#### AUTUMN LEAVES.

[A lovely afternoon in October. A party of young people carrying paper bags, satchels and baskets, strolling up a pleasant country road. Leaning over the garden gate of the picturesque and many-gabled house they have just left, looking after them. the gentleman shad-ing his eyes from the sun with his right

Mr Maurice (turning to his companion, still shading his eyes).—One would imagine, judging from those happy youths and maidens, that the violets were here instead of the golden-rod, and that the roses were conjudent. and that the roses were coming, and not the snow-flakes. They go as merrily to gather autumn leaves as they went to seek for May's sweet blossoms. Life's spring makes all seasons its own.

Mrs. Ogden (laughingly) .- True. But that is no reason you should protect your sight any longer. You have turned your back upon the sun.

Mr. Maurice (dropping his hand and walking beside her, as she saunters to-ward the grape arbor).—When we two were young, I thought your beauty much more dazzling than the sun.

Mrs. Ogden (slowly) .- That was great many years ago.
Mr. Maurice.—We'll say fifteen.

Mrs. Ogden (knowing it to be nine

Mr. Maurice.—Is it possible? Looking at you, I can scarcely believe it to be

Mr. Maurice.—I could not lose what I Mrs. Ogden—I never firted with the possessed. I abhor flattery.

Time must have been fallen in love with the got into the habit of strolling over to our house from the hotel, and spending our house from the hotel, and spending. the old greybeard ever after, as he made his yearly rounds, only gazed upon you smilingly, and passed on. No hand of his has been laid upon your dark tresses. He has never touched your broad smooth brow. Your wine-brown eyes have the same sparkle and your pretty mouth the same smile as of old. Only your form is more matronly, and your chin not quite so round, and I should suspeet (glancing at her plump hand) that you now wear six and a half instead of six. The first philopena I ever gave you — Mr. Maurice—And Percy Germain? I let you catch, me, by-the-bye-was a pair of gloves. As for me, the foot-prints of the crow are plainly visible around my eyes, my hair and my mustache are turning gray, and the buttons and but-ton-holes of the brown coat in which you first beheld me (it was at the elder Miss Sargent's sixteenth birthday party, and you threw Bob Taylor over imme diately I was introduced, and allowed me to feed you with strawberries and cream the rest of the evening) wouldn't He was very patient and kind with me

Mr. Maurice (suddenly, after a few moments' thought). — Ah! Melicent, what happy, happy days those were when you seventeen and I two-andtwenty were so wildly in love with each other. That is, when I was wildly in love with you, and you thought you were very much in love with me. Do you remember the morning in early April when the blue-bird flew in at the open window, and, perching above your picture, sang its few sweet notes over and over again? Mr. Maurice.—And I said: In what more beautiful shape could death come to us? The smiling sky above, the smiling waters beneath, and the fragrant flowers around us.

Mrs. Ogden.—You were always awfully poetical But in spite of the poetry, I caught a severe cold, and loöked like a fright for week. And can you recall the terrible thunderstorm that overtook us as we were sauntering through the woods one August day, and the fearful clap that shattered the maple tree beneath which we sought shelter?

Mr. Maurice.—Can I recall it? Can I ever forget it, you mean. For that same clap which you call fearful, but which I thought heaven sent, threw you into my arms, and—I—kinsed you.

Mrs. Ogden.—After I married him. You seem to be well informed on the subject. [With a little sigh.] He was a very good husband, and never scolded me during all the ten years of married life.

Mr. Maurice.—And you loved him?

Mrs. Ogden.—Certainly. As soon as we were engaged I considered it may the duty to begin to love him.

[A lovely afternoon in October. A party of young people carrying paper bags, satchels and baskets, strolling up a pleasant country road. Leaning over the garden gate of the picturesque and many-gabled house they have just left, looking after them. the gentle ing his eyes from the sun with his right hand—Mrs. Melicent Ogden, widow, and Mr. Sidney Maurice, old bachelor.]

Mr Maurice (turning to his companion, still shading his eyes).—One would imagine, judging from those happy youths and maidens, that the violets were here instead of the golden-rod, and that the roses were coming, and not the snow-flakes. They go as merrily to gather autumn leaves as they went to seek for May's sweet blossoms. Life's spring makes all seasons its own

Mr. Maurice.—Is it possible? Look ing at you, I can scarcely believe it to be half that number.

Time must have been fallen in love with you when you entered upon the summer of your life-I don't wonder at it-and the old greybeard ever after, as he made his yearly rounds, only gazed upon you smilingly, and passed on. No hand of his has been laid upon your dark tresses. He has never touched your broad smooth brow. Your wine-brown eyes have the same sparkle and your pretty mouth the same smile as of old. Only your form is more matronly, and your chin not quite so round, and I should sus peet (glancing at her plump hand) that you now wear six and a half instead of six. Visit to a Pin Factory writer in the New York Eve

Post thus describes the mysteries of pin-making: The pin machine is one of the closest approaches that mechanics have made to the dexterity of the human hand. A small machine about the height and size of a lady's sewing machine, only stronger, stands before you. On the back side a light belt descends from the long shaft at the ceiling that drives all the machines, ranged in rows on the floor. On the left side of our machine hangs on a peg a small reel of wire that has been straightened by runhing through a compound system of

mall rollers.

This wire descends and the end of it enters the machine. It pulls it and bites it off by inches incessantly, 140 bites to a minute, Just as it seizes each bite a little hammer with a concave face hits the end of the wire three taps and 'upsets" it to a head, while it grips it in countersunk hole between its teeth. With an outward thrust of its tongue it groove across the rim of a small wheel hat slowly revolves just under its nose By the external pressure of a stationary hoop these pins roll in their places as they are carried under two series of small files, three in each. These files grow finer toward the end of the series These files They lie at a slight inclination on the points of the pins, and by a series of cams, levers and springs are made to play "like lightning." Thus the pins are pointed and dropped in a little

shower into a box.

Twenty-eight pounds of pins is a day's tomatons. Forty machines on this floor make 560 pounds of pins daily. These are then polished. Two very intelligent machines reject every crooked pin, even the slightest leregularity of form being

detected.

Another automaton assorts half a dozen lengths in as many different boxes all at once and unerringly, when a careless operator has mixed the contents of boxes from various machines Lastly, a perfect genius of a machine hangs the pin by the head in an inclined platform through as many "slots" as there are pins in a row on the papers These slots converge into the exac space, spanning the length of a row Under them runs the strip of pin paper A hand-like part of the machine catches one pin from each of the slots as it falls and by one movement sticks them al through two corrugated ridges in the paper, from which they are to be picked by taper fingers in boudoirs and all sorts of human fingers in all sorts of human circumstances. Thus you have its

An exchange says: It is an interesting sight to see the great logs of poplar wood go through the powerful machine wood go through the powerful machine at the Connecticut river pulp mill at Holyoke, Mass. The wood, as it is brought to the mill, is about the size of cordwood used for fuel, and in this shape the machine takes it and gnaws it up very fine. So rapidly does this process go on that the machine eats about seven and a half cords of wood in a day, and this makes between three and four tons of pulp. After coming from the machine the pulp is put into vats and reduced by the action of chemicals. It is used for the manufacture of news and book paper.

The canary is jealous and imita-tive. A bird fancier in Phoenixville, Australia, taking advantage of these characteristics, by a simple method makes him a musical artiste. He puts the canary in a house where there is no other bird of any kind. He hangs the bird before a mirror; behind it there is musical clock, so that the bird may learn the tunes. The canary thinks that his image in the mirror sings the melody: and he tries to imitate him, the year is which he succeeds in doing. The bird fancier has already taught the plumed artiste to sing several entire pieces. He thinks he can train a hundred canaries to sing in chorus by the same process.

A dispatch from Tokio, Japan, to the New York Herald, describing the movements of Nordenskjold, the Arctic explorer, in search of a northwest passage, speaks of Behring's Island and the sea bear farm established there. The most important industry of the island is the export of the skins of the sea bear, which animal some years ago bid fair to be-come extinct, but is now thriving and multiplying under a wise and beneficent system of protection. On one promon tory alone were seen as many as two hundred thousand of the animals, whose fur is in such great request in American and European cities. From thirty to fifty thousand are slaughtered on Behring's and Copper islands annually, but only at the time when the hair is in the best order. No young or females are allowed to be killed, and otherwise stringent regulations are enforced for the preservation of a valuable species. The result is that their numbers are now sugmenting, and they display no fear or anxiety on the approach of men.

The reward offered by the American Humane Association for a cattle car that will enable railway companies to transport stock without erue ty, should stimulate inventors. The reward for an invention that will meet all the requirements is \$5,000. As cattle are now transported, one great cause of com-plaint is lack of water. Under existing arrangements the animals suffer, and to a degree that sometimes lessens their value. The huddling of numbers to gether is an evil, as in addition to the eramped quarters which do not permit free movement, unruly or vicious animals sometimes wound and even kill others. The jolting of the cars also causes sores, which impair the value of the cattle. It is not likely that the re-ward offered will accomplish what the keenest-witted railway men and stock importers have failed to discover, but it may possibly be the means of suggesting methods that will at least mitigate evils complained of. The man who can de-vise means by which cattle can be transported great distances without loss now experienced, can make a handfortune. But to do that he must not require much more room than is occupied by a cattle car, nor must he ncrease the weight very much.

company or none at all. This country is not in need of sleight-of and performances to induce people to emigrate. There is here enough unbroken land for the maintenance of millions more, if they wish to come; we can afford to establish State Boards of emigration, but we cannot afford to misrepresent. There is a good future for industrious and determined men, who understand that pioneering is to hild's play, but a hard fight for the first few years. One failure, like that of the English colony of farmers in Texas, result ing as it did from incorrect statements of railroad agents, does the country more harm in the eyes of others about to come than several years' failure of crops. This reckless organization of colonies, we are glad to say, is not practised by all the Ronds. The Northern Pacific and the Canadian Roads grant passes to prospecting parties, and if the land they wish to get

rid of is good, why shouldn't they be glad

to-do this?

People who are in the habit of giving for hurch purposes to the extent of their ability are apt to be discouraged by the frequent recurrence of these appeals, while the par ties whom they are intended to reach shelter thomselves behind the plea that it is only another way of bringing a pressure to bear upon them, a pressure from which they instinctively recoil. The remedy lies n our own hands. It is to be found only, and certainly, in the institution in each congregation of such a system of collecting noney for all church purposes as shall each every member and be best adapted o the circumstances of the congregation A system which shall lead men to enquire intelligently into the merits of the cases abmitted to these, and conscientiously to regulate their contributions according to their several abilities .- Presbyterian Re-

## The Council, or the People.

The Legislative Council has, for the time eing, triumpfied over the people; the few succeed and the many go to the wall. The electors of this Prevince have been made to feel that they count for nothing when party influence is at stake, and that they must stand aside at the bulding of a few old men who happen to be dressed in a little brief authority. The people count for nothing, the Council counts for all. "The nominees of the Crown" contemptously trample upon the elected of the people, now accept the issue, and from this time for ward the abolition of the Legislative Council must be the first plank in all future political contests. The independent electors Scattered thickly through the cabled Province will not, we suppose, submit with stitutional rights, and we hope to see something like earnest work in some of the constituencies which are now open for the re-election of minist rs. And it looks now as if Messrs. Flynn. ministers are m n who are supposed to be "safe" with their respective constitu encies but there are no constituencies "safe" when the liberties
