Technical and Bibliographic Notes/Notes techniques et bibliographiques

The Institute has attempted to obtain the best original copy available for filming. Features of this copy which may be bibliographically unique, which may alter any of the images in the reproduction, or which may significantly change the usual method of filming, are checked below.

L'Institut a microfilmé le meilleur exemplaire qu'il lui a été possible de se procurer. Les détails de cet exemplaire qui sont peut-être uniques du point de vue bibliographique, qui peuvent modifier une image reproduite, ou qui peuvent exiger une modification dans la méthode normale de filmage sont indiqués ci-dessous.

12X	16X	20X	24X	28X	32X

The copy filmed here has been reproduced thanks to the generosity of:

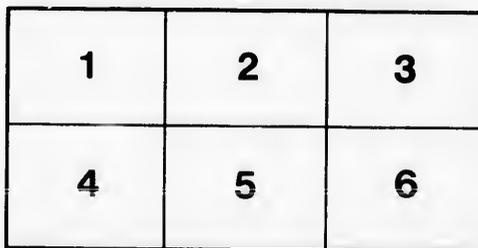

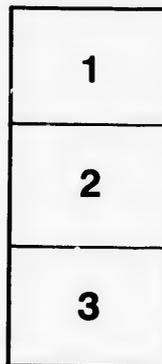

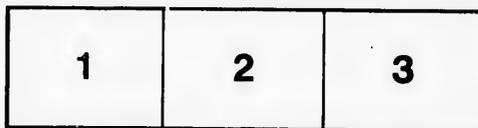

Library of the Public  
Archives of Canada

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol → (meaning "CONTINUED"), or the symbol ▼ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

La bibliothèque des Archives  
publiques du Canada

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole → signifie "A SUIVRE", le symbole ▼ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

(Standard Size,  
6x9 inches.)

*American Railway  
Master Mechanics' Association*

OFFICE OF SECRETARY, 256 BROADWAY, N. Y.

R. C. BLACKALL, PRESIDENT.  
ANGUS SINCLAIR, SECRETARY.

NEW YORK, DECEMBER 16, 1895.

**DRIVING-BOX WEDGES.**

- 1.—Have you ever had any experience with locomotives whose driving boxes were not put up with adjustable wedges? If so, please give us the results of your observations.
- 2.—Do you think that a close fitting box put up between a shoe and a fixed wedge (that could be lined only by a machinist when occasion required), would be a better method of construction than the present one of a movable wedge?
- 3.—If in favor of the stationary wedge, please say how ought the box to be fitted in order to give the longest mileage without risk of the box sticking when the engine is first turned out?
- 4.—Will you, for experimental purposes, equip an engine with stationary wedge, and run it some four or five months, and report results to us?
- 5.—Are not the majority of hot boxes (not hot journals) caused by enginemen setting up movable wedges too tight?
- 6.—Now that so many side rods have bushed ends, and are therefore not adjustable as to length, is it not advisable to take from enginemen the power of varying the distances apart of the axle centers, as can now be done on an engine with movable wedges?
- 7.—Do not stationary wedges break off fewer axle box flanges than movable wedges?
- 8.—If stationary wedge were not used, or in other words, if new engines had the frame pedestals forged with parallel faces and then fitted with pedestal blocks paralleled in every way, so that the new pedestal blocks as they came from the milling machine could

be used interchangeably, either front or back, up or down, would it probably increase the risk of failure on the road by fractures of the frame ?

9.—Under the above conditions would the engine tend to come back to shop for repairs having made less mileage than if equipped with wedges ?

10.—Also, under the above conditions, would engine be appreciably less economical in the use of steam, during, say the last half of her mileage ?

Will our members oblige the Association, and this Committee, by early replies to the foregoing questions, addressing J. Davis Barnett, Stratford, Ontario, Canada.

J. DAVIS BARNETT,  
H. A. CHILDS,  
T. J. HATSWELL,  
R. ATKINSON,  
R. E. REDDING,

*Committee.*
