## THE

## PREFACE

~HE favourable Reception my two former Volumes of Voyages and Defcriptions have already met with in the World, gives me Reafon to hope, That notwithftanding the ObjeCtions which have been raifed againft me by prejadiced Perfons, this Third Volume likewife may in fome meafure be acceptable to Candid and Impartial Readers, who are curious to know the Nature of the Inhabitants, Animals, Plants, Soil, ert. in thofe diftant Countries, which have either feldom or not at all been vifited by any Earopeans.

$$
\mathbf{A}_{4} \quad \mathbf{l t}_{t}
$$

## Thbe Preface.

$\therefore$ It has almoft always been the Fate of thofe who have made new Difcoveries, to be difefteeined and flightly fpoken of, by fuch as either have had no true Relifh and Value for the Things themselves that are difcovered, or have had fome Prejudice againft the Perfons by whom the Difcoveries were made. It would be vain therefore and unreafonable in me to expect to efcape the Cenfure of all, or to hope for better Treatment than far Worthier Perfons have met with before me. But this Satisfaction I am fure of having, that the Things themfelves in the Difcovery of which I have been imployed, are moft worthy of our Diligenteft Search and Inquiry ; being the various and wonderful Works of God in different Parts of the World : And however unfit a Perfon I may be in other refpects to have undertaken this Task, yet at leaft I have given a faithful Ac-

## The Preface.

count, and have found fome Things undifcovered by any before, and which may at leaft be fome Affiftance and Direction to better qualified Perfons who thall come after me.

It has been Objected againft me by fome, that my Accounts and Defcriptions of Things are dry and jejune, not filled with variety of pleafant Matter, to divert and gratify the Curious Reader. How far this is true, I muft leave to the World to judge. But if I have been exactly and ftrickly careful to give only True Relations and Defrriptions of Things (as I am fure I have;) and if my Defcriptions be fuch as may be of ufe not only to my felf (which I have already in good meafure experienced) but alfo to others in future Voyages; and likewife to fuch Readers at home as are more defirous of a Plain and Juft Account of the true Nature and State of the Things, de-

## The Preface.

defcribed, than of a Polite and Rhetorical Narrative : I hope all the Defects in my Stile, will meet with an eafy and ready Pardon.

Others have taxed me with borrowing from other Men's Journals; and with Infufficiency, as if I was not my felf the Author of what I write, but publifhed Things digetted and drawn up by others. As to the firft Part of this Objection, I affure the Reader, I have taken nothing from any Man without mentioning his Name, except fome very few Relations and particular Obfervations received from credible Perfons who defired not to be named; and thefe I have always exprestly diftinguifhed in my Books, from what I relate as of my own obferving. And as to the latter; I think it fo far from being a Diminution to one of my Education and Employment, to have what I write, Revifed and Corrected by Friends; that on the

## The Preface.

contrary, the beft and moft eminent Authors are not afhamed to own the fame Thing, and look upon it as an Advantage.

Laftly, I know there are fome who are apt to flight my Accounts and Defcriptions of Things, as if it was an eafie Matter and of little or no Difficulty to do all that I have done, to vifit little more than the Coafts of unknown Countries, and make fhort and imperfect Ob fervations of Things only near the Shore. But whoever is experienced in thefe Matters, or confiders Things impartially, will be of a very different Opinion. And any one who is fenfible, how backward and refractory the Seamen are apt to be in long Voyages when they know not whither they are going, how ignorant they are of the Nature of the Winds and the fhifting Seafons of the Monfoons, and how little even the Officers themfelves generally are skilled

## The Preface.

skilled in the Variation of the Needie and the Ufe of the Azimuth Compafs; befides the Hazard of all outward Accidents in ftrange and unknown Seas: Any one, I fay, who is fenfible of thefe Difficulties, will be much more pleafed at the Difcoveries and Obfervations I have been able to make, than difpleafed with me that I did not make more.

Thus much I thought neceffary to premife in my own Vindication, againft the Objections that have been made to my former Performances. But not to trouble the Reader any further with Matters of this Nature ; what I have more to Offer, fhall be only in relation to the following Voyage.

For the better apprehending the Courfe of this Voyage, and the Situation of the places mentioned in it, I have here, as in the former Volumes, caufed a Map to be Ingraven, with a prick'd Line, reprefenting

## The Preface.

prefenting to the Eye the whole Thread of the Voyage at one View ; befides Draughts and Figures of particular Places, to make the Defcriptions I have given of them more intelligible and ufe. ful.

Moreover, which I had not the opportunity of doing in my former Voyages; having now had in the Ship with me a Perfon skill'd in Drawing, I have by this means been enabled, for the greater Satisfaction of the Curious Reader, to prefent him with exact Cuts and Figures of feveral of the principal and moit remarkable of thofe Birds, Beafts, Fifhes and Plants, which are defcribed in the following Narrative ; and alfo of feveral, which not being able to give any better or fo good an Account of, as by caufing them to be exadly Ingraven, the Reader will not find any further Defcription of them, but only that they were found

## This Preface.

found in fuch or fuch particular Countries. The Plants themfelves are in the Hands of the Ingenious Dr. Woodpard. I could have caufed many others to be drawn in like manner, but that I refolved to confine my Self to fuch only, as had fome very remarkable difference in the fhape of their principal Parts from any that are found in Europe. I have befides feveral Birds and Fifhes ready drawn, which $I$ could not put into the prefent Volume, becaufe they were found in Countries, to the Defcription whereof the following Narrative does not reach. For, being oblito prepare for another Voyfooner than I at firft expecthave not been able to Contifue the enfuing Narrative any further than to my Departure from the Coaft of Ners Holland. But, if it pleafe God * that I return again fafe, the Reader may exped a Continuation of this Voyage from

## The Preface.

my departure from New Holland, till the foundring of my Ship near the Illand of Afcenfion.

In the mean time, to make the Narrative in fome meafure complear, I fhall here add a Summary Abftract of that latter part of the Voyage, whereof I have not had time to draw out of my Journals a full and particular Account at large. Departing therefore from the Coaft of New Holland in the beginning of September, 1699 . (for the Reafons mentioned Page 154.) we arrived at Tizsor, Sept. 1 5. and Anchored off that Illand. On the $24^{\text {th }}$ we obtain'd a fmall Supply of frefh Water from the Governor of a Dutch Fort and Factory there; we found alfo there a Portuguefe Settlement, and were kindly treated by them. On the 3 gd of December we arrived on the Couft of New Guines, where we found good frefh Water, and hadicoms merce with the Inhabitants of a

## The Preface.

certain Illand call'd Pulo-Sabuti. After which, pafling to the Northward, we ranged along the Coaft to the Eaftermoft part of New Guinea; which I found does not join to the main Land of Ners Guinea, but is an Ifland, as I have defcribed it in my Map, and call'd it New Britain.

It is probable this Ifland may afford many rich Commodities, and the Natives may be eafily brought to Commerce. But the many Difficulties I at this time met with, the want of convenience to clean my Ship, the fewnels of my Men, their defire to haften home, and the danger of continuing in thefe Circumftances in Seas where the Shoals and Coalts were utterly unknown, and muft be fearched out with much Caution and length of time; hindred me from profecuting any further at prefent my intended Search. What I have been able to do in this Mat-

The Preface.
ter for the Publick Service, will, I hope, be candidly receiv'd.; and no Difficulties Ihall difcourage me from endeavouring to promote the fame End, whenever I have an opportunity put into my Hands.

May 18. in our return, we arrived again at Timor. Fune 21; due palt by pant of, the Ifland fava. Iuly is we anchored in Bataviat Road; and I went afhore, vilted the Dutch General, and detired the Privilege of buying Provifions that wanted ; which was granted me. In this Road, we lay till the 17 th of October following; when, having fitted the Ship; recruited my Self with Provifionş, filled all my Water, and the Seafon of the year for returning towards Europe being come; I fet Sail from Batavia, and on the roth of December made the Cape of Goood Hope; whence departing $\mathcal{F}$ an. ir , we made the Illand of Santa Hellena on the 31 ft; and February the 2 ift. the Illand. a

## The Preface.

of Afcenfion; near to which my Ship, having fprung a Leak which could not be ftopped, foundred at Sca; with much difficulty we got afhore, where we liv'd on Goats and Turtle; and on the 26 th of February found, to our great Comfort, on the S. E. fide of a high Mountain, about half a mile from its top, a Spring of frefh Water. 1 returned to England in the Canterbury Eaft-India-Ship. For which wonderfut Deliverance from to many and great Dangers, I think my felf bound to rettritn continual Thanks to Almighty God; whofe Divine Providence if it fall pleafe to bring me fafe again to my Na tive Country from my prefent intended Voyage; 1 hope to publihh a particular Account of all the material Things I obferved in the feveral Placés which I have now but barely mentioned.

## An Error noted. C. Finefterre.

Ceem'd to have gone nearer to it than they ${ }^{A n .}$ 1699: thought they .hould. My Mafter, who was Comewhat troubled at it at firt, was not difbleas'd however to find that hẹ had Company in his Miftake: Which, as I have heard, is a very common one, and fatal to many Ships. The Occafion of it is the not allowing for the Change of the Variation fince the making of the Charts; which Captain Hally has obferv'd to be very confiderable. I thall refer the $A n A d-$ Reader to his own Account of it which he vertifecaus'd to be Publifh'd in a fingle Sheet of ment nePaper, purpofely for a Caution to fach as be obfervid pafs to and fro the Englig Channel. The Ti in the Naof it. le of it is in the Margin. And my own Ex-up and perience thus confirming to me the Ufefulnefs ${ }^{\text {down }}$ tbe of fuch a Caution, I was willing to take this bannel of occafion of helping towards the making it the soid by more Publick.

Not to trouble the Reader with every Prince's Days Run, nor with the Winds or Weather ${ }_{S_{\text {c: }} P_{i t} \text { inl's }}^{\text {Arms in }}$ (but only in the remoter Parts, where it may churchbe more particularly ufeful) ftanding away Price $2 d$ : from C. la Hague, we made the Start about 5 that Afternoon; which being the laft Land we faw of England, we reckon'd our Deparfure from thence: 'Tho' we had rather have aken it frow the Lizard, if the hazy Weather would have fuffer'd us to have feen t.

The firt Land we faw after we were out pf the Channel was C. Finifterre, which we

4 J. Lancerota. J. Allegrance. J. Tener. $\overbrace{}^{\text {An. }}{ }^{1699}$ Lancerota, one of the Canary Iflands; of which, and of Allegrance, another of them, I have here given the Sights, as they both appeared to us at two feveral Bearings and Diffances. [Table I. ${ }^{\circ}$. $\mathbf{I}$, 2.]
We were now ftanding away for the Ifland Teneriffe, where I intended to take in fomes Wine and Brandy for my Voyage. Oṇ Sunday, half an hour paft 3 in the Afternoon, we made the Ifland, and crouded in with all our Sails till 5 ; when the N. E. Point of the Inle bore W. S. W. dift. 7 Leagues: But being then fo far off that 1 could not expect to get in before Night, I lay by till next Morning, deliberating whether I hould put in at Santa Cruz, or at Oratavia, the one on the E. the other on the W. fide of the Illand ; which lies moftly North and South; and thefe are the principal Ports on each Side. I chofe Santa Cruz as the better Harbour (efpeciall at this time of the Year) and as beft furnilh' with that fort of Wine which I had occafion to take in for my Voyage: So there I comed to an Anchor Fan. 30th, in 33 Fathom-wa ter, black flimy Ground; about half a Mild from the Shore; from which diftance I tool the Sight of the Town. [Table I. No.3.] In the Road Ships mult ride in 30, 40, 0 50 Fathom-water, not above half a mile fron the Shore at fartheft: And if there are man Ships, they muft ride clofe one by anothet The Shore is generally high Land, and if moft Places fteep too. This Road lies fo ope

## Santa Cruz Road, T. and Wrecks.

 to the Eaft, that Winds from that fide make a great Swell, and very bad going afhore in Boats: The Ships that ride here are then often forced to put to Sea, and fometimes to cut or flip their Anchors, not being able to weigh them. The beft and fmootheft Landng is in a finall fandy Cove, about a mile to the N. E. of the Road, where there is good Water, with which Ships that lade here are Cupply'd; and many times Ships that lade at Oratavia, which is the chief Port for Trade, rend their Boats hither for Water. That is a worfe Port for Wefterly than this is for Eafterly Winds; and then all Ships that are there put to Sea. Between this Watering-place and Santa Cruz are two little Forts; which with fome Batteries fcatter'd along the Coaft command the Road. Santa Cruz its felf is a finall unwalled Town fronting the Sea, guarded with two other Forts to fecure the Road. There are about 200 Houfes in the Fown, all two Stories high, ftrongly buils with Stone, and covered with Pantile. It path two Convents and one Church, which re the beft Buildings in the Town. The Forts here could not fecure the Spanifh Gallepns from Admiral Blake, tho' they hall'd in lofe under the main Fort. Many of the Inabitants that are now living remember that Ation; in which the Englif batter'd the Town, and did it much Damage; and the narks of the Shot ftill remain in the FortValls. The Wrecks of the Galleons that
## 6 <br> Way from Santa Cruz to Laguna.

$\overbrace{\text { An. } 1695 \text {.were burnt here, lie in } 15 \text { Fathom-water : }}$ And'tis faid that moft of the Plate lies there, tho' fome of it was haftily carried afhore at Blake's coming in fight.

Soon after I had anchor'd I went afhore here to the Governor of the Town, who receiv'd me very kindly, and invited me to dine with him the next day. I return'd on board in the Evening, and went athore again with two of my Officers the next Morning ; hoping to get up the Hill time enough to fee Laguna, the principal Town, and to be back again to Dine with the Governour of Santa Cuiz ; for I was told that Laguna was but 3 Mile off. The Road is all the way up a pretty fteep Hill; yet not fo fteep but that Carts go up and down laden. There are Publick Hicules fattering by the way-fide, where we got fome Wine. The Land on each fide feemed to be but rocky and dry; yet in many Places we faw Spots of green flourihing Corn. At farther diftances there were fmall Vineyards by the Sides of the Mountains, intermixt with abundance of watte rocky Land, unfit for Cultivation, which afforded only Dildo-bufhes. It was about 7 or 8 in the Morning when we fet out from Santa Cruz and it being fair clear Weather, the Sun thone very bright and warmed us fufficiently before we got to the City Laguna ; which we reached about 10 a Clock, all fweaty and tired, and were glad to refrefh our felve: with a little Wine in a forry Tipling houfe

## Laguna T. and Gardens.

But we foon found out one of the Englith An. 1699: Merchants that refided here ; who entertain'd us handfomly at Dinner, and in the Afternoon thew'd us the Town.

Laguna is a pretty large well-compacted Town, and makes a very agreeable Profpect. It ftands part of ir againft a Hill, and part in a Level. The Houfes have moftly ftrong Walls built with Stone and covered with Pantile. They are not uniform, yet they appear pleafant enough. There are many fair Buildings; among which are 2 ParifhChurches, 2 Nunneries, an Hofpital, 4 Convents, and fome Chapels; befides many Gentlemens Houfes. The Convents are thofe of St. Auftin, St. Dominick, St. Francis, and St. Diego. The two Churches have pretty high fquare Steeples, which top the reft of the Buildings. The Streets are not regular, yet they are moftly fpacious and pretty handfome; and near the middle of the Town is a large Parade, which has good Buildings about it. There is a ftrong Prifon on one fide of it; near which is a large Conduit of good Water, that fupplies all the Town. They have many Gardens which are fet round with Oranges, Limes, and other Fruits: In the middle of which are Pot-herbs, Sallading, Flowers, foc. And indeed, if the Inhabitants were curious this way, they might have very pleafant Gardens: For as the Town ftands high from the Sea, on the Brow of a Plain that is all open to the Eaft, and

An. 1699.hath confequently the benefit of the true Trade-wind, which blows here, and is moft commonly fair; fo there are feldom wanting, at this Tuwn, brisk, cooling, and refrefhing Breezes all the day.

On the back of the Town there is a large Plain of 3 or 4 Leagues in length and 2 Miles wide, producing a thick kindly fort of Grafs, which lookt green and very pleafant when I was there, like our Meadows in England in the Spring. On the Eaft-fide of this Plain, very near the back of the Town, there is a natural Lake or Pond of frefh Water. It is about half a Mile in circumference; but being ftagnant, 'tis only us'd for Cattle to drink of. In the Winter-time feveral forts of wild Fowl refort hither, affording plenty of Game to the Inhabitants of Laguna. This City is called Laguna from hence; for that Word in Spanifh fignifies a Lake or Pond. The Plain is bounded on the W. the N. W. and the S. W. with high fteep Hills; as high above this Plain as this is above the Sea; and 'tis from tine foot of one of thefe Mountains that the Water of the Conduit which fupplies the Town, is conveyed over the Plain, in Troughs of Stone rais'd upon Pillars. And, indeed, confidering the Situation of the Town, its large Profpect to the Eaft (for from hence you fee the Grand Canary) its Gardens, cool Arbors, pleafant Plain, green Fields, the Pond and Aqueduc, and its refrefhing Breezes, it is a very delightful Dwelling :

## Pike of Ten. Wines. Oratavia.

efpecially for fuch as have not Bufinefs that $A \mathrm{An}^{1699 .}$ calls them far and often from home: For the Illand being generally Mountainous, fteep and craggy, full of Rifings and Fallings, 'tis very troublefome Travelling up and down in it, unlefs in the Cool of the Mornings and Evenings: And Mules and Affes are moft us'd by them, both for Riding and Carriage, as fitteft for the ftony, uneven Roads.

Beyond the Mountains, on the S. W. fide, ftill further up, you may fee from the Town and Plain a fmall peeked Hill, overlooking the reft. This is that which is called the Pike of Teneriffe, fo much noted for its heighth: But we faw it here at fo great a difadvantage, by reafon of the nearnef's of the adjacent Mountains to us, that it looked inconfiderable in refpect to its Fame.

The true Malmefy Wine grows in this Illand; and this here is faid to be the beft of its kind in the World. Here is alfo CanaryWine, and Verdona, or Green-wine. The Canary grows chiefly on the Weft-fide of the Illand; and therefore is commonly fent to Oratavia; which being the chief Sea-port for Trade in the Illand, the principal Engliß Merchants refide there, with their Conful ; becaufe we have a great Trade for this Wine. I was told, That that Town is bigger than Laguna; that it has but one Church, but many Convents: That the Port is but ordinary at beft, and is very bad when the $\mathrm{N} . \mathrm{W}$. Winds blow. Thefe Norwefters give notice

## 10

 Verdona-mine, Fruits, \&c:An. 1699 tice of their coming, by a great Sea that tumbles in on the Shore for fome time before they come, and by a black Sky in the N. W. Upon thefe Signs Ships either get up their Anchors, or Alip their Cables and put to Sea, and ply off and on till the Weather is over. Sometimes they are forced to do fo 2 or 3 times before they can take in their Lading; which 'tis hard to do here in the faireft Weather: And for frefh Water, they fend, as I have faid, to Santa Cruz. Verdona is green, ftrong-bodied Wine, harfher and fiharper than Canary. 'Tis not fo much efteemed in Europe, but is exported to the WeftIndies, and will keep beft in hot Countries; for which Reafon I touch'd here to take in fome of it for my Voyage. This fort of Wine is made chiefly on the Eaft fide of the Illand, and fhipt off at Santa Cruz.

Befides thefe Wines, which are yearly vended in great plenty from the Caxary Iflands. (chiefly from Grand Canary, Teneriffe, and Palma) here isftore of Grain, as Wheat, Barly and Maiz, which they often tranfport to other places. They have alfo fome Beans.and Peas, and Coches, a fort of Grain much like Maiz, fow'd moftly to fatten Land. They have Papah's; which I fhall fpeak more of hereafter; Apples, Pears, Plumbs, Cherries, and excellent Peaches, Apricocks, Guava's, Pomegranates, Citrons, Oranges, Lemons. Limes, Pumpkins, Onions the beft in the World, Cabbages, Turnips, Potato's, © $\varepsilon_{a}$

## Animals and Trade of the Canaries.

They are allo well focked with Horfes, $A n .1609$ Cows, Affes, Mules, Sheep, Goats, Hogs, Conies, and plenty of Deer. The Lancerot Horfes are faid to be the moft mettlefome, fleet, and loyal Horfes that are. Laftly, here are many Fowls, as Cocks and Hens, Ducks, Pidgeons, Patridges, ©rc. with plenty of Fifh, as Mackril, erc. All the Canary Iflands have of thefe Commodities and Provifions more or lefs: But as Lancerota is moft fam'd for Horfes, and Grand Canary, Teneriffe, and Palma for Wines, Teneriffe efpecially for the beft Malmefy, (for which reafon thefe 2 Iflands have the chief Trade) fo is Fortezentura for Dunghil-Fowls, and Gomera for Deer. Fowls and other Eatables are dear on the Trading Iflands; but very plentiful and cheap on the other; and therefore 'tis beft for fuch Ships that are going out on long Voyages, and who defign to take in but little Wine, to touch rather at thefe laft; where alfo they may be fupply'd with Wine enough, and good cheap: And for my own part, if I had known it before I came hither. I fhould have gone rather to one of thofe Iflands than to Teneriffe : But enough of this.
'Tis reported they can raife 12000 armed Men on this Ifland. The Governor or General (as he is call'd) of all the Canary Iflands lives at Laguna: His Name is Don Pedro de Ponto. He is a Native of this Ifland, and was not long fince Prefident of Panama in the South Seas; who bringing fome very rich

12 Governors at Laguna and Santa Cruz. An. 1699. Pearls from thence, which he prefented to the Queen of Spain, was therefore, as 'tis faid, made General of the Canary Illinds. The Grand Canary is an 1 II and much fuperiour to Teneriffe both in Bulk and Value; but this Gentleman chules rather to refide in this his native Illand. He has the Character of a very worthy Perfon; and governs with Moderation and Juftice, being very well beloved.

One of his Deputties was the Governor of Santa Cruz, with whom I was to have Dind ; but ftaying fo long at Laguna, I came but time enough to fup with him. He is a civil, difcreet Man. He reffdes in the main Fort clofe by the Sea. There is a Centinel ftands at his Door; and he has a few Servants to wait on him. I was Treated in a large dark lower Room, which has but one fmall Window. There were about 200 Mufkets hung up againft the Walls, and fome Pikes; no Wainfcot, Hangings, nor much Furniture. There was only a fmall old Table, a few old Chairs, and 2 or 3 pretty long Forms to fit on. Having Supp'd with him, I invited him on Board, and went off in my Boat. The next Morning he came aboard with another Gentleman in his Cornpany, attended by 2 Servants: But he was prefently Sea-fick, and fo much out of order, that he could fcarce Eat or Drink any Thing, but went quickly afhore agair.

## Trade-Wind. Pike of Ten.

Having refrefh'd my Men afhore, and ta- An. 1699. ken in what we had occafion for, I Sail'd away from Santa Cruz on Feb.4. in the Afternoon; haftening ont all I could, becaufe the N. E. Winds growing ftormy made fo great Sea, that the Ship was fcarce fafe in the Road; and I was glad to get out, tho' we left behind feveral Goods we had bought and paid for: For a Boat could not go afhore; and the ftrefs was fo great in weighing Anchor, that the Cable broke. I defign'd next for the I. of Mayo, one of the C. Verd Iflands; and ran away with a ftrong N. E. Wind, right afore it, all that Night and the next Day, at the rate of 10 or II Miles an Hour; when it flacken'd to a more moderate Gale. The $\mathrm{Ca}-$ nary Illands are, for their Latitude, within the ufual Verge of the True or General Trade-Wind; which I have obferv'd to be, on this fide the Equator, N. Eafterly : But then lying not far from the African Shore, they are moft fubject to a N. Wind, which is the Coafting and conftant Trade, fweeping that Coaft down as low as to C. Verd; which fpreading in breadth, takes in moftly the Ca nary Iflands; tho' it be there interrupted frequently with the True Trade-Wind, N. Weft-Winds, or other Shifts of Wind that Illands are fubject to; efpecially where they lie many together. The Pike of Teneriffe, which had generally been Clouded while we lay at Santa Cruz, appear'd now all white with Snow, hovering over the other Hills;

14 J. Mayo, one of the $C$. Verd's. An. 1699. but their height made it feem the lefs conffderable; for it looks moft remarkable to Ships that are to the Weftward of it. We had brisk N. N. E. and N. E. Winds from Teneriffe; and faw Flying-fifh, and a great deal of Sea-thiftle Weed floating. By the gth of Feb. at Noon we were in the Lat. of 15 d . 4 m . fo we fteered away W. N. W. for the I. of Mayo, being by Judgment, not far to the E. of it, and at 8 a Clock in the Evening lay by till Day. The Wind was then at W. by South. and fo it continued all Night, fair Weather, and a fmall eafie Gale. All thefe were great Signs, that we were near fome Land, after having had fuch conftant brisk Winds before. In the Morning after Sunrife, we faw the Ifland at about 4 Leagues diftance. But it was fo hazy over it, that we could fee but a fmall part of it; yet even by that part I knew it to be the Ifle of Mayo. See how it appear'd to us at feveral Viens, as we were compaffing the E. the S. E. and the S. of it, to get to the Road, on the S. W. of it, [Table II. $\left.\mathrm{N}^{\bullet} .1,2,3.\right]$ and the Road it felf [ $\mathrm{N}^{\circ}$. 4.]

I got not in till the next Day, Feb. II. when I come to an Anchor in the Road, which is the Lee-ward part of the Ifland; for 'tis a general Rule, never to Anchor to Wind-ward of an Illand between the Tropicks. We Anchored at in a Clock in 14 Fathom clean Sand, and very fmooth Water, about three quarters of a Mile from the
KII. Cape Verd Iflands P,

$\frac{\text { N.b.E. }}{4} \quad$ I,Mayo

The Road

Shore, in the fame Place where I Anchor'd $\mathrm{An}^{16995}$ - in my Voyage round the World; and found riding here the Newport of London, a Merchant Man, Captain Barefoor Commander, who welcomed me with 3 Guns, and I returned one for Thanks. He came from Fayal, one of the Weftern Illands; and had ftore of wine and Brandy aboard. He was taking in Salt to carry to Newo-found-land, and was very glad to fee one of the King's Ships, being before our coming afraid of Pyrates; which, of late Years, had much infefted this and the reft of the Cape Verd IJlands.

I have given fome Account of the Illand of Mayo, and of other of thefe Iflands, in my Voyage round the World, [Vol. I. p. 70.] but I fhall now add fome further Obfervations that occur'd to me in this Voyage. The I. of Mayo is about 7 Leagues in Circumference, of a roundifh Form, with many fmall rocky Points fhooting out into the Sea a Mile, or more. . Its Lat. is 15 d . N. and as you fail about the Inle, when you come pretty nigh the Shore, you will fee the VVater breaking off from thofe Points; which vou mult give a Birth to, and avoid them. I fail'd at this time two parts in three round the Illand, but faw nothing dangerous befides thefe Points; and they all hew'd themfelves by the Breaking of the Water : Yet 'tis reported, That on the N. and N. N. W. fide there are dangerous Sholes, that lye farther off at Sea; but I was not on that Side. There are 2 Hills
$\underbrace{\text { An. } 1699 . ~ o n ~ t h i s ~ I f l a n d ~ o f ~ a ~ c o n f i d e r a b l e ~ h e i g h t h ; ~ o n e ~}$ pretty bluff, the other peeked at top. The reft of the Ifland is pretty level, and of a good heighth from the Sea: The Shore clear round hath fandy Bays, between the Rocky Points I pake of ; and the whole Ifland is a very dry fort of Soil.

On the Weft-fide of the Inle where the Road for Ships is there is a large Sandy Bay, and a Sand-bank, of about 40 Paces wide within it, which runs along the Shore 2 or 3 Miles; within which there is a large Salink or Salt-pond, contained between the Sandbank and the Hills beyond it. The whole Salina is about 2 Miles in length, and half a Mile wide; but above one half of it is commonly dry. The North end only of the Pond never wants Water, producing Salt from November till May, which is here the dry Seafon of the Year. The Water which yields this Salt works in from out of the Sea through a hole in the Sand-bank before-mentioned, like a Sluce, and that only in Spring-tides; when it fills the Pond more or lefs, according to the heighth of the Tides. If there is any Salt in the Ponds when the Flufh of Water comes in, it prefently diffolves: But then in two or three Days after it begins to Kern; and fo continues Kerning till either all, or the greateft part of the Salt-water is congeal'd or kern'd; or till a frefh Supply of it comes in again from the Sea. This Water is known to come in only at that one Paffage on the N .

## Salt-Kerning, and Irade.

part of the Pond; where alfo it is deepeft. An. 1699\% It was at a Spring of the New Moon when I was there; and I was told that it comes in at no other time but at the New Moon Spring-tides: but why that thould be I can't guefs. They who come hither to lade Salt rake it up as it Kerns, and lay it in heaps on the dry Land, before the Water breaks in anew: And this is obfervable of this Salt-pond, that the Salt kerns only in the Dry Seafon, contrary to the SaltPonds in the Weft-Indies, particularly thofe of the Illand Salt-Tortuiga, which I have formerly mentioned [Vol. I. p. 56.] for they never Kern there till the Rains come in about April; and continue to do fo in May Fune, fuly, \&c. while the Wet Seafon lafts; and not without fome good Shower of Rain firft: But the Reafonalfo of this Difference between the SaltPonds of Mayo, and thofe of the Weft: Indies, why thefe Thould Kern in the Wet Seafon, and the former in the Dry Seafon; I fhall leave to Philofophers.

Our Nation drive here a great Trade for Salt, and have commonly a Man of War here for the Guard of our Ships and Barks that come to take it in, of which I have been inform'd that in fome Years there have not been lefs than 100 in a Year. It cofts nothing but Men's Labour to rake it together; and wheel it out of the Pond;
C except

## 18

Frape-boats defcribed.
An. 1699. except the Carriage: And that alfo is very cheap; the Inhabitants having plenty of Affes, for which they have little to do befides carrying the Salt from the Ponds to the Sea-tide at the Seafon when Ships are here. The Inhabitants lade and drive their Affes themfelves, being very glad to be imploy'd; for they have fcarce any other Trade but this to get a Penny by. The Pond is not above half a Mile from the Landing-place, fo that the Affes make a great many Trips in a day. They have a fet number of Turns to and fro both Forenoon and Afternoon, which their Owners will not exceed. At the Landing-place there lies a Frape-boat, as our Seamen call it, to take in the Salt. 'Tis made purpofely for this ufe, with a Deck reaching from the Stern a third part of the Boat ; where there is a kind of Bulk-head that rifes, not from the Boats bottom, but from the Edge of the Deck, to about 2 foot in heighth; all calk'd very tight. The Ufe of it is to keep the Waves from dafhing into the Boat, when it lies with its Head to the Shore, to take in Salt : For here commonly runs a great Sea; and when the Boat lies fo with its Head to the Shore, the Sea breaks in over the Stern, and would foon fill it, was it not for this Bulk-head, which fops the Waves that come flowing upon the Deck,

## Frape-boats defcribed.

and makes them run off into the Sea on An. 1699: each fide. To keep the Boat thus with the Head to the Shore, and the Stern to the Sea, there are two ftrong Stantions fet up in the Boat; the one at the Head, the other in the middle of it, againft the Bulkhead, and a Foot higher than the Bulkhead. There is a large Notch cut in the top of each of the fe Stantions big enough for a fmall Hazer or Rope to lie in; one end of which is faften'd to a Poft afhore, and the other to a Grapling or Anchor lying a pretty way off at Sea : This Rope ferveth to hale the Boat in and out, and the Stantions ferve to keep her faft, fo that the cannot fwing to either fide when the Rope is hal'd tight : For the Sea would elfe fill her, or tofs her afhore and ftave her. The better to prevent her ftaving and to keep her the tighter together, there are two fets of Ropes more: The firft going athwart from Gunnal to Gunnal, which, when the Rowers Benches are laid, bind the Boats fides fo hard againft the Ends of the Benches that they cannot eafily fall afunder, while the Benches and Ropes mutually help each other; the Ropes keeping the Boats fides from flying off, and the Benches from being crufh'd together inwards. Of thefe Ropes there are ufually but two, dividing the Boats length, as they go acrofs the fides, into there equal

Frape-boats bow manag'd.
An. 1699. parts. The other fet of Ropes are more in number, and are fo plac'd as to keep the Ribs and Planks of the Boat from ftarting off. For this purpofe there are holes made at certain diftances through the Edge of the Keel that runs along on the infide of the Boat; through which thefe Ropes paffing are laid along the Ribs, fo as to line them, or be themfelves as Ribs upon them, being made faft to them by Rattan's brought thither, or fmall Cords twifted clofe about both Ropes and Ribs, up to the Gunnal: By which means tho' feveral of the Nails or Pegs of the Boat fhould by any fhock fall out, yet the Ropes of thefe two fets might hold her together : Efpecially with the help of a Rope going quite round about the Gunnal on the out-fide, as our Long-boats have. And fuch is the Care taken to ftrengthen the Boats; from which girding them with Ropes, which our Seamen call Fraping, they have the Name of Frape-boats. Two Men fuffice to hale her in and out, and take in the Salt from Shore (which is brought in Bags) and put it out again. As foon as the Boat is brought nigh enough to the Shore, he who ftands by the Bulk-head takes inftantly a turn with the Hazer about the Bulk-head-Stantion; and that ftops her faft before the Sea can turn her afide: And when the two Men have got in their Lad-

## 1. Mayo. Silk-Cotton.

ing, they hale off to Sea, till they come a ${ }^{A n .}$, $\sim_{99}$ little without the fwell; where they remove the Salt into another Boat that carries it on board the Ship. Without fuch a Frape-boat here is but bad Landing at any. time: for tho' 'tis commonly very fmooth in the Road, yet there falls a great Sea on the Shore, fo that every ship that comes here fhould have fuch a Boai, and bring, or make, or borrow one of other Ships that happen to be here; for the Iahabitants have none. I have been thus particular in the Defcription of there Frapeboats, becaufe of the Ufe they may be of in any Places where a great S a falls in upon the Shore; as it doth efpecially in many open Roads in the Eaft and Weft-Indies; where they might therefore be very ferviceable; but I never faw any: of them there.

The Inland Mayo is generally barren, being dry, as I faid; and the beft of it is but a very indifferent Soil. The fandy Bank that pens in the Salt-pond hath a fort of Silk Cotton growing upon it, and a Plant that runs along upon the Ground, branching out like a Vine, but with thick broad Leaves. The Silk-Cotton grows on tender Shrubs, 3 or 4 Foot high, in Cods as big as an Apple, but of a long fhape; which when ripe open at one end, parting leifurely into 4 quarters; and at the firfo open-

An. 1699. ing the Cotton breaks forth. It may be of ufe for ftuffing of Pillows, or the like; but elfe is of no value, any more than that of the great Cotton tree. I took of thefe Cods before they were quite ripe, and laid them in my Cheft; and in two or three days they would open and throw out the Cotton. Others I have bound faft with Strings, fo that the Cod could not open; and in a few Days after, as foon as I flackned the String never fo little, the Cod would burft, and the Cotton fly out forceably, at a very little hole, juft as the Pulp out of a roafting Apple, till all has been out of the Cod. I met with this fort of Cotton afterwards at Timor (where it was ripe in November) and no where elfe in all my Travels; but I found two other forts of Silk-cotton at Brazil, which I thall there defcribe. The right CottonShrub grows here alfo, but not on the Sand-bank. I faw fome Buthes of it near the Shore; but the moft of it is planted in the middle of the Ifle, where the Inhabitants live, Cotton-cloth being their chief Manufacture; but neither is there any great fore of this Cotton. There alfo are fome Trees within the Ifland, but none to be feen near the Sea-fide; nothing but a few Bulhes fcattering upand down againft the fides of the adjacent Hills; for, as I faid before, the Land is pretty high from

## Soil of I. Mayo, Towns, \&c.

the Sea. The Soil is for the moft part ${ }^{A n .} 1699$ either a fort of Sand, or loofe crumbling Stone, without any frefh Water Ponds or Streams, to moiften it; but only Showers in the Wet-feafon, which run off as faft as they fall : except a fmall Spring in the middle of the Infe, from which proceeds a little Stream of Water that runs through a Valley between the Hills. There the Inhabitants live in three fmall Towns, having a Church and Padre in each Town: And thefe Towns, as I was inform'd, are 6 or 7 Miles from the Road. Pinofe is faid to be the chief Town, and to have two Cburches: St. Fohns the next; and the third Lagoa. The Houfes are very mean; frnall, low Things. They build with Fig-tree; here being, as I was told, no other Trees fit to build with. The Rafters are a fort of wild Cane. The Fruits of this Ifle are chiefly Figs, and WaterMelons. They have alfe Callavances (a fort of Pulfe fike French Beans) and Pumpkins, for ordinary Food. The Fowls are Flamingo's, Great Corlews, and GuineaHens; which the Natives of thofe Iflands. call Gallena Pintata, or the Painted Hen; but in $\begin{aligned} & \text { famaice, where } 1 \text { have feen alfothofe }\end{aligned}$ Birds in the dry Savannah's and Woods, (for they love to run about in fuch Places) they are calld Guinea-Hens. They feem to be mack of the Nature of Partridges,

An. 1699. They are bigger than our Hens, have long Legs, and will run apace. They gan fly too, but not far, having large heavy Bodies, and but Chort Wings, and hort Tails: As I have generally obferved that Birds have feldom long Tails unlefs fuch as fly much; in which their Tails are ufually ferviceable to their turning about, as a Rudder to a Ship or Boat. Thefe Birds have thick and ftrong, yet Tharp Bills, pretty long Claws, and hort Tails. They feed on the Ground, either on Worms, which they find by tearing open the Earth ; or on Grafhoppers, which are plentiful here. The Feathers of thefe Birds are fpeckled with dark and light Gray; the Spots fo regular and uniform, that they look more beautiful than many Birds that are deck'd with gayer Feathers. Their Necks are fmall and long; their Heads alfo but little. The Cocks have a fmall rifing on their Crowns, like a fort of a Comb. ${ }^{2}$ Tis of the colour of a dry Wall-nut-fhell, and very hard. They have a fmall red Gill on each fide of their Heads, like Ears; ftrutting out downwards; but the Hens have none. They are fo ftrong that one cannot hold them; and very hardy. They are very good Meat, tender, and fweet ; and in fome the Flẹa is extraordinary white; tho' fome others have black Flefh: But both forts are very good. The Natives take them with Dogs, running them down whenever they pleafe; for here are abundance of them. You fall fee 2 or 300 in a company. I had Several brought aboard alive, where they throve very well ; forme of them 16 or 18 Months; when they began to pine. When they are taken young they will become tame like our Hens. The Flamengo's I have already defcrib'd at large, [Vol. I. p. 79.] They have alpo many othar fort of Fowls, viz. Pidgeons and Tar-tle-doves; Miniota's, a fort of Land -fowls as big as Crows, of a grey colour, and good Food; Crufia's, another fort of greycolour'd Fowl almoft as big as a Crow, which are only feen in the Night (probably a fort of Owls) and are faid to be good for confumptive People, but eaten by none elfe. Rabek's, a fort of large grey eatable Fowls with long Necks and Legs, not unlike Herons; and many kinds of Small Birds.

Of Land-Animals, here are Goats, as I laid formerly, and Affes good fore. When I was here before they were said to have had a great many Bulls and Cows: But the Pirates, who have fince miferably infected all there Illands, have much leffen'd the number of thole; not having fpar'd the Inhabitants themSelves: for at my being there this time the

An. ${ }^{1699}$ Governor of Mayo was but newly return'd from being a Prifoner among them, they having taken him away, and carried him about with them for a Year or two.
The Sea is plentifully ftock'd with Fifh of divers forts, viz. Dolphins, Boneta's, Mullets, Snappers, Silver-fifh, Gar-fifh, erc. and here is a good Bay to hale a Sain or Net in. I hal'd mine feveral times, and to good purpofe; dragging afthore at one time 6 dozen of great Fifh, moft of them large Mullets of a foot and a half or two foot long. Here are alfo Porpofes, and a fmall fort of Whales, that commonly vifit this Road every day. I have already faid, [Vol. I. p. 75.] That the Months of May, fune, fuly and August, (that is, the Wet Seafon) are the time when the Green Turtle come hither, and goathore to lay their Eggs. I look upon it as a thing worth taking Notice of, that the Turtle flould always, both in North and South Latitude, lay their Eggs in the wet Months. It might be thought, confidering what great Rains there are then in fome places where thefe Creatures lay, that their Eggs fhould be fpoiled by thems But the Rain, tho' violent, is foon foaked up by the Sand, wherein the Eggs are buried; and perhaps finks not fo deepinto it as the Eggs are laid: And keeping down the Heat may make the Sand hetter below
than it was before, like a Hot-bed. What- An. $\underbrace{1699}$ : ever the Reafon may bo why Providence determines thefe Creatures to this Seafon of laying their Eggs, rather than the Dry, in Fact it is fo, as I have conftantly abfervid; and that not only with the SeaTurtle, but with all other forts of Amphibious Animals that lay Eggs; as Crocodils. Alligators, Guano's, efc. The Inhabitants of this Ifland, even their Governour and Padre's, are all Negro's, Woolpated like their African-Neighbours; from whom 'tis like they are defcended; tho' being Subjects to the Portugucze, they have their Religion and Language. They are ftout, lufty, well-limb'd People, both Men and Women, fat and flefhy; and they and their Children as round and plump as little Porpoles; tho' the Illand appears fo barren to a Stranger as fcarce to have Food for its Inhabitants, I inquired how many People there might be on the Ine; And was told by one of the Padre's, that here were 230 Souls in all. The NegroGovernor has his Patent from the Portugueze Governour of St. faga. He is a very civil and fenfible poor Man; and they are generally a good fort of People. He expets a fmall Prefent from every Commander that lades Salt here; and is glad to be invited aboard their Ships. He fpends moft of his time with the Englift in the Salting indeed, all the flanders are then fully emplayed in getting fomewhat; for they have no Veffels of their own to Trade with, nor do any Portugueze-Veffels come hither: farce any but Englif, on whom they depend for Trade; and tho' Subjects of Portugal, have a particular Value for us. We don't pay them for their Salt, but for the Labour of thetprelves and their Beafts in lading it: for which we give them Victuals, Come Mony, and old Cloaths, viz. Hats, Shirts, and other Cloaths: By which means many of them are indifferently well rigg'd ; but forme of them go almoft Naked. When the Turtle-feafon comes in they watch the Sandy-bays in the Night, to turn them; and having fall Huts at particular Places on the Bays to keep them from the Rain, and to deep in : And this is another Har vet they have for Food; for by Report there come a great many Furthe to this and the reft of the Cape Verb lands. When the Turtle Seafon is over they have little to do but to hunt for Guinea-Hens, and manage their Small Plantations. But by the fe means they have all the. Year Come Employment or other; whereby they get a Subfiftence, tho' but little else. When any of them are defirous to go over to St. Fagot they get a Licence from the Governor, and define paffage in

$$

$$

any ${ }^{\prime}$ Ens $l i f b$ Ship that is going thither : An. 1699. And indeed all ships that lade Salt here will be obliged to touch at St. Fago for Water, for here at the Bay is none, not fo much as for Drinking. 'Tis true there is a fmall Well of brackifh Water not half 2 mile from the Landing-place, which the Affes that carry Salt drink at; but 'tis very bad Water. Affes themfelves are a Commodity in fome of thefe Illands, feveral of our Ships coming hither purpofely to freight with them, and carry them to Barbadoes and our other Plantations. I fay'd at Mayo. 6 days, and got 7 or 8 Tun of Salt aboard for my Voyage: In which time there came alfo into this Road feveral Sail of Merchants Ships for Salt ; all bound with it for Nemfoundland.

The 19 th day of February, at about One a Clock in the Morning I weighed from Mayo-Road, in order to Water atSt. Fago, which was about 5 or 6 Leagues to the Weftward. We coafted along the Illand St. Fago, and paft by the Port on the Eaft of it, I mention'd formerly [Vol. I. p. 76.] which they call Praya; where fome Englifh outward-bound Eaft-India Men ftill touch, but not fo many of them as heretofore. We faw the Fort upon the Hill, the * Houfes and Coco-nat Trees: But I would not go in to anchor here, becaufe I expected better Water on the S. W. of the Illand,
$\underbrace{\text { An } 1699 .}$ Illand, at St. Fago Town. By 8 a Clock in the Morning we faw the Ships in that Road, being within 3 Leagues of it: But were forc'd to keep Turning many hours to get in, the Flaws of Wind coming fo uncertain; as they doefpecially to the Leewoard of Illands that are High Land. At length two Portugueze Boats came off to help tow us in ; and about 3 a Clock in the Afternoon we came to an Anchor ; and took the Profpect of the Town, [Table II. ${ }^{\circ}$. 5.] We found here, befides two Portugueze.Ships bound for Brazil, whofe Boats had tow'd us in, an Englif Pink that had taken in Affes at one of the Cape Verd Iflands, and was bound to Barbadoes with them. Next Morning I went afhore with my Officers to the Governor, who treated us with Sweet-meats: I told him, the occafion of my coming was chiefly for Water; and that I defired alfo to take in fome Refrefhments of Fowls, erc. He faid I was welcom, and that he would order the Townfmen to bring their Commodities to a certain Houfe, where I might purchafe what I had occafion for: I told him I had not Mony, but would exchange fome of the Salt which.I brought from Mayo for their Commodities. He reply'd, that Salt was.indeed anacceptable Commodity with the poor People, but that if I defign'd to buy

St. Jago T. defcribed.
buy any Cattle, I muft give Mony for $\underbrace{\text { An. } 1699 .}$ them. I contented my felf with taking in Dunghil Fowls: The Governor ordering a Cryer to go about the Town and give notice to the People, that they might repair to fuch a place with Fowls and Maiz for feeding them, where they might getSalt in exchange for them: So I fent on board for Salt, and ordered fome of my Men to truck the fame for the Fowls and Maiz, while the reft of them were bufie in filling of Water. This is the effect of their keeping no Boats of their own on the feveral Iflands, that they are glad to buy even their own Salt of Foreigners, for want of being able to tranfport it themfelves from Ifland to Illand.

St. Fago Town lies on the S. W. part of the Illand, in Lat. about 15 Deg. N. and is the Seat of the General Governour, and of the Bifhop of all the Cape Verd Mlands. This Town ftands fcattering againft the fides of two Mountains, between which there is a deep Vally, which is about 200 Yards wide againft the Sea; but within a quarter of a mile it clofes up fo as not to be 40 Yards wide. In the Valley, by the Sea, there is a ftragling Street, Houres on each Gide, and a Run of Water in the bottom, which empties it felf into a fine fmall Cove or fandy Bay, where the Sea is commonly very fmooth: rocky and bad for Ships. Juft by the Landing-place there is a fmall Fort, almoft level with the §ea, where is always a Court of Guard kept. On the top of the Hill, above the Fown, there is another Fort ; which, by the Wall that is to be feen from the Road, feems to be a large Place. They have Cannon mounted there, but how many know I not: Neither what ufe that Fort can be of, except it be for Salutes. The Town may confift of 2 or 300 Houfes, all built of rough Stone; having alfo one Convent, and one Church.

The People in general are black, or at leaft of a mixt colour, except only fome few of the better fort, giz. the Governor, the Bifhop, fome Gentlemen, and fome of the Padres; for fome of thefe alfo are black. The People about Praya are Thievifh; but thefe of St. Jago Town, living under their Governour's Eye, are more orderly, tho' generally poor, having little Trade: Yet befides chance Ships of other Nations, there come hither a PortuguezeShip or two every Year, in their way to Brazil. Thefe vend among them a few European Commodities, and take of their principaliManufactures, viz.ftriped Cotton-cloth, which they carry with them to Brazil. Here is alfo another Ship comes hither from Por-

## Sugar. Wine. Fruits.

tugal for Sugar, their other Manufacture, An. 1699. and returns with it directly thither : For tis reported that there are feveral fmall Sugar-works on this Ifland, from which they fend home near 100 Tun every Year; and they have plenty of Cotton growing up in the Country, wherewith they cloath themfelves, and fend alfo a great deal to. Brazil. They have Vines, of which they make fome Wine; but the European Ships furnifh them with better; tho' they drink but little of any. Their chief Fruits are, (befides Plantains in abundance) Oranges, Lemons, Citrons, Melons, (both Musk and Water-melons) Limes, Guava's, Pomgranates, Qüinces, Cuftard-Apples, and Papah's, Ofc.

The Cuftard-Apple (as we call it) is a Fruit as big as a Pomegranate, and much of the fame colour. The out-fide Husk, Shell or Rind, is for fubftance and thicknefs between the Shell of a Pomegranate, and the Peel of a Sevil-Orange; fofter than this, yet more brittle than that. The Coat or Covering is alfo remarkable in that it is befet round with fmall regular Knobs or Rifings; and the infide of the Fruit isfull of a white foft Pulp, fweet and very pleafant, and moft refembling a Cuftard of any thing, both in Colour and Tafte : From whence probably it is called a CuftardApple by our Engli/b. It has in the mid-

## 34

## Cuftard-Apple. Papah.

An . 6 g. . dle a few fmall black Stones or Kernels; but no Core, for 'tis all Pulp. The Tree that bears this Fruit is about the bignefs of a Quince-tree, with long, fmall, and thickfet Branches fpread much abroad: At the Extremity of here and there one of which the Fruit grows upon a Stalk of its own about 9 or 10 Inches long, flender and tough, and hanging down with its own weight. A large Tree of this fort does not bear ufually above 20 or 30 Apples; feldom more. This Fruit grows in moft Countries within the Tropicks. I have feen of them (tho' I omitted the Defcription of them before) all over the WefIndies, both Continent and Iflands; as alfo in Brazil, and in the Eaf-Indies.

The Papab too is found in all thefe Countries, though I have not hitherto defcrib'd it. It is a Fruit about the bignefs of a Musk-Melon, hollow as that is, and much refembling it in Shape and Colour, both outfide and infide: Only in the middle, inftead of flat Kernels, which the Me-- lons have, thefe have a handful of fmall blackifh Seeds, about the bignefs of Pep-per-corns; whofe Tafte is alfo hot on the Tongue fomewhat like Pepper. The Fruit it felf is fweet, foft and lufcious, when ripe ; but while green tis hard and unfavory: tho even then being boiled and eaten with Salt-pork or Beef, it ferves in-

## Papah. Beafts of St. Jago:

fread of Turnips, and is as much efteemed. An. $1699^{\circ}$ The Papah-Tree is about 10 or 12 Foot high. The Body near the Ground may be a Foot and an half or 2 Foot Diameter; and it grows up tapering to the top. It has no Branches at all, but only large Leaves growing immediately upon Stalks from the Body. The Leaves are of a roundifh Form and jag'd about the Edges, having their Stalks or Stumps longer or fhorter as they grow near or further from the top. They begin to fpring from out of the Body of the Tree at about 6 or 7 Foot heighth from the Ground, the Trunk being bare below: But above that the Leaves grow thicker and larger ftill towards its Top, where they are clofe and broad. The Fruit grows only among the Leaves; and thickeft among the thickeft of them ; infomuch that towards the top of the Tree the Papabs fprings forth from its Body as thick as they can ftick one by another. But then lower down, where the Leaves are thinner, the Fruit is larger, and of the fize $I$ have defrrib'd : And at the Top, where they are thick, they are but fmall, and no bigger than ordinary Turnips ; yet tafted like the reft.
Their chief Land-Animals are their Bullocks, which are faid to be many; tho' they ask us 20 Dollars apiece for thern; They have alfo Horfes, Affes, and
$\xi_{6}$ Animals of St. Jago. Its Road. An. 1699 . Mules, Deer, Goats, Hogs, and blackfac'd long-tail'd Monkeys. Of Fowls they have Cocks and Hens, Ducks, GuineaHens, both tame and wild, Parnkites, Parrots, Pidgeons, Turtle-Doves, Herons, Hawks, Crab-catcherrs, Galdens, (a larger fort of Crab-catchers) Curlews, © $c$. Their Finh is the fame as at Mayo and the reft of thefe Iflands, and for the moft part thefe Illands have the fame Beafts and Birds alfo ; But fome of the Illes have Pafturage and Employment for fome particular Beafts more than other; and the Birds are incouragd, by Woods for fhelter, and Maiz and Fruits for Food, to flock rather to fome of the Illands (as to this of St. Fago) than to others.

St. Fago Road is one of the wort that I have been in. There is not clean Ground enough for above three Ships; and thofe alfo mult lye very near each other. One even of thefe muft lye clofe to the Shore, with a Land-faft there: And that is the beft for a fmall Ship. I fhould not have come in here if I had not been told that it was a good fecure place; but I found it fo much otherways, that I was in pain to be gone. Captain Barefoot, who came to an Anchor while I was here, in foul Ground, loft quickly a Anchors ;

# I. Fogo. 

 Fogo thews its felf from this Road very plain, at about 7 or 8 Leagues diftance; and in the Night we faw the Flames of Fire iffuing from its Top.D<br>CHAP.

An. 1699.

The A. defigns for Brazil. Amphisbxna, small Black and Small Grey-Snake; the great Land, and the great Water-Snake: And of the Water-dog. Of their Sea-fifb and Turtle; and of St. Paul'sTown.

HAving difpatch'd my fall Affairs at the C. Vert Inlands, I meditated on the procefs of my Voyage. I thought it requifite to touch once more at a cultivated Place in there Seas, where my Men might be refrefh'd, and might have a Market wherein to furnish themfelves with Ne ceffaries: For defigning that my next Stretch should be quite to N. Holland, and knowing that after fo long a Run nothing was to be expected there but frefh Water, if I could meet even with that there, I refolved upon putting in frt at forme Port of Brazil, and to provide my felf there with whatever I might have further occafion for. Befide the refrefhing and furnifhing my Men, I aim'd aldo at the inuring them gradually and by intervals to the Fatigues that were to be expected in the remainder of the Voyage, which was to be in a part of the World they were altogether Strangers to ; none of them, except two young Men, having ever crofs'd the Lime.

## The A. departs from St. Jago.

With this Defign I fall'd from St. Iago An $\underbrace{1599}$. on the 22 d of February, with the Winds at E. N. E. and N. E. fair Weather, and a brisk Gale. We fteered away S. S. E. and S. S. E. half Eat, till in the Lat. of 7 deg. 50 min . we met with many Riplings in the Sea like a Tide or flong Current, -which retting againft the Wind caus'd fuch a Ripling. We continu'd to meet there Currents from that Lat. till we came into the Lat. of 3 deg. 22 N . when they ceafed. During this time we flaw Come Boneta's, and Sharks; catching one of there. . We had the true General TradeWind blowing frefh at N. E. till in the Lat. of 4 deg. 40 min. N. when the Wind varied, and we had fall Gales, with forme Tornadoes. We were then to the Eat of St. Fago 4 deg. 54 min . when we got into Lat. 3 deg. 2 min. N. (where I laid the Kipling ceased) and Long. to the Eat of St. Fago 5 deg. 2 min . we had the Wind whiffing between the S. by E. and E. by N. fmall Gales, frequent Calms, very black Clouds, with much Rain. In the Lat. of 3 deg. 8 min . N. and Long. E. from St. Fago 5 deg. 8 min. we had the Wind from the S. S. E. to the N. N. E. faint, and often interrupted with Calms. While we had Calms we had the opportunity of trying the Current we had met with hitherto, and found that it let N. E.

## The A. croffes the Line.

An. 1699 by $E$. half a Knot, which is 12 mile in 24 hours: So that here it ran at the Rate of half a mile an hour, and had been much Atronger before. The' Rains held us by intervals till the Lat. of 1 deg. o min. N. with fall Gales of Wind between S. S. E. and S. E. by E. and rometimes calm: Afterwards we had the Wind between the S. \& S. S. E. till we crofs'd the Line, foal Winds, Calms, and pretty fair Weather. 'We daw but few Fifth befide Porpofes; but of them a great many, and truck one of them.

It was the roth of March, about the time of the Equinox, when we crofs'd the Equator, having had all along from the Lat. of 4 deg. 40 min. N. where the True Trade-Wind left us, a great dwell out of the S. E. and but foal uncertain Gales, monty Southerly, fo that we crept to the Southward but lowly. I kept up againft theft as well as I could to the Southward, and when we had now and then a flurry of Wind at E. I fill went away due South, purpofely to get to the Southward as fat as I could; for while near the Line I expeted to have but uncertain Winds, ferequant Calms, Rains, Tornadoes, Orc. which would not only retard my Courfe, but endanger Sicknefs allo among my Men: efpecially thole who were ill provided with Cloaths, or were too lazy to flift them-

Obfervations for croffing the Line. 43
felves when they were drench'd with the $A n .1699$. Rains. The Heat of the Weather made them carelefs of doing this; but taking a Dram of Brandy, which I gave them when wet, with a Charge to Chift themfelves, they would however lye down in their Hammocks with their Wet Cloaths; fo that when they turn'd out they caus'd an ill fmell where-ever they came, and their Hammocks would Itink fufficiently; that I think the Remedying of this is worth the Care of Commanders that crofs the Line; efpecially when they are, it may be, a Month or more e'er they get out of the Rains, at fometimes of the Year, as in Fune, July, or Auguf.

What I have here raid about the Currents, Winds, Calms, erc. in this Paffage, is chiefly for the farther illuftration of what I have heretofore obferv'd in general about thefe Matters, and efpecially as to Croffing the Line, in my Difcourfe of the Winds, \&c. in the Torrid Zone : [See Vol. II. Part 3. .p. 5, 6.] Which Obfervations I have had very much confirm'd to me in the Courfe of this Voyage ; and I Thall particularis in feveral of the chief of them as they come in my Way. And indeed I think I may fay this of the main of the Obfervations in that Treatife, that the clear fatisfaction I had about them, and how much I might rely upon them, was a great Eafe to my

## 44 The A. defigns for Pernambuc.

An. 1699. Mind during this Vexatious Voyage; wherein the Ignorance, and Obftinacy withal, of fome under me, occafion'd me a great deal of Trouble: Tho' they found all along, and were often forc'd to acknowledge it, that $I$ was feldom out in my Conjectures, when I told them ufually before-hand what Winds, \&uc. we fhould meet with at fuch or fuch particular places we fhould come at.

Pernambuc was the Port that I defigned for at my firf fetting out from St. Fago; it being a place moft proper for my purpofe, by reafon of its Situation, lying near the Extremity of C. St. Augufine, the Eafternmoft Promontory of Brazil ; by which means it not only enjoys the greater benefit of the Sea-breezes, and is confequently more healthy than other Places to the Southward, but is withal lefs fubject to the Southerly Coafting-Trade-winds, that blow half the Year on this Shore; which were now drawing on, and might be troublefome to me: So that I might both hope to reach fooneft Pernambrc, as moft Trectly and neareft in my Run; and might thence alfo more eafily get away to the Southward than from Bebia de Tados los Santos, or Ria faneira.

But notwithftanding thefe Advantages I propos'd to my felf in going to Pernambuc, I was foon put by that Defign through the

# And wohy be.quitted that Defign. 

 refractorinefs of fome under me, and An . $1599 \mathrm{Cl}^{\circ}$ the Difcontents and Backwardnefs of fome of my Men. For the Calms and Shiftings of Winds which I met with, as I was to expect, in croffing the Line, made them, who were unacquainted with thefe Matters, almoft heartlefs as to the purfuit of the Voyage, as thinking we fhould never be able to weather Cape St. Augufine : And though I told them that by that time we fhould get to about three Degrees South of the Line, we fhould again have a true brisk general Trade-Wind from the North-Eaft, that would carry us to what part of Brazil we pleas'd, yet they would not believe it till they found it fo. This, with fome other unforefeen Accidents, not neceffary to be mention'd in this place, meeting with the Averfion of my Men to a long unknown Voyage, made me juflly apprehenfive of their Revolting, and was a great Trouble and Hindrance to me. So that I was obliged partly to alter my Meafures, and met with many Difficulties, the Particulars of which I fhall not trouble the Reader with : But I mention thus much of it in general for my own neceffary Vindication, in my taking fuch meafures fome-
## 46 He refolves for the B. of All-Saints.

${ }^{\text {An. } 1699 .}$ times for profecuting the Voyage as the ftate of my Ships Crew, rather than my own Judgment and Experience, determin'd me to. The Diforders of my Ship made me think at prefent that Pernambuc would not be fo fit a place for me; being told that Ships ride there two or three Leaguess from the Town, under the Command of no Forts; fo that whenever I fhould have been athore it might bave been eafie for my difcontented Crew to have cut or flipt their Cables, and have gone away from me: Many of them difcovering already an intention to return to England, and fome of them declaring openly that they would go no further onwards than Brazil. I alter'd my Courfe therefore, and ftood awtay for Babio de todos los Santos, or the Bay of all Scints, where I hop'd to have the Governour's help, if need fhould require, for fecuring my Ship from any fuch mutimous Attempt ; being forced to keep ay felf all the way upon my Guard, and to lie with my Officers, fuch as I could truft, and with fmall Arms upon the Quarter-Deck; it farce being fafe for me to lie in my Cabbin, by reafon of the Difcontents among my Men.

On the 23d of March we faw the Land An. 1699 of Braxil; having had thither, from the time when we came into the true TradeWind again after croffing the Line, very fair Weather and brisk Gales, moftly at E. N. E. The Land we faw was about 20 Leagues to the North of Babia; fo I coafed along Shore to the Southward. This Coaft is rather low than high, with SandyBays all along by the Sea.

A little within Land are many very white Spots of Sand, appearing likeSnow; and the Coaft looks very pleafant, being checker'd with Woods and Savannahs. The Trees in general are not tall; but they are green and flourifhing. There are many fmall Houfes by the Sea-fide, whofe Inhabitants are chiefly Fifhermen. They come off to Sea on Barklogs, made of feveral Logs faften'd fide to fide, that have one or two Matts with Sails to them. There are two Men in each Barklog, one at either end, having fmall low Benches, raifed a little above the Logs, to fit and fifh on, and two Baskets hanging up at the Maft or Malts ; one to put their Provifions in, the other for their Fifh. Many of thefe were a-fifhing now, and two of them came aboard, of whom I bought fome Fifh. In the Afternoon we failed by one very remarkable piece of Land, where, on a fmall pleafant Hill, there was a

## 48 The A. anchor'd at Bahia de T. S.

 $\xrightarrow[\sim]{\text { An. 1699. Church dedicated to the Virgin Mary. See }}$ a Sight of fome parts of this Coaft [Table III. $\left.\mathrm{N}_{0} .1,2,3,4,5.\right]$ and of the Hill the Church ftands on [Table III. $\mathrm{N}^{\circ}$. i.]I coafted along till the Evening, and then brought to, and lay by till the next Morning. About 2 hours after we were brought to, there came a Sail out of the Offin (from Seaward) and lay by about a Mile to Windward of us, and fo lay all Night. In the Morning, upon fpeaking with her, fhe proved to be a Portugueze Ship bound to Babia; therefore I fent my Boat aboard and defired to have one of his Mates to Pilot me in: He anfwer'd, That he had not a Mate capable of it, but that he would Sail in before me, and fhew me the way; and that if he went into the Harbour in the Night, he would hang out a Light for me. He faid we had not far in, and might reach it before Night with a tolerable Gale; but that with fo fmall an one as now we had we could not do it: So we jog'd on till Night, and then he accordingly hung out his Light, which we fteered after, founding as we went in. I kept all my Men on Deck, and had an Anchor ready to let go on occafion. We had the Tide of Ebb againft us, . Fo that we went in but flowly; and it was about the middle of the Night when we Anchor'd. Immediately the Portugueze Mafter came

aboard to fee me, to whom I returned An. 169\%." Thanks for his Civilities; and indeed I found much refpect, not only from this Gentleman, but from all of that Nation both here and in other Places, who were ready to ferve me on all Occafions. The Place that we Anchored in was about two Miles from the Harbour where the Ships generally ride ; but the Fear I had leaft my People fhould rin away with the Ship made me haften to get a Licence from the Governour, to run up into the Harbour, and ride among their Ships, clofe by one of their Forts. So on the 25 th of March about roa Clock in the Morning, the Tide ferving, I went thither, being Piloted by the Super-intendant there, whofe bufinefs it is to carry up all the King of Portugal's Ships that come hither, and to fee them well moored. He brought us to an Anchor right againft the Town, at the outer part of the Harbour, which was then full of Ships, within 150 yards of a fmall Fort that ftands on a Rock half a mile from the Shore. See a Profpect of the Harbour and the Town, as it appear'd to us while we lay at Anchor, [Table III. $\mathbf{N}^{\circ}$. 5.]

Babia de todos los Santos lies in Lat. 13 deg. S. It is the moft confiderable Town in Brazil, whether in refpect of the Beanty of its Buildings, its Bulk, or its Trade and Revenue. It has the convenience of a

An. 1599. good Harbour that is capable of receiving Ships of the greateft Burthen : The Entrance of which is guarded with a ftrong Fort ftanding without the Harbour, call'd St. Antonio: A Sight of which I have given [Table III. N . 4.] as it appeared to us the Afternoon before we came in; and its Lights (which they hang out purpofely for Ships) we faw the fame Night. There are other fmaller Forts that command the Harbour, one of which ftands on a Rock in the Sea, about half a Mile from the Shore. Clofe by this Fort all Ships mult pals that Anchor here, and mult ride alfo within half a mile of it at fartheft between this and another Fort (that ftands on a point at the inner part of the Harbour and is called the Dutch Fort) but mult ride neareft to the former, all along againft the Town : Where there is good holding Ground, and lefs expoled to the Southerly Winds that blow very hard here. They commonly fet in about April, but blow hardeft in May, Fune, Fuly and Auguf: But the place where the Ships ride is expofed to thefe Winds not above 3 points of the Compals.

Befide thefe, there is another Fort fronting the Harbour, and ftanding on the Hill upon which the Town ftands. The Town it felf cofinfts of about 2000 Houles; the major part of which cannot be feen
$f$

## Bahia Toron defcribid.

from the Harbour; but fo many as appear An. 1699. in fight, with a great mixture of Trees between them, and all placed on a rifing Hill, make a very pleafant Profpect ; as may be judg'd by the Draught, [Table III. $\left.\mathrm{N}^{\circ} .5.\right]$

There are in the Town 13 Churches, Chapels, Hofpitals, Convents, befide one Nunnery; viz. the Ecclefia Major or Cathedral, the Jefuits College, which are the chief, and both in fight from the Harbour: St. Antonio, Sta. Barbara, both Pa-rifh-Churches; the Francifcans Church, and the Dominicans; and two Convents of Carmelites; a Chapel for Seamen clofe by the Sea-fide, where Boats commonly land, and the Seamen go immediately to Prayers; another Chapel for poor People, at the farther end of the fame Street, which runs along by the Shore ; and a third Chapel for Soldiers, at the edge of the Town, remote from the Sea; and an Horpital in the middle of the Town. The Nunnery ftands at the outer-edge of the Town next the Fields, whetein by Report there are 70 Nuns. Here lives an Archbifhop, who has a fine Palace in the Town; and the Governor's Palace is a fair Stone-building, and looks handfome to the Sea, tho' but indifferently furnifh'd within: Both Spaniards and Portugueze in their Plantations abroad, as I have generally

$$
\mathbf{E}_{2} \quad \mathrm{ob}
$$ but are little curious about Furniture, except Pictures fome of them. The Houfes of the Town are 2 or 3 Stories high, the Walls thick and ftrong, being built with Stone, with a Covering of Pantile ; and many;of them have Balconies. The principal Streets are large, and all of them pav'd or pitch'd with fmall Stones. There are alfo Parades in the moft eminent Places of the Town, and many Gardens, as well within the Town as in the Out-parts of it, wherein are Fruit-trees, Herbs, Salladings and Flowers in great variety, but order'd with no great Care nor Art.

The Governor who refides here is call'd Don fobn de Lancaftario, being defcended, as they fay, from our Englijb Lancafer Family; and he has a refpect for our Nation on that account, calling them his Countrymen. I waited on him feveral times, and always found him very courteous and civil. Hepe are about 400 Soldiers in Garrifon. They commonly draw up and exercife in a large Parade before the Governors Houle; and many of them attend him when he goes abroad. The Soldiers are decently clad in brown Linen, which in thefe hot Countries is far better than Woollen; but I never faw any clad in Linen but only thefe. Beffde the Soldiers in Pay, he can foon have fome thoufands of Men up in

## The Merchants of Bahia.

Arms on occafion. The Magazine is on $\underbrace{\text { An. }}$. 599. the Skirts of the Town, on a fmall rifing between the Nunnery and the Soldiers Church. 'Tis big enough to hold 2 or 2000 Barrels of Yowder; but I was told it feldom has more than 100 , fometimes but 80 . There are always a Band of Soldiers to guard it, and Centinels looking out both Day and Night.

A great many Merchants always refide at Babia ; for tis a place of great Trade: I found here above 30 great Ships from Europe, with two of the King of Portugal's Ships of War for their Convoy; befide two Ships that Traded to Africa only, either to Angola, Gamba, or other Places on the Coaft of Guinea; and abundance of fmall Craft, that only run to and fro on this Coaft, carrying Commodities from one part of Brazil to another.
The Merchants that live here are faid to be Rich, and to have many NegroSlaves in their Houres, both of Men and Women. Themfelves are chiefly Portugueze, Foreigners having but little Commerce with them ; yet here was one Mr. Cock an Englifß Merchant, a very civil Gentleman and of good Repute.. He had a Patent to be our Englifh Conful, but did not care to take upon him any Publick Character, becaufe Englijh. Ships feldom come hither, here having been none in 11

54 Commodities from and to Europe. 'An. 1699. or 12 Years before this time. Here was alfo a Dane, and a French Merchant or two; but all have their Effects tranfported to and from Europe in Portugueze Ships, none of any other Nation being admitted to Trade hither. There is a Cuftom-houfe by the Sea-fide, where all Goods imported or exported are entred. And to prevent Abufes there are 5 or 6 Boats that take their turns to row about the Harbour, fearching any Boats they fufpect to be running of Goods.

The chief Commodities that the $E$. ropean Ships bring hither, are Linnencloaths, both courfe and fine; fome Woollens alfo, as Bays, Searges, Perpetuana's. Orc. Hats, Stockings, both of Silk and Thread, Bisket-bread, Wheat-flower, Wine (chiefly Port) Oyl-Olive, Butter, Cheefe, ©́c. and Salt-beef and Pork would there alfo be good Commodities. They bring hither alfo Iron, and all forts of IronTools; Pewter-Veffels of all forts, as Dihhes, Plates, Spoons, Ơc. Lookingglaffes, Beads, and other Toys; and the Ships that touch at St. Fago bring thence, as I faid, Cotton-cloath, which is afterwards fent to Angola.

The Exropean Ships carry from hence Sugar, Tobacco, either in Roll or Snuff, never in Leaf, that I know of: Thefe are the Staple Commodities. Befides which,

## Claying of Sugar.

here are Dye-woods, as Futtick, erc. with ${ }^{\text {An. } 1699 .}$ Woods for other ufes, as fpeckled Wood, Brazil, \&c. They alfo carry home raw Hides, Tallow, Train-Oyl of Whales, Oec. Here are alfo kept tame Monkeys, Parrots, Parakites, \&rc. which the Seamen carry home.

The Sugar of this Country is much better than that which we bring home from our Plantations: For all the Sugar that is made here is clay'd, which makes it whiter and finer than our Mufcovada, as we call our unrefin'd Sugar. Our Planters feldom refine any with Clay, unlefs fometimes a little to fend home as Prefents for their Friends in England. Their way of doing it is by taking fome of the whiteft Clay and mixing it with $W$ ater, till 'tis like Cream. With this they fill up the Pans of Sugar, that are funk 2 or 3 Inches below the Brim by the draining of the Moloffes out of it : Firft fcraping off the thin hard Cruft of the Sugar that lies at the top, and would hinder the Water of the Clay from foaking through the Sugar of the Pan. The refining is made by this Percolation. For 10 or 12 days time that the Clayifh Liquor lies foaking down the Pan, the white Water whitens the Sugar as it paffes thro ${ }^{\circ}$ it; and the grofs Body of the Clay it Relf grow hard on the top, and may be taken off at pleafure; when fcraping off with a E 4 Knife the very upper part of the Sugar, which will be a little fullied, that which is underneath will be White almoft to the bottom: And fuch as is called Brazil Sugar is thus Whitened. When I was here this Sugar was fold for 50 s . per 100 th. and the Bottoms of the Pots, which is very courfe Sugar,for about 20 s. per 100 苗. both forts being then fcarce; for here was not enough to lade the Ships, and therefore fome of them were to lye here till the next Seafon.

The European Ships commonly arrive here in February or March, and they have generally quick Paffages ; finding at that time of the Year brisk Gales to bring them to the Line, little Trouble, then, in croffing it, and brisk E. N. E. Winds afterwards to bring them hither. They commonly return from hence about the latter end of May, or in Fune. 'Twas faid when I was here that the Ships would Sail hence the 20th day of May; and therefore they were all very bufy, fome in taking in their Goods, others in Careening and making themfelves ready. The Ships that come hither ufually Careen at their firf coming; here being a Hulk belonging to the King for that purpofe. This Hulk is under the charge of the Superintendent I fpoke of, who has a certain Sum of Mony for every Ship that Careens by her. He alfo provides purpofe : And the Ships do commonly hire of the Merchants here each 2 Cables to moor by all the time they lye here, and fo fave their own Hempen Cables; for thefe are made of a fort of Hair, that grows on a certain kind of Trees, hanging down from the Top of their Bodies, and is very like the black Coyre in the EaffIndies, if not the fame. There Cables are ftrong and lafting : And fo much for the European Ships.

The Ships that ufe the Guinea-Trade are fmall Veffels in comparifon of the former. They carry out from hence Rum, Sugar, the Cotton-cloaths of St. Fago, Beads, erc. and bring in return, Gold, Ivory, and Slaves ; making very good returns.

The fmall Craft that belong to this Town are chiefly imployed in carrying European Goods from Babia, the Center of the Braflian Trade, to the other Places on this Coaft; bringing back hither Sugar, Tobacco, éc. They are Sailed chiefly with Negro-Slaves; and about Cbriftmas thefe are moftly imployed in Whale-killing: For about that time of the Year a fort of Whales, as they call them, are very thick on this Conft. They come in alfo into the Harbours and inland Lakes, where the Seamen go out and kill them. The Fat of therr
$\overbrace{}^{\text {An. } 1559}$, them is boiled to Oil ; the Lean is eaten by the Slaves and poor people : And I was told by one that had frequently eaten of it, that the Flefh was very fweet and wholefome. Thefe are faid to be but fmall Whales: Yet here are fo many, and fo eafily kill'd, that they get a great deal of Mony by it. Thote that ftrike them buy their Liceufe for it of the King: And I was inform'd that he receives 30000 Dollars per Annum for this Fifhery. All the fmall Veffels that ufe this Coanting Traffick are built here; and fo are fome Men of War alfo for the King's Service. There was one a building whenl was here, a Ship of 40 or 50 Guns: And the Timber of this Country is very good and proper for this purpofe. I was told it was very ftrong, and more durable than any we have in Europe: And they have enough of it. As for their Ships that ufe the European Trade, fome of them that I faw there were Engdifh built, taken from us by the Frenchduring the late War, and fold by them to the Portuguefe.

Befides Merchants and others that trade by Sea from this Port, here are other pretty Wealthy Men, and feveral Artificers. and Trades-men of moft forts, who by Labour and Induftry maintain themfelves. very well ; efpecially fuch as can arrive at the purchafe of a Negro-Slave or two.

## Carriage in Hammocks.

And indeed, excepting people of the low- $A n \xrightarrow{1599}$. eft degree of all, here are fcarce any but what keep Slaves in their Houfes. The Richer Sort, befides the Slaves of both Sexes whom they keep for fervile Ufes in their Houfes, have Men Slaves who wait on them abroad, for State; either running by their Horfe-fides when they ride out, or to carry them to and fro on their Shoulders in the Town when they make thort Vifits near home. Every Gentleman or Merchant is provided with Things neceffary for this fort of Carriage. The main Thing is a pretty large Cotton Hammock of the Weft-India fafhion, but moftly died Blue, with large Fringes of the fame, hanging down on each fide. This is carried on the Negro's Shoulders by the help of a Bambo about 12 or 14 Foot long, to which the Hammock is hung; and a Covering comes over the Pole, hanging down on each fide like a Curtain: So that the perfon fo carry'd cannot be feen unlefs he pleafes; but may either lye down, having Pillows for his Head; or may fit up by being a little fupported with thefePillows, and by letting both his Legs hang out over one fide of the Hammock. When he hath a mind to be feen he puts by his Curtain, and falutes every one of his Acquaintance whom he meets in the Streets; for they take a piece of Pride in greeting will hold long Conferences thus in the Street: But then their two Slaves who carry the Hammock have each a tong well-made Staff, with a fine Iron Fork at the upper end, and a tharp Iron below, like the Reft for a Musket, which they flick fart in the Ground, and let the Pole or Bamboo of the Hammock reft upon them, till their Matters Bufinefs or the Complement is over. There is farce a Man of any falchion, especially a Woman, will pals the Streets but fo carried in a Hammock. The chief Mechanick Traders here, are Smiths, Hatters, Shoemakers, Tanners, Sawyers, Carpenters, Coopers, Orc. Here are alfo Taylors, Butchers, ere. which haft kill the Bullocks very dexteroufly, flicking them at one Blow with a fharp-pointed Knife in the Nape of the Neck, having frt drawn them clofe to a Rail; but they dress them very loverly. It being Lent when I came hither, there was no buying any Flefh till Eater. Eve, when a great number of Bullocks were kill at once in the Slaughter-houfes within the Town, Men, Women and Children flocking thither with great Joy to buy, and a Multitude of Dogs, almoft ftarv'd, following them ; for whom the Meat feem'd fitteft, it was fo Leani. All thee Trades-men buy Negros, and train them

## Negro's. Crane for Goods.

them up to their Several Employments, An. 159,7 which is a great help to them : and they having fo frequent Trade to Angola, and other parts of Guinea, they have a conftant Supply of Blacks both for their Plantations and Town. Thee Slaves are very ufeful in this Place for Carriage, as Porters; for as here is a great Trade by Sea, and the Landing-place is at the foot of a Hill, too fteep for drawing with Carts, fo there is great need of Slaves to carry Goods up into the Town, especially for the inferior fort : But the Merchants have alpo the Convenience of a great Crane that goes with Ropes or Pullees, one end of which goes up while the other. goes down. The House in which this Crane is ftands on the Brow of the Hill towards the Sea, hanging over the Precipice : and there are Planks fat fhelving againft the Bank from thence to the bottom, againft which the Goods lean or flide as they are hoifted up or let down. The Negro-Slaves in this Town are fo numerous, that they make up the greateft part or bulk of the inhabitants: Every House, as I laid, having lome, both Men and Women; of them... Many of the Fortuguefe, whore Batchelors, keep of there black Women for Miffes, tho' they know the danger they are in of being poyfon'd by them, if ever they give them any orcafin of Jealouly. A Gentleman of my Ac- with his Cook-maid, lay under fome fuch Apprehenfions from her when I was there. Thefe Slaves alfo of either Sex will eafily be engaged to do any fort of Mifchief; - even to murder, if they are hired to do it, efpecially in the night: for which Reafon, I kept my Men on board as much as I could ; for one of the French King'sShips being here, had feveral Men murther'd by them in the night, as I was credibly inform'd.

Having given this account of the Town of Babia, I fhall next fay fomewhat of the Country. There is a Salt-water Lake rums forty Leagues, as I was told, up the Country, N. W. from the Sea, leaving the Town and Dutch Fort on the Starboard fide. The Country all round about is for the moft part a pretty flat even Ground, not high, nor yet very tow: It is well water'd with Rivers, Brooks and Springs ; neither wants it for good Harbours, Navigable Creeks, and good Bays for Ships to ride in. The Soil in general is good, naturally producing very large Trees of diver forts, and fit for any ufes. The Savannahs alfo are loaden with Grafs, Herbs, and many forts of fmaller Vegetables; and being cultivated, produce any thing that is proper for thofe hot Countrios, as Sagar-Canes, Cotton, Indi-

## The Brafilian Trees, \&c.

 co, Tobacco, Maize, Fruit-Trees of sIeve- An. 1699 sal kinds, and eatable Roots of all forts. Of the several kinds of Trees that are here, I Shall give an account of come, as I had it partly from an Inhabitant of Bahia, and partly from my knowledge of them otherwife, viz. Sapiera, Vermiatico, Comeeferie, Guitteba, Serrie, as they were pronounced to me, three forts of Mangrove, speckled Wood, Fuftick, Cotton-Trees of three forts, err. together with Fruit-Trees of divers forts that grow wild, befide fuch as are planted.Of Timber-Trees, the Sapiera is faid to be large and tall; it is very good Timber, and is made ufe of in building of Houses; fo is the Vermiatico, a tall ftreight-bodied Tree, of which they make Plank 2 Foot broad; and they alto make Canon's with it. Come /erie and Guitteba are chiefly ufed in building Ships; there are as much efteem'd here as Oaks are in England, and they fay either fort is harder and more durable than Oak. The Serrie is a fort of Tree much like Elm, very durable in Water. Here are alpo all the three forts of Mangrove Trees, viz. the Red, the White, and the Black, which I have deferibed [Vol. I. p. 54.] The Bark of the Red Mangrove, is here us id for Tanning of Leather, and they have great Tan-pits for it. The Black Mangrove grows lar-

An. 1699 . ger here than in the Weft-Indics, and of it they make good Plank. The White Mancrove is larger and tougher than in the $W_{\mathrm{eft}}$-Indies; of the e they make Mafts and Yards for Barks.

There grow here wild or baftard Co-co-Nut Trees, neither fo large nor fo tall as the common ones in the Eaft or WeftIndies. 'They bsar Nuts as the others, but not a quarter fo big as the right CocoNuts. The Shell is full of Kernel, without any hollow Place or Water in it ; and the Kernel is fweet and wholefome, but very hard both for the Teeth and for Digeltion. Thefe Nuts are in much efteem for making Beads for Pater-nofter's, Boles of Tobacco-Pipes, and other Toys : and every fmall Shop here has a great many of them to fell. At the top of thefe Baftard Coco-trees, among the Branches, there grows a fort of long black Thread like Horfe hair, but much longer, which by the Portuguefe is called Trefabo. Of this they make Cables which are very ferviceable, ftrong and lafting; for they will not rot as Cables made of Hemp, tho' they ly expofed both to Wet and Heat. Thele are the Cables which I faid they keep in their Harbours here, tolet to hire to European Ships, and refemble the Coyre-Cables.

Here are three forts of Cotton Trees that bear Silk-Cotton. One fort is fuch as I have

## Cotton-Tree of Brazil.

have formerly defcrib'd; [Vol. I. p. 165.] $\underbrace{\text { An. }} 169$ g, by the Name of the Cotton-tree. The other two forts I never fam any where but here. The Trees of the fe latter forts are but fall in comparifon of the former, which are reckon'd the biggett in all the Wef-India Woods; yet are however of ab good bigness and heighth. One of there lift forts is not fo full of Branches as the other of them ; neither do they produce their Fruit the fame time of the Year : For one fort had its Fruit juft ripe, and was fheddring its Leaves while the other fort was yet green, and its Fruit Small and growing, having but newly done bloffoming; the Tree being as full of young Fruit as an Apple-Tree ordinarily in England. There lat yield very large Pods, about 6 Inches long, and as big as a Man's Arm. It is ripe in September and October ; then the Pod opens, and the Cotton burls out in a great Lump as big as a Man's Head. They gather there Pods before they open: otherways it would fly all away. It opens as well after 'tic gathered; and then they take out the Cotton, and preferve it to fill Pillows and Bolfters, for which ufe 'tit very much efteemed! But 'ti fit for nothing elfe, being fo flory that it cannot be Spun. 'Wis of a tawney Colour; and the Seeds are black, very round, and as big as a white Pea: $\underset{F}{\text { The other fort is ripe }}$ in

## 66 Silk-Cotton. Cotton. Fruits.

An. 1699. in March or April. The Fruit or Pod is like a large Apple, and very round. The out-fide Shell is as thick as the top of ones Finger. Within this there is a very thin whitifh Bag or Skin which inclofeth the Cotton. When the Cotton-Apple is ripe, the outer thick green Shell Cplits it felf into 5 equal parts from Stemb to Tail,and drops off, leaving the Cotton hanging upon the Stemb, only pent up in its fine Bag. A day or two afterwards the Cotton fwells by the heat of the Sun, breaks the Bag and burfts out, as big as a Man's Head: And then as the Wind blows 'tis by degrees driven away, a little at a time, out of the Bag that ftill hangs upon the Stemb, and is fcatter'd about the Fields; the Bag foon following the Cotton, and the Stemb the Bag. Here is alfo a little of the right Weft-India Cotton Shrub; but none of the Cotton is exported, nor do they make much Cloth of it.

This Country produces great variety of fine Fruits, as very good Oranges of 3 or 4 forts; (efpecially one fort of China Oranges;) Limes in abundance, Pomgranätes, Pomecitrons, Plantains, Bonano's, right Coco-nuts, Guava's, Coco-plumbs, (call'd here Mun/heroo's) Wild-Grapes, fuch as I have defcrib'd [Vol. II. Part 2. p. 46.] befide fuch Grapes as grow in Europe. Here are alfo Hog-plumbs, Cuftard-Ap-

## Braflian Fruits : The Sour-fop.

 pes, Sour-Sops, Cafherso, Papal's (called An. $\overbrace{}^{609}$ here Mamoons) fennipab's (called here fenni-papab's) Manchineel-Apples and Mango's. Mango's are yet but rare here : I caw none of them but in the Fefuit's Garden, which has a great many fine Fruits, and forme Cinamon-trees. There, both of them, were frt brought from the DaftIndies, and they thrive here very well: So do Pumplemuffes, brought alto from thence; and both China and Sevil Oranges are here very plentiful as well as good.The Sour-fop (as we call it) is a large Fruit as big as a Man's Head, of a long or oval Shape, and of a green Colour ; but one ide is Yellowifh when ripe. The outfine Rind or Coat is pretty thick, and very rough, with fall Sharp Knobs; the infide is full of fpungy Pulp, within which alto are many black Seeds or Kernels, in Chape and bigness like a Pumkin-feed. The Pulp is very juicy, of a pleasant Tate, and wholesome. You fuck the Juice out of the Palp, and fo fit it out. The Tree or Shrub that bears this Fruit grows about io or 12 Foot high, with a small fort Body; the Branches growing pretty trait up; for I did never fee any of them freed abroad. The Twigs are lender and tough ; and fo is the Stemb of the Fruit: This Fruit grows alpo both in the $E_{a f t}$ and Weft-Indies:

F 2 The

## 68 The Cafhew-Fruit, and Jenipah.

The Caßbew is a Fruit as big as a Pippin, pretty long, and bigger near the Stemb than at the other end, growing tapering. The Rind is froth and thin, of a red and yellow Colour. The Seed of this Fruit grows at the end of it ; 'tic of an Olive Colour shaped like a Bean, and about the fame bignefs, but not altogether fo flat. The Tree is as big as an Apple-Tree, with Branches not thick, yet fpreading off. The Boughs are gross, the Leaves broad and round, and in fubftance pretty thick. This Fruit is oft and Spongy when ripe, and fo full of Juice that in biting it the Juice will run out on both fides of ones Mouth. It is very pleafant, and gratefully rough on the Tongue ; and is accounted a very wholefome Fruit. This grows both in the Eaft and Weft-Indies, where I have feet and eaten of it.

The fenipab or fenipapab is a fort of Fruit of the Calabafh or Gourd-kind. It is about the bignefs of a Duck-Egg, and Somewhat of an Oval Shape; and is of a grey Colour. The Shell is not altogether fo thick nor hard as a Calabash: 'Ti full of whitifh Pulp mix with small flat Seeds; and both Pulp and Seeds muff be taken into the Mouth, where fucking out the Pulp you fit out Seeds. It is of a tharp and pleafing Tate, and is very innocent. The Tree that bears it is much like an Aft, Strait

## The Arifah-Fruit, and Mericafah.

 clean from Limbs till near the top, where there branches forth a fall Head. The Rind is of a pale grey, and fo is the Fruit. We used of this Tree to make Helves or Handles for Axes (for which it is very proper) in the Bay of Campeachy ; where I have feed of them, and no where else but here.Befide there, here are many forts of Fruits which I have not met with any where but here ; as Arijab's, Mericafab's, Petango's, ETc. Arifab's are an excellent Fruit, not much bigger than a large Cherry; shaped like a Catherine-Pear, being fall at the Stemb, and felling bigger towards the end. They are of a greenish Colour, and have fall Seeds as big as Muftard Seeds, they are fomewhat tart, yet pleafant, and wery wholfom, andmay be eaten by fickPeople.

Mericafab's, are an excellent Fruit, of which there are two forts; one growing on a fall Tree or Shrub, which is countted the bet; the other growing on a kind of Shrub like a Vine, which they plant about Arbours to make a hade, having many broad Leaves. The Fruit is as big as a fall Orange, round and green. When they are ripe they are. Fofl and fit to eat ; full of white pulp mist thick with little black Seeds, and there is no feparating ane from the other, till they are in your F 3 Mouth ;

## 70 Petango. Petumbo. Mungaroo, órc.

 A. 1699. Mouth; when you fuck in the white Pulp and fpit out the Stones. They are tart, pleafant, and very wholfome.Petango's, are a fmall red Fruit, that grow alfo on fmall Trees, and are as big - as Cherries, but not fo Globular, having one flat fide, and alfo 5 or 6 fmall protulerant Ridges. 'Tis a very pleafant tart Fruit, and has a pretty large flattifh Stone in the middle.

Petumbo's, are a yellow Fruit (growing on a Shrub like a Vine) bigger than Cherries, with a pretty large Stone: Thefe are fweet, but rough in the Mouth.

Mungaroo's, are a Fruit as big as Cherries, red on one fide and white on the other fide: They are faid to be full of fmall Seeds, which are commonly fwallowed in eating them.

Muckijfaw's, are faid to be a Fruit as big as Crab-Apples, growing on large Trees. They have, alfo fmall Seeds in the middle, and are well tafted.

Ingwa's, are a Fruit like the LocuftFruit, 4 Inches long, and one broad. They grow on high Trees.

Otee, is a Fruit as big as a large CocoNut. It hath a Husk on the outfide, and a large Stone within, and is accounted a very fine Fruit.

## Multeran-de-ova. Palm-berry, \&c. $7 \mathbf{I}$

Mufteran-de-ova's, are a round Fruit as An. 1699. big as large Hazel-Nuts, cover'd with thin brittle Shells of a blackifh colour: They have a fmall Stone in the middle, inclofed within a black pulpy fubftance, which is of a pleafant tafte. The outfide Shell is chewed with the Fruit, and Spit out with the Stone, when the pulp is fuck'd from them. The Tree that bears this Fruit is tall, large, and very hard Wood. I have not feen any of thefe five laft named Fruits, but had them thus defcribed to me by an Irifh Inhabitant of Babid; tho' as to this laft, I am apt to believe, I may have both feen and eaten of them in Acbin in Sumatra.

Palm-berries (called here Dendees) grow plentifully about Babia; the largeft are as big as Wall-nuts; they grow in bunches on the top of the Body of the Tree, among the Roots of the Branches or Leaves, as all Fruits of the Palm-kind do. Thefe are the fame kind of Berries or Nuts as thofe they make the Palm-Oyl with on the Coaft of Guinea, where they abound: And I was told that they make Oyl with them here alfo. They fometimes Roaft and Eat them; but when I had one Roafted to prove it, I did not like it.

Pbyfick-Nuts, as our Seamen call them, are called here Pineon; and Agnus Caftus is called here Carrepat: Thefe both grow

72 Brafilian Fruits, Roots, and Herbs. ${ }^{\text {An. } 1699 \text {. here: So do Mendibees, a Fruit like Pbjffck- }}$ Nuts. They forch them in a Pan over the fire before they eat them.

Here are alio great plenty of CabbageTrees, and other Fruits, which I did not get information about, and which I had not the opportunity of feeing ; becaufe this was not the Seafon,it being our Spring, and confequently their Autumn, when their beft Fruits were gone, tho' fome were left. However I faw abundance of wild Berries in the Woods and Fields, but I could not learn their Names or Nature.
They have withal good plenty of ground Fruit, as Callavances, Pine-Apples, Pumkins, Water-Melons, Musk-Melons, Cucumbers, and Roots; as Yams, Potato's Caffava's, ©́c. Garden Herbs alfo good ftore; as Cabbages, Turnips, Onions, Leeks, and abundance of other Sallading, and for the Pot. Drugs of feveral forts, viz. Saffafras, Snake-Root, éc. Befide the Woods I mentioned for Dying, and other Ufes, as Fuftick, Speckled-wood, Ơc.

I brought home with me from hence a good number of Plants, dried between the leaves of Books; of fome of the choiceft of which, that are not fpoild, I may give a Specimen at the End of the Book.

Here are faid to be great plenty and variety of Wild-Fowl, viz. Yemma's, Maccaw's (which are called here fackoo's, and are a larger fort of Parrots, and fcarcer) Par-

## Birds. The Yemma, and Crows. 73

 rots,Parakites, Flamingo's,Carrion-Crows, An: 159, Chattering-Crows, Cockrecoes, Bill-Birds finely painted, Correfoes, Doves, Pidgeons, Fenetees, Clocking-Hens, Crab-Catchers, Galdens, Currecoo's, Mufcovy Ducks, common Ducks, Widgeons, Teal, Curlews, Men of War Birds, Booby's, Noddy's, Pelicans, obc.The Yemma is bigger than a Swan, greyfeathered, with a long thick fharp-pointed Bill.

The Carrion-Crow and ChatteringCrows, are called here Mackeraw's, and are like thofe I defcribed in the Weft-Indies, [Vol. II. Part II. p. 67.] The Bill of the Chattering. Crow is black, and the Upper Bill is round, bending downwards like a Hawks-Bill, rifing up in a ridge almoft Semi-circular, and very fharp, both at the Ridge or Convexity, and at the Point or Extremity : The Lower-Bill is flat and fhuts even with it. I was. told by a Portugueze here, that their Negro-Wenches make Love-Potions with thefe Birds. And the Portugueze care not to let them have any of thele Birds, to keep them from that Supertition: As I found one Afternoon when I was in the Fields with a Padre and another, who fhot two of them, and hid them, as they faid, for that reafon. They are not good Food, but their Bills are reckoned a good Antidote againft Poifon.

74 Bill-bird. Currefo. Turtle-Dove, \&c. An. 1699. The Bill-Birds are fo called by the Englijb, from their monftrous Bills, which are as big as their Bodies. I faw none of thefe Birds here, but faw feveral of the Breafts flea'd off and dried, for the beauty of them; the Feathers were curioully colour'd with Red, Yellow, and Orangecolour.

The Currefo's (called here Mackeran's) are fuch as are in the Bay of Campeachy [Vol. II. Part 2. p. 67.]

Turtle-Doves are in great plenty here; and two forts of Wild Pidgeons; the one fort blackifh, the other a light grey: The blackifh or dark grey are the bigger, being as large as our Wood-Quefts, or WoodPidgeons in England. Both forts are very good Meat ; and are in fuch plenty from May till September, that a Man may fhoot 8 or 10 Dozen in feveral Shots at one ftanding, in a clofe mifty Morning, when they come to feed on Berries that grow in. the Woods.

The Fenetec is a Bird as big as a Lark, with blackifh Feathers, and yellow Legs and Feet. 'Tis accounted very wholfome Food.

Clocking-Hens, are much like the Crabcatchers, which I have defcribed [Vol. II. Part 2. p. 70.$]$ but the Legs are not altogether fo long. They keep always in fwampy wet places, tho their Claws are

## Birds of the Heron-kind, \&c.

like Land-Fowls Claws. They make a $\mathrm{An}^{1699}$ Noife or Cluck like our Brood-Hens, or Dunghil-Hens, when they have Chickens, and for that reafon they are called by the Englijb, Clocking-Hens. There are many of them in the Bay of Campeachy (tho' omitted to fpeak of them there) and elfewhere in the $W e f$-Indies. There are both here and there four forts of thefe longleg'd Fowls, near a-kin to each other, as fo many Sub-Species of the fame kind; viz. Crab-catchers, Clocking-Hens, GaIdens (which three are in thape and colour like Herons in England, but lefs; the Galden, the biggeft of the three, the Crabcatcher the fmalleft ;) and a fourth fort which are black, but fhaped like the other, having long Legs and fhort Tails; there are about the bignefs of Crab-catchers, and feed as they do.

Currecoos, are Water Fowls, as big as pretty large Chickens, of a bluih colour, with fhort Legs and Tail ; they feed alfo in fwampy Ground, and are very good Meat. I have not feen of them elfewhere.

The Wild-Ducks here are faid to be of two forts, the Mufcouy, and the com-mon-Ducks. In the wet Seafon here are abundance of them, but in the dry time but few. Wigeon and Teal alfo are faid to be in great plenty here in the wet Seafon.

76 Ofridges. Dunghil-Fowl. Beafts, \&c.
An. 1699. To the Southward of Babia there are alfo Oftridges in great plenty, tho', 'tis faid, they are not fo large as thofe of Africa: They are found chiefly in the Southern Parts of Brazil, efpecially among the large Savannahs near the River of Plate; and from thence further South towards the Streights of Magellan. -

As for Tame Fowl at Babia, the chief befide their Ducks, are Dunghil-Fowls, of which they have two forts; one fort much of the fize of our Cocks and Hens ; the other very large: And the Feathers of thefe laft are a long time coming forth; fo that you fee them very naked when half grown; but when they are full grown and well feathered, they appear very large Fowls, as indeed they are; neither do they want for price; for they are fold at Babia for half a Crown or three Shillings apiece, juft as they are brought firft to Market out of the Country, when they are fo lean as to be fcarce fit to Eat.

The Land Animals here are Horfes, black Cattle, Sheep, Goats, Rabbits, Hogs, Leopards, Tigers, Foxes, Monkeys, Pecary (a fort of wild Hogs, called here Pica) Armadillo, Alligators, Guano's (call'd Quittee) Lizards, Serpents, Toads, Frogs, and a fort of Amphibious Creatures called by the Portugnezze Cachora's da egua, in Englifh.Water-Dogs.

Wild-Beafts. Serpents. Amphisbxna. 77
The Leopards and Tigers of this Couni- An. 1699 . try are faid to be large and very fierce : But here on the Coaft they are either deftroyed, or driven ${ }^{\circ}$ back towards the heart of the Country; and therefore are feldom found but in the Borders and Ont-plantations, where they oftentimes do Mifchief. Here are three or four forts of Monkeys, of different Sizes and Colours. One fort is very large ; and another fort is very fmall : Thefe laft are ugly in Shape and Feature, and have a ftrong Scent of Musk.

Here are feveral forts of Serpents, many of them vaftly great, and moft of them very venomous: As the Rattle-fnake for one: And for Venom, a fmall Green Snake is bad enough, no bigger than the Stemb of a Tobacco-pipe, and about 18 Inches long, very common here.

They have here alfo the Amphisbana, or Two-headed Snake, of a grey Colour, mixt with blackih Stripes, whofe Bite is reckon'd to be incurable. 'Tis faid to be blind, tho it hastwo fmall Specks in each Head like Eyes: But whether it fees or not I cannot tell. They fay it lives like a Mole, moftly under Ground; and that whenit is found above Ground it is eafily kill'd, becaufe it moves but flowly: Neither is its Sight (if it hath any) fo good as to difcern any one that comes near to kill hurt him but when he comes in their way. 'Tis about 14 Inches long, and about the bignefs of the inner joint of a Man's middle Finger ; being of one and the fame bignefs from one end to the other, with a Head at each end, (as they faid; for I cannot vouch it, for one I had was cut fhort at one end) and both alike in thape and bignels; and 'tis faid to move with either Head formoft, indifferently; whence 'tis called by the Portugueze, Cobra de dos Cabefas, the Snake with two Heads.

The fmall black Snake is a very venomous Creature.

There is alfo a grey Snake, with red and brown Spots all over its back. 'Tis as big as a Man's Arm, and about 3 Foot fong, and is faid to be venomous. I faw one of thefe.

Here are two forts of very large Snakes or Serpents: One of 'em a Land-fnake, the other a Water-frake. The Landfnake is of a grey colour, and about 18 or 20 Foot long: Not very Venomous, but Ravenous. I was promifed the fight of one of their Skins, but wanted opportunity.

The Water-fnake is faid to be near 30 Foot long. Thefe live wholly in the Water, either in large Rivers, or great Lakes, and prey upon any Creature that comes

## Great Water-Snake of Brazil.

within their reach, be it Man or Beaft. $\mathrm{A}^{1} 1599$ They draw their Prey to them with their Tails: for when they fee any thing on the Banks of the River or Lake where they lurk, they fwing about their Tails 10 or 12 Foot over the Bank; and whatever ftands within their Sweep is fiatch'd with great Violence into the River, and drowned by them. Nay 'tis reported very credibly that if they fee only a fhade of any Animal at all on the Water, they will flourih their Tails to bring in the Manor Beaft whofe fhade they fee, and are oftentimes too fuccefsful in it. Wherefore Men that have bufinefs near any place where thefe Water-Monfters are fufpected tolurk, are always provided with a Gun, which they often Fire, and that fcares them away, or keeps them quiet. They are faid to have great Heads, and ftrong Teeth about 6 Inches long. I was told by an Irijb Man who lived here, that his Wife's Father was very near being taken by one of them about this time of my frft Arrival here, when his Father was with him up in the Country : For the Beaft flourili'd his Tail for him, but came not nigh enough by a yard or two; however it fcared him fufficiently.

The Amphibious Creatures here which I faid are called by the Portugueze Cuchora's de Agua, or Water-dogs; are faid to beas

80 Cuchora de Agua. Fib, Shell-Fi/b, $\sim_{\text {An. 1599. big as fmall Maftives, and are all hairy and }}$ fhaggy from Head to Tail. They have 4 fhort Legs, a pretty long Head and Thort Tail; and are of a blackifh Colour. They live in frefh Water-ponds, and oftentimes come afhore and Sun themfelves; but retire to thie Water if affaulted: They are eaten, and faid to be good Food. Scveral of thefe Creatures which I have now fpoken of I have not feen, but inform'd my felf about them while I was here at Babia, from fober and fenfible Perfons among the Inhabitants, among whom I met with fome that could fpeak Englifh.

In the Sea upon this Coaft there is great ftore and diverfity of Fifh, vix. Jew-fifh, for which there is a great Market at Babia in Lent : Tarpom's, Mullets, Groopers, Snooks, Gar-finh (called here Goolion's,) Gorafes, Barrama's, Coquinda's, Cavallie's, Cuchora's (or Dog-finh) CongerEels, Herrings (as I was told) the Serrem, the Olio de Boy, (I write and fpell them juft as they were named to me) Whales, éc.

Here is alfo Shell-fifh (tho in lefs plenty about Babia than on other parts of the Coaft,) viz. Lobtters, Craw-fifh, Shrimps, Crabs, Oyfters of the common fort, Conchs, Wilks, Cockles, Mufcles, Perriwinkles, foc. Here are three forts of SeaTurtle, viz. Hawksbill, Loggerhead, and

## Green-Turtle: Hawds-bill Turtle. 81

Green : But none of them are iu any $\sim^{\text {An. } 1699}$ efteem, neithet Spaniaids nor Portuguefe loving them : Nay they have a great Antipathy dgainft them, and would much rather eat a Porpofe, tho' our Englifh count the Green Turtle very extriordinary Food. The Reafon that is commonly given in the Wef-Indies for the Spaniards not caring to eat of them, is the fear they have left, being ufually foul-bodied, and manny of them pox'd (lying, as they do, fopromifcuoufIy witt their Negrines and other Sheflaves) they fhould break out loathfomely like Lepers; which this fort of Food, 'tis faid, does much encline Men to do, fearching the Body, and driving out any fuch grofs Humors : For which caufe many of our Englifh Valetudinarians have gone from Famaica (thio there they have alfo Turtle) to the I. Caimanes, at the Layingtime, to live wholly upon Turtle that then abound there; purpofely to have their Bodies fcour'd by thjsFood, and their Diftempers driven out; and have been faid. to have found many of them good Succefs in it. But this by the way. The Hawkf-bill-Tuttle on this Coaft of Brazil is moft fought after of any, for its Shell ; which by Report of thofe I have convers'd with at Babia, is the cleareft and beft clouded Tortoife-thell in the World. I had fome of it hewn me, which was indeed as good

## 82 <br> St. Paulis, erc. in Brazil.

华. 1699: as I ever faw. They get a pretty deal of it in fome Parts on this Coaft; but tis very deaf.

Beffete this Port of Babia de todos los Sartos, there are two more principal Ports on Brazil, where European Ships Trade, viz. Pernambanc and Ria Faneira ; and I was told that there go as many Ships to each of thefe Places as to Babia, and two Men of War to each Place for their Convoys. Of the other Ports in this Country none is of greater Note than that of St. Paul's, where they gather much GoId; but the Inhabitants are faid to be a fort of Banditti, or loofe People that live under no Government : But their Gold brings them allforts of Commodities that they need, as Cloths, Arms, Ammunition, ofr. The Town is faid to be large and ftrong.

Holland, and digs Wells, but brackifh. Of the Inhabitants there, the great Tides, the Vegetabless and Animals, \&c.

MY flay here at Bahia was about a Month: during which time the Vice-Roy of Goa came hither from thence in a great Ship, faid to be richly laden with all forts of India Goods; but the did not break Bulk here, being bound home for Lisbon: only the Vice-Roy intended to refrefh his Men (of whom he had loft many, and moot of the reft were very fickly, having been 4 Months in their Voyage hither) and fo to take in Water, and depart for Europe, in Company with the other

Portuguefe. Ships thither Bound ; who $\overbrace{}^{\text {An. } 1699 .}$ had Orders to be ready to Sail by the twentieth of May. He defirid me to carry a Letter for him, directed to his Succeffor the new Vice-Roy of Goa: Which I did; fending it thither afterwards by Captain Hammorid, whom I found near the Cape of Good Hope. The refrefhing my Men, and taking, in Water, was the main alfo of my Bufinefs here; befide the having the better opportunity to compofe the Diforders among my Crew : Which, as I have before related, were grown to fo great a Heighth, that they could not without great Difficulty be appeafed : However, finding Opportunity, during my ftay in this Place, to allay in fome meafure the Ferment that had been raifed among my Men, I now fet my felf to provide for the carrying on of my Voyage with more Heart than before, and put all Hands to work, in order to it, as faft as the backwardnefs of my Men would permit ; who Chew'd continually their unwillingnefs to proceed farther. Befides, their Heads were generally filld with ftrange Notions of Southerly Winds that were now retting in (and there had been already fome Flurries of them)

## 86 Of the Winds and Seafons,at Bahia.

 An. $1699 \cdot$ which, as they furmis'd, would hinder any farther Attempts of going on to the Southward, fa long as they fhould lật.The VVinds begin to thift here in April and September, and the Seafons of the Year (the Dry and the Wet) alter with them. In April the Southerly Winds make their entrance on this Cgaft, bringing in the wet Seafon, with viọlent Tornado's, Thunder and Light. ning, and much Rain. In September the other Coaiting Trade, at Eaft NortinEatt comes in, and clears the Sky, bringing fair Weather, This, as to the change of Wind, is what I have obferv'd Val. II. Part. 3. p. 19. but as ta the change of Weather accompanying it fo exacty here at Babia, this is a particular Exception to what I have Experienc'd in all other Places of South Latitudes that I have been in berween the Tropicks, or thofe I have heard of; for there the Dry Seafons, fets in, in April, and the Wet about Olfober or November, fooner of later (as I have faid that they'are, in Saquth Latitudes, the Reverfe of the Seafons, or Weather, in the fame Months in N. Latitudes, Vol.II. Part. 3. p. 77.) whereas on this Coalt of Brazil, the wet Seafon

## Seafoon for untting Sugar-Canes.

 it doth in N. Latitudes, and the Dry (as I have faid here.) in September; the Rains here not lafting fo far in the year as in other Places : for in September the Weather is ufually 60 fair, that in the tatter part of that Month they begin to cut their SugarCanes here, 12 wastold; for I enquired particularly about the Seafons: Though this, as to the Seafon of cutting of Canes, which 1 was now affur'd to be in September, agvees not very well with what I was formerly told [Vol. II. Paut. 3. p. 82.] that in Braciit they cut theiCanesinfily. And To, as to what is faid alittle lower in the fame Page, that in managing their Canes they are not confin'd to the Seafons, this ought to have been exprefs'd only of Planting them; for they never cut them but in the dry Seafon.But to return to the Southerly Winds, which came in (as I expected they would) while I was here: Thefe daunted my Ship's Company very much, tho I had told them they were to look for them: But they being ignorant as to what I told them farther, that thefe were only Coaft-ing-Winds, fweeping the Shore to abous 40 or 50 Leagues in breadth from it; and imagining that they had blown fo all the Sea over, between America and Africa;

## 88 <br> Watering-place at Bahia;

An. 1699 and being confirm'd in this their Opinion by the Portinguefe Pilots of the European Ships, with whom feveral of my Officers converfed much, and who were themfelves as ignorant that thefe were only Coalting Trade-Winds (themfelves going away before them, in their return homewards, till they crofs the Line, and fohawing no experience of the Breadth of them) being thus poffers'd with a Conceit that we could not Sail from hence till September; this made them ftill the more remifs in their Duties, and very liflefs to the getting Things in a readinefs for our Departure. However I was the more diligent my felf to have the Ship fcrubb'd, and to fend my Water-Casks afhore to get them trimm'd, my Beer being now out. I went alfo to the Governor to get my Water fill'd ; for here being but one Wateringplace (and the Water running low, now at the end of the Dry Seafon) it was always fo crouded with the European Ships Boats, who were preparing to be gone, that my Men could feldom come nigh it, till the Governour very kindly fent an Officer to clear the Water-place for my Men, and toftay there till my WatereCasks were all full, whom I fatisfied for his Pains. Here I alfo got Aboard 9 or ic Tun of Ballaft, and made my Boatfwain fit the Rig-

## and pleafant Fields about it.

Rigging that was amifs : And I enquired An. $\sim^{1699}$ allo of my particular Officers whofe Bufmefs it was, whether they wanted any Stores, efpecially Pitch and Tar; for that here I would fupply my felf before I proceeded any farther; but they faid they had enough,tho it did not afterwards prove fo.

I commonly went afhore every day, either upon Bufinefs, or to recreate my felf in the Fields, which were very pleafant, and the more for a fhower of Rain now and then, that ufhers in the Wet Seafon. Several forts of good Fruits were alfo ftill remaining, efpecially Oranges, which were in fuch plenty, that I and all my Company ftock'd our felves for our Voyage with them, and they did us a great kindnefs; and we took in alfo a good quantity of Rum and Sugar: But for Fowls they being here lean and dear, I was glad I had ftock'd my felf at St. Fago. But by the little care my Officers took for frehh Provifions, one might conclude, they did not think of going much farther. Befides, I had like to have been imbroiled with the Clergy here (of the Inquifition, as I fappofe) and fo my Voyage might have been hindred. What was faid to them of me, by fome of my Company that went afhore, I know not; but I was affured by a Merchant there, that if they got me into their Clutches (and
an. 1699. it feems, when I was laft athore they had narrowly watch'd me) the Governor himfelf could not releafe me. Befides I might either be marther'd in the Streets, as he fent me word, or poyfoned, if 1 came athore any more; and therefore he advifed me to flay aboard. Indeed I had now no further Bufinefs afhore but to take leave of the Governor, 'and therefore took his Advice.

Our Stay here was till the 23 d of Aprit. $I$ would have ionie before if I could fooner have fitted my felf; but was trow earnet to be gone, becaule this Harbour lies open to the S. and S. S. W. which are raging Winds here, and now was the Seafonfor them. We had two or three Touches of them; and one pretty fevere, and the Ships ride there fo near each other, that if a Cable fhould fail, or an Anchor \{tart, you are inftantly aboard of one Ship or other: And I was more afraid of being difabled here in Harbour by thefe bluftring Winds, than difcouraged by them, as my People were, from profecting the Voyage ; for at prefent I even wifh'd for a brisk Southerly Wind as foon as I hould be once well out of the Harbour, to fet me the fooner into the True General TradeWind.

The Tide of Flood being fpent, and having a fine Land-Breeze on the 23d. in
C. Salvador: Winds and Breezes.
the Morning, I went away from the An-choring-place before 'twas light; and then lay by till Day-light that we might fee the better how to go out of the Harbour. I had a Pilot belonging to Mr. Cock, who went out with me, to whom I gave three Dollars; but I found I could as well have gone out my felf, by the Soundings I made at coming in. The Wind was E. by N. and fair VVeather. By 10 a Clock I was got paft all danger, and then fent away my Pilot. At 12 Cape Salvadore bore N. diftant 6 Leagues, and we had the VVinds between the E. by N. and S. E. a confiderable time, fo that we kept along near the Shore, commonly in fight of it. The Southerly Blafts had now left us again; for they come at firft in thort Flurries, and fhift to other Points (for 10 or 12 days fometimes) before they are quite fet in: And we had uncertain Winds, between Sea and Land-Breezes, and the CoaftingTrade, which was its felf unfettled.

The Eafterly-Winds at prefent made me doubt I fhould not Weather a great Sheal which lies in Lat. between 18 deg, and 19 deg. S. and runs a great way into the Sea, directly from the Land, Eafterly. Indeed the Weather was fair (and continued fo a good white) (o that I might the better avoiḍ any Danger from it : And if the VVind came to the Southward I knew

## 92

An. 1699. Longitude taken from C. Salvador. I could ftretch off to Sea; fo that I jogg'd on couragioully. The 27th of April we faw a frall Brigantine nnder the Shore plying to the Southward. We alfo faw many Men of War-birds and Boobies, and abundance of Albicore-Fihh. Having ftill fair Weather, fmall Gales, and fome Calms, I had the opportunity of ttying the Current, which I found to fet fometimes Northerly and fometimes Southerly: And therefore knew I was ftill within the Verge of the Tides. Being now in the Lat. of the Abroble Shoals, which I expected to meet with, I founded, and had Water leffening from 40 to 33 , and foto 25 Fa thom: But then it rofe again to 33,35 , 37, Grc. all Coral Rocks. Whilft we were on this Shoal (which we crofs'd towards the further part of it from Land, where it lay deep, and fo was not dangerous) we caught a great many. Fifh with Hook and Line; and by evening Amplitude wẹ had 6 deg. 38 min . Eaft Variation. This was the 27th of April; we were then in Lat 18 deg. $13 \mathrm{~min} . S$. and Eaft Longitude from Cape Salvadore 31 min. 'On the 29 th, being then in Lat. 18 deg. $39 \mathrm{~min} . S$. we had fmall Gales from the W. N. W. to the W. S. W. often thifting. The 3oth we had the Winds from W. to S. S. E. Squalls and Rain: And we faw fome Dolphins and other Fifh about us. We. were

## Shear-water's. Shark's cook'd.

 fo 4 or 5 Days: But the Winds now hanging in the South was an apparent Sign that we were ftill too nigh the Shore to receive the True General Eaft-Trade; as the Eafterly VVinds we had before fhew'd that we were too far off the Land to have the Benefit of the Coafting South-Trade : and the faintnefs of both thefe VVinds, and their often Thifting from the S.S. VV. to the S. E. with Squalls, Rain and fmall Gales, were a Confirmation of our being between the Verge of the S . Coafting-Trade, and that of the True Trade; which is here, regularly, S. E.The third of May being in Lat. 20 deg. 00 min. and Merid. diftance VVeft from Cape Salvadore 234 Miles, the Variation was 7 deg. 00 min. VVe faw no Fowl but Shear-waters, as our Sea-men callthem, being a fmall black Fowl that fweep the VVater as they fly, and are much in the Seas that lie without either of the Tropicks: They are not eaten. We caught 3 . fmall Sharks, each 6 Foot 4 Inches long; and they were very good Food for us. The next day we caught 3 more Sharks of the fame fize, and we eat them alfo, efteeming them as good Finh boild and prefs'd, and then flew'd with Vinegar and Pepper.

Wbales. Innumerable Fowls.
VVe had nothing of Remark from the 3 d of May to the 1oth, only now and then feeing a fmall Whale fpouting up the Water. We had the Wind Eatterly, and we ran with it to the Southward, running in this time from the Lat. of 20 deg .00 m . to 29 deg. 5 min . S. and having then 7 d . 3 m . E. Long.from C. Salvadore; the Variation increafing upon us, at prefent, notwithftanding we went Eaft. We had all along a great difference between the Morning and Evening Amplitudes; ufually a degree or two, and fometimes more. We were now in the True Trade, and therefore made good way to the Southward, to get without the Verge of the General Trade-Wind into a V Vefterly VVind's way, that might carry us towards the Cape of Good Hope. By the 12th of May, being in Lat. 31 deg. 10 min. we began to meet with VVefterly VVinds, whichfreflaned on us, and did not leave us till a litule before we made the Cape. Sometimes it blew fo hard that it put us under a fore-courfe; efpecially in the Night : but in the day-time we had commonly our Main Top-fail rift. VVe met with nothing of moment ; only we paft by a dead VVhale, and faw Millions (as I may fay) of Sea-Fowls about the Carcals (and as far round about it as we could fee) fome feeding, and the reft flying about, or fitting

Pintado-birds,Shear-waters, Petrels,\&c. 95 ting on the VVater, waiting to take their $A$ n. 1699. Turns. VVe firft difcovered the $V$ Vhale by the Fowls; for indeed I did never fee fo many Fowls at once in my Life before, their Numbers being inconceivably great: They were of divers forts, in Bignefs, Shape and Colour. Some were almoft as big as Geefe, of a grey Colour, with white Breafts, and with fuch Bills, VVings, and Tails. Some were Pintado-Birds, as big as Ducks, and Speckled Black and VVhite. Some were Shear-waters; fome Petrels; and there were feveral forts of large Fowls. VVe faw of thefe Birds, efpecially the Pintado-birds, all the Sea over from about 200 Leagues diftant from the Coaft of Brazil, to within much the fame diftance of New-Holland. The Pintado is-a Southern Bird, and of that Temperate Zone; for I never faw of them much to the Norwardof 30 deg . S. The Pintadobird is as big as a Duck; but appears, as it flies, about the bignefs of a tame Pigeon; having a fiort Tail, but the VVings very long, as mottSea-Fowls have; efpecially fuch as thefe that lly far from the Shore, and feldom come nigh it : for their Refting is fitting afloat upon the VVater; but they lay, I fuppofe, affiore. There are three forts of there Birds, all of the fame make and bignefs, and are only different in Colour. The firft is black all over:

## 96

$\xrightarrow{\text { An. } 1699}$
The fecond fort are grey, with white Bellies and Breafts. The third fort, which is the true Pintado, or Painted-bird, is curioufly fpotted white and black. Their Heads, and the tips of their VVings and Tails, are black for about an Inch; and their VVings are alfo. edg'd quite round with fuch a fmall black Litt ; only within the black on the tip of their VVings there is a white Spot feeming as they fly (for then their Spots are beft feen) as big as a Half-crown. Alt this is on the outfide of the Tails and VVings; and as there is a white Spot in the black Tip of the VVings, fo there is in the middle of the VVings which is white, a black Spot ; but this, towards the back of the Bird, turns gradually to a dark grey. The Back its felf, from the Head to the Tip of the Tail, and the Edge of the Wings next to the Back, are all over-fpotted with fine friall, round; white and black Spots, as big as a Silver Two-pence, and as clofe as they can ftick one by another: The Belly, Thighs, Sides, and inner part of the Winds, are of a light Grey. Thefe Birds, of all thefe forts, fly many together, never high, but almoft fweeping the Water. We Chot one a while after on the Water in a Calm, and a Wa-ter-Spaniel we had with us brought it in: 1 have given a Picture of it [See Birds. Fig. 1.] but it was fo damaged, that the Picure doth

This very much refermbles the Guarauna, defcribed, and figured by Pifo.

## The Pintado Bird. P. $g^{6}$.

## The Petrel. Variation.

doth not thew it to adwantage ; and its $A n .1699$ Spots are beft feen when the Feathers are fpread as it flies.

The Petrel is a Bird not much unlike a Swallow, but fmaller, and with a fhorter Tail. 'Tis all over black, except a white Spot on the Rump. They fly fweeping like Swallows, and very near the Water. They are not fo often feen in fair Weather; being Foul-weather Birds, as our Seamen call them, and prefaging a Storm when they come about a Ship; who for that Reafon don't love to fee them. In a Storm they will hover clofe under the Ship's Stern, in the Wake of the Ship (as 'tis call'd) or the fmoothnefs which the Ship's paffing has made on the Sea : And there as they fly (gently then) they pat the VVater alternately with their Feet, as if they walk'd upon it ; tho ftill upon the Wing. And from hence the Seamen give them the name of Petrels, in allufion to St. Peter's walking upon the Lake of Gennefareth:

VVe alfo faw many Bunches of Sea: weeds in the Lat. of 39.32. and by Judgment, near the Meridian of the Illand Trifiian d' Aconha: And then we had about 2 d : 20 min. Eaft Variation; which was now again decreafing as we ran to the Eaftward; till near the Meridian of Afcention; where we found little or no Variation: But from thence, as we ran farther to the Eaft; out Variation increafed VVefterly.

98 Fowls Shoving the C. of G. Hope near. G. Hope, my Variation was 7 deg. 58 min . Weft. I was then in 43 deg .27 min . Eaft Longit. from C. Salvador, being in Lat. 35 deg. 30 min . this was the firft of June. The fecund of June I Caw a large black Fowl, with a whitish flat Bill, fly by us; and took great notice of it, because in the Eaf-India Waggoner, or Pilot-book, there is mention made of large Fowls, as big as Ravens, with white flat Bills and black Feathers, that fly not above 30 Leagues from the Cape, and are look'd on as a Sign of ones being near it. My Reckoning made me then think my elf above go Leagues from the Cape, according to the Longitude which the Cape hath in the common Sea-Charts: So that I was in forme doubt, whether there were the right Fowls Spoken of in the Waggoner; or whether thofe Fowls might not fly farther off Shore than is there mentioned; or whether, as it proved, I might not be nearer the Cape than I reckoned my pelf to be; for I found, ron after, that I was not then above 25 or 30 Leagues at moff from the Cape. Whether the fault were in the Charts laying down the Cape too much to the Eat from Brazil, or were rather in our Reckoning, I could not tell: But our Reckonings are liable to fuch Uncertainties from Steerage, Log, Currents, Half-

Minute-Glaffes; and fometimes want of An. $\sim^{1699}$ Care, as in fo long a Run caufe often a difference of many Leagues in the whole Account.

Moft of my Men that kept Journals imputed it to the Half-Minute-Glaffes; and indeed we had not a good Glafs in the Ship befide the Half-watch or Two-Hour-Glaffes. As for our Half-Minute-Glaffes we tried them all at feveral times, and we found thofe that we had ufed from Brazil as much too fhort, as others we had ufed before were too long: Which might well make grear Errors in thofe feveral Reck= onings. A Ship ought therefore to have its Glaffes very exact; and befides, an extraordinary care ought to be ufed in heaving the Log, for fear of giving too much Stray-Line in a moderate Gale; and alfo to ftop quickly in, a brisk Gale, for when a Ship runs 8, 9 or 10 Knots, half a Knot or a Knot is foon rum out, and not heeded : But to prevent danger, when a Man thinks himfelf near Land, the beft way is to look out betimes, and lye by in the Night, for a Commander may err eafily himfelf; be fide the Errors of thofe under him, tho' never fo carefully eyed.
Another thing that ftumbled me here was the Variation, which, at this time, by the laft Amplitude I had I found to be but 7 deg. $58 \mathrm{~min}, W$. whereas the Variation

## 100 Difficulties in taking the Variation.

 ${ }^{\text {An. }} 169.5$, at the Cape (from which I found my felf not 30 Leagues diftant) was then computed, and truly, about 11 deg. or more : And yet a while after this, when I was got Io Leagues to the Eaftward of the Cape, I found the Variation but 10 deg . 40 min . W. whereas it thould have been rather more than at the Cape. Thefe Things, I confefs, did puzzle me: Neither was I fully fatisfied as to the Exactnefs of the taking the Variation at Sea : For in a great Sea, which we often meet with, the Compals will traverfe with the motion of the Ship; befides the Ship may and will deviate fomewhat in fteering, even by the beft Helmfmen: And then when you come to take an Azimuth, there is often fome difference between him that looks at the Compafs, and the Man that takes the Altitude heighth of the Sun; and a fmall Error in each, if the Error of both chould be one way, will make it wide of any great Exactnefs. But what was moft fhocking to me, I found that the Variation did not always increafe or decreafe in proportion to the degrees of Longitude Eaft or Weft ; as I had a Notion they might do to a certain Number of Degrees of Variation Eaft or Weft, at fuch or fuch particular Meridians. But finding in this Voyage that the Difference of Variation did not bear a regular proportion to the difference of Longitude, ICapt. Halley's Scheme of the Variat. 10 r was much pleas'd to fee it thus, obferv'd in An. 1699. a Scheme fhewn me after my Return home, wherein are reprefented the Reveral Variations in the Atlantick Sea, on both fides the Equator ; and there, the Line of no Variation in that Sea is not a Meridian Line, but goes very oblique, as do thofe alfo which the w the increale of Variation on each fide of it. In that Draught there is fo large an Advance made as well towards the Accounting for thofe feemingly Irregular Increafes and Decreãfes of Variation towards the S. E. Coait of America, as towards the fixing a general Scheme or Syftem of the Variation every where, which would be of fuch great ufe in Na vigation, that I cannot but hope that the Ingenions Aurhor, Capt. Halley, who to his profound Skill in all Theories of thefe kinds, hath added and is adding continually Perfonal Experiments, will e'er long oblige the World with a fuller Difcovery of the courfe of the Variation, which hath hitherto been a Secret. For my part I profefs my felf unqualified for oftering at any thing of a General Schẹme; but fince Matter of Fact, and whatever increafes the Hiftory of the Variation, may be of ufe towards the fettling or confirming the Theory of it, If thall here once for all infert a Table of all the Variations I obfery'd beyond the Equator in this Voyage, both $\mathrm{H}_{3}$ in

102 Variations obferved in this Voyage. An. 1899 . in going out, and returning back; and what Errors there may be in it, I fhall leave to be corrected by the Obfervations of others.

But

## 108 Meeting the Antelope of London.

 But to return from this Digreffion: Having fair Weather, and the Winds hanging Southerly, I jog'd on to the Eaftward, to make the Cape. On the third of June we faw a Sail to Leeward of us, fhewing Englifh Colours. I bore away to fpeak with her, and found her to be the Antelope of London, commanded by Captain Hammond, and bound for the Bay of Bengal in the Service of the Nem-Eaf-India Company. There were many Paffengers aboard, going to fettle there under Sir Edward Littleton, who was going chief thither: I went aboaid, and was known by Sir $E d$ spard and Mr. Hedges, and kindly received and treated by them and the Commander; who had been afraid of us before, tho' I had fent one of my Officers aboard. They had been in at the Cape, and came from thence the Day before, having ftock'd themfelves with Refrefhments. They told me that they were by Reckoning, 60 Miles to the Weft of the Cape. While I was aboard them, a fine fmall Wefterly Wind fprang up; therefore I thortned my ftay with them, becaufe I did not defign to go into the Cape. When I took leave I was prefented with half a Mutton, 12 Cabbages, 12 Pumkins, 6 Pound of Butter, 6 Couple of Stock-fifh, and 2 quantity of Parfnips; fending them fome Oatmeal, which they wanted.The A. paffes the C. of G. Hope. IO9
From my firft fetting out from England, An. ${ }^{1699}$ : I did not defign to touch at the Cape; and that was one Reafon why I touch'd at Brazil, that there I might refrefh my Męn, and prepare them for a long Run to Nero Holland. We had not yet feen the Land; but about 2 in the Afternoon we faw the Cape-Land bearing Eaft, at above 16 Leagues diftance: And Captain Hammond being alfo bound to double the Cape, we jog'd on together this Afternoon and the next Day, and had feveral fair Sights of it; which may be feen [Table III. No. 6, 7, 8.]

To proceed : Having ftill a Wefterly Wind, I jog'd on in company with the Antelope, till Sunday Fune the 4 th at 4 in the Afternoon, when we parted; they fteering away for the Eaft-Indies, and I keeping an E. S. E. courfe, the better to make my way for New Holland: For tho' Nemo Holland lies North-Eafterly from the Cape, yet all Ships bound towards that Coaft, or the Streights of Sundy, ought to keep for a while in the fame Parallel, or in a Lat. between 35 and $4 c$. at leaft a little to the S. of the Eaft. that they may continue in a variable Winds way; and not venture too foon to ftand fo far to the North, as to be within the Verge of the Trade-Wind, which will put them by their Eafterly Courfe. The Wind increafed upon us; but

An. 1699. we had yet fight of the Antelope, and of the Land too, till Tuefday the 6th of Fune: And then we faw alfo by us an innumerable Company of Fowls of divers forts $;$ fo that we look'd about to fee if there were not another dead Whale, but faw none.

The Night before, the Sun fet in a black Cloud, which appeared juft like Land; and the Clouds above it were gilded of a dark red Colour. And on the Tuefday, as the Sun drew near the Horizon, the Clouds were gilded very prettily to the Eye, tho' at the fame time my Mind dreaded the Confequences of it. When the Sun was now not above 2 deg. high,itentered into a dark Smoaky.coloured Cloud that lay parallel with the Horizon, from whence prefently feem'd to iffue many dusky blackifh Beams. The Sky was at this time covered with fmall hard Clouds (as we call fuch as lye fcattering about, not likely to Rain) very thick one by another; and fuch of them as lay next to the Bank of Clouds at the Horizon, were of a pure Gold colour to 3 or 4 deg. high above the Bank: From thefe to about 10 deg. high they were redder, and very bright; above them they were of a darker Colour ftill, to about 6 c or 70 deg. high; where the Clouds began to be of their common Colour. I took the more particular Notice of all this, becaufe I have generally obferved fuch colour'd Clouds to ap-
pear before an approaching Storm : And $A n$. ${ }^{1699}$ this being Winter here, and the time for bad Weather, I expected and provided for a violent blaft of Wind, by riffing our Topfails, and giving a ftrict charge to my Officers to hand them or take them in, if the Wind fhould grow ftronger. The Wind was now at W. N. W. a very brisk Gale. About 12 a Clock at Night we had a pale whitilh Glare in the N . W. which was another Sign, and intimated the Storm to be near at hand; and the Wind increafing upon it, we prefently handed our Top-fails, furled the Main-fail, and went away only with our Fore-fail. Before 2 in the Morning it came on very fierce, and we kept right before Wind and Sea, the Wind ftill encreafing: But the Ship was very governable ${ }_{3}$ and fteer'd incomparably well. At 8 in the Morning we fettled our Fore-yard, lowering it 4 or 5 Foot, and we ran very fwiftly; efpecially when the Squals of Rain or Hail, from a black Cloud, came over Head, for then it blew exceffive hard. Thefe, tho' they did not laft long, yet came very thick and faft one after another. The Sea alfo ran very high; But we running fo violently before Wind and Sea, we Ship'd little or no Water; tho' a little wafh'd into our upper Deck-Ports; and with it 2 Scuttle or Cuttle-Fih was calt upon the Carriage of a Gun.

112 Seafon of Wefterly Winds bere. An. 169.0. The Wind blew extraordinary hard all Wedneflay, the 7 th of Fune, but abated of its fiercenefs before Night: Yet it continued a brisk Gale till about the 16 th, and ftill a moderate one till the igth Day; by which time we had run about 600 Leagues: For the moft part of which time the Wind was in fome point of the Weft, viz. from the W. N. W. to the S. by W. It blew hardeft when at $W$. or between the $W$. and $S$. W. but after it veered more Southerly the foul Weather broke up: This I obferved at other times alfo in thefe Seas, that when the Storms at Weft veered to the Southward they grew lefs; and that when the Wind came to the E. of the S. we had ftill fmaller Gales, Calms, and fair Weather. As for the Wefterly Winds on that fide the Cape, we like them never the worfe for being violent, for they drive us the fafter to the Eaftward ; and are therefore the only Winds coveted by thofe who Sail towards fuch parts of the Eaft-Indies, as lye South of the Equator; as Timor, Fava; and Sumatra; and by the Ships bound for Cbina, or any other that are to pafs through the Streights of Sundy. Thofe Ships having once paft the Cape, keep commonly pretty far Southerly, on purpofe to meet with thefe Weft-winds, which in the Winter Seafon of the feClimates they foon meet with; for then the Winds are generally Wefterly at

## Winds and Courfe topoards New H. 113

 the Cape, and efpecially to the Southward $\mathrm{An}^{16.169 .}$ of it: But in their Summer Months they get to the Southward of 40 deg. ufually e're they meet with the Wefterly Winds. I was not at this time in a higher Lat. than 36 deg. 49 min . and oftentimes was more Northerly, altering my Latitude often as Winds and Weather required; for in fuch long runs 'tis beft to fhape ones courfe according to the Winds. And if in fteering to the Eaft, we fhould be obliged to bear a little to the N . or S . of it, 'tis no great matter; for 'tis but Sailing 2 or 3 Points from the Wind, when 'tis either Northerly or Southerly; and this not only eafeth the Ship from ftraining, but fhortens the way more than if a Ship was kept clofe on a Wind, as fome Men are fond of doing.The 19th of $\mathcal{F}$ une we were in Lat. 34: deg. 17 min . S. and Long. from the Cape 39 deg. 24 min . E. and had fmall Gales and Calms. The Winds were at N. E. by E. and continued in fome part of the E. till the 27th Day. When it having been fome time at N. N. E. it came about at N. and then to the W : of the N . and continued in the Weft-board (between the N. N. W. and S. S. W.) till the 4 th of $\mathcal{F} u l_{j}$; in which time we ran 782 Miles; then the Winds came about again to the Eaft, we reckoning our felves to be in a Meridian 1100 L. Eat of that of the Cape ; and having fair Weather founded, büt had no Ground:

II 4 Signs of being near Land:
An. 1599 We met with little of Remark in this Voyage, befides being accompanied with Fowls all the way, efpecially PintadoBirds, and feeing now and then a Whale: But as we drew nigher the Coalt of NewnHolland, we faw frequently 3 or 4 Whales together. When we were about ninety Leagues from the Land we began to fee Sea-weeds, all of one fort; and as we drew nigher the Shore we faw them more frequently. At about 30 Leagues diftance we began to fee fome Scuttle-bones floating on the Water; and drawing ftill nigher the Land we faw greater quantities of them.

July 25 . being in Lat. 26 deg. 14 min . S. and Longitude E. from the C. of Good Hope 85 deg. 52 min . we faw a large Garfilh leap 4 times by us, which feemed to be as big as a Porpofe. It was now very fair weather, and the Sea was full of a fort of very fmall Grafs or Mofs, which asjit floated in the Water feem'd to have been fome Spawn of Fifh; and there was among it fome fmall Fry. The next day the Sea was full of fmall round things like Pearl, fome as big as white Peas; they were very clear and tranfparent, and upon crufhing any of them a drop of water would come forth: The Skin that contain'd the water was fo thin that it was but juft difcernable. Some Weeds fwam by us, fo that we did not doubt but we thould quíckly fee Land.

## Whates: Skipjacks: Fowols; \&c. 115

On the 27th alfo, fome. Weeds fwam by $\overbrace{\text { An 1699: }}$ us; and the Birds that had flown along with us all the way almof from Braxil, now left us, except only 2 or 3 Shear-waters. On the 28 th we faw many Weeds fwim by us, and fome Whales, blowing. On the 29th we had dark cloudy Weather, with much Thunder, Lightning, and violent Rains in the Morning: But in the Evening it grew fair. We faw this Day a Scuttle-bone fwim by us, and fome of our young Men a Seal, as it fhould feem by their Defcription of its Head. I faw alfo fome Boneta's; and fome Skipjacks, a Fifh about 8 Inches long, broad and fizable, not much unlike a Roach; which our Seamen call fo from their leaping about.
The 3 th of Fuly, being ftill nearer the Land, we faw abundance of Scuttle-bones and Sea-weed, more Tokens that we were not far from it; and faw alfo a fort of Fowls the like of which we had not feenin the whole Voyage, all the other Fowls having now left us. Thefe were as big as Lapwings; of a grey Colour, Black about their Eyes, with red fharp Bills, long VWings, their Tails long and forked like Swallows; and they flew flapping their Wings like Lepwings. In the Afternoon we met win 2 Rupling like a Tide or Current, or the Whater of fome Shole or Over: Gall buyt were paflit before we could found:

## i 16 AbrohloSboal nea N. Hotland.

An. $\stackrel{\text { ragg. The Birds latt mention'd and this were }}{\sim}$ further 'Siftis' of Land, In the Evenifig we had falr Weather, and a fmall Gate at Wef. At \% a Clbck we founded again"; but had no Gtound.

We kept on fill to the egfodird, with an eafy Sail, looking oft fharp : For by the many Signs we had, I did expect that we were hear the Land. At 12 a Clock in the Night I founded, and had 45 Pathom, courfe Sand and fall white Shells. I prefently clapt on a Wind and ftood to the South, with the Wind at W. becaufe I thought we were to the ${ }^{5}$ Soth of a Shoal calld the Abrobtes (an Appellative Name for Shols, as it feems to the) which in a Draught I had of that Codaft is lay'd down in $27^{\prime}$ deg. 28 min. Lat. ftretehing about 7 Leagues into the Sea. 1 was the bay before in 27 deg. ${ }^{8} 8$ min. by Reckoning. And afterwards fteving E: By'S. purporely to avoid it, 1 thought I'muft have been'to the Sbuth of it: Bat founding tgain, at One a Clock in the Mornitig, Ang! the fint, we hrad bat 25 Fathbm, Cothl Roeks, and fo found thestiol tras to the South of us. We prefentfy tack d again, and food tothe Nbrth, anit then foon deepned our Vater; fot at two inthe Morning we frad - 26 Fathot Coral ftill: 'At three we had - 28 Cdralgronit ? At 4 thad 30 fa thiom, courfe Sind ${ }_{2}$ with fotite Coral: At

## The A. arrizes at N Holland.

 5 we had 45 Fathom, courfe Sand and An. 1699 . Shels, heing now of the Shole, as appeard by the sand and Shells and by having left the Coral. Byalithis I now we had fallen into the North of the shole, and that it was lati down wropg in my SeaChart Forridud lye inabout 27 deg. Lat, and bo Pur $R$ un if the hext day, $I$ found that the Out ward ed ge of it, which I Tounded on, fies 16 Leagues off Shore. When it was day we feetred in E. N. E. with a fige bisk Gale, but did not fee the Land till 9 in the Morning, when we faw it from gur Topmari head, and were diftant from it about to teagues; having then 40 Eathom-water, and Glean Sand. About 3 Hours after we faw it on our Quarter-Deck, being by Judgment about 6 Leagues off, and we had thinem 40 Fathom, clean squa. As we ran in, this day and the hext, we took feveral Sights of it, at differept Bearings and Diftances; from which it appeard as you fee in [Table IV. $\left.\mathbf{N}^{\bullet}, 1,2,3,4,5{ }^{\circ}\right]$ And here I would Note once for all. That the Latitudes mark $d$ in the Draughts, or Sights here given, are not the Latitude of the Land, buit of the Ship when the Sight was taken. This Morning, Augut the firf, as we were flanding in we faw feveral large Seafowis, like our Gannets on the Coaik of England, fyying three or four to-
## 18 N. HoHand in Lat. $26^{\text {A }} S$.

 An 16ge: gether; and a fort of white Sea-Mews, but black äbout the Eyes, atid with forked Tails. VVe ftrove to run in near the Shore to feek for a Harbour to refrefh us after our tedious Voyage ; having made one continued ftretç from Brazil hither of about 114 deg. defigning from herice al-, fo to begin the Difcovery Ihad a mind to make on N. Holland and N. Guinea. The Land was low, and appear'd even, and as we drew nearer to it, it made (as you fee in Table IV. $\mathbf{N} . \cdot 3,4,5$.$) with fome red$ and fome white Clifts ; there laft in Lat. 26. Io S. where you will find 54 Fathom, within four Miles of the Shore:About the Lat. of 26 deg. S. we faw an Opening, and ran in, hoping to find a Harbour there: But when we came to its Mouth, which was about two Leagues wide, we faw Rocks and foul Ground within, and therefore ftood out again: There we had 20 Fathom-water within two mile of the Shore. The Land every where appear'd pretty low, flat and even; but with fteep Cliffs to the Sea; and when we came near it there were no Trees, Shrubs or Grafs to be feen. The Soundings in the Lat. of 26 deg. S. from about 8 or 9 Leagues off till you came within a League of the Shore, are generally about 40 Fathom; differing but little, feldom above three or four Fathom. But the

Lead brings up very different forts of $\mathrm{An}^{\mathrm{An} .1699}$ Sand, fome courfe, fome fine; and of feveral Colours, as Yellow, VVhite, Grey, Brown, Bluifh and Reddifh.

When I faw there was no Harbour here, nor good Anchoring, I ftood off to Sea again, in the Evening of the fecond of $A u$ $g u f$, fearing a Storm on a Lee-fhore, in a place where there was no hhelter, and defiring at leaft to have Sea-room: For the Clouds began to grow thick in the VVeft-ern-board, and the VVind was alread: there, and began to blow frefh almoft upon the Shore; which. at this place lies along N. N. VV. and S. S. E. By nine a Clock at Night we had got a pretty good Offin; but the VVind ftill increafing, I took in my Main Top-fail, being able to carry no more Sail than two Courfes and the Mizen. At two in the Morning, Aug. 3. it blew very hard, and the Sea was much raifed; fo that I furled all my Sails but my Main-fail. Tho the VVind blew fo hard, we had yet pretty clear VVeather till Noon: But then the whole Sky was blackned with thick Clouds, and we had fome Rain, which would laft a quarter of an hour at a time, and then it would blow very fierce while the Squals of Rain were over our Heads; but as foon as they were gone the Wind was by much abated, the ftrefs of the Storm being over. We found-

$$

$$

## i20 Arrioal at Sharks-Bay in N. H.

An. 1699 ed feveral times, but had no Ground till 8 a Clock Aug. the 4th in the Evening; and then had 60 Fathom-water, Coralground. At ten we had 56 Fathom fine Sand. At twelve we had 55 Fathom, fine Sand; of a pale bluifh Colour. It was now pretty moderate VVeather; yet 1 made no Sail till Morning; but then, the VVind veering about to the S. VV. I made Sail and ftood to the North : And at 11 a Clock the next day, Aug. 5. we faw Land again, at about to Leagues diftance. This Noon we were in Lat. 25 deg. 30 min . and in the Afternoon our Cook died, an Old Man, who had been fick a great while, being infirm before we came out of England.

The 6th of Auguft in the Morning we faw an Opening in the Land, and we ran into it, and anchored in feven and a half Fathom-water, 2 miles from the Shore, clean Sand. It was fomewhat difficult getting in here, by reafon of many Shoals we met with: But I fent my Boat founding before me. The Month of this Sound, which.I call'd Shark's Bay, lies in about .25 deg. S. Lat. and our Reckoning made its Longitude from the C. of Good Hope to be about 87 Degrees; which is lefs by 195 Leagues than is ufually laid down in our common Draughts, if our Reckoning was right, and our Glaffes did not deceive

## Soil of Sharks-B. in N, Holland. 121

us. As foon as I came to anchor in this An. 1699. Bay (of which $\mathbf{F}$ have given a Plan, Table IV. $\mathrm{N}^{-}$6.) I fent my boat athore to Yeek for fren Water : But in the Evening my Men returned, having found none. The next Morning I went afhore my felf, carrying Pick-axes and Shovels with me, to dig for Water; and Axes to cut Wood. We tried in feveral Places for Water, but finding none after feveral Trials, nor in feveral Miles Compafs, we left any farther fearch for it, and fpending the reft of the Day in cutting VVood, we went aboard at Night.

The Land is of an indifferent heighth, fo that it may be feen 9 or to Leagues off. It appears at a diftance very even; but as you come nigher you find there are many gentle Rifings, tho' none fteep not high. 'Tis all a fteep Shore againft the open Sea: But in this Bay or Sound we were now in, the Land is low by the Sea-fide, rifing gradually in within the Land. The Mould is Sand by the Sea-fide, prodicing a large fort of Sampief, which bears a white Flower. Farther in, the Mould is reddifh, a fort of Sand producing fome Grafs, Plants, and Shitubs The Grafs grows in great Tufts, as big as a Bufhel, here and there a Tuft: Being intermix'd with much Heath, much of the kind we have growing on our Commons in England,

122 Vegetables and Birds of Sharks-B. An. 1699 tand. Of Trees or Shrubs here are divers forts; but none above ten Foot bigh : There Bodies about three Foot about, and 5 or 6 Foot high before you come to the Branches, which are bufhy and compos'd of fmall Twigs there Spreading abroad, tho' thick fet, and full of Leaves; which were mottly long and narrow. The Colour of the Leaves was on one fide whitifh, and on the other green : and the Bark of the Trees was generally of the fame colour with the Leaves, of a pale green. Some of thefe Trees were fweetfcented, and reddifh within the Bark, like Saffafras, but redder. Moft of the Trees and Shrubs had at this time either Bloffoms or Berries on them. The Bloffoms of the different fort of Trees were of Ceveral colours, as red, white, yellow, Orc. but moftly blue : And thefe generally fmelt very fweet and fragrant, as did fome alfo of the reft. There were alfo befide fome Plants, Herbs, and tall Flowers, fome very Imall Flowers, growing on the Ground, that were fweet and beautiful, and for the moft part unlike any I had feen elfewhere.

There were but few Land-Fowls : we faw none but Eagles, of the larger forts of Birds; but 5 or 6 forts of fmall Birds. The biggeft fort of thefe were not bigger than Larks; fome no bigger than Wrens, all

finging with great variety of fine fhrill Notes; and we faw fome of their Nefts with young Ones in them. The WaterFowls are Ducks, (which had young Otes now, this being the beginning of the Spring in thefe Parts;) Curlews, Galdens, Crabcatchers, Cormorants, Gulls, Pelicans; and fome Water-Fowl, fuch as I have not feen any where befides. I have given the Pictures of 4 feveral Birds on this Coalt. [See Birds: Fig. 2, 3, 4, 5.]

The Land-Animals that we faw here vvere only a fort of Raccoons, different from thofe of the Wefz-Indies, chiefly as to their Legs; for thefe have very fhort Fore-Legs; but go jumping upon them as the others do, (and like them are very good Meat:) And a fort of Guanc's, of the fame Chape and fize vvith other Guano's, defcrib'd [Vol. I. p. 57.] but differing from them in three remarkable Particulars: For thefe had a larger and uglier Head, and had no Tail: And at the Rump, inftead of the Tail there, they had a ftump of a Tail, vvhich appear'd like another Head; but not really fuch, being vvithout Mouth or Eyes: Yet this Creatare feem'd by this means to have a Head at eachend; and, wvhich may be reckon'd a fourth difference, the Legs alfo feem'dall four of them to be Fore-legs, being all alike in fhape and length, and feeming by

An. 1699. the Joints and Bending to be made as if they were to go indifferently either Head or Tail foremoft. They were fpeckled black and yellow like Toads, and had Scales or Knobs on their Backs like thofe of Crocodiles, plated on to the Skin, or fuck into it, as part of the Skin. They are very flow in metion; and when a Man comes nigh them they will fland fill and hifs, not endeavouring to get away. Their Livers are alfo fpotted black and yellow: And the Body when opened hath a very unfavory Smell. I did nèver fee fuch ugly Creatures any where but here. The Guano's I have obferv'd to be very good Meat : And I have often eaten of them with pleafure; but tho' I have eaten of Snakes, Crocodiles and Allegators, and many Creatures that look frightfully enough, and there are but few I fhquid have been afraid to eat of, if preft by Hunger, yet I think my Stomach would fcarce have ferv'd to venture upon thefe $N$. Holland Guano's, both the Looks and the Smell of them being fo offenfive.

The Sea-fifh that we faw here (for here was no River, Land or Pond of frefh Water to be feen) are chiefly Sharks. There are abiundance of them in this particular Sound, that I therefore gave it the Name of Shark's Bay. Here are alfo Skates, Thornbacks, and other Fifh of the Raykind $;$

## Shells, Turtle, large Sbark. 125

 kind ; (one fort efpecially like the Sea- -An .1598. Devil) and Gar-fifh, Boneta's, ©ic. Of Shell-fin we got here Mufcles, Periwinkles, Limpits, Oyfters, both of the Pearlkind and alfo Eating-Oyfters, as well the common fort as long Oyfters; befide Cockles, orc. The Shore was lined thick with many other forts of very frrange and beautiful Shells, for variety of Colour and Shape, moft finely fpotted with Red, Black, or Yellow, orc. fuch as I have not feen any where but at this place. I brought away a great many of them; but loft all, except a very few, and thofe not of the beft.There are alfo fome green Turtle weighing about $200 \%$. Of thefe we caught 2 , which the Water Ebbing had left behind a Ledge of Rock, which they could not creep over. Thefe ferved all my Company 2 Days; and they were indifferent fweet Meat. Of the Sharks we caught a great many, which our Men eat very favourily. Among them we caught one which wasri Foot long. The fpace between its 2 Eyes was 20 Inches, and 18:Inches from one Corner of his Month to the other. Its Maw was Hike a Leather Sack, very thick, and foteught thata fharp Knife could fcarce cut it: In which we found the Head and Bones of a Hippopotomus; the hairy Lips of which were fill found and not putrified, 2ก̣
$\underbrace{\text { An. } 1699}$ and the Jaw was allo firm, out of which we pluckt a great many Teeth, 2 of them 8 Inches long, and as big as a Man's Thumb, fmall at one end, and a little crooked; the reft not above half fo long. The Maw was full of Jelly, which ftank extremely : However I faved for a while the Teeth and the Sharks Jaw : The Flefh of it was divided among my Men; and they took care that no watte fhould be made of it.
'Twas the jth of Aug. when we came into Sbark's-Bay ; in which we Anchor'd at three feveral Places, and ftay'd at the firt of them (on the Weft-fide of the Bay) till the I Ith. During which time we fearched about, as I faid, for frefh Water, digging Wells, but to no purpofe. However, we cut good ftore of Fire-wood at this firt Anchoring-place; and my Company were all here very well refrefhed with Raccoons, Turtle, Shark, and other Fifh, and fome Fovvls; fo that vee vivere novv all much brisker than vvhen vve came in hither. Yet ftill I vvas for ftanding farther into the Bay, partly becaufe I had a mind to increafe my ftock of frefh Water, wvhich vvas began to be lowv; and partly for the fake of Difcovering this part of the Coaft. I vvas invited to go further, by feeing from this Anchoring-place all open before me; vohich therefore I defigned to fearch before I left the Bay. So on the ir th about Noop, 1 Ateer'd

## Sailing about Sharks-Bay.

127
I treer'd farther in, vvith an eafie Sail, be- An. $1699^{\circ}$ caufe vve had but fhallow Water: We kept therefore good looking out for fear of Sholes; fometimes hortning, fometimes deepning the Water. About 2 in the Afternoon vve favv the Land a Head that makes the S. of the Bay, and before Night vve had again Sholdings from that Shore : And therefore fhortned Sail and ftood off and on all Night, under 2 Top-fails, continually founding, having never more than 1० Fathom, and feldom lefs than 7. The Water deepned and fholdned fo very gently, that in heaving the Lead 5 or 6 times vve fhould farce have a Foot difference. When vve came into 7 Fathom either vvay, vve prefently vvent about. From this S. part of the Bay, vve could not fee the Land from vvhence vve came in the Afternoon: And this Land vve found to be an Ifland of 3 or 4 Leagues long, as is feen in the Plain, [Table IV. $\mathrm{N}^{-6}$ 6.] but it appearing barren, I did not ftrive to go nearer it; and the rather becaufe the Winds vvould not permit us to do it vvithout much Trouble, and at the Openings the Water vvas generally Shole. I therefore made nofarther attempts in this S. W. and S. part of the Bay, but fteered avvay to the Eaftuvard, to fee if there vvas any Land that vvay, for as yet ve had feen none there. On the 1 th in the Morning vve pals'd by the N. Point of that

An. 1699. that Land and were confirm'd in the Perfuation of its being an INand, by feeing ant Opening to the Eaft of it, as we had done on the W. Having fair Weather, a fmall Gale and fmooth Water, we ftood further on in the Bay, to fee what Land was on the E. of it. Our Soundings at firf were 7 Fathom, which held fo a great while, but at lengeh it decreas'd to 6 . Then we faw the Land right a-head, that in the Plan makes the E. of the Bay. We could not come near it with the Ship, having but Shole-water : and it being dangerous lying there, and the Land extraordinarily low, very unlikely to have frefh Water (though it had a few Trees on it, feemingly Mangroves) and much of it probably covered at High-water, I food out again that Afternoon, deepning the Water, and before Night anchored in 8 Fathom, clean white Sand, about the middle of the Bay. The next day we got up our Anchor; and that Afternoon came to an Anchor once more near two Illands, and a Shole of Coral Rocks that face the Bay. Here I fcrubb'd my Ship: and finding it very improbable I thould get any thing firther here, I pade the bett of my way ogt to Sea again, founding all the way: but finding by the hallowners of the Water that there was no going out to Sea to the Eaft of the $\$$ wo llands that face the

Bay, nor between them, I return'd to the An. $1699:$ Weft Entrance, going out by the fame way I came in at, only on the Eaft inftead of the VVeft-fide of the fmall Shole to be feen in the Plan: In which Channel we had 10, 12 , and 13 Fathom-water, ftill deepning upon us till we were out at Sea: The day before we came out I fent a Boat aThore to the moft Northerly of the two Illands, which is the leaft of them, catching many fmall Fifh in the mean while with Hook and Line. The Boats Crew returning, told me, that the Ifle produces nothing but a fort of green, fhort, hard, prickly Grafs, affording neither Wood nor frefl Water; and that a Sea broke between the two Illands, a fign that the VVater was fhallow. They faw a large Turtle, and many Skates and Thornbacks, but caught none.

It was Auguft the 14 th when I Sail'd out of this Bay or Sound, the Mouth of which lies, as I faid, in 25 deg. 5 min. defigning to coaft along to the N. E. till I might. commodioully put in at fome other part of. N. Holland. In paffing out we faw three VVater-Serpents fwimming about in the Sea, of a yellow Colour, fpotted with dark brown Spots. They were each about four Foot long, and about the bignefs of a Mans Wrift, and were the firf I faw on this Coaft, which abounds with

An. 1699. Several forts of them. We had the Winds at our firft coming out at N . and the Land lying North-Eafterly. We plied off and on, getting forward but little till the next day: When the Wind coming at S. S. VV. and S. we began to Coalt it along the Shore to the Northward, keeping at 6 or 7 Leagues off Shore; and founding often, we had between 40 and 46 Fathom-water, brown Sand, with fome white Shells. This 15 th of Auguft we were in Lat. 24 deg. 41: min. On the 16 th Day at Noon we were in 23 deg .22 min . The Wind coming at E. by N. we could not keep the Shore aboard, but were forced to go farther off, and loft fight of the Land. Then founding we had no Ground with 80 Fa-thom-line; however the Wind fhortly after came about again to the Southward, and then we jog'd on again to the Northward, and faw many fmall Dolphins and Whales, and abündance of Scuttle-fhells fwimming on the Sea; and fome Waterfnakes every day. The 17 th we faw the Land again, and took a Sight of it. [See Table IV. N". 7.]

The 18 th in the Afternoon, being 3 or 4 Leagues off Shore, I faw a Shole-point, ftretching from the Land into the Sea, a League or more. The Sea broke high on it; by which I faw plainly there was a Shole there. I ftood farther off, and coaft-

## Sboles, and noify Whales.

ed a long Shore, to about 7 or 8 Leagues diftance: And at in a Clock at Night we founded, and had but 20 Fathom, hard Sand. By this I found I was upon another Shole, and fo prefently fteered off VV. half an hour, and had then 40 Fathom. At Onein the Morning of the 18th day we had 85 Fathom: By two we could find no Ground ; and then I ventur'd to fteer along Shore again, due N. which is two Points wide of the Coaft (that lies here N. N. E.) for fear of another Shole. I would not be too far off from the Land, being defirous to fearch into it where-ever I fhould find an opening or any Convenience of fearching about, for VVater, evc. When we were off the Shole-point I mention'd' where we had but 20 Fathom-water, we had in the Night abundance of Whales about the Ship, fome a-head, others a-ftern, and fome on each fide blowing and making a very difmal Noife; but when we came out again into deeper Water they left us. Indeed the Noife that they made by blowing and dathing of the Sea with their Tails, making it all of a Breach and Fome, was very dreadful to us, like the breach of the Waves in very Shole-water, or among Rocks. The Shole thefe. Whales were upon had depth of Water fufficient, no lefs than twenty Fathom, as I faid; and it lies in Lat. 22 $\mathrm{K}_{2}$ deg. bold all along; we had met with no Shole at Sea fince the Abroblo.fhole, when we firt fell on the $N$. Holland Coaft in the Lat. of 28. till yefterday in the Afternoon, and this Night. This Morning alfo when we expected by the Draught we had with us to have been 11 Leagues off Shore, we were but 4 ; fo that either our Draughts were faulty, which yet hitherto and afterwards we found true enough as to the lying of the Coalt, or elfe here was a Tide unknown to us that deceived us; tho' we had found very little of any Tide on this Coaft hitherto. As to our VVinds in the Coafting thus far, we had been within the Verge of the General Trade (tho' interrupted by the Storm I mention'd) from the Lat. of 28 , when we firft fell in with the Coaft: And by that time we were in the Lat of 25 . we had ufually the regular Trade-wind (which is here S. S. E.) when we vvere at any diftance from Shore: But vve had often Sea and Land-Breezes, efpecially vohen near Shore, and vvhen in Sbarks-bay; and had a particular N. Weft Wind, or Storm, that fet us in thither. On this 18th of Auguft vve coafted vvith a brisk Gale of the True Trade-vvind at S. S. E. very fair and clear Weather; but haling off in the Evening to Sea, were next Morning out of fight of Land; and the

## Breezes on the Coaft of N. Holland 133

 Land now trending away $N$. Eafterly, $\underbrace{A_{n} 1599}$ and we being to the Norward of it, and the Wind alfo fhrinking from the S. S. E. to the E. S. E. (that is, from the True Trade-Wind to the Sea-breeze, as the Land now lay) we could not get in with the Laid again yet a-while, fo as to fee it, tho' we trim'd fharp and kept clofe on a VVind. VVe were this 19th day in Lat. ${ }^{21}$ deg. 42 min . The 20 th we were in Lat. 19 deg. 37 min . and kept clofe on a Wind to get fight of the Land again, but could not yet fee it. VVe had very fair VVeather; and tho' we were fo far from the Land as to be out of fight of it, yet we had the Sea and Land-Breezes. In the Night we had the Land-Breeze at S. S. E. a fmall gentle Gale ; which in the Morning about Sun-rifing would flift about gradually (and withal increafing in Strength) till about Noon we fhould have it at E. S. E. which is the true Sea-breeze here. Then it would blow a brisk Gale, fo that we could fcarce carry our Top-fails double rift : And it would continue thus till 3 in the Afternoon, when it would decreafe again. The VVeather was fair all the while, not a Cloud to be feen; but very hazy, efpecially nigh the Horizon. VVe founded feveral times this 20th day, and at firft had no Ground: But had afterwards from 52 to 45 Fathom, courfe K 3 brown134 Sea-Serpents. N. Holland. An. 1690. brown Sand, mixt with fmall, brown and white Stones, with Dints befides in the Tallow.

The 2Ift day alfo we had fmall Landbreezes in the Night, and Sea-breezes in the day: And as we faw fome Sea-fnakes every day, fo this day we faw a greatmany, of two different forts or fhapes. One fort was yellow, and about the bignefs of a Mans Wrift, about 4 Foot long, having a flat Tail about 4 Fingers broad. The other fort was much fmaller and fhorter, round and fpotted black and yelJow. This day we founded feveral times, and had 45 Fathom Sand. We did not make the Land till Noon, and then faw it firlt from our Topmaft-head. It bore S. E. by E. about 9 Leagues. diftance; and it appeared like a Cape or Head of Land. The Sea-breeze this day was not fo ftrong as the day before, and it veered out more; fo that we had a fair Wind to run in with to the Shore, and at Sun-fet anchored in 20 Fathom, clean Sand, about 5 Leagues from the bluff Point; which was not a Cape (as it appear'd at a great diftance) but the Eaftermoft end of an Illand, about 5 or 6 Leagues in leigth, and one in breadth. There were 3 or 4 Rocky Illands about a League from us between us and the bluff Point; and we faw many other Illands both to the Eaft and Weft of it, as

## IRands by N. Holland.

far as we could fee either way from our An $\underbrace{1699}$ Topmatt-head : And all within them to the S. there was nothing but İands of a pretty heighth, that may be feen 8 or 9 Leagues off. - By what we faw of them they mult have been a Ranige of Illands of about 20 Leagues in length, ftretching from E. N. E. to W. S. W. and for ought. I know, as far as to thofe of SharksBay ; and to a confiderable breadth allo, (for we could fee 9 or 10 Leagues in amorg them) towards the Continent or main Land of N. Holland, if there be any fuch thing hiereabouts: And by the great Tides I met with a while afterwards, more to the N. Eaft, I had a froing fufpicion that here might be a kind of Archipelago of flands, and a Paffage poffibly to the $S$. of N.Holland and $N$. Guinea into the great S. Sea Eaftward; which I had thoughts alfo of attempting in my return from $N$. Guinea (hiad circumftances permitted) and told my Officers fo: But I would not attempt it at this time, becaufe we wanted Water, and could not depend upon finding it there. This place is in the Lat. of 20 deg .21 min . but in the Draught that 1 had of this Coaft, which was Tafinan's, it was laid down in 19 deg. 50 min . and the Shore is laid down as all along joining in one Body or Continent, with fome Openings appearing like Rivers; and not $\mathrm{K}_{4}$ like
$\underbrace{\text { An. } 1509 .}$ like Iflands, as really they are. See feveral Sights of it, Table IV. ${ }^{\circ}$. 8, 9; 10. This Place therefore lies more Northerly by 40 min . than is laid dowa in Mr. Taforan's Draught : And befide its being made a firm, continued Land, only with fome Openings like the Mouths of Rivers, I found the Soundings alfo different from what the prick'd Line of his Courfe fhews them, and generally fhallower than he makes them; which iaclines me to think that he came not fo near the Shore as his Line fhews, and fo had deeper Soundings, and could not fo well dittinguifh the Iflands. His Meridian or Difference of Longitude from Sharks-Bay agrees well enough with my Account, which is 232 Leagues, tho' we differ in Lat. And to confirm my Conje cture that the Line of his Courfe is made too near the Shore, at leaft not. far to the Eaf of this place, the VVater is there fo hallow that he could not come there fo nigh.

But to proceed; in the Night we had a fmall Land-breeze, and in the Morning I weighed Anchor, defigning to run in among the Illands, for they had large Channels between them, of a League wide at leaft, and fome 2 or 3 Leagues wide. I fent in my Boat before to found, and if they found Shole-water to return again; but if they found VVater enough, to go a-

## Ranging along N. Holland Iflands. 137

thore on.one of the Illands, and fay till An. 169 the Ship came in ; where they might in the mean time fearch for Water. So we followed after with the Ship, founding as we went in, and had 20 Fathom, till within 2 Leagues of the Bluff-head, and then we had fhole Warer, and very uncertain Soundings: Yet we ran in fill with an eafie Sail, founding and looking out well, for this was dangerous Work. When we came abreaft of the Bluff-head; and about 2 Mile from it, we had but 7 Fathom : Then we edg'd away from it, but had no more Water; and running in a little farther, we had but 4 Fathoms: so we Anchored immediately; and yet when we had veered out a third of a Cable we had 7 Fathora Water again; fo uncertain was the Water. My Boat came immediately aboard, and told me that the Illand was very Rocky and Dry, and they had little hopes of finding Water there. I fent them to found, and bad them, if they found a Channel of 8 or io Fathom Water, to keep on, and we would follow with the Ship. We were now about 4 Leagues within the outer fmall Rocky Illands, but ftill could fee nothing but Iflands within us; fome 5 or 6 Leagues long, others not above a Mile round. The large illands were pretty high; but all appeared Dry, and moftly Rocky and Barren. The Rocks look'd of

1 § 8 Rofemary-I. its Vegetables, \&c.
An. 1699 a rufty yellow Colour, and $\bullet$ therefore. $I$ difpair'd of getting Water on any of them: but was in fome hopes of finding a Channel to run in beyond all thefe Iflands, could I have fpent time here, and either get to the Main of Newt Holland, or find out fome other Illands that might afford us Water and other Refrefhments: Befides, that among fo many Illands, we might have found fome fort of Rich Mineral, or Ambergieefe, it being a good Latitude for both thefe. But we had not Sailed above a League farther before our Water grew fholer again, and then we Anchored in 6 Fathom hard Sand.

VVe were now on the inner fide of the Illand, on whofe out-fide is the Bluff-point. We rode a League from the Ifland, and I prefently went afhore, and carried Shovels todig for Water, but found none. There grow here 2 or 3 forts of Shrubs, one juft like Rofemary; and therefore I call'd this Rofemary Illand. It grew in great plenty here, but had no fmell. Some of the other Shrubs had blue and yellow Flowers; and we found 2 forts of Grain like Beans: The one grew on Bufhes; the other on a fort of a creeping Vine that runs along on the Ground, having very thick broad Leaves, and the Bloffom like a Bean Bloffom, but much larger, and of a deep red Colour, looking very Beautiful. We faw
here fome Cormorants, Gulls, Crabcatch. An. 1699: ers, $\sigma^{\circ} c$ a few fmall Land-Birds, and a fort of white Parrots, which flew a great many together. We found fome Shellfifh, viz. Limpits, Perriwinkles, and abundance of fmall Oyfters growing on the Rocks, which were very fweet. In the Sea we faw fome green Turtle, a pretty many Sharks, and abundance of WaterSnakes of reveral forts and fizes. The Stones were all of rufty Colour, and ponderous.
We faw a Smoak on an Illand 3 or 4 Leagues off; and here alfo the Bufhes had been burned, but we found no other fign of. Inhabitants : 'Twas probable that on the INand where the Smoak was there were Inhabitants, and frefh Water for them. In the Evening I went aboard, and confulted with my Officers whether it was beft to fend thither, or to fearch among any other of thefe Iflands with my Boat; or elfe go from hence, and Coaft along Shore with the Ship, till we could find fome better place than this was to ride in, where we had thole water, and lay expos'd to Winds and Tides. They all agreed to go from hence; fol gave Orders to weigh in the Morning as foon as it fhould be light, and to get out with the Land-breeze.

Accordingly, Auguf the 23d, at five in the Morning we ran out, having a pretty freh

An. 1699. frefh Land-breeze at S. S. E. By 8 a Clock we were got out, and very feafonably; for before 9 the Sea-breeze came on us very ftrong, and increafing, we took in our Topfails and ftood off under 2 Courfes and a Mizen, this being as much Sail as we could carry. The Sky was clear, there being not one Cloud to be feen; but the Horizon appeared very hazy, and the Sun at fetting the Night before, and this Morning at rifing, appeared very Red. The Wind continued very ftrong till twelve, then it began to abate : I have feldom met with a ftronger Breeze. Thefe frong Sea-breezes lafted thus in their Turns 3 or 4 Days. They fprung up with the Sun-rife : By 9 a Clock they were very ftrong, and fo continued till Noon, when they began to abate: And by Sun-fet there was little Wind, or a Calm till the Land-breezes came; which we fhould certainly have in the Morning about 1 or 2 a Clock. The Land-breezes were between the S. S. W. and S. S. E: The Sea-breezes between the E. N. E and N. N. E. In the Night while Calm, we fih'd with Hook and Line, and caught good ftore of Fifh, viz. Snappers, Breams, Old-Wives, and Dog-filh. When thefe laft came we feldom caught any others; for if they did not drive away the other Fith, yet they would be fure to keep them from taking our Hooks, for they would

## Coafting along N. Holland. 141

firf have them themfelves, biting very An. ${ }^{1699}$ : greedily: We caught alfo a Monk-fifh, of which I brought home the Piture. See Fijh, Fig. I.

On the 25th of $A u g u f$, we fill coafted along Shore, that we might the better fee any Opening; kept founding, and had about 20 Fathom clean Sand. The 26th day, being about four Leagues off Shore, the Water began gradually to fholden from 20 to 14 Fathom. I was edging in a little towards the Land; thinking to have anchored : But prefently after the Water decreas'd almoft at once, till we had but 5 Fathom. I durft therefore adventure no farther, but fteer'd out the fame way that we came in ; and in a thort time had ro Fathom (being then about 4 Leagues and a half from the Shore) and even Soundings. I fteer'd away E. N. E. coafting along as the Land lies. This Day the Seabreezes began to be very moderate again, and we made the beft of our way along Shore, only in the Night edging off a little for fear of Sholes. Ever fince we left Sharks Bay we had had fair clear weather, and fo for a great while etitl.

The 27 th day, we had $\approx 0$ Fathom water all night, yet we could not fee Land till x in the afternoon from our Topmafthead. By 3 we could juft difcern Land from our Quarter-deck: We had then 16

Fathom. fteer'd E. by N which is but one Point in on the Land: Yet we decreas'd our Water very faft; for at 4 we had but 9 Fathom; the next Caft but 7, which frighted us; and we then tackt inftantly and ftood off : But in a fhort time the Wind coming at N. W. and W. N. W. we tackt again, and fteer'd N. N. E. and then deepned our Water again, and had all night from 15 to 20 Fa thom.

The 28th day we had between 20 and 40 Fathom. We faw no Land this day, but faw a great many Snakes and fome Whales. We faw allo fome Boobies, and Noddy-birds; and in the night caught one of thefe laft. It was of another thape and colour than any I had feen before. It had a fmall long Bill, as all of them have, flat Feet like Ducks Feet; its Tail forked like a Swallow, but longer and broader, and the Fork deeper than that of the Swallow, with very long Wings: The Top or Crown of the Head of this Noddy was Coal-black, having alfo fmall black ftreaks round about and clofe to the Eyes ; and round thefe ftreaks on each fide, a pretty broad white circle. The Breaft, Belly, and under-part of the Wings of this Nod$d y$ were white : and the Back and upperpart of its Wings of a faint black or fmoak Colour. See a Pigure of this, and of the

## An Eclipfe of the Moon. <br> 143

common one, Birds, Fig. 5, 6. Noddies An. 1699. are feen in moft places between the Tropicks, as well in the Eaf--Indies; and on the Coaft of Brazil, as in the $W_{e f} f$-Indies. They reft afhore a nights, and therefore we never fee them far at Sea, not above 20 or 30 Leagues, unlefs driven off in a Storm. When they come about a Ship they commonly perch in the night, and will fit fill till they are taken by the Seamen. They build on Cliffs againft the Sea, or Rocks, as I have faid Vol. I. p. 53.

The zoth day, being in Lat. I8 deg. 21 min. we made the Land again, and faw many great Smokes near the Shore; and having fair Weather and moderate Breezes, I fteer'd in towards it. At 4 in the Afternoon I anchor'd in 8 Fathom water, clear Sand, about 3 Leagues and a half from the Shore. I prefently fent my Boat to found nearer in, and they found io Fathom about a mile farther in : And from thence fill farther in the water decreafed gradually to $9,8,7$, and at 2 mile diftance to 6 Fathom. . This Evening we faw an Eclipfe of the Moon, but it was abating before the Moon appear'd to us; for the Horizon was very hazy, fo that we could not fee the Moon till the had been half an hour above the Horizon: And at two hours, 22 min . after Sun-fet, by the reckoning of our Glaffes, the Eclipfe was quite gone,

144 Landing again in N. Holland.
An. 1699: gone, which was not of many Digits. The Moon's Center was then 33 deg. 40 min. high.

The 3 Ift of Auguf betimes in the Morning I went afhore with 10 or II Men to fearch for water. We went armed with Muskets and Cutlaffes for our defence, expecting to fee people there ; and carried alfo Shovels and Pickaxes to dig Wells. When we came near the Shore we faw 3 tall black naked Men on the fandy Bay ahead of us: But as we row'd in, they went away. When we were landed, I fent the Boat with two Men in her to lie a little from the Shore at an Anchor, to prevent being feiz'd; while the reft of us went after the 3 black Men, who were now got on the top of a fmall Hill about a quarter of a Mile from us, with 8 or 9 Men more in their Company. They feeing us coming, ran away. VVhen we came on the top of the Hill where they firft ftood, we faw a plain Savannah, about half a Mile from us, farther in from the Sea. There were feveral Things like Hay-cocks, ftanding in the Savannah; which at a diftance we thought were Houfes, looking juft like the Hottentot's Houfes at the Cape of G. Hope : but we found them to be fo many Rocks. VVe fearched about thefe for water, but could find none, nor any Houfes; nor People, for they were all

## Natives of N. Holland.

145
gone. Then we returned again to the $A n .160 \%$ Place where we Landed, and there we dug for VVater.

While we were at work there came 9 or 10 of the Natives to a fmall Hill a little way from u9, and food there menacing and threatning of $u s$, and making a great Noife. At latt one of them came towards us, and the reft followed at a diftance. I went out to meet him, and came within 50 yards of him, making to him all the Signs of Peace and Friendhip I could; but then he ran away, neither would they any of them ftay for us to come nigh them; for we tried two or three times: At laft I took two Men with me, and went in the Afternoon along by the Seafide, purpofely to catch one of them, if I could, of whom I might learn where they got their frefh Water. There were 10 or 12 of the Natives a little way off, who feeing us three going away from the reft of our Men, followed us at a diftance. I thought they would follow us: But there being for a while a Sand-bank between us and them, that they could not then fee us; we made a halt, and hid our felves in a bending of the Sand-bank. They knew we mult be thereabouts, and being 3 or 4 times our Number, thought to feize us: So they difpers'd themfelves, fome going to the Sea-hore, and others beating about I.
the counter we had had with them in the Morning that we could eafily out-run them: So a nimble young Man that was with me, feeing fome of them near, ran towards them; and they for fome time, ran away before him. But he foon overtaking them, they faced about and fought him. He had a Cutlafs, and they had wooden Lances; with which, being many of them, they were too hard for hime. When he firft ran towards them I chas'd two more that were by the Shore: But fearing how it might be with my young Man, I turn'd back quickly, and went up to the top of a Sand hill, whence I faw him near me, clofely engag'd with them. Upon their feeing me, one of them threw a Lance at me, that narrowly mifs'd me. I difcharg'd my Gun to fcare them, but avoided fhooting any of them; till finding the young Man in great danger from them, and my felf in fome; and that tho the Gun had a little frighted them at firft, yet they had foon learnt to defpife it, toffing up their Hands, and crying Pooh, Pooh, Poob; and coming on afrefh with a great Noife, I thought it high time to charge again, and fhoot one of them, which Idid. The reft, reeing him fall, made a ftand again; and my young Man took the opportunity to difengage himfelf, and come

## Natives of N. Holland.

off to me; my other Man alfo was with me, who had done nothing all this while, having conie out unarm'd; and I return'd back with my Men, defigning to attempt the Natives no farther, being very forry for what had happened already. They took up their wounded Companion; and my yourrg Man, who had been ftruck through the Cheek by one of their Lances, was afraid it had been poifon'd: But 1 did not think that likely. His VVound was very painful to him, being made with a blunt VVeapon: But he foon recover'd of $i$.

Among the $N$. Hollanders, whom we were thus engag'd with, there was one who by his Appearance and Carriage, as well in the Morning as this Afternoon, feem'd to be the chief of them, and a kind of Prince or Captain among them. He was a young brisk Man, not very tall, nor fo perfonable as fome of the reft, tho' more active and couragious: He was painted (which none of the reft were at all) with a Circle of white Pafte or Pigment (a fort of Lime, as we thought) about his Eyes, and a white ftreak down his Nofe from his Forehiead to the tip of it. And his Breaft and fome part of his Arms were alfo made white with the fame Paint; not for Beauty or Ornament, one would think, but as fome wild Indian Warriors are faid todo;he
4. 1595. feem'd thereby to defign the looking more terrible; this his Painting adding very much to his natural Deformity; for they all of them have the moft unpleafant Looks and the worft Features of any People that ever I faw, tho' I have feen great variety of Savages. Thefe New Hollanders were probably the fame fort of People as thofe I met with on this Coaft in my Voyage round the World; [See Vol. I. p. 464, Oc.] for the Place I then touched at was not above 40 or 50 Leagues to the N. E. of this: And there were much the fame blinking Creatures (here being alfo abundance of the fame kind of Flefh-flies teizing them) and with the fame black Skins, and Hair frizled, tall and thin, orc. as thofe were : But we had not the opportunity to fee whether thefe, as the former, wanted two of their Fore-Teeth.

We faw a great many places where they had made Fires; and where there were commonly 3 or 4 Boughs ftuck up to Windward of them; for the Wind (which is the Sea-breeze) in the day-time blows always one way with them; and the Landbreeze is but fmall. By their Fire-places we fhould always find great heaps of Fith-
 that thefe poor Creatures here lived chiefly on the Shell-filh, as thofe I before defcrib'd did on fmall Fifh, which they caught in

## Tides in N. Holland.

Wires or Holes in the Sand at Low-water. An. 1699 : Thefe gather'd their Shell-fifh on the Rocks at Low-water ; but had no Wires (that we faw) whereby to get any other forts of Fifh: As among the former I faw not any heaps of Shells as here, though I know they alfo gather'd fome Shell-fifh. The Lances allo of thofe were fuch as thefe had; however they being upon an Ifland, with their Women and Children, and all in our Power, they did not there ufe them againft us, as here on the Continent, where we faw none but fome of the Men under Head, who come out purpofely to obferve us. We faw no Houfes at either Place; and I believe they have none, fince the former People on the Ifland had none, tho' they had all their Families with them.

Upon returning to my Men I faw that tho they had dug 8 or 9 Foot deep, yet found no Water. So I returned aboard that Evening, and the next day, being September ift, I fent my Boatfwain ahhore to dig deeper, and fent the Sain with him to catch Fifh. Winile I Itaid aboard I obferved the flowing of the Tide, which runs very fwift here, fo that our Nun-buoy would not bear above the Water to be feen. It flows here (as on that part of - N. Holland I defcrib'd formerly) about 5 Fathom : And here the Flood runs S. E. by $S$. till the laft Quarter ; then it fets

150 New Paffage to the South-Sea. An. 1699 right in towards the Shore (which lies here S. S. W. and N. N. E.) and the Ebb runs N. VV. by N. VVhen the Tides flackned we fifh'd with Hook and Line, as we had already done in feveral Places on this Coaft ; on which in this Voyage hitherto, we had found but little Tides: But by the Heighth, and Strength, and Courfe of them hereabouts, it fhould feem that if there be fuch a Paffage or Streight going through Eaftward to the Great South-Sea, as I faid one might fufpect, one would expect to find the Mouth of it fomewhere between this Place and Rofemary Ifland, which was the part of New Holland I come laft from.

Next Morning my Men came aboard and brought a Rundlet of brackifh Water which they got out of another VVell that they dug in a Place a mile off, and about half as far from the Shore; but this Water was not fit to drink. However we all concluded that it would ferve to boil our Oatmeal, for Burgoo, whereby we might fave the Remains of our other Water for drinking, till we fhould get more; and accordingly the next day we brought aboard 4 Hogheads of it: But while we were at work about the Well we were fadly pefter'd with the Flies, which were more troublefome to us than the Sun, tho it Shoneclear and Atrongupon us all the while;

## Plants in N. Holland.

very hot. All this while we faw no more $A n .1699$. of the Natives, but faw fome of the Smoaks of fome of their Fires at 2 or 3 miles diftance.

The Land hereabouts was much like the part of New Holland that I formerly defrribed [Vol. I. p. 463.] 'tis low, but feemingly barricado'd with a long Chain of Sand hills to the Sea, that let's notning be feen of what is farther within Land. At hizh Water the Tides rinng fo high as thev do, the Coaft hews very low ; but when 'tis low Water it feems to be of an indifferent heighth. At low Water-mark the Shore is all Rocky, fo that then there is no Landing with a Boat ; but at high Water a Boat may come in over thofe Rocks to the Sandy Bay, which runs all along on this Coaft. The Land by the Sea for about 5 or 600 yards is a dry Sandy Soil, bearing only Shrubs and Bułes of divers forts. Some of thefe had them at this time of the year, yellow Flowers or Bloffoms, fome blue, and fome white; mof of them of a very fragrant Smell. Some had Fruit like Peafcods; in each of which there were juft ten fmall Peas: 1 opened many of them, and found no more nor lefs. There are alfo here fome of that fort of Bean which I faw at RofemaryLiand : And another fort of fmall, red, hard Pulfe, growing in Cods alfo, with

$$
\mathrm{L}_{4} \quad \text { little }
$$

## 152 Nature of the Land in N. Holland.

An. ${ }^{1699}$. little black Eyes like Beans. I know not their Names, but have feen them ufed often in the Eaft-Indies for weighing Gold; and they make the fame ufe of them at Guinea, as I have heard, where the Women alfo make Bracelets with them to wear about their Arms. Thefe grow on Bulhes; but here are alfo a Fruit like Beans growing on a creeping fort of Shrublike Vine. There was great plenty of all thefe forts of Cod-fruit growing on the Sand-hills by the Sea-fide, fome of them green, fome ripe, and fome fallen on the Ground: But I could not perceive that any of them had been gathered by the Na tives; and might not probably be wholefome Food.

The Land farther in, that is lower than what borders on the Sea, was fo much as we faw of it, very plain and even; part1y Savannahs, and partly Woodland. The Savannahs bear a fort of thin courfe Grafs. The Mould is alfo a courfer Sand than that by the Sea-fide, and in fome places tis Clay Here are a great many Rocks in the large Savannah we were in, which are 5 or 6 Foot high, and round at top like a Hay-cock, very remarkable; fome red, and fome white. The Woodland lies farther in ftill; where there were divers forts of fmall Trees, fcarce any three Foot in circumference; their Bodies 12 or

## Their Beafts, Fowl and Fijb.

14 Foot high, with a Head of fmall Knibs or Boughs. By the fides of the Creeks, efpecially nigh the Sea, there grow a few fmall black Mangrove-Trees.

There are but few Land-Animals. I faw fome Lizards; and my Men faw two or three Beafts like hungry Wolves, lean like fo many Skeltons, being nothing but Skin and Bones: 'Tis probable that it was the Foot of one of thofe Beafts that I mention'd as feen by us in N. Holland, [Vol. I. p. 463.] We faw a Rackoon two, and one fmall fpeckled Snake.

The Land-fowls that we faw here were Crows (juft fuch as ours in England) fmall Hawks, and Kites; a few of each fort: But here are plenty of fmall TurtleDoves, that are plump, fat and very good Meat. Here are 2 or 3 forts of fmaller Birds, fome as big as Larks, fome lefs; but not many of either fort. The SeaFowl are Pelicans, Boobies, Noddies, Curlews, Sea-pies, Ơc. and but few of thefe neither.

The Sea is plentifully ftock'd with the largeft Whales that I ever faw; but not to compare with the vaft ones of the Northern Seas. We faw alfo a great many Green Turtle, but caught none; here being no place to fet a Turtle-Net in; here being no Channel for them, and the Tides running foftrong, We faw fome Sharks,

## 154

 Fifb in N. Holland.An. 1699 and Parracoots; and with Hooks and Lines we caught fome Rock-fifh and OldWives. Of Shell-fifh, here were Oyters both of the common kind for Eating, and of the Pearl kind: And alfo Wilks, Conchs, Mufcles, Limpits, Perriwinkles, Coc. and I gather'd a few frange Shells; chiefly a fort not large, and thick-fet all about with Rays or Spikes growing in Rows.

And thus having ranged aboat, a confiderable time, upon this Coaft, without nding any good freft Water, or any con-- enient Place to clean the Ship, as I had hop'd for: And it being moreover the heighth of the dry Seafon, and my Men growing Scorbutick for want of Refrehments, fo that I had little incouragement to fearch further; I refolved to leave this Goak, and accordingly in the beginning of September fet fail towards Tiwzor.

## PLANTS <br> Collected in

Brafl, New Holland, Timor, and Ners Guinea; referring to the Figures Engraven on the Copper Plates.

TAB. I. Fig. I. Cothon-flapen from Baja in Brazil. The Fiower com fifts of a great many Filaments, almoft as finall as Hais, betwixt 3 and 4 luches long, of a Murrey-colour; on the top, of them frand frmallahh-colourid apices. The pedicule of the Flower is inclosid af the bottom with fixe narrow ftiff Leaves, ar: bout fix Inches long. There is one of this genus in Mr. Ray's Supplement, which agreas

An. 1699. green exactly with this in every refpect, only that is twice larger at the leaft. It was fent from Surinam by the Name of Mono.

Tab. 1. Fig. 2. Jafminum Braflianum luteum, mali limonite folio nervofo, petalis cradles.

Tab. 1. Fig. 3. Crifta Pavonis Brafiliana Bardance folios. The Leaves are very tender and like the top Leaves of Bardana major, both as to chape aud texture : In the Figure they are represented too tiff and too mach ferrated.

Tab. I. Fig. 4. Filix Brafiliana Ofmunde minor ferrate folio. This Fern is of that kind, which bears it's Seed-Veffels in Lines on the edge of the Leaves.

Tab. 2. Fig. 1. Rapuntium Nova Follandix, fore magno coccineo. The Perianthium composed of five long pointed Parts, the Form of the Seed-Veffeland the fallnets of the Seeds, together with the irreguar Chape of the Flower and thinners of the Leaves, argue this Plant to be a Rapuntium.

Tab. 2. Fig. 2. Fucus folios capillaceis brevi $\int$ imps, veficulis minimi: donatis. This elegant fucus is of the Erica Marina or Sargasso kind, but has much finer parts than that. It was collected on this Coat of Hew Holland.

Pants foumd in Brajil.

Plants found in New DFolland.

Tab. 2. Fig. 2. Ricinoides Nove Hol-An. 1699 tande angulofo craffo folio. This Plant is thrubby, has thick woolly Leaves, efpecially on the under fide. Its Fruit is tricoccous, hoary on the ont-fide with a Calix divided into five parts. It comes near Ricini fructu parvo frucofa Curaflavica, folio Pbylli, P. B. pr.

Tab. 2. Fig. 2. Solanum Spinofum Nove Hollandir Pbylli foliis fubrotundis. This new Solanum bears a blewih Flower like the others of the fame Tribe; the Leaves are of a whitifh colour, thick and woolly on both fides, fcarce an Inch long and near as broad. The Thorns are very fharp and thick fet, of a deep Orange colour, efpecially towards the Points.

Tab. 3. Fig. I. Scabiofa (forte) Nove Hollandie, ftatices foliis subtus argenteis. The Flower ftands on a Foot-ftalk four Inches long, included in a rough Calix of a yellowifh colour. The Leaves are not above an Inch long, very narrow like Thrift, green on the upper and hoary on the under fide, growing in Tufts. Whether this Plant be a Scabioks, Tbrift or Helichryfum is hard to judge from the imperfect Flower of the dry'd Specimen.

Tab. 3. Fig. 2. Alcea Nova Hollandie foliis auguftis utrinque villofis. The Leaves, Stalk, and under fide of the Perianthium of this Plant are all woolly. The Petala are as the Calix: In the middle ftands a Colmola thick fer with thrummy apicule, which argue this Plant to belong to the Malvaceonus kind.

Tab. 3. Fig. 3. Of what Genus this Shrub or Tree is, is uncertain, agreeing with none yet defcribed, as far as can be judged by the State it is in. It has a very beautiful Flower, of a red colour, as far as can be guefs'd by the dry Specimen, confitting of ten large Petal, hoary on both fides, efpecially underneath; the middle of the Flower is thick ret with Stamina, which are woolly at the bottom, the length of the Petal, each of them crowned with its Apex. The Calix is divided into five round pointed parts. The Leaves are like thole of Amelanchier Lob. green a top and very woolly underneath, not running to a point, as is common in others, but with an Indenture at the upper end.

Tab. 3. Fig. 4. Dammar ax Nova-Hollandia, Sanamunde fecundie Cbyfi folios. This new Genes was firth rent from Ans boyne by Mr. Rumpbius, by the name of Daminara, of which he transmitted two kinds; one with narrow and long tiff Leaves, the other with Shorter and broader. The firth of them is mention'd in Mr. Petiver's Centurial, p. 350. by the name of Arbor Hortenfis Favanorum folios Atamineis lutefcentibus; Muf: Pet. As alfo in Mr. Ray's Supplement to his Hiftory of Plants now in the Prefs. This is of the fame genus with them, agreeing both in Flower and Fruit, tho very much differing in Leaves. The Flowers are ftamineous and feem to be of an herbaceous colour, growing among the Leaves, which are fhort and almoft found, very fiff and ribb'd on the under fide, of a dark green above, atid a pale colour underneath, thick fet on by paits, anfwering one another crofs-ways, To that they cover the Stalk. The Fruit is as big as a Pepper-corn, almoft round, of a whitifh colour, dry and tough, with a hole on the top, containing fmall Seeds. Any one that fees this Plant without its Seed-Veffels, would take it for an Erica or Sanamunda. The Leaves of this Plant are of a very aromatick Tafte.

Tab. 4. Fig. 1. Equifetum Nove Hollandie frutefctus foliis longiJJimis. 'Tis doubtful whether this be an Equifetum or not; the texture of the Leaves agrees beft with that gentes of any, being articulated one within another at each Joint, which is only proper to this Tribe. The longeft of them are about nine Inches.

Tab. 4. Fig. 2. Colutéa Nowix Hollandice floribus amplis coccineis, umbellatime difpofitis macula putpurea notatis. There being na. Leaves to this Plant, 'tis hard to fay what

An. 1599. genus it properly belongs to. The Flowers are very like to the Colutea Barbs Fovis folio fore coccineo Breynii; of the fame Scarlet Colour, with a large deep Purple - Spot in the vexillum, but much bigger, coming all from the fame Point after the manner of an Umbel. The rudiment of the Pod is very woolly, and terminates in a Filament near two Inches long.

Tab. 4. Fig. 3. Conyza Nova Hollandia anguftis Rorifmarini folios. This Plant is very much branch'd and rems to be woody. The Flowers ftand on very hort Pedicules, arifing from the finks of the Leaves, which are exactly like Rosemary, only left. It taftes very bitter now dry.

Tab. 4. Fig. 4. Moboh Infule Timor. This is a very odd Plant, agreeing with no defcrib'd genus. The Leaf is almoft round, green on the upper fide and whitiff underneath, with Several Fibres runming from the infertion of the Pedicle towards the circumference 'ti umbilicate as Cotyledon aquatica and Paba FEgoptia. The Flowers are white ftanding on fingle Foot-Italks, of the Chape of a Stramonium, but divided into four points only, as is the Perianthium.

Tab. 5. Fig. 1. Fucus ex Nova Guinea uvea marina diatus, folios varies. This beautiful fucus is thick et with very Small hort tufts of Leaves, which by the help

Plants found in New Jfolland \& Iimor.

## An Account of Plants.

of 2 magnifying Glafs, feem to be round and articulated, as if they were Seed-Veffels ; befides thefe, there are other broad Leaves, chiefly at the extremity of the Branches, ferrated on the edges. The veficule are round, of the bignefs exprefs'd in the Figure.

Tab. 5. Fig. 2. Fycus ex Nova Guinea Fluviatilis Pifanc F. B. foliis. Thefe Plants are fo apt to vary in their Leaves, according to their different Statts, that 'tis hard to fay this is diftinct from the laft. It has in feveral Places (not all exprefs'd in the Figure) fome of the fmall fhort Leaves, or Seed-Veffels mention'd in the former; which makes me apt to believe it the fame, gather'd in a different State; befides the broad Leaves of that and this agree as to their Shape and Indentures.

# An Account of fome Fifbes that are 

 Figured in Plate 2. \& 3.See Plate 3. Fig. 5.
THis is a Fifh of the Tunny-kind, and agrees well enough with the Figure in Tab. 3. of the Appendix to Mr. Willugbby's Hiftory of Fifhes under the Name of Gurabuca; it differs fomething, in the Fins efpecially, from Pifo's Figure of the Guarapucu.

See Plate 3. Figure 4.
This refembles the Figure of the Guaperva maxima candata in Willughby's Icbthyol. Tab. 9. 23. and the Guaparva of Pifo, but does not anfwer their Figures in every particular.

See Plate 2. Figure 2.
There are 2 forts of Porpufes: The one the long-fnouted Porpufs, as the Seamen call it; and this is the Dolphin of the Greeks. The other is the Bottle-nofe Porpufs, which is generally thought to be the Pbocena of Ariftotle.

Plate 2. Figure 7.
This is the Guaracapema of Pifo and "Marcgrave, by others called the Dorado. 'Tis Figured in Willugbby's Ichthyol. Tab. O. 2. under the Name of Delphin Belgis.
