Cana

CIHM/ICMH Microfiche Series. CIHM/ICMH Collection de microfiches.

Canadian Institute for Historical Microreproductions

Institut canadien de microreproductions historiques

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

The last recorded frame on each microfiche shall contain the symbol → (meaning CONTINUED"), or the symbol ▼ (meaning "END"), whichever applies.

The original copy was borrowed from, and filmed with, the kind consent of the following institution:

National Library of Canada

Maps or plates too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

Les images suivantes ont été reproduites avec le plus grand soin, compte tonu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole → signifie "A SUIVRE", le symbole ▼ signifie "FIN".

L'exemplaire filmé fut reproduit grâce à la générosité de l'établissement prêteur suivant :

Bibliothèque nationale du Canada

ori fe: im

Les cartes ou les planches trop grandes pour être reproduites en un seul cliché sont filmées à partir de l'angle supérieure gauche, de gauche à droite et de haut en bas, en prenant le nombre d'images nécessaire. Le diagramme suivant illustre la méthode :

STATIONS-DESCRIPTIVE NOTES

Quebec—Population 75,000. This old city occupies the base and summit of a lofty crag projecting into the St. Lawre.ce. Jacques Cartier, the first European who sailed into the river (1534), spent a winter at the base of the cliffs, and French fur companies soon after established here a headquarters for trading. A few years later the headland was fortified, and, as the settlement grew, the fortifications were enlarged until Quebec became the stronghold of Canada, remaining so until captured by the English under Wolfe, in 1759.—No city in America is so grandly situated, or offers views from its higher points so diversified and lovely. In the "upper town," on the highlands, the public buildings, churches, best business blocks, hotels and schools are found, and here the Engl sh and modern part of the town has outgrown its antecedents. The "lower town," near the water, abounds in irregular, narrow streets, quaint old houses, and an almost exclusively French population.—The commerce of Quebec began with the fur trade, and this remains an important element. Enormous transactions

in lumber go on here annually. The whole lower valley of the St. Lawrence and the northern lumbering regions draw their merchandise from this centre.—The suburbs of Quebec are remarkably interesting in scenery, history, and opportunities for sport, especially fishing.—The railways centreing here, other than the Canadian Pacific,

	LEAVE 8.00 P.M.	Montreal—Population (with suburbs) 250,000. The city stands upon an island formed by mouths of the Ottawa. It was visited in 1634 by Jacques Cartier, who found the Indian village of Hochelaga on its site, at the base of Mount Royal, now the city's park. A trading post and fort was established here a century later, called Ville Marie, and was the last point yielded by the French in 1763. Settlements accumulated about this post, and a city rapidly grew up; about three fourths of the popula-		65 74 79 84 90
	EASTERN STANDARD TIME	tion at present are of French descent. The building of the canal about the Lachine rapids, just above the city, and the growth of railways and commerce, caused Montreal to increase, until it became the metropolis of the Dominion. Here resided the governor of the Hudson's Bay Co., and the fur trade has always occupied a prominent place in the city's commerce. In summer, great numbers of steamships and sailing vessels ascend to Montreal, which is one of the best harbors, as well as most thoroughly furnished warehouse-ports, in the world. The city is built almost entirely of stone, possesses imposing public buildings, churches and institutions, and many handsome residences, and is provided with superior hotels. Its suburbs are quaint and beautiful, and the whole neighborhood abounds in objects of interest. Steamships of the Allan, Dominion, and other lines run to Europe; and steamers connect Montreal with all the river and lake towns. The South Eastern Railway makes connection for Boston and all parts of New England,—the new cantilever bridge at Lachine soon to give it access to the Canadian Pacific Station. Over the Victoria bridge, the trains of the Centtal Vermont and Delaware and Hudson Canal Co's railroads connect	10 10 10 11 11 11 12	09 14 18

SCENE ON BOW RIVER; ENTRANCE TO THE ROCKY MOUNTAINS

Miles Contin'l Train STATIONS-DESCRIPTIVE NOTES from Mont'l LEAVE whence a magnificent outlook is obtained into the foothills, especially toward the left hand, rising in successive tiers of sculptured heights to the snowy range behind "By-and-by the wide valleys change into broken ravines, and lo! through an opening in the mist, made rosy with early sunlight, we see, far away up in the sky, its delicate pearly tip clear against the blue, a single snow-peak of the Rocky Mountains. · · · Our coarse natures cannot at first appreciate the exquisite aërial grace of that solitary peak that seems on its way to heaven; but, as we look, gauzy mist passes over, and it has vanished." An open, lightly timbered region succeeds. Here is the Stony Indians' reservation; and a glimpse is caught of *Morleyville*, their agency village, and of some of their well-tilled farms. "On again we go, now through long stretches of park-like country, now near great mountain-shoulders, half misty, half defined, with occasional gleams of snowy peaks far away before us like kisses on the morning sky. The Kananaskis river flows directly across the pass that leads into the mountains which here begin to close in around us. We stopped at the Kananaskis station, and walking [to the right] across a meadow, behold the wide river a mass of foam leaping over ledges of rock into the plains below." (Lady Macdonald.) 2324 1.52 **The Gap—**A rocky gateway, letting the Bow river issue from the hills, beyond which the track turns northward. and ascends the long valley between the Palliser and Front ranges of the Rocky Mountains. A remarkable contrast in appearance between these two ranges will be noticed. On the right are fantastically broken and castellated heights; on the left, massive snow-laden promontories, rising thousands of feet, penetrated by enormous alcoves in which haze and shadow of gorgeous coloring lie engulfed. Now begins a series of visions and experiences beside which all seen before dwindles into insignificance. Five ranges of prodigious mountains are to be crossed before the Pacific coast is reached, and grandeur and beauty now crowd upon the attention without ceasing, as the train speeds through gorge and over mountain, giving here a vast outlook, and there an interior glimpse, then exchanging it for a new one with the suddenness of a kaleidoscope. 2329 2.10 Canmore—Altitude (of station) 4,230 ft. Divisional point. The three lofty peaks on the left, seen as the station is approached, are the Three Sisters. On a hill behind the station stands a group of isolated monumental rocks (conglomerate) curiously weathered out of the softer soil, and widely renowned. "Here the pass we are travelling through has narrowed suddenly to four miles, and as mists float upwards and away we see great masses of scarred rock rising on each side—ranges towering on above the other. Mont'1	Train LEAVE	blush-pink and silver, as the sun lights their snowy tips. Every turn becomes a fresh mystery, for some huge mountain seems to stand right across our way, barring it for miles, with a stern face frowning down upon us; and yet a few minutes later we find the giant has been encircled and conquered, and soon lies far away in another direction. Mount Cascade is perhaps one of the most remarkable of these peaks. Approaching its perpendicular massive precipice-front, streaked with a thousand colors which glow in the sunshine, we half shrink from what seems an inevitable crash. From this precipice falls a narrow cascade, making a leap of about 1,800 feet. Surely it will presently burst over us!
2342	3.03	But no; a few minutes later Mount Cascade has mysteriously moved away to the right, and its silver waterfall soon gleams in the distance." (Lady Macdonald.) Banff—Station for the National Park, and the Hot Springs of Banff—a medicinal watering-place and pleasure-resort. This park is a tract of many square miles embracing every variety of scenery, charming and wonderful, which the government has already made accessible by many carriage-roads and bridle-paths. In the rivers and lakes trout are plentiful and of a size unheard of elsewhere, and in the hills and forests roam deer, mountain sheep, and goats. The general altitude of the valley is about 4,500 feet. Roads have been built northward to Devil's
		lake, an extremely deep sheet of water, walled in by tremendous cliffs, and overlooked by that remarkable peak, the Devil's Head, which forms a well-known landmark, since it is visible far out upon the plains. The fishing here is unrivalled, and the scenery grand. In the Bow river, near Banff station, are some beautiful falls and rapids, dropping 60 feet in the course of a few rods. Cottages and small hotels now exist; but the railway is building a very large and elegant hotel, with perfect arrangements for bathing in the spring water, and for all sorts of recreation.

BRANDING CALVES

Miles Trans from Mont'l Contin'l Train STATIONS-DESCRIPTIVE NOTES LEAVE of the main range. Here comes into view, off towards the north, the first of the great glaciers. It is a broad, crescent-shaped river of ice, bearing all the characteristics of the Swiss glaciers (so far as I can judge from pictures of Swiss glaciers), the further end concealed behind the lofty yellow cliffs that hem it in. You seem to be almost on a level with it, and at the distance of hardly half-a-dozen miles; but it is 1,300 feet above you, and a round dozen miles away, and almost inaccessible by reason of the ravines and rocks and forest which intervene. Down its back flowed in August a meandering stream of blue water. This fell over the front in a fine waterfall, and came to us in a creek as white as milk, which poured into the Bow. The larger river itself drains from the glacier higher up, and its דדנים stream at this height is pale with that peculiar chalky tint which melting glaciers have. The forest is not noteworthy until the top of the pass (altitude 5,300 feet) is reached, when the eye looks across miles of magnificent evergreen trees, filling the great depression through which the Kicking Horse stream rushes headlong from cataract to cataract down to the westward, dividing at the summit from the eastern waters in a marshy spot, which supplies moisture that perceptibly trickles right and left to the Atlantic and to the Pacific. A large post is seen at the left of the track, marking the boundary line between Alberta and British Columbia." (E. I.) 2384 4.25 | **Stephen**—Alt. 5,290 ft. | Summit of the Rocky Mountains. 2387 5.35 Hector—Alt. 5,190 ft. Stephen is named after the vast 2395 6.20 **Field**—Alt. 4,050 ft. and beautiful mountain, loftiest of the Rocky Mountains in this latitude, to which the honorable name of Sir George Stephen, President of the Canadian Pacific Railway, is attached. This peak is stated to be 8,240 feet above the track. The castellated mass this side of it, which comes into good view on the left, as soon as the summit is passed, is Cathedral mountain. A magnificent picture of snowy peaks, one behind the other, bursts upon the vision across the valley toward the north and west; and the difficulties of the descent begin. "We saw the little stream gradually FIFTH diminishing as we ascended towards the lake, and now on the other side we see another little rill running out DAY of a swamp and led into an artificial channel. This is the first stream encountered that goes towards the Pacific, and it is one of the heads of the Kicking Horse river. We follow it along, and the little brooklet expands into a creek, and leads us past the Cathedral mountain, broad and snow-covered, its towers and pinnacles resembling some great Duomo. We have pierced the range, and now start downward on the Pacific slope by a steep gradient. An extra locomotive is fastened behind the train, and all brakes put on, so that these, with the reversed engines, retard the descent. Rounding a curve, the tall form of Mount Stephen, with its two surmounts. ing peaks, comes into full view as the outpost on the southern side of the pass, its snowy tops tapering off into

LEAVE

a long glacier. The little stream expands into a lake, where wild ducks disport, but the forest fires have blackened all the surrounding surfaces. Winding through the valley is the 'tote road' of the railway builders, a necessary preliminary of the work, but now abandoned. We pass the little station of *Hector* (named from Dr. Hector, the hero of the 'kicking horse' incident after which the pass was christened by Palliser's exploring expedition, about 1845), which is nestling under the shadow of Mount Stephen. Our little creek has become a mountain torrent, and falls into quite a large lake, from which flows on the right hand the Kicking Horse river. Here begins the great canon which this stream, with impulsive suddenness, soon carves deep into the mountain side. The river becomes a wild and roaring torrent, leaping over cataracts and dashing down rapids far below us, making a vast fissure in the mountain which the railway has to get down by difficult work and skilful engineering... The route is cut out of the great cliffs high up on the sloping side of the cañon, turning and twisting about in the roughest country imaginable to put a railway through. Mountain peaks are seen everywhere, with subsidiary valleys between them, each sending out its rushing stream to feed the swelling river that roars over the boulders far below. The views along these are indescribably grand, while their sides are composed of great and small rocks apparently strewn about by some terrific convulsion. Passing under the edge of the Tunnel mountain the railway finally gets down to the bottom of this portion of the cañon, where the river flows with comparative peacefulness into a valley of some breadth. Here, under the edge of the Tunnel mountain, with the river in front and an array of other peaks opposite, the Railway is building a pretty Swiss chalet, as a mountain halting place for tourists. This is *Field*, 2,395 miles west of Montreal, named from Cyrus W. Field, of New York, who has always been a great advocate of this route." (London Times.)

The most striking view along this stretch is where the line crosses for the second time the Kicking Horse, where the river rushes underneath the railway through a deep and narrow gulch. The traveller here sees a valley coming down from the right, out of a marvelous array of snow-laden and glacier-studded peaks, the most prominent of which (on the opposite side, ahead) is Mt. Field. After passing the tunnel this huge peak comes into plainer view. The hotel at Field (which is the first station in British Columbia) is an excellent point for stoppage. It is managed by the Company, and well

provided in every way.

LEAVE

the Beaverfoot valley, coming in from the left, where the road makes a short turn to the right, exposing the noble Beaverfoot range at the left. "Thus we enter the lower cañon of the Kicking Horse, the river running suddenly from a broad vailey into a steep-banked fissure, through which the railway winds. The cañon narrows, and its sides grow higher, while the river, again a roaring torrent, cuts deeper and deeper into the fissure. The foaming waters sweep with raging speed past great precipices and over rocks and boulders that have fallen directly into the stream-bed. There is hardly room for the river and railway to make their way between the enormous masses of cliff towering far above and almost shutting out the sunlight. The route is cut out of the rocks, and the cañon makes such sharp bends that in several cases to get in a curve that the trains can go around the cliffs have to be tunnelled and the river bridged. This is repeatedly done, the torrent being crossed and recrossed within brief distances. Tre old 'tote road' is scratched out of the hill-side above, and looks like a most dangerous highway, yet along it all the materials had to be taken before the railway could be built." Finally the cañon ends, and the train rushes through a narrow gateway out into the valley of the Columbia.

Here another surprise awaits. The train, escaped from the canon-walls, rushes at full speed along the base of a ridge, which confronts it on the right, until it swings around its foot toward the north. Then springs into view a magnificent sierra, lifted high against the azure sky. It is the Selkirk range of mountains, lofty, rock-ribbed and glacial. Their base is hidden behind massive folds of foot-hills looking almost black beneath a mantle of spruce, which sweeps far up the sides of even the central cones, intercepted here and there by jutting crags, cut from top to bottom in long lanes mowed year after year by the avalanches, and capped by a chain of summits from whose turrets winter never retreats. And when the afternoon sun is dropping slowly towards it, and the mists of the great valley have risen into light clouds that fleecily veil the cold peaks, they swim in a radiant warmth and glory of color that suggests Asgard, the celestial city of Scandinavian story, whose foundations were laid on the icy pillars of those far northern

mountains where the Vikings worshiped.

2428 9.03 Golden—A small village on the bank of the Columbia river. Much gold mining has been done in the vicinity, and the place is steadily growing in importance. From here the steamer Duchess makes weekly trips (Thursday) to the head-lakes of the Columbia, where there are placer mines. This trip is a novel one, profitable to both sportsman and lover of scenery. From the head of naviga-tion, roads and trails lead over to Findlay creek and mining village; and to the agricultural and grazing districts in the Kootenay valley.

PACIFIC TIME

Miles from Mont'l

> The Columbia is crossed and its western bank followed down to the Gate of the Beaver, into which the line turns sharply to the

left toward Roger's pass through Selkirks. Crossing the Columbia on a fine truss bridge, the railway runs down its margin close under high wooded bluffs, which here rise into the foot hills of the Selkirks. The banks of the river opposite are also lofty bluffs. Seventeen miles below Donald the Beaver river comes down from the mountains, finding exit through a narrow opening between high rocks, after the manner of all the streams in this region. Up through this gateway the railway turns and follows the gorge of the Beaver for several miles, by means of admirable engineering and through enchanting scenery. It occupies a bed cut into the mountain side, higher and higher above the stream, which is presently abandoned for the side-gorge at the right, down which Mountain creek leaps and dashes, and is crossed upon a bridge nearly 1200 feet in length. Beyond, Cedar creek is crossed by a bridge 125 feet in height, and not far west of it is a bridge spanning a rivulet which descends in a succession of foaming cascades, whence one of the most beautiful prospects of the whole journey is to be had. So impressed were the builders with the charm of this magnificent picture of mountains, that they named the spot *The Surprise*. The principal difficulty in construction along this part of the line was occasioned by the torrents, many of them in splendid cascades, which come down the very steep slopes along which the road creeps. To span these fierce torrents with bridges or culverts which would not be torn away required great skill and a liberal expenditure. Several of the more notable bridges have been mentioned, but the greatest of all crosses Stony creek-a noisy rill flowing in the bottom of a V-shaped channel, cut deeply into the soft rock. To so high a level upon the hillside was the line compelled to attain, that this bridge spans the ravine 295 feet above the torrent—one of the loftiest railway bridges in the world. It is about 750 feet long and cost \$250,000. After crossing this bridge the line follows up the gorge of the insignificant Bear creek, at whose source is the narrow portal, between Mt. Carroll on the south and Hermit mountain northward, which

Miles Trans Contin'l Train from Mont' STATIONS-DESCRIPTIVE NOTES LEAVE admits to the summit. These mountains are flanked by enormous precipices, down the side of one of which (on the right) pitches a waterfall several hundred feet in height, white and dusty like snow. Mt. Carroll towers a mile in vertical height above the track, so near, so bare, sheer and stupendous, that it impresses one with a sense of the height and majesty of these mountains in a way that perhaps no other single view can do. As this magnificent promontory, whose base is green with abundant foliage and warmth and whose crest is wreathed in clouds and snow, is gradually left behind, the splendid peaks of the massive Hermit mountain (so named from its close resemblance in one aspect to a cowled monk of St. Bernard, followed by his dog) are disclosed, and the upper course of the noble cataract seen below can be traced to its source in the mighty glaciers that surmount The Hermit and his neighbors. Roger's Pass-Summit of the Selkirks, 4,300 ft. in altitude 2479 10.07 at the station. The pass was named after Maj. Rogers, by whose adventurous energy and skill it was discovered in 1883, previous to which no human foot had penetrated these fastnesses of this great central range. The pass lies between two lines of huge snow-clad peaks. on the right forms a prodigious ampitheatre, whose parapet, eight or nine thousand feet above the valley, encircles vast spaces of snow and shelters wide fields of perpetual ice, glaciers beside which those of Switzerland would be insignificant, and so near them that the shining green fissures penetrating their mass can be distinctly seen. The changing effects of light and shadow on this brotherhood of peaks, of which The Hermit is chief, are beyond statement, and never to be forgotten by the fortunate man who has seen the sunset or sunrise tinting their battlements, or has looked up from the valley about him at some snow-shower trailing its curtain along their crests, with perchance a white peak or two standing serene above the harmless storm. Glacier House-Two miles west of the summit the train 11.42 2481 turns to the left and takes one into view of the greatest of all the Selkirk glaciers, overlooked by the stately monolith named Sir Donald peak, after Sir Donald Smith of Montreal. Facing this enormous field of ice and that crowning summit of the range, whose head is reared a mile and a quarter in vertical height above the track, stands the pretty Swiss châlet which forms a mealstation for passing trains, and a most comfortable stopping place for tourists who wish to hunt or fish or explore the surrounding mountains and glaciers. The great glacier is hardly a mile away, and its forefoot is

only a few hundred feet above the level of the hotel. A good path has been made to it, and its exploration is entirely practicable, adding sensations of novelty and superiority of size to all those features that attract Alpine climbers in Switzerland. Many other pleasant paths and "improvements" have been made in the neighborhood of this hotel, which offers a luxurious

Descent of the western slope of the Selkirks, which begins at "the loops" just beyond the Glacier House. "Perhaps," writes Lady Macdonald, "no part of the line is more extraordinary

as evincing daring engineering skill, than this pass, where the road-bed curves in *loops* over trestle-bridges of immense height, at the same time rapidly descending. In six miles of actual travelling the train only advances two and a half miles, so numerous are the windings necessary to get through this cañon. As I sit looking forward down the pass I can see long trestle-bridges below, and yet on a line with the one we are crossing at the moment! They show above the forest, sharply distinct, so far below, that for a moment my heart beats quickly as I feel the brakes tighten, and the engine bear on with a quiet, steady, slower rush round and down and over, while I look through the trestle-beams into the hurrying foam of waters 150 feet below."

The outlet of this glacier is the Illecillewaet ("swift current") river, and it is by its gorge that the descent The best views are now backward, toward Sir Donald and adjacent peaks, which many judge to be the grandest of all seen. The Illecillewaet is a stream of no great size but of course turbulent, whose water is at first pea-green with glacial mud, but rapidly clarifies. The gorge is sometimes of considerable width, filled with that remarkable forest of gigantic trees for which British Columbia is famous, and there are exceedingly grand outlooks all along, especially backward. Halfway down the train skirts the very brink of several remarkably deep cañons, cut like enormous trenches through the solid rock, whose sheer walls rise hundreds of feet on the opposite side, too steeply to let any soil or vegetation cling, and buttress the wooded crags beyond which ranks of glacial mountains are heaped against the sky. The most striking of these canons is the Albert, where a deep fissure opens in the rocks and the river suddenly drops down a cataract some 200 ft., flowing nearly 300 ft. below the railway, a raging mass of waters compressed into a stream scarcely 20 ft. wide. "This strange chasm twists about, and from the train you have momentary glimpses of the foaming waters far below. When it stops, the passengers rush out to get a better view of the abyss. At another place, nearer the Columbia, there is a second gorge, broader but much similar." After the huge mountain known as the Twin Butte (which has a notch cut in the peak, dividing it into two summits) has been passed, there looms up

Miles from font'l	Trans- Contin'l Train	STATIONS-DESCRIPTIVE NOTES
	LEAVE	upon the right the conspicuous and beautiful peak named Clachnacuddin. The Illecillewaet resembles the other river-passes in guarding its entrance with narrow, rocky portals. Through these, exit is made into the broad plain of the Columbia west of the Selkirk foothills, and Begbie, with its glaciers and snow-fields, Cunningham with its double summit, and a long line of other snowy monarchs in the Gold range ahead, suddenly break upon the vision. "We make our final crossing to the north bank of the Illecillewaet, which has done such good service in guiding the railway down out of the mountains, and then it rushes away from us to end its course in the Columbia. The rows of bordering peaks continue out to the larger river, which flows in a broad stream southward between the ranges past the great Mt. Begbie. The railway crosses the level forest, where the huge cedars have nearly all been burnt, and comes to this little town of Revelstoke."
2524	15.08	Revelstoke—Alt. 1,600 ft. Second crossing of the Columbia, which falls 950 feet between Donald and this point and has here a current of eight miles an hour. This is the supplying point for a large area of gold-mining operations; especially northward toward the great bend of the river around the northern extremity of the Selkirks. Half-civilized Kootenay Indians are likely to be seen here cleverly handling their strangely shaped canoes of birch-bark. The river is here navigable for steamers.
2533 2541 2553 2553	16.17	Eagle Pass Griffin Lake Craigellachie Then the ascent of the Gold range begins by moderate gradients and through earth-cuttings to the Summit lake, at the top of Eagle pass, 1,800 feet above the sea. "The railway is laid along a succession of lakes and connecting streams that conduct it through the mountains, and by comparatively easy gradients it gets both up to and down from the pass. The region traversed is a gold-producing section, and prospectors and placer miners are numerous, though there are scarcely any other settlements anywhere in the mountains. The Gold range has some snow-capped peaks, but generally they are much lower than the Rockies or the Selkirks, and have more rounded tops, being composed of loose materials, requiring very little difficult rock-cutting in building the line. The region is a universal forest in the valleys and upon the mountain slopes. The Valley and Griffin. We go through these forests to the
		summit of the pass, which is the dividing ridge between the waters seeking the Pacific ocean by the Columbia river and these flowing westward through the Fraser iver. At the actual summit there is a long and narrow lake of beautiful clear water surrounded by high mountains. This is the beginning of the Eagle river, and the railway route is cut out of the rocky border of the lake Its winding shores and overhanging cliffs are very pretty

STATIONS-DESCRIPTIVE NOTES

Then the line follows the Eagle river down the western slope, a succession of long narrow lakes and their connecting streams, the railway seeking one shore or the other as has best presented a feasible line. While the scenery is fine, there is nothing like the startling cañons and terrific engineering seen in the other mountain ran-Lake after lake is passed, the finest being the Three Valley lake, which stretches three arms into as many gorges. The lakes and streams are full of fish, and thousands of trout and salmon can be seen swimming in their clear waters, a great temptation to the angler. It is in this attractive region that we pass a little station alongside the Eagle river, 2,553 miles from Montreal, which has been given the sturdy Scotch name of Craigellachie. It was here that the "last spike" in the construction of the Canadian Pacific Railway was driven with modest ceremony by Sir Donald Smith, in November, 1885."

Sicamous
Salmon Arm
Tappen Siding
Notch Hill
Shuswap

The London Times recently described this part of the road most excellently: "The Eagle river leads us down to the Great Shuswap lake, so named from the Indian tribe that lived on its banks and who still have a 're-

Ducks serve' there. This is a most remarkable body of water. It lies among the mountain ridges, and consequently extends its long narrow arms along the intervening valleys like a huge octopus in half-a-dozen directions. arms are many miles long, and vary from a few hundred yards to two or three miles in breadth, and their high, bold shores, fringed by the little narrow beach of sand and pebbles, with alternating bays and capes, give beautiful views. The railway crosses one of these arms by a drawbridge at Sicamous narrows, and then goes for a long distance along the southern shores of the lake, running entirely around the end of the Salmon arm. For fifty miles the line winds in and out the bending shores, while geese and ducks fly over the waters and light and shadow play upon the opposite banks. This lake with its bordering slopes gives a fine reminder of Scottish scenery. The railway in getting around it leads at different, and many, times towards every one of the thirty-two points of the compass. Leaving the Salmon arm of the lake rather than go a long and circuitous course around the mountains to reach the Southwestern arm, the line bodily strikes through the forest over the top of the intervening ridge. We come out at some 600 feet elevation above this 'arm,' and get a magificent view across the lake, its winding shores on both sides of the long and narrow sheet of water stretching far on either hand, with high mountain ridges for the opposite background. The line gradually runs down hill until it reaches the level of the water, but here it has passed the lake, which has narrowed into the [south branch of the] Thompson river. The remainder of the foute follows the valley of this stream, which gives as pretty a sight as one would 4

Trans-Contin'i Train Miles from Mont'i STATIONS-DESCRIPTIVE NOTES LEAVE care to see of a rich pastoral valley enclosed between mountain ridges. The Shuswap Indian reserve shows some signs of settlement and cultivation between the river and the lake on an extended stretch of lowland bordered by forests. The Indians of British Columbia are said to make better labourers than most of those on the plains, when they will work. They make excellent herdsmen and shepherds on the ranches in these luxuriant valleys, and their little settlements are scattered at intervals along the river wherever they can pick up a livelihood. "The Thompson river broadens in to the Little Shuswap lake, and the route is cut out of the hillside on its southern bank. Then the valley broadens, and the eye that has been so accustomed to rocks and roughness and the uninhabited desolation of the mountains is gladdened by the sight of grass, fenced fields, growing crops, haystacks, and good farmhouses on the level surface, while herds of cattle, sheep, and horses roam over the valley and bordering hills in large numbers. This is a ranching country extending far into the mountain valleys west of the Gold range on both sides of the railway, and is one of the garden spots of British Columbia. The people are comparatively old settlers, having come in from the Pacific coast, and it does one's heart good, after having passed the rude little cabins and huts of the plains and mountains, to see their neat and trim cottages, with the evidences of thrift that are all around.' Kamloops—Pop. 1,00°. Divisional point, and principal town in the Thompson River valley, begun years ago 21.40 2653 around a Hudson's Bay post. The north fork of the Thompson comes down from the mountains 100 miles northward, and here joins the main stem, whence the the name, which is an Indian word meaning a riverconfluence. It is a beautiful spot. "The broad valley is intersected by another coming into it at right angles. The rivers flow over the plain and finally join. There is both a background and a foreground of bordering hills, and the town stretches along a single street at the edge of the river. At either end the Chinese have set up their special little towns, while the English residents occupy the centre. The railway track enclosed with planks runs along the middle of the street, and this is the footwalk and promenade. Little steamboats are on the river, and saw-mills are briskly at work." The principal industry around Kamloops will always be grazing, since the hills are covered with most nutritious bunch-grass. 2661 22.18 †Tranquille Below Kamloops the Thompson en-2667 22.39 Cherry Creek ters a series of cañons, leading to the 2678 23.17 great gorges of the Fraser river, into Savonas 2684 23.41 which it pours at Lytton. and Fraser rivers has also called for great engineering skill, and gives for hundreds of miles a succession of

superb scenes and magnificent displays of the art of successful road-making. . . . It is at the Kamloops lake, a beautiful sheet of water into which the Thompson river widens just below the town, that the fine scenery of the cañon begins. This lake is about 20 miles long and a mile or two wide. The river above it meanders in careless crookedness through a valley that is enclosed by parallel ridges of round-topped, furrowed, and water-worn hills, the bottom-lands making a good grazing country, with many herds of cattle. The lake spreads across this valley, the bordering hills, however, changing to towering rocks, which become higher as the mountain range is entered. They bear no timber, and the sombre aspect of the cliffs, with the parched brown vegetation, contrasts sharply with the bright green waters. The railway has to be carried on ledges and through tunnels on the southern bank, the views over lake being beautiful as the route winds in and out, now piercing a tunnel and now hung upon a bridge over some great fissure. A half-dozen rocky ridges stretch across this lake, and have been broken through by the waters, so that it presents a series of high promon-The little village of tories and intervening bays. Saronas [where the Government's line ended and the C. P. R. construction eastward began is at the foot of the lake, and below this the gorge narrows and the Thompson river flows out with swift current towards the sea, plunging with mad pace over the successions of rapids at the bottom of the cañon. This cañon broadens and narrows as the mountain chains approach or recede, and the railway is carried high above the river on the southern side. Where the bottom lands spread out the river winds through them, leaving flats or bars. It is on these and the sandy outflows of the mountain streams which fall in, that much gold has been found, and both here and on the Fraser river can be seen the gold hunters shaking their "cradles" to wash the sand from the gold dust. In the bottoms and on the hills along this river, until the gorge runs too far into the mountains, the grazing is good, and there are evidences of some settlement, with cattle herds and horses feeding on the 'bunch grass,' which looks in its dried condition like so much hay. Below this part, however, the rocks become too steep to permit of much habitation. A light bridge deep down in the cañon, thrown across the Thompson river where several roads come together out of the mountains, gives a name to the station of Spence's Bridge. . . . As the Thompson river cañon gets further into the mountains the gorge becomes deeper and narrower and the scenery even more grand. The hills are denuded of trees, but some shrub-timber grows in sheltered parts of the valleys. The river becomes a wild torrent. The railway has a difficult route, is laid high

Miles Trans-Contin'l Train STATIONS-DESCRIPTIVE NOTES LEAVE above the water, and crosses a great number of lofty trestle-bridges over the fissures in the sides of the canon, while it has to pierce cliff after cliff through tunnels. The sides of the gorge in most places are preipitous, making it impossible to get down to the water's edge. A wagon road is cut into the precipice along the top, high above the stream, and here are seen a party of Indians with their ponies, moving their household goods on the animals' backs. But it seems perilous navigation to go along such a roadway in such a dangerous place, entirely unprotected from falling far down into the abyss below. Then the canon gradually winds its way into the mountains and approaches the highest peaks, some with snow-rifts on their summits, which border the cañon of the Fraser river. And finally we come to Lytton, a town started by a colony of goldminers at the junction of the two rivers. The Fraser river is the chief watercourse of British Columbia, rising in the northern portion of the Rockies, and flowing for about 500 miles before it begins to break through the mountains on its way to the strait of Geor-It passes Lytton as a full stream with rapid, turbid current, which, when the Thompson river is added, becomes much larger and at times a foaming torrent. flows through a deep and rocky gorge, but with the slopes and bottoms better timbered than the Thompson River valley. The scenery is, if anything, on a grander SIXTH scale, and the huge rocks that have fallen into the water have been worn by the action of the elements into forms DAY like towers, castles, and rows of bridge-piers, with the swift current eddying around them. The cliffs that encompass the river rise for thousands of feet, and in many places stand up like solid walls, or jut out, and almost bar the passage. A pair of such protruding promontories is used by the railway to cross the river on a fine iron bridge [the cantilever bridge near Sisco], but it has to tunnel one of the cliffs to secure a safe route on the opposite bank. The great number of mountain torrents coming in, and the rocky buttresses that intervene, make the railway for miles a succession of tunnels and trestle-bridges, most costly to construct, and compel endless bends to get a practicable route at all. These obstructions narrow the channel so that the river runs at race-horse speed. Clouds encompass the higher peaks and float along in the canon while the water boils below. There are intervals, however, when the valley broadens sufficiently to permit a nook where an acre or two of comparatively level land gives a chance for brief cultivation. 2774 5.38 North Bend-Divisional point; refreshment rooms. Indian mission-station, of some 300 people. Vancouver is a calling-port for most of the coast-wise steamers, and port of departure for steamers to Japan and China. On the arrival of the train a steamer departs for Victoria, on Vaucouver island,—a ferriage of eight hours through the beautiful archipelagos of the gulf of Georgia and Puget sound.

SCENE ACROSS THE STRAIT OF FUCA

2990 | 21.00 | 9.00pm

Victoria—Pop. 12,000. Capital of British Columbia, situated at the southern extremity of Vancouver island. It has a lovely site, and its mild climate is healthful. English people and manners predominate, in contrast with "Western" abruptness, Chinese picturesqueness and Indian squalor. At Esquimault harbor (2 m.), an Imperial naval station, a fleet rendezvous. This station, Beacon Hill park, overlooking the straits of Fuca and the Olympic mts., and many fine drives make the place one of the most interesting in Canada.—Victoria does a large business in naval supplies, general merchandise, fish, coal and timber. A railway extends thence to the coal and farming districts near Nanaimo on the western coast of the island.

Steamships on the Pacific Ocean

Steamships of the Canadian Pacific line, depart every three weeks for Japan and China, according to the appended table. These are fast steamers heretofore in the service of the Cunard line. Their route is shorter by 800 miles than the steamers from San Francisco. The trip will require only 12 to 15 days to Yokohama, and 17 to 20 days to Hong Kong. At Yokohama, connection is made for all other ports in Japan, eastern China and Corea; and at Hong Kong for Sydney, Melbourne, Auckland, Levuka, Batavia, Calcutta and the East Indies, and Australasia generally.—In addition to the Japan line an extensive coast-service has been provided. At Victoria, where daily connection is made by prompt steamboats and railroads for all the seaports, towns and farming districts in Washington Terr. and Oregon, U.S.A. Once a week, or oftener, steamers depart from Vancouver or Victoria to San Francisco, where connection is made for the Sandwich Island and Australia, southern California, Mexico and South America. Once a fortnight, a steamer leaves Vancouver for Alaska, traversing a region of magnificent scenery. The course is wholly within narrow and intricate, but deep and safe, channels, affording a constant succession of magnificent scenery.

from Mont'l	Contin'l Train	STATIONS-DESCRIPTIVE NOTES
499	Train LEAVE 3.30 P.M.	Owen Sound—Pop. 6,000. Port on Georgian bay for Canadian Pacific steamships. Entered by a long detour eastward, along the edge of the bay, where steep grades bring the line down to the wharves. This town has grown rapidly since the building of the railway; and is the shipping point for a vast area of farming country. The huge elevators and lumber-piles will be observed. Building stone and brick-clays abundant. Manufactures, especially of furniture and wooden-ware, are increasing. Shooting and fishing in great variety is easily accessible. In addition to the steamships of the Canadian Pacific line for Port Arthur, steamers depart regularly for Collingwood, and all ports on Georgian bay, Manitoulin island, and in the Indian peninsula separating Georgian bay from Lake Huron. Many irregular steamers and sailing vessels call at frequent intervals, taking passengers
		and freight to and from all the lake ports.

Canadian Pacific Steamships.—The steel steamships ALBERTA and ATHABASCA, of this line, perform a bi-weekly service between Owen Sound and Port Arthur, departing from Owen Sound on Wednesdays and Saturdays, on the arrival of the steamship express from Toronto.

These vessels are new and elegant Clyde-built steamships surpassing in speed, safety and comfort, all other steamers on the great lakes. They each have a gross measurement of nearly 1,800 tons, are 270 feet in length, and complete in every detail. Their furnishing is equal in luxury to that of the ocean steamers, and their table compares favorably with that of the leading hotels of our large cities. They are lighted throughout by electricity, furnished with steam steering-gear, and provided with every appliance for safety.

from Mont'l	Can. Pac. Steam- ships	STATIONS-DESCRIPTIVE NOTES.
499	LEAVE 4.00 P. M.	Owen Sound—The course of the departing steamer is laid down Georgian bay, with the wooded shores of Indian peninsula on the left, and many pretty islands in view.
	WEDNESDAY OF SATURDAY	During the night the steamer passes out into L. Huron, and by morning approaches Garden River, an Indian reservation and small settlement at one of the debouches of St. Mary's river, which drains the overflow of lakes Michigan and Superior into L. Huron. Up this narrow, forest-bordered and charming water-defile, the steamer pursues a devious way for several hours until debarred by the rapids of St. Mary, where it makes its only stop between Owen Sound and Port Arthur.

770	THURSDAY OON VOON VOOD VALUE ABBUTTON OF SUNDAY	Sault Ste. Marie—This is on the Michigan side, and has always been an important place to the aborigines, early traders and modern commerce. All vessels must stop here to pass through the canal by which the falls, or "Sault Ste. Marie," are avoided. "The first canal was built in 1853-5 Since then a new canal has been made. It is 1 m. long, with one lock, 515 ft. in length, admitting vessels of 16 ft. draught, and overcoming a rise of 18 ft. The width of the canal varies from 108 to 270 ft. The old canal has two locks, of 350 ft. each. Both are on the United States side."—A garrison of U.S. troops, has enabled a large and busy village to grow up. There is a smaller village on the Canadian side. The fishing here is excellent, and a favorite local sport is running the rapids in boats guided by Indians. Here will soon be built the bridge connecting the Algoma branch of the Can. Pac. Ry., with United States railways running westward to St. Paul.—After an hour's halt, the steamer enters L. Superior, and heads northwest, past Whitefish point (on the left) straight across the lake to Isle Royale and Thunder cape, protecting Thunder bay and the harbor of

CONSTRUCTION.

As a thoroughly built and splendidly equipped line, the Canadian Pacific has earned a reputation for comfort and regular time that few ines in America have ever reached, and none until after many years of operation. In the construction of this line the utmost care was taken with every detail, and nothing was left undone to make it what it was ntended by its projectors to be—the very best line ever constructed on he American continent.

TRACK AND BRIDGES.

The cuttings are unusually wide and thoroughly drained; the mbankments are very wide and solid; the bridges, resting on first class ons. This is a well hasonry, are of steel, and of twice the ordinary strength; the rails are of lated and highly be best steel, manufactured under rigid inspection, and are laid with supporting some ngle splices of double strength; the ties are large and closely laid, and hing communities he track is ballasted with the best materials.

Every appliance of proven value, calculated to secure safety, has towns northward een adopted on this line without regard to cost. These are too numerlian Pacific with us to mention, but they include an elaborate guard system at all bridges, ooke's patent safety switch at all turn-outs from the main track-the the through carrily safety switch in use in Canada, and the only one known that will acros ith certainty prevent derailment from a misplaced switch. Especial are has been taken to make the heating apparatus on trains entirely safe, nd the oil used in lighting the cars is manufactured expressly for the roads southward ompany, and is safer even than candles, while it affords a most brilliant

EQUIPMENT.

The line is equipped with the finest Passenger, Sleeping and Parlor 0. Large factorieurs in the world. The wheels used under all the passenger rolling stock re of Krupp steel, 40 inches in diameter, not one of which has ever failed; 0. Flour mills and e axles are of steel, and of the full size of the iron axles used on other nes. The car boxes are strongly framed to meet any contingency, and A manure wider and higher than those of any other railway. Both first and ,000. A beautifuecond class cars are designed to secure uniform warmth, combined with erfect ventilation, in winter, and an abundance of cool air, with freedom irrounded by rictom dust, in summer; and the cars of no other line can compare with em in these respects, nor in strength, elegance and comfort.

TIME.

The trains of this line are run sharply on time. The through trains . R. station at the ake very few stops, and no annoying delays are permitted to occur at stations. All freight trains are kept well out of the way of passenger alls are loc trains, and no train is permitted to follow a passenger train from a station he best hot untill it has passed the next station ahead. This is the only line in America Dining halls where this rule is in force.

THE SLEEPING AND PARLOR CARS

Are owned and operated by the Company, and no expense has been poken of b spared to make them perfect. They are finished outside with polished mahogany, and their interiors, with their rich carvings and beautiful fit-arefully wa tings, are beyond comparison. The berths are wider and longer than in other sleeping cars. The curtains, blankets and linen, made expressly for the Company, are of the finest quality. The sleeping cars are provided with bath-rooms, and the sleeping and parlor cars are specially constructed so as to enable passengers to view the scenery passed.

SECOND CLASS, OR COLONIST, SLEEPING CARS

Are run on this line instead of the ordinary second class cars. They are numerate t handsomely finished in light woods, on the general plan of ordinary ifferent rai sleeping cars. They are bright and pleasant, and so comfortable that they are largely used by first class passengers in making short trips. No station she extra charge is made in these cars. Colonists on transcontinental trains can procure mattresses, curtains and blankets from the Company, suitable nly, or to s for these cars, at cost price.

DINING CARS,

Beyond comparison in style and finish, are run during day time on all through transcontinental trains between Montreal and Vancouver. Special attention has been given by the Company to the service on these cars, and travellers will find all the delicacies of the season at their demand for the nominal charge of 75 cents per meal.

In the Rocky Mountain region, hotels have been built, and will be operated under the control of the Company, near Banff Hot Springs, at the eastern base of the mountains; at Field, on the summit of the Rockies; at Glacier station, near the summit of the Selkirks; and at North Bend, on the Fraser. These hotels form admirable stopping places for tourists, who do not wish to make the overland journey, through the scenery of that region, in one unbroken trip.

TRAIN LUNCHES

Are served on the trains of the Canadian Pacific Railway by waiters, from a bill of fare, the charges being extremely moderate. lunches, which are under the immediate supervision of the Company,special compartments being fitted up in first class coaches for the purpose—are now being served on night and day trains in both directions between Toronto and Montreal, and have been made a special and an attractive feature of this road. In addition to these train lunches, dining

ay of passenger alls are located at convenient stations, setting a table equal to that of in from a station he best hotels of the country, at which ample time is allowed for meals. line in America Dining halls and luncheon counters are marked thus 2 on this time table.

CIVILITY AND ATTENTION.

The civility and attention of the employees of the Company are pense has been poken of by every traveller on the line. The cleanliness of cars and with polished ations is also noticed. These two points are, next to safety, most arefully watched by the management.

TICKETS AND PRIVILEGES.

Coupon tickets to all important points in Canada and the United tates, also to Europe, Japan, China and Australia, are placed for sale at Il principal stations on this Company's lines. Passengers desiring to archase such tickets should, in all cases, designate over which connectg line or lines they desire to travel, as our agents are instructed to They are numerate the routes, but to maintain strict neutrality in regard to the an of ordinary ifferent railways interested.

Stop-over checks will be granted to passengers desiring to stop off at short trips. No station short of the destination to which their tickets read, on applicantinental trains on to the conductor; but this privilege is confined to first class tickets mpany, suitable nly, or to such other tickets as the Company may from time to time xtend it. These stop-over checks are not transferable, and will not be ccepted for passage after the date of their expiration.
