Technical and Bibliographic Notes/Notes techniques et bibliographiques

The Institute has attempted to obtain the best original copy available for filming. Features of this copy which may be bibliographically unique, which may alter any of the images in the reproduction, or which may significantly change the usual method of filming, are checked below.

L'Institut a microfilmé le meilleur exemplaire qu'il lui a été possible de se procurer. Les détails de cet exemplaire qui sont peut-être uniques du point de vue bibliographique, qui peuvent modifier une image reproduite, ou qui peuvent exiger une modification dans la méthode normale de filmage sont indiqués ci-dessous.

12X	16X	20X	24X	28X	32X

The copy filmed here has been reproduced thanks to the generosity of:

Library of the Public
Archives of Canada

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol $\rightarrow$ (meaning "CONTINUED"), or the symbol ∇ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

La bibliothèque des Archives
publiques du Canada

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole $\rightarrow$ signifie "A SUIVRE", le symbole ∇ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

ADVERTISEMENT.

IT is hoped this work will be found more complete, comprehensive and accurate, than any thing of the kind hitherto attempted in this Province. It is, however, scarcely possible to avoid *some* errors, from the very nature of the undertaking, but we hope they are *few*.—Great attention has been paid to the astronomical calculations. The prognostications of weather can never be quite certain, although there may be just grounds for the expectation of changes in this particular, at certain periods to come, by reason of planetary, and other influences. These calculations are at least amusing, and are therefore inserted according to ancient usage.

The MILITIA APPOINTMENTS being taken from the Adjutant General's Office, are of course accurate. Indeed, every thing depending upon the statements obtained from the Public Offices in Toronto must be correct, since the heads of the various Departments have, with much kindness, given every facility towards the satisfactory completion of this undertaking;—for which they have the Proprietor's warmest acknowledgements.

BRIEF ANNALS of PUBLIC EVENTS connected with the HISTORY of the CANADAS, together with a SKETCH of their PRESENT STATE, and of the Sister Colonies of NOVA SCOTIA, NEW BRUNSWICK, PRINCE EDWARD'S ISLAND and NEWFOUNDLAND are added; and, also, some useful instructions to Emigrants, and many valuable Tables, that cannot fail to render this work a useful Companion to every class of persons in this country; and, particularly so, to occasional visitors, and travellers through the country; it being a MATTER OF FACT BOOK, carefully compiled from the most authentic sources.

Since the first establishment of this work several important additions have been made, amongst which the STATISTICAL TABLES formed from the ASSESSMENT ROLLS, and the POPULATION RETURNS, are perhaps the most valuable, as they will show at one view, when the whole are collected, what are the resources of the country, in a manner that must be perfectly clear and indisputable; and, a comparison of years, will prove the amount of increase, or decrease.

A very comprehensive CHRONOLOGY has been likewise added, to mark some interesting epochs in the History of the World.

THE SEASONS.

How beautiful are nature's thousand hues !
 First comes the virgin Spring, with emerald set,
 And cheeks of glowing childhood ; Summer next,
 With all her gay and gladsome trappings on,
 Rejoicing in the glory of her growth,
 And brading roses in her foliage ;
 And next, maturer Autumn, soft at first,
 Yet oftimes sad in her departing rays ;
 Tis hoary Winter meets her on the heath,
 And breathes destruction on her yellow cheek.

COMMENCEMENT OF THE SEASONS.

Spring—Sun enters ♈, March 20.

Summer—Sun enters ♋, June 21.

Autumn—Sun enters ♏, September 23.

Winter—Sun enters ♊, December 21.

ECLIPSES IN THE YEAR 1839.

March 15th.—The SUN will be Eclipsed, at 10 m. past nine, in the morning—to us invisible.

Sept. 7th.—The SUN will be again Eclipsed at 17 minutes past 5, in the evening—to us invisible.

THUNDER AND LIGHTNING.

To determine the distance of Lightning, count the number of *Seconds* between the *flash* and the *clap of Thunder*, and allow rather less than a *quarter of a mile* for each second.

The middle of the room is the safest situation in a Thunder Storm, and lower rooms are more safe than upper chambers.

THE FORCE OF LIGHTNING.

A person may be killed by lightning, although the explosion takes place at the distance of twenty miles, by what is called the backstroke. Suppose that the two extremities of a cloud, highly charged with electricity, hang down

towards the earth, they will repel the electricity from the earth's surface, if it be of the same kind with their own, and will attract the other kind; and if a discharge should suddenly take place at one end of the cloud, the equilibrium will instantly be restored by a flash at that point of the earth which is under the other. Though the back-stroke is often sufficiently powerful to destroy life, it is never so terrible in its effects as the direct spot, which is frequently of inconceivable intensity. Instances have occurred in which large masses of iron and stone, and even many feet of a stone wall have been conveyed to a considerable distance by a stroke of lightning, rocks and the tops of mountains often bear the marks of fusion from its action, and occasionally vitreous tubes, descending many feet into banks of sand, mark the path of the electric fluid. Some years ago, Dr. FIELDER exhibited several of those fulgorites in London, of considerable length, which had been dug out of the sandy plains of Siberia and Eastern Prussia.* One found at Paderborn was forty feet long. Their ramifications generally terminate in pools or springs of water below the sand, which are supposed to determine the course of the electric fluid. No doubt the soil and sub-strata must influence its direction, since it is found by experience, that places which have been struck by lightning are often struck again.—Mrs. SOMMERVILLE'S *Connexion of the Sciences*.

The Planet *Venus* will be the Evening Star until the 28th of October; then the Morning Star to the end of the year.

THE SUN WITH THE SEVEN PLANETS.

♍ Virgo,	♓ Pisces.

MOON'S RISING AND SETTING.

At four days old it sets at	15—at full, it rises about
and shines till about 10 at night.	6 in the evening.
5—about 11,	16—at $\frac{1}{4}$ after 7
6—about 12,	17—at $\frac{1}{2}$ after 8,
7—at near 1 in the morning,	18—at about 10,
	19—at about 11
	20—at about 12.

N. B.—This table is sufficiently accurate for the purpose it is wanted for, that of ascertaining moonlight evenings.

OF THE CHANGES OF THE MOON.

Many persons understanding that the mean time between one new Moon and another is 20 days, 15 hours, 44 minutes and a fraction, imagine that, to find the full or quarters of the Moon, they have only to add a half or fourth part of that time; and when they do not find the changes marked in the Calendar to correspond with this method, they impute it to mistake in the calculation of those changes. It is, therefore, necessary to put them in mind, that the great inequality of the Moon's motions renders the above rule extremely inaccurate, so that nineteen times in twenty it must fail in giving the true conjunction or change.

PROGNOSTICS OF WEATHER.

Instead of prophesying the changes of weather, on any particular day to come, in a column especially devoted for that purpose,—which may prove incorrect—we prefer enabling the reader to form an estimate for himself by

the following rules; by the careful observation of which, he will seldom, if ever, find himself mistaken. For their general truth has been fully confirmed by three such men as Drs HERSCHELL, ADAM CLARKE, and DARWIN.—ED.

PERPETUAL WEATHER TABLE.

BY DOCTOR HERSCHELL.

The following Table, constructed by the celebrated Dr. Herschell, upon a philosophical consideration of the attraction of the sun and moon, in their several positions, as to the earth, and confirmed by the experience of many years actual observation, may without doubt, suggest to the observer what kind of weather will probably follow the moon's entrance into any one of her quarters, and that so near the truth, that it will be very seldom found to fail:—

If it be new or full moon, or the moon enters into the first or last quarter, at the hour of 12 at noon.		SUMMER.	WINTER.
Or between the hours of 2 and 4,		Very rainy,	Snow or rain
4 to 6 .		Changeable,	Fair and Mild
6 to 8 .		Fair, if wind N. W.—Rainy if S. or S. W.	Fair
8 to 10 .			Fair and Frosty if N. or N. E.
10 to midnight,			Rain or Snow if S. or S. W.
Midnight to 2.		Ditto	S. or S. W.
		Fair	Ditto
			Fair and Frosty.
			Hard Frost, unless wind S. or S. W.
			Snow and Stormy
Forenoon.	2 to 4	Cold, with frequent showers.	
	4 to 6	Rain	Ditto
	6 to 8	Wind and Rain	Stormy
	8 to 10	Changeable	Cold rain if W.
	10 to 12	Frequent Showers	Snow if E.
			Cold high wind

From the above Table it will be seen, that the nearer to midnight either of the moon's periodical changes, (i. e. within two hours either before or after it) the more fair the weather is in summer, while the nearer to noon that the changes take place the reverse may be expected. Fair weather may also follow when either of the periodical changes occur during the afternoon six hours, viz :—from four to ten ; but this is mostly dependent on the wind.—The moon's entrance during all the hours after midnight, except the two first, is unfavourable to fair weather. The like may nearly be observed in winter. Every farmer ought to preserve a copy of this table, and carefully to regulate his pursuits by its indications. Such a line of conduct might materially promote his comforts and his interests, while in no case could it disturb his prospects or destroy his hopes.

OBSERVATIONS ON PROGNOSTICATIONS OF THE WEATHER.

BY THE REV. ADAM CLARKE, L. L. D. F. A. S.

From my earliest childhood I was brought up on a little farm, which I was taught to care for and cultivate ever since I was able to spring the rattle, or the whip, manage the sickle, or handle the spade, and as I found that much of our success depends on a proper knowledge and management of the weather, I was led to study it ever since I was eight years of age. I believe *Meteorology* is a *natural science*, and one of the first that is studied ; and that every child in the country makes, untaught, some progress in it ; at least so it was with me. I had actually learned, by silent observation, to form good conjectures concerning the coming weather ; and on this head, to teach wisdom among those who were perfect, especially among such as had not been obliged like me to watch earnestly, that what was so necessary to the *family support*, should not be spoiled by the weather before it was housed. Many a time, even in tender youth, have I

watched the heavens with anxiety, examined the different appearances of the morning and evening sun, the phases of the moon, the scintillation of the stars, the course and colour of the clouds, the flight of the crow and the swallow, the gambols of the colt, the flutterings of the ducks, and the loud screams of the seamew—not forgetting even the hue and creaking of the frog. From the little knowledge I had derived from close observation, I often ventured to direct our agricultural operations in reference to the coming days, and was seldom much mistaken in my reckoning. When I thought I had a pretty good stock of knowledge and experience in this way, I ventured to give counsel to my neighbours. For my kindness, or perhaps my officiousness on this head, I met one day with a mortifying rebuff. I was about ten years of age; it was harvest time, and "what sort of a day to-morrow would be," was the subject of conversation. To a very intelligent gentleman who was present, I stated in opposition to his own opinions, "Mr. B. to-morrow will be a *foul day*." To which he answered—"Adam, how can you tell?" I answered without giving the rule on which my prognostication was founded, "O Sir, I know it will be so." "You know! how should you know?" "Why, Sir," I pleasantly replied, "because I am *weatherwise*." "Yes," said he, "or *otherwise*." The next day, however, proved that my augury was well drawn.

About twenty years ago, a table, purporting to be the work of the late Dr. Herschell, was variously published, professing to form prognostics of the weather, by the times of the change, full, and quarters of the moon.—I have carefully consulted this table for several years, and was amazed at its general accuracy; for though long, as you have seen, engaged in the study of the weather, I never thought that any rules could be devised, liable to so few exceptions. I have made a little alteration in the arrangements, and illustrated it with further observations.

A TABLE,

*For foretelling the Weather through all the Lunations
of each Year, forever.*

This table, and the accompanying remarks, are the result of many years actual observation; the whole being constructed on a due consideration of the attraction of the sun and moon in their several positions respecting the earth; and will, by simple inspection, show the observer what kind of weather will most probably follow the entrance of the moon, into any of its *quarters*, and that so near the truth as to be seldom or never found to fail.

If the New Moon,—the First Quarter—the Full Moon—or the last Quarter, happens, between midnight and two in the morning.		SUMMER.	WINTER.
		Fair,	Hard frost unless the wind be s. or w.
2 and 4 morning,	}	Cold with fro- q't showers.	Snow and stor- my.

6 and 8 "	"	W nd & Rain.	Stormy.
8 and 10 "	"	Changeable.	Cold rain if wind west; snow if e.
10 and 12 "	"	Freq't show'rs.	Cold, & high wind.
At 12 o'clock, M. and 2 P. M.		Very rainy.	Snow or rain.
Between 2 and 4 P. M.		Changeable.	Fair & mild.
4 and 6 "	"	Fair.	Fair.
6 and 8	}	Fair if wind n. w., Rainy if s. or s. w.	Fair & frosty if wind n. or n. e. rain or snow if s. or s. w.
8 and 10 "	"	ditto.	ditto.
10 and midnight,	"	Fair.	Fair & frosty.

OBSERVATIONS.

1. The nearer the time of the Moon's change, First Quarter, Full, and Last Quarter, are to MIDNIGHT, the fairer will the weather be during the seven days following.

2. The space of this calculation occupies from ten at night till two next morning.

3. The nearer the MID-DAY, or NOON, the phases of the Moon happen, the more foul or wet weather may be expected during the next seven days.

4. The space for this calculation occupies from ten in the forenoon to two in the afternoon. These observations refer principally to Summer, though they affect Spring and Autumn nearly in the same ratio.

5. The Moon's change—First Quarter—Full—and last Quarter, happening during six of the afternoon hours, i. e. from four to ten, may be followed by fair weather; but this is mostly dependent on the WIND, as it is noted in the Table.

6. Though the weather, from a variety of irregular causes, is more uncertain in the latter part of Autumn, the whole of Winter, and the beginning of Spring, yet, in the main, the above observations will apply to those periods alone.

7. To prognosticate correctly, especially in those cases where the wind is concerned, the observer should be in sight of a good VANE, where the four cardinal points of the heavens are correctly placed. With this precaution he will scarcely ever be deceived in depending on the Table.

It is said that the late Dr. Darwin, having made an appointment to take a country jaunt with some friends on the ensuing day, but perceiving that the weather would be unfavorable, sent as an excuse for not keeping his promise, a poetical epistle containing an enumeration of most of the signs of approaching ill weather. I have enlarged these by adding several new ones, and remodelling others; and subjoin it as very useful, and a thing easy to be remembered.

SIGNS OF APPROACHING FOUL WEATHER.

The hollow winds begin to blow,
 The clouds look black, the glass * is low;
 The scot falls down, the spaniels sleep;
 And spiders from their cobwebs peep.
 Last night the sun went pale to bed;
 The moon in halos hid her head;
 The boding shepherd heaves a sigh,
 For see, a rainbow spans the sky.
 The walls are damp, the ditches smell.
 Closed is the pink-eyed pimpernell.
 Hark! how the chairs and tables crack,
 Old Betty's joints are on the rack:
 Her corns with shooting pains torment her,
 And to her bed untimely sent her.
 Loud quacks the ducks, the sea-fowls cry,
 The distant hills are looking nigh.
 How restless are the snorting swine!
 The busy flies disturb the kine.
 Low o'er the grass the swallow wings;
 The cricket too, how sharp he sings!
 Puss on the hearth, with velvet paws,
 Sits wiping o'er her whiskered jaws.
 The smoke from chimnies right ascends:
 Then spreading, back to earth it bends.
 The wind unsteady veers around,
 Or settling in the south is found.
 Through the clear stream the fishes rise,
 And nimbly catch the incautious flies.
 The glow-worms, numerous, clear and bright,
 Illumed the dewy hill last night.
 At dusk the squalid toad was seen,
 Like quadruped, stalk o'er the green.
 The whirling wind the dust obeys.
 And in the rapid eddy plays,
 The frog has changed his yellow vest,
 And in a russet coat is dressed.
 The sky is green, the air is still;
 The mellow blackbird's voice is shrill.

The dog, so altered is his taste,
 Quits mutton bones, on grass to feast.
 Behold the rooks, how odd their flight,
 They imitate the gliding kite,
 And seem precipitate to fall,
 As if they felt the piercing ball.
 The tender colts on back do lie,
 Nor heed the traveller passing by.
 In fiery red the sun doth rise,
 Then wades through clouds to mount the skies,
 'Twill surely rain, we see't with sorrow,
 No working in the fields to-morrow.

In Canada, many other *prognostics*, by the accurate observer of nature, may be added; such as the *looming* of the atmosphere; the *banking* of the *clouds*, the duration of the *Indian Summer*: regularity of the *periodical frosts*; migration of animals: whistling of *frogs*: especially of the *Tree Frog*; bellowing of the *Bull Frog*; degrees of annoyance from *Mosquitoes*; &c. &c. &c.—ED.

EXPLANATION OF THE CALENDAR.

The First Column contains the Days of the Month; the Second the Days of the Week; the Third Aspects, Holidays, Anniversaries, &c.; the Fourth, Fifth and Sixth, the Places of the Moon, the Rising and Setting of the Sun, and the last, the Rising and Setting of the Moon.

TABLE OF THE DIAMETERS, &c. OF THE

TIME is precious, but its value is unknown to us.—
We shall obtain this knowledge when we can no longer
profit by it. Our friends require it of us as if it were
nothing, and we give it them in the same manner. It
is often a burden to us, and we know not what to do
with it; but the day will come when a quarter of an
hour will appear of more value to us than all the riches
of the universe.

God, who is liberal in all his other gifts, shows us,
by the wise economy of his providence, how circum-
spect we ought to be in the management of our time,
for he never gives us two moments together. He only
gives us the second as he takes away the first, and
keeps the third in his own hands, leaving us in abso-
lute uncertainty whether it shall ever become ours or
not! Time is given us that we may take care for
eternity; and eternity will not be too long to regret the
loss of our time if we have mis-spent it.—FENELON.

AN ANSWER TO "WHAT IS TIME?"

"Know'st thou me not?" the deep voice cried,

"So long enjoyed, so oft misused:—

Alternate in thy fickle pride,

Desired, neglected, and abused.

"Before my breath, like blazing flax,

Man and his marvels pass away,

And changing empires wane and wax,

Are founded, flourish, and decay.

"Redeem my hours,—the space is brief,

While in my glass the sand-grains shiver,

And measureless thy joy or grief,

When TIME and thou shalt part for ever."

SIR W. SCOTT.

I. JANUARY.

ORIGIN OF THE NAMES OF THE DAYS OF THE WEEK.

As it may be a subject of curiosity to know the origin of the names of the days of the week, we present our readers with an account extracted from a Treatise on the Idols of the Saxons, from whom the days were called and distinguished.

SUNDAY.

THE Idol of the Sun, from which Sunday is derived, among the Latins *DIES SOLIS* was placed in a temple and adored and sacrificed to; for they believed that the sun did co-operate with this Idol. He was represented like a man half naked, with his face like the Sun, holding a burning wheel with both hands on his breast, signifying his course round the world; and by its fiery gleams, the light and heat wherewith he warms and nourisheth all things.

MONDAY.

The Idol of the Moon, from which cometh our Monday, *DIES LUNÆ* anciently Moonday: This Idol appears strangely singular, being habited in a short coat like a man: Her holding a Moon, expresses what she is.*

TUESDAY.

Tuisco, the most ancient and peculiar God of the Germans, represented in his garment of skin, according to their ancient manner of cloathing; next to the Sun and Moon, they paid their adoration to this Idol, and dedicated the next day to him; from which our Tuesday is derived, anciently Tuisday, called in Latin

* What *DIONORUS SICULUS* says of the ancient inhabitants of Egypt, may perhaps be said with equal truth of all other idolatrous nations. "When they took a view of the universe, and contemplated the nature of things, they imagined that the Sun and the Moon were the two first and the greatest Gods." Ed.

DIES MARTIS. According to Verstigan, an undoubted authority, Tuisco was the greatest personage amongst the *ancient* Germans, after whom they called themselves *Euytsben*, that is *Duytsh* (hence the word Dutch.)—The Germans regarded him as the founder of their nation. Even Tacitus writes of him as a most important personage, and remarks of him that, “In all songs and ballads (the only memorials of antiquity amongst the Germans) the God *Tisto*, who was *born of the earth*, and Mannus his son are celebrated as the founders of their race.”

W E D N E S D A Y .

WODEN,* was a valliant prince among the Saxons; his image was prayed to for victory over their enemies, which if they obtained, they usually sacrificed the prisoners taken in battle to him. Our Wednesday is derived from him, anciently Woden's day.

T H U R S D A Y .

THOR,† was placed in a large hall, sitting on a bed, canopy'd over with a crown of gold on his head, and 12 stars over it, holding a scepter in his right hand; to him

* Or ODIN, as he is termed by the moderns.—It is a mistake to call him a “*prince of the Saxons*,” though most of the Saxon princes pretended to be descended from him. Odin is believed to have been the name of the one true God amongst the first colonies who came from the east, and peopled Germany and Scandinavia, and among their posterity for several ages. He was peculiarly the God of their battles, and had in their estimation the attributes of omnipotence. For an interesting account of this deity, and also of THOR and FREA see *Mallett's Northern Antiquities*.

† THOR was the eldest and bravest of the sons of Odin and Frea—and next to them the greatest of the Scandinavian Gods. It was anciently believed that Thor reigned over all the heavens; that in his palace were 540 halls; that he launched the thunder, pointed the lightning, and gave direction to the meteors, winds and storms. He it was who wielded a hammer or a club dreaded alike by Gods and men.--Ed.

was attributed the power over both heaven and earth, and that as he was pleased or displeased he could send thunder, tempests, plagues, &c. or fair, seasonable weather, and cause fertility. From him our Thursday derives its name, anciently Thorsday; among the Romans, *DIES JOVIS*, as this Idol may be substituted for Jupiter.

FRIDAY.

FRIDA,* this idol represented both sexes, holding a drawn sword in the right hand and a bow in the left, denoting that women as well as men should fight in time of need; She was generally taken for a Goddess, and was reputed the giver of peace and plenty, and cause of love and amity; Her day of worship was called by the Saxons, *Fridadeag*, now Friday, *DIES VENERIS*.

SATURDAY.

SEATER or *Crono* stood on the prickly back of a perch. He was thin visaged and long beard, bare headed and bare-footed, carrying a pail of water in his right hand, wherein are fruit and flowers; and holding up a wheel in his left, and his coat tied with a long girdle: his standing on the sharp fins of this fish, signified to the Saxons, that by worshipping him they should pass through all dangers unhurt; by his girdle flying both ways, was shewn the Saxons freedom, and by the pail with fruit and flowers, was denoted that he would nourish the earth. From him, or from the Roman deity *Saturn*,† comes Saturday.

* More properly *Frea*, the Goddess of Love, Beauty, and Pleasure amongst the Scandinavians. She was the wife of *Odin*, and was the deity most revered—although the mother of all the Gods, she was the same with *Horthus*, or the Earth, and to her votaries she bestowed every variety of delight, particularly happy marriages and easy births.
—Ed.

† The *Seator* or *Seater* of the Scandinavians and Celtic nations was the same with the *Saturn* of the Romans. He was worshipped by all the Celtic nations in the west of Europe.—Ed.

To this those unaccustomed land, to add system of origin of the Land of Accordance and not less thus related

“ It happened Deira, some bers, that brought to are went to the market Gregory, being of his to be of with yellow them to see him, he asked they were alas! that tiple of such that those w foul sculs. were called, *Angles*. They allude unto not without faces like made partake Then demand

† *Thor*, the navians and Romans, and in the North is *Thunders* day dedicated Saxon book

To this account it may be still more interesting to those unacquainted with the early History of our Fatherland, to add, that the occasion of the overthrow of the system of Idolatry, just alluded to, in England, and the origin of the name of England, or *Angel-land*, or the Land of Angels, arose from a circumstance perfectly in accordance with the spirit and practice of those times and not less curious than it is deeply interesting. It is thus related by Verstegan.

“ It happened in the time that Cella reigned King of Deira, sometime part of the Kingdom of the Northumbers, that certain English children of that country were brought to Rome to be sold, (as captive heathen people are wont to be *among Christians*;) and standing there in the market, a certain reverend religious father named Gregory, being a man of the greatest virtue and learning of his time, coming thither, and beholding them to be of a very fair complexion, ruddy and white, with yellowish hair, demanded of the merchant that had them to sell, of whence they were? which being told him, he asked if they were christened? It was answered they were not: whereat, fetching a deep sigh, he said, alas! that the author of darkness should yet detain people of such bright countenances in his possession, and that those with such fair faces should inwardly carry such foul souls. Demanding by what name this people were called, answer was made him that they were called *Angles*. The reverend Father perceiving this name to allude unto the name of *Angeli*, in Latin, said, Verily, not without cause are they called *Angles*, for they have faces like *Angels*, and meet it were that such were made partakers and coheirs with the angels in heaven.— Then demanded he the name of the Province from whence

† *Thun*, had the same relationship amongst the Scandinavians and Saxons, as *Jupiter* had with the Greeks and Romans, and all his attributes were the same. To this day in the Netherlands, Thursday is called *Dundersdag*, that is *Thundersday*, clearly showing that anciently it was the day dedicated to the God of Thunder, and in several old Saxon books, it is written *Thunres-Deag*. Ed.

they came; and it was answered him, they were of *Deira*. That is well, quoth he, for they are to delivered *De ira Dei*, that is, *from the wrath of God*, and called to the mercy of Christ. What is the name, quoth he, of the King of that country? It was answered that his name was *Cella*; unto which name also alluding, *Allelujah*, quoth he, must be sounded in that prince's dominions, to the praise of Almighty God his Creator; and been stricken with much compassion, to behold that such angelical people, in respect of their great beauty and comeliness, should continue the bond-slaves of the foul fiend of hell, he went, &c."

Then follows an account of Gregory's intention to visit England, towards which he took a three day's journey; of his recall by the entreaty of the people of Rome, and lastly, on his elevation to the *Papedom*: of his sending *Augustine* and certain other Monks to England. They, after some difficulties arrived in the Isle of Thanet; where King Ethelbert gave them audience, the result of which, was the baptism of the monarch and of most of his subjects,—*the turning away of the people from serving and sacrificing unto their idols, THOR, WOODEN, FRIGA, and the like; overthrowing the synagogues of Satan, and breaking down the abominable idols before mentioned.*

T W E L F T H D A Y .

The origin of the practice of drawing for King and Queen over the twelfth cake on this day is involved in obscurity, like that of many other customs of apparently greater moment. Some trace it to a play of the Roman Children, who drew beans at the end of the Saturnalia for the same purpose; and this classical origin is countenanced by the amusement having prevailed in our universities, where the decision was made by beans found in the cake.

Others imagine in it a faint resemblance of the offerings made to the new born Saviour by the Magi, or wise men of the East, of Gold, Frankincense, and Myrrh; and this opinion seems probable, as to the ceremony performed in this country, annually on this day, the Monarch either personally, or by his Chamberlain, makes a similar offering.

The old Calendars notice that on the vigil of this day Kings were elected by beans, and the day was called the festival of Kings.

In the time of King Alfred, the twelve days after the nativity of our Saviour, were declared to be festivals.

The festivities of Twelfth day are still kept up at Rome, in France and Spain. The day is called the feast of Kings.—*New Monthly Magazine*.

HISTORICAL EXPLANATION OF SOME REMARKABLE DAYS IN MARCH AND APRIL.

1st. SAINT DAVID.—The Welsh regard St. David as their tutelar saint, and annually hold festive meetings on this day. In 640 the Britons, under King Cadwallader, obtained a complete victory over the Saxons; and St. David is considered not only to have contributed to this victory by his prayers, but by the judicious regulations which he adopted for rendering the Britons known to each other. He directed the Welsh to wear leeks in their caps, drawn from a garden near the field of action; while the Saxons, from a want of some distinguishing mark, frequently mistook each other, almost indiscriminately slaying friends and foes. Hence the custom of the Welsh wearing leeks in their hats on St. David's day. St. David was descended from the Royal Family of the Britons, being uncle of King Arthur, and son of Xantus, Prince of Cerotieu, now Cardiganshire. Being ordained Priest, he retired into the Isle of Wight, and embraced an acetic life. He founded twelve monasteries one of which was in the vale of Ross, near Menerva, now called St. David's. Soon afterwards, the Archbishop of Caerleon resigned his see to St. David, whose opposition was only overcome by the absolute commands of the synod. He had, however, the liberty to transfer his see from Caerleon, then a populous city, to Minerva. He continued in this see many years and died, towards the end of the 6th century, at a very advanced age.

17th. SAINT PATRICK. He was a native of Scotland, whose original name was Succuthus, but was changed by Pope Celestine into Patrick. In 432 he was sent by that Pontiff as a missionary into Ireland. He converted a great many of the Irish to Christianity, and founded, in 472, the Archbishoprick of Armagh. He has been justly called the Apostle of the Irish, and the Father of the Hibernian Church; and he is also esteemed the tutelar Saint of the country. The works of St. Patrick were published in London in 1656. Among the miracles of St. Patrick, it is recorded that he delivered Ireland of venomous reptiles, restored sight to the blind, health to the sick, and raised nine dead persons to life. He was buried at Downpatrick, where his body was found in 1163, in a church bearing his name. The custom of wearing shamrock, or *trefoil*, on this day, arose, according to some, from St. Patrick's using a leaf of it, when expounding the doctrine of the Trinity, to represent the divisibility of the Divinity into three distinct parts, and its union in one stem.

FIFTH SUNDAY IN LENT.—Rites peculiar to Good Friday were formerly used, in the Roman Catholic Church, on this day, which was called *Passion Sunday*; because they began to advert to the passion of Christ. In the north of England there are yet some remains of these observances. Among others of the old ceremonies, soft beans were distributed as a kind of dole to denote this season of grief; but peas are now used in their repasts of this day, which is known by the name of *care* or *careing* Sunday, signifying a day of especial care or devotional attention. At Newark upon Trent, one of the fairs is denominated "Careing Fair," and is held the Friday before "Careing Sunday," which is the Sunday fortnight before Easter.

GOOD FRIDAY.—This day is held as a solemn fast in remembrance of the **CRUCIFIXION** OF OUR SAVIOUR. Its appellation of *Good*, seems peculiar to the Church of England. The Saxons called it *Long Friday*, from the

length of ceremonies on that day; but its ancient title was *Holy Friday*, and the week in which it happens, was, and is now, denominated *Holy* or *Passion Week*.

According to St. Mark, the Crucifixion commenced at the 3d, and ended at the 6th hour—but St. John states it to have begun at the 6th hour. It has, however, been decided, that the third hour is the correct account. In the Church of Rome, offices called *Tenebræ*, (i. e. darkness) are sung on holy Friday, and the day preceding and succeeding it. The lights are extinguished and nearly at the conclusion of the service, a solemn silence is observed—when suddenly a tremendous noise ensues, in token of the rending of the veil of the Temple. In London, *Cross Buns*—(so called from the cross impressed upon them)—form the general breakfast on Good Friday. In some counties, a stock of cakes is preserved as a cure for the faithful throughout the year—a remnant of the sacramental wafer or *housell* of the Church of Rome, as practised by the priests nearly eight centuries ago.

EASTER DAY.—Is the day on which our Saviour rose from the dead; the third day after Good Friday. The word Easter signifies “to rise.”—This grand festival was so anciently observed by the Church, that no one in former times doubted that it was established by apostolical authority. As all Christians on the preceding Friday, stood, as it were, mournfully by the cross of their Saviour, and the next day were overwhelmed with grief for his departure; the Church on this day, upon the first notice of his resurrection from the grave, calls upon us, with a becoming and holy transport, to turn our heaviness into joy, to put off our sackcloth, and gird ourselves with gladness. Among the primitive Christians, this queen of feasts, as they called it, was so highly esteemed, that it was solemnized fifty days successively; but as devotion abated, this feast was shortened; the whole week however, was for a long time observed as holidays, for the expression of their joy for our Lord's resurrection.

BORROWING DAYS.—The three last days in March (*Old Series*) were, in the north, termed "*borrowing days*,"

March borrowed frae April,
 Three days, and they were ill :
 The first o' these was wind and weet,
 The second o' them was snaw and sleet,
 The third o' them was sic a freeze,
 That the birds legs stack to the trees."

Leyden's complaint of Scotland.

It is further explained by Sir W. SCOTT, in a note to the *Heart of Mid. Lothian*.

FIRST OF APRIL; OR, APRIL FOOL'S-DAY.

The origin of the Fooleries practised on this day has puzzled all our most celebrated antiquarians. We refer those who may desire to know more concerning them, to Brand's *Popular Antiquities*, Bellingers *French Proverbs*; Gentleman's Magazine, for 1766, by Dr. Pegg; do. for 1783. The *Public Advertiser* for April 1789, gives the following humorous Jewish origin of the custom of making Fools on the first of April. "This is said to have been from the mistake of Noah in sending the dove out of the ark before the water had abated, on the first day of the month amongst the Hebrews, which answers to our first of April; and to perpetuate the memory of this deliverance, it was thought proper, whoever forgot so remarkable a circumstance, to punish them by sending them upon some slaveless errand similar to that ineffectual message, upon which the bird was sent by the Patriarch."

"The First of April was anciently observed in Britain as a high and general festival, in which an unbounded hilarity reigned through every order of its inhabitants; for the sun at that period of the year, entering into the sign Aries, the new year, and with it the season of rural sports and vernal delight was then supposed to have commenced. The proof of the great antiquity of the observance of this annual festivity, as well as the probability of its original establishment in an Asiatic region arises from

the evidences of facts afforded us by astronomy, which shall presently be adduced. Although the reformation of the year by the *Julian* and *Gregorian* calendars, and the adoption of its commencement to a different and for a nobler system of theology, have occasioned the festival-sports, anciently celebrated in the country on the first of April to have long since ceased; and although the changes occasioned during a long lapse of years by the shifting of the equinoctial points, have in Asia itself been productive of important astronomical alterations as to the exact era of the commencement of the year; yet on both continents, some very remarkable traits of the jocundity which then reigned, remain even to these distant times. Of those preserved in Britain, none of the least remarkable or ludicrous, is that of making *April Fools*, as it is called, on the first day of that month; but this Colonel Pearce has proved to have been an immemorial custom among the Hindoos (in the second volume of *Asiatic Researches*) at a celebrated festival, holden about the same time in India, which is called the *Huli festival*. I shall insert the Colonel's own words:

"During the *Huli*, when mirth and festivity reign among Hindoos of every class, one subject of diversion is to send people on errands and expeditions that are to end in disappointment, and raise a laugh at the expense of the person sent. The *Huli* is always in March and the last day is this general holiday. I have never yet heard any account of the origin of this English custom, but it is unquestionably very ancient, and is still kept up even in great towns, though less in them than in the country. With us it is chiefly confined to the lower class of people, but in India high and low join in it; and the late Suraja Doulah, I am told, was very fond of making *Huli* fools, though he was a Mussulman of the highest rank. They carry the joke here so far as to send letters making appointments, in the names of persons who it is known must be absent from their home at the time fixed upon, and the laugh is always in proportion to the trouble given.—*Maurice's India Antiquities.*

MAY DAY.

Queen of fresh flowers,
 Whom vernal stars obey,
 Bring thy warm showers,
 Bring thy genial ray.
 In nature's greenest livery drest,
 Descend on earth's expectant breast,
 To earth and heaven a welcome guest,
 Thou merry month of May!

Mark! how we meet thee,
 At dawn of dewy day!
 Hark! how we greet thee,
 With our roundelay.
 While all the goodly things that be
 In earth, and air, and ample sea,
 Are making up to welcome thee,
 Thou merry month of May!

Flocks on the mountains,
 And birds upon their spray.
 Tree, turfs, and fountains,
 All hold holiday;
 And love, the life of living things,
 Love waves his torch, and claps his wings,
 And loud and wide, thy praises sings,
 Thou merry month of May!

HEBER.

ST. ANDREW'S DAY.—The 30th of November is the day on which the true hearted sons of Caledonia honor the tutelar Saint of their country; and here it may not be amiss to enumerate the particular badges of distinction, which were anciently worn by each Chieftain, respectively, to distinguish them from each other, whether in battle, or upon festive occasions; and we insert them on this occasion, to keep alive the genuine "*amor patrie*."

CHRISTMAS DAY.

From the *Calvis Calendaria*.

"This Grand Festival is universally observed on the 25th of December in memory of the Nativity of **JESUS CHRIST**, whence the term **CHRIST'S Mass** from the appellation, **CHRIST**, having been added to the name of **JESUS**, to express that he was the *Messiah*. The *Mass* of **CHRIST**, as originally used by the Church, implied solely the festival celebrated.

From the various alterations in the Roman Calendar, arose the accuracy that certainly prevails, in keeping the day of our Lord's nativity, which did not take place on the 25th December, but at the time the Jews kept their Feast of Tabernacles.

The first Christians kept the Nativity on the first of January, conforming in this computation to the Roman year. On the **FEAST of TABERNACLES**, they decorated their Churches with green boughs, as a memorial that Christ was actually born at that time.

The custom of ornamenting churches and houses with evergreens at Christmas, is still pretty generally observed.

The now almost obsolete custom of making presents at this season, under the title of Christmas Boxes, arose from the custom of a box devoted to every ship which sailed on a voyage being deposited with a priest, into which money might be dropped to give efficacy to the

which, t

prayers of the Church, and these boxes being opened at Christmas in each year, thence acquired the name of CHRISTMAS BOXES. This in process of time, became the familiar name of Presents themselves, and the poorer classes were encouraged to beg of their richer neighbours Box Money, or in other words, money to supply the Priest's box.

The ancient salutation of A Merry Christmas, like that of A Happy New Year, adverted to the hospitality of the rich whose spacious Halls, crowded with tenants and neighbours, were scenes of boundless hospitality. "*Round about our coal fire,*" they were regaled with the most substantial fare the season could afford. The first dish was generally a BOARS HEAD, and sometimes a Gammon of Bacon. The Boar's Head is yet served upon Christmas Day at Queen's College, Oxford—where it is solemnly ushered into the Hall with a *Monkish Carol*. Both these dishes were meant to express an abhorrence of Judaism.

PLUM PUDDINGS were emblematical, from their ingredients, of the offerings to the wise men; and mince Pies with pieces of paste over them in the form of a cratch or hay rack, commemorated the manger in which our Saviour was first laid. A composition of Ale, Sugar, Nutmeg, &c., called Lamb's Wool, passed jovially from hand to hand in the Wassail Bowl, the name given to the vessel out of which the Saxon colonists in Britain took such copious draughts, as even to call for legislative interference. Wassail is a corruption of the words *Waes Heal, Be of health*.

When Hengist and Horsa first visited Britain at the solicitation of Vortigern prince of the Silures, the British chief became enamoured of Rowena, the niece of Hengist, at a Banquet prepared by the stranger in honor of Vortigern, the Princess, instructed by her Uncle, presented to the aged Prince a cup of spiced wine, and with a smile welcomed him in the words, '*Waes Heal, Halford Cyning,*' or *Be of health, Lord King*, to which, through his interpreter, he answered, '*Drinc*

'Heal,' or *I drink your health*. The event is narrated by Robert of Gloucester, but as the vocabulary of this ancient Rhymer may not be intelligible generally to our readers, we shall prefer the more modern paraphrase in the Antiquarian Repertory.

"Health, my Lord King, the sweet Rowena said;
Health, cried the Chieftain to the Saxon Maid;
Then gaily rose and 'mid the concourse wide
Kissed her hale lips, and placed her by his side.
At the soft scene such gentle thoughts abound,
That healths and kisses 'mongst the guests went round;
From this the social custom took its rise,
We still retain, and still must keep the prize.

Waes Heal or Wassail from that period, became the name of the Drinking Cups of the Anglo Saxons; and the custom of drinking healths, derived from their Saxon Ancestors, still remains amongst the English and those descending from them; hence drinking parties were called WASSAILS, and the jolly Bacchanalians WASSAILERS.

Christmas, considered as a religious festival, is one of the first consequence; and although, from the change which modern luxury has introduced in the manners of the age, many of the solemnities with which it was formerly observed, are now discontinued, it still is marked as a period when a more social intercourse takes place between the different classes of society, and one at which the poor are considered as having, amidst the general festivity which prevails, a stronger claim upon the benevolence and charity of their richer neighbours. The reader will find an interesting account of Christmas, as it was observed in the early part of the last century, in one of the first numbers of the Sketch Book.

ST. STEPHEN'S DAY.—On the anniversary of St. Stephen, (*the day after Christmas day*) it is customary for groups of young villagers, in Ireland, to bear about a holly-bush adorned with ribbons, and having many wrens depending from it. This is carried from house to

house w
are ter
which n

which occ

house with some ceremony, the "*Wren boy*," (as they are termed,) chanting several verses, the burden of which may be collected from the following lines of their song:

"The wren, the wren, the king of all birds,
St. Stephen's day was caught in the furze;
Although he is little, his family is great;
I pray you good land-lady, give us a treat."

A small piece of money is annually bestowed upon them, and the evening concludes in merry-making with the money thus collected.

The same superstition is observed in the Isle of Man, on which day many hundreds of these poor little innocent birds suffer death by stoning from crowds of rascally urchins who pursue them. But what allusion this custom can have to the Martyrdom of St. Stephen, it is now impossible to trace. It is most probably intended to commemorate some other event of less importance, which occurred on that day. Ed.

FROM THE
DISCOVERY OF AMERICA,
TO THE
DIVISION OF THE PROVINCE OF QUEBEC
INTO
UPPER AND LOWER CANADA.

IT has been judiciously remarked by the author of the American Annals, that the discovery of a New World, (which has been receiving inhabitants from the old for more than three hundred years,) and those events and actions which are connected with it, can now be accurately ascertained, without having recourse to such legends as have darkened and disfigured the early annals of most nations.

Nevertheless, doubts not less dark and mysterious than those which hang over the origin of the more ancient nations of Asia and of Europe, are entertained amongst the learned concerning the first occupation of America by human beings, previous to the Spanish invasion in the 15th Century. But, with this subject we shall not meddle at present. It is the purpose of the compiler of these Annals to confine himself, (after noticing the Discovery of Columbus,) to such events as relate to Canada only.

C. F.

BRIEF ANNALS,

&c. &c.

ANNO DOMINI 1492.—On the 3rd day of August, Christopher Columbus set sail from *Palos in Spain*, with three vessels and ninety men; and on the 11th of October following, discovered land on one of the Bahama Islands.—This was the first certain knowledge possessed by modern Europeans of any part of the New World.*

1497.—Henry VII. of England gave permission to John Cabot to take six ships, with all things necessary for a voyage of discovery in North America. Early in June, in the same year, having his son, Sebastian, with him, he discovered part of Newfoundland; he next saw and named the Island of St. John; and, continuing a westerly course he afterwards arrived at the Continent, along the coast of which he sailed northerly as far as 67 and a half north latitude.

It is remarkable that no further attempts towards discovery were made by the English for upwards of sixty years afterwards, if we except the proposed expedition of Elliot and Ashurst.

1502.—Hugh Elliot and Thomas Ashurst, merchants, of Bristol, with two other gentlemen, obtained a patent from Henry VII. for the establishment of Colonies in the countries then lately discovered by Cabot; but it is not known whether they availed themselves of this permission, or made any voyage to the New World.

1506.—John Denys, a Frenchman, sailed with his pilot, Camart, a native of Rouen, from Harfleur to Newfoundland, and drew a map of the Gulf of St. Lawrence and the adjacent coast.

* We say *modern*, because we are believers in the success of the famous expedition of Madoc, from Wales, in the 12th century.—*Ed.*

1508--Thomas Aubert, who made a voyage in this year, from Dieppe to Newfoundland, was the first who sailed up the great River St. Lawrence to the country of Canada.-- This man carried off some of the natives, and exhibited them in Paris.

1517--The cod fishery on the Banks of Newfoundland had, by this time, attracted the attention of several European nations, for there were fifty Spanish, French and Portuguese ships employed in it this year.

1522--Newfoundland settled by different nations before any part of Canada, is said to have contained, at this period, about fifty houses.

1527--The scheme of discovering a passage to the East Indies by the North West being resumed in England, a voyage was made, by the advice of Robert Thorne, of Bristol, with two ships, furnished out by Henry VII; but it proved unsuccessful, and even disastrous, for one of the ships was lost. Hakluyt says, this Master Thorne was "a notable member and ornament of his country," and that he exhorted the King with "very weightie and substantiall reasons, to set forth a discoverie even to the North Pole."

1535--Cartier discovering now the river of Canada, which gradually obtained the name of St. Lawrence, sailed up this noble stream more than three hundred leagues to a great and swift fall or rapid; formed alliances with the natives; took possession of the territory; built a fort; and wintered in the country, which he called *New France*. He, at this time, visited Hochelaga, which he called *Mount Royal*, (afterwards *Montreal*) a large Indian settlement. This was the first attempt made by the French to form a settlement in America.

Charlevoix says, the name of the St. Lawrence was given to the bay, next to the Gulf, and then to the river of Canada.

On this expedition of Cartier's, he carried off Donnacona, a Chief of the natives, and Hakluyt says, "the poore king of the country, with two or three of his chiefe companions, comming aborde of the French shippes, being required thither to a banquet, was traiterously carried away into France, where he lived four yeares, and then dyed a Christian there."

1536--A voyage was made from England to Newfound-

land, by 120 persons, 30 of whom were gentlemen of good education, and character, at the head of whom, according to Hakluyt, was "one Master Hore of London, a man of goodly stature and of great courage, and given to the studie of Cosmographie, &c." Cape Breton was discovered during this voyage, but the expedition was ever totally so disastrous through famine, that the survivors were constrained to support life by feeding on the bodies of their dead companions.

1540—François de la Roque, Lord of Roberval, a nobleman of Picardy, and the King of France's Lieutenant General and Viceroy in Canada, sent out Cartier, with five ships to Canada this year, intending to follow him with two other ships, fitted out at his own expense, for the purpose colonizing some part of the banks of the St. Lawrence.

1542—The Lord Roberval, himself, arrived in Canada this year, and built a fort, and wintered about four leagues above the Island of Orleans, (which was at first called the Isle of Bacchus.) Purchas says, this fort was "faire and strong."

1543—The first Act of the English Parliament relating to any part of America was made this year; this was to protect and encourage the English fishery on the banks of Newfoundland.

1549—In this year, Lord Roberval, accompanied by his brother and a numerous train of adventurers, again embarked for the river St. Lawrence; but they were never heard of afterwards; a disaster which so discouraged the government and people of France, that for more than fifty years no further measures were taken for supplying the few settlers that remained in Canada.

1576—Martin Frobisher was sent out by Queen Elizabeth with three small ships, and discovered Elizabeth's Foreland and the straights which still bear his own name. He entered a bay in N. L. 63 degrees, and carried off one of the natives, whom, Hakluyt says, "for very choler and disdain bit his tongue in twaine within his mouth."

1577—The discovery of supposed gold by Frobisher, in his voyage of last year, encouraged the society of adventurers to send him out, with three other ships, to explore the coast of Labrador and Greenland, with an ultimate view of discovering a passage to India; but he again returned

without success, though he brought away nearly 200 tons of this supposed gold, and with it a man, woman and child, of the natives : but Stow says in his Chronicle, that "neither the man, woman, nor child, lived long ; nor did his gold prove ore but dross."

1578—Frobisher sailed again for this northern Continent, with no less than fifteen ships, in search of gold, and was foolish enough to carry home immense quantities of the same glittering stones (most probably *zinc mica*, or *talc*) to the utter ruin of many adventurers.

1581—The French trade to Canada was renewed, after an interruption of nearly 50 years. The cause of which interruption was the carrying off the Indian King or Chief in 1531, by Cartier, an outrage that could not be forgiven by the natives, who would have no dealings or intercourse with the French for so many years afterwards.

1583—Sir Humphrey Gilbert, by virtue of a commission which he carried from Queen Elizabeth this year, took possession of St. John's in Newfoundland, and 200 leagues every way around it, for the Crown of England, and published laws for the government of the territory. This formal possession in consequence of the discovery by the Cabots, is considered the foundation of the right and title of the Crown of England to the territory of Newfoundland, and the fishery on its banks.

The renewal of the French trade with Canada was so suspicious, that three ships, one of them 189 tons, were employed this year in that trade.

1585—Sir Walter Raleigh introduced the fashion of smoking Tobacco in England. It had been carried thither for the first time in 1575 by Sir John Hawkins, but was then considered as a mere drug, and Stow says in his Chronicle, that "*all men wondered what it meant.*" But Raleigh, and a Mr. Law, had learned the practice of smoking, through pipes made of clay, from the Indians of Virginia. This singular plant appears to have been used in all parts of North America. In the account of Cartier's voyage, in 1535, it appears that it was used in Canada, and a particular account is given of the manner of preserving it. "There groweth a certain kind of herbe, whereof in summer they make a great provision for all the year, making a great account of it, and only men use of it, and first they cause it to be dried."

in the sunne, then weare it about their neckes wrapped in a little beastes skinne made like a little bagge, with a hollow piece of stone or wood, like a pipe; then when they please they make powder of it and then put it in one of the ends of the said cornet or pipe, and laying a cole of fire upon it, at the other ende, sucke so long that they fill their bodies full of smoke, till that it cometh out of their mouth and nostrils, even as out of the tonnell of a chimney."—Hakluyt, iii. 224.

1591—The *Walrus* or *Morse* must have been common in and about the Gulf of St. Lawrence; for this year, we find that a fleet of ships was fitted out from the port of St. Malo, in France, for Canada, and to hunt for *Morses* about the bay of St. Lawrence, whose teeth were sold at a much dearer rate than ivory. They also obtained oil in vast quantities from the bodies of those animals. An English Voyager in Hakluyt says, there were 15,000 of these creatures killed this year, by one small bark at Ramea, an island lying within the straights of St. Peter, back of Newfoundland, in N. Lat. 47.

1593—George Drake, an Englishman, made a voyage up the Gulf of St. Lawrence, to the Isle of Ramea, and carried home intelligence of the profitable trade of the French and others in these parts of America.

1598—The Marquis de la Roche received a commission from Henry IV. to conquer Canada; but returned without doing any thing of consequence, and shortly afterwards died of vexation.

1600—On the death of La Roche, his patent was renewed in favor of M. de Chauvin, who made a voyage up the St. Lawrence as far as *Tadousac*, where he left some of his people; and returned with a freight of Furs. The following year he sailed again and proceeded as far as *Trois Rivières*.

1603—Pierre du Gast, Sieur de Monts, a gentleman of the bed chamber to Henry IV. of France, received a patent of the American territory from the 40th to the 46th degree N. Lat. constituting him Lieutenant General of the country, with power to colonise it and subdue and convert the natives to Christianity.

Samuel Champlain, of Brouage, in France, anchored at *Tadousac* this year, and made discoveries in the neighboring territory.

with three ships for the purpose of making a permanent settlement, this year laid the foundation of Quebec, the future capital of Canada, after having examined all the most eligible situations in Acadia and along the river St. Lawrence. Subsequent experience has proved the wisdom of his choice. Champlain says that *Quebec* was the Indian name of the place. "Trouvant un lieu 'e plus estroit de riviere, que les habitants du pays appellant Quebec, j'y bastir et odifier une habitation, et de frichter des terres, et faire quelques jardins."

1612—The English colony in Conception Bay, Newfoundland, this year consisted of 54 men, 6 women, and 2 children.

1621—This year Acadia first received the name of *Nova Scotia*, its whole territory being granted by that name to Sir Wm. Alexander, of Minstry, by King James I.

1627—The Colony of Quebec, by direction of Cardinal Richelieu, then sole Minister of France, was taken out of the hands of the French Protestants, and together with its trade, placed under the management of one hundred persons called the "*Company of One Hundred Associates*," at the head of which was the Cardinal himself, with the Marechal Desiat, and other persons of eminence. Charlevoix thinks nothing could have been better planned; and that France would have been the most powerful colony in America, had the execution been answerable to the design.

1630—A commission having been given by Charles I. to David Kertk, and his valiant kinsmen, to conquer the American Dominions of France, Kertk had attacked Canada in July, 1628, and still carried on his military operations with vigour. — Louis and Thomas Kertk, appearing again at this time off Point Levi, sent an officer on shore to Quebec, to summon the city to surrender; Champlain, then in command, knowing his means to be inadequate to a defence, surrendered the city by capitulation. The terms of this capitulation were very favourable to the French colony; and they were so punctually and honourably fulfilled by the English, that the greater part of the French chose to remain with their captors, rather than go, as had been stipulated, to France. "Thus was the capital of New France subdued by the arms of England, just one hundred

and thirty years before its final conquest by the celebrated Wolfe."

1632—Charles I. by the treaty of St. Germain, resigned the right which he had claimed to *New France, Acadia and Canada*, as the property of England, to Louis XIII. King of France. Chalmers says, the signal event of the capture of Quebec was unknown when peace was re-established in April, 1629; and assigns this as the reason King Charles, at that treaty, absolutely restored to France, those territories generally and without limits; and particularly *Port Royal, Quebec, and Cape Breton*. From the restitution of these territories to France, may be dated the commencement of a long train of evils to the British Colonies, and to England, to this transaction, in the judgment of the able historian last quoted, may be fairly traced back the colonial disputes of latter times, and the American revolution.

1635—Rene Rohault, having become a Jesuit, resumed a project, which had been interrupted by the English conquest of Quebec, of founding a college in that city: a seminary that had been planned ten years before. This institution succeeded; and, it is said, was of essential service to the colony: many Frenchmen were now encouraged to embark with their families, for Canada.

M. Champlain died at Quebec this year: he was justly regretted by the whole colony of New France, of which he might be said to be the parent. He had penetration, courage, constancy, probity and patriotism: Charlevoix says of him that he was "un historien fidele et sincere, un voyageur, qui observe tout avec attention, un ecrivain judicieux, un bon geometre, et un habile homme de mer."

1639—A Nunnery of French Ursulines was founded at Quebec, *Madame de la Peltrie*, a pious Catholic lady, devoting both her time and fortune to this design, went to Quebec with three Ursulines, attended by Le Jenro, Superior of the Jesuit mission into Canada. Entering the city under a general discharge of cannon, they proceeded with much triumph, amidst the acclamations of the people, to the church, where *Te Deum* was sung, with great solemnity, for their arrival. Charlevoix says that this *Madame de la Peltrie* had such zeal for the conversion and comfort of the native Canadians, that she actually cultivated the earth with her own hands, to increase her power of doing good.

The Hospital, called *l'Hotel Dieu*, was founded the preceding year at Sileri, by Madame la Duchesse d'Aiguillon.

1642—Maisonneuve, a gentleman of Champaign, who the preceding year, brought over several families to Montreal, now entered with them into possession of their new habitation, and Chapel, on this island, with many religious ceremonies. In 1640 the French King had vested the property of the island in 35 associates, of whom Maisonneuve was one; and on the 15th of October, 1641, he was declared Governor of the Island.—*Charlevoix Nouvelle France*.

1647—The French in Canada, in their trade, with the neighbouring Indians, had, for several years, been obstructed by the *Mohawks*. Unable to subdue that formidable tribe without assistance, about this time, they sent M. Marie as an agent to solicit aid from the Massachusetts, with offers of liberal compensation, but the government of that colony rejected the alluring proposal. It is said this Marie was a *Jesuit*, and offered a large sum for assistance: but the English gave the very wise answer that the *Mohawks* had never injured them, and they would have nothing to do with the business.

1648—The Colonists of Newfoundland sent to the Governor and Council of Canada a proposal of perpetual peace between the Colonies, though the mother countries might be at war; although the French were much pleased with the proposal, and anxious to conclude an agreement of this kind, the business terminated without success, because the English were firm in their determination not to assist the French against the *Iroquois*.

1649—In the month of March, one thousand Iroquois suddenly attacked the Huron village of St. Ignatius, containing 400 persons, all of whom, three only excepted, were massacred.

1654—About this period the *Eries*, a numerous tribe of Indians which inhabited the borders of Lake Erie, were so effectually exterminated by the Iroquois, that were it not for the name of the Lake, we should have no memorial of their former existence. Charlevoix calls them "la nation des Eriez, on du *Chat*."

1655—The *Onondagas* sent deputies to Quebec to solicit missionaries of the French, a number of whom were ac-

cordingly sent to that tribe, and many of the heads of it became converts to the Christian Religion.

1660—Francois de Laval, Abbot of Montigny, being appointed Bishop of Canada, came over and brought, for the first time, some Monks of other orders besides the *Jesuits*.

1664—The Rev. John Elliot completed his translation of the Bible into the Indian language, which was printed at Cambridge, and entitled “ *Mamusse Wunneetupanatamwe UP BIBLUM GOD Nanceeswe NUKKONE TESTAMENT Kah Wonk WUSKU TESTAMENT*.”

1665—M. de Courcelles being appointed Governor of New France, transported the regiment of Carignan Salieres to Canada this year. It consisted of 1,000 foot, a great number of families, numerous mechanics, hired servants, horses, (*the first ever seen in Canada*) cattle and sheep, were brought to this country at the same time. The 100 associates in whom the property of the Colony was vested, had grown weary of the expense of maintaining their colony and from the year 1644 abandoned the Fur Trade to the inhabitants, reserving to themselves, as their right of lordship, an annual payment of 1,000 Beavers. Reduced at length to the number of 45 associates, they made a total resignation of all their rights, 1662, to the French King, who soon afterwards included New France in the grant which he made of the French Colonies in America, in favour of the West India Company formed by the great Colbert.

1666—The Mohawks, having greatly annoyed the French, were attacked this year by a French army of 23 companies of foot and the whole militia of the Colony. This formidable body of troops marched upwards of 700 miles, in the depth of winter, from Quebec into the country of the Mohawks, with a view of utterly destroying them; but the Indians retired, with their women and children, into the depth of the woods, leaving only a few ancient SACHEMS in the villages, who chose rather to die than desert their habitations. These were murdered by the French, and their villages burnt; yet nothing of political importance was gained by this expedition, which was commanded by M. de Tracy in person, who was then upwards of 70 years old.

1667—Peace was at length established between the French and the Five Nations, which continued for several years,

and they French M westward as he wen

and they cultivated a mutual trade. The Sieur Perot, a French Missionary, travelled more than 1200 miles to the westward of Quebec, making proselytes amongst the Indians as he went along.

1670—A terrible disease broke out amongst the Indians in the northern parts of Canada, and it swept off whole tribes, particularly the tribe of *Atlikamegues*, which has never since been heard of. *Tadousac*, the chief mart of the Indian fur trade with the French, was deserted, as also *Trois Rivières*, where the small pox carried off 1500 Indians at once.

1671—A grand Congress of the French, and of many Canadian Indians, was held this year at the Falls of St. Mary; where the Indians professed submission to the King of France, in a formal manner.

1672—M. de Courcelles, Governor of Canada, built a fort on the north side of the outlet of Lake Ontario, (near the modern Kingston,) as a barrier against the Iroquois, pretending, however, that he merely intended it as a place of trade, and for their mutual accommodation.

1673—The Count Frontenac completed the Fort on lake Ontario, begun last year by Courcelles, and called it after his own name. The French likewise built a fort at Michilimackinac. Father Marquette, in company with one Joliet, a citizen of Quebec, employed by M. Talon, for the discovery of the Mississippi, entered that noble river on the 17th of June, and descended it to a point within three days journey of the Gulf of Mexico, when they returned to Canada: the French had received information of this river from the Indians. Ferdinand de Soto had discovered the country on the Mississippi 130 years before, but the Spaniards did not see fit to settle it.

1674—Quebec was made a Bishopric.

1678—M. de Sale re-built the Fort Frontenac with stone: he also launched a Bark of ten tons on Lake Ontario, and in the year following another vessel of sixty tons on Lake Erie; about this time he likewise enclosed a little spot of ground at Niagara with stockades, intended for a Fort.

1680—The Father Hennepin, with M. Dacan, sent out on discovery by M. de la Sale, ascended the Mississippi, from Canada, as far as the Falls of St. Anthony.

1682—M. de la Sale descended the Mississippi to the sea,

and took possession of all the country watered by that mighty stream, in the name of Louis XIV; calling it in honour of the King, *Louisiana*.

1683—The French erected a Fort between the Lakes Erie and Huron.

1684—M. de la Barre, with a large army from Canada, made an unsuccessful expedition into the country of the Five Nations. De la Barre found it necessary to conclude his campaign with a treaty. He was met, at the place appointed, by the *Oneidas*, *Onondagas*, and *Cayugas*; the *Mohawks* and *Senekas* refusing to attend. Seated in a chair of state, surrounded by his own Indians (principally the *Hurons* of Lorette) and the French officers, he addressed himself to Garangula, an Onondaga Chief, in a very haughty speech, which he concluded with a menace to burn the castles of the Five Nations, and destroy the Indians, unless the satisfaction, which he demanded, was given.

Garangula, who sat some little distance before his men, with his pipe in his mouth, and the *Great Calumet of Peace* before him, did nothing but look at the end of his pipe during this harangue—when it was finished, after walking five or six times round the circle, in silence, he stood perfectly upright, and thus answered the French General:

"Onnuntio, I honour you, and all the warriors who are with me honour you: your interpreter has finished your speech. I now begin mine: my words make haste to reach your ears; harken to them: Onnuntio, in setting out from Quebec you must have imagined that the scorching beams of the sun had burnt down the forests, which rendered our country inaccessible to the French; or, that the inundations of the Lakes had shut us up in our castles; but now you are undeceived; for I and my warriors have come to assure you that the *Senekas*, *Cayugas*, *Onondagas*, *Oneidas* and *Mohawks*, are yet alive." After ascribing the pacific overtures of the General to the impotence of the French, and repelling the charges brought against his countrymen, he added: "We are born free; we have no dependence, either on the Onnuntio, or the Corlar."* This speech, which affords an interesting specimen of the spirit and elo-

Denonvill 23d of June.

quence of the aboriginals, has this fine conclusion : " My voice is the voice of all the Five Nations ! Hear what they say ; open your ears to what they speak : The *Senekas*, *Cayugas*, *Onondagas*, *Oneidas*, and *Mohawks*, say, that when they buried the hatchet at Cataracuay, in the presence of your predecessor, in the very centre of the Fort, and planted the tree of peace in the same place, it was then agreed that the Fort should be used as a place of rendezvous for merchants, and not as a refuge for soldiers.— Hear, Onnuntio, you ought to take care, that so great a number of soldiers, as appear now, do not choke the tree of peace, planted in so small a fort, and hinder it from shading both your country and ours with its branches. I do assure you that our warriors shall dance to the Calumet of Peace under its leaves, and that we will never dig up the ax to cut it down, until the Onnuntio or the Corlar shall either jointly or separately endeavour to invade the country which the Great Spirit has given to our ancestors. This belt confirms my words ; and this other, the authority, which the Five Nations have given me."

Enraged at this bold reply, De la Barre retired to his tent, and prudently suspended his menaces. Two days after, at the conclusion of the peace, the Indian chief and his retinue returned to their country, and the French army embarked in their canoes for Montreal.

1685—The inhabitants of Canada amounted to 17,000 ; three thousand of whom were supposed to be capable of bearing arms. Chalmers says, these numbers were taken from an accurate account made by order of the government.

1687—In this year the French cabinet took measures to destroy, as was intended, at one blow, the whole British interest in North America. M. Denonville, who had succeeded De la Barre, took the field at the head of 1500 French and 500 Indians. The *Senekas*, who had refused to meet De la Barre at the late treaty, were known to be most firmly attached to the English, it was therefore determined either to extirpate that tribe, or so to humble them, as to render them examples of French resentment to all the other Indians.

Denonville commenced his march from Cataracuay on the 23d of June. In this campaign, the scouts of the French

army had advanced as far as the corn of the villages without seeing a single Indian ; though they passed within pistol shot of 500 Senekas, who laid on their bellies, and suffered them to pass and repass, without disturbing them.— But, on a sudden, when the invading army had approached within a quarter of a league from the chief village of the Senekas, the war shout arose, in terrific effect, intermingled with a discharge of fire arms from all sides. This surprise threw the French into confusion, and the Senekas fell upon them with great fury ; but the French Indians being rallied, in the end repulsed them. In this action there fell about 100 French, 10 French Indians, and 80 Senekas. The next day Denonville continued his march with the intention of burning the village ; but he found it already in ashes. The Senekas had burnt it and fled. Two old men only were found in the castle, who were cut into pieces and boiled, to make soup for the French allies, [see Colden, p. 78.] The valour of the French army was next employed in destroying the corn of the Indian plantations, which they effectually accomplished ; and thus ended the *extirpating* campaign of Denonville !

Before Denonville returned into Canada he built a fort, with four bastions, at Niagara, in which he left a garrison of 100 men with provisions ; but it was soon afterwards abandoned.

1689—On the 27th of June, the Senekas, Cayugas, Onondagas, and Oneidas, renewed their covenant with the English. Colden says this renewal was previous to the arrival of Count Frontenac, who came over on the 2d of October, this year, as Governor of Canada, at the advanced age of 68 years, in the room of Devonville, who was recalled.

A body of 1200 Indians of the Five Nations invaded the island of Montreal on the 26th of July, burnt all the plantations, and made a horrible massacre of men, women and children, throwing the whole French Colony into the utmost consternation ; insomuch, that Valrenes, the commandant at Cataracuay, was ordered by Denonville to abandon that place. SMITH (in his N. York, p. 56) says, that 1000 French were slain in this invasion, and 26 carried off and burnt alive. Charlevoix's account is horrible : “ Ils ourrirent le sein des femmes encientes, pour en arracher le fruit,

qu'elles por-
broche, et
faire rotir.”

In a conference held this year between the English Colonies and the Five Nations, the latter promised to preserve "*the chain* (which united them) *inviolable* ;" and said "*we wish that the sun may always shine in peace over all our heads, that are comprehended in this chain.*"

1690—An unsuccessful attack on Quebec was made this year by the English forces, from the Colonies, under the command of Sir W. Phipps. The fleet did not arrive before that fortress until the 5th of October. The large ships carried 44 guns. A simultaneous attack on Montreal, by the way of Lake Champlain, at the same time, was designed, but the army was compelled to retreat by sickness (as it is said) and the fleet, after many disasters, arrived at Boston on the 19th Nov.

1693—Count Frontenac invaded the country of the *Mohawks* from Canada, but his army, after encountering the greatest hardships, and losing 80 men killed and 30 wounded, found it necessary to return without accomplishing any thing material. A great quantity of Fur had been accumulated by the French at Michilimakinac ; but the Five Nations had so effectually blocked up the passage between that place and Canada, that they had remained useless for several years. At length, however, a fleet of 200 canoes, laden with furs, arrived at Montreal, and Colden says, this arrival "gave as universal a joy in Canada, as the arrival of the *Galleons* gave in Spain."

At this period Canada contained, by computation, 130,000* souls. There were six churches in Quebec.

1694—*Decanesora*, who had for many years the greatest reputation among the Five Nations, as a speaker, arrived in Canada, with many other other deputies, to hold a treaty with the French. "This *Decanesora* was grown old," says Colden, "when I saw him, and heard him speak ; he had

* Here is an apparent inconsistency—A. D. 1685.—It is said there were only 17,000 inhabitants by a census *accurately* taken. Now, in 1693, only eight years afterwards, 'tis said there were 130,000 by *computation*. The only way for accounting for this extraordinary difference is to suppose that the first census comprehended the *white* population only, and that in the latter statement, all the Indian tribes were included.—*Ed.*

great fluency, and a graceful elocution that would have pleased in any part of the world. His person was tall and well made; and his features, to my thinking, resembled much the *bustos* of Cicero."

It is not clear how this treaty terminated, or whether there was any made; for, we find this same *Décaneora* were soon afterwards assuring an English conference, at Albany, of a fact that could not be very satisfactory to the French. Addressing Governor Fletcher, of New-York, the orator gave the following passage, as part of his speech to the Governor of Canada: "Onnuntio, we will not permit any settlement at *Cataracui*; you have had your fire there thrice extinguished. We will not consent to your re-building that fort, but the passage, through the river, shall be free and clear. We make the sun clear and drive away all clouds and darkness, that we may see the light without interruption."

1695--The Five Nations having now positively refused to accede to the terms proposed by the French, Count Frontenac determined to compel them to submission. Having previously sent out 300 men, in the hope of surprising them on their hunting ground between Lake Erie and Cataracuay Lake, [now Lake Ontario] and at the same time to view the old French fort there; he, in the summer of this year, sent out a considerable body of French and Indians, to repair the fortifications of Cataracuay, in which work they were completely successful, and restored its former name, *Port Front nac*.

1696--The Count Frontenac having secured his Fort at Cataracuay, resolved to make the Five Nations feel his resentment. Having assembled all the regular troops and the militia of Canada, at Montreal, together with the *Owenagungas*, the *Quetoghies* of Lorette, the *Adironducks*, *Sokokies*, *Nepicisinians*, the *Praying Indians* of the Five Nations, and a few *Uttawawas*, he marched with this formidable army from that Island on the 4th of July. After twelve days march the French army arrived at Cataracuay. On approaching Ono daga, the Indians hearing of the formidable power of the French, by a Seneka deserter, thought it prudent to retire, after setting fire to their poor fort and bark cottages. All the French did here was to destroy a very extensive field of corn. The Chevalier de Vandreuil

was despatched with 6 or 700 men to destroy another field of corn, belonging to the Oneidas, at no great distance, which was accomplished; and these feats, with 35 Oneidas, who staid to welcome the French, in one of their little forts, were all the achievements of this grand enterprise. The fact was, the French experienced the insurmountable difficulty of supporting so large an army in a wilderness, and they were obliged to return to Montreal on the 10th of Aug. without doing any thing more.

1698—Count Frontenac died, aged 78 years. Charlevoix speaks thus highly of him. "He retained the firmness, and all the vivacity of his best years; and died as he had lived, beloved by most, esteemed by all, and with the glory of having, without scarcely any succours from France, sustained and augmented a colony, open and liable to be attacked on all sides, and which he had found on the point of ruin.

1699—M. de Calliers, succeeding the Count Frontenac, as Governor of Canada, terminated the disputes between the French and the Five Nations, by agreeing to have an exchange of prisoners at Onondaga. Colden says this peace was esteemed by the Canadians as the greatest blessing Heaven could grant them, "for nothing could be more terrible than this last war with the Five Nations." When the French Commissioners came to Onondaga, Deconesora met them without the gate, and complimented them with three strings of wampum. "By the first he wiped away their tears for the French, who had been slain in the war; by the second he opened their mouths that they might speak freely; by the third he cleared the mat on which they were to sit, from the blood that had been spilt on both sides.

1705—A recent misfortune of the Canadians, in the loss of a large and richly laden ship, proved eventually a signal benefit; for it compelled the colonists to raise hemp and flax, which, by permission of the French Court, they manufactured into linens and stuffs, to the great advantage of the colony. The ship was called the SEINE, and was captured by the English. She was bound to Quebec, and had on board the Bishop of that city, a great number of ecclesiastics and laymen of large fortunes, with a general cargo of the estimated value of 1,000,000 *livres*.

1709—A plan was formed by Lord Sunderland, Secretary

of State, for the subversion of the French power in Canada, Acadia and Newfoundland, by joint forces from England, and her Colonies in America, but it was not carried into effect.

1710—Col. Schuyler, impressed with a deep sense of the necessity for vigorous measures against the French, made a voyage from New-York to England, on purpose to convince the Ministry of the absolute necessity of reducing Canada to the crown of Great Britain. He was accompanied by the Five Indian Chiefs, who gave their assurances of fidelity to Queen Anne, and solicited her assistance against their common enemy, the French. The appearance of these *Sachems* in England excited much interest.

1712—The merchants of Quebec raised 59,000 crowns for the purpose of completing the fortifications of that city.

1714—At this period, Canada could not raise more than 4,484 men able to bear arms, from the age of 14 to 60; but she had, besides, 28 companies of marines, who were paid by the King of France, and these contained 627 soldiers.—*Charlevoix*.

1715—*Ginseng* was discovered in Canada this year, by Father Lasitan, a Jesuit.

1727—John Thomas, a praying Indian of the *Mohawks*, who had been amongst the first converts to Christianity, and always a steady friend to the English, died this year at the advanced age of 110 years.

1749—Acadia, being ceded to Great Britain by the treaty of Aix la Chapelle, changed its name to Nova Scotia. Parliament, aware of its importance, resolved to colonize it forthwith, and voted £40,000 in aid of that purpose. Advantageous terms being offered, 3760 adventurers accepted them, and settled at the bay of Chebucto. Every soldier and seaman was allowed 50 acres; an Ensign 200; a Lieutenant 300; a captain 460; and every officer of higher rank 600 acres; together with 30 for every servant. They were furnished with instruments for fishing and agriculture, had their passage free, and provisions found them for the first year after their arrival.—*Hewett*.

At this time the Militia of Canada amounted to 12,000 men, the regular troops to 1000; and the companies of marines to 628.—*Univ. Hist. XL. 190.*

that was felt throughout a great part of America. Its motion was undulatory, and it occasioned a great deal of mischief in towns and villages. Its course was from the N. West to the S. East. Its extent upwards of 1000 miles, until it passed into the ocean in the direction of the West India Islands from the Chesapeak Bay.

1756—M. de Montcalm succeeded the Baron Dieskau in the chief command of the French Forces in Canada.

1757—It was in this year, at the capture of Fort William Henry, that the horrible massacre of many hundred unarmed British officers and soldiers, by the Indians in the French service, was permitted by Montcalm and his officers, to their eternal disgrace, and in direct violation of a solemn compact.—(*For a shocking account of this butchery see Carver's Travels.*)

At this period the whole colony of Louisiana is said to have contained no more than 10,000 souls, whites and negroes. Montreal contained about 5,000 inhabitants.

1758—By the acquisition of Fort William Henry, the French had full possession of the Lakes Champlain and George; and by the destruction of Oswego they had acquired the dominion of those other Lakes which connect the St. Lawrence with the waters of the Mississippi. The first afforded the easiest admission from the northern colonies into Canada, or from Canada into those colonies; the last united Canada to Louisiana. But the strong arm of Britain had not yet been put forth with all the energy of its power, guided by the wisdom and foresight of the immortal CHATHAM, who had been recently placed at the head of a new administration, and it was not long before the aspect of affairs was changed in this part of the world.

Admiral Boscawen arrived with a formidable fleet at Halifax, and General Abercrombie was shortly at the head of 50,000 men, the most powerful army, till then, ever seen in America.

Louisburgh, and the whole of Cape Breton; Isle Royal; St. John's, and their dependencies, were speedily conquered and taken possession of by Boscawen and Gen. Amhurst. Fort Frontenac, on Lake Ontario, which then possessed 60 pieces of cannon, 18 mortars, a large number of small arms, and a vast quantity of provisions, military stores, and merchandize, surrendered at discretion to a force under Col.

Bradstreet, who had been despatched on this service by Gen. Abercrombie, from before Ticonderoga. Nine armed vessels fell likewise into the hands of Col. Bradstreet, who destroyed both the Fort and the vessels, and such stores as he could not carry away. Fort du Quesne was captured by Gen. Forbes, who named it Pittsburg, in compliment to the popular minister.

1759—This was a memorable year for Canada, in which the vast and daring project which had been so often formed and abandoned, was at length carried into effect; that of making an immediate and entire CONQUEST of the country by Great Britain; which was accomplished by the immortal WOLFE and his brave associates, in the taking of Quebec. We cannot pretend to go into any detail of this famous achievement in a work like this.

Whilst the operations were carried on against Quebec, Sir Wm. Johnson secured the conquest of Upper Canada, by the capture of Niagara, and the defeat of the entire French force in that quarter.

Quebec contained, at the time of its capitulation, about 10,000 souls. (*Precis sur l'Amerique.*) Gen. Wolfe, who expired in the arms of victory, was only 33 years of age. He possessed those military talents, which, with the advantage of years and the opportunity of actions, "to moderate his ardour, expand his faculties, and give to his intuitive perfection and scientific knowledge, the correctness of judgment perfected by experience, would have placed him on a level with the most celebrated generals of any age or nation." After he had received his mortal wound, it was with reluctance that he suffered himself to be conveyed into the rear. Leaning on the shoulder of a Lieutenant, who knelt down to support him, he was seized with the agonies of death: but, hearing the words 'they run,' he exclaimed, 'who run?' 'The French,' replied his supporter. 'Then I die happy,' said the General, and expired—a death more glorious, says Belsham, is no where to be found in the annals of history. Montcalm was every way worthy to be a competitor of Wolfe. He had the truest military genius of any officer, whom the French had ever employed in America. After he had received his mortal wound, he was carried into the city; and when informed that it was mortal, his reply was—'I am glad of it.' On

being told that he could survive but a few hours, 'so much the better,' he replied, 'I shall not then live to see the surrender of Quebec.'

1760—The fall of Quebec did not produce the immediate submission of Canada. After the battle on the Heights of Abraham, the French army retired to Montreal. This army, the command of which devolved on M^r. de Levi, still consisted of ten battalions of regulars, and it was reinforced after the action, by 6,000 Canadian Militia, and a body of Indians. With these forces an attempt was made for the recovery of Quebec; but it was unsuccessful. On the 8th of September, Montreal, Detroit, Michilimakinac, and all other places within the Government of Canada, were surrendered to his Britannic Majesty; and, the destruction of an armament, ordered out from France in aid of Canada, completed the annihilation of the French power on the continent of North America.

1763—By the second article of the *Treaty of Fontainebleau*, France renounces and guarantees to Great Britain all Nova Scotia and Acadia, and likewise CANADA, the Isle of Cape Breton, and all other Islands in the Gulf and River of St. Lawrence—By the same article it was stipulated that the French in Canada may freely profess the Roman Catholic Religion, as far as the laws of Great Britain permit; that they may enjoy their civil rights, retire when they please, and may dispose of their Estates to British Subjects.

A Proclamation was issued by his Majesty the King of Great Britain, in the month of October, declaring the Government of Quebec to be "bounded on the Labrador Coast by the River St. John, and from thence by a line drawn from the head of that river through the Lake St. John to the south end of Lake Nipissing—from whence the said line crossing the River St. Lawrence and the Lake Champlain in 45 deg. N. Lat. passes along the Highlands which divide the rivers that empty themselves into the said River St. Lawrence from those which fall into the sea; and also the north-coast of the Bay of Chaleurs, and the coast of the Gulf of St. Lawrence to Cape Rosiers, and from thence crossing the mouth of the River St. Lawrence by the west

end of the Island of Anticosti, terminates at the aforesaid River St. John."

In testimony of the 'Royal sense and approbation of the conduct and bravery of the officers and soldiers of the army and to reward the same,'—the Governors were empowered to grant lands, without fee or reward, to such reduced officers, as had served in America during the late war, and to such private soldiers, as had been, or should be, disbanded in America, and were actually residing there, &c. &c.—

At this time Canada contained upwards of 65,000 inhabitants.—(Stokes.)

The exports from Great Britain to Canada, amounted this year to £8,623 15s. 11d.

1765—It may be remarked that Canada and Halifax submitted to the famous *Stamp Act* which occasioned so much turmoil in the Provinces now constituting the United States.

1773—The Shawanese Indians, including men, women, and children, were reduced to 600 —(*Am. Annals.*)

1774—A Committee of the American Insurgents was appointed to seduce the Canadians from their loyalty to the Crown of Great Britain; and Ministers of the Gospel were employed as agents for this abominable purpose. The form of the circulars used on this occasion is preserved in the *American Annals*.

1775—The revolted Colonies, by a Public Address, called on the people of Canada to unite with them. Gen. Schuyler afterwards tells them, that he has received positive orders from Congress "*to cherish every CANADIAN !*"

The famous discomfiture of Montgomery and Arnold, in their attack on Quebec, in which the former lost his life, occurred late, November, this year.

1776—Early in the summer, Canada was entirely freed from the presence of the Insurgent Army of the Americans, under Gen. Arnold, who had continued the blockade of Quebec for some time.

1780—The 19th of May was distinguished by the phenomenon of a remarkable darkness in the northern parts of America; and is still called 'the dark day.' In most parts of the country where it prevailed, the darkness was so great that persons were unable to read common print, determine the time of day, dine, or manage their domestic business, without additional light. It commenced between 10 and 11, A. M. it appeared to grow by a succession of clouds from the northward, and was most pitchy about 2 o'clock, P. M. The Mem. of Acad. says, 'Candles were lighted up in the houses; the birds, having sung their evening songs, disappeared and became silent; the fowls retired to roost; the cocks were crowing all round as at day break; objects could not be distinguished but at a very little distance; and every thing bore the appearance and gloom of night.'

1783—The Province of Quebec contained, by enumeration, 113,000 inhabitants, English and French; exclusive of 10,000 *Loyalists*, who had recently settled in the upper parts of the Province.—Coll. Hist. Soc. VI. 49.

1786—Lord Dorchester [Sir Guy Carleton] arrived at Quebec with the Commission of Captain General and Governor of Quebec, Nova Scotia, New Brunswick, and their Dependencies, and the Island of Newfoundland.

1791—By an Act of Parliament, the Province of Quebec was divided into two separate Provinces, to be called 'THE PROVINCES OF UPPER AND LOWER CANADA' On this occasion a very interesting debate took place in the House of Commons:—

Mr. PITT said it appeared to His Majesty's Ministers, *first*, that the only way of consulting the interests of the internal situation of the Province of Quebec, and of rendering it profitable to Great Britain, was to give it a Legislature, as near as circumstances would admit, according to the principles of the British Constitution. In the next place, it appeared to them that *there was no probability of reconciling the jarring interests and opposite views of the inhabitants, but by giving them two Legislatures.* It was conceived this form of Government was the best adapted to put an end to all the difficulties of a legal sort, and to render the regulations more useful to the subjects of that country. He believed there was such a rooted opposition of interests of one description and the other, that if there was a Constitution,

consisting of a House of Assembly, in which the parties might be nearly balanced, the consequence at least for a long series of years, would be a great degree of animosity, and a great degree of confusion. It seemed to his Majesty's servants the most desirable thing, if they could not give satisfaction to all descriptions of men, to divide the Province, and to contrive that one division should consist, as much as possible, of those who were well inclined towards the English Laws, and that the other part should consist of a decided preponderancy of the ancient inhabitants, who were attached to the French Laws. It was in Upper Canada particularly, that they were to expect a great addition of English inhabitants. The consequence was, that if it was not divided from the rest, the Canadians, forming a majority of five to one, the grievance would be every year increasing, in proportion as the population increased. It was intended to give a FREE CONSTITUTION to Canada, according to *British ideas of Freedom*. This could not be done without a division of the Provinces, to prevent the clashing of opposite interests, which must otherwise necessarily ensue.

Many of the difficulties and serious inconveniences, even at that time foreseen by Mr. Fox, as likely to arise from this division of interests in the Canadas, have indeed been actually experienced, (to such a degree on the part of Upper Canada) as to render an appeal to the Imperial Parliament, to re-unite the Provinces under one Legislature, necessary. This appeal has not yet been successful, owing, principally, to the opposition raised by the Lower Canadians of French origin. Better prospects may be now reasonably anticipated. The *French Faction* is prostrated; and, as a mere faction, FOR EVER! The BRITISH COLONIES upon this CONTINENT, must, and will be CONSOLIDATED; and possess, not in name only, but in Principle, and in FACT, that perfection of Government, when in its purity, the BRITISH CONSTITUTION.

A

SKETCH OF THE PRESENT STATE

OF

CANADA,

DRAWN UP EXPRESSLY FOR THIS WORK,

BY CHARLES FOTHERGILL, ESQUIRE.

1839

THE geographical position of this vast country, [including both the Canadas, which ought never to have been separated] may be thus generally stated:—It is bounded on the East by the Gulf of St. Lawrence, and Labrador*—on the North, by the Territories of Hudson's Bay; on the West, by the Pacific Ocean; on the South, by Indian Countries, which extend to Mexico; and part of the United States of America, viz. *Wisconsin, Illinois, Indiana, Michigan, Ohio, Pennsylvania, New York, Vermont, New Hampshire*, the *District of Maine*, and by the British Province of New Brunswick.

These boundaries describe a large and magnificent portion of the globe we inhabit, large enough for the foundation of an Empire which may become hereafter the arbitress of the destinies of the new world, embracing with her mighty arms the whole width of the great continent of America.—

* In the year 1809, Labrador was strangely annexed to the Government of Newfoundland, though the sea will continue to roll through the straits of Bellisle in despite of artificial arrangements, and unnatural connexions.

Secured in her rear by the frozen regions of the north, and with such a front as she possesses towards the south, it is impossible but, with the adoption of wise and decisive measures, she must be able hereafter to hold a far more potential influence over the countries of the south, than was ever held by the Tartars (in their best days) over Asia; or by the northern hordes of Europe, over the Empire of Rome, at the period of her overthrow. The *foundation stone* of this Empire has been laid by England, and it depends on the wisdom of her councils, and on the loyalty, ambition, temper, skill, industry, bravery, high qualities, and perseverance of Canadians, no matter of what origin, how far the fairy vision which is kindled up in fancy, may be realized.

We have only to cast our eyes transiently over a map of North America to be immediately assured of the singularly advantageous situation of the settled parts of Upper Canada—Seated like a gem in the bosom of a country that is neither scorched by the sultry summers of the south, nor blasted by the tardy, bitter, biting, winters of the north; surrounded by the most magnificent Lakes, and possessing the most extensive internal navigation in the known world, it would be difficult, perhaps impossible, to find, in any other region of the globe, a tract of country of the same magnitude with so many natural advantages, as that part of Upper Canada which lies between the Lakes Ontario, Erie, and Huron, and the Ottawa, or Grand River, nine-tenths of the whole extent of which are calculated for the exercise of almost every description of agricultural labour, and with such a prospect of success as, perhaps, no other part of this continent could realize. A part of this tract of country, commencing in the neighbourhood of Kingston, and running westward nearly 500 miles to the Sandwich frontier, by a depth, northward, of from 40 to 100 miles, is, *alone*, capable of supplying all Europe with grain; besides being rich in cattle; and producing silver, lead, copper, iron, lime, marle, gypsum, marble, free stone, coal, salt, wool, hemp, and flax, (of the best quality) tobacco, and timber of every description; besides furs, game, fish, and many other valuable productions.*

* It must be understood that we are always speaking of the settled parts of Upper Canada, unless especially mentioned to the contrary.

† We may so
ration of clima

Much has been said, at a distance, against the climate of this fine country. Those, however, who have removed to it from Great Britain, are agreeably disappointed in finding it more pleasant, (all things considered, than that which they have left, because it is neither so moist nor so unsettled. It might be said, with no great impropriety, that the present† inhabitants of Canada have but two seasons—Summer and Winter—for Winter has no sooner disappeared, which generally happens by the middle of April, than the whole animal and vegetable creation starts into renewed life with a rapidity and vigour that leaves the season of spring with such doubtful limits as to be scarcely perceptible, or deserving a specific character; again, in the fall of the year, the months of September and October are generally so fine and summer like, and these being succeeded by what is aptly termed the *Indian Summer*, in November, (that month which is so gloomy in England, and said to be so fatal to Englishmen) that we should have great difficulty, were it not for an artificial Calendar, in saying when it was autumn. As a proof of the genial nature of our climate, and to show that we have other sources of wealth, by the exercise of domestic industry, in store; it must not be here forgotten that the culture of both cotton and indigo has been attempted, on a small scale, in the Western District, with success;—that the various species of *Mulberry*, necessary for the growth of *Silk*, flourish under the care of those who have made the experiment in the London and Western Districts; that *Vineyards* may be advantageously laid out; and the *Hop* is found in perfection almost every where.

To convey a more just and certain idea of the severity of an Upper Canada Winter, it may be well to mention that the chain of shallow Lakes which run in an easterly, and south-easterly, direction from Lake Simcoe, towards the Midland District, and of which the River Trent is the outlet, are seldom or never frozen over, hard enough to bear a man with any heavy burthen, until about Christmas; and they are again open before the middle of April. Owing to the want of a proper explanation by travellers, and others, who

† We may say *present*, because we have no doubt of a further amelioration of climate, as the woods are cleared away and the waters diminish.

have attempted to describe this country, an erroneous idea has been formed in England inducing a supposition that our Great Lakes are frozen over in winter; whereas they are always open, frequently exhibiting a beautiful and striking phenomenon during the inclement season, by reason of the water being warmer than the atmospherical air; in consequence of which, an evaporation resembling steam, and in every variety of shape, in clouds, columns, and pyramids, may be frequently observed ascending with uncommon grandeur and magnificence from the vast surfaces of Ontario, Erie, Huron, and Superior, as from so many immense cauldrons.

It is the small, and nearly stagnant bays, and for a few yards only from the shores, where the water is shallow, that any part of the Great Lakes is frozen in winter. Truth requires that we should except Lake *Erie*; which, in two or three instances, *not* more, within the last *thirty* years, has been frozen entirely across, so as to allow sleighs to pass over where the channel is narrow; but it must be borne in mind that Lake *Erie* is, comparatively, a shallow Lake, having no where a greater depth than fifty fathoms; and, that in the course of time, probably not more than a century, it will be a mere river! The earth, too, is seldom frozen to a greater depth than from 12 to 18 inches, and the snow rarely lies in greater depth than from 18 inches to two feet, unless where it is drifted. It is very seldom the roads are in any permanent condition for the use of the *Sleigh* or *Cariole* before the second week in *January*, and they are again broken up towards the end of *March*, a fact which sufficiently indicates the duration of snow and of sharp frosts. In Upper Canada, the occurrence of winters with scarcely any snow at all, are not unfrequent, and such seasons are generally found to be injurious to the fall-crops of wheat. It is proper, however, to remark that the winters of Lower Canada (being in a higher latitude) are both more severe and of longer duration. There is a difference of at least one month in the length of the inclement season at Quebec, and on the shores of Lake Ontario; and, farther westward, to the Sandwich Frontier, this favourable difference is still greater. In Upper Canada a laboring man, if he chooses, can at all times work out of doors; but in the Lower Province there are days of particular severity, in

the winter season, in which it would be impossible for him to pursue out-doors work.

There are natural phenomena in the climate of CANADA, which remain unaccounted for, and are sufficiently puzzling to the philosopher of nature. Of these, the *Indian Summer*, which almost uniformly commences and terminates in the month of November; and the *tertian intervals* of fine weather, throughout the winter, after two or three nights of intense frost, deserves to be particularly mentioned.

The *Indian Summer*, as it is termed, consists of many days, [the Indians say there *must be fifteen smoky days* to constitute one of these summers] of delightfully mild, serene weather, with a misty, hazy, atmosphere, though the haze is dry and soft, appearing to rest chiefly on the horizon.—In the evenings of these days, the sun generally goes down with a crimson flush on the western heavens. The temperature of the atmosphere, during this season, is singularly grateful to animal sensation; and those of the feathered tribes who are directed by an infallible guide to seek other regions, more to the southward, on the approach of hoary-headed winter, avail themselves of this charming season, in which to prosecute their interesting journey; and it is at this time the rivers and lakes of Canada are covered by innumerable flocks of wild fowl, of every species known to this quarter of the world, gathering with their families for winter quarters. Many persons have supposed that the peculiar nature of the atmosphere of these *smoky days*, as they are termed, is occasioned by the annual conflagration of the immense *Prairies* to the westward of the Mississippi, and of our Great Lakes, by the Indians. But, although the Western Indians do frequently set fire to the long and rank grass of their immense plains, in order to produce a finer and sweeter growth for their Buffalo and Deer—yet this cause is adequate neither to the extent nor the *regularity* of the effect.

We are inclined to consider the following conjecture as the most rational cause of this phenomenon:—It is well known that water, when passing into the form of ice, gives out a large quantity of its latent heat. In the high northern latitudes visited by Parry and Ross, it appears that the winter commences in the beginning of September, and that

through the whole of that month the congelation proceeds with great activity. It is reasonable to suppose, therefore, from the immense amount of ice formed during that period, that the quantity of heat thrown into the atmosphere during the month of September, must be sufficient to exert a very powerful and perceptible effect upon the temperature of the air in countries lying south of the Arctic circle, especially as the northerly winds prevail at that season.

By what is termed *tertian intervals* of fine weather, through the winter season, is meant a very extraordinary and certain phenomenon that may be relied upon with the same surety as the diurnal motion of the planets. The greatest intensity of frost is *always remittant* at the end of the *third day*—that is, the inhabitants of Upper Canada never suffer the extreme severity of their climate for more than two or three days at any one time; being perfectly assured, on feeling any extreme degree of cold, that it will mitigate within three days, and that several days of mild weather will succeed. It may require several years of attentive observation to ascertain the number and duration of the intervals of mild and severe weather that usually occur in a Canadian winter between the 43d and 49th degrees of North Latitude; but it would prove a subject of very interesting and instructive inquiry to any gentleman of sufficient leisure to pursue it in the country.

So many persons have been deterred from emigrating to CANADA through a false notion of its climate being frightfully severe, that it seems to be a duty incumbent on those who speak or write for the instruction of others at a distance, to endeavor to remove the erroneous impression. Those who arrive from Europe, and settle in Upper Canada, uniformly express their satisfaction at the change, in this particular, at least. There is generally a clearness, dryness, and brilliancy in the atmosphere, so captivating, after the catarrhal moisture which saturates the air of northern Europe, that it is impossible for the newly inducted emigrant not to rejoice in the change—whilst the starry host of heaven appear with a splendour far more dazzling than any thing he has before seen, and the mode of travelling in winter in carriages or sleighs, the easiest and most delightful in the world, gives him ready access to distant markets, whether of business or pleasure.

* Passing
wide and rich
north by a re

It may be readily supposed that in such a vast extent of country every description of soil, and every variety of surface, as to mountains, hills, vallies, and plains must occur. Speaking of the inhabited parts of Canada, the Lower Province is the most mountainous, and the Upper Province the most level and Champaign; indeed, from the division line on Lake St. Francis to Sandwich, a distance of nearly six hundred miles, nothing like a mountain occurs, although the greater part of the country which is passed through, between those places, is gently undulated into pleasing hills, fine slopes, and fertile vallies. There is, however, a ridge of rocky and generally barren country, running south-easterly from Lake Huron, through the Newcastle and Midland Districts, towards the Ottawa, or Grand River, at the distance of from 50 to 100 miles from the northern shore of Lake Ontario, and the course of the River St. Lawrence; a ridge which divides and directs the course of innumerable streams, those on one side running to the northward or north-east, whilst those on the other run to the southward, and empty themselves into Lake Ontario or the River St. Lawrence. The base of this ridge has an elevation of not much less than 200 feet above the level of Ontario, and it is rich in *Silver, Lead, Copper, and Iron**—and, near the Lake of Marinora, in white Marble. In the neighbourhood of Gananoque, a beautifully variegated marble of green and yellow is found; and, in the vicinity of Kings' on, there is an immense bed of *black*, and also of grey marble.

Farther to the north, beyond the French River, which falls into Lake Huron, are immense mountains, some of them of great elevation. Many of the mountains which describe the great valley of the St. Lawrence, are from 2,000 to 3,000 feet above the level of the river; and that part of the chain which approaches the city of Quebec, on the northern side of the river, is worthy the attention of the geologist; and, in a particular manner, of the minerologist, from the hope there is every reason to entertain that these mountains yield several rare and valuable kinds of earth for pigments, which may hereafter become articles of com-

* Passing this ridge, towards the north, the explorer descends into a wide and rich valley of great extent; which is again bounded on the north by a rock and mountainous country of still higher elevation.

more. When in Quebec, some years ago, the writer of this *Sketch* was shown several fine specimens, in the Seminary of that city, which had been procured in these mountains at no great distance from Quebec; amongst which may be mentioned a rich brown resembling the *vandyke brown* of artists; a yellow, equal to that of *Naples*—and an extraordinary fine blue, of a tint between that of *Indigo* and the costly *Ultra-marine*. The subject is mentioned in this place with a view of exciting further inquiry, and experiment; because, at present, the artists and colourmen of London are principally supplied with their most valuable pigments from Italy.—A scientific gentleman who has lately explored the coast of Labrador, and the Gulf of St. Lawrence, was very successful in his mineralogical pursuits, particularly in the neighborhood of Gaspe, from whence he obtained some new, and many valuable and beautiful specimens of the *Quartz* family—including a great variety of *Cornelians*, *Agates*, *Opals*, and *Jaspers*; several of which have been cut into useful or ornamental articles at Quebec. From Labrador the same gentleman brought several large and beautiful specimens of the spar so peculiar to that coast, and which is commonly known by the name of *Labrador-spar*, of a brilliant *Sarulean*, or *ultra marine* tint—with others of a green, yellow, red, and, one or two of a singularly fine pearl grey colour. These specimens were found at Mingan imbedded in a rock of granite.

The whole northern shore of the St. Lawrence, from Quebec to its mouth, and round the coast of Labrador, offers to the geologist and mineralogist a fine field for research and inquiry. It has never been thoroughly explored by scientific men. Much of the coast bordering on the Gulf of St. Lawrence, however, is of primitive, or of the earlier formations of rock.

The *Saguenay* is a very remarkable river, and richly deserves the notice of a scientific traveller:—as far up as *Chicoutiny*, which is 25 leagues from its mouth, the foot of the high, and sometimes bald or scantily wooded, mountains of granite, are washed on both sides by its waters. The *Point aux Bouleaux*, and for some distance on the western side of its mouth, is an alluvial deposit, containing, probably, the richest soil in the world, being composed of a species of soapy, grey, marl from 30 to 40 feet in depth.—

But, as the object of this little sketch is to give the stranger a general idea of the nature of that part of the country in which we are writing, we must go back to the soil of Upper Canada, and speak of its quality ; which, in its wild or uncultivated state, may be known by the species and fine growth, or otherwise, of the timber with which it is covered.

The best lands are those which produce the *hardest* timber, such as Oak, Maple, Beech, and Elm, Black Walnut, &c. though Bass-wood, when of luxuriant growth, is also an indication of good land ; and so is Pine, where it is large, clean, tall and thrifty. Many of the Cedar swamps where the Cedars are not stunted, and are intermingled with Ash of large growth, contain soil of the richest quality, and are calculated for the finest *Hemp grounds* in the world.*

It may give a just idea of the general richness of the soil to state, that we have frequently heard of instances where 50 bushels of Wheat per acre have been produced on a farm, even where the stumps (which would probably occupy one eighth of the surface of a field) have not been eradicated ; we know, indeed, of some instances where 60 bushels, and one in the City of Toronto, where *One Hundred Bushels*

* As the SOCIETY for the ENCOURAGEMENT of ARTS, MANUFACTURE, and COMMERCE, in London, still hold out their premium of a *Gold Medal* or \$200, for the cultivation of Hemp in the British Provinces of North America, there is still hope that this important article will become a staple of the country. Since the last edition of this work was published, a sum of money has been granted by the Legislature of Upper Canada for the purchase of the necessary apparatus to dress, clean, and manufacture Hemp ; and Col. Covert, of New Lodge, near Cobourg, deserves great credit for his exertions to encourage the growth of this article in his neighbourhood. The high price of labour, and the want of a ready market, hitherto, has been the chief difficulty in the way of its general cultivation ; for, in no country in the world, can a superior growth of *Hemp* be seen, than in Upper Canada.

of Wheat,* have been obtained from a single acre ; and, in the District of Newcastle, many examples may be found wherein Wheat has been raised on the same ground, for 16 or 18 years successively, without the application of manure!—The general average of the returns of Wheat crops, however, throughout Upper Canada, probably, is not more than 25 bushels *per acre*, owing to the space occupied by stumps, and the indifferent skill of the ordinary farmers. The winter wheats are found to be most productive, and they weigh the heaviest. These are what Farmers term *white* wheats—[reds have not yet been generally introduced]—and the best seldom exceeds 64 or 65 lbs. to the *Winchester Bushel*, although we have known several instances of higher weights. The *Imperial* Weights and Measures are now the standard in U. C. by an act of the Legislature.

Of Indian Corn, or Maize, from 60 to 80 bushels per acre, is not an uncommon return ; and of Pumpkins, of the largest kinds, we have instances of more than a *ton* weight being produced from a single seed.

But there cannot be a more certain indication of the depth and richness of the soil than the fine growth of the timber which it produces ; and, we have not unfrequently measured particular trees of that species of *white oak* which grows in low moist places, and which is usually called *swamp oak*, that gave circumferences of 16 to 17, and 18 feet, and an altitude of from 30 to 40, and even to 50 feet to the first bough. And we have more than once, on the rich lands to the northward of Rice Lake, found *White Pine* trees that gave a diameter of *five feet*, and an altitude of *two hundred* ! These are facts that determine at once the depth, richness, and vegetative power of the soil, since those giants of the forest are not nourished solely by the heavens which they pierce, but by the earth from whence they spring.

Farther to the west, however, and particularly beyond the Rocky Mountains, there are instances of the large growth

* As this assertion has been ridiculed as extravagant, we can assure the *sceptic*, whoever he may be, that he can be furnished with ample proof of its truth, by application to Mr. F. at the Palladium Office.

of Timber that appear to be almost incredible—yet seemingly well authenticated. Ross Cox mentions a Pine in the *Unpqua* country, a little to the southward of the Columbia River, which measured 57 feet in circumference, and 216 feet in height to the *first branch*. Another, on the banks of the Columbia, that was 300 feet high, and 46 feet in circumference at the height of a man, and that *sound* trees, in a *perfect state*, of from 200 to 280 feet in circumference were common.

Vegetation is so rapid in this country that Barley sown the last week in July, has been reaped in the second week of September, for several years successively, and on land that was deemed poor and exhausted, and a more abundant crop has been seldom witnessed.

From every observation and experiment that has been made, no doubt can be entertained of the great fertility of the soil of this fine country, not only every vegetable production which thrives in similar latitudes in Europe, prosper here; but others which require either greater heat, or greater care, are found to succeed in CANADA, without any particular attention. The finest Melons and Cucumbers are brought to perfection in the open fields, and tobacco is cultivated with success. Even the wild Grapes become ripe by the first or second week in September—so that there is every reason to believe, if vineyards were cultivated, the inhabitants of this country might add a variety of choice wines to their list of articles of home consumption, and of foreign trade. We have drank of wine very nearly resembling, and but little inferior to, that of Oporto, which was made from the common wild grape of the country.

It is remarkable, throughout this country, that the soil and growth of timber upon the immediate banks of the rivers and lakes is inferior to that of the country further back—and it appears that all the larger rivers and lakes have a second bank at some distance behind that which at present bounds the waters. This is even the case with the St. Lawrence and the Great Lakes. On another occasion, when our limits are not so circumscribed as they necessarily are at present, we may venture upon an explanation of these phenomena. In the meanwhile, however, we may briefly state our conviction, not only that our principal lakes have been *salt*; but, that they are the remnants of

one vast inland sea which at no very remote period covered the greater part of the Upper Canadian Peninsula ;—hence the innumerable remains of marine plants and zoophytes, still to be met with in this region.

In all newly discovered countries, that are thickly wooded, the navigable waters are the great thoroughfares along which the inhabitants must conduct their business. The first settlements are therefore formed along the banks of the principal rivers and lakes—extending backwards, only by slow degrees, as the lands in front are occupied. In Canada, a remarkable exemplification of this kind of progress has been seen. A long straggling settlement from a hundred and fifty miles below Quebec, to Sandwich, being a distance of more than a thousand miles, was formed before the people ever thought of penetrating into the interior for any other purpose than that of hunting, or bartering with the Indians. Even at this day the most remote *settled* Townships, from the frontier waters, with the exception of the road from Toronto to Penetanguishene, are not more than from 40 to 80 miles. It is not, therefore, in this country, as it is in the back parts of the United States, where an emigrant, purchasing land, has frequently the painful necessity of commencing his establishment at a vast distance from any neighbours. In Canada there is abundance of the most fertile land in every variety of situation, in the midst of, or closely adjoining to, active settlements, that may be had from Government, or from the Great Canada Land Company, on moderate terms; and on such credits (*if desired*) as enable the purchaser to make good his payments at his own leisure and convenience; and we may here state that we have never heard of a single instance wherein the Government has taken advantage of defaulters—and many such there are. The writer of this Sketch purchased a farm, in the township of Hope, from a man who had occupied it for eighteen years without fulfilling any one of his engagements with the Government from whom he had bought it—and our author, himself, paid the fees which had been due for nearly *twenty* years, and *no interest was charged*. This instance, and there are hundreds of others of a like nature, speaks loudly for the liberality of those who are at the head of this department.

Nevertheless, justice to the question in hand, and the best interests of this Province, demands a few important strictures upon this *all-important* subject, which our long experience enables us to urge home—particularly as a most wretched, fluctuating, and injurious policy in the mode of granting land, and the amount of fees to be paid thereon, has been more recently pursued;—a policy that has driven thousands of good subjects into the United States, who would otherwise have remained with us.

In the United States a certain price, per acre, is fixed upon the public lands that are in market. Its present rate, and it has been the same for a series of years past, is *One Dollar and a Quarter* per acre, and we see that a proposition has been lately made in Congress to reduce it to *three shillings and five-pence*, of our currency, on *FIFTEEN MILLIONS* of Acres west of the Mississippi. The rate being fixed and universally known, the purchaser may *pick and choose* wherever he pleases; having decided upon a lot he has no further trouble, whatever, than to pay his money, and take his Deed, which he may have in *five minutes*!

Unfortunately the case has been widely different here—But, trusting in the hope that our land-granting affairs will be better managed for the future, we will pass over those unwarrantable and expensive delays, and troubles which, heretofore, have occasioned so many heart burnings to the *grantees*; and touch only on the enormous and impolitic amount of fees which have at different times been demanded—and point out the remedy.

When the last edition of this Sketch was in the course of preparation for publication, the following high fees were demanded:

50 Acres,			<i>gratis</i>
100 "			£ 12 Sterling
200 "			30
300 "			60
400 "			75
500 "			125
600 "			150
700 "			175
800 "			200
900 "			225
1000 "			250

1100 Acres,			275 Sterling.
1200 "			300

Although, at that very period, thousands, and tens of thousands of acres of land in more convenient situations, were to be had from private individuals at lower rates. The absurdity of this schedule was speedily felt, and a line of very fine Townships in the Newcastle and Midland Districts, were thrown open for settlement on payment of the fees ordered in Council on the 5th of January, 1819, to wit:—

TOWNSHIPS.

Now, however, the system is so far changed that the payment of fees is done away with altogether; and, in lieu thereof, monthly sales are held in different parts of the country where the lands intended for sale by the Government are situated; at which the lots are put up for sale by auction at a certain *upset* price; proportioned to the average value of wild lands in that particular neighbourhood; and they are knocked down to the *highest bidder*. So that, no lands are now GRANTED, according to the usual accepta-

tion of the persons, such as men, there who *have* grants of land in the Army or Navy, as it is a chase of land to a table in another

U. E. class ever they find however, but it is not on the present much improved however, and must be proved. The mode of actually purchasing the lords of the land to pay *expenses* character of the land and *speculation* possible rate of the country—a tedious, laborious site coast, the *peace* of the country amply repaid money, and sales and all we know a

Let, then, or 5s. at most for himself, unnecessary in these times *more merely* it, be it even the of any

tion of the term, not even to what are called *privileged* persons, such as *Military* and *Naval* claimants—Gentlemen, therefore, who have retired from the service, and who *have* claims on the Government, instead of receiving grants of land in proportion to their respective rank in the Army or Navy, as heretofore, are allowed *Remission Money*, as it is termed, (according to their rank) in their purchase of lands at the public sales alluded to—and according to a table of rates that will be found under the proper head in another part of this work.

U. E. claimants can, as a matter of right, *locate*, wherever they find a vacancy. Much abuse and favouritism, however, has been manifested in the exercise of this right. But it is no part of our business to turn grievance mongers on the present occasion. Our system of *land-traffic* is of so much importance to the general prosperity of the Province, however, and it is still so lamentably imperfect, that we must be permitted to make a few remarks calculated to improve it. The more plain, simple, and straight-forward, the mode of proceeding the better. The land being originally purchased from the Indians, who are the aboriginal lords of the soil, has again to be parcelled out, and *sold*, to pay *expenses* and *prime cost*. It should be beneath the character of the British Government to turn LAND-JOBBERS and *speculators*. It should therefore be resold at the lowest possible rates to facilitate the speedy settlement of the country—and, so as to leave the poor, but honest and industrious, labouring, emigrant, *nothing to cry* on the opposite coast, claimed by Jonathan! *Three shillings and nine pence* of our Halifax currency, per acre, would amply repay our Government for the original purchase money, and all costs attending it—together with the resale and all the minor expenses of the department. **THIS WE KNOW AND COULD PROVE.**

Let, then, *three shillings* and nine pence of our ordinary c'y, or 5s. at most be the price; and let the purchaser go and choose for himself, pay his money, and take his deed without any unnecessary bother, or waste of time, or money. No man in these times buys property for the sake of a nominal tenure *merely*. If he lays out his capital, or any portion of it, be it ever so small, leave him without trammels, or fetters of any kind, and he will be certain to turn it to *some*

good account—either for himself or others. As to roads, bridges, mills, &c. they ought, in every instance, in all new Townships, to be commenced and carried on by the Government—as they were in the Genessee country by Sir Wm. Pulteney and his successors; and, as the example has been more recently followed in this country, by the Canada Company on the Huron Tract. We can speak to the point on this subject, and shew an example worthy of imitation, and one that ought to occupy the attention of our Legislature more than it has done. The writer of this Sketch was the first applicant for the scite of the present town of Peterborough, in the Newcastle District, in which the first house, and the first Mill were built by him. The situation of Peterborough (*which has now assumed the rank of a County Town*) is so admirable, and the country around it so fine, and so well settled, that it was soon found expedient the Government should undertake the erection of Mills upon a more extended scale than any private individual, at that time, was enabled to undertake, for the public benefit. This was done, and a sum amounting to about *Two Thousand Pounds*, from the public chest, was expended upon Grist and Saw Mills a little above the first named Mill. In the course of a very few years the Mills erected by Government were sold at public auction, when they realized £500 MORE THAN THE FIRST COST, although they had been constructed without much regard to economy.

Now, this important fact clearly shews to what extraordinary advantage, both to the country generally, and to the Government itself, a certain amount of the public monies might be kept constantly afloat in the most beneficial manner; and, *unspeakably*, for the public good.—This would be effected by an appropriation expressly for that object. For the comparatively trifling sum of £10,000, *Five new Grist Mills* could be annually constructed, at a vast profit to the Government, in as many new settlements where they might be more required, precisely upon the plan adopted at Peterborough.

It was by the adoption of a similar wise principle that the Genessee country, in the State of New York, so early began to flourish under the direction of SIR WM. PULTENEY, and his agents; and it is on the same principle that the

CANADA COMPANY have been able to effect so much in the western parts of this Province.

As much *senseless* clamour has been occasionally heard, even in this Province, which has been so much benefitted by their operations, against the CANADA COMPANY; and, as it is important, on various accounts, that a true statement of their plans, and of the very satisfactory results already derived from their operations should be generally diffused—we shall here take a review of the entire proceedings of the Company since its formation.

During the last Session of the Provincial Parliament, an *official statement* was required from the Company, with a detail of the several sums expended, and brought to their credit in account with the Executive Government, in part payment for lands sold them in this Province, for making roads, bridges, wharves, piers, and other erections, &c. &c. together with a statement of lands purchased by the Company from Her Majesty's Government during the twelve years ending the 1st of January, 1838, *according to the spirit, intention, and meaning* of the 30th article of the agreement between Her Majesty's Government and the Canada Company; with all other particulars;—and, it is from this document, and the full and explicit replies that were so ably drawn up by the resident Commissioners here. The Hon. WILLIAM ALLAN, and THOMAS MERCER JONES, Esq. that we shall now present our readers with a clear view of every thing of importance relating to the subject:

The original agreement between the Canada Company and Her Majesty's Government was for the purchase of a portion of the Crown and Clergy Reserves in this Province.

The former consisting of 1,384,413 Acres.

and the latter..... 829,430 do.

Forming a total of.....2,213,843

According to the report of the Commissioners appointed for that purpose by Her Majesty's Government, those lands were valued at three shillings and six pence an acre, at which rate the Clergy Reserves amounted to £145,150 5s

In consequence of the difficulties, however, which subsequently arose, regarding the disposal of the Clergy Reserves, they were withdrawn by Her Majesty's Government—and in lieu thereof, and for the same amount in the ag-

gregate, a block of land in the London and Western Districts to the extent of about One Million Acres was made over to the Canada Company, as will appear from the first clause of the second agreement between the Earl Bathurst and the Canada Company.

This Block formed part of an extensive Tract of Land purchased by the Government from the Six Nations Indians, was unsurveyed and indeed unexplored, was a considerable distance from all settlements without the advantage of roads, or even of contiguity to them, advantages which the Clergy Reserves possessed in an eminent degree.

In consequence of these circumstances the Canada Company were allowed one-third of the purchase money, or £48,380, to be expended in public works and improvements within the Block, per clause 2 of the same agreement.

To obviate the possibility of misunderstanding as to what might be considered "Public Works and Improvements," it was stated in clause 3 that they would be understood to apply to Canals, Bridges, High Roads, Churches, Wharves, School Houses, and other works calculated for the common use and benefit of the inhabitants of the Tract.

Clause 4, of the same agreement, is to the effect that the plan and estimate of any such undertaking as those referred to, shall originate with the company; but that the company must invariably submit them to the Governor in Council prior to his consent being given, that the expense thereof shall be received in part payment of the purchase of the land.

In clause 5, the company are required, upon the completion of any such undertaking, to lay before the Governor in Council a statement of the cost incurred by them in effecting the same, and if the Governor in Council shall deem such work to have been duly executed according to the plan upon which the estimate was founded, and in such manner as was intended at the time that the plan and estimate given in by the Company was approved, that they shall then be allowed credit for the amount actually expended, provided it have not exceeded the estimate. If, however, the expense should in any instance exceed such estimate, and the Governor in Council shall deem such excess to have been justified by special circumstances, the Company shall in that case also be allowed credit in account

for the amount actually expended, provided such sums do not exceed in the whole one third of the said purchase money of the million acres.

The amount which the Canada Company have obtained credit with Her Majesty's Government for under these clauses to the present date (Feb'y 1, 1838) is £27,493 12s. 10d. for the following works :—

* Opening a Sleigh road between Wilmot and Goderich, 64 miles and building 4 log bridges,	{ £1963 10 5
Opening a Road from the Goderich line to the Township of London, 35 miles, making 2872 rods of causeway, and erecting 4 bridges,	{ 3215 15 0
Turnpiking the London Road 8000 rods, at 7s. 6. and extra work on causeway, £19 14s.	{ 3268 1 6
Opening Road from Wilmot, through Goderich, to Lake Huron, the full width of 65 feet, being 61 miles, with the necessary cross-ways and bridges,	{ 10,289 1 10
Turnpiking road from Wilmot to Lake Huron, 18,803 32 00 rods.	{ 7409 15 3
Opening the Bayfield line of road, 13 62 00 miles, with 873 16 25 rods of causeway, and two bridges,	{ 678 1 4
Opening 6 miles of road from Hicks, through Goderich to the Lake, and making 323 rods of crossway.	{ 200 10 0
Opening 5 2-4 miles road through Tuckersmith, and extra work,	{ 303 17 6
Amount expended towards erecting an Episcopal Church at Goderich,	{ 100 0 0
	£27,493 12 10

The statement just exhibited shows the credit claimed by the Company in part payment of the *Huron Tract*. All the work has been performed strictly in accordance with plans and estimates submitted for the decision, and which obtained the approbation, of the Governor in Council—evidence of the performance being given under oath.

The Canada Company could have no possible interest in deception.

The amount already passed to their credit,
is as has been shewn : £27,493 12 10

Various contracts are now in progress for
works sanctioned by Her Majesty's
Government in the Huron Tract, on
which the amount already paid is..... 2,500 0 0

* It is unnecessary to specify the dates, or more of the minutiae, in these our narrow limits.—Ed.

And on which, when completed a further amount will have to be paid of about 5,000 0 0

£34,993 12 10

The Land Patented in the Huron Tract to the Company is only 770,584½ acres, leaving still to be surveyed 329,415½ acres, which have yet to be opened by means of Roads, Bridges, &c. to settlement, for which, and other works, still required, even in the settled portion of the Huron, so soon as the present works are completed, and the amount passed the Governor in Council, only about 13,900 pounds will remain.

In other works, the expense of which is not noted in these statements, they have expended upwards of £87,000, which had the Company deemed the improvement fund adequate to meet as well as to make the required Roads, Bridges, &c. yet to be constructed, might have been made under the above mentioned clauses.

The Company were further required, by the Legislature of U. C. to furnish a statement of the Lands purchased by them from Her Majesty's Government during the twelve years ending the 1st day of January, 1838, according to the spirit, intention, and meaning of the 30th article.

This they were quite willing to furnish as soon as time shall admit of their doing so.

In the meanwhile, as it may be satisfactory and as bearing upon the subject in some measure of the present enquiries, and as shewing the gross quantity of Land, *actually* under Patent to the Canada Company, we beg leave to annex a copy of a document recently addressed by the Commissioners of the Canada Company to a Committee of the Honorable the Legislative Council sitting upon a Bill lately sent up by the House of Assembly.

From this document it will also appear how very unfounded has been the assertion that the Canada Company avoid the payment of the Tax already imposed upon wild land by only taking out Patents to the extent of their sales of Land when the Tax falls upon the purchaser.

It is there shewn that the whole purchase made by the Company of Her Majesty's Government was 2,213,843 acres, of which are now under Patent to the Canada Company, unsold or unlocated Lands on which the Company

are now
impo

Located, and upon which the present occu-	
piers pay those Taxes.....	692,282
Remaining still vested in the Crown.....	810,056
	2,213,843

Or, it may be said, in round numbers, that 2.3ds of their contract term are now expired, during which period the Canada Company have taken out Patents for two-thirds of their purchase—that they have actually located one-third of the whole purchase on which the Taxes are paid by the occupant—that they hold, unsold and unproductive to themselves, one-third, on which a large amount of Taxes has already been paid by the Company, and that the remaining third is applicable to the unexpired term of their contract.

In justice to the Canada Company, we must add the following remarks to what we have already brought forward, which were written by Mr. JONES, to be added to the Memoranda, submitted to the Hon'ble the Legislative Council, whilst the Bill for the Taxation of Lands not then ceded by the Crown, but which *were* to be patented in fulfilment of their contract to the Company:—

Clause 21, of the first agreement made between the Earl Bathurst and the Canada Company, is as follows :

“ During a period of fifteen years to commence and be computed from the 1st Jan. 1826, (subsequently extended to sixteen years commencing 1st July, 1826, per clause 9 of the second agreement, dated 23d May, 1836,) the company shall, in each year, enter into possession of so much of the Lands *to be conveyed* to them as, according to the valuation to be made by the Commissioners, shall be of the value of £20,000 Sterling,” and this is the minimum which I have already taken the liberty of calling your attention to.

In proof that the Canada Company have, to the present period, fulfilled on their part the obligations conveyed under this clause, I beg to submit for your consideration the following statement :

Between the 20th June, 1827, and the 20th June, 1837,
the Instalments paid by the Canada Company to Her

Do. do. 1834.....	19,000
Do. do. 1835.....	20,000

and in each of the seven succeeding years the like sum of
£20,000.

Clause 11. of the arrangements between the Company and Her Majesty's Government sets forth that the contract is to terminate on the 1st July, 1842; when the Company must take up the remaining lands, or abandon them.

In consequence of the difficulty which arose afterwards, relative to the disposal of the Clergy Reserves, they were withdrawn by the Government, and in lieu of them, and for the same amount of consideration money, Her Majesty's Government substituted to the Canada Company the Huron Tract of about one million of acres, per clause No. 1. of arrangements, dated "Downing Street, 26th May, 1826."

In clause 7. of the same agreement, it is stated that all the provisions contained in the various agreements for the security and benefit of the public, shall be applied to, and affect the lands substituted for the Clergy Reserves.

Contemplating the sale of the Clergy Reserves to the Canada Company, Clause 24, sets forth that the Canada Company should each quarter of a year take possession of the Lands granted to them on the principle of one lot of the Clergy Reserves, for every two lots upon which they might enter of the Crown Reserves so long as a sufficient quantity of each description remained untouched.

Subject to those conditions, it is stated in clause 25, that the Company have the right of deciding which of the Lands included in the proposed Grants to them, shall be occupied by them, their Agents, Grantees, or Lessees, at any particular time, and that Her Majesty's Government will not controul the power of the Company to select such districts or townships, as to them may at any particular period appear best adapted for effecting settlements.

From the foregoing premises the deduction is that the Lands in the Huron Tract and Crown Reserves, until patented to the Canada Company, are the property of the Crown, with a reservation in favor of the Company that they shall have pre-emption of purchase on certain defined principles or conditions, which conditions being fulfilled on their part, Her Majesty is bound to give a Title in free and common socage for the same to the Canada Company.

That the Canada Company are unrestricted as to which description of Lands they shall take up annually a certain minimum being fixed, but above that minimum, they are

only limited in quantity by the extent of their contract and the amount at their credit with the Receiver General.

So soon as those Lands are patented they become private property, and as such, of course liable to taxation, and under such circumstances the Canada Company have paid taxes to a considerable amount, but until they are patented they are Crown property, and if the Legislature now impose a tax upon them, it will of course have to be paid out of the Colonial Revenue.

That the clauses imposing upon the Huron Tract all the obligations intended to have been applied to the Clergy Reserves, sets at rest the argument used by some, that although the House of Assembly have no power to tax the Reserves—the Huron Tract being a more positive purchase, and *now* the property of the Canada Company that they have over it.

The Huron Tract is not more private property than the scattered Crown Reserves and the right of taxation or injustice towards the Company would apply equally to *each description*.

Further interesting and valuable information furnished to the Upper Canada Legislature, by the Commissioners of the Canada Land Company, under the date of 15th January, 1837.

In lieu of the Clergy Reserves, agreed to be sold the Canada Company, in the first instance, for the sum of £145,150 5 0. The Government substituted to the Company a Block of Land in the London and Western Districts called the "Huron Territory," and containing one million acres, unsurveyed, at a distance from all settlements, without either the advantage of roads or even contiguity to them—advantages which the Clergy Reserves possessed in a superior degree.

In consequence of these circumstances, the Company were allowed one third of the purchase money agreed to be paid for this Tract of Land to be expended in public works.

This amounted to £48,383 8 4, as will be found per the first clause of the arrangements between His Majesty's Government and the Canada Company, dated Downing Street, 23d May, 1826.

The 2nd clause specifies the public works contemplated,

being Canals, Bridges, High Roads, Churches, Wharves, and School Houses.

The 3rd clause—That although the plans and estimates of such works will originate with the Company, they must invariably be submitted by them to the Governor in Council, prior to his consent being given, that the expense of the undertaking, when completed, shall be placed to the credit of the Company.

The 5th clause requires the Company to lay before the Governor in Council a statement of the cost incurred by them, in carrying such undertakings into effect, and sets forth that if the Governor in Council should deem such works to have been duly executed, the Company shall be allowed credit in account for the amount actually expended.

The 8th clause sets forth that the Block of One Million Acres shall be surveyed at the expense of His Majesty's Government.

At the present period the Canada Company have completed the formation of about 100 miles of road, superior to any which are to be found in this Province, erected the necessary bridges, &c. at a cost of £25,274 10 0, for which they have submitted the required vouchers and received credit for the same with the Government. They have submitted the estimates of the expense of making about 38 miles more, amounting to £3,088 8 0, which were approved of, and the works are now nearly completed, when the proper vouchers will be laid before His Excellency in Council.

Estimates for the following works now in progress and nearly completed, have been submitted and approved:—

On the 21st October, 1834, for opening a road from the Town of Stratford, in Easthepe,

To Zorra, 7½ miles,	£520	0	0
From Bayfield Mills, Tuckersmith, to Wilmot Road, 1½ miles,	134	13	9
From do. to London Road, 1½ miles	273	16	3

These works were approved under the same Minute of Council as the Turnpiking of the London Road, viz. on 9th May, 1835.

On 12th January, 1836, for opening a road through the Township of Stanley, from the London road to the Lake shore, 8 miles,	£488	8	0
Do. from Town of Goderich to the River Bayfield, between the 1st and 2d concession of former Township, 14½ miles,	761	0	0
For opening a road through the Township of Goderich, between lots 25 & 26, from 11th to 1st concession, on Lake shore, 6 miles,	260	10	0
For the construction of a bridge over the Maitland, at Goderich,	400	0	0
On the 13th of August, 1836, were submitted the estimates for the erection of a bridge over the Bayfield, on the London road, between the Townships of Tuckersmith and Stanley, amounting to £250, which was approved by a Minute of Council on 13th of the following month—shewing a probable total of expenditure on works now in progress, under the sanction of the Government, of	£3,088	8	0
And a grand total of expenditure	29,462	18	0
Leaving a balance applicable to further improvements of	18,920	10	4

In addition to the foregoing, the sanction of the Company has been given to the construction of 21½ miles of road not yet submitted to the Government, but which will be done in the course of a week or two.

The only two points now remaining to be proved as to the proper fulfilment by the Company of all the engagements on their part with the Government, are the annual payments under their contract amounting, in the aggregate, at the present period, to £205,555 11 2, for which they are ready to produce, if required, the vouchers from the Receiver General—and the settlements effected on lands annually taken up or paid for under the 30th clause of Minutes of the intended arrangements between Earl Bathurst and the Canada Company, viz :

“ The Company will, in each year, during the before mentioned period of fifteen years, place one half at least of the lands which, during those years may have been occupied and purchased by them, in the possession of settlers,

either as Grantees or as Lessees under them, in the proportion of one head of a family for every 200 acres of such lands."

That the Company have fulfilled this part of their undertaking will appear from the following statement:

Lands located up to 31st Dec. 1829,			90,796	Acres.

In the event of failure in placing one settler on every 200 acres contained in half the land taken up within the year by the Company from the Government, they were to forfeit to His Majesty \$25 for each such lot, to be expended by him in improving the land or water communication of one or more of the Townships in which the Company hold lands, or, if they preferred it, the Company might, *at their option*, expend within six calendar months after 31st December, in each year, \$35, in opening, constructing or improving public roads or bridges in some one or more of the different Townships in which the lands purchased by the Company were situated, and such forfeiture or settlement effected, should exonerate the Company from settlement duty on the remaining half of the lands taken up in each year—the latter alternative or the forfeiture of \$35, was accepted by the Company on 29th Dec. 1824.

The annual payments to His Majesty's Government by the Canada Company bear date from 1st July, 1826.

On the have been is £31,94 acres each were requ that perio

ficiently gration f spring of

To thi of partic vices ren from Eu

In 183 Compan and indee country, ipated, a Superint at home this year complete

On the 31st December, 1829, their payments appear to have been, in currency, £63,888 17 9, one half of which is £31,944 8 10, equal to the purchase of 912 lots of 200 acres each, being the number of lots on which the Company were required to place one settler or head of a family for that period.

The actual sales of the Company at this time are shown to have been 90,796 acres, equal to 454, 200 acre lots, shewing a deficiency of 458 settlements, which, at the rate of forfeiture agreed upon, would amount to £3,778 10, whilst during this period, in preparing the Township of Guelph for settlement, the Company had expended, in various public improvements, upwards of £13,500, being a surplus of nearly £10,000, applicable if necessary to the forfeiture for non-performance of settlement duty.

Since that time the expenditure of the Company in various public works, such as roads and bridges in the same Township has been about 2,000, and on various other roads in the Province, *exclusive* of the Huron Tract, they have expended as large a sum in addition.

In the year 1827, the Canada Company's Superintendent came out to this country to take charge of their affairs, but as many preparatory arrangements had then to be made, the Company can scarcely be considered to have been fairly embarked in their system of improvement, or to have sufficiently arranged their plans for turning the tide of emigration *from* the United States *to* Upper Canada until the spring of 1828.

To this period for the three preceding years, it is worthy of *particular attention*, as illustrative of the important services rendered by the Canada Company that immigration from Europe only averaged 13,096.

In 1830, by which time the exertions made by the Canada Company in diffusing throughout the United Kingdom, and indeed Europe, correct information in regard to this country, and its capabilities began to have the effect anticipated, and to which all the energies of the Company's Superintendent in this country, and the Board of Directors at home were directed with unremitting attention. In this year, therefore, we find their labours crowned with complete success, for the immigration amounted to

24,392

In 1831, it amounted to.....49,256
 And in 1832, it amounted to..... 51,429

In addition to the various measures taken, and so successfully too, for turning immigration from Europe to the Canadas, means were also taken by the Canada Company, for guarding, as far as possible, against the emigrant on his arrival at Quebec being diverted from his original place of destination through the interested representations of individuals to the United States, by the Canada Company granting him, in the event of his proceeding to Upper Canada and taking up land from the Canada Company, a free passage from Quebec to the Head of Lake Ontario for himself and family.

Immigration to this country reached its highest point in the year 1832; since that period it has fluctuated much, but the exertions of the Canada Company for promoting it have been unremitting. Various causes may be assigned for this falling off, local, political, and accidental, but it is not our province now particularly to allude to them, as our only object is to shew that the Canada Company are not the *mercenary land-jobbers* which their enemies have represented them to be, and the present prosperous state of this country and the turn immigration has taken to it within the last seven or eight years, is the consequence in a great measure of their exertions as well in this country as in England.

It has been frequently asserted that they have annually withdrawn large sums of money from this country, whilst the very reverse is positively the fact, as the proprietors well know, and as the various calls upon them fully prove.

In the improvement of the Huron Tract, and the various expenditure therein for bettering the condition of the present settlers, and for the inducement of the wavering or undetermined to settle there, by improved roads, modes of conveyance, erection of mills—roads unequalled in the Province to the extent of 100 miles, and as good as any to the extent of 100 more—a steamboat conveyance—advances to indigent settlers, many of whom, through such assistance from being altogether destitute without the means of subsistence, are now independent and possessing the power of assisting others in *their* turn.

For these objects the expenditure of the Canada Company has been little less than £60,000, and they now have works, either in progress or about to be undertaken, which will amount to £20,000 more.

Although the exertions of the Company have been directed to the improvement of the country generally, still they were more particularly turned to the settlement of Guelph, one of their largest Blocks of Land, and situated in the Gore District, and the Huron Tract, containing one million of acres, which, before the year 1827, had not even been explored, yet at the present time Guelph contains a population of 1,845, a thriving village with three handsome places of worship, artisans, mechanics, storekeepers, mills, distilleries, breweries and all the usual evidences of prosperity. The Huron Tract contains 4,500 inhabitants, with stores, mills, &c. &c.

In Guelph, their expenditure was upon the same scale as in the Huron Tract, and thus have the Company adhered to the grand and philanthropic objects contemplated by them on their formation.

Great as has been the expenditure of the Canada Company in the Huron Tract, it would have been greater still had the Legislature granted the application they made two years ago for a charter similar to the application now before it, for the improvement of Gaderich Harbour.

Hitherto the situation of this harbour has been a serious drawback in the settlement of that valuable portion of country, in consequence of a Bar formed at the mouth of the River Maitland, by the action of the North W. wind, and to remove which a good pier or breakwater is all that is necessary, according to the opinions of eminent and experienced Engineers who have been consulted, not only in this country but also in England.

This improvement, calculated to be of so much importance to the country at large, as well as to their own immediate settlements, the Canada Company were willing to undertake, at their own risk, advancing the money, but as they did so they thought that it would be considered only reasonable by the Legislature that, as the Company supplied the necessary funds, they should be authorised to levy tolls on goods and shipping at such reasonable rates as should be deemed meet by the Government to support

the incidental expenses of care and management, and eventually to pay a moderate interest on the outlay.

In support of the Company's application at that period, it was urged that, at that very moment, the autumn of 1834, several fine vessels were lying wrecked high upon the sand on the Lake shore, which could, during the heavy gales of that period, have easily made Goderich, had the harbour been accessible.

The House of Assembly, however, on that occasion, no doubt from not having sufficient information on the subject laid before them, rejected the application, and in consequence the whole of the next season was entirely lost; and the steam boat which had been built at such a heavy expense to the Company, from the ice having melted so gradually during the spring as to have had little effect in removing any portion of the bar, was unable to cross it that year, and remained in harbour to the great injury of the settlement the entire season.

The mouth of the Maitland is capable of being made one of the finest harbours in this country, is the only natural one, if the term may be so applied to one, having a bar at its mouth, between Penetanguishine and the Rapids of the St. Clair, a distance of about 300 miles—the importance of improving it and making it accessible to all vessels navigating those waters, needs no further comment or proof than that the number of valuable vessels wrecked, as before stated, in consequence of the state of the harbour amounted to nine.

The Company having been thus disappointed in obtaining a charter, still anxious that the improvement of the country should not be retarded through any want of exertion on their part, made application for a lease of the Water lots, on obtaining which, with authority to levy wharfage under reasonable restrictions, they were willing to undertake the improvements to a certain extent until such time as, by obtaining a charter, they might be encouraged in carrying all their plans of improvement into complete effect, (a privilege which it is respectfully urged by the Company was never before refused, when properly and respectfully applied for by places similarly situated with Goderich.)

This application was liberally granted by the Executive Government, and under the authority of this lease the Ca-

nada Company have already expended £3,000, and now contemplate a further outlay of £4,000.

Such is a brief statement of the more prominent benefits conferred on this country by the exertions and liberal expenditure of the Canada Company.

The foregoing statements have only reference, of course, to the operations of the Canada Company up to the dates of the documents themselves, or rather to the 31st Dec'r, 1837; at which period it would appear that the Canada Company had expended in public works of the first importance, as promoting the interests and comfort of their settlers, no less a sum than £27,493 12 10

Coming under the improvement clauses of their agreement with Her Majesty's Government—and upon works and for objects not strictly coming under that head, in addition, about..... 30,000 0 0

During the past year we understand that the Company have completed the erection of seven bridges, with $7\frac{3}{4}$ miles of road, for which they have laid before the proper authorities the necessary vouchers, and have received credit for the same, viz :..... 1,302 0 4

On various works, now in progress, but not yet completed—erection of bridges—one of a very superior construction—and opening 50 miles of road—they have expended upwards of 5,000 0 0

And before their entire completion, a further expenditure will be required of 6,000 0 0

On the improvement of the harbour at Goderich, they have expended upwards of 9,000 0 0

Making a grand total of..... £58,995 13 2

To Her Majesty's Government, in this country, they had paid, to the 31st Dec. last £250,000 0 0

And tri-annually, they have paid large sums for assessed Taxes on their unsold Lands.

The very superior state of their immediate settlements, and the prosperity of their inhabitants, afford the most satisfactory evidence of the judicious nature of the management adopted by this Company—as does the rapid advance

in prosperity and importance which this Province has made since the establishment of the Canada Company, and this after years of inactive torpor—the invaluable service which the formation of the Canada Company has been of to the Upper Province.

The active exertions of the Company have, to a great extent, filled the western portions of this Province with loyal British subjects; and it may not now be out of place for us, to reflect upon what might possibly have been the result of their sympathising acts—and the invasions of our peaceful territory—by our Republican neighbours, during the past and present winter, had emigration from Great Britain and Ireland not been promoted and directed to this country. And since the Canada Company have, undoubtedly, been eminently serviceable by producing the fortunate result, it may be asserted, without fear of contradiction, that the establishment of this enterprising body amongst us, was one of the most fortunate events that could have occurred to the Province. In the year 1829, it appears there were only four families in the county of Huron, yet that it now contains upwards of 5,000 inhabitants. At that period their important harbour was inaccessible to vessels drawing more than $3\frac{1}{2}$ feet water; whilst now, in consequence of the improvements carried forward with such spirit by the Company, the shallowest part of the Bar has $8\frac{1}{2}$ feet water upon it; and when their further improvements, now in progress, shall be completed this depth will be increased to 11 feet, and may be still further increased to 18 feet by carrying out the piers.

For the accommodation of the settlement, the Canada Company built a Steam Boat four years ago, which plies regularly twice a week between Goderich and Sandwich, at the head of Lake Erie; thus completing the water communication with the ocean.

It is now only necessary for the county to build their jail and court-house, when it will be declared a separate District; and the district town having the only harbour on the British side of Lake Huron for a distance of 150 miles, Goderich must, ere long, become a place of vast trade and importance; and, in the next Parliament, its population will entitle it to return two members to the Legislature; when, judging from the character of their constituency,

men will support the Canada Company.

Ever since the western Erie, the British and of the Detroit forgetting were fool rivals, and grand point committed the wonder the directly in desolate—LAND CANA make a great loss can merely other.

But then the evil the of; but, a LAKE HUR end to the it is under such public merchants sure as one report, it is

"Although the principal part which is done means increased other harbours as well as abundance business with

"To draw the Upper Canada

men will be chosen who will devote all their energies in support of the real interests of the Province, and in seconding the valuable and praiseworthy efforts of the Canada Company.

Ever since the tide of emigration set from the eastern to the western States of the Union, by the route of Lake Erie, the Canadians have been constantly twitted by tourists and others with the contrast of superiority exhibited on the Detroit Frontier over that of our own opposite to it; forgetting that it could not have been otherwise, since we were fools enough to cede the Michigan Territory to our rivals, and not only give them the *landing place*, but the *grand portage*, itself, to boundless regions. Having committed this incalculably mad and egregious error, could we wonder that the shores of our beautiful little peninsula, directly *in view*, but *out of the line*, remained commercially desolate—all that the magnificent undertaking of the WEL- LAND CANAL has done, or all that it ever can do, will not make amends to the Western and London Districts for the great loss sustained in the cession of Michigan—since it can merely transfer the shipping from one Lake into the other.

But there is a measure that would go far to recompense the evil that has been inflicted. It has been much talked of; but, as yet, little has been done in it. We mean the LAKE HURON RAIL ROAD from Toronto. There will be no end to the advantages arising from this national work—if it is undertaken on the scale and in the spirit on which such public works should be undertaken. Enterprising merchants at Oswego have long regarded this great measure as one of superlative importance, and in a very recent report, it is again alluded to in the following terms:

“Although Oswego has now secured to herself the principal part of the lake business—with the exception of that which is done at the port of Rochester, (which is by no means inconsiderable)—it will eventually be shared by other harbours; and when the fertile regions of the West, as well as those of Upper Canada, pour forth their superabundance of wheat, they will all carry on more or less business with the Western States and Canada.

“To draw a portion of the great Western trade through Upper Canada, a plan has been projected for the construc-

tion of a rail road from the Head of Lake Ontario to Sandwich opposite Detroit. Although the beneficial effects of such a road would be felt in Canada sooner than elsewhere it would not be long before they would be perceived along the whole northwestern part of New York. The construction of this road is for the present suspended—but when the Canadas become settled and prosperity restored, this project will again be revived and carried into effect. Besides this, the building of another rail road, to run from Lake Ontario to Lake Huron, has been contemplated. It is asserted that it is the determination of the Governor General of the Provinces to recommend to the Home Government the enlargement of the Welland Canal, and the construction of a ship canal around the rapids of the St. Lawrence ; thus opening the whole chain of inland lakes, except Superior, to the Atlantic. The results inevitably following such a work are so important, both in a military and commercial point of view, that the British Government, with her far-reaching policy, cannot long hesitate to execute a project so truly grand. What effect it would have upon the whole commerce of the lakes, time alone can tell."

Thus far all the business carried on between Ontario and the upper lakes has been through the medium of the Welland Canal ; and the time has now arrived when it must be greatly enlarged, and the works rendered more durable. On the importance of such a canal it is not necessary to dwell. Its merits have frequently been discussed, and are too well known to require repetition here. But if one would but look forward to what the Western country is to be, and endeavour to estimate the amount of business that must eventually be transacted between the Atlantic and the western States, he will be led to the conviction that the time is coming when such a work must and will be constructed. With such an enlarged communication as a ship canal between the waters of Lake Ontario and Erie, and the *Great Rail Road from Toronto to Lake Huron* such a route between the east and west would then be opened, as would defy all competition.

It is very gratifying to learn that, in despite of all our public trials, the affairs of the Welland Canal are prosperous,

OPENING OF THE WELLAND CANAL.

From the Oswego County Whig.

It is with pleasure we lay before our readers the following letter, which was politely furnished for publication, on the subject of the Welland Canal. It shows that notwithstanding the outrages of our citizens, and the mad and unheard of course pursued by many of them, who would, to gratify their own evil propensities, sacrifice every principle of honesty, of interest, and destroy the whole business of Oswego, and ruin her prospect for years, the canal is still open to our citizens, and every exertion will be used on the

part of the Canadians to aid our forwarders in the prosecution of their business.

St. Catharines, U. C. 23d Jan. 1839.

CHAS. SMITH, Jr. Oswego---

Dear Sir—You are, no doubt, even at this early season of the year, beginning to think of next summer's business through the Welland Canal, and it may therefore not be amiss to inform you at present I see no reason why the same should not be open as early in the spring as vessels can leave your harbour to it. We are keeping the water on throughout the whole extent of the canal, and have one lock only, No. 17, in course of repair, which will be done in March—the other usual trifling repairs and cleaning out the short levels, will also be done in good time.

The vessels lying at Port Robinson are all safe, and I have given orders to the men in charge of that level to keep it well up so that they shall not ground. I really hope that those of your village whose interest it certainly is, to have the free use of the canal, will use their influence to ensure it without interruption. It depends mainly on yourselves, and as far as my exertions can go to have it ready for navigation by an early day in April, they shall not be wanting, I assure you.

Yours, truly, W. B. ROBINSON,
Superintendent Welland Canal.

But it is high time to return to the point from whence we digressed to treat of the Canada Company's affairs.

The New Townships are formed out of recent purchases by Government from the Indians, who receive their payments annually, in clothing, ammunition, and such articles as they require. It must be interesting to many readers to see a statement of some of these purchases; the following are amongst the most recent—with the exception of Sir F. B. Head's celebrated treaty, of which more anon:—

1818, October,	The LAKE HURON Purchase,	<i>per annum.</i>
	of 1,592,000 acres,	£ 1,200 0
	The MISSISSAUGA Purchase,	
	of 648,000 acres,	522 10
Nov.	The RICE LAKE Purchase,	
	of 1,861,200 acres,	740 0

1819, April, The LONG WOOD Purchase,
 of 552,190 acres, 609 0

1820, Feb. The MCHAWK Purchase,
 [*Midland District*] of 27,000 acres, 450 0

Being 4,680,390 acres, at the annual charge of £3,512 10s. which is defrayed by an appropriation of part of the am't received for fees on the grants of land to emigrants, or for sales. This system prevents any complaints, or even a murmur of any kind, from the *Aborigines* of the country, who live on the best terms with their white neighbours.

Since the purchases just named were satisfactorily accomplished, Sir F. B. Head attempted another and more extensive bargain for the whole of the Indian Lands on the south side of Lake Huron, to be paid for in money, on condition that all the Indians having claims upon them, should retire to, and remain upon, the Manitoolan Islands. This agreement was in fact concluded upon, when through an unfortunate mis-understanding, which occasioned some angry feeling and discussion at the time, and the departure of Sir F. B. Head from this country, the affair remained unsettled; although it will probably be eventually amicably arranged, when a vast additional territory, in Upper Canada, will be thrown open for survey and settlement.

Whilst engaged in this part of the subject, it may not be amiss to give a word or two of advice to Emigrants of all classes, from one who has seen a good deal of the country.

It must always be taken for granted that whoever leaves England, no matter where he goes, must experience some change for the worse; for if he is no otherwise affected than in his feelings, he must suffer a temporary laceration that will jaundice every first view he may take of the new country to which he goes; and it is not pretended that even CANADA is so heavenly a land as to do away at once with all such views and feelings, although the writer of this account has but little hesitation in stating that it speedily takes fast hold of the new comer—and that, if a fair comparison is made between the advantages and disadvantages possessed by the various Colonies of Great Britain in different parts of the world, and that those things are coolly and candidly weighed, the decision *must be* in favour of CANADA; which is undoubtedly, one of the most fertile and magnificent re-

gions of the Globe ; peopled by the subjects of Great Britain—in the full possession of British Laws, and immunities ; and, with a Constitution nearly on an exact model with that of England, and which is likely to be still further perfected—but without the vexatious operation of a *tythe system*, with scarcely any taxes, and with many other privileges it would be tedious to name on this occasion. Were it not for the difference of scenery and climate, a man emigrating from England to this country would scarcely feel sensible of any immediate change, since he finds the same laws, manners, customs, language, and very often the same faces, which he had formerly known.

With all these superior advantages and enjoyments, which are such as can be had in no other colony, some individuals may be found to undervalue them, and be discontented, but these instances serve as lessons to others. Let one of them be here named : A man who arrived in this Province from the north of England with a few pounds in his pocket settled on a farm between York and Lake Simcoe ; the industry and economy of five or six years, in this new situation, made him comparatively independent. He had a sufficient quantity of land cleared, and a saw mill, to bring him a handsome income—and he lived at ease, and with plenty. But it is the nature of man to be restless and dissatisfied ; so it was in this instance. Although he had never enjoyed so much affluence at any former period of his life, this man grew uneasy ; he thought of England, of his former abodes, his home, his ancient friends, and his recollections became insupportable—he sold his farm, his mill, his stock, and once more set his face towards England—the voyage was passed, a few hours brought him into the midst of the scenes of his youth—he again took a farm, stocked it, again tried the fluctuations of markets and fairs, and was again bankrupt, fatally bankrupt, for now there was nothing left, and this foolish man ended his days in a work house ! Frightful exchange for the ease and independence of a CANADIAN YEOMAN !

Those who labour under the bitter feelings of expatriation should consider that the same sun, and the same moon and stars which shine on the scenes they have left behind, gladden creation here : and that the Great Father of all,

reserved tr
that is pra

who is the same *yesterday, to-day, and forever*, is alike present every where. Let the beautiful reply of the immortal HOWARD, which he gave to an expostulating friend, on the eve of his departure for the southern parts of Russia, where he died, be always in our recollection, "The road to Heaven is quite as short from Cairo, as it is from London!" And let them consider themselves as the workmen employed by Omnipotence to lay the foundation of what is to become hereafter a mighty Empire, in which their children's children are to have an inheritance and a name, and that what are now the beautiful fields and gardens of England, once looked as a wilderness in the eyes of our forefathers.—Of what value is that religion, or philosophy, which for ever chains its possessor down to present and painful realities? Let us be wise, and learn how to appreciate those advantages and blessings which may be actually enjoyed in this our adopted country, and sorrow, regret, and despondency, will soon be banished from our dwellings!

But the instances of men taking the gloomy side of the question, are rare; particularly amongst the lower class of society, to whom the advantages are much greater than any other country affords. His land (which is a Freehold) costs him little or nothing; a few months labour for others, should he have no money at all, [at the high rate of wages in this country] enables him to stock his farm, on which he may keep a yoke of oxen, or a pair of horses, constantly employed, besides leaving timber sufficient for fire wood for many years. He should, however, be careful not to destroy his timber in a heedless manner, by burning it in large log heaps, after he has a few acres cleared. Some of the finest timber in the world is often considered so great an eye-sore, that the sooner it can be utterly destroyed the better; but if, on making the clearance, the top and under brush only, were burnt in the field, and the heavy timber was cut into cord wood, or split into rails, instead of being consumed in one universal conflagration, it would be much better for the small Freeholder; and afterwards, when the whole projected clearance was made, and it became necessary to attack the reserved trees, only to thin them out, in the same manner that is practised in the wood lands of England, taking those

trees only which have arrived at maturity, and leaving the young thrifty wood to improve—several generations must appear and disappear before any serious inconvenience could arise from the want of fuel. Of course there is not the same necessity for such economy on the larger grants.—After all, there is the comfortable assurance of abundance of coal in various parts of the country; and from the many navigable waters intersecting it in almost every direction, that useful article can never be very expensive.

For a great number of years to come there will be an ample range for a large stock of cattle and pigs in the woods and on the plains—so that the small occupier will be freed from the necessity of having any part of his land in pasture, unless it should be his choice to have it otherwise. Swedish Turnips are found to answer extremely well, and to stand the utmost severity of the climate; with a couple of acres under a crop of this invaluable root, and the straw of his Maize, Wheat, Barley, or Oats, he may maintain, comparatively, a large stock of horned cattle through the winter; and in the summer the only expense attending them will be an occasional visit, to see that all are going on well. Pigs grow very fat whilst running at large in the woods, especially towards the fall of the year. All the taxes, or assessments, put together, which a man of this description has to pay, does not amount to more than a few shillings—and, as to raiment, it is customary to grow wool and flax sufficient for the clothing of his family: Sugar he manufactures himself, so that he has only a little *tea* to purchase, should he require, through custom, the use of that luxury. Many people in country situations use the young shoots of the *Hemlock Tree*; and other herbs of the forest of agreeable flavour, in lieu of tea, without any bad consequences, or disrelish. If he is a *Tobacco-smoker* or *chewer*, he may raise as much as he pleases in his own garden.

Wages, compared with those paid in Great Britain, are still very high in this country; and hitherto, in the Upper Province, it has not been difficult to procure work. In many parts, indeed, there is yet a scarcity of labourers.—It is true that money is not now plentiful; but there is scarcely any thing that the older residents have to spare in payment of wages that is not useful, nay, absolutely necessary to those going on to a new farm; and two years be-

For

ing allowed by Government for the performance of settlement duty (which in favourable weather may very often be done in one month) the poor emigrant has plenty of time to earn a yoke of oxen, and a cow or two, a few pigs, seed corn, and potatoes, &c. &c. besides the necessary provisions in pork and flour, until his own crops are ready; and should he not prove an expert axeman, even to hire men to do his settlement duty for him, which is often the case. Several instances have occurred where English rustics, by *threshing alone*, [where every *ninth or tenth* bushel was allowed for the labour] have earned wherewithal for the cropping and stocking their new farm.

In consequence of these advantages, there are many individuals, who have abundance and to spare, even upon the smallest Grants, after being more than three years in the Province. All the poor emigrant, who arrives at Quebec or Montreal, has to do, is to push forward as speedily as possible for the Upper Province; he must not suffer himself to be deterred by its apparent distance, and he must stop his ears against all the insinuations and seductions that will be used in his passage up the country, especially by Americans, along the whole coast of the St. Lawrence, who will try every art to seduce him into the United States—Let him ever bear in mind what he may have been frequently told—and with much truth—that Upper Canada is the best “poor man’s country in the world;” and let him determine on making actual experiment for himself; and, if he has only industry, *sobriety*, perseverance and integrity, we will not only answer for his success, but that neither himself nor his children will ever have occasion to repent the choice which he has made. Such a man may in a short time realize every object of a reasonable ambition, and become one of the most free and independent men on earth.

Should this slight sketch fall into the hands of any of the poor class of Emigrants, before they can have made a settlement, it may be well to give them some idea of the expense they must be at, before they can be said to be at all comfortable in their new abode. At the present time it will cost the emigrant pretty nearly as follows:—

For building a log-house, with a shade for	} £ 7 10 0
his oxen, and a pig-sty	

—For this sum his house may have two a-	7	10	0
partments, a stone chimney and hearth,* and			
two glazed sash windows.			
Clearing, fencing, and sowing 5 acres of }			
land, if he has to pay cash for it, }	15	0	0
Seed for the first crop with the price of two }			
axes, two hoes, two brush hooks, two }	4	0	0
forks, one spade, and one shovel,† }			
Yoke of oxen and chain, from £10 to	15	0	0
An ox sleigh	1	10	0
A cow £3, sow with pigs £1 5,	4	5	0
Two ewes with lamb \$2 each,	1	0	0
†Some necessary articles of household fur- }	10	0	0
niture,			
Putting up a log barn,	5	0	0
Two kettles for making sugar,	3	0	0

Prov. Cur'y,..... £66 5 0

Any able bodied man may earn the above amount within the two years allowed him for the performance of tattle ment duty, and if he should choose to work himself with his oxen, in clearing, sowing, fencing, or in erecting the buildings, a considerable part of the above mentioned sum may be saved. But it is now supposed that the man is a

* This expense of a stone chimney, &c. has been questioned by several persons unacquainted with the work required, and from parts of the country where the proper materials are scarce—but we know, from experience, that where workmen accustomed to the laying of mis-shapen stones, and where the materials are at hand, the labour can be done for the price here stated.

† A plough should not be required for several years, because the best management of newly cleared lands is to sow down with good grass seed, either with the second or third crop, and to keep it in grass until the stumps begin to rot, when the plough may be put in with full effect.

‡ We would say to the emigrant, who is about to embark, *bring no furniture*, the carriage of which will cost more than it is worth in this country, but be provided with plenty of good substantial wearing apparel, which is here generally flimsy and very expensive.

stranger to the sort of labour required, and that he has no money but what he earns in this country. The two first crops with the increase of his stock, ought to go far towards paying the whole of the above amount.

A friend of the Author's has published a plan in London, by which he conceives that a number of those people now subsisting on parochial relief in England, may be removed to, and employed in, this country with great advantage, both to the public and themselves.* The money required in aid of this scheme, is not to be paid to the people, but is to be laid out within two years, in provisions and supplies of implements and stock, under the direction of certain managers. The cleared lands to constitute a mortgage to secure the payment of what is then the *debt* of the colonist. "During the laying out of the money and the clearing of the lands, some slight restrictions on the employment and alienation of the property will be imposed on the owners of it; but, after the re-payment of the capital employed, each individual in the settlement will be free from all interference. The time of such re-payment, within ten years, will depend upon the exertions of the settlers, who may receive their deeds on redeeming their lands."

The projector assumes a family, of the description to which he alludes, to consist of five persons, and that the sum of £200, managed with ordinary prudence, will enable such a family to acquire a prosperous settlement in Canada in two years, without any exposure to privations, and within ten years the money might be repaid, without inconvenience, by the family to which it was loaned. The author gives a detailed account of the expenses, with the manner in which he conceives the important business should be conducted, and sums up the total expenditure for 100 such families, thus:—

For the journey to the coast for 100 families,	} £ 2,000
at 20l. each family, 1st Feb. 1822.	
For the voyage to Montreal, March, 1822,	3,000

* This plan differs from those lately suggested for diminishing the public burthens of England, as it relies for success on the personal exertions of the colonist, uncontrolled by the perpetual presence of superintendants; and as a boon or charity is not intended to be given them.

For the expenses to be incurred between May } and June, 1822,	5,000
<i>Item</i> , between June and October, 1822,	4,500
<i>Item</i> , between October, 1822, and Jan. 1823,	2,100
<i>Item</i> , between January and May, 1823,	1,500
<i>Item</i> , between May and July, 1823,	1,000
<i>Item</i> , in July, 1824,	900

£20,000

The quantity of land required for 100 families, on this plan, is half a township, or 31,500 acres—which will be divided in the following proportions :

	<i>Acres.</i>
For the settlers,	10,000
For the Managers,	5,000
For the Clergy and Schools,	4,000
For the Crown and civil government,	4,000
For the Town Plot, to belong to the Parish and Managers,	2,000
For the Surveyors,	1,500
For the Parish advancing the Capital,	5,000

31,500

The Managers should be competent to give the settlers proper directions for the sale of so much of their household goods as cannot usefully be carried with them; and for the purpose of the present sketch, the whole party will be assumed to be safely landed at Montreal, in May.

Under favorable circumstances, the people will be placed on their lands early in June, prepared to clear away for a spring crop. With common industry, three such persons as we ought to presume our able settlers to be, will not find it difficult to get five acres sown in proper time in 1822; from which they may expect to raise about fifty bushels of wheat, eighty bushels of Indian corn, with the usual quantity of pumpkins, musk and water melons, 100 bushels of potatoes, and a quantity of corn stalks and straw, with garden productions; during the summer, before the crops are harvested, the people will be employed in preparing five acres more for an autumn season, and this cleared ground, with the former five acres, will be ready for wheat in the first autumn. After having sent a proportion of this first

crop to market, a certain quantity turned into flour, salted their pigs, and put up a warm hovel for their cattle, they will in the winter of 1822--23 again be occupied in clearing more land for the ensuing spring. The quantity which may be then prepared will be about ten acres which will be sown with oats, Indian corn, barley, pumpkins and turnips, and planted with potatoes. Besides this work, they will sow the first ten acres, with seed for a meadow; during the second summer, five acres more will be prepared for the second autumn; and the several seasons will bring their own work on the lands previously cleared.

Having thus in the second autumn, ten acres of wheat land, and ten acres of meadow, with additional occupations for the winter of 1823--24, on this increase they will be able to clear for the third spring only five acres more; so that in the third harvest of 1824, such a family as we have assumed will possess thirty acres of cleared land, and seventy uncleared: ten acres of the thirty will be sown with wheat, ten with spring crops, and ten will be in meadow.

Their produce at the close of the third autumn, may be stated thus, at a low estimate:

From 10 acres of wheat, about	250 bushels
2 ditto of oats,	70 ditto
2 ditto of Indian corn, . . .	100 ditto
2 ditto of barley,	70 ditto
2 ditto of potatoes,	300 ditto
2 ditto of turnips,	200 ditto

Pumpkins, in number about 5000, which are planted in the Indian corn hills.

Not more than ten tons of hay can be expected from the meadow, incumbered as it will be with stumps and trees, for several years. To this must be added the natural increase of the stock, together with the abundance of water and musk melons in the corn fields, and of garden productions, and an ox and several hogs in salt.

After this third autumn of 1824, the repayment of the capital advanced will begin; it will arise out of the production of the harvest of 1825, and the rate at which it will be made, may be judged of by the foregoing statement.

"It appears to me impossible," continues this ingenious writer, "that upon equal capital, any set of men of the class here contemplated, can be placed so advantageously;

both to themselves and to the country, in any other part of the world as in Upper Canada."

The author illustrates his argument by an example after the following manner:

"In 1775, the parish of Barkham, in Berkshire, contained 200 inhabitants, of whom about 40, besides the sick, received relief to the amount of £75 a year. The average expense of supporting the families of laborers in Barkham, was then about £25 each; making the rate of £75 to be divisible amongst a number of people equivalent to three ordinary families, which may be said to be the number in excess in the want of employment. If the parish could be disburdened of these three families, and employment should not vary, those left behind would receive wages equal to their full support, until paupers again super-abound.

"The means of settling three families in Upper Canada is assumed to be a loan of £600, to be repaid in ten years, as before stated, and this sum will be raised easily by a mortgage of the rates under the sanction of an act of Parliament. Thus the rates will be lowered forthwith to the interest of that loan; viz. to £30 a year from £75; and they will decrease continually in proportion as the loan shall be repaid, and as the town plot and other land apportioned to the parish shall become marketable. This will be variable in point of time; and the amount of the proceeds will depend on the general prosperity of the whole settlement: it can hardly fail of making a very considerable return within seven years of the colonists quitting England. According to the expenditure of Barkham, the rates for a surplus population of one hundred families is 2500*l.* a year. Upon this income it would be easy to borrow £20,000 under the authority of an Act Parliament. The interest on which being taken at 1000*l.* a year, the parish from which the colonists could proceed, would make a present annual saving of 15,000*l.*

As to the introduction of British Paupers into the forests of Upper Canada, no one anxious to witness the prosperity of this country can have any objection, at least on this side of the water, if they come as well provided as our friend B— proposes, viz: with 200*l.* sterling for each family of five persons; but we think the expenses are over-rated, and have no doubt that such a family, (particularly where this

species of emigration was carried on extensively) could be removed and settled down comfortably, with all that was necessary to preserve it from becoming any kind of burthen whatever to others, for 100*l.* sterling.* We are quite certain there are many persons, on whom the most perfect reliance could be placed, who would be very glad to undertake the removal and settlement, in this country, of two hundred such families for the sum of twenty thousand pounds sterling.

Whilst on this subject it ought to be mentioned that there is now a man in the District of Newcastle, who came out a little more than two years ago, without a single shilling in his pocket, his health and the use of his hands were all his dependence. A short time since, this same man disposed of a capital yoke of oxen and a fine cow, which he had earned over and above what he required upon his little farm, on which he had besides, two excellent cows and a large stock of pigs, left for store pigs and for breeding, after having packed fourteen barrels of pork. He had also purchased a Reserved Lot from a neighbour, on which he had sown several acres of Fall Wheat; and in the following year, (his third) he proposes building a good framed house together with a large barn. The means for accomplishing all these results, so vast for one in his original mean circumstances, have been earned in an honest and fair way by farming on shares, as it is here termed, that is, he has a certain share, as may be previously agreed upon, of the produce of a farm (whose owner cannot conveniently work it himself,) for his labour and expense in cultivating it, a practice that is common in many parts of Canada.

Here, then, is an instance of a man who without friends, without capital, without credit, realizes what is, comparatively a comfortable independence in three years! Many more instances of a similar kind might be adduced, were it necessary to shew with what rapidity and ease, an industrious, honest man, though poor, may elevate himself above

* In the second edition of "Sketches of Plans for settling in Upper Canada, &c." the author admits that he had over-rated the expense for the passage and settlement of each family upon his arrival in this country.

the reach of want in this highly favored country; and if a single, unaided, individual can prosper, surely, half the sum mentioned by our friend B—— already alluded to, expended with prudence and economy, would establish a family of five persons in Canada so as to be no longer burthensome to the parish who sent them out, or, to this country which received them into her bosom. Enough it is conceived has now been said to shew the advantages held forth in Canada to the poorer classes of society, on an occasion where the limits of discussion are so much narrowed by the necessity of regarding other subjects.

The field which is here presented to men of an higher order, and to capitalists, is so extensive, and requires so much detail as well as argument and illustration to demonstrate, that we cannot pretend to enter upon it with any fullness on this occasion; nor would it, indeed be altogether a fit subject for discussion in a mere sketch like this. However, as it is not improbable that this little work may fall into the hands of persons anxious for some information on this head, a few brief remarks shall be added, reserving a fuller statement for another opportunity.

Of the liberal professions, Clergymen are most required, and Lawyers the least needed. Such a provision has been made by the Imperial Government for the established Church, without any demand or tythe from the people, as must eventually make the Canadian clergy, (should things remain as they now are) the most powerful, wealthy, and influential body to be found in any country, ancient or modern, no less than *one seventh of the whole soil* being set apart for its use and support. It is true the income, at present derived from this vast appropriation, is scarcely worth naming, from its general unproductiveness and the number of claimants upon the funds; but it is every day increasing, and it is impossible to say to what extent it may hereafter arrive. There are a great many situations in various parts of the Province, where Clergymen who would be active in the performance of their important duties, are much wanted, indeed the necessity for them is pressing.

An act of the provincial parliament prevents English or Scottish Attornies from practising here until they have served a clerkship of the same duration as is required from Law Students in this country, viz: *Five years actual ser-*

vice, under articles to a practising Attorney of this province. Regular Barristers, however, or any person who has been called to practice at the Bar of any of Her Majesty's superior courts, not having merely local jurisdiction in England, Scotland, or Ireland, or in any of Her Majesty's Provinces in North America, on producing testimonials of good character and conduct, to the satisfaction of the Law Society of this Province, may be called by the said Law Society to the degree of a Barrister upon his entering himself of the said Society, and conforming to all the rules and regulations thereof.

There are several openings in country situations in different parts of the Province where skilful medical men are much wanted and in which they could scarcely fail to realize handsome properties; but the labour in such situations is severe. A Medical Board is established at Toronto to examine all candidates who have not graduated in the regular manner at some eminent British or Foreign University; and no pretender to knowledge in this important profession is allowed to practice here without having previously satisfied the Board of his ability, and obtaining the licence for that purpose.

Of all professional men, of those of the middle ranks of Society who are not possessed of much wealth, there are none to whom so many advantages are offered in this country, as to the *Half Pay Officers* of the British Army and Navy. They become *immediately* independent. Entitled by the regulations of Government to receive from 500 to 1200 acres of land, according to their rank,* in the Army or the Navy: on payment of a fee scarcely worth naming (£2 18s. 8d.) they are immediately placed on a footing with the country gentlemen, as to real estate, whilst their half pay drawn at stated intervals gives them an advantage possessed by very few in this country. Their Bills almost always bear a premium of from 7½ to 12 per cent, this, with the difference of currency, and the certainty that One Hundred Pounds will go farther in the purchase of all the little luxuries for the table, and for the conveniences of life, than Two Hundred Pounds will obtain in

* We have before stated that there is now an alteration in the mode of settling their claims.

England; besides the almost total freedom from Taxes, Assessments, and many other expenses that must be incurred by gentlemen of this class in Great Britain, altogether give them extraordinary advantages; and we have often thought that in no other part of the globe could they settle down so advantageously as in this province. Besides, by their attainments, and rank in life, they are immediately eligible for many honorable stations and employments, which add to their influence and consequence, if not to their wealth; and such gentlemen will have the additional satisfaction of finding much of that kind of society to which they have been accustomed, in almost every part of the Province, for there are now but few of the settled townships in which there are not some half pay officers, either in the Army or Navy.

We purposely omit saying any thing of Merchants and Tradesmen, because if any such persons embark *speculatively* in this country without being previously well acquainted with it and the mode of transacting business, it will undoubtedly be to their severe cost and loss. Mechanics of almost every description are certain to do well, if honest, sober and industrious. Spirituous liquors are unfortunately so extremely cheap, that temptations to drunkenness daily and hourly occur to him who is addicted to that most fatal of all vices.

To the small capitalist of from £5000 to £20,000. and upwards, the field that is opened in Upper Canada is *alluring, splendid and dazzling!* But it is such a subject that it is difficult to know where to begin, and still more so, to stop! neither do we feel very willing to open the stores of our budget, in this particular, to the whole world, further than by touching generally on a few of those subjects to which such a capitalist should direct his attention, and by earnestly requesting him "*to come and see,*" when we promise he shall know more. Capital alone is wanting to place Canada in the rank which her natural wealth and position entitle her to maintain in the scale of nations and as the right arm of Great Britain: and we would venture to insure a certain number of capitalists, of the calibre above named, a quadruple return for the sum expended, within the term of ten or a dozen years! pected that we should state the mode of procedure on this occasion.

The buying and selling, the parcelling out and settling, and locating land, may be called the staple business of all new countries, and that in which both individuals and the State are most deeply concerned. Much therefore, nay, almost every thing, depends upon the way in which it is managed. It is an idle and absurd opinion that land jobbing is injurious. When carried on extensively it is very advantageous to any new country; it imparts life, spirit and enterprise, and converts what would otherwise become stagnant and putrid, into a living fountain of all that gives strength and power to empire. The whole history of the United States, and especially the account of the settlement of the Genesee Lands in the state of New York, to which we have already alluded, afford striking illustrations of this argument. The present times are very favorable for making extensive purchases of land in Upper Canada—the price, owing to that general depression in the value of all kinds of property which succeeded the late war, being nearly as low now as it was at the first settlement of many parts of the country. The Province is just now emerging like a new creation, into that general notice which it deserves, and the value of lands must speedily rise in an extraordinary ratio. The growth of Canada has never been forced; and, though it may have been considered tardy in comparison with that of the United States, (many parts of which are hot-beds of human population) its advancement has been natural, wholesome, and regularly progressive.

The usual mode of setting apart the Crown and Clergy Reserves in Upper Canada, is certainly very much against those capitalists who may wish to embark in undertakings of this kind, and even against others who may desire to settle down together, and form a little community of their own. But it is probable the Provincial Government might be induced to vary from the common practice of allotting Reserves, on being convinced that it would be productive of public and private advantage, to any material extent, in any particular vicinity.

At the time when the question of the Charter to the Canada Company was agitated and the best mode of aiding

indigent settlers in this country was much canvassed, we were struck with the truth and pertinency of the following judicious remarks on some of the evidence adduced before the British House of Commons, and which were published in the Montreal Gazette of the day. They are well worthy of remembrance, and of preservation.

Alluding to Bishop Macdonnell's evidence, the writer observes :

" In his answer to the first query, notwithstanding the bishop's ample opportunities of judging of this subject, we would with all deference to his opinion, beg to say the plan he recommends, is not the most suitable for existing circumstances. To 'help Emigrants with the means of clearing the lands and settling themselves,' has been found not to answer ; nor will it induce them 'to remain in the country,' but have a contrary effect. When what are called the military settlements were first established, those who took lands in them were allowed rations for one year, and furnished with tools for other necessaries. The great majority of these settlers idled away their time, without exertion, while thus receiving rations—and as soon as they were withdrawn, many left their lands, without making any improvements upon them. Some who remained, until the expiration of the time allowed for obtaining their deeds, having barely cleared what was required by the conditions of their location tickets—sold their lots and left the settlement. To give help to settlers to clear lands necessarily implies, that they are totally destitute, and to such settlers, the assistance they receive, is in almost every case thrown away ; whereas, those possessed of capital (which is the description of settlers for whom the information is sought in the query,) require no help for clearing—and it would be much better bestowed by enabling them to raise and cultivate different crops or to make improvements on their farms, after they are cleared, by the erection of buildings, the promotion of laudable schemes, such as building mills, draining, fencing, and other plans that would enhance, the value of a cleared farm or be serviceable to those in its vicinity. It will never answer to advance help to the settler who has no capital of his own to enable him to clear his lands. The Bishop in his answer to the second query recommends assistance to be given to

settlers to enable them to clear lands in '*the American way*,' from which it may be inferred that such a practice as that of advancing means to clear lands to the settler is common in the United States. This we have reason to think is not the case. Americans, or those so called, possess an uncommon turn for clearing wood lands, with facility. They will clear the same extent at one half the expense and in one half the time a settler from the old country could—and there are few of them so destitute of capital as to require any help for this purpose. Besides, the sentiments of these and of British Emigrants are generally, so diametrically opposite, as regards the possession of lands, that what might be of service to the one would be injurious to the other. When a native of Great Britain once becomes a proprietor of the soil he considers it as his stock in trade, he goes on to improve it, not only to raise from it his present necessities and comforts, but to leave it as a portion and provision for his family. He has no intention of selling, and nothing but its being unsuitable for his purpose or his being pressed by necessity, will induce him to do so. What improvements he makes are not done to enhance the price of his property when brought to market, but to add to his own comforts and increase the means of providing for his children. The American, on the contrary, looks upon a farm as a piece of merchandize, or the clearing land in the same light that a mechanic views any piece of workmanship, he is engaged in. The sooner it is done the quicker he can bring it to market, and he never calculates on receiving any profitable return from it but by its sale. To advance help to the latter to clear their farms, is the same as lending money to a merchant to enable him to make a favorable speculation, and which may be returned next day when he effects a sale. But to give an advance to a British settler to clear his lands is hanging the weight of an obligation upon him which he cannot for years repay—and in addition to his other difficulties, in clearing wood lands, he has the melancholy reflection to think that he is in debt, and while he is so, he views the possession of his farm, not as a proprietor, but as a sort of lessee. It is not by this land jobbing system of retaking the lots after being given out, for the value of the improvements, that will ever attract British farmers to Canada; although

such a plan would perhaps induce some of the Americans who speculate in clearing and selling lands. It is the desire of becoming *bona fide*, the proprietor of the soil, and the hope of exemption from taxation, which forms the magnet of attraction to British Emigrants in Canada; none of them ever clear a farm with the hope of increasing their capital by the sale of it; but in the expectation of its descending to posterity as an heir loom, and a fortune to secure their families from want.

Sometimes an entire Township is offered for sale, as was the case in the District of Newcastle, in that of Seymour, through which the river Trent, one of the finest streams in the Province, and abounding with Mill Seats, runs in its course from the Rice Lake to the Bay of Quinte on Lake Ontario. This Township is admirably calculated for the formation of a beautiful and rich settlement; it is in the immediate neighborhood of the Marmora Iron Works; and surrounded on all sides by thriving settlements.

The following additional tracts have been also advertised for sale, on very liberal terms, viz:

Blandford, about,	20,000
Houghton, —	19,000
Middleton, —	14,000
Southwold, —	17,000
Yarmouth, —	11,000
Westminster, —	9,237
Sheffield, —	56,688

The whole of which, together with Seymour, were appropriated for the endowment of a College in this Province.

But there is scarcely any part of the Province where a man of judgment and of necessary funds, might not lay out his money with a certainty of great advantage.

To those who might wish to embark in a commerce of raw material, or in the extensive manufacture of staple articles of home consumption, there is here also a fine field for enterprise; since there are none of those restrictions which gave so much umbrage in the United States before their separation from the British Crown, and which were so much dwelt upon by the famous Dr. Price, in his work

on *Civil Liberty*, as being a just cause of discontent and remonstrance. Of the precious and valuable metals, Government reserves Gold and Silver only. Grantees are put into the full, free, and uncontrolled possession of all the Copper, Lead, Iron, Tin, or other Metallic or Mineral substances which may be found on their lands, together with Coal, and all other substances whatever; and the more this country is explored, by men properly qualified, the richer it will be found in valuable mineral productions.

The history of the establishment of the Marmora Iron Works, is alone sufficient to show the liberality of Government, and the hopes that any other capitalist may reasonably entertain of success in laying the foundation of future wealth, so far, at least, as the patronage and encouragement of Government, is concerned or desired.

There are several manufactories of a domestic nature in which large capitals are required, the want of which is at present seriously felt by all classes of people in this province. Of these, *Salt*, (which may be obtained by going to a sufficient depth in almost every part of the country) stands the first in the list of necessity, yet it is an article with which the Upper Canadians are not only supplied with great irregularity, but they pay at least double what they ought to pay for it, and are under the control, in this respect, to a serious and alarming extent, of a people who are always, rivals, and sometimes enemies. At one period during the last war, Salt was sold in this country at from \$10 to \$15 per bushel, and even now, it is frequently 5, 6, and 7\$ per barrel, when it ought not to be more than 2\$. The culture of Tobacco, Hemp, Flax, and Wool, and Rape for the manufacture of Oil for exportation, also the establishment of improved Paper Mills, (none but paper of an inferior quality being as yet manufactured in the province;) of Nail and Screw Factories, Glass-Houses, Potteries, and a manufactory of Coarse Paint. All promise abundant returns for the outlay of capital; and to be of the most beneficial consequences to the country.

Public attention has been of late much drawn to the cultivation of Silk;—which is a most interesting and profitable investment for capital. The true Chinese *Morus Multicaulis*, with the *M. Expansa*, *Alpina*, *Broassa*, *Canton*, and other varieties, being found to flourish as luxuriantly, and to be as productive, in those parts of Upper Canada,

where the experiment has been made, as in any part of the state of New York.

A great deal of enterprise and public spirit has been shewn in the Western District, where *Tobacco crops* have increased so considerably as to allow the exportation of *many hundred hogsheads*. We have heard of a single cultivator having 40 acres of this valuable crop. As the markets of the Lower Province are much too limited for the disposal of the quantity which will shortly be raised in the West, an application has been made to the Imperial Government at home, by our Legislature, in favor of the Canadian growers which had the most satisfactory result; the Lords of the Committee of Privy Council for Trade, having consented that Tobacco, the produce of Canada, shall be admitted into Great Britain on payment of a duty of three pence per lb. less than is payable on Tobacco the produce of any other country.

Amongst the Domestic Manufactures, that of Coarse Woollen Cloth is one of the most considerable, and throughout the country it is a trade, together with the weaving of linen, rapidly increasing.

Nature has designed this country to become rich, not only from its agricultural resources, which promise to be inexhaustible; but through the commercial advantages of her natural position, which cannot be surpassed; for no country in the world is possessed of so many public highways, by water communication, as Upper Canada. The rivers of the country may be compared to the arteries and veins of the human body, as being alike the channels, for communicating health, vigor, and life, into every part, and as if to shew that the bounties with which the benificent God of NATURE has been pleased to bless this region, should be unbounded. The richest and most inexhaustible fisheries, probably in the whole world, exist at the outlet of Lake Superior into Lake Huron; and in other parts of the Great Lakes; but especially in the *Sault St. Maries, Isle of St. Joseph*, and that vicinity, where the White-fish, and Salmon Trout, especially, are of very superior size and flavor, and may be taken to any extent! Already, many thousand barrels are annually taken and cured for distant markets. Here is a living mine, far superior to any gold or silver mine in the world!

The River St. Lawrence, which we shall here consider as arising from the magnificent basin of Lake Superior, (which is more than 1500 miles in circumference) has a course to the sea of nearly 3000 miles, varying in its course from 1 to 90 miles in width, of which distance, including the Lakes Ontario, Erie, and Huron, it is navigable for ships of the largest class nearly 2000 miles, and the remainder of the river is navigable for barges, batteaux, and vessels drawing little water, of from 10 to 15, and even 60 tons burthen. Into this great *artery*, as it were, of the finest part of the country, fall many other rivers of such extent as would be esteemed waters of considerable magnitude, and of the highest importance, in any other country.

Some of these Rivers are the outlets of regions of vast extent that are watered by countless lakes and minor streams. Of these the Saguenay, which falls into the St. Lawrence below Quebec; and the Ottawa, or Grand River, whose embouchure is divided into two branches by the Island of Montreal; and the Trent, or River Otonabee, which is the outlet of a long chain of Lakes, in the northwest country towards Lake Huron, and which falls into Lake Ontario near Kingston, are the most considerable.* Steam Boats of the first class, and with the most elegant accommodations, are now found on all the large waters as far to the westward as the Lakes Huron and Michigan; and Canals are cutting in various quarters to facilitate commercial intercourse.

But it would be impossible in a sketch like this to mention a fiftieth part of the lakes and rivers which open and fertilize the extensive regions of Upper Canada. No one who looks at any existing map of the Province, can form an idea either of their number or magnitude.—Amongst the improvements lately suggested, is one of vast moment to the commercial interests of both provinces; and, indeed of all British America. Several public spirited individuals have formed themselves into a company which

* The Bay of Quinty is, in fact, rather the mouth of the River Trent, or Otonabee, than a Bay of Lake Ontario: as there is not only a perceptible current down its centre—but it has no side communication with the lake for many miles, until it arrives at what is termed the Upper Gap.

is called the "St. Lawrence Association." Their objects extend to an inquiry into the most feasible methods of improving the navigation of the St. Lawrence, throughout its entire course, by means of steam machinery, rail-ways, canals, deepening channels or any other method that may be suggested in the course of research. The improvement of the navigation of the Ottawa, as well as of all the other smaller streams which empty themselves into the St. Lawrence, will also claim the attention of this "Association," whose scope will, in fact, extend to whatever may increase or develop the resources of this country, in a commercial point of view.

The views of the Association are not confined merely to an improved method of ascending the Rapids between La Chine and Johnstown, although that is certainly an object of primary importance. To facilitate the conveyance of produce from one province to the other will prevent its taking direction through foreign channels, and must necessarily promote that profitable intercourse which should ever subsist between provinces whose interests are so immediately blended.

It appears upon inquiry that produce, should the contemplated improvements be carried into effect, might be brought with facility from Niagara to Quebec, a distance, of about 570 miles in the short space of 60 hours. With a favorable wind a vessel may traverse the length of Lake Ontario in 24 hours; a boat can descend the St. Lawrence from Kingston to Montreal in 20 hours; and the passage of a steam boat from the latter city to Quebec, would occupy 16 hours; making in all 60 hours!

To show the wonderful and unequalled advantages which the Canadas possess, in respect to internal navigation, to those at a distance, it may be proper to mention that besides the steam-boats which at present navigate the upper part of the St. Lawrence and Lake Ontario, there are many of large dimensions and excellent accommodations, and several large schooners on Lake Erie, which ply from Buffalo to Detroit, a distance of more than 230 miles, and these vessels commence their regular trips at a point upwards of *One Thousand Miles* from the Gulf of St. Lawrence! The navigation from Quebec to Buffalo, with all the present interruptions may be performed in a week, and

from thence to the river St. Clair, [either to Detroit or Sandwich) in three days. From thence into the Lakes Huron, Michigan, and Superior, the impediments are few and trifling. From the Island of Anticosta at the mouth of the St. Lawrence to the head of Lake Superior, we have a navigation of an extent little less than three thousand miles; the greater part of which is ship-navigation; and may be run over, with all the present obstacles, during the summer months, at the rate of about 80 miles per day; and that through the greatest extent of fertile country to be found, in continuity, in any part of the world—and a climate highly favorable to agricultural labor!!

The population of Canada is increasing with great rapidity. Including the military and also the aborigines of the country, both provinces cannot contain at the present juncture, less than 1,350,000 of souls.

But it is very difficult to get at the truth, in this respect notwithstanding an Act of the Provincial Parliament of Upper Canada compels the inhabitants of each Township, through their Town Clerk, to make an annual return. The census is usually taken in so careless and slovenly a manner, in the country, that it is seldom or never accurate, and the error is always in under-rating. In the Lower Province, the census is generally made by the resident Clergy.

The settled parts of Upper Canada contain 500 000 souls. The largest towns are Toronto and Kingston, of which Toronto is the most populous, containing 12,500 inhabitants.

The militia of Upper Canada have become formidable, not merely by their number, but for their quality and metal; and there cannot be more loyal nor better disposed men towards the British Government in any part of the Empire; no, not in the heart of England; and the last war with the United States having given them an immortal renown; their spirit is of so high and confident a character, that it will be extremely difficult if not impossible to subdue it,—and their conduct during the late disturbances, and in repelling the lawless invasions with which we have recently been assailed is above all praise. It is no longer a problem whether the Canadas will prove an easy conquest to the United States of America. 150,000 Canadian militia, (which both Provinces have now at command) so well disposed as

they certainly are, with the troops of Provincial Cavalry and riflemen which have been voluntarily raised, under the orders of an able General, from the nature of the country they have to defend, may bid defiance to any number that may be brought against them. And here we purposely omit saying any thing of Her Majesty's regular troops, and the aid to be derived from the Indians.

The Abbe du Pradt was never more mistaken than in his assertion, at page 479, of his famous work on the Colonies, where he says, in his usual pompous and conceited phraseology. "Acadie and Canada will have ceased to belong to England, on the day that the United States will be able to establish an army of 50,000 men." That experiment has been tried; even whilst the Canadian Hercules was as an infant in his swaddling clothes. We hope it will be long before it may be necessary to evince a greater maturity of strength, by a set-to in earnest.

Nothing is more tempting, and nothing is more dangerous, and fallacious, to minds of a certain grasp, than analogous reasoning. It requires a penetrating and comprehensive genius, especially in politics, to apply it with any hope of drawing safe and just conclusions. Du Pradt adds to the assertion just quoted: "The English will find themselves in a position, with respect to the Americans, equivalent to that which they formerly found themselves in France. They will be in the same circumstances in Canada as they were in France during the time that they held possession of Guienne and Normandy, as the Swedes were in Finland since a Petersburg existed, but with this difference that Guienne and Finland are situated only at the distance of a few leagues from England and Sweden, whereas the United States are by the side of Canada, and England is distant a thousand leagues from it."

This amusing and interesting Frenchman, forgets a very important fact; that a given extent of country, (especially one like Canada possessing so much wilderness, with strong natural boundaries and barriers,) even as a fortress of certain magnitude, requires no more than a sufficient number of men to garrison it; and that a greater number than what is required often proves an incumbrance, (when straightened in a siege,) rather than a benefit, as in such case, they only serve to consume the means of a protract-

ed defence. We think it was Gustavus Adolphus of Sweden, who said that he would not desire a larger defensive army than 40,000 men fit for actual service, to accomplish any military object; as such a force would always enable him to chuse his positions. It is indeed worthy of remark how few men, comparatively, have been actually engaged in all the most memorable battles, both of ancient and modern times. But to return, M du Pradt never reflected that, unlike Guienne or Normandy, or Finland, the Canadas were destined to become in a few years a match single handed, against any neighboring foe; and of this fact there cannot now be much doubt, whilst nothing could be more preposterous than to suppose the two French provinces, which have been named, were a match for all France; or, that Finland was capable of defending itself against the enormous power of the Russian Autocrat. Enough, however, has been said on the subject here.

The exports of Canada are already considerable; and, from the encouragement held forth by the "Trade Act," passed by the Imperial Parliament, in favor of this country it is reasonable to expect they will be greatly increased in a short time. Since the last war with the United States the exports from the two provinces have averaged (including Furs and Peltry,*) £2,000,000 per annum, and from 1,000 to 1,200 ships are employed every year in the foreign and coasting trade.

Many of what are termed luxuries can be had here in their proper season, at moderate prices, such as Oysters, Cod fish, Venison, and game in abundance.

The domestic animals of Canada admit of great improve-

* The value of Furs and Skins imported into London by the Hudson's Bay Company, from British North America, alone, amounted last year, (according to a correspondent of the Quebec Gazette,) to £250,000 sterling; and, as these valuable productions of the country, to a very large amount, at least £50,000, are annually carried into the United States from various parts of Canada, besides those exported to Great Britain; and if we include, also, the furs sold by Free Traders, and others remitted to Montreal and Quebec, from the interior, we may safely put down the total amount for this product at £325,000 sterling!

ment, and it is strongly recommended from the success of experiments which have been already made, to attend to this improvement rather by judicious selection and crossing than by importing fine breeds from the too highly refined stock of England; excepting only a few Stallions of the large improved Coach or Draft horses of England, which are much wanted to give weight and power to the spindle shanked, flimsy horses imported into the Upper Province from the United States; and to give size to the tight, compact, hardy, invincible little horses of the Lower Province.

It has often been asserted that the pony of Wales, and the Galloway of Scotland, are superior, for their size to any other horses in the world. But the writer of this article has no doubt that horses can be found in Montreal and Quebec of 14 hands high, and under, taking into consideration, and making due allowance for the difference in weight and inches, that, for drawing or carrying heavy weights, and for bottom and sheer hardihood, would far surpass the horses of any other country, not excepting any part even of Great Britain, so justly renowned for the excellence of its ponies, as well as for the matchless character of its hunters and race horses; since the little horses of Lower Canada are every day performing what would be deemed great exploits were they recorded in the Sportsman's magazines of England. But excellent as these horses are, their inferior size renders them unfit for many purposes of draught in agricultural labor. It must be remembered that the renowned *Tom Thumb*, the matchless trotter, is a Canadian Horse.

The horned cattle of this country, merely want good wintering, and more attention than is now generally paid to a judicious cross in breeding, to be every thing that a farmer could desire.

This fact the writer has fully tested and better milch cows or draught oxen need not be, than what may be had in Upper Canada.

Sheep are for the greater part, imported from the United States, and have more or less of the 'merino' in their breed; too much so, in our opinion, to be profitable in this climate, and with the careless management they receive as they may be. It is thought that the improved 'Chevoit,'

whose fleece is weighty, and possesses a long staple, might be introduced into Canada with great success, and it is well worth while to make the experiment.* It is to be lamented that the different breeds of sheep are not more generally cultivated than they are in Canada, as the climate is very favorable to the growth of wool, which might hereafter become a valuable article of export; and, what is very remarkable, although little or no attention is paid to these useful animals, they are not here subject to the same disorders which are so frequent in Great Britain, such as the *scab*, the *rot*, the *foot-rot*, &c. &c. Although reputed to be of a tender constitution, the Improved Leicester sheep, succeed very well with us here. For our domestic manufactures whatever breeds are chosen, the long woolled should have the preference.

There are those who wish for an importation of the largest breed of English Hogs, to give weight to those of this country, as well as to render them of a more 'kindly nature,' as a breeder would term it. But, there is not the smallest doubt that a skilful and attentive farmer, who is a good manager, may have a breed of Hogs, without leaving Canada, equal to any thing that he may desire. Hogs which arrive at the weight of 300 lbs. are surely heavy enough for ordinary consumption, and from two to three hundred pounds weight is a common average for hogs intended for the barrel in Canada, without any particular attention being paid to them.

Having now noticed the principal objects which claimed attention in the present sketch, we have only to point out a few subjects of vital importance to this Province, which, it is ardently hoped, will receive the most serious attention of our Legislature, at its approaching session.

LORD DURHAM should be supported by the strongest representations that can be forwarded to him from this Parliament, in favor of the CONSOLIDATION of BRITISH INTERESTS by the annexation of Montreal and the Eastern Townships to this province; or, by a UNION of BOTH PROVINCES.

* This experiment, we are happy to add, has been made, at great expense, by our highly esteemed friend E. WALKER, Esq. of Oro, lake Simcoe, and has been found to answer.

Nothing should be left undone to accomplish this great object.

The Peninsula of Upper Canada has inexhaustible resources of mineral wealth, in every direction, under the surface of her fertile soil. A Geological Survey ought to be ordered immediately, and maintained by the Government. The expense deserves not to be named in comparison with the beneficial results that must follow. We have gentlemen, too, fully qualified to undertake it. Of public men for this work we would name Col. BONNYCASTLE and Capt. BADDELEY, both of the ROYAL ENGINEERS; and we could name several private gentlemen worthy of being associated with them.

But the subject of paramount interest, importance, and, we may say, necessity, is that of *Emigration*. From various causes the tide from Great Britain has been in a great measure turned from us, and we are sorry, and even ashamed, to say that this serious aberration and defalcation has originated from that most unaccountable ignorance which still prevails, almost throughout the mother country, on every subject relative to the true state of things in these Provinces. This tide must be turned again upon our shores.—But how? First, by dispelling those clouds of ignorance which have hitherto kept from the knowledge of our countrymen at home, the superiority of the claims which this Province in truth possesses over all other Colonies in any part of the world, by every means in our power; and, secondly; by sending a Commissioner or Commissioners, at the public expense, or, at least let our Parliament grant a liberal sum towards the expense of such a commission (and no money could be more advantageously appropriated for the public good) for the express purpose of visiting every quarter of England, Scotland and Ireland, from whence we might reasonably expect to derive that kind of wholesome emigration of which we now stand so much in need. We have not the least doubt that by the aid of such a commission, an emigration of 500,000 valuable settlers, with ample means, too, might be induced to our shores, within the space of three or four years from this time.

One gentleman, in particular, has been frequently named for this mission who is admirably well qualified for it

and we have great pleasure in giving this public testimony in his favor. We allude to Dr. THOMAS ROLPH, of Ancaster. If an extensive knowledge of his subject, to which he has assiduously devoted his attention for several years;—if vast collections of facts and references in regard to the present state and future prospects of this country:—if talents of a very superior order;—sound British principles;—unwearied assiduity; and a most surprising activity and readiness in any cause he undertakes; an able pen; and above all, for our present purpose, a flow of eloquence that is always attractive and commanding, and sometimes irresistible, and overwhelming; if, we say, these are requisites in a candidate for such a mission, we hesitate not to add that Dr. THOMAS ROLPH possesses them all in an eminent degree, and no one better qualified for it can be found in this Province.

Our limits prevent us saying more on the present occasion; and we shall close this sketch, as we closed our last on a similar subject, in the eloquent language of a celebrated French Author:

“Every thing depends upon, and arises, from the cultivation of land. It forms the internal strength of states; and draws riches into them from without. Every power which comes from any other source except the land, is artificial and precarious, either in natural or moral philosophy. Industry and commerce which do not act immediately upon the agriculture of a country, are in the power of foreign nations, who may either dispute these advantages through emulation, or deprive the country of them through envy. This may be done either by establishing the same branch of industry among themselves, or by suppressing the exportation of their own unwrought materials, or the importation of those materials in manufacture. But a state well manured, and well cultivated, produces men by the fruits of the earth, and riches by those men. This is not the teeth which the dragon sows to bring forth soldiers to destroy each other: it is the milk of Juno, which peoples the heavens with an innumerable multitude of stars.”

C. F.

TORONTO, }
Jan. 1, 1839 }

ERRATA AND ADDENDA.

p. 81. For "sound trees, in a perfect state, of from 200 to 280 feet in circumference," read "sound trees, of from 200 to 280 feet in height and 20 to 40 feet in circumference were common!"

p. 82. It is important to add to the remarks, made towards the bottom of p. 82, that the establishment of the Court of Chancery, which has since been effected, may most materially affect, and destroy the mutual confidence between government and the people here spoken of;—at least, in a vast number of cases, where several applications may have existed for the same lot, thereby opening a way for the influence of "Favoritism." We have heard of a very recent decision by the Vice Chancellor, directly in point, but it cannot be detailed in this place.

p. 89. After the words, "evidence being given under oath," read, "That the Canada Company could have no possible interest in deception, is evident from the following statement:"

p. 90. In the fifth paragraph leave out the word "lately" and add, "during the last session," after the words "lately sent up to the House of Assembly."

p. 91. To the second paragraph add the words, "was under consideration."

p. 99. In the 18th line from the top, for "2,000," read "£2,000."

p. 103. After the paragraph, "and tri-annually, they have paid large sums for assessed taxes on their unsold lands," add, "It will be observed that the same subjects are treated upon by the commissioners in each paper, which arose from circumstances unnecessary here to detail;—but as they have been adverted to in a somewhat different form in each, and, as omitting any portion of either document might, in some measure, impair the effect which we had in view, that of affording all the information in our power, on a subject so interesting to the province, and to the emigrant, we thought it preferable to insert the entire document. But having done so, we must beg of our readers to bear in mind that the remarks relative to the Goderich Harbour, have reference to the state it was in at the close of the year 1836."

Our concluding remarks will enable the reader to form a clearer idea of the unceasing efforts of the Canada Company in promoting the grand and beneficial objects of their Incorporation: viz. the improvement of the country;—the furtherance of emigration; and the promotion of the comfort and interest of their settlers. He will also place in contrast the description of the state of the Goderich Harbour at the close of the past year, with that of the pending one.

It appears that up to the 31st Dec. 1837, the Canada Company had expended in public works of the first importance in promoting the interest and comfort of their settlers, no less sum than £27,494,12,10.

p. 135. Since writing the paragraphs relative to the necessity which exists for an immediate *re-union* of the Provinces, we rejoice to find (March 17) that our House of Assembly, amongst other important resolutions on the state of the province, has just moved one, to the following effect:—"That in the opinion of this House, a UNION of THE PROVINCES, having in view a *permanent security of British interests*, would remedy those glaring evils (previously pointed out), and place Canada in that elevated position contemplated by EARL DURHAM, with the least difficulty, and delay." &c.

p. 136. Hear what the Editor of *Blackwood's Magazine* says, when commencing his review of Mr. McGregor's *British America*: "One pledge for the future prosperity of Canada is found in her mineral wealth. Even *petalite*, the rarest of fossils is yielded by her soil, (near Toronto); *Iron*, of the best quality, *Copper*, *Tin*, *Lead*, *Plumbago*, &c., &c., and all the metals predominant in the useful arts, have been found already; nor do we recollect a single mineral which is indispensable to manufacturing industry, except only *Coal*, which has not been discovered in Canada. *Salt* and *Gypsum* are now produced in abundance. Even coal would probably have been detected long* ago, had the woods been less infinite. And, should it even appear that coal were never detected, still the vast coal-fields in the neighbouring province of Nova Scotia, (to say no-

* But coal *has been detected*. It exists in Whitby, Hope, and no doubt in many other places.

thing of what might be had from New Brunswick, or Cape Breton or Nova Scotia) are known to be sufficient for the consumption of all America, through very long periods of time."

And, with such a prospect before us, will our Representatives in Parliament do nothing towards a Geological Survey? That we may measure the length, and breadth, and depth of the bounties of Divine Providence towards us, if indeed, that be possible!

A BRIEF VIEW
OF THE
GOVERNMENT OF BRITAIN,
DURING THE PERIOD IN WHICH IT WAS RANKED AS
A PROVINCE OF THE ROMAN EMPIRE.
FROM THE INVASION OF JULIUS CÆSAR,
FIFTY FIVE YEARS BEFORE CHRIST,
TO THE ARRIVAL OF THE SAXONS, A. D. 449.

SKETCHED EXPRESSLY FOR THIS WORK,
By CHARLES FOTHERGILL, ESQUIRE.

We agree with the learned BORLASE, who has adduced unquestionable evidence of the fact, that the large and beautiful Island of Great Britain, the most renowned in the world, was known to, and partially settled by, the *Phœnicians* at a very early period, even when the greatest part of Europe remained an unexplored wilderness, rude and wild as the remotest fastness of America. It was inhabited for many ages; and, as Dr. Henry observes, was the scene of many wars, revolutions, and other important events, before it was invaded by the Romans under JULIUS CÆSAR in the year before CHRIST, 55.

But it is not our purpose to plunge into the gloom and doubt of so remote an antiquity. We have no desire, especially in this place, to peer and pry into the darkness of unwritten History, or to gaze on the creations of fancy, when unimpeachable records, and substantial forms, are near.

From the retreat of Julius Cæsar, to the invasion of Claudius, a period of *ninety-seven* years, but little is known

of the Monarchs, Princes or Chiefs of the Island. Neither Augustus, Tiberius, nor Caligula, (although the latter Emperor had collected an army of no less than 200,000 men on the opposite coast of Gaul) attempted the invasion.

At the period of the invasion of Claudius, we hear much of Caractacus, a native Prince, who seems to have been worthy of the fame which has been bestowed upon him, by every historian of that age—and, after him, the renowned BOADICIA, Queen of the *Iceni*,* who was at one time, and in one engagement, at the head of 230,000 men. From the defeat of this immense army, to A. D. 207, the southern parts of Britain were chiefly under the rule of Governors sent thither from Rome; amongst whom, Agricola was the best and most famous. He not only defeated the *Caledonians* in many battles, but was the first who circumnavigated the Island, and determined its entire coast.

It was in the year 207, that the Emperor Severus arrived in England, where he remained for four years, and built the stupendous wall, from sea to sea across the Island towards the north, which bears his name:—it was for the purpose of checking, if not to prevent, the inroads of the Scots: and vestiges of the vast undertaking may be still traced. Severus died in the city of York, on the 4th Feb. 211, and three immense *Tumuli*, *Severus's Hills*, which were raised by his army, remain as an imperishable monument, within a mile and a half of the city walls, to this day.†

After the departure, from Britain, of the two new Emperors Caracalla, and Geta, to the accession of Dioclesian in 284, the Government remained in the hands of a regular succession of Roman Vicegerents, though but little is known of that long and dark period of our history.

* The *Iceni* inhabited the counties of Suffolk, Norfolk, Cambridge, and Huntingdon.

† There is a tradition amongst the country people of that part of Yorkshire, which the writer of this sketch has often heard, still remaining, which affirms that these hills were raised by earth carried from a hollow, (in which a village called *Hole Gate* now stands) *in the helmets of the whole Roman army!* Two of these hills or *Tumuli*, are not less than 100 feet high, with proportional bases!!

* V

It was about this time that the *Franks* and *Saxons* began to figure on the stage of politics, and of war, acting chiefly as pirates. We hear of considerable numbers of these people, distinguishing themselves under *Alecus*, in his opposition to *Constantius*, when *London* was fortunately preserved from utter destruction, in the year 296.

Constantine the Great, began his reign and splendid career at *York*, A. D. 306. His mother *Helena*, is said to have been a daughter of *Coel*, one of the native Kings of Britain.—Many have affirmed that this Emperor was born in the Island,* and his warmest panegyrist exclaims, with much energy—“*O fortunate Britain! more happy than all other lands, for thou hast first beheld Constantine Cæsar!*”

After the death of this great Prince, the Government of Britain fell to his eldest son, who was likewise named *Constantine*, and who was slain in the year 340.

Gratianus Funarius, the father of *Valentinian*, appears as the Roman Governor of Britain, under the Emperor *Constantine*, in 354.

From the year 367 to 375, the excellent and brave *Theodosius* was Governor. From that period to 381, when he assumed the *Purple*, the Emperor *Maximus*, who had married the daughter of a British Prince, held the Government. Both *Theodosius* and *Maximus* were very much beloved by the people.

From the date of 393 to 412, we hear of *Chrysantus*, and *Victorinus*, as the military representatives of Imperial Rome—and, from 418 to 421 we find *Gallio*, a general of great ability, acting as Governor.—Afterwards, to the arrival of the *Saxons*, in 449, began the most disastrous and melancholy period in the whole history of our country,—harrassed by incessant attacks from the marauding *Scots*, and the yet more barbarous *Picts*, she became the prey of horde after horde of lawless savages from the north, till she had little left for the breechless vagabonds to plunder.

During this unhappy period, the Britons appear to have been without either order, law, government, or any chiefs worthy of the name; all was confusion, famine, pestilence, rapine, and plunder. The Roman had turned pale, and his empire, and name, and greatness, were tottering before

* *Vide U. sect. de primord. Eccles. Brit. c. 8.*

the threats, and actually falling before the power, of the terrible ATTILA !

OFFICERS OF THE BRITISH GOVERNMENT,

WHILST UNDER THE DOMINION OF ROMAN EMPERORS.

That the reader may form some distinct idea of the state of the country and its government, in the early part of its history, we here subjoin some lists of officers, and notes from the *Notitia Imperii*, a work of great antiquity and rarity.

Under the Government of the Honorable the Vicegerent of Britain, are :

Consular Governments of those parts of Britain, called
Maxima Cæsariensis,*
Valentia ;

Presidial Governors of those parts of Britain, called
Britannia Prima,
Britannia Secunda,

This Honorable Vicegerent hath his Court composed in this manner : † A principal Officer of the Agents, chosen out of the Ducenarii, or under Officers.

A principal Clerk, or Secretary,
Two Chief Accountants, or Auditors,
‡ A Master of the Prisons,
A Notary,
A Secretary for Despatches,
An Assistant, or Surrogate,
Under Assistants,
|| Clerks for Appeals,

* The two most northerly provinces were governed by consulars, as being most exposed to danger.

† Under the lower empire there were many incorporated bodies of men of different professions ; and these incorporated bodies were called *Scholæ*.

‡ The Master of the Prisons was called *Commentariensis*, from his keeping an exact calendar of all the prisoners in all the prisons under his inspection.

|| The *Exceptores* were a particular order of Clerks or Notaries, who recorded the proceedings and sentences of the Judges upon Appeals.

Sergeants, and other inferior Officers,

There were also *Nine Military Stations*, with the necessary Officers, under the command of the Count of the Saxon Shore.

The Count of Britain had also a Court composed after the manner we have mentioned.

Under the Government of the Honourable the Duke of Britain were the PREFECTS, viz :—

Prefect of the Sixth Legion,	Prefect of the Scouts,
" " Dalmatian Horse,	" " Directores,
" " Crispian Horso,	" " Defensores,
" " Cuirassiers,	" " Solenses,
" " Borearii Tigresiensens,	" " Pacenses,
" " Nervii Dictenses,	" Longovicarii
" " Watchmen,	" Derventionenses

Also along the line of the *Wall*,

The Tribune of the 4th Cohort,

A Cohort of Carnovii,

1st Cohort of Frixagi,

1st Cohort of Batavi, and Tungri, and

of the 4th Cohort of Gauls, and the 2d of Dalmatians, Dacians, Moors, Spaniards, and many others.

He had also a body of men in armour ; and in his court was a principal officer from the Courts of the Generals of the Soldiers in ordinary attendance, who was changed yearly.

To mark the extraordinary changes brought about by time, and the rise and fall of nations, we add the following striking comparative statement of the British and Roman empires, from authentic sources :

British Empire—at the accession of Queen Victoria, A. D. 1837.	Roman Empire—in the reign of Marcus Aurelius, Antonius. A. D. 180.

OF THE SAXON HEPTARCHY.

Upon the establishment of the *Saxons* and *Angles* in South Britain, after the year 450, the whole of that part of the Island was divided into the seven following Kingdoms, viz :—

I—KENT, founded by *Hengist*, in 455—It terminated in 823.

II—SUSSEX, or the South Saxons, was founded by *ELLA* in 491, and ended about the year 600.

III—EAST ANGLES, founded by *Uffa*, in 751, and ended in 792.

IV—WESSEX, or the West Saxons, founded by *Cerdic*, in 519, and ended about 1012.

V—NORTHUMBERLAND, established by *Ida* in 547, and ended in 827.

VI—Essex, or the East Saxons, founded by *Ereenwin* in 527, and ended in 810.

VII—Mercia, founded by *Cridda*, in 584, and ended in 824.

TABLE IV.

PRESENT ROYAL FAMILY OF GREAT BRITAIN.

[Alexandrina] THE QUEEN, VICTORIA I. Queen of the United Kingdom of Great Britain and Ireland, Defender of the Faith, Sovereign of the Orders of the Garter, Thistle, Bath, and St. Patrick, born May 24, 1819. Succeeded her Uncle, William, IV., June 20, 1839. Proclaimed June 21st.

THE QUEEN DOWAGER. ADELAIDE, Sister of the Duke of Saxe Meiningen, born August 13, 1792. Married July 11th 1818 to his late Majesty William IV. who died June 20, 1837.

Privileges of the Queen Dowager. It may not generally be known that a Queen Dowager has most of the privileges belonging to her as Queen Consort. But no man can marry her without special license "from the crown," on pain of forfeiting his lands and goods. Sir E. Coke says that this was enacted in the 6th of Henry VI. but the statute is not in print, and cannot be found. Blackstone states that a Queen Dowager, when married again to a subject, does not lose her regal dignity as peeresses dowager do their peerage when they marry commoners; for Catharine, Queen Dowager of Henry V., though she married a private gentleman, Owen ap Meredith ap Theodore, commonly called Owen Tudor, yet by the name of Catharine, Queen of England, maintained an action against the Bishop of Carlisle. And so the Queen Dowager of Navarre, marrying with Edward Earl of Lancaster, brother to Edward I, maintained an action of dower (after the death of her second husband) by the name of Queen of Navarre.—Nor can the Queen marry a subject without the "consent of the crown;" but, as her Majesty is "the crown," Queen Victoria for instance, could give her consent to her own marriage with any peer or person whom she might select.

MOTHER OF THE QUEEN. Victoria Maria Louisa, sister of the Duke of Saxe Cobourg Gotha, born Aug. 17, 1786.—Married May 29, 1818, to Edward, late Duke of Kent, and had issue Alexandrina Victoria, her present Majesty.—The Duke died Jan. 23, 1830.

UNCLES AND AUNTS OF THE QUEEN. Augusta Sophia, born Nov. 8, 1768.

Elizabeth, born May 22, 1770, was married to the Landgrave of Hesse Homburg, who died April 2, 1829.

Ernest Augustus, King of Hanover, and Duke of Cumberland, born June 5, 1771, married May 29, 1815, Fredericka Sophia Carolina, sister of the Duke of Mecklenburgh Strelitz and widow of the Prince of Solms Braunsfels. Issue, George Frederick, born May 27, 1819.

Augustus Frederick, Duke of Sussex, born Jan. 27, 1773.

Adolphus Frederick, Duke of Cambridge, born Feb. 24, 1774, married May 7th, 1818, to Augusta Wilhelmina Louisa, niece of the Landgrave of Hesse, born July 25, 1797. Issue, George William born March 26, 1819, and Augusta Caroline, born July 19, 1822, Mary Adelaide, Nov. 27, 1833.

Mary, born Apr. 25, 1776, married July 22, 1816, to her cousin William, Fred. Duke of Gloucester, who died Nov. 30, 1834.

Sophia, born Nov. 3, 1777.

COUSIN OF THE QUEEN, and sister to the late Duke of Gloucester,—Sophia Matilda, born May 23, 1773.

MILITARY STATISTICS OF EUROPE.

In the Almanach de Gotha for 1838, a publication of great authority and circulation on the continent, there appears a very detailed and apparently correct statistical table of the military and naval forces of all the powers of Europe, which in the present rather momentous state of affairs may not be without its value. According to this table the preponderance of military strength lies decidedly in favor of Russia, which, with a population of 50,000,000, and in addition to keeping a fleet of 130 sail, maintains an army of upwards of 1,000,000 of men, nearly one half of whom, however are distributed along the frontiers of the empire, with a view of overawing the different tribes which that power has from time to time incorporated in her dominion. Next in the scale of numerical military strength comes Austria, which country, with a population of 33,000,000, maintains a regular army of 400,000 men, exclusive of a Landwehr, or militia of nearly equal number.—France with a population of 32,000,000, has a regular military force of 350,000, exclusive of the National Guards, and in addition possesses a fleet of 220 sail, of which more than one hundred are in commission. The military force of the kingdom of Great Britain and Ireland, with a population of 24,000,000, is set down at 109,000 men, exclusive of the East India Company's; while the navy is rated at 530 sail, either in commission or in ordinary, and mounted with 23,000 guns. Prussia, with a population infinitely smaller than any other of the leading states of Europe, maintains a very strong military force, the army being calculated at 250,000 men, with a Landwehr or reserve of 350,000. Being, however, a purely agricultural country, she possesses no navy.

 THE QUEEN'S MINISTERS.

First Lord of the Treasury,... Viscount Melbourne,
Chancellor of the Exchequer,. Rt. Hon. Ths. Spring Rice,

have two powers—the one absolute, the other ordinary; the meaning of which is, he must observe the form of proceeding in other Courts; yet, in his absolute power, he is not limited by the written law, but in conscience and equity. He may issue Writs of Habeas Corpus at all times. He has power to collate to all Ecclesiastical benefices in the King's gift rated under £20 per annum in the King's books; his oath is to do justice to all persons, poor and rich; the King truly to counsel, and to keep the King's counsel, and not to suffer the rights of the Crown to be in any way diminished. The Lord Chancellor and Lord Keeper are the same in power and precedence, Both are appointed by the King's delivery of the Great Seal; they differ only in this—the Lord Chancellor hath also letters patent, the Lord Keeper none.

LORD PRESIDENT OF THE COUNCIL.

The Lord President of the Council holds his post by Letters Patent *durante bene placito*. By the statute 21, Henry VIII, he is to attend the King's Person; to manage the debates in Council; to propose matters from the King at the Council, and to report to the King the resolutions thereupon.

FIRST LORD OF THE TREASURY.

The Lord Treasurer, whose office is now executed by Lords Commissioners, hath the appointment of all Officers employed in Collecting the Revenues of the Crown; he hath the nomination of all escheators, and the disposal of all places and ways relating to the Revenue, and of the Kingdom; and power to Let Leases of the Crown Lands. The office of Chancellor of the Exchequer is always held by one of the Lords Commissioners of the Treasury, (except upon some very particular occasions when the Lord Chief Justice of the King's Bench is appointed to act as such). He is styled Chancellor and under Treasurer of the Exchequer; he has custody of the Exchequer Seal; he has also the controlment of the Rolls of the Lords of the Treasury; and he sits in the Court of Exchequer above the Barons of Exchequer. He has many lucrative offices in the Court of Exchequer in his gift.

LORD PRIVY SEAL.

This great Officer is so called from his having the Privy Seal in his custody, which he must not put to any grant without war and under the King's Signet. This Seal is used to all Charters, Grants, and Pardons, signed by the King before they come to the Great Seal.

SECRETARY OF STATE FOR THE HOME DEPARTMENT.

Until the Reign of Henry VIII there was only one Secretary of State; and until the Reign of Elizabeth, the Secretaries were never of the Privy Council. From that time to the present there have been two Secretaries of State, and sometimes three; and thus a Council has seldom been held without the presence of at least one of them. From the death of Queen Anne to the Rebellion of 1745, there was a third Secretary for Scotland; and from 1768, to the loss of America in 1782, there was one for the Colonies. In 1795 there was another appointed under the denomination of the War Department. The Department of the two Secretaries were, previous to 1782, divided into one Foreign, and the other Domestic; with the Home Secretary, all grants, pardons, and regulations in civil matters of any kind are made and executed. To the Foreign Secretary belong all despatches to and from other Courts, and all business appertaining to the same. They have the custody of the Privy Signet, because the King's private letters are sealed with it. There are four Clerks of the Signet, who are to make out grants, patents, &c. which have the sign manual, to which the Signet being added, it is a warrant to the Privy Seal; as the Privy Seal is a warrant to the Great Seal. The Paper Office belongs to the Secretary of State, where all letters, papers, memorials, and negotiations, are deposited and preserved.

THE LORD HIGH ADMIRAL.

The power of Lord High Admiral hath, since the Reign of Queen Anne, been executed by Commissioners, except for a short period when in the reign of Geo. IV., the Duke of Clarence (our late sovereign) was Lord High Admiral of England. The Statute of Charles II. ascertains his authority in these words:—"That the Lord High Admiral for the time being, shall have full power and authority to

The C
officers
Queen's
Stole,) b
into the
ficers of

grant commissions to inferior Vice Admirals or Commanders in Chief of any squadron of ships: to call and assemble Courts Martial, consisting of Commanders and Captains; and no Court Martial where pain of death shall be inflicted, shall consist of less than five Captains at least, the Admiral's Lieutenant to be, as to this purpose, esteemed as a Captain, and in no case wherein sentence of death shall pass (by the articles for regulating the government of Her Majesty's ships of war, or any of them except mutiny) there shall be execution of such sentence without leave of the Lord High Admiral, if the offence be committed in narrow seas; but, in case any of the offences aforesaid be committed in any voyage beyond the narrow seas, then execution shall be done by order of the Commander in Chief. He appoints Coroners to view dead bodies found on the coasts, and Judges in the High Court of Admiralty. To him belong all fines and forfeitures of all transgressions at sea, and at the sea shore; and in ports from the first bridge on rivers to the sea, goods of pirates, waifs, wrecks, &c. Since the revolution, the maritime laws have undergone alterations and revisions, and the office of Lord High Admiral has been considerably abridged of its perquisites.—Of late years this high office has always been in commission, and still remains an office of great honor, power, and emolument. The first commissioner of the Admiralty has a salary of three thousand pounds per annum, and the six commissioners £1,000 a year each, and all of them (the youngest commissioner excepted) has a house in the Admiralty.

ACCOUNT OF SOME OF THE PRINCIPAL OFFICERS OF HER MAJESTY'S HOUSEHOLD.

LORD CHAMBERLAIN.

The Office of Lord Chamberlain is to take care of all the officers and servants (excepting those belonging to the Queen's bed-chamber, who are under the Groom of the Stole,) belonging to the Queen's chamber, who are sworn into their places by him. He hath the oversight of the officers of the Wardrobe at all Her Majesty's houses; and

the removing of wardrobes of beds; of tents, revels, music, comedians, huntsmen, messengers, of all handicrafts and artizans; and what is not common to other nations, although a layman, he hath the oversight of the Queen's Chaplains, and all the heralds, physicians, apothecaries, &c. It is his place to inspect the charges of coronations, marriages, public entries, cavalcades, and funerals; and all furniture for, and in, the Parliament houses, and rooms of addresses to the Queen.

LORD STEWARD.

The estate of the Queen's Household is entirely committed to the Lord Steward, to be ruled and governed by his discretion; and all his commands in court are to be obeyed; his authority reaches over all officers and servants of the Queen's household, except those of the Queen's Chamber, stable and chapel. Under the Lord Steward, in the country house are the Treasurer of the household, Comptroller, Cofferer, Master of the household, clerks of the Green Cloth, &c. It is called the Counting House, because all the accounts and expenses of the King's household are daily taken and kept in it. The Board of Green Cloth was kept in it.

MASTER OF THE HORSE.

The Master of the Horse hath the charge and government of all the King's stables and horses. He hath also power over equeries and pages, footmen, grooms, and farriers, smiths, saddlers, and all other trades in any way relating to the stables. He has the privilege of applying to his own use, one coachman, four footmen, and six grooms, in the Queen's pay. In any solemn cavalcade he rides next behind the Sovereign.

SUMMARY OF THE WHOLE HOUSE OF COMMONS IN ENGLAND.

Under the reform bill an addition to the number of County Members is made in about the same proportion as

the n
whole
of the

the number of Borough members is decreased, so that the whole number remains much the same as before the passage of that bill.

40 Counties in England, sent	80 Knights,
25 Cities, (Ely none--London 4)	50 Citizens,
167 Boroughs, 2 each,	334 Burgesses,
5 Boroughs, (Abingdon, Banbury, Bewdly, Higham Ferrars, and Monmouth,) 1 each,	5 do
2 Universities, 2 each,	4 do
8 Cinque Ports, viz. Hastings, Dover, Sandwich, Romney, Hythe, and their 3 branches, Rye, Winchelsea, and Seaford,	16 Barons,
12 Counties in Wales, 1 each,	12 Knights,
12 Boroughs in do do	12 Burgesses,
Shires of Scotland,	20 Knights,
Boroughs of do	15 Burgesses,
Shires of Ireland,	64 Knights,
Boroughs of do	36 Burgesses,

Total, 658

The first returns of Representatives, for

Counties, and some Cities, was in the	49 Henry III
Shires, (on record) do	13 Edw'd III
Cities and Boroughs, do	23 Edw'd I
The principality of Wales, do	27 Henry VIII
The House of Peers consists of 430 members.	

AGRICULTURAL WEALTH OF ENGLAND.

The number of acres in Great Britain are—according to the third report of the Emigration Committee—77,394,433, in the following proportions and condition:—

	Uncultivated, but capab'e of improve-			
	Cultivated	ment.	Waste.	Total.
England,	25,632,000	3,451,000	3,256,400	32,342,000
Wales,	3,117,000	530,000	1,105,000	4,752,000
Scotland,	5,265,000	5,950,000	8,523,930	19,738,930
Ireland,	12,125,280	4,900,000	2,416,664	19,441,944
British Islands,	383,690	166,000	569,469	1,119,159

In England and Wales it is calculated that there are in profitable farming land—

Acres.

3,252,000	employed in the cultivation of wheat.
1,250,000	in that of barley and rye.
3,200,000	do oats, beans, and peas.
1,200,000	do clover and artificial grasses.
1,200,000	do field roots.
2,100,000	do fallow.
48,000	do hops.
17,300,000	do meadow and pasture.
1,200,000	do hedgerows, copses, woods, and waste.

WEALTH OF BRITAIN.—Mr. McQueen. in his abstracts of the general statistics of the British Empire, estimates the property in land and farming stock in the United Kingdom at £2,971,756,670, yielding an annual return of £470,029,688. The property in manufactures is rated by the same writer at £201,000,000, yielding an annual return of £262,085,189.

CIVIL LIST
OF
UPPER CANADA.

NOTE. It is proper here to remark that the "*Toronto Almanack and Royal Calendar*," is not an *Official* publication, and, therefore, any arrangement in the various lists of Public Officers, as presented in this work, cannot in any degree, affect the precedence which any such officer may be entitled to. The Editor has taken every pains in his power to give correctness to the work, the official returns being all drawn, with great attention to accuracy, from the respective authorities; and he would desire to be found within the rules of propriety in respect to arrangement. Any hint from respectable authority will be attended to in future editions.

A LIST OF THE LIEUTENANT GOVERNORS, PRESIDENTS
AND ADMINISTRATORS OF UPPER CANADA, FROM THE
DIVISION OF THE PROVINCES, IN THE YEAR 1791, TO THE
PRESENT TIME.

NAMES.	TITLES.	PERIOD OF ACCESSION.
Col. John Graves Simcoe,	Lieut. Gov.	July 8, 1792
Hon. Peter Russell,	President,	July 21, 1796
Lieut. Gen. Peter Hunter,	Lieut. Gov.	Aug. 17, 1799
Hon. Alex'r Grant,	President,	Sep. 11, 1805
His Excellency Francis Gore,	Lieut. Gov.	Aug. 25, 1806
Maj. Gen. Sir Isaac Brock,	President,	Sep. 30, 1811
Maj. Gen. Sir R. Hale Sheaffe, Bt.	do do	Oct. 20, 1812
Maj. Gen. F. Baron de Rot- tenburgh,	do do	June 19, 1813
Lieut. Gen. Sir Gordon Drum- mond, G. & B.	Prov. Lt. Gov	Dec. 13, 1813
Lieut. Gen. Sir Geo. Murray, Bt.	do do	April 25, 1815
Maj. Gen. Sir Fred. Philipse Robinson, K. C. B.	do do	July 1, 1815
His Excellency Francis Gore,	Lieut. Gov.	Sep. 25, 1815
Hon. Samuel Smith,	Adm'trator,	June 11, 1817
Maj. Gen. Sir Peregrine Mait- land, K. C. B.	Lieut. Gov.	Aug. 13, 1818
Hon. Samuel Smith,	Adm'trator,	Mar. 8, 1820
Maj. Gen. Sir Peregrine Mait- land, K. C. B.	Lieut. Gov.	June 30, 1820
Maj. Gen. Sir John Colborne, K. C. B.	do do	Nov. 5, 1828
Maj. Sir Francis Bond Head, K. C. H.	do do	Jan. 25, 1836
Maj. Gen. Sir GEORGE ARTHUR* Knight Commander of the Royal Hanoverian Guelphic Order, &c. &c. &c.	do do	March 1838

*It would be a great improvement, (an improvement we

contemplate in future editions) to this part of our work, if a sketch of the character and influence of each successive administration, from that of Gov. SIMCOE, downwards, was added to this list. At present this cannot be done; but, as we live in the midst of strange events, and in critical times; and as from the retired habits and unobtrusive character of our present Lieutenant Governor, it is scarcely possible that a very great majority of our people can form any just estimate of his qualifications for the high office which he has hitherto so satisfactorily filled; It may not be amiss here to state the estimation in which he was held in another British Colony, of which he may be truly said to have been the Father; VAN DIEMENS LAND,—over the Government of which he presided for the long period of *twelve* years. We have it from the best authority, that on his Excellency's assuming the reigns of government in that colony, all was confusion and anarchy; the streets were impassable, the roads (even the main road to Launceston) were impracticable; the buildings of mean construction and inconvenient; the harbors incommodious; bushranging, and attacks on the inhabitants of the interior by the aborigines, frequent; the laxity of morals was excessive, and concubinage deemed honorable; in short, an evil principle was abroad in the land destructive of the morals of the rising generation and even holding out honesty as a crime!

When Governor ARTHUR departed all was order and peace; the streets and roads were greatly improved; the public and private buildings would do honor to any country—particularly the Churches, Orphan-schools, Police offices, and Penitentiaries. The new Wharf will for generations to come, exhibit a stupendous monument of his great efforts in improving the country. Bushranging is now unknown, and the hostile aborigines have been quietly removed, without a single act of cruelty on the part of the authorities; morals have been vastly improved by the introduction of schools, and the erection of churches, but above all by the force of example; for, *never was there a man more attentive* to his duties as a husband, a father, and a Christian, than Governor Arthur. In short he succeeded in making Van Diemen's Land an honest country, and

life and property in that colony, is now said to be even more secure than in England!

But the greatest boon conferred by his administration was the consolidation of all the penal settlements at Port Arthur, and the admirable system of penal discipline perfected there, through which the worst of the population are by discipline rendered orderly and useful, and return, after due probation, to the settled districts better members of society. It is said to be the most perfect thing of the kind in the world.

When Governor Arthur left this Colony, the tears and the blessings of the vast multitude which had assembled to witness his departure, afforded an unequivocal testimony of the universal and high estimation in which he was held.

He has now a wider field for the display of his talents, and for the exercise of his virtues, and long may he remain to possess, as we believe he now does, the confidence of our people.

The following Reverend Gentlemen, through age and infirmity, are retired; nevertheless, they occasionally do a little duty:

Joseph Thompson, Cavan, Newcastle District,
John Peterson, Markham, Home District.

REMARKS.

Hence it appears that the number of resident Clergymen of the Established Church, amount to.....	66
Missionaries of the Church residing amongst the Indians.....	2
Travelling Missionaries.....	3
Clergymen who are occasionally, but not fully employed, on account of their age, or infirmities, or having other duties to perform.....	5

Total number of Clergymen belonging to the *Established Church* at present in Upper Canada..... 76

The Clergymen above enumerated, regularly officiate, though at various intervals, at no less than *One Hundred and fifty* different places or stations.

Number of Churches already built..... 88

Number of do in progress towards being built, 20

Whole number of Churches..... 108

The present application for Clergymen, from various parts of the province, amount to more than *One Hundred*. There is indeed, scarcely a settled Township in the province in which a pious and active Clergyman would not find ample employment amongst our people who are every where to be found in considerable numbers, except, perhaps, in Glengarry, which is divided, almost equally between the Roman Catholics and Presbyterians.

The list above exhibited so far from shewing the *Established Church* to be in a languishing position in this Province, as its enemies assert, proves directly the contrary; and, if any deficiencies are discoverable, it will be found they are against, and not in favour of the Church.

In addition to this statement, we have the satisfaction of knowing, that, besides several ordinations within the Diocese, a large accession of Clergymen from England is hourly expected.

Wm. Lang, James McInmurray, William Rees, Henry
Sullivan, Walter Telfer, John E. Tims, Christopher
Widmer, William Winder, *M. D.*

* * Just as this sheet was going to press we learned
with much satisfaction that a Bill *has* passed the House of
Assembly, and is now before the Legislative Council,
with every prospect of becoming a Law—to constitute
the Medical Board of Toronto a COLLEGE of PHYSI-
CIANS and SURGEONS for UPPER CANADA, with valu-
able privileges—a measure long required; and, by which
the present Members of the Board become Professors.

KING'S COLLEGE LAND OFFICE.

Registrar and Bursar, The Hon Lt. Col. Joseph Wells,
Clerk, Edmund J. Ridout,

The management of all matters connected with the Land belonging to the University of King's College, and likewise of the Upper Canada College, are conducted here.

EMIGRANT OFFICE.

OFFICE, PUBLIC BUILDINGS, FRONT STREET.

Superintendent,—Anthony B. Hawke,
Clerk,—Robert Beckman,

Ottawa	Thomas H. Johnson, Esqrs.

PROBATE AND SURROGATE COURTS.

The Lieut. Governor is Judge ex officio. This Court is the supreme Ecclesiastical Court of the Province, in which Wills, &c., are proved. It is held in Toronto four times in each year, on the first Monday in January, the last Monday in March, first Monday in June, and last Monday in September.

The Surrogate Court is held in every district on the same days as the Probate Court, and relates to Wills, &c. which can be proved, and letters of administration granted any day at the office of the District Surrogate.

JUDGES OF DISTRICT COURTS AND THEIR CLERKS.

NOTE.

The Editor, notwithstanding his most attentive care, and this section of the work has occasioned him more trouble than all the other Lists and Tables put together, is aware that many errors will be discovered as to the spelling of proper names, and, probably in a few of the dates of appointments, by the gentlemen more immediately interested in the foregoing Register. But the Editor can assure the Patrons of this work, that the whole has been copied by experienced clerks from, and afterwards collated with, the Record in the Adjutant General's Office; it has been continued down to the very week of publication; and, it is hoped that it will prove a valuable PROVINCIAL ARMY LIST—and a useful book of reference hereafter.

Capt. Briscoe, Amherstburgh.	
Capt. Randolph, Prescott.	One Hundred Rank & File.

ROYAL ARTILLERY.

1st Lieut.—Colonel Cubitt—1st Lieut. Wilkins,
 Major—Jackson, Macbean, Parker, and Harrison, Adjt.
 Captains—Howell, Kenneday, and Glasgow.
 1st Lieut.—Newcomer, Airey, and Marriott.
 2nd do—Smith, and Gardiner,

The Dragoon Guards and Royal Artillery are well horsed, and admirably well equipped and disciplined. The Royal Sappers and Miners are employed, not only in their own peculiar duties, under the officers of the Engineers; but they are also well drilled to act with troops of the line.

The whole of Her Majesty's Regular Troops now in Upper Canada, only, compose an effective Force of not less than 5,000 men. There is also a sufficient number, apparently, of Staff-Officers; of Officers on particular Service, of the Commissariat; of the Medical Staff; and of the Ordnance, and Barrack Departments.—Altogether, this Province, in the event of any foreign aggression, or of national hostilities on the part of the United States of America, is in a much better posture of defence than it was at the commencement of the last war with the same power:—at all events: We fear them not!

POST OFFICE.

INTRODUCTORY NOTICE.

CHARLES BERCZY, Esq., Deputy Post Master, at Toronto, has politely favoured the Editor with the following important information relative to this department :—

OFFICE HOURS TORONTO CITY POST OFFICE.—
On week days from 8, A. M., to 6, P. M., if all the Mails are in, if not, the Office is kept open until 8 o'clock, P. M.; on Sundays between the hours of 9 and 10 o'clock, A. M., but, should the Eastern Mail not be in in time, between the hours of morning and evening service, according to the hour of its arrival.

Mails for all Offices lying West and South from Toronto, including the United States Mails, are closed at 11 o'clock, A. M., and for all East, at 4 o'clock, P. M.

The Northern Mails are closed on Mondays, Wednesdays and Fridays, at 9 o'clock, A. M.

Letters can be sent by the Western Mail up to 10 minutes to 12, A. M.; by the Eastern to 10 minutes to 5 P. M., and by the Northern to the hour of 9 o'clock, 20 minutes, A. M., on payment of 3d. with each letter, whether that is paid or not.

The Western and Southern Mails due daily (Sundays excepted) at 1 o'clock, P. M.

The Eastern Mails are due daily (Tuesdays excepted) at 6 o'clock, A. M.

The Northern Mails due on Tuesdays, Thursdays and Saturdays, at 2 o'clock, p.m.

Letters for the United States must be paid to Lewiston, Kingston, Prescott, or Sandwich, and on such as are intended to go by that route to the United Kingdom, the Postage must be paid to New York, also an additional charge of 7d. and 1s. 2d. made by the Packets and Steam Ship owners; thus by Packets a single letter is charged 2s. 5d., a double 4s. 11d., and so on; by the Steam Ships the rate of Postage for a single letter is 3s. 1d., double, 6s. 2d., and so on.

Letters for the United Kingdom can be sent by the way of Quebec, between 20th May and 31st October, in Merchant vessels; they can be forwarded via Halifax per Falmouth Packets, and also by New York. If by private ships, via Quebec, the Postage must be paid to that place; if by the Falmouth Packets the Postage to Halifax, and if by the New York as before stated.

Letters to any other parts of Europe are not liable to more than the inland Postage.

A letter with one enclosure is double, with two or more (if it does not weigh an ounce) treble, if weighing an ounce, it is charged four single rates, and for each quarter ounce over that weight, a single rate is chargeable.

Newspapers, Magazines, and other printed papers, not subject to letter postage, must be paid at the time of mailing, at the rate of one penny per sheet, or per every 16 pages 8vo., otherwise they will be charged full letter postage.

Prices Current and Commercial Lists, published within these Provinces, may be forwarded to the United Kingdom by the Government Packets, via Halifax, at the reduced charge of one penny each, paid at the time of posting. These publications are subject to all regulations that apply to Newspapers.

Colonial Newspapers may be sent to the United Kingdom, either by the way of Halifax or New York

ect to all
e United
New York

By the way of Halifax they are free of Postage to sender and receiver. By New York the sender must pay 2d. on each paper, if by the old lines of Packet, but if by the Steam Ships 4d. The receiver in England, by the latter route, pays 3d.

All Newspapers received from Europe, via New York, are chargeable with 2d. each.

Newspapers, via Halifax from the United Kingdom, are free of Postage to sender and receiver, if sent within seven days from the date of publication; if mailed after that period, they are charged with full letter postage. Newspapers intended to go free, via Halifax, must have no mark, initials, or date on the envelope, or paper, nothing more than the address. otherwise they will be charged with full letter postage.

MEMORANDUM.—Persons in addressing letters to their friends should be very particular to ascertain the name of the Post Office nearest to where they live, and address them simply by the name of the office, thus—"Mr. James Dobs, New Market, Upper Canada," or any other Office, as the case may be, as in consequence of letters not being properly addressed they are frequently lost to the writer and the one to whom they are addressed. We have selected New Market, as we think that we can in that manner better prove the necessity of being particular in addressing letters under the simple name of Post Offices. That place is situated on a road called Yonge Street, thirty-four miles long, on which there are five Post Offices, besides the City Office, which serves that part of it which is within the limits of the City, it is a common thing to address a letter thus—"Mr. James Dobs, Yonge Street." Now which Office is that letter intended for, the City or any of the five others? It will therefore appear clearly, that unless the Post Master, where the letter is mailed, knows the party to whom it is addressed, that such letter will, most likely, never

reach its destination. After this explanation, we trust that all will be particular in a matter of so much importance to them, and we feel convinced, if they are guided by the foregoing instructions regarding the Post Office, that their correspondence will be much more regular.

Foreign Letters can be sent to the undermentioned places, via Halifax, on payment of the following rates of postage :—

s.	d.	s.	d.
France,	3 9	Madeira,	3 3
Netherlands,	3 11	Azores,	3 3

Portugal,	3 2		
To Gibraltar, Malta, the Ionian Islands, Greece,			
Egypt, and the East Indies, via Falmouth,			
To Malta, the Ionian Islands, Greece and Egypt,			
if sent through London and France, and			
specially directed 'via Marseilles,'			
To the East Indies, via France, and specially			
directed, 'via Marseilles,'			
In addition to the foregoing rates, will be			
charged the provincial postage from the place			
of posting to Halifax, say from Toronto,			

In order to economize space in the following Lists, and prevent unnecessary repetitions, we give the following rules for *rating* Letters, the amount being in proportion to the distance; thus:—

60 miles and under,—				s.	d.
61	..	to	100 inclusive,		4½
101	..	..	200 ..		7
201	..	..	300 ..		9
301	..	..	400 ..	1	11
401	..	..	500 ..	1	2
501	..	..	600 ..	1	4
601	..	..	700 ..	1	6
701	..	..	800 ..	1	8
801	..	..	900 ..	1	10½
901	..	..	1000 ..	2	1
1001	..	..	1100 ..	2	3
1101	..	..	1200 ..	2	5
1201	..	..	1300 ..	2	7
1301	..	..	1400 ..	2	9
1401	..	..	1500 ..	3	0
1501	..	..	1600 ..	3	2

A LIST
OF THE
POST OFFICES AND POST MASTERS
IN THE CANADAS,

ALPHABETICALLY ARRANGED,

Shewing the distance in miles (and the Postage on a single Letter) from the Post Office at Toronto to any other Post Office in British North America.

Mails are dispatched to Offices marked *a* on Mondays,
b on Tuesdays,
c on Wednesdays,
d on Thursdays,
e on Fridays,
f on Saturdays,

And to all other Offices not marked, daily, Sundays excepted.

Those marked thus † are situated in Lower Canada.

NOTE.

We cannot conclude this section of our work without again expressing our surprise, and regret, that the productive, and continually increasing source of revenue arising from the Post Office Department, is not conceded to us by the Imperial Government, since this impost is an *unconstitutional tax upon the people of these Provinces*, contrary to the provisions of the 14th of Geo. III, which declares that all monies raised in the Province shall be accounted for to the Provincial Legislature. But the fault is unquestionably with our own Representatives, whose duty it is, at their every Session, to petition the Imperial Parliament until the boon is granted; and there is no doubt that, by such reiterated application, this act of justice will speedily follow; and a present addition of some £30,000 per annum be afforded to our provincial revenue, with the certainty of continual increase.

As matters now stand, in relation to this department, whatever abuses may exist, or whatever may be its regulations, whether convenient to the public or not, or of whatever nature may be any imposition, (such for instance as the present heavy tax upon the *Newspaper Press*, amounting to *several thousands per annum*, which goes into the pocket of an individual *as a perquisite*), we, of the Provinces, have no redress without going to England for it; since, on making any complaint here, we are told it is a separate department of State, and we have *nothing to do with it!* But our own Legislators ought to point out to the Imperial Government that **WE HAVE EVERY THING TO DO WITH IT!**

The following statement will shew the aggregate Population of Upper Canada, as far as the actual returns have been made for the year 1829, together with the number of Deaf and Dumb and Insane persons in each District. To which is added the computed deficiencies from those settled Townships which have neglected to make their annual return in time for this publication; and, also the number of Indians, unreported Settlers, Army, Navy, and other sojourners who consume imported and dutiable articles:—

<i>Districts,</i>	<i>Population, Deaf & Dumb, Insane,</i>

1838. Returns for Oakland,
 Delaware, North Ox-
 ford, Plympton, Sombra,
 Walpole, Island, How-
 ard and Tilbury, Mc-
 Killop, Hibbert, Tuck-
 ersmith and Stanley, } 5758
 (the four last in the
 Huron Tract). None
 of those Townships are
 included in the above
 enumeration for 1839,
 although settled. }

Carried forward, 391,574 actually returned.

* As our City Patrons will be anxious to see a more detailed account of this extraordinary encrease of our population since the last edition, in this rising Metropolis,—which is destined to become a vast commercial Emporium,—we subjoin the following official statement. In the year 1826 the population of Kingston greatly exceeded that of *Little York*, (now the flourishing City of Toronto):

Kingston then contained,..... 2,329 inhabitants,
 And *Little York*, now Toronto,... 1,677 only!

Now, mark the present difference, ye croakers and prognosticators of evil! for, considering the embarrassments of the times we have survived, it is really wonderful, almost miraculous!! and all looks well and lively yet! God be praised.

Dumb, Insane

10

157

From the careless manner in which these returns are usually made by the assessors, in order to save trouble to themselves, it is certain the numbers are *under-rated* in nine instances out of ten; on an average, as nearly as may be fairly computed, of *one-fourth* on the grand total. We are well assured of this fact after strict inquiry in various parts of the Province. There are, besides, great numbers of *squatters*, lumbermen, and others scattered through the remote Townships, and even in settled Townships, but which are not entitled by law to hold *Town Meetings* in January, and appoint their own officers.

Population of the City of Toronto and Liberties, July, 1838.

croakers and
the embarrass-
really wonder-
and lively yet

The following statement, however, will shew at one view as correct an aggregate of the present numbers and description of persons consuming imported and dutiable articles within this Province as can be formed:

Number of residents actually returned by the Assesors,.....	391,574
Add one-fourth for the under-rating of numbers, and for Townships not returned,...	97,892
Squatters, Lumber-men, and other bush-men,.....	3,500
Settlers in Townships not entitled to hold meetings and appoint their own officers,....	2,500
Number of domiciliated Indians, and other Indians using imported goods, at least,....	7,500
Lodgers, strangers, and persons unlocated,	3,000
Army, Navy, and persons employed in navigation,.....	7,500

Total amount of the population of Upper Canada, as far as the numbers can be satisfactorily ascertained from actual returns made to the Legislature, and from the best information that can be obtained from other sources, for the year 1839.	}	* 513,467
--	---	-----------

* This enumeration is entirely confined to the Peninsula, or settled parts of Upper Canada; the Hudson's Bay Company, and their numerous posts extending entirely across the continent, together with the various tribes of Indians, within the British lines, in the North West country, altogether a vast number of souls, are necessarily omitted; although claiming British allegiance, protection, and privileges. There is one description of persons, however, forming a distinct class, with peculiar and strongly marked characteristics, that will soon make themselves known and felt in the centre of our North Western possessions, that claim a particular notice, although we cannot enlarge upon the subject here. These are the *Bois Brules* or *half-breeds* of the interior, rapidly becoming a formidable race, both as to numbers and character—uniting all the daring

The following Table will shew the aggregate population of *all* the BRITISH PROVINCES OF NORTH AMERICA; the germ of an Empire that, under the Blessing of Divine Providence, and the fostering care of the Mother Country, is designed to occupy the broad shoulders of this continent, and influence, direct, or control its destinies; and, perhaps, hereafter to command both the *Old* and the *New World*!

<i>Provinces.</i>	<i>Population</i>
Upper Canada,.....	513,467
Lower Canada,.....	750,000
New Brunswick,	260,000
Nova Scotia,.....	230,000
Cape Breton,.....	78,000
Prince Edward,.....	80,000
Newfoundland,	95,000
	2,066,467

Being upwards of Two MILLIONS in the Seven Provinces.

and courage and muscular strength of their white parentage, with the patient fortitude, long endurance, craft and other qualities of the Indians. They are excellent horsemen and marksmen, and are possessed of a breed of horses, descended from the Spanish, equal for hardihood and speed, to any in the world. From authentic sources of information in our possession, these people, at the present moment, amount, were it possible to collect them together at one point, to 5000 men. Here then, in the depths of our Western wilderness, a *Nation* of North American Arabs, Tartars, or Cossacks, is secretly but rapidly gaining strength and numbers, until at no distant day a vast cloud of native cavalry from the interior, of the most formidable description will be ready to carry the desolations of war, (and they will delight in the service), into the regions of the south, or upon the west flank of the United States, at the nod of the British monarchy.

A SET OF
STATISTICAL TABLES
FORMED FROM THE
ASSESSMENT ROLLS
OF THE
PROVINCE.

NOTE.

In our last Edition we were constrained to find fault with the generally careless and slovenly manner in which the assessments are made and reported; and notwithstanding the provisions of the Statute in such case made and directed, this important service, although an improvement is discoverable, is still very imperfectly performed. Up to the very moment of sending these Statistical Tables to press, the assessment roll of the Western District, for the past year, has not been received! It will be seen from the many valuable deductions that may be drawn from Tables, (when accurately formed) like these, that this matter is of the first importance, as a sort of gage of the living state and prosperity of the country.

Total amount collected,....£ 1,251 17 11½

* It will be observed that this return is for 1837, that of last year has not been received probably owing to the disturbed state of things in that section of the country, on account of the *Yankee* invasions. The curious reader will make such an increase to this roll as he may conceive would naturally arise in the course of one year.

REMARKS.

The total valuation of the property enumerated in the foregoing Tables, appears to be £5,040,253 11 9, whilst in 1826 it was only £2,203,094, (errors excepted), on which the rate of one penny in the pound is collected for the local uses of the several Districts.

A comparison of years with this statement, (which is as perfect as the accuracy of the documents from which we have had to compile, would admit), as succeeding editions of this work make their appearance, will shew the gradual increase of the resources of the country.

But, it is our duty to declare, and, from long observation, we know it to be the case, that either through dishonest motives, and a desire to pay as little tax as possible on the part of the assessed, or, through the carelessness of those employed to make the returns, the reports are *below the true numbers* by, at least, *one-fourth*, with the exception of the number of Houses, Shops, and Mills.

Assuming this to be a fact, (of which we ourselves have no manner of doubt), we shall here place in round numbers the real amount of several items in a general aggregate; and, a most interesting statement it is.

Upper Canada then, from the best evidence that can be at present obtained, has now

* 1,738,503 Acres of Land under cultivation,

678 Grist Mills,

933 Saw Mills;

(*More than nine-tenths of these Mills are wrought by water.*)

* 76,563 Horses of three years old and upwards,

* 57,641 Oxen of four years old and upwards,

* 156,252 Milch Cows, and, at least,

* 60,895 Young Cattle from two to four years old,

And, in the whole, an *actually assessed* property rated at *more than TWENTY MILLIONS OF DOLLARS*, but, in reality, upwards of *TWENTY-FIVE MILLIONS!! exclusive of floating capital.*

The items marked with an asterisk (*) have the one-fourth alluded to added. The return of grist and saw mills, being more free from suspicion, from the public nature of the property, remains, in this view, as sent by the assessors.

In the preceding quantities we have considered it wholly useless to mention the number of acres of wild or uncultivated land; because the returns are ridiculously below the real amounts, of which we will here give the most satisfactory proof.

There are now 318 Townships of land actually surveyed in Upper Canada; these, according to instructions from the Surveyor General's Office, average about 66,000 acres each, so that we have unquestionable evidence to shew that 20,988,000 acres have been actually surveyed in this Province. To say the least of it, three-fourths of that quantity have been located, and, yet, what is the number of acres of wild land returned in the assessment rolls?—Why, about 5,000,000, or not quite *one-fourth part of the actual quantity!*

The stranger ought to be informed that, as the common log-houses of the country pay no tax, they are not mentioned in any of the returns; neither are lumber, or common double-horse market waggons mentioned in these returns, (of which there are a vast number), nor sheep, nor swine, of which latter description of farming stock, (pork being one of the staple articles of Canadian commerce), computing by the number of families, there cannot be less than 600,000 in the Province, at the present time.

The number of Milch Cows forms a remarkable and most gratifying feature in this view of our rural statistics; but, in truth, Upper Canada is one of the finest *dairy countries* in the world. As good butter is here made as in any part of Cambridgeshire, Yorkshire or Ireland; and cheese also, of as good and rich a quality as can be produced in Cheshire or Gloucestershire. The number of young horned cattle in these tables is most ridiculously *under-rated*: in truth, many very substantial farmers do not know *how many they have*, since their young cattle are generally allowed to run at large until some are wanted for the dairy, or for draft. As this description of stock forms the nursery for the milch cows and draft oxen, it is manifest the numbers are greatly under-rated.

These returns may be said to be confined almost wholly to the agricultural wealth of the Province. The large amount of floating capital employed in commerce, domestic manufactures, and in steamboats, and the ship-

ping interests generally, not, in any degree, coming under our consideration on the present occasion.

The scale by which these District rates are valued and levied will be found under the head of Provincial Taxation.

This part of our work will be far from complete unless we state the number of *Shop, Tavern, and Distillery Licences* for 1838, from which, together with the *Hawkers, Pedlers, and Auctioneer's Licences* a large portion of the Provincial revenue is derived. It is proper here to premise that it is only the shops of those merchants which are open for the sale of Foreign goods, and for the retail of wines and spirituous liquors by the quart, that are subject to an impost; hence, the apparently small number. The number of Shop Licences issued during the year

1838,.....	274
of Tavern's or Innkeepers do	855
of Distilleries do	* 6,532½ gals.

Amongst the curious and interesting reflections occasioned by a review of the foregoing tables, there are some well worthy of particular attention, either from the singularity of the facts, or, by reason of the important deductions that may be drawn from them.

Notwithstanding the wise provisions of the Statute 32, HENRY VII, ch. 13, and of the 27th of HENRY VIII, ch. 6, in the subsequent reign of ELIZABETH, when England was threatened with invasion by the Spanish Armada, in 1588, after a general survey, ordered for the express purpose, ELIZABETH could find no more than 50,000 serviceable horses *throughout her entire kingdom*.

Here, in a country almost covered with wood, and apparently but ill adapted, in its present state, for the breeding of horses; and settled (with the exception of a few French Canadians on the Western frontier) but little more than forty years, we have more horses than were to be found in all England at a most flourishing period of its

* This estimation (we are sorry on every account to remark) is very far below the true account. The boilers, or distilling vessels, themselves, are *gauged*, and it is by their *capacity*, not by the number of gallons that may be run off in the course of a year, that they are taxed, at the rate of half a dollar per gallon on the measurement of the vessel or boiler.

history; and, in both Canadas together, there is now beyond a doubt, at least three times the number of horses that were returned to the patriotic Queen ELIZABETH, on the momentous occasion alluded to.

But there are considerations arising from a contemplation of the subject before us, of the very highest national importance. It must be recollected that we are not sowing the seeds of future greatness upon a mere island of the sea, nor within any narrowly contracted limits, like Van Diemen's Land, or New Zealand, but upon a vast continent, which is destined, beyond all doubt, by its position on the globe, and from the character of the people by whom it is inhabited, and by the boundless immensity of its resources, to command the world. We must recollect that, notwithstanding the loss of those colonies which now constitute the United States, by the impolitic treaty of 1783, the British Empire upon this continent, and of which we form, perhaps, the most valuable portion, still commands a latitudinal length of *two thousand* miles, by a longitudinal breadth of nearly *five thousand* miles; and possessing within that vast region, which is more extensive than the legitimate dominion of any other earthly potentate, save that of our own beloved monarch, every conceivable natural advantage. This is no exaggerated statement!

Now for a few indisputable facts, and the deductions therefrom which we have a right to draw. Towards the conclusion of Mr. McGregor's valuable work, entitled "British America," he gives us a statistical table of the number of inhabitants, acres of land that are cultivated, horses, cattle, sheep, &c. in the Provinces of Canada, New Brunswick, Nova Scotia, Prince Edward's Island, and Newfoundland. In this table his total numbers are, of

Inhabitants,.....	1,245,000	Horned cattle, 785,000
Acres of land, cultivated, 4,635,000		Hogs,.....723,000
Horses,.....	128,000	Sheep,.....918,000

This statement was made for the year 1831, and his estimated value of the land and cattle above stated is,..... £23,548,000

To this he adds the amount of capital vested in other property in these Colonies,..... 19,015,000

£42,563,00

And declares that this large amount is the "*lowest estimate of fixed capital and cattle, exclusive of the cost of the extensive fortifications in Canada, and the maritime Colonies.*" He next proceeds to shew the amount of goods exported to these same colonies from the United Kingdom in 1830 (nine years ago, mark!) from the best authority, the custom's returns, which he places at £2,386,549, and justly observes that that amount was much *under* the *actual* value of British exports to the North American Colonies, since it is well known the goods are estimated *below* their worth, on account of the *ad valorem* duties.

McGREGOR next observes that the aggregate tonnage of the shipping employed in the trade between Great Britain and these Colonies, in the intercolonial trade, in the coasting trade, and in the fisheries cannot be less than 780,000 tons; and the number of sailors and fishermen employed in consequence are stated to be at least 65,000, (all this mind in 1831). He then closes his elaborate and satisfactory general statement in these appropriate and emphatic terms:—

"Let those, therefore, who think lightly of the British Dominions in North America, reflect on these facts, and and consider the multitudes of men, women, and children, BRITISH SUBJECTS, who are supported at home and abroad, by the operations of the North American Colonial trade; and by Great Britain possessing those Colonies; and let them also reflect that those countries are only yet in comparative infancy, beginning to develop their mighty resources, before they form conclusions that betray gross ignorance, or the absence of intellectual capacity.

"Men, however, who can, with the minds of great statesmen, appreciate the present value of those Colonies, will clearly anticipate, and justly estimate, their future grandeur, and their importance in maintaining the influence of England over the whole of the western world, and their consequence in preserving British power in Europe."

We have not the same means of judging the amount of increase in the various sources of wealth above alluded to, in our sister colonies, during the past eight or nine years, as enable us to come pretty nearly at the truth in this respect, in the Canadas. But, if the increase which has been made in those sister colonies at all approaches the

advance *we* have made in that period of time, at least *one-third* must be added to the amount of every item in Mr. McGregor's estimates, and it may be confidently affirmed that the British Provinces of North America, at the present moment, contain Two MILLIONS of settled inhabitants; fixed and floating capital to the amount of at least FIFTY MILLIONS of pounds, or Two HUNDRED MILLIONS of dollars; that they give employment to one hundred thousand tons of British shipping, and to nearly ninety thousand sailors and fishermen, and that they annually consume British goods and manufactures to the amount of more than THREE MILLIONS sterling.

Are such interests to be sacrificed to the profligate and insatiable cupidity of the nick-named United States to the southward of us? — NEVER.

But now for the most important consideration.— According to Dr. PRICE, and all the best authorities, at the period of the commencement of those differences which led to a separation of the colonies, now forming the United States, the exports from Great Britain to them, on an average of three years previous to February 9, 1775, did not amount to more than £3,370,900, nor did the white population of those same colonies, at the same period, greatly exceed three millions. By a parity of reasoning, therefore, it is fair to conclude that, in the same number of years to come, which have elapsed since that period in 1775, to wit, sixty-four years, these Provinces and the vast extent of British territory to the west of us, even to the Pacific Ocean, will possess as numerous a population, and exhibit as many resources, and as much apparent wealth as all Jonathan's United States can now boast!

Our readers may be assured that we have not put ourselves to the trouble, and, we can truly add, to the expense of bringing forward these facts, and suggesting the considerations consequent in our view therefrom, upon an occasion like the present, but, from the best and most patriotic motives. This little book will, no doubt, fall into the hands of many who have never thought of these things; and the good it may do, will, we hope, be like the bread that was cast upon the waters, and which was found after many days!

IMPORT DUTIES, TAXES, AND DISTRICT RATES OR ASSESSMENTS IN UPPER CANADA.

The public revenue for the support of Government in this province is chiefly derived from the following imposts.

All goods and merchandize imported by sea at Quebec, and Montreal, (except wines, spirituous liquors, and some other articles of luxury which pay a higher and a specific duty) are subject to the payment of 2 1-2 per cent ad valorem. This duty is paid by the importer, and forms the principal source of revenue. Certain articles, also, imported from the United States are subject to the payment of duties according to the annexed rate of customs; and all merchants shops, taverns, distillers, auctioneers, and hawkers and pedlars, are obliged to pay for a license to carry on their respective avocations.

THE LOCAL TAXES, OR DISTRICT RATES,

	£	s.	d.
Are, for every acre of arable pasture, or meadow land,	1	0	0
Every acre of uncultivated land,		4	0
Every town lot,	50	0	0
*Every house built with timber squared or hewed on two sides, of one story, with not more than two fire places,	20	0	0
do for every additional fire place,	4	0	0
Every house built with square or flatted timber on both sides, of two stories, with not more than 2 fire places,	30	0	0
do. for every additional fire place,	8	0	0
Every framed house under 2 stories in height, with not more than two fire places,	35	0	0
do for every additional fire place,	5	0	0
Every brick or stone house of one story and not more than two fire places,	40	0	0
do for every additional fire place,	10	0	0
Every framed, brick, or stone house, of two stories, and not more than two fire places,	60	0	0
do for every additional fire place,	10	0	0

* The common Log-houses of the country, pay no tax.

Every grist mill, wrought by water, with one pair stones,	150	0	0
do with every additional pair.	50	0	0
Every saw mill,	100	0	0
Every merchant's shop,*	200	0	0
Every store house,	200	0	0
Every stone horse,	199	0	0
Every horse of the age of 3 years old and upwards,	8	0	0
Oxen of the age of 4 years and upwards,	4	0	0
Milch cows.	3	0	0
Horned cattle from 2 to 4 years,	1	0	0
Every close carriage with 4 wheels kept for pleasure,	100	0	0
Every open carriage or curricie, do	25	0	0
Every other carriage or gig, with two wheels, do	20	0	0
Every waggon kept for pleasure,	15	0	0
Every stove erected and used in a room where there is no fire place is considered as a fire place.			

NOTE.—The rate of assessment is limited to one penny in the pound, which, when collected is paid into the District Treasury, and is applicable to local purposes within the District for which the rates are levied.

HIGHWAY RATES.

Every person inserted on the assessment roll, in proportion to the estimate of his property, is held liable to work on the highways in every year, as follows :

If his property be rated at	£25	2 days.
do	25 to 50	3 do
do	50 to 75	4 do
do	75 to 100	5 do
do	100 to 150	6 do
do	150 to 200	7 do
do	200 to 250	8 do
do	250 to 300	9 do
do	300 to 350	10 do
do	350 to 400	11 do
do	400 to 500	12 do

* These are considered merchants shops, only which are open for the sale of foreign articles, and wines, or spirituous liquors by the quart.

For every	£100 above	500 to 1000	one day.
do	200 above	1000 to 2000	do
do	300 above	2000 to 3500	do
do	500 above	3500	do

Every person possessed of a waggon, cart, or team of horses, oxen, or beasts of burthen or draft used to draw the same, to work on the highway three days.

Every male inhabitant from 21 to 50, not rated on the assessment roll, is compelled to work on the highway 3 days.

Persons emigrating to this province, intending to become settlers, and not having been resident six months, are exempt; and all indigent persons, by reason of sickness, age or numerous family, are exempt at the discretion of the magistrates.

Any person liable may compound, if he thinks fit, by paying 5s. per day for each cart, &c. and 2s. 6d. for each day's duty, to be paid within 10 days after demand is made by the surveyor, or the magistrates can issue a distress warrant for double the amount and costs.

RATE OF CUSTOMS IN UPPER CANADA.

IMPORTS FROM THE UNITED STATES.

Prohibited.—Arms, ammunition, books, (all such as are prohibited to be imported into the United Kingdom,) base coins, fish, dry or salted, oil, blubber, or skins of creatures living in the sea, tea.

Free.—Ashes, bullion, beef, bread, bacon, biscuit, corn, cocoa nuts, cordwood, cabinet-makers' wood, diamonds, drugs, dye-woods, fruits, meat and fish, (being fresh) flour, flax, grain, (unground), gums of all kinds, hay, horses, hams, hemp, live stock, lathwood, lumber, logs, masts, meal, pork, rice, rosin, resins, rawhides, staves, shingles, tortoiseshell, tow, tallow, timber, woodhoops, wood.

Admitted at the rate of 7½ per cent.—Alabaster, anchovies, argot, anniseed, amber, almonds, brimstone, botarge, currants, capers, coral, cork, dates, essences [of bergamot, lemons, roses, citron, orange, lavender, and rosemary,] emerystone, fruit, [dry in sugar or wet in brandy,] figs, honey, iron in bars, unwrought pig iron, incense of frankincense, juniper berries, lava or malta stone for building, marble, medals, nuts, oil of olives, or almonds, ostrich feathers, olives, pickles, pitch, paintings, pozzolona, pumice stone, punk, parmesan, cheese, pearls, precious stones, prints, raisins, sponge, sausages, turpentine, tar, vermicelli, whetstones, wine.

Admitted at the duty of 20 per cent.—Candy sugar, cotton manufactures, glass manufactures, tobacco manufactures, refined sugar, soap.

Admitted at the duty of 30 per cent.—Books and papers, clocks, and watches, leather manufactures, linen manufactures, silk manufactures, musical instruments, wire, (all sorts.)

Admitted at the rate of 15 per cent.—Goods, wares, or merchandize not being enumerated or otherwise charged with duty.

Duties charged by weight, &c.—Salt, 6d. c'y, per bushel; spirits, 1s. sterling, per gallon; sugar, 5s. sterling per cwt.; coffee, 5s. sterling per cwt.; cocoa, 5s. sterling per cwt.; molasses, 3s. sterling per cwt.; wine in bottles, 7d. per gallon, and further 7½ per ct. ad valorem, and 1s. sterling each dozen quart bottles.

Elm,	50		31	4

N. B. The woods were very good of the sort, except the Elm, and all very dry; the measure is English, and the weight Avordupois.

It is probable, that the woods of Canada are lighter, [except those grown on plains and exposed situations,] than similar species produced in England.

Dimensions of a statute acre in yards, from 1 to 100 yards in length.

No. 13.

To turn any given Currency into any Currency required.

RULE I.—Let the value of the Spanish Dollar be expressed in Shillings or Pence, in each of the Currencies, writing them in the form of a Fraction,
And making the | required given | Currency the
Numerator } of the Fraction.
Denominator }

Reduce this Fraction to its *least terms*, and it will serve as a constant Multiplier, by which any such of the *given* Currency being Multiplied, it will be converted into the Cuarency required.

N.B.—When the Fraction is not an improper one the *Multiplier* will become a *Divisor*.

EXAMPLE.—To form a rule for changing Sterling at 4s. 6d. per dollar into New York at 8s. per dollar.

Here *Sterling is given and York required*: The dollar in } York is 8s., or 96 Pence Numerator,
Sterling, 4s. 6d., or 54 Pence Denominator.

Therefore $\frac{96}{54}$ is the Multiplier sought, which reduced to its least terms, becomes $\frac{16}{9}$ or $\frac{17}{9}$, therefore, if Sterling be Multiplied by 16 and divided by 9, the result will be York, thus, $\frac{16}{9}$ is the same as 2 into $\frac{8}{9}$, but $\frac{8}{9}$ is the same as 1 less $\frac{1}{9}$, therefore 2 into $\frac{8}{9}$ is equal to 2 into 1 less $\frac{1}{9}$; which is that Rule, expressed shorter thus $\frac{16}{9} = 2 \times \frac{8}{9} = 2 \times 1 \frac{1}{9}$.

To turn Sterling into	{	Currency, or Halifax,	add 1	9
	{	Army,	add 1	27
Currency into	{	Sterling,	deduct 1	10
	{	Army pay,	deduct 1	15
Army pay into	{	Sterling,	deduct 1	28
	{	Currency,	add 1	14

A Half Joe is	£1	16	0	Stg.	£2	0	0	Cury.	£1	17	4	Army
A Guinea is	1	1	0		1	3	4		1	1	9	
A Dollar is	0	4	6		0	5	0		0	4	8	

RECEIPTS, &c., &c.

Disorder from Heat in a Hot Climate.

One drachm Camphor, desert spoonful of Brandy, half an ounce of Sugar; rub the camphor and brandy together, then add the sugar; when well mixed, add one pint of boiling water by degrees; cover up, keep till cold, and take a quart or half a pint of all, in a day after, Jame's powder. If a tendency to putrefaction, two drachms sweet spirit of vitriol to the pint.

Powder for Rheumatism when first coming.

Pulvis Ipecacuanha Compositus, of the last London Dispensatory. In common cases with no violent pain 10 grains at going to bed; in great pain, 20 grains, wash down with diluting liquor.

For Rheumatic Pains, or the Lumbago.

Dissolve as much salt in water as will make it swim an egg, rub it in with your hand on the part affected before a

fire, for 15 or 20 minutes, just before going to bed; it is uncommonly effective.—A YOUNG.

A Cement which equally resists both Fire and Water

Make a pint of milk coagulate on the fire by means of an acid till it is quite clear; filtrate it, and separate perfectly the caseous particles; mix with the whites of four or five eggs, which beat well separately, and then again anew; then mix it with quick lime reduced to an impalpable powder in such quantity that the whole may form a consistent mass to be adopted as a cement.

[G. E. Skoge Act, de L'Acad, Swez Vol. 34, p. 1.

To Extinguish Fire.

For preserving buildings from fire, Mr. Hartley's celebrated method of plates which is cheaper and more effectual than other modes that have been tried, is of the utmost importance in all buildings to be applied as a partial security in the spots most liable to be set on fire. To put out a fire an experiment has been tried which deserves further enquiry—A modern traveller gives this account at Augsburg;—"We saw an experiment for extinguishing fire; they had made a fabrick of boards set round with faggots, dry cloven wood and other combustibles, when all was thoroughly on fire, they threw in a little barrel, it made a small explosion, and the fire immediately abated; but continuing still to burn at one end, they threw in another barrel and it was all extinguished. The same I am told, has since been performed in England." If I mistake not the Society of Arts offered a premium for something of the sort, and in consequence some experiments were made long after this author wrote, which was in 1722, and Mr. Godfrey, the chemist, produced a ball or barrel, which exploding had the same effect, and was very satisfactory: but the composition was a secret which dyed with the great Mr. Boyle. It is to be regretted that other, and greater premiums are not given to re-discover so valuable an art.—A YOUNG.

To render White Wash durable.

White Wash of Lime is rendered fixed and durable without cracks if made with water, in which common salt is dissolved—[Lavasseuseur Annales des Arts et Man.

GOLDEN RULES.

To render young tradesmen respectable, prosperous, and wealthy.

1. Choose a good and commanding situation, even at a higher rent or premium; for no money is so well laid out, as for situation, provided good use is made of it.

2. Take your shop door from off the hinges at seven in the morning, that no obstruction may be opposed to your customers.

3. Clean and set out your windows, at eight o'clock, and do this with your own hands, that you may expose for sale the articles which are most saleable, and which you most want to sell.

4. Sweep before your house; and, if required, open a footway from the opposite side of the street, that passengers may think of you while crossing, and that all the neighbours may be sensible of your diligence.

5. Wear an apron if such be the custom of your business, and consider it a badge of distinction, which will procure you respect and credit.

6. Apply your first returns of ready money to pay debts before they are due, and give such transactions due emphasis by claiming discount.

7. Always be found at home and in some way employed; and remember that your meditating neighbours have their eyes upon you and are continually gauging you by appearance.

8. Re-weigh and re-measure all your stock, rather than let it be supposed that you have nothing to do.

9. Keep some article not usually kept, or sell some current article cheap, that you may draw customers and enlarge your intercourse.

10. Keep up the exact quality or flavour of all articles which you find are approved of by your customers, and by this means you will enjoy their preference.

11. Buy for ready money as often as you have any to spare; and when you take credit, pay to a day and unasked.

12. No advantage will ever arise to you from any ostentatious display of expenditure.

13. Beware of the odds and ends of stock, of remnants, of spoiled goods, and of waste, for it is in such things that your profits lie.

14. In serving your customers, be firm and obliging, and never lose your temper, for nothing is got by it.

15. Always be seen at Church or Chapel on Sunday; never at a Gaming Table; and seldom at the Theatre or places of amusement.

16. Prefer a prudent and discreet, to a rich and showy wife.

17. Spend your evenings by your own fire side, and shun a public house or a sottish club as you would a bad debt.

18. Subscribe with your neighbours to a book club, and improve your mind, that you may be qualified to use your future affluence with credit to yourself, and advantage to the public.

19. Take stock every year, estimate your profits, and do not spend above their fourth.

20. Avoid the common folly of expending your precious capital upon a costly architectural front; such things operate on the world like paint on a woman's cheeks—repelling beholders, instead of attracting them.

21. Every pound wasted by a young tradesman, is two pounds lost at the end of three years, and sixteen pounds at the end of twenty-four years.

22. To avoid being robbed and ruined by apprentices and assistants, never allow them to go from home in the evening, and the restrictions will prove equally useful to servant and master.

23. Remember that prudent purchasers avoid the shop of an extravagant and ostentatious trader; for they justly consider that, if they must deal with him, they must contribute to his follies.

24. Let these be your rules till you have realized your stock, and till you can discount for prompt payment on all purchasers; and you may then indulge in any degree which your habits and sense of prudence suggest.

COMMON SENSE.

Old Parr's Maxims of Health.—Keep your feet warm by exercise, your head cool through temperance; never eat till you are hungry, nor drink but when nature requires it.

A
GENERAL CHRONOLOGY
OF
REMARKABLE EVENTS,
FROM THE
CREATION OF THE WORLD,
TO THE
PRESENT TIMES.

COMPILED FOR THIS WORK,
BY CHARLES FOTHERGILL.

BEFORE CHRIST.

- 4004 THE Creation of the World, according to the Hebrew text of the Scriptures.
4003 The birth of Cain, the first born of woman.

- 1686 The Newtonian Philosophy published.

- 1688 The revolution in England, and abdication of James II.—Smyrna destroyed by an Earthquake.
 1690 King William gains the battle of the Boyne.
 1692 The Sea Fight off La Hogue, in which the French are defeated.—The massacre of Glencoe, in Scotland.
 1694 The Bank of England incorporated.—Messina destroyed by an Earthquake.
 1700 The New Style introduced by the Dutch and Protestants in Germany.

EIGHTEENTH CENTURY.

- 1703 Gibraltar taken by Admiral Brooke.
 1704 The battle of Blenheim won by the Allies.—St. Petersburg founded by Peter the Great.
 1705 The English take Barcelona, and defeat the Spanish fleet off Gibraltar.
 1706 The French defeated at Ramilies by Marlborough. The articles of union between England and Scotland signed.
 1708 The French defeated at Oudenarde by Marlborough and Prince Eugene.
 1709 Charles the Twelfth defeated by the Russians at Pultowa.—The French defeated by Marlborough and Prince Eugene at Malplaquet.
 1714 The interest of money in England fixed at five per cent.
 1715 The Rebellion in Scotland.—Treaty of Utrecht.
 1718 Charles the Twelfth of Sweden killed at the siege of Frederickshail.
 1720 The South Sea Scheme begins April 7th, and ends on September 29th.
 1722 The Czar of Muscovy assumes the titles of Emperor of Russia.
 1727 Death of Sir Isaac Newton in his 85th year.
 1744 Anson completes his voyage round the globe.
 1745 Battle of Fontenoy.—The English take Louis-

burgh, and Cape Breton.—Rebellion in Scotland.

1746 The victory of Culloden puts an end to the Scottish rebellion.

1747 The French fleet defeated by Hawke.—Lord Lovat beheaded.

1752 The New Style introduced in England.

1753 The British Museum established at Montague House.

1759 Gaudaloupe surrendered to the English.—The allies defeat the French at Minden.—General Wolfe takes Quebec.—Boscawen defeats the French fleet off Gibraltar.

1760 The British troops take Montreal and Canada.

1761 The English take Pondicherry, and Bellisle.

1765 Death of the Duke of Cumberland and of the Chevalier de St. George.

1766 The American Stamp Act repealed.

1768 Act making the Irish Parliament Octennial, passed.—Mr. Wilkes returned for Middlesex.—Riot in St. George's Fields.—Captain Cooke returned from his first voyage.—The Royal Academy established.

1769 Mr. Wilke's second and third elections declared void.

1770 Poland, which had been for some years a prey to anarchy, was this year afflicted with another dreadful scourge, the plague, which made dreadful havoc. The neighbouring powers, which had long had their eyes upon this country, found this a convenient opportunity to draw forces round her on pretence of defending themselves against the introduction of that dreadful disorder into their dominions; but in reality, to be ready to act when an opportunity offered.

Settlement of the Falkland Islands by the British. At the Grand Fire Works at Paris, played off on the marriage of the Dauphin, afterwards Louis XVI. to Maria Antoinette of Austria, an alarm ta-

king place, the crowd pressed so much to get away, that nearly 3000 persons were killed, drowned, crippled or wounded. The deaths alone were 712. This accident was said to be ominous which it really proved to be.

The Court of Chancery, in the case of *Miller vs. Taylor*, for selling *Thompson's Seasons*, determined that Taylor should account to Miller for the profits on the books he had sold; by which means the question respecting Literary property was finally determined.

1771 The King of Poland carried off from the midst of his capital by a small party of desperate Poles.

This Session the great question respecting the Printing the debates came on. Some of the printers of Newspapers were called up to the House for disobeying the standing orders of the house, in printing their debates. The printers did not attend. The Speaker, by order of the House, issued a Warrant to take them into custody, and a messenger was sent into the city to arrest them. The messenger who arrested Miller, was carried before the Lord Mayor (Crosby,) and Alderman Oliver and Wilkes, who discharged the printers and held the messenger to bail. The House of Commons, in a rage, committed their two members, Crosby and Oliver, to the Tower, where they remained during the sitting of Parliament. The printers have ever since continued to print the debates, and the House of Commons have not thought proper to expose themselves to the like opposition again.

The Royal Academy met for the first time in the new apartments, given them by the King, at Somerset House.

The Lord Mayor carried by Habeas Corpus, before the Chief Justice of the Common Pleas, but the Chief Justice declared he could give no relief.

A solemn hearing before the Court of Common

Pleas respecting the Lord Mayor. The Court determined they could not give any relief.

1772 This year disclosed one of the most infamous Treaties that ever disgraced the States of the Continent. The balance of power has employed the attention of the politicians of Europe for nearly a century but in this transaction it appears to have been totally lost sight of by the partition of Poland. The House of Commons, from their conduct in the Middlesex election, had lost much of their credit with the public; and the printers set them at defiance this year in opposition to their standing orders.

In the Archipelego, no less than 700 houses, and 5000 inhabitants have been destroyed since Christmas by Earthquakes.

 A pleasure boat of fifteen tons, built of Iron,
 launched in the river Foss, in Yorkshire, several
 persons embarked in her.
 1778 Ministers announce to the House that the French
 had acknowledged the Independence of the United
 States. On the Duke of Richmond's arguing in
 the House of Lords, a few days afterwards, that
 England should do the same, the great Earl of
 Chatham rose with apparent heat, to answer the
 Duke, declaring his objection to what he called
 the dismemberment of the Empire, when he fell
 into convulsions, and died in a few hours.
 Pondicherry taken by the English, which may be
 said to have extinguished the French power in the
 East.
 Nootka Sound discovered by Capt. Cook.
 The Sandwich Islands discovered.
 A party from on board an American Privateer,
 commanded by Paul Jones, landed and burned one
 of the ships in the harbor of Whitehaven. He had
 just before landed near Kirkeudbright, in Scotland
 and pillaged the house of Lord Selkirk.

1782 Turkish confines, but the Emperor of Germany did the same; and the latter refused to renew the treaty with Turkey, which was nearly expiring.

An Act, disqualifying officers of customs, excise, &c. even from voting for members of Parliament was passed, as did Mr. Burke's bill of Reform in the Household. Mr. Pitt, about the same time, made a motion for a reform of Parliament, which was lost by a majority of 20 only.

The city of London paid £27,000 for damages done in the city by the Rioters of 1780.

1783 Several cities, towns, and villages, and upwards of 40,000 persons of Naples, and Sicily, were destroyed this year by Earthquakes. Of the town of Castel Nova, the following account is given:— That an inhabitant of that place, being on a hill at no great distance, looking back, saw no remains of the town, but only a black smoke, and a lake of stinking water. 4,000 people perished in that town.

The Parliament in England, in fact, ceded the right of taxing Colonies; and France had introduced into the minds of her people, both civil and military, those notions, which in the end, brought about the Revolution.

His Majesty created a new order of Knighthood for Ireland, to be called Knights of the Illustrious Order of St. Patrick.

It was determined in the Court of King's Bench, when two parties, not in partnership, drew a bill to their order, both must endorse it, to make it negotiable.

It was determined in the Court of King's Bench that an in-keeper is bound to keep his guests in security; and therefore, a verdict was given to a gentleman who had been robbed in an inn.

A member expelled the House of Commons, who had been proved guilty of perjury.

 1784 Muslins first manufactured in England.—Mail
 Coaches first established.
 1785 Mr. Pitt, the Chancellor of the Exchequer, and
 now Prime Minister, had pledged himself to bring
 forward the subject of Parliamentary Reform: he
 did so, early in the session, and suffered the ques-
 tion to be carried against him by 278 to 174.
 A frost lasted 115 days.
 The Court of King's Bench determined that an
 officer on half pay is not subject to a Court Mar-
 tial.
 In a salute fired by one of our India Ships in Chi-
 na, a loaded gun was inadvertently fired which
 killed a native; the government demanded that the
 gunner be given up; he was soon strangled.
 Came on, at Shrewsbury, the trial of the Rev. Dr.
 Shipley, Dean of St. Asaph, for a libel in publish-
 ing Sir W. Jones's dialogue on government; when
 the Jury returned the following verdict: "Guilty
 of publishing, but whether a Libel or not, the Jury
 did not find."
 An important cause was tried before the Court of
 Session in Scotland, respecting literary property.
 The proprietors of the Encyclopedia Britannica had
 printed a great part of Mr. Gilbert Stuart's Histo-
 ry in their work; the court determined they were
 subject to the penalty of the Acts.
 The right of Vicars to clover seed, turnip seed,
 and all small tithes, was this day settled in the
 Court of Exchequer.
 1786 Mr. Fox recovered £2000, damages against the
 High Bailiff of Westminster, for not returning him
 as member for the City of Westminster.
 Margaret Nicholson made an attempt to assassinate

His Majesty as he was getting out of his carriage at St. James' but did him no harm.

 1787 A forged Gazette extraordinary was circulated, with a view to afflict the funds. The principal in this business has never been discovered.
 A Shark was taken in the Thames, near Poplar; in his belly was found a watch, with the name of Watson engraved on it. The watch had belonged to a young gentleman who had been drowned near Falmouth.
 The Colony of Botany Bay settled.
 The Agricultural Society Formed.
 Died at Horton near Leek, Staffordshire, Mary Brook, aged 148.
 1788 The Quakers at Philadelphia, emancipated their slaves, and opened schools of instruction for them.
 A bog in Ireland, in the County of Tipperary, was observed to swell, which soon burst, overflowed a vast tract of fertile land adjoining, and tore up several trees by the roots.
 By a verdict in the Court of King's Bench it was determined, that interest may be charged on a debt after the usual term of credit is expired.
 Lady Strathmore recovered an estate of £12,000 a year from her husband, which she had assigned under the influence of terror.
 The Chancellor refused a bankrupt's certificate because he had lost £5 at one time in gaming.
 A leather canon was proved in the King's Park, at Edinburgh, which was found to answer; it was fired three times.

- 1788 Died at Galway, Patrick Conolly, Esq. 114
 At Selkirk Mr. Riddell 116

1789 The National Assembly of France one morning, finding the hall they met in shut, with a view to prepare a throne for the King, took offence, and hastened to a Tennis-court to deliberate, and there took an oath not to separate until they had formed a Constitution.

The Pope, in addition to the mortification he had already suffered, now saw his power in, and profit from, France at an end. He heard with dismay the decree of the National Assembly, that Tithes were abolished, and the possessions of the Clergy declared national property.

A severe frost, which began on the 25th of November, and continued unremitted for seven weeks; the Thames was frozen in a remarkable manner and the ice this day, (Jan. 14th,) for the first time, broke up, at the time that the fair was held thereon.

A vessel was launched at Deptford, built of Copper.

The Bastile at Paris taken and destroyed.

Many of the Princes and Nobles of France emigrate.

The Liberty of the Press in France decreed.

- 1790 Ismael captured by Suwarrow, the place was taken by storm, and the most horrible excesses committed; 15,000 of the besieged fell, and all the inhabitants were massacred.

A dispute takes place between the English and Spaniards, respecting Nootka Sound.

Letters received from the philanthropic Mr. Howard, which say, that from the bad state of the Russian Hospitals at Riga, Cronstadt, &c. nearly 70,000 men have perished within the last year.

Nuns and Friars turned out of the Convents of France.

The Court of King's Bench determined that, a.

Advice was received of a mutiny on board the
Bounty, armed ship, which had been sent from O-
taheite, with the bread fruit. The mutineers put
the Captain and seventeen men into one of the
boats, in which they ran nearly 4,000 miles; and
were miraculously preserved.

In digging for a new dock at Blackwall, after pas-
sing several strata of sand, clay, &c. were found
a number of large trees, and a hazel nut hedge.

A Verdict was given in the Court of King's Bench
in favor of a Slave, who sued his master for wa-
gos.

It was determined that a Livery stable keeper
cannot detain a horse for his keep, although an
Inn keeper may.

Galvani, of Italy, discovered the Crural Nerve of
a frog to be convulsed when touched with a wet
knife; hence Galvanism.

1791 A most important debate took place respecting Mr.
Hastings' trial: The question was—Whether an
impeachment abated on a dissolution of Parlia-
ment? and it was determined that it did not.

The riots at Birmingham, when many dissenting
meeting-houses, and several private dwellings,
were destroyed.

Females debarred from succeeding to the Crown
of France.

The Court of King's Bench determined that the
half pay of an officer of the Army was not assign-
able.

A Jury at Sudbury not being able to agree, op-
pressed with hunger, broke open the door, and went
home.

In the course of this year, above 32,000 houses
were destroyed by fire at Constantinople.

1792 France declared a Republic, and the trial of Louis
XVI. which lasted to the end of the year.

1792 On the meeting of Parliament, Mr. Fox brought in his Bill to make the Jury judges of law as well as the fact, in cases of libel. It passed into a law.

The King of Sweden assassinated by Ankerstroom at a masked ball.

A verdict of £50 given against the Printer of a newspaper, for advertising for stolen goods, and that no questions should be asked.

All Records of Nobility ordered to be burned in France.

The Kalendar, and names of the months altered by the French Convention.

Egypt visited by a Plague; 800,000 persons died.

The Americans began their gold coinage of Eagles, half Eagles, and quarter Eagles.

Died, at Islington, Mrs. Judith Scott, 162

At Deretend, near Birmingham, Mr. Johnson, 120

At Kirkcudbright, Scotland, Will. Marshall, a Tinker, 120

1793 This year the Board of Agriculture was established by Parliament.

Louis XVI. guillotined.

Captain Bligh, with two ships, arrived from Otaheite, at Jamaica, with 800 plants of the bread fruit in a healthy state.

The Lake of Harrenten, in Ireland, above a mile in compass, sunk into the earth.

Marat assassinated by Charlotte Corday.

Verdict against the Crown, for property in a Royal Forest, which had been enclosed for 60 years.

The Queen of France guillotined.

The Duke of Orleans, father of the present King of France, guillotined by the factions in power.

Christian Religion suppressed in France.

The first Ambassador from the Ottoman Porte arrived in London, and made a public entry.

1793 Died, at Savannah La Mar, in Jamaica, Hora Gálé, a Negro, aged 120.

The tide, at Plymouth, rose two feet perpendicular in nine minutes, and retired again; and this recurred three times in one hour.

1794 Kosciusko, the Polish Patriot, appears at the head of an army. He had been a soldier under General Washington.

Suwarrow storms the City of Warsaw, and allows no quarter.

The partition of Poland, which ceased to be a Kingdom.

The British fleet under Lord Hood, brought from Toulon 14,877 emigrants, many of them women and children.

Kosciusko gained possession of Warsaw.

The Republican Danton and eight others, guillotined under Robespierre.

The Princess Elizabeth of France guillotined at Paris.

Lord Howe defeated the French fleet, and took seven sail of the line.

A Bailiff arrested a dead body.

Robespierre and his partizans destroyed by the Convention—himself, his brother, and others, the leaders, executed.

This year the Slave Trade was prohibited by the French Convention.

The Island of Corsica was put under British protection.

The French, at the battle of Fleurus, made use of a Balloon to reconnoitre the enemy's army, and convey the observations by Telegraph.

A bale of yarn, soaked in rape oil, spontaneously takes fire.

1795 The towns of Holland opened their gates to the French, and they entered Amsterdam in triumph. The Stadtholder, finding the Dutch much inclin-

1795 ed to the French interest, prudently withdrew, and took refuge in England.

The famous "Gagging Bill" passed. The treaty of Amity and Commerce between Great Britain and the United States, commonly called "Jay's Treaty."

In this year the popular political lectures of Mr. John Thelwall were interdicted by an Act of Parliament, passed avowedly for the purpose.

Free exercise of all Religions allowed in France. In the National Convention of France it was asserted that they had gained twenty seven victories, taken 116 strong places, 91,800 prisoners, and 5,800 pieces of cannon.

The Princess Caroline of Brunswick arrived, and was married, on the eighth of April, to the Prince of Wales.

Mr. Hastings, after a Trial which lasted seven years before the House of Lords, was acquitted.

The East India Company granted Mr. Hastings a pension of £5,000 per annuo.

One hundred and eighty-eight French Emigrants who had returned, shot at Quiberon Bay.

The Cape of Good Hope taken by the English.

The Discovery, Captain Vancouver, returned from a voyage of Survey and Discovery on the N. W. coast of America.

Stanislaus, King of Poland, resigned his Crown; and his Kingdom was partitioned among Austria, Prussia and Russia.

A Stone, from the atmosphere, fell near Wold Cottage, in Yorkshire, which weighed fifty-five pounds.

A successful attempt to cut cast iron, heated to a certain degree, with a common saw, made at Glasgow.

The sheep in Shetland Islands calculated at 150,000, and the finest of their wool is wrought into stockings of two guineas a pair.

1814 First action on French territory between the allies and the French; Mortier defeated, Jan. 24.

Battle of St. Dizier, in Champagne, between the Allies and Napoleon in person, who was defeated.

The British entered Bordeaux.

Fontainebleau entered by the Austrians.

Defeat of Soult at Orthez, by the British.

A man at Monmouth confessed himself guilty of a murder for which he had been tried and acquitted 27 years before.

Deputies from Bourdeaux arrived in London to invite Louis XVIII. to return to France.

Battle of the Barriers of the city; Marmont evacuated Paris, and on the following day (March 31) the allies entered.

A decree of the Senate of France, declared Napoleon Bonaparte and his family, to have forfeited the Imperial Crown.

A verdict of fifty pounds given against the Landlord of an Inn at Preston, at the Lancaster Assizes, for preventing a gentleman from departing from his inn with horses hired from another inn.

Bonaparte signed his abdication of the Crown of France and Italy.

Battle of Toulouse; Soult finally defeated by the British.

Genoa surrendered to the British.

Louis XVIII. entered London in much state from his retreat at Hartwell, attended by the life guards

1814 and many of the King's carriages, and accompanied by the Prince Regent. He stopped at Grillon's Hotel, Albemarle street.

Here he left his Court and was congratulated by the Lord Mayor and citizens of London, and by most of the nobility,

Louis embarked at Dover in the Royal Yacht, and landed in France in four hours.

Preliminary treaty between Britain and France, signed at Paris.

Napoleon embarked at Frejus, in Provence, for the Isle of Elba, in the British frigate Undaunted. The Emperor of Russia and King of Prussia reached London. The former took up his residence at the Imperial Hotel, Piccadilly, and the latter at St. James' Palace. They were attended by many Princes and Nobles.

A Naval Review at Portsmouth before the royal visitors.

Ferdinand VII. restored the inquisition, which had been suppressed by the Cortes.

The Banner of Lord Cochrane, as a Knight of the Bath, removed from Henry VII.'s Chapel, his Lordship having been implicated in the fraud on the Stock Exchange.

The City of Washington taken by the British.

Peace signed at Ghent between Great Britain and the United States of America.

1815 Bonaparte escaped from Elba, and landed in France with less than 1000 followers, but was soon joined by various bodies of the army, and marched for Paris, which he entered.

The Prussian army, under Blucher, attacked at Ligne, and totally defeated, June 16th.

Battle of Waterloo. Napoleon Bonaparte at the head of about 80,000 men, and the Duke of Wellington, at the head of about 69,000 men, June 18th.

Cambray taken by the English.

1815 Bonaparte arrived at Rochfort, with the intention of sailing to America.

Paris evacuated by the French, and occupied by the allied army.

Louis XVIII. returned to Paris, and resumed the Government.

Napoleon surrendered to Capt. Maitland of the Bellerophon, and on the 24th of June, arrived in that ship in Torbay; on the 26th sailed to Plymouth.

The season was so backward this year in Canada, that snow fell on the 20th of May, and the trees were not in leaf before the fourth of June.

Marshall Ney executed, notwithstanding the capitulation of Paris, which guaranteed the safety of all.

Murat shot in Calabria.

Bonaparte arrived at St. Helena.

King of Candy made prisoner by General Brownrigg.

By Treaty between Russia and Britain, the Ionian Isles were placed under the protection of the latter power.

Treaties of a general peace signed at Paris.

Lavalette condemned at Paris for high treason.

Lavalette escaped from prison dressed in the clothes of Madame Lavelette.

Lord Cochrane sentenced to £1000 fine for escaping from the King's Bench Prison, which was paid by subscriptions of one penny.

The tonnage of Shipping in England registered at 2,139,310.

Average Charge of the poor for three last years, per annum—£6,147,000,

1816 A Bill passed for detaining the Emperor Napoleon at St. Helena.

Major general Sir Robert Wilson, Michael Bruce, Esq. and Capt. J. H. Hutchinson, convicted in Paris of assisting the escape of the Comte de Lava-

1816 Lette condemned for high treason, and sentenced to 3 months imprisonment.

Princess Charlotte of Wales married to the Prince of Saxe Cobourg; the annual sum of £60,000, settled on them by Parliament.

Algiers bombarded by Lord Exmouth; a treaty followed, and Christian slavery was abolished.

Holy League, a convention so called, signed at Paris by the Emperor of Austria and the King of Prussia, by which it is said they bound themselves to be governed by Christian principles in their political transactions.

Every person from 20 to 30 years, in Poland, a soldier, by order of Alexander of Russia.

1817 The Princess Charlotte of Wales, died soon after she had been delivered of a still born male child.

William Ashford appealed Abraham Thornton for the atrocious murder of his sister, Mary Ashford, in the Court of Kings Bench

Brandreth, Turner, and Ludlam, executed for high treason at Derby.

1818 The King of Spain demanded of the British Government £400,000, in consideration of the partial abolition of the slave trade which he had granted. In the case of appeal of murder, Ashford against Thornton before the Court of Kings Bench, the Court allowed that the law gave the defendant a right to his wager of battle. But the appellant, the brother of the young woman who had been murdered, not feeling himself justified in accepting the challenge, the murderer was discharged.

The Attorney General brought in a bill to take away the right of appeal for murder.

The German Prince Leopold, obtained a shilling damages against an English country gentleman for shooting on his grounds.

Treaty between Great Britain and the Netherlands for abolishing the slave trade.

1818 The Duke of Clarence married to the Princess of Saxe Meiningen, and the Duke of Kent to a Princess of Saxe Coburg.

In many parts of England and France the trees blossomed twice or three times, and at Paris the thermometer rose to 98 on the 18th of August.

At Cornwall Assizes, Miss Tucker was acquitted of the charge of writing a libel on the Vice-warden of the Stannery Court. She pled her own cause, and ably defended herself on the ground of the truth of what she had written.

It appeared from an official report that in the last 28 years, 146 persons had been executed for forgery.

Queen Charlotte died at Kew, on the 17th Nov. in her 75th year.

Two Juries at the Old Bailey, one of the Middlesex, and the other of London, acquitted the person tried before them on the capital charge of passing forged notes because the clerk of the bank would not explain the marks by which he believed the notes to be forged.

It appeared by an article in the Monthly Magazine that from 1774 to 1780, the average heat was 51 68; and 1787 to 1800, was 50 54; from 1801 to 1816 was 50 93; the hottest day in the 43 years, in July 1808, being 93 5, and the coldest, December, 1796, at 5.

Mr. Samuel Lee introduced to public notice, who had taught himself seventeen languages in fourteen years.

It appeared by the report of the House of Commons that four millions of pounds weight of sloe, liquorice, and ash tree leaves, are every year mixed with Chinese teas in England.

It appeared by a report that the Telegraph from Calais to Paris, communicates in three minutes, and from Paris to Lyons in 3 minutes.

1818	Total funded debt in the United Kingdom,	£1,106,759,015
	Amount of Exports,	£53,509,701
	of Imports,	45,188,249
	Number of Vessels registered,	24,207
	Number of Seamen,	167,402

1819 The Will of her late Majesty, Queen Charlotte, proved in Doctors Commons; the personal property sworn under £140,600.

A great sensation arose in the metropolis in regard to the number of persons capitally convicted at the Old Bailey for passing forged bank notes.—The London jury presented an address to the court hoping that capital punishment for those offences might be altered.

Many distressed persons embarked under the sanction of government, to establish a new colony at the Cape of Good Hope.

The States of Bavaria to prevent duelling, wisely established a Court of Honor.

Twelve millions of the sinking fund applied to make the income of the state equal to the expenditure.

Marquis Camden received the thanks of the house of Commons, and of the country, for giving up his profits of the Tellership of the Exchequer to the public.

The unique copy of Bocaccio, purchased by the Duke of Marlborough for £2,260, knocked down for 875 guineas.

The bill to abolish Wager of Battle passed both Houses.

Sir Manasseh Lopez sentenced to a fine of £10,000 and two years imprisonment, for bribing at the Grampound Election.

Thirty-two pigeons sent from Antwerp were liberated from London at seven o'clock in the morning; and on the same day at noon, one of them arrived at Antwerp; a quarter of an hour afterwards, a

1819 second arrived; the remainder on the following day.

At Liskeard a bird's nest discovered in the interior of a sound ash tree.

Oyster-shell powder found an excellent manure. 40 bushels equal to 80 tons of dung.

Mr. Dumont discovered that fruits may be preserved by carbonic acid gas.

M. Monge discovered that pyroligneous acid will prevent the putrefaction of flesh for any length of time.

A stone of 60 lb. weight fell near Smolensko, in Russia, and showers of stones near Weston, Connecticut.

Burnt Cork discovered to be efficacious in Cholera Morbus.

Messrs. Perkins and Co. of Philadelphia, introduced into London a mode of Engraving on soft steel, which, when hardened, will multiply copperplates and fine impressions indefinitely.

By a report of the Small Pox Hospital, it appeared that in twenty years previous to the introduction of vaccination, there died in that hospital 1867 patients, but in the subsequent twenty years, only 814; while in London generally, the deaths in the former period were 36,189, but in the latter, 22,480.

The Swedish Consul at Tangiers reiterated the known fact, that oil, administered externally, is a preventative, and internally, a cure for the plague.

Mr. G. Inglis announced that trees cut after the fall of the leaf, are not subject to the dry rot.

Sugar extracted from potatoe starch at the rate of 16 per cent.

A shower of red and rose coloured snow fell in Carniola, and the neighbouring countries; the red matter consisting of silix, alumine, and oxide of iron.

1820 His Royal Highness the Duke of Kent died, much regretted.

King George III. died January 29th, in the Eighty-second-year of his age, and the sixtieth of his Reign. No Sovereign ever possessed in a higher degree, the veneration and affection of his subjects.

Her Royal Highness, the Dutchess of York, died August 6.

Her Majesty, Caroline the Queen, landed at Dover from the Continent, June 6th.

1821 Her Majesty Queen Caroline Amelia Elizabeth, died Aug. 7th.

1822 His Majesty embarked at Greenwich for Scotland August 10.

Death of the Marquis of Londonderry.

Congress of Sovereigns at Verona, Oct. 22.

Assassination of the celebrated Ali Pashaw, Chief of the Albanians.

Melancholy shipwreck of the Albion Packet from New York, on the coast of Ireland, in which perished Miss Powell of Toronto, and Major Gough of the Army.

Sir Alexander Boswell killed in a duel.

Aleppo devastated by an earthquake, which destroyed 30,000 people.

Introduction of Steam Coaches and Carriages in London.

Reappearance of Encke's Comet at Paramatta, in New South Wales in June.

1823 Death of Canova, of Carnot, aged 70—of Dr. Hutton, aged 86 ;—of Dr. Jenner ;—of John Kemble ;—of Earl St. Vincent ;—of Lord Keith ;—of Mr. Ricardo.

Entrance of a French army into Madrid in May.
Death of Robert Irthington, near Carlisle aged 118 years.

Arrival in England of Capt. Parry, from his celebrated North West Expedition after an absence of nearly three years.

1824 Burning of the House of Assembly at Toronto, in December.

1824 A volcano opened in the centre of Aleppo, in Syria, and subsided into a lake.

The great ship Columbus built at Quebec; length of Keel 294 feet; breadth of beam, 50 feet; depth of hold 32 feet; length of upper deck 300 feet; admeasurement 3,600 tons, having a clear run, with a flat bottom, four masts and a bowsprit.

The New Testament translated into the Chinese language.

Awful and destructive Thunder-storm at Quebec.

Death of Lord Erskine.—Fayette visits the United States.—Execution of Fauntleroy.

The Literary and Historical Society at Quebec, founded by Earl Dalhousie.

Execution of Thurtell for the murder of Mr. Wearo (Jan'y 9th). The course and termination, of the hitherto mysterious river Niger, in Africa determined.

Death of Col Nichol (in May) by driving over the heights of Queenston, during a frightful storm by night.

The entire skeleton of a Mammoth discovered at the depth of 16 feet below the surface of the earth, at Ilford in Essex England.

Braham, the Singer, was offered, and he refused, Ten Thousand Guineas, for one season in America!!

The death of Lord Byron, at Missolonghi, in Greece, on the 17th of April in the 37th year of his age.

Henry Brougham whipped by Robert Gourlay in the Lobby of the House of Commons!

The death of Sir Charles McCarthy, and the disastrous battle with the Ashantees in Africa.

First proposition for a Steam Navigation between Great Britain and America, from Valentia in Ireland.

War with the Burmese in India. Sir Howard Douglass arrived at St. Johns, N. B. Aug. 24th

and was sworn in as Lt. Governor of New Brunswick.

Death of Louis XVIII. of France, and accession of Charles X.

The removal and re-interment of the remains of General Brock, and of Col. McDonell, his aide-de-camp in the monument on Queenston Heights, with great ceremony, on the 13th October this year.

- 1825 Arrival of the Commissioners of the Great Canadian Land Company, viz. Col. Cockburn, W. M. Gillivray, Sir John Harvey, K. C. B., John Galt, Esq. and M. Davidson.

Arrival in Toronto of Capt. Franklin and the Officers of the Land Arctic Expedition on their route Northwards--and departure on the 7th of April. Total overthrow of the Burmese by the British.

Unblushing Yankee National imposition! The North Carolina, called and rated a seventy-four, sails for the Mediterranean and has mounted

34 long 42 pounders, on her lower gun deck,

34 long 32 do. on her upper do.

24 Carronades, 42 lbs. } Spar deck.
2 long do. 32 lbs.

94 mounted.

8 ports in her gangway, for 8 more 42 lbs. Carronades.

102 guns, capable of throwing a heavier broadside than a British Three Decker. Yet this Yankee ship is called a two decker, and a 74!!!

The Baron of Renfrew built near the Falls of Montmorency, containing Six Thousand Tons of timber, sails for England!

The great fire in New Brunswick, which, for its extent and destructiveness, is without a parallel in the history of the world.

1825 Loss of the Kent, East Indiaman, by fire, in the Bay of Biscay.

1826 The early part of this year will be long remembered on account of the long pending, closely contested, and angry discussions which occurred in the Upper Canadian House of Assembly on the celebrated ALIEN QUESTION;—when his Majesty's Printer, who was a member of that house for the county of Durham, was dismissed, without a moments warning, by the administration of the day, for exercising his privilege as a member of the House, in a fearless and independent manner; and according to the best of his ability and judgment, for which, he received the public thanks, and a piece of plate of One Hundred Guineas value, was awarded him, at a public meeting convened in the city of Toronto for that purpose.

Constantine, of Russia, renounces his birth-right, and claim to the Throne of all the Russias.

Death of the King of Portugal.

Peace with the Burmese.

Captain Polhill, of the first King's Dragoons, undertook and performed, without any apparent injury the extraordinary feat of walking fifty miles, driving fifty miles, and riding fifty miles, in the short space of 24 hours, for a wager of 100 sovereigns! He did the thing in such style as to have 4 hours and 55 minutes to spare!!

The celebrated abduction of Miss Turner by Mr. Wakefield.

Death of John Adams and Thomas Jefferson, *ci-devant* Presidents of the United States of America. It is certainly a most remarkable co-incidence that these venerable gentlemen departed this life, on the same day, and that day was the 4th of July!

Don Pedro renounces the throne of Portugal.

Mr. Canning enforces the celebrated Order in Council relative to Colonial Trade, closing the West India Ports against American Vessels.

- The Canada Company receive their Charter, and commence operations.
- 1827 Abduction and supposed murder of Morgan the Free Mason.
- Construction of the first eight locks on the Rideau Canal.
- Death of His Royal Highness, the Duke of York, Jan'y 5th.
- War between Russia and Persia.
- Change of Ministry in England, in consequence of differences on the Catholic Emancipation Bill.
- Mr. Canning, Premier and the Duke of Clarence Lord High Admiral.
- Guelph in U. C. founded by the Canada Company; Mr. Galt, Dr. Dunlop and others officiating.
- Safe return of the Arctic Land Expedition under Sir John Franklin.
- Death of the Right Hon. George Canning on the morning of the eighth of August, to the universal regret of the nation.
- Death of Dr. Heber, bishop of Calcutta.
- The Duke of Wellington resumes the command of the army.
- Lord Godrich, Premier.
- Death of Mr. Emmet, at New York, in November.
- Monument to Wolfe and Montcalm, founded in Quebec under the auspices of Earl Dalhousie.
- Sir Walter Scott avows the authorship of the Waverly Novels.
- Destruction of the Turkish Fleet at Navarino.
- 1828 A ship canal proposed through the centre of Ireland!
- Death of De Witt Clinton, of Albany.
- Committal of Cols. Coffin and Givins, at Toronto for resisting a Warrant from the Speaker of the House of Assembly.
- Peace between Russia and Persia.
- Death of Capt. Clapperton, R. N.
- Sir George Murray comes into the Duke of Wel-

1823 Wellington's Cabinet in the secession of Mr. Huskisson.

Don Miguel usurps the kingdom of Portugal.

The Duke of Clarence, resigns his situation of Lord High Admiral, owing to some difference with the Duke of Wellington.

Foundation of King's College, London. Change of Ministry. Duke of Wellington and Sir Robert Peel at the head of affairs.

1829 Emancipation of the Catholics of Ireland. Battle of Navarino. Passage of the Balkan by the Russians. The minor College of Toronto founded by Sir John Colborne in full operation.

1830 Death of Geo. Tierney, Jan'y 25. Death of King GEO. IV. June 26th, and accession of WILLIAM IV. Capture of Algiers by the French. Revolution of three days in Paris in July, flight of CHARLES X. and accession of LOUIS PHILIPPE. The Ex-King seeks and obtains an asylum in England—Dissolution of the Wellington Cabinet, which is succeeded by Earl Greys' administration.

In this year Mr. FOTHERGILL introduced his *Bill* into the House of Assembly to establish *Agricultural Societies*, in every part of the Province, which became a Law; and from hence may be dated the first *effectual* impulse that was given to the holding of *Fairs* and public Markets for Cattle &c. in country situations throughout this Province.

1831 Death of Bolivar. The last convulsive throes of the unfortunate Poles to recover their independence. Revolution in Brazil, and abdication of PEDRO. Formation in London, of the "*North American Colonial Association*," Election of LEOPOLD to the throne of Belgium. Coronation of WILLIAM and ADELAIDE, Sep. 8th, Loss of the Reform Bill in the House of Lords—and consequent prorogation of Parliament, great commotions in En-

gland in consequence of the loss of the Reform Bill. The Bristol Riots.

- 1832 Appearance of the Asiatic Cholera both in England and Canada, exceedingly destructive in U. C. especially in Toronto; Passage of the great English Parliamentary Reform Bill, Death of Sir Walter Scott, Crusade and capture of the Duchess de Berrie in the South of France.

- 1833 Siege of Antwerp by the French, and its noble defence by the Baron Chasse. Cobbet elected M. P. for Oldham. Capt. Back sails in search of his friend Capt. Ross. The Falkland Islands again taken possession of by Great Britain, Don Pedro takes Lisbon, and drives Miguel out of Portugal. Extraordinary Meteoric Phenomenon seen over most parts of North America, which exhibited a *Shower of Millions* of the most brilliant Meteors descending on all sides from a point, a star in the Zenith. They descended in curved lines like the parallels of longitude on an artificial map—exhibiting the most splendid pyrotechny that can be conceived. This occurred on the 13th of Nov. and continued for more than two hours—Death of K. Ferdinand of Spain. Return of Capt. Ross, and Discovery of the Magnetic Pole. *MacKenzie twice expelled the House of Assembly Upper Canada.*

- 1834 Death of Lord Exmouth, aged 47. Abolition of Slavery in the Bahamas. Much alarm in England occasioned by the Trades Unions. Murder of Lander the African Traveller, on the banks of the Niger. Humes infamous expression of "*the baneful domination of the Mother Country*," applied to Canada, and recommending insurrectionary movements! Don Carlos, of Spain, with his suite arrives in England. Shocking accident at a public meeting, Market Square Toronto, by the falling of a Gallery, when many persons were killed and wounded. Reappearance of the Asiatic Cholera in

Canada, but in a milder form. Dissolution of Earl Grey's Ministry. Lord Melbourne Premier. Don Carlos returns to Spain. Act of Negro Emancipation goes into effect without disturbance in Jamaica. Death of Don Pedro of Portugal, Sept. 24th. Destruction of the two Houses of the British Parliament by fire. Total Eclipse of the Sun visible in Canada, Nov. 30th. Death of Earl Spencer.

1835 Sir Robert Peel first Lord of the Treasury, Expedition by Steam to navigate the Euphrates. Lord Brougham takes his seat in the House of Lords. Dissolution of Peels Ministry, and Lord Melbourne again in Power. Suspension of the Foreign Enlistment Bill in favour of the Queen of Spain. Death of Wm. Cobbett, aged 73. Lord Gosford, Sir Charles Grey, and Capt. Gipps, sent out as Commissioners to Lower Canada. Return of Capt. Back from the Polar Sea. At the celebration of the "*Three Days*" Revolution in Paris Louis Phillippe and his sons saved, almost by a miracle, from the explosion of an infernal machine which destroyed Marshall Mortier, a General, a Colonel, and several of the National Guards. The Great Fire at New-York. The Dowager Marchioness of Salisbury burnt to a cinder in the destruction of a wing of Hatfield House by fire.

1836 Sir John Colborne's departure from Toronto and triumphant procession the whole way to the Lower Province. The generous and disinterested mediation between France and the United States of America on the part of Great Britain, whereby an immense sum long withheld by France (18,000,000 francs) was paid to the States. The memorable defection of the Hon'bles P. Robinson, J. Wells, R. Baldwin, G. H. Markland, J. H. Dunn and John Rolph from Sir F. B. Head's Council, on the ground that *they were only occasionally consulted!* asserting that the Governor is bound to consult.

his Council upon *all and every occasion*, and to *take no step whatever without their concurrence!* Texas declares its independence. Santa Anna taken by the Texans. Suspension Bridge over the Niagara River at Queenston at the cost of £34,000, projected.

1837. Announcement of Col. Chessney's successful descent of the Euphrates by steam. One *third* part of the City of St. Johns. N. B., destroyed by fire. The Influenza, an epidemical disease, rages to such an extent in London as to cause nearly a total suspension of business. The independence of Texas acknowledged by the States. The great war-ship, the *Pennsylvania*, carrying 136 guns, *mostly 32 pounders*, launched at Philadelphia.—Death of Wm. IV., and accession of QUEEN VICTORIA, (June 20th.)

The fall of this year will long be memorable for the Rebellion which broke forth nearly simultaneously in both Provinces of Canada. It is not our business to trace the causes, or follow the effects of the insurrectionary movements in either Province, on this occasion.

Mackenzie's descent on Toronto, with a band of his ruffians, was made in the night of December 4, and on the 7th the engagement and dispersion of the rebels at Montgomery's Tavern, three miles to the northward of the city took place. The 29th of the same month was distinguished by the destruction of the Yankee steamer *Caroline*, by a Canadian force under Commodore Drew, R. N.

1838. A Mr. Anthony, of Randolph, assassinated in open day, and in full Assembly in the Legislature of Arkansas, United States, by a brother Member of the name of Wilson! Steam Navigation continued without interruption on Lake Ontario till near the close of February. Total evacuation of Navy Island by the rebels and bandits January 10

UNIVERSITY OF KING'S COLLEGE.

Contracts have been given out, and a commencement has been at length made towards the erection of the buildings of this noble institution, at the head of *College Avenue* which opens into Lot street, in the city of Toronto. This princely establishment is most richly endowed; and, if we may judge by the success of the Upper Canada College, founded by that exemplary friend to education, and every good work, SIR JOHN COLBOURNE; and from the high character of those who will have the selection of professors, it will soon become famous, as a school of learning and science, throughout the New World.

This University, when fully established, will be entitled to send one member to the House of Assembly.

Chancellor. His Excellency the Lieut. Governor.

Visitor. The Lord Bishop.

President. The Hon. and Ven. John Strachan, D. D.
Archdeacon of York.

Bursar and Secretary Lieut. Col. Joseph Wells.

UPPER CANADA COLLEGE.

Visitor. His Excellency the Lieutenant Governor.

Council. The Council of King's College.

The Solicitor General,	" J. S. Macaulay,

Bursar and Registrar. The Hon. Joseph Wells.

Principal. Rev. John McCaul, L. L. D.

Classical Department. Rev. Chas. Mathews, M. A., F.
W. Barron, Esq., Scholar Q. Coll. Camb., Rev. H.
Scadding, B. A.

Mathematics. Rev. George Maynard B. A.

French. Mr. De la Haye.

English. Mr. Barber and Mr. Duffy.

Drawing. Mr. Howard and Mr. Young.

Preparatory School. Mr. Cosens, Master.

CENTRAL, OR NATIONAL SCHOOL OF UPPER CANADA.

His Excellency the Lt. Governor, *Patron.*

BOYS SCHOOL.

First Department. Joseph Spragge, *Master.*

2nd do J. T. Wilson, *Master.*

GIRL'S SCHOOL.

Mistress. Rebecca Sylvester.

All the rudiments of a good common English education are taught in this School, at the moderate cost of *One Dollar*, per quarter, to those who can afford to pay that sum; and tickets of *free admission* to the children of those parents who cannot afford to pay for their instruction may be had by application to the Hon. Dr. Strachan, or to the Hon. Joseph Wells.

*A Sketch of the Length, Breadth, and circumference of the following Lakes in Upper Canada by Estimation.**

Names	Length	Breadth	Circumference
	Miles	Miles	Miles
Superior	450	Nearly 200	1525
Huron	250	190	1100
Michigan	260	90	1000
Erie	275	50	700
Ontario	180	80	500
		(From Port Hope to Genessee River)	
Simcoe	40	30	120
St. Clair	35	30	100
		(bet. Lakes Superior and Huron.)	
George	25		58
Rice Lake	24	2½ to 5	58

* The Lakes of Upper Canada are innumerable, and we cannot pretend to notice a hundredth part of them in this place. We can only give an estimate of those best known, and of which the banks are already partially settled.

Besides those mentioned in this table, there are several of large extent in the Newcastle District, the banks of which are also partially settled; these are, Trout Lake, Schegamong, Pigeon Lake, Sturgeon Lake, Cameron's and Balsam Lake, which are connected together, and extend through five Townships, viz: Smith, Ennismore, Harvey, Verulam, and Fenelon. The superficies of Sturgeon Lake have been measured, and contain about eight thousand acres. These lakes are all navigable for vessels of considerable burthen, and abound with the finest fish, especially Maskinonge and Salmon Trout.

The mean depth and elevation above tide water, of six of the principal Lakes, will appear to be as follows, according to a report of the Michigan State Geologist, viz:

	Mean depth	Elevation.
Lake Superior,.....	900.....	596
Michigan,.....	1000.....	578
Huron,.....	1000.....	578
St. Clair,.....	20.....	570
Erie,.....	84.....	565
Ontario,.....	500.....	232

It is computed that the lakes contain more than 14,000 cubic miles of water; a quantity more than half of all the fresh water on the earth.

The extent of country drained by the lakes, from Niagara, to the North-western angle of Superior, including also the area of the lakes themselves, is estimated at 335,515 square miles.

ERRATA.
