Technical and Bibliographic Notes / Notes techniques et bibliographiques

The Institute has attempted to obtain the best original copy available for filming. Features of this copy which may be bibliographically unique, which may alter any of the images in the reproduction, or which may significantly change the usual method of filming are checked below.

- Coloured covers / Couverture de couleur
- Covers damaged / Couverture endommagée
- Covers restored and/or laminated / Couverture restaurée et/ou pelliculée
- Cover title missing / Le titre de couverture manque
- Coloured maps / Cartes géographiques en couleur
- Coloured ink (i.e. other than blue or black) / Encre de couleur (i.e. autre que bleue ou noire)
- Coloured plates and/or illustrations / Planches et/ou illustrations en couleur
- Bound with other material / Relié avec d'autres documents
- Only edition available / Seule édition disponible
- Tight binding may cause shadows or distortion along interior margin / La reliure serrée peut causer de l'ombre ou de la distorsion le long de la marge intérieure.
- Blank leaves added during restorations may appear within the text. Whenever possible, these have been omitted from filming / Il se peut que certaines pages blanches ajoutées lors d'une restauration apparaissent dans le texte, mais, lorsque cela était possible, ces pages n'ont pas été filmées.
- Additional comments / Commentaires supplémentaires:

L'institut a microfilmé le meilleur exemplaire qu'il lui a été possible de se procurer. Les détails de cet exemplaire qui sont peut-être uniques du point de vue bibliographique, qui peuvent modifier une image reproduite, ou qui peuvent exiger une modification dans la méthode normale de filmage sont indiqués ci-dessous.

- Coloured pages / Pages de couleur
- Pages damaged / Pages endommagées
- Pages restored and/or laminated / Pages restaurées et/ou pelliculées
- Pages discoloured, stained or foxed / Pages décolorées, tachetées ou piquées
- Pages detached / Pages détachées
- Showthrough / Transparence
- Quality of print varies / Qualité inégale de l'impression
- Includes supplementary material / Comprend du matériel supplémentaire
- Pages wholly or partially obscured by errata slips, tissues, etc., have been refilmed to ensure the best possible image / Les pages totalement ou partiellement obscurcies par un feuillet d'errata, une pelure, etc., ont été filmées à nouveau de façon à obtenir la meilleure image possible.
- Opposing pages with varying colouration or discolourations are filmed twice to ensure the best possible image / Les pages s'opposant ayant des colorations variables ou des décolorations sont filmées deux fois afin d'obtenir la meilleure image possible.

This item is filmed at the reduction ratio checked below / Ce document est filmé au taux de réduction indiqué ci-dessous.

10x	14x	18x	22x	26x	30x
12x	16x	20x	24x	✓	28x

**The copy filmed here has been reproduced thanks
to the generosity of:**

**Library
Agriculture Canada**

**The images appearing here are the best quality
possible considering the condition and legibility
of the original copy and in keeping with the
filming contract specifications.**

**Original copies in printed paper covers are filmed
beginning with the front cover and ending on
the last page with a printed or illustrated impres-
sion, or the back cover when appropriate. All
other original copies are filmed beginning on the
first page with a printed or illustrated impres-
sion, and ending on the last page with a printed
or illustrated impression.**

**The last recorded frame on each microfiche
shall contain the symbol → (meaning "CON-
TINUED"), or the symbol ▽ (meaning "END"),
whichever applies.**

**Maps, plates, charts, etc., may be filmed at
different reduction ratios. Those too large to be
entirely included in one exposure are filmed
beginning in the upper left hand corner, left to
right and top to bottom, as many frames as
required. The following diagrams illustrate the
method:**

L'exemplaire filmé fut reproduit grâce à la générosité de:

Bibliothèque
Agriculture Canada

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par la première page et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole —> signifie "A SUIVRE", le symbole V signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

Crop Protection Leaflet No. 13.

THE EUROPEAN CORN BORER.*

(*Pyrausta nubilalis* Hbn.)

The European Corn Borer has recently been discovered (August and September, 1920) in corn, both sweet and field, in the province of Ontario, particularly in certain counties bordering on Lake Erie. Up to the present time corn is the only crop in which the borer has been found. In the State of Massachusetts where the pest was first discovered, the following plants are also attacked: celery, bean, beet, spinach, potato, tomato, turnip, rhubarb, dahlia, crysanthemum, gladiolus, etc.

NATURE OF THE INJURY.

All parts of corn which is the most favoured food plant are attacked, except the fibrous roots. The most serious damage is caused to the stalks and ears which are partially or totally destroyed. The borer generally enters the stalk at the upper end near the base of the tassel and at first tunnels upward. The damage so weakens the tassel stalk that it breaks over before the tassel matures, resulting in loss of pollen and normal fertilization of grain in the ears. After destroying the tassel the borers tunnel downwards through the stalk gradually increasing the size of their tunnels as they develop.

DESCRIPTION OF THE BORER.

When mature the European Corn Borer is about one inch long. It is of a light brownish or flesh colour, some specimens being darker than others. The head is dark brown, the neck or thoracic shield paler brown, as are also the warts or tubercles on the body. This borer is closely allied to other species and usually an expert determination is necessary.

HABITS.

Judging from the habits of the insect in New York State, which is the nearest known infestation to Canada, there is only one annual generation of the borer in Ontario. The female moth lays its eggs in clusters on the leaves of the corn or other

*By Arthur Gibson, Acting Dominion Entomologist and Chief of the Division of Field Crop Insects, and L. S. McLaine, Chief of the Division of Foreign Pests Suppression.

ENTOMOLOGICAL BRANCH

WARNING

THE EUROPEAN CORN BORER

This pest attacks **CORN, POTATOES, OATS, FOODEN AND GARDEN CROPS**
and has recently been found in the United States
where it is doing great damage.

THERE IS GRAVE DANGER OF THIS SERIOUS FOREIGN PEST BEING BROUGHT INTO CANADA.

HOW TO RECOGNIZE IT

Holes in the stalks of the above mentioned plants with sawdust-like material issuing from them indicate the presence of the borer or caterpillar. In the case of corn, broken tassels also show where the borer is at work.

If the infested stems are split open the caterpillars will be found at work. These are often found just above the roots.

The insect spends the winter as a caterpillar in old stalks of corn or other food plants and changes to a reddish-brown pupa late in the spring. The pupa soon turns into a moth.

Illustrations reproduced by courtesy of the Bureau of Entomology, U. S. Department of Agriculture.

All persons are urgently requested to keep a constant lookout for this most dangerous pest and to report immediately all suspicious cases. Infected plants together with the insects themselves should be forwarded to the DOMINION ENTOMOLOGIST, DEPT. OF AGRICULTURE, OTTAWA, ONT. Packages under twelve ounces in weight may be sent free of postage.

host plant and about ten days later the eggs hatch. The young borers are about one-fifth of an inch long, with a black head and white body. They feed for a few days upon the surface of the leaf and then migrate to the opening tassel, bore a hole in the stem and complete their caterpillar life within the plant. The borer changes its skin five or six times as it grows and spends the winter as a full grown or nearly full grown caterpillar within its tunnels. With the advent of warm weather the following spring the borer resumes feeding but soon changes to the pupa or resting stage. The insect remains in this condition for about two weeks, when the adult moths emerge.

The illustration on the opposite page is a reduced copy of the "Warning Poster" which was widely distributed during the spring and summer of 1919 and 1920, before the borer was discovered in Ontario. It illustrates graphically the life-history of the insect and shows typical damage to the corn plant.

MEANS OF CONTROL.

1. Cut corn stalks as close to the ground as possible, thus reducing the number of borers left in the stubble (see illustration). The earlier in the season the corn is cut the better. Some farmers this year are cutting the worst infested patches by hand with a sharpened, short-handled, hoe. With such a tool the stalks may be cut almost level with the ground. Ploughing under infested stubble will not kill the borers. Experiments have shown that they will work their way up through sixteen inches of soil.
2. Put corn fodder in the silo, or at least feed the stalks to stock.
3. Keep the fields free from weeds. The borers have already been found in smartweed, lambs' quarters, ragweed, and certain thick-stemmed grasses and other weeds.
4. Burn or bury deeply in the spring all infested corn stalks, cobs, waste, etc., after winter feeding of stock. Mix with horse manure. There is not sufficient heat generated in cow manure to kill the borers.
5. Burn over weedy and infested corn fields to destroy hibernating borers.

SOME IMPORTANT DON'TS.

Don't leave corn stalks standing in the fields all winter to be ploughed under in spring. Unused corn stalks should be burned in early spring.

Don't throw old stalks, cobs, litter, etc., into the cow yard to be trampled on by cattle in the hope of destroying the borer.

Don't spread the corn borer into new territory by shipping infested stalks, corn on the cob, or corn cobs, either for feed for stock or packing purposes.

OTTAWA, September 24, 1920.
