The copy filmed here has been reproduced thanks to the generosity of:

Library of the Public Archives of Canada

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol → (meaning "CONTINUED"), or the symbol ▼ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

La bibliothèque des Archives publiques du Canada

Les images suivantes ont été reproduites avec le plus grand soin, compte *snu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originsux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'empression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, seion le cas: le symbole → signifie "A SIJIVRE", le symbole ▼ signifie "FiN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

Genuine Narrative

OF THE

TRANSACTIONS

IN

NOVA SCOTIA,

Since the Settlement, June 1749, till August the 5th, 1751;

In which the Nature, Soil, and Produce of the Country are related, with the particular Attempts of the *Indians* to disturb the Colony.

By JOHN WILSON,
Late Inspector of the STORES.

LONDON:

Printed and fold by A. Henderson, J. Fox, B. Tovry, Westminster-Hall; J. Robinson, Ludgate-Street; J. James, and H. Cook, at the Royal-Exchange.

(Price Sixpence,)

Cli me at fai an to of Pl

AN

ACCOUNT

OF THE

Colony in Nova-Scotia.

S Nothing tends more to the Welfare and Happiness of a Nation, when Peopling a Colony, than to be wellinformed of the Nature, Produce, and Genius of the

Climate, the Treatment and Encouragement of its first Settlers, and the Probability of encreasing the Advantages, and surmounting the Difficulties that must appear at first setting out; so I think that a faithful Narrative of the Soil, Climate, and Produce of Nova-Scotia, in order to open the Eyes of those who are so fond of Novelties, as to leave a well-cultivated Place, abounding not only with the Ne-

fa

of

F

R

ta

or

th

B

cessaries, but likewise the Delicies of Life. for one quite different. And in order to do this, I shall observe the Rule of Pytbagoras, upon the Door of whose School, was written this Inscription in Greek Characters, "Let no Person enter this School without " the Knowledge of Geography." Then to begin with the Description of Hallifax, the Capital of Nova-Scotia. It contains eight Streets in Length, as many in Breadth; and about 6000 Houses. It lies in Latitude 43°; a cold Air, for which various Reasons are affigued, viz. The freezing East Winds, which blow in the same Direction with the general Motion of the Sea, striking upon Cape Sable, propagate thro' the Strait that runs between the Penin ula of Acadia. and the Continent; the vast Number of Woods tending to make the Air damp and foggy; and these chilling by means of the Winds, that employ their fiercest Breath from the Instant that they are driven from the Ice that lies towards the North Pole, and is more cold than the Parts which lye in the same Parallel of Latitude in Norway, and Nova-Zembla. The Reason of this terrible

terrible Cold is, that the Land in North America is not so broad, nor yet is it so far extended as that in the Northen Parts of Muscovy, Tartary, and Norway.

The Infant Colony, have not yet begun to manure the Country, which on the 27th of June 1749, the Day of the Fleet, under the Command of Commodore Roast, arrived at it, was but one continued Wood, reaching in some Parts within two Feet of the Water Mark.

The Trees at our Arrival were much taller than any ever I faw, either in England, or Scotland, both of which I have traversed: they are generally Pine, Birch, Beach, black Beach, which last, is a good firm Wood, somewhat resembling Mahogany, being a hard close Timber, and so firm, that if a Ball was to strike upon it, a Hole might be made, but the Timber There is Napple Wood, would not rend. which resembles pretty nearly the English Oak, but is more yielding and moist; and what Oak is there, lyes at a vast Distance up in the Country. There is a coarse kind of Timber called Hemlock, which is used for for Firing, but makes such a crackling and Noise, and disperses into so many Splinters as makes it disagreeable and dangerous for Use; but of them all the Pine is the tallest, and at the same Time thick, being 16 Inches Diameter, very fit for making Masts; several of which, were carried over to Portsmouth for that Purpose, in the Osbora Galley, Captain Appleton, Master, which was launched at Hallifax, in July 1751.

The Harbour at Hallifax, is a large Bay, that propagates from the Ocean for near an 100 Miles, between two Necks of Land, which lye five Miles from the Town. It is in some Places three Miles broad; the Sea abounds with Fish, such as Mackrel, Eels, Haddocks, Flounders, and Hollow-butts, which last resembles a Flounder, is very large, some weighing thirty Pound: is very good Eating, only requires a vast deal of Butter to make them The other Fish are larger than those in the North of Scotland, and are fully as delicious and palatable. But Cod which. abounds from the Beginning of May till the End of October, are only caught in the Ocean's and

Ocean; are not so long as those in Scotland, nor yet so firm, or so relishing, but agree very well with the Salt, and are transported in great Quantities to Cadiz in Spain, where they are frequently fold by the Quintal, i. e. 112 Pound Weight for 11. or Guinea. There are some fine Salmon about the Head of the Part called the Bason, nine Miles from Hallifax, but these are vastly rare; I remember that upon our Arrival several of our People were fickly, but the Fish made; and properly prepared with Broth, diffused so muscilaginous and generous a Juice, as in a short time to render them perfectly whole; there are some Partridges, wild Duck, and wild Geese, which are as large and as delicious as ours; Eagles, Hawks, and Swans are far up in the Woods. Last August, when I left Hallifax, the Woods were for the Space of a Mile every way cut round it; while the Town and Suburbs extend along the Shore, about three Miles, where they are closed by the Woods.

There are several Gardens, and Enclofures made in the Spaces that have been cleared, cleared; Potatoes Carrots, Turnips, Cabbage, Pease and Beans, Onions, and Parsley have been sown in them; but a Venomous Insect, called the *Grub-Worm*, damages them as soon as they begin to appear, and pry into the very Heart of the Vegetable.

The Soil is of a brownish Hue, of a very crumbly Nature, which may be owing to the vast Number of Leaves that fall from the Woods, and impregnate with the Snows; and like a Scurvy, cover the Ground, and so very far from being acid, that there has not been a Piece of Clay found thro' all the Tract that has been sought; and the only Grain that seems to flourish among them is *Indian* Corn, of which one Crop appeared in October 1750, and its not doubted but the same may be repeated this Season.

Last Summer five Acres of Land were given to every one of fixteen Persons, who petitioned the Governour for that Purpose; he granted their Request, but then it was with this express Injunction, to bring it to Persection, and render it productive as

foon

foon as possible; but really its my Opinion that seven Years will pass before they can clear it of the Trunks of the Trees that have been cut. In a Word, I cannot indulge myself in any sanguine Expectation as to the Success of this New Colony, from the above Considerations, and from others more terrible and discouraging, that now

I begin to relate.

About March the 20th, the Spring begins to succeed a very sharp and rigorous Winter, which lasts from about November the 10th, for four Months and near an half, and is much more terrible, with dreadful Showers of Snow, that sometimes continue violent for two Days, and cover the Country, making the Ground three Feet higher than before. These Showers come from all Points of the Compass, but those which proceed from the N. W. and N. W. by N. are the most piercing, it being impossible to endure them. If the Winter in Nova Scotia be as mild as it was terrible in Scotland in the Year 1740, the Seafon is teckoned temperate and good.

B

Many

Many unfortunate Prople died of Cold the first Winter after their Settlement. This indeed, may be imputed to the Want of Houses, which only such as could build were able to obtain; and to see the vast Flakes of Snow lying about the Tents of those who had been accustomed to warm Fires about Newcastle and London, was enough to move the Heart of Stone.

Time would fail me to represent the dismal Spectacle of Vessels coming from Boston in New England, having their Stern and Head, their Decks and Main-yard covered with Snow, and Pendules of Ice hanging upon the Ropes and Rigging. The Harbour is frozen from every Side, but the Ice terminates before it meets, leaving as much Space as to allow a small Vessel pass to with Ease; but indeed, few visit the Colony in time of those Storms; and last Winter, a Loaf of Bread, containing three Pound eight Ounces, was fold for Sixpence; Beef fells at Sixpence per Pound; Mutton at Seven-pence; Pork is a little more reasonable; the Method of buying these, is thus: The Creature

The

ure

Creature is put alive into a Scale, with it's feet tied; and according to its Weight it is fold, most frequently at Two-pence half-penny per Pound; the other Creatures are flaughtered in the Market-place, but most frequently such as are capable chuse to buy them on their Feet, and have them slaughtered at their own Houses: With all these, as also Liquors, viz, Rum, Brandy, and Beer, they are supplied from New England; which likewise furnishes Fowls, and these are sold at the following Prices: A Hen is fold at two Shillings and Sixpence; a Goose at three Shillings and Sixpence; a Duck at three Shillings; and a Pint of Milk costs one Shilling; the Hay, on which the Cowes feed, is brought from Boston in New England.

In a Word, if the Country were not supplied with Fish, there would be no living for the Poor: Add to all this, that the Poor Inhabitants are under continual Alarms from the *Indians*, who are spirited up by the *French*, who have settled at *Menis* and *Pisgel*; they are made to believe the strangest Stories concerning the

B 2 English,

English, and among other Things, that "They, viz. The People of Great-Britain, "murdered our Lord Jesus Christ." They are furnished by them with Muskets, Hangers, and large Knives, but no Bayonets, or Cannon, nor yet are they taught the Mannual Exercise of regular Troops. The new Colony is terribly afraid of them; for they come down about the Dawning of the Day, fculk in the Bushes, and there wait for their Prey; they are very dexterous and alert at Firing, and can frequently do Execution at the Distance of 100 Yards; they correupon Houses, which they alarm with. their Shot; if they meet with Relistance. and a superior Force, they fly to the Woods, and if pursued, like the Parthians of old, they turn about and discharge, then shelter themselves behind the Thickets. whence they let'fly Volleys of Shot, and Showers of Arrows. In October last, about eight of the Inhabitants of Hallifax, among whom was Mr. Brown, the Governor's Gardner, another of that Name, an Irishman, Bookeerer to Capt. Clappam, went to take their Diversion; and as they were Fowling

Fowling, they were attacked by the Indians, who took the whole Prisoners; scalp'd: the Gardener with a large Knife, which they wear for that Purpose, and threw him into the Sea, whence he was cast upon the Ground about eight Days after; the other was destroyed, so far as never to be heard The remaining fix were conducted Prisoners to the French Settlement at Menis, where they underwent great Hardships for want of proper Bed-cloaths, and the Necessaries of Life, receiving nothing in the Twenty-four Hours but alittle Barley Meal drained thro' the Water; and on Sunday were allowed a Piece of Beef without Salt. In this Condition they continued five Months, till relieved. But before I quit this Part of my Narrative, it will not be forreign to my Purpose to give an Account of their Manner of Scalping, that fo the Reader may both have an Idea of the Savage, and barbarous Tempers of these inhuman Cannibals, and at the same Time. be invited to fet a proper Value upon a Country that is now civilized; and which before the Romans came into it, was a Proverb

verb, and Bye-Word, among the Nations; for such was their Brutality, that they would, like Lycaon, Kill and serve up their Lodgers at their voracius Entertainments.

These Indians chain the unfortunate Prisoner to a large thick Tree, and bind his Hands and his Feet, then beginning from the middle of the Craneum, they cut quite round towards the Neck; this being done, they then tear off the Skin, leaving the Skull bare; an Inflammation quickly follows, the Patients fevers, and dies in the most exquisite Tortures. In this Situation was Poor Brown found, while his Comrades were thought to have undergone the fame Hardships, they not having been heard off, till accidentally some Butchers going up to Menis, to buy Cattle, got Intelligence of the Matter, and informed Governor Cornwallis; he immediately wrote to the Commanding Officer of a little Fort, belonging to Great-Britain, in the Neighbourhood of Menis, and recommended to him to make Reprifals, to the Intent that the English Prisoners might be redeem'd. Party was accordingly fent out, and order'd

to seize upon any of the Inhabitants of Menis they might meet with. The Detachment having gone a little Way, came upon a French Priest as he was hunting in the Woods, laid hold of him, and conducted him to the Fort, whence he was sent under a strong Guard to Hallifax, where he was confined to the Governor's House, but met with quite different Usage from that which was given to our Countrymen.

The Governor directly wrote a Letter to the French Commander at Menis, demanding a Restoration of the Prisoners, and proffering to deliver up the Priest in their

Room, which was complied with.

Tho' this might serve to illustrate the the horrid Barbarity of the Indians, and to shew what little Confidence is to be put in our neighbouring Colony; yet, I have something equally surprising to relate. On the 27th of May last, a Party of these Indians surprized Dartmouth, a small Town opposite to Hallifax, a little before sour in the Morning; they all at once appeared, fired thro' the Windows and Doors, and,

and killed fifteen Persons, including Women and Children; wounded seven, three of whom died in the Hospital; fix Men were carried away, and never heard of fince. The Party quartered there, being alarmed by the Noise in the Morning, were instantly drawn up by Lieutenant Clark, of Colonel Warburton's Regiment, who commanded there; they marched in haste to the Indians, who discharged some Shot, killed a Serjeant dead upon the Spot, and wounded the superior Officer in the Leg; the former being very brave, run before the others, where he was attacked, and got feveral Wounds; his right Hand was cut off and the Thumband Ring-finger of his Left-Hand; he was miserably mangled by their Hangers and Knives; three Soldiers were wounded.

The Indians, after discharging one Volley run off with Precipitation, not waiting the Arrival of our Troops, and giving them an Opportunity of firing when just at their Breasts with the Muzzle of their Guns. as the Commandant vainly imagined: They were not purfued for fear an Ambush, as the Officer gave out; tho' I am

Volley

ing the g them

at their

Guns,

n Am-

apt

apt to believe that his not pursuing, was rather owing to the little Confidence he had in the Troops over whom he commanded; and here, I protest, that in my humble Apprehension, it's no good Policy to send raw and undisciplined Forces, I mean Soldiers, who have not been accustomed with Battles, to make good such desperate Settlements; and I can well remember what a poor Figure Col. Lascelle's Regiment, now stationed in Nova Scotia, made at the Battle of Presson-pans in 1745; but as this is too delicate a Point, I shall not surther enlarge upon it.

'Tis eafy to imagine what a mighty Confernation was raised in Hallifax, upon hearing the Report of the Guns about the Dawn of the Morning; every one got up and run to the Beach, i.e. the Sea-Shore, while forty or fifty Men, twenty of whom were Grenadiers, were put on Board of three large Boats under the Command of Captain Murray, and Lieutenant Auchterlony; their Passage was abundantly quick, but not so quick as to intercept the Maroders, who had plied their Heels and escaped; the Troops

followed for some Miles into the Woods,

but all to no Purpose.

It was a dismal Speciacle to behold the Husband lying weltring in his Blood; and classed in the Arms of his Spouse; nor less terrible to see the Spouse breathing her last, and reposing her Head upon the Arm of her Husband; the weaned Child was lying dead in the Nurse's Arms, and the sucking Child stretched on the Breast of his Mother.

I

During this Confusion, the Lieutenant was carried over to Hallifax, and by proper Remedies in six Weeks Time he was able to go abroad in an armed Chair, carried by two Soldiers, and on the 5th of August, when the Osborn Galley set Sail, he was

capable of walking upon Crutches.

In the mean Time all imaginable Care was taken for Defence of Dartmouth; the Command was reinforced, and they are now bufy in Walling in the Town after the Manner of Hallifax; i. e. Trees of half a Foot Diameter are driven into the Ground.

ods,

the andnor her

Arm
was
the

prowas car-Au-

Care puth; they own I rees the pund,

Ground, and these again crossed by others for rendering the Desence more secure.

But, before I quit this Part, I must trouble my Reader with the Account of a Boy of about eight Years of Age, whom I frequently have feen and converfed with at Mr. Orpin's House in Hallifax, whose Spoule is a Scotch Woman. Upon the Morning of the 27th of May, when the Indians made the Attack upon Dartmouth. the Boy's Father was one of the fix who were carried away; the Child who had been out of the way at the time of the Affault, miffing his Father, went into the Woods in Quest of him, and having gone too far, one of the Maroders seized upon him, and taking out a large Knife, held him while another scalped him, amidst the most piercing Groans, and then made off leaving him as dead; here he continued in this Situation till next Morning, when, being recovered a little, he knew not where he was, or where to go; however hearing the fignal Gun at Hallifax, and then the Trevally, i. e. the Drums beat, he directed his Rout by the Sound, and C_2

being but two Miles off, he came into the Town, where he exhibited, in his own Person as terrible a Spectacle as any I have been describing. The Mother of the Boy, with two other Children, one of whom sucking upon the Breast, directly embarked in a Boat for Hallifax, and applied to the Governor, who affigned Mr. Orpins's House as most convenient for one in his difmal Situation. it adjoining to the House of Mr. Grant, the Surgeon of the Place, who applied Linnen Clothes, plaister'd over with Grease; and afterwards covered with warm Flannels; in this Situation he continued for a Month, and began to recover by degrees, to the Astonishment of all who saw him.

I thought it my Duty thus far to oblige my Country with a faithful Narrative, in Order to prevent their being imposed upon by a Parcel of News Writers, who trump up chimerical Stories, and publish them afterwards in Books, to the great Detriment of honest Men; and so render for ever Miserable, such as deserve better of their Country, than to be enticed to go to a Place, whose

itry, hofe ling chilling Colds in Winter must benumb the Senses, and whose hazy and thick Foggs in Summer must raise Consumptions, involve in Misery, and an ill State of Health.

Let then the Possessor of New England, so much enraged at the giving up Cape Breton, that they threaten a Mutiny, people this New Colony, and stand upon the Desensive for their own Preservation; but let not those of OldEngland, or even Old Scotland itself, expose themselves to such an unwhole-some Climate, where Money is very scarce, and every Thing extreamely dear; where the Prices of Work are as great as in London, and where every Hour of the Day they may be in Danger of salling a Sacrifice to a robust, vigorous, and savage Set of Mortals, who are incensed by a Party, naturally Enemies to the British sile.

FINIS.
