

## Crptantions of tje Catenvar 響ages.

At the head of the respective pages for each month are given the ordinary tables of
the changes and quadratures of the Moon. The 1st and $2 d$ columns show the mean times of the rising and setting of the Sun. The quantities are only set down to the nearest minute, the uncertainty of the observed times of the rising or setting of heavenly bodies on land, caused by the varying amount of horizontal refraction and the general liability to the intervention of terrestial objects in such observations, renders a closer approximation unnecessary for ordinary practical purposes. In the 3rd colnmne, marked "south," are given the times which should be shown by a well regulated clock or watch when the Sun is on the Meridian. The 4th column shows the moon's place. The 5th column contains the mean times of the rising or setting of the Moon. The quantities are only set down to the nearest minute, for the reasons mentioned above in respeet to the Sun.

In the year 1853 there will be two Eclipses of the Sun and one of the Moon.

I-An Annular Eclipse of the Sun, June 6th, invisible at Montreal. The mean time of Conjunction in Right Ascension will be at 3 hours and 3 minutes in the Evening.
II.-A Partial Eclipse of the Moon, June 20th and 21st, visible at Montreal. First contact with the derk shadow, . . 20 10 58 Evening. Beginning of the Eclipse,. . . . . . . 21019 Middle of the Eclipse,. . . . . . . . 2117 End of the Eclipse, . . . . . . . 21 1 56$\}$ Morning. Last contact with the dark shadow; $\quad .21 \quad 3 \quad 26)$
The duration of visibility will be 1 hour and 37 minutes.
Magnitude of the Eclipse, (Moon's Diameter =1) 0.204 on the Northern limb.
III.-A Total Eclipse of the Sun, November 30th, invisible at Montreal. The mean time of Conjunction in Right Ascension will be at 2 hours and 16 minutes in the evening.

Venus will be the Morning Star till May 13th, thence Evening Star the remainder of the year.
[For Tables of French and English Measures, see Canadian Farmer's Almanac, No. 5, for 1852, which can be had at C. Bryson's Book Store, St. François Xavier Street, Muntreal.]

Gardening is farming in the superlative degree; the plough is an fnverted spade and the harrow is a horse rake Many of the best practices in farming have been transforred from the garden to the feld, and the nearer that fleld culture can be made to approach to gardening, the nearer it approaches to perfection. And, though a very strict analogy may not exist, yet, the connecting link is evidently not very lengthy, and may be much shortened. Gardening is very generally believed to be unprofitable, and an employment of Inxury, and a sonree of amnsement. But, domestic gardening, when properly arranged and conducted, may be made a source of much profit, as it affords materials for the kitchen, the cow stall, the piggery, and the poultry yard; and to these ends, our views will all be directed. Fine fruits, and a profusion of flowers, are not much in the farmer's way; but the family table must be supplied with vegetables, the most wholesome and innocent of all human food.

Nothing can be done in the open ground during this month.
Fruit Room and Cellar.-Examine the fruit in barrels and on shelves, and the vegetables, pick out and remove the decayed and tainted.

23

Put up and prepare a few hot beds, for early forcing of radishes and lettuces, and sow cucumber and melon seeds in pots, to be afterwards transplanted. Look over your vegetables Give air to your green house when weather is fine, and water sparingly. You may begin to move large forest trees, with a ball of earth at the root. In planting shrubs, and herbaceous roots, great attention must be paid, first, as to the height they will attain when in flower; arranging them so that the dwarf sorts may be in front, and the taller at the back. Flower shrubs, which have grown too luxuriant, should be cut and tied up, Cutting a shrub entirely down, is often resorted to with success, when it appears to be dying, after all other means have failed to restore it

1853]
Memorandum for February.

You may go on putting up and preparing frames during this month. Sow your melons and cucumbers, for general crop, about the 10th, and transplant them about the 18th of next month into frames in the open ground. Sow early peas, radishes, onions, carrots, and winter cabbages. Cut all useless shoots from gooseberry and currant bushes before the sap rises. Transplant fruit trees and other plants, and proceed with your pruning. Give air to your greenhouse and water more freely, syringing is necessary as the heat increases. This is the best season for propagating, by cuttings from all green-house plants. Divide and plant the routs of any hardy herbaceous plants that are tos large. Plant out any half-hardy annuals that are ready; or, if your soil is stiff, pot them, three or four in a pot, and keep them in a frame.

1853] Memorandum for April. 11

Transplant your melons and encumbers for general erop about the 18th. All vegetables that were not sown last month, must be laid down as early as possible. Corn should not be sown later than the \%0th, to ensure a good crop. Sow annuals early this month. Plant dablias about the 20th. This is the proper season for transplanting fruit and forest trees. Pro-欺gate - flants by cuttinge and slins, early this month. Give plenty of air to your graenhouse, and syringe freely every other day. The latter end of this month is about the best season for removing evergreens. Finish your praning before the sap rises. Turn out into the open air your half-hardy annuals, after they have rooted well in the pots, they will not be so much checlued by the ehange, se in tranaplanting them at once from the hot bed.
1853.] Memorandum for May. 18

D. H. M.

Sow cucumbers for pickling about the 14 th, which is the best season for ensuring a good crop. Transplant winter cabbages. Plant potatoes, not later than the 20th. Transplant celery. Sow endive, to be transplanted in August. Sow black radishes for winter use. Turn out your greenhouse plants into a half shaded exposure. No crop, if sown after this month, can be depended on. Cut down, and clear away all weeds. Continue to sorf both hardy and tender annuals, to keep up a succession of flowers. This if an important point to attend to, so as to prevent your flowers from being \$ sown or planted, as to blow all at one time.
1853.] Memorandum for June. 15

Sow a few annuals in succession, about the beginning of this month Greenhouse plants require to be regularly watered, according to the heat Propagate plants, going out of flower, by cuttings. Earth up beans, pers and potatoes, and destroy weeds everywhere. Put a few layers of your finest carnations to blow in pots. Gather the seed of your spring flowen that are ripe. Pinks and carnations, raised from seed last year, will blor about this time. Lay shoots of those worth preserving, and water thet moderately in dry weather. This is the best season for budding rose trees

Attend to your greenhouse plants. Go on propagating plants by cuttings and slips. Transplant strawberries. This is the proper season for budding fruit trees. Cut off all supernumerary shoots from transplanted trees, and train the retained bearers of the next year. Take up your bulbous roots and dry them. Plant the roots again about October. Sow the seed of bulbous roots in pots. If the weather is moist, transplant into borders your seedling biennials and perennials, which were sown early. In hot weather, shade the root with a garden pot through the day, which remove at night so that the plant may have the benefit of the dew.

Continue transplanting evergreens and strawberries. Prepare ground for transplanting and fall sowing. Propagate plants by cuttings. Remove all plants to the greenhouse, for the winter, during this month. Take up oniong dc., as they ripen. Collect seeds as they ripen, choose a dry day for gather ing them, if put away in a damp state they are apt to decay; from careless ness in this respect, great disappointment often accrues. Some seeds ought to be gathered a little before they are ripe, otherwise, they will be entirely $\mathrm{l}_{\text {ost. }}$ Begin to prepare composts for spring use.

Secure every department for the coming winter. Attend to your green house; water sparingly, and give air when the weather will permit. Transplant fruit and forest trees. Protect all tender plants. Dig and lay out borders for the winter. Prune such shrubs as require it. Take off all suckers where they are not wanted. Manure all soils that are exhausted or worif out. Cover over with straw, and protect all plants likely to suffer frum se vere rains and frost, otherwise the plants will rot and die.

Bites and Stings of Repthles and Insects.-The local pain produced by the bites and stings of reptiles and insects, in general, is greatly relieved by the following application. Make a lotion of five ounces of distilled water, and one ounce of tincture of opium. To be applied immediately.

Buttre to Preserve.-Take three parts of the best common salt, one part of goorl and one part of saltpetre; beat them together, and blend the whole completely. Take one ounce of this composition for every sixteen ounces of butter; work it well into the mass, and close it up for use On the top put some salt, and when that is turned to brine, add some strong salt and water. Put the butter in glazed earthen pans or wooden tubs, holding from twelve to fifteen pounds, and they st ould not be opened for a month.

To Prbserva Flannels from Shrinkine-While new, put them in a pail of water, and pour boiling water on them; let them remain in the water till it is cold.

To Preserve Feut the Whole Year Without Spolling,-Mix one pound of nitre with three pounds of clean common sand; then in dry weather, take fruit of any sort, which is not fully ripe, allowing the scalks to remain, and put them one by one into an open glass, till it is quite full; cover the glass with oiled cloth tied closely down. Put it three or four inches down in the earth, in a dry cellar, and surround it on all sides to the depth of three or four inches, with the above mixture. The fruit will thus keep the whole year.

To Kerf Swret Potaqoess-The method is simply to throw the potatoes up in conical heaps of eight or ten bushels to the heap, covering them lightly with straw, then with tops, or cornstalks, and lastly with dirt, being careful to have the ground upon which you make the heap, so elevated as to drain off all rain water, and the tops of the heaps so well secured, as not to admit water. It has been suggested to put them in small heaps of eight or ten bushels, because when potatoes, put away for winter use, are onee disturbed by breaking into them, decay is apt to commence very soon thereafter. By having them in small heaps, when once the heap is disturbed, it being small, you can use it before much injury is done.

The potatoes should always be dug as soon after the first good frost as can be. Do not suffer too much cold to come upen them.

Good Bread.-The "art" of making good household bread, says the Maine Cultivator, is one which no person acquainted with the frequent failures of the good "woman," in this important department of domestic economy will be disposed meanly to undervalue. The following receipt, from the pen of Mr. James Roche, one of the most celebrated bakers in the city of Baltimore, and who was for a long time honorably distinguished for the superior flavor and excellency of his loaves, will be read with interest we presume by all desirous of excelling in this useful and important art.
"Take an earthen vessel larger at the top than at the bottom, and in it put one pint of milk-warm water, one and a half pound of flour and a half pint of malt yenst; mix them well together and set it away, (in winter it should be in a warm place,) until it rises and falls again, which it will in from three to five hours (it may be set at night if wanted in the morning.) then put two large spoonfuls of salt into two quarts of water, and mix it well with the above rising; then put in about nine pounds flour and work your dough well, and put it by until it becomes light. Then mix it out in loaves. New flour requires one fourth more salt than old and dry flour: The water should be tempered according to the weather: in spring and fall it should only be milk-warm; in hot weather, cold; and in winter, warm."

Strawberrys,-If you have a bed of strawberries, clean and dress it without delay. If you have not, procure the plants, and set a bed out, as no father should permit his family to be without such a delightful as well as healthful luxury.

## 

 IMPORTERS OF
## DRUCSS，BRIIISH AID POREICII CHBMICALSS，

## Soaps，Pomades，Perfumes，Brushes，\＆c．，\＆c，

Respectfully inform the trade and Country Merchants that they have always on hand a large and well selected stock of the above，suitable for this market，which being of their own importation，they can offer as low as any other house in the trade．

As great attention is paid to quality in selecting their stock，they feel confident in being able to give satisfaction．

With a general assortment of Drugs and Chemicals，and English Patent Medicines，A．S．\＆Co．have always on hand a supply of

Fine Turkey and other Sponges．
Prout＇s and Metcalfe＇s Tooth and Nail Brushes．
London Hair Brushes．
Alpaca Sponge Bags．

## 

As small profits and quick returns are the principles upon which this establishment was commenced, and is still conducted,

## COUNTRY' MERCHANTS AND DEALERS

Will find it their advantage to call, as they can here select their Stock in any quantity required, and from a Stock which contains a greater variety of Teas and Correres, than can be found in any other Store in the City.

## BLACK TEA.

THE Commissioners appointed by our Most Gracious Sovereign the Queen, to conduct a chemical analysis of articles used for food, have fully demonstrated the heulthful tendency of

## BLACK TEAS,

of SOUCHONG and CONGOU characters, over every other description imported (vide London Lancet), and, in consequence, the consumption has immensely increased.

To our fair dispensers of the Beverage, (which "cheers, but not inebriates") who are now becoming sensibly alive to this subject, the Subscriber has the pleasure to announce that he has succeeded, by personal inspection, and the services of Tasters of the highest reputation, in procuring a Stock of

## BLACK TEAS

from the English and American Markets, hitherto unequalled in this Metropolis, and not to be surpassed in quality and prices by the first dealers in the United Kingdom.

## QUEBEC.

W. H. Weloh, Esq., Agent. I Dr. Morrin, Medical Adviser. The Rates of Premium charged by the Canada Company are lower than those of any other Company doing business in the Province. Tables, Reports and all otber information may be obtained at the Company's offices in Hamilton and Montreal, or at any of the Sub-Agencies. The following will shew the Rates at different Ages to assure $£ 100$ payable at death:

The Directors liave lately, with a view of encournging the practice of Life Assurance among all classes, sanctioned the issue of Policies for as low an amount as $£ 25$ on the scale of non-participation.

## THE COLONIAL LIFE ASSURANCE COMPANY.

CAPITAL, $£ 500,000$ STERLING.

## COVBRNTOR.

THE RIGHT HONORABLE THE EARL OF ELGIN AND KINCARDINE, Governor General of Canada.

CANADA,-head office montreal.

49, Great St. Jamigs Strebet.
BOARD OF DIRECTORS.
THE HON. PETER M'GILL, President of the Bank of Montreal, Chairman.
The Hon. Justice M'CORD.
The Hon. A. N, MORIN,
| B. H. LEMOINE, Esq. HENRY STARNES, Esq.

## Manager.

A. DAVIDSON PARKER.

The Board in Montreal is invested with absolute powers in the disposal of Business. The deliverance of the Board at Montreal is final and irrevocable.

This arrangement gives to the Colonial all the facilities of a local company; and combines the additional advantage of $a$ large Guaranteed Capital, affording perfect security in all Assurance transactions.

The Company grant Assurances on the following plan :HALF of the Annual Premium will be received for the first FIVE or SEVEN years, the remaining half, (on which interest shall be payable each year in advance,) being cbargeable as a debt on the Policy, to be paid off when convenient, or, at the option of the assured, to be deducted at the settlement of the claim.

Thus a party, aged 30 , years next birth-day, may effect an assurance on his life for $£ 500$, at a premium for the first year of £5 19s. 8d.

A. DAVIDSON PARKER, Manager, Canada.
