By A. G. HUNTSMAN. Biologist to the Biological Board of

I planned to investigate the region at the northern end of Cape Breton Island, where the waters of the Gulf of St. Law rence flow out into the Atlantic on the south side of Cabot Strait. In the middle of May the motor-boat "Prince," named after Professor E. E. Prince, Commission er of Fisheries for the Dominion, and Chairman of the Biological Board of Canada, was taken from the Atlantic Biological Station at St. Anna.
wick, in the Bay of Fundy, around Nova Calder and Captain Elmer Rigby were in charge of the boat, and carried out the various fishing operations and experi-ments most efficiently. Eastern Harbor on the western side of Cape Breton Island served as our headquarters for the summer, and proved to be most suitable as a base from which to study the neighbouring waters. We were much indebted to Mr. Clifford Le Couteur, the capable local nanager for the firm of Robin, Jones & Whitman for many courtesies extended to us during the course of the summe

ened to be vacant, was placed at our di posal and proved to be an excellent laboratory for the carrying on of the micros copic and other detailed examinations of the material that was collected. Each month from May to September the con-dition of the Waters between our base and the Magdalen Islands was determined by dition of the waters between our base and the Magdalen Islands was determined by making observations at a series of selected stations, additional trips being made up and down the coast of Cape Breton to examine other localities. In particular an examination was made of Aspy Bay just east of Cape North and of the water at

THE BATTLE OF BUNKER HILL both our net trawl and fish fry trawl at a cunners being captured in it regular

thoroughly investigated. A great variety of methods and gear 10 and 20 fathoms. In this zone the tem- My Dear Mrs. Storr: must be used to discover what kinds of perature at the bottom underwent violent animals there are in the water, where they remain, and how they live. First or so, at one time being as high as 65° F. Mell volunteered to go over on and foremost come the usual fishing implements:-The drag seine, which is a net that is run out into the water in the form of a semi-circle with the open side towards the shore and is then hauled up on the beach by means of a line at each on the shore fishes such as trout, young salmon, alewives, small herring, capelin, cunners, white perch, sculpins, tomcod, young hake, flounders, dabs window-panes, smelt, mummichogs, Bunker Hill, which had been thrown up sticklebacks, pipe fish, sand launce, and butterfish, anchor and buoy at each end. and left a variable length of time before hauling. It catches a variety of fishes depending upon the place where it is set, but we may mention the following: Cod. No time was to be lost. The ships in haddock, hake, pollock, flounder, plaice, the harbor and a battery on Copp's Hill halibut, mutton-fish, sculpin, skate, and opened fire; but those were not the days grey-fish. The gill-net, of which we used various meshes, is a net set vertically at spires, and roofs of the city were covered grey fish are caught in this way, and also through the water, is a long net bag with General Howe was too proud of British a broad mouth and a funnel about half valour to turn the works, but, forming his way along on the inside, which permits assault. The Americans, who had little end, but keeps them from getting out artillery, and no ammunition to waste, again. The mouth is kept open, either by waited in silence until the British were a stout beam, or, as is more usual now, by

within ten rods, and preparing to charge means of "otter" boards, one at the end when a sheet of fire broke out along their of each of the two "wings" of the trawl, breastworks with such deadly aim, that to which the wire cables for hauling are whole ranks were cut down, and those attached. These "otter" boards act in not killed or wounded fled precipitately the same way as a kite, for just as a kite to the water-side. They were rallied, and tends to rise when hauled through the air, advanced a second time with a like result. so do these boards tend to go one to one. side and the other to the other, when progress of the battle from the heights of hauled through the water. The net trawl Boston, now came with reinforcements; is operated in mid-water or on bottom some gunboats enfiladed the works, and a takes whatever fish there are at that third attack, aided by a flank diversion, level, supposing that it is of the right size on, through the water. We obtained with it brass water bottle, which automatically cod, plaice, sole, hake, flounder, smelt, cunner, butterfish, dab, skate, sculpin, renadier, lobster, and spider crab, as well as many of the small bottom animals,

butts of their muskets. The British loss was about 1000 killed and wounded, out of a force of 3000; that of the Americans, various kinds, but it was quite successful in taking the large fishes as well, for we have brought up in it after one hour's us the explanation of the movements of Americans, and has been celebrated by them as one of the most glorious events of their War of Independence—Chambers' of fish, including one that weighed fifty pounds. The fish-fry trawl is a similar trawl, but small and made of sacking and without any funnel. It takes the was to obtain as much infe smaller animals in the water, including possible concerning the undevelop the young fishes, and occasionally even quite large ones. For the fish eggs and the very small animals and plants that professor Cox, to the cunner by Mr. Johnson, and to the place by myself.

The many facts learned concerning that name given to the floating organisms of abundance, edibility, life histories, etc. the water, which are legion. The nets will be dealt with in special accounts and are made of the silk bolting cloth, used need not be detailed here. In the unitzaby millers for sifting flour, the coarsest of tion of each fish special problems are which will stop anything as large as one-sixteenth of an inch in diameter, while the finest will permit only those less than one two-hundredths of an inch in diameter to pass out. These nets are of various sizes and are towed through the water at

> ensely and form the food of the many ottom-living fishes. It also gave us one of the bottom material: stones, and, mud, etc., in which or on the surface wind currents, and also being carried to which the animals live. Small traps or the eastward by the general set of the costs made of laths are ordinarily used for currents toward Cape North. The enor-

ast of Cape North and of the water at different depths out into Cabot Strait, where we were successful in operating through the net. Fish also were taken, (Continued on page 8)

depth of 200 fathoms in spite of the small when it was placed near shore where the size of our boat (60 feet). Many rare lived. By means of these traps we dis the sloping bottom between the depths of and at another as low as 39° F. This was I caused by the winds, for when the wind was blowing on shore it drove the surface 18th, going over he was hit by either a water against the coast and heaped it up, from the coast and the cold water wei up from below to take its place and flooded the zone. The effect of this on the slow moving bottom animals may be imagined. Few of them would be able to stand such changes, but the active fishes are able to move up and down the slope and avoid these changes, and in fact we caught the cold-loving cod and haddock in large numbers in this zone, when the temperature was low. The importance, to any one who is fishing, of knowing what the temperature at the bottom is in such cases, is obvious, for when the cold water up-wells and comes nearer shore, the fishes will follow it and may be caught without the fisherman having to go as far

from land as at other times. Head-lines for catching fish with baited nooks and jigs of lead with many hooks.

we used only occasionally. Another important part of the work was the determining of the physical conditions in the water. Most important of these is the temperature, which was taken regularly during the whole summer at definite depths from the surface to the bottom at the stations between Cape rifle or machine gun bullet in the left Breton and the Magdalen Islands. For shoulder. depths, left a few nights and then turned across. brass water bottle, which automatically closed on turning over and so imprisoned great loss of a true son, while we have and a length of 806 feet. upon the plain till the afternoon, when the arrival of the Prussians gave their side the superiority. It is unnecessary to repeat details which have been told in a hundred chronicles. Enough that that veteran, army of Napoleon retreating and dispersing never to re-assemble, and that within a month his sovereignty in France sentially rash and ill-omened adventure, had ended in consigning him to those six years of miserable imprisonment which form such an anti-climax to the twenty of onquest and empire that went before.

If we must consider it a discredit to Wellington that he was unaware on the evening of the 15th that action was so near—even attending a ball that evening in Brussels—it was amply redeemed by the marvellous coolness and sagacity with which he made all his subsequent arrangements, and the patience with which he sustained the shock of the enemy, both at Quatre Bras on the 16th, and on the 18th in the more terrible fight Samuel Butler.

Miss Gertrude Leland, of Boston, is spending the summer with her sister, Mrs C. D. Adams.

of Waterloo. Thrown on that occasion into the central position among the opponents of Bonaparte, he was naturally and justly hailed as the saviour of Europe, the equal force of Prussians bore in meeting the French battalions. Thenceforth the name of Wellington was venerated the name of Wellington was venerated above that of any living Englishman.

Waterloo was fought by 80,000 French and 250 guns, against 67,000 English, preached in the Baptist Church on Sunday evening. He will be with us each Sunday through the summer months.

Mrs. Basil L. Paul returned home on Sunday, after spending a few weeks with her parents, Mr. and Mrs. Wm. Hunter, at Harvey.

England, and the civilized world generally, from the dangerous ambition of an unscrupulous and too powerful adversary.

When Napoleon recovered his throne at Paris, in March 1815, he could only wring from an exhausted and but partially loyal country about two hundred thousand discovered his troops on the field, of whom the total number killed was 1417, and wounded 4923. The total loss of the allied forces on the field, of whom the total number killed was 1417, and wounded 4923. The total loss of the allied forces on that bloody day was 22,378, of whom the total number killed was 1417, and wounded 4923. The total loss of the allied forces on the field, of whom the total number killed was 1417, and wounded 4923. ### Procedure of Registration

On June 22nd every person residing in Canada, male or female, British or alien, of sixteen years or over, must attend one of the registration booths located in his or her district, and there observe the procedure explained below.

Where to Register Every person required to register has the privilege egistering at any of the public places provided for the surpose. The location of all such places will pecified in proclamations posted conspicuously.

How to Register edure of registration is simple. The

card shown in the illustration is a facsimile of the registration card for males. An advertisement ing the card for females appears in another paper.

the questions carefully so that you will be able to answer them promptly when registering. If you have becal qualification, or feel that your services would be more beneficial to the country in some other line.

While all are compelled to register on Registration Day, it is not contemplated by the Government to force the sick, feeble and aged to turn out. If such persons will notify the Registrar prior to June 22nd of their inability to attend at a place of registration, an effort will be made to register them at a control of the request is reasonable and justified.

Hours-7 a.m. to 10 p.m. Register early and get your Certificate for your own pr

CHAPTER IX. ISS ELLIOTT'S expression. when I turned to observe the effect of the intruder upon her. was found to be one of brilliant delight. With glowing eyes, her lips parted in a breathless ecstasy, she gazed upon the newcomer, evidently fearing to lose a syllable that fell from his lips. Moving closer to

me, she whispered urgently:

"Keep him-ob, keep him!" To detain him, for a time at least, was my intention, though my motive was not merely to afford her pleasure. The advent of the young man had produced a singularly disagreeable im-pression upon me, quite apart from any antagonism I might have felt toward him as a type. Strange sus-picions teaped into my mind, formless in the surprise of the moment-but rapidly groping toward definite outline, and following hard upon them crept

"Now, about how much," he asked slowly, "would you expec' t' git f'r a pitcher that size?"

"It isn't mine," I informed him. "You don't tell me it's the little lady's—what?" He bowed genially

and favored Miss Elliott with a stare

of warm admiration. "Pretty a thing as I ever see," he added.
"Oh," she cried, with an ardor that choked her slightly, "thank you!"
"Oh, I meant the pitcher!" he said hastily, evidently nonplused by a grat-itude so tervent.

The incorrigible damsel cast down her eyes in modesty. "And I had hoped," she breathed, "something so

I could not be certain whether or not he caught the whisper. I thought he did. At all events, the surface of his easy assurance appeared somewhat disarranged, and perhaps to restore it

by performing the rites of etiquette "Well, I expec' the smart thing now is to pass the cards, but mine's in my grip, an' it ain't unpacked yet. The name you'd see on 'em is Oil Poicy."

"OH Poicy." echoed Miss Elliott, turnng to me in genuine astonishment. Mr. Earl Percy," I translated. "Oh, rapturous!" she cried, her face

radiant. "And won't Mr. Percy give us his opinion of my arr?"

He turned again to the easel, and as he examined the painting thereon at closer range amazement overspread his features. However, pulling himself together, he found himself able to reply

and with great gallantry:

"Well, on'y t' think them little hands cud 'a' done all that rough woik!" I saved the girl's feelings by entering into the conversation with a question, which I put quickly:

"You intend pursuing your historical researches in the neighborhood?" "Them fairy tales I handed you about ole Jeanne d'Arc an' William the Conker," he said, "say, they must 'a' made you sore afterwolds!"

"On the contrary, I was much intertoo brief visit," I returned. "I am even more so now."

"Well, m' friend"—he shot me a side-long, distrustful glance—"keep yer

"That is just the point," I laughed, with intentional significance, for I meant to make Mr. Percy talk as much as I could. To this end, remembering that specimens of this kind are most seet when carefully enraged. I added, stimulating his own manner: "Hyes open and doors locked! What?"

"I guess they ain't much need o' lockin' your door," he retorted darkly; "not from what I saw when I was in your studio." He should have stopped there, for the hit was palpable and justified, but in his resentment he overdid it. "You needn't be scared of anybody's cartin' off them pitchers. young feller! Whoosh! An' f'm the luks of the clo'es I saw bangin' on the wall," he continued, growing more nettled as I smiled cheerfully upon him, "I don' /b'lieve you gut any worries comin' about them neither."

"I suppose our tastes are different," I said, letting my smile broaden. There might be protection in that." His stare at me was protracted to an unseemly length before the sting of this remark reached him. It pene-

trated finally, however. "As I tell the little dame here," he said, pitching his voice higher and affecting the plaintiff, "I make no passes at a friend o' hers not in front o' her. anyways. But when it comes to these here ole, ancient curiosities"-he cackled again loudly—"well, I guess them clo'es I see that day kin hand it out t' anything they got in the museums, 'Look here,' I says to the waiter, 'these must be'n left over f'm ole Jeanne d'Arc herself,' 1 says. 'Talk about yer relics,' I says. Woosh! I' like t' died!" He laughed violently and concluded by turning upon me with a contemptuous flourish of his stick. "You think I d'know what makes you SO TAW?"

The form of repartee necessary to augment his ill humor was, of course, a matter of simple mechanism for one student days in the quarter, and I de-livered it airily, though I shivered inwardly that Miss Elliott should

"Everything will be all right if when you dine at the inn you'll sit with your back toward me.'

To my shamed surprise this roustabout wit drew a nervous, silvery gig-gle from her, and that completed the work with Mr. Percy, whose face

grew scarlet with anger. "You're a hot one, you are!" he meered, with shocking bitterness, "You're quite the teaser, ain't ye, s'long's yer lady friend is lukkin' on! I guess they'll be a few surprises comin' your way before long. P'raps I cudn't give ye one now 'f I had a

"Pshaw!" I laughed and, venturing at hazard, said, "I know all you know."

"Oh, you do!" he cried scornfully. "I reckon you might set up an' take a little notice, though, if you knowed 'at I

know all you know!"
"Not a bit of it!"
"No? Maybe you think I don't know what makes you so raw with me;
maybe you think I don't know who ye've got so thick with at this here Pigeon house; maybe you think I don't know who them people are!"

"No, you don't. You have learned," I aid, trying to control my excitement, "nothing. Whoever hired you for a spy lost the money. You don't know anything."

"I don't!" And with that his voice went to a half shrick. "Maybe you think I'm down here f'r my health; maybe you think I come out fr a leasant walk in the woods right now; maybe you think I ain't seen no other ady friend o' yours besides this'n today, and maybe I didn't see who was with her-yes, an' maybe you think SUIT YOU I d'know no other times he's be'n with her; maybe you think I ain't be'n layin' low over at Dives; maybe I don't know a few real names in this neighborhood! Oh, no, maybe not!"
"You know what the maitre d'hotel

told you, nothing more." "How about the name—Oliver Saf-fren?" he cried fiercely, and at that, though I had expected it, I uttered an involuntary exclamation.

"How about it?" he shouted, ad, came here at a risk, but I thought, vancing toward me triumphantly, that with great care it might be made little."

"Here?" "Hey? That stings some, does it?
Sounds kind o' like a false name, does it? Got ye where the hair is short that time, didn't 1? Your side's where the trouble is. That's what's eating into you. An' I tell you flatfoot you're gittin' rough "ith me and playing" Charley the Show-off in front o' yer lady friends "Il all go down in the bill. These people ve've got so chumny These people ye've got so chummy with—they'll pay f'r it all right, don't

said deliberately, with as much satire in as I could command—"you couldn't in possibly mean that any sum of more money might be a suive for the in-

juries my unkind words have inflict-

He seemed upon the point of destroys ing me physically, but, with a slight shudder, controlled himself. Stepping close to me, be thrust his head for ward and measured the emphasis of his speech by his right forefuger upon my shoulder as he said:

m'dear friend they's jest as much hav in this country as they is on the corner o' Twenty thoid street an Fif avenoo! You keep out of the way of it or you'll git runned over!" Delivering a final tap on my shoul

der as a fast warning he wheeled deft again. He could remember how to ly upon his beel, addressed Miss Elliott briefly. "Glad t' know you, lady." and, striking into the bypath by which ested in everything pertaining to your be had approached us, was soon tost to sight. The girl faced me excitedly. "What

> is it?" she cried. "It seemed to me you insuited him deliberately." "You wanted to make him angry?"

"Oh, I thought so!" she exclaimed breathlessly. "I knew there was something serious underneath. It's about Mr. Saffren."

and, turning to my own easel, began to get my traps together.

"I want you to go to see Mrs. Harman at once and tell her not to leave Quesnay for at least two days. As for myself, I must go now to look up with their pure air. Now, I say he is Keredec and Oliver Saffren."

The girl started manfully upon her journey. I stared after her for a moment or more, watching the pretty brown dress flashing in and out of much the old fool! And for that shadow among the ragged greeneries. greatest restoration of all I have Then I picked up my own pack and set out for the inn.

As I went through the woods that day, breathless with haste and curi- his paean of triumph. Only one exous fears, my brain became suddenly, unaccountably busy with a dream I had had two nights before, I had not recalled this dream on waking; the recollection of it came to me now for the first time. Yet I had been thinking so constantly of Mrs. Harman that there was nothing extraordinary in he worthless ex-husband being part of told him to come to me and tell me." the forest, I see how strange it was that I could not quit remembering how in my dream I had gone motoring up Mount Pilatus with the man I had seen so pitiably demolished on the Versailles road two years before-Larra-

bee Harman, CHAPTER X:

FEREDEC was alone in his salon. extended at ease upon a long chair, an ottoman and a stool. when I burst in upon him. A a prolific pipe, smoking up from his confused. "But Oliver still speaks of tically dressed in green and gold. great cloud of beard, gave the final reality to the likeness he thus presented of a range of hills ending in volcano.

"I feel that you know me at least" well enough," I began rather hesitatingly, "to be sure that I would not, for the world, make any effort to intrude in your affairs or Mr. Saffren's." "You are our friend. We know it."

"Very well," I pursued; "then speak with no fear of offending, When you first came to the inn I couldn't help seeing that you took a great many precautions for secrecy, and when you afterward explained these precautions to me-well. L'could not help seeing that your explanation did not cover all the ground."

"It is true-it did not." He ran his huge hand through the heavy white waves of his hair and shook his head vigorously. "No; I knew it, my dear sir. This much I can say to you: We

"There is a keen faced young man who has come to spy on you."

"It was in connection with the risk you have mentioned that I came to talk," I returned, with some emphasis, for I was convinced of the reality of Mr. Earl Percy. "I think it necessary

But the professor was launched. I might as well have swept the rising tide with a broom. He talked with magnificent vehemence for twenty minutes, his theme being some theory "You couldn't by any possibility," 1 soul is immortal and that even in perfestion the soul cannot possibly merge

"And so it is with my boy," he pro-desired, coming at last to the case in "Go to Pere Baudry. Have no

Oliver Saffren, that has never change! The outside of him, those thing that belong to him, like his memory, they have change, but not himself, for him- Oliver wis some that way Detain self is eternal and unchangeable. I kim t will join you there." have taught him, yes. I have helped I strode to the door and out to the him get the small things we can add gallery I was halfway down the to our possession-a little knowledge. "You paint this in yer pitchers, maybe, a little power of judgment, But, my dear sir, I tell you that such things are only possessions of a man. They are not the man! So with Oliver. He had lived a little while, twen-ly-six years perhaps, when-pft!-like that, he became almost as a baby

talk, but not much more. He had lost his belongings. They were gone from the lobe of the brain where he had store them, but he was not gone. No part of the real himself, was lacking. Then presently they send him to me to make new his belongings, to restore his possessions. Ha, what a task to take him with nothing in the world of his own and see that he get only good possessions, good knowledge, good experience! I took him to the mountains of the Tyrol two year, and there his body became strong and splendid ir. Saffren."

while his brain was taking in the stores. It was quick, for his brain had retained some habits. It was not a baby's brain, and some small part of its old stores had not been lost. But if anything useless or bad remain we empty it out-1 and those mountain all good and the work was good. I am proud! But I wish to restore all that was good in his life. Your Keredec is something of a poet. You may put it

> brought my boy back to France." A half light had broken upon me as he talked, pacing the floor, thundering planation, incredible, but possible, sufficed. Anything was possible, I thought, with this dreamer.

> "By the wildest chance," I gasped, you don't mean that you wanted him to fall in love"-

"Ha, my dear sir," he laughed, "you have said it! But you knew it. You it. But, and yet, looking back upon so "But I mean that you-that you had that last, hurried walk of mine through , selected the lady whom you know as Mme, d'Armand." "Again," he shouted, "you have said

> "Professor Keredec," I returned, with asperity, "I have no idea how you came to conceive such a preposterous scheme, but I agree heartily that the word for it is madness. In the first place, I must tell you that her name is not even d'Armand."

> "My dear sir, I know. It was the mistake of that absurd Amedee. She is Mrs. Harman."

> her as Mme. d'Armand."

"He does not know. She has not told him.'

"In the meantime." I said sharply. "there is a keen faced young man who took a room in the inn this morning and who has come to spy upon you, 1 believe."

"What is it you say?"

He came to a sudden stop. I had not meant to deliver my information quite so abruptly, but there was no help for it now, and I repeated the statement, giving him a terse account of my two eucounters with the rattish youth and adding:

"He seemed to be certain that 'Oliver Saffren' is an assumed name, and he made a threatening reference to the laws of France." The effect upon Keredec was a very

distinct pallor. "Do you think he came back to the inn? is he here now?" "I do not know."

"We must learn. I must know that at once." And he went to the door. "Let me go instead," I suggested.

I stepped out to the gallery, to discover Mme. Brossard emerging from a door on the opposite side of the courtyard.

"Mme. Brossard," said the professor, you have a new client today." "That monsieur who arrived this norning," I suggested.

"He was an American," said the hostess, knitting her dark brows, "but I do not think that he was exactly a monsieur." "Is he at the inn now?"

"No, monsieur, but two friends for whom he engaged apartments have "Who are they?" asked Keredec

quickly. "It is a lady and a monsieur from Paris, but not married. They have taken separate apartments, and she has a domestic with her-a negress. Algerian.

"What are their names?" "It is not ten minutes that they are installed. They have not given me

their names." "What is she?" demanded Keredec impatiently. "Is she blond? Is she brunette? Is she French, English. Spanish?

"I think," said Mme. Brossard-"! think que would call her Spanish, but she is very fat, not young, and with a great deal too much rouge."

She stopped with an audible intake of breath, staring at my friend's white

"M. Saffren and I leave at once," exclaimed Keredec. "I shall meet him on the road. He will not return to the inn. We go to-to Trouville. See that no one knows that we have gone until tomorrow, if possible. I shall leave fees for the servants with you. Go now, prepare your bill and bring it to me at once. I shall write you where to send our trunks. Quick! And you, my friend," he turned to me, "my friend, will you help us? For we need

to his lightest cart and wait in the road heroud the cottage. Stand in the roud yourself while that is being done.

steps before I saw that Oliver Saffren was already in the courtyard, coming . toward me from the archway with a light and buoyant step.

He tooked up, waving his hat to me his face lighted with a happiness most remarkable and brighter even than the strong midsummer sunshine flaming over him. Dressed in white as he was and with the air of victory he wore, as might have been at that moment a

Sie screamed that he was killing her figure from some marble triumper, youthful, conquering, crowned with the laurel.

But entering from the road, upon the trail of Saffren and still in the shadow of the archway, I was startled to see the discordant fineries and mushrooms," said the stranger, "some hatchet face of the ex-pedestrian and delicately browned toast with plenty of tourist, my antagonist of the forest. butter-" "Scuse me, sub," interrupted

"Hurry" was the word I would have said, but it stopped at "hur." The times?"-Washington Star. second syllable was never uttered.

and sarill as the wail of a captured hen, and out of the passage across the portentous volume was in his lap and "You knew it?" 1 cried, hopelessly courtyard floundered a woman fantas-

She was abundantly fat, double chinned, coarse, greasy, smeared with blue pencilings, carmine, enamel and rouge.

At the scream Saffren turned. She made straight at him, crying wildly: "Entin! Mon mari, mon mari-c'est

moi! C'est ta femme, mon caeur!" She threw herself upon him, her arms about his neck, with a tropical terocity that was a very paroxysm of triumph.

"Embrasse moi, Larrabi! Embrasse

moi!" she cried Horrified, outraged, his eyes blazing, he flung her off with a violence surpassing her own and with loathing unspeakable. She screamed that he was killing her, calling him "husband," and tried to fasten herself upon him again. But he leaped buckward beyond the reach of her clutching hands and, turning, plunged to the steps and staggered up them, the woman follow-

face of heredec. He caught Saftren under the arm and half lifted him to the gallery, while she strove to hold him by the knees.

"O God!" gasped Saffren. "Is this

the woman?" The giant swung him across the gallety and into the open door with one great sweep of the arm, strode in after him and closed and boited the door. The woman fell in a heap at the foot of the steps, uttering a cracked simulation of the cry of a broken heart.

"Name of a name of God." she mailed. "After all these years! And my busband strikes me!"

Then it was that what had been in my wind as a monstrous suspicion became a certainty, for I recognized the woman. She was Mariana-la bella Mariana la Mursiana.

If I had ever known Larrabee Harman: it, instead of the two strange glimpses I had caught of him, I had been familiar with his gesture, waik, intonation; even perhaps if I had ever heard his voice, the truth might bave come to me long ago.

Larrabee Harman! "Oliver Saftren" was Larrabee Han-

#### APPOINTED CARETAKER

Harry C. Rutter has been appointed caretaker of the parliament buildings, Fredericton, in succession to the late John Payne, who died in March last. The office of sergeant-at-arms of the Legislature and that of caretaker have been combined. Mr. Rutter has been sergeant-atarms for 24 years.

#### THE REVISED REGULATIONS OF **EATING HOUSES**

The revision of the Order-in-Council applying to eating houses has extended the application of the regulation to eating houses of every description. Formerly the law applied only to those houses that erved for pay more than twenty-for at "Elm Corner" for several weeks, moved meals a day, and many proprietors did not observe it because their trade did not average that amount, but the amended Mr. Guthrie and family arrived on Order-in-Council is all inclusive, and not Thursday, and have opened their summer only boarding honses, but even private families taking a few boarders must meet its requirements.

In addition the amended regulation applies to public entertainments, such as socials, picnics, lunches, tea meetings, or other gatherings, where meals or refreshments are served, and to all semi-private parties, luncheons, picnics, or dinners where food or refreshments are served to fifteen or more persons. This is the main new feature in the revised regulations.

Another change in the revised Order worth noting is that permission is granted to all eating houses to make stews from chucks, briskets, plates, flanks, and leftovers of beef and veal for any mid-day meal. In this Province nearly all our hotels serve dinner at noon, and the regulation which did not allow any serving of veal or beef except at the evening meat Andrew's, N. B., on July 1st, to spend the worked considerable hardship. The revision affords some relief.

During the past month there has been ments. Fudge must disappear, since denying the charges. I want to thank the members of the sugar cannot be used in making candy

### AGREEMENT BETWEEN CHINA AND JAPAN

Tokio, June 8.—The official statement planatory of the Chinese-Japanese military agreement declares that this agreement relates only to cooperation by the two nations in defence of the peace and welfare of the Far East, and explicitly denies various rumors to the contrary. The text of the explanatory statement, which accompanied the notes exchanged between the two Governments, reads:

"Having regard to the steady penetration of hostile influence into Russian territory, jeopardizing the peace and welfare of the Far East, and recognizing the imperative necessity of cooperation between Japan and China adequately to meet the exigencies of the case, the Govemments of the two countries, after a frank interchange of views, caused the annexed notes to be exchanged on March 25 between the Minister of Foreign On Sunday, June 2nd at 4 a. m., Pte. Affairs and the Chinese Ministers at

MILITARY AND NAVAL ARGUMENTS "In pursuance of the purpose of the notes, the Imperial Government subsequently sent commissioners representing the Imperial army and navy to Peking, where they held conference with the authorities of the Chinese army and navy. The negotiations progressing smoothly, two agreements were concluded, one, relating to the army, being signed on May 16, and the other relating to the navy, on May 19. These agreements embody only the concrete arrangements as to the manner and conditions under which the armies and navies of the two countries are to cooperate in the common defence against the enemy on the basis of the above-mentioned notes exchanged

"The details of the arrangements, constituting, as they do, a military secret, cannot be made public, but they contain no provisions other than those pertaining to the object already defined.

VARIOUS RUMORS DENIED

"Currency has been given to various rumors, alleging that the agreements contain, for instance, such stipulations as that the Chinese expedition is to be under Japanese command; that Japan may construct forts in Chinese territory at Japan will take control of the Chinese of the Russian Black Sea fleet and now railways, shipyards, and arsenals, and China's finances, will organize China's police system, will acquire the right of

"It cannot be too emphatically stated that these and similar rumors are absolutely unfounded."

"Jibbleton always has plenty of money to spend, yet I never see him doing anything to earn it." "His wife is rich." "Ah! In that case he earns it."—Birmingham Age-Herald.

"Pa, what's a scintilla?" "A scintilla, my son, is a thing there is never anything f."—Boston Transcript.

### FACTORS IN PRODUCTION

WHY NOT BUCKWHEAT?

Try a field of buckwheat this year. It is a wheat substitute and will be needed more than ever next winter.

Buckwheat will be sure to have a more important place in the human diet.

It is useful for feeding purposes, especi-

ally for poultry.

In addition, buckwheat is a handy crop. It can be grown on a great variety of soils and under many different condit ions. If oats, barley or corn fail in some parts of the fields, try buckwheat. If you have a field that drys up late, try buckwheat. If you have a sandy corner on the farm, try buckwheat. If you have an acre that has just been cleared, try buckwheat. It is easy to grow, and will often give good returns on soil where other crops will scarcely survive. It must also not be forgotten that buckwheat will respond readily to the richer soils and to good cultivation. There are several varieties that are good, among them being Rough or Rye, Silver Hull, and Tartarian.

Buckwheat will, as a rule, do well i sown any time during June. It is best to have the soil well-worked in order to start the crop growing quickly. Three to four pecks per acre should be sown with the ordinary grain drill, and don't sow it too deep. About one inch in heavy soil and not more than two inches in light soil is

that he has graded this year. This augurs Offset against this record of recruiting well for the price that the New Brunsfor May is a records of wastage of 8,243. wick wool growers will receive, and also speaks well for the local wool growers, considering this is the initial effort, along this line, on an extensive scale in this

The main idea to keep in mind in marceting wool co-operatively is that the Association forces local buyers to pay somewhere near what the wool is worth, and farmers should keep this in mind. Again the Association wool is graded and properly prepared. The Association caters to the Woolen Mills and gives them exactly what they want. They get a guaranteed product and consequently are willing to pay the highest market value.

The warehouses at Fredericton and Moncton will continue to take in wool luring the entire month of June. Those farmers that have not any standard sacks or twine can ship in clean bran sacks, and in lieu of paper twine can use the neck band to tie each fleece with separately.

### SALMON CANNERY FLEET CAUGHT IN BEHRING SEA

Washington, June 10.-The first merchant fleet this year from Seattle to the salmon capneries on Bristol Bay has got stuck in late ice in Behring Sea, and one steamer, the Tacoma, has been sunk according to word received to-day by the Department of Commerce.

The ice steamer Roosevelt, of the Bur eau of Fisheries, has located the crew and passengers of the *Tacoma* and has gone to their assistance. Four other ships were towed to safety by the *Roosevelt*.

The following wireless message from

the commander of the Roosevelt was re

"Brought barkentine Centennial to safety. She had no rudder and stern post The high price paid by farmers for was gone. Have located camp of Tacomo survivors. Am going for them now."

The fleet carried several hundred per sons, mostly workmen going to work in clover seed could not be grown, it has were in the fleet is not known here, but been repeatedly proven of late that seed as the crews and passengers of five have has been no large loss of life.

T is generally known that many birds make migrations annually, and fairly well known that certain fish make similar migrations, but even entomologists are not always familiar with the fact that there are migratory insects as well. Of these perhaps the most striking case is that of the monarch butterfly—the large brown and black butterfly so common to the United States. In the hall of insect biology in the American Museum of Natural History has been installed a group showing hundreds of monarchs swarming on a small white oak, in early autumn preparatory to making their migration south. They have settled on the tree in thick

species feed on milkweed. They are protected from insect-eating birds by their "warning colors," which proclaim them not good to eat. The adults, which emerge in the fall from beautiful green chrysalids, also have a gaudy coloring which indicates that they are inedible. With the coming of fall the monarch butterflies begin their movement south-ward, thousands flying together, and ward, thousands flying together, and stopping from time to time at certain resting or gathering places which, strangely, seem to be used year after year. In such places great swarms of the monarchs settle down on the trees, sometimes almost completely disguising the foliage, their brown wings so like leaves, giving the trees a late autumn appearance. It was from one of these swarming places near Clinton, Conn., that the specimens for a museum group were obtained.

When the clouds of migrating monarchs, having reached something like their full strength of number, continue their southerly flight, the air is filled with the soft beating of their brown wings, which gleam with a ruddy light in the sunshine. In an article written for Harper's Magazine, Howard J. Shannon describes such a migration: They travel paralell with that is, at fairly even distances apart; and so concerted is the movement that even my sudden striking gesture with the net turns aside only the insects immediately attacked; it does not disturb the onsweeping advance of the general body that seems like a sentient river in irresistible, ceaseless flow. Indeed, their number is enormous.

CAUSE OF INSECTS' MIGRATIONS.

For a brief calculation of the numerical were in transit-produces the impressive, must be strictly enforced, still by the 360,000.

study to the migrations of insects, states therefore, be made to preserve fruit and that the principles an laws governing the vegetables to the utmost permitted by the better-known bird migrations have a increased production. remarkable paralell in the annual movements of certain members of the insect world, both birds and insects being influenced by meteorogical and geographical conditions which deflect and determine the routes, and the psychologies of both birds and insects reacting to the travelling is made: impulses which are unsatisfied in some cases with anything less than a world-wide Tedeschi; 218417, W. A. Bosson.

How far South these roaming monarchs go, or whether they return north in the spring is not a matter of record. It is a T. Arsenault; 117439, G. Proctor.

known fact, however, that no specimens have been found in New England during the winter, although adult specimens are common in May. This would seem to indicate that they had returned from the South, and it is fairly generally accepted that such return migrations do take place.

Outside Germany!

The rooster loud may blaw his horn, The bubblyjock may guzzle corn;
For nobler duties you were born An' higher destiny! On the other hand, their good condition ems strong testimony that adults found North in May have not made any such long journey.

The object of the migration also remains a mystery. According to Dr. F. E. Lutz, Dae your best, an' when you die associate curator of the department of invertebrate zoology of the American Museum of Natural History of New York city, the cause cannot be food shortage; for when the migration starts flowers are plentiful and food abundant. Moreover, adult butterflies take but little nourish-They have settled on the tree in thick clouds, clinging everywhere to branch and twig Magazine above referred to suggests that the insects travel south for further breed-During the summer the larvæ of this ing, the swarming movement being supposedly connected with a psychological impulse to wander co-existent with the breeding instinct. This theory, however, does not account for the apparently defin-

ite and traditional routes followed. Due no doubt partly to its roaming habits and partly to its protection from birds, the monarch butterfly is gradually spreading over the entire earth. It

### "MY SHIP"

THINK of my bed as a big, big ship, To carry me over the sea; Sometimes we go off on a stormy trip, My Gollywog and me.

J. L. L.

"What's in a name?" is a modern ques-tion implying a negative answer. There with pounded lobster and Crisco; stir till are instances, however, where a name is it boils and boil fifteen minutes, then pass are instances, however, where a name is of prime importance. For example, take such a common product as fish. More than 560 species, including subspecies, of fish are found in Canadian waters, but only a few dozen are used for human food.

Some, of course, are not suitable for food.

CREAM OF TOMATO SOUP the obvious thing to do is to discard the bad name and appip a good one. Dogfish for food as dogfish, was 'quite' impossible in the United States, but it was re-named 'grayfish' and cleverly advertised and was soon in demand. In Canada, about the only use that is made of these "ocean pests" is to reduce them for their oil and for fertilizer. Such "trade names" have long been applied to other more common-ly used fish. Thus, ling are sold as cod, and the bulk of the canned sardines sold in Canada are really not sardines at all, but small herrings.

Again, there are certain fish that have "made names for themselves." This is one reason why such a comparatively small number of species of fish are used and halibut and flounder have the name of being good fish and so everyone buys necessarily objectionable as food. At the one hour. same time, dealers might profitably apply new and more attractive names to hitherto unused food fish as a step toward making them more attractive to the consumer.-A. D., in Conservation.

### WHO PAYS THE PARCEL **DELIVERY CHARGES?**

The cost of delivering parcels is approximately four per cent of the total sales, and about one-half of these sales are delivered. Sales of, say, \$35,000 per annum would, therefore, have a delivery cost of \$1,400, the delivery customers paying \$700 and the carry customers also paying \$700, though receiving no service

The carry customers, however, are doing more than this. Had all the parcels been delivered, the delivery cost would have been doubled and the delivery customers would have had a delivery charge of eight per cent. added to the original cost of the goods.

Under the delivery system, the service rendered and paid for is as follows: The carry customer receives \$1.00 of dry toast.

worth of goods and pays \$1.04. The delivery customer receives \$1.00 worth of goods and eight cents worth of delivery service \$1.08, for which he pays only \$1.04.

Another phase of delivery cost is the number of small orders delivered to one customer. If the cost of each delivery which averages six to ten cents, were added to each small order, the customer would object. Consequently, it is added on a percentage basis, and thus the customer who groups his wants and places ed; let boil twenty minutes, strain, ruban order of larger amount is mulcted in bing puree through sieve. Return it all the delivery cost of the service supplied to saucepan, add Crisco and flour mixed to the less considerate customer.

the service received.

SOUPS.

- CHEESE SOUP
- 4 tablespoons grated cheese 3 quarts clear soup stock
- 1½ cups flour
- 2 cups rich milk
- Salt, pepper, and paprika to taste Finely grated cheese.

Put flour into double boiler, add gradual ly milk. Crisco, 4 tablespoons grated che and paprika to taste. Stir over fire until smooth paste. Break in eggs, mix well, cook two minutes longer and all to cool. Roll into balls, when they are all formed drop into boiling water and cook gently five minutes. Drain and put into sour tureen. Pour over stock and serve with dish of finely grated cheese.

- LOBSTER BISQUE 1 can lobster
- 1 cup breadcrumbs
- 1 quart milk
- l quart water 1 tablespoon flour
- Salt, pepper, red pepper, and grated
- nutmeg to taste.
- Squares fried bread Thin lemon slices.

Open a can of lobster, take out best pieces, and cut into small squares without tearing; put them aside. Place remains of lobster in basin and pound smooth with Crisco. Soak bread in water adding flour

- CREAM OF TOMATO SOUP
- 2 tablespoons flour
- 1 tablespoon Tomato Catsup 1 cup milk a serio an
- 21 cups strained tomato juice 1 teaspoon celery sait
- Salt, pepper, and paprika to taste Pinch baking soda

Blend flour and Crisco together in sauce pan over fire, add milk, bring to the boiling may have to be closed, but it is only fair point. Heat tomato juice, tomato catsup that such drastic action should apply to and seasoning. Just before serving add the homes before it closes our industries. Crisco mixture to tomato juice and stir until boiling. Serve hot.

THICK RICE SOUP

- 2 pints water or stock Salt and pepper to taste
- 2 small onions
- 2 tablespoons Crisco
- 1 cup rice

Wash and drain rice. Heat Crisco in them. It would be to the advantage of until a golden brown. Now add water or consumers to remember that dogfish or stock onions and tomatoes cut in small catfish, or other illnamed fish, are not pieces and seasoning. Cook slowly for

FISH SOUP

- 1 lb. cod or other white fish 2 tablespoons Crisco
- 1 quart white stock, or half milk, I
- water 1 small carrot
- 1 small onion
- 1 stalk celery 3 parsley sprigs
- 1 blade mace
- 2 egg yolks cup cream
- 1 lemon
- 2 tablespoons flour 1 teaspoon chopped parsley

Dry toast Wash and dry fish and cut into small pieces. Put into saucepan with sauce, egetables cut into small pieces, parsley and mace. Let these simmer for half an hour, then strain off liquid. Melt Crisco in pan, stir until it boils. Draw it to the side of the fire and let cool slightly. Beat has cooled strain them in. Reheat soup without boiling it to cook eggs. Season and add a few drops of lemon juice and chopped parsley. Serve with small pieces

SOUP VERTE

- 4 tablespoons flour 3 tablespoons Crisco
- 2 quarts stock
- 1 lb. spinach
- 1 bunch parsley 1 teaspoon sugar
- 2 egg yolks Salt and pepper to taste

Put stock into saucepan; add spinach and parsley, picked and thoroughly wash-Thus, under the present delivery sys- strained juice of a quarter of a lemon. tem a surtax is placed upon the custom- Let boil five minutes. Beat yolks of egg er who carries his parcels and is consid- with 1 cup water. Add them gradually requires delivery service does not pay for ed. Soup must not boil after yolks are added. regulations are as follows:-1. Pork, beef and veal must not be served on Wednesday or Friday at any

2. Fish, fowl, lamb, or mutton may

served at any meal. 3. Beef and veal can only be served at an evening meal.

4. Pork may be served at the mornin

meal on Sunday, Tuesday, and Thursday, volks of egg with cream and when soup and at the noon meal on Monday and Saturday. 5. Bread shall not be placed on tables until the first course is served; at the

mid-day meal not more than one ounce of wheat or product of wheat shall be served to an individual. 6. No more than two ounces of standard flour bread or rolls can be served to any individual, and substitutes shall be

served whenever white bread is served. 7. Sugar for any purpose shall be served only when called for. 8. Waste of food is strictly prohibited.

### CANADA FOOD BOARD NOTES

HOW ABOUT THE HARVEST?

The shortage of flour and wheat protogether with cupful of water, sugar, and ducts is so serious between now and next harvest that every effort must be made by this continent to tide it over. Farmers by producing wheat are helping to win the erate in ordering, while the customer who to soup off fire, and stir near fire till cook- war. By saving flour they and everybody else in the country may also help towards the same end. In this connexion it is of interest to note that in the West it is stimated that the three Prairie Provinces this spring have sown an increase of about 2,600,000 acres of which 2,000,000 acres are of wheat. This is the report of Mr. J. D. McGregor, Director of Labor for the Canada Food Board, with offices candy, cake, crackers, biscuits, pastry, for the Canada Food Board, with offices confectionery, ice-cream cones, or chewing in Winnipeg. It is based upon estimates gum. without first obtaining a license received from a large number of points from the Canada Food Board, on and throughout the three Provinces as well as upon the personal observation of Mr. Me-

REGULATIONS THAT APPLY TO Gregor himself. If the average crop from this increased acreage amounts to only ten bushels of wheat per acre, which is a very low estimate indeed, the average being more like twenty bushels, it would mean 20,000,000 bushels of wheat. The average consumption of wheat in the sumption, or for frosting cakes, or as a wheat-consuming countries the world overruns about five bushels per capita per year, so that the increased crop which Canada expects to produce this summer would feed 4,000,000 people for twelve onths. At a most conservative calculation, that is to say it would feed the bulk of the British army. The probabilities are that this increase will be double that amount, and it is to be hoped such indeed will be the case, as there in need of every

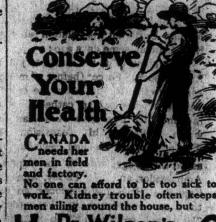

Dr. J. W. Robertson, who made a tour of Eastern Canada, in the production campaign on behalf of the Food Board and the Minister of Agriculture, estimates an of paste for posters, wall papering, or increased acreage of cultivated crops for the five Provinces, Ontario, Quebec, New Brunswick, Nova Scotia, and Prince Ednutacture ice cream containing more ward Island, of 2,000,000 acres. Comparad with former years, there w an increase in wheat acreage in these Provinces, but what this amounts to it is impossible to say, as the fall wheat did not winter very well in many districts where an attempt was made to grow it. Some of these areas, however, have been

> replaced by spring wheat. The Eastern Provinces will grow also increased amounts of fodder for livestock, so that the meat supply will benefit as

well as the dairy output. Canadian farmers are responding magnificiently to the call for increased production, despite the many other calls that have been heard and answered. The world is at the greatest crisis in its history and the farmers of Canada have realized the fact and shown the true Canadian spirit. It remains now for the people of the towns and cities to organize and sacrifice personal interests in a wholehearted campaign to save these crops, which have been so scccessfully planted despite difficulties, so that the harvest will be as great in proportion as the acreage sown. This summer and autumn will mean a long pull and a strong pull for all hands.

### **RESTAURANT LICENSES REQUIRED**

It will be illegal to operate a public eating place without a license from the Canada Food Board. The time has been extended from June 1st to July 1st, because of the rush of applications which were more than could be dealt with in time by the Board's office staff.

### SONG OF THE FAIRIES

AT NIGHT IN AN APPLE ORCHARD

NOS beata fauni proles, Quibus non est magna moles Quamvis lunam incolamus, Hortos sæpe frequentamus

Furto cuncta magis bella, Furto dulcior puella, Furto omnia decora,

Furto poma dulciora. Cum mortales lecto jacent Nobis poma noctu placent.

Illa tamen sunt ingrata

Nisi furto sint parata.

THOMAS RANDOLPH. (Born June 15, 1605; died March 17,

#### FROM "AENEID" OF VIRGIL

THE emblem of the revolt in Ireland-A a green flag with a yellow castle upon it, and beneath the castle the motto "Urbs antiqua fuit studiisque asperrima belli"has a touch of classicism in it, inasmuch as its motto is taken from the " Æneid of the Roman poet Virgil. The words of the motto, translated into English, are "There was an ancient city, most keen in the pursuits of war." Here is the entire

Urbs antiqua fuit, Tyril tenuere coloni, Carthago Italiam contra Tiberinaque longa

Ostia, dives opum studiisque asperrima

helli. In English! An ancient city there was, held by Tyrian that suit them.

colonists. Carthage, opposite Italy and the long Tiberine

Shores, rich in resources and most keen in the pursuits of war.

The motto of the Irish flag of revolt is their eggs were found floating at the same made up of the first half of the first line time. Their fry were very abundant, and and the second half of the last line of the first book of the poem.

### MAGNA CHARTA

TINE 19th of June 1215 remains an ever-memorable day to Englishmen, and to all nations descended from Englishmen, as that on which the Magna Charta was signed. The mean wickedness and tyranny of King John had raised nearly the whole body of his subjects in rebellion against him, and it at length appearthat which he derived from a band of mer, but no one has yet determined exforeign mercenaries. Appalled at the actly how the eggs and fry of the hake position in which he found himself, he agreed to meet the army of the barons under their elected general, Fitz-Walter, on Runnymead, by the Thames, near Windsor in order to come to a pacifica tion with them. They prepared a charter. assuring the rights and privileges of the various sections of the community, and this he felt himself compelled to sign, though not without a secret resolution to disregard it, if possible, afterwards.

It was a stage, and a great one, in the establishment of English freedom. The barons secured that there should be no liability to irregular taxation, and it was conceded that the freemen, merchants, and villains (bond laborers) should be safe from all but legally imposed penalties. As far as practicable, guarantees were exacted from the king for the ful filment of the conditions. Viewed in contrast with the general condition of Europe at that time, the making good of such claims for the subjects seems to imply a remarkable peculiarity of character inherent in English society. With such a fact possible in the thirteenth, we are prepared for the greater struggles of the seventeenth century, and for the happy union of law and liberty which now makes England the admiration of continental nations.-Chambers' Book of Days.

### WOMEN IN ST. PAULS A DEAN'S DILEMMA

Colonel Seymour, of the Canadian Expeditionary Force and late of the United July getting the fry both in the harbor States army, told the following story of the annual meeting of the British and Foreign Unitarian Association at Essex Hall, London, some days ago:

When about to go to Canada to join the Expeditionary Force (before America's entry into the war) he asked the dean of St. Paul's whether the cathedral would the flags in position in the cathedral, enterprise in seeking new sources of bait They gladly consented to do so, and he supply. At fastern Harbor salted clams hurried back to tell the dean, who was horrified, and threw up his hands

"To allow women to take part in a ceremony in St. Paul's Cathedral would ly limited. There is, however, a moderbe to establish a precedent !" he exclaimed.

mour: "I come from a country where we

#### FISHERIES RESEARCH IN THE GULF OF ST. LAWRENCE IN 1917

(Continued from page 1)

no longer near shore, but only at som considerable depth, about 15 fathoms, the reason being that the surface water was at that time too warm for them. Mr. ing his view on the herring, which he obtained in summer in his net experiments, and some of which were nearly ripe for spawning. We are glad to be able to confirm this so definitely. The time of spawning was about the end of August on the Cape Breton shore, and the Magdalen Islands. These fall spawners could undoubtedly be caught at this time by setting nets at the right depth which depends upon the temperature ferred by these fish.

The regular collection of material by the various kinds of gear employed gave us large quantities of all sorts of animals from different depths and levels, and enabled us to determine just where they were to be found. Since we took temperatures and collected samples of the water at various depths and at various points from Cape Breton to the Magdalen Islands we were able to ascertain just how the distribution of an animal depends upon the physical conditions. The warm water that collects at the surface during the summer is entirely unsuitable for the cod and plaice, but agrees perfectly with the lobster and mackerel. The haddock and the herring, on the other hand, dislike both the very warm water near the surface and the very cold water in the depths and are to be found principally in between these, where they find conditions

The cod were spawning during May and June, large numbers of their eggs being found floating at the surface. Their fry occurred during June and July. The plaice were spawning with the cod, and as summer wore on went deeper and deeper into the water until they reached the coldest layers near the bottom. The sole spawned during June, July, and August, and its floating eggs were very abundant at the surface or a little below, while the young fry kept to slight depths where the water was of intermediate temperature. The mackerel spawned contemporaneously with the sole. Their eggs and fry of all stages remained near

the surface in the very warm water. may be dietinguished, therefore we cannot be certain of this identification. With the cod in the spring were small quantities of the eggs and fry of haddock. To show how complex is the life history of these fishes, we may instance the

mackerel, sole, and plaice. They all have floating eggs, which are to a considerable extent found together near the surface of the water, the plaice spawning on the whole earlier than the others. As the surface water gets warmer during the summer the eggs of the sole and plaice sink to the colder water below, but those of the mackerel remain near the surface. The fry of the plaice, as has been already described, go deeper and deeper into the water as they grow older, and finally are living in the ice-cold water that covers the bottom where the old plaice live. The fry of the sole, on the contrary, although leaving the warm service water, do not enter the ice-cold water until after they have changed into the adult condition and gone to the bottom, but remain in the water of intermediate temperature at slight depths. The mackerel passes through all its stages from egg to adult in the warm surface water.

We were interested in knowing the extent to which capelin are to be found in these waters. Apparently they are very rare, but do occur at times all along the coast, although never in large enough quantities to be of any importance. We found them only at Eastern Harbor, seining a spawning female on June 4, and in and outside, but never in very large numbers, and none at the Magdalen islands. Why should they be so abundant on the Gaspe coast and so rare else where in the southern part of the gulf? This question remains to be answered.

BAIT Lack of bait is a perennial source of take into its care five American flags complaint by the fishermen. They are large ones are to be found at the Magdawhich he had in his possession. The traditionally dependent for bait upon her- len Islands, and the recent development dean agreed, and Colonel Seymour then ring and squid, which occur at times in of a demand for skate-wings makes it asked Mrs. Page, wife of the American such large numbers and are so easily certain that a fishery for them would be Ambassador, and Lady Perley, wife of the handled. When these fail, the fishery profitable, if they could be conveyed oner, to place stops for lack either of knowledge or of brought from outside points are used to there are only a few kinds of valuable some extent, and a very few fresh clams fishes. The only one at present in use is are dug locally, but the supply is extreme- the cod, of which we have already spoken. are abundance of the dark edible mussel size, and is taken on the cod lines but not. Ten rooms and bath-room, large dish cur "That's all right," said Colonel Sey- (Mytilus edulis), the bait that is in such brought in. small mouths, they do not take the hook harbor and to them off the bottom. They occur in the harbor and other estuaries from low tide trawls.

The large spider crab is also an inhold.

fish were all around in the water as the net trawls were used a fair number of trawl was being lifted. Trawls set near these crabs would be taken as a by-Cowie has already reported that fall herring, took grayfish to the exclusion of water several varieties of large shrimps almost all other fish.

mussel, which is to be found in tolerable quantities half buried in the mud in the brackish water in the mouths of rivers, SIR ROBERT BORDEN AND PARTY like the Plateau river at Cheticamp.

At the Magdalen islands clams are dug for bait, but are not very abundant. about the middle of the same month at There are, however, large quantities of the round whelk (Lunatia heros) or "cockle," as it is called in the Bay of Fundy, where it is much sought after and sold at a high price to the bank fishermen. about 48° F., apparently being that pre- We obtained large numbers at the Magdalen Islands on the sandy bottom that prevails there in depths of from 5 to 15 fathoms. It would be a simple matter to collect them with a suitable drag or rake and keep them in crates till needed. They are to be found at Eastern Harbor also, but for lack of extensive areas of the right kind of bottom at suitable depths, they are not numerous enough to be of any importance.

> FISHERIES OF EASTERN HARBOR The fisheries of Eastern Harbor are carried on almost exclusively by farmerfishermen, which considerably limits their extent. Up-to-date equipment for fishing fish is very efficiently done. In the case of certain fisheries further expansion is probably not advisable, as, for example, those of the salmon and lobster which are carried on along shore. The former are shipped in the fresh state and the latter are canned. The present high prices have lead to the fishing for these being very SUMMER BOARDERS thorough. It is regrettable that the lobster canneries operate for such a very short period, since the canning of other fish, as, for example, grayfish or mackerel. might enable the factories to operate most of the season and would both lower the cost of operation and improve the type of factory. Grayfish have already been canned at Eastern Harbor experi-

> mentally. The herring and mackerel are only partly exploited, but owing to their somewhat uncertain movements the fishermen must be constantly on the qui vive to make the most of them. It is different with the cod fishery, for an immense area well stocked with cod is within easy reach, and only a small part of it is ex- School Trustees of St. Andrews up to ploited and that for only a portion of the noon on Friday 29th June. The quantity time. Haddock and hake are taken, but only to a limited extent, because of the very limited area where suitable water and bottom occur. A few pollock are taken, but this part of the coast marks the extreme northerly limit of their range as a fishery. Very rarely are pollock seen any farther in the gulf, although they have been known to go as far as Gaspe. The sword fishery ends at Cape North and does not reach Eastern Harbor. Halibut are only occasionally taken.

We were particularly concerned with the possibility of developing new fishery resources, and found many fishes entirely neglected. Smelt occur in fair quantities but have not been caught. Flounders are abundant along shore but only small ones can be got in shallow water during the summer, as the larger ones retreat to the deep water and cannot be easily caught until they come near shore during the cool weather. Perch or cunners, locally called tanche, are very numerous everywhere in shallow protected water. Through small, they are of very good flavor and have long been eaten in the 50-tf. New England States. There are also in the shore waters large numbers of the shore crab, the sand shrimp, and the periwinkle, as well as mussels. Oysters and 50-1wp. quahaugs, which are to be found in the harbor, are few, because the bottom suitable for them is of very limited extent, but if properly handled the oysters would well repay the attention of one man.

coast and of no value. Tomcod also are rarely seen. In the outer waters at slight depths there are few fishes of any value, out rather large numbers of lumpsuckers are taken in the salmon traps in the 50-tf. spring and should be made use of. On the trawls a fair number of mutton-fish or rock eels are taken, and also an occasional cat-fish. Both of these should be used as food instead of being thrown away as is done now. Skates are few and of small size at Factors Harbor, but work.
