The detectives had hidden themselves in the storeroom when they were placed in charge of the investigation by Captain of Detectives Lasnier after it was discovered that for some time money was disappearing from the slot machines seized in raids and kept in the storeroom.

Besides facing a charge of theft of the money from the machines, Provencher is also charged under section 381 of the Criminal Code, which reads: "Everyone is guilty of an indictable offence and liable to 14 years' imprisonment who, by means of any picklock, false key or other instrument steals anything from any receptacle for property locked or otherwise secured."

# *Sudden or Violent Deaths Total 10 Over Week-End*

## *Suicide, Accidents, and Shooting Victims Taken to Morgue — Elderly Couple Fatally Hurt*

TEN deaths—including a suicide; a husband and wife killed in an automobile accident; a woman shot by a jealous lover some days ago; a man fatally injured by a fallen tree; and four sudden deaths, occurred in the city over the week-end. The feature of this week's deaths, apart from being one more than that of a week ago, is that the additional suicide brings the total of this kind of death up to 16 for the past 30 days. Morgue authorities are much worried over the growing number of suicides, and a rumor has it that they intend appealing to city and church organizations to start a campaign to prevent such deaths.

**LIST OF VICTIMS**

Suicide, accident and natural death victims this week-end were:

Unknown man, about 40 years of age, who jumped from the Jacques Cartier Bridge into the river.

Mr. and Mrs. Benjamin Leduc, 78 and 73 years of age, respectively, killed in auto accident.

Mrs. Germaine Laurin, 30, maid at 4648 Park Avenue, shot by a lover, died.

George Barton, 29, Vankleek Hill, Ont., fatally injured when struck by a tree.

Odilon Desailliers, 69, Bossuet street, sudden death.

Felix Henrichon, 71, 3753 Courtrier street, sudden death.

Alice Crackford, 55, 759 Melrose avenue, sudden death.

Frederick E. Harvey, 84, 5141 Notre Dame street east, sudden death.

A harbor policeman and a bridge watchman, saw the unknown man climb up on the railing of Jacques Cartier bridge at 7.40 o'clock last

(Continued on Page 11)

# BOY SCOUTS' DRIVE NEAR COMPLETION

## 97 Per Cent of Objective Reported by Workers to Headquarters

Officials of the Boy Scout "Welcome Baden-Powell" campaign announced that the campaign total had reached $126,195 this morning, or 97 per cent of the objective of $130,000. Further returns are expected during the afternoon, and these will be included in the total to be announced at the closing meeting of team members and Scout officials which will be held at 6.30 this evening in the Windsor Hotel.

W. J. Thistlethwaite and the teams committee have been busy over the week-end urging team captains to complete their reports so that all collections will be in the hands of the campaign staff at Scout Headquarters well before the time of the meeting. An appeal has also been made to members of the special names committee to complete their returns to H. J. Evennett, secretary of the committee, at the head office of the Royal Bank of Canada. Campaign officials state that they desire the canvass to close definitely by tonight.

R. C. Stevenson, chairman of the campaign committee announced that a subscription of $5,000 had been received from Lord Atholstan. He stated that with this and other subscriptions which were coming into headquarters, and with the last minute efforts which he knew the team members were making, he felt confident that the objective would be attained.

**ADDITIONAL CONTRIBUTIONS**

Additional contributions have been received as follows: Sun Life Assurance Company of Canada, $5,000; Dominion Bridge Company, Ltd.,

(Continued on Page 11)

## CITY ITEMS

LECTURERS at the Temple Emanu-El College of Jewish Studies tonight will be Ernst Newmann, well known local artist, who will speak on "Jews in Art." Mordecai Mendelsohn will give Hebrew Instruction. Miss Emma Goldman will speak on "Crime and Punishment."

* * *

"GILBERT AND Sullivan: Mostly Gilbert," is the title of a paper to be given before his fellow-members of the St. James Literary Society tomorrow evening, by J. A. McNeil. The meeting, to be held in the Engineering Institute, 2050 Mansfield street, will open at 8.15 o'clock.

* * *

"CANADA'S NICKEL" will be the subject of a talk by C. E. Macdonald, manager, International Nickel Company of Canada, Limited, Toronto, at the luncheon of the Electrical Club of Montreal to be held in the Queen's Hotel, March 6, at 12.45 p.m.

* * *

THE ANNUAL meeting of the Art Association of Montreal will take place Friday afternoon at 5 o'clock in the galleries. The presentation of the annual report of the election of officers and council will form part of the business.

* * *

LLOYD ALMOND, C.C.F. candidate in Mount Royal Division, will address the Young Socialists' League on "The Necessity of the C.C.F." at 4899 St. Lawrence boulevard, tomorrow evening at 8.15 o'clock.

C. Marcotte sold to H. Bloom part of lot No. 926 St. Louis ward, with buildings 3961, 3963 De Bullion street, for $1,000.

# BUILDING TRADES PROTEST ACTION

## Delegates See Deputy-Minister About Labor Agreements Act

The building trades acted independently today to plead before the Deputy Minister of Labor in the Government offices here against the shelving of the new Collective Labor Agreements Act.

Dissatisfied with the reception which they received from Premier Taschereau, with scores of other crafts in the recent conference at Quebec, union chiefs and officials of the Montreal Builders Exchange met Gerard Tremblay, deputy minister, this morning to ask that at least some of their proposals for putting "teeth into the Act," be retained.

Mr. Tremblay was told that if the Provincial Government could not see fit to impose penalties for violators of codes set under the Act, some steps might be taken to penalize those companies which refused to open their books for inspection by the joint committee.

**OPEN RECORDS**

The charge has been made that such companies not only fail to pay the required rates but fight any attempt by union chiefs to find out how little their employes are being paid. The Act, it was claimed, specifies that such records should be open for inspection by the joint committees, so that offenders can be sued in court for the return of whatever money has been kept back from the men.

Many companies have stubbornly refused to hand over these records and have threatened to carry their

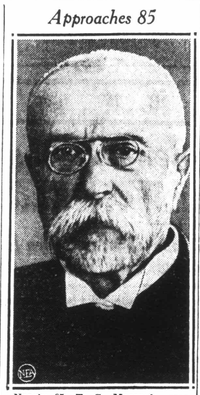
# OLD JUDGMENTS QUOTED IN COURT

## Jurisprudence Heard in Markus-Chernoff Case

Two old pieces of jurisprudence laid down by the Bench of England in 1841 and 1871, but which had obviously been overlooked by the Appeal Courts of this country and province figured in the argument advanced before Judge Desmarais today as to whether Louis Markus and Samuel Chernoff should be committed for voluntary statement on charges of conspiring to possess illicit alcohol and by it to defraud the Canadian Government out of $250,000 in excise taxes. Argument will be continued Thursday. The Government will not prosecute the two on a charge of conspiracy to smuggle alcohol into the country. James Crankshaw, of Government counsel, stated in announcing the withdrawal of this count.

It was while Lucien Gendron, K.C., counsel for Chernoff, was arguing the question of the merging of the offences that he produced the old authors to give weight to his attack on the prosecution's procedure in confounding conspiracy with what he termed the substantive offences. He admitted that the judgments were of rather ancient vintage, but they still held, he contended.

**OVERLOOKED BY COURT**



Answering this, Mr. Crankshaw remarked "that this old jurisprudence had evidently been overlooked by the Appeal Court in some of its recent decisions, notably in the Harry Davis case wherein the tribunal had defined conspiracy and took it that the substantive offences could be proved simultaneously. Separate acts done by separate people, if they led to a single conclusion, constituted conspiracy, he argued, and it was not necessary to show that the parties had ever met one another, for it was known that sometimes conspirators never met. If a hypothesis of innocence was shown at the trial, then it was for the jury to decide whether or not the accused was guilty, but if no hypothesis of innocence existed, then the only verdict could be guilty.

Peter Bercovitch, K.C., argued that there was no evidence tending to link his client, Markus, with the conspiracy. It was not even shown by the prosecution that the liquor had been illegally imported nor was there anything apart from a few coincidences to show that he was in concert with others. He should only be sent for trial if the court finds that his acts were inconsistent with any other rational conclusion.

## INFORMATION ASKED ABOUT DISMISSALS

TORONTO, March 4—(C.P.)—The Conservative Opposition in the Ontario Legislature has questioned the Government upon the dismissal of 12 additional Ontario Magistrates. In each case the questions ask name of the successor to each magistrate, his salary and travelling expenses.

*Approaches 85*

Nearly 85, T. G. Masaryk, president of Czecho-Slovakia, actively controls the Government of his people. This new portrait, shows him clear-eyed and vigorous though gray. His birthday will be celebrated March 7.

## CZECHOSLOVAKS PAY PRESIDENT HONOR

More than 600 Czechoslovaks gathered in Bonsecours Hall yesterday to honor President Thomas Masaryk, who, on March 7, celebrates his 85th birthday. The octogenarian president of Czechoslovakia was the object of praise from Dr. F. Pavlasek, Czechoslovak consul-general, who spoke in his own tongue to his compatriots.

A speech was also made by Dr. William Caldwell, Professor Emeritus of McGill University, who is a personal friend of President Masaryk. Father Felix Felicko, priest of the Czechoslovak colony in Montreal, also spoke. Jan Villin presided.

## ACCUSED OF THEFT OF VICTORY BONDS

TORONTO, March 4—(C.P.)—John Nelles Neville appeared in court here today before Magistrate J. E. Jones on a seven-year-old warrant involving Victory Bonds valued at $4,000 and was remanded until March 11.

Neville was arrested in Windsor last week, charged with the theft of four $1,000 bonds from Prof. Wasteneyes, of the University of Toronto.

**ATTEND BALL**

# DEPUTATION HEARD ON CENTRAL BANK

## Bankers Consult Rhodes About Giving Up Gold at $20.67 An Ounce

OTTAWA, March 4—(C.P.)—Representatives of all the chartered banks and of the Canadian Bankers' Association were conferring today with Hon. E. N. Rhodes, Minister of Finance on matters associated with the relations between the Government and the banks particularly with reference to the establishment of the Bank of Canada.

It was understood that the chartered bank officials sought the interview for the particular purpose of discussing the provision in the Bank of Canada statute which will oblige them to hand over their gold reserves within the next few weeks at the normal price of $20.67 a nounce.

The Bank of Canada will open for business within a fortnight, possibly on Monday next, and according to the statute the chartered banks are required immediately thereafter to deliver their gold reserves to the central institution. The act says that they shall receive no benefit from the current appreciated value on gold.

No official information was available but it was understood that the conference covered the gold question in general and touched also on the withdrawal of note issue privileges enjoyed by the chartered banks. The Bank of Canada will gradually assume the sole power of issue and the chartered banks notes will be withdrawn from circulation gradually over a period of 10 years.

# MRS. STOTLAND FOUND GUILTY OF PERJURY

## Will Be Sentenced March 12

When Ruth Rudnikoff, wife of Hyman Stotland, swore at her husband's trial for assault that she was in Ste. Agathe des Monts on the night of August 22-23, 1933, she was not telling the truth.

Such was the decision reached by Chief Judge Perrault today in a judgment declaring her guilty of committing perjury at Stotland's hearing in answer to a charge of assaulting Jean Rudnikoff, her sister. At the same time Judge Perrault dismissed the conspiracy charge against her, contending the Crown had failed to produce proof to substantiate the second accusation.

At the request of Rene Gauthier, attorney for Mrs. Stotland, Judge Perrault postponed sentence until March 12. The accused was ordered to post a bond for $500 to insure her appearance before the court on that date.

Judge Perrault also announced that the trials of Jean Rudnikoff, sister of the accused, and Ethel Pernett, who are facing similar accusations in connection with the same case, will open March 26.

At the Stotland assault trial, heard by Judge Monet on November 8, 1933, and subsequently dismissed, His Honor stated that evidence was produced in an attempt to show that Hyman Stotland had assaulted Jean Rudnikoff, sister of the present accused, in an uptown hotel. Stotland, however, contented the woman he struck was his wife, Ruth Rudnikoff. Ruth Rudnikoff, on her part, contended she was not in Montreal on the night in question, having left the city late in the afternoon of August 22 by car. During the present trial she stated she had gone to Ste. Agathe des Monts by bus and produced nine witnesses in an effort to prove her contention.

Mrs. Stotland also denied emphatically she had ever gone with a man known as Morris.

## COURT RECORD

**Superior Court.**
**Practice Division.**
**March 4, 1935.**
**Presiding: Mr. Justice Curran.**

The following Judgments were rendered:

A. Dagenais vs. C. Cagne and Dame E. Millette. Judgment dismissing petition to fix value of services.

Dame Gilberte Trudel et al. vs. Pierce Corporation. Judgment maintaining inscription in law.

A. E. Allard et al. vs. A. Methot. Judgment dismissing motion to revise bill of costs.

E. Vaillancourt vs. N. Lamer. Exception to the form maintained for costs only.

Standard Cab Association, Ltd., vs. A. Audette. Judgment for $127.55.

Dame E. Page vs. Heirs of late G. Parr et al. Judgment granting petition for sequestration.

A. Dagenais vs. J. H. Taupier. Judgment maintaining rule for costs only.

Dame Marie Anne Houde vs. Camille Dumont. Judgment authoriaing examination before plea.

Acme Sales & Specialty Company, Ltd., vs. J. A. Leger. Judgment authorizing to sell en bloc.

G. Wilson vs. William Harrison, and A. Senecal et al.—Judgment declaring seizure binding.

A. Rosenberg vs. H. Schleien.—Judgment granting motion for peremption without costs.

A. Lukian vs. Montreal Tramways Company.—Judgment ordering medical examination of plaintiff before plea.

A. Lukian vs. Montreal Tramways Company.—Judgment ordering examination of plaintiff before plea.

Dame M. E. Blanchard vs. C. Ley. — Judgment declaring articulated facts pro confessis.

J. Frechette vs. J. E. Smith, and Sam Bloom and C. A. Gagnon, and Dame E. Kutzman, opposant.—Judgment ordering the examination of opposant.

J. Adamic vs. Leo Hymer, and J. Fianz et al.—Judgment authorizing to contest declaration of garnishee.

H. Lamoureux vs. J. N. Theberge. — Judgment granting motion to joint cases, costs to follow.

Provincial Loan & Discount Association vs. I. Levine et al., and Sarah Elscovitch et al., and National Publix Finance Corporation.—Judgment ordering garnishee to declare.

Dame M. Fulhaber et vir. vs. Antoinette Bergeron.—Judgment authorizing medical examination before plea.

H. P. Pelletier vs. N. A. Yanakis. — Judgment authorizing medical examination before plea.

M. G. Birmingham vs. Granite Fire Insurance Company.—Judgment granting motion for substitution without costs.

H. Legault vs. Diamond Truck Co., Ltd. et al.—Judgment authorizing examination before plea.

Dame M. W. Stewart et al. vs. W. B. Balkie et al., and T. Brassard es qual. m.c.—Judgment maintaining an hypothecary action for $5,913.06.

# U.S. INCOME TAX AGENT IS IN CITY

Cornelius J. Murphy, United States Internal Revenue Agent under the Collector of Inland Revenue at Boston, Mass., is making his annual visit to Montreal. Mr. Murphy will be here for two weeks at the office at the United States Consulate General, Hon. Wesley Frost, in the Castle Building, Stanley and St. Catherine streets. Every year on March 1 Mr. Murphy, or a co-worker in the Boston office, comes to Montreal to help those liable to income tax in United States.

Last year, Mr. Murphy interviewed about 100 people in his office, gave 50 other brief interviews, and answered more than 50 telephone inquiries.

# RINTELEN AGGRESSIVE AT TRIAL FOR TREASON

## Accuses Chancellor of Fearing Interview

VIENNA, March 4—(A.P.)—Dr. Anton Rintelen, who was "unable to remember" Saturday, was in an aggressive mood today when his courtmartial for alleged complicity in last July's putsch was resumed.

He accused Chancellor von Schuschnigg and other Government officials of fearing to face him and to make charges against him personally.

He declared von Schuschnigg had given him an urgent invitation to confer but after a brief discussion had asked him to wait in an anteroom.

"Von Schuschnigg then simply disappeared," said Dr. Rintelen. "Neither he nor any other Cabinet member personally accused me before my arrest."

After the Nazi putsch of last July, during which former Chancellor Dollfuss was slain, Rintelen was seriously wounded by a revolver shot. He said today that he did not intend to commit suicide, for if such had been his intention he could have fired a second shot and killed himself.

# SAYS BRITAIN TO LEAD WORLD IN CHANGES

## Former Labor M.P. Talks of Economic Situation

HALIFAX, March 4—(C.P.)—Great Britain is the country that will eventually bring about further changes in the world economic system, and these changes will be based purely on an appeal to public reason, J. F. Henderson, former Labor member in the British House of Commons, declared aboard the liner Alaunia over the week-end.

En route to England, Mr. Henderson said that he noticed many changes in Canada and the United States since the early days of Socialism in Great Britain. A Socialist for 34 years, he refused any comment on the general election pending in the Old Country, but made a casual mention of the sweeping gains that his party had made in civic elections.

## C. W. CASGRAIN, HURT BY AUTO, IMPROVES

DETROIT, March 4 — (C.P.)—A slight improvement was reported today in the condition of Charles W. Casgrain, son of the late Senator C. W. Casgrain who is in a serious condition in a hospital here as a result of being struck by a street car on Friday. Mr. Casgrain, 75 years old, was born in Windsor, but has lived in Detroit for more than 50 years.

He is a first cousin of Sen. J. P. B. Casgrain.

## $30,000 FIRE LOSS AT CAMPBELL'S BAY

CAMPBELL'S BAY, Que., March 4 — (C.P.)—Fire early today caused damage estimated at $30,000, sweeping through a brick business block owned by T. H. Mousseau.

Firemen fought the blaze for more than three hours before getting it under control. Fireman Rene Gauthier suffered a severe cut on his left hand when he was struck by a piece of falling glass.

# SUICIDE EPIDEMIC BY AIR INCREASES

## Young Unemployed Man Leaps From Plane at Toronto

TORONTO, March 4 — (C.P.) — With the body of James C. Grant, 22-year-old son of a western Canada bank manager, lying in an undertaker's mortuary in North York Township today, latest to end his life by means of a leap from an airplane in flight, authorities here wondered desperately how far-reaching would be the sensational precedent established by two English girls several weeks ago.

Since the Dubois sisters, daughters of the United States Consul at Naples, broken-hearted over the death a week previous of their Royal Flying Corps sweethearts in a crash in Italy, had chartered a plane and killed themselves in a drop to English earth, three others have followed suit. Grant's suicide was the only one in Canada.

Grant, depressed because he had lost his job a few weeks ago, was the fifth.

He went to the headquarters of National Air Transport, Barker Field just north of Toronto, Saturday afternoon and asked for a "refresher" flight. Grant had obtained his pilot's license two years ago while a member of the Toronto Flying Club.

Accompanied by Flight-Lieutenant G. Ralph Spadbrow, he took off, did some climbing turns and other manoeuvres, then, without a warning, handed some letters and his purse and pilot's license to Spadbrow, and leaped to his death.

Spadbrow did not know Grant was out of the cockpit and standing on one of the wings until the moment before he leaped. With a wave of one arm and a smile, the young man disappeared. His crumpled body was found on the ground, half a mile east of Barket airport.

One of the letters Grant left with Spadbrow absolved the flight-lieutenant from any responsibility for his death. The other was to a relative here with whom he had been living, intimating he was despondent over unemployment.

The young man was a son of F. C. Grant, manager of the Bank of Commerce branch at Nanaimo, British Columbia.

# DAY SHELTER PROMOTER CHARGED WITH FRAUD

## Allegation Denied by Accused in Court

E. J. Lincoln, former American who appeared in the police court today before Judge Tetreau on a charge of obtaining $1,000 from persons unknown by false pretenses, claims that his efforts to aid the unemployed of Montreal have led him into court through a mistake.

Police claim that Lincoln was trying to obtain money by false pretenses through letters mailed to various Montrealers for donations for a day shelter, which, they say, he did not have.

Lincoln, however, claims that three months ago he acquired the old Morgue building on Craig street and proceeded to turn it into a day shelter for unemployed men, who are turned out of the night shelters at 7 o'clock in the mornings.

He claims he had the place going for two months before inspectors arrived and closed the building on the grounds that it was unsafe and that he would have to do $10,000 worth of repairs before he could continue.

Accused contends that he then visited Mayor Houde, Alderman Savignac, chairman of the Executive Committee, Albert Chevalier, superintendent of public assistance, and other interested to obtain permission to make the repairs and continue with his project. He says he was told he could go ahead if he could form a responsible committee, which he did.

Lincoln claims that it was then he proceeded to write 7,500 letters asking for donations for the project. He says that only 200 of these letters had been mailed, the police seized the remainder, and he had actually only received $50.

Police claim that in these letters Lincoln was asking for donations for "continuation of the day shelter," and that he could not and did not intend to continue the shelter, thereby obtaining the money by false pretenses.

He was remanded by Judge Tetreau to March 12 for enquete, and was sent back to detective headquarters for three days on verbal remand.

# LAST TRIBUTE IS PAID TO MARCIL LAVERDURE

## Funeral Held of Late City Detective

Requiem mass was sung in the Church of St. Jean Berchmans this morning for the late Marcil Laverdure, at one time a sergeant-detective in the city police department. The service was taken by Rev. Oscar Valiquette, chaplain to the fire department. Present at the funeral were 100 detectives under the command of Inspector Brodeur and 40 uniformed constables under Capt. T. E. Caron. The band of the 65th Regiment under Bandmaster Goulet was also present.

Among those who attended the service were Deputy Director Barnes, Inspectors Maranda, Lefebvre, Desrosiers and Lawton, Captains-Detective I. Pelletier, J. A. Tourville and T. Sevigny, Lieuts.-Detective Morin, Bourdon and Francoeur. Representatives of the investigation department of the Canadian Pacific Railway and of the Harbor police were also present.

The pall-bearers were Sergts.-Detective Lapierre, Pasmore, Des Ormeau, Poirrier, Laroche and Monchant.

## OVER $100,000,000 SUITS LOST BY FOX

WASHINGTON, March 4—(A.P.)—A double defeat was suffered today by William Fox in United States Supreme Court in the invalidation of talking picture patents upon which he sought to collect more than $100,000,000.

It declared invalid patents for making and developing separate picture and sound films and then printing them on a single film, as well as patents on a projecting machine for exhibiting the films.

**SAVED HER CHILDREN.**

LONDON — When eight bales of wool fell off a lorry a mother snatched her six-weeks-old baby from its perambulator, and dragged a four-year-old child to safety. The mother was injured by one of the bales and the perambulator smashed.

# WOMAN IS HELD IN B.C. SHOOTING

VANCOUVER, March 4 — (C.P.) — Eldred Brown, 29, is in hospital today recovering from a bullet wound in the breast which he said he received when a small automatic pistol he was cleaning accidentally discharged, but police, unable to find the weapon, have started an investigation.

A woman, police said, who had been living with Brown in his East Hastings apartment, is being held for investigation. The woman, police, said, told them a stranger came into the suite and took the gun while she was calling a doctor. Police said, however, that another tenant of the building, who denied all knowledge of the gun, had called the doctor.

# YOUTH PLEADS GUILTY SHOPLIFTING CHARGE

## Companion Held For Trial in Case

Marcel Ethier, 19, who gave his address as 1071 St. Lawrence boulevard, pleaded guilty when he was arraigned before Judge Tetreau in police court today on a charge of shoplifting in an uptown department store, but his alleged companion, Gerard Bouchard, 21, who gave his address as 1059 DeBullion street, pleaded not guilty to a similar charge.

Both were remanded to March 7, Ethier for sentence, and Bouchard for trial.

John Patterson, 17, who gave his address as 2011 Richardson street, was remanded to March 6 for sentence on a charge of burglary to which he pleaded guilty.

Lionel Merrifield, 33, who gave his address as 987 St. James street, will be tried on March 7 on a charge of having a gun in his possession illegally.

# PIONEER RESIDENT OF SOUTH SHORE IS DEAD

## Arthur Rochon Was in 70th Year

The funeral will take place at St. Lambert Parish Church at 9 o'clock tomorrow morning, of Arthur Rochon, 69, former mayor and alderman of Montreal South and one of that town's founders, who died suddenly at his home, 116 St. Denis street, St. Lambert, yesterday.

He had a lifelong association with the clothing trade and, as one of the outstanding designers of the Montreal district, attended a large number of trade conventions both in Canada and the United States. He was at work as usual on Saturday morning.

He was a member of the Canadian Order of Foresters and of the St. Jean Baptiste Society. He is survived by his wife, formerly Aslda Parent; a son, Gerard; two daughters, Mrs. Z. Vadeboncoeur and Mrs. C. Vezina; three stepsons: Jean, Fernand and Dr. Roland Achim; and a brother, Oscar Rochon. Another brother, Ernest, predeceased him six weeks ago.

## MOTHER OF 20 DIES IN HALIFAX AGED 38

HALIFAX, March 4—(C.P.)—Mrs. Veronica Birkey, mother of 20 children, was dead here today in her 38th year. Married when only 15 years old, she had eight children by her first husband and 12 by her second. Only nine survive.

**MORE BODIES FOUND**

CASTRIES, St. Lucia, March 4 — (C.P. Cable.)—Preliminary hearing into manslaughter charges against the owner and captain of the excursion ship St. George was adjourned today as the known death toll in the vessel's capsizing February 14 of St. Lucia rose to 43 with the finding of two more bodies in her beached hull.

HE QUEEN MARY HAS COMPANY

mparison, follows in her wake, the majestic Queen Mary steams past the equally majestic skyline of New orner is the Battery sea wall where thousands massed to view the sight. The photograph was taken from ocean greyhounds steamed up the North River from Quarantine to her pier.

r shows excellently the appearance of New York Bay as the new British superliner Queen Mary left liver pier. Tugs, excursion vessels and harbor craft of every description followed in her wake, steamed les blowing a deafening welcome to the new pride of Great Britain's mercantile fleet, ending her maiden

## 'Queen Mary' Is Primed To Give Speed Display

### *Cunard-White Star Chairman Hints Record Will Be Attacked on Homeward Trip — Sister Ship Justified*

NEW YORK, June 2—(U.P.)—An army of stewards, seamen, and mechanics began making the giant SS. Queen Mary ready today for a possibly record-making maiden voyage to England.

Sir Percy Bates, chairman of the Cunard-White Star Line, the 80,000-ton liner's owner, indirectly confirmed reports that her 200,000 horsepower engines will be opened up on the eastern passage in a challenge to the trans-Atlantic record of the French ship Normandie.

"I believe that she can easily beat the Normandie's time with favorable weather," he said, "and she may do it on the passage home."

The Queen Mary will sail at 10.30 A.M. Friday, Cunard officials expected her to carry even more than the 1,849 passengers she landed at New York yesterday at the end of her first Atlantic voyage. She barely missed equalling the Normandie's speed record then.

One year ago today the French ship made her maiden voyage from Southampton in 4 days, 11 hours, 41 minutes. The Queen Mary steamed from Cherbourg, a course 34 miles shorter, in 4 days, 12 hours, 23 minutes. The Normandie's average speed was 29.64 knots, the Queen Mary's 29.13 knots.

**ENGINEER BLAMES FOG**

The Queen Mary's chief engineer, Llewellyn Roberts, blamed fog on Friday for failure of his ship to capture the trans-Atlantic blue ribbon on her first cruise.

"She has more power than the builders knew," he said. "It will be just a dance for her when we get a slant of fine weather."

Passengers on the shakedown cruise said the vibration common to most ships built for high speed was noticeable on the Queen Mary only during a part of the voyage and then principally near the stern.

Other aspects of the builders' regard for passenger comfort was

## SAYS CANADA COULD FORCE DROP IN WHEAT

Special Cable by J. E. Poole, The Star's Resident Correspondent.

LONDON, June 2—The wheat selling policy of Canada is the subject of increasing attention here. The Times financial section says: "It will be unwise to place too much reliance on excessive heat in Canada and the United States as a cause of partial price recovery. The real reason is the covering of short sales accompanying a downward movement. Should Canada resume her policy of meeting the market, the price could easily resume a downward movement."

In simple language this means that if the Canadian Wheat Board decided to sell wheat at whatever price the market offers, there is every probability that the price of wheat will decline in the near future. The Times suggests that ship charterers may find the St. Lawrence route too short to suit them.

## MONTREAL BILL'S STUDY POSTPONED

### Bouchard Reports Temporary Failure to Reach Civic Rule Agreement

By ALBERT E. PERKS
(Star Staff Correspondent)

QUEBEC, June 2—The private bills committee of the Legislature this morning received an interim report from Hon. T. D. Bouchard, chairman of the sub-committee appointed to consider the question of a new system of government for the City of Montreal and postponed consideration of the Montreal Bill until next week, Mr. Bouchard's report being to the effect that developments in Montreal since last week had been such as made it impossible for the sub-committee to make a final report before the end of this week.

Mr. Bouchard reported as fol-

(Continued on Page 2, Col. 4)

## India's "Untouchables" Start To Break Religious Bonds

BOMBAY, India, June 2—(U.P.)—Ten thousand of India's millions of "untouchables" — inaugurated the first big scale effort today to break away from the religious bonds which for centuries have caused them to be regarded as pariahs.

At an intensely emotional meeting, they resolved in future not to worship at Hindu temples, not to observe Hindu festivals and not to visit holy places.

Their leaders announced that they had chosen another religion than Hinduism. They did not disclose what it was but invited their followers to adopt a religion of their own, whether Mohammedanism, Theosophy or Christianity—provided only that it granted them the equality of status which is denied them under the ancient Hindu caste system from birth to death.

Such leaders as Mahatma Gandhi have been fighting for years to obtain equal rights for the untouchables, and it was believed that the present effort might mark a real start in a big scale breakaway of the outcasts from the Hindu religion.

## Hardships To Labor Recited

### Chairman of C. N. Trustees Accounts For Stewardship

### NOT RESIGNING

**In Detail Gives Reasons He Did Not Relinquish Public Trust**

OTTAWA, June 2— (Star Special by Staff Correspondent) — Appearing today before the Canadian National Committee, the Hon. C. P. Fullerton, chairman of the board of trustees, entered into a lengthy defence of the trustee administration of the system. He recalled the circumstances under which the trustees' commission had been named on the recommendation of the Duff Commission; entered into an analysis of financial results; spoke of the economies which have been effected and then—at particular length—emphasized the obstacles in the way of cooperative economics.

The greatest difficulty he found to be in the anticipated hardships from the displacement of labor. Constant effort should be applied for further economising. There were evidences of recovery and it might be that "in the operation of the dual factors of improved business and economics lay the salvation of the railways."

At the end Mr. Fullerton told of being asked to resign and of why he had refused to give up a public trust, for which he had been appointed for a term of years.

Hon. C. D. Howe told the Committee in effect that he had come to a very early conclusion that a railway man was needed to head the system, rather than a judge. The employees had that idea. Though the job was distasteful he had approached Mr. Fullerton for his resignation. The latter had wanted his judgeship back but there was no vacancy. Other terms were discussed but before completion Mr. Fullerton decided that he would not resign. The Government had concluded to go ahead with the reorganization.

Considerable wrangling followed in the committee.

**Railways Everywhere Have Suffered Losses**

At the outset Mr. Fullerton declared he was not a "free agent." He filled a position of trust; one of great difficulty. Controversy would accentuate it. He did not claim to be infallible. The chairman went on to review the vital findings of the Duff Commission, concerning pressure, the wholly "advisory nature of the directors," the "red thread of extravagance" and the freedom of expenditures which prevailed. The trustees had endeavored to overcome this.

Proceeding Mr. Fullerton said in part: "In considering the results for the railway system during the regime of the trustees, it must be constantly kept in mind that for some years back the depression has borne down with particular severity on railway companies in general. They have suffered as well, and particularly, from the competition of new and recently developed methods of transportation. One has only to look at the position of railway companies in the United States and other lands to realize the significance of this fact. Having this truth ever in mind, and as well the history of the National Railways themselves, and the fact that a very great proportion of their mileage was not constructed with a view to profit but rather for great national purposes, it becomes clear that it is very easy to expect too much in the way of restoration of this great system to a favorable operating basis.

The trustees have had control of the railway since January 1, 1934. The financial results for 1934 and 1935 are contained in the reports of the trustees which have been

# BUDGET TRIBUNAL RENDERS VERDICT

(Continued from Page 1)

broker and issued instructions for the sale of more securities."

7—"Immediately afterwards instructions were given for insurance against increases in taxation in two matters of the budget. They were mainly effected at the permitted rate and as high as 30 guineas per centum; a rate much exceeded in average but reaching 40 guineas in the insurance last affected."

8—"Effecting insurances in the name of the nominee or nominees, was a practise heretofore not adopted by Butt."

9—"Then there was the misrepresentation by Kenneth Butt (broker, son of Sir Alfred) of the name of the party really interested; a misrepresentation which, to the knowledge of Sir Alfred, was not corrected until about May 1 in answer to a request of the Messrs. Willis, Faber and Dumas."

10—"There were the irreconcilable differences between the evidence of Sir Alfred and Kenneth Butt and others regarding instructions for insurance against a rise in the duty on tea."

Other witness before the tribunal were found guilty of not telling the truth.

"Alfred Bates, in our view, was not candid in answering the tribunal," the report said.

### Leslie Thomas Is Absolved

LONDON, June 2—(A.P.)—The budget tribunal cleared the former Colonial Secretary's son, Leslie M. Thomas, of all blame, expressing the unanimous opinion he neither knew nor suspected Bates had improper information on the budget secrets.

(Leslie Thomas conducted business with Bates when the latter bought insurance against tax increases announced in the Government budget.)

"Having heard the witnesses and observed their demeanor," stated the tribunal, "we do not believe the explanation of successful insurance on two risks was fortuitous."

(The "two risks" were the increases in taxes on incomes and on tea.)

The judges said they saw no connection between Bates' payment of £15,100 ($75,000) for an autobiography of Thomas and the budget leakage, "save that it accentuates the close connection of friendship between the two men and put Thomas under obligations to Bates."

(Bates testified he had offered Thomas £20,000 for the right to publish an as then unwritten autobiography and had purchased a house for Thomas at Ferring-on-Sea at a cost of £15,100 as a down payment.)

Thomas, Sir Alfred and Bates all denied from the witness stand that they had discussed budget secrets.

The tribunal said there was "not a shred of evidence" suggesting that anyone save Thomas was guilty of disclosing the secrets, which provided Britain's major political scandal of the past decade.

"We think it right and in the public interest that our view in this respect should be openly and plainly affirmed," the report added.

"It seems improbable," the report stated relative to one statement by the former Colonial Secretary.

### THOMAS UP EARLY

LONDON, June 2 — (A.P.) — Right Hon. J. H. Thomas, who resigned as Colonial Secretary after a judicial inquiry into alleged leakage of Budget secrets, arose early today to get one of the first copies of the investigating commission's formal report.

Thomas hurried from his country home in Devon to London.

After studying the report he may make a public statement on its contents, sources close to the former Cabinet Minister said. He may at that time disclose whether he is intending to retire from the House of Commons.

### MODERN ENOCH ARDEN

GODERICH, Ont., June 2—(C.P.)—Charles Mew, of Jackson, Mich., returned to Goderich after 20 years' absence to find his name neatly carved in the list of dead on the cenotaph here. Mew said he "felt funny all over" when he saw it. He explained that he had been reported missing after the Vimy battle, was in hospital a long time and after being invalided home went to live with relatives in Jackson.

# *Fullerton Opposes Rail Co-ordination*

(Continued from Page 1)

submitted to Parliament. Let us compare the results in 1934 and 1935 with the year 1933 to see what has been accomplished. The published statements show that during 1934 and 1935 the gross revenues averaged $20,523,759 more than in 1933. The statements show further that the cash deficit in 1934 was $10,547,488 less than in 1933, and that in 1935 it was $11,533,924 less than in 1933, or an average reduction of $11,040,706, which is equal to 54 per cent of the increase in gross revenue. We consider this to be a very satisfactory performance under the difficult conditions which have prevailed. For the two years combined the reduction in the amount of cash which the Government had to find to meet the deficit of the railway was $22,081,412.10

### How C.N.R. Figures Compare

"There have appeared remarks very recently concerning the efficiency of the Canadian National Railways organization, and I propose to make a comparison between the results achieved by National Railways on the one hand, and those of Canadian Pacific Railway, and what are known as Class 1 railways of the United States.

In making this comparison I wish it to be clearly understood that neither directly nor by inference am I casting any reflections on the management of the systems mentioned. It is only because of the necessity of adopting some well-known and accepted standard that I refer to them.

"In the first year of the trustees administration of National Railways, 1934, as compared with the immediately preceding one, the operating revenues increased by 11 per cent, while operating expenses went up 6.39 per cent. In 1934, the Canadian Pacific Railways operating revenues increased by 2.9 per cent over the previous year, while expenses increased by 6.7 per cent. On class 1 railways of the United States revenues in the same period increased 5.7 per cent and expenses 8.5 per cent. It will be noted that notwithstanding National Railways had the largest percentage of operating revenue increase, its percentage increase in expenses was less than that of the Canadian Pacific Railway and Class 1 United States railways.

### Operating Costs And Revenues

"In 1935 the operating revenues of the National Railways were 5.02 per cent greater than in 1934, while operating costs went up 4.6 per cent. In the same year Canadian Pacific Railway revenues increased 3.3 per cent and their expenses 6.1 per cent, while Class I United States lines' operating revenues increased by 5.5 per cent and expenses 6.3 per cent. Again it will be noted that the percentage increase of revenue was greater for the Canadian National Railways than for the Canadian Pacific Railway, and nearly equal with Class I roads, while the percentage increase of expenses was least. In the accomplishment of those results the railway was maintained at the high standard which the trafic demanded.

A word should, perhaps, be said about the ratio of gross revenues which is absorbed by operating expenses. This is, to a large extent, dependent on traffic density and other traffic characteristics, as obviously there must be great difference of cost in operating in territories which are well populated, as compared with those which are not, and in the transportation of commodities which pay substantial freight rates as compared with those which, while occupying space and being heavy, pay low and, in some cases, uneconomic rates. No railway has, of course, a monopoly of either kind of territory or traffic, but it varies on all lines, and the ratio of costs of operation to the revenue derived varies also. Comparisons are, therefore, difficult to make, but it may be of interest to state that whereas the Canadian Pacific Railway operating ratio increased from 79.38 in 1933 to 79.56 in 1935, the National Railways operating ratio decreased from 96.16 in 1933 to 91.77 in 1935.

### Where Earlier Losses Turned Into Profits

"A word may be added to capital expenditures. Members of the committee will recall that the Duff Commission reported the capital expenditures during the period 1923-1931 had been $456,345,456, an average of $50,705,000 per annum. During the two years 1934-1935 the retirements exceeded the additions and betterments, that is to say, no any additional funds were required in these two years on capital expenditure account.

Mr. Fullerton went on to refer to the appointment of Mr. Hungerford as president in charge of operation and to explain the division of authority, under him (Mr Fullerton): Nine departments, legal accounting, publicity, medical, colonization, agriculture, secretary, property, hotels, and steamships. Reference was made to the improvement in the steamship services. The Merchant Marine had been a losing proposition practically from its inception, yet in 1935 after a succession of deficits the line was able to report a surplus on operation. Detailed figures of these were given. The receipts for the first few months of this year were up $150,000.

There had been a distinct improvement in the result of hotel operations during the trustees administration. 1934 was the first year since consolidation that there was a profit from the operation of the company's hotels, the profit for that year being $37,017. In 1935 the gains were extended, and a profit of $101,771 reported. Comparing the year 1935 with 1933 there was an improvement of $274,745. From 1923 to 1934 there had been deficits.

In all the revenue producing departments, as above, losses had been turned into operating profit, while in the other departments which are purely administrative and non-revenue departments, substantial economies had been effected, "without any sacrifice of efficiency."

### Men Were Unsettled But Situation Improved

Mr. Fullerton next related the efforts he and Mr. Hungerford had made to effect economies. As a result, an annual savings of $200,000 was brought about. Details of the departments where this was effected were given. Economies, however, could be at the cost of efficiency but, S. W. Fairweather, economist was quoted as saying that the C.N.R. is as efficient as any system.

The trustee chairman turned next to the morale of the system. When he took office, he said, it was low: The men had seen their numbers cut from 113,385 to 70,625; their compensation from $176,000,000 to $99,000,000. Mr. Fullerton thought it essential to the interests of the system that the conditions as to security of employment should be equal to that of professions and occupations.

In more than two years no representations had been made to the trustees reporting any special unrest among any of the men.

### Comments On Co-Operation Plan

Over 4,000 new employes had been taken on and the payroll of 1935 was $9,229,000 greater than that of 1933. Dealing with co-operation, Mr. Fullerton said the obligation to agree upon such plans rested upon both systems. Reference was made to the great amount of data which have to be assembled in bringing about such agreements. The trustees had to rely in large degree in their officers. They (the trustees) had been "most persistent in directing their own attention and that of the officers under them to this very important subject."

Allowing for technical and other difficulties Mr. Fullerton added "It is my view that quicker progress could have been made had there been present the officials of both railroads, a greater measure of the will to co-operate. There could, in my opinion, easily be a more enthusiastic disposition to overcome obstacles in the way of co-operative progress, and it may be useful to devote a little time to the consideration of some of the aspects of co-operation which influence the average railway official.

### Instructive Distrust By Railway Experts

"In the opinion of Mr. Eastman, (Federal Co-ordinator of transportation in the United States) the tendency of railroad management to cling to assumed individual advantages in preference to those which would be gained by co-ordination, or correlation, is ingrained, and it may be, impossible to overcome.

"Many railroad executives have an instinctive distrust of co-ordination projects, especially those which are large in scope. Such projects run counter to their training, and often to their self-interest. The executive officers have grown up in the business, and this idea of conflicting interests is ingrained and predominant. Their habit of mind is intensely individualistic and suspicious of collective action. When such action is proposed, notwithstanding that it may be for the good of the industry as a whole, the normal executive will at once seek to determine how it may affect his railway in comparison with others.

### Hardships Blamed On Unfavorable Times

"Another factor to which attention must be given is that almost every scheme for effecting further economies has a direct bearing on some community, and the interests of each community has to be seriously considered.

"There is still another and very real impediment in the way of further extensive economies, and of co-operation. Throughout the whole service there is a widespread conviction that the difficulties of the Canadian National Railways (and no doubt this also applies to other railroad systems), are of a purely temporary nature brought about by times of depression, which in due course will pass.

"But perhaps the greatest difficulty in the way of expediting further extensive economies concerns labor. To reduce expenses on any large scale men must be displaced, and if serious hardship and unrest are to be avoided, some form of dismissal pay or compensation should be considered. It is my personal view that a great deal more progress might be made in co-operative measures for economy, as well as in other economy measures, if some plan for employe dismissal compensation were worked out and adopted. I believe it to be a fact that the officials of the railroad, contemplating changes designed to secure economy but which involve putting men out of work with little hope of re-employment, are influenced by humanitarian feelings, and naturally the men resist all such measures to the limit. It does not seem unreasonable to urge that part of the advantage to the employers should be shared with labor, rather than that the whole burden should be borne by labor.

"The Canadian National-Canadian Pacific Act requires that both the burden and the advantage should be shared by the two companies. It seems to have been overlooked that the joint advantage can be secured only by transferring the burden to labor. A more equitable arrangement with labor appears to be required and should be provided. If this were done, one great preliminary step towards the accomplishment of any radical changes which might displace labour would be made.

### Railways And Ottawa Should Confer

"I have reached the conclusion that the government, the railways and the representatives of railway labour, should discuss this matter together with a view to the adoption of some arrangement for the two Canadian railroads as will afford reasonable protection against hardship on the part of those employes who, after long years of service, may be displaced by the adoption of co-operative measures."

Mr. Fullerton came to the proposed re-organization of board and, since it was publicity stated, he admitted resignations had been asked for. He declined. He quoted the act of 1933 that no trustee should be removed, "except for assigned cause." While this remained, the law it should be thought, be fully observed. Mr. Fullerton concluded: "In discharge of my duties I have consistently maintained an independent and unbiased attitude towards the political parties and their members, and as long as I am chairman of the trustees I purpose to continue to do so. That, I consider, is merely the observance of a fundamental condition of my appointment and of the spirit of 1933 act.

"When I was asked for my resignation in October last my first impulse was to give it, as, no more than any other man, do I have a desire for carrying on my work in other than an atmosphere of friendliness, appreciation and confidence. On reflection, however, it was borne in on me that to yield on a matter of this nature, no matter how great the temptation to do so might be, would be to betray a trust, which through a statute of Canada, had been reposed in me, and that any such action on my part would simply be acquiescing in the creation of a situation which Parliament itself had taken special steps to prevent arising.

"I have therefore, found myself in a most unpleasant situation, but a situation in which I think there was only one course which I could with honor and fidelity to duty pursue, and I truste that thos whose duty it is to review my action will appreciate the facts to which I have called attention."

# MONTREAL BILL'S STUDY POSTPONED

(Continued from Page 1)

lows: "Relative to the Montre Bill, we met yesterday the co mittee appointed by the City Montreal, and we have developed in Montreal wi prevent us from making any port today.

"The Montreal City Council pointed a committee to consi this question of a new system administration for the city. Th sat on two successive days then adjourned sine die with having decided anything. We yesterday in Montreal and he several persons representing v ous public bodies, who desired give us their views on various p jects which have been put forw for study by the sub-committe with reference to the revision reform of the system of admini tration of that city. Thereafte we adjourned the meetings of t sub-committee until 9.30 o'cloc tomorrow morning.

"We notified the authorities the City of Montreal that it w not necessary to bring them Quebec this morning for consid eration of the Montreal Bill be cause we did not think it possibl that we should be able to make a final report. We do not think we shall be able to reach a final report before the end of this week."

The chairman asked whether the committee should postpone study of the Montreal Bill until the end of the week, but Mr. Bouchard suggested the beginning of next week would be better.

The situation now stands, therefore, that the sub-committee studying a new form of government will sit tomorrow morning and continue its sittings until it reaches a final report, probably by the end of this week and the private bills committee will receive that report and resume study of the Montreal bill next Tuesday morning.

The private bills committee this morning approved, with a few detailed amendments, a bill to incorporate the Catholic Scouts of the Province of Quebec and then adjourned until tomorrow morning.

## JOB-HUNTING TIPS GIVEN TO STUDENTS

TORONTO, June 2—(C.P.)—W. J. Dunlop, director of the University of Toronto extension department, yesterday gave pointers on job-hunting for the benefit of more than 1,000 students who will graduate this week.

They are: Go after the job for which training and preference qualify you.

Be cheerful in applying—the long mournful face doesn't work.

Be original in applying.

Observe a due medium between modesty and boastfulness.

## Head of Tribunal Lives Only for Law

LONDON, June 2 — (C. P. Cable)—Mr. Justice Porter, who headed the "budget leak" tribunal, is 59 years old. He is a bachelor and lives for the law and for the law alone.

Bereft of wig and robes and away from the Law Courts, he would not be recognized by one in 10,000.

His tall slight figure and face are reminiscent of the late Mr. Justice Avory, as is his manner on the bench with his habit of quiet but persistent examination.

Sir Samuel Porter has been a judge only two years. His earlier work at the Bar was concerned largely with intricate commercial causes wherein he showed an almost uncanny grasp of figures.

LOW ROUND TRIP FARES FROM MONTREAL

Lv. MONTREAL (Bonaventure Station) 12.10 p.m. - 8 p.m.
FRIDAY JUNE 12
RETURN LIMIT Tuesday, June 16, except Gaspe and Halifax, Wednesday, June 17.

GASPE - - $7.00

D19159

Promotions in the C. N. R. Staff are made regardless of the need of occupants of such posts, and the appointment of Mr. Edge, as per the hereto attached article indicates how little consideration is afforded the Canadian tax payers.

It is simply ridiculous to suppose that a Sup't of the C. N. R. personnel along such a long line could exercise any kind of influence of the same.

The same rule obtains from the President down to the lowest post of the C. N. R.

In Montreal C. N. R. Offices, clerks leaves their offices to go to a nearby restaurant to drink Coka Cola and are absent for more than 1/2 hour during the day, and no complaints are ever heard, because not one single employee of the C. N. R. has a single dollar investited in the C. National Railway, except the Can. Govermement. Which was for the most part, done under the execrable liberal rule.

However, as your colleagues in the Senate are in the majority, you may be able to secure the necessary reforms.

Remember that Fullerton and Hungerford are continueing the Henry Thornton policy of extravagance, but at a lower pitch.

T. P. Mazurette.

Please note that Senator Raoul Dandurand, whom secured his nomination as a senator through the late Sir Wilfrid Laurier, is a first cousin of Charles Lanctor, former Dep. Attorney General of Quebec against whom a warrant for his arrest has been issued by the Dup. Gouverment. Dandurand never was elected in any constituency in Canada, and could not do to-day.

If Hungerford declares that it would not be in the interest of the C. N. R. to reveal any information concerning the C.N. R., let him know, as did the late Dr. Peter McGibbon, that it will be for the members to decie that question, as they are responsible to the Can. Public, and if Hungerford refuses, let him be dismissed.

Honesty in Can. Politic can only be obtained by a Russian purge.

*C. N. R. Promotion*

F. W. EDGE
formerly inspector of staffs of the Canadian National Railways, who has been promoted to the post of superintendent of personnel for the line.

## ANGLO-U.S. PEACE PACT IS SUGGESTED

NEW YORK, May 3—(C.P.)—An alliance between Great Britain and the United States "literally could impose peace upon the world," Sir Henry Braddon, Australia's first High Commissioner to the United States, said in an address last night.

"These two great nations," Sir Henry said, have power enough, economic and other, to localize any war which might break out and prevent its expansion into another devastating world clash."

## HUSBAND RESCUES WIFE FROM PURSE SNATCHER

### Surprised Good Samaritan Wounded By Thug

To play to role of Good Samaritan, and then to find he was playing it to his own wife, was the unique experience late last night of 29-year-old Robert Ronne of 7515 Christophe Colomb street.

Ronne was driving home, and was nearing his garage, when he heard a woman scream, and saw a man snatch her purse. Going to her aid, when he assisted her to her feet he found it was his wife. Taking up pursuit of the purse-snatcher while his wife telephoned for police, Ronne caught up with the man at Christophe Colomb and Everette streets. The man drew a knife when Ronne grappled with him, and succeeded in escaping after gashing Ronne's forehead and biting his wrist. Ronne was treated for these wounds, and his wife for nervous shock, at St. Justine's Hospital. Both were allowed to go to their home.

Sergt.-Detectives Caumartin and Bourdage searched the neighborhood but could find no sign of the man, a good description of whom was given by the Ronnes.

In all the excitement, Mrs. Ronne managed to hang on to her purse.

# DEFENCE LAWYER OUTLINES CASE

(Continued from Page 23)

Have you any book that will show the payment of $1,100,000 as stock bonus to shareholders of 1915 to date?

I have extracts from them. I have the books here also.

Will you file as exhibit D1 copy of the minutes of the board of directors of the Sun Life passed at the meeting on June 1, 1915?

Witness did so.

Mr. Cormier: This exhibit reads: The management recommended that from the sum standing to the credit of the shareholders a stock dividend of $10 per share, making a total of $100,000 be given, increasing the capital stock from $350,000, and that a dividend of 15 per cent be paid as from July 1st next. Moved by Mr. Hosmer, seconded by Senator Dandurand that this stock be issued and the dividend declared."

The Court: Is that proving your plea that $1,100,000 was given as stock bonus?

Mr. Cormier: That is part of it. Will you tell the Court the second bonus that was granted?

Witness: Minutes of a meeting of the directors on June 20, 1918. The management recommend that the paid up capital stock be increased by $125,000 by making the necessary call therefor. Resolved that a call of $12.50 per share be and the same is hereby made on the shareholders, payable on the 30th day of June, 1918 to the company at its head office. The management recommended that from the sum standing at the credit of the shareholders a cash dividend $12.50 per share be declared payable to the shareholders of record of June 20, 1918. Resolved that the recommendation of the management as set forth be adopted and that the dividend as stated be declared, said dividend to be applied in payment pro tanto of the balance of the subscribed capital not yet paid to the company."

Will you read the minute of June 2, 1919?

## Cash Bonus Given

## *Sir Henry In South*

Sir Henry Thornton, former president of the C.N.R. is shown here wrestling with a score card instead of railway statistics. He is down at Miami and all those who have heard Sir Henry in after-dinner speeches will readily recognize the whimsical smile he is wearing.

Rt. Hon. Arthur Meighen, P. C.,
The Senate,
Ottawa, Ont.

Dear Senator Meighen:

I enclose a memorandum on the subject of a suggestion I have received from Mr. Allan G. McAvity, M. P., to whom I have written saying that so far the Senate Committee has not considered any proposals for effecting economies except those which have been investigated by the Joint Co-operative Committee.

I am sending a copy of the memorandum to Senator Dandurand as I doubt if the Committee can usefully go into specific proposals for economies which have not been considered by the railway or railways concerned.

Yours very truly,

BMMc

MEMORANDUM

C. N. R. Freight to Saint John

Mr. Allan G. McAvity, M.P., has written me at some length on the subject of the routing by the C.N.R. of freight for Saint John through to Moncton and thence first to Saint John and afterwards to Fairville, instead of direct into West Saint John from McGivney Junction through Fredericton. This latter routing he says was recommended in the Gibb Report and would effect an operating economy. Mr. McAvity asks that the information be put before the special Senate Committee and adds that he would like to be present and obtain permission to put some questions on the subject to the witnesses.

O.M.B.

## Why Railways Cannot Prosper

THE Board of Railway Commissioners at Ottawa have given out their reasons for refusing the railway companies permission to abandon certain lines in the interest of economy — lines on which they are losing money because the people use other means of transport.

The reasons are various, but as we read them they mostly centre around the fact that the people who live in the districts through which the branches run wish to keep these lines as a standby service.

If something too big for trucks is shipped in the railway is very handy. If the highways are blocked by spring thaws or winter snows it is nice to have the railroad to fall back on.

On such a basis the railroads have drawn closer and closer to the starvation line in the last 15 years.

* * * * *

FOR years the railways have been clubbed and for years their position has been steadily growing worse, and still we need them.

They have been clubbed by arbitrary rate structures and by being forbidden a free hand in bidding for business while their competitors have had all the freedom in the world. They have been handicapped by labor restrictions from which their competitors have been free, and they have been clubbed by unnecessary railway competition enforced by the state.

Now they are being clubbed by administrative orders compelling them to give service on lines the people only want as a standby, and despite the fact that these lines are operated at a heavy loss.

Real statesmanship should concern itself with plans for saving the rails for those who are willing to pay what the service is worth, not in imposing impossible burdens with the excuse that rails were once good profit makers.

## The Limitations Of The Radio

THERE is unlimited pulp in the forests, waiting to be turned into newsprint. Natural forces set no limits to the production of ink or linotypes or presses. But there are only a certain number of wave-lengths on the broadcasting band.

These statements apparently have no connection, but put them together and they add up to this — our vaunted freedom of the press cannot be extended to radio broadcasting.

### *Election Being Fought on Local Issues Contends D'Arcy O'Connell in Last Campaign Speech*

The D'Arcy O'Connell campaign for the aldermanic seat left vacant by his late father, Thomas O'Connell, ended last night with a meeting in the St. Ann's Hall with approximately 1,000 persons acclaiming over a score of speakers.

Reiterating his stand that no political issues were at stake and that the campaign was merely local, the candidate stressed that he could make no promises impossible of fulfilment, but guaranteed to the electors that he would do his utmost to forward those projects supported by his late father.

Included in this category were improvements to the approach of the Wellington street tunnel, better lighting, re-arrangement of the tunnel sidewalks, lay labor for all public works, co-operation with any housing scheme approved by the Metropolitan Commission, and the general betterment of the ward.

The intrusion of politics into the campaign was decried by several speakers, Frank L. Connors, M.L.A., describing it a regrettable instance unknown in former municipal ward elections.

Michael Pierson declared that ...e ward had more playgrounds ... any other in the city and ... people required work and ... works rather than ...omised by the

# Wage Law Latitude At Outset

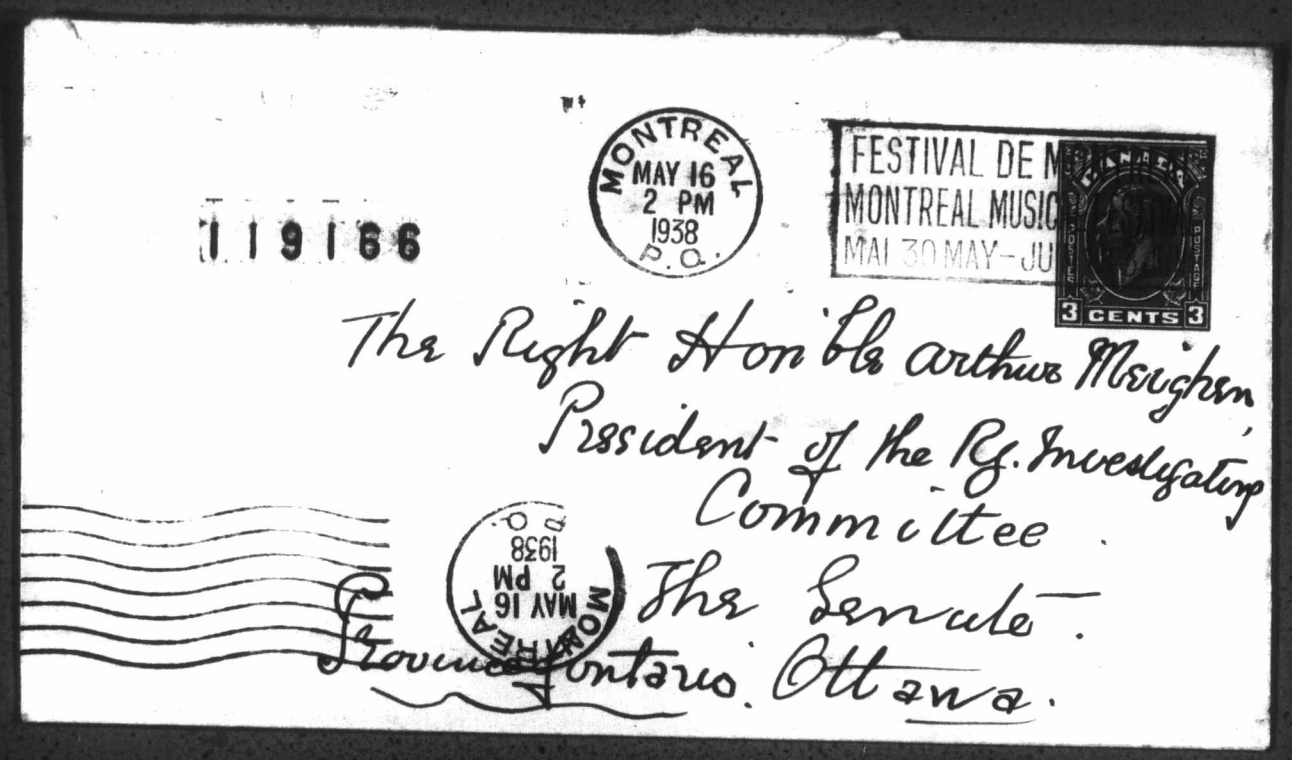
### Re-Adjustment is Allowed But Inspectors Will Check on Infractions

## Order In Force

A certain amount of latitude in application of Ordinance No. 4 of the Quebec Fair Wage Board which became effective yesterday, will be allowed in special instances as a means of permitting re-adjustment where a hard-and-set wage rule is not applicable, official sources hinted this morning.

However, it was stressed, the inspectors in charge of enforcement of the ruling will not be lax in seeking redress for the employee where downright violation is found. Inspectors are now getting ready to check into all angles of complaints which it is expected will be received from employees since the ordinance went into effect.

**MANY PROTESTS.**



Following numerous protests by the Montreal business community against article 63 of the ordinance, a last minute amendment has been made in view of the many difficulties which its application presented.

The amendment empowers the board to authorize reductions in the rates of wages specified in the two preceding articles. Article 61 specifies that rates already fixed on January 1, 1938, if higher than the rates fixed by the ordinance, must be maintained. Further, it provides for payment of the same wage for those who replace employees in the same work. Article 62 is that which specifies time-and-one-half as the basic time for overtime.

Clauses 61 and 62 had been much criticized by some business people on grounds that their application would prevent any pay increases because the employer would be forced, should an employee resign, to pay a new employee taking his ...lace the same wage as he was

WHOLESALE

CABLE ADDRESS "THORELLA"
A.B.C. CODE USED, 5TH EDITION

CORNER OF
ST. HELEN & RECOLLET STREETS

Montreal, May 14th, 1938.

The Right Honourable Arthur Meighen,
The Senate--Parliament Buildings,
Ottawa, Ontario.

Dear Sir:-

The writer has been reading the reports on the Railway discussion in the Senate which have appeared from day to day in the newspapers, but there is one point which is seldom, if ever, mentioned, and that is the question of "Passes". We believe that the matter has been given a certain amount of attention in recent years but not nearly enough. The loss of Revenue to both Railways from this source runs into many, many thousands of dollars.

In our opinion, there is no more reason why anybody (and that means employees of the Railways as well) should get free transportation than that the grocer or butcher should give his merchandise free to his employees. The Railway's stock-in-trade is transportation and everybody should pay for it. If one mentions this fact to a Railway man he is immediately told that the "Pass" is part of his salary but, why should it be, when they are paid as good or better salaries than any other class of workers in the country.

We hardly think it is necessary to cite examples as the Railway Officials know only too well what the situation is but, for your information, we will tell you what is going on in and around Montreal--the sub-urban trains out of Montreal carry a very large percentage of employees with passes. At this time of the year, the 5:15 train leaving Montreal from the Tunnel Terminal carries many of the employees and they are not at all interested whether paying passengers have accomodation or not. The same thing applies to the train arriving in Montreal at 8:46 in the morning. In addition to this, we find on both Lake Shore and St. Eustache lines children attending Universities using passes. The Maritime Express going though St. Hyacinthe on Friday about 5:00 o'clock carries wives of employees who do their marketing there, using passes and occupying space to the disadvantage of paying passengers. To our knowledge, the same thing applies in the region of Moncton, N. B., and no doubt, exists throughout the entire country.

Why not take up this question seriously and fearlessly and do away with all "Passes".

Yours very truly,
FINLEY, SMITH & CO. LIMITED

Ottawa,
May 19, 1938.

J. S. Gillies, Esq.,
Gillies Bros. Ltd.,
Braeside, Ont.

Dear Mr. Gillies:

I duly received your very interesting letter of 17th May. The case you present is very clearly and forcefully stated.

I have not the least doubt you are correct that the great cause of the present disparity of transportation charges as compared with earlier rates is due to heavier labour charges, and that these in turn are attributable to strength of the Unions. One cannot deny to labour the right to unionize, but there does flow from it an artificial situation as to wages, where very decided unfairness exists between the returns to labour capable of unionization and the returns to labour not thus capable. In the latter class I place particularly farmers. When and how the solution of this situation is to be brought about is more than I can even offer an opinion upon.

Memoranda have been placed before me containing analyses which go to show that the farmer pays to labour engaged in the transportation of his products and in the carrying to him of his requirements as much per hour as he himself (on the average for Canada) earns per day.

Frankly though, I do not believe we can cover the subject in the present Committee. The purpose of the Committee is to find some relief for the C. N. R's financial burden, and, while this subject is directly related to it, it is not peculiarly a C. N. R. subject, and the Committee won't have time to cover all the required ground anyway. If there is time, I think you can depend upon an effort to get somewhere even on this phase.

Yours very truly,

AM/E.

Arthur Meighen.

## LUMBER MANUFACTURERS

ESTABLISHED 1873

Braeside, Ont. CANADA. May 17th, 1938.

The Honourable Arthur Meighen,
Senate Chamber,
Ottawa, Ontario.

Dear Sir:- Re - Railroad Enquiry.

May I submit a few figures from the point of view, not of a railway man but of the manufacturer who pays the freight. Below I give a few items showing the increase in freight rates on lumber from the Ottawa Valley during the time I have been connected with this business:-

| Braeside to - | | | 1890. | 1938. | Per-centage |
|---|---|---|---|---|---|
| Montreal | $ 1.50 per M | = | 6 ¢ | 15⅜¢ | 250 % |
| Syracuse | 2.35 " " | = | 9 | 23 | 250 % |
| New York | 3.00 " " | = | 12 | 33 | 275 % |
| Brockville | 1.00 " " | = | 4 | 12 | 300 % |

Below are lumber prices for all lumber in Canada (taken from the Dominion Bureau of Statistics) for the following periods:-

| 1908-1914 | 1908-1933. | 1932. | 1935. | 1937 |
|---|---|---|---|---|
| $ 15.95 | $ 22.00 | $ 14.85 | $ 16.11 | Say $18.00 |

1935 is the last census figures I have but I think that $2.00 per M would cover the increase since then.

From this you can see that the 1932 prices were below the prewar prices while the present day price is less than 20% above prewar prices while freight rates show from 250 to 300% increase.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 187)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119173

The increase in freight rates on lumber were quite gradual prior to the McAdoo Award in the United States, made during war times, when rates and wages were doubled over night. There was later approximately 10% reduction from the peak wartime freight rates but in the United States five percent (5%) of this has been recently re-instated.

Our own trade in White Pine sawn lumber, due largely to the high freight rates on Eastern Canada lumber as compared with the rates on Pacific Coast lumber to our markets, is confined to the area out-lined by Detroit, Cincinnati, Pittsburgh, Philadelphia, New York, Boston and Montreal. In this territory lumber freight rates from Braeside to the various important markets run from 1.2¢ per ton mile to 2.35¢ per ton mile with an average of say 1.8¢ per ton mile.

Freight rates on lumber from the Pacific Coast to this territory run from .56¢ per ton mile to .70¢ per ton mile and seems to have an average of .6¢ per ton mile so that our lumber per ton mile is paying three times what the pacific coast lumber is paying to the same markets. If the blanket rate on Pacific coast lumber to points east of Detroit is considered separately (85¢ to Detroit - 95¢ to New York) the railways are hauling lumber from Buffalo and Detroit to New York City on the basis of .27¢ per ton mile, or about one-sixth of what they are charging from the Ottawa Valley for similar distances.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 187)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

These low rates on west coast lumber are doubtless made to compete with water rates but this is grossly unfair to the interior mills in eastern Canada. If the railroads can profitably haul lumber from the Pacific Coast to the Atlantic at .6¢ per ton mile it would seem that the Ottawa Valley rate of 1.8¢ per ton mile is grossly out of line. I understand that the average rate on all traffic is in the neighborhood of 1¢ per ton mile, and considering that lumber is a low priced and slow moving commodity, and in one of the lower class rates, this comparison further accentuates the unfairness of the Ottawa Valley Lumber rates.

RE WAGES:- In the 1890's and 1900's the wages of railway men and of lumber men were approximately the same, many men worked in the woods in the winter and on the railroads in the summer (the summer was then the busy railroad season - even more so than now), but since the McAdoo Award (when railroad rates were advanced perpendicularly) this relative position of the two industries no longer exists and the railway men from the point of view of wages and work done are in a preferred class and away beyond anything the lumberman or farmer can pay. Keep in mind that lumber is a basic industry and vitally dependent on export trade while the railway is a sheltered industry. Increases in railway wages and railway freights are due to trade unions on the one hand and to political pressure on the other. Without the export trade of our basic commodities the railways in Canada, and the country as a whole, would have a very lean time.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 187)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119175

In some high-priced commodities figures may be submitted by the railway protaganists to show that the freight paid has no great effect on the selling price delivered to the consumer, but on low priced commodities, such as lumber, freight rates are a very high percentage of the final cost and low and equitable freight rates are an absolute necessity to this trade. Further, the timber holder is entitled to the benefit of his geographical situation and should not be robbed of the value of his standing timber by discriminatory freight rates.

From a layman's point of view the freight rate situation in North America has never had any logical basis, being worked out on the principle of "all the traffic will bear". One of the results of this policy is that the railroads are attempting to meet water competition at the expense of traffic originating in interior points.

My point is that each method of transportation, ocean shipment, canals, railroads, trucks, aeroplanes, have ~~their~~ their own place. Each method of transportation should pay both the capital cost and the maintenance cost of the improvements required - canals, dredging, harbors, railroads, motor roads, air dromes, etc., and should be allowed to enjoy what traffic it can legitimately command on these conditions. The Governments should discontinue bonus subventions or government assistance of any kind direct or indirect and let each industry stand on its own feet and its own costs and the different methods of transport would eventually adjust themselves on a natural basis.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 187)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119176

In the case of the railroad, freight rates should be figured for each class of traffic on a mileage basis. This would releive the Governments and the railroads of any special freight concessions as between provinces, towns, or industries, the only thing to be taken into consideration being the facilities and services provided by the forwarder and the distance the freight is hauled.

You doubtless have available all the railway figures as to the cost per ton mile, rate of wages, etc., and can check up my figures but in a rough way they are reasonably correct and I trust you can arrange that rates on lumber on our territory should be placed in line with those from competing sections based on the distance from market.

As to the remedy for the railroad situation in Canada I can see nothing but the old-fashioned method of economy, shutting down the duplicate and unprofitable lines, and using busses and trucks where the traffic warrants instead. Cut down expenses, including wages, and put costs in line with the basic industries. Do the same in Government spending. It is wonderful what can be done when necessity forces us to it as the lumber trade well knows through bitter experience.

Yours truly,

J. S. GILLIES.

The Rt. Hon. Arthur Meighen,
Parliament Buildings,
Ottawa, Ont.

Dear Mr. Meighen,

For some time, I have been trying to ascertain the number of passes and the amount of free transportation granted by the Canadian National Railways and also, if possible, the Canadian Pacific Railway in an average year. Some of this information is available in Part 7 of the Duff Report, but this is not up-to-date, nor is it sufficiently illuminating.

I was thinking that perhaps it would be possible for you to have this information presented in the investigation now proceeding in the Senate. I would like to have, not only the number of passes issued, but the mileage represented by those passes, and any other information which could be reduced to terms of dollars and cents.

If you could secure this information without interfering with your already arduous duties, I would appreciate it very much.

Respectfully yours,

Alex. C. Hall

CORRESPONDENCE OF THE
COMPANY SHOULD BE ADDRESSED
P.O. DRAWER 1539, MONTREAL

# The Montreal Telegraph Company,

Executive Offices,

Montreal, Canada.

May 19th, 1938.

Rt.Hon. G.P. Graham and
Hon. C.P. Beaubien,
Joint Chairmen,
Senate Committee,
Ottawa, Canada.

Gentlemen:- In re C.N.R. and C.P.R. Unification

With reference to that part of Mr. Fairweather's testimony as reported in the press, wherein he says,- "We even went so far as to open informal negotiations with the Montreal Telegraph Company for the purchase of stock but we couldn't get to first base. They thought they had a good thing." I beg to submit, on behalf of the Directors of this Company, for your information, the following:

On the afternoon of Friday, April 13th, 1934, following an appointment as to the day and hour, I was waited on by the Hon. C.P. Fullerton, in the company of two other gentlemen, for the purpose of his making, without having given any notice of the motive of his visit, the unexpected enquiry as to what proposition the Montreal Telegraph Company had to make in order to enable the Federal Government to bring about a consolidation of the Canadian Pacific and Canadian National Telegraph Companies, to which the Montreal Telegraph Company was an obstacle.

My reply to Hon. Fullerton was that the Montreal Telegraph Company had no proposition to make but it would be open to receive one from the Federal Government, relative to which I would write him after I had conferred with the Directors of the Company.

Subsequent to a meeting of the Directors of the Company, held April 19th, 1934, at which the matter was discussed, a letter as per copy enclosed was addressed to Hon. Fullerton, and no acknowledgment has ever been received from him.

Subsequent to such letter to Hon. Fullerton an interview took place between Mr. F.K. Morrow and myself, the essence of which was submitted to the Board of Directors of this Company on December 26th, 1934, upon which date I wrote to Mr. Morrow as per copy attached, accompanied by a memorandum referred to, since when nothing further has been heard of the matter from him.

COMPANY SHOULD BE ADDRESSED
P.O. DRAWER 1539, MONTREAL
PLACE D'ARMES POSTAL STATION

*The Montreal Telegraph Company,*
*Executive Offices,*
*Montreal, Canada.* April 20, 1934.

Hon. C.P. Fullerton, K.C.,
Chairman,
Canadian National Railways,
360 McGill Street,
Montreal.

Dear Mr. Justice:-

I have related to the Directors of this Company, at the usual monthly meeting of the Board held yesterday the 19th instant, the conversation between you and myself on the afternoon of Friday the 13th instant relative to the lease to The Great North Western Telegraph Company held by this Company as bearing on the proposed amalgamation of the Canadian Pacific and Canadian National Telegraph Companies.

I may now inform you, in reply to your enquiry, that the Directors have no proposition to offer, but that they have an open mind to consider any proposition received from you that they could recommend as being equitable to their shareholders and for their acceptance.

Such to be subject, however, in their discretion, to first taking the counsel of the Company's legal advisors and your undertaking to assume any legal costs to the Company that may thereby be incurred and become payable irrespective of and/or to the principle of your proposition as submitted.

Yours very truly,

*Henry E. Rawlings*

President.

MEMORANDUM

December 20, 1934.

The subject of the proposed purchase by the Canadian National Railway Telegraphs of the Company's lease to the Great North Western Telegraph Company was discussed by the Board and the general feeling was that the Board should abide by the terms of the President's letter of April 20th to Judge Fullerton.

The Board, however, was favourably disposed towards giving consideration to any equitable proposal for such purchase of the lease of the Company on some terms similar to those by which the Dominion Telegraph Company lease was acquired by the American Union Telegraph Company, etal.

Ottawa,
May 24, 1928.

Mr. A. Douglas,
Makinak, Man.

Dear Mr. Douglas:

I duly received your letter of 19th May which I have read with care. I have not the lea t doubt myself that extravagance just of the kind you refer to and which comes under your own observation is widespread throughout the entire C. N. R. organization. After the dismissal of Mr. Hanna, who was a careful money-saving Scotchman who knew the Railway business, and all during the reign of Sir Henry Thornton, extravagance became the key-note of the whole C. N. R. institution. Such habits are very easily acquired and very hard to eradicate.

I am of opinion the Railways have to get down to a much lower cost of operation, both as respects savings such as you have in mind and also as respects salaries, pensions and labour costs. All these costs are paid for by the public, and if they are out of line, as I believe they are out of line, the public suffers and what it suffers is unjust.

What you say as to Passes has a great deal to justify it also, and I personally would like to see a movement under way to abolish practically all Passes.

I am by no means sure that the present Committee is going to have time to go into this matter as fully as the circumstances demand, but we are going to do the best we can.

Yours very truly,

AM/E.

Arthur Meighen.

May 19th 193[illegible]

Senator Arthur Meighen
Ottawa

my Dear Sir.

I noticed your inquiry re the C.N.R. if the road is overloaded with unemployed. Perhaps not but one thing has passed under my observation re this roads extravigance. Last year there was a new bridge put in over a small creek east of town, the piles were driven and of course they would have to be cut to a level, and many of these piles had 8 to 10 & 12' cut off them and were left there for the section foreman to pick up. I would reckon these would cost the company 25 to 35 c per lineal ft, and I reckon there was over 200 ft at say 30c ft would mean the company threw away easily $60.00 which could have been made use of if only for ties. they are now in the section foremans yard again. I noticed they put in new cattle guards on this section this year which cost I would reckon at least 25 c each when many of the old ones had one or at most a few bars broken in them, which could have easily been repaired by taking the good slats out of one or two broken ones and repaired easily 12 or 13 out of every 15 and made them last for at least another 5 or 6 years. and this could have been done in the winter when the men had practically nothing to do and saved easily $3 00.00 I would reckon on there 15 miles of roads alone. So if they do the same thing on every 7 miles of the road you can easily see how it would run into millions of dollars. I know foremen as a rule like to keep their beat in good shape and are not inclined to do much repairing but prefer supplying something new. I know if the farmers was good business men were to handle their business in the same way they too would soon be hard up and in fact would soon go under. Then again there is the free pass system they have on this road, which should have never been allowed in the first place, as all R.R. employes are well paid

and can well afford to pay their way on the trains as well as the rest of the public. When on the trains it makes me sore to see so many passes handed to the Conductor, particularly on holiday times, there often are more than 50 on the train are on free passes, many of whom scarcely ever pay one dollar towards the support of the R.R. when I know that during the last 40 years I have paid out more than 25 or $30,000,00 in freight and fares and if I were to get on the train without a ticket they would put me off at the next station. I think that I am safe in saying that nearly every station agent who takes two or three weeks holidays will travel with his wife and often one of his family on free passes that would cost me daily $2.00,00. I would reckon if an investigation were made you would find the R.R. being deprived of several millions in fares alone, so I dont wonder at the R.R. not going ahead financially. I know this is a difficult matter to handle, but I am sure they would be ahead of the game if they cut out the free passes and pay them 2 to 5 or per month higher wages, in lieu of the passes, you may wonder why I am making myself busy re this question but I know men in your position, do not know it all and most generally are ready to accept suggestions from others who are observant and in a better position to know. When Jim Bowman was an M.P. he used to write me quite often to get my opinion on questions that were coming up in parliament. Perhaps you will remember writing me in 1926, about my suggestion of turning the Rid mts into a Park. Bill Ward claims the honour of putting this over when he and all Federal members of Manitoba supported Dr Bissettes proposition for the Park to be in the eastern part of the Provincial. when I saw it got its first reading, I wrote a letter to the Free press showing the Rid mts to be the proper place for the Park, and when Ward, Glen & McKay saw it they backed Bissets proposition and was held up for 4 years before they finally decided on the Rid mts. I have your letter on file yet to show you were interested in the Park, with your suggestions re formation yours Respectfully

May 18th 1928.

Rt. Hon. Arthur Meighen,
Ottawa,

Dear Mr. Meighen:

In the current issue of MACLEAN'S (May 15th, page 19) I have pointed out serious shortages in our lists of natural assets. The accompanying pamphlet goes into this matter in more detail. I have suggested that we take stock and base our expenditures on facts instead of on ballyhoo. If we had followed this program years ago we would not now have a railway problem to investigate.

There is an interesting point here: In Vancouver recently two Hedley Amalgamated officials who reported 500,000 tons of ore that they could not demonstrate were not lauded as optimists but they were sent to jail. Now, the demonstrated shortage in our national coal inventory is ten thousand times the Hedley shortage: yet this coal shortage is ignored and the officials who maintain these absurd figures continue to occupy high positions and receive high honors. My point is: Why should gross exaggeration in regard to national assets be encouraged while exaggeration in regard to the assets of a small mine be punished as a crime?

Yours very truly,

C. M. Campbell

# A New National Policy

By C. M. Campbell*

(Annual Meeting, B.C. Division, Vancouver, B.C., October, 1936)

## Introduction

In 1902, a famous Canadian geologist made the following statement:

"From what we know now of the iron-ore fields of the Province, we may feel that Ontario is assured of a great future as an iron-ore producing country. Judging from the extent of the territory over which the newly discovered ranges have been found, Ontario should in the not far distant future take her place as one of the chief iron producers in the world".

In 1905, an official of the Department of Mines said:

"In ten years Canada will have become a great metallurgical country. You will see an iron industry in this Dominion larger than in any country in the world. Canada will yet furnish the world with its iron supply. It will be the same with iron as with wheat. A decade from now Canada will outstrip all other countries in wheat growing. The production of iron at a cheaper rate than it can be made elsewhere will cause Canada to take a similar position as far as iron is concerned".

In 1924, a former President of the Institute, in arguing his claim for inconceivable mineral wealth in this country, stated as a "certainty" that iron-ore deposits on the scale of the ones in Minnesota would be found "again and again" in the Canadian Precambrian.

In 1930, a Minister of Mines announced that "The country surrounding Churchill holds large deposits of valuable iron and coal", and he stated that, at that place, "We will have an industry in iron that will compare with Pittsburgh".

These statements are definite promises, just as definite and important as the statement "I promise to pay" on a note, and they are not fulfilled by casually stating, as is the habit, that some day we will work our low-grade iron ores. Nor are they fulfilled by stating, as is often done, "Oh, So-and-So did not mean that". Due to their importance and to the prominent positions held by the men who made these statements, they were widely circulated throughout Canada. They were taken at their face value, and on the strength of them and many more of the same kind in regard to our other resources we have planned and built, at huge expense, provinces, governments, civil services, railways, and other equipment. The reserves that were to justify these expenditures have not appeared. There has not been a ton of iron ore mined in Canada for many years, and important commercial reserves are unknown. We have built the mill, but adequate ore is lacking. As a con-

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119194

sequence, we are faced with interest-bearing debts aggregating about ten thousand million dollars. The spending of this huge sum helped greatly our prosperity. The time has now come to stop borrowing and to start paying back, and we are in distress. Even with crushing taxation, we are not even paying the interest but are budgeting for deficits. We are faced with the most serious situation in our history.

In his Dominion Day editorial, H. Napier Moore, editor of *Maclean's*, referring to the platitudes in regard to our glorious heritage and our unparalleled opportunities, said, "Patriotism is not the art of kidding oneself. It means devotion to the welfare of one's country". Is it not true that the habit of kidding ourselves that we have unlimited resources is the cause of over-expansion and heavy debt? The logical solution is, therefore, to stop kidding ourselves, to make an accurate survey of our resources, and to govern ourselves accordingly. This is exactly what Mr. Moore has suggested. Speaking to a Vancouver audience, he has said: "Canada possesses no boundless resources and the time has come to take stock, to make an honest appraisal of the Dominion's assets".

The records of this Institute show that in 1921 a despatch was sent over the name of the Institute, and on behalf of the Institute, to the Premier of Canada saying that "inconceivable wealth in minerals" was then a "fact" in Canada. This statement, deliberately made, was publicly endorsed by leading members of the Institute. Stories of this sort have received every encouragement and they have been passed on, and they continue to be passed on, to the press and to be featured in every hamlet in the Dominion. This policy was in evidence at the last annual meeting, when prominence was given to a statement that "The only things we lack are manganese and a high quality of iron ore".

It will be remembered that the late Will Rogers said, "All I know is what I read in the papers". Canadians are like Will Rogers, and for the past three decades the papers, on the authority of leading mining men, have circulated stories like the above among the citizens of this country; wasteful extravagance has been the rule and oppressive debt and taxation the result. After investigating this matter for fifteen years, I know the private views of many members from the Atlantic to the Pacific and the private view is diametrically opposed to the view given to the public. The "don't quote me" opinion is that "inconceivable wealth" is "damn nonsense". It is trash. Our sanitary authorities gather up trash as a matter of course and destroy it—it is a menace to health. Trash such as I have quoted has wrecked our financial health and all we now hope for is a partial cure, the chief remedy being higher and higher taxation. The proper treatment is to eliminate the cause. Clean up our publicity, and financial health will gradually return.

Three reasons have been advanced for the dissemination of this ballyhoo:

1. It will bring capital to Canada.
2. It is the true spirit of the mining industry.
3. It will inspire confidence.

The dissemination of trashy publicity will do none of these things. Ballyhoo repels both capital and confidence. The true spirit of mining and every other industry and activity was summed up recently by Winston Churchill when he said: "The important point about any fact stated in

119195

this House is whether it is true or false". That is the only spirit we want in this Institute; it is the only spirit that will bring worthwhile capital to Canada and it is the only spirit that will inspire confidence in Canadians. In view of the predominance these days of the economic situation, I would like to add that it is the only spirit that will balance budgets and reduce taxation. In other words, it is the only spirit that will pay. It is essential, therefore, if we are to carry on with credit to this Dominion, to stop kidding ourselves, to cut out the ballyhoo, to get the facts and to act on them. Here, therefore, is a new national policy. An accurate list of our mineral resources, an honest appraisal for all Canada, is the objective of this paper.

## PRESENT VALUE OF OUR METAL WEALTH

The list of metal mines on the Toronto Exchange and Curb, which includes nearly every worthwhile mine in Canada, shows a market value at the present time of about $2,000,000,000. Add those left out, and our metal wealth is not much above that figure. This may appear large, but from a comparative point of view it is very small, for it would take five times this total to pay our national, provincial, and municipal debts. Our railway deficits since the Institute announced inconceivable wealth total one billion dollars and, in view of the extravagance of the mining publicity, I have no hesitation in saying that the great bulk of that figure should be charged to the mining industry. It would take the International Nickel ($800,000,000) and the Consolidated ($200,000,000) to pay off that debt. Our Dominion deficit alone last year (1935) was $162,000,000. The Noranda ($140,000,000) and the McIntyre ($30,000,000) would little more than wipe out that deficit. It now looks as if the deficit this year (1936) would be well in excess of $100,000,000, and the public has been taught to believe that in our new gold mines is the solution of the problem. In British Columbia we have the Pioneer, Bralorne, Minto, Cariboo Gold Quartz, Island Mountain, Relief Arlington, Vidette, Sheep Creek, Kootenay Belle, and Reno. To pay only four months' deficits, all these mines would have to be turned over in their entirety. We hear a lot about the new finds in the East, but—it will take the Central Patricia, God's Lake, Hard Rock, Little Long Lac, MacLeod-Cockshutt, O'Brien, and Pickle Crow to pay the deficit for the remaining eight months. Canadian metal mines are important, they are very important, but they are a small item compared with the almost astronomical figures now used to represent our debts.

## UNEMPLOYMENT

Much has been written about the effect of mining on unemployment. A pamphlet issued by the Empire Mining Congress in 1927, and circulated throughout the Empire, stated that more than one-quarter of Canada's employees were at work in the mining industry. The effect of this type of publicity on the minds of Canadians who are not mining men can be shown by a couple of examples. Last March, Mr. Justice Manson, of this city, in a widely quoted address, stated:

> "Mining directly and indirectly can take every single, solitary, able-bodied man presently unemployed out of unemployment. I make this statement without the slightest reservation. I repeat again, mining can

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 187)

**What a 'ghost' camp looks like.**
This was one of the main streets of Phoenix, a camp that for some time shipped in excess of 5,000 tons of ore per day. Aside from a couple of old-timers and the occasional gleaner, it is entirely abandoned.

**A 13,000,000-ton monument.**
This is not only a monument to the Grand Forks smelter but to the copper-smelting industry of British Columbia. This Province has had, at different times, smelters at Ladysmith, Crofton, Van Anda, Anyox, Boundary Falls, Greenwood, Grand Forks, and Trail. Due to depletion of tributary mines, all smelters have been shut down and, generally, abandoned The only operating smelter at present is at Trail, and it is not a copper smelter. Such copper ores as remain are shipped to Tacoma in the United States. In the face of depletion on almost every hand, official propaganda is still to the effect that mining will "permanently" solve our chief troubles.

3819119197

give employment to the unemployed. Mining can pull Canada out of the financial morass, the provinces out of financial disaster, and put the municipalities back on their feet".

Last April, Mr. Crerar closed his series of broadcasts with the statement: "Is it too much to say that a production of gold in Canada of from $200,000,000 to $250,000,000 a year would . . . decisively and permanently solve the question of unemployment?" This idea of a permanent supply of ore is one of the achievements of our mining publicity. Mr. Crerar, we are told, proposes to visit every producing mine in Canada. We would suggest that he also visit some of the ghost coal and metal camps in this neighbourhood and he will realize that mining is not a permanent but a wasting asset. Let us suppose, however, that we can make the increase suggested. It would

**The Le Roi mine.**
"There is a bottom to every mine", said Rhodes. The above is a picture of the famous Le Roi mine at Rossland—now abandoned.

take not more than 30,000 men to produce this extra gold. Now, the number of gainfully employed in Canada is about 2,500,000, to which the mining industry contributed in 1935 only 83,000 persons. This is the highest estimate I can find and it is less than four per cent of the total. We are now told that the number on the dole is over 1,000,000, that with dependents the total is 1,800,000, and that the annual drain approximates $200,000,000. Even admitting the existence of the ore and indirect benefits, how can 30,000 jobs put 1,000,000 people to work? Even mining men are idle. Last year Granby closed its big Anyox plant, and there are thousands of coal employees idle in British Columbia alone. If mining men wish to save their industry from confiscatory taxation, they would do well to cease volunteering to save this situation and that situation and warn the Governments of this Dominion very promptly and very plainly that, faced with this huge total of unemployed, our industry can do very little to help and that a solu-

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119198

**Cassidy, Vancouver Island, when in operation.**

Vancouver Island is prolific in ghost coal-mining camps. A list prepared recently included Cassidy, Morden, Lantzville, Douglas, Extension, Wakesiah, Jingle Pot, East Wellington, Chandler, Wellington, Southfield, and South Wellington. Reports detailing very serious conditions in regard to reserves have been withheld by the Geological Survey.

Another thing. At Cassidy, the Granby Company planned a garden village. The location was ideal: level ground under 100 ft. elevation, delightful climate, and a railway connection. When, however, the trees were cut down it was found that there was not enough soil to grow grass. Soil had to be hauled-in to provide the boulevards shown. Gardens were very few. With the exhaustion of the coal, the village was abandoned and the cottages torn down. Gravel and rock instead of soil is a common condition in British Columbia, yet, as in the case of our coal and metal wealth, the facts are not given to the public; a huge population is promised; and waste, extravagance, and deficits continue to gather momentum.

tion will have to be found elsewhere. In this matter, members do not have to accept my opinion. The *Monthly Review* of the Bank of Nova Scotia for July last, after careful study, concludes with the following statement:

> "Important as its contribution to recovery has been, metal mining under the most favourable conditions could only reabsorb directly and indirectly a fraction of the unemployed".

## Annual Mineral Production

Our annual mineral production is now in excess of $300,000,000. Tell a Canadian that this is *WONDERFUL* and he will believe you. If it were only one million and you said it was wonderful, he would still believe you. Why? He is acquainted with the engineering tradition of accuracy and he pays us the compliment of accepting our conclusions without question. Now, while it is very important, there is nothing wonderful about a mineral production of $300,000,000 in a country the size of Canada. The United States has produced twenty times that value in one year; each of five individual States has a higher production, one of them two and a half times as

119199

much; and one American company, the Anaconda, has reported sales of that amount in one year. On a *per capita* basis, this production gives the Canadian only $30 per year. How far will $30 go with a person brought up to believe he is the inheritor of inconceivable wealth? Particularly when, as I will now show, he does not get it.

A Canadian Premier has said: "For every dollar this country has taken out of mines it has probably put in two dollars or perhaps five dollars". While I certainly would not go as far as this, there are so many deductions to be taken from that $30 *per capita* as to make it very doubtful whether or not the mining industry is paying its way. Some of these deductions are:

1. Money sent out of Canada by mine officials and employees. Information is lacking. Remittances by immigrants totalled $23,400,000 in 1929 and in 1935 were only one-third that figure. Remittances by mining employees would only be part of that figure.
2. Supplies imported.
3. Tariffs and subventions on account of the coal industry. Tariffs are about $7,000,000 per year and subventions now total $2,000,000 annually. These also help the Government and the railways.
4. Direct public subscriptions to stock issues and the sums privately spent on mining development.
5. Broker's fees in part.
6. Dividends paid outside Canada. This is estimated at 40 to 45 per cent and in 1934 the total was $20,853,000. There is a credit here for outside money spent in Canada.
7. Government contributions for geological work, trails, roads, etc. A percentage of the deficits on Government railways through mining areas should also be charged to mining.
8. Depletion allowance. Just as a mine plays out, so the mining industry of the Dominion will play out. In many sections, the end has already arrived.
9. *Contra* account. This covers payment for coal, iron, petroleum, etc., imported. Under normal conditions, this will exceed $250,000,000.

## Sources of Mineral Wealth

Our mineral wealth can, in the main, be traced to three sources, the Cordilleran, the Precambrian, and our coal reserves.

### *The Cordilleran*

Expenditures in the British Columbian section of the Cordilleran are controlled mainly by Premiers King and Pattullo, and the opinions of these men in regard to the resources available are important. Premier King is on record as stating that, "No corresponding territory on the face of the earth can compare with British Columbia in the matter of natural resources". Premier Pattullo has said that we have resources in this Province to maintain a population of from 30 to 40 million people. A similar statement was recently made here and in London by Mayor McGeer. I can see no justification for these claims. No criticism can, however, be made of these men

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 187)

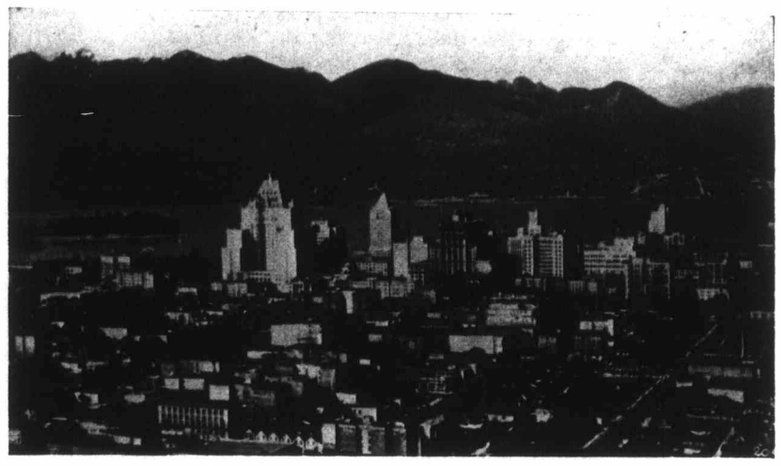
119200

**The Highlands.**
A bright July day in the upper part of the Interior. This condition is typical of huge areas. When engineers demonstrate their ability to settle these areas it will be time to talk about 40,000,000 people for British Columbia.



by mining engineers in regard to these statements, for Premier King's statement is a logical interpretation of the despatch sent him by this Institute and Premier Pattullo's statement is an identical statement already made in local mining circles. With ideas of this sort, extravagance, waste, and patronage can be expected and they have not been lacking. A. E. Foreman, well known McGill graduate and formerly Chief Engineer for the Public Works Department, recently published a 32-page pamphlet listing some of these wastes, and from this list the following typical samples are taken:

> "In 1918, in the Cranbrook district, I saw three good-sized bridges across a ravine within a short distance of each other. In explanation, the Road Superintendent said that a few years before there was a surplus in the District vote which would revert to the Consolidated Revenue Fund if not spent by the end of the fiscal year. The result was that the middle bridge was built, and when we saw it several years later, there was no road leading to it.
>
> "Nearly $500,000 has been spent on roads and bridges in the Bella Coola valley, and a Government report states that 'the majority of the settlers seem to prefer fishing to farming, there being only four farmers in the valley who actually make their living off the land'.
>
> "Last year a bridge was built at Nanaimo. The lumber for forms and scaffolding was supplied by a man who did not have a mill and the price paid was $20.69 per thousand when a fair price at the time was about $11 or $12 per thousand".

It takes a rich country to carry-on on this basis, but I will now show that this country is far from rich. The following summarizes the non-mining resources of the Province.

119201

**The Barrier.**
The Jubilee of Vancouver as a city was celebrated this year (1936), yet the picture shows settlement to be confined to the lowlands which occupy only a very small fraction of the Province. The real Province is the sea of mountains beyond.

*Fisheries.*—Already on a quota basis.

*Timber.*—The good fir will be used up in 15 to 20 years. Some increase in pulp production is possible if demand arises.

*Agriculture.*—Good land is estimated as low as 10,000 square miles. It is so scarce that Sumas lake was drained at a loss to the Government of about $3,000,000. Consider also the North Shore skyline, which is more typical of British Columbia than is the Fraser valley.

*Water Power.*—At minimum flow, we have 2,000,000 h.p. Strategically cheap rates are seldom available.

*Scenery.*—Of the highest grade. Appreciation is handicapped by poor roads with unkempt borders and a policy which has allowed such outstanding features as the Green Timbers and the groves along the Cowichan road to be cut down.

*Population.*—There is a small population brought-up on the inconceivable-wealth doctrine. The outlook of the prodigal son, particularly in the matter of the disposition of natural resources and Government expenditures, therefore prevails. To change this outlook is as difficult as changing a man's religion.

In considering the mining situation, the presence of mining operations in Greenland, Spitzbergen, Central Africa, New Guinea, and above the 14,000-ft. contour in Peru, indicates that the world has already been searched for mineral and our operations in the Great Bear area and Yukon show that the outskirts of Canada have not been overlooked. New finds are, as a rule, few, and, while there is no better prospecting ground than Canada, and no better area in Canada than British Columbia, I wish to emphasize the very great difficulty there is in finding pay ore and the consequent need to operate this country as economically as possible. It is a well known but little realized fact that no major mining area has been discovered in this

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 187)

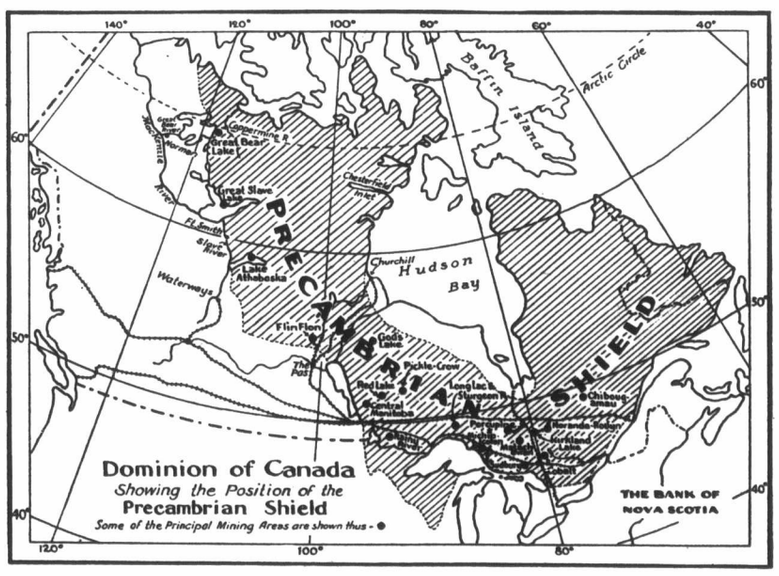
ARCHIVES PUBLIQUES
CANADA

119202



Province for thirty years. Half our present production is from the Sullivan, discovered 42 years ago. We have, fortunately, ore blocked out for years, minor finds are being made and major finds are still possible, but new discoveries are not at a rate to justify the claim being made that "mining is the great basic industry of the future". We are also told that we will produce on the same scale as in the Cordilleran areas in the United States. Without challenging this statement, it is no argument for an appreciably greater mining industry than now exists during periods of normal metal prices. Mineral wealth in the Western States is pretty well blocked out and its limitation is a matter of concern.

### *The Precambrian*

The great misconception held by the average Canadian is that this area is 100 per cent geologically favourable for economic mineralization. This propaganda has been assiduously spread by mining engineers in defiance of the opinion of Dawson, and the most prominent writers in Canada now feature this fiction. The following is from a *Financial Post* editorial:

> "Practically every inch of that 'dead heart' (Precambrian) of Canada is laden with precious metals—with gold, silver, copper—even with iron, nickel, lead, and zinc. Practically every acre will some day be pouring forth its rich flow of wealth for Canada".

**The Precambrian.**

The above map, published by the Bank of Nova Scotia, features this area as uniform. It teaches, what Canadians believe to be the case, that the entire area is geologically favourable for mines. There is no reference in these maps or in the accompanying text of the vital fact that approximately 90 per cent of the Precambrian is unfavourable for mines.

119203

The *Manitoba Free Press*, believing in the announced "broadly uniform" character of the Precambrian, has published a series of articles stating that discoveries already made can be repeated "pretty nearly anywhere and almost everywhere in the mammoth rock formation in Canada."

The idea of mines everywhere was also featured by Mr. A. P. Woollacott in *Maclean's* for March 15th, 1929, when Canadians were told that, "It is a safe bet to build a railway almost anywhere in the Canadian Shield, as such a feature would provide its own tonnage in minerals beside the market value of the ore".

Mr. Grant Dexter, well-known Canadian writer, in the August, 1930, issue of the *Canadian Magazine* dealt with the Precambrian. Referring to a photograph at the head of his article, he said: "This photograph reveals a stretch of virgin territory over which no prospector has ever passed. Yet this view reveals a country mineralized to a degree every bit as great as the far-famed Cobalt area of northern Ontario".

Here, again, I do not wish to be understood as criticizing the publications mentioned. The writers in these papers have simply taken fair interpretations of the statements made by leading mining engineers and mining organizations and have passed them on to the public. The understanding outlined in the quotations is now, we believe, the understanding of the Canadian people, and our plans and expenditures are based on that understanding.

The Precambrian is a long story, but do not forget this: Approximately 90 per cent of that huge area, or half of all Canada, is granite, and granite is not geologically favourable for mines. Dawson pointed that out forty years ago. Much of the remaining 10 per cent has been prospected in detail and found to be barren. An occasional mine may be found in the granite, but the rule is as stated. We are selling the Precambrian as all wool when only 10 per cent is wool and the rest is shoddy—and we are fooling nobody but ourselves.

### *Our Coal Resources*

The estimate of our coal resources, frequently quoted, is that we have 1,234 billion tons in reserve and that this is one-sixth the world's reserve or 35,000 times Canada's annual consumption. This estimate was prepared by Survey officials and is summed up on page one of Memoir 59, entitled *Coal Fields and Coal Resources of Canada*. This estimate is the estimate used by the International Geological Congress in its monograph entitled *Coal Resources of the World*, presented at Toronto in 1913.

Without going into detail in regard to the basis of the estimate, one of the outstanding features is that the English language meaning of a 'reserve' as something available has been wrongfully ignored and fanciful rules adopted. Remotely possible coal in seams one foot thick at 4,000-ft. depth and similar conjectural tonnages were included in the reserves, and all tonnages, actual, probable, and possible, were added together to form the grand and glorious total given above. No engineering or commercial organization would tolerate this procedure when dealing with the reserves of a mine or of a company. There is no reason whatever why the rules for a Dominion should be different.

As a result of this gross breach of the rules, enormous shortages have been recorded. In 1921, when in the coal mining business on Vancouver island, I found evidence of shortage in the Island reserves, stated to be

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 187)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

1119204

5,793 million tons, and reported the matter to Ottawa. Mr. J. D. MacKenzie, then in charge of the Survey here, was sent over to check up, and his report, which appeared in 1923, showed that the actual recoverable coal did not exceed 26,000,000 tons, with some possibilities beyond that figure. A few copies of this report were issued, when the Department officially announced that "it has not been published". Discussion was, therefore, stopped.

The evidence published at the Fuel Commission enquiry at Nanaimo last year indicated only 40,000,000 tons in the Nanaimo and Comox areas, only part of which can be recovered. In other words, every 100-lb. sack of coal listed in our inventory contains less than one pound. This is not optimism: this is short weight. At this Nanaimo enquiry, the question of the MacKenzie report came up when one of the counsel said:

> "My instructions were that this report was not given the stamp of approval of the Government department by which it was issued and that it was withdrawn or suppressed. . . . We have never read it, we have never been able to obtain a copy of it".

Now, the operators who co-operated in the preparation of the MacKenzie report made no criticism. Various explanations for its suppression have been offered but none of them will hold water. As stated, I have a personal interest in the matter and for 13 years I have, as everybody here knows, tried to get this report published, but I have not yet reached first base. You have an opportunity now, in the presence of the Minister, and the President of the Institute, to say whether you wish the MacKenzie report, and later information on the matter, to see the light.

The Survey and Congress figure for the Alberta reserve is 1,075 billion tons, widely featured as 14 per cent of the world's reserve. Dealing with this figure, the Alberta Coal Commission, 1925 (Evans Report), showed gross errors and how they had been made. On page 26 we are told:

> "Many Carboniferous coals are made up of large trees, but the Cretaceous coals originated in smaller types of vegetation which grew along shore lines where conditions were changing very rapidly. Therefore, coal seams in Alberta vary from place to place and in the distance of a few miles in a certain direction may change into an area where there is no coal at all".

This Commission then (page 32) made this recommendation:

> "Since the bulk of the world's coal in the estimates quoted occurs in the United States and Europe, where conditions are better known, and moreover consists of the more uniformly occurring Carboniferous coals, it is hardly possible to expect a similar shrinkage in all the estimates. This Commission, therefore, believes that even on the definition of seams one foot thick and over to a depth of 4,000 feet, the present state of knowledge demands a reduction of the Alberta estimates both as to area and quantity, to at most one-fifth of the 1913 calculations. Even allowing something for similar reductions elsewhere, it will more nearly represent the latest information to say that Alberta probably has 3 per cent and not 14 per cent of the world's coal reserves. Certainly, there appears to be no warrant for continuing to make this statement that Alberta has one-seventh of the known coal deposits".

1119205

This report also cut the reserve to 28 billion tons, a figure that was further cut by the recent Barlow Commission to 20 billion tons. In both these reports, the tonnage figures were compiled by Dr. J. A. Allan. These figures have never been challenged, yet our Survey has ignored both these reports. The figure of 20 billion tons is still large but it is quite conceivable, as, under normal conditions, this tonnage would last the United States only 40 years.

The figure given for Nova Scotia is 9,718 million tons, but evidence of shortage reported in the *Transactions*, and the fact that Canadians pay heavy charges annually to keep this industry going, indicate that a proper estimate would greatly alter these figures.

In 1934, I summarized these objections in an article printed in the *Financial Post*. In this article, I referred to the estimate as a farce. I was replied to by a member who outlined the common argument. He said:

> "The estimate was not intended to establish the reserves recoverable for commercial sale under present-day conditions, but rather to establish the ultimate reserves, taking a very long-range view. The estimate represents scientific data rather than commercial information. The basis used, which was the same for all countries named in the estimate, included all seams of coal over one foot in thickness to a depth of 4,000 feet below the surface. Obviously, therefore, the estimate was not on an existing commercial operating basis. At the same time, when Canada's coal reserves are compared with the reserves of other countries, calculated on the same basis, the proportions are correct".

In regard to this statement, I have the following comments to make:

(1) Reserve tonnages of coal are essentially for commercial purposes and, if they are not for commercial purposes, they should most emphatically not be referred to as reserves. I think I am correct in stating that, almost without exception, Canadians believe that the tonnages given them by the Survey represent coal 100 per cent available under present conditions, and Canada's grandiose plans have been built on that understanding.

(2) I take exception to the use of the word 'scientific'. The repudiation of established rules is not scientific. The habit of taking 'ultimate' (presumably 'probable' and 'possible') reserves and adding them up with 'actual' coal and calling the total a reserve is the antithesis of scientific. When bank managers play that game they are the subject of court action. In this case, also, the sequel has shown, as I have stated, that huge tonnages of this so-called 'ultimate' coal have been shown by drilling and underground work to have no existence at all. It simply isn't there and if it isn't there now how can it be there ultimately?

(3) The rules may have been the same for all countries, but to the credit of some other countries, at least, it should be stated that they ignored these improper rules. We therefore read in reports where tonnages were not reported because they "would largely be guesses and of little value as contributing to our knowledge".

(4) The statement says that, as these reserves were calculated on the same basis, "the proportions are correct". Suppose you all agreed to do a job for $5,000 each and when the work was done you were handed $40 each and told that the proportions were correct. Would you be satisfied? If not,

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 187)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

I 9206

why are you satisfied with this coal estimate? The totals are not correct and, further, the proportions are far from correct. I have shown how some countries ignored the improper rules and I have shown how Alberta, realizing that they were improper, cut the proportion for that Province from 14 per cent to 3 per cent.

(5) The estimate was made by geologists who were utterly impractical and it should be scrapped as far as tonnage estimates are concerned. The reports of MacKenzie and Allan, based on engineering methods, have been accepted without question by the operators, they have been questioned by no one, and they should be recognized.

### THE PROCEDURE IN OTHER COUNTRIES

The facts are obtained in other countries, they are faced in other countries, and other countries for that reason have left Canada far behind. Here are a few examples:

GREAT BRITAIN:

From one single issue of the *Parliamentary Debates*, dated May 21st last, I make the following quotations, in addition to the statement of Winston Churchill, already quoted:

> "I know that the nation will not fail anyone who tells it the truth".
> "It is ridiculous for ministers to come here with a hush-hush policy".

That these statements were made in earnest is shown by the third and following quotation:

> "A detailed survey has been made of the material, operative, and technical resources of the country and they have been examined and tabulated".

SOUTH AFRICA:

In 1926, Sir Robert Kotze, Government Mining Engineer, took stock and announced that Rand production would shortly decline. South Africans investigated the matter, realized the seriousness of the situation, organized, and made plans to offset the loss as much as possible. Fortunately, the price of gold was increased and the crisis passed.

JAPAN:

This country has taken stock and frankly admits shortages. The chapter on mining in its *Year Book* opens with the sentence, "Japan is poor in mineral resources". Yet her production per square mile is nearly ten times that of Canada. Canadians are still featuring that ballyhoo about the 20th Century belonging to Canada. Japan has faced the facts, good and bad, and has stolen the show.

UNITED STATES:

The *Report of the Planning Committee for Mineral Policy*, based on carefully compiled facts, was recently made public. Americans took stock twenty years ago, recognized their mineral shortages, and the result has been that

I 9207

action taken has given them control of as much of the world's mineral resources as has the British Empire. Sir Thomas Holland, dealing with American methods, said, in 1927, "The precision and thoroughness with which the vital question of mineral needs in the United States is being treated gives us a lead which it would be dangerous to disregard".

I have shown that they did not disregard that lead in Great Britain and that they have tabulated their resources. What happened in Great Britain has happened in other countries. Why are we behind? A tabulation of our resources would show that, not only are we short of manganese and a good quality of iron ore, but that our supplies of the vital minerals coal and petroleum are entirely inadequate and huge importations have to be made. A small population only is served with natural gas and waste is on such a scale as to indicate a shortage in the future. Our production of abrasives, asphalt, barite, fluorspar, iron oxides, magnesite, salt, and structural materials is also inadequate for our needs. In the ores of aluminium, antimony, iodine, mercury, molybdenum, strontium, tin, vanadium, in precious stones, and in borax, potash, phosphates, and nitrates, we do not even appear in the production table and we have no important known reserves.

I have therefore advocated that a survey of Canada's mineral wealth be made, and to explain in some detail the character of the inventory I submit the accompanying tabulation of the gold reserves of Canadian mines, taken from a paper by John J. Croston and published by the American Institute.

In view of the fact that this table has been widely quoted and used in Canada, the question naturally arises: Why should we not prepare these inventories ourselves, instead of depending on citizens of other countries for them? If statistics of Canadian mines are sufficiently important for outsiders to tabulate, and for everybody to use, surely they are of sufficient importance to Canadians to justify our going into the matter. Insofar as this table is concerned, Mr. Croston made no attempt to include the gold reserves of the great copper mines now developed (with the sole exception of Noranda) nor were other base-metal mines carrying a gold content included. This extra reserve is appreciable, the Flin Flon alone being good for about 1,800,000 oz. One large mine, the Lake Shore, is deliberately omitted from the list, as the reserve figure for this mine is not available. Numerous other minor properties are also omitted and in some other cases the figures given are in error.

My idea would be to tabulate at least all properties beyond the project stage. Not only would the tonnage, grade, and total metallic content be listed as above, but we would also add a column showing the rate of annual depletion. As probabilities and possibilities are important, often more important than the actual ore blocked out, they would be referred to briefly in a column headed *Remarks*.

Mr. Croston finds that, including the Noranda, Canada has 60,000,000 tons of gold ore available containing 13,823,030 oz. This means an average value of 0.23 oz. per ton. Including the Flin Flon and an estimate for other properties not listed, we have about 18,000,000 oz. gold blocked out which will produce over $600,000,000. Modern methods mean rapid depletion, and at the present rate of depletion all the gold ore now in reserve in Canada will be gone in the short space of five years—a piece of information that is of the greatest value. In some cases, as in the Noranda, the reserves cannot be worked out in five years; in other cases, therefore, the reserves will be

(*) The ore reserves cited are only those quantities published by mining companies in their annual reports and do not represent mine possibilities.—PUBLICATIONS COMMITTEE.

119209

cleaned up in less than that time. It is, of course, true that many mines have been active for a considerable time and have never had reserves ahead for more than a few years. That is a situation, however, that does not last and, later, I will quote opinions that indicate that at the present time new finds are not equalling the depletion. There is also reason to believe that the geologically favourable areas have been prospected to a greater extent than is generally supposed. It is also true that large producers in Canada's main gold area are now down over 4,000 feet, and some over 5,000 feet. This situation should not be overlooked.

The list submitted is the best list that has been prepared, yet it is in error in important particulars. The proposal is that we can and should prepare accurate statistics in regard to our mineral wealth. We cannot understand the engineering complex that glories in exaggeration.

These lists should be compiled for every known mineral. If a certain mineral does not occur in Canada, this fact would be noted. Some of the information needed is now available in the files of the different Departments of Mines, and much of it is still to be gathered. The collection of this information, its presentation in tabloid form, and its periodical revision, is a work that we consider of national importance.

Give the public the facts, and waste and extravagance will be eliminated as they have been in all successful mines and as they are in successful countries. Members might ask Mr. Browning, Chairman of this meeting and General Manager of the Britannia mine, if the Britannia would be running today if he had based his expenditures on ballyhoo instead of carefully ascertained facts. If Britannia had not faced the facts, several hundred men would now be out of work, and if Canada had faced the facts, as has Britannia, unemployment would not now be a serious matter in this Dominion. It is time to get down to something less pleasant, but more effective, then ballyhoo. If we face the facts, we can cut costs, lower taxes, mine marginal ore, stop soil drifting, produce wheat from marginal areas, salvage timber now left to rot, and re-forest our land. All this will help employment.

Do not fear for the Canadian people. In the war days, recruiting was best when the news was bad. Give Canadians facts and fairplay and there will be one economic Vimy after another. I am an optimist and I speak with enthusiasm when I think of what could be done with this country, low-grade as it is, if we would only get rid of this wretched ballyhoo. The important thing in Canada is not whether capitalism, national credit, social credit, or socialism prevails. The important thing is whether or not ballyhoo prevails. If it does, it will, in time, wreck ~~our~~ system. With these stories of great wealth prevalent, there is no incentive to find ways and means. There is no urge for an economic victory so long as Canadians are taught that we can afford to keep men in idleness, to pay two men to do the work of one.

## THE RAILWAYS AND THE MINES

This condition exists to a pronounced degree in our railway organization. Alleged mineral resources have played an important part in our railway policy. In 1902, Sir Wilfrid Laurier, in introducing his bill for a third transcontinental railway, justified the construction of the Grand Trunk Pacific in the following words:

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 187)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119210

"It is established that the railway would place us in communication with the Omineca district, famous for its gold mines which today are idle because it is impossible for the miner to get access to them with his tools and provisions but which, probably, the moment we secure access to them will develop into another Klondike."

I do not know who told Sir Wilfrid this fiction, but we are now planning major projects with little better justification. In regard to one of these, I was recently told, "Oh, So-and-So says it is all right". We need something more definite than this. We need a signed report by competent engineers and time to consider this report before construction begins on any project. We need to look into these matters just as carefully as did the Flin Flon before it spent its millions on the development of that project.

Sir Wilfrid's justification for the National Transcontinental was based on belief in the existence of adequate natural resources, including mineral resources, and was covered by the statement:

"It is established that the region between Winnipeg and Quebec is rich in all those resources that go to make up a fine agricultural and industrial country".

Default was made on both these promises, our second and third railway systems became bankrupt, and in 1922 they were combined and have since been operated by the Government. The only reason for this policy was that we considered that the natural resources along these lines would provide the freight to justify our action. Continued publicity of this sort is what has maintained our railway policy. That this same type of publicity is still current is evident from broadcast No. 6, delivered by the Minister on March 6th last, in which he said:

"If, within the next five years, we achieve in the development of our mineral resources what it is quite possible to achieve, we shall have solved our railway problem".

This statement commits the industry to action on an unprecedented scale. Our National Railway deficits run about $100,000,000 per year. This is made up of operating losses, interest, and depreciation. There are now only four of Mr. Crerar's five seasons remaining. Does anybody believe that we can find and equip mines in that time to wipe out that huge deficit? The result, as I see it, will be further delay in solving this matter and several hundred millions added to our debt.

Let us go into this matter further. In this Province, the Canadian National operates 703 miles from Yellowhead to Prince Rupert, 518 miles from Yellowhead to Vancouver, and 116 miles from Kamloops to Kelowna. There is only an occasional small mine in that entire mileage and no major operation in sight. There is, as yet, no indication of an appreciable increase in coal or metal freights on the Prairies or the adjoining Precambrian. As for Ontario and Quebec, I submit the evidence given here last November.

Mr. J. Y. Murdock said:

"Many promising discoveries have been made in recent years, and some new mines developed, but not in sufficient ratio to counterbalance the ore depletion of existing mines".

119211

Mr. C. G. Williams said:

"It is a very unfortunate fact, but one which, if thoroughly investigated, I believe will be generally accepted, that mining development in Canada is not keeping pace with mine exhaustion".

Mr. G. C. Bateman said:

"The development of new mines is unfortunately not keeping pace with the depletion of old ones".

As for the Maritimes, an appreciable increase in coal freights, should it materialize, will be offset by heavy subventions. Where, therefore, is the greatly increased freight to come from?

The idea that reduction in taxation will encourage mine finding is good but not practical, as a perusal of the budget addresses of Messrs. Dunning and Hart will show. Mr. Dunning is now quoted as saying that there will be a further increase in taxation. We are told of the great success of the T. & N.O. This is more ballyhoo, as this road is a financial failure and now owes the Ontario Government well over $30,000,000. If this railway, stated to be well managed, through the richest part of the Precambrian, cannot pay, except indirectly, what chance is there for other railways through poorer sections? The stories of how the mining industry supplies the railways with a third of its freight are also misleading. It is revenue that comes first, not tonnage. In 1934, the railways received $230,324,942 in freight receipts and $12,320,584 in express, or a total of $242,654,526. We have the statement of Mr. Crerar in the broadcast referred to that "producing mines alone, not including junior properties, paid our railways over $12,000,000 in freight and express in 1934". Suppose, in order to include items left out, that we double the figure, it would mean that the revenue from mining freight would only represent 10 per cent of the total. There is no definite information available, but I should say that the mining freight handled by the Canadian National supplies not more than $10,000,000 to that railway. How can any increase in sight wipe out that huge deficit?

## NEW MANAGEMENT SHOULD TAKE STOCK

I wish here to emphasize the importance of this matter to younger men. To these I say: You will soon be taking over the management of this Dominion. You will take over a debt referred to as aggregating about ten thousand million dollars. This debt has been carefully listed and the bondholders will not let you forget it. You will be expected to pay this debt and to pay it with interest, and, though you did not contract it, you are being told that you are "dishonest and unsportsmanlike" if you repudiate. To pay this debt you are referred to a heritage of unlimited wealth of natural resources. "The future," you are told, "will attest the truth of this claim". My suggestion is that you back me up and have the truth of this claim attested before you accept responsibility for the debt. If the goods are not on the shelves, you have a perfect right to tell the world that you will be responsible for only a limited amount of debt. Let us, therefore, have these assets listed with the same detail as the liabilities. The Provincial Government added ten millions to our debt last year and, though you may not know it, this addition, like the original debt, is for your account. It is also planned that, for the additions the Dominion Government is making, you,

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 187)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119212

not we, will do the paying. Now is the time to check over in detail these assets, before those responsible pass off the scene. If there is any way in which I can be of service to you, I hope you will let me know.

In the earliest days, Moses not only numbered his people but he listed the land, the grain, and even the goats, and of these one-tenth was set aside. When ballyhoo dominated, the Jews went broke and entered captivity. Thousands of years later we do not seem to have learned this lesson. There should be no time lost in numbering the resources of this country, in making an honest appraisal, and in acquainting the shareholders of this Dominion with the unvarnished facts. The new national policy here advocated, therefore, is nothing more than the age-old policy of Moses—that we take stock of our resources.

I am called, by leading men in the industry, a pessimist, a knocker, a crepehanger, and many other things. If it will serve any useful purpose, I am prepared to admit that I am beyond the pale. The issue before you is not my shortcomings, but whether fact or fiction is to prevail in Canada. Do you, or do you not, want an accurate inventory of our mineral wealth? That is the question that we can settle here and now.

Ottawa,
May 26, 1928.

Mr. R. F. McWilliams,
Box 61,
Rockwood, Ont.

Dear Mr. McWilliams:

I have your letter of 22rd May and have read it with very greatest interest, and indeed, with some satisfaction. Frankly, my views on the whole situation are not out of accord with your own at all. At the same time, we must all remember that whatever a Government may do may be upset if the people immediately defeat the Government and bring in others to power. Under Democracy some regard must be had to the ability to do the right thing.

There are too many men in public life, though, who make no attempt to do any thinking, but follow the easy course of trying to find out what the public want and then do that so as to keep popular with the public, although they may know it to be absolutely wrong.

I note with very great sympathy what you say as to the unfavourable position our farmers are in as respects the better organized labour of our Railways. Right there is a problem--one of the biggest which this or any country faces now.

With kindest regards,

Yours very truly,

AM/E.

Arthur Meighen.

Senator Arthur Meighen 1926

Dear Sir = I wonder if you will pardon an old retired farmer his presuntion in writing to offer a suggestion or two.

I understand President Beatty of the C. P. R. is to present to the Senate his case in favor of the amalgation of our two railroads this week.

In March 1933 - the conservatives had a committee meeting in Guelph at which Hon. Hugh Guthrie our member for South Wellington was present. In discussing different questions he told us of the enormous deficit which the C. P. R.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 187)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

was going to have to face that year or rather the Government on their behalf & I said. Don't you think the best thing to do would be to turn it over to the C.P.R. & let them opperate it under certain restrictions & regulations.? To which he promptly replied most certainly I do but no party dare go to the country with a policy of that of that Kind. Angus Dunbar a young lawyer spoke up & said I think you are wrong Hugh, that might have been the case a few years ago but I believe the vast majority of the people realize now that somthing has got to be done or the C.N.R. is going to bankrupt the country & Hugh said I wish I could believe it we would soon end our R.R. trouble. Conditions have been getting worse ever since & it seems hard to believe that men whom we elect to Parliament (& think we are electing statesmen) should be so utterly devoid of the responsibilty of their position & so lacking in courage as to be afraid to express their opinions & vote for what they Knew would be best for the country.

How long do you expect the farmers of the country to remain loyal when while working 16 hrs a day themselves they are being taxed off their farms to help pay R.R. men more in one year for an 8 hour day than they make in 3.

To cite you one example of what looks to me like absolute folly in their business management.

In 34 a cousin & his wife & my wife & I were going out to the coast & as none of us were young had we been able to get reasonable rates would have much preferred going by train than motoring.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 187)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

They were giving 2¢ a mile rates good for 45 days but we wanted to be away 4 mos as some of my family live in Vancouver & we wanted to make several side trips to visit friends & places of interest on the way.
The trains were running anyhow & what possible difference could it make to their profit whether we came back in 45 days or 45 weeks so long as they had our money & they would have had some profit on our meals & berths, as it was they lost the whole thing. Was it good business.? For goodness sake put that brilliant brain of yours to work on the probalem & help solve it someway befor the R. R. puts the country any further in the red. Remember to whom much is given much will be expected & unless you & those of like ability can solve this tremendous debt probalem of our country the future certainly won't be very bright for those who come after us. Yours truly,
R. J. McC. Williams

2090-1
119221

MEMORANDUM

Senate Railway Inquiry

1. Only five weeks intervene before July 1st. To complete the inquiry in June a very definite programme will be essential. Moreover, I have had word that I must be before the Privy Council on July 4th, which means that I must sail not later than June 25th. The Committee will no doubt desire that I should arrange for the attendance of any witnesses who cannot be examined before I leave.

2. Of course, if the Committee desired to explore all the collateral issues which might be raised the inquiry might be indefinitely prolonged. If, on the other hand, it were satisfied to confine itself to a full examination of what appears to be the main issue, I see no reason why it should not be able to complete its work during the next four weeks.

3. This main issue appears to be whether, balancing the economies to be obtained by united management against its possible social disadvantages, unification is to be preferred to any alternative course when the economies to be obtained from each course open are balanced against its disadvantages.

4. On this main issue the principal remaining question of fact seems to be whether, within about five years, economies of the order of $50,000,000 - $75,000,000 can be secured by unified management even if line abandonments are confined within narrow limits.

5. To answer this question no doubt involves decisions on several politico-social problems, but in arriving at these the evidence of witnesses is not likely to be of much assistance to members of the Committee. There are, however, abundant sources of evidence upon them, and it would be useful to have determined which, if any, of these sources the Committee desires to tap and how far afield it desires to go in considering what I have described as the main question of fact.

6. On this question we shall next week have the evidence of some seven or eight officers of the Canadian Pacific Railway in support of the estimate that by an arrangement for unified management economies substantially exceeding $50,000,000 annually would be made available for division between the owners of the Canadian National and the Canadian Pacific. No doubt the Committee will desire to hear what officers of the Canadian National have to say about the soundness of this estimate. I should imagine that evidence of this character would be likely to occupy about two weeks.

7. I doubt if outside the two railways and the staff of the Board of Railway Commissioners there are witnesses with such an intimate technical knowledge of the Canadian railways situation as to make their evidence on the question of the amount of possible economies of very great value, and it would probably be objectionable to invite officers of the Board of Railway

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 187)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119222

Commissioners to express to the Committee opinions on points upon which the views of officers of the two railways were in disagreement.

8. On the question of possible economies it may be thought desirable to have evidence dealing with the experience in Great Britain, France and the United States. With regard to Great Britain the Committee will have before it certain documentary material. The United States situation has been glanced at from time to time and that in France has been mentioned. Mr. Hungerford and Sir Edward Beatty are in agreement that no detailed examination of the experience in other countries is likely to be of much value.

9. Representations have been made to members of the Committee and to me that the wages of railway workers generally have in the last twenty-five or thirty years increased more than in proportion to those of workers in other occupations requiring equal technical qualifications. What information I have been able to obtain on the point indicates that the question is a very confused and difficult one which if entered upon would involve a complicated and prolonged inquiry. As it is not raised by the railway managements I doubt if the Committee could usefully attack it at least at this stage.

10. Quite apart from it and in relation to the other questions raised Mr. A. R. Mosher, the President of the All-Canadian Congress of Labour, has asked for an opportunity to submit a memorandum, either before June 4th or after June 21st, and Mr. W. L. Best, Vice-President of the National Legislative Representative Brotherhood of Locomotive Firemen and Enginemen, has requested that representatives of the railway unions should be heard. Independently of any question as to the level of railway wages the Committee will probably desire to hear labour representatives, unless the members are unanimous in considering that proper protection of individual railway workers can be afforded and must be an essential feature of any action which Parliament might take.

11. Mr. D. M. LeBourdais has asked for an opportunity for representatives of the National Railway League to submit their views. I have asked Mr. LeBourdais to let me have a memorandum indicating the nature of the submission the League desires to make.

12. Apart from railway witnesses the Committee may desire to hear the views of bankers as to the existing and prospective financial position of both the country and the railways, of shippers and representatives of commercial organizations as to the money value, in terms of taxes, of securing continued competition between the two railways, and of more or less academic students of the railway situation, of whom there are several, both in and outside of universities, who might be called upon.

13. I suggest the desirability in the circumstances of an early decision on these points relating to the scope of the inquiry.

Ottawa, May 28th, 1938.

## PROPOSAL ABANDON LINES AND SERVICES A GRAVE SITUATION

**(AN EDITORIAL)**

As the Senate Committee inquiry into Canada's so-called railway problem proceeds, a great deal of interest is being aroused in the question. The matter is necessarily an involved one and there are many aspects, national welfare, economics, etc.

One of the main arguments put forth by the proponents of co-ordination or amalgamation is that of economy. There is a wise economy, and also false. If one is to be consistent and economy is a major issue, then it is obvious that that phase must be followed to its ultimate conclusion.

On this basis let us consider just what this means insofar as the Maritime Provinces are concerned. To begin with the Canadian Pacific has two trains, one daily train and one daily except Saturday, out of Montreal to Saint John, and two in the opposite direction, as has also the Canadian National. Now the thing to do would be to take off a train from each railway in each direction, the morning train out of Montreal, say, to be over the Canadian Pacific and the evening train over the Canadian National, and vice versa.

In the matter of freight, the shortest haul to seaboard from Montreal is to Portland, and, economy being the watchword, then it is wasteful to haul it all the way to Saint John or Halifax. So, to Portland it should go, particularly as the National System has a direct line to Portland.

* * * * *

The Atlantic Region with the Atlantic Division of the Canadian Pacific could be made into a mere General Superintendent's division, seeing that there would be only two through passenger trains from Montreal and two in the opposite direction, and a very greatly curtailed freight movement, the bulk of it going to Portland.

It would be the natural thing, therefore, to close the railway shops at Moncton and McAdam. Modern locomotives are very hardy and the obvious thing to do would be to send engines requiring general repairs to Montreal where there are two large shops, one belonging to each

Daily Times, Moncton, N. B. May 30,1938

railway. One of these will have to be closed, and repairs in the East will be confined to what are termed running repairs done in roundhouses.

The General Offices in Moncton would also be abolished, and the General Superintendent could be located either at Saint John or Moncton with a much smaller staff.

There would be no need of duplicate freight or passenger staffs, so one of these could also be done away with.

* * * * *

With the greatly diminished train operations the coal consumption would be greatly curtailed and this, of course, would cut the coal purchases in the Maritimes by about half. The Canadian National at the present time purchases coal to the value of $6,700,000 in the Maritimes, and this lessened coal consumption would, of course, greatly curtail the output of the mines. Much smaller purchases of materials and supplies would also follow with a greatly lessened amount of money expended in this part of Canada.

These are only a few of the factors which would be involved and they would have their reaction all along the line, affecting every individual. Real estate values would be lowered as there would be a much lessened number of employees; tax returns would be considerably curtailed, and taken by and large there would be a big financial loss to the Maritimes.

If economy is not to be the sole guide but national development and the use of our own natural resources is to be taken into consideration, then the whole case for co-ordination or amalgamation falls to the ground.

One of the main remedies with regard to the railways is the elimination of highway competition as Australia has done. This can be brought about by a heavy license fee, the same as was done by the Antipodean Government. Trucks and busses should be confined to routes not served by the railways and they should be eliminated where they parallel railway service.

* * * * *

The Canadian Pacific in its submission to the Senate Committee of proposed abandonment of lines would scrap 3,258 miles of Canadian National Lines and only 1,705 miles of its own road, certainly a most prepostrous proposal. The Diamond Jct.—Moncton section of the National Transcontinental Railway, one of the stretches the Canadian Pacific would like to see abandoned was cited by an official of that road as not being of any great value. Now, let us see! The Transcontinental is a line possessing the most even grades in Canada and affords an artery for most expeditious handling of traffic between Upper Canada and the Maritimes.

The C.P.R. contention that it is little used is absolutely refuted by figures furnished by the Canadian National officials of the daily average (including Sundays) of carloads of revenue freight handled in the months from November, 1937, to April, 1938, inclusive, and embracing the Chipman, Grand Falls and Glendyne sub-divisions. The daily average of eastbound loads on the former ranged from 177.3 to 113 and in a westbound direction from 134.1 to 92.3, while on the second named sub-division the daily average eastbound loads were from 171.2 to 113.6 and westbound from 136.4 to 94.9. On the Glendyne sub-

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 187)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

division the daily average eastbound figures ranged from 170.8 to 111.1, while the westbound averages were from 145.7 to 88.9. All of these serve to illustrate that freight traffic density over the N.T.R. is very substantial and lends ample justification to the argument that this line should be maintained in operation as a unit of the Canadian National.

* * * * *

Were it to be imagined for a moment that abandonment of the N.T.R. line would ensue and the plan of the Canadian Pacific to share the Maritimes-Upper Canada traffic become effective, it would mean not only a great loss of traffic to the Canadian National, but higher operating costs over the C.P.R. route through the State of Maine due to the heavy grades on that road. Whereas now, for instance, for every two trains operated over the N.T.R., the C.P.R. would have to operate three, and then again part of the revenue would be diverted to railwaymen of another country. With the present average of traffic handled by the Canadian Pacific, it would be physically impossible for that road also to efficiently take care of that handled over the N.T.R. and retain the export and import business for Canadian ports. Then again there is still another angle, that of having a direct line through Canadian territory in case of war. With the Canadian Pacific operating 201 miles of line in Maine, this would prevent the use of that route in event of a conflict. The entire case for abandonment of the National Transcontinental is absolutely unjustifiable and any attempt to give action to such a proposal would in our opinion, cause a veritable revolution among the people of this country.

* * * * *

While grave possibilities surround such abandonment proposals as that involving the National Transcontinental, the situation would become even more grave if the plan was carried out. What would happen to the fine Moncton shops and regional general offices? Abandoning of trackage is only one phase of the concerted attack to unscramble the Canadian National System. Dismantling of Moncton shops and decimination of the Atlantic Region headquarters here would inevitably follow if the large-scale abandonment of lines in the East were permitted. Then what would become of Moncton, the progressive city of the Maritimes? With the backlog of its prosperity removed, it would in a short time become a decadent centre. The population would necessarily have to remove to other places and the resultant effect would be the closing out on a large scale of its business establishments. To permit any destructive move that would result in chaos at a time when stability is needed most must be opposed by a solid front with every means in the people's power. The time to act is now and local public bodies should give leadership in a crusade that will forcibly serve notice upon those in whose hands lie the destiny of this country that wholesale abandonment of Canadian National lines and other co-related services will not be tolerated.

Mr. R. H. Mode,
President, Sturgeon Bridge Gold Mines,
Room 112, 23 Scott St.,
Toronto, Ont.

Dear Mr. Mode:

I have your letter of 26th May, which I have read with interest and satisfaction.

Mr. Beatty did make a splendid presentation. He has not, of course, stated the terms upon which the Canadian Pacific would be ready to come to a unification. He could not be expected to do so, because the Committee to whom he would state them has no power whatever to negotiate on behalf of the Canadian National.

As respects abandonment of lines, there are some, doubtless, which could be abandoned, but I think I can assure you there will be none abandoned unreasonably, and that the first concern in all such matters should be fair treatment of settlers affected.

Without abandonment at all, however, the contention of the C. P.,--and very ably supported it is--is that tremendous savings can be made by the utilization of one duplicate line as a main traffic line, and utilizing the other as a local line, necessitating a much lower standard of maintenance. In fact, only about 10% of total savings depend on abandonment anyway.

Yours very truly,

AM/E.

Arthur Meighen.

HEAD OFFICE [redacted]

TORONTO, CANADA

OFFICE OF PRESIDENT

MAY 26, 1938.

Rt. Hon. Arthur Meighen,
Parliament Buildings,
OTTAWA, Ontario.

Dear Mr. Meighen:-

I wish to commend the position you are taking in the investigation now going on before the Senate into the problem connected with our railway situation in Canada. So many factors have to be considered in connection with the solution we would like to reach, that the problem is a difficult one on that account, rather than from a strict business settlement of the difficulties confronting us.

I judge from the newspaper reports that you are endeavoring to bring forward a business solution, rather than one influenced by some of these outside facts. I thought Beatty made a fine presentation of his subject. I may be cordial to him as an old friend, for we were University classmates, but I felt that he advanced the clarifying of the situation by the way he presented his material. I say this in spite of the fact that I do not personally agree with his solution, for I think he is asking the C.N.R. to give up too much in favour of his own system.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 187)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

D.19229

I would like to ask for a greater consideration of the public who must be harmed by the dropping of railway lines as seems inevitable. Beatty asked that the C.N.R. line from Sudbury to Port Arthur should be abandoned and the C.P.R. line retained. As a frequent traveler over these lines for many years and having business along them I think the future is with the C.N.R. line and not with the C.P.R. line and that the C.P.R. line should be the one abandoned. There is no prospect at the present of future mines along it and its timber resources are long since depleted. They are largely depleted along the C.N.R. line but a vast mineral Empire is arising along the C.N.R. from Gogama to Nipigon.

The tragedy of the people living along lines which might be abandoned is illustrated by the appeal presented to your committee by a man from Hornepayne. I think no such tragedy should be permitted.

My contention is that if either one of these stretches of lines were abandoned that a motor highway should take its place to promote the business of the communities now established along the railway lines. I think it is up to all parties concerned to protect the people who have established themselves in full reliance on railway facilities. In the case I have just cited, if the C.P.R. line were abandoned, the Transcontinental highway could come through the same territory affording facilities to people otherwise deprived of the same.

I am,

Yours truly,

R. H. Moore.

Ottawa,
June 2, 1938.

Dear Mr. Reid:

I just received your letter of 1st with enclosure, for which I thank you.

You ask what members of the Senate are Directors, officers, bondholders or stockholders of the C. P. R. I am sure I cannot tell you. As far as I know, there is no Senator a Director of the Company or an officer, and I do not know of any way of finding out what Senators, if any, are bondholders or stockholders, except to go around and ask them, and I do not think you would expect me to do that. One thing I can assure you of, and that is that I have not five cents interest in the bonds or stocks of the C. P. R. directly or indirectly, or any other way.

The time has come in this country when we have either to use a lot of courage and commonsense or go broke, and when we get to that stage, big matters should be discussed solely on their merits. Having sat in this Committee for weeks, I can assure you this is a tremendous problem, and all we can hope to do is to aid somewhat in its solution.

Yours very truly,

Mr. R. A. Reid,
905 Kent Bldg.,
156 Yonge St.,
Toronto, Ont.

Dear Senator Meighen:

I wonder if you can have a list compiled for me of all those members of the Senate who are either bondholders, stockholders or directors or officers of the C.P.R. I understand there are quite a number of those patriots and disinterested, unbiased and unprejudiced Senators, who are in favour of amalgamation, and also of being such shareholders & at the same time. They are like the fellows who suddenly give

ARCHIVES PUBLIQUES
CANADA

119232

up all such connections on becoming either Cabinet Ministers or Prime Ministers, and then, after leaving those posts, are found back on the old stamping grounds once more as shareholders, directors &c. No wonder we are breeding a race of morons in this country who are simple enough to believe all this is quite legitimate. I must maintain my views.

I have been asked to contribute a few columns of "plums" at Beatty's proposals ~~and~~ ~~about~~ I have put together about 40 preliminary pages of manuscript. I would like the information I ask to fill in a place I have left for that matter.

I am informed that Senator Beaubien is a large shareholder and also a director. Is that a fact?

I was up at the Hydro Inquiry for a short time today and heard Mr Lyon belabour Sir Herbert Holt. He said that Holt had boasted that he smashed two governments at Ottawa and moved smash another in Ontario if necessary to gain his ends. He did not mention which governments, but I asked him afterwards to what he referred and he said Rings government in 1920 because he had given Beauharnois a charter in opposition to the Montreal Light Heat & Power Co.

119236

By-election South Oxford, April 16th, 1934.

Woodstock Sentinel Review, March 22nd, 1934.

Report of Honourable W. D. Euler's speech at Ingersoll, March 21st, 1934.

"In my opinion the railways cannot continue unless they get together," declared Hon. W. D. Euler, M.P., former Minister of National Revenue, speaking last evening at a rally here in the interests of A. S. Rennie, Liberal candidate in the South Oxford by-election. "We have said in the past competition is the life of trade. Well, I don't believe it. Competition in many instances, and especially in the operation of railways, is death. My own belief is that our railways are wasting money by competition with each other. Sir Henry Thornton was authority for the statement that if they were amalgamated it would save 75 to 100 million dollars a year. I do not believe in handing the Canadian National to the C. P. R., because we would still have the interest to pay, but if you had amalgamation under public ownership there would be some possibility of getting out of the hole ultimately."

Woodstock Sentinel Review

August 21st, 1924.

Premier King and Members of his Cabinet at Woodstock,

August 20th, 1924.

Hon. James Murdock on - UNEMPLOYMENT.

"The question might be asked: "Why are there so many unemployed in Canada?" said the Minister. "The truth is that many of the unemployed want to know first what they are going to get for their services rather than go to work, and get, as in the old days, what it was possible to get. The national resources of farm, forest, mine, and sea exist for those who want to work under what those natural resources can afford to pay, I have no sympathy with many unemployed, but the department is at the service of the unemployed, and I may say, the employed, too. My advice to the unemployed is "Get to work at a price the industry or undertaking can afford to pay you." The question asked, "What will I get? only results in the employer not being able to pay the price set by the workman's conditions,"

"Let the unemployed realize that we expect them to get out and hustle as the rest of the citizens have had to do," said the Hon. Mr. Murdock, to the accompaniment of loud hand-clapping.

S. J. Hungerford, Esq.,
President,
Canadian National Railways,
Montreal, P.Q.

Dear Mr. Hungerford,-

The proposals and views of the Canadian Pacific have now been pretty completely laid before the Senate Committee, and the next steps indicated in my letter to you of April 26th now fall to be taken. I have no doubt that the Committee will desire to hear your views on the various points that have been the subject of discussion, and that Mr. Fairweather's evidence will also be useful. There may be other officers of the Canadian National who would be in a position to assist the Committee by their comments.

I suppose I may communicate with Mr. Rand with regard to the details of the arrangements to be made and to discuss with him when it would be most convenient for you to attend.

Yours very truly,

BER

I. C. Rand, Esq., K.C.,
Commission Counsel,
Canadian National Railways,
Montreal, Que.

Dear Mr. Rand:-

No doubt the Committee may desire to hear Mr. Hungerford and Mr. Fairweather not only on the question of the savings that could be effected by unification but also on some of such general questions as have been raised, most of which I think are set out with others in the memorandum covered in my letter to Mr. Hungerford of April 26th. There may also, however, be other officers of the Canadian National who could throw light on the situation and I should be glad to go into this question with you are any time that might be convenient.

As I said to you last Thursday I am inclined to think the evidence on the question of unification saving might properly be concentrated on the soundness or otherwise of the assumptions which underlie the Canadian Pacific estimates. These, as I understand the position, are that under a management not directly responsible to the Minister of Transport, (1) C.P.R.

NOTE—THE FOREGOING COPY IS SENT FOR YOUR INFORMATION

unit costs might properly be applied, (2) train and car miles might be eliminated as set out in Exhibit 49 (B & C), (3) the joint coal bill could be reduced by the percentages assumed, and (4) substantial savings could be effected by the joint use of all station and terminal facilities.

As I have already indicated in the correspondence we have had on the subject, the soundness of Mr. Fairweather's $56,000,000 estimate as submitted to the Duff Commission will also require to be discussed.

I should like to have an opportunity of discussing the whole situation with you as long in advance of the re-assembly of the Committee as possible, but I suppose you will hardly be ready for this before Saturday or Monday. Perhaps in the meantime you could let me have a memorandum giving the names of the witnesses whom you think the Committee might advantageously hear and the topics to which the evidence of each might be directed. We could then when we meet discuss the order in which it would be most convenient to call them.

Yours very truly,

BER

June 7th, 1938

Rt. Hon. Arthur Meighen,
Senator,
Parliament Bldgs.,
OTTAWA

Dear Sir:-

The Governments, both Federal and Provincial, City Council and Board of Police Commissioners should investigate and stop the establishment of a Fruit Terminal and Farmer market in the ditch at the Foot of Simcoe and Front Streets - The most CONGESTED freight area in the City of Toronto.

How can we permit an increase of a thousand farmer vehicles and two thousand fruit vehicles daily to frequent that area through the only street leading to it, Simcoe Street, on top of the present congested traffic existing there? Front Street is continuously interrupted with both railways switching over it, so that we cannot expect relief from there.

Why not establish the market in the logical location on Fleet Street, east of Yonge Street? Of course, this will not permit the splitting of the juicy mellon between the three major fruit property holding firms who are pushing this deal. They have already obtained control of the new market, if built at the foot of Simcoe Street, through their extensive lobbying.

Why should Canadian National Funds, which is public money, build a market and hand it over to a few individuals for private exploitation.

Why should not the market be built by both railways, and conducted by them on the proper location, where facilities can be provided for the future needs of the City, and avoid individual profiteering and mortgaging the future market with a half million dollar unnecessary outlay on the top of its own cost of erection?

Yours truly,

JN:IM

## *Letters to the Editor*

60 Dundas Street,
Belleville, Ont.,
June 3rd., 1938

Editor, The Ontario Intelligencer,
Dear Sir,—

What would you think of a farmer who would go in debt for a tractor and then hire his neighbor's tractor and let his own lie idle and then find fault because he could not get along? Or what would you think of a Canadian Taxpayer; part owner in the C.N.R. who finds fault with that $42,000,000 deficit and won't use his own road?

To my mind they are six in one and a half dozen in the other.

If the owners of the C.N.R. wish to see the railway problem settled all they have got to do is to ship and travel C.N.R.

# Patronize Your Own Railway Says Writer

Speaking of the much debated railroad question the Duff Commission advised co-operation while knowing that it was impossible to co-operate and compete at the same time and be satisfactory to both railways.

Sir E. W. Beatty is satisfied with the pool trains between Montreal and Toronto. And why shouldn't he be satisfied? The C.N.R. had the C.P.R. beat a half-hour on the time and in addition was getting about 90 per cent. of the passenger traffic.

But this brings up the question whether it was a square deal for the owners of the C.N.R. It goes without question that if anyone did business for a private company like that they would not hold their jobs very long. The fact is that there's not enough traffic on Canadian railways to support a competitive railway structure. And that is the reason why the government should do the operating. This means that if there were any profits they would remain in Canada. If operated by a private company—and they failed . . . well, what happened when the other private companies failed?

**Could Never Be Monopoly**

Some are afraid of a monopoly if the two roads were operated under one head. How could there be such a monopoly when there are the highways and waterways to compete with? If the C.P.R. were absorbed by the C.N.R. there would be a certain amount of scrapping of some really unnecessary duplication and thereby some money would be saved. This would lead to a lowering of the rates. Eventually it would mean that business would come back from the trucks and busses and some of those railroaders who had been laid off would have to be taken on again.

The railroaders might just as well get it into their heads first as last that there has got to be some scrapping done.

**C.P.R. Shareholders Would Get Money**

On the other hand if the private company had control there would be wholesale scrapping and Sir E. W. Beatty would not lack much of saving his $75,000,000.00. But what good would that do us when around 88 cents of every dollar of his profits would go out of the country to the shareholders of the C.P.R.?

On the other hand if operated by the government and in the interests of the taxpayers there would be a portion of that $75,000,000.00 saved and every cent of it would remain in Canada.

**Country Can't Afford Two Rail Systems**

Everyone agrees that the country cannot stand the enormous expense of operating the two systems in competition and it is also true that everyone agrees that there has got to be something done about it.

Sir E. W. Beatty has a solution but the opponents of unification are opposed to his plans, but fail to come forward with a solution of their own. I have no quarrel with Mr. Beatty for doing everything possible for the interests of the C.P.R. shareholders and his own job, or with the C.P.R. shareholders for shipping and travelling C.P.R. They are advised to do that and are educated as to the best methods to get business for their own company. It was even the case at one time that they were offered cash prizes for the best suggestions for getting business.

To my mind, if the officials of the C.N.R. would use the same methods in operating the C.N.R. as this—I should say our competitors—the whole thing would come to a head in a short time.

How long under those conditions could the C.P.R. hold out?

**Some Timely Questions**

Suppose the president of the C.N.R. would say to the taxpayers:

"It is up to you to settle the railway problem.

"You are not looking after your own interests if you don't travel and ship C.N.R.

"There are about 76 C.N.R. shareholders to every 1 C.P.R. shareholder living in Canada. You are responsible for the debt so why don't you get busy and settle this question once and for all?" Don't think for a minute that if Sir E. W. Beatty had that kind of an argument that he wouldn't use it.

**Post Office A Monopoly Yet Suits Everybody**

As to a monopoly: The best institution in the world is a monopoly. There is no duplication and no competition and scarcely any politics and suits everybody—namely the Post Office. No two mail carriers go over the same route. There are hundreds of rural routes that don't pay but they accommodate and are necessary.

The same applies to some railway branch lines.

We have an example here in this section—a double track from here to Toronto that connects with 26 villages and a single track that does the same.

As I see it we have no use for the third line: The branch line from Trenton to Picton, I understand, doesn't pay but is very necessary.

One way for the Senate Committee to find out why the C.N.R. is not getting a square deal is to guarantee the workers that they won't lose their jobs if they tell what they know and they will find out plenty.

To my mind the proper thing to do is to find out what Sir E. W. Beatty wants done and then not do it.

D. S. LaRUE.

## MAY BUILD $30,000 APARTMENT HOUSE

An item in the Building Record reads that Mr. James H. Armstrong of Trenton will retain an architect to prepare plans for the construction of a new $30,000 apartment house to be erected, the building to contain either ten or twelve suites. In conversation with The Sun, Mr. Armstrong verified this statement but stated no defin-

Ottawa,
June 15, 1938.

Mr. F. C. Harrington,
Woodstock, Ont.

Dear Mr. Harrington:

I have your letter of 14th June.

It would seem to me that the Railways would reduce their tariff to get this business if they could do so and not lose money.

Of course, I note your argument also as to the free use of our canals, and the consequent injurious competition to Railways. There is a lot in this argument, but Canadians have historically followed the policy of free waterways, however expensive the construction, and I cannot see much movement to change that policy.

I have taken careful note of your representations.

Yours very truly,

AM/E.

Arthur Meighen.

The Honorable Senator Arthur Meighen,
Ottawa, Ontario.

Dear Sir:

We have read with deep interest the reports in the various newspapers regarding the evidence before the Senate Railway Committee and are taking the liberty of presenting to you some facts concerning the freight tariffs on Bituminous Coal in effect on the Canadian National Railway.

Until a few years ago practically all of the coal used in Central and Western Ontario entered Canada via the Niagara Frontier or passed through Toledo, Ohio and Detroit, Michigan, entering Ontario via Windsor or Sarnia, to be delivered to destination by the Canadian National or Canadian Pacific Railways. A large percentage of this tonnage is now carried via water to various docks on the lakes and the Welland Canal, in fact an official of the Canadian National Railway stated that he believed at least 800,000 tons of freight on coal was lost annually because of the indirect competition of the Railway with the Welland Canal. With a reasonable tonnage toll on the Welland Canal and possibly a slight lowering of the freight rate from the Niagara Frontier to Hamilton, Toronto and intermediate points, a very large percentage of this business would be recovered by the Railroads.

The Canadian National Railway owns a controlling interest in the Detroit, Toledo and Shore Line Railway, which operates between Toledo and Detroit, the Grand Trunk Railway operating from Detroit to Port Huron is part of the Canadian National Railway system, therefore, the Canadian National haul coal over their own Railways from Toledo, Ohio to destination in Ontario.

Woodstock, Ont.,

Continued...Page 2

The tonnage carried in this way is now comparatively small because a large percentage of the coal is carried by water and placed on docks, to be furthered to destination by truck or rail. If the freight rate from Toledo,Ohio to Ontario destinations was reduced .30¢ per ton, the Shore Line, Grand Trunk and Canadian National Railways would receive a very large increase of profitable business. This is the approximate concession granted on shipments of coal entering Ontario by water.

The Canadian National Railway haul coal from the docks at Montreal to Toronto, about 350 miles, for $1.00 per ton; from Chatham to Toronto, 190 miles, for .66¢ per ton; from Point Edward to Toronto, about 200 miles, for .85¢ per ton; but from Detroit to the Stratford, Kitchener, Galt and Guelph district, about 200 miles, the rate is $1.40 per ton and to Woodstock, 150 miles from Detroit, $1.30 per ton.

The discrimination of the Canadian National Railway is keenly felt by Industries in certain districts, as can be seen by the above rates and will continue to be until these Cities are given a fair and competitive rate.

In the hope that this information may prove of value to you, we are,

Yours very truly,

# Canada's Mining Industry

Globe & Mail Toronto

## Capital and Payrolls Have More Than Doubled Since 1919—Production Increase Far Greater Than in Any Other Line—Now 25 Per Cent of National Total—Railway Problem of Pressing Import

April 19 | 38

(By W. H. STUART.)

Part 3.

Capital employed in the mining industry has increased from half a million dollars in 1919 to one billion dollars in 1937. The national wealth of Canada has swung like a pendulum between $25 billion and $32 billion. No other nation has maintained such balance. The great human drama has moved on.

The mining industry has so interlocked itself with other industries as to prompt the national confidence and inspiration which have been, in periods of stress, the nation's weapons of defense.

The payroll of the mining industry was $68 millions in 1919 and $148 millions in 1937. The payroll of the steam railways was $246 millions in 1919 and $190 millions in 1937. There were 53,000 employees in the mining industry in 1919, and 117,000 in 1937. There were 185,000 employees in the steam railways in 1919, and 132,000 in 1937. From these figures will blaze forth the despondent position of the steam railways, and one is inclined to meditate on what would have befallen the rail companies but for the unparalleled growth of the mining industry in all its ramifications.

**Supports an Army.**

It has been ascertained that for every employee in the mining industry there are four dependents. Each employee supports indirectly ten people out of his earnings, and contributes directly and indirectly toward the maintenance of twenty-five people. The industry can be depended upon to continue its contribution toward the welfare of labor and toward all those who derive benefit from it. It is rich in creative faculties, and is ever at the service of the nation. There is no disunity in the mining industry, and the high standards of duty fall in line with the best thought. Labor of the industry was a factor in the success of the Allied arms in the Great War. Its attitude, responding as it does to the principles enunciated by Provincial Prime Minister Mitchell Hepburn in his crusade for law and order, is a great tribute to that spirit of humanity which directs the welfare of the mining industry.

At the risk of partial repetition, let us emphasize the production of the major metallics from 1919 to 1937, in Canadian funds. Gold was $1,072,024,283; silver, $208,260,149; nickel, $424,986,409; copper, $455,869,941; lead $216,703,168; zinc, $146,123,714, and platinum, $36,468,457.

**Mining Increase Greatest.**

In studying the production of six of the major industries from 1919 to 1937, the mining industry stands out as a beacon of even greater promise for the future:

| | | |
|---|---|---|
| Field crops— | | |
| Dec'd from | $1,537,169,000 to | $553,823,000 |
| Mining— | | |
| Inc'd from | 176,686,390 to | 452,054,000 |
| Construction contracts— | | |
| Inc'd from | 190,028,000 to | 224,056,700 |
| Electrical energy— | | |
| Inc'd from | 47,933,490 to | 147,000,000 |
| Forestry (primary products)— | | |
| Dec'd from | 200,000,000 to | 150,000,000 |
| Pulp and paper mill products— | | |
| Inc'd from | 137,903,871 to | 210,000,000 |
| Fisheries— | | |
| Dec'd from | 56,508,479 to | 40,000,000 |

Of the total production of these six industries for the individual years of 1919 and 1937, the following production percentages apply:

| | Total 1919 production $2,347,000,000 | Total 1937 production $1,777,000,000 |
|---|---|---|
| | 1919 | 1937 |
| Field crops | 66% | 31% |
| Mining | 7% | 25% |
| Construction contracts | 8% | 13% |
| Electrical energy, central stations | 2% | 8% |
| Forestry, primary products | 9% | 8% |
| Pulp and paper mill products | 6% | 13% |
| Fisheries | 2% | 2% |
| | 100% | 100% |

**Railway Problem Pressing.**

One cannot analyze the railway problem in the light of reason and reality without becoming conscious that it is a problem of foremost concern. The creative faculties of our leaders have not, as yet, found a remedy for the desperate diseases which have overtaken both the Canadian Pacific and Canadian National. The former is private enterprise, and it is a system interwoven in the development and glory of Canada. And the same can be said also of the Canadian National. The interest of all industries in the transportation problem of Canada reflects the remorseless growth of need for further taxation.

Both transportation systems are managed by men of exceptional ability and probity. Why is it that hostility appears when an honest effort is made to find a practical way out of the rail morass? Is it that the effort is steeped in the spirit of selfish and narrow loyalty to one system, rather than in the spirit of patriotism to our country, Canada? It is the great paradox of life that humankind, as represented by statesmen and politicians and executives, although made of the same substance, seems incapable of mixing respective ingredients for the common weal.

The Duff Commission undertook the thankless and gigantic task of reporting on the transportation imbroglio of Canada. Credit must not be withheld from Right Hon. R. B. Bennett for vision in selecting the most competent and forceful personnel that ever presided over the deliberations of Canadian problems. It made a constructive report, but economists, so called and in reality, presented such a variety of false and conflicting pictures that the seeds of the Commission's understanding were not allowed to germinate. The problem is now before the Senate, and the writer feels the outcome will be along useful lines, even if that outcome brings to the Senate some chill winds.

It is the writer's opinion that, had Sir Henry Thornton lived and had he been permitted to carry on, he would today be teamed up with Sir Edward Beatty, and the railway problem would be well on the way to solution. There is no doubt that Mr. S. J. Hungerford, transportation genius and a kindly executive, knows what could and should be done to accomplish the greatest of all national needs. But, here again, the keystone put in place by political parties must not be disturbed. The solution of the railway problem will pass on to the younger men. It is reported that two of the C.N.R. Vice-Presidents at Montreal will, in two or three years' time, bring in fearless leadership, animated by ideals as will ensure achievement.

One of the Vice-Presidents in question has risen to his present position through the exact channels that made Lord Shaughnessy such a successful railway leader—executive, purchasing and stores departments, where knowledge of the most vital nature is acquired. He has had jurisdiction over purchases exceeding one billion dollars in value, and yet not one suggestion has ever been made reflecting in any way on his honesty and integrity. The other Vice-President has the legal background of Sir Edward Beatty, combined with the knowledge that comes from actual contact with all forms of traffic. The problem is not confined to that of saving the Canadian National Railways. The Canadian Pacific, because of the company's relation to Canada's credit, must be saved from injury. Even an able and practical Minister of Transport is unable to do much without the support of Parliament and the country.

Dear Sir:

Mr. Meighen has directed me to acknowledge your telegram of 16th instant, sent on behalf of the citizens of Redditt and district. He has made careful note of your representations and same will be kept in mind when the report of the Special Railway Committee of the Senate is in course of preparation.

Yours very truly,

E. Secretary to Senator Meighen.

Dear Sirs

I duly received your letter of 15th which I have read with care. It is a reasonable and fair outline of the position of those you represent.

I cannot anticipate the report of the Committee, but I would think it altogether unlikely that the report will recommend any abandonment which would adversely affect you.

Yours very truly,

AM/E.

Arthur Meighen.

# C.N.R. System Federation No. 11

WESTERN REGION

May 13, 1938.

Right Hon. Arthur Meighen,
Ottawa, Ontario.

Dear Sir:

At a meeting of the Executive Board of the Canadian National Railways System Federation, Western Region, which represents the employees of the different crafts from Port Arthur to Vancouver, it was decided to write to members of the Senate Committee who are now considering the Unification or Amalgamation of the Canadian Pacific and Canadian National Railways. Representing men of different opinions, we are not approaching this from any political angle, but as Railroad men believing that unification or amalgamation would be detrimental to Canada as a whole; and not viewing this in a dog in the manger spirit in opposition to other forms of travel, as we believe that these different methods of transportation, bus, truck, steam ship and airplane play a valuable part in the transportation field of our Country, but our appeal to you is not on a narrow sectional view, but in the sincere belief that in opposing unification we are actuated by the desire of giving the greatest benefits to the majority of the people of Canada.

May we first draw to your attention the part that the Railroad has taken in the development of the Country, in carrying settlers to our vast areas, and in return taking from these settled places products of the soil to be sent by rail to sea board thence transported to the four corners of the world. Also let us consider the wonderful expansion of the mining industry which in many cases would have been impossible without the territory being opened up by our Railroads.

As Railroad workers we are anxious to give facts to prove that the C.N.R. is doing its share in upbuilding the Dominion and to repudiate the insinuation that is being broadcast that the C.N. is a liability or that unification or amalgamation of the two roads would be of benefit. In reference to the liability we would respectfully draw attention to fact that in the worst years of depression the C.N.R. paid all operating expenses, with a surplus towards its interest charges, paying interest on debts which were incurred before the Canadian National was formed; our critics fail to tell that the C.N.R. is the largest Railroad on this Continent, that it serves 90% of the people of Canada, and that about ¼ of the people would be without Railway facilities if it wasn't for the C.N.R.

D.119257

In the Bill now before the Senate certain lines have been mentioned to be abandoned. This if carried out would leave many localities without Railway service. We contend that in addition to causing unemployment this would be terrible hardship for many who in good faith have pioneered and settled in these districts, who have given their best in time, talent and money to develop these parts; rail abandonment would make many of them homeless, making their years of toil wasted, and again turning their cultivated places back into a wilderness.

Another factor that is so often forgotten is the effect that unification would have on the unemployment situation of our Country outside of the Railroad worker who would be displaced. We refer to the amount of work given to employees in firms who supply the material required on our Railway and in our Main Shops in the different parts of the Country. We find that $62,500,000.00 was spent by the C.N.R. in 1937 with Canadian firms, this being spread amongst approximately 10,000 different manufacturers, and we believe this should give food for thought to those who think that anything that would disrupt or interfere with our present Railroad Systems is only a question for the employees directly affected, but to pause and consider how much work is created by the purchase of goods valued at $62,500,000. and to visualize how the lowering of this purchasing power would adversely affect the prosperity of the Dominion.

So on behalf of the C.N.R. System Federation #11 Western Region employees we respectfully suggest that you will carefully consider these facts, and we would ask that your efforts will be to oppose unification of the C.P.R. and the C.N.R. convinced as we are this would be a backward step for the whole Dominion.

Yours sincerely,
H.R. Hosfield
Sec'y-Treas.
Western Region Fed.

Personal

Dear Arthur:

Thanks very much for sending me the material enclosed in your letter of 17th. I have read it carefully. The labour situation is the root of very much of the trouble, but we simply cannot cover everything in this investigation. We have been sitting forenoon, afternoon and night, but are quite a distance from being through yet, and then we have our report. I am quite certain no supporter of the Government on the Committee would have agreed to investigate the wages end anyway, because nothing is clearer than that they are looking out carefully to protect the Government from any adverse publicity.

I am afraid I will have to put off the visit to Buckingham until after you get back. We are going to be driven day and night until at least the Convention is over. If I find I can go between the 8th and the 12th, I will advise you, but that is the only time there is any hope.

Yours very truly,

Arthur H. Campbell, Esq.,
Board of Trade Bldg.,
Montreal, Que.

Rt. Hon. Arthur Meighen,
The Senate,
Ottawa, Ont.

Dear Arthur:

I am enclosing copy of a letter which was sent to the Special Committee of the Senate on Railways by the Lumber Association of the Montreal Board of Trade, and the working conditions of the railroad employees is what I have been complaining about, as well as the enormous increase in their wages compared with those paid by other industries.

In the past, competition, inventions or substitutions have prevented most wages from getting out of line. For instance, lathers had a very strong union and put up their wages to a high figure and then limited the amount of lath which they would lay in a day, so now there is practically no demand for lath because the fibre board manufactured from pulp has taken the place of lath on account of the cost being much cheaper, although in my opinion, it is not as good.

As I mentioned in a previous letter, on account of our long distances in Canada and sparse population, it is absolutely necessary that we have reasonable freight rates, especially covering articles that are exported, and the only way that the railroad labour unions can be checked in their demands is to have competition from trucks, boats and airplanes, so I am in hopes that the Senate will again defeat Howe's bill as they did last year.

In regards to freight rates on lumber, during the time I have been in business the rates in Eastern Canada have been increased from 60% to 100%. See J. S. Gillies' letters for the facts confirming this statement.

Is there any chance of you making a trip to Buckingham during the first part of July? I am leaving on the 12th for Ogunquit, Maine and will be there until the 30th.

Yours sincerely,

Arthur H. Campbell

THE MONTREAL LUMBER ASSOCIATION

May 20th,
1938

The Right Honourable George P. Graham, P.C.,
and
The Honourable C. P. Beaubien, K.C.,
Joint Chairmen,
Special Committee of the Senate on Railways,
OTTAWA, Ont.

Dear Sirs:

The cost of transportation constitutes a vital factor in nearly every industry. This is particularly true in the lumber business and prompts the members of this Association to suggest to your Committee, which is presently investigating the railway problem, that it enquire into the Executive salaries, rates of wages and especially the hours of work. The attached table shows an enormous increase over a period of years in the cost of salaries and wages of railway employees.

It is felt by the members of this Association that while the scale of wages and salaries, etc., in the railway business has been developed under unusual conditions, your Committee should, nevertheless, make a thorough examination into this major factor in the Canadian railway operation.

Yours very truly,

Secretary.

II 9262

This is not the time to discuss in detail the working rules of railroads, but in a general way I will give just one or two examples. For instance, a certain railroad with whose operating policy I am quite familiar found some branch lines unprofitable, particularly as to passenger traffic, and found that by substituting for the existing passenger trains a Diesel-powered single car those lines could be turned from a loss to a profit. Arrangements were being made to take that action when the Railroad Brotherhoods stepped in and said: "Certainly. Of course. That is fine. But you must recognize that a train is a train, and you must have on your new, single Diesel car a full crew, consisting of an engineer, a fireman, a conductor and two brakemen - a complement of five." That made the difference between a profit and continuation of the loss, so all of the passenger service was abandoned, and whereas one or maybe two men could have had jobs, five for each train were thrown out of jobs.

As a second illustration, in the earlier days of railroading one hundred miles was considered a fair day's run for freight service, and it was. But with increasingly improved rolling stock and motive power, roadbeds and the like, higher speed became possible, and the railroads naturally were able to run much further than one hundred miles for an average day. But one hundred miles continues to be the basis for the payment of one day's compensation to railroad employees. For a day's work a train crew may receive two or three days' pay, and the public foots the bill. It seems to me that in looking for a remedy for the railroads these working rules of unions might be examined and yet, even among the railroads, I find no inclination to raise that point and to seek the very real and very considerable economies which are possible in that direction.

Dear Mr. Ferguson:

I have your letter of 17th June and have looked over the proposals made by Mr. Taylor, which you were good enough to enclose.

We have learned a lot about the Railway situation, and I especially have been close to it for many years, but I must say it would take a real Railway operating man to come to an intelligent conclusion as to the merits of Mr. Taylor's proposals. Unless they appeal to a Railway operating man, it would be quite a waste of time for anyone else to seek to put them into effect. Further, it would seem to me that they would require many, many thousands of separate contracts, which would be exceedingly difficult to obtain and to enforce.

Yours very truly,

Arthur Meighen.

June 17, 1938

The Right Honourable Arthur Meighen, P.C., K.C.
The Senate
Ottawa

Dear Senator Meighen,

I have the honour to submit to you a Scheme developed by Mr. W.H. Taylor of this city, to enable The Railways to recover to a large extent, traffic now being lost to them, owing to Motor Truck competition.

I may say that I submitted this plan to the Canadian National and Canadian Pacific Railways early in the year 1935 and also to the Honourable R.J. Manion, the then Minister of Railways.

The Railways, however, informed me at that time that they did not think the scheme feasible of adoption under existing conditions.

The Honourable Doctor Manion by letter of February 13th, 1935, informed me that he did not think any general revision of existing rates would be possible except after full inquiry and exhaustive hearings at which the Railways and Shippers could be heard, and suggested that in the event of such inquiry it would be quite in order for my client to present his views.

In view of the fact that there is now a Bill before the Senate dealing with the question of Transport, I have taken the liberty of bringing Mr. Taylor's Scheme to your attention, and would be pleased to give you any further particulars of the Plan should you so desire.

I am enclosing Memorandum of Mr. Taylor's Plan which explains its working, and may add that I have also forwarded the Memorandum of Mr. Taylor's Plan to the Honourable C.D. Howe, Minister of Transport.

I have the honour to be,

Sir,

Your obedient servant,

J. M. Ferguson

SCHEME BY W. H. TAYLOR TO ENABLE THE RAILWAYS TO RECOVER TRAFFIC NOW BEING LOST TO THEM OWING TO MOTOR TRUCK COMPETITION.

---

My scheme is based on agreements to be entered into between shippers and the railways, whereby the shippers agree to give to the railways, a proportion, say at least 75%, of their short haul freight, and in return the railways are to give the shippers a reduced rate on long haul shipments consigned to points outside of the provinces contiguous to points of shipment, the reduction to be progressively greater to the more distant provinces.

Although I have treated each provice as a zone, other zones may be adopted.

In the submission of my proposal, I desire to say I have considered each provice as a separate nation, each striving to extend trade with the others, but owing to the largeness of the country, circumvented in its efforts by long distance, necessitating high freight charges; consequently, the manufacturers and producers of each provice have ignored the possibilities of trade with the distant provinces and find themselves in the keenest of competition for the markets of each contiguous province, and to accomplish their purpose have employed the motor truck as a cheaper means of transportation, regardless of the fact that the railways must be maintained. I realize this object may be obtained in three ways, namely,

By competition, which is ruinous.
By legislation, which may cause political strife, or,
By agreement, which ninety per cent of the people will support.

Needless to say, I have chosen the latter and in addition to the elimination of truck competition and the circumventing of future competition from this source, these proposals, I believe will accomplish the following:-

a - Secure the support of all provincial organizations from coast to coast, political or otherwise, who will consider the advantages to be derived from their own geographical, economical, or political point of view, if my scheme is put into operation.

b - Remove in a measure the "Maritime Righters" grievances.

c - Increase interprovincial trade, especially, with the more distant provinces.

d - Enable the railways, by the control of trucks, to charge profitable rates should it be found (after control is secured) that present truck rates are unprofitable.

e - Periodically and progressively, increase all railway and truck rates on "short hauls" and decrease rail rates on "long hauls" and thus decentralize large populations by an exodus of manufacturers from high taxation in the large cities. If shippers from distant provinces invade the local manufacturer's market, he will not desire to continue to pay high taxes, this, in turn will bring about a building boom, which will provide a means to absorb immigrants and eliminate slums.

In concluding my scheme, which is divided into nine parts and the illustrations thereof, it must be borne in mind, that the figures herein given are merely illustrative of the scheme and are subject to change to meet the actual revenue figures derived from the shipment of freight to each province named and the percentage of freight rate reductions must be sufficient to induce the shippers to contract with the railways. And it is obvious that the scheme will exercise a strong pressure on the reluctant shipper. The fear of surplus products from distant provinces being dumped into his market without his having the option to take advantage of the reduced freight rates to extend his business to other distant provinces would at least be sufficient to change his mind.

As the freight originating in Saskatchewan and Alberta consists principally of wheat, I have also in mind a plan to enable the railways to compete more successfully with water carriers.

I realize that if this scheme is approved and accepted by

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119266

the railways, that, with slight alterations as regards zones, it would be applicable to the United States' railways and to other railways in large countries and would be immense value.

In presenting these proposals, I would expect the railways to deal justly with me, and request that they be considered as confidential, as, in the event that they are not adopted, I have other uses to which I may apply them, or the principles involved. As the publishing of these proposals, would undoubtedly destroy the usefulness of the scheme, not only to me, but to the railways as well, if they should at any time desire to put these proposals into practice, I repeat, that I would request that they be considered as confidential.

In anticipation of favorable consideration and reasonable compensation , if this scheme should be approved by the railways.

Respectfully yours,

Montreal, 9th January, 1938. Walter H. Taylor

Following is to be seen the working out of my scheme for the various provinces:

PRINCE EDWARD ISLAND

It is proposed that the shippers of all freight "originated" in the Province of Prince Edward Island and carried by either one of the two Canadian Railway Systems, namely the C.N.R. or the C.P.R. shall be given the following percentage of freight rate reductions on all "long hauls" to the Provinces below named and in considerations of such freight rate reductions (as examples shown below) the shippers of the province of Prince Edward Island agree to give the railways at least seventy-five per cent (75%) of all "short haul" freights now being carried by moter trucks and destined to points "within" the Province of P.E.I. or the contiguous province (Nova Scotia). It is further to be agreed that the railways shall have the option to transport by rail or motor vehicle.

The following freight rate reductions are suggested:-

| | |
|---|---|
| From P.E.I. to Quebec | 10% |
| From P.E.I. to Ontario | 12% |
| From P.E.I. to Manitoba | 15% |
| From P.E.I. to Sask. | 18% |
| From P.E.I. to Alberta | 20% |
| From P.E.I. to B.C. | 25% |

Partly manufactured goods to be considered "originated"

Above figures are illustrative.

NOVA SCOTIA

Is proposed that the shippers of all freight "originated" in the province of Nova Scotia, and carried by either one of the two Canadian Railways Systems, namely the C.P.R. or C.N.R. shall be given the following percentage of freight rate reductions on all "long hauls" to the provinces below named and in consideration of such freight rate reductions (as example shown below) the shippers of the province of Nova Scotia agree to give the above named Railways a preference of at least seventy-five per cent (75%) of all "short haul" freights now being carried by Motor Trucks and destined to points "within" the province of Nova Scotia, or the contiguous provinces ( N.B. and P.E.I.). It is further to be agreed that the Railways have the option to transport by rail or motor vehicle.

The following freight rate reductions are suggested:-

| | |
|---|---|
| From Nova Scotia to Quebec | 10% |
| " " " " Ontario | 12% |
| " " " " Manitoba | 15% |

QUEBEC

It is proposed that the shippers of freight "originated" in the Province of Quebec and carried by either one of the two Canadian Railway Systems, namely the C.P.R. or C,N.R. shall be given the following percentage of freight rate reductions on all "long hauls" to the provinces below named and in consideration of such freight rate reductions (as example shown below) the shippers of the province of Quebec agree to give the above named railways a preference of at least seventy-five per cent (75%) of all "short haul" freights now being carried by moter trucks and delivered to points "within" the Province of Quebec or the contiguous provinces (Ontario and New Brunswick). It is further to be afreed that the railways will have the option to transport by rail or moter vehicle.

The following freight rate reductions are proposed:-

BRITISH COLUMBIA

It is proposed that the shippers of all freight "originated" in the province of British Colunbia" and carried by either one of the two Canadian Railway Systems, namely the C.P.R. or C.N.R. shall be given the following percentage of freight rate reductions on all "long hauls" to the provinces below named, and in consideration of such freight rate reductions (as example shown below) the shippers of the province British Columbia agree to give the above named Railways a preference of at least seventy-five per cent (75%) of all "short Haul" freights now being carried by motor trucks and destined to points "within" the province of British Columbia or the contiguous protince of Alberta. It is further to be agreed that the Railways will have the option to transport by Rail or Motor Vehicle.

The following freight rate reductions are proposed:-

| | | | |
|---|---|---|---|
| From British Columbia | to | Sask. | 10% |
| " " " | " | Manitoba | 12% |
| " " " | " | Ontario | 15% |
| " " " | " | Quebec | 15% |
| " " " | " | N.B. | 18% |
| " " " | " | N.S. | 20% |
| " " " | " | P.E.I. | 25% |

Above figures are illustrative.

Partly manufactured goods to be considered "originated".

I will further illustrate my scheme as regards two provices - the far western province (British Columbia) and a central province (Ontario).

BRITISH COLUMBIA

We will now assume for illustration that in a given time twenty million dollars has been derived from the carriage of freight "originated" in the province of British Columbia and carried by "Rail and Motor Vehicle Transportation" and that 80% of the twenty millions has been derived from freight destined to points "within" British Columbia or the contiguous province (Alberta) and 20% destined to points in other provinces.

$20.000.000 X 80% - $16.000,000

Of this sum the Railway earned 70%
and the Motor Trucks 30%

$16,000,000 X 70% - $11,200,000
$16,000,000 X 30% - 4,800,000
$16,000,000

leaving a balance of $4,000,000 that has been derived from "rail freight" and destined to other provinces in the following proportions:

From British Columbia to Sask. 25% or $1,000,000

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES

| | | | | | | |
|---|---|---|---|---|---|---|
| From British Columbia | to | Man. | 20% | or | 800,000 |
| " " " | " | Ont. | 15% | " | 600,000 |
| " " " | " | Que. | 15% | " | 600,000 |
| " " " | " | N.B. | 12% | " | 480,000 |
| " " " | " | N.S. | 10% | " | 400,000 |
| " " " | " | P.E.I. | 3% | " | 120,000 |
| | | | | | $4,000,000 |

Applying the proposed reductions to the proportions of revenue derived from freight shipped to other provinces.

| | | | | | |
|---|---|---|---|---|---|
| From B.C. | to | Sask. | $1,000,000 | X 10% | $100,000 |
| " " | " | Man. | 800,000 | X 12% | 96,000 |
| " " | " | Ont. | 600,000 | X 15% | 90,000 |
| " " | " | Que. | 600,000 | X 15% | 90,000 |
| " " | " | N.B. | 480,000 | X 18% | 86,000 |
| " " | " | N.S. | 400,000 | X 20% | 80,000 |
| " " | " | P.E.I. | 120,000 | X 25% | 30,000 |
| | | | $4,000,000 | | $572,000 |

This shows a gain for the shippers of British Columbia of $572,400, and a loss to the railways, but this loss is offset by the railways, gain on the short haul from freight destined to points "within" British Columbia or contiguous province (Alberta). Thus:

| | | | | |
|---|---|---|---|---|
| $16,000,000 | X 70% | - | $11,200,000 | Railways |
| 16,000,000 | X 30% | - | 4,800,000 | Trucks |
| 4,800,000 | X 75% | - | 3,600,000 | |

$3,600,000 - $572,400 - $3,027,600 gain for the Railways in gross revenue, the result of the proposed aggeement of 75% of short hauls being now done by Motor Truck transportation.

The Railways will have additional gains from increased traffic, and competition in interprovincial markets due to reduced freight rates,

## ONTARIO

I have illustrated how my scheme should work out in the province of British Columbia. I will now further illustrate (by assumed figures) the application of my scheme to a central province having two contiguous boundaries or provinces. And we will assume that, in a given time, one hundred million dollars has been derived from the carriage of freight originated in the province of Ontario, and carried by both rail and motor vehicle transportation and that 85% of the one hundred millions has been derived from freight destined to points within the province of Ontario or the contiguous provinces (Manitoba and Quebec) and 15% destined to points in other provinces.

Thus:

| | | | |
|---|---|---|---|
| $100,000,000, | X 85% | - | $85,000,000 |
| of this sum the Railways earned | | | 60% |
| and the Motor Trucks | | | 40% |
| $85,000,000 | X 60% | - | $51,000,000 |
| " | X 40% | - | $34,000,000 |
| | | | $85,000,000 |

leaving a balance of $15,000,000 that has been derived from rail freight destined to points in other provinces, in the following proportions:-

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

| | | | | | |
|---|---|---|---|---|---|
| From Ontario to | Sask. | 20% | or | $3,000,000 |
| " " " | Alberta | 18% | " | 2,700,000 |
| " " " | B.C. | 12% | " | 1,800,000 |
| " " " | N.B. | 25% | " | 3,750,000 |
| " " " | NS. | 20% | " | 3,000,000 |
| " " " | P.E.I. | 5% | " | 750,000 |
| | | | | $15,000,000 |

Applying the proposed reduction to the proportions of revenue derived from freight shipped to other provinces (as shown above)

| | | | | | |
|---|---|---|---|---|---|
| From Ontario to | Sask. | $3,000,000 | X | 10% | = $300,000 |
| " " " | Alta. | 2,700,000 | X | 15% | = 405,000 |
| " " " | B.C. | 1,800,000 | X | 20% | = 360,000 |
| " " " | N.B. | 3,750,000 | X | 10% | = 375,000 |
| " " " | N.S. | 3,000,000 | X | 12% | = 360,000 |
| " " " | P.E.I. | 750,000 | X | 15% | = 112,000 |
| | | $15,000,000 | | | $1,912,000 |

This conditional gift by the Railways to the shippers of Ontario is offset by the railways gain on "short haul" freights now being hauled by motor trucks and destined to points "within" the pr province of Ontario, "or" the contiguous provinces (Manitoba and Quebec), Thus:

| | | | |
|---|---|---|---|
| $34,000,000 | X | 75% | = $25,000,000 |
| $25,000,000 | — | 1,912,000 | $23,088,000 |

gain for the Railways in Gross Revenue.

Chicago, Ill.

Dear Mr. Hastey:

I have your letter of 17th. This Railway Committee has been sitting forenoon, afternoon and night, and has been compelled to devote its time to getting evidence in the fullest practical way on the big phases of the Railway problem, namely, whether further important savings can be made by co-operation or whether such savings can and should be made by unification. We have not been able to go into details of management at all, and, as the Session is near its end, I am sure we will never be able to do so.

Yours very truly,

AM/E.

Arthur Meighen.

Hon. Arthur Meighen,
The Senate,
Ottawa Ont. Canada.

Dear Senator Meighen:

I understand that the officers of the Canadian National Railway are now appearing before the Railway Committee and am wondering if you have been able to obtain the information I requested sometime ago, namely: How much W. Ky. coal has been purchased each month during the year 1937 and 1938, what mine it was purchased from and what price was paid at the mine and over what Railway it was shipped before reaching the Canadian National Railway?

I shall appreciate hearing from you at your earliest convenience.

Yours very truly,

RPH/N.

AT OTTAWA, Ont., June 22nd, 1938.

Dear Senator,

Mr. A. R. Mosher's quotation of Mr. J. M. Keynes in the brief read to the Committee last night is not an unfair representation of the position taken by Mr. Keynes in recent years - especially in his book, "Employment Interest and Money". I should qualify this remark that this is as I understand Mr. Keynes. I doubt whether anybody quite understands him.

Mr. Keynes has moved quite definitely in this direction of late years, but is never consistent. You may have heard of Lord Baldwin's dictum that, at a meeting of economists, there are as many opinions as there are economists present, and an extra opinion if Mr. Keynes is one of them.

On the whole I think that Mr. Mosher would have little difficulty in producing a quotation from Mr. Keynes to back up almost any opinion.

Yours sincerely,

P. C. Armstrong

O t t a w a,
June 8, 1938.

Mr. Jas. Norris,
Toronto, Ont.

Dear Sir:

I have your letter of 7th.

The National Railways Directorate manage or are supposed to manage the operations of the Company through their General Manager. I am told, however, that since the passing of the new Act two years ago, there has been virtual direction of all matters of policy by the Minister of Railways.

I quite agree with you that waste should be avoided, but unless a new system is set up, I don't think it is going to be avoided.

Yours very truly,

AM/E. Arthur Meighen.

Don't know who this is, as there was no address.

The Rt. Hon. Arthur Meighen, P.C.,
The Senate,
Ottawa, Ont.

My dear Senator,-

I enclose for what it may be worth a memorandum along the lines of our conversation yesterday. I spoke also to Senator Dandurand and to the two Chairmen, to whom I am sending copies of the memorandum. It was arranged between Senator Dandurand and Senator Beaubien that the memorandum should be used only if both Chairmen agreed to its being so.

Yours very truly,

O. M. Biggar

## SENATE COMMITTEE ON THE RAILWAY SITUATION

(All numerical references are to the proceedings of the Committee so far as presently available).

1. The "extremely serious railway condition and financial burden consequent thereto" which are referred to in the resolution constituting the Committee presumably refer to the difference between the net income of the Canadian National Railway before interest and the interest charge on its securities in the hands of the public. It is to that that the attention of the Committee has been chiefly directed.

2. The successive differences between the National Railway's net income and the interest due to the public since 1923 have amounted in the aggregate to approximately $470,000,000 (Ex. 17, p.56), the average annual difference having been about $50,000,000 during the last six years, and the amount for 1937 having been about $42,000,000. There is at least a possibility that the difference in 1938 may substantially exceed $50,000,000 (Ex. 90, p.1184), although a large crop might result in a diminution even of last year's figure.

3. The only suggestions for meeting the situation which have emerged are those looking to a reduction of the joint expenses of the National and Pacific Railways (1) by continued voluntary co-operation between them, (2) by compelling the abandonment of services by one or other, or (3) by providing for the joint private management of both together.

4. Action along any of these lines is opposed on the ground that it will tend to reduce the amount of employment in the railway service, and will adversely affect the market for the materials required for that service. It is suggested that one of the best ways to deal with unemployment is to provide occupation through organizations such as the National and Pacific Railway Companies, which have in the past (1929) given employment to as many as 183,770 people, (Ex. 25, p.73, and Ex. 26, p.83), and in 1936 employed 131,263 (Ibid.). The adoption of this principle would, of course, lead to a report that nothing should be done along any of the lines suggested.

5. Even, however, if this ground for inaction is rejected, there are two others which may require consideration.

6. The first of these depends upon the general policy of the country with respect to transport facilities, and particularly upon a comparison of the amount of public money invested in railway transportation and in water transportation respectively. In the former the total investment appears to be nearly $1813,000,000 as against approximately $1306,000,000 in the latter (Ex. 55, p.830). It is common knowledge that the direct annual returns in money from the expenditure on water transportation failures are small and the indirect effect

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119280

on the national economy of that expenditure may be considered to be less important dollar for dollar than the investment in railway transportation. If, therefore, the figure of the total expenditure on this form of transportation were taken to be correct and interest were calculated at the same rate both upon it and upon the $1300,000,000 requiring to be taken in consideration in connection with the National Railways (Ex. 95), the importance of an annual charge on the budget representing the interest on the latter sum may be thought to have been over-emphasized.

7. The second possible reason for inaction depends upon the prospects for the future. The Chairman and President of the Pacific company said (p.564) that his company could carry on even if there were no change in the relations between it and the National company. On his last appearance before the Committee, however, he was inclined to disclaim confidence in any conjecture as to future traffic conditions, and the Committee may feel it advisable to consider the possibility of his being wrong about the future stability of his company, and what, if he were wrong, would be the consequences to Canada of the company's finding itself unable to carry on. On June 22nd also Sir Edward Beatty indicated that the operation of both systems together as an exclusively national undertaking would, in his opinion, be calamitous. How serious it would be is perhaps a question for the Committee's consideration, and in considering that question it may be necessary for the Committee to give some attention to the possible consequences to the country of its being compelled to acquire the Pacific company's undertaking in order to provide for its continued operation.

8. It is only after these basic questions have been disposed of that the Committee need attempt to make a selection among the alternative courses which have been suggested.

9. Purely voluntary co-operation, according to the evidence of Mr. Fairweather (pp. 208,217) is not likely to lead to any economies whatever beyond those already made, amounting to $1,771,000 (p.121). An inference that Mr. Hungerford does not differ from this view is capable of being drawn from his statement to the Committee (pp.1047 ff.). Mr. Armstrong, however, reiterated before the Committee the view submitted by the Pacific Company to the Royal Commission six years ago that by purely voluntary co-operation a total economy of some $11,500,000 might be looked for (pp.466-7, Ex. 48, p.412). Several witnesses indicated that one of the principal difficulties in the carrying out of co-operative proposals was the equitable allocation between the two companies of the consequent burden and advantage. The Committee may feel it necessary to consider whether either or both railways have been too insistent on their respective points of view on this head. The officers of each think that their approach was reasonable, and there is little or no evidence upon which to base a contrary conclusion. The Committee may, however, think it proper in this connection to give some weight to the possibly stronger bargaining position of the National company's officers in that in the case of that company a failure to make

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119281

savings resulted only in the increase by a negligible fraction of the deficit to be provided by Parliament, whereas a corresponding failure in the case of the Pacific company permanently affected its limited though large resources. The only documentary evidence indicating the respective attitudes of the officers of each company is contained in the papers together constituting Exhibit 40 (pp.180-6,227-300).

10. The provisions for compelling the abandonment of services by either the National or the Pacific railway at the instance of the other as contained in the Canadian National-Canadian Pacific Act, 1933, have remained a dead letter. The reasons for this are given in Sir Edward Beatty's evidence (p.536), and with them Mr. Hungerford does not disagree, although Mr. Fairweather takes a different view on this point (p.162). Mr. Hungerford suggests that the burden of initiating compulsory proceedings should be shifted from the railways to a Government appointee (p.1054), but Sir Edward Beatty criticises this proposal on June 22nd (print not yet available) on grounds to which the Committee will no doubt desire to give consideration.

11. The only estimate of the savings which might be expected from the exercise of compulsion is that given by Mr. Fairweather. He said that $10,000,000 was the top figure to be hoped for on the basis of the present traffic level (pp.197, 208,217), and Mr. Hungerford agreed that this was "as good an estimate as could be prepared" (p.1062). The amount differs little from the Pacific company's estimate of possible savings on a voluntary footing, referred to in the preceding paragraph, and is very much below the amounts ($35,000,000 and $24,000,000) suggested to the Royal Commission by Mr. Fairweather (Ex. 41, p.300; Ex. 44, not printed. See pp.194-5, 206-7, 1260).

12. The Committee may consider that Sir Edward Beatty's suggestion (June 22nd) that these latter figures were relied upon by the Royal Commission in making their recommendations is not without force, and that the lower figure is insufficient to justify insistence on compulsion in view of the objection to which it is open. As has been suggested, Parliament cannot escape the difficulty inherent in its dual position as representing the public in the usual sense and as representing the owners of the National Railway. It might itself direct the abandonment of services furnished by that railway which were dispensable in view of those furnished by the Canadian Pacific. Thus the function of an officer responsible to Parliament for the exercise of compulsory powers might be represented as being to compel the Pacific Company to abandon services the continuance of which it regarded as essential to the maintenance of its competitive position and consequent stability.

13. There remains the proposal for unification, the adoption of which, according to the officers of the Pacific company, would permit a reduction of the joint expenses of that company and the National company by $75,000,000 a year on the basis of normal traffic (Ex.49, p.416 and passim), and some $60,000,000 on the basis of the traffic of 1937 (p.985). None but one of the Canadian National witnesses has made an independent estimate of the financial results of unification,

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

but they have criticized, generally and in detail, the estimates made by their opposite numbers in the privately owned railway as having been founded on erroneous assumptions and greatly exceeding in amount the economies that they regard as possible.

14. The sole officer of the National company who ever directed his attention to the possibilities of unification did so long in advance of the time the question was examined by the officers of the Pacific company (pp.531,1259). He arrived at a figure of $56,000,000 (Ex. 42, p.474) on the basis of the 1930 level of traffic, and gave details of the items entering into the total which he said "must not be taken as exhaustive but rather as indicative", (p.484). A general comparison of the principal figures of this estimate with that prepared by his own officers was made by Sir Edward Beatty (p.576), and a more detailed comparison of the two estimates was subsequently supplied by the Pacific company (Ex. 78, p.1039). Mr. Fairweather directed no criticism to either of these comparisons.

15. Mr. Fairweather said that in the course of the preparation of this estimate he became convinced that it could not be relied upon, and so stated to the Royal Commission when he laid the estimate before it (pp.206-7). He still remains of opinion that it is incapable of realization, basing his view in this respect chiefly upon the probability of an adverse public reaction to the reduction of services which is involved and upon probable disapproval by the public of any plan directed to eliminating competition between the railways and thus creating a monopoly (pp.1259 ff.). The Committee did not think it useful to proceed with that part of Mr. Fairweather's examination which was directed to an analysis of the items of his estimate in order to differentiate between those involving reductions of service and those to which the only objection that could be made was the general objection to a railway monopoly (pp.1276-7). More than one member of the Committee indicated without contradiction an opinion that substantial economies could undoubtedly be made by unification.

16. It is a matter for consideration whether some of the difficulty in connection with the opposing views with respect to both this estimate and that made by officers of the Pacific company does not arise from an uncertainty with respect to the status of officers of the National railways. They are frequently treated as having respectively a status corresponding to that of their opposite numbers in the Pacific company, but two of the more important of them have disclaimed any such status and have asserted a status similar to that of civil servants.

17. Mr. Hungerford in his prepared memorandum frequently refers to the unprofitableness of certain services which he is called upon to provide (pp.1047 ff.), and in the course of his examination makes it quite clear that he does not regard himself as responsible for the policy of providing these services, but merely for carrying out the general policy laid down for him by Parliament (pp.1067-8), although he

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119283

denies that his job is to keep the Minister of Railways out of trouble (p.1061).

18. There may here be some confusion of function, the possibility of which is perhaps indicated in Mr. Fairweather's evidence when he says (p.324):- "I am trained to take the national standpoint, and I have on very many occasions taken that standpoint and advised in the light of the national interest as compared with the narrow railway interest. But even at that, though I am specially trained to do that, there is a tendency for a railway man to be prejudiced and to underrate these features of public convenience and necessity". His evidence with regard to the estimate of the possible savings from unification may perhaps be regarded as pointing in the same direction (pp.94-5, 206-7, 354, 1259 ff.). It is to this point that the statements of Sir Edward Beatty quoted in paragraph 148 of the report of the Royal Commission and certain of his remarks on the occasion of his last appearance before the Committee appeared to be directed.

19. Entirely apart from these considerations the Committee may feel hesitation in making a choice between the evidence of the two groups of witnesses on so highly a technical subject as railway operation and railway accounts. Such a choice may well be regarded as a necessary preliminary to Parliament's entertaining a proposal which is likely to be exposed to attack on the ground of the elimination of competition and the creation in the field of railway transportation of a monopoly of such a size as to be at least capable of being represented as dangerous to the state. No choice is, of course, necessary if these general considerations against unified management are regarded as conclusive irrespective of the amount of the possible savings.

20. Assuming, however, that they are not held to be conclusive, and that the question of entering upon negotiations is regarded as depending upon the actually possible and realizable savings from unification, the Committee has before it the alternative of attempting to weigh the conflicting evidence on the subject of the accuracy of the estimates made by the officers of the Pacific company or of finding some other course which presents less difficulty.

21. It may regard the soundness of these particular estimates as being of less importance than a determination of the actually realizable savings, upon which point little assistance beyond that to be derived from Mr. Fairweather's $56,000,000 estimate is to be found in the evidence of officers of the National system. In that case the Committee may feel it desirable to examine the proposal that an outside opinion should be obtained from disinterested railway engineers, among whom Sir Edward Beatty says it is possible to find men who have international reputations and are entirely without personal interest in the Canadian railway situation (June 22nd).

22. From a logical point of view the questions for the Committee's decision would seem to arise in the following order:-

(1) Is it from a national point of view inadvisable at the present time to insist upon any economies in railway expenditure?

(2) Has the importance of the annual interest charge of some $50,000,000 on the National Railway's securities been over-emphasized?

(3) Is the possibility that circumstances may compel an amalgamation of the two railway systems one that need be envisaged and, if so, need account be taken of it at present?

(4) Is it advisable to continue to rely upon voluntary co-operation alone?

(5) Should resort to the compulsory provisions of the Canadian National-Canadian Pacific Act, 1933, be insisted upon?

(6) Is it advisable to alter the procedure with regard to compulsion as suggested by Mr. Hungerford?

(7) Are the objections to unified management insuperable, irrespective of the amount of the economies which would result from it?

(8) If not, can the Committee determine on the evidence before it that the total economies likely to result from unified management are either sufficient or insufficient to justify discussion of possible plans for unification?

(9) If it cannot, is the suggestion for an independent enquiry one which it might be advisable to adopt?

MEMORANDUM ON THE BRITISH RAILWAYS 119288

This memorandum is based upon the results of an investigation of transportation in Great Britain by a Committee of Canadian National officers appointed to study the railway situation with particular reference to competition between the railways and highways, the pooling of traffic between competing railways and other co-operative activities.

During the war period and for some time thereafter the British railways were operated on behalf of the Government under the direction of a Railway Executive Committee consisting of the General Managers of certain leading railways. The many railway corporations were provided with a standard return based upon past performances. The operation of the railways during this period was carried on more or less as a unit.

There was an obligation to return the railways to private operation. Out of this situation developed the plan of grouping the railways into four groups, introducing an element of competition as between the groups. The legislation under which grouping took place was passed in 1921 and the grouping became effective in 1923.

The British railways have shown a very considerable increase in operating efficiency and an improvement in the quality of service. There are those who argue that this improvement has resulted from the elimination of competition. There are others who ascribe the improvement to other factors, such as the general business conditions of England, the levels of railway rates, material prices and wages, capital expenditures for improvements and improvements in the art of railroading.

The Railway Research Service of Great Britain, maintained by the four main line railways, made a study for the years 1923 to 1930 inclusive and a subsequent study for the years 1923 to 1935 inclusive, but failed to definitely trace a reduction of expenses to the grouping plan, it being pointed out in these reports that capital expenditures had in many cases resulted in

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119289

payroll economy and that fluctuations in traffic had also affected the staff. These two reports pointed out how extremely difficult it is to analyse the results of operations over a period of years and ascribe the changes in financial results to specific causes.

The British railways have undoubtedly made great strides and it is easy to fall a victim of a hasty generalization and ascribe the improvement to the grouping plan. It is informative in that connection, however, to make two comparisons:-

First - A comparison between the improvements which took place in Great Britain and the improvements which took place in the same period in the United States and in Canada. When this is done it develops that both Canada and the United States exhibit the same characteristics of improved railway services and lowered costs with much less than a commensurate increase in rates as compared with pre-war conditions. Grouping was not a factor in the United States.

Second - A comparison of the Great Western Railway of England with the other railways is also informative. The Great Western Railway was hardly affected at all in size or organization by the grouping plan, whereas the London, Midland and Scottish and the London and North Eastern are composites of many companies. It is a fact that the Great Western Railway shows almost identically the same reduction in railway expenses in the period between 1913 and 1936 as the London, Midland and Scottish and the London and North Eastern.

Reference has already been made to the fact that when grouping was adopted competition was not neglected as will be seen from the following references of centres of population in Great Britain, showing how many are served by four, three, two and one railway respectively:-

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119290

| | Served by | | | |
|---|---|---|---|---|
| | 4 Sys. | 3 Sys. | 2 Sys. | 1 Sy. |
| Large Centres in excess of 1,000,000 Population | 1 | - | 2 | - |
| 500,000 - 1,000,000 Population | - | 2 | 1 | - |
| 200,000 - 500,000 Population | - | - | 8 | 8 |
| 100,000 - 200,000 Population | - | 1 | 12 | 18 |
| | 1 | 3 | 23 | 30 |

Much of the competitive traffic of the British railways has been pooled, but this would seem to have been less directed at the reduction in operating expenses than towards introducing a greater degree of flexibility in meeting competition from other forms of transport. The pooling arrangements are especially suited for this latter purpose because they aim at the division of the net receipts after deducting cost of service performed by each of the parties to the pooling arrangement. It is left to the discretion of each railway to determine what services shall be run and, inasmuch as the cost of running competitive services is borne by the pool, it is not surprising that the pooling arrangement has not resulted in any considerable reduction in duplicate train services.

Various pooling arrangements are estimated to involve over one-half of the railway traffics of Great Britain and the economy is estimated at between £280,000 and £340,000 per annum.

It is an observed fact that agressive competition between the railways for pool traffic exists, which is doubtedless due to a number of factors. It is apparent that any appreciable let-down in quality of solicitation or service, as a result of pooling, would result in a diversion of traffic from railways to other forms of transport. Also, since the pooling arrangements are subject to change, each railway has a continuous interest in identifying itself with the traffic.

119291

The British railways have never earned the standard return provided for in the 1921 Act and, as a consequence, have been hampered by lack of capital. At the time the railways were turned back to private operation, the Government paid £60,000,000 for alleged deterioration of,line, etc. In recent years the railways secured substantial relief of taxation and a refund amounting to £12,000,000. The railways have secured loans for capital improvements from the Government aggregating some £27,000,000, maturing in 16 years, on much more favourable terms as regards interest (2½%) than the railways could have obtained in the open market.

FOREWORD

The attached study of the English railway situation was prepared by Mr. F. Bramley, Secretary of Canadian Pacific Railway Company, early in May. Mr. E.J. Lemon, Vice President of The London, Midland and Scottish Railway, was in Canada at the time, and Mr. Bramley handed him a copy for his comments and criticisms. The following letter was received by Mr. Bramley in return. The re-adjustments of paragraphs suggested by Mr. Lemon have been attended to, but no other material change has been made. The memorandum on the last five pages was of course prepared later and was not shown to Mr. Lemon:

CANADIAN PACIFIC STEAMSHIPS LIMITED

"DUCHESS OF RICHMOND",
QUEBEC, 13th May, 1938.

My dear Bramley,

I have read through your paper two or three times this afternoon and frankly, apart from adjustments of paragraphs to put them in sequence, which you can do better than I can, I see nothing to criticize. In fact, I should like to congratulate you on having put together a very fair statement of the results of Railway amalgamation in Great Britain, and would like you to be good enough to send me a copy of this paper some time at your convenience.

When I get home I will look up any information that is available on the economies effected since amalgamation and post them on to you.

With my very kind regards to all the C.P.R. officers,

Yours sincerely,

SGD. E.J. Lemon,
(Vice President, L.M.S. Rly.)

F. Bramley, Esq.,
Secretary,
Canadian Pacific Railway,
Montreal.

# SUMMARY OF STUDY ON THE ENGLISH RAILWAY SITUATION CONSEQUENT UPON AMALGAMATION OF 120 COMPANIES INTO FOUR GROUPS

The amalgamation of 120 railway companies in the United Kingdom into four systems was undertaken as a result of the conditions following the end of the Great War. During the War great changes had occurred in the social and economic conditions of Britain. The type and distribution of traffic had changed. The standards of remuneration of all workers had risen. Heavy taxation laid an increasing burden on all forms of business. Concentration of technical effort on the problems of the War had checked the steady development of railway technique. Freight rates had increased over 100% and passenger fares 75% above pre-war.

As a result of all these and other factors the railway system which had been built up under a policy of "laissez faire" was no longer functioning after the War either well or profitably. While they were still being operated by the Government they were working on a deficit basis, and it was clear that the companies would be unable to earn returns on invested capital, or to obtain new capital. Their revenues were inadequate to permit them to maintain the increased level of wages. Their rates were so high as to impose a burden on industry and commerce, and to prevent them from meeting the growing competition of other forms of transport. Their equipment was rapidly becoming out of date.

A National Government undertook a rationalization of the situation, and in 1921 the United Kingdom was divided into

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119297

four general areas, in each of which a railway company was created to absorb all the existing companies.

The division into zones was not precise - although large areas were left to single companies.

In view of the great concentration of economic activities on London as a focus, the division of territory between the four companies was arranged, in a general way, into sectors radiating from London.

It was provided by the Railways Act of 1921 that competition in railway service was not to be regarded as any longer desirable, and, while the four companies remain independent of each other, it was from the first understood that they would endeavour to cooperate to avoid any ill effects of what competition was left in existence after the grouping.

Since the motive behind this policy was to remove the ill effects of conditions as stated above, almost the entire effort of the railway companies was directed to using the advantages resulting from amalgamation to accomplish: (A) reductions of rates; (B) the maintenance of fair rates of pay, and (C) improvement of railway equipment and technique, with the expectation of gradually increased benefits in the matter of net revenues.

For this reason, it is not possible to place a precise money figure on the savings which have resulted from amalgamation. Individual studies on this subject have arrived at the conclusion that a figure of £45,000,000 per annum would represent the savings from amalgamation, but it is impossible to obtain confirmation of this from the railway companies, who

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119298

have not felt it necessary to attempt any segregation of figures dealing with this point, but who generally refer to the solvent condition of their industry, with substantial over-all decreases in expenses, the reduction of rates, the maintenance of fair wage levels, and increased ability to compete with highway transport as adequate evidence of the success of amalgamation.

Public opinion unanimously accepts the results of amalgamation as representing a successful solution of a difficult problem, and labour presses constantly for a final amalgamation of all railway services of the United Kingdom - on the ground that this will permit further savings in addition to those already realized.

Rate regulation and supervision of standards of service are in the hands of tribunals appointed by the State, with the result that the public offers no criticisms on the ground of loss of competition. Labour was given protection by Statute against any damage from amalgamation, and no criticism is offered on this point.

Post-amalgamation competition as between railway groups has been prevented from exercising any unfavourable effect by a system under which the railways pool their earnings from "competitive" traffic.

The pregress of improvement in railway technique has been rapid and extensive.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

ARCHIVES PUBLIQUES
CANADA

119299

Public opinion in the United Kingdom unquestionably accepts amalgamation as a successful solution of a difficult problem and as having permitted a proper adaptation of railway transportation to the needs of the times.

F. Bramley,

STUDY ON THE ENGLISH RAILWAY SITUATION CONSEQUENT UPON AMALGAMATION OF 120 COMPANIES INTO FOUR GROUPS

---

A comprehensive understanding, and a reliable appraisal of developments in the English Railway situation since the effective date of amalgamation in January 1923 can be based upon general and specific statements which have been made on this subject by the Minister of Transport and English railway executive officers.

A study to this end can be specially directed towards such important factors as to whether and to what extent inter-group railway competition was affected by grouping and in what degree, if any, it still exists today; the element of railway monopoly, and the general results consequent upon the amalgamation which consolidated into four groups not less than 120 railway systems each with more or less strongly marked diversity in respect to mileage, financial stability, gross and net earnings, traffic density, operating procedure and general economic outlook.

In respect to railway competition the Government, through the Minister of Transport, made its position perfectly clear, at the outset. The Minister of Transport plainly indicated that he had no intention whatever of preserving any such wasteful policy. He announced that it was his avowed and deliberate aim in carrying through Amalgamation to put an end, as far as possible, to all direct railway competition. In a "White Paper" issued in 1920 the proposals of the Government were specifically declared as follows:-

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

"It is proposed that the railways of Great Britain should be formed into a limited number of groups, the Groups will be determined on the basis of operating economy and all direct competition between the groups will, as far as possible, be eliminated."

The Railways Act of 1921 was the outcome and expression of this proposal.

The original intention of the Minister of Transport in connection with grouping, was that the whole of the railways in Scotland should be placed in one group; this idea was not carried out, however, because of the representations made that the Scottish railways, as a group, without the financial support of their more powerful railway neighbours to the south of the border, could not have survived. But this fact further emphasized that the British Government saw no necessity whatever for the maintenance of railway competition.

By reason of the form of amalgamation as adopted, a specific area was assigned on a rough geographical basis to each of the individual Groups, although there was unavoidably a certain amount of over-lapping in the case of each area. The London Midland & Scottish Railway was formed by the amalgamation of 8 major and 27 subsidiary Companies which served the Midland and North Western areas of England and the West of Scotland. The London & North Eastern Railway was similarly constituted by the grouping of 7 major and 26 subsidiary Companies serving the Eastern and North Eastern areas of England and the East of Scotland. This, in itself, had at once the effect of abolishing an immense amount of railway competition, which previously existed as between the Companies now amalgamated into one group serving a more or less compact area.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

 119303

Individual areas, including entire Counties of great industrial and economic importance were placed under the "control" of one railroad group and thus the element of railroad competition was vitally and immediately affected.

The elimination of this "area" type of railway competition may be illustrated in further detail by a reference to the fact that the whole of Eastern England and Scotland between the Thames and the Forth was left, by reason of amalgamation, almost exclusively to the London & North Eastern Railway which group absorbed the North British, North Eastern, Great Central, Great Northern and Great Eastern Railways; the latter four lines formerly carried on among themselves an intense competition (later limited only partially by a working agreement) in the area between York and London and in the Eastern Counties. Practically all direct railway competition in this large area was definitely abolished. The L.M.S.Group after grouping penetrated only to a limited extent North of the Humber by its line into Goole and its running powers into Hull and York,with a branch to Lincoln and a branch and joint line service into Norfolk and a line skirting the North bank of the Thames to Southend. The general result, therefore, of amalgamation, as a glance at a railway map clearly indicates, was to leave the entire Eastern side of England and of South Scotland to the railway"control" of the L.&.N,E.R. A somewhat similar though not so marked- condition exists in regard to the L.M.S.Group and part of the West Coast of England. The amalgamation of the South Eastern & Chatham, London & South Western and London, Brighton & South Coast Railways, resulted in the Southern Rail-

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119304

way being given an absolute "control" in South Eastern England between the Thames and the Solent. In this particular area there is not a vestige of railway competition.

Sir William Acworth, in the Harvard Business Review, July 1923, referred to the elimination of railway competition by grouping and pointed out:-

> "In many cases highly competitive lines have already been amalgamated- as for instance the Midland and London & North Western, the Great Central with the Great Northern, and the Glasgow & South Western with the Caledonian. The belief is now commonly held in Great Britain by Economists that railways and other public utilities ought to be monopolies."

It is of interest in respect to the railway group areas in Great Britain to note their peculiar position relative to the City of London. Economic and industrial trends of great importance focus upon London, in a manner which has no counterpart in any Canadian City. The areas allotted to each individual railway group in Great Britain are pivoted upon London. The headquarters of the four groups are in that City.

The final delineation of the areas allotted to each of the four railways took some cognizance, therefore, of these factors in that the groups, as established, were in such form as to facilitate the transport to and through London of a large amount of traffic- including the extensive movement which should be normally cross-country but which, instead of moving laterally, finds it more expedient to go up to London, transit across the City, and out again to its final destination.

After the amalgamation, although an immense amount of railroad competition had been abolished there was (and, possibly,

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119305

to a very small extent, still is) a certain amount of such competition especially in Central and Western England where the Groups are in contact. This unavoidable result was foreseen in the Railways Act of 1921 wherein the Government, to deal with it, provided specifically for pooling arrangements to be carried through in due course by the Railway Groups themselves, with the consent of the Minister.

The Committee appointed by the Minister of Transport in 1932 to report on the request put forward in due course by the Railway Companies for permission to enter into pooling, said:-

> "The Amalgamation did away with a good deal of competition- there remained competition at points of contact as between groups, to some extent intensified on account of the larger resources of the competing groups which enabled them to press the competition. It was the stress of this type of competition that the railway Companies were feeling and it is from this stress, which contributes towards impoverishing them, that they desire to be relieved. It is the remedy of pooling which they wish to be applied to this situation."

Sir Josiah Stamp (now Lord Stamp) and Sir Ralph Wedgwood, in their joint testimony on this application said:-

> "Under the elimination of competition the Companies hope to maintain or make improvements in existing transportation facilities."

It is clear therefore that the underlying motive on the part of railway Companies in establishing pooling arrangements was further to assist in the entire elimination of competition and its evil effects.

Pooling arrangements were put into force in 1932 and these have to all intents and purposes, achieved the original

CANADA

119306

aim and intention of the Government "that all direct competition as between the Groups will, as far as possible, be eliminated."

Mr. Wm. Whitelaw, Chairman of the L.&.N.E.R. confirmed the understanding that railway competition must disappear in Great Britain when, speaking at Glasgow on January 13, 1932, he said:-

> "There was scope and absolute need for an infinitely greater measure of co-operation between railway Companies today, and the first step towards putting railways upon a sound economic basis consisted in the complete abolition of competition among themselves. There was no room for the inevitable waste incurred by carrying traffic by any route other than the shortest."

In Ireland public transport competition in respect both to rail and road has been cut out.

It is noticeable that British Railway personnel went out of their way to condemn railway competition and complained of its maintenance.

In their evidence before the National Wages Board in 1931, the Railway Clerks Association pointed out, -

> "The absurdity of the Companies still continuing to canvass against each other for railway traffic."

It is very significant also to bear in mind, in respect to any assertion that there is still a desire for railway competition in England, the London Transport Act of 1932. It will be shown later, how the effect of this Act was to wipe

119307

out entirely all public transport competition, except in regard to efficiency of service, in the Metropolitan area of London and a daily transport of not less than ten million (10,000,000) persons (almost equivalent to the entire population of Canada) was handed over to one Authority which, for this purpose, absorbed about 140 separate transport undertakings.

Mr. Wm. Whitelaw, speaking in 1932 said-

> "without unification in London the position would have been chaos".

Railway competition is now generally regarded in Great Britain as a discard. Old Ideas in regard to its supposed value have been exploded. In the United Kingdom it is becoming increasingly recognized as having nothing more than a nuisance value, and to be the source of indefensible waste. At the Government enquiry in 1932 preceding pooling the representatives of Traders finally receded from the position that some railway competition was desirable- practically all opposition on this account was withdrawn, the representations of the railways that the abolition of competition would in no way decrease their transportation facilities but would rather increase them, being accepted. It is true to say that the alternative of road competition is part of the picture.

The Tribunal interpreted the attitude of the trading community in respect to the elimination of railway competition in the sense that the Traders "were willing to make their contribution to the national well being in time of emergency."

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119308

Since the pooling arrangements were entered into, round trip passenger travel tickets issued in the United Kingdom to any point are available for the return journey by any alternative authorized route without extra charge and this emphasizes again that these facilities are certainly not used in a competitive sense, and confirms also that the lessening of competition increases, rather than decreases, traffic facilities. Moreover, the traffic to be catered for is so large, and requires so varied a service, that it would be impossible to cut out much, if any part, of the existing facilities. These supplementary traffic terminals are also, in some instances taken advantage of on the basis of part joint use.

Neither the Railways Act nor pooling can abolish that form of competition arising from travel trends dependent upon the "holiday appeal" of varied districts and the geographical "pull" of different ports providing a choice of facilities for both passenger and freight traffic to the Continent, Ireland, Overseas, and Coastwise.

With a system of pooling net revenues - and especially when pooling allows for full working costs to be deducted from the gross receipts by the carrying company before the net balance is pooled - there is the possibility of temptation for the railways to go after traffic to secure as large a gross traffic and revenue as possible for the supposed "benefit" of its operating units; in this way, where the traffic could be dealt with more expeditiously by an alternative route, costs may be expanded by some traffic being diverted to a less favourable service.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119309

This possibility indicates some weakness in pooling in general and is an argument in favour of complete unification for operating purposes, as being the only sure method to cut out effectively unnecessary duplicate facilities.

The English railway pooling arrangements are of a comprehensive character embracing - in the case of the LMS - LNER - GWR Cos., - a gross traffic revenue, subject to pooling, of no less a sum than $350,000,000 per annum. It is significant that the visible relief expected by way of economies through the operation of these elaborate pooling arrangements is stated as $1,700,000 per annum - or less than one-half of one per cent of the traffic revenue involved. This latter sum, admittedly in itself is not a small amount but, when measured against the huge revenue from which it is obtained, emphasizes the comparatively restricted measure of economy relief through a pooling arrangement as compared with what might be accomplished under amalgamation. Reference is made later to the economies secured through the amalgamation of the railways into the four groups.

The process of consolidation or unification must be pushed to the point where success, having regard to the object in view, is attained. In Great Britain, the Minister of Transport originally contemplated 6 groups. It was, later, made clear that more than four groups would not obtain satisfactory results, and the 120 Companies and 20,000 miles of line were therefore consolidated into that number of groups - which is possibly all that is necessary to achieve success in Great Britain.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119310

So marked however has been the success consequent upon amalgamation and so favourable to it is labour that the latter sees an advantage in attempting to improve upon it by still further consolidating into less than four groups - preferably into one group.

The Railway Trade Unions on behalf of the personnel are pressing for further consolidation, and this has been referred to in a very important quarter, namely by Mr. William Whitelaw, Chairman of the L. & N.E. R., who has publicly stated that, if its sought to consolidate the four railway groups still further into one organization under a single control, such a step, assuming the interests of the owners of the railways are properly safeguarded, could not very well be resisted. Mr. Whitelaw makes it very clear, however, that he is not advocating "Nationalization" in its usually accepted sense, but "Rationalization" and he maintains that any controlling authority must be in the nature of some form of operating Board, it being above all things absolutely essential that any form of single authority established must be completely and entirely divorced from any possible direct Government control. Such a stipulation would be accepted as perfectly feasible in England, as evidenced by the London Transport Board and Port of London authority.

At the 1938 Annual Meeting of the L. & N.E. R., just held, Mr. Whitelaw expressed himself on this subject as follows:-

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

"On the question of nationalization he would like to say definitely that it would not be found that anything he had said or written during the last few months was favourable to what had been called "Nationalization" by the speakers at the meeting. What he had said was that, if at any time the Government of this Country proposed to purchase the railways, then, provided they got fair terms, he did not think the stockholders would oppose. He had advocated the ownership of all the railways and road-transport interests perhaps in one hand, but not in the sense of nationalization under which the railways and road transport would be managed by a Parliamentary Committee. That was not in his mind at all, and he has never uttered it, and the word "nationalization" put into his mouth in that connection was generally entrely misleading."

"Monopoly" abuse

The L.M.S. and L. & N.E.R. groups in particular were granted a "monopoly" in their respective areas which, to an extent, may not improperly be measured - in relation to general economic, industrial, social, political, population, traffic units, and in the number of railway personnel serving each group, - with any "monopoly" which can be effected through railway unification in Canada.

The Railway Gazette of April 27, 1923, pointed to the fact that grouping had established a considerable amount of monopoly in territory.

Sir Ralph Wedgwood (L. & N.E.R.) in a letter to the "Manchester Guardian" in 1922, emphasised that excesses on the part of the enlarged Companies would be most unlikely because that would be against the interests of the Companies themselves and the enlarged Companies would be sensitive to public opinion.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119312

On the question of the fear of a "monopoly" of this kind, one may again refer to the London Transport Board set up in 1932, as another striking example of the elimination of the competitive element in public transport, and, in that sense, the establishment of a "monopoly", as previously stated the Railways Act of 1921 had left undisturbed the multiplicity (some 140) of transport interests of various types which handled the great proportion of the enormous passenger traffic moving within the London area.

The London Passenger Transport Act of 1932 set up a single consolidated Authority (apart from the main line railway Companies) in the Metropolitan area.

After the consolidation of these individual operating units there was inaugurated a system of pooling net revenue in such a manner as to include the passenger carryings within the London area of the four Main Line Railway Groups which are thus, so far, embraced within the orbit of the London Transport Board Act, and complete its intention that London transportation requirements should be, to all intents and purposes, completely unified.

Refusing to be stampeded by any suggestion of "abuse through monopoly" in relation to the country wide control by four railway groups, and the handing over of London's huge daily transport requirements to one authority, the Minister of Transport relied with confidence upon the powers vested -

in the Railway & Canal Commission as being ample to -

(quote) "secure and promote the Public safety or the interests of the Public or of Trade or of any particular locality by the provision of all reasonable railway services, facilities and conveniences."

in the Railway Rates Tribunal for the - [illegible]

(quote) "proper application of railway rates and charges alike fair and reasonable both to the Community and to the Railways."

and in the Central Wages or the National Wages Boards (Now (Railway Staff National Council and Railway Staff National Tribunal)

In regard generally to conditions of service for Personnel.

Highway Transport

In England jurisdiction over the highways is vested in the Minister of Transport and, through him, the County authorities.

In the matter of Regulation the Railways in Great Britain, as compared with Canadian railways, are gradually being placed in a much better position viz-a-viz road competitors because the control over both Railways and Highways rests with the one authority, whereas in Canada the Provinces' control over the Highways makes this a much more difficult problem.

The English Railways found themselves obliged to engage direct in highway transport; their activities in this respect have been principally in the direction of assuming a fifty-fifty control in the more important road passenger services and, to a very much smaller degree, in certain road freight services.

The British Railways have invested relatively heavily in the former and in a much less degree in the latter. It is understood that the road freight services in which the railways are interested financially are chiefly engaged in the pick up and delivery of goods traffic for the railway Companies, within city limits, a service which has always been

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES

L1931.4

provided by the English railways and for which service a special charge is included in the rates. In some few instances the railways have taken over the freight road services of Companies penetrating into country districts.

Economic consequences of amalgamation of the Railways in Great Britain into four groups.

At the conclusion of the Great War, when the return of the railways to the owners was due -

the Public wanted - the railways to be returned to private ownership

the Traders & Shippers desired - lower rates and charges and decreased passenger fares.

the Personnel required - the war-time wages schedules to be maintained

the Railway Companies sought - to be in a position to earn satisfactory net revenues

and it was accepted that anything short of a thorough measure of amalgamation would not meet this situation. It was especially clear that, without consolidation, the weaker Companies could not possibly carry on and meet these various conditions.

The provisions of the Railways Act of 1921 were intended to cover this situation and the amalgamation of the railways in the United Kingdom, insofar as transfers of ownership were concerned, was completed in 1923, when 120 Companies were consolidated into four groups. The Act -

(a) facilitated the return of the railway undertakings from Government ownership to their private owners.

(b) provided for amalgamation, and

(c) in place of the hitherto existing system of maximum charging powers created a revised method of rates and charges based upon a standard maximum profit for the four groups. (The aggregate of the net revenues for 1913 - with some allowance for increased capital expenditure) was adopted as the basis for the new maximum net profits)

The Minister of Railways expressed his strong opposition to any policy of Nationalization, as generally understood by that term, in respect to the railways in Great Britain and, in any case, the Public would not have stood for continued Government control of the railways after the war. In this connection Sir Ralph Wedgwood, Chief General Manager of the L.& N.E.R. has stated -

> "The Railways Act, in grouping the Companies did no more than what the Companies have been attempting to do for many years but their efforts prior to the War to seek approval for consolidation programmes were regarded with disfavour by the Government."

Consolidation or unification implies inherent advantages in a "National", as well as in a purely "Railway" sense, and the Railway Act of 1921 is no exception to this rule. The "National" benefits were to accrue to the public in increased and improved facilities and by moderate rates and charges, and in a "Railway" sense to benefit the Personnel by the application of a schedule of fair wage rates, and the Railway owners by the attainment of satisfactory net revenues.

An annual saving of twenty-five million pounds within seven years was estimated by Sir Eric Geddes, the Minister of Transport, responsible for the Railways Act of 1921.

The "Railway Gazette" in 1922 recorded -

> "That there would possibly be no resultant economies in the long run", and, again, that "the whole scheme rests on a very flimsy foundation involving a strange belief in the great economies to be derived from grouping".

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119316

But on January 24, 1930, it had this to say in an editorial article respecting the virtues of amalgamation in Great Britain -

"After seven years - Sufficient time has now elapsed to make it possible in some measure to estimate the successes or otherwise of the Railways Act of 1921. While it is possible that the results have not been so far-reaching as were expected this has not been the fault either of the Railways or the Act. Trade conditions have been bad but real substantial benefits have already accrued to the railway user, the shareholder, and the railway employee alike."

"Material concessions in rates and fares have been made to the trader and the public. Amalgamation has brought about a condition of greater stability in the railway structure to the advantage of the railway stock-holder and the negotiating machinery in wages questions set up by the Act has made for peace in the railway world. It is true that the vast economies foreshadowed by those responsible for the Act have not been realized but very substantial economies of operation and administration have been made and this is borne out by the results for the year 1928, an abnormally bad year from the traffic point of view. The common sense point of view of the amalgamation policy from the standpoint of economies is to regard it as a tendency rather than as achievement - as a process that is still going on. This is particularly true of standardization, the fruits of which are becoming more apparent every year".

W. H. Fraser writing in the "Railway Age", on January 5, 1924, said -

"So far, there is every indication that Sir Eric Geddes was justified in introducing the Railways Act of 1921 as being the only solution to the difficulties of the railways which had arisen through Government control. Consolidation has materially strengthened the industry at a most critical time."

By 1926 the Railway Managers were being questioned as to whether the savings anticipated by reason of amalgamation had been realized.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119317

In that year Sir Josiah Stamp, (now Lord Stamp) on behalf of the L.M.S. Railway, said that the savings predicted under amalgamation had not been realized but he pointed out that it takes time for such economies to become effective.

Apparently the Great Western Railway had begun to benefit by amalgamation; in the same year (July 1926) Sir Felix Pole, General Manager of that Company, in a contribution to the "Sunday Express", expounded his views on the results of the grouping of the railways. He pointed to the great economies effected, as demonstrated by the fact that wages were high and on a level of approximately 150% above pre-war; credit was good and large sums were being expended in improving the standard of maintenance of absorbed lines. At the same time, the railways were giving substantial concessions in rates and charges of all descriptions and, so far as the Great Western was concerned, the economies effected had been of a substantial character. Sir Felix concluded his review of the situation by saying:-

> "It is astonishing how considerable these economies have proved."

Sir Felix speaking at Cardiff as early as October 16, 1924, had already stressed the fact that amalgamation had produced very substantial economies especially in overhead charges, reductions of Directors, decreased office expenses, in altered methods of train working, eliminations of duplicate lines and by standardization. - Sir Felix was very emphatic:-

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119318

"I have no hesitation in saying", he said, "that but for economies which have been effected in this and other ways, as a result of grouping, the Great Western Railway could not have been in a position to make such reductions in rates and charges as have been made."

Sir Felix pointed out that on Coal shipments alone in South Wales the Great Western had been enabled to decrease its railway and dock charges by nearly £3,000,000 in one year.

The Railway Companies could also have stated that, in anticipation and because of the adoption of amalgamation, very considerable annual savings had already been secured prior to, and in the period between 1921 and the effective date of amalgamation in January 1923.

These particular savings were admitted by the Railway Rates Tribunal at £1,200,000 per annum. The Railways were allowed to add one-third of any savings resulting from amalgamation as between the passing of the Railways Act in August 1921 and the effective date in January 1923 to their standard net revenue basis so that for this purpose the railways were credited by the Tribunal with £400,000 as follows:-

| | |
|---|---|
| L.& N.E.R. | £91,000 |
| L.M.S. | £139,000 |
| G.W.R. | £93,000 |
| Southern | £77,000 |

This type of saving is witnessed to by Sir William Wood who, speaking in 1933, said:-

> "In anticipation of amalgamation there were informal partnerships which resulted in substantial savings of a permanent nature."

As a matter of fact, the railway groups admit that it took them until 1925 to decide questions of policy founded upon the new conditions under amalgamation, and to initiate large scale action thereon.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119319

It might further be noted that the estimate as to savings was based upon the maintenance of at least a normal traffic revenue, and also not without regard to a potential increase in traffic which, in 1921, everybody, including the Minister of Transport, confidently expected.

Sir William Wood, of the L.M.S., has, however, pointed out that,-

> "The years following amalgamation were of great economic disturbance with their attendant effects on the trade of the Country; and immediately before amalgamation was actually made effective and since, railway transport bound at almost every point by public regulation was subject to fierce unregulated road competition lavishly subsidized by public funds."

This prolonged business blizzard, as it has been called, greatly stimulated in its detrimental effects by the General Strike and also the Miners strike in 1926, coupled with ever increasing road encroachments into traffic, was bound injuriously to affect any calculations and results, involving anticipated economies, founded upon basic normal conditions.

The extent of the road competition may be measured by the fact that, in 1932, the four Railway groups, in their evidence in connection with the Road-Rail Traffic Act, stated that the estimated annual loss to their net revenue by road competition was no less than £16,000,000 - of which £10,000,000 was attributable to Passenger traffic and £6,000,000 to Freight traffic.

Let it be said, however, that the English railway groups declare it is impracticable to assess any approximate saving in working expenses due to amalgamation. Even so, such a statement does not mean that such savings are not

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119320

there. It merely means, in effect (that while it is certain that there are no responsible English railwaymen today who would be prepared to affirm that amalgamation in itself has been anything other than of the greatest possible service in establishing the railway system generally in Great Britain upon its present satisfactory basis) the four groups do not think it worth while to go to the trouble and expense of segregating such economies.

It is not difficult to imagine that in respect to this matter the Railway Companies have their own reasons for the attitude which they adopt. At the time of writing, they are feeling pleased with themselves generally and satisfied apparently to take things as they are. They persist under amalgamation in exhibiting a cheerful outlook, even while still seriously affected by excessive road competition - and meeting it to an extent which would have been impossible except for the relief afforded by amalgamation.

Sometimes the Railways are not quite so reticent. In 1931, before the National Wages Board, the Railway Trade Unions were making application for the maintenance of their idea of fair railway conditions of service for the personnel. The Unions are not without some knowledge of the extent to which savings must have accrued to the Companies by reason of amalgamation, and they strongly pressed the factor of these savings; we therefore find the Railway Companies make this declaration:-

> "The Railway Companies do not deny that since amalgamation considerable savings have been effected nor do they maintain that the possibility of future savings has been exhausted."

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

[11932]

But in their general attitude on this question of amalgamation savings the Railways, as Companies, have been consistent in their standpoint that such savings cannot readily be segregated. As far back as 1922 Sir Ralph Wedgwood, in a letter to the "Manchester Guardian" dealt with this point in the following arresting way:-

> "He deprecated the attention paid to "what savings will accrue". He thought this was unanswerable and unimportant. Unanswerable because the only savings that really count must be spread over years and cannot be isolated. Unimportant, because savings to be permanent can only flow from a sound basic organization and are entirely dependent upon the establishment of the industry in a satisfactory relation to the Trading public on the one hand and the employees on the other.
> These relations are fundamental and if they are neglected savings realized in one year will be wasted in useless friction in the next or swallowed up in the progressive discrediting of the industry."

Individual statements however by responsible Railway Executives and representations of the personnel clearly indicate that the gratifying effects of the rationalization measures initiated and carried through by the General Managers with such notable skill and efficiency could only have been achieved, in anything like their full extent, by reason of the fact that they were applied to wide scale operation founded upon amalgamation. Without the initial impetus thus furnished by consolidation the rationalization measures securing such efficiency and economy would have been impossible. It also follows, of course, that without the qualities of railway leadership as exhibited by the General Managers and their staff, amalgamation in itself would have been useless.

Sir William Wood, Vice-President of the L.M.S., speaking to the local section of the Institute of Transport at Liverpool on November 7, 1930, said:-

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119322

"The policy of amalgamation had undoubtedly been justified by the economies which have resulted."

"The Railways Act of 1921 has been a success generally, the one exception being the shrinkage in net earnings and the cause largely the activity of the state in aiding road transport. Further economies (under amalgamation) are without doubt obtainable and will mitigate these uneconomic effects of road development. Some of these economies will follow from a further fruition of amalgamation policy although larger physical developments with profits, as now, are improbable."

In June 1932, in reference to the savings secured by the L.M.S. through their locomotive policy, Mr. E.J. Lemon, Vice-President of that railway, said:-

"Rationalization has now yielded economies which would never have been achieved under smaller Company management."

and also

"Amalgamation facilitated economies due to bulk purchasing of "stores". Mr. Lemon stated, for example, that purchasing schedules before amalgamation contained 30,000 items; these were reduced, under amalgamation, to 4,400 articles. He said also that the value of the stores Department Stock, (excluding coal and hotel stores) taking January 1923 as 100 was down to 69% by 1931. Seventeen per cent of this reduction was made possible by revised carryings of stock made possible by amalgamation.)"

Sir William Wood, in October 1933, dealing especially with the subject of -

"Resultant economies - following amalgamation" said -

"Although ten years have elapsed since amalgamation took place, it is, I think, too soon to express an opinion on their ultimate effect, partly because many of the steps to fusion can only be taken or completed as individuals retire or as assets require to be withdrawn, and partly because many new arrangements and works fructify only gradually."

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119323

He however affirmed that, so far as the L.M.S. was concerned, amalgamation had facilitated certain steps with ultimate resultant economies. These include

1. Concentration of Boards of Directors, General Management, and accounting work.

2. Gradual unification of previously distinct offices and staffs at stations and agencies.

3. General availability of rolling stock previously used only in one area.

4. Fusion of stores purchasing, and storage arrangements.

5. Common advertising and stationery arrangements.

x 6. Amalgamation of rival steamships services.

x 7. Adoption of Common braking system.

x 8. Track improvements permitting increase of availability of rolling stock.

x Required new capital expenditure.

9. Research and costing work with resultant economies which could only be secured on a wide basis by a large scale organization. This - Sir William said - has had a marked effect not only in reducing working expenses but also in reducing the quantity of Capital employed in rolling stock.

Sir William did not attempt directly to estimate the net effect, in pounds sterling, of reduction in working expenditure due to amalgamation but what he did say on this point was significant -

> "I do not propose to burden you with further details of these consequences of fusion, over a number of years very full descriptions of them have been given in evidence before the Railway Rates Tribunal, and I shall not attempt to estimate their net effect. To disentangle them from the economies which would have accrued in any event and the reductions in working expenses, due to price levels and less traffic, is extremely difficult, if not impossible in many cases, and while large specific cases have been isolated, totals are impracticable. Overall figures are of course available and they are most striking. Between 1922 and 1932 there was reduction in

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

[ ] 93324

working expenses of £49,000,000 in the four groups and in this period by far the larger part was due to economies, though not solely to those resulting from amalgamation."

The Railway Groups spent some £200,000,000 during the ten years on major reconstruction and additions but only a minor proportion (about ten per cent) of this expenditure had been charged to new capital.

Sir William goes on to say:

THE INCIDENCE OF THE RESULTS OF AMALGAMATION

"So far I have been considering the broad National results of amalgamation as that was the principal object of the Act of 1921, and the results of the ten years, considered nationally, have, I consider, been more satisfactory than was anticipated in 1921, although many of the good results were not then thought of and some then forecast have not been touched."

"When, however, we come to the incidence of those results (due to amalgamation) as between railway owners, railway users, and railway employees, compared with the anticipations of 1921 the position is very different."

In this respect, in regard to the railway situation existing in 1933 Sir William Wood expresses himself as follows -

The Railway Act contemplated that normally each of the four new companies would earn the same net currency as its parts did in 1913 - namely (with some allowance for the expenditure of new capital) £51,000,000 per annum. In 1932 the net revenue of the four Groups was only half that amount due to heavily decreased traffics, combined with a level of railway rates which, in 1933, was only 45% greater than in 1913 with net railway working costs 80% higher, (Sir William says that this 80% net increase is arrived at after allowing for all the amalgamation economies and savings).

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

 119325

Sir William concludes from this situation that under amalgamation -

1. Railway users have benefitted because railway charges have increased less than railway costs.

2. Railway staffs have benefitted because the wages rates have increased considerably more than the cost of living, in fact, in purchasing power they are higher than ever before.

3. Railway net revenues alone have suffered unduly.

so that while the Public and Railway personnel had benefitted from amalgamation results, the Railway owners - in respect to net revenues - Sir William concludes, had not so benefitted. Net revenues had been left the "knocks".

Sir William, for the purpose of his analysis, arrives at the net figure of 80% increase in working costs after giving due credit to the effect of the savings and economies following and largely consequent upon amalgamation. Without these savings the working costs would necessarily have been at a higher figure, personnel would have suffered, railway rates would have been higher, and railway net revenues would have been still worse off.

Sir William Wood closed his review of the ten years' working under amalgamation conditions, saying, in part,-

> "I consider that the unnatural part of road transport development between 1923 and 1933 was the considerable waste of National resources at a critical period, which also retarded the intentions of the Railways Act of 1921. It sounds paradoxical but the success of that Act in other respects has assisted Road transport and its Government aid because amalgamation economies to some extent hid the effects of the Government road policy and had the old companies continued their separate ownership there would have been a crisis before now".

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119326

In reference to personnel Sir William had pointed out that -

> "Staff conditions in the usual sense - rates of wages, hours of labour, etc. - had been revised on a National basis during the period of Government possession, and the further changes following amalgamation were unimportant. This pre-amalgamation change was, in fact, one of several burdens which the poorer Companies could not have carried if amalgamation, or other legislation with a like effect, had not been enacted. This was recognised by trading interests when the Government plans of 1921 were under consideration, and it was then urged that in the interests of trade the poorer Companies should not be left to take their chance. The result has, however, been to make the difficulties of the amalgamated Companies greater than they otherwise would have been in the exceptional economic conditions of recent years.

Speaking at Bristol as late as October, 1936, Sir Wm. Wood made a very important statement in relation to specific L.M.S. economies due primarily to amalgamation. We now get nearer to some definite idea as to savings in at least one important direction and it might be noted, in view of the nature of the saving here referred to, that the Railways Act of 1921 very definitely intended that the objective of the Railway Groups should be the closest possible adherence to the principle of standardization especially in relation to rolling stock, including locomotives. The Act in fact embodied authority to enforce, if necessary, standardization and savings effected under that heading should, in fairness, be ascribed to amalgamation.

Sir William said:-

> "This brings me to the economies which have been effected in recent years. Between 1922 and 1935 the four companies effected a reduction in working expenses of no less than £45,000,000. This includes, of course,

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119327

reductions due to price changes and output as well as true economies and against it must be set the interest incurred on capital expenditure to secure it. I can best illustrate the type of economy I have in mind by referring to one feature relating to my own company, that of locomotive policy. We are working to-day on the L. M. S. with a reduction of 24 per cent. in the total number of locomotives compared with the time of grouping, which is I think in itself a striking example of the saving effected. By reducing the number of types, re-organising the workshops and repair sheds, obtaining longer runs between shoppings for repairs, improving the running shed arrangements and introducing locomotives of new designs, we have secured a clear economy of £2,000,000 per annum apart altogether from changes in prices and quantity of work. I think you will agree that this result - which I give merely as a striking example of what all the companies are doing in various directions - is very satisfactory."

(Vice-President E. J. Lemon, L. M. S., in July 1930, stated that the results obtained in this respect by the L. M. S., were typical of what was being accomplished by his colleagues on the other railways.)

It has been said that because the English railway groups were not allowed to dismiss personnel by reason of amalgamation this is offered as one of the main reasons for non-production of economies. No one, however, has any need to make, any such excuse for (supposed) lack of economies.

Since amalgamation the "exit", so far as the personnel was concerned, was wide open to give effect to the normal attrition process BUT THE ENTRANCE leading into the service was guarded, and it was at the latter point that any economy in personnel gained its momentum and achieved its effect. Thus was economy in personnel obtained, and by this simple process can always be obtained, so far as unification

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119328

is concerned, without hardship of any kind to a single established railway man.

The English Railway Companies say that the decrease of 68,754, or 11% in personnel between the years 1937 and 1923 can be attributed to:-

(a) reduction in administrative staff

(b) the improved service efficiency consequent upon amalgamation, and

(c) fluctuations of traffic.

The tentency is for personnel to increase again with traffic improvement and in any event railway employment, under the more settled conditions, applicable to the four groups on a consolidated basis is now of a more assured character.

The testimony furnished independently by the English Railway Executives indicates therefore that there have been very large economies clearly ascribable to amalgamation. The economy of £340,000 per annum to be achieved by pooling - and which certainly would not have been available except under amalgamation conditions - has been referred to as being, if not spectacular, at least worthwhile. Credit must apply in greater measure to the other considerable savings which have been acknowledged by the Railway Companies, and repeated as follows -

Sir William Wood announces a saving per annum of £2,000,000 on the L. M. S. alone, related to locomotive policy; information published by the railways shows that in

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119329

respect to the administrative class of personnel, by 1924, a payroll saving of £413,000 per annum had been effected. We know that in the eleven years ended in 1931 no less than 3,000 Station Masters had disappeared which could hardly mean an annual saving of less than £750,000. At the Annual General Meeting of the L. M. S. Railway Company in February, 1930, Sir Josiah Stamp (now Lord Stamp), the Chairman and President of that Company, pointed out that there had been a reduction of £372,000 in salaries and office expenses and he stated "This is an easily isolated example of the steady fruition of the economies resulting from fusion of administrative staffs". At the L. M. S. Annual General Meeting in February, 1932, the Chairman and President pointed out that this particular saving had been expanded to £1,000,000 comparing the year 1931 with the year of amalgamation. Savings admitted in respect to displaced Boards of Directors amounted to £150,000 per annum, and pre-amalgamation savings, due to unification, were officially admitted at £1,200,000 per annum.

But the greatest economy of all, however, and amply justifying Sir Eric Geddes' estimate, is represented by the results from the rationalization efficiency secured by the General Manager of English Railways rendered possible through the application of amalgamation in 1923. The English Railway Companies have endorsed the claim that this improved efficiency had enabled them to keep down freight rates and passenger fares to a general level not exceeding 50% above pre-war, with pay for the personnel at 100 per cent above pre-war.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119330

Sir William Wood emphasized that a very large proportion of the benefits derived from rationalization does not appear in reduced working expenses as arrived at by a balance in figures and, in that sense, does not shew in the accounts at all. Such benefits, represented by operating economies, have been turned back for the credit of the Traders in the maintenance of low freight charges and passenger rates and for the benefit of the personnel in the increased salary and wage schedules.

Eminent authorities, not connected with railway interests, but as a result or studies facilitated by the English railway management, have formed the same opinion in regard to amalgamation economies. In an article, by a well-known Civil Engineer, published in the "Financial Post" (New York) on April 23, 1938, it is claimed that these (in a sense, unseen) economies which have been passed on to the shipper and to the Staff, amounted in total in 1936, to no less a sum than £42,000,000. In the same article appears also the following significant reference:-

> "The Railways Act made possible the rationalization of the British Railways on a comprehensive scale, without which the subsequent reduction in rates would have bankrupted one-third of the rail mileage."

K. H. Johnston, writing to the "Railway Gazette" in February 1938, said -

> "No ill effects have been attributed to the measure of consolidation hitherto achieved by the railways in Great Britain and many economies have been rendered possible by it - probably some two-thirds or more of the huge saving of £40,000,000 a year which, according to W.J. Stevens' published book, the railways were able to effect between 1924 and 1933."

Sir William Wood has also pointed out that the reductions in railway working expenses in England would have

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

[illegible] 1933 [illegible]

~~been much~~ larger had there not been the necessity for expanding expenditure for the purpose of fighting road competition in particular and, to a less extent, air competition.

In the face of such testimony in favour of the results of railway amalgamation in Great Britain it cannot possibly be maintained that such a policy has been anything other than a huge success.

Without amalgamation, in the words of Sir William Wood, -

> "if separate ownership had continued there would have been a crisis".

With amalgamation, in the words of Sir Ralph Wedgwood, Chairman of the General Managers Conference in London, (speaking for the four railway groups as a whole) in April 1938

> "The railways look back on the year 1937 with satisfaction and they look forward to 1938 with confidence."

In conclusion, it is true that for the reasons which have been given the British railway companies have not seen fit to segregate or to publish complete figures assessing the money value of the economies produced by their amalgamation into four systems.

It must be kept in mind, however, that the objects to be attained by amalgamation went far beyond the mere reduction of expense to the railways or the increase of railway net revenues.

Before amalgamation and immediately after the Great War the railway situation in the United Kingdom presented

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119332

three chief problems. There was the serious necessity of lowering railway charges to their users. These were comparatively high as compared with those for example prevailing in North America, and the national economies required a reduction in transportation charges. In addition, in the special circumstances of the United Kingdom, the effect of highway competition was beginning to be very marked, and it was necessary to enable the railways to meet this. The second point was that, as part of a general social policy it was regarded as an essential part of public policy that the comparatively high rates of remuneration for the personnel established during the Great War should be maintained.

The third urgent question was to permit the British railways to obtain the resources needed to bring the technique of their operations up to a point where the delay to improvements created during the War would be overcome. During the War British railways had suffered from inability to continue the normal modernization of their methods.

The fourth problem was to prevent a financial crisis in the affairs of a large number of privately owned railways, which could not meet these new conditions under a continuance of separate ownership and intense competition.

It is thus necessary in considering the advantages of amalgamation of the British railways into four groups, to avoid any attempt to measure them solely by the simple test of reduction in expenses.

The test of success is whether all the problems above described have been solved. The public opinion in Great Britain is unanimously to the effect that this has been

accomplished.

The railway workers in particular, as already indicated, are quoting the success obtained as evidence in favour of a more complete process of amalgamation. Attached are a few figures giving operating results and number of personnel of the British railways from 1923 to 1937.

MEMORANDUM RE APPLICATION OF POOLING OF COMPETITIVE RAILWAY TRAFFIC AS IN THE UNITED KINGDOM, TO CANADA.

In view of certain questions which were raised at the sitting of the Committee of June 22nd, it has appeared desirable to amplify the general memorandum describing the effects of railway amalgamation in the United Kingdom so as to deal more specifically with the pooling arrangements which were referred to in the main memorandum as being established in order to eliminate as far as possible, the effects of such railway competition as remained in existence.

It may be noted that, as indicated in the main memorandum, there was no intention to regard these arrangements for pooling as being, in any sense, a desirable substitute for amalgamation. They were adopted specifically for the express purpose of eliminating, as far as possible without complete amalgamation, the wasteful effects of the remaining intergroup railway competition.

With this in view, the railway companies in collaboration abstracted for a period of two selected years complete details of the competitive railway traffic conveyed between each pair of competitive points in the United Kingdom - as, for example, between such points as London and Birmingham, which are served by two railways.

Having determined in this manner what were regarded as the standard proportions of carryings by each railway group between the various competitive points, these were accepted as governing future traffic. It was then provided that, as from

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119336

an agreed date, on all future traffic between the said competitive points, firstly, the Company which actually carried the traffic would receive what was regarded as a reasonable fixed allowance to cover cost of carrying and that, secondly, the remaining revenue from the traffic would be divided between the companies in the same proportion as ascertained by their competitive carryings in the standard years.

This method has enabled a satisfactory division to be made of the revenues derived from competitive traffic, with a minimum of accounting, and is designed to put an end to all competitive soliciting effort.

While the detailed results of this arrangement are not available and further investigation would be needed to obtain a complete picture, it is clear that, in making such a plan operate successfully and be generally acceptable, there can be no great diversion of traffic from one route to another to unbalance the carryings of the respective companies. These would have to be maintained generally in their former proportions. It is assumed that to obtain this end the scheme embraces some automatic or prescribed provisions.

Although this method of partial co-operation cannot possibly produce savings on a scale equal to those obtained by physical amalgamation of the properties and complete unification of management, it is evident that it permits some removal of the waste resulting from competition.

In considering the possibility of the application of a similar plan in Canada, certain obvious differences of conditions must be taken into consideration.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

I 19337

As pointed out in the main memorandum, the effect of the amalgamation of British railways into four systems has been very much in the direction of establishing regional monopolies. These, as has also been pointed out, all cover sectors of England radiating from London. In Canada, there is no such general focus of business which would control the division of the country into zones as between two railways.

In the United Kingdom, generally speaking, the main lines of the amalgamated railways do not infringe on each other's territory in a marked degree. In Canada, the main lines of the two railways are parallel throughout the country and, except in very few cases, there is nothing in the nature of regional monopoly. Indeed, the main and branch lines of Canadian railways cross each other in an interlaced network throughout the Dominion. That is, on a larger scale, the existing situation in Canada is not comparable to the present situation in the United Kingdom but rather to that which existed as between many railways in the United Kingdom before amalgamation.

In the second place, in the United Kingdom, owing to the comparatively small size of the country, the freight rate structure is not affected by distance to anything like the degree which is the case in Canada. In Canada, it is generally a fact that length of haul is subordinated to other considerations in rate making whereas, to a far greater extent in the United Kingdom the rates are in proportion to mileage.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119338

From the standpoint of working expense, there is also a marked difference. The compactness of the United Kingdom, the density of traffic and the comparatively large volume of each type of traffic all tend to produce a greater uniformity of cost of handling traffic than is the case in Canada. In Canada, with the greater distances and the greater variety of operating conditions and the more limited density of movement in total and by types, there is not the same uniformity throughout the country of working expense. In these circumstances, it seems probable that to develop an equitable formula for the application of this method of co-operation in Canada, short of complete unification, would involve great difficulties.

In the United Kingdom a certain stability of traffic conditions has been attained to a much greater extent than in Canada. The permanence of division as between competing railways of individual items of traffic is probably much more established in the United Kingdom than is the case in Canada.

For example, one of the major items of railway traffic in Canada is Western grain. The proportion which this bears to the total traffic of the two railways varies as from one year to another in millions of tons. It varies also as between successive years and as between the two railways. It varies also in its geographical distribution in the different parts of Western Canada as between any two years. It varies greatly in the proportion which each railway handles. To obtain a formula which would make any division of revenue from

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119339

grain traffic equitable would be extremely difficult, and, even if this could be accomplished, there would be left a very serious difficulty in arranging an equitable distribution of expense.

While, therefore, there might be advantage in a further study of this method of co-operation as applied in the United Kingdom, since it was not adopted there as an alternative to amalgamation, since the conditions in the United Kingdom differ so markedly from those in Canada, and since it would not permit the important economies which are made available through the best physical facilities of both railways, it is respectfully submitted that it is improbable that this represents an effective method of eliminating competition without resorting to complete unification.

F. Bramley,

**RAILWAY CO-OPERATION**

To the Editor of The Star.

Sir: It is interesting to note the voluminous reports given by different railway chiefs before the Senate committee, wherein they all stress the need for more co-operation, and their attempts to explain the failure of the two systems in getting to an agreement.

As most people who followed the Duff commission reports are aware, the stress was laid on the advisability of the express and telegraph departments to unify. This could be done with no loss of service to the public and would result in considerable savings. In the recent evidence, however, the stress of this as applying to telegraphs has been brought out but no reference has been made to the express departments. It has been estimated conservatively that savings of over $1,500,000 yearly would result in express unification alone.

When the railway brotherhoods' own representatives approved of this unification, why have the railroads been so slow to get down to a business-like agreement.

What the railroads seem to be suffering from is lack of good business heads. It is much easier to blame truck competition for their poor showing when the trouble seems to reflect on their poor business methods. PUBLICO

COPY LETTER

January 17th, 1939.

Rt. Hon. Senator Geo. P. Graham, P.C.,
Joint Chairman,
Special Committee,
The Senate,
Ottawa.

Sir:

In view of the fact that no representations have been heard by your committee on the railway question from western agriculture, a number of my friends have urged me to convey to you my willingness to appear before the Senate Committee and present this case as I see it.

If you desire me to do so and will advise me as to a convenient date, I shall be glad to comply with that suggestion. As far as I know at present I should be free to attend almost at any time during the next month.

Many western farmers now feel that the inevitable outcome of the present drift must necessarily be an early increase in freight rates, which would be calamitous. I would deal with that phase of the subject.

I would submit evidence as to the futility of anticipating increased traffic revenue by reason of an early substantial increase in population. Also that any such solution of the railway problem would, under present circumstances, be highly detrimental to agriculture.

It would be my intention to discuss the existing fixed railway wage level, the largest item in operating costs, in comparison with the fluctuating agricultural price level and cost of living.

I would submit observations on the subject of competitive railway services from the standpoint of agriculture.

It would be my intention to briefly outline a plan covering the composition of a board of directors to supervise our railway administration

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

which would, I believe, effectually remove it from political influence and group pressure.

The group urging me to offer my services to your committee in this matter feels, that your final conclusions on the railway issue should not be formed until you have heard and considered the arguments of the largest and most vitally interested body of producers in Canada.

I may say, that I have lived and farmed in Western Canada for over half a century and have edited my farm periodical for thirty-five years. I have thus come into intimate and continued contact with agricultural opinion. I would not appear as the accredited representative of any rural organization responsible for my submission, but would express my own views based on lengthy experience and a somewhat careful study of the history of transportation development and its bearing on western agriculture.

Yours respectfully,

Sg. Edward Partridge

# "THE RAILWAY PROBLEM"

*Address delivered by A. L. A. Richardson to the Belleville, Ont., Rotary Club, January 30th, 1939*

If I express at the outset what may seem a commonplace to you in saying that I really do appreciate the honor of addressing this Club, may I assure you that for several reasons I do it with a real sense of humility?

Because, from what I appreciatively read in our newspapers concerning Belleville, there are many in your own community who are better qualified to address you on this subject, and who could say what I have to say more forcibly and eloquently. I feel I am carrying coals to Newcastle.

In addition to these reasons, I too belong to a Monday Luncheon Club and have served on the Executive, and know the difficulty of securing speakers to fill in between the really important Club engagements. Gentlemen, I appreciate that I am distinctly a "filler-in."

I once heard about another Club, the President of which was asked how they were getting along. "Fine," he answered, "except for two difficulties. First we have to find a speaker for every Monday. That's not so bad, it's the second difficulty that hurts. We then have to listen to him."

But on the other hand, this Club is under a certain obligation to me, because last Summer, after attending one of your luncheons, certain bandits proposed a game of golf on your beautiful Belleville course, and gave me (the visitor) as partner one of your members who plays as badly as I do, and then proposed some small stakes. Suffice it to say, my noon luncheon was not a free one.

## Lessons to be Learned from the British Railways

Gentlemen, one of the most interesting studies I have encountered having a bearing on our Canadian railway problem (and in spite of propagandists to the contrary, I insist that we have one) does not once mention Canada or the Canadian National Railways. It is a little book called A NEW ERA FOR BRITISH RAILWAYS, and is a study of the British Railways Act of 1921 from an American standpoint, with special reference to amalgamation. It was prepared by H. C. Kidd, of the University of Pittsburgh, and I commend it to your attention.

May I summarize it briefly for you, although the subject matter no doubt is very familiar to many of you?

In 1914 the railways of England, Scotland and Wales were drafted into the military service of the nation, and for seven years they were primarily machines of war. They were then honourably discharged and became once more instruments of commerce.

While the Government had a number of post war problems to settle, the railway problem was a complex one because the Government in 1914 had guaranteed to maintain their net receipts on the 1913 basis, and to return the properties to their private owners with equities unimpaired after the conclusion of hostilities.

But during the war changes had occurred in the social and economic life of Britain. Taxation had become heavy. The type and distribution of traffic had changed, and the railways were experiencing increased highway competition. The standards of pay had risen, as had most other costs, and railway equipment was rapidly becoming out of date.

Although passenger and freight rates had gone up substantially, and were imposing a heavy burden on industry and commerce, revenues of the railways were still inadequate to permit them to maintain the increased level of wages.

So at the close of the war the 120 railways in Great Britain were losing money. The shareholders wanted some return on their investment, the shippers wanted a reduction in rates, and the railway workers demanded that the general increase in wages brought about in the war period should be continued.

Convinced that competition was no longer desirable, the National Government undertook a rationalization of the situation.

Did they have the approval of the country?

They did not! The railways were opposed, the railway journals were opposed, labour was opposed, the Opposition in Parliament was opposed, and local Chambers of Commerce were opposed.

Sir Eric Geddes, after a brilliant career, had assumed, in a blaze of glory, the position of Minister of Transport, and had the unenviable task of guiding the Bill through Parliament. Within a few weeks his popularity had vanished. He and his Bill seemed to please nobody.

But the Government had hopes that, by the institution of economies, they would be in a position to lower rates, maintain wages, and satisfy the shareholders, and the only solution they could see was to eliminate, by a scheme of rationalization, the unnecessary and wasteful competition that prevailed among the railways.

So in 1921 the United Kingdom was divided into four general areas, with London the focus, and in each of these a railway company was created to absorb all the existing companies (120 all told).

The four lines were the Southern Railway System, the Great Western, the London, Midland and Scottish and the London and North Eastern, the names of which indicate the areas served.

So under the Act, the general plan of grouping was to eliminate direct competition between the groups — only competition between the areas would remain.

According to Sir Eric, railway competition was largely destructive. In his own words: "Such competition as there was, was the wrong kind of competition; it was the competition that tried to pinch somebody else's traffic."

Gentlemen, in Economics, railways are placed in the category of Natural Monopolies. That is, they are the type of enterprise in which competition is uneconomic and wasteful, and where we must depend upon the regulatory powers of such Boards as our Railway Commissioners to protect the user against any possible abuses of rates or services. The man who argues the necessity of competition among railways is today arguing for a theory which is unsupportable, and which is as extinct as the dodo.

Keep this in mind: The avowed purpose behind the rationalization of the British railways was the maintenance of fair rates of pay, improvement of railway equipment and technique, and reduction of rates, with the expectation of gradually increased benefits in the matter of net revenues.

What is their situation today?

1. Public opinion unanimously accepts the results of amalgamation as representing a successful solution of a difficult problem.

2. Rate regulation and supervision of standards of service are in the hands of tribunals appointed by the State, with the result that the public offers no criticism on the grounds of loss of competition.

3. Labour was given protection by statute against any damage from amalgamation and no criticism is offered on that point.

4. Labour have kept their jobs; they have suffered no reduction in the rate of pay, and throughout the period of 1921 to the present, have been strongly advocating and assisting in the creation and making of economies in every direction. The railway worker has co-operated in averting the hiring of additional workers and has been a leader in urging administrative economies of all descriptions.

The English railway worker is today pressing for a final amalgamation of all the railway services, on the ground that there will be further savings.

D 19353

Now, Gentlemen, does the situation of the British railways in 1921 and their position today offer any guidance for our Canadian railway problem?

It is said that the Englishman "muddles" his way through problems—and there seems to be a growing Canadian philosophy that we should drift through our problems (although in some of them we are drifting pretty far from the shore).

But, Gentlemen, Great Britain knew she could not afford to muddle through her railway problem. She took action—and by protecting all interests fairly and by not sacrificing wages, rates or railway workers, has progressed a long way towards its final solution.

Does that deserve the attention of every Canadian citizen, and of every citizen of Belleville, the majority of whom directly or indirectly benefit from railway employment?

## Canadian Railway Problem

Up to this point I have not been on controversial ground, and the views that I am now going to express may be at variance with the views held by many citizens of your community, many of whom might ask what right have I to discuss the problem. I have little or no right—except as a citizen of Canada, and as an unwilling contributor to the deficit of the Canadian National Railways, and because I was assured that this group rather prided itself on the maintenance of an open forum for the discussion of such questions.

There are two schools of thought on our Canadian railway problem. I belong to the school which urges that there is much that must be done to correct our present hopeless situation, and which believes that the problem would largely disappear if we tackled it as courageously and forthrightly as the similar problem was tackled in Britain in 1921.

Of the several plans that have been presented for dealing with the Canadian railway problem, I feel the one that promises the most successful solution from the point of view of the taxpayer, the railway user, labour, and the railways themselves, is the plan of unification advanced by Sir Edward Beatty.

I adhere to it because it is the only constructive idea that either railway has advanced. Any one who took the trouble to read the evidence presented before the Special Committee of the Senate last year will confirm my statement that all the presidents and other high officials of the Canadian National Railways had to offer was criticism of the Canadian Pacific estimate of savings, and a pious hope that conditions would some day get better, and by a miracle the deficits would be reduced. For years they have been expressing similar hopes, and we have never yet seen the realization of one of them, and year by year the Canadian National is plunging the country deeper into debt.

I do not apologize to anyone for listening and subscribing to Sir Edward Beatty's recommendations, because after all he is the head of one of the largest and most successful transportation companies in the world, let alone Canada, and his company is one of the greatest Canadian assets, and one which never, since the initial grants in 1882, has cost the Canadian taxpayer one cent.

What is the other school of thought? It is the school which would have existing conditions prevail, and even allow them to become worse. All who belong in this school are like the man we all know who will not go to a doctor when he is sick for fear the doctor will prescribe something drastic in the way of an operation, even though that operation may save his life and give better health in future.

This do-nothing school of thought is the pleasantly optimistic school, which should have as its school crest an ostrich with its head in the sand.

It is a school, one of the chief mentors of which is the Winnipeg Free Press, which has been wrong on every railway question for the last thirty years—they are still wrong.

This paper was the leader of the group which forced the building of the $170,000,000 National Transcontinental Railway for the carrying of grain, although in twenty years it has carried one shipment of 4,000,000 bushels.

This same paper advocated the building of the Hudson Bay Railway, although from the first it was certain that the route would be a commercial failure. It has been a colossal commercial failure. This paper is one of a school whose expensive and optimistic thinking, if continued, will lead this nation to the verge of financial disaster. I submit that a viewpoint which insists on ordinary business prudence in the conduct of our railway affairs possesses greater national vision than the discredited promises of mere futurists who are content to see our country over-mortgaged to support a future mirage of Canadian National prosperity.

## Labour and Unification

A great many of those who agree that something must be done with our railway problem fear that nothing can be done because of the opposition of labour.

May I make it perfectly clear, with the utmost sincerity at my command, that if I felt there were any danger of increasing unemployment or decreasing labour's income in solving the Canadian railway problem by unification, I should definitely and strongly oppose the movement to the best of my ability?

But we have seen from the British experience that labour has benefited from a solution of the British railway problem along sound economic lines, and that British labour is more than satisfied with a result which has prevented a forcible lowering of the standard of living of the many thousands of men who are employed on the British railways.

I am convinced that a similar result could be achieved in Canada, and that Parliament would grant adequate protection to labour.

The public and railway men in particular must have noted with interest that Sir Edward Beatty, in his advocacy of Unification, has stated on numerous occasions that he would not be in favour of the plan if it did not contemplate a safeguarding of existing railway labour. Such meagre steps as have been taken to ameliorate the condition confronting the Canadian railways and taxpayers since 1933 have not safeguarded labour. In other words, when the need for economy forced the railways to pool or reduce certain services, men were thrown out of work, and there are today in Canada many thousands of railway workers who are only nominally connected with any railway.

A condition such as exists today is not necessary if we, the people of Canada, insist that our Government bring about the reform that is needed, a reform which would eliminate duplications of all descriptions, not the least of which is the duplication in the ranks of higher executives who are not laid off in depressions.

I do not think that the inauguration of a plan of Unification would cost the consolidated railway system any material amount of money to protect its labour after the first or possibly the second year.

I say this because I have never met an unemployed bank clerk; and you will recall that in the last seven or eight years there has been a closing of something like 1,000 bank branches in Canada, or approximately one branch in four. If the closing of a bank branch had meant the dismissal of the employees of that branch, we would have unemployed bank clerks in this country to about the same relative number as we have unemployed railway men today.

But the policy of the Canadian banks, to the best of my knowledge has been throughout not to dismiss employees. The employees of the closed branches were absorbed into other work, or in the case of older employees, they were retired on full pay or pension, or a compromise between the two, a few years prior to their regulation age.

Keep this in mind: At least one employee in 25 leaves the railway service on the average each year through death, retirement, etc. Thus, in five years if the average were maintained a total of about 20% of the employees leave the railway. It has been calculated that a single co-ordinated unified railway system could be operated efficiently and give all its employees a greater number of days work per week than under the present duplicated and competitive system.

Thus, I contend, that if the co-ordinated railway was not required to save itself in the first or second year, but on the contrary gave every man now on the lists at least as much work as he has at present, there would be a gradual improvement in the earnings of this community, and every other community, and with lasting permanent benefits not only to the community, but to the workers themselves. Would it not be

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

L 19354

something to look forward to? Can they see any lasting improvement under the present disastrous system? I feel certain, if labour were properly informed on these points, that they would support the movement.

## Deficits — And Their Interpretation

Now, gentlemen, before discussing my next few points, may I sincerely say that for the rank and file of the Canadian National employees — a number of whose friendship I value — I have the utmost confidence in them and their willingness to serve, but several weeks ago I was invited with one of your members to hear Mr. Fairweather, chief of Research and Development of the Canadian National Railways, address the Young Men's Canadian Club in Toronto.

I was most anxious to hear him, because he has been assuming positions of ever-increasing importance in the National Railways organization, and is now regarded fairly widely as the official spokesman or apologist of the System. During the past few years, I have been rather amazed, and have read with growing astonishment, various new so-called economic philosophies which he and other officials have been advancing to justify the staggering losses of the National System.

Mr. Fairweather advanced the proposition in Toronto — and I observe similarly in Saskatoon — that the Canadian National Railways is a great asset. No one is silly enough to dispute the asset value of the railway, but he goes on to argue that because it is a great asset helping Canadians in all parts of the country to produce wealth, the annual deficits are not deficits at all, if you please, but really only a small deduction from the net national income.

Mr. Hungerford, the President of the National Railways, expressed a similar thought when he appeared before the Senate Committee last year and argued that the National Railways do not exist to make a profit, but for the purpose of rendering a service to the public.

Strong exception must be taken to this viewpoint for two reasons: One would infer that the Canadian National System was the only railway which in the past or at the present time is contributing anything useful to the economic life of our country. I venture to suggest that the Canadian Pacific Railway, a privately owned company, has contributed just as much to our development, and at infinitely less cost to our country. This viewpoint of Canadian National officials should be objected to, and the belief certainly should not be permitted to exist among officials of the Government railway that they do not have to show satisfactory operating results, and that any deficiency in this respect will simply be forgotten by the country because they are now preening themselves as developers of our hinterlands.

If, as Mr. Fairweather argues, a $50,000,000 deficit is to be offset because of development work and so on, why does he not keep all the employees engaged and have a $100,000,000 deficit?

In the past, Mr. Fairweather has given as his considered opinion that the Canadian National deficits are not really serious in their effect on our national life. He claims that the deficits and failure to provide interest on their borrowings from the public are not serious, because, as he said, the credit of the Dominion could not be as high as it is if they were really serious. If Mr. Fairweather can secure a statement from our present Minister of Finance, or any of our Ex-Ministers, that they have not found the deficits of the Canadian National an intolerable burden to our national finance, I will gladly stop talking Unification. Gentlemen, such statements coming from a public servant are unmitigated gall — and it is high time someone expressed that opinion in public.

A year or so ago he expressed the belief that the road would pay at some time in the future — even though in the years of their peak traffic they were unable to provide a satisfactory operating ratio.

He has offered throughout the country explanations for the high debt of the railway, which are at complete variance with the facts. He considers it a satisfactory record for the railway to have paid its operating expenses EXCEPT INTEREST, although such a record would have meant bankruptcy for a private concern.

He has defended heavy capital expenditures, which were severely censured by the Royal Commission. He has even made the startling and incorrect statement that the Royal Commission findings were not derogatory to the Canadian National, and that any criticism of Canadian National extravagance was quite understandable because the Commission's report had the disadvantage of being prepared in the depth of the depression.

Now he is advancing the theory that these deficits are a necessary accompaniment to the services that the Canadian National is rendering to the country, although, as I have previously remarked, the privately owned competitor is doing the same for the country, and not costing us a cent.

I submit that the bringing forth of this novel argument — which is none other than a lame excuse for the failure of the Canadian National as a business enterprise — will quickly return us by its encouragement of extravagance on the part of every Canadian National employee to the same condition which necessitated the examination of the railways by the Duff Commission in 1931. The inference is also left with his hearers that the asset value which exists in the Canadian National Railways would cease to exist under a scheme of Unification. The fact is that the asset would remain, and become a valuable asset under proper management. I am amazed that the rank and file of Canadian National employees are as efficient as they are under the direction of such philosophy.

For twenty long years Canada has listened to railway addresses containing similar bursts of patriotic camouflage about the future, and has patiently waited for some relief from the tax burden she could ill afford to bear. For twenty years our country has patiently spoon-fed the Canadian National from the public exchequer, and listened to official announcements of future possibilities while the unsatisfactory conditions have remained and the Dominion of Canada has had to stamp its written guarantee on the backs of every newly issued Canadian National bond, which have been issued in ever-increasing number.

Why should a man occupying Mr. Fairweather's responsible position (and I repeatedly mention him because he is apparently the spokesman for the railway); why should he be guilty of perpetuating statements that unbiased students of the railway problem felt had been completely answered by the exhaustive reports of our Royal Commission, and then protest that he is not making controversial statements or that he wants to "keep the record straight" and admonishes us to view with scepticism any statements derogatory to the Canadian National.

I have not the least intention of attacking the Canadian National Railways. I am one of the owners of that System— and do not intend to cry down the value of my property. It is an asset — to me and to the country. It has, however, cost us too much, and I am most unwilling to admit that I have no right to say that.

I wish to draw a very clear distinction between the Canadian National Railway System and the present politically inspired method of managing it; between the System as a physical property, and its maintenance as an unnecessary extravagance.

The property is the asset. Anyone who suggests that we should not retain this is no ally of mine. Its independent operation at high cost is not an asset — it is a liability, and I object to the paid employees of the Canadian taxpayers being permitted to wander over the country denying this at the public expense.

Mr. Fairweather recommends scepticism — and so do I — concerning his arguments and the propriety of his using them.

Of course, should Mr. Fairweather continue to present his case in this fashion, taxpayers are justified in questioning his soundness of judgment, as well as his sincerity of purpose. And if Mr. Fairweather believes in his arguments, then I submit with every degree of seriousness that he is not competent to continue holding the position of head of the Department of Research and Development of the Canadian National Railways. As official spokesman for the Railway, and as an employee of a publicly owned and supported railway, his time could be far better occupied striving to increase the efficiency of the Railway rather than wasting the taxpayers' money in advancing special pleadings — the accuracy of which I am by no means convinced. And I make this statement in spite of his lengthy years of railway experience, which should be the basis for an infinitely sounder understanding of the railway problem than I can ever hope to have.

## Politics and the Canadian National Railways

We then come to the type of person who agrees that something must be done about our railway problem, but who shrugs his shoulders and says we can't do anything because of politics, but still insists that we can eliminate politics from the National Railways.

Gentlemen, how much longer will this farce of trying to eliminate politics from our National Railway be continued. I do not believe that there is a man of any responsibility in the community who believes that our National Railways will ever be operated free from politics. The Drayton-Acworth Report stressed again and again that politics should not be introduced into the operation of the railways. The Duff Commission Report repeats the necessity for the removal of the Canadian National Railways from politics, yet we have had two changes of management since their recommendations were brought in, and is there any one in this room who is foolish enough to believe that we should have a change of Government in the next one, or two, or three years, there would not be another change of directors?

Politics — and each party — and every citizen of Canada must take his responsibility for it and not try to blame someone else — has be-devilled this System not only from its inception, but in the days of the so-called private units which preceded the system. Incidentally, Mr. Fairweather's repeated pleas for sympathy, because of the National System having to take over private enterprises which had fallen by the wayside, are rather amusing in view of the fact that the Intercolonial and Transcontinental were Government undertakings, the Grand Trunk Pacific and Canadian Northern fairly reeked of political machinations and patronage, while even the Grand Trunk Railway became completely enmeshed in political intrigue — as witness the undertakings entered into on behalf of the National Transcontinental and the Grand Trunk Pacific.

Now, gentlemen, why should politics be the curse of this Government-owned railway? Why has our Royal Commission stressed its presence, and emphasized that it must be thrown out?

Let me read to you from the Drayton-Acworth Royal Commission Report of 1917 on Page LV — a report prepared by men very familiar with politics.

* * * *

### Railways Not a Proper Subject for Direct Parliamentary Control

"We have given expression to a strong view that the operation of the railways of the country by a department of the Executive Government directly responsible to Parliament would be against the interest of Canada. Lest it should appear that this view implies a reflection on the honesty and ability of ministers and members of Parliament, we desire to explain why we entertain it. Our reason is, not that Government by a Cabinet responsible to a popularly elected Parliament is a bad Government for the ordinary purposes of Government, but that it is not a form of Government suitable for the management of a railway undertaking. . . .

### Private Interests and Public Interest

"The railway touches the life of the country at innumerable points. It can almost make one city and unmake another. It vitally affects the question whether an industry in one place is more or less profitable than in another. Every city wants to become a railway centre, to have railway works located within its limits. And the local member invariably wants it too. Every citizen wants the railway station placed where it best suits his own personal convenience, and wants that every express train shall stop at it. He naturally strives to secure these benfits for himself, and his local member naturally desires to help him in their attainment. The individual citizen, the local member, cannot be expected to see the railway situation as a whole; to appreciate, for instance, that an express which stops at every man's local station ceases to be an express at all. Even if he does appreciate it — human nature being what it is — he will probably be quite content if, by bringing political pressure to bear, he can gain an advantage in which his neighbour at the next station does not participate. It is too much to expect of the average merchant, the average manufacturer, that if he finds that by pressure he can obtain for himself an exceptionally low rate, he will refrain from asking for it, because it gives him an unjustifiable advantage over a rival, or because he knows that the balance of net revenue must be made up by unreasonably higher rates paid by other people's traffic.

"It is only when the management is protected from the pressure of special interests that a railway can be managed in the interest of the public as a whole, that it can be expected that improvements and alterations will be made, even though they injuriously affect certain individuals, because they are justified by greater benefits to the people at large. To take one example. We are satisfied that there are many cases where, in the interest of economy, duplicate services should be abolished, and duplicate stations closed. Any such change must injure somebody. Supposing that it results in a saving of $1,000 a year to the taxpayer, while the injury can be measured by a loss of $25 a head to three or four people, clearly the change ought to be made. But if the three or four men can get their grievances voiced in Parliament, while the taxpayer is an abstract entity with no one to speak for him, probably the change will never be made. There is no need to multiply instances. We believe that the history of railways all over the world, where the management is directly under a minister responsible to a democratic Parliament, confirms our position that under such a system the public suffer because special interests obtain concessions at the expense of the community as a whole. It is for this reason that we have emphasized our recommendation that the management of the railways be entrusted to a body independent of politics."

* * * *

Is there anyone in this room who believes that politics and the Government railway will not go hand-in-hand in the future as they have in the past? If you do, then explain to me the completion of the white elephant terminal in Montreal at an additional cost of $12½ million to the taxpayers of Canada, when editors of daily newspapers right across Canada by an overwhelming majority give it as their opinion that the project should not be proceeded with.

Does the Government railway want it — and if they do, are they prepared to pay the interest on the investment? How can they? They are not paying interest on the hundreds and hundreds of millions of dollars of assets that they are now using.

Or are you prepared five or ten years from today to have an official railway apologist plead that the Canadian National Railways cannot be held responsible for its erection because it was, if you please, an unemployment project, etc., etc.?

Gentlemen, are we so lifeless or child-like that we are going to let the word "politics" in a democratic country deprive us of our solution to this problem? A week or so ago I listened to Mr. Floyd Chalmers, of the Financial Post, deliver a stirring address at the Rotary Club of Toronto concerning the problems of democracy in measuring up against the totalitarian powers, and in which he asked the question as to whether democracy means enough to us that we will work to make it work right here in our own country. He asked how far are we prepared to go in proving the superiority of the system of freedom and liberty. Mussolini has said that he is not afraid of the democracies because they are stupid.

Gentlemen, are you one of those who shrug their shoulders and say that the railway problem cannot be solved because of politics? If you are, then you must subscribe to Mussolini's indictment of our democracies as being a stupid form of Government.

If you don't, let us awaken ourselves to this problem, and possibly the Rotary Clubs and other service organizations may give to the country the leadership that it so badly needs at the present time. May I remind you of your service slogan, "He profits most who serves best"?

Mr. George L. Harris,
Barrister,
16 McBeath Block,
Moncton, N. B.

Dear Sir:

I have your letter of 30th January.

You argue that the Senate Committee which sat most of last Session investigating the Railway question with a view to its solution should not be re-convened to complete their work this Session because to do so would lose the votes of C. N. R. employees for the Conservative Party.

I cannot pretend to be any better judge than anyone else as to what will gain or what will lose votes, but this I do know: that if the Senate of Canada determines its course by reference to this test, the next thing the Senate should do would be to petition the Crown for its dissolution. It can serve no worth while purpose in this country unless it determines its course absolutely from the standpoint of the Nation's interests. It was created so that it might perform that very function, and, as long as I am there, I am going to do the best I can to have it do its duty.

Even if we should decide our course with our eye on the ballot box--which we should not--I am by no means convinced that we will gain votes for the Conservative Party by ignoring the Railway problem. When the Government of Mackenzie King in 1923 dismissed Mr. Hanna and his very efficient and certainly non-partisan Board, and appointed Sir Henry Thornton and a thoroughly partisan Board, they took the first step to bedevil the whole Railway situation in Canada, and Sir Henry Thornton, at a cost of hundreds of millions of dollars to the people of this country, succeeded in making the Canadian National Railway personnel an appendage of the Liberal Party. I think it is very likely to continue as such appendage. Long

Canada

January 30, 1939.

The Right Honourable Arthur Meighen,
The Senate,
OTTAWA, Ontario.

Dear Sir:

The Railway Trainmen, living in this district, of whom there are many, were and still are much perturbed by the investigation carried on before a committee of The Senate last session on the railway question, and notwithstanding the anti-unification resolution passed at the recent Conservative Convention, they look with distrust on The Conservative Party which they fear, if returned to power the next election, would repeal the Act which now makes Unification or Amalgamation impossible.

If this matter is farther exploited in The Senate during the present session and Unification or Amalgamation supported by yourself and other Conservative Senators, the damaging effect upon the Conservative Party candidates at the next election, will be far-reaching as the Railway vote is a heavy one.

Railway Trainmen are well posted and are thinkers and they are embued with the idea that Saint James Street, the Vested Interests and the C.P.R. are working together to blast through and consumate Amalgamation with disasterous results to them and their families.

Did you ever estimate the vote of Railway men, their wives, sons, daughters, and their families over all Canada? The Railway men know their friends.

The only solution of the railway question is assisted immigration of Refugees from Europe to fill up the vacant spaces all over Canada, "an ordered plan of immigration," quoting from Mr. R. B. Bennett's speech at Saint John, N. B.

I commend for your perusal the pamphlet issued by The Canadian National Committee on Refugees and Victims of Political Persecution, 124 Wellington Street, Ottawa, Ontario, entitled, "Should Canada admit Refugees?"

The C.P.R., the British and Canadian Governments, and Jewish Associations should, and no doubt will, pay the cost of assisted immigration over a period of five years, or longer, if necessary.

If you prolong the work of this Senatorial Committee, you increase the strength of The Liberal Party all over Canada, and may set The Conservative Party back ten years or more.

Yours truly,

Geo L Harris

MEMORANDUM

March 10, 1939

119360

Mr. Meighen:

Herewith copy of three communications which will doubtless be discussed in the meeting of the Special Railway Committee on Wednesday.

With reference to Mr. Peterson's assumption that his travelling expenses will be defrayed, my understanding is the Committee has no intention of authorizing such payments.

CO-OPERATIVE LEGISLATIVE COMMITTEE

STANDARD RAILWAY LABOUR ORGANIZATIONS

119361

506 Birks Building,
Ottawa, Ontario, March 9th, 1939.

Mr. Arthur Hinds,
Chief Clerk of Committees,
The Senate,
O T T A W A.

Dear Mr. Hinds:

I understand that the Special Committee of the Senate appointed during the last Session of Parliament to inquire into the railway situation has been re-appointed and will shortly commence holding public sittings.

We assume that in resuming the inquiry it is intended to review former submissions during last Session, which would include those of railway labour groups given a hearing by reason of their holding working agreements with the railways. Therefore, on behalf of the Legislative Committee representing the Standard Railway Labour Organizations, whose membership are composed of the major number of railway employees affected, we shall esteem it a favour if you will arrange an opportunity to make such further representations as may be warranted by developments.

Thanking you in advance, I remain

Respectfully yours,

Wm. L. Best,
Secretary,
Co-operative Legislative Committee.

THE CANADIAN CHAMBER OF COMMERCE

W. FRANK PRENDERGAST,
HONORARY TREASURER

W. McL. CLARKE,
SECRETARY

The Board of Trade Building,
Montreal, 13th March, 1939.

The Right Honourable Arthur Meighen, P.C.,
The Senate,
Ottawa, Canada.

Dear Senator Meighen,

Referring to our interchange of correspondence during the month of January, may I say that the Executive of The Canadian Chamber of Commerce have noticed with satisfaction, at its meeting on 9th March, the re-appointment of the Special Railway Committee of the Senate. I was accordingly requested to refer to each member of the Committee the Chamber's considered policy on the Railway Problem, which was forwarded you earlier and which is again end osed for your convenience.

You will recall that this recommendation, looking toward the re-appointment of the ad hoc Senate Committee to study the railway question, received the imprimatur of the representative business men from our member Boards of Trade and Chambers of Commerce across Canada at our Annual Convention held in September, 1938.

Now that the Committee is re-empanelled, we are hopeful that it will be in the wisdom of the Senate Committee to appoint the body of experts to which specific reference is made in the Chamber's policy.

Yours very truly,

W. C. Clarke

Secretary.

Mr. J. F. MacMillan,
Chisholm Saw Mills, Ltd.,
Edmonton, Alta.

Dear Mr. MacMillan:

I have your letter of 11th, which I have read carefully, and as well the copy of letter to the Prime Minister which was enclosed.

In the main I am in agreement with what you say. However, there is one feature with which I am afraid I cannot agree and that is the suggestion in your letter to an Alberta M. P. that the country might take over the Canadian Pacific. This would produce unification all right, but I have seen so much of Government operation over so many years that I have become utterly discouraged on the subject, and would dread a united Government-operated Railway system in Canada more than I do even the present situation.

What you say as to the wage situation has very great point indeed. The primary producer pays for artificial wage levels, and while he thinks other things are causing his level of prices to be unduly raised against him, the real cause is our wage level. It would all be fine if the farmer could be artificially raised as well, but he cannot be.

Yours very truly,

AM/E.

Arthur Meighen.

Senator Arthur Meighen,
The Senate,
OTTAWA, Ontario.

Dear Sir:

Re: Railway Problem

I enclose herewith copy of a letter I recently wrote the Prime Minister for your perusal. I note you are not in accord with Mr. Manion's policy. The trouble with all our politicians is that they place too much stress on the railway vote which, of course, is organized, and it looks as though the masses will have to organize against such tactics.

On February 9th last I wrote an Alberta M.P., as follows:

" With reference to the Toronto Globe & Mail editorial of the 4th instant, in which it states Mr. King is committed by a party platform to retain the Canadian National Railways as a publicly owned and publicly operated system, it seems to me the only honorable thing to do, both with the employees and the public, which have become very incensed since the public has listened to McCulloch on the air, would be to purchase the common stock of the Canadian Pacific Railway and pay them say double of the present stock market value, or what amount could be agreed upon, which would be indicative that the Government tried to be fair.

" Beatty would be the best man to be the Chairman of the Board as he is energetic and progressive and a good executive. Whilst Hungerford is a nice chap and good mechanic he is not an executive and lacks force to drive matters and allows his heads to dictate and run their departments and there is no co-operation between the different units. On account of our leaders playing too much politics it looks as though the general public is paying a terrific price for political cowardice and I venture to predict the time is coming quickly when the railroad vote will not offset the vote of the general public on this question.

" Assuming that the Government took over the Canadian Pacific Railway and there was a strike there are enough bumped railway employees throughout Canada who could run the railways temporarily in a pinch. The fact of the matter is the unions have been running the railways for some time and the executives have not had sufficient backing from our Governments to keep the employees in their places because all the different parties have been playing too much politics and the general public are beginning to get fed up and when the reaction sets in the railroad employees will not be able to control it and may get a much worse deal than they enjoy to-day. There is such a thing as riding a willing horse to death, which I claim our railway employees have done. "

I hope our Senators will not play too much politics and give more thought to economics and endeavor to improve the present railway situation and eliminate so many existing jealousies between the two railways' executives.

Yours truly,

J. F. MacMillan.

COPY

March 6, 1939.

Rt. Hon. W. L. Mackenzie King., P.C.,
PRIME MINISTER,
OTTAWA, Ontario.

Dear Mr. King: Re: Railway Problem

I notice by the press where the Hon. J.L.Ilsley, in a recent address before the Toronto Board of Trade, made the statement that many critics had accused the Government of failing to solve the railways problem but none had suggested increased railway rates or lower wages as a remedy so I am going to take the liberty of accepting that challenge and offer some suggestions.

One good reason for not offering the above suggestions as referred to by Mr. Ilsley is because the general public, from past experience, feel it is useless to offer such when they know the attitude of all political parties at Ottawa regarding labor unions and their votes. This railway situation has now developed into a serious and chaotic condition and to overcome same I would suggest that a questionaire with many questions thereon be submitted at the next Federal election and get the ideas of the masses and not individuals as there are a great many differences of opinions amongst the people. It would be advisable to get suggestions as to the questions to be submitted from the both railways, the Boards of Trade throughout Canada, and the general public, and then let your Minister of Railways bring forward his recommendations to your Government. This would relieve all political parties of much embarrassment from the railway unions and many other interests. Then if the people want co-operation, unification, or competitive systems let them choose and if they make a mistake let them pay for same by taxation or otherwise.

My suggestions are as follows:

1. Put your canals on a self-supporting basis from the time they were built because when the policy of free canals was adopted the railways were in a prosperous condition but owing to competition from these canals as well as the truck these conditions have changed. In those good old days a railway franchise was considered a valuable asset but to-day it is a liability so Governments have therefore got to change their policies with changed conditions, which, as you know from my previous correspondence with you, as a result of free canals and water competition, that the railroads are forced to chisel and reduce their rates and discriminate unreasonably against territories possessing no water outlets.

2. Subsidize both railroads covering unprofitable mileage, of which I understand there are about five thousand miles as submitted to the Railway Commission some years ago, on a basis that would be fair to both railways. The Canadian National Railways claim they were forced to take over a large number of lame ducks so this policy would eliminate that cry in future operations and put them on a competitive basis without so many alibis.

3. Cut out railways passes to everyone. In the case of the press let the railroads pay the press for their advertising or services. In the case of members of Parliaments they are entitled to free transportation but let their respective Governments pay for same under travelling and transportation costs. Why should the railways have to absorb this expense? As a matter of fact all members of parliaments are underpaid, taking into consideration their time and all the demands made on their purses. In the case of railway employees, as they are paid better than

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

019368

any other class of employees and protected with pensions, they are not entitled to this extra consideration, especially when the citizens of Canada are obliged to pay for same through extra taxation. It may have been excusable in the old days when the railroads were small but not now when railroads are large and engaged in all lines of business. Why should bell hops and domestics at hotels be entitled to these privileges, or in fact any employees?

4. After these adjustments are made and more revenue for the railroads is required, then both increase freight rates and reduce wages and place the railroads in a sound financial position.

5. My observation to-day is the Canadian National Railway is heavily subsidized by way of deficits which are paid for by the taxpayers of Canada and the Canadian Pacific Railways does not receige any subsidy under present conditions although very large taxpayers in Canada. I personally favour an amalgamation of the railways under some satisfactory form and under one management, and the elimination of a lot of unnecessary competition and overhead in telegraph, express, freight, and passenger services at many points. The Banks in Canada were forced to adopt this policy and why not the railways? While it may be true a lot of employees lost their former positions the Banks were, however, compelled to provide for them on a reduced basis in some manner and the railways will have to do likewise for a few years until the situation becomes adjusted.

6. Railways rates, if I remember correctly, were advanced 25% in 1918 and 20% in 1921 and the railway employees largely got the benefit of same. It strikes me our political friends in all parties place too much stress or confidence upon the strength of this railway vote because the proportion of that vote is less than 3% of the total vote of Canada. McAdoo of the United States during the period of the war, and who had at that time ambitions of becoming president of the United States and was playing politics and courting favour with the railway unions, is largely responsible for the present financial condition of all the railways in American to-day as a result of unwarranted wage increases and which our Canadian Government at that time was foolish enough to follow, even though to such an extent they were economically unsound.

7. Co-ordination and consolidation of transportation, if accomplished, offers only a partial solution to the problem. With the decrease in rail traffic and the use of improved transportation machinery labor must expect and should be forced to absorb some of the effects of changed transportation conditions. When a powerful competitive type of transportation, such as the truck and automobile, enters the field and will work with enthusiasm and energy at lower rates of wages and longer hours, there must be some concessions made by railroad labor and labor of older modes of transportation if they hope to remain in business, otherwise these older forms of transportation will be destroyed piecemeal by high costs regardless of the economic facts or the needs of the country.

These are merely suggestions to consider from a Western Prairie viewpoint.

Yours truly,

JFM/GW

J.F.MacMillan.

119372

CANADIAN BROTHERHOOD OF SHIPS' EMPLOYEES

March 16th, 1939.

Senator James Murdock,
Senator Chambers,
House of Commons,
Ottawa, Ontario.

Honorable Sir,

Your statement as cited in press dispatch that the Canadian Federation of Labour as reported, "was founded on a shoe string and paid by those in favor of unification" is a statement of very far reaching effects, but it is refreshing to note that the Right Honorable Meighan has decided to hear the President of the C.F. of L., Allan Meikle, on the question.

In so far as it being founded on a shoe string, may I emphasize that many of Canada's most prominent men peddled newspapers and worked at meagre jobs in their beginning.

With regard to the support you mention, the same should be proven before a statement of this kind is made, for as being on the Executive Committee of the Canadian Federation of Labour, I am totally unaware that any such support exists.

Your other expression that, "they want to come here and raise ----", is again unwarranted. If you had the patriotic interests of Canada at heart, which I am sure your citations indicate that you have not, you would express your sentiments towards co-ordination of labour for the purpose of labour peace in Canada, as well as attempt some reasonable sane solution whereby our workers in the railways would not be treated as a preference or preferred labour class whose wages are in the highest brackets in the country and almost double that of the Canadian seafaring personnel.

It is along these lines that such outbursts that you have made actuates the public to rally to the various "isms" and such a movement as the "Leadership League" whereby the country at large may have a hope of relief.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

Therefore it is clearly apparent that your sympathies are with foreign labour organizations who are now fast compiling a minority issue in Canada, and the time may not be far distant when the Canadian Government may have to deal with this labour issue in Canada under the control of a foreign power - which would involve just such a case as that of Hitler and Czecho-Slovakia.

Yours truly,

CANADIAN BROTHERHOOD OF SHIPS' EMPLOYEES.

H.N. McMaster,

Governor.

D 19374

CANADIAN BROTHERHOOD OF SHIPS' EMPLOYEES

March 16th, 1939.

Senator John T. Haig,
Senate Chambers,
House of Commons,
Ottawa, Ontario.

Honorable Sir,

As reported in the press that you state, "the Canadian Federation of Labour represents the radical or more red lement of workers", I charge that it is a malicious falsehood in which you should be called upon to prove.

As a member of the Executive Board of the Canadian Federation of Labour, and the Governor of the Canadian Brotherhood of Ships' Employees, on behalf of both of these organizations, I strenuously protest such language and challenge you to prove that there is one member of the Executive of the C.B.S.E. or its subordinated affiliates that is a member of the Communist Party, or has Communistic leanings in the slightest.

Your statement is a gross fabrication of misleading propaganda designed deliberately to harm and prejudice an all Canadian organization, and is a direct censor on patriotic Canadians for upholding Canadianism.

The Canadian Brotherhood of Ships' Employees has constantly fought the radical and red element throughout the Great Lakes district which is now overrun by foreign organizations under foreign control. I may state that the ports of St. John, Halifax, Montreal, Three Rivers, Toronto, Windsor, Sarnia, Port William and Port Arthur are definitely under the control of a foreign power, and this foreign power is making strenuous efforts to control Canadian trade and commerce within Canada's waterway system.

Such statements as you have made will do incalcuable damage to the cause of our all Canadian Brotherhood as well as seriously effect its membership growth.

Just why Senators and the present Government appear to be taking a definite stand to penalize Canadian organizations with patriotic Canadian intentions and policies is beyond our comprehension.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

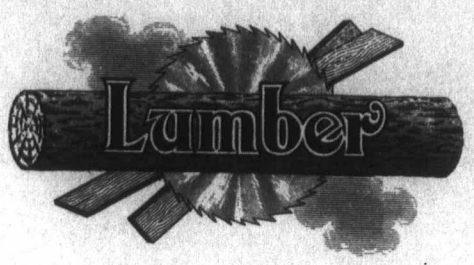
Even the Department of Labour in the recording of its statistics knowingly records a misrepresentation of the Canadian Federation of Labour membership, and I may say that the Department of Labour has consistently refused to treat on an equal basis the interests of the Canadian Brotherhood of Ships' Employees when it becomes involved with foreign labour organizations, and the past files of the Department of Labour will verify this.

If your statement had not been made by a public personage of prominence, I would have attributed it to a sailor coming off a long drunk who had some feud with his union.

I would therefore ask on behalf of the interests I represent and in British fair play that you retract this statement. But it would look to us that it is about time that the forces of the Canadian public should join up and consolidate once again to place Canada within the British Commonwealth of Nations.

Yours truly,

CANADIAN BROTHERHOOD OF SHIPS' EMPLOYEES.



H.N. McMaster,
Governor.

O t t a w a .

Right Honorable Sir,

As the leader of the Senate, we are forwarding to you additional correspondence on the incident of a statement made to the press by Senator Murdock. A copy of our previous letter sent to the Senator was forwarded to you under date of March 16th.

It is unfortunate that one has to be penalized for being a Patriotic Canadian, and it is also unfortunate that a Senator should use his position for public utterances of national importance without having first checked same as to their accuracy.

We think that an incident should be made with Senator Murdock for using such language, especially when it is untrue and unbecoming to a Senator of Canada.

Respectfully submitted,

Yours truly,

CANADIAN BROTHERHOOD OF SHIPS' EMPLOYEES.

H.N. McMaster.

March 18th, 1939.

Senator Murdock,
Senate Chambers,
House of Commons,
Ottawa, Ontario.

Honorable Sir,

I regret very much that your letter of March 17th in reply to mine of the 16th requires an answer.

In your second paragraph where you mention expulsion of the O.B.U. from the Canadian Federation of Labour, this is an internal matter of which at the present time I am not in a position to discuss.

However in your third paragraph where Mr. McLean advises that we made application to join that congress sometime ago on the solicitation of their representative, Mr. Joe Wall, who in his solicitation presented only meagre partial facts and did not discuss the real object or true facts concerned with the make up of their organization, and upon further information being submitted to us from various sources, and on the misrepresentation of the facts by Mr. Wall to us, we declined to accept their charter which was mailed to us, and received by us at Montreal, but, returned same to them without any delay. If Mr. McLean deliberately told you what is contained in your letter he is an unadulterated liar of the first degree and which we can prove by our files and our council as they never denied our application but actually issued their warrant to us as I have stated, and Mr. McLean, in making this statement, knows that he is a malicious liar and misrepresenting the facts. But, I am surprised at you repeating them without any further documentary evidence.

In following where you state that, "the Department of Labour says that I and my family are doing a very commendable work under the protection of the letterhead which you sent in securing for transit and unemployed seamen in Montreal getting them a bite to eat once in a while", I again state the the person who made this statement is a malicious liar of the first water and should have his head cracked for making it as they know in Ottawa from records we have submitted the make up of this Brotherhood.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

For your information the affiliated groups in this Brotherhood are the Canadian Brotherhood of Marine Engineers of which Mr. L.O. Lamoureux is the Chairman of the Board and is surrounded by a elected Board; the Mercantile Marine Officers' Guild of Canada, of which Captain A.C. Clarry is the Chairman of the Board with his elected Board; Captain Clarry is the Master of a Lake ship, and Mr. Lamoureux is a Chief Engineer of a Lake boat of another firm; In so much as the National Seamen's Association is concerned, in which we have in excess of four thousand members applications signed by Canadian Lake seamen and witnessed, the Chairman of the Board of which is Mr. F.G. Valiquette of the city of Montreal, and with him he is surrounded by a Board elected by the seamen. The Canadian Brotherhood of Ships' Employees as the administration group is composed of delegates only of these component parts. In all we have close to five thousand members and this organized movement has been in existence for the past ten years. So that if you call this my "family" it is a very large one and our records will support every item in this letter.

For your impertinent information I may say that the only one of my family or relatives in this odd five thousand is one daughter, whom I challenge any person to better for conscientious sincere loyalty to the cause and support of principles, and for your information this girl has worked many many months without one cent of salary.

With regard to giving the sailors a bite to eat once in a while, it is true that in the winter of 1935/36 we fed in excess our records show of thirty thousand meals to sailors who were absolutely and positively denied the subsistance of life from any other source and we figure we have had a pretty helpless government in looking after the wants of those destitute citizens. Since that time however due to the criticism levelled at us for feeding this odd thirty thousand meals, we have declined to feed anybody, or even pass out a dime, with the result that there is an increase in crime amongst the seamen and they now hibernate in jails and prisons and panhandle in Canada's large cities.

I wish to impress you, sir, that I know what I am talking about and for practical application to the problems of life in so far as our industry is concerned, I have had more than forty years experience and held the best position in Canada with marine transportation companies that Canada has had to offer, and one tenure of office was eighteen years with what I consider one of Canada's best marine firms at that time, and have never been spoon fed, but went through the rough and tumble of the sailing ships in all its grades to executive positions in steamship companies.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

No other marine organization in connection with seamen has managed to stand up against the criticism for the length of time we have and for your information may I say that the S.I.U. in Canada from the U.S. is conducted by the Communist party and under the control of radicals whom we threw out of our organization and during 1938 it was proven our action was justified as they formed strong arm squads who kidnapped crews and put through a policy of education amongst the sailors to incite revolt and create mutiny in many cases, and Mr. Senator, I may tell you that if there is not more co-operation amongst the head of governments to deal with the situation as it now exists with the C.I.O. and A.F.L. grabbing at each other throats on the Atlantic and Pacific coasts, and the C.I.O. spending in excess of twenty-five thousands dollars a month to get control of the Lakes, that you will have our whole Canadian mercantile marine under the heel of a foreign power before this season is over, and Canadian marine matters will be dealt with and settled by the National Labor Relations Board under the Wagner Act of the United States.

Frankly speaking I don't like the tone of your letter and I would challenge you, or your informers, to prove any of the statements I have taken exception to.

Further this Brotherhood holds contracts with what we consider the best and most reputable steamship companies in Canada to-day and these contracts are being administered from the labour side by the executive board of this Brotherhood, which has obtained the highest wage scale paid to Canadian seamen on the Great Lakes with the best conditions of employment.

If I was talking to you personally I could tell you a lot more than I can put on paper. But I may add that the Department of Labour in its present set up is of no assistance whatsoever to inspire patriotic nationalism in the ranks of labour, but flies immediately to the assistance of any foreign organization at their sqawk who make an appeal.

Yours truly,

CANADIAN BROTHERHOOD OF SHIPS'
EMPLOYEES.

H.N. McMaster.

Governor.

Canada.

Ottawa, March 17th, 1939.

Mr. H.N. McMaster,
Govern, Canadian Brotherhood
of Ships Employees,
Room 37,
635 St. Paul Street, West,
Montreal, Quebec.

Dear Mr. McMaster,

I received your very interesting letter of March 16th, which I have carefully noted. Mou are quite correct in stating that many of Canad's most prominent citizens peddled newspapers, and worked at meagre jobs in their beginning, and you might be interested in knowing that, from April 18th, until September of 1890, I worked in a ballast pit on the C.P.R., west of London, with a shovel, one of four men to a car, loading gravel on freight cars, and then from September 15th, 1890, until June, 1902, I was a freight brakeman on the Canadian Pacific, and I think the records will show that I worked steadier at that job than any other brakeman on the Division, so that I know a little about the jobs of which you speak.

This morning we have an interesting announcement over the radio, to the effect that Mr. Burford has expelled or suspended the O.B.U. from membership in the Canadian Federation of Labour, and of course the first thought occurs to me, is how Mr. Alan Meikle, President of the C.F. of L. will appear before our Committee on Tuesday next when the organization, the O.B.U., to which he belongs, has been suspended or expelled. I presume that he will get around this in some way.

COPY -

On receipt of your letter I undertook to ascertain the status of your Brotherhood, and was advised by Mr. McLean of the Canadian Congress that you made application to join that Congress some time ago, and that, because your Brotherhood did not represent any members, your application was denied. I also enquired from the Labour Department, and learned that you and your family are doing very commendable work under the protection of the letterhead which you send me, in securing help for the transient and unemployed seamen in Montreal, getting them a bite to eat once in awhile. If the information given is correct, as I assume it is, your heart must be in the right place, but you can get a very nice little bet from the undersigned that concrete and definite figures will not disprove the statements to which you so nicely take exception. I particularly noted the concluding paragraph of your letter, and have wondered if the views you express do not fairly well indicate one of the troubles of the world today, whereby human beings, men of common cause and interest, working men, have been and are being agitated to conspire against, and oppose others in equal positions, just becuase of some real or imaginary boundry line, that gives an opportunity to start what, in many cases, is merely a personal interest, selfish argument, or point of view.

I noticed that your letter did not express any view on the question of railway unification, and I presume this is for the reason that ship employees would hold that they would get just as much business whether the Railways were unffied or divided.

I appreciate receiving the views which were contained in your letter, and wish you well in your efforts to relieve the hunger of the unfortunate seamen who gather in Montreal.

Yours truly,

(signed) JAMES MURDOCK.

March 20th, 1939.

Honorable N. Rogers,
Minister of Labour,
Ottawa, Ontario.

Honorable Sir,

I wish to draw your attention to a press dispatch in connection with the Canadian Federation of Labour and the Canadian Brotherhood of Ships' Employees as released by Senator Murdock in which he states that the C.F. of L. was "founded on a shoe string and paid for those in favor of railway unification", and wherein we were accused of being the red element.

I took the matter up with Senator Murdock and the point I have at issue is that in his reply to me he states that he "enquired from the Department of Labour and learned that you (referring to myself) and your family are doing a very commendable work under the protection of the letterhead which you sent me in securing help for transient and unemployed seamen in Montreal, getting them a bite to eat once in a while". Senator Murdock further goes on in his letter to say he assumes this information is true.

You will understand that the implication of this statement as released by your Department to Senator Murdock carries the clear presumption that I am conducting an organization on fraud and misrepresentation , and that the party who released this information from your Department considers that we have nothing here but a letterhead and a flop house for giving the seamen a bite now and again.

In addition to all the other incidents concerning the activities of your Department which clearly carry with them destructive propaganda not only against the C.F. of L., but also the C.B.S.E., and while your Department is constantly requesting detailed information for this, that, and other things from us, in the name of common sense why would your Department want any information of any kind from us when they are giving out such statements as this that consider we are nonexistent as an organization and only operating under a letterhead.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

If it is true that your Department has taken into its employ a person who was convicted of perjury, it only adds to this sort of propaganda which tends to destroy patriotic nationalism by those who would sponsor it in Canada. It further places a penalty on Canadian citizens who do sponsor Canadian nationalism to the extent of being loyal Canadian citizens under the Crown.

Under these circumstances it would seem to us that your Department is due for an investigation. We realize that Senator Murdock is the product of American unions and may be somewhat prejudiced as well, but with my constant contacts with your Department over a period of years and the recorded facts as filed with your Department citing Contracts as between this Organization and ships owners, should at least have fair play and at least give a correct interpretation in accordance with your records without prejudicing any Canadian interests.

Yours very truly,

CANADIAN BROTHERHOOD OF SHIPS' EMPLOYEES.

Governor.

Co-Operative Legislative Committee
Standard Railway Labour Organizations

12386

#1

506 Birks Building,
Ottawa, Ontario, March 23rd, 1939.

To the Chairman and the Members of the
Special Railway Committee of the Senate
inquiring into the Railway Situation.

Honourable Gentlemen:

The Members of the Co-Operative Legislative Committee of the Standard Railway Labour Organizations have observed with more than passing interest the submission made to your Committee on the 21st instant by Professor J. L. MacDougall of Queen's University, bearing on the wages and wage structure of railway labour. In view of the fact that many of the statements contained in that submission will, inevitably, convey to your Committee an erroneous and misleading impression regarding the subject, we hope you will agree that in all fairness to the thousands of railway employees and the communities supported by them, an opportunity should be accorded their representatives to prepare and submit an appropriate reply.

As intimated in our brief Supplementary Memorandum on the 21st instant, we have undertaken the preperation of some statistics directly bearing on wages and increased productivity of railway employees, and although the data is not quite complete, we believe it is of vital importance and of considerable value that you have our further submission on the subject introduced by Professor MacDougall, before your conclusions are reached.

Respectfully yours,

Wm. L. Best,
Secretary,
Co-Operative Legislative Committee.

From Judge Emerson Coatsworth

119388

March 27th, 1939.

Hon. C. P. Beaubien,
Rt. Hon. George P. Graham,
Joint Cahirmen,
Special Committee of the Senate
Inquiring into the Railway Condition,
Ottawa, Canada.

Honourable Senators:

In view of the desire expressed by Senator Murdock to have your Committee investigate the Citizens' Group for Railway Action, I am writing you, in my capacity as President of the Group, to give a frank explanation of the origin and objectives of this organization, and such other information as seems pertinent and not in violation of the confidence placed in us by a number of private citizens of Canada. We note also from the proceedings of March 15th that your Committee is prepared to receive brief memoranda from interested persons or organizations.

- If it meets with your approval, it is our request that you have this letter placed on record, especially in view of continued insinuations by one member of your committee that our Group is in some way connected with or supported by the Canadian Pacific Railway or other organizations actively promoting the cause of railway unification.

In the first place, I wish to state that the Citizens' Group is independent in every sense of the word. It is definitely not supported by the Canadian Pacific and so far as I can discern from a careful scanning of the list of members, there are no members who are or who ever have been known as prominent shareholders in the Canadian Pacific Railway Company. Certainly no director, officer or employee of the Citizens' Group is working in any interest except the interest of the Canadian taxpayer.

We also wish to point out that the Citizens' Group for Railway Action has not advocated unification or any other specific solution of the problem. The organizers of the Group felt that the first objective should be the arousing of the

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119389

public, to the "extremely serious railway condition and the financial burden consequent thereto." It also was felt that it would be presumptuous for a small organization to make recommendations in the name of the people of Canada to your body or to any other authorities, at least until the membership became large enough to justify a claim that it was truly representative of a least a cross-section of the public in all sections of Canada and all walks of life. For the time being, therefore, we are interested only in helping in the widest dissemination of the facts, and the interesting of the greatest possible number of people in the problem.

It is contemplated that, at some later date, the Group may by a majority vote of its members approve some specific plan for solution, or support and endeavour to win support for, some plan already made public. In short, we feel that if all people had given the study to the problem which your honourable committee has done, it would not be long before the general public, setting aside partisan considerations, would demand the adoption of a plan to solve the problem.

The idea for the organization of the Citizens' Group for Railway Action originated, to the best of my knowledge, with Mr. William M. Bean, treasurer and associate editor of the Waterloo (Ont.) semi-weekly "Chronicle", a publication of very high standing in its field.

This was in July last, following the prorogation of parliament and the rising of your committee, when it seemed to Mr. Bean and others that the railway question was being obscured, by a feeling on the part of the public that it was merely an argument between two sets of railway officers holding opposing views. As Mr. Bean's idea evolved, it seemed best that the organization's independence should be made evident by barring from membership every person who might, because of interest in his employment, have views one way or the other on the question. We did not think of barring shareholders of the private company, but, if practicable, it perhaps would have been better if we had done so. Our membership would have been one less, at least, for presumably the member of the Montreal Stock Exchange, who joined for five years, is normally a shareholder on clients' account if not his own.

Unfortunately our Group had barely completed its provisional organization before it was discovered that some opponents of reform were not above resorting to intimidation against those who might be vulnerable in a business way. It speedily became evident that, for instance, a merchant who numbered among his customers employees of the government railway could expect, if he joined our Group openly, to be subjected to threats of

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

 119390

loss of business if not the actual loss of business. For this reason certain persons have supported our work on condition that their names be not made public.

We have at this writing 463 paid members representative of every province and city, not including 25 or 30 individuals who have contributed anonymously. We contend and rightly, we believe, that the financial affairs of the Group are of concern only to its members since we have refrained from making commitments beyond our immediate means. For the protection of members, our books are kept accurately and are audited by a chartered accountant. While, as I have said, we do not believe that the financial affairs of the Group are matters of public concern, I may say that the president and directors receive no remuneration for their services. Salaries and fees are paid only for essential office and field work and are not at all commensurate with the amount of work done.

Aside from public meetings addressed by representatives of the Group, our principal activity has been the publication of "Railway Facts", of which fourteen issues have been mailed, including the first on September 12th, 1938. It is the purpose of Railway Facts to help keep the railway problem in the public eye and it has been the constant endeavour of its editors to be accurate in every respect. Any errors that have crept in have been unintentional, and corrected at the first opportunity. We have invited Senator Murdock to cite specific instances of inaccuracies, but, although he has replied to our letter, he has not as yet cited any one instance where we have been wrong.

We believe that it is perfectly within our right to disseminate such information to the public as we see fit, having regard to the law of libel and any other restrictions dictated by good sense and the post office regulations applying to this class of mail matter. It is also, in our opinion, a healthy sign in a democracy that, despite the attempts at intimidation referred to above, there are in this country a Group of citizens willing to lend their names and otherwise support an effort which is designed, wisely or not, to help solve a public problem which has been in need of solving for so many years, and which has not been solved because of the uncompromising opposition of a minority group.

Since the Group has not yet adopted a specific platform for the solution of the railway problem, it is not suggesting that it be heard by your committee, the aims of which are parallel to its own. At the same time if honourable senators feel that it can contribute at the present anything constructive to the evidence, officers of the group are ready at any time to answer questions which the committee might

# C O N S T I T U T I O N

## NAME

1. The name of the organization shall be Citizens' Group for Railway Action.

## OBJECTS

2. The Objects of the C.G.R.A. shall be:

(a) To promote, in all parts of Canada, the study of Canada's serious railway problem, with a view to finding a solution that will relieve Canadian taxpayers of the financial burden imposed upon them through uneconomic railway operation.

(b) On the basis of careful study of the railway problem, to make constructive recommendations for its solution to the Dominion Government and to the chief executives of the Canadian National and Canadian Pacific Railways.

## MEMBERSHIP

3. Membership in the C.G.R.A. shall be open to all Canadian citizens with the exception of directors, officers or employees of any Canadian railway. For the purpose of this section, the term, "Canadian citizens", shall include Canadian incorporated organizations; and each of the latter shall have the right to name a person by whom its incorporated organization may be represented at meetings.

4. There shall be three classes of membership, namely: Active, Associate and Sustaining.

5. Annual membership dues shall be as follows:

| | | |
|---|---|---|
| (a) Active Members | ----- $ | 5.00 |
| (b) Associate " | | 1.00 |
| (c) Sustaining " | | 100.00 or more. |

## MEMBERSHIP PRIVILEGES

6. Active and Sustaining Members shall be entitled to hold office in C.G.R.A. when elected thereto, to vote at all meetings and to serve on committees.

7. Associate Members shall not be entitled to vote except on questions of policy with regard to any proposed solution or solutions of the railway problem and shall not be entitled to hold office in C.G.R.A., but shall be eligible for appointment or election to committees and in meetings of committees on which they serve shall be entitled to vote.

## OFFICERS

8. Officers of the C.G.R.A. shall be one or more Honorary Presidents, a President, one or more Vice-Presidents and a Secretary-Treasurer.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119393

9. The President and the senior Vice-President shall be elected by majority vote of the Active and Sustaining Members, and the Honorary Presidents and the other Vice-Presidents shall be elected by the Board of Directors.

10. The Secretary-Treasurer shall be appointed by the Board of Directors.

## DIRECTORS

11. The Board of Directors shall consist of the President, the Vice-Presidents and six Directors elected by majority vote of Active and Sustaining Members, present in person or by proxy at the adjourned organization meeting when this constitution is adopted. During the twelve months immediately following the adoption of this Constitution, the Board of Directors shall have power to elect other Directors up to a maximum of twelve in number, exclusive of the President and Vice-Presidents, to hold office until the Annual Meeting. Thereafter the Board of Directors shall consist of the President, the Vice-Presidents and a maximum of eighteen directors, exclusive of the said officers, elected by majority vote of the Active and Sustaining Members.

## DUTIES OF OFFICERS

12. The duties of the President shall be to preside at all general meetings of the C.G.R.A. and at all meetings of the Board of Directors. He shall also be an ex-officio member of all committees.

13. The duties of the senior Vice-President shall be to assume the duties of the President in his absence. He shall also be an ex-officio member of all committees.

14. The duties of the Secretary-Treasurer shall be to attend all meetings of the C.G.R.A. and of the Board of Directors and to keep records thereof: to carry out organization work under direction of the Board; to conduct correspondence on behalf of C.G.R.A.; to make necessary expenditures, as authorized by the Board, and, in general, to perform all other duties normally associated with this type of office.

## REMUNERATION OF OFFICERS

15. The President and the Vice-Presidents shall serve without remuneration, but shall be entitled to reimbursement for expenses incurred on behalf of the C.G.R.A.

16. The Secretary-Treasurer's remuneration for his services shall be fixed by the Board of Directors.

## DUTIES OF BOARD OF DIRECTORS.

17. The Board of Directors shall be responsible for all organization work and activities of the C.G.R.A. The Board shall appoint such committees as may seem necessary to further the purposes of C.G.R.A. and may assign special duties to these committees and to the Secretary-Treasurer. The Board may engage paid assistants for the carrying out of work in behalf of the C.G.R.A., or may authorize the employment of such assistants by the Secretary-Treasurer.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119394

## COMMITTEES

18. There shall be a Finance Committee, consisting of the President, the senior Vice-President, two other directors and the Secretary-Treasurer, whose duties shall be to direct the financial details of organization and administration of C.G.R.A., and to make recommendations to the Board on the financing of the activities of C.G.R.A.

19. The Board shall have power to appoint, either from its own members or from the Active, Sustaining and Associate Members of the C.G.R.A., such other committees as may seem desirable for furthering the objects of C.G.R.A.

## VOTING

20. Voting on matters requiring the vote of members of C.G.R.A. may take place at general meetings duly called by notice sent to Active and Sustaining Members two weeks before the date of such meetings, or may be conducted by ballots mailed to Active and Sustaining Members and returnable to the Secretary-Treasurer by a fixed date not later than two weeks after the mailing of such ballots.

## MEETINGS

21. During the life of this organization the annual general meeting of the Group shall be held in the month of September each year at the call of the Board of Directors. Notices calling the annual meeting shall be mailed to the active and sustaining members not less than two weeks prior to date of meeting.

22. A general meeting of the Group may be called at any time by the Board of Directors on two weeks' notice by mail to the active and sustaining members. A general meeting shall be called upon the written request of any ten active and sustaining members, within three weeks of the receipt of such request by the President.

23. Meetings of the Board of Directors shall be at the call of the President; or upon written request of a majority of members of the Board of Directors, the President shall call a meeting in accordance with the terms of the written request. Notice of regular Board meetings shall be mailed to the officers and directors ten days prior to date of meeting, but special meetings may be convened on shorter notice and under such circumstances the decisions of a special meeting shall be subject to ratification by a subsequent regular meeting of the Board.

## QUORUM

24. A quorum of all meetings of the Board of Directors shall be four directors, including two officers.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119395

## NOMINATIONS

25. The names of active and sustaining members in good standing shall be placed in nomination for election to office or directorship at the annual general meeting, and for purposes of organization at the adjourned organization meeting presently convened when this constitution is adopted, or subsequently held after due notice to the members. The elections shall be held immediately upon receipt of nominations, and at the same meeting. The notice calling the annual general meeting shall contain an invitation to the members to place in nomination the name or names of any active or sustaining member, or members, accompanied by the written consent of the nominee, or nominees.

## AUDITOR

26. An auditor shall be appointed by the active and sustaining members in attendance at the adjourned organization meeting following the adoption of this constitution, and an auditor shall subsequently be appointed each year at the annual general meeting. It shall be the duty of the auditor to audit all the books and records of the C.G.R.A., and to prepare an annual financial statement which shall be mailed to all active and sustaining members along with the notice calling the annual general meeting. The auditor shall be remunerated for his services at the discretion of the Board of Directors.

## AMENDMENTS TO CONSTITUTION

27. The Constitution may be amended at an Annual Meeting, or at a general meeting specially called for such purpose, or by a vote of members by mailed ballot as set forth in Article 20.

28. Active and Sustaining Members shall be notified of proposed amendments to the Constitution at least two weeks in advance of the date at which the amendments are to be voted upon.

29. Amendments to the Constitution, to be valid, shall be supported by the votes of at least two-thirds of the Active and Sustaining Members voting on such amendments.

March 27th, 1939.

Rt. Hon. Arthur Meighen,
The Senate,
Ottawa.

Dear Senator Meighen:

In connection with the discussion of Mr. Joseph Corbett's proposals for solution of the railway problem in the Senate Committee on March 21, I have today written to Senator Hugessen, giving him an explanation of the summary of Mr. Corbett's proposals published in the March 13 issue of "Railway Facts."

For your information, I enclose copies of my letter to Senator Hugessen and of Mr. Corbett's letter referred to therein.

Yours very truly,

CITIZENS' GROUP FOR RAILWAY ACTION.

119398

March 27th, 1939.

Hon. A. K. Hugessen,
The Senate,
Ottawa, Ont.

Dear Senator Hugessen:

In reading the report of the proceedings of the Special Senate Committee on the Railway Problem for March 21, I observe (page 62 and following pages) that there was considerable discussion as to whether Mr. Joseph Corbett had advocated repudiation of the railway debt as a solution of the problem. As "Railway Facts", published by the Citizens' Group for Railway Action, was brought into the discussion, may I take this opportunity of explaining the basis of the item in which Mr. Corbett's proposals were summarized?

Mr. Corbett's letter to the Windsor Star, which you read into the record, was, as appears from the first paragraph, a reply to a letter of mine in which I had criticised an earlier letter of his. This earlier letter of Mr. Corbett's, signed by him as General Chairman, Brotherhood of Railway Carmen of America, C.N.R. System, was also published in the Windsor Star of December 24, 1938, and in numerous other Canadian newspapers.

I enclose a copy of this earlier letter of Mr. Corbett's, and you will perhaps agree that the proposals which he numbers (1) and (2) are tantamount to advocating repudiation of the railway debt through inflation of the Canadian currency. If you will read this letter in conjunction with Mr. Corbett's second letter, I believe you will find that "Railway Facts" was justified in assuming that repudiation of the C.N.R. debt is one of Mr. Corbett's proposals.

Yours very truly,

CITIZENS' GROUP FOR RAILWAY ACTION.

Secretary-Treasurer.

## SOLUTION OF THE RAILWAY PROBLEM

119399

It has been stated in certain newspapers that "if a railway worker does not like unification or is afraid of it, the only criticism he ought to offer is to propose a substitute."

This is a fair challenge which the writer desires to take up and here is a logical and practical solution:

1. Apply Abraham Lincoln's Monetary Policy as follows:

"Money is the creature of law and the creation of the original issue of money should be maintained as an exclusive monopoly of National Government.

"Money possesses no value to the State other than given to it by circulation.

"Capital has its proper place and is entitled to every protection. The wages of men should be recognized in the structure of and in the social order as more important than the wages of money.

"No duty is more imperative on the Government than the duty it owes the people to furnish them with a sound and uniform currency, and of regulating the circulation of the medium of exchange so that labor will be protected from a vicious currency, and commerce will be facilitated by cheap and safe exchanges.

"That available supply of gold and silver being wholly inadequate to permit the issuance of coins of intrinsic value or paper currency convertible into coin in the volume required to serve the needs of the people, some other basis for the issue of currency must be developed to prevent undue fluctuations in the value of paper currency or any other substitute for money of intrinsic value that may come into use.

"The monetary needs of increasing numbers of people advancing toward higher standards of living can and should be met by the Government. Such needs can be served by the issue of national currency and credit through the operation of a national banking system. The circulation of a medium of exchange issued and backed by the Government can be properly regulated and redundancy of issue avoided by withdrawing from circulation such amounts as may be necessary by taxation, redeposit, and otherwise. Government has the power to regulate the currency and credit of the nation.

"Government should stand behind its currency and credit and the bank deposits of the nation. No individual should suffer a loss of money through depreciation or inflation or bank bankruptcy.

"Government possessing the power to create and issue currency and credit as money and enjoying the right to withdraw both currency and credit from circulation by taxation and otherwise, need not and should not borrow capital at interest as the means of financing governmental work and public enterprise. The government should create issue, and circulate all the currency and credit needed to satisfy the spending power of the government and the buying power of consumers. The privilege of creating and issuing money is not only the supreme prerogative of government, but it is the government's greatest creative opportunity.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119400

"By the adoption of these principles, the long-felt want for a uniform medium will be satisfied. The taxpayers will be saved immense sums in interest, discounts and exchanges. The financing of all public enterprise, the maintenance of stable government and ordered progress, and the conduct of the Treasury will become matters of practical administration. The people can and will be furnished with a currency as safe as their own government. Money will cease to be master and become the servant of humanity. Democracy will rise superior to the money power."

2. The Government, through the Bank of Canada, to recall all C.N.R. bonds giving the bond holders credit in the Bank of Canada for the face value of their bonds. The security for the bank credit to be durable wealth represented by the railway property - the same security as at present for the bonds. The C.N.R. operating surplus to be used to cancel the capital investment.

3. Revise certain freight rates upward (at least equal to those in the United States) to meet the changed condition caused by trucks hauling the best paying commodities over the highways and leaving unprofitable freight for the railways.

4. Require trucks and busses to pay for the use of public highways and City streets on the basis recommended to the Ontario Government, Feb. 21, 1938, by the Railway Association of Canada.

5. Regulate bus and truck traffic on the same basis as Railways.

6. Require ship owners to pay in full for the use of inland waterways, Canals, etc.

7. Enforce a maximum eight hour day and six day week in all forms of transportation competing with railways.

8. The Government to compensate railways for the sections operated at a loss to give necessary service to the public, in the interests of Canada as a whole.

(Signed) Jos. Corbett,

General Chairman B.R.C. of A.
C.N.R. System.

Right Honourable Arthur Meighen, P.C., K.C.,
The Senate,
Ottawa.

Dear Mr. Meighen:-

re - A.R.Mosher.

You will remember that Mosher in his evidence was strong against amalgamation. In the June, 1934, issue of the "Canadian Unionist" at page 3, Mosher has an article called "Canada's Transportation Problem." It is too long to copy but paragraph 6 contains one of his conclusions, as per attached.

If you would like to see the original article. I have it.

Yours truly,

John T. Haig.

Excerpt from an article entitled "Canada's Transportation Problem by A. R. Mosher, President of the Canadian Brotherhood of Railway Employees," printed in the June 1934 number of "The Canadian Unionist"

(6) That the national interest will be best served by consolidating the C.N.R. and C.P.R. under public auspices, and that the obligation to be assumed on account of Canadian Pacific common stocks should be the rate of dividend United States railways are legally allowed to earn, or the average of the dividend paid over the whole period of the present business cycle, for the reason that, while over half the C.P.R. common stock, and probably a greater proportion of its securities, is held by non-residents of Canada, the value of C.P.R. properties has accrued largely from gifts of Canadian money, lands, and mines, and through the general agricultural development arising from the labour of the Canadian people.

THE SENATE
CANADA

119403

Ottawa, March 27th, 1939.

Right Honourable Arthur Meighen, P.C., K.C.,
The Senate,
Ottawa.

Dear Mr. Meighen:-

I enclose you copy of five Addresses made over the radio by the Winnipeg Railway Men. These addresses, they claim, are paid for by the Standard International Railway Unions (Winnipeg and District) but if you glance through them you will see that they are a straight fight against any change in the present railway setup.

I have sufficient copies for each member of the Committee but I have been debating whether to send it to them or not. You will remember that Meikle suggested that a lot of propaganda went on in Western Canada and this is one of the things he referred to.

Yours truly,

encl.

John T. Haig.

D.19404

Announcer: Tonight you are to hear the fifth in a series of discussions between Mr. John Citizen and Mr. Railwayman on the Canadian Railway Problem. This series of broadcasts are sponsored and conducted by the Winnipeg and District Educational Committee of the Standard International Railway Unions.

John: Last week, when we left the studio, I got to thinking over our last discussion about the value of our C.N.R. to the people of Canada. Prior to our talks, the deficit to the taxpayer seemed to me the only thing of importance. After our second talk I was convinced that it is of the least importance, because actually as you have proven, the taxpayer ultimately is the winner, I would like to discuss the subject a little further if I may. Can you give me a few examples of what the citizens like myself, can look forward to, from a continuation of the present policy of operation.

Rail Man: Your question, John, opens up a very wide field for discussion. Let me make a little picture of my idea of a national industry. The C.N.R. is an example of nationalized industry. I think I am perfectly safe in saying that it is the largest single, nationalized industry which exists under democratic form of government.

John: But Mr. Railwayman, I and many other citizens may not believe in nationalized industry, what value is that to me as a taxpayer?

Rail Man: Don't be impatient, John, I am coming to that. One special feature of the C.N.R. is that the form of its administration is that of a private industry. The citizens of this country are its shareholders, its stock is held in trust by the Minister of Finance for the People. The board of Directors is appointed by the Government, and each year reports to the shareholders through Parliament. Nowhere in any other country does this particular form of organization exist.

John : But private industry revolves around the profit incentive, in fact, industry exists for no other purpose, and if profits ceases the justification for the continued existence of that particular industry is questioned and usually bankruptcy results, so what is your point?

Rail Man: Does this fact not appeal to you, John, that the emphasis placed upon profits stimulates the management to carry on economically to keep abreast of the times and to watch each dollar spent so that we can expect more than a dollar in return. In my opinion to be equal of a private industry and keep before the management the objective of business profits as far as possible, is a very good thing.

John: I agree with you there, Mr. Railman, but don't you think that treating the C.N.R. as a private industry leads to a misunderstanding of the activities of the C.N.R and Subjects the management to undeserved criticism?

.... 2

CANADA

119405

Mr. Railwayman: Yes, but don't you understand, John, that it was the bankruptcy of private railway industry that brought the C.N.R. into existence? We must realize that the failure of these railways must not interfere with the continued servicing of our provinces and communities with the necessary transportation.

John: That is a very good point, and you have convinced me that it justifies itself as a national industry; but how about the profit motive you speak of.

Mr. Rail Man: It was necessary to continue railway transportation when the profit incentive, under private ownership had broken down. The management knew that in order to justify its existence, it had to make a practical application, much broader than the profits to a few private shareholders. Namely, the development of our great Canadian nation and its natural resources. This in my opinion, is one of the best examples I can give you of wealth that can be shared by Canadian citizens, if the management is left alone to continue its present policy free from unjust criticism and sabotage.

John: Sabotage? Did you say? I was not aware that it had anything to do with the railway deficit, you must have reasons for speaking of it. What are they?

Rail Man: To answer your question, John, I must digress a little, but your curiosity leads me to believe, that it is of sufficient importance to do so, and to tell you what has been in the minds of all railway workers and not a few other citizens, too; but has never been voiced very much until this evening, when I sat down to read my evening newspaper. May I wuote Mr. Ralph Maybank, Liberal M.P. "During the five years that the Honorary R. J. Manion was Minister of Railway and Canals, the C.N.R. was systematically sabotaged."

John: Yes, I read that too; but that is no proof of guilt. Why are the railway employees so convinced of its truthfulness?

Rail Man : John, the railway employees have ways and means through the officers of their organizations of acquiring information which affects their welfare.

John: Very true. I begin to see now the great dangers there are involved in such a monoply. But let us return to our former discussion. You were speaking of our natural resources and their development. I realize of course, that transportation is essential to the development of any country; more especially to such a young country as Canada. But can you point to a specific case where the building of a line justified itself even if profits were not tobbe realized for a time.

Rail Man: I certainly can, John, I will refer to one quite near home to you in Western Canada, one that should give every Westerner a good idea, of what the railways do to develop national wealth. You have heard of the line which was constructed to develop the Flin Flon and Sherrit Gordon mining areas. These mineral deposits were eighty miles from a railway. It cost $9,000,000 to construct and I know that commerically, it is not paying expenses, but I do know that the development of this mining territory, has resulted in an annual production of $25,000,000 and that the capital wealth created by it is estimated at $60,000,000.

I 19406

John: You certainly have demonstrated that the profits and loss sheet is no safe criterian by which to judge the existence of the C.N.R. as an enterprise or the efficiency with which it is administered. But how shall it be judged? How can its accounts, which are kept in the form of private enterprise be made comparable with private industry?

Railwayman: I want you to give my answer serious thought, John, because an honest perusal of the present financial set-up of the Canadian National must make you fully aware that something is wrong with it. The present management is not responsible for the deficit, and should not be charged with it. Sooner or later, it must be written down so that the Canadian people who own this great railway, can be given a true picture of its real financial standing.

John: Excuse me, did I understand you to say the the C.N.R. didn't create this deficit?

Railwayman: That is true. It came with the railways which were bankrupted through private ownership. Critisism is always directed at the deficit; but the deficit does not arise from the operation of the C.N.R. as a private enterprise, but from a trusteeship set up in the form of private enterprise which no such enterprise could undertake at a profit. The best proof I can give you is, that private enterprise tried it and failed. The deficit consists solely of interest upon capital. We have made a very fine showing, John, in spite of all this unjust criticism and we feel justly proud when we can tell the citizens of Canada, that the C.N.R has always paid its operating expenses from revenues.

John: Thanks for that information. I can now discuss it intelligently with my friends, who like me, are very much in need of enlightenment on our railway problem. But what of my questions. You have digressed somewhat. What do you suggest in lieu of the present financial set-up.

Rail Man: I am sorry, John, that deficit has been pushed before us so much that it refused to be pushed aside. However, here is one suggestion, I would classify the lines of the C.N.R. into two groups, those which conform in volume of traffic with traffic with private industry, and those which fall into the sub-strata of pioneering and development routes, and too credit the system as a bonus. The deficit, including interest on capital, which is incurred in furnishing transportation to the pioneering fringe. If this were done, the bonus would appear as a charge on the C.N.R. and a profit and loss statement of the railway could then be fairly set up, comparable with private industry. This suggestion of course would present some difficulties but its application would at least give you a gauge with which you could compare its efficiency with other enterprises.

John: Yes I can see one obvious objection to such a proposal. It would be very difficult to determine with any degree of accuracy, what the bonus should amount to, because it would fluctuate widely, depending on the volume of traffic. Is it possible to make your suggestion workable?

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119407

Rail Man As I have said, you must have a gauge by which to make comparisons with other enterprises. Canada is a country of vast distances, and needs the cheapest possible railway transportation and we must therefore examine the performance of the C.N.R. to see whether there is any means of reducing, costs, consonant with its justification as a national public utility. Profit and loss statements being utterly useless for the purpose, I invite you to turn to the detail of operating results, into which the expenses of performing transportation may be resolved.

John: But will not this require a skilled analysis and a precise knowledge of the task to be performed especially as to what amounts of non-profitable services should be rendered in the national interest.

Rail Man: In my judgement, when considerations are given to the special problems of the C.N.R. the people of Canada get full value for every dollar spent and I do not know of any railway of comparable size, which has a higher operating efficiency. Do not therefore be mislead by profit and loss accounts which do not and cannot tell you the whole story. Canada needs her railways and without them she could not be the wealthy and important nation that she is.

John: You seem to have a logical answer to all my questions. Here is another I would like to have explained. Criticism has been directed at the high cost of operation, where does Canada rank in comparison to other countries?

Rail Man: If a man should attempt to list railways in other countries in order of cheapness you would find that Canada stands at the top of all nations in having the lowest cost per ton mile and in setting up this figure I am talking of the economic or all inclusive cost of railway transport. This condition is a challenge to those who are always expressing dissatisfaction with transportation conditions. If we in this country, faced with difficulties no other country has, and with such a low density of population per mile, can show a record such as October last, in which period in response to a moderate increase in traffic, the C.N.R. system showed net earnings of $4,650,000, we have achieved something which other nations under much more favorable circumstances, have failed to do.

John: Yes, that month was certainly a very good record and I can only express the hope that conditions will continue to improve. Now, I see our time is getting short. As these little talks are becoming more interesting each time we meet, may I suggest to our radio audience the subject under discussion, is your railway. The information imparted in these talks is given sincerely and truthfully. On your response depends the future of your railway, till we meet next week, good night and thank you.

ANNOUNCER: Tonight you are to hear the fourth in a series of discussions between Mr. John Citizen and Mr. Railwayman on the Canadian Railway Problem. This series of broadcasts are sponsored and conducted by the Winnipeg and District Educational Committee of the Standard International Railway Unions.

John: Mr. Railwayman, if you would not mind, I would like to venture into a little different phase of our subject tonight. You referred in a former discussion to the method through which the Government acquired a number of more or less bankrupt railroad properties, which had practically fallen down as private profit making concerns, and the Government, having become entangled to some extent through the guarantee of securities etc., the acquisition of the properties was not altogether a matter of choice. In general terms, the case submitted to the Senate Committee by Mr. Beatty conveyed theimpression that an unwise venture of the State into the railway field has produced the greatest danger to the future of the nation by the creation of the C.N.R. What do you think about the venture?

RAIL MAN: Well, John, I have my doubts about the wisdom of the Government of that day either allowing itself to have assured responsibilities for securities in excess of the actual worth of the properties, or of being a little too easy with the former owners in driving a bargain. I have no doubt that the Government was either forced by circumstances, or just a little too willing to relieve the former owners who had bitten off more than they could swallow. Be that as it may, it is nothing more than an indication of the criticism and attack which must be expected from the opponents of a State Owned Enterprise, for one to say that the creation of the C.N.R. as a state owned and controlled public utility is a danger to Canada, much less the greatest danger, to the future of the nation. Those who hold and express such views are very conveniently overlooking the great measure of public service performed by the C.N.R. System in the development of Canada and in furnishing railway transportation to communities to which, as parts of this Dominion, they are entitled but which it is impossible to provide on a paying basis judged by railway profits.

John: You mean to say that there are parts of the System that are operated without profit, or even at a loss, but that is ... an obligation of the State to develop and open new territory and provide the people with service. I think that is a logical argument. After all, we never hear any complaint about the extension of highways into new territory; we even hear persistent demands for new roads and the development of waterways, and air services, all of which as you have already stated, created annual deficits far in excess of what the State is called upon to meet in connection with its railways. Yet I do not recall ever having heard Mr. Beatty refer to the heavy Highway and Waterway deficits as endangering the future of Canada.

RAIL MAN: The history of the formation of the C.N.R. is that public service demanded the continued operation of roads which found it impossible to continue operations on a profit basis. The public service need for service existed, and still exists, and the only instrumentality of providing that service was the lines of railway now incorporated into the C.N. System. If, as was the case, it proved impossible to operate these lines under private ownership at a profit and if they render a needed public service, it would be illogical to expect that there should not be some measure of financial encumbrance as a result of their continued operation in the public interest.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

John: You would say then, I take it that it was unwise for the Government to take over these lines, even while knowing that they would not return a direct profit, in order to assure their continued operation in the public, interest?

RAIL MAN: Yes, The wisdom of the formation of the C.N.R. cannot be judged solely from its financial results. There is a sounder justification for the operation of the property than rail profits. That justification is found in public service. Judged from that point of view, the C.N.R. far from being a danger to the national existence has aided in a large degree, and is continuing to aid, in the development of the country. Amounts by which the property falls short of earning interest on its bonded indebtedness are more than offset by these features.

John: I do not think what you say in that regard can be questioned. But, it is possible that you are overlooking the possibilities of the same measure of public service being continued under the plan of Unification advocated by Mr. Beatty.

RAIL MAN: Mr. Beatty has recently been trying to "soft pedal" on the matter of line abondonments. The reason no doubt being that from the time of the hearings of the Royal Commission in 1932 up until it was dragged into the open by the Senate Committee in May 1938 the question of abandonment of lines was kept a closely guarded secret, and when it did become public knowledge after the Senate Committee brought it out, it raised such a storm of public protest that it brought the Unification Plan to a sudden stop. However, let us not forget that in advancing arguments in favor of unification before the Royal Commission in 1932, the Canadian Pacific placed line abandonments as the important initial step and stated that "the first task of the Committee was to determine what tracks it was considered could be abandoned if the properties were operated as a unit", and again, "We are confident that unification would permit an abandonment in excess of 5,000 miles", and yet again, "We put that (5,000 miles) as a minimum and not the maximum." It should be clear to you now, John, that I was not overlooking the possibility of the same measure of public service being continued under unification. You could not abandon 5,000 miles of lines, and particularly when you know that the unprofitable lines would be the first to be abandoned - and still have the same measure of public service. But let me go a little further. I have used line abandonments because it is only in line abandonments that there has been a complete disclosure of the programmes contemplated in unification. It is to be regretted that the C.P. has not given the details of the proposed curtailment of services, and what shops, terminals, division points, roundhouses, stations, etc., it is proposed to abandon. The extent to which public service, or public interest would be adverseley affected may be gauged by this reluctance to give the details of just what is contemplated in the unification plan.

John: Has there been no intimation given as to what other facilities in addition to lines were to be discarded?

RAIL MAN: Nothing specific. Mr. Beatty estimates the necessary saving in labor costs at from 15% to 17%. Mr. R. A. Pyne, Supt. of Motive Power and Car equipment of the Canadian Pacific Western lines has stated before the Senate Committee after considerable jockeying to evade the pressure of a number of rather inquisitive Senators that of the five Western Main Shops, namely Ft. Rouge, Transcona, Weston, Calgary and Vancouver, that three of them could be eliminated. When asked to suggest the three that could be dispensed with, he said: "There is a political atmosphere that might make it impossible for me to go home, if I made a suggestion like that". The frank statements by the C.P.R. officers that

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119410

to divulge such information would impair relationships with the communities affected, should be quite sufficient evidence that the general statement contained in the brief presented to the Senate Committee, that the quality and quantity of transportation service in no part of the country would be seriously impaired is incorrect.

John: I can only admit that you have made out a good case, and it is difficult to see where the present standard of public service and protection of the public interest could be continued under unification. Railway savings purchased at the expense of the development of Canada and of a wide disturbance in the already disturbed labor and material markets of the country would be too dearly obtained. The country instead of being better off would be worse off. Yet it is only to the extent that a programme of drastic reduction in expenses could be achieved that the country would be warranted in inviting the perils of monopoly and of the great difficulties which I forsee in the type of management of the joint enterprise which is now proposed. Monoply does not make for efficiency when the motive is profit rather than service.

RAIL MAN: You touched on an important point then, John, when you mentioned the difficulties which you foresaw in the type of management in such an enterprise. I do not know what type of management is contemplated, but it certainly requires some extraordinary type of Management to manage the type of partnership contemplated. A partnership between such diverse interests as public and private ownership is liable to produce no end of unforseen problems which might concievably involve the state to an extent never contemplated in the original partnership contract. There would be bound to arise a conflict between the public on one hand and private interes on the other. Public interest is properly and primarly concerned with the use of the railway property for purposes of national development and national policy, private interests are primarly concerned with profits and dividends. A Joint Board of Directors representing such diverse interests would, in my opinion, quickly get into difficulties and, since the scrambled properties could not be unscrambled, the State could only break the stalemate which would result either by acquiring the C.P. property, or by making some concession in the form of guarantees or otherwise. The present proposal for unification has neither the merits of public or of private ownership and is impractical if for no other reason, because of the diversity of interests of the proposed partnership, and would concievably lead to serious involvement of the State.

John: One of the arguments against continuing these two diverse interests as separate entities is that it is unfair for a private enterprise paying a heavy burden of taxation, part of which goes to meet the so-called deficit of the other, to compete with a public owned enterprise which is free from taxation. My point is that while admitting that they might not be very congenial partners, neither are they properly suited as competitors.

RAIL MAN: That is just another of the many misconceptions regarding our railway situation, The fact is that the C.N.R. has much fewer exemptions from taxation than the C.P.R. In direct and indirect taxation it pays about twice as much in taxes as the C.P.R. I have noticed in an address made by Mr. Fairweather before the Rotary Club in Moncton, N.B. he makes a comparison of the taxes of the two properties. Mr. Fairweather was at that time Director of the Bureau of Economics for the C.N.R. Unfortunately, the period for which these taxes were compiled is not stated, but here are the figures.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119410

| | | |
|---|---|---|
| Direct Railway taxation | C.N.R.- $5,200,000 | C.P.R.- $4,100,000 |
| Estimated indirect taxation | C.N.R.-$16,000,000 | C.P.R.-$10,000,000 |
| Total - - - - - - - - - - - | C.N.R.-$21,200,000 | C.P.R.-$14,100,000 |

What he refers to as indirect taxation includes sales tax and excise tax and the secondary distribution of the general tax burden.

John: How does it come that there is so much difference in the Direct Railway tax between the two properties?

RAIL MAN: I am not an authority on taxation, but I presume there is a considerable difference in the value of the properties, and in addition to that, the C.P.R. through agreements secured in its pioneering days has been the beneficiary of a great man legal exemptions from taxation. But here is just one more very important public service that is usually lost sigh of and should be credited to the C.N.R.
From the onset of the depression in the fall of 1929 until about the middle of 1930 the C.N. pursued a policy of maintaining at work on the property all of the staff for which legitimate employment could be found, rather than taking the drastic step of wholesale dismissal, closing down of shops, etc. This policy was publicly announced and supported in Parliament. Such a policy, pursued at a time of falling traffic while naturally affecting the 1930 labor costs on the C.N.R. There is no doubt that it cushioned the onslaught of the depression, not only through the employment that it provided, but through the effect of the good example to industry in general. The value of such an example as a means of averting a panic at such a time is beyond estimation in dollars and cents.

John: I hope that our radio audience have got as much enlightment out of this little discussion as I have. But now our time is up again and until next week at the same time we say goodnight.

Announcer: Tonight yoh are going to hear the third in a series of discussions between Mr. John Citizen & Mr. Railwayman on the Canadian Railway problem. This series of broadcasts are sponsored and conducted by the Winnipeg and District Educational Committee of the Standard International Railway Unions.

John. In our former discussions you touched briefly upon the financial structure of the Canadian Railways, but we did not go very far into that feature. It seems to me that, basically, the railway problem is a financial one and that were it not for financial difficulties there would be no call for Amalgamation. We have been led to believe that the C. N. R. has an annual deficit. We have been led to believe that it is Sir Edward Beatty's concern for the national interests that has prompted him to advocate a merger of the two main railways, fearing that the C. N. R. annual deficit will eventually impair the credit of Canada. Has the C. N. R. an actual deficit each year?

R. M. I think I showed you in a former discussion that from 1923 to 1927 inclusive the C. N. R. made and handed to the Government an average of $24,090,000 each year, or a total of $361,346,000. This amount represents an excess of operating revenue over operating expenses. In other words, it represents the profit earned by the operation of the C. N. R. and turned over as interest on the capital invested. Suppose that a man has $100,000 invested in a business and that the revenues from his business are enough to pay his wage bill, the cost of all materials used, and to maintain his factory in good useable condition paying all taxes and public charges, and has left $2,000 a year. Would you say that his business had yielded him a $2,000 profit on a $100,000 investment, or would you say that it should have earned $6,000 instead of $2,000 and therefore the business had lost him $4,000?

John: I would say that his investment had made him a profit of $2,000 and whm you put it in that light I would say that from 1923 to 1927 inclusive, the C. N. R. has made a profit of a yearly average of over $24,000,000. But there must be some reason for people saying that there is an annual deficit.

R. M.: Yes there are many reasons. Referring to it as a deficit helps to discredit public ownership. Calling it a deficit tends to arouse the public to the desirability of getting rid of it, and helps those who are anxious to grab off the property and eliminate competition. However, the fact that the interest being earned on the investment capital is less than the interest that is annually charged to it. The term may be more or less applicable regardless of the fact that both the amount of capital investment and the rate of interest is out of all proportion to the physical value of the property, or the rate for which money can be secured in the present market. You can see from the illustration that I have given you of the $100,000 business that the profits made only amounted to 2% on the stated value of the business. But tsuppose the owner had foolishly guaranteed to himself or someone else, 6%, he would have to find another $4,000 or 4% somewhere, and might contend that his year's operations had resulted in a $4,000 deficit. The logical thing then would be for him to decide that his business was capitalized too high, or that his guaranteed interest rate was too high, or perhaps both. No business is worth more than its earning capacity.

John: That explains it quite clearly, and I agree with you that if a business will not earn a fair return on the estimated value, then the business must be over-estimated. Is that possible in the case of the C. N. R.?

R. M.: Well inasmuch as no one can contend that the C. N. R. is not efficiently and economically managed, and when we take into consideration the method through which it was acquired by the Government. I believe this is more than likely the case. But instead of whittling it down to something like its real value, the tendency is to increase it by adding to it from year to year the amount by which the profits were short of

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119413

paying the unreasonable sum charged against it. To make this point a little more clear let us use again the example of the man with the $100,000 business. The business earns him a net profit of $2,000 or 2% but it had been estimated that it should earn $6,000 or 6%, and therefore the imaginary deficit of $4,000 or 4% is added to the $100,000 capitalization, and it is estimated the following year that the business must earn 6%, on $104,000. This goes on for a period of years and you will see that in a relatively short time the business which in point of fact was making a small return on the invested capital would be shown as a hopeless proposition. The fact of the matter is, John, that the C.N.R. is a real asset to Canada, and all it requires is a little common sense reorganization of its financial structure, instead of continuing to hamstring it as those who have a strangle hold upon it seem to be doing.

John. I have heard a lot of reckless statements about financial manipulation, but I have never had a concrete example shown to me before, I must admit that you have made it very plain. I am inclined to agree with what you said a moment ago about the purpose of the imposition of an impossible burden being to discredit public ownership and to scare people into parting with their railroad by making what is in reality a real asset appear as a White Elephant. Now another thing that I do not quite understand is that back in 1926 Mr. Beatty delivered an address in Montreal in which he was very emphatic in his opposition to Amalgamation. He said that he thought a merger of these two principal properties would involve difficulties of administration which were scarcely comtemplated and which would in time affect the whole character of the service given to the public that he did not know how it would be possible with the best Executive, the most loyal and efficient officers, and the wisest and most patriotic board of directors, for an enterprise with one hundred to one hundred and fifty thousand employees to be maintained in the highest state of efficiency without the spur of competition. It would be extremely difficult, he said, to maintain a high morale, and that "on-his-toes" attitude of railway employees when they have nothing to measure their efforts against and that so far as they are concerned the struggle for results is taken away because there is no one else in the ring. That was twelve years ago, but it is quite apparent that some time between then and now Mr. Beatty has totally reversed his opinion. How do you account for the Change?

Rail M. John, I am not one of those individuals who condemn a man for changing his mind. The ability to alter his opinion is one of the admirable qualities of Mr. Beatty. If some of our prominent statesmen were only blessed with this quality and could get away from this "always-and-always-will-be" there would be some hope for economic recovery in this country. I do not profess to know definitely what caused Mr. Beatty to reverse his position in this instance, but knowing that Mr. Beatty is a very efficient and very persistent servant of "Big Business" and that the accepted ethical code of "Big Business" is "profits, interest and dividends for us, let the little fellow take care of himself" I would have no hesitation in making a guess that this has something to do with it. Over a long period of years, extending back to 1893 in the case of preference stock, and back to 1911 in the case of ordinary stock, a dividend of 4% on preference stock and 10% on ordinary stock has been unfailingly well paid. Even in 1930, when the depression was well under way, the amount paid in dividends was the greatest in the history of the C. P. R. In 1931 the dividend on preference stock was continued as usual and that on ordinary stock amounted to 6¼%. And again in 1932 the amount appropriated from revenues for dividends on preference stock amounted to a half-yearly dividend on that stock. Then over a long period of years the Company has been building up a surplus out of premium on capital stock sold until at the end of 1935 that surplus out of premium

CANADA

1944

stood at $66,712,887. Now you will note according to these figures that the stockholders had a little goldmine which only started to show signs of petering out in 1931 and got weaker in 1932. The fact that Mr. Beatty changed his mind with regard to the advantages of "spur of competition" just about the same time as this little gold-mine showed signs of diminishing, seems to me to have some significance, and is no doubt one of the congributing factors to the change.

John. That seems to be a pretty fair explanation. A few years depression made a lot of us change our minds about many things, and I would not condemn Mr. Beatty for doing so under the circumstances. If only our Governments would change their minds away from the theory that such problems as unemployment would automatically adjust itself we might get something done about it. But now to take up another feature. What do you think of Mr. Beatty's argument that the C.N.R. has a bottomless purse in the shape of the Federal Treasury, while the C.P.R. has to rely on its own resources?

Rail M. That would be amusing were it not for the fact that there are those who swallow it, hook, line and sinker. One would think that the C.P.R. had never dipped into the public treasury. There is this difference, however, every cent ever taken out of the public treasury for the C.N.R. has been charged up to the huge expenditure upon which it is now demanded that it earn the interest. No consideration has been given to the fact that is is a public asset, and like the C.P.R. was part of the government undertaking as a means of bringing about Confederation and developing and binding the Provinces together, While large doles have been handed out to the C.P.R. as public grants recognizing the governments responsibilities in fulfilling its Confederation promises. I think I can explain what I mean by quoting from the report of the Duff Commission. Listen to this: Quote: The promise of railway construction formed an integral part not only of the Confederation arrangement of 1867, but also of the terms upon which Prince Edward Island and British Columbia later entered the Dominion. The obligation to the Maritime provinces was discharged by building entirely at public cost, the intercolonial Railway from Halifax, N. S. to the St.Lawrence at Rivière du Loup, by the construction of the Prince Edward Island Railway, and the provision of a ferry between that Island and the Main land. The agreement to connect British Columbia with Eastern Canada by a railway from the Pacific Ocean was fulfilled by the building of the C.P.R. Failing to interest private capital in this project the Government undertook the work as a public enterprise. Later a syndicate, which afterward developed into the C.P.R. Co., entered into an arrangement with the Government to construct this transcontinental line in 10 years, from 1880 to 1890. The agreement provided that the country subsidize the company by a gift of twenty-five-million dollars, twenty five million acres of land, and of the railway lines already constructed with public monies, at a cost exceeding thirty seven millions of dollars. End of quote.

John. Do you mean to say that $25,000,000 in cash, $37,000,000 worth of railway construction, and twenty five million acres of land were all a free gift?

Rail Man. That is exactly what it was as an inducement to the Company to proceed. When the line was completed in five years instead of ten, the company was given a little more help by a guarantee of security to the extent of $15,000,000, but the Company paid this security when it matured.

John: What would be the value of the land, per acre?

Rail Man. That would be difficult to say, except that it would be worth more after the railway was constructed than it was before, but we get some idea of its value in the fact that inside of five years from the time the grant was made the Government bought back six million seven-hundred and ninety-three acres of it for which they paid the Company well over $10,000,000.

John. It seems to me, after hearing this that it ill-behooves the C.P.R. to make too many references to the use of the public treasury by the C.N.R. However, our time seems to be about up again and I must say that I have enjoyed our little discussion and hope that it has been enlightening to our radio audience.

ANNOUNCER: Tonight you are to hear the second in a series of discussions between Mr. John Citizen & Mr. Railway man on the Canadian RailWay problem. This series of broadcasts is sponsored and conducted by the Winnipeg & District Educational Committee of the Standard International Railway Unions.

John: Mr. Railwayman, when we last discussed the Railway problem you appeared to know all the answers, but there is one statement you made that I wo uld like a little further enlightment on. When referring to Mr. Beatty's suggestion that unification of the two railways could be put into operation and the estimated staff reduction of 15 to 17% affected without anyone being taken out of the railway service, except those leaving through the normal process of retirements, deaths, etc., thus making the entire reduction in this way spread over a five year period during which no new employees would be engaged, you said that the proposal might sound logical, but to experienced railroaders it was not practical. Now, I admit that it might not be a desirable proposition for the reason that it would close another potential avenue of employment for the youth of the nation for a period of five years, and at the same time it would automatically increase the average age of railroad workers by five years. But the fact that a thing is not desirable from the national standpoint does not necessarily make it impracticable.

RAIL MAN: A good question, John. And I observe from your remarks that you have been doing a little exploration of the problem on your own. I am glad of this because the only real danger of unification of our railways being effected, is a lack of interest on the part of the people of Canada, and if we had more of them trying to get a peep beneath the surface of the problem, as you appear to have been doing, the danger would be minimized.

John: I thank you for the compliment, but you have not answered my question as to the impracticability of Mr. Beatty's suggested method of making a 17% staff reduction without injury to any employee.

Rail Man: I was coming to that. When I say that it is one of those theories that has no practical application, I mean just this: When you reduce the amount of work to be performed, or the operations to be made in an industry like a railroad, by 17%, you cannot in practice defer the saving in labor costs to a future date.

John: Could you illustrate the point you have just made?

Mr. Railman: Yes, a train might consist of only a few cars, or it might consist of one hundred or even more. Regardless of its length or its tonnage, it is manned by a crew of five men: Engineer, fireman, conductor and two brakemen. Under unification, many trains, both freight and passenger, would be consolidated and no doubt on many of the lines certain trains, if not all trains, would be abandoned. Taking our cue from Mr. Beatty's estimated labor saving of 17%, it is safe to say that the same volume of traffic would be handled with 17% fewer trains, and consequently 17% fewer train crews. Incidentally this would mean 17% less spending power spent in the community by the Engine and Train crews, and 17% diverted from the community to investors in London and New York. But this is aside from the question for the moment. Now in railroad practice, there may be any number of engine and trainmen on the staff. Senior men on the staff have regular employment, but as you come further down the list you find employment becoming more and more intermittent with the junior men getting only periodical employment. Being on the staff does not give them employment unless there are trains to be moved. Therefore, reduce the number of trains by 17% and you automatically reduce the employment of train crews and enginemen by 17% regardless of the fact that these 17% may still be on the staff.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119417

Consequently, the 17% saving in labor costs of moving trains becomes an immediate saving to the railroad, and an immediate loss to the junior train and engine staff. The saving cannot be deffered for three to five.

John: You have made out a good case and I can see how unworkable the plan would be in its application to train and engine crews, but there are a great many employees in other departments, the big repair shops for instance.

Rail Man: Well, take the repair shops, and the same might well apply to all other departments. Any institution operated for profit, cannot afford to purchase any more man-hours of labor than is necessary for its successful and efficient operation. Unification is estimated to dispense with 17% of the man-hours of labor now being purchased. This means that there will be 17% less men required in the shops and that under Mr. Beatty's suggestion that none shall be removed from the staff except through the natural reduction, there will be 17% of the time, plus the time, plus the time that they cost under present conditions, whenever it can be managed. Here again they can agree to retain all men in the service, they can even agree to retain the 40-hour minimum week, but excuses can always be found for closing the shops, and thus making the estimated 17% saving immediately for the railroad, and a 17% loss immediately for the employees. Here again it would not be practical to defer the saving until the staff had been adjusted through attrition.

John: You seem to be overlooking one thing. Mr. Beatty has asked the Union Representatives of the men to sit down with him and negotiate some kind of an agreement that would afford protection to those who may be affected by unification. You are jumping to the conclusion that all he would be prepared to do is to agree that no employee would be removed from the staff in any department and the entire saving in labor costs would be that derived from those normally leaving the service through retirements, deaths, etc. You may be wrong, Mr. Beatty and his associates might be prepared to agree that all these men shall not only be retained on the staff but guaranteed their wages whether they work or not, until gradually there will be employment for them as the older ones go out. He might also be prepared to agree to no shut-downs during this period.

Rail Man: I have tried to show, John, that Mr. Beatty's suggestion was not practical, but when you stretch his suggestion as far as you have stretched it, I am confident that it will be the Management's turn to say that it is not practical. In the first place there are hundreds of railway-workers who are unemployed and not earning a cent now. Your suggestion would restore them to the pay-roll with a guaranteed wage and it would take a few years of retirements to get the pay-roll down to where it is at present before they started making any actual saving in labor costs. If on the other hand, these unemployed men were excluded from the status of present employees, it would mean their total exclusion from railway service for some five years, and the loss of pension and other acquired rights, so that any way you look at it, it still seems to be impractical.

John: You seem to have made quite a study of this whole problem, and I gather that you have not much confidence in all of Mr. Beatty's assurances that the employees will get a square deal if unification comes. Neither do you seem very anxious to have your representatives sit down at the conference table and see how far he is prepared to go in that direction before making up your mind about it. Why is that?

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

19418

Rail Man: Well, that is a double question. In answer to the first, our lack of confidence in Mr. Beatty's assurance of a square deal is partly this: For years we have recognized the technilogical displacement of human labor in the railway industry. We have seen larger locomotives hauling more cars, and cars of greater tonnage, we have seen both making an ever-increasing number of miles without repairs, paint-sprays taking the place of the brush-hands, modern machines displacing gangs of workers, and we have gone to railroad managements for adjustments that would have prevented the distressing spectacle of men with 25 and 30 years of service being deprived of their livelihood. We have never suggested the retarding of progress; we have never opposed the introduction of the machine, but we have said that there should be a fairer distribution of the benefits of the machine, than reduced labor costs for the employer, and unemployment and distress for the worker. We have time and again made the further proposal that the employment of new men should be suspended until all present employees were regularly employed.

John: What has been the reception to that suggestion?

Rail Man: You will find the answer in Mr. Beatty's evidence before the Senate Committee, on May 24th, 1938, when he said that about 29% of the employees of the C.P.R. had been in the service less than five years. My point is this, John, if Mr. Beatty is so sure now that the reduction in necessary labor can automatically adjust itself without causing unemployment, why couldn't he and the C.N.R. Management as well, have given as much consideration to their old and faithful employees in the past?

John: If Mr. Beatty's plan can be used to protect the victims of unification, why has it not been used in the past to protect the victims of increased productivity?

Rail Man: They have gone along engaging new employees as apprentices in their shops while experienced mechanics were being laid off; they have contracted out the building of equipment to outside firms while their own shops have been working part time and their own mechanics idle. Why, then all this assurance of protection under unification, that he refused to give us under other causes of unemployment? And this leads to your second question: Why are we not anxious to sit down and see how far he will go with us? Frankly, we suspect a motive behind it. Our Railway Unions, we are egotistic enough to believe we have some public influence. We have opposed amalgamation of the railways, and hope to continue to oppose it. Not from our own selfish interests, but in the interests of Canada. We cannot oppose a program and at the same time assist in drafting it, and we believe that to sit down and talk it over as suggested would weaken our opposition to it, and our action would be construed as an admission that amalgamation is inevitable.

John: In other words, Mr. Railway man, you attribute the invitation of Mr. Beatty to strategy, rather than genuine concern for his employees, and I am inclined to agree with you. I suppose your experience with unemployment as a result of what you term technilogical development, would put you on your guard. Can you tell me anything about this development? You mention, for example, larger locomotives and cars.

Rail Man: Yes, I have some figures here on that, that I am sure will serve to elaborate on the point. There are no doubt later figures available, but the latest I have are for 1935. In 1920 there were in operation on Canadian Ry., 6,030 locomotives, with an average tractive power per locomotive of 31,112 lbs. A total tractive power of 85,000,000 lbs. In 1935 there were 4,797 locomotive average tractive power was 38,140 lbs., total tractive power was only 1.5% less than in 1920, although there were 1,233 less locomotives in service. In 1920 there were

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119419

224,489 freight cars in service on Canadian Rlys., with an average capacity per car of 35.41 tons. Total car capacity was 7,888,821 tons. In 1935 the number of cars dropped to 176,760. The average capacity per car increased to 41,047 lbs. The result being that with 47,729 cars less in service the total car capacity was the same as in 1920. In 1920, the average train handled was 28.17 cars, and in 1935 this was slightly reduced to 36.31 cars, an increase in the number of cars average per train over 1920 of 28.9%. Or put in another way, three trains in 1928 were four trains in 1920.

John: That is indeed interesting. Inside a fifteen year period you show over 1200 less locomotives and able to do the same work. Nearly 48,000 less cars but the same carrying capacity, and three trains doing the work of four. I can see where the train crews and the repair shop workers would feel the effect of this on their employment, and why the threat of amalgamation on top of this continual development should get them worried. But why is it that with this kind of increased productivity per worker running all through the industry, there should be any railway problem? It seems to me that profits should be on the increase for the railways.

Rail Man: To put it as briefly as possible, the trouble is a top-heavy financial structure. Amalgamation of our Railways is designed primarily to protect the interests of the bondholders at the expense of the railway men who actually operate the railways. If the investment value of railway bonds has depreciated, the Bondholders should take the loss as we all expect to do if we make an investment that depreciates in value.

John: Thank you, Mr. Railwayman, our time is up, but we will meet again and go more fully into the question.

Announcer: Much has been heard in recent years of our Canadian Railway problem. Tonight we will hear a discussion between Mr. John Citizen and Mr. Railwayman. The Broadcast is sponsored by an organized group of railway workers.

John..... Mr. Railwayman, as an ordinary citizen trying to keep in touch with current events by reading the papers, there are some things that are very confusing to me. Perhaps you can help to clear them up. Sir Edward Beatty, President of the C. P. R. is advocating Unification of the railways. One of the local dailies opposes Unification, and advocates what it terms "Compulsory Co-operation." The Conservatice party has taken a similar position, and the President of the C. P. R., in appearing before the Senate Committee last Spring, expressed very similar views. Now, just what is the difference between the two?

Ry. Man..: There is very little difference. They both mean ultimate amalgamation of our railways. Unification envisages the enactment of legislation with one stroke of the pen. What they term "Compulsory Co-operation" would do the same thing on the installment plan, and has been very well described by Mr. Beatty in his evidence before the Senate Committee as "Unification in Disguise."

John.... "That seems a pretty clear explanation, and if you will pardon my ignorance of the situation, I would like to have you explain why society, and various sections of the people are opposed to amalgamation of the railways? I have in mind the railway-workers, taxpayers, farmers, business and professional groups; outlying municipalities, and in fact a cross-section of the citizens generally. You might deal with those one at a time. Suppose you explain why a taxpayer should be opposed to Amalgamation, when he has had the C. N. R. pictured to him in the light of a "White Elephant."

Ry. Man :Well, John, there are many reasons for it. A taxpayer who stops to think for himself, as many are doing now-a-days, can readily see that Amalgamation would not mean the slightest relief from the tax burden. It might well, in fact, mean increased taxation. According to President Hungerford of the C. N. R., in his evidence before the Senate Committee, the C. N. R., during the period 1923 to 1937 inclusive, earned its full operating expenses, plus an excess of operating revenue over operating expenses of $361,000,000, or an average of $24,000,000 per annum. The deficits of which we hear so much, arise not from operation, but from a heavy burden of interest charges. This heavy burden of interest charges is the result of a former Government protecting the credit of Canada during the war hysteria, by taking over five major railroad systems and a number of smaller roads, all virtually bankrupt, and assuming outstanding obligations of more than one billion dollars, and in such run-down condition that some $400,000,000 had to be psent to put them into operating condition. Without going into detail regarding the ramifications of past governments, railway promoters or financial manipulations, the fact remains that there is a huge debt piled up and rightly or wrongly saddled onto the C. N. R., and for which the operation of the property since its acquisition by the Government is in no way responsible. Amalgamation with the C. P. R. does not relieve the tax-payer of this burden. It still has to be paid. The C. P. R. is assisting materially towards meeting it, when over a period of 15 years it was able to hand over to the Government a net operating revenue earned of an average of $24,000,000. It is questionable whether so handsome a contribution towards our national debt would be continued under unification.

John.....:You seem to have something there. I can see where unification, or not, Mr. Taxpayer still has an obligation to meet, and with unification he might have to foot the bill without the assistance of the C. N. R.

Ry. man..: Yes, but that is not all. Do you know that expenditure on our highways and waterways, in the year 1935, exceeded the revenues from those sources by almost $70,000,000 - or $27,500,000 more

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

than the reported deficit of the C. P. R. for that year? If those competitive forms of transport, which are sapping the very life-blood of the railways, while subsidized to that extent, were subjected to the same government restrictions as are the railways there would be no railway problem, and the net operating revenue of the C. N. R. would easily meet the huge interest burden with which it has been saddled. Tax-payers cannot be expected to remain silent about paying out $70,000,000 per annum for the upkeep of the agencies responsible for the decreased earnings of the railways, by having their attentions fixed upon that much lesser burden.

John. :You mean that if governments discontinued this $70,000,000 annual subsidy to highway and waterway transportation systems, that the shortage of the C. N. R. net revenues to meet the full interest charges would disappear, and the tax-payer would be relieved of both these burdens?

Ry. Man :That is it in a nutshell. But here is another thing that is beginning to dawn on the tax-payer. From 1930 until the end of last year, $503,000,000 was spent by Canada in relief projects. Add to this the cost of the administration of relief, suppression of unemployed demonstrations, and related matters, and it will be seen that compared to the much talked-of C. N. R. deficit the latter fades into sad insignificance. How then can the tax-payer hope to lighten our national burden by deliberately planning to throw more of our citizens out of employment and thereby increase the number of relief recipients? It seems natural to conclude that when savings are made in labor costs, that unemployment will spread to those industries which cater to the wants of railroad workers; that the real tax-burden of unemployment and all that it entails, will be increased beyond any relief which might be hoped for through a very doubtful reduction in the C. N. R. deficit.

John....:I must admit that you have made out a good case, and I can quite understand now why Amalgamation of the Railways makes no appeal to the intelligent tax-payer. But how about the Business and Professional man from the viewpoint of his business, forgetting for the moment the tax question?

Ry. Man :No doubt the business and professional man realizes that the backbone of his income is the man on the pay-roll. What would it profit him to let someone "kid" him that there is a lot of waste and duplication in the railway industry, which, if eliminated, would pay the interest in full on an indebtedness incurred years ago through the questionable transactions of past governments and "wild cat" promoters, if, in the process of elimination, by the unification route, he is going to break the backbone of his source of income.

John....:You might enlarge a little on that point, I don't quite get it.

Ry. Man :Does the Doctor, for instance, relish the thought of being called out during the night to find that his patient is one of the victims of Amalgamation? And unable to pay his bill. Does the merchant, for instance, want to see those good cash customers of his who buy regularly from him, walking past his window and looking longingly in at the things they would buy from him if they had not been separated from their jobs through amalgamation? And it is not only the railway worker who would be separated from his job. Unemployment breeds more ubemployment, and any falling off of the pay-roll in a large industry immediately reflects itself in a falling-off in pay-rolls in general. I merely mention the Doctor and the Merchant to illustrate my point. Every business and profession would be affected. A realization of how they would be affected, which of course accounts for their opposition to amalgamation.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119422

John.... :I think that is quite clear, but you are assuming that amalgamation means reduction in the railway staff. I have read where it can be put into operation without staff reductions. If it means staff reductions then your argument is sound. In fact I have had an example of this very thing. A young fellow living across the street from me was laid off in a staff reduction from a big store, where he had worked steady for years. When I expressed my surprise at him being laid off at this time of the year when the shopping season was busy, he explained it by the effect upon business of the C. P. R. shops being closed Oct.21st to 14th of Nov. He is to be taken back when the mid-month pay-day comes in the C. P. R. shops. It is not, he says, only the actual loss of the business that this three weeks wages means, but business is apt to regard such retrenchment as a barometer indicating a slump in the offing, and a general retrenchment takes place. But what about the claim that a staff reduction is not necessary under the unification plan?

Ry. Man :Every cent that is saved in labor costs must come out of the pay cheques of railroad labor. There may be savings from sources other than labor costs. Mr. Beatty has stated that the estimated saving in labor cost is from 15 per cent to 17 per cent. I think this is too low an estimate, but even taking his word for it, it means that the railroad pay-roll will be 15 percent to 17 percent less than at present, if unification ever goes into effect. Mr. Beatty proposes - and this is perhaps where you got the idea from- that this reduction need not be immediate. He estimates that by the simple process ofnnot engaging new men, until the estimated reduction of 15 to 17 percent has been affected through normal retirements, deaths, etc., that no present employee need lose his job. But he does estimate that in the course of three and a half years there will be 17 percent reduction in the railroad wage-bill due to a smaller staff. Now that might sound logical, but to experienced railroaders it is not practical; it means 17 percent less purchasing power to be expended on goods and services; and that much more unemployment relief for the tax-payer to take care of.

John.....:What do you mean when you say it is not practical?

Ry. Man..:Just this:- The fact that a railwayman is not laid off, does not mean that he draws a pay-cheque. A train crew, for example, works when a train is dispatched. There may be many crews on the staff awaiting their call, but with fewer trains, because of more cars to the train, there will be fewer runs for the crews, so that if 17 percent is the correct estimated saving in labor coat, it must of necessity be made immediately as far as train crews are concerned. Shopmen, for instance, could be retained on the staff, but if there were more than required the shops would be periodically closed down, so that if there were less man-hours of work required under unification, say 17 per cent less, then 17% less man-hour labor would be purchased, not 5 years hence, but at once, and still no men need be taken off the staff.

John.....:Yes, that is quite clear. You fellows seem to know all about railroad practice. But tell me something about the workers' opposition.

Ry. Man..:Many railroad workers have spent the better part of their lives in the railroad industry, many of them have passed the age of adaptation to a new occupation, even if there were new opportunities, which there are not. Those railroad workers have a stake in the industry,equal, if not greater importance than the stake of the Bondholder or Stockholder. When we earn wages they are immediately put into circulation in the community in which they are earned, and the community benefits. On the other hand, if, as contemplated by Amalgamation, the wage pay-roll is reduced so as to increase the interest and dividend pay-roll, the community is the loser. The interest and dividend pay-roll does not even help Canada. For instance, of the C. P. R. stock, 83.16% of ordinary stock and 99.72% of the preference stock of the Company is held outside of Canada. Hence, we oppose amalgamation not

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119423

only from our industrial and community interests but also from the national interest.

John... :I must confess that I have never looked at it in just that light. I think this explains many things. The business people of Canada are naturally more interested in their own customers than they would be in outsiders, and amalgamation would deprive their customers to meet the demands of outsiders. Now, why the opposition of the farmer?

Ry. Man..:The farmer is interested in two things: lower freight rates for his commodity, and efficient service from the railroad. It is n not the purpose of amalgamation to give the public chepaer rates. Savings effected, if any would not be passed on to the public, but would be passed on to the coupon-clippers. Therefore, there is no inducement here for the Farmer to support Amalgamation. Secondly: He realizes that a private monopoly such as amalgamation contemplates, is not conducive of efficient service. Many of the older farmers have had railway monopoly in the old days and want no more of it. But in addition to all of that, the farmer knows that the best market for his product is a wage pay-roll, rather than a foreign dividend pay-roll.

John... :I believe what you say is true, but don't forget that there is a continuous campaign being to play the workers against the farmer, so that both can be exploited by a third party while they fight between themselves. Many of them nay still blame the railwaymen for the fact that rates have not been lowered. Now, tell me about the outlying municipalities to which you referred as being opposed to Amalgamation.

Ry. Man..:Yes, I will, but first let me point out to you that Canada has the lowest freight rates in the world, and any deficit that has to be made up by the Government, just means that we are socially subsidizing what the individual shipper would have to pay direct in any other country. But now about the outlying community. What I had in mind was the community that would be in danger of abandonment if amalgamation was put into effect. Mr. Beatty, of course, denies that his plan would injure any community, by abandonment of lines, and in the same breath he says that it will not injure the workers. Just where is the $75,000,000 per annum to come from? Have you ever made the trip through the Crow's Nest Pass, or the Kootenay country, and seen what they call "Ghost Towns"? That is a town that has been developed in years gone by because of the operation of coal or metal mines; where workers in the mines and business people catering to them had invested hundreds of thousands of their hard-earned funds in homes and business places, only to awaken some fine morning and find that the directors in London or New York decided to abandon the mine. The result was a total loss. Fallen down, dilapidated, worthless homes with broken window panes stand as a monument to the false security in their businesses, their homes and their employment, without taking into consideration the inhumanity of foreign investors whose motto is: "The wages of invested mnoey must be paid regardless of who may suffer in the process." The same treatment would be meted out to dozens of small towns throughout Canada, towns that have been built upon the strength of the railway. We do not want a country of ghost towns. Unification may have been justified in Great Britain where the country has long since been developed, but to even talk of it in a young country like Canada is an admission of defeat. All this no doubt explains the opposition of the outlying communities.

John... :I am sure, Mr. Railwayman, that you have given me a very intelligent slant on this whole question. I am convinced that there are better ways of meeting this problem than by the Amalgamation method.

Montreal, P.Q. Mar. 27-1939.

The Honorable Senators,
Members of the Special Senate Committee,
Hon. Geo. P. Graham, Chairman,
Rt. Hon. Raoul Dandurand, Leader,
Rt. Hon. Arthur Meighen,
Hon. James Murdock,
Ottawa, Canada.

Very Honorable and distinguished gentlemen:-

The undersigned, through exclusively charitable motives, wishes to voice the opinion of a body of employees who have no other means of being heard, that is, unorganized labor who would form a group of perhaps two million workers, all of whom are good C nadians, heretofore unheralded as a most potential group of tax-paying consumers. A nd, further asks that the Honorable Members of this Special S enate Committee be good enough to consider the following remarks as coming from one railroad man to another (there being at least one or two H onorable Members, who were at one time railroad employees), with the frankness and honesty that is second to no other class of worker with the same dependability as the tide of the ocean, notwithstanding the lack of academical phraseology or the uncandid assumption of cosmopolitan leadership, for which consideration I am most grateful.

Having assisted at the hearings of Tuesday, the 21st., instant before the above-mentioned Committee, and unreservedly convinced of approval by all respectable workers, I wish to unqualifyingly state that any and all unrespectful utterances made at said hearing, were NOT that of any bona-fide railroadman's volition.

Since my return to Montreal, many railroad employees of different departments, such as conductors, trainmen ( brakemen), firemen, clerks, telegraphers, both railroad and "commercial", train-despatcher and others, employees of both railroads including a railroad conductor formerly employed by the New York Central and now residing in Ottawa, in commenting the newspaper reports in our dailies in both languages, are not only in

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

disagreement with the two solutions offered,but enthusiastically insist, in the best interests of Canada and all the workers,that our economic requirements are such as that propounded by the undersigned,on request, to the Special Senate Committee under date of the 17th.,instant.

It must be remembered that Sir Edward Beatty has never irrevocably contended that his ideas were omnipotent or unquestionable,but,rather invariably suggested that in view of the accruing debt incurred by our nationally-owned railroad,an impartial study of his recommendations be made in the interests of Canada and the tax-paying Canadians.

Again,it must be conceded that Mr.S.W.Fairweather,is the Director of Economic Research of the largest railroad in America,if not in the world, and,his opinion should also be given all the value implied by such distinctive authority.And,in the writer's humble opinion,the officials of either and both railway companies are gentlemen and competent administrators.Furthermore,it is believed beyond any doubt,that these same gentlemen are immeasurably above requiring the dictates of a miner,or even the self-assumed leader of a dress-making organization,whose views on social and political economy are foreign to that of our democratic Administration in Canada.

It is also the opinion of the writer that,90 percent of all the Canadian Pacific employees would NOT exchange positions for that of similar positions with the O ppposition company because of any administrative dissatisfaction. Hence,to infer that C.P.R.employees are discriminated against,or unequally treated and that they are not given holidays with pay,on an equal basis of that of the Opposition,is a deliberate untruth which allows for the interpretation that it was made with the intention that such statement may be conducive to distortion of a half-truth,and an excuse to excite antipathy among classes such as is provided in the recommendations supposedly given out by adherents to a subversive totalitarian government who obtained and retains power

through the massacre and the shedding of the blood of its predecessors.

With all due respect for the educational and instructional potentialities of one of the witnesses last Tuesday, as well as that of any preceding witness possessing likewise competence in fields of industry other than railroading, I must point out that the present situation, exposed in my communication to the said above-mentioned Committee, is due solely to the lack of individual purchasing power and not in any way due to a surplus of capital in circulation. Hence, presuming that the above statement is in accordance with the veracity of the facts it is observed that, to withdraw from circulation another fifty or more millions of dollars per year, will only add to the burden of taxation imposed on the consumer by our different governments, in addition to that required for more victims of direct relief, amounting to perhaps fifty million dollars yearly, plus the four millions and more otherwise collected by the Federal Government through the established sales tax of 8 per cent.

On the other hand, the writer feels confident that, given the privilege of devising ways and means to bring about economic recovery on a sound and permanent basis, it would be possible to do so without causing any financial tumult nor any apprehension on the part of the purveyors of capital, locally or from abroad.

As regards any "adequate" provision for those affected by a diminution of personnel, one has only to recall the fate of the former railroad employees in Horne Payne, Coteau Landing, and, futurely, those of Chapleau, Capreol, Sudbury, North Bay, Greater Montreal, Port Arthur and Fort William, Winnipeg and St. Ignace, Moose Jaw, Swift Current, Saskatoon, Medicine Hat, McAdam, Toronto, St. John, Halifax, Vancouver and many intermediate points all of whom should have a voice in the matter.

Unorganized labor in Canada, whose salaries and family obligations do not allow for the payement of dues are nevertheless best qualified to decide what is required for the best interests of their dependents,

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119427

although not having the privilege of voicing their opinion in any organized movement owing to a very logical practise that the interests of members only shall be looked after, the financial success of a union, required to defray onerous expenses, depending on the dues and assessments of their membership. It is for this reason and for charitable and patriotic motives ONLY, that the writer has undertaken to fulfill the duties that a salaried union official is unable to do, because the non members, as they are so designated, are not invited to choose his or her representative, nor vote in favor of or against any intended representations to be made, for which services it is desired to declare, that the undersigned has not and does not expect any pecuniary remuneration, directly or indirectly. On the contrary, all expenses incurred by trips and displacements, via automobile and otherwise, papeterie and other expenses including loss time, since a score of years in research work, have been defrayed by myself without any contribution from any source whatsoever, this being the writer's uncompensated contribution to a wothy cause for a no less worthy people.

The absence of formal protests or the silent acceptance of a state of affairs does not necessarily indicate adherence to a measure which would otherwise have been refuted or declined.

In conclusion, it is pointed out that the National Combines Act, or the Trades and Commerce law, is not the only unpunitively transgressed law, since it is known that the law forbidding the commission of libel has become, through legislative inequity, a protection for the transgressors against whom it was intended to severe, all because of another law unwittingly authorizing the commission of such criminal offenses, making the working public, victims of a manoeuvre despicable in more ways than one. However, it is believed that, if our legislators knew of such legislative inadequacies, they would adopt means to correct a deplorable state of affairs equally detrimental to economic recovery as that of our

Hon. Sir Arthur Meighen
House of Commons
Ottawa Ont.

Dear Sir:

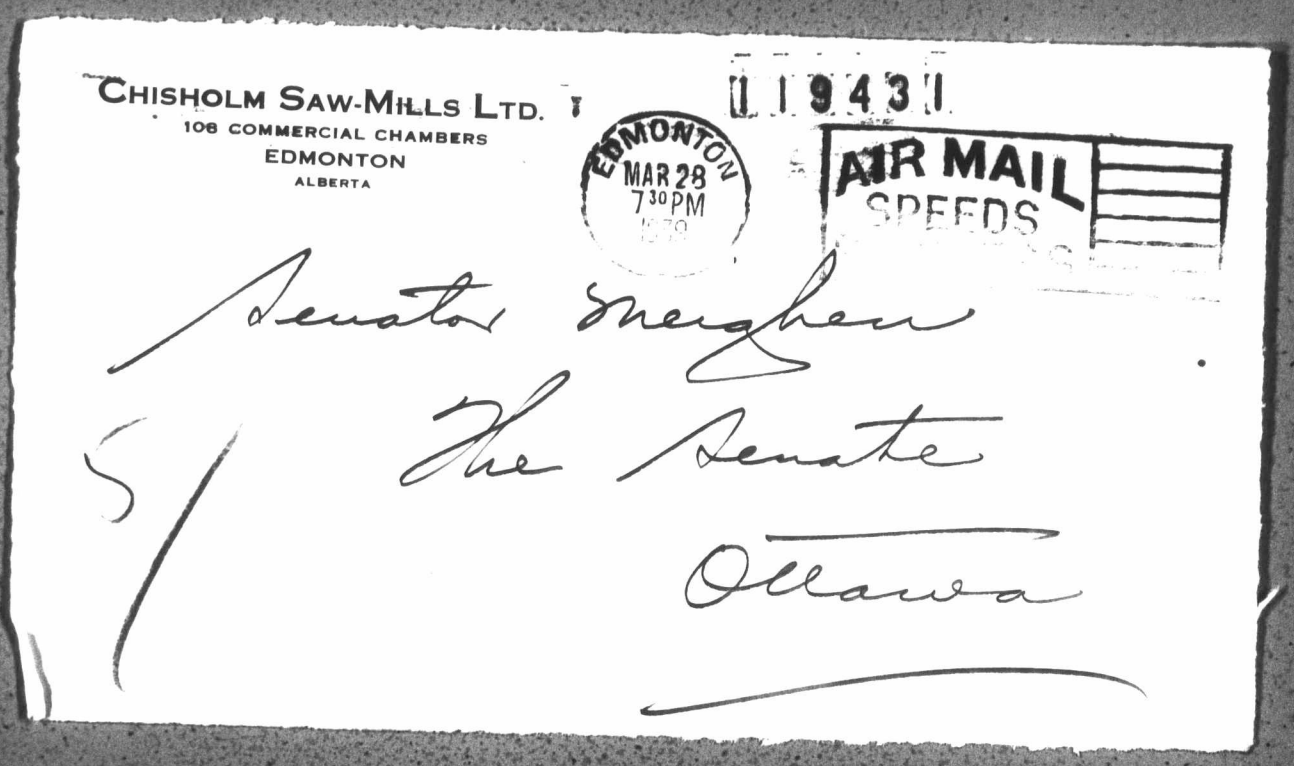
We wrote to Mr.Rogers some time ago for some time on the floor of the house in order that we may place our views regarding the junior men in the milage question,on the railway situation before the house, but Mr Rog er informed us that the senate was the proper place for the question. M

No doubt you know that there are thousands of us men who are walking the streets,and on the relief rolls,that are classed engineers and instead of walking the streets ,we should be gainfully employed and as your committee knows,that if the running trades were working 2600 miles a month or 26 days per month,instead of 38 days as a lot of them are doing at the present time .

We have canvassed a great number of the railwaymen in Ontario districts ,in regards the 26 working days a month and we find that on the seniority district where 673 men are employed,there are 450 of these men are in favor of the 2600 miles a month,there is no doubt that the junior men is certainly entitled to some consideration .

As your committee is investigating the railway situation ,it is our desire that we may be represented before your comittee for the junior men. Awaiting your formal reply as to when time will be assured to us to make our representations,as there are too many merrits to allow this matter to go by.Thanking your for your co-operation.

We Remain



Sincerely Yours

Senator Murdock,
The Senate,
OTTAWA, Ontario.

Dear Sir:

You are apparently worried over who is putting up the money for the Citizens' Group of Toronto for Railway Action. My reply to your anxiety is that the business men all over Canada are prepared and willing to contribute within reason to get the facts before the general public. We cannot expect the press to do it because your unions have seen to it that their union members and families and the press get passes for travelling without cost, hence that is their price so the time has arrived when the general public must organize against uneconomic trusts and unions who have been racketeering this country for many years now. McAdoo and his swards put all the railways in America on the bum and you know it but will not admit it.

When the masses get organized, Mr. Murdock, the politicians will drop your running trade unions like a bunch of hot potatoes unless your members take a tumble and get down to economic reasoning and fair play. The fact is the railway vote franchise, including their better halves, does not exceed 10% so why should they be permitted to control 90% of the franchise vote? My advice to you, Mr. Murdock, is for you to advise your running trade unions to become reasonable and especially so now when they have such competitors as the truck and bus, whose operators work for much less wages and much greater hours per month and lesser conditional demands, otherwise they cannot expect to get public opinion behind them under present financial conditions.

Yours truly,

JFM/GH

J.F.MacMillan.

Dear Sir: Re: Railway Problem

I have been a reader of your paper for the past few years and have come to the conclusion you must be prejudiced by the railway unions or a certain railway organization for submitting their side of the story only and against letting the masses know the real facts of the situation. Why do you not tell your readers what Prof. J.L.McDougall has been stating before the Senate railway committee, such as the following:

" Senior engineers on Canada's two railways are earning more than $4000.00 a year and working about fifteen days in a month. "

Why don't you engage a reporter to interview truck drivers and bus drivers and ascertain what wages they are paid and how many days, on an average, they work each month and give it some publicity too? You no doubt realize the truck and bus are the railways' greatest competitors!

In my opinion the two greatest problems our Federal Government have to solve are the railway and relief situations and our leading newspapers should try and assist the taxpayers of Canada instead of assisting uneconomic organizations such as the running trade unions on the railways. I do not for one moment think the office help of the railways are, generally speaking, overpaid but I do claim the running trades are when you compare them with the truck, bus, and the aif operators and are standing in their own light and apparently do not know it.

I would like to see a paper like yours come out and give the public both sides of the story, as well as all the facts.

Thanking you in advance for an early reply,

Yours truly,

JWM/GW J.W.MacMillan.

# USE OF C.N.R. HOLE AS TRAFFIC CENTRE URGED BY ENGINEER

## G. R. MacLeod Strongly Opposed to Present Railway Terminal Plans

## OTHER CITIES STUDIED

### Veteran Expert Says Tramways, Buses, Autos, and Later Subways Could Use Centre

Abandonment of the Canadian National Railway's Dorchester street terminal, use of the present excavation, the tunnel and the proposed viaduct to the south for a city traffic system, and acceptance of the Canadian Pacific Railway's offer for joint use of the Windsor, Park avenue and Place Viger stations by the railways, is suggested by G. R. MacLeod in the light of his experience as an engineer with the City of Montreal and railway companies.

From 1913 to 1938 Mr. MacLeod occupied various engineering posts with the city, having been engaged for the express purpose of dealing with numerous problems arising between the city and the railways,

Photo by Rice.
G. R. MacLEOD

tramways and other transit companies.

To provide for future city traffic needs, Mr. MacLeod contended, it would be good business for the C.N.R. to transfer without charge the tunnel under the mountain and the Dorchester street excavation to the city as a basis for expansion of local transit equipment. The city could lease the tunnel to the Montreal Tramways Company or operate a municipal service through it, he said. Viaduct to the south could be used for vehicular or tramways traffic and the whole would serve as a future nucleus, possibly many years hence, for a subway system.

PROPOSAL IS SKETCHED.

Mr. MacLeod has prepared a drawing showing a bird's-eye view of the uses which might be made of the existing C.N.R. properties north and south of Dorchester street, leading to Mount Royal Tunnel.

"The project of using the excavation at Dorchester street as a railway terminal ought to be definitely opposed," said Mr. MacLeod yesterday. "That site would not have been proposed for such a purpose were it not for the fact there is a tunnel through the mountain, a legacy from one of the smaller railways which had to be taken over by the Dominion to be merged into the national railway system. The tunnel is, of course, an asset, but the enormous expense of building a railway passenger terminal station there, including the cost of building rail connections from the old Grand Trunk main lines and yards, is tremendously out of proportion to the value of the tunnel as a railway approach, to say nothing of the great inconvenience to the public of Montreal by having another large railway terminal in the centre of the City.

"In the first place, Montreal has too many railway terminals and too many tracks and yards. To transfer Bonaventure Station two blocks east and two blocks north, still as an independent main terminal, will aggravate the situation and give no tangible advantages.

"While on the subject of 'too many railway terminal stations.' —just compare the situation in Montreal with those in Toronto and Ottawa. At each of these two important cities, they have one union station operated jointly by the same two railway companies which have six passenger terminals in Montreal. The rivalry and hostility between the railways originally entering both Toronto and Ottawa were even more bitter than between any companies in America today, but even in those difficult days the better counsels prevailed. It will be a great pity if similar adjustment cannot be amicably arrived at in Montreal. It is not yet too late.

UNION TERMINALS WORK.

"In my nine years of service with railways, I had many opportunities to observe the railway terminals in certain American cities,—Buffalo, Detroit, Chicago, St. Louis, Mo., for example. At St. Louis there were 22 separate railways having their trains enter one union station. —and everybody happy; whereas at the other cities named, there were numerous separate passenger terminals, with the corresponding overlapping and duplication of expense for buildings, yards and operation. And the inevitable inconvenience and expense to the "through" travelling public for transfers, etc.

"A better solution at Montreal would be for the Canadian National Railways to accept the offer which, I understand, the Canadian Pacific has made, that the two railway companies join in establishing a general system of terminal stations and terminal tracks. The Windsor Station, the Park Avenue Station and the Place Viger Station could be made a basis for this purpose.

"This is especially true in these days, when the railways are bound by law to continue to pool their passenger train services. The pooling of services is ultimately going to reduce by a large percentage the number of passenger trains entering and leaving Montreal, and it would be absurd to increase the passenger train terminal facilities at present. We should be reducing them, in order to implement the pooling of services effectively.

CIVIC TRAFFIC CENTRE.

"From the standpoint of the people of Montreal, it would be a shame to see the opportunity missed to use the present excavation at Dorchester street as a civic traffic centre.

"On this point," Mr. MacLeod said, "I want to disassociate myself from a proposal to plunge into the expenditure of millions of dollars overnight for a civic traffic centre. The financial condition of the city prohibits any such idea. Yet, Montreal is one of the great cities of the world, and will continue to grow. We must make provision for he fuure, and my own belief is that the tunnel under the mountain, and the Dorchester street excavation should be taken over by the city at once, as a basis for the correction and expansion of our local transit equipment.

"I see no reason why the Canadian National, or the Dominion Government, should not find it very good business to transfer this property to the city without charge. The operating convenience of the C.N.R., and the finances of the Government will both be appreciably improved by co-operation between the two railway systems to use the Canadian Pacific terminal facilities.

"The existing Mount Royal Tunnel was built, naturally at great expense, but with great expectations for a large volume of suburban railway traffic and for a wonderful development of a very large area of unoccupied lands between the mountain and the Back River. Through the 25 years these dreams have not come true (except to a very small extent,) as a result of the construction of the tunnel. In my suggestions there is a way to make effective use of this tunnel which has been almost idle for 25 years.

COULD WIDEN TUNNEL.

"While on this part of the subject, I can tell you that during the past two or three years sever-

ARCHIVES PUBLIQUES
CANADA

PRESS CLIPPING
From Gazette 9437
Date February 25th 1939

al friends of mine, mostly engineers, Montrealers who are serious thinkers, have been suggesting the advocacy of a tunnel through Mount Royal to avoid the ever growing congestion of motor traffic of all kinds from the heart of the city to the area north, northwest and northeast of Mount Royal. My invariable answer has been that there is a tunnel already, not used as the asset it is, and why not use that? Their suggestions were for a new motor traffic tunnel. My idea is that it would be very far cheaper to widen the existing railway tunnel if it is found really necessary to provide accommodation for motor traffic.

"The city could lease the tunnel to the Montreal Tramways Company, or operate a municipal service through it. I should myself be in favor of a lease to the Tramway Company, in order that the rapid transit trains or cars through the tunnel might be operated in conjunction with the Montreal Tramways services throughout the city.

"The growth of the City of Montreal is inevitably going to be chiefly back of the mountain, and it is easy to see how this development would be aided by a system under which all the tramway and bus services in that territory could give transfers to a fast train service to the centre of the ciy.

"Sooner or later, of course, we shall have to have East and West subway services, and this is the opportunity to acquire a central point at which these services will meet, and connect with the service under the mountain.

MOTORS TO USE VIADUCT.

"As for the viaduct to Victoria Bridge, which is really useless to the Canadian National Railways, this means a first-class opportunity to give a direct access for motor traffic from the Victoria Bridge to the centre of the city. The northern portion of the excavation—that above the Dorchester street bridge — should be converted into a modern bus terminal, and a parking space for the private motors and trucks which come in across the Victoria Bridge, and which could use the new viaduct so conveniently.

"The whole uptown centre of Montreal would be revolutionized by such a programme. There is an enormous mass of non-paying low-grade building property in the area bounded by Windsor, St. Catherine, Beaver Hall and Craig streets. There are some fine buildings in the area, but not many. Were we to take advantage of the opportunity suggested and establish a transit centre at Dorchester street, all this property would rapidly be covered by modern business buildings. The whole characer of that part of the city would be altered, and real estate values enormously improved.

"The present excavation, with modest but adequate buildings for tramways and bus terminals, could be turned into a beauty spot, at very small expense, and become a real park in the centre of the city. The sides of the excavation could be covered by gardens, and the whole effect made most attractive.

"Certainly the possession of this key point would enable us to plan adequately for the future in connection with under-ground rapid transit.

# PROPOSED TRAFFIC CENTRE FOR CITY OF MONTREAL

The above sketch has been prepared by G. R. MacLeod, former city engineer, to illustrate his plan for making a traffic centre out of the famous C.N.R. "hole." Mr. MacLeod urges that it is not too late to abandon the present C.N.R. terminal plan. Chief features of his proposal are use of the centre for tramway tracks, enlargement of the tunnel for auto traffic, which would also use the viaduct from the Victoria Bridge, and provision for a future subway system.

My dear Senator,-

Re: Railway Enquiry

I enclose a proof of the memorandum I have drafted on the subject of the evidence as to estimates. I propose to submit copies to the Railways for their comments to ensure that there can be no quarrel with the accuracy and completeness of the outline.

In my letter sending it on to the joint chairmen I have included an enquiry as to whether the Committee is likely to want to go thoroughly into the question of railway wages, since the preparation of the material on that subject will involve a great deal of work which I do not want to undertake unnecessarily.

Yours very truly,

BER

# The Challenge to Democracy in Canada

By R. W. DIAMOND*

(Annual Western Meeting, Vancouver, B.C., November, 1938)

## INTRODUCTION

PUBLIC debts, and the policies guiding public finance in Canada today, are in such a state that every intelligent citizen should be familiar with them, and should be concerned about them. None of you have to be reminded that taxes have already risen to a point where they both annoy and hurt you, but they should also alarm you; alarm you, not so much because of the taxation, but because of the mounting expenditures represented by that taxation.

I have no hesitation, therefore, in presenting a paper dealing with public finance at a meeting of the Mining Institute, since all present are concerned, both as individuals and as representatives of the industry.

Moreover, it is important that engineers, particularly, should become better acquainted with the interlocking relationships of economics, public finance, government, and technology.

While I am neither an economist, a tax expert, nor a chartered accountant, I shall try to tell you, from my viewpoint as an engineer and an interested voter, the story of public finance in Canada today and of certain causes and effects, and I shall venture certain conclusions. In doing so I may merit criticism by experts, but I will risk this in the hope that sufficient interest will be stimulated in the subject to persuade you, as individuals and as groups, to advance, or to institute, your own studies in public finance, and in turn to interest others. I hope that some of the ideas which will be expressed, or which may develop, will bear fruit.

I fully realize that several eminently qualified men have spoken on this subject during recent months, and that many authoritative articles have been written. However, I approach it with confidence, because I propose speaking to you not as an authority, but as one of you, having similar interests and similar engineering knowledge, who only a few months ago became particularly interested in the subject, studied it, and who now sets before you a summary of his findings, with the conviction that the situation is so serious that constructive planning and constructive action by all thinking citizens are imperative.

## THE CHALLENGE TO DEMOCRACY

I assume that 'Democracy' is the most desirable form of government. In a modern democracy, the opinion and the will of every adult member of the group are supposed to enter into the determination of group behaviour.

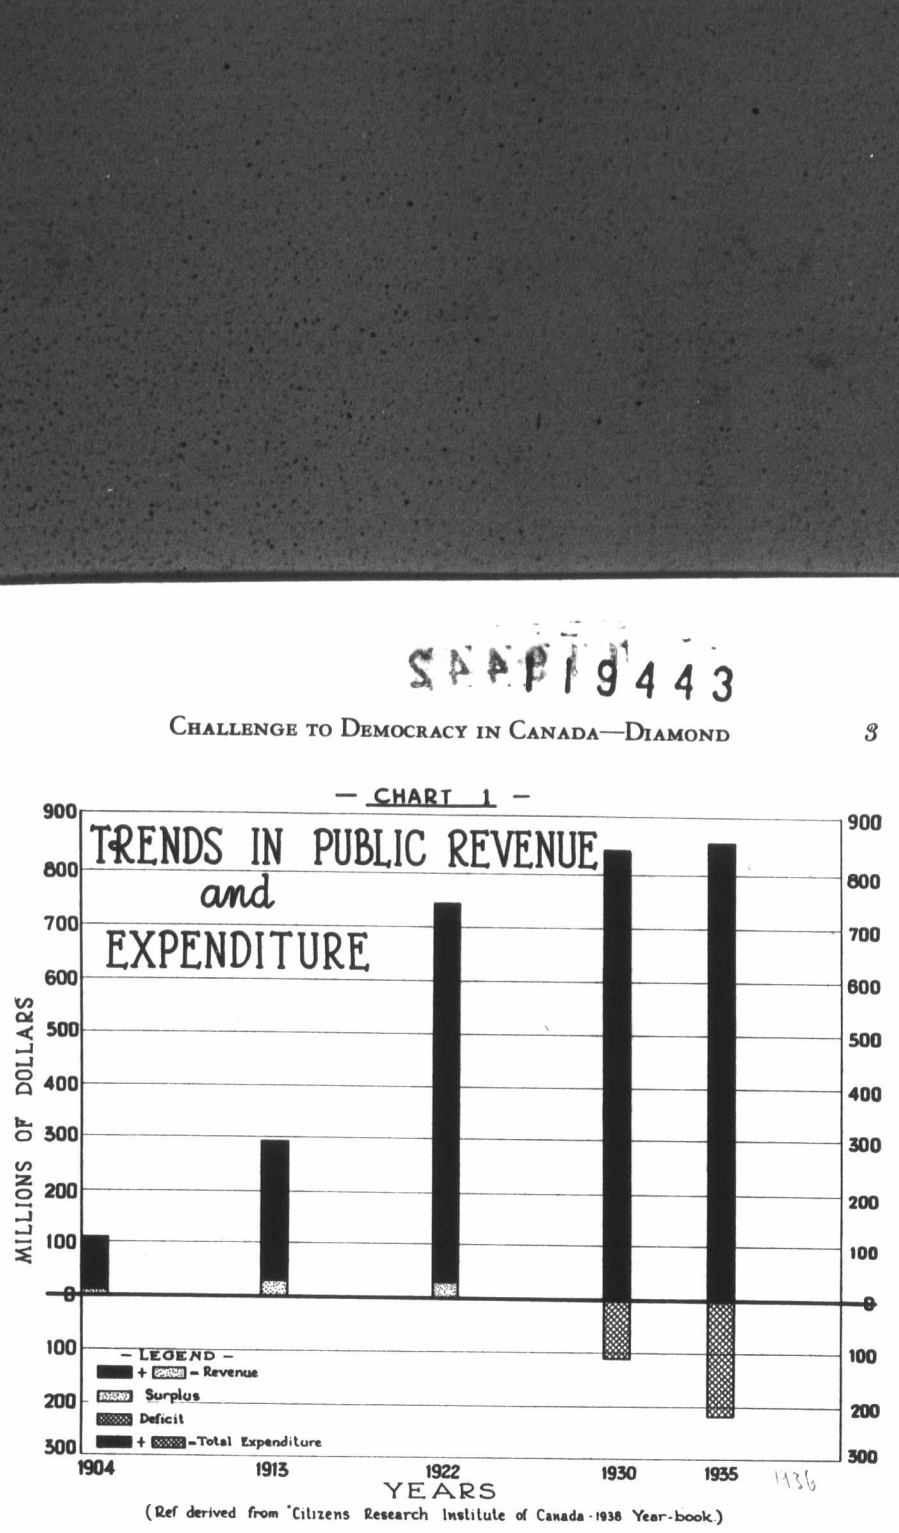
Reasonable knowledge of national problems by voters and by representatives of the people in Parliament is pre-supposed.

Theoretically, the representatives of the people should be the best informed and the most capable citizens and should possess the highest integrity. No question of remuneration should limit their selection. No political machine should guide their selection. While a true democracy provides for voting of the nation's expenditures by the great mass of the people who pay but a very small part of the nation's direct taxes, a wise national economy is contemplated.

At the time of Confederation, life in Canada was relatively simple. The internal combustion engine and many other pace setters had not then been invented and life's tempo was moderate. The national problems of that day were generally familiar to the people and to their representatives in Parliament, and the franchise was highly regarded. A reasonable approach to a true democracy existed. This condition continued until the war years. During and since that time we have experienced a transition to an entirely different state of affairs, tending dangerously away from true democracy. Generally, our citizens do not seem to value their franchise; nor are they as familiar with our national problems as they should be; yet bitter criticism of government is heard on all sides. The fact that our governments are the creations and instruments of the people is generally overlooked. Because of this lethargy and this individual attitude, we too frequently blame our legislators for the unhealthy conditions which have developed, such as over-government, a demoralizing paternalism, an unhealthy railway situation, widespread petty provincialism, an unsolved unemployment problem, and unsound financial policies, when we ourselves are equally to blame.

It is because of general conditions such as these that fascists say that, in modern life, democracy will not work. It is my opinion that democracy is in danger in Canada, unless, in the early future, every one of our intelligent voters across the land comes to a realization of the present state of affairs and takes an active, intelligent interest in the business of his country. The challenge to democracy in Canada today is much more serious than is generally realized.

### NEED FOR WELL-INFORMED ELECTORATE



Science and industry have travelled at such a rapid pace during the past twenty-five years that governmental, social, and economic vision and practice have lagged, with the result that an unbalanced state exists. We are now paying the price for this unbalanced state; hence Canada's most pressing need today is the re-establishment of equilibrium between these forces. To restore equilibrium, we must first restore that essential element of democracy, a well-informed and interested electorate. To many, such an objective may seem hopeless, but if we value the privileges of democracy and wish to retain them, we must each accept the responsibilities of the individual in a democracy. If we reject these responsibilities, we will be forced into accepting some form of dictatorship. Let me repeat that we, individually, rather than our representatives and our governments, are responsible for the present state of affairs, and that it is therefore the responsibility of each of us to correct it.

I do not think that the establishment of an informed populace is a hopeless task. It may be a tremendous task; it may be a task calling for nation-wide

119445

organization and effort, with the use of truth-spreading propaganda, on a grand scale and for a prolonged period. Nevertheless, the education of the people *is* possible and must be accomplished if we are to retain democracy.

A few months ago, when I became particularly interested in this subject, I found that comprehensive summaries and statements of the nation's business, intelligible to the average voter, did not exist. I was, of course, familiar with *The Canada Year Book*, *The Public Accounts*, and so forth, but interpretation of these required prolonged and intensive study which was not possible for the average voter. Later, I found excellent summaries and special studies relating to the nation's business in publications of *The Citizens' Research Institute of Canada*, *The Canadian Journal of Economics and Political Science*, *The Canadian Chartered Accountant* and other professional journals, in the *League of Nations* publications, and among the briefs submitted to *The Royal Commission on Dominion-Provincial Relations*, and elsewhere; but all of these are generally for specialists, have very limited circulation, and hence do not reach the average voter. Their interpretation by him, in any case, would be difficult or generally impossible.

### STATISTICS OF PUBLIC FINANCE

How then can public interest in the nation's business be created, and how can the public be properly educated? Before we proceed to consider this problem, let me first put before you selected statistics for those natural classifications of public finance—'*Revenue*', '*Expenditure*', and '*Debt*'—as they apply to Canada as a whole, to the Dominion government, to Provincial governments, and to the Municipal administrations, in an attempt to give you the general perspective. I will then discuss taxation briefly, and conclude with a general summary and my recommendations.

Chart 1 shows total public expenditures and revenue in Canada for a series of years from 1904 to 1935. Note that, even though revenue has increased rapidly, expenditures have increased more rapidly, with resulting serious deficits.

Chart 2 gives an analysis of public revenue. Note the importance of the sales tax in recent years, the growth in automobile and gasoline taxes, the tremendous growth in income taxes, realty taxes, and miscellaneous taxes, and particularly note the growth in total net revenues. Realty taxes increased from 28 millions in 1904 to 88 millions in 1913 and to 252 millions in 1935.

Chart 3 shows the growth in public expenditures in recent years and that the rates of increase for the Dominion, the Provinces, and the Municipalities have been fairly similar.

Chart 4 gives the same information as Chart 3, but on a *per capita* basis.

Chart 5 gives an analysis of governmental expenditures and compares the fiscal year 1926 with that of 1936. Note particularly the growth in charges for debt service and public welfare or social services, and note also the increase in total expenditure.

Chart 6 gives a picture of Dominion finance, 1911 to 1937, and discloses the alarming persistence of large deficits since 1931. Note the surplus during all of the late 'twenties'.

Chart 7 gives similarly a picture of Provincial finances and is of especial interest. Note the steady and rapid growth in revenue and expenditure until the early 'thirties', then the slowing-up in revenue but the continued growth

119447

CHART – 7

(Ref - Canada Year Book 1938 - p. 875)

in expenditures, with accompanying deficits. Note the tremendous revenue in 1936, and in spite of this a substantial deficit.

Chart 8 shows the growth in public debts. Unfortunately, the data for the fiscal year 1936 are not available. They would probably show a present public debt of approximately eight billion dollars and a *per capita* debt of well over $700.

Chart 9 shows the national income and the relationship between public expenditure and national income. Note particularly the tremendous falling-off in national income during depression years, and, in spite of this, continually rising public expenditures.

### TAXATION

Among the powers conferred on the Dominion Government by the British North America Act, subject always to the specific powers conferred on the Provinces and to the decisions of the courts, are the following: the right to deal with the public debt and property, the raising of money by any mode or system of taxation, and the borrowing of money on the public credit.

The Provinces were assured a certain income in subsidies from the Dominion treasury, and, through the ownership of their lands, mineral and other

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119448

natural resources, were assured additional income. Further, they were empowered to impose direct taxation within the province for the raising of revenue for provincial purposes and to borrow money on the sole credit of the province.

The Provinces have exclusive power to pass laws concerning municipal institutions. As might be expected, there is variety in the form of municipal organization; but all municipalities have this much in common, that the principal source of municipal revenue is real property. In certain provinces, the municipalities also impose 'personal property', 'income', and 'business' taxes. The power of borrowing money on the credit of the municipality is general. Grants of money from the provincial governments supplement the local revenues.

As a basis for a brief study of the general subject of taxation in Canada, we must recognize the fact that high taxes will continue with us for many years and that the present problem is not one of tax reduction so much as one of equitable tax distribution and of reduction in expenditure. We should also accept, as a cardinal principal of public finance, the balancing of budgets, but, for the immediate future, it may be expedient to have unbalanced budgets within reasonable limits, provided taxes and expenditures are reduced simultaneously for trade stimulation. We must not overlook certain economic and psychological effects of unwise or inequitable taxation, such as the effect of hidden taxes on the working man, the effect of excessive taxation on realty, and the effect of excessive income taxation in the higher brackets. Also, we must keep in mind that, with excessive taxation rampant, capital hesitates to assume the risks of investment in new industry, and the wealthy man is often provoked into taking his money out of the country. It should be apparent that, if funds in increasing quantities are diverted from the stream of business, to taxation, then the services rendered by the remainder must be correspondingly restricted and that such taxation of trade and industry may quickly pass the point of maximum returns. It should also be apparent that the higher the taxation of trade and industry, the more difficult becomes our competition in foreign markets. We *must* conclude, then, that high taxation constitutes a serious restraint of trade, and a serious cause of unemployment.

It has been said that methods of taxation in Canada in recent years have been determined by expediency rather than in accordance with sound principles. A detailed study has led me to conclude that this is the case and that adjustments are overdue. Let us now review briefly the four principal methods of taxation.

REALTY TAXES:

> "The possession of real property is rapidly becoming less and less an index of ability to pay, as modern forms of wealth have assumed many new shapes . . .
>
> "It is also clear that municipalities have been forced to adopt so many new obligations of a social or humanitarian nature, and at the same time have been increasing the efficiency of former duties, with an attendant increased expense, that the limit of the burden which real property can carry has been exceeded" (1).

(1) Report of The Municipal Taxation Commission, 1933 (British Columbia).

119450

Municipal taxes upon real property have become so burdensome that many city residents have been driven to lower-taxed suburbs, and, similarly, industry is so inclined.

The growth in the imposition of taxes upon realty in Canada in recent years is appalling when the effects of the tax are fully understood. Property values are, of course, generally fixed by their present or potential earning power; the higher the tax, the lower the earning power, and hence the lower the property value. With ever-increasing taxes, the plight of the property owner during recent years has become desperate and this is evidenced by the ever-increasing volume of tax sales, the falling off in capital values, the slackness in home building, and the unfavourable attitude toward home ownership. Sir Thomas White recently said:

> "Restore confidence in the freedom of real estate from too onerous taxation, and enterprise would quickly set the wheels of the building industry turning again".

In England, the taxing of real property is largely based upon earning power. In Canada, on the contrary, the taxing of real property is based upon appraised values, generally irrespective of earning power. Some Canadian authorities say that the English method is not applicable to Canada, but this is undoubtedly a debatable point. Regardless of this, there must soon be a downward revision of the taxes imposed by municipalities upon land.

CUSTOMS AND EXCISE TAXES:

I do not propose discussing *Customs and Excise Taxes* at length, realizing that the subject is very controversial. It is, however, safe to say that, while wise in principle, the tariff is undoubtedly responsible for a great deal of the unhealthy provincialism evidenced across Canada today, and to express the opinion that this is not generally realized. Undoubtedly, the present tariff policy works out to the great advantage of Ontario and Quebec and to the disadvantage of the Maritimes and the West. In the words of Professor Rogers, now the Dominion Minister of Labour:

> "It is our contention that the protective tariff from the time of its adoption has failed to meet the just requirements of a national policy in a federal state, that it has been haphazard in its growth, unequal in its incidence, and that it does not represent a fair compromise of the conflicting interests of the other provinces of the federation. The effect of the tariff has been to restrict external competition while internal competition has been left free. This has resulted in a lack of balance as between the various provinces of the Dominion. A truly national policy would take into consideration those industries which are dependent on the internal market. If this were done, the cost of the Canadian tariff policy to the seven economically oppressed provinces would be reduced".

INCOME TAX:

*Income Taxation*, in principal, is generally recognized as being one of the most equitable forms of taxation; but, as applied in Canada, many abuses exist. It is not a sufficiently general tax. Rates in the higher brackets are

119451

unquestionably too high. There is no uniformity between provinces, and numerous other criticisms can be made.

At the present time, less than 2 per cent of the people pay a Dominion income tax, and 1 per cent pay about 97 per cent of the total collections from individuals.

CHART-10

**PERCENTAGE OF INCOME TAXES TO GROSS INCOME-1937**

PAYABLE BY A MARRIED MAN WITH NO DEPENDENTS AND NOT ENTITLED TO ANY OTHER EXEMPTIONS OR DEDUCTIONS.

| GROSS INCOME- | CANADA & ONTARIO | U.S.A & NEW YORK STATE | GREAT BRITAIN |
|---|---|---|---|
| $ 2,500 | .89% | NIL % | 11.5% |
| 5,000 | 3.65 | 3.75 | 18.25 |
| 10,000 | 8.78 | 7.87 | 21.63 |
| 15,000 | 13.11 | 10.95 | 24.81 |
| 25,000 | 20.49 | 15.16 | 30.38 |
| 50,000 | 30.29 | 22.75 | 39.62 |
| 100,000 | 40.11 | 35.62 | 48.07 |
| 250,000 | 54.36 | 54.0 | 56.78 |
| 500,000 | 63.62 | 63.05 | 59.84 |
| 1,000,000 | 70.24 | 69.82 | 61.07 |
| 2,000,000 | 74.01 | 74.29 | 63.66 |
| 5,000,000 | 76.34 | 77.54 | 65.21 |

**With the exception of percentages for gross income of $2,500, figures are taken from *The Canadian Chartered Accountant*, April, 1938, article entitled "Income Taxes, Succession Duties, and other Direct Taxes in Canada, United States, and Great Britain, not including Taxes on Property", by W. L. Gordon, Chartered Accountant, Toronto.**

**Note.—The rate for Great Britain shown is that prior to the increase in the spring of 1938, from 25 per cent to 27½ per cent, or from 5s. 0d. to 5s. 6d. in the pound.**

Chart 10 shows very clearly the different application of the income tax in Canada, the United States, and Great Britain.

A much higher tax on the small incomes in Great Britain than in the other two countries, and a lower tax on the extremely high incomes, is of particular interest. The equity and the wisdom of the practice in Great Britain seems apparent. The interest of the small-income man in public affairs is assured, because his pocket-book is affected. Industry created by the high-income man is benefited and the net receipts from income taxes are greater.

SALES TAX:

The *Sales Tax* has, of course, proved to be a tremendous revenue producer, and as such has certain arguments in its favour. The principal criticism of it is that it is a hidden tax. It should be brought out into the open and prop-

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119452

erly labelled. Due to its pyramiding effect, it is estimated that the sales tax increases the price of all manufactured goods in Canada approximately 12 per cent.

TAXATION IN CANADA, GREAT BRITAIN, AND UNITED STATES COMPARED:

Chart 11 shows the relative importance of sources of income in Canada, the United States, and Great Britain.

Note, particularly, the similarity of taxes in Canada and the United States, and the much greater importance of income taxes and of customs duties in Great Britain than in Canada. Note, also, that revenue from realty taxes in Great Britain is relatively much less than in Canada.

Is it not significant that in Great Britain, where direct taxation of income is more general and heavier than in Canada, interest in public affairs is more general and public finances are on a much sounder footing than in this country ?

CHART - 11

| RELATIVE IMPORTANCE OF THE DIFFERENT TAXES LEVIED IN CANADA, THE UNITED STATES and GREAT BRITAIN — — — IN PERCENTAGES. | CANADA | U.S.A. | GR. BRITAIN |

THE CANADIAN CHARTERED ACCOUNTANT, April, 1938 - Article entitled "Income Taxes, Succession Duties and Other Direct Taxes in Canada, United States and Great Britain, not including Taxes on Property". by J. L. Gordon, Chartered Accountant, Toronto.

EXPENDITURES

I will not attempt to discuss *expenditures* in any detail. Many economies are obviously possible and these have been summarized most capably in the various briefs submitted to the Royal Commission on Dominion-Provincial Relations. The most prominent of these possible economies are undoubtedly in the administration of Social Services, the Canadian National Railways, re-financing of loans, simplification of governments, and the elimination of duplication.

119453

CHART - 12.

SOCIAL SERVICE EXPENDITURES

| | 1926 | 1930 | 1936 |
|---|---|---|---|
| DOMINION | $ 1,005,000 | $ 11,327,000 | $ 71,716,000 |
| PROVINCIAL | 21,474,000 | 33,925,000 | 74,130,000 |
| MUNICIPAL | 20,961,000 | 33,658,000 | 56,262,000 |
| TOTAL | 43,440,000 | 78,910,000 | 202,108,000 |

**They do not include education, protection of persons and property, recreation, or soldiers' pensions and hospital care, but they do include health.**

SOCIAL SERVICES:

The April, 1938, *Monthly Letter* of The Royal Bank of Canada gives a very interesting history of the growth of social services in Canada and I commend it to you for attention.

What all these social services have cost us is shown in Chart 12, compiled from data furnished by *The Citizens' Research Institute of Canada*.

Without doubt, many of these new social services are desirable and may be necessary, but they must be instituted only after most careful investigation and they must be in keeping with our ability to pay.

The following sound submission was made on behalf of the United Church of Canada to the Royal Commission on Dominion-Provincial Relations:

> "Whatever legislation may be enacted to promote social security, we believe that provision must be made to allow adequate expression for individual acts of self-giving on behalf of citizens.
>
> "We believe that only a solvent state can adequately maintain the welfare of its people. We would ask for recognition in all government policy of the fact that the ultimate basis of government is moral and that the bribing of the people with public money, the failure of governments to maintain contracts, the unwise administration of public funds, the desire to spend money far beyond the nation's ability to pay, spells ruin.
>
> "We believe that sound social-security legislation must be based upon knowledge gained through experience. As our experience in this country in such matters is meagre, the nation must be willing to take tentative steps".

CHART - 13

THE RAILWAY PROBLEM:

So much has been said about the *railway problem* in recent years that I will only remind you that the business of the Dominion of Canada is our business and the money spent by the Dominion is our money. *Are we content, then, to see wasteful duplication of railway services continue?*

Charts 13 and 14 show briefly the situation.

Note that, during recent years, cumulative deficits have been increasing about 100 million dollars annually and that competent authorities estimate that millions may be saved annually by logical unification.

## RE-FINANCING OF LOANS

No useful purpose can be served by attempting to establish responsibility for the public debt. The problem is, not where to fix the blame, but how best to profit by the lessons of the past and to plan for the future. History shows that, in other countries, material reductions in debt have been rare, and the possibilities of substantial budget surpluses, available for the reduction of the public debt of Canada, are perhaps remote. *Refunding* has given, and still offers, some promise of relief, but this relief must not be nullified by increased debt burdens.

## Conclusion

In this paper I have tried to present a brief but comprehensive picture of public finance in Canada today. It is apparent that this situation is so serious that, if we allow a drifting policy to continue, it must become acute, and the day of reckoning will not be far distant.

A year ago, high hopes were held for appropriate action following the report of the National Employment Commission. While some results have followed, our hopes have not materialized. A few months ago, high hopes were held for the outcome of the work of the Royal Commission on Dominion-Provincial relations. We now hear the opinion expressed on all sides that, because of the attitude of Ontario and of Quebec, nothing is likely to be accomplished as a result of this splendid endeavour.

These are typical cases of government apathy fostered by our individual attitudes. There's a job to be done in Canada, for Canada, and for democracy, but it is *not* done because we allow indifference and political considerations to over-rule common sense.

This job cannot be done without an interested and informed electorate. I have already referred to the difficulties encountered by the average voter if he searches for a comprehensive and easily understood summary of the nation's business.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

ARCHIVES PUBLIQUES
CANADA

119458

I propose, as the first step in the establishment of interest and knowledge, that such information be made easily available to him by the publication and widespread distribution, in the press and in pamphlet form, of a brief, interesting, and easily understood

*VOTERS' EDITION*
*of an*
*ANNUAL REPORT ON THE*
*PUBLIC FINANCES*
*of*
*THE DOMINION OF CANADA*
*and of its*
*PROVINCES AND MUNICIPALITIES*

prepared by some responsible non-political body, endorsed by representative industrial, commercial, professional, labour, religious, and other groups across the Dominion, which, together, would constitute a cross-section of the people and thus disassociate the volume from the possibility of any charge of misrepresentation or partisanship.

As a second step I propose that local groups be formed in strategic centres across the Dominion for organizing and prosecuting educational campaigns. Naturally, these groups should be non-political, and co-ordination between them would be desirable.

There are undoubtedly numerous other steps that might wisely be taken, and I appeal to you to appraise seriously the present situation and to support whole-heartedly all worthy efforts to correct it.

It has been aptly said that the greatest challenge to democracy is lethargy and complacence. Let us shake off this lethargy and complacence. Let us recognize Canada's business as *our* business. Let us once more place the ideal of an informed democracy in the high position it deserves and let us go forward as Canadians and put our house in order.

Mr. F. H. Widner,
359 Cameron St.,
Sarnia, Ont.

Dear Sir:

I have your letter of April 9th which I have read very carefully. The case you make is very much the same as that made by Professor MacDougall. His insistence was also that owing to the artificial and obsolete regulations compelling far more men to be used than are necessary, the entire cost is too high and contributes to the annual loss. Specifically, though, he took the same view as you as to the unfair advantage given the senior men. You may be sure your point of view will be before the Committee.

Yours very truly,

AM/E. Arthur Meighen.

Senator A. Meighen
Ottawa.

Dear Sir:-

I would appreciate it very much if you would put the following information before the Senate, Rly. committee because I was very much impressed with the report of Professor Macdougalls to which he made before the Rly committee, which was the truest words ever spoken befor a Rly committee, on the matter of higher miles for Senior Conductors and Engrs on the C.N.R. Its not the high rate of pay paid to these Rly men but the high miles that they are allowed to make, and the Junior men are made to suffer in order, that the

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119462

senior men may have all the work, I will quote to you if the management at Montreal were to cut their time that is cut their days which means miles because they are allowed at present to make 3800 to 4300 miles per month and 100 miles per day at $4.84. a hundred for brakeman and a higher rate for conductors, so if the miles were cut to 2600 miles per month that is shared up the miles and spread the work amongst their junior fellow man.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

ARCHIVES PUBLIQUES
CANADA

3

119463

2600 miles ~~a~~per month at $1.84. a 100 would give a trapeman $121.84. per month. as it is now. 3800 miles at $1.84. a 100 miles per day gives a regular trapeman $183.92 and this varies from month to month higher. so you see what it would do if the miles were cut. I have to use the word miles instead of days or pay. because we are paid by the mileage rate, this isn't new to the goverment we have been trying to get the management to cut miles and also the Dept of Railways to beat

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES

CITIZENS' GROUP FOR RAILWAY ACTION
MEETING OF TORONTO MEMBERS
HELD IN CITY OF TORONTO
April 13, 1939.

**RESOLUTION**

WHEREAS the national railway problem is such as to involve the expenditure of upwards of $1,000,000 per week of the taxpayers' money;

AND WHEREAS a solution of this problem appears to be attainable by way of pooling of services, elimination of unnecessary duplication, or some other method;

AND WHEREAS the elimination or substantial reduction in the cost to the taxpayers would remove one of the obstacles to national recovery;

THEREFORE BE IT RESOLVED that this meeting of Toronto members of the Citizens' Group for Railway Action go on record as approving the action of the Board of Directors in promoting, by publication of "Railway Facts" and otherwise, the dissemination of information to the public at large on this grave question;

THAT in our opinion the inquiry by the Special Committee of the Senate should be pursued with the object of finding the best possible solution of the problem and of urging that the Government bring about the greatest possible savings in the maintenance and operation of an adequate but not extravagant railway establishment;

THAT in view of the disparity in estimates of possible savings under various plans advanced by officers of the government and of the principal privately owned systems there should be an examination of those estimates by independent

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119469

experts and that the Government should provide necessary funds for that purpose;

THAT pending adoption of a plan for dealing comprehensively with the problem all expenditures of a capital nature be deferred, and more especially the expenditure on the Montreal passenger terminal until it has been shown conclusively that such expenditure is in the interest of the taxpayer and will not prevent or retard the adoption of a solution of the problem whether by way of pooling, co-operation, co-ordination or unification or of any other programme which may finally be adopted; and

THAT copies of this resolution be sent to the Prime Minister, the Leader of the Opposition, the Joint Chairmen of the special Senate committee, the Government leader in the Senate, the leader of the Conservative party in the Senate, the Minister of Transport, and the Toronto and York members of the House of Commons.

Dear Sir:

On instructions of the Winnipeg Joint Lodges, Canadian Association of Railwaymen, in regular meeting on April 9th, I would advise that -

The Executive Board of the Canadian Association of Railwaymen, in regular Executive session, February 8th, 1939, unanimously went on record, as follows:

> THAT this Association is opposed to co-ordination or amalgamation of the Railways, unless the interests of the workers are fully safeguarded.
>
> FURTHER, that this Association is opposed to any plan for coordination, unification, or amalgamation, except under public ownership of the Railways.

Respectfully yours,

J. Bryant

Secretary, Winnipeg
Joint Lodges.

My dear Senator:

I have yours of 13th. I do not think the question of wages as between one class and another class is part of the work of the Committee. It is important, no doubt, but whether the wages are given to one class or the other does not affect the burden of the C. N. R. on the public appreciably anyway.

Yours sincerely,

AM/E.

Right Hon. A. Meighen, K.C.,
President,
Canadian General Securities,
320 Bay Street,
Toronto, Ont.

My dear Chief:-

I have just received a letter from two junior men of the running trades of the railways, wishing to be heard before our Special Committee.

They complain that the senior men in these trades allocate to themselves a much larger portion of the work than is justified, the result being that the junior men are continually laid off. They further claim that if the seniors were allowed an equivalent of some $200.00 a month, then work could be passed on to some 15,000 men now idle, which would provide for a very large portion of our population now destitute.

I can't help thinking that these junior men of the running trades should be heard, but I would very much like to know your own opinion on the subject.

Very truly yours,

CPB-AG

My dear Senator,-

Re: Railway Enquiry

In order that you may know the present situation with regard to the memorandum as to last year's evidence I enclose copies of a letter I received on Saturday from Mr. Hungerford and of the reply I have made to him today. His real quarrel with the memorandum seems to be that it deals with the question of economies item by item instead of dismissing the whole idea of economy by unification as illusory. That this view is a possible one is indeed suggested in my memorandum of last year, but it seems to me to be one which must be based upon an estimate by the Committee of the force of the evidence, not upon its formal content, and not one which can be usefully discussed in such a memorandum as that in question.

Yours very truly,

BER

CANADIAN NATIONAL RAILWAYS 119474

Montreal, 15th April, 1939.

Dear Colonel Biggar,

As requested in your letter of April 6th I have reviewed the printer's proof of your memorandum.

Ordinarily I would prefer not to comment upon such a document prepared by you at the request of the Senate Committee, but absence of comment, on my part, might be construed as meaning that I found myself in agreement with it. This is far from being the case.

It would perhaps be improper for me to comment upon the way in which the memorandum presents the Canadian Pacific estimate of $75,000,000, but I must protest against the way in which the Canadian National evidence as to the impracticability of this estimate appears to be minimized in your memorandum. Anyone reading the memorandum would surely get the impression that the Canadian Pacific Railway had submitted a sound and well documented estimate of savings possible from unification. He would also gain the impression that the Canadian National officers criticized the estimate in minor detail only and without to any degree suc essfully controverting it. This, I must say, is not my understanding of the force of the evidence which shows that I, and other Canadian National officers, pointed out that the estimate was not prepared in sufficient detail to allow of a careful analysis of it; that The Canadian Pacific positively refused to disclose essential data of what was contemplated or of what underlay their calculations and proposals; that to the extent there was an exposure of detailsas, for instance, in the case of line abandonments, the impracticability of much of what was proposed by the Canadian Pacific Railway was clearly shown; that the Canadian Pacific estimate presumed to deal with Canadian National conditions without a knowledge of them; that the estimate contained serious inaccuracies; that it was not applicable under present-day conditions; that the year 1930 could not properly be taken as a base year for future operations and that in no sense could it be considered as an estimate of tangible and realizable economies.

I do not find that your memorandum deals adequately with the evidence of the Canadian National officers and consequently, the tendency of the memorandum is to give an impression of reality to the $75,000,000 estimate as being, in

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

D.J. 9475

a large measure, realizable which, in my judgment, as expressed to the Committee is little short of absurd. The same observation applies to he Canadian Pacific claim of $59,740,000 annual savings under present-day conditions, particularly in view of the tremendous reductions in expenses which have already been made in every department of the railways. As I stated to the Committee, I cannot too forcefully emphaskze my conviction that savings of anything like this order could never emerge.

My criticism of theoretical estimates applies alike to the Canadian Pacific estimate and to the estimate submitted by Mr. Fairweather to the Royal Commi sion, although in the latter case Mr. Fairweather plainly warned the Commission and the Senate Committee that it was only a theoretical study of what might be attempted under monopoly conditions, but tht it was not realizable in fact.

I note in your letter that you desire that comments be prepared on any points in which the memorandum appears to require correction or expansion. I have had an analysis of the memorandum made and I am sending you a copy of it herewith. This analysis can by no means be considered exhaustive, beceuse you will appreciate the impossibility of making it so, in the short time which is available. It is furnished you, however, in the hope that it may enable you to recast your memorandum in a form which could be said to mpresent the force and effect of the evidence given by the Canadian National as to the unsoundness, inaccuracy and impracticability of the Canadian Pacific estimate of $75,000,000.

Yours very truly,

(SGD). S. J. Hungerford

President.

S. J. Hungerford, Esq.,
President,
Canadian National Railways,
Montreal, P. Q.

Dear Mr. Hungerford,-

Your letter of the 15th reached me about ten-thirty on Saturday night. I gather from it that you do not think the memorandum under discussion is the kind of memorandum which should have been prepared at all. In this you may be quite right. I was most reluctant to undertake its preparation, but felt obliged to comply with the instructions I received. If they are rescinded my only feeling will be one of relief.

The memorandum in accordance with those instructions was intended to be expository, not argumentative. It was designed to serve as a guide to the evidence which was in fact given on the subject of the sums in dollars which might be saved under each of a large number of specific heads, not to estimate the weight or force of that evidence.

Some of the comments you transmit with your letter are pertinent and useful. I have amended the expressions in the memorandum to meet these; others seem to indicate a

NOTE—THE FOREGOING COPY IS SENT FOR YOUR INFORMATION

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

D.I.9477

misunderstanding of its purpose. Questions of state policy such as the comparative advantages and disadvantages of a railway monopoly are quite outside its scope, and since no one is being either praised or blamed this is equally true of the reasons why in the absence of independent enquiry individual witnesses were unable to be of any assistance to the Committee on the points withwhich the memorandum deals.

Further comments drafted with these considerations in mind and preferably proposing specific expressions in substitution for those to which exception is taken on the ground of their inaccuracy or incompleteness would still be most welcome, and there seems to be no reason why these should not extend to suggestions with respect to the points raised in your letter for which no page references to the evidence are given.

As to time, prints of the memorandum have been in your hands for almost as long as it took to prepare. I am having it reprinted as corrected in the light of the comments I have received, and do not think there should be any difficulty in postponing the final printing until your officers have had abundant opportunity to suggest all the changes and additions which should be made in order that the

Re Unification of Railways.

Dear Senator:

I notice in the morning paper that Mr. C. W. Peterson has suggested to the Senate Committee a plan for creating a Directorate. In case you may not have seen what I have said on the Subject, I am enclosing a marked copy of my paper on "Some problems involved in the expansion of Canada", which appeared in the January number of the Engineering Journal.

I refer to my experience on the International Joint Commission with its equal representation, and because of that experience, I expressed the belief that if the two railways "were brought together on a basis of equal representation, the time would soon come when they would find themselves working as one, and just as satisfactorily as they are now separately and to the benefit of our country--which means the employees as well".

My thought is a small Board consisting only of the Presidents and certain officers of each Company. It would be a "try-out" for a few years. They would soon appreciate that they must reach common ground. Then, later on, they might come forward with a proposed permanent arrangement based on experience rather than to elaborate something today based on theory.

During that "try-out" period, if they should require new capital, my idea is that the National road would have to go to Parliament and the other to its own Company, either having the right to turn down the proposed new expenditure.

The problem is also to pull the National road out of political party management. I believe the present Minister of Transport is a capable business man and a man of integrity. If he has to find a directorate for the Government Road, he confines his efforts to his own political party--that is the custom. Whereas, should he happen to be a political party bigot and had to find a man for an important position in his own business, he absolutely forgets his politics. I am not suggesting that Governments will not try and find capable men, but they are political appointments and out they go when the Government changes, meantime they have political critics while in office.

My hope is that something of value to our transportation problem will come out of the Senate investigation.

With kind regards,

Yours sincerely,

J. P. Mackenzie

C. A. MAGRATH, LL.D., HON.M.E.I.C.
*Past Chairman, International Joint Commission*

**Paper to be presented before the General Professional Meeting of The Engineering Institute of Canada, at Ottawa, Ontario, on February 15th, 1939**

**SUMMARY—The author develops a theme whereby the interest of men of the "Empire Builder" type could be obtained as a means of helping to solve the western dry areas problem. Engineering investigations should be advanced and some definite move forward must be made without loss of time as there is a limit to the courage of even the best of a fine people. As an instance of other major problems in Canada requiring immediate solution, he also refers to the railway problem, advocating a unified management.**

"Wherever I travel I try to point the vision of men and women to the great domain that lies beyond the reach of rails and roads and cities as the foremost of all Canada's possessions. What has been our attitude? What but to exploit and plunder for an individual's bank account! The common interest, the good of the nation, the legacy to the future—these have been handy bits of banquet oratory, but they have had little to do with the actual economic management of the country's natural resources."

*Grey Owl's Message.*

The above arresting statement by an amazing man, whose life was almost entirely spent in the wilds of our interior, was made in an effort to awaken the vision of our people. There is some excuse for those with "bank accounts," which includes our most capable business minds, not getting "beyond the reach of rails and roads," but none for not knowing more about the rural life of our country and its problems. The successful man in our large enterprises only became so through digging into the very vitals of the work he was expanding. The countryside is largely "known" to most of our prosperous men as seen from the windows of railway carriages or from motor cars.

Many can go abroad from time to time for a month or so, but would it occur to any to spend a few weeks in driving through large portions of our country, developing contact with people on the land—the real makers of a nation—and using that fine capacity of theirs to see in what way the condition of our people could be bettered? I quite understand that many would feel that they had no right to interfere in the affairs of others, but their object would soon become evident to and be appreciated by the people. Contact between what I will call the centre and the circumference should result before long in greater contentment in our rural sections, and it is certainly necessary. I believe that was the basic thought in the mind of Grey Owl when penning that message to our people.

The building of a country is largely the task of engineers, and in addressing the members of The Engineering Institute of Canada, I propose dealing with the subject in a large way—a fitting method for a country of Canada's dimensions. My main object is to bring to your attention a major problem on our western plains, a problem which calls for immediate consideration.

The European situation appears to be clearing up, and let us hope that a very definite improvement is but a short way ahead, so that we may pull ourselves together and courageously face some of the larger development problems involved in our expansion. It at once brings to my mind the necessity of reviving the "Empire Builder." Canada owes its foundation to the empire builders of the French regime; their descendants to-day are a splendid people, whom to know is to appreciate. Sometimes I express the wish that another Company of Gentlemen Adventurers would come along with a further supply of that stock brought to us via the Hudson's Bay. Then a little over half a century ago, a few Scots took hold of the Canadian Pacific Railway project, which turned out to be a great piece of empire building.

I fear our people do not appreciate what that project has meant to our country—an undertaking to extend a railway across the Continent, when Canada had less than five million people! I was out on our western plains all through the period when that road was being built. I believe I am well within the mark when I say that within the territory between Winnipeg and the Pacific Ocean—a distance of 1,400 miles—the total value of improvements, such as Hudson's Bay Posts, etc., did not at that time exceed a value of $1,000,000. That group of Scots had to contend with difficulties in crossing our mountain ranges greater than any other transcontinental railway. Look at the development to-day to be found in that territory, and largely due to the courage of those empire builders! Not only has their enterprise left us a great railway system, but a fleet of ships which are to be found sailing the "Seven Seas." It is true we gave them a considerable cash subsidy, as well as a large land grant. I believe their expenditures in promoting the settlement of those lands, and otherwise aiding in opening up our country, have been double the grant of money they received from Canada.

If we have no obligation to that Company, as some appear to think, we certainly have to our own pockets, which we do not seem to understand. I say this in view of our indifference to the necessity of bringing our two railway systems into one operating organization. I am absolutely against, not only our buying the Canadian Pacific Railway, but am equally opposed to our selling to that Company our National Railways, because it would be utter madness to attempt the former, and nothing short of disgraceful to do the latter, without obtaining for it some reasonable measure of its cost, which is well beyond the horizon of the present generation.

I am aware Great Britain had its "rotten boroughs" in the past. To-day its political system is second to none in the world, and it has a great public service as well. The reason largely is, that its people have a proper appreciation of their responsibilities to the public servant, which I regret to say is not yet properly understood in Canada, and to the detriment of our own fine service. I am aware our parliamentary methods are making good headway, though the principles of the cricket field would be helpful to us all, including political life. My definition of political partyism, made in a moment of levity, has a measure of truth in it. It is, that should the government of the day decide on a policy urging the people to work heavenwards, those in opposition would dissent, claiming that due to our rigorous Canadian winters, an occasional visit to Hades would have its advantages.

Such an attitude has destroyed in me any confidence in political party control of a business organization, no matter how absolutely fair the government may be to the management. In a privately owned property, the directors are behind their organization, in foul as well as in fair weather, but in the case of a publicly owned property, the moment the wind changes, be it a gentle zephyr or a wild hurricane, there are those amongst the opponents of the government on the alert to start a campaign against the property, even

119482

through an attack on the management of the property. In the meantime the public does not interest itself in the problem, apparently on that unsound assumption, "that which is everybody's business is the business of none."

If these two transportation organizations, operating in the same territory, were owned by the country they would quickly be brought under one management and the same thing would happen if they were privately owned. Both reached their present expansion largely before Canada started out to spend millions in the construction of highways. No one will criticize the expansion of our highways but we should not forget that they exist for transportation purposes, and consequently a revision of our railroad activities seems absolutely necessary.

In my time in Parliament, railway charters could be had for the asking, the doctrine being that competition would regulate railway rates. It failed in that respect, and left us overburdened with railroads. Is it unreasonable to say that if the State finds itself operating a public service—fairly recently acquired—in the same field as one it had authorized many years before, and is unwilling to have the two services reach common ground for the benefit of both, that it should be willing to come to the financial assistance of the privately owned one as well as its own?

As a result of my long experience as a member of The International Joint Commission, dealing with issues between Canada and the United States, I am not alarmed about "unification." Each country has been represented on this organization by three members, and with equal voting strength, it was astonishing how quickly confidence developed between the two groups. I have confidence in the capacity and integrity of the managements of our two railway systems, and I believe if they were brought together, on a basis of equal representation, the time would soon come when they would find themselves working as one unit, just as satisfactorily as they are now separately, and to the benefit of our country, which means the employees as well.

The development of our vast country, with our quite inadequate population, will at times force upon us large and difficult problems. Let me remind you that Canada's population moved forward about 6,000,000 in the last 37 years, and stands to-day at 11,000,000, while our good neighbours increased in the same period about 53,000,000, with a total now of about 129,000,000. I am quite satisfied that Canada has great natural wealth. It is not amiss, however, to occasionally bring together a few figures and give some play to our imagination as to our future.

It was the terms of British Columbia's entry into Confederation that forced upon us the construction of the Canadian Pacific Railway, which was only made possible by the use of some of our natural resources. Could they be put to better use than in helping to expand our country's opportunities, especially as we will still have the advantage of such wealth as they may afterwards produce?

Instead then of continuing the policy of handing over large blocks of our northern territory to our Provinces, with populations of but a few people per square mile, and nothing being done with the added territory, except by Ontario, which built a railway to James Bay, would it not be much better for our Dominion Government to retain the balance of that northern country, and see if it is not possible to work out a plan, by which some of its resources could be used in helping to finance large development projects, which our governments, Dominion and Provincial, are unable to further under existing conditions. I am not suggesting that it is an easy task to find such a plan, but it is our responsibility to make a determined effort to that end. Negative attitudes will not make Canada.

I cannot emphasize too strongly the necessity of our best business minds dropping that apparent indifference, when anything out of the ordinary, looking to an improvement in our national methods, is brought to their attention.

I now propose discussing a major problem, the one which is responsible for my undertaking this paper. The subject is the improvement of land settlement conditions on that area in our Mid-West frequently referred to in the past few years as the "drought area," and to others in the long past as "the treeless plains," fully 100,000 sq. mi. in extent. I find F. H. Peters, M.E.I.C., Surveyor General and Chief of our Hydrographic Service, has prepared a very interesting paper on irrigation, the main agency for improving conditions in that territory. No one is better qualified to do so, as some years ago he was our Commissioner of Irrigation. I will therefore endeavour to develop my views on the same subject, without duplicating his arguments.

While I have never lost my interest in that western country, my close contact with it was during the thirty years ending in 1910. In the latter third of that period, settlers could not be kept off our public lands. Hardships did not deter them. Their sod huts were a common sight scattered throughout the country. To-day land settlement is shunned—another national problem that has to be faced at an early date.

I was on those plains shortly before the buffalo disappeared. Grass—much of it being a short curly variety and known as "buffalo grass"—was to be found everywhere for our horses, but this was not the case with water. My theory is that a territory with good soil and *ample* moisture in the state of nature will be found covered with timber; whereas if without timber, and the soil is good, then there must have been a shortage of moisture. Regardless, however, of theories, that particular area in the last sixty years to my knowledge has had its periods of insufficient rainfall, and towards the end of every such period, an agitation would develop for putting to use the available water for irrigation; especially was that true in the western end of the area. Then with the return of the "wet" seasons, the past would be quickly forgotten.

And so it continued until the recent drought period, probably the longest and certainly the most severe since those lands have been occupied. And now the subject of reclamation is again to the fore, and everyone interested in that western country knows that some definite move forward must be made, and without further loss of time, as there is a limit to the courage of even the best of empire builders.

The following rough estimates will give some idea of the situation in our so-called drought area, as well as in the area outside of it in Saskatchewan and Alberta. Probably 6,000 sq. mi. in south-western Manitoba have suffered from drought, but I am unable to give any details respecting that territory.

In the Provinces of Saskatchewan and Alberta, the drought area is about 100,000 sq. mi., and in this area there is a population of 788,829, and 6,691 mi. of railway. *Outside* of the drought area, there are 81,000 sq. mi. in which there is some settlement. Of this area 57,000 sq. mi. is partially wooded, and 24,000 sq. mi. is covered with bush. There are 914,866 people in this *outside* area, and 7,620 mi. of railway.

The above figures indicate that the drought area carries practically half of the entire development that has taken place in those two provinces since they were opened for settlement over fifty years ago. All things in life are more or less uncertain, but when uncertainties become abnormal, as for instance in the capacity of land to produce, it must be expected that it will lead to a lessened use of that land—hence in the interests of our Canadian Confederation we must do everything that is possible to vitalize that central link in our four separate settled areas extending across the continent—a link that in the past has produced a vast amount of wealth for Canada.

In 1904 I urged the late Sir Clifford Sifton, very shortly before he retired from public life, to have an intensive examination made of that "dry area" in order to see to what extent those waters wasting into Hudson Bay could

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

J 1 9483

be used. While I have brought forward the suggestion at odd times since, I have never been dogmatic as to how far it would be possible to make use of the waters of those major streams, including the North Saskatchewan River, that flow out from the foothills of the Rocky Mountains. I believe it would be necessary to reservoir their spring freshets, if practicable in the river valleys, otherwise the amount of water available would not, I fear, justify such a large enterprise being undertaken.

I am aware that a couple of irrigation projects in Southern Alberta have been disappointing. One reason may be that the full "duty" of water was allotted to each land holding, whereas the rolling nature of those plains is such that only a percentage of the total area could be reached with water. Apart then from the objection of promoting large irrigation enterprises in rolling country, there is the objection in the case of the drought area of confining the very limited supply of water to a small area, with the water in wet seasons doing a minimum of service.

I therefore agree with Mr. Peters that the available water should be distributed over the widest possible area for stock purposes, tree culture, irrigation of small plots of land. In wet years the water should be conserved in reservoirs as far as practicable in order to supplement the supply in dry years. The evaporation, I appreciate, would be quite heavy.

What then is to be done about the drought area? I believe the Government has been doing excellent work in it during the past few years by making use of the water that falls within the territory, also in the treatment of soils, and otherwise helping the settlers. I was pleased to learn quite recently that the Reclamation Service of the Department of the Interior, which operated at Calgary some years ago, had accumulated a great deal of information regarding the surface of the drought area, thereby materially reducing the field work necessary to determine the possibility of distributing water throughout the territory.

My opinion is that, in the interests of those within the area, the Government should have the engineering investigations pushed forward to completion as early as possible, thereby putting an end to the discussions as to what is or is not possible in the way of stabilizing and increasing the production of the drought area through the use of water. I know the cost figures will be very large, and possibly so large that the undertaking would be impossible, but where so much is involved we are not justified in making any assumptions. My hope is that with maps and other details of a great project showing very definite benefits to the drought area, that it would appeal to the imagination of the empire builder type, and through the use of some of our resources in our north-land, the project could be financed, as was done in the case of the Canadian Pacific Railway. While in London last year, I tried to interest a few men in our expansion, drawing their attention especially to our drought area, and failed. I fear our Canadian independence, to which I will refer presently, had something to do with it.

We Canadians might as well realize that Canada is still very much in the making, and in a country of its vast dimensions great development projects are ahead of us if we are to succeed. Such development cannot be financed by our governments alone, especially under present conditions. This situation should not deter us from expounding these developments in such a way as might interest others in them. After all, that is our present day method of window dressing without which those in business would soon have to close their doors.

I will close with a reference to our British connection. At times we seem to go out of our way to claim that Canada is an independent nation, notwithstanding the fact that we are part of a great family. The more independent units this old world is broken up into, the wider the base of international distrust becomes. While I am unquestionably a Canadian, I also regard myself as British, even if I have not, so far as I know, a drop of English blood in my veins. I fear that sensitiveness about our independence may have been responsible for my experience in London to which I have referred—an unwillingness to intrude in the affairs of another nation. I sincerely hope I am wrong as to that.

Not only have we Canadians major undertakings which, due to our small population, cannot be financed in the usual way, but I believe it will be found that Australia and South Africa are in the same position, and probably New Zealand as well—each being under-populated. Great Britain, on the other hand, carries an excess of people. Assuming it would take say two or three billion dollars expended over a term of years, on major projects, to start our overseas Dominions on the up-grade again, enabling all of them to take many of their idle people away from their drab surroundings in centres of population, and place them, as well as others from Great Britain, out on land, are we going to admit that through team-play on the part of the members of the British Commonwealth, and the use of some of our territory with resources, we cannot find funds for a great movement of that character? Not to-day, I will admit, but what about to-morrow? This question may soon be urgent. Meanwhile let us list our major development problems, and bring together all details as to possible solutions, so as to be ready for the "Empire Builder."

I appreciate that many will say that there is no place for further agriculturalists in Canada to-day. I am not thinking of wholesale farm production through the use of machinery, but of the type of farming carried on in eastern Canada in my boyhood days, when it was a common expression "the farmer is the most independent man in the country," who produced probably 90 per cent of what he consumed and most of his clothing as well. The bright lights and other conveniences drew people from the land to the city. Now through electricity all that the city offered can be brought to those in and about rural communities out on the land. It is a problem that must be solved. Let us try and get away from the idea that our over-worked governments must find solutions for all our difficulties. I am aware of the efforts to revive British emigration to this country, and wish them every success. Real effort to find sound methods cannot fail to make progress.

I have gone far afield in this paper, as I am aware that none know better than the members of The Engineering Institute that Canada offers splendid opportunities to the exploring mind, and that great works are the outcome of that type of mentality plus the knowledge and capacity of the engineer.

A C. Coleman

11948

19th April, 1929

The Right Honourable George P. Graham,
The Honourable G. P. Beaubien, K. C.,
Joint Chairmen,
Special Railway Committee of the Senate,
O T T A W A, Ont.

Honourable Sirs:

During the presentation to your Honourable Committee last year of the evidence in support of the estimate of savings from unification prepared by the officers of the Canadian Pacific Railway, the question was raised, on various occasions, as to the effect on the amount of economies possible which would result from the decline in the combined expenditures of the two companies which had occurred between 1930 - the year used as a basis for the original estimate - and 1927.

The economies made during this period comprise:

(a) Co-operative savings secured by joint action which would correspondingly reduce the amount of the potential savings;

(b) Economies due to a reduction in the volume of traffic which, to the extent they occurred in duplicate services, would reduce the opportunities for economy, and;

(c) Unilateral economies made by the two companies apart from volume of traffic which by their

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119485

very nature would be largely outside the field of economies estimated to be possible by the elimination of duplicate facilities and services.

It was admitted that the effect on the estimate should be only to vary it approximately in proportion to the lessened volume of combined expenditures (Mr. Fairweather, p. 204 and p. 206). A calculation on the basis of this assumption was submitted by Mr. W. M. Neal in evidence on June 8, 1938 (page 935) which showed that on the basis of the 1937 volume of traffic the annual savings could be estimated at approximately $59,740,000.

Immediately after Prorogation of Parliament, I instructed a committee of our officers to prepare a detailed estimate based directly on the operations of 1937, and this study has recently been completed. The same general methods were followed as in the original estimate, and the same care was exercised. Full consideration was given to all criticisms of the original study which had been offered.

This second estimate indicates that under the traffic and business conditions which prevailed in 1937, annual savings of $56,346,000 could be effected after making adjustments necessary to provide for the fact that the normal rates of pay in force in 1930 and now again in effect, were only in process of restoration in 1937. This figure makes no provision for any saving resulting from abandonment of lines. Assuming such abandonments as we believe the Board of Transport Commissioners would authorize in the event of unification under present conditions, the estimate is increased to $59,361,000.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119486

The close correspondence between these figures and those arrived at by reducing the original estimate in proportion to the reduction in the combined expenditures of the two companies between 1930 and 1937, confirms our belief that the original estimate can be taken as a valid one, and that a conservative figure of the annual savings to be obtained by unified operation under conditions as of 1930 is in the neighbourhood of $75,000,000.

Full details of the estimate, based on conditions which prevailed in 1937 can be furnished if it be desired, and can be supported by evidence of the officers who prepared the report.

I have also asked these officers to prepare a memorandum replying to the criticisms offered by Canadian National officers in respect of the estimate of savings based on the conditions of the year 1930, and this memorandum will be available for filing with you within a few days.

Yours very truly,

(Sgd.) D. C. Coleman.

Vice-President.

**EXCERPTS FROM DEBATES OF THE SENATE** D 19487

1. (No. 6, page 59). (Hon. Mr. Dandurand).

"This $12,000,000 will give us a central station to meet the needs of the Canadian National Railways. Traffic from east of Montreal, south of Montreal and north of Montreal will come to that station. The C.P.R. Windsor station can attend to the western passenger service. I only have to look at a map of the location and observe the topography to be sure from the information I have that for its business from the north, from the south and from the east the Canadian Pacific will come to that terminal willy-nilly. This view will be discussed in committee. I am not ready to answer all the questions of my honourable friend, but from the statements I have had I feel that the Canadian National owes it to itself, and the metropolis of Canada owes it to itself, to have that central station, upon which so large an amount has already been spent."

2. In reply to Mr. Cote on the same page, he said as follows:

"They have not raised their voices, but we know the Publicity Bureau of the Canadian Pacific Railway and Sir Edward Beatty are constantly on the job and constantly stressing the fact that the Canadian National is losing large sums of money. I think the Canadian Pacific Railway representatives would appear in a better light if they were candid about their campaign and spoke of their own needs. We shall discuss these matters when we go into committee."

EXCERPTS FROM PROCEEDINGS OF THE SENATE COMMITTEE

119488

(p.12) 1. " HON. MR. DANDURAND: Last week I think we agreed to hear from the Canadian National what lines are unprofitable——those that are in the red. That information would enable us to visualize the situation. Have they been notified?

MR. BIGGAR: Yes.

HON. MR. DANDURAND: At that time we decided to ask the two railways what they have done since July last to implement our resolution of June 30th, in which we urged them to continue to co-operate as closely as possible.

RIGHT HON. MR. MEIGHEN: We could hear from the two railways if we have asked them to do that.

HON. MR. DANDURAND: We have asked them to do that.

HON. MR. COTE: Are they going to deal with the matter of joint terminal facilities in Montreal?

HON. MR. DANDURAND: In asking them to tell us what they have done since last July towards co-operation we shall very likely strike the terminal situation. "

(p.82) 2. " HON. MR. COTE: Mr. Chairman, are we to understand that these labour men will limit their evidence to the subject-matter of Professor McDougall's submission to us, or are they going to reopen the question of unification, amalgamation, and all that kind of thing?

HON. MR. PARENT: And the Montreal terminals.

THE CHAIRMAN (HON. MR. BEAUBIEN): Of course we, as Chairmen, are here to do what you want.

HON. MR. COTE: I was just asking what was intended.

THE CHAIRMAN (HON. MR. BEAUBIEN): In order to enlighten you, I am trying to find out what the intention of the Committee is.

HON. MR. DANDURAND: I should like to answer Senator Cote's question. I took for granted that we would hear the two railway companies on the lean lines, and we were giving a day to the Canadian National. We will give a day to the Canadian Pacific, if they want it. We would also devote attention to inquiring what the two railways have done since the first of July under the 1933 co-operation Act. And, of course, if any member desires, he can ask about the terminals in Montreal. "

"MONTREAL GAZETTE - JANUARY 17th, 1938"

L-79489

"Before the general Federal elections come, the Canadian National Railways will have their central station in Montreal, declared Hon. P. J. A. Cardin, Minister of Public Works, as he wound up the Liberal campaign in St. Henry Division last night at the Levis School in Ville Emard. If the station has not been built - and Mr. Cardin made it clear that with this project there was also linked the elimination of the level crossings - it was because of Camillien Houde, said the Minister.

"At an afternoon meeting in Atwater Market, Hon. Ferdinand Rinfret, Secretary of State, had made a similar pledge to the 2,000 electors who attended. Both statements clarified and amplified the declaration of Mr. Rinfret on Friday that the Liberal Government would "fill the hole on Dorchester Street"."

Geo. C. Vaudrin, Esq.,
6048 St. Hubert St.,
Montreal, Que.

Dear Sir:

I have your letter of 19th just received this afternoon.

Only this morning I protested in the Committee against further hearings other than those already decided upon, so it wouldbe inconsistent for me to change my attitude and ask that you be heard.

I regret not being able to send you a more favourable reply.

Yours very truly,

AM/E.

Arthur Meighen.

Montreal, Que., April 1[illegible], 1932.-

Right Honourable Geo. P. Graham, P.C.:
Right Honourable Senator Arthur Meighen:
Right Honourable Senator Mr. Black:

Right Honourable and Distinguished Sirs:-

The undersigned respectfully suggests that you refer to Hansard, Special Committee, March 29th, page 128, first four paragraphs, particularly pertaining to solution of unemployment problem and the $50,000,000. economy withdrawn from payrolls and my submission of March 17th and Statement of March 27th which do not appear in Hansard.

Because the task of segregating relevant essentials of testimony heard, requires more than ordinary patience, the writer, having completed said segregation of essentials, believes the Special Committee could appreciate to its just value both sides of the story by hearing orally the observations made in concordance with the view expressed on page 15, Mar. 15th., by the Right Honourable Mr. Meighen, 4th. last paragraph, to which I might supplement that my interest in this question dates back to the advent of the installation of railroad telephones in 1910.

Respectfully Yours,

Geo. C. Vaudrin.

Mr. Geo. G.Robertson,
15067 Pinehurst Ave.,
Detroit, Mich.

Dear Mr. Robertson:

I have your letter of 18th instant, for which I thank you.

What you have in mind is much along the line of what has been proposed to the Committee, but, of course, not the same.

I am not clear as to the meaning of the third paragraph. Anything in the nature of unified management could not be effective unless there was a virtual merging of the departments now competitive.

Yours very truly,

AM/E. Arthur Meighen.

OTTAWA, ONT.

Dear Senator Meighen:

I have been talking with Mr. McIntosh of The Globe and Mail about railroad savings and the method in which I thought they could be effected. He has taken quite an interest in my ideas and attempted to arrange an interview with you while I was here at the Easter week-end, but I was unfortunate in this respect, and also too late yesterday to get in touch with you before you left for Ottawa. However, I made a little skeleton of my ideas or plan, if you can call it such, which I am enclosing.
I am returning to Detroit tomorrow, but if this is worthy of any consideration on your part I shall be glad to hear from you further.

Yours very truly,

Geo. G. Robertson

A suggested plan for united management of the Canadian National and the Canadian Pacific Railways to effect reduction in expenses.

The Canadian National and the Canadian Pacific Railways to retain their corporate structures.

A Board of Control to be appointed with absolute authority to manage the united transportation properties, and to consist of an Executive officer--less than President--from each of the Railways, and the President of one of the running trade unions. The union official to be changed each year.

Departments having the same duties to be merged as far as possible under one roof in order that the staff may acquire the same viewpoint about their duties. This merging of departments to be carried on throughout, with the exception of the competitive departments, which consist mostly of passenger and freight.

All employees to be retained and reduction of employment to be effected by natural causes, such as resignations, deaths and retirements in the regular course, it being understood that no pressure will be brought to bear to bring out any involuntary reductions. No vacancies to be filled from the outside. If necessary, transfers to be made from departments carrying surplus.

At the beginning savings will be effected through reductions in purchases, as there is now a very large duplication of blanks, stationery, tariffs, record books, etc and materials which, of course, are now purchased separately. Savings will also start very soon in pay roll accounts.

Increased patronage can be brought about by better service without any increase in expense.

MEMORANDUM FOR THE JOINT CHAIRMEN

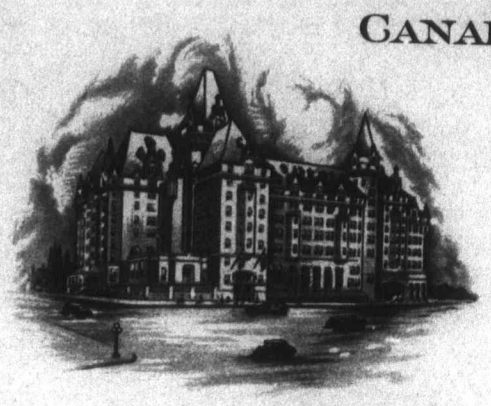
RE: Railway Enquiry

Senator Dandurand telephoned on Friday asking me to arrange for the attendance on Tuesday of Mr. Black, the author of the memorandum referred to in the Committee by him and by Senator Hugessen. I arranged through Senator Hugessen accordingly, though Senator Hugessen told me that Mr. Black's synopsis of his paper which it was intended to distribute could not be so much in advance of Tuesday's meeting since it would not be ready until Monday.

In addition to Mr. Black the other witnesses who have been warned that they might be heard on Tuesday are Mr. [redacted], one of the principal officers of the Brotherhood of Locomotive Engineers, and either Mr. A. J. Kelly, the Chairman of the Co-operative Legislative Committee of the Standard Railway Labour Organizations, or Mr. W. L. Best, the Secretary of that Committee. So far as I know Mr. Chase has no written submission but I am advised that one has been prepared on behalf of the Co-operative Legislative Committee and that that Committee greatly desires that an opportunity to read it should be afforded to Mr. Kelly as its Chairman.

I must tomorrow cross-examine the principal witness on the other side of the case in the trial of which I have been engaged since last Wednesday and from which I was able to absent myself to attend the meeting of the Senate Committee last Thursday morning. I do not see that my presence tomorrow could be of any use in connection with Mr. Black's submission and perhaps of very little, if any, in connection with the submissions by the Railway Unions.

I hope in the circumstances the Committee will excuse me from attendance tomorrow morning. If it sits again late in the afternoon or in the evening I could of course easily attend.



Ottawa, April 24, 1939.

Proceedings Special Senate Committee, 1938, Page 207, Mr. S. W. Fairweather on the stand:

By Hon. Mr. Murdock:

"Q. Would not that $10,000,000 to some extent be still theoretical? You could not say conclusively that it would be so, an actual saving -

A. I can only say in general terms what I think it would be.

Q. But it would be a theoretical estimate? - A. As an honest opinion for what it is worth, that is what would result. But frankly it is an educated guess.

Q. And that would not take into consideration displacement of men? -

A. No. If you entered on that program with an obligation within that limited scope you compensate labour for its being displaced, and if you took into consideration also compensation of industries that would be dislocated, then you would not come there at $10,000,000. figures. I quite admit that. But I do say this. It is based on an expectation that railway labour would have to take its chance with every other type of labour in the country. When a factory finds a better way of doing its work, it fires some of its men, and it does not have to compensate them.

Q. In other words, you would have to make a contribution and the public would have to make a contribution? A. Yes.

The Right Honourable Arthur Meighen
The Senate,
Ottawa, Ontario

Dear Senator Meighen:

I have your letter of April 20th, for which I thank you.

There may be similarity, of course, in some respects between other propositions and mine, but I have been following the matter pretty well in the papers and have failed to find any that contemplated retaining all employees at the beginning.

Regarding the third paragraph, Had in mind to keep the soliciting department separate as traffic is the essence of the proposition, and competition in the solicitation was to be maintained. There is plenty of competition from outside railroads and it was to meet this that soliciting forces of the roads were to be maintained at the highest efficiency.

Yours very truly,

Geo. G. Robertson

Dear Mr. Sweezey:

Thank you very much for your kind letter of 26th instant.

I am afraid it will be too late now for the Committee to propose to hear other views on the Railway question than those already agreed to be heard. In fact, I think we have agreed to hear far too many, and are going to have great difficulty in getting our report or reports in shape for this Session, and this is an absolute necessity.

Yours very truly,

AM)E.

Arthur Meighen.

26th April, 1939

Rt. Hon. Arthur Meighen,
The Senate,
OTTAWA. ONTARIO.

Dear Senator Meighen,

I have been following with considerable interest the Senate investigation of the railway problem. In this I have been particularly impressed with the lack of sincerity of leading Liberal members of the Senate.

Your own interest in finding a solution is evident by your treatment of the subject, and for that reason I am writing to suggest that the Senate Committee should invite Mr. Lesslie R. Thomson, Consulting Engineer of Montreal, to give evidence on the railroad question.

Mr. Thomson, as you know, is the author of a recent book on this subject, and he is possessed of a store of technical and economic information and opinions that can hardly be equalled by any other person in this country. I would judge, however, that if a man of this kind is to be heard he has to ask to be invited, but it seems to me that if the Senate is sincere in its desire to get at the facts, then surely men like Mr. Thomson should be invited to give their opinions.

Many people would be pleased to find that Mr. Thomson had been invited for this purpose.

With best personal regards, I remain,

Yours sincerely,

R. O. Sweezey

Montreal April 26th, 1939.

Hon. A, Meighen
Senator
OTTAWA.,

Dear Sir:-

In my opinion, the Committee of the Senate concerning the Railway problem cannot make a practical and useful report to satisfy the public expectation for the very reason that nobody yet has put before the Committee the real and classic remedy to settle the railways problem.

My views had the approval of six chiefs engineers of railways and 85 workers associations.

Presently I have the support of 60 public bodies through the City Improvment League of Montreal. I see no reason why the Committee should not hear me in accepting my demand.

I do claim that my suggestion shall facilitate a valuable report to satisfy the public.

I hope you will specially call the attention of the Committee on my request.

Yours very truly.

D 19505

MEMORANDUM IN REBUTTAL OF THE EVIDENCE GIVEN BY OFFICERS OF CANADIAN NATIONAL RAILWAYS IN CRITICISM OF THE CANADIAN PACIFIC ESTIMATE OF SAVINGS BASED ON OPERATIONS IN THE YEAR 1930.

The criticism of the Canadian Pacific estimate took three forms: (a) that the savings from line abandonments included in the estimate were a major item in it, and that most of the mileage listed could not be abandoned; (b) that the estimate based on operations in 1930 was no longer valid in view of the subsequent economies made by both systems; (c) that the estimate as a reflection of the 1930 conditions was in error in several respects.

As to the first point, the criticism ignored evidence to the effect that the estimated savings could in the main be achieved without line abandonment by rerouting traffic and reducing maintenance expenses (Macnabb, pp. 610, 639). It has been shown that the complete elimination from consideration of all line abandonments would only reduce the total savings by $7,248,798 (pp. 583, 905-06, 985; Exhibit 70, p. 943; Exhibit 80, p. 1112). It was also shown that if only those lines common to both the Canadian National and the Canadian Pacific estimates to the Royal Commission were abandoned, the total savings would be reduced by approximately $4,215,000 (Exhibit 70, p. 943). The validity of these figures was not questioned, and since they are not a major factor in the estimate, the question as to whether a particular portion of line can or cannot be abandoned is not of importance in respect of total savings.

As to the second point, it was recognized that the economies put into effect by the two railways since 1930 are substantial, but attention is drawn to the fact that many of these will prove temporary in character; that by far the greater proportion were the result of sub-normal

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

traffic volume, and that only a small proportion pertained to economies of the type inherent in unification. Therefore, it is an error to assume that these economies are properly deductible in total from the savings based on the operations of 1930, or the savings for a year of normal traffic. Although, to appraise accurately the effect of these economies on present conditions, would require the preparation of a new detailed estimate, the Canadian Pacific officers offered an approximation of the savings under conditions as of 1937, based on the assumption that savings from unification would fall in total in proportion to the reduction in expenses. This was admitted to be a proper test (Fairweather, p. 206). The result of this calculation indicated savings of $59,740,000 and no criticism of this was made. Recently, the Canadian Pacific has made a detailed study, which fully supports this calculation. For these reasons, in dealing with the detailed criticisms of the various items included in the estimate, the many references to the economies accomplished since 1930 will not be dealt with further in this memorandum.

With respect to the third point, the criticism will be met under the headings in which the savings were calculated as follows:

Supervisory Items

The re-arrangement of supervisory organizations as proposed by the Canadian Pacific witnesses was criticized only in respect of the prudence of including in such an arrangement Canadian National lines in the United States, and in respect of three minor supervisory offices, namely: Prince Edward Island, Levis and St. Thomas, none of which could have any vital effect on the validity of the estimate because the difference in the savings if all of these objections were

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

1.19507

given effect to would not be substantial in the aggregate.

The savings which resulted from the re-arrangement were dealt with by Canadian Pacific witnesses in connection with the various main accounts whose expenses included some proportion of the supervisory costs. The critical witnesses contented themselves with casting doubt upon the amount of realizable savings, but the basis of these calculations was never seriously questioned. On the question of amount, the inference was drawn that the economies by the Canadian National in supervision since 1930 had rendered much of the estimate under this heading invalid, the answer to which argument has already been given in this memorandum.

Maintenance-of-Way and Structures

The critical witness was C. B. Brown, whose evidence begins on page 1198 of the Proceedings. He criticized the Canadian Pacific formula, which involved estimating Maintenance-of-Way Expenses on a basis of the average expense per equated track unit, and suggested a simpler method of average expense per mile, on the ground that there was insufficient data to permit an estimate to be made on any recognized equated mileage formula.

It is submitted that, since the Canadian Pacific formula was so weighted as to give effect to the difference in cost of maintaining branch lines as compared with main lines, that it provides for the cost of maintaining a double track line as compared with a single track line, and that it allows for the difference in cost between lines in Eastern and Western Canada, it is in every way superior to Mr. Brown's formula which does not allow for these factors.

Mr. Brown further criticized the comparability of Canadian

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

D 19508

Pacific maintenance expenses on two grounds. The first referred to the treatment of certain items of tie and rail expense, and it is apparent that Mr. Brown has not appreciated the fact that the identical items referred to were provided for in the Canadian Pacific estimate (pp. 838-39 of the Proceedings). The second was on the ground that certain items of expense were included in the Canadian National figures which were not reflected in Canadian Pacific costs. These items were:

(a) $1,800,000 more for tie renewals. As to this the Canadian Pacific points out that its estimate allowed the same proportion of treated ties and total ties for the unified system as on the Canadian Pacific, whereas the Canadian National actually installed less ties per mile and a lower percentage of treated ties in 1930 than did the Canadian Pacific, thus indicating that the Canadian Pacific estimate was conservative.

(b) $1,500,000 more because of preponderance of Canadian National mileage in Eastern Canada, where maintenance costs were higher by $500 per mile (p. 1203). As to this, the Canadian Pacific submits that its estimate actually makes an allowance amounting to about $600 per mile for the added cost of maintenance in Eastern Canada as compared with Western Canada.

(c) $600,000 more for timber bridges, and

$1,500,000 less because of lesser traffic density on the Canadian National. Since the net result of these is a decrease of $900,000, they do not support the Canadian National contention.

Maintenance of Equipment

The critical witness was Mr. J. Roberts, whose evidence begins at

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119509

page 1207. The main ground of objection (p. 1210) was that the unified management could not reduce the cost of repairs per mile on Canadian National equipment, since Canadian National repair costs were already as low, judged by comparison with those of United States railroads, as was consistent with efficiency. No criticism was offered so far as the savings were attributable to reductions in locomotive and car miles, although these savings accounted for the greater proportion of the total (p. 1208).

It is submitted that the lower Canadian Pacific unit costs were not the accidental result of conditions peculiar to the Canadian Pacific, nor were they obtained by the sacrifice of efficiency. It is contended that they follow from the adoption of policies and methods developed after many years of experience in a variety of conditions. It is further submitted that unified operations would greatly increase opportunities for the more effective utilization of equipment than is possible under separate operation. Because of this, costs at least as low as those on the Canadian Pacific can be obtained by a unified system.

With respect to locomotive repair costs, specific criticism was made on the following grounds (p. 1208):

First: That because Canadian National locomotives had a greater average tractive effort than those of the Canadian Pacific, the cost of repairs would be correspondingly greater. The Canadian Pacific witness pointed out at page 808 of the Proceedings that the effect of the increase in average tractive effort on the Canadian Pacific locomotives has been accompanied by off-setting benefits and the cost of maintenance per mile has not increased. The actual increase in the

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

D.19510

average tractive effort on Canadian Pacific locomotives between 1925 and 1938 was 16.3%.

Second: That the unified management would find it more expensive to maintain the greater number of classes of locomotives which would be contained in the unified inventory. It is submitted that the elimination of the least desirable classes of locomotives and the increased opportunity for segregation of similar classes in the most suitable territory which would be done under unification would be sufficient to discount any such tendency.

Third: That Canadian National locomotives had been modernized to a greater extent than those of the Canadian Pacific, and that, while modern devices increase efficiency, they add to maintenance costs. Canadian Pacific experience has been that it is possible to maintain a uniform cost level despite modernization because of the resulting increase in utility and efficiency.

Fourth: That the proportion of locomotive mileage on the Prairies was greater on the Canadian Pacific than on the Canadian National, and, therefore, the former's costs might be expected to be lower than those of the latter. The answer of the Canadian Pacific is that bad water conditions of the Prairie Provinces have increased repair costs with the result that these costs are only fractionally different from those in other sections of the country.

Transportation - Rail Line

The following main criticisms were made by Mr. N. B. Walton, beginning at page 1167 of the Proceedings:

Savings indicated were impossible because savings to the extent indicated would produce a ratio of transportation expense to revenue

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

D.1950.D.

for the unified system of 33.9% as compared with transportation ratios of United States Railroads varying from 36.2% to 37.5%.

In this connection it is pointed out that Mr. Walton's criticism is based on a miscalculation since the revenues and transportation expenses for the unified system in 1930 should have been taken as $450,230,364 and $166,562,217 respectively, which is a transportation ratio of 37%.

Station Service

Criticism under this heading was confined to -

(a) Casting doubt on the validity of the Canadian Pacific estimate by drawing attention to alleged errors in assumed Canadian National expenses for station services at Winnipeg and Montreal.

The Canadian Pacific admits that there may be errors in some of the figures owing to lack ot detailed information, but does not agree that small differences of this kind invalidate its estimate of savings. It should be noted that the critical witness does not say whether the assumed expenses at these points were too high or too low, or whether the errors claimed were themselves compensating or compensated by differences in other accounts. The basis of the estimate is not in any event called into question.

(b) Pointing out that since 1930 station expense had been substantially reduced by the two systems. As has been previously said, these reductions do not invalidate the estimate based on 1930 conditions nor do they indicate that these economies are deductible in total from the savings.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119512

Yard Services

The criticism under this heading was devoted chiefly to casting doubt on the reliability of the Canadian Pacific estimate which the critical witness suggested had been calculated on the basis of the reduction in locomotive miles amounting to 12.2%, which percentage was the same as that derived from the calculation of savings in yard service expenses. The fact is that the savings were derived by detailed study and analysis at specified points where duplicate facilities were maintained by the two systems, and with full regard to actual operating and physical conditions. These savings at these points were then expressed as a percentage of system costs. The percentage thus found happens to coincide with the percentage saving developed for road locomotive miles, but there is no necessary relationship between them.

A further criticism was directed to errors in assumed yard costs of the Canadian National at Montreal and Winnipeg. As in the case of station service, the critical witness gave no indication as to whether these costs were too high or too low, or whether the differences mentioned were compensating.

Train Services

The criticism under this heading was chiefly confined to casting doubt upon the possibility of reducing train and car miles to the extent estimated by the Canadian Pacific. Specifically, the various items were criticized as follows:

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119513

(a) Train Service - Abandoned Lines and Consolidation of Merchandise Traffic.

This was criticized on the ground that no details were furnished and that reductions were wholly speculative. While it is easy to criticize any estimate on such a ground, no alternative figures were given by the Canadian National. The Canadian Pacific's position is that the estimate was made after careful study of all the ascertainable facts.

(b) Heavier Loading of Carload Traffic. Reductions due to this were criticized on the ground that in order to get substantial reductions in train and car miles the situation would have to be carried to such an extreme as to impair service to the public. The Canadian Pacific estimated only 1% reduction for each of the two factors which is conservative when compared with the estimate of 5% increase in car loadings included in the Canadian National estimate (p. 509).

(c) Re-routing of Empty Cars. This was criticized on the ground that all possible savings have been made under co-operation. The Canadian Pacific admits that at certain points co-operative effort has eliminated a small portion of the duplication in this respect. The total savings cannot, however, be obtained until the practice is made to apply throughout the two systems, and that would only be possible under unification.

(d) Re-routing of Freight Traffic. Reductions from this source were criticized on the ground that there was insufficient

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119514

detail furnished to enable these reductions to be verified, and that any savings possible under unification could equally well be accomplished under co-operation (pp. 1174-5).

As to the first point, the Canadian Pacific draws attention to the evidence of Mr. O'Brien (pp. 763-74) and to Exhibit 57 which, while not printed, was filed and available to Canadian National witnesses (p. 774). As to the second point, the Canadian Pacific submits it is no criticism of an estimate of savings under unification that equal savings can be made under co-operation. In addition, Canadian Pacific points out that it has been made very clear in the discussion on co-operative economies that these necessarily do not go as far as those under unification.

(e) The reduction of 2½% in the cost of fuel was criticized on the ground that such a saving was a remote possibility. It is submitted that this is a matter of opinion, although Mr. Vaughan, Vice-President of the Canadian National, (p. 1249) admitted that some savings could be made by consolidating purchases.

(f) Other Transportation Expenses. Three items, namely, Clearing Wrecks, Damage to Property, and Damage to Livestock on Right-of-Way were reduced by 12.38%, the derivation of which percentage was not, apparently, made clear. The Canadian Pacific points out that these accounts will obviously reflect the reductions in all classes of train miles, and the percentage used was that of the combined reductions in freight, passenger and mixed train miles.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119515

The only major criticism under the heading of Other Transportation Expenses was related to the economies effected by the separate systems since 1930 in sleeping car services. The effect of such economies has already been dealt with.

Increased Operating Revenues

The critical witness (pp. 1231-36) expressed the view that the Canadian Pacific estimate under this heading was in error because the traffic being "overhead" was enjoyed by the Canadian railways in competition with the United States railroads only because -

(a) New England business desired to retain as many competitive routes as possible, and

(b) the differential rates which permitted such traffic to move on Canadian lines are "grudgingly" agreed to by United States railroads.

It was suggested (p. 1231) that if the Canadian railroads "were lining up together" that traffic might disappear. The answer of the Canadian Pacific is that if New England business supports the routes in question in order to add to the number of competitive routes, it is illogical to suppose that the removal of one by unification would cause them to withdraw support from the remaining one. It is further submitted, on the second point, that competition alone influences the United States railroads, and that the competitive position of the Canadian railways would be strengthened under unification because of the improved service thereunder.

The critical witness objected to the estimate on various other grounds, He insisted that it would be impossible for the unified

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

system to compel connecting United States railways to interchange traffic moving to and from New England so as to give the unified system the advantage of a longer haul on its own lines. Yet, the same witness objected also to the amount of savings which might be made by substituting Portland, Me., for North Stratford, N.H., and St. Johnsbury, Vt., on the ground that the Canadian National had already, since the date of the 1930 estimate, made a re-arrangement, for this precise purpose. It is submitted that these two objections destroy each other. That is, where it was necessary to his criticism to argue that the United States lines could retain their long haul, he did so.

The critical witness also offered the objection that the lease of the Boston and Maine line between Newport, Vt., and Wells River, Vt., to the Canadian Pacific meant that the rental of $246,000 per annum could not be saved by substituting the Central Vermont for this line for interchange purposes. Obviously, the question of whether the lease exists or not is not pertinent to the amount of savings which could be made by not using the line in question. The only effect of the lease is to make it certain that, at its termination in 1956, the annual rental can be added to the savings from unification.

The critical witness also objected to certain items which were not included in the original estimate but which were suggested as proper additions thereto by the Canadian Pacific (p. 984), and which were included in the Canadian National estimate (p. 486). The Canadian Pacific suggested that $1,500,000 could be gained by readjustment of interline divisions of freight revenue. This item was estimated by the Canadian National (p. 476 - Proceedings) at $2,500,000.

No criticism was offered of the estimated savingsof $1,136,000

CANADA

119517

per annum to be obtained by rerouting traffic passing through the Detroit Gateway - although this would seem to be open to the same objections as erroneously offered concerning the New England Gateways.

The Canadian Pacific total estimate for increase of revenue by rerouting of freight and redivision of interline freight revenues even after amendment showed a gross increase of only $4,771,000. The estimate of these savings offered by the Canadian National (p. 489 - Proceedings) showed increased revenues from these sources of $5,385,800 - which is evidence that the Canadian Pacific original estimate of $2,135,000 was conservative.

Traffic Expenses

The only specific criticism under this heading not already covered in discussing the economies effected by the separate railways since 1930, was confined to casting doubt on the comparability of the expenses of the two systems. The only difference relied upon in support of this was that of the treatment of expenses of Colonization, Agriculture and Natural Resources. The Canadian Pacific pointed out that this difference was provided for in its estimate by a separate calculation (Exhibit 67, p. 941).

All Other and General Expenses

The only criticism under these headings related to the reduction in expenses since 1930, and this has already been dealt with.

British Columbia Coast Steamships

The critical witness directed his attention chiefly to two points, namely -

(a) the Canadian Pacific suggestion that two ships could be dispensed with; and,

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

(b) the suggestion that the Canadian Pacific estimate involved elimination of the Canadian National barge fleet (pp. 1108-09).

The answer of the Canadian Pacific to the first item is that the witness, not having investigated the matter, was quite unable to say whether or not the saving in question could be made (p. 1107). As to the second point, the Canadian Pacific witness was wrongly reported both on page 968 and by the Canadian National witness. It was said that savings of $104,000 were predicated on "elimination of the extra services and the elimination of one barge fleet". The evidence clearly indicates and the fact is that the reference was to the consolidation of the barge fleets and the elimination of one barge slip. (See page 968).

Interest on Reduced Investment in Equipment and Stores and Track Material

The criticism of the Canadian Pacific estimate under this heading was directed, first, to the effect of the reduction in inventory since 1930, and, second, as many other critical witnesses had done without giving a basis for their suggestion, that the estimated reductions in train and car miles could not be achieved.

As to the first point; the reduction in inventory since 1930 is not a valid criticism of an estimate based on conditions in 1930 any more than is the argument that economies made by the two railways since that time are deductible in total from the 1930 estimate of savings.

As to the second point; the Canadian Pacific submits that while it was admitted that reductions in passenger train and car miles were

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119519

too high, the increase in the savings in freight train and car miles more than counter-balanced this (pp. 983-4).

Summary

The criticism was summarized by Mr. Hungerford (pp. 1047-1052) and divided into two parts which involved fifty-five million dollars and twenty million dollars of the total estimate respectively. As to the first, he listed the alleged assumptions on which the estimate was based (p. 1050), which, it was said, would "raise doubts in thoughtful minds " as to the reliability of the estimate. These alleged assumptions may be listed individually with Canadian Pacific answers to the criticisms which result:

1 - That Canada has entirely too much railway mileage and that 5,000 miles "should be torn up regardless of the pioneering service" it performs.

Answer: No such assumption was made. The effect of line abandonments or no line abandonments on the estimate is unimportant for the reasons before stated.

2 - That the quality of service in Canada is too high - it clearly being inferred that unification savings will be at the sacrifice of this quality.

Answer: The estimate makes no such assumption. It does contemplate that service will, in many cases, be improved and, as improved, will cost less than under separate operation.

3 - That traffic can be "forced to move over specified routes."

Answer: Economies from re-routing of traffic are not

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119520

based on forcing anyone or anything, but rather on a choice of the more economical routes.

4 - That stations, terminals, etc., can be abandoned without regard to the effect on the community and the country as a whole.

Answer: No such assumption was made.

5 - That Canadian Pacific costs are applicable to Canadian National operations notwithstanding geographical and other differences in conditions.

Answer: Unit costs of the Canadian Pacific were not applied to Canadian National operations, but to a new unified system neither Canadian National nor Canadian Pacific (Mr. Coleman, p. 1370).

6 - That the savings are net savings without providing for capital expenditures and compensation to displaced labour.

Answer: The Canadian Pacific admitted that there was no specific allowance for capital expenditures required, but it was pointed out in the original estimate (p. 416) and in the introductory statement (p. 529) that the annual interest charges on capital required would be more than counter-balanced by savings not included in the estimate, attributable to the fact that the unified system would not require as much capital outlay in the future as the separately operated systems. Compensation to displaced labour is not a permanent expenditure and will not effect the ultimate economies under unification.

7 - That disturbance to labour and markets are of no consequence.

Answer: Disturbance to labour will be prevented by

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119521

temporary compensation allowances which are an essential part of the Canadian Pacific plan. As to the alleged disturbance of markets, it is submitted that unification will be of great benefit to industry.

As to the second division, namely, that involving twenty million dollars of the estimate, it was said that these were matters of statistical conjecture, a statement which is apparently based on the argument that differences in operating and maintenance problems between the two systems render the estimate invalid to this extent. The Canadian Pacific contends that it has made allowance for differences in conditions where they exist but that these differences between two nation-wide systems are compensating or in total are unimportant.

In conclusion it may be said that where the criticisms were, in some degree, valid, the effect of these on the estimate of savings was not substantial. As indicated on pages 933 and 984, the Canadian Pacific had, prior to any criticism being offered by the Canadian National, made adjustments which involve deductions of $4,000,000, largely to reflect permanent economies made since 1930, and additions of $9,000,000, arising from items, which, while they might properly have been included, were omitted from the original estimate. The net effect of these adjustments more than adequately meets any valid criticism.

1. - "S U P E R V I S E D  C O - O P E R A T I O N"

One Suggested Solution of Canada's Railway Problem.

In proposing a plan of "Supervised Co-operation" as one of two workable solutions of Canada's Railway Problem, I am influenced by an appreciation of the serious nature of the present situation. Not alone, however, am I concerned for the Canadian National Railways and the taxpayers of Canada, on whom the burden of a large annual deficit falls. Canada's railway problem concerns also the private company equally with the public.

The primary consideration does not consist, as is often stressed, in relieving the drain on the national treasury. The primary danger of inadequate railway earnings rests in the crippling of both organizations in their most important task of providing adequate transportation facilities for the needs of Canada.

Nor is the railway problem limited to Canada alone, as will be illustrated in some detail further on. The competition of the motor car, the bus and the truck has made heavy inroads on the volume of traffic, freight and passenger, of the railways not alone of Canada but of Great Britain and the United States and nearly every other country in the world. In Great Britain and the United States almost desperate efforts are being made by the railways for measures of relief. They are urging either the cancellation of all existing regulations in order that they may be free to combat highway rivals, or the regulation of the truck and the bus so that they will be similarly controlled and forced to operate on a fair competitive basis with the railways. In all such appeals to the State, the principle is set forth that fair conditions of operation and adequate earning power are absolutely essential to the railways if they are to continue to provide the public with a proper standard of transportation.

Our problem, then, consists of working out a rehabilitation of earning power, insofar as this is possible under the conditions existing today. The importance of conserving the strength and efficiency of our railways probably could not be illustrated more forcibly than by the statement that, of all the vital physical factors that are fundamental to the continued expansion and prosperity of Canada, the two great railway systems stand in a class by themselves. I would go further and say that to probably no other country in the world does this statement apply with equal force - whether one looks upon the past, the present, or the future. For Canada, more than any other country in the world today, is dependent upon adequate railway transportation facilities not only for her present needs, but for developing those vast resources, lying north of the upper fringe of our mining and forest activities of today, that will constitute a storehouse of national wealth in the years to come.

CO-OPERATION HAS NOT RECEIVED A FAIR TEST: TWO MAIN WEAKNESSES:

Let us deal at once with the nature of the experiment that has been on trial now for nearly five years, known as Co-operation. In this connection, I would like to urge that the relative failure to achieve convincing results under Co-operation to date - say, about $1,750,000 of savings a year where tens of millions have been held to be within the range of possibility - does not provide the slightest proof that Co-operation is the wrong method, and that it should now be abandoned, and that we should try something else. Both railway groups admit the inadequacy of the results so far achieved. One official termed the progress "disappointingly slow"; another estimated a period of 25 to 50 years before worthwhile savings could be established - at the present rate of going.

And yet, at one time or another in the past five years, it appears that almost every project that seemed to offer a chance for savings in the opinion of both groups of railway officials had been

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119524

inspected. What was it that blocked progress? All the evidence submitted to the Senate Committee, I believe, goes to show, not that Co-operation as a plan for large savings has proved a failure, but that the real failure rested largely in the un-cooperative attitude of the railway representatives. What Co-operation lacked was real co-operation behind it. In the majority of proposals for effecting savings, the railway committees reached a deadlock. This was hardly surprising - with two separate interests and two distinct properties involved. What is surprising is that no final efforts were made to break the repeated deadlocks. The two groups, in effect, "agreed to disagree". In not one single instance was there an attempt made to utilize what had been recommended by the Duff Commission and supplied by Parliament in the Railway Act, the "arbitral tribunal" - to bring the negotiations to a settlement and to realize the savings involved.

This picture was presented with startling vividness in the evidence before the Senate Committee, and appeared to have aroused the impatience of many. For there was seen to exist a serious - and highly disturbing - clashing of views: what under vastly different circumstances the Senate is familiar with as "incompatibility".

Clearly, something more than Co-operation, as we have had it so far, is required, and I am firmly convinced that public opinion in Canada will demand, not that the principle of Co-operation be abandoned henceforth, but that an Act of Parliament be passed to modify the present methods, and to compel a comprehensive test of Co-operation, under conditions more favourable for the maximum results. With this in view, I am submitting an amended Plan of Co-operation which I feel will be in close accord with public opinion in Canada; will accomplish many times what has been done so far under voluntary Co-operation, and, finally, will at least come close to achieving the net savings possible under various other proposals that call for a more drastic departure from existing conditions of operation.

Let us turn now to the Act of Parliament, the "Canadian National and Canadian Pacific Act", under which Co-operation was made binding on the railways. There appear to be two fundamental weaknesses in this legislation. One of these is the "voluntary" character of reference of disagreements to an "arbitral tribunal": I would make this compulsory. The second is the character of that tribunal: I would improve its efficiency and enlarge its scope.

In connection with this I would lay down two principles for the working out of Co-operation:

(1) That in dealing with the railways in Canada as corporations - just as with any other business situation - the fullest opportunity continue to be given those actually connected with the railways to work out a solution themselves, as the ones who should be the best equipped for this job.

PERMANENT AND LARGER RAILWAY TRIBUNAL:

(2) That if the whole field of possible savings is not explored by the railways, or if failure to agree as between the two groups results in a deadlock, automatically each project on which action is not taken within a specified period be referred to the arbitral tribunal. Two courses would be open to this body. First, if the cause of failure by the railways were due merely to inability to agree on the details, where the principle of the step had been approved, a decision should be given by the tribunal and sent back to the railways to put into effect. Second, to make a thorough survey of the entire field of possible savings, and to urge action along specific lines which the committee may have overlooked or disregarded.

And, closely associated with this larger authority for the tribunal, I would reorganize the body that the Railway Act contemplated, and make it a permanent tribunal, constituted as a branch of the Dominion Transport Board, and known as the "Railway Co-ordinating Tribunal".

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119525

CO-OPERATING COMMITTEE:

Action by the railways would be taken through a "Co-operating Committee". This would be an outgrowth of the present Executive Committee. This, however, up to the present, has been limited to representatives of the two railways. The new form of Committee would consist of three members, a representative from each of the railways, and a neutral chairman. The last-mentioned would occupy a pivotal position in Co-operating activities, to facilitate the reaching of agreements between the two groups and putting savings into effect. Heretofore no one has occupied such a position in the picture of Co-operation. To strengthen the status and influence of such a Chairman, as well as to indicate the importance of the Co-operating Committee in the solving of the Railway Problem, the Chairman might well hold the position as well as Chairman of the Co-ordinating Tribunal, and be Vice-President of the Dominion Transport Board. The official connection of this Chairman with the Tribunal would serve to ensure the closest contact between this body and the railway executives, in the process of Co-operation.

It would be the duty of the Co-operating Committee to pass in review the entire field of possible savings, and, whether disposed to act on these or not, to send up to the Tribunal considered reports on all such proposals. Under co-operation as it exists today, any disagreement between the railway executives would end in no action being taken. Under the new plan, the deadlock stage should be eliminated.

I have chosen the word "co-ordinating" as part of the title and functions of the "Tribunal" by reason of its duty being to "Co-ordinate" the established railway services of the country - to make them fit in and function to the best advantage of the national economy, or, as it has been referred to in Senate discussions, the "public interest".

RAILWAY EXPERTS ON TRIBUNAL:

The Co-ordinating Tribunal should be technically equipped so as fairly to adjudicate each step as between the two railways. Heretofore, in inquiries I have made of officials of each, in seeking to discover the real reason for so many deadlocks, the situation has been explained thus: "We would offer a $2 advantage to the other road and be met with only a $1 advantage as an offset. So naturally we refused to accept it". The explanation from the other railway would be almost identical, even to the wording.

The Tribunal must be in a position to meet such obstacles by inspiring confidence in its judgment. In the past, I do not believe any experienced railway man has ever occupied a seat on the Board of Railway Commissioners of Canada - the Tribunal in the past that held the scales of justice as between the railways and the public. On this new Tribunal, in order that justice may be rendered both railways, two or four expert railway officials should be placed. I am suggesting the appointment in the early years of railway men to the Tribunal as being likely, with the prestige of membership, to draw the higher type of operating railway executives. Later on, railway men might be part of the technical staff of the Board.

The need of expert advice on such a tribunal was indicated recently when the head of the C.P.R. urged on the Senate Committee the appointment of experts to pass upon the evidence laid before the Committee at the last session: the difficulty would be to find such experts today in Canada, outside the officials of the one railway or the other. This Tribunal would constitute such an independent, expert body.

And what of the impartial character of ex-railway men, today probably strongly partisan: could we look upon them not only as skilled but impartial arbiters? I think you will accept this answer: that such railway operators, placed in a position of honour and permanency could

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119526

be expected to give a similar type of public service as we are accustomed to receive from the most partisan lawyers when they are elevated to the Bench.

But, it might fairly be asked: Would the railways encourage a competent operating official leaving them for the Tribunal? The railways probably would recognize that the work of such men would prove of much more value in the effort to effect large savings for the roads than by any services they were rendering in their specific operating capacities.

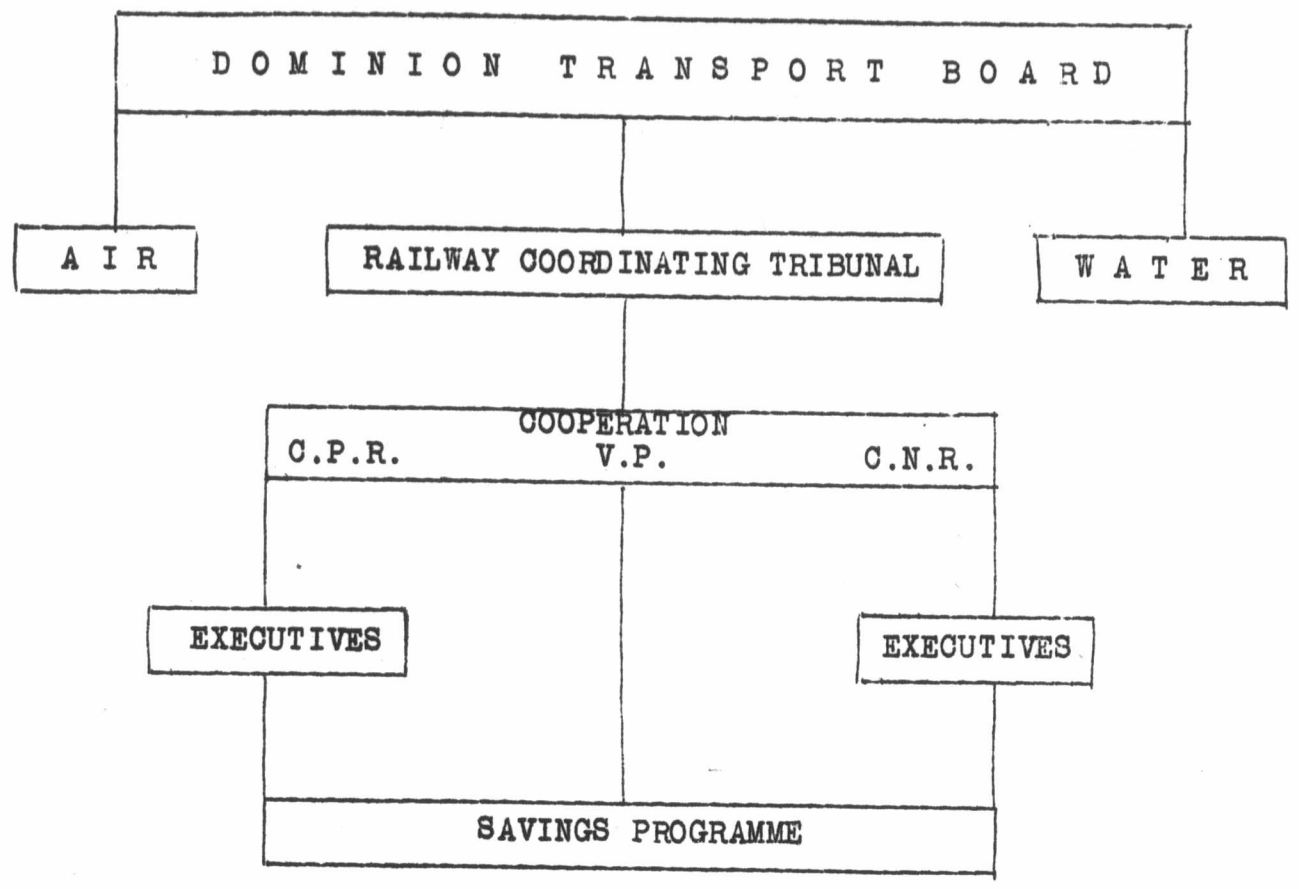
I must admit that at first I was rather inclined towards "Compulsory" Co-operation. It looked so simple in getting results. But probably it was too simple to be sound. For this Railway Problem of ours - of all Canadians, just as much as of the Senate and the Government and the railways themselves - is complex and bristles with difficulties. There is at least one possible result of "compulsion" that should be given careful consideration. In the event that the private company was forced, without its consent, to carry out a broad programme of changes, involving loss of earning power and abandonment - and destruction - of assets, the security holders, as was the case with the shareholders of the Grand Trunk Railway Company, might seek to place responsibility upon the public body, and, therefore, on the Government of Canada. I do not like the precedent of 18 or 20 years ago.

WIDESPREAD PUBLICITY - A POWERFUL INFLUENCE:

In case it should be thought that under these circumstances we were getting back to the present unsatisfactory results of "voluntary" Co-operation - in spite of the large extension in the efficiency and scope of the Tribunal I have proposed - I would add the element of "Publicity". Periodically, there should be made public to the people of Canada a list of all the proposals for Co-operation and savings that had been under consideration, with the verdict reached by the Tribunal, the attitude of each of the railways, and the final step taken, positive or negative. Widespread Publicity, which has been largely absent so far, I am convinced would soon become one of the strongest influences toward securing comprehensive Co-operation. This would leave full responsibility with the railways, and remove it from the shoulders of the Government.

Hence, my final judgment would be in favour of "Supervised" Co-operation on a broad scale without recourse to compulsion on the part of an outside body.

May I also urge, that one of the most important functions of this proposed Co-ordinating Tribunal would be to analyze and appraise the possible savings of various suggested programmes of joint action by the railways, which by the nature of their sponsorship and the claims made in the way of large savings naturally have commended themselves to a considerable section of the public. That would be only fair to adherents of these plans; only fair also to those who are opposed to them and are adherents of other plans, in particular those who believe in the efficacy of Co-operation as an alternative; and only fair also to the general public who will be the final judges.



I have not attempted to work out the exact relation of the "Railway Co-ordinating Tribunal" to the over-all body, the "Dominion Transport Board". The former would have the job of "co-ordinating" the two transportation public utilities in the best interests of Canada; with the Transport Board, probably, as today, a court of last appeal - between the public, the railways and that other active agent in solving the railway problem, namely, the Co-ordinating Tribunal.

119527

Diagram Showing How Supervised Co-operation Would Work Out.

OBJECTIONS RAISED TO OUTSIDE TRIBUNAL:

A study of the evidence submitted before the Senate Committee at the 1938 Session has left me confused as to the attitude of at least one of the partners in Co-operation towards an outside, independent Tribunal, an important factor in the Railway Act and a much more important one relatively under the plan I have suggested of "Supervised" Co-operation. There was an apparent unwillingness to accept any intermediary in disputes. One statement raised a question as to "the judgment of an independent tribunal which would have to take up an isolated case which would affect a company throughout the whole system". Under the plan I have suggested, the Tribunal would not take up an "isolated" case; it would deal with a comprehensive programme, and balance up the items as between the two railways. In another instance, objection was raised to making application to a Tribunal as likely to disturb the "cordial" relations between the two groups. One wonders whether a heavy penalty is not being paid for "cordiality". Once again, it was urged that "compulsion" would remove the "responsibility" that has been recognized heretofore to exist "under statute and contract" with the Canadian Government. While I am not advocating "compulsion" it is only natural to raise the parallel instance of an almost complete surrender of "responsibility" (over assets and earnings) that would develop under Joint or Unified Management. In either case - with Compulsory Co-operation or Unified Management - the "quid pro quo" for a loss of responsibility would be 50% share in the savings.

ESTIMATES OF SAVINGS:

I have already urged that the amount of savings that might be accomplished under any particular plan should not be allowed to determine a decision in its favour - regardless of the final effect of any such plan on the "public interest". These various estimates of savings, however, cannot be ignored. They have two important

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119528

aspects: they must be an influence on a final selection of a plan for railway savings; and, secondly, the larger the claims for savings, the greater the probable influence on the public mind - all other factors being equal. Perhaps long years of experience over the predominating fallacy in estimates of savings under mergers or consolidations of industrial corporations have rendered me rather skeptical of practically all the estimates dealing with the Railway Problem. I would like, however, to check up on these estimates in two or three directions.

One estimate was that abandonment of 5000 miles of road would save $16,000,000, or $3,200 a mile. Even when this figure, at last session, was cut to $7,500,000, the average saving would be $1,500 a mile. Actual abandonments, so far as I have been able to learn, averaged far below even the latter figure, and some were down to $300 a mile.

One interesting test of the estimate of $75,000,000 in savings, and, I think, essentially a fair one, would be to allow for the 50 percent share claimed for the private company, that is, $37,500,000, and deduct this saving from operating costs as they actually were for 1930 to which the estimate applied. The result would be remarkable. The amount available for dividends would have been increased from $38,000,000 to over $75,000,000; 58% would have been earned on the 4% preferred stock instead of the actual 29%, and $5.33 on the common in place of $2.51. Allowing for the split of 4 - for - 1 in the stock in 1930, earnings on the common would have exceeded $21 a share on the old basis - a level never reached in the Company's history. Moreover, in place of almost 79%, the operating ratio would have been cut to 58%, a level sharply below that of any railways in the United States or Great Britain.

The average operating ratio of all the Class I roads in the United States in 1930, for instance, was 74.4% (in place of 58%); the best showing I could find being about 64% for the Chicago & Milwaukee, while the Pennsylvania was 74.8%, and the New York Central, 78.8%. The average of the four British railways was 80.8%, only the Great Western falling below 80%, and the London, Midland & Scottish operating at a ratio of almost 82%. The result indicated for the Canadian road would have been viewed, I am convinced, as a "railway miracle".

"NET" SAVINGS VERSUS "GROSS":

But we cannot afford to leave estimates of savings merely as "gross", without taking account of various offsets and necessary deductions arising out of steps taken by the railways to cut down costs. We must seek to determine what "net" savings will be after the "debit" items have been deducted from the "gross". So far as I have been able to discover, no attempt has been made to set forth the "net" savings in any estimate presented, and obviously I can only indicate a few in fairly general terms.

Among the offsets to gross savings, the element of labour bulks largely. One aspect of this is the admittedly lower level of efficiency of labour in any effort to consolidate the workings of two huge rival systems. This is a real but necessarily intangible item. Something much more tangible is the obligation arising out of the cutting down of employes through Co-operation and every other closer-working arrangement.

In one plan, major savings are based on a reduction of 25%, and the permanent lowering of railway jobs from 100% to 75% for the future - through the "painless" operation of conforming to an estimated "turnover" in labour of 5% per year for 5 years is declared to have no bearing on the national phase of the Railway Problem.

This theory might be accepted if the C.N.R. and C.P.R. were two private plants, and each undertook, in its own interests, to reduce its staff in 5 years by 25%, that is by over 40,000

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119529

employees. That might be none of our business: "Government must not interfere with private enterprise", it might be said. But Co-operation, Unification and half a dozen other plans have been urged from the outset primarily as a means of relieving a national burden (in the form of C.N.R. deficits after bond interest); of relieving taxation by tens of millions of dollars of "savings" under the Plan. Then what of the 40,000 fewer jobs available for Canadian labour - with railway jobs permanently cut from the 175,000 available in 1930? If conditions in the labour world were as 10 or 15 years ago in Canada, we might imply that other industries might find employment for 40,000 if the railway industry curtailed its operations to this extent. Today, this would be impossible; strike off 40,000 jobs anywhere - even the 30,000 (25% of 1938 employees) - and a huge additional burden of relief would fall on the Government; and so on the taxpayer (and relief to the taxpayer is the major reason advanced in favour of any Railway plan, so far).

IF 25% OF RAILWAY JOBS WERE WIPED OUT:

The following table will help to make this hypothesis more clear:

| RAILWAY EMPLOYEES | | | SALARIES AND WAGES | | AVER. WAGE PER YEAR | | RATIO OF WAGES TO | |
|---|---|---|---|---|---|---|---|---|
| Year | Number | Index | Amount | Index | Amount | Index | Revenues | Expend. |
| 1926 | 179,800 | 100.0 | $260,350,390 | 100.0 | $1,448 | 100.0 | 45.7% | 58.0% |
| 1927 | 182,143 | 101.3 | 273,932,396 | 105.2 | 1,504 | 103.9 | 48.1 | 58.9 |
| 1928 | 187,710 | 104.4 | 287,775,316 | 110.5 | 1,533 | 105.9 | 47.0 | 59.8 |
| 1929 | 187,846 | 104.5 | 290,732,500 | 111.7 | 1,548 | 106.9 | 48.9 | 60.2 |
| 1930 | 174,485 | 97.0 | 268,347,374 | 103.1 | 1,538 | 106.2 | 55.4 | 66.1 |
| 1931 | 154,569 | 86.0 | 229,499,505 | 88.2 | 1,485 | 102.6 | 58.5 | 65.4 |
| 1932 | 132,678 | 73.8 | 181,113,588 | 68.6 | 1,365 | 94.3 | 56.4 | 64.5 |
| 1933 | 121,923 | 67.8 | 158,326,445 | 60.8 | 1,299 | 89.7 | 53.9 | 62.5 |
| 1934 | 127,326 | 70.8 | 163,336,635 | 62.7 | 1,283 | 88.6 | 54.3 | 64.8 |
| 1935 | 127,526 | 70.9 | 172,956,218 | 66.4 | 1,356 | 93.6 | 51.2 | 60.1 |
| 1936 | 132,781 | 73.9 | 182,638,365 | 70.2 | 1,375 | 95.0 | 49.9 | 59.0 |

1937 and 1938 -- No figures yet available on exactly same basis as those for prior years.

This table shows that the number of railway employes rose from 179,800 in 1926 to the peak of 187,846 in 1929, but that the number was cut down by 66,000 by 1933, and only slightly increased since then. Wages rose from $260 million in 1926 to $290 million in 1929 - the peak for all time. The average wage of $1,548 in 1929 fell to $1,283 by 1934.

But, apart altogether from the sharp drop in railway employment through falling revenues, it is proposed - to effect savings - to cut down normal employment by 25%. In the light of unemployment conditions and of jobs available in Canada today, this further cut (large or small) necessarily is thrust into the foreground as a matter of national concern, a very definite part of our Railway Problem. I have tried to illustrate this phase by the following table:

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119530

| Year | 25% of Employes | 25% of Wages | Average Wage | Amount at $500 |
|---|---|---|---|---|
| 1926 | 44,950 | $65,087,597 | $1,448 | $22,475,000 |
| 1927 | 45,536 | 68,483,099 | 1,504 | 22,768,000 |
| 1928 | 46,927 | 71,943,829 | 1,533 | 23,463,000 |
| 1929 | 46,961 | 72,683,125 | 1,548 | 23,480,000 |
| 1930 | 43,621 | 67,086,843 | 1,538 | 21,800,000 |
| 1931 | 38,642 | 57,374,876 | 1,485 | 19,321,000 |
| 1932 | 33,219 | 45,278,397 | 1,365 | 16,609,000 |
| 1933 | 30,481 | 49,581,611 | 1,299 | 15,240,000 |
| 1934 | 31,831 | 40,834,159 | 1,283 | 15,915,000 |
| 1935 | 31,881 | 43,239,054 | 1,356 | 15,940,000 |
| 1936 | 33,195 | 45,659,591 | 1,375 | 16,597,000 |

The figures speak for themselves. Taking the year 1930 again, a 25% cut in employes would have amounted to 43,000, whose share of total wages would have been $67,000,000. Under conditions of heavy unemployment prevailing for years past, due to a serious lack of available jobs for employable men, any heavy reduction in railway jobs would increase by close to that amount the number of unemployed. Take the average wage of $1,538 prevailing in 1930, and even if only $500 a year were paid to keep a family on relief (that under normal conditions of 100% railway employment would have received a job on the railways), some $22,000,000 would require to be deducted from estimated gross savings to cover the extra drain on the public treasury as the direct result of these railway savings. And so on, for other years. Hence, our railway deficit would be reduced, but our <u>unemployment relief</u> would be increased.

Once again, there is no suggestion that if 75% of the employes would be sufficient, the railways should be forced to employ 100%: the figures are presented simply as a large and serious debit item - from the national standpoint - against estimated gross savings.

These debit items, then, would include heavy capital expenditures, dislocation of efficiency if a unified management were to be put into effect, such dislocation of industry as would result from a widespread abandonment of mileage, and the relief problem arising out of the reduced employment. It would be extremely difficult to hazard even a guess as to what proportion of <u>gross</u> estimates this <u>net</u> balance finally would represent.

<u>UNIFIED MANAGEMENT ONLY HALF WAY - CONTEST FOR CONTROL?</u>

Several proposals, public and private, have based estimates of substantial savings on a form of consolidation of the railways, not of assets, but to the extent of their operation under Joint or Unified Management. Generally speaking, a Board of 15 members has been suggested. In one case, 5 would be chosen by the Government as representing the C.N.R. interest; 5 by the Canadian Pacific, and these 10 were to be given the task of agreeing upon another 5. In another instance, the third 5 were to be chosen by various public bodies. But either plan, in an attempt to lay one problem, raises another that promises to bristle even more with difficulties. If years have gone by without the two railway groups being able to reach agreement on certain mechanical details, and to go ahead and save money, what about agreement on the major point - the personnel of management - the five men who will hold the "balance of power"?

For Unified Management is not an ordinary "merger", a consolidation of two independent systems into one unit. Where two corporations merge, a new corporation usually is born, with the old securities eliminated and replaced by new; the two old individualities eliminated and replaced by a single new one. There is no reason why the old antipathies and jealousies between competitors should then survive. There will no longer be the interests of "A" or the interests of "B" - the interests of "C" alone exist. Hence the two groups can work together freely; even with enthusiasm.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

ARCHIVES PUBLIQUES
CANADA

[ 19531 ]

But Management only? Either the plans go too far in seeking a unified management of two separate systems; or they go only half far enough - and should have unified these two systems so as to eliminate their separate interests and enable a real unified management, in control of a single, unified system, to function without friction. As it is, the Canadian Pacific will still remain a separate corporation (whatever is done towards merging its physical assets); it will have a president, I presume, vice-presidents and other executive officers; and what perhaps, is more important still, it will have tens of thousands of holders of its preference and ordinary stock, and holders of its debentures and bonds. And the Canadian National Railways will still exist as a separate entity - with officers, and huge liabilities in the form of bonds in the hands of the public - and, most important and difficult of all as a divisive element, there will be the public interest, and the trusteeship for the public that will remain vested in the government of the day.

The "Semi"-Unified plans suggested would be difficult enough - exceedingly difficult to operate - if the two systems were privately-owned. Leaving a private corporation and one publicly owned to continue apart but with a merged management would only complicate the other difficulty. The vital point for each would be control of management, and the scramble for control of the five neutral members on the Management Board is suggestive to me of something that might easily prove to be one of the most unholy spectacles in the railway or political history of Canada.

A complete unification would require the consolidation of assets and of securities, as well as management, into one common corporate system. I am convinced, in the face of the strange anomaly of two great transcontinental systems operating side by side, with one representing "private", and the other, "public" ownership, that the only complete and logical unification would be the "nationalization" of the railways of Canada under public control. Such a consummation, I firmly believe, would be advantageous only if present railway conditions became much more serious than they actually are today. It is to prevent such an emergency step that I have urged this plan of Supervised Co-operation.

AMALGAMATION WOULD CAUSE NEW PROBLEMS OF MANAGEMENT:

The next step after Unified Management, and often urged, is that of "amalgamation of assets". As the British post-war reorganization of its railway system into the present four units has frequently been cited as an example for Canada (although "four" is a good deal more than "one"), I would like to place on record an opinion given recently by Sir William Wood, Vice-President and Financial Adviser to the greatest railway in England, the London, Midland and Scottish. The question was asked this official, at the time (late last year) of the appeal of the British railways to the Government for the wiping out of all restrictions in order that the roads might be the better able to compete with the trucks, as to whether "amalgamation" were not a possible remedy. His reply, which emphasizes also the "public" interest, as well as that of the railways, was as follows (according to "The Financial News", of London):

> "Railway amalgamation would not materially affect railway net receipts; in fact, it might cause new problems which would decrease net receipts.
> "I see it suggested that the railway workshops should be reduced in number. Each of the amalgamated companies has made reductions in the number of its shops, but very gradually owing to the disturbance it created.
> "This involves the fortunes of whole towns. Assuming Doncaster, Wolverton, Crewe, Derby and Swindon were amalgamated into one or even two, very difficult questions would immediately arise in regard to the transfer of staff, with its reaction on housing questions.
> "There is a limit to the size of businesses, and amalgamation would cause new problems of management. But shortly, amalgamation does not solve the present difficulties or even ameliorate them."

## RAILWAY REVENUES VS BUSINESS ACTIVITY

I would like now to deal with a department of the railway situation in Canada that may provide quite as broad a field for effective improvements in net earnings as Co-operation or Unified Management or any other method that may be considered by the Senate Committee or the Government. I refer to the serious losses in recent years of freight and passenger revenue through highway competition. So destructive has this been to railway revenues that the latter have failed by a large margin to keep pace with the gains shown in industrial activity throughout Canada. During the Senate inquiry, Senator Meighen made reference to this outstanding phase in these words:

> "Keep in mind that the railway business has been for years a diminishing business relative to the aggregate business of the country".

Until I read this statement, in a study of most of the 1,250,000 words of evidence, I had only realized this truth vaguely. When I came to explore it, I was amazed at the extent to which the railways had been falling behind the pace of business in Canada. I would like to record the alarming facts and to try to interpret them. The table sets up a parallel of volume of railway business in Canada and volume of business activity from 1926 to 1938, with the 1926 results taken as the yardstick and designated 100.

| Year | Gross Revenues C.P.R. & C.N.R. | Index of Railway Bus. | *Physical Vol. of Bus. Index | % Increase over 1932 Rly. Revenues | % Increase over 1932 Bus. Index |
|---|---|---|---|---|---|
| 1938 | $324,339,000 | 69.2 | x112.4 | 13.8% | 42.8% |
| 1937 | 342,984,363 | 73.1 | 122.7 | 20.3% | 55.9% |
| 1936 | 325,173,252 | 69.3 | 112.2 | 14.1% | 42.6% |
| 1935 | 302,863,406 | 64.4 | 102.4 | 6.3% | 30.2% |
| 1934 | 290,445,457 | 61.9 | 94.2 | 1.9% | 20.0% |
| 1933 | 262,789,430 | 56.0 | 79.7 | - 7.8% | 1.2% |
| 1932 | 285,040,308 | 60.8 | 78.7 | - | - |
| 1926 | 469,000,000 | 100.0 | 100.0 | - | - |

xFirst 11 months.

*Figures of Dominion Bureau of Statistics.

Some of these contrasts are startling: indeed, one does not need to go beyond this brief record to discover the chief origin of a "Railway problem" in Canada today.

### RAILWAYS OFF 44%; BUSINESS ONLY 20%:

How far did railways and business slump during the depression? By 1932 the business index was off from 100 in 1926 to 78.7; the index of railway revenues was down to 60.8: business was off 21.3% but the railways were down nearly 40%.

In 1933, railway gross was still lower, off 44% from 1926 totals, while business in general was beginning to pick up - at 79.7% of 1926 - off only 20.3%.

In 1934, railway gross was 61.9% but business up to 94.2% of 1926 - the one still down 38%, business now off only 6%.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

In 1935, railway gross at 64.4%, but business actually higher than in 1926 at 102.4% - one still off 35.6%, the other actually up 2½%.

In 1936, railway gross up to 69.3% of 1926, but business up to 112.2%; railway still off 30% from 1926, but general business 12% above 1926.

In 1937 - the peak of the recovery - railway gross at 73.1%, but business up at 122.7% - railway still below 1926 by 27% but business almost 23% higher.

In 1938, railway gross down again at 69.2%, with business at 112.4% (for 11 months) - again a very sharp contrast; the one off 31%, the other above 1926 by 12%.

RAILWAY RECOVERY ONLY ONE-THIRD OF BUSINESS:

Or again; the depth of the depression (for the railways), 1933, found railway revenues off no less than 44% from 1926 - down from $469,000,000 to $263,000,000 - while the business index had fallen only 20%.

Or, put it this way; from 1932 to 1938, railway revenue recovered only 13.8%, where business had recovered 42.8%; that is, railway revenue recovery in six years was not one-third the percentage of business recovery in Canada!

EACH RAILWAY'S LOSS ALMOST IDENTICAL:

A study of the experiences of the C.P.R. and C.N.R. will make it clear that in this phase of the railway problem, as indeed in most, each suffered almost identically: highway competition played no favourites.

C.P.R. gross recovered 27.2% from the railway depression low of 1933 to the high levels of 1937, while the C.N.R. showed a gain of 33.2% - C.P.R. being up from $114 million to $145 million; C.N.R. up from $148.5 million to $197.9 million.

But, between 1933 and 1938, C.P.R. gross was up 24.6% while C.N.R. gross was up 22.6% - as against a business gain of 42%. The contrast between 1932-1937 and 1932-1938 results from the two systems (in one the C.N.R. gain being higher, and in the other C.P.R. being up slightly more), was that United States business originating in its Grand Trunk Western division gave the C.N.R. a marked advantage in gains in 1937 over the C.P.R. In 1938, the positions were reversed. Losses were sharper for the C.N.R. through a heavier decline in U.S. business than Canadian, especially that business having its origin in the automobile area of Detroit and vicinity.

But, let us note carefully, nature was distinctly neutral - refusing to recognize any distinction between the "public" and the "private" systems.

GROSS LOSS OF $204,000,000: HOW MUCH CAN BE REGAINED?

Let us leave these glaring discrepancies in percentages and make a single check-up on just what it would have meant in revenue to the railways had they continued - as years ago - to progress in line with the business index (which includes not only industry but agriculture, and the development of natural resources, production, exports, and a score of other constituent elements of national activity).

In 1938, the business activity index was 12½ per cent ahead of 1926. In 1926, railway revenue was $469,000,000. Add 12½ per cent to this, and the total would be $528,000,000. Actual railway revenues in 1938, however, were only $324,000,000 - or $204,000,000 less - a terrific difference; and most of it was the toll paid to highway competition in Canada!

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119534

This is the picture so far as gross earnings are concerned. What of net?

The $528,000,000 - on the basis of the business index - happens to have been just under gross railway revenue recorded in the year 1928 (and a little more than in 1929). Net profits of the two railways in 1928 were almost exactly $106,000,000. And net operating revenue of the railways in 1938 was barely $27,000,000.

Here is a sheer drop in net revenue, due in the main to highway competition, over $70,000,000. Regulate highway traffic; enforce fair competition with the railways, and restore a considerable part of this $70,000,000 to the railways in higher net profits - and the bigger part of the "railway problem" is solved.

PASSENGER AND FREIGHT CONSIDERED SEPARATELY:

It will be of interest and value in seeking to adjust the position of the railways to highway competition to consider the elements of revenue separately, as from passengers and freight. The record given below indicates that passenger revenue has been struck more severely than freight, from the combined losses to motor cars and busses. For instance, in 1932, passengers carried by the railroads in Canada, 21,099,582, was barely one-half of the total in 1926, which was over 42,000,000. And, perhaps, even more significant, while business recovered over 40% from 1932 to 1936, the number of passengers carried on the railroads in 1936 was actually less than in 1932.

Freight tonnage in 1932 was only 58% of the 1926 total (60,000,000 tons against 105,000,000), but, at least in 1936 freight volume had gained 15,000,000 tons, or 25%. Even at that it was 28% below 1926 levels, where business activity was 12% above.

The comparative record follows:

| Year | Passengers | Index No. | Freight(tons) | Index No. | Phy. Vol. of Bus. Index |
|---|---|---|---|---|---|
| 1926 | 42,686,166 | 100.0 | 105,221,906 | 100.0 | 100.0 |
| 1927 | 41,840,515 | | 106,011,255 | | |
| 1928 | 40,592,792 | | 118,652,969 | | |
| 1929 | 39,078,893 | 95. | 115,187,028 | 109. | |
| 1930 | 34,698,767 | | 96,194,017 | | |
| 1931 | 26,396,812 | | 74,129,694 | | |
| 1932 | 21,099,582 | 49.4 | 60,807,482 | 57.8 | 78.7 |
| 1933 | 19,172,193 | | 57,364,025 | | |
| 1934 | 20,530,718 | | 68,036,505 | | |
| 1935 | 20,031,839 | | 69,141,100 | | |
| 1936 | 20,497,616 | 48.0 | 75,846,566 | 72.1 | 112.2 |

NOTE: If passenger traffic had kept pace with the Business Index the total for 1936 would have been 47,893,000 - instead of 20,497,000. Had freight traffic kept pace with the Business Index, the 1936 total of tons of freight would have been 118,057,000 tons - instead of only 75,846,000 tons.

SECOND PROBLEM: HIGHWAY COMPETITION:

This brings us up fairly against the Second Phase of the railway problem. The first, of course, is, How best to undo present excess mileage and duplication to the end that substantial "savings" will accrue to the railways. This deals with net revenue, in the main. The second is, How best to bring to an end, or at least to modify, the unfair competition for the regulated railways that has developed from highway traffic - truck and bus - that is unregulated; whose rates are grossly unfair to the railways in that the truck is free to take the cream of business offered and to reject what is unprofitable, while the railway as a "common carrier" is forced to transport whatever is offered to it; unfair, also, in that trucks (and busses) are not required to contribute their fair shares of the costs of building and

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119535

maintaining the highways, while the railways bear the entire cost of their own individual "highways"; unfair; also, in the inadequate regulation of hours of labour, of wages and other conditions of employment - and in a host of other directions.

That highway competition is largely responsible for the loss of $200,000,000 of gross revenue and net of $70,000,000 for the railways makes it clear that the results that might fairly be anticipated from a fair regulation of highway traffic compare closely with the gains in net revenues that would accrue from Co-operation between the two systems. Thus, <u>two Co-ordinations</u> are essential to improve railway revenues and to ease the railway burden of the Canadian taxpayer:

1. To Co-ordinate operations of the C.N.R. and C.P.R., and

2. To Co-ordinate railway and highway competition.

As I have noted before, provincial claims of jurisdiction have prevented the inclusion of highways under the Dominion Transport Board. Obviously, the Federal and Provincial authorities must get together and work together - for the railway problem, as it concerns the public, is equally a problem of the provinces as of the Dominion. The two groups, therefore, in conjunction, should seek a solution: else Canada's railway problem will be only half solved; and the potential savings be only half realized.

<u>CANADA, GREAT BRITAIN, UNITED STATES IN IDENTICAL POSITIONS</u>:

In solving this second problem, Canada will have the advantage of exactly similar efforts being made in the United States and Great Britain to work out some method of establishing some fair basis of highway competition with the railways. Indeed, in the United States, the railways' loss of passenger traffic, if not freight, has been much more pronounced even than in Canada.

There has just reached me a copy of a report issued by the Institute of International Finance of New York University on "The Railroad Problem in the United States".

The report of the Institute opens by citing the "far-reaching adverse economic effects" of the "severe decline in the traffic and earning power of American railroads during recent years". These include: great curtailment of employment on railways and in industries that serve them; costly results to financial institutions as holders of more railroad securities than of any other industry; quality of service to public checked in improvement of quality through inability to raise money freely for modernization; business stability undermined through failure of railways to make normal capital expenditures - as they are largest U.S. industry next to agriculture.

<u>Decline in Income</u> - Operating revenues of Class I roads almost cut in two, from yearly average of $6,167 million between 1920-1929 to $3,127 million im 1932 - up to $4,166 million in 1937; down to $3,560 million in 1938. Income available for fixed charges down from average of $1,292 million to $551 million in 1932, and only $540 million in 1938.

Also: number of employes on same roads down from 2,022,000 in 1920 to less than 1,000,000 in 1938.

Some 100 roads, operating 78,000 miles of line, or more than 30% of total, <u>now in bankruptcy or equity receivership awaiting reorganization</u>. In case of 37 class I roads being reorganized, bonds outstanding are $3,767,000,000.

In 1937, production almost equal to 1929 peak, but freight revenue off 20%.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119536

In 1920, passenger traffic of 47,370,000,000 passenger-miles record for all time - down to low level of 16,368,000,000 passenger-miles in 1933, or one-third of 1920.

Transportation Tends to Increase - In dealing with the "long-term" outlook for the railways, the Institute lays down the theory that "the total volume of all forms of transportation required by the people of the United States will tend to increase, over a period of time, as the population grows and the standard of living is raised. A higher standard of living usually brings in its wake an increased per capita demand for transportation, both for goods and persons. It is true that certain influences, such as the growing decentralization of industry, the loss of agricultural export markets, and the substitution of hydroelectric power for coal, reduce the demand for transportation services. Yet, on balance", it concludes, "the long-term trend of the total volume of transportation should continue to be moderately upward".

It next refers to what it regards the most serious element in the railway situation. "The railroads", it is declared, "have been performing a declining percentage of the total volume of transportation in the United States since the World War period. Motor vehicles and pipelines have been making persistent inroads into the share of freight transportation performed by the railroads while private automobiles and buses have diverted the larger part of the passenger traffic".

FOUR MAIN PROPOSALS OF REMEDIAL NATURE:

The Report cites four of many remedial proposals that deserve particular attention, as follows:-

A. Relaxation of regulations to permit the railroads to compete more vigorously and effectively with their competitors;

B. Co-ordination and consolidation of railroad facilities;

C. Drastic financial reorganizations to bring fixed charges well within existing earning power;

D. Government ownership and operation.

AS TO A: The Report holds that "some relaxation of regulatory restrictions on the railroads, now that they are subject to such keen competition from other transportation agencies, is doubtless desirable. However, from the earnings standpoint", it is added, "it is probably more important that the competitors, especially the motor carriers, be brought under fuller regulation themselves so that they will be required to compete on a more equal basis with the railroads". Warning is given that relaxations for the railways that would lead to "excessive rate cutting" on their part would lead to "a reduction in railroad earning power, rather than its rehabilitation".

AS TO B: The most ambitious plan for wholesale Co-ordination and consolidation was the "Prince Plan", which proposed a combination into seven systems. The sponsors estimated economies of $743,000,000 annually on the basis of the "very depressed year 1932". The Report states that "it is very significant that Joseph B. Eastman, when he was Co-Ordinator of Transportation, made a very careful check of these claimed economies and found that the Plan would yield a minimum of $218,462,000 of annual economies under the most unfavourable assumptions". The Report considers that "large savings in operating costs could be achieved through co-ordination and consolidation".

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

D 19537

"Severance Compensation" - Such a proposal, it is declared, found powerful opposition from the railway labour unions, and in 1933 a clause was inserted in the Transportation Act providing that the position of no railway employe could be changed for the worse by Co-Ordination projects. In 1936, a voluntary five-year agreement was reached between railroad managements and unions under which such loss of employment required payment of an allowance varying from two months' full pay for less than one year's service, to 60 per cent of the regular wage scale for a period of five years where there had been fifteen years of service. In the case of the Prince Plan, 76,000 employes would have been displaced, "involving dismissal pay of about $53,000,000 on the first year". The Report concludes: "Despite the problem of severance compensation, however, co-ordination and consolidation constitute the most promising available remedy for the financial difficulties of the railroads".

The C solution is hardly applicable to the Canadian situation.

AS TO D: Government Ownership - strongly supported by Mr. Eastman, even he opposed this as a solution for the present, it is declared, "because it would eliminate the benefits of competition, serious administrative problems would be raised, labour relations would become even more inflexible, and there is no aggressive public sentiment in favour of public ownership". In addition, "the government is not now in position to assume the heavy financial burden involved".

FOR LONG-TERM OUTLOOK HIGHWAY COMPETITION MUST BE SOLVED:

The Report definitely singles out the meeting of highway competition by the railways as the strongest hope for the future - in these words:

> "The long-term outlook for railroad traffic depends primarily upon the ability of the railway lines to check the diversion of freight and passengers to other transport agencies".

Certain recent developments had strengthened the ability of the rail lines to retard further diversion. These were summarized thus:

1. Rival transportation agencies are being subjected to stricter government regulation (since 1935). Still, "railway regulation is still far more strict than that applicable to their rivals", it is declared.

2. Taxation of competing forms of transportation has been on the increase.

3. Wages and working conditions are being improved in the truck and bus industries, "thus limiting another major advantage of the railways' rivals".

4. The railroad lines have bettered their technique, through store-door pickup and delivery service, faster delivery of freight shipments, the use of containers and detachable trailers, etc., so that the character of the service given the shipper of package and high-value freight by rail is more nearly equal to that furnished by the trucker. "However, much remains to be done in this direction", is the comment.

(This last paragraph applies also to Canada, as does also the following summing-up on this subject in the Report):

> "It may be concluded, therefore, that, while the railroads will doubtless lose additional traffic to competitive transportation media over a period of time, the rate of such diversion should be far more gradual

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

ARCHIVES PUBLIQUES
CANADA

119538

than in the past. Also, some of the traffic previously lost may be regained through better service or rate concessions, as is now being witnessed where streamlined fast passenger equipment and lower fares are causing travelers to shift back from buses to trains".

(NOTE: Experiences in Canada will bear this out).

FACTORS OF CHANGE IN RAILROAD EARNING POWER:

The Report contains the following summary of how various phases of railroad earning power have deteriorated in recent years:

| | 1937 | % of 1929 | % of 1923 |
|---|---|---|---|
| Revenue freight ton-miles carried (millions) | 360,620 | 80 | 87 |
| Average revenue per ton-mile (millions)..... | 9.35 | 87 | 84 |
| Freight operating revenues (millions)..... | $3,370 | 70 | 73 |
| Revenue passenger-miles (millions)..... | 24,655 | 79 | 65 |
| Average revenue per passenger-mile (cents).. | 1.794 | 63 | 59 |
| Passenger operating revenues (millions)..... | $442 | 51 | 39 |
| Total operating revenues..... | $4,166 | 66 | 66 |
| Maintenance expenses (millions)..... | $1,322 | 64 | 58 |
| Total operating expenses (millions)..... | $3,119 | 69 | 64 |
| Taxes (millions)..... | $325 | 82 | 98 |
| Net railway operating income (millions)..... | $590 | 47 | 61 |
| Net income (millions)..... | $98 | 11 | 18 |

## HOW ENGLAND IS SOLVING RAILWAY PROBLEM

### Agreement Between Railways and Truck Organizations to Ease Highway Competition.

In England, so-called amalgamation, which still has left four independent railway systems, has not solved the railway problem. Conditions still continue as a serious menace to maintenance of adequate earning power. So much so, that representatives of the railways, late in November last, waited upon the Ministry of Transport to urge the removal of government restrictions on the railways in order that they might be left free, and so better armed to wage war on what was declared to be the real problem, highway competition.

In the end, a plan for Co-operation between the railways and the truck organizations, or "hauliers" as they are termed, was proposed and a "square deal" agreement was worked out. Both groups agreed to set up a "Central Consultative Committee" to arrange measures of co-ordination, and the railways, in turn, gave certain guarantees for the protection of industry, in the event that existing restrictions on rates and other conditions were removed or relaxed.

An account of the agreement reached on February 5, 1939, appeared in the Weekly Edition of "The Manchester Guardian" of February 10, and I reproduce this in full below, as affording suggestions for a similar compromise - for the benefit of the Canadian railways and as a substantial means for solving the railway problem of Canada. The article reads as follows:

"Representatives of the railway companies and of the Liaison Committee on road transport rates reached the basis of agreement on the railways' 'square deal' proposals in London on Monday (Feb. 5, 1939). A joint memorandum embodying the agreed proposals will be submitted by the two industries to the Transport Advisory Council.

"The effect of the plan is that the railways will restrict objections to certain types of haulier licences for two years after receiving their freedom. The two industries agree to establish a Consultative Committee to arrange measures of co-ordination and deal with difficulties, and there are safeguards for the protection of industry in the form of right of appeal to a tribunal.

"An official statement issued at the end of the meeting said that the road haulage industry, subject to safeguards, will raise no objection to the "square deal" proposals. The two industries have drawn up a joint memorandum. Both the railway and the road-haulage industries hold the view that due regard must be given to the ultimate objective of co-ordination of all forms of transport. They are convinced, however, that it would not be practicable to apply to road transport the present railway rates structure with its elaborate classification, restrictions and obligations.

"In order to afford road hauliers greater freedom to negotiate agreements for the co-ordination of their own industry, the railways have given an undertaking that they will not, unless there are exceptional circumstances, raise objections for two years after they have been given their freedom to applications for -

(a) The renewal without any alteration of existing A or B licences;

(b) The granting to existing hauliers of A licences for additional vehicles;

(c) The granting to existing hauliers of additional B licences for vehicles whose operations are limited to a radius not exceeding twenty-five miles.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

D 119540

"The two industries agreed to set up voluntarily a Central Consultative Committee to arrange measures of co-ordination and to deal with difficulties that may arise. The committee will consider and formulate the principles on which voluntary agreements can be entered into in regard to the rates to be charged by road and rail for merchandise traffic.

"In regard to the fear of the road haulage industry that the railways, if freed from their present obligations, might use the freedom coercively, the railways state that it is an explicit part of their proposals that they should charge reasonable rates and that there should be a right of appeal by traders on the question of reasonableness to a tribunal.

"The memorandum claims that the recommendations contain ample safeguards for the protection of trade and industry in the form of a right of appeal to a judicial tribunal, and that nothing in the proposals involves any interference with the right of the trader to use his own vehicles under a C licence.

"The two forms of transport, the memorandum concludes, will continue to exist side by side as competitive but co-ordinated agencies."

CANADIAN RAILWAYS AS HIGHWAY OPERATORS:

Coming back to the Canadian situation, one feels that the only solution is not a fair regulatory control over competing highway operators. One dares to hold the view that the railways themselves - even at this late date - could profitably enter the bus and trucking business. What more complete and attractive service could the railways offer to potential customers, than the alternative of rail or truck facilities to move flour, or sugar, or cement - or the thousand and one commodities that have slipped, here and there, from their grasp?

I would like to give two examples of possibilities along this line. One is the Provincial Transport Co. of Montreal, which is controlled by Montreal Tramways Company and is steadily expanding its excellent bus services over the Province of Quebec. I am not quite clear that the two railways could not have organized a joint bus service years ago - to supplement and fit in with train passenger service. Starting in competition today with Provincial Transport obviously would constitute unfair competition.

The New York, New Haven & Hartford Railway (steam) gradually has developed or absorbed a large percentage of bus and truck business in Massachusetts, Rhode Island and Connecticut, largely through the "New England Transportation Company", and operates also in New York State.

FAIR BUS DECISION OF QUEBEC PUBLIC SERVICE COMMISSION:

In many quarters the view seems to be held that just because a dispute in jurisdiction over the highways has arisen in the case of at least two Provinces, the "provincial" attitude, if it can be considered as distinct from that of the Federal, favours local bus or truck organizations and is not disposed to treat the steam railways fairly.

Such a conclusion cannot be assumed. I have just come across a judgment rendered by the Public Service Commission of Quebec that impresses me as an almost ideal method for a government body to adopt in sizing up the relative claims of a railway and an applicant for a bus licence, and might well serve as one basis for the regulation of highway competition. As I have not seen it quoted yet, I will make a brief summary of the case.

119541

An application had been made to the Commission by a private party for authority to handle passengers by taxi, at so much per person, from Dolbeau to Quebec, going through the National Park. The application was opposed by the Canadian National Railways on behalf of a subsidiary, the Quebec and Lake St. John Railway. For the latter, it was stated that it had been a pioneer in establishing communication between Chicoutimi, the Lake St. John region and Quebec, for both freight and passengers; that the only and exclusive means of travel between Quebec and these districts during the winter season (almost seven months of the year) was by trains of this company; that costs were particularly high on account of the rigorous climate and heavy grades; that during the last few years three vehicular roads had been opened up by which both passenger and express traffic had been diverted in great part to automobiles or trucks; and, that, if present existing competition were increased, the railway would be forced to adopt drastic curtailment of its services so as to avoid serious losses.

It was also pointed out that the railway company "makes a distinction between auto bus operations which are complementary to the rail service, capable of being co-ordinated with the rail service, and auto bus operations which accomplish little or nothing in added service to the public but merely serve to divert from the railway local and long distance travel". In regard to complementary auto bus services, the railway agreed to co-operate with approved bus operators of this category by mutual arrangement of bus and train schedules, the use of stations, interchange of tickets and ticket facilities, and "any other measures which will co-ordinate services and make for efficiency, economy and public convenience". The commission was informed finally that "if the railway receives protection against competition for its local and long distance services, it is prepared to furnish a reliable adequate summer and winter service", and to co-ordinate its services with complementary auto bus services. If, however, it was stated, "the railway must face competition from auto buses in its local and long distance services, then the railway refuses to recognize any obligation to furnish any passenger service winter or summer which does not pay".

The Commission refused the private request, under the following judgment:

"After careful consideration the Commission has reached the conclusion that the evidence submitted by all parties would not justify it in granting the request of the Applicants, but on the contrary if it were granted it might lead to a modification of train service prejudicial to the district in question as well as to the inhabitants thereof.

"The Commission wishes to call attention to the fact that during the winter this region has no other means of transportation but the railway and if it is desired that this means continue it is important to make this possible by avoiding all competition which local needs do not call for at the moment".

RAILWAY TO OPERATE BUSES:

The final step was an application by the railway itself to the Commission for permission to operate a bus line of its own between the Lake St. John district and Quebec City, the highway being only 157 miles in comparison with 226 miles by rail. This request, I understand, is expected to be granted - completing a sound policy in relation to railway and highway competition, a government regulatory body, and the interests of the public.

## HOW THE PUBLIC INTEREST IS INVOLVED

I would like to make some reference to what I consider one of the most important considerations involved in any solution of the railway problem of Canada, what may be termed the "public interest". Senator Graham laid emphasis on this during the Senate inquiry. He said, in part (page 94 of the report): "When an application comes before the Board of Railway Commissioners, the fact that a saving may be made may not be conclusive evidence that the line ought to be closed. There is another element that is probably of greater importance than that. Will the saving adequately provide for what the public loses by the abandonment of that line? It might be that a good case could be made out by the railways for economy, but that it would not be a good case for the public".

The "public interest", I would like to urge, enters into the solution from many angles. We should consider the two railways as primarily not two private operating corporations but as performers of a public function; as public utilities doing a public service, not only by far the largest but by far the most important public utilities in Canada.

Nor should their importance be judged by present necessities but much more in the light of future requirements. When we consider, as we have been doing, the problem of the railways in Great Britain and the United States, stress rightly is laid on the need to maintain railway services for the needs of industry, agriculture, etc., of today or for the expanded needs of the future. But, for Canada the future holds in store, not only a busier area of today, but a new area of the future when the map of today is rolled back upon our undeveloped north.

It is fairly simple to visualize the physical map of England or the United States in the future - where both countries are fully developed today - in the main. Canada's greatest development lies before her - in multiplying many times the remarkable growth of our mineral resources; in the building up of great newsprint mills among our forest resources of the farther north; of new water powers; of much else. And, more than ever before, railway transportation is absolutely essential as these developments move back from the front of population, industry and tidewater facilities.

Let us not, just because abandonment of lines will show a saving today, strip the future of lines needed for developing our natural resources. Let us not, simply because the public railway system stands as a heavy strain today on our finances, become panic-striken and conclude that the drain is too heavy to be borne - and do today what we will repent tomorrow. A substantial cash deficit on the C.N.R. may not be too heavy a price to pay for the guarantee of facilities that the future will lean heavily upon.

### NORANDA MINES: $3,250,000 VERSUS $150,000,000:

Take the railways in relation to the development of our mineral resources alone - the wealth from which was the most powerful factor in shielding Canada from descending to the worst depths of the recent business depression. It is fair to say that a large proportion of the huge total of billions of dollars of mineral production in the past 25 years would never have been brought up out of the earth had it not been for the railway facilities provided by the two systems.

And the actual cost - in railway expenditure - is a very small item against the results. The profit seldom passes directly to the railway; frequently a small deficit is charged to it, and we say it does not pay. But millions are added to the wealth of Canada - and the railway cost is a small (and richly profitable) commission to pay.

Let me illustrate. Some 12 years ago the Canadian National agreed to build a branch line from the National Transcontinental to Rouyn - a distance of 44 miles - on the prospects of the establishment of the first copper-gold operation in the Northern area of Quebec Province.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119543

The line was built, and one of the best known mines in the world was born. In the 11 years since then (1928 to 1938) that mine produced gold and copper to a value of over $150,000,000, and the cost to the C.N.R of that branch line was $3,250,000 - a mere 2% or one-fiftieth of the wealth that this expenditure made possible. That mine was "Noranda". And to its shareholders it has paid out in dividends $48,000,000 - or nearly 15 times the cost of the railway line.

That railway line served the "public interest", as well as the private. For some time past, I believe that 44 miles of road has paid a fair return on its cost: were it showing a deficit, could we fairly brand that mileage as a net loss to Canada (and the taxpayer) or a very profitable item of "overhead cost"?

HUDSON BAY MINING - CONSOLIDATED SMELTERS:

Let us move west to Manitoba. There is a mine there, destined, it seems, to be one of the greatest in Canada as a copper and zinc producer and a contributor to Canada's wealth. Into that mine was cast, for years, in the development stage, more millions of dollars, we are told, than ever went into any other mine ever developed in the history of the world before it had started to produce. Some $60,000,000 has been invested in it, most of it coming from outside Canada, and nearly $25,000,000 of new wealth comes forth each year. That mine is known, in every mining circle in the world, as "Hudson Bay Mining & Smelting", and the absolute condition of its birth and growth was a branch line of the Canadian National Railways, that cost $9,000,000 to construct, and does not yet pay. Would you call that deficit in operating cost a debit or a credit item for Canada?

Let us go westward to British Columbia, where a Canadian Pacific line made possible the honour - and the profit for Canada - of owning the greatest lead mine in the world. A mine that between the years 1920-37 has brought out of the earth national wealth of $386,000,000; paid to its shareholders large sums, and contributes to the C.P.R. as holder of a controlling interest in its shares rich dividends now, exceeding $5,000,000 in 1937, and annually provides for it $3,000,000 to $4,000,000 of freight revenue.

It has been estimated that each dollar that has been spent on railway construction in Canada is represented by 1000 per cent in the national wealth resulting directly therefrom. And future dividends should continue on the same impressive and profitable scale.

$20,000,000 TO $30,000,000 A YEAR: RAILWAYS' SUBSIDY TO WHEAT GROWERS:

Just one more reminder of our debt to the C.P.R. and the C.N.R. It is well known that in Canada existing grain rates are the lowest relatively of any country in the world. For an area that extends from the far west to the eastern terminal of the Hudson Bay Railway, grain rates are today in force that date back to the original Crow's Nest agreement of 1897 - 42 years ago. I have asked railway men for estimates as to what subsidy the railways are paying to our wheat industry in providing transportation at excessively low rates. The answers have run - for an average wheat crop - from $20,000,000 to $30,000,000 a year.

From first to last, we spend large sums in subsidies to stimulate natural production. If even a portion of this twenty to thirty million dollars was returned to the railways, the C.N.R. deficit would be largely reduced, and the C.P.R. would be enabled to restore the old-time dividend on its preference stock, and to pay a substantial return on its ordinary shares.

## SOME MISCONCEPTIONS

I would like now to comment on a few of what appear to me to be "misconceptions" as to what the railway problem really is and what it is not. I offer this as a necessary corollary to the consideration of any definite plan.

"BANKRUPTCY" AND "REPUDIATION" AS THREAT:

In public discussions, in some speeches and newspaper editorials, the argument is advanced that the burden to the country at large arising out of the Canadian National Railways must be removed; otherwise, "disaster" will follow. One particularly zealous newspaper recently declared that if one particular plan of solving the railway problem were not adopted, Canada would be brought to "bankruptcy" and "repudiation". Such comment, to my mind, was quite unpardonable. It gave the impression of seeking to force acceptance of this one plan by arousing a feeling of panic in the public mind.

This editorial I cite as an instance of "gross exaggeration". In reply, I suggest that any country that could (with practically no change in the rate of taxation) show the remarkable recovery that Canada had in its national finances between the fiscal years of 1935-36 and 1937-38, need have no fear of bankruptcy, under any efficient operation of the government railway system. For through recovery in business, in imports and general buying, and in the earning power of its people, the Minister of Finance had been able to report to Parliament a reduction in the national deficit from $160,000,000 for the year ended March 31, 1936, to $77,000,000 the following year, and to $13,775,000 for the year ended March 31, 1938 - an improvement of $146,000,000 in two years. This over-all deficit was not incurred as a result of what was known as "ordinary" expenditures, but after making provision for special charges on revenue such as capital expenditures, C.N.R. deficits, relief and special drought expenditures. The last-mentioned item, in the fiscal year ended March 31, 1938, included over $24,000,000 spent on "drought area relief", chiefly in Saskatchewan. Without this "extraordinary" expenditure, the national finances would have shown a surplus of some $11,000,000, even after meeting C.N.R. requirements of $42,000,000 for interest on its funded debt in the hands of the public.

SHARP DROP IN CAPITAL EXPENDITURES:

Another misconception that has been allowed largely to continue without much if any effort to correct it has been the idea that the huge figures that are quoted - running into hundreds of millions of dollars over a few years - as expenditures on capital account for the Canadian National Railways, and additions to the funded debt of the C.N.R. have been continuing right through the past few years with unabated speed. I shall not attempt to appraise the merits of the heavy expenditures in the earlier years when the five separate systems were being co-ordinated into a single C.N.R. unit. It is noteworthy, however, and one of the most significant phases of the railway situation in Canada from the standpoint of the public, that the volume of capital expenditures on the Government systems - resulting in earlier huge increases in the funded debt - have been cut down sharply in the past few years. Probably the extent will surprise most Canadians. The Duff Commission Report showed expenditures (mainly on capital account) from 1917, when the Canadian Northern Railway was taken over, to the end of 1931, of $677,000,000. This total included $48,000,000 for the Hudson Bay Railway; $169,000,000 on the Intercolonial Railway; $107,000,000 on the Grand Trunk, $42,000,000 on the Grand Trunk Pacific, and so forth; or an average of $45,000,000 in each of the 15 years. Between 1932 and 1937 inclusive, capital expenditures had dwindled to barely $10,000,000, or an average of around $1,500,000 a year, against an average of $45,000,000 in the

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119545

earlier years. In this estimate I am omitting the cost of purchases of rolling stock. While in the earlier phase of paying off the equipment trust certificates, that usually are issued by both roads to provide funds for about 75% of the cost, C.N.R. purchases would require capital advances, eventually they are amortized as an operating charge.

Here, then, is almost remarkable evidence of the stemming of the spending pace, and of capital demands upon the public treasury. I feel sure this will be largely continued, at least until such time as both railways are compelled to enter into large capital expenditures to meet new demands made on them in connection with the growth of Canada. In such an event, expenditures might be looked on as "carrying" themselves in the added income they produced.

NET PROFIT UP $16,000,000 ON SAME GROSS:

One other improvement in connection with the public obligation on C.N.R. account is worth noting - a substantial reduction in cost of operations in the past few years, that is, in what is called the "operating ratio". Two years that are readily comparable and are almost identical in volume of gross earnings are 1931 and 1937. In the earlier year, revenue was over $200,000,000 (I am using even figures to simplify the comparison). Out of this total, only $1,192,000 remained as net revenue, after absorbing operating costs. In 1937, gross revenue was just under $198,000,000, but net profit rose to $17,110,000 - a gain of $16,000,000. That is, due largely to greater efficiency and to a more co-ordinated National system, the operating ratio fell from 99.41% to 91.36%, and the net profit on each $100 of gross revenue rose from 59 cents in 1931 to $8.64 in 1937.

EVEN WITH DEFICITS, CANADA NOT THE LOSER:

Another misconception appears to have been that various plans submitted would have wiped out entirely the deficiency between net operating revenues of the C.N.R. and bond interest charges ($42,000,000 in 1937 and $54,000,000 in 1938). This, of course, was impossible, as a substantial portion of the savings must fairly go to the private company. It may seem a little unorthodox, but I am compelled to express the opinion here that no matter what method of solving the railway problem is put into effect, it will be many, many years before the deficit can be eliminated; quite possibly it will always exist. And I make bold also to submit, that in view of the value of the services of the C.N.R. to Canada, as an essential unit in our transportation system, any such deficit (after all reasonable efforts to co-ordinate the two systems) would not leave Canada the loser from the C.N.R., but very heavily in its debt. And I would say the same with equal emphasis, in regard to the debt of Canada to the Canadian Pacific as our other great transportation public utility. Let us, then, not be disappointed through too great expectations.

## RAILWAY PUBLICITY AND PROPAGANDA.

Before closing this comment on certain phases of Canada's Railway Problem, I would like to urge the discontinuance - in public discussion of the railways - of discrimination and recrimination against either the C.N.R. or the C.P.R. We have with us, willingly or unwillingly, the two systems, embodying public ownership and private ownership, and I am convinced that the Two-fold Solution I have suggested has an identical application to the one as to the other. Proponents of Unification have no excuse for "knocking" the C.N.R., nor have opponents of Unification any justification for condemning the C.P.R. and seeking to penalize it just because sponsorship of Unification is fairly closely bound up with the private company. Either course only serves to becloud the issue and to make its solution more complex.

Once again, I would urge that our railways should be looked upon objectively, impersonally, as our most essential public utilities insofar as service is concerned - and with a past record of usefulness of a high order. One of the most valuable of these is in the "pioneering" past. The C.N.R. inherits the mantle of the old Grand Trunk of more than eighty years ago - in Eastern Canada. The Canadian Pacific, from the early eighties - the outcome of a ten-year programme of massive proportions fully completed in one-half that time. It was well that the Duff Commission laid stress on this, when it spoke of the "faith, courage and invincible energy" that the Company's administrators had brought to the task of building its lines through the undeveloped West; an enterprise that it declares "became a national asset of acknowledged value and importance to the Dominion".

And here might also be included an answer from the same Report that is applicable to so much of the ill-considered criticism of C.N.R. management as responsible for the creation of a heavy charge upon the public treasury: "Following upon the consolidation of many lines into the Canadian National system, in 1923, the railway has been energetically administered, and has deservedly won approval by its success in welding together the various working forces of the separate companies in the consolidated system".

### NEED OF KEEPING THE PUBLIC ADEQUATELY INFORMED:

I have referred to some phases of the "public interest" as a vital factor to be considered in working out a railway solution. These include the present or probable needs for retaining or providing for transportation facilities required for the development of our natural resources. In another direction, it is important that the "public interest" be served, namely, in keeping the public well informed on progress being made towards solving the railway problem, and on various plans that may be suggested and perhaps adopted. "Unification" has not lacked for sponsorship; "Co-operation" and its progress (such as it was) had little sponsorship. Moreover, defence of the Canadian National is rendered the more difficult just because it is a public railway. Obvious obstacles face defence by the officials of the C.N.R., while a championship by a government as a trustee for the public runs the risk of being discounted as "political". Some suitable settlement must be worked out, however, else the "railway issue" will become one-sided and the general public be deprived of sufficient information to enable it to view the case in proper perspective.

One instances will suffice to make clear the logic of raising this point. Propaganda was directed against recent decision to build a terminal for the Canadian National Railways at Montreal. There were obviously two sides to this proposal; only one was presented publicly.

I 19547

WHOLE-HEARTED CO-OPERATION (MINUS A "CAMPAIGN"):

I would like to carry the subject of publicity campaigns in favour of one plan or another one step further. In the event that the Senate Committee adopts any plan (for solving the Railway Problem) and Parliament passes legislation - new or amending - is it too much to assume that, in the interests of the success of such a plan, neither party to it should consider themselves free to carry on a campaign of publicity in opposition to it and in support of some other plan during the period of the experiment?

Would whole-hearted zeal towards any railway experiment - any partnership between the C.N.R. and the C.P.R. - be possible under these conditions? Would it be consistent to carry on - simultaneously - a campaign to destroy public confidence in a plan that Parliament had enjoined upon the two railway systems, by proclaiming its failure from the start, and by advocating the adoption of some other plan? One is tempted to quote, "Ye cannot serve God and Mammon".

CO-OPERATION GAVE C.P.R. RECORD EARNINGS ON ITS SHARES:

As a final argument for Co-operation (under the superior conditions which I have outlined), I wish to draw attention to an actual experiment in Co-operation that produced unique results in savings of overhead costs and in net profits. I have already made an indirect reference to it as conducted under the Canadian Railway War Board. On that occasion, the dominating factor was the emergency that demanded the maximum of efficiency in the transportation of men, foodstuffs, munitions and all the other accessories of War. The railway men of Canada, those of the Canadian Pacific, the Grand Trunk (as it was then), the Canadian Northern, and the rest, gave of their best in the national and Empire crisis. While there was no abandonment of lines, there was consolidation of effort, and there were outstanding examples of co-operation. There was a remarkable result also in railway profits. In fact, in the year 1916, for example, the net revenues of the Canadian Pacific, that is the balance left - after fixed charges and for the capital stock of the Company, was the largest in its history insofar as I have been able to trace back the results. There was earned on the common stock, for instance, $16.76 a share, where in 1928, when the traffic receipts were the largest in the history of the Company, net on the common was $14.98 a share. That is, with gross revenue of only $139,000,000 in 1916, the C.P.R. had net operating revenue of over $50,400,000, where in 1928 it required $90,000,000 more of gross to earn $51,694,000. That was an outstanding achievement for one hundred per cent Co-operation.

What was accomplished in the War years under Co-operation can be accomplished largely today.

THE PUBLIC AND THE THOUGHT OF "MONOPOLY":

I would like, before closing, to say a word directly as to "Unification", for this proposal, owing to the ability and persistency of its advocacy, has become the spear-head of the railway discussion for several years past. During these years, I have watched with the deepest interest the intense struggle that was being waged before the public. In the main, the larger campaign has been limited to Unification. Despite that advantage, it has impressed me as failing to make the necessary headway against a strong under-current of opposition throughout the country towards the phase of "monopoly" that was thought to be involved. This result, at least as it appeared to me, served to strengthen my early conviction that an almost insurmountable barrier lay in the way of its acceptance by the public at large and by Parliament. Nor was this conclusion weakened by the recent admission of some leading advocates that only through the extreme or emergency step of the formation of a "National Government" could the necessary legislation be pressed through at Ottawa.

119548 119550

As for myself, feeling that any railway plan that embodied some form of monopoly would have no chance of being placed on the statute books, I have sought for something that would not be too radical a departure from the present experiment, but would provide a competent outside body on whose fairness both railways could rely, while the automatic element of reference to a tribunal would remove that "contentious" element that has been objected to in the present "Canadian National and Canadian Pacific Act".

Hence, I would urge that some measure like "Supervised Co-operation" be adopted as the most effective plan for immediate results in lessening duplication and creating savings, with a fair form of regulation of highway competition as a means for the recovery of much of the traffic that has been lost in recent years.

## RECOMMENDATIONS

1. SUPERVISED CO-OPERATION:

Revision of present system of Co-operation so as to make it more workable, and much more effective in regard to savings. Present basis of "arbitral tribunal" (not once invoked by the railways) should be extended to establishment of permanent and larger body known as "Railway Co-ordinating Tribunal", membership of which would include railway experts, and whose duty, all the year round, would be to supervise Co-operation and to see that it was made effective.

It would have two functions: (1) as a referee to decide as between the two railways where disputes occurred over plans that promised savings (all failures to agree being reported to it automatically); (2) in an advisory capacity, to study the entire field of operations and to suggest methods of savings.

A Co-operating Committee of the railways would have a neutral Chairman, the Vice-Chairman (or even Chairman) of the Railway Co-ordinating Tribunal, to strengthen the spirit of co-operation and to stimulate action.

These recommendations arise out of weaknesses in the present Act governing Co-operation and the disappointing results of railway action during the past four or five years - due to the lack of close and permanent contact with the Tribunal.

As a background and a precedent for abundant success for Co-operation there is the experience of the Canadian Pacific Railway during the War years. Under the jurisdiction of whole-hearted co-operation through the Railway War Board, with Mr. W. M. Neal as Secretary and virtually manager, the C. P. R. (in 1916) showed the lowest operating ratio in its history, and the largest per share earnings on its preference and ordinary shares, and with gross revenue of only $139,000,000 came within $1,200,000 of equalling the record for all time of net profits, that of $51,694,000 established in the year 1928, when the company had the benefit of $90,000,000 more revenue.

In case it should be thought that without compulsion we were merely continuing the present unsatisfactory results of "voluntary" Co-operation - in spite of the large extension in the efficiency and scope of the Tribunal I have proposed - I would add the element of "Publicity", largely absent so far in co-operative effort. Periodically, there should be made public to the people of Canada a list of all the proposals for Co-operation and savings that were considered, with the verdict reached by the Tribunal, the attitude of each of the railways, and the final step taken, positive or negative. Widespread Publicity, I am convinced, would soon become one of the strongest influences - as powerful possibly as compulsion - toward securing comprehensive Co-operation. This would leave full responsibility with the

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119550

railways, and remove it from the shoulders of the Government.

2. REGULATION OF HIGHWAY COMPETITION:

But there is another field with even greater promise of results. From an analysis of the destructive effect of highway competition on the gross and net revenues of the railways during the past ten or fifteen years, I am convinced that the regulation of highway traffic to compel fair competition with the railways will be the most fruitful of all methods for solving the railway problem of Canada - through increasing gross and net revenues. Conversely, that unless the Federal and Provincial authorities work together to this end, only disappointing results can ensue in savings to the railways from any plan that may be devised for lessening duplication through railway action alone.

For such plans, in the main, are designed to cut down overhead costs: they would not solve, except slightly and indirectly, the major problem of restoring to the railways the huge losses in gross and net revenues they have suffered in the past few years from the inroads of highway competition.

One example should make this clear. In 1938, gross revenues of the C. P. R. and C. N. R. amounted to $324,000,000. Had revenues kept pace since 1926 with the Index of Physical Volume of Business in Canada (compiled by the Dominion Bureau of Statistics), the gross revenue would have been $528,000,000 or $204,000,000 more.

And as for net profits: Actual net in 1938 was barely $27,000,000, while on the almost identical parallels of the heavier volume in 1928 and 1929 the net for 1938 would have been close to $100,000,000 - or $70,000,000 more than it was, the drop being largely the result of "cut-throat" highway competition. This is the field that needs most solving; the field that promises the greatest source of increased gross and net railway revenues; the field that is being most zealously explored for the relief of the British and the American railways; the field that the Senate, and the Dominion and Provincial Governments should take in hand at once - this field is the Second and most vital phase of Canada's Railway Problem.

This field, too, has the overwhelming advantage in another direction: Co-operation, Unification and other similar railway plans alike count on a very high percentage of savings as coming from a reduction of employment by the railways: fair regulation of highway traffic is a positive plan; it proposes, not a reduction of employees, and an increase in unemployment in Canada, but an increase of employees, through a recovery in volume of traffic. Altogether something that is infinitely more consistent with constructive statesmanship.

D.1955

In Great Britain, a movement for co-operation between the railways and the truckers already, during 1939, has made marked progress. In the United States, little emphasis is being laid on consolidation of the railways, although there are several hundred of these: in a report just issued by the Institute of International Finance of New York University, the following statement is made: "The long-term outlook for railroad traffic thus depends primarily upon the ability of the railway lines to check the diversion of freight and passengers to other transport agencies".

I submit then, the Two-fold Solution of the Railway Problems:

(1) - SUPERVISED CO-OPERATION, to cut down overhead and effect savings;

(2) - REGULATED HIGHWAY COMPETITION, to restore large gross earnings to the railways, to increase net profits, and to increase, not cut down, railway employment.

MONTREAL, April, 1939.

To the Special Committee of the Senate
Appointed to enquire into and report upon the best means of relieving the country from its extremely serious railway condition and financial burden consequent thereto.

Honourable Sirs:-

Our request to appear before your Honourable Committee was actuated by a news item appearing in the Montreal Star of March 21st, in which was embodied statements purported to have been made to your Committee on that date by Professor J.L. MacDougall of Queen's University. The item in the Montreal Star reading, in part as follows:

"LABOR AGREEMENTS CALLED OBSOLETE-

Obsolete wage agreements arrived at years ago when railway conditions were prosperous coupled with complicated rules governing working agreements prevented Canadian railways from making large economies, Prof. MacDougall, told the committee.

The regulations agreed on between the railway managements and the employees produced anomalous conditions. they worked to the advantage of those in the higher-age class on the seniority lists and to the disadvantage of the general body of junior employees.

Under them passenger engineers were able to receive wages amounting to slightly more than $4,000 a year, for a 15-day month. Railway wage-rates were today on the 1929 basis, the highest ever reached, Prof. MacDougall said. They continued on that scale in spite of the fact that all returns disclosed railroading to be a declining industry.

It is anomalous that this country should guarantee the highest 1929 wage rates to sheltered workers and continue to pay them to a gradually decreasing number having regard to the pressure on the labor market", said Mr. MacDougall

HIGH WAGES CAUSE UNEMPLOYMENT.

To Senator C.W. Robinson (Lib., New Brunswick), Mr. MacDougall declared that this illustrated how "high wages cause unemployment."

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

0 19553

"The men high up on the seniority lists were receiving top remuneration while in view of declining business, the junior men were squeezed out altogether.

"Your indictment is not so much against the state of wages as against the system, and the artificial rules with which that system is surrounded" suggested the Conservative leader, Senator Arthur Meighen.

"The whole structure is fundamentally unsound and obsolete," Professor MacDougall said, "You have wages here that have gone up to the 1929 level, in the face of a declining cost of living."

Mr. McDougall cited how passenger engineers continued to be paid at a rate that enabled them to earn better than $4,000 a year for a 15-day month, while operators of a passenger bus line, working 10 hours a day regularly, were paid $1,800 a year.

ROADS URGED TO TRY FOR LOWER WAGES

There was no reason why the railway managements should not get together and press for wage reductions if they had the courage and strength to do so, Mr. MacDougall said. A drawback was the international character of the employees' unions and the fact that they wielded a great financial power in that they could pay strike wages over a long period.

The railway managements had done much to engender goodwill among their employees, but Professor MacDougall "wondered" if the price of that goodwill had not come too high.

Senator J.J. Donnelly (Con., Ontario) declared that if those reductions were pressed by the railways, there would be a strike. If the Government insisted on it, the consequence of that insistence would be felt at the next election.

ACTION HINDERED BY FEAR

"We see a field of economy that could be effected", Senator F.B. Black (Con., New Brunswick) said, but we seem to be afraid to do it."

He asked if it would not be better to have a strike, even if it lasted for six months, so that the whole structure could be overhauled. Prof. MacDougall did not think a strike would last six months. The transportation methods of today were vastly different from those in the years when the agreements were made with the railwaymen and when railway transportation was more vital than now.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119554

He believed, however, that the situation could be composed by a process of attrition. The big-wage earners, he repeated, were in the high-age classes. These could be left alone and no accession to their ranks be made. Agreements could be worked out with the junior classes, who were largely unemployed, and thus in time matters would be adjusted.

Prof. MacDougall agreed with Senator James Murdock (Lib. Ontario), that wages on Canadian railways were from 10 to 13 per cent lower than in the United States. However, having regard to the other factors which lowered the cost of living, the margin was not as wide as the figures indicated."

As result of which the following wire was sent to the Chairman of your Committee, Honourable C.P. Beaubien:-

"Montreal Star March twenty one contains item covering statements made to your Committee by Professor J.L. MacDougall STOP If correctly reported references made to passenger locomotive engineers by Professor MacDougall are grossly untrue and incorrect STOP In the interests of the men we represent I most earnestly desire an opportunity of appearing before your Committee in order to refute statements made and to present the true facts STOP Would you please arrange accordingly and provide for two days notice as to date when we can be heard.

(Sgd) H.B. CHASE,
Assistant Grand Chief Engineer,
Brotherhood of Locomotive Engineers,
Room 504, 1411 Crescent Street,
Montreal, P.Q."

At the outset, we wish to make it clear that in refuting the statements made by Professor MacDougall we are assuming that the item in the Montreal Star was a correct report.

Dealing with statement reading as follows:

"The regulations agreed on between the railway managements and the employees, produced anomalous conditions. They worked to the advantage of those in higher-age class on the seniority lists and to the disadvantage of the general body of junior employees."

Under them passenger engineers were able to receive wages amounting to slightly more than $4,000 a year, for a 15-day month....."

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119555

The true facts of the situation do not substantiate the state - ments made by Professor MacDougall, for the reason that passenger and other locomotive engineers are, by the agreements with the railways, restricted with regard to the amount of mileage which they are permitted to run or earn during a 30-day working period, and further, commencing in 1931, and up to the present time, other regulations have been placed in effect res - tricting locomotive engineers from making the maximum mileage provided for by the general agreements. These restrictions have had the effect of compelling locomotive passenger engineers to, so-to-speak, take a vacation after their mileage for a 30-day working period has reached the limit of forty-five to forty-six hundred miles in passenger service, and thirty-five to thirty-six hundred miles in freight service.

By the application of these additional regulations, the senior men are, to a reasonable extent, required to share the work with the junior men; therefore, the regulations do not operate to the disadvantage of the general body of junior employees.

The lowest rate paid to passenger locomotive engineers on the smaller classes of power is $6.16 per 100 miles; while the highest average rate in the Dominion of Canada is approximately $6.48 per 100 miles.

Assuming that each passenger locomotive engineer was able to work to the extent of 4,600 miles per month (which is not generally the case) for the entire year, the engineer operating the smallest class of power could make $3,400.32 per annum, while a man working on a locomotive carry- ing the highest rate could earn $3,486.96 per annum.

Thus far we have given the maximums which can be earned, but on the other hand there are minimums, as the regulations provide that no reduc- tion will be made in the number of passenger engineers employed as long as they can earn a minimum of 4,000 miles per month. Under the minimum regu- lations, with a locomotive carrying the lowest rate, a passenger engineer could earn $2,956.80 per annum, and with an engine paying the highest rate, the minimum earnings could be $3,100.40 per annum. It is also safe to say that some passenger engineers are at the maximum, while many are at the minimum, and a further large number are in between the maximum and the minimum; thus it will be noted that Professor MacDougall's statement to the effect that passenger locomotive engineers are able to receive wages amounting to slightly more than $4,000 a year, is incorrect.

We might further add that the above figures are based on the assumption that the passenger engineers work steadily throughout the year, and it is equally true to say that many of them do not work steadily throughout the year.

D.19556

As to how Professor MacDougall arrives at his 15-day month, is perhaps best known to himself. Passenger locomotive engineers, in common with freight locomotive engineers, work, and are paid on a mileage basis, and not on a daily basis; therefore, no true comparison can be made as between men who work and are paid on a mileage basis, with those who work strictly on a daily basis. Some passenger runs operate on fast schedules, while others operate on slow schedules, and the length of time consumed in running 100 miles or more varies in accordance with the schedule speed of the train. Many of the locomotive engineers are required to be on their runs practically every day in the month, while in other instances they may double the road one day, and have the next day off. The manner in which these men operate is figured out to the best advantage of both the railways and the employees.

As further proof, may we direct your attention to the Statistics of Steam Railways of Canada for the year ending December 31st, 1937, pages 34 and 35, where you will find the following:

| | Average Number Employed | Total hours on duty | Total Salaries and wages | Average hours worked | Salaries and wages per hour | Salaries and wages per year |
|---|---|---|---|---|---|---|
| Road passenger Engineers and Motormen | 866 | 1,774,774 | $2,775,746 | 2,049 | $1,564. | $3,205.25 |

By taking the average hours worked, i.e.: 2,049, and dividing it by twelve, it will be found that these passenger engineers work on an average of 170 2/3 hours per month, and when reduced to days worked per month, it works out at an average of approximately 21 days of eight hours. The average salary being $3,205.25, taking into account what has been set forth above, again bears out our statement that Professor MacDougall's contentions are incorrect when he states - "passenger engineers were able to receive wages amounting to slightly more than $4,000 a year, for a 15-day month."

Professor MacDougall also states - "The railway wage rates were today on the 1929 basis, the highest ever reached". This statement is also incorrect, as the highest rates of pay were reached under the McAdoo Award in the year 1920, and at this juncture may we state that the application of the so-called McAdoo Award was put into effect on the Canadian Railways as a result of Privy Council Order No. 1768, dated July 16th, 1918, reading, in part, as follows:

> 1- "That the scales of wages of railway employees as fixed by the McAdoo Award in the United States territory, including any amendments or extensions thereof be applied in Canadian territory, insofar as all lines of railways owned, operated or controlled by the Government are concerned.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119557

2 - "That the wage scales of privately owned railway companies in Canada should be similarly advanced."

The scale of wages provided for by the McAdoo Award and the Order of the Privy Council only remained in effect until July, 1921; whereupon a 12½% reduction in pay was made effective on Canadian Railways.

In the year 1927, the locomotive engineers in Canada secured an increase in pay amounting to approximately 5%, and the rates established at that time are still in effect; therefore, even though wages rates are on the 1929 basis, they are not the highest ever reached.

Professor MacDougall also states -

> "It is anomalous that this country should guarantee the highest 1929 wage rates to sheltered workers and continue to pay them to a gradual decreasing number, having regard to the pressure on the labor market."

Evidently Professor MacDougall has not taken into account the reasons for the gradual decreasing number of railway employees. The true facts can be readily ascertained if a study is made of the changes which have taken place, say since the year 1920.

In 1920 there were 6,030 locomotives in service on the Canadian Railways with an average tractive power per locomotive of 31,112 lbs.

In 1937 the number of locomotives had declined to 4,667, a decrease of approximately 22.6% as compared with 1920; the average tractive power per locomotive in 1937 had, however, reached a new high peak of 38,871 lbs, an increase in average tractive power of approximately 25% over 1920.

The introduction of larger locomotives and steel cars has undoubtedly reduced the amount of employment, not only for locomotive engineers, but for other classes of railway employees; but, on the other hand, it must be admitted that when operating a larger locomotive and handling larger trains, there has been a considerable increase in the productivity of each individual locomotive engineer; in fact, in many sections of the country, two locomotive engineers are now producing as much as three men formerly produced, and this without any great increase in the cost to the railways. The lowest rate per 100 miles for engineers in passenger service being $6.16, while the highest average, excluding Mountain territory, is $6.48 per 100 miles. In other words, the locomotive engineers are in no way responsible for the gradually decreasing number of employees, neither are they receiving any higher wages than they formerly received, irrespective of the fact that their productivity per man has greatly increased. The decrease in the number of

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119558

employees is also affected by the decrease in the amount of traffic handled by the railways, and again let us point out that the senior men have endea - voured to assist somewhat in spreading the work, and taking care of some of the junior men.

The item in the Montreal Star, above referred to, also contains the following -

> "To Senator C.W. Robinson (Lib. to New Brunswick) Mr. MacDougall declared that this illustrated how "high wages cause unemployment."

To this we would say that it is generally recognized that there are two schools of thought with regard to the causes of unemployment, but our view is that low wages cause unemployment, while high wages create employ - ment, as an illustration we might state, that during recent years, while wage deductions were in operation on the Canadian Railways, the employees of those railways contributed from their pay cheques approximately $100,000,000.

The deduction of that money from the pay cheques of the employees reduced the purchasing power of railway employees alone to the extent of $100,000,000, and with wage cuts and deductions being the order of the day in various industries in Canada, the shrinkage of purchasing power undoubtedly had its effect upon employment, and assisted to create unemployment. If the working people have good wages, they are able to buy many things which they need, which in turn must of necessity stimulate industry, but when unable to purchase the goods and materials produced in the country, all forms of industrial life are affected, and more of our people find themselves in the ranks of the unemployed.

To continue -

> "Mr. MacDougall cited how passenger engineers continued to be paid at a rate that enabled them to earn better than $4,000 for a 15-day month, while operators of a bus line, working 10 hours a day regularly, were paid $1,800 a year."

With the greatest of deference to the operators of the passenger bus lines, we feel it desirable to say that no fair comparison can be made between a locomotive engineer and an operator of a passenger bus.

On the average, less than one locomotive engineer in ten ever gets to where he is regularly assigned to a passenger train, and in order that your Honourable Committee may have a slight idea of, what might be termed, the training period which a man must go through in order to reach the stage where he can be regularly placed in charge of a passenger locomotive, the following explanation may be of value.

Generally speaking, a man commences at about the age of maturity by

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119559

cleaning engines in the shop, and eventually emerges as a locomotive fireman, provided he is in good physical condition, and can pass the necessary examinations. For several years thereafter he is able to work only when some other man lays off, or due to an increase in traffic. After about 10 years of these ups and downs, he may secure regular employment as a fireman, where he will in all probability remain for a further period of approximately 15 years, but before being qualified to work as a locomotive engineer, he is required to pass a thorough examination, written and oral, on the locomotive itself, on the air brake and electrical equipment, and in addition thereto pass a very rigid examination with respect to visual acuity, colour sense and hearing. He must also pass a written and oral examination on the book of operating rules, and here it might be noted that the Canadian National book of rules contains 637 rules, while the Canadian Pacific contains 673.

If he passes these examinations successfully, he commences his life as a locomotive engineer, and again takes the ups and downs, being used when other men lay off, or when increased traffic conditions arrive, and for approximately another 10 or 15 year period he finds himself alternating between running and firing a locomotive.

His next move will be to regular freight work, and when he reaches the age of approximately 60 years, if he has survived for that length of time, he becomes a passenger engineer, with about 5 years in which to remain in service.

Every two years he is required to pass a further examination on visual acuity, colour sense and hearing, and if any of these senses fail, he is, so-to-speak, relegated to the yard service, or to the scrap heap, as the case may be.

A demerit mark system also prevails, and if he be unfortunate enough to acquire 60 demerit marks against his record, he is subject to dis - missal, and here let it be said that once a locomotive engineer loses his employment as such, his entire career as locomotive engineer is ended, as there is no place in Canada where he can again secure such employment.

When in charge of a first class passenger train he not only has under his care a power plant on wheels, of an approximate value of $100,000., carrying up to as high as 275 lbs. of steam, but has in addition thereto a train with a value of approximately $1,000,000.; in other words he is the General Manager of a $1,000,000. plant.

While on duty he must remember all of the rules, not only those in the rule book, but those which appear in the time-tables and bulletin books, and must execute all orders given to him by the train despatcher. In fact, from the time he steps on the locomotive until he steps off, he is nothing but a keyed up bundle of nerves, and may we add that it is beyond the limit

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119560

of physical endurance for a human being to stand up against this kind of work day in and day out, without sacrificing his health.

The passenger bus operator is not required to go through such an intensive period of training as that which applies to a locomotive engineer, and if he should be so unfortunate as to lose his employment with one Company his career as a bus operator is not necessarily ended, as is the case with a locomotive engineer.

Generally speaking, locomotive engineers are stable citizens, are home owners and taxpayers, and take an active interest in municipal and other affairs, and with the wages which they are at present able to earn, it can be safely said that no members of their families are on relief; on the contrary, many of them are taking care of their sons and daughters, and their grandchildren, and in many instances are giving their sons and daughters higher education so that they may enter professions, and become useful and worthwhile citizens of Canada.

A contributory pension system is in effect on both of the major railways of Canada. Under the Canadian Pacific Plan the earnings of the engineer during his last 120 months of service are used to determine the amount of his pension. The arrangement on the Canadian National is slightly different, but in both cases by contributing to these pension plans the men assure their future after reaching the age of 65, thereby avoiding the possibility of their becoming public charges.

In most lines of industry when an employee is sent away from home on business for his firm he is paid expenses, but this does not apply to locomotive engineers; consequently expenses away from home must be paid from the wages received, and as in most lines of industry the senior employees receive the highest wages, we submit that there is nothing extraordinary in the methods which now prevail governing wages and conditions for passenger locomotive engineers. May we again draw your attention to the fact that in the year 1937 there were only 866 passenger engineers working in the Dominion of Canada.

Professor MacDougall also stated -

> "We believe, however, that the situation could be composed by a process of attrition. The big wage earners, he repeated, were in the high-age classes. These could be left alone and no accession to their ranks be made. Agreement could be worked out with the junior classes, who were largely unemployed, and thus in time matters would be adjusted."

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

D 119560

It is extremely hard to find language which would sufficiently express our views with regard to this statement. Can anyone imagine an employer entering into an agreement with unemployed men to govern wages and conditions of those who are employed ? In our opinion, this would be contrary to public policy, and would be a clear violation of the principle and spirit of the Industrial Disputes and Investigation Act.

Since writing the above I have received copy of the proceedings of your Special Committee for Tuesday, March 21st, and at page 22, Professor MacDougall is quoted as follows:

> "Secondly, even the engineer, who is the most skilled member of the train crew, need not be a person of unusual skill. A man of sound intelligence could be trained to operate a locomotive in a very short time. In the pre-war period when the labour force was being rapidly increased, men quite frequently ran as full-fledged engineers after only six months experience, etc."

We have no record of men with six months experience being promoted to the position of locomotive engineer, and it may interest your Committee to know that the rules in effect, as between the engineers' Organizations and the Railways, require that a man must have at least three years experience as fireman before being promoted to a locomotive engineer. We hold that the Railways and their employees, rather than Professor MacDougall, are in a better position to decide as to the training which a man should have before attempting to operate a locomotive, and we may add that the standard, as above set forth, was in effect long before the war period.

At the bottom of page 24, a note appears, reading as follows:

> "[4]CF. Case No. 469, Labour Gazette, XXXVIII (November, 1938), pp. 1215-16. In this case it was shown that in one case the mileage of engineers was increased from 4,160 to 5,200 miles per month; in another, from 4,200 to 5,397 miles in assigned service. On the facts cited above, $299 per month is the current earnings for approximately 4,680 equivalent miles, and only 3,276 actual road miles. If the present mileage be assumed to be 5,397 miles, then monthly earnings would rise to $345 per month for 15 calendar days of work."

Again in this instance, Professor MacDougall was evidently not in possession of the true facts, as the note would lead anyone to believe that in that particular case the locomotive engineers were making 5,200 and 5,397 miles respectively.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119562

The true facts, as developed when the case was heard by the Canadian Railway Board of Adjustment No.1, proved that in one instance the engineers were making 4,800 miles per month, and in the other instance 4,500 miles per month.

At page 33, the following appears:
"By Hon. Mr. Murdoch:
Q. Now, tell me what would happen if there was a breakdown or a snowbank at Prescott causing delay of four or five hours?- A. After you pass eight hours you go on time and a half.
Q. But what about this passenger car if they were held up?- A. The engineer's overtime would commence at five hours, and the conductor's and brakeman's at seven hours and forty minutes."

Again, Professor MacDougall gives the wrong information. There are absolutely no provisions in the agreements between the locomotive engineers and the railways in Canada to provide for payment of time and a half in passenger service, and further, as the preceding question indicates, if the discussion related to a train operating between Montreal and Brockville, a distance of 126 miles, the overtime for the engineer would not commence after five hours. The rule governing overtime for engineers in passenger service provides for straight time payment for overtime, and the crew goes on overtime if the train fails to average a speed of 20 miles per hour over the entire subdivision. In this particular case, the overtime for the engineer would commence six hours and eighteen minutes after the train had departed from the Station at Montreal.

Having regard to an article appearing in the Financial Post of March 18th, last, entitled - "High payrolls hobble Canadian Railroads", - together with the statements made by Professor MacDougall, coupled with an editorial appearing in the Montreal Gazette of March 23rd last, it would appear as if a move is on to try to educate the public into believing that the principal trouble with the railways is due to high wages, with the wages of the locomotive engineers being singled out for the attack.

Believing that your Committee is desirous of viewing all sides of the question, and with the hope that the Press will be equally as anxious to present the true facts to the public, as they have been in their endeavour to lead the public to believe that the wages of railway employees are too high, we submit herewith three tables; one showing Interest on Funded and Unfunded Debt of Canadian Railways in Canada for the years 1920 to 1937 inclusive; the second showing dividend payments made by Canadian Railways during the years 1920 to 1937 inclusive, and the third showing the total number of employees, total hours worked, and total compensation paid to employees of Canadian Railways, for the year 1920 to 1937 inclusive. (Note.- 1937 is the last year for which complete records are available.)

These tables are submitted merely for the purpose of showing what has taken place commencing with the year 1920 and running through to the end of the year 1937, as affecting bondholders, the shareholders, and the employees, and we submit that the employees have not, and are not, enjoying any unfair advantage.

119566

As further proof of our contention, returning to the increase in the average tractive power per locomotive in 1937 over the year 1920, and returning to the part played by the locomotive engineer, we submit herewith the rates of pay per 100 miles:

| Weight on Drivers | Passenger Per 100 miles | Through freight & all other service not otherwise specified Per 100 Miles | Snow Plow and Way Freight Per 100 Miles |
|---|---|---|---|
| Less than 80,000 lbs. | $6.16 | $6.84 | $7.36 |
| 80,000 to 100,000 lbs. | 6.16 | 6.92 | 7.44 |
| 100,000 to 140,000 lbs. | 6.24 | 7.00 | 7.52 |
| 140,000 to 170,000 lbs. | 6.32 | 7.24 | 7.76 |
| 170,000 to 200,000 lbs. | 6.40 | 7.40 | 7.92 |
| 200,000 to 250,000 lbs. | 6.48 | 7.56 | 8.08 |
| 250,000 to 300,000 lbs. | 6.56 | 7.70 | 8.22 |
| 300,000 to 350,000 lbs. | 6.64 | 7.84 | 8.36 |
| 350,000 to 400,000 lbs. | 6.72 | 8.04 | 8.56 |
| 400,000 to 450,000 lbs. | 6.80 | 8.04 | 8.56 |
| 450,000 to 500,000 lbs. | 6.88 | 8.04 | 8.56 |
| 500,000 lbs. and over | 6.96 | 8.04 | 8.56 |
| Mallets, less than 275,000 lbs. | 7.16 | 8.54 | 9.06 |
| Mallets, 275,000 lbs. and over | 7.16 | 8.76 | 9.28 |

We have stated above that in 1920 the average tractive power per locomotive was 31,112 lbs., and to assist your Committee in arriving at an understanding as to how these rates of pay apply to the weight on drivers, coupled with the tractive power, we would observe that a locomotive with a tractive power of 31,112 lbs. falls generally within the classification of 140,000 to 170,000 lbs. weight on drivers, and it will be noted that the rates of pay for such locomotives are -

| Passenger | Through Freight and all other service not otherwise specified. | Snow Plow and Way Freight. |
|---|---|---|
| $6.32 | $7.24 | $7.76 |

The locomotive with a tractive power of 38,871 lbs. falls within the classification of 170,000 to 200,000 lbs. and 200,000 to 250,000 lbs. weight on drivers. While the average is 38,871 lbs. it would be true to state that the locomotives generally in use are 200,000 to 250,000 lbs.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119567

weight on drivers; the rates for these locomotives being:

| Passenger | Through freight and all other service not otherwise specified | Snow Plow and Way Freight |
|---|---|---|
| $ 6.48 | $7.56 | $8.08 |

The average tractive power having been increased by approximately 25%, it will be perhaps interesting to note that the difference in the rates of pay for locomotive engineers, whose productivity in 1937 was 25% greater than it was in 1920, is only increased by the following amounts:

| Passenger | Through freight and all other service not otherwise specified | Snow Plow and Way Freight |
|---|---|---|
| .16 cents | .32 cents | .32 cents |

While if the rates had advanced with the tractive power, they would be increased to the following extent:

| Passenger | Through freight and all other service not otherwise specified | Snow Plow and Way Freight |
|---|---|---|
| $ 1.58 | $1.81 | $1.94 |

The above does not take into account the fact, as herein set forth, that the basic rates of pay are at present approximately seven and one-half (7½%) percent below those of the year 1920.

With the advent of the heavier power and modern appurtenances, the responsibility of the locomotive engineers has greatly increased, and this coupled with the increased productivity should certainly be given recognition as a reasonable argument for a wage increase, rather than for a wage reduction, which, we take it, Professor MacDougall feels should be now instituted.

In conclusion, may we express to your Honourable Committee our appreciation of your action in granting us the privilege of appearing before you.

Respectfully submitted,

H B Rose

Assistant Grand Chief Engineer,

Pride of the West Division No. 67

Hon Allerghen
Senator, Ottawa Canada.
Dear Sir/

Address of Writer:
193 Kitson St
Norwood Grove
Manitoba

Date May 1st 1939

at a Special Meeting of Members Division by C.B.of R.E representing some 500 clerical Workers, Station Employees Etc Canadian National Railways Winnipeg - Called for purpose of discussing a Bill introduced into the Senate aiming at Compensation for Railway Employees who will be thrown out of Work by Compulsory Enforcement of the So Called Cooperative Measures - Went on record as Entirely opposed to Such a Bill in any form and adopted the following resolution —

Whereas a Bill has been introduced into the Senate which would provide a Mere pittance as Compensation for Railway Workers who will be thrown out of Employment through a Scheme of Cooperation of the two Railways and who would Eventually have No recourse but that of being Compelled to go on relief and adding to present Terse Un Employment Situation throughout the Country - Be it therefore Resolved that we register our Emphatic disapproval of any Such Legislation being Enacted and further we are of the opinion that the Vast Majority of the people of Canada are behind us in our Condemnation of Such a Measure as we are Convinced that it is only a New form of Endeavour to put "Beatty's" Unification or Amalgamation Scheme into Effect.

Therefore we ask you to Stand by your Party's pledge to Maintain the Integrity of the Canadian National Railways - We fully believe as do the public of Canada that Cooperation will as Surely destroy it as will any other of the Many Schemes Suggested and found Wanting. We ask your Support and action against this Bill and in return give your party Continued Support in its Endeavours to Save thousands of Railway Workers and their families from Prospects of destitution and Want in Country they have helped to build.

Thanking You for Courtesy of Reply
Views.

Yours truly

Dear Mr. Huet-Duluth,

I duly received your letter of the 1st of May, and also have today your letter of the 28th of April. The second message arrived last.

I have read with care your communication to the Right Honourable Mackenzie King. The subject of this communication has been under investigation by the Special Senate Railway Committee, and this Committee has now reached the stage where a definite close to evidence has been arranged. Members of the Committee are exceedingly anxious to get their report out this Session. They were disappointed in not getting it out last Session. As the contents of the report will require a great deal of discussion, we will have to move quickly to be sure to complete our work. This must be the reason the Leader of the Government has seen fit not to ask that you be heard.

Yours truly,

after May 15th

Montreal, May 1st 1930.

Right Honorable W. L. Mackenzie King, C.M.G., P.C.,
Prime Minister of Canada,
Ottawa, Ont.

Dear Sir,

This communication shows clearly a great danger for your Government in the fact of the Canadian National Railways proceeding with its Montreal Terminal Project, which has been condemned by the Citizens of Montreal.

To be loyal and constructive, we hereby present the manner by which your government can avoid the precipice, that is the falling of your Government at the next election, on the Montreal railway question.

To make a long history short, the following is a resume of the situation: -

The movement in favor of a Plan dEnsemble has been active since 1909 in Montreal. In 1929 - 1930 Mr. Terreault, Engineer and City advisor, made public lectures and proved to be ignorant and opposed to the movement : engineering his salary first evidently and ruling that the railway problem must be settled first, meaning the C. N. R. project first, to be with his author, Mr. Decarie. For this reason the Montreal Project has been delayed for decades.

In 1930 the Civic Government was in danger. It could prevent the danger by having the Montreal Project or a Plan Directeur made by an independent urbanism, or complete organization, in which all projects of public interest would have been coordinated and every problem solved properly, including the railway problems in the Greater Montreal area. The Desroches Government in Montreal in 1930 took the advice of Mr. Terreault who had been originally engaged by Mr. Ernest Decarie, the C.N.R. Director.

At the election the Desroches Government faced thirty-five Houde candidates speaking against the C. N. R. Project. The Mayor received 41,000 majority and only seven wards out of the thirty-five returned the Desroches candidates.

The newspaper files are there to prove my statement of facts. Therefore the Montreal citizens have proven to be unanimously opposed to the project going ahead(stupidly) before the Master Montreal Project for coordination of projects and in cooperation with all interested parties.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119573

The revolting manner of spending the federal money and the fact of "empecher Montreal de realiser son meilleur et vrai Plan d'Ensemble" - killing the better future of the Metropolis .....etc - these reasons which made the precipice for the Desroches Government in Montreal in 1930 will surely create the precipice for the Mackenzie King Federal Government in 1939.

Is is true that you are not willing to change your mind? We have doubt of this assertion of your adverseries. Why not accept our Doctrine and let it be the Senate Doctrine ?

The coordination of projects(including railway projects) in a general comprehensive plan - "Plan d'Ensemble" - is necessary for the protection of the citizens of present and future generations.

Montreal University and McGill University scientists in cooperation with interested parties, independent as to political parties, independent as to realestate speculations, united with experts in the sciences of "Urbanism" the Prescience of City Planning, would plan the extension of Montreal for double its present population with provoyance necessary for sixty years ahead and more, and the C. N. R. project would be harmonized in coordination and economically with all the many projects relatively codependent.

The Governments of Ottawa, Quebec and Montreal would pay the cost of the "Plan Directeur d'Urbanism, the skeleton plan prepared by the Independent City Planning Institute. Remember please that any work going ahead, unless this is done, will be constructions to be transformed in the near future, and exposed to entire destruction for better City Planning. Political programmes must be in harmony with the citizens'( urbanism)programme regarding public works of general interest in the area of the future Greater Montreal.

Since 1909, we - of the C. Duluth Studios - have been preparing for this [illegible]al moment, when the Federal, Provincial and Municipal Montreal governments will have to agree on the necessity of the "Plan Directeur d'Urbanism" the general skeleton plan of coordination ----- We have always kept away from party politics, but we are not neutral on politique-d'urbanism.

We propose that the three governments agree on a law forcing every concern having projects of public interest to work in cooperation with the Independent City Planning Institute until coordination be made and plans approved by the technical department of urbanism of this Institute and also by the Grand Council of this Institute.

Yours very truly,

C. Huet-Duluth

1130 Beaver Hall Hill,
Montreal, 28th April 1939

Right Honorable Arthur Meighan, P. C. ,
The Senate, Ottawa, Ont.

Dear Sir,

On the 19th inst. I sent to the Honorable Mr. Dandurard a lengthy discussion on the Montreal Terminal Project of the Canadian National Railway, and at the same time I sent a copy of my letter and paper to Senator Beaubien at Ottawa.

The Municipal Government in Montreal went down to defeat at the polls in 1930 on the question of the Canadian National Project and the citizens have shown themselves to be unanimously against the project.

I am quite unbiased on the subject of politics, being only interested in the question of"politic-urbanism"

Would you be so kind, sir, as to take cognizance of the copy of my discussion on the subject to Senator Dandurand, and use your best efforts to have the matter properly discussed at the meetings of your Honorable committee of the Senate. To date I have not had the courtesy of a reply from Senator Dandurand, although I have since written him for an acknowledgement.

Yours sincerely,

Clément Huet-Duluth

Montreal May 3th, 1939.

Hon. A. Meighen.
Senator
Ottawa.,

Dear Sir:-

I have your letter of the April 27th.

I include copy of my demand which has been refused again by the Committee.

As for the Union Station, neither the Windsor site of the C.P.R, nor the Dorchester site of the C.N.R are adequat sites for a real Union used by the seven companies of Transport.

The true site is between St-Lawrence and Bleury streets site approved by seven ex chief engineers of Railways (including two chief engineers of the C.P.R).

This site was chosen by McKensie and Mann from the Mont Royal tunnel to reach the Tramways terminal.

But they had no more money to prolonge their tunnel to that site; then they built in the meantime a little station in the hole where Palmer made his big mistake.

I have all the reports from their engineers about that new site I would propose as part of a general plan of Montreal including the granary plant.

I include a booklet printed 3 years ago, but the financing has been modified by a firm in England.

The Committee is unable to make a satisfying report because all the aspects of the problem is refused to be contemplated above the parties interested in the two family compacts. Why not hear a third aspect, which might bring the consent of all the parties in the interest of Canada; the Committee is bound to know it, I can answer to all the questions.

Yours very truly.

Montreal, April 29th, 1939.

Mr. Arthur H. Hinds.
Chief Clerk of Committees.

Dear Sir:-

I have your letter of April 27th saying that my brief sketch in my letter of the 16th March last is not sufficient for the purposes of the Committee.

I include the following sketch which I hope shall satisfy the Committee:

NO POPULATION, NO PRODUCTION
NO PRODUCTION, NO TRAFFIC.
NO TRAFFIC, NO RAILWAY.

Therefore the life of a railway is based on traffic.

Is the production power of the actual population sufficient to give enough traffic to our railways?

Is the available traffic sufficient to abolish the deficit?

Shall the cooperation increase the traffic?

Shall the fusion increase the traffic?

Can we provoke from the western Provinces a stream of traffic on canadian routes towards all Atlantic sea ports during 12 months instead of six months as it is to day?

Can we store in Montreal a full year of cropp to answer the offer and demand during 12 months?

Can we put Montreal the centre of distribution during 12 months towards all Atlantic sea ports, canadian and american?

Can we beat Buffalo, Albany and Argentina by competition?

Why Argentina is building an hundred million dollars granary plant for 12 months?

Why foreign routes have the benefit of 67% of canadian production; the energy of canadian people?

Why Montreal has only a storage of 15 millions bushels in cappcity during only six months of commerce on the Atlantic when Vancouver is working 12 months on the Pacific?

Has the British Empire any responsability in the present situation of our railways?

Can the Imperial Governement help to extricate Canada of the railway problem as it did in 1862.

119577

Can we build in Montreal a granary plant to feed England in case of war with rapid transits of 12 months?

Can we store in Montreal the Alberta oil in case of war with facilities of 12 months?

Can we shorten the distance from Montreal to St-John and Halifax of 260 miles?

Can we have a winter harbor at Tadousac?

Can we build in Montreal a 12 month centre of distribution without taxes?

Can the Imperial Governement guarantee part of such a centre?

Why the Builders of Canada have built canadian routes towards Atlantic?

What was the spirit of the Statesmen of the past in building those canadian routes?

Why the Statesmen of to day do not maintain the spirit of the Builders of Canada?

Is it not for that reason our railways are in deficit?

I hope it is sufficient to convince the Committee to agree to my demand and to hear me.

YOURS VERY TRULY

THE SENATE
CANADA

Ottawa,
May 3, 1939.

Rt. Hon. Arthur Meighen,
The Senate,
Ottawa, Ont.

Dear Mr. Meighen:

I thank you for the chance I have had today to read the draft report which you and others of the Special Committee on Railways propose to make to the House. This report is entirely along the lines that I approve of.

I am sorry, on account of illness, not to be able to remain in Ottawa, and, therefore, will not be here to sign the report as finally completed. I would like you, though, please to sign such report for me. I give you full authority to do so, as I am quite sure any modifications you make will not alter the nature of the final report.

Yours very truly,

Hon. Lapointe

E.

D.19579

REPORT MADE BY THE FOLLOWING MEMBERS OF THE SPECIAL RAILWAY COMMITTEE OF THE SENATE SELECTED TO COMPLETE THE INQUIRY AND SUBMIT A REPORT UPON THE BEST MEANS OF RELIEVING THE COUNTRY FROM ITS EXTREMELY SERIOUS RAILWAY CONDITION, AND THE FINANCIAL BURDEN CONSEQUENT THERETO.

---

It is deeply regretted that an unanimous report was found impossible of attainment, as in a matter of such grave importance, at the present juncture, the added weight of unanimity in the Committee would have been of very great value not only to Parliament but as well to all our people who are now so heavily burdened with taxation.

Canadian National Capitalization and Deficits

The Canadian National constitutes for the nation its most obdurate and perilous domestic problem. The outlay of Canada to December 31, 1938, on its publicly-owned railway system, including interest, has been in excess of $3,300,000,000, of which the greater part has been brought about by recurring yearly deficits assumed and loans made by the Canadian Government to the Canadian National.

The cash deficit in 1938, substantially greater than in 1937, as shown in the Canadian National Railways Annual Report for 1938, is $54,314,195. This deficit does not include capital losses of $2,712,877 charged against Proprietor's Equity under the Canadian National Capital Revision Act of 1937, nor does it include interest on $672,688,000, the principal amount of such Proprietor's Equity. The aggregate contributions of the Government to the System as at March 31, 1938, written off to Consolidated Fund, has amounted to $838,000,000. (See Public Accounts, 1938, Appendix 28.) In addition, the aggregate of interest to December 31, 1936, on Government loans to the System, accrued and unpaid, which was transferred to the Canadian National Securities Trust, under the Act referred to, has amounted to $574,781,000.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

The above large sums already written off represent in reality assumption by the Dominion of Canada of a very considerable total of capital which went into our railways, and entail as well a substantial addition to the National Debt. No criticism of such writing off is implied in this report. The results, however, after the writing off, speak for themselves.

It is evident that the railway problem cannot continue to drift as it has done in the past, without more hardship to the taxpayer and great and imminent danger to the credit of Canada.

In view of the marked increase in Government expenditure and taxation within the last years, of our constantly growing requirements, more particularly for national defence, for the relief of large sections of the community, for rapidly expanding social legislation, and the corresponding greater necessity of husbanding the resources of the country, we are moved to quote anew the solemn admonition given to the nation by the Duff Royal Commission of 1932. It is far more justified today than it was seven years ago:

> "We feel compelled, as a matter of public duty, to strike a serious note of warning to the people of Canada. Unless the country is prepared to adopt the plan we have proposed, or some other equally effective measures, to secure the efficient and economical working of both railway systems and thereby not only reduce the burden on the federal treasury but improve the financial position of the privately-owned railway, then the only courses that would be left would be either to effect savings in national expenditure in other directions or to add still further to the burdens under which the industries of the country are suffering by the imposition of yet further taxation. Failing the adoption of one or other of these courses, and there are obvious limits to their application, the very stability of the nation's finances and the financial credit of the Canadian Pacific Railway will be threatened, with serious consequences to the people of Canada and to those who have invested their savings in that railway."

119581

Reasons for Inaction

It is contended that the expenditure of the Canadian National, even if excessive, provides for the subsistence of a portion of the population which, otherwise, might be under relief. Obviously, this is fallacious as nothing guarantees that such excess in expenditure goes to those otherwise in need of it and, above all, as such policy, if accepted, would lead to unrestrained wastage in all Government departments. The complacent state of mind of many witnesses, including some officials, who seemed anxious to see the country resign itself to the perpetuation of unbearable deficits, is deplorable. To this end it was represented that these deficits were but an apparent loss to the country, as the Canadian National provided for the nation an equal value in services which were essential to its present well-being and future development. Such a contention is utterly inadmissible, as like adequate services can be, and in fact are, rendered by the other railway system in Canada, and by similar companies in other countries, at no cost to the nation.

Witnesses appearing before the Committee outlined solutions of the problem, in which there was implied no abandonment of essential services, but all were designed to reduce or eliminate unnecessary duplication and redundancy of services.

It is obvious that relief can be obtained otherwise only by a very large increase in revenues, which appears to be definitely unattainable either through increases in rates or through any conceivable growth of traffic.

Remedies Suggested.

Three different methods were proposed to the Committee for securing economies to reduce the burden of Canadian National deficits.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119582

Voluntary co-operation

A more effective application of the co-operative provisions of the Canadian National-Canadian Pacific Act, 1933, was recommended.

This suggestion is far from being promising. Since the coming into force of the above law in 1933, the total savings from arrangements now in effect, and others agreed upon by the railways but not yet in effect, will be less than $2,000,000 per annum.

Five years of trial has, it must be admitted, demonstrated that economies to be effected through voluntary co-operation are of a very minor order. Further, the evidence submitted on behalf of the officials of both railways made it abundantly clear that hope for the future in this regard is practically negligible. The absence of singleness of interest in the result to be obtained by economies, the continuous and not unnatural jealousies of officials as to the prestige of and immediate consequences to their respective properties, make the securing of what they describe as a balance of burden and advantage the subject of a long drawn-out and almost always futile struggle. In this respect any contention that the larger measure of responsibility for this futility rests on either one of the two companies more than on the other cannot certainly be supported by the evidence.

Enforced co-operation

A second recommendation, made by the President of the Canadian National, provides for the injection into negotiations between the railways of a new body consisting of a representative of each of the railways, and a chairman appointed by the Government, the chairman to have an ower-riding vote. This body would have authority to initiate studies of any project suggested by any individual member, and, if a favourable report was made by a majority, or by the chairman alone, the proposal would automatically go before an Arbitral Tribunal for final decision.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119583

It was argued that this would relieve the railway companies of the stigma which would attach to agreement to undertake unpopular economies. As to the latter point, it would be most unwise to depend on the Government voluntarily submitting to public odium--as the result of the action of its representative--a public odium which railway officials themselves admit they have recoiled from incurring. Experience proves that no Government will incur odium knowingly. The suggestion appears to be useless.

It might be pointed out as well that there would seem to be a dangerous responsibility assumed in establishing, as the effective agent of enforced changes in operation or physical assets, a Board on which two members would, as between the two railway systems, be representative of one, and only one representative of the other. It is important to avoid with the utmost care any enforced action which might be the ground of liability to the country later on.

It seems to us the sooner the people of Canada accept the conclusion that co-operation of two competing systems cannot be effective in any worthwhile way in bringing about absolutely needed economies, the better it will be for the establishment of some really effective remedy and for the solvency of our country. In this connection it must never be forgotten that the railways are in a death struggle for a living, and while that struggle continues, each will fight for itself. The consequence of this mutual destructiveness falls on the taxpayers of Canada. It was very strongly urged before your Committee that such mutual destructiveness can only end when the officers and employees of both systems are working wholeheartedly for a single economic end.

Unification of Management

The third suggestion made was unified operation by a single management of the Canadian National and the Canadian Pacific, each company continuing to own its respective properties, and no guarantee being given to the Canadian Pacific of a return

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119584

on its stock or on its bonds or other capital issues. Each company would continue to receive, under unified operation, the net earnings which past actual results over an agreed period of years indicate that each would have received as an independent institution, and additional net earnings made available by the economies of unified operation would be shared between them on an equitable basis. It was intimated that of these additional net earnings the Canadian National should receive at least half. The suggestion was that unified operation would be under the control of a Board to be created by Parliament and to be composed of fifteen directors, five of which would be selected by the Government or by the Canadian National, five by the Canadian Pacific, and the remaining five by the directors already chosen, or by some other appropriate method.

This proposal was met at the outset by two objections:

Firstly: - It was contended that such unified management would create a huge and possibly an oppressive monopoly.

To this objection the following arguments taken from the evidence apply:

(1) For many years very large sections of the Dominion not served by both railways have lived under the monopoly, if such it be called, of either the Canadian National or the Canadian Pacific, and have done so without any perceptible disadvantage;

(2) The Railways have long ago been stripped of all powers which might render any monopolistic feature injurious to the public interest. The Board of Transport Commissioners holds by Statute supreme authority over them and controls all abandonment of lines, withdrawals or reductions of services, as well as of increases or decreases of rates and fares.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

(3) The development of transportation by means of motor cars, busses and trucks (public and private) and by air and water traffic, has created conditions where even under unified railway operation there would be very effective competition anyway, and competition quite difficult to cope with. Indeed, many witnesses, including some who spoke for labour, contended strongly that under the present system of operation it was impossible to meet this competition, and that if the situation is not met effectively, railway labour itself would be direct sufferers, and on a serious scale.

(4) The modern world exists under a great number of monopolies imposed by the free will of the people for the essential purpose of suppressing excessive charges and wastage due to duplication. This is strikingly exemplified in transportation, telephone, water, gas, electricity and other urban services, and in some countries, of railways.

Secondly: - The other objection is based on the apprehension that there would be created a large mass of population, whose united influence might dominate the political life of Canada. To this the answer seems to be that if the interest coalescing the railway employees is an occupational or a professional one, it exists already. No more striking evidence of this can be imagined than the opposition to unified management, as well as to co-operation, voiced by the railway employees of both Systems through their unions.

If the interest creating the coalition be a political one, then conditions now are just as favourable for its success as they could be under unified management. Indeed, there are many who believe that such political power is now exercised. Without any doubt at all, pressure is exerted, through their unions, by the mass of employees of both railways, on political parties.

This can

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119586

This continuous, concerted pressure is mainly directed to the protection of a fortunate section among all the labouring classes of the country.

This influence is in fact one of the chief obstacles to the settlement of our railway problem. It can only be removed by placing the administration of the Canadian National definitely and finally above political interference and in the hands of capable, strong and thoroughly independent men, whose tenure of office could be attacked only for cause. This could be accomplished by placing our railways under the direction of a properly selected board, whose only object could be the successful operation of a united system.

Any reasonable cause which railway workers might have had to oppose unified management has been eliminated by the proffer of provisions protecting them, in the manner effected in Great Britain, against loss by dismissal, demotion or transfer. It must be remembered that not less than from five to seven years will be essential to attain, step by step, the full results of unification. The evidence indicates that normal attrition, which accrues through death, pension age, or resignation, would remove men from employment faster in the aggregate than would be required during the process of unification, and those who suffer in special cases--for some would so suffer--can be assuredly compensated. These guarantees which have been definitely offered are measures of protection hitherto unknown to the working classes of any industry in the country, and corresponding protection is certainly not enjoyed by any other class.

It was not unreasonable to expect that railway workers would have been reassured by the definite statement to the above effect made on behalf of the Canadian Pacific--which, undoubtedly, would be acceptable to the Government if an arrangement were

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

entered into--and would have withdrawn their opposition to a unified scheme of management. This is especially true because the scheme of compensation would be, and should be, the subject of an agreement in which the wishes of the employees would be fully represented, and the rights under such agreement would become Statutory.

The object sought to be attained is the avoidance of financial disaster to our country, in which disaster every class would suffer, and the poorer classes even more than others. It is not, therefore, unjust to ask that all co-operate in a fair spirit to such an end.

Persistence in their present attitude simply means they insist that the taxpayers of Canada, for all time, shall carry the burden of many thousands of positions which are not required. On this point it must be carefully noted that the benefit in the main goes to the more fortunate class of senior employees, while junior men are left to suffer for want of work.

In this connection, it is important to keep in mind that the railway business of the Dominion, as indeed of all countries, has been steadily diminishing in volume as compared with business as a whole. The evidence before your Committee led irresistibly to the conclusion that this tendency may be expected to continue.

Mr. Hungerford, President of the Canadian National Railways, submitted in his evidence that the efforts to operate the property on economical lines were circumscribed by what he defined as considerations of "public interest"; that what constitutes "public interest" was really determined by the Government of the day and that if the Canadian National were not a Government enterprise it certainly could not be carried on its present footing.

It may be reasonably inferred, as was indicated by the late Sir Henry Thornton in his evidence before the Royal Commission, that the policy of the Government, whatever might be

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

 119588

the efforts of the Canadian National Management to operate on sound business lines, is unhappily reflected in the administration of the railway in increases or reductions in personnel, in the carrying out of contracts for works, purchases, etc., which fact largely accounts for the Canadian National spending on operating costs alone last year 96.67¢ for every dollar earned by it, whereas, the Canadian Pacific spent 82.29¢ to earn the same amount.

As a glaring instance of political influence on the policies of the Canadian National, we may cite the fact that the completion of the Montreal Terminal was definitely promised on the hustings by Ministers of the Crown, months before the Directors made their recommendation to proceed with the work.

It is submitted that joint managership, by elimination of this and other forms of political interference, and by gradually removing duplications and utterly unnecessary costs in many spheres, might well overcome the major cause of past recurring deficits.

Savings from unification.

Sir Edward Beatty, President of the Canadian Pacific Railway Company, claimed that through the unified management of both railways, savings to the amount of $75,300,000 per annum could be effected under average traffic conditions, which he stated are those of the year 1930. This claim was supported in the greatest detail by a long line of officers of that Company. These officers and Sir Edward himself were questioned at length by members of your Committee. Figures and supporting evidence for lesser, but still huge, savings were given, applicable to years of diminished traffic.

As to the method followed to establish such savings, it seems important that it should be described in some detail.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119589

The outline which follows is carefully deduced from, and is supported in every particular by, the evidence submitted:

> As to savings by unified management, there were first set out the conclusions arrived at by the respective officials of the two Companies at the request of, and submitted to, the Duff Royal Commission. These conclusions were as follows:
>
> <u>By Canadian Pacific officials</u>:
>
> $75,300,000 based on the same scale of operations as prevailed in 1930;
>
> <u>By Canadian National officials</u>:
>
> $50,340,000 based on the scale of operations of 1931. This would be equivalent to $56,440,000 based on the scale of operations in 1930--the operations of 1930 being about 30% larger than the operations of 1931.
>
> It is clear from the above that the comparable figures are $75,300,000 as presented by Canadian Pacific officials and $56,440,000 as presented by Canadian National officials.

There was then set out a full outline of the very thorough methods adopted in arriving at the above estimates of savings.

The evidence of Canadian Pacific officials was first given and showed that a Committee of officers from the operating, engineering, traffic, mechanical and accounting Departments was constituted and worked over a long period. They surveyed the existing supervisory organizations of the two Railways as independent units, the location and function of the various lines of railway; passenger and freight train services; and terminal and shop facilities. Each phase was taken in hand by officers familiar by experience with each special work. Senior officials were made available for consultation. In a word, the resources of the entire organization were used by the Committee. The efforts of the Committee were directed not to determine any maximum limit of savings, but merely what could reasonably be expected under normal conditions. Methods employed by the Canadian National were described as somewhat unlike those adopted by the Canadian Pacific. Both, however, included economies from reduction in general overhead expenses, traffic solicitation, advertising and regional supervision; line abandonments, re-routing of traffic, increased car and train loading,, consolidation of repair work, readjustment of passenger train services, as well as from operating joint freight and passenger terminals, consolidating express and telegraph services, consolidating accounting services and other expenses. There are items which appear in each estimate which are not in the other estimate, but, considering that two different methods were followed in getting together these estimates, there is an added importance to such similarity as appears

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119590

in the two results. It was brought out in the evidence that in the case of the Canadian Pacific estimate the services of an experienced official of the Great Northern Railway Company were obtained to review very carefully the whole plan of estimating savings which had been adopted. This official, Mr. V. P. Turnburke, General Auditor of the Great Northern, had had to do, himself, with the consolidation of the Great Northern and the Northern Pacific. After a very thorough review on his part, he made certain criticisms and suggestions, and finally reported that in his opinion the committee of the Canadian Pacific, in estimating savings, had proceeded along conservative lines, and he did not hesitate to accept the conclusions reached.

> A number of principal officers and engineers of the Canadian Pacific, who had been working on seventeen committees in all, demonstrated, under the several headings in use in railway accounting, the various retrenchments in expenditure estimated to result from unified operation. Most of these headings were divided into sections and even into further sub-sections, in order in each case to build up from the ground two sets of figures--the first set being such as applied to the particular section or sub-section as a part of the two systems when unified, and the other set being the savings in each case resulting from unification.

It cannot be gainsaid that the body of evidence made up by the above process was thorough and impressive.

There is one feature of these savings which should be especially emphasized. Efforts have been made to give the public the impression that savings can only be effected, or can at least mainly be effected, by abandonment of lines. The evidence very clearly demonstrated that savings by abandonment of lines did not amount to more than 10% of the total savings that are realizable. Even this 10% of savings, which might be described as attributable to abandonment, included such almost unused short lines as to the abandonment of which no railway made objection. There appeared no intention, on the part of any of those who gave testimony, of abandoning any lines save such as would, after argument from all interested, be deemed by the Transport Commission of Canada as proper to be abandoned without sacrifice of public interest. Very large economies were shown to be realizable without abandonment at all.

The evidence supported, and, save for minor items hereinafter referred to, justified savings to an amount of $75,300,000 for the traffic level of 1930, as established in the Canadian Pacific estimate submitted to the Royal Commission in 1932.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119591

In view of the enquiries made by various members of the Committee, the Canadian Pacific undertook, since the original hearing, the preparation of an estimate on the basis of 1937 traffic level, and this showed savings of $56,346,000 without any line abandonments whatever, and savings of $59,361,000 with allowance for such line abandonments as it was reasonable to assume the Board of Transport Commissioners would authorize under present conditions. This reduction was qualified by the statement that savings would fluctuate with traffic, and, therefore, revert to $75,300,000 should traffic again reach the level of 1930.

The submission of the Canadian Pacific witnesses was necessarily of a technical nature. The same could be said, though in less degree, of the evidence in opposition submitted by the officers of the Canadian National.

To demonstrate the very special character of the argument made on both sides, it is sufficient to refer to the method used, not exclusively but in the main, to establish savings from unification.

This method required the ascertainment of reduction in train and car mileage obtainable without detriment to public service from the consolidation of lightly loaded trains--a consolidation which, manifestly, unified management could bring about--and from the use of the shortest and most economical routes both for passenger and freight. The result, according to the evidence, was a saving of 6,909,939 passenger train miles or 14.3%, and 8,897,000 freight train miles, or 15.4%. These percentage reductions and others similarly calculated were used to measure the realizable economy in the different departments where such percentages could properly be applied.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119592

In other cases economy was calculated directly by estimating what reduction would be possible by the consolidation of departments. The train and car mileage formula was used to prove over $50,000,000 out of the $75,373,000 of savings claimed as realizable. Other technical methods were applied either exclusively or jointly with decrease in train mileage to establish the balance of the economy so claimed.

All these calculations were based on the figures of 1930.

The Canadian National officers opposed the above formula and its results by denying that the stated reduction in train mileage is exact, and further by asserting that Canadian Pacific unit costs are not applicable to the Canadian National as the lines of the two railways are not comparable. Evidence was submitted by the Canadian Pacific to show that Canadian Pacific unit costs had not been applied to Canadian National operations, but, where used, had been adopted as the measure of cost possible of achievement by the unified system. The Canadian National officers further contended that the Canadian Pacific calculations took no account of the substantial reduction in expenditures of the former system from 1930 to 1937. The Canadian Pacific admitted that permanent savings made in recent years justified a deduction of $4,801,000 from the original estimate, but showed that additions of $9,056,000 were justified by other known items of change. In addition, the evidence showed that by their very nature the temporary savings made independently by the railways were entirely different from the permanent

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119593

economies which would be possible under unified management through the elimination of duplicate effort. The revised Canadian Pacific estimate to which reference has been made, having been computed on the basis of 1937 level of traffic, completely disposes, if it is reasonably accurate, of the contention that large economies are no longer available because of individual economies effected by the railways, either on account of reduction in traffic, or otherwise.

From 1930 to 1937, gross revenues of both railways fell 21.6%. Combined expenditures of both railways between the same years was reduced by 20.7%.

Mr. Fairweather seems to be the only Canadian National witness who has surveyed the whole question. The gist of his evidence was that large savings from the unification of railways were impossible of realization, as the public and employees would not tolerate consequent reduction of the services and the creation of a monopoly. When confronted with many items of savings to which these objections did not appear to pertain, even remotely, he gave the impression of unwillingness to consider any savings to which his objections did not apply. This general affirmation was supported also in general terms by Mr. Hungerford, the Canadian National President.

Throughout the testimony of these officers there was a pervading strain of concern for the popularity of the Canadian National Railway and management. This is not an unnatural characteristic, having regard to the atmosphere in which inevitably officers who are answerable only to a Government must live. It cannot, however, be too strongly emphasized that such attitude of mind leads irresistibly to redundant and extravagant services and the sacrifice of the taxpayer.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

In connection with Mr. Fairweather's evidence in particular, there must be kept in mind the report made by him and submitted to the Royal Commission of 1932. This report embodied the conclusion that there was a possible saving of $56,230,000 from unification on the traffic level of 1930, and $50,090,000 for 1931, which latter year approximated closely the traffic conditions of 1937. Further, this report was made at the request of the late Sir Henry Thornton and submitted in train conference to the Royal Commission. It is important also to note that it was prepared prior to the constitution of that Royal Commissiom, and before the Canadian Pacific, at the request of the Commission, began work on its estimate. For the preparation of the above report Mr. Fairweather had the collaboration of seven technical assistants and access to any information he desired from the Canadian Pacific.

Mr. Fairweather's original estimate is elaborate and comprises an explanatory memo of 12 pages and schedules of 39 pages. Although prepared by a totally different method, it appears to corroborate generally Sir Edward Beatty's contention as shown by the following comparison of the two estimates under their main headings:

Estimates by Canadian National and Canadian Pacific respectively of possible savings through unification, based on the level of traffic for 1930.

| | C. N. R. | C. P. R. |
|---|---|---|
| Increased railway operating revenues | $ 6,540,000 | $ 1,396,000 |
| Traffic solicitation & advertising | 6,950,000 | 5,976,000 |
| Transportation & Misc. operations | 20,047,000 | 24,954,000 |
| Maintenance of Way & Structures | 3,423,000 | 14,889,000 |
| Maintenance of Equipment | 7,797,000 | 14,360,000 |
| General | 1,573,000 | 4,289,000 |
| Lake and coastal steamers | 500,000 | 450,000 |
| Hotels | 4,500,000 | --------- |
| Express operations | 600,000 | 1,450,000 |
| Telegraphs (railway & commercial) | 700,000 | 948,000 |
| Interest on released investment in material & rolling stock | 3,000,000 | 6,350,000 |
| Miscellaneous | 600,000 | 311,000 |
| Grand Total | $56,230,000 | $75,373,000 |

Details show items in each estimate that are not in the other, which indicates that a combination of both estimates might well produce potential fields of economy greater than the total of either.

Mr. Fairweather also gave evidence as to possible savings under co-operation. In this his opinion appeared to undergo very considerable variations as he first appraised savings under this head at $35,000,000, then at $24,000,000, subsequently again at $10,000,000, and finally stated that such estimates were but guesses on his part. It is difficult to appraise the value of evidence so submitted.

This very brief analysis of the evidence suffices to reveal its technical character. While the undersigned feel, as probably other members of your Committee feel, that after many months of close study of this situation, and after having had the advantage of hearing scores of witnesses on every phase of the subject and of questioning such witnesses, they have been able to reach a dependable conclusion on the merits of the conflicting contentions advanced, respectively, by officers of the two Railway Companies, they are also of the opinion that not being possessed, themselves, of special expert knowledge on these subjects, the public would be better served and better satisfied if it

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

 119596

could be supplied with the findings of an impartial tribunal of experts, qualified by training and experience to report on the evidence submitted. Accordingly, a motion was made before your Committee on May 2, 1939, in the following terms:

> "That the evidence before this Committee be submitted to a firm of Railway Engineers and Accountants of high standing, free from all interest in either Railway System, to the end that such firm may study said evidence, and especially its practical Railway engineering and accounting features, and make such physical examinations as it may deem necessary with a view to making full report to this Committee as to what in the judgment of such firm would be the amount of savings which could be effected by a system of unified management, and whether and to what extent, if any, such savings would entail impairment of service to the Canadian people."

This motion, we regret to say, was defeated.

The undersigned are of opinion that such investigation need not have entailed very great expense, because, first, the evidence is already submitted, and, secondly, investigation on the premises would only be necessary in rare cases, because facts, maps, plans and other necessary data are already available and can be made open to inspection at the offices of the respective companies. The undersigned further are of opinion that only by means of such report could the full value of the vast mass of information, which your Committee has accumulated, be obtained and utilized by the Canadian people.

The undersigned consider it a matter of much significance that on this question which should have been dealt with as a pure question of savings to the people of Canada in the operation of the nation's railways, in which question necessarily the provision of essential services would be a part, there should be found two distinctly opposite sets of opinion among railway officials, and that one set should be entirely confined to the Canadian Pacific and the other set entirely confined to the Canadian National. The question considered as above defined is, or should be, essentially one and the same for both systems. The only conclusion is that considerations

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119597

other than those included in the above definition must have intervened.

At this point again the undersigned further beg to emphasize the overwhelming necessity, from the standpoint of the whole country, from the standpoint of its credit and solvency, and for the good of every class and every community of the Dominion, that some solution definite and effective must be found, and found without further avoidable delay.

## Conclusions

In the terms of your Committee's appointment, your Committee was assigned a very definite duty, namely:

> "to inquire into and report upon the best means of relieving the country from its extremely serious railway condition, and financial burden consequent thereto,"

To comply with the above commitment, a full enquiry had first to be made. This has been done. After enquiry, the next duty is to "report", and such report must disclose what in the judgment of your Committee is a "means of relieving the country from its extremely serious railway condition, and financial burden consequent thereto"; and the "means" reported must be, in the judgment of those reporting, the "best" means as shown by the evidence submitted.

The undersigned are utterly unable to find in the evidence any hope whatever of relief from any other source than that hereinafter indicated in this report.

We further are of opinion that if, contrary to the evidence, effective relief can possibly emerge out of any other of the suggested policies, such policies applied to the extent absolutely essential to bring such measure of relief will be open to whatever objections, if any, can be offered to the course hereinafter indicated.

119598

We are impressed by the following considerations:

(1) That huge competing businesses struggling for a living in the same field can in general, and probably always, effect tremendous economies by unified operations;

(2) That such unified operations as have in a very minor way been put in effect in respect of our railways have already shown large percentage reductions. In the case, for example, of the pool trains, there has been shown an operating saving of 33%, though such pool trains still carry the waste of duplication in terminals, yards, etc.

(3) That in addition to savings in year to year operations, new capital requirements for one singly-managed System should be very substantially less than new capital requirements for two competing Systems.

(4) That assuming the public interest can be protected and essential services maintained, there would seem to be strikingly important opportunities for saving by some plan of unified management in respect of two such Systems as now exist in Canada. To ensure the full conservation of every essential public interest and public service, and to safeguard the interests of Canada, the undersigned recommend insistence on the conditions enumerated below in respect of any system of unified management which may be worked out. The undermentioned stipulations are not advanced with any thought that they are all-inclusive. We believe, however, that conditions in Canada, both as affecting the Dominion on the one hand, and as affecting the Canadian Pacific Railway Company on the other, are such that all necessary and reasonable provisions can be arrived at and agreed upon. The following objectives should be secured:

i. There should be no obligation, legal or moral, implied or expressed, whereby the country assumes any liability in respect of Canadian Pacific obligations or securities, either as to capital or interest;

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119599

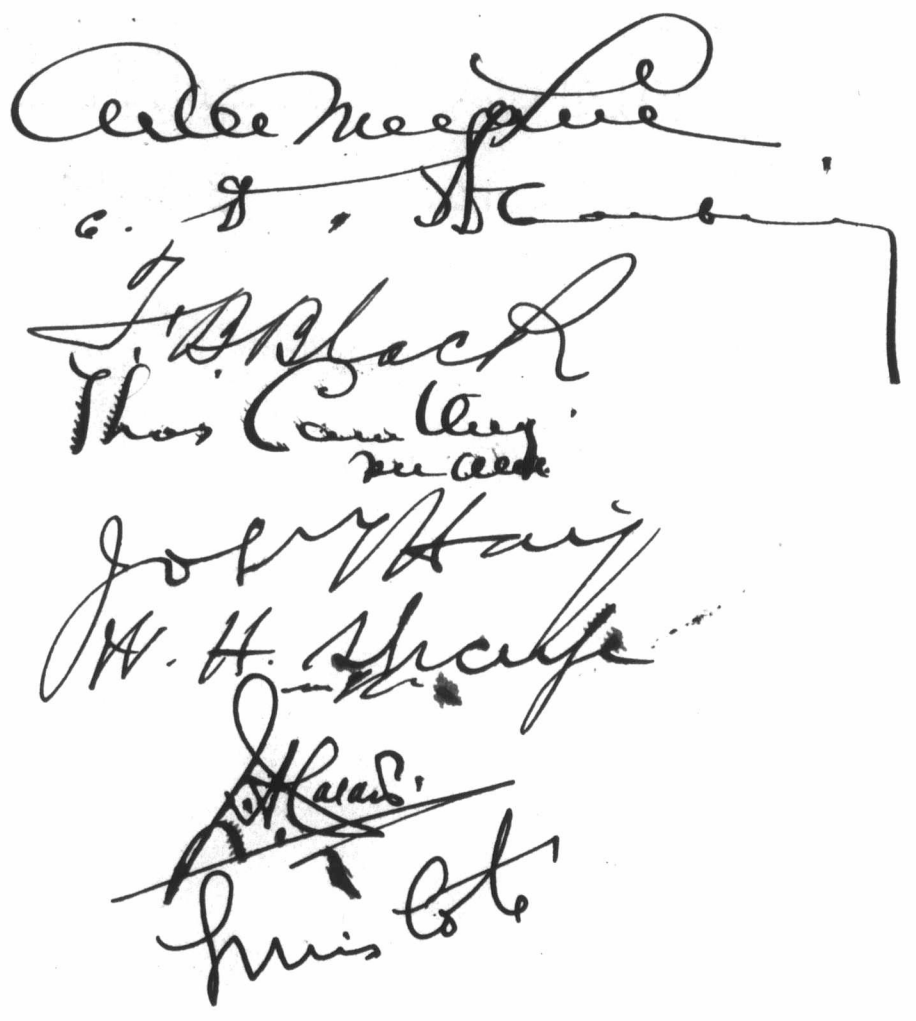
ii. Any plan of unified management adopted should be such that the resulting operation can in no sense be dominated by the Canadian Pacific Railway Company;

iii. Out of earnings up to the average aggregate earnings of both Systems over such a period of years as may be agreed upon, the Canadian National must be assured the same share of such earnings as it has enjoyed of such average earnings;

iv. Out of earnings above such average earnings, which presumably will be earnings due to economies effected by unified management, the Canadian National should receive not less than one-half;

v. New capital investments, limited as they will be to joint requirements, should be provided for on a basis of definite and individual responsibility for respective shares of the capital on the part of the Canadian National (or of the Dominion of Canada), on the one hand, and of the Canadian Pacific Railway Company on the other hand.

vi. Both parties should agree to such enlargement of the powers and supervision of the Board of Transport Commissioners as may be deemed necessary to protect and serve every public interest.



vii. In view of the very extensive economies to be attained, and to the end that the process may not involve undue hardship on anyone, provision should be made for the due protection, by both Systems, of labour adversely affected by such economies, along the lines lately followed by the Railways of Great Britain.

viii. Agreement to all provisions should be obtained from each separate class of security holders of the Canadian Pacific and of the Canadian National, insofar as such latter security holders are not already protected by Government guarantee.

The undersigned are of opinion that on the evidence submitted this country can look only to a system of unified management for relief; that the evidence demonstrates that relief can in fact be obtained under such a system, provided complete absence of political interference is assured in the Statutory terms creating such system; and are further of opinion that same can be done with ample and complete protection of all public interests.

#9

Memo for Rt.Hon.Mr.Meighen.

This is a very enlightening document. I think you should show it to Senator Murdoch.

The difficulty if,what can we do about it?.The railway workers are so well organized that they are difficult to deal with and in all past disputes that run so far as to bring about a strike, the public seems always to be on the side of the railway men. Until the public make up its mind to disregard the hardships of an extended strike and to show no sympathy with the strikers,I dont see what can be done. The unfair aspect of the situation seems to me to be that the RR men insist on being placed on the same payment basis as those in the U.S.A. whereas we all know that in every other trade this is not so-or possible. There lies our only solution,as I see it.

Why should young men work on a farm at $15 to 30 a month and board when they can get $75.a month as foremen,learning as they do, a trade at the expense of the Ry.Company?. They just dont do so, as my experience with a farm shews.

A.C.H.

Senator Hardy

REPORT MADE BY THE FOLLOWING MEMBERS OF THE SPECIAL RAILWAY COMMITTEE OF THE SENATE SELECTED TO COMPLETE THE INQUIRY AND SUBMIT A REPORT UPON THE BEST MEANS OF RELIEVING THE COUNTRY FROM ITS EXTREMELY SERIOUS RAILWAY CONDITION AND THE FINANCIAL BURDEN CONSEQUENT THERETO.

1 9 6 0 3

---

It is deeply regretted that an unanimous report was found impossible of attainment, as in a matter of such grave importance, at the present juncture, the added weight of unanimity in the Committee would have been of inestimable value.

Canadian National Capitalization and Deficits

The Canadian National constitutes for the nation its most obdurate and perilous problem. The outlay of Canada to December 31, 1938, on its publicly-owned railway system, including interest, has been in excess of $3,300,000,000, of which the greater part has been brought about by recurring yearly deficits assumed and loans made by the Canadian Government to the Canadian National.

The cash deficit in 1938, substantially greater than in 1937, as shown in the Canadian National Railways Annual Report for 1938, is $54,314,195. This deficit does not include capital losses of $2,712,877 charged against Proprietor's Equity under the Canadian National Capital Revision Act of 1937, nor does it include interest on $672,688,000, the principal amount of such Proprietor's Equity. The aggregate contributions of the Government to the System as at March 31, 1938, written off to Consolidated Fund, has amounted to $838,000,000. (See Public Accounts, 1938, Appendix 28). In addition, the aggregate of interest to December 31, 1936, on Government loans to the System accrued and unpaid, which was transferred to the Canadian National Securities Trust, under the Act referred to, has amounted to $574,781,000.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

119604

The above large sums already written off represent in reality assumption by the Dominion of Canada of a very considerable total of capital which went into our railways, and entail as well a substantial addition to the National Debt. No criticism of such writing-off is implied in this report. The results, however, after the writing-off, speak for themselves.

Hard Much

It is evident that the railway problem cannot continue to drift as it has done in the past, without more hardship to the taxpayer and great and imminent danger to the credit of Canada.

In view of the marked increase in Government expenditure and taxation within the last years, of our constantly growing requirements, more particularly for national defence, for the relief of large sections of the community, for rapidly expanding social legislation, and the corresponding greater necessity of husbanding the resources of the country, we are moved to quote anew the solemn admonition given to the nation by the Royal Commission of 1932. It is far more justified today than it was seven years ago:

> "We feel compelled, as a matter of public duty, to strike a serious note of warning to the people of Canada. Unless the country is prepared to adopt the plan we have proposed, or some other equally effective measures, to secure the efficient and economical working of both railway systems and thereby not only reduce the burden on the federal treasury but improve the financial position of the privately-owned railway, then the only courses that would be left would be either to effect savings in national expenditure in other directions or to add still further to the burdens under which the industries of the country are suffering by the imposition of yet further taxation. Failing the adoption of one or other of these courses, and there are obvious limits to their application, the very stability of the nation's finances and the financial credit of the Canadian Pacific Railway will be threatened, with serious consequences to the people of Canada and to those who have invested their savings in that railway."

**Reasons for Inaction**

It is contended that the expenditure of the Canadian National, even if excessive, provides for the subsistence of a portion of the population which, otherwise, might be under relief. Obviously, this is fallacious as nothing guarantees that such excess in expenditure goes to those otherwise in need of it and, above all, as such policy, if accepted, would lead to unrestrained wastage in all Government departments. The complacent state of mind of certain Canadian National officials who seem anxious to see the country resign itself to unbearable and unpayable deficits is deplorable. To this end it was represented that the Canadian National deficits were but an apparent loss to the country as that Company provided to the nation an equal value in services which were essential to its present well-being and future development. Such a contention is utterly inadmissible, as like adequate services can be, and in fact are, rendered by the Canadian Pacific Railway and by similar companies in other countries at no cost to the nation.

Witnesses appearing before the Committee outlined solutions of the problem, in which there was implied no abandonment of essential services, but all were designed to reduce or eliminate unnecessary duplication and redundancy of services.

It is obvious that relief can be obtained otherwise only by a very large increase in revenues, which appears to be definitely unattainable either through increases in rates or through any conceivable growth of traffic.

**Remedies Suggested.**

Three different methods were proposed to the Committee for securing economies to reduce the burden of Canadian National deficits.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119606

Voluntary co-operation

A more effective application of the co-operative provisions of the Canadian National-Canadian Pacific Act, 1933, was recommended.

For mcl

This suggestion is not very promising. Since the coming into force of the above law in 1933, the total savings from arrangements now in effect, and others agreed upon by the railways but not yet in effect, will be less than $2,000,000 per annum.

Five years of trial has, it must be admitted, demonstrated that economies to be effected through co-operation are of a very minor order. Further, the evidence submitted on behalf of the officials of both Railways made it abundantly clear that hope for the future in this regard is practically negligible. The absence of singleness of interest in the result to be obtained by economies, the continuous and not unnatural jealousies of officials as to the prestige of and immediate consequences to their respective properties, make the securing of what they describe as a balance of burden and advantage the subject of a long drawn-out and almost always futile struggle. In this respect any contention that the larger measure of responsibility for this futility rests on either one of the two Companies more than on the other cannot certainly be supported by the evidence.

Enforced co-operation

A second recommendation, made by the President of the Canadian National, provides for the injection into negotiations between the Railways of a new body consisting of a representative of each of the Railways, and a chairman appointed by the Government, the chairman to have an over-riding vote. This body would have authority to initiate studies of any project suggested by any individual member, and, if a favourable report was made by a majority, or by the chairman alone, the proposal would automatically go before an Arbitral Tribunal for final decision.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

 119607

It was argued that this would relieve the Railway Companies of the stigma which would attach to agreement to undertake unpopular economies. As to the latter point, it would be most unwise to depend on the Government voluntarily submitting to public odium - as the result of the action of its representative - a public odium which railway officials themselves admit they have recoiled from incurring. Experience proves that no Government will incur odium knowingly. The suggestion appears to be useless.

It might be pointed out as well that there would seem to be a dangerous responsibility assumed in establishing, as the effective agent of enforced changes in operation, a Board on which two members would, as between the two Railway Systems, be representative of one, and only one representative of the other. It is important to avoid with the utmost care any enforced action which might be the ground of liability on the country later on.

It seems to us the sooner the people of Canada accept the conclusion that co-operation of two competing systems cannot be effective in any worthwhile way in bringing about the absolutely needed economies, the better it will be for the establishment of a real remedy and for the solvency of our country. In this connection it must never be forgotten that the Railways are in a death struggle for a living, and while that struggle continues, each will fight for itself. The consequence of this mutual destructiveness falls on the taxpayers of Canada. It was very strongly urged before your Committee that such mutual destructiveness can only end when the officers and employees of both systems are working for the same purse.

Unification of Management.

The third suggestion made was unified operation by a single management of the Canadian National and the Canadian Pacific, each company continuing to own its respective properties and no guarantee being given to the Canadian Pacific of a return on its stock or on its bonds or other capital issues. Each company would continue to receive, under unified operation, the net earnings which past actual results over an agreed period of

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119608

years indicate that each would have received as an independent institution and additional net earnings made available by the economies of unified operation would be shared between them on an equitable basis. It was intimated that of these additional net earnings the Canadian National should receive at least half. The suggestion was that unified operation would be under the control of a Board to be created by Parliament and to be composed of fifteen directors, five of which would be selected by the Government or by the Canadian National, five by the Canadian Pacific, and the remaining five by the directors already chosen, or by some other appropriate method.

This proposal was met at the outset by two objections:

Firstly:- It was contended that such unified management would create a huge and possibly an oppressive monopoly.

To this objection the following arguments taken from the evidence apply:

(1) For many years very large sections of the Dominion have lived under the monopoly, if such it be called, of either the Canadian National or the Canadian Pacific, and have done so without any perceptible disadvantage;

(2) The Railways have long ago been stripped of all powers which might render any monopolistic feature injurious to the public interest. The Transport Board holds by Statute supreme authority over them and controls all abandonment of lines, withdrawals or reductions of services, as well as of increases or decreases of rates and fares.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119609

(3) The development of transportation by means of motor cars, busses and trucks (public and private) and by air traffic, has created conditions where even under unified railway operation there would be very effective competition anyway, and competition quite difficult to cope with. In this connection water competition also plays its part.

(4) The modern world exists under a great number of monopolies imposed by the free will of the people for the essential purpose of suppressing excessive charges and wastage due to duplication. This is strikingly exemplified in transportation, telephone, water, gas, electricity and other urban services, and in some countries, of railways.

Secondly:- The other objection is based on the apprehension that there would be created a large mass of population, whose united influence might dominate the political life of Canada. To this the answer seems to be that if the interest coalescing the railway employees is an occupational or a professional one, it exists already. No more striking evidence of this can be imagined than the opposition to unified management, voiced by the railway employees of both Systems through their unions.

If the interest creating the coalition be a political one, then conditions now are just as favourable for its success as they could be under unified management. Indeed, there are many who believe that such political power is now exercised. Without any doubt at all, pressure is exerted, through their unions, by the mass of employees of both railways, on political parties.

This continuous, concerted pressure is mainly directed to the protection of a fortunate section among all the labouring classes of the country.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

This influence is in fact one of the chief obstacles to the settlement of our railway problem. It can only be removed by placing the administration of the Canadian National definitely and finally above political interference and in the hands of capable, strong and throughly independent men, whose tenure of office could be attacked only for cause. This could be accomplished by placing our railways under the direction of a properly selected board, whose only object could be the successful operation of a united system.

Any reasonable cause which railway workers might have had to oppose unified management has been eliminated by the proffer of provisions protecting them, in the manner effected in Great Britain, against loss by dismissal, demotion or transfer. It must be remembered that not less than five or seven years will be essential to attain, step by step, the full results of unification. Normal attrition, which accrues through death, pension age, or resignation, would remove men from employment faster in the aggregate than is required for unification, and those who suffer in special cases--for some would so suffer--can be assuredly compensated. These guarantees which have been definitely offered are measures of protection hitherto unknown to the working classes of any industry in the country, and corresponding protection is certainly not enjoyed by any other class.

It was not unreasonable to expect that railway workers would have been reassured by the definite statement to the above effect made on behalf of the Canadian Pacific--which, undoubtedly, would be acceptable to the Government if an arrangement were entered into--and would have withdrawn their opposition to a unified scheme of management. This is especially true because the scheme of compensation would be, and should be, the subject

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

of an agreement in which the wishes of the employees would be fully represented, and the rights under such agreement would become Statutory.

The object sought to be attained is the avoidance of financial disaster to our country, in which disaster every class would suffer, and the poorer classes even more than others. It is not, therefore, unjust to ask that all co-operate in a fair spirit to such an end.

Persistence in their present attitude simply means that they insist that the taxpayers of Canada, for all time, shall carry the burden of many thousands of positions which are not required.

Mr. Hungerford, President of the Canadian National Railways, submitted in his evidence that the efforts to operate the property on economical lines were circumscribed by what he defined as considerations of "public interest"; that what constitutes "public interest" was really determined by the Government of the day and that if the Canadian National was not a Government enterprise it certainly could not be carried on its present footing.

It may be reasonably inferred, as was indicated by the late Sir Henry Thornton in his evidence before the Royal Commission, that the policy of the Government, whatever might be the efforts of the Canadian National Management to operate on sound business lines, is unhappily reflected in the administration of the railway in increases or reductions in or personnel, in the carrying out of contracts for works, purchases, etc., which fact largely accounts for the Canadian National spending on operating costs alone last year 96.67¢ for every dollar earned by it, whereas the Canadian Pacific spent 62.29¢ to earn the same amount.

As a glaring instance of political influence on the policies of the Canadian National, we may cite the fact that the completion of the Montreal Terminal was definitely promised on the hustings by Ministers of the Crown, months

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

before the Directors made their recommendation to proceed with the work.

It is submitted that joint managership, by elimination of this and other forms of political interference, and by gradually removing duplications and utterly unnecessary costs in many spheres, might well overcome the major cause of past recurring deficits.

Savings from unification.

Sir Edward Beatty, President of the Canadian Pacific Railway Company, claimed that through the unified management of both railways, savings to the amount of $75,300,000 per annum could be effected under average traffic conditions, which he stated are those of the year 1930. This claim was supported in the greatest detail by a long line of officers of that Company. These officers and Sir Edward himself were questioned at length by members of your Committee. Figures and supporting evidence for lesser, but still huge, savings were given, applicable to years of diminished traffic.

As to the method followed to establish such savings, it seems preferable to quote Sir Edward himself:

> "Your Committee, however, may desire some account of the basis and methods used for this calculation, and without being too technical, I shall endeavour to explain the origin of the figures. Estimates of savings were submitted by both the Canadian Pacific and Canadian National Railways as the result of requests to them of the Royal Commission. Three estimates were made - $75,300,000 by the Canadian Pacific, based on 1930; $50,340,000 by the Canadian National, based on 1931 - practically the level of traffic in 1937; and $56,440,000 by the Canadian National on a year of normal traffic, which was taken as 30 per cent above 1931, or practically the level of traffic in 1930.
>
> I should like to explain to your Committee the precise procedure followed in making the estimate offered by the Canadian Pacific Railway.
>
> When the Royal Commission requested that the Canadian Pacific exhibit in money its estimate of the amount of railway duplication, I arranged for a committee of our officers from the operating.

of an agreement in which the wishes of the employees would be fully represented, and the rights under such agreement would become Statutory.

The object sought to be attained is the avoidance of financial disaster to our country, in which disaster every class would suffer, and the poorer classes even more than others. It is not, therefore, unjust to ask that all co-operate in a fair spirit to such an end.

Persistence in their present attitude simply means that they insist that the taxpayers of Canada, for all time, shall carry the burden of many thousands of positions which are not required.

In this connection, it is important to keep in mind that the Railway business of the Dominion, as indeed of all countries, has been steadily diminishing in volume as compared with business as a whole. The evidence before your Committee led irresistibly to the conclusion that this tendency may be expected to continue.

Mr. Hungerford, President of the Canadian National Railways, submitted in his evidence that the efforts to operate the property on economical lines were circumscribed by what he defined as considerations of "public interest"; that what constitutes "public interest" was really determined by the Government of the day and that if the Canadian National were not a Government enterprise it certainly could not be carried on its present footing.

It may be reasonably inferred, as was indicated by the late Sir Henry Thornton in his evidence before the Royal Commission, that the policy of the Government, whatever might be the efforts of the Canadian National Management to operate on sound business lines, is unhappily reflected in the administration of the railway in increases or reductions in personnel, in the carrying out of contracts for works, purchases, etc., which fact largely accounts for the Canadian National spending on operating costs alone last year 96.67¢ for every dollar earned by it, whereas the Canadian Pacific spent 82.29¢ to earn the same amount.

engineering, traffic, mechanical and accounting departments to convene and to prepare an answer to the Commission's request.

They surveyed the existing supervisory organizations of the two railways as independent units, and the probable organization of a railway as unified; the location and function of the various lines of railway; the passenger and freight train services; and the terminal and shop facilities. Each phase was assigned to officers qualified to deal with it. When information covering a special problem was not available, the senior officer in the territory affected was consulted. In other words, the resources of the entire organization were used by the Committee in its work. The committee understood they were not trying to determine the maximum limit of savings, but only what could reasonably be expected under normal conditions.

In addition to savings resulting from unification of actual operations, there are other advantages. Account must be taken also of the savings in future capital expenditures. In providing for the normal growth of traffic and changes in its character, the extension of one plant would obviously cost less than the extension of two. This consideration would apply throughout the entire scheme of additions and betterments necessary to adapt the system from time to time to the use of new machinery and methods. I regard this as a most important element in unification, and one involving a very large item of saving.

As has already been pointed out, our estimate was offered with two prepared by the Canadian National Railways. One of those was a figure of $56,440,000 based on a year in which traffic would be 30 per cent above the volume of 1931. This is a little over the level of traffic in 1930, and it is, therefore, reasonable to compare theCanadian Pacific figure of $75,300,000 with the Canadian National estimate of $56,440,000.

Close examination of the two estimates shows that both included economies from reduction in general overhead expenses, traffic solicitation, advertising and regional supervision; from line abandonments; from re-routing of traffic; from increased car and train loading; from consolidation of repair work; from readjustment of passenger train services; from operating joint freight and passenger terminals; from consolidating express and telegraph services; from reduction in accounting, and other expenses. Individual items appear in each estimate which are not in the other, but, considering that two quite different methods were followed in compiling the estimates the close similarity in result is unquestionable proof that, at the time of the Royal Commission, responsible officers of both companies were in general agreement that the savings to be had were substantial."

And Sir Edward adds:

"When the preliminary results of the various studies were ready, a draft report was prepared and considered by Mr. Grant Hall, Vice-President, Mr. Coleman, Vice-President, Western Lines, Mr. Curle, General Counsel, and Mr. E. E. Lloyd, Comptrollider. The Committee were questioned in detail upon their conclusions, corrected, when necessary, and instructed to continue their studies along the lines which had been followed and to prepare the necessary exhibits for filing with the Commission. Upon the completion of the final draft, it was again reviewed in detail by Messrs. Hall, Coleman, Curle and Lloyd. Mr. W. N. Tilley, Consulting Counsel, and I also went over the material carefully with a number of the officers concerned. I should mention that, knowing the importance that might be attached to the findings, I asked the President of the Great Northern Railway if he could have someone who had had experience in calculating the possible savings from the consolidation of the Great Northern and Northern Pacific come to Montreal and examine the work of our Committee. He kindly allowed Mr. V. P. Turnburke, General Auditor of the Great Northern, to do so. The latter who had had extensive engineering accounting experience, spent some time examining the Committee's work, made some criticisms and certain suggestions, and later reported to me that he was satisfied that the Committee had proceeded upon conservative lines and that from his experience he would not hesitate to accept the conclusions reached."

Exemplifying the method expounded by Sir Edward Beatty, a number of principal officers and engineers of the Canadian Pacific, divided into seventeen committees, demonstrated, under the several headings in use in railway accounting, the retrenchment in expenditure estimated to result from unification of the two systems. Most of these headings were divided into sections and even into further sub-sections in order, in each case, to build up from the ground, on the one hand, such particular section or sub-section as a part of the two systems when consolidated and, on the other hand, to gather and appraise the savings resulting from this operation. It cannot be gainsaid that the body of evidence made up by this process was thorough and impressive.

There is one feature of these savings which should be especially emphasized. Efforts have been made to give the public the impression that savings can only be

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119617

effected, or can at least mainly be effected, by abandonment of lines. The evidence very clearly demonstrated that savings by abandonment of lines did not amount to more than 10% of the total savings that are realizable. Even this 10% of savings, which might be described as attributable to abandonment, included such almost unused short lines as to the abandonment of which no railway made objection. There appeared no intention, on the part of any of those who gave testimony, of abandoning any lines save such as would, after argument from all interested, be deemed by the Transport Commission of Canada as proper to be abandoned without sacrifice of public interest.

It supported, and, save for minor items hereinafter referred to, justified savings to an amount of $75,200,000 for the traffic level of 1920, as established in the Canadian Pacific estimate submitted to the Royal Commission in 1932.

In view of the inquiries made by various members of the Committee, the Canadian Pacific undertook, since the original hearing, the preparation of an estimate on the basis of 1937 traffic level, and this showed savings of $56,346,000 without any line abandonments whatever, and savings of $59,361,000 with allowance for such line abandonments as it was reasonable to assume the Board of Transport Commissioners would authorize under present conditions. This reduction was qualified by the statement that savings would fluctuate with traffic and, therefore, revert to $75,200,000 should traffic again reach the level of 1920.

The submission of the Canadian Pacific witnesses was necessarily of a technical nature. The same could be said, though in less degree, of the evidence in opposition submitted by the officers of the Canadian National.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119618

To demonstrate the very special character of the argument made on both sides, it is sufficient to refer to the method used, not exclusively but in the main, to establish savings from unification.

This method required the ascertainment of reduction in train and car mileage obtainable without detriment to public service from the consolidation of lightly loaded trains-- a consolidation which manifestly unified management could bring about--and from the use of the shortest and most economical routes both for passenger and freight. The result, according to the evidence, was a saving of 6,909,939 passenger train miles or 14.8% and 8,097,000 freight train miles, or 15.4%. These percentage reductions and others similarly calculated were used to measure the realizable economy in the different departments where such percentages could properly be applied.

In other cases economy was calculated directly by estimating what reduction would be possible by the consolidation of departments. The train and car mileage formula was used to prove over $50,000,000 out of the $75,375,000 of savings claimed as realizable. Other technical methods were applied either exclusively or jointly with decrease in train mileage to establish the balance of the economy so claimed.

All these calculations were based on the figures of 1930.

The Canadian National officers opposed the above formula and its results by denying that the stated reduction in train mileage is exact, and further by asserting that Canadian Pacific unit costs are not applicable to the Canadian National as the lines of the two railways are not comparable. Evidence was submitted by the Canadian Pacific to show that Canadian Pacific unit costs had not been applied to Canadian National operations, but, where used, had been adopted as the measure of cost possible of achievement by the unified system.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119619

The Canadian National officers further contended that the Canadian Pacific calculations took no account of the substantial reduction in expenditures of the former system from 1930 to 1937. The Canadian Pacific admitted that permanent savings made in recent years justified a deduction of $4,801,000 from the original estimate, but they showed that additions of $9,056,000 were justified by other known items of change. In addition, the evidence showed that by their very nature the temporary savings made independently by the railways were entirely different from the permanent economies which would be possible under unified management through the elimination of duplicate effort. The revised Canadian Pacific estimate to which reference has been made, having been computed on the basis of 1937 level of traffic, completely disposes, if it is reasonably accurate, of the contention that large economies are no longer available because of individual economies effected by the railways, either on account of reduction in traffic, or otherwise.

From 1930 to 1937, gross revenues of both railways fell 21.6%. Combined expenditures of both railways between the same years was reduced by 20.7%.

Mr. Fairweather seems to be the only Canadian National witness who has surveyed the whole question. The gist of his evidence was that large savings from the unification of railways were impossible of realization as the public and employees would not tolerate consequent reduction of the services and the creation of a monopoly. When confronted with many items of savings to which these objections did not appear to pertain, even remotely, he gave the impression of unwillingness to consider any savings to which his objections did not apply. This general affirmation was supported also in general terms by Mr. Hungerford, the Canadian National President.

119620

Throughout the testimony of these officers there was a pervading strain of concern for the popularity of the Canadian National Railway and management. This is not an unnatural characteristic, having regard to the atmosphere in which inevitably officers who are answerable only to a Government must live. It cannot, however, be too strongly emphasized that such attitude of mind leads irresistibly to redundant and extravagant services and the sacrifice of the taxpayer.

In connection with Mr. Fairweather's evidence in particular, there must be kept in mind the report made by him and submitted to the Royal Commission of 1932. This report embodied the conclusion that there was a possible saving of $56,230,000 from unification on the traffic level of 1930, and $50,090,000 for 1931, which latter year approximated closely the traffic conditions of 1927. Further, this report was made at the request of the late Sir Henry Thornton and submitted in train conference to the Royal Commission. It is important also to note that it was prepared prior to the constitution of that Royal Commission, and before the Canadian Pacific, at the request of the Commission, began work on its estimate. For the preparation of the above report Mr. Fairweather had the collaboration of seven technical assistants and access to any information he desired from the Canadian Pacific.

Mr. Fairweather's estimate is elaborate and comprises an explanatory memo of 12 pages and schedules of 89 pages. Although prepared by a totally different method, it appears to corroborate generally Sir Edward Beatty's contention as shown by the following comparison of the two estimates under their main headings:

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

119621

Estimates by Canadian National and Canadian Pacific respectively of possible savings through unification, based on the level of traffic for 1930.

| | C. N. R. | C. P. R. |
|---|---|---|
| Increased railway operating revenues | $ 6,540,000 | $ 1,396,000 |
| Traffic solicitation & advertising | 6,950,000 | 5,976,000 |
| Transportation & Mis. operations | 20,047,000 | 24,954,000 |
| Maintenance of Way & Structures | 3,425,000 | 14,889,000 |
| Maintenance of Equipment | 7,797,000 | 14,360,000 |
| General | 1,575,000 | 4,289,000 |
| Lake and coastal steamers | 500,000 | 450,000 |
| Hotels | 4,500,000 | ---------- |
| Express operations | 600,000 | 1,450,000 |
| Telegraphs (railway & commercial) | 700,000 | 948,000 |
| Interest on released investment in material & rolling stock | 3,000,000 | 6,350,000 |
| Miscellaneous | 600,000 | 311,000 |
| Grand Total | $56,250,000 | $75,373,000 |

Details show items in each estimate that are not in the other, which indicates that a combination of both estimates might well produce potential fields of economy greater than the total of either.

Mr. Fairweather also gave evidence as to possible savings under co-operation. In this his opinion appeared to undergo very considerable variations as he first appraised savings under this head at $35,000,000, then at $24,000,000, subsequently again at $10,000,000, and finally stated that such estimates were but guesses on his part. It is difficult to appraise the value of evidence so submitted.

This very brief analysis of the evidence suffices to reveal its technical character. While the undersigned feel, as probably other members of your Committee feel, that after many months of close study of this situation, and after having had the advantage of hearing scores of witnesses on every phase of the subject and of questioning such witnesses, they have been able to reach a dependable conclusion on the merits of the conflicting contentions advanced, respectively, by officers of the two Railway Companies, they are also of the opinion that not being possessed, themselves, of special expert knowledge on these subjects, the public would be better served if it

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

D 19622

could be supplied with the findings of an impartial tribunal of experts, qualified by training and experience to report on the evidence submitted. Accordingly, a motion was made before your Committee on May 2, 1939, in the following terms:

> "Moved by the Right Honourable Arthur Meighen that the evidence before this Committee be submitted to a firm of Railway Engineers and Accountants of high standing, free from all interest in either Railway System, to the end that such firm may study said evidence, and especially its practical Railway engineering and accounting features, and make such physical examinations as it may deem necessary with a view to making full report to this Committee as to what in the judgment of such firm would be the amount of savings which could be effected by a system of unified management, and whether and to what extent, if any, such savings would entail impairment of service to the Canadian people."

firm X

This motion, we regret to say, was defeated.

The undersigned are of opinion that such investigation need not entail very great expense, because, first, the evidence is already submitted, and, secondly, investigation on the premises will only be necessary in rare cases, because facts, maps, plans and other necessary data are already available and can be made open to inspection at the offices of the respective Companies. The undersigned further are of opinion that only by means of such report can the full value of the vast mass of information, which your Committee has accumulated, be obtained and utilized by the Canadian people.

The undersigned consider it a matter of much significance that on this question which should have been dealt with as a pure question of savings to the people of Canada in the operation of the nation's Railways, in which question necessarily the provision of essential services would be a part, there should be found two distinctly opposite sets of opinion among railway officials, and that one set should be entirely confined to the Canadian Pacific and the other set entirely confined to the Canadian National. The question considered as above defined is, or should be, essentially one and the same for both Systems. The only conclusion is that considerations other than those included in the above definition must have intervened.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

I 19623

At this point again the undersigned further beg to emphasize the overwhelming necessity, from the standpoint of the whole country, from the standpoint of its credit and solvency, and for the good of every class and every community of the Dominion, that some solution definite and effective must be found, and found without further delay.

## Conclusions

We were utterly unable to find any hope whatever of relief from any other source than that hereinafter indicated in this report.

We further are of opinion that if, contrary to the evidence, effective relief can possibly emerge out of any other of the suggested policies, such policies applied to the extent absolutely essential to bring such measure of relief will be open to whatever objections, if any, can be offered to the course hereinafter indicated.

We are impressed by the following facts:

(1) That huge competing businesses struggling for a living in the same field can in general, and probably always, effect tremendous economies by unified operations.

(2) That such unified operations as have already in a very minor way been put in effect in respect of our railways, as, for example, the pool trains, have already shown an operating saving of 33%, though such pool trains still carry the waste of duplication in terminals, yards, etc.

(3) That assuming the public interest can be protected and essential services maintained, there would seem to be strikingly important opportunities for saving by unified management in respect of two such Systems as the Canadian Pacific and the Canadian National. To ensure the full conservation of every essential public interest and public service, and to safeguard the interests of Canada, the undersigned recommend insistence on the conditions enumerated below in respect of any system of unified management which may be worked out. The undermentioned conditions are not advanced with any thought that they are all-

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

inclusive. We believe, however, that conditions in Canada, both as affecting the Dominion on the one hand, and as affecting the Canadian Pacific Railway Company on the other, are such that all necessary and reasonable stipulations and conditions can be arrived at and agreed upon. Provision to the following effect should be secured:

i. There should be no obligation, legal or moral, implied or expressed, whereby the country assumes any liability in respect of Canadian Pacific obligations or securities, either as to capital or interest;

ii. Out of earnings up to the average aggregate earnings of both Systems over a period of five, ten or fifteen years as may be agreed upon, the Canadian National must be assured the same share of such earnings as it has enjoyed of such average earnings.

iii. Out of earnings above such average earnings, which presumably will be earnings due to economies effected by unified management, the Canadian National should receive not less than one-half.

iv. New capital investments, limited as they will be to joint requirements, should be provided for on a basis of definite and individual responsibility for respective shares of the capital on the part of the Canadian National (or of the Dominion of Canada), on the one hand, and of the Canadian Pacific Railway Company on the other hand.

v. Both parties should agree to such enlargement of the powers of the Board of Transport Commissioners as may be deemed necessary to serve every public interest.

vi. In view of the very extensive economies to be attained, and to the end that the process may not involve undue hardship on anyone, provision should be made for the due protection, by both Systems, of labour adversely affected by such economies, along the lines lately followed by the Railways of Great Britain.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119625

vii. Agreement to all provisions should be obtained from each separate class of security holders of the Canadian Pacific and of the Canadian National, insofar as such latter security holders are not already protected by Government guarantee.

The undersigned being of opinion that on the evidence submitted this country can look only to a system of unified management for relief, and being further of opinion that the evidence demonstrates that relief can be obtained under such a system, provided complete absence of political interference is assured, and that same can be done with ample and complete protection of all public interests, recommends as follows:

I. That because of the need of bringing public opinion in Canada to a better understanding of all facts and arguments bearing on this problem and to a better appreciation of the true meaning and implications thereof, and of the solution suggested, the Government be urged to submit the evidence to a Board of technical experts, as suggested in the Resolution quoted in this report. The undersigned are confident that the effect of such report would be not only helpful to public opinion in general in advancing the solution of this problem, but would be decisive as to the policy any Government in office would be constrained to adopt.

II. That if the Government is not so disposed, steps should be taken at once to negotiate an agreement looking to the unified management of the two Railway Systems of Canada, and to provide in such agreement and in the legislation to give effect to same, complete and effective protection of all public interests.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

The Canadian National constitutes for the nation its most obdurate and perilous problem. The outlay of Canada to December 31st, 1938, on its publicly-owned railway system, including interest, has been in excess of $3,300,000,000, of which ~~by far~~ the greater part has been brought about by recurring yearly deficits assumed and loans made by the Canadian Government to the Canadian National.

1 - 9626

The cash deficit in 1938, substantially greater than in 1937, as shown in the Canadian National Railways Annual Report for 1938, is $54,314,195. This deficit does not include capital losses of $2,712,877 charged against Proprietor's Equity, under the Canadian National Capital Revision Act of 1937, nor does it include interest on $672,688,000, the principal amount of such Proprietor's Equity. The aggregate contributions of the Government to the System as at March 31st, 1938, written off to Consolidated Fund, has amounted to $838,000,000 (See Public Accounts, 1938, Appendix 28). In addition, the aggregate of interest to December 31st, 1936, on Government loans to the System accrued and unpaid, which was transferred to the Canadian National Securities Trust, under the Act referred to, has amounted to $574,781,000. No implied criticism May 3 1939? a

Sen. Beaubien's report 1939

REPORT MADE BY THE FOLLOWING MEMBERS OF THE SPECIAL RAILWAY COMMITTEE OF THE SENATE SELECTED TO COMPLETE THE INQUIRY AND SUBMIT A REPORT UPON THE BEST MEANS OF RELIEVING THE COUNTRY FROM ITS EXTREMELY SERIOUS RAILWAY CONDITION, AND THE FINANCIAL BURDEN CONSEQUENT THERETO.

It is deeply regretted that an unanimous report was found impossible of attainment, as in a matter of such grave importance, at the present juncture, the added weight of unanimity in the Committee would have been of inestimable value.

Canadian National Capitalization and Deficits

The Canadian National constitutes for the nation its most obdurate and perilous problem. The present investment of Canada in its railway system exceeds $3,300,000,000, of which by far the greater part is brought about by recurring yearly deficits assumed and loans made by the Canadian Government for the Canadian National.

The cash deficit in 1938, substantially greater than in 1937, as shown in the Canadian National Railways Annual Report for 1938, is $54,314,195. This deficit does not include interest on loans advanced by Government, which amounts annually to approximately $ nor does it include capital losses of $2,712,877 charged against Proprietor's Equity. The aggregate interest as at December 31st, 1938, on Government contributions to the System, written off to Consolidated Fund, amounted to $838,000,000 (See Public Accounts 1938, appendix 28). The aggregate interest at the same date on Proprietor's Equity totalled $672,688,000.

It is evident that the railway problem cannot continue to drift as it has done in the past, without more hardship to the taxpayer, and great and imminent danger to the credit of Canada.

In view of the marked increase in Government expenditure and taxation within the last years, of our constantly growing requirements, more particularly for national defence, for the relief of large sections of the community, for rapidly expanding social legislation, and the corresponding greater necessity of husbanding the resources of the country, we are moved to quote anew the solemn admonition given to the nation by the Royal Commission of 1932. It is far more justified today than it was seven years ago:

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

D 19628

"We feel compelled, as a matter of public duty, to strike a serious note of warning to the people of Canada. Unless the country is prepared to adopt the plan we have proposed, or some other equally effective measures, to secure the efficient and economical working of both railway systems and thereby not only reduce the burden on the federal treasury but improve the financial position of the privately-owned railway, then the only courses that would be left would be either to effect savings in national expenditure in other directions or to add still further to the burdens under which the industries of the country are suffering by the imposition of yet further taxation. Failing the adoption of one or other of these courses, and there are obvious limits to their application, the very stability of the nation's finances and the financial credit of the Canadian Pacific Railway will be threatened, with serious consequences to the people of Canada and to those who have invested their savings in that railway."

Reasons for Inaction

It is contended that the expenditure of the Canadian National, even if excessive, provides for the subsistence of a portion of the population which, otherwise, might be under relief. Obviously, this is fallacious as nothing guarantees that such excess in expenditure goes to those otherwise in need of it and, above all, as such policy, if accepted, would lead to unrestrained wastage in all Government departments. The complacent state of mind of certain Canadian National officials who seem anxious to see the country resign itself to unbearable and unpayable deficits is deplorable. To this end it was represented that the Canadian National deficits were but an apparent loss to the country as that company provided an equal value in services to the Nation which were essential to its present well-being and future development. Such a contention is utterly inadmissible, as like adequate services can be, and in fact are, rendered by the Canadian Pacific Railway and by similar companies in other countries at no cost to the Nation.

Witnesses appearing before the Committee outlined ~~fully~~ solutions of the problem, in which there was implied no abandonment of essential services, but all were designed to reduce or eliminate unnecessary duplication and redundancy of services.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

D.119629

It is obvious that relief can be obtained otherwise only by a very large increase in revenues, which appears to be definitely unattainable either through increases in rates or through any conceivable growth of traffic.

Remedies suggested.

Three different methods were proposed to the Committee for securing economies to reduce the burden of Canadian National deficits.

Voluntary co-operation

A more effective application of the co-operative provisions of the Canadian National-Canadian Pacific Act, 1933 was recommended.

This suggestion is not very promising. Since the coming into force of the above law in 1933, the total savings from arrangements now in effect, and others agreed upon by the railways but not yet in effect, will be less than $2,000,000 per annum.

Five years of trial has, it must be admitted, demonstrated that economies to be effected through co-operation are of a very minor order. Further, the evidence submitted on behalf of the officials of both Railways made it abundantly clear that hope for the future in this regard is practically negligible. The absence of singleness of interest in the result to be obtained by economies, the continuous and not unnatural jealousies of officials as to the prestige of and immediate consequences to their respective properties, make the securing of what they describe as a balance of burden and advantage the subject of a long drawn-out and almost always futile struggle. In this respect any contention that the larger measure of responsibility for this futility rests on ~~the Canadian Pacific~~ either one of the two companies more than on the other cannot certainly be supported by the evidence.

Enforced co-operation.

A second recommendation, made by the President of the Canadian National, provides for the injection into negotiations between the Railways of a new body consisting of a representative of each of the Railways, and a chairman appointed by the Government, the chairman to have an over-riding vote. This body would have authority to initiate

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

M.19630

studies of any project suggested by any individual member and if a favourable report was made by a majority, or by the chairman alone, the proposal would automatically go before an Arbitral Tribunal for final decision. It was argued that this would relieve the railway companies of the stigma which would attach to agreement to undertake unpopular economies. As to the latter point it would be most unwise to depend on the Government voluntarily submitting to public odium - as the result of the action of its representative - a public odium which railway officials themselves admit they have recoiled from incurring. Experience proves that no Government will incur odium knowingly. The suggestion appears to be useless. Exception to it from the Canadian Pacific is clearly not unreasonable, as the Government delegate, in conjunction with the Canadian National representative, might be urged to vote for the adoption of schemes costly to the Canadian Pacific, and treat very differently those unfavourable to the Canadian National.

It seems to us the sooner the people of Canada accept the conclusion that co-operation of two competing systems cannot be effective in any worthwhile way in bringing about the absolutely needed economies, the better it will be for the establishment of a real remedy and for the solvency of our country. In this connection it must never be forgotten that the Railways are in a death struggle for a living, and while that struggle continues, each will fight for itself. The consequence of this mutual destructiveness falls on the taxpayers of Canada. It was very strongly urged before your Committee that such mutual destructiveness can only end when the officers and employees of both systems are working for the same purse.

Unification of Management.

The third suggestion made was unified operation by a single management of the Canadian National and the Canadian Pacific, each company continuing to own its respective properties and no guarantee being given to the Canadian Pacific of a return on its stock or on its bonds or other capital issues. Each company would continue to receive, under unified operation, the net earnings which past actual results over an agreed on period of years indicate that each would have received as an independent institution and additional net earnings made available

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

[illegible] 19631

by the economies of unified operation would be shared between them on an equitable basis. It was intimated that of these additional net earnings the Canadian National should receive at least half. The suggestion was that unified operation would be under the control of a Board to be created by Parliament and to be composed of fifteen directors, five of which would be selected by the Government or by the Canadian National, five by the Canadian Pacific, and the remaining five by the directors already chosen, or by some other appropriate method.

This proposal was met at the outset by two objections:

Firstly, it was contended that such unified management would create a huge and possibly an oppressive monopoly.

To this objection the following arguments taken from the evidence apply:

(1) For many years very large sections of the Dominion have lived under the monopoly, if such it be called, of either the Canadian National or the Canadian Pacific, and have done so without any perceptible disadvantage;

(2) The Railways have long ago been stripped of all powers which might render any monopolistic feature injurious to the public interest. The Transport Board hold by Statute supreme authority over them and control all abandonment of lines, withdrawals or reductions of services, as well as of ~~increases~~ decreases of rates and fares.

C > 3 Other compulsions

(3) The modern world exists under a great number of monopolies imposed by the free will of the people for the essential purpose of suppressing excessive charges and wastage due to duplication. This is strikingly exemplified in transportation, telephone, water, gas, electricity and other urban services, and in some countries, of railways.

Secondly; The other objection is based on the apprehension that there would be created a large mass of population, whose united influence might dominate the political life of Canada. To this the answer seems to be that if the interest coalescing the railway employees is an occupational or a professional one, it exists already. No more striking evidence of this can be imagined than the opposition to unified management, voiced by the railway employees of both Systems through their unions.

If the interest creating the coalition be a political one, then conditions now are just as favourable for its success as they could be under unified management. Indeed, there are many who believe that such political power is now exercised. Without any doubt at all pressure is exerted, through their unions, by the mass of employees of both railways on political parties.

This continuous, concerted pressure is mainly directed to the protection of a fortunate, ~~if not, indeed, a privileged~~ section, among all the labouring classes of the country.

This influence is in fact one of the chief obstacles to the settlement of our railway problem. It can only be removed by placing the administration of the Canadian National definitely and finally above political interference and in the hands of capable, strong and thoroughly independent men, whose tenure of office could be attacked only for cause. This could be accomplished by placing our railways under the direction of a properly selected board, whose only object could be the successful operation of a united system.

Any reasonable cause which railway workers might have had to oppose unified management has been eliminated by the proffer of provisions protecting them, in the manner effected in Great Britain, against loss by dismissal, demotion or transfer. Normal attrition, which accrues through death, pension age, or resignation, would remove men from employment faster in the aggregate than is required for unification, and those who suffer in special cases, for some would so suffer, can be assuredly compensated. These guarantees which have been definitely offered are measures of protection hitherto unknown to the working classes of any industry in the country, and corresponding protection is certainly not enjoyed by any other class.

It was not unreasonable to expect that railway workers would have been re-assured by the definite statement to the above effect made on behalf of the Canadian Pacific - which, undoubtedly, would be acceptable to the Government if an arrangement were entered into - and would have withdrawn their opposition to a unified scheme of management.

D 19633

The object sought to be attained is the avoidance of financial disaster to our country, in which disaster every class would suffer, and the poorer classes even more than others. It is not, therefore, unjust to ask that all co-operate in a fair spirit to such an end.

Persistence in their present attitude simply means that they insist that the taxpayers of Canada, for all time, shall carry the burden of many thousands of positions which are not required.

Mr. Hungerford, President of the Canadian National Railways, ~~admitted~~ submitted in his evidence that the efforts to operate the property on economical lines were circumscribed by what he defined as considerations of "public interest"; that what constitutes "public interest" was really determined by the Government of the day and that if the Canadian National was not a Government enterprise it certainly could not be carried on its present footing.

It may be reasonably inferred, as was indicated by the late Sir Henry Thornton in his evidence before the Royal Commission, that the policy of the Government, whatever might be the efforts of the Canadian National Management to operate on sound business lines, is unhappily reflected in the administration of the railway in increases or reductions in personnel, in the carrying out of contracts for works, purchases, etc., which fact largely accounts for the Canadian National spending on operating costs alone last year 96.67¢ for every dollar earned by it, whereas the Canadian Pacific spent 82.29¢ to earn the same amount.

As a glaring instance of political influence on the policies of the Canadian National, we may cite the fact that the completion of the Montreal Terminal was definitely promised on the hustings by Ministers of the Crown, months before the Directors made their recommendation to proceed with the work.

It is submitted that joint managership, by elimination of this and other forms of political interference, and by gradually removing duplications and utterly unnecessary costs in many spheres, might well overcome the major cause of past recurring deficits.

Savings from unification.

Sir Edward Beatty, President of the Canadian Pacific Railway Company, claimed that through the unified management of both railways, savings to the amount of $75,300,000 per annum could be effected under average traffic conditions, which he stated are those of the year 1930. This claim was supported in the greatest detail by a long line of officers of that Company. These officers and Sir Edward himself were questioned at length by members of your Committee. Figures and supporting evidence for lesser, but still huge, savings were given, applicable to years of diminished traffic.

As to the method followed to establish such savings, it seems preferable to quote Sir Edward himself:

> "Your Committee, however, may desire some account of the basis and methods used for this calculation, and without being too technical, I shall endeavour to explain the origin of the figures. Estimates of savings were submitted by both the Canadian Pacific and Canadian National Railways as the result of requests to them of the Royal Commission. Three estimates were made - $75,300,000 by the Canadian Pacific, based on 1930; $50,340,000 by the Canadian National, based on 1931 - practically the level of traffic in 1937; and $56,440,000 by the Canadian National on a year of normal traffic, which was taken as 30 per cent above 1931, or practically the level of traffic in 1930.
>
> I should like to explain to your Committee the precise procedure followed in making the estimate offered by the Canadian Pacific Railway.
>
> When the Royal Commission requested that the Canadian Pacific exhibit in money its estimate of the amount of railway duplication, I arranged for a committee of our officers from the operating, engineering, traffic, mechanical and accounting departments to convene and to prepare an answer to the Commission's request.
>
> They surveyed the existing supervisory organizations of the two railways as independent units, and the probable organization of a railway as unified; the location and

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

function of the various lines of railway; the passenger and freight train services; and the terminal and shop facilities. Each phase was assigned to officers qualified to deal with it. When information covering a special problem was not available, the senior officer in the territory affected was consulted. In other words, the resources of the entire organization were used by the Committee in its work. The committee understood they were not trying to determine the maximum limit of savings, but only what could reasonably be expected under normal conditions.

In addition to savings resulting from unification of actual operations, there are other advantages. Account must be taken also of the savings in future capital expenditures. In providing for the normal growth of traffic and changes in its character, the extension of one plant would obviously cost less than the extension of two. This consideration would apply throughout the entire scheme of additions and betterments necessary to adapt the system from time to time to the use of new machinery and methods. I regard this as a most important element in unification, and one involving a very large item of saving.

As has already been pointed out, our estimate was offered with two prepared by the Canadian National Railways. One of those was a figure of $56,440,000, based on a year in which traffic would be 30 percent above the volume of 1931. This is a little over the level of traffic in 1930, and it is, therefore, reasonable to compare the Canadian Pacific figure of $75,300,000 with the Canadian National estimate of $56,440,000.

Close examination of the two estimates shows that both included economies from reduction in general overhead expenses, traffic solicitation, advertising and regional supervision; from line abandonments; from re-routing of traffic; from increased car and train loading; from consolidation of repair work; from readjustment of passenger train services; from operating joint freight and passenger terminals; from consolidating express and telegraph services; from reduction in accounting, and other expenses. Individual items appear in each estimate which are not in the other, but, considering that two quite different methods were followed in compiling the estimates the close similarity in result is unquestionable proof that, at the time of the Royal Commission, responsible officers of both companies were in general agreement that the savings to be had were substantial."

And Sir Edward adds:

"When the preliminary results of the various studies were ready, a draft report was prepared and considered by Mr. Grant Hall, Vice-President, Mr. Coleman, Vice-President, Western Lines, Mr. Curle, General Counsel, and Mr. E. E. Lloyd, Comptroller. The Committee were questioned in detail upon their conclusions, corrected, when necessary, and instructed to continue their studies along the lines which had been followed and to prepare the necessary exhibits for filing with the Commission. Upon the completion of the final draft, it was again reviewed in detail by Messrs. Hall, Coleman, Curle and Lloyd. Mr. W. N. Tilley, Consulting Counsel, and I also went over the material carefully with a number of the

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119636

officers concerned. I should mention that, knowing the importance that might be attached to the findings, I asked the President of the Great Northern Railway, if he could have someone who had had experience in calculating the possible savings from the consolidation of the Great Northern and Northern Pacific come to Montreal and examine the work of our Committee. He kindly allowed Mr. V. P. Turnburke, General Auditor of the Great Northern, to do so. The latter who had had extensive engineering accounting experience, spent some time examining the Committee's work, made some criticisms and certain suggestions, and later reported to me that he was satisfied that the Committee had proceeded upon conservative lines and that from his experience he would not hesitate to accept the conclusions reached."

Exemplifying the method expounded by Sir Edward Beatty, a number of principal officers and engineers of the Canadian Pacific, divided into seventeen committees, demonstrated, under the several headings in use in railway accounting, the retrenchment in expenditure estimated to result from unification of the two systems. Most of these headings were divided into sections and even into further sub-sections in order, in each case, to build up from the ground, on the one hand, such particular section or sub-section as a part of the two systems when consolidated and, on the other hand, to gather and appraise the savings resulting from this operation. It cannot be gainsaid that the body of evidence made up by this process was thorough and impressive.

(8)

It supported, and save for minor items hereinafter referred to, justified savings to an amount of $75,300,000 for the traffic level of 1930, as established in the Canadian Pacific estimate submitted to the Royal Commission in 1932.

In view of the inquiries made by various members of the Committee, the Canadian Pacific undertook, since the original hearing, the preparation of an estimate on the basis of 1937 traffic level, and this showed savings of $56,346,000 without any line abandonments, and savings of $59,361,000 with allowance for such line abandonments as it was reasonable to assume the Board of Transport Commissioners would authorize under present conditions. This reduction was qualified by the statement that savings would fluctuate with traffic and, therefore, revert to $75,300,000 should traffic again reach the level of 1930.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119637

The submission of the Canadian Pacific witnesses was necessarily of a technical nature. The same could be said, though in less degree, of the evidence in opposition submitted by the officers of the Canadian National.

To demonstrate the very special character of the argument made on both sides, it is sufficient to refer to the method used, not exclusively but in the main, to establish savings from unification.

This method required the ascertainment of reduction in train and car mileage obtainable without detriment to public service from the consolidation of lightly loaded trains--a consolidation which manifestly unified management could bring about--and from the use of the shortest and most economical routes both for passenger and freight. The result, according to the evidence, was a saving of 6,909,939 passenger train miles or 14.3% and 8,897,000 freight train miles, or 15.4%. These percentage reductions and others similarly calculated were used to measure the realizable economy in the different departments where such percentages could properly be applied.

In other cases economy was calculated directly by estimating what reduction would be possible by the consolidation of departments. The train and car mileage formula was used to prove over $50,000,000 out of the $75,373,000 of savings claimed as realizable. Other technical methods were applied either exclusively or jointly with decrease in train mileage to establish the balance of the economy so claimed.

All these calculations were based on the figures of 1930.

The Canadian National officers opposed the above formula and its results by denying that the stated reduction in train mileage is exact, and further by asserting that Canadian Pacific unit costs are not applicable to the Canadian National as the lines of the two railways are not comparable. Evidence was submitted by the Canadian Pacific to show that Canadian Pacific unit costs had not been applied to Canadian National operations but, where used, had been adopted as the measure of cost possible of achievement by the unified system. The Canadian National

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

D.T. 9638

officers further contended that the Canadian Pacific calculations took no account of the substantial reduction in expenditures of the former system from 1930 to 1937. The Canadian Pacific admitted that permanent savings made in recent years justified a deduction of $4,801,000 from the original estimate, but they showed that additions of $9,056,000 were justified by other known items of change. In addition, the evidence showed that by their very nature the temporary savings made independently by the railways were entirely different to the permanent economies which would be possible under unified management through the elimination of duplicate effort. The revised Canadian Pacific estimate to which reference has been made, having been computed on the basis of 1937 level of traffic, completely disposes, if it is reasonably accurate, of the contention that large economies are no longer available because of individual economies effected by the railways, either on account of reduction in traffic, or otherwise.

From 1930 to 1937, gross revenues of both railways fell 21.6%. Combined expenditures of both railways between the same years was reduced by 20.7%.

Mr. Fairweather seems to be the only Canadian National witness who has surveyed the whole question. The gist of his evidence was that large savings from the unification of railways were impossible of realization as the public and employees would not tolerate consequent reduction of the services and the creation of a monopoly. When confronted with many items of savings to which these objections did not appear to pertain, even remotely, he gave the impression of unwillingness to consider any savings to which his objections did not apply. This general affirmation was supported also in general terms by Mr. Hungerford, the Canadian National President.

Throughout the testimony of these officers there was a pervading strain of concern for the popularity of the Canadian National Railway and management. This is not an unnatural characteristic, having regard to the atmosphere in which inevitably officers who are answerable only to a Government must live. It cannot, however, be too strongly emphasized that such attitude of mind leads irresistibly to redundant and extravagant services and the sacrifice of the taxpayer.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

ARCHIVES PUBLIQUES
CANADA

119639

In connection with Mr. Fairweather's evidence in particular, there must be kept in mind the report made by him and submitted to the Royal Commission of 1932. This report embodied the conclusion that there was a possible saving of $56,230,000 from unification on the traffic level of 1930, and $50,090,000 for 1931, which latter year approximated closely the traffic conditions of 1937. Further, this report was made at the request of the late Sir Henry Thornton and submitted in train conference to the Royal Commission. It is important also to note that it was prepared prior to the constitution of that Royal Commission, and before the Canadian Pacific, at the request of the Commission, began work on its estimate. For the preparation of the above report Mr. Fairweather had the collaboration of seven technical assistants and access to any information he desired from the Canadian Pacific.

Mr. Fairweather's estimate is elaborate and comprises an explanatory memo of 12 pages and schedules of 39 pages. Although prepared by a totally different method, it appears to corroborate generally Sir Edward Beatty's contention as shown by the following comparison of the two estimates under their main headings:

Estimates by Canadian National and Canadian Pacific respectively of possible savings through unification, based on the level of traffic for 1930.

| | C. N. R. | C. P. R. |
|---|---|---|
| Increased railway operating revenues: | $6,540,000 | 1,396,000 |
| Traffic solicitation & advertising... | 6,950,000 | 5,976,000 |
| Transportation & Misc. operations | 20,047,000 | 24,954,000 |
| Maintenance of Way & Structures | 3,423,000 | 14,889,000 |
| Maintenance of Equipment | 7,797,000 | 14,360,000 |
| General | 1,573,000 | 4,289,000 |
| Lake and coastal steamers | 500,000 | 450,000 |
| Hotels | 4,500,000 | ---------- |
| Express operations | 600,000 | 1,450,000 |
| Telegraphs (railway & Commercial | 700,000 | 948,000 |
| Interest on released investment in material & rolling stock | 3,000,000 | 6,350,000 |
| Miscellaneous | 600,000 | 311,000 |
| Grand Total | $56,230,000 | $75,373,000 |

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

D 19640

Details show items in each estimate that are not in the other, which indicates that a combination of both estimates might well produce potential fields of economy greater than the total of either.

Mr. Fairweather also gave evidence as to possible savings under co-operation. In this his opinion appeared to undergo very considerable variations as he first appraised savings under this head at $35,000,000, then at $24,000,000, subsequently again at $10,000,000, and finally ~~admitted~~ stated that such estimates were but guesses on his part. It is difficult to appraise the value of evidence so submitted.

This very brief analysis of the evidence suffices to reveal its technical character. While the undersigned feel, as probably other members of your Committee feel, that after many months of close study of this situation, and after having had the advantage of hearing scores of witnesses on every phase of the subject and of questioning such witnesses, they have been able to reach a dependable conclusion on the merits of the conflicting contentions advanced, respectively, by officers of the two Railway Companies, they are also of the opinion that not being possessed, themselves, of special expert knowledge on these subjects, the public would be better served if it could be supplied with the findings of an impartial tribunal of experts, qualified by training and experience to report on the evidence submitted.

Accordingly, a motion was made before your Committee on 2nd May in the following terms:

"

This motion, we regret to say, was defeated.

The undersigned are of opinion that such investigation would not need entail very great expense, because, first, the evidence is already submitted, and, secondly, investigation on the premises will only be necessary in rare cases, because facts, maps, plans and other

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119641

necessary data are already available and can be made open to inspection at the offices of the respective Companies. The undersigned further are of opinion that only by means of such report can the full value of the vast mass of information, which your Committee has accumulated, be obtained and utilized by the Canadian people. The undersigned consider it a matter of much significance that on this question which should have been dealt with as a pure question of savings to the people of Canada in the operation of the Nation's Railways, in which question necessarily the provision of essential services would be a part, there should be found two distinctly opposite sets of opinion among Railway officials, and that one set should be entirely confined to the Canadian Pacific and the other set entirely confined to the Canadian National. The question considered as above defined, is, or should be, essentially one and the same question for both Systems. The only conclusion is that considerations other than those included in the above definition must have intervened.

At this point of view the undersigned further beg to emphasize the overwhelming necessity, from the standpoint of the whole country, from the standpoint of its credit and solvency, and for the good of every class and every community of the Dominion, that some solution definite and effective must be found, and found without further delay.

CONCLUSIONS:

We were utterly unable to find any hope whatever of relief from any other source than that hereinafter indicated in this report.

We further are of opinion that if, contrary to the evidence, effective relief can possibly emerge out of any other of the suggested policies, such policies applied to the extent absolutely essential to bring such measure of relief will be open to whatever objections, if any, can be offered to the course hereinafter indicated.

We are impressed by the following facts:

(1) That huge competing businesses struggling for a living in the same field can in general, and probably always, effect tremendous economies by unified operations.

(2) That such unified operations as have already in a very minor way been put in effect in respect of our Railways, as, for example, the pool trains, have already shown an operating saving of 33%, though such pool trains still carry the waste of duplication in terminals, yards, etc.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

D 19642

(3) That assuming the public interest can be protected and essential services maintained, there would seem to be strikingly important opportunities for saving by unified management in respect of two such Systems as the Canadian Pacific and the Canadian National. To ensure the full conservation of every essential public interest and public service, and to safeguard the interests of Canada, the undersigned recommend insistence on the conditions enumerated below in respect of any system of unified management which may be worked out. The undermentioned conditions are not advanced with any thought that they are all-inclusive. We believe, however, that conditions in Canada, both as affecting the Dominion ~~xxxxxxxxx~~ on the one hand, and as affecting the Canadian Pacific Railway Company on the other, are such that all necessary and reasonable stipulations and conditions can be arrived at and agreed upon. Provisions to the following effect should be secured:

i. There should be no obligation, legal or moral, implied or expressed, whereby the country assumes any liability in respect of Canadian Pacific obligations or securities, either as to capital or interest;

ii. Out of earnings up to the average aggregate earnings of both Systems over a period of five, ten or fifteen years as may be agreed upon, the Canadian National must be assured the same share of such earnings as it has enjoyed of such average earnings.

iii. Out of earnings above such average earnings, which presumably will be earnings due to economies effected by unified management, the Canadian National should receive not less than one-half.

iv. New capital investments, limited as they will be to joint requirements, should be provided for on a basis of definite and individual responsibility for the capital on the part of the Canadian National (or of the Dominion of Canada), on the one hand, and of the Canadian Pacific Railway Company on the other hand. respective shares of

v. Both parties should agree to such enlargement of the powers of the Board of Transport Commissioners as may be deemed necessary to serve every public interest.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

C.T.9643

vi. In view of the very extensive economies to be attained, and to the end that the process may not involve undue hardship on anyone, provision should be made for the due protection, by both Systems, of labour adversely affected by such economies, along the lines lately followed by the Railways of Great Britain.

vii. Agreement to all provisions should be obtained from each separate class of security holders of the Canadian Pacific and of the Canadian National, insofar as such latter security holders are not already protected by Government guarantee.

The undersigned being of opinion that this country can look only to a system of unified management for relief, and being further of opinion that the evidence demonstrates that relief can be obtained under such a system, and that same can be done with ample and complete protection of all public interests, recommends as follows:

I. That because of the need of bringing public opinion in Canada to a better understanding of all facts and arguments bearing on this problem and to a better appreciation of the true meaning and implications thereof, and of the solution suggested, the Government be urged to submit the evidence to a Board of technical experts, as suggested in the Resolution quoted in this report.

II. That if the Government is not so disposed, steps should be taken at once to negotiate an agreement looking to the unified management of the two Railway Systems of Canada, and to provide in such agreement and in the legislation to give effect to same, complete and effective protection of all public interests.

Secret

REPORT MADE BY THE FOLLOWING MEMBERS OF THE SPECIAL RAILWAY COMMITTEE OF THE SENATE SELECTED TO COMPLETE THE INQUIRY AND SUBMIT A REPORT UPON THE BEST MEANS OF RELIEVING THE COUNTRY FROM ITS EXTREMELY SERIOUS RAILWAY CONDITION, AND THE FINANCIAL BURDEN CONSEQUENT THERETO.

---

It is deeply regretted that an unanimous report was found impossible of attainment, as in a matter of such grave importance, at the present juncture, the added weight of unanimity in the Committee would have been ~~of inestimable value.~~ of very great value not only to Parliament but as well to all our people who are now so heavily burdened with taxation.

## Canadian National Capitalization and Deficits

The Canadian National constitutes for the nation its most obdurate and perilous domestic problem. The outlay of Canada to December 31, 1938, on its publicly-owned railway system, including interest, has been in excess of $3,300,000,000, of which ~~so large~~ the greater part has been brought about by recurring yearly deficits assumed and loans made by the Canadian Government to the Canadian National.

The cash deficit in 1938, substantially greater than in 1937, as shown in the Canadian National Railways Annual Report for 1938, is $54,314,195. This deficit does not include capital losses of $2,712,877 charged against Proprietor's Equity under the Canadian National Capital Revision Act of 1937, nor does it include interest on $672,688,000, the principal amount of such Proprietor's Equity. The aggregate contributions of the Government to the System as at March 31, 1938, written off to Consolidated Fund, has amounted to $838,000,000. (See Public Accounts, 1938, Appendix 28). In addition, the aggregate of interest to December 31, 1936, on Government loans to the System accrued and unpaid, which was transferred to the Canadian National Securities Trust, under the Act referred to, has amounted to $574,781,000.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

The above large sums already written off represent in reality assumption by the Dominion of Canada of a very considerable total of capital which went into our railways, and entail as well a substantial addition to the National Debt. No criticism of such writing-off is implied in this report. The results, however, after the writing-off, speak for themselves.

It is evident that the railway problem cannot continue to drift as it has done in the past, without more hardship to the taxpayer and great and imminent danger to the credit of Canada. *

In view of the marked increase in Government expenditure and taxation within the last years, of our constantly growing requirements, more particularly for national defence, for the relief of large sections of the community, for rapidly expanding social legislation, and the corresponding greater necessity of husbanding the resources of the country, we are moved to quote anew the solemn admonition given to the nation by the Duff Royal Commission of 1932. It is far more justified today than it was seven years ago:

> "We feel compelled, as a matter of public duty, to strike a serious note of warning to the people of Canada. Unless the country is prepared to adopt the plan we have proposed, or some other equally effective measures, to secure the efficient and economical working of both railway systems and thereby not only reduce the burden on the federal treasury but improve the financial position of the privately-owned railway, then the only courses that would be left would be either to effect savings in national expenditure in other directions or to add still further to the burdens under which the industries of the country are suffering by the imposition of yet further taxation. Failing the adoption of one or other of these courses, and there are obvious limits to their application, the very stability of the nation's finances and the financial credit of the Canadian Pacific Railway will be threatened, with serious consequences to the people of Canada and to those who have invested their savings in that railway."

* as indicated above the Canadian National deficit for the year 1938 approximates $55.000.000 and as our total population is roughly estimated at 11.000.000 there must be taken on an average, to meet this deficit, from every man, woman & child in Canada the sum of five dollars by means of direct or indirect taxation.

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

D 19646

**Reasons for Inaction**

It is contended that the expenditure of the Canadian National, even if excessive, provides for the subsistence of a portion of the population which, otherwise, might be under relief. Obviously, this is fallacious as nothing guarantees that such excess in expenditure goes to those otherwise in need of it and, above all, as such policy, if accepted, would lead to unrestrained wastage in all Government departments. The complacent state of mind of ~~(certain Canadian National officials)~~ many witnesses including some officials who seem anxious to see the country resign itself to unbearable ~~(and unpayable)~~ deficits is deplorable. To this end it was represented that ~~(the Canadian National)~~ these deficits were but an apparent loss to the country as ~~(that Company~~ the Canadian National provided for the nation an equal value in services which were essential to its present well-being and future development. Such a contention is utterly inadmissible, as like adequate services can be, and in fact are, rendered by ~~the Canadian Pacific Railway~~ the other railway system in Canada and by similar companies in other countries at no cost to the nation.

Witnesses appearing before the Committee outlined solutions of the problem, in which there was implied no abandonment of essential services, but all were designed to reduce or eliminate unnecessary duplication and redundancy of services.

It is obvious that relief can be obtained otherwise only by a very large increase in revenues, which appears to be definitely unattainable either through increases in rates or through any conceivable growth of traffic.

**Remedies Suggested.**

Three different methods were proposed to the Committee for securing economies to reduce the burden of Canadian National deficits.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

D 19647

Voluntary co-operation

A more effective application of the co-operative provisions of the Canadian National-Canadian Pacific Act, 1933, was recommended.

This suggestion is far from being ~~(not very)~~ promising. Since the coming into force of the above law in 1933, the total savings from arrangements now in effect, and others agreed upon by the railways but not yet in effect, will be less than $2,000,000 per annum.

Five years of trial has, it must be admitted, demonstrated that economies to be effected through voluntary co-operation are of a very minor order. Further, the evidence submitted on behalf of the officials of both Railways made it abundantly clear that hope for the future in this regard is practically negligible. The absence of singleness of interest in the result to be obtained by economies, the continuous and not unnatural jealousies of officials as to the prestige of and immediate consequences to their respective properties, make the securing of what they describe as a balance of burden and advantage the subject of a long drawn-out and almost always futile struggle. In this respect any contention that the larger measure of responsibility for this futility rests on either one of the two Companies more than on the other cannot certainly be supported by the evidence.

Enforced co-operation

A second recommendation, made by the President of the Canadian National, provides for the injection into negotiations between the Railways of a new body consisting of a representative of each of the Railways, and a chairman appointed by the Government, the chairman to have an over-riding vote. This body would have authority to initiate studies of any project suggested by any individual member, and, if a favourable report was made by a majority, or by the chairman alone, the proposal would automatically go before an Arbitral Tribunal for final decision.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119648

It was argued that this would relieve the Railway Companies of the stigma which would attach to agreement to undertake unpopular economies. As to the latter point, it would be most unwise to depend on the Government voluntarily submitting to public odium - as the result of the action of its representative - a public odium which railway officials themselves admit they have recoiled from incurring. Experience proves that no Government will incur odium knowingly. The suggestion appears to be useless.

It might be pointed out as well that there would seem to be a dangerous responsibility assumed in establishing, as the effective agent of enforced changes in operation, a Board on which two members would, as between the two Railway Systems, be representative of one, and only one representative of the other. It is important to avoid with the utmost care any enforced action which might be the ground of liability to the country later on.

It seems to us the sooner the people of Canada accept the conclusion that co-operation of two competing systems cannot be effective in any worthwhile way in bringing about the absolutely needed economies, the better it will be for the establishment of a real remedy and for the solvency of our country. In this connection it must never be forgotten that the Railways are in a death struggle for a living, and while that struggle continues, each will fight for itself. The consequence of this mutual destructiveness falls on the taxpayers of Canada. It was very strongly urged before your Committee that such mutual destructiveness can only end when the officers and employees of both systems are working for the same purpose.

Unification of Management.

The third suggestion made was unified operation by a single management of the Canadian National and the Canadian Pacific, each company continuing to own its respective properties and no guarantee being given to the Canadian Pacific of a return on its stock or on its bonds or other capital issues. Each company would continue to receive, under unified operation, the net earnings which past actual results over an agreed period of

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119649

years indicate that each would have received as an independent institution and additional net earnings made available by the economies of unified operation would be shared between them on an equitable basis. It was intimated that of these additional net earnings the Canadian National should receive at least half. The suggestion was that unified operation would be under the control of a Board to be created by Parliament and to be composed of fifteen directors, five of which would be selected by the Government or by the Canadian National, five by the Canadian Pacific, and the remaining five by the directors already chosen, or by some other appropriate method.

This proposal was met at the outset by two objections:

Firstly:- It was contended that such unified management would create a huge and possibly an oppressive monopoly.

To this objection the following arguments taken from the evidence apply:

(1) For many years very large sections of the Dominion (not served by both Railways) have lived under the monopoly, if such it be called, of either the Canadian National or the Canadian Pacific, and have done so without any perceptible disadvantage;

(2) The Railways have long ago been stripped of all powers which might render any monopolistic feature injurious to the public interest. The Transport Board (Commissioners) holds by Statute supreme authority over them and controls all abandonment of lines, withdrawals or reductions of services, as well as of increases or decreases of rates and fares.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119650

(3) The development of transportation by means of motor cars, busses and trucks (public and private) and by air traffic, have created conditions where even under unified railway operation there would be very effective competition anyway, and competition quite difficult to cope with. ~~In this connection water competition~~ ~~has always been a factor, but it has never~~ ~~been~~ ~~so great as it is at present.~~

(4) The modern world exists under a great number of monopolies imposed by the free will of the people for the essential purpose of suppressing excessive charges and wastage due to duplication. This is strikingly exemplified in transportation, telephone, water, gas, electricity and other urban services, and in some countries, of railways.

Secondly:- The other objection is based on the apprehension that there would be created a large mass of population, whose united influence might dominate the political life of Canada. To this the answer seems to be that if the interest coalescing the railway employees is an occupational or a professional one, it exists already. No more striking evidence of this can be imagined than the opposition to unified management, voiced by the railway employees of both Systems through their unions.

If the interest creating the coalition be a political one, then conditions now are just as favourable for its success as they could be under unified management. Indeed, there are many who believe that such political power is now exercised. Without any doubt at all, pressure is exerted, through their unions, by the mass of employees of both railways, on political parties.

This continuous, concerted pressure is mainly directed to the protection of a fortunate section among all the labouring classes of the country.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

This influence is in fact one of the chief obstacles to the settlement of our railway problem. It can only be removed by placing the administration of the Canadian National definitely and finally above political interference and in the hands of capable, strong and throughly independent men, whose tenure of office could be attacked only for cause. This could be accomplished by placing our railways under the direction of a properly selected board, whose only object could be the successful operation of a united system.

Any reasonable cause which railway workers might have had to oppose unified management has been eliminated by the proffer of provisions protecting them, in the manner effected in Great Britain, against loss by dismissal, demotion or transfer. It must be remembered that not less than five or seven years will be essential to attain, step by step, the full results of unification. Normal attrition, which accrues through death, pension age, or resignation, would remove men from employment faster in the aggregate than is required for unification, and those who suffer in special cases--for some would so suffer--can be assuredly compensated. These guarantees which have been definitely offered are measures of protection hitherto unknown to the working classes of any industry in the country, and corresponding protection is certainly not enjoyed by any other class.

It was not unreasonable to expect that railway workers would have been reassured by the definite statement to the above effect made on behalf of the Canadian Pacific--which, undoubtedly, would be acceptable to the Government if an arrangement were entered into--and would have withdrawn their opposition to a unified scheme of management. This is especially true because the scheme of compensation would be, and should be, the subject

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119652

of an agreement in which the wishes of the employees would be fully represented, and the rights under such agreement would become Statutory.

The object sought to be attained is the avoidance of financial disaster to our country, in which disaster every class would suffer, and the poorer classes even more than others. It is not, therefore, unjust to ask that all co-operate in a fair spirit to such an end.

Persistence in their present attitude simply means that they insist that the taxpayers of Canada, for all time, shall carry the burden of many thousands of positions which are not required.

(a)

In this connection, it is important to keep in mind that the Railway business of the Dominion, as indeed of all countries, has been steadily diminishing in volume as compared with business as a whole. The evidence before your Committee led irresistibly to the conclusion that this tendency may be expected to continue.

Mr. Hungerford, President of the Canadian National Railways, submitted in his evidence that the efforts to operate the property on economical lines were circumscribed by what he defined as considerations of "public interest"; that what constitutes "public interest" was really determined by the Government of the day and that if the Canadian National were not a Government enterprise it certainly could not be carried on its present footing.

It may be reasonably inferred, as was indicated by the late Sir Henry Thornton in his evidence before the Royal Commission, that the policy of the Government, whatever might be the efforts of the Canadian National Management to operate on sound business lines, is unhappily reflected in the administration of the railway in increases or reductions in personnel, in the carrying out of contracts for works, purchases, etc., which fact largely accounts for the Canadian National spending on operating costs alone last year 96.67¢ for every dollar earned by it, whereas the Canadian Pacific spent 82.29¢ to earn the same amount.

119653

As a glaring instance of political influence on the policies of the Canadian National, we may cite the fact that the completion of the Montreal Terminal was definitely promised on the hustings by Ministers of the Crown, months before the Directors made their recommendation to proceed with the work.

It is submitted that joint managership, by elimination of this and other forms of political interference, and by gradually removing duplications and utterly unnecessary costs in many spheres, might well overcome the major cause of past recurring deficits.

Savings from unification.

Sir Edward Beatty, President of the Canadian Pacific Railway Company, claimed that through the unified management of both railways, savings to the amount of $75,300,000 per annum could be effected under average traffic conditions, which he stated are those of the year 1930. This claim was supported in the greatest detail by a long line of officers of that Company. These officers and Sir Edward himself were questioned at length by members of your Committee. Figures and supporting evidence for lesser, but still huge, savings were given, applicable to years of diminished traffic.

As to the method followed to establish such savings, it seems preferable to quote Sir Edward himself:

> "Your Committee, however, may desire some account of the basis and methods used for this calculation, and without being too technical, I shall endeavour to explain the origin of the figures. Estimates of savings were submitted by both the Canadian Pacific and Canadian National Railways as the result of requests to them of the Royal Commission. Three estimates were made - $75,300,000 by the Canadian Pacific, based on 1930; $50,340,000 by the Canadian National, based on 1931--practically the level of traffic in 1937; and $56,440,000 by the Canadian National on a year of normal traffic, which was taken as 30 per cent above 1931, or practically the level of traffic in 1930.
>
> I should like to explain to your Committee the precise procedure followed in making the estimate offered by the Canadian Pacific Railway.
>
> When the Royal Commission requested that the Canadian Pacific exhibit in money its estimate of the amount of railway duplication, I arranged for a committee of our officers from the operating,

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

engineering, traffic, mechanical and accounting departments to convene and to prepare an answer to the Commission's request.

They surveyed the existing supervisory organizations of the two railways as independent units, and the probable organization of a railway as unified; the location and function of the various lines of railway; the passenger and freight train services; and the terminal and shop facilities. Each phase was assigned to officers qualified to deal with it. When information covering a special problem was not available, the senior officer in the territory affected was consulted. In other words, the resources of the entire organization were used by the Committee in its work. The committee understood they were not trying to determine the maximum limit of savings, but only what could reasonably be expected under normal conditions.

In addition to savings resulting from unification of actual operations, there are other advantages. Account must be taken also of the savings in future capital expenditures. In providing for the normal growth of traffic and changes in its character, the extension of one plant would obviously cost less than the extension of two. This consideration would apply throughout the entire scheme of additions and betterments necessary to adapt the system from time to time to the use of new machinery and methods. I regard this as a most important element in unification, and one involving a very large item of saving.

As has already been pointed out, our estimate was offered with two prepared by the Canadian National Railways. One of those was a figure of $56,440,000 based on a year in which traffic would be 30 per cent above the volume of 1931. This is a little over the level of traffic in 1930, and it is, therefore, reasonable to compare theCanadian Pacific figure of $75,300,000 with the Canadian National estimate of $56,440,000.

Close examination of the two estimates shows that both included economies from reduction in general overhead expenses, traffic solicitation, advertising and regional supervision; from line abandonments; from re-routing of traffic; from increased car and train loading; from consolidation of repair work; from readjustment of passenger train services; from operating joint freight and passenger terminals; from consolidating express - and telegraph services; from reduction in accounting, and other expenses. Individual items appear in each estimate which are not in the other, but, considering that two quite different methods were followed in compiling the estimates the close similarity in result is unquestionable proof that, at the time of the Royal Commission, responsible officers of both companies were in general agreement that the savings to be had were substantial."

119655

And Sir Edward adds:

"When the preliminary results of the various studies were ready, a draft report was prepared and considered by Mr. Grant Hall, Vice-President, Mr. Coleman, Vice-President, Western Lines, Mr. Curle, General Counsel, and Mr. E. E. Lloyd, Comptrollider. The Committee were questioned in detail upon their conclusions, corrected, when necessary, and instructed to continue their studies along the lines which had been followed and to prepare the necessary exhibits for filing with the Commission. Upon the completion of the final draft, it was again reviewed in detail by Messrs. Hall, Coleman, Curle and Lloyd. Mr. W. N. Tilley, Consulting Counsel, and I also went over the material carefully with a number of the officers concerned. I should mention that, knowing the importance that might be attached to the findings, I asked the President of the Great Northern Railway if he could have someone who had had experience in calculating the possible savings from the consolidation of the Great Northern and Northern Pacific come to Montreal and examine the work of our Committee. He kindly allowed Mr. V. P. Turnburke, General Auditor of the Great Northern, to do so. The latter who had had extensive engineering accounting experience, spent some time examining the Committee's work, made some criticisms and certain suggestions, and later reported to me that he was satisfied that the Committee had proceeded upon conservative lines and that from his experience he would not hesitate to accept the conclusions reached."

Exemplifying the method expounded by Sir Edward Beatty, a number of principal officers and engineers of the Canadian Pacific, divided into seventeen committees, demonstrated, under the several headings in use in railway accounting, the retrenchment in expenditure estimated to result from unification of the two systems. Most of these headings were divided into sections and even into further sub-sections in order, in each case, to build up from the ground, on the one hand, such particular section or sub-section as a part of the two systems when consolidated and, on the other hand, to gather and appraise the savings resulting from this operation. It cannot be gainsaid that the body of evidence made up by this process was thorough and impressive.

There is one feature of these savings which should be especially emphasized. Efforts have been made to give the public the impression that savings can only be

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119656

effected, or can at least mainly be effected, by abandonment of lines. The evidence very clearly demonstrated that savings by abandonment of lines did not amount to more than 10% of the total savings that are realizable. Even this 10% of savings, which might be described as attributable to abandonment, included such almost unused short lines as to the abandonment of which no railway made objection. There appeared no intention, on the part of any of those who gave testimony, of abandoning any lines save such as would, after argument from all interested, be deemed by the Transport Commission of Canada as proper to be abandoned without sacrifice of public interest.

It supported, and, save for minor items hereinafter referred to, justified savings to an amount of $75,300,000 for the traffic level of 1930, as established in the Canadian Pacific estimate submitted to the Royal Commission in 1932.

In view of the inquiries made by various members of the Committee, the Canadian Pacific undertook, since the original hearing, the preparation of an estimate on the basis of 1937 traffic level, and this showed savings of $56,346,000 without any line abandonments whatever, and savings of $59,361,000 with allowance for such line abandonments as it was reasonable to assume the Board of Transport Commissioners would authorize under present conditions. This reduction was qualified by the statement that savings would fluctuate with traffic and, therefore, revert to $75,300,000 should traffic again reach the level of 1930.

The submission of the Canadian Pacific witnesses was necessarily of a technical nature. The same could be said, though in less degree, of the evidence in opposition submitted by the officers of the Canadian National.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119657

To demonstrate the very special character of the argument made on both sides, it is sufficient to refer to the method used, not exclusively but in the main, to establish savings from unification.

This method required the ascertainment of reduction in train and car mileage obtainable without detriment to public service from the consolidation of lightly loaded trains--a consolidation which manifestly unified management could bring about--and from the use of the shortest and most economical routes both for passenger and freight. The result, according to the evidence, was a saving of 6,909,939 passenger train miles or 14.3% and 8,897,000 freight train miles, or 15.4%. These percentage reductions and others similarly calculated were used to measure the realizable economy in the different departments where such percentages could properly be applied.

In other cases economy was calculated directly by estimating what reduction would be possible by the consolidation of departments. The train and car mileage formula was used to prove over $50,000,000 out of the $75,373,000 of savings claimed as realizable. Other technical methods were applied either exclusively or jointly with decrease in train mileage to establish the balance of the economy so claimed.

All these calculations were based on the figures of 1930.

The Canadian National officers opposed the above formula and its results by denying that the stated reduction in train mileage is exact, and further by asserting that Canadian Pacific unit costs are not applicable to the Canadian National as the lines of the two railways are not comparable. Evidence was submitted by the Canadian Pacific to show that Canadian Pacific unit costs had not been applied to Canadian National operations, but, where used, had been adopted as the measure of cost possible of achievement by the unified system.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119658

The Canadian National officers further contended that the Canadian Pacific calculations took no account of the substantial reduction in expenditures of the former system from 1930 to 1937. The Canadian Pacific admitted that permanent savings made in recent years justified a deduction of $4,801,000 from the original estimate, but they showed that additions of $9,056,000 were justified by other known items of change. In addition, the evidence showed that by their very nature the temporary savings made independently by the railways were entirely different from the permanent economies which would be possible under unified management through the elimination of duplicate effort. The revised Canadian Pacific estimate to which reference has been made, having been computed on the basis of 1937 level of traffic, completely disposes, if it is reasonably accurate, of the contention that large economies are no longer available because of individual economies effected by the railways, either on account of reduction in traffic, or otherwise.

From 1930 to 1937, gross revenues of both railways fell 21.6%. Combined expenditures of both railways between the same years was reduced by 20.7%.

Mr. Fairweather seems to be the only Canadian National witness who has surveyed the whole question. The gist of his evidence was that large savings from the unification of railways were impossible of realization as the public and employees would not tolerate consequent reduction of the services and the creation of a monopoly. When confronted with many items of savings to which these objections did not appear to pertain, even remotely, he gave the impression of unwillingness to consider any savings to which his objections did not apply. This general affirmation was supported also in general terms by Mr. Hungerford, the Canadian National President.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119659

Throughout the testimony of these officers there was a pervading strain of concern for the popularity of the Canadian National Railway and management. This is not an unnatural characteristic, having regard to the atmosphere in which inevitably officers who are answerable only to a Government must live. It cannot, however, be too strongly emphasized that such attitude of mind leads irresistibly to redundant and extravagant services and the sacrifice of the taxpayer.

In connection with Mr. Fairweather's evidence in particular, there must be kept in mind the report made by him and submitted to the Royal Commission of 1932. This report embodied the conclusion that there was a possible saving of $56,230,000 from unification on the traffic level of 1930, and $50,090,000 for 1931, which latter year approximated closely the traffic conditions of 1937. Further, this report was made at the request of the late Sir Henry Thornton and submitted in train conference to the Royal Commission. It is important also to note that it was prepared prior to the constitution of that Royal Commission, and before the Canadian Pacific, at the request of the Commission, began work on its estimate. For the preparation of the above report Mr. Fairweather had the collaboration of seven technical assistants and access to any information he desired from the Canadian Pacific.

Mr. Fairweather's original estimate is elaborate and comprises an explanatory memo of 12 pages and schedules of 39 pages. Although prepared by a totally different method, it appears to corroborate generally Sir Edward Beatty's contention as shown by the following comparison of the two estimates under their main headings:

* The estimates of possible savings from unification - in round figures fifty six million and fifty million respectively - made by Mr Fairweather in 1932 when compared with the statement made by Mr Hungerford before your Committee in 1939 that such savings could not exceed ? raise a very serious doubt as to the accuracy or reliability of the latter estimate.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

could be supplied with the findings of an impartial tribunal of experts, qualified by training and experience to report on the evidence submitted. Accordingly, a motion was made before your Committee on May 2, 1939, in the following terms:

> "~~Moved by the Right Honourable Arthur Meighen~~ that the evidence before this Committee be submitted to a firm of Railway Engineers and Accountants of high standing, free from all interest in either Railway System, to the end that such firm may study said evidence, and especially its practical Railway engineering and accounting features, and make such physical examinations as it may deem necessary with a view to making full report to this Committee as to what in the judgment of such firm would be the amount of savings which could be effected by a system of unified management, and whether and to what extent, if any, such savings would entail impairment of service to the Canadian people."

This motion, we regret to say, was defeated.

The undersigned are of opinion that such investigation need not have entailed very great expense, because, first, the evidence is already submitted, and, secondly, investigation on the premises would only be necessary in rare cases, because facts, maps, plans and other necessary data are already available and can be made open to inspection at the offices of the respective Companies. The undersigned further are of opinion that only by means of such report could the full value of the vast mass of information, which your Committee has accumulated, be obtained and utilized by the Canadian people.

The undersigned consider it a matter of much significance that on this question which should have been dealt with as a pure question of savings to the people of Canada in the operation of the nation's Railways, in which question necessarily the provision of essential services would be a part, there should be found two distinctly opposite sets of opinion among railway officials, and that one set should be entirely confined to the Canadian Pacific and the other set entirely confined to the Canadian National. The question considered as above defined is, or should be, essentially one and the same for both Systems. The only conclusion is that considerations other than those included in the above definition must have intervened.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

At this point again the undersigned further beg to emphasize the overwhelming necessity, from the standpoint of the whole country, from the standpoint of its credit and solvency, and for the good of every class and every community of the Dominion, that some solution definite and effective must be found, and found without further ~~undue~~ unavoidable delay.

(a) Conclusions

The undersigned ~~We~~ were utterly unable to find in the Evidence any hope whatever of relief from any other source than that hereinafter indicated in this report.

We further are of opinion that if, contrary to the evidence, effective relief can possibly emerge out of any other of the suggested policies, such policies applied to the extent absolutely essential to bring such measure of relief will be open to whatever objections, if any, can be offered to the course hereinafter indicated.

We are impressed by the following ~~facts~~ considerations:

(1) That huge competing businesses struggling for a living in the same field can in general, and probably always, effect tremendous economies by unified operations.

(2) That such unified operations as have already in a very minor way been put in effect in respect of our railways, as, for example, the pool trains, have already shown an operating saving of 33%, though such pool trains still carry the waste of duplication in terminals, yards, etc.

have already had large percentage reductions. In the case there been

(3) That assuming the public interest can be protected and essential services maintained, there would seem to be strikingly important opportunities for saving by some plan of unified management in respect of two such Systems as now exist in Canada ~~the Canadian Pacific and the Canadian National.~~ To ensure the full conservation of every essential public interest and public service, and to safeguard the interests of Canada, the undersigned recommend insistence on the conditions ~~x~~ enumerated below in respect of any system of unified management which may be worked out. The undermentioned ~~conditions~~ stipulations are not advanced with any thought that they are all-

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

 119662

inclusive. We believe, however, that conditions in Canada, both as affecting the Dominion on the one hand, and as affecting the Canadian Pacific Railway Company on the other, are such that all necessary and reasonable ~~stipulations and conditions~~ provisions can be arrived at and agreed upon. ~~Provision to the following effect~~ The following objectives should be secured:

i. There should be no obligation, legal or moral, implied or expressed, whereby the country assumes any liability in respect of Canadian Pacific obligations or securities, either as to capital or interest;

ii. Out of earnings up to the average aggregate earnings of both Systems over a period of (five, ten or fifteen) years as may be agreed upon, the Canadian National must be assured the same share of such earnings as it has enjoyed of such average earnings.

iii. Out of earnings above such average earnings, which presumably will be earnings due to economies effected by unified management, the Canadian National should receive not less than one-half.

iv. New capital investments, limited as they will be to joint requirements, should be provided for on a basis of definite and individual responsibility for respective shares of the capital on the part of the Canadian National (or of the Dominion of Canada), on the one hand, and of the Canadian Pacific Railway Company on the other hand.

v. Both parties should agree to such enlargement of the powers of the Board of Transport Commissioners as may be deemed necessary to serve every public interest.

vi. In view of the very extensive economies to be attained, and to the end that the process may not involve undue hardship on anyone, provision should be made for the due protecting, by both Systems, of labour adversely affected by such economies, along the lines lately followed by the Railways of Great Britain.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119663

vii. Agreement to all provisions should be obtained from each separate class of security holders of the Canadian Pacific and of the Canadian National, insofar as such latter security holders are not already protected by Government guarantee.

The undersigned ~~being~~ are of opinion that on the evidence submitted this country can look only to a system of unified management for relief, and ~~being~~ to further of opinion that the evidence demonstrates that relief can in fact be obtained under such a system, provided complete absence of political interference is assured in the Statutory terms creating such System, and that same can be done with ample and complete protection of all public interests, ~~recommends as follows~~:

I. That because of the need of bringing public opinion in Canada to a better understanding of all facts and arguments bearing on this problem and to a better appreciation of the true meaning and implications thereof, and of the solution suggested, the Government be urged to submit the evidence to a Board of technical experts, as suggested in the Resolution quoted in this report. The undersigned are confident that the effect of such report would be not only helpful in the formulation of public opinion ~~in general in advancing the solution~~ on this question ~~problem~~, but would be decisive as to the polity any Government in office would be constrained to adopt.

II. That if the Government is not so disposed, steps should be taken at once to negotiate an agreement looking to the unified management of the two Railway Systems of Canada, and to provide in such agreement and in the legislation to give effect to same, complete and effective protection of all public interests, ~~it~~ to goes without saying that no such agreement should become effective until approved by Parliament.

REPORT MADE BY THE FOLLOWING MEMBERS OF THE SPECIAL RAILWAY COMMITTEE OF THE SENATE SELECTED TO COMPLETE THE INQUIRY AND SUBMIT A REPORT UPON THE BEST MEANS OF RELIEVING THE COUNTRY FROM ITS EXTREMELY SERIOUS RAILWAY CONDITION, AND THE FINANCIAL BURDEN CONSEQUENT THERETO.

It is deeply regretted that an unanimous report was found impossible of attainment, as in a matter of such grave importance, at the present juncture, the added weight of unanimity in the Committee would have been of inestimable value.

Canadian National Capitalization and Deficits.

The Canadian National constitutes for the nation its most obdurate and perilous problem. The present investment of Canada in its railway system exceeds $3,300,000,000 of which by far the greater part is composed of recurring yearly deficits assumed and loans made by the Canadian Government for the Canadian National.

The cash deficit in 1938, substantially greater than in 1937, as shown in the Canadian National Railways Annual Report for 1938, is $54,314,195. This deficit does not include capital losses of $2,712,877 charged against Proprietor's Equity, any interest ~~on Proprietor's Equity~~ ~~which~~ at December 31st, 1938, ~~amounted to $672,688,000, or~~ on Government contributions to the System, written off to Consolidated Fund ~~which aggregated~~ $838,000,000 (See Public Accounts 1938, appendix 28).

It is evident that the railway problem cannot continue to drift as it has done in the past, without more hardship to the taxpayer and great and imminent danger to the credit of Canada.

In view of the marked increase in Government expenditure and taxation within the last years, of our constantly growing requirements, more particularly for national defence, for the relief of large sections of the community, for the rapidly expanding social legislation, and the

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119665

corresponding greater necessity of husbanding the resources of the country, we are urged to quote anew the solemn admonition given to the nation by the Royal Commission of 1932, ~~for~~ It is far more justified today than it was seven years ago:

> "We feel compelled, as a matter of public duty, to strike a serious note of warning to the people of Canada. Unless the country is prepared to adopt the plan we have proposed, or some other equally effective measures, to secure the efficient and economical working of both railway systems and thereby not only reduce the burden on the federal treasury but improve the financial position of the privately-owned railway, then the only courses that would be left would be either to effect savings in national expenditure in other directions or to add still further to the burdens under which the industries of the country are suffering by the imposition of yet further taxation. Failing the adoption of one or other of these courses, and there are obvious limits to their application, the very stability of the nation's finances and the financial credit of the Canadian Pacific Railway will be threatened, with serious consequences to the people of Canada and to those who have invested their savings in that railway."

Reasons for Inaction.

It is contended that the expenditure of the Canadian National, even if excessive, provides for the subsistence of a portion of the population which, otherwise, might be under relief. Obviously, this is fallacious as nothing guarantees that such excess in expenditure goes to those otherwise in need of it and, above all, as such policy, if accepted, might lead to unrestrained wastage in all Government departments. The complacent state of mind of certain Canadian national officials who seem anxious to see the Country reason itself to unbearable and unpayable deficits is deplorable. Further, it was represented that the Canadian National deficits were but an apparent loss to the country as that company provided an equal value in services to the Nation which were essential to its present well-being and future development. Such a ~~This~~ contention is utterly inadmissible, as like ~~such~~ adequate services can, and in fact are, rendered by and by similar Companies in other countries the Canadian Pacific Railway at no cost to the Nation. ~~The~~ Witnesses appearing before the Committee ~~suggested possible~~ deserving outlined policy solutions of the problem, ~~none~~ ~~of~~ which implied ~~the~~ abandon- there was no

CANADA

119666

ment of essential services, but all were designed to reduce or eliminate unnecessary duplication and redundancy of Services.

It is obvious that relief can be obtained, otherwise only by a very large increase in revenues which appears to be definitely unattainable either through increases in rates, or through an increasable growth of traffic, ~~or, in the alternative, by a sweeping reduction in the cost of operation.~~

Remedies suggested.

Three different methods were proposed to the Committee for securing economies to reduce the burden of Canadian National deficits.

Voluntary co-operation.

A more effective application of the co-operative provisions of the Canadian National-Canadian Pacific Act, 1933 was recommended.

This suggestion is not very promising, since the coming into force of the above law in 1933 the total savings from arrangements now in effect, and others agreed upon by the railways but not yet in effect, will be less than $2,000,000 per annum.

(1) Re write

Past experience has demonstrated that economies through co-operation are not of an order of importance or certainty which would give grounds for confidence that the results secured would cover more than a small portion of the distance towards the objective which must be reached.

Enforced co-operation.

The second recommendation, made by the President of the Canadian National, provides for the injection into negotiations between the railways of a new body consisting of a representative of each of the railways, and a chairman appointed by the Government, the chairman to have an over-riding vote. This body would have authority to initiate

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119667

studies of any project suggested by any individual member and if a favourable report was made by a majority, or by the chairman alone, the proposal would automatically go before an Arbitral Tribunal for final decision. It was argued that this would relieve the railway companies of the stigma which would attach to agreement to undertake unpopular economies. As to the latter point it would be most unwise to depend on the Government voluntarily submitting to public odium - as the result of the action of its representative - which the railways would recoil from incurring. The suggestion appears to be useless and might prove unfair to the Canadian Pacific as the Government delegate, in conjunction with the Canadian National representative, might be urged to vote for the adoption of schemes costly to the Canadian Pacific and treat very differently those unfavourable to the Canadian National.

(2) Co-operation whether voluntary or enforced cannot be effective if coupled with competition. The railways are in a death struggle for a living and it would be unnatural for them to grant concessions without receiving due compensation. In the past negotiations between the two systems, this apportionment of burden and advantage has been the main obstacle in the way of successful results and will so remain in the future, until both railways, working for the same purse, will have the same interest and, therefore, the same incentive in realizing economies .

Unification of Management.

The last suggestion made was unification of management of the Canadian National and the Canadian Pacific, each company continuing to own its respective properties and no guarantee being given to the Canadian Pacific of a return on its stock or other capital issues. Each company would continue to receive, under unification, the net earnings

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

actual results over ~~a period~~ an agreed on period of years which past ~~experience~~ indicates that each would ~~have obtained~~ have received as an independent institution and additional net earnings made available by ~~unification~~ the economies of unified operation would be shared between them on an equitable basis. It was intimated that of these additional net earnings the Canadian National should receive at least half ~~Unification would be operated~~ the suggestion was that unified operation would be under the control of a Board composed of fifteen directors, five of which ~~to~~ would be created by Parliament and to be appointed by the Government or by be selected by the Canadian National, five by the Canadian Pacific, and the remaining five by the directors already chosen, or by some other appropriate method.

This proposition, at the outset, was met by two preliminary objections. The first was that ~~unification~~ such unified management would create a huge and possibly an oppressive monopoly. The answer is that the railways have been stripped of all powers which might render them injurious to public interest, either under a monopoly or otherwise.

The Transport Board holds supreme authority over them and controls all abandonment of lines, withdrawals or reductions of services, as well as all increases of rates and fares. For many years large sections of the Dominion have lived under the monopoly of either the Canadian National or the Canadian Pacific without any perceptible disadvantage. The modern world exists under a number of monopolies imposed by its own free will in order to suppress excessive charges and wastage due to duplication. This is strikingly exemplified in transportation, telephone, water, gas, electricity, and other urban services.

Secondly The other objection is based on the apprehension that there would be ~~levelled at the creation of~~ a large mass of population, whose united influence might dominate the political life of Canada. To this the answer seems to be that if the interest coalescing the railway ~~workmen~~ employees is an occupational or professional one, it exists already. No more striking evidence of this can be imagined than the opposition to unified management, voiced by the railway employees of both ~~railways~~ systems through their unions.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

If the interest creating the coalition be a political one, then ~~it operates today to a marked degree as more than half of our railway employees are now, if not openly, without doubt, very effectively under government and party influence. But far worse still is the pressure~~ conditions favourable for its success as they could be under unified management now are just as exerted, without any doubt as they are through their unions, by the mass of employees of both railways on political parties.

This continuous concerted pressure is mainly directed to the protection of a privileged ~~class~~ section among all ~~the~~ labouring classes of the country. fortunate that indeed a

This influence is one of the chief obstacles to the settlement of our railway problem. It can only be removed by placing the administration of the Canadian National above political interference and in the hands of capable, strong and thoroughly independent men, whose tenure of office, ~~like that of judges~~, could be attacked only for cause, ~~and through impeachment.~~ This could be accomplished by placing ~~unification~~ our railways under the direction of a properly selected ~~and protected~~ board. Whose only object could be the successful operation of a united system. Any ~~real interest~~ reasonable cause which railway workers might have had to oppose unified management has been eliminated by the proffer of provisions protecting them ~~completely~~ against dismissal, demotion or transfer. Normal attrition, which ~~includes~~ death, pension age, or resignation, would remove men from employment faster than required for unification, and those suffering from transfer from one place ~~or from one task~~ to another would be fully compensated. These ~~are privileged terms~~ unknown to the working classes of any ~~other~~ industry in the country and not enjoyed by any other class.

It was ~~to be~~ expected that railway workers would have been re-assured by the definite statement made on behalf of the Canadian Pacific - which, undoubtedly, would be acceptable to the Government if an arrangement was entered into - and would have withdrawn their opposition to ~~unification~~ a unified scheme of management

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

D 1967

The object sought to be attained is the avoidance of financial disaster to our country in which disaster every class would suffer and the poor classes even more than others. It is not unfair to ask that all cooperate in a joint effort to save Canada from disaster

based, as it was, on the ground that it might reduce prospective employment for their class, particularly when present employees would be so amply protected.

Persistence in their present attitude simply means that they insist that the traffic of the country, for all time, should carry the burden of some 25,000 positions which are not required.

Unification, or joint managership, by elimination of political interference by labour or other organized elements in the community might well overcome the major cause of past recurring deficits.

Savings from unification.

Sir Edward Beatty, President of the Canadian Pacific Railway Company, claimed that through the unified management of both railways, savings to the amount of $75,300,000 could be effected under average traffic conditions, which he states are those of the year 1930.

As to the method followed to establish such savings, it seems preferable to quote Sir Edward himself:

> "Your Committee, however, may desire some account of the basis and methods used for this calculation, and without being too technical, I shall endeavour to explain the origin of the figures. Estimates of savings were submitted by both the Canadian Pacific and Canadian National Railways as the result of requests to them of the Royal Commission. Three estimates were made - $75,300,000 by the Canadian Pacific, based on 1930; $50,340,000 by the Canadian National, based on 1931 - practically the level of traffic in 1937, and $56,440,000 by the Canadian National on a year of normal traffic, which was taken as 30 per cent above 1931, or practically the level of traffic in 1930.
>
> I should like to explain to your Committee the precise procedure followed in making the estimate offered by the Canadian Pacific Railway.
>
> When the Royal Commission requested that the Canadian Pacific exhibit in money its estimate of the amount of railway duplication, I arranged for a committee of our officers from the operating, engineering, traffic, mechanical and accounting departments to convene and to prepare an answer to the Commission's request.
>
> They surveyed the existing supervisory organizations of the two railways as independent units, and the probable organization of a railway as unified; the location and

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

The submission of the Canadian Pacific witnesses was of a highly technical nature. Some of the evidence in opposition submitted by the officers of the Canadian National.

To demonstrate the very special character of the argument made on both sides, it is sufficient to refer to the method used, not exclusively but in the main, to establish savings from unification.

This method required the ascertainment of reduction in train and car mileage obtainable without detriment to public service from the consolidation of lightly loaded trains and from the use of the shortest and most economical routes both for passenger and freight. The result, according to the evidence, was a saving of 6,909,939 passenger train miles or 14.3% and 8,897,000 freight train miles, or 15.4%. These percentage reductions and others similarly calculated were used to measure the realizable economy in the different departments where such percentages could properly be applied.

In other cases economy was calculated directly by estimating what reduction would be possible by the consolidation of departments. This was the formula used to prove over $50,000,000 out of the $75,373,000 of savings claimed as realizable. Other technical methods were applied either exclusively or jointly with decrease in train mileage to establish the balance of the economy so claimed.

All these calculations were based on the figures of 1930.

The Canadian National officers opposed the above formula and its results by denying that the stated reduction in train mileage is exact, and further by asserting that Canadian Pacific unit costs are not applicable to the Canadian National as the lines of the two railways are not comparable. Evidence was submitted by the Canadian Pacific to show that Canadian Pacific unit costs had not been applied to Canadian National operations but, where used, had been adopted as the measure of cost possible of achievement by the unified system. The Canadian National officers, further contended

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119672

that the Canadian Pacific calculations took no account of the substantial reduction in expenditures of the former system from 1930 to 1937. The Canadian Pacific admitted that permanent savings made in recent years justified a deduction of $4,801,000 from the original estimate, but they showed that additions of $9,056,000 were justified by other known items of change. In addition, the evidence showed that by their very nature the temporary savings made independently by the railways were entirely different to the permanent economies which would be possible under unified management through the elimination of duplicate effort. The revised Canadian Pacific estimate to which reference has been made, having been computed on the basis of 1937 level of traffic, completely disposes of the contention that large economies are no longer available because of individual economies effected by the railways, either on account of reduction in traffic, or otherwise.

From 1930 to 1937, gross revenues of both railways fell 21.6%. Combined expenditures of both railways between the same years was reduced by 20.7%.

This cursory analysis of the evidence suffices to reveal its technical character. Nothing else is needed to establish, beyond contradiction, that none other but fully qualified and experienced accountants and engineers could verify, complete if necessary, and surely weigh and fairly judge this evidence.

Mr. Fairweather is the only Canadian National witness having surveyed the whole question. The gist of his evidence was that our savings from the unification of railways were impossible of realization as the public and employees would not tolerate consequent reduction of the services or the creation of a monopoly. When confronted with many items of savings to which these objections did not appear to pertain, even remotely, he refused to consider any savings

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

19673

to which his objections did not apply. This general affirmation was supported also in general terms by Mr. Hungerford, the Canadian National President. In connection with Mr. Fairweather's evidence in particular there must be kept in mind ~~was greatly weakened by~~ the report made by him and submitted to the Royal Commission of 1932. This report embodied the conclusion that there was a possible saving of $56,230,000 from unification on the traffic level of 1930, and $50,090,600 for 1931, which latter year approximated closely the traffic conditions of 1937.

Further this report was made at the request of the late Sir Henry Thornton and submitted in train conference to the Royal Commission. It is important also to note that it was prepared prior to the constitution of the Royal Commission, and before the Canadian Pacific at the request of the Commission began work on its estimate.

For the preparation of the above report Mr. Fairweather had the collaboration of seven technical assistants and access to any information he desired from the Canadian Pacific.

Throughout the ~~Enquiry~~ testimony of these officers there was a pervading strain of concern for the popularity of the Canadian National Railway and management. This is not an unnatural characteristic in regard to the atmosphere in which inevitably officers who are answerable only to a Government must live. It cannot however be too strongly emphasized that such attitude of mind leads irresistibly to redundant and extravagant Services and the sacrifice of the taxpayer.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119674

Mr. Hungerford, President of the Canadian National Railways, admitted in his evidence that the efforts to operate the property on economical lines were circumscribed by what he defined as considerations of "public interest", that what constituted "public interest" was really determined by the Government of the day and that if the Canadian National was not a Government enterprise it certainly could not be carried on its present footing.

It may be reasonably inferred, as was indicated by the late Sir Henry Thornton in his evidence before the Royal Commission, that the policy of the Government, whatever might be the efforts of the Canadian National Management to operate on sound business lines, is unhappily reflected in the administration of the railway in increases or reductions in personnel, in the carrying out of contracts for works, purchases, etc., which fact largely accounts for the Canadian National spending on operating costs alone last year 96.67¢ for every dollar earned by it, whereas the Canadian Pacific spent 82.29¢ to earn the same amount.

As a glaring instance of political influence on the policies of the Canadian National, we may cite the fact that the completion of the Montreal Terminal was definitely promised on the hustings by Ministers of the Crown, months before the Directors made their recommendation to proceed with the work.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119675

Mr. Fairweather's estimate is elaborate and comprises an explanatory memo of 12 pages and schedules of 39 pages. Although prepared by a totally different method, it appears to corroborate generally Sir Edward Beatty's contention as shown by the following comparison of the two estimates under their main headings.

Estimates by Canadian National and Canadian Pacific respectively of possible savings through unification, based on the level of traffic for 1930.

| | C. N. R. | C. P. R. |
|---|---|---|
| Increased railway operating revenues: | $6,540,000 | $1,396,000 |
| Traffic solicitation & advertising -- | 6,950,000 | 5,976,000 |
| Transportation & Misc. operations -- | 20,047,000 | 24,954,000 |
| Maintenance of Way & Structures - - - | 3,423,000 | 14,889,000 |
| Maintenance of Equipment - - - - - -- | 7,797,000 | 14,360,000 |
| General - - - - - - - - - - - - - -- | 1,573,000 | 4,289,000 |
| Lake and coastal steamers - - - - --- | 500,000 | 450,000 |
| Hotels - - - - - - - - - - - - - -- | 4,500,000 | ------- |
| Express operations - - - - - - - -- | 600,000 | 1,450,000 |
| Telegraphs (railway & commercial) --- | 700,000 | 948,000 |
| Interest on released investment in material & rolling stock - - - - -- | 3,000,000 | 6,350,000 |
| Miscellaneous - - - - - - - - - - - | 600,000 | 311,000 |
| Grand Total - - - - - | $56,230,000 | $75,373,000 |

Details show items in each estimate that are not in the other, which indicates that a combination of both estimates might well produce potential fields of economy greater than the total of either.

Mr. Fairweather also gave evidence as to possible savings under co-operation. In this, his opinion appeared to undergo very considerable variations as he first appraised savings under this head at $35,000,000, then at $24,000,000, subsequently again at $10,000,000, and finally admitted that such estimates were but guesses on his part. DD is different to appraise the value of evidence so submitted

The disposition of Mr. Fairweather to alter or adjust his estimates from time to time casts grave doubt on the value of his evidence.

(4)

Conclusions. Without professional assistance, the Special Railway Committee will be unable fully and satisfactorily to report on its investigation and, as a consequence, a rare amount of

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119676

valuable information will be lost and the solution of the Canadian railway problem will, in no way, be advanced.

That such a solution may be found in unification was "prima facie" demonstrated by the witnesses of the Canadian Pacific.

For that reason, it is of paramount importance that the whole evidence submitted to the Committee be thoroughly tested.

That the total elimination of all duplication and competition between the two railways must result in substantial economies seems incontestable.

That such economies would or would not be of such importance as to justify so great a departure as unified management remains to be seen, and can be ascertained from the material amassed, if submitted to proper technical advice.

It must be borne in mind that the investigation has revealed the remarkable success of the co-operative projects already in effect, including the pool trains, which projects constitute but a partial and local application of unification. The evidence indicates that these projects show a saving in operating costs of no less than 33%, but pool trains, for example, must still carry the waste of duplication in terminals, yards, etc. If duplication and competition were largely banished from both railway systems, would the saving resulting therefrom not be very great?

It is therefore recommended that the evidence laid before the Special Railway Committee be studied, completed if necessary, and reported upon to the said Committee as soon as possible, by one or more firms of railway engineers and accountants of high standing, free from all interest in

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119677

either railway system.

It is further recommended that such firm or firms of railway engineers and accountants be selected by mutual agreement between the Canadian Pacific Company and the Canadian National Railways and should this selection be not made within thirty days from the prorogation of the present session, then that said firm or firms be nominated by the Chief Justice of the Supreme Court from panels of firms of engineers and accountants submitted by the two railway systems.

It is recommended that the Government be strongly urged to provide the funds to defray the services of the firm or firms of engineers and accountants, so chosen or nominated.

The Right Honourable Arthur Meighen, P.C.,
The Senate,
Ottawa, Ont.

My dear Senator:

Re Railway Enquiry

Referring to my letter of April 17th covering copies of my correspondence with Mr. Hungerford on the subject of the memorandum dealing with the figures of the estimates and the evidence directed to them, I enclose a copy of a further letter from Mr. Hungerford dated on April 28th and of the reply which I made to this.

I have in the circumstances completed the memorandum and it should be ready for distribution to the members of the Committee on Monday as arranged.

Yours very truly,

BMG

CANADIAN NATIONAL RAILWAYS

D.19679

Montreal

28th April 1939

Dear Colonel Biggar,

I have your letter of April 17th. I hope you do not consider me to be critical of action on your part. Perhaps we may not be looking at the matter from exactly the same points of view, but to me the issues are of such importance as to justify my expression of views on your memorandum in such form as appears to me to be necessary, even though it may be that technically the precise character of your task is not, from your standpoint, strictly kept in mind.

May I venture the opinion that any summary of evidence which is not a bare skeleton reference to subject matter and record, almost necessarily involves a degree of judgment in expression which, however carefully exercised, does trench on its force or weight. The language of your memorandum seems to me to warrant that observation. If the former method had been followed, it would have served the function of a reference index which might have met the purpose of the Committee. In this, however, I do not presume to suggest what should be asked by or furnished to the Committee; I am only hazarding a comment on the bald question of the mode of enabling the Committee quickly to turn to the evidence on any topic raised.

Perhaps the chief difference of view between us is indicated in that part of your letter in which you used the following language:

> "Questions of state policy such as the comparative advantages and disadvantages of a railway monopoly are quite outside its scope, and since no one is being either praised or blamed this is equally true of the reasons why in the absence of independent enquiry individual witnesses were unable to be of any assistance to the Committee on the point with which the memorandum deals."

What we must keep in mind is this: One of the two large railway systems of Canada submitted a scheme for the solution of a difficult railway problem; the officers of the Canadian National were requested to deal critically with those submissions and certainly, to the

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

D / 9680

ordinary person, it would be assumed that the strength of the critical comments on the scheme would reflect vitally on the strength of the scheme itself. But the fact is that there were fundamental data withheld without which it was out of the question for the National officers or anyone else to deal in any degree adequately with the items of that scheme. Yet, if I correctly apprehend your view, the "reasons" for the inability of the National officers to furnish a full and reliable critical comment on the various features are irrelevant to the purpose of the memorandum. Technically, that may be so, but when the substantial purpose and effect of the memorandum in its actual form is considered, surely it would be assumed, in the absence of explanation, that the opposing submissions were co-extensive in basis and subject matter, and the absence of the "reasons" would permit therefore an implication that is fundamentally erroneous. From my standpoint, the fact of the absence of that date is a most essential feature of the evidence presented by way of criticism of the scheme; from yours, apparently, that fact is irrelevant. All I can ask is that with the utmost deference I be permitted, in a matter of such importance, to make clear that I do not agree with you in that regard.

I note your statement that you have amended the original draft of the memorandum in the light of some suggestions in the comments enclosed with my first letter.

In view of the difference of opinion between us as in part indicated in the foregoing, and the peculiar relation of the matter of that difference to any statement of the evidence as a whole, it would, I think, be improper for me to suggest specific modifications of your memorandum, and I therefore refrain from doing so.

Yours faithfully,

(sgd) S. J. Hungerford

President.

Montreal May 10th, 1939.

Hon. Arthur Meighen
Senator
Ottawa.,

Dear Sir:-

An unic directorate on the railways means a Government under a Dictature in Canada which autority could not be applied here unless it is applied first in England.

With our democratic Government the unification means that the syndicate of the employees shall comprise the real shareholders receiving their orders from the american head office, which can compel the unic Board to increase any time their salaries 10% 15% or more, as they please, or the syndicate of employees might go in strike and force the Board or the Government to accept the new scale of salaries wiping out all suggested economies.

The British tie will be cut, because orders will come from foreign heads ignoring all social justice.

The only way to settle the railway problem is in increasing the traffic, I am in a position to establish that the canadian routes are robbed of 67% of their own traffic by foreign routes and to bring before the Committee the means to close the leaks of our railways. The Committee is as much competent than any other judge, to appreciate the proof of the leaking and the proper means to close it.

Why close the door to independant evidence?

Sincerely yours
SERAPHIN OUIMET

Toronto, Ontario.
May Tenth, 1939.

The Editor,
The Evening Telegram,
Toronto,
Ontario.

Dear Sir,

It is most pleasing to read of the stand taken by Senator Arthur Meighen, on Railway unification.

Reviewing the Transportation Problem, over a length of years, one is permitted to reach the conclusion,that handing control of Canadian Railways, over to the foreign controllers of the Canadian Pacific Railway, and their affiliations would disloyal to Britain and disastrous to the best interests of Canada.

Over fifty years ago, the British Investors who backed the building of the Grand Trunk Railway, as an east to west line parallelling the St.Lawrence and Lakes Ontario and Erie, did so with the vision of the future, which has become vitally important to Canada recently. Included in their immediate proposal was that of extending the Grand Trunk northerly from the main line as the more settled conditions required, AND, the opening of the Seaway to Port Arthur, to have the products of Western Canada, loaded into British Ocean-going vessells at that point, and carried to the markets of the world, by the British Mercantile Marine.

To frustrate this plan, foreign financiers 'induced' in what ever terms may be contained in that word, Canada to bonus the Foreign Financiers with huge grants of land, to provide the costly system of rail transportation about 1,200 miles across the non-revenue-producing district of northern Ontario. From that contra-British act has developed not only our rail problem, but other disastrous conditions.

To compete with even the meagre boat service of the local boats, the C.P.R. was granted the right to haul wheat to the advantage of its foreign owners, at rates competitive with the lake rates. If any, a very small portion of this lowered rate, made effective to forestall any chance the British Interests might prevail, and the seaway be built, was directed to the primary producer, or the Canadian public. The cost of operating freight trains over this immense district, was not met by the rate permitted, so something had to be done about it, or the poor Foreign Financiers would lose money.

Thw germ was taken out of the wheat, and the origin of diabetes, and infantile paralysis, the fine starch-like su bstance from which the bread of today is made, caused untold instances of illness, and edeaths, and untold costs with relation to the general health of Canadians, particularly building the diabetic and similar ills of today, with their immense expenditures.

As the British usages and customs, even the basis of that greatest of empires, is founded on the teachings of the Bible, it might not be misleading for the reader to do some comparison work.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

The Bible vary clearly tells us, Quote ' [illegible] ' A measure of wheat for a penny, and THREE measures of barley for a penny, AND SEE THAT THOU HURT NOT THE OILY GERM, or the wine'.

Now here is where the comparison is important. Take the latest report of the prices for wheat, and divide that by three, and compare that with the prices of barley, and you will find you are paying much too much for the barley when you take the wine, or other alcoholic drink made from the barley. But as the Foreign financiers who control that industry of making the barley into liquors, which they sell the Canadian public at tremenduous profits, Canada licenses them to rob the consumer.

One may purchase liquor or not, but one has difficulty in [illegible] avoiding the use of bread.

Now another comparison, check the price of barley in the latest report, and mutiply it by three, the price the Bible tells us the primary producer should get, and what have you ?.

Then turn to the consumer value again. In a comparison of this type, one finds the producer receives just about half the ratio advocated in the Bible, then about sixty percent of the food value, in the shape of the germ is taken out, extracted is the term one qualified medical man terms it, and from the left-overs is made the bread which goes into the homes at a figure far beyond the wage figure of today.

The sturdy Scotsmen, get around this nicely. and what a pity we had not more sturdy Scots in the administration of the affairs of this unit of the British Empire.

From Port Arthur to Scotland, wheat from the Canadian west is carried in British Boats, and in Scotland, amde into the Whole Wheat Bread, which sells there to the consumer, for about twenty percent less than the defiled substance on which Canadians are fed.

Why wander away from Transportation, because these items are irrevocably included in the field of transportation, and are controlled by the foreign financiers.

No doubt the Canadian Association of Broadcasters will take exception to the statement, that all this transportation problem, made the market for the Nostrums, which George Hebden Corsan, criticised as occupying too much time on radio broadcasts. The difference between Mr. Corsan, and this association is that Mr. Corsan is endeavouring to create a greater interest in the beautiful things of God, where as the Broadcasters, who are licensed by the Canadian Government, promote the interests of foreign financiers, who profit from the sale of the diluted flour, which in turn creates the conditions for which Nostrums are used. Because the parasitic patrons of the foreign financiers grant a license to defy amd ignore the Bible, does not make the persons or parties who follow that defiantly, and with the full intent to ignore the Bible, any less evil. The crucifixion of Christ was made legal, but His death was just as great a loss as though it had been comitted outside the law licensing it.

The fact that the Canadian Government licensed and co-operated in these and other similar movements, does not point defianee and ignoring of the Bible to be the correct thing to do.

Rt. Honorable Arthur Meighen
The Senate
Ottawa, Canada

Dear Mr. Meighen:

You are cordially invited to meet with a group of some one hundred fifty scholars in the field of economics and government to discuss problems that are of common interest to Canada and the United States. This Conference will be held at The St. Lawrence University, Canton, New York, from Monday afternoon, June 19 to Thursday afternoon, June 22. The nature of the program which is enclosed is such that it is important that members remain throughout the Conference.

The Carnegie Endowment for International Peace will pay your personal travelling expenses from the address indicated above to Canton and return. The St. Lawrence University will be the host for the occasion and will provide rooms and meals at the Men's Residence without expense to invited members of the Conference. Should you be accompanied by members of your family, arrangements will be made for them to obtain similar accommodations at the Men's Residence at the rate of $3.00 per person per day. If you should prefer to reside at the Hotel Harrington, it will be necessary for you to conclude your own arrangements with the hotel. A circular showing rates is enclosed.

This invitation is extended to you on behalf of the Carnegie Endowment for International Peace, The St. Lawrence University, and Queen's University.

Very truly yours,

Albert B. Corey.

ABC DF

Chairman of the Executive Committee.

This is confirm your understanding with Dr. Shotwell

CANADIAN-AMERICAN CONFERENCE

June 19th-22nd, 1939

The St. Lawrence University, Canton, New York

Draft Programme

**Monday, June 19:**

6:00 P.M. Opening Dinner
Address of Welcome: Laurens H. Seelye
President, The St. Lawrence University

8:00 P.M. GENERAL SESSION

Subject: NORTH AMERICA IN THE WORLD TODAY

Chairman: James T. Shotwell
Director of the Division of Economics and History of the Carnegie Endowment; Bryce Professor of the History of International Relations, Columbia University

Address: W. A. Mackintosh
Professor of Political and Economic Science, Queen's University

**Tuesday, June 20:**

9:30 A.M. DISCUSSION SESSION

Subject: NORTH AMERICA'S EXTERNAL ECONOMIC INTERESTS

Chairman and leader of discussion: Harold A. Innis
Professor of Political Economy, Toronto University

2:00 P.M. SPECIAL DISCUSSION SESSION

Subject: TRADE AND TRADE CONTROLS

Chairman and leader of discussion: Henry Chalmers
Chief of the Division of Foreign Tariffs, Department of Commerce, Washington, D.C.

2:00 P.M. SPECIAL DISCUSSION SESSION

Subject: INTERNATIONAL FISCAL CONTROLS

Chairman and leader of discussion: Roswell F. Magill
Former Undersecretary of the Treasury; Professor of Law, Columbia University

8:00 P.M. GENERAL SESSION

Subject: NORTH AMERICA'S EXTERNAL POLITICAL INTERESTS

Chairman: Rt. Hon. Arthur Meighen
Former Prime Minister of Canada

Addresses: "The European and the North American Situation"
by: John Foster Dulles
Former Counsel on Reparations to American Delegation to Negotiate Peace, etc.

"The Pacific Area and North America"
by: H. F. Angus
Professor of Economics, University of British Columbia

Wednesday, June 21:

9:30 A.M. DISCUSSION SESSION

Subject: NORTH AMERICA'S EXTERNAL POLITICAL INTERESTS

Chairman and leader of discussion: Robert C. Wallace
Principal, Queen's University

1:00 P.M. SPECIAL LUNCHEON

Chairman: Lewis W. Douglas
Principal, McGill University

Speakers: Hon. Charles A. Dunning
Minister of Finance, Canada

(Other Speaker to be Announced)

8:00 P.M. GENERAL SESSION

Subject: DEFENCE AND EXTERNAL OBLIGATIONS

Chairman: Major General John F. O'Ryan

Addresses: "An American View" by: Hon. Elbert D. Thomas
U.S. Senator from Utah

"A Canadian View" by: Charles Perry Stacey
Department of History,
Princeton University

To the Hon Senator A Meighan
Dear Sir

I was deeply interested in the suggested bill for compensation to be made to the discharged employees of the C.N.R & C.P.R due to the outcome of the proposed unification of the two roads & would like to offer the following suggestion to be embodied in the Bill
"To all employees with thirty years or more service accumulated. the pruvilege should be accorded of voluntary retirement on Pension". In support of this suggestion I would point out that the average worker of to day after he reaches the age of fifty five has outlived his best years of servce & could be advantageously replaced by a younger man. Further if retirement on Pension was permissable at this age I venture to state that several long service employees would take advantage of the concession & by doing so, obviate the neccessity of forcing junior men (several of whom would be of more value to the railway service) into the ranks of the unemployed & thus having the expense of compensating them for their being relieved from their positions I would further

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

reiterate that the service of the returned soldier deteriorates around the age of fifty and I think that concession of retirement on Pension in their case should be lowered to voluntary retirement after twenty five years service at the age of fifty I feel certain if unification of the two railways is necessary that the scheme as outlined above, would be to the advantage of the operation of the railroads & a financial saving by reducing the number of workers who would have to be compensated for the loss of their employment. I trust that you will excuse the liberty I am taking in writing to you, and that you will give my proposal your kind consideration

I am Sir

Yours Truly

Ernest J. Caswell

# RAILWAY FACTS

Published by the Citizens' Group for Railway Action.

JUDGE EMERSON COATSWORTH, President DALTON J. LITTLE, Secretary-Treasurer W. F. GREENFIELD, General Field Secretary

No. 18 611 TEMPLE BLDG., TORONTO 2, ONT. May 12, 1939

## Senator Dandurand Prevents Public from Learning Facts on Rail Problem

### C.N.'s Station Plan Is Not Good Enough To Stand Criticism

Whatever merit there may be in the plans of the Canadian National Railways to build a new passenger terminal in the famous hole in the ground in Montreal, it is not sufficient merit, evidently, to run the risk of criticism either from the Canadian Pacific or from outside persons.

For some reason which perhaps never will be explained, the Commons Standing Committee on the C.N.R. heard little pertinent questioning from Conservative members. H. H. Stevens, who evinced great curiosity in the early stages of the session, did not appear at the Committee.

The Special Senate Committee has not been allowed to examine into the question at all. Senator Dandurand cracked the party whip and voted down the Conservative members when they would have heard what the C.P.R. had to say about union terminal possibilities in Montreal. George Macleod, a former city engineer of Montreal, also was refused permission to explain his scheme for using the hole in the ground for tramway purposes.

A member of the Citizens' Group who proposed that it be made into a ravine park, wherein could repose a statue of the late Sir Henry Thornton, did not ask to have his views placed on the record.

### Junior Workers Lash Out At Seniors' Adding Days

Two spare-list employees of the Canadian National, named Black and White, have written the Senate Committee to argue that senior men in the railway running trades should not be permitted to earn 38 days' pay per month.

They argued that reducing the senior men to 26 days would give them good pay and give work to 10,000 or 12,000 additional men. They asserted that of 673 employees in Ontario canvassed, 450 were in favor of the change.

### Senator Meighen's Resolution

"That the evidence before this Committee be submitted to a firm of railway engineers and accountants of high standing, free from all interest in either railway system, to the end that such firm may study such evidence and especially its practical railway engineering and accounting features, and make such physical examination as it may deem necessary, with a view to making a full report before this Committee as to what in the judgment of such firm would be the amount of savings which could be effected by a system of unified management, and to what extent, if any, such savings would entail an impairment of services to the Canadian people."

This resolution was defeated.

Anyone who has followed the course of the Special Senate Committee in the current year must have concluded that the aged though sprightly Government leader in the Senate, Raoul Dandurand, is losing his political acumen. Ample evidence of this is his refusal to accept the resolution of Senator Meighen that the unification estimates of Sir Edward Beatty be examined as to their validity by a firm of independent auditors and engineers.

The figures, explained in great detail by a half dozen or more of the highest operating officials of the Canadian Pacific, were stated by all Canadian National officers who testified as being gross exaggerations. Between the statements of responsible officers of both railways, Senators on the committee had their choice. It was Mr. Meighen's idea that if a reputable and competent firm not connected with either railway examined the Beatty proposal and reported thereon, the committee and the public would be better able to determine whether or not unification is the answer to the Canadian railway problem.

But after giving himself two days to think it over, Senator Dandurand read a statement to the committee last week which expressed opposition to the resolution on the ground of its possible expense and, one inferred, because, in his opinion, the C.P.R. figures were wrong anyway. In the subsequent vote of the committee, five Liberals and Senator McRae voted with him.

The reason for believing that Senator Dandurand is not as politically astute as he has been considered in his younger years is that a reference of the whole unification question to an outside authority would have shelved the entire railway question for several months at least. No politician in either Liberal or Conservative camps desires the railway question to be discussed in the general election which observers think will be coming in the present year, although Mr. King could, if he wished, wait until next year.

Senator Haig, of Winnipeg, a member of the committee, in an address following the Dandurand statement, deplored Senator Dandurand's attitude for the reason that, he said, he would like an expert, independent opinion on the estimates of savings. But he added that it seemed to him poor political tactics for Senator Dandurand to deny what the Meighen resolution asked for. For it was Senator Haig's belief that the railway question would be an issue in the coming election whether or not either party desired it to be.

Contacts which the Citizens' Group for Railway Action has throughout Canada strongly corroborate Senator Haig's belief that the public is aroused to the need for a solution of the railway problem. And if funds permit, it is the intention of the Citizens' Group to continue to disseminate information on the railway question, regardless of the attempts to keep the question in the background.

### One Locomotive Driver Favors Railway Reform

A letter signed "Locomotive Engineer" and dated from Regina in The Financial Post of April 29th, said:

"Unify the railways as much as you like. I think that is sane business, but passenger engineers don't earn and aren't paid $4,000 a year. . ."

J. L. McDougall, of Queen's University, told the Senate Committee that some passenger engineers could earn up to $4,000. It is believed that the average pay of regularly employed engine drivers is between $3,200 and $3,500 per year.

### Interest Charges Higher

Interest charges applying to the Canadian National Railways for 1938 were $50,765,147, an increase of $132,051 over 1937.

### Loan of C.P.R. in 1933 Cost Taxpayers Nothing

In railway labor circles it is continually being implied that the Canadian Pacific Railway received aid from the Canadian taxpayer by reason of the Dominion Government's guarantee of a $60,000,000 bank loan of the C.P.R. in 1933. The fact is that the C.P.R. repaid the loan in full, with interest, so that the guarantee did not cost the taxpayer anything, and there is not now even a contingent liability in connection with it.

The record of this transaction is:

| | Borrowed |
|---|---|
| June 22, 1933 | $35,000,000 |
| December 1, 1933 | 25,000,000 |
| Total borrowed | $60,000,000 |
| | Repaid |
| July 2, 1934 | $12,000,000 |
| February 15, 1936 | 12,000,000 |
| April 1, 1936 | 36,000,000 |
| Total repaid | $60,000,000 |

### Sixteen Hours' Deficit Would Pay for Experts

The first reason that Senator Dandurand gave for his refusal to permit the C.P.R. unification savings estimates to be examined by independent experts was the probable cost, which he set at perhaps $100,000.

On the basis of 1930 traffic the unification savings were estimated at $75,000,000; on the basis of 1937 traffic, the estimate is $59,000,000.

The Canadian National cash deficit was $42,000,000 in 1937 and $54,000,000 in 1938. The average daily cash deficit on the Canadian National in 1938 was $148,000.

Senator Meighen expressed doubt that the examination he proposed would cost $100,000, but in any event it was negligible in comparison with the existing losses and it would be money well spent to enable the country to judge whether or not unified management would substantially reduce the enormous annual deficit of the Canadian National.

### Farquharson Says West Ready for Rail Solution

After completing an extended tour of Western Canada for the Toronto Globe and Mail, R. A. Farquharson, a veteran journalist and observer, wrote from Winnipeg in the April 12 issue of the Globe and Mail:

> Vancouver cheered the move which prevented operation of rival railway hotels and led to the formation of a joint company to operate the palatial new Vancouver Hotel. "Public opinion always ends in backing common sense," a Vancouver lumberman assured me.
>
> Decision to complete the C.N.R. railway terminal at Montreal at a cost of $12,600,000 to the taxpayers, brings just as much protest in the West as in Ontario, only the protest is couched in more vigorous language.
>
> Any leader who can convince the West that his plan opens the door to possible freight rate reductions in the future, can count on prairie support.

### C.N. Wages Up Millions Since '34, Commons Told

Canadian National Railways in 1934 employed almost the same number of persons as in 1938, but the 1938 wage bill was $26,000,000 higher. The figures as given by Hon. C. D. Howe in the House of Commons are:

| | Employees | Pay |
|---|---|---|
| 1934 | 74,774 | $ 90,408,102 |
| 1938 | 74,953 | 116,526,106 |

### Says Trucks Not Seen

With regard to the high cost of operating trains on thin-traffic branch lines, Prof. McDougall, of Queen's, remarked to the Senate Committee that "the Railway Commission may some day realize that there are trucks and buses on the highways."

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

## Must Look Down to See New Montreal Terminal

Canadian National employees throughout the country apparently have been told that the proposed C.N.R. terminal in Montreal is necessary in order to place that railway on equal terms with the C.P.R. in getting business.

It is generally conceded that passenger terminals do not add to railway revenue.

In the Montreal case, the terminal as at present planned will not be imposing. So far as can be learned, no part of the structure will be above the street level.

Many of the most important trains now entering or leaving Montreal on either railway are pool trains, with the revenues divided on a pre-determined basis between the two railways, no matter which sells the ticket or which actually carries the passenger.

The co-operative committees of the two railways now are, moreover, studying the feasibility of a complete passenger pool.

At present, the principal non-pool trains entering and leaving Montreal are the trans-continental and other trains passing through Ottawa, and trains connecting with United States railways.

## Would Quit Talking About Great Problem

From Hansard of May 3, 1939:

Dr. Manion—. . . In my opinion, however, there is no method possible whereby the Canadian National Railway deficits can be completely eliminated, or whereby we can even approach wiping it out.

Mr. Gray—Then let us quit talking about it.

## Railway Wages Rise

Wages of United States railway employees since 1933 have risen more rapidly than the cost of living. Canadian railways pay approximately the same rate of wages.

In Great Britain, where 120 railways were grouped into four systems following the war, personnel declined from 642,254 in 1923 to 574,500 in 1937. This was accomplished without dismissals and without reduction in wages and salaries.

## Overtime for Engine Drivers

In a recent issue of Railway Facts, Prof. McDougall, of Queen's was quoted as saying that passenger engineers begin to collect overtime after being five hours on their runs. On the Montreal-Brockville run, it later was developed before the committee, the overtime would begin after about six hours and twenty minutes.

## Another Famous Saying

"There's no such thing as a railway problem." — H. B. Chase, assistant grand chief engineer of the Brotherhood of Engineers, as quoted in the Ottawa Journal of April 28.

## Branch Lines Don't Pay

According to calculations by S. W. Fairweather, of the Canadian National Railways, 4,034 miles of that system in 1937 had a surplus of $8,976,700 after taxes and fixed charges; 4,087 miles earned operating expenses but had a deficit of $7,879,200 after taxes and fixed charges, while 13,851 miles, mostly branch lines, had a net operating deficit of $17,808,300 before taxes and fixed charges, and a deficit of $36,618,500 after taxes and fixed charges. In this way, Mr. Fairweather arrived at a 1937 deficit of $35,521,000 for all lines, excluding those in the U.S. and excluding hotel and steamship operations.

## TWO MILES OUT OF EVERY THREE!

In 1937, one and a half billion dollars of the C.N.R. debt was taken out of the railway's books and made part of the national debt. Interest on that money is no longer charged to the rail system and, therefore, adds nothing to its annual deficit. None the less, apologists for the $54,314,196 deficit recorded in the C.N.R. report for 1938 argue that the system could pay its way were it not so burdened with debt—much of which, by the way, has been self-created since 1922.

However, on no less authority than that of the company's own experts, it is now revealed that in 1937 two-thirds of the C.N.R. mileage did not even earn operating expenses. In this, no question of interest on debt or capital investment is involved. The plain fact is that two miles out of every three (13,851 out of 21,972 miles) of the government-owned railways did not earn enough to pay for wages, coal, repairs, etc.

It is admitted that analyzing the detailed operation costs of a great railway is a job for experts, and C.N.R. officials would undoubtedly classify some of this money-losing mileage as good feeder line—mileage which, although unprofitable itself, contributes traffic and revenue to the more profitable lines. Yet, the ordinary citizen may well be curious as to just how much of that 13,851 miles can be justified on that score and what considerations compel the continued operation of the rest of it. He might ask how much of it is operated for political reasons, or because of political pressure exerted by the railway brotherhoods? Who would lose by abandonment of certain mileage—and how great would be the loss compared to the present cost of operation?

The Citizens' Group for Railway Action came into being because citizens in all parts of the country were becoming more and more alarmed at the continued inaction in regard to the tremendous drain on the national treasury caused by C.N.R. annual deficits. If you, too, are disturbed by the losses of this government-owned enterprise, join the Citizens' Group and thereby add to the effectiveness of the efforts being made to get something done to rationalize the railway situation.

## C.N. Service Good, But Deficit is Ghastly

In anonymous letters and otherwise the Citizens' Group for Railway Action is accused of being hostile to the Canadian National. It is undoubtedly hostile to the deficit for the reason that the deficit has become an intolerable and largely unnecessary burden on the taxpayer.

There has not been in Railway Facts or other publications of the Citizens' Group any word of criticism of Canadian National service to the public, which undoubtedly is good and has been good since the early days of Sir Henry Thornton's regime.

The real enemies of the Canadian National, and the real enemies of the principle of public ownership, are those who would take no step to reduce or eliminate that ghastly annual cash deficit.

Among the statements frequently made about the Canadian National which are not strictly accurate, is that that company is in disrepute only because of the load of interest inherited from the bankrupt lines it took over. Transport Minister Howe is authority for the statement that a billion and half dollars were taken out of the C.N.R. debt and added to the general debt of the country. Moreover, the Canadian National since 1923 has earned only about half enough to pay interest on the new debt created since 1923, although it is a fact that the Grand Trunk, the Canadian Northern and the Intercolonial were worth something when they were merged into the present Canadian National system.

## Cash Needed Regularly

Announcement is made that the Canadian National Railway system will require help from the public treasury to the extent of $62,771,000 during 1939. When it comes to such bolstering the letters C. N. R. stand for Cash Needed Regularly.—Brantford Expositor.

So far as employment is concerned, the boom year for railway workers was 1920, when 185,177 were employed. The next highest year was 1928, when 179,361 were employed. The low point was 111,789 in 1933.

CIRCULAR NO. 1268

UNITED STATES SENATE RESOLUTION
DEALING WITH POOLING OF
LESS THAN CARLOAD FREIGHT TRAFFIC

No doubt you are fully aware of the comprehensive study made about five years ago by the United States Federal Coordinator of Transportation, regarding the method of handling Less than carload freight by the railroads, and you have knowledge of the appointment of an Advisory Committee, consisting of United States Railway executives, appointed to deal with the same subject matter.

Although the United States Federal Coordinator of Transportation and the members of the Advisory Committee unanimously reached the conclusion that the railroads should, in their own interest, as well as in the Public interest, pool all less than carload traffic, because such traffic, it was alleged, was being handled in an unprofitable and wasteful manner to the railroads, and in an unsatisfactory and inefficient way in so far as the Public was concerned.

Senator Reed of Kansas, has introduced S.J. Res. 117, to provide for the pooling by the railroads of their less than carload freight traffic.

The United States Senator's resolution alleges that the railroads have not been able to agree amongst themselves on the method to be used in pooling all less than carload traffic, and it is, therefore, suggested in the resolution that Congress shall provide that on and after January 1st, 1940, it shall be unlawful for any common carrier by railroad, subject to the provisions of the Interstate Commerce Act, to handle its less than carload freight in any other manner than through a single agency created by all such carriers; subject to such regulations, rules and divisions of earnings amongst the participating carriers as shall be approved by the Commission.

It also provides that any employee displaced by the pooling of such less than carload freight traffic, shall be subject to the so-called Washington agreement, providing for employees displaced through coordination or other economy measures.

Your Committee will endeavour to follow the proceedings of this resolution and will report developments. In the meantime, we would respectfully suggest if you are interested in the matter that you should arrange to get a copy of Senator Reed's resolution which can be obtained through the United States Government Printing Office at Washington, at a nominal cost.

Respectfully submitted,

C. La Ferle,
President.

S.W. Mayhew, Chairman,
Special Railway Committee.

Mr. E. W. Nesbitt,
Woodstock, Ont.

Dear Mr. Nesbitt:

I was indeed pleased to get your letter this morning. You have the same forthright way of expressing yourself that you had when in the House.

You are absolutely right about the National Railway question, and I am not very far (if at all) out of sympathy with you in everything you say in this letter.

Will try to run in and see you next time I drive up to London. Do not very often drive now, as I find the train easier.

Kindest regards,

Yours sincerely,

AM/E.

May 11th, 1939.

The Right Honourable Senator Arthur Meighen,
The Senate,
Ottawa, Ontario.

Dear Mr. Meighen:

I read, yesterday, your report on the Railway situation. I was very pleased to see that you were taking an interest in the question, because if you turn your mind to it, shrely something will be done to rectify the present situation. It is absolutely impossible, with the country in its present condition financially, for us to pay that loss. Your answer to the various points raised was excellent.

I was extremely sorry that you or Bennett were not chosen again as leader. I am sorry, but I cannot have any use for Manion. He is a vote hunter for the mob, which will not put this country in the position it should be. That is King's trouble - too much mob rule. To carry on the Railway question as it is, and spend $12,000,000 on that hole in Montreal, is too absurd for rational men.

I would like to say that I am in accord with that Globe man, in advising the multitude to vote for the man, regardless of the party. I hope before another election, we can get the multitude to see it that way.

Personally, and strictly personally, I was very disappointed with the last Conservative meeting, which was silly ass politics with no regard to the business welfare of the country.

Hoping to see you if you are coming through any time, I am,

Yours truly,

E W Nesbitt K.

Hon. Arthur Meighen
Senate,
Ottawa, Can.

Dear Sir;-

Have seen paper reports of your endeavour to have unification of our Railways. I am sure in this section of Ontario 90 % of the people outside the Railway Employees would vote for unification or one Management and take Control out of Politics.

In this Town of a population between 8,000 and 9,000 we have three Town Railway Offices, one C.P.R. and two C.N.R. with three Express Trucks and men besides the ~~station~~ staff at the Railway Station, all drawing good salaries. One office for express and telegraph would be amply sufficient.

I have been doing business with Railways for many years, first the Northern & Midland Railway, then the Grand Trunk took this over, then when the Government took over these roads the staff at many stations was doubled and wages raised and hours of work cut down. In small stations Agents in former times were on duty ten and twelve hours aday, which were cut down to ~~twelve hours a day~~ eight hours, and if necessary to work any longer were paid double the amount or wages. The Railway is not run on business lines, no business could pay its way with the extra employees kept on, and our Country is taxed to make up the loss. Something should be done to save the great loss. We are spending large sums in making good roads and highways for trucks and busses, to kill the Railways.

I hope you can do something and wish you all Success.

Yours truly,

AM/B.

Allan McPherson.

Ray Lawson, Esq.,
Lawson & Jones Limited,
London, Ont.

Dear Mr. Lawson:

I thank you very much for your letter of 12th.

This Session has to me been a rather discouraging one at Ottawa. Senator Dandurand, whom personally I like very much, and whose handling of his work generally I admire, has allowed himself to become far too much the agent of his Party in the Senate this Session.

To take the other course has brought me into a lot of criticism, but, after giving long years of attention to Canadian Railway troubles, and after two Sessions of intensive study, I have not the least doubt the line of action recommended in the report which I prepared is correct.

I am enclosing a copy of this report in full. If it could be got into a paper at London, it would be a real service. What is needed is public support. This is coming, but could be made to come a great deal faster.

Very sincerely yours,

AM/E.

Rt.Hon:Arthur Meighen,K.C.,P.C.,
Senate Chambers
Ottawa

Dear Senator:

It was a great disappointment to many Canadians that Dandurand's report was adopted. This report certainly does not go far enough.

It is most unfortunate that politics play such an important part in the business of running our Country.

Your proposals are certainly along the right line and the members of both parties who are at present opposing it will eventually regret their present action. While co-operation appears to be the only course at present, yet eventually there will have to be unification,and the sooner it comes the better for all of us.

Liberals and Conservatives all over the country admire your stand and a great many are one hundred percent behind you. We appreciate the enormous amount of work you have done, and are doing, and if you keep it up I predict that within a couple of years you will be successful, and your name will go down in history as having accomplished something worth-while.

Sincerely yours

Ray Lawson

May 18, 1939.

Rt. Hon. Arthur Meighen,
Senate of Canada,
Ottawa, Ontario.

Dear Mr. Meighen:-

May I convey to you my grateful appreciation for the excellent service which you have rendered this country in the report you made a few days ago regarding the Canadian railway problem? It takes real courage, as well as ample knowledge and vision, to differ so radically with your associates in the Senate and to present this problem in its basic elements, with the fundamentals of a future policy which will contribute to the upbuilding, rather than the destruction, of our economic welfare. When I read the majority report, I could not but realize that those who signed it had failed egregiously in the kind of service expected of them; but when I read your minority report I could not but be thankful that we have a few men in the public life of the country who have the ability to thoroughly comprehend the facts, the courage to change their mind in the face of realities, and the will to subject political considerations to national well-being.

I have given many addresses over many years to clubs, business forums, and other organizations of business men, and I can assure you that the presentation of unified management, when made clearly and without regard to personal, political and sectional interests, invariably commands the confidence and adherence of all thoughtful men. I hope you may long continue your good work and that you will soon see its fruit.

With the sincere good wishes of your classmate of '96,

W. T. Jackman.

May 16th., 1939.

The Right Honourable Arthur Meighen,
The Senate,
OTTAWA, Ontario.

My dear Senator: RE: Automatic Train Stop.

Two gentlemen in St. Thomas have invented an automatic train stop, which they are anxious to have tested out by the Canadian National Railway System, at their London, Ontario Division.

The device is quite simple and is made of solid steel, which when the electric current is completed or broken, which ever is desired, will automatically pull the emergency brake on the locomotive and bring it to a stop automatically. This brake cannot be released until such time as the air pressure is taken off by the engineer. In order to operate the device it would be necessary for the railway track to be electrified or blocked so that the signal can be picked up by the electrical device and transmitted to the safety device on the locomotive, which as stated before works automatically. The cost of the device is very nominal and is claimed to be superior to any block system now in operation. It will not permit the train to run through an open switch.

Would it be possible to have the railway commissioners permit these gentlemen to try out this and see if it will actually do what they claim?

If you will kindly put me in touch with the proper people, it will be greatly appreciated.

Yours very truly,

C.Stirling Smith

Rt-Hon. Arthur Meighen,
The Senate,
Ottawa.

Dear Mr. Meighen:

May I add my congratulations to you in your most able plea for the unified management of the Canadian National and Canadian Pacific Railways?

The safeguards to the plan proposed by you seem to me to be ample for this time, backed by my long experience and constant study of the fundamentals of rail and water transport; it is now too late, in my opinion, to hope for any substantial improvement in the affairs of the Canadian National Railways, or to materially lessen the burden on the public, and without any public interest served that joint management would not do better and seems by far the better alternative .

It is to be sincerely hoped that your endeavor to induce the political leaders to abandon outworn platitudes and fearsome bogies of disaster by unification of management, to face reality and with ability to impose obvious safeguards, will go a long way to avert the palpable danger of disaster to business and enterprise of all kinds. Morale is fading in classes far removed from the unfortunate out-of-works', both, I am afraid from the same causes. Besides, public sentiment as reflected by the Press generally, is changing rapidly, Government propaganda is distrusted as well as political honesty in these times of stark realities.

With many thanks for your enlightened leadership,

I am,

Sincerely yours,

W. P. Hinton

Rt. Hon. Arthur Meighen,
Parliament Buildings,
Ottawa, Ontario.

Dear Mr. Meighen:

In an editorial in the Evening Telegram, today, mention is made of the report of the Senate committee on Railways, and of your own minority report.

According to that editorial, you have said some things in your report that very much needed saying. As I have felt, for some years, that our railway problem required courage, more than anything else, for its solution, I am delighted to find you tackling the matter in that spirit. I do not think that you will find, however, that the courageous solution of the railway problem is unpopular in the country as a whole. Even railway men seem sick of deficits today.

I should very much like to read these reports, however, in full, and, as I do not know just whom to apply to for them, I am asking you to have copies sent to me.

Yours very truly,

Douglas Laidlaw

" Forest City " *Division No.* # 96

*Address of Writer:*

3 Lyndhurst Place, London,

*Date*

May 16, 1939.

Senator Arthur Meighen,
The Senate,
OTTAWA, Ont.

Dear Sir:-

Recent newspaper reports indicate that the Government Leader Senator Raoul Dandurand has introduced a Bill suggesting that in the event of co-operation and co-ordination of our two great railway systems, the employees laid off through such schemes be compensated to the extent of sixty percent of their wages based on the previous years salary and on a graded bases, allowing for years of service.

Local No. 96, C.B.R.E. comprised of over two-hundred and fifty members in the City of London, and one of two-hundred and seventy locals throughout the Dominion, after serious consideration, instructed me to forward the following resolutions.

Whereas- the proposed co-operation or co-ordination of our two great Railway systems will bury the identity of the Can. National Railways which the present government stoutly maintained they would never allow.

And whereas- the proposed co-operative or co-ordinating measures will in way alleviate the present so called C.N.R. deficit which would still be a governmental debt even if the two Railway systems were amalgamated and would reduce the purchasing power, so badly needed in other trades and industries.

And whereas- the proposed compensation will in no way provide employment for those affected and among the lower paid classes of Railway Employees will not constitute as much as they would receive in relief.

And whereas- this proposed Bill aggravates the present unemployment situation particularly amongst the youth of our Country, who are placed in an almost intolerable position to-day.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES

L 19722

FORM 121—10M-20-5-38

# *Canadian Brotherhood of Railway Employees*

AFFILIATED WITH THE ALL-CANADIAN CONGRESS OF LABOUR AND THE INTERNATIONAL TRANSPORTWORKERS' FEDERATION

_____ *Division No.* _____

*Address of Writer:*

*Date*

And whereas- a scheme of this nature only fill the ranks of the unemployed and eventually saddles the taxpayers of this Dominion with a greater burden of taxiation, although the present one is almost unbearable.

And whereas- no government should through legislation assist in the detioration of this Great Dominion by creating a monopoly of Transport.

Be it therefore resolved- that Local No. 96, C.B.R.E., City of London, go on record as being unaminously and absolutely opposed to any such form of compensation for employees affected t through co-operation or co-ordination.

And that this Government instead of attempting further co-operative or co-ordinating measures, cause the C.P.-C.N. Act of 1933, to be repealed and the two Railways stand as straight competitors.

And be it further resolved that if this ~~g~~ Government see fit to entertain this Bill in the House, providing it is recommended by the Senate, that this local use every means at it's disposal to oppose the same.

And be it further resolved that in the opinion of this local, it would be to the advantage of this Dominion and to the Taxpayers to ammend the B.N.A. Act to abolish the Senate, which has spent so much of the Taxpayers money in attempting to place our Dominion in an unfavourable and untenable labor position.

Yours sincerely,

K. D. Southcott

Recording Secretary.

CANADA

May 17th, 1939

The Hon. Arthur Meighen,
The Senate,
House of Commons,
OTTAWA, Ontario.

Dear Mr. Meighen:

I notice with great interest an article in the Winnipeg Free Press relative to immediate immigration to Canada of European refugees and British, advocated by yourself and others, and it has evoked favorable comment. I congratulate you on your action in this matter. The time is undoubtedly ripe for a movment of this sort as Canada could easily absorb twice her present population, providing a fair amount of capital comes with them.

Many of our major problems would be solved if this transpired, chief of which would be the railway situation, and, with a population such as you mention, there would be very little of our primary products needed for export. Consequently, in a domestic market, much more satisfactory prices could be maintained.

The objective of Canada in or about the year 1904 was placed at 20,000,000 population by 1925, and our public services were all built up with that idea in mind. Unfortunately the Great War put a stop to immigration, but it did not stop the building up of our Public Services. Therefore, the only solution to our financial difficulties is a very much larger population, with greater development of our natural resources which would give a large amount of employment. Unless something like this developes in the near future, we will continue on the down grade, particularly in Western Canada.

L19725

I have been associated for some years with Brigadier-General Hornby, of Lethbridge, in advocati ng British Immigration to Canada. The very large foreign element, in the Province of Saskatchewan particularly, might be detrimental in the near future. The General, Mr. G.C. Neff of Grenfell, and I have done some very good work but are now at a standstill and the reaction of those who should be strongly behind such a movement has been one of indifference.

The proposition outlined by you will naturally alarm the timid ones in Canada. A large percentage of our population are of this nature and they conjure up all sorts of excuses to keep immigration out, their usual cry being that it will create unemployment. They do not get the vision of a larger population keeping industry going and eating our primary products.

Mr. W.P. Fess, whom I believe is associated with you, is an old friend of mine. He and I have discussed the matter of immigration many times but, like many others who are sympathetic to a scheme, he does not make it his business to get out and do something.

I sincerely hope that your efforts will be crowned with success and no doubt the organization to which I belong will have some little part to play in actually helping to settle the people.

Trusting you will not think me presumptuous in making these remarks, I am

yours sincerely

John R Garden

(John R. Garden)

Bon Air, Ont. May 22nd 1939

Senator A. Meighen M.P.,
Ottawa, Canada.

Dear Sir;- I dont have your address in detail, I am back in the woods. I notice your attitude on the railroads & will ask you to lend me your ears.
A partial introduction who I am. On May 22nd 1889 I was married by the late Rev. John Mutch of Chalmers Church of Toronto. Would like to & have been acquainted with you when you were there. Next Monday May 22 1939 is the Golden Wedding. Not much gold. I like Mr Mutch. I kept a grocery store & had a nice little cream colored horse & nice delivery wagon & Mr Mutch often rode round the streets & talked with me. Here is a quotation he used. "The working man is crushed almost out of human recognition"
I have lots things I would like to talk about with you, seeing you are in office, Okipe the C.P.R. off the map. Confiscate the equipment. The public have already paid for it- far more than it is worth. All human works crumble & decay & the C.P.R. is not worth anything like what it cost & build it. Those who 'invested' in bonds & stocks have invested & lost. Just as a man invests in a building & the building decays. How can any honest man tax wealth producers & pay those bond holders. Steal from the necessary successful worker & pay it to the speculator. Ridiculous.
It might be wise to wipe out 1/2 the C.N.R. Excessive transportation impoverishes Canada. You will have noticed a young farmer with his fancy horses & carriage goes to town often & neglects the farm & finally loses the farm. What right has the C.P.R. with tourist trade & put all small men out of business? Competition is the life of trade. But to give the C.P.R. 7,000,000 of the peoples money for new equipment is ridiculous. How dont give 7,000,000 to those who already have an established tourist trade. If more common sense is desired I am at your service.

Yours truly, W. A. Elder.

0.19727.

You as a preacher will know that it is perverted gov. that is the cause of present ills. "When the righteous are in authority the people rejoice but when the wicked beareth rule the people mourn"
Men could marry on $5-0 cents these times succeed if not hindered by perverted gov. every thing works automatically if not legislated against, causing periodical depressions & misery.
I cannot conceive of any such a thing as unemployment. I know and I know that I know. Should you not know & dont know that you dont know and further dont want to know like a great many that are in office, there would be little use me wasting time writing I desire very much to meet an energetic pusher of intelligence instead of having any thing to do with money grabbers. "The love of money is the root of all evil"
Would like to talk with you on wiping out the temperance movement dont suppose I spent a dollar on any sort of liquor for 15 years or even 30 years. But I recognize that "Wine was made to make men glad" While temperance people evidently aim to make men sad.
About 55 years ago I could see disaster coming. One person eating up the other must come to a climax, & I had to take all sorts of bluff from all sorts of people like Noah being so foolish as to build a ship on dryland. A looking glass could not reflect the situation any plainer.
Ottawa intelligence makes the people feed the railroads. Any intelligence would make the railroads feed the people. Now don't go with the money grabber.

I am adding a few more lines before sealing the envelop. I cannot make myself believe that a man who preached in Chalmers Church could ever have a conscience so calloused that he would not listen to the truth. But one never knows what might happen in Ottawa company. It might take an earthquake to turn Ottawa right side up. Prepare yourself for drastic action if you would have Canada a desirable place to live in. "Behold the hire of the laborer who has reaped down your fields, which is of you kept back by fraud" etc. There are Billions of money in insurance companies that should not be there, a very small percentage of the premiums paid in ever go back to the policy holders. Why not give people a chance to earn their own living? There is no sense in keeping those parasites in luxury, before getting a dollar for your own private use.

Look at the city st cars gathering up the last coppers that it is possible to get hold of. Free st cars would eliminate a lot of unnecessary labor. (I am only touching on subjects) it makes a big difference who pays the taxes for public revenue. Shifting the taxes on to the otherfellow has become consecuenc proof.

Without privilege from perverted gov. Chain Stores would crumble. Before the war they would not buy from a Canadian traveller. After war started they removed Made in Germany labels & added Made in Canada. How could Canadian factories live on that generous treatment? Why can't you take as drastic action as those people do?

Don't fine a young man for building his home calling it revenue! Take public revenue for public purposes & let the private individual use his own earnings for his own private use. Pay for what you get & get what you pay for is honest policy. Abolish indirect taxation & wholesale fraud.

Imagine dry goods stores selling cloth 85-% wool (it is woolen rags chewed up & if it was virgin wool they chew it up so it wont wear to long) & I suppose the other 15-% is to hold it together until it is sold. Free competition produces quality when not legislated out of existence & Supply & Demand regulates prices if not hindered by legalized bandits. Exercise Drastic Action.
Sometimes stovepipes are made so flimsy that they wont last 2 weeks often they fall to pieces & burn down houses & sometime the people in them. Within 2 miles of where I am now writing a child was burned & death in its crib & the parents did not even find a bone of it. The house was a total loss. It is hard to convince those who dont want to hear, but I have a better opinion of a presbyterian.
I would like to talk to 20.000 people & debate with your whole parliament staff & allowed free speech.

THE SENATE
CANADA

Office of the Hon.C.P. Beaubien,
84 Notre-Dame St. West.

Montreal, May 22, 1939.

Right Hon. Arthur Meighen, P.C.,
Leader of the Opposition,
The Senate,
Ottawa, Ont.

My dear Leader:-

Senator Dandurand suggested first and then firmly promised that the reports of the Senate Railway Committee will not be dealt with before Wednesday afternoon. As it is more convenient for me to stay here tomorrow night, I shall only arrive in Ottawa Wednesday noon when, of course, I will be prepared, if required, to proceed in submitting and supporting our own report.

You will receive this letter tomorrow morning and if anything requires my presence tomorrow evening, please advise me forthwith by phone - Lancaster 5790.

Very sincerely yours,

C. J. Beaubien

Senator, &c., Ottawa.

Dear Mr. Meighen,---

Meeting you on Yonge-st. a few days ago, on my complimenting you on your attitude on the railway situation, you kindly offered to send me some printed documents thereupon if I would write to remind you.

That is the purpose of this note, and I am sure many Canadians like yourself are concerned over the policy of mere drift which seems togovern us at present and with scant chance of a change soon. Sometimes I think you will yet be conscripted again for the Prime Ministership, notwithstanding your reluctance. With best respects,

Yours faithfully,

W. S. Dingman

The Rt. Hon. Lord Queenborough, G. B. E.,
Camfield Place,
Hatfield, Herts.,
England.

My dear Lord Queenborough:

I have been now about two weeks steadily in Ottawa and, indeed, home very little for quite a longer time. I have been thinking of writing you and should have done so, ever since the visit of Their Majesties to Ottawa.

You may rest assured that the visit of the King and Queen has been of tremendous importance to this country, and, further, the success they have made of every occasion is really remarkable. Naturally the newspapers make the most of all events, but you can take it from me that it is impossible to exaggerate the skill, dignity and graciousness with which the Royal pair have conducted themselves. For myself, I never expected such an effect could be produced as undoubtedly has been produced.

There is a lot of criticism here of the conduct of the Government and especially of Mr. MacKenzie King. He has not exercised the care always to the fore in England in using such oppertunities to ingratiate the Throne with all sections of public opinion. I am afraid it must be said that he has sought to make the whole visit a Liberal pageant, and especially a MacKenzie King pageant. This is unfortunate, but it is equally true that full recompense has been made by the extraordinarily acceptable conduct of Their Majesties themselves. That conduct indeed has been past admiration. Nothing will be said of the other feature until at least they return, and I hope, myself, very little is said then.

The Farm and Ranch Review,
Calgary, Alta.

Dear Mr. Peterson:

I appreciate very highly indeed your letter of May 23rd. Have read with care also the editorial, proof of which you were good enough to send me.

As a matter of fact, I should have written earlier to express my indebtedness to you for the very admirable presentation you made to our Committee. There was all the difference in the world between the calibre of your analysis of the situation and that of 95% of the evidence before us.

I am becoming convinced that the cause of Railway rationalization has made more progress among our people than is generally believed. About all one sees in the press now in opposition is the assumption, often boastfully proclaimed, that unified management has not popular support. I am very disappointed that the Ottawa Journal in particular should keep harping on this instead of trying to accomplish sometning by disseminating facts for the public. The Toronto Star mumbles along in the same tune.

You make a note in the margin of the editorial enquiring whether the additional annual outlay we are under for money borrowed to pay Railway deficits and assist the C. N. R. generally is included in the report. It is not, except to the extent it is covered in the paragraph you quote in your editorial. However, in my speech on Thursday I emphasized this feature quite strongly. Will see that you are sent a copy of the speech which is being printed.

May 23rd, 1939.

Rt. Hon. Arthur Meighen, P.C., K.C.,
The Senate,
Ottawa, Ontario.

My dear Senator:

I delayed writing you until I had digested your minority report on the railway problem and composed an editorial on the subject, proof of which I attach. Later on I shall refer more in detail to your report. This time I wanted to go after "political management".

Your report is splendid. It summarizes the situation completely. I am entirely at a loss to understand why General McRae should elect to dissent.

Your report appeared almost in full (over a page of it) in our local dailies and must have been widely read throughout Canada. It seems to me now that the whole subject has at last been brought out into full daylight and the effect has been electrical. The daily press even is beginning to be interested in an active way. Obviously, the daily papers have to walk circumspectly. The labour element is a large factor in circulation almost everywhere.

In political circles one hears about unification proposals being premature, ahead of public opinion etc. I do not know where that superstition arises. I am positive that, aside from the labour interest, there is no settled public opinion on this issue. The people of Canada generally simply do not understand the subject at all and would be perfectly happy to have the railway muddle solved through

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119747

unified management or in any other efficient and practical way.

I do not think that the labour element has been wisely handled by the C. P. R. (This is between ourselves.) You and I know that labour opposition to unification is stupid in the highest degree. These men should, in their own interest, be working tooth and nail for unification, on the general principle that it presents the most fertile channel of effecting, in the shortest possible time, sufficiently substantial economies to fairly solve the financial problem and, therefore, constitutes the only hope they can possibly entertain of warding off a drastic cut in wages and severe revision of the present preposterous working rules. Any fool railway employee would see that.

You may rest assured that this labour "racket", which has now been pretty largely publicized, is on its last legs and that the labour leadership fully realizes that uncomfortable fact. What is needed now is to educate the rank and file of labour to the same sensible point of view. In my judgment, the time has come for plain speaking. There has been entirely too much "pussy-footing" on this subject.

The C. P. R. should issue to each of their own employees a fairly brief, but fully explanatory, printed statement, couched in a sympathetic tone, outlining the whole situation, pointing out that the interests of the company and its employees are absolutely identical, namely, to salvage the concern which employs them. That the company's officials have explored every possible remedy for several years, but see no way out excepting unification or, failing that, a very severe cut in its pay-roll, high and low, and that the company would be reluctant to impose the full burden of rehabilitation on its wage-earners.

Such an appeal would very quickly percolate into the hands of Canadian National employees also, who are in an even more vulnerable position than those of the C. P. R. In fact, the C. P. R. statement should be skilfully written with that very object in view, but not, of course, apparent.

If labour could now be assured of a favourable deal and realizing that the "jig is up", opposition to unification would quickly evaporate. If it were made easy for them, they could probably be in-

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119748

duced to press for it. As soon as the general elections are over, the government would be more receptive and some action might then be expected.

Why Dr. Manion is playing the game of the Liberals instead of maintaining a neutral attitude, is beyond my understanding. I don't think these Ottawa people know very much about public opinion in Canada. On this subject there is no concrete public opinion at all, outside railway employees. But there is a very decided fear of permitting the railway muddle to ruin Canada. If I were a leader I should ask for no better election issue than this given a little time.

However, I have rambled along on this subject long enough. Too long you will no doubt consider. Whatever may be the outcome of this you have done a splendid job and I am proud of you and so are all your friends in the West and in the East.

With very best regards,

Yours sincerely,

Richard B. Bennett

## RAILWAY LABOUR DOMINATION

The Senate Special Committee on the railway problem has now finished its labours. The government leader, the suave politician, Senator Dandurand, submitted a wholly inoccuous and meaningless majority report, obviously chiefly designed to side-step uncomfortable political issues, which, of course, nullified almost completely the valuable investigation of the committee over two years. Fortunately, Senator Arthur Meighen came to the front with a minority report with teeth in it. But there is little hope that government—any government — will run the political risk of dealing in a business-like manner with this blot upon our public life, until the tax-payers and voters of Canada take matters into their own hands and force the issue.

### THE FAILURE OF DEMOCRACY.

The scandalous situation which has prevailed in respect to the annual losses of the Canadian National Railway over many years constitutes the clearest evidence, if any is needed, of the utter futility of democratic government as functioning in Canada. *Both the great political parties are equally guilty. Neither of them has exhibited sufficient backbone to deal constructively with this unjustifiable and murderous drain on the Canadian tax-payer.* The remedies are obvious. They are easy to understand and not difficult to apply. But both parties are more concerned with playing "safety-first," party politics than they are with fulfilling their solemn duty to protect the public interest. Our responsible "statesmen," in fact, stand revealed as small-town politicians. It is the most disgraceful spectacle in the public life of Canada since confederation.

Here is the picture as shown by Senator Meighen in his courageous minority report:

"The Canadian National constitutes for the nation its most obdurate and perilous domestic problem. The outlay of Canada to December 31, 1938, on its publicly-owned railway system, including interest, has been in excess of $3,300,000,000, of which the greater part has been brought about by recurring yearly deficits assumed and loans made by the Canadian Government to the Canadian National.

The cash deficit in 1938, substantially greater than in 1937, as shown in the Canadian National Railway's Annual Report of 1938, is $54,314,195. This deficit does not include capital losses of $2,712,877 charged against Proprietor's Equity under the Canadian National Revision Act of 1937, nor does it include interest on $672,688,000, the principal amount of such Proprietor's Equity. The aggregate contributions of the Government to the System as at March 31, 1938, written off to Consolidated Fund, has amounted to $838,000,000. (See Public Accounts, 1938, Appendix 28). In addition, the aggregate of interest to December 31, 1936, on Government loans to the System accrued and unpaid, which was transferred to the Canadian National Securities Trust, under the Act referred to, has amounted to $574,781,000.

"The above large sums already written off represent in reality assumption by the Dominion of Canada of a very considerable total of capital which went into our railways, and entail as well a substantial addition to the National Debt. No criticism of such writing off is implied in this report. The results, however, after the writing off, speak for themselves.

"It is evident that the railway problem cannot continue to drift as it has done in the past, without more hardship to the taxpayer and great and imminent danger to the credit of Canada."

### THE STRANGLING HAND OF POLITICS

The loss of $54 Mill. shown apparently does not tell the whole story. The actual loss, including all interest costs, runs well over $100 Mill. annually. And with this disastrous record behind it, a palsy-stricken government actually agreed during recent years to increase the wages of grossly over-paid railway labour, so as to add another $22 Mill. per annum to the operating cost of our financially embarrassed steam railways, most of it clearly to be contributed by the tax-payer. This was perpetrated purely and simply to influence a quarter million of railway employees and their dependents. *How long is this corrupt and servile attitude toward the railway unions, at the expense of the shippers and tax-payers, to be tolerated?*

The solution of the problem is perfectly clear. The average pay of railway labour is $1,448 per annum. A reduction of 25 per cent would save about $50 Mill. annually. This reduction must, of course, be applied intelligently. Unified management of the two great railways, with a fair division of traffic receipts, would save between $50 and $75 Mill. a year on operation. With these remedies in effect, within three to five years the railway problem would be solved and western farmers might again look forward to much needed decreases in live stock and other rates, instead of — as we now are — inevitably headed for substantial rate increases.

### THE ARBITRARY ATTITUDE OF LABOUR.

The stated attitude of railway labour to the committee was, that they will resist wage decreases. They do not want unified management or co-operation to effect economies. They do not want anything, in fact, which will deprive a single employee of his comfortable job unless he is retired on full pay. *As labour views it, the railways apparently are there simply to furnish the greatest number of fat jobs and pensions.* Efficient transportation at economic rates is merely a side-issue. Railway labour is perfectly happy to continue to exploit their near-bankrupt employers and the tax-payers of Canada. They are not in the least interested in the railway problem, in where the money is to come from to satisfy their exhorbitant demands, or in the natural anxiety of western farmers about the danger of destructive freight rate increases, plainly foreshadowed by the Minister of Railways in a recent speech. Did any country ever witness a more callous exhibition of utter selfishness?

The railway unions apparently depend on their quarter million votes to intimidate the timorous politicians. So far they have succeeded beyond all reasonable expectation. But I wonder how many votes the farmers of Canada have, and if they are now ready to use them intelligently? *During the forthcoming general election western—and eastern—farmers should pledge every last candidate of every political party to clean up our destructive railway mess.* The pressure must come from below. The party bosses are apparently completely terrorized by the labour union steam roller and its persuasive lobby.

### ARGUMENTS AGAINST UNIFICATION

Some fear unified operation of our railways on the grounds that it would establish a "monopoly." In early days the west fought persistently and justly for competition in transportation. With the advent of the Transport Commission and full public control of rates and services, however, this issue became obsolete. In fact, this Commission at once established Canadian railway services on a virtual monopoly basis. That was the intention of the law.

The assertion that competitive enterprise is desirable in order to promote efficiency in railway services is absurd. According to that theory we should also have competition in telephone and postal services and in other public utilities, when it is common knowledge that the tendency the world over is precisely to operate all public utilities as a monopoly under rigid state control, not alone in the interest of efficiency and economy, but also to avoid the burden of uneconomic services. *Public service enterprises are everywhere regarded as "natural" monopolies.*

When a democratic government undertakes, directly or indirectly, to bargain about wages with large bodies of powerfully organized employees, its final decision obviously affects its own political fortunes and, therefore, opens the door wide to political corruption. In every general election thes railway vote would naturally favour the highest bidder. We cannot afford to ignore this deadly danger to the integrity of our public life. It has been suggested, that railway unification in Canada would constitute a public menace, as so large an organization would be politically all-powerful. That, of course, is sheer nonsense.

### ABOLISH POLITICAL MANAGEMENT

Whether the railway vote is concentrated under one management, under two or under half a dozen, the railway brotherhoods will always act as a unit and labour, under the present set-up, will bestow its political rewards or punishments as one unit. The danger of labour domination obviously lies solely in the political administration of railways and unified management would for all practical purposes entirely eliminate the paralysing hand of government.

The government must be divorced entirely from the management of our railways, through unified control under a board of possibly fifteen directors, five elected by the government, five by the shareholders of the Canadian Pacfic Railway and one each nominated by some such representative and non-political bodies as the Canadian Chamber of Agriculture, the Chamber of Commerce of Canada, the Trades and Labour Council, the Canadian Manufacturers' Association and the Engineering Institute of Canada. A board so constituted would would completely protect the management of the unified railways from political pressure and would also give the tax-payers and shippers of Canada direct representation uninfluenced by politics. The Transport Commission would continue to look after the interests of the public, as it has successfully and impartially done for many years.

Dear Mr. Meighen:-

May I add my own humble word to the many expressions of approval and appreciation you must be receiving from day to day in regard to your courageous and independent stand on the question of Canada's national railway problem.

As you no doubt know, I have been for years obsessed with the difficulties of the kindred problem of real estate taxation. The more one studies it the more one feels convinced that the impossible burdens of Municipal finance thrust upon landlords are in large measure attributable to the mere weight of the Municipal share of direct unemployment relief cost. In our Property Owners' Association movement there is a strong conviction that the unemployment problem is a national problem and can only be solved by national effort. It seems to us that the national solution of the unemployment problem is being put in the background not only by the Constitutional difficulty but even more so by the necessity of finding some $50,000,000 a year to finance national railway deficits which are bound to recur because of the inefficiencies of Government management. The consequence is that many of us regard the solution of the unemployment problem as being dependent upon a solution of the national railway problem.

One of the representatives at our Ontario Property Owners' Convention in February of this year put the political side of the question very neatly when he said that the continuance of this deficit was rendered necessary from a political point of view because Governments were afraid of the influence of 125,000 railway workers. Why could they not see that there were in Canada probably a million property-owners whose interests were being sacrificed and who represented at least potentially a much more powerful factor at the polls?

May I again express to you my personal appreciation of your stand.

Yours sincerely,

HEM/W

Dear Mr. Meighen,

I cannot refrain from expressing my admiration for the courageous leadership which you have so signally displayed in dealing with the railway question in the Senate Chamber in recent days.

The railway question has probably become "public problem No. 1" and surely the only hope of its solution lies in outstandingly courageous leadership by our representatives in high places.

Yours respectfully,

Arthur Walwyn

Dear Senator Meighen:

May I congratulate you on your outstanding accomplishment in the Canadian Senate yesterday in putting through the Minority Report of the Senate Committee on Railway Unification.

It is distinctly encouraging to know that there are men in political life, even as highly placed as you, who have the courage to speak out at the proper time.

I think business men in general right across the country are all thinking the same thing,- that the drain on the resources of the Dominion, due to our railway situation, is the anchor that is dragging and holding progress back. It seems to be accepted by them in the same breath that no political party will ever deal with it for obvious reasons.

I hope the very convincing case that you made out will have the effect of spurring some political party on to action. Meanwhile, I beg to submit my congratulations along with those of hundreds of others which I am sure you will be receiving today.

Yours sincerely,

Joseph M. Pigott

Right Hon. Arthur Meighen, Esq.,
Parliament Buildings,
Ottawa, Ontario.

Sir:-

The leading editorial in the Montreal Star of May 26th was a most able statement of the true function of our Canadian Senate, and of the non-political attitude which Canadians have a right to expect from senators individually.

That non-political attitude has been strikingly demonstrated by you, Sir, in the most recent debates on the "Railway problem." The Senate's action last night was, apparently, very largely the result of your example in this respect. I know very definitely that I echo the sentiments of most people whom I know in offering you our thanks and congratulations on having forced one more forward step in the long, long trail which, we hope, will lead ultimately to the one apparent solution - unified management.

Hundreds of our taxpayers who normally vote Conservative are anxiously pondering our decision at the next election. We feel that the railway problem is the major issue. We have studied the arguments pro and con with some care, and are in entire agreement with your views. After all it is our money that is being poured "down the sink" all these years so we have a very personal interest.

At the next election we want to vote in favour of that man or party who will at least try to give effect to our views. But who is the man? and where is the party?

Unfortunately the present Conservative leader in the House of Commons has expressed himself against unified management. But Mr. Manion must know of the old proverb to the effect that "only a fool never changes his mind." He can find ample precedent for a change of attitude in the actions of Stanley Baldwin and Neville Chamberlain in recent years and recent months.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119764

If he will follow their example he will be assured of the support of many electors, like myself, who are seriously considering the possibility of finding other means of getting their views represented.

I don't know whether a "straw vote" on this question throughout the country would be practicable. If it were the results might be enlightening.

Again, may I express my personal appreciation and admiration for what you have done, and the hope that your leadership will help to produce a more constructive attitude on the part of the Party?

Yours very truly,

Observation only May 29/39

The enclosed clipping has been more or less my contention for past ten years since the event of Motor traffic x Had it been done then Canada would have saved hundreds of millions, and the lesson should now make railway-adjustment doubly keen when we see our error?

Duplicate tracks, stations, Express and Telegraph, unessary thousands of rural stations, a double set of over-head officials and work-men in all branches; City terminals and Hotels duplicated, up-town ticket offices, not necessary, as all have to come from station, unproductive high-paid officers and officials in duplicate; should be no passes?

Double unproductive Rolling Stock.
It is a crime to hoodwink the poor work-people of Canada, (and children-women and widows) taxed to pay the pairs of politicians and the thousands of the favored few, when these poor workers cannot afford to even make the added trip without feeling the punch of the cost?
The tax-payers know the budget will never be balanced with the present Railway-loss continued, which means no business confidence and a dwindling in enterprise and industry, still breeding unemployment, more taxes, and disaster.

**Good Advice To Railways**
Efficiency Magazine

Mr. Frederick Smith, head of the transport organization of Lever Brothers and Unilever, has given a word of advice to our railways.

In a speech at the Institute of Transport, Leeds, he said that the railways can save £30,000,000 a year by reorganizing goods and passenger traffic.

They can, he said, cut out small goods stations and branch lines and concentrate upon radial centres. Road motor vehicles would feed these centres.

He said that goods wagons today are loaded to only one fifth of their capacity; and that £17,000,000 can be saved on goods traffic alone.

A further £13,000,000 can be saved, he said, by dealing with passenger traffic in the same manner.

I may say that my partner of long ago — Mr. Harrington Emerson — after doing efficiency work for a year for the Santa Fe Railway, said that American railways could save £60,000,000 a year by applying the principles of efficiency to their activities.

Mr. Smith has given our railways a £30,000,000 tip. And it should be given serious consideration.

Dear Mr. Harvey:

I have your letter of 27th. Will send you copy of what I said in the debate last week.

Many years ago I would have been not at all averse to trying Government operation of both roads. Now I would be determinedly opposed. No matter what one does to sever the operation from Government interference, the whole thing is altered, and, if necessary, by Statute, just as soon as another Government comes in. King did this in 1922 and again in 1935. The consequence has been the complete bedevilment of the whole Railway business of the country. You may take it from me there is no hope whatever of Government operation in this Dominion.

Yours very truly,

AM/E. Arthur Meighen.

Dear Mr. Meighen:-

Re Railway situati on

I have for some years been suggesting that the only honest and sane solution of the Railway Problem in Canada is for the nation to take over the C.P.R., at a reasonable price and to pay for it with long term bonds, bearing a reasonable rate of interest; then for the nation to go on and operate its railways under a Commission responsible to Parliament and not to the Government.

In this connection I sent a letter to the Citizens' Group for Railway Action, in Toronto, in November last, a copy of which I enclose to you herewith. This letter pretty well sets forth what I believe to be the only honest and sane solution of the Railway Problem.

Yours sincerely,

(J.G.Harvey)

The Citizens' Group for Railway Action,
607 Temple Bldg.
Toronto, (2) Ont.

Dear Sirs:-

It is a great pleasure to me to know that some effort is being begun, even by a few of the people of Canada, to find some reasonable ending to the terrible railway situation that has burdened us for so long. Even if we are 20 years late in going after it.

I have done some urging upon the matter during the past 4 or 5 years, in opposition to the Free Press. The editor and owners of that paper, together, have for many years, in my opinion, been of the number of the greatest misleaders and misguiders of the people of Canada; and especially of Western Canada. One could almost say that we have been hag-ridden by them during the past 35 years.

Their record with regard to the railway situation is only one item of their baleful influence. They have been and are, on account of their perpetual nagging, false and insidious statements, one of the most powerful disintegrating forces in Canada-- causing suspicion and ill-will between various sections of our country etc., etc; while at the same time crying aloud for an independent nation.

But what do you stand for? What remedies do you suggest? Upon your answers to these questions depends how wholeheartedly the people of Canada will support you.

I have given the railway situation considerable thought and have had letters published in the Free Press and elsewhere and have placed my suggestions before Sir Edward Beatty; with whom I do not agree.

The following are extracts from one of my letters to the Free Press, dated May 7th. 1935:-

"Notwithstanding the Hon. Mr. Manion, and the Hon. Mr. Hanson, and The Winnipeg Free Press, I still suggest that the only honest and sane solution of the Railway problem in Canada is for the nation to take over the C.P.R., at a reasonable price, and to pay for it with long term bonds,

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

"bearing a reasonable rate of interest; and then for the nation to go on and operate its railways under a Commission responsible to Parliament and not to the government. Just how long the other means of public transportation-- boat, motor vehicle, airplane,--shall be left in the hands of private capital to compete with the peoples' railways, is a matter for further consideration.

"To continue to compel the shareholders and bondholders and employees of the C.P.R., to continue to compete against a railway that is backed by the public purse and public taxation is dishonest. For the people of Canada to continue to support two railway systems, with much duplicate mileage and duplicate staffs, far beyond what are required, and without any end of that state of affairs in view, is insane.

"As for Mr. Manion, Mr. Hanson and the Free Press, they appear to have not yet outgrown the old days of pandering to a sectional interest-- that is, to the railwaymen's votes. They fear that amalgamation will result in many of the railwaymen losing their jobs, and that the railwaymen will vote against any party that advocates amalgamation. But amalgamation, as I suggest it, will not cause a single man to lose his job. We have been carrying the burden of overstaffing for many years, without any hope of that evil being ended so long as the two systems with a double set of costs remain in operation. Surely we can continue to bear that burden for a few years longer, if that burden is accompanied, not only by the hope, but by the assurance of its being ended eventually under the amalgamated system.

"What good reason of any kind do the three parties above mentioned, offer for a continuation of the two systems? Not a man would be put off the payrolls under my idea of amalgamation. All would be retained. This would result in an overstaffing for a time only, for the numbers of the employees would soon be brought down in the usual course of events-- some would resign or quit the service for one reason or another; some would arrive at the end of their service and be superannuated; some would be discharged for cause; some would be incapacitated by accidents; and some would die. These five ordinary causes would soon overcome the evil of overstaffing that would exist at first. That, at any rate, would be one advantage to be derived from amalgamation.

"Then there is some talk of the advantages of competition. But there can be no real competition between a railway (the C.P.R.) that has cost only $55,000.00 per mile and one (the C.N.R.) that has cost $110,000.00 per mile. It is evident the railway with only $55,000.00 per mile invested in it can undersell the other railway in the matter of freight rates, passenger rates,etc. And that is just what has happened. The railway rates have been fixed by the Railway Commission at a figure,which, when business is good, will permit the C.P.R. to pay dividends to its shareholders. Whereas the same rates do not enable the C.N.R., to pay much more than operating expenses and some interest. That is why the C.N.R.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

"from the beginning has been a constant drain upon the public purse; in order to make up its losses. Some years it did not even pay operating expenses. On the other hand there can be no fair competition between a railway that is privately owned and whose financial resources are limited, and one that is owned by the State, and backed by the public purse and public taxation.

"One of the great weaknesses in our political outlook on our public affairs is "provincialism" and "sectionalism". The hope for Canada is the growth in the people of a national spirit, a national outlook that will lead us to turn into national affairs several matters that are today looked upon as provincial affairs. Our railway and airplanes are national affairs. Why should not the others means of transportation-- boats, motor buses and motor trucks-- also be placed under the control of the Federal Parliament? Why should motor buses and motor trucks, operating upon and wearing out the public highways, which the public moneys have built, be allowed the right to compete with, and eat into the business of, our national railways, free from any control by our National Parliament? If there is any money to be made by the motor buses and motor trucks competition, it ought to go into the national purse to help to diminish the loss we are suffering from the operation of our railways."

or at least be divided between the provinces and the Dominion as to highways, to the contribution which the Dominion has contributed

The following are extracts from a letter which I wrote Sir Edward Beatty (then E.W.Beatty) dated 27th. July 1934:

"An editorial appearing in the Free Press of the 25th. instant is the reason for this letter. I am enclosing you a copy of the editorial.

"This is the kind of opposition that I suggest to you exists in the country today against the C.P.R. This is the kind of stuff that goes over big with the people and on the hustings at elections.

"You are fighting a losing fight if you think that the people of Canada will ever consent to the C.P.R. taking over the C.N.R., or to the shareholders of the C.P.R. receiving more than a very small dividend upon their stock, and that not at a price they paid for it, but at what it is worth after de-valuing the railway from time to time. The suggested devaluing of the C.N.R., will be a precedent.

"I suggest again to you that the only sane and honest settlement of the railway situation between the people of Canada on the one side and the bondholders and shareholders of the C.P.R., on the other side, is for the nation to take over the C.P.R., at a fair price. If the C.P.R. waits too long, it may not get a fair price.

"Anyone can see "with half an eye" that the C.P.R., with an investment of about $54,000.00 per mile has the whip-hand of the conglomeration now called the "Canadian National Railways" with an investment of about $111,000.00 per mile. But what good is that going to do the C.P.R. in the face of popular agitation and action?

"I have suggested that any competition or rivalry between a private corporation and a publicly owned corporation, in the same field of service to the public, is insane for the owners of the private corporations; for eventually the public will drive the privately owned corporation to bankruptcy. Unfair, even

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

dishonest, advantages will be taken in order to make the publicly owned utility defeat the privately owned one. Was that not the experience of the C.P.R., from 1911 to 1930 ?

"The enclosed editorial is only a sample of the opposition that will be continually stirred up against the C.P.R. What have (a) the bondholders, or (b) the shareholders to gain by continuing to operate the C.P.R. in competition with the C.N.R., and in the face of such opposition? I believe all bondholders and shareholders should be told that notwithstanding all efforts to the contrary, the way above suggested (i.e. in the face of the opposition above suggested) is the only way in which the C.P.R., can be operated at the same time as the C.N.R. in the field of public service.

"There are two things, in addition to the financial advantage to the nation, which I think would be accomplished by the taking over of the C.P.R., by the nation. They are (1) the elimination of such editorials as the one enclosed (and all that it represents) from the number of mystifying questions that are troubling the minds of our people; and (2) the obtaining of a fair settlement for the bondholders and shareholders of the C.P.R., and so the preventing of another attack upon the probity of the Canadian people such as arose upon the taking over of the Grand Trunk.

"The railway situation will never be cleared up and the whole of the railway systems of our country will never be placed on a paying basis (that is be compelled to provide a revenue sufficient to pay their operating expenses, interest and sinking fund by higher income on the one hand and less expenditures on the other) until the whole are under public ownership and operation. It is up to the railways to do this, (to pay their interest, sinking fund and operating expenses). But the C.N.R. will never be asked to do this, or even approach this, so long as the C.P.R. remains.

"Further, the growing opposition of motor-trucks and aeroplanes as common carriers- both of which are new and popular- can never be regulated so as to give our railway systems a fair chance so long as part of those systems is privately owned. The motor-truck opposition offers a hard nut to crack. In all its aspects and uses the motor truck seems to be under the wing of the provincial governments. The question arises as to whether the whole matter of "common carriers", including all methods of transportation of goods and passengers for hire, ought not to be brought under the control of one governing body and so regulated as to prices etc., as to prevent our railways, in which there is invested nearly $4,000,000,000.00 from being seriously handicapped by this opposition. If the whole of these various methods of transportation were placed under national control, some means could be taken to protect our investments in our railways. This could be more easily accomplished if our railways were all publicly owned. The sooner this matter and some other matters which affect the people of the nation at large are nationalised, the better it will be for us as a nation and not as a number of segregated and independent provinces. Anything that tends to increase our sentiments as a nation as

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

one people from Halifax to Victoria is worthy of being advocated.

"With the whole of the railway systems owned and operated by the nation, many things would be advocated of advantage to the railways that can not be advocated today, for the simple reason that in many cases it is impossible to advocate policies that would assist the C.N.R., because they at the same time, would assist the C.P.R."

These letters contain my firm and considered opinion (at least in part) upon the whole matter.

If you are proposing some other remedy-- will you kindly let me know what it is?

I am convinced that if the railways of Canada are allowed or compelled to operate much longer as they are, the shareholders of the C.P.R., will get nothing for their shares, and even the mortgageholders and bondholders will not receive 100 cents on the dollar. While I am neither a shareholder, nor a mortgageholder nor a bondholder of the C.P.R., nor represent any such, I do not wish the debacle to be greater than can be helped. I do not want a repetition of the laments and anger of the Grand Trunk Railway shareholders-- a much smaller affair. I admit that any idea of saving anything for the bondholders, mortgageholders or shareholders of the C.P.R., is not a popular attitude or frame of mind today in Canada where the people from one end to the other are being taught by newspapers and politicians-- that it is not dishonest to refuse to pay your debts. So it may be argued: Why should the people of Canada pay for the C.P.R., anything over what it would bring at a forced or bankrupt sale?

On the other hand I maintain that the people of Canada should not be mulcted to pay any more than the physicial assets of the C.P.R., are worth in situ as they are in place on the ground-- no regard being given as to prices at which the C.P.R., stock was sold, nor as to its past business, nor its future prospects, nor as to its earnings, past, present or prospective future.

As to the payment of the price when fixed,- it would, of course, be paid by the issue and delivery to those entitled thereto, of long term bonds of the Dominion of Canada, bearing interest at 3%.

Let me advise the shareholders, bondholders or mortgageholders of the C.P.R., to sell their railway as soon as they can. Let not Sir Edward Beatty or any other officials of the C.P.R., any longer keep you blinded as to your own interests. No doubt Sir Edward is trying to make the best of things from his standpoint. But do not forget that his standpoint and the standpoint of the higher paid and even more lowly paid officials and employees of the C.P.R., as to what is best may not be the same standpoint, as that from which

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

the bondholders, mortgageholders and shareholders should view the situation. And also that what may seem the best for Sir Edward Beatty and other officials and employees of the C.P.R., may not be best for the bondholders, mortgageholders and shareholders.

I suggest that it is your duty to advise the seventy odd thousand holders of common stock in the C.P.R. and the twenty-five thousand and over holders of preference stock in the C.P.R. just what danger is threatening them. I doubt if Sir Edward or any other official of the C.P.R. has ever so advised these people or ever suggested to them the advisability of selling the Railway and getting out from under the loss they are going to suffer, as soon as possible; for the loss will only be the greater the longer things are allowed to go on with the privately owned C.P.R. competing against the publicly owned C.N.R. Yet these common and preference shareholders are the real owners of the C.P.R. and are these who will bear the brunt of any loss that shall be suffered. Has any one thought of giving them any disinterested advice in the matter?

If you "Citizens' Group for Railway Action" are out to put an end to the railway situation by having the Dominion of Canada buy the C.P.R. out, at a price such as above suggested, to be paid in the manner above suggested, then I am wholeheartedly with you, and will be glad to become an active member.

If you are not, kindly let me know what other suggestions you have as to remedying the railway situation.

If you are out to get as high a price as possible for the C.P.R. at the expense of the people of Canada, or if you are out to bring about the payment of dividends to C.P.R., shareholders, or if you are out to keep the C.P.R. operating as a railway under private ownership but with assistance from the public funds, you are doomed to failure.

The following are extracts from my letter of the 17th. of January 1938 to Sir Edward Beatty:-

"I am very much obliged to you for your letter of the 13th. instant, and for the clear statement you have given me with regard to your own ideas upon the matter of the amalgamation of our railways.

"I do not wish to worry you with a discussion item by item of the many thoughts and suggestions contained in your letters.

"I think there is one general thought underlying all your suggestions and thoughts and that is that the people of Canada if given control of the whole of the railway systems are not capable of operating them as purely business affairs of the Dominion, and upon a proper business basis and as things separate and apart from their party political strifes, prejudices and corruptions.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

"On the other hand have you ever thought that a great deal "of the success which attended the increasing pressure for political and patronage concessions which Sir Henry Thornton referred to, was the direct result of our having a great publicly owned railway running in competition with a great privately owned railway; and that there would not be so much chance of success of any such pressure if the people of Canada, from one end to the other, owned the both railways? Would the people not feel charged with the duty of operating this wonderful undertaking in a good-proper-business-like-economic manner? At any rate would there not be much less chance of pressure for sectional advantages or concessions under such circumstances? Or can not such protection be thrown around the railway management and the Board of Railway Commissioners as would enable them both to freely consider all railway affairs from the standpoints of economy and adequate reasonable service, wages, rates, etc., only.

"I believe that any person who has given any thought to the "matter has come to the conclusion that something ought to be done with the railway situation.

"That being so, I have much pleasure in agreeing with you "that "the next step would seem to be for the owners of the two railway systems to discuss the matter frankly and honourably"; and that in such discussion what is fair to the shareholders of the Canadian Pacific Railway as well as what is fair to the people of Canada, ought to be considered."

The writing off of $1,000,000,000.00 or so of the cost of the C.N.R. and transferring it to the public debt of Canada is only a step towards enablying the C.N.R. to compete with the C.P.R. in the matter of freight and passenger rates and to come forth at the end of the year and say, "Look what we have done this year. We have "earned more than our operating expenses and interest." But all the time the people of Canada will be being called upon to pay the $50,000,000.00 or so of interest on the $1,000,000,000.00 written off. The only object in all this, other than enabling the Railway to present a false balance sheet to the people each year, is that in case the earnings of the C.N.R. grew to such an extent as that there would be sufficient to more than pay the interest and running expenses, a demand would be made for lower passenger and freight rates; which being granted by the C.N.R., the C.P.R. would be forced to follow; and thus would be continued the effort to bankrupt the C.P.R.

If you are out to further some private interests of your organisers or others and not in the best interests of the people of Canada you are doomed to failure. By the best interests of the people of Canada I mean, the relieving of them from debt, costs and taxation on account of our railway and transportation facilities in general. The utilities ought to be enabled and compelled by means of legitimate charges to be self supporting and no public funds ought to be contributed to their support, and no taxation of the people on their account ought to be made or levied.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

If you are thinking of obtaining for the shareholders, either of common or preferred stock of the C.P.R., more than a moiety of what they have paid for that stock, you are doomed to disappointment; unless you can sell the assets of the C.P.R., to the people of Canada for more than they are worth, or can work some other scheme on the people of Canada.

What support do you expect to receive from the Press of our country? This Press is no longer responsible to anyone except its incorporated, money-seeking owners and editors. Formerly the Press of our country was responsible to one or other of the political parties; was the servant of those parties and advocate of their respective public policies; but that state of affairs no longer exists. The Press has become practically a body of corporation owned newspapers, the owners of which are all cut for self, with the public interest a very secondary affair. The Siftons and the Southams no doubt have great influence upon the political thought of the people of Western Canada. It is unfortunate that this state of affairs exists. Neither Premier King nor Leader Manion, nor the C.C.F. appear to be big enough to adopt a policy upon the railway situation in the interests of the people at large. This is so, mainly, I suggest, because of lack of newspaper support for any policy as yet prominently advocated. Only two policies to my mind have been strongly advocated, they are (1) the one adopted by Parliament, which was (after writing off a $1,000,000,000.00 of the C.N.R. debt) to let the railways go on as they have been doing for many years past; and (2) the somewhat vague suggestions made by Sir Edward Beatty for some kind of a unification of the railways. I am suggesting policy (3), namely, that the Dominion of Canada take over the C.P.R., and own and control and operate the whole of the railway facilities of Canada. The people of Canada themselves will finally have to decide which policy they will adopt.

Hostile Free Press

The best scheme of the Free Press

I would like to quote the following from your leaflet, "Railway Facts":-

"The only phase of the Group's activities which never will "be known except to its auditors and bookkeepers is, the identities of members who wish their identity kept secret. In the "earlier stages of the organisation, it was found that all sorts "and conditions of men were in favor of this effort, but insisted "on anonymity."

I imagine that you perceive that a very bad effect amongst the people at this anonymity is going to have. There is only one thing that would counteract it; and that would be, the policy which you would openly advocate. A policy that could be stated in perhalf a dozen sentences. For example, if you were to adopt the policy of public ownership of the whole of our railway facilities; which includes the taking over by the Dominion of Canada of the C.P.R.; your whole policy in that matter could be set forth in half a dozen sentences. At any rate nothing will counteract the anonymity of some of your members which you suggest except the absolute certainty and definiteness and entire openness of your policy.

The leaflet which I have is No. 4 dated 29th. ult., I would be very glad to receive leaflets Nos. 1, 2, and 3.

JCH)

Yours sincerely,

J. H. Harvey

Sir Edward W. Beatty, K.C.,
President,
Canadian Pacific Railway Co.,
Montreal, Que.

My dear Sir Edward:

I thank you very much indeed for your kind letter of 29th May. The truth is I am sorry you read the speech. I delivered it very rapidly and the Hansard report was bad--at least, I do not believe that I made the mistakes in construction which there appear. The revised report will be much better.

The Toronto Star and Ottawa Journal have come out with antagonistic editorials. Both take the line that the public is against unification, and, therefore, we should forget about it. Serious thinking seems to be going out of fashion.

Kindest regards,

Yours sincerely,

AM/E.

Rt. Hon. Arthur Meighen, P.C.,
c/o The Senate,
Ottawa, Ont.

My dear Arthur,-

I spent part of yesterday in reading the Hansard report of the debate in the Senate on the railway reference.

Needless to say, I was greatly impressed with your extraordinarily able and penetrating analysis of the situation. I do not think I have ever read a clearer presentation of this problem than you made in your address in support of the alternative report.

I presume it is all very simple to you with your knowledge of the men involved, but, for the life of me, I cannot follow either Dandurand or Manion. While their motives may be quite clear, neither of them - particularly the Senator - would, I think, take the extreme position they have taken unless there were some influence which was directing their approach to the problem and doing it very effectively. In Dandurand's case, of course, the hand of Fairweather is found in every one of his utterances, and he now has the doubtful honour of dividing with Fairweather most of the inaccurate statements interjected into the record.

The important considerations arising out of the debate are, of course, first: that you succeeded in obtaining the support of your report; and, secondly, that the public now know that the problem is not either

MONTREAL

settled or is it to be forgotten. This must be a great disappointment to the Government who seem to feel that this is one question which should not be discussed.

It must not be forgotten, however, that the definition of the Prime Minister of the position of his party is not really embarrassing in the event he wishes to take another course. His words were: "The Government is committed to the preservation of the identity and integrity of the Canadian National Railways as a government-owned, government-controlled railway". There is in actual fact nothing in this definition which he cannot reconcile with unified management because, physically, the property will always be the Canadian National Railways'; it will always be owned by the Government; its integrity will be improved; and the Prime Minister is not committed to any particular form of control: in other words, that the establishment of a tribunal controlling the operations of both Companies under unification would be in substantial compliance with his pledge. I am afraid the genial Doctor has edged himself out on a limb, and I do not see how he can get back to a safe place. It is a pity, because, like many others, I have always felt that some day we could look to the Conservative Party to supply the courage and constructive action which would go a long way towards ending the tragic comedy of our railway situation.

I congratulate you most warmly on having performed a conspicuous

# CITIZENS' GROUP FOR RAILWAY ACTION

611 Temple Building,
TORONTO 2, ONTARIO

May 29, 1939.

Rt. Hon. Arthur Meighen,
Senate of Canada,
Ottawa, Canada.

Dear Senator Meighen:

Allow me to congratulate you on the very able manner in which you presented the minority report of the Special Committee of the Senate to the members of the Upper House last Friday.

We regard the said report in favour of unified management of the Canadian National Railways and the Canadian Pacific Railway, in conjunction with the arguments advanced in its support by yourself and other members of the Senate as being a very valuable contribution to an intelligent understanding of the Railway Problem of this country.

As you are aware, our Group is not at this time committed to any particular plan for solution of the Railway Problem, but we welcome every constructive proposal to this end.

Our job at the moment is primarily to help enlighten the public regarding the railway situation. In pursuance of this objective we would like to have extra copies of your address to the members of the Senate in support of unified management. If you should decide to have extra copies printed we could make very good use of about 700 copies which we would mail to all of our members. We have about 650 paid members resident in all the provinces of Canada at present.

In conclusion I might add that I have today read your speech in its entirety, as reported by Hansard, and although I cannot as an officer of the Citizens' Group advocate either continued co-called "co-operation" or unified management I am very much impressed by the sound arguments and facts which you have advanced and presented. I intend to recommend to the quarterly meeting of our Board of Directors being held on June 6th next that we submit the

CANADA

119791

proposals for continued co-operation, and those for unified management to a vote of our members in view of the stand taken by the Senate of Canada on the 26th instant. I believe without being too specific as to details under which unified management might be put into effect, that if the majority of our members are in favour of the general plan as outlined by yourself, we would be justified in taking a stand as an organization in support of the general principles of unification.

Yours very truly,

Senator Arthur Meighen

Dear Sir: This is not the first time I have had the presumption to write you altho the last time was several years ago. but I feel I must congratulate you on your stand on the R.R. probablem.

It is hard for we laymen to understand why the Government - and one party is as bad as the other should be afraid to take whatever extreme measures may be necessary to at least improve the situation

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

for I have no hope that it can ever be entirely overcome.
As proof of the soundness of your stand I might say that at a committee meeting in March 1933, Hugh Guthrie who was then Minister of Railways was telling us of the enormous R.R. deficit there was going to be that year & I said. Don't you think the best thing you could do would be to turn it over to the C.P.R. & let them operate it under certain restrictions? To which he replied. most certainly I do, then I said. Why in the world don't you do it.? And he replied, because no party dare go to the country with a policy of that kind, they would be snowed under. Angus Dumbar a young lawyer spoke up & said I think you are absolutely rong Hugh that might have been the case a few years ago but people are becoming aware of the fact that if this R.R. probablem is not solved it is going to ruin the country & Hugh replied most fervently I wish to heaven I could believe it we would do it to-morrow. That is 6 years ago & things have certainly not improved any, so if we are becoming very skeptical of both the business ability & sincerity of the men who form our Government

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

you can scarcely blame us..
I don.t know wheather Dr Manion is possessed of any ability or not, certainly some of his remarks since he became leader would sound as tho he lacked plain common sense.
I don~~o~~t Know why with so many men of outstanding ability our country should be ~~c~~ursed with two such dumbells as our ~~P~~remier & Dr. Manion.
We should be able to look to our leaders for leadership instead of which as a friend John Armstrong - one of the leading business men in Guelph - said the other day in discussing the unemployment probablem, public opinion is years ahead of the Government.
Could anything be more absurd than thousands of people being unemployed

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

in a country with unlimited
quantities of raw material while
other thousands are doing without
the common decencies of life.
I am quite convinced that if you would
call a meeting of a dozen of the best
business men you know including
Dr Bruce, Hon Edward Beaty, Geo Drew.
Geo McCullagh & yourself you could
sit down & in a few hours do more
to work out a plan to solve our proba-
blems than all the legislation that
has been passed so far.
If instead of trying to curtail production
& ficticously raise the price of what is
produced by minimum wage laws &
bonus-es they would realize that the only
way to increase the wealth of & lessen the
debt of the country is by producing more
of the things we have to sell at a cost that
would enable us to sell them at a price
people could afford to buy them, in

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES

other words try to harmonize industry to a place where the farmers days work would buy the fruit or result of the other fellows days work, if the farmer has the money he is the best buyer there is because of the quantity & variety of his needs but so long as he has got to work 2 to 4 days to pay for one days work of the man who produces the things he needs he has got to do without them so you have the vicious circle of unemployment & want in the midst of plenty.

Another man whom you should add to your group is a Dr C.C. Grant of 215 College St. Toronto who had one of the sanest letters in the Globe & Mail a few days ago that has appeared for some time. I quite realize you must be a very busy man so don't expect you to take time to answer this complaint for I know that is what it is but I will feel better for having got it off my chest.

Yours truly

R. J. McWilliams

May 30th, 1939

Rt. Hon. Arthur Meighen,
Parliament Buildings,
Ottawa, Ontario.

Dear Mr. Meighen:

Thank you very much for your letter of the 20th, and the copy of the day's proceedings of the Railway committee, in the course of which your report was presented. It amply deserved the endorsation it reeived from the Senate.

About once a session, if not oftener, it seems to me, the Senate amply justifies its existence by taking up a stand for the good of the country rather than for party advantage, a thing that an elected house cannot be expected to do very often, if at all. I am glad to see the Senate doing so on the railway question, and I hope that you can keep them at it until the government is forced to take some action.

I am afraid, however, that the government never could, even if it wished, get out of the railway business. To my way of thinking, it does not matter whether the C.P.R. or the C.N.R. absorb its rival, for, either way, the government will eventually own them both. I am afraid that is inescapable, much as I deplore it. Arguments over the nature and title of the amalgamation that must take place leave me rather cold. We might as well argue over what colour we should paint the stations.

To my mind, the only active railway executive that has shown any grasp of the problem is Sir Edward Beatty, and I hope he will have the satisfaction of seeing his public spirit vindicated. People are still too ready to mistake it for Machiavellan cunning.

Senator Dandurand's, and Mr. Hungerford's, quibbling over the amount of the estimated savings under amalgamation heartily disgust me. Is it not obvious, and sufficient, that there

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

will assuredly be savings from amalgamation? They talk largely of the neccessity of providing services for the good of the country, but what good it does the country to maintain branch lines to carry traffic that wont even pay for out-of-pocket expenses, I can't see. Again, what good purpose is served by duplicate lines and terminals all over the country? I am afraid their language is but a cloak for their thoughts or the lack of any serious thought.

Last December, andarticle appeared in 'Civil Engineering', published by the American Society of Civil Engineers, that interested me enough to get several re-prints for sending around to people I thought it would interest. I enclose one to you now. As the author points out, railways are a declining industry, and that quite apart from the effects of motor traffic, due to their own mistaken policies. Why, then, should we quarrel with wholesale abandonment of trackage? Is it not better to tear down the unused barns before they catch fire and burn down the house?

Please excuse my outbursts. I know you do not need them, and I know your opponents would not heed them, but I feel so strongly on the subject I must explode to someone, and, perhaps, exploding to you may help you in your campaign.

I should like to study the work of the Senate's railway committee further. Would it be possible for me to obtain a complete copy of its proceedings? I would even wade through another dozen of Mr. Hungerford's turgid letters to get at the bottom of the matter, and advance the cause of commonsense in railway management.

Thanking you again for your kindness, I am,

Yours very truly,

Douglas Macmillan

Hon. D. Meighen,

Sénateur

à Ottawa

Mon cher M.

Je viens de lire un résumé de votre discours au Sénat, contre l'amplication des chemins de fer et l'appareil en tous points ce que vous dites. Si le Gouvernement et l'opinion contraire, a tort - J'ai jamais déjà dit et répété à plusieurs là où je crois que réside la plus grande partie du mal je crois fait trop vite trop de beaux chemins pour les camions -

2e Les provinces devraient mettre des licences tellement fortes, pour aller bien que ça ne paierait pas de les prendre; tout à fait prohibitives -

3e Les employés des Chemins de fer sont trop chers - Il y a déjà un seul employé même le général Manager pour qui devrait toucher plus 5,000.00 par année et tous devraient être réduits jusque au bas de l'échelle, même les cantonniers qui sont payés 1.70 par journée de 8 heures, tandis que les journaliers

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

Que travaillent à ici leurs 10 heures
n'ont que 1.25 à 1,50 par jour-
Le déficit provient des causes que je
viens de citer ci-haut-
4e De plus on devrait fermer les hôtels
qui ont des déficits -

Imaginez un simple quintuplement
de dimension qui a fait payer en 1890
$100.00 par mois et qui en reçoit
4 à 5 mille d'aujourd'hui, par année
à peu près le même coût pour la
vie; c'est monstrueux. Et la même
extravagance du haut en bas de
l'échelle. Toutes salaires et horbi-
tants pour encourager tout le monde et
surtout les simples journaliers
et causent un malaise extraordi-
naire dans le pays. —

Je vous rappelle que je vous
ai écrit contre le vote des femmes
et contre la mise en force de la loi
en 1917 et 18, pour ramener les cons-
crits et épargner raison - C'était
autant de dépenses inutiles, tout com-
me celles des armements actuels.

Croyez-moi
Votre tout dévoué H. Bourassa

Dear Senator:

As one who is not keenly interested in politics in so far as to whether a Conservative or Liberal Party is in power, I wish to take this opportunity of heartily congratulating you on your attitude and address regarding the Canadian National Railway, and I feel certain that the thinking people in Canada are entirely with you judging by the remarks I have heard from different quarters.

It is just pathetic that the Canadian National Railway question has for so many years been a political football, and in spite of the fact that the House of Commons apparently does not intend to take any action on your report, I think you have taken a very Statesmanlike stand.

Notwithstanding the laissez faire attitude of the Commons, I think you would be doing the Country an outstanding service by speaking, on every occasion that presents itself, on the Canadian National Railway problem, as in this manner public opinion will be focused on the question, and eventually place the matter beyond the question of mere votes. It seems to me that it is only by continuous reference to this problem by a political figure, such as yourself, that we will get any action in the way of unification.

Yours truly,

Ed. Brownell

MEMORANDUM

119827

Over one-half the Canadian national debt is due to the C. N. R. Many people believe we have not received value for this expenditure and are not at present receiving value for the half million dollars per week, or more that is being lost by the National railways. We are at war and the C. N. loss is equal to the cost of five bombers per week. It is the purpose of this memo to suggest a means by which C. N. losses can be forthwith eliminated by the simple expedient of reporting clearly where the losses occur.

Let the railway no longer receive advances from the Federal Treasury and in future, out of operating income, service such portion of its debt as may be determined to represent a fair value of its equipment. The balance of its debt must be written off to folly and charged to the National Treasury.

Without some means of recompense for operating lines maintained to develop the country rather than for immediate profit the C. N. would be required to cease its 'development' lines, perhaps to Canada's detriment. In order that no such damage be done to the progress of the Dominion 'development' lines would receive assistance from the Federal Treasury by way of specific subventions. These grants would be published annually together with reports as to the benefits obtained therefrom.

Subventions and their amounts would be determined by a board which would enquire into costs and consider the benefits of the line and the extent of service desirable. All subventions would naturally be reviewed annually.

It is readily admitted that such a practice would not by itself either reduce costs or increase revenues, but certainly the first step to correction is to know the facts and what is here suggested would clearly show every taxpayer where the country is dissipating the equivalent of five bombers per week.

This claim is, I think, too modest and would probably be far exceeded, for, if each portion of the C. N. loss was required to be justified by an equivalent benefit, no doubt a large part would be unjustifiable and immediately eliminated.

Right Hon. Wm. L. Mackenzie King, C.M.G., P.C., L.L.D.,
Premier and President of the Privy Council,
Parliament Buildings,
O T T A W A.

Dear Mr. Premier:

We are enclosing, herewith, two copies of our Memorandum of Proposed Legislation, a copy of which is going to each of your colleagues in the Cabinet and to the Leaders of Opposition groups in the Commons and in the Senate.

Because of the heavy responsibilities devolving upon yourself and colleagues during the critical period through which we are passing, we have refrained from making any specific request for a conference to discuss the items submitted. However, as intimated in our Memorandum, if in the Government's consideration of these items it is desired to confer with members of our Committee, we shall be glad to accommodate the convenience of yourself or colleagues on receipt of due notice.

Respectfully yours,

WM. L. BEST,

Secretary,
Dominion Joint Legislative Committee.

MEMORANDUM OF PROPOSED LEGISLATION SUBMITTED ON BEHALF OF THE DOMINION JOINT LEGISLATIVE COMMITTEE OF THE RAILWAY TRANSPORTATION BROTHERHOODS.

Ottawa, Ontario, February 25th, 1941.

To the Right Honourable the Premier
and Members of the Cabinet.

Honourable Sirs:

It has been our custom for many years to prepare and submit for discussion and consideration a Memorandum of Proposed Legislation prior to the opening of each Session of Parliament. While representing a large body of workers engaged in railway transportation we have endeavoured to bring to the Government their views as railway employees and as citizens.

In our present Empire crisis we fully appreciate the heavy responsibilities attending the various matters engaging the attention of yourself and colleagues at this time. For this reason, we refrain from requesting a conference and submitting a Memorandum appropriate to peace time conditions. However, there are one or two important items which concern those we represent and involve the collective and individual responsibility of all in our war effort and the period of re-adjustment which must follow the conclusion of hostilities.

1. PENSIONS FOR HARBOUR BOARD EMPLOYEES.

For sometime prior to the present war period, we have been pressing for the establishment of a Pension Plan to cover employees under the jurisdiction of the National Harbours Board. Repeated discussions have been had with the Minister and with the Board. Intimation was given that a plan was being worked upon. From all discussions we have been promised that favourable consideration had been given and definite progress would be made. Despite the time which has elapsed since our first approach on the subject, no pension plan has been made effective and our men are reaching an age where the quota retired annually without any pension is reaching serious proportions. Obviously, the employees are anxiously waiting an early announcement of a retirement plan being made effective.

2. NATIONAL TRANSPORTATION POLICY.

As intimated in our Memorandum presented under date of May 27th, 1940, former submissions have dealt exhaustively with important phases of Canada's transportation problem. These have emphasized the disastrous effects which unregulated highway competition has had on the steam railways. Obviously we are confronted with constitutional difficulties when proposals are made to place all forms of transportation under a central govern -

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 188)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119831

ment authority for equitable regulation and effective control. Pending the necessary amendments to the British North America Act, attention is directed to the suggestion contained in the Report of the Royal Commission on Dominion-Provincial Relations, reading as follows:

> "The Commission has come to consider the transportation problem of Canada one of the problems which cannot be solved without close collaboration between the Dominion and the provinces. It realizes, however, that its own technical competence is slight in this field and has, therefore, confined itself to discussing the issues which will have to be faced, in the hope of doing something to clarify the problem of jurisdiction. It points out, however, the great advantage which might be derived from a Transport Planning Commission which would be concerned both with planning transportation developments in a broad way, and with facilitating the co-operation between the Dominion and the provinces in transportation matters which is necessary for the taxpayer."

3. SIROIS REPORT.

We deplore the circumstances which made it impossible to give due consideration to the several recommendations of the Report of the Royal Commission on Dominion-Provincial Relations, at the recent Conference which convened in Ottawa January last for that purpose. The Commission observes that the decisions underlying the recommendations were reached before the outbreak of War; but it also points out that the basic recommendations concerning the re-allocation of the functions of government and the financial relations of the Dominion and the provinces were framed with the possibility of emergencies in mind and are sufficiently flexible to be adjusted to any situation which the War may produce. It is our sincere hope that the necessary co-operation may yet be secured to make possible the implementing of those important recommendations, the need for which, the Commission states "is far greater and far more urgent in time of war and of post-War reorganization than it is in time of peace."

4. ST. LAWRENCE DEEP WATERWAY.

The proposed deepening of the St. Lawrence Waterways has been the subject of repeated and consistent representations by our group in opposition to the project. Present or anticipated transportation requirements do not, by any stretch of imagination, warrant the expenditures which would be involved, especially at this time. With respect to power required for our war effort, as intimated by some exponents, we believe there is sufficient

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

0.19832

power available within the borders of Canada to supply our maximum production demands. Therefore, we desire to again register our strenuous opposition to the expenditure of public money for such an unnecessary project.

5. INCREASED APPROPRIATION TO RAILWAY GRADE CROSSING FUND

With a view to the conservation of human life and property, it is again respectfully urged that the annual appropriation to the Railway Grade Crossing Fund be increased to at least five hundred thousand dollars and that Section 262 of The Railway Act be amended accordingly, at the present Session of Parliament.

To the foregoing items we respectfully urge the favourable consideration their importance warrants, consistent with other demands upon your time. If, in the consideration of these items, it is desired to confer with members of our Committee, we shall be glad to accommodate the convenience of yourself or colleagues on receipt of due notice. For many years our Brotherhoods have been ready and have shown our willingness to co-operate with the Government of the day in dealing with national problems. At this critical time, we are even more anxious to assure you of our desire to continue that co-operation on any matters concerning which we may be of service.

Respectfully submitted,

J. B. WARD,
Assistant Grand Chief, and
Dominion Legislative Representative,
Brotherhood of Locomotive Engineers.

WM. L. BEST,
Vice-President and

June 9, 1941.

Hon. J. L. Ilsley,
Minister of Finance,
OTTAWA, Ontario.

Dear Sir:

Re: Free Passes

In reading Hansard dated May 20, 1941, I find on page 3233 where you make the following statement;

" It is part of their remuneration or wages. I consider that if we were to begin collecting transportation taxes from these employees of the railway companies, many of whom have to use the railways to go from one place to another, in the discharge of their duties on the railways, we would be following an improper procedure. "

In view of such please advise if it is your intention to collect the National Defense Tax on all those, except using work passes, receiving passes in lieu of remuneration or wages.

Yours truly,

JFM/GW

J.F.MacMillan.

119837

Honourable Members of the Committee:

The terms of the resolution of the Senate appointing you show that you are "To Enquire into and Report Upon the Best Means of Relieving the Country From Its Extremely Serious Railway Condition and Financial Burden Consequent thereto".

Since I last appeared before your Committee you have heard a great deal of evidence from the officers of the Canadian Pacific and Canadian National Railways. As our Vice-President has told you, our officers have given their reasons for certain estimates which they have prepared. The corresponding officers of the publicly-owned railway have offered certain criticisms of our figures.

You will have noted a pronounced difference in point of view. With few exceptions the officers of the Canadian National Railways have followed their Chairman and President in bringing into the discussion their view of what they call the "public interest". They admit that savings could be obtained by unifying the managements of the railway systems, but they assert that anything accomplished in this direction would be more than offset by the disturbance to public and private interests which would result.

I believe that it is fair to say that the officers of the Canadian National assume that the people of Canada desire to pay a large amount of money each year for the

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119838

privilege of owning and operating a railway system, and do not wish the results of this railway to be subject to measurement by the ordinary yardstick of commercial administration.

In my judgment these are unwarranted assumptions, but they may explain the difference in attitude of the two groups of officers, and I suggest that, in appraising their evidence, this distinction should be kept in mind.

In the early part of your Proceedings it is shown that you proposed to ascertain why co-operation, as defined in the Canadian National - Canadian Pacific Act of 1933, has not produced more immediate and important savings, and then to study the unification of railway management, and an estimate of the savings which were possible under it.

In addition, it has been suggested by the officers of the Canadian National that consideration should be given to some new form of coercion to be exercised to force co-operation.

The evidence has shown that the Canadian Pacific has always co-operated willingly. Furthermore, it is obvious that it was in its own interest to do so.

The facts are simply that co-operation can only produce very limited savings while competition is maintained. Important measures of joint economy will never be effected in Canada until some arrangement is made by which their results are shared automatically by the two railways. That, I think you will realize fully.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119839

I most strongly dissent from any suggestion that the policy of the Canadian Pacific is less considerate of public opinion than is that of its competitor. This is disproved by its record of efficient service of high quality. If there were any truth in such a suggestion, however, it would support the view that my Company would have less to fear from any unpopularity of co-operative measures than would the Government railway.

When you turned to discuss unification, I note that your Proceedings show various references to the "case" of the Canadian Pacific Railway. This reveals a misconception. The officers of this Company have had no case to make. They have merely given evidence as to methods which might be adopted, in their opinion, to reduce the waste of money on railway transportation. Our Vice-President has summarized their evidence on this point, and dealt with the criticisms of it made by officers of the Canadian National. No evidence has so far been presented which would cause me to alter my opinion that our original estimate of savings in the order of $75,000,000 per annum in normal times is realizable. Mr. Coleman has dealt with the question of the scale on which savings might be expected in the present depressed conditions of business.

In answer to enquiries from your Committee, some of the officers of the Canadian National have suggested that the savings so far agreed upon under co-operation, of approximately $1,700,000 per annum, might be increased to

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119840

$10,000,000 per annum, provided that some Board is set up which will relieve the railways of the odium of initiating economies. Since the Canadian Pacific has suggested that economies may be made of a much larger sum per annum, it must be clear that it does not fear this odium. The officers of the Canadian National may, but, since any form of co-operation, compulsory or otherwise, can only obtain its initiative from a suggestion from some quarter, it must be evident that to add a representative of the Government to the Co-operative Committees of the two railways is merely to suggest that the state must take over the burden of odium from the Canadian National Railways. After all, is this not merely to say that this department of Government is to be relieved from the duty of economizing?

My objections to this new plan of coercion are two-fold. In the first place, I cannot see that it would overcome the objections offered to unification. The only real reasons against the adoption of unified management so far offered to my knowledge are that the savings under it would not be as important as I believe them to be, and that the adoption of the measures of economy which would result would be offensive to public opinion. It is admitted that all the savings possible under unification cannot be made under co-operation. In many cases competitive conditions will prevent the removal of duplicate services under co-operation which could be eliminated, without inconvenience to the public, under joint management. Further, co-operation - compulsory or otherwise - cannot remove unnecessary duplication of head offices and supervisory

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119841

and soliciting staffs. Certainly, co-operation as far as it eliminated duplication of service and created economies by dispensing with unnecessary employment, would meet the same opposition that is shown to unification.

Beside these objections, I see a very distinct injustice to the Canadian Pacific in such a proposal. It is a revision of one made by the late Sir Henry Thornton before the Royal Commission, when he suggested a new type of Board to administer the Canadian National, and have supreme control of the operations of both companies. The same theory of power to control our operations without financial responsibility is behind the present suggestion.

It should only be necessary for me to call your attention to Clause 7 of the Canadian Pacific Charter, which provides that "the Canadian Pacific Railway shall become and be thereafter the absolute property of the Company, and the Company shall thereafter and forever efficiently maintain, work and run, the Canadian Pacific Railway". That imposes on us obligations in return for which we hold certain rights.

In the plan submitted to you it is proposed to substitute for this arrangement the creation of a tribunal, on which the Company would have only a minority representation, with power to deal at discretion with the Company's property and its services, without regard to the statutory responsibility of its directors, and with no responsibility to anyone should damage result to the Company's interests. This principle I cannot accept.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119842

The idle objection to my contention is interposed that subjection of every railway to the power of the state is admitted. That the state has the right to hold the balance as between railways and the public, no one will deny. That this theory can be converted into one under which the state might have the power to sacrifice the interests of a private corporation for the purpose of easing the burdens of the state in connection with its operation of a publicly-owned railway is an extension of the principle of state control which I cannot believe would commend itself to the people of this country.

Co-operation, as provided for in the Canadian National - Canadian Pacific Act, was adopted after estimates of large savings under it had been offered by the Canadian National Railways. It was argued - and without qualifications - that $35,000,000 or $24,000,000 per annum could be saved. At that time I ventured to suggest that the savings would be very much smaller. I am convinced that the present attempt to focus your attention on the possibility of attaining even the small figure of savings now estimated to be practicable under coercion is merely another effort to withdraw your attention from the far greater savings which can be made by unified management.

The ingenious suggestion is offered that perhaps, if your Committee will express a firm opinion against unification, this would permit greater progress with co-operation. I have already pointed out that there has been no delay or lack of interest in connection with co-operation, on the part of the Canadian Pacific Railway. We believe in savings by co-operation, and only object

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

to the present system because it is inadequate. Therefore, no statement that the complete co-operation known as unification is not to be tried would cause us to alter our attitude in respect of the importance of making any possible savings by incomplete co-operation. I do not see why fear of unification should limit the efforts of co-operation of the officers of the Canadian National - unless it is meant that, fearing that success in obtaining savings by co-operation may prove the advantages of unification, they have deliberately limited their efforts.

These remarks sum up all that I have to offer you at this moment concerning the respective merits of co-operation, unification, and coercion. With your permission I should like now to answer certain questions put to me by Senator Dandurand, in a statement read to this Committee at the close of your sitting of June 2nd, and printed on Page 1003 of the Proceedings.

Senator Dandurand stated that his enquiries were the result of his understanding that the Canadian Pacific had submitted to the Royal Commission suggestions with respect to the division of net income under unification, and urged that this information should also be given to your Committee.

The document in question is incorrectly described. It contained, in the form requested by the Royal Commission, studies of how the public revenues would benefit from various possible divisions of the net income of the unified railways. It contained no offer of terms, but - as with our estimate of savings - was merely an illustration of possible benefits. The document handed to the Royal Commission was prepared and transmitted in confidence. I believe that

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

 L.119844

such confidence should be respected.

I can deal quite readily with the specific questions asked by Senator Dandurand. The first concerns the assets which the Canadian Pacific is prepared to put into the unified railway system. As I have pointed out, my suggestion does not involve any transfer of assets. It merely covers the entrusting by each of the railway companies, to a joint management, of certain railway properties, and I assume that Senator Dandurand wishes to know what assets of the Canadian Pacific would contribute to joint earnings under unified management.

I should recommend to our Directors and shareholders that these include our rail lines in Canada, in Maine, and in Vermont; our lake, river and coast steamships, and our telegraph, express and hotel systems.

If the Government desired, after considering all the extremely important questions of national marine policy involved, to include ocean steamships, arrangements could probably be made. Clearly, the Company's right to a share in the net earnings of the unified system would be affected by the amount of the earnings from such assets included in the agreement for joint management.

Obviously, the entrusting to joint management of most of our non-railway assets would not increase the earnings from them, and therefore they should not be included.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

C 119845

The second question deals with the share of the net earnings of the unified system which the Company would expect, the period of experience to be used, the ranking of payments, and the other factors in a formula of division. The number of possible arrangements is almost unlimited. I can only suggest that a general description of the proposal is that the share of net earnings to be received by each of the participants in the plan of unification would be defined in an agreement to be made by authorized representatives of the Government and the Company - subject to ratification by Parliament, and by the shareholders of the Canadian Pacific.

Senator Dandurand's third question seeks information as to what assets the Canadian Pacific would pledge as security for a guarantee by the Government of any old or new capital obligations. In the unlooked-for event of a request for such a guarantee, the security would be whatever was agreed upon by the Government of the day and the Company.

It may be interesting for you to know that the equity of the ordinary and preferred shareholders of the Canadian Pacific Railway as at December 31st, 1937 amounted to over $753,000,000 as against an aggregate par value of their holdings of approximately $472,000,000. The equity represents the difference between the total assets of $1,382,062,058.01 and the amount of capital liabilities, current liabilities, deferred liabilities and reserves, aggregating $628,873,682.02.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119846

Senator Dandurand is evidently under a misapprehension when he says that I ask this Committee to endorse a plan in principle, leaving the details for the formal contract. I have made no request of any kind to this Committee. I have given evidence, at the call of this Committee, concerning a certain suggestion of my own to assist in relieving the country from its extremely serious railway condition and financial burden consequent thereto - which your Committee was appointed to consider. No action to implement that suggestion can be taken at this stage other than for the Government to accept the offer to discuss the problems, and endeavour to negotiate an agreement.

Incidentally, it is not an offer to establish unification on certain precise and detailed terms, but a suggestion to the owners of the National Railways to consider the formulation of a plan. The Government of Canada must be satisfied with the terms, which can only be reached by negotiation. Equally, they must be approved by the shareholders of the Canadian Pacific, and, probably, by its security-holders as well. They are informed that the Directors of the Company and myself are willing to discuss terms with the Government, but I am no more able to bind them to a detailed agreement than are the members of this Committee to contract on behalf of the Government - which is precisely why I cannot commit myself at this time to the discussion of details of a possible arrangement.

It has been admitted that the present railway situation produces losses to the public treasury which are of an alarming nature.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

D.19847

You are now informed that little or nothing can be done about the situation, and that railways in the wrong place and duplicate railways must always remain in existence and must always be paid for from the taxes because, for some extraordinary reason, it is in the national interest. I cannot accept this attitude of defeatism as the proper solution of an admittedly grave national problem.

When, in the face of these facts, I suggest that we try to make savings by combining the operations of the Canadian National with those of the Canadian Pacific, I am met with the statement that this would be destructive to the public interest. All that I can say on that point is, if the argument be a sound one, then it must have been very wrong for the officers of the Canadian National to undertake the economies which they are inclined to boast they have made since 1930. In 1937, the expenses of that system were $47,000,000 less than those for the year 1930. How can this be in the public interest if it be now wrong to proceed to save $75,000,000 more? Were not services reduced in the past seven years? Were not unnecessary employees laid off? Were not purchases reduced? If these were good things to do because the railway would otherwise have lost large sums of money each year, would it not be well to do the same things again when the railways are continuing to lose large sums of money each year? For my own part, I cannot accept any other conclusion.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119848

The argument of politics is not for me to answer. All that it means is that the Government must choose between spending money for unnecessary railway services or using that money for more effective and constructive purposes. The decision on that point is one for Parliament to make. Can this argument be legitimately adduced by the officers of the Canadian National Railways to show why they object to further savings in railway transportation? Their answer for all practical purposes is to do nothing and wait for times to be better. Mine is to make savings.

May I suggest to you that you have now reached the stage when you may properly recommend a checking by experts of these various estimates and conclusions,and when I say experts I mean independent experts, not associated in any way with either Company. There are firms of engineers who for years have specialized in prescribing for transportation situations which are uneconomical and unwholesome, I would think that the Committee might be warranted, as the next step, in recommending that such an examination should be made, and that the books and data of both Companies should be thrown open to the enquirers and their properties thoroughly inspected. The resultant report to the Government would be illuminating and, in my judgment, very valuable.

The railway problems which your Honourable Committee is investigating are set out in the terms of your reference. I can contribute nothing more to their solution than my personal assurance that if the Canadian Pacific can, under the ordinary rules of prudence and equity, assist the Government to a solution, that assistance is at the disposal of the nation.

Honourable Members of the Committee:

It has appeared desirable, in view of certain evidence given by officers of the Canadian National Railways, to have an officer of the Canadian Pacific Railway appear before you not so much to engage in rebuttal of the statements made in criticism of the estimates of savings under unification given you by our officers, as to correct any possible mis-apprehension which may result from certain remarks in that evidence.

The impression has been created - through no words of our officers - that unification, on the basis of making the economies included in our estimate of savings of $75,000,000, is a plan evolved by the Canadian Pacific Railway, of its own initiative, in order to obtain control of the Canadian National. Requests of a Royal Commission in 1931-2 to officers of both systems, to develop the facts in connection with a suggestion for unified management, resulted in the preparation of estimates of savings, to illustrate the extent of possible economies. These estimates were not in any sense parts of unification proposals.

As an officer of the Canadian Pacific who received these instructions from the Royal Commission, I can assure you that the facts as I have given them are correct.

As you will have noted, and as Mr. W. M. Neal, Vice-President of Western Lines, has impressed upon you, our officers in preparing their estimates, used the care which is customary with the Canadian Pacific and other large organizations in preparing estimates on which to base business policies. Our officers were

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119850

aware that this estimate was being prepared for the information of a Royal Commission, and that their responsibility for accuracy was a serious one. The preparation of each detail of the estimate was confided to those engaged in that branch of railway service. As our estimates necessarily took into account such statistics as we had concerning the results of Canadian National operations, it may be well to point out that our officers took into consideration at all stages the comparability of the accounting methods of the two railways.

Even before any estimate had been requested by the Royal Commission, officers of the Canadian National had, on instructions of their President, prepared and submitted an estimate of possible savings in a normal year of $56,000,000. The validity of this estimate is now denied, and an attempt is made to indicate that it was based on conditions of neglect of the public interest which made it impossible of realization. As the Exhibit filed with you shows, it was made in complete detail and bears every evidence of being a serious attempt to value the possible savings from unification.

In addition the Canadian National submitted to the Royal Commission estimates of $35,000,000 and $24,000,000 to be saved annually by the system of co-operation, whose failure has been described to you. There is no record of any qualifications attached to these, and the comment which accompanies them, as well as the circumstances surrounding their preparation

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

and submission, make it evident that they were offered as showing how co-operation would solve the railway problem. As one who was closely in touch with Enquiry made by the Royal Commission, I have always believed that it took all these estimates seriously, and endorsed co-operation as a substitute for unification largely because of the figures furnished by the Canadian National.

Beyond the suggestion of compulsory co-operation the officers of the Canadian National had no contribution to make to your investigation except certain criticisms of details of the Canadian Pacific estimate of savings. Our estimate might well require some correction were we to have available as complete information concerning the operations of the Canadian National Railways as we have about our own. Our officers, listening carefully to the evidence given by corresponding officials in the Canadian National, inform me that it would not be difficult to indicate misstatements of fact and errors of judgment in their comments on the Canadian Pacific estimate. They tell me that they can trace much misunderstanding concerning the basis on which we made our estimate - especially in connection with certain references to the use of Canadian Pacific unit costs. This, of course, is not surprising when you realize that several officers of the Canadian National have admitted that they have not given consideration to the subject of the savings from unification in the past, but have only recently prepared memoranda calculated to disprove the validity of our estimate.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119852

For example, the officers of the Canadian National argue that our officers had made a mistake in suggesting that unit costs of the Canadian Pacific might be applied to operations of the Canadian National. They insisted that certain conditions make it inevitable that the Government railway will have higher unit costs than its private competitor. There is no intention on our part to impugn the efficiency of Canadian National operations. Our application of Canadian Pacific unit costs in the estimate was based on the simple assumption that as a result of unification there would be created a single well co-ordinated railway system operating on a larger scale than either of the present railways. In such circumstances, it does not seem unreasonable to hope that its operations can be carried on at unit costs as low as, or lower than, are those of the Canadian Pacific.

I seem to trace throughout the Canadian National evidence the general misapprehension that our estimates are based on the fact that we consider the Canadian Pacific a more efficient railway than its competitor. This is not the point. It is not a question of what will happen to two separate railways after unification but of what will happen to a single unified railway. What we argue is that a single railway can be operated at lower unit costs than can two as a direct result of unification. It would be very regrettable if the question of unification is to be discussed on the basis that it is a mere turning over of one railway to the officers of another railway to operate. It is a plan for using all the best equipment and resources of two railways in the joint operation of a single system - for the joint advantage of the owners of both systems.

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

Subject to the wishes of your Committee, it is not proposed to offer witnesses in rebuttal, since there is no desire on our part either to extend the length of your hearings, or to convert the record of your Proceedings into a mere register of differing opinions. If you desire to examine witnesses among the Canadian Pacific staff in order to determine whether the criticisms of their estimates have been such as to justify general distrust in either their competence or sincerity, I trust that you will recall them.

The Canadian Pacific has offered a suggestion for the solution of the problem before you. It is based on estimates of savings which could, we believe, be realized without depriving any community of adequate service or neglecting the rights of labour.

So much of the evidence of the Canadian National was directed to proving the extent of economies in that System's operations since 1930 that I must point out that this again was not pertinent to your investigation as I understood its purpose. Our estimate was definitely based on the conditions of 1930, and we have endeavoured to alter it to reflect permanent changes which have occurred since then. We have admitted that, to some extent, these changes have resulted from other causes than depressed conditions of business. Mr. Neal dealt with this and pointed out that while we have not attempted to make a complete estimate of savings by unification under the conditions of 1937, the combined expenses of

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

the railways in 1937 were $79,643,000, or 20.7%, less than in 1930, and that, if it be assumed that all the unification economies possible in 1937 had fallen in the same proportion as the reduction in expenses of the two railways operated separately, the estimated saving of $75,373,000 would be reduced to $59,740,000. He reminded you that in this connection it should be kept in mind that the level of wages in 1937 was appreciably below the levels of both 1930 and 1938.

The Canadian Pacific officers admit, of course, that permanent economies made by the Canadian National and ourselves will affect the possible savings from unification but, after considering our estimate, we feel that this factor would fail to compensate for unestimated economies, and warn against too general assumptions that expenses will not rise almost in proportion to increasing revenues. The compulsory co-operation estimate of the Canadian National lately offered has been supported by the statement that its benefits will increase as traffic conditions improve.

We have assumed that the process of rationalizing the transportation machinery of the country would be carried out with care, and that its effects would be spread over a period of years, and thus be prevented from disturbing seriously either public or private interests. Public opinion will not interpose objections to measures which do not produce serious public or private losses.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119855

I am therefore confident that no part of the suggestions of the Canadian Pacific Railway need be regarded as in itself certain to produce grave difficulties for the national Government, and I think that I can demonstrate this quite clearly in discussing certain references to a schedule of lines which might be abandoned. This schedule was submitted by the Canadian Pacific at the request of the Royal Commission in 1931-2, and was furnished to that body in confidence,

You have learned that the total effect on the savings from unification of abandoning none of the lines in the schedule would be a reduction of the estimate by about ten percent.

Looking over the public statements of our Chairman and President, I find few references to line abandonment, and those of a general character. In only one case - a direct answer to a direct question - did he refer to the figure of 5,000 miles of abandonments so freely used as describing the consequences of any plan of unification.

It is thus evident that the emphasis laid on line abandonment must have come from other quarters, and I suggest that it results in part, from misunderstanding, and, in part, from ingenious propaganda intended to convince the public that any plan of unification necessarily involves line abandonment on a large scale.

This belief is, of course, incorrect. What has been suggested is a general plan for establishing joint management of the railway systems for joint interest of their owners. No detailed plan has been worked out or offered.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119856

It should be borne in mind that the preparation by the Canadian Pacific of a schedule of line abandonments was at the request of the Royal Commission, following the submission of a similar schedule by the officers of the Canadian National- prepared by them before the Royal Commission was appointed. Indeed, the Royal Commission specified to us many of the lines- such as those from Sudbury to Fort William, Saskatoon to Unity, and Kamloops to Hope- where very obvious duplication had impressed the Commissioners, and directed that these be included in the study of line abandonments.

Unification of the railways in one way or another has been before the public of this country for many years, but line abandonment as a factor in it was never generally discussed until the Royal Commission investigation. A suggestion that savings from this source should be included was made by the Royal Commission directly to Mr.A.E.Warren, Vice-President of the Canadian National Railways, and myself, and I am, therefore, in a position to inform you accurately as to the origin of this discussion.

It is my belief that many miles of line can be abandoned. Under unification, necessary conditions to the abandonment of any lines would include a decision to that effect by the management of the unified system- not by the executive of the Canadian Pacific; and with the consent of the Board of Railway Commissioners. It has already been suggested, by our Chairman and President, that the powers of that body, to protect the public interest, should be strengthened.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119857

Our Chairman and President will deal with more general questions and particularly with certain recommendations of officers of the Canadian National Railways for the application of coercion to obtain greater savings than have yet been found possible under co-operation. I believe that you have been fully informed as to the history of co-operation, and have been shown that its ineffectiveness was due to the very nature of the plan.

However, lest there should be any remaining impression that the Canadian Pacific is to blame for the failure of co-operation, I venture to quote the Hon. C. P. Fullerton. In his evidence before the Select Standing Committee of the House of Commons on Railways and Shipping, owned, operated and controlled by the Government, on ~~May 26th~~ JUNE 2ND, 1936, Mr. Fullerton, then Chairman of the Board of Trustees of the Canadian National Railways, placed the blame for lack of progress impartially on the officers of both railways. He particularly pointed out the possibility of fear of reduction of employment as a limiting factor. He repeated his opinion before the Standing Committee on Railways, Telegraphs and Harbours of your House on June 12th, 1936. Mr. Fullerton made no suggestion that the officers of the Canadian Pacific were the more to blame and, since the reason which he felt he detected - the possibility of reducing employment - is a favoured argument of the officers of the Canadian National, I may leave it to

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119858

your decision whether his evidence justifies the charge that the Canadian Pacific is to be held responsible for lack of progress. On this point I feel that I can speak with some certainty since I was present before the Committee of your House when Mr. Fullerton made his statement. At that time, I told the Committee that, in my opinion, no blame attached to the officers of either Company.

In conclusion, I trust that I have made it clear that there is no necessity for public excitement over the alleged consequences of unification. Erroneous ideas have been circulated that unification means committing the country to the power of a heartless monopoly; the throwing out of work of thousands of men; the drastic curtailment of necessary transportation services; the risk of adding to the Government's obligations on railway account - any of which would be a real objection to unification. I can assure you that none of them can result from any plan of unification to which the Canadian Pacific would be a consenting party, and that the suggestion of our Chairman and President for consideration of this subject is very far from being a recommendation that the country should accept unification and its consequences as they have been described to you by those who are hostile to rationalization of our transportation machinery, or who have misunderstood the purport of his recommendations.

MEMORANDUM, DATED 16th NOVEMBER, 1931, SUPPLEMENTARY TO "A SOLUTION OF THE CANADIAN RAILWAY PROBLEM" AS SUGGESTED BY SIR THOMAS TAIT IN MAY 1921.

Undoubtedly appreciable savings in working expenses can be effected by close co-operation and co-ordination between the Canadian National and Canadian Pacific Companies, but it is confidently submitted that the savings which can thus be made will be but a very small part of those which could be brought about by consolidation of the two systems with one financial identity and administration.

So long as the Canadian National and Canadian Pacific are separate financial identities, the management of each must, and will, strive to secure its share of the traffic.

As passenger fares, freight rates and other charges are the same on both systems, the competition for traffic and other business is entirely in service. There is probably no competition so wasteful as that between railways. This is particularly true where the competing railways are, to such a great extent, parallel to each other as is the case with the Canadian National and Canadian Pacific, and where they both serve nearly every important place in the country.

If the two systems are consolidated and there is only one financial identity, it would be immaterial over which line traffic was carried, or by which of the existing systems service was rendered, and the revenue therefrom earned. Provided, therefore, that there be no serious disadvantage to the public, working expenses can be reduced to the extent to which they are incurred to provide unnecessary service for competitive purposes.

To illustrate this a few examples are here given:

Each Company now runs a very fast passenger train each way daily, in the afternoon, between Montreal and Toronto, mainly for business between these two cities. If the two systems were consolidated and it did not matter on which line the revenue from these trains was earned, the expense, with practically no disadvantage to the public, could be reduced fifty percent by giving this fast service over only one line; probably in this case the Canadian National line as it is shorter and serves more important places en route and it has a double track all the way between Montreal and Toronto. If the financial identity of both Companies be maintained, neither will be willing to discontinue this fast service, with the resulting loss of revenue and prestige. Savings in working expenses, with practically

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

no loss of revenue or disadvantage to the public, can undoubtedly be effected in a great many other cases where there are now competitive train services.

In Montreal the Canadian Pacific Ticket Office on St. Catherine Street West could be closed up. It is not far anyway from the Windsor Street Station of that Company, nor from the present station of the Canadian National Company, and will almost adjoin the proposed new station of that Company. The ticket office of The Canadian National on St. James Street could be closed and the business done at both it and the ticket office of The Canadian Pacific, nearby on the same street, be conducted in the latter.

In New York each Company now occupies very expensive ticket offices. The business could be handled in one office, and the expense be reduced nearly fifty percent, without any disadvantage to the public. In this same way the expense of outside ticket offices elsewhere could be reduced, probably more than one half, for in some places, if the two systems were consolidated, no outside ticket offices whatsoever would be needed. Duplicate representation in London and in Great Britain and in Europe could be done away with.

Travelling and soliciting passenger and freight agents could be very largely dispensed with, for it would be immaterial over which line traffic was carried.

Large savings could be effected in the same way in the outside telegraph and express offices, and staff and existing telegraph lines could be used jointly, thus obviating expenditure for years for additional lines and their maintenance.

A very large saving could be effected in car haulage if the cars of both Companies were equally available for distribution and use on the consolidated system. For instance, at places or in territory at which there is track connection, under existing conditions if there be a surplus of, say, box cars for one system and a shortage for the other, the former probably hauls its surplus cars away and the latter hauls them in. With the two systems consolidated this expense would be avoided.

It is submitted that with the consolidation of the two systems, so much better and efficient use could be made of locomotives and cars, especially freight cars, that the present stock would be sufficient for a much larger traffic, thus obviating the cost of building or buying more locomotives and cars, and of their upkeep for probably many years.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119861

The expense of switching would be considerably reduced in many ways. For instance, a carload of freight to be placed on a private siding, could be forwarded by the line on which the siding was located instead of, as frequently is the case now, by the other line, thus entailing extra switching at the terminal from that line to the other line. The return of the cars of one Company to the other would be unnecessary, thus also reducing switching expense.

The present terminal facilities of both Companies would, in most places, be ample for many years without incurring expenditure for their enlargement and maintenance.

Money could be saved by:

Amalgamating store houses and stocks of stores.

Concentration of purchasing, etc.

Joint stations, shops, engine houses, etc., might be arranged for, in cases where the expenditure involved is not too great.

Using the shorter or easier lines, and therefore the cheaper routes for traffic.

Where existing lines now closely parallel each other, one of them might be taken up, or anyway they might be used as double tracks, with, in either case, a possible saving in the expense of stations, etc.

Overhead expenses could be reduced, as, for instance, in the cost of management, superintendents, supervision, inspection, etc.

The competition in constructing hotels and in radio broadcasting would be done away with, and some of the expense now attendant on the operation and upkeep of hotels might be saved.

The steamships of both Companies could be utilized to better advantage in the interest of the consolidated system and competitive steamship service be discontinued.

The ways in which, and the instances where, expenses could be reduced and capital expenditures obviated, without appreciable

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

disadvantage to the public, or loss of revenue, by the consolidation of the two systems, are so numerous and varied that it is impractical to detail them in this brief memorandum.

It may be confidently anticipated these savings in the aggregate would be so large that in a comparatively short time, not only would there be no deficits on our Canadian Railways in earning their fixed charges, including the dividend guaranteed on the stock of the Canadian Pacific, but that there would be some return on the money which can be fairly said to be invested in them.

# A SOLUTION OF THE CANADIAN RAILWAY PROBLEM

**Suggested by Sir Thomas Tait in April 1917 and revised in May 1921 and again in January 1932.**

In April, 1917, I ventured to suggest a solution of the Canadian Railway Problem and I published a revision of this in May 1921. There have since been many important changes in the Canadian Railway situation, but as these do not appreciably affect the fundamental principles of the scheme then outlined, I again venture to suggest that solution with some modifications which in the light of altered conditions and further consideration appear to be necessary or advisable.

The Dominion of Canada, through The Canadian National Railways, owns or controls over 22,000 miles of railway in Canada and about 1,500 miles in the United States. The Canadian Pacific Railway Company owns or controls about 17,300 miles in Canada and over 5,000 miles in the United States. A large proportion of the mileage of The Canadian National and Canadian Pacific systems is competitive and in many instances serves the same places and territory—indeed some of their lines are closely parallel.

There was a deficit on The Canadian National Railway System in the year 1930 of $35,585,894 in meeting the interest charges, before interest on Dominion Government advances, or, including the latter a deficit of $68,279,769. A considerable part of these advances, however, does not represent assets, but is made up of deficits in past years in operating expenses and in interest charges. The Canadian National Railways are debited with $100,000,000 for the Capital Stock of The Canadian Northern Railway Company, although it was acquired by The Dominion for only $10,000,000. The figures for the year 1931 are not yet available, but the deficit in that year will be much larger than in 1930.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119865

One of the most important problems therefore which Canada and its citizens have to deal with at the present time is to eliminate as soon as possible the deficit resulting from the operation of its National Railways.

It is confidently submitted and will, I think, be generally admitted by practical railway officers that, if The Canadian National and The Canadian Pacific Railway Systems are combined and worked as one system, very large savings indeed in Operating Expenses can be effected, as for instance by:—

The utilization of the shorter or easier, and therefore cheaper, routes for traffic.

The taking up or temporary abandonment of duplicate lines or lines of little value where the public would not be appreciably affected.

The ability to use all motive power and rolling stock freely on any part of the whole system, thus saving much unnecessary movement, especially of freight cars, and obtaining greater service out of such equipment.

Reduction in train service without appreciable disadvantage to the public, thus avoiding present duplicate services.

Joint switching.

Joint instead of separate stations, terminals, offices, etc., with a consequent reduction in staff, etc.

Joint instead of separate outside ticket, telegraph and express offices and reduction in soliciting passenger and freight agents.

Concentration of work in shops, locomotive and car sheds and elsewhere, and of stocks of materials and supplies.

Larger and concentrated purchases and therefore lower prices of materials and supplies.

Undoubtedly appreciable savings in working expenses can be effected by close co-operation and co-ordination between the Canadian National and Canadian Pacific Companies, but it is confidently submitted that the savings

119866

which can thus be made will be but a very small part of those which could be brought about by consolidation of the two systems with one financial identity and administration.

So long as The Canadian National and Canadian Pacific are separate financial identities, the management of each must and will strive to secure its share of the traffic.

As passenger fares, freight rates and other charges are the same on both systems, the competition for traffic and other business is entirely in service. There is probably no competition so wasteful as that between railways. This is particularly true where the competing railways are, to such a great extent, parallel to each other as is the case with The Canadian National and Canadian Pacific, and where they both serve nearly every important place in the country.

If the two systems are consolidated and there is only one financial identity, it would be immaterial over which line traffic was carried, or by which of the existing systems service was rendered, and the revenue therefrom earned. Provided, therefore, that there be no serious disadvantage to the public, working expenses can be reduced to the extent to which they are incurred to provide unnecessary service for competitive purposes.

Another advantage in combining all the important railways of Canada in one system to be worked for the good of all is that the construction of competing lines would be prevented and that new lines would be so located that the least possible mileage would serve the greatest possible area or population.

The savings, not only on The Canadian National, but on The Canadian Pacific system which could be effected in these and other directions are so many and so considerable and in the aggregate would represent such a large amount, that they can be confidently relied upon to immediately commence to appreciably reduce the deficit on The Canadian National Railways and within a comparatively short time to eliminate any deficit.

The combination of The Canadian National and The Canadian Pacific Systems to be worked as one system for

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119867

the good of all, is, in my opinion, the quickest and best method of substantially improving the financial results of The Canadian National Railways.

Some dangers, however, arise in connection with the combination in one great system of practically all of the railways of the country and these must be guarded against.

The administration may become too powerful a factor in the affairs of The Dominion.

There is the absence of competition and of incentive for efficient management.

There is the much-talked-of danger, in case this great system is managed by a Board or Commission appointed by the Government of the day under legislation which can later on be amended or abrogated by those in power at the time, that the administration will in the course of time be hampered or interfered with and that there will be difficulty in the way of a continuity of policy.

The following is an outline of a scheme which it is submitted will guard against these dangers and soon reduce and before long eliminate the present enormous loss resulting from the operation of Canada's railways.

## OUTLINE OF SCHEME

A. A Railway Company, to be known as, say, "The Canadian Railways Company," hereinafter called "The Company," to be incorporated with a Capital Stock of, say, $500,000,000 in shares of ten dollars par value.

1. The Company to lease The Canadian Pacific Railway System in perpetuity for a rental equivalent to an agreed annual return on its common stock and to guarantee the payment of all dividends or interest on all the securities of that system which are senior to its common stock, and to assume all the liabilities of that Company, including all its guarantees on the securities of other railway companies, and the payment of all rentals for which The Canadian Pacific is responsible. The Company to take over all the assets of The Canadian Pacific, except those which are not closely connected with the

119868

operation of its railways and connections, such as its lands and interests in mines (except coal mines) and in The Consolidated Mining and Smelting Company, which would be transferred to a separate Company for the benefit of The Canadian Pacific Shareholders. The exclusion of these assets would reduce the rate of dividend to be guaranteed on the common stock of The Canadian Pacific. The Company should take over The Canadian Pacific Company's Ocean and Coastal Steamships and its Hotel and Commercial Telegraph and News Departments and its interest in The Dominion or other Express Companies operating on its lines.

2. The Company to lease The Canadian National Railway System in perpetuity for a rental equivalent to the interest charges on its Funded Debt and on such advances from The Dominion as represent assets—these advances not to include deficits in operating expenses, or in meeting interest charges in past years, or more than the actual cost to The Dominion of The Canadian Northern Capital Stock. The Company to take over all the assets of The Canadian National Railways and to be responsible for all its obligations.

3. The Company, through its Board of Directors and Executive Officers, to administer the affairs of the two Railway Systems so taken over and to operate and maintain the two Systems as one System.

4. The Capital Stock of The Company to be sold to and held by Canadian citizens or institutions only, of which no one shall hold or own directly or indirectly more than shares.

5. The Board of The Company, hereinafter called "The Board" to consist of eleven members. Three of these Directors to be appointed in the first instance by The Governor-General-in-Council, to hold office for three years. Two of them to be appointed by The Board of Directors of The Canadian Pacific Railway Company, to hold office from year to year. Four of them to be appointed by The Dominion Board of Railway Com-

ARCHIVES PUBLIQUES
CANADA

119869

5. The Board of The Company, hereinafter called "The Board" to consist of eleven members. Three of these Directors to be appointed in the first instance by The Governor-General-in-Council, to hold office for three years. Two of them to be appointed by The Board of Directors of The Canadian Pacific Railway Company, to hold office from year to year. Two of them to be appointed by The Dominion Board of Railway Commissioners, to hold office for one year, when their places are to be filled by two Directors elected by the Shareholders of the Company's stock, hereinafter called "Citizen Shareholders", to hold office for two years. One Director to be elected by the officers and employees of The Company, who have been in the service at least five years - to hold office for two years, and one Director to be appointed by the combined Canadian Chamber of Commerce and Canadian Manufacturers' Association - to hold office for two years. Two Directors to be appointed by The Governor-General-in-Council, to hold office from year to year. All Directors to be eligible for re-election or re-appointment. The three Directors appointed by The Governor-General-in-Council for three years should be three of the ablest railway officers obtainable, one of them to be The President of the Company and the other two to be Vice-Presidents. These three Directors to receive good salaries, commensurate with their respective duties and responsibilities. They should be subject to dismissal for misconduct or incapacity with right of appeal to The Supreme Court of Canada. Their successors to be appointed by The Board of Directors of The Company.
The Board of Directors to direct the policy of The Company and to have complete control of the administration of The Company's affairs and operations, and of the appointment, remuneration and work of The Company's officers and employees.

rentals, guarantees and other obligations payable by it,

shall be set aside in a Reserve Fund (the maximum amount of this Fund to be determined) to provide for a possible deficit in meeting such obligations in a year or years, when, for instance, there is a poor grain crop. Any withdrawals from this Fund for such purpose to be

2. Any such excess net earnings, after providing said Reserve Fund and maintaining it, to be set aside in a Fund to be designated, say, as "Dividend Increase Fund". When there is sufficient money in this Dividend Increase Fund to do so, an increase in the guaranteed dividend on the Citizen Shareholders' Stock, to be paid, of not less nor more than one half of one percent per annum, and this increase in such dividend to be cumulative - that is, if not paid in any year, it is to be paid in subsequent years, if earned. In the event of the accumulated net earnings in the Dividend Increase Fund being more than sufficient for the payment of the cumulative increase in the dividend on the Citizen Shareholders' stock, at the rate of one half of one percent per annum, with an ample excess (to be determined) then the balance at the credit of such fund to be paid in such proportions as may be agreed to The Canadian Pacific and The Dominion of Canada.

The prospect of an increase in its dividend should incline The Canadian Pacific to accept a somewhat lower guaranteed dividend.

tures on Capital Account and to be entitled to be paid interest thereon at the same rate as the dividend guaranteed on the Citizen Shareholders' stock, The Company, however, from time to time to issue and sell additional stock to Citizen Shareholders to such extent as may be required to recoup The Dominion for such advances.

missioners, to hold office for one year, when their places are to be filled by four Directors elected by the Shareholders of the Company's stock, hereinafter called "Citizen Shareholders," to hold office from year to year. One Director to be elected by the officers and employees of The Company, who have been in the service at least five years—to hold office for two years, and one Director to be appointed by the combined Canadian Chamber of Commerce and Canadian Manufacturers' Association—to hold office for two years. All Directors to be eligible for re-election or re-appointment.

The three Directors appointed by The Governor-General-in-Council should be three of the ablest railway officers obtainable, one of them to be The President of The Company and the other two to be Vice-Presidents. These three Directors to receive good salaries, commensurate with their respective duties and responsibilities. They should be subject to dismissal for misconduct or incapacity, with right of appeal to The Supreme Court of Canada. Their successors to be appointed by The Board of Directors of The Company.

The Board of Directors to direct the policy of The Company and to have complete control of the administration of The Company's affairs and operations, and of the appointment, remuneration and work of The Company's officers and employees.

B. The Dominion of Canada to guarantee to The Company in perpetuity, the payment of the rentals which The Company guarantees to pay for the leases of The Canadian Pacific System and of The Canadian National System, and in addition to guarantee the payment of a dividend, at a rate to be determined, on so much of the Capital Stock of The Company as may from time to time be outstanding. The rental to be paid to The Canadian Pacific by The Company to be also guaranteed direct by The Dominion of Canada to The Canadian Pacific Railway Company.

C 1. The net earnings of The Company in excess of all rentals, guarantees and other obligations payable by it,

shall be set aside in a Reserve Fund (the maximum amount of this Fund to be determined) to provide for a possible deficit in meeting such obligations in a year or years, when, for instance, there is a poor grain crop. Any withdrawals from this Fund for such purpose to be replaced from such subsequent excess net earnings and to be a first charge against such excess net earnings.

2. Any such excess net earnings, after providing said Reserve Fund and maintaining it, to be set aside in a Fund to be designated, say, as "Dividend Increase Fund." When there is sufficient money in this Dividend Increase Fund to do so, an increase in the guaranteed dividend on The Canadian Pacific Common Stock and on the Citizen Shareholders' Stock, to be paid, of not less nor more than one half of one percent per annum, and this increase in such dividend to be cumulative—that is, if not paid in any year, it is to be paid in subsequent years, if earned. In the event of the accumulated net earnings in the Dividend Increase Fund being more than sufficient for the payment of the cumulative increase in dividends, at the rate of one half of one percent per annum, with an ample excess (to be determined) then the balance at the credit of such fund to be paid to The Dominion of Canada, towards re-imbursement of the money paid in past years by the Dominion for deficits in operating expenses and in meeting interest charges on the Canadian National Railways and for subsidies in aid of the construction of railway lines in Canada.

The prospect of an increase of one half of one percent in its dividend should incline The Canadian Pacific to accept a somewhat lower guaranteed dividend.

D 1. The Dominion of Canada in the first instance to provide the funds required by The Company for expenditures on Capital Account and to be entitled to be paid interest thereon at the same rate as the dividend guaranteed on the Citizen Shareholders' stock, The Company, however, from time to time to issue and sell additional stock to Citizen Shareholders to such extent as may be required to recoup The Dominion for such advances.

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

2. All proposals for expenditures on Capital Account to be submitted to a competent authority, say, a Board of three Members, thoroughly well qualified for the purpose, appointed by the Governor-General-in-Council, at good salaries, on the same conditions as regards tenure of office as in the case of Judges of the Supreme Court of Canada. Such proposals to be reported on by this authority before they are submitted to The Minister of Railways. All such reports of said authority to be laid before The House of Commons and The Senate.

(It might be interjected here that a similar procedure might well be followed in all cases involving large expenditures of public money on or in connection with works, such as canals, docks and harbours, dredging, important buildings, etc., and the authority above mentioned might also be utilized to investigate and report in regard to such projects. Every Member of Parliament would thus have knowledge based on independent and competent authority as to what he was voting for.)

E. Rates and fares and other charges for transportation and other services not to be increased without the approval of The Dominion Board of Railway Commissioners, and not to be reduced without the consent of the Board of Directors of The Company until the Reserve Fund referred to in Section "C 1" has been provided and maintained and the increases in cumulative dividends have been paid and the margin in the Dividend Increase Fund, referred to in Section "C 2" has been established and maintained, and then only to the extent which the net earnings of The Company in the preceding three years are in excess of all the obligations of the Company, including its payments into the Reserve Fund and the increase in dividends, but this condition is not obligatory—only restrictive.

F. The Government may, by Order-in-Council, declare a matter to be one of general policy and request The Board to submit a report, giving its views as to carrying out such policy. The Government may, on receipt and consideration of such report, direct The Board to give

effect to such policy in whole or in part, but in the event of the Board not concurring in such direction, the Dominion to reimburse annually to The Company the yearly increase in expenditure or decrease in revenue of The Company, occasioned by the carrying out of such direction in excess of such increase or decrease as would have been occasioned by the carrying out of such direction to the extent only to which The Board concurred in it.

The Report of The Board and all papers relating to any such direction to be laid before The House of Commons and The Senate.

Inasmuch as the Dominion, either directly or indirectly, is so largely interested in the net earnings of the Company, such re-imbursements to the Company would to a great extent mean "out of one pocket into the other," but the net earnings of the Company would not be adversely affected.

G. The accounts and books of The Company to be continuously audited by an auditor to be appointed by The Governor-General-in-Council, who shall certify to the balance sheet, profit and loss account, and other annual statements of The Company.

H. Legislation to be enacted providing for the settlement of disputes between The Company and its employees without resort to strikes or lock-outs. Pensions to be provided for the officers and employees of The Company.

## NOTES

Under this scheme no difficulty should arise in working any of the lines in the United States, for they would be operated by an incorporated Company, all the stock of which would be owned by private shareholders.

The idea which I have in mind in providing for increased dividends to the Canadian Pacific and Citizen Shareholders, in the event of certain favourable financial results, is to enlist their interest and support in the efficient administration of The Company.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

It would be highly desirable to have a large number of representative institutions and citizens of The Dominion directly interested financially in the administration of the Railways of The Dominion and, through the appointment by them of four out of eleven Directors of The Company, to have a voice in such administration. A scheme can easily be devised by which the stock in The Company will be equitably distributed and held by all classes of the community throughout all the Provinces of The Dominion. The larger number of shareholders, the better, for it will mean the greater the interest in the efficient administration of The Company among the citizens of Canada.

The proceeds from the sale of stock by The Company to Citizen Shareholders could, if not required by The Company, be used by The Dominion for the redemption of Bonds or other purposes, subject, of course, to repayment when required for the purposes of The Company. These proceeds would thus not remain idle pending the need of them by The Company.

What is in mind in Section "F" is to prevent a deadlock between the Government of the day and The Board in the event of the Government considering it desirable in the interest of the public and the country to have effect given to some matter of general policy, which policy in whole or in part is not concurred in by The Board, from a railway point of view. Under this provision, the loss in revenue or the increase in the expenses of The Company, representing the money difference between the opinions of the Government and The Board, would not adversely affect the net profits of The Company, as it would be paid to The Company out of the general revenue of The Dominion.

The interests of the public can be safeguarded by preserving The Dominion Board of Railway Commissioners, in whose jurisdiction and authority, however, consequential restrictions and modifications would be necessary if effect were given to this scheme, as, for instance, in the matter of reducing rates and fares. The Board of Railway Commissioners should also be charged with the duty of seeing that the lines, equipment, etc., are maintained in a safe and efficient

condition, and that the train and other services are such as the business justified.

It may be urged as an objection to the foregoing scheme that there would be an absence of competition, but competition between railways as it has existed has been wasteful and far from efficient in the true sense of that word. My experience on State Railways in Australia was that every patron was a critic not only as a patron but because as a taxpayer he considered himself interested financially in the efficient management of the State's Railways, and that this made it unnecessary to have competing railways to keep the administration up to the mark. Moreover, we have in Canada The Dominion Board of Railway Commissioners to safeguard the interests of the public, prevent unfair discrimination, etc.

No matter how independent a Board or Commission for the administration of State Railways may be made by the legislation under which such a body is originally constituted and appointed, the time will surely come, and at no distant day, when it will become unpopular and create antagonism (for instance, by rightly declining to accede to the demands from some part of the country, some particular industry or some class of the community) and when this occurs its independence of outside control or interference is apt to be taken away or modified by amending legislation. In such a scheme as is here suggested, however, there would be a contract between The Canadian Railways Company, representing tens of thousands of citizen shareholders and The Dominion which could not be amended or abrogated, even if the administration of The Company might become temporarily unpopular. This is an important feature of this scheme.

In this connection attention is directed to the following extract from the minority report of the late Mr. A. H. Smith, a member of The Drayton-Acworth-Smith Commission, and then President of The New York Central Railroad Company:—

"I am unable to join my colleagues in their recommendations. They propose that practically all of the railways

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119875

in Canada, except The Canadian Pacific and the American lines shall be turned over to a corporation to be managed by a board of trustees appointed by Government. They insist that this Board is to be permanent and self-perpetuating. I do not know by what means one Parliament can bind its successors to a given policy, especially in so simple a matter as changing the organization of a government board. My friends seek to avoid government ownership and operation, in fact condemn it as inadvisable, but propose a plan which contains so many elements of danger in the direction which is sought to be avoided, that I am unable to join them."

A scheme can, it is believed, be worked out on some such lines as the foregoing under which all the important railways of Canada can be combined and worked as one great system with enormous savings in working expenses and in other directions and with other beneficial results, and under which there would be the advantage of such efficient and prudent administration of our National Railways as that of a well managed and independent company, and this with the interests of the public adequately safe-guarded.

There are some novel features in this scheme, and it may be considered that The Dominion should not irrevocably commit itself to it. I think myself this would be wise, as in any case experience may show that the scheme can with advantage be altered in detail. I therefore suggest that it would be well to reserve the right to The Dominion to terminate the contract with The Company at the end of each, say, ten year period, on two years' notice, and on taking over from the Citizen Shareholders their stock in The Company at a premium of, say, ten percent.

119876

Statement shewing the financial results of a 10 and a 15 per cent saving respectively on the average Working Expense for the years 1929 and 1930 of the combined Canadian National and Canadian Pacific Systems. The year 1929 was a good year while the year 1930 was a poor year. The average Working Expenses and Net Financial Results of these two years are taken as representing a normal year for the combined Systems.

| | Year 1929 | Year 1930 | Average for Years 1929 and 1930 |
|---|---|---|---|
| **Total Working Expenses** of both Canadian Pacific Railway Company and of Canadian National Railways including Eastern Lines | $421,577,264 | $370,940,167 | $396,258,716 |
| 15% Saving on above Working Expenses | 63,236,589 | 55,641,025 | 59,438,807 |
| 10% " " " | 42,157,726 | 37,094,016 | 39,625,871 |
| **Net Financial Results** after payment of all charges and full dividends in the case of the Canadian Pacific and after payment of all interest charges including interest on Dominion Government advances in the case of the Canadian National Railways | Deficit 38,763,051 | Deficit 68,146,584 | Deficit 53,454,817 |
| Financial Result of 15% Saving in Working Expenses | Surplus 24,473,538 | Deficit 12,505,559 | Surplus 5,893,990 |
| Financial Result of 10% Saving in Working Expenses | Surplus 3,394,675 | Deficit 31,052,568 | Deficit 13,828,946 |

NOTE—If the advances by the Dominion to the Canadian National Railways be reduced, as they should be, so that they will represent Assets only, that is, that they will not include deficits in operating expenses or in meeting interest charges in past years, and the debit against those Railways of $100,000,000 for the stock of the Canadian Northern Railway Company be reduced to what that stock cost the Dominion—viz $10,000,000—then there would be such a reduction in the interest charges that there would be a substantial surplus from the consolidated Railway System based on the average of the two years, 1929 and 1930, even with only a ten per cent saving in the working expenses.

# THE CANADIAN RAILWAY PROBLEM

JOHN L. McDOUGALL

## I.

THIS article will attempt to show what the railway problem of the country now is and to indicate some of the more important things that may be done about it. It will argue that the extreme seriousness of the financial situation is not in its essence a railway problem at all: it is merely another index of the gravity of the current depression and can be reduced to manageable proportions only by a restoration of traffic and revenues. The problem is a financial problem, not a problem of practical operation. It is certainly bad enough as it is; but if the railways were unable to move readily the traffic offered them, then the money losses to, and the partial disorganization of, the commercial community would make our present difficulties look very puny indeed.

The experience of this country is not unique. It is of the nature of railway operations, wherever carried on, that expenses cannot be reduced as rapidly as revenues fall. Conversely, a very large part of any increase in revenues can be converted into net profit. Part of the costs are constant and therefore appear as increasing unit costs in declining traffic and as decreasing unit costs when traffic increases. The point can, perhaps, be brought home most clearly by the following simple comparative table showing in condensed form the earnings of all railways in Canada in 1928 and 1933:

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119879

TABLE I.—Income Account—Steam Railways of Canada.[1]

| | 1928 $ (000 omitted) | 1933 $ (000 omitted) |
|---|---|---|
| Gross earnings, including outside operating revenues | 582,363 | 281,075 |
| Railway operating expenses, including outside operating expenses | 457,654 | 242,520 |
| | 124,709 | 38,555 |
| Other deductions, net | 2,946 | 18,205 |
| Balance available for the payment of interest and dividends, and for reserves | 121,763 | 20,350 |

In other words, while gross earnings fell by some 52 per cent., the balance available for security holders almost vanished even though the most drastic economies were made.[2]

Table I raises two questions: What was the experience in past depressions? By how much did revenues fall in such periods? A partial answer is given by table II.

TABLE II.—Cyclical Decline and Recovery in Canadian Railway Gross Earnings.[3]

| High year to date | Subsequent low | Percentage decline in gross earnings | Year in which previous peak is exceeded | Percentage excess over that previous peak |
|---|---|---|---|---|
| 1875 | 1877 | 3.3 | 1878 | 5.4 |
| 1878 | 1879 | 2.9 | 1880 | 14.8 |
| 1884 | 1885 | 3.6 | 1887 | 16.2 |
| 1893 | 1895 | 10.1 | 1898 | 14.1 |
| 1908 | 1909 | 1.3 | 1910 | 18.4 |
| 1913 | 1915 | 22.1 | 1916 | 2.0 |
| 1920 | 1922 | 10.4 | 1926 | 0.3 |
| 1923 | 1924 | 6.8 | 1926 | 3.2 |
| 1928 | 1933 | 52.1 | .... | .... |

[1] *Statistics of Steam Railways of Canada, 1933*, Ottawa, Dominion Bureau of Statistics, 1934, pp. 14-5.

[2] Those economies included reductions in maintenance expenditures to levels which are, in all probability, not permanently tenable. See a comparison of certain maintenance expenditures in "The Report of the Duff Commission" to appear shortly in the *Canadian Journal of Economics and Political Science*, vol. I, no. 1.

119880

A measurement of this kind is not exact, but it gives some indication of the impact of past depressions on the railway structure, and supports certain broad generalizations. The first is that past business depressions have been relatively short. In every case cited, with two exceptions, bottom has been reached in the first or second year, and the previous peak exceeded in the third. The exceptions are the very deep depression of the 1890's, which reached bottom in 1895 but halted on the recovery in 1896 and 1897, making its decisive upward move in 1898; and the indicated six years, 1920-26, before the previous high was surpassed. This latter is an apparent rather than a real exception. In the readjustments after the 1919-20 boom, both railway rates and wages were cut sharply. Ton mileage, which is the best single indication of physical work done, touched its low in 1921 and was 6.8 per cent. higher in 1923 than in 1920. With three years as the duration of the "normal" depression and five years as the outside figure, what shall be said of the present depression in which it took five years to reach bottom? The year 1934 is, of course, an improvement over 1933, but the most hopeful readings of the results for the first nine months would indicate earnings for the full year 46 per cent. below the 1928 level.

The second generalization is that the "normal" depression was not a deep one. The periods 1913-15 and 1920-22 can hardly come within that category. The one was the joint product of the ending of one of the greatest investment booms the world has ever known and of the onset of the Great War; the other was part of the disorganization caused by the War. But if these two are excluded, then the greatest remaining decline in railway

[3] *Canada Year Book*, 1916-17, p. 434; *ibid.*, 1933, p. 655; *Statistics of Steam Railways of Canada, 1933*, pp. 16-7. The years are to June 30, 1875-1919, and calendar years 1919 to date.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119881

revenues was that of 10.1 per cent. between 1893 and 1895. If that is to be accepted as the most severe "normal" depression, what is to be said of the 1928-33 drop of 52 per cent.? In other words, on both counts of intensity and duration, the present business cycle far outruns anything the railways have previously had to face. It can be said with complete confidence that, even if they had been paragons of conservatism in every department of finance and operation, they would still have been rocked to their foundations by such an extraordinary change in their fortunes as came between 1928 and 1933.

It may be worth while to pursue this point a little further. There seem to be some people who still think that the failure to cover interest charges is due to excessive competition or to a defect in the courage of railway executives; that out of current gross revenues a resolute executive corps ought to be able to meet all costs. Table III is devised for their information.

It may be remarked that in 1898 and 1899 when railways were able to save a larger proportion of their gross earnings than at other time before or since, their operating ratios (the ratio of operating expenses to revenues and therefore an easily computed index of profitability) went down to 65.5 per cent. The less hopeful of the two assumptions made in the above table presupposes for its fulfilment an operating ratio of 50 per cent.; the more hopeful one, an operating ratio of 37.4 per cent.

Even if it were possible to reduce the unit costs of materials used by the railways *pari passu* with reductions in hourly wage-rates (which, as will be shown below, is at least open to doubt), it would require the cutting of money wages to 49.5 per cent. of the 1929 levels[4] in order to meet that operating ratio of 50 per cent., and to 31.8 per cent.

[4]Hourly wage-rates in 1933 were about 15 per cent. below 1929 levels.

119882

to meet the operating ratio of 37.4 per cent. Reductions in that order are possible only if there is a general and severe deflation. It is quite impossible to single out railway workers as a class and force them to accept cuts far deeper than are made into the incomes of other classes of the community. Men may be brought to accept a cut in their money wages after the necessity for a general reduction has been explained to them, but it is a wildly foolish dream to expect them to accept cuts far beyond those yet taken by other recipients of labour income, and particularly when some fixed-income receivers, notably

TABLE III.—Income Account, 1933, Steam Railways of Canada.[5] Showing the actual figures and the reductions in operating expenses which would be necessary in order to earn (*a*) the interest charges of 1933 and (*b*) the dividends of 1930.

L | 9883

bondholders, have suffered no reduction whatever. Both of these assumptions are pure pipe-dreams, unworthy of serious consideration. They have been brought up here only because certain newspapers which ought to be better informed are writing as if they represented real possibilities. Nothing could be farther from the truth. Without an increase in gross revenues the most strenuous action by the executives of the railways can do very little indeed. They may very slightly improve a bad situation if they act wisely (they might make it even worse than it now is if they were to arouse too many antagonisms); but cure it they cannot. A complete remedy depends on business revival and expanding traffic and revenues.

If revival in traffic is the only way in which we can make any real impression on the present problem, how is it to be brought about? The answer to that question lies with the industries producing raw materials for export. They are the backbone of the whole Canadian economy. They are the industries which are able to meet international competition. The whole existence of the industries which live behind the tariff is predicated upon the continued strength and growth of these export trades. In the case of the railways, over 70 per cent. of all their traffic is made up of the basic raw products of the field, the fisheries, the forest, and the mines. In the most recent arrangement of Canada's exports in descending order of value, the first eight were raw products whose value was 60.7 per cent. of that of all domestic exports; twenty-one out of the first twenty-five were raw products to a corresponding ratio to the value of all domestic exports of 74.7 per cent. The other four were manufactures, namely, whiskey, automobiles, machinery, and photographic film, to an aggregate value of 4.9 per cent. of all domestic exports. Of all males gainfully employed

L | 9884

at the date of the 1931 census, 39.1 per cent. were directly employed in these extractive industries. The greater part of all the railway mileage of this country was built in order to further the growth of these industries, and much of it would be permanently valueless without their traffic. On a large proportion of such traffic the ton-mile rates are low. That is, however, offset in part by two considerations: first, these goods move long distances in full carload lots, and second, when the industries producing them are prosperous there is a heavy backward movement of finished manufactures which pay high rates. The correlation in the past between the prosperity of the export trades and that of the railways and of the country as a whole is too close to be without causal significance.

It is well known that these trades are now extremely distressed. Their selling prices fell suddenly and drastically after 1929; their costs for materials and labour lagged far behind. What is their position, now in the sixth year of the depression? It is not possible to give one answer to such a broad question about industries with divergent problems, but the behaviour of the wholesale-price indexes is the best single indication of the extent to which the structure of prices has been normalized. Table IV compares the prices of 1929 with those of October, 1934.

It will be observed that the international goods have fallen in price in this period about 3.8 times as far as have the domestic goods. That means that the capacity of their producers to command such domestic goods in exchange is proportionately lessened. It is difficult to perceive how they can afford to purchase larger quantities of such goods unless the spread between the prices at which they sell and the prices at which they buy is very greatly narrowed. Until that happens their capa-

city to demand consumers' goods is rigidly restricted and there is neither financial capacity nor profit-incentive to invest new capital in such industries.

TABLE IV.—Canadian Wholesale-price Indexes.[6]
(1926=100)

| | Yearly average | October 1934 | Per cent. decline |
|---|---|---|---|
| General Wholesale-price Index | 95.6 | 71.4 | 25.3 |
| *Group A—International Trade Goods* | | | |
| Vegetable products | 91.6 | 66.5 | 27.4 |
| Animal products | 109.0 | 67.5 | 38.1 |
| Wood, wood products and paper | 93.9 | 65.2 | 30.6 |
| Non-ferrous metals and their products | 99.2 | 62.2 | 37.3 |
| Weighted average | 97.0 | 66.1 | 31.6 |
| *Group B—Products fabricated for the domestic market from raw products* | | | |
| Fibres, textiles, and textile products | 91.3 | 72.5 | 20.6 |
| *Group C—Domestic goods* | | | |
| Iron and its products | 93.7 | 86.7 | 7.5 |
| Non-metallic minerals and their products | 92.9 | 86.2 | 7.2 |
| Chemicals and allied products | 95.4 | 80.7 | 15.4 |
| Weighted average | 93.6 | 85.8 | 8.3 |

In the field of immediate and practical policy this country is faced with two alternatives. The first is to wait in hope that some of the inflation dynamite which has been scattered around in the United States (and Great Britain) in the past two years will finally go off. If it does, there might be an upward movement in the prices of export goods which would in a short time wipe out most of the disparities noted above in table IV. During the waiting period before that happens (if ever), railway losses would continue, the amount of unemployment

[6] *Prices and Price Indexes*, 1913-32, and supplement for October, 1934, Ottawa, Dominion Bureau of Statistics. The weights used are those officially used in the preparation of the general index.

119886

would be little changed, relief costs would be high; but all of those would be, in the eyes of many, risks worth running if deflation could be staved off. But if such an inflation does not come, then deflation of domestic prices is inevitable. By one means or the other the two sections of the price-level must be brought into such a relationship with one another that a free exchange of consumable goods may again take place and that there may again be reason for the investment of savings in capital goods for productive purposes. To go on, as at present, putting all our savings into government securities which are issued to finance current deficits is stupid and may ultimately be disastrous.

Over the longer period, a reconsideration of tariff policy is long overdue. Some of the very low railway rates on export products, notably the Crow's Nest rates on grain,[7] are admittedly offsets to the burden of the tariff on the areas producing raw products. Since 1930 loans have been made to the provinces which have had the same effect. The time is quite rapidly approaching (if it has not already been reached) when these offsets will equal the benefits to the protected area. When that occurs the whole structure of high tariffs on the one hand and compensating subsidies on the other will be a piece of highly intricate, unstable, dangerous, and utterly meaningless machinery. It will add to the overhead costs of business in this country, distort the structure of production, reduce the productivity of labour and the real income of the community, and will not carry any net benefit whatever to those classes and areas which it was, at first, designed to help. It is one of the hopeful signs of the times that the business interests most intimately connected with the

[7] The Maritime Freight Rates Act, 1927, was passed for the same purpose.

extractive industries, *e.g.*, the railways,[8] the Winnipeg Grain Exchange, and the elevator companies are at last realizing that they cannot hold themselves aloof from this problem. It is at last possible to entertain some hope of an eventual return to sanity.

## II

It is all very well to say that the problem is a problem of the depression; but the genius of the capitalistic system has been that the pressure of losses has forced the executives of each firm affected to make the necessary readjustments in its costs. When enough of them have done so (and the others have failed) prosperity returns as a natural consequence. Why should that normal course not be followed now? What adjustments are possible? What savings do they promise without waiting for a return of general prosperity? How can they be put into effect?

At the present time the policies which are under discussion are complete amalgamation of the Canadian National and Canadian Pacific Railways, or, alternatively, the maintenance of their separate identities with the enforcement of a close co-operation between them. Of the two, amalgamation has been held out as promising the greater saving in money and will be discussed first. The estimates of possible savings by amalgamation ranged between $50,340,000 and $75,000,000[1] based on the gross earnings of 1931 and of 1930 respectively. Those sums amount to 14.1 per cent. and 16.5 per cent. of total

[8]See, for example, the speech of Mr. D. C. Coleman, vice-president of the Canadian Pacific Railway, to the Toronto Railway Club on December 8, 1934 (Toronto *Daily Star*, December 10, 1934, p. 3, col. 1).

[1]Mr. S. W. Fairweather, director of the Bureau of Economics of the Canadian National Railways, using 1931 gross earnings as his base, estimated total possible economies of $50,340,000; this might be increased to $56,440,000 with a 30 per cent. increase in gross (*Proceedings of the Royal Commission on Railways and*

119888

railway earnings of their respective years. They are, therefore, important amounts both absolutely and relatively.[2] Totals of that kind, however, are no better than the items which go into them and the assumptions on which they are based. How carefully were these estimates made, and what do they assume?

Unfortunately, the discussion of the detailed estimates is a technical matter which would require an inordinate amount of space. It is given as a considered judgment that even the most resolute executives, working under the most favourable external conditions, could not realize ultimately more than $40,000,000 on the traffic of a normal year. The postulates on which these estimates are based are of manageable form and can be discussed. Both estimates assumed that it would require five years to work out such a programme, getting increasing benefits in each of the transitional years. So many lines would be abolished, so many terminals re-arranged, that it would be impossible ever again to have two separate systems without prohibitive cost. If an attempt were made to retain the physical properties necessary to two systems, the larger part of the possible economies would automatically evaporate. Amalgamation might or might not prove to be a solution of the problem; but it would have to be made permanent before it could produce anything of value. Mr. Fairweather's primary postulate was that

*Transportation in Canada*, 1931-2, V, pp. 18-32, December 16, 1931). Mr. E. W. Beatty presented an estimate prepared by a committee of officers of the Canadian Pacific of total savings in railway operating expenses of $64,268,000 and a total net gain of $75,000,000 (*ibid.*, IV, pp. 2401-76, February 19, 1932; see also an earlier submission on the same topic, *ibid.*, II, pp. 902-63, January 5, 1934). This latter estimate was part of a proposal for action and in Mr. Beatty's opinion was fully realizable, possible economies to which a money value had not been given being as great as, or greater than, any doubtful items in the estimate.

[2]But it should be noted that Mr. Fairweather's estimated saving of $50,340,000 amounted to only 3 per cent. of his estimate of the total cost of transport in Canada, by road, rail, and water.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

CANADA

119889

"this programme was predicated upon a docile or practically helpless public and on an equally docile or helpless staff of employees."[3] Mr. Beatty made assumptions which were even more sweeping. He thought that managing the enlarged organization presented no problem.[4] So little did that question worry him that in the detailed estimates of savings there was allowance made for a reduction in the unit costs of superintendence. Further, "an allowance has been made for the benefit to be derived from . . . the purchase of coal in larger quantities from the most favourable sources."[5] He did not think that the management would be less responsive to the needs of the

[3] *Proceedings, op. cit.*, V, p. 31. Unfortunately, some of the economies making up this total seemed to assume the same helplessness on the part of connecting American carriers. That, as was pointed out by Mr. George H. Parker, transportation analyst to the Commission, was an unjustified assumption. (See his covering letter on his first report to the Commission, dated March 30, 1932.)

[4] *Proceedings, op. cit.*, II, pp. 957-8.

[5] *Ibid.*, IV, p. 2419. In 1931, the Canadian National purchased 3,935,000 tons, the Canadian Pacific 2,998,000 tons of coal (George H. Parker, *Report for the Royal Commission on Railways and Transportation on the Transportation Situation in the Dominion of Canada*, June 10, 1932, I, pp. 131-8). It is something more than optimistic to expect reduced unit costs per ton because of consolidating such purchases; and if what is in mind is reduced use of Canadian coal in areas where American coal is definitely cheaper, the whole question of subsidies to the less favoured areas is raised. It was estimated by the Department of Railways and Canals that the Canadian National was put to an additional expense of $1,120,247 by such purchases in Nova Scotia, Alberta, and British Columbia. The following statement by the premier of Nova Scotia, in private session with the Duff Commission, in answer to the question whether the people of Nova Scotia had any definite preference for private or public ownership, is of interest for its possible bearing on this subject: "I don't think there is any fear of monopoly. We have the Board of Railway Commissioners to whom we can always appeal, and we feel that is a very satisfactory thing. Moreover we can always appeal in the final analysis to public opinion. I do not think we have very much fear of monopoly" (*Proceedings, op. cit.*, II, pp. 1060-1, January 11, 1932). The attempt by a railway monopoly, whether public or private, to interfere in a delicate matter of sectional balances in the name of economy and without being able to offer offsets to what is taken away, might have most uncomfortable and unlooked-for results; while the attempt to find offsets would involve it in essentially political negotiations.

119890

community even though it possessed a monopoly.[6] Although 5,000 miles of line were to be abandoned, there was no provision for any compensation to the populations affected, and it was assumed that there would be no need to offer compensation to any of the displaced employees because the normal turnover of labour would reduce staffs at least as rapidly as the economies went into effect.[7] Formally, he seemed to think that there would be much less danger of political pressure upon a railway monopoly if it was in private hands than was now exerted, though there are certain indications that a wise monopoly knew when not to ask too much.[8]

Enough has been said to show the highly doubtful nature of these assumptions. Why, then, did Mr. Beatty press so hard for amalgamation? Why does he still use the estimate of $75,000,000 of possible savings,[9] which was originally made on the basis of 1930 gross earnings, despite

[6] *Ibid.*, II, pp. 941-3.

[7] *Ibid.*, IV, pp. 2422-3.

[8] That amalgamation would not remove the possibility of political pressure is shown by the following extract (*ibid.*, IV, p. 2462; and see also p. 2475 for further evidence of accommodation to such pressures): In the examination of February 19, 1932, Mr. Loree asked why, with 16,000 miles of line with traffic density less than 250,000 ton-miles per mile of line per annum (the estimated minimum paying quantity), it was proposed to abandon only 5,000 miles? Mr. Beatty replied that they studied the situation to see where they could withdraw without harm; their estimate being, in any case, a minimum and not a maximum one. Commissioner Loree: "That indicates that you propose to abandon the line to Prince Rupert?" Mr. Beatty: "No, sir." Commissioner Loree: "Is there any reason why that should be maintained?" Mr. Beatty: "None except political reasons."

[9] "I believe that I am safe in saying that we waste from fifty to seventy-five million dollars a year in the operation of unnecessary railway facilities in this country . . ." (*The Logical View of the Railway Situation*, address before the Board of Trade and service clubs of Vancouver, September 4, 1934, privately printed, p. 7). As is pointed out above, such an estimate postulates a complete freedom from political pressure and from resistance from the organized railway trades. It is also based on gross earnings of 1930. Neither of the first two is a workable assumption. Gross earnings from railway operation were $454,232,000 in 1930; $270,278,000 in 1933; and may slightly exceed $300,000,000 in 1934.

119891

the enormous reductions in expenditure since that date? The answer appears in his cross-examination by the Commission on February 19, 1932. What follows is pieced together from that source.[10]

During the War the government had taken over the lines now forming the Canadian National Railways because it thought such a course necessary in order to preserve the credit of the Dominion. It had proceeded to put them in proper operating condition, to which no great objection could be taken. That process was completed by 1923 and was followed by a programme of unlimited expansion.[11] That expansion had been most detrimental to the Canadian Pacific, which had been forced into competitive capital expenditures in order to maintain its position. The existing depression had put a stop to such expenditures for the time being only. So long as the government remained a shareholder in the Canadian National, so long was the Canadian Pacific exposed to a revival at any time of a ruinous level of capital expenditures by the National system.[12] With that danger continuously hanging over it, the company's interest lay quite as much in getting the government out of the railway business as in making any immediate adjustment which would temporarily ease the financial strain.[13] The Canadian public had never considered the question fully. Questions of national policy had always arisen to obscure the issue; but now the time had come. If only the Commission would "paint the picture accurately even if it be in somewhat sombre colours,"[14] then it was proper to look for such a

119892

reaction here as took place in Great Britain when the May Committee's exposure of the budget deficit was followed by the threat to the gold standard.[15] In short, Mr. Beatty's main effort before the Commission was devoted to getting the government out of the railway business, not to the development of plans for economy in current operation. To say this is not to impute blame. That was the logical and necessary position which would have been taken by any head of the Canadian Pacific if he felt there was a chance of getting a permanent and favourable solution.

This also goes a long way toward explaining the radical difference between the opinions of the Canadian National and of the Canadian Pacific executives on the relative merits of co-operation. It was the repeatedly expressed opinion of Mr. Hungerford[16] that just as much could be accomplished by co-operation as would ever be possible by amalgamation. The essence of railway operation was that it was carried on beyond the direct control of the executive officers who had to rely on the loyalty and enthusiasm and honesty of the men themselves. Under amalgamation that quality of enthusiasm would evaporate, and its loss would counterbalance most of the gains made in other directions. Lines could be abandoned by agreement just as well as under a monopoly. Agreement could be reached on the joint use of certain facilities. It

[15] It will, however, be remembered that almost as soon as a national government was formed in Great Britain to protect the gold standard it was forced to abandon it by a combination of international pressure and the impossibility of cutting money costs of production at home as fast as international prices were falling. It may equally be doubted on the basis of table III, above, whether even a national government and a railway monopoly could together have safeguarded all railway-security holders against the sweep of the depression in the past five years.

[16] *Proceedings, op. cit.*, II, pp. 774-901, January 5-6, 1932, especially p. 893; and IV, pp. 2501-43, February 20, 1932, especially pp. 2536-7.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119893

was a problem of will, not of fact. Furthermore, this solution left a flexibility which its alternative, amalgamation, did not. For Mr. Beatty that was not so. The gains from co-operation were of necessity small. The most that his committee of officers could find was $6,348,000 per annum:

> . . . Conflict of interest and of governing policy is bound to exercise a restraining influence. Prestige and goodwill are of the utmost value in the railway business and withdrawal from certain areas by companies professing to give national service might endanger both and do damage to the morale of the whole organization. The operation of a transcontinental system cannot be localized . . . . In short, competition and co-operation are in practice irreconcilable.[17]

The net effect of these conflicting views is a dangerous stalemate. Co-operation has, for reasons not yet fully disclosed, failed to produce more than a small fraction of Mr. Beatty's estimated saving, which, in the light of the preceding paragraph, was probably highly conservative. There is little or no hope of getting amalgamation. The Commission appointed to study the matter turned that solution down flat.[18] Even if the Commission had made such a recommendation, it is doubtful whether it could have been carried in the country at large. The people of the Prairie Provinces have altogether too clear a picture in their minds of what would be the result of confiding their essential interests to one railway system. Their feeling is only partially submerged: it has not been permanently lessened; it is a form of economic claustrophobia and would break out again in some violent form if a monopoly of any kind were established.

[17] *Ibid.*, IV, pp. 2407-8. Mr. Beatty is repeating in substance what he had to say at an earlier hearing (II, pp. 902-4, January 5, 1932).

[18] *Report of the Royal Commission to Inquire into Railways and Transportation in Canada*, Ottawa, King's Printer, 1932, chap. v.

How can this deadlock be resolved? As things now are, it never can. So long as the Canadian National has even a potential call on government funds to finance capital expenditures and unnecessary operating deficits, so long will the Canadian Pacific not dare to enter fully into plans for co-operation with it. The answer lies in two related actions. First, the Canadian National must have its debt-charge written down to a level which it can properly be expected to bear. Present obligations in excess of that level would be frankly and finally transferred to the Dominion Government, where they now rest in any case. The Canadian National management would be required to finance thereafter on its own responsibility and without guarantee. As a means of easing the strain in the weaning period, they might be given, say, $25,000,000 of government guaranteed bonds for use in emergencies, which they could use at their discretion, but with full knowledge that, once used, they would receive no further aid. That is offered as the nearest substitute now possible for the return of the Canadian National to private ownership under acceptable conditions. Its faults are patent, but it at least has the merit of attempting to end the present division of responsibility between the government of the day and the railway officers. The responsibility would be concentrated on the latter and enforced against them. Once that was done, one might properly expect a greater readiness on the part of the Canadian Pacific to enter into a programme of co-operation. This is not offered as a solution of the railway problem. But it is as near an approach as can be made to that solution by changes inside the railway structure. The major problem is to get an enlarged volume of traffic to provide revenues. Even these proposed changes must wait upon that if they are to be implemented.

## III

The immediate problem before this country is the normalization of its price structure and the restoration of activity. Until that occurs it must continue to stagger through a morass of unemployment, government deficit, railway losses, and the like. From that cloud of testimony which darkens counsel—complaints of relief costs, of the rising costs to the Ontario Hydro of power contracted for but now unused, the pitiful bleatings of bank presidents on the mounting deficits on railway and other accounts—there rises one meaning only: they all complain of the disparities created when the sheltered sections of the community resist a drop in the rate of their remuneration in keeping with the drop in prices at which the basic products are sold abroad. It might be possible to stabilize either prices or production; but the only possible result of the attempt to fix certain prices while others move is to cause inordinate movements in the volume of production.

The pressing railway problem is a function of the depression, and will, in large measure, be automatically solved as the depression lifts. Amalgamation is not a solution: it is a final act of despair. Even to Mr. Beatty it is not the ideal solution: "... I have always hoped that some day we would have two private systems in reasonable competition with each other."[1] If it were to be adopted, the railway security holders (including the government as owner of the Canadian National) could not hope to save the full economies for themselves. The new organization would have to bear the full brunt of political and sectional pressures for lower rates, which can now be diffused between the two railways. Railway

[1] *Proceedings, op. cit.*, IV, p. 2470. It will be noted that this statement appears toward the end of his examination.

119896

employees now are among the highest-paid groups of workers in the country. If they were brought into closer unity by a common employment they might well become one of the most powerful political forces in the country. Even if both these considerations be set aside as negligible, there still remain certain very weighty questions. Could the executive officers retain that close and intimate control of the property if it was expanded to 37,000 miles of line? Would they remain as sensitive to the needs of the community as they now are under competition? It is not a question of regulation by a Board of Railway Commissioners with enlarged powers. What is called for is initiative; and that is not provided by regulation. It is a fact of no mean importance that within two or three years after a monopoly was formed there would be no measuring stick by which to judge of its operating efficiency. What would happen to the *esprit de corps* which now animates the employees of both lines? Could it be kept at the same high level under monopoly? The loss of it might mean a very serious increase in costs. The whole question was most carefully canvassed by the Duff Commission. Their time and attention went to it almost to the exclusion of other considerations. They came to the conclusion that it was not a desirable thing because of the problem of management and of "a natural and justifiable hesitation to commit finally future generations, and even the present one, to a policy adopted under the stress of difficult circumstances which may not be best adapted to a new set of conditions difficult to forecast."[2]

The past seventeen years have demonstrated that the Canadian National can be built up to any desired point of size, efficiency, or competitive strength, regardless of

[2] *Report of the Royal Commission on Railways and Transportation in Canada*, 1931-32, para. 199.

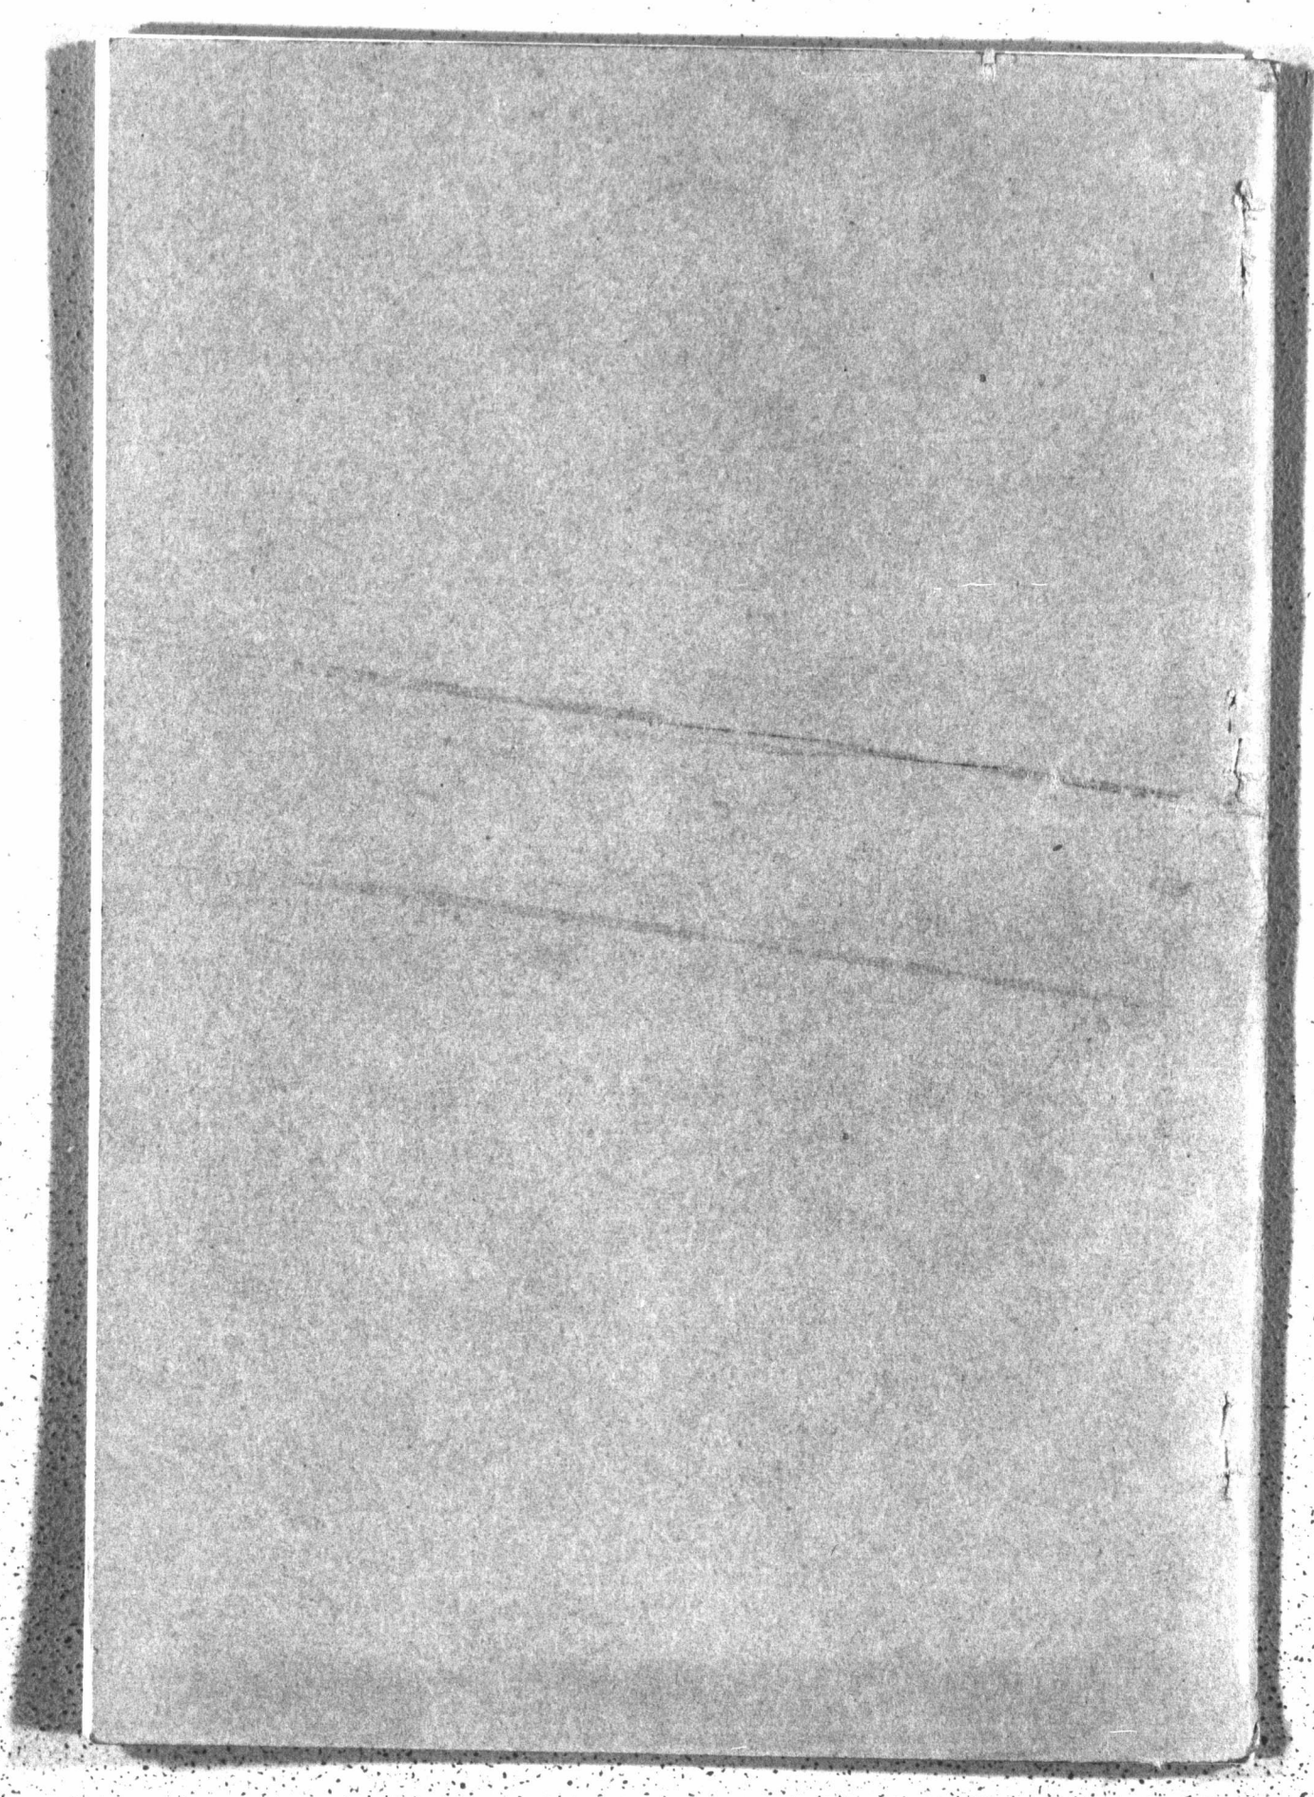
119697



the rate-level. The results tend to show up in an accumulating funded debt and in a continuous and an increasing pressure on the Canadian Pacific Railway. They indicate that, if the process is continued long enough, the latter will ultimately prove unequal to the strain. To continue in our present course would be gravely unjust to those who have invested in it; it would also be a piece of criminal folly even from the most narrowly opportunist point of view. This country must remain flexible in its economic organization; it must be a region of low transportation costs. Those are basic pre-requisites to its prosperity. The inevitable end to our present course is a government monopoly. Should the management of such a monopoly run to seed, what would be the effect on the economic organization of the country?

The people of the Prairie Provinces have inherited an antagonism to the Canadian Pacific from the time when they were wholly dependent upon it. Through the 1920's they were ready to encourage any level of capital expenditure by the Canadian National without regard to the effect of such expenditures on the Canadian Pacific. If they are now to show themselves as much interested in their future prosperity and in their freedom from dependence on one railway system as they have been in riding an ancient grudge, they will stand solidly behind the Canadian Pacific and see to it that it is given conditions in which it can maintain its full competitive efficiency.

## Professor McDougall on Railways: A Reply

This is a reply by Professor W. T. Jackman to an article by Professor John L. McDougall, of Queen's University, which appeared in the January, 1935, number of the University of Toronto Quarterly.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

At the beginning of his article in the *Quarterly* Mr. McDougall says: "This article will attempt to show what the railway problem of the country now is and to indicate some of the more important things that may be done about it. It will argue that the extreme seriousness of the financial situation is not in its essence a railway problem at all . . . . The problem is a financial problem, not a problem of practical operation" (p. 219). But a financial problem is very definitely a problem of practical operation, for railway operation is carried on with the object of securing the necessary finances in order to be solvent. Finances do not drop down from the skies; there is no other source whence they arise except from operation. A railway company cannot meet its financial problem unless its operating results are favourable. Moreover, Mr. McDougall's statement, that "the extreme seriousness of the financial situation is not in its essence a railway problem at all . . .", runs directly counter to the statement of Premier Bennett before the Toronto Board of Trade, on January 28, 1935, when he said: "Unless a solution to the present increasing railway deficit is found, Canada cannot maintain the fabric of her credit." These are the words of the government leader, who meets the railway problem at every turn.

Mr. McDougall says that his article is going to show what may be done about the railway problem; but, instead of showing some of these "more important things" that may be done for the improvement of the situation, his final solution seems to be to allow things to go on till the return of better times; for he says: "If revival in traffic is the only way in which we can make any real impression on the present problem, how is it to be brought about?" (p. 224). After this statement, he enters

68-1-98

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119900

upon the "reconsideration of tariff policy" as highly desirable. This, however, is not our immediate concern here.

A large part of the later section of his article is devoted to a criticism of the plan suggested by the president of the Canadian Pacific Railway, to the Royal Commission, for dealing with the railway problem, namely, the unification of the Canadian National and the Canadian Pacific for operating purposes. The purpose of this plan was to eliminate the disastrous wastes of competition and to divide the savings thus effected between the two companies. Mr. McDougall says that under this plan "so many lines would be abolished, so many terminals rearranged, that it would be impossible ever again to have two separate systems without prohibitive cost" (p. 229). There is every reason why, in the interest of saving, the useless lines and the unnecessary terminals should be scrapped. Some of these expensive terminals, such as the Montreal Terminal project, should never have been undertaken. As to the abandonment of lines, are we going to continue operating many unprofitable and useless lines (and terminals) simply because they have been constructed, often for political purposes, and have been in partial or intermittent use? Both railway companies urged abandonment of a substantial mileage and it would only remain to determine what lines could be taken up with the least disadvantage. Many of these sections of country are served by highway transport and others are near existing lines of railway (*e.g.*, the line from Glen Tay to Whitby, that from Woodstock to Windsor, *etc.*). It must be remembered that not all lines taken up would be those of the Canadian National Railways. In any decisions of this kind, the Board of Railway Commissioners is the final authority.

Mr. McDougall, in criticizing Mr. E. W. Beatty's statements as to the benefits of unification of management, makes some wholly unjustified assumptions (pp. 230-1), which he makes no attempt to prove, and then says: "Enough has been said to show the highly doubtful nature" of the benefits of unification as stated by Mr. Beatty. Let us note some of these:

(1) "He [President Beatty] did not think that the management would be less responsive to the needs of the community even though it possessed a monopoly." In reality, the railway would be required to meet the competition of the motor vehicles, which are operating everywhere; and to meet the competition of these and other agencies it would be necessary for the railway to give the fullest service and the greatest advantages to the communities served.

(2) "Although 5,000 miles of line were to be abandoned, there was no provision for any compensation to the populations affected, and it

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

1 1901

was assumed that there would be no need to offer compensation to any of the displaced employees because the normal turnover of labour would reduce staffs at least as rapidly as the economies went into effect." This inference is not justified by President Beatty's statement to the Commission. In regard to possible compensation for line abandonment, no general statements can be made, because the conditions vary so widely in different cases. Concerning the assumption—which is nothing more substantial than an assumption—as to compensation to displaced employees, he was outlining the basic principles, not giving the details, of his solution. Moreover, in frequent addresses he has referred to the necessity of caring for labour. For example, before the Regina Board of Trade, February 5, 1935, his words were: "I repeat what I have already said, that protection for labour is a necessary part of my plan, and that savings in that regard should be made gradually, wisely and considerately, and without hardship to those now dependent on railway employment."

(3) "Formally, he [President Beatty] seemed to think that there would be much less danger of political pressure upon a railway monopoly if it was in private hands than was now exerted, though there are certain indications that a wise monopoly knew when not to ask too much." Neither in the Drayton-Acworth report of 1917 nor in the report of the Royal Commission of 1931-32 was there the least suggestion that political influence had been attempted toward or by the Canadian Pacific. But this was far from being true of the Canadian National, and the president of that company made a very definite statement to the Duff Commission that a government-owned enterprise could not get rid of political interference.[1]

Mr. McDougall seems to think that there would be a railway monopoly if the two roads were being operated together by a private company. But the minister of railways and canals has recently stated upon two occasions that the monopoly would not be economic but of a political nature.

Following such representations as the above Mr. McDougall says: "Enough has been said to show the highly doubtful nature of these assumptions" (p. 231). He would need to present some *facts*, rather than mere suggestions, if he would obtain the approval of the thoughtful reader for such a statement. But many of his other statements are equally incapable of substantiation. For example, we noted above the words in his first paragraph that the railway problem "is a financial problem, not a problem of practical operation", and we have shown the

[1] *Report of the Royal Commission to Inquire into Railways and Transportation in Canada, 1931-2* (Ottawa, 1932), p. 51.

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119902 [illegible]

fallacy of this. Its chimerical nature may be enforced by the recent report of the federal co-ordinator of railroads in the United States, who says it is a question of operation and obtaining economy of operation by co-ordination of railroads and other facilities.

Again, Mr. McDougall says that President Beatty, in his evidence before the Royal Commission, showed that the Canadian Pacific was exposed to the renewal at any time of the extravagant scale of capital expenditures by its competitor. "With that danger continuously hanging over it, the company's interest lay quite as much in getting the government out of the railway business as in making any immediate adjustment which would temporarily ease the financial strain. . . . In short, Mr. Beatty's main effort before the Commission was devoted to getting the government out of the railway business, not to the development of plans for economy in current operation . . . . That was the logical and necessary position which would have been taken by any head of the Canadian Pacific if he felt there was a chance of getting a permanent and favourable solution "(pp. 232-3).

This certainly does not give a statement of fact. When one examines President Beatty's evidence before the Commission there is no indication of any such view. He knew that so long as the government owns the Canadian National, and could not dispose of it if it wished, there is no chance of "getting the government out of the railway business". His evidence before the Commission, and any public statements made dealing with this matter, show that his solution was to effect economies by unified operation and to divide the amount saved between the two companies on an equitable basis.

It was the seriousness of the general situation which induced him to make such a proposal. The increase of this railway's debt from the time the government acquired the lines to the end of 1934 brought the net debt at the latter time up to $2,764,964,294,[2] which is more than double what it was when the roads were taken over. In the face of this situation it is no wonder that the Royal Commission persistently emphasized the serious situation, stating that "drastic measures of economy are imperative" and striking "a serious note of warning to the people of Canada". It was the endeavour to outline proposals for meeting this problem that brought forth President Beatty's statements in his evidence, not the motive which Mr. McDougall attributes to him.

Still more recently some of our public men entrusted with the administration of our banks—those institutions which are so intimately

[2] *Debates of the House of Commons of the Dominion of Canada*, Feb., 13, 1935, p. 841.

CANADA

1 9903

connected with the business and social welfare of the country—have again reminded the country of its serious situation. At the last annual meeting of the Bank of Nova Scotia, the president was very urgent in showing the danger of the country's financial debt burden. Likewise, the president of the Dominion Bank, at its recent annual meeting, deplored the continuance of a "dual transportation system" with the yearly accumulations of the Canadian National Railway debt, and urged that this situation demands instant solution. When these and other men who are entrusted with the people's savings give such insistent warnings, it is a complete perversion for Mr. McDougall to say that a revival of traffic is the only way in which we can make any impression on the present problem (pp. 224, 235), and his reference to "pitiful bleatings", of bank presidents regarding the mounting railway deficits is a gratuitous insult.

It is evident that the seriousness of our railway problem is bound up intimately with the problem of government ownership; and the prime minister of the Dominion in his address before the meeting of the Toronto Board of Trade, January 28 last, was very explicit in this matter: "So long as there are men thinking only in terms of party politics there can never be a solution of the railway problem in Canada . . . . Unless a solution to the present increasing railway deficit is found, Canada cannot maintain the fabric of her credit." But Mr. McDougall dismisses all such statements with a wave of the hand and says: "The pressing railway problem is a function of the depression, and will, in large measure, be automatically solved as the depression lifts" (p. 236). It was a problem of this magnitude, which became critical before the depression, that President Beatty was discussing before the Royal Commission, with the purpose of presenting a means of gradual amelioration of our railway conditions, and not the problem of putting an end to government ownership, as Mr. McDougall would want us to believe.

"Lines could be abandoned by agreement just as well as under a monopoly. Agreement could be reached on the joint use of certain facilities "(p. 233). Such a statement shows that its writer knows very little about the practical problems in connection with business and government; for in the case of two lines, one of which is privately owned and uninfluenced by political pressure, and the other government owned and continuously subject to political and community pressure, anything like agreement as to the abandonment of lines is attained with great difficulty. As was stated by Mr. R. B. Hanson (now minister of trade and commerce) before the Select Standing Committee of the House of Commons on Railways and Shipping in 1934, if a member of Parliament cannot hold a particular line in his constituency from being abandoned,

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

D 19904

he is very likely to go down to defeat; and when he was chided about bringing politics into this matter he said: "That is all right. You can never get it out of politics." He emphasized this still further by saying: "You can't get it out. Public opinion in your communities won't let you."[3] This is confirmed by the minister of railways at the same sitting of this Committee, when he said: "If you spread out the list of the lines that might be abandoned, which are only being considered, the concern by any section of the country that is affected, the uneasiness and discontent, would, I am afraid, cause not only the government but the railway management and members [of Parliament] to be inundated with complaints." So long as votes are forthcoming for the government party from the district in which the abandonment of a section of the government-owned line is being contemplated, there is little likelihood of its being abandoned.

"Co-operation has, for reasons not yet fully disclosed, failed to produce more than a small fraction of Mr. Beatty's estimated saving . . ." (p. 234). To those who are familiar with the specific problems which have to be solved, it is not surprising that progress with co-operative measures is slow. One of these difficulties arises from the perplexity of making agreements when the fundamental force behind the government-owned line is entirely different from that of the privately-owned line. We have already exemplified this and need not pursue it further. But upon the purely economic basis the complication in connection with agreement of these two companies makes this issue one the importance of which is realized by but few.

For example, suppose the two companies were considering the abandonment of the Canadian National line from Parry Sound to near Sudbury. There is little local traffic over this line. Under what remuneration would the Canadian Pacific allow the Canadian National to operate over the Canadian Pacific tracks? The natural answer would be that the Canadian National should pay the same proportion of the Canadian Pacific maintenance costs, *etc.*, as the gross earnings on the Canadian National tracks to be abandoned bear to the gross earnings of the Canadian Pacific on its line. Let us assume, for the sake of argument, that the Canadian National earns $200,000 and the Canadian Pacific $800,000. The Canadian National, therefore, when its line was abandoned would pay one-fifth of the cost of operating the Canadian Pacific line. But immediately another aspect comes into view. An industrial company has a plant located on this part of the Canadian Pacific line. With the Canadian National reaching this plant now, which they would under the dual operation on this line, the industrial

[3] *Proceedings* of the Committee, June 6, 1934, p. 25.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

11905

company might feasibly divide its paying traffic between the two railways. The Canadian National, therefore, would receive, say $250,000 of earnings not now accruing to them and would be paying only one-fifth of the cost of operating the line. The Canadian Pacific might be losing a substantial amount of revenue which it now obtains, and the Canadian National would be reaping a considerable surplus of net revenue. Even if this situation could be adjusted satisfactorily, there would be no basis upon which division of earnings received from another jointly operated line could be determined in advance. The whole argument would have to be considered, due to different conclusions. But under unified operation the Canadian National line would be abandoned and the final net revenue from operating this division would be divided equitably between the two railways.

We could go on to great length exemplifying the economic difficulties attending co-operation, and the more one knows the actual circumstances attending railway operation the more evident does it become that co-operation is not the solution of our railway problem. On the other hand, unified operation has a great deal in its favour.

This brings us to another statement made by Mr. McDougall, that the Royal Commission turned down flat the amalgamation proposal. But this was not suggested by President Beatty. His plan was unified operation, not unified properties. Unfortunately, some have gone around the country saying that it makes no difference whether you call it unification or amalgamation: they mean the same thing. They would mean the same thing if merging of the properties into one organization were intended. But unified operation means something altogether different from amalgamation, notwithstanding the distortion of the meaning, as the terms were explained to the Royal Commission.

Mr. McDougall says that "as near an approach as can be made" to a solution of the railway problem "inside the railway structure" is to write down the debt of the Canadian National "to a level which it can properly be expected to bear", transferring the excess to the Dominion government, and thereafter requiring the Canadian National "to finance on its own responsibility and without guarantee" (p. 235). It might be given $25,000,000 of government bonds to start it off. It is a strange contradiction to say that "revival in traffic is the only way in which we can make any real impression on the present problem" (p. 224), and then to say that there may be an approach to a "solution by changes inside the railway structure". This scheme seems to be a particular favourite of Mr. McDougall's; for he has previously said that

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119906

this writing down of the debt would be the nearest to a solution;[4] but in that case he said this would have to "wait upon recovery from the current depression", whereas in this case the scheme "is offered as the nearest substitute now possible . . .".

But leaving aside such inharmonious statements, it is evident that in presenting the bold outline of such a plan he has little, if any, realization of what this would involve. Concerning it, let us note the following:

(1) While the Canadian National is a government road, the government cannot divorce the road from itself by simply assuming some of the liabilities and leave the company to bear the remainder. The company is a unit, not a series of separate liabilities, and as such the *full* responsibility remains with the government for the entire obligations of the system. A government cannot say that it will be responsible for *some* of its obligations and place upon other interests the responsibility for the remainder of its obligations. No government can release itself from responsibility for its own property.

(2) The annual railway deficits which have now accumulated to enormous totals—being in 1934 $49,506,695 less than enough to meet interest on the debt due the public—and the interest on government loans, which, at the end of December, 1934, amounted to $459,486,186,[5] are as much a charge against the company as its debt to the public or the interest on that debt. By no reasonable system of accounting could the company be released from the former any more than from the latter. The same truth applies throughout the entire series of liabilities.

(3) A governmental business is entirely different from a private company under conditions of stress. A private company, when it cannot meet its obligations, goes into receivership and the creditors secure what they can, but the company passes out of existence or else is reorganized. The government, on the other hand, must meet its legitimate obligations. It cannot repudiate its just debts. It cannot be put into the hands of a receiver who will dispose of its assets and then give the creditors their share. Moreover, so long as these debts must be borne by the Dominion government, the source of the debts must be shown in the accounts. The government, in making a true statement of its finances, must show how these accrue—the sources of its revenue and the bases of its expenditures. It could not act differently in regard to a particular division of its business, namely, the Canadian National Railways. Any attempt, therefore, to write down the "debt-charge"

[4] *Proceedings of the Sixth Annual Meeting of the Canadian Political Science Association*, vol. VI, 1934, p. 133.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119907

of the Canadian National would be a clear indication of an attempt to disguise the real situation.

(4) If this deception were practised and the liabilities were written down, there would be still greater demands made upon the company for increased services and reduced rates. The late president was asked why he did not recommend that the capitalization should be written down and that the property should be operated free from active connection with, and control by, the government. His reply was that, if the debt were reduced, it would be only a few days before political or community interests would come to the management and urge that, because its obligations had been reduced, the company could now grant them increased service or lower rates, and, being a government-owned road, the company could not resist these demands.

(5) Akin to the foregoing, there is the consideration that if the debt were written down, so that it did not reveal the enormous amount of waste perpetrated by the governments of the country, there is every probability that in the future there would be precipitated another orgy of extravagant spending just as soon as the present conditions had passed out of mind.

(6) The plea that, after the writing down of its liabilities, the road "would be required to finance thereafter on its own responsibility and without guarantee", as Mr. McDougall suggests, would be ludicrous if the financial situation were not so serious. In order to finance its requirements the company would have to have a strong credit standing. But even if its liabilities were written down to the point where the road had enough revenue to pay its operating expenses and its fixed charges, including interest on the debt as thus written down, it would still lack the essential for a credit standing. In order to have a credit status which would enable it to borrow in the financial market, it would need to have a substantial surplus revenue which would furnish the basis of such credit requirements; and when the company could not have such a surplus revenue—since in 1934 it lacked $49,506,695 of meeting interest due the public—it is the height of absurdity to speak of requiring it to finance "on its own responsibility and without guarantee". The only thing it could finance without government guarantee would be the purchase of equipment through the usual means of equipment trust certificates.

Mr. McDougall offers this as the "nearest substitute now possible for the return of the Canadian National to private ownership under acceptable conditions" and he thinks that if this were done the Canadian Pacific might then enter into a programme of co-operation, while under present conditions "so long as the Canadian National has even a potential

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119908

call on government funds to finance capital expenditures and unnecessary operating deficits, so long will the Canadian Pacific not dare to enter fully into plans for co-operation with it" (p. 235). Such a statement is without foundation.

We have noted above the futility of this proposed solution; and, so far as the statement in the latter quotation is concerned, there is no more reason for saying that the Canadian Pacific will not co-operate with the Canadian National than to say that because the Canadian National has the long purse of the state behind it, it will not co-operate with the Canadian Pacific. But more conclusive is the statement in the Canadian National report for 1934, saying that both companies have "considered and discussed continuously" co-operative measures.

But Mr. McDougall says that even his proposed changes must wait upon the securing of an enlarged volume of traffic "if they are to be implemented" (p. 235). In other words, he considers that the present enormous financial burden must continue unabated and that nothing can be done about it until the enlarged volume of traffic can be obtained. But even assuming that we should have another year with the unprecedented volume of business of 1928, the revenues of the Canadian National would still be utterly insufficient; for in that year it was unable to pay the interest on its funded debt to the extent of a $29,868,437 deficit.[6] Since that time, of course, the annual interest obligations have increased, so that in 1930 they were approximately $10,000,000 more than in 1928.[7] Under these conditions, to speak of requiring the Canadian National Railways to finance its own needs without guarantee from the government is strange indeed.

"The pressing railway problem is a function of the depression, and will, in large measure, be automatically solved as the depression lifts" (p. 236). The government did not believe this; it therefore appointed a Royal Commission to develop a remedy and the Commission uttered some very serious notes of warning as to the immediate need of a solution. The Commission did not place the blame for the railway difficulties merely upon the depression, but listed seven "principal contributory causes". It did not tell the country that its railway problem would be "automatically solved" if the people would only exercise patience until better times returned. On the contrary, it showed the disastrous effects which would accrue from failure to solve the problem now.

Mr. McDougall repeats certain questions or suggestions of the Royal Commission, to which the latter gave only a hesitating answer (p. 237):

[6] *Canada Year Book*, 1931, p. 672.
[7] *Ibid.*, 1932, p. 554.

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119909

(1) Could the railway officers of a unifiedly operated system manage the entire 37,000 miles of railway? (2) Would the management be as sensitive to the needs of the community as the two are now when in competition? (3) Would the workers' *esprit de corps* be maintained?

In regard to the *first* we would say: (*a*) The present official staff are now managing the entire mileage and there is no reason for thinking that it could not be managed under a unified staff. (*b*) The system of decentralization, under which each system has its eastern and western divisions, and each of these its subdivisions, has been so satisfactory that the collective judgment of these officers enables them to formulate policies for a nation-wide system that will meet the needs of all parts of the country. (*c*) Large organizations in other countries, like the large railroad and industrial corporations in the United States or the L.M.S. railway in Great Britain have no inherent difficulty in management. The fact is that unified operation would make the problem of management much less difficult than under the present system with its diversity of officials and interest.

In regard to the *second*, consider the following: (*a*) The management would be as sensitive to the real needs of the community as either road is now, because it would be desirable for the management to retain the public goodwill in order to increase its traffic and revenue. Otherwise a larger share would be diverted to the railway's competitors. (*b*) The management could then act in a judicious manner, without regard to political forces, which at the present time are so powerful as to prevent the management of the Canadian National from following its judgment as to the wisest course.

In regard to the *third*, let us note: (*a*) The workers' *esprit de corps* depends in a considerable measure upon their attitude toward the management; and when the relations of the management and the men are acceptable there is the highest incentive of devotion. It certainly cannot be said that the private company's organization is lacking in this respect. (*b*) The *esprit de corps* depends also upon the nature and outlook of the business. A business with an uncertain financial standing can seldom have the same measure of devotion on the part of its officers and men as one which is able to meet all its legal financial obligations. If these two roads were operated as one property, so as to eliminate the vast amount of present waste and to obtain even the substantial economies which have been mentioned by Mr. McDougall, namely, $40,000,000 a year, a new day of hope would dawn, with a decided advance in the *esprit de corps*.

D 1991 1

Mr. A. J. Middleditch

Ladies and gentlemen:

I am going to deal, as far as I can, with the view point of the employees with regard to this question. Mr.Bowman is going into the question largely and I shall not take up a great deal of your time. We are going to leave the real meat of this matter with Mr.Bowman. He is well acquainted with it, and as the Chairman has stated, is capable of going into the matter in detail.

We have been enjoying a period of viewing with alarm. Sir Edward Beatty views with alarm the transportation problem; the financial interests view with alarm the transportation problem, and the Canadian Manufacturers Association are having a severe case of the jitters over the transportation problem. I tell you, ladies and gentlemen, it is not a transportation problem; it is a financial problem.

Sir Edward Beatty has come forward to slay the dreadful monster that is eating at the vitals of the Canadian Nation. He is going to save seventy five million dollars for us. Who are we to turn down seventy five million dollars. Really, we ought to hail Sir Edward as the financial saviour of the country, but, Ceasar had a phrase, "Timeo daneos et dona ferrentes". For the sake of those of you who have forgotten what you learned at school it means, "I fear the Greeks when they come bearing gifts". And we have every need to fear Sir Edward Beatty. Did you ever hear of a financier risking his own business in order to save his competitor ---- neither did I.

Now how is Sir Edward going to save this seventy five million dollars for us? He is going to save it by dispensing with the services of approximately 17000 employees of the joint railways, and he is also going to do it by abandoning 5000 miles of track. Now the main saving on employees has been estimated on the basis of an average salary of $1700.00 per annum. If this is the average salary, then I am underpaid. The actual average salary has been figured out at about $1300.00 per annum, and at this figure, in order to make the saving he expects, Sir Edward would have to dispense with somewhere in the neighborhood of 25000 and not 17000 employees, and that is something that he is not telling the public. Sir Edward states that the normal wastage of 5% per year would in five years offset this so that the employees interests would be protected.

Now I am in the position of being a sort of recording angel of the Dauphin Division to some of you fellows. I know your shortcomings, the things you have done that you ought not to have done, the things you have left undone that you ought to have done, and so forth over a period of years; and I was very sceptical of this figure of 5%. So, I looked up my records for the last ten years, and bear in mind that we have on our seniority lists on the Dauphin Division something like 1000 men. There are between 600 and 700 permanently employed. Also please bear in mind that when I speak of the Dauphin Division, I speak of the Canadian National System, and that when I speak of the town of Dauphin, I speak of any town that might be affected by this unification scheme. As I say, I looked up the records and found that in the last ten years 46 employees had been retired on pension on the Dauphin Division. If you figure that out you will find that that is less than one-half of one per cent per annum. I didn't let it stop there. I thought of a gentleman who should know what he is talking about. I wrote him and asked, "Can you tell me how many employees are retired each year, how many die, how many resigned", and he told me that approximately 1% of the employees are retired per annum. He didn't have any figures they could depend upon for resignations and deaths, but they are about the same. So there you have it --- 3% covers the normal wastage of the C.N.R. personnel, not 5% so that you can see that the normal wastage would take more than five years. Sir Edward, however, is very generous, he might even spread the scheme over seven years if necessary. He would have to go a lot longer than that.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119912

Now in his statement to the Senate the other day Sir Edward said, (I am going to quote his words) "Unification would help the workers by making their positions secure." He cited the case of the British Railways, where under amalgamation 70% of the workers were retained by the Railways, and the remainder were taken care of by the Government. In other words, in order to save the country from paying the Canadian National deficits the workers dispensed with would have to go on relief; there is no other explanation. Again, further on in his statement, Sir Edward said, quote: "I do not think the labor problem is serious. There are three ways of handling it. The age limit for retirement could be reduced; provision might be made for an allowance after a period of years, or the formative period of unification could be extended for seven years. I would not worry about that," he said, "There would be no serious dislocation of labor." He had given the matter a great deal of consideration. He was prepared to go "very far" in meeting human demands. What do you think of that now.

Let us read a little bit more that Sir Edward Beatty said in the Senate, and I can almost see Sir Edward weeping crocodile tears when he said it.

"The only reason for accepting unification is that it is in the national interest, and it is in the national interest because every measure which will reduce the cost of carrying on the vital task of transportation in Canada is in the national interest. It is in the national interest because the public finances of this country need relief, and unification will afford it. It is for these reasons that I have come to the conclusion that unification can not be avoided. I have never welcomed unification. The Canadian Pacific is a highly developed organization and an object of pride to all its Officers and employees. Under unification it will lose its identity - and that is a real loss to those of us who have spent a lifetime in its service. Even with the acute competition given it by what I consider has been an unwise venture of the state into the railway field, I still believe that the Canadian Pacific can survive as an independent institution. Far from eagerness to seize the publicly owned system, I feel deep regret that, only by unification, can we remove the greatest danger of which I know to the future of the nation. In a recent public address I said that unification is inevitable. The public need compels it."

What do you think of that? He has the national interest at heart, hasn't he?

The Ottawa Journal, (I don't know if any of you have seen it's editorials) wanted six questions answered on the subject of unification. They had reference to a speech made by Sir Edward. I am going to read the questions and their answers to you, I won't take too long, merely the questions and the answers. Please pay attention to the answers, they're good.

1. Upon what did the executives of Canadian Railways, in their evidence before the Duff Commission, base their estimates of such a saving?

Answer. The estimates furnished the executives of the Canadian Railways were arrived at after careful analysis of the traffic, service, equipment and facilities of the two railways.

2. Is Sir Edward himself in possession of facts leading him to suppose that such a saving would be possible?

Answer. Yes.

3. If so, what are the facts?

Answer. Based on a year of normal traffic volume, Sir Henry Thornton estimated possible economy of $60,000,000. Sir Edward Beatty's estimate was based on the year 1930 and showed a possible economy of $75,000,000.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119913

4. Would such a saving involve the tearing up of many miles of tracks, and, if so, how many miles?

Answer. The economies to be derived from the joint operation and management of the two properties are not primarily dependent upon abandonment of railway lines. The major part of the savings would be possible without any abandonment. However, careful analysis indicated that there were up to 5,000 miles of line in Canada which could be classed as duplicate or redundant. With a re-routing of traffic, some of such lines could be either abandoned or the standard of maintenance reduced in keeping with the changed nature of the traffic.

5. In the event of the necessity of tearing up tracks, where, in what parts of Canada, would the tracks be torn up, and where would a beginning be made?

Answer. As has been indicated, the tearing up of tracks would neither constitute the major nor initial step in securing unification economies. In carrying out the physical unification of the two systems, the first step would be to re-route the traffic in order to utilize the most economical facilities and secure the most efficient handling. The re-routing offers a wide scope for economies throughout the whole of Canada. After conditions had become stabilized on the route selected for permanent operation, the sections of track which should be abandoned would be clearly indicated and their elimination should be accomplished without serious friction.

6. Would such a saving necessitate the dismissal of railway employees, and, if so, of how many railway employees - this in view of the fact that so large a proportion of railway costs are labor costs?

Answer. Unified management of the two railway systems would ultimately result in a reduction of from 15 to 17 per cent in the numbers of those employed in a year of normal traffic. The number of railway employees affected at any stated time depends upon several considerations, such as whether traffic volume was increasing or decreasing, the rate at which the unification plans were progressing and the policy to be followed in regard to the employee situation. After all, the actual adjustment in labour employment will be solely dependent upon the rate at which it is decided to eliminate the present uneconomic cost of duplicate railway services. It should be possible to progress the plan of unification at a reasonable pace so as to keep the number of present employees unfavourably affected, and thus entitled to compensation, at a minimum.

Now I am sure my friend Mr.Bowman will appreciate all this, he is a lawyer, so is Sir Edward. He wrapped it up didn't he? You can't make very much out of that, and I don't think they did in the Senate either. It isn't an easy thing to tie Sir Edward down to facts.

Consider those men who are going to be dispensed with on account of the unification scheme, if it is put into effect. They will, as I have said, have to go on relief. They would lose their homes, all that they had invested, and their savings would be wiped out. Men who have spent half a lifetime in the service of the railway would be forced to realize on their homes, forced to retire in a world where labor was becoming cheaper.

Let us consider Dauphin, remembering what I said previously, that when I speak of Dauphin I also speak of every town that is going to be affected by this unification scheme. There are 235 employees working in Dauphin at present, just in Dauphin Terminal itself, not out on the Division. They own homes assessed at $265,350.00, they also rent homes assessed at $106,375.00, a total of $371,725.00. Now your total assessment for the Town of Dauphin is $1,982,000.00, at 55 mills

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119914

on the dollar, which is the tax rate this year the assessed property owned by the employees and rented by them pay $20,444.87 in taxes to the town, and the rates paid by the railway for light and water for the year 1937 was $10,570.78. Those of you that have your tax notices, look at the light and water surplus, take away the light and water rates paid by the employees and the railway and you would have a deficit and not a surplus. Do you begin to see what unification would mean to Dauphin if this terminal was done away with. Station staffs and offices would be removed, shops would be closed, and with the exception of a few men left on the track to take care of the reduced maintenance as suggested by Sir Edward, and possibly a few train and enginemen, all the employees would be forced to move elsewhere.

Take myself for instance. I have lived in Canada for 27 years, I have been in the service of the Canadian National with the exception of time overseas for a quarter of a century, and I have worked hard, as you all have, under present conditions all men who have worked for the Canadian National have worked hard, what is going to happen to us if we are dispensed with. Some employees, notably the train and enginemen, could go elsewhere and exercise their seniority. This is not the case with Office staffs, and shop staffs and sectionmen. There is no seniority off of this Division for us, so that I, if I were laid off as a result of this unification scheme, where would I be? -- Holding the bag. Yet Sir Edward Beatty says, he does not think the labor problem offers very serious difficulties. If these men have to leave Dauphin as a result of this scheme, those that are left, and I speak of those people who are not employees of the Canadian National here, you will have to bear the brunt of the taxes that I and my fellow employees do not pay. If I am forced to leave Dauphin and go elsewhere my home will be worth nothing, under these circumstances I could not sell it, I could not even rent it, and without a salary I could not pay the taxes on it and eventually it would go back to the town. And what would be the effect on you people that are left, your schools would be the first to feel the effect. Homes gone back to the town through being left and no one to pay the taxes. Your services would be curtailed. Dauphin would become again a small farming community. Not only would the loss fall on us, but on the business men who have invested in each town to serve the wants of employees, investment values would languish, business income crippled.

I want you to think of other towns besides Dauphin, and I am going to quote further from the Senate enquiry, and this will give you an idea. "When a railroad quits."

"In 1933 the Milwaukee railroad abandoned its branch line between Sioux City, Iowa, and Wynot, Nebraska, a distance of about 50 miles. The abandonment was made necessary by truck competition, which had caused the railroad to carry on operations on the branch line at a substantial loss for some time. The trucking concerns serving the area assured interested townspeople and farmers that they could entirely fill any transportation need. This claim was taken into consideration by the Interstate Commerce Commission in permitting the abandonment. Here, according to the Minnesota Grain and Feed Review, are some of the results.

> First, grain shipped from the affected area to Sioux City, thence to be sent east, was carried by railroads at 3 cents a bushel. To-day the rate is 10 cents a bushel. In the days of the railroad, coal was laid down in the farthest town on the branch line for 20 cents a ton. To-day the truck rate to close-in points is $2.00 per ton. Real estate values in the railroad-less area are at new lows. Town homes that cost $4,000.00 cannot find buyers at $500.00. Farm values have dropped from 50 to 75 per cent. The branch line railroad paid $28,000.00 each year in taxes to local units of Government. That sum has now been shifted to the remaining taxpayers.

This is no argument against trucks, in their proper field. It simply illustrates the fact that those who think an area can get along without the railroad don't know what they are talking about."

Rather illuminating, that, don't you think?

119915

The employees of the C.P.R. don't like this scheme any more than we do but they don't dare say anything, they can't.

The employees of the Canadian National Railways are, after all, public servants, and they are the lifeblood that animates what is a public utility publicly owned, and it is up to every one of us to keep it out of the piratical grasp of private interests, for that is what is going to happen to the property if we do not interest ourselves. Think of this in relation to Dauphin. Are there any elevator men here? If there are, I want you to think for a moment of the houses that you have along the lines of proposed abandonment. Are you going to leave your elevators there, or are you going to move them elsewhere, if so, where? Farmers on the abandoned lines would be forced to haul their grain to the nearest railroad, they would be going back to pioneer days when grain was hauled as high as 50 miles. The whole scheme is re-actionary.

This is a scheme to benefit foreign investors. I do not know whether it is any information to you, but I am an Englishman, I am very fond of my native land,but my loyalty is to the land of my adoption. I am not fond enough of my native land to see Canada ruined for the sake of 58% of the Canadian Pacific investors who live in Great Britain, indeed, these proposed savings could only be achieved by the inhuman process of disregarding the rights of men who have given years of their life to its building.

Mr.Deachman, M.P. stated in his speech on the railway problem, that if the wastage of 5% was true of the railway, then it was true of all industry, and we know it is not true, the result will be chaos.

I want you to think of one more thing before I leave this part. I told you before we have on our seniority lists on the Dauphin Division about 1000 men. There are just over 600 men permanently employed. That means that there are 400 men only getting seasonal work, as the fluctuation which Sir Edward Beatty refers to goes up and down, that is, as we move grain in the fall and as industry increases and we get tonnage to move, we take on more men. In the summertime we have more men working on our tracks, fixing them up to take care of the traffic. That accounts for a lot more men. With the exception of these track men we haven't taken on one man in the last ten years. Now where is your normal wastage of 5%? Those men who have been on the seniority list for ten years looking for work to do, what is going to become of them. They hold themselves available for a period of ten years. Have they no consideration coming to them? What will happen to them if permanent men are laid off as a result of unification?

Reverting to Mr.Deachman's statement. The opponents of the National System claim that it will collapse if it is not unified. By the same argument, so will Canada. It has one Federal Government and nine Provincial Governments and a thousand and one Municipal organizations, each overlapping and competing in some degree. Unified control here would be more efficient. If we are going to put the C.N.R. and the C.P.R.together, why can't we do the same with our Governments? I'll tell you the reason why. The people of Canada are not prepared to scrap their legislative machinery, their right to choose their own representatives. But some of them, mostly financial interests are prepared to swallow the propaganda for railway amalgamation that is being poured out in all directions. I have no doubt that some of you have read the effusions put out by the Canadian Manufacturers Association. Ask most of them what this is all about, they won't be able to tell you, they are all for this unification, but they do not know why. But there is one man among them - I don't know how many of you have read the current issue of the Dauphin Herald, if you have not done so I advise you to do so and read the letter written by Mr.H.L.McKinnon, President of the Melrose Products. There is a man who has no axe to grind, a Manufacturer, not a Railwayman, who practically put his future into a protest against the colossal claims of the C P.R.

If amalgamation is put over there will be a huge breach in the walls of democracy and the enemies of it will not be slow in moving in. There can be no compromise on the question of amalgamation. Not merely our jobs are at stake, but a defence of public interest and living standards of all Canadians against a major attack. The problem of the railways is an inheritance from the days of spendthrift private building and financing.

But the railways are not the only public utility that is piling up deficits. In this connection it is interesting to know that the excess of expenditure over revenue on aids to navigation, canals and harbors for the fiscal year ending March 31st, 1936 paid by the Dominion Government amounted to $32,057,018.00 and the excess of expenditure over revenue on highways for the year 1935 amounted to $37,866,826.00. These two competitors of the railways thus cost the people of Canada the huge sum of $69,923,844.00. This does not take account of the extra subsidies to air transport, but nevertheless amounts to nearly double the estimated deficit of the Canadian National Railways for the year 1937.

There are impressive rules and deductions to be drawn from the Canadian Railway experience, and the obvious one is that care should be taken lest the Government of Canada should be manoeuvered into a scheme of railway unification that will have amalgamation as its final consequence.

The annual C.N.R.deficit represents an adjustment cost of the Canadian method of maintaining a comperatively low freight rate schedule, 10 to 20 percent lower than on United States roads, this is notably true of grain. I will give you some figures that will illustrate this.

From Regina to Fort William, a distance of 776 miles the freight rate on grain is 20¢ per hundred, while from Glasgow, Montana to Duluth, a distance of 783 miles, only seven more miles you will observe, the rate is 35¢ per hundred. From Calgary to the Lake Ports, a distance of 1243 miles the rate is 26¢ per hundred, while from Rexford, Montana, a distance of 1245 miles, observe again only two more miles, the rate is 55¼¢ per hundred.

It would be equitable to increase the rates by 10% to cover the deficit, but the C.P.R. would benefit,and the result would be that we would not have to pay the C.N.R. deficit, the C.P.R.would get a nice little bit of velvet, and the farmer would not get so much for his grain. In other words, no matter how you shape it, whether you increase rates, or whether you retire railroad men earlier, or put them on relief, or compensate them in other ways, you are going to pay that deficit, the only thing that will take it off our hands naturally is a boom in business.

If, as Sir Edward Beatty states, the C.P.R. could get along and still operate at a profit, why does he not wait until the Government, representing the country come to him and ask him to save the National Railways? He would be in the driver's seat and would be able to dictate his own terms. He is being driven by his own shareholders to try and obtain control of the entire railway system of Canada. The National Railways, in spite of their deficits, is still a National Asset.

Sir Edward appeals to the well known rapacity of the tax-payer, and that is you and I, how many of us like to have our taxes reduced and not ask too many questions as to how it is going to be done. Yet, mark this, your taxes are never reduced without you pay for it in some way,and that is the basis of this appeal to the public to obtain a strangle hold on the National Railways.

Be sure that if Sir Edward Beatty does gain control, to paraphrase Mr. Joseph Chamberlain, your transportation will cost you more, if not directly, then indirectly. Are you going to help him do it. It is up to everyone that is interested in the welfare of his country to talk to the public on every opportunity you get to let them see that the C.P.R. and Sir Edward Beatty leading them, is out to gain possession of the National Railways at any cost.

Ladies and Gentlemen, I thank you.

Hon. J. L. Bowman

Mr. Chairman, Ladies & Gentlemen:

I have gathered from the remarks of the previous speaker that he has little use for Sir Edward Beatty. I cannot agree with him. I think Mr. Beatty is a very able man, and, if I were President of the Canadian Pacific Railway, I would do exactly as he is doing - continue to advocate unification - provided it was going to help the Canadian Pacific and I cannot imagine what else it is going to do, - Sir Edward is for it.

While in the East in the early part of this year I found this Railway question a topic of current conversation and interest. One person who, if I were to give you his name you would at once recognize as being one of the foremost men in the business world in our Dominion said to me - "This Railway question will never be settled until there is a crisis in our affairs -- The Canadian Pacific Railway will either have to go broke, or we will have to have a war and a union Government, before the Railway problem will really be grappled with in a serious way; otherwise no Government will undertake to deal with this question because it it is political dynamite." I think it rather unfortunate that the Railway question has become political dynamite. It is a matter of such tremendous importance to everyone in the Dominion that we should be able to consider the various aspects of the problem on their merits and free from all local, sectional and party prejudices.

I purpose viewing this matter from the viewpoint of the taxpayer, the man who has to pay the bill.--and of the owner. Mr. Chairman, if we could get across to the people that it is they who own the Canadian National Railway then our troubles would be over so far as any worry over unification or amalgamation is concerned. I travel Canadian National because it is 'my' Railway. If we could get the rest of the people, or the majority of them, to travel C.N.R. because it is their Railway or to ship their freight C.N.R. for the same reason, we would not need to worry over further deficits or losses.

When we speak upon this question and talk of hundreds of millions, and even billions, the huge sums involved make the question appear complicated. The truth is that the basic facts are not so difficult to understand. If we bear in mind the history of the formation of the Canadian National Railway system we will understand things much better and perhaps view the present situation from a different angle. One trouble today is that the advocates for unification so constantly and repeatedly emphasize the monetary losses of the Canadian National Railway system that this phase of the question alone is given consideration, while other sides of the problem just as important are wholly overlooked. This emphasis on deficits also creates dissatisfaction and in turn leads to agitation and a demand for action of some kind. It is the hope of some that the cry will be for "unification."

Of course we are losing money! Can anyone who has ever read history of the Canadian National Railway, and the manner in which it was brought into being expect it could do anything else under existing conditions than lose money? Major parts of the Canadian National Railway System were never built with the idea of profit. The Intercolonial system was built as a fulfillment of a pledge given by the Fathers of Confederation to the Maritime Provinces, that if they would come into Confederation the Maritimes and Upper and Lower Canada would be linked together by a Railway. When, then, in 1923 the Intercolonial Railway was brought into and became part of our Canadian National system it brought with it deficits of some four to five hundred millions of dollars which had accrued over previous years of operations and which hugh sums are now charged as part of our investment in the Canadian National Railway System. Then too, many hundreds of miles of Railway subsequently taken into the Canadian National System were built for the primary purpose of opening up new areas for settlement and for the development of the resources of our mines and forests.

May I quote from a speech I made some three or four years ago. "You are all aware of the conditions under which the Canadian Northern, the Intercolonial and Grand Trunk and Grand Trunk Pacific were merged into one great corporation called the Canadian National Railway System. I would draw attention to this fact, that at the time of that amalgamation it was really a merging together of bankrupt concerns. The Grand Trunk Pacific was in the hands of the receiver, the National Transcontinental was still in the hands of the Government; the Canadian Northern Railway had failed in its ability to carry on during the war period and had secured financial backing from the provinces and the Federal Government; the Intercolonial had shown deficits year after year, and the Grand Trunk had been dragged down to the verge of bankruptcy by the contract which it had made for the operation of the Grand Trunk Pacific. It must be borne in mind that during those years of the merger 1919, 1920, 1921, 1922 we were paying out immense sums to meet the deficits of these railways, as follows: 1919 - $55,000,000, 1920 - $80,000,000."

You will note that even as far back as 1920 we were paying out in deficits almost twice the deficit of last year.

"1921 - $70,000,000, 1922 - $58,000,000. It must be borne in mind that at that time we had a medley of bankrupt concerns operating as separate and distinct entities, and operating at tremendous losses, with a great preponderance of main line mileage over branch line mileage, and with forty-one per cent of the roads out of the hands of the construction contractors only with the previous ten years. These Railways were equipped as one might expect bankrupt concerns to be equipped. The first step for the new management of 1922-23 was to construct additional branch lines and to furnish the roads with proper equipment. To mention only a few of those items. Between 1923 and 1930 the following sums were spent: for branch lines, $65,000,000; permanent ways and structures, $106,000,000, of which $20,000,000 was spent in one item alone for creosoted ties; freight cars, $71,000,000; new passenger cars, $29,000,000; locomotives, $36,000,000; telegraph lines $7,000,000. One could go on giving similar sums which were spent in that way. It must be remembered when we speak of the tremendous sums of money which were put into these Railways that we knew what kind of a bargain we were making when we took them over. We knew that large sums of money would have to be spent to enable the railways to operate as an efficient and economical unit."

Sir Henry Thornton may have had his faults, and who hasn't, but no one can take from him the credit of consolidating and co-ordinating these bankrupt concerns into one of the greatest Railway systems in the world.

Just as that co-ordination and consolidation was nicely under way we were hit with the depression and unfair motor vehicle competition. Do not forget that prior to the depression this conglomeration of bankrupt concerns, still in the process of consolidation, did not do too badly. We forget these figures now because nobody is drawing our attention to them. As a matter of fact that is why we are having this meeting tonight. One of the best informed men on Railway matters, Honorable R. J. Manion, said to me in Toronto a couple of months ago. "The people of Canada are hearing only one side of this question". Well if that is a fact it is time we heard the other side.

What are the figures prior to 1930? In 1923, the first year after the Railways were merged, the net income of the newly formed Canadian National system totalled $13,000,000, the interest was $35,000,000, the deficit would therefore be some $22,000,000. Not bad when you review the figures quoted of losses of 55, 80 and 70 millions in the years 1919, 1920 and 1921. In 1924 the deficit was 24 millions, in 1925, 10 millions. In 1926 we actually made 2 millions over and above all interest charges. In 1927 we lost about 4 millions, in 1928 we made about 3 millions over and above all interest charges. At least the results of the merger during these years was better than the deficits which were paid in 1920, 1921 and 1922.

Then came the depression. In 1930 the net income fell off by 17 millions over the previous year and in 1931 there was a further falling off of income amounting to another 20 odd millions. Since then we have had loss after loss. Of course we had! Have not the majority of Railways in the United States taken just as big losses proportionately as the Canadian National Railway? Recently an

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119919

authority on Railway matters expressed the view that today there were only three Railways in the United States whose stock was worth a dollar. This may be an exaggeration but it at least indicates that the Canadian National Railway is not the only Railway system that is having trouble. One may pause to ask - How is it with the C.P.R.? Why this cry for unification if all is well in this quarter?

Now we are through the period of depression and if one views the figures for recent years the situation is not, perhaps, so black as it had been painted.

In 1931 our net profit on operations was a little over $1,000,000 (I give round numbers only) in 1932 $6,000,000; in 1933 $6,000,000; in 1934 $13,000,000; in 1935 $14,000,000; in 1936 $15,000,000; in 1937 $17,000,000. In other words net profits have risen from $1,000,000 to $17,000,000 in hard times, and yet we are told there is no hope, that the best think that we can do is to throw the Canadian National system overboard. Well, I for one am not prepared to do so.

Losses naturally lead to charges of inefficiency and extravagance and we have heard much of this in respect to the Canadian National Railway. Certainly there was error and extravagance in the years 1928 and 1929. The Company undoubtedly built hotels which should not have been built. The Seattle-Vancouver-Victoria boat service expenditure was a mistake, but what eminent financier or big Corporation in Canada or the United States did not make the same kind of mistake in the same period? How many of us individually did not make mistakes through those boom years? Yet there are those who would impress upon the Public that the management of the Canadian National Railway alone was unwise and extravagant during that abnormal period. As a matter of fact both our great Railway systems were guilty of over expansion at this time but to no greater extent than other individuals or Corporations.

Coming back to Unification, of which we are now hearing so much. Formerly it was "Amalgamation" now it is "Unification". "Amalgamation" is taboo since 1932 because in that year the Duff Commission decided that there was to be no Amalgamation. Now we have a different scheme, - There is to be "Unification" - but not "Amalgamation." The advocates of "Unification" tell us that by some mysterious process of shifting around the Railways, combining services here and there, abandoning this line and that, pooling trains and services we are going to save $75,000,000. I have carefully read Sir Edward Beatty's speeches on this subject. To me it is rather strange that not once in any of his public addresses on this subject has Sir Edward ever given the public details of the proposals which would effect this huge saving. At last some information in this regard is being made available through the Senate Committee at Ottawa at present investigating out Railway problem.

From this source we now learn that in 1932 either Sir Edward or some other official of the Canadian Pacific Railway Company submitted to the Duff Commission a secret proposal, the details of which have been kept from the public until the present time. What are some of the details of this proposal? Roughly - there were to be 39 abandonments, mostly C.N.R. West of Fort William. Of approximately 5000 miles of Railway thus to be dealt with 2216 miles of main line and 1042 miles of branch lines, or a total of 3258, were C.N.R. - 744 miles of main line and 961 miles of branch line, or a total of 1705, were C.P.R. Is that what we are to expect from Unification? Abandonment on the basis of 3200 odd miles Canadian National and 1700 Canadian Pacific? Kept secret for six years for fear, as we see from the Press, that the public in these proposed abandonment areas might not become too incensed over the proposal of abandonment. Is there any doubt in your minds as to why Sir Edward wants Unification? Does he want to help the Canadian National Railway or does he want to help his own system? Do I need to labor that point.

"Unification" -- what form is it to take? Well I presume that they have in mind the setting up of a Central Management Committee -- unified management -- a management to take over both roads. May I ask what kind of a management there should be if we are to have efficiency! Should you have a harmonious management, or should you have one, part of which is pulling this way and part in the opposite direction? Personally I cannot see much hope for harmony with a management composed of representatives of these two Railroad systems -- that is presuming such representatives are loyal to the Railways they represent. Could you expect harmony

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

ARCHIVES PUBLIQUES
CANADA

M 19920

and agreement, for instance, in considering the proposal for abandonment to which I have just referred?

In this proposal for unification Sir Edward states that he does not wish the two Railway systems to become one -- he wants the identity of the Canadian Pacific Railway to remain. You all know Winnipeg. Supposing under this unification scheme it is decided that either the Transcona Shops or the C.P.R. Shops are to be closed -- say that the Transcona shops are to be closed -- as that perhaps might be expected seeing that Sir Edward is proposing to take up 2200 miles of C.N.R. main line -- and that the work is to be done in theC.P.R. shops. Well, they do that and operate the one shop for six or seven or eight or ten years and it is decided, because times are better to put the C.P.R. back on its own and the C.N.R. likewise. Will someone tell me how you are going to do it? In the event of segregation how are the employees in this particular shop to be allocated? To the Canadian Pacific? - or to the Canadian National? And when you decide to make a division, after a period of years passes by, are you going to have enough employees to man both shops? And won't the same thing apply with regard to other services? After, say ten years, if we want the Canadian National back or the Canadian Pacific is once more to go on its own how are we going to unscramble the systems? Surely an impossibility. And so, I say, unification means first -- loss of identity. Sir Edward has just said that he does not want the Canadian Pacific to lose its identity.-- then to me unification means only one thing and that is the loss of the identity of the Canadian National Railway system.

Now let us look at this unified management from another angle altogether. What are we going to do with the revenues of the Roads when unification goes into effect? Are we going to pay part of the money into the pockets of the Canadian Pacific and some into the pockets of the Canadian National and pool the whole? Well, if we are going to have one management the monies certainly should all go into onepocket. Then how is it going to be spent? In considering this question it might be well to remember that the Senate in the year 1925 passed a resolution that the two Railway systems be brought under one directorate and that in addition to providing for payment of outstanding bonds and debentures of the Canadian Pacific Railway the shareholders of this Company be guaranteed a fair annual return on their stock holdings. It is abundantly clear that one of the ideas behind unification -- and perhaps the main one -- is that the shareholders of the Canadian Pacific should get, in fact be guaranteed, a return on their investment. The bond holders and debenture holders are fairly safe now. Enough money, in face 8 or 9 million dollars annually over and above requirements in this connection, is being earned by the Canadian Pacific at the present time. And so one must inevitably come to the conclusion that it is the ordinary shareholder of the Canadian Pacific who is to profit from unification. Speaking before the Senate Commitee within the last day or two Sir Edward Beatty stated that "Unification would permit the Canadian Pacific to earn a fair return on prudently invested capital." Are we prepared to enter into any scheme whereby we are going to undertake a further liability and take on another burden by way of guaranteeing a "fair return"to the shareholder of the Canadian Pacific Railway? And bear in mind that the present liability of the Canadian Pacific to its bond and debenture holders is approximately $20,000,000 a year. Might we not fairly ask ourselves the question as to what would happen if conditions did not improve and Railway revenues fell of instead of increasing. Might we not become liable for payment of the annual interest due the Canadian Pacific bond and debenture holders and thus shoulder another $20,000,000 annual payment in addition to the 40 or 50 million dollars which we are carrying at the present time? I for one say "No." If we cannot handle the deficits of our own publicly-owned system then certainly we are not in a position to take on any further liability and I prefer to take my chances with the Canadian National as a separately operated system than join up with the Canadian Pacific and attempt to operate under the huge and unwieldy system that would result from this union.

Before I sum up may I point out that in Canada at the present time,- and many people forget this, - there is legislation providing for co-operation. Perhaps co-operation may not have been the success that some of us expected nevertheless a saving of some $1,750,000 annually has been effected. I believe the main trouble in the past has been that the opposing factions in the joint co-operation Committee have not been able to get together. In my opinion further savings could be made, and without hurting anyone, if changes were to be put into effect gradually.

D 19921

I have, I believe, made it abundantly clear that Unification is not the answer to the problem; it is my confirmed opinion that it will only lead to the destruction of the Canadian National Railway. Have the taxpayers of the Dominion of Canada, after paying two and one half billion dollars into this vast, publicly-owned transportation system and after building it up into one of the greatest Railway systems in the world, arrived at the stage where they are prepared to risk the loss of this vast sum of money - almost as great as our National Debt - by a merging of our two great Railways for some theoretical or problematical saving? Do not forget that even if, as a result of unification, the Canadian Pacific were to emerge as the owner of both systems, Canada is still liable for a guaranteed debt of a billion dollars on the Government guaranteed bonds and debentures of the C.N.R. If we were to give the Canadian National Railways away today we are still liable for this huge sum and its annual charge of approximately $50,000,000.

Is the population of Canada to remain stationary? Is business never going to be better? Are we ready to throw up our hands in despair? Or are we going to adopt the attitude that I am sure the vast majority of us are in favor of and say - "These expenditures are behind us - we are the owners of one of the greatest Railway systems in the world - our population will increase - business will be better - let us carry on!"

What about our grain crop? Even last year with only half a wheat crop we paid $6,000,000 taxes into the coffers of the Federal Treasury and had another $8,000,000 to apply on the interest of the Railway Debt.

Then too are we going to say that two of the greatest Railway systems in the world, one of 17,000 miles and the other of 22,000 miles, under one management would be better, more efficient and bring greater returns. Rather would you not contend that the ablest management have enough to handle in the respective systems as they now exist. I quote from the report of the Duff Commission "The Management of so great a system (referring to amalgamation) might well become unwieldy and necessitate segregation."

Are we prepared to carry on as we are or do we prefer a monopoly? To this latter question the Duff Commission said "No." I quote again from its report. "To establish a monopoly of such magnitude and importance would place in the hands of those responsible for the administration of the system powers that would, if not properly exercised, prejudice the interests of the Dominion as a whole."

At the present time our freight rates on grain are the lowest in the world;-partially because we have competitive systems. One can very well imagine that if the Railways became one the first thing that might be expected would be an application for an increase in freight rates. Would it not be better to have a Railway system of our own which would give us some say in what the freight rates should be?

No matter how I look at this question of unification or amalgamation -- whether I look at it as a taxpayer or as an owner --- there is absolutely nothing in it to appeal to me nor do I believe to the average unprejudiced citizen having a knowledge of the basic facts. It does seem to me that we have everything to lose and nothing to gain through unification. Certainly it would lead to loss of the identity and perhaps the destruction of our Canadian National Railway System while not removing one iota of our liability as taxpayers for appreximately $50,000,000 per year on guaranteed debt.

Why not realize that we have a great Railway System of our own.

That having two transportation systems prevents the evils which always flow from monopoly -- that it insures competition and efficient services and equitable freight rates.

That the cost of building and equipping this great Railway System is behind us and that we are now the owners of a Railway System capable of handling passenger and freight traffic as efficiently and economically as any of the great Railways of the world.

That this System is operated by men highly capable of performing their respective tasks and duties and who are loyal to the System to the last degree.

That vast benefits continue to accrue to Canada through the products of new wealth from the farm, the forests, the mines and the great inland waters served by this vast transportation system.

That tremendous sums of money are yearly saved to this Dominion by the comparatively low freight rates at which grain is carried.

That despite unfavorable conditions net revenues, after paying very large sums of money into the coffers of the Dominion Treasury for taxes, a net profit is being realized (without considering interest) and that a return to better times will see a substantial reduction in the Canadian National Railway deficits.

Believing as we do in the future development of this great Country, this is no time or place for defeatism -- let us carry on."

Hon. Robert Hawkins, M.L.A.

Mr. Chairman, Ladies and Gentlemen:

I desire to thank you for the invitation to attend this meeting, and I am glad of an opportunity of again expressing my opinion with regard to the so-called "Unification Plan" of the Railroad Systems of Canada.

I am happy to be associated on this occasion with your Chairman, Mr. Ronald S. Moore, a young man who was educated in our local schools and received his training in this community, and who has always taken a deep interest in public affairs, and has shown such marked aptitude for public life, and whose abilities and knowledge as a student have gained for him a position of leadership in the community. Also, with the Hon. J. L. Bowman, whose long record of public service and untiring efforts on behalf of the public, together with his contributions to the public life of the country, recently earned for him deserving recognition in the House of Commons, at Ottawa.

I am pleased to note too that Mr. Middleditch, one of the younger executives of the Canadian National Railways System is taking a prominent part in this and other public affairs, and it seems to me that the expressed opinion of this meeting is bound to have some weight, and some bearing on the question, now an important issue, which may possibly affect very materially the development of this town, and the progress and standing of its people.

There has been some criticism of the calling of this meeting, on the grounds that public opinion here could not very well be other than opposed to the unification plan as proposed by Sir Edward Beatty, President of the Canadian Pacific Railways. This perhaps, is a natural reaction in a Canadian National Railway town, but in my judgment, the move was quite wise, and the sponsors of the meeting are to be commended, because the question of unification of railways is one on which there is divided opinion even here. True , for the most part, residents of the Town of Dauphin, in the light of its history, and what the Canadian National Railways has meant to it, would be apt to look very carefully into any movement or action which might affect the position of the railway and its employees, and oppose very strongly anything which seemed to them might be detrimental to their interests. I find, however, as a result of the intensive propoganda of the last few years, that some form of amalgamation has induced a feeling amongst a great many people throughout the district that some form of joining up the two systems is necessary, and as the case against amalgamation is not nearly so well submitted, a meeting such as this will give an opportunity to clarify the situation, and give a better understanding of the question.

There are many earnest students who are trying to form a conclusion as to what would be the best way to deal with a situation that is undoubtedly serious, and causing grave concern to the people of Canada. I have listened with a great deal of interest to the address of Mr. Middleditch, and the Hon. Mr. Bowman, and appreciate, as you no doubt do, the amount of information which they have given us, and as this has been so clearly, concisely, and emphatically placed before you by these two speakers, I shall try to avoid repeating the arguments, and restating the facts as submitted by them.

The case for unification is now being presented before the Senate Committee at Ottawa, and I have no doubt you have all been following the reports of the proceedings before that Committee, which are given very fully in the daily papers. There is indeed a wealth of information now available as a result of speeches, press articles, pamphlets and broadcasts which have been prominently before the public recently, so that, perhaps, most people are reasonably well informed.

I have already stated, in writing to the Railwaymen's Legislative Committee, my opposition to the unification plan, as advocated by Sir Edward Beatty and have studied the situation as contained in the plans submitted by the advocates

of unification, and in the speeches, addresses and articles of those opposed to it, such as R.J.Deachman, M.P., as set out in the pamphlet published by the Kamsack Board of Trade, which has been circulated very freely; the addresses of Mr.Fairweather, of the Canadian National Railways; Senator Murdock, who in a brilliant peroration in a speech made in the House of Commons, submitted some 26 arguments against railway amalgamation, which briefly, are set out as follows:

(1) Amalgamation has already been fully considered and rejected; (2) the group advocating amalgamation are motivated by self-interest; (3) the real problem is that of national finance, not railways; (4) the problem of fixed charges would not be solved by amalgamation; (5) efficiency would be lessened by the removal of competition; (6) possible economies are greatly exaggerated by the amalgamationists; (7) estimates made several years ago no longer apply; (8) hypothetical figures of saving are misleading; (9) ten years would be required for physical amalgamation, and by that time the financial situation of the country might be totally different; (10) the C.P.R. would gain far more than the country; (11) contemplated economies would cause drastic injury to workers and private investors; (12) track abandonment is not feasible; (13) economic disturbance through labor displacement would be shocking; (14) monopoly would be in the saddle; (15) bureaucracy of the Board of Railway Commissioners would be encouraged; (16) other forms of transportation do not constitute effective competition; (17) labor troubles would be inevitable; (18) bureaucracy of railway unions would be encouraged; (19) efficient administration of the proposed mammoth monopoly would be doubtful; (20) monopoly would induce administrative stagnation; (21) the C.P.R. would pay dividends at the expense of the country; (22) comparisons of C.N.R. and C.P.R.earnings during the past ten years are not a fair test; (23) prospective earning capacity of the C.N.R. has not been fairly stated; (24) amalgamation would drag railways into politics worse than ever; (25) the present is no time for lavish-scale amalgamation experiments; and (26) amalgamation would be virtually irrevocable."

The Hon.Mr.Bowman has on other occasions, as well as this, argued the case very effectively against unification, as is shown by the published record of his addresses. There is also a very effective article on the railway situation on the editorial page of the Free Press, of May 26th, and assuming that most of you will have carefully read this article I refrain from quoting, but call your attention to it as very clearly setting forth the argument against so-called unification.

I have already mentioned that the Town of Dauphin owes much of its progress and development to the Canadian National Railways, and perhaps the greatest progress was made here in the early years when Dauphin was a very important divisional point on the Canadian Northern Railway. The effect of a previous amalgamation, however much might have been said for it at the time, affected the railroad business here very adversely, and quite naturally the Dauphin people are very much concerned over the situation, and quite apprehensive of the effect of a further amalgamation, such as would be the case if Sir Edward Beatty's unification plan was carried through.

It might be said, however, that we need not be disturbed in this respect, as the plan would have no effect on this part of the railroad system. Assuming such to be the case, and that the local interests would not be affected, - which I very much doubt, - there is the question of the employees standing and rights which would inevitably be affected. I still take the position that, from the larger national point of view, nothing has been shown to conclusively prove that such unification would be in the best interests of the country as a whole, and I think the reasoning set forth in the arguments I have quoted show that it would not solve the railway problem, but would in all likelihood aggravate the difficulties.

One cannot but realize that the scheme is the product of the C.P.R. It was proposed and advocated by their own spokesmen, and after the most intensive propaganda, they are now desperately urging it, and it must be admitted that this unification plan involves the definite acceptance of the principle of monopoly in railway transportation. I am entirely opposed to any such monopoly, and believe

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

L 119925

that such would be contrary to the best interests of the country, and that without any competition the public would be at the mercy of a monopoly, controlled by an institution whose past record, in the days and times when they were able to exercise a monopoly, is not such as to warrant the public having any confidence in placing so much power in their hands now. Should this occur, the profit motive would be the first principle under which they would operate, and this, monopoly, as all other private monopolies, would almost sure to become corrupt. If monopoly is necessary, the only kind that ought to be considered would be a State monopoly, subject to the control and the will of the people.

I trust that the protest of this meeting against the proposed plan of unification will be effective in helping to prevent the present unification plan being put into effect. It seems to me a solution of the problem is in a different conception, a wider vision, and greater development of this vast country, which, although in some respects it may have developed too much along certain lines, - with all its boundless possibilities, is yet capable of such progress as will enable it to take care of all that has been so laboriously built up, and even though we have lost something, and had to make some sacrifices as a result of the too optomistic vision of past years, there is yet hope in the exercise of the spirit of the Canadian people, to develop resources capable of sustaining a population of five to ten times greater than of the present.

Railways

MEMORANDUM

On October 24th 1935 I wrote to the Honourable C. D. Howe, the new Minister of Railways, congratulating him on his appointment, and adding that "when it is convenient for you I shall be glad to meet any arrangement for an interview which you may make". I received a reply dated October 26th 1935 suggesting an interview for the 31st.

On October 24th I left for Winnipeg and returned on the morning of the 29th. On reaching the office I was informed by Mr. Hungerford that he had been sent for by Mr. Howe and had discussed railway matter with him for three hours on Sunday, October 27th, at Ottawa. When I saw Mr. Howe he apologized to me for sending for Hungerford, but by way of explanation said that someone had suggested it to him, and besides Hungerford was an old friend.

After a short discussion of railway matters generally, he made the suggestion to me that the Trustees should resign. I asked him if he had any criticism to make of my administration. He said that he had none, but that the morale of the men on the Canadian National Railways was very bad indeed, owing mainly to the fact that I was not a railway man. I pointed out to him that neither the Chairman of the Canadian Pacific Railway nor of any of the English railways was a practical railway man, but he appeared to be so convinced with his morale argument that I saw further discussion on the subject was useless. He then told me that he intended to put Hungerford in as Chairman, and appoint a young man as operating officer. I reminded him that from 1923 until 1933 the railway was in the sole charge of railway men, and that if he again left the management solely to railway men the conditions of 1930 would speedily return.

When I first took over my present position, I was anxious to discover the manner in which the business of the Canadian National Railways had been conducted from 1923 up to the end of 1933, and, with this end in view, I read over the minutes of meetings of Directors, Finance Committee, etc., covering this period. These minutes clearly demonstrate that from 1923 up to the end of 1930 the Directors were simply rubber stamps, and did nothing but register the decisions of the railway management. During all this period no single instance can be found where the Directors differed in opinion as to the wisdom of accepting the propositions laid before them by the railway management, and it is certain if they ever did so there is no record of it in the minutes. During the greater part of 1931 there is very little evidence that the new Directors exercised any greater control than their predecessors, but after that they began to show evidence of real control.

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

In order to convey some understanding of the manner in which the business of a railway is conducted, it must be explained that the work is distributed amongst numerous departments. There is the Operating Department, which is directly responsible for the operation of the trains, and the construction and maintenance of the roadbed and equipment. Allied to this department are the Traffic, Purchasing and Stores, Personnel, Express, Telegraph, Sleeping, Dining and Parlor Car, and Investigation Departments, all closely associated in the direct operation of the railway. Besides the above there are certain what may be called non-operating departments, namely, Secretary, Legal, Finance and Accounting, Publicity, Medical, Hotels, Land and Property (other than railway right of way), and Agriculture and Colonization. There are also a large number of subsidiary companies, some of which are in active operation and others which are inactive or non-operating.

Section 10 of "The Canadian National-Canadian Pacific Act, 1933" requires the Trustees to appoint, "on terms to be fixed by them, and with the titular rank of President, a person other than one of themselves to execute and perform, under and in consultation with them, the powers, authorities and duties of chief operating officer of National Railways, as such powers, authorities and duties shall be from time to time defined by by-law or resolution of the Trustees and committed for execution and performance". In pursuance of this section, Mr. Hungerford was appointed on the 31st day of January 1934. By-law No. 21, which defined his powers, authorities and duties, reads as follows:

"BE IT ENACTED by the Trustees as follows:-

"It shall be the function of the President to execute and perform, under and in consultation with the Trustees, the powers, authorities and duties of chief operating officer of National Railways and, without restricting the foregoing generality, to be the officer in charge of and directly responsible to the Trustees for:-

A. The maintenance, renewal and construction of all roadbeds stations, signals, telegraph wires and equipment, bridges, ferries, rolling and stationary stock, motive and engineering equipment and property used by the National Railways, or in which they have any interest, for the purpose of transportation and communication.

B. The management, regulation, initiation, continuance, utilization and suspension of all transportation and communication services, including, for example, the fixing of time schedules and conditions in connection therewith.

C. The engaging and continuing in and discharging from employment the personnel required for such purposes, or any of them, and the fixing of the terms and conditions of such employment, all salaries to be approved by the Chairman of the Trustees. This authority, however, is not to cover the appointment of Vice-Presidents, General Managers, Secretary, Treasurer, European Agent, European Secretary-Treasurer, or Heads of Departments.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

"The President shall similarly execute and perform such duties and directions as may from time to time be given him by the Trustees.

"The President shall be the senior ranking officer of National Railways, and for the purpose of co-ordinating services and supplying information and advice to the Trustees shall have general supervision of all officers and of all activities of the National Railways.

"PASSED by the Trustees this 31st day of January, 1934, and sealed with the Company's seal."

The question then arose as to who should be responsible for the conduct of the non-operating departments of the railway, and the non-operating subsidiary companies. No one questions the fact that operating the Canadian National Railways is a full-time man's job. After giving the matter very careful consideration, the Trustees decided that these other departments should report to the Chairman. On the 4th day of March 1934 the decision of the Trustees was made known to Mr. Hungerford. At first he demurred. He thought that we were taking away from him some of his authority as President. After discussing the matter at some length he acquiesced, and later brought the Chairman a list of the departments which he thought the Chairman should take over. These are the departments which I have described above as the non-operating departments.

From my experience with the organization during the first two months of my chairmanship, I had become convinced that the management proposed to treat me exactly as they had treated the Directors, that is, to give me as little information about the affairs of the railway as possible. Moreover, Mr. Hungerford had been overworked and was not in good health, and I felt that in taking over these non-operating functions I would relieve him of a good deal of work and permit him to give his whole attention to the operation of the road. Apart from all this, there appears to be no alternative under the wording of the Act itself which required the Trustees to appoint a person to execute and perform the powers, authorities and duties of an operating officer. Clearly it is no part of the duties of an operating officer to look after non-operating departments. While I am well aware that a small group of officers at headquarters deeply resented my taking over these departments, I have never regretted having done so, and am able to demonstrate that these departments have been handled successfully.

The first department to which I gave attention was the Hotel and Dining Car Department, which had for many years been in charge of Mr. Walter Pratt. The hotels had been in the red ever since 1923. From 1923 up to the end of 1933 the average operating loss was $214,986, and the total operating

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

loss $2,364,853. In the year 1933 the operating loss was $176,000. I felt there was something radically wrong with the management, and that changes should be made. Mr. Pratt was asked to resign, the Hotels and Dining Car Department were separated, and the hotels placed in charge of Mr. J. Van Wyck with headquarters at the Chateau Laurier. Mr. Van Wyck had been Assistant General Manager of the hotels under Mr. Pratt. That the two departments were overstaffed is demonstrated by the fact that a number of positions were abolished, and an annual saving of $75,000 was effected.

In the first year of operations Mr. Van Wyck had an operating profit of $37,000, and for the first time since the Canadian National Railways was formed the hotels were in the black. This year (1935) the operating income of the hotels is $101,770. The financial results of the change in the hotel management demonstrate that the move was a wise one.

The Dining Car Department was placed in charge of Mr. W. W. Swinden, who reports to Mr. Hungerford. Even in this department the change of management has made a great improvement financially. There are two branches to this department: Sleeping & Parlor Car Services, and Dining, Cafe & Buffet Car Service. The former always shows a profit, the latter a loss. In the latter service our operating deficit last year was $259,824.61, which is the lowest for the past twelve years, as will be seen from the following comparative figures:

| | | | |
|---|---|---|---|
| 1924 | - | $ 581,350.22 | Loss |
| 1925 | - | 502,598.32 | " |
| 1926 | - | 522,242.58 | " |
| 1927 | - | 715,688.65 | " |
| 1928 | - | 759,769.16 | " |
| 1929 | - | 833,829.19 | " |
| 1930 | - | 892,154.19 | " |
| 1931 | - | 584,890.25 | " |
| 1932 | - | 341,372.65 | " |
| 1933 | - | 285,748.61 | " |
| 1934 | - | 281,543.45 | " |
| 1935 | - | 259,824.61 | " |

It will be noted that we were able to reduce our deficit for 1935 as compared with 1934, notwithstanding the fact that we had to take care of an additional $23,000 due to restoration of 5% wage reductions. In the Sleeping and Parlor Car services the profit for 1935 was $478,658.61, as compared with $350,378.19 for 1933, or an increase of $128,280.42.

Another of the departments taken over by the Chairman was the Steamships. Everyone knows of the tremendous losses which have been made in the operation of the Canadian Government Merchant Marine and the Canadian National (West Indies) Steamships. The income statement of the Canadian Government

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

Merchant Marine from 1923 is as follows:

| | Operating profit or loss |
|---|---|
| 1923 | $ 1,073,086 |
| 1924 | 1,450,889 |
| 1925 | 926,844 |
| 1926 | 90,180 |
| 1927 | 720,735 |
| 1928 | 1,208,088 |
| 1929 | 878,907 |
| 1930 | 854,211 |
| 1931 | 444,286 |
| 1932 | 326,615 |
| 1933 | 17,959 |
| 1934 | 127,286 |
| 1935 | 511,822 |

The West Indies service was begun in 1929. The operating results for the years 1929 to 1935, inclusive, are as follows:

| | | |
|---|---|---|
| 1929 | $ 447,941 - | Operating loss |
| 1930 | 523,157 - | " " |
| 1931 | 446,588 - | " " |
| 1932 | 283,716 - | " " |
| 1933 | 497,997 - | " " |
| 1934 | 98,679 - | " " |
| 1935 | 200,050 - | Operating profit available for bond interest |

In the spring of 1935 a change was made in the management of the Steamships. Mr. Allan, who had been General Manager since May 1931, was retired and Captain Tedford was appointed. Tedford had been General Marine Superintendent since the C. G. M. M. commenced operations. That this change was in the interests of the Steamships is evidenced by the fact that whereas we had an operating deficit of $223,945 in the year 1934, we have an operating profit of $511,852 in the year 1935.

In the face of the results obtained in the Hotels and Steamships during the years 1934 and 1935, it can be scarcely contended that the handling of these departments by the Chairman has not been successful. It is conceded the Hotels and Steamships are not strictly described as non-operating, but the thought was that they are not an integral part of rail operations.

Another matter about which I understand criticism has been levelled at the Chairman is the making of a survey of the departments in 1934. Early in 1934 Mr. Morrow strongly urged that we should have a complete survey of all the departments of the railway. He wanted Clarkson, Gordon, Dillworth, Guilfoyle & Nash, auditors in Toronto, to be employed and given full authority to survey all the departments. Messrs. Clarkson & Company actually arrived in Montreal, and spent several days conferring with our officers and looking over the departments. I asked them to put in writing what they proposed to do if

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

employed. They did so, and it is as follows:

"MONTREAL - 19th January 1954.

"As arranged at our recent interview with yourself and the other members of the Board of Trustees of the Canadian National Railway Company, we have made a short preliminary examination in order to advise you as to the form which, in our opinion, a survey of the business and affairs of the Canadian National Railway System would take, to enable the Trustees to be informed of the position of the undertakings and the kind and character of the assets combined in them, and also whether, in the administration of such assets, economies can be effected, efficiency improved and expenses be eliminated or reduced.

"It is our opinion that such a survey would require and include -

(a) An investigation of the investments in the several undertakings combined in the System which include those of -

Canadian National Railway (formerly Grand Trunk Railway)
Canadian Northern Railway
Grand Trunk Pacific Railway
Grand Trunk Western Railroad
Canadian Government Railways
Central Vermont Railway
Canadian National Telegraphs
Canadian National Express
Hotels, Steamships and numerous other undertakings, which are included in the Balance Sheet of the System at $2,136,895,346.00 as of date 31st December 1932, in addition to which there are about $100,000,000.00 investments in other companies and physical properties which are scheduled separately in the Balance Sheet of the System. Such inquiry, in our opinion, is necessary in order that the Trustees may be informed as to the amount, character and the different kinds of assets which are under their control, and to what extents, if any, values attributed thereto include Deferred Maintenance, abandoned or inactive assets, and/or items the values of which have been written up.

(b) An inquiry into the status of approximately 125, or more, subsidiary companies in order to determine whether it is necessary to maintain and operate such companies as separate entities, or whether it is possible to merge their undertakings with those of their parent companies so as to simplify operation and so save labor and expense.

(c) An inquiry into approximately $100,000,000.00 of Working, Deferred and other assets in order to determine the composition, character and value of the same.

(d) An inquiry into the liability of the various companies in respect to pensions to employees and Workmen's Compensation charges, in order to determine the accrued liability in respect thereof, and the effect that such charges would have upon future operating results.

(d) An inquiry into the Deferred Maintenance Charges on properties and equipment to determine, if possible, the extent of the same, which, unless disposed of will affect operating results in future years.

(f) An inquiry into the methods of administration generally, to determine the efficiency of the same, and also whether economies can be effected and expenses be reduced or eliminated.

"The above is a short general statement of what we consider should be the scope of a survey of the business and affairs of the Canadian National Railway System."

Messrs. Clarkson & Company admitted to me that the work would take six months, although in my opinion it would take much longer. Already a very large amount of money - some $372,000 - had been paid by the Canadian National Railways to one Gaston for preparing material in connection with a proposed

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

revision of the capital structure, and our Accounting Department had the fullest possible data in connection with the matter. I felt it would be a pure waste of money to have these men go further into the question of the capital structure. On the question of a survey of the wide character suggested, I felt that this would have a most damaging effect on the morale of the organization, which was at the time at a very low ebb. As a compromise the Chairman decided to make a personal survey of the several departments. At a dinner attended by the headquarters officers the Chairman explained his reasons for declining to bring in outside surveyors, but announced his intention of making a survey himself. The reasons given by the Chairman for such a survey were that it would make him familiar with the workings of the several departments, and would place him in a position to know definitely whether they were being conducted in an economical and efficient manner.

Following upon this announcement, the Chairman organized a small staff, and during the year 1934, with the assistance of the departmental heads, reports were made on all the departments. The Operating Department made its own report. As a result of this survey an annual saving of $760,000 was effected, exclusive of the Operating Department. Many of the departments were found to be overstaffed, and in other respects were not being conducted on an economical basis. The Insurance Department is a striking example. This department was being conducted as if it were an outside independent insurance company dealing at arms length with the railway. Ten inspectors were employed. When a fire occurred proofs of loss were filed, losses were adjusted, and generally the procedure usually followed by independent insurance companies was adopted. As the company has its own insurance fund out of which losses are paid, all this procedure expense was obviously unnecessary. Reports on the departments surveyed were prepared, and from time to time submitted to the Trustees, but the Chairman himself must take the responsibility for the reductions of staff and other changes, since, with the single exception of the Publicity Department, neither of the other Trustees at any time offered any suggestions or assistance. The economies effected in the several departments are the following:

Mr. Howe, the new Minister of Railways, made a speech in Toronto on December 7th 1935. His speech is reported in the January 1936 issue of the "Canadian Railway and Marine World" at Page 5. At Page 6 he is reported as follows:

> "It is recognized that only trained and experienced railway men should be in charge of such operations, but, in the larger sphere of direction and control of management and policies, it has been only too evident in recent years that the interests of the Canadian National have suffered by the arrangement under which the late Government delegated its responsibilities. It will be the duty of the present Government, in the public interest, to seek some more suitable and satisfactory system of direction and control of our great railway investment."

These are serious charges, but of a most general nature. No wonder the "Toronto Globe", in its editorial columns on the 10th day of December 1935, says:

> "The charge - and it may fairly be called such - that the absolute form of control imposed in a Board of Trustees has operated to the injury of the publicly owned system is one on which the people, without question, would like to be informed fully, as they have a right to be."

It would be interesting to know what Mr. Howe intends to charge by the use of this language. After giving the subject careful study, I can only conclude that Mr. Howe has two points in mind:

(1) - The Chairman's administration of certain departments.

(2) - The survey of the departments which I conducted.

I may say that a day or two after this speech was made I asked Mr. Hungerford if he knew of any policies adopted by the Trustees which had not his full concurrence and support. His answer was that all he could think of was the 1934 survey.

It would look as if the Chairman is between the devil and the deep blue sea. He is abused if he fails to effect economies, and is abused if he makes economies. I am satisfied to leave it to the people of Canada to say whether reductions in staff brought about by the survey and the saving to the railway of an annual sum of $780,000 was detrimental to the Canadian National Railways. I informed the Select Standing Committee of the House of Commons as to these departmental surveys in my statement to the Committee June 6th 1934. The matter was also referred to in the Trustees Annual Report dated March 12th 1935, but no objections were ever made that the proceeding was calculated to injure the railway.

As to the charge that the taking over of certain departments by the Chairman was detrimental to the Canadian National Railways, the financial results of the hotels and Steamships is a complete answer so far as they are concerned. As to the other departments, there is nothing in connection with the conduct of these departments which can be criticized.

As I stated earlier, Mr. Howe informed me that he had nothing to criticize in connection with my work, but that the morale of the road was bad, due chiefly to the fact that I was not a railway man. He intimated that only a railway man could secure the loyalty of the men. This is pure nonsense, and a mere excuse to justify his own conduct in trying to get rid of me. I have no doubt that his own Deputy, who has an ambition to get back on the Board, and certain officials here at headquarters who have axes to grind have preached this into his ear. The fact is that when I took over in January 1934 the morale of the men was low. The number of men employed had been cut in two, wages reduced, salaries of officials slashed and the propaganda for amalgamation of the railways under the management of the Canadian Pacific Railway was in full swing. Under the circumstances it could hardly be expected that morale could be high. To meet this situation I held meetings of the officers and men at Toronto, Moncton and Winnipeg, and very frankly discussed with them the whole situation. I broadcasted a message to the men in the April 1934 issue of the Canadian National Magazine. Since then I have visited the whole system as frequently as time could be spared, and have done what I can to improve the morale. Today the morale of the men is good on all the regions. I have talked to the General Managers of the three regions and they assure me that the claims about morale being bad are

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

absurd and untrue. Moreover, let me say that even if it were true the fault surely does not lie at my door. From the day I assumed the position of Chairman I have never interfered with the practical operation of the road. That part of the work has been handled solely by Mr. Hungerford and his officials. My attention is mainly directed to the general policy of the road; checking leaks, watching expenditures, and generally seeing that the affairs of the railway are being conducted on a business basis.

Referring again to Mr. Howe's speech, he is reported as saying:

> "To those who may think that trustees have improved the management I call attention to the statement contained in the first report of the trustees to the effect that no material saving in operating costs had been made, due to the fact that all possible savings had already been made by the Board of Directors that preceded them."

No such statement is contained in that report. What is said is that -

> "During the year studies have been made in numerous directions in the effort to secure the maximum economy in the operation of all departments. The severe decline in gross revenue had made it imperative that all opportunities for economy be closely examined and re-examined and the drastic curtailment of all expenditures effected prior to 1934 testifies to the vigorous steps taken. Further economies necessarily became difficult to secure, if the efficiency of the service was to be maintained."

The report goes on to say that substantial economies had resulted from the surveys undertaken. (See Annual Report 1934, Page 11). Mr. Howe, if correctly reported, deliberately misrepresented the facts.

Again, he says:

> "The purpose of the trustee form of management was to take the railway out of politics. <u>I wish that this were possible.</u>"

Mr. Howe is evidently of the opinion that the railway cannot be kept free from political interference, despite the fact that since the first day of January 1934 there has been no successful interference by any politician with the affairs of the railway.

He further says:

> "As Minister of Railways I have no desire to interfere with the expert management of the road, nor to allow any member of Parliament to do so. My concern is the reverse, which is, interference by the railway management with the expressed policies of the Government. We cannot escape the fact that the railway is owned by the people of Canada, that taxes collected from the people of Canada pay its deficits, and that the prosperity of every citizen in thousands of communities from coast to coast can be affected by its managerial policies. Mine is a railway riding, and the trustees have it within their power to destroy my political future."

There had been some consideration given to the question of consolidating the two railway companies' forces at Fort William and Port Arthur with a view to effecting a substantial economy. No doubt Mr. Howe is referring to this, and would oppose any such economy in his or any other Liberal Minister's constituency which might affect the vote in the constituency. All I can say is, if this is the

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

policy Mr. Howe proposes to adopt when he gets control of the Canadian National Railways, the people of Canada need look for no economies in the future.

In his Toronto speech Mr. Howe said:

> "The 1933 legislation which abolished the board of directors and substituted the trustee form of direction and control went further. It removed control of this directing agency from the hands of the Government and placed it in the hands of parliament -- jointly in the two houses of parliament, the Commons and the Senate, though the latter might not be in any sense representative of public opinion as expressed in the election of the representative chamber."

Mr. Howe complains that the Government has not control of the Trustees as he alleges it had of the directors. Mr. King always maintained that he deliberately refrained from interference with the directors in the management of the road. Mr. Howe wants to go further than Mr. King and control the Trustees. Had Mr. Howe made no attempt to purchase the resignations of the Trustees one perhaps might believe that his demand for a change in the Act was made in good faith. His attempt to summarily get rid of the Trustees shows that his anxiety is to remove the present Trustees and replace them with men that he can control.

The Speech from The Throne says that legislation will be sought "which will serve to afford a greater measure of governmental authority and responsibility to parliament". The greater measure of Government authority desired is the power to dismiss by order-in-council. Now what are the reasons Mr. Howe gives for desiring this power? -

1. - He will not be a rubber stamp.

2. - He fears "interference by the railway management with the expressed policies of the Government."

3. - The policies of the Trustees might destroy his political future.

I have already dealt with the latter reason, but might add that the "Toronto Star" pointed out in an editorial that the future prosperity of Canada is far more important than Mr. Howe's political career.

As to the second reason, "Interference by the railway management with the expressed policies of the Government" - it can be said that up to the present time nothing of the kind has ever happened. The Trustees have at all times shown themselves ready to co-operate with the Government in all matters which concerned the welfare of Canada. For example, last year when the Government with the view of helping the heavy industries proposed to purchase rolling stock the Trustees co-operated. Only within the last few weeks the Trustees have arranged to assist the Government in connection with the relief of unemployment by providing work for some 5,000 unemployed.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

Again, Mr. Howe said:

> "It (the Government) must also accept with as good grace as possible, all criticism concerning sins of commission or of omission on the part of the railway management and the Trustee Board."

Under the present Trustee Board the task has not been a difficult one, since there has been no criticism. From the beginning to the end of the Dominion election campaign not a single word of criticism of the C. N.R. management was heard. Moreover, it may be pointed out that criticism can be directed at the management alone so long as the Government refrains from interference.

If the business of the railway is to be carried on upon a sound and economical business basis two things are essential:

1. - Continuity of management.

2. - An independent controlling head who is in daily touch with the affairs of the road.

That continuity of management, in so far as that is possible, is not only in the interests of the company, but essential to its success, will be readily admitted. That a controlling head independent of the Government is necessary to protect the railway from the pressure of politicians will be admitted by any one who knows the history of the railway between 1923 and 1930. The man in control should represent the proprietors and should not be a railway man already associated with the company.

At my first interview with Mr. Howe he informed me that he intended to make Mr. Hungerford Chairman of the Board. Without detracting in any way from Mr. Hungerford's reputation as an operating man, it is safe to say that in such a position he would do exactly as he was told by Mr. Howe. Moreover, Mr. Hungerford was as operating officer largely responsible for all the extravagance of the old regime. The great bulk of the expenditures on capital account between 1923 and 1930 was made on his recommendation. While it must be admitted that part of this expenditure was necessary to rehabilitate the road, there was a great deal of it which has brought in no useful return and should never have been made.

Reviewing the whole situation, I am unable to arrive at any other conclusion than that the real purpose of the proposed legislation is to bring the railway back into the position it was before 1930, but even more under political control. The employees of the railway are almost to a man opposed to any change that will have this effect.

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

Notwithstanding the poor opinion concerning the morale of the Canadian National employees held by Mr. Howe, the financial position of the railway has been materially improved since the Trustees took over. -

The cash deficit of the railway in 1933 was $58,950,000. In 1934 it was $48,400,000, and in 1935 $47,421,000. That is to say, compared with the year immediately preceding my taking office, the amount of cash which the Government had to find to operate the railway was reduced in the first year by $10,550,000, and in the second year by $11,529,000, a total reduction in the amounts to be provided of $22,079,000. The additional gross revenue over 1933 was $16,380,000 in 1934, and $24,665,000 in 1935, or a total of $41,045,000 for the two years combined, out of which we saved $22,079,000 or over 50%. We did this notwithstanding increased wage rates and increased price of fuel, etc., which, while they add to our operating expenses, are not occasioned by the movement of the additional traffic.

In hotel operations a loss of $176,000 in 1933 was converted into a profit of $101,000 in 1935.

The results from our steamship services also show a very great improvement. The amount of money which the Government had to find in 1933 for the operation of the combined Canadian Government Merchant Marine and West Indies services was $986,000. In 1935 there will be a small profit after paying interest on the bonds of the West Indies Company, indicating an improvement of $1,000,000 since the administration was turned over to us. When you realize that from the time the West Indies service started, to the end of 1933, the Government had to provide an average of $1,400,000 a year to run these services, and that in 1935 we had a small profit, you will appreciate the change which has taken place during our administration.

Montreal, Quebec,
March 31st, 1936.

"It is common knowledge that the three Trustees have made no real progress toward the improvement of our railway situation".

Additional Revenue received in 1934 and 1935 over 1933, and the Resulting Decrease in the Cash Deficit of the Railway

| | | | |
|---|---|---|---|
| Revenue | 1934 | $ 164,902,501 | |
| | 1933 | 148,519,742 | |
| | Increase - | | $ 16,382,759 |
| | 1935 | $ 173,184,501 | |
| | 1933 | 148,519,742 | |
| | Increase - | | 24,664,759 |
| | Total additional revenue in the two years - | | $ 41,047,518 |
| Cash Deficit | 1934 | $ 48,407,900 | |
| | 1933 | 58,955,388 | |
| | Decrease - | | $ 10,547,488 |
| | 1935 | $ 47,421,464 | |
| | 1933 | 58,955,388 | |
| | Decrease - | | 11,533,924 |
| | Total decrease in cash demands on the Government - | | $ 22,081,412 |

The above shows that out of the additional revenue over 1933 received during the two years of Trustee administration 54% was available to reduce the cash deficit of the Railway.

COMPARISON WITH C. P. R. AND CLASS 1 ROADS

| | C.N.R. | C.P.R. | Class 1 Roads |
|---|---|---|---|
| 1934 over 1933 | | Increase per cent | |
| Operating revenues | 11.00 | 9.9 | 5.7 |
| Operating expenses | 6.39 | 6.7 | 8.5 |
| 1935 over 1934 | | | |
| Operating revenues | 5.02 | 3.3 | 5.5 |
| Operating expenses | 4.6 | 6.1 | 6.3 |

CANADA

C. N. R. AND C. P. R.

| | | Gross Revenue | Net Revenue | |
|---|---|---|---|---|
| C. N. R. | 1933 | $ 148,519,742 | $ 5,707,183 | |
| | 1935 | 173,184,501 | 14,258,253 | |
| | | $ 24,664,759 | $ 8,551,070 | 35% |
| C. P. R. | 1933 | $ 114,269,688 | $19,423,294 | |
| | 1935 | 129,678,904 | 22,397,524 | |
| | | $ 15,409,216 | $ 2,974,230 | 19% |

The proportion of the additional revenue not absorbed by increased operating expenses was 35% for the C. N. R. and 19% for the C. P. R.

The operating ratio of the C. P. R. (excluding taxes) in 1935 was 79.56 as compared with 79.38 in 1933.

The operating ratio of the C. N. R. in 1935 was 91.77 as compared with 96.16 in 1933.

- - - - - - - - - - - - -

"They had failed to achieve any substantial co-operative economies, and from their own published statements the prospects for future results along this line were not bright."

Maintenance expenditures and train and car mileage have been drastically reduced -

| | 1930 | 1935 | Reduction | (x)Economies by unification under Beatty plan |
|---|---|---|---|---|
| Maintenance of Way | $47,962,357 | $34,420,886 | $13,541,471 | $14,888,622 |
| Maintenance of Equipment | $49,367,985 | $34,393,565 | $14,974,420 | $14,360,414 |
| Passenger train miles | 27,644,208 | 18,638,871 | 9,025,337 | 7,574,454 |

Co-operative economy is a most difficult process when maintenance, expenditures, and train and car mileage have been so drastically reduced.

Co-operation between two competing roads is most difficult to achieve. Our report shows what we have been attempting, and what has been done.

In 1933 the Emergency Transportation Act was passed in the United States, the general purpose of which is similar to that of the Canadian National-Canadian Pacific Act. Mr. Eastman was appointed Co-ordinator. He surrounded himself with a huge staff, but up to the present no definite co-ordination measures have been achieved.

In a statement issued on August 5th 1935 he said: "Based on their research the staff of the Co-ordinator have made many recommendations for improvement covering a very wide field. Even if there were general agreement on their soundness and practicability, it would take a long time to carry all of their recommendations into effect".

At least this can be said, that we have gone as far in co-ordination as has the Canadian Pacific, and we have heard no criticism of their failure to make progress.

Again, it must be understood that studies in railway co-ordination are matters of a very technical character which can only be conducted by practical, skilled railway men. From January 1934 all essential technical committees have been established whose duty it was to study projects for the co-ordination of facilities, and to recommend them to the Executives of the two companies. These committees have been under the general direction and control of Mr. Hungerford.

- - - - - - - - - - - - - - -

<u>"Neither had they been able to secure any considerable reduction in the railway's operating costs."</u>

Has anybody ever heard of a railway decreasing its operating costs with expanding traffic? The operating costs necessarily increase and the criterion of good management is to keep that increase as low as possible. Comparing 1935 with 1933, the Canadian National operating

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

expenses absorbed 65% of the additional gross revenue, whereas the Canadian Pacific operating expenses absorbed 81% of the additional gross revenue. Also note that in 1934 our operating expenses increased 6.39% as compared with an increase of 6.7% for the Canadian Pacific, and 8.5% for Class 1 Roads, notwithstanding that our additional revenue increased 11% as compared with 9.9% for the Canadian Pacific and 5.7% for Class 1 Roads.

Again, in 1935 our expenses increased 4.6% as compared with 6.1% for the Canadian Pacific and 6.3% for Class 1 Roads, although our gross revenue increased 5.02% as compared with 3.3% for the Canadian Pacific and 5.5% for Class 1 Roads.

Further, we reduced our operating ratio from 96.16 in 1933 to 91.77 in 1935, and the Canadian Pacific showed a slight increase.

Again, on a survey made by the Chairman a permanent annual saving of over $700,000 was effected.

The following are the financial results of the departments which have been reporting to the Chairman -

CANADIAN GOVERNMENT MERCHANT MARINE

| | Revenues | Expenses | Net Cash Requirements |
|---|---|---|---|
| 1933 | $2,229,897 | $2,247,835 | $ 17,938 Loss |
| 1934 | 2,302,559 | 2,429,825 | 127,266 Loss |
| 1935 | 2,764,549 | 2,452,727 | 311,822 Profit |

1935 improvement over 1933 - $329,760

CANADIAN NATIONAL (WEST INDIES) STEAMSHIPS

| | Revenues | Expenses | Bond Interest | Net Cash Requirements |
|---|---|---|---|---|
| 1933 | $2,956,975 | $3,454,972 | $470,000 | $ 967,997 Loss |
| 1934 | 3,509,738 | 3,606,416 | 470,000 | 566,678 Loss |
| 1935 | 3,816,245 | 3,616,214 | 470,000 | 269,969 Loss |

1935 improvement over 1933 - $698,028

Combined improvement of both services - $1,027,788

HOTELS

- - - - - - - - - - - - - - - -

"The internal situation in the management of the road was no better. Everywhere Canadian National employees regarded the Trustee method of direction with 'distrust and suspicion'."

When the Trustees took charge in January 1934 the morale of the road was admittedly bad. This was due to the fact that wages had been reduced, salaries slashed, men laid off and the whole organization placed under suspicion. Moreover, the campaign for amalgamation was in full swing, and the purpose behind the new form of administration was suspect. I did what I could to restore the morale of the men, which today I believe is far better than it was. It is easy to make charges: it is another thing to prove them. I would like the Minister to state what evidence he has to support his statement. Moreover, a little consideration will show that the morale of the men depends almost entirely on those in direct charge of the men. I may say that I have been informed by all three regional managers that the morale of our men at the present time is good.

- - - - - - - - - - - - - - - -

"The Trustees themselves had confided to the Minister that the present system was not good."

I cannot speak for the other Trustees, but I can say that I personally have never made any such statement, either to the Minister or any one else.

"Two years have passed since the Trustee method became operative and no one would argue that any more had been accomplished than had there been a board of directors instead."

My only answer is that no one can say definitely what such a board of directors might have done or left undone. The real object that the Royal Commission had in view was the removal of the railway from the influence of improper political and community pressure. I can say with confidence that under the management of the Trustees this purpose has been accomplished. That this has been beneficial to the railway no one can deny.

- - - - - - - - - - - - - - -

With regard to the Minister's criticism of the Trustees' annual reports as being too lengthy, I can only say that our endeavour was to give the public the fullest possible details concerning the affairs of the road, and particularly concerning co-operation between the two railways, which is a matter to which great importance is attached.

The Debates of the Senate

OFFICIAL REPORT

# REMOVAL OF TRUSTEES

## NATIONAL RAILWAYS RESPONSIBLE TO PARLIAMENT OR GOVERNMENT

### Speech by the Rt. Hon. Arthur Meighen in the Senate, June 19, 1936

Right Hon. ARTHUR MEIGHEN: Honourable senators, I had hoped that the motion for third reading might be deferred for another day. In the intense rush upon us in these closing hours, with a long succession of Bills requiring as thorough study as can be given to them, I have not been able to collect and arrange in order, as I should have liked, such material as would have enabled me to discuss briefly, and at the same time not ineffectively, this proposed measure.

Possibly point will be best given to what I have to say by telling the House in the very first breath where I stand in relation to this Bill. I am opposed to it. I think it is deplorable that the Government should have seen fit to introduce such a measure as expressive of its policy on a matter so vital, indeed a matter that goes to the very fate and destiny of our financial and industrial well-being. I am not only opposed to the Bill, but I am prepared to see the Bill defeated, and to take all consequences, if by any act of mine I could bring about its defeat. I say that with no reflection on the bona fides and intent of those who reason otherwise. I have for a great many years lived with this railway situation certainly as closely as any other honourable senator, and I can assure the House I have not come to this conclusion hastily, nor in any spirit of hostility to the Administration. I am amazed that such a course as this should have been decided upon, almost under the echo of the result of an election, and announced to the public without even such time for seemly consideration as would appear to me to be all-important in a step so far-reaching.

What is the history of our railway problem? It must be stated hurriedly and imperfectly. We were a young country and the means of locomotion and carriage were essentially by rail. At very considerable national expense and risk we engaged in the construction, first, of one railway system in the East, then of another from coast to coast, and subsequently, commencing in the late nineties, we encouraged the construction of a system in Western Canada to serve a vast territory previously unsupplied. In the early part of this century Parliament as then constituted decided in its wisdom, supported by the people of Canada in their wisdom as then developed, that another road should be constructed from coast to coast by means of a complicated system of mortgages and guarantees involving heavy liability on the Dominion. Then Parliament decided to guarantee the obligations, at all events the basic obligations, for a third transcontinental. This decision was reached in the early part of 1911, and early in the session of that year the honour and pledge of this nation were affixed to that stupendous venture.

Hon. Mr. DANDURAND: My right honourable friend says 1911.

Right Hon. Mr. MEIGHEN: I am referring to the Canadian Northern, the third transcontinental line. It was in the last session of the Laurier Administration. I am not now pausing to criticize the judgment of the Parliament of Canada or the Government of that day. Suffice to say that it affixed the signature of this Dominion to very serious obligations in connection with those two systems.

I 9946

The only important railway extension made by the succeeding Government was in respect to the Canadian Northern line from Edmonton to the coast; an extension which in my judgment—perhaps I was wrong—was essential for the rounding out of an already almost completed system in so far as the authorization and assistance of Parliament was concerned.

We found ourselves in possession, either as mortgagees or guarantors, but largely as guarantors of the obligations of these two systems. In many respects we found ourselves the owners of vast sections of the systems. We were the owners of the Intercolonial, and of the Transcontinental from Moncton to Winnipeg, and by the time the real crisis arrived we were virtually the owners of the Grand Trunk Pacific, too, from Winnipeg to Prince Rupert; for as an independent venture it had completely failed. Then the very first of our railways found itself unable to operate and to take care of its debts. We were guarantors, not of all the debts, but of such portions of them, immense in their aggregate, as to make us in effect guarantors of all; and, being guarantors of the obligations, we were virtually in the position of mortgagees.

From the superior, though not very well informed, criticism of modern writers one would think that the Administration of the time of this crisis, about 1919, had been seized with an ambition to become the proprietor of these tremendous railway systems which were in trouble, and that it had made the vast error of plunging into the centre of their difficulties and placing the whole burden upon the shoulders of the people of Canada. The fact is, the burden was on our shoulders then and could not be honourably removed. It was as direct an obligation as any nation was ever under. We could not escape from it. We could of course continue under the load of liability and let the assets go where they would; but no one at the present time can place himself back in that period and, surveying the circumstances, think for a moment that although the obligations were binding upon us, we could have just let everything be sold under the hammer and have awaited the chaos which would at that time have been very quickly upon us if the then Administration had displayed such an utter lack of foresight and of common sense.

We have been too optimistic in the construction of railways. That is the fundamental cause of our difficulties.

As years went on, a way had to be found of managing what the Government had decided it should take over. I emphasize once more the fact that the decision of Canada to take over the railways was forced upon it; it was not a decision prompted by any ambition to incur the responsibilities of railway management. At that time a plan was devised to incorporate all the railways into a single system, taking their various elements in one by one, or ten by ten, until all should be included in a great Canadian national railway company. This work was completed in 1923. The legislation providing for it and making it inevitable had been passed about one or two years before. The method of procedure was to provide for a board of directors and place the Government of Canada in the position of shareholders of the road, exercising such control as shareholders in a company are entitled to exercise, the spokesman and active instrument of that control being the Minister of Finance. Provision was made also that all capital expenditure was to be controlled by the Governor in Council and provided by vote of Parliament. It was hoped and believed that this method would sufficiently remove actual operation from interference of political influences and give the railway a fair chance to vindicate itself as a business enterprise.

The board then created was headed by Mr. D. B. Hanna, a man who previously had been the general manager of the largest unit in the new system. Towards the end of 1922 the general manager and entire board were removed. I cannot recall that any reasons were given as to why this action was taken. A new board and general manager were appointed. At that stage a nine-year period began. The new general manager was Sir Henry Thornton.

At the end of nine years, or ten, the system was in a rather pitiable plight. It is only fair to remind honourable members that we happened to be then in the dark abysm of a depression, and the road had suffered more perhaps than any other single enterprise in Canada from the effects of that depression. What the road suffered from otherwise I shall not speak of personally. Anything I say on that phase will be said entirely on the faith of authorities much more important and dependable than I. At that point, the system being under liabilities aggregating not far from three billions of money, the losses being terrific, and the cloud formed by railway difficulties being the blackest on the horizon of Canada, the Government of the day decided there should be a review by commission of the whole situation with a view to finding a new policy or improving the old one, or discovering some way out of our trouble.

The commission appointed was headed by the present Chief Justice of Canada. It was composed of men of oustanding capacity and repute. The leading member was Lord Ashfield, whose experience in the management and corporate control of large railway enterprises in Great Britain was perhaps unequalled. Another member was Sir Joseph Flavelle, who

I 9947

had been president of the Grand Trunk System in Canada about the year 1920, and who is recognized as being among the first two, three, or four of the men of front-rank business capacity in this Dominion. Of the other members, one, Mr. Lorie, came from the United States. His experience had been gained in management of the biggest railway there. Another was Mr. Beaudry Leman, one of the most successful and respected business men of the province of Quebec.

Hon. Mr. CASGRAIN: And an engineer, too.

Right Hon. Mr. MEIGHEN: An engineer too. The other member of the commission was Dr. Webster, who, though Canadian born, had returned to Canada only within recent years, and who had a very successful career, indeed, in everything to which he had put his hand. No one has ever ventured to suggest that there was any political bias, or possibility of it, in the personnel of that commission. I know of only two of its members who had ever been identified in any way with Canadian political affairs—one on one side, and the other on the other side; and certainly neither had been active. It was an able commission and commanded the confidence of the people of this country. I never heard its ability challenged in either House, or indeed anywhere in the Dominion.

That commission made a lengthy and very thorough investigation into the whole problem of our railways. Its report is one of the most impressive documents in our literature. It does credit even to a man with such a record as that of the Chief Justice of Canada. The commissioners examined first into the causes of the trouble we were in, and disclosed those causes in most definite form, amply supported by evidence and incontestable facts; indeed, by facts no one has ever ventured to question. They attributed our difficulty first to that earlier basic cause I mentioned at the opening of my address—over-construction due to over-optimism of the Canadian people. They added, though, that another cause was unrestricted, uncontrolled competition between two great systems serving the same people, one of which was publicly owned and the other privately owned, and that the privately owned one had deemed it necessary to meet the pace of expenditure set by the publicly owned one in order to hold its share of the field. They gave as another cause the absorption of non-paying independent lines and other properties into the Canadian National System, under compulsion of political or, as they preferred to describe it, public pressure, the consequence being an appalling increase in the capital liabilities of the system. They gave as a third cause, inelasticity in the power to compete with outside, extraneous means of transport, due to rigidity of freight and passenger tariff schedules. They gave as still another cause the position in which the railways found themselves because of international trade unions controlling in considerable degree the level of railway wages and compensation, and the consequent inability of the railways to meet periods of stress as they can be met in individual enterprises. These were the main reasons advanced for the immensity of the problem which confronted this country.

The commission then proceeded to outline methods of escape or alleviation; means whereby the road might be saved for the future so that improvement, at least, might be looked forward to, and the impediments surrounding the management of a nationally owned system be reduced to the utmost extent, or removed.

Throughout the entire report one finds the main criticism to be this: that the very fact of the National System being publicly owned and having the treasury of Canada as its means of resource induced an atmosphere of extravagance over the whole range of management.

Hon. Mr. CASGRAIN: Public ownership!

Right Hon. Mr. MEIGHEN: As a consequence the entire history over the period covered was characterized by the "red thread of extravagance." Expenses in every sphere of railway operation and near-railway operation were startling. The aggregate amount was indeed something to shock the people of our country. The commissioners quoted the evidence of witnesses in explaining how it came about that a road so controlled was subject to these influences; and they did so in no spirit of hostility to any administration, as is very clear from every line. Nothing perhaps can exceed the vulnerability of such a system as was in vogue, namely a system of a board, with the Government, exercising the authority of stockholders, as its dominating factor. They quoted the authority of Sir Henry Thornton, who said, in a language of which he was a master—sonorous, very, very friendly and insinuating—no matter what Government in the world was in power, public pressure was bound to exert itself through the medium of that Government and result in expenditures by the road, chiefly of a capital nature, which no private enterprise would enter upon. They gave other authorities and many instances. They said it was not just a case of a member of Parliament wanting a pass or a job for someone, or even of a Minister trying to tell them what they had to do. It was the influence of communities upon the Administra-

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

tion, and through it upon the railroad, that resulted in this vast liability being incurred.

What were the liabilities? The commissioners found that over a period of nine years, from 1923 to 1931, inclusive, liabilities of the National System had been added to by 922 millions of money, or over $100,000,000 a year. They found that some of this, of course, was due to the cumulative effect of repeated and successive deficits, which took the form of liabilities to the Government. Over these nine years four hundred and fifty-six millions of the total was due to new capital expenditures, or over $50,000,000 per annum. In instancing these expenditures they pointed to a fleet of ships tied idly to our Western docks; to hotels of imposing magnitude in many of our cities, without business or, indeed, with closed doors; they pointed to railroads taken over which had no earning power and were only a liability after they were absorbed. These things they euphemistically but truthfully ascribed to the fact that the public treasury governed and supplied. They did not intimate that anything in the nature of corruption or wrong intent was allowed to enter. This situation they portrayed as the inevitable result of leaving management exposed to influences exercised through Government.

Hon. Mr. DANDURAND: And to the action of Parliament.

Right Hon. Mr. MEIGHEN: Well, the action of Parliament at the instance of Government, for, inasmuch as money was the one essential, it had to be at the instance of Government. The Government looks to Parliament, of course, to provide the money.

Hon. Mr. DANDURAND: And to the building of branch lines.

Right Hon. Mr. MEIGHEN: Some; yes, certainly. The honourable gentleman is helping me considerably. Does any one for a moment think the pressure of communities to have branch lines constructed is not just one instance of that public pressure which the report reveals? I am trying to emphasize public pressure, upon which may depend the fortunes of some candidate, or more than one, as an evidence of the same influence which, in huge degree, was responsible for the dilemma of the railways.

The commissioners came then to the still more difficult problem of finding some means of effecting a remedy or betterment. To overcome the disabilities incident to unrestrained competition, and to avoid the tremendous expenditures consequent upon them, they recommended first of all a system of co-operation enforced by a tribunal to which either railways could appeal if such co-operative measures could not be effected by mutual agreement.

But the main recommendation, the one which is paramount in its consequences, was that there should be set up a system which would to the utmost possible extent remove the operation of the road from the pernicious, deleterious and, indeed, catastrophic influences that had brought it where it was. What was the former plan? The ex-board of directors, appointed by the Government, was responsible to the Government. The Government took the place of shareholders and directly exerted its influence as the representative of the shareholders. Therefore the board of directors was virtually answerable to the Administration for all the Administration's demands. The commission gave it as a finding that the board of directors, ever since its existence, had felt itself in exactly that position and not able to exercise independent judgment; that it had looked upon the word of the Government and the word of the president, who was a Government appointee, as the be-all and the end-all of policy.

What did the commission recommend as a remedy for that evil? It said that the best means it could suggest was the removal of the board, which supervises the management, from direct responsibility to the Government and the placing of it under direct responsibility to Parliament. It said there should be appointed a board of trustees on a basis of permanency, or at least of such a degree of permanency as would prevent their inevitable removal with the shifting of the political thermometer; that the board of trustees should report to Parliament each year; that in no way should the board be under the influence, or even in the immediate presence of, the Government, and that administration of the road should rest solely upon the shoulders of that board, unrestrained, unrestricted, and unsupplied with money except such money as was voted by Parliament directly for the purpose.

In all these regards and to all this advice the utmost consideration was given; consideration not only by the Government, but by the House of Commons and, I think I can say, particularly by this House. It was in the Senate that new legislation was initiated. Here it received its first and principal review. Here every phase was criticized and examined, the whole matter being brought under our eye. This House decided, first, that the proposed system was good and should be given a fair trial with a view to seeing whether we could not make at least some progress towards betterment of the financial situation of the road. Appointments were made in the fall of that year, after having been delayed somewhat because of difficulty in inducing men of requisite weight and type to take on the duties of trustees.

To the position of chairman was appointed Judge Fullerton, a man who because of his experience in the practice of law, as a judge on the Bench, and, for some time before his appointment, as head of the Board of Railway Commissioners of Canada, was deemed competent to take the principal post of responsibility. The other appointees were certainly very good men. I do not know that better men could be secured to-day than Mr. Morrow and Mr. Labelle.

Hon. Mr. CASGRAIN: What did they know about running a railway?

Hon. Mr. POPE: What do you know about it?

Right Hon. Mr. MEIGHEN: The central responsibility was on Judge Fullerton. I must have regard to the well-intentioned interruption of the honourable senator from De Lanaudière (Hon. Mr. Casgrain), who asked what they knew about running a railway. Well, Judge Fullerton did know quite a lot about railways; his experience had taught him a lot about them. In the next place, the business of the trustees was not the management nor the operation of the railway. The Act which authorized their appointments, and which in this respect also fulfilled the recommendations of the Duff Commission, provided for the appointment of an operating manager, with the titular rank of president, who was to do the operating. The three trustees were supervisionary men who were to take the place of directors, perform the functions of directors and report to Parliament. They were required to direct their energy—the chairman was to give all his time and energy—to an endeavour to better the condition of the road and to save expense, while maintaining the character and efficiency of the system and making it a credit to Canada. Above all, they were to try to reduce the burden on the back of the taxpayers of this country.

Hon. Mr. MURDOCK: May I ask the right honourable gentleman a question? Does he not recall that Judge Fullerton, when he appeared before our committee the other day, intimated that he took action entirely at variance with what the right honourable gentleman has just stated? I think what the right honourable gentleman has stated should have been the position. But did not Judge Fullerton say that he had taken certain departments under his own control and discharged some responsible officers who had served a long time on the road, replacing them by others?

Right Hon. Mr. MEIGHEN: The honourable gentleman will have plenty of time to speak on this later. I would ask him not to interrupt me unless he has something more pertinent. Judge Fullerton said no such thing.

Hon. Mr. MURDOCK: I beg the honourable gentleman's pardon. He did say such a thing. If there was a stenographic report it will bear me out.

Right Hon. Mr. MEIGHEN: There was a stenographic report all right. What Judge Fullerton said was that in the matter of the operation of the railway system the whole thing was left to the titular president, and that he never interfered in the slightest degree with that titular president. But there were certain responsibilities of the company, not at all concerned with operation of the road, which he deemed it his duty to assume, and which he did assume. And he has reported to Parliament, as to the committee, the whole result of that management. That I would have stated whether any interruption had been made or not.

Such was the system that was inaugurated. And let me inquire briefly what the result has been. May I direct the minds of honourable members back to the evils revealed by the Duff Report and to the reasons why the disastrous results of which we were witnesses had taken place? Political and public pressure was the main evil. Directly due to the influence of that political and public pressure was a staggering measure of extravagance. Let us now examine into the results effected by the board of trustees. I said there had been an aggregate expenditure in new capital of $456,000,000 in nine years, or more than $50,000,000 a year. I might have mentioned, as I will now, what the Duuff Commission especially pointed out, that because of public pressure the investment in the capital of the road was, in the year before an election, more than double what it had averaged in the previous eight years. But what happened after the trustees took control? They are able to report for but two years, for it was only a year and nine months after their appointment that they were told to go. In those two years no money was put into new capital at all. Rather I should say that the retirements were greater than the expenditures in new capital.

Those two years have not been good years; they have been years of depression. For railways over the whole of this continent, including the United States, they have been relatively bad years. Yet, because of a measure of increase in business, accompanied by reductions in expenditures, the trustees were able to make a saving of over $22,000,000 in the cash deficit in those two years. That much less money was required from the treasury. As indicating one element in this reduction of deficit, Judge Fullerton was able, in a

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

11950

statement presented to the House of Commons, to point to an improvement in the result of the management of every one of the different branches of which he had taken direct and immediate control. Several of those branches were such as had no revenue at all; branches like that having to do with colonization. But the hand of economy was applied generally, and in the short period when the trustees were in control excellent results were obtained in the reduction of cost to the country, regard being had to conditions at large.

Judge Fullerton was able to show that in respect of steamships, which are entirely separate from railway operations, instead of there being a deficit which had reached as high as $1,800,000 a year and which I should say would average somewhat less than $1,000,000 annually, the Australian service had produced in 1935 a surplus of $317,000 and the West Indies service a surplus of $310,000. Excellent as were those surpluses, which appeared for the first time in 1935, he was able to show even more favourable results for this year, up to the date about which he was speaking. In the management of hotels—and all this is, of course, aside from interest on cost; it is only a comparative presentation—he was able to show a surplus of about $101,000 for last year, as against continued deficits for at least a decade. He never claimed, though, that these results were all that could be obtained, or that he was anywhere near the goal he was seeking.

After a survey of all branches, conducted by himself, he produced an average annual saving of over $700,000. In the midst of his activities, and with all these accomplishments behind him, he was told to please step out, because he was not a railway man. I am afraid that if the reason for his stepping out was a sound one, it would, if followed, produce a convulsion in the structure of almost every big enterprise in this country. If that principle were applied it certainly would produce a convulsion in the present Government.

Hon. Mr. MURDOCK: Was he not asked to step out in January, 1935?

Right Hon. Mr. MEIGHEN: Not at all.

Hon. Mr. MURDOCK: Is the right honourable gentleman sure of that?

Right Hon. Mr. MEIGHEN: Absolutely sure. The whole difficulty is incomplete information—and "incomplete" is a complimentary word. No such instruction was ever given or even suggested to him.

Hon. Mr. MURDOCK: Will the right honourable gentleman assist to bring this out by having the proper parties tell the story on the stand?

Right Hon. Mr. MEIGHEN: He was on the stand.

Hon. Mr. MURDOCK: No.

Right Hon. Mr. MEIGHEN: Judge Fullerton was not on the stand? What is the meaning of these interruptions, Mr. Speaker? Have they any point or purpose? Judge Fullerton was on the stand, but was not asked that question. Why was it not put to him? I say to the House—and I have the floor—that he never was asked for anything of the kind.

Hon. Mr. MURDOCK: No. He was not the one who should have been asked.

Right Hon. Mr. MEIGHEN: No. And he should not have been asked by this Government to go. But he was asked to go, on the ground that he was not a practical railroad man. Such a principle, if applied, would have removed from the chairmanship of the board and position of effective head of the Steel Corporation of the United States, Judge Gary, a man who had been a judge before he took that appointment, and who, at his death, was recognized as perhaps the foremost industrialist on this continent. His business was not to make steel, nor even to supervise active operations of the plant. His business was to exercise control over finances, over policy, over the great economic factors that enter into the business of production and sale. The same principle would have removed Sir Joseph Flavelle from the presidency of the Grank Trunk. Did anyone suggest that he was not a fit man for that post?

Hon. Mr. MURDOCK: Lots of people.

Right Hon. Mr. MEIGHEN: The same principle would have removed him from the presidency and chairmanship of the Munitions Board of this country, in the occupancy of which he undoubtedly, by his business capacity, saved hundreds of millions of dollars for this country, Great Britain and the Allies. The same principle would remove many Ministers now occupying supervisionary posts over great departments in which there are operating branches. But it is a principle which has never been recognized by business concerns in choosing their heads.

"By their fruits ye shall know them." We have had two years in which to test Judge Fullerton, to examine the fruits of his administration. I ask honourable members if it is not better to see results represented by increased figures in the black than by a continuation of huge figures in the red? The operation of the road was not his duty. Direct contact with the men was not essential for him. He was told—not when he was asked to go, but two months later—that the reason for the request was the low morale of the road.

11951

Well, our committee studied this Bill. Judge Fullerton was called, as was Mr. D. C. Coleman, Vice-President of the Canadian Pacific. Anyone else whom honourable members desired to hear upon this subject could have been called, but no one else was invited. What was the evidence given on this question of morale? Mr. Coleman, who was the first witness, said that he was Vice-President of the Canadian Pacific Railway and was in charge of operations. I asked him, "If the morale of your road is bad whose fault would it be?" He said, his own; it was his business to keep it up; he was the operating head. Before he went there he was, I think, a newspaper man. I hope honourable members have heard that.

Right Hon. Mr. GRAHAM: A good training.

Right Hon. Mr. MEIGHEN: A good training, certainly; and he has proved an excellent man and a credit to Canada. He said, "If there is anybody responsible for the morale on my road it is myself." I asked him who occupied the corresponding position on the Canadian National Railways. He said it was Mr. Hungerford. So I asked, "Who is responsible for bad morale, if there is any, on the Canadian National Railways?" He said, "Mr. Hungerford." Mr. Hungerford is the heir presumptive to the management and chairmanship of the board under this new system.

But Mr. Fullerton did not attack Mr. Hungerford. On the contrary, he said Mr. Hungerford had kept up the morale. The morale is not bad. The supposition that it is bad is a pure delusion of the Minister. He is the only one who ever said so. Mr. Fullerton said. "I never heard of that until he told me on the 30th of December last year." He said further: "Just last week I was talking to Mr. Warren,"—a vice-president of the Canadian National Railways at Winnipeg, whom we all know, and who has been on the road virtually all his life—"and I asked him if the morale was bad. 'Why, no,' said Mr. Warren, 'it is excellent'." Every tittle of evidence before the committee showed the morale of the road was splendid. Then why this change?

This brings me to the critical point of the matter. Why is the change to be made? I know very little of, I scarcely know personally, the new Minister of Railways. He was never in Parliament before the last election. I know that his reputation as an engineer is good. I have not the least reason to doubt that as a business man also his reputation is good. So I do not approach him predisposed adversely. But within a week of attaining office he decides that the Duff-Flavelle-Ashfield report, prepared after many months of inquiry and study under the authority of men of unquestioned rank and respect, is to be thrown into the waste-basket and forgotten. He finds that men, into the real results of whose work he has never inquired or never had time to inquire, have to be thrown on the ash heap and abandoned. He finds that the system of management which brought about the disastrous consequences revealed in the Duff-Flavelle-Ashfield report has to be restored and put under his direction; that all the vulnerability to public pressure and politics, all the weaknesses consequent upon that position, have to be restored. In almost his first utterance in the city of Toronto he said: "We cannot tolerate the present position. Why? Because we own the road, we have to provide the money, and therefore we must have control."

Now, I ask, for what purpose was it so essential that the Government be restored to control of the Canadian National Railways, as it will be under this measure? I do not have to answer the question. Mr. Howe has answered it himself. Mr. Howe says: "I am not a bit afraid of this bogey of the Government interfering with the road. What I am afraid of is the road interfering with the Government." To make his point clear he gave an instance. He said: "Mine is a railway riding, the riding of Port Arthur. This trustee board has it within its power to destroy my political career." Could such a thing be tolerated? Is the fate of the National Railways comparable, in its consequence to this Dominion, with the success of the political career of Mr. Howe? Mr. Howe announced he was going back to Government control in order to see to it that the road was directed in such a fashion as would answer the political necessities of the Administration. He is on record in the frankest language, and I am asked to support the process. I have indicated to honourable senators why I do not feel I can do so.

Has anything further been since adduced? Mr. Fullerton reveals what has been accomplished in two years of operation; and for this he does not himself take credit, but gives credit to the system under which he was able to handle business unimpaired and unimpeded. He says that although on the Canadian Pacific and first-class roads of the United States the percentage of improvement in traffic was not as good as on the Canadian National, yet the percentage rate of increase of expenses on the Canadian Pacific and the first-class roads of the United States was not by any means as low as on the Canadian National; and that the operating ratio of the Canadian National in the two years under the trustee system had improved vastly over former years—from 96 per cent to 91 per cent—while the ratio of Canadian Pacific remained al-

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

J.I9952

most stationary, and that of first-class roads in the United States was approximately stationary. By the test of operation ratio, although it is not perfect, you can most intelligently judge efficiency of administration.

Mr. Fullerton says, "This has been done, not by robbing men of their jobs, not by economizing at the expense of labour." This apparently he set himself against, rightly or wrongly. He says, "Instead of having fewer men employed we have 4,000 more, and instead of having lower wages we have restored part of the cut. It appears in our labour payments of last year, which represent more than $9,000,000 increase as compared with the year before."

The consequences of a return to the system of management by a board of directors with Government authority also restored may not be the consequences that followed the same system in other years; I do not know. But I do know that consequences which did follow in the past were disclosed as inevitable because of the system, and I do know that the same man is head of the Government to-day who was head of the Government in those days. Therefore I cannot very logically be asked to work up a tremendous degree of confidence that the same consequences will not be repeated.

It is said that this is a great national business and since the people have returned the present Government to power, whether or not you like the way it is going to handle the National Railways, it ought to be given a chance. I know the duties of senators are important, their responsibilities heavy; and I recognize there are limitations surrounding us, and it is in the interests of Canada that those limitations should be observed. I want to observe them. But unless the Government has at least a specific, definite and understandable mandate from the people of Canada, I do not think those limitations go to the extent of imposing upon me any compulsion to support it when I have every reason that any thoughtful man of experience can have, to believe that the course now to be taken will be calamitous in its financial consequences to our National Railways, when I know what all investigation in the past has shown and that similar consequences cannot well be avoided under the system now being restored.

I said there was no specific mandate. Is there anything you can call a mandate? Did members of the present Government disclose to the people of Canada before the election that they intended to abandon the trustee system, with the trustees responsible to Parliament and not to the Government? I venture to say not one man now in the Administration ever indicated to the people of Canada that such was his intention. Certainly the present Prime Minister did not. Did he ever intimate to the people of Canada his aversion to the principles of the Duff-Flavelle-Ashfield report, or his intention to tear it to tatters and throw it into the limbo of the past? He never did. Certainly everything that can be done to help the Canadian National Railways the Government has a right to do, but it has no right to substitute its ideas, undisclosed to the people of Canada, for ideas confirmed by Parliament in the past because of the authority with which they have been advanced, and in the face of facts which that authority reveals. Certainly there is no compulsion upon me to support the Bill because of a mandate. A mandate does not exist. I do not regard the general authority of Government to do what it likes in financial matters as necessarily forcing me to be a party to a reversal of a policy which up to this day has proved at least a partial success, and to the substitution of a system which through most of its existence was nothing but a total failure.

Consequently I intend to vote against the measure. I do not know that by doing so I am acting in the interest of the party with which presumably I have some relation. I care not. I am not going to take a step which in future years I might look back upon and be unable to defend. That is the reason I am taking this course. It may be that improvement in business, which undoubtedly is under way, will in some measure help the Administration to show larger aggregate results. I know it hopes to be saved by Providence from the consequences of its own folly; and possibly it will be. But I am as certain as I can be of anything that there would be far greater success under the system safeguarded as it is to-day, than by this reversion to a discarded system which is now commended to the House. Having so convinced myself, I take my stand against the Bill, and I take upon myself all the responsibilities of that stand.

# MINUTES OF EVIDENCE

THE SENATE,

TUESDAY, June 14, 1938.

The Special Committee appointed to inquire into and report upon the best means of relieving the country from its extremely serious railway condition and financial burden consequent thereto, met this day at 11 a.m.

Right Hon. George P. Graham and Hon. C. P. Beaubien, Joint Chairmen.

Colonel O. M. Biggar, K.C., Counsel to the Committee.

The CHAIRMAN (Right Hon. Mr. Graham): Are we ready to proceed, Gentlemen? I believe that Senator Dandurand has something to say.

Hon. Mr. DANDURAND: Honourable senators, I deem it my duty to recall what the decision of the Committee was when we first met on this matter. We decided that we would hear representatives of the Joint Co-operative Committee, in order to find out what efforts they had made to bring about co-operation between the two railroads and obtain economies thereby. The Committee is made up of two sections of three members each, one section representing the Canadian Pacific and the other section representing the Canadian National. But during the adjournment which followed our opening sittings, Colonel Biggar met those gentlemen and came to the conclusion that the chairmen of the two sections should first be heard, that is Mr. Fairweather and Mr. Armstrong. We heard those two gentlemen. Then it was decided that we should hear from the higher officials, the executives. So, Sir Edward Beatty followed Mr. Armstrong. Sir Edward made statements, which were confirmed by heads of various departments of the Canadian Pacific. Continuing along the same lines this morning, we have Mr. Hungerford here, and he very likely will do as Sir Edward Beatty did and ask the committee to allow his experts to follow him. I mention that in order to dispel any idea that we are placing the two railways in opposition to each other here. We are simply facing one with the evidence of the other because this is the only way in which we can get expert evidence. It is with that end in view that we are proceeding in the way that we have been.

Hon. Mr. BLACK: Mr. Chairman, may I make a request? I think we are all now thoroughly familiar with the proposed abandonment of lines suggested by the Canadian Pacific. A good many of us, I imagine, were surprised to find that line abandonment was not nearly as important a feature as we had thought it was. In their original statement the Canadian Pacific recommended an abandonment of something over 5,000 miles, and the Canadian National suggested abandonment of something over 2,000 miles. Now, the mileage which the Canadian Pacific proposed for abandonment is indicated on the map by black marks, and it seems to me it would be very helpful if these marks were removed and new ones placed on the map to indicate the abandonment suggested by the Canadian National. This procedure would I think be useful to us when the time comes for us to make our report. I make my suggestion subject to the wishes of other members of the Committee.

Hon. Mr. DANDURAND: I suppose that when we are through with the evidence that point will have been covered.

Hon. Mr. BLACK: My suggestion will not have been met unless the markings indicating Canadian Pacific proposed abandonment are removed from the map and replaced by markings indicating Canadian National proposed abandonments.

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

L 119955

Mr. BIGGAR: It occurred to me that it would be unfortunate to remove those black tape markings from the map, but that the point Senator Black has raised might very well be met if some white adhesive tape were placed over the black to show the Canadian National proposals.

Hon. Mr. BLACK: Quite all right. That is just what I wanted to get, something like that.

The CHAIRMAN (Right Hon. Mr. Graham): We have had a great many requests from individuals, municipalities and organizations of various kinds for an opportunity to be heard before this Committee. One such request came from the town of Sioux Lookout, Ontario, and I suggested to the Mayor that we could not very well give him an opportunity to be heard, but if a resolution were sent in we should see that it was placed before the Committee. I have now received a communication from the Mayor of Sioux Lookout, and I would ask the Clerk to read it to you.

The CLERK: This is the letter:

TOWN OF SIOUX LOOKOUT

Sioux Lookout, Ont., June 1, 1938.

The Rt. Hon. SENATOR GEORGE P. GRAHAM,
Chairman, Senate Railway Inquiry Committee,
Ottawa, Ontario.

*Memo Re—Railway Unification*

DEAR SIR:

As Mayor of the largest town between Capreol and Transcona, this territory taking in some one thousand miles of the Canadian National Railway Lines, which is proposed to be abandoned under the C.P.R. scheme of unification, I am at the direction of a thoroughly aroused people directed to place before your honourable committee some of the facts as it affects my town and the surrounding district.

I may say that you will find that the statements which I make in this memorandum will be found in direct variance with statements already made by C.P.R. representatives before this committee, and I respectfully propose to show to your honourable body that a deliberate attempt would seem to have been made to leave with you and through the press to the people of Canada an absolutely inaccurate picture of what abandonment of this piece of C.N.R. track would mean to the people living in the north country, and would seek to minimize the terriffic human sacrifices, the wholesale human suffering, this abandonment would entail on the part of these people.

It would seem that the statements made to your honourable body by C.P.R. representatives, as reported in the press, were made for the purpose of belittling the importance of the area before mentioned, both from a standpoint of property and human values and from an industrial and railroad standpoint.

Permit me to point out one specific instance of such misrepresentation. It was reported through the press that C.P.R. General Superintendent McNab, informed you that there were only some 3,500 people between Long Lac and Transcona, a distance of some 671 miles.

May I respectfully be permitted to classify that statement as being so ridiculously inaccurate as to expose the fact that Mr. McNab is utterly unfamiliar with Northern Ontario and it would seem that he made the statement more to an eye to its value as public propaganda than to a desire to furnish your honourable body with reliable information.

L 119956

I make this direct statement that you may find 3,500 people within a radius of twelve miles of the town of Sioux Lookout alone, and let me say that I am not including any miners or trappers.

The town of Sioux Lookout alone has an assessment roll of nearly $900,000 and a property value of at least $1,800,000, including municipal improvements. This town was built by the thrift and industry and savings of those who believe in this district and who never dreamed that their means of communication would ever be taken away.

From an industrial standpoint, the proposed abandonment of these C.N. lines would retard and probably halt the mining development of Northern Ontario, which promises to be the most important industry in Canada.

Within a radius of 100 miles of Sioux Lookout, there are no less than seven producing mines, market valuation $28,500,000. In addition to this, and I base my statements on my knowledge of the north country as a mining man, there are not less than nine near producing mines with a market valuation $22,500,000, a total of $51,000,000.

The milling plants for these nine properties and others have still to be freighted in. This would be impossible without the Canadian National Line.

There is at least five thousand people engaged in mining in that district—ninety per cent of the freight is shipped to these mines by water from Hudson and other points along the Canadian National Lines.

I would again point to a specific instance where misrepresentation has been supplied your committee. C.P.R. General Superintendent McNab is reported to have told you that the mining business and transportation of freight to the Red Lake country could be readily handled from a point on the C.P.R. I make this statement that 15 out of every 16 tons of freight shipped into the Red Lake country from the town of Hudson on the C.N.R. and is shipped from rail head by the water route. The other ton is shipped by airplane.

It is a known fact that the C.P.R. could make no other connection with Red Lake than by airplane. I would point out that a great percentage of the bulky freight shipped to Red Lake by water in the first place could not be shipped by airplane and the terrific increase in the cost of transportation through an all-airplane route would put your Northern Ontario mines out of business.

I would swing for one moment to a brief survey of a wider territory. Between the towns of Capreol and Transcona, you may find property values made up of the homes of workers totalling a sum of at least $8,000,000. You will find in that area a population of at least 22,000. These figures are based on first hand information from the organized towns and a thorough familiarity with the smaller towns involved. You will find at least ten saw-mills in that area giving employment through bush operations to thousands of men. You will find at least four of these saw-mills at, and within, ten miles of Sioux Lookout.

In conclusion, I might say it would be too much to ask that the interests of the individual, or of a single community, should be placed above the interests of the nation, but I respectfully submit to your honourable body that, on the one hand, you have problematical savings in railway operations about which even railway experts disagree, and, on the other hand, you have the known fact that railway unification, as proposed, would leave a trail of ghost towns across Canada — would cause terrific suffering to thousands — would result in a huge inflation of relief rolls — would wipe out the life savings of thousands of Canadian citizens and, with unification an accomplished fact, would render desolate that part of Canada affected for generations to come.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119957

I would ask one more question. Mr. McNab, when making the statement that the interests of the people of Hornepayne were not paramount, said that transportation will still be afforded the town of Hornepayne. My question is when you abandon this part of the Canadian National Railway who will be left at Hornepayne who will require transportation.

The people of Northern Ontario look forward to you, Senator Graham, to have the facts placed before your committee.

Yours respectfully,

(Sgn.) JNO. L. MORAN,
*Mayor.*

Hon. Mr. DANDURAND: Mr. Chairman, would you allow me to express an opinion to the committee? I thought that we should proceed with the expert evidence to be offered this morning by the representatives of the Canadian National Railways who, since 1934 and before, have been in contact with the Canadian Pacific representatives in reference to co-operation or unification, and that in the meantime our esteemed chairman would examine any communications which reach us from the outside and give us a summary of them later. Already a dozen or two communications have reached me. Some I have read and others of forty and fifty pages in length I have asked my secretary to summarize.

The CHAIRMAN (Right Hon. Mr. Graham): We have no secretary.

Hon. Mr. DANDURAND: I was under the impression that we were to defer dealing with any communications from outside until this evidence is closed.

The CHAIRMAN (Right Hon. Mr. Graham): I think it is a good idea and that we had better not discuss it. I think my honourable friend really means to say, "Let us get on with our work." Senator Beaubien and myself, as well as the leaders and other members of the committee have received letters, but possibly not so many have received resolutions from towns and cities.

When we last met we suggested, with some force, that we should make notes of the evidence and refrain from asking the witnesses questions until they were through. I am not sure that we succeeded very well along that line.

Son. Hon. MEMBERS: Oh, oh.

The CHAIRMAN (Right Hon. Mr. Graham): But it was the best we could do. My brother chairman and I desire to repeat that suggestion, in the hope that it will shorten the proceedings. Let us allow the gentlemen to express their views or give their testimony without interruption, unless under trying circumstances, and then we can ask them any questions we like on what they have said. Gentlemen, if that suggestion is not a success, don't blame us. Often suggestions of this kind are made in committees and do not work out at all. My confrere says that I should say something about holding the communications until we get through, as was suggested by Senator Dandurand. We have plenty of them, and, perhaps, when we look through them we will find that the ground has been covered. Meantime I suggest, and I think you will agree with me, that we should not have any more letters before the committee until we get through with the heavier work.

Mr. BIGGAR: Mr. Chairman, the committee is anxious to hear Mr. Hungerford, who is here, and he should not be detained. I have half a dozen documents that were asked for last week, ready to put in, but I think we might postpone them until we have heard Mr. Hungerford.

Some hon. SENATORS: Hear, hear.

119958

S. J. HUNGERFORD, Chairman and President, Canadian National Railways, was called as a witness and took the stand.

*By Mr. Biggar:*

Q. Mr. Hungerford, you have attended here to-day at the request of the committee for the purpose of assisting the committee in dealing with their reference from the Senate. I need hardly remind you what the terms of that reference are. The committee is asked to report upon the best means of relieving the country from its extremely serious railway condition and financial burden consequent thereto. I understand that you have some submissions to make with regard to that situation, and that you have reduced them to writing and are prepared to open with them.—A. That is quite correct. I thought it would save the time of the honourable committee if my views were more or less condensed.

Q. And copies of that are available to the members of the committee, and are being distributed?—A. I believe so.

Q. Now, Mr. Hungerford, will you go on, please?—A. I have to apologize for my voice. I am not sure that I can speak clearly enough to enable you to hear, but I will do my best.

Honourable Senators: Having been requested to appear before you, I reviewed the proceedings of this Committee and in accordance with the approach to the problem, as developed therein, I believe you would first desire to have my views on unification and on the estimate of 75 million dollars per year saving which has been put forward to support it, and then my views on the general situation.

The railway problem was examined by the Royal Commission on Transportation in 1931 and in 1932, and as one who appeared before that Commission, I can bear testimony to the very careful and searching inquiry which was made of the merits of unification. The conclusions arrived at by the Royal Commission bear the stamp of careful and considered judgment on a difficult and complicated matter. Unification, as suggested to the Royal Commission by the Canadian Pacific, was rejected and a policy of enforced co-operation was recommended. These are the conclusions which impartial study would appear to warrant. It is my considered judgment that these conclusions are as sound to-day as they were in 1932.

The Chairman and President of the C.P.R. in his evidence before this Committee has told you of his surprise at the findings of the Royal Commission. I, on my part, was surprised at the subsequent institution by the Canadian Pacific of a policy of pressing publicly for unification. I cannot but feel that the atmosphere created by this policy has made co-operation between the properties less effective than it otherwise might have been. The management of the Canadian National Railways has not carried on a public controversy as to the merits or otherwise of unification and the reiteration of one side of the case may have created an impression that there is no reasonable and logical answer to it, which is not correct.

As part of the advocacy of unification, the income deficits of the Canadian National Railways have been constantly stressed and there have been statements that the accounting of the system since the passage of the Refinancing Act in 1937 is improper; also, while I cannot believe that it was part of the policy of the Canadian Pacific Railway, there has been a continuing attack by self-styled experts and writers upon the administration of the Canadian National properties. In a democracy it must be expected that State owned enterprises will be subjected to criticism and attack, especially in periods of depression and to be engaged continually in public controversy answering uninformed statements would, it was felt, give to this type of criticism a greater weight than it deserved.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119959

From time to time, however, it is well to examine the fundamentals of our railway transportation system and we should at no time overlook any opportunity of bettering it.

Reduced to simple terms, the case submitted by the Canadian Pacific to this Honourable Committee is that an unwise venture of the State into the railway field has produced the greatest danger to the future of the nation by the creation of the Canadian National Railways; that this danger can only be removed by unification and that savings of $75,000,000 a year would result.

I cannot agree that the creation of the Canadian National Railways as a State owned and controlled public utility is a danger to Canada, much less the greatest danger to the future of the nation. Those who hold and express such views overlook the great measure of public service performed by the Canadian National Railways System in the development of Canada and in furnishing railway transportation to communities to which, as parts of this Dominion, they are entitled but which it is impossible to provide on a paying basis judged by railway profits.

The history of the formation of the Canadian National Railways System is that public service demanded the continued operation of roads which found it impossible to continue operations on a profit basis. The public need for service existed, and still exists, and the only instrumentality of providing that service was the lines of railway now incorporated in the Canadian National System. If, as was the case, it proved impossible to operate these lines under private ownership at a profit and if they render a needed public service, it seems to me illogical not to expect a measure of financial encumbrance as a result of their continued operation in the public interest.

The wisdom of the formation of the Canadian National Railways cannot be judged solely from its financial results. There is a sounder justification for the operation of the property than railway profits. That justification is found in public service. I am firmly of the opinion that judged from that point of view the Canadian National Railways far from being a danger to the national existence has aided in large degree, and is continuing to aid, in the development of the country. Amounts by which the property fails to earn interest on bonded indebtedness are more than offset by these features.

In the administration of this property there is always taking place a balancing of two features; on the one hand the real need of service to the public and on the other hand a requirement to render the property self-sustaining. That it has never since 1923 failed to meet its operating expenses, notwithstanding the great depression, and that during the years of prosperity it succeeded in earning its interest charges to the public is a remarkable achievement having regard to the condition of the properties when they were taken over by the Government and the requirements of public service which it was necessary to meet.

There is a tendency to consider the income deficits of the Canadian National as deficits arising out of the operation of the property, but this is not so. The property, in fact, has a very great earning capacity under normal traffic conditions. For the 15-year period, 1923-1937 inclusive, its operating revenues exceeded its operating expenses by $361,346,000, or an average of $24,090,000 per annum. Even in the years of depressed earnings, 1932 to 1937 inclusive, the System earned $71,567,000 in excess of its operating expenses, an average of $11,928,000 per annum. In the five most prosperous years, 1925-1929, the property earned $225,287,000 over its operating expenses, an average of $45,057,000 per annum. These figures relate to the all-inclusive system. The deficits arise not from the operations but from the heavy burden of interest charges.

The potential earning power of the Canadian National System is very great and cannot be judged from any period in the past. As I have just indi-

119960

cated, an average of 45 millions of dollars was earned, after payment of operating expenses, in each of the 5 years 1925-1929 inclusive, despite the fact that during this period a program of rehabilitation of the properties was going on, involving very heavy operating charges. Under similar traffic conditions in the future, I am confident that the net earnings would be substantially greater.

While I cannot agree that the continued existence of the Canadian National Railways is the greatest danger to the nation, because I hold quite contrary views, I am, naturally, willing and anxious to examine the merits of any proposal for reducing railway transportation costs in this country. I might say here, however, that the cost of railway transport in relation to the work done, apart from interest on invested capital, is practically as low in Canada as in any other country in the world at all comparable to this Dominion. It is admittedly impossible to reduce invested capital to any considerable extent in any plan, however drastic; consequently it is fairly obvious that when you try to improve upon a performance which ranks with the best, assertions of savings need to be carefully scrutinized to see whether they hold real promise of being realizable. Perhaps I am in a specially favoured position to judge the practical economies to be expected from large-scale consolidation of railways, because in my experience I have gone through three such consolidations:—

1st—Consolidation of the Canadian Northern and Canadian Government Railways into the Canadian National Railways.

2nd—Consolidation of the Canadian National with the Grand Trunk Pacific.

3rd—Consolidation of the Canadian National with the Grand Trunk Railway.

My experience has been that large-scale economies are not produced from consolidations, and I speak not from theory but from experience. I do not mean to infer by this that very considerable improvement in the operating performance of the Canadian National Railways System has not taken place. In point of fact, since 1923 there has been a progressive improvement in the efficiency with which the operations have been carried on. I do want to make it clear, however, that this improvement has not, in a large degree, resulted from consolidation, but is mostly the result of improvements in the art of railroading and has been paralleled by the experience of railways in other countries. It is probably more closely related to the competitive principle than to any other single factor. Drastic abandonments of lines, service and facilities were not a factor and indeed, if attempted, would have defeated the very object for which the National Railways was formed.

Your Committee has before it from the Canadian Pacific an estimate of $75,000,000 per year as being the realizable economies from unification. In my judgment, based upon my extensive experience in consolidations, savings of this order would never emerge.

In the absence of details as to what physical changes in facilities and services other than line abandonments are contemplated, it is impossible to deal in detail with the estimate, although if the Committee desire to have their views, the officers of the Canadian National Railways are available here for a critical examination of it in as much detail as the partial exposure of it will permit.

I find that the asserted savings of $75,000,000 per year divide, upon examination, into two broad classifications:—

1st—Those savings which are based upon assumptions that the quantity of transportation service is greater and the quality of transportation service is higher than is needed, to which I have joined the asserted savings from a drastic program of abandonment of lines, the closing of stations, shops and other repair points and the consolidation of ancillary services. This group totals approximately $55,000,000 a year.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

1 1 9961

2nd—Those savings which are based on the assumption that Canadian Pacific unit costs can be applied with propriety to Canadian National operations without due regard to differences in geographical distribution of lines and the relative traffic, maintenance and operating problems. This group totals approximately $20,000,000 per year.

The assumptions which underlie assertions of such savings are, I believe, unsound.

There is an assumption that Canada has entirely too much railway mileage and that a minimum of 5,000 miles of line should be torn up regardless of the pioneering service which much of it is performing.

There is an assumption that the quality of railway service in Canada is on too high a standard and that great savings can be made by reducing it without detrimentally affecting the commercial and industrial activity of the country.

There is an assumption that railway traffic can be forced to move over specified routes to suit economy of operation without regard to the requirements of industry.

There is an assumption that stations, terminals, roundhouses, repair points and main shops can be abandoned and rearranged to suit the convenience and economy of the railways alone without regard to the way in which the continued operation of these facilities affects the communities in which they are located and the country as a whole.

There is an assumption that Canadian Pacific unit costs are applicable to Canadian National operations notwithstanding the fact that the geographical distribution of lines, the nature of the traffic and operating problems are very considerably different.

There is an assumption that the savings which appear in the estimates are net savings, but there is no regard to offsetting features such as expenditures for changes in facilities, compensation to displaced labour, the loss to individuals occasioned by the withdrawal or restriction of railway service, loss of tax revenue and the loss to communities from the abandonment of facilities.

There is an assumption that the disturbance to the labour and material markets would be of no consequence.

Each of these assumptions must raise doubts in thoughtful minds as to the reliability of estimates based upon them and, in my opinion, these doubts will be confirmed in proportion as the details of the changes proposed to be made are disclosed.

Consider line abandonments, for instance. In advancing arguments in favour of unification before the Royal Commission, the Canadian Pacific placed line abandonments as the important initial step and stated that "the first task of the Committee was to determine what tracks it was considered could be abandoned if the properties were operated as a unit," and again, "We are confident that unification would permit an abandonment in excess of 5,000 miles," and yet again, "we put that (5,000 miles) as a minimum and not the maximum."

At the request of the Royal Commission, the Canadian Pacific furnished an estimate of the proportion of the total savings in railway operating expenses due to line abandonments as being $16,366,850 per year with the qualification that "due to the manner in which the figures were assembled for the exhibit, this distribution has had to be made upon somewhat arbitrary lines."

Among the things which have emerged from your Committee's inquiry, it appears to be clear that the abandonment of 5,000 miles of railway in this country is not feasible, having regard to the public interest. I leave it to your

1 1 9962

judgment whether it would be in the best interests of this country to do what has been proposed in this instance. For my part, I cannot envisage setting the transportation clock of Canada back 30 years. The public interest is too much involved. I hold that much of the economy, based on other and undisclosed drastic changes, involving the abandonment of stations, roundhouses, terminals, shops, etc., and the degeneration of main lines into branch lines, if given a similar touch of reality by a disclosure of exactly what was contemplated, would likewise prove unsound and unrealizable.

The continuing insistence by the Canadian Pacific in evidence before this Committee that 5,000 miles of line can be abandoned (if not the lines in their program, then some other lines), may be taken as a faint warning of the attitude towards public service to be expected under unification.

I have used line abandonments as an example because it is only in line abandonments that there has been a complete disclosure of the program contemplated in unification. It is to be regretted that the Canadian Pacific has not given the details of the proposed curtailment of services and what shops, terminals, division points, roundhouses, stations, etc., it is proposed to abandon. The extent to which public interest is adversely affected may be gauged by this reluctance to give the details of just what is contemplated in the unification plan. The frank statements by Canadian Pacific officers that to divulge such information would impair relationships with the communities affected, is sufficient evidence to me that the general statement contained in the brief of the Canadian Pacific that the quality and quantity of transportation service in no part of the country would be seriously impaired, is incorrect. Nor can I accept the Canadian Pacific argument that since none of these things will be done without the prior consent of the Board of Railway Commissioners, the country need not concern itself with such matters at this time.

The real matter to be decided upon is whether the estimate of $75,000,000 can, in fact, be realized. It makes no difference in that regard whether the refusal to contemplate such drastic changes is expressed now by public opinion or subsequently by a Commission acting in the public interest. Such exposure of the details as has taken place has confirmed my general belief that most of the economies of unification are incapable of realization.

Most of the economies which are realizable in a practical sense, in that they relate to economies which can be really made effective without unduly impairing the public interest, will be found upon examination to be obtainable under the principle of co-operation and the country need not incur all of the unknown perils of unification in order to obtain these economies.

It is entirely feasible under co-operation to arrange for the abandonment of one of two closely paralleling lines of railway where public interest is not adversely affected. It is feasible under co-operation to make arrangements for joint stations and terminals where an economy is indicated. It is feasible to arrange for the handling of one company's traffic over another company's line. It is feasible to eliminate duplicate competitive passenger train services to the extent justifiable in the public interest. It is feasible to deal co-operatively with ancillary services. Types of all of these economies have been explored and have been demonstrated as entirely practicable and workable.

The second classification which I have made of the $75,000,000 estimate relates to the treatment by the Canadian Pacific of the operating costs of the unified system. It is an unwarranted assumption that statistical averages of the Canadian Pacific performance can be used to determine the operating costs of the Canadian National Railways without reference to the differences between the maintenance and operating problems of the Canadian Pacific and the National System. Add to this the narrow basis upon which the comparative operating costs are based, namely, the single year 1930, and it becomes apparent that the $20,000,000 is a mere statistical conjecture.

The Canadian National Railways, from the onset of the depression in the fall of 1929 until about the middle of 1930, pursued a policy of maintaining at work on the property all of its staff for which legitimate employment could be found, rather than taking the drastic step of wholesale dismissals, closing down of shops, etc. This policy, whether well-founded or not, was publicly announced and supported in Parliament. Such a policy pursued at a time of falling traffic, naturally affected the 1930 basis of unit costs on the Canadian National.

The inference which has been drawn from this manner of treating the operating costs, namely, that the Canadian National is less efficient in its management than the Canadian Pacific, I desire most emphatically to deny. While there is a superficial similarity between the two systems, there are wide differences between them as regards the property and facilities to be maintained.

The nature and volume of the traffic handled by the two systems is also considerably different and these factors have a bearing upon operating costs through the average car load, through the average haul and through terminal operations, which are much more complicated in the case of the Canadian National on account of its dominance in the industrial section of Canada and its lines in the United States.

The average volume of traffic per mile of line on the Canadian National is less than on the Canadian Pacific and this has an adverse effect upon the comparative operating results because on the average the Canadian National has to maintain and operate more mileage of lines than the Canadian Pacific to earn the same gross revenue. Development on the pioneering lines of the system will remedy this disparity, but it is one which exists at the present time.

The Canadian Pacific witnesses have admitted a lack of detailed knowledge of Canadian National traffic and operating conditions and have based their comparisons upon a presumed comparability of Blue Book statistics, whereas it is well known to railroad people in this country that the Blue Book statistics on railways lack comparability to such a degree that the Minister of Transport has set up a Joint Committee of Canadian railway officers and of Government officials to develop a uniform method of reporting.

The historical development of the Canadian National System, which is a consolidation of four other systems must also be taken into account. In any event, 1930 is now eight years behind us and I do not believe that figures which are so much out of date can safely be used to draw conclusions with regard to present and future operations. Since that time both railway systems have effected many changes leading to a reduction in operating expenses. In that connection, I most earnestly desire to assure the Committee and the Canadian people that the National Railways is being operated at a minimum of expense consistent with the requirements of public service. It is my considered judgment that no portion of the $20,000,000 per year savings arrived at by applying statistical averages to conditions which are not comparable, could be realized. If you desire further evidence supporting this conclusion, I shall be pleased to have the officers of the company who are here supply it.

To sum up my position with regard to the asserted economies from unification or amalgamation, it is my judgment that they are largely unrealizable. Railway savings purchased at the expense of the development of Canada and of a wide disturbance in the already disturbed labour and material markets of the country would be too dearly obtained. The country instead of being better off would be worse off. Yet it is only to the extent that a program of drastic reduction in expenses could be achieved that the country would be warranted in inviting the perils of monopoly and of the great difficulties which I foresee in the type of management of the joint enterprise which is now proposed. It is my opinion that monopoly does not make for efficiency. I do feel that there is a very grave danger of a slackening of the morale of the organization, of a lessening of initiative and enthusiasm, a loss of sympathetic contact

[Mr. S. J. Hungerford.]

119964

between the management and the men and between the management and the public. These risks are, in my opinion, so great that they could only be offset by the reality of substantial economies on a scale which I, for my part, cannot envisage.

That there are financial risks involved in unification cannot be gainsaid. The Canadian Pacific has made very plain that unification, while it contemplates the technical preservation of the respective ownerships of the properties, really consists of a permanent fusion of the physical properties and of the organizations into an indivisible unit. The State, as represented by the Canadian National, and private ownership, as represented by the Canadian Pacific, are to go into a partnership on some terms as yet undisclosed.

In the absence of knowledge of the exact terms of the proposed partnership it would be idle to speculate upon this aspect of unification, although it may be fitting to remark that a partnership between such diverse interests as public and private ownership is liable to produce a number of unforeseen problems which might conceivably involve the State to an extent never contemplated in the original contract. The reason I hold this view is that there would tend to be a conflict of interests in a partnership between the public on the one hand and private interests on the other. Public interest is properly and primarily concerned with the use of the railway property for purposes of national development and national policy; private interests are primarily concerned with profits and dividends. The Joint Board of Directors representing such diverse interests would, in my opinion, quickly get into difficulties and, since the properties could not be unscrambled, the State could only break the stalemate which would result either by acquiring the Canadian Pacific property or by making some concession in the form of guarantees or otherwise. The present proposal for unification has neither the merits of public or of private ownership and, in my opinion, is impractical and would conceivably lead to serious involvement of the State.

I have previously indicated that I am in favour of a policy of enforced co-operation to eliminate any waste or duplication of effort where such could be accomplished without unduly weakening the benefits of competitive incentive or of unduly reducing the services which the railways render to the public. I would emphasize again, however, that we must not mistake railway economies, purchased at the expense of the public at large, as being true economies in the national interest. Within this reservation there is a considerable opportunity for effecting savings by enforced co-operation, not only as regards the elimination of duplicate facilities and the elimination of wasteful effort, but also the prevention of additional duplications in the future.

I think these considerations are sufficient to justify a policy of enforced co-operation and the only question in my mind is the best machinery for making that policy effective.

I have previously referred to the unfavourable atmosphere under which co-operation has been attempted in the past five years. It may be that if this Senate inquiry could dispose finally of unification as an alternative to co-operation, that greater progress in achieving co-operative economies will be made in the future.

Furthermore, from the experience gained in the past five years, I suggest that serious consideration be given to the setting up, for a period of years, of a public body to deal with co-operation. This body should, in my opinion, be made up of three people, one representing the Canadian National Railways, one representing the Canadian Pacific Railway, and a Chairman representing the public interest.

Such a body need not be permanent, but might with profit be appointed for a 5-year term. It should be charged with the exploration of the whole field of possible co-operative measures and the development of specific co-

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119965

operative projects. It should be its duty to endeavour to secure agreement of the two railways to all such proposals as are feasible, productive of economy, and in the public interest.

The reports of the body on specific projects should in all cases be made public at the time a majority decision is arrived at, because I feel an informed public opinion on specific co-operative projects would be very helpful to railway executives in considering co-operative measures.

In cases where public interest and economy indicate that a measure should be made effective, but in regard to which either railway company refuses to agree, compulsion should be invoked through the medium of the arbitral tribunal provided for in the present Act. I would suggest, however, that instead of leaving this to the discretion of the railway companies, it should follow automatically after a reasonable stated time had elapsed from the date of the publication of the report.

A report of all the activities of the body should be made to Parliament each year.

The Chairman and President of the Canadian Pacific in evidence before this Committee has expressed the view that some such body might be of assistance in furthering co-operation, but finds the idea of compulsion distasteful and argues that enforced co-operation is an undesirable invasion of the rights of private enterprise. My answer to this is simple. I know of no country in which private ownership of railways exists in which the State does not reserve to itself the right to exercise compulsion in the public interest and, in this Dominion, it is specifically provided for in the Canadian National-Canadian Pacific Act.

If it secures unification, the Canadian Pacific has indicated a willingness to submit to compulsion in the public interest through the medium of an over-riding commission having wide powers. It is not clear if the principle of compulsion is proper in unification why it should not be proper in co-operation.

It has been suggested that co-operation is only successful to the extent that it destroys competition and that proceeding logically, therefore, it has the same goal as unification. This would be true if through co-operation the drastic abandonments contemplated in unification, as submitted by the Canadian Pacific Railway were attempted, but co-operation, as I envisage it, is limited to practical economies which can be justified as being in the public interest; nor is it designed to completely eliminate competition. In fact, its object is to maintain a state of healthful competition while eliminating obvious existing duplications and preventing duplications in the future.

It has been argued that co-operation and competition are incompatible terms and that so long as the competitive element is permitted to exist little can be expected from co-operation. My answer to this is that given a will to co-operate, substantial economies would result. That has been demonstrated time and again. I would go further and say that if an opportunity for economy in the public interest exists and the will to co-operate does not exist in the railways, compulsion is quite justifiable in the public interest.

In conclusion I would say that the difficulties in which railways of this country find themselves at the present time are the direct result of the depression in trade and the general disturbances in economic conditions throughout the world. I know of no magic by which this fundamental situation can be cured. Fundamentally a solution must await the return of a more normal flow of production, commerce and trade. I know there are those who view the present condition of affairs as permanent and who ask whether we can continue as a nation to bear the cost of rail transportation on the present scale. It is instructive in that connection to consider the general economic condition

119966

of the country. All things considered, Canada has suffered less from the depression than other countries. It is a really remarkable fact that last year the national income exceeded the national outgo by over 500 millions of dollars and, in consequence, Canada, as a people, actually reduced its debt to the rest of the world and added to its store of wealth. Such a record does not support a pessimistic outlook or justify a policy of defeatism. Canada has vast potentialities of wealth production and railway service is essential in developing them. We may have built our railways somewhat in advance of immediate requirements, but, generally speaking, they are well located and admirably adapted to the requirements of the country. Railway transport is still by long odds the cheapest form of land transport and this gives the industry a great advantage over its competitors. The problems facing the railway in the way of highway, water and air transport competition are difficult, but not insolvable. At the moment we face a situation of increased railway costs and decreased railway traffic and admittedly that is a serious matter so far as the immediate prospect is concerned, but I am not prepared to admit that this is a permanent condition.

The Canadian Pacific in its submission has stated that the Canadian Pacific Railway, even under depressed conditions, can carry on and meet its fixed charges. For the Canadian National that is impossible. The property can, however, pay all of its operating expenses out of revenues, notwithstanding the disabilities in the way of rendering pioneering and public services, to which I have previously alluded, and the Canadian National is in a position to quickly show substantial increased net earnings with increases in the general level of business activity in this country.

I have previously alluded to the great potentialities of the property and have stated that no period in the past can be taken as indicative of its real earning power. The Canadian National has far greater potentialities than its principal rival in Canada or for that matter than any other railway on the continent because no other railway is so well located in relation to the natural resources of the northern half of this continent.

One of Canada's chief natural resources on which the great pulp and paper and cellulose industries depend is the vast coniferous forests in northern Ontario and Quebec, served almost exclusively by the Canadian National. From the point of view of mineral development, we are only beginning to realize the wealth which is stored in the geological formation known as the Laurentian Shield, which extends from the Mackenzie River Basin to the Labrador Coast. The Canadian National Railways traverses the Laurentian Shield with main and branch lines and it is, therefore, no accident that most of the mining development which has taken place in Canada in the last 10 years has been along the lines of the Canadian National.

Consider too, that in the highly industrialized section of the country, which will continue to draw its stimulus from the development of the north, the Canadian National is pre-eminent in serving every industrial centre and I think you will realize the truth of what I have said, that the potentialities of the System are very great. If development takes place without a needless duplication of lines of railway, which would serve only to increase expenses and divide the traffic, the broad outlook for the development of traffic on the lines of the Canadian National Railways is decidedly encouraging.

Throughout the depression the property of the Canadian National has been improved in its inherent efficiency. There is no considerable amount of deferred maintenance to be picked up and, from all of these points of view, we may look to the future with a degree of confidence. In the meantime the wise policy, as I see it, is to conserve the property.

Q. Mr. Hungerford, the main point that you make, as I have followed your submission, is that railway transportation is really an activity that is carried on

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

11987

in the public interest; that it is not primarily an activity for private profit. Am I right in that?—A. Well, I suppose it is both to a degree, but it partakes of the nature of a necessary public service.

Q. But your memorandum emphasizes, and I think perfectly properly, that considerations of public interest have affected the character of the Canadian National Railways and the character of the service that they give. I am right in that, am I not?—A. I think so.

Q. Now, really, the problem before the committee is how much the taxpayer can afford to pay for these transportation facilities. The more of them there are, of course, the better the public interest will be served, and I think I should perhaps first direct your attention to the situation in that respect. You will remember, no doubt, that in discussing this subject with you six years ago, the present Chief Justice of Canada in the course of the commission proceedings referred to the condition of the Canadian National and the Canadian Pacific in 1932 from a financial point of view as desperate. That was the expression he used. It is at page 2521 of the Proceedings of the Commission, and if you have not a memory of it I will refer you to it.—A. I remember a great deal of the proceedings, but not that particular item.

Q. It is just towards the end of the proceedings of the inquiry. What Mr. Justice Duff, as he then was, said in speaking to you, was this:—

> Of course, Sir Joseph has put it in such a way that there is no necessity whatever to repeat it. Of course, the economic situation is a desperate one. You can conceive of an economic situation where you would be told by the Government, well, there is no more money. Let us suppose that it is not so severe as that. There may be money expended for trestles and to keep the line in such a state of efficiency that it would permit the running of trains over it. In other words, to avoid the expenditure of money would really be criminality. Suppose the financial situation is such that there is no money for anything other than that, what would be the effect?

He was speaking about the economic situation then. And since 1931, which was the last year that was under consideration by that commission, it appears that the amount that has been contributed by the Government to the Canadian National Railways—you will find it at page 52 of these Proceedings—is 301·2 million dollars, or $50,000,000 a year. And I find that the total ordinary revenue of Canada during the same six years was 1,867·94 millions, so that the amount that went into the Canadian National is 16·13 per cent of the total revenue of Canada for those six years. Now, I should be glad if you would direct your attention to how far it is justifiable for Canada to spend some one-sixth of its total revenue in providing, in the public interest, transportation service by the Canadian National Railways.—A. Would you repeat the question, please?

Q. What I want to direct your attention to is the position presented by the fact that during the last six years since Sir Lyman Duff referred to the situation as desperate, 301·2 millions have gone into the Canadian National for deficits, or 16·13 per cent of the total revenues of Canada, the total ordinary revenues of Canada.—A. You mean the total wealth production?

Q. No, the total revenue, the total tax revenue. I was thinking of what this means in terms of taxes. For example, the total revenue of Canada for last year, when it was considerably higher than in any previous year, was $445,000,000, and $42,000,000 of that, or about 10 per cent, went into the Canadian National. In the previous year the revenue was $372,000,000, and the year previous to that it was $304,000,000; then it dropped into the $200,000,000 for the previous year. Now, really that is what the committee is concerned with. That is what the terms of reference of the committee are directed to. I was

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119968

thinking in terms of taxes. Suppose the tax burden of this country could be reduced by 16·13 per cent by the elimination of that obligation to meet deficits—
—A. My answer is that I know of no means by which it can be done.

Q. You see, it really comes home to all of us. If one-sixth of that $40,000,000 odd be taken off the income tax, it is, roughly speaking, 30 per cent of the total received. That is our real difficulty, Mr. Hungerford. It is not a question of particular figures; it is really a question of getting out of a very difficult situation here in Canada. Our whole war pensions are no more expensive than the Canadian National Railways.—A. After all, railway service is probably the most useful and efficient tool for producing wealth in the country, and the country unquestionably gets a very substantial benefit through the provision of this railway service.

Q. I agree. I concede at once that there are national advantages in running unprofitable railways. But the question is how far can this country afford that luxury?—A. Well, if relief is to be set up on the abandonment of the railway and the service entirely, you simply change the incidence of the burden. You would improve the railway situation, but the burden of supporting the people is transferred to other agencies.

Q. Let me call your attention to that interesting graph that the Bureau of Statistics furnished us and which appears at page 63 of the Proceedings. There you will find that the share of the economic results that has been obtained by the railway has been dropping ever since 1923, which is as far back as our figures carry us. What is going to happen?—A. Well, no one can predict what is going to happen, but one thing is very evident, and that is that the business of this country cannot be carried on without substantially the present volume of railway service.

Q. But can it be carried on with a volume of railway service which costs 10, 15 or 16 per cent of the total revenue of the country? It is a constructive suggestion that we really need. How are we going to get out of that difficulty? Sir Edward Beatty has put it quite clearly in his submission that ever since 1917, when the Drayton-Acworth report was made, there has been a continuous suggestion from certain quarters that were interested in national railway transportation, "Wait and see. We will do better some time soon." Yet, instead of doing better, we are actually faced in 1938 with a situation which is very much more serious than the one we were facing in 1917; very much more serious than the one in 1925 or in 1932. Now, what is your suggestion about meeting that situation?—A. Just exactly what it was before the Royal Commission.

Right Hon. Mr. MEIGHEN: Another Royal Commission.

The WITNESS: To carry on as economically as possible, to restrict capital expenditure.

*By Mr. Biggar:*

Q. You are doing that now, aren't you?—A. Yes. Then, persisting that.

Q. You are doing it as economically now as you can possibly do it, consistently with what the railway administration regards as public interest, is that not so?—A. Well, that question of the public interest is usually to a very large extent determined by the Board of Railway Commissioners.

Q. No, I do not think that is an answer to my question. That is the basis upon which you are operating the road, as economically at it can be operated?
—A. Yes.

Q. That is, as economically as it can be operated, consistently with your view of the public interest?—A. Yes.

Q. Suppose you had a different view of the public interest, could it be operated for less money, with less burden on the revenue?—A. It might possibly be, yes, it might be operated at a lower cost for the railway, but from my point of view it would be simply a transference of the burden.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

11969

Q. But is not that a political rather than a railway problem?—A. Possibly.

Q. May I call your attention to what your predecessor said to the Duff Commission, as it appears at page 1038 of our proceedings? He is quoted there as having said:—

> One of the inherent disadvantages of any state-owned enterprise such as the Canadian National Railway, is the problem of political interference—and one might also add, public pressure. In making this statement I wish it distinctly understood that I imply no criticism of any party or any government, present or past. I merely state a fundamental and universally admitted condition.
>
> The leaders of all political parties and the people of Canada as a whole are a unit in their desire to prevent political invasion of the Canadian National Railway. But the plain fact is that irrespective of such wishes and desires, the problem presents difficulties beyond the control of our leaders, be they ever so patriotic or high minded. After all in any form of popular government it must be accepted as axiomatic that the business of government is politics and, irrespective of whether one likes it or not, politics is something with which a government must reckon in all of its activities.

Now, is that not really the position, that it is the public interest and the political considerations which have determined the losses of the Canadian National?—A. No, I would not say that.

Q. That, in other words, it is the public interest which has determined the level of the service and which does now prevent you from making economies that if you were operating this line for private shareholders you would be absolutely obliged to make?—A. If you could get authority to do it.

Q. Exactly, if you could get authority.—A. If you could get it.

Q. But you cannot get authority now, because every time you seek to throw men out of work there is a political flurry?—A. Well, let me say one thing, if I may.

Q. Yes.—A. So far as the ordinary operation of the railway is concerned, it is carried on like that of any other railway, and, I think, with the same degree of efficiency. We are endeavouring to bring it to the highest state of efficiency, and we have made very substantial progress so far as that is concerned. But there is no question but what we have burdens to carry in the way of service that, judged by all past experience, we could not possibly get rid of if we attempted to do so. I could show you line after line of railway on which we provide a service at a loss, and I am sure that you would agree with me immediately that it would be quite hopeless to make an attempt or expect to be permitted to withdraw service from those lines. Recognizing that fact, the only thing that is open to the management of the Canadian National Railways to do is to provide the service that is insisted upon as being in the interest of the public upon those lines, and provide that service as economically and suitably as possible.

Q. I agree. I am conceding that whole situation. But it is a fact that if you were operating this line for private shareholders who were not able to supply $50,000,000 of a deficit every year, you would cut down expenses in a way that you cannot do under the present circumstances?—A. We would do so, Mr. Biggar, if we could get the power to do it.

Q. In other words, it is true that there are shops that you cannot close, because of the political storm that would follow—I do not care what government was in power. Whatever government was in power there would be a political storm if you, for example, made a change in your roundhouses at the Lakehead, or at Winnipeg?—A. No. It is quite possible that we have more trouble,

PRICE 11970

more representations and things of that kind, than a private company would; but in general and to a maximum extent carry on, I think, as an ordinary railroad would.

Q. But do you? I mean, for example, in the St. Henry election just this year, the question of the Montreal terminals and proceeding with them was an active political question, was it not?—A. I heard of it.

Q. There is no question about its having been discussed, and it was proposed that it should be carried on. I am not blaming anybody. It is a matter of course, is it not?—A. The railway management was not involved in that.

Q. No. That is just my point, that the railway management had nothing to do with it. It was done on behalf of the owners of the Canadian National. Now, what would happen, suppose that this was a private organization and it was not a question of operating this railway in the public interest at an expense of $50,000,000 a year?—A. My point with regard to that is that public opinion and public requirements would have to be considered, irrespective of whether there was unified management.

Q. I am not speaking about unification at all. Suppose that the Canadian National was not a government enterprise, it certainly could not be carried on on the present footing?—A. Certainly not.

Q. Private people would not put in $50,000,000 a year, would they?—A. No.

Q. Let us carry that just a little further. Suppose that there had been a company, private people, who had put in all the money that Canada has put into the Canadian National Railways, and suppose that it had been carried on in the same way until it had got to the present point and that then it just threw up its hands, and the owners would not supply any more money at all. I am just putting it to you on the supposition that Parliament said, "We cannot afford to pay one cent more." Now, what would happen to the Canadian National?—A. I think the Government would take it over, just as it did before.

Q. I put it to you, suppose the Government said, "We cannot pay any more money to the Canadian National," what would happen?—A. Well, you could not provide the service beyond a certain point.

Q. What is its value to private investors to-day?—A. I am sorry, I do not follow that.

Q. You put it yourself to the Royal Commission that the value of any enterprise depends on its earnings. The quotation that I am referring to is at pages 2527 and 2528 of the Royal Commission. Now, what is the value of the Canadian National Railways undertaking to-day, on the basis of its earnings?—A. That depends on so many different things. I could not give you an answer offhand in regard to that.

Q. You have not changed your opinion with respect to the value of any undertaking depending on its earnings, have you?—A. No.

Q. Well, now, take the Canadian National as an instance of an undertaking, the value of which depends upon its earnings. What is its value? What could you get for it if you went into the market?—A. Well, that is something that it is very difficult to answer.

Q. Well, Mr. Fairweather thought that railways were a drug on the market. Wouldn't you say that the Canadian National could not be sold for anything except a nominal sum?—A. Possibly so. I cannot conceive of a private interest buying the Canadian National and assuming its obligations at the present time.

Q. Of course, I am not speaking about any obligations. How much could it earn suppose it was sold free of obligations and the purchase money applied against the obligations? How much could private people afford to come forward and offer the Dominion of Canada for this railway enterprise?—A. I would like to give you an answer a little later on, sir, may I? I cannot tell you that.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

11971

Hon. Mr. DANDURAND: How much would a syndicate offer when in 1926 the Canadian National earned $40,000,000 above its operating expenses? What would it represent?

Mr. BIGGAR: Would it have bought on one year's record or on ten years' record? I looked at the statement appearing at pages 82 and 83 of the record. After all, the Canadian National organization was really put together in 1923, and you have got to allow a certain length of time to shake down.

Right Hon. Mr. MEIGHEN: The statute providing for its being put together was passed in 1921.

Mr. BIGGAR: The length of time that one gives an organization to shake down is just a question of judgment.

Q. Suppose one gives the Canadian National to 1927 to shake down. I am referring to part of Exhibit 26, at pages 82 and 83 of the proceedings, and I find that during the ten-year period the Canadian National's income before its fixed charges was $164,793,673, that is for the whole ten years. That means an annual amount of approximately $16,500,000, over and above operating expenses. Now, it seems to me that would not be an unfair way of getting at the value of the Canadian National, would it?—A. I would not think so.

Q. What would you think? I am only suggesting this because it is your view that we are after, not mine.—A. I am not trying to sell the railway.

Q. But you are trying to help this Committee to solve the problem of relieving the country from its extremely serious railway condition and the financial burden consequent thereto.—A. I tried to indicate the manner in which the burden could be lessened in the largest degree, having regard to the vital character of the public interest and service.

Q. But you have not dealt with the other point. How about this public interest business? I mean, is it not a little like a man who has an income of $2,000 a year trying to live in a house the rental of which is $1,800?

Hon. Mr. SINCLAIR: You are assuming, Mr. Biggar, the present control of freight rates?

Mr. BIGGAR: Yes. Mr. Hungerford has not raised the question of freight rates, but I suppose we shall have to speak to him about that before we finish.

*By Mr. Biggar:*

Q. What are we going to do about it, Mr. Hungerford? I do not want to press you to say what you do not want to say, but we have a real difficulty there, and that is what the committee is directing itself to.—A. In my opinion, considering the value of this railway service to the public and the influence that it has upon the production of wealth in the country, I think that what should be done is to continue as we are and to economize to the extent that public interest will permit.

Q. Who is going to determine public interest, members of Parliament in their respective constituencies, who are going to get into trouble if they are supporters of the Government and any economy is made in the Canadian National administration in their particular constituencies?—A. We try to strike a balance between what we regard as public need on the one hand and the necessity of operating as cheaply as possible on the other. As a matter of fact it is checked very largely by the board representing public interest.

Q. I am troubled really about that, because Mr. Fairweather when he was examined before the committee said he thought, difficult as he found it, in terms of national interest, not in terms of railway interest whenever he could. Is not that the danger, instead of this railway being operated as a railway, it is operated as a national public work, that is, consistently with what is at the moment regarded as being the public interest, and that extends, as Sir Edward Beatty

11972

put it, I think, throughout the whole organization of the Canadian National. Your job after all is to keep the Minister of Railways out of trouble; is it not?—A. Oh, no.

The CHAIRMAN (Right Hon. Mr. Graham): It does not always succeed.

Hon. MEMBERS: Oh, oh.

Mr. BIGGAR: No.

*By Mr. Biggar:*

Q. Is not that true of the whole organization?—A. I confess I find it very difficult to express my views exactly in regard to this, but let me illustrate in a way. The type of public interest I have in mind may be illustrated, say, by the operation of the Gaspé line. That line does not pay.

*By Hon. Mr. Dandurand:*

Q. Running from Matapedia station straight on through Gaspé?—A. Yes, sir. I do not know that it ever will pay. I do not see any prospect of it ever paying, and yet it was considered essential that those people should have railway service. If we were going to act on the broad principle of only operating those services that pay, putting them on the basis on which a private company might operate them, then every one of those services would be wiped out. But we know perfectly well we could not possibly withdraw services from lines such as that. The public would not permit it.

*By Mr. Biggar:*

Q. Another point occurred to me in regard to that. I find according to the statistical returns given in Exhibit No. 26, I think it is, the total passenger revenue of the Canadian National was $17,023,000 in 1936, which is only about less than half of this deficit. It struck me as an interesting comparison that the deficit on the Canadian National was more than double the total of what is put as passenger revenue. There is another figure of passenger train revenue of $31,000,000. I am not quite sure what the relation between them is. Perhaps you can tell me.—A. I do not know.

Hon. Mr. MCRAE: Colonel Biggar, in that connection, I think the freight and passenger business for last year would have to be advanced 25 per cent, and then would fall probably $2,000,000 short of the probable deficit. That gets it down to freight and passenger business together.

Mr. BIGGAR: Yes.

Right Hon. Mr. MEIGHEN: Without increase of costs.

Hon. Mr. MCRAE: Yes. You would still be short $2,000,000 of the deficit.

*By Mr. Biggar:*

Q. Then am I to understand your position is that you cannot suggest any way of meeting this situation at all except by this scheme of compulsory co-operation that you have suggested?—A. I think that having regard to the value of the service to the public it is in the best interests of the country to proceed that way. I may be egotistical in expressing a view of that kind, but it is my opinion.

Q. We have been told by Mr. Fairweather that the utmost that can be reached by compulsory co-operation is an annual saving of $10,000,000. It is not very clear whether the million and three-quarters already made was included in that or not, because Mr. Fairweather told us he could not break down the $10,000,000. The Canadian Pacific told us their view was that the total that could be obtained from any kind of co-operation was $11,000,000 odd, and from that is to be deducted the million and three-quarters. Does your view disagree with those?—A. With the amounts of the estimates?

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

11973

Q. Yes; that we cannot look from compulsory co-operation to economies of more than about $10,000,000 a year.—A. I have learned to distrust all estimates of that kind.

Q. Are you distrusting one more than the other?

*By Right Hon. Mr. Meighen:*

Q. What is your estimate?—A. As a matter of fact, I do not see how anyone can make an estimate accurately without investigating the whole situation. Without such investigation the figure is not an estimate; it is more or less of a guess.

*By Mr. Biggar:*

Q. My question is really this. You disagree with the views already expressed by several of the witnesses who have already appeared before the committee that the utmost to be hoped for in the way of economies from compulsory co-operation is about $10,000,000 a year.—A. I would not limit it to that, sir. I would not place any figure on it because there is not sufficient knowledge of the matter to warrant any figure.

Q. But we have had those estimates given to us very seriously. What would you replace them with?—A. They may be quite right, but I will not give an estimate in regard of them.

*By Hon. Mr. McRae:*

Q. Mr. Hungerford, you are strongly recommending to the committee compulsory co-operation. Surely you have arrived in your mind at some result which might be obtained from that compulsory co-operation?—A. Yes.

Q. I think the committee will be very much interested to have your opinion on that.—A. I think a substantial amount would be obtained, but just what that amount would be I do not think anyone can say.

Q. We are interested in what might result from the adoption of that compulsory co-operation.—A. I would say $10,000,000 is as good an estimate as could be prepared. I think it is somewhere in that vicinity, but I doubt whether anybody could be exact.

*By Hon. Mr. Black:*

Q. Just along that line I should like to ask a question. At page 1032 of the proceedings of this committee will be found Exhibit No. 76, which is a summary of Mr. Fairweather's discussion of Exhibit No. 49 before the Duff Commission. At that time Sir Henry Thornton, who occupied the position you now occupy, estimated a saving of $60,000,000 net per annum could be made. He did not give any particulars of that estimate, but taking Mr. Fairweather's submission at the time, his estimate was that a saving of $49,000,000 could be made. Then he went into particulars and said that it might be increased to $56,440,000. There is a great disparity between the estimates of savings in 1932 and 1938. I think Mr. Fairweather's estimated saving of $56,000,000 odd was based on a year of normal traffic. 1930 was not such a year. It is difficult for those of us who are trying to find a solution of the railway problem to reconcile the very great difference between the estimated savings made before the Duff Commission in 1932 and the possible savings submitted to this committee now. What would you say, Mr. Hungerford, about those estimates, first, that by Sir Henry Thornton of $60,000,000 and the other by Mr. Fairweather of a possible $56,000,000, both given before the Duff Commission in 1932?—A. The general attitude I took in regard to those estimates was the same as I take to-day. I said they were unrealizable. They were simply lists containing a great many figures and items that never would be realized at all. It is idle to expect they could be. Consequently an estimate of $50,000,000, $56,000,000, $60,000,000 or $75,000,000 is more or less unrealizable.

11974

*By Hon. Mr. Horsey:*

Q. Have you ever attempted an estimate yourself, Mr. Hungerford?—A. No.

*By Mr. Biggar:*

Q. That is what I was going to ask. The two estimates, particularly the estimate of $75,000,000 made by the Canadian Pacific, have been before the country now for about six years. It would have been possible, I suppose, to go over that work very carefully and check it and be prepared to express an opinion as accurately as any can be expressed on estimates of what amount could be saved?—A. I have grave doubts as to the ability of anyone to make a very accurate estimate in advance. A good deal would depend, don't you see, upon the extent of what you are permitted to do and how you are going to determine what that would be in advance. You could make an assumption, but you have no guarantee you would be permitted to go that far.

Q. Could you let the committee have a calculation of the kind of thing you act upon day by day, of what the position you think will be from year to year, say for ten years? Because we must plan for a considerable number of years ahead. I mean you have to make some assumptions about what you can and cannot do with respect to the Canadian National. For instance, you will have to make some assumptions about the level of traffic. But with those assumptions it ought to be possible to calculate approximately what the position of the Canadian National will be from year to year, say, from 1939 to 1948, so we may have something before us that you think the Canadian National can live up to.—A. We could make an estimate with, I think, reasonable accuracy if we could assume a certain level of traffic; but I do not know how we could reasonably forecast that at all, more particularly at this time of general world-wide disturbance. The whole thing depends upon how much revenue you are going to have, and that cannot be more than a conjecture. We will do it if you wish.

Q. I think if would be very useful to the committee to have something specific in the way of a prognosis of that kind.—A. May I add this, sir,—

Hon. Mr. DANDURAND: Would not the crops during the next ten years have to be computed?

*By Hon. Mr. McRae:*

Q. I presume that Sir Henry Thornton's estimate of $60,000,000 was based on a very carefully prepared statement. You, Mr. Hungerford, were in charge of operation at that time. Was not that built up similarly to the case of the C.P.R. here? You got the information through the different departments.—A. Frankly, I do not know how it was arrived at.

Q. Were you not ever consulted about it?—A. No.

Hon. Mr. MORAUD: Is it possible to make that estimate? It is all very well to give large figures to the public, but first of all we should know whether it is possible to reach some sound figure.

Mr. BIGGAR: Mr. Hungerford says he can do it, except for the level of traffic.

The WITNESS: If you assume gross earnings.

*By Mr. Biggar:*

Q. It might be based on two or three alternatives. Perhaps your opinion is no better than anyone else's with regard to world-wide movements of trade; therefore it might be done on two or three alternative bases. But there is another thing of the same kind which gives me a little difficulty. Having regard to that chart, Exhibit No. 24, it is at least possible that the railways, instead of being able to obtain the present level of traffic and revenue may have less, isn't it?

1 19973

You will remember that in 1932 everybody who had to do with the Duff Commission thought you were at the bottom of the depression, that nothing could be worse than the condition you were then facing and that in six months or a year you would be back on top of the wave, like you were in 1928. Now, suppose, instead, that the other thing happens, and that we go down now—and, as a matter of fact, there is some reason for thinking we may be going down, because the returns for the first three months of this year are not as good—

Hon. Mr. HAIG: Four months.

Mr. BIGGAR: I have the figures for only three months. They indicate that the Canadian National failed to earn operating expenses.

Hon. Mr. HAIG: I was going to ask if these figures could not be brought up to the 1st of June. I saw figures in the press on Saturday up to the 7th of June. They showed that the gross revenues of the Canadian Pacific for the week were down 11 per cent this year, and that the figures for the Canadian National for the same period were down 17 per cent as compared with last year.

Mr. BIGGAR: The only reason I do not put in the documents is that they are quite elaborate.

Hon. Mr. HAIG: The Ottawa Journal on Saturday gave that information.

Mr. BIGGAR: I got the figures from the Statistical Department this morning.

The CHAIRMAN (Right Hon. Mr. Graham): Mr. Hungerford was trying to say something.

The WITNESS: I just want to explain for Senator Haig's benefit that the figures published are the figures of the gross earnings statement, which is issued week by week; but there is nothing published in that way in respect of the expenses. The expenses are out somewhere about the 20th of the following month, and are given for the full month.

*By Mr. Biggar:*

Q. According to the figures I got from the Bureau of Statistics, the Canadian National System failed to earn its operating expenses for the first three months of this year by $5,652,000, of which $4,559,000 is attributable to the Canadian National Canadian lines, so there is a possibility that we may not have as much revenue as we have had in the past five years. Now, what is going to happen to the C.P.R. under those circumstances?—A. You have their statement that they can carry on.

Q. That is perfectly true, but what I am really putting to you is this. It is not a question of whether we have unification or not, but we cannot exclude from the consideration the possibility that we may have to have unification after the Canadian Pacific has got into trouble, and not before. Is not that a possibility? —A. I suppose all things are possible. I cannot quite contemplate it myself.

Q. Can you count on going on indefinitaly with a national enterprise, supported to the extent of many millions a year, in competition with a private enterprise which has no such resources? Are there not bound to be waves of depression which at some time are going to swanp the boat that has not got this aid?

Right Hon. Mr. MEIGHEN: Or both.

*By Mr. Biggar:*

Q. Or both.—A. Of course, things of that kind may be possible. I am one of those who believes that this country it going to grow. It is growing now.

*By Right Hon. Mr. Meighen:*

Q. I notice that on page 22 of your submission you get down to figures. We want to understand them. I read one sentence. You say:—

> It is a really remarkable fact that last year the national income exceeded the national outgo by over 500 millions of dollars and, in consequence, Canada, as a people, actually reduced its debt to the rest of the world and added to its store of wealth.

I presume the $500,000,000 is the excess of exports over imports.—A. All factors are involved.

Q. Just what are the factors? I thought it was simple. Maybe it is not. —A. May I ask Mr. Fairweather to read the items? We have them here.

Q. I was going to ask you. Can you tell us how you made up that $500,000,000?—A. That is made up from information from the Dominion Bureau of Statistics.

*By Hon. Mr. Robinson:*

Q. Is that the calculation of the Dominion Bureau of Statistics?—A. It is taken from that.

Hon. Mr. HAIG: Let him tell us what it is.

*By Right Hon. Mr. Meighen:*

Q. Give us a few of the items anyway, if it takes too long to give them all—A. Well, here is commodity exports $947,000,000, less commodity imports $625,000,000; net gold export $131,000,000; tourist expenditure in Canada $255,000,000, less the estimated expenditure by Canadians elsewhere, less net freight payments on exports and things of that kind, capital expenditure. There is private construction performed.

Q. What?—A. Private construction performed; not building contracts issued, but reported by trade and general contractors for private account, $143,000,000.

Q. Is that called income?—A. That would be capital surplus, I suppose.

Q. Private construction, and you put it in income?—A. It is simply an accumulation of wealth.

Q. Good gracious: You don't mean to say you have the amount put into construction in the income of the country?

Hon. Mr. BLACK: I suppose the money was all borrowed for it.

Right Hon. Mr. MEIGHEN: It does not matter. It is not a receipt in any sense on earth. You have included money that people have put into houses as income, but you say we have reduced our debt. How much have we reduced our debt to the outside world? $500,000,000?

Hon. Mr. MURDOCK: Does not the report of the Bank of Canada contain that item?

Right Hon. Mr. MEIGHEN: We never reduced our debt $500,000,000.

The WITNESS: Paid, bond maturities held abroad, $145,000,000.

*By Right Hon. Mr. Meighen:*

Q. What is that? I cannot hear you.—A. I am sure it would be much more intelligible if we let you have the statement.

Q. What I am getting at is this. You have made this statement to us, and have told us in these words that our national income exceeded our outgo by $500,000,000. No doubt sales of goods are properly included as part of the income, less the purchase of goods. But you gave investments in houses, so I do not see how you get your $500,000,000 as a difference. Do you maintain that we have reduced our debt to the outside world by $500,000,000?—A. No.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

1 19978

Q. Then, by how much?—A. The increase in wealth was $500,000,000.

Q. You do not say that. You say we have reduced our debt. I want to know how much we reduced our debt to the outside world in 1937.

Hon. Mr. ROBINSON: As I understand it, this is a calculation of the Bureau of Statistics.

Right Hon. Mr. MEIGHEN: No, this is his interpretation of something, and I want to get at the common sense of it.

The WITNESS: The net change in bonds and securities held abroad is $156,000,000.

*By Right Hon. Mr. Meighen:*

Q. Do you mean to say that we have changed our debt by that, because there is a net change in bonds held abroad?—A. That is part of it.

Q. You do? Then I will stop.

*By Hon. Mr. McRae:*

Q. Have you taken into that account the interest which private companies paid?—A. I think we have taken all factors in.

*By Right Hon. Mr. Meighen:*

Q. And the net reduction is what?—A. Well, I—

Q. You don't know.—A. It all depends on how you look at it. The conclusion is, anyway, whether the figures are right or wrong—

Q. What is the net reduction of debt?

Hon. Mr. DANDURAND: We should perhaps allow the witness to examine into these figures, and to give them exactly when we return at half-past three.

Right Hon. Mr. MEIGHEN: Mr. Fairweather might be prepared to give them.

Hon. Mr. MCRAE: May I suggest to this statement that has been arranged for—we have endeavoured to bring down the C.P.R. estimates to 1937—that by collecting them we can pretty well apply 1937 to 1930 with reasonable accuracy. He could base this statement on 1937. We then should have something to go on, instead of going over several years. Take the operation for last year; how much would the saving be under enforced co-operation on the basis of last year's operation?

Mr. BIGGAR: Assuming the same level of traffic?

Hon. Mr. MCRAE: Yes. We should have something to compare then.

Hon. Mr. HAIG: On page 22 of the memorandum read by Mr. Hungerford this morning there is this statement:—

> At the moment we face a situation of increased railway costs and decreased railway traffic and admittedly this is a serious matter . . .

I should like the figures up to the 30th of April this year, of expenses and net earnings, compared with 1937.

The committee adjourned at 1.05 p.m., to resume after the Senate rises this afternoon.

1 19979

The committee resumed at 4.35 p.m.

The CHAIRMAN (Hon. Mr. Beaubien): Gentlemen, are you ready to proceed?

Mr. S. J. HUNGERFORD reappeared and took the stand.

*By Mr. Biggar:*

Q. Mr. Hungerford, I have had an opportunity during the adjournment to read over your memorandum of this morning, and I think perhaps I can put the point that you are making quite shortly. The first point, as I understand it, is this—I am using practically the words of your memorandum—that the Canadian National is being operated as efficiently as it can possibly be operated, consistently with the public interest?—A. I think that is right, sir.

Q. And that public interest is really determined by the public as represented by the Government of the day?—A. In its larger aspects.

Q. And the duty of the railway administration is, subject to that determination, to operate that railway at the minimum possible expense?—A. Correct.

Q. Now, if then as a matter of public policy more expense is being incurred than might be incurred from a strictly railway point of view, that is really a matter for the public, as represented by the Government of the day, rather than for the railway administration, to whom the actual day-to-day conduct of the railway is being entrusted?—A. In a sense that is correct, sir.

Hon. Mr. DANDURAND: Could you not enlarge upon that expression, "the Government of the day"? The Government is but the executive of Parliament.

Mr. BIGGAR: Yes. Well, "Parliament" is perhaps more accurate.

Q. If that is so, it seems to me that perhaps it is true to say that a national undertaking of this kind differs from a private undertaking in this, that in the case of a private undertaking the administration does two things: it actually operates the undertaking and it determines, by recommendation at least, the policy that is to be followed?—A. Yes, that is correct.

Q. Whereas, in the case of a national undertaking the actual administration is done, as it were, by one body, the railway administration, while the determination of policy is done by Parliament or the Government?—A. Well, again, in its larger aspects that is correct.

Q. Now, when you compare the proposal that has been made by Sir Edward Beatty with the present situation, what you are really comparing is an administration as now of the Canadian National, dealing with the administration of the railway, and an administration that determines not only how the railway is to be operated but also what its policy should be?—A. Yes, if I follow you correctly.

Q. In other words, that the determination of the general policy is not necessarily, under the new circumstances, in what we have been describing as a public interest, but in what I think Mr. Fairweather described as the narrower railway interest?—A. I think that is correct.

Q. Quite independently of that, I suppose that your view would be that monopoly, even in a national administration, where there was this divergence of function between the actual administration and the determination of policy, would have its dangers?—A. I am afraid I do not follow that, sir.

Q. Would you think that a national monopoly had its dangers? I mean, suppose that something happened so that the people of Canada had to take over the administration of the Canadian Pacific as well as the Canadian National and form it into one organization, there would be some dangers of monopoly, would there not?—A. Possibly so. Personally I do not like a monopoly.

Q. But even in that form, that is what I mean.—A. Yes.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

1 1 9980

Q. And there would be also the dangers of the lack of stimulus of competition, in exactly the same way as there would be under unification, in the sense that Sir Edward Beatty has put it forward?—A. Well, if the spirit of competition was eliminated, there would probably be the same background that I think would be the case.

Q. But when you come down to the essence of the thing, the real difference between the present situation and the situation as it would be under unification is this, that half or rather more than half of the railway mileage in Canada is now operated under a policy that is determined by reference to the public interest?—A. I think that is correct, sir.

Q. While the other part of it is determined by an administration that is really concerned with the railway interest primarily?—A. Quite right.

Q. And that if the change came about that Sir Edward Beatty has proposed, what you would have would be all the railways substantially in Canada operated from the point of view of the narrower railway interest?—A. Well, certainly narrower, but I do not think to the full extent.

Q. But certainly a narrower railway interest?—A. Yes.

Q. And would you think that the dangers of monopoly and the absence of the stimulus of competition would be greater or less under those circumstances than in the case of a national railway including all the railway lines?—A. Well, I do not think that there would be a great deal of difference There might be some, but perhaps not a lot.

Hon. Mr. COTE: Mr. Biggar, would you ask that he means by "public interest" as distinct from what you refer to as the narrower railway interest?

Hon. Mr. DANDURAND: Would you not have that definition in the directions given by the Board of Railway Commissioners? That Board has to examine into the public interest when a proposition is made to them.

Hon. Mr. COTE: I don't think we would find the definition there. The only object of my question is to get a definition in relation to some function of the railway under the head of "public interest" as distinguished from what Mr. Biggar refers to as the narrow concept of a railway as a transportation system.

*By Mr. Biggar:*

Q. It is really covered, Mr. Hungerford, by your memorandum. What we have been using the expression "public interest" to means is, as I understand, the provision of such service as is necessary for local areas to carry on as they are, notwithstanding that such service may not return a profit?

Hon. Mr. HORSEY: Yes. He illustrated it this morning by the Gaspé situation.

The WITNESS: I would like to say, sir, that it is common knowledge that we are carrying on with the consent of everyone the operation of a great many lines of railway which are not profitable in themselves, and if we were operating on a profit basis we would desire to eliminate those lines. But inasmuch as this organization was created in the first instance to carry on, to provide service on lines of this character that could not support themselves, we always assume that it was the policy that was desired. It has been approved, I think, by each succeeding government to a degree, and it appears to be the viewpoint of the people of the country that that is what they want, as I understand it.

Q. And that would be true too of the maintenance of more roundhouses and shops than are strictly necessary from a railway point of view?—A. Well, that is rather a different question, and a good many different features are involved in regard to that.

1 1 9981

Hon. Mr. MURDOCK: Here, Senator Cote, is what President Hungerford said this morning.

> Public interest is properly and primarily concerned with the use of the railway property for purposes of national development and national policy; private interests are primarily concerned with profits and dividends.

Hon. Mr. COTE: Yes; but he was referring to operating a line which was not a paying proposition, and he put that under the heading of public interest. The private company does that to; the C.P.R. is operating lines which do not pay.

Mr. BIGGAR: Not to the same extent.

Hon. Mr. COTE: They have to continue to operate those lines because they cannot close them without the consent of the Railway Board. To the extent that they are continuing the operation of lines which are not producing a net revenue they are also serving the public interest.

Hon. Mr. MURDOCK: But the Board of Railway Commissioners say they must not abandon those lines because it would not be in the public interest for the Canadian Pacific to do so.

Hon. Mr. COTE: But the extent that they do not abandon those lines they are serving the public interest too.

Hon. Mr. DANDURAND: They are limited by the decisions of the Railway Board.

Hon. Mr. COTE: Yes.

*By Hon. Mr. Haig:*

Q. If the people of Canada did not own the Canadian National Railway, and the system was owned by yourself, what economies could you put into effect to make your expenditure equal your income?

The CHAIRMAN (Right Hon. Mr. Graham): They do.

Hon. Mr. HAIG: Oh, no. They have to pay the bond interest on the road the same as anybody else has to.

Hon. Mr. MORAUD: But they are in a different position. They had to take over those lines.

Hon. Mr. HAIG: That is not my question.

Hon. Mr. MORAUD: That is your question.

Hon. Mr. HAIG: No.

*By Hon. Mr. Haig:*

Q. I want to know, Mr. Hungerford, if you had not the public purse to draw on, and had to run your road as the Canadian Pacific run theirs, and keep out of bankruptcy, is there anything you could do to prevent the road going into bankruptcy if you had to do what the Railway Commission compels you to do, the same as the C.P.R. The Canadian Pacific can do only certain things because the Railway Commission will not permit them to do anything else.—A. There is a degree of similarity in that respect between the two roads. The outstanding feature, however, is that the Canadian National was constituted originally out of a lot of lines that were not self-supporting. The private interests that ran them failed, and the Government had to step in and take them over in order to provide service. Apparently it was felt to be essential to the public interest to provide that service.

Q. You have not so far this morning or this afternoon suggested any savings at all. Mr. Fairweather told us he estimated $10,000,000. When Sir Henry Thornton appeared before the Duff Commission he estimated I think a saving

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

11 9882

of $60,000,000, and at that time Mr. Fairweather gave an estimate of $56,000,000 based on normal traffic of 1931. Can you give us any savings that you can make at all, leaving out any question of public opinion? The only opinion I want you to consider is what the Railway Commission will make you do; nothing else.

Hon. Mr. COPP: He cannot say in advance.

Hon. Mr. HAIG: He can tell that.

The WITNESS: It would depend altogether on what the Railway Commission would permit us to do.

*By Hon. Mr. Haig:*

Q. You know what they will permit you to do. The law is the same for you as for the C.P.R.—A. As you know, we have applied for permission to abandon a lot of small branch lines that in our opinion had outlived their usefulness, and we got permission to abandon about one-half; the others were refused. Under those conditions it would seem to me to be quite hopeless to apply to the board for permission to abandon anything more important and more useful and more productive in the way of traffic than the lines which we did include in that group for which we asked permission to abandon.

Q. In your opinion no other savings can be made?—A. Oh, yes, certain savings can be worked out by co-operation.

Q. What are those?—A. In certain places where there are lines closely parallel to each other. There are places—

Q. Tell us where they are. We compelled the other side to tell us where theirs were. Now, what is your suggestion of where savings can be made?—A. I have read the evidence myself and have not found any except line abandonments.

Hon. Mr. MCRAE: Colonel Biggar, I think I can put the question in another way.

*By Hon. Mr. McRae:*

Q. Mr. Hungerford, can you give the committee roughly an estimate of the extent to which your earnings are affected by what we would call extra national service?—A. I am afraid, senator, I could not answer that off-hand. That would require some investigation.

Hon. Mr. ROBINSON: It is not the earnings, it is the original organization.

Hon. Mr. MCRAE: But the earnings are affected by this extra national service.

*By Hon. Mr. McRae:*

Q. Let me give you these figures. The Canadian Pacific Railway contemplated abandonment of 5,000 miles, and the Canadian National 2,200 miles. I think roughly that was three-fifths Canadian National and two-fifths Canadian Pacific Railway, as I remember it. Now, without any abandonment whatever the Canadian Pacific Railway's $75,000,000 savings would be reduced by 10 per cent, $7,500,000, of which three-fifths would be applicable to the Canadian National, about $5,000,000. Is it fair to presume that on account of this extra national service you are expending about $5,000,000 more than you probably would if you were running the system strictly on a railroad basis?—A. Well, it would have to be a pure conjecture on my part at this stage.

Q. I know it would be just an estimate, but I want to correlate those two situations.—A. No, sir, I don't think I could give you an estimate at this time.

Q. Then do you think, if there was no abandonment made of the 5,000 miles, the $7,500,000 would cover the deficit cost of operating that 5,000 miles?—A. No.

Q. You don't think that figure would be it?—A. No, I would not think so off-hand.

11 9883

*By Mr. Biggar:*

Q. I understood, Mr. Hungerford, your view was that you were not prepared to discuss specific figures with regard to specific possibilities until you had had an opportunity of having every single factor that entered into the figures closely examined for the purpose of determining how accurate it was? That is what I understood your position to be.—A. I do not know that I have said that, sir, but I think that would cover the position to-day.

Q. That is what I understood. But may I go back for one instant to that question of public interest—

Hon. Mr. HAIG: Before you do that, Mr. Biggar, I want to ask a question. The Railway Commission says what can be done by any railroad in regard to abandonment of lines and that sort of thing. Now, what service does the Canadian National give that by law they do not have to give? That is what I am trying to get this witness to say.

Mr. BIGGAR: I do not suppose Mr. Hungerford can possibly go over the whole system.

Hon. Mr. HAIG: No; but he should be able to give a specific illustration of any service they furnish the public that they would not have to furnish if they did not want to.

Mr. BIGGAR: As a matter of fact, Mr. Hungerford first put it in the memorandum he gave us this morning. At page 11 he said:—

> It is to be regretted that the Canadian Pacific has not given the details of the proposed curtailment of services and what shops, terminals, division points, round-houses, stations, etc., it is proposed to abandon. The extent to which public interest is adversely affected may be gauged by this reluctance to give the details of just what is contemplated in the unification plan.

Hon. Mr. HAIG: That is not what I mean. He speaks of public service as if the Canadian National had to do something on their system that the Canadian Pacific Railway did not have to do. What is that thing?

The WITNESS: All right.

*By Hon. Mr. Haig:*

Q. That is what I want to know.—A. For instance, the National Transcontinental.

Q. You have to run it?—A. Yes.

Q. But the Railway Commission would not allow you to abandon it anyway?—A. No.

Q. You have to do that by law. But what else do you do that you do not have to do?

Hon. Mr. MORAUD: Did you not get those things?

Hon. Mr. HAIG: No.

Hon. Mr. MORAUD: He illustrated that by the Gaspe line. That is a line which was forced on the Canadian National and they have to operate it at a heavy loss, just for the public interest.

Hon. Mr. HAIG: But they do not have to do it on account of the public interest; they have to do it because the Railway Commission compels them to do it.

Hon. Mr. MORAUD: No, no.

Hon. Mr. MURDOCK: No.

Hon. Mr. HAIG: They could not abandon that line.

Hon. Mr. MURDOCK: A number of those lines were made part of the Canadian National not by action of the Railway Commission.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

11898-4

Hon. Mr. HAIG: That is true to a great extent. They operate the Gaspe line, and they cannot abandon it without the consent of the Railway Commission.

Hon. Mr. MURDOCK: That is right.

Hon. Mr. HAIG: And the Railway Commission would not now allow them to abandon that line. But the other railroad is in the same position.

Hon. Mr. ROBINSON: No. The Canadian National have to operate all the railroads taken over by the Government.

Hon. Mr. HAIG: The Railway Commission makes them do so.

Hon. Mr. ROBINSON: That is public service. If the Government had not taken those lines over the Canadian National would not have to operate them.

Hon. Mr. HAIG: But the C.P.R. do the same thing.

Hon. Mr. MORAUD: Not at all.

Hon. Mr. HORSEY: Not to the same extent.

*By Hon. Mr. McRae:*

Q. Colonel Biggar, I want to get this thing boiled down at little. The 2,200 miles which the Canadian National contemplate abandoning, and which, I presume, Mr. Hungerford, would include 1,500 or 1,200 miles of your own lines, was on the basis of not depriving any necessary public service, was it?—A. Speaking from memory, the figures relate mostly to closely parallel lines. I am speaking from memory entirely.

Q. That could be abandoned without any serious interference with the public service?—A. I do not say I endorsed that recommendation which was submitted by the Canadian National to the Royal Commission at that time, because I do not recall at the moment whether I endorsed it or not. I do not think I did. I certainly would want to look over the items before expressing an opinion on them.

Q. I am trying to get those things correlated, Mr. Chairman. Here is 2,200 miles of railway that the Canadian National agreed to abandon. That, I take it, was without depriving the public of necessary service. If we could tie onto that and get some estimated saving from that source, the committee would be getting somewhere.

Hon. Mr. BLACK: Then we have the illustration, Messrs. Joint Chairmen, of that matter suggested by Colonel Biggar, of what is supposed to be abandonable by the C.N.R.

Hon. Mr. DANDURAND: I think, Mr. Fairweather was of opinion that 1,000 miles would be the maximum.

Mr. BIGGAR: Approximately I think it is.

Hon. Mr. HAIG: We have the C.P.R. abandonment proposal to the Duff Commission. Where is the C.N.R. proposal made to the Duff Commission?

Mr. BIGGAR: That is what we are waiting for.

Hon. Mr. ROBINSON: What is the use of continuing to harp upon the $56,000,000 C.N.R. saving, when the C.N.R. disclaim any such thing? It was on the basis of doing things which they say cannot be done.

Hon. Mr. BLACK: Is not that, Senator Robinson, what we are trying to get at? The object of the committee is to discover some means whereby this burden may be reduced. We were told by Mr. Fairweather that no further co-operation could be effected or very little more without compulsion. I should like to know what in the way of compulsion this committee may have to recommend. We may not get anywhere with it, but if it is a matter of compulsion to get further economies, then in the final analysis we are certainly entitled to know what the C.N.R. think they can abandon if this compulsory cooperation is brought into execution.

[ ] 9985

Hon. Mr. MURDOCK: Mr. Chairman, may I read two paragraphs here which, it seems to me, cover conclusively the point we are talking about. They will be found at the bottom of page 12 and the top of page 13 of Mr. Hungerford's submission:—

> Most of the economies which are realizable in a practical sense, in that they relate to economies which can be really made effective without unduly impairing the public interest, will be found upon examination to be obtainable under the principle of co-operation, and the country need not incur all of the unknown perils of unification in order to obtain these economies.
>
> It is entirely feasible under co-operation to arrange for the abandonment of one of two closely paralleling lines of railway where public interest is not adversely affected. It is feasible under co-operation to make arrangements for joint stations and terminals where an economy is indicated. It is feasible to arrange for the handling of one company's traffic over another company's line. It is feasible to eliminate duplicate competitive passenger train services to the extent justifiable in the public interest. It is feasible to deal co-operatively with ancillary services. Types of all of these economies have been explored and have been demonstrated as entirely practicable and workable.

It seems to me that covers the point Senator Haig was inquiring about.

Hon. Mr. HAIG: For five years these two railways have been trying to co-operate. Mr. Fairweather told us, and the witness tells us again, that we have to have compulsion to do it. Now, I want to know what savings could be made under compulsion.

Hon. Mr. HUGESSEN: Is not that a little unfair, Mr. Chairman?

Hon. Mr. HAIG: No.

Hon. Mr. HUGESSEN: Will you allow me to make an observation? Sir Edward Beatty read a general statement. He did not go into detail, but left that to his officers. I imagine Mr. Hungerford will do the same thing, and will leave the details and suggestions for compulsory economies to his officials.

Hon. Mr. MCRAE: Sir Edward Beatty did tell us in the aggregate what the saving would be, very definitely.

Mr. BIGGAR: It is fair to remark that Sir Edward Beatty had had made by his officers, in advance, what he regarded as a very comprehensive and penetrating study, whereas Mr. Hungerford has told us he has had so such study made and does not want to express any opinion about it.

Hon. Mr. MCRAE: But he recommends very strongly to this committee that we should endorse compulsory co-operation. What Senator Haig is trying to get at is the saving that is going to be made.

Mr. BIGGAR: He has told us he cannot help us on that.

Hon. Mr. MCRAE: He has made a recommendation, and it must have some basis.

Hon. Mr. MURDOCK: It is true that Sir Edward indicated that we could save $75,000,000; but there are 792 railroad presidents and boards of directors in the country immediately adjacent to us who guessed the same thing in the operation of certain railroads which finally went into receivership. The dear old Erie did so three or four times because of a guess, an estimate made by a president and a board of directors who optimistically hoped for things that they were not able to bring about.

Hon. Mr. HAIG: That still does not answer my question. This gentleman recommends compulsory co-operation. Under that what saving can he make? If he says he cannot answer, let him tell me who can, and I will see that he is called.

Mr. BIGGAR: He has told us he was not going to disagree with the estimate already made of about $10,000,000.

Hon. Mr. HAIG: Well, let him say—

The WITNESS: May I say this by way of explanation? Without a complete investigation extending over a long time, and specifying the points that you have dealt with, and without analyzing every possible item and studying it through to a conclusion, you could not make an estimate that would be accurate. You can make some kind of a guess—

Hon. Mr. HAIG: Let me call attention to the fact—

Hon. Mr. ROBINSON: Let him finish.

The WITNESS: What I tried to say, and intended to say, was that it was my opinion that practically all the savings that could be made effective with the consent of the board or either party under unification could be made effective under co-operation. Just the extent to which that would go I am not prepared to say. I do not know, and I do not think anybody else knows; and if anyone quotes a figure it can only be at most an intelligent guess.

*By Mr. Biggar:*

Q. Would you really go as far as that without this inquiry, that all the expenditures that could be saved by unification could equally well be saved under co-operation?—A. Not quite all. There would be a difference, in my opinion, largely in respect of the cost of the supervising staff generally. Under unification some saving might be made in that regard. So far as the use of facilities or the abandonment of facilities and services is concerned, I think as much can be done under co-operation as under unification. As I said before, I think something could be saved by unification in the way of official set-up. In my opinion the amount that would be saved in that respect would be offset, however, by let-down in the organization.

Q. I do not want to lead you into a discussion of details that you are not prepared to deal with, but I understood you to say that you were not able to express an opinion with regard to the view that the limit of savings under co-operation was about $10,000,000.—A. Again I have to say that that might be considered a reasonably intelligent guess, nothing more.

Q. I need not bother going into details, then, as to the difference between consolidation and co-operation. There is just one other point I thought it was fair to call attention to. You speak in your memorandum, on page 6, and again later, of your experience in connection with consolidations, and say that large scale economies are not produced according to your experience. Now, it is true, is it not, that your experience of consolidation has been under Government ownership, national organization?—A. Yes, that is right.

Q. I think that is all.

Hon. Mr. HAIG: I asked for some returns.

Mr. BIGGAR: They are in course of preparation. I am getting them.

*By Hon. Mr. McRae:*

Q. Possibly, Mr. Hungerford, you would give us your idea as to why voluntary co-operation during the last four or five years has accomplished so little?—A. I think there are a good many factors involved. One of the difficulties was that in the first instance, when we started, we had no experience as to how to organize or proceed to handle this work on a more or less formal basis. We made some false starts and used up a great deal of time in that regard. Then later on, for a time, we seemed to make pretty good progress; then we seemed to get more or less into the position of, "I won't do this unless you do that," and altogether it is a very difficult matter to analyse and determine.

119987

I thought at the beginning that the machinery set up for the purpose was complete and adequate, but after struggling with it for a considerable time I came to the conclusion that there should be a representative of the public introduced into the work in order to ensure that proper progress would be made and a determination reached. I am sorry that I cannot give you a more definite explanation than that, but it has proved quite a difficult thing.

Q. Naturally you were quite disappointed in the results?—A. Frankly, I was. As I said before, I thought the machinery planned for the purpose originally—although it was not my suggestion—would be adequate for the purpose. And I think it was, to a point; but in my opinion we found an element lacking.

Q. For all practical purposes you have gone about as far as you can go with voluntary co-operation, haven't you?—A. I would think so, unless there was a determination on the part of both railroads to go at it again energetically.

*By Right Hon. Mr. Meighen:*

Q. You could have made the arbitration compulsory at any minute you wanted to all through these years?—A. Quite so; but apparently there was a reluctance on the part of a good many people to incur the odium of doing what was an unfriendly act, or something of that kind.

*By the Chairman* (Hon. Mr. Beaubien):

Q. If there were a third party standing between the two railways to constrain them to certain economies, in your opinion should that party have the right to initate the economies to be made?—A. Yes, sir. In my opinion the third party, the chairman of this body, should have the right to initiate the consideration of any question, any suggestion that might come to him in the way of a co-operative measure.

Q. And therefore you consider that he would be instituting the study of both lines, substituting for both boards, and intimating where the economies should be planned. Do you think that would be quite right?—A. I do not quite follow that, sir. I am sorry.

Q. If that party had the initiation of all the economies to be made, then he would have the responsibility of examining both railways and pointing out where those economies should be made.—A. Yes. My suggestion was that the board consist of three members, one nominated by each of the railways, and one nominated and appointed by the Government, the chairman to have the power to initiate any investigation and pursue it and push it to a definite conclusion. I do not know just exactly what legal provision would be required, but that is my thought as to how it should function.

Q. And in that case surely both railways, the representatives of each railway, would suggest the economies to be made.—A. Oh, quite; the suggestion might come to the board from any member.

Q. And then the arbiter would decide?—A. Yes, sir.

Q. Haven't you got that now?—A. No, sir.

Q. I cannot understand. What is your arbitral tribunal for?

Right Hon. Mr. MEIGHEN: The arbiter is not selected by the Government but by the chairman of the railway commission. If he is selected by the Government you will have two one way and one the other.

*By the Chairman* (Hon. Mr. Beaubien):

Q. What is your opinion of the arbitral tribunal now?—A. The arbitrator is to plan and pursue all of these studies and bring them to a conclusion. If they are accepted by the two railways they are to be made effective with the permission of the Board of Railway Commissioners. if their permission happens to be necessary. If not they can proceed without that. But if there was a

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119988

dispute and a disinclination on the part of one of the railways to make the measure effective there should be an appeal, and in my opinion it should be automatic and should not be left to the initiative of any of the railways.

Q. And you do not think that would be duplicating your arbitral tribunal? —A. No, I do not.

Q. Both railways now have the right to initiate economies?—A. Yes.

Q. If they do not agree, they call in the arbitral tribunal?—A. Yes, but there is more than that.

Q. And then the arbitral tribunal decides. Is that right?—A. That is what it is supposed to do.

Q. I cannot see very much difference between that and the proposition you have just made.—A. The arbitral tribunal was only designed to settle disputes when there was disagreement between the parties.

Q. That is the function of the arbitral tribunal now?—A. It is not an arbitral tribunal. My suggestion of the commission is along the lines of the conciliation board under the Industrial Disputes Investigation Act, except that it would not be appointed for a specific case, but for a specific period of time, to deal with all cases.

*By Hon. Mr. Moraud:*

Q. With the right to initiate?—A. Yes.

Right Hon. Mr. MEIGHEN: But the very men to initiate that have to initiate now.

Hon. Mr. MORAUD: Now the railway has to go to the Board.

Right Hon. Mr. MEIGHEN: But the railway representatives would be on this board of three, and they could say, "We three members of this Board have to bring about a conclusion." That is exactly what they have a right to do now.

Hon. Mr. MORAUD: Except that under the new scheme the chairman of the Board could force action.

Right Hon. Mr. MEIGHEN: No, he could not.

Hon. Mr. MORAUD: If Parliament gave the power to initiate.

Right Hon. Mr. MEIGHEN: But the representatives of the railways would have to agree.

Hon. Mr. MORAUD: Not necessarily, because the chairman of the Board would have the right to force the matter.

Right Hon. Mr. MEIGHEN: That is not the suggestion in this memorandum.

Hon. Mr. MORAUD: It should be.

*By the Chairman* (Hon. Mr. Beaubien):

Q. Do you think it would be quite proper for this third party to set aside your judgment, to go about your own road and come back and tell you that you have to make economies? Do you think he would be better qualified than yourself and your board to do that?—A. Well, if I understand your question, sir, that implies the setting aside of the provisions of the existing Act. Perhaps I do not understand your question.

Q. I am discussing the power to initiate that the arbitrator would have in the case of the Board that you have just proposed. That arbitrator, if he has a right to initiate an economy on any of the roads, could go about your roads and find economies to be made and come back to your Board and say, "I do not attach very much importance to your judgment. I am going to put the opinion of the President aside and I suggest that such-and-such economy be made." Do you think that would be quite proper and in the interest of your road?—A. I think there is a misunderstanding in regard to the use of the

119989

word "initiate." It is not to initiate the actual putting into force of the thing, but to initiate the study and consideration and analysis of a proposition and bring it down to a definite recommendation. Then the recommendation naturally would go to the executive of each railway and they would have the privilege of saying whether they wanted to go along with it or not. And if there was disagreement, there is provision for going before the arbitral tribunal.

Q. Then if there was any economy, it would be suggested in the first place by the Canadian Pacific or the Canadian National?—A. No, not necessarily. It might be suggested by the Chairman.

Q. That can be done now.

Hon. Mr. MORAUD: It cannot be done now.

*By Hon. Mr. Black:*

Q. Is this not right, that no application has been made to the Board by either road, the Canadian Pacific or the Canadian National, at any time in the last five years? Neither road has applied to the arbitral tribunal for a decision? —A. That is right.

Q. And it seems the reason given in both instances is the same, that they did not want to offend each other's feelings.

*By Hon. Mr. Robinson:*

Q. Do I understand this to be the suggestion, with regard to the Board of three, that a matter may be initiated by any one of them, or by someone outside the board—say, Senator Black, or Senator McRae. Then it would be referred to the executive and thoroughly investigated, and if no action were taken upon it it would not be necessary for either railroad to apply to the arbitral tribunal, but the chairman himself could do it and take it off the shoulders of the railway? Is that the idea?—A. I would make it automatic. I would make it a requirement that if a measure was favourably reported upon by this committee or commission and not acted upon by the two railways, that it automatically should be referred to the arbitral tribunal for consideration, after the lapse of a few months, or something to that effect.

Q. That takes the onus off the railways?—A. Yes.

*By Hon. Mr. Hugessen:*

Q. Let me see if I understand your suggestion. You would substitute for the two present bodies one set up by the railways, comprised of one man representing each line?—A. Yes.

Q. And you would add to those two an independent chairman, representing the public? The board would then fulfil the functions which your two co-operative committees are doing now, with the difference that if the two railways did not agree upon any economy the chairman would have the duty of calling for an arbitral tribunal to settle the matter? Is that right?—A. In a way, yes.

Q. Unlike what Senator Meighen said a few moments ago, it is a completely different set-up from that existing at the present time.—A. At the present time there are two sections of what we call a co-operative committee, the Canadian Pacific section and the Canadian National section, under the chairmanship of two men. They are expected to work along and bring in reports, if they can. My suggestion would be that the committee be composed of three: one representative from each of the railways and a chairman selected by the Government from outside, a neutral person altogether.

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119990

*By Hon. Mr. Haig:*

Q. What would happen in a case like this? Suppose a matter comes before the board and both railway men on the board are not in favour of it. What would happen then?—A. I would give the chairman two votes, or something of that nature.

Q. Then there would be a tie. You would have to give him three. Would you give him power to override the other two?

*By Hon. Mr. Black:*

Q. As I understand your suggestion, you would give him power to override so far as that he could decide to call for a tribunal?—A. In the ordinary course he would decide with one man or the other.

*By Hon. Mr. Haig:*

Q. Senator Hugessen said that your position was not as Senator Meighen suggested. You told Senator Hugessen that the suggestion was that the Canadian Pacific would appoint one representative and the Canadian National one, and the Government one. Now, suppose a proposition for economy is suggested by the Chairman, say. And the Canadian National man on the committee says "No," and the Canadian Pacific man says "No." Now, what would happen?—A. That is a situation I can hardly contemplate.

Q. Well, following up what Senator Hugessen said, can you tell me what would happen then?—A. You would have to make some provision for that.

*By Hon. Mr. Horsey:*

Q. You said it would go automatically to the tribunal?—A. That was my thought, that if there was any disagreement the matter would go automatically before the tribunal.

*By Mr. Biggar:*

Q. You are not suggesting the abolition of the Joint Co-operative Committee? This board that you have been suggesting is a body in addition to the Joint Co-operative Committee, is it not?—A. No sir, it would take the place of those two.

*By Hon. Mr. Horsey:*

Q. I understand that you say that when the two railways could not agree on a proposition of savings, that automatically the matter then would go before the arbitral tribunal for decision?—A. Yes.

Q. Then you would get action. That is where it differs from the present set-up.

Hon. Mr. HAIG: Then the chairman would be the whole committee. He could have a matter sent to the arbitral tribunal over the heads of the other members.

*By the Chairman* (Right Hon. Mr. Graham):

Q. I suppose, Mr. Hungerford, you have not studied the whole details of this. You are in favour of some statute that would compel people to act?—A. Yes, to have some progress made.

Q. And you would leave it to some person else to work out a scheme to carry that idea out. If it is not feasible there would be no use getting details. But I imagine that if we decided that there should be a compulsory board somewhere, to compel co-operation, there would be a way of finding the machinery?—A. Yes. I was only offering a broad suggestion without trying to specify all the details of it.

119991

Q. I doubt if any of us sitting around here could even give a suggestion of what the machinery would be, if we were asked to do it.

*By Hon. Mr. Cote:*

Q. You contemplate a situation under which the two railways could not agree on the economy under study, and then you go a step further and you say that in the case of a disagreement there shall be a reference to an arbitral tribunal. If we should so legislate, there would not need to be a chairman at all; the matter would be automatic.—A. The purpose of the chairman is not so much in resolving disputes when they come down to a definite difference of opinion, as to insuring progress being made in the study of projects and bringing them to a conclusion.

*By Hon. Mr. Hugessen:*

Q. And to relieve one of the railways from forcing the arbitral tribunal on the other?—A. Yes. And there are other features in connection with it.

*By Hon. Mr. McRae:*

Q. There is one question I should like to ask you. Are you favourable to an advance in rates to make up in part the deficit of your system?—A. It is a very broad question, sir.

Q. It is a definite one.—A. Yes. It is very very questionable. If you got an increase in rates and got a loss in traffic, you would not be improving the situation from the national viewpoint; you would make it worse.

Q. Sir Edward Beatty told us he was not in favour of an advance in rates. Would you agree with him?—A. I think I would take that view too, in a general way.

Q. Then naturally you would depend on the public treasury entirely to make up your deficit?—A. Yes.

*By Hon. Mr. Moraud:*

Q. How do your rates compare in this country with rates in other countries of the world? Are they higher or lower?—A. Almost exactly the same as the rates in effect in the United States, and lower than in any other country in the world that we know of, except, I think, Japan and India.

Hon. Mr. HORSEY: They are purely Government roads.

*By Hon. Mr. Gordon:*

Q. Perhaps this is not a fair question to ask you. In dealing with the Canadian Pacific during the past five years—and during that time a good many of us think that as much progress was not made as should have been made—have you found them pretty hard to deal with? I wonder if your attitude would change in respect of the Canadian Pacific if the Government of the day came to you and said, "Mr. Hungerford, we are getting tired of paying these deficits. We are going to place $100,000,000 or $150,000,000 to your credit, with the understanding that when that is exhausted something is going to be done; we are going to get rid of this railroad. That is the limit of the money that is going to be advanced to you in future for deficits." Would your attitude towards the Canadian Pacific then be the same as it is now?—A. All I can say in regard to that is that I cannot visualize the premises that you mention. After all, it is not a question of any individuals responsible—

Q. I should like to get a reply to that question. If you had $150,000,000 put to your credit to be used for deficit purposes and you knew that when that ran out there would be no more coming to you, would you not endeavour more strongly to come to terms with the Canadian Pacific under a plan of unification or amalgamation or something else? Would you, or would you not?—A. I cannot visualize those premises.

Q. Why cannot you?—A. Because after all—

Q. Is it your idea that the Government obtains money in some other way than by taxation and borrowing?—A. No.

Q. And that it is going to keep coming down from Heaven all the time?—A. After all, sir, the Canadian National Railways system is the property of the people of this country, and they have the say as to how that property shall be run. All we do is to run the system in the way that they apparently want it run.

Q. But, Mr. Hungerford, I should think from that you are not of opinion that it needs to be run as a business organization at all?—A. Oh, yes, I do.

Q. No business could last with continuing deficits such as we have got to meet every year.—A. And no railroad organization could have got started with the financial set-up that we have; it could not be done.

Q. Do you think it is better to pay those deficits continually, or try to do something now to stop their continuance—A. My suggestion is to do all these things that you can that will not injure the nation otherwise to a greater extent.

*By Hon. Mr. Horsey:*

Q. If a definite decision was reached against unification would the progress in your view be must greater under cooperation than it has been?—A. I would expect there would be some improvement.

*By Mr. Biggar:*

Q. Mr. Hungerford, I think you have covered the ground very fully, and I am very much obliged to you. I understood you to say you were not familiar with any of the details of these estimates that had been made, and that that remark applied both to the $56,000,000 estimate made by Mr. Fairweather and the $60,000,000 estimate made by Sir Henry Thornton.—A. May I ask what the question was in relation to that?

Q. I understood you to say you were not familiar with the details of either of those estimates.—A. Oh, I have seen the details as published more or less.

Q. But I mean you are not prepared to discuss the soundness or otherwise of the detailed figures?—A. No, sir. Quite frankly I do not believe any of them. I do not think they are realizable.

Q. And that it applied to both of them. It was suggested to me that I had misunderstood you.

*By Hon. Mr. Coté:*

Q. Mr. Hungerford, you said a moment ago, and quite correctly too, that the properties of the Canadian National are the assets of the Canadian people. Then you added that the railway is run as the people want it run.—A. In regard to broad policy.

Q. Broadly speaking?—A. Yes.

Q. I think that involves two subdivisions. There is the acquisition of lines, and I can visualize in the past where a non-profitable line has been forced on the Canadian National Railways by governmental purchase. To that extent I realize the implication of what you have said. But then the second subdivision of my question is the operation of the facilities already acquired. To what extent, if any, do the people, as represented by Parliament or by the Governments of the day, this Government and the last Government, interfere with the operation of the railways?—A. Well, in so far as actual operation is concerned, there is not very much interference at all. That, I think, is a mistaken idea entirely.

119993

*By Hon. Mr. Moraud:*

Q. There is interference after you are forced to operate 100 miles of line that you never expect to make profitable?—A. Yes, there is that broad obligation or requirement, or whatever it may be termed, to provide railway service under conditions that cannot be profit-making.

*By Hon. Mr. Coté:*

Q. Senator Moraud's question goes back to my first point of acquisition. But the moment you have acquired a railway, I want to know to what extent there is Government interference. I do not mean political interference.—A. You mean the number of trains run, and things of that kind?

Q. In the operation of the system?—A. None.

Q. So in running the railway you are at this disadvantage, that unprofitable lines from time to time have been, I would say—

Hon. Mr. MORAUD: Unloaded.

Hon. Mr. COTÉ: —unloaded on the system?

The WITNESS: To a very considerable extent, sir, we started that way, because the Canadian National Railway system was originally composed of lines that were unable to carry on. They had not earned or paid anything on their fixed charges for some time before.

Q. Will you go a little further in connection with the operation of lines? I do not suppose there would be very much difference between your operation of your facilities and the operation of the C.P.R.?—A. I would not think so.

Q. You give what you think is reasonable service where you have to operate your railways, and then you cannot curtail that service beyond a certain point, even if you wanted to, because the Railway Board is in the background and regulates all that sort of thing: is that correct?—A. That is correct. If we want to make a change in our train service we have got to get the consent of the Railway Board.

*By Hon. Mr. McRae:*

Q. You referred earlier in the day, Mr. Hungerford, to the expense of running the Transcontinental Railway. Do you think it would be practicable and economical and justifiable to run more than one transcontinental train across the country?—A. On all lines?

Q. What we will call one up-to-date transcontinental train.—A. That is, as between the Canadian Pacific and the Canadian National?

Q. Yes.—A. Oh, yes.

Q. Whether, in other words, co-operation there could not be worked out?—A. That is a very, very difficult matter, because both companies have found it necessary over extended periods to run even more trains.

Q. I mean one system. As a matter of fact, you referred to the expense of it, and I wondered if there was not some way in which that could not be minimized.—A. The difficulty lies in this fact. While there are common terminii for those lines, almost invariably the lines serve quite different communities. For instance, west of Winnipeg the Canadian Pacific parallels the border pretty well to Medicine Hat and Calgary; whereas the Canadian National mainline goes northwest through Saskatoon and Edmonton. It is a question whether those communities, large and important as they are, are not entitled to a daily service of good quality. We have felt that they were so entitled. But these through trains never have been through trains so far as our line is concerned, for they have always performed local service practically from one end of the line to the other. On some sections they represent the only passenger service.

11994

Q. Another question, Mr. Hungerford. I asked Sir Edward Beatty, and now I ask you: It appears indisputable that obsolescence is going on at a rapid pace on the railways in the United States and, I presume, to some extent here. In the march of time is it not going to require a great deal of capital in the way of new equipment and betterments if we are to keep up to the same standard as the roads to the south of us?—A. I think possibly you have in mind the deisel-propelled light-weight, high-speed equipment in the States?

Q. They are carrying that very far now.—A. I cannot visualize any very radical change in the construction of locomotives and freight equipment, and things of that kind. Passenger equipment may lend itself a little bit more to developments of that sort. Improvements will be effected of course continuously. Probably the largest development will be by the greater employment of alloy steels of lesser weight, and things of that kind. There has been a very considerable beginning made already; but so far as the usual equipment is concerned, apart from the special feature train, I do not see anything but normal development ahead.

Q. There is a good deal of agitation in the United States now that the roads are getting antiquated, and that new equipment should be introduced to bring the roads up to date as an unemployment relief measure.—A. I think there is really a lot of misunderstanding and possibly some exaggeration in regard to that.

Q. The trouble is a great many people riding across the continent in those trains like them very much.—A. Yes. The newest train put on is propelled by steam on the run from New York to Chicago.

Q. The one running from New York to San Francisco is a modern deisel train that makes the trip in thirty-six hours?—A. Yes.

Q. You have got to reserve accommodation on that three weeks or a month ahead.—A. There is that development of special passenger equipment. I have felt that the field in Canada was not sufficiently large for any general use of that equipment. But, to come back to your original thought, as to the probability of considerable obsolescence of railway equipment, generally I cannot see it. It will be improved in design as it has always been progressively, and modern equipment is very much more efficient and capable of performing very much more work. But as to throwing away a lot of equipment and spending huge sums of money to replace that equipment, I cannot visualize such a situation. We have gone through the period of replacing wooden cars; that has been accomplished.

*By Hon. Mr. Haig:*

Q. Do the Government interfere, if you want to close up some shops, more than it would if the shops were privately-owned?—A. It is twenty years since I worked for a privately-owned company. I really do not know.

*By Hon. Mr. Ballantyne:*

Q. Let me put it this way, Mr. Hungerford. Suppose traffic is decreasing, and the Canadian Pacific decided to lay off, say, 2,000 men; and you felt it was necessary to close down your shops at Winnipeg and Montreal and so curtail the number of your employees. The C.P.R. could do it on their own initiative; but I am under the impression you would have very great difficulty in laying off the same number of men. In fact, I doubt very much whether you would be able to do it.—A. All I can say is, we have done it frequently in the past.

*By Hon. Mr. Moraud:*

Q. How many did you lay off between 1930 and 1932, say?—A. I don't know how many; we laid off a considerable number during that period as

11995

distinguished from those that simply terminated their seasonal work and were not taken back. Of course, there was a drop in the staff of between 30,000 and 40,000.

Q. Between 30,000 and 40,000?—A. Yes.

*By Hon. Mr. Haig:*

Q. The 1st of June this year did you lay off any shopmen?—A. Yes, on the Atlantic Division, and we reduced the days of work.

Q. On the Central Region?—A. No, nor on the Western Region; but we reduced the days of work for the two months.

*By Hon. Mr. McRae:*

Q. There was quite a protest, too.—A. There is always a protest. If you lay off one man at a place there is a protest, but that is something you have to face.

The CHAIRMAN (Hon. Mr. Beaubien): Are there any more questions?

Hon. Mr. SINCLAIR: We were to get an explanation as to page 22, in reference to the question asked by Mr. Meighen before we adjourned at the noon hour.

Mr. BIGGAR: The question with regard to the $500,000,000?

Hon. Mr. SINCLAIR: Yes.

The WITNESS: This was prepared for me by our Bureau of Economies, and was accepted as such, and here is a little memorandum that covers it, I think. With the permission of the Chairman, I would ask Mr. Fairweather to read it and to answer any questions about it.

Mr. BIGGAR: Yes.

Mr. FAIRWEATHER: (Reading):—

> The statement contained on page 22 of the brief that the national income of Canada exceeded the national outgo by over 500 millions of dollars for the year 1937 is based upon publications of the Dominion Bureau of Statistics, arranged to show the addition of capital surplus to the people of Canada for the fiscal year 1936-37. The additional savings to the people of Canada are represented by increased saving bank deposits, increased life insurance, a decrease of indebtedness outside of Canada and an increase in construction of homes, stores, factories, etc., within the country. Expenditures by governments and provinces on capital works were not included, because it was impossible to segregate such works from unemployment relief expenditures. The principal items representing the increased savings to the people of Canada in the year are as follows:—

| | |
|---|---|
| Increase in savings bank deposits | $ 52,434,000 |
| Net increase of life insurance | 91,045,000 |

Right Hon. Mr. MEIGHEN: Life insurance?

Mr. FAIRWEATHER: That is the amount of premiums paid, less death dues. It is the net increase in life insurance outstanding.

Right Hon. Mr. MEIGHEN: It has nothing to do with premiums at all.

Mr. FAIRWEATHER: It represents the difference between the premiums paid by the public, and the death dues paid by the companies to the public.

| | |
|---|---|
| Securities outside of Canada retired less new securities issued | $ 156,100,000 |
| Net capital transactions of international branch plants | 74,200,000 |

MEIGHEN PAPERS, Series 5 (M.G. 26, I, Volume 189)

PUBLIC ARCHIVES
ARCHIVES PUBLIQUES
CANADA

119996

| | |
|---|---|
| Private capital construction within Canada.. | 143,223,000 |
| Insurance transactions of foreign companies, net. | 26,000,000 |
| Total.. .. .. .. .. .. .. .. .. .. | $ 543,002,000 |

The Dominion Bureau of Statistics report on international balances for 1937 contained the following paragraph:—

> It is almost correct to say that Canada is amortizing her foreign debt at a rate of between 3¼ and 4 per cent per yea.. . . . capital goods which were created in former years are paying returns and the surplus production as compared with consumption is permitting a gratifying reduction in foreign indebtedness. The results suggest that, on the whole, former investment in Canada has been sound.

Hon. Mr. HAIG: The $52,000,000 may have been diverted from some other source to savings deposits, and the same is true of life insurance and building.

Right Hon. Mr. MEIGHEN: We have it down now. It will be very interesting.

The CHAIRMAN (Hon. Mr. Beaubien): Are there any more questions, gentlemen?

Mr. BIGGAR: With the permission of the committee, we might take a few minutes to deal with the documents asked for last week, and which are available now to be put in.

The first document asked for was a detail of the $64,268,000 of savings in connection with transportation generally. It is item 3, I think, in the main schedule of the Canadian Pacific. I have got that and will state to the committee generally what it shows. The reduction in train, locomotive and car miles represents a total of about $17,000,000, divided into 10½ passenger and 6¾ freight. The reduction in supervisory, traffic and general expenses represents 13·6 millions. The common use of facilities and equipment, reclassification of lines and consolidation of operations, represent a sum divided under several heads, as follows: road and yard, eleven and a quarter million; shops and engine houses, seven and a half million; stations and offices, three and three-quarter million; road service, $1,600,000; yard service, three and a half million, and other, one and a half million. Then there is a column with regard to incidental economies from unification, which includes $1,600,000, largely advertising, and $2,500,000 of locomotive fuel. These make a total of $4,121,000. All those add up to the $64,000,000. Then there is a final column which gives the distribution among the various headings of maintenance of way and so on of line abandonment savings included, amounting to seven and a quarter million. Details with regard to the subordinate heads are attached. I think this might go in, though the first page alone is probably all that we need refer to. It will be Exhibit No. 80.

The next document asked for was the operating ratio of the unified system for 1930. The details of that are given on a single sheet. It shows that under unified management the operating ratio would be 70·5 as against 85·6 for combined operation. That will be Exhibit No. 81.

The third is a comparison of unit costs in the years 1930 and 1937 as between the Canadian Pacific and the Canadian National systems. That is given for each of the detailed heads under maintenance of way, and covers three or four pages. With regard to that I must tell the committee that the Canadian National has a very strong objection to a comparison between the unit costs of the two systems, for various reasons that have been set out in a long document handed to me. But the Canadian Pacific disagrees with these reasons, and I do not think it would be useful at this time to go into these differences of documentary material. The comparison, however, must be submitted subject to that reservation. It will be Exhibit No. 82.

119997

The next document is the valuation of the telegraph companies. I do not think this need be printed, though it should be given a number. What I have got before me is not the document itself or the documents themselves. I did not bring them over. They are each of them a large volume about twenty inches long, fourteen inches high and three inches thick. The Canadian Pacific and the Canadian National each got one of these, and each is preceded by a general statement running to about 6, 7 or 10 pages, showing the basis upon which the valuation was made. There is also a schedule giving the details of the valuation in tabular form. I have not attempted to get both statements of the bases, because they are very much the same, but the Canadian Pacific have been able to give me a copy of the basis that precedes their valuation, and I have compared it with the Canadian National basis, and they are so closely identical that I think one of them will do with the two schedules. That will be Exhibit No. 83.

The next document is the Montreal Telegraph agreement, which is a comparatively short document. It will take only three or four pages to print it. It provides for the return of the system with additions, and I think it might be printed, because the actual provision may be relevant. That will be Exhibit No. 84.

The next two documents relate to the question of abandonments as dealt with in Exhibit No. 56, which is the Canadian National statement as to the disposition of the 2,098 miles that was common to the two abandonment programmes. The Canadian Pacific does not agree with that distribution or indication of the position of each, and has submitted in tabular form its views about that. I think we can print that for comparison. It will be Exhibit No. 85.

Finally, there was the request for information with regard to the distribution of an amount that appears in Exhibit No. 62, at page 938, in respect of payments for injury. There was a request for an indication of how much related to employees and how much to others. The figures for 1930 are not available, but the distribution for the same item for 1937 is six-sevenths to employees, and one-seventh to others, and I think that is really all we need.

Hon. Mr. HUGESSEN: There is just one question with reference to Exhibit No. 81 and the operating ratio suggested of 70·5 per cent under unification for the year 1930. For my own information and the information of the committee, I think it might be advisable to get, in support of that or as an appendix, a statement of the operating ratios during that year of the principal railroads in the United States.

Mr. BIGGAR: I have them for last year, but I have not them for 1930.

Hon. Mr. HUGESSEN: I should like them for 1930, so as to make a comparison.

Mr. BIGGAR: No doubt they can be got, Senator.

Subject to the Committee's approval, there are three Vice-Presidents of the Canadian National here to be heard. They are all going to address themselves to details, particularly of line abandonment. Mr. Appleton is from the Atlantic region; Mr. Kingsland is from the Central region, and Mr. Warren from the Western region. They would not follow logically now; the logical precedure would be to hear Mr. Fairweather now, but it seems to me that we might properly hear these gentlemen and let them go back to their work. That is subject to the Committee's approval, of course.

Hon. Mr. MCRAE: It would be better if the map could be marked, before we go into the abandonments.

Mr. BIGGAR: I have arranged for that to be done, and I think it can be done during the supper adjournment.

119998

The CHAIRMAN (Hon. Mr. Beaubien): As time is getting very short and we still have a lot of work to do, it is suggested that the members of the Committee should have the kindness to come back at 8 o'clock.

At 6.05 p.m. the Committee adjourned until 8 p.m.

## EVENING SITTING

The Committee resumed at 8 p.m.

Mr. BIGGAR: We begin with Mr. Appleton.

Hon. Mr. ROBINSON: Mr. Chairman, somebody asked a while ago if these proposed abandonments could be divided up into provinces. I wonder if that has been done?

Hon. Mr. MURDOCK: They are divided into provinces, at pages 427 and following of the record. You will find it starts there at the east and goes west.

Mr. W. U. APPLETON, Vice-President and General Manager of the Canadian National Railway, Atlantic region, appeared as a witness and took the stand.

*By Mr. Biggar:*

Q. Mr. Appleton, you are the Vice-President and General Manager of the Canadian National Railways, Atlantic region?—A. Yes, sir.

Q. You were going to direct the attention of the Committee to some matters in relation to abandonment of transcontinental lines east of Diamond Junction, Quebec?—A. Yes.

Q. Have you got your submission in the form of a memorandum?—A. To some extent, yes.

Q. Will you just go on?—A. I intend to deal chiefly with the proposed abandonment of the National Transcontinental Railway, Chipman to Cyr, New Brunswick, 146 miles; and Diamond Junction, Quebec, to Edmundston, New Brunswick, 225 miles, a total of 371 miles of railway which costs the people of Canada at least $31,000,000. Such a proposal could only be the outcome of a very superficial examination and without any conception whatever as to the result economically or with respect to the through or local traffic. This portion of the railway serves a population of approximately 96,000 people.

*By the Chairman* (Right Hon. Mr. Graham):

Q. Could you tell us the name of the railway of which those portions form a part? Are they part of the Transcontinental, the Intercolonial or what? —A. No, sir, it is the dark section on the map that runs from Diamond Junction to Chipman. That is part of the National Transcontinental. The industrial investment is estimated at $11,256,000, not including the development at Edmundston or on the line between there and Cyr, which would increase this by several million dollars and make it evident that the abandonment of any portion of the railway would have a very serious effect on the economic welfare of the communities it serves. I might mention some of the stations to give you some indication of the local traffic. Perhaps I should give the earnings. The local earnings for the year 1937 amounted, in my territory, that is from Monk to Chipman, to $1,894,235; and from Monk to Diamond Junction, to $238,000. At Riviere Bleue the revenue amounted to $241,000. That is a station on the line between Monk and Edmundston. If the railway was taken away it would

119999

leave those people more on less isolated, and the margin of profit in the handling of their business would be so small that I think they would have to move out. The same thing applies to Riviere Manie. The gross revenue there was $141,000; and at La Fontaine it was $143,000. I think these are substantial amounts, and we should give very serious consideration to the matter of abandoning a line that even enjoys local traffic to that extent.

*By Hon. Mr. Black:*

Q. There must be a very considerable amount of earnings from Edmundston to St. Leonard?—A. I am omitting the earnings at Edmundston, Green River and St. Leonard. The total gross in that territory was $1,274,000. On the line from Diamond Junction to Chipman, excluding those stations, it would be about $1,500,000.

*By Hon. Mr. Moraud:*

Q. Those figures are for local traffic?—A. Local traffic only.

*By Hon. Mr. McRae:*

Q. Does that include incoming as well as outgoing freight?—A. Yes, sir. For the six months ending April 30, 1938, the freight cars moved from Monk terminal were 60,416 and for the year ending April 30 they were 98,568. The daily average for six months was 334 cars, and for a year it was 270 cars. The average gross tons handled in through traffic was 2,047,824 for six months; and 3,315,125 tons for one year.

*By Mr. Biggar:*

Q. Those are absolute tonnages, not averages?—A. Absolute.

Q. You said average?—A. Those are the totals. The local traffic was 663,826 tons in six months; and for the year ending April 30, it was 965,340 tons. The total tonnage moved in six months was 2,711,650 tons, and for the year 4,280,465 tons. Actual net tons per mile of road—daily average for the N.T.R. 4,911 tons, and for the Atlantic region 1,576 tons. I mention that to indicate the difference in the density of traffic on the Atlantic region as compared with the tonnage on the National Transcontinental.

Another rather interesting feature is that the National Transcontinental from Moncton to Monk represents 356 miles of track. The total mileage of the Atlantic Region is 3,030 miles. The percentage of the National Transcontinental to the Atlantic Region mileage is 11·7. The net ton traffic on the N.T.R. is 41·5 per cent. So that we are handling 41·5 per cent of traffic which moved on the Atlantic Region on 11·7 miles of N.T.R. track, indicating the importance of this track.

Operating economies in the movement of through traffic, National Transcontinental versus I.C.R. or C.P.R., or the latter railways combined, amount to $727,807 per year, or more than sufficient to maintain that portion of the National Transcontinental and keep this important traffic lane open. In other words, if you withdrew the through traffic that operates over the National Transcontinental you lose an economy as against the operation of that through traffic either by the C.P.R. or the I.C.R. of $727,000 odd. That is more than sufficient to maintain the track and structures of the Transcontinental and leave a surplus of $46,700 per annum, without taking into account the increased track maintenance on the Intercolonial and the Canadian Pacific that would result through the diversion of the traffic now going over the track in question.

I hope I have made myself clear. To move a train on the Transcontinental one mile with a given unit of power would require a mile and a half of similar service on the C.P.R. or Intercolonial. On that account we get these economies.

The CHAIRMAN (Hon. Mr. Beaubien): As time is getting very short and we still have a lot of work to do, it is suggested that the members of the Committee should have the kindness to come back at 8 o'clock.

At 6.05 p.m. the Committee adjourned until 8 p.m.

## EVENING SITTING

The Committee resumed at 8 p.m.

Mr. BIGGAR: We begin with Mr. Appleton.

Hon. Mr. ROBINSON: Mr. Chairman, somebody asked a while ago if these proposed abandonments could be divided up into provinces. I wonder if that has been done?

Hon. Mr. MURDOCK: They are divided into provinces, at pages 427 and following of the record. You will find it starts there at the east and goes west.

Mr. W. U. APPLETON, Vice-President and General Manager of the Canadian National Railway, Atlantic region, appeared as a witness and took the stand.

*By Mr. Biggar:*

Q. Mr. Appleton, you are the Vice-President and General Manager of the Canadian National Railways, Atlantic region?—A. Yes, sir.

Q. You were going to direct the attention of the Committee to some matters in relation to abandonment of transcontinental lines east of Diamond Junction, Quebec?—A. Yes.

Q. Have you got your submission in the form of a memorandum?—A. To some extent, yes.

Q. Will you just go on?—A. I intend to deal chiefly with the proposed abandonment of the National Transcontinental Railway, Chipman to Cyr, New Brunswick, 146 miles; and Diamond Junction, Quebec, to Edmundston, New Brunswick, 225 miles, a total of 371 miles of railway which costs the people of Canada at least $31,000,000. Such a proposal could only be the outcome of a very superficial examination and without any conception whatever as to the result economically or with respect to the through or local traffic. This portion of the railway serves a population of approximately 96,000 people.

*By the Chairman* (Right Hon. Mr. Graham):

Q. Could you tell us the name of the railway of which those portions form a part? Are they part of the Transcontinental, the Intercolonial or what? —A. No, sir, it is the dark section on the map that runs from Diamond Junction to Chipman. That is part of the National Transcontinental. The industrial investment is estimated at $11,256,000, not including the development at Edmundston or on the line between there and Cyr, which would increase this by several million dollars and make it evident that the abandonment of any portion of the railway would have a very serious effect on the economic welfare of the communities it serves. I might mention some of the stations to give you some indication of the local traffic. Perhaps I should give the earnings. The local earnings for the year 1937 amounted, in my territory, that is from Monk to Chipman, to $1,894,235; and from Monk to Diamond Junction, to $238,000. At Riviere Bleue the revenue amounted to $241,000. That is a station on the line between Monk and Edmundston. If the railway was taken away it would

119999

leave those people more on less isolated, and the margin of profit in the handling of their business would be so small that I think they would have to move out. The same thing applies to Riviere Manie. The gross revenue there was $141,000; and at La Fontaine it was $143,000. I think these are substantial amounts, and we should give very serious consideration to the matter of abandoning a line that even enjoys local traffic to that extent.

*By Hon. Mr. Black:*

Q. There must be a very considerable amount of earnings from Edmundston to St. Leonard?—A. I am omitting the earnings at Edmundston, Green River and St. Leonard. The total gross in that territory was $1,274,000. On the line from Diamond Junction to Chipman, excluding those stations, it would be about $1,500,000.

*By Hon. Mr. Moraud:*

Q. Those figures are for local traffic?—A. Local traffic only.

*By Hon. Mr. McRae:*

Q. Does that include incoming as well as outgoing freight?—A. Yes, sir. For the six months ending April 30, 1938, the freight cars moved from Monk terminal were 60,416 and for the year ending April 30 they were 98,568. The daily average for six months was 334 cars, and for a year it was 270 cars. The average gross tons handled in through traffic was 2,047,824 for six months; and 3,315,125 tons for one year.

*By Mr. Biggar:*

Q. Those are absolute tonnages, not averages?—A. Absolute.

Q. You said average?—A. Those are the totals. The local traffic was 663,826 tons in six months; and for the year ending April 30, it was 965,340 tons. The total tonnage moved in six months was 2,711,650 tons, and for the year 4,280,465 tons. Actual net tons per mile of road—daily average for the N.T.R. 4,911 tons, and for the Atlantic region 1,576 tons. I mention that to indicate the difference in the density of traffic on the Atlantic region as compared with the tonnage on the National Transcontinental.

Another rather interesting feature is that the National Transcontinental from Moncton to Monk represents 356 miles of track. The total mileage of the Atlantic Region is 3,030 miles. The percentage of the National Transcontinental to the Atlantic Region mileage is 11·7. The net ton traffic on the N.T.R. is 41·5 per cent. So that we are handling 41·5 per cent of traffic which moved on the Atlantic Region on 11·7 miles of N.T.R. track, indicating the importance of this track.

Operating economies in the movement of through traffic, National Transcontinental versus I.C.R. or C.P.R., or the latter railways combined, amount to $727,807 per year, or more than sufficient to maintain that portion of the National Transcontinental and keep this important traffic lane open. In other words, if you withdrew the through traffic that operates over the National Transcontinental you lose an economy as against the operation of that through traffic either by the C.P.R. or the I.C.R. of $727,000 odd. That is more than sufficient to maintain the track and structures of the Transcontinental and leave a surplus of $46,700 per annum, without taking into account the increased track maintenance on the Intercolonial and the Canadian Pacific that would result through the diversion of the traffic now going over the track in question.

I hope I have made myself clear. To move a train on the Transcontinental one mile with a given unit of power would require a mile and a half of similar service on the C.P.R. or Intercolonial. On that account we get these economies.

The resistance eastbound on the Transcontinental, owing to grade, is about eight pounds per ton and the resistance on some parts of the Intercolonial and of the Canadian Pacific, based on 1½ per cent grade, is actually thirty pounds per ton.

*By the Chairman* (Right Hon. Mr. Graham):

Q. What grade did you say the Transcontinental has?—A. Four-tenths of 1 per cent eastbound and six-tenths of 1 per cent westbound.

The local passenger traffic reflects the industrial development of the territory, and it might be mentioned that 11,336 revenue passengers were handled between Edmunston and Monk during the six months November, 1937, to April, 1938. The large proportion of this was local business. There was also quite a heavy local business between Monk and Quebec city.

The strategic position of the N.T.R. in time of war will also be apparent because of the fact it is in all-Canadian territory and a sufficient distance inland to be safe from attack by sea. On the other hand, the Canadian Pacific line passes through the State of Maine for a distance of approximately 201 miles, or 41·65 per cent of the distance between Saint John and Montreal, and in the event of war could not be used for the movement of munitions and troops unless the United States were an ally. For heavy troop movements the N.T.R. route would be of great value because of the longer trains that could be handled than on either the I.C.R. or the C.P.R.

There is quite a heavy capital investment in communications along the N.T.R. route, such as commercial telegraph lines and radio broadcasting circuits, and it is preferred for these services because of the shorter distance and the freedom from weather interruptions during winter. It is estimated that to transfer these facilities from the N.T.R. to the I.C.R. would entail an expense of about $204,000.

Another feature is, we are building up quite an important import and export traffic over the Transcontinental. We can move trains about four hours faster over that route than on the Intercolonial, and it is almost entirely free from passenger service and lends itself admirably to the movement of heavy freight trains. Last winter we moved nearly a quarter of a million tons of coal from Sydney to Montreal and points in Ontario, and I am very doubtful if we could have handled that traffic without a substantial loss by the other route.

During the period November, 1937, to April, 1938, inclusive, the traffic density averaged 6,362 net ton miles per mile of road daily. During the same period 664 freight trains were operated eastward and 678 westward, making a total of 1,342, or an average of 7·4 trains a day, with the maximum reaching 13 trains on one particular day. Excluding locals there was an average of 6·5 through trains daily which would require 10 trains if this traffic were diverted to the I.C.R., and, from information available, 11 trains via the C.P.R. route. The statement was made that the traffic of the Transcontinental consisted of one train a day, and that the Canadian Pacific could absorb half of one of those trains in its light trains westbound, overlooking entirely that if the trains were running light westbound, they must have been loaded eastbound, and I do not know how they propose to handle the eastbound traffic. On the one day with 13 through trains it would have required 20 trains over the I.C.R. or about 22 trains over the C.P.R. to handle the same tonnage.

Local freight traffic over the N.T.R. for the period under review was 14 per cent of the total moved eastward and 34 per cent of the total moved westward. This local traffic consisted mostly of coal from the Minto and Springhill mines for the Fraser Companies at Edmundston and Madawaska, together with farm and forest products.

I have Exhibit No. 3, which shows a comparison of the utility of two C.N.R. routes and demonstrates that at least 55 per cent more train miles are required to move a given volume of tonnage over the Intercolonial than would be needed to move the same traffic via the National Transcontinental.

*By Mr. Biggar:*

Q. You are speaking of Exhibit No. 3?—A. I have it marked in my memorandum.

Q. Do you want to refer to it in your evidence?—A. Yes, sir.

Q. It will be Exhibit No. 86. It is a statement in regard to what?—A. It is a comparison of the utility of the two C.N.R. routes and demonstrates that at least 55 per cent more train miles are required to move a given volume of tonnage over the Intercolonial than via the National Transcontinental.

Q. That is by reason of the heavier grades?—A. Yes.

Q. Has it anything to do with the comparative length of the two lines?—A. It reduces the operating condition to a percentage basis and makes it simple.

Q. Do both those factors enter into the percentage, or only one?—A. Distance and resistance.

Q. What is the difference in distances?—A. The difference is shown here. Montreal to Saint John via Canadian Pacific-Maine Central is 481·7 miles. That is shown in detail. 41·8 per cent of this mileage runs through the United States. Montreal to Moncton via the Canadian Pacific-Maine Central-Canadian National is 571 miles. Montreal to Moncton via Canadian National (Intercolonial) is 647·4 miles. Montreal to Moncton via the Canadian National (National Transcontinental) is 613·3 miles. Montreal to Saint John via Canadian National (Intercolonial) is 736·7 miles. Montreal to Saint John via Canadian National (National Transcontinental) is 702·6 miles.

Q. I am afraid I have not followed that comparison. But you told us a moment ago that 100 train miles, as I understand, on this line you are speaking about was equivalent to 155 on the Intercolonial Railway.—A. Yes, sir.

Q. And my question was, how much of that is due to the longer haul, and how much to the worse grades.—A. It is all due to grades.

Q. All due to grades?—A. Yes, sir.

Q. None of it is due to longer haul?—A. No, sir. It is resistance that makes the comparison.

Q. In other words, it is really a question of breaking it up into more trains?—A. That is it.

Q. Consequently you have more train miles but smaller trains?—A. Yes.

Q. But in each case you are taking the normal maximum weight of trains that can be carried over the line by an engine of a given power. Is that 100 per cent engine?—A. We are using a 53 per cent engine. That means 53,000 pounds drawbar pull or tractive effort.

Hon. Mr. BLACK: Is the route from Montreal to Moncton via the National Transcontinental shorter than via the Intercolonial?—A. Yes, sir.

Hon. Mr. MURDOCK: 613 as against 647.

The WITNESS: Some 40 miles difference.

Hon. Mr. BLACK: I misinterpreted your figures. I was afraid you were not doing justice to one of the lines.

*By Mr. Biggar:*

Q. You were going to compare the National Transcontinental line and the C.P.R. on the same basis?—A. Yes, sir.

Q. Perhaps before you leave that comparison between the National Transcontinental and the Intercolonial you can give us a figure that includes both additional length of haul and the disadvantage of the greater grades?—A. I have a statement here respecting the diversion of freight traffic from the I.C.R. between Riviere du Loup and Moncton.

Q. I am afraid the figures will not be right.—A. Yes, they are absolutely right. That heading is just an error. I will read this if you will permit me.

Q. Yes.—A. The physical characteristics of the alternative routes between Joffre and Moncton are such that heavier trains can be handled over the N.T.R. The density of passenger traffic also being lighter on the N.T.R., with better facilities for the yarding of trains at Monk, Edmundston and Napadogan than at Riviere du Loup, Mont Joli and Campbellton, it is possible to give quicker despatch via the N.T.R.

The utility of the N.T.R. route as compared with the I.C.R. for freight operation is demonstrated by the following table, which shows the number of trains it would be necessary to run over the various portions of the two routes, using 53 per cent Mikado type locomotives with full rating to handle eastward 100,000 gross tons in 2,500 cars, the average gross tons per car being about 40 tons. Now, the National Transcontinental route requires 16,239 train miles to handle a gross tonnage per train of 2,827 tons. On the I.C.R. it would require 5,138 train miles to handle a gross tonnage per train of 1,957 tons. In order to be positive about this we took the actual gross tonnage of the trains and worked it out on that basis.

Q. For 1937?—A. For any period. This shows that 55 per cent more train miles are required on the I.C.R. than on the N.T.R. to handle the same amount of traffic without regard to the more adverse weather conditions on the I.C.R. That is another thing we are up against. I have known a snowfall in the Matapedia valley of 168 inches, and of traffic being tied up seriously, whereas inland, on the Transcontinental we did not meet with that condition. We have also had washouts. I remember on one occasion the Canadian Pacific had a washout and had to divert their traffic over our line, and they paid us $90,000 in detour charges. Of course, that is apt to happen to anyone. But we were fortunate on that occasion.

*By Hon. Mr. Sinclair:*

Q. You do not get that on the— —A. We never had anything of that kind on the National Transcontinental. The snowfalls are more even, and the winds are not as great. The Intercolonial, being exposed to the Bay of Chaleur and the Northumberland Strait, gets some terrific weather conditions.

It may also be remarked that an increased grain movement, for instance, resulting in greater average gross tons per car, would raise this percentage, the increase in train miles via the I.C.R. increasing to 61 per cent where cars average 60 gross tons.

The data shown above relates to eastward movements only, but as the operating conditions affecting westward movements are very similar, it would seem unnecessary to treat them separately, except to point out that on the I.C.R. full tonnage trains must be assisted in each direction over the Sayabec grade, a distance of 29 miles, whereas on the N.T.R. there are 13 miles of pusher grade eastward to Summit, and 13 miles of pusher grade westward to Pelletier.

*By Mr. Biggar:*

Q. Does that cover the figures?—A. I think so.

Q. Those figures are all based on 1937?—A. Yes, sir.

120003

Q. There has been considerable change since.—A. I thought that question might come up, and I have a statement here showing the interchange of cars at Monk for the years 1927 to 1937 inclusive. It might be assumed that traffic was not very good in 1930, but I find that 72,830 cars went through the Monk gateway in that year as against 81,730 in 1937. That indicates, I think, at least to some extent, the very excellent freight service we have been able to give on that line, and that it is resulting in increased export and import traffic.

Q. My attention is called to the evidence you gave before the Duff Commission, page 380, in which you were asked about returns on the Transcontinental portion. Your answer, as I understand it, was this: —

> Oh yes, they did at one time grow substantially, but with the depression and the falling off of import and export traffic to the extent that it has, the traffic is very light.
