Facts for all Electors

The executive of the Dominion Grange, in its discreet but forceful appeal to the members of subordinate Granges, with reference to the policy of that organization in the forthcoming Federal elections, has taken grounds which will, for the most part, be quite generally endorsed by the more independent element of the Canadian electorate, even though they may not all agree on every particular point. In presenting its case, the Grange Executive has wisely refrained from throwing the onus of responsibility on either political party, but has urged the members of its organization to use their influence within the existing parties to advance the objects with which the Grange has identified itself.

On the subject of militarism, the voter is re-\$2,000,000; in 1906 it was \$6,600,000. In the expenditure on armouries, which is carried out is proportionate.

The taxpayer is reminded that, in the thirteen a half million dollars have been paid out of the Federal treasury to iron and steel manufacturers, as a free gift to this favored interest; while, from 1882 to 1907 over four million dollars were paid in bounties to the fishermen of Quebec and the Maritime Provinces. Lead and petroleum producers are among the other classes heavily subsidized at the general expense. On agriculture, the one great unsubsidized industry, the net burden of all these favors eventually falls, with only partial and indirect return to the form of improved home demand and prices for farm products.

The Expert Judge System

factorily. Here and there one finds a society to which an inefficient man has been sent, that is contemplating returning to the old system under the employment of their judges, and there are societies that have had such experience with governin results overbalances the isolated cases of disthem in condensed, readable form in the agricul- ing" on the part of exhibitors and spectators than formerly.

In practice it is highly desirable that judgby somebody who knows no more about live-stock than will enable him to distinguish the sex of the

For the smaller societies the system has been something of a boon. It has enabled them to avail themselves of the services of first-class men at the minimum cost, so far as the salary and expenses of the judge were concerned. The stronger societies have benefitted, too, from the system, but not to the same extent as the smaller fairs. The government expert judge system, however, is only a phase in the evolution of our agricultural fairs. There are indications already that the era that produced that system is passing. Exactly what the next step will be is a little difficult to forecast. A good many societies are either getting a little tired of the present system, or else desire to have the selection of their judges absolutely in their own hands, and we would not be surprised if quite a number of fairs next year reverted back to the old system that formerly prevailed. It will not be the old system either, to be exact, for a good deal has been learned in the last few years about judges and judging, and there is little danger of falling back into the old rough and ready way method of having anybody at all to do the judging.

ducing sources of Canada of. . . \$35,200,000.00

FARMER'S ADVOCATE AND HOME JOURNAL, WINNIPEG

These industries and allied trades have a total investment of upwards of \$100,000,000.00 and pay annually provincial and government licenses amounting to upwards of \$14,000,000.00.

In addition they pay city licenses, real estate and personal property taxes aggregating the enormous total of \$7,500,000.00.

This is an array of figures that is being cir-culated throughout Canada by interests opposed to prohibition. Accompanying it is an appeal to working men to defeat the objects of the prohibitionists on the ground that the liquor interests provide a certain amount of labor and in London, comes as a serious rival to Ireland's great contribute from their funds a certain amount to fixture, but in its own especial province the latter is the public treasury.

In discussions of the liquor traffic, the public seldom gets the arguments pro and con. Pro-hibitionists invariably make their appeals upon moral grounds, as while anti-prohibitionists horse enthusiasts all over the world are, however, too adopt a line of argument of which the above is a firmly established to call for any re-statement of them fair sample. In so far as prohibitionists endeavor here. The show for the present year took place from to eliminate the liquor traffic by confining their appeals to morals, we think they make a mistake. Few men will be convinced that when all accounts Few men will be convinced that when all accounts are balanced up they are any less moral than the the visitors. Unfortunately, many farmers were preaverage. One man will drink, another will not vented from patronizing this show owing to the pres-drink, but is mean to his men or his family, or is sure of harvest work, but, notwithstanding this resomething else. All of us think we have a right striction, between 50,000 and 60,000 persons passed to our pet vices and the endeavor to dispose of through the gates. Buyers, of course, were present one of these vices by special legislation upon moral grounds can scarcely be expected to succeed. But in the figures above submitted is found the strongest possible argument for prohibition upon economic grounds.

* *

Primarily men expend their energy to provide themselves with food and clothing, or to produce some form of wealth which can be exchanged tor lite's necessaries. And what applies to in- event are well aware that it is mainly on account of dividual effort applies also to the community and its magnificent display of horses of the hunting type nation. nation. Whatever makes for the maintenance that it possesses the importance which it is admitted of life and contributes to life's necessities and comforts is worthy of the expenditure of human But liquor does not come under the energy. head of life's necessities nor comforts, in so far as hunter. There are classes of horses, of course, which its use contributes more to human misery than to are being greatly damaged from this cause—such, for human comfort, and destroys rather than repairs instance, as the tram or street-car horse, the harness or builds up human energy. Hence any work horse, and perhaps, to some extent, the wagon-dragger expended in the production of liquor is a waste of in our big cities. But "the Irish specialty," either energy and all waste is an economic evil. Thus, the figures we have submitted represent a waste of \$35,200,000 without taking into account the money paid in licenses.

Could any institution except humanity, stand such a waste and live? Are people so blind as to believe that the \$14,000,000 contributed to the purposes of government have been brought from Cannot every one see that it is a fee paid out of the discriminate use of the thoroughbreds now at service pleasure of the courteous editor by attempting to the best interview of the induce of the courteous editor by attempting to the best interview of the induce of the courteous editor by attempting to the best interview of the induce of the courteous editor by attempting to the best interview of the induce of the courteous editor by attempting to the best interview of the induce of the toll the liquor trade has collected from the people, may not be advisable in the best interests of the indus-

HORSE

The Dublin Horse Show

Few, if indeed any, horse shows enjoy more genuine opularity among equine fanciers throughout the orld than that held each August under the auspices of the Royal Dublin Society. No doubt the recently established International Carnival, which takes place still without a superior, and it will give any other country of the same size more than they can do to oust it from its pre-eminent position as a demonstra-Tuesday, 25th, to Friday, 28th August, and as usual, it proved a great attraction, not only in Ireland and Great Britain, but to many countries on the confrom various countries, and some very fine prices were realized during the week. For instance, there was the fancy figure of $\pounds 1,250$, paid by a Hungarian Count, for one of the first prize five-year-old hunters. other transactions were effected, but need not be detailed.

Most people who know anything about this big to enjoy. The Irishman is by nature a sport-loving individual, and even the rapid spread of the motor and other mechanical means of locomotion seems to have no serious influence upon the popularity of the Irish horse, and particles. But "the ITISD spectra in our big cities. But "the ITISD spectra for the hunting field, or as an army remount, does not seem to have felt the stress of mechanical rivalry. It would be a pity, indeed, that it should at any time. Regarding the breeding of hunters as an industry, it is the general consensus of opinion that the animals of the present day are vastly better in style and quality than they were ten or twelve years ago. This desir-than they were ten or twelve years ago. This desir-than they mere ten or twelve years ago. This desir-than they mere ten or twelve years ago. considered by the best authorities to be very injudicious, and a highly important problem presents itself as to the system on which hunters should in the future be to the system on which numers should in the ratifie be bred. The most sensible solution is to establish a stud book for a recognized breed of clean-limbed, strong-boned horses, such as have made Ireland's reputation, and undoubtedly, this is the best—indeed, the only—way to fix a type; mere spasmodic crossing the only—way to fix a type; mere spasmodic crossing, which rings the changes on the light thoroughbred (to secure quality and breeding) and the heavy feather heeled draft breeds (to obtain substance and size) will be at best an unreliable way of keeping hunters up to the mark. This discussion, will no doubt, he par the mark. This digression, will no doubt, be pardoned, but it is obviously suggested by such an important gathering as that under review.

Turning now more particularly to the show itself, an idea of its scope may be gleaned from the fact that the total entries reached the fine aggregate of 1,200, of which over 900 were hunters or young horses to develop thereinto. The thoroughbred section, of course, was not so extensive, but its importance en-titles it to first attention. Thoroughbred sires in two classes numbered 28, and the stallions over 8 years of age were thought to be the finest collection ever seen at Dublin, which is claiming a good deal. The noted Co. Waterford bred Red Sahib, by that famous champion, Red Prince II., was a handsome winner, and he also secured the Croker cup as the best sire for his present owner, Mr. E. W. Robinson. At the London International last year, Red Sahib won first for huntergetting sires-a notable distinction for a grand Irish stallion. The junior stallions were not quite so even a lot as the older ones, and this was not at all satisfactory. Still, several good ones were forward, and a very symmetrical, good-quality bay, named Gavello, the property of Mr. Thos. Lindsay, of Crossgar, was for one of the first prize five-year-old hunters. chosen as the winner, A better-boned and stronger Princess Ena, a beautiful chestnut mare, showing made horse, named Hill of Ward, got the second prize lovely quality, grand breeding and tiptop ability as a for Mr. Parr, of Athboy, but he did not possess the mover. She was entered by Mr. Laverly, of Dunga-non and a full sister, named Activity, was sold by this classes for wardings report must be approach at the non and a full sister, named Activity, was sold by this classes for yearlings, regret must be expressed at the exhibitor to the same buyer for £525. Numerous number of weaklings that turned up among the 58 other transactions were effected, but need not be dethe fact that some of the sires were rather deficient in bone. The same comment may be made with regard to the 32 fillies, but it must not be understood that either of these classes lacked in merit, as the winners and many more besides, were the makings of very nice animals. Thoroughbred mares were a most pleasing collection, and a capable lot of animals of splendid conection, and a capable lot of animals of splendid substance was found bearing away the rosettes. Prominent among them were:—Mr. Burke's Lady Marmiton, from Co. Galway; Mr. Boothman's Excite-ment, from Co. Dublin; Mr. R. G. Carden's Katrine, from Co. Tipperary; Mr. Cole's May Morning, from Co. Westmeath; Mr. J. O'Sullivan's Fairy Queen, from Co.'Cork: and Mr. Hassett's Belle of New York from Co. "Cork; and Mr. Hassett's Belle of New York, from

and that if the people paid it direct they would save the millions of dollars that go to the support of a large class in indolence and a larger class in the avy imported breeds—Clydesdales and Shires—is the avy imported breeds—Clydesdales and Shires—is the production of the means of ill-gotten wealth?

The liquor business is commonly looked upon as one of the most profitable of enterprises from the manufacturers', wholesalers' and retailers' standpoints, and if \$35,200,000 represents the wholesale cost of the raw materials it is safe to assume that the cost to the consumer of the finished product is very close to twice this sum. Yet the public, as a whole, is asked to pay this enormous sum for the reason that the industry involved may pay out to working men \$6,000,000. Would it not be cheaper to keep these men in idleness, also all the wholesalers and retailers and their families than to pay through the nose in ten cent. prices and increased taxes the enormous sums represented above?

* * *

The liquor traffic thus presents to us a serious economic waste. If men were not working at the manufacture and sale of liquors they would be engaged in pursuits that would contribute to the sum of life's necessities and comforts that increase the efficiency of the hand and brain and expand the capacity to enjoy living. In its scope it is a world-wide problem. Local measures of restriction leveled at the improvement of morals must necessarily be of doubtful benefit. The real remedy for the evil of the liquor trade is the gradual elimination of manufacturers and reduction of licenses extending over a period of years with the ultimate object of entire elimin-ation after a given period. Remomins rather than morals dictate such a policy. We have infinitely more faith in an appeal to the pocket than to the conscience.

The harness section at Ballsbridge has to take a subsidiary place, but still it never fails to attract some grand teams of stylish steppers, several of them com-either, ing from across the channel. Some classes for cobs Win and ponies also succeeded in bringing together interesting displays, and both these sections well maintained their reputations at the late show

It was peculiarly unfortunate that the weather proved most inclement right through, and each day's proceedings were greatly marred by heavy rain; still, enthusiasm was as usual very buoyant, and the entire show was voted a distinct success, and a credit to the country.

EMERALD ISLE.

The Future of the Percheron

EDITOR FARMER'S ADVOCATE:-

It was the American demand, largely for a draft horse that could get up and go, that produced the modern Percheron. A century ago, the weight for the breed, as officially stated, was 1,200 to 1,400 lbs. At that time they were bus horses. hundred years the industries in which draft horses are son from their neighbors or from others who do employed have been calling all the time for more weight and strength. When the Americans first began talking about the ton horse the world was a little incredulous but the ton horse epoch is not only here, but passing. Modern civilization is demanding a constanty increasing size in draft horses, and the demand will be met

rather too large to be briefly told. About the beginning of last century some French horses of draft blood were imported into this country. The breed in those days seems to have been adapted about as much for trotting as for draft purposes. At any rate, one stal-lion in this first importation sired a horse from which that was destined to inaugurate that era of draft breeding that has finally placed the breed he repre-sented in first place as the favorite drafter of the Amer-

panies, by brewers and in other lines where strength and weight are required, combined with docility and a whole lot of horse sense, one finds the Percheron forging rapidly to the front. And on the farms, when the breed is known as it will be known in a very few years more, the Percheron will come into his own here just as he has come into it on the farms of the Central and Western States during the last fifty years. And it will not take him half a century to do it

It pays to give a good Typically, the Percheron is a horse of some range, price for feeders. The cheap ones in the long arrested by the supervention of more favorable connot squatty or chunky. He has a top line that differs run are money losers for the man who feeds them. Breed is a minor consideration in feeding cattle. A man wants them, of course, to be of a beefing breed, but whether they are Shorthorns, be carefully sought for, and if discovered steps should Angus, Herefords or Galloway's pure breds or be taken to remedy it. The general aim should be to lay on flesh and fat economically depends wholly on type. The ones that will feed best and mature are not essential from the butcher's standpoint, material, but for the feeder they are essential considerations. They are the best outward indications to him of the thrift and probable food three times a day. capacity for feed and gain in the animal he is purchasing. Blocky steers are always the most thrifty, as a rule they are the early maturing ones The man who cannot discover the undesirable that feeding will be unprofitable.

Depraved Appetite in Cattle

I have a heifer nearly three years old that is in very poor condition. She began to fail after she calved in the spring, and she eats a considerable lot of earth. We examined her mouth and found her back teeth all black. She seems to have con-

L. R. W.

B. C. Cattle without any appreciable cause lick the clothes of their care-takers, chew and swallow articles of clothing, bones, old shoes, earth, coal, gravel, and even the dung of other cattle. Cattle suffering from this disease have a capricious appetite as regards their ordinary food, but evince a strong desire for the articles above mentioned. Cows in calf and young cattle are especially liable to develop these symptoms. They are frequently known to swallow such articles as small pocket knives, table forks, nails, wire, needles, coins, lumps of clay, and hair, which may give rise to secondary symptoms of a more or less serious nature. The small pointed objects such as pins, needles, and wire, etc., often taken by accident with the food, are liable to penetrate the walls of the second stomach, and make their way to the heart with fatal results, sometimes these objects even pierce the abdominal walls forming a fistula. Animals so affected become restless and uneasy, and frequently bellow. The disease may last for months, and in extreme cases, the animal will die from emaciation and exhaustion.

In general terms the causes of depraved appetite portion, at least, of the stock they require. are so numerous that the trouble must be looked upon as a symptom of many morbid conditions rather than as a disease of itself. Heredity is said to be a cause, this may be the case, when, from long continued unhygienic conditions, a weakness of constitution is transmitted from parent to offspring. Another cause is the feeding of animals on exhausted soil not care to feed stock for market. Some men that lacks especially the elements of lime and have some certain plan they follow in buying, phosphorus, absence of soda salts in hay grown on some certain district they go to each fall for their certain lands. Soils that have been cropped to feeding stock, others pick up likely-looking exhaustion are robbed of both earthy, and alkaline steers wherever they are to be found. Wherever salts, animals fed on the exclusive products of such a soil, frequently suffer, not only from depraved appe-tite, but also from a disease called osteo-malacia which is a softened condition of the bones. Digestive dications of feeding quality in the cattle he buys, that are too important to be over-looked, and while known to most buyers are worth em-similar manner. The following are examples of such food. The rank products of wet or swampy soils, the fibrous plants which grow on poor or wet or soured soils, and generally spoilt food which has undergone fermentation.

Yearly breeding and constant milking, by undermining the general health predispose so strongly, that in many cases this depraved appetite is seen in dairy cows. The last period of gestation, when the demands of the growing calf are greatest, is a period of especial danger. Permanent stabling which denies the invigorating influence of the sun,

The course, if the affection is chronic, unless ditions. often takes place when the animal is turned out to pasture and open air life, and especially if a liberal grain ration is added. The cause of the disease should the animal with a sufficiency of sound and wholesome food and water. A complete change of environ-ment and diet may be necessary. Comment upon farming operations invited.

Corn Growing in Manitoba

A few miles from Winnipeg, out beyond the agricultural college lies the Monroe Milk Comppany's farm where this week a sixty acre field of corn is being harvested and put into the silo. harvesters are at work cutting it, a portion of the growing in is a tough gumbo, like most of the soil around Winnipeg. The variety of corn is the Longfellow. It was sown with the drill in rows three feet apart about the twentieth of May. EDITOR FARMER'S ADVOCATE: Harvesting operations began on the twenty-third of September, at which date the crop had just largely experimental. I might say in regard to my been glazed with frost. It stood then an average own experience with winter wheat, and also some height of eight feet, and will yield fifteen or experimental work under the direction of the Departeighteen tons of green fodder to the acre.

bottom in this country. Corn will not grow to any remarkable height in this country, the ordin- After the snow is melted, it gets spring-killed. ary varieties will not ripen, but it spreads out so a late spring it would probably do very well, but in thick at the bottom, stools out so exceptionally, that for fodder it yields equal to anything grown in the regular corn belt. The harvesters had all the bottom they could handle, and, though the largest size built, the cutter choked up occasionally in the heavier parts of the field.

Corn is no new crop in Manitoba, but it is seldom one sees it growing here in sixty acre blocks. That it can be grown successfully has been demonstrated, that it will make excellent silage, the experience on this farm for the past two years is ample proof. For putting in the silo it is rather too green and immature when cut, and requires to be wilted for a few days after cutting. But dry it out a little and it makes silage equal in quality to anything made anywhere else. And as a winter feed for dairy cows nothing yet discovered is its equal.

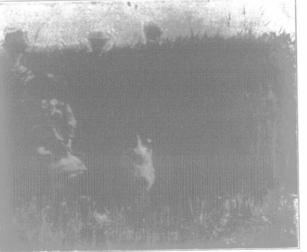

To insure of a good growth before frost comes in the fall corn requires to be in the ground just about as early in May as a man can get it in. This field we are speaking of was sown a trifle late, the land not being fall plowed throwing the seeding a little later than it should have been. From the first to the tenth of May is the proper time for sowing. The soil intended for corn should be fall plowed always. Drilling the seed scarcely ever injure the spring wheat crops. in is the handiest way of sowing, though if the I might add for the information of your readers, better to plant in hills and cultivate both ways. tion during the summer, the cultivator requires looking plant when growing, but one trial was to be kept going most of the time. The Prize Farm at Carberry

Wind Clear is what they call the place, and the name is both original and appropriate. The McGregor farm is wind clear all right, that is, if dense wind-breaks on the North, West, and to some extent on the East do anything towards keeping the breezes off. It is about a mile-andout past the agricultural society's grounds. The farm seems originally to have been divided in half, two sets of buildings being on the place, one towards the North side being occupied by a hired man, the other being the home buildings of the owner. The farm, as one approaches its main entrance and turns up the lane towards the house and barns, impresses one most favorably, with the level sweeping fields, stretching for a mile to the West and half-a-mile North or South, the house and outbuildings sheltered in the grove, and the homelike appearance of the whole place.

Wind Clear Farm belongs to Mr. Thos. Mc-Gregor. Mr. McGregor came to this Western country from Huron County, Ontario, about thirty years ago, and settled on this particular place about ten years since. Previously he had been living out at Wellwood, where he homesteaded. Wind Clear was never seriously infested with weeds, and its former owner was as careful as the present occupant in seeing that no noxious weed was allowed to gain a foothold on the place. The result is that, by giving careful attention to seed, by preventing as much as possible the in-WINTER WHEAT ON THE FARM OF MR. A. E. BURNETT, troduction of weed seeds during threshing time,

Getting Rid of Wild Buckwheat

EDITOR FARMER'S ADVOCATE:

Can you give me a few points on the method of summer fallowing, that you think the most likely to suit many of the settlers in this district who are troubled with buckwheat?

It does not appear necessary for us to consider the question of moisture at present. The only points which it appears necessary for us to consider are: "How to kill the buckwheat and leave the ground in condition to ripen the following crop of wheat as way. The husbandman should be contented on a break work in the summer fallow. During the win-early as possible." We have now been trying to grow good farm. A laudable pride to maintain the fertility start with the summer fallow. During the win-Red Fyfe for three years, but it appears likely that of the land, to keep the fences and buildings in good ter the manure, as produced, is hauled out on to provide the buildings in good the oat stubble that's to be summer fallowed the on breaking we shall get frozen wheat two years out repair and to improve the home surroundings should the oat stubble that's to be summer fallowed the of three, so our only chance now appears to be to either to sow wheat on land that has had several crops grow that one has planted to provide flowers as ible, the land is plowed, worked up at intervals of oats, and accept the volunteer oats in the crop, or well as fruit is a pleasing ambition. manage our summer fallowing in some way so as to give us earlier ripening in the following crop than is usual from the ordinary method of summer fallowing.

Alta

As wild buckwheat is an annual plant, it does not present as many difficulties in the way of eradication as perennials or biennials do. 11 the seeds produced in this season's crops are spreated this fall on the ground, or allowed to start next spring, the plants produced can be cut off by cultivation, cultivating before seeding if practicable, or by harrowing after the grain is up. A good plan is to disc or harrow the stubble in the fall directly after harvest, so as to cover T

DAIRYING AND LIVE-STOCK

OCTOBER 7, 1908

The dairy herd consists of fifteen cows. It is pastured during the summer up among the sand hills to the west, and fed in winter much the same as dairy cows in this country generally are about eighty cents per gallon, and bringing in winter a rather better price, generally a dollar. When we visited the farm in August they were selling five or six gallons a day from the fifteen cows, besides what was used at home, and the owner seemed satisfied with the returns.

In addition to the cows, steers are winter fed, and the young stock pastured in summer. Some of the steers fed are bred on the farm; the rest are purchased. Last winter three carloads were fattened, fed in the stable, tied up and turned off in the spring at 1,285 pounds per head, selling at five cents. The steers are fed on hay, straw, and chopped grain, barley and oats.

The cattle stables will accommodate a hundred head. The stalls are conveniently arranged. A gasoline engine pumps water and grinds feed. In addition to the main barn, there is a fair-sized implement house, hog pen and hen house. The residence has been built recently. It is a modern brick cottage, set in among shade trees and flowers. Back of it, to the north, one may see one of the farm finest gardens in Manitoba, a garden containing a selected lot of small fruits and the vegetable crops ordinarily found in kitchen gardens.

The competition in Carberry was closer, perhaps, than in any other in the province. There are some exceptionally high-class farms on the Carberry plains, particularly north. Professor Rutherford, and Mr. Golden, deputy minister of agriculture, acted as judges.

DAIRY

The Small Topped Milking Pail

One of the best ways to reduce the amount of dirt falling into the milk is by reducing the size of the opening in the top of the milk pail. Many milkers claim that it is impossible to use a small opening in the pail because so much milk is wasted. Repeated tests have proved that the milker who wants to keep the milk clean, and is willing to give the small-topped pail a fair trial, will have no difficulty in hitting a four-inch hole with practically every stream of milk. There are a few cows that have large udders which hang low posts. and must be milked with a wide-topped pail, but that is no excuse for using the old "dirt-catcher on all the cows. is not necessary, and, in fact, is of little assistance in the country, and have no experience in butter- several which were proposed, only one was built, in keeping the milk clean. The simplest pail is the best. The opening is on the edge of the pail where it can be easily reached. The cover is fastened solid to the pail, and cannot be taken off, put on a dirty shelf, or on the floor, while the milk is being emptied, and then put on the pail again when the milker is ready for the next cow. The cover is of such a shape that every seam and part of the inside of the pail can be seen when being washed. It is balanced so that it may be turned over a steam jet and sterilized as easily as any milk-can. The shape of the cover and the way it is fastened to the pail acts as a brace, stiffening the pail and making it strong and durable .--Storrs' Bulletin.

rather more than the average farmer would man- of wood work or iron work that furnishes an exage to get through with. But it keeps the place cellent lodging place for dust. The best stan-

chions, too, are rather more expensive than chains but they accomplish the purpose required of them rather better than chains, and permit of as nearly perfect freedom to the animal as it is assumption that the yield of milk is considerably less possible for any tie to give. A swing stanchion than stated. fastened at the top and bottom with a short chain answers every requirement for convenient, safe

Sunlight In Cow Stables

In these "bacillian" days it is interesting to know that one of the most active agents in the destruction of germ life is sunlight. Bacteriolo- simply draw the milk off and put the cream in a clean gists have demonstrated that the tubercle bacilli may be killed by exposing them for ten minutes to direct sunlight. Most other bacterial forms are as effectually and speedily destroyed by the action of the sun's rays. Some organisms, of course, resist the effects of light for a longer time than others. The tuberculosis germ is among the least resistant. Neither is sunlight a very convenient germicide at all times to use. The point to remember, however, is that the presence of light is unfavorable to germ life, and that where it penetrates, disease producing germs have one of the most efficient of the great natural destroyers of their kind to contend with. It has been frejuently demonstrated that cattle are less liable are invariably dirty ones, and where dirt lurks bacteria generally flourish. Light shows where the dirt is and makes it easier to keep the barn clean. Plenty of windows in a stable make it healthier for the cattle and a more cheerful place for the men who care for the stock to work in.

country, or anywhere else, that had too much wrapped in parchment paper, or it may be packed window space. We hardly think it possible to incrocks or parchment-lined boxes. get too much light into cow barns. At any rate, we never heard of anybody building up the v indow space after the stable was complete because too much sunlight was getting in, but we have seen quite a few of those dark, dismal old barns that have been improved by cutting holes in the walls and putting in windows.

The amount of window space required in a cow barn depends upon the width of the building. If the stable is made for a double row of stalls, and is about thirty-five feet wide, there should be at least four square feet for each cow. A window three feet square behind every other cow to combine and erect packing houses in which all the will furnish sufficient supply. If the stable is packing in the immediate neighbourhood is done. double, and can only be lighted from one side, larger windows are required. They should then be practically continuous along the whole side of the barn, leaving space only for the necessary

fed. The product is sold in the form of cream and comfortable tie, and can be installed at a be kept clean, and should be milked in a cleanly manner. Where six or more cows are kept, it is The cow, it is probably needless to say, should wise to have a cream separator, but if, as we suppose is the case, only one or two cows are kept, shallow pan creaming would be most economical. Strain the milk as soon as possible after milking into a regular milk can, and set in cold water or hang it down a well. crock in a cool place, or in another can down the well. Keep cream cold and sweet, stirring well each time fresh cream is added, until sufficient for a churning is collected, which should be twice a week. Warm to a temperature of 65 degrees twenty-four hours before churning, adding about 10 per cent. of a pure culture of good-flavored sour skim milk or buttermilk. When the cream commences to thicken, it may be gradually cooled to churning temperature. This is from 58 to 65 degrees in summer, and 65 to 72 degrees in winter. Scald the churn—a barrel or box churn is best-with hot water, then rinse with cold water before pouring in the cream. When the butter is like grains of clover seed a dipperful of water may be added to assist separation. When the butter granules are the size of wheat grains the churning is completed and the buttermilk should be to succumb to tuberculosis when kept in well- drawn off through a strainer. Pour cold water on lighted, well-ventilated quarters. Dark stables the butter and wash by revolving the churn rapidly. are invariably dirty ones, and where dirt lurks Salt to taste, or to your customer's taste, sifting the salt over the butter granules in the churn,or after the butter is removed from the churn.

ean. Plenty of windows in a stable make it ealthier for the cattle and a more cheerful place r the men who care for the stock to work in. We cannot remember seeing a stable in this puntry, or anywhere else, that had too much

HORTICULTURE

Fruit Packing in Vancouver Island

Uniformity in output is one of the principal things to be aimed at in putting fruit on the market. This cannot possibly be attained where each grower does his own packing and grading. In order that the best results may be obtained, it is necessary for the growers

Vancouver Island fruit growers are just beginning to understand the value of careful packing. A determined effort has been made during the past season to have uniformity of grades, and the effort has met with considerable success, although there is still a good deal to be desired in this respect. Many of the fruit farms are too remote from their neighbors to allow for the erection of packing houses, or even for

the land leat, one and for we will the winut on to owed the as possntervals the fall. ollowing with a the crop land is nd next After f it, and respects wheator in any country

The Essentials of a Good Cow Tie

The method of tying cows is important. A satisfactory cow tie is one that will secure the cow safely, and yet at the same time allow as much freedom of the head as possible. There are two general means of tying cows in the stable. one is by a chain hooked about the neck and sliding up and down on a rod or pole; the other is by means of stanchions. A chain tie allows considerable freedom to the cow. She can move the head up and down readily enough and do most of the other things which a cow tied up reeds to do, but it has a number of disadvantages nd, on the whole, does not seem to be as favored wadays as the stanchion.

The Progress Fruit Packing Co., Ltd., was formed tion will be even. ten farmers, all within a mile of the packing house, Cover the whol to combined in order to market their fruit co-operively. They subscribed at the rate of fifteen dollars per acre of orcharding, and built a house that is a credit to the neighborhood, and will be an asset for many years to come.

The orchards in that district are, with two exceptions, very young, in fact, they are just beginning to bear. They are planted to apples, pears, plums, prunes, cherries, and all kinds of small friut. The packing house is used, however, only for the five fruits mentioned, as each man packs his own strawberries, raspberries, loganberries, and currants. All four expert men in charge of a foreman are kept busy throughout the season. These men each pack fifty crates of plums or prunes in a day, and sometimes more. The crates contain twenty pounds each. Of apples and pears they can pack considerably more.

No distinction is made in the fruit from the differ- the weeds if any are in the soil. ent orchards, as after it is packed and credited to the grower, it is all mixed together, and the packing company's label attached to every crate. The foreman in charge of the packers examines every crate, and then nails it down so that there is no possibility of any of the fruit getting away in a bad condition.

Much of the fruit is shipped to the prairies by exgreater, the fruit arrives in so much better condition when sent that way. The Progress company makes a specialty of supplying cherries by express. The to the old-fashioned sweet cherry.

Next to the cherry in popularity among growers at least six inches lower than the back. is the prune and those varieties of plums which resemble the prunes in all the essentials, yet are finer In the middle of September of this year, the fruit. first full carload of prunes was shipped from Victoria to Regina. Five tons of these were put up by the Progress Packing Co., and the other five tons were supplied by the Victoria Fruit and Produce Exchange. Prunes lend themselves very well to being transported long distances as they are so firm and ripen so slowly.

It is probable that many prairie dwellers know the prune only from having eaten the dried fruit. If they eat the ripe fruit as it comes direct from the orchard, they would realize that they never really is only a poor substitute. Never tasted a prune before. It is very luscious, a great from a cow stable for a hot bed. improvement on the plum.

The experience of the Progress people during the past season in running their packing house is proving a great impetus to the other districts, which are already discussing the advisability of following the example of their neighbors. In the Cowichan district, north from Victoria thirty or forty miles, there is a movement on foot to do this, and as there are a number of fine young orchards growing up in that beautiful and productive orchards that adorn the district, it is probable that they will carry out their shores of the West Arm. Passing by one of more There are also several places in the neighplans. borhood of Victoria, notably at Gordon Head and at Saanich, where packing houses are needed, as well they were drawn into conversation, and in the course as on Salt Spring Island. Steps are being taken of their talk, the traveller intimated that he had passed to build before next season, and doubtless there will be several by the time the next fruit harvest arrives. H. F. PULLEN. B.C.

Making a Forcing Bed

and that is the one shown in the illustration here- whole pit is thoroughly trodden and packed. In this way the sink caused by the heat and fermenta-

Cover the whole bed with a layer of leaf mould about one inch in depth. Then a layer of the same depth of fine sifted soil, well pressed or trodden down. Then on top of this place the the same width as storm windows used.

In selecting soil, do not dig it from holes or pits, but get surface mould on any plot or garden previously used. If the manure is above the pit, cover over the edges with about the same depth the other fruit is takes to the packing house, where of soil used inside the frame. Put the storm windows on and keep it covered up closely for from three to five days; then throw open and leave open for a day. Rake over the surface of the soil inside of the frame, and this will destroy

In sowing cabbage, cauliflower or tomatoes, I mostly get a round stick and press heavily on the surface of the soil till the stick has sunk from onequarter to three-eights of an inch in depth; leave about one inch space between each drill, sow seed thinly, and then cover evenly with fine soil. press in preference to freight, as although the cost is I like to sow seed thinly, as in this way plants River, he replied that that was hardly a fair question, will be found to grow much stronger.

This height of frame will leave about one foot olivet cherry is the principal one grown, it being of space between the surface of the soil and the rather acid. This fruit is much preferred by the buyer glass, a little more at the back, and a little less glass, a little more at the back, and a little less no reason why, with proper care and attention to the at the front. Always use manure from horse stable if possible; the next best is from the pig pen, but this is only a poor substitute. Never use the manure

S. LARCOMBE.

Nelson Fruit Fair

A middle-aged man of perhaps forty years strolled leisurely along the wagon road that skirts Kootenay Lake, pausing occasionally to admire the many shores of the West Arm. Passing by one of more than usual interest, he encountered the owner, and through this section more than a dozen years ago, and that he had considered the fertile benches and lake front that he now looked upon with delight and admiration as being almost valueless and available

In a brief n av I ha

The Shaughnessy Cup was open to competition for the best display of products from any one ranch, grown and produced by the owner. This was won by Mr. James Johnstone, President of the British Columbia Fruit Growers'Association, and the exhibit included ham, bacon, cheese, butter, pickles, and practically all kinds of vegetables and fruits.

The most interest centred in the award of the frame, which should be from 16 to 18 inches deep District Challenge Cup. There were five districts at the back, and from 10 to 12 inches deep in front, with even side sloped; have each partition did not send an exhibit. The cup was won by Kalso district. This is the second time for Kaslo to win this honor, as she won the cup two years ago. It is this nonor, as she won the cup two years ago. It is also the second honor for Kaslo this season, as at the Kootenay Lake Fruit Fair, held at Kaslo, she also won the Grand Challenge Cup. The competition was very keen, and the judges were not a little puzzled in making the award.

His Excellency Earl Grey was present on the last evening of the fair, having come up in a launch from his ranch at Boswell, and he expressed himself as highly pleased with the character of the Kaslo exhibit, it having been preserved in its entirety for him to see

The fair management are to be congratulated upon securing the services of Mr. J. L. Porter, of Hood River, as one of the judges. In reply to a question, Mr. Porter expressed himself as both surprised and delighted at the excellent character of Kootenay fruit. When asked how it compared with Hood as the Kootenay at present was where Hood River was fifteen years ago. "You have only a few scattered orchards as yet, and we have thousands of acres in orchard. I would say, though, that I see trees, that your district should not in the future be able to make progress along a horticultural line in

largely because of the very favorable reports on this variety by the Dominion Fruit Division, and also on The essential for having fairly long and even account of the exceedingly high price that was paid bottom heat is to have the bed well trodden. to Hood River growers for this variety last fall. It may not be uninteresting to your readers to mention that this variety brought twelve dollars a box on the Portland market. In a few short weeks this was noised abroad and given wide publicity through the nursery catalogues, and in a few weeks more there was hardly a nursery on the Pacific slope but had sold their entire stock of Winter Banana. The growers who are fortunate enough to have planted this variety are much pleased with it, and the nurserymen report that they are experiencing an unprecedented demand for this new apple, whose flower is so not unlike a banana that it has been given that name. The samples on exhibition at the fair were up to the standard in size, flavor and color, and were much admired.

Another new apple of considerable interest was the Cox's Orange Pippin. This is being grown in Kootenay chiefly because of the unprecedented demand on the London market for this variety. There is some doubt among growers as to the advisability of growing an apple that finds a good market only at a point so far away, and all the disadvantages of transportation have to be taken into account, yet it seems to be in unusual demand this season, so nurservmen report.

The most enthusiastic Kootenay growers do not claim that their district is a good all round peach secbut the peaches on exhibit this year, especially those from Grand Forks, deserve special mention. They were more than the average in size, of good color and excellent flavor. One grower from this section expressed himself as being so well satisfied with their success that he purposed planting next

A reader asks us for information as to the making of forcing beds; or, as they are sometimes called, hot beds. An authority on this subject in our own province answers as follows:-

In making hot beds I would not advise putting in the manure in the fall. The writer has tried this on a few occasions, but never successfully. If the manure is drawn out in the fall and placed in a pit, it will freeze solid during the winter months; and it will be from the 1st to the 15th sufficient to cause fermentation and heat. The and various industries of Kootenay were on exhibition. better plan is to dig a hole or pit, about two feet in depth, let it be two feet longer and two feet more than anything else, will illustrate what the diswider than the frame that is intended to cover it. This, of course, should be dug this fall if intended to be used the coming spring. Fill up with dry the 10th March, if the spring is favorable, re- just three years ago last spring. move straw or set on fire, and commence to fill manure to accumulate in the horse stable for real monster on exhibition from New Denver. out to keep from freezing if well trodden down. Keep drawing a fresh supply until you have from two to twoand a half feet in depth.

for grazii told the story of the rise of the fruit-growing industry in Kootenay.

Somewhere about a dozen years ago, a few pioneers began to experiment with fruit and vegetables on the shores of Kootenay Lake. Although they encountered numerous difficulties on account of their inexperience, their efforts have been crowned with unusual success. Five years ago they held their first fruit fair. It was only a small affair, the products of success. Nelson and immediate vicinity only being represen-ted. Now it has grown until in this sixth annual fair we have a representative fair of the whole Koo-April, generally, before this has thawed out tenay country, and at which the products of the many

There were two exhibits about the fair that. trict is capable of doing. One was a scion of all this year's growth, ten feet four inches long. This was brought down from near Kaslo, and has already been referred to in connection with the Kaslo fair. The straw or any dry litter that will keep the snow other was the fact that the Wealthy apples, which from filling in during the winter. Then about carried off the first prize, were grown on trees planted

in with manure from horse stable. Allow the dred and sixty pounds? This was the weight of a three or four days at a time, as in this way suf- evidence was to hand as to what method of cultivaficient heat will be found in each portion drawn tion produced this result. But, the result was there. Some giant cabbages from Fruitvale also had their share of attention. A collection of unusually large potatoes were much admired. A collection of tomatoes from the Lower Arrow Lake demonstrated things are going along in a quiet, progressive way that Do not use too much dry litter or straw. I what can be done in growing this vegetable. They **IKE tO SHAKE OUT ONE THIRD OF ONE HALL OF THE LONG Straw, as the shorter will pack closer and retain the heat much longer.** It is better, perhaps, to have the back of the bed (which should be North) about two or three inches higher than the front, with an even slope and surface. See that the

year five acres of peaches. The Kootenay Jam Factory, a new industry, had a well assorted exhibit. The owners hope in a short time to so extend their operations as to embrace fruit canning as well. There is a large home market for this product in the mining camps, and it will be several years before even the home market can be supplied. Earl Grey was so impressed with the character of the exhibit that he ordered a case for himself.

The exhibit of forest production by the Mountain Lumbermen's Association, which was placed to the right of the entrance in the main building, was a fair criterion of what the Kootenay produces along this With the development of the prairie provinces line. and an ever increasing market, the lumber interests of Kootenay will be no mean factor in its upbuilding.

Taken altogether, the fair was a decided success, and marked another step forward. One prominent What do you think of a squash weighing one hun- gentleman, a resident of one of the winter camps, and who had never visited the fair, intimated that No the fruit exhibit was a revelation to him and a practical demonstration of the fact that, while he had always considered mining the only industry in Kootenay worth while, another and very important one had sprung up without its progress exciting his notice. There is no booming in the fruit and land line, but means much. The growers, who after all, by

SHEEP

The eight breeds of sheep shown at Toronto were ever seen at the Western Fair, high-class quality and good fitting being the rule in every class, while the judging was, on the whole, more than usually satisfactory

Leicesters were well shown by James Snell, Clinton; Hastings Bros., Crosshill; and O. Turnbull, Walton, the majority of first prizes, including both champion-ships and flock prize, going to Snell, whose entries stood high in the rating at Toronto, and were of high-class type and quality, and well fitted, as, indeed, were nearly all in the class.

Lincolns were well shown by John T. Gibson, Denfield, and Campbell & Lethbridge, Strathburn. The Denfield contingent came out in fine condition, as usual, being full of quality in flesh and fleece, and showing grand evidences of constitution and thrift, and handling firm, while sound and active

made up important parts of a strong exhibit of the exhibition throughout showing approved type, horseflesh. Prizes in the various classes were satis-factorily placed, and, although the big money went of the principal prizes going to the Burford flock, to such stables as Graham-Renfrew Co., Miss K. L. though Monkman had the champion ewe and firstprize pen of lambs.

The Importance of Grain as Brain Food

It has been repeatedly demonstrated by the most eminent doctors in every country that the cereal grains contain food for man of the most nutritious value; but another curious and interesting circumstance has of late appeared in a publication, which will certainly raise the estimation of grain food very considerably, or at least should certainly do so, in the eyes of the masses, besides which it will give a certain impetus to the disciples of the Darwinian and vegetarian schools. As has been said, up to the present the value of grain as regards its bodily nutriment for man has not been disputed, but that grain, directly and indirectly, should have raised us from apedom to our present perfection, perhaps only a few were aware of. Those that held fast to the doctrine that every nation must be barbarous unless grain forms the principal feature in its staple food, will find themselves sadly disappointed in the views expressed by Dr. Gerland, in his book entitled "Anthropologische Beitrage," because we not only find in it advocated our present perfected shape, but has also imparted the sense of understanding to our brain, and thus made us the all-supreme in the animal creation.

So far as history extends, wheat-eating nations have always been, are still, and are likely to be, dominant; therefore, though other varieties of food should be jealously retained, there can be no doubt of the importance of wheat as the prime basis of diet, people, bearing a striking contrast to rice-eating races. Nevertheless, science, has received a valuable contribution by the publication of "Anthropologische Beitrage." In the latter we find that the author In the latter we find that the author developed themselves through the last brute stages as a spur to exertion, the great elements of progressive Dr. Gerland, in his book, dismisses such tree-fruit apedom?-Practical Confectioner and Baker. as cocoanuts and dates, and roots such as yams and counts mainly for the lightness of the showing of this potatoes. He will not even be satisfied with the whole mixed diet of a wild-forest tribe, with its who or how many will come on with exhibits from the miscellaneous items of berries, roots, insects, eggs, show deters local breeders from fitting and bringing small creatures of the land and water, with an ir-out selections from their herd. The result of it all has regular supply of fish and large game. With all this, were advanced last week and contracts are being the præman or first man would not have risen perhaps numbers at London of this important breed, only beyond apehood. To develop him to man's estate one of the herds shown at Toronto showing at London. required—grain. Suppose, then, a primæval, not Aberdeen Angus were the best represented of the yet human tribe, in some warm region where cereal grasses grew in close patches, self-sown crop succeedherd championships. Lowe, of Elora, won the bull ears till they came to the primitive form of threshing championship. The other beef breeds were forward by knocking out the grain against a stone. Then they prize money. Ayrshires were shown by R. Hunter & rest, our ancestors rose gradually, but in a direct line, Sons, Maxville, A. Hume & Co., and Wm. Stewart, from the condition of lower animals to that of agri- mainder of this season anyway, will be about the

exhibitors were G. W. Clemens, St. George; Dunkin & most like that of some modern African tribes, whose Hulet, Norwich; and C. E. Smith, Scotland, Ont. grain-food is supplied by a bountiful soil and climate, The majority of the prizes, as at Toronto, went to the with slight tillage of the rudest sort. Somewhere near this stage of mental development primitive men learnt to use and produce fire, which a low halfapeish race of creatures would never have the sense to control or benefit by. Thus, according to Dr. all represented here, the display being one of the best Gerland, an agricultural stage is to be reckoned the earliest in the history of civilization, but when in process of time, hordes, pressed by need, wandered off into the wilds and lived by hunting, they lost the means and the very memory of agriculture, and degenerated into absolute savages. So much for a short outline of Dr. Gerland's views.

327

It will be seen that Dr. Gerland, in giving such exclusive importance to grain food as an agent in developing mankind, underrates the value of fruits and roots, which, in favourable regions, furnish supplies of food all the year round. Not much as yet is known of the laws of connection between food and mental development. But one might reasonably fancy that if any dietary would lead an ape up into a farm labourer, this might be done by the regular and plentiful South Sea Island fare of fish, bananas, cocoanuts, Such plants might both have furnished nourish-

ment in their wild condition, and have suggested their Shropshires made an excellent showing in the own cultivation, almost as well as any wild cereal, hands of John Lolyd-Jones, Burford; W. D. Monk- such as the ancestor of wheat or maize. Secondly, as man, Bond Head; and W. E. Wright, Glanworth, to the theory that the agricultural stage came before the wild hunting and fishing stage. On Dr. Gerland's own hypothesis, the præ-human beings at one time fed principally on the seed of wild plants. But creatures living in this way would also have gathered whatever eatable fruits and roots were to be had, and would also have killed and eaten whatever animals of land or water could be easily come by. If it be granted that for these purposes they used sticks and stones (as animals so intelligent would no doubt have done), then this is tantamount to saying that they got their living from wild vegetables and animals in somewhat the same way as other uncivilized tribes, though with ruder appliances. It is really putting an exceedingly low savage state down so early in history as to come not only before the agricultural state, but before the full development of man himself. Thus Dr. Gerland's argument hardly tends to alter the order of progression now generally received by anthropologists, viz., that men lived on wild produce, such as seeds, berries, roots, insects, reptiles, fish, and game, before they attained to the art of planting which brought them to a settled life. The effect of the hypothesis, if proved to be true, would be to take away from human life the two first stages of what we are used to call civilization, and to transfer them to the remote ages when the ancestral animals had not yet developed into men.

It will be seen from the above what importance, that grain-food has undoubtedly raised us not only to after all, the argument gives one as regards the value of cereal plants in relation to human food and development. It is certainly a subject deserving the greatest attention. We have it on record that wheat was derived originally from Egypt, and from this the inference is irresistible that the ancient Egyptians were the first people who relied mainly upon it for subsistence, their earliest imitators being the nations of Palestine and Persia. Even in China, wheat was and the equal importance of securing its best possible known at least 3,000 years before Christ, and con-preparation in the form of bread. For the last three sequently much earlier in Egypt. The stimulus or four thousand years we have undeviating testi- thus given to the physical development of mankind tallion, any age—Graham-Renfrew Co. Brood mare, with foal by side—1, Graham-Ren-acter, and inevitable dominancy of the wheat-eating seems to explain, the very remarkable comparative superiority of the inhabitants of that part of the globe during a long period, extending over countless generations. And so also we equally find the key to the explanation of a subsequent decay of those argues that man was undoubtedly developed from a nations, in their too exclusive reliance for many ages lower animal form, and, taking this as his starting on a particular kind of grain as their principal food, point, argues in what conceivable way these creatures without combining with it other varieties of substances which are so essential to the multifarious and into humanity. Though need may have been there infinitely subtle forces which go to make up the complete creature-man. It would rather be a strange development were well-being and leisure. Now this anomaly and illustration of the weakness of humprosperous state of life could only be attained by help anity to imagine, that we should have been raised of a permanent supply of some suitable food, available entirely by grain-food from the lower animal grade to all the year round. This, Dr. Gerland maintains, our present state of brain development, which we in was not animal food, for the supply of game is too our comparative perfection now use for principally irregular, and can only supplement the vegetable employing savage animal sustenance for our present dietary on which a settled population must mainly existence; and we could, therefore, on the above depend. What then was the indispensable element theory, argue with equal right, and put the pointed question, Shall we thus, consequently, return to

FIELD NOTES

Western Fair a Success

a chance to show what would be the result with rea-

sonably favorable weather. The outcome has been gratifying to all concerned. That the management

The Western Fair at London, Ont., this year, had

strated on the one hand by the large herds and flocks in the stables and the great display of agricultural products, and on the other by the uncomplimentary remarks of the loud-mouthed side-show sharks, who do not hesitate to assert in strong language that London shows are no good because the management makes fees for tent space and other privileges that meet their requirements so high as to take away the profits. Despite these railings from those whose sole tendency is to depreciate the value of any agricultural exposition, London Fair in 1908 was worth attending. That the general public appreciated its on their feet. fair as a whole was evidenced by the gradual increase

 attendance after the opening day.
 Stately Clydesdales and light-footed roadsters Wilks and Dalgety Bros., there was a fair distribution of the ribbons, thus giving substantial evidence that the horsemen of only a few years' standing have secured the right kind of foundation stock.

CLYDESDALES

Always the pride of those who love a strong horse with quality, the Clydesdales at the Western this year did not fall below the mark. Graham-Renfrew Co., with Sir Marcus, sired by Sir Simon, and out of Bowfield, was at the top of the list, and two-year-old Top Spot, sired by Baron Hood, and from the same stable, did not appear to any disadvantage beside his older competitor when the sweepstakes awards were being made. E. W. Charlton, of Duncrief, placed the ribbons.

The following had fine animals in the Clydesdale stalls:-Graham-Renfrew Co., of Bedford Park; Dalgety Bros., of London; Chas. Bean & Sons, of Brinsley; Jas. Henderson & Sons, of Belton; T. E. Robson, of London; J. D. Ferguson & Son, of Mapleton; Jas. Robson & Sons, of Telfer; Thos. Delaney, of Inferson; Wm. Gray & Sons, of Mount Brydges; Fierheller Bros., of Mount Elgin; P. H. Petrie, of Stratford; John Campbell, of Hay; Wm. Young & Son, of Mount Brydges; Chas. Fallen, of Ballymote; Jas. Smellie, of Inwood; Alex. F. McNiven, of St. Thomas; J. F. Burr, of Waubuno; and S. J. Prouse, of Ingersoll.

The ribbons were placed as follows:-

The display of Shires was not numerous. C. K. Geary, St. Thomas, was one of the principal exhibitors, winning the aged stallion prize and stallion championship.

CATTLE

Shorthorns were none too strong at the Western this year. The Robsons, of Ilderton, G. H. Oke, Alvinston, Burr, of Blyth, and H. Fairbaine, Nedford, made up the entire exhibit. The London fair, in respect to cattle, is badly situated. The lightness of the prize money offerings at London, as compared with the of this vegetable diet? fat list hung up at Toronto, where the breed society duplicates the fair board's provision, probably acclass at the Western Fair, while the uncertainty as to out selections from their herd. The result of it all has been, for the last two or three years, a slim show in

beef breeds, the Bowman herd from Guelph putting in good numbers.

the two latter of Menie, Ont. In Holsteins, the chief cultural men, whose condition in this respect was same as formerly.

Lake Rates Advanced

Wheat rates from Port Arthur and Fort William made for the transport of grain from the head of the lakes to the seaboard, for seven and one-half cents per bushel during the season's rush. During the summer. lake rates to Montreal have been as low as three up the strongest display, and winning the female and ing crop perpetually. The creatures munched at the and one-half cents, but this rate was a special cut and boat owners claim that to them it has been little watched the seed fall and sprout and the new plant short of ruinous. The low rate brought a good deal Dairy cattle were represented in all breeds. Bull ripen, till they learnt to assist nature by sowing it of business to Montreal and crippled the New York Son, Brampton, made the largest individual entry themselves. Thus, developing muscle and brain with export grain trade pretty seriously. But it is bein Jerseys, and got, as usual, the largest share of the abundant food, which gave their life comfort and coming evident that rates shortly, and for the re-

FARMER'S ADVOCATE AND HOME JOURNAL, WINNIPEG

Results of Experiments at Brandon Experimental Farm

Vie

Superintendent Murray of the Brandon Experi- Golden Beauty. mental Farm has issued a condensed report of the work conducted on the Experimental Farm in grains, grasses, clovers and roots in 1908.

328

The work of the past season with grains has been completed, and the results are given herewith. The season has been a favorable one throughout, and although the yields are not so high as has sometimes although the yields are not so high as has sometimes been the case, they are with most crops a good average. Seeding was started on April 16th, about three weeks earlier than last year, with the ground in perfect condition. Excellent growing weather fol-lowed with the result that all crops made an even strong start. The growth of straw was not so rank as in many previous years, and the crops were more easily harvested and with less waste. Rust did very little damage except on one field that was very rank and closely enclosed with trees.

The following are the yields per acre and the number of days maturing of the varieties of wheat grown on uniform plots:-

UNIFORM TEST PLOTS OF WHEAT.

				1161
			Days	per a
Variety		Matu		Bus.I
Variety Marquis		 	116	49

Marquis and Chelsea are two cross-bred wh recently produced at the Central Experime Farm. Both are hard red beardless wheats clo resembling Red Fyfe, but distinctly earlier in ripen The baking tests have been very favorable and give promise of being valuable wheats. This is first year they have been sown on the Brandon Fa and it is therefore not safe to draw conclusions to their yields compared with other varieties.

from the Minnesota Experiment Station where it gives a distinctly higher yield than the original Preston. This year it did not yield as much as our own Preston, This year more than an average crop was harvested, nor was it so uniform in character.

STANDARD GRADES OF WHEAT.

Samples of the Standard grades were obtained from the Chief Grain Inspector at Winnipeg and were sown under uniform conditions. Early in the season the higher grades had a somewhat stronger growth but as the season advanced, the difference seemed to disappear, and the plots from No. 1 Hard, and No. 1 and No. 2 Feed were practically indistinguishable When they were threshed a very distinct difference again became apparent. It is not wise to draw con clusions from the result of one year's test, so the

Saskatchewan Bulletin No. 7

6.42 A bulletin has just been issued by the depart-56.42ment of agriculture at Regina. It is entitled, "Weeds of the Farm and Ranch." T. N. Willing, 52.2456.22 chief weed inspector for the province, is the author. 52.14The work is, in part, a revision of Bulletins Nos. 7 and 16 of the North-West Territorial series. 9.18 8.36 7.40 but considerable new matter, illustrations of 5.20weeds especially, is introduced. Brief directions 32.24are also given for preventing injury to crops by insects, gophers, smut and potato scab.

Bulletin No. 7 has been compiled in order that acre. Lbs. there may be placed at the service of the farmers 54.80 of Saskatchewan, in a readable form, the latest 50.40 information to hand on weeds and the latest ^{19.28} methods recommended for their eradication. 12.24Ontario Agricultural College and Central Experi-1.42mental Farm bulletins have been drawn upon 1.32 largely for the illustrations used. The remarks 1.221.12 on the different species and their eradication 36.42 are prepared with an eye to Western conditions. 36.12 Anyone writing the Department of Agriculture 35.40 at Regina may obtain a copy of this work.

Saskatchewan Crop Report

The department of agriculture of Saskatchewan has issued a report showing the estimated total grain yields for the province for 1908. The total of all cre. grains is placed at 89,467,795 bushels, as compared bs. with 53,767,251 bushels last year. This is the largest $_{00}^{00}$ grain crop ever harvested in Saskatchewan, the crop $_{50}^{00}$ of 1906 with a total of 63,052,210 bushels, being the 40 heaviest previously harvested.

The yields of the different grains are estimated as 20 30 follows:-Wheat acreage 2,375,058, estimated yield 40 43,539,608 bushels, average per acre 18.34 bushels. 20 Oats, acreage 1,170,452, estimated yield, 41,663,065

experiment will be repeated. Following are the yields per acre and the weigh per bushel of each grade:—	victoria.

50 bushels, average per acre 33,59 bushels. Barley. 20 acreage 101,033, estimated yield 2,695,113, average 50 per acre 26.67 bushels. Flax, acreage 141,451, esti-20 mated yield 1,570,009 bushels, average per acre 30 11.10 bushels.

00 The figures given above are estimated on threshing .20 reutrns per acre already to hand, and the acreage sown 40 to the various crops in the province. It is possible .20 that they may be revised somewhat later when final crop returns are compiled from threshers' reports. 40 The figures are a fair estimate of the probable yield at this date.

Ontario Crop Report

Statistics giving the acreage and vields of field crops in Ontario up to the end of August have just been issued by the department at Toronto. All farm crops with the exception of fruit and roots are acre, reported on. These will be given in the final report Lbs. in November.

550 The wheat area is practically the same as that of 966–1907, but the yield is estimated at nearly a million 1204 bushels in excess of the final returns of last year. 808 The area in barley shows a shrinkage of about five 1026 per cent., and is over a million bushels short of the 630 crop of 1907. The poor crop of oats in 1907 caused a 1838 falling off in the area of 1908 of over five per cent., or 1660 158,000 acres; the yield, however, shows an estima-274 ted incerease of about 15 million bushels, the vield 1680 per acre being seven bushels in excess of 1907 and 294 $\frac{154}{96}$ equal to the average of the previous 26 years. The 1700 areas in rye and peas show substantial increases, but 3.334 they are still below the annual averages. The bean 1780 crop differs but little from that of 1907. There is a slight reduction in the hay area, but the yield harorther vested a quarter of a ton to the acre over the light rieties, crop of the last year.

FARMER'S ADVOCATE AND HOME JOURNAL, WINNIPEG

Scottish Exhibition Notes

Facing the central avenue in the beautiful Scottish National Exhibition at Edinburgh is Canada's fine building. The eyes of the visitor are instinctively drawn to the attractive circular building crowned with the glittering sheaves of golden wheat, flanked by Ont., the sheep. the Union Jack on the one side, and the Canadian flag on the other

Just inside the main entrance is a fine painting of Lord Strathcona, fittingly inscribed "Canada's Grand Old Man, and one of Scotland's greatest gifts to Canada.'

The most striking feature is the magnificent central tower, built up of Canadian grain, flour and field products, and surmounted by a beautiful golden crown far up in the dome.

But of all the exhibits the display of fruit is by far the greatest surprise to visitors,-it seems well nigh incredible that such fruit can be grown in the open air in Canada. Many are the glances to the adjoining exhibit of furs-they seem fitting to preconceived ideas of Canada, but the fruit display means Canada from an altogether new standpoint.

The forest and mineral wealth of the Dominion are adequately shown, and there are very many large photographs of sea, lake, plain, and mountain scenery.

There are many striking statements displayed, and there is a good deal of truth in this one.

"The great movement of United States farmers to Canada work up the people of the British Isles to Canada's possibilities. In fact the same movement installed immediately across Canada from coast to made Canadians appreciate the value of their own coast for the transmission and sending of messages. country

Canadians can justly be proud of this one. "Canada's foreign trade is two and one-half times

that of the United States on a per capita basis.' This statement is a revelation to British tenant

farmers "87 per cent. of Canada's farmers are their own

landlords One rather wonders whether "wages" have been

allowed for before computing the interest earned. "On the \$2,000,000,000 invested in the agricultural interests of the Dominion, the annual value of

the farm prduce and crops is \$363,000,000, or 15 per cent. on the capital invested." And I am inclined to think that some Western

farmers would be a little skeptical about the "interests" in this placard.

"Canada elects its own parliaments and makes its own laws; Canada's population is over 50 per cent. farmers, therefore the interests of the farmers are bound. The Commission was much impressed by well represented in parliament, which is said not to what they saw in the West, in the prairie provinces B be the case in Great Britain, where the farmers only and British Columbia. Their report is expected to amount to five per cent. of the population.'

One of the most attractive exhibits at the Scottish National Exhibition is the "Small Holdings" buildings erected by Messrs. Graham-Yooll & Co. The house especially, has a peculiarly pleasing effect—the red tile roof blending with the light grey of the walls. The homestead is surrounded by a neat iron fence.

Events of the Week

Sir Wilfrid Laurier is offering himself as a candidate for the Commons in Ottawa.

A C.P.R. striking mechanic was shot on Main Street, Winnipeg, by a strike breaker on September 30th. This is the second shooting affair in connection with the strike in Winnipeg.

The Ontario Agricultural College at Guelph has this year one of the largest freshmen classes on record. The attendance in all classes is unusually large.

Down in Ontario the severe drought is seriously affecting dairying and the live-stock industry. The milk supply in quite a few places is getting low, pastures are burnt up, and farmers have been feeding corn for quite a few weeks now. Wells are giving out and fall plowing is being seriously interfered with.

Signor Marconi, of wireless telegraphy fame, This is the first step made in America towards the utilization of the Marconigram for the internal business of the country, the use of wireless telegraphy being confined hitherto'to coast work and ocean service.

. . .

According to a report received at the department of trade and commerce from J. S. Larke, Canadian trade commissioner in Australia, Canada's trade with New Zealand is increasing by leaps and bounds. Last year Canada sold to the new Dominion goods to the value of £205,536, as against only £52,374 in 1902. During the same period Canada brought from New S Zealand $\pounds78,015$ worth of goods, as against $\pounds7,366$ worth in 1902.

. . .

The members of the Scottish Agricultural Commission have completed their tour of Canada so far as the W West is concerned, and left last week homeward aid materially in placing this country and its agricul- E tural resources properly before the farmers of Scot- D land.

. . .

Principal Black, of the Manitoba Agricultural College, returned last week from Ontario and the M Southern States fully recovered from the serious ill-These buildings are the outcome of a competition ness which necesitated his absence from the college organized last year by the Highland and Agricul-tural Society of Scotland. Prizes were offered for the best plans of building suitable for a 20 acre holding. fill the vacancies that exist on the staff. The advisory board met last week, and will go into the matter R The cottage is of concrete slabs, with roof of con-visory board met last week, and will go into the matter R of engaging professors for dairying, animal husbandry H ing. The divisions between the stalls are of concrete and field husbandry. Announcement of the filling of these positions may be shortly expected. MARKETS

There is little change to note in the situation in wheat for the week period just closed. Values shrunk considerably early in the week, but recovered pretty well after two or three days bearing. Demand for grain is strong, and shows no signs of abating. De-liveries during the week fell off somewhat, due to unfavorable weather over the entire American spring wheat belt, but the drop in receipts coinciding with a temporary slackening in European demand had little effect upon values. Take the world over, the situation of the first cereal has not perceptibly altered. Argentine advices are construed by operators as being bearish. Australian prospects also are re-ported extremely favorable. Other grains than wheat

New Brunswick Provincial Exhibition

The New Brunswick Exhibition was held at St. John's, from September 14th to 19th, and favored by ideal weather, large attendance and splendid exhibits, was one of the most successful held to date in the province. The minister of agriculture for the Dominion officiated at the opening ceremonies, and spoke in a most happy vein of the progress of agriculture in the province by the sea. In live stock, dairy products and agriculture. the entries were numerous, and despite the fact that an exhibition was being held at Chatham, in the northern part of the province at the same time, the display in all departments was not only up to previous records but in a good many sections, live stock particularly, was away ahead of anything seen at a provincial was away ahead of anything seen at a provincial exhibition before.

New Brunswick always shows strong in agricul- week and by daylight only. tural and dairy products. Roots especially among field crops are prominent, and this year was no exin which eleven buttermakers competed.

Ayrshires, Holsteins, Jerseys, Guernseys, Dutch one, ever built. By a strange coincidence, on the Belted and French Canadian cattle. Shorthorns and same day as the St. Vincent was put into the water, Herefords were exhibited of the beef breeds, but in a private British shipbuilding firm launched a fightrather small numbers. Ayrshires made the heaviest ing monster, two thousand tons heavier, for the ranging from that down to \$4,40; export bulls are breed exhibit, 130 animals being shown. The sheep Brazilian government. Hogs were rather scarce. Horses government. It is expected that these three battle- to \$3,50, and cows, \$2.50 to \$3,00. Sheep are kuoted never loom large at a Maritime fair. While the horse ships will be taken over by the British government, at \$3.25 to \$3.50, and lambs \$4.00 to \$5.00. Hogs exh exhibitions, the display was rather light.

Last week was the first date for receiving applications for pensions under the new Pensions Act in Great Britain. Thousands of applications were received. The measure is certainly proving popular.

There are more men out of work in the British Isles this year than for some time, and the indications are that the army of unemployed will be greatly increased during the winter. The problem of providing for those in need of help is engaging widespread attention, and action of some kind is expected of the government.

. . .

. . .

This year a buttermaking competition was held cent, and is armed similarly to the Dreadnought, going as high as \$7.25. There is no present prospect has a tonnage of something over nineteen thousand of a hog slump. Receipts are rather low. Sheep are In live-stock the dairy breeds were most prominent, tons, and is the most formidable fighting unit, but unchanged at \$5.50.

it this year showed improvement over former as Brazil is hardly in a position to take them off the dropped a quarter from last week's high point, selling builders' hands when they are built.

PEOPLE AND THINGS THE WORLD OVER

Earl Grey's annual musical and dramatic competition will be held next year in Montreal on the 19th of April.

#At the last election in Finland which has just taken place twenty-five women were successful candidates, as compared with nineteen women members in the previous House. They represent all of the parties, but the majority are social democrats.

The triennial house-moving of Methodist ministers in Great Britain has just taken place.

A New Brunswick paper calls attention to the fact that the 150th anniversary of the occupation of that province by the British should have been observed on Sept. 20th. On that date in 1758 Sir George Monckton landed at St. John, and established a fort, the ruins of which still stand.

The remains of all officers, enlisted men, civilians and famous Indians buried at old Fort Yates in Dakota, have been moved to the National cemetery in Keokuk, Ia. The body of Sitting Bull who was the chief instigator of the valued contributor, to the FARMER'S ADVOCATE-Custer massacre is among the number.

JOHN BULL'S WAY

Ten members of the Mile End Board of Guardians used their official positions to enrich themselves. In other words they were grafters. The bar and the treating system—two of the They made an arrangement with a builder, ture than he would otherwise have got, and they divided the difference with him. Now one ose that under an alleged effete with indifference; but John Bull has some queer ways. The ten guardians were promptly arrested; they were as promptly tried, although it took twenty days to get the case through the court; it was not suggested that they were mentally unbalanced; the jury in the case was composed of the first twelve men whose names were drawn. They returned a verdict with commendable promptness; the judge sentenced the ton guardians to imprisonment with hard labor, and also imposed fines. In the course of an hour or two they were safely within the walls of a prison, where they will remain. As far as we have observed their pictures were not printed in the papers; their biographies were not set forth at length; there was absolutely nothing sensational about the whole thing. They were treated just like any other ten thieves, and there the matter ended. How would it do to have a little of this sort of thing in Canada, when public officials stand in with contractors? It is a good thing to make speeches against corruption in public life; we hope it is a good thing to write editorials against it; doubtless it is admirable to put declarations against it in party platforms; but for ourselves we confess to a preference for the good old-fashioned way of sending the guilty people to prison. Pending the application Beside the pleasure Miss Agnes Laut has gained of John Bull's way to those instances in Canada how would it do to get into the fashion which

October 7, 1908

The winter hat now reigns supreme. It seems early always to be taking to felt hats in September considering that we must wear them until next April. but still, one feels unseasonable going around in a lace or straw hat when the first snowflakes are flying.

The new hats are either very large -larger than the summer variety-or very small. The big ones are built on the Directoire models, being ovalshaped with brim turned down all the the way round, or curved a tiny bit on the left. The brim is wider on the left the right, and quite often the trim-ming is put on the right side. The crowns are tall and wide. The mater-ials for the hat are satin and corded silk on stiff shapes, and felt and beaver shapes. The most popular colors are brown,blue(both in rather bright shades) and black. Then there are greens and blues in dull unusual shades, and some odd fawny grays.

If you are going in for a Directoire you must get a new one; you hat, couldn't make over anything you have into that shape. But if you want one The prediction of the equally popular small hats you making a fashionable hat out of old materials. In the small hat, the brim is very narrow all the way round as the hight drooping. The crown is large and round. You can easily raise the crow to the requisite height—three-and ahalf or four inches—by cutting in off carefully and putting in a strip of light-weight cardboard or heavy canvas. You can't widen it, but you can attain the height by judicious trimming. Wide bands of silk or satin liad in folds and going completely round the crown to the correct thing, and if these bands are lined with some stiff atshionable width, and the brim the high band effect is seen in almost at the hat, to box pleats carried right down the hat be but there are variations. The high band effect is seen in almost of the equally popular small hats you have a chance to show your skill by making a fashionable hat out of old

THE FALL SKIRTS AND BLOUSES.

This day on which I am writing is as hot as any day we have had this sum-mer, and it seems absurd to be writing an article on fall and winter clothes. But the chances are that this is summer's ardent farewell, and that by the time you read this the thought of cloth skirts and coats will not be so unseasonable.

The great changes this season are the skirts and the sleeves, and they are radically different to anything we have had in some time.

The sheath skirt, of which the Directoire variety carried out extravagantly, made so much newspaper gossip during the silly season, has apparently come to stay. In its extreme form it will be of no particular use to us, for such length and clinginess are not for people who do anything more important than just getting into gowns and wearing them,—nothing to do but look nice. But the modified forms will be seen in business skirts, afternoon dresses, and nice suits. The plain smooth-fitting skirt cut high in the waist line, and allowed just enough

List of Licensed Track Buyers Season 1908-09

The following list gives the names of the only persons, firms and corporations to whom Track Buyer's licenses have been issued up to this date for the current grain season (1st September, 1908, to 31st August, 1909).

No other persons, therefore, can legally purchase grain on track in car loss at this date

I attach to the list of Licensees the Form of Grain Purchase Note which licensed Track Buyers are required by law to issue in duplicate for every car lot of grain purchased on track. This form shows the license season-1908-09-and the number of the Track Buyers' license. No other form of Track Buyers' Purchase Note is permitted to be used.

OCTOBER 7, 1908

The Fall Skirts and Blouses-Continued

stitched close to the edge and the stitch-ing extended down well below the hips. This makes an excellent walking skirt because of the extra fulness at the bottom. A skirt like No. 6009, in July 8, shows a good style and looks well in plain goods with a front panel cut on the straight, and buttons covered with the same material all the way down both sides.

Now for the sleeves. In them there is a very great variety, but the tendency is more and more towards increased length and decreased fulness. The short sleeve is still worn in fancy blouses, but many of them have the long leg o' mutton or the mousquetaire sleeve, often made of material different to the main body of the blouse. good view of the mousquetaire sleeve is seen in No. 6006, July 15th, issue The plain shirtwaist calls always for a full length sleeve with stiff cuff. Most of the fancy blouses are made with yoke or guimpe, with sleeves like either yoke or blouse, and some device is almost invariably used to cover the arm-hole seam. Many of the new blouses fasten down the left side, having a band of silk, braid or ribbon to mark the opening, and the skirt is trimmed in the same way, the band reaching down the left side right to the bottom of the skirt and often being

decorated with buttons The materials used in dresses this fall will give every one plenty of choice. For cloth dresses and suits there are worsteds, French broad-cloths, chevronstriped cheviots, serges and the popular panama. The soft finished cashmere

Belcher spent a night of much humor in the shed, according to his relation to me of those circumstances afterwards. "I've suffered for ye, Jim," said he. "What are ye so scart about May Stingaree for? The's nothin' around to harm her. She's mittened ye anyway eh? You're a durn crank, Jim. You been a partly supportin' her an' Bate unbeknownst to 'em this long while like a chapter outer the gospil. ain't no gospil. You're a durn tuff, two-leggid crank, that's what you Why don't ye haul yerself tergether and act like a Christian?"

"I'm aiming for that, Stu."

"Wal', ye won't aim through me ag'in. I've spent my last night in that racket. I'd ruther make my piller on the flats 'long o' the clams. They're quiet. I'd no sunner wrinch a rat off 'n my ear an' throw him agin the side o' the shed, than I'd have ter pull one off my nose. Ef I opened my mouth, they'd begin ter draw my teeth. Then when I'd slew so many of em that I was wore out and kind o dozed off, ef three Toms an' harf-a-dozen Betty cats follerin' didn't make a dash at that little eight-by-ten-inch winderpane in the rear o' the shed to git in outer the rain; they lep so husky, an' so fur, they landed clean acrost the shed on my sleepin' mouth, every durn one of 'em. Wal', don't say nothin','' sighed Belcher; "Jim, I've suffered for ve

"I'll never forget it, Stu."

"Ye better not, ye blame ol' cabinetsize fool," responded Belcher, with a wink of such cheerful confidence it

almost took on the hue of affection.

joy to and the wind blew. But I knew my had a longer voyage in mind, and I course. I liked that night! I loved it! should not touch at Waldeck again. By Heaven, I had joy! The storm and I fought it out alone in the darkness.

knew we should not fail. It was too early for business in the town when I tied to the wharf off

as well of that dark long sail about me; and I sent my message Waldeck. It came on to rain, drew my money from the bank, for

333

The wind was faint and baffling when I set sail for home, but it breezed handtried my boat and sped her on. I somely to a flying gale with the high tide, and I made port before sunset.

Then for the next few days came the waiting for the boat I had engaged to Waldeck; so I lay down to take a nap bring the doctor over from Waldeck in the cuddy of my own boat. When to show in the offing; that, and the I woke the day had dawned soft and necessary precautions for Mary and Rob warm. I missed the cold wind and the and Cuby. I could have broken up the If Belcher passed a night which he storm, and went languidly in the nest at Spook House, but that would was able to construe afterwards into sunshine, a sort of ghost, preoccupied, have brought Bate's recent history to so jocose an epic, I managed to make a amid the crude and noisy traffic round light, and he was Mary's brother;

CHAPTER XXVIII.

THE STEEP WAY. So much more did I demand of Belcher, that I enlisted his services to sleep for one night, unknown to the family within, and on oath of secrecy, in the shed of the Stingaree house.

preafter I could guard the house myself; but I was for sailing to Waldeck that ary night so as to make the return trit in the morrow. The message mu le sent at once.

Be Prepared for Emergencies.

If you live in a small village or country district, you will appreciate the value of a telephone.

Haven't there been times when you would have given a good deal to communicate with a friend ?

Or, perhaps you needed the services of a doctor, in a hurry, but had no way of communicating with him, at once.

The minutes seemed like hours, didn't they, when you've had to suffer while the doctor was being sent for ?

Have one of our telephones placed in your house and so be prepared to summon the doctor at a moment's notice.

A short delay in getting a doctor may mean life or death, so why take chances, why not be prepared for any emergency ?

Suppose a fire should occur or burglars break in and your wife and children were alone, what protection would they have if there was no telephone in the house ?

But a telephone is something you can't take chances with.

You must have one that you can absolutely depend upon.

Send us your address and we will tell you all about a reliable telephone that is easily installed at a small cost.

his crime had been against Rob, whom she loved; and I, with heart and soul, was all for binding their romance now, not destroying it. And to spirit Mary and Rob away, and to take Cuby away, before harm befell them, that was my work.

Some labor I did in the cornfield too, where my scarecrow stood true. Mrs. Byjo was true. She slept for defense on the lounge in the house, while I slept in the shed, unknown to them within.

"What ailed Stu Belcher t'other night?" Mrs. Byjo inquired, passing sturdily through the field on her way home. "Queerest ructions I ever knew concerning Stu. I knew he took a little once in a while, but I thought he always kept his head." "Why, what now?" "Why, about ten o'clock o' night,

I was reading, I heard the steadiest snoring out in the shed—good, peaceable, honest, thundering snoring. There wasn't any villainy to that snore, and it was dead heavy; no timber that snored like that would work ye any harm. And I went and looked, and there lay Stu Belcher. I shut the door and went back to consider of it. If you'll believe me, he lay there and kept you'll believe me, he lay there and kept his exhaust pipe going at that same pace, without any break, till morning; for I lay awake a long time, listening, and every time I woke afterwards, I heard him, drawing his coal and freight cars up grade, all the night through." "Funny. Nothing disturbed him— no mice? No cats?" "The cat was inside under the stove, and I cleaned all the rodents out o'

and I cleaned all the rodents out o' there long ago. But the question is, what was he there for? I said nothing to Mary. Thought I'd ask you first. Her eye twinkled.

"Good old Stu," I said; "he's sort of eccentric, you know. Don't give him

away." "No," said Mrs. Byjo, her commonplace eyes flashing intelligence at me and with an approving tremble in her voice, "'good old' Jim, nor I won't give you away, neither.'

Before noon I went down to the River again, where Cuby was on the look-out continually for the sail that should bring deliverance in the person of the great doctor.

It was yet hardly time for it, we considered, when after a day's work, as I stood looking off at the grand desolate gorge of the river with the lead of suspense on my heart, Cuby, from her cabin door, called to me excitedly, but softly

"Jeem, the s'el! It is come! It is heem!" The tide was low, and the boat anchored far out. Two men boarded the little punt; one landed and the other returned to the boat. By that ime I had raced to the shore

EXPERIENCE IS BETTER THAN ARGUMENT

The world-wide fame of Mother Seigel's Syrup is based on the evidence of men and women whom it has cured of indigestion, biliousness, constipation, headaches, sleeplessness, flatulence, nervous depression, anæmia, and other disorders of the stomach, liver and kidneys. Compounded of roots, and herbs, Mother Seigel's Syrup contains digestive ferments and gentle tonics for the stomach, liver and kidneys. These qualities render it invaluable to all who, through unhealthy surroundings, sedentary occupation, worry, overwork, or climatic changes, lack the vitality which only good food, well digested, can supply. When you are tortured with indigestion, so that you can't eat, can't work, can't think, can't sleep, you should at once give Mother Seigel's Syrup a trial. Tens of thousands of people testify to the curative qualities ossessed by Mother Seigel's Syrup because it has cured them. Profit by their experience !

Here is some proof :— Mr. Christy Battersow, Mabou, Inverness Co. N.S., writing on August 13th, 1908, says :— About eighteen months ago I took a severe cold, while at work near Marble Mountain, C.B. Neglect brought on frequent headaches, a racking cough and a sore side. While visiting a friend at Lake Ainslie, I was induced to take Mother Seigel's Syrup. In a short time my cough vanished and apart from obtaining a cure, I increased my weight by thirteen pounds.

Price, 60 cts. a bottle. Sold everywhere. A. J. White & Co., I.td., Montreal.

E A MOTHER'S EE HAPPY THOUGHT.

A lady writing from Ireland says :---" I went to see my sister's baby, who was very ill indeed. She had been up for nights with him without undressing ; he was crying all the time as with some internal pain. The doctor told her he could do nothing except put him in a warm bath, which gave him a little case for the time being.

"I thought of STEEDMAN'S SOOTHING POWDERS which I used for my own children; and next day GOSSIP

EXPERIMENTS IN ROADMAKING

The United States department of agriculture is about to make an experiment in road building which is to be uniquely interesting. It will be an effort to build a dust-proof road by combining the heretofore little used blast furnace slag with asphalt or tar.

One of the experimental stretches of road is to be constructed in Chicago. This road is to be built of slag and asphalt, another in Massachusetts of slag and tar. In this latter state a further experiment will be made with molasses as a road building material. Lime water and rock will be mixed with the molasses and experiments that have been made thus far have shown it to be an ideal surface.

This molasses is the almost useless by-product of the great sugar cane refineries of the south and the beet sugar refineries of the west and southwest. It is sickishly sweet, nearly as black and as thick as tar, and almost as powerful as a binder. Having always been a waste product it can be bought at a lower price than coal tar and in greater quantities. In laboratory experiments it behaved so well and held out such promises for ideal roads that the practical test of a real road was decided upon.

"Slag as the useful by-product of the blast furnaces and molasses as the useless by-product of the sugar refineries," a circular issued by the office of public roads says, "may in a few years revolutionize country roadbuilding, create a demand for more extended roads in the United States, where those products are most easily to be had, and add millions to the wealth of the country by putting a cash value on hitherto waste material.

"While experts are laboring with these experiments in the east, south and middle west, another scientist, also from the office of public roads, is engaged at Independence, Kan., in trying to devise a method of constructing oiled roads analogous to the methods which have produced the famous oiled roads of Southern California. He is mixing heavy oils, possessing pronounced asphaltic basis, with natural soil and sand and compacting the preparation so formed with a tamping roller.

so formed with a tamping roller. "The oiled roads of California have saved millions of dollars to the farmers and fruit growers of that fertile state in the last few years by suppressing the dust that formerly arose in blinding clouds with the passing of every vehicle. Those dust clouds, floating to adjacent fields and orchards, depreciated the price of farm produce and lowered the values of real estate to a startling degree. The sprinkling of oil was tried and the dust was held in check. Then some of the roads were plowed and the oil mixed with earth and the mass firmly rolled to a properly crowned surface. Splendid results followed in most instances."

> PAINTING a roof is work. Buying the paint is expense. Both are needless if your roof is Amatite.

> When you finish laying Amatite, take away your ladder, pick up your hammer and knife, go away and leave the roof to take care of itself. A few years later you may go back and look at it if you care to, but it won't be necessary, and there won't be anything to do.

This is due to the fact that Amatite has a *real mineral surface*—a surface that is too strong to need protection—too durable to require painting.

If you buy one of the smooth surfaced roofings you will have to paint it every two or three years to keep it from leaking. In fact, such roofs depend on the paint almost entirely for their waterproofing qualities. A matite on the other hand depends for its waterproofing upon double layers of Coal Tar Pitch, —the greatest known enemy to water.

LORD KITCHENER'S HOBBY

In the brief leisure which his life in India affords (and he has none while frontier troubles are on), Lord Kitchener amuses himself by making a wonderful collection of old china. This amiable weakness is becoming a positive passion with the commander-in-chief. Lord Kitchener still holds his view that matrimony means the end of a soldier's career. One lady, the wife of an army officer, is credited with having reduced Lord Kitchener to silence on this point by asking him, "If the officers of the army of to-day are not to marry, where will you look for the officers of the army of tomorrow?"

TRUE TYPE OF THE HOLSTEIN

Editor Farmer's Advocdte:----

VOCATE S St. MANITOBA Considerable public comment appearing in the agricultural papers upon the type of Holstein-Friesian cattle is very properly directing attention to the subject of the true type of the breed. The

Amatite comes in rolls of 110 square feet ready to lay. No special tools are required, and anyone can lay it properly.

A Sample of Amatite will be forwarded free on request. Send for it and see how much better it is than the kind which requires painting to keep tight.

true type is very accurately delineated in the official scale of points. It is to be regretted that illustrations of typical specimens are not used to illustrate and emphasize this description. Large size in the Holstein is the first thing to impress the casual observer, and its importance should never be disregarded.

In defining pure-bred Holstein cattle this fact was duly set forth by the founders of the Herd-Book Association in these words, which should never be forgotten, no matter what may be the shall be held to mean and refer to only those large, improved black and white cattle."

Scientific investigations in the United States, particularly in Wisconsin, has confirmed the wisdom of the early breeders in thus defining the type of the breed as "large," tor the large cow of any breed is uniformly the most profitable

With large size as the recognized predominant characteristic of the breed aside from their beautiful black and white color markings in perfectly defined patches or spots, the next general definition relates to the general conformation of the animal. There are three definite types, described as the milk and beef form, the milk form, and beef and milk form.

The average form of this breed and that toward which conscientious breeders are directing their efforts to maintain and improve, is the milk and beef form. It may be further emphasized that the milk and beef form describes a cow of the wedge form, with shoulders moderately thick, deep and broad, crops well filled, barrel well rounded, loin and hips broad and full, and quarters straight, wide and full. To this form of these cattle is due their extraordinary constitutional vigor or vital force, and

it affects all their relations to their food, care and productions,

The future of the breed will be greatly endangered by those who, from one consideration or another, the combination of pedigrees to attain large average records or fat percentages, or by neglect of proper feed and care in the early life of the animal, are led to the mating of animals other than those of large size, and possessing the milk and beef form. Brattleboro. Vt. F. L. HOUGHTON.

AGRICULTURAL CO-OPERATION **MOVEMENT STARTED**

A movement has been recently set on foot in Great Britain with the object of establishing co-operation among farmers. Sir Horace Plunkett, Chairman of the Joint Board for Co-operative Agricultural Trade, has issued a memorandum setting forth the scope and purpose of this Board.

The three main directions, indicated by the memorandum in which agricul-tural co-operation is to be advanced, are

The organization of farmers is to be brought to a higher level of business efficiency by the exchange of experiences between the three organization societies.

2. The co-operative agricultural trade is to be developed by joint action between the organized farmers of England, Scotland and Ireland, and

Regarding the agricultural inter-3. est as a whole, the new machinery which is to be established for these two purposes will be used, as the opportunity presents itself, for advancing and protecting the interests of the agricultural classes in relation to government.

Continuing his remarks in the memorandum, Sir Horace Plunkett states that the movement will be primarily and essentially practical in its aims; and the matters in which joint action may use

fully advance co-operative agricultural trade fall into three main divisions:— 1. The acquisition of farmers' supplies of the best quality at the lowest price.

2. The marketing of produce in the most economical manner.

3. The interchange of certain products between the movements.

The memorandum also deals with the development in relation to government, the value of organization being insisted upon as a means of strengthening the position and influence of the agricultural interest in its relation to local administration and government.

OLD-TIME SPECIFICS

James Lambert, a prolific writer on live-stock and their diseases during the last quarter of the seventeenth century, gives the following "special remedy for sore eyes in bull, ox, cow, or calf, says the English Live Stock Journal:-Take six egg-shells, and put the meat clean forth, and lay the shells betwixt two tile stones, and lay the stones and shells in the hot, glowing fire, and burn them well, and cover the edge of the tiles with clay for to keep the ashes from the shells, and when they are burnt, pound them to powder, and with a quill blow the powder into the beast's eye, and it will mend presently; and blow it in three times a day." Here is Lambert's pre-scription for the murrain:—"Take for every beast a quart of old wash and good quantity of hen's dung, and lay the latter to steep eight or ten hours, and then strain the dung forth, and break to every beast two rotten eggs into the forenamed juice, and give to every one two pennyworth of spikward, and blend all these together, and give it to the beast; but first let blood, both sick and sound, and separate the sick from the Drench both horses and swine, sound. for they are both apt to take the dis-Bury the dead deep in the ground ease. so that dogs cannot get at the carcase.'

* * *

Alex. Galbraith & Son, who have been located for nearly thirty years at Janesville, Wisconsin, have decided to move their horses to De Kalb. Illinios. where in future the headquarters of the firm will be. De Kalb is fifty-eight miles from Chicago on the Chicago and North-Western Railway. The Galbraith horses are just in from a very successful season at the Iowa, Minnesota and Wisconsin States Fairs.

COMPARISON OF FOOD PRICES

From the English Board of Agriculture and Fisheries comes one of their annual volumes of agricultural statistics containing the prices and supplies of corn, live stock, and other agricultural produce for the year 1907. It opens with a report on the course of prices, in which it is shown that if the prices in the quinquennial period 1871-5 be represented by 100, last year's prices would be indicated by 56 in the case of wheat, 71 for beef, 93 for mutton, 121 for bacon, 100 for cheese, and 97 for butter. Wheat and beef therefore show the most substantial reductions in price level. While 1896-1900 were years of lowest prices there has been a steady annual rise since then, however, in each The greatest boon to of these commodities, the most striking the farmers of the West being in the case of bacon and cheese. since the invention of the The price of fat cattle was distinctly binder. Cuts from five to higher in 1907 than in 1905 or 1906, and the actual price per cwt. of beasts twenty-five acres of brush per day. Requires weighed alive show an average for Great Britain of 33s. 8d., as compared with 32s. only three horses to cut 11d. in each of the two previous years. the heaviest willow, and cuts close to the ground, In the case of store stock and sheep there was but little change, the prices on the leaving it so that a mowthe case of fat pigs prices were lower afterwards. THE Harmer Implement Co. 142 Princess St., Winnipeg

Make Every Grain of Corn Count

If the feeder made his own price on his market stock he could base his selling price on the cost of his feed and labor, but he is at the mercy of the stock buyers. He must, therefore, use great caution not to put more into a steer or hog than the market will allow him. Working, as he does, at this disadvantage, every grain of corn counts. Two matters of the most vital importance enter into the cost of market stock. One is the health of the animal, the other is the digestive capacity. Both the health of the animal and the strength of its digestion have been carefully considered by Dr. Hess (M. D., D. V. S.) and he has applied the teachings of his profession to these important details. Every ingredient in Dr. Hess Stock Food has the indorsement of the medical colleges for increasing the digestion and insuring the feeder against loss by disease or disorder of the system generally.

contains the bitter tonics long known to improve digestion. Iron, the best blood and tissue builder, nitrates to allow the system to expel more freely the poison us waste that is deposited under heavy feeding, and laxatives to regulate the bowels. This prescription is guaranteed to pay for itself many times over in increased growth and improved conditions. Remember your whole profit is risked to the digestion and condition of your animal. Can you believe the medical writers that are back of every ingredient in Dr. Hess Stock Food? If they are reliable your profit is assured. This system of increasing the profit by increasing digestion has become known as "The Dr. Hess Idea." Another strong point in "The Dr. Hess Idea." besides saving feed that is wasted through illcondition and poor digestion, is the increased appetite, making the animal consume more roughage, more hay, more cheap feed. If you have never tested it do so now-at our expense if it is not satisfactory. If your dealer cannot supply you, send your order to us. The dose is small and it is fed but twice a day. Free from the last to the 10th of each month-Dr. Hess (M.D., D.V.S.) will preserve for alling animals. You can have here the stering rule for the asking. Send 20 stamp and mention this paper.

 100 Ibs. \$7.00;
 Smaller quantities at a slight advance. Duty paid.
 DR. HESS & CLARK, Ashland, Ohio, U.S.A.

 25 Ib. pail \$2.00.
 Also manufacturers of Dr. Hess Poultry Pan-a-ce-a and Instant Louse Killer.

DR. HESS POULTRY PAN-A-CE-A often stands between the poultryman and failure. It is a effect is to give greater strength to the digestive organs of the hen. That means better use of lood and greater returns from it. Where Poultry Pan-acc-a is given once a day in soft feed, hens are uniformly healthy and great layers. Poultry Pan-acc-a is "The Dr. Hess Idea" of making growth and egg production by increasing digestion. It is made up of ingredients always helpful for curing gapes, roup, cholera and other diseases due to ill-condition. It is a guaranteed egg producer, a help to moulting hens and of great benefit to little chickens. A penny's worth is enough for thirty hens one day.

the previous year, for first quality of home production. Taking the average for the year, the price of butter is given as $\pounds 5$ 6s. 6d. per cwt., as against $\pounds 5$ 8s. 2d. for 1906, the latter being the highest price since 1893, and last year's average coming next. Incidentally the price of margarine, which in 1906 was at its lowest, had risen to the 1905 level of $\pounds 2$ 10s. 3d. per cwt., or less than half the price of butter. We wonder how much of the margarine at this low price was retailed as butter! Amongst foreign butters Russian, followed by Australian, sustained the greatest depreciation. The prices for wool show a slight decrease as compared with 1906, amounting in some cases to 2d. per lb., but then the value of homegrown wools in 1906 had reached a very high level, the average prices being the highest since 1887.—Farmer's Gazette.

THE DOUKHOBORS IN B.C.

A B.C. correspondent sends us the following interesting account of the progress the Doukhobor Colony is making in British Columbia. The intention of these people, seemingly, is to migrate to the coast province in large numbers, the advance party already on the ground merely making preparations for the remainder of the band.

"On his recent visit to Kootenay, Peter Veregrin, the Doukhobor leader, placed with the Riverside Nurseries of Grand Forks, what is probably the largest individual nursery order ever placed in British Columbia. The total amount of the order was 18,000 trees and, in addition, 2.000 trees are on order from Salem, Ore. Mr. Veregrin expressed himself as being delighted with the progress of the colony, and intimated that other colonies would be established in the future. He laid especial stress on the climate of Kootenay, which he considered to be the finest to be found anywhere. The wonderful productiveness of the soil had surpassed all his expectations, and to illustrate the latter, he stated that on two tomato plants grown on their colony at Waterloo he had personally counted 135 and 155 specimens respectively. "There are at present one hundred

settlers on the ground, who have already cleared almost two hundred acres of land. These hundred men will stay on the ground all winter and erect the necessary houses to accommodate their families who are still in Saskatchewan. It is the intention to erect a sawmill immediately. In fact, the machinery for it will be shipped as soon as Mr. Veregrin returns to Yorkton.'

No Disease is so Quiet and Stealthy in its Approach as Kidney Disease

That is why it is so dangerous. It may become deep-seated before you realize the danger.

It is therefore of great importance to recognize the early warning symptoms: pain or dull ache in the back, bladder pains, smarting sensation when urinating, frequent or surpressed urination, sediment in the urine, etc., because in its early stage kidney disease is easily cured by DOAN'S KIDNEY PILLS.

Mr. Elgin Brisebois, Vernon, Ont., writes:-I was troubled a great deal with kidney trouble. 1 had to get up four or five times every night, my urine contained a thick brick-dust sediment, I had a pain in the small of my back, and could not sleep at night.

I commenced using Doan's Kidney Pills and in a very short time I was all right again. I am very thankful to have found a cure so speedy in its action.

Doan's Kidney Pills are 50c. per box or 3 boxes for \$1.25, at all dealers, or mailed direct on receipt of price by The Doan Kidney Pill Co., Toronto, Ont.

THE GOVERNMENT AND ZAM-BUK.

Survey out from Fort William Takes this Wonderful Balm

Zam-Buk the favorite household balm is now adopted as "The Doctor" by leading parties in surveying various parts of the Dominion lands.

Mr. Henry Hall writing from Fort William says:--"Having proved how beneficial Zam-Buk is in cases of cuts, skin injuries and dis-eases, I determined to keep a supply handy. Being engaged to go on a Survey I thought it would be a most useful thing to take along. I obtained a supply in Fort William, and very well it was I did so. I may say that pretty nearly every day it was called into requisition by one or other of the party for cuts, bruises, burns, or some injury or other. It is wonderful how quickly Zam-Buk takes the soreness out of cuts, burns, bruises and injuries, and on our survey it earned golden opinions from all who had occasion to try it. I found have it very fine for skin disease, and I can strongly re-commend it as a household balm." Mr. Lascelles Scott one_of the leading Gov-

FARMER'S ADVOCATE AND HOME JOURNAL, WINNIPEG

BARBED WIRE WOUND

Horse had his fore leg wounded by barbed wire. The skin and flesh were badly torn, and the front tendon severed and about three inches of bone exposed. My veterinarian stitched the wound and treated the case for some time. The stitches broke out in a few days The bone is now covered and the tendon united, but the skin has not grown over the surface of wound. The horse can walk well, but cannot raise the knee very high.

B. F. G.

Sask.

Ans.-The wound has made a good recovery, and a false skin will gradually form, but there will always be a large scar devoid of hair. In most cases a considerable enlargement and faulty action result from a severed tendon. No doubt, action will gradually im-prove in your case, but it is not probable that it will ever be normal. All that you can do is to apply carbolized oil or vaseline, 1 part carbolic acid to 25 parts sweet oil or vaseline, three times daily, and allow nature to have her course

WORMS IN HORSES

Please let me know through The FARMER'S ADVOCATE, a recipe you recommend for worms in horses. I have seen it published in the inquiry columns, but have mislaid the paper. Man.

Ans.-Take 11 ounces each of sul phate of iron, sulphate of copper, and tartar emetic, and 1 ounce calomel. Mix and make into 12 powders. Give a powder every night and morning in damp food, or mixed with a little water as a drench. After giving the last powder, in about eight or ten hours give a purgative ball of 8 drams Barbadoes aloes and 2 drams ginger. Feed bran only till purgation commences, and do not work until bowels regain normal condition.

RUPTURED FOAL

I have a filly four months old with a rupture just behind the navel, about two inches long; it was not born this way; did not come on till it was a month old, and then enlarged little by little. The intestines protrude in a little bag shape, hanging down about three inches What Think it was caused by a strain. would you recommend doing?

Ans.-We would advise consulting a veterinarian, as this appears to be a rather bad case of rupture (umbilical hernia). It may possibly be cured by means of a truss, but it may be nec essary to have a veterinarian operate by means of a clam.

Questions and Answers Two Tailor-Made Costumes for Fall

339

We have just received from a North of England woollen mill one of the largest shipments of cloths that ever came into Canada; and the largeorder-price we got is what enables us to turn these excellent suits out at such astonishing prices.

These suits are modelled after two of the newest and smartest Fall Styles from New York. They were made up in our own workrooms, and we are directly responsible for every stitch that is in them. You will find these suits hard to match in tailoring and smartness, even if you pay double their price.

OFF-COLORED NOSE

1. The nose of a purebred Aberdeen-Angus heifer turned white last winter What was the cause, and can it be treated so as to restore the normal color?

2. Will this affect her for show purposes?

OLD SUBSCRIBER.

Ans.-1. It is not possible to state the cause of this change of color. It is probably a reversion to some impurelybred ancestor. We know of no means

of restoring the normal color. 2. With some judges it would disqualify, while others might overlook it. It is not correct, but if satisfactory evidence were available that it was formerly of the proper color for the breed, it might be accepted. Much would depend upon the view the judge might take of the circumstances.

LUMPS ON SHOULDER

Horse has small lumps resembling collar boils on his shoulder. E. C. B.

Ans.-If these are little abscesses they should be opened and then dressed three times daily with a five-per-cent solution of carbolic acid, until healed. If they are hard and fibrous, and contain no pus, they should be carefully dissected out, and the wounds dressed with the above lotion until healed.

A Suit of Best English Tweed G145

in grand colorings of browns, greens, navys, fawns and greys, in plain, checks and stripe mixtures. The coat is a becoming length to the majority of ladies. It is strictly man-tailored. Trimmings of heavy stitchings and buttons. New large turnover pockets with the cuffs to match. Tailored cut back trimmed with buttons. The skirt is of Directoire style, full flare with fold, buttons down front, at the extreme low \$0.98 price

G146 A Suit of English Venetian Cloth

with fine broadcloth finish in black, navy, brown, cardinal and green. The coat is strictly tailored semi-fitting back. The collar and cuffs and pockets are trimmed with braid trimmings; back of coat smartly cut in mannish fashion, trimmed with buttons. The skirt is very new, full flared with fold and heavily stitched around bottom, with two rows of buttons down front fold. This is an exceptional smart, stylish suit, suitable for \$0.98 ladies of any age, extremely low-priced .

SIZES-Coat: 32 to 42 inches bust measure. Skirt: 37 to 43 inches in length from lower edge of waistband. Waistband: 22 to 29 inches.

1. Mare's eyes become sore; lids swell, and a yellowish-white fluid flows from them. They get better for a while, but the trouble returns.

2. Cow has warts on her teats. A. S. R. Man.

Ans.—1. This is a constitutional disease called periodic or specific ophthalmia. The attacks cannot be prevented, and there is a probability of the mare becoming blind from cataract. Each attack should be treated by placing her in a comfortable box stall, excluding from draughts and strong sunlight. Bathe the eyes well three times daily with hot water, and, after bathing, put a few drops of the following lotion into each eye, viz. Sulphate of zinc, 10 grains; fluid extract of belladonna, 20 drops; distilled water 2 ozs.

2. Those with constricted necks should be cut off and the raw surface dressed three times daily with carbolic acid 1 part, sweet oil 25 parts. The flat ones should be dressed once daily with butter of antimony, applied with a feather, until they disappear.

DISEASED OVARIES

I have a three-year-old mare in good health, worked in the spring and well fed. She works well until she gets warmed up, and then begins to kick and jump. Urinates frequently and cannot be bred. What is the trouble and what treatment would you advise?

SUBSCRIBER. Alta. Ans .--- Your mare is suffering from diseased ovaries, which accounts for her troublesome condition." She may never become quiet, unless the diseased organs or organs are surgically removed. But if the disease has not passed the congestive stage, it may be overcome by reducing her diet to bran mashes for three days, then follow with a good purgative ball compound of Barbadoes aloes, from seven to nine drams (according to size of the animal), powdered ginger one dram, soft soap sufficient to make the ball, roll up in soft paper. After the ball has ceased to operate, try her with the horse, she will then be quieter and may stand still. If it is possible to get her in foal she may then get over her nervousness.

LUMPS AND BOILS ON HORSE

I have a gelding, used for saddle only Whenever he gets warm by a run there appear large lumps on him, usually under saddle, but often on other parts of the body. These lumps, after about a day, break, and there is slight bleed ing from them. They are similar to a boil in appearance. Please let me know FOUNDED 1866

The Needle's Eye

We first test everything which enters into our cartridges and shells, then test at various stages; finally the finished product is shot under all conditions, in all makes of arms, against all other makes of ammunition.

Our tests are pronounced by European experts the finest in use anywhere.

For all makes of arms. Costs me-third to one-fifth less than duty paying ammunition. Our guarantee puts all risk on the Dominion Cartridge Co., Ltd., Montreal.

BELOW IS GIVEN AN EXACT COPY OF A LETTER RECEIV. ED THE OTHER DAY FROM loose box, and turn out for exercise on TWO OF OUR FIRST SETTL-ERS AT SLOCAN PARK, WHEN IT WAS OPENED IN DECEMBER LAST YEAR. THESE TWO MEN OWN IN PARTNERSHIP THREE LOTS, THE BROTHER OF ONE WILL ΤΑΚΕ Α FOURTH Alta. Slocan Park, Gutelius P.O., B.C., Sept. 15, 1908. N. Wolverton, Esq., President, The Kootenay-Slocan Fruit Co., Ltd. Nelson, B.C. Nelson, B.C. Now that we have had an opportunity of judging fairly as to the merits of land at Slocan Park, we thought possibly you might be desirous of our opinion. We cleared 4 acres last spring in as many weeks, and we are keeping as a souvenir the only stone we found on it. The fruit trees we planted, despite the exceptionally dry summer, are growing fine. despite the exceptionally dry summer, are growing fine. Mr. W. Roberts (a brother of Mr. L. Roberts,) who is on a visit from England, is so favorably impressed with the possibilities, he has decided to buy a lot and make his home here. It would require to be a hand-some advance on the price to induce us to part with the three lots we bought last year. Thanking you for the fair treatment we have received at your hands, Yours faithfully.

FARMER'S ADVOCATE AND HOME JOURNAL, WINNIPEG

ERADICATING POVERTY WEED

Will you kindly advise me through your valuable paper what is the name of enclosed weed. We have a lot of it on our place, and grain will not grow where it is. Please tell me what to do to get rid of it. Sask.

SUBSCRIBER.

Ans.—The plant received is called Poverty Weed. It is a weed that occurs n grain fields all through Western Canada. It thrives in all soils, but seems to do best on land that is slightly alkaline. It is a perennial, a rather per-sistent perennial, grows in large patches, is very exhaustive of soil moisture, and thus does serious injury to the crop it is growing in. The method of cultivation followed to eradicate it from the land is summer fallowing. The plowing should be clean and deep, followed all through the growing season by frequent cultivation with a broad-shared cul-tivator. It requires to be kept down completely for one season, not one plant being allowed to grow green above the surface, much less produce any seed. In grain farming, summer fallowing is the only means of eradicating it.

CHRONIC LYMPHANGITIS

I have a thirteen-year-old mare that vas bad with lymphangitis all last winter, and the leg has remained thick ever since. Is there anything that can be done for it, if not, can there be anything given to her so that it will not come on again this winter, when idle

A. M. H.

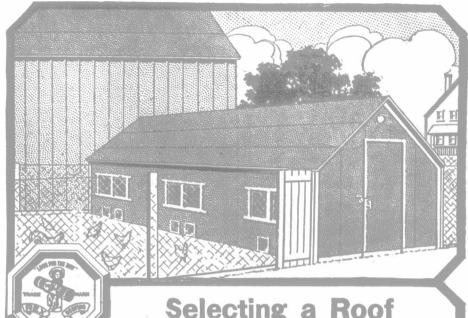

Ans.—The leg has now become so changed in structure, from repeated inflammations, that it will never regain its normal condition, it will always remain large. Every time the leg is attacked with the disease more lymph becomes organized into new tissue, and leaves the limbs that much thicker. The best way to prevent these attacks is to feed bran mashes on the evening before a day of rest, withholding the grain ration then, and on the rest day. Substitute bran mashes until the horse resumes work. Also give in the mash one-half ounce doses of nitrate of potash three times a day for two days; always keep her in a roomy Sundays and holidays

CEMENT FENCE POSTS

1. Would you advise me to use cement posts in building a permanent wire fence?

2. If so, state cost of posts and (3) the proper way of making.

J. A. M.

Selecting a Roof

Every prospective builder should show the same discrimination in the selection of a roof as in the investing of money. There are a lot of poor roofings on the market. Discriminate, examine and test roofing before buying it. You cannot do that with all roofings, but it is possible to do so with

FLINTKOTE ROOFING

and we are glad to have you do it.

If you will send us your name and address we will be pleased to send you samples. We would like to have you test its acid-proof qualities-like to have you prove to yourself that REX Flintkote Roofing will not leak or catch fire from falling sparks. By all means investigate before you buy. On every roll of REX Flintkote Roofing appears the boy trademark. It is a sign that means thorough roof-satisfaction.

NELSON, B.C.

Ans.-1. If you have gravel handy and the time to spare for making them, we think it advisable, as they would be

Sask

practically indestructible.

2. We quote from an American bulletin that seven-foot posts, 6 x 6 inches at bottom, and 6 x 3 inches at top, counting in everything, material, moulds and labor, would cost 30 cents each. In this estimate the gravel is valued at five cents per post.

3. Moulds consist of a level platform on which boards on edge, fastened together the proper distance apart for the required thickness of posts are placed. Somewhat rich concrete should be used, 1 to 5 say, mixed rather thin and sloppy. In the process of filling, reinforcing wires, one near each corner, should be imbedded. Twisted wire is best for this purpose. Wire staples, to which horizontal fence wires can be fastened, should also be inserted at proper places. The ends and sides of moulds may be removed after twenty-four hours, but posts should not be handled for at least a week, being protected meantime from sun and wind and sprinkled several times daily. They should be allowed Advasate Ads for Results to cure sixty days before being used.

HORSES SLOBBER

I have five acres of alfalfa clover which I cut about July 1st, and about July 20th I started to let the horses in at night, and the days when not working, and they slobber at the mouth, the watery fluid just running from them at times, but they seem all right otherwise. When we were having they were fed some of the hay about five days and results were similar. Could you explain the reason for this, and if it injurious to the horses to slobber so. S. R Sask.

Ans.-We are at a loss to explain this excessive salivation, except on the hypo thesis that there is some weed in the alfalfa which induces it. The alfalfa alone, while probably having a tendency that way, owing to its somewhat acrid nature and its great palatibility, should not cause any such excessive secretion. We do not expect it will do them any very great harm, and they will probably slobber less after a time.

Power Lot--God Help Us

ATTENDING STRICTLY TO BUSINESS.

John E. Watrous, of Burlington Kan., is one of the deputy collectors of internal revenue. Travelling along a country road one day, Mr. Watrous was attracted by frightful screams coming from a little house not far from the road. Hurriedly tying his horse he ran to the house and found that a little boy had swallowed a quarter, and his mother, not knowing what to do, was frantic. Mr. Watrous caught the little fellow by the heels, and holding him up, gave him a few shakes, whereupon the coin soon dropped on the floor. "Well mister," said the grateful mother, "you certainly know how to get it out. Are you a doctor?" "No, madame," replied Watrous, "I'm a collector of internal revenues."

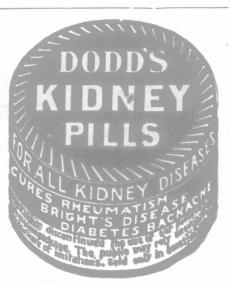

HER RESPONSIBILITY REALIZED.

Mrs. J.'s patience was much tried by a servant who had the habit of standing around with her mouth open. One day, as the maid waited upon the table, her mouth was open as usual, and her mistress said:

"Mary, your mouth is open." "Yassum," replied Mary; "I opened

it.''

The sexton of a certain famous English church the other afternoon had conducted a party round, and, despite dropping more than one 'gentle, 'int,' it appeared as if the sexton was to go unrewarded. In the porch the leader paused. 'I suppose,' he said, been here many years?' you've been here many years?' 'Forty,' replied the old man, 'an' it's a werry strange thing as whenever I'm a-showing a party out o' the porch they allus asks me that question or

in quieting the heart, restoring its normal beat and imparting tone to the nerve centres, is beyond all question, marvellous

PILLS

Mr. Darius Carr, Geary, N. B., writes: "It is with the greatest of pleasure I write you a few lines to let you know the great blessing your Milburn's Heart and Nerve Pills have been to me. I was a total wreck from heart failure, and my wife advised me to take your pills. After using two boxes I was restored to perfect health. I am now 62 years old and feel almost as well as I did at 20."

Price 50 cents per box, or 3 for \$1.25, at all dealers, or mailed direct by The T. Milburn Co., Limited, Toronto, Ont.

'Where is your husband?'

'Well, mum, he be gone at last.' 'Oh, I'm sorry. That is very sad

for you,' said the lady, seeking to find some words of consolation. 'Yes, mum, it be sad,' replied the old woman, 'but then, you see, he were fearfully in the way of the oven."

'For my part,' said one, 'I think Fred is very bright and capable. I am confident he will succeed.' 'Yes,' replied the other, 'he is certainly a worthy young man, but I doubt whether he has beed arough to fill his father's he has head enough to fill his father's shoes.

NOT ALL LOSSES.

Quotations cleverly malapropos or neatly distorted furnish half the wit of the professional humorist. Nevertheless, when such a verbal misstep is spontaneous, there is often real fun in it.

A young man had been out sailing with his sister and a friend of hers. He did not know particularly well the fine points of the art, and on trying to make the landing against a head wind, he exclaimed, after several vain attempts

"Well, it is better to have luffed and lost than never to have luffed at all!

Some time later, a second robbery was committed and reported as before, as the result of which there was another investigation, which disclosed the fact that the stamps had been extracted on this occasion without any violence to the safe. 'But how was it done?' asked the

inspector, somewhat puzzled. 'The safe does not seem to be injured at all.' 'The 'I made up my mind that I would

not be caught again,' replied the post-master, slyly, 'I left it open.'-Philadelphia Public Ledger.

'The paper states that a girl's presence mind averted a panic.' 'How?' of mind averted a panic.' She sang, and the audience quietly sneaked out.' — Louisville Courier Journal.

* * *

A dentist received a call the other morning from a couple whom he soon had reason to believe were lovers. The girl had an aching tooth, and as they entered the young man said :

"Now, darling, the worst is over. Just take a seat, and it will be out in a minute."

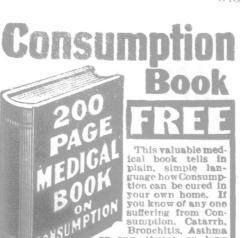

"Oh, I daren't!" she gasped.

"But it really won't hurt you at all, you know.

"But I'm afraid it will."

"It can't. I'd have one pulled in a minute if it ached." 'I don't believe it.''

"Well, then, I'll have one pulled out ust to show you that it doesn't hurt." He took a seat, leaned back, and opened his mouth, and the dentist seemed to be selecting a tooth to seize with his forceps, when the girl pro- false.

(with emphasis) the other.' 'Indeed!' smiled the visitor. 'And what may the other be?' 'What I calls question number two,' replied the sexton calmly, 'is jest this—''Samiwell, is tips al-lowed?'' And Samiwell allus answers, ''Tips is allowed!'' The hint was taken, as was the tip.

LOOKING AT THE BRIGHT SIDE.

A lady residing in a quiet village in Suffolk used to take an interest in a very aged couple who were spinning out the last thread of life in 'Darby and Joan' fashion, seated on either side of the fireplace. She often paid them a visit to cheer them up. The old man had been ailing, and at last a day came when the visitor found only one chair occupied. Darby was not in his usual place

Black Watch **Biggest and Best''** Plug hewing Tobacco

METHODS AGAINST FLEAS.

The following are recommended:-Fill a soup-plate with soapsuds; in the centre place a glass of water with a scum of kerosene on top; place the soupplate on the floor in an infested room, and set fire to the kerosene at night. Fleas in the room will be attracted and will jump into the soapsuds. It is also said that houses may be rendered immune by dissolving alum in the whitewash or kalsomine applied to the interior walls, putting sheets of thick paper that have been dipped in the solution of alum under the floor matting, and scattering pulverized alum in all crevices where insects might lodge or breed. Powdered alum may be sprinkled upon carpets already laid, and then brushed or swept into their meshes with no injury to the carpets, and with the certainty of banishment to many insect pests, including both moths and fleas. Sheets that have been soaked in alum water and then dried may profitably enclose those that are spread nearest to the sleeper.-Science.

When a certain Berks County storekeeper, who was also the postmaster of the borough, began the transaction of business one morning about a year ago, he found that the safe in which were kept the postage stamps had been robbed during the night, and promptly reported the matter to the authorities The latter decided, after an investiga tion, that restitution should be made for the stolen stamps, but that the expense of repairing the damage to the

* * *

With health and strength as the sole foundation, many a man has built fame and fortune. For lack of it, many a budding genius has passed into oblivion, many high hopes have been shattered, many hours of misery spent. The world is full of half-sick, half-well, half-successful men, any one of whom could become a power in life with vigorous strength as a fundamental asset—could find happiness where he now sees nothing but gloom

where he now sees nothing but gloom.

I CAN RESTORE YOUR STRENGTH

There is no medicine, no mystery, no magic in my treatment. It is founded on the great basic truth that electricity is the motive power of the human body, and that effort causes an expenditure of this power. Success is possible in this world to any man who has the energy to strive for what he wants. A man without strength has no inclination to work. The vital energy of the human body is electricity. This has been proven. The way to become strong, to keep strong, and to stimulate ambition is to give your body a charge of electricity every day giving you a good reserve fund of vitality to draw on. The newest device for electrifying the human body is the Dr. Sanden Hercules Body Battery, composed of a series of cells arranged in the form of a girdle, to be worn comfortably about the body at night while you sleep. It is the most convenient, most comfortable, and most effective means of applying galvanic electricity for curative purposes.

FREE UNTIL CURED.

FREE UNTIL CURED. In order that every sufferer may have a chance to prove its merits I now offer this famous Appliance on trial for two months, not to be paid for unless you are cured.
