HASZARD'S GAZETTE, NOVEMBER 15.

sides. I had been riding with fragments of a soldier's jacket tied round my feet, which I usually kept out of the stirrups, the contact of the iron increasing the cold. At Orcha, the invaluable Paul brought me a Jew (the Jews were our chief purveyors on this account) with boots for sale. I selected a pair and threw away my old ones, which for many days I had not taken off. My feet were already in a bad state sore and livid. I bathed them, put on fresh stockings, and my new boots, and contrived with a pair of old trousers, a sort of leggings or overskirt, closed at the bottom, and to be worn over the boots. From that day till we got beyond the Niemen, a distance of one hundred and ten leagues, which we took three weeks to perform, I never took off any part of my dress. During that time I suffered greatly from my feet; they swelled till my boots were too tight for me, and at times I was agony. When we at last were comparatively in safety, I found myself, for the first time since I left Orcha, in a warm room, with a bed to lie upon and water to wash, I called Paul to pull off my boots. He, with them came off my stockings and a curtain skin of both feet. A player's knife could hardly have done the thing more completely. For a moment I gave myself up as lost. I had seen enough of this kind of things to know that my feet were on the verge of mortification. There was scarcely time to amputate, had any been at hand to do it, and had I been willing to give over life at such a price. Only one thing could save me and I resolved to try it. I ordered Paul to bring a bottle of brandy; I put a piece of ice between my teeth, and bade him pour the spirit over my feet. I can give you no idea of the excruciating torture it then endured. Whilst I lay there, maddened by my sufferings overcame with pain. It was agony—but it was safety. Out of the fire, nearly in two, and made thus—" (Here the doctor drew up his lip and exhibited a defective tooth, in company with some very white and powerful grinders.) "The extraction saved me; I recovered, but the new antagonist, which in this country my nerves first, soon chilled by the recollection of their past career's suffering, and from that day to this I have never had feet otherwise than cold. But here we are at Orlans, air, and under us I expect—stand by my old Franklin."

The train stopped as he concluded, and a faint-looking veteran, with white hair, an empty sleeve, and a silken patch over one eye, pressed impetuously into the carriage. Like most Englishmen, I have a particular aversion to the Continental fashion of men kissing and hugging each other, but I confess I held with infinite sympathy those who quickly separated, and, with hands clasped, looked joyously and affectionately into each other's faces, whilst a thousand recollections of old kindness and long comradeship were evidently swelling at their hearts. In his joy, my travelling companion did not forget the attentive listener, whose journey he had so agreeably shortened. Turning to me, he presented me to the general, as an Englishman and a new acquaintance, and then cordially invited me to pass the rest of the day at his house. But the business that took me to Orleans was urgent, and my return to Paris must be speedy. And it has been otherwise, I think I still should have scrupled to restrain, by a stranger's presence, the first blow of intimate communion to which the two friends evidently looked forward with such warm and pleasurable feelings. So I gratefully declined, but pledged myself to take advantage of the doctor's hospitality upon my next visit to Orleans. When that comes, I shall hope to glean another Russian Reminiscence.

SIR JOHN FRANKLIN.

The discovery of the remains of Sir John Franklin, so far from allaying anxiety, only tends to create a still more longing desire to know more of the sad details. The remains of himself and companions have been lying scattered about the banks of the Great Fish River of Baffin since the spring of 1850. The story of their death Dr. Rae learned from the Indians. No white man has been there to collect their journals and to gather from the silent memorials around any of the particulars of their last moments.

In all probability the journals of Sir John, or of some of his officers, may be recovered by visiting the spot. They would tell of his progress and discoveries and are, therefore, well worth the attempt of recovery. We hope a party will next year be sent to the place to glean particulars and collect journals. The importance of such an expedition is so obvious that it need only be suggested, not argued. The story of their fate comes only from the Esquimaux, but it carries with it such an air of probability, that no one seems to question its main features.

Where is Sir John Franklin to be looked for? is a question that has engaged the geographical mind of England and America, for the last four or five years. Within that time expedition after expedition and ship after ship have been despatched in search of the lost explorers, but none of them had brought back any tidings, except that they spent the year of 1845–46 at Riley's Bay. In looking at the instructions given, and the route taken by these expeditions, one is now struck with the singular fatuity with which Prince Regent's Inlet, leading down into the Gulf of Boothia, where the ships are said to have been lost, seems to have been overlooked, both by those who projected and those who conducted the English searching parties.

When the American expedition of Mr. Grinnell was decided upon, it was understood that the British Government had abandoned the idea of any further attempt to afford relief to its missing navigators. This expedition was directed to search the shores of Wellington Channel, which up to that time had not been visited.

The American expedition led to the fitting out of several more from England, every one of which, with singular persistency, was directed to Wellington Channel, as the principal point of search. Penny, Ross, and Ommaney, Beecher, and Austin, and Kellett, every one went there to search in De Haven's wake. Kennedy and Forsyth did indeed look into Prince Regent's Inlet; but it was nothing more than a look, for the former went no further than Ormesson Bay and the latter than Fury Beach.

When it was ascertained in this country that the searching vessels of 1850 were all bound to the same place, and that, in the writings which had been published on the

other side upon the subject, no importance was attached to Prince Regent's Inlet and the gulf into which leads as places to be searched, the omission was pointed out by a gentleman of this city. He went at length into a statement of the reasons which induced him to believe that Sir John Franklin had taken that route, and that in the Gulf of Boothia his ships were then to be found, as Sir John would not be able to extricate them. Furthermore, the opinion was advanced, in this remarkable letter, that even the searching party would have to abandon its vessels in the Gulf of Boothia, and take the very route for the south, which it appears that Franklin and his party did take.

This letter was written on the 23d of March, 1850, by Col. Peter Force, and addressed to Captain Scoresby, the celebrated Arctic voyager. We happen to have a copy of it, and may be excused for making a few extracts which bear most directly upon the subject:

"In your late very valuable publication on 'Franklin's expedition' you cover the whole ground of research, save one point, and that the very point to which I solicited your attention, the Gulf of Boothia. In my desire to hear your opinion on this suggestion, I have too long deferred writing to return my thanks for your kind remembrance."

"It appears that at the time Sir John Franklin sailed, he, in common with many others, was of the same opinion that a passage through Prince Regent's Inlet would be practicable. I recovered, however, the new evidence which in time covered my错误 first, once chilled by the recollection of their predecessors' sufferings, and from that day to this I have never had feet otherwise than cold. But here we are at Orleans, air, and under us I expect—stand by my old Franklin."

The train stopped as he concluded, and a faint-looking veteran, with white hair, an empty sleeve, and a silken patch over one eye, pressed impetuously into the carriage. Like most Englishmen, I have a particular aversion to the Continental fashion of men kissing and hugging each other, but I confess I held with infinite sympathy those who quickly separated, and, with hands clasped, looked joyously and affectionately into each other's faces, whilst a thousand recollections of old kindness and long comradeship were evidently swelling at their hearts. In his joy, my travelling companion did not forget the attentive listener, whose journey he had so agreeably shortened. Turning to me, he presented me to the general, as an Englishman and a new acquaintance, and then cordially invited me to pass the rest of the day at his house. But the business that took me to Orleans was urgent, and my return to Paris must be speedy. And it has been otherwise, I think I still should have scrupled to restrain, by a stranger's presence, the first blow of intimate communion to which the two friends evidently looked forward with such warm and pleasurable feelings. So I gratefully declined, but pledged myself to take advantage of the doctor's hospitality upon my next visit to Orleans. When that comes, I shall hope to glean another Russian Reminiscence.

"In his search for this passage (which it has been ascertained since does not exist) he would press on to the south, believing every mile he gained in that direction a gain of so much toward the open water of the Akhooie on Barrow's map. His character for energy and perseverance is well known. No obstacle presented by ice, no matter how heavy, would induce him to relinquish his enterprise. He knew that Aberdeen Island was scarcely a degree south of Lord Mayor's Bay; but he had no knowledge of the continuous land, since then followed by Rae, from Repulse Bay entirely across to Boothia. His exertions to get through to Akhooie would only get him farther in the ice toward the bottom of the Boothian Gulf, from whence he would be unable to trace his steps, where he, with his ships, if he found a harbor, may be at this time.

"And he had no doubt his ships were lost, and probably here he was at the moment the above paragraph was written.

"The tribes of Esquimaux on the coast west of Repulse Bay, and the tribes on Hudson's Bay know of the existence of each other, but there is very little intercourse between them. There is some intercourse between the tribes on Hudson's Bay and on Baffin's Bay. By the accidental meeting of parties of these several tribes, news might be transmitted from one to another; but such means of transmission would require much time to convey to Pond's Bay intelligence of the arrival of Franklin's ships in the Gulf of Boothia. The account itself could not be very exact, and would become more confused when translated by one who had but an imperfect knowledge of their language. Indeed an Esquimaux drawing of Committee Bay, beginning at Cape Chapman, might have been mistaken for one of all the spaces within Prince Regent's Inlet.

"It would seem from the great drifting of the ice, noticed by Capt. Sir John Ross that there must be, at times, at least much open water towards the bottom of the Gulf. An attempt should be made to reach this in both its eastern and western shores. A thorough examination of these shores, of the intermediate ice, and of Committee Bay, would appear to me, to be much more likely to lead to the discovery of Franklin than an examination of any of the points to which the public attention is now directed.

"The officer selected for the command of an expedition for this purpose should be provided with materials for the transportation of the crew and necessary provisions, in the not improbable event of being compelled to abandon his ships. He should also be assured of the co-operation of the Hudson's Bay Company, for their relief if necessary, and for the assistance which would be required in returning by Repulse Bay or Montreal Island, or by the more southern course to Wager river, or perhaps Chesterfield Inlet, in which latter direction it is supposed there is much open water.

How poignant now must be the regret that some one of the leading parties was not directed to enter Prince Regent's Inlet and look into the Gulf of Boothia! *National Intelligencer.*

When it was ascertained in this country that the searching vessels of 1850 were all bound to the same place, and that, in the writings which had been published on the

RUSSIA.

Is less an aggressive power than in previous periods; but on the defensive, the forces of the allies will be consumed in detail, and the Crimean and the shores of the Euxine will be for years a drain on the wealth and resources of France and England. These overburdened nations may soon exhaust with Pyrrhus. "One more such victory, and we are undone." The vast territorial limits of Russia laugh to scorn the occupation of the allies; they may take possession of here and there a stronghold, but they will be subject to the assault of fresh armies which will rise at the command of the Czar to expel these invaders.

The killing off of the old crop of Russian generals is not a small advantage, and the talent of the young officers, who have been educated in the military academies founded by the present Emperor, will next be called on. The devotion and constancy of the Russian soldier is proverbial. Defeated over and over by Charles XII., pursued even into the heart of the country, the Russians raise after each defeat more formidable than ever. No comparison can be made between the present resources of the Empire and those under the command of Peter the Great. Let the allied armies attempt to enter the Empire, and the examples of Pultowa and Moscow are before them. History is always self-repeating, and we might extend the precedents of destruction from the modern conquerors, Charles XII. and Napoleon, up to the ancient Semiramis and Cyrus. Alexander was too wise to enter into a war with the Cithynian tribes. We may be told that the Cossacks cannot compete in the field with the warlike and disciplined legions of England and France,—but their numbers will at last consume and destroy the proudest armies that can be sent to invade their territory.

The great lesson of the present war, exhibited in the destruction of the Russian fortresses, is the mighty advance in the execution of the modern engines of war. Eight and ten inch guns, discharging solid balls and hollow shells of prodigious weight have been sent from a distance of a mile and a half and over, with the effect of crumbling stone walls in a few hours into heaps of ruin. The equipment of forts with a similar artillery is now absolutely necessary, and in this respect the Russians appear to have been behind the age. The ships at the distance of 2700 yards delivered their tremendous fire against the walls of Bomarsund while lying in perfect safety from any dangerous return from the guns of the fortress.

With all these serious losses the interest of Russia is still war, even though Sweaborg and Cronstadt share the fate of Bomarsund and Sebastopol, for the war, if protracted, must end in the ruin of the Western powers, or in the rise again in revolution of their over-taxed subjects. To make a peace in the face of these reverses, a degree south of Lord Mayor's Bay; but he had no knowledge of the continuous land, since then followed by Rae, from Repulse Bay entirely across to Boothia. His exertions to get through to Akhooie would only get him farther in the ice toward the bottom of the Boothian Gulf, from whence he would be unable to trace his steps, where he, with his ships, if he found a harbor, may be at this time.

With all these serious losses the interest of Russia is still war, even though Sweaborg and Cronstadt share the fate of Bomarsund and Sebastopol, for the war, if protracted, must end in the ruin of the Western powers, or in the rise again in revolution of their over-taxed subjects. To make a peace in the face of these reverses,

the Cossacks and Crimeans would be to abandon the national prestige, and sink into a second-rate power. Nicholas will never submit to such degradation, or we mistake his character.—*Halifax Sun.*

BRITISH ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE.

CRIMES—GOOD AND BAD TIMES.—The Rev. John Clay, Chaplain to the Preston House of Correction, read a paper "On the effect of good and bad times on convicts to prison." He quoted a number of statistics to show that high wages among the working classes did not decrease crime, but increased it, and this anomaly in the condition of the laboring classes he attributed to high wages inducing intoxication and crime, in consequence of the education of the working classes being neglected.

A long discussion followed, in which the Earl of Harrowby, on behalf of the working classes, said they had no where to go but to the public-house as their club. He strongly advocated innocent amusement among the working classes being coupled with education.

Mr. Hill, the Recorder of Birmingham, eulogized the paper, and agreed with the conclusions drawn by the Rev. Mr. Clay.

The Archbishop of Dublin also strongly eulogized the public services of the Rev. Mr. Clay, whose prison reports he had frequently read.

Several other gentlemen addressed the section, and ultimately the thanks of the meeting were passed to Mr. Clay with acclamation.

UNITED STATES.

The emanation of recognitions between the United States' Cabinet, and the Government of Dominica, are now made patent by the "leakage" of the authorities, and the vigilant and accurate correspondence of the New York press.

It seems that by dint of lavish bribes to the "colored" functionaries of the Dominican Government, President Plaza's "Commission" has secured for the U. S. the right to establish "naval and military posts and depots on the Northern parts of the Island," including the map indicator—the Peninsula of Samana, and the hilly region—clearly presenting an admirable position, not establishing a basis for warlike operations against the adjacent islands belonging to Spain—while being once "occupied" the peaceful or forcible annexation of the whole island of St. Domingo is to be "accomplished" and Solonque cease to reign.

Samana and the mountainous region, are known to be abundantly rich in minerals; the American negotiator, therefore, stipulated that American citizens shall have free right "to hold and cultivate land, and work mines," without being required to become naturalized." In plain terms, they may enjoy all the rights of citizenship, with others to which no citizen can lay claim.

The not least singular feature in these revelations is that, the success of the Yankee diplomat, beyond even the most sanguine expectations of his Government, is mainly attributable to the clever management of a lady, known to

the reading world as Corn Montgomery, but now reposing in the name of a Dominican gentleman, of colour, M. Constance.

That it needed the exercise of considerable persuasive power to induce the Dominicans people to assent to a virtual annexation to the Great Continental Republic, may fairly be inferred from the well known fact that, their leader has hitherto been towards France, that they dreaded the Americans as cruel Slave-drivers, filibusters, and "image-breaking" *Pretendants*.

So far, then, all has gone along smoothly enough, but Congress must have its say before the treaty can be ratified. As an independent Government, capable of negotiating the Dominicans.

That before its ratification with the United States, there is the Black Empire—Haiti; and Liberia, too, a Sable Republic.

These must be admitted to the international relations. But there will be a black hole; Haiti and Liberia are inhabited and governed by blacks; and the South holds four millions of that race in brutal bondage; and the South can afford to receive "Niggers," upon any terms or equals.

It will recognize Dominica and occupy its territory as a basis of operations for the extension of Slavery, but not of Liberty, in the language of a New York contemporary.

Ronald McDonald, Esquire, who has been for 11 years Editor of *Le Canadian*, and was for a long time connected with the *Gazette* published in this city, departed this life on Saturday evening last, at the age of 55 years. In him we have lost a highly respected member of society, and a well informed and much esteemed contemporary.—*Quaker Paper.*

Donald McDonald, Esquire, who has been for 11 years Editor of *Le Canadian*, and was for a long time connected with the *Gazette* published in this city, departed this life on Saturday evening last, at the age of 55 years. In him we have lost a highly respected member of society, and a well informed and much esteemed contemporary.—*Quaker Paper.*

The prevalence of incorrect notions upon the subject of medicine, is a great cause of misery. Medical practice should be governed by principles cautiously deduced from the contributions of long experience and close observations. How important, then, that no medicine should be taken by invalids, unless it emanates from the hands of men of talent, judgment, and the strictest probity. Hoofland's German Bitters, prepared by Dr. C. Jackson, Philadelphia, is a preparation emanating from one of the most celebrated practitioners of modern times, and one of the greatest medical writers Germany ever produced. This article is now in able hands, evidence that it is prepared carefully and skillfully, it is producing the effect the original inventor intended. It is used by many of the leading practitioners of Philadelphia in cases of debility of the digestive organs, and biliary apparatus, and the diseases arising therefrom. We therefore recommend this medicine to suffering invalids.

Holoway's Ointment and Pills have Effectually Cured a Wound in the Leg and Prevented it being Amputated.—The following extraordinary cure was communicated by Captain Smith, of Yarmouth, to Mr. Dixon, chemist, Norwich. "Mr. Walton, late in Her Majesty's Service in the British Fleet, at Malta, had an ulcerated wound in the ankle, for which he was in the Malta Hospital six months, afterwards in Portsmouth Hospital for four months; here, as at Malta, refusing to have the limb amputated; he was turned out incurable: other medical aid failed also: when, by Captain Smith's recommendation, he tried Holoway's Ointment and Pills, which in three months cured him, and he is now in perfect health, and Coast Guard Officer at Newhaven."

HASZARD'S GAZETTE.

Wednesday, November 15, 1854.

A friend of ours asked us the other day, why it was, that the congregation of the Church of England in Charlottetown, continued to be so exclusive, and this at a period when, to their honor, most of the Churches of the Establishment were being actuated by a more liberal mode of feeling as regards strangers. "I have no objections," said our friend, "to their keeping their pews, sacred to the use of themselves and their families during the two services in the day time, but I cannot see why they do not, as is the custom in Halifax, and elsewhere, open the Church generally at night, so that those, whom circumstances of various kinds, prevent from attending public worship during the day, may take that opportunity of offering their tribute of praises and thanksgiving to the Lord and Father of all. I went to the Church of St. Paul's, the last time I was in Halifax,—about a fortnight ago on the Sunday night, and I went rather early, that I might have no difficulty in securing a seat; and on expressing my apprehensions to the door-keeper that I was too early, he was surprised to hear him say 'not at all, Sir, the Church is nearly full, but go in and take whatever place you choose to sit in, as the whole church is full, everybody leaves his own pew, and takes his chance with the rest.' I accordingly went in and found that before the service had begun, the Church was completely filled, so that it would have been difficult, if not impossible to find a seat. I wish we could get a similar rule adopted here, I would cheerfully do it, give up my own pew, and I doubt not that many others, if not all, would willingly do the same."

We considered this as a hint to improve the matter before the eyes of the congregation, and we avail ourselves of it. It is a thousand pities we have often thought that the practice of locking portions of the Church for the exclusive use of particular persons, ever came into fashion. It is totally opposed to the spirit of Christianity, and can only be defended on the ground that, unless persons contributing to the building of a Church are accommodated with pews, there would be none built. We are not satisfied that this would be the case at the present day. In England, the new churches are, we believe, very many of them built upon the principle of open seats. Be this however, as it may, to return to the question started by our friend, we think that the congregation of St. Paul's only need that the pews be made, in order to accede to it. We can hardly imagine that there would hardly be a dissentient voice.

After having enjoyed the advantages of two services in the course of the day, it would no great stretch of Christian charity to them to allow those who have had no such opportunity, to take their place, particularly as the doing so, need not deprive them from attending the service, all they have to do is to enter the Church by a different door to what they way to the first vacant seat. And even if excluded by means of the throng of strangers, the truly pious mind will find more cause of gratification than regret, in the consideration that the temporary inconvenience that he is suffering, may be the means of reclaiming to the fold a number who have gone astray, and adding others who, perhaps had never heard, or for that permission to enter freely the gates of the temple, the glad tidings of the gospel of peace.

The not least singular feature in these revelations is that, the success of the Yankee diplomat, beyond even the most sanguine expectations of his Government, is mainly attributable to the clever management of a lady, known to

WORMS! WORMS!

Worms! A great many learned treatises have been written, explaining the origin of, and classifying the worms generated in the human system. Scientifically any topic of medical science has admitted more acute observation and profound research; and yet physicians are very much

THE SUNSET.

The sun-set rays are falling
On leafy trees and down,
O'er gurgling brooks and well,
The dewy cottage houses, all
In ray light is o'er.
The green mountain-slope,
And like a silver flood,
The stream gushes now,
In streams in lonely bays,
In hills where pride and beauty dwell;
By the wide, wide sea,
And through the woods in the sun.
Through painted Gothic pines
The red dusk-laden fall,
And straggles through the bays
Eds the Geoffrey Frost Wall.
Ruthless in some deep,
With morn's pale pall,
Until the mighty waves
Roll out like molten gold.

'Tis on the tears of those,
Who are another eve,
Shattered in east-round, and
Will home and kindred leave.
And there are eyes that watch
With joy such passing day,
The eastern beams to them
Shall bring a fatal day.

'Tis shedding haly light
Over land and dying eyes,
And like smiling where,
The way-worn pilgrim lies.
Or may we, when our race
Below shall all be run,
As gently depart
As that bright setting sun.

THE PROGRESS OF DISCOVERY.

No man can tell where improvements in the arts will stop, or what discoveries are yet to be evolved from the still wide and unbounded unknown. When we think of what was a century ago, and what is now; when we review the inventions which have been made during that period, and pass them before the mind, they almost seem to surpass and great for our belief. In 1805, there were only four steam-engines in the United States; not a steamboat, not a railroad; not a locomotive. Few machines of any kind were made then, and scarcely any kind of manufacturing operations conducted. In 1840, there was not an established line-of-telegraph in our country; now we have no less than twenty-three or four thousand miles of wires. The Daguerreotype is but a few years of age, and the vulcanization of India rubber no older. In the manufacture and improvement of various tools, vast progress has been made in a very few years. The printing-press, from the slow hand-machine, printing a few hundred copies in an hour, has been yoked to the steam-engine, and now throws off thousands of copies in the same time. It is impossible for us to enumerate a tithe of all the inventions and discoveries which have been made during the past century; they are almost beyond computation. Our object is to present the subject for reflection to the numerous ingenious men in our country.

The field before them is still a comprehensible one. Some new discovery may yet be made whereby the air above may be as safely and economically navigated as the waters beneath. In agriculture, in machinery and in chemistry, what stores of new wonders may be developed. Every man who makes a new improvement or discovery is a public benefactor. His labors will far beyond the boundaries of his own existence, even to distant generations.

Victor of ATMA.—The following stanzas, in addition to *Rufus Britannicus*, were sung by Madame Krollin, at the Mechanics' Institute on Tuesday evening, last, and were repeated on the evening of her Concert in Charlton on Thursday. In each instance they were resoundingly applauded. The stanzas are from the pen of a resident of Charlton.

Our gallant sons and soldiers brave,
Dare WHO goes to check thy beautiful Carr,
May God in mercy deign to save,
From cruel rage of bloody war.

Both British freedom! Both o'er land and sea,
And Allied Hosts united bold,
Northland, the trend of battle bold,
The world of New-shires flags and French have waved,

O'er Alba's bloody field, on high,
And undying dangers bravely proved.

Both British freedom! Both o'er land and sea,
And Allied Hosts united bold, when enemies of

themselves stand, and eddies of tempests blow.

The Rector: Ouchon.—A lady took umbrage at the use, by a gentleman, of a very common word, of which the primary and most obvious sense was unexceptionable, while its most remote and unusual signification was indecorous;—beg pardon, said the offender, apologetically; I certainly did not mean what you were thinking of—a rector which was as philosophical, as it was just and severe.

WHOLESALE AND RETAIL MURDER.—By the late foreign arrivals we have the following sanguinary item from Italy. A military man was in love with a young lady whom he could not obtain in marriage. Incensed at her refusal, he resolved on vengeance. Arming himself with four revolvers, he repaired to the mansion of the fair one. The first person that appeared was her mother—he shot her; the next was her father—he shot him; then came the young lady herself—he shot her; then came the uncle and aunt—he shot them—and then he shot himself.

A BEAUTIFUL IMAGE.—A deaf and dumb person being asked to give his idea of forgiveness, took a pencil and wrote—it is the sweetness which flowers yield, when trampled on.

WHAT is that dog barking at? asked a boy, whose boots were more polished than his ideas. "Why," replied a bystander, "because he sees another puppy in your boot."

THE SUNSET.

LET TO H. R. R.

Highly Important to the Public.

The Nick named as the R. R. R. Theory.

THREE GREAT REMEDIES.

The attention of the public is particularly directed to the three quick and powerful remedies discovered by RADWAY & CO. So quick, so powerful, so effectual, so safe, so pleasant, are these remedies in stopping pain, clearing disease, expelling from the human body all foul and corrupt humor, all diseased and venereal deposits, and restoring the weak, feeble, and fragile frame, worn out by disease and long sufficing, to sound health and long life, that whatever other therapeutic and remedial substances with the R. R. R. Theory, are used, they prove themselves to be worse cases in less than twenty-four hours.

They invigorate, they renovate, they regulate, they relieve the suffering, pain-attacks, caused from the most torturing pains to five minutes.

They restore the sick and disabled body to health and longevity.

To the low-spirited and perverse they impart gaiety, vigor, and a happy glow of spirits.

To the aged and infirm, whose constitutions are worn out by debilitations and limbs palsied and enfeebled, they impart the elasticity and buoyancy of mind and body.

To the young, who, between the period of youth and manhood, outgrow their natural strength, who are afflicted with languor, listlessness, loss of appetite, gloomy feelings, &c., they impart to the recuperative organs a healthy regularity of action.

To the thoughtless and vicious they impart警fulness, vigor, and a happy glow of spirits.

To the aged and infirm, whose constitutions are worn out by debilitations and limbs palsied and enfeebled, they impart the elasticity and buoyancy of mind and body.

To the young, who, between the period of youth and manhood, outgrow their natural strength, who are afflicted with languor, listlessness, loss of appetite, gloomy feelings, &c., they impart to the recuperative organs a healthy regularity of action.

To the low-spirited and perverse they impart gaiety, vigor, and a happy glow of spirits.

To the aged and infirm, whose constitutions are worn out by debilitations and limbs palsied and enfeebled, they impart the elasticity and buoyancy of mind and body.

To the young, who, between the period of youth and manhood, outgrow their natural strength, who are afflicted with languor, listlessness, loss of appetite, gloomy feelings, &c., they impart to the recuperative organs a healthy regularity of action.

To the thoughtless and vicious they impart警fulness, vigor, and a happy glow of spirits.

To the aged and infirm, whose constitutions are worn out by debilitations and limbs palsied and enfeebled, they impart the elasticity and buoyancy of mind and body.

To the young, who, between the period of youth and manhood, outgrow their natural strength, who are afflicted with languor, listlessness, loss of appetite, gloomy feelings, &c., they impart to the recuperative organs a healthy regularity of action.

To the low-spirited and perverse they impart gaiety, vigor, and a happy glow of spirits.

To the aged and infirm, whose constitutions are worn out by debilitations and limbs palsied and enfeebled, they impart the elasticity and buoyancy of mind and body.

To the young, who, between the period of youth and manhood, outgrow their natural strength, who are afflicted with languor, listlessness, loss of appetite, gloomy feelings, &c., they impart to the recuperative organs a healthy regularity of action.

To the thoughtless and vicious they impart警fulness, vigor, and a happy glow of spirits.

To the aged and infirm, whose constitutions are worn out by debilitations and limbs palsied and enfeebled, they impart the elasticity and buoyancy of mind and body.

To the young, who, between the period of youth and manhood, outgrow their natural strength, who are afflicted with languor, listlessness, loss of appetite, gloomy feelings, &c., they impart to the recuperative organs a healthy regularity of action.

To the low-spirited and perverse they impart gaiety, vigor, and a happy glow of spirits.

To the aged and infirm, whose constitutions are worn out by debilitations and limbs palsied and enfeebled, they impart the elasticity and buoyancy of mind and body.

To the young, who, between the period of youth and manhood, outgrow their natural strength, who are afflicted with languor, listlessness, loss of appetite, gloomy feelings, &c., they impart to the recuperative organs a healthy regularity of action.

To the thoughtless and vicious they impart警fulness, vigor, and a happy glow of spirits.

To the aged and infirm, whose constitutions are worn out by debilitations and limbs palsied and enfeebled, they impart the elasticity and buoyancy of mind and body.

To the young, who, between the period of youth and manhood, outgrow their natural strength, who are afflicted with languor, listlessness, loss of appetite, gloomy feelings, &c., they impart to the recuperative organs a healthy regularity of action.

To the low-spirited and perverse they impart gaiety, vigor, and a happy glow of spirits.

To the aged and infirm, whose constitutions are worn out by debilitations and limbs palsied and enfeebled, they impart the elasticity and buoyancy of mind and body.

To the young, who, between the period of youth and manhood, outgrow their natural strength, who are afflicted with languor, listlessness, loss of appetite, gloomy feelings, &c., they impart to the recuperative organs a healthy regularity of action.

To the thoughtless and vicious they impart警fulness, vigor, and a happy glow of spirits.

To the aged and infirm, whose constitutions are worn out by debilitations and limbs palsied and enfeebled, they impart the elasticity and buoyancy of mind and body.

To the young, who, between the period of youth and manhood, outgrow their natural strength, who are afflicted with languor, listlessness, loss of appetite, gloomy feelings, &c., they impart to the recuperative organs a healthy regularity of action.

To the low-spirited and perverse they impart gaiety, vigor, and a happy glow of spirits.

To the aged and infirm, whose constitutions are worn out by debilitations and limbs palsied and enfeebled, they impart the elasticity and buoyancy of mind and body.

To the young, who, between the period of youth and manhood, outgrow their natural strength, who are afflicted with languor, listlessness, loss of appetite, gloomy feelings, &c., they impart to the recuperative organs a healthy regularity of action.

To the thoughtless and vicious they impart警fulness, vigor, and a happy glow of spirits.

To the aged and infirm, whose constitutions are worn out by debilitations and limbs palsied and enfeebled, they impart the elasticity and buoyancy of mind and body.

To the young, who, between the period of youth and manhood, outgrow their natural strength, who are afflicted with languor, listlessness, loss of appetite, gloomy feelings, &c., they impart to the recuperative organs a healthy regularity of action.

To the low-spirited and perverse they impart gaiety, vigor, and a happy glow of spirits.

To the aged and infirm, whose constitutions are worn out by debilitations and limbs palsied and enfeebled, they impart the elasticity and buoyancy of mind and body.

To the young, who, between the period of youth and manhood, outgrow their natural strength, who are afflicted with languor, listlessness, loss of appetite, gloomy feelings, &c., they impart to the recuperative organs a healthy regularity of action.

To the thoughtless and vicious they impart警fulness, vigor, and a happy glow of spirits.

To the aged and infirm, whose constitutions are worn out by debilitations and limbs palsied and enfeebled, they impart the elasticity and buoyancy of mind and body.

To the young, who, between the period of youth and manhood, outgrow their natural strength, who are afflicted with languor, listlessness, loss of appetite, gloomy feelings, &c., they impart to the recuperative organs a healthy regularity of action.

To the low-spirited and perverse they impart gaiety, vigor, and a happy glow of spirits.

To the aged and infirm, whose constitutions are worn out by debilitations and limbs palsied and enfeebled, they impart the elasticity and buoyancy of mind and body.

To the young, who, between the period of youth and manhood, outgrow their natural strength, who are afflicted with languor, listlessness, loss of appetite, gloomy feelings, &c., they impart to the recuperative organs a healthy regularity of action.

To the thoughtless and vicious they impart警fulness, vigor, and a happy glow of spirits.

To the aged and infirm, whose constitutions are worn out by debilitations and limbs palsied and enfeebled, they impart the elasticity and buoyancy of mind and body.

To the young, who, between the period of youth and manhood, outgrow their natural strength, who are afflicted with languor, listlessness, loss of appetite, gloomy feelings, &c., they impart to the recuperative organs a healthy regularity of action.

To the low-spirited and perverse they impart gaiety, vigor, and a happy glow of spirits.

To the aged and infirm, whose constitutions are worn out by debilitations and limbs palsied and enfeebled, they impart the elasticity and buoyancy of mind and body.

To the young, who, between the period of youth and manhood, outgrow their natural strength, who are afflicted with languor, listlessness, loss of appetite, gloomy feelings, &c., they impart to the recuperative organs a healthy regularity of action.

To the thoughtless and vicious they impart警fulness, vigor, and a happy glow of spirits.

To the aged and infirm, whose constitutions are worn out by debilitations and limbs palsied and enfeebled, they impart the elasticity and buoyancy of mind and body.

To the young, who, between the period of youth and manhood, outgrow their natural strength, who are afflicted with languor, listlessness, loss of appetite, gloomy feelings, &c., they impart to the recuperative organs a healthy regularity of action.

To the low-spirited and perverse they impart gaiety, vigor, and a happy glow of spirits.

To the aged and infirm, whose constitutions are worn out by debilitations and limbs palsied and enfeebled, they impart the elasticity and buoyancy of mind and body.

To the young, who, between the period of youth and manhood, outgrow their natural strength, who are afflicted with languor, listlessness, loss of appetite, gloomy feelings, &c., they impart to the recuperative organs a healthy regularity of action.

To the thoughtless and vicious they impart警fulness, vigor, and a happy glow of spirits.

To the aged and infirm, whose constitutions are worn out by debilitations and limbs palsied and enfeebled, they impart the elasticity and buoyancy of mind and body.

To the young, who, between the period of youth and manhood, outgrow their natural strength, who are afflicted with languor, listlessness, loss of appetite, gloomy feelings, &c., they impart to the recuperative organs a healthy regularity of action.

To the low-spirited and perverse they impart gaiety, vigor, and a happy glow of spirits.

To the aged and infirm, whose constitutions are worn out by debilitations and limbs palsied and enfeebled, they impart the elasticity and buoyancy of mind and body.

To the young, who, between the period of youth and manhood, outgrow their natural strength, who are afflicted with languor, listlessness, loss of appetite, gloomy feelings, &c., they impart to the recuperative organs a healthy regularity of action.

To the thoughtless and vicious they impart警fulness, vigor, and a happy glow of spirits.

To the aged and infirm, whose constitutions are worn out by debilitations and limbs palsied and enfeebled, they impart the elasticity and buoyancy of mind and body.

To the young, who, between the period of youth and manhood, outgrow their natural strength, who are afflicted with languor, listlessness, loss of appetite, gloomy feelings, &c., they impart to the recuperative organs a healthy regularity of action.

To the low-spirited and perverse they impart gaiety, vigor, and a happy glow of spirits.

To the aged and infirm, whose constitutions are worn out by debilitations and limbs palsied and enfeebled, they impart the elasticity and buoyancy of mind and body.

To the young, who, between the period of youth and manhood, outgrow their natural strength, who are afflicted with languor, listlessness, loss of appetite, gloomy feelings, &c., they impart to the recuperative organs a healthy regularity of action.

To the thoughtless and vicious they impart警fulness, vigor, and a happy glow of spirits.

To the aged and infirm, whose constitutions are worn out by debilitations and limbs palsied and enfeebled, they impart the elasticity and buoyancy of mind and body.

To the young, who, between the period of youth and manhood, outgrow their natural strength, who are afflicted with languor, listlessness, loss of appetite, gloomy feelings, &c., they impart to the recuperative organs a healthy regularity of action.

To the low-spirited and perverse they impart gaiety, vigor, and a happy glow of spirits.
