For these reasons, it seems difficult to question the policy of the changes that have recently been effected in the navigation laws, partly by the bills introduced by Mr. (now Lord) Wallace in 1821, and Mr. Huskisson in 1825, and partly by the adoption of what has been called the *Reciprocity System*. Under the existing law (6 Geo. 4. c. 109, see *post.*) the intercourse with all European countries in amity with Great Britain is placed on the same footing. The memorials of our former animosity, and of our jealousy of the prosperity of certain of our neighbours, have thus been abolished; and the same law is henceforth to regulate our commerce with the Continent. This uniformity, besides giving greater scope to mercantile operations, and extending our traffic with some of our most opulent neighbours, removes a great source of embarrassment and litigation; at the same time that it detracts considerably from that selfish character which had been believed on the Continent, and not without considerable reason, to be the animating principle of our commercial system.

The distinction between enumerated and non-enumerated goods is still kept up under the new regulations; but, instead of confining the importation of the former into the United Kingdom, either to British ships, or ships belonging to the country or place where the goods were produced, or from which they originally were exported, the new regulations permit that they may be imported either in British ships, in ships of the country of which the goods are the produce, or in ships of the country or place from which they are imported into England. This is a very important alteration. Under the old law, when a number of articles, the products of different countries, but all of them suitable for importation into England, were found in a foreign port, they could not be imported except in a British ship, or separately in ships belonging to the different countries whose produce they were. This was obviously a very great hardship on the foreigner, without being of any real advantage to our own ship owners. When the foreign merchant had vessels of his own, it was not very probable he would permit them to remain unoccupied, and freight a British vessel; and there were very few ports of any importance in which foreign bottoms might not be found, in which the articles could be legally imported. The real effect of the old law was not, therefore, to cause the employment of British ships, but to oblige foreigners to assort their cargoes less advantageously than they might otherwise have done, and thus to lessen their intercourse with our markets. The new law obviates this inconvenience; while, by restricting the importation of European goods to ships of the built of the country of which the goods are the growth, or to those of the built of the country or port from which the goods are shipped, and which are *wholly owned* by the inhabitants of such country or port, it is rendered very difficult for the people of a particular country to become the carriers of the produce of other countries to our markets.

Another new regulation is of such obvious and unquestionable utility, that it is surprising it was not long ago adopted. By the old law, all articles, the produce of Asia, Africa, or America, could only be imported directly in a British ship from the place of their production. This law had already been repealed in so far as respected the United States, whose ships were allowed to import their produce directly into this country; but it was maintained with respect to Asia, Africa, and South America. And hence, although a British ship happened to find, in South American, African, or Asiatic ports, articles, the produce of one or more of the other quarters of the globe, suitable for our markets, and with which it might have been extremely advantageous for her to complete her cargo, she was prohibited from taking them on board, under penalty of forfeiture and confiscation, not only of the goods, but also of the ship. This regulation has been repealed; and it is now lawful for British ships to take on board all articles, the importation of which is not prohibited, on meeting with them in any Asiatic, African, or American port. Lord Wallace originally intended to extend this principle to European ports, or to make it lawful for British ships to import all non-prohibited articles from *whenever they might find them*. But it was supposed by some, that foreign ships might be more cheaply navigated than ours; and that foreigners, taking advantage of this circumstance, would import the Asiatic, African, and American products required for our consumption into the contiguous continental ports, and would consequently restrict the employment of British ships to their carriage thence. We believe that these apprehensions were, in a great measure, visionary. But the law is so contrived as to avoid even the possibility of danger on this head; such of the products of Asia, Africa, and America, as are required for home consumption, being, with a few trifling exceptions, inadmissible from Europe; and only admissible when they are imported in British ships, or in ships of the country or place of which the goods are the produce, and from which they are brought. The only exceptions to this rule are articles from Asiatic and African Turkey imported from the Levant, and bullion.

Besides the restrictive regulations already alluded to, it had been a part of our policy to encourage the employment of our shipping, by imposing higher duties on commodities imported into our harbours in foreign vessels, than were imposed on them when imported in British vessels; and it had also been customary to charge foreign vessels with higher port and light-house duties, &c. This system was always loudly complained of by foreigners; but we had little difficulty in maintaining it, so long as the state of our manufactures enabled us to disregard the retaliatory measures of other powers. But the extraordinary increase that took place, since the commencement of the late war, in our manufactures for foreign consumption, and the necessity under which we were, in consequence, placed, of conciliating our customers abroad, led to the adoption of the *reciprocity system*. This system was first introduced into the trade with the United States. After the North American colonies had succeeded in establishing their independence, they set about framing a code of navigation laws on the model of those of this country. Among other regulations of a restrictive character, it was enacted, that all foreign vessels trading to the United States should pay  $\frac{1}{2}$  a dollar, which was afterwards raised to a dollar, per ton duty, beyond what was paid by American ships; and further, that goods imported in foreign vessels should pay a duty of 10 per cent. over and above what was payable on the same description of goods imported in American vessels.

This law was avowedly directed against the navigation of Great Britain; though, as it was bottomed on the very same principles as our navigation laws, we could not openly complain of its operation. Under these circumstances, it would have been sound policy to have at once proposed an accommodation; and instead of attempting to meet retaliation by retaliation, to have offered to modify our navigation law, in so far as American shipping was concerned, on condition of the Americans making reciprocal modifications in our favour. A different course was, however, followed. Various devices were fallen upon to counteract the navigation system of the Americans, without in any degree relaxing our own: but they all failed of their object; and at length it became obvious to every one that we had engaged in an unequal struggle, and that the real effect of our policy was to give a bounty on the importation of the manufactured goods of other countries into the United States, and thus gradually to exclude both our manufactures and ships from the ports of the Republic. In consequence, the conviction of the necessity of making concessions gained ground progressively; and it was ultimately fixed, by the commercial treaty agreed upon between Great Britain and the United States in 1815, that in future *equal charges* should be imposed on the ships of either country in the ports of the other, and that *equal duties* should be laid upon all articles, the produce of the one country, imported into the other, whether such importation were effected in the ships of the one or the other.

The new States of South America were naturally anxious to establish a commercial marine; and, to forward their views in this respect, they contemplated enacting navigation laws. But this intention was frustrated by the interference of the British government, who, without stipulating for any peculiar advantage, wisely offered to admit their ships into our ports on a fair footing of reciprocity, or on their paying the same charges as our own ships, on condition that they admitted British ships into their ports on a similar footing. Commercial treaties framed on this sound and liberal principle have since been entered into with most of these States.

The principle of the reciprocity system having been thus conceded in the case of the intercourse with the United States, whose commercial marine is second only to that of Great Britain, it was not possible to refuse acting on the same principle in the case of such European countries as might choose to admit our ships into their ports on a footing of equality.\* The first demand of this sort was made on the part of the Prussian government, by whom an order in council was issued on the 20th of June, 1822, which made large additions to the port dues charged on all ships belonging to those nations which did not admit Prussian ships on a footing of reciprocity. The real object of this order was to injure the navigation of this country; and it was speedily found that it had the desired effect, and that its operation on British shipping was most pernicious.

Under these circumstances, the British merchants and ship owners applied to our government for relief. "We were assailed," said Mr. Huskisson, "with representations from all quarters connected with the shipping and trade of the country, against the heavy charges imposed upon British ships in the ports of Prussia. In such circumstances, what course did his Majesty's government take? We felt it to be our duty, in the first instance, to communicate with the Prussian minister in this country; and our minister at Berlin was, I believe, also directed to confer with the Prussian government on the subject. I myself had a conference with the Prussian minister at this court, and

\* By the fourth section of the act 6 Geo. 4. c. 1. it is enacted, that his Majesty may, by an order in council, admit the ships of foreign states into our ports, on payment of the like duties that are charged on British vessels, provided that British ships are admitted into the ports of such foreign states, on payment of the like duties that are charged on their vessels.

I well recollect the substance of his reply to me: — 'You have,' he said, 'set us the example, by your port and light charges, and your discriminating duties on Prussian ships; and we have not gone beyond the limits of that example. Hitherto, we have confined the increase of our port and tonnage charges to ships only; but it is the intention of my government next year,' (and of this he showed me the written proof,) 'to initiate you still more closely, by imposing discriminating duties on the goods imported in your ships. Our object is a just protection of our own navigation; and so long as the measure of our protection does not exceed that which is afforded in your ports to British ships, we cannot see with what reason you can complain.'

"Against such a reply what remonstrance could we in fairness make to the Prussian government? We might have addressed ourselves, it may be said by some, to the friendly feelings of that government; we might have pleaded long usage in support of our discriminating duties: we might have urged the advantages which Prussia derived from her trade with England. Appeals like these were not forgotten in the discussion; but they were of little avail against the fact stated by the consul at Dantzic, — that 'the Prussian ship owners were all going to ruin.'

"By others it may be said, 'Your duty was to retaliate, by increasing your own port charges, and discriminating duties on Prussian shipping.' I have already stated generally my reasons against the policy of this latter course. We were not prepared to begin a system of commercial hostility, which, if followed up on both sides to its legitimate consequences, could only tend to reciprocal prohibition. In this state of things, more prudently, as I contend, we entered upon an amicable negotiation with the Prussian government, upon the principle of our treaty with the United States, — that of 'free shipping, on both sides, all discriminating duties on the ships and goods of the respective countries in the ports of the other.'

"Having concluded an arrangement with Prussia upon this basis, we soon found it necessary to do the same with some other of the Northern states. Similar conventions were accordingly entered into with Denmark and Sweden. Reciprocity is the foundation of all those conventions: but it is only fair to add, that they contain other stipulations for giving facility to trade, and from which the commerce of this country, I am confident, will, in the result, derive considerable advantage." — (*Mr. Huskisson's Speech*, 12th of May, 1826, *on the State of the Shipping Interest*.)

This statement shows conclusively, that the establishment of the reciprocity system, with respect to which so violent a clamour was raised, was not a measure of choice, but of necessity. In the state in which our manufactures are now placed, we could not afford to hazard their exclusion from a country into which they are annually imported to a very large extent. So long as the Prussians, Swedes, Danes, &c. chose to submit to our system of discriminating duties on foreign ships, and on the goods imported in them, without retaliating, it was no business of ours to tell them that that system was illiberal and oppressive. But when they found this out without our telling them; and when they declared, that unless we modified our restrictions, they would retaliate on our commerce, and either entirely exclude our commodities from their markets, or load those that were imported in British ships with prohibitory duties; should we have been justified, had we refused to come to an accommodation with them? Were we to sacrifice the substance to the shadow? — to turn away some of our very best customers, because they chose to stipulate that the intercourse between them and us should be conducted either in their ships or in ours, as the merchants might think best? Our government had only a choice of difficulties; and they wisely preferred adopting a system which has preserved free access for the English manufacturer to the markets of Prussia, and to the English ship owners an equal chance with those of Prussia of being employed in the traffic between the two countries, to a system that would eventually, and at no distant period, have put an end to all intercourse between the two countries, and which had already subjected it to great difficulties.

It was said by the ship owners, and others opposed to the late alterations, that the Prussians can build, man, and victual ships at a cheaper rate than we can do; and that the ultimate effect of the reciprocity system would, consequently, be to give them a decided superiority in the trade. But, admitting this statement to be true, still, for the reasons already given, it is pretty evident that the policy we have pursued was, under the circumstances of the case, the best. Had we refused to establish the reciprocity system, we must have submitted to be entirely excluded from the markets of the United States, Prussia, &c. In grasping at what was beyond our reach, we should thus have lost what we were already in possession of. We should not only have injured our ship owners, by getting them forcibly excluded from the ports of many great commercial states, but we should have done an irreparable injury to our manufacturers, — a class which, without undervaluing the ship owners, is of incomparably more importance than they. Although, therefore, no doubt could be entertained with respect to the statements of the ship owners as to the comparative cheapness of foreign shipping, that would

be no good objection to the measures that have been adopted. But these statements, though probably in some respects true, were certainly much exaggerated. In comparing the cost of British and foreign shipping, it is usual to estimate it by the tonnage; but this is a very false criterion; for, while foreign ships are accurately measured, our ships are measured so that a vessel of 150 tons register generally carries 220 tons of a mixed cargo, and a vessel registered at 400 tons seldom carries less than 600. If this difference be taken into account, it will be found that the Prussians, and other Northern nations, from whom the greatest danger was apprehended, have no considerable advantage in the cheapness of their ships; and it is generally admitted that ships built in the ports on the Baltic will not last the time, nor bear the wear and tear, that ships built in this country or France will do. The wages of American seamen are higher than ours; and it is stated by those engaged in the shipping trade, that the wages paid by the Northern ship owners are about as high as in England, and that their crews are larger in proportion to the burden of the ship. The difference in the cost of victualling must be immaterial, for, in all distant voyages, our ships procure provisions and stores of all sorts at the same rate as the foreigner.\* On the whole, therefore, it would appear that the alarm with respect to the apprehended decay of our shipping was in a great degree, if not entirely, imaginary. And while the late modifications in the navigation laws were imperiously required by a just regard to our manufacturing and commercial interests, there are no good grounds for thinking that they will be injurious to our shipping.

ABSTRACT OF AN ACT ENTITLED FOR THE ENCOURAGEMENT OF BRITISH SHIPPING AND NAVIGATION.  
3 & 4 WILL. 4. c. 54.

This act shall come into and be and continue in full force and operation, from and after the 1st day of September, 1833. — § 1.

*Ships in which only enumerated Goods of Europe may be imported.* — The several sorts of goods herein-after enumerated, being the produce of Europe, viz. masts, timber, boards, tar, tallow, hemp, flax, currants, raisins, figs, prunes, olive oil, corn or grain, wine, brandy, tobacco, wool, shumac, madders, madder roots, barilla, brimstone, bark of oak, cork, oranges, lemons, linseed, rape seed, and clover seed, shall not be imported into the United Kingdom to be used therein, except in British ships, or in ships of the country of which the goods are the produce, or in ships of the country from which the goods are imported. — § 2.

*Places from which only Goods of Asia, Africa, or America may be imported.* — Goods, the produce of Asia, Africa, or America, shall not be imported from Europe into the United Kingdom, to be used therein, except the goods herein-after mentioned; (that is to say),

Goods, the produce of the dominions of the Emperor of Morocco, which may be imported from places in Europe within the Straits of Gibraltar;

Goods, the produce of Asia or Africa, which (having been brought into places in Europe within the Straits of Gibraltar, from or through places in Asia or Africa within those Straits, and not by way of the Atlantic Ocean) may be imported from places in Europe within the Straits of Gibraltar;

Goods, the produce of places within the limits of the East India Company's charter, which (having been imported from those places into Gibraltar or Malta in British ships) may be imported from Gibraltar or Malta;

Goods taken by way of reprisal by British ships:

Bullion, diamonds, pearls, rubies, emeralds, and other Jewels or precious stones. — Sect. 3.

*Ships in which only Goods of Asia, Africa, or America may be imported.* — Goods, the produce of Asia, Africa, or America, shall not be imported into the United Kingdom, to be used therein, in foreign ships, unless they be the ships of the country in Asia, Africa, or America, of which the goods are the produce, and from which they are imported, except the goods herein-after mentioned; (that is to say),

Goods, the produce of the dominions of the Grand Seigneur, in Asia or Africa, which may be imported from his dominions in Europe, in ships of his dominions;

Raw silk and mohair yarn, the produce of Asia, which may be

imported from the dominions of the Grand Seigneur in the Levant seas, in ships of his dominions:

Bullion. — Sect. 1.

*Manufacture deemed Produce.* — All manufactured goods shall be deemed to be the produce of the country of which they are the manufacture. — § 5.

*From Guernsey, &c.* — No goods shall be imported into the United Kingdom from the islands of Guernsey, Jersey, Alderney, Sark, or Man, except in British ships. — § 6.

*Exports to Asia, &c. and to Guernsey, &c.* — No goods shall be exported from the United Kingdom to any British possession in Asia, Africa, or America, nor to the islands of Guernsey, Jersey, Alderney, Sark, or Man, except in British ships. — § 7.

*Coastwise.* — No goods shall be carried coastwise from one part of the United Kingdom to another, except in British ships. — § 8.

*Between Guernsey, Jersey, &c.* — No goods shall be carried from any of the islands of Guernsey, Jersey, Alderney, Sark, or Man, to any other of such islands, nor from one part of any of such islands to another part of the same island, except in British ships. — § 9.

*Between British Possessions in Asia, &c.* — No goods shall be carried from any British possession in Asia, Africa, or America, to any other of such possessions, nor from one part of any of such possessions to another part of the same, except in British ships. — § 10.

*Imports into British Possessions in Asia, &c.* — No goods shall be imported into any British possession

\* See on this subject an able pamphlet, entitled "Observations on the Warehousing System and Navigation Laws," by Sir John Hall, Secretary to the St. Katharine's Dock Company. The following extract from the evidence of Mr. Edward Solly, before the Lords' Committee of 1820, seems to be conclusive as to the accuracy of the statements in the text:—"I," said he, "was formerly a considerable owner of Prussian ships, and therefore I had a good deal of experience in Prussian shipping, and I can safely say that Prussian ships cannot compete with English ships in time of peace: the English ships are navigated cheaper than Prussian ships; the Prussian vessels are more heavily masted and rigged, and require a greater complement of men, whilst the English ship is manned mostly by apprentices; the English ships require less ballast; the economy of shipping is better understood and practised in them; there is greater activity of the captain and crew; they are insured in clubs at the average rate of 5 per cent., while the Prussian ships cannot get the same insurance done for 12; and as to the outfit, the provisions, and other necessaries for the ship, both parties have their choice where they will lay in their stock, whether in a Prussian or an English port: if provisions are cheap in the Prussian port, the English captain lays in his stock of provisions there. Generally, I am of opinion that British ships can sail cheaper than those of any other nation." — (Evidence, p. 11.)

in Asia, Africa, or America, in any foreign ships, unless they be ships of the country of which the goods are the produce, and from which the goods are imported. — § 11.

*No Ship British, unless registered and navigated as such.* — No ship shall be admitted to be a British ship, unless duly registered and navigated as such; and every British register ship (so long as the registry of such ship shall be in force, or the certificate of such registry retained for the use of such ship) shall be navigated during the whole of every voyage (whether with a cargo or in ballast), in every part of the world, by a master who is a British subject, and by a crew, whereof 3-4ths at least are British seamen; and if such ship be employed in a coasting voyage from one part of the United Kingdom to another, or in a voyage between the United Kingdom and the islands of Guernsey, Jersey, Alderney, SaZe, or Man, or from one of the said islands to another of them, or from one part of either of them to another of the same, or be employed in fishing on the coasts of the United Kingdom or of any of the said islands, then the whole of the crew shall be British seamen. — § 12.

*Exception in favour of Vessels under 15 Tons Burden, &c.* — All British-built boats or vessels under 15 tons burden, wholly owned and navigated by British subjects, although not registered as British ships, shall be admitted to be British vessels, in all navigation in the rivers and upon the coasts of the United Kingdom, or of the British possessions abroad, and not proceeding over sea, except within the limits of the respective colonial governments within which the managing owners of such vessels respectively reside; and all British-built boats or vessels wholly owned and navigated by British subjects, not exceeding the burden of 30 tons, and not having a whole or a fixed deck, and being employed solely in fishing on the banks and shores of Newfoundland and of the parts adjacent, or on the banks and shores of the provinces of Canada, Nova Scotia, or New Brunswick, adjacent to the Gulf of Saint Lawrence, or on the north of Cape Canso or of the islands within the same, or in trading coastwise within the said limits, shall be admitted to be British boats or vessels, although not registered, so long as such boats or vessels shall be solely so employed. — § 13.

*Honduras Ships to be as British, in Trade with United Kingdom and Colonies in America.* — All ships built in the British settlements at Honduras, and owned and navigated as British ships, shall be entitled to the privileges of British registered ships in all direct trade between the United Kingdom or the British possessions in America and the said settlements; provided the master shall produce a certificate under the hand of the superintendent of those settlements, that satisfactory proof has been made before him that such ship (describing the same) was built in the said settlements, and is wholly owned by British subjects; provided also, that the time of the clearance of such ship from the said settlements for every voyage shall be endorsed upon such certificate by such superintendent. — § 14.

*Ship of any Foreign Country to be of the Built of, or Prize to such Country; or British-built, and owned and navigated by Subjects of the Country.* — No ship shall be admitted to be a ship of any particular country, unless she be of the built of such country; or have been made prize of war to such country; or have been forfeited to such country under an act of the same, made for the prevention of the slave trade, and condemned as such prize or forfeiture by a competent court of such country; or be British-built (not having been a prize of war from British subjects to any other foreign country); nor unless she be navigated by a master who is a subject of such foreign country, and by a crew of whom 3-4ths at least are subjects of such country; nor unless she be wholly owned by subjects of such country usually residing therein, or under the dominion thereof: provided always, that the country of every ship shall be deemed to include all places which are under the same dominion as the place to which such ship belongs. — § 15.

*Master and Seamen not British, unless natural-born, or naturalised, &c.* — No person shall be qualified to be a master of a British ship, or to be a British seaman within the meaning of this act, except the natural-born subjects of his Majesty, or persons naturalised by any act of parliament, or made denizens by letters of denization; or except persons who have become British subjects by virtue of conquest or cession of some newly acquired country, and who shall have taken the oath of allegiance to his Majesty, or the oath of fidelity required by the treaty or capitulation by which such newly acquired country came into his Majesty's possession; or persons who shall have served on board any of his Majesty's ships of war in time of war for the space of 3 years: provided always, that the natives of places within the limits of the East India Company's charter, although under British dominion, shall not, upon the ground of being such natives, be deemed to be British seamen: provided always, that every ship (except ships required to be wholly navigated by British seamen) which shall be navigated by 1 British seaman, if a British ship, or 1 seaman of the country of such ship, if a foreign ship, for every 20 tons of the burden of such ship, shall be deemed to be duly navigated, although the number of other seamen shall exceed 1-4th of the whole crew: provided always, that nothing herein contained shall extend to repeal or alter the provisions of an act passed in the 4th year of the reign of his late Majesty King George IV. for consolidating and amending the laws then in force with respect to trade from and to places within the limits of the East India Company's charter. — § 16.

*Foreigners having served 2 Years on board H. M. Ships during War.* — It shall be lawful for his Majesty, by his royal proclamation during war, to declare that foreigners, having served 2 years on board any of his Majesty's ships of war, in time of such war, shall be British seamen within the meaning of this act. — § 17.

*British Ship not to depart British Port unless duly navigated, &c.* — No British registered ship shall be suffered to depart any port in the United Kingdom, or any British possession in any part of the world (whether with a cargo or in ballast), unless duly navigated: provided always, that any British ships trading between places in America may be navigated by British negroes; and that ships trading eastward of the Cape of Good Hope, within the limits of the East India Company's charter, may be navigated by Lascars, or other natives of countries within those limits. — § 18.

*If Excess of Foreign Seamen, Penalty 10*l*. for each, &c.* — If any British registered ship shall at any time have, as part of the crew, in any part of the world, any foreign seaman not allowed by law, the master or owners of such ship shall for every such foreign seaman forfeit the sum of 10*l*.: provided always, that if a due proportion of British seamen cannot be procured in any foreign port, or in any place within the limits of the East India Company's charter, for the navigation of any British ship; or if such proportion be destroyed during the voyage by any unavoidable circumstance, and the master of such ship shall produce a certificate of such facts under the hand of any British consul, or of 2 known British merchants, if there be no consul at the place where such facts are to be ascertained, or from the British governor or any place within the limits of the East India Company's charter; or, in the want of such certificate, shall make proof of the truth of such facts to the satisfaction of the collector and comptroller of the customs of any British port, or of any person authorised in any other part of the world to inquire into the navigation of such ship; the same shall be deemed to be duly navigated. — § 19.

*Proportion of Seamen may be altered by Proclamation.* — If his Majesty shall, at any time, by his royal proclamation, declare that the proportion of British seamen necessary to the due navigation of British ships shall be less than the proportion required by this act, every British ship navigated with the proportion of British seamen required by such proclamation shall be deemed to be duly navigated, so long as such proclamation shall remain in force. — § 20.

*Goods prohibited only by Navigation Law may be imported for Exportation.* — Goods of any sort or the produce of any place, not otherwise prohibited than by the law of navigation herein-before contained, may be imported into the United Kingdom from any place in a British ship, and from any place not being a British possession in a foreign ship of any country, and however navigated, to be warehoused for exportation only, under the provision of any law in force for the time being, made for the warehousing of goods without payment of duty upon the first entry thereof. — § 21.

*Forfeitures how incurred.* — Any goods imported, exported, or carried coastwise, contrary to the law of navigation, shall be forfeited, and the masters of ships carrying the same shall forfeit each the sum of 100*l*. — § 22.

*Recovery of Forfeitures.*— All penalties and forfeitures incurred under this act shall be sued for, prosecuted, recovered, and disposed of, or shall be mitigated or restored, in like manner as any penalty or forfeiture can be sued for, prosecuted, recovered, and disposed of, or may be mitigated or restored, under an act passed in the present session of parliament for the prevention of smuggling.— § 23.

**NEW ORLEANS**, the capital of Louisiana, one of the United States, situated on the eastern bank of the Mississippi, about 105 miles from its mouth, in lat.  $29^{\circ} 57' 45''$  N., lon.  $90^{\circ} 9'$  W. Population, in 1830, 46,309. The new-built streets are broad, intersecting each other at right angles; and the houses are mostly of brick. It is the grand emporium of all the vast tracts traversed by the Mississippi, the Missouri, and their tributary streams, enjoying a greater command of internal navigation than any other city either of the Old or New World. Civilisation has hitherto struck its roots, and begun to flourish, only in some comparatively small portions of the immense territories of which New Orleans is the sea-port; and yet it appears, from the official accounts printed by order of Congress, that during the year ending the 30th of September, 1832, the value of the native American produce exported from this city amounted to 14,105,118 dollars, while the value of that exported from New York only amounted to 15,057,250. With respect to imports, the case is materially different; the value of those of New Orleans, in the year just mentioned, being only 8,871,653 dollars, or not more than a *sixth* part of those of New York. It is believed by many, seeing how rapidly settlements are forming in the "West," that New Orleans must, at no very distant period, exceed every other city of America, as well in the magnitude of its imports as of its exports; and, considering the boundless extent and extraordinary fertility of the uncultivated and unoccupied basins of the Mississippi and Missouri, the anticipations of those who contend that New Orleans is destined to become the greatest emporium, not of America only, but of the world, will not appear very unreasonable. Steam navigation has been of incalculable service to this port, and, indeed, to the whole of central America. The voyage up the Mississippi, that used formerly to be so difficult and tedious, is now performed in commodious steam packets with ease, celerity, and comfort. "There have been counted," says Mr. Flint, "in the harbour, 1,500 flat boats at a time. Steam boats are arriving and departing every hour; and it is not uncommon to see 50 lying together in the harbour. A forest of masts is constantly seen along the *levée*, except in the sultry months. There are often 5,000 or 6,000 boatmen from the upper country here at a time; and we have known thirty vessels advertised together for Liverpool and Havre. The intercourse with the Havannah and Vera Cruz is great, and constantly increasing."— (*Geography and History of the Western States*, vol. i. p. 557.) From 1811, when the first steam boat was launched in the Mississippi, down to the beginning of 1830, no fewer than 336 steam boats had been built for the navigation of this river, the Missouri, Ohio, &c., of which 213 were employed at the latter period. In December, 1831, the aggregate burden of the steam vessels belonging to this port amounted to 36,676 tons! Vessels of the largest burden may navigate the river several hundreds of miles above New Orleans. A large proportion of the foreign trade of New Orleans is carried on in foreign bottoms; and as a shipping port, she ranks far below several of the other ports of the Union. The total of the registered, enrolled, and licensed tonnage belonging to New Orleans on the 31st of December, 1831, amounted to 55,407 tons; of which 37,840 tons were employed in the coasting trade. The depth of water in the river opposite to New Orleans is, at a medium, about 70 feet; and it maintains soundings of 30 feet till within a mile of its confluence with the sea. Besides 3 or 4 of inferior consequence, the Mississippi has 4 principal passes or outlets. In the south-east, or main pass, at Balize, the water on the bar at ordinary tides does not exceed 12 feet; and as the rise of tides in the Gulf of Mexico is not more than 2 or  $2\frac{1}{2}$  feet, vessels drawing much water cannot make their way from the ocean to New Orleans.— (*Darby's View of the United States*, p. 467.)

The unhealthiness of the climate is the great drawback on New Orleans. This probably arises from the low and marshy situation of the city and surrounding country, which is under the level of the Mississippi, being protected from inundation only by an artificial *levée* or mound, varying from 5 to 30 feet in height, and extending along the bank of the river a distance of 100 miles. The unhealthy season includes July, August, and September; during which period the yellow fever often makes dreadful havoc, particularly among the poorer classes of immigrants from the North and from Europe. Latterly, great efforts have been made to improve the health of the city, by supplying it abundantly with water, paving the streets, removing wooden sewers, and replacing them with others of stone, &c. Many places, where water used to stagnate, have been filled up; and large tracts of swampy ground contiguous to the town have been drained. And as such works will no doubt be prosecuted on a still larger scale, according to the increase of commerce and population, it is to be hoped that the ravages of fever may be materially abated, though the situation of the city excludes any very strong expectation of its ever being rendered quite free from this dreadful scourge.

The following Tables give a very complete view of the trade of this great and growing emporium:—

I. Account of the Quantity of the various Articles imported from the Interior to New Orleans during the Nine Years ending with the 30th of September, 1832. These, of course, form also the Articles of Exportation.

We are indebted for the above valuable information to the *Circular Statement of Messrs. John Hogan and Co., New Orleans, the 1st of October, 1832.*

There were in this city, in 1830, 4 banks, with a capital of 9,000,000 dollars, exclusive of a branch of the Bank of the United States, having a capital of 1,000,000 dollars. The aggregate amount of dividends on bank stock during that year amounted to 542,400 dollars. But one of the banks, having a capital of 2,500,000, had only commenced; and as the whole capital of another bank had not been paid up, the dividend was really the produce of a capital of 6,750,000 dollars; being at the rate of 8-037 per cent. thereon. There were, during the same year, 6 insurance companies in the city, having an aggregate capital of 2,400,000 dollars. — (*Statement by J. H. Goddard, Esq., New York Daily Advertiser, 29th of January, 1831.*)

For *Monies, Weights, and Measures*, see New York.

**NEWSPAPERS.** Publications in numbers, consisting commonly of single sheets, and published at short and stated intervals, conveying intelligence of passing events.

*Importance and Value of Newspapers in a Commercial Point of View.* — It is foreign to the purposes of this work to consider the moral and political effects produced by newspapers: of the extent of their influence there is no doubt, even among those who differ widely as to its effect. Their utility to commerce is, however, unquestionable. The advertisements they circulate, though these announcements are limited in Great Britain by a heavy duty, the variety of facts and information they contain as to the supply and demand of commodities in all quarters of the world, their prices, and the regulations by which they are affected, render newspapers indispensable to commercial men, supersede a great mass of epistolary correspondence, raise merchants in remote places towards an equality, in point of information, with those in the great marts, and wonderfully quicken all the movements of commerce. But newspapers themselves have become a considerable commercial article in Great Britain. In the year 1830, the produce of the stamp duty, deducting the discount, levied on newspapers, was 410,980*l. 6s. 6d.* The gross produce of the sale must have been more than double this sum, without allowing for the papers sold at a higher price than 7*d.*; so that the consumption of newspapers must have amounted, in that year, to nearly 1,000,000*l.* sterling.

Newspapers, in London, are sold by the publishers to newsmen or newsvenders, by whom they are distributed to the purchasers in town and country. The newsmen, who are the retailers, receive, for their business of distribution, a regulated allowance. The papers which are sold to the public at 7*d.*, which form the great mass of London newspapers, are sold to the newsmen in what are technically called quires. Each quire consists of 27 papers, and is sold to the newsmen for 13*s.*; so that the newsmen's gross profit on 27 papers is 2*s. 9d.* In some instances, where newspapers are sent by the post,

$\frac{1}{2}d.$  additional on each paper is charged by the newsmen to their country customers. Some of the clerks at the post-office, called clerks of the roads, are considerable news-agents. The stamp duty on a newspaper is, at present, nominally  $4d.$ ; but a discount is allowed on those papers which are sold at a price not exceeding  $7d.$ , of 20 per cent. which reduces the stamp duty actually paid to  $3\frac{1}{2}d.$  Each paper being sold to the newsman at a little less than  $5\frac{3}{4}d.$ , the sum which is received by the newspaper proprietors for paper, printing, and the expenses of their establishments, is a small fraction more than  $2\frac{3}{4}d.$  for each copy. Advertisements form a considerable source of profit to newspapers; and without this source, some of the most widely circulated of them could not support their great expenditure. Each advertisement is now charged, without distinction of length, with a government duty of  $1s. 6d.$ ; but until last year (1833), the duty was  $3s. 6d.$  In 1832, the advertisements produced  $155,400l. 16s.$  in Great Britain, and  $15,248l. 17s. 4d.$  in Ireland. We have no means of ascertaining exactly the portion of this sum derived from newspapers, as distinguished from other publications, but we believe we should under-estimate it by taking it at  $\frac{3}{4}$ ths of the whole. The charges of newspapers for advertisements are proportioned to their length, and to the character of the newspaper itself. The sum received for them may now be taken, inclusive of the duty, at  $200,000l.$

Newspaper stamps are obtained at the Stamp Office, where the paper is sent by the stationers to be stamped. The stamps are paid for before the paper is returned. The duty on advertisements, which is also under the management of the commissioners of stamps, is paid monthly; and, for securing these payments, the printer and 2 sureties become bound in moderate sums.

The London newspapers have become remarkable for the great mass and variety of matter which they contain, the rapidity with which they are printed and circulated, and the accuracy and copiousness of their reports of debates. These results are obtained by a large expenditure and considerable division of labour. The reports of parliamentary proceedings are obtained by a succession of able and intelligent reporters, who relieve each other at intervals of  $\frac{1}{3}$  of an hour, or occasionally less. A newspaper cannot aim at copious and correct reports with less than 10 reporters for the House of Commons; and the expense of that particular part of a morning newspaper's establishment exceeds  $3,000l.$  per annum.

*Regulations as to Newspapers.* — The 38 Geo. 3. c. 78. enacts, that no person shall print or publish a newspaper, until an affidavit has been delivered at the Stamp Office, stating the name and places of abode of the printer, publisher, and proprietor; specifying the amount of the shares, the title of the paper, and a description of the building in which it is intended to be printed. A copy of every newspaper is to be delivered within 6 days, to the commissioners of stamps, under a penalty of 100*l.*

The act 39 Geo. 3. c. 79. requires that the name of every printer, type founder, and maker of printing-presses, shall be entered with the clerk of the peace, under a penalty of  $20l.$ ; and every person selling types or presses must, if required by a justice of the peace, state to whom they are sold.

A printer is bound to print, upon the front of every page printed on 1 side only, and upon the first and last sheet of every publication containing more than 1 leaf, his name and place of abode. He is also required to keep a copy of every work he prints, on which shall be written or printed the name of his employer; and shall produce the same to any justice, if required, within 6 months.

Persons publishing papers without the name and abode of the printer may be apprehended, and carried before a magistrate; and a peace officer, by warrant of a justice of peace, may enter any place to search for printing presses or types suspected to be kept without the notice required by the act, and may carry them off, together with all printed papers found in the place.

The 1 Geo. 4. c. 9. enacts, that all periodical pamphlets or papers, published at intervals not exceeding 2 days, containing public news, intelligence, or occurrences, or any remarks thereon, and not containing more than 2 sheets, or published for less price than  $6d.$ , shall be deemed newspapers, and shall be subject to the same regulations and stamp duties.

*Influence of the Tax on Newspapers.* — At present it is impossible, without a violation of the stamp laws, to sell newspapers under  $7d.$  or  $7\frac{1}{2}d.$ ; so that those poorer persons, who cannot afford so large a sum, or who have no means of getting a newspaper in company with others, are obliged either to be without one, or to resort to those low priced journals that are circulated in defiance of the law. It has been proposed to reduce the duty to  $2d.$ ; but it may be doubted whether this would be any improvement, and whether the duty be not at present sufficiently low on a paper sold at  $7d.$  or upwards. All fixed duties on newspapers seem, however, to be essentially objectionable, inasmuch as, by effectually hindering the free and open circulation of the cheaper sort, they throw their supply into the hands of the least reputable portion of the community, who circulate them surreptitiously, and not unfrequently make them vehicles for diffusing doctrines of the most dangerous tendency. The better way, therefore, would be to assess the duty on newspapers on an *ad valorem* principle, making it, in all cases, 50 per cent., that is,  $6d.$  on a newspaper sold at  $1s.$ ,  $1d.$  on one sold at  $2d.$ ,  $\frac{1}{2}d.$  on one sold at  $1d.$ , and so on, proportionally to the price. Several advantages would result from such a plan. It would remove the unjust stigma that now attaches to low-priced papers; and men of talent and principle would find it equally advantageous to write in them as in those of a higher price. Were such an alteration made, it seems probable that the present two-penny papers, than which nothing can be conceived more utterly worthless, would, very soon, be superseded by others of a very different character; and if so, the change would

be in the highest degree beneficial. It would also, we apprehend, introduce into newspaper compiling, that division of labour, or rather of subjects, which is found in every thing else. Instead of having all sorts of matters crammed into the same journal, every different topic of considerable interest would be separately treated in a low-priced paper, appropriated to it only, and conducted by persons fully conversant with its principles and details. Under the present omnivorous system, individuals who care nothing for the theatre are, notwithstanding, unable to procure a paper in which it does not occupy a prominent place; and those who cannot distinguish one tune from another have daily served up to them long dissertations on concerts, operas, oratorios, and so forth. The proposed system would give the power of selecting. Those who preferred an *olla podrida* to any thing else, would be sure of finding an abundant supply; while those who wished for a more select regimen — who preferred one or two separate dishes to a multitude luddled together — would be able, — which at present they are not, — to gratify their taste. Neither can there be much doubt that an *ad valorem* duty would be more productive than the present duty; inasmuch as, by legitimatising the circulation of low-priced papers, their number would be prodigiously augmented. It also would have the advantage of being easy of collection; for, being a certain portion of the price, no question could arise with respect to it.

Instead, however, of imposing an *ad valorem* duty on newspapers, it has been proposed to repeal the duty entirely, and to substitute in its stead a post-office duty, similar to that charged in the United States. A scheme of this sort would entirely exempt all newspapers printed and sold in large towns from the duty; a result which, we confess, we do not think is in any respect desirable, but the reverse. In our view of the matter, the object ought not to be to relieve newspapers from the tax, or to create differences in their price by charging a duty only on those carried by post, but to assess the duty so that it should fall equally on them all.

*Notices of Newspapers.* — The history of newspapers, and of periodical literature in general, remains to be written; and were the task executed by an individual of competent ability, and with due care, it would be a most interesting and important work. It appears, from the researches of Mr. Chalmers, that the first newspaper published in modern Europe made its appearance at Venice, in 1536; but the jealousy of the government would not allow of its being printed; so that, for many years, it was circulated in manuscript! It would seem that newspapers were first issued in England by authority, in 1588, during the alarm occasioned by the approach of the *Armada* to our shores; in order, as was stated, by giving real information, to allay the general anxiety, and to hinder the dissemination of false and exaggerated statements. From this era, newspapers, of one sort or other, have, with a few intermissions, generally appeared in London; sometimes at regular, and sometimes at irregular intervals. During the civil wars, both parties had their newspapers. The earliest newspaper published in Scotland made its appearance under the auspices of Cromwell, in 1652. The *Caledonian Mercury* was, however, the first of the Scotch newspapers of native manufacture; it made its appearance at Edinburgh, under the title of *Mercurius Caledonius*, in 1660; but its publication was soon afterwards interrupted. In 1715, a newspaper was, for the first time, attempted in Glasgow.

The *Daily Courant*, the first of the daily newspapers published in Great Britain, made its appearance at London in the early part of the reign of Queen Anne. — (See the *Life of Riddiman*, pp. 102—121.)

From the Stamp Office accounts, it appears that the number of newspapers sold annually in England, during the 3 years ending with 1753, was 7,411,757; in 1760, 9,464,790; in 1790, 14,035,639; in 1792, 15,005,760.

1. Account of the Aggregate Number of Stamps issued for Newspapers in each of the undermentioned Years; distinguishing the Numbers in England, Scotland, and Ireland.

| Years. | England.   | Scotland. | Great Britain. | Years. | England.   | Scotland. | Great Britain. | Ireland.* |

Note. — This return is founded upon periodical accounts rendered by stationers, who procure the stamps at this office for country newspapers. The papers marked thus \* being the property of 1 person, in whose name the stamps are taken out, the number used for each paper cannot be distinguished.

\* \* We extract the following important paragraph from a note by Mr. Wood, the present very intelligent chairman of the Board of Stamps, subjoined to the *Parl. Paper*, No. 758, Sess. 1833. It shows that the returns given above, as to the circulation of country newspapers, cannot be much depended upon. Of course, there are no such inaccuracies in the accounts of advertisements:—  
“Supposing, however, that the returns had been correct transcripts of the books in this office, it is worthy of remark, that they would not have afforded accurate information as to the circulation of newspapers. The circumstances hereafter detailed will show that such returns must be always incomplete and fallacious.

“In the instance of the London newspapers, the account may approach to tolerable correctness, as the stamps are usually obtained by the parties directly from this office; but it may be observed, that these papers borrow from each other, and we have also reason to believe that agents of country papers have been induced by London printers to take out stamps in the name of the latter which were intended for country use; so that, even with regard to the London papers, perfect accuracy cannot be attained.

"But in the case of country papers still less reliance can be placed on these accounts. The supply of stamps to country papers is collected through London stationers and paper-makers, and accounts also through country stationers. These persons take out large quantities of stamps, and furnish them, from time to time, to the respective newspapers as required. It is only from the returns made by those stationers that the numbers of stamps obtained by each country paper are known at this office. The stationers are bound to make these returns, but in general they furnish them with much reluctance and irregularity, and frequently omit them altogether. It is well known that the Board have no means of detecting or punishing any mis-statement, and it is therefore believed, that, even when furnished, little regard is paid to accuracy.

"The trouble occasioned at this office ought not to be a consideration, if the returns were really a source of useful and authentic information. But the preceding observations show that no useful results arise; on the contrary, such returns occasion endless complaints from persons whose circulation is underrated, and on whom positive injury is thus inflicted.

"It is, therefore, worthy of consideration whether similar returns should in future be allowed.

III. An Account showing the Number of Stamps issued for the following London Newspapers, in the Years 1830, 1831, and 1832, and the respective Amount of Stamp and Advertisement Duty paid by each in the same Years.

The increase of newspapers in Great Britain, though it is shown by these documents to have been pretty considerable, has been materially repressed by the mode in which the stamp duty has been assessed. The circulation of the Parisian daily papers much exceeds that of the London journals; a result which can only be ascribed to their greater cheapness.

*American Newspapers.* — The increase of newspapers in the United States has also been a good deal more rapid than in England; a consequence, partly, no doubt, of the greater increase of population in the Union, but more, probably, of their freedom from taxation, and of the violence of party contests. The total number of newspapers annually issued in the Union has been estimated at from 55,000,000 to 60,000,000, while the total number issued in Great Britain and Ireland, in 1833 (see No. I.) was only 34,515,221; so that, making allowance for the difference of population, every individual in America has, at an average, more than twice the supply of newspapers enjoyed by individuals in England. "From this exuberant supply of daily and weekly papers, and the low price charged as compared with the English and French newspapers, they are liberally patronised by all classes, and are found in almost every dwelling and counting house, and in all hotels, taverns, and shops; and attract a large share of the public attention. As the paths of honour and promotion are alike open to every one, it follows that public discussion forms the principal staple of the newspapers. There is no country where the press has a more powerful influence over public opinion." — (*Picture of New York*, p. 391.)

We are not, however, to estimate the influence of newspaper literature by its quantity only, but must have regard also to its *quality*. The latter is, indeed, the principal thing to be attended to; and in whatever degree the Americans may exceed us in the number, they certainly are immeasurably below us in the quality, of their newspapers. Speaking generally, we do not hesitate to say that the newspaper press is a disgrace to the Union. The journals indulge, with few exceptions, in the most offensive personalities. Instead of examining the principles of the measures brought forward, they assail the character and misrepresent the motives of those by whom they are introduced. It is impossible, we believe, to name an individual, who has attained to any high office in the United States, or to consideration in Congress, who has not been libelled, traduced, and calumniated by a large portion of the press, to a degree that can hardly be imagined. The magnitude of the evil will, probably, lead to its cure. An intelligent and well instructed people cannot, surely, continue to patronise a press whose principal features are misrepresentation, exaggeration, and abuse.

The following Table contains a Statement of the Number of Newspapers published in the United States at the Commencement of the Revolutionary War, and the Number of Newspapers and other Periodical Works published in the same in 1810 and 1828.

| States.              | 1775. | 1810. | 1828. | States.         | 1775. | 1810. | 1828. |

NEW YORK, the capital of the state of that name, and the commercial metropolis of the United States, in lat. 40° 42' N., lon. 74° 8' W. It is situated on the southern extremity of Manhattan Island, at the point of confluence of the Hudson river, which separates Manhattan from New Jersey, with East River, which separates it from Long Island. New York bay, or inner harbour, is one of the most capacious and finest in the world; it is completely land-locked, and affords the best anchorage. The entrance to the bay through the Narrows is extremely beautiful. On each side, the shore, though wooded down to the water's edge, is thickly studded with farms, villages, and country seats. At the upper end are seen the spires of the city; and in the distance the bold precipitous banks of the Hudson. From New York to the bar between Sandy Hook Point and Schryer's Island (the division between the outer bay or harbour and the Atlantic) is about 17 miles. Fortifications have been erected at the Narrows, Governor's Island, and other places, for the defence of the city and shipping. The wood-cut on the opposite page represents the city and bay of New York, and the surrounding country.

The Hudson river was first explored in 1609, by the famous English navigator whose name it bears, then in the service of the West India Company of Holland. In 1612, New Amsterdam, now New York, was founded by the Dutch, as a convenient station for the fur trade. In 1664, it was taken by the English. The Dutch again recovered possession of it in 1673; but it was retaken by the English in the following year, and continued in their occupation till the termination of the revolutionary war.

New York has increased faster than any other city of the United States. In 1699, it contained 6,000 inhabitants. In 1774, previously to the commencement of the war of independence, the population amounted to 22,750. During the war, the population continued stationary; but since 1783, its increase has been quite extraordinary. In 1790, the population amounted to 33,131; in 1800, to 60,489; in 1810, to 96,373; in 1820, to 123,706; and in 1830, to above 213,000! Originally the houses were mostly of wood, and the streets narrow and confined. In these particulars, however, a great improvement has taken place during the last half century; most of the old houses having been pulled down, and rebuilt with brick. The new streets, which are broad, and intersect each other at right angles, are well paved and lighted. Broadway, the principal street, is one of the largest and finest in the world. Many of the public buildings are commodious and elegant. The pools, that were formerly abundant in the city and its vicinity,

\* For some curious details with respect to newspapers in Louisiana, see Mr. Stuart's *Three Years in America*, vol. ii. p. 210. — the most instructive and trustworthy of all the recent works on the United States.

have been completely filled up; a measure that has done much to improve the health of the population. In respect of cleanliness, however, New York is not to be compared with an English town. There is hardly such a thing as a sink or common sewer in the whole city: the night-soil and filth are collected in pits, of which there is one in every house, and, being conveyed to the nearest quay, are thrown into the water; but as these quays are made of timber, with many projections, a great deal of filth is retained about them, producing, in hot weather, an abominable stench. The yellow fever, by which New York is sometimes visited, uniformly breaks out in the lower and dirtiest part of the town; and seldom, indeed, extends to the new and more elevated streets. It is now much less prevalent than formerly; and the general opinion seems to be, that if stones were substituted for timber in the quays, sewers constructed, and proper regulations enforced as to cleanliness, the scourge would entirely disappear.

New York is indebted, for her wonderful increase, to her admirable situation, which has rendered her the greatest emporium of the New World. The rise of the tide is about 6 feet; and even at ebb, there is 21 feet water on the bar; and the water in the outer and inner bays, and in the river, is so deep, that ships of the largest burden lie close to the quays, and may proceed to a great distance up the river. The navigation of the bay is but rarely impeded by ice. The great strength of the tide, and the vicinity of the ocean, keep it generally open, even when the Chesapeake and Delaware bays are frozen over. The influence of the tides is felt in the Hudson as far as Troy, 160 miles above New York, affording very peculiar facilities for its navigation. These natural advantages have been vastly extended by a system of canalisation, which has already connected the Hudson with Lake Ontario and Lake Erie; and which, when completed,

will connect it with the Ohio river, and consequently with the Mississippi and the Gulf of Mexico! So prodigious a command of internal navigation is not enjoyed by any other city, with the exception of New Orleans; but the readier access to the port of New York, the greater salubrity of the climate, and her situation in the most industrious part of the Union, where slavery is abolished, give her advantages over her southern rival, which, it is most probable, will secure her continued preponderance.

*Entrance to Harbour, Light-houses, &c.* — The course in entering the harbour of New York is nearly due W. from the outermost white buoy on the bar, till the buoy on the S. W. point of the east bank be passed, and then nearly due N. The navigation is extremely easy. Pilots generally board vessels without the bar; for, otherwise, they are only entitled to half fees. Were it not for fear of vitiating insurances, their services would seldom be required. — (See *Rates of Pilotage, post.*) The light-house near the extremity of the long, low, narrow tongue of land, projecting from the New Jersey shore, called Sandy Hook, is in lat. 40° 28' N., lon. 74° 8' W. It is fitted up with a very powerful fixed light, which, in clear weather, may be seen by vessels coming from the westward 10 leagues off. But, from its position, it is not readily discovered by ships coming from the S. till too near. To obviate this inconvenience, a floating light was moored about 7 miles E. from Sandy Hook Point. In 1823, however, 2 light-houses were erected on Neversink hills, nearly 4 miles S. by E. from Sandy Hook. They are 300 feet apart; the most northerly being furnished with a fixed, and the other with a revolving light, both of great power. The lights are elevated 250 feet above the level of the sea; and may be seen, in clear weather, in all directions, from 40 to 50 miles. Since they were fitted up, the floating light has been discontinued. Vessels load and unload at the wharfs on both sides the city.

*Trade, &c.* — The commerce of New York is very extensive. The value of the merchandise annually loaded and unloaded in the port is estimated at from 100,000,000 to 120,000,000 dollars. The number of vessels in the port in the busy season varies from 500 to 750, exclusive of about 50 steam packets. The number of arrivals from foreign ports amounted in 1832 to 1,808; and the coasting arrivals are between 4,000 and 5,000. The total value of the imports into the United States in the year ending the 30th of September, 1832, was 101,029,266 dollars; of which no less than 53,214,402, or more than the half, were imported into New York! The customs revenue on the goods paying duties, imported into this city, amounts to about 13,000,000 dollars, while the total customs revenue of the United States seldom exceeds 22,000,000 dollars. The imports comprise an infinite variety of articles. The principal are cottons woollens, linens, hardware, and cutlery; earthenware, brass and copper manufactures, &c. from Great Britain; silk, wine, brandy, &c. from France and Spain; sugar and coffee from the Havannah and Brazil; with tea, spices, cochineal, indigo, dye woods, &c. The value of the exports from New York in the year ending the 30th of September, 1832, amounted to 26,000,945 dollars, being between  $\frac{1}{3}$  and  $\frac{1}{2}$  part of the total exports from the United States. The exports principally consist of wheat flour, corn, rice, and cotton; beef, pork, butter, dried fish, and all sorts of provisions; furs, tobacco, coarse manufactured goods, lumber, &c. The great excess of the imports into New York over the exports is accounted for by the fact, that, while mostly all articles of export from the Western States are shipped at New Orleans, the greater part of the more valuable articles brought from abroad, and destined for the consumption of Ohio, Indiana, Illinois, and, in some degree, even Kentucky, are principally imported into New York.

The tonnage of New York is greater than that of Liverpool, or any other city, with the single exception of London. The registered tonnage belonging to the port on the last day of December, 1831, amounted to 122,458 tons, and the enrolled and licensed tonnage to 163,980 tons; making a grand total of 286,438 tons, being between  $\frac{1}{3}$  and  $\frac{1}{2}$  of the whole tonnage of the United States.

Account of the Quantities of some of the principal Articles of Native American Produce exported from New York during each of the Three Years ending with the 1st of January, 1833.

The arrivals in 1832 from foreign ports, were, ships, 444; barques, 75; brigs, 885; schooners, 386; galliots, 2; sloops, 6; being, in all, 1808. Of these there were, American, 1,290; British, 363; French, 42; Dutch, Hamburg, and Bremen, 32; Swedish, 25; Spanish, 19; Danish, 11, &c. By far the greater part of the British ships are from our colonies in North America and the West Indies.

Regulations as to Passengers arriving at New York. — On the arrival of passengers, an entry must be made at the Custom-house of their names, clothes, or implements of trade or profession (all of which are exempt from duty), and an oath taken respecting them; the form of which, and the entry, may be had at the office gratis. Cabin passengers make this entry themselves, and pay 20 cents each for a permit; on exhibiting which to the officer on board, they are allowed to remove their baggage after it has been inspected. Only 1 entry and permit is necessary for a family, and only 20 cents demanded, whatever may be the number of the family. Remains of sea stores, such as tea, sugar, foreign spirits and wines, are liable to pay duties; but unless these are of great bulk or quantity, they are generally allowed to pass free.

An entry is usually made by the master of the vessel of steerage passengers and their baggage: they pay each 20 cents for a permit. When entry is made by any person not the owner, he gives bond for payment of the duties, if any; and if, after entry is made at the Custom-house, and the oath taken, any article is found belonging to a passenger, liable to pay duty, not specified in the entry, it is forfeited, and the person in whose baggage the article is found, subjected in treble the value.

Besides making entry at the Custom-house, it is provided by a law of the State, that every master of a vessel arriving from a foreign country, or from any other port of the United States, "shall, within 24 hours after entering his vessel at the Custom-house, make a report in writing, on oath, to the mayor, and in case of his sickness or absence, to the recorder of the said city, of the name, age, and occupation of every person who shall have been brought as passenger in such ship or vessel on her last voyage, upon pain of forfeiting, for every neglect or omission to make such report, the sum of 75 dollars for every alien, and the sum of 50 dollars for every other person neglected to be so reported as aforesaid."

Masters of ships bringing passengers to New York must also pay a dollar on account of each passenger to the corporation, as commutation money, or give bond that none of them shall become chargeable on the city poor rates for the space of 2 years. They almost uniformly prefer paying the commutation. The number of immigrants arriving at New York from the British islands during the 5 years ending with 1832, was as follows: —

| Years. | From England. | From Ireland. | From Scot'and. | Total. |
|--------|---------------|---------------|----------------|--------|
| 1828   | 6,631         | 6,197         | 2,717          | 15,547 |
| 1829   | 8,110         | 2,443         | 948            | 11,501 |
| 1830   | 16,352        | 5,497         | 1,584          | 21,433 |
| 1831   | 13,808        | 6,721         | 2,078          | 22,607 |
| 1832   | 18,947        | 6,050         | 3,286          | 28,283 |
| Totals | 63,848        | 24,908        | 10,613         | 99,371 |

In addition to which there were great numbers of immigrants from Germany, the Netherlands, &c.

Lines of Packets. — The establishment of regular lines of packets from New York to foreign ports, and also to every principal port in the United States, has produced a new era in the commerce of the city, and rebounded equally to the benefit of the enterprising individuals by whom they were projected, and the public. The principal intercourse is carried on with Liverpool. There are above 20 packet ships employed between these cities, distributed in 4 lines.

Statement of the Passages made by the different Ships and Masters employed in the Old Line, from 1818 to 1827, inclusive, embracing a Period of 10 Years, and comprising 188 complete Voyages.

The passages from New York to Liverpool, during the said period, have averaged - 24 days each.  
 Those from Liverpool to New York, during the said time, have averaged - 58 -  
 The shortest passage from New York to Liverpool was made by the ship New York, Captain Maxwell, in December, 1823, being - 16 days.  
 The longest passage from New York to Liverpool was made by the ship Nestor, Captain S. G. Macy, in December, 1820, and January, 1821, being - 57 -  
 The shortest passages from Liverpool to New York were made by the ship Amity, Captain George Maxwell, in April, 1819, and by the ship Colombia, Captain Rogers, in February, 1824, being - 22 -  
 The longest passage from Liverpool to New York was made by the ship Pacific, Captain Crocker, in December, 1827, and January and February, 1828, being - 71 -  
 The passages are not reckoned from land to land, as is sometimes the case; but from one city to the other.

Packet ships for New York sail from Liverpool on the 1st, 8th, 16th, and 24th of each month throughout the year. And they sail on the same days in each month from New York for Liverpool.

The cabin passage to New York, 35 guineas; from New York, 30 guineas; which includes provisions, wines, beds, &c., so that the passengers have no occasion to provide any thing except personal apparel.

Sixteen ships in the whole, varying in size from 500 to 550 tons burden each, are employed as regular packets between New York and Liverpool: they are all American property, and built chiefly in New York, of beautiful workmanship, and fitted up with every convenience for passengers, and in a most expensive and splendid style. Each ship has a separate cabin for ladies; each state-room, in the respective cabins, will accommodate two passengers; but a whole state-room may be secured for 1 individual by paying at the rate of 14 passage, that is, 52 1/2 guineas.

Packets for Philadelphia sail from Liverpool on the 8th and 20th of every month throughout the year: and 4 of these ships sail from Philadelphia for Liverpool on the 20th of each month; the others do not always return direct from Liverpool, but go to Charleston, Savannah, &c., to bring cargoes of produce to Liverpool.

Cabin passage same as that to and from New York.

These ships, 9 in number, are all American built and owned, and are from 300 to 500 tons burden; some of them are as splendid as the New York packets, and all are fitted up with every regard to comfort.

Packet ships for Boston sail at specified periods in January, February, and March, and again in June, July, and August, in each year; but they seldom return direct from Boston to Liverpool. The rate of passage the same as that by the packets for New York.

The rate of *steerage* passage varies, in the course of the year, considerably; depending on the number of ships and the number of passengers going at the time. By the packet ships, it fluctuates from 5 to 6 guineas for each full-grown person; and children under 14 years are taken at half-price. By other ships, the rate of *steerage* passage varies from 1*l.* 10*s.* to 5*l.*; being sometimes reduced, by competition, so low as 30*s.*; but the *average* rate may be taken at 4*l.* 4*s.* For these rates, the ship provides nothing but *berths*, fire, and water; the passengers provide their own provisions, bedding, &c. The expense of provisions for a poor person, who might wish to be as economical as possible, for the voyage out to the United States, would not be more than from 40*s.* to 50*s.*

The *cabin* passage by the common traders (and many of them are quite equal to the packets in equipment and safety) varies from 15*l.* to 25*l.*; no wines being provided by the ships at these rates, but provisions, bedding, malt liquor, and spirits.

The rates of *freight* to New York, are —

New York and London Packets. — Nine ships are engaged in this trade. They are fitted out in the same way as the Liverpool packets. They touch at Cowes.

New York and Havre Packets. — Twelve ships are engaged in this trade, all fitted up with the greatest splendour and attention to comfort. Cabin passage, 140 dollars, including bed, bedding, wines, and stores of every description.

BANKS, INSURANCE COMPANIES, ETC. — We borrow from a detailed and authentic statement by Thomas H. Goddard, Esq., published in the *New York Daily Advertiser* for the 29th of January, 1831, the following particulars in relation to the banks, insurance companies, &c. of New York, in 1830, with a view of their progress from 1819 to 1830.

| Banks.                            | When chartered. | Length of Charter. | No. of Shares. |          | Amount of Share. |          | Amount of Capital. | Time and Rate of Dividend. | Amount of Dividend. |

**Recapitulation.** — There were, in 1830, 16 banks in this city, whose aggregate capital was 18,130,000 dollars. And these made dividends for 1,037,700 dollars. Of these, the Hudson and Delaware made no dividends, in consequence of appropriating their means to the great work of completing the canal between the 2 rivers, which promises a great advantage to the city. The Greenwich had just commenced; so that the dividend accrued upon a capital of 17,930,000 dollars — making an interest of 5-7/8 per cent., as the paper discounted would average 60 days' notes, and 6 per cent. discount deducted, there must have been discounted during the year paper to the amount of 103,769,952 dollars. **Marine Insurance.** — During 1830, there were in this city 8 marine insurance companies, with an aggregate capital of 3,050,000 dollars. And these made dividends for 403,000 dollars. But 2 companies, whose capital amounted to 450,000 dollars, divided nothing, so that the dividend really arose out of a capital of 2,600,000 dollars, making an interest of 15-5/72 per cent. The American Company commenced

in 1815, and its dividends to 1830 inclusive were 312 per cent., amounting to 1,560,000 dollars. The Ocean, with a capital of 350,000, has, from 1823 to 1830 inclusive, made dividends for 126 per cent. 441,000 dollars. **Fire Insurance.** — During 1830, there were in this city 20 fire companies, whose aggregate capital was 7,800,000 dollars. And these made dividends for 473,750 dollars. But 2 companies, whose capital amounted to 750,000 dollars, divided nothing, so that the dividend really arose out of a capital of 7,050,000 dollars, making an interest of 6-8/105 per cent. The Washington commenced in 1814, and has made a uniform semi-annual dividend of 12 per cent., making in all 141 per cent., amounting to 720,000 dollars. The dividends of the Eagle were 69 1/2 per cent. 517,500 dollars. Globe - 52 per cent. 240,000 dollars. Franklin - 44 1/2 - 135,000 dollars. North River - 61 - 221,000 dollars. New York - 76 - 380,000 dollars.

Progress of Stocks in the City of New York, from 1819 to 1830, both inclusive.

| 12 years - | 11,202,050              |                         |              | 1,110,291,776                 |                    | 7,600,800                |                           |                    | 5,868,500               |              |

In the previous estimates, the rate per cent. on the actually productive capital was given. Here the interest is determined by comparing the whole capital with the whole dividend.

**Remarks on Banking at New York.**—The reader will find in the article BANKS, FOREIGN (*ante*, p. 109.), some details as to the banking system of the United States. It seems to be quite as defective in New York as in any other part of the Union. Several banks in that State have failed, and some of those that still exist, obtained their charters by resorting to the most disgraceful practices. In the summer of 1836, the grand jury of the city entered upon an investigation of certain circumstances connected with the formation of some of these establishments, which ended in the conviction, as conspirators to defraud the public, of not a few citizens, and even of some members of the legislature, who had previously been deemed highly respectable! The Court of Errors afterwards decided, by a small majority, that these convictions were illegal; but the fact of the most scandalous abuses having prevailed was established beyond all question. We may mention, by way of example, that the United States Lombard Association, incorporated in 1825, was sworn to as having a paid up capital of 300,000 dollars; but the association having failed in 1826, it was ascertained that not more than 30,000 dollars had ever been paid up! There were, we are sorry to say, several other cases quite as bad, or, if possible, even worse than this.—(*Report and Observations on the Banks, &c. of the State of New York*, p. 10.)

With the exception of the branch of the United States Bank, all the other New York banks issue notes of so low a value as 1 dollar. They all discount bills; generally at 6 per cent.

In order to protect the public from the mischief resulting from the failure of banks, the legislature of the State of New York enacted a law, in 1829, compelling all banks chartered in future, or getting their charters renewed, to pay from 2 to 1 per cent. of their capital stock to the treasurer of the State, by whom it is invested and accumulated as a guarantee fund. When a bank fails, its debts, under certain restrictions, are to be paid from this fund. Commissioners have also been appointed, having authority to examine upon oath, and to inquire into any particulars as to the management of the different banks subjected to this regulation.

This system has not been established for a sufficient length of time to enable a conclusive opinion to be formed as to its practical operation. We believe, however, that it will be found quite inadequate to eradicate the evils complained of. Even were it otherwise successful, what can be more unjust than to tax the capital of solid and well-managed concerns, to create a fund to pay the debts of those set on foot for the purpose of swindling? The interference of the commissioners, by lessening the responsibility of the directors, must be a good deal worse than useless; and can have no effect other than the multiplication of abuses. We have not, indeed, the least doubt, that it will be found in America, as in England, that banking can acquire no real solidity till a stop be put to the issue of all notes for payment of which security has not previously been given. Nothing short of this can be of any material service. It is mere error and delusion to suppose that it is possible to prevent fraud or mismanagement by any system of official superintendence.

Forgery is extremely prevalent in the State of New York, and, indeed, throughout the Union; a consequence of the low value at which notes are issued, and of their employment even in the smallest transactions. It is not, in truth, easy to imagine that the paper currency of any country can be in a less satisfactory condition than that of the United States. And it will not, certainly, be improved, but much deteriorated, should the president succeed in his efforts to destroy the Bank of the United States.

**SALES BY AUCTION.**—The practice of selling goods, particularly those imported from abroad, by auction, is of long standing in New York, and is carried to a very great extent. Auctioneers are appointed by the senate, on the nomination of the governor.

Statement of Sales at Auction in the State of New York, from 1810 to 1830 inclusive, from Returns made by the Auctioneers to the Comptroller.

| Years. | Amount of Duties. |        | Amount of Sales dutiable. |        | Amount of Sales not dutiable. |        | Total.      |        |

**Abstract of the principal Provisions of the Law concerning Auctions.**

- The duties are—
  1. On wines and ardent spirits, foreign or domestic, 2 per cent.
  2. On goods imported from beyond the Cape of Good Hope, and sold in packages, bales, &c., as imported, 1 per cent.
  3. On all other articles, subject to duties, 1 1/2 per cent.
- The following articles are not subject to duties:—
1. Ships and vessels.
  2. Vessels of husbandry, horses, neat cattle, hogs, and sheep.
  3. Articles grown, produced, or manufactured in this state, except distilled spirits.

4. All fabrics of cotton, wool, hemp, and flax, manufactured within the jurisdiction of the United States.—

- Goods are exempted from auction duties.—
1. When they belong to the United States or this State.
  2. When sold by the authority of a court, or when seized by a public officer on account of any forfeiture or penalty, or under a distress for rent.
  3. The effects of a deceased person sold by executors or administrators, or by a person authorized by a surrogate.
  4. The effects of a bankrupt or insolvent sold by his assignees, appointed pursuant to law, or by a general assignment for the benefit of all his creditors.
  5. Goods damaged at sea and sold within 20 days after being landed, for the owners or insurers.

\* The returns of sales for 1814, having been mislaid at the comptroller's office, the amounts are stated by estimating the average of the 4 preceding years in proportion to the duties paid, which are exactly correct as stated.

† The amount of real estate sold in 1829 (included in the above not dutiable) was 2,131,200 dollars and 62 cents.

Any citizen of this State may sell at auction (except in the city of New York) all such goods as are not subject to duties. In the city of New York, or where the goods pay duties, the sale must be by an authorized auctioneer, his partner, or clerk. And any person selling contrary to the said provisions is guilty of a misdemeanor.

When an auctioneer cannot attend an auction by sickness, by duty as a fireman, by military orders, or necessary attendance in a court of justice, or when he is temporarily absent from the place for which he is appointed, he may employ a partner to attend in his behalf.

He must give bond to the people of this State, with 2 freehold sureties, conditioned in the penalty of \$400 dollars, for the payment of the duties imposed by law and accruing on the sales. The penalty of selling without the bond, is 125 dollars for each article offered for sale.

No auctioneer in any city shall at the same time have more than 1 house or store for holding his auctions, and shall, before entering on his office, designate in a writing, to be filed with the clerk of the city, such house or store, and his partner or partners. But goods sold in the packages in which they were imported, furniture, and such bulky articles as have usually been sold in warehouses, in the streets, or on the wharfs, need not be sold in the house or store designated in such writing, if such sales be advertised at least 2 days previously in 1 or more newspapers.

Auctioneers are to receive 2½ per cent. on the amount of all sales, unless by previous agreement in writing; and for demanding or receiving an unlawful commission, shall forfeit 2½ dollars, and refund the monies so received.

No auctioneer, on the same day and at the same place where his public auction shall be held, nor any other person at the same time and place, shall sell at private sale any goods liable to auction duties, under penalty of forfeiting their prices. Every auctioneer shall make out in writing a quarterly account, dated on the 1st days of April, July, October, and January in the year for which he is appointed, stating minutely—

1. The sum for which any goods shall have been sold at every auction held by or for him, from the time of his giving bond, or from the date of his last quarterly account.
2. The days on which sales were so made, and the amount of each day's sale, designating the sales made by himself, or in his presence, and those made in his absence by his partner or clerk, and the causes of his absence.
3. The amount of all private sales made by himself or his partner, and the time thereof.
4. The amount of duties chargeable on all sales made.

Every such account shall, within 20 days after its date, be exhibited, by auctioneers for a city, to the mayor or recorder; and if by an auctioneer for a county, to a county judge, and be verified by oath. Every partner of an auctioneer, and every clerk who has made any sales, shall also swear to his belief in the truth and justice of every particular of such account.

The State duties (together with the addition of 2½ per cent. on the whole amount of them) are to be paid within 10 days after exhibiting such account.

Any deceit or fraud in violating any provision of the law respecting auctioneers, is made a misdemeanor, and subjects the offending party to the payment of treble damages to the party injured.

| 10 cents, 20 40ths                                | 0  | 5 18      |
| Half dime, 5 do.                                  |    |           |

Standard silver is 1,485 parts pure, and 179 alloy. A pound of pure gold is valued at 15 lbs. of pure silver.

Coins of the United States actually divided. — 10 mills make 1 cent, 10 cents 1 dime, 10 dimes 1 dollar, 10 dollars 1 eagle.

Rules for reducing the Currencies of the different States into each other.

To reduce the currencies of New Hampshire, Massachusetts, Rhode Island, Connecticut, and Virginia, into those of New York and North Carolina, — to the given sum add 1-3d part thereof. Of Pennsylvania, New Jersey, Delaware, and Maryland, — to the given sum add 1-10th thereof. Of South Carolina and Georgia, — from the given sum subtract 2-9ths thereof.

To reduce New York and North Carolina into New Hampshire, Massachusetts, Rhode Island, Connecticut, and Virginia, — from the given sum deduct 1-10th thereof. Into South Carolina and Georgia, — multiply by 3 and 1-9th, and divide the product by 5; or multiply by 25, and divide by 45.

To reduce South Carolina and Georgia into New Hampshire, Massachusetts, Rhode Island, Connecticut, and Virginia, — to the given sum add 2-7ths thereof. Into Pennsylvania, New Jersey, Delaware, and Maryland, — multiply the given sum by 45, and divide by 28. Into New York and North Carolina, — from the given sum subtract 1-7th, and double the remainder.

CUSTOM-HOUSE REGULATIONS. — Vessels must be reported to the collector by the master 24 hours after arrival; must come to a full entry 48 hours after arrival, at which time the commander swears to a detailed account of his cargo, stores, and passengers, and that he has deposited all letters in the post-office, except such as are for his ship's husband, at which time he must also deposit the register, clearance, and cocket in the Custom-house.

Warehousing. — There is no warehousing system, but goods are received into the public stores, where they are allowed to remain 6 months at the risk and expense for fees of cartage, labor and storage, as fixed by the Chamber of Commerce, see post of the owner, without any duties being demandable. Woollens are the only exception to this rule: since 1855, interest is charged upon the amount of duty payable on their account from the time of their importation.

Port Charges. — For American vessels, or those of States having reciprocity treaties: —

|                  | Doll. | Cts. | L. | s. | d. |
|------------------|-------|------|----|----|----|
| Fees on entering | 5     | 70   | or | 1  | 5  |
| Fees on clearing | 2     | 70   | —  | 12 | 12 |

CUSTOM-HOUSE FEES. — 1. Fees payable to Collector. — Entry of a vessel of 100 tons or upwards, 2 dollars and 50 cents; clearance of a vessel of 100 tons or upwards, 2 dollars and 50 cents; entry of a vessel under 100 tons, 1 dollar and 50 cents; clearance of a vessel under 100 tons, 1 dollar and 50 cents; every post entry, 2 dollars; permit to land goods, 20 cents; every bond taken officially, 40 cents; permit to load goods, for the exportation, for drawback, 20 cents; delinquent or other official certificate, 20 cents; official document (register excepted) required by any person, 20 cents.

2. Fees payable to the Surveyor. — Admeasuring and certifying the same, of every ship or vessel of 100 tons and under, per ton, 1 cent; admeasuring of every ship or vessel above 100 tons, and not exceeding 200 tons, 1 dollar and 50 cents; above 200 tons, 2 dollars; for all other service on board any ship or vessel of 100 tons and upwards, having on board goods, wares, or merchandise subject to duty, 5 dollars; for like services on board any ship or vessel of less than 100 tons, 1 dollar and 50 cents; on all vessels not having on board goods, wares, or merchandise subject to duty, 66 2-3d cents. Certificate of registry of vessels, 2 dollars. Endorsement on registry or record, 1 dollar. Every bond required by this act, 25 cents; every bond for a Mediterranean passport, 40 cents; every seaman's protection, 25 cents.

Under the Customs Act. — Admeasuring every vessel in order to the registering, enrollment, licensing, or recording the same, of 5 tons or upwards, and less than 20, 50 cents; 20 and not exceeding 70, 75 cents; 70, 1 dollar; above 100, 1 50 cents. For every certificate of enrollment, 50 cents; every endorsement of ditto, 20 cents; every licence, including the bond, not exceeding 20 tons, 25 cents; above 20 tons, and not more than 100, 50 cents; more than 100, 1 dollar. Recording certificates, manifest, and granting permit, of less than 20 tons, 25 cents; above 50 tons, 50 cents. For certifying a manifest, and granting permit for registered vessels, 150 cents. For receiving certified manifest and granting permit for registered vessels, 150 cents. Granting permit for a vessel not belonging to a citizen, on arrival, to proceed from district to district, and receiving a manifest, 2 dollars; receiving manifest and granting permit to unlash, as above, 2 dollars. Granting permit for a vessel to carry on fishery in a foreign port, 25 cents. For report and entry of any foreign goods imported in such last-mentioned vessel, 25 cents.

| Flax seed, do.  | 7   | 0  | 0 | 28 |

*Rates of Wharffage.*—Vessels under 50 tons, 50 cents per day  
 or 50 cents per day for every 50 tons more, 12½ cents additional  
 = 7d.  
*N. B.*—Wharfs are all private property.

*RATES OF COMMISSION.*—recommended for general Adoption,  
 and allowed by the New York Chamber of Commerce, when no  
 Agreement subsists to the contrary.

*On Foreign Business.*—On the sale of merchandise, 5 per cent.—  
 sale or purchase of stocks, 1 per cent.—Specie, ½ per cent.—  
 Purchase and shipment of merchandise, with fund in hand,  
 on the aggregate amount of costs and charges, 2½ per cent.—  
 Drawing or indorsing bills, in all cases, 2½ per cent.—Vessels,  
 sailing or purchasing, 2½ per cent.—Procuring freight, 5 per cent.—  
 Collecting freight on general average, 2½ per cent.—  
 Profits or disbursements, with funds in hand, 2½ per cent.—  
 Effecting marine insurance, in all cases, when the premium  
 does not exceed 10 per cent., on the amount insured, ½ per cent.—  
 When the premium exceeds 10 per cent., on the amount of  
 premium, 5 per cent.—Collecting dividends on stock, ½ per cent.—  
 Collecting delinquent or litigated accounts, 5 per cent.—  
 Adjusting and collecting insurance losses, 2½ per cent.—Re-  
 ceiving and paying monies, from which no other commission  
 is derived, 1 per cent.—Remittances in bills, in all cases, ½ per cent.—  
 Landing and reshipping goods from vessels in distress,  
 on the value, 2½ per cent.—Receiving and forwarding goods  
 entered at the Custom-house, on the value, 1 per cent.—and  
 2½ per cent. on responsibilities incurred.

*On Inland Business.*—On the sale of merchandise, 2½ per cent.—  
 Purchase and shipment of merchandise, or accepting for  
 purchase, without funds or property in hand, 2½ per cent.—  
 Sale or purchase of stocks, 1 per cent.—Sale or purchase of  
 specie, ½ per cent.—Sale of bills of exchange with indorse-  
 ment, ½ per cent.—Sale of bank notes or drafts not expired,  
 ½ per cent.—Selling or indorsing bills of exchange, 2½ per cent.—  
 Selling or purchasing vessels, 2½ per cent.—Charter-  
 ing to proceed to other ports to load, 2½ per cent.—Procuring  
 or collecting freight, 2½ per cent.—Profits or disbursements,  
 2½ per cent.—Collecting general average, 2½ per cent.—Effect-  
 ing marine insurance, in all cases when the premium does not  
 exceed 10 per cent., on the amount insured, ½ per cent.—When  
 the premium exceeds 10 per cent., on the amount of premium,  
 5 per cent.—Adjusting and collecting insurance losses, 2½ per cent.—  
 Collecting dividends on stocks, ½ per cent.—Collecting  
 bills, and paying over the amount, or receiving and paying monies  
 from which no other commission is derived, 1 per cent.—  
 Receiving and forwarding goods, on the value, 1 per cent.—  
 The same when entered for duty or debenture, 1 per cent.—  
 Remittances in bills, in all cases, ½ per cent.—

The above commissions to be exclusive of the guarantee of  
 debts for sales on credit, storage, brokerage, and every other  
 charge actually incurred.—The risk of loss by fire, unless in-  
 surance be ordered, and of robbery, theft, and other unavoi-  
 dable occurrences, if the usual care be taken to secure the prop-  
 erty, is in all cases to be borne by the proprietor of the goods.  
 When bills are remitted for collection, and are returned un-  
 der protest for non-acceptance, or non-payment, the same  
 commission to be charged as though they were duly honoured.  
 On consignments of merchandise withdrawn or reshipped,  
 full commission to be charged to the extent of advances or re-  
 sponsibilities incurred, and half commission on the residue of  
 the value.

*RATES OF STORAGE.*—chargeable per month, as established by  
 the New York Chamber of Commerce.

| Wines. See Liquors.   |        |
| Woods, for dyeing, under cover, per ton                               | 50     |
| ditto, in yards   | 45     |
| Whiting, in hhls., per ton  | 374    |

On articles on which the rate is fixed by weight, it is un-  
 derstood to be on the gross weight; and on liquors, oil, &c. on  
 which the rate refers to gallons, it is understood to be on the  
 whole capacity of the casks, whether full or not. The prop-  
 rior of goods to be at the expense of putting them in store,  
 stowing away, and turning out of store.—All goods taken on  
 storage to be subject to 1 month's storage; if taken out within  
 15 days after the expiration of the month, to pay ½ a month's  
 storage; if after 15 days, a whole month's storage.

RATES OF CARTAGE.

| Do. half shot of like dimensions  | 2 6  |
| Do. whole shot of 7 to 10 inches  | 12 0 |
| Do. half shot of like dimensions  | 6 0  |
| Do. whole shot of 10, and not exceeding 12 inches in circumference                    | 14 0 |
| Do. whole shot of 12, and not exceeding 14 inches in circumference                    | 20 0 |
| Do. half shot of the dimensions of the two last mentioned                             | 10 0 |
| Do. whole shot of 14 and not exceeding 15 inches                                      | 21 0 |
| Do. half shot of like dimensions  | 12 0 |
| Do. whole shot of 15 inches   | 32 0 |
| Do. half shot of like dimensions  | 16 0 |
| * <i>Goods, wares, merchandise, or other articles not herein enumerated, per load</i> | 2 0  |

In all cases where the distance exceeds  $\frac{1}{2}$  a mile, and not 2 miles,  $\frac{1}{2}$  in addition to be allowed.

**Rates of Portage.**—For any distance not exceeding  $\frac{1}{2}$  a mile, 12 cents; over  $\frac{1}{2}$  a mile, and not exceeding a mile, 25 cents; and in that proportion for any greater distance. For carrying a load upon a hand-barrow, for any distance not exceeding  $\frac{1}{2}$  a mile, 25 cents; over  $\frac{1}{2}$  a mile, and not exceeding a mile, 41 cents; and in that proportion for any greater distance.

**Hand-carriers.**—For any distance not exceeding  $\frac{1}{2}$  a mile, 18 cents; over  $\frac{1}{2}$  a mile and not exceeding a mile, 31 cents; and in that proportion for any greater distance.

## Harbour Master.

The office of harbour master was created in 1808, by legislative enactment, with power to regulate and station all vessels in the harbour, or at the wharfs, to accommodate vessels wishing to discharge their cargoes, and to decide promptly all disputes connected with the foregoing subjects. Resisting his authority subjects to a fine of 50 dollars and costs, for the benefit of the New York hospital.

**Fees.**—In vessels amounting, 13 cent per ton. Vessels paying foreign duties and tonnage, double; which must be paid within 48 hours after arrival. Schooners and sloops in the coasting trade, 2 dollars. For adjusting any difference respecting situation, 2 dollars.

Pilots must register their vessels, names and places of abode, in his office; and are obliged to put to sea whenever ordered by him. The penalty for refusing is 5 dollars and loss of licence.

## Pilotage.

There are 9 branch and 9 deputy pilots, and as many registered boats.

**Rates of Pilotage.**—Every pilot who shall take charge of any vessel to the eastward or southward of the White Buoy on the eastern ridge near the bar, and conducts and moors safely such vessel to a proper wharf, or from the city to the southward or eastward of said buoy, is entitled by law to the following rates, to wit:—For vessels of the United States, and those who are entitled by treaty to enter upon the same terms as American vessels, the sums which follow:—Every vessel drawing less than 14 feet, 1 dol. 50 cts. per foot; do. drawing 14 feet, and less than 18, 1 dol. 75 cts. per foot; do. drawing 18 feet or upwards, 2 dol. 25 cts. per foot. The same rates of pilotage to be allowed for any vessel that may be piloted any where within the Hook, whose master or owner does not wish the same to be brought to the city wharfs. Half pilotage only to be allowed to any pilot who shall take charge of a vessel to the westward of the White Buoy. No pilotage whatsoever to be given to any pilot, unless he shall take charge of a vessel to the southward of the upper Middle ground, nor unless such vessel shall be of 70 tons burden, provided the usual signal be not given, in which case half pilotage is to be allowed. Between the 1st of November and the 1st of April, inclusive, 4 dol. additional to be allowed for vessels of 10 feet water and upwards; if less than 10 feet, 2 dol. The fourth additional to be given to the pilots who shall take charge of vessels out of sight of the light-house. For every day any pilot shall be required to remain on board, 3 dol. per day. Foreign vessels not entitled by treaty to enter on the same terms as those of the United States, to pay 1-4th additional to the pilots, and also 5 dol. over and above the foregoing rates of pilotage.

## Wardens of the Port.

Vessels and goods arriving in a damaged state, and required to be sold by auction for the benefit of underwriters out of the city of New York, must be under the inspection of the ward-

ens, who may be required to certify the cause of the damage, and amount of sale and charges.

**Fees.**—13 per cent. on gross amount of sales; and for entry survey on board of any vessel, at any store, or along the docks or wharfs, 3 dol. on damaged goods; each survey on hull, spars, rigging, &c., 5 dol. each certificate, 1 dol. 25 cts.; ditto of distress of said vessel, 2 dol. 50 cts.; same services for vessels paying foreign duties and tonnage, double.

## QUANTITY OF GOODS TO COMPOSE A TON.

Extract from the By-Laws of the New York Chamber of Commerce.

**Revised.**—That when vessels are freighted by the ton, and no special agreement is made between the owner of the vessel and freighter of the goods, respecting the proportion of tonnage which each particular article shall be computed at, the following regulation shall be the standard of computation:—

That the articles, the bulk of which shall compose a ton, to equal a ton of heavy materials, shall be in weight as follows:—

1,768 lbs. of coffee in casks, 1,450 ditto in bags; 1,120 lbs. of cocoa in casks, 1,307 ditto in bags.

352 lbs. of pigment in casks, 1,110 ditto in bags.

8 barrels of flour of 136 lbs. each.

6 barrels of beef, pork, tallow, pickled fish, pitch, tar, and turpentine.

20 cwt. of pig and bar iron, potashes, sugar, logwood, fustic, Nicaragua wood, and all heavy dye woods, rice, honey, copper ore, and all other heavy goods.

16 cwt. of coffee, cocoa, and dried codfish, in bulk, and 12 cwt. of dried codfish in casks of any size.

6 cwt. of ship bread in casks, 7 cwt. in bags, and 8 cwt. in bulk.

200 gallons (wine measure) reckoning the full contents of the casks, of oil, wine, brandy, or any kind of liquors.

22 bushels of grain, peas or beans in casks.

36 bushels of ditto in bulk.

36 bushels of European salt.

31 bushels of salt from the West Indies.

29 bushels of sea coal.

40 feet (cubic measure) of mahogany, square timber, oak plank, pine and other boards, beaver, furs, peltry, bees' was, cotton wool, and bale goods of all kinds.

1 hoghead of tobacco, and 10 cwt. of dry hides.

8 cwt. of China raw silk, 10 cwt. nett linnen, and 8 cwt. green tea.

## Tares allowed by Custom.

|   |               |
|---|---------------|
| Alum, in bags   | 5 lbs.        |
| in casks  | 10 per cent.  |

\* The decrease of shipping in 1829 is apparent only. From 1790 down to that year, the returns were made up from the registers, without making any allowance for the vessels worn out, lost, sold, or captured! This glaring defect was, if noticed at all, not obviated till 1829. No dependence can, therefore, be placed on any previous statement as to the amount of American tonnage. We hope that measures have been taken to prevent the future publication of any such scandalously inaccurate official accounts.

**Bills of Exchange.**—By a revised law of the State of New York, the following damages on bills drawn or negotiated in this State, and protested for non-payment, are allowed, viz.—Bills drawn on the States of Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New Jersey, Pennsylvania, Ohio, Delaware, Maryland, Virginia, or District of Columbia, 5 per cent. North Carolina, South Carolina, Georgia, Kentucky, or Tennessee, 5 per cent.

Any other State or territory of the United States, or any other place on or adjacent to this continent, and north of the equator, or any British or other foreign possession in the West Indies, or elsewhere on the Western Atlantic Ocean, or any port or place in Europe, 10 per cent.

Such damages shall be in lieu of interest, charges of protest, and all other charges incurred previous to and at the time of giving notice of non-payment, but the holder of such bill shall be entitled to demand and recover lawful interest upon the aggregate amount of the principal sum specified in such bill, and of the damages thereon, from the time at which notice of protest for non-payment shall have been given, and payment of such principal sum shall have been demanded.—Sect. 19.

If the contents of such bill be expressed in the money of account of the United States, the amount due thereon and of the damages herein allowed for the non-payment thereof, shall be ascertained and determined without any reference to the rate of exchange existing between this State and the place on which such bill shall have been drawn, at the time of the demand of payment or of notice of non-payment.—Sect. 20.

If the contents of such bill be expressed in the money of account or currency of any foreign country, then the amount due, exclusive of the damages payable thereon, shall be ascertained and determined by the rate of exchange or the value of such foreign currency, at the time of the demand of payment.—Sect. 21.

**TARIFF OF THE UNITED STATES.**—Notwithstanding the unprecedented progress of the United States in wealth and population, their foreign trade was nearly stationary for the 10 years ending with 1830! And yet, considering the spirit of commercial enterprise by which the people, particularly in the New England States and New York, are animated, and their skill in navigation, it might have been fairly presumed that the growth of their foreign trade would, at least, have kept pace with the development of the internal resources of the country. That it did not do so, is wholly owing to the policy of government. Not satisfied with the extraordinary advances their constituents had made in numbers and wealth, Congress seems to have believed that their career might be accelerated by means of Custom-house regulations!—by giving an artificial direction to a portion of the public capital and industry, and turning it into channels into which it would not naturally flow!

No one who has the slightest acquaintance with the condition of America—who knows that she is possessed of boundless tracts of fertile and unappropriated land—that her population is comparatively thin, and wages high—can doubt for a moment that agriculture *must*, for a long series of years, be the most profitable species of employment in which her citizens can engage. There can be no question, indeed, that such branches of manufacture as are naturally adapted to her peculiar situation, will gradually grow up and flourish in America, without any artificial encouragement, according as her population becomes denser, and as the advantage which now exists on the side of agriculture becomes less decided. But to force, by means of duties and prohibitions, the premature growth of manufactures, is plainly to force a portion of the industry and capital of the country into businesses in which it will be *least* productive.

Such, however, has been, for a lengthened period, the policy of the American legislature. The exploded sophisms of the mercantile system, though renounced by every statesman in Europe, acquired a noxious influence in congress, and were put forth with as much confidence, as if their soundness neither had been, nor could be, questioned! From 1816 down to 1832, the object of the American legislature was to bolster up a manufacturing interest, by imposing oppressive duties on most manufactured articles imported from abroad. Now, it is obvious, even had the articles produced in America through the agency of this plan been as cheap as those they superseded, that nothing would have been gained by it; for, to whatever extent the importation of foreign articles may be diminished, there must be a corresponding diminution in the exportation of native American products; so that the only result would have been the raising up of one species of industry at the expense of some other species, entitled to an equality of protection. But the "American system" was not so innocuous. Instead of the goods manufactured in the States being as cheap as similar ones manufactured in Europe, they were admitted to be, at an average, from 30 to 100 per cent. dearer! The extent of the pecuniary sacrifice that was thus imposed on the Union has been variously estimated by American writers; but we have been assured by those who have the best means of knowing, that it may be moderately estimated at from 50,000,000 to 60,000,000 dollars, or from about 11,000,000*l.* to 13,000,000*l.*! And this immense burden—a burden nearly *three* times as great as the whole public expenditure of the republic—was incurred for no purpose of public utility, and was productive of nothing but mischief. The whole effect of the scheme was to divert a certain amount of the national capital from the production of cotton, wheat, rice, tobacco, &c., the equivalents sent to foreigners in payment of manufactured goods, to the direct production of these goods themselves! And as the

latter species of industry is nowise suitable for America, a tax of 13,000,000 a year was imposed on the Union, that the manufacturers might be enabled to continue a losing business. We leave it to others to determine whether the absurdity of the system, or its costliness, be its more prominent feature. That its influence was not more injurious, is solely owing to the smuggling it occasioned. With a frontier like that of America, and with a half or more of the population hostile to the tariff, it would have been worse than absurd to suppose that it could be carried into full effect. But it had enough of influence to render it in the last degree prejudicial — to occasion a great rise in the price of many important articles — to cripple the trade and navigation of the country — and to throw a considerable part of it into the hands of foreigners, who carried it on in defiance of the law.

It is difficult, however, to say how long this perverse system might have been maintained, but for its political effects. It was principally patronised by the Northern States. We believe, indeed, that it is quite impossible to show that they either did or could derive any benefit from it; but, at all events, it is quite certain that it was highly injurious to the Southern States. Their staple products are cotton, tobacco, and rice, of which by far the largest portion is exported to foreign countries; and the planters speedily found that every restriction on importation from abroad occasioned a corresponding difficulty of exportation. This led to a disunion of interests, and to strong remonstrances against the tariff by the Southern States. These, however, were disregarded. Provoked by this treatment, South Carolina took the decisive step of refusing to enforce the customs acts; and threatened if coercion were attempted, to repel force by force, and to recede from the Union! This was a death-blow to the tariff. Congress now saw, what all sensible men had seen long before, that it was necessary to recede; that, in fact, either the tariff must be modified, or the integrity of the Union be brought into jeopardy. A law was accordingly passed on the 14th of July, 1832, which directed a considerable deduction to be made from the duties on various articles after the 3d of March, 1833; and a subsequent act, commonly called "Mr. Clay's New Tariff Bill," was passed on the 2d of March, 1833, providing for the future gradual reduction of the duties. These judicious acts restored tranquillity; and, there can be no doubt, will be, in every point of view, highly beneficial to the republic.

We subjoin the act of the 23d of March, 1833, and the explanatory letter of Mr. M'Lane, Secretary to the Treasury.

MR. CLAY'S NEW TARIFF BILL.

To modify the Act of the 14th of July, 1832, and all other Acts imposing Duties on Imports.

Be it enacted by the Senate and House of Representatives of the United States of America, in Congress assembled, that, from and after the 31st of December, 1833, in all cases where duties are imposed on foreign imports by the act of July 14, 1832, entitled "An Act to alter and amend the several Acts imposing Duties on Imports," or by any other act, shall exceed 20 per cent. on the value thereof, one tenth part of such excess shall be deducted; from and after the 31st of December, 1835, another tenth part thereof shall be deducted; from and after the 31st of December, 1837, another tenth part thereof shall be deducted; from and after the 31st of December, 1839, another tenth part thereof shall be deducted; and from and after the 31st of December, 1841, one half of the residue of such excess shall be deducted; and from and after the 30th of June, 1842, the other half thereof shall be deducted.

Sect. II. — And be it further enacted, that so much of the second section of the act of the 14th of July aforesaid, as fixes the rate of duty on all milled and fulled cloth, known by the name of plains, kerseys, or Kendall cottons, of which wool is the only material, the value whereof does not exceed 55 cents a square yard, at 5 per cent. *ad valorem*, shall be and the same is hereby repealed. And the said articles shall be subject to the same duty of 50 per cent. as is provided by the said 2d section for other manufactures of wool, which duty shall be liable to the same reductions as are prescribed by the 1st section of this act.

Sect. III. — And be it further enacted, that until the 30th of September, 1842, the duties imposed by existing laws, as modified by this act, shall remain and continue to be collected. And from and after the day last aforesaid, all duties on imports shall be collected in ready money, and all credits now allowed by law, to the payment of duties, shall be and are hereby abolished, and such duties shall be laid for the purpose of raising such revenues as may be necessary to an economical administration of the government; and from and after the day last aforesaid, the duties required to be paid by law on goods, wares, and merchandise, shall be assessed upon the value thereof at the port where the same shall be entered, under such regulations as may be prescribed by law.

Sect. IV. — And be it further enacted, that, in addition to the articles now exempted by the act of the 14th of July, 1832, and the existing laws, from the payment of duties, the following articles imported from and after the 31st of December, 1833, and until the 30th of June, 1842, shall also be admitted to entry free from duty; to wit, bleached and unbleached linens, table linens, linen napkins, and linen cambrics, and worsted stuff goods, shawls, and other manufactures of silk and worsted, manufactures of silk, or of which silk shall be the component material of chief value, coming from this side of the Cape of Good Hope, except sewing silk.

Sect. V. — And be it further enacted, that from and after the said 30th of June, 1842, the following articles shall be admitted to entry free from duty; to wit, indigo, quicksilver, sulphur, crude saltpetre, grindstones, refined borax, emery, opium, tin in plates or sheets, gum Arabic, gum Senegal, lac dye, madder, madder root, nuts and berries used in dyeing, saffron, turmeric, wood or pastel, aloes, ambergris, Burgundy pitch, cochineal, cannonile flowers, coriander seed, catsup, chalk, cocculus Indicus, horn plates for lanterns, ox horns, other horns and tips, India rubber, unmanufactured ivory, juniper berries, musk, nuts of all kinds, oil of juniper, unmanufactured rattans and reeds, tortoiseshell, tin foil, shellac, all vegetables used principally in dyeing and composing dyes, weld, and all articles employed chiefly for dyeing, except alum, copperas, bichromate of potash, prussiate of potash, chromate of potash, and nitrate of lead, equalparts and tartaric acid. And all imports on which the 1st section of this act may operate, and all articles now admitted to entry, free from duty or paying a less rate of duty than 20 per cent. *ad valorem* before the said 30th of June, 1842, from and after that day may be admitted to entry, subject to such duty, not exceeding 30 per cent. *ad valorem*, as shall be provided for by law.

Sect. VI. — And be it further enacted, that so much of the act of July 14, 1832, or of any other act, as is inconsistent with this act, shall be and the same is hereby repealed: provided that nothing herein

contained shall be so construed as to prevent the passage, prior or subsequent to the said 30th of June, 1842, of any act or acts from time to time, that may be necessary to detect, prevent, or punish evasion of the duties on imports imposed by law; nor to prevent the passage of any act prior to the 30th of June, 1842, in contingency either of excess or deficiency of revenue, altering the rate of duties on articles which, by the aforesaid act of the 14th of July, 1832, are subject to a less rate of duty than 20 per cent. *ad valorem*, in such manner as not to exceed that rate, and so as to adjust the revenue to either of the said contingencies.

*Circular to Officers of the Customs.*

Treasury Department, April 20, 1833.

The 7th section of the act of the 14th of July, 1832, entitled "An Act to alter and amend the several Acts imposing the Duties on Imports," provides, that in all cases where the duty which now is or hereafter may be imposed on any goods, wares, or merchandise imported into the United States, shall, by law, be regulated, or be directed to be estimated or levied upon the value of the square yard, or any other quantity or parcel thereof, and in all cases where there is or shall be imposed any *ad valorem* rate of duty on any goods, wares, or merchandise imported into the United States, it shall be the duty of the collector, within whose district the same shall be imported or entered, to cause the actual value thereof, at the time purchased, and place from which the same shall have been imported into the United States, to be appraised, estimated, and ascertained, and the number of such yards, parcels, or quantities, and such actual value of every of them as the case may require; and it shall, in every case, be the duty of the appraisers of the United States, and every of them, and every other person who shall act as such appraiser, by all the reasonable ways or means in his or their power, to ascertain, estimate, and appraise the true and actual value, any invoice or affidavit thereto to the contrary notwithstanding, of the said goods, wares, and merchandise, at the time purchased, and place from whence the same shall have been imported into the United States, and the number of such yards, parcels, or quantities, and such actual value of every of them as the case may require, &c. &c.

The 9th section of the same act provides, "that it shall be the duty of the secretary of the treasury, under the direction of the President of the United States, from time to time to establish such rules and regulations, not inconsistent with the laws of the United States, as the President of the United States shall think proper, to secure a just, faithful, and impartial appraisal of all goods, wares, and merchandise as aforesaid, imported into the United States, and just and proper entries of such actual value thereof, and of the square yards, parcels, or other quantities, as the case may require, and of such actual value of every of them; and it shall be the duty of the secretary of the treasury to report all such rules and regulations, with the reasons therefor, to the next session of Congress."

The 1st section of the act of the 2d of March, 1833, entitled "An Act to modify the Act of the 14th of July, 1832, and all other Acts imposing Duties on Imports," declares, "that from and after the 31st of December, 1833, in all cases where duties are imposed on foreign imports by the act of the 14th of July, 1832, entitled 'An Act to alter and amend the several Acts imposing Duties on Imports,' or by any other act, shall exceed 20 per cent. on the value thereof, one tenth part of such excess shall be deducted," &c. &c.

It is believed that by this provision, and as necessary to the execution of the law, all duties imposed by any act of Congress upon foreign imports are substantially regulated by, and are directed to be estimated and levied upon, the value of the square yard, where that is the form, and upon some other quantity or parcel in cases where the duty is not imposed by the square yard; and that consequently the authority conferred by the 9th section aforesaid must necessarily be exercised, for the more effectual execution of the said act of the 2d of March, 1833.

The following rules and regulations are therefore established, under the direction of the President of the United States, for the purpose of securing a just, faithful, and impartial appraisal of all goods, wares, and merchandise imported into the United States from and after the 31st of December next, and for the just and proper entries of the actual value thereof, and of the square yard, parcels or other quantities, as the case may require.

In all cases of *ad valorem* duties under the act of the 14th of July, 1832, or any other act, the regulations at present authorised by law, for ascertaining the actual value, will remain unaltered. With respect to those articles liable to a specific duty, or other duty than that of *ad valorem*, the actual value thereof at the time purchased, and place from which the same shall have been imported into the United States or in the country wherein the same may have been originally manufactured, or produced, as the case may be, will be appraised, estimated, and ascertained, and the number of yards, or square yards, tons, pounds, gallons, bushels, or other parcels or quantities, and such actual value of any of them as the case may require, and just and proper entries thereof be made, in the same manner and according to the same regulations, as are required by the said act of the 14th of July, 1832, and other acts now in force in regard to articles paying *ad valorem* duty; and in all such cases the same verification of invoices and other proofs will be required and produced as are at present authorised in respect to articles liable by previous acts to an *ad valorem* duty. The value of all such articles being thus ascertained, the proportion which the duty now paid by such articles bears to the said value will be calculated, and from the excess thereof beyond 20 per cent. there will be deducted, from and after the 31st of December next, 10 per cent.; that is to say, where such proportion shall be equal to 50 per cent., there shall be deducted 10 per cent. upon 30 per cent.; or 3 dollars; and from and after the 31st of December, 1835, the like deduction shall be made from the same excess, or 10 per cent. upon 30 per cent., being 3 dollars more; and in the same manner, at the several periods specified in the said act of the 2d of March, 1833, until the 31st of December, 1841; from and after which, one half of the residue of such excess will be deducted, and the other half thereof from and after the 30th of June, 1842.

From the proportion of the duty thus ascertained upon the wines of France, in addition to the said 10 per cent., there will also be deducted such further per cent. as will be necessary to preserve the discrimination in favour of such wines, stipulated in the convention between the United States and his Majesty the King of the French, concluded at Paris on the 4th of July, 1831, and authorised by law.

It may be proper to observe, that all manufactures of cotton, or of which cotton shall be a component part, will be appraised, estimated, and the number of yards, square yards, or otherwise, parcel or quantities, and of such actual value thereof as the case may require, will be ascertained, and just and proper entries thereof made, according to the foregoing regulations.

It is believed that the value of foreign imports referred to in the act of the 2d of March, 1833, is not the assumed value on which the duty upon all manufactures of cotton, or of which cotton shall be a component part, is directed to be estimated under the act of the 14th of July, 1832; viz. of *thirty cents*, if not dyed, coloured, painted, or stained, though valued at less than 30 cents; and of *thirty-five cents*, if dyed, coloured, painted, or stained, though valued at less than 35 cents the square yard. This value is merely artificial, and assumed by previous laws as a means of augmenting the *ad valorem* rate of duty, imposed for the purpose of protection, upon such articles; and the amount of the duty, although ascertained by the adoption of the minimum principle, is the proportion which the sum collected by the government bears to the actual value of the article; and, therefore, a quantity of such cottons, costing in fact 80 dollars, but valued for the purpose of the act of the 14th of July, 1832, at 240 dollars, really pays a duty of 75 per cent. upon the true value thereof.

The act of the 2d of March, 1833, however, proceeds upon a different principle, and aims at a different purpose. It obviously intends to make an equal deduction from the duty on all foreign imports, and ultimately to reduce it to a rate not exceeding 20 per cent. upon the real, and not an assumed, value of the articles imported. This last purpose is explicitly stated in the last clause of the 5th section, which pro-

vides "that all imports on which the 1st section of this act may operate, and all articles now admitted to entry free of duty, or paying a less rate of duty than 20 per cent. *ad valorem*, before the said 30th of June, 1842, from and after that day may be admitted to entry, subject to such duty, not exceeding 50 per cent. *ad valorem*, as shall be provided for by law." And the 1st section, which has been already referred to, expressly provides for the deduction, after the 30th of June, 1842, of all excess of foreign imports above 20 per cent. on the value thereof, which shall have been imposed by previous laws, and to which they may then be subject.

The object of thus establishing a general *ad valorem* duty on foreign imports, and of equalising the rate, can only be attained by calculating the duty on the real instead of the assumed value. This purpose is more particularly manifest from the last clause of the 3d section, which provides, that from and after the 30th of June, 1842, "the duties required to be paid by law on goods, wares, and merchandise, shall be assessed upon the value thereof at the port where the same shall be entered, under such regulations as may be prescribed by law." Each of these clauses relates to the actual value of the foreign import, and they differ only in estimating that value; previously to the 30th of June, 1842, the value in the foreign port being taken, and after that time, the value at the port of entry. The object of neither can be accomplished at any period, by adhering either to the nominal value assumed by previous acts, or to the rate of *ad valorem* founded upon such assumption.

In all importations of manufactures of cotton, therefore, or of which cotton shall be a component part, after the 31st of December, 1832, the value thereof will be ascertained in the manner aforesaid; and from the amount which the rate of duty under the act of the 14th of July, 1832, or any other act, shall exceed 20 per cent. on such value, the deduction required by the act of the 2d of March, 1833, will be made according to the foregoing rules.

Though these rules and regulations will not go into effect until the 1st of January next, they have been thus early adopted and made public, for the purpose of giving timely notice to the manufacturers and merchants, and all others concerned; and especially as to the verification, by the consuls abroad of the invoices of importations to be made after that time.

LOUIS M'LANE, Secretary of the Treasury.

The following Table exhibits the progressive reductions that will take place in the duties on some of the principal articles imported into the United States, under Mr. Clay's Bill.

| Articles.  | Per Cent. <i>ad Valorem</i> . | 1833. Dec. 31. 1-10th per Cent. | 1835. Dec. 31. 1-10th per Cent. | 1837. Dec. 31. 1-10th per Cent. | 1839. Dec. 31. 1-10th per Cent. | 1841. Dec. 31. Half of Excess per Cent. | 1842. June 30. Remir. of Excess per Cent. <i>ad Valorem</i> . |
|--|-------------------------------|---------------------------------|---------------------------------|---------------------------------|---------------------------------|---|---|
| Wool manufactured, the value at the place of exportation less than 8 cents per lb.   | free                          | free                            | free                            | free                            | free                            | free                                    | 20  |
| Wool, exceeding 8 cents per lb. at the place of exportation, 4 cents per lb. specific, and 40 per cent., equal to average  | 51                            | 50-60                           | 47-20                           | 43-80                           | 40-40                           | 30-20                                   | 20  |
| Woolen cloths, milled, filled; known by the name of plains, kevers, or local customs, of which wool is the only material, the value exceeding 35 cents a square yard, 5 per cent., raised by H. Clay's Bill to | 50                            | 47                              | 44                              | 41                              | 38                              | 29                                      | 20  |
| All other woolen cloths  | 50                            | 47                              | 41                              | 41                              | 38                              | 29                                      | 20  |
| Flannels, Bocking, baizes, 16 cents the square yard, equal to average  | 50                            | 47                              | 41                              | 41                              | 38                              | 29                                      | 20  |
| Cottons, white, costing under 30 cents a square yard, valued at 30 cents, and pay 25 per cent., equal to average   | 42½                           | 40-25                           | 38                              | 35-75                           | 33-50                           | 26-75                                   | 20  |
| Cottons, coloured, valued at 35 cents a square yard, pay 25 per cent., equal to average  | 42½                           | 40-25                           | 38                              | 35-75                           | 33-50                           | 26-75                                   | 20  |
| Nails, 5 cents per lb., equal to average   | 78                            | 72-20                           | 66-40                           | 60-60                           | 54-80                           | 37-40                                   | 20  |
| Spikes, 4 cents per lb., equal to average  | 96                            | 88-40                           | 80-80                           | 73-20                           | 65-60                           | 42-80                                   | 20  |
| Brazier's rod, spike rod, sheet, 7p, slit, or rolled iron, 5 cents per lb., equal to average   | 115                           | 103-70                          | 91-40                           | 83-10                           | 75-80                           | 47-90                                   | 20  |
| Pig iron, 50 cents per cwt., equal to  | 43                            | 40-70                           | 38-40                           | 36-10                           | 33-80                           | 26-90                                   | 20  |
| Bar iron, rolled, 1 dol. 50 cents per cwt., equal to   | 95                            | 87-60                           | 80                              | 72-50                           | 65                              | 42-50                                   | 20  |
| hammered, 30 cents per cwt., equal to  | 33                            | 31-70                           | 30-40                           | 29-10                           | 27-08                           | 23-90                                   | 20  |

**Drawback.**—All articles subject to duty imported into the United States, not having been landed more than 3 years, are allowed a drawback of the duties, on exportation of the same (except foreign dried and pickled fish, and other salt provisions, and chain cables).

**Credits.**—When the duty on an article of which wool is not a component part does not exceed 200 dollars, it must be paid in cash without discount; when it exceeds 200 dollars, a credit of 3 months is allowed for the ½, and of 6 months for the other ½, reckoning from the date of the vessel's entry. Duties on wool, and all manufactures of wool, to be paid in cash without discount.

**Discount.**—When the duties on any article, except wool and woollen manufactures, exceed 200 dollars, and they are paid in cash at the time of entry, the importer is entitled to a discount of 4 per cent.

**Leakage and Brakage.**—On spirits, 2 per cent.; ale, beer, and porter, in bottles, 10 per cent.; all other liquors, in bottles, 5 per cent.

**Restrictions.**—No goods to be imported in vessels less than 50 tons burden. No beer, ale, and porter, in casks of less capacity than 40 gallons, beer measure; or, if in bottles, in packages less than 6 dozen. No distilled spirits in casks of less capacity than 50 gallons, wine measure, except brandy, which may be imported in casks of any capacity, not less than 15 gallons.

**Tonnage Duty.**—On American vessels, and the vessels of Denmark, Central America, Netherlands, Hamburg, Bremen, Lubek, Prussia, Sweden, Norway, Oldenburgh, Russia,

Austria, Brazil, Hanover, Papal Dominions, Portugal, and Sardinia, from whatever port or place, and on French vessels coming from Martinique and Guadeloupe, free. On French vessels from other ports, and on all other foreign vessels (except as above enumerated) coming from ports where Americans are permitted to trade, 1 dollar per ton; and from ports where Americans are not permitted to trade, 2 dollars and 50 cents per ton.

On Spanish vessels, coming direct from Spain, 5 cents per ton.

**Free Goods.**—The following, among other articles, are admitted free of duties:—Antimony, almonds, aloes, aniseed, amber, ambergris, argols, arrowroot, arsenic, assafoetida, Balsams, barilla, bees' wax, bleaching powder, brimstone, borax—Cantharides; camphor, crude; capers, chalk, cinchona, cloves, cocons, cochineal, coffee; copper, in pigs and bars, and sheathing; cream of tartar, currants.—The woods of all kinds.—Fruits of all kinds, flax; furs of all kinds, not dressed.—Ginger, gums of all kinds, gunny bags.—Hemp, Manilla and Sisal, hides, horns, honey—Ipecacuanha, juniper berries, ivory, jalap.—Lac dye, liquorice paste.—Mace, madder, manna, marble, musjeet.—Nuts of all kinds, nutmegs, nutgalls.—Oils—of almonds, aniseed, castor, cinnamon, cloves, palm, juniper, lavender, bergamot, lemons, roses, opium, olive.—Pepper, Peruvian bark, plineto, plaster of Paris.—Quicksilver.—Rings, rhubarb.—Sarsaparilla, sulphur, shellac.—Teas, from China; tin, in bars, plates, or sheets; tartar, tortoise-shell.—Verdigris.—Wood; wool, not costing over 8 cents per lb.

**NICARAGUA or PEACH WOOD** (Ger. *Nicaragaholz*, *Blutholz*; Du. *Bloed-haut*; Fr. *Bois de sang*, *Bois de Nicaragua*; It. *Legno sanguigno*; Sp. *Palo de sangre*; Port. *Pao sanguinho*), a tree of the same genus (*Casalpinia*) as the Brazil and sapan wood; but the species has not been exactly ascertained. It grows principally in the vicinity of the lake of Nicaragua, whence its name. It is said by Dr. Bancroft to be almost as red and heavy as the true Brazil wood, but it does not commonly afford more

than a third part, in quantity, of the colour of the latter; and even this is rather less durable and less beautiful, though dyed with the same mordants. Nicaragua or peach woods differ greatly in their quality as well as price; one sort being so deficient in colouring matter, that 6 pounds of it will only dye as much wool or cloth as 1 pound of Brazil wood; while another variety of it will produce nearly half the effect of an equal quantity of Brazil wood, and will sell proportionally dear. — (*Bancroft on Colours*, vol. ii. p. 332.)

The London dealers distinguish Nicaragua wood into 3 sorts, viz. *large*, *middling*, and *small*; the price of the 1st sort (duty included) being from 14*l.* to 20*l.* per ton; of the 2d, from 8*l.* to 10*l.* per do.; and of the 3d, from 7*l.* to 8*l.* per do. The entries of Nicaragua wood for home consumption amounted, in 1831, to 1,485 tons; in 1832, they amounted to 1,880 tons; an increase that was, no doubt, in part at least, occasioned by the duty having been reduced in 1831 from 15*s.* to 5*s.* a ton.

NICKEL, a scarce metal, which occurs always in combination with other metals, from which it is exceedingly difficult to separate it. When pure, it is of a fine white colour resembling silver. It is rather softer than iron: its specific gravity, when cast, is 8.279; when hammered, 8.932. It is malleable, and may without difficulty be hammered into plates not exceeding  $\frac{1}{100}$ th part of an inch in thickness. It is attracted by the magnet; and is not altered by exposure to the air, nor by being kept under water. It is employed in potteries, and in the manufacture of porcelain. — (*Thomson's Chemistry*.)

NITRE. See SALTPETRE.

NOTE, PROMISSORY. See BANKING, and BANKS.

NUT, or HAZEL NUT (Ger. *Haselnüsse*; Fr. *Noisettes*, *Avelines*; It. *Nuccinole*, *Avellane*; Sp. *Avellanas*; Port. *Avellãs*; Lat. *Avellana*), the fruit of different species of *Coryli*, or hazels. The kernels have a mild, farinaceous, oily taste, agreeable to most palates. A kind of chocolate has been prepared from them; and they have sometimes been made into bread. The expressed oil of hazel nuts is little inferior to that of almonds. Besides those raised at home, we import nuts from different parts of France, Portugal, and Spain, but principally from the latter. The Spanish nuts in the highest estimation, though sold under the name of Barcelona nuts, are not really shipped at that city, but at Tarragona, a little more to the south. Mr. Ingliss says that the annual average export of nuts from Tarragona is from 25,000 to 30,000 bags, of 4 to the ton. They cost, free on board, in autumn, 1830, 17*s.* 6*d.* per bag. — (*Spain in 1830*, vol. ii. p. 362.) The entries of nuts for home consumption amount to from 100,000 to 125,000 bushels a year; the duty of 2*s.* a bushel producing from 10,000*l.* to 12,500*l.* nett.

NUTMEG (Ger. *Muskatennüsse*; Du. *Muskãt*; Fr. *Muscades*, *Noix muscades*; It. *Noce muscada*; Sp. *Moscada*; Arab. *Jowzaltëib*; Sans. *Jãtãphãli*; Malay, *Buh-pala*), the fruit of the genuine nutmeg tree (*Myristica Moschata*), a native of the Moluccas, but which has been transplanted to Sumatra, Penang, &c. An inferior and long-shaped nutmeg is common in Borneo; but the fruit nowhere attains to the same perfection as in the Moluccas. Of the several varieties of the tree, that denominated the Queen Nutmeg, which bears a small round fruit, is the best. The kernel, or proper nutmeg, is of a roundish oval form, marked on the outside with many vermicular furrows, within of a fleshy farinaceous substance, variegated whitish and bay. Nutmegs are frequently punctured and boiled, in order to obtain the essential oil; the orifice being afterwards closed; but the fraud is easily detected by the lightness of the nutmeg. — (*Thomson's Dispensatory*; *Ainslie's Materia Indica*.)

Nutmegs should be chosen large, round, heavy, and firm, of a lightish grey colour on the outside, and the inside beautifully marbled, of a strong fragrant smell, warm aromatic taste, and a fat oily body. They are very subject to be worm-eaten. The best manner of packing them is in dry chunan. The oblong kind, and the smaller ones, should be rejected. 15 cwt. are allowed to a ton. — (*Milburn's Orient. Com.*)

The dried produce of a nutmeg tree consists of nutmeg, mace (which see), and shell. Supposing the whole produce to be divided into 100 parts, there are 13½ of mace, 33½ of shell, and 53½ of nutmeg. In the ancient commerce, and down to the establishment of the Dutch monopoly, nutmegs were always sold and exported in the shell. The natives, whenever the commerce is left to their management, continue the practice, which is strongly recommended by Mr. Crawford. — (*East Indian Archipelago*, vol. iii. p. 336.)

The jealous and miserable policy of the Dutch has reduced the trade in nutmegs to a mere trifle, compared to what it would otherwise have been. They have, in so far at least as it was possible, exerted themselves to exterminate the nutmeg plants every where except in Banda. They bribe the native princes of the surrounding islands to root out the trees; and annually send a fleet to see that the work of destruction has been effected, and that the bribes have not been bestowed in vain. To engage in an illicit trade in spices is *death* to an inferior person, and *banishment* to a noble; and yet, notwithstanding these tremendous penalties, it is supposed that about 60,000 lbs. of nutmegs, and 15,000 lbs. of mace, are clandestinely exported each year! In Banda, the aboriginal inhabitants have been expatriated, and the island parcelled among settlers from Holland, under the name of *park keepers*. These persons, who may be turned out of their farms on the most trifling pretext, have about 2,000 slaves, who cultivate and prepare the nutmegs. The prices paid to the cultivator are all fixed by government; and it deserves to be mentioned, as affording one of the most striking illustrations of the ruinous effects of monopoly, that the fixed price which the government is now obliged to pay for nutmegs is *FIVE TIMES GREATER* than the price at which they bought them when the trade was free! Such is a rough outline of that monstrous system, which has reduced what used to be one of the most important branches of Eastern commerce so low, that it is unable to afford employment for the capital of a single wealthy merchant. We cannot conceive how so enlightened and liberal a government as that of Holland should continue to tolerate such scandalous abuses — abuses destructive alike of the rights of those subjected to its authority in the East, and the

commerce and wealth of its subjects at home. — (*Modern Universal History*, vol. x. p. 467—467. 8vo ed.; and *Crawford's Eastern Archipelago*, vol. iii. p. 394—413.)

Mr. Crawford estimates the produce of the Banda Islands at about 600,000 lbs. of nutmegs, and 150,000 lbs. of mace.

During the period that the English had possession of the Spice islands, nutmeg plants were carried to Penang, Bencoolen, and some of the West India islands. In the latter they have altogether failed, at least as far as respects any useful purpose; but very good nutmegs, and in considerable quantities, are now raised at Penang and Bencoolen. Mr. Crawford, however, alleges that the cost of bringing them to market is there so high, that the restoration of a free culture in the native country of the nutmeg would instantly destroy this unstable and factitious branch of industry. — (*Eastern Archipelago*, vol. iii. p. 409.)

The duty on nutmegs was reduced, in 1819, from 5s. 5d. to 2s. 6d. per lb.; and the quantities entered for home consumption have since rapidly increased. We subjoin

An Account of the Quantities of Nutmegs retained for Home Consumption in the United Kingdom, and each Year since 1810, the Nett Amount of Duty received thereon, and the Rates of Duty.

| Years. | Quantities retained for Home Consumption. | Nett Amount of Duty received thereon. |        | Rates of Duty charged thereon.  | Years.                            | Quantities retained for Home Consumption. | Nett Amount of Duty received thereon. |        | Rates of Duty charged thereon. |       |

NUTRIA, or NEUTRIA, the commercial name for the skins of *Myopotamus Bonariensis* (Commerson), the *Coyou* of Molina, and the *Quoia* of D'Azara. In France, the skins were, and perhaps still are, sold under the name of *racoonda*; but in England they are imported as *nutria* skins — deriving their appellation, most probably, from some supposed similarity of the animal which produces them, in appearance and habits, to the otter, the Spanish name for which is *nutria*. Indeed, Molina speaks of the *coyoo* as a species of water rat, of the size and colour of the otter.

Nutria fur is largely used in the hat manufacture; and has become, within the last 15 or 20 years, an article of very considerable commercial importance. The imports fluctuate considerably. In 1823, they amounted to 1,570,103 skins; but they have not in any other year been much more than half that number. In 1826, they were only 60,871. In 1831 and 1832, the imports were, at an average, 338,280 skins a year. Those entered for home consumption pay a duty of 1½d. a skin. They are principally brought from the Rio de la Plata. Nutria skins are very extensively used on the Continent. Geoffroy mentions\*, that in certain years, a single French furrier (M. Bechem), has received from 15,000 to 20,000 skins. — (See FUR TRADE.)

The *coyoo* or *quoia* is a native of South America, very common in the provinces of Chili, Buenos Ayres, and Tucuman, but more rare in Paraguay. In size it is less than the beaver, which it resembles in many points. The head is large and depressed, the ears small and rounded, the neck stout and short, the muzzle sharper than that of the beaver, and the whiskers very long and stiff. There are, as in the beaver, 2 incisor teeth, and 8 molar, above and below — 20 teeth in all. The limbs are short. The fore feet have each 5 fingers not webbed, the thumb being very small; the hind feet have the same number of toes; the great toe and 3 next toes being joined by a web which extends to their ends, and the little toe being free, but edged with a membrane on its inner side. The nails are compressed, long, crooked, and sharp. The tail, unlike that of the beaver, is long, round, and hairy; but the hairs are not numerous, and permit the scaly texture of the skin in this part to be seen. The back is of a brownish red, which becomes redder on the flanks: the belly is of a dirty red. The edges of the lips and extremity of the muzzle are white.

Like the beaver, the *coyoo* is furnished with 2 kinds of fur; viz. the long ruddy hair which gives the tone of colour, and the brownish ash-coloured fur at its base, which, like the down of the beaver, is of much importance in hat making, and the cause of the animal's commercial value.

The habits of the *coyoo* are much like those of most of the other aquatic rodent animals. Its principal food, in a state of nature, is vegetable. It affects the neighbourhood of water, swims perfectly well, and burrows in the ground. The female brings forth from 5 to 7 at a time; and the young always accompany her.

The *coyoo* is easily domesticated, and its manners in captivity are very mild.

\* We are indebted for this account of *nutria* — the first, we believe, that appeared in any English work, to W. J. Broderip, Esq. F.R.S., &c.

NUX VOMICA (Fr. *Noix Vomique*; Hind. *Kaachla*), the fruit of a species of *strychnos*, growing in various places in the East Indies. The fruit is about the size of an orange, covered with a smooth crustaceous yellow bark, and filled with a fleshy pulp, in which are imbedded several orbicular flattened seeds, about ⅔ of an inch in diameter. Nux vomica is inodorous, and has a very bitter, acrid taste, which remains long on the palate. It is known as a very virulent poison. A suspicion has, however, been entertained, that it has been used in porter breweries; but its introduction into them is prohibited under heavy penalties. — (*Thomson's Dispensatory*, &c.)

\* *Annales du Muséum*, vol. vi. p. 82. The figure given is, generally speaking, good; but the tail is too hairy, and contradicts the description.

## O.

**OAK** (Ger. *Eiche*; Du. *Eik*; Da. *Eeg*; Sw. *Ek*; Fr. *Chêne*; It. *Quercia*; Sp. *Roble, Carballo*; Port. *Roble, Carbalho*; Rus. *Dub*; Pol. *Dab*; Lat. *Quercus*; Arab. *Baalut*). There are several varieties of this valuable tree; but the common English oak (*Quercus robur*) claims precedence of every other. The oak timber imported from America is very inferior to that of this country: the oak from the central parts of Europe is also inferior, especially in compactness and resistance of cleavage. The knotty oak of England, the "unwedgeable and gnarled oak," as Shakspeare called it, when cut down at a proper age (from 50 to 70 years), is the best timber known. Some timber is harder, some more difficult to rend, and some less capable of being broken across; but none contains all the three qualities in so great and equal proportions; and thus, for at once supporting a weight, resisting a strain, and not splintering by a cannon shot, the timber of the oak is superior to every other.

A fine oak is one of the most picturesque of trees: it conveys to the mind associations of strength and duration, which are very impressive. The oak stands up against the blast, and does not take, like other trees, a twisted form from the action of the winds. Except the cedar of Lebanon, no tree is so remarkable for the stoutness of its limbs; they do not exactly spring from the trunk, but divide from it; and thus it is sometimes difficult to know which is stem and which is branch. The twisted branches of the oak, too, add greatly to its beauty; and the horizontal direction of its boughs, spreading over a large surface, completes the idea of its sovereignty over all the trees of the forest. Even a decayed oak,

" ————— dry and dead,  
Still clad with reliques of its trophies old,  
Lifting to heaven its aged, hoary head,  
Whose foot on earth has got but feeble hold,"

— even such a tree as Spenser has thus described, is strikingly beautiful; decay in this case looks pleasing. To such an oak Lucan compared Pompey in his decline: —

" Qualis frugifero quercus sublimis in agro  
Exuvias veteres populi, sacrataque gestans  
Dona ducum; nec jam validis radicibus hærens,  
Pondere fixa suo est; nudosque per æera ramos  
Effundens, trunco, non frondibus, efficit umbram.  
At quamvis primo nutet casura sub Euro,  
Tot circum silvæ firmo se robore tollant,  
Sola tamen colitur." — (Lib. i. lin. 136.)

The oak is raised from acorns, sown either where the oak is to stand, or in a nursery whence the young trees are transplanted.

The colour of oak wood is a fine brown, and is familiar to every one: it is of different shades; that inclined to red is the most inferior kind of wood. The larger transverse septa are in general very distinct, producing beautiful flowers when cut obliquely. Where the septa are small, and not very distinct, the wood is much the strongest. The texture is alternately compact and porous; the compact part of the annual ring being of the darkest colour, and in irregular dots, surrounded by open pores, producing beautiful dark veins in some kinds, particularly pollard oaks. Oak timber has a particular smell, and the taste is slightly astringent. It contains gallic acid, and is blackened by contact with iron when it is damp. The young wood of English oak is very tough, often cross-grained, and difficult to work. Foreign wood, and that of old trees, is more brittle and workable. Oak warps and twists much in drying; and, in seasoning, shrinks about  $\frac{1}{3}$ d of its width.

Oak of a good quality is more durable than any other wood that attains a like size. Vitruvius says it is of eternal duration when driven into the earth: it is extremely durable in water; and in a dry state it has been known to last nearly 1,000 years. The more compact it is, and the smaller the pores are, the longer it will last; but the open, porous, and foxy coloured oak, which grows in Lincolnshire and some other places, is not near so durable.

Besides the common British oak (*Quercus robur*), the sessile-fruited bay oak (*Quercus sessiliflora*) is pretty abundant in several parts of England, particularly in the north. The wood of this species is said by Tredgold to be darker, heavier, harder, and more elastic than the common oak; tough, and difficult to work; and very subject to warp and split in seasoning. Mr. Tredgold seems disposed to regard this species as superior to the common oak for ship building. But other, and also very high authorities, are opposed to him on this point; and, on the whole, we should think that it is sufficiently well established, that for all the great practical purposes to which oak timber is applied, and especially for ship building, the wood of the common oak deserves to be preferred to every other species. A well-informed writer in the *Quarterly Review* has the following remarks on the point in question: —

" We may here notice a fact long known to botanists, but of which our planters and purveyors of timber appear to have had no suspicion, — that there are two distinct species of oak in England — the *Quercus robur*, and the *Quercus sessiliflora*; the former of which affords a close-grained, firm, solid timber, rarely subject to rot; the other more loose and sappy, very liable to rot, and not half so durable. This difference was noted so early as the time of Ray; and Martyn in his *Flora Rustica*, and Sir James Smith in his *Flora Britannica*, have added their testimonies to the fact. The second species is supposed to have been introduced some 2 or 3 ages ago, from the Continent, where the oaks are chiefly of this latter species, especially in the German forests, the timber of which is known to be very worthless. But what is of more importance to us is, that *de facto* the imposture abounds, and is propagated vigorously, in the New Forest and other parts of Hampshire; in Norfolk, and the northern counties, and about London; and there is but too much reason to believe that the numerous complaints that were heard about our ships being infected with what was called, improperly enough, *dry rot*, were owing to the introduction of this species of oak into the naval dock-yards, where, we understand, the distinction was not even suspected. It may thus be discriminated from the true old English oak; — The acorn stalks of the *robur* are long, and its leaves short; whereas the *sessiliflora* has the acorn stalks short, and the leaves long; the acorns of the former grow singly, or seldom two on the same footstalk; those of the latter, in clusters of 2 or 3 close to the stem of the branch. We believe the Russian ships of the Baltic, that are not of larch or fir, are built of this species of oak; but if this were not the case, their exposure on the stocks, without cover, to the heat of summer, which, though short, is excessive, and the rifts and chinks which fill up with ice and snow in the long winter, are enough to destroy the stoutest oak, and quite sufficient to account for their short-lived duration."

A great deal of inquiry and discussion has taken place at different periods as to the supply and consumption of oak timber; but the results have not been very satisfactory. In a *Report of the Commissioners of Land Revenue*, printed in 1812, it is stated that, taking the tonnage of the navy in 1806 at 776,087 tons, it would require, at 1½ load to a ton, 1,164,085 loads to build such a navy; and supposing the average duration of a ship to be 14 years, the annual quantity of timber required would be 83,147 loads, exclusive of repairs, which they calculate would be about 27,000 loads; making the whole about 110,000 loads; of which, however, the commissioners reckon may be furnished 21,341 loads as the annual average of the prizes; and of the remaining 88,639 loads, they think it not unreasonable to calculate on 28,659 from other sources than British oak. " This," they observe, " leaves 60,000 loads of such oak, as the quantity which would be sufficient annually to support, at its present unexampled magnitude, the whole British navy, including ships of war of all sorts; but which may be taken as equivalent together to 20 74-gun ships, each of which, one with another, contains about 2,000 tons, or would require, at the rate of 1½ load to the ton, 3,000 loads; making just 60,000 loads for 20 such ships."

Now, it has been supposed that not more than 40 oak trees can stand on an acre of ground, so as to grow to a full size fit for ships of the line, or to contain each 1½ load of timber: 50 acres, therefore, would be required to produce a sufficient quantity of timber to build a 74-gun ship, and 1,000 acres for 20 such ships; and as the oak requires at least 100 years to arrive at maturity, 100,000 acres would be required to keep up a successive supply, for maintaining a navy of 700,000 or 800,000 tons. The commissioners further observe, that as there are 20,000,000 acres of waste lands in the kingdom, a 200th part set aside for planting would at once furnish the whole quantity wanted for the use of the navy.

According to Mr. Barrow, this calculation is exaggerated by about a half. " In the first place," says he, " it supposed a state of perpetual war, during which the tonnage of the whole navy is considered as more than double of what it now actually is: and, in the second place, it reckons the average duration of the navy at 14 years only; which, from the improvements that have taken place in the construction and preservation of ships of war, with the resources of teak ships built in India, we should not hesitate in assuming at an average of twice that number of years; and if so, the quantity of oak required for the navy will be nothing like that which the commissioners have stated."

" The fact, however, is certain, that long before the conclusion of the late war, a scarcity began to be felt, especially of the larger kind of timber fit for ships of the line; and so great was this scarcity, that if Sir R. Seppings had not contrived the means of substituting straight timber for that of different forms and dimensions, before considered to be indispensable, the building of new ships must entirely have ceased. " If, however, the growth of oak for ship timber was greatly diminished during the war, so as to threaten an alarming scarcity, there is little doubt that, from the increased attention paid by individuals to their young plantations, and their great extension, as well as from the measure of allotting off portions of the royal forests to those who had claims on them, and inclosing the remainder for the use of the public, this country will, in future times, be fully adequate to the production of oak timber equal to the demand for the naval and mercantile marine." — (*Suppl. Ency. Brit. art. Navy.*)

The bark of the oak tree is very valuable. It is preferred to all other substances for the purpose of tanning, and brings a high price. — (See BARK.)

The foreign oak timber imported into Great Britain is principally derived from Canada and Prussia. The latter is the most valuable — its price being to the former in the proportion of about 9 to 6; that is, if a load of Prussian oak timber brought 9*l.*, a load of Canada ditto would not bring more than about 6*l.* The quantity imported varies; but may, at an average, amount to about 10,000 loads, of 50 cubic feet each; the greater part from Quebec. Oak plank is almost wholly imported from Prussia. The quantities imported during the 6 years ending the 5th of January, 1833, were —

| Years. | Loads. | Years. | Loads. | Years. | Loads. |
|--------|--------|--------|--------|--------|--------|
| 1827   | 5,470  | 1829   | 1,434  | 1831   | 2,525  |
| 1828   | 2,449  | 1830   | 1,542  | 1832   | 1,789  |

For further details with respect to the importation of oak, its price, duty on, &c., see WOOD — See, also, *Tredgold's Principles of Carpentry*; *art. Navy, Supplement to Ency. Brit.*; the very interesting work on *Timber Trees and Fruits*, in the *Library of Entertaining Knowledge*; *Rees's Cyclopadia*, &c.

OATS (Ger. *Hafer*; Du. *Haver*; Da. *Havre*; Sw. *Hafre*; Fr. *Avoine*; It. *Vena*, *Avena*; Sp. *Avena*; Port. *Avea*; Russ. *Oves*; Pol. *Owies*), a species of grain, the *Avena sativa* of botanists. There are innumerable varieties of this grain, some of which are said to be indigenous to Britain. It is the hardiest of all the cereal grasses, growing luxuriantly in cold northern climates, and in coarse mountainous districts, where neither wheat nor barley can be advantageously cultivated. It thrives best, and is, indeed, chiefly raised, in latitudes north of Paris; being but little known in the south of France, Spain, or Portugal. It is, however, cultivated in Bengal, so low as the 25th degree of latitude, and, it is said, with considerable success. In Scotland, where it has long formed a principal part of the food of the people, it is far more generally cultivated than any other species of grain. It is also very extensively cultivated in Ireland. In England it is grown principally in the northern counties, and in the fens of Lincoln, Huntingdon, Cambridge, and Norfolk; but the oats of Northumberland and Scotland are reckoned superior to those raised farther south.

There are 4 leading varieties of this grain cultivated in England, viz. white, black, grey, and brown or red oats. The sub-varieties of the white are numerous. That denominated the potato oat is at present almost the only one raised on land in a good state of cultivation in the north of England and the south of Scotland, and usually brings a higher price in the London market than any other variety. It was accidentally discovered growing in a field of potatoes in Cumberland in 1788; and from the produce of that single stalk has been produced the stock now in general cultivation. Black and grey oats are little cultivated, except in some places in the north of Scotland. The red oat is chiefly confined to Cheshire, Derbyshire, and Staffordshire. A species of naked oats, provincially called *pillur*, is raised in Cornwall.—(*Loudon's Encyc. of Agriculture; Brown's Rural Economy*, vol. ii. pp. 47—52.)

In 1765, Mr. Charles Smith estimated the number of consumers of oats in England and Wales at 623,000.—(*Tracts on the Corn Trade*, 2d edit. p.140.), but at present we believe they are very considerably fewer. The feeding of horses has at all times occasioned the greatest consumption of oats in this part of the kingdom; and as the number of horses kept for business and pleasure has been vastly increased within the last 30 or 40 years, the culture of oats has been considerably extended, notwithstanding the increasing imports from Ireland. Perhaps the produce of no species of grain varies more than that of oats. Where the ground is foul and exhausted, not more than 20 bushels an acre are obtained; but on rich soils, well managed, 64, 72, and sometimes 80 bushels and upwards have been reaped. Oats yield, at an average, 8 lbs. meal for 14 lbs. corn.

For information as to the laws regulating the importation and exportation of oats, their prices, the quantities imported and exported, &c., see **CORN LAWS AND CORN TRADE.**

**ODESSA**, a flourishing sea-port of Southern Russia, on the north-west coast of the Black Sea, between the rivers Dniester and Bug, in lat. 46° 28' 54" N., lon. 30° 43' 22" E. Population said to amount to 40,000. The foundations of Odessa were laid so lately as 1792, by order of the Empress Catharine, after the peace of Jassy. It was intended to serve as an *entrepôt* for the commerce of the Russian dominions on the Black Sea and the Sea of Azoff, and has in a great measure answered the expectations of its founders. By an Imperial ukase, dated the 7th of February, 1817, it was declared a free port, and the inhabitants exempted from taxation for 30 years; since which period its increase has been extremely rapid. The bay or roadstead of Odessa is extensive, the water deep, and the anchorage good, the bottom being fine sand and gravel; it is, however, exposed to the south-easterly wind, which renders it less safe in winter. The port, which is artificial, being formed by 2 moles, one of which projects to a considerable distance into the sea, is calculated to contain about 300 ships. It has also the advantage of deep water. There is a convenient lazaretto, on the model of that of Marseilles. The want of fresh water used to be the greatest disadvantage under which the inhabitants laboured; but this has been obviated by the construction of a canal which conveys an abundant supply of water into the town. There are no trees in the vicinity, which has, in consequence, a bleak and arid appearance.

**Light-houses.**—A light-house has been erected on Cape Fontan, about 6½ nautical miles S. of Odessa. The light, which formerly revolved, is now fixed, and is about 203 (Russian) feet above the level of the sea. At the distance of 11 leagues E.S.E. ½ S. from Odessa, on the north end of the long, narrow, low island of Pendra, a light-house has been erected, of great use to ships approaching Odessa from the S. or W. The lantern, elevated 92½ (Russian) feet above the level of the sea, was lighted, for the first time, on the 15th of September, 1827. It consists of 3 reflecting lights, suspended in the form of a triangle, revolving in the space of 4 minutes, so that each lamp arrives at its maximum of brilliancy after an interval of 1 min. 20 sec. Being also of a red colour, this light is readily distinguished from Fontan light, and the other lights in the Black Sea. In foggy weather, a bell is kept ringing.—(*Coutier sur les Phares*, 2d ed.; *Norrie's Sailing Directions for the Mediterranean and Black Seas*, &c.)

For several years after Odessa was founded, wheat formed almost the only, as it still forms the principal, article of export.—(For details with respect to the corn trade of Odessa, see *antè*, p. 432.) But large quantities of tallow, wool, iron, hides, copper, wax, caviare, potash, salt beef, furs, cordage, sail-cloth, tar, butter, isinglass, &c. are now exported. The tallow of Odessa is of a bright yellow straw colour, and is said to be superior to that of Petersburg. The following account of the quantity (since 1824) and value of the tallow exported from Odessa from 1814, sets the rapid increase in the trade in this article, and its importance, in a very striking point of view:—

| Years. | Value of Tallow exported. | Years. | Value of Tallow exported. | Quantity.     | Years. | Value of Tallow exported. | Quantity.     |
|--------|---------------------------|--------|---------------------------|---------------|--------|---------------------------|---------------|
|        | <i>Roubles.</i>           |        | <i>Roubles.</i>           | <i>Poods.</i> |        | <i>Roubles.</i>           | <i>Poods.</i> |
| 1814   | 84,534                    | 1820   | 1,137,401                 |               | 1826   | 2,800,000                 | 331,872       |
| 1815   | 72,175                    | 1821   | 1,591,549                 |               | 1827   | - - -                     | 135,425       |
| 1816   | 103,397                   | 1822   | 991,323                   |               | 1828   | - - -                     | 13,883        |
| 1817   | 96,318                    | 1823   | 2,124,782                 |               | 1829   | - - -                     | 160,024       |
| 1818   | 185,110                   | 1824   | 1,674,566                 | 276,118       | 1830   | - - -                     | 245,638       |
| 1819   | 368,792                   | 1825   | 2,687,334                 | 316,157       | 1831   | - - -                     | 287,240       |

This Table, says the *Journal d'Odessa* (1827, No. 16.), serves to give some idea of the means which the south of Russia possesses for carrying on commerce. The exports of

tallow have increased twenty-fold in 10 years; materially augmenting the value of the herds, and enriching vast countries, which must have remained comparatively poor, had not this outlet been found for their produce.

The increase in the exportation of wool is also very considerable. Within the last 20 years, the Merino breed of sheep has been extensively introduced into the governments of Taurida, Cherson, and Ekaterinoslov; so that there has been not only a great increase, in the quantity, but also a very decided improvement in the quality, of the wool exported.

The iron shipped at Odessa is principally brought from Siberia, partly by the Volga, and partly by the Don to Taganrog, whence it is conveyed to Odessa. A good deal of it is in a manufactured state, from the founderies at Tula. Timber for ship building, and pitch and tar, are also brought from Taganrog. In fact, from its not being at the mouth of any great river, nor having any considerable manufactures, Odessa is not a port for the exportation of what may be termed articles of native growth: but in consequence of its convenient situation, and the privileges which it enjoys, it is, as already remarked, the emporium where most of the produce of Southern Russia destined for foreign countries is collected previously to its being exported, and where most of the foreign articles required for home consumption are primarily imported. The shallowness of the water at Taganrog, and the short period during which the Sea of Azoff is navigable, hinder foreign vessels of considerable burden from visiting her port, and occasion the shipment of a considerable part of the produce brought down the Volga and the Don in lighters to Caffa and Odessa, particularly the latter. A good deal is, however, exported direct from Taganrog to the Mediterranean. All the products brought down the Dniester, the Bug, and the Dnieper, are exported from Odessa; but owing to the difficult navigation of the first and last mentioned rivers, most part of the corn brought to Odessa from Podolia, the Ukraine, &c. is conveyed in wagons drawn by oxen. — (See *ante*, p. 432.)

The principal trade of Odessa is with Constantinople, Smyrna, and other towns in the Levant, Naples, Leghorn, Genoa, Marseilles, &c. "It is generally stated," says Mr. Jacob (*Memoir on the Trade of the Black Sea*, in the *Appendix to the 8vo edition of Treats on the Corn Trade*), "that the supply of Constantinople requires annually 100,000 quarters of Black Sea wheat. The Greek islands scarcely, on the average of years, produce sufficient wheat for their own consumption; and, in some years, require a large supply, which is furnished partly from the neighbouring continent, and partly from the Black Sea.

"The Asiatic coasts of the Turkish empire, especially in Anatolia, are nearly in the same predicament. At times, the market of Smyrna is very favourable for the sale of the corn of Southern Russia. The islands of Malta and Gozo produce only about half as much corn as the 120,000 inhabitants require.

"Sicily, though it has greatly declined from its ancient productiveness, has still a quantity of grain to spare for the less fruitful parts of Italy in most years; and its wheat enters into competition with that of the Black Sea, in the ports of Naples, Genoa, and Leghorn.

"There are few years in which Tuscany grows a sufficiency of wheat; and its chief port, Leghorn, being one of those in which ships can unload their cargoes of corn, without being detained to perform quarantine, has been at all times a place of deposit for the wheat of the Black Sea. A market at some price may always be found there, as the capitalists are disposed to purchase; relying on the uncertain productiveness of some adjacent country, in which they may realise a profit at no great distance.

"Genoa, like Leghorn, is a port where wheat can be unloaded within the bounds of the lazaretto. The country around it yields but little wheat; and at some periods, it enjoys a trade in that article even as far as Switzerland. This internal demand, and the chance of advantageous re-exportation, induces much trade in corn. There is said to be seldom less than 100,000 quarters in store at the two ports of Genoa and Leghorn; and at some periods, a far greater quantity.

"Nice, though not having the same advantageous quarantine regulations, and, consequently, not being a *depot* for corn beyond its own demand, from the sterile soil that surrounds it, requires every year a large importation of wheat. That of Sicily and Odessa create a competition in its port; and the government draws a revenue, by imposing a heavy duty on both.

"Though the corn laws of France have kept the ports closed against the introduction of foreign corn for domestic use, yet it is allowed to be landed for re-exportation. From the frequent local and partial scarcities which occur on the eastern coast of Spain, at which periods wheat is allowed to be lawfully imported, and, it is said, from the facility of its introduction by contraband, when not legally allowed, Marseilles has been a great *depot* for the wheat of the Black Sea.

"From thence, as also from Gibraltar, where there is generally some in store, it can easily be transported to Spain, to Sardinia, to Corsica, to Tunis, to Tripoli, or wherever scarcity has created a beneficial market.

"The coasts of Barbary, though often having a surplus of wheat, much of which occasionally assists to feed Portugal, in some seasons have been affected with most deficient harvests. This was recently the case in a remarkable degree. Tripoli and Tunis experienced, in the year 1820, a harvest most miserably short, and were supplied from other countries."

But exclusive of wheat, the other articles mentioned as being exported from Odessa, find their way to the different markets in the Mediterranean. Those shipped for Turkey are iron, tallow, sail-cloth, cordage, anchors for ships of war, butter, &c. The exports to Italy and other European countries are similar.

The importation of all foreign articles into the Russian dominions on the Black Sea and the Sea of Azoff is confined to Odessa, Theodosia or Caffa, and Taganrog. The import trade is, however, of inferior importance when compared with the export trade. The principal articles are sugar and coffee, dye woods, wine and brandy, cotton stuffs, spices, cutlery, oranges and lemons, lemon juice, oil, tin and tin plates, dried fruits, paper, silk, specie, &c.

The previous statements, for which we are indebted to Messrs. Moberly and Simpson, show the effect of the war between Russia and Turkey on the trade of Odessa; and but has again resumed its former activity; and will, doubtless, continue progressively to increase with the improvement of the vast countries of which it is the principal entrepôt. Several American merchantmen appeared, for the first time, in the Black Sea, in 1830.

A Tribunal of Commerce was established at Odessa in 1824, the jurisdiction of which extends over all disputes connected with trade. There is no appeal from its decision, except to the senate. Its institution is said to have been productive of considerable advantage.

There are 12 sworn brokers, approved and licensed by the Tribunal of Commerce, who have deputies appointed by themselves. They receive  $\frac{1}{2}$  per cent. from each party as commission. They are bound to register the various transactions in which they are employed.

A discount or loan bank has been established at Odessa, which discounts bills, not having more than 9 months to run, at the rate of 6 per cent. interest; and makes advances upon the security of goods. Two institutions for marine insurance, and 1 for fire insurance, have been established within the last 4 or 5 years.

Most articles of provision are very cheap. Beef may be bought for  $\frac{1}{4}$ d. or 1d. per lb.; a quarter of lamb for 5d.; and poultry at proportionally low prices. Fish costs almost nothing, and is excellent. Water is an expensive article; and fire-wood is for the most part scarce and dear. Latterly, however, he inhabitants have begun to supply themselves with coal from Bakhmoute, in the government of Ekaterinoslov. A good deal of English coal has been taken to Odessa as ballast, and sold at a fair price — (Morton's Travels in Russia, p. 262. &c.)

*Monies, Weights, and Measures*, same as at Petersburg; which see.

\* Maltese and Ionians included.

Odessa has a considerable and increasing trade with Redout-kalé, at the mouth of the Phasis, and with Trebisond and several ports on the south coast of the Black Sea. Georgian and Armenian merchants are already considerable purchasers at the Leipsic and other German fairs; and civilisation is beginning to strike its roots throughout all the extensive countries between the Black Sea and the Caspian. It is probable that, at no very remote period, the Phasis will be frequented by British ships; and that our merchants, without any enchantress to aid them, and depending only on the superior cheapness and excellence of their goods, will be hospitably received in the ancient Colchis, and bear away a richer prize than fell to the lot of Jason and his Argonauts.

Account of Imports at Redout-kalé from Odessa, from 1825 to 1830, both inclusive.

For some further details as to the trade of the Black Sea, see the article SINOPÉ.

*Epochs in the Trade of the Black Sea. Depth of Water. Difficulty of Navigation, &c.* — The trade of the Black or Euxine Sea was of great importance in antiquity. The shores of the Crimea, or Taurica Chersonesus, were settled by Milesian adventurers, who founded Panticapæum and Theodosia. The exports thence to Athens were nearly the same as those which are now sent from Odessa and Taganrog to Constantinople, Leghorn, &c.; viz. corn, timber, and naval stores, leather, wax, honey, salt fish, caviare, &c., with great numbers of slaves, the best and most serviceable that were anywhere to be met with. The Athenians set a very high value upon this trade, which supplied them annually with about 400,000 medimni of corn; and to preserve it, they carefully cultivated the alliance of the Thracian princes, and kept a garrison at Sestus, on the Hellespont. — (See the authorities in *Anacharsis's Travels*, c. 55.; and in *Clarke's Connexion of the Saxon and English Coins*, pp. 54—64.) During the middle ages, the Genoese acquired an ascendancy on this sea, and laboured with pretty considerable success to monopolise its trade. Their principal establishment was at Caffa, which was the centre of a considerable commerce. But the conquest of Constantinople by the Turks, in 1453, was soon after followed by the conquest of Caffa, and the total exclusion of European vessels from the Black Sea, which became in a great measure unknown. This exclusion was maintained for about 300 years, or till it was opened to the ships of Russia by the treaty of Kainardgi in 1774. The Austrians obtained a similar equality of privileges in 1784; and British, French, &c. ships were admitted by the treaty of Amiens. There were, however, some restraints still kept up; but these have been abolished by the late treaty between the Turks and Russians in 1829; and, for commercial purposes at least, the Black Sea is now as free as the Mediterranean.

Notwithstanding the number of English and other European ships that have visited this sea within the last 20 years, its geography is still very imperfectly known. A notion seems to have been long prevalent, that it was not only stormy, but also infested with numerous shoals. Polybius, indeed, contends, that, owing to the vast quantities of alluvial deposit brought down by the Danube and other large rivers that fall into the Black Sea, it was gradually filling up, and would become, at no very remote period, an immense morass! Dr. Clarke seems to have espoused the same theory. But, how probable soever it may appear, extremely little progress has hitherto been made towards the consummation described by Polybius. Instead of being shallow, the water is for the most part remarkably deep; with a bottom, where soundings have been obtained, of gravel, sand, and shells. A strong current sets from the Black Sea, through the Bosphorus, or Canal of Constantinople, into the Sea of Marmara, and from the latter through the Dardanelles, which it requires a fresh breeze to stem. This current is said to be sensibly felt in the Black Sea, 10 or 12 miles from the Bosphorus; and it may probably carry off some of the mud brought down by the rivers. — (See *Tournefort's Voyage du Levant*, Lett. 15, 16.; Art. 9. in No. I. of the *Journal of the Geographical Society*; *Macgill's Travels in Turkey*, vol. i. p. 245., &c.)

The navigation of the Black Sea has been represented, by most modern and all ancient writers, as exceedingly dangerous. We believe, however, that there is a good deal of exaggeration in the greater number of the statements on this subject. It is said to be particularly subject to dense fogs, and to currents; but the former are prevalent only at particular seasons, and the influence of the latter is not greater than in many other seas which are not reputed dangerous. Tournefort, one of the best and most accurate of

and Simpson, Odessa; but it progressively to principal entrepôt. Sea, in 1830. extends over all its institution to have deputies they are bound to having more than security of goods. within the last b.; a quarter of and is excellent. tterly, however, government of d at a fair price

travellers, considers the navigation of the Black Sea as safe as that of the Mediterranean; — “*Il n'a rien de voir, pour ainsi dire, que le nom: les vents n'y soufflent pas avec plus de furie, et les orages ne sont guères plus fréquens que sur les autres mers.*” — (Tome ii. p. 164. 4to ed.) Dr. Clarke (*Travels*, vol. ii. p. 387. 8vo ed.) affects to doubt this; but he assigns no grounds for his opinion; and who would think of putting his authority in competition with that of Tournefort? The truth is, that any sea would be dangerous to the Greek and Turkish pilots, by whom the Black Sea is principally navigated. If the progress of navigation were to be estimated by its state amongst them, we should have to conclude that it had been stationary from the era of the Argonauts. They seldom venture to get out of sight of the coasts; they have neither charts nor quadrants; and hardly even know that one of the points of the needle turns towards the North! — (*Tournefort, in loc. cit.*) There is not, certainly, much room for wonder at shipwrecks being frequent among vessels so navigated. On leaving the Black Sea, the greatest difficulty is in making the Bosphorus. “The mountains,” says Mr. Macgill, “are all so much alike, that it is difficult to determine which of them is at the entrance, until you are within a very few miles of the coast: then, with a fair wind, you are on a lee shore with a lee current; and if you make a mistake, destruction is almost inevitable. The Turks have two light-houses at the entrance; but unless you see them before sunset, they are of little use: in the forests, on its borders, great quantities of charcoal are made, and the lights from it bewilder, and often mislead, the unhappy mariner.” — (Vol. i. p. 245.)

From the vast quantity of fresh water poured into the Black Sea, the saline particles are so much diluted, that, with a slight frost, the surface becomes covered with ice; hence, during a great part of the year, hardly any navigation is attempted. The vessels that resort to Odessa seldom arrive at that port before the latter end of May; and those whose cargoes are not completed before the end of October, more frequently wait the return of spring, than adventure to encounter the dangers of an autumnal or winter voyage.

At Taganrog the frost commences earlier, and continues longer, than at Odessa; so that there are scarcely more than 4 or 5 months in the year, during which the Sea of Azoff can be safely navigated.

**OIL.** (Fr. *Huile*; Ger. *Oel*; It. *Olio*; Lat. *Oleum*; Rus. *Maslo*; Sp. *Acite*.) The term *oil* is applied to designate a number of unctuous liquors, which, when dropped upon paper, sink into it and make it seem semi-transparent, or give it what is called a greasy stain. These bodies are very numerous, and have been in common use from time immemorial. Chemists have divided them into two classes; namely, *volatile* and *fixed* oils. We borrow from Dr. Thomas Thomson the following statement with respect to these bodies: —

1. **VOLATILE OILS**, called also *essential oils*, are distinguished by the following properties: — 1. Liquid, often almost as liquid as water, sometimes viscid; 2. Very combustible; 3. An acrid taste and a strong fragrant odour; 4. Volatilised at a temperature not higher than 212°; 5. Soluble in alcohol, and imperfectly in water; 6. Evaporate without leaving any stain on paper.

By this last test it is easy to discover whether they have been adulterated with any of the fixed oils. Let a drop of the volatile oil fall upon a sheet of writing paper, and then apply a gentle heat to it: if it evaporates without leaving any stain upon the paper, the oil is pure; but if it leaves a stain upon the paper, it has been contaminated with some fixed oil or other.

Volatile oils are almost all obtained from vegetables, and they exist in every part of plants, — the root, the bark, the wood, the leaves, the flower, and even the fruit; though they are never found in the substance of the cotyledons; whereas the fixed oils, on the contrary, are almost always contained in these bodies.

When the volatile oils are contained in great abundance in plants, they are sometimes obtained by simple expression. This is the case with oil of oranges, of lemons, and bergamotte; but in general they can only be obtained by distillation. The part of the plant containing the oil is put into a still with a quantity of water, which is distilled off by the application of a moderate heat. The oil comes over along with the water, and swims upon its surface in the receiver. By this process are obtained the oil of peppermint, thyme, lavender, and a great many others, which are prepared and employed by the perfumer: others are procured by the distillation of resinous bodies. This is the case in particular with oil of turpentine, which is obtained by distilling a kind of resinous juice, called turpentine, that exudes from the juniper.

Volatile oils are exceedingly numerous. They have been long known; but as their use in chemistry is but limited, they have not, hitherto, been subjected to an accurate chemical investigation. They differ greatly in their properties from each other; but it is impossible at present to give a detailed account of each.

1. The greater number of volatile oils are *liquid*; many, indeed, are as limpid as water, and have none of that appearance which we usually consider oily. This is the case with the following; namely, oil of turpentine, oranges, lemons, bergamotte, roses. — Others have the oily viscosity. It varies in them in all degrees. This is the case with the oils of mace, cardamom, sassafras, cloves, cinnamon. — Others have the property of becoming solid. This is the case with the oils of parsley, fennel, aniseed, balsam. — Others crystallise by slow evaporation. This is the case with oil of thyme, peppermint, marjoram. — The oil of nutmegs has usually the consistence of butter. This is the case also with the oils of hops and of pepper.

2. The colour of the volatile oils is as various as their other properties. A great number are limpid and colourless; as oil of turpentine, lavender, rosemary, sassafras, some are yellow; as spike, bergamotte; some are brown; as thyme, savory, wormwood; others blue; as camomile, motherwort; others green; as milfoil, pepper, hops, parsley, wormwood, enjuput, juniper, sage, valerian; others, though at first colourless, become yellow or brown by age; as cloves, cinnamon, sassafras.

3. The odours are so various as to defy all description. It is sufficient to say, that all the fragrance of the vegetable kingdom resides in volatile oils. Their taste is acrid, hot, and exceedingly unpleasant.

4. Their specific gravity varies very considerably, not only in different oils, but even in the same oil in different circumstances. The following are the specific gravities of several of the volatile oils, as ascertained by Dr. Lewis:—

|                  |       |                 |      |
|------------------|-------|-----------------|------|
| Oil of Sassafras | 1.991 | Oil of Tansy    | .916 |
| Cinnamon         | 1.935 | Caraway seeds   | .940 |
| Cloves           | 1.934 | Origanum        | .940 |
| Fennel           | .907  | Spike           | .936 |
| Dill             | .991  | Rosemary        | .931 |
| Pennyroyal       | .978  | Juniper berries | .911 |
| Cammin           | .973  | Oranges         | .888 |
| Mint             | .975  | Turpentine      | .792 |
| Nutmegs          | .918  |                 |      |

When the volatile oils are heated in the open air, they evaporate readily, and without alteration diffuse their peculiar odours all around; but there is a considerable difference between the different oils in this respect. When distilled in close vessels, they do not so readily assume the form of vapour. Hence they lose their odour, become darker in colour, and are partly decomposed. Oils do not seem very susceptible of assuming the gaseous form, unless some other substance, as water, be present.

II. Fixed Oils are distinguished by the following characters:—1. Liquid, or easily become so when exposed to a gentle heat; 2. An unctuous feel; 3. Very combustible; 4. A mild taste; 5. Boiling point not under 400°; 6. Insoluble in water, and nearly so in alcohol; 7. Leave a greasy stain upon paper.

These oils, which are called fat or expressed oils, are numerous, and are obtained partly from animals and partly from vegetables, by simple expression. As instances, may be mentioned whale oil or train oil, obtained from the blubber of the whale and from cod; olive oil, obtained from the fruit of the olive; linseed oil and almond oil, obtained from linseed and almond kernels. Fixed oils may also be extracted from poppy seeds, hemp seeds, beech mast, and many other vegetable substances.

All these oils differ from each other in several particulars, but have also many particulars in common.

1. Fixed oil is usually a liquid with a certain degree of viscosity, adhering to the sides of the glass vessels in which it is contained, and forming streaks. It is never perfectly transparent; has always a certain degree of colour, most usually yellowish or greenish; its taste is sweet, or nearly insipid. When fresh, it has little or no smell.

There exist also in the vegetable kingdom a considerable number of bodies which, at the ordinary temperature of the atmosphere, are solid, and have hitherto been considered as fixed oils. Palm oil may be mentioned as an example. The various substances used in India and Africa as substitutes for butter, and as unguents, may likewise be mentioned.

2. All the fixed oils hitherto examined are lighter than water: but they differ greatly from one another in specific gravity. The same difference is observable in different samples of the same oil. The following Table contains the specific gravity of such oils as have been examined:—

|             |              |                   |      |
|-------------|--------------|-------------------|------|
| Oil of Palm | .968         | Oil of Beech nuts | .925 |
| Hazel nuts  | .911         | Ben               | .917 |
| Poppy-seed  | .930         | Olive             | .915 |
| Linseed     | .932         | Rape-seed         | .913 |
| Almonds     | .932         | Cacao             | .892 |
| Walnuts     | .925 to .917 |                   |      |

Fixed oil, when in the state of vapour, takes fire on the approach of an ignited body, and burns with a yellowish white flame. It is upon this principle that candles and lamps burn. The tallow or oil is first converted into a state of vapour in the wick; it then takes fire, and supplies a sufficient quantity of heat to convert more oil into vapour; and this process goes on while any oil remains. The wick is necessary, to present a sufficiently small quantity of oil at once for the heat to act upon. If the heat were great enough to keep the whole oil at a temperature of 640°, no wick would be necessary, as is obvious from oil catching fire spontaneously when it has been raised to that temperature. When oil is used in this manner, either in the open air or in contact with oxygen gas, the only new products obtained are water and carbonic acid.

The drying oils are used as the vehicle of paints and varnishes. Linseed, nut, poppy, and hemp seed oils, belong to this class. These oils in their natural state possess the property of drying oils, but imperfectly. To prepare them for the use of the painter and varnish-maker, they are boiled for some time in an iron pot, and sometimes burnt till they become viscid. When they burn for some time, their unctuous quality is much more completely destroyed than by any method that has been practised. Hence it is followed frequently in preparing the drying oils for varnishes, and always for printers' ink, which requires to be as free as possible from all unctuousity.

Nut oil has been found preferable to all other oils for painters' ink; though the dark colour which it acquires during boiling renders it not so proper for red ink as for black. Linseed oil is considered as next after nut oil in this respect. Other oils cannot be employed, because they cannot be sufficiently freed from their unctuousity. Ink made with them would be apt to come off and smear the paper while in the hands of the bookbinder, or even to spread beyond the mark of the types and stain the paper yellow.

For the regulations with respect to the importation and exportation of train oil, see p. 153.

**OLIBANUM** (Fr. *Eucens*; Ger. *Weiranch*; It. *Olibano*; Arab. *Looban*), a gum-resin, the produce of a large tree (*Libanus thuriferus*) growing in Arabia and India. It is imported in chests, containing each about 1 cwt., from the Levant and India; the best comes from the former, and is the produce of Arabia. Good olibanum is in semi-transparent tears, of a pink colour, brittle, and adhesive when warm; when burnt, the odour is very agreeable: its taste is bitterish, and somewhat pungent and aromatic; it flames for a long time with a steady clear light, which is not easily extinguished, leaving behind a black (not, as has been said, a whitish) ash. Olibanum is the frankincense (*thus*) of the ancients; and was extensively used by them in sacrifices. — (*Plin. Hist. Nat. lib. xii. c. 14.*) It has also been used in the ceremonies of the Greek and Roman churches. — (*Ainslie's Mat. Indica*; *Thomson's Chemistry*; *Kippingii Antiq. Rom. lib. i. c. 11.*)

**OLIVE, OLIVES** (Ger. *Oliveu*; Fr. *Olives*; It. *Ulivo, Olive*; Sp. *Acitunas*; Port. *Acitonas*; Lat. *Oliva*), a fruit yielding a large quantity of oil, the produce of the *Olea*, or olive tree. The wild olive is indigenous to Syria, Greece, and Africa, on the lower slopes of Mount Atlas. The cultivated species grows spontaneously in Syria, and is easily reared in Spain, Italy, and the south of France. It has even been raised in the open air in England, but its fruit is said not to have ripened. The fruit is a smooth oval plum, about  $\frac{3}{4}$  of an inch in length, and  $\frac{1}{2}$  an inch in diameter; of a deep violet colour when ripe, whitish and fleshy within, bitter and nauseous, but replete with

a bland oil; covering an oblong, pointed, rough nut. Olives intended for preservation are gathered before they are ripe. In pickling, the object is to remove their bitterness, and to preserve them green, by impregnating them with a brine of aromatised sea salt; for this purpose various methods are employed. The wood of the olive tree is beautifully veined, and has an agreeable smell. It is in great esteem with cabinet-makers, on account of the fine polish of which it is susceptible.

**OLIVE OIL** (Ger. *Baumöl*; Fr. *Huile d'olives*; It. *Olio d'oliva*; Sp. *Acete de aceitunas*; Lat. *Oleum olivarum*). The olive tree is principally cultivated for the sake of its oil. This is an insipid, inodorous, pale greenish yellow coloured, viscid fluid, unctuous to the feel, inflammable, incapable of combining with water, and nearly insoluble in alcohol. It is the lightest of all the fixed oils; and is largely used, particularly in Greece, Italy, Spain, and France, as an article of food, and in medicine, and the arts. It is also very extensively used in this country, particularly in the woollen manufacture.

The ripe fruit is gathered in November, and immediately braised in a mill, the stones of which are set so wide as not to crush the kernel. The pulp is then subjected to the press in bags made of rushes; and by means of a gentle pressure, the best, or *virgin* oil, flows first; a second, and afterwards a third, quality of oil is obtained by moistening the residuum, breaking the kernels, &c., and increasing the pressure. When the fruit is not sufficiently ripe, the recent oil has a bitterish taste; and when too ripe, it is fatty. After the oil has been drawn, it deposits a white, fibrous, and albuminous matter; but when this deposition has taken place, if it be put into clean glass flasks, it undergoes no further alteration; the common oil cannot, however, be preserved in casks above 1½ or 2 years. It is sometimes adulterated by the admixture of poppy oil. — (*Thomson's Dispensatory*.)

The best olive oil is said to be made in the vicinity of Aix, in France. That which is brought from Leghorn, in chests containing 30 bottles, or 4 English gallons, is also very superior; it is known in our markets by the name of Florence oil, and is used mostly for culinary purposes. Olive oil is the principal article of export from the kingdom of Naples. — (See **NAPLES**.) Apulia and Calabria are the provinces most celebrated for its production. The Apolian is the best, and is preferred by the woollen manufacturers, by whom it is extensively used. By far the largest portion of the olive oil brought to England is imported from Italy; principally from Gallipoli, on the east coast of the Gulf of Tarento, in lat. 40° 37' N., lon. 18° 25' 55" E., whence it is commonly known by the name of Gallipoli oil. But, besides Italy, Spain sends us a large quantity; and we derive smaller supplies from Malta, Turkey, the Ionian Islands, &c. Thus, of 2,791,057 gallons of olive oil imported in 1830, 2,034,237 were from Italy; 620,468 do. from Spain; 52,004 do. from Malta, partly at second hand; 21,467 do. from Turkey; 11,900 do. from the Ionian Islands; and about 30,000 do., at second hand, from the Netherlands and Germany.

The price of olive oil, duty paid, in London, in January, 1834, was as follows: —

|                                  |                 |          |              |                |                 |          |              |
|----------------------------------|-----------------|----------|--------------|----------------|-----------------|----------|--------------|
| Gallipoli                        | tun (252 gals.) | L. s. d. | 53 0 to 53 0 | Barbary        | tun (252 gals.) | L. s. d. | 53 0 to 51 0 |
| Spanish Calabria                 | —               | —        | 55 0 — 0 0   | Lucca, in jars | —               | —        | 6 15 — 0 0   |
| Calcia, Genoa, and Provence, 1st | —               | —        | 75 0 — 80 0  | Florence       | ½ chest         | —        | 1 1 — 0 0    |

The duty of 8*l.* 8*s.* a tun (252 wine gallons) amounts to about 20 per cent., or 1-5th of the price. But as olive oil is an article much used in household economy, and of essential importance in the arts, particularly the woollen manufacture, such a duty seems to be quite oppressive. Were it reduced to 2*l.* 2*s.* a tun, we believe it would be very little, if at all, less productive than at present, while the fall of price consequent upon such a reduction would have many beneficial consequences. Nothing can be more absurd than to elevate duties till they become less productive than they would be were they lower; but when the articles so overtaxed are of great utility, the mischievousness of the practice exceeds its irrationality. Olive oil is necessary to the preparation of the best species of soap; but the high duty prevents it from being so employed in this country, and, consequently, obliges us to make use of an inferior article.

An Account of the Quantity of Olive Oil entered for Home Consumption in each Year since 1820; distinguishing the Rate of Duty, and stating the Amount of Duty received in each Year.

| Years. | Quantities entered for Home Consumption in the United Kingdom. |              | Rates of Duty charged.  | Years. | Quantities entered for Home Consumption in the United Kingdom. |             | Rates of Duty charged.  |

Olive oil, the produce of Europe, may not be imported into the United Kingdom for home consumption, except in British ships, or in ships of the country of which it is the produce, or from which it is imported, on forfeiture of the same and 10*l.* by the master of the ship. — (3 & 4 *Will.* 4. c. 54. § 2. 22.) It is ordered by a Customs Minute of the 23d of July, 1828, that when the actual tare is not taken, 1-3d for tare on each jar, and 1-7th for foot, may be allowed.

*Oil Trade of Naples.* — The oils of the kingdom of Naples are produced in Apulia, from Bari to its southern extremity, the Capo di Leuca; a district comprising the territories which export from Gallipoli and Taranto; and in Calabria, from Rossano, on the gulf of Tarento, across to Gioja. The whole coast from Gioja as far as Gaeta is covered with olive trees. They are also abundant in the Abruzzi and the Terra di Lavoro; but Apulia and Calabria furnish by far the greatest quantity of oil.

The principal magazines, or *carricatori*, for oil, are at Gallipoli and Gioja.

Gallipoli supplies England, Holland, the north of Europe, and, in short, all those countries that require the most perfectly purified oil. It is clarified to the highest degree, by merely keeping it in cisterns hollowed out of the rock on which the town is built. The voyages it has to perform being long, it is put into casks so well constructed, that it frequently arrives at Petersburg, in the heat of summer, without the least waste or leakage, — an advantage attributed to the seasoning of the staves, which, before they are put together, are well soaked in sea water.

We borrow the following details with respect to the preparation of oil at Gallipoli, from a very interesting paper, communicated by an English gentleman who had resided in the town, in the volume entitled *Vegetable Substances Materials of Manufactures*, published by the Society for the Diffusion of useful Knowledge.

"The rock on which the town is built is easily excavated; and in caverns thus constructed oil clarifies sooner, and keeps without rancidity much longer, than in any other place. Hence numerous oil-houses are established at Gallipoli, and a very considerable portion of the rock is cut into cisterns. A Gallipolitan oil warehouse generally occupies the ground floor of a dwelling-house, and has a low arched roof. Some are more extensive, but on an average they are about 30 feet square. In the stone floor you see 4, 6, or more holes, which are circular, about 2 feet in diameter, and like the mouths of wells. Each of these holes gives access to a separate cistern beneath your feet; and when the oil is poured into them, care is taken not to mix different qualities, or oils at different stages, in the same reservoir. One cistern is set apart for *oglio mosto*, or oil that is not clarified, another for pure oil of the season, another for old oil, &c. I have seen oil that had thus been preserved for 7 years in a perfect state, or, as the Gallipoli merchants have it, *chiaro, giallo, e lampante*, — words which, during some months, I have heard at least 100 times a day. I also many times verified the fact: the *mosto*, or oil in its turbid state, which arrived almost as black and thick as pitch, soon became bright and yellow in these excellent reservoirs, without any help from man.

"All the oil, whatever may be its quality, is brought to the magazine in sheep or goat skins, which are generally carried on mules — there being but few *strade rotabili*, or roads fit for wheeled carriages, in these parts. In a good year, and at the proper season, I have counted, by the course of an afternoon's ride, as many as 100 mules returning from Gallipoli, where they had been to deposit their unctuous burdens, to different towns and villages in the *Terra d'Otranto*, or the more distant province of Bari. The quantity of oil required may be conceived, when I state, that at one time (in the year 1816) I saw 9 English, 3 American, 2 French, and 6 Genoese vessels, (not to mention some small craft from the Adriatic,) all waiting in the port of Gallipoli for entire or partial cargoes of it. When the oil is to be shipped, it is drawn off the cistern into *uteri*, or skins, or so carried on men's shoulders down to a small house on the sea shore. In that house there is a large open basin, capable of containing a given quantity, and of measuring the oil; and into that the porters empty their skins as they arrive. A tube communicates from the basin to a large cock at the outside of the house. When the basin is full, well-made casks, of various sizes for the convenience of storage, are placed under the cock, which is then turned, and the casks are filled. As the casks are closed up by the cooper, the porters roll them down to the brink of the sea, where the sailors secure several of them together with a rope, and taking the end of the cord into the boat, they row off to the vessel, towing the oil casks through the water after them.

"I first became acquainted with the Gallipolitans shortly after the fall of Napoleon, whose system, whatever good parts of it may have done in the rest of Italy, was certainly most ruinous to the provinces of Lecce and Bari. Unable to export, or find any market for their produce, the proprietors in many parts of those provinces let the olives lie and rot upon the ground. For some years, indeed, the price of oil scarcely paid the cost of its preparation, to say nothing of transport and other necessary expenses. During the Continental system, the best *chiaro, giallo, e lampante* oil was sold at Gallipoli for 5 Neapolitan ducats the *salma*; in 1816 and 1817, it found a ready market at from 60 to 70 ducats per *salma*!

"Those who, during the evil time, had penetration enough to foresee better days, and that a system opposed to the general commercial prosperity of Europe could not last; and who had, at the same time, money enough for such objects; by annually making their oil as usual, and buying up the oil of others at the low current prices of the day, realised enormous profits when peace threw open the port of Gallipoli, and ships of all nations flocked thither as before.

"The olives of which the Gallipoli oil is made, are never gathered, but allowed to drop in their maturity from the tree on the ground, where they are picked up chiefly by women and children, and carried to the mill.

"The machinery employed in expressing the oil is of the rudest kind, and, no doubt, numerous improvements might be introduced, not only into this branch, but into that of cultivating the olive tree. The peasantry, however, and, in the kingdom of Naples, those who stand higher in the scale of fortune and rank, are too often but bores in intellect, are obstinate in their attachment to old practices, and are apt, when any of these are reprehended, to stop discussion by saying — *Faccio come faceva la buon' anima di mio padre, e cio basta.* (I do as my father of blessed memory did before me, and that's enough.)

"The poor people of the country make culinary uses of the same oil that is exported, and which in England is only used in manufactures, or burnt in lamps; but in the houses of the gentry I have often tasted oil prepared with more care, which was truly delicious, being equal to that of Sorrento, Vico, and Massa, or even to the best oils of Tuscany or Provence." (p. 200—204.)

"The *caricatori* of Bari and Monopoli furnish oils for the consumption of Upper Italy and Germany, through the medium of Venice and Trieste. They also draw supplies from Brindisi and Otranto.

"The *caricatori* of Taranto, of Eastern Calabria or Rectromarina, and of Western Calabria, the principal of which is Gioja, furnish supplies for Marseilles, &c. But the *caricatori* now mentioned, having no conveniences for clarification, produce only the thick oils used for soap-making.

"The oils of Sicily, like those of Tunis, are too thin to be used singly in the making of soap; and being used only for mixing, are less valuable than most others.

"The oil trade in the provinces is in the hands of respectable houses, which purchase by retail of the several planters. The oil thus collected is sold in Naples at a profit equal to the difference between the size of the measures by which it is bought and those by which it is sold. To facilitate transactions, orders or *cedulas* are circulated, representing quantities of oil deposited in the provincial *caricatori*. These orders are negotiable, like bills of exchange, and are indorsed by the intermediate holder, who receives their value in cash, without, however, becoming liable for their due satisfaction. The only responsible parties are the drawer and drawee. The latter is obliged to deliver the oil at sight of the order, or to hold it, at the bearer's disposal, till the 10th of November for the *caricatori* of Apulia, and till the 31st of December for those of Calabria. If the contract be for time, that is, from one year to another, the oil is usually placed at the purchaser's command on the 1st of March. Purchases for time are effected by means of a contract, wherein the vendor undertakes to deliver the oil by the end of January, on receiving payment of the money; but the oil, as observed above, is not really at the purchaser's disposal before the beginning of March. Hence, in time bargains, the payment of the money precedes the delivery of the oil more than a month: scarce an instance is on record of an engagement of this sort having been broken, and the order is as readily negotiable as any other security.

"In purchases of oil at command, payment likewise precedes the delivery of the article; but in this case the advance is confined to the 5 days necessary to transmit the order to the *caricatore* where the oil is kept for delivery.

"The oil remains in the *caricatore* under the care and responsibility of the vendor, to be delivered on demand to the bearer of the order, free of all costs and charges whatever for the first year; but for every successive year from 25 to 50 grains per *salma* are charged for keeping, and for renewal of warranty. —

which would be the value of the omnium, or 1*l.* 8*s.* per cent. premium, independently of any discount for prompt payment.

**ONION** (Ger. *Zwiebel*; Fr. *Oignon*; It. *Cipolla*; Sp. *Cebolla*; Rus. *Luk*), a well known bulbous plant (*Allium Cepa* Lin.) cultivated all over Europe for culinary purposes. The Strasburgh, Spanish, and Portuguese varieties are the most esteemed.

**ONYX** (Ger. *Onyx*; Fr. *Onix*, *Onice*; Sp. *Onique*; Lat. *Onyx*). "Any stone exhibiting layers of 2 or more colours strongly contrasted is called an *onyx*; as banded jasper, chalcedony, &c., but more particularly the latter, when it is marked with white, and stratified with opaque and translucent lines. But the Oriental onyx is considered a substance consisting of 2 or more layers or bands of distinct and different colours. A sard, or sardoine, having a layer of white upon it, would be called an *onyx*; and according to the number of layers it would be distinguished as an *onyx* with 3 or more bands. Some of the antique engravings are upon onyxes of 4 bands."—(*Mawe's Treatise on Diamonds*, &c.)

**OPAL** (Ger. *Opal*; Fr. *Opale*; It. *Opalo*; Sp. *Opalo*, *Piedra iris*; Port. *Opala*; Lat. *Opalus*), a stone, of which there are several varieties, found in different parts of Europe, particularly in Hungary, and in the East Indies, &c. When first dug out of the earth it is soft, but it hardens and diminishes in bulk by exposure to the air. The opal is always amorphous; fracture conchoidal; commonly somewhat transparent. Hardness varies considerably. Specific gravity from 1.958 to 2.54. The lowness of its specific gravity in some cases is to be ascribed to accidental cavities which the stone contains. These are sometimes filled with drops of water. Some specimens of opal have the property of emitting various coloured rays, with a particular effulgency, when placed between the eye and the light. The opals which possess this property are distinguished by lapidaries by the epithet *Oriental*; and often, by mineralogists, by the epithet *nobilis*. This property rendered the stone much esteemed by the ancients.—(*Thomson's Chemistry*; see also *Plin. Hist. Nat. lib. xxxvii. c. 6.*, where there are some very curious details as to this stone.)

Mr. Mawe gives the following statement with respect to the precious opal, or opal *nobilis*:—"The colour of the opal is white or pearl grey, and when held between the eye and the light is pale red, or wine yellow, with a milky translucency. By reflected light it exhibits, as its position is varied, elegant and most beautiful iridescent colours, particularly emerald green, golden yellow, flame and fire red, violet, purple, and celestial blue, so beautifully blended, and so fascinating, as to captivate the admirer. When the colour is arranged in small spangles, it takes the name of the harlequin opal. Sometimes it exhibits only 1 of the above colours, and of these the most esteemed are the vivid emerald green and the orange yellow. When the stone possesses the latter of these colours, it is called the golden opal.

"The precious opal is not quite so hard as rock crystal: it is frequently full of flaws; which greatly contributes to its beauty, as the vivid iridescent colours which it displays are occasioned by the reflection and refraction of light, which is decomposed at these fissures. It is never cut in facets, but always hemispherical. It is generally small, rarely so large as an almond or hazel nut, though I have seen some specimens the size of a small walnut, for which several hundred pounds were demanded. At present, a pretty opal may be bought at from 1 to 3 or 5 guineas, sufficiently large for a pin or ring stone. It requires great care and judgment in the cutting, as it is fragile and easily spoiled.

"The opal, in all ages, has been highly esteemed: the history of the Roman senator, who preferred death rather than give up his opal ring to the Emperor Nero, is familiar to every one. Among the Eastern nations, the opal ranks higher than in Europe.

"A spurious substance is sometimes sold for black and green opal, and often set in jewellery; it occurs of the size of a small almond, but more commonly not larger than a lentil or pea. This *precious gem* is nothing more than the cartilage of the hinge of a large shell, glass, and even scoria, having an iridescent appearance, have also often been sold for opal."—(*Treatise on Diamonds*, &c. 2d ed. pp. 123—125.)

**OPIUM** (Ger. *Mohnsaft*; Fr. *Opium*; It. *Oppio*; Sp. and Port. *Opio*; Lat. *Opium*; Arab. *Ufyoon*; Hind. *Ufem*; Turk. *Malyoon*), the concrete juice of the white poppy (*Papaver somniferum*), which is most probably a native of Asia, though now found growing wild in the southern parts of Europe, and even in England. Opium is chiefly prepared in India, Turkey, and Persia; but the white poppy is extensively cultivated in France, and other parts of Europe, on account of its capsules, and of the useful bland oil obtained from its seeds. It has also been cultivated, and opium made, in England; but there is very little probability of its ever being raised here to any considerable extent.

The poppy is an annual plant, with a stalk rising to the height of 3 or 4 feet; its leaves resemble those of the lettuce, and its flower has the appearance of a tulip. When

at its full growth, an incision is made in the top of the plant, from which there issues a white milky juice, which soon hardens, and is scraped off the plants, and wrought into cakes. In India, these are covered with the petals of the plant to prevent their sticking together, and in this situation are dried, and packed in chests lined with hides and covered with gunny, each containing 40 cakes, and weighing 2 mannds or 149½ lbs.; they are exported in this state to the places where the opium is consumed. Turkey opium is in flat pieces, covered with leaves, and the reddish capsules of some species of *rumex*; which is considered an indication of its goodness, as the inferior kinds have none of these capsules adhering to them.

According to Dr. A. T. Thomson, Turkey opium has a peculiar, strong, heavy, narcotic odour, and a bitter taste, accompanied by a sensation of acrid heat, or biting on the tongue and lips, if it be well chewed. Its colour when good is a reddish brown, or fawn colour; its texture compact and uniform. Its specific gravity is 1.336. When soft, it is tenacious; but when long exposed to the air, it becomes hard, breaks with a uniform shining fracture, is pulverulent, and affords a yellowish brown powder.

East Indian opium has a strong empyreumatic smell; but not much of the peculiar narcotic, heavy odour of the Turkey opium; the taste is more bitter, and equally nauseous, but it has less acrimony. It agrees with the Turkey opium in other sensible qualities, except that its colour is blacker, and its texture less plastic, although it is as tenacious. Good Turkey opium has been found to yield nearly 3 times the quantity of *morphia*, or of the peculiar principle of the drug, that is yielded by East Indian opium.

Opium is regarded as bad, when it is very soft, greasy, light, friable, of an intensely black colour, or mixed with many impurities. A weak or empyreumatic odour, a slightly bitter or acrid, or a sweetish taste, or the power of marking a brown or black continuous streak when drawn across paper, are all symptoms of inferior opium. — (*Dispensatory*.)

The raising of opium is a very hazardous business; the poppy being a delicate plant, peculiarly liable to injury from insects, wind, hail, or unseasonable rain. The produce seldom agrees with the true average, but commonly runs in extremes; while one cultivator is disappointed, another reaps immense gain: one season does not pay the labour of the culture; another, peculiarly fortunate, enriches all the cultivators. This circumstance is well suited to allure man, ever confident of good fortune. — (*Colebrooke's Husbandry of Bengal*, p. 119.)

In England, opium is little used, except as a medicine. In 1831 and 1832, the quantity entered for home consumption amounted, at an average, to 28,097 lbs. a year. The principal part of our supply is brought from Turkey. Opium from the latter was worth, in the London market, in December, 1833, from 16s. to 17s. per lb. The duty is 4s.

*Consumption and Trade of Opium in China.* — Opium is pretty extensively used, both as a masticatory and in smoking, in Turkey and India; but its great consumption is in China and the surrounding countries, where the habit of smoking it has become almost universal. The Chinese boil or seethe the crude opium; and by this process the impurities, resinous and gummy matter, are separated, and the remaining extract only is reserved for use. Thus prepared, the drug loses its ordinary strong and offensive aromatic odour, and has even a fragrant and agreeable perfume. A small ball of it, inserted in a large wooden pipe with some combustible matter, is lighted, and the amateur proceeds to inhale four or five whiffs, when he lies down and resigns himself to his dreams, which are said to have no inconsiderable resemblance to the sensations produced by inhaling the oxide of azote. Those who do not carry the indulgence to excess, do not, it is said, experience any bad effects from it.

The supplies for the Chinese market are derived from India and Turkey, but principally from the former. The government of China has issued edict upon edict, forbidding the importation and consumption of the drug, but without effect. Most part of the authorities openly connive at the proceedings of the smugglers, while the few who might be desirous to enforce the law are wholly without the power; so that the trade is conducted with the greatest facility, and almost perfect security. It was at first carried out Whampoa, about 15 miles below Canton; next at Macao, whence it was driven by the exactions of the Portuguese; and now the principal entrepôt is in the bay of Lintin. The opium is kept on board of the commonly called receiving ships, of which there are often 10 or 12 lying together at anchor. The orders are mostly effected by the English and American agents in Canton, who give orders for the delivery of the opium; which, on producing the order, is handed over to the Chinese smuggler, who comes along-side to receive it. Frequently, however, the smuggler purchases the opium on his own account, paying for it on the spot in silver; it being a rule of the trade, never departed from, to receive the money before the drug is delivered. When it is landed, the laws are equally set at defiance in its conveyance throughout the country; and public smoking houses are said to be every where established!

The consumption of opium in China is rapidly extending. During the first 10 years of the present century, the exports from India to China were about 2,500 chests (of 149½ lbs. each). In 1821-22, after the introduction of Malwa opium into the markets of Calcutta and Bombay, the exports increased to 4,025 chests; and, owing, no doubt, to the greatly increased supply and lower price of the article, the exports in 1831-32 exceeded 20,000 chests, worth above 13,000,000 dollars! — (*See ante*, p. 239.) The whole of this immense trade is in the hands of private individuals; the Company not choosing to engage in a business prohibited by the Chinese government. The imports of Turkey opium into China are believed to amount at present to about 1,000 chests. Smyrna is the principal Turkish port for the export of opium. — (*See SMYRNA*.)

*Cultivation of Opium in India.* *Monopoly.* — The cultivation of opium in India is a government monopoly, and is confined to the provinces of Bahar\* and Benares, and Malwa in Central India. Every one within the prescribed limits may engage in the opium cultivation; but the drug, when prepared, must all be sold at a fixed price to the Company's agents. The price is very far below the price at which it is

\* The opium of Bahar is known in commerce by the name of Patna opium.

afterwards sold for exportation; and the circumstance of its being fixed and inadequate deprives the cultivators of most part of the favourable chances in the lottery previously alluded to by Mr. Colburn. Indeed, Mr. C. distinctly tells us (*Asst. Bengal*, p. 118.) that, except in a few situations that are peculiarly favourable, its cultivation is unprofitable. The peasants engage in it with reluctance; and are tempted only by the immediate advances the government agents are obliged to make to enable them to carry on the business.

The monopoly has sometimes produced a net revenue of about 1,000,000*l.* a year. Latterly, however, this revenue has been materially diminished. This has been occasioned, partly by the conquest of Malwa, and the impossibility of extending the same sort of monopoly into that province that was established in Bahar and Benares, and partly to the introduction of Turkey opium into the Chinese market by the Americans.

The system under which the Indian opium trade has been conducted, has been the theme of much eulogy, and has been supposed to afford the only example of an *unexceptionable monopoly*. By confining the cultivation of the plant to particular districts, and taking care that the whole produce raised in them shall be exported, we prevent, it is said, the use of this deleterious drug from gaining ground in India; while the high price at which it is sold produces a large revenue to the Company's treasury. It is admitted, too, that even the interests of the Chinese are consulted by the system; that they obtain the drug in a state of purity, which would otherwise be adulterated; and that the high price they are obliged to pay for it merely acts as a wholesome restraint on their vicious propensity to indulge in what is so very injurious. We doubt, however, whether there be much foundation for these eulogies. There can be no question that opium is a very excellent subject for taxation; and the higher the duty can be raised on it, without encouraging smuggling, the better. It is not, however, so clear that the monopoly system is the best way of accomplishing this; and, though the system had been originally a good one, it is no longer possible to enforce it. To imagine, indeed, that the illicit cultivation of, and traffic in, opium can be prevented, now that it is raised in most parts of the extensive country of Malwa, is altogether ludicrous. As to the supposed influence of the monopoly in insuring the purity of the drug, it is sufficient to observe that Malwa opium, which is produced under a comparatively free system, has been rapidly improving in its quality, and now very often fetches a higher price than the opium of Bahar and Benares, where the strictest *surveillance* is kept up. The latter, indeed, has sometimes been nearly unobtainable, from the careless way in which it has been prepared, and the extent to which it was adulterated. — (*Campbell on the Monopoly of the East India Company*, p. 55.) It is needless, however, to say more on this point, than that Turkish opium maintains, in respect of purity and careful preparation, a decidedly higher reputation than any produced in India. — (*Thomson's Dispensatory*.)

We doubt, too, whether the use of opium, when taken in moderate quantities, be really so injurious as has been represented. That it may, like spirits and wine, be abused, is abundantly certain; but it has not been shown that it is more liable to abuse than either of these articles. No one doubts that the Chinese, by whom it is principally consumed, are a highly industrious, sober, frugal people; but thought it were otherwise, we really do not see that the East India Company are warranted in subjecting a profitable article of cultivation in India, to the fetters of monopoly, that the morals of the Chinese may be preserved. It is unnecessary, however, to dwell upon this view of the matter. The Turks and Americans have no scruples of this sort; and, if the Company's attempt to force up the price of opium to an extravagant height, would throw a still greater proportion of the trade into the hands of their active competitors, to the great injury of the Indian cultivators.

Neither must the interests of the cultivators in India be lost sight of, who are materially injured by the existing system. Even were it in other respects proper, their allowances are far too small.

Upon the whole, therefore, we do not see any solid grounds for supposing that this monopoly forms an exception to the common rule; and we agree with those who think that the better way would be to establish the same system, as to the trade in opium, that is established with respect to the spirit trade in this country; that is, to allow every one to cultivate it upon taking out a licence, and to lay an excise duty on the prepared article. Such a plan would put an end to some most oppressive regulations; and while it would open a new source of wealth to the cultivators, the revenue derived by government would be materially augmented.

Besides the works previously referred to, we have consulted, in compiling this article, *Ainslie's Mat. Indica*; *Milburn's Orient. Com.*; *Bell's Review of the Commerce of Bengal*; *Evidence on East Indian Affairs, before the Parliamentary Committee*, in 1830 and 1831, &c. &c.

#### OPOBALSAM. See BALSAM.

**OPOPONAX** (Ger. *Opopanax*; Fr. *Opopanax*; It. *Opoponasso*; Sp. *Opopanea*; Arab. *Jawesheer*), a gum-resin obtained from the *Pastinaca Opoponax*, a species of parsnip. It is a native of the south of Europe, and Asia Minor. The stem rises to the height of 4 or 5 feet, with a thick branched yellow-coloured root. The roots being wounded, a milky juice flows from them, which, being dried in the sun, is the opopanax of the shops. It is in lumps of a reddish yellow colour, and white within. Smell peculiar. Taste bitter and acrid. Specific gravity 1.622. It is imported from Turkey. Being used only to a small extent in medicine, the consumption is inconsiderable. — (*Thomson's Chemistry*; *Ainslie's Mat. Indica*.)

**OPORTO**, or **PORTO**, a large city and sea-port of Portugal, situated on the north bank of the river Douro, about 2 miles from its mouth, in lat. 41° 10' 30" N., lon. 8° 37' 18" W. It is a beautifully situated, well-built city; and is supposed to have contained, before the late hostilities, 70,000 inhabitants.

*Harbour.* — The harbour of Oporto is a bar harbour, and can only be entered, at least by vessels of considerable burden, at high water; and it is seldom at any time practicable for vessels drawing more than 16 feet. On the north side of the entrance is the castle of St. Joao de Foz, whence a ledge of rocks, some of which are at all times above water, extends in a south-west direction. The outermost of these rocks, named Figueira, which is always visible, is left on the left or harbour side on entering. Cadele Point, forming the southern extremity of the entrance, is low and sandy. The bar being liable, from the action of the tides, and of sudden swellings or *fresches* in the river, to perpetual alterations, it is exceedingly dangerous for any vessel to attempt crossing it without a pilot. Pilots are always on the alert, and ready to offer their services when a vessel comes in sight, unless the weather be so bad that they cannot go off. On some few occasions of this sort, vessels have been detained for 3 weeks off the port, without having an opportunity of entering. The chapel of St. Catherine in a line with that of St. Michael leads over the bar. The ordinary rise of spring tides is from 10 to 12 feet, and of neaps from 6 to 8 feet. A light-house with a fixed light is erected on a hill about 630 yards N. N. W. of St. Joao de Foz.

The swellings of the river, or *fresches*, as they are called, most commonly occur in spring, and are caused by heavy rains, and by the melting of the snow on the mountains. The rise of water at such times is frequently as much as 10 feet, and the rapidity and force of the current are so very great, that no dependence can be placed on anchors in the stream. Fortunately, a *fresch* never occurs without previous warning; and it is then the practice to moor with a cable made fast to trees, or stone pillars erected on the shore for

that purpose.—(For further information as to the harbour of Oporto, see Mr. Purdy's valuable *Sailing Directions for the Bay of Biscay*.)

**Trade.**—Oporto is the emporium of a large portion of the kingdom of Portugal, and enjoys a pretty considerable foreign commerce. The well-known red wine, denominated Port, from its being exclusively shipped at this city, forms by far the largest article of export. The exports vary in different years, from about 16,500 to above 40,000 pipes. England is much the largest consumer of port. The high discriminating duties on French wine originally obtained for it a preference in the British market, to which, though an excellent wine, it had no natural claim; and its long continued use has so confirmed the taste for it, that it is probable it will maintain its ascendancy notwithstanding the late equalisation of the duties. At an average of the 10 years ending with 1833, there were shipped from Oporto for England 22,121 pipes a year; but exclusive of the port shipped from Oporto, a considerable quantity of red wine is now brought from Figueira. Next to England, Brazil, Russia, and the north of Europe in general, are the principal consumers of port. The other exports are oil, oranges and other fruits, wool, refined sugar, cream of tartar, shunning, leather, cork, &c. The imports are corn, rice, beef, salt fish, and other articles of provision; sugar, coffee, &c. from Brazil; cotton and woollen goods, hardware, tin plates, &c. from England; hemp, flax, and deals, from the Baltic, &c.

Besides the British manufactured goods imported into Portugal for the use of the natives, a considerable quantity is destined for the consumption of Spain; being smuggled into that country through Buzanza and other towns on the frontier.

**Monies, Weights, and Measures** same as those of Lisbon; which see.

We subjoin an account, obtained from the Portuguese Custom-house, of the wine shipped from Oporto during the 10 years ending with 1833.

Account of the Quantities of Wine exported from Oporto during the Ten Years down to 1833 Inclusive; specifying the Countries to which they were sent, and the Quantities sent to each.

*N.B.*—It was not till 1825, that the exclusive privilege possessed by the Oporto Wine Company, of shipping wine for Brazil, was put an end to, previously to which period the shipments for that country were not given.

It is hardly possible to form any estimate of the value of the wine shipped from Oporto; the price varying from 5*l.* to 50*l.* per hoghead. The export duty on wine approved for exportation (*vinho d'exportação*), is about 6*l.* (5*l.* 8*s.* 6*d.*) per pipe, or, at the present (January, 1834) rate of exchange, 1*l.* 2*s.* a pipe. Separated wine (*vinho separado*) is not generally allowed to be exported; but at present it may be shipped on paying 18*l.* (18*l.* 8*s.* 6*d.*) more, or 5*l.* 3*s.* 2*d.* a pipe. The other expenses are trifling. Freight to this country varies from 1*l.* to 1*l.* 1*s.* 6*d.* per pipe.—(For an account of the Oporto Wine Company, see *WINE*.)

Sometimes wine is purchased from the farmer in the wine country. In this case, the casks are sent about 60 miles up the river, in boats, to be filled. Owing to the miserable state of the roads, the expense of carriage is very considerable; the cartage from and to the river side frequently costing from 1*l.* to 2*l.* per pipe. The freight from the upper country down the river to Oporto is about equal to that from the latter to England. There is also an internal duty of about 1*l.* 2*s.* per pipe on all wine brought down the river. Inasmuch, however, as these charges are perpetually varying, it is not possible to lay before the reader any *pro forma* account of the cost of wine brought in the Upper Douro.

The Oporto Wine Company have the monopoly of the brandy as well as of the wine trade of the Douro. The consequence is, that brandy costs at this moment, at Oporto, about 3*l.* per pipe; while equally good brandy may be bought in Lisbon, and much better in Cognac, for about 1*l.* per pipe! The abolition of this company would certainly be one of the most desirable returns that could be accomplished, even in Portugal.—(*Private information*.)

**ORANGES** (Ger. *Pomeranzen*; Du. *Oranjen*; Fr. *Oranges*; It. *Melanzane*; Sp. *Naranjas*; Rus. *Pomeranzii*; Hind. *Narunge*; Malay, *Sima-manis*), the fruit of the orange tree. The common, or sweet orange (*Citrus sinensis*, or *Citrus nobilis*), and the Seville, or bitter orange (*Citrus aurantium*), are natives of China; and the Portuguese are entitled to the honour of having transferred the plant to other countries. Particular species of *Citrus* seem to be indigenous to various Eastern countries; but the birth-place of the proper orange may be distinctly traced to China. It is now to be found in our green-houses. Oranges are imported in chests and boxes, packed separately in paper. The best come from the Azores and Spain; very good ones are also brought from Portugal, Italy, Malta, and other places.

The orange trade carried on by this country is of considerable value and importance. Oranges are not much more expensive than most of our superior domestic fruits, while they are, perhaps, the most refreshing and wholesome of those of warmer climates. The entries for home consumption in 1831 and 1832 amounted, at an average, to 270,606 boxes a year; and assuming each box to contain 700 oranges and lemons, the number entered for consumption will have been 189,424,000. The duty produced, at an average of the above years, 61,036*l.* a year. The number of persons employed in the importation and sale of oranges must be very considerable. The policy of charging any duty on oranges seems questionable. They are very apt to spoil; and as no abatement is made from the duty on account of any damage, its influence on their price is much more considerable than might at first be supposed.

**ORCHILLA WEED, ORCHIELLA, or ARCHIL** (Ger. *Orseille*; Fr. *Orseille*; It. *Oricello, Orquilla*; Sp. *Orquilla*), a whitish lichen (*Lichen orquilla*) found in the Isle of Portland; but that which is used, is imported from the Canary and Cape de Verd Islands, Barbary, and the Levant. From it is obtained the archil, or orchil, of commerce, which yields a rich purple tincture, fugitive, indeed, but extremely beautiful. The preparation of orchilla was long a secret, known only to the Florentines and Hollanders; but it is now extensively manufactured in this country. Archil is generally sold in the form of cakes, but sometimes in that of moist pulp; it is extensively used by dyers; and in times of scarcity, the weed or lichen has sold as high as 1,000*l.* per ton! — (*Thomson's Dispensatory*.) At this moment (January, 1834), Canary orchilla fetches, in the London market, 320*l.* a ton, while that which is brought from Madeira fetches only 200*l.*, and Barbary not more than from 10*l.* to 25*l.* The total quantity imported in 1829 amounted to 1,813 cwt., or 90½ tons.

**ORGOL.** See **AGOR.**

**ORPIMENT** (Ger. *Orperment*; Fr. *Orpiment*; It. *Orpimento*; Sp. *Orpimente*; Lat. *Auripigmentum*), the name usually given to sulphuret of arsenic. When artificially prepared, it is in the form of a fine yellow-coloured powder; but it is found native in many parts of the world, particularly in Bohemia, Turkey, China, and Ava. It is exported from the last two in considerable quantities; and is known in the East by the name of *bartal*. Native orpiment is composed of thin plates of a lively gold colour, intermixed with pieces of a vermilion red, of a shattery foliaceous texture, flexible, soft to the touch like talc, and sparkling when broken. Specific gravity 3.45. The inferior kinds are of a dead yellow, inclining to green, and want the bright appearance of the best specimens. Its principal use is as a colouring drug among painters, bookbinders, &c. — (*Thomson's Chemistry*; *Milburn's Orient. Com.*)

**ORSEDEW, ORSIDUE, MANHEIM or DUTCH GOLD** (Ger. *Flittergold*; Du. *Klatergoud*; Fr. *Oripeau, Oliquant*; It. *Orpello*; Sp. *Oropel*), an inferior sort of gold leaf, prepared of copper and zinc. It is sometimes called *leaf brass*. It is principally manufactured in Manheim.

**OSTRICH FEATHERS.** See **FEATHERS.**

**OWNERS OF SHIPS.** Property in ships is acquired, like other personal property, by fabricating them, or by inheritance, purchase, &c.

No ship is entitled to any of the privileges of a British ship until she be duly registered as such, and all the provisions in the Registry Act (3 & 4 Will. 4. c. 55.) be complied with. — (See **REGISTRY**.)

A British ship may belong either to one individual or to several individuals. It is ordered by the act just cited, that the property of every vessel of which there are more owners than one, shall be divided into 64th shares; and that no person shall be entitled to be registered as an owner who does not, at least, hold one 64th share. It is further provided by the same statute, that not more than *thirty-two* persons shall be owners of any one ship at any one time. Companies or associations holding property in ships, may choose *three* of their members to act as trustees for them.

Neither the property of an entire ship, nor any share or shares in such ship, can be transferred from one individual to another, except by bill of sale or other instrument in writing; and before the sale is valid, such bill or instrument must be produced to the collector and comptroller, who are to enter the names, residences, &c. of the seller and buyer, the number of shares sold, &c. in the book of registry of such vessel, and to indorse the particulars on the certificate of registry. — (See the clause in the statute, art. **REGISTRY**.)

But, though compliance with the directions in the statute accomplishes a complete transference of the property, when the transaction is not in its nature illegal, it gives no sort of security to a transference that is otherwise bad. The purchaser should in all cases endeavour to get *possession* of the ship, or of his share in her, as soon as his title to her or it is acquired, by the registration of the particulars of the bill of sale; for though all the formalities of sale have been completed, yet, if the sellers continue as apparent owners in possession of the ship, their creditors may, in the event of their becoming bankrupt, acquire a right to it, to the exclusion of the purchasers. In the case of a sale or agreement for a part only, it is enough if, the sale being completed, the seller ceases to act as a part owner. — (*Lord Tenterden on the Law of Shipping*, part i. c. 1.)

Property in ships is sometimes acquired by capture. During war, his Majesty's ships,

and private ships having letters of marque, are entitled to make prizes. But before the captors acquire a legal title to such prizes, it is necessary that they should be condemned in the Admiralty or other court constituted for that purpose. When this is done, the captors are considered to be in the same situation, with respect to them, as if they had built or purchased them.

The act 3 & 4 Will. 4. c. 55. has ruled, that no person having the transfer of a ship, or a share of a ship, made over to him as a security for a debt, shall be deemed an owner, or part owner, of such ship. And when such transfer has been duly registered according to the provisions of the act, the right and interest of the mortgagee are not to be affected by the bankruptcy of the mortgagor, though he be the reputed owner, or part owner, of such ship. — (See *REGISTRY*.)

In the article *MASTERS OF SHIPS* is given an account of the liabilities incurred by the owners of ships for the acts of the masters. But it has been attempted to encourage navigation by limiting the responsibility of the owners, without, however depriving the freighter of a ship of an adequate security for the faithful performance of the contract. To effect this desirable object, it has been enacted, that the owner or owners shall not be liable to make good any loss or damage happening *without their fault or privity*, to any goods put on board any ship or vessel belonging to such owner or owners, further than the value of such ship or vessel, with all its appurtenances, and the freight due, or growing due, during the voyage that may be in prosecution, or contracted for, at the time when the loss or damage has taken place. — (53 Geo. 3. c. 159.)

This limitation was first introduced into our law by the 7 Geo. 2. c. 15. But it had previously been adopted in the law of Holland, and in the justly celebrated French Ordinance of 1681. In the Ordinance of Rotterdam, issued in 1721, it is expressly declared, that “the owners shall not be answerable for any act of the master, done without their order, any further than their part of the ship amounts to.” Independently, however, of this general agreement, the expediency of the limitation appears, for the reasons already stated, sufficiently obvious.

It was also enacted in 1786 (26 Geo. 3. c. 60.), that neither the master nor owners of any ship or vessel shall be liable to answer for or make good any gold or silver, diamonds, watches, jewels, or precious stones, lost or embezzled during the course of the voyage, unless the shipper thereof insert in his bill of lading, or declare in writing to the master or owners, the true nature, quality, and value of such articles.

The responsibility, at common law, of a *master* or *mariner* is not affected by the first-mentioned limitation, even though such master or mariner be owner or part owner of the vessel; neither does the limitation extend to the owner or owners of any lighter, barge, boat, &c. used solely in rivers or inland navigation, nor to any ship or vessel not duly registered according to law.

When several freighters sustain losses exceeding in the whole the value of the ship and freight, they are to receive compensation thereout in proportion to their respective losses: and any one freighter, on behalf of himself and the other freighters, or any part owner, on behalf of himself and the other part owners, may file a bill in a court of equity for the discovery of the total amount of the losses, and of the value of the ship, and for an equal distribution and payment. If the bill be filed by or on behalf of the part owners, the plaintiff must make affidavit that he does not collude with the defendants, and must offer to pay the value of the ship and freight, as the court shall direct.

It is usual in most countries, where the part owners of a ship disagree as to her employment, to give those possessed of the greater number of shares power to bind the whole. But in this country, while the majority of the owners in value have authority to employ the ship as they please, the interests of the minority are secured from being prejudiced by having their property engaged in an adventure of which they disapprove. For this purpose the Court of Admiralty has been in the practice of taking a stipulation from those who desire to send the ship on a voyage, in a sum equal to the value of the shares of those who object to it, either to bring back and restore to them the ship, or to pay them the value of their shares. When this is done, the dissentient part owners bear no portion of the expenses of the outfit, and are not entitled to a share in the profits of the voyage; the ship sails wholly at the charge and risk, and for the profit, of the others. — (*Abbott*, part i. c. 3.)

For the statutory enactments as to the sale and transfer of ships, see *REGISTRY*.

**OYSTER, OYSTERS** (Ger. *Austern*; Fr. *Huitres*; It. *Ostriche*; Sp. *Ostras*; Lat. *Ostrea*). This well known shell-fish is very generally diffused, and is particularly plentiful on the British coasts, which were ransacked for the supply of ancient Rome with oysters. They differ in quality according to the different nature of the soil or bed. The best British oysters are found at Purfleet; the worst, near Liverpool. The nursing and feeding of oysters is almost exclusively carried on at Colchester, and other places in Essex. The oysters are brought from the coast of Hampshire, Dorset, and other maritime counties, even as far as Scotland, and laid on beds or layings in creeks along the

shore, where they grow, in 2 or 3 years, to a considerable size, and have their flavour improved. There are said to be about 200 vessels, from 12 to 40 or 50 tons burden, immediately employed in dredging for oysters, having from 400 to 500 men and boys attached to them. The quantity of oysters bred and taken in Essex, and consumed mostly in London, is supposed to amount to 14,000 or 15,000 bushels a year. — (*Supp. to Ency. Brit. art. Fisheries.*)

The imports of oysters fluctuate very much. From 1824 to 1828, both inclusive, none were imported. But, at an average of 1831 and 1832, the imports amounted to 52,095 bushels a year.

The stealing of oysters, or oyster brood, from any oyster bed, laying, or fishery, is larceny, and the offender, being convicted thereof, shall be punished accordingly; and if any person shall unlawfully and wilfully use any dredge, net, &c. for the purpose of taking oysters, or oyster brood, within the limits of any oyster bed or fishery, every such person shall be deemed guilty of a misdemeanour, and, upon being convicted thereof, shall be punished by fine or imprisonment, or both, as the court may award; such fine not to exceed 20*l.*, and such imprisonment not to exceed 3 calendar months. It is provided, that nothing in the act shall be construed as preventing any one from catching *floating fish* within the limits of any oyster fishery, with any net, instrument, or engine adapted to the catching of such fish. — (7 & 8 Geo. 4. c. 29. § 30.)

## P.

PACKAGE, SCAVAGE, BAILLAGE, AND PORTAGE, were duties charged in the port of London, on the goods imported and exported by aliens, or by denizens being the sons of aliens.

During the dark ages, it was usual to lay higher duties upon the goods imported or exported by aliens, whether in British or foreign ships, than were laid on similar goods when imported or exported by natives. But according as sounder and more enlarged principles prevailed, this illiberal distinction was gradually modified, and was at length wholly abolished, in so far at least as it was of a public character, by the 24 Geo. 3. c. 16. This act, after reciting that "the several duties and restrictions imposed by various acts of parliament upon merchandise are, by the alterations of the trade now carried on between this kingdom and foreign states, in some cases become an unnecessary burden upon commerce, without producing any real advantage to the public revenue, and that it is expedient they should no longer continue," enacts, that the duty commonly called "the petty customs," imposed by the 12 Car. 2., and all other additional duties imposed by any act upon the goods of aliens above those payable by natural-born subjects, should be no longer payable. The act then goes on to provide, that nothing contained in it shall "alter the duties due and payable upon goods imported into or exported from this kingdom in any *foreign* ship, nor the duties of *package* and *scavage*, or any duties granted by charter to the city of London;" and then follow provisions to prevent the city being defrauded of such duties by false entries of aliens' goods in the name of a British subject. — (*Chitty's Commercial Law*, vol. i. p. 160.)

The duties thus preserved to the city were not very heavy; but the principle on which they were imposed was exceedingly objectionable, and their collection was attended with a great deal of trouble and inconvenience. Not being levied in other places, they operated to the prejudice of the trade of the metropolis. For these reasons, we observed, in the former edition of this work, that "if the funds of the corporation will not admit of their following the liberal example of the legislature, by voluntarily abandoning this vexatious impost, it would be good policy to give them a compensation for relinquishing it." And we are glad to have to state that this suggestion has since been carried into effect. The act 3 & 4 Will. 4. c. 66. authorised the Lords of the Treasury to purchase up the duties in question from the city. This has been done, at an expense of about 140,000*l.*, and the duties are now abolished. There is a Table of the duties in the former edition of this work.

PACKETS. See NEW YORK, PASSENGERS, and POST-OFFICE.

PALERMO (anciently PANORMUS), a large city and sea-port, the capital of the noble island of Sicily, on the north coast of which it is situated, the light-house being in lat. 38° 8' 15" N., lon. 13° 21' 56" E. Population, 170,000.

The bay of Palermo is about 5 miles in depth, the city being situated on its south-west shore. A fine mole, fully  $\frac{1}{2}$  of a mile in length, having a light-house and battery at its extremity, projects in a southerly direction from the arsenal into 9 or 10 fathoms water, forming a convenient port, capable of containing a great number of vessels. This immense work cost about 1,000,000*l.* sterling in its construction; but the light-house, though a splendid structure, is said to be very ill lighted. There is an inner port, which is reserved for the use of the arsenal. Ships that do not mean to go within the mole may anchor about  $\frac{1}{2}$  a mile from it, in from 16 to 23 fathoms, the mole light bearing N.W.  $\frac{3}{4}$  W. A heavy sea sometimes rolls into the bay, but no danger need be apprehended by ships properly found in anchors and chain cables. In going into the bay, it is necessary to keep clear of the nets of the tunny fishery, for these are so strong and well moored, as to be capable of arresting a ship under sail. — (*Smyth's Sicily*, p. 70. and *Appen.* p. 4.)

Money. — Since 1818, the coins of Sicily have been the same as those of Naples, their names only differing. — (See NAPLES.) The ducat, = 3*s.* 5*d.* sterling, is subdivided into 100 *bajocchi* and 10 *piccioli*;

but accounts are still generally kept in *oncie, tari, and grani*: 20 grani = 1 taro; 30 tari = 1 oncia. The oncia = 3 duccats; and 1 carlino of Naples = 1 taro of Sicily. The Spanish dollar is current at 12 tari 8 grani.

**Weights.**—These are the *cantaro grosso*, subdivided into 100 *vottoli grossi* of 33 oncie, or into 110 rottoli sottili of 30 oncie; and the *cantaro sottile*, subdivided into 100 rottoli sottili of 30 oncie, or 230 lbs. of 12 oncie. The rottolo of 33 ounces = 193 lbs. avoirdupois = 234 lbs. Troy = 873 hectogrammes = 177 lbs. of Amsterdam = 18 lbs. of Hamburg. The rottolo of 30 ounces = 175 lbs. avoirdupois = 213 lbs. Troy = 794 hectogrammes = 16 lbs. of Amsterdam = 161 lbs. of Hamburg.

100 Sicilian pounds of 12 ounces = 70 lbs. avoirdupois = 85.11 lbs. Troy = 31.76 kilog. = 64.23 lbs. of Amsterdam = 65.98 lbs. of Hamburg.

**Measures.**—The *salma grossa* = 9.48 Winchester bush; the *salma generale* = 7.62 Winchester bush.

The principal liquid measure is the *tonna*, divided into 4 barilli, each equivalent to  $\frac{1}{2}$  wine gallon. 1 barile = 2 quartari; 1 quartara = 20 quartucci. The cask of oil = 43 Eng. gallons.

The yard or *canna* = 8 *putoi*; 21 palms = 1 yard Eng. — (*Nelkenbrecher*: *Smyth*, p. 62. App.)

**Taxes.**—Collee, indigo, pepper, and dye woods, 2 per cent. and weight of package. Cinnamon, 6 rottoli per seron, with 1 wrapper, or 8 rottoli, with 2 wrappers; cocoa, 2 per cent., weight of package, and 3 per cent. for dust; cod-fish, 3 per cent.; herrings, 12 per cent.; tin, 13 rottoli per barrel; wax, weight of package, and 3 to 4 per cent. extra allowance; Havannah sugars, 16 per cent.; Brazil do., in short cases, 18 per cent., and in long cases, 20 per cent.; crushed sugar, weight of cask, and 5 per cent., or 13 per cent. in all, at the option of the buyer; East India do., in bags, 8 rot. to 10 rot. per bag. 1 rotolo taken as weight of bag, for coffee and cocoa in bags.

**Charges on Goods.**—The regular charges on the sale of goods consigned to Palermo, are—commission, 3 per cent.; brokerage,  $\frac{1}{2}$  per cent.; warehouse rent,  $\frac{1}{2}$  per cent.; and portage and boat hire, with 2 per cent. *dell' credito*, being almost always sold on credit. The charges may occasionally vary  $\frac{1}{2}$  to 1 per cent., and imports are frequently sold duty paid; the prices, however, so obtained, fully compensate for the trifling increase of charges.

The charges on goods exported are—3 per cent. commission; brokerage, so much per *cantaro, salma, &c.*, generally amounting to about  $\frac{1}{2}$  per cent., except on fruit, on which it is equivalent to from 2 to 3 per cent.

**Imports and Exports.**—The great articles of export from Sicily are—grain, particularly wheat and barley; beans, wine, brandy, oil, barilla, lemons and oranges, lemon juice, almonds, salt, shumac, salt-fish, cheese, with brimstone, argol, manna, liquorice, pumice stone, rags, skins, honey, cotton wool, nuts, linseed, saffron, &c. Wheat is largely exported. It is of a mixed quality, hard, and is generally sold from the public magazines, or *caricatori* (see *post*), by measure, without weight. But the best hard wheat, grown in the neighbourhood of Palermo, is sold by the *salma* of 372 rottoli = 476 lbs. Eng.; and the difference between weight and measure being made good by the seller or buyer, as the case may be. Wine is principally shipped from Marsala; lemons, oranges, and lemon juice, from Messina; salt, from Trapani; and barilla, from the southern coast. But all the articles to be found on the coast may, for the most part, be had at Palermo; unless, however, the quantity required be small, it is usually best to ship them from the outports, the expense of their conveyance to Palermo being very heavy. The crops of barilla and shumac come to market in August; but brimstone, salt, oil, wine, rags, &c. may generally be had all the year round. The first shipments of lemons and oranges may be made in the beginning of November. Purchases of produce are always paid for in cash, generally  $\frac{1}{2}$  on making the purchase, and the other  $\frac{1}{2}$  on delivery, when in Palermo, and on receiving order for delivery, on the coast.

The imports consist of sugar, coffee, cocoa, indigo, dye woods, spices, iron, tin, hides, Newfoundland cod, cotton and woollen stuffs, timber for building, &c. We have no means of forming any estimate either of the quantity or the value of the principal articles of import and export. Silk is a staple produce of the island; but its exportation in an unwrought state, except to Naples, is prohibited.—(We have gleaned these details principally from *private communications*. The best account of the trade of Sicily, though now a little antiquated, that we have met with in any English work, is contained in *Swainburne's Travels in the Two Sicilies*, 4to ed. vol. ii. pp. 401—413. See also the article NAPLES in this work.)

**Remarks on the Trade, &c. of Sicily.**—This noble island contains about 10,500 square miles, being the largest in the Mediterranean, and one of the most fertile and best situated in the world. Its population is about 1,900,000. In ancient times, Sicily was celebrated for the number, magnitude, and opulence of its cities; and, notwithstanding its population was then, at least, treble its present amount, it obtained, from its furnishing vast supplies of corn and other articles of provision for the use of Rome, the appropriate epithet of *horreum Romanorum*. When the Roman power had been overthrown, Sicily was occupied, first by the Saracens, then by the Normans, and after them by the French. The Sicilian Vespers put a fatal period to the dominion of the latter; and a prince of the house of Aragon having been called to the Sicilian throne, the island became, in course of time, a dependency, first of the crown of Spain, and more recently of that of Naples.

It is to this dependence that we are induced to ascribe the backward state of Sicily. The multiplied abuses which grew up in Spain, under Ferdinand the Catholic, and his successors of the Austrian line, flourished with equal luxuriance in Sicily, and have proved no less destructive of the industry and civilisation of its inhabitants than of those of Spain. The Bourbon or Neapolitan régime has been equally pernicious. "The government of this island," says a recent and most intelligent observer, "seems to unite in itself nearly all the defects, both theoretical and practical, of which political institutions are susceptible. It is a model in its way. We find here a system of laws quite barbarous, and the administration of them notoriously corrupt; high taxes, levied arbitrarily and unequally; the land generally held on such a tenure as makes it unalienable, so that few can ever be proprietors; and farming leases, for church land at least, are binding on the farmer only, and not on his landlord. For want of roads, produce cannot be exported from one part of the island to another; the consequence of which is, that a scarcity and a glut may and frequently do exist at the same time in different parts of the island, without the means of timely and effectual communication."—(*Simond's Italy and Sicily*, p. 529.) But the grand curse of Sicilian, as well as of Sardinian, industry — (see CAGLIARI) — is the restriction on the exportation of corn. It is true that the difficulties in this respect are not so great now as formerly, but they are still such as to oppose an

invincible obstacle to the spread of improvement, and to the development of the national resources. No exportation of corn can take place without leave of the *real patrimonio*, — a tribunal that pretends to take a yearly account of the crop, and of the supply required to meet the home demand. When this body has determined that an exportation may take place, it issues (or rather, we believe, sells) its licences to export certain specific quantities, to a few favoured individuals\*, who, in consequence, are able to regulate the price; so that they, and not the corn growers, reap all the advantage! Thus, says M. Simond, "neither scanty nor plentiful crops affording a chance of gain, farmers are discouraged, and corn is frequently scarce in a country once the granary of Imperial Rome, although its own population be now reduced to 1-6th of what it was at that period. † Such is the system of minute and vexatious regulations, that a man cannot go in or out of town with a loaf of bread or a joint of meat without special permission. The revenue laws in England are sufficiently vexatious, but they at least answer their fiscal purpose. Here the vexation is gratuitous; for little or nothing comes of it ultimately, drained as the little sources of revenue are, in their way to the treasury, by malpractices of all sorts." — (p. 530.)

There are only certain ports from which corn can be exported. This limitation has given rise to the establishment of public magazines or *caricatori*, where the corn may be deposited till an opportunity occurs of shipping it off. Provided it be of good quality (*mercantibile* or *recetibile*), and provided it be brought in immediately after harvest, or, at farthest, in August, it is warehoused free of expense; what it gains in bulk after that period (about 5 per cent.) being sufficient to defray all expenses. The receipt of the *caricator*, or keeper of the magazine, is negotiable like a bill of exchange, and is the object of speculative purchases on the exchange at Palermo, Messina, &c. according to the expected rise or fall in the price of corn. The depositor of a quantity sells it in such portions as he pleases, the whole being faithfully accounted for. The public magazines, in some parts of the island, are either excavations into calcareous rocks, or holes in the ground shaped like a bottle, walled up, and made water-proof, containing each about 200 salme of corn, or about 1,600 English bushels. The neck of the bottle is hermetically closed with a stone fastened with gypsum. Corn may be thus preserved for an indefinite length of time; at least, it has been found in perfectly good order after the lapse of a century. — (*Simond*, p. 540.; *Swinburne*, vol. ii. p. 405. For an account of the oil *caricatori* of Naples, see OLIVE OIL.)

Hemp grows very well in Sicily; and when the English were there, their ships were abundantly supplied with that article; but its exportation being no longer permitted, its culture is now, of course, neglected! — (*Simond*, p. 539.) Sugar canes were, at one time, pretty extensively cultivated in Sicily; but their culture has been long declining, and is now nearly extinct.

Were the bounty of nature towards Sicily not counteracted by vicious laws and institutions, she would undoubtedly be one of the richest and finest of European countries. All that she requires is security of property and freedom of industry. Let but these be given to her, and a few years will develop her gigantic resources, and elevate Girgenti, Termini, and Sciacca, to a very high rank among corn-shipping ports.

PALM OIL (Ger. *Palmoil*; Fr. *Haile de palme*, *Haile de Senegal*; It. *Olio di palma*; Sp. *Acete de palma*) is obtained from the fruit of several species of palms, but especially from that of the *Elais Guineensis*, growing on the west coast of Africa, to the south of Fernando Po, and in Brazil. When imported, the oil is about the consistence of butter, of a yellowish colour, and scarcely any particular taste; by long keeping it becomes rancid; loses its colour, which fades to a dirty white; and in this state is to be rejected. It is sometimes imitated with hog's lard, coloured with turmeric, and scented with Florentine iris root. The inhabitants of the coast of Guinea employ palm oil for the same purposes that we do butter. — (*Lewis's Mat. Med.*; *Thomson's Dispensatory*.)

Account of the Quantities of Palm Oil entered for Home Consumption in the United Kingdom, the Amount of Duty received thereon, and the Rate of Duty, each Year since 1821.

The price of palm oil (duty paid) varies from 3*l.* to 3*l.* a ton.

\* The late Queen is said to have been a great dealer in corn on her own account!

† We cannot help looking upon this as an exaggeration. There do not seem to be any good grounds for thinking that Sicily ever contained more than 6,000,000 inhabitants, — that is, a little more than 3 times as many as at present.

Almost all the palm oil made use of in this country is brought from the western coast of Africa, south of the Rio Volta.

**PAMPHLET**, a small book, usually printed in the octavo form, and stitched.

It is enacted by 10 Ann. c. 19. § 111., that no person shall sell, or expose to sale, any pamphlet, without the name and place of abode of some known person, by or for whom it was printed or published, written or printed thereon, under a penalty of 20*l.* and costs.

It is enacted by the 55 Geo. 3. c. 185., that every book containing 1 whole sheet, and not exceeding 8 sheets, in 8vo, or any lesser size; or not exceeding 12 sheets in 4to, or 20 sheets in folio, shall be deemed a pamphlet. The same act imposed a duty of 3*s.* upon each sheet of *one* copy of all pamphlets published. This duty, which was at once vexatious and unproductive, hardly ever yielding more than 1,000*l.* or 1,100*l.* a year, was repealed in 1833.

**PAPER** (Ger. and Du. *Papier*; Fr. *Papier*; It. *Carta*; Sp. *Papel*; Rus. *Bumaga*; Lat. *Charta*; Arab. *Kartas*; Pers. *Kaghas*). This highly useful substance is, as every one knows, thin, flexible, of different colours, but most commonly white, being used for writing and printing upon, and for various other purposes. It is manufactured of vegetable matter reduced to a sort of pulp. The term paper is derived from the Greek *πᾶπυρος* (*papyrus*, see *post*), the leaves of a plant on which the ancients used to write. Paper is made up into *sheets*, *quires*, and *reams*; each quire consisting of 24 sheets, and each ream of 20 quires.

*Historical Sketch of Paper. Difference between ancient and modern Paper.* — It has often been a subject of wonder with those learned and ingenious persons who have written concerning the arts of the ancient world, that the Greeks and Romans, although they possessed a prodigious number of books, and approached very near to printing in the stamping words and letters, and similar devices, should not have fallen upon the art; the first rude attempts at typography being sufficiently obvious, though much time and contrivance have been required to bring the process to the perfection in which it now prevails. They ought rather, perhaps, to have wondered that the more civilised nations of antiquity did not invent paper, which must precede the invention of printing, as may be easily shown. The rocks, pillars of stone or of marble, and especially the walls of edifices, supply fixed surfaces, upon which, were we unprovided with more convenient tablets, much valuable information might be preserved; and were all our public and many of our private buildings thickly covered with inscriptions, the memory of divers historical facts, and other matters of importance, might be handed down to posterity. Men wrote thus in very remote ages; and the old usage is still retained in many instances, particularly in our churches and cemeteries. In very remote ages, also, we read that they were accustomed to write upon portable surfaces of various kinds: and if it were possible to deprive us of our ordinary means of fixing and communicating our thoughts, modern ingenuity would speedily reinvent numerous expedients which have long been superseded; and we should have recourse to plates of metal of various dimensions, sometimes, probably, as thin as foil; to slices of soft, light wood, not thicker than those of which hand-boxes are sometimes made; to cloth, leather, and the like. These materials would often be primed, like the canvass of painters, that they might more readily receive, and more plainly show, the ink or paint that formed the characters. It is evident that, in the course of time, large libraries might be gradually composed of books constructed in this manner; and the whole amount of human learning might still be very considerable. The substances which we have enumerated are all somewhat costly: it would be desirable, therefore, to find one that was cheaper; and we should doubtless direct our attention very early to that which has served the office of paper in all times, and is used as such in some countries of the East at this day, — we mean the leaves of trees. Some of the palms, and other vegetables, that are natives of hot countries, furnish the Orientals with books that are not inconvenient: the leaves of the indigenous plants of Great Britain are not so well suited for the purpose; but by care in the selection, and skill in the preparation, some might certainly be chosen, which would, in some degree, be fit to receive writing. Leaves, when they are dry, are apt to split in the direction of the fibres; it has commonly been found expedient, therefore, to glue others at the back in an opposite direction; and by thus crossing the fibres at right angles, the texture is strengthened; and when it has been pressed and polished, the page is less unsightly and inconvenient than might have been supposed. Such, in the main, was the structure of the ancient paper. In Sicily, and in other countries on the shores of the Mediterranean Sea, but principally in Egypt and in the Nile, or rather in the ponds and ditches that communicate with that river, grows, in the nineteenth century after the death of the last of the Ptolemies, as of old under that illustrious dynasty, and under their predecessors the Pharaohs, a lofty and most stately reed or rush, the *Cyperus Papyrus* of modern botanists. It has been introduced into the hot-houses of some of our botanical gardens, where it may be seen conspicuous with its long, drooping, and graceful plume. A description of the various purposes to which the ancients applied this useful plant would fill a volume; we shall speak of that only from which it has earned an immortality of renown. The inner bark was divided with a needle into very thin coats; these were placed side by side longitudinally, and the edges were glued together; similar

layers were glued across these behind, at right angles, to give the page the requisite strength; and the sheets were pressed, dried, polished, and otherwise prepared for use. Ancient writers have described the process, and especially Pliny (*Hist. Nat.* lib. xiii. c. 11, 12, 13.). From that naturalist, and the notes of Hardouin and his other commentators, it may be fully traced; and Mr. Bruce has collected the authorities, and has added his own observations, in the 7th vol. of the 8vo edition of his *Travels*. That remarkable person even attempted to make paper from the papyrus; in which, however, he was not very successful; and he imputes his failure to the erroneous directions of Pliny; for it seems not to have occurred to him, that had he endeavoured, trusting to written directions, without experience and traditional art, to make modern paper, or even a pair of shoes, he would, most probably, have been equally infelicitous. Alexandria was the chief seat of this valuable manufacture; but in later periods much was also made at Rome, where an article of superior beauty was produced. Pliny enumerates the various kinds of paper that were composed, from the coarsest, which was used, like our brown paper, for packing, to the most expensive and finest. The consumption of paper was very considerable; it seems to have been tolerably cheap; and since the principal part was made at Alexandria, it was an important article in the commerce of that city — furnishing employment for many workmen and much capital. Flavius Vopiscus relates, that in the 3d century, the tyrant Firmus used to say there was so much paper there, and so large a quantity of the glue or size used in preparing it, that he could maintain an army with it: — “*Tantum habuisse de chartis, ut publicè sæpe duceret, exercitum se alere posse papyro et glutino.*” We may doubt whether the value of the paper which any single city now contains would do the like. Learned men have discussed the antiquity of this manufacture. It is not improbable that an earlier date ought to be assigned to it than is commonly given: nor ought we rashly to conclude that it was unknown at a particular period, because it is not mentioned in a poem of that time; for the poet sought to celebrate the achievements of gods and heroes, and not to compose an Encyclopædia, or a Dictionary of the Arts and Sciences. Ancient paper was white, smooth, durable, and well adapted in all respects for writing; but it was not suited for the printer: by reason of the closeness of the grain, it would not receive the ink from the types more kindly than shavings of wood, &c.; and so brittle was its texture, that it would have shivered into pieces under the press. Nor did it resemble modern paper in its structure: it was, in truth, an artificial mass; leaves, or rather strips of bark (“*viværa nivea virentium herbarum*”), being pasted together by the edges, others were laid across them behind; whereas the paper which we now use is, perhaps, the most subtle and extraordinary of human inventions. If a cistern or other vessel be filled with water turbid with lime or clay, and the earth allowed to subside slowly, the water being evaporated, or drawn off gently, and the sediment left to dry, the calcareous or argillaceous deposit will reproduce faithfully the formation of paper; and it will be smooth, and of an equal thickness throughout; for an equal portion of the earth of which it is formed was suspended in the troubled water over each point in the bottom where it finally lodged. In making paper, the water is turbid with the pulp or paste of triturated rags, and the suspended pulp is not suffered to subside slowly; but a sieve or frame of wire gauze is dipped equally into the cistern, and is raised gently to the surface, and agitated in a level position, which facilitates the passage of the water through the wires, while the fibres of rag are in some degree interwoven by it, and, remaining on the surface of the sieve, form the sheet of paper. This is pressed between felts, to exclude the water, and to render its texture closer; it is dried and sized, and undergoes various operations, which it is unnecessary to enumerate, as we seek only to show that the result of this wonderful invention is as much an aqueous deposit as the earthy sediment at the bottom of a cistern, although it is obtained more rapidly. Modern paper has nothing in common with the ancient, save that vegetable fibre is the basis of both. The application of rotary motion has effected wonders in many of the arts; nor have the results been less astonishing in the paper-mill: instead of dipping the sieves or frames into the cistern of turbid water, a circular web, a round towel of woven wire, revolves under the vessel, receives the deposit, conveys it away, and, by an adjustment of marvellous delicacy, transfers it uninjured, although as frail as a wet cobweb, to a similar revolving towel of felt: thus an endless web of paper is spun, as long as the machine continues to move, and the water charged with pulp is supplied. We are unable to pursue the process, however interesting; for we desire merely to explain the general principle according to which our paper is constructed. It is to this admirable material that we owe the invention of printing, which could not subsist without it: its pervious and spongy texture imbibes and retains the ink, and its toughness resists the most violent pressure; and, in a well-bound book, under favourable circumstances, its duration is indefinite, and, for all practical purposes, eternal! It is true that legal documents are sometimes printed on parchment, which is less liable to be torn, or injured by rubbing; and the luxury of typography occasionally exhibits a few impressions of a splendid work upon vellum; and that these two substances were known

to the ancients: but they are necessarily expensive, and the cost of either far exceeds the price of the best penmanship; so that it would be altogether unprofitable to cast types, to construct presses, and to incur the various and heavy charges of an establishment for printing, unless we possessed a cheaper material.

We owe the introduction of paper into Europe to the Arabians or Moors. There is some uncertainty as to the precise era of its first appearance; and we are unable to trace the origin of the precious invention, or even to imagine by what steps men were led to it. We cannot conceive how any one could be tempted to pound wet rags in a mortar, to stir the paste into a large body of water, to receive the deposit upon a sieve, to press and to dry it. The labour of beating rags into pulp by the hand would be as hopeless as it would be tedious and severe. It is true that paper was originally made of cotton, — a substance less obstinate than linen rags, which are now commonly used. At present, the fresh rags are torn in pieces by a powerful mill: formerly, it was the practice to suffer them to rot; to place them in large heaps in a warm and damp situation, and to allow them to heat and ferment, and to remain undisturbed until mushrooms began to grow upon them; so that, being partially decayed, it might be less difficult to triturate them. Nevertheless, the invention of paper is a mystery. The Chinese possess the arts of making paper and of printing; but we know not how long they have had them, nor whether the Mohammedans learned the former from them. The illiterate inhabitants of some of the islands in the South Seas were able to compose a species of paper, which they used in fine weather for raiment, of the bark of trees. The basis of paper being the vegetable fibre, it has been made of various substances, as straw, as well as of rags.\*

*Manufacture of Paper in England.* — The application of paper to the purposes of writing and printing, and the fact of its being indispensable to the prosecution of the latter, render its manufacture of the highest utility and importance. But, even in a commercial point of view, its value is very considerable. France, Holland, and Genoa had, for a lengthened period, a decided superiority in this department. The finest and best paper being made of linen rags, its quality may be supposed to depend, in a considerable degree, on the sort of linen usually worn in the country where it is manufactured; and this circumstance is said to account for the greater whiteness of the Dutch and Belgian papers, as compared with those of the French and Italians, and still more the Germans. The rags used in the manufacture of writing paper in Great Britain are collected at home; but those used in the manufacture of the best printing paper are imported, principally, from Italy, Hamburgh, and the Austrian States, by way of Trieste. — (See RAGS.) We believe, however, that it was owing rather to the want of skill, than, as has sometimes been supposed, to the inferior quality of the linen of this country, that the manufacture of paper was not carried on with much success in England till a comparatively recent period. During the 17th century, most part of our supply was imported from the Continent, especially from France. The manufacture is said to have been considerably improved by the French refugees who fled to this country in 1685. But it is distinctly stated in *The British Merchant* (vol. ii. p. 266.), that hardly any sort of paper, except brown, was made here previously to the Revolution. In 1690, however, the manufacture of white paper was attempted; and within a few years, most branches were much improved. In 1721, it is supposed that there were about 300,000 reams of paper annually produced in Great Britain, which was equal to about two thirds of the whole consumption. In 1783, the value of the paper annually manufactured was estimated at 780,000*l.* At present, besides making a sufficient quantity of most sorts of paper for our own use, we annually export about 100,000*l.* worth of books. We still, however, continue to import certain descriptions of paper for engraving from France, and a small supply of paper hangings. The duty on both amounts to about 2,800*l.* a year.

In 1813, Dr. Colquhoun estimated the value of paper annually produced in Great Britain at 2,000,000*l.*; but Mr. Stevenson, an incomparably better authority upon such subjects, estimated it at only half this sum. From information obtained from those engaged in the trade, we incline to think that the total annual value of the paper manufacture in the United Kingdom, exclusive of the duty, may at present amount to about 1,200,000*l.* or 1,300,000*l.* There are about 700 paper-mills in England, and from 70 to 80 in Scotland. The number in Ireland is but inconsiderable. Of these mills, we believe very few have lately been unemployed. About 27,000 individuals are supposed to be directly engaged in the trade: and, besides the workmen employed in the mills, the paper manufacture creates a considerable demand for the labour of millwrights, machinists, smiths, carpenters, iron and brass founders, wire-workers, woollen manufacturers, and others, in the machinery and apparatus of the mills. Some

\* We are indebted for this valuable historical sketch to our learned friend, T. J. Hogg, Esq., barrister-at-law. The reader may resort, for further information as to the history of paper, to the article on it in *Rees's Cyclopaedia*.

parts of these are very powerful, and subject to severe strain; and other parts are complicated and delicate, and require continual renovation. Owing to this, the manufacture is of much greater importance, as a source of employment, than might at first be supposed, or than it would seem to be considered by government, who have loaded it with an excise duty amounting to more than *three times as much as the total wages of the work-people employed!*

The modern discoveries in chemical science have not only materially facilitated the manufacture, but have greatly enlarged the supply of materials from which paper may be made. Until within these few years, the sweepings of cotton mills, owing to the grease and dirt with which they are mixed up, were of no value whatever, except as manure. But means having been discovered of rendering them white, they are now made into very good paper; and the neighbourhood of Manchester has, in consequence, become a principal seat of the manufacture.

During the present century, so remarkable for improvements in the arts, this manufacture has been signally promoted, notwithstanding the excise regulations, by the application of machinery to the conversion of pulp into paper. The first idea of this originated in France: a model of the machinery was brought to this country by a M. Didot, which, though very far from giving assurance of success, was yet sufficient to induce English capitalists and engineers, particularly Mr. Donkin, to follow up the scheme; and in the course of a few years they have brought it to a high degree of perfection. Mr. Dickinson, of Hertfordshire, one of the most intelligent mechanists and extensive paper manufacturers in England, has invented a machine of a different construction for the same purpose, and has also introduced various subsidiary improvements into the manufacture. The result is all but miraculous. By the agency of a great deal of complicated machinery, so admirably contrived as to produce the intended effect with unerring precision and in the very best manner, a process, which in the old system of paper-making occupied about *three weeks*, is performed in as many minutes! A continuous stream of fluid pulp is, within this brief space of time, and the short distance of 90 feet, not only made into paper, but actually dried, polished, and every separate sheet cut round the edges, and rendered completely ready for use! The paper manufactured by this wonderful combination of intelligence and power is, at once, moderate in price, and for most purposes superior in quality to that which was formerly made by hand. The sample before the reader, though not the finest that is made, will warrant what is now stated. Mr. Dickinson has very recently made an important improvement in the paper manufacture, on the principle of veneering in cabinet work. He makes two webs of paper, each by a separate process; and by laying them together while in an early stage, they are rendered inseparable by the pressure to which they are subjected. This paper is used in copperplate printing; and by adopting a peculiar method of preparing the pulp, and selecting a finer rag for the web which forms the face of the paper, it is much better calculated for taking a fine impression. This admirable invention has put nearly a total stop to the importation of French paper, which was formerly used in considerable quantities by copperplate printers.

*Duty on Paper. Excise Regulations.* — It is difficult to say whether the duty on paper, or the regulations under which that duty is collected, be the more objectionable. All writing, coloured, or wrapping paper, card-boards, and pasteboards, are denominated 1st class paper, and pay 3*d.* per lb. duty (28*s.* a cwt.); unless *manufactured wholly of tarred ropes, without the tar being previously extracted*, in which case the paper is denominated 2d class, and pays 14*d.* per lb. (14*s.* a cwt.). Millboards and scale-boards, made of the same materials as 2d class paper, pay 2*d.* per lb. (21*s.* a cwt.) duty.

The duty on the various descriptions of 1st class paper varies from about 25 or 30 per cent. on the finest, to about 200 per cent. on the coarsest! A duty so oppressive has led to the commission of very great frauds, which all the vigilance of the officers, and the endless multiplication of checks and penalties, have been unable to prevent; the resort of such miserable devices being to injure the honest manufacturer, and to give those of a different character greater facilities for carrying on their fraudulent schemes. But, laying out of view for a moment the oppressiveness of the duty, can any thing be more preposterously absurd, than to interdict the manufacturer of wrapping paper (for it is to him that the regulation applies) from using any other material than *tarred ropes*? If there must be a duty on paper, let it be assessed upon the finished article on an *ad valorem* principle; but do not let the plans and combinations of the manufacturer be interfered with. Were it not for the existing regulation, wrapping paper of equal strength and better appearance than what is now manufactured, might be made of much less costly materials. Since the peace, and the very general introduction of iron cables, tarred ropes have advanced considerably in price; but as the use of *any other material whatever* would occasion an increase of 14*s.* a cwt. of duty, advantage cannot be taken of this circumstance; so that the excise regulation, without putting one sixpence into the pockets of government, obliges the public to pay an increased price for an inferior article! Neither is this its only effect: a good deal of the refuse thrown out in sorting rags, which might be used in the manufacture of coarse wrapping paper, is at present sold by the manufacturers for about 3*s.* a cwt.; while a good deal that might be used in the same way cannot be sold at all, but is absolutely lost. It is plain, therefore, that this regulation has a two-fold operation: first, in adding to the cost of wrapping paper, by compelling it to be made from a comparatively expensive article; and, secondly, in adding to the expense of fine paper, by preventing the refuse of the rags used in its manufacture from being beneficially employed.

The other regulations in the excise acts (54 Geo. 2 c. 20, and 42 Geo. 3 c. 94.) as to paper, are of a piece with that now brought under the reader's notice. Every step of the manufacture must be conducted under the *surveillance* of the excise; and the provisions as to entries, folding, weighing, sorting, labelling, removing, &c. are not only exceedingly numerous, but are in the last degree vexatious, at the same time that compliance with them is enforced under ruinous penalties. That this is not an exaggerated statement will be obvious from the following extracts from the statements of

manufacturers, given in Mr. Poulett Thomson's admirable speech on the taxation of the empire, 26th of March, 1830.

"We are bound," says a manufacturer on whose accuracy and honour I (Mr. P. Thomson) can rely, "to give 24 or 48 hours' notice (according to the distance the exciseman lives), before we can change any paper, and to keep it in our mills for 24 hours afterwards before we send it to market, unless it has been reweighed by the supervisor; to have the different rooms in our manufactories lettered; to have our engines, vats, chests, and presses numbered; and labels pasted on each ream: should we lose one label, the penalty is 200*l.* I generally write a request for 500 labels to the excise at one time; and should any person get into my mill, and steal or destroy them, the penalty would be 100,000*l.* I believe there is not any kind of paper pays more than 20*s.* per ream duty. If the penalty were 40*s.*, it would be quite sufficient to answer every purpose for the security of the revenue. We are obliged, also, to take out a yearly licence; and a mill with 1 vat pays as much as one that has 10."

Another says,—"It is no slight aggravation of the evil, that the laws are so scattered and confused as to render it almost impossible for any body to have a knowledge of them; and frequently, what is a great annoyance to an honest man, is no check to a rogue. It is true, the excise laws are seldom, or perhaps never, acted upon to their utmost rigour; but still they confer almost unlimited power on those who have the administering of them, over the property of all who come under their influence; and I am persuaded that they never could have existed, if they had affected the whole of the community."

It is singular that nothing should hitherto have been done to amend regulations so justly complained of. In point of fact, they are good for nothing but the oppression of the trade. It has not been shown that their maintenance is indispensable to enable the duty to be assessed and collected; but if such be the case, it is, of itself, a sufficient ground for the repeal of the duty. Our condition is not, fortunately, such as to require that one of the most important manufactures carried on in the empire should be subjected to a system of oppressive regulations for the sake of 700,000*l.* a year.

But, though it were possible to assess and collect the duty so as to prevent fraud, without interfering with the manufacture, we should very much doubt, considering the purposes to which paper is applied, the policy of subjecting it to any duty whatever. Printers, stationers, bookbinders, type-founders, artists, copperplate and lithographic printers, card-makers, paper-stainers and paper-hangers, &c. are all injured by the duty on paper. But the greatest evil of all is its influence in increasing the price, and hindering the publication, of books. "This places a great obstacle in the way of the progress of knowledge, of useful and necessary arts, and of sober, industrious habits. Books carry the productions of the human mind over the whole world, and may be truly called the raw materials of every kind of science and art, and of all social improvement."—(See the admirable work of Sir H. Parnell, on *Financial Reform*, 3d ed. p. 30.)

An Account of the Quantities of the different Sorts of Paper charged with Duties in each of the 3 Years ended the 5th of January, 1833; the Rates of Duty on such Paper; the Gross and Nett Produce of the Duties; the Drawbacks on Paper exported, and the Cost per Cent. at which the Nett Revenue is collected, separating the Accounts of England, Scotland, and Ireland.

Note.—The cost per cent. at which the duty on paper is collected, cannot be stated with any degree of accuracy, the officers being employed in charging excise duties generally; but the sum which would probably be saved to the revenue, under the head of "Salaries to Officers," if the duties on paper should be repealed, may be estimated at 5,500*l.*; and for stationery supplied by the revenue for purposes connected with the paper duties, a further saving of 750*l.*, making together 6,250*l.*, which is about  $\frac{1}{3}$  per cent. on the nett revenue of the last year.

At all events, the existing duties, varying as they do from 30 to 200 per cent. *ad valorem*, are quite exorbitant; nor can there be a doubt that they would be more productive were they adequately reduced, and assessed on reasonable principles. But, as we have shown in the art. Books, it is not possible to lay a duty on the paper intended to be used in printing, without committing injustice. No one can foretell, with any thing approaching to certainty, whether a new book, or even a new edition of an old book, will sell; and the fact is, that one third of the books, and nineteen twentieths of the pamphlets published, do not pay their expenses. Now, we ask whether, under such circumstances, any thing can be more obviously unjust, more utterly subversive of every fair principle, than the imposition of the same heavy taxes upon all publications, — upon those that do not sell, as well as upon those that do? Upon a successful work, the duty may only be a reasonable deduction from the profits of the author and publisher; but when (as is the case with 1 out of 3 books, and 19 out of 20 pamphlets) the work does not sell, there are no profits from which to defray the duty, which has, of course, to be paid entirely out of the capital

of the author or publisher! Such is the encouragement given to literature, such the facilities afforded to the diffusion of useful information, by the popular government of England! All other businesses meet with very different treatment. Dealers in gin or brandy, for example, may lodge their goods in bonded warehouses, and are not obliged to pay any duty upon them until they are sold for home consumption; but such privilege is denied to the bookseller, though the article in which he deals be a thousand times more capricious. He must pay the duty on the whole impression of every book, before bringing a single copy of it to market; so that he not unfrequently pays duty upon 1,000 volumes, though unable to sell above 150 or 200, except as waste paper! Even this is not the whole injury done him: for upon an advertisement announcing the sale of a 6d. pamphlet, as heavy a duty is charged as if it announced the sale of an estate worth 100,000!

There are but two ways of putting an end to this scandalous injustice; viz. either by entirely repealing the paper duty, or by putting publishers under the *surveillance* of the excise, and assessing the duty on works according to the number sold at the publication price. The former would be the simpler method; but if the state of the finances will not allow of the sacrifice of the paper duty, there are no insuperable difficulties in the way of the latter alternative. And were it adopted, and the duties reduced and simplified, justice would be done to authors and publishers, and a very great stimulus given to the paper manufacture, without any loss of revenue.

**PARCEL**, a term indifferently applied to small packages of wares, and to large lots of goods. In this latter sense, 20 hogsheads of sugar or more, if bought at one price, or in a single lot, are denominated "a parcel of sugar."

**PARCELS, BILL OF**, an account of the items composing a parcel.

**PARCHMENT** (Ger. *Pergament*; Fr. *Parchemin*; It. *Cartapeccora*; Sp. *Pergamino*), the skin of sheep or goats prepared in such a manner as to render it proper for writing upon, covering books, &c. It is an important article in French commerce: besides being largely exported, the home consumption is very considerable. The name is derived from Pergannus, the city where it is said to have been first manufactured.

**PARTIAL LOSS.** See **INSURANCE (MARINE)**.

**PARTNERSHIP**, the association of two or more individuals for carrying on some business or undertaking in common; each deriving a certain share of the profits, and bearing a corresponding share of the loss arising therefrom.

The term partnership is usually applied to those smaller associations in which the partners personally conduct their joint affairs: the term company being applied to those great associations conducted by directors and servants appointed by the body of the partners to act for them; the latter having no direct concern in the management of the affairs of the company. — (See **COMPANIES**.)

The advantages of partnerships are obvious. Many businesses could not be successfully carried on without a larger command of capital than usually belongs to an individual; and most of them require the combination of various species of talent. An individual may have capital sufficient to undertake a particular business; but he may not be thoroughly versed in any of its details, or he may be familiar with certain parts of it and not with others; so that it might be for his advantage to assume one or more individuals as his partners, supposing them to be without capital, provided they possessed the skill and other qualifications required in prosecuting the business. Associations of this sort enable capital and talent to derive all the assistance that each is capable of lending to the other. And as the gains of each partner usually consist of a certain *proportion* of the total profits made by the company, each has the most powerful motive to exert himself for the benefit of the concern. It is not, indeed, to be denied, that associations of this sort are occasionally productive of mischievous consequences. The public interest requires that the whole partners in a firm should be bound by the acts of any one of their number; so that the folly or fraud of a single partner may entail very serious consequences upon those associated with him. Generally, however, this is not an evil of frequent occurrence; and there can be no question that, both in a private and public point of view, partnerships are highly beneficial.

To enter into any thing like a full discussion of the law of partnership would very far exceed our limits. We shall, therefore, merely state a few of those leading principles with respect to it, as to which it is of importance that mercantile men, and the public generally, should be well acquainted.

**Formation of Partnerships.** — The mere consent of the partners, fixed and certified by acts or contracts, is quite sufficient to constitute a private copartnership; so that if two or more merchants, or other persons, join together in trade, or in any sort of business, with a mutual, though it may be unequal, participation in the profit and loss of the concern, they are in every respect to be considered as partners. No particular form of words or proceeding is necessary to constitute a partnership. It may be entered into either by an express written agreement, or by a merely verbal one. The former ought in almost all cases to be preferred. The contract of copartnership should state the parties to it, the business to be carried on, the space of time the partnership is to continue, the capital each is to bring into the business, the proportion in which the profit and loss are to be divided, the manner in which the business is to be conducted, the mode agreed upon for settling accounts at the dissolution of the partnership, together with the special covenants adapted to the circumstances of each particular case.

To constitute a partnership, there must be a participation in uncertain profits and losses: and the true criterion to determine, when money is advanced to a trader, whether the individual making the advance is to be looked upon as a partner or not, is to ascertain whether the *premium or profit be certain and defined, or casual, indefinite, and depending upon the accidents of trade*. In the former case he is a lender merely; in the latter he is a partner. The mere participation in the profits of any business or adventure, without a participation in the losses, constitutes a partnership, so far as to render the individual so participating liable to third parties for the engagements of the concern, though as between the parties themselves it may be no partnership. Thus, if a clerk or other servant stipulate for a share of the profits of any business as a *reward for his labour*, he becomes responsible to third parties as a partner, and no private arrangement can cancel his liability.

If an individual, by his own act or inadvertence, allow himself *to appear to the world as a partner*, he is precluded from disputing the fact, even though he have no interest in the profits. A partner who withdraws from a firm is liable on account of the remaining partners continuing his name in the firm, though without his consent, unless he take the necessary precautions — (see *post*) — to show that he has ceased to belong to it.

If there be no express stipulation as to the management of partnership property, the majority decide as to the disposition and management of the joint affairs of the firm; or, if there be but two parties in a firm, one may manage the concern as he thinks fit, provided it be within the rules of good faith, and warranted by the circumstances of the case. The general duty of a partner is to keep in view, at all times, and in all transactions, the interest and welfare of the partnership, by acting honestly and uprightly, and as a prudent man would conduct his own affairs.

*Liability of Partners as to third Parties.* — It may be laid down as a general rule, that partners, whether actual, ostensible, or dormant, are bound by the act of their partner, made in the course of and with reference to the partnership business, and in the regular course of dealing by the firm; and though the general rule of law be, that no one is liable upon any contract, except such as are privy to it, yet this is not contravened by the liability of partners, as they are supposed virtually present at and sanctioning the proceedings they singly enter into in the course of trade, or as being each vested with a power enabling them to act at once as principals and as the authorised agent of their copartners. It is for the advantage of partners that they are thus held liable; for the credit of their firm is in consequence greatly enhanced, and facility is given to all their dealings, even when they reside in different parts of the country, or of the world. A due regard to the interest of strangers is at the same time observed; for where an individual deals with one of several partners, he relies upon the credit of the entire firm, and therefore, ought to have his remedy against all the individuals who compose it.

Unless, however, the act of one partner relate to and be connected with the partnership trade, and in the *course of dealing by the firm*, such acting partner only will be bound; for it is only by acting in the course of their particular trade or line of business that an implied authority is delegated by partners to each other; and it is only in such transactions that third parties have a right to rely upon the partnership funds. To bind a partnership, credit must be given to the firm itself, and not to one merely of its partners. One of them may even, in furtherance of the objects of the firm, enter into a contract with some third party; but if such contract be made *exclusively and solely upon the credit of the individual partner*, it will only bind him, and not the firm. The presumption of the law, however, always is, that a contract with one of the partners in reference to the business of the firm has been entered into upon the credit of the whole; and this presumption is not to be rebutted, except by very clear evidence. One partner cannot, as such, except in bankruptcy, bind another by deed.

The authority of a partner is revocable; and it is now fully established that a *disclaimer* of the authority of the partners in any particular transaction will preclude him from binding his copartners. Even during the subsistence of the partnership, one partner may to a certain degree limit his responsibility; and if there be any particular speculation or bargain proposed, which he disapproves of, he may, by giving distinct notice to those with whom his partners are about to contract that he will not be concerned in it, relieve himself from all consequences. Such notice would rebut his *prima facie* liability. The partnership would be suspended *quoad* this transaction. Thus, if a partner draw, accept, or indorse a bill or note, he will, in all ordinary cases, thereby render the firm liable. But, to use the words of Lord Ellenborough, "it is not essential to a partnership that every partner should have such power; they may stipulate among themselves that it shall not be done; and if a third party, *having notice of this*, will take such security from one of the partners, he shall not sue the others upon it, in breach of such stipulation, nor in defiance of notice previously given to him by one of them, that he will not be liable for any bill or note signed by the others." — (*Galway v. Matthew*, 10 East, 264.); and so in other cases.

However small the share a partner may have in a concern, he is liable for the *whole* of the debts contracted by the firm; and must seek his remedy in a rateable contribution against his partners. Should one party enter into a smuggling or other illegal transaction on the partnership account, the other partners are liable to the duties and the penalty; and the Crown may proceed against the real delinquent alone, or against all the partners. A bookseller, or newspaper proprietor, is answerable for the acts of his agent or co-partner, not only civilly, but also *criminally*.

*Dissolution of Partnerships.* — A partnership may be dissolved by the effluxion or expiration of the time during which it was originally agreed that it should continue. When a copartnership is formed for a single dealing or transaction, the moment that is completed, it is at an end. Partnerships may also be dissolved by death, agreement, bankruptcy, outlawry, &c. A court of equity will interfere to dissolve a partnership, in cases where a partner so misconducts himself as to be injurious to the firm, or to defeat the object for which the partnership was formed; or when a partner becomes insane, or is in such a state of mind as to render him permanently incapable of transacting the peculiar business of the firm; or where a partnership is formed for an impracticable purpose. Indeed, in all cases, where even a partnership may be dissolved without the interference of a court of equity, it may be most prudent, if the dissolution be opposed by one of the partners, to file a bill, praying a dissolution and account, and an injunction against using the partnership name.

When a partnership is dissolved by agreement, or one of the partners withdraws from it, public notice of the dissolution must be given in the *London Gazette*; and a *specific intimation of the circumstance must be sent to all individuals accustomed to deal with the firm*. Where such intimation has not been sent, the individual withdrawing from the firm may be made liable to third parties after he has ceased to have any thing to do with it. A dormant partner, whose name has never been announced, may withdraw from a firm without making the dissolution of partnership publicly known.

When the joint debts of the firm are paid, and the property duly distributed among the partners, the dissolution may be said, in a general sense, to be accomplished. If any one of the firm be guilty of a breach of duty, in misapplying the effects before the concern is finally wound up, the proper course is to apply to the Court of Chancery to appoint a manager.

Within a reasonable time after the death of one partner, the survivors must account to the representatives of the deceased; and if not willing to do so, a court of equity will compel them. In taking partnership accounts at the death of a partner, they must commence with the last stated account; or, if there be none such, with the commencement of the partnership; and they must end with the state of the stock at the time of the partner's death, and the proceeds thereof until it be got in.

No notice is necessary to third parties of the death of a partner; the partnership is dissolved, and all liabilities for subsequent acts cease. The surviving parties are to be sued alone for the partnership liabilities and obligations, for which they are liable to the full extent. But they are not liable for the separate debts of the deceased partner, unless, after payment of all the joint debts, they have a surplus of the partnership effects in their hands.

Upon a dissolution by death, if the joint effects be insufficient to pay the partnership debts, the separate estate of the deceased partner, if he have any, is liable for the deficiency.

The statements now made will, probably, be sufficient to give our readers a tolerably distinct notion of the formation of partnerships; and of the more important rights, duties, liabilities, &c. arising out of such institutions. Those who wish to go deeper into the subject, may consult the treatises of *Watson and Montague on the Law of Partnership*; *Chitty's Commercial Law*, vol. iii. pp. 225 — 269.; *Woolrych on Commercial Law*, pp. 298 — 317., &c.

PASSENGERS, in commercial navigation, are individuals conveyed for hire from one place to another on board ship. Passage ships are those peculiarly appropriated to the conveyance of passengers.

*Regulations as to the Conveyance of Passengers.* — The conveyance of passengers between Great Britain and Ireland is regulated by the act 4 Geo. 4 c. 83., which provides, that no vessel employed in the conveyance of passengers, of less than 200 tons burden, shall carry more than 20 persons as passengers, unless a licence to that effect has been obtained from the Custom-house. A licensed vessel is not to take, exclusive of the crew, more than 5 adult persons, or 10 children under 14, or 15 children under 7 years of age, for every 4 tons burden; and if such vessel be partly laden with goods or wares, not to take more than the above proportion of passengers for every 4 tons that remain unladen. Penalty for carrying more than twenty without licence, 5*l.*; and for a licensed vessel carrying more than the above proportion for each 4 tons burden, 5*l.* for each passenger. Merchant vessels of not more than 100 tons, not to carry more than 10 persons; or of not more than 200 tons, not more than 20 persons; under a penalty of 5*l.* each person.

The conveyance of passengers to North America is regulated by the 9 Geo. 4 c. 21. This act provides, that no ship shall sail from the United Kingdom for any port or place in his Majesty's possessions on the continent or islands of North America, with more than three persons on board for every 4 tons of the registered burden of such ship, the master and crew being included; and no ship to carry passengers,

unless of the height of 54 feet, at least, between decks: 2 children under 14, or 3 under 9, or 1 child under 12 months with its mother, to be reckoned as 1 person. Good and wholesome provisions to be provided, at the rate of 50 gallons of pure water for every person on board, and 50 lbs. of bread, biscuit, oatmeal, or bread-stuffs, for every passenger. Ships that have their full complement of passengers are prohibited from carrying any part of their cargo or stores between decks. Before clearing out, the master is to deliver to the collector a list of the passengers, specifying as accurately as may be their names, ages, professions or occupations, and the name of the port or place at which each is contracted to be landed. Masters of ships compelling passengers to land at any other place than that agreed upon, shall forfeit to every such passenger so landed a sum of 20*l*. Masters who take a greater number of passengers than allowed by law, or do not provide the requisite quantity of water and provisions, or stow them or any part of the cargo between decks, or furnish false lists to the collector, shall be deemed guilty of a misdemeanor. A bond for 1,000*l*. with one good and sufficient surety, shall be given by the master of every ship clearing out for British North America with passengers on board, that such ship is seaworthy, and that all and every the rules and regulations of this act will be well and truly performed. Such bond may be without a stamp. This act does not extend to Post-office ships, nor to the Bahama Islands, nor to the West Indies.

It is enacted by the 9 Geo. 4. c. 47, that the master of any packet or vessel employed in carrying passengers from one part of the United Kingdom to another is to be licensed by the commissioners of excise to retail foreign wine, strong beer, cider, perry, spirituous liquors, and tobacco. Such licence to be annually renewed, and to be transferable by endorsement. Duty to be paid by the owners on obtaining such a licence, 1*l*. Penalty for selling wines, &c. without a licence, for every offence, 10*l*.

It is enacted by 9 Geo. 4. c. 76, that every steam vessel which is of the registered tonnage of 140 tons shall be deemed to be a vessel of 200 tons at least.

The act 6 Geo. 4. c. 116, which regulated the conveyance of passengers to foreign parts, was repealed by 7 & 8 Geo. 4. c. 19.

In some respects, passengers may be considered as a portion of the crew. They may be called on by the master or commander of the ship, in case of imminent danger either from tempest or enemies, to lend their assistance for the general safety; and in the event of their declining, may be punished for disobedience. This principle has been recognised in several cases; but, as the authority arises out of the necessity of the case, it must be exercised strictly within the limits of that necessity. — (*Boyce v. Bacliffe*, 1 Campbell, 58.) A passenger is not, however, bound to remain on board the ship in the hour of danger, but may quit it if he have an opportunity; and he is not required to take upon himself any responsibility as to the conduct of the ship. If he incur any responsibility, and perform extraordinary services in relieving a vessel in distress, he is entitled to a corresponding reward. The goods of passengers contribute to general average. — (*Abbott on the Law of Shipping*, part iii. c. 10.)

Return of the Number of Persons who have emigrated from the United Kingdom to any of the Colonies of Great Britain in each Year since 1820, and to the United States of America since 1825; distinguishing the Colonies to which they have emigrated. — (*Part. Paper*, No. 650. Sess. 1830, and No. 696. Sess. 1833.)

The foregoing statement, founded upon special returns transmitted from the various ports of the United Kingdom by the local officers of customs, exhibits the number of persons of both sexes, and of all ages, who have emigrated to the colonies in each of the last 10 years, so far as the same can be ascertained. The officers report that they have not the means of distinguishing males from females, or adults from children, in these returns; and in some cases they state that the distinction cannot be drawn with accuracy between emigrants and passengers of other descriptions.

For the regulations as to the landing of passengers in New York, see New York.

**PATENT**, a privilege from the Crown granted by letters patent (whence the name), conveying to the individual or individuals specified therein, the sole right to make, use, or dispose of some new invention or discovery, for a certain specified period.

The power to grant patents seems to exist at common law; but it is limited and defined by the famous statute 21 Jac. 1. c. 3, which enacts, "That any declaration before-mentioned shall not extend to any letters patent and grant of privilege for the term of 14 years or under, thereafter to be made, of the sole working or making of any manner of new manufactures within this realm, to the true and first inventor and inventors of such manufactures, which others at the time of making such letters patent and grants shall not use, so as also they be not contrary to the law, nor mischievous to the state, by raising prices of commodities at home, or hurt of trade, or generally inconvenient. The said 14 years to be accounted from the date of the first letters patent, or grant of such privilege thereafter to be made; but that the same shall be of such force as they should be if that act had never been made, and none other."

**Policy of Patents.** — The law with respect to patents is unavoidably encumbered with several difficulties. The expediency of granting patents has been disputed; though, as it would seem, without any sufficient reason. Were they refused, the inducement to make discoveries would, in many cases, be very much weakened; at the same time that it would plainly be for the interest of every one who made a discovery, to endeavour,

if possible, to conceal it. And notwithstanding the difficulties in the way of concealment, they are not insuperable; and it is believed that several important inventions have been lost, from the secret dying with their authors. On the other hand, it is not easy to decide as to the term for which the patent, or exclusive privilege, should be granted. Some have proposed that it should be made perpetual; but this would be a very great obstacle to the progress of improvement, and would lead to the most pernicious results. Perhaps the term of 14 years, to which the duration of a patent is limited in England, is as proper a one as could be suggested. It may be too short for some inventions, and too long for others; but, on the whole, it seems a pretty fair average.

*Specification.* — Previously to the reign of Queen Anne, it was customary to grant patents without any condition, except that they should be for really new inventions. But a condition was then introduced into all patents, and is still retained, declaring that if the inventor do not, by an instrument under his hand and seal, denominated a specification, particularly describe and ascertain the nature of his invention, and in what manner the same is to be performed, and also cause the same to be enrolled in Chancery within a certain time (generally a month), the letters patent, and all liberties and advantages whatever thereby granted, shall utterly cease and become void. This was a very judicious regulation. It secures the invention from being lost; and the moment the patent expires, every one is in a situation to profit by it.

*Mode of granting a Patent.* — Letters patent are obtained upon petition and affidavit to the Crown, setting forth, that the petitioner has, after great labour and expense, made a certain discovery, which he describes, and which he believes will be of great public utility, and that he is the first inventor. The petition is referred to the attorney or solicitor general, who is separately attended by the applicant and all competitors, if there be any. They explain their projects to him, and he decides on granting or withholding the patent. When the inventions of two or more conflicting applicants coincide, he rejects all the applications. It would seem, that to decide upon such difficult questions in mechanics as are often agitated in applications for patents, a familiar knowledge of the principles and practical application of mechanical science would be indispensable. But by the law, as it now stands, such knowledge is not deemed necessary. The legal officers of the Crown are the sole judges as to what patents should or should not be granted; their award is final; and they are subject to no responsibility, other than the common remedies against public officers by impeachment, indictment, &c. — none of which would be entertained, unless a corrupt motive were established. After approval by the law officers, the grant is made out, sealed, and enrolled.

Considering the authority under which patents are granted, can any one wonder at the number that have been overturned in the courts of justice? or at the litigation to which they have given rise?

*Expense of Patents.* — Separate patents have to be taken out for England, Scotland, and Ireland, if it be intended to secure the privilege in the three kingdoms. The expense of stamps, fees, &c. is in all cases very heavy. It varies according to the intricacy of the invention, the opposition (if any) to the patent being granted, &c. According to Mr. Farey, it may be estimated at 120*l.* for England, 100*l.* for Scotland, and 125*l.* for Ireland. — (See his valuable evidence in the *Commons' Report on Patents*, p. 17.)

*Conditions as to Patents.* — The novelty and utility of the invention are essential to the validity of a patent; if it can be shown to have been in use previously to the grant of the patent, or to be of no utility, it will be void. It must also be for something vendible — something "material and useful made by the hands of man." — (*Lord Kenyon*, 8 T. R. 93.) A philosophical principle only, neither organised, nor capable of being so, is no ground for a patent; because it is an element and rudiment of science, and which, till applied to some new production from these elements, cannot, with justice to other inventors, be applied to the exclusive use of any one of them. In all patents there is required, in the words of Lord Tenterden, "something of a corporeal or substantial nature, something that can be made by man from the matters subjected to his art and skill, or at the least some new mode of employing practically his art and skill." — (*Godson on the Law of Patents*, p. 81.) Previously to Lord Tenterden, it had been ruled that a new process or method was not the subject of a patent. But his Lordship having suggested that "the word manufacture (in the statute) may, perhaps, extend to a new process to be carried on by known implements, or elements acting upon known substances, and ultimately producing some other known substance, &c." — (*Godson*, p. 82.) — this principle of interpretation has now been adopted.

A patent for a machine, each part of which was in use before, but in which the combination of the different parts is new, and a new result is obtained, is valid. But, in order to its being valid, the specification must clearly express that it is in respect of such new combination or application, and of that only; and not lay claim to original invention in the use of the materials.

A patent may be granted for an addition to an old invention. But the patent must be confined to the addition or improvement, that the public may purchase it without being encumbered with other things. If the patent include the whole, it will be void; for the property in the addition or improvement can give no right to the thing that has been improved. — (*Godson*, p. 71.)

A valid patent may be obtained for an invention, "new in this realm," though it may have been previously practised in a foreign country.

A patent is void, if it be for several distinct inventions, and any one of them fail of originality.

The specification must be prepared with great care. It should set forth the invention fully and correctly. The terms used must be clear and unambiguous; no necessary description must be omitted, nor what is unnecessary be introduced; and the invention must be described in the best and most improved state known to the inventor. If any one of these conditions be not complied with, the patent will be void. Any inaccurate or defective statement, were it even inserted through inadvertency, will vitiate the whole.

*Caveat.* — It is not unusual for inventors who have not brought their inventions to perfection, and who

are afraid lest they be anticipated by others, to lodge a caveat at the offices of the attorney and solicitor general; that is, an instrument by which notice is requested to be given to the person who enters it, whenever any application is made for a patent for a certain invention therein described in general terms. The entry of a caveat is, therefore, nothing more than giving information that an invention is nearly completed; so that, if any other person should apply for a patent for the same thing, the preference may be given to him who entered it.

An injunction may be obtained for the infringement of a patent, in the same way as for a violation of the copyright acts.

Patents have been sometimes extended by act of parliament beyond the term of 14 years, on the ground that that term was too short properly to reward the inventor.

Account of the Number of Patents granted in the Eight Years ending with 1828.

|      |     |      |     |      |     |
|------|-----|------|-----|------|-----|
| 1821 | 108 | 1824 | 161 | 1827 | 148 |
| 1822 | 113 | 1825 | 249 | 1828 | 152 |
| 1823 | 138 | 1826 | 131 |      |     |

Total number of patents in force in May, 1829, 1,855.

The reader will find a great deal of curious and instructive information with respect to patents, in the Report of the Committee of the House of Commons on that subject (No. 332, Sess. 1829), particularly in the evidence and papers laid before the Committee by Mr. Farey. The treatise on the Law of Patents and Copyrights, by Mr. Godson, is clear and able.

PATRAS, or PETRASSO, a sea-port in the N. W. corner of the Morea, near the entrance of the Gulf of Lepanto, in lat. 38° 14' 25" N., lon. 21° 46' 20" E. Population variously estimated, from 5,000 to 10,000.

The port lies a little to the northward of the town; but the part fronting it is unsafe, and exposed to heavy seas, particularly in winter. Vessels, therefore, go a little further up the gulf, where there is a mole or quay, and where they can lie close to the wharf. Patras has a more extensive trade than any other port of Greece. The principal exports are currants, oil, valonia, wine, raw silk, raw cotton, wool, skins, wax, &c. Of these, currants are by far the most important. The fruit is larger, and freer from sand and gravel, than that of the Ionian Islands. They are shipped in casks of various sizes; but, as the weight of the cask is included in that of the fruit, it is said to be, for the most part, made heavier and stronger than necessary. Morea currants are preferred in most countries, except England; but here the currants of Zante are held in equal, or perhaps greater, estimation. The exports of currants from Patras, at an average of the 3 years ending with 1831, amounted to about 50,000 cwt. a year, worth about 33,000*l.* More than half the quantity shipped in 1830 and 1831 was for England. The value of the exports of valonia and oil may, together, amount to from 7,000*l.* to 10,000*l.* a year. The imports at Patras, as at the other Greek ports, consist principally of sugar, coffee, and other colonial produce; plain and printed cotton stuffs, woollen goods, salted fish, iron, tin plates, hardware, cordage, hemp, deals, &c. Imported articles are brought principally from the Ionian Islands, Malta, Venice, Leghorn, Marseilles, and Trieste; but, from the unsettled state of the country, it is quite impossible to form any accurate estimate of their amount, either as respects Patras, or any other Greek port.

Shipping. — The arrivals at Patras in 1830 and 1831 have been

Port Charges. — Foreign and Greek vessels pay as follows: —

The Tariff established by the government in March, 1830, is in force, according to which all articles may be imported and exported, on payment of the duties therein fixed, without distinction of foreign or native flag. The rate of duty is 10 per cent. *ad valorem* for imports, and 6 per cent. *ad valorem* for exports.

Money. — Since the revolution, the Greeks have established a system of coinage in imitation of that of France. The phoenix is a silver coin, that should contain 9-10ths of pure metal, and 1-10th of alloy, or 4029 grammes of the former, and 448 do. of the latter, being worth about 8*d.* sterling. The lepta is a copper coin, being 1-100th part of the phoenix. But the silver coins are already so much debased, that they have been refused even by the officers of government.

Weights and Measures. — The quintal is divided into 44 okes, or 132 lbs. Hence, 100 lbs. of Patras = 88 lbs. avoirdupois. Silk weight is 1-5th heavier.

A sack of currants weighs 140 lbs. of the common weight, or about 123 lbs. avoirdupois.

The staro, corn measure, = 24 Winch. bushels.

The long pic, or pik, used in measuring linens and woollens, = 27 English inches. The short pic, used in measuring silks, = 25 ditto.

We have derived these details, partly from the Answers made by the Consul at Patras to the Circular Queries; partly from the Archives du Commerce, tome ii. pp. 236—242; and partly from other sources.

Commerce of Greece. — Considering the favourable situation of Greece, the number and excellence of her ports, the hardy enterprising character of the people, and the progress they have already made in navigation, nothing seems to be required to insure her rapid advancement in commercial industry, but the establishment of good order and internal tranquillity. We trust that this *sine qua non* of prosperity will now be realised; and that the newly constituted government will be strong enough to curb the factions into which the population has been split, and to put down and punish every species of outrage. If they succeed in this, and abstain from all attempts, by prohibition or otherwise, to force manufactures and commerce, we have no doubt that the progress of Greece will be all that her most sanguine friends could wish. It appears from a report presented to the congress at Napoli, in January, 1832, that Greece was at that time possessed of 2,941 vessels of all sorts, of which 614 were of the 1st class, that is,

of more than 150 tons burden. The value of the imports into Greece, in 1831, are estimated in the same document at about 1,100,000*l.* sterling. It must, however, be observed, that a large proportion of these imports is carried to Syra, which has now become an important *entrepôt*, merely that they may be sent at convenient opportunities to the Turkish provinces in Europe, Asia Minor, &c. — (See *Archives du Commerce*, tome ii. p. 239.)

It is deeply to be regretted, that Candia, or Crete, was not either added to the new kingdom of Greece, or made independent. We cannot help considering it as disgraceful to the Christian nations of Europe, that this famous island, where European civilisation first struck its roots, should be consigned to the barbarians by whom it is now laid waste. It is as well entitled to the favourable consideration of England, France, and Russia, as any part of Continental Greece; and we do hope that measures may yet be devised for rescuing it from the atrocious despotism by which it has been so long weighed down.

**PATTERNS**, are specimens or samples of commodities, transmitted by manufacturers to their correspondents, or carried from town to town by travellers, in search of orders. Patterns, if not exceeding 1 ounce weight, shall be charged with only an additional penny of postage, provided they be sent under cover, open at the sides, and without any letter or writing, except the name of the person sending the same, the place of his abode, and the price of the article or articles. — (52 *Geo.* 3. c. 88.)

**PAWNBROKERS AND PAWNBROKING.** A pawnbroker is a species of banker, who advances money, at a certain rate of interest, upon security of goods deposited in his hands; having power to sell the goods, if the principal sum, and the interest thereon, be not paid within a specified time.

1. *Advantages and Disadvantages of Pawnbroking.* — The practice of impledging or pawning goods, in order to raise loans, is one that must necessarily always exist in civilised societies, and is, in many cases, productive of advantage to the parties. But it is a practice that is extremely liable to abuse. By far the largest proportion of the *bonâ fide* borrowers of money on pawn consist of the lowest and most indigent classes; and were the lenders not subjected to any species of regulation, advantage might be taken (as, indeed, it is frequently taken, in despite of every precaution) of their necessities, to subject them to the most grievous extortion. But, besides those whose wants compel them to resort to pawnbrokers, there is another class, who have recourse to them in order to get rid of the property they have unlawfully acquired. Not only, therefore, are pawnbrokers instrumental in relieving the pressing and urgent necessities of the poor, but they may also, even without intending it, become the most efficient allies of thieves and swindlers, by affording them ready and convenient outlets for the disposal of their ill-gotten gains. The policy of giving legislative protection to a business so liable to abuse, has been doubted by many. But though it were suppressed by law, it would always really exist. An individual possessed of property which he may neither be able nor willing to dispose of, may be reduced to a state of extreme difficulty; and in such case, what can be more convenient or advantageous for him than to get a loan upon a deposit of such property, under condition that if he repay the loan, and the interest upon it, within a certain period, the property will be returned? It is said, indeed, that the facilities of raising money in this way foster habits of imprudence; that the first resort for aid to a pawnbroker almost always leads to a second; and that it is impossible so to regulate the business, as to prevent the ignorant and the necessitous from being plundered. That this statement, though exaggerated, is to a certain extent true, no one can deny. On the other hand, however, the capacity of obtaining supplies on deposits of goods, by affording the means of meeting pressing exigencies, in so far tends to prevent crime, and to promote the security of property; and it would seem as if the desire to redeem property in pawn would be one of the most powerful motives to industry and economy. At the same time, too, it must be borne in mind, that it is not possible, do what you will, to prevent those who are poor and uninstructed from borrowing; and that they must, in all cases, obtain loans at a great sacrifice, and be liable to be imposed upon. But the fair presumption is, that there is less chance of any improper advantage being taken of them by a licensed pawnbroker, than by a private and irresponsible individual. Although, however, the business had all the inconveniences, without any portion whatever of the good which really belongs to it, it would be to no purpose to attempt its suppression. It is visionary to imagine that those who have property will submit to be reduced to the extremity of want, without endeavouring to raise money upon it. Any attempt to put down pawnbroking would merely drive respectable persons from the trade, and throw it entirely into the hands of those who have neither property nor character to lose. And hence the object of a wise legislature ought not to be to abolish what must always exist, but to endeavour, so far at least as is possible, to free it from abuse, by enacting such regulations as may appear to be best calculated to protect the ignorant and the unwary from becoming the prey of swindlers, and to facilitate the discovery of stolen property.

2. *Obligations under which Pawnbrokers should be placed.* — For this purpose it seems indispensable that the interest charged by pawnbrokers should be limited; that they should be obliged to give a receipt for the articles pledged, and to retain them for a reasonable time before selling them; that the sale, when it does take place, should be by public auction, or in such a way as may give the articles the best chance for being sold at a fair price; and that the excess of price, if there be any, after deducting the amount advanced, and the interest and expenses of sale, should be paid over to the original owner of the goods. To prevent pawnbrokers from becoming the receivers of stolen goods, they should be liable to penalties for making advances to any individual unable to give a satisfactory account of the mode in which he became possessed of the property he is desirous to pawn; the officers of police should at all times have free access to their premises; and they should be obliged carefully to describe and advertise the property they offer for sale.

3. *Law as to Pawnbrokers.* — It may appear singular that pawnbrokers should hardly have been named in any legislative enactment till after the middle of last century. It was enacted by the 30 Geo. 2. c. 24., that a duplicate or receipt should be given for goods pawned; and that such as were pawned for any sum less than 10*l.* might be recovered any time within two years, on payment of the principal and interest; but the rate of interest was not fixed. This defect was supplied by the 25 Geo. 3. c. 48.; but the act 39 & 40 Geo. 3. c. 99. contains the latest and most complete regulations on the subject.

Every person exercising the trade of a pawnbroker must take out a licence, renewable annually, 10 days at least before the end of the year, for which he shall pay, within the cities of London and Westminster, and the suburbs of the two cities, 1*l.* 5*s.*, and elsewhere else, 7*l.* 10*s.* No person shall keep more than 1 house by virtue of 1 licence; but persons in partnership need only take out 1 licence for 1 house. All persons receiving goods by way of pawn or pledge for the redemption of money lent thereon, at a higher rate of interest than 5 per cent., to be deemed pawnbrokers.

Upon every pledge on which there shall have been lent not exceeding 2*l.* 6*s.*, interest may be charged at the rate of 3*d.* per month;

| <i>l.</i> | <i>s.</i> | <i>d.</i> | <i>l.</i> | <i>s.</i> | <i>d.</i> |
|-----------|-----------|-----------|-----------|-----------|-----------|
| If 0      | 7         | 6         | 0         | 0         | 11        |
| 0         | 7         | 6         | 0         | 0         | 11        |
| 0         | 10        | 0         | 0         | 0         | 2         |
| 0         | 15        | 0         | 0         | 0         | 3         |
| 0         | 15        | 0         | 0         | 0         | 5         |
| 0         | 17        | 6         | 0         | 0         | 3         |
| 1         | 0         | 0         | 0         | 0         | 4         |
| 2         | 2         | 0         | 0         | 0         | 8         |

And for every sum exceeding 4*l.* and not exceeding 10*l.*, at the rate of 3*d.* in the pound, by the calendar month, including the current month; and so in proportion for any fractional part.

Pawnbrokers are to give farthings in exchange. Persons applying to redeem goods pawned within 7 days after the first calendar month after the same shall have been pledged, may redeem the same without paying any thing for the first 7 days; and, upon applying before the expiration of 14 days of the second calendar month, shall be at liberty to redeem such goods, upon paying the profit payable for 1 calendar month and the half of another; and in all cases where the parties so entitled, and applying as aforesaid, after the expiration of the first 14 days, and before the expiration of the second month, the pawnbroker is allowed to take the interest of the whole second month; and the same regulations and restrictions shall take place in every subsequent month.

When goods are pawned for more than 5*s.*, the pawnbroker, before advancing the money, shall immediately enter in his book a description of the pawn, the money lent thereon, the day of the month and year, the name of the person pawning, and the name of the street, and number of the house, if numbered, where such person resides, and use the letter L, if the person be a lodger, and the letters H, if a housekeeper; and also the name and abode of the owner of the party offering such pledge; and if the money lent shall not exceed 5*s.*, such entry shall be made within 24 hours after the goods shall have been pawned; and the pawnbroker shall, at the time of taking the pawn, give to the party pawning a duplicate, corresponding with the entry in the book, which the party pawning shall take in all respects, and the pawnbroker shall not receive any pledge, unless the party so pawning shall receive such duplicate.

*Rates payable for Duplicates.*

|                                    | <i>l.</i> | <i>s.</i> | <i>d.</i> |
|------------------------------------|-----------|-----------|-----------|
| If under 5 <i>s.</i>               | 0         | 0         | 0         |
| 5 <i>s.</i> and under 10 <i>s.</i> | 0         | 0         | 0         |
| 10 <i>s.</i> and under 2 <i>l.</i> | 0         | 0         | 1         |
| 2 <i>l.</i> and under 5 <i>l.</i>  | 0         | 0         | 2         |
| 5 <i>l.</i> and upwards            | 0         | 0         | 4         |

The duplicate to be produced to the pawnbroker before he shall be compelled to redeliver the respective goods and chattels, except as herein-after excepted.

The amount of profits on duplicates shall be added on pledges redeemed, and such duplicate shall be kept by the pawnbroker for 1 year.

Persons pawning other people's goods without their consent, may be apprehended by the warrant of a justice, and conveyed in a penalty not exceeding 5*l.* nor less than 20*s.*, and the full value of the goods pawned; and if the forfeiture be not immediately paid, the justice shall commit the party to the house of correction, to be kept to hard labour for 5 calendar months; and if within 5 days before the expiration of the commitment the forfeiture shall not be paid, the justice may order the person to be publicly whipped, and the forfeitures shall be applied

towards making satisfaction to the party injured, and defraying the costs; but if the party injured shall decline to accept such satisfaction and costs, or if there be any surplus, such forfeiture shall be paid to the poor of the parish.

Persons forging or counterfeiting duplicates may be seized and delivered to a constable, who shall convey them before a justice; and, upon conviction, such person shall be committed to the house of correction for any time not exceeding 3 calendar months.

Persons offering pledges, not giving a satisfactory account of themselves, or the means by which they became possessed of such goods, or wilfully giving any false information, or if there shall be reason to suspect that such goods are stolen, or illegally obtained, or if any person not entitled to redeem goods in pawn, shall endeavour to redeem the same, they may be seized and delivered to a constable, to be carried before a justice; and if there should appear ground for a second examination, they shall be committed to the common goal or house of correction, to be dealt with according to law; or where such proceedings are not authorised by the nature of the offence, the party shall be committed for any time not exceeding 3 calendar months.

Persons buying or taking in pledge unfinished goods, linen, or apparel, intrusted to others to wash or mend, shall forfeit double the sum lent, and restore the goods.

Peace officers are empowered to search for pawned goods which shall be come by unlawfully.

When goods are unlawfully pawned, the pawnbroker is to restore them; and their house may be searched during the hours of business, by a warrant from a magistrate, on the discovery of such property.

Persons producing notes or memorandums are to be deemed the owners of the property.

Where duplicates are lost, the pawnbroker, upon affidavit made by the owner of such loss before a magistrate, shall deliver another duplicate.

Goods pawned are deemed forfeited at the end of a year; but, on notice from persons having goods in pledge, 5 months further are to be allowed beyond the year for redemption; such notice to be given before the twelve months is expired.

All goods pawned may be sold at the expiration of one whole year; and all goods so forfeited, on which above 10*s.* and not exceeding 10*l.* shall have been lent, shall be sold by public auction, and not otherwise; notice of such sale being twice given, at least 5 days before the auction, in a public newspaper, upon pain of forfeiting to the owner of the goods not more than 5*l.* nor less than 2*l.*

All pictures, prints, books, bronzes, statues, busts, engravings in ivory and marble, cameos, intaglios, musical, mathematical, and philosophical instruments, and china, shall be sold by themselves, and without other goods, 3 times only in every year; viz. on the 1st Monday in January, April, July, and October, in every year.

Pawnbrokers are not to purchase goods while in their custody, nor take in pledges from persons under 12 years of age, or intoxicated; nor take in any goods before 8 in the forenoon or after 8 in the evening between Michaelmas-day and Lady-day, or before 7 in the forenoon or after 8 in the evening during the remainder of the year, excepting only until 11 on the evenings of Saturday, and the evenings preceding Good Friday and Christmas-day, and every fast or thanksgiving day.

An amount of profits on pledges for more than 10*s.* is to be entered by pawnbrokers in a book, and the surplus is to be paid to the owner of the goods pawned, if demanded within three years of the sale, under penalty of 10*l.* and treble the sum lent.

Pawnbrokers are to place in view the table of profits; and their name and business is to be placed over the door, on penalty of 10*l.*

Pawnbrokers injuring goods, or selling them before the time specified, shall, upon application to a magistrate, be compelled to make satisfaction for the same; and if the satisfaction awarded shall be equal to or exceed the principal and profit, the pawnbroker shall deliver the goods pledged to the owner, without being paid any thing for principal or profit.

Persons who produce their books before a magistrate; or, refusing so to do, shall forfeit a sum not exceeding 10*l.* nor less than 5*l.*

Pawnbrokers offending against this act, shall forfeit for every offence not less than 40*s.* nor more than 10*l.*

It has been held by the Court of King's Bench, that a pawnbroker has no right to sell unredeemed pledges, after the expiration of a year from the time the goods were pledged, if, while they are in his possession, the original owner tender him the principal and interest due. — (*Waller v. Smith*, 22d of January, 1800.) On a motion for a new trial, Lord Tenterden said, "I am of opinion, that if the pledge be not redeemed at the expiration of a year and a day, (and no notice given that 3 months further are to be allowed for its redemption,) the

pawnbroker has a right to expose it to sale so soon as he can, consistently with the provisions of the act; but if at any time before the sale has actually taken place, the owner of the goods tender the principal and interest, and expenses incurred, he has a right to his goods, and the pawnbroker is not injured; for the power of sale is allowed him merely to secure to him the money which he has advanced, together with the high rate of interest which the law allows to him in his character of pawnbroker."

Such is the present state of the law with respect to pawnbrokers. On the whole, the regulations seem to be judiciously devised. Perhaps, however, the rate of interest on small deposits might be advantageously lowered. The law allows interest at the rate of  $\frac{1}{4}d.$  per month to be charged on loans of 2s. 6d., which is at the rate of 20 per cent.; but the same sum of  $\frac{1}{4}d.$  per month is exigible from all smaller loans; and as very many do not exceed 1s. 6d., and even 6d., the interest on them is exceedingly oppressive. No doubt there is a great deal of trouble with respect to such loans; but still, considering the vast number of advances under 2s. 6d., it would seem that the interest on them might be somewhat reduced. Perhaps, too, it might be advisable, still better to secure compliance with the statute, to enact that no one should be licensed as a pawnbroker without producing sufficient security for a certain sum to be forfeited in the event of his knowingly or willfully breaking or evading any of its provisions. This would prevent (what Dr. Colquhoun says is not an uncommon practice) swindlers from becoming pawnbrokers, in order to get the means of selling stolen goods. — (*Treatise on the Police of the Metropolis*, 2d ed. p. 156.)

It would be a useful regulation to oblige pawnbrokers to insure against losses by fire. Much mischief has been occasioned by the neglect of this precaution.

An Account of the Number of Pawnbrokers licensed in the Metropolis, and in the Country, with the Rates respectively charged on their Licences, and the Duty received on the same, in each of the Five Years ending the 5th of January, 1830. — (*Parl. Paper*, No. 681. Sess. 1830.)

| —                | 15                                    | 0         | 295     | 4,425 | 0                         | 15        | 0       | 47    | 705    | 0 |
| —                | 7                                     | 10        | 7       | 52    | 10                        | 7         | 10      | 1,038 | 7,785  | 0 |

The produce of each rate of duty not being distinguished in the distributors' accounts until the year ending the 5th of January, 1829, the number of licences cannot be given prior to that date for the country.

4. *Notices of Pawnbroking in Italy, France, &c.* — The practice of advancing money to the poor, either with or without interest, seems to have been occasionally followed in antiquity. — (*Beckmann*, vol. iii. p. 14. 1st Eng. ed.) But the first public establishments of this sort were founded in Italy, under the name of *Monti di Pietà*, in the 14th and 15th centuries. As it was soon found to be impossible to procure the means of supporting such establishments from voluntary contributions, a bull for allowing interest to be charged upon the loans made to the poor was issued by Leo X. in 1521. These establishments, though differing in many respects, have universally for their object to protect the needy from the risk of being plundered by the irresponsible individuals to whom their necessities might oblige them to resort, by accommodating them with loans on comparatively reasonable terms. And though their practice has not, in all instances, corresponded with the professions they have made, there seems no reason to doubt that they have been, speaking generally, of essential service to the poor.

From Italy these establishments have gradually spread over the Continent. The *Mont de Piété*, in Paris, was established by a royal ordinance in 1777; and after being destroyed by the Revolution, was again opened in 1797. In 1804, it obtained a monopoly of the business of pawnbroking in the capital. Loans are made, by this establishment, upon deposits of such goods as can be preserved, to the amount of two thirds of the estimated value of all goods other than gold and silver, and to four fifths of the value of the latter. No loan is for less than 3 francs (2s. 6d.). The advances are made for a year, but the borrower may renew the engagement. Interest is fixed at the rate of one per cent. per month.

The *Mont de Piété* receives annually about 1,200,000 articles, upon which it advances from 20,000,000 to 21,000,000 francs; it has generally from 600,000 to 650,000 articles in its possession. The expense of management amounts to from 60 to 65 centimes for each article; so that a loan of 3 francs never defrays the expenses it occasions, and the profits are wholly derived from those that exceed 5 francs. At an average, the profits amount to about 280,000 francs, of which only about 155,000 are derived from loans

upon deposit, about 125,000 being the produce of other funds at the disposal of the company.

|  |   |               |                                       |
|--|---|---------------|---------------------------------------|
| The articles in pawn are returned in the proportion of                           | - | $\frac{1}{3}$ | in number and $\frac{2}{3}$ in value. |
| Are continued in pawn by a prolongation of the loan                              | - | $\frac{2}{3}$ | - - - $\frac{1}{3}$ - -               |

| Are sold, subject (as in England) to a claim for surplus any time during 3 years | - | $\frac{1}{3}$ | - - - $\frac{2}{3}$ - -               |
|  |   | $\frac{1}{3}$ | - - - $\frac{2}{3}$                   |

(Bulletin des Sciences Géographiques, Avril, 1830.)

There are no means of making a statement of this sort with respect to London; but, were it possible to make it, the proportion of forfeited pledges would be found, we have no doubt, much greater.

In some respects, particularly the lowness of interest upon small loans, and the greater vigilance exercised with respect to the reception of stolen goods, the *Mont de Piété* was an advantage over the pawnbroking establishments in this country. It may be doubted, however, whether it is, on the whole, so well fitted to attain its objects. The limitation of the loans to 3 francs would be felt to be a serious grievance here, and it can hardly be otherwise in France; nor is it to be supposed, that the servants of a great public establishment will be so ready to assist poor persons, having none but inferior articles to offer in security, as private individuals anxious to get business. And such, in point of fact, is found to be the case, not in Paris only, but in all those parts of the Continent where the business of pawnbroking is confined to a few establishments. And hence it would seem that, were the modifications already suggested adopted, our system would be the best of any.

PEARL-ASH. See POTASH.

PEARLS (Du. *Paarlen*; Fr. *Perles*; Ger. *Perlen*; It. *Perte*; Lat. *Margarita*; Rus. *Shentschug, Perli*; Sp. *Perlas*; Arab. *Looloo*; Cyng. *Mootoo*; Hind. *Mootie*), are well known globular concretions found in several species of shell-fish, but particularly the mother-of-pearl oyster (*Concha margaritifera* Lin.). Pearls should be chosen round, of a bright translucent silvery whiteness, free from stains and roughness. Having these qualities, the largest are of course the most valuable. The larger ones have frequently the shape of a pear; and when these are otherwise perfect, they are in great demand for ear-rings. Ceylon pearls are most esteemed in England.

*Value, &c. of Pearls.*—Pearls were in the highest possible estimation in ancient Rome, and bore an enormous price.—(*Principium culmenque omnium rerum pretii, margarita tenent.*—*Plin. Hist. Nat. lib. ix. c. 35.*) Their price in modern times has very much declined; partly, no doubt, from changes of manners and fashions; but more, probably, from the admirable imitations of pearls that may be obtained at a very low price. According to Mr. Milburn, a handsome necklace of Ceylon pearls, smaller than a large pea, costs from 170*l.* to 300*l.*; but one of pearls about the size of peppercorns may be had for 15*l.*: the pearls in the former sell at a guinea each, and those in the latter at about 1*s. 6d.* When the pearls dwindle to the size of small shot, they are denominated *seed pearls*, and are of little value. They are mostly sent to China. One of the most remarkable pearls of which we have any authentic account was bought by Tavernier, at Catifa, in Arabia, a fishery famous in the days of Pliny, for the enormous sum of 110,000*l.*! It is pear-shaped, regular, and without blemish. The diameter is  $\frac{1}{63}$  inch at the largest part, and the length from 2 to 3 inches.

Much difference of opinion has existed among naturalists with respect to the production of pearls in the oyster; but it seems now to be generally believed that it is the result of disease, and is formed in the same manner as bezoar—(see BEZOAR); pearls, like it, consisting of successive coats spread with perfect regularity round a foreign *nucleus*. In fact, the Chinese throw into a species of shell-fish (*mytilus cygneus*, or swan muscle), when it opens, 5 or 6 very minute mother-of-pearl beads strung on a thread; and in the course of a year they are found covered with a pearly crust, which perfectly resembles the real pearl.—(*Milburn's Orient. Com.*; *Ainslie's Mat. Indica*, &c.)

*Pearl Fisheries.*—The pearl oyster is fished in various parts of the world, particularly on the west coast of Ceylon; at Tuticoreen, in the province of Tinnevelly, on the coast of Coromandel; at the Bahrein Islands, in the Gulf of Persia; at the Sooloo Islands; off the coast of Algiers; off St. Margarita, or Pearl Islands, in the West Indies, and other places on the coast of Colombia; and in the Bay of Panama, in the South Sea. Pearls have sometimes been found on the Scotch coast, and in various other places.

The pearl fishery of Tuticoreen is monopolised by the East India Company, and that of Ceylon by government. But these monopolies are of no value; as in neither case does the sum for which the fishery is let equal the expenses incurred in guarding, surveying, and managing the banks. It is, therefore, sufficiently obvious that this system ought to be abolished, and every one allowed to fish on paying a moderate licence duty. The fear of exhausting the banks is quite ludicrous. The fishery would be abandoned as unprofitable long before the breed of oysters had been injuriously diminished; and in a few years it would be as productive as ever. Besides giving fresh life to the fishery, the abolition of the monopoly would put an end to some very oppressive regulations, enacted by the Dutch more than a century ago.

*Persian Gulf.*—The most extensive pearl fisheries are those on the several banks not far distant from the Island of Bahrein, on the west side of the Persian Gulf, in lat. 26° 50' N., lon. 51° 10' E.; but pearl

oysters are found along the whole of the Arabian coast, and round almost all the islands of the gulf. Such as are fished in the sea near the islands of Karrak and Corgo contain pearls said to be of a superior colour and description. They are formed of 8 layers or folds, whilst others have only 5, but the water is too deep to make fishing for them either very profitable or easy. Besides, the entire monopoly of the fishery is in the hands of the sheik of Bushire, who seems to consider these islands as his immediate property.

"The fishing season is divided into two portions—the one called the short and cold, the other, the long and hot. In the cooler weather of the month of June, diving is practised along the coast in shallow water; but it is not until the intensely hot months of July, August and September, that the Bahrein banks are much frequented. The water on them is about 7 fathoms deep, and the divers are much inconvenienced when it is cold; indeed, they can do little when it is not as warm as the air, and it frequently becomes even more so in the hottest months of the summer. When they dive, they compress the nostrils tightly with a small piece of horn, which keeps the water out, and stuff their ears with bees-wax for the same purpose. They attach a net to their waists, to contain the oysters; and aid their descent by means of a stone, which they hold by a rope attached to a boat, and shake it when they wish to be drawn up. From what I could learn, 2 minutes may be considered as rather above the average time of their remaining under water. Although severe labour, and very exhausting at the time, diving is not considered particularly injurious to the constitution; even old men practise it. A person usually dives from 12 to 15 times a day in favourable weather; but when otherwise, 3 or 4 times only. The work is performed on an empty stomach. When the diver becomes fatigued, he goes to sleep, and does not eat until he has slept some time.

"At Bahrein alone, the annual amount produced by the pearl fishery may be reckoned at from 200,000*l.* to 240,000*l.* If, to this, the purchases made by the Bahrein merchants or agents at Abottabce Sbarra, Hasni Khymack, &c. be added, which may amount to half as much more, there will be a total of about 300,000*l.* or 350,000*l.*; but this is calculated to include the whole pearl trade of the gulf; for it is believed that all the principal merchants of India, Arabia, and Persia, who deal in pearls, make their purchases, through agents, at Bahrein. I have not admitted in the above estimate much more than *one sixth* of the amount some native merchants have stated it to be, as a good deal seemed to be matter of guess or opinion, and it is difficult to get at facts. My own estimate is in some measure checked by the estimated profits of the small boats. But even the sum which I have estimated is an enormous annual value for an article found in other parts of the world as well as here, and which is never used in its best and most valuable state, except as an ornament. Large quantities of the seed pearls are used throughout Asia, in the composition of majoons, or electuaries, to form which all kinds of precious stones are occasionally mixed, after being pounded, excepting, indeed, diamonds; these being considered, from their hardness, as utterly indigestible. The majoon, in which there is a large quantity of pearls, is much sought for and valued, on account of its supposed stimulating and restorative qualities.

"The Bahrein pearl fishery boats are reckoned to amount to about 1,500, and the trade is in the hands of merchants, some of whom possess considerable capital. They bear hard on the producers or fishers, and even those who make the greatest exertions in diving hardly have food to eat. The merchant advances some money to the fishermen at cent. per cent., and a portion of dates, rice, and other necessary articles, all at the supplier's own price; he also lets a boat to them, for which he gets 1 share of the gross profits of all that is fished; and, finally, he purchases the pearls nearly at his own price, for the unhappy fishermen are generally in his debt, and therefore at his mercy."—(*Manuscript Notes communicated by Major D. Wilson, late Political Resident at Bushire.*)

The fishery at Algiers was farmed by an English association in 1826, but we are ignorant of their success.

The pearl fisheries on the coast of Colombia were at one time of very great value. In 1587, upwards of 677 lbs. of pearls are said to have been imported into Seville. Philip II. had one from St. Margarita, which weighed 250 carats, and was valued at 150,000 dollars. But for many years past the Colombian pearl fisheries have been of comparatively little importance. During the mania for joint stock companies, in 1825, two were formed;—one, on a large scale, for prosecuting the pearl fishery on the coast of Colombia; and another, on a smaller scale, for prosecuting it in the Bay of Panama and the Pacific. Both were abandoned in 1826.

The best fishery ground is said to be in from 6 to 8 fathoms water. The divers continue under water from a minute to a minute and a half, or at most 2 minutes. They have a sack or bag fastened to the neck, in which they bring up the oysters. The exertion is extremely violent; and the divers are unhealthy and short-lived.

PEARL SHELLS, commonly called *Mother-of-pearl shells*, are imported from various parts of the East, and consist principally of the shells of the pearl oyster from the Gulf of Persia and other places, particularly the Sooloo Islands, situate between Borneo and the Philippines, the shores of which afford the largest and finest shells hitherto discovered. On the inside, the shell is beautifully polished, and of the whiteness and water of pearl itself; it has the same lustre on the outside, after the external laminae have been removed. Mother-of-pearl shells are extensively used in the arts, particularly in inlaid work, and in the manufacture of handles for knives, buttons, toys, snuff boxes, &c. The Chinese manufacture them into beads, fish, counters, spoons, &c.; giving them a finish to which European artists have not been able to attain. Shells for the European market should be chosen of the largest size, of a beautiful pearly lustre, thick and even, and free from stains. Reject such as are small, cracked or broken, or have lumps on them. When stowed loose as dunnage, they are sometimes allowed to pass free of freight.—(*Milburn's Orient. Com.*) The imports during the 3 years ending with 1832 were—1830, 465,591 lbs; 1831, 510,492 do.; 1832, 721,527 do.—(*Parl. Paper*, No. 425. Sess. 1833.)

PEAS (Ger. *Erbse*; Fr. *Pois*; It. *Piselli*, *Bisi*; Sp. *Pesoles*, *Guisantes*; Rus. *Goroch*). The pea is one of the most esteemed of the leguminous or pulse plants. It is supposed to be indigenous to the south of Europe, and was cultivated by the Greeks and Romans, the latter of whom probably introduced it into Britain. There are many varieties; but the common garden pea (*Pisum sativum*), and the common grey or field pea (*Pisum arvense*), are the most generally cultivated; being reared in large quantities in all parts of the country, particularly in Kent. But since the introduction of the drill husbandry, the culture of the pea as a field crop has been to a considerable extent superseded by the bean. Sometimes, however, it is drilled along with the latter; for, being a climbing plant, it attaches itself to the bean, so as to admit the ground being hoed; at the same

time that the free admission of air about its roots promotes its growth. It is not possible to frame any estimate of the consumption of peas. The field pea is now hardly ever manufactured into meal for the purpose of being made into bread, as was formerly the case in many parts of the country; but there is reason to think that the garden pea is now more extensively used than ever. — (*London's Ency. of Agriculture; Brown on Rural Affairs*, vol. ii. p. 72. For an account of the laws regulating the importation, &c. of peas, see COAN LAWS AND COAN TRADE.) Leguminous crops are very extensively cultivated in India. The exports of pulse from Calcutta, in 1830, exceeded 1,300 tons.

PECK, a dry measure for grain, pulse, &c. The standard, or Imperial peck, contains 2 gallons, or 554.55 cubic inches. Four pecks make a bushel, and 4 bushels a coomb. — (See WEIGHTS AND MEASURES.)

PELLITORY, the root of a perennial plant (*Athenis pyrethrum*), a native of the Levant, Barbary, and the south of Europe. The root is long, tapering, about the thickness of the finger, with a brownish cuticle. It is imported packed in bales, sometimes mixed with other roots, from which, however, it is easily distinguished. It is inodorous. When chewed, it seems at first to be insipid, but after a few seconds it excites a glowing heat, and a pricking sensation on the tongue and lips which remains for 10 or 12 minutes. The pieces break with a short resinous fracture; the transverse section presenting a thick brown bark, studded with black shining points, and a pale yellow radiated inside. It is used in medicine as a stimulant. — (*Thomson's Dispensatory*.) The price varies, including the duty (*6d.*), from 2s. to 2s. 6d. per lb.

PENCILS (Ger. *Pinzel*; Du. *Pinseelen*; Fr. *Pinceaux*; It. *Pennelli*; Sp. *Pinceles*), the instruments used by painters in laying on their colours. They are of various kinds, and made of various materials; some being formed of the bristles of the boar, and others of camel's hair, the down of swans, &c.

PENCILS, BLACK LEAD. See BLACK LEAD PENCILS.

PENKNIVES (Ger. *Federmesser*; Fr. *Cunifs*; It. *Temperini*; Sp. *Corta plumas*), small knives, too well known to need any particular description, used in making and mending pens. The best and most highly ornamented penknives are manufactured in London and Sheffield.

PENNY, formerly a silver, but now a copper coin. This was the first silver coin struck in England by our Saxon ancestors, being the 240th part of their pound; so that its weight was about 22½ grains Troy.

PENS (Fr. *Plumes à écrire*; Ger. *Schreibfedern*; It. *Penne da scrivere*; Rus. *Pera Stwoli*), well known instruments for writing, usually formed of the quills of the goose, swan, or some other bird. Metallic pens have been occasionally employed for a lengthened period; but it is only within these few years that they have been extensively introduced. They first began to be largely manufactured by Mr. John Perry, of London. Mr. P. having succeeded in giving to his pens a greater degree of softness and elasticity than was possessed by any metallic pens previously in use, they speedily obtained a very extensive sale. This success brought crowds of rivals into the field; so that metallic pens are now manufactured in vast quantities, and of an immense variety of forms. But though they have superseded, to a very considerable extent, the use of quills, and have some peculiar advantages, it does not appear possible to give them the elasticity of the quill, nor to fit them so well for quick and easy writing.

PENNYWEIGHT, a Troy weight, being the 20th part of an ounce, containing 24 grains.

PEPPER (Fr. *Poivre*; Ger. *Pfeffer*; Du. *Peper*; It. *Pepe*; Sp. *Pimienta*; Rus. *Perez*; Lat. *Piper*), the berry or fruit of different species of plants, having an aromatic, extremely hot, pungent taste, used in seasoning, &c. The following sorts of pepper are met with in commerce: —

I. BLACK PEPPER (Fr. *Poivre*; Ger. *Schwarzen Pfeffer*; It. *Pepe negro*; Sp. *Pimienta*; Sans. *Mereha*; Hind. *Gol-mireh*; Malay, *Lada*; Jav. *Mariha*), the fruit of a creeping plant (*Piper nigrum*), one of the pepper genus, of which there are upwards of 80 species. It is cultivated extensively in India, Siam, the Eastern islands, &c. It requires the support of other trees, to which it readily adheres. It climbs to the height of 20 feet; but is said to bear best when restrained to the height of 12 feet. It begins to produce at about the 3d year, and is in perfection at the 7th; continues in this state for 3 or 4 years; and declines for about as many more, until it ceases to be worth keeping. The fruit grows abundantly from all the branches, in long small clusters of from 20 to 50 grains; when ripe, it is of a bright red colour. After being gathered, it is spread on mats in the sun, when it loses its red colour, and becomes black and shrivelled as we see it. The grains are separated from the stalks by hand rubbing. That which has been gathered at the proper period shrivels the least; but if plucked too soon, it will become broken and dusty in its removal from place to place. The vine produces two crops in the year; but the seasons are subject to great irregularities.

Pepper should be chosen of a pungent aromatic odour, an extremely hot and acrid

aste, in large grains, firm, sound, and with few wrinkles — for of these it always has some. Reject that which is shrivelled, or small grained, or which on being rubbed will break to pieces.

In point of quality, the pepper of Malabar is usually reckoned the best; but there is no material difference between it and that of Sumatra, and the other islands. In the market of Bengal, where they meet on equal terms, the produce of Malabar is generally about 2 per cent. higher than the other. In Europe, there is generally a difference of  $\frac{1}{4}$  *l.* per lb. in favour of Malabar; but in China they are held in equal estimation.

Black pepper sold ground, is said to be often adulterated with burnt crust of bread.

II. WHITE PEPPER is made by blanching the finest grains of the common black pepper, by steeping them for a while in water, and then gently rubbing them, so as to remove the dark outer coat. It is milder than the other, and is much prized by the Chinese; but very little is imported into England.

III. CAYENNE PEPPER is the produce of several varieties of the *Capsicum*, an annual plant, a native of both the Indies. The best, which is brought home from the West Indies ready prepared, is made from the *Capsicum baccatum* (bird pepper). It has an aromatic, extremely pungent, acrimonious taste, setting the mouth, as it were, on fire, and the impression remaining long on the palate. It is sometimes adulterated with muriate of soda; and sometimes with a very deleterious substance, the red oxide of lead; but this fraud may be detected by its weight, and by chemical tests. — (See CHILLIES.)

IV. LONG PEPPER. — This species is the produce of a perennial (*Piper longum*), a native of Malabar and Bengal. The fruit is hottest in its immature state; and is therefore gathered while green, and dried in the sun. It is imported in entire spikes, which are about  $\frac{1}{2}$  inch long. It has a weak aromatic odour, an intensely fiery pungent taste, and a dark grey colour. The root of long pepper is a favourite medicine among the Hindoos.

The quantities of the last 3 species of pepper imported are quite inconsiderable, compared with the quantity of black pepper. — (*Milburn's Orient. Com.*; *Ainslie's Mat. Indica*; *Thomson's Dispensatory*, &c.)

*Trade in Pepper. Consumption of, and Duties on, in England.* — Pepper is extensively used, all over Europe and the East, as a condiment. It was originally imported into this country by way of the Levant (see *anté*, p. 522.); and for many years after the establishment of the East India Company, it formed the most important article of their imports. It nothing has the beneficial effect of opening the Indian trade been so unequivocally displayed as in the instance of pepper. The private traders have resorted to new markets, and discovered new sources of supply which had hitherto been wholly unexplored; so that there has been not only a very great increase in the quantity of pepper brought to Europe, but also a very great fall in its price, which does not now exceed a third of what it amounted to in 1814!

The quantities in the following Table are taken from the *Parl. Papers*, No. 22. Sess. 1830, and No. 425. Sess. 1833; the prices have been supplied by Mr. Cook.

Amount of the Total Quantity of Pepper imported from the East Indies into Great Britain, with its Price in London, each Year, from 1814.

| Years. | Pepper.     | Prices.                      | Years. | Pepper.     | Prices.                    | Years. | Pepper.     | Prices.                    |

Pepper is one of the most grossly over-taxed articles in the British tariff. Until 1823, the duty was 2*s.* 6*d.* per *lb.* — a duty so exorbitant, that one would be inclined to think it had been imposed in order to put a total stop to the use of the article. In 1823, the duty on pepper from a British possession was reduced to 1*s.* per *lb.*; but even this duty, as compared with the price of the article (3*d.* to 4*d.* per *lb.*), is quite enormous, amounting to no less than from 400 to 300 per cent. ! It will be seen from the subjoined Table that the reduction of the duty, in 1823, has increased the consumption from about 1,400,000 *lbs.* to 2,225,000 *lbs.* a year; and were the duty reduced, as it ought to be, to 2*d.*, or at most 3*d.* per *lb.*, so that pepper might become accessible to the lower classes, to whom its free use would be of infinite importance, we have not the slightest doubt that in a very short period the consumption would amount to 5,000,000 or 6,000,000 *lbs.* There would either be no loss of revenue by such a measure, or none worth mentioning; and it is not to be endured that the bulk of the people should be deprived of so useful a commodity, and the trade of the country seriously injured, by keeping up oppressive duties, which serve no purpose whatever, unless it be to keep alive the remembrance of the ignorance and rapacity of those by whom they were imposed.

We have already shown (see *ante*, p. 545.) the difficulties under which the dealers in pepper labour, in consequence of the absurd regulations as to the warehousing of commodities from India.

Account of the Quantity of all Sorts of Pepper retained for Home Consumption in the United Kingdom, the Rates of Duty thereon, and the Total Revenue derived from the same, in each Year since 1809.

| Years. | Quantities retained for Home Consumption. | Nett Amount of Duty received thereon. | Rates of Duty charged thereon. |           |  |  |                |                |         |

Supply of Pepper. — The following instructive details with respect to the supply of pepper are taken from the *Singapore Chronicle*; to which they were contributed by John Crawford, Esq. — than whom there can be no more competent authority as to such subjects.

Of all the products of the Eastern islands, and of the countries immediately in their neighbourhood, in demand among strangers, black pepper is the most important, both in value and quantity.

The pepper countries extend from about the longitude of 90° to that of 115° E., beyond which no pepper is to be found; and they reach from 5° S. latitude to about 12° N., where it again ceases. Within these limits we have Sumatra, Borneo, the Malayan peninsula, and certain countries lying on the east coast of the Gulf of Siam.

The whole produce of the island of Sumatra is estimated not to fall short of 168,000 piculs, of 133 1/2 lbs. each; the south-west coast being said to produce 150,000, and the north-east coast 18,000 piculs.

The pepper ports on the north-east coast of Sumatra are Lankat and Delli, with Sardang. The first produces 15,000 piculs, and the latter 3,000 annually. The cultivation is carried on by the Batta nation in the interior.

The ports on the south-west coast, and the amount of their produce, as given in a recent estimate, are as follows: viz. port and district of Trumah, 40,000; district of Pulo Dua, 4,000; ditto of Cluat, 30,000; coast from Tampat Tuan to Susu, 33,000; port of Susu, 1,000; Kuala Batta, 20,000; Anabau, 2,000; districts to the north of Anabau, 20,000; making in all, 157,000 piculs.

Hence it is of importance to remark, that the culture and production are extremely fluctuating.

During the last pepper season, there obtained cargoes on the west coast of Sumatra, 27 American ships, 6 country traders, 4 large French ships, besides the ships belonging to the East India Company, which generally take away 500 tons. Nearly the whole of this trade is in the hands of Europeans or Americans; the pepper finds its way to Europe, to America, and in a small proportion to China.

The north-east coast of Sumatra, from Pedder down to the Carimons, is estimated, as already mentioned, to produce 18,000 piculs. Prince of Wales Island is the principal *depôt* for this, from whence the greatest part is exported to India and China. The produce of Prince of Wales Island itself is about 15,000 piculs.

Of the islands at the mouth of the Straits of Malacca and Singapore, Bingtang, on which Rhio is situated, and adjacent islands, produce 10,000 piculs; and Lingga about 2,000. A large proportion of this is brought to Singapore, which exported last year about 21,000 piculs; some part to Bengal and China, but principally to Europe direct, in free traders.

The west coast of the Malayan peninsula produces no pepper, with the exception of about 4,000 piculs afforded by the territory of Malacca.

On the east coast of the peninsula, the production of pepper is very considerable. The ports of Patani and Calantan — chiefly the latter — yield about 16,000 piculs annually, and Tringau about 8,000. A portion of this is brought to Singapore and Penang; but we believe the greater proportion goes direct to China in junks, of which 3 large ones frequent Tringau annually, and 1 Calantan. The Americans, too, occasionally visit these ports. In the year 1821, 3 vessels of considerable burden obtained cargoes.

The east coast of the Gulf of Siam, from the latitude of 10 1/2° to that of 12 1/2° N., affords an extensive produce of pepper. This coast is scarcely known, even by name, to the traders of Europe. The principal ports here are Chantibun, Tungeai, Pongoon, and Kampop; the first 2 being under the dominion of Siam, and the latter under that of Kamboja. The whole produce is estimated at not less than 60,000 piculs; 40,000 of which are brought at once to the capital of Siam as tribute to the king, and the whole finds its way to China in junks. It remains only to estimate the produce of the island of Borneo. The whole produce of Borneo is estimated at about 20,000 piculs; of which a large share is carried to China direct in junks, some by Portuguese vessels; and about 7,000 piculs are now annually brought by the native craft of the country itself to Singapore in the course of that free trade, which is happily flourishing at this settlement. The data which have been stated, will enable us to estimate the whole production of the Malayan Archipelago, including that of the peninsula of Malacca, and that of the east coast of the Gulf of Siam, as 308,000 piculs; and as there is no other part of the world that affords pepper, excepting the western coast of the peninsula of India, and this affords but 30,000 piculs, or less than 1-10th part of what the places we have enumerated produce, we have, accordingly, at one view, the whole production of the earth, being 338,000 piculs, or 45,066,000 lbs. avoirdupois. The average price of pepper has been lately about 9 Spanish dollars a picul; so the whole value drawn into India from Europe, China, and the

e imposed.

New World, on account of this single commodity, is 3,012,000 dollars. The quantity given in this statement may appear enormous; but if meted out to the whole population of the globe, or to 1,000,000,000 of people, it would be found that the average annual consumption of an individual would amount to no more than 323 grains.

Mr. Crawford has very recently supplied us with a revised estimate of the production of pepper as follows:—

|                                   |       |                          |         |       |                         |
|-----------------------------------|-------|--------------------------|---------|-------|-------------------------|
| Sumatra (west coast)              | - - - | <i>Ls.</i><br>20,000,000 | Siam    | - - - | <i>Ls.</i><br>8,000,000 |
| Do, (east do.)                    | - - - | 8,000,000                | Malabar | - - - | 4,000,000               |
| Islands in the Straits of Malacca | - - - | 5,000,000                |         |       |                         |
| Malay peninsula                   | - - - | 3,734,333                |         |       |                         |
| Borneo                            | - - - | 2,665,667                |         |       |                         |
|                                   |       |                          | Total   | -     | 50,000,000              |

The localities in the previous estimate are quite correct; and we, therefore, did not think it would be right to suppress it.

But, though this may be depended upon as being a fair statement of what has been, till a comparatively late period, the average supply of pepper, the extreme depression of price has occasioned a very considerable decline in the production of some of the places mentioned above, within the last 4 or 5 years. The late advance of price will, however, probably, check any further diminution of production. But though prices were to rise still more considerably than they have done, the effect on the supply, owing to the plant requiring a few years to come to maturity, may not, at first, be so great as might be supposed.

PERCH, a long measure, 16½ feet in length. — (See WEIGHTS AND MEASURES.)

PERMIT, a licence or instrument, granted by the officers of excise, authorising the removal of goods subject to the excise duties.

It is enacted by the 11 Geo. 3. c. 30., that no person shall demand or receive a permit for the removal of brandy, arrack, rum, spirits, and strong waters, coffee, tea, and cocoa nuts, without the special direction *in writing* of the person out of whose stock they are to come, on pain of forfeiting 50*l.*; and in default of payment, to be imprisoned 3 months. Persons taking out a permit, and not removing the goods within the prescribed period, nor returning the permit to the officer, forfeit *treble* the value of the goods mentioned in such permit. By the 57 Geo. 3. c. 123., persons selling, lending, or making use of a permit for any other purpose than that for which it was granted, forfeit 50*l.* By the 6 Geo. 4. c. 80. § 116. it is enacted, that any retailer of spirits sending out more than *one gallon* without a lawful permit; any retailer, compounder, or dealer, receiving into his stock any spirits without a permit; or any carrier, boatman, or other person, assisting in the removal or transportation of any spirits without a permit; shall forfeit 20*l.* over and above every other penalty, together with all such spirits; the packages, carts, horse, &c. employed in the removal of such goods shall also be forfeited, and may and *shall* be seized by any officer of excise. The 9 Geo. 4. c. 44. § 5. dispenses with the necessity of a permit for the removal of coffee and cocoa. The commissioners of excise provide frames or moulds for making the paper used for permits, which has the words "Excise Office" visible in the substance of it. It is a capital offence to make such frames, or to have them in one's possession without a lawful excuse.

These regulations will, it is most probable, be speedily modified; the commissioners of excise inquiry, of whom Sir Henry Parnell is chairman, having recommended the abolition of permits in case of the removal of tea, and some other articles.

PERRY, a fermented liquor made from pears, in the same manner as cider from apples. The pears best fitted for producing this liquor are exceedingly harsh and tart; but it is itself pleasant and wholesome. — (See CIDER.)

PETERSBURGH, the modern metropolis of the Russian empire, situated at the confluence of the river Neva with the eastern extremity of the Gulf of Finland, in lat. 59° 56' 23" N., lon. 30° 18¾ E. Population (including military) 480,000.

This flourishing emporium was founded by Peter the Great, whose name it bears, in 1703. In the same year, the first merchant ship that ever appeared on the Neva arrived from Holland; and the czar, to mark his sense of the value of such visitors, treated the captain and crew with the greatest hospitality, and loaded them with presents. In 1714, 16 ships arrived at Petersburg; in 1730, the number had increased to 180; and so rapid has been the progress of commerce and civilisation in Russia since that period, that, at present, from 1,200 to 1,500 ships annually enter and clear out from Petersburg!

It is much to be regretted, that, although favourable to commerce, the situation of Petersburg is, in other respects, far from being good. The ground on which it stands is low and swampy; it has, on different occasions, sustained great injury from inundations; and the country round is, generally speaking, a morass and forest, so that almost every thing required for the subsistence of the inhabitants must be brought from a distance. No one less bold and daring than Peter the Great would have thought of selecting such a situation for the metropolis of his empire; and none possessed of less power and resolution could have succeeded in overcoming the all but insuperable obstacles which the nature of the country opposed to the completion of his gigantic schemes.

Cronstadt, situated on a small island about 20 miles W. of Petersburg, may, in some measure, be considered as the port of the latter. Almost all vessels bound for Petersburg touch here; and those drawing above 8 feet water load and unload at Cronstadt; the goods being conveyed from and to the city in lighters, the charges of which vary according to the demand at the time. The merchants' harbour at Cronstadt is fitted to contain about 600 ships; but it is exposed to the westerly winds. Cronstadt is strongly fortified, and is the principal station of the Russian fleet. Vessels bound for Petersburg must pass by the narrow channel to the south of the island, commanded by the fortifications of Cronstadt on the one side, and of Cronslot on the other. The wood-cut on the next page, taken from the official survey published by the Russian govern-

ment, gives a better idea of the situation of Petersburg, Cronstadt, &c. than could be derived from any description.

References to Plan.— A, Cronslot; B, Men-of-war haven; C, Tolliken light-house, 88 feet high, furnished with a fixed light. Soundings in fathoms. It appears from the above plan, that the depth of water between Cronstadt and Petersburg does not, in some places, exceed 6 or 7 feet; but it is increased about a foot by continued westerly, and is diminished about as much by continued easterly, winds. Cronstadt is, therefore, as already observed, in reality, the port of Petersburg; and has, indeed, no separate Custom-house or jurisdiction. The transfer of goods between the two places by means of lighters has of late years been materially facilitated by the employment of steam tugs.

*Trade, &c.* — Petersburg has the most extensive foreign trade of any city in the north of Europe. This arises from its being the only great maritime outlet on the Gulf of Finland, and from its vast and various communications with the interior of the country. Few countries have such an extent of internal navigation as Russia. By means partly of rivers, and partly of canals, Petersburg is connected with the Caspian Sea. Goods are conveyed from the latter to the capital, through a distance of 1,434 miles, without once landing them! The iron and furs of Siberia, and the teas of China, are received at Petersburg in the same way; but owing to the great distance of those countries, and the short period of the year during which the rivers and canals are navigable, they take 3 years in their transit. Immense quantities of goods are also conveyed during winter upon the ice, in sledges, to the different ports, and to the nearest *pristans*, or places in the interior where barks are built for river or canal navigation. They are put on board in anticipation of the period of sailing, that the barks may be ready to take advantage of the high water, by floating down with the current as soon as the snow and ice begin to melt. The cargoes carried up the river into the interior during summer are principally conveyed to their ultimate destinations by the sledge roads during winter. The conveyance by the latter is generally the most expeditious; and it, as well as the internal conveyance by water, is performed at a very moderate expense.

The barks that come from the interior are mostly of a very rude construction, flat-bottomed, and seldom drawing more than 20 or 30 inches water. When they arrive at their destination, they are sold or broken up for fire-wood. Those that leave the ports for the interior are of a superior description, and are comparatively few in number; the commodities imported being, at an average, of much greater value relatively to their bulk and weight than those that are exported.

*Principal Articles of Export and Import.* — The principal articles of export are tallow, hemp and flax, iron, copper; grain, particularly wheat; deals and masts, potashes, bristles, linseed and hemp seed, linseed and hemp seed oils, furs, leather; fox, hare, and squirrel skins; canvass and coarse linen, cordage, caviare, wax, isinglass, tar, &c. Tallow, both for candles and soap, is more largely exported from this than from any other port in the Baltic, and is an article of great commercial importance. — (See TALLOW.) The hemp is of good quality, though inferior to that of Riga: it is assorted, according to its quality, into *clean hemp*, or firsts; *outshot hemp*, or seconds; and *half-clean hemp*, or thirds. The first sort should be quite clean, and free from spills; the second is less so; and the third, or *half-clean*, contains a still greater portion of spills, and is, besides, of mixed qualities and colours. Russian flax is much esteemed for the length of its fibre; it is naturally brownish, but becomes very white after the first bleaching. Three qualities are distinguished; viz. 12 head, 9 head, and 6 head. — (See HEMP, and FLAX.) Iron is of very good quality, and is preferable to that from the other Russian ports: there are two kinds, old and new sable; the former is the best. Leather is largely exported; it is divided into many different sorts. — (See the details with respect to it in the art. RUSSIA LEATHER.) The grain trade between this country and Petersburg has, within the last 7 years, become of very considerable importance; and Russia will, probably, continue henceforth to be one of the principal sources of supply to this country. The *Russian wheat*, so called to distinguish it from the *azemaia*, or soft wheat, and the *kubanka*, or hard wheat, is the lowest description of wheat shipped from Petersburg. It is very small-grained, and dingy coloured; being, though sound, unfit for the manufacture of fine bread. The *azemaia* is of a larger, though still not a large grain, and better colour, and has of late been extensively imported into England. The *kubanka*, or hard wheat, is a large semi-transparent grain. Its hardness has nothing of the flinty character of the Spanish hard wheat, which it most resembles. When first brought to London, the millers objected to it, on account of the difficulty experienced in grinding it; but it is now much esteemed. All the Russian wheats are well calculated for keeping, either in granary, or when made into bread: but the *kubanka* has this quality in a peculiar degree; and is in great demand for mixing with other wheats that are old, stale, or out of condition. A shipment of 100 chetwerts of wheat in Petersburg is found, when delivered here, to yield about 72 Imperial quarters. The principal imports are sugar, especially from the Havannah (the importation of refined sugar was prohibited in 1822); coffee, but not in large quantities; madder, indigo, cochineal, and dye woods; cotton stuffs and yarn, — the latter being by far the principal article sent from this country to Russia; woollens, oils, spices, salt, wine, lead, tin, coal, fine linen from Holland and Silesia, &c.

Rapid as has been the increase of Russian commerce, its progress has been materially retarded by restrictions on importation. Considering the immense variety of valuable natural productions with which Russia abounds, the thinness of the population, and the slavery and ignorance of the great bulk of the people, nothing can be more absurd than the attempt to render them, by dint of Custom-house regulations, rivals of the English and Germans in manufacturing industry! However, it must be confessed, that in enacting prohibitions and restrictions, they are only following a line of policy which we have not

yet entirely abandoned, though it has been quite as injurious to us as it can be to them. We had hoped that sound commercial principles were beginning to get an ascendancy at Petersburg, inasmuch as the ukase of the 26th of March, 1830, materially modified several of the previous restrictions. But more recently a new ukase made its appearance, enacting a considerable increase of duties on several articles. It is, we are afraid, pretty clear, that the Russian government has profited little by the admirable work of M. Storch (*Cours d'Economie Politique*), though written for the special use of the present emperor of Russia, and his brother the Grand Duke Michael, and published by order of the late emperor.

*Inspection of Goods.* — At Petersburg, Riga, and other Baltic ports, when goods are brought from the interior to be shipped, they are inspected and classified according to their qualities, by officers (*brachers*) appointed by government for that purpose, and sworn to the faithful performance of their duty. All sorts of timber, linen and canvass, flax and hemp, linseed and hemp seed, ashes, wax, &c. are subject to such inspection. They are generally divided into three qualities: *Krohn* (crown), or superior; *Brack*, or middling; and *Bracks-Brack*, or inferior. This classification is said to be, in most cases, made with considerable fairness. A factor or commission agent in Russia, instructed to buy, on account of his correspondent in England or Holland, a specified quantity of any description of produce subject to the official visit, is not liable to any action in the event of the article being found upon delivery to be of inferior quality, provided he produce a certificate to show that it had been officially inspected, or *bracked*. But a factor is at liberty, should any article delivered to him be manifestly defective, to name 1 or 2 other *brachers* to decide whether the article be merchantable or not.

*Native and Foreign Merchants, &c.* — Every Russian carrying on trade must be a burgher, and have his name registered in the burghers' book; he thus acquires an unlimited freedom of trade. All whose names are in the burghers' books, are either townsmen who have property within the city, or members of a guild. There are three guilds. Those belonging to the first must possess from 10,000 to 50,000 roubles: these may follow foreign trade, are not liable to corporal punishment, and may drive about the city in a carriage drawn by 2 horses. Those belonging to the second guild declare themselves possessed of from 5,000 to 10,000 roubles; they are confined to inland trade. A capital of from 1,000 to 5,000 roubles entitles its owner to admission into the third guild, which comprises shopkeepers and petty dealers. The rates paid by the members of these guilds amount to 1 per cent. upon their declared capital, the "statement of which is left to the conscience of every individual." Burghers are not obliged to serve in the army, but may provide a substitute, or pay a fine. The *guests*, or foreign merchants, who enrol themselves in the city register on account of their commercial affairs, enjoy privileges nearly similar to those enjoyed by the members of the first guild.

None but native Russians are allowed to engage in the internal trade of the country; and hence a foreigner, who imports goods into Russia, must sell them to Russians only, and at the port where they arrive. A few foreigners, indeed, settled in Russia, and having connections with the natives, do carry on a trade with the interior; but it is contrary to law, and the goods are liable to be seized.

The merchants engaged in foreign trade are mostly foreigners, of whom the English are the principal. The peculiar privileges formerly enjoyed by the latter are now nearly obsolete; and their rights, in common with those of other foreigners, are merely those of *guests*. The English factory is, at present, little more than a society formed of some of the principal English merchants, several of whom, however, do not belong to it: its power extends to little else than the management of certain funds under its control.

*Purchase and Sale of Commodities, &c.* — Owing to the scarcity of capital in Russia, goods, the produce of the country, are frequently paid in advance; and foreign goods are most commonly sold upon credit. From the month of November till the shipping season in May, the Russians who trade in flax, hemp, tallow, bristles, iron, &c. either come themselves to Petersburg, or employ agents to sell their goods to foreigners, to be delivered, according to agreement, in May, June, July, or August. The payments are made according to the circumstances of the sellers and buyers; sometimes the buyer pays the whole amount, in the winter months, for the goods which are to be delivered in the summer or autumn; and sometimes he pays a part on concluding the contract, and the remainder on delivery of the goods. The manufacturers and dealers in linen usually come to Petersburg in March, and sell their goods for ready money.

Foreign goods were formerly almost entirely sold at a twelvemonth's credit, and some at a still longer term; but of late years several articles, as coffee and sugar, are sold for ready money; still, however, the great bulk of foreign goods for the supply of the interior is sold on credit. Most of the Russians who buy goods on credit of foreigners, for the use of the interior, have no other connection or trade with Petersburg, than merely coming there once or twice a year to make purchases: which having accomplished, they set off with the goods, and the foreigner neither sees nor hears of them again till the bills become due.

It is obvious, from this statement, that experience and sagacity are nowhere more requisite in a merchant than here. He has nothing, in fact, but his own knowledge of the native dealers to depend upon; and it is highly creditable to the Russians, that foreigners do not hesitate to trust them with immense

sums on such a guaranty. A foreign merchant, carrying on business in Russia, must also be acquainted with the customary forms and obligations of contracts; the mode of making payments; the many formalities that encumber, and sometimes turn aside, the course of justice; the spirit, still more than the letter, of the tariff and the Custom-house regulations; the privileges claimed by the Crown, and the different orders; with a variety of other particulars, which attentive and able men may learn on the spot, and nowhere else.

"Another circumstance connected with the British trade is too curious to be passed in silence. Every mercantile house in Petersburg employs certain men, called in the language of the country *artelschicks*, who are the counting-house men, and employed by every merchant to collect payment on bills, and to receive money, as well as, in many instances, to pay it in very considerable sums. This is an important part of their trust. There being no bankers in Russia, every mercantile house keeps its own cash; and as the payments between merchants, and for bills of exchange, are made entirely in bank notes of no higher value than 5, 10, 25, 50, and 100 roubles—most of them in so tattered a state as to require several hours to count over a sum of 2,000, or 3,000.—this business is performed by *artelschicks*; and very few instances have occurred of loss by their inattention, either in miscounting the notes, in taking false notes, or, where they are much torn, in receiving parts of different bank notes.

"These *artelschicks* are also employed to superintend the loading and unloading the different cargoes; they receive the most valuable into the warehouse, where they are left solely under their care; and in these warehouses not merely merchandise, but often large quantities of dollars, are deposited. These Russians are mostly natives of Archangel and the adjacent governments, of the lowest class; are often slaves, generally of the Crown; and the only security of the merchant arises in some degree from the natural reluctance of the Russian to betray confidence reposed in him; but in a much greater from their association, which is called an *artel*.

"An *artel* consists of a certain number of labourers, who voluntarily become responsible, as a body, for the honesty of each individual. The separate earnings of each man are put into the common stock; a monthly allowance is made for his support; and at the end of the year, the surplus is equally divided. The number varies in different associations from 50 to 100; and so advantageous is it considered to belong to one of these societies, that 500 and even 1,000 roubles are paid for admission. These societies are not bound by any law of the empire, or even written agreement; nor does the merchant restrain them under any legal obligation; yet there has been no instance of their objecting to any just claim, or of protecting an individual whose conduct had brought a demand on the society."—(*Coe's Travels in Russia*, vol. in. p. 315.)

Few Russian merchants engage in foreign trade. It is carried on principally in foreign bottoms, of which by far the larger proportion are English. Marine insurances are generally effected in London or Amsterdam; there being no establishment for that department of business in Russia. An insurance company against fire has been established in Petersburg, and enjoys several privileges. It is a joint stock company, divided into actions, or shares. It has been very successful; and its shares are at a very high premium. No insurances on houses or goods in Russia, made in a foreign country, can be legally recovered; no official documents of loss being allowed to be furnished for such a purpose.

**Money.**—Accounts are kept at Petersburg, and throughout Russia, in bank roubles of 100 copecks; formerly, accounts were kept in silver money; but, by an order of government, the practice of keeping accounts in bank note roubles has been enforced since 1811, to the exclusion of the other.

The only gold coin at present struck is the *Imperial*, or 5 rouble piece, = 15s. 8d. sterling very nearly. The silver rouble is worth 3s. 2d. sterling very nearly; and is declared, by a ukase issued in 1828, to be worth 500 copecks; this would give the value of the paper rouble at nearly 11d.; but it fluctuates with the exchange.—(For an account of the Commercial Bank of Russia, see *out*, p. 108.)

**Weights and Measures.**—The Russian weights are the same for gold, silver, and merchandise, viz.—

3 Soltnicks = 1 Loth. | 10 Poods = 1 Pool.  
32 Loths = 1 Pound. | 10 Poods = 1 Berkovitz.

The Russian pound contains, according to Dr. Kelly, 6318½ English grains. Hence, 100 lbs. Russian = 902½ lbs. avoirdupois = 40·93 kilog. The pood = 36 lbs. 1 oz. 11 drs., but among merchants it is reckoned = 36 lbs. According to Nelkenbrecher, 100 lbs. Russian = 90·19 lbs. avoirdupois = 40·9 kilog. = 82½ lbs. of Amsterdam = 81·44 of Hamburg.

The following regulations for the importation of foreign goods are strictly enforced:—

All goods imported must be accompanied by the following documents:—

1. The declaration of the captain, according to the form ordered by the Custom-house.

2. An attestation from the Russian consul, and, where there is no consul, from the Custom-house of the place, of the quantity and quality of the goods, and a declaration that they are not the produce, manufacture, or property of an enemy's country.

3. Bills of lading of all goods, in which the weight, measure, or quantity of each package must be specified. In case the bills of lading are not exactly after this regulation, the goods pay double duty as a fine. In case more is found than specified in the bill of lading, the surplus is confiscated; if less is found, the duty must be paid on the quantity specified. Of wine, it is not sufficient to specify the number of pipes or hogheads

The principal measure for corn is the chetwert, divided into 2 *schekels*, 4 *pinjeks*, 8 *chetwicks*, or 64 *garritz*. The chetwert = 5·952 Winchester bushels. Hence, 100 chetwerts = 74·4 English quarters.

In liquid measure, 11 Tsharka = 1 Kraschka. 8 Kraschka = 1 Vedro. 40 Vedros = 1 Sarskoy. The vedro = 3¼ English wine gallons. 13 1/3 Bottles = 1 Vedro.

1 sashen = 7 English feet; 1 arshen = 28 English inches. 100 Russian feet = 111 English feet. The versh, or Russian mile, = 5 furlongs 12 paces. The English inch and foot are used throughout Russia, chiefly, however, in the measure of timber.—(*Kelly's Comulat. art. Russia*; *Selkenbrecher, Manual d'Interret*.)

In fixing freight to England, a ton is 63 poods of hemp, dry, tallow, iron, copper, and ash; 44 poods of Friesland, indigenous leather, and wax; 5 dozen of deers; 3,500 raw skins; 8 chetwerts of wheat or linseed; and 60 pieces of sail-cloth.

only, but also their contents in gallons, &c. Of iron, the number in each box must be specified. Of manufactured goods, the measure of each piece must be specified, and the number of pieces in each bale. It is indifferent whether the gross or the nett weight be specified. If the packages be all of the same weight, measure, or contents, a general specification will do, as for example, 100 casks alum, of 17 lib-pounds each. Of dry woods, the weight of the whole need only be mentioned. Of goods of small bulk, as pepper, &c., it is sufficient to state the weight of every 5 or 10 bills, but with specification of the numbers. There must not be any erasures or hits in the bill of lading. All goods not accompanied by these documents, or where the documents are not according to the above regulations, will be sent back. Bills of lading may be made out either to some house, or to order.

The following charges have been fixed by the merchants of Petersburg:—

|   | Per cent. |   | Per cent. |   | Per cent. |
|---|-----------|---|-----------|---|-----------|
| Commission on sales and purchases                   | 2         | Charges on duty, paid inwards                         | 4         | Dues to be paid to the church, 10 roubles each vessel                 |           |
| Extra charges on all goods                          | 1         | Ditto, paid outwards                                  | 4         | Clearing of ships, of or under 25 lasts each, 40 roubles each vessel. |           |
| Commission and extra charges for goods delivered up | 2         | Commission for collecting freight, or average inwards | 3         | 25 to 50 do. 60   |           |
| Brokerage on sales and purchases                    | 2         | Commission for procuring freight outwards             | 2         | 50 — 75 — 80  |           |
| Ditto on bills                                      | 2         | For clearances, 40 roubles.                           |           | 75 — 100 — 100  |           |
| Ditto on freight, per ton, 60 copecks.              |           |   |           | 100 — 150 — 150   |           |
| Stamps  | 2         |   |           | 150 or above, 200   |           |

Tare on Goods exported, as fixed by the Custom-house.

| Dry Goods.                                   | Per cent. | Moist Goods.       | Per cent. | Moist Goods.          | Per cent. |
|--|-----------|--------------------|-----------|-----------------------|-----------|
| In barrels or chests                         | 10        | Pressed caviare    | 15        | Honey                 | 17        |
| In sacks                                     | 2         | Soap               | 2         | Treacle               | 10        |
| In mats, or sacks made of mats               | 5         | Meat and salt fish | 5         | All other moist goods | 17        |
| Except Muscovy leather, of which is deducted | 5         | Tallow             | 10        |                       |           |

Tare on Goods imported.

| Dry Goods.                         | Per cent. | Dry Goods.      | Per cent. | Dry Goods.                 | Per cent. |
|------------------------------------|-----------|-----------------|-----------|----------------------------|-----------|
| In barrels or chests               | 10        | In double sacks | 4         | In sacks and mats together | 5         |
| In vessels of glass or earthenware | 20        | In mats         | 5         | In baskets                 | 5         |
| In sacks                           | 2         |                 |           |                            |           |

**Molt Goods imported.**—The following are some of the tares specified in the tariff:—

|  |   |    |           |  |   |    |           |
|--|---|----|-----------|--|---|----|-----------|
| Oilve oil in casks                         | - | 17 | per cent. | Cochineal must be weighed in the sacks after being taken from the casks; for every sack of from 4 to 7 poods | - | 2  | lbs.      |
| of Italy, in flasks and straw              | - | 20 | —         | sacks of from 2 to 3½ poods  | - | 1  | —         |
| of France, in flasks and earthenware       | - | 40 | —         | In bags in serons; every seron of from 5½ to 7 poods   | - | 34 | —         |
| Salt fish in barrels                       | - | 36 | —         | In ½ serons, ¾ to 4 poods  | - | 20 | —         |
| And generally on all most goods in barrels | - | 17 | —         | of Guatemala   | - | 20 | per cent. |
| In glass and earthenware                   | - | 20 | —         | in boxes   | - | 20 | —         |
| <b>Miscellaneous Goods.</b>                |   |    |           |  |   |    |           |
| Cotton twist in bales                      | - | 6  | —         |  |   |    |           |
| in chests and barrels                      | - | 15 | —         |  |   |    |           |

Bills drawn in Russia, and payable after date, are allowed 10 days' grace: but if payable at sight, 3 days only: Sundays and holidays are included in both cases. The Julian calendar, or old style, is still retained throughout Russia. This is 12 days later than the new style; and in leap-year, 13 days, after the month of February.

**Port Charges payable on British Ships at the Port of Petersburg.**

Remarks on Tables.— It would appear from the above Tables, that the trade of Petersburg has increased with extraordinary rapidity since 1812. But though its increase since that epoch has been very considerable, it has not been by any means so great as might be inferred from the previous statements. The reason is, that the returns are all made in paper roubles; and that they have borne a much lower value, as compared with silver, since 1812, than they did previously. Since 1826, however, the value of the paper rouble has been pretty constant; and in the interval there has been a considerable increase of trade. We have no doubt, indeed, that the commerce of Russia is yet only in its infancy; and that it will continue to increase according as the increase of population and the slow but gradual progress of civilisation develop the gigantic resources of this great country. It is reasonable, too, to suppose that this development will be accelerated by the adoption of a more liberal system of commercial policy.

\* Of these, 155 ships brought coals.

the 26th of April, 7th of May, 30th of Nov., 27th

W., is a sandy headland, rising about 12 feet above the level of the sea. It has recently been surmounted by a light-house, 60 feet in height. The light revolves once a minute; an eclipse of 50 seconds being succeeded by a brilliant flash of 10 seconds. It is seen in clear weather from 30 to 35 miles off. Cape Henlopen, marking the southern boundary of the bay, is in lat. 38° 47' N., lon. 75° 4' 45" W. A little south from it is a hill, elevated about 60 feet above the level of the sea; and on it is erected a light-house, 72 feet in height, furnished with a powerful fixed light, visible in clear weather 10 leagues off. To the N. of this principal light, and close to the extremity of the cape, a second light-house has been constructed, 35 feet above the level of the sea, which is also furnished with a fixed light, which may be seen at about 6 leagues off. The channel for large ships is between Cape Henlopen and the banks called the Overfalls. The navigation is, however, a little difficult, and it is compulsory on ships to take pilots. The latter frequently board them at sea; but if not, as soon as a ship comes between the capes, she must hoist the signal for a pilot, and heave to as soon as one offers to come on board. — (*Coulier sur les Phares*, 2d ed. See post, for regulations as to pilotage.)

**Trade.**—The exports principally consist of wheat and wheat flour, Indian corn, and other agricultural products, lumber, coal and iron, various species of manufactured goods, &c. The principal imports are cotton, woollen, and silk goods; sugar, coffee and tea, wines, brandies, spices, &c. In point of shipping, Philadelphia is the third port of the United States; being in this respect inferior only to New York and Boston. The registered, enrolled, and licensed tonnage belonging to Philadelphia, in 1832, amounted to 79,968 tons, of which 27,244 were employed in the coasting trade. The total value of the articles imported into Pennsylvania, in the year ended the 30th of September, 1832, was 10,678,358 dollars; the total value of the exports during the same year being 3,516,063 dollars.

**Banks.**—There were, in 1830, in Philadelphia, 12 joint stock banks, exclusive of the Bank of the United States. Allowing for the share of the capital of the latter employed in banking speculations in that city, the total amount engaged in bank business in Philadelphia at that year may be taken at 10,867,000 dollars, on which a dividend accrued of 633,175 dollars, being at the rate of 6-407 per cent. The bank of the late Mr. Girard, being a private establishment, is not included in this estimate. — (Statement by J. H. Gottlard, Esq., *New York Daily Advertiser*, 29th Jan. 1831.) None of the Philadelphia banks issue notes for less than 5 dollars. They all discount good bills, having 60 or 90 days to run, at 6 per cent. In Philadelphia the banks have been pretty successful; but in Pennsylvania, generally, there have been many failures.

**Insurance.**—There were, in Philadelphia, in 1830, 9 marine insurance companies, with an aggregate capital of 3,280,000 dollars: they divided amongst them, during the same year, 275,400 dollars, being at the rate of 8-396 per cent.

There were also, in 1830, 4 fire insurance companies in the city, having amongst them a capital of 1,600,000 dollars. Their dividends, during the year, were 300,000 dollars; but as one of the companies, with a capital of 200,000 dollars, paid nothing, the dividends amounted to 6-428 per cent. on the producing capital.

In Pennsylvania, the dollar is worth 7s. 6d. currency; so that 1l. sterling = 1l. 13s. 4d. currency. — (See New York.)

**Weights and Measures** same as those of England.

**Regulations of the Port.**—If any master or captain of any ship or vessel, or other person, shall refuse or neglect to comply with the directions of the harbour master, in matters within the jurisdiction of his office, such person shall, for each and every such offence, severally forfeit and pay any sum not exceeding 100 dollars. And the said harbour master, shall in full compensation for his services be entitled to have, recover, and receive from the master, captain, or consignee of each and every ship or vessel arriving at the port of Philadelphia (coasting vessels not exceeding the burden of 75 tons excepted) the sum of 1 dollar for each and every voyage by such ship or vessel performed, and no more.

Every ship or vessel that may arrive in this harbour, and that shall come to anchor in the stream anywhere between Almond and Vine Streets, having previously caused her gunpowder, if any she had on board, to be landed as the law directs, may remain in that situation 24 hours, and no longer, taking care to lie as near to the island or sand bar as may be consistent with their safety. But, from the circumstance of a vessel having stores on board, or from any other cause, it may be thought necessary or convenient to lie a longer time in the stream, then, and in every such case, the owners, master, pilot, or other person having the charge or direction of such vessel, shall remove her from opposite the city, and shall moor her, or cause her to be moored, to the northward of Vine Street, with 1 anchor and cable up and 1 anchor and cable down the stream; and in both the above-mentioned situations, the regulation contained in the next succeeding article to be duly attended to.

If any vessel properly moored in the stream shall have her anchor or cable overlaid by any other vessel in anchoring or mooring, the master or person having the care or direction of such last-mentioned vessel shall, immediately, or as soon as may be after application made to him by the party aggrieved, cause the said anchor or cable so overlaying to be taken up and cleared. When any ship or vessel shall be hauled in to any wharf or dock, or alongside of another vessel that may be lying at such wharf or dock, the owner, master, pilot, or whoever may have the command, care, or direction of her, shall have her securely made fast; and if outside of another vessel, shall get one good fast from each end of the vessel to the shore, with sufficient fenders between them and the inside vessel; and shall cause the flukes of their anchors to be taken in board; and, within 24 hours thereafter, cause her 3rd boom, sprit-sail-yard, main boom, spanker and ringtail booms, if any they have, to be rigged in, and their lower yards topped up, in such a manner as least to interfere with vessels passing.

If the fasts of vessels when moored at a wharf shall extend across a dock, so as to obstruct the passing or repassing of sledges, lighter, or other craft or vessel, the master or other person having the command of such ship or vessel shall, upon the first application, immediately cause such fasts to be cast off or slacked down.

No outward-bound vessel, putting off from a wharf, shall lie longer in the stream between Vine Street and Almond, in the district of Southwark, above mentioned, than 24 hours. And if vessels lying at the end of wharfs so much interlock with each other as to prevent vessels hauling in and out of docks, the master, owner, pilot or other person having the charge of the same, shall, immediately on application from any person so wanting to haul his vessel in or out of docks aforesaid, have the vessel or vessel so interlocking moved in such a manner as to accommodate the one applied for; in which case the vessel making room for another to haul in or out shall have liberty to make her warps fast to the most convenient place adjacent for a reasonable time; and all sea vessels, when transporting

or wanting to haul into a wharf or dock, or to make sail in order to proceed to sea, shall have the same privilege.

When any ship or vessel may be lying alongside any wharf, and not taking in or discharging, she shall make way for and permit any vessel that wants to unload or load, to come inside, next the wharf, until she discharges or loads her cargo; and the said vessel, when so discharged or loaded, shall haul outside and give way to the vessel that first occupied the wharf; provided that, from the 10th of December to the 1st of March, no vessel shall be compelled to move from her berth (only those at Gloucester Point piers), excepting to let vessels in and out of docks.

No ship or vessel loading or discharging hemp at any wharf, or within any dock, shall be allowed to have any fire on board; neither shall any vessel lying outside or near her be permitted to have fire on board, while it may be considered dangerous. And no tar, turpentine, rosin, or pitch, shall be heated on the wharf, or on board any vessel lying at any wharf within the limits of the city.

**Rules of Pilotage.**—Inwards, up to 12 feet, at 2-67 dollars per foot; above 12 feet, at 3-53 dollars. Outwards, up to 12 feet, at 2 dollars; above 12 &c., at 2-67 dollars.

Every vessel of 75 tons and upwards arriving from, or bound to, any port within the United States, and the master of all such vessels, are bound as above.

The pilot of every vessel is required to inform the master of his having to report at the warden's office.

As vessels obliged to receive a pilot are required to pay 10 dollars in addition, as winter pilotage, from the 20th of November to the 10th of March, both days inclusive.

Foreign vessels, i. e. French, Spanish, Portuguese, Neapolitan, Danish, Russian, South American, and Haytian, to pay 2 dollars 75 cents in addition to other pilotage.

Every pilot detained more than 21 hours by any master, owner, or consignee, is entitled to 2 dollars per day for every day he is so detained.

Every pilot detained more than 48 hours by the ice, after he has conducted his vessel to a place of safety, is entitled to 2 dollars per day for every day he is so detained.

Every pilot compelled to perform quarantine is entitled to 2 dollars per day, for every day he is so detained, and cannot be discharged in less than 6 days, without his consent.

Every pilot obliged by the ice or stress of weather to proceed to another port, is, when there, entitled to his pilotage; and if there discharged, to 2 cents a mile for every mile he has to travel home.

Every pilot is required, under a penalty of 12 dollars, to make report, within 48 hours, at the warden's office, of every vessel he conducts to the city.

Rates of Commission recommended for general Adoption, and allowed by the Philadelphia Chamber of Commerce, when no Agreement subsists to the contrary, established at a stated Meeting on the 10th of March, 1823.

| Accounts, collecting disputed or litigated accounts, or claims on insolvent estates                        | 5         | 5         | 5         | 5         |
| Mooles, receiving, from which no other commission is derived   | 5         | 5         | 5         | 5         |
| Paying ditto   | 5         | 5         | 5         | 5         |
| Paying and receiving ditto   | 1         | 1         | 1         | 1         |
| Guarantee, in all cases  | 2½        | 2½        | 2½        | 2½        |

On bills remitted for collection under protest for non-acceptance or non-payment, ½ commission to be charged.

On consignment of merchandise withdrawn or re-shipped, full commission to be charged to the extent of advances or responsibilities incurred, and ½ commission on the current value of the residual.

The sales of merchandise originally consigned to another house, but withdrawn, and where no responsibilities are incurred, only ½ commission to be charged on the current value.

The current value in all cases to be settled by certificates of 2 respectable merchants, auctioneers, or brokers.

The above commissions to be exclusive of guarantee, brokerage, storage, and every other charge actually incurred.

The risk of loss by fire, unless insurance be ordered, and of robbery, theft, and other unavoidable occurrences, if the usual care be taken to secure the property, is, in all cases, to be borne by the proprietor of the goods.

**PHOSPHORUS**, a substance of a light amber colour, and semi-transparent; but, when carefully prepared, nearly colourless and transparent. When kept some time, it becomes opaque externally, and has then a great resemblance to white wax. It may be cut with a knife, or twisted to pieces with the fingers. It is insoluble in water; its specific gravity is 1.77. When exposed to the atmosphere, it emits a white smoke, and is luminous in the dark. When heated to 148° it takes fire, and burns with a very bright flame. When phosphorus is inflamed in oxygen, the light and heat are incomparably more intense; the former dazzling the eye, and the latter cracking the glass vessel. — (*Thomson's Chemistry.*)

**PIASTRES**, or **DOLLARS**, Spanish and American silver coins in very extensive circulation. Value, at an average, about 4s. 3d. sterling. — (See **COINS.**)

**PILCHARDS** (Ger. *Sardellan*; Du. *Sardynen*; Fr. *Sardines*; It. *Sardine*; Sp. *Sardinas*; Rus. *Sardelü*; Lat. *Sardina*), fishes closely resembling the common herring, but smaller, and at the same time thicker and rounder. They are rarely found on the British shores except on the coasts of Cornwall and Devon, particularly the former, where they are taken in great numbers from the month of July to September, both inclusive. It is a saying of the Cornish fishermen, that the pilchard is the least fish in size, most in number, and greatest for gain, taken from the sea.

*Pilchard Fishery.* — This is carried on along the coasts of Cornwall and Devon, from the Bolt Head in the latter, round by the Land's End to Padstow and Bossiney in the former. Its principal seats are St. Ives, Mount's Bay, and Mevagissey. The fish usually make their appearance in vast shoals in the early part of July, and disappear about the middle of October; but they sometimes reappear in large quantities in December. They are taken either by *seams* or by drift nets, but principally by the former. A seam is a net, varying from 200 to 300 fathoms in length, and from 10 to 14½ do. in depth, having cork buoys on one edge and lead weights on the other. Three boats are attached to each seam, viz. a boat (*seam boat*), of about 15 tons burden, for carrying the seam; another (*fallower*), of about the same size, to assist in mooring it; and a smaller boat (*burker*), for general purposes. The number of hands employed in these 3 boats varies from about 13 to 18; but may be taken, at an average, at about 16. When the shoals of fish come so near the shore that the water is about the depth of the seam, it is employed to encircle them; the fishermen being directed to the proper places for casting or shooting the nets by persons (*luers*) stationed for that purpose on the cliffs.\* The practice is to row the boat with the seam on board gently round the

\* The tunny fish in the Archipelago was caught in a similar way: — "Ascendebat quidam (Anglicè *luer*,"

shoal; and the sean being, at the same time, thrown gradually into the water, assumes, by means of its buoys and weights, a vertical position, its loaded edge being at the bottom, and the other floating on the surface. Its 2 ends are then fastened together; and, being brought into a convenient situation, it is moored by small anchors or grapnels. At low water, the enclosed fish are taken out by a small sean or *tuck net*, and carried to the shore. A single sean has been known to enclose at once as many as 3,000 hogsheads of fish! But the quantity taken depends on so many accidental circumstances, that while one sean may catch and cure in a season from 1,000 to 2,000 hogsheads, others in the neighbourhood will not get a single pilchard. In some places, the tides are so strong as to break the seans and set the fish at liberty. When the quantity enclosed is large, it requires several days to take them out, as they must not be removed in greater numbers than those who salt them can conveniently manage.

Drift nets are usually about a mile long, by about 44 fathoms deep; they are shot in the open sea, and entangle the fish in their meshes in the same way as the herring nets. The fish thus taken are said to be superior to those taken by the seans.

As soon as the fish are brought to shore, they are carried to cellars or warehouses, where they are piled in large heaps, having a sufficient quantity of salt interspersed between the layers. Having remained in this state for about 35 days, they are, after being carefully washed and cleaned, packed in hogsheads, each containing, at an average, about 2,600 fish\*; they are then subjected to a pressure sufficient to extract the oil, of which each hogshead yields about 3 gallons. This oil usually sells for from 12 to 15 per cent. under the price of brown seal oil. The oil, blood, and dirty pickle that drain from the fish while they are piled up, are collected in reservoirs, and sold to the curriers. The broken and refuse fish and salt are sold to the farriers, and are used as manure with excellent effect. The skimmings which float on the water in which the pilchards are washed, are called *garbage*, and are sold to the soap-boilers.

The pilchard fishery has been rather declining of late years. This has been ascribed partly to the failure of the catch, partly to the withdrawal of the high bounty of 8s. 6d. per hhd. formerly paid on exportation, and partly to the relaxed observance of Lent in the Mediterranean, and the imposition of a heavy duty on the importation of the fish into Naples, which has long been their principal market. The following is

An Account of the Exports of Pilchards during the Three Years ending with 1832; specifying the Places to which they were exported, the Quantity shipped for each, and their Price at the Port of Shipment.

| Years. | Leghorn. | Naples. | Genoa. | Ancona. | Venice. | Trieste. | Malta. | Messina. | C. Vecchia. | Total. | Price.   |
|--------|----------|---------|--------|---------|---------|----------|--------|----------|-------------|--------|----------|
|        | Hhds.    | Hhds.   | Hhds.  | Hhds.   | Hhds.   | Hhds.    | Hhds.  | Hhds.    | Hhds.       | Hhds.  | s. d.    |
| 1830   | 2,473    | 9,751   | 1,665  | 1,587   | 4,562   | 1,652    | -      | 304      | -           | 21,194 | 35 to 40 |
| 1831   | 4,631    | 10,276  | 2,100  | 5,286   | 4,205   | 520      | 34     | -        | 618         | 27,112 | 35 - 40  |
| 1832   | 3,738    | 11,612  | 3,116  | 5,078   | 5,781   | 1,000    | 217    | -        | 510         | 31,618 | 25 - 45  |

Of the 27,112 hhds. exported in 1831, St. Ives furnished 12,141, and Mount's Bay 9,013; the remainder being furnished by Mevagissey, St. Austle's Bay, St. Mawes, Fowey, &c.

Pilchards are not used in England, except in Cornwall and Devon, where about 3,000 hhds. a year may at present be made use of. We believe, however, that their consumption in these counties has begun to increase with considerable rapidity.

The sean fishery employs from 2,700 to 3,600 hands, and about 180 or 190 seans; but exclusive of these, there are a considerable number of seans unemployed, in consequence of the failure of the fishery since 1814, and other causes. The first cost of each sean, with its boats, may be about 750l. The drift fishery employs, during the season, from 900 to 1,000 men, and about 230 boats; the cost of each boat and nets amounting to about 500l. The labour in the cure of the fish may be taken at about 4s. a hogshead. The total capital embarked in the fishery, in 1832, was estimated by those engaged in it at from 200,000l. to 250,000l.

The drift fishermen employ themselves, when not engaged in the pilchard fishery, in the mackerel, herring, and hook-line fisheries. The sean fishermen consist principally of agricultural labourers, miners, &c. attracted to the business in the expectation, (in which, however, they are not unfrequently disappointed,) of making a comparatively large sum by a few weeks' exertion. But there are always 3 or 4 individuals of the crew of each sean that are regularly bred, expert fishermen.

Four fifths of the persons employed on shore in the salting, curing, packing, &c. of the fish, are women.

The wages of those employed in the fishery are made sometimes to depend on the number of fish taken; but in other instances they are independent of any such contingency.

The fishery at St. Ives is carried on under a particular act of parliament, which is said to occasion the employment of a third more seans than are necessary. The exaction of a tithe of the fish is a very serious burden on the fishery; sometimes it is taken in kind, but is more generally compounded for. — (*Dr. Paris's Guide to Mount's Bay and the Land's End*, 2d ed. pp. 146—156; *Beauties of England and Wales*, vol. ii. p. 471., and *private information* obtained from authentic sources, and obligingly communicated, by Mr. Coulson, of Penzance.)

**PILOTS AND PILOTAGE.** The name of pilot or steersman is applied either to a particular officer, serving on board a ship during the course of a voyage, and having the charge of the helm and the ship's route; or to a person taken on board at any particular place, for the purpose of conducting a ship through a river, road, or channel, or from or into a port.

It is to the latter description of persons that the term pilot is now usually applied; and pilots of this sort are established in various parts of the country by ancient charters of incorporation, or by particular statutes. The most important of these corporations are those of the Trinity House, Deptford Strond; the fellowship of the pilots of Dover, Deal, and the Isle of Thanet, commonly called the *Cinque Port pilots*; and the Trinity houses of Hull and Newcastle. The 5 Geo. 4. c. 73. established a corporation for the regulation and licensing of pilots in Liverpool.

The principle of the law with respect to pilots seems to be, that where the master is bound by act of parliament to place his ship in charge of a pilot, and does so accordingly,

*Græcè thunoscopos* in altum promontorium, unde thunnorum gregem specularetur, quo viso, signum piscatoribus dabant, qui retibus totum gregem includebant. — (*Bishop of London's Notes on the Perse of Æschylus*, quoted by Dr. Paris, in his *Guide to Mount's Bay*, p. 150.)

\* Mr. Pennant inadvertently states the number of fish in a hogshead at 25,000. — (*British Zoology*, vol. iii. p. 344. ed. 1776.). Trusting to his authority, we fell into the same error in the 1st edition of this work.

the ship is not to be considered as under the management of the owners or their servants, and they are not to be liable for any damage occasioned by the mismanagement of the ship, unless it be proved that it arose from the negligence or misconduct of the master or men: but when it is in the election or discretion of the master to take a pilot or not, and he thinks fit to take one, the pilot so taken is to be considered as the servant of the owners, who are to be responsible for his conduct. — (*Abbott on the Law of Shipping*, part ii. c. 5.)

The statute of 6 Geo. 4. c. 125. has consolidated the laws with respect to the licensing, employment, &c. of pilots. It is of great length; but all its provisions of any material importance may be embraced under the following heads: —

1. *Appointment of Pilots.* — The corporation of the Trinity House of Deptford Strand are required to appoint and license fit and competent persons, duly skilled, to act as pilots for the purpose of conducting all ships or vessels navigating the Thames, the Medway, and the several channels, creeks, and docks thereof, between Orfordness and London Bridge, as also from London Bridge to the Downs, and from the Downs westward as far as the Isle of Wight, and in the English Channel from the Isle of Wight up to London Bridge; and all ships and vessels sailing as aforesaid (except as herein-after mentioned) shall be conducted and piloted within the aforesaid limits by such pilots, and by no other persons whomsoever.

No person shall be licensed by the said corporation as a pilot, who has not served as mate for 3 years on board of, or been for 1 year in the actual command of, a square-rigged vessel of not less than 80 tons register tonnage, as to licences for the *North Channel* upwards; and not less than 150 tons register tonnage, as to licences for the *North Channel*, *Queen's Channel*, *South Channel*, or other channels downwards; or who shall not have been employed in the pilotage or buoyage service of the said corporation for 7 years, or who shall not have served an apprenticeship of 5 years to some pilot vessel licensed under the act passed in the 52d year of the reign of George III. or under this act; and no person so licensed shall take charge as a pilot of any ship or vessel drawing more than 14 feet water, in the river Thames, Medway, or any of the channels leading thereto or thereupon, until such person shall have acted as a licensed pilot for 3 years, and shall have been, after such 3 years, on re-examination, approved of in that behalf by the said corporation, on pain of forfeiting 10*l.* for every such offence; and the person employing or permitting such pilot to take charge of such ship or vessel is also to forfeit 10*l.* — § 3.

Every pilot licensed by the corporation of the Trinity House of Deptford Strand is to pay an annual licence of 3*l.* 3*s.* and 6*d.* in the pound upon his earnings; which sums are to be applied to the uses of the pilots' fund of the said corporation. — § 4.

The said corporation are further authorised to appoint competent persons, not more than *five*, nor less than *three*, at such ports and places as they may think fit (except within the liberty of the Cinque Ports, and such other ports and places as may have been specially provided for by act of parliament, or by charter, for the appointment of pilots), to be called sub-commissioners of pilotage, who are to take the following oath: —

"I, *A. B.*, do swear, that I will diligently and impartially examine into the capacity and skill of in the art of piloting ships and vessels into the roadstead, port, or harbour, and upon the coasts following; *videlicet* [here describe the limits within which the person examined is intended to act as pilot], and will make true and speedy return thereof to the corporation of Trinity House of Deptford Strand, without favour, affection, fee, or reward, other than such fee or reward as is allowed by the by-laws or regulations duly established in that behalf. So help me God."

And upon the recommendation of such sub-commissioners, the Trinity House Corporation may grant licences to pilots. — § 5.

Notices of the appointment of pilots are to be put up in writing at the Trinity House and Custom-house, London, and at the Custom-houses of the ports for which they are licensed, and are to be published in the *London Gazette*. — § 7.

No person shall take charge of any ship or vessel as a pilot belonging to the *Cinque Ports*, before he be examined by the master and two fellows, or by four wardens of the society or fellowship of pilots of Dover, Deal, and the Isle of Thanet, touching his abilities, and shall be approved and admitted into the said society by the Lord Warden of the Cinque Ports, or his lieutenant; and any person presuming to act as a pilot belonging to the said society or fellowship, without having been so examined, approved, and admitted, shall for the first offence forfeit 10*l.*, for the second 20*l.*, and for every other offence 40*l.* — § 15.

No person licensed by the aforesaid society or fellowship is to take charge of any ship or vessel drawing more than 11 feet 6 inches water, until he has acted as a pilot for 3 years; nor of a vessel drawing more than 14 feet water, till he has acted as a pilot for 5 years; nor of a vessel drawing more than 17 feet water, till he has acted as a pilot for 7 years; when he is to be again examined; and if he shall be approved of and licensed upon such second examination, he may take charge of ships of any draught of water. — § 16.

The number of *Cinque Port* pilots used to be fixed at 140; but during peace, no more than each alternate vacancy is to be filled up, unless the number be reduced below 120. — § 24.

All bodies politic and corporate, and all persons authorised to appoint or license pilots for any port or place in England, shall, upon any such appointment being made, forthwith transmit to the Trinity House, London, and to the commissioners of customs, London, the Christian name and surname, age, and place of residence, of every pilot so appointed, distinguishing the limits in which he is to act, and by whom appointed. And the said bodies politic, &c. are to transmit lists, corrected up to the 31st day of December in each year, either on that day, or within a month after, to the said Trinity House and commissioners of the customs, of the names and residences of all the pilots within their respective jurisdictions; stating all the alterations that may have been made within the year in the rates of pilotage charged, and in the rules and regulations for governing pilots within their respective districts. — § 35.

The commissioners of the customs are to transmit to their principal officers, at the different ports, the names and places of residence of all the pilots residing within the limits of each port, as far as they are acquainted with the same; and every pilot is to be furnished with copies of all proclamations and orders in council respecting the performance of quarantine. — § 36.

A particular description of the person of every pilot is to be written upon the back of his licence; and no person shall take charge of any ship or vessel, or in any manner act as a pilot, or receive any compensation for acting as a pilot, until his licence shall have been registered by the principal officers of the Custom-house of the place at or nearest to which such pilot shall reside (which officers are hereby required to register the same without fee or reward, nor without having his licence at the time of his so acting in his personal custody, and producing the same to the master of any ship or vessel, or other person, who shall be desirous of employing him as a pilot, or to whom he shall offer his services, on pain of forfeiting a sum not exceeding 30*l.*, nor less than 10*l.*, for the first offence; and for the second or any subsequent offence, a sum not exceeding 50*l.*, nor less than 30*l.*; and upon further pain, as to any person licensed as aforesaid, of forfeiting his licence, or being suspended from acting as a pilot, by and at the discretion of the corporation or other authority from which such pilot's licence was derived, either for the first, second, or any subsequent offence. — §§ 65, 66.

2. *Government of Pilots.* — All persons licensed to act as pilots by the Trinity House, are subject to the

government of the said corporation, which is empowered to make by-laws, rules, &c. specifying what sums shall be paid by such pilots to the sub-commissioners of pilotage for their examination, and for granting, or renewing, or confirming their licences from time to time, and annexing such reasonable penalties and forfeitures for the breach of such by-laws as to them shall seem expedient. But no such by-laws, regulations, &c. shall have any force till they have been examined, sanctioned, and approved by the chief justice of the Court of King's Bench, or the chief justice of the Court of Common Pleas.—§ 11. (*N.B.*—The by-laws of the Trinity House, Deptford Strond, sanctioned by Lord Tenterden, are annexed to this article.)

Copies of any proposed by-laws are to be transmitted to the privy council and the commissioners of customs, 3 months before they are submitted to any chief justice for approval; and the commissioners of the customs are to cause such proposed by-laws to be hung up in the several Custom-houses of the principal ports of Great Britain, for the inspection of all parties having an interest therein. And when such by-laws shall have been sanctioned, they shall be hung up in the several Custom-houses within the limits of which the pilots respectively shall be licensed, and also at the Trinity House in London.—§§ 12, 13.

The *Cinque Port* pilots are to be subject to the rules and regulations framed by the Lord Warden of the said ports, or his deputy, with the assent of the majority of the commissioners of *Loadmanage* (master and wardens of the fellowship of pilots of Dover, Deal, and the Isle of Thanet). The privy council may, however, amend, correct, or enlarge such rules or regulations, if they shall appear to them, upon the representation of any person having an interest therein, to be in any material point erroneous, insufficient, or defective.—§§ 21, 22.

The Trinity House Corporation are authorised and required to establish, vary, and alter, from time to time, as circumstances may require, the rates of pilotage performed by pilots licensed by the said corporation, according to the size and draught of water of the vessels, the distance piloted, the detention and responsibility of the pilot, and such other circumstances as they may think fit to take into account. Tables of these rates are to be hung up at the several Custom-houses of the ports to which they apply; and no greater or less rates, or other reward or emolument for such pilotage, shall, under any pretence whatever, be demanded, solicited, paid, received, or offered, on pain of forfeiting 10*l.* for every such offence, as well by the party offering as by the party accepting or soliciting the same. Ships returning by stress of weather, contrary winds, or on account of accident, into ports in the district of the Isle of Wight, Plymouth, and Falmouth, shall be subject to pay half the common pilotage in such ports.—§ 8.

If the majority of the pilots licensed by the Trinity House Corporation in any port or place, or any ship owner in the same, be dissatisfied with the rates, they may appeal to the privy council, who may decide upon the matter as they think fit.—§ 9.

Every person applying for a licence to act as a pilot, shall, before any such licence be granted to him, execute a bond in a penal sum, at the discretion of the Trinity House Corporation, or of the Lord Warden of the Cinque Ports, to an amount not exceeding 100*l.*, for the better securing his due obedience to the by-laws, rules, regulations, &c. to be made by competent authority.—§ 27.

Licences may be annulled, suspended, or adjudged forfeited, at the pleasure of the foresaid corporation and Lord Warden; but pilots, whose licences are so annulled, suspended, &c. may appeal to the privy council, who are authorised to make such adjudication in the premises as they may think fit.—§§ 29, 30.

3. *Licensing of Pilot Boats.*—The Trinity Corporation and the fellowship of the Cinque Port pilots are authorised to license pilot vessels of such size and description as may appear to them to be proper for having pilots constantly in attendance in such vessels at sea; and the licensed pilots are authorised to form themselves into companies, with consent of the corporations aforesaid, for providing and maintaining such pilot vessels, such companies and vessels being at all times subject to such rules and regulations as shall from time to time be sanctioned by the said corporate bodies.—§ 31.

Pilot boats or vessels are to be distinguished by being at all times and on every station fitted with black sides, and having the upper streak next the gunwale painted white; they are, while afloat, to carry a flag of large dimensions, proportioned to the size of the vessel, at the mast head, or on a sprit or staff in some conspicuous situation, which flag shall be half red and half white, in horizontal stripes, the white uppermost. The name of the pilot on board is to be painted in large white letters (3 inches long) on a black ground on the stern, and on each bow the number of the licence of such pilot; and the concealment of such name or number, or the evasion of any of the before-mentioned provisions, incurs a penalty of 20*l.*, to be paid by the senior pilot on board, who is answerable for their observance. Any pilot carried off in a boat other than a pilot boat, is to hoist a flag as previously ordered, on pain of forfeiting 20*l.* unless he show reasonable cause for having omitted it.—§ 32.

The owners or master of any boat or vessel carrying a pilot's flag, without having a licensed pilot on board, shall for every such offence forfeit 100*l.*—§ 33.

The Trinity House Corporation, the Court of *Loadmanage* of the Cinque Ports, and all other corporations and persons authorised to manage or direct pilots in any part of England, shall, on the 1st of January in each year, or within the month next following, transmit to the officer of the sixpenny duty in the port of London, a list of all the vessels of every description employed by them or by those under them, for the purposes of pilotage, with the number of men and boys belonging to or serving in such vessels.—§ 37.

4. *Duties of Pilots.*—In order to secure the due performance of his important duties by the pilot, it is enacted, that every pilot, duly licensed, who shall, without sufficient cause, refuse or decline going off to any vessel wanting a pilot, upon signal being made by the same, or upon being required to do so by the master of such ship, or by any person interested therein as principal or agent, or by any officer of the corporation to which such pilot shall belong, or by any principal officer of the customs; or who shall, on any frivolous pretext, quit any ship or vessel, or decline piloting thereof, after he has been engaged to pilot the same, or after going alongside thereof, without leave of the master; shall, for every such offence, forfeit not more than 100*l.* not less than 10*l.*—§ 72.

Any licensed pilot employing or making use of, or compelling or requiring any person having the charge of any ship or vessel to employ or make use of, any boat, anchor, cable, &c. beyond what is actually necessary, shall forfeit and pay for every such offence not more than 50*l.* and not less than 10*l.*, and shall also be deprived of his licence, or suspended, at the discretion of those by whom he was licensed.—§ 73.

If any licensed pilot shall lend his licence to an unlicensed person, to assist him in acting or claiming to act as pilot, and if such unlicensed person shall by drunkenness render himself incapable of conducting any ship or vessel, or negligently or wilfully lead, decoy, or betray any ship into danger, or shall unnecessarily or improperly cut any cable or cables belonging to any vessel; or if any such person shall, by wilful misrepresentation of any circumstances upon which the safety of the vessel shall appear naturally to depend, obtain or endeavour to obtain the conduct of such vessel, then, and in every such case, the person so offending, or who shall aid in, procure, abet, or connive at the committing any such offence or offences, shall, besides being liable to damages at the suit of the party grieved, forfeit and pay a sum of not more than 100*l.* and not less than 20*l.*; and if the person offending be a pilot, he shall be liable to be deprived of his licence, at the discretion of those by whom he was appointed.—§ 74.

Pilots keeping public-houses, or selling wine, spirituous liquors, tobacco, or tea (unless authorised by the competent authorities), or being concerned in any fraud or offence against the revenue laws, or in relation to any branch of their duty, shall, over and above all mutes, penalties, &c. for such offences, be adjudged to forfeit their licence, or be suspended, at the discretion of those by whom they are licensed.—§ 68.

A pilot, when taken on board, shall enter his name in the log-book of every ship entering the port of London requiring to be piloted under this act, and if any pilot or other person insert a false name, he is

to forfeit 20*l.*; and the name or names of the pilot or pilots so entered in the log-book and employed in piloting the vessel, are to be inserted in the *entry or report* of such vessel inwards; and this insertion is to be made (without fee or reward) by the proper officer of the customs, who shall report the same daily to the Trinity House, and monthly to the Lord Warden of the Cinque Ports. The principal searcher or officer of the customs at Gravesend is to demand and take the name or names of the pilot or pilots of all vessels clearing outwards, and shall transmit monthly lists thereof to the Trinity House, on pain of forfeiting a sum not more than 10*l.*, nor less than 5*l.*, to be paid by each and every of the persons foresaid who shall neglect to comply with any of the foresaid regulations. — § 43.

Pilots quitting any vessel in the Thames or Medway before she has arrived at the place to which she was bound, without the consent of the captain or other person in command, and unless some other duly qualified person shall with such consent come on board and take charge of the ship, shall forfeit for such offence all pay or reward they might be entitled to, and shall also be subject to such other penalty or punishment as may legally affect them in consequence of any by-law, &c. — § 42.

Pilots neglecting or refusing to obey the orders of the different dock masters within their respective jurisdictions incur a penalty of not more than 50*l.* and not less than 20*l.* for each offence, and may be dismissed or suspended. — § 75.

Licensed pilots may supersede unlicensed ones. And if any unlicensed person shall act after a duly licensed pilot has offered to come on board and take charge of the ship, she being at the time within the limits for which he is qualified, such unlicensed person shall forfeit not more than 50*l.* and not less than 20*l.* — § 70.

But unlicensed persons may act so long as no licensed pilot offers to take charge of the ship, or makes a signal for that purpose, or where and so long as the ship shall be in distress. — § 71.

Licensed pilots who have executed the bond before mentioned shall not be liable to any action for damages on account of neglect or want of skill, at the suit of the party grieved, in any greater sum than the amount which shall have been specified by way of penalty in such bond, and the pilotage payable to him in respect of the voyage during which the neglect or want of skill are alleged to have been exhibited. — § 57.

5. *Fees of Pilotage.* — The charge on account of pilotage is regulated in various places by usage or statute, and generally increases in proportion to the depth of water which the vessel draws. The Trinity House Corporation and the Lord Warden of the Cinque Ports have authority, as before mentioned, to fix the rates on account of pilotage to be charged by all pilots licensed by them. — (Subjoined to this article are Tables of the present rates.)

Any pilot carried to sea beyond the limits of his district without his free consent, except in cases of absolute necessity, shall, over and above his pilotage, receive 10*s. 6d.* a day, to be computed from and inclusive of the day next after the day on which the vessel shall pass the limit to which the pilot was engaged to conduct her, and until he shall be returned to the port or place where he was taken on board, or be discharged for a sufficient time to enable him to return there. — § 38.

Pilots are to qualify themselves for conducting vessels in and out of Rammgate harbour, and the harbours of Dover, Sandwich, and Margate, and shall be entitled to and receive for such pilotage at the rate of 5*s.* for every foot of the draught of water of every vessel so piloted. — § 39, 40.

Ships bound to the Thames, repairing to Standgate Creek, or other place appointed for the performance of quarantine, are to pay the full charges of pilotage to such place, and a further sum of 8*s.* a day for the days the pilot shall be obliged to remain on quarantine.

Any boat or vessel running before a ship or vessel, not having a licensed pilot on board, when such ship or vessel cannot be boarded, for the purpose of directing her course, the pilot on board such boat or vessel, or, if no pilot be on board, the person having the command thereof, and who shall run before such ship at the request or by direction of the master, shall be entitled to full pilotage for the distance run. — § 24.

All the sums which shall become due to any licensed pilot for the pilotage of foreign ships or vessels trading to or from the port of London may be recovered from the owners or masters of such ships or vessels, or from the consignees or agents thereof, who shall have paid, or made themselves liable to pay, any other charge for the ship or vessel in the port of her arrival or delivery as to pilotage inwards, and in the port whence she shall clear out or sail as to pilotage outwards; and may be levied in like manner, according to the amount, as any penalty may be recovered and levied by virtue of the act, demand thereof being made in writing at least fourteen days before such levy. And the master or other person having the charge of ships or vessels, not having British registers, which shall enter into or sail from the port of London, and which are by law required to be piloted by persons licensed by the corporation of the Trinity House, or the consignees or agents thereof, are to pay at the Trinity House, in London, to persons appointed by the corporation of the Trinity House, the full pilotage inwards and outwards; viz. as to pilotage outwards, the amount for the distance which the ship is by law required to be piloted; as to pilotage inwards, where a pilot shall have been on board, the amount for the distance piloted by him, if greater than that which she shall be required to be piloted; if less, or if no pilot shall have been on board, the amount for the distance which she was by law required to be piloted: the pilotage inwards may be levied, &c. upon the master or other person in charge, consignee, or agent, in the same manner as in the case of ships having British registers, if such pilotage inwards be not paid within fourteen days from the day of the ship's reporting inwards. — § 44, 46.

The pilotage outward upon foreign vessels is to be calculated according to the scale or amount of tonnage upon which such ships or vessels are rated in the port of London for payment of light and other dues, or according to the draught of water thereof, as the Trinity House may think most proper. — § 40.

In order to prevent controversies with respect to the draught of water of ships not having British registers, the Trinity House is empowered to appoint an officer to measure the draught of water of ships with respect to which there is any controversy, such officer receiving 1*l.* 1*s.* for his trouble if the ship be below the entrance to the London Docks, and 10*s. 6d.* if above such entrance, from the party against whom he may decide. If arriving inwards, application for such officer must be made within 12 hours after the ship has come to her moorings, and before she begin to unlade; and before quitting her moorings, if clearing outwards. — § 50.

The Trinity House are empowered to take measures for the relief of foreign vessels coming to the port of London with fish, corn, and other provisions on board, either from the whole or a part of the charges on account of pilotage that would fall upon them under this act. — § 51.

No foreign vessel shall be cleared outwards until a certificate, signed by the person appointed for that purpose by the Trinity House, that the pilotage has been paid, has been produced; the corporation pay the pilot employed, on proof that he has duly performed his service, the pilotage, after deducting the *6d.* duty. — § 47.

The consignees or agents of any ship or vessel are authorised and empowered to retain in their hands respectively, out of any monies which they may have received or shall thereafter receive for or on account of such ship or vessel, or the owner or owners thereof, so much as shall be sufficient to pay and discharge such pilotage, and any expenses attending the same. — § 45.

6. *Responsibility, &c. of Masters.* — Ships coming from the westward, bound to any place in the Thames or Medway, not having a duly qualified Cinque Port pilot on board, shall, on arriving at *Dungness*, and until they have passed the south buoy of the *Brake*, display and keep flying the usual signal for a pilot to come on board; and the master shall heave to and shorten sail, so as to facilitate the entry of the pilot. Persons not displaying such signal, &c. shall forfeit and pay double the amount of the sum that the charge

for pilotage would have amounted to. And it is further provided, that all masters of vessels acting themselves as pilots, or employing any unlicensed person as such, or any licensed person out of the limit of his qualification, after any licensed and qualified pilot shall have offered to come on board, or made a signal for that purpose, shall forfeit double the sum that would have been legally demandable as pilotage, and an additional penalty of *5*l.** for every 50 tons burden of the ship, if the Trinity House or Lord Warden of the Cinque Ports, as the case may be, shall think it proper to certify the same.

But the master of any of the following vessels may pilot the same, so long as he is not assisted by any unlicensed pilot or other person than the ordinary crew: viz. the master of any collier, or of any ship or vessel trading to Norway, or to the *Cattegat* or *Baltic*, or round the *North Cape*, or into the *White Sea*, on their inward or outward voyages, or of any constant trader inwards, from the ports between *Antwerp* inclusive, and the *Baltic* (all such ships or vessels having *British* registers, and coming up by the *North Channel*, but not otherwise), or of any *Irish* trader using the navigation of the rivers *Thames* and *Medway*, or of any ship or vessel employed in the regular coasting trade of the kingdom, or of any ship or vessel wholly laden with stone from *Guernsey*, *Jersey*, *Alderney*, *Sark*, or *Man*, and being the production thereof, or of any ship or vessel, not exceeding the burden of 60 tons, and having a *British* register (or not exceeding the burden of 60 tons, and not having a *British* register, if authorised so to do by an order of the privy council), or of any other ship or vessel whatsoever, whilst the same is within the limits of the port or place to which she belongs, the same not being a port or place in relation to which particular provision hath heretofore been made by any act or acts of parliament, or by any charter or charters for the appointment of pilots. — § 53, 60.

The master or mate of any vessel, being the owner or part owner thereof, and residing at *Dover*, *Deal*, or the *Isle of Thanet*, shall not be liable to any penalty for conducting or piloting his own ship or vessel up or down the rivers *Thames* or *Medway*, or into or out of any place within the jurisdiction of the Cinque Ports. — § 62.

This act shall not extend, or be construed to extend, to subject the master or owner of any ship or vessel to any of the penalties of this act, for employing any person or persons whomsoever, as a pilot or pilots, in and for the assistance of such ship or vessel, whilst the same shall be in distress, or in consequence thereof, or under any circumstances which shall have rendered it necessary for such owner or master to avail himself of the best assistance which at the time could be procured. — § 61.

No owner or master of any ship or vessel shall be answerable for any loss or damage which shall happen to any person or persons whatsoever, from or by reason or means of no licensed pilot or of no duly qualified pilot being on board thereof, unless it shall be proved that the want of such licensed or of such duly qualified pilot respectively shall have arisen from any refusal to take such licensed or qualified pilot on board, or from the wilful neglect of the master of such ship or vessel in not heaving to, or using all practicable means, consistently with her safety, for the purpose of taking on board thereof any pilot who shall be ready, and offer to take charge of the same. — § 53.

Nothing in this act shall extend, or be construed to extend, to make the owner of any ship or vessel liable in any such case, for any loss or damage beyond the value of such ship or vessel and her appurtenances, and the freight due, or to grow due, for and during the voyage wherein such loss or damage may happen or arise. — § 54.

No owner or master of any ship or vessel shall be answerable for any loss or damage which shall happen to any person or persons whatsoever, from or by reason or means of any neglect, default, incompetency, or incapacity of a licensed pilot acting in the charge of any such ship or vessel, under or in pursuance of any of the provisions of this act, where and so long as such pilot shall be duly qualified to have the charge of such ship or vessel, or where and so long as no duly qualified pilot shall have offered to take charge thereof. — § 55.

Nothing in this act shall be construed to extend to deprive any person or persons of any remedy or remedies upon any contract of insurance, or of any other remedy whatsoever, which he or they might have had if this act had not been passed, by reason or on account of the neglect, default, incompetency, or incapacity of any pilot duly acting in the charge of any ship or vessel, under or in pursuance of any of the provisions of this act, or by reason or on account of no pilot or of no duly qualified pilot being on board of any such ship or vessel, unless it shall be proved that the want of a pilot arises from a refusal on the part of the master to take such pilot on board, or to heave to for him. — § 56.

All masters or other persons having the command of any ship, who shall report, or be privy to any one reporting, a false account of the draught of water of such ship, shall, besides the full pilotage, forfeit double the amount thereof; and any master or other person having any interest, share, or property in any vessel, who shall fraudulently alter any marks on the stem or stern post thereof, diminishing the draught of water, or shall be privy or consent thereto, shall for every such offence forfeit and pay the sum of 500*l.*

7. *Recovery of Penalties.* — Penalties incurred under this act, not exceeding 20*l.*, are to be recovered before a justice by prosecution within six months; and penalties above 20*l.* by action of debt in any of the courts of record at *Westminster*, to be commenced within twelve months; but if it shall be made to appear, as soon after as the circumstances of the case will admit, that the commencement of the prosecution or action has been delayed by reason of the absence of any party or parties, whether offending or complaining, or of any necessary witness, then, upon such circumstances being stated by affidavit, made before any judge of any of his Majesty's courts of record at *Westminster*, any such judge may order or authorise the commencement of the prosecution or action within such further time as he shall think fit to limit.

It is, however, provided that nothing therein contained shall affect or impair the jurisdiction of the Court of Loadnamage, or High Court of Admiralty, nor the right of the city of *London*, nor (in general) any separate jurisdiction established under any act of parliament or charter. — § 76, 77, 87, 88, 89.

BY LAWS, REGULATIONS, AND ORDINANCES AS TO PILOTS, framed by the Trinity Corporation, and sanctioned by Lord Tenterden, 19th of April, 1826.

I. Annul the previous regulations.

II. It is ordained, that every pilot who shall be ordered to proceed on his Majesty's service, by any order signed by the deputy master or secretary of the said corporation, or by the officer for the time being for the said corporation at *Yarmouth*, or elsewhere, duly authorised to act in matters of pilotage, or who shall be so ordered, in writing or otherwise, by any officer in his Majesty's service, shall immediately proceed thereon; and every pilot who shall fail so to do, or shall evade the receipt of any such order, or who shall quit or decline such service, shall for the first offence forfeit *5*l.**, and for the second and every subsequent offence 10*l.* each.

III. It is ordained, that every pilot engaged in the charge of any ship employed by government in the transport service, shall observe particularly if any unnecessary delay take place on the part of the master in proceeding towards his destination; and if any delay does take place, such pilot shall, on his return, report the same to the secretary of the said corporation, and upon going on board, such pilot shall give notice to the master that he has orders so to do.

IV. It is ordained, that no pilot having the charge of a merchant ship shall stop the same alongside the moorings of his Majesty's ships at *Deptford*, or elsewhere, or between the *Hound Tree* and *Bathing-house*, *Gravesend* (except in either of such cases there be an extreme necessity for so doing, or leave be obtained for that purpose from the proper officer or officers in that behalf), and all pilots licensed by the said corporation are at all times to be particularly careful to steer clear of the king's ships in passing them.

V. It is ordained, that every pilot, when called upon or required to pilot any ship or vessel, shall, if

under engagement to any other ship, forthwith make known such engagement, and specify the particulars thereof truly and faithfully to the person calling for or requiring such pilot's service; and in case of any concealment, misrepresentation, or falsehood, in respect of such alleged previous engagement, the pilot offending shall forfeit 10*l*.

VI. It is ordained, that every pilot who shall have taken charge of any ship from the river Thames to the Downs, or elsewhere, shall, without any additional compensation in that behalf, wait on board for the space of 3 complete days while such ship may be detained at Gravesend, or elsewhere, for want of seamen, or by any other casualty; nor shall he at the end of 3 complete days be at liberty to quit such ship, or receive any additional compensation, if she shall be further detained by winds, weather, or tides; and should the ship be detained beyond 3 complete days on any other account except winds, weather, or tides, the pilot having the charge thereof shall nevertheless still (if required so to do) remain in the charge of her, provided a compensation of 6*s*. per day be offered to him in that behalf by the master or owner.

VII. It is ordained, that every pilot shall in all cases demean himself civilly and respectfully towards all persons who may require his service, and towards all officers in his Majesty's navy, and shall maintain a strict temperance and sobriety in the exercise of his office, and shall use his utmost care and diligence for the safe conduct of every ship which he shall be intrusted with the charge of, and to prevent her doing damage to others.

VIII. It is ordained, that every pilot who shall undertake the charge of any ship downwards, shall, before his departure, leave, or cause to be left, notice thereof, in writing, at the proper office at the Trinity House in London, with one of the clerks there attending, and shall be considered as disengaged until he shall have done so; and upon such pilot's return, he shall immediately, in his own person, attend at the said office, and make and sign such entry, in a book there kept for that purpose, as the said corporation shall from time to time direct or require.

IX. It is ordained, that every pilot licensed by the said corporation shall, from time to time, and at all times, in obedience to the order or summons of the said corporation, under the hand of the secretary thereof for the time being, duly delivered or offered to such pilot, or left a reasonable time at the usual or last known place of residence of such pilot, attend the said corporation, at their courts, by-boards, or committees, or their secretary for the time being, at the Trinity House in London; and that every pilot licensed by the said corporation, upon a certificate of qualification from sub-commissioners of pilotage, shall, in like manner, attend the sub-commissioners of the port or place for which such pilot shall be so licensed, in obedience to the order or summons of the said sub-commissioners, under their hands, or the hands of the major part of them, duly delivered, offered, or left as aforesaid, to answer to any charges brought against such pilots respectively, or for the performance of any public service, or for any other purpose whatsoever; and in default of such attendance, every pilot so offending shall forfeit for the first offence 40*s*., and for the second and every subsequent offence 5*l*. each.

X. It is ordered, and hereby directed, that every pilot licensed or to be licensed by the said corporation, upon their receiving a certificate of examination by any sub-commissioners of pilotage, shall, for such examination, and for granting the licence thereon, pay the sum of 2 guineas to the said sub-commissioners of pilotage by whom he shall be examined, or to one of them; and shall also, for the renewing or confirming such licence from time to time, pay to the sub-commissioners of pilotage for the time being, at or for the port or place specified in such licence, or to 1 of them, the annual sums following; (that is to say,) every pilot so licensed or to be licensed as aforesaid, for the ports of Plymouth, Portsmouth, or Cowes respectively, the annual sum of 2 guineas; and every pilot licensed or to be licensed as aforesaid, for any other port or place, the annual sum of 1 guinea, unless the pilots at or for such port or place shall be divided into 2 classes; and, in that case the pilots of the 1st class are to pay the annual sum of 2 guineas each, and pilots not of the 1st class the annual sum of 1 guinea each.

XI. It is ordained, that no pilot shall add to or in any way alter his licence, or make or alter any endorsement thereon, nor shall he be privy to any such licence or endorsement being altered.

XII. It is ordained, that every pilot who shall observe any alteration in any of the sands or channels, or that any of the buoys or beacons of the said corporation are driven away, broken down, or out of place, shall forthwith deliver or send a correct statement thereof, in writing, to the secretary of the said corporation for the time being.

XIII. It is ordained, that every pilot shall, whenever he comes to an anchor, carefully observe the settings of the tide, and the force of the stream; and if it shall happen that he comes near to a sand or other object or cause of danger, and there be any other ships or ship in company likely to fall in therewith, such pilot shall immediately give notice thereof to the captain or principal officer of the ship under his care, that he may make a signal to such other ship or ships for avoiding the same.

XIV. It is ordained, that no pilot shall, on any pretence, aid or assist, either in his own person or with his boat or servants, or by any other means whatever, the landing, removing, or secreting any seaman from any merchant ship or vessel, to avoid serving in his Majesty's navy, or escape the impress for the same.

XV. It is ordained, that every pilot shall from time to time conform himself strictly to all directions which shall be given to him by any of the harbour masters authorised by act of parliament, under the corporation of the city of London, touching the mooring, unmooring, placing, or removing of any ship or vessel under his charge, as long as such ship or vessel shall be lying and situate within the limits of the authority of such harbour master.

XVI. It is ordained, that each and every pilot belonging to a licensed pilot vessel shall be at liberty to entertain one apprentice and no more.

XVII. It is ordained, that for any work done on the rivers Thames or Medway by men in boats, being less than the work for the whole tide, the pay shall be, for half a tide's work, 4*s*. to each man, and in proportion for any time less than a whole tide, the pay for which is settled by the said act of the 6th year of the reign of his present Majesty at 8*s*.

XVIII. It is ordained, that in all cases where pecuniary penalties and forfeitures are annexed to the breach of the foregoing by-laws, rules, orders, regulations, and ordinances, the said corporation of Trinity House may mitigate and reduce the same to 1-4th part at their discretion.

XIX. It is ordained, that every pilot who shall offend against any or either of the foregoing by-laws, orders, regulations, and ordinances, shall, for every such offence (whether the same shall subject him to any pecuniary penalty or not, and in addition to such penalty if any), be liable to have his licence annulled and forfeited, or suspended, at the discretion of the said corporation.

N. B.—Besides conforming themselves diligently to the above by-laws, rules, orders, regulations, and ordinances, the pilots licensed by the corporation of Trinity House are, of course, in all things to observe and obey the same enactments and provisions relating to such pilots contained in the said act of parliament made and passed in the 6th year of the reign of his Majesty King George the Fourth, a copy of which act has been delivered to each of the said pilots.

\*.\* The following Tables of the charges on account of pilotage, &c. are the most complete that have hitherto been published. They have all been derived from official sources, so that their accuracy may be depended upon.

| For putting a Pilot on board, and for Pilotage of Ships and Vessels to the Anchorage in the Downs.* | 60 Tons, and under 150. |    |    | 150 Tons, and under 250. |    |    | 250 Tons, and under 400. |    |    | 400 Tons, and under 600. |    |    | 600 Tons, and upwards. |    |    |

In the River Thames } For a boat of a class carrying an anchor of above L. s. d. } Per trip for the whole distance  
 above Gravesend - } 4 cwt. with a corresponding tow-line - - - 2 2 0 } from Gravesend to London;  
 Do. do. 2 cwt. - - - - - 1 0 0 } and in proportion for any part  
 Do. do. under 2 cwt. - - - - - 0 15 0 } of that distance.  
 And for each man's service in those boats, 5s. per tide.

**RATES CHARGED FOR THE PILOTAGE OF VESSELS, WITH AN ACCOUNT OF OTHER CHARGES AFFECTING THEM IN SOME OF THE UNDERMENTIONED PORTS.**

**BAUMARIS District, viz.** — From Ilango to a line drawn from Great Ormes Head to Point Linas; and to and from, and into and out of, all ports and places within those limits.  
*N. B.* — No master of a vessel is compelled to take a pilot within this district, unless coming into or going out of port; but if he do take a pilot, it must be one of the district pilots, if one offer.

*Rates of Pilotage, for piloting Ships within the Baumaris District.*

|                               | Into the Bay    | Outwards        | L. s. d. |
|-------------------------------|-----------------|-----------------|----------|
| From the outside of the Sound | Under 100 tons  | Under 100 tons  | 0 15 0   |
|                               | 100 to 200      | 100 to 200      | 1 1 0    |
|                               | 200 — 300       | 200 — 300       | 1 11 6   |
|                               | 300 and upwards | 300 and upwards | 2 2 0    |
| From the inside of the Sound  | Under 100 tons  | Under 100 tons  | 0 10 6   |
|                               | 100 to 200      | 100 to 200      | 0 15 0   |
|                               | 200 — 300       | 200 — 300       | 1 1 0    |
|                               | 300 and upwards | 300 and upwards | 1 11 6   |

Ships not having British registers are to pay  $\frac{1}{2}$  more than is stated in the above Table.

Should the pilot be landed at Great Ormes Head — L. s. d. 2 2 0 extra  
 If taken out of the limits of his licence, to Chester or Liverpool — 3 3 0  
 In case the pilot should happen to have charge of the vessel to either of the said places — 5 5 0  
 The sum of 7s. 6d. per day is to be allowed to the pilot for every day such pilot may be detained on board in consequence of the ship or vessel performing quarantine, or detained under any other restrictions or circumstances such ship may be liable to.

**BARONTON.** — Pilotage for the Beaches at Brighthelmston, Hastings, or Beachill.

| 8 Feet and under. | 8 to 10 Feet.     | Above 10 Feet. |
|-------------------|-------------------|----------------|
| 1s. 3d. per foot. | 1s. 9d. per foot. | 2s. per foot.  |

The above rates for the harbours and beaches are due both inwards and outwards; but no charge whatever is to be made for the use of pilot boats.

Ships going into the harbours of Rye and Shoreham, and unloading near the harbour's mouth, are subject to a pilotage only; but if such ships are afterwards removed by pilots to any dock or wharf near the town, where such ships may be for the purpose of taking in a cargo, in that case the full pilotage is due.

Ships taken charge of in distress are to pay according to circumstances, to be settled by the sub-commissioners.

Ships not having British registers are to pay  $\frac{1}{2}$  more of the rates of pilotage for the harbours and beaches, than stated in the above Tables.

\* When the pilot is put on board by a boat from the shore, one seventh to the pilot, and the remaining six sevenths to the boat and crew.

| 300 and upwards   | 1 11 3        | 1 5 0    | 1 11 3        | 1 5 0    |

**DARTMOUTH District.** — From Bob's Nose to the Start, and vice versa; and to and from, and into and out of, all ports and places within those limits.  
*N. B.* — No master of a vessel is compelled to take a pilot within this district, unless going into or coming out of port, within a line drawn from the Mewstone to the Blackstone; but if he do take a pilot between Bob's Nose and the Start, it must be one of the district pilots, if one offer.

*Rates of Pilotage, for piloting Ships within the Dartmouth District.* — All British ships, if boarded within the run of the Mewstone East, or the Blackstone West, are to pay as follows; viz. — Per Foot.

| Drawing 10 feet of water and under | Per Foot. |
|------------------------------------|-----------|
| 10 to 12 feet                      | 3 0       |
| 12 to 14 —                         | 3 6       |
| 14 to 16 —                         | 4 0       |
| 16 feet and upwards                | 5 0       |

All British ships, if boarded within that line, are to pay  $\frac{1}{2}$  part less.

All British ships, boarded within the Castle, are to pay only half pilotage; subject to the consideration of the weather, which is to be settled by the sub-commissioners.

In carrying ships out of the harbour, the pilotage is to be in all cases  $\frac{1}{2}$  less than the inward pilotage.

All ships not having British registers are to pay  $\frac{1}{2}$  more than the rates above stated.

Masters of ships taking a pilot at sea; viz. 2 leagues or more from the harbour's mouth, are to pay according to circumstances attending the hazard run, assistance required, &c., which is to be regulated, in case of dispute, by the sub-commissioners. The pilot is to provide a proper tow-boat and crew consisting of at least 4 men; for whose services he shall be entitled to charge 2s. 6d. per man per day, in addition to the rate of pilotage; and, in case of dispute, to be settled by the sub-commissioners, and the assistants rewarded according to the risk, time, and trouble.

Ships not having British registers, nor being privileged as British, to pay 1 more than the above rates.

Pilots to provide a boat and crew to assist over the bar to a mooring berth; for which they shall be paid, over and above the pilotage, 2s. 6d. for each man or crew employed for that purpose.

Masters of ships taking a pilot off the Bill of Portland, or the Star (which is optional to them), are to pay, beyond the pilotage from Bob's Nose, or Lyme, as follows, viz.: — Colliers and coasters, 2 guineas; ships from foreign ports, 3 guineas; and proportionately for intermediate distances.

**Falmouth District, viz.** — From the Dodman to the Lizard, and vice versa; and to and from, and into and out of, all ports and places within those limits.

Masters of vessels taking a pilot at sea, are to pay — L. s. d.

For putting a pilot on board without a line drawn from the Manacles to the Dodman — 2 2 0

Diffo, from the entrance of Helford Harbour to the Bull Rock — 1 1 0

Diffo, a mile without the Shag Rock or Pendennis Point — 0 10 6

Diffo, off the Lizard, or in the parallel of the Lizard, or meeting a vessel there, and running before her, not being able to pass a pilot on board, provided the master of the vessel consents to receive a pilot at that distance — 3 3 0

Ships not having British registers are to pay 1 more of the rates of pilotage than stated in the above Table.

N. B. — No allowance for a pilot going on board a ship in the harbour to take her out, except in extremely bad weather, or when ships are on shore or making signals of distress, in which cases a reasonable compassment is to be made.

All vessels belonging to the port of Truro, bound to or from foreign parts, including Guernsey, Jersey, Alderney or Sark, are to pay no more than 1/2 the above rates of pilotage, when navigating within the limits of the Falmouth district on their passage to or from Truro. The rate of 1s. 6d. per foot for subsequent removal remaining unaltered.

**Fowey District, viz.** — From Looe, inclusive, to the Dodman, and vice versa; and to and from, and into and out of, all ports and places within those limits.

N. B. — No master of a vessel is compelled to take a pilot within this district till he comes off the port of Looe; or within a line drawn from Looe to the Gribben Head, for the port of Fowey; or from the Gribben Head to Blackhead, for Polkerris Bay; or from the Gribben Head to the Dodman, for Mevagissey; but if he do take a pilot between Looe and the Dodman, it must be one of the district pilots, if one offer.

**Rules of Pilotage, for piloting Ships within the Fowey District.** — All British ships of 11 feet water and upwards, if boarded without the land, off Looe or the Dodman, which must be known by the western land, called the Gray, being open off the Dodman, shall pay 5s. per foot pilotage, if carried into the harbour of Fowey, Mevagissey Pier, Charlestown Basin, or Looe.

British ships under 14 feet water, boarded as above stated, to pay 4s. per foot for the like service.

British ships above 14 feet, within that line, to pay only 1s. per foot; and ships under 14 feet, boarded as above, only 3s. per foot for the like service.

All ships not having a British register to pay 1/2 more than the rates above stated.

All the above rates to be paid in proportion for every 1/2 foot of water, but no allowance to be made for any draught of water above, or under, 1/2 a foot.

In carrying ships to sea from the said harbour, the pilotage to be in all cases 1-3d less than the inward pilotage, as mentioned in the third article.

All ships which may anchor on their arrival either in Mevagissey Bay, or the sands off Fowey, to pay only 1/2 of the before-mentioned rates of pilotage.

All pilots employed to carry ships from any one of the harbours to another, to be paid the same pilotage as if the said ships had been boarded within the headlands coming from sea.

Masters of ships taking a pilot at sea (which is optional with them) — L. s. d.

3 leagues without a line drawn from the Looe to the Dodman, are to pay — 3 3 0

6 leagues ditto — 4 4 0

10 leagues ditto — 6 6 0

and proportionately for intermediate distances.

Ships not having British registers are to pay 1/2 more of the rates of pilotage than stated in the above Table, to be paid at the Custom-house, Harwich.

**HOLYHEAD District, viz. —** To and from the anchorages at Great Ormes Head, along the coast of the Isle of Anglesea and Wales, as far as Bardsey Island, and to and from, and into and out of, all ports and places within those limits (except the bar and harbour of Caernarvon, and the Swellies).

**N.B. —** No master of a vessel is compelled to take a pilot within this district, till he comes to the North Stack, bound to Holyhead Harbour; but if he do take a pilot between Great Ormes Head and Bardsey Island, it must be one of the district pilots, if one offer.

**Rates of Pilotage, for piloting Ships into and out of the Harbour of Holyhead.**

**Vessels per Register to pay, for**

| 300 and less than 400 Tons. | 200 and less than 300 Tons. | 120 and less than 200 Tons. | 80 and less than 120 Tons. | 60 and less than 80 Tons. | Under 60 Tons.  |
|-----------------------------|-----------------------------|-----------------------------|----------------------------|---------------------------|-----------------|
| <i>L. s. d.</i>             | <i>L. s. d.</i>             | <i>L. s. d.</i>             | <i>L. s. d.</i>            | <i>L. s. d.</i>           | <i>L. s. d.</i> |
| 3 3 0                       | 2 2 0                       | 1 11 6                      | 1 1 0                      | 0 15 0                    | 0 10 6          |

Ships not having British registers are to pay 1/2 more than stated in the above Table.

All ships and vessels, under any circumstances of distress, are to pay such pilot a further sum of money, to be calculated according to the extent and circumstances of such distress, and the service afforded.

Ships and vessels which shall be boarded by pilots, at the distance of 3 leagues or farther to the southward and westward of Holyhead (where it is optional to masters of vessels to take pilots), are to pay the several rates following; viz.

|   | <i>L. s. d.</i> |
|---|-----------------|
| On having a Liverpool pilot on board, off Point Linas, and landing the Holyhead pilot there | 3 3 0           |
| On landing the pilot at the Great Ormes Head  | 4 4 0           |
| If a pilot is taken beyond the limits of his licence to Chester Water or to Liverpool       | 5 5 0           |

With the sum of 7s. 6d. per day for every day such pilot may be detained on board in consequence of the ship or vessel performing quarantine, or detained under any other restrictions such ships may be liable to.

Pilots boarding ships and vessels at a less distance than 3 leagues from the Head, as above, are to receive 10s. 6d. less for pilotage than the above rates.

It is particularly requested that commanders of ships, on discharging their pilots off Point Linas, or the Ormes Head, should be certain that such pilots will be taken on shore without being delayed on board such vessels or boats as may receive them; as a pilot will be entitled to 7s. 6d. per day for every day he shall be kept out from landing, after the day he is discharged from the ship or vessel he may have piloted, unless it can be proved that such delay has unavoidably happened from the violence of the wind and weather.

**HULL. — Town Dues for Alien Vessels.**

LIVERPOOL.

**Rates of Pilotage for British Vessels trading to Foreign Ports.**

| Per Foot.   | <i>L. s. d.</i> |
|---|-----------------|
| <b>Inward.</b> — From the length of the west end of Great Ormes Head, bearing S. by W., or before Penman Bathan be shut, with Great Ormes Head, at the rate of                          | 0 0 0           |
| From the eastward of Great Ormes Head, as above   | 0 0 8 0         |
| From the only house now on Great Hillra Island, bearing S. S. W., by the compass, or shall be piloted from the Road of Howlake only, or from the bay of the Fair-Way in Forraby Channel | 0 1 0           |
| <b>Outward.</b> — Whether through the Rock or Forraby Channel   | 0 1 0           |

No British vessel, trading to foreign parts, inward and outward bound, is to refuse a pilot; but if such vessel have passed the Brazil buoy in the Rock Channel, or the Middle Watch buoy in Forraby Channel, or if a pilot boat fall in with a vessel in the narrow of the channels in stormy weather, that she cannot land her without imminent danger, the pilot shall then lead the way, and, in either case, he entitled to such pilotages shall be awarded by the committee at their next meeting.

For Alien Ships and Vessels.

| Per Foot.   | <i>L. s. d.</i> |
|---|-----------------|
| <b>Inward.</b> — From the length of Great Ormes Head, as above, at the rate of  | 0 12 0          |
| From the eastward of Great Ormes Head, as above   | 0 11 0          |
| From the only house now on Great Hillra Island, bearing S. S. W., by the compass, or shall be piloted from the Road of Howlake only, or from the bay of the Fair-Way in Forraby Channel | 0 5 6           |
| <b>Outward.</b> — Whether through the Rock or Forraby Channel   | 0 7 0           |

An alien vessel, inward or outward bound, is not to refuse a pilot, as circumstances are described for English foreign vessels as above.

For Coasting Vessels, and those trading to and from Ireland, the Islands of Faro or Fern, Jersey, Guernsey, Alderney, Sark, and Guernsey.

| Per Foot.   | <i>L. s. d.</i> |
|---|-----------------|
| <b>Inward.</b> — From the length of Great Ormes Head, as above, at the rate of  | 0 4 6           |
| From the eastward of Great Ormes Head, as above   | 0 4 0           |
| From the only house now on Great Hillra Island, bearing S. S. W., by the compass, or shall be piloted from the Road of Howlake only, or from the bay of the Fair-Way in Forraby Channel | 0 2 0           |
| <b>Outward.</b> — Whether through the Rock or Forraby Channel   | 0 2 0           |

No coasting vessel to pay for less than 8 feet of water, nor any vessel to pay for odd inches under 2 a foot. No coasting vessel, inward or outward bound, of the burden of 100 tons or upwards, (unless she be in ballast) is to refuse a pilot, as the master or owner, &c. must pay the full pilotage if one be offered. No vessel to be denied a coaster unless she has been 6 months in that trade.

Extra Pay.

| Per Day.   | <i>L. s. d.</i> |
|--|-----------------|
| In the river, exclusive of the day coming from sea, the day of docking, and the day of going to sea, for the pilot's attendance, if required by the master or owner, &c.   | 0 5 0           |
| And if the attendance of a pilot boat be requested as above  | 2 2 0           |
| The pilotage from sea into Howlake is ½ inward, and from Howlake out to sea ½ outward.   | —               |
| Notwithstanding the pilot or boat be not employed whole day, to be paid for a day.   | —               |
| So far includes all the rates and prices for pilotage and extra pay.   | —               |
| The Pilots' Committee may resolve to recommend to the merchants of Liverpool, &c. that when a pilot conducts a ship or vessel into port to their satisfaction, to employ the same pilot to take the vessel out again; and if he should be absent on days, that one belonging to the same boat be employed. | —               |
| <b>Pilot's Rules and Regulations.</b> — Any person acting as a pilot in the port of Liverpool, without a licence, to forfeit 2 <i>l.</i>   | —               |

Pilots refusing to conduct ships, or assist ships in distress, to forfeit 10*l.*, and lose their licence.

Masters in coasting trade in ballast, or under the burden of 100 tons, may pilot their own vessels.

Masters of vessels forcibly taking pilots beyond the limits of the port, shall forfeit not exceeding 20*l.*, nor less than 5*l.*

Pilots refusing to have their licences recalled, and if they act otherwise, to be liable to the same penalties as if they were not pilots.

Vessels liable to pay pilotage coming into port, to display a signal for a pilot, under a penalty of 5*l.*

Reward for pilots assisting ships in distress to be settled by the committee.

Compensation to be made to pilots for taking vessel out of the port which have been forced back, to be fixed by the committee.

Ships forced back after parting with the pilot, and piloted out again from Howlake, to pay 3*l.* the price.

Every master to give the pilot a true account of the draught of water of his ship, and pilots authorised to admeasure.

Pilots to obey the orders of the harbour and dock masters.

No vessels to be brought round the Rock, or into the docks, in the night-time.

| A line drawn from St. Anne's Point to Sheep's Island, or from Hubbardstone Head | Any place above a line drawn from Newtor Nose Point to Martin's Haven, in addition  | 0 2 0 0 2 6                    |

**Additional Rates for Ships boarded without the Entrance of the Harbour.**

|  |          |
|--|----------|
| From a line drawn from Lenny Point to Skokam Island, in addition, per foot   | L. s. d. |
| 1/2 to the southward of St. Owen's Head, ditto   | 0 2 0    |
| Or from Caldly Island eastward, or from the westward of the Grassholm, or 5 leagues without Lenny Point, in addition to the harbour pilotage | 3 3 0    |
| 6 leagues ditto  | 4 4 0    |
| 10 leagues ditto   | 6 6 0    |

The fourth part is to be added to the harbour rates for ships not having British registers.

**Rates for Services and Assistance performed in the Harbour.**

For a boat carrying an anchor of above 6 cwt., with a corresponding hawser —

|   |        |
|---|--------|
| L. s. d.  |        |
| If in Hulberrstone Roads  | 2 2 0  |
| Each man in the boat, each tide   | 0 5 0  |
| If below Hulberrstone Roads, a line drawn from the E. point of Hillswick, to the E. point of Angle Hay and above the Stack Rock | 2 12 6 |
| Each man in the boat, each tide   | 0 5 0  |
| If in Dale Head, and the anchor is brought from Milford   | 4 4 0  |
| Or if carried off from Dale   | 3 12 6 |
| Each man in the boat, each tide   | 0 5 0  |

Not exceeding: at the discretion of the sub-commissioners.

For a boat carrying off an anchor of 5 cwt. and not exceeding 6 cwt., with a corresponding hawser, the boat and men to have 4 of the sums above specified.

For a boat with an anchor of 2 cwt. and not exceeding 5 cwt., with a corresponding hawser, the boat and men to have 2 of the said above specified sums.

For unmooring a ship drawing 14 feet water, and upwaring, and bringing her alongside the quay, or into Hulberrstone Pill —

|               |       |
|---------------|-------|
| L. s. d.      |       |
| For the pilot | 1 1 0 |

Not exceeding: at the discretion of the sub-commissioners.

Each person employed — 0 5 0

From the 3d station specified — 1 11 6

Each person employed — 0 5 0

Not exceeding: at the discretion of the sub-commissioners.

And for taking a ship of 14 feet draught of water and upwards, from the quays, or Hulberrstone Pill, to moorings in any of the situations before mentioned, the like sums above specified.

Ships under 11 feet draught of water, to or from the situations before mentioned, 3/4 of the sums for the pilot; the boats and men as above specified.

For unmooring a ship drawing 14 feet water, in either of the situations before described —

|                                      |        |
|--------------------------------------|--------|
| L. s. d.                             |        |
| For the pilot                        | 0 10 6 |
| If with a boat, an additional sum of | 0 10 6 |
| Each person employed                 | 0 5 0  |

Not exceeding.

|   | 0 1 0         | per ves.  | Nil.          |           |

**NEWHAVEN and SHORNHAM District, viz.** — From Dungeness to the Towers, and vice versa; and to and from, and into and out of, all ports and places within those limits.

N. B. — No master of a vessel is compelled to take a pilot within this district, until he comes to the entrance of Rye, Shoreham, or Newhaven, and is bound to one of those ports; but if he does take a pilot between Dungeness and the Owers, it must be a district pilot, if one offers.

**Rates of Pilotage, for piloting Ships within the Newhaven District.** — Coast pilotage from Dungeness to the west end of the Owers: 7 feet draught and under, 2s. 6d.; 7 to 10 feet, 4s. 4d.; 11 feet, 5s. 12s.; 12 feet, 5s. 12s.; 13 feet, 6s.

14 feet, 6s. 12s.; 15 feet, 6s. 12s.; 16 feet, 6s. 12s.; 17 feet, 7s. 2s.; 18 feet, 7s. 2s.; 19 feet, 7s. 12s.; 20 feet, 7s. 12s.; 21 feet, 8s. 12s.; above 21 feet, 8s. 12s.  
**Harbour Pilotage.** — Newhaven. — 8 feet draught and under, per foot, 1s. 4d.; 8 to 10 feet, 1s. 6d.; above 10 feet, 2s.  
 Rye. — 8 feet draught and under, per foot, 2s. 6d.; 8 to 10 feet, 3s.; above 10 feet, 4s.  
 Shoreham. — 8 feet draught and under, per foot, 2s. 6d.; 8 to 10 feet, 3s.; above 10 feet, 4s.

**NORTH CHANNEL, &c. upwards from Orfordness to London.** — Of the pilots within this district, some are licensed from the Durdan light-vessel to Orfordness, and thence to the Downs; others are further licensed from Smith's Knoll to Orfordness. But the taking of pilots along the coast, to the northward of Orfordness, is optional to masters of vessels, though, if a pilot be employed, he must be licensed as above, if one offers.

Licences granted for the northward of Orfordness do not authorize the pilotage into or out of Yarmouth Roads or Harbour, except as may be requisite in the passage to the Downs or river.

**PEZZANER District, viz.** — From the Lizard to Cape Cornwall, and vice versa; and to and from, and into and out of, all ports and places within those limits.

N. B. — No master of a vessel is compelled to take a pilot within this district, until he comes within a line drawn from St. Clement's Isle to Trewavas Head, for Mount's Bay and Penzance; but if he does take a pilot between the Lizard and Cape Cornwall, it must be one of the district pilots, if one offers.

**Rates of Pilotage, for piloting Ships within the Peznaner District.**

| From  | To          | Feet & under | 8                                 | 10 | 11 | 12 | 13 | 14 | 15 | 16 | 17 | 18 | 19 | 20 |

| Sea, and either of the roads, or either of the steads, & vice versa | Mount's Bay | 10           | 16                                | 24 | 30 | 35 | 40 | 45 | 50 | 55 | 60 | 67 | 72 |    |
|   |             | 1s. 6d.      | per foot of the draught of water. |    |    |    |    |    |    |    |    |    |    |    |

Ships not having British registers are to pay 1/2 more than stated in the above Table.

Boats and vessels boarded by pilots at a distance southward of the bay —

|  |       |
|--|-------|
| L. s. d.   |       |
| For putting a pilot on board without a line drawn from the Lizard to Tol Pedan Penwith                                       | 2 2 0 |
| Ditto, within a line drawn from the Lizard to Tol Pedan Penwith, without a line drawn from Carn Dew to Penguin Point         | 1 1 0 |
| Ditto, within a line drawn from Carn Dew to Penguin Point, and without a line drawn from St. Clement's Isle to Trewavas Head | 0 10  |

And within those limits to be charged inwards.

**PLYMOUTH District, viz.** — To the westward as far as Looe, and eastward as far as the Start; and to and from, and into and out of, all ports and places within those limits.

N. B. — No master of a vessel is compelled to take a pilot within this district, except going in or coming out of the port, within a line drawn from the Ram Head to the Mewstone; but if he do take a pilot between the Start and Looe, it must be one of the district pilots, if one offers.

**Rates of Pilotage, for piloting Ships within the Plymouth District.** — 1. All British ships of 14 feet water and upwards, except East Indianmen, if boarded without the land off Penke Point or the Mewstone, which must be known to the western land being open off the Ram Head, shall pay 5s. for pilotage, if carried into the harbour of Hamoaze, Castwater, or Sutton Pool.

2. British ships under 14 feet water, down to 8 feet, boarded as above stated, are to pay 3s. per foot for the like service.

3. Ships above 14 feet, within that line, are to pay only 1s. per foot; and ships under 14 feet, boarded as above, only 5s. per foot for the like service.

4. All ships under 8 feet water, are to pay as above stated, as if the vessel was of that draught.

5. All the above rates are to be paid in proportion for every 3/4 of a foot of water, but no allowance is to be made for any draught of water less than 1/2 foot.

6. In carrying ships to sea from the said harbours, the pilotage is to be, in all cases, the same as the inward pilotage.

7. All ships which may anchor on their arrival, either in Cawsand Bay or Plymouth Sound, are to pay only 1/2 of the before-mentioned rates of pilotage.

8. All pilots employed to carry ships from any one of the harbours to another, are to be paid the same pilotage as if the said ship had been boarded within the headlands coming from sea.

9. Should any ship above 17 feet water be boarded while the western land is open off the Ram Head by one of the 2d class pilots, and he runs the ship as far in as either of the buoys on the Panther or Shovel, and is there superseded by one of the 1st class, he shall be entitled to 1/2 of the pilotage.

10. Masters of ships taking a pilot at sea —

|  |       |
|--|-------|
| L. s. d.   |       |
| 3 leagues without a line drawn from the Ram Head | 3 0 0 |
| 6 leagues ditto                                  | 4 4 0 |
| 10 leagues ditto                                 | 6 6 0 |

and in proportion only for intermediate distances.

11. Ships not having British registers are to pay 1/2 more of the rates of pilotage than is stated in the above Table.

12. If a master choose to retain or employ a pilot whilst at anchor, the rate for the lay days is to be 7s. 6d. a day, not including the day coming in or going out.

**Port District, viz.**—From Christchurch, inclusive, to St. Alban's Head, and vice versa; and to and from, and into and out of, all ports and places within those limits.

**N.B.**—No master of a vessel is compelled to take a pilot within this district until he comes to the entrance of Poole, Studland Bay, or Christchurch, bound to one of those places; but if he do take a pilot between Christchurch and St. Alban's Head, it must be one of the district pilots, if one offers.

**Rate of Pilotage for piloting Ships within the Poole District.**—For the pilotage of any vessel from Studland Bay to Poole Quay, 3s. per foot.

For the pilotage of any vessel from Studland Bay to Brownsea, 2-3ds of the above.

For the pilotage of any vessel from St. Alban's or Christchurch Head, to Poole Quay, 1s. per foot, and in proportion from those heads to Brownsea, &c.

For the pilotage of any vessel from any place between those heads and Studland Bay, to Poole Quay, 3s. 6d. per foot; and in proportion from the same places to Brownsea, &c.

For the pilotage of any vessel outwards; the same as for a vessel inwards.

Ships not having British registers are to pay 1/2 more of the rate of pilotage than above stated.

The pilot having charge of any ship or vessel, either inwards or outwards, and being required by the master or owner to remain on board any such ship or vessel, shall be paid 1s. per day in addition to the limited pilotage, for every day after the first.

The pilot of any vessel shall, if required by the owner or master only, provide a boat, with 4 men to attend her, from Stokes to the Quay, or from the Quay to Stokes, to tow her in or out, or to carry ropes on shore or to the buoys, as may be necessary; for which service there shall be paid the sum of 10s.

The pilots shall, at all times, when required by the master or owner, lend their assistance to work any vessel to or from the Quay, into or out of the harbour; for which service they shall be paid as follows, viz.—For working a vessel to or from the bay, 3s. per man; to or from Brownsea, 3s. ditto; and to or from Stokes, 2s. ditto; and the same for the boat they attend in; and 1s. per day each man, if detained on board after the first day. Floating vessels to pay 2-5ds of the above rates of pilotage.

PORT GLASGOW.

|   | Foreign Rate. | British Rate. |
|---|---------------|---------------|
|   | L. s. d.      | L. s. d.      |
| Harbour dues. If a foreign voyage   | 0 1 0 per ton | 0 0 6 per ton |
| Above 30 tons coasting  | 0 0 6 —       | 0 0 3 —       |
| Pilotage: From any place between Umray Light & the Lough Light, or from the anchorage at Fairlee Roads, Botway, or Quarantine Station, Holy Lock, to Greenock Roads, murrage, and berthing, or vice versa | 0 0 2 1/2 —   | 0 0 1 1/2 —   |
| From any place inside the Lough Light, or from the anchorage at Greenock Roads, or the Tail of the Bank   | 0 0 1 1/2 —   | 0 0 1 —       |
| Vessels inward bound, not boarded until nearer Greenock than the Bay of Quirk   | 0 0 0 1/2 —   | 0 0 0 1/2 —   |
| From Greenock to Port Glasgow, which rate is to be added to above for vessels from any of those stations for that port  | 0 0 1 1/2 —   | 0 0 1 —       |

**Portsmouth and Cowes District, viz.**—From the Owers, within and without the Isle of Wight, to Faversham, and vice versa; and to and from, and into and out of, all ports and places within those limits.

**N.B.**—The pilots of this district have authority to supersede such of the London or Cinque Port pilots as are demanded for the charge of vessels to the Isle of Wight, when they arrive near the channels leading into the ports and harbours within the Isle of Wight; but no master of a vessel is compelled to use a Portsmouth or Cowes pilot, till within 5 miles of Bembridge Ledge, or 5 miles of Dunnoose, St. Catherine's, or the Needles, (or till at St. Helen's, if he is piloted thereto by a duly licensed London or Cinque Port pilot); but if he do take on board a pilot between the Owers and Faversham, it must be one of the district pilots.

**Rate of Pilotage for piloting Ships within the Portsmouth and Cowes District.**—From 5 miles without Bembridge Ledge, or 5 miles without Dunnoose or St. Catherine's, or 5 miles from the Needles Point, coming in at that passage.

To Spithead, Motherbank, Stokes Bay, or Cowes Road.

**Per Foot.**  
For ships of every draught, as far as 17 feet inclusive - 5 0  
From 17 feet to 20 feet draught inclusive - 6 0  
Above 20 feet draught - 7 0

But if the ship be boarded within 2 miles of the buoys off Bembridge, or within 3 miles of the Owers Point, the rate to be 1s. per foot less than the above for each foot the ship draws. And the same rates as the above for pilotage outwards.

Ships inward bound, boarded between the Needles and Hurst Castle, to pay 2s. per foot. Between Hurst Castle and Newtown Creek, 1s. per foot.

Ships anchoring and remaining at St. Helen's, Yarmouth, or Lynnhington, either inward or outward bound, to pay 1/2 the rate of pilotage.

Pilots taken on board by the captain without the above limits, to receive the following pay; viz.

|                             | L. s. d. |
|-----------------------------|----------|
| If 3 leagues from the Wight | 5 3 0    |
| 6 ditto ditto               | 4 4 0    |
| 10 ditto ditto              | 6 6 0    |

and proportionately for any intermediate distances. Ships coming into Cowes Harbour to pay 1s. 6d. per foot, and the same on going out, as harbour pilotage.

Pilots of ships drawing 17 feet water and under, are to have 2s. per foot in addition to the pilotage from sea, from any place within the Isle of Wight to Portsmouth Harbour, or to Southampton, or to Hurst's Head, or to Langstone Harbour and Lynnhington; and for all vessels drawing above 17 feet water, 3s. per foot.

Ships coming from the Downs with a London or Cinque Port pilot, to the Isle of Wight, and he continuing the charge into any of the places within the said island, no duly licensed pilot offering, is to be allowed 1/2 pilotage from St. Helen's to the anchorage, but not otherwise.

For transporting vessels from one berth to another in Portsmouth harbour—

|                    | L. s. d. |
|--------------------|----------|
| As far as 200 tons | 10s. 6d. |
| 200 to 300         | 15s.     |
| Above 300          | 21s.     |

For the pilotage of vessels from Southampton to Redbridge, Eling, Fortham, or Chappel, and vice versa, 1s. per foot; and from Southampton to Hamble, Hurdledon, Looe, Buckler's Hard, or Beaulieu, and vice versa, 1s. 6d. per foot; and for any intermediate distance, a proportionate rate.

Ships not having British registers are to pay 1/2 more of the rate of pilotage than stated in the above Table.

If a master choose to retain or employ a pilot while at anchor, the rate for the lay days is to be 7s. 6d. per day, not including the day coming in or going out.

For every 10 leagues beyond the meridian of Faversham Point, for ships not exceeding 11 feet water, 3s. 3d. for the same distance for ships of more than 11 feet water, 4s. 3d.; and proportionately for intermediate distances.

All vessels belonging to the port of Southampton bound to or from foreign parts, are to pay no more than 1/2 the foregoing rates of pilotage, when navigating within the limits of either the Cowes or Portsmouth districts, provided such vessels shall at the time be actually bound to or from the port of Southampton.

All vessels trading to or from the islands of Guernsey, Jersey, Alderney or Sark, are to pay no more than 1/2 the foregoing rates of pilotage when navigating within the limits of the Portsmouth or Cowes districts.

**Scilly District, viz.**—To and from, and into and out of, all ports and places in and about the Scilly Islands.

**Rate of Pilotage, for piloting Vessels within the Scilly District, in and out.**

|                                      | L. s. d. |
|--------------------------------------|----------|
| Coasting vessels of 60 to 75 tons    | 1 11 0   |

WEYMOUTH District.—From St. Alban's Head to Lyme, and vice versa; and to and from, and into and out of, all ports and places within those limits.

N. B.—No master of a vessel is compelled to take a pilot within this district, until he comes within a line drawn from Lulworth Cove to the Shambles, or within the Race, into the

**PIMENTO, ALLSPICE, or JAMAICA PEPPER** (Fr. *Poivre de Jamaïque*; Ger. *Nelkenpfeffer*; It. *Pimenti*), the fruit of the *Myrtus pimenta*, a beautiful tree which grows in great plenty on the hills on the north side of Jamaica. The berries are spherical, and, when ripe, of a black or dark purple colour. But, as the pulp is in this state moist and glutinous, the berries are plucked when green; and being exposed in the sun to dry, they lose their green colour, and become of a reddish brown. They are packed in bags and hogsheds for the European market. The more fragrant and smaller they are, the better are they accounted. They have an aromatic, agreeable odour, resembling that of a mixture of cinnamon, cloves, and nutmegs, with the warm, pungent taste of the cloves. Pimento is used in medicine; but its principal use is in the seasoning of soups and other dishes.

ports of Portland and Weymouth, and off those of Bridport and Lyme; but if he do take a pilot between St. Alban's Head and Lyme, it must be one of the district pilots, if one offer.

Rules of Pilotage, for piloting Ships within the Weymouth District.

| From   | To                                | Under 8 Feet. | From 8 Feet to 10 Feet. | Above 10 Feet. |
|--|-----------------------------------|---------------|-------------------------|----------------|

The same rates of pilotage to be paid outwards.

Ships not having British registers to pay 1/3 more of the rates of pilotage than is stated in the above Table.

The pilot of any vessel shall, if required by the owner or master only, provide a boat with 4 men to attend her, from the roads to the quay, or from the quay to the roads, to tow her in or out, or carry ropes on shore or to the posts, &c., as may be necessary, for which service each man is to be paid 4s. per tide: the owner of the boat to be paid the same as a man.

Masters of ships taking a pilot at sea (which is optional to them) to pay as follows, viz—

| From   | To | L. s. d. |
|--|----|----------|
| From St. Alban's Head or Bill of Portland, to off Bridport or Lyme |    | 2 2 0    |

"The returns," says Mr. Bryan Edwards, "from a pimento walk in a favourable season are prodigious. A single tree has been known to yield 150 lbs. of the raw fruit, or 100 lbs. of the dried spice; there being commonly a loss in weight of  $\frac{1}{3}$  in curing; but this, like many other of the minor productions, is exceedingly uncertain, and perhaps a very plentiful crop occurs but once in 5 years. The price in the British market, as may be supposed, fluctuates accordingly; but I believe its average for some years past may be set down at 7d. per lb., exclusive of the duty (3d.)." — (Vol. ii. p. 372. ed. 1819.) The price of pimento in bond, in the London market, has varied of late years from 4d. to 5d. per lb.

At the period when Mr. Edwards's work was published, the annual imports of pimento from Jamaica amounted to about 672,000 lbs., and were decreasing every year — (*loc. cit.*). But at an average of the 3 years ending with 1832, the annual imports were 2,349,893 lbs., the annual exports 1,927,731 lbs., and the annual entries for home consumption 316,348 lbs. There has been, however, a considerable falling off in the imports of 1831 and 1832, which do not amount to much more than the half of those of the previous 4 years. The duty of 5d. per lb., being more than 100 per cent. on the price of the article, produces, at a medium, about 7,000*l.* a year. It ought to be repeated altogether. Jamaica furnishes more than  $\frac{1}{10}$ ths of the pimento brought to England.

**PINCHBECK** (Ger. *Tombach*; Du. *Tombak*; Fr. *Tambac*, *Similor*; It. *Tombacco*; Sp. *Tumbac*, *Tumbago*), a name given to one of the many imitations of gold. By melting zinc in various proportions with copper or brass, some alloys result, the colours of which approach more or less to that of gold. This composition is frequently employed as a substitute for gold, in the formation of watch-cases, and various other articles of a like description. Pinchbeck is sometimes called *Tumbac*, and sometimes *Similor*, and *Petit-or*.

**PINE**, or **FIR**, a species of forest tree, next, if not superior, to the oak, in point of utility and value. There are above 20 species of pines. They do not bear flat leaves, but a species of spines, which, however, are real leaves. They are mostly, though not all, evergreens; but the appearance of the tree, as well as the quality of the timber, varies with the species, and also with the situation in which it grows. Generally speaking, the timber is hardest and best in exposed cold situations, and where its growth is slow. We shall only notice those species, the timber of which is most in use in this country.

1. **Scotch Pine** (*Pinus sylvestris*), is a native of the Scotch mountains, and of most northern parts of Europe; being common in Russia, Denmark, Sweden, Norway, and Lapland. It is straight, abruptly branched, rising in favourable situations to the height of 80 or 90 feet, and being from 3 to 4 feet in diameter. It is at perfection when 70 or 80 years old. The colour of the wood differs considerably; it is generally of a reddish yellow, or of a honey yellow, of various degrees of brightness. It has no larger transverse septa, and it has a strong resinous odour and taste. In the best timber, the annual rings are thin, not exceeding  $\frac{1}{10}$ th of an inch in thickness; the dark parts of the rings of a bright reddish colour; the wood hard and dry to the feel, neither leaving a woolly surface after the saw, nor filling its teeth with resin. The best Norway is the finest of this kind, and the best Riga and Memel are not much inferior. The inferior sorts have thick annual rings; in some, the dark parts of the rings are of a honey yellow, the wood heavy, and filled with a soft resinous matter, feels clammy, and chokes the saw. Timber of this kind is not durable, nor fit for bearing strains. In some inferior species, the wood is spongy, contains less resinous matter, and presents a woolly surface after the saw. Swedish timber is often of this kind.

Scotch fir is the most durable of the pine species. It was the opinion of the celebrated Mr. Brindley, "that red Riga deal, or pine wood, would endure as long as oak in all situations." Its lightness and stiffness render it superior to any other material for beams, girders, joists, rafters, &c. It is much used in joiners' work, as it is more easily wrought, stands better, is much cheaper, and is nearly, if not quite, as durable as oak.

Scotch fir is exported from Norway and Sweden, under the name of *redwood*. Norway exports no trees above 18 inches' diameter, consequently there is much sap wood; but the heart wood is both stronger and more durable than that of larger trees from other situations. Riga exports a considerable quantity under the name of masts and spars: pieces from 18 to 25 inches' diameter are called *masts*, and are usually 70 or 80 feet in length; those of less than 18 inches' diameter are called *spars*. — (See **RIGA**.) Yellow deals and planks are imported from various parts of Norway, Sweden, Prussia, Russia, &c. Tar, pitch, and turpentine, are obtained from the Scotch fir. — (See these titles.) When the tree has attained to a proper age, it is not injured by the extraction of these products.

2. **SPRUCE PINE**. — Of this there are 3 species: the Norway spruce, or *Pinus abies*; white spruce, or *Pinus alba*; and black spruce, or *Pinus nigra*. These are noble trees, rising in straight stems from 150 to 200 feet in height. They yield the timber known by the name of *white fir*, or *deal*, from its always being imported in deals or planks.

Deals imported from Christiania are in the highest estimation. — (See **CHRISTIANIA**.) The trees are usually cut into 3 lengths, generally of about 12 feet each; and are afterwards cut into deals by saw-mills, each length yielding 3 deals. The Norway spruce thrives very well in Britain, and produces timber little inferior to the foreign: it is somewhat softer, and the knots are extremely hard.

The white spruce, or *Pinus alba*, is brought from British North America. The wood

is not so resinous as the Norway spruce: it is tougher, lighter, and more liable to twist in drying.

The black spruce, or *Pinus nigra*, is also an American tree; but it is not much imported into this country. The black and white spruce derive their names from the colour of the bark; the wood of both being of the same colour.

The colour of spruce fir, or white deal, is yellowish or brownish white; the hard part of the annual ring a darker shade of the same colour; it often has a silky lustre, especially in the American and British grown kinds. Each annual ring consists of two parts; the one hard, the other softer. The knots are generally very hard. The clear and straight-grained kinds are often tough, but not very difficult to work, and stand extremely well when properly seasoned. White deal, as imported, shrinks about  $\frac{1}{10}$ th part in becoming quite dry.

3. WEYMOUTH PINE, or WHITE PINE (*Pinus strobus*), is a native of North America, and is imported in large logs, often more than 2 feet square and 30 feet in length. It is one of the largest and most useful of the American trees, and makes excellent masts; but it is not durable, nor fit for large timbers, being very subject to dry rot. It has a peculiar odour.

4. SILVER FIR (*Pinus picea*), is a native of the mountains of Siberia, Germany, and Switzerland, and is common in British plantations. It is a large tree, and yields the Strasburgh turpentine. The wood is of good quality, and much used on the Continent both for carpentry and ship building. The harder fibres are of a yellow colour, compact, and resinous; the softer nearly white. Like the other kinds of fir, it is light and stiff, and does not bend much under a considerable load; consequently, floors constructed of it remain permanently level. It is subject to the worm. It has been said to last longer in the air than in the water; and, therefore, to be fitter for the upper parts of bridges than for piles and piers.

5. LARCH (*Pinus larix*). There are 3 species of this valuable tree; 1 European, and 2 American. The variety from the Italian Alps is the most esteemed, and has lately been extensively introduced into plantations in Great Britain. It is a straight and lofty tree, of rapid growth. A tree 79 years of age was cut down at Blair Athol, in 1817, which contained 252 cubic feet of timber; and one of 80 years of age, at Dunkeld, measured 300 cubic feet. The mean size of the trunk of the larch may be taken at 45 feet in length, and 33 inches' diameter. The wood of the European larch is generally of a honey yellow colour, the hard part of the annual rings of a redder cast; sometimes it is brownish white. In common with the other species of pine, each annual ring consists of a hard and a soft part. It generally has a silky lustre; its colour is browner than that of the Scotch pine, and it is much tougher. It is more difficult to work than Riga or Memel timber; but the surface is better when once it is obtained. It bears driving bolts and nails better than any other species of resinous wood. When perfectly dry, it stands well; but it warps much in seasoning.

It is in all situations extremely durable. It is useful for every purpose of building, whether external or internal; it makes excellent ship timber, masts, boats, posts, rails, and furniture. It is peculiarly adapted for flooring boards, in situations where there is much wear, and for staircases: in the latter, its fine colour, when rubbed with oil, is much preferable to that of the black oaken staircases to be seen in some old mansions. It is well adapted for doors, shutters, and the like; and, from the beautiful colour of its wood when varnished, painting is not necessary. — (We have abstracted these particulars from *Mr. Tredgold's* excellent work, *The Principles of Carpentry*, pp. 209—217.)

PINE-APPLE, or ANANAS, though a tropical fruit, is now extensively cultivated in hothouses in this country, and is well known to every one. When of a good sort and healthy, it is the most luscious, and, perhaps, the best fruit that this country produces; and when carefully cultivated, is equal in point of quality to that produced in the West Indies. A pine-apple raised at Stackpool Court, Pembrokeshire, and served up at the coronation dinner of George IV., weighed 10 lbs. 8 oz. — (*Vegetable Substances*, p. 379., *Lib. Entert. Knowledge*.)

PINT, a measure used chiefly in the measuring of liquids. The word is High Dutch, and signifies a little measure of wine. The English pint used to be of 2 sorts; the one for wine, the other for beer and ale. Two pints make a quart; 2 quarts a pottle; 2 pottles a gallon, &c. The pint, Imperial liquid measure, contains 34.639 cubic inches.

PIPE, a wine measure, usually containing 105 (very nearly) Imperial, or 126 wine gallons. Two pipes, or 210 Imperial gallons, make a tun. But, in practice, the size of the pipe varies according to the description of wine it contains. Thus, a pipe of port contains 138 wine gallons, of sherry 130, of Lisbon and Bucellas 140, of Madeira 110, and of Vidonia 120. The pipe of port, it is to be observed, is seldom accurately 138 gallons, and it is usual to charge what the vessel actually contains.

PIPE-CLAY, a species of clay abounding in Devonshire, and other parts of England, employed in the manufacture of various sorts of earthenware, and in bleaching.

PIRACY, consists in committing those acts of robbery and violence upon the seas, that, if committed upon land, would amount to felony.

Pirates hold no commission or delegated authority from any sovereign or state, empowering them to attack others. They can, therefore, be only regarded in the light of robbers or assassins. They are, as Cicero has truly stated, the common enemies of all (*communes hostes omnium*); and the law of nations gives to every one the right to pursue and exterminate them without any previous declaration of war; but it is not allowed to kill them without trial, except in battle. Those who surrender, or are taken prisoners, must be brought before the proper magistrates, and dealt with according to law.

By the ancient common law of England, piracy, if committed by a *subject*, was held to be a species of treason, being contrary to his natural allegiance; and, by an *alien*, to be felony only: but since the statute of treasons (25 Edw. 3. c. 2.), it is held to be only felony in a subject. Formerly this offence was only cognisable by the admiralty courts, which proceeded by the rules of the civil law; but it being inconsistent with the liberties of the nation that any man's life should be taken away, unless by the judgment of his peers, the statute 28 Hen. 8. c. 15. established a new jurisdiction for this purpose, which proceeds according to the course of common law.

It was formerly a question whether the Algerines, and other African states, should be considered pirates: but, however exceptionable their conduct might have been on many occasions, and however hostile their policy might be to the interests of humanity, still, as they had been subjected to what may be called regular governments, and had been admitted to enter into treaties with other powers, they could not be treated as pirates.

Pirates having no right to make conquests, or to seize upon what belongs to others, capture by them does not divest the owner of his property. At a very early period of our history, a law was made for the restitution of property taken by pirates, if found within the realm, whether belonging to strangers or Englishmen: but any foreigner suing upon this statute must prove that, at the time of the capture, his own sovereign and the sovereign of the captor were in mutual amity; for it is held that piracy cannot be committed by the subjects of states at war with each other.

Piracy was almost universally practised in the heroic ages. Instead of being esteemed infamous, it was supposed to be honourable. — (*Latrocinium maris glorie habebatur*. — *Justin*. lib. xliiii. c. 3.) Menelaus, in the *Odyssey*, does not hesitate to inform his guests, who admired his riches, that they were the fruit of his piratical expeditions — (lib. iv. ver. 90.); and such, indeed, was the way in which most of the Greek princes amassed great wealth. — (*Goguet*, *Origin of Laws*, vol. i. p. 383. Eng. trans.)

The prevalence of this piratical spirit in these early ages may, perhaps, be explained by the infinite number of small independent states into which the country was divided, and the violent animosity constantly subsisting amongst them. In this way ferocious and predatory habits were universally diffused and kept alive; and it is not to be supposed that those who were at all times liable to be attacked by hosts of enemies, should very accurately examine the grounds upon which they attacked others. According, however, as a more improved system of government grew up Greece, and a few states, as Athens, Corinth, &c., had attained to distinction by their naval power, piracy was made a capital offence: but though repressed, it was never entirely put down. Cilicia was at all times the great stronghold of the pirates of antiquity: and in consequence of the decline of the maritime forces of Athens, Rhodes, &c., which had kept them in check, they increased so much in numbers and audacity as to insult the majesty of Rome herself; so that it became necessary to send Pompey against them, with a large fleet and army, and more extensive powers than had been ever previously conferred on any Roman general.

During the anarchy of the middle ages, when every baron considered himself a sort of independent prince, entitled to make war on others, piracy was universally practised. The famous Hansatic League was formed chiefly for the purpose of protecting the ships of the confederated cities from the attacks of the pirates by which the Baltic was then infested. The nuisance was not finally abated in Europe till the feudal system had been subverted, and the ascendancy of the law everywhere secured. In more modern times, some of the smaller West India islands have been the great resort of pirates: latterly, however, they have been driven from most of their haunts in that quarter. They are still not unfrequently met with in the Indian seas east of Sumatra.

Besides those acts of robbery and depredation upon the high seas, which, at common law, constitute piracy, some other offences have been included under that term. Thus, by the stat. 11 & 12 Will. 3. c. 7., if any natural-born subject commits any act of hostility upon the high seas against others of his Majesty's subjects, under colour of a commission from any foreign power, this, though it would only be an act of war in an alien, shall be construed piracy in a subject. And further, any commander or other seafaring person betraying his trust, and running away with any ship, boat, ordnance, ammunition, or goods, or yielding them up voluntarily to a pirate, or conspiring to do these acts; or any person assaulting the com-

mander of a vessel, to hinder him from fighting in defence of his ship, or confining him, or causing or endeavouring to cause a revolt on board, shall for each of these offences be adjudged a pirate, felon, and robber, and shall suffer death, whether he be principal, or merely accessory by setting forth such pirates, or abetting them before the fact, or receiving them, or concealing them or their goods after it; and the stat. 4 Geo. 1. c. 2. expressly excludes the principals from the benefit of clergy. By the stat. 8 Geo. 1. c. 21., the trading with known pirates, or furnishing them with stores or ammunition, or fitting out any vessel for that purpose, or in any wise consulting, combining, confederating, or corresponding with them; or the forcibly boarding any merchant vessel, though without seizing or carrying her off, and destroying or throwing any of the goods overboard, shall be deemed piracy; and such accessories to piracy as are described by the statute of King William are declared to be principal pirates, and all pirates convicted by virtue of this act are made felons without benefit of clergy. To encourage the defence of merchant vessels against pirates, the commanders and seamen wounded, and the widows of such seamen as are slain in any engagement with pirates, are entitled to a bounty, to be divided among them, not exceeding the *one-fiftieth* part of the value of the cargo saved; and the wounded seamen are entitled to the pension of Greenwich Hospital. — (11 & 12 Will. 3. c. 7.; 8 Geo. 1. c. 21.) The first of these statutes also enacts, that if any mariner or inferior officer of any English ship decline or refuse to fight when commanded by the master, or shall utter any words to discourage the other mariners from defending the same, he shall lose all the wages due to him, together with such goods as he hath in the ship, and be imprisoned and kept to hard labour for 6 months.

The 6 Geo. 4. c. 41. enacts that a bounty shall be paid to the officers and crews of such of his Majesty's ships of war as may be engaged in the actual taking, sinking, burning, or otherwise destroying any vessel or boat manned by pirates, of 20*l.* for each pirate taken or killed during the attack, and of 5*l.* for every other man of the crew not taken or killed, who shall have been alive on board the said piratical vessel at the attack thereof.

The same statute (35) enacts that vessels and other property taken from pirates, proved to have belonged to any of his Majesty's subjects, are to be delivered up to them, on their paying a sum of money, as salvage, equal to 1-8th part of the true value of the same.

**PISTACHIA** or **PISTACHIO NUTS** (Ger. *Pistaschen*; Dn. *Pistaszjes*; Fr. *Pistaches*; It. *Pistacchi*, *Festucchi*; Sp. *Alfocigos*; Lat. *Pistacia*), the fruit of the *Pistachia vera*, a kind of turpentine tree. It grows naturally in Arabia, Persia, and Syria; also in Sicily, whence the nuts are annually brought to us. They are oblong and pointed, about the size and shape of a filbert, including a kernel of a pale greenish colour, covered with a yellowish or reddish skin. They have a pleasant, sweetish, mucuous taste, resembling that of sweet almonds; their principal difference from which consists in their having a greater degree of sweetness, accompanied with a light grateful flavour, and in being more oily. Pistachias imported from the East are superior to those raised in Europe. — (*Lewis's Mat. Med.*)

**PITCH** (Ger. *Pech*; Fr. *Pois*, *Brai*; It. *Pee*; Sp. *Pez*; Rns. *Smola gustaja*), the residuum which remains on inspissating tar, or boiling it down to dryness. It is extensively used in ship building, and for other purposes. Large quantities are manufactured in Great Britain. The duty on pitch, which is 10*d.* a cwt., produced, in 1829, 448*l.*, so that 10,752 cwt. must have been entered for home consumption.

An allowance is to be made for tare on pitch, of 95 lbs. each on Archangel casks, 36 lbs. each on Swedish do., and 56 lbs. each on American do.

**PLANE**, a forest tree, of which there are 2 species; the Oriental plane (*Platanus Orientalis*), and the Occidental plane (*Platanus Occidentalis*).

The Oriental plane is a native of the Levant, and other Eastern countries, and is considered one of the finest of trees. It grows to about 60 feet in height, and has been known to exceed 8 feet in diameter. Its wood is much like beech, but more figured, and is used for furniture and such like articles. The Occidental plane is a native of North America, and is one of the largest of the American trees, being sometimes more than 12 feet in diameter. The wood of the Occidental plane is harder than that of the Oriental. It is very durable in water.

The tree known by the name of plane in England is the sycamore, or great maple (*Acer pseudo-platanus*). It is a large tree, grows quickly, and stands the sea spray better than most trees. The timber is very close and compact, easily wrought, and not liable either to splinter or warp. It is generally of a brownish white; or yellowish white colour, and sometimes it is very beautifully curled and mottled. In this state it takes a fine polish, and bears varnishing well. It is chiefly used in the manufacture of saddle trees, wooden dishes, and a variety of articles both of furniture and machinery. When kept dry, and protected from worms, it is pretty durable; but it is quite as liable as beech to be attacked by them. — (*Tredgold*, p. 196.)

**PLANKS** (Ger. and Dn. *Plancken*; Da. *Planker*; Sw. *Planhor*; Fr. *Planches*, *Bordages*; Rus. *Tolstüle olosku*), thick strong boards, cut from various kinds of wood, especially oak and pine. Planks are usually of the thickness of from 1 inch to 4. They are imported in large quantities from the northern parts of Europe, particularly from the ports of Christiania, Dantzic, Archangel, Petersburg, Narva, Revel, Riga, and Memel, as well as from several parts of North America.

**PLANTAIN**, or **BANANA**, the pulpy fruit of the *Musa paradisiaca*, an herbaceous plant, extensively cultivated in most intertropical countries, but especially in Mexico. It is not, like most other fruits, used merely as an occasional luxury, but is rather an established article of subsistence. Being long and extensively cultivated, it has diverged into numerous varieties, the fruit of which differs materially in size, flavour, and colour. That

Note. — The pr prior to the year the distributors.

of some is not above 2 or 3 inches long, while that of others is not much short of a foot; some sorts are sweet, and of a flavour not unlike nor inferior to that of a good mellow pear; but the larger kind are, for the most part, coarse and farinaceous. The latter are either used fresh or dried in the sun, in which latter state they are occasionally ground into meal and made into bread. In Mexico, the sweeter sorts are frequently pressed and dried, as figs are in Europe; and, while they are not very inferior to the last mentioned fruit, they are infinitely cheaper.

"I doubt," says M. Humboldt, "whether there be any other plant that produces so great a quantity of nutritive substance in so small a space. Eight or 9 months after the sucker is planted, it begins to develop its cluster. The fruit may be gathered in the 10th or 11th month. When the stalk is cut, there is always found, among the numerous shoots that have taken root, a sprout (*pimpollo*), which, being 2-3ds the height of its parent plant, bears fruit 3 months later. Thus a plantation of bananas perpetuates itself, without requiring any care on the part of man, further than to cut the stalks when the fruit has ripened, and to stir the earth gently once or twice a year about the roots. A piece of ground of 100 square metres of surface will contain from 30 to 40 plants. During the course of a year this same piece of ground, reckoning the weight of the cluster at from 15 to 20 kilog. only, will yield 2,440 kilog., or more than 4,440 lbs., of nutritive substance. What a difference between this product and that of the cereal grasses in most parts of Europe! The same extent of land planted with wheat would not produce above 30 lbs., and not more than 90 lbs. of potatoes. Hence the product of the banana is to that of wheat as 133 to 1, and to that of potatoes as 44 to 1."—(*Essai sur la Nouvelle Espagne*, tom. ii. p. 388. 2d ed.)

The banana forms a principal part of the food of the people of Mexico; and the apathy and indolence of the natives in the *tierras calientes*, or hot regions, has been ascribed, and probably with good reason, to the facility with which it supplies them with subsistence. It is by no means in such extensive use in tropical Asia; and comes nowhere in it into competition with corn as an article of food.

**PLATE**, the denomination usually given to gold and silver wrought into articles of household furniture.

In order partly to prevent fraud, and partly for the purpose of collecting a revenue, the manufacture of plate is placed under certain regulations. Those who carry it on are obliged to take out a licence, renewable annually on the 31st of July.—(See *anté*, p. 755.) Assay offices are established in different places; and any one selling any article previously to its having been assayed and marked, forfeits 50*l.*—(24 *Geo.* 3. c. 53.) No plate is passed at the assay offices, unless it be of the fineness of the old standard, or 11 oz. and 2 dwts., or of the new standard of 11 oz. and 10 dwts. Gold plate, with the exception of gold watch-cases, is to pay a duty of 17*s.* an oz., and silver plate a duty of 1*s.* 6*d.*; but watch-cases, chains, tipplings, mountings, collars, bottle tickets, teaspoons, &c. are exempted. The 52 *Geo.* 3. c. 143. made the counterfeiting, or the transference from one piece of plate to another, of the marks, stamps, &c. impressed on plate by the assayers, felony without the benefit of clergy. But the offence is now punishable by transportation or imprisonment only.—(1 *Hill.* 4. c. 66.)

In his able speech on the state of the country, 18th of March, 1830, Mr. Huskisson said, "The rate of duty upon silver wrought plate, in 1804, was 1*s.* 6*d.*, upon gold 1*s.* an ounce; it was afterwards raised to 1*s.* 6*d.* upon silver, and 17*s.* on gold. But what has been the increase in the nett produce of the duty? It has risen from less than 5,000*l.* in 1804, to 105,000*l.* in 1828; a rise of more than twenty-fold, notwithstanding the greatly diminished supply from the mines, and the consequent increasing value of the precious metals. It may be further remarked, that this augmentation shows how large a portion of gold and silver is annually diverted from the purposes of coin to those of ornament and luxury."

A Return, showing the Annual Nett Produce of the Duty levied on wrought Gold and Silver Plate, in each Year from 1805 to 1832, both inclusive; distinguishing, as far as possible, Gold from Silver, and also the Rate of Duty in each Year.—(*Parl. Paper*, No. 246. Sess. 1833.)

Note.—The produce of the duties on gold and silver plate cannot be distinguished for the country prior to the year ended 5th of January, 1819, the same not having been distinguished in the accounts of the distributors.

We endeavoured to show, in the former edition of this work, that Mr. Huskisson had been deceived by trusting to false or defective information; and that, instead of the increase of the duties, and, consequently, of the consumption of plate, being nearly so great as he had represented, it fell far short of what might have been fairly expected from the increasing wealth and population of the country. The preceding Table shows that our criticism was well founded. The stationary amount of duty may, perhaps, be accounted for by the facility with which the duties are evaded. The increase of duty in 1825 is a curious phenomenon.

**PLATINA**, a metal which, in respect of scarcity, beauty, ductility, and indestructibility, is hardly inferior to gold, was unknown in Europe till about the middle of last century, when it began to be imported in small quantities from South America. It has since been discovered in Estremadura in Spain, and, more recently, in the Ural Mountains in Asiatic Russia, where it is now raised in very considerable quantities.

Platina is of a white colour, like silver, but not so bright, and has no taste or smell. Its hardness is intermediate between copper and iron. Its specific gravity is about 21.5, that of gold being 19.3; so that it is the heaviest body with which we are acquainted. It is exceedingly ductile and malleable; it may be hammered out into very thin plates, and drawn into wires not exceeding 1.1940th of an inch in diameter. In these properties it is probably inferior to gold, but it seems to surpass all the other metals. Its tenacity is such, that a wire of platina 0.078 inch in diameter is capable of supporting a weight of 274.31 lbs. avoirdupois without breaking. It is one of the most infusible of all metals; but pieces of it may be welded together without difficulty when heated to whiteness. It is not in the smallest degree altered by the action of air or water. — (*Thomson's Chemistry*.)

The late Dr. Wollaston discovered a method of fusing platina, and, consequently, of rendering it easily available in the arts. The Russians have, within these few years, issued platina coins of the value of 3, 6, and 20 silver roubles. Platina first began to be an object of attention in Russia in 1824, when 1 pood 3 lbs. were collected. In 1830, the produce amounted to 303 poods 14 lbs. In 1831, a piece of native platina was discovered at Demidoff's gold mines, weighing 20 lbs. 2½ zolt. — (*Official Statements* published by the Russian Government.)

**PLATTING**, slips of bast, cane, straw, &c. woven or plaited for making into hats, &c. — (See **HATS**, **STRAW**.)

**PLUMS**, the fruit of the *Prunus domestica*, are too well known to require any description. They were introduced into England in the 15th century, and are cultivated in all parts of the country. There are said to be nearly 300 varieties of plums.

**PLUMBAGO**. See **BLACK LEAD**.

**POMEGRANATE**, **POMEGRANATES** (Ger. *Granatäpfel*; Fr. *Grenades*; It. *Granati*, *Melagrani*; Sp. *Granadas*), the fruit of the pomegranate tree (*Punica granatum*). This tree, which grows to the height of 15 or 20 feet, appears to be a native of Persia, whence it has been conveyed, on the one side, to Southern Europe, and on the other, to the tropical parts of Asia, and eventually to the New World. The fruit is a pulpy, many-seeded berry, the size of an orange, covered with a thick, brown, coriaceous rind. The pulp has a reddish colour, and a pleasant subacid taste. The value of the fruit depends on the smallness of the seed and the largeness of the pulp. The finest, called by the Persians *badana*, or seedless, is imported into India from Caubul and Candahar, where the pomegranate grows in perfection. The tree thrives all the way to the equator; but, within the tropics, the fruit is hardly fit for use. The pomegranates brought to England from the south of Europe and the West Indies are very inferior to those of Persia. — (*Private information*.)

**POPLAR** (Ger. *Pappel*, *Pappelbaum*; Du. *Populier*; Fr. *Peuplier*; It. *Pioppa*; Sp. *Alamo*; Lat. *Populus*). Of the poplar (*Populus* of botanists), there are about 15 species described; of these, 5 are common in England; viz. the common or *White*, the *Black*, the *Aspen* or trembling poplar, the *Abele* or great white poplar, and the Lombardy poplar. In most favourable situations, the white poplar grows with great rapidity, sometimes sending forth shoots 16 feet long in a single season. The wood is soft, and not very durable, unless kept dry; but it is light, not apt either to swell or shrink, and easily wrought. The Lombardy poplar grows rapidly, and shoots in a complete spire to a great height; its timber does not differ materially from that of the white poplar. It is very light; and is, therefore, well adapted for the manufacture of packing-cases. None of the species is fit for large timbers. — (*Tredjold's Principles of Carpentry*; *Veget. Sub., Lib. of Entert. Knowledge*.)

**POPULATION**. To attempt giving in this place any explanation of the laws which regulate the progress of population, would be quite inconsistent with the objects and limits of this work. It may, indeed, be thought that the word has no business here. However, as it is frequently of importance in commercial questions, and in others materially affecting commercial interests, to be able to compare the consumption of an article with the population, we believe we shall gratify our readers by laying before them the following Tables, showing the results of the different censuses that have been taken of the population of Great Britain and Ireland.

I. Popula

PORCELAIN, or CHINA WARE, a very fine species of earthenware. The first specimens of this fabric were brought to Europe from China and Japan. The best Chinese porcelain is of a very fine texture, white, semi-transparent, and sometimes beautifully coloured and gilt; is infusible, and not subject to break by the sudden application of heat or cold. The Chinese term for the article is *tse-ki*. But the Portuguese, by whom it was first brought in considerable quantities into Europe, bestowed on it the name of porcelain, from *porcella*, a cup.

Common earthenware, sometimes of a very good quality, is manufactured in Canton, Fokien, and several other provinces of China. But it is a curious fact, that the beautiful porcelain imported into Europe is made only in the town of Kingtsing, in the province of Kyangsi. Its manufacture is fully described by Duhalde, in his account of China, under the head "Porcelain and China ware." The porcelain of Japan is decidedly inferior to that of China; very little is imported, and it is valued only as a curiosity.

After porcelain began to be imported, its beauty soon brought it into great request, notwithstanding its high price, as an ornament for the houses and tables of the rich and the great. The emulation of European artists was in consequence excited. Very little information was, however, obtained as to the mode of manufacturing porcelain till the early part of last century, when the process was developed in a letter from a French Jesuit in China, who had found means to make himself pretty well acquainted with the subject. The knowledge that thus transpired, and the investigations of Reaumur and other chemists, prepared the way for the establishment of the manufacture in Europe. It was first commenced at Dresden, which has been famous ever since for the beauty of its productions; but the finest and most magnificent specimens of European china have been produced at Sévres, in France, in the factory carried on at the expense of the French government.

*British Porcelain Manufacture.*—This, though unable to boast of such fine specimens of costly workmanship as have been produced at Sévres and Dresden, is of much greater national importance. Instead of exclusively applying themselves to the manufacture of articles fitted only for the consumption of the

rich, the artists of England have exerted themselves in preference to produce China ware suitable for the middle classes; and have succeeded in producing articles at once excellent in quality, elegant in form, and cheap. We are principally indebted for the improvements made in this important manufacture to the genius and enterprise of the late Mr. Josiah Wedgwood. This extraordinary man owed none of his success to fortuitous circumstances. Devoting his mind to patient investigation, and sparing neither pains nor expense in accomplishing his aims, he gathered round him artists of talent from different countries, and drew upon the stores of science for aid in pursuing the objects of his praiseworthy ambition. The early and signal prosperity that attended his efforts served only as an incentive to urge him forward to new exertions, and as means for calling forth and encouraging talent in others, in a manner calculated to promote the welfare of his country. Previously to his time, the potteries of Staffordshire produced only inferior fabrics, flimsy as to their materials, and void of taste in their forms and ornaments; the best among them being only wretched imitations of the grotesque and unmeaning scenes and figures portrayed on the porcelain of China. But such have been the effects resulting from the exertions and example of this one individual, that the wares of that district are now not only brought into general use in this country, to the exclusion of all foreign goods, which had been largely imported, but English pottery has since been sought for and celebrated throughout the civilised world, and adopted even in places where the art was previously practised. An intelligent foreigner, M. Faujas de St. Fond, writing on this subject, says, — "Its excellent workmanship, its solidity, the advantage which it possesses of sustaining the action of fire, its fine glaze impervious to acids, the beauty and convenience of its form, and the cheapness of its price, have given rise to a commerce so active and so universal, that, in travelling from Paris to Petersburg, from Amsterdam to the farthest part of Sweden, and from Dunkirk to the extremity of the south of France, one is served at every inn upon English ware. Spain, Portugal, and Italy are supplied with it; and vessels are loaded with it for both the Indies and the continent of America." — (See the quotation in the *Account of the Porcelain Manufacture*, p. 16, in *Dr. Lardner's Cyclopaedia*;) — for the statistical details with respect to the manufacture, see the article *EARTHENWARE*, in this work.)

The British porcelain manufacture is principally carried on at the potteries in Staffordshire, and at Worcester, Derby, Colebrook Dale, and other places.

*Murrhine Cups.* — It was long a prevalent opinion among modern critics, that the *vasa murrhina*, so famous in Roman history, were formed of porcelain. Pompey was the first who brought them to Rome from the East, about 64 years before the Christian era. They were used as drinking cups, and fetched enormous prices; Nero having given, according to the common method of interpreting, 58,000*l.* for a single cup. The extravagance of the purchaser may, in this instance, be supposed to have increased the price; so that the degree of estimation in which these cups were held may be more accurately inferred from the fact, that, of all the rich spoils of Alexandria, Augustus was content to select one for his share. — (*Sueton.* lib. ii. c. 71.) Pliny (*lib.* xxxvii. c. 2.) says they were made in Persia, particularly in Karamania. But those who contend they were China ware, chiefly found on the following line of Propertius: —

*Murrheaque in Parthis pocula cocta Focis.* — (*Lib.* iv. *Eleg.* 5. *lin.* 26.)

In despite, however, of this apparently decisive authority, M. Le Bland and M. Larcher have, in two very learned dissertations (*Mémoires de Littérat.* tom. xliii.), which Dr. Robertson has declared are quite satisfactory, endeavoured to prove that the *vasa murrhina* were formed of transparent stone, dug out of the earth in some Eastern provinces, and that they were imitated in vessels of coloured glass. — (*Robertson's Dissertation on India*, note 9.) Dr. Vincent (*Commerce and Navigation of the Ancients*, vol. ii. p. 722.) inclines to the opposite opinion; but the weight of authority is evidently on the other side. At all events, it is plain that if the murrhine cups were really porcelain, it had been exceedingly scarce at Rome, as their price would otherwise have been comparatively moderate. But it is most probable that the ancients were wholly unacquainted with this article; which, indeed, was but little known in Europe till after the discovery of the route to India by the Cape of Good Hope. — (For some further details on this question, see *Kippingii Antiq. Rom.* lib. iv. c. 3.)

**PORK**, the flesh of the hog. Salted and pickled pork forms a considerable article of export from Ireland to the West Indies and other places.

Pork and Bacon exported from Ireland in the under-mentioned Years.

Most part of the bacon is exported to England — (see *Bacon*), — and also a good deal of the pork. The account cannot be brought further down than 1825, the trade between Great Britain and Ireland having since then been placed on the footing of a coasting trade.

**PORT.** See *WINE*.

**PORT-AU-PRINCE**, the capital of Hayti, or St. Domingo, in lat. 18° 33' 42" N., lon. 72° 27' 11" W. Population variously estimated, probably from 18,000 to 20,000. It is situated on the west coast of the island, at the bottom of a large and deep gulf. It was founded in 1749; since which, with few intervals, it has been the capital of French St. Domingo, as it is now of the entire island. It is partially fortified; the harbour being protected by a battery on a small island at a little distance from the shore. The country round is low and marshy; and the heat in the summer months being excessive, the climate is then exceedingly unhealthy. The buildings are principally of wood, and seldom exceed 2 stories in height.

*Harbour.* — The entrance to the harbour is between White Island and the southern shore. The depth of water varies from about 18 feet at ebb to about 21 do. at full tide. It is customary, but not compulsory, to employ a pilot in entering the harbour. They are always on the look-out. Ships moor head and stern, at from 100 to 500 yards from shore; loading and unloading by means of boats, as there are neither docks nor quays to assist these operations. The harbour is perfectly safe except during hurricanes, which may be expected from August to November.

Hayti is, next to Cuba, the largest of the West India islands. It was discovered by Columbus, on the 5th of December, 1492. Its greatest length is estimated at about 160 leagues, and its greatest breadth at about 40. Its superficies is estimated at about 2,450 square leagues. Three principal chains of mountains (from which emanate smaller mountain arms) run from the central group of Cibao. The whole of these are described as fertile and susceptible of cultivation, even to their summits; affording great variety of climate, which, contrary to what is the fact in the plains, is remarkably healthy. The soil of the plains is, in general, a very rich vegetable mould, exceedingly fertile, and well watered. There are several large rivers, and an immense number of smaller streams, some tributary and others independent. The ports are numerous and good. The harbour of Cape St. Nicholas, the fortifications of which are now in ruins, is one of the finest in the West Indies; being inferior only to the Havannah. Timber of the finest description is most abundant; and mines of gold, silver, copper, tin, iron, and rock salt, besides other natural productions, are said not to be wanting. The French are, therefore, fully justified in designating this magnificent island, *La Reine des Antilles*. The principal towns, besides Port-au-Prince, are Cap Haïtien, formerly Cap François, on the north coast, St. Domingo on the south, Les Cayes, and Janel.

Previously to the revolt of the blacks, Hayti was divided in unequal portions between the French and Spaniards; the former possessing the west, and the latter the eastern and larger portion of the island. The revolution began in 1789; and terminated, after the most dreadful massacres, and the destruction of a vast deal of property, in the total abolition of slavery, and the establishment of an independent black republic. The Spanish part of the island and the French were finally consolidated in 1822.

**Population.** — In 1789, the French part of Hayti was by far the most valuable and flourishing colony in the West Indies. The population was estimated at 524,000; of which 31,000 were white, 27,500 people of colour, and 465,500 slaves. The Spanish part of the island was much less densely peopled; the number in 1785 being estimated at 152,640; of which 122,640 were free people of all colours, mostly mulattoes, and the rest slaves. The population of the entire island, in 1827, was estimated by M. Humboldt at 820,000, of whom 30,000 were whites; but there are good grounds for thinking that this estimate is exaggerated.

**Imports.** — The principal articles of import are provisions; such as flour, rice, mess and cargo beef, fish, &c. and timber, from the United States; cotton goods of all sorts, Irish and Scotch linens, earthenware, cutlery, ammunition, &c. from England; wines, satins, liqueurs, jewellery, toys, haberdashery, &c. from France; and linens, canvass, gin, &c. from Holland and Germany.

**Exports.** — There has been an extraordinary decline in the quantity and value of the articles exported from Hayti since 1789. Sugar, for example, has fallen off from 141,000,000 lbs. to almost nothing; coffee from about 77,000,000 lbs. to little more than 32,000,000 lbs. in 1826; cotton from 7,000,000 lbs. to 620,000 lbs. in do.; indigo from 758,000 lbs. to nothing, &c. Mahogany is almost the only article, the exports of which have rapidly increased of late years. The following Table illustrates what has now been stated: —

A General Table of Exports from Hayti, during the Years 1789, 1801, and from 1818 to 1826, both inclusive.

| Yrs. | Clayed Sugar. |            | Muscovado Sugar. | Coffee.    |         | Cotton. |        | Cacao.  | Indigo. | Molasses. | Dye Woods. |         | Tobacco. | Castor Oil. | Mahogany. | Cigars. |

| 1825 | -             | 2,020      | 36,031,300       | 815,697    | 339,937 | -       | -      | -       | -       | -         | 5,307,453  | 340,588 | -        | -           | 2,136,984 | 179,500 |
| 1826 | -             | -          | 32,864           | 32,189,784 | 620,972 | 457,592 | -      | -       | -       | -         | -          | -       | -        | -           | -         | -       |

Sum Gualacum, in 1822, 7,338 lbs. — 1823, 13,056 lbs. — 1824, 68,692 lbs.

The destruction caused by the deplorable excesses which accompanied the revolution explains a part of this extraordinary falling off: but the greater part is to be accounted for by the change in the condition of the inhabitants. It could not reasonably be expected that the blacks were to make the same efforts in a state of independence they made when goaded on by the lash to exertions almost beyond their powers. It may, however, be fairly anticipated that they will become more industrious, according as the population becomes denser, and as they become more civilised, and acquire a taste for conveniences and luxuries. Hitherto industry in Hayti cannot be said to be free. It is enforced and regulated by the *Code Rural*, which is, in fact, a modification of the old French regulations as to slavery embodied in the *Code Noir*. "The provisions are as despotic as those of any slave system that can be conceived. The labourer may almost

be considered *adscriptus glebe*; he is deemed a vagabond, and liable to punishment, if he venture to move from his dwelling or farm without notice; he is prohibited from keeping a shop; and no person can build a house in the country unconnected with a farm. The code determines the mode of managing landed property; of forming contracts for cultivation between proprietor and farmer — farmer and labourer; of regulating grazing establishments, the rural police, the inspection of cultivation and cultivators; of repressing vagrancy; and of the repair and maintenance of the public roads. Lastly, it affixes the penalty of fine in some cases, and in others of indefinite imprisonment, at the option of the judge of the peace." — (*Mr. Consul Mackenzie's Despatch; Parl. Paper, No. 18. Sess. 1829.*)

Another serious obstacle to industry seems to be the enormous weight of the taxes imposed to defray the French indemnity. These are greatly beyond the means of the Haytiens; so that the stipulated payments are in arrear, and will have to be abandoned.

Besides the articles specified in the above Table, hides, tortoise-shell, wax, ginger, and bullocks' horns are exported in considerable quantities. Hides are principally exported from the eastern, or, what was, the Spanish part of the island. They constitute a valuable article.

In despite, however, of these unfavourable circumstances, it appears abundantly certain that a considerable increase has taken place within these few years in the exports of coffee, cotton, mahogany, tobacco, and some other articles. But it is very difficult to arrive at the exact truth with respect either to this or any other matter connected with Hayti. During the discussions on the slave trade, both parties referred to it in support of their peculiar views; and the most contradictory statements were put forth as to the numbers and condition of the people, the extent of trade, &c. A good deal of smuggling is also carried on; so that even the official statements are not to be depended on. The subjoined account of the exports of 1832 is taken from the *Anti-Slavery Record* of the 6th of June, 1833. We do not pretend to guarantee its authenticity; but we have been assured by competent judges that it does not involve any material error:—

|   |                 |  |              |
|---|-----------------|--|--------------|
| "Computed amount of exports for 1832, according to the Custom-house books:— |                 | Coffee, from all parts . . . . .   | 500,000 lbs. |
| Coffee exported from  |                 | Five woods — . . . . .   | 5,000,000 —  |
| Port-au-Prince . . . . .  | 18,000,000 lbs. | Hides — . . . . .  | 80,000       |
| Gonaïves . . . . .  | 2,000,000 —     | Tortoise-shell — . . . . .   | 12,000 lbs.  |
| Cap Haïtien . . . . .   | 2,000,000 —     | Cigars — . . . . .   | 500,000      |
| Jérémie . . . . .   | 3,000,000 —     |  |              |
| Les Cayes . . . . .   | 8,000,000 —     |  |              |
| Jacmel . . . . .  | 5,000,000 —     |  |              |
| Partie de l'Est . . . . .   | 5,000,000 —     |  |              |
|   | 50,000,000 lbs. |  |              |
| Cotton, from all parts . . . . .  | 1,000,000 —     | "The value of the crop of coffee is estimated at about 1,000,000 sterling. The duties realised on this sum, 1st, by the imports required to purchase it, and 2dly, the exports, which are subject to a duty of 15 dollars the 1,000, are estimated at 25 per cent on the value of the crop. This would give 250,000 <i>l.</i> on the coffee. This, at 7 Haytian dollars to the pound sterling, makes 1,750,000 dollars of revenue realised by this commodity alone." |              |
| Mahogany — . . . . .  | 600,000 feet.   |  |              |
| Tobacco — . . . . .   | 500,000 lbs.    |  |              |

The duties on imports amount, at an average, to about 900,000 dollars a year. The total receipts of the treasury may be estimated at about 2,500,000 dollars, which is, however, exceeded by the expenditure.

The Americans, British, French, and Germans carry on almost the whole trade of Hayti. The imports from England are very decidedly larger than those from any other country; but the exports to America exceed those destined for us. As the articles carried to Hayti from the United States are, for the most part, bulky, consisting of flour, salt fish, and provisions of all sorts, timber, &c., the number of American vessels engaged in the trade very materially exceeds those trading under any other flag.

*Arrivals.*—The arrivals of shipping at Port-au-Prince and Cap Haïtien, in 1829, 1830, and 1831, have been as under:—

| Places.                  | 1829.          | 1830.  | 1831.  |
|--------------------------|----------------|--------|--------|
| Port-au-Prince . . . . . | vessels - 130  | 157    | 171    |
|                          | tonnage 18,268 | 22,823 | 23,686 |
| Cap Haïtien . . . . .    | vessels - 77   | 77     | 69     |
|                          | tonnage 10,596 | 11,787 | 9,070  |

*Port Charges.*—The charges on a native and foreign ship of 300 tons are the same, and as follows:—

|  | Dollars.      |
|--|---------------|
| Tonnage duty*                          | 300           |
| Administrator . . . . .                | 12            |
| Commandante de place . . . . .         | 12            |
| Commissaire de guerre . . . . .        | 12            |
| Commandante de port . . . . .          | 12            |
| Director of customs . . . . .          | 12            |
| Interpreter . . . . .                  | 12            |
| Treasurer . . . . .                    | 12            |
| Doctor . . . . .                       | 12            |
| Summs for entry and clearing . . . . . | 16 60         |
| Fountain tax . . . . .                 | 20            |
| Pilotage . . . . .                     | 2             |
| <b>Total, currency</b>                 | <b>454 50</b> |

chant's stores; a late order has, however, suspended that indulgence. The rate is 1 per cent. per year, and no allowance made for waste or loss. Goods exported in the same vessel they arrive in a day, if landed, 4 per cent. and wharfage fees.

*Money.*—The weight of the dollar is 216 grains; the 4 and 4 dollar being in proportion. But nearly 4 the weight of the coin consists of tin or other alloy; so that the value of the dollar does not exceed 1*l.* 10*s.* sterling.

*Weights in Hayti* are divided as in avoirdupois and apothecaries' weight; but they are about 8 per cent. heavier than British weights.

*Measures.*—Same as those used in France.

*Regulations as to Trade.*—It is enacted, that all persons exercising any trade or profession, excepting that of cultivating the soil, must be provided with a patent or licence to carry on such trade or profession; that all strangers admitted as merchants into the republic must, in the first place, procure the permission of the president to take out a patent, which, when obtained, only authorises them, under heavy penalties, to carry on a wholesale business, not with each other, but with the Haytiens, in the open ports, which are Port-au-Prince, Gonaïves, Cap Haïtien, Port-à-Plate, Santo Domingo, Jacmel, Les Cayes, and Jérémie. The minimum quantities of goods that may be sold are fixed by the same law. The Haytian consignee may be also a retailer, on taking out a corresponding patent.

A charge of 3,000 dollars is made for each patent to a foreigner trading to Port-au-Prince; 1,800 for Les Cayes, Cap Haïtien, and Jacmel; and 1,000 for each of the remaining ports.

*Duties.*—The duties on all imported commodities consigned to foreign merchants are 17 1/2 per cent. on an established tariff, whether they be brought in native or foreign ships, with the exception of those from the United States which pay an ad-

*Custom-house Regulations.*—On arrival, the master of the vessel proceeds to the Custom-house with the Interpreter, where he makes his declaration whether he illecharges his cargo in the port. If he discharge, his invoices are translated, and the goods verified in the presence of the consignee, who is allowed to land and store them. On clearing outwards, the merchant pays the duties on the cargoes both ways, and exhibits a receipt at the office of the commissaire de guerre, commandante de place, and commandante de port, who sign a certificate that the vessel may depart.

*Warehousing.*—The warehousing and bonding system is established by law, but there are at present no buildings appropriated to the reception of bonded goods. Until very recently, goods were permitted to be bonded under this law in the mer-

\* This is the present consul's statement. Mr. Consul Mackenzie says, that as Haytian vessels pay for a licence, they are not subject to the tonnage duty. Perhaps, however, the regulation in this respect has been changed since his "Notes" were published.

tioned 10 per cent. on the amount of the duties. Goods consigned to native merchants pay only 16 1/2 per cent.

The following articles are duty free in all bottoms:—Shot of all sizes, grenades, howitzers, bomb-shells, and other projectiles of artillery; iron and bronze cannon, mortars, muskets and bayonets, carbines, pistols, and cavalry sabres, trisques, or short swords for infantry; machines and instruments for simplifying and facilitating the cultivation of the soil, and the preparation of its products; horses and cattle, mules, asses, gold and silver coin of classical and denary works, sewed in boards, or bound in parchment, for the instruction of youth.

The following is a list of articles absolutely prohibited, without reference to their place of growth:—Mahogany, logwood, human sites, flax, coffee, cotton wool, cacao, raw and clayed sugar, rum, taffy, syrups, molasses; canes, whips, and umbrellas, containing swords, stilettes, or other arms; books, and other works, opposed to good morals.

Besides the export, there is also a territorial duty levied equally on the produce of the soil, whether exported in national or foreign ships.

The export of the following articles is strictly prohibited:—Gold and silver coin, old and fire arms, munitions, and other articles of war; old or new iron and copper; horses, brood mares, mules, asses, and wood for ship building.

The coasting trade is entirely confined to Leyden citizens.

The commerce of Port-au-Prince is carried on by various classes of persons. The imports from Europe and America are principally consigned to European and North American commission houses, besides a few Italian establishments. The capital is one of the ports to which foreign merchants are confined by the law of patents; but they are, or at least were during the time of the revolution, restricted by heavy penalties to wholesale business. Of course they cannot deal with the consumers, but with the native retailers, who are chiefly women, styled "marchandes;" these employ hucksters, also women, who traverse the country, attend the markets, and give an account of their transactions to their employers, either every evening, once a week, or once a month, according to their character for integrity.

**PORTERS AND PORTERAGE.** Porters are persons employed to carry messages or parcels, &c.

In London, they are divided into different classes. It is enacted by 39 Geo. 3. c. 58., that the following rates shall be the maximum charge upon all parcels not exceeding 50 lbs. weight in London, Westminster, Southwark, and the suburbs; viz. —

|  |   |     |
|--|---|-----|
| For any distance not exceeding 1/4 of a mile | 0 | 3   |
| Not exceeding 1/2 mile                       | 0 | 6   |
| Not exceeding 3/4 mile                       | 0 | 9   |
| Not exceeding 1 mile                         | 0 | 12  |
| Not exceeding 2 miles                        | 0 | 18  |
| Not exceeding 3 miles                        | 0 | 24  |
| Not exceeding 4 miles                        | 0 | 30  |
| Not exceeding 5 miles                        | 0 | 36  |

| Not exceeding 50 miles                       | 0 | 306 |

And so in like manner the additional sum of 5s. for every further distance not exceeding 1/2 a mile. Tickets to be made out at the inns, and given to the porters, who are to deliver them with the parcels, and any keeper not making out such tickets to forfeit not exceeding 40s. nor less than 5s.; porters not delivering, or detaching the same, to forfeit 40s., and if they make any overcharge they are to forfeit 20s. Parcels brought by coaches, to be delivered within six hours, under a penalty not exceeding 20s. nor less than 10s. Parcels brought by wagons to be delivered within twenty-four hours, under a like penalty. Parcels directed to be left till called for, to be delivered to those to whom the same may be directed, on payment of the carriage, and 2d. for warehouse room, under like penalty. If parcels be not sent for till the expiration of a week, 1d. more for warehouse rent may be charged. Parcels not directed, to be left till called for, to be delivered on demand, under the above penalty. Misbehaviour of porters may be punished by a fine not exceeding 20s. nor less than 5s. The porters of London have the exclusive privilege of taking up and carrying goods within the city, and the employment of any one else may be punished by fine.

**PORT LOUIS,** or **NORTHWEST PORT,** the capital of the Mauritius, in lat. 20° 9' 56" S., lon. 57° 28' 41" E. It is situated at the bottom of a triangular bay, the entrance to which is rather difficult. Every vessel approaching the harbour must hoist her flag and fire 2 guns; if in the night, a light must be shown; when a pilot comes on board, and steers the ship to the entrance of the port. It is a very convenient port for careening and repairing; but provisions of all sorts are dear. In the hurricane months, the anchorage in Port Louis is not good; and it can then only accommodate a very few vessels. The houses are low, and are principally built of wood. The town and harbour are pretty strongly fortified. Almost all the foreign trade of the island is carried on here.

The Mauritius was so called by the Dutch in honour of Prince Maurice; but it was first settled by the French in 1720; and is indebted for most part of its prosperity to the skillful management of its governor, the famous M. de la Bourdonnais. It was taken by the English in 1810; and was definitively ceded to us in 1814.

**Exports and Imports, &c.** — Mauritius is pretty fertile, a considerable part of the surface being, however, occupied by mountains. Its shape is circular, being about 150 miles in circumference. The climate is healthy, but is very subject to hurricanes. The principal product of the island is sugar, which is now cultivated to the almost total neglect of every thing else; but it also produces excellent coffee, indigo, and cotton. The blackwood or ebony of the Mauritius is very abundant, and of a superior quality. Very little corn or grain of any kind is raised in the island; most articles of provision being imported. Previously to 1825, the sugar and other articles brought to Great Britain from the Mauritius were charged with the same duties as the like articles from

As the payments of the importer are generally in money, and there is only one important article of export—coffee—the returns can only be made after the crops have been gathered; and these are effected by brokers, who often bargain with a class of natives called coffee speculators, for their dealing for the chance of the market with the cultivators and either sell to the best advantage, or fulfil contracts previously entered into.

Among the respectable *marchands* there is said to be much good faith; but with the great body of the customers, I believe, the merchants are obliged to use the utmost circumspection.

All the ordinary tradesmen, such as tailors and shoemakers, and even a water-proof hat manufacturer, are to be found at Port-au-Prince, and I confess I was struck with the respectable appearance of several booksellers' shops, having looked in vain for such things both in Barbadoes and Antigua. The books are generally elegant, viz. French publications, and romances. The works of Voltaire, Rousseau, and others of the same class, abound.

There are also two printing presses; one at which the government gazette *Le Triporteur* is printed, and the other from which the *Feuille de Commerce* issues. The former rarely contains more than the documents issued by the government; the latter occasionally some spirited papers, and is conducted by M. Courtois, who was for a short time director of the post-office.

The apothecaries' shops are numerous, as they ought to be in such a horrible climate, and are well supplied with all the contents of the French Pharmacopoeia. There are also saw-tanneries, in which the bark of the mangrove is used as the tanning material. As far as I could ascertain, the great bulk of the former people were citizens of that country, and are called in the French time "*petits blancs*," or people of colour. The labourers in town and country are generally black.

With the exception already referred to, we have derived these details with respect to Hayti partly from the communications to government, and the published *Notes* of Charles Mackenzie, Esq., late consul in that island; and partly from Mr. Consul Courtenay's *Answers to the Circular Queries*.

**PORTERS (TACKLE-HOUSE),** regulated by the city of London. They have the privilege of performing the labour of unshipping, landing, carrying, and hoisting the goods of the East India Company, the East India Company, and all other goods, except from the East country, the produce of the British plantations and Ireland, and goods coastwise. They give bond for 500*l.* to make restitution in case of loss or damage, and are limited to rates fixed by the corporation.

**PORTERS (TICKET),** are persons appointed by the city of London, and have granted to them the exclusive privilege of unshipping, loading, and hoisting pitch, tar, soap, ashes, wine, scot, fir, poles, masts, deals, oars, chests, tables, boxes and iron, brought to London from the East country; also iron, cordage, and timber, and all goods of the produce of Ireland and the British plantations, and all goods coastwise, except lead. They are freemen of the city, give security in 100*l.* for fidelity, and have their names and numbers engraved on a metal badge. They are under the tackle porters; who may, in performing the business of the port, employ other labourers, if ticket porters be not at hand. — (*Montfleur's Dictionary*.)

Any person may bring goods into the city of London; but he is liable to a fine if he either take up, or carry, any within the city. It is astonishing that such absurd regulations should be still kept up; why should not the merchants of London, as well as those of Manchester, be allowed to employ any one they please in the conveyance of goods? Does any one doubt that competition would, in this, as in every thing else, be productive of the greatest advantage? The regulations in question merely tend to keep up oppressive privileges, injurious to the public interests, and the disadvantageous even to those in whose favour they are enacted.

India: but in the above-mentioned year this distinction was done away, and it was enacted (6 Geo. 4. c. 111. § 44.), that all goods of the growth, produce, or manufacture of the Mauritius, should, upon importation into any part of the United Kingdom, be subject to the same duties and regulations as the like goods being of the growth, produce, or manufacture of the British colonies in the West Indies; and that the trade with the Mauritius should be placed as nearly as possible on the same footing as that of the West India islands.

This was a great boon to the Mauritius, and the exports of sugar from it have since rapidly increased. According to Mr. Milburn (*Oriental Commerce*, vol. ii. p. 568.), they amounted, in 1812, to about 5,000,000 lbs. In 1818, they amounted to about 8,000,000 lbs.; and in 1824, to 23,334,553 lbs. They have since been as under:—

|      |   |                 |      |   |                 |
|------|---|-----------------|------|---|-----------------|
| 1826 | - | 42,489,416 lbs. | 1830 | - | 54,399,520 lbs. |
| 1827 | - | 40,916,254 —    | 1831 | - | 57,965,936 —    |
| 1828 | - | 48,038,780 —    | 1832 | - | 59,049,872 —    |
| 1829 | - | 33,371,236 —    |      |   |                 |

The cultivation of sugar being found more profitable than that of coffee, the exports of the latter, though of excellent quality, have declined so far, that in 1832 we only obtained from the Mauritius 26,945 lbs. The exports of cotton are also inconsiderable. The exports of ebony in 1826 amounted to 2,002,783 lbs., of the estimated value of 9,017*l.* The value of the tortoise-shell exported in the same year was also estimated at about 9,000*l.* Considerable quantities of Indian piece goods are exported. The principal imports consist of provisions, particularly grain and flour; the supply required for the use of the island being almost entirely derived from the Cape of Good Hope, Madagascar, India, Bourbon, &c. Earthenware, machinery, furniture, hardware, piece goods, wine, &c. are also largely imported. The total estimated value of the imports in 1831 amounted to 705,583*l.*; the estimated value of the exports for the same year being 606,684*l.* In 1831, 342 ships cleared outwards, of the burden of 90,462 tons; of which 22 ships, of the burden of 5,937 tons, were for Britain.

In 1826, the population of the Mauritius amounted to 94,624 souls; of which 8,111 were whites (exclusive of the king's troops), 15,444 free blacks, 69,076 slaves, 1,736 troops, and 257 resident strangers. The population of the Seychelles — small islands dependent on the Mauritius — amounted at the same time to 7,665, of whom 6,525 were slaves.

*Monies, Weights, and Measures.*—According to the regulations of government, the franc is deemed equal to 1*l.*, and the Spanish dollar to 4*s.* 4*d.* The government accounts are kept in sterling money; but merchants, shopkeepers, &c. keep their accounts in dollars and cents, and dollars, livres, and sous.

The measures and weights are those of France previously to the Revolution. 100 lbs. French = 108 lbs. English; the French foot is to the English foot as 100 to 92.89, but in practice they are supposed to be as 16 to 15. The *velte* = 1 gallon 7.8 pints English; but in commercial transactions it is always taken at 2 gallons.

*Duties, &c.*—A duty of 6 per cent. *ad valorem* is laid on all goods imported for consumption in British vessels from all quarters of the world. The duties on the goods imported in foreign ships are, for the most part, also 6 per cent. A duty of 25 cents, or 1*s.* 1*d.* per cwt. is laid on all sugar exported in British bottoms, to all places except Bourbon; and an additional duty of 8 per cent. *ad valorem* is laid on all goods exported in foreign bottoms. The charges for pilotage, wharfage, &c. are fixed by government, and may be learned at the Custom-house. For the most part they are very moderate.

*Finance.*—In a financial point of view, the Mauritius does not seem to be a very valuable acquisition. During the 15 years ending with 1825, the expenditure of government in the island exceeded the revenue by no less than 1,926,208*l.* According to the estimate of the commissioners of inquiry, the probable future revenue of the Mauritius may be estimated at 184,233*l.* a year; but the commissioners state that the expenditure in the island in 1828 amounted to 166,542*l.*, and the expenditure in Great Britain on account of the island to 77,857*l.*; making together 244,399*l.*—(*Parl. Paper*, No. 194. Sess. 1831.) It appears from the accounts published by the Board of Trade, that the total revenue of the colony in 1831 amounted to 232,438*l.*, and the expenditure to 249,834*l.*—(Vol. i. p. 246.) We believe, however, that, by enforcing a system of unsparring retrenchment, this unfavourable balance might be considerably diminished: at present, both the number of functionaries and their salaries seem quite excessive.—(This article has been almost entirely compiled from official documents.)

**PORTO-RICO**, the capital of the valuable Spanish island of the same name, in lat. 18° 29' 10" N., lon. 66° 13' 15" W. It is situated on the north side of the island, on a peninsula joined to the main land by a narrow isthmus. The fortifications are very strong: the town, which stands on a pretty steep declivity, is well built, clean, and contains from 20,000 to 30,000 inhabitants.

*Harbour.*—The harbour of Porto-rico has a striking resemblance to that of the Havannah, to which it is but little inferior. The entrance to it, about 300 fathoms in width, has the Morro Castle on its east side, and is defended on the west side by forts erected on 2 small islands. Within, the harbour expands into a capacious basin, the depth of water varying from 5 to 6 and 7 fathoms. On the side opposite to the town there are extensive sand banks; but the entrance to the port, as well as the port itself, is unobstructed by any bar or shallow.

The island of Porto-rico lies in the same latitude as Jamaica. Though the smallest of the greater Antilles, it is of a very considerable size. Its form is that of a parallelogram; being about 115 miles in length from east to west, with a mean breadth of about 35, containing an area of 4,140 square miles. The surface is pleasantly diversified with hills and valleys, and the soil generally fertile. It has, however, suffered much from hurricanes; those of 1742 and 1825 having been particularly destructive. Since the breaking up of the old Spanish colonial system, the progress of Porto-rico has hardly been less rapid than that of Cuba. Her population, which in 1778 was estimated at 80,650, amounted, according to a census taken in 1827, to 288,473, of which only 28,408 were slaves. A large proportion of the free inhabitants are coloured: but the law knows no distinction between the white and the coloured *roturier*; and this circumstance, as well as the whites being in the habit of freely intermixing with people of colour, has prevented the growth of those prejudices and antipathies that prevail between the white and the black and coloured population in the United States, and in the English and French islands.—(*Bulbi, Abrégé de la Géographie*, p. 1175.; *Poinsett's Notes on Mexico*, Lond. ed. pp. 4—11.)

*Trade.* — Sugar and coffee are by far the greatest articles of export. Next to them are cattle, tobacco, molasses, rum, cotton, &c. The imports consist principally of flour, fish, and other articles of provision, lumber, &c. from the United States; cottons, hardware, machinery, &c. from England; wines, silks, jewellery, perfumery, &c. from Spain and France; linen from the Hanse Towns; iron from Sweden, &c. Large quantities of rice, maize, &c. are raised in the island.

Account of the Value of the Imports into, and the Exports from, the Island of Porto-rico in 1830; specifying those made by the Spaniards, Americans, English, &c.

| Flags.               | Imports.       |               | Exports.  |             |                |

The Quantity and Value of the principal Articles of Export in 1830 were —

|                     | Quantity.        | Value.             |
|---------------------|------------------|--------------------|
| Cotton              | 4,978 quint.     | 59,745 dollars.    |
| Sugar               | 710,463 —        | 1,560,655 —        |
| Coffee              | 169,119 —        | 1,318,181 —        |
| Molasses            | 2,181,739 quart. | 82,215 —           |
| Rum                 | 875 punch.       | 26,218 —           |
| Tobacco             | 31,902 quint.    | 135,600 —          |
| Horses, cattle, &c. |                  | 202,203 —          |
|                     |                  | 3,219,129 dollars. |

The Customs duties collected at the different ports of the island in 1830 amounted to 581,990 dollars. The city of Porto-rico has from 1-5d to 1-11th part of the trade of the island. The other principal ports are Mayaguez, Ponce, Aguadilla, Guayama, and Fajardo. — (These statements have been taken from the *Balanza Mercantil*, published at Porto-rico, 20th of June, 1831.)

**POSTS. See HARBOURS. POSTAGE AND POST-OFFICE.**

Postage is the duty or charge imposed on letters or parcels conveyed by post; the Post-office being the establishment by which such letters or parcels are conveyed.

1. *Establishment of Post-offices.* — Regular posts or couriers were instituted at a very early period, for the safe, regular, and speedy transmission of public intelligence. Herodotus informs us (lib. viii. c. 98.), that in Persia, men and horses, in the service of the monarch, were kept at certain stations along the public roads; and that the despatches, being given to the first courier, were by him carried to the second, and so on, with an expedition that neither snow, nor rain, nor heat, nor darkness, could check. A similar institution, under the name of *cursum publicum*, was established at Rome by Augustus, and was extended and improved by his successors. Horses and carriages were kept in readiness at the different stations along the public roads, not only for the transmission of despatches, but also for the conveyance of official personages, or others who had obtained an order from authority allowing them to travel post. By this means government was speedily apprised of whatever took place in the remotest corners of the empire; and instructions or functionaries could be sent to, or recalled from, the most distant provinces, with a celerity that would even now appear considerable. — (*Bergier, Histoire des Grands Chemins*, liv. iv. c. 4.; *Bouchaud sur la Police des Romains*, pp. 136—151.)

Posts appear to have been established, for the first time, in modern Europe, in 1477, by Louis XI. They were originally intended to serve merely, as the ancient posts, for the conveyance of public despatches, and of persons travelling by authority of government. Subsequently, however, private individuals were allowed to avail themselves of this institution; and governments, by imposing higher duties or rates of postage on the letters and parcels sent through the Post-office than are sufficient to defray the expense of the establishment, have rendered it productive of a considerable revenue. Nor, while the rates of postage are confined within due limits, or not carried so high as to form any serious obstacle to correspondence, is there, perhaps, a more unobjectionable tax.

*English Post-office.* — The Post-office was not established in England till the 17th century. Post-masters, indeed, existed in more ancient times; but their business was confined to the furnishing of post-horses to persons who were desirous of travelling expeditiously, and to the despatching of extraordinary packets upon special occasions. In 1635, Charles I. erected a letter office for England and Scotland; but this extended only to a few of the principal roads, the times of carriage were uncertain, and the post-masters on each road were required to furnish horses for the conveyance of the letters at the rate of 2½d. a mile. This establishment did not succeed; and at the breaking out of the civil war, great difficulty was experienced in the forwarding of letters. At

length a post-office, or establishment for the weekly conveyance of letters to all parts of the kingdom, was instituted in 1649, by Mr. Edward Pridcaux, attorney-general for the Commonwealth; the immediate consequence of which was a saving to the public of 7,000*l.* a year on account of post-masters. In 1657, the Post-office was established nearly on its present footing, and the rates of postage that were then fixed were continued till the reign of Queen Anne. — (*Black. Com.* book i. c. 8.)

From the establishment of the Post-office by Cromwell, down to 1784, mails were conveyed either on horseback, or in carts made for the purpose; and instead of being the most expeditions and safest conveyance, the post had become, at the latter period, one of the slowest and most easily robbed of any in the country. In 1784, it was usual for the diligences between London and Bath to accomplish the journey in *seventeen* hours (it is now accomplished in *twelve* hours), while the post took *forty* hours; and on other roads their rate of travelling was in about the same proportion. The natural consequence of such a difference in point of despatch was, that a very great number of letters were sent by those conveyances; the law being very easily evaded, by giving them the form of small parcels.

Under these circumstances, it occurred to Mr. John Palmer, of Bath, comptroller general of the Post-office, that a very great improvement might be made in the conveyance of letters, in respect of economy, as well as of speed and safety, by contracting with the proprietors of the coaches for the carriage of the mail; the latter being bound to perform the journey in a specified time, and to take a guard with the mail for its protection. Mr. Palmer's plan encountered much opposition, but was at length carried into effect. The consequences have proved most beneficial: the use of mail-coaches has extended to every part of the empire; and while the mail is conveyed in less than half the time that was required under the old system, the coaches by which it is conveyed afford, by their regularity and speed, a most desirable mode of travelling. Mr. Palmer was the author of several other improvements in the economy of the Post-office; nor is there any other individual to whose exertions this department owes so much. — (*Macpherson's Hist. of Com.* anno 1784.)

The *Scotch Post-office* was established on its present footing in 1710: but, owing to the backward state of Scotland, the limited amount of its trade and population, and the extreme badness of the roads — (see Roans), — it was very defective in most parts of the country till after the American war. In proof of this, we may mention that the first mail-coach, from London to Glasgow direct, arrived at the latter on the 7th of July, 1788. Previously to that period, the course of post from London to Glasgow was five days; this, however, is not to be entirely ascribed to the slowness of the conveyance by horseback; for the mail came round by Edinburgh, and was detained there *twelve hours*, or till the usual Edinburgh despatch was made up for Glasgow in the evening!

It does not really seem, though the contrary has been sometimes contended, that the Post-office could be so well conducted by any one else as by government: the latter alone can enforce perfect regularity in all its subordinate departments; can carry it to the smallest villages, and even beyond the frontier; and can combine all its separate parts into one uniform system, on which the public may confidently rely both for security and despatch. The number of letters and newspapers conveyed by the British Post-office is quite immense. The letters only, despatched from London, may, we believe, be estimated, at an average, at about 40,000 a day! — (See *App. to 18th Report of Revenue Commissioners*, p. 299.)

*Laws relating to the Post-office.* — The post-master general does not come under the denomination of a carrier, for he enters into no contract, and has no hire; the postage of letters being an article of revenue, and not a mere reward for the conveyance. He is, therefore, not liable to constructive negligence.

But the safety of letters by the post is provided for by numerous statutes; and for inferior offences, which do not amount to absolute crimes, by the regulations of the General Post-office, all inferior officers are punished by dismissal, on complaint to the post-master general, or his deputies.

The early statutes for the protection of letters, before mail-coaches were invented, still apply to those roads on which such coaches are not established. The first necessary to be noticed is 5 Geo. 3. c. 25., which enacts, that if post-boys conveying the mail-bag shall quit the mail, or suffer any other person to ride on the horse or carriage, or shall loiter on the road, or not, if possible, convey the mail at the rate of 6 miles an hour, they shall, on conviction before 1 justice, on oath of 1 witness, be sent to the house of correction for not exceeding 1 month, nor less than 14 days. For unlawfully collecting letters to convey them, being convicted in like manner, shall forfeit for every such letter 10*s.* to informer, and be committed for 2 months, mitigable to 1. And any persons *intrusted to take in letters, and receive the postage*, embezzling, or employing to their own use, the same; or burning or destroying said letters; or advancing the rates of postage, and not accounting for the money shall be guilty of felony.

The 7 Geo. 3. c. 5. extends the punishment to *all persons whatever employed in the business of the Post-office*, guilty of the like offences, and for stealing out of any letter, any bill, note, or other security for money, and makes the offence felony without benefit of clergy. This statute did not extend to embezzling money itself, or to *parts* of securities.

The 42 Geo. 3. c. 81. extends the punishment of felony without benefit of clergy to all *such persons*, stealing *parts* of notes, bills, and other securities, out of letters, as also to all persons buying or receiving the same; and the accessories may be tried whether the principals be apprehended or not, and the offence may be tried either where it was committed or the offender apprehended.

And, by the same statute, if any person shall wilfully secrete, or detain, or refuse to deliver to any officer of the Post-office authorised to demand the same, any letter or bag of letters intended to be conveyed by the mail, which he shall have found or picked up, or which shall by accident or mistake have

been left with any other person, he shall be guilty of a misdemeanour, and punished by fine and imprisonment.

By 52 Geo. 3. 143, if any deputy, clerk, agent, letter-carrier, post-boy or rider, or any other officer employed by or under the Post-office, on receiving, stamping, sorting, changing, carrying, conveying, or delivering letters or packets, in any way relating to the Post-office, shall secrete, embezzle, or destroy any letter, packet, or bag or mail of letters, which shall have come into his hands in consequence of such employment, containing the whole, or any part of any bank note, bank post bill, bill of exchange, Exchequer bill, South Sea or East India bond, dividend warrant of the same, or any other company, society, or corporation; navy, or victualling, or transport bill: ordnance debenture, seaman's ticket, state lottery ticket, or debenture, bank receipt for payment on any loan, note of assignment of stock in the funds, letter of attorney for receiving dividends or selling stock in the funds, or belonging to any company; American provincial bill of credit, goldsmiths' or bankers' letter of credit, or note relating to the payment of money, or other bond, warrant, draft, bill, or promissory note whatever, for payment of money; or shall steal and take out of any letter, with which he shall have been so intrusted, or which shall have come to his hand, the whole or any part of any such bank note, bank post bill, &c.; shall be guilty of felony without benefit of clergy.

Any person stealing or taking away from any carriage, or from the possession of any person employed to convey letters sent by the post, or from any receiving-house for the Post-office, or from any bag or mail sent or to be sent by the same, any letter, packet, bag, or mail, shall suffer death without benefit of clergy.

And all persons who shall counsel, command, hire, persuade, promise, aid, or abet such persons, or shall with a fraudulent intention buy or receive any such securities, instruments, &c., shall suffer in like manner; necessaries may be tried before apprehension or trial of principals. Trials may be in the county where offenders are apprehended.

Exemptions from Postage, Franking, &c. — The statutes for regulating the rates of postage, and the exemptions from postage, from the 9th of Anne to the 33d of Geo. 3., are too numerous to be inserted, but the principal regulations are as follows: —

The king, the persons filling the principal offices of government, the public Boards, and the Post-office may send and receive letters duty free.

Also all members of either house of parliament during the sitting of the same, or within 40 days before or after any summons or prorogation, not exceeding 1 ounce in weight, on condition that the names of the member, and the post town from which sent, the day of the month at full length, and the year, shall be indorsed thereon; also that the member directing it shall be at, or within 20 miles of, the post town, on the day, or day before, the letter is put into the post-office; and also on condition that no member send more than 10, or receive more than 15, letters in one day.

Printed votes of parliament, and newspapers in covers open at the sides, &c. are exempted from postage. But the post-masters may search to see if any thing else be contained in the cover; and if there be any such found, it shall be charged treble postage.

Persons altering the superscription of franked letters, or counterfeiting the handwriting of members on them to avoid postage, guilty of felony, and to be transported for 7 years.

But nevertheless, members who from infirmity are unable to write, may authorise and depute another to frank for them, sending notice thereof under hand and seal, attested by a witness, to the post-master general.

Bills of exchange, invoices, merchants' accounts, &c. written on the same piece of paper with a letter, or several letters written to several persons on one piece of paper, to pay as *one* letter. — (7 & 8 Geo. 4. c. 21.)

So writes or other legal proceedings.

Patterns and samples of goods in covers open at the sides, without any writing inside, to be charged as single letters. But, by 52 Geo. 3., if not open at the sides, and weighing only 1 oz., an additional rate of 2d.; but if less than 1 oz. and open at the side only, the additional rate of 1d.

Foreign letters suspected to contain prohibited goods may be opened in the presence of a justice, or magistrate, of the place, or district, on oath of person suspecting. If contraband goods found, to be destroyed, and the letter sent to the commissioners of customs; if none found, the letter to be forwarded with an attestation of the circumstances by the justice or magistrate.

By 9 Anne, c. 10., no person except the post-master, and persons authorised by him, shall carry or convey any letters, on pain of 5s. for every offence, and a penalty of 100l. per week besides, to be recovered in any court of record. And by 5 Geo. 4. c. 20., no person shall send or tender, or deliver to be sent, otherwise than by the authority of the post-master or his deputies, or to the nearest or most convenient post town to be forwarded by the post, any letter or packet, on pain of 5s. for each letter so sent, to be recovered in any court at Westminster.

Except letters concerning goods to be delivered with such goods, sent by a common carrier; letters of merchants, owners of ships or merchant vessels with cargoes to be delivered; such letters being carried without hire or reward; any commission or return thereof; process or return thereof out of any court, or any letter sent by any private friend in their way of journey; or by any messenger sent on purpose concerning private affairs.

Post-masters may make private agreements with persons living in places (not being post towns), for the receiving and sending to them respectively, letters to and from the post town; but for the delivery of letters within the limits of the post town, he is entitled to no remuneration.

**RATES OF POSTAGE.** — Letters containing 1 enclosure are chargeable with 2 single rates. Letters containing more than 1 enclosure, and not weighing 1 ounce, are chargeable with 3 single rates. Letters weighing 1 ounce, whatever the contents may be, are chargeable with 1 single rate; and for every 4 of an ounce above that weight, an additional single rate is chargeable.

Letters to soldiers and sailors, if single, and in conformity to the act of parliament, are chargeable with 1 penny only.

|                                      |       | Cuba                        | 3 0   |

No letters to any of the above places and parts (except the West India colonies and British America) can be forwarded unless the postage be first paid.

Mails made up in London as follows: —

FRANCE, daily, Sunday excepted. Letters received on Tuesday and Friday till 5 P.M., and on other days till 7 P.M.  
 HOLLAND, BRITAIN, and HAMBURG, every Tuesday and Friday. Letters received till 11 P.M.  
 SWEDEN, every Friday. Letters received till 11 P.M.  
 AMERICA, first Wednesday, monthly.  
 JAMAICA, LEWARD ISLANDS, and CARTHAGENA and LA GUAYRA, first Wednesday in each month.  
 BRAZIL, first and third Tuesday in each month.

MADEIRA, BRAZIL, & BUENOS AYRES, first Tuesday, monthly.  
 PORTUGAL, every Tuesday.  
 GIBRALTAR, MALTA, PATRAS, and CORFU, first day of every month, except when it falls on a Sunday.  
 COLUMBIA, first Wednesday, monthly.  
 HONDURAS, first Wednesday, monthly.  
 JAMAICA, ST. DOMINGO, MEXICO, and CUBA, third Wednesday, monthly.  
 Letters for Portugal, Brazil, and other foreign ports, will in future be received until the hour for closing the boxes for Inland Letters.

General Post-office, London. — Letters received at the general post receiving houses till 5 P.M.; by the letter carriers, ringing bells, (on payment of 1d. with each letter or newspaper,) from 5 to 6 P.M.; at the Branch Post-offices, at Charing Cross, Vere Street, Oxford Street, and Borough, till 3 past 6 P.M.; and at the General Post-office in St. Martin's-le-Grand, and the Branch Post-office, Lombard Street, till 7 P.M.  
 Newspapers must be put into the receiving houses before 5 P.M., or at the General Post-office, St. Martin's-le-Grand, before 6 P.M.

Stamps. — The date shows when the letters were received at the General Post-office.  
 The circular stamp of black ink, when the postage is to be paid on delivery.  
 Ditto of red ink, with the word "Paid," when the postage has been paid at the time of posting the letter.

Ditto of red ink, with the word "Free," when letters are franked.  
 Overcharged Letters. — Overcharges returned on presenting the letter at the window in the hall at the Office, St. Martin's-le-Grand; or the letter may be sent to the Office by the letter-carrier, and the overcharge will be returned with the letter in 2 days. When single letters are charged double, or double letters treble, if they are opened in presence of the letter carriers who deliver them, that part having the direction and tax upon it will be sufficient to obtain return of the overcharge; but in cases of single letters being charged treble, such letters must be shown at the Post-office before return of the overcharge can be made.

Ship Letter Office. — The postage for letters forwarded through this Office, to the Cape of Good Hope, New South Wales, Isle of France, Bombay, Ceylon, Madras, Bengal, Singapore, and Prince of Wales's Island, is the full inland rate of postage, to the port where the ship may be, and 2d. sea postage in addition, for every letter not exceeding 2 ounces, and 1s. per ounce for every ounce above.

Letters from the country for the above places, are charged with the full inland postage to London, and 2d. sea postage in addition, for every letter not exceeding 3 ounces, and 1s. per ounce for every ounce above.

Newspapers and price currents that have paid the stamp duty, are forwarded to India, if made up open at the ends, for 1d. on each packet, not exceeding 1 ounce, and for each packet exceeding the ounce, 1d. per ounce.

But letters, newspapers, and price currents to the coast of Africa, St. Helena, Batavia, and all places where there are no packets, the highest rate of packet postage is charged.

All letters from abroad, except the Cape of Good Hope, Isle of France, New South Wales, Bombay, Ceylon, Madras, Bengal, Singapore, and Prince of Wales's Island, are liable to a sea postage of 8d. single, and 1s. 4d. double, and so on over and above all inland rates whatever; but those from the Cape of Good Hope, Isle of France, Bombay, Ceylon, Madras, Bengal, Singapore, and Prince of Wales's Island, are liable to the full inland rates, and a sea postage of 4d. for every letter not exceeding the weight of 3 ounces, and 1s. per ounce for every ounce exceeding that weight.

Newspapers printed within his Majesty's colonies, and brought into the United Kingdom by any ship other than a packet, if left open at the ends, and containing no other enclosure or correspondence, are charged 3d. each paper.

All letters forwarded through this Office, must be paid for at the time they are put into the office.

Seamen's and soldiers' single letters are forwarded through this Office to the East Indies and New South Wales, on payment of 1d. at the time of putting in; and letters from the East Indies are chargeable with 1d., or 3d. if the penny is not paid when the letter is put into the office; and to places abroad, to where there are no regular packets, on the payment of 3d.; and those received from such places are charged 3d.

Seamen and Soldiers, within any part of his Majesty's dominions, to and from which there are regular mails, can send and receive single letters on their own private concerns only, while they are employed on his Majesty's service, for 1d.

Letters coming from a Seaman, or from a Sergeant, Corporal, Trumpeter, Fifer, or private Soldier. — The penny must be paid at the time it is put into the post-office. The name of the soldier or sailor, his class or description, and the name of the ship or regiment, corps or detachment, to which he belongs, must be specified. And the officer having the command must sign his name, and specify the name of the ship or regiment, corps, or detachment, he commands.

Letters going to Seamen or Soldiers. — The penny must be paid at the time it is put into the post-office.

Newspapers for his Majesty's Colonies, and Places beyond Seas. — Every such newspaper or other printed paper liable to the stamp duty, and for the conveyance of which any duty of postage is chargeable, to be put into the post-office of the town or place in Great Britain or Ireland, on any day, within seven days next after the day on which the same shall be published, the day of publication to be ascertained by the date of such paper; and in case any such paper be put into any post-office after the expiration of such seven days, such paper to be charged as a single letter.

Printed votes and proceedings in parliament from Great Britain and Ireland to any of his Majesty's colonies are to be charged with a rate of one penny half penny per ounce, and so on in proportion, in lieu of any sum payable under any former act, to be paid on putting the said votes and proceedings into the post-office.

N. B. — If such printed vote, proceeding, newspaper, pamphlet, magazine, &c. be not sent without a cover, or in a cover open at the sides, or if any writing be thereon, other than the superscription, or any other paper or thing be enclosed therein, the packet will be liable to the full rates of postage, as a letter.

Bank Notes and Drafts. — Persons wishing to send bank notes or drafts by post, are advised to cut such notes or drafts in halves, and send them at two different times, waiting till the receipt of one half is acknowledged before the other is sent.

Money, Rings, or Lockets, &c. — When money, rings, or lockets, &c. are sent by the post from London, particular care should be taken to deliver the same to the clerk at the window at the General Post-office; and when any such letter is to be sent from the country, it should be delivered into the hands of the post-master: but it is to be observed, that this Office does not engage to insure the party from loss.

Caution to Masters of Vessels. — Masters of vessels opening sealed bags of letters intrusted to them, or taking the out letters, or not duly delivering the bags at the post-office of the first port of arrival, forfeit 200l. Masters, or others, having letters in their possession after the master's delivering the letters at the post-office, forfeit 5l. for every letter found on board. — (55 Geo. 3. c. 133.)

Masters and commanders of vessels are required to deliver their ship's letters to the person appointed by the post-master general to demand the same; and if any letters not exempted by law, not exceeding by the weight therein mentioned, be found on board after any such demand, the same penalty is incurred as on masters and commanders in whose possession letters are found after delivering their letters at the post-office.

Masters and commanders of vessels are still bound to deliver at the post-office of the first port at which they arrive, all letters on board not exempted by law, if they shall not have been previously demanded by some person specially appointed for that purpose by the post-master general. — (7 & 8 Geo. 4. c. 21.)

**Twopenny Post-office.** — Besides the General Post-office, or that intended for the conveyance of letters from one part of the kingdom to another, letters are received in the metropolis and other large towns for delivery in the same. In London, these letters are charged 2d.; but in other towns they are only charged 1d. The limits of the twopenny post extend generally 7 or 8 miles round the metropolis; and there are daily several deliveries, and the establishment is extremely convenient. The Twopenny Post-office is dependent upon, though in some measure distinct from, the General Post-office. Its principal offices are at the General Post-office, and Gerrard Street, Soho. There are a great number of receiving houses scattered up and down the town and the adjacent country.

The gross receipt and nett revenue derived from the twopenny post in the metropolis in the under-mentioned years, has been as follows: —

| Years. | Gross Receipt. |    |    | Nett Revenue. |    |    | Rate per Cent. of Charge of Collection. |    |    |
|--------|----------------|----|----|---------------|----|----|---|----|----|
|        | £.             | s. | d. | £.            | s. | d. | £.                                      | s. | d. |
| 1826   | 118,743        | 15 | 3  | 71,942        | 12 | 0  | 33                                      | 10 | 46 |
| 1827   | 115,800        | 8  | 11 | 75,866        | 17 | 7½ | 31                                      | 9  | 8½ |
| 1828   | 117,205        | 8  | 2½ | 77,517        | 7  | 9½ | 31                                      | 0  | 7½ |

The gross number of letters collected in the two separate grand divisions, within the same period of 6 days, gives the following result: —

|                         |                 |
|-------------------------|-----------------|
| G. Post-office division | 73,127 letters. |
| Gerrard Street division | 69,157 —        |

The number of letters delivered in the respective divisions in the same period are as follows: —

|                         |                 |
|-------------------------|-----------------|
| G. Post-office division | 68,693 letters. |
| Gerrard Street division | 80,573 —        |

The reciprocal transfers between the two divisions of the letters collected by each, destined for delivery within the limits of the other, are as follows: —

|   |                 |
|---|-----------------|
| From G. Post-office to Gerrard Street     | 40,896 letters. |
| From Gerrard Street to the G. Post-office | 25,906 —        |
| (21st Report of Revenue Commissioners.)   |                 |

**REGULATIONS AS TO THE TWOPENNY POST-OFFICE.** — There are 2 principal offices — at the General Post-office, and the other in Gerrard Street, Soho; the hours of receipt and delivery, and all the regulations of which, are the same at the one as the other. There are, besides, numerous receiving houses for letters in and around London.

There are 6 collections and deliveries of letters in town daily; and 3 deliveries at, and 2 departures from, most places in the country districts of this office. General post letters are despatched to the country letter carriers the same morning of their arrival in London.

The time by which letters should be put into the receiving houses, or either of the 2 principal offices, for each delivery of the day, and that by which they are despatched for delivery, are as follows: —

| 2 afternoon                         | 3 —                                     | 4 —                               |
| 5 —                                 | 6 —                                     | 7 —                               |
| 8 —                                 | 9 —                                     | 8 next morning.                   |

And each delivery should be completed generally in about 1½ hour after the despatch from the principal offices, according to distance and number of letters, &c. At some of the out ports of the town, however, 5 deliveries and collections only can be given, on account of their distance from the principal offices; and for the same reason, the deliveries are later, and the collections earlier than in the interior.

The out parts served but 3 times a day, and to which the 7 o'clock delivery at night does not extend, are (alphabetically) as follows:—

- |                                    |  |
|------------------------------------|--|
| Bermundsey, beyond the Spa Road.   | Mill Bank, Westminster, to Thomas Bank Place.  |
| Belmal Green and Road.             | New Road.                                      |
| Blackney Road.                     | New Grove, Mile End.                           |
| Haggerston.                        | Pimlico, beyond Vauxhall Bridge.               |
| Hoxton.                            | Rotherhithe, beyond the Church.                |
| Kingsland Road to the Bridge.      | Tothill Fields, Vauxhall Bridge Road, Pimlico. |
| Limehouse, beyond the Bridge.      | Sloane Street.                                 |
| Mile End, beyond the 1 mile stone. |  |

From Mile End and other out parts letters are collected 4 of an hour earlier than the above periods. And for the 10 o'clock, or last delivery of the day, at these parts, letters must be put in at the interior receiving houses by 2 o'clock, or the principal offices by 3.

*From London to the Country.*

|                                     |   |  |
|-------------------------------------|---|--|
| If put into the receiving houses by | Or either of the 2 principal offices by | They are despatched from the latter at |
| 5 morning                           | 3 morning                               | 10 morning                             |
| 2 afternoon                         | 3 afternoon                             | 4 afternoon                            |
| 5 —                                 | 6 —                                     | 7 —                                    |

To places having but 2 deliveries a day, letters are sent off at the above hours of 10 in the morning, and 4 or 7 in the afternoon. Such as go off at 10 are delivered at noon; those at 4 are delivered the same evening; and such as go off at 7 are for delivery early next morning. To places having only 1 post a day, they go off at 10, and are delivered the same day at noon.

The deliveries in the country should be completed, generally, between the hours of 11 and 1; between 6 and 9 in the evening; and by, or about, 9 in the morning.

*From the Country to London.*—If put into the post in time for the morning despatch, they arrive in town between 10 and 11 o'clock, and are sent out at 12 from the principal offices, for delivery in all parts of London. If put in for the afternoon despatch, they arrive between the hours of 5 and 6, and are sent out at 4 for delivery the same evening.

*From one Part of the Country to another.*—If going from one part of a ride or district to another part of the same ride or district, and put in for the morning despatch, they are delivered,

through the means of a by-post arrangement, the same day at noon. If put in for the afternoon despatch, they are delivered the same evening, where an evening delivery is given. If going to parts not belonging to the same ride, they come to London; such letters put into the post for the morning despatch, are delivered in the country the same evening, where an evening delivery is given; if for the afternoon despatch, the next morning, where a morning delivery is given; or otherwise at noon.

*Stamps.*—The date stamp on letters, or, if there be more than one, that having the latest hour, shows the day and time of day they were despatched for delivery; that on returned letters, excepting, which shows the time they were returned to the office as dead letters. The oval stamp is used at the chief office; the indented stamp at the Westminster; and the circular at the country offices. Persons having occasion to complain of the delay of their letters, are requested to transmit to the comptroller the covers, with a statement of the time of delivery, as the date and stamp will assist materially in tracing their course.

*Postage.* The postage of each letter or packet, passing from one part of the town to another, both being within the limits of the general Post-office delivery, is 2d. To or from the country, or from one part of the country to another, 3d. The postage of this Office on each letter, or packet, passing to or from the General or Foreign Office, is 2d. in addition to the general or foreign rates. To prevent mistakes, it is recommended to persons paying the postage of letters at putting in, to see them stamped with the paid stamp before they leave the office.

*Soldiers and Sailors.*—Single letters from or to soldiers and sailors, under certain restrictions, are throughout both this and the general post, or either, for 1d. only, it paid at putting in.

*Newspapers.*—Newspapers pass from London to the country, by covers open at the ends, for 1d. each; but from one part of London to another, or from the country to London, or one part of the country to another, the postage is the same as for letters.

*Letters of Value.*—This Office is not liable to make good the loss of property contained in letters. But, for the greater security of such property, it is recommended that notice of it be given to the office-keepers at putting into the post. This, however, with the exception of bank or other notes, or drafts payable to bearer, which should be cut in halves, and sent at twice, the first half to be acknowledged before the other is sent.

*Weight.*—No letters or packets exceeding the weight of 4 oz. can be sent by this post, except such as have first passed by, or are intended to pass by, the general or foreign mails.

*Letters for the Post not to be put into the general Post.*—Letters for the twopenny post are sometimes put into the general post, by which they are unavoidably delayed. It is, therefore, recommended that they be put into the twopenny post offices or receiving houses, that they may be regularly forwarded by their proper conveyance.

*Letters not to be delivered back.*—And to prevent the possibility of letters being surreptitiously obtained from the offices where put in, office-keepers are strictly forbidden returning, to any persons whatsoever, letters that may be applied for, under whatever circumstances the recovery may be urged. This is moreover forbidden by the established principle, that the instant a letter is committed to the post, it is no longer the property of the sender.

*Post-office Revenue.*—The progress of the post-office revenue of Great Britain has been very remarkable. Most part of its increased amount is, no doubt, to be ascribed to the greatly increased population of the country, and the growing intercourse among all classes of the community; but a good deal must also be ascribed to the efforts made in the early part of the reign of George III. to suppress the abuses that had grown out of the privilege of franking, and still more to the additions that have repeatedly been made to the rates. We believe, however, that these have been completely overdone; and, considering the vast importance of a cheap and safe conveyance of letters to commerce, it will immediately be seen that this is a subject deserving of grave consideration. In point of fact, the post-office revenue has been about stationary since 1814; though, from the increase of population and commerce in the intervening period, it is pretty obvious that, had the rates of postage not been so high as to force recourse to other channels, the revenue must have been decidedly greater now than at the end of the war. Were the rates moderate, the greater despatch and security of the post-office conveyance would hinder any considerable number of letters from being sent through other channels. But, in the estimation of very many persons, the present duties more than counterbalance these advantages; and the number of coaches that now pass between all parts of the country, and the facility with which the law may be evaded, by transmitting letters in parcels conveyed by them, renders the imposition of oppressive rates of postage quite as injurious to the revenue as to individuals.

The gross product of the post-office revenue of Great Britain, in the under-mentioned years, has been as follows:—

| Years. | Duty.     | Years. | Duty.     | Years. | Duty.     | Years. | Duty.     |
|--------|-----------|--------|-----------|--------|-----------|--------|-----------|
| 1722   | £ 201,804 | 1800   | 1,083,950 | 1825   | 2,160,390 | 1830   | 2,053,720 |
| 1755   | 210,663   | 1810   | 1,675,076 | 1828   | 2,048,042 | 1831   | 2,064,334 |
| 1775   | 345,321   | 1814   | 2,005,987 | 1829   | 2,024,418 | 1832   | 2,034,603 |
| 1795   | 745,238   | 1820   | 1,993,885 |        |           |        |           |

The progress of the Scotch branch of the post-office revenue has been quite extraordinary. In 1698, Sir Robert Sinclair of Stevenson had a grant from William III. of its entire produce, with an extra allowance of 300l. a year, on condition of his keeping

up the post; but, after trial, he abandoned the undertaking as disadvantageous. In 1709, the Scotch post-office revenue was under 2,000*l.*: its average annual amount is now about 140,000*l.* nett; having increased *seventy* fold, in little more than a century! In 1781, the Glasgow post-office produced only 4,341*l.* 4*s.* 9*d.*, while its ordinary revenue is at present about 35,500*l.*! — (*Stark's Picture of Edinburgh*, p. 144.; *Cleland's Statistics of Glasgow*.)

The expenses of collecting the post-office revenue amount, at an average, to from 24 to 30 per cent. on the gross receipt. In 1832, they were 557,313*l.*, being at the rate of about 27 per cent. After all deductions on account of collection, over-payments, drawbacks, &c., the total nett payments into the exchequer on account of the post-office revenue of Great Britain amount to about 1,350,000*l.*

The British post-office is admitted on all hands to be managed with great intelligence. But there are several departments in which it is believed that a considerable saving of expense might be effected. The packet service costs 115,000*l.* a year. The mileage to mail coaches, and the payments to guards, tolls, &c. amount to about 72,000*l.* The conveyance of mails in Canada, Nova Scotia, and Jamaica, is an item of above 12,500*l.*!

There may, in all, be about 3,000 persons employed in the carriage and distribution of letters in Great Britain only; besides about 180 coaches, and from 4,000 to 5,000 horsers.

*Irish Post-office.* — The most gross and scandalous abuses have long been prevalent in every department of the Irish post-office. The commissioners of Revenue Inquiry exerted themselves to abate the nuisance; but, as it would appear from the evidence of the Duke of Richmond before the committee of the House of Commons on public salaries, without much effect. His Grace has, however, laboured with laudable activity and zeal to introduce something like honesty, order, and responsibility into this department. The gross revenue of the Irish post-office amounted, in 1832, to 221,693*l.*; the expenses of collection were 86,151*l.*; and the nett payments into the exchequer, 138,000*l.*

Account of the Gross Receipt of the Post-office Revenue at the following Cities and Towns in 1831 and 1832.

| Posteries and Newcastle, Staffordshire | 6,676             | 6,712     | Waterford   | 4,751             | 5,377     |

*Charges on Newspapers transmitted to and received from Foreign Parts.* — A most objectionable practice has long obtained in the Post-office, of eking out the salaries of the clerks in the foreign department, by allowing them to charge heavy fees on the newspapers transmitted to and received from foreign parts. The subjoined statements, derived from the *Part. Paper*, No. 146. Sess. 1832, show the number of British papers that go abroad through the Post-office, and the nature and amount of the charges to which they have been subject: —

|   | <i>L.</i> | <i>s.</i> | <i>d.</i> | No.        |
|---|-----------|-----------|-----------|------------|
| Newspapers sent to various places in the United Kingdom through the Post-office from London, in 1830 -                | -         | -         | -         | 12,962,000 |
| Average daily   | -         | -         | -         | 41,412     |
| Newspapers sent to the British colonies   | -         | -         | -         | 185,418    |
| Producing, at 1 <i>d.</i> postage each  | 1,159     | 0         | 0         |            |
| Newspapers received from the British colonies   | -         | -         | -         | 12,429     |
| Producing, at 5 <i>d.</i> postage each  | 157       | 7         | 3         |            |
| Total produce   | 1,311     | 7         | 3         |            |
| Total number of daily papers sent through the Post-office to foreign parts, in 1830                                   | -         | -         | -         | 90,770     |
| Ditto 3 days a week   | -         | -         | -         | 17,628     |
| Ditto twice a week  | -         | -         | -         | 2,908      |
| Ditto weekly  | -         | -         | -         | 185        |
| <i>Aggregate Fees received by the Post-office Clerks.</i>   |           |           |           |            |
| Number of daily papers per annum, 90,786 - 2 <i>s.</i> 2 <i>d.</i> at 5 <i>d.</i> each, or 55 p. cent.                | 1,620     | 13        | 4         |            |
| Ditto 3 days per week, 17,628 - 11 <i>s.</i> 6 <i>d.</i> at 3 <i>d.</i> each, or 67 p. cent.                          | 339       | 0         | 0         |            |
| Ditto 2 days per week, 208 - 2 <i>s.</i> at 3 <i>d.</i> each, or 100 p. cent.   | 6         | 0         | 0         |            |
| Weekly, 185 - 3 <i>d.</i> at 2 <i>d.</i> 4 <i>d.</i> each, or 145 <i>d.</i> p. cent.                                  | 7         | 14        | 0         |            |
| Amount received by the clerks in the General Post-office (Foreign Department), for transmitting British papers abroad | <i>L.</i> | 1,973     | 7         | 4          |

Now, it appears from this statement, that while the annual cost of a daily London paper amounts to 2*s.* 1*d.*, inclusive of the stamp, it has not been possible to get it even at Calais or Boulogne for less than 13*s.* 5*d.*, the clerks of the Post-office having been allowed to charge a fee of 4*d.* 4*s.* for their trouble in forwarding

It! The charges on the papers brought from abroad have been similar; a French paper costing from 2*l.* to 4*l.* a year at Calais, not being obtainable in London for less than from 7*l.* to 10*l.*, because of the fees to the Post-office clerks! In consequence of this preposterous system, a far more serious obstacle has been imposed to the diffusion of intelligence and of useful information, than any that could have grown out of the fears or caprices of the most arbitrary monarchs. It is not, perhaps, going too far, to say that the circulation of British newspapers abroad does not amount, at this moment, to the third or fourth part of what it would have amounted to had they been exempted from these oppressive charges; and the circulation of foreign newspapers in England has been proportionally narrowed.

The mischievous operation of this system has long been obvious; but the difficulties in the way of a change were so great, that it has hitherto kept its ground. But we are glad to have to state that it is now on the eve of being abolished. The Post-office clerks are to be compensated for the loss of fees by an increase of their regular salaries; so that there will no longer be any obstacle, other than their natural cost, or the impediments that foreign governments may throw in their way, to the circulation of British papers abroad.

UNITED STATES. — We subjoin an account of the number of post-offices, the extent of post roads, the rates of postage, &c. in the United States.

POST-OFFICES AND POSTROADS.

|                      |                                   |         |
|----------------------|-----------------------------------|---------|
| Post-offices in 1790 | 75; extent of post roads in miles | 1,875   |
| — 1800               | 903                               | 20,817  |
| — 1810               | 2,300                             | 36,406  |
| — 1820               | 4,500                             | 72,492  |
| — 1829               | 8,004                             | 115,000 |

RATES OF POSTAGE.

|  |          |               |
|--|----------|---------------|
| For Single Letters, composed of One Piece of Paper — |          |               |
| Any distance not exceeding 30 miles,                 | 6 cents. |               |
| Over 30, and not exceeding 50                        | — 10     | —             |
| — 80   | — 150    | — 12 <i>½</i> |
| — 150  | — 400    | — 18 <i>½</i> |
| — 400 miles  | —        | — 25          |

Double letters, or those composed of 2 pieces of paper, are charged with double the above rates.

Triplic letters, or those composed of 3 pieces of paper, are charged with triple the above rates.

Quadruple letters, or those composed of 4 pieces of paper, are charged with quadruple the above rates.

All letters weighing 1 ounce & a half, or more, are charged at the rate of single postage for each  $\frac{1}{2}$  of an ounce, or quadruple postage for each ounce, according to their weight; and no letter

can be charged with more than quadruple postage, unless its weight exceeds 1 ounce avoirdupois.

The postage on ship letters, if delivered at the office where the vessel arrives, is 6 cents; if conveyed by post, 2 cents in addition to the ordinary postage.

Newspaper Postages. — For each newspaper, not carried out of the State in which it is published, or if carried out of the State, but not carried over 100 miles, 1 cent. Over 100 miles, and out of the State in which it is published, 1*½* cent.

Magazines and Pamphlets. — If published periodically, distance not exceeding 100 miles, 1 cent per sheet. — over 100 — 2*½*

If not pub. period. dist. not exceed. 100 miles, 4 cts. per sheet. — over 100 — 6

Small pamphlets, containing not more than a  $\frac{1}{2}$  sheet royal, are charged with  $\frac{1}{2}$  the above rates. Eight pages quarto are rated as one sheet, and all other sizes in the same proportion.

The number of sheets in a pamphlet sent by mail must be printed or written on one of the outer pages. When the number of sheets is not truly stated, double postage is charged.

Every thing not coming under the denomination of newspapers or pamphlets is charged with letter postage.

Account of the Postage received at the Post-offices of some of the principal Towns of the United States, during the Year ended the 31st of March, 1832.

| Towns.       | Dollars. | Towns.     | Dollars. |
|--------------|----------|------------|----------|
| New York     | 160,203  | Richmond   | 18,715   |
| Philadelphia | 105,530  | Cincinnati | 15,899   |
| Boston       | 62,270   | Savannah   | 14,278   |
| Baltimore    | 54,225   | Pittsburgh | 13,794   |
| New Orleans  | 27,288   | Albany     | 15,003   |
| Charleston   | 20,123   | Albany     | 11,411   |

The post-master general of the United States stated, in a letter to a committee of Senate, 19th of May, 1833, that it was of almost daily occurrence, that a ton weight of newspapers was carried in one mail for hundreds of miles together. The total post-office revenue of the United States, in the year ended the 31st of March, 1832, amounted to 1,471,371 dollars; of which the newspaper postage made about 254,000 dollars. — (*American Almanac* for 1834.)

POST ENTRY. When goods are weighed or measured, and the merchant has got an account thereof at the Custom-house, and finds his entry, already made, too small, he must make a *post* or additional *entry* for the surplussage, in the same manner as the first was done. As a merchant is always in time, prior to the clearing of the vessel, to make his post, he should take care not to over-enter, to avoid as well the advance, as the trouble of getting back the overplus. However, if this be the case, and an over-entry has been made, and more paid or bonded for customs than the goods really landed amount to, the land-waiter and surveyor must signify the same, upon oath made, and subscribed by the person so over entered, that neither he nor any other person, to his knowledge, had any of the said goods over-entered on board the said ship, or anywhere landed the same without payment of custom; which oath must be attested by the collector or comptroller, or their deputies, who then compute the duties, and set down on the back of the certificate, first in words at length, and then in figures, the several sums to be paid.

POSTING, travelling along the public road with hired horses, and with or without hired carriages. Duties are charged upon the horses and carriages so hired. — (For the duties on the latter, see *anti*, p. 285.) The duties on post horses are regulated by the 4 Geo. 4. c. 62.

Duties. — Every post-master to pay 5*s.* annually for a licence. For every horse, mare, or gelding, let for hire by the mile, 1*½d.* for every mile; if let to go no greater distance than 8 miles, 1-5th part of the sum charged for such letting, or 1*s.* 9*d.*; if let to go no greater distance than 5 miles, and not to bring back any person, nor deviate from the usual line of road, 1*s.*; if let for any time less than 28 successive days, or in any other manner than by the mile, or to go no greater distance than 8 miles, in either case, 1-5th part of the sum charged on every such letting; or the sum of 2*s.* 6*d.* for each day not exceeding 3 days; and the sum of 1*s.* 9*d.* for each day exceeding 3, and not exceeding 13 days; and the sum of 1*s.* 3*d.* for each day exceeding 13, and less than 28 days. If let for 28 successive days, or for any longer period, and returned in a less period of time than twenty-eight successive days, and not exchanged for another horse, mare, or gelding, in continuation of the same hiring, 1-5th part of the sum agreed to be received for such letting, or the sum of 2*s.* 6*d.* for each day not exceeding 3 days; and the sum of 1*s.* 9*d.* for each day exceeding 3, and not exceeding 13 days; and the sum of 1*s.* 3*d.* for each day exceeding 13, and less than 28 days, during the time every such horse, &c. shall have been under the direction of the person hiring the same.

The duties imposed by the act do not extend to horses used in stage or hackney coaches duly licensed; nor to any mourning coach or hearse, where the same is hired to go no greater distance than 10 miles from Temple Bar; nor to any cart or carriage kept for the conveyance of fish.

Persons letting any horse, mare, or gelding, for hire, without licence from the commissioners of stamps, are subject to a penalty of 10*l.* No post-master to keep more than 1 horse by virtue of 1 licence, under a penalty of 10*l.*; and the words *licensed to let horses* for hire to be painted in legible characters on the front of their houses, under a penalty of 5*l.* Postmasters are to give security by bond, renewable at the expiration of 3 years. The commissioners or collector of stamps to furnish *blank tickets and certificates* to postmasters, and *exchange and check tickets* to the toll-gate keepers: the former containing the name and abode of the post-master, the number of horses, whether let for a day or longer period; the latter, the name of the toll-keeper, the place where he lives, and the places the horses hired are going to. When horses are returned within the period for which they were hired, check tickets are to be delivered up to the collector; penalty 20*l.* Improperly using a check ticket subjects to a penalty of 50*l.* Travellers are to deliver up their tickets at the first toll-gate, and to ask for and receive the necessary exchange and check tickets in return.

*Letting of Duties to farm.* — The commissioners of stamps, by authority of the Lords of the Treasury, are authorised to let the post-horse duties to farm for any period not longer than 3 years, either in whole, or divided into divisions or districts. The biddings are conducted under regulations issued by the commissioners; at least a month's notice being given of the time and place of letting the duties. The highest bidder being preferred, must forthwith execute a contract, and give bond with three or more securities for payment of the yearly rent contracted for at the head office of stamps in equal portions by eight several annual payments. The commissioners have also the power to appoint a time for making a deposit, and the amount thereof; and in case any bidder fail of making such deposit, or of executing a proper contract and giving security, the duties to be again put up. Duties not to be farmed by persons licensed to let post horses.

An Account of the Produce of the Duties on Posting, in each of the Eight Years ending the 1st of January, 1833. — (*Parl. Paper*, No. 689, Sess. 1830, and *Annual Finance Accounts*.)

**POTASH** (Da. *Potaske*; Fr. *Potasse*; Ger. *Pottasche*; It. *Potassa*; Pol. *Potasz*; Rus. *Potash*). If vegetables be burned, the ashes lixiviated, and the solution boiled to dryness in iron vessels, the mass left behind is the *potash* of commerce — the impure carbonate of potass of chemists. It is intensely alkaline, solid, and coloured brown by the admixture of a small portion of vegetable inflammable matter, which generally becomes moist. When potash is calcined in a reverberatory furnace, the colouring matter is destroyed, it assumes a spongy texture, and a whitish pearly lustre; whence it is denominated *pearl-ash*. The latter generally contains from 60 to 83 or 84 per cent. of pure carbonate of potass. — (See *anti*, p. 25.)

The ashes of those vegetables only which grow at a distance from the sea, are employed in the manufacture of potash. Herbaceous plants yield the largest portion, and shrubs more than trees. It is principally manufactured in America, Russia, and Poland, the vast forests of which furnish an inexhaustible supply of ashes.

Potash is of great importance in the arts, being largely employed in the manufacture of flint glass and soft soap, the rectification of spirits, bleaching, making alum, scouring wool, &c. At an average of 1831 and 1832, the entries of pot and pearl ashes, for home consumption, amounted to 188,477 cwt. a year. Of 228,757 cwt. imported in 1831, 169,891 cwt. were brought from the British possessions in North America; 15,835 from the United States; the remainder being almost entirely furnished by Russia. The ashes of the United States are the purest, and bring the highest price.

The prices of pot and pearl-ash in the London market, in December, 1833, were as under: —

|                           | £ | s. | d. | £ | s. | d. | £ | s. | d. |
|---------------------------|---|----|----|---|----|----|---|----|----|

| pearl, 1st                | - | 1  | 5  | 6 | -  | 0  | 0 | 0  | 0  |
| United States, pot, 1st   | - | 0  | 0  | 0 | -  | 0  | 0 | 0  | 0  |
| United States, pearl, 1st | - | 0  | 0  | 0 | -  | 0  | 0 | 0  | 0  |
| United States, pearl, 2d  | - | 1  | 4  | 0 | to | 0  | 0 | 0  | 0  |
| Russia, do. do.           | - | 1  | 3  | 0 | -  | 1  | 5 | 0  | 0  |

Ashes from Canada are duty free; those from Russia and the United States pay a duty of 6s. cwt.

**POTATOES** (Ger. *Kartoffeln*; Du. *Aardappelen*; Fr. *Pommes de terre*; It. *Patate*, *Pomi di terra*; Sp. *Patatas manchegas*; Rus. *Jabloki semlenië*) the roots of the *Solanum tuberosum*, of innumerable varieties, and too well known to require any description.

1. *Historical Notice.* — The potato, which is at present to be met with everywhere in Europe, and forms the principal part of the food of a large proportion of its inhabitants, was entirely unknown in this quarter of the world till the latter part of the 16th century. It is a native of America, but whether of both divisions of that continent is doubtful. — (*Humboldt, Nouvelle Espagne*, liv. iv. c. 9.) Some authors affirm that it was first introduced into Europe by Sir John Hawkins, in 1545; others, that it was introduced by Sir Francis Drake, in 1573; and others, again, that it was for the first time brought to England from Virginia, by Sir Walter Raleigh, in 1586. But this discrepancy seems to have arisen from confounding the common, or Virginian potato (the *Solanum tuberosum* of Linnæus), with the sweet potato (*Convolvulus batatas*). The latter was introduced into Europe long before the former, and it seems most probable that it was the species brought from New Granada by Hawkins. Sweet potatoes require a warm climate, and do not succeed in this country; they were, however, imported in considerable quantities, during the 16th century, from Spain and the Canaries,

and were supposed to have some rather peculiar properties. The kissing comfits of Falstaff, and such like confections, were principally made of battatas and cringo roots. On the whole, we are inclined to think that we are really indebted for the potato (as well as for tobacco) to Sir Walter Raleigh, or the colonists he had planted in Virginia. Gerarde, an old English botanist, mentions, in his *Herbal*, published in 1597, that he had planted the potato in his garden at London about 1590; and that it succeeded there as well as in its native soil, Virginia, whence he had received it. Potatoes were at first cultivated by a very few, and were looked upon as a great delicacy. In a manuscript account of the household expenses of Queen Anne, wife of James I., who died in 1618, and which is supposed to have been written in 1613, the purchase of a very small quantity of potatoes is mentioned at the price of 2s. a pound. The Royal Society, in 1663, recommended the extension of their cultivation, as a means of preventing famine. Previously, however, to 1684, they were raised only in the gardens of the nobility and gentry; but in that year they were planted, for the first time, in the open fields in Lancashire, — a county in which they have long been very extensively cultivated.

Potatoes, it is commonly thought, were not introduced into Ireland till 1610, when a small quantity was sent by Sir Walter Raleigh to be planted in a garden in his estate in the vicinity of Youghal. Their cultivation extended far more rapidly than in England; and have long furnished from  $\frac{1}{3}$  to  $\frac{1}{2}$  of the entire food of the people of Ireland!

Potatoes were not raised in Scotland, except in gardens, till 1728, when they were planted in the open fields by a person of the name of Prentice, a day labourer at Kilsyth, who died at Edinburgh in 1792.

The extension of the potato cultivation has been particularly rapid during the last 40 years. The quantity that is now raised in Scotland is supposed to be from 10 to 12 times as great as the quantity raised in it at the end of the American war; and though the increase in England has not been nearly so great as in Scotland, it has been greater than during any previous period of equal duration. The increase on the Continent has been similar. Potatoes are now very largely cultivated in France, Italy, and Germany; and, with the exception of the Irish, the Swiss have become their greatest consumers. They were introduced into India some 60 or 70 years ago; and are now successfully cultivated in Bengal, and have been introduced into the Madras provinces, Java, the Philippines, and China. But the common potato does not thrive within the tropics unless it be raised at an elevation of 3,000 or 4,000 feet above the level of the sea, so that it can never come into very general use in these regions. This, however, is not the case with the sweet potato, which has also been introduced into tropical Asia; and with such success, that it already forms a considerable portion of the food of the people of Java, and some other countries. So rapid an extension of the taste for, and the cultivation of, an exotic, has no parallel in the history of industry; it has had, and will continue to have, the most powerful influence on the condition of mankind. — (For further details with respect to the history of the potato, see *Sir F. M. Eden on the State of the Poor*, vol. i. p. 508.; *Humboldt, Essai sur la Nouvelle Espagne*, tome iii. pp. 460—465. 2d ed.; *Sir Joseph Banks on the Introduction of the Potato*; *Phillips's History of Cultivated Vegetables*, vol. ii. art. *Potato*.)

2. *Influence of the Cultivation of the Potato on the Number and Condition of the People.* — There is a considerable discrepancy in the statements of the best authors as to the number of individuals that might be supported on an acre of land planted with potatoes, as compared with those that might be supported on an acre sown with wheat; some stating the proportion as high as *six to one*, and others at only *two to one*. According to Mr. Arthur Young, 1 lb. of wheat is about equal in nutritive power to 5 lbs. of potatoes. But Mr. Newenham, who has carefully investigated this subject, states that "3 lbs. of good mealy potatoes are, undoubtedly, more than equivalent to 1 lb. of bread," — (*Newenham on the Population of Ireland*, p. 340.); and his estimate is rather above Mr. Wakefield's. Supposing, however, that 1 lb. weight of wheat is fully equal to *four* pounds of potatoes, still the difference in favour of the superior quantity of food derived from a given quantity of land planted with the latter is very great. According to Mr. Young, the average produce of potatoes in Ireland may be taken at 82 barrels the Irish acre; which, at 20 stone the barrel, is equal to 22,960 lbs.; and this being divided by *four*, to bring it to the same standard, in point of nutritive power, as wheat, gives 5,740 lbs. Mr. Young further estimates the average produce of wheat, by the Irish acre, at 4 quarters; which, supposing the quarter to weigh 480 lbs., gives in all 1,920 lbs., or about  $\frac{1}{3}$  part of the solid nourishment afforded by an acre of potatoes. — (*Tour in Ireland*, Appen. pp. 12. 24. &c. 4to ed.) This estimate must, however, be somewhat modified when applied to Great Britain; the soil of which, while it is better adapted to the growth of wheat, is generally supposed not to be quite so suitable for the potato as that of Ireland. But it notwithstanding admits of demonstration, that even here, "an

acre of potatoes will feed double the number of individuals that can be fed from an acre of wheat." — (*General Report of Scotland*, vol. i. p. 571.)

It is clear, therefore, on the most moderate estimate, that the population of a potato-feeding country may become, *other things being about equal*, from 2 to 3 times as dense as it could have been, had the inhabitants fed wholly on corn. But it is exceedingly doubtful whether an increase of population, brought about by a substitution of the potato for wheat, be desirable. Its use as a subordinate or subsidiary species of food is attended with the best effects — producing both an increase of comfort and security; but there are certain circumstances inseparable from it, which would seem to oppose the most formidable obstacles to its advantageous use as a *prime* article of subsistence. The discussion of this subject can hardly be said properly to belong to a work of this sort; but its importance may, perhaps, excuse us for making a few observations with respect to it.

It is admitted on all hands, that the rate of wages is principally determined by the species of food made use of in a country. Now, as potatoes form that species which is produced at the very least expense, it may be fairly presumed, on general grounds, that wages will be reduced to a minimum wherever the labouring classes are mainly dependent on potatoes; and the example of Ireland shows that this conclusion is as consistent with fact as with principle. It is clear, however, that when the crop of potatoes happens to be deficient in a country thus situated, the condition of its inhabitants must be in the last degree unfortunate. During a period of scarcity, men cannot go from a low to a high level: if they would elude its pressure, they must leave the dearer and resort to cheaper species of food. But to those who subsist on potatoes this is not possible; they have already reached the lowest point in the descending scale. Their wages being determined by the price of the least expensive sort of food, they cannot, when it fails, buy that which is dearer; so that it is hardly possible for them to avoid falling a sacrifice to absolute want. The history of Ireland abounds, unfortunately, in examples of this sort. Nothing is more common than to see the price of potatoes in Dublin, Limerick, &c. rise, because of a scarcity, to 5 or 6 times their ordinary price, and the people to be involved in the extreme of suffering; and yet it rarely happens, upon such occasions, that the price of corn is materially affected, or that any less quantity than usual is exported to England.

It may be said, perhaps, that, had potatoes not been introduced, wheat, or barley, or oats, would have been the lowest species of food; and that, whenever they happened to fail, the population would have been as destitute as if they had been subsisting on potatoes. It must, however, be observed, that the proportion which the price of wheat, or any species of grain, bears to the price of butcher's meat, tea, beer, &c. is always decidedly greater than the proportion which the price of potatoes bears to these articles: and it therefore follows, that a people, who have adopted wheat, or any species of corn, for the principal part of their food, are much better able to make occasional purchases of butcher's meat, &c.; and will, consequently, be more likely to have their habits elevated, so as to consider the consumption of a certain quantity of animal food, &c. as indispensable to existence. And hence it appears reasonable to conclude, that a people who chiefly subsist on corn would, in most cases, subsist partially on butcher's meat, and would enjoy a greater or less quantity of other articles; so that it would be possible for them, in a period of scarcity, to make such retrenchments as would enable them to elude the severity of its pressure.

But, though the population in corn-feeding countries were dependent on the cheapest species of grain, not for a part only, but for the whole, of their food, their situation would, notwithstanding, be less hazardous than that of a population subsisting wholly on potatoes.

In the *first* place, owing to the impossibility, as to all practical purposes at least, of preserving potatoes, the surplus produce of a luxuriant crop cannot be stored up or reserved as a stock to meet any subsequent scarcity. The whole crop must necessarily be exhausted in a single year; so that, when the inhabitants have the misfortune to be overtaken by a scarcity, its pressure cannot be alleviated, as is almost uniformly the case in corn-feeding countries, by bringing the reserves of former harvests to market. Every year is thus left to provide subsistence for itself. When, on the one hand, the crop is luxuriant, the surplus is of comparatively little use, and is wasted unprofitably; and when, on the other hand, it is deficient, famine and disease necessarily prevail.

In the *second* place, the general opinion seems to be, that the variations in the quantities of produce obtained from land planted with potatoes, are greater than the variations in the quantities of produce obtained from land on which wheat, or any other species of grain, is raised.

And *lastly*, owing to the great bulk and weight of potatoes, and the difficulty of preserving them on shipboard, the expense of conveying them from one country to another is so very great, that a scarcity can never be materially relieved by importing them from

abroad. In consequence, those who chiefly depend on potatoes are practically excluded from participating in the benevolent provision made by nature for equalising the variations in the harvests of particular countries by means of commerce, and are thrown almost wholly on their own resources.

We should, therefore, be warranted in concluding, even though we were not possessed of any direct evidence on the subject, from the circumstance of the potato being a crop that cannot be kept on hand, from its natural fickleness, and from the incapacity of importing it when deficient, or of exporting it when in excess, that the oscillations in its price must be greater than in the price of wheat; and such, in point of fact, is the case. The oscillation in wheat is thought great when its price is doubled; but in a scarce year the potato is not unfrequently *six* times as dear as in a plentiful one! — (*Minutes of Evidence taken before the Agricultural Committee of 1821*, p. 212.) And the comparatively frequent recurrence of scarcities in Ireland, and the destitution and misery in which they involve the population, afford but too convincing proofs of the accuracy of what has now been stated.

It is, therefore, of the utmost consequence to the well-being of every people, and to their protection in years of scarcity, that they should not subsist principally on the potato. In this country, the pressure of a scarcity is evaded by resorting to inferior species of food, such as potatoes, and a lower standard of comfort; but if our people were habitually fed on the potato, this would be impracticable. The chances of famine would thus be vastly increased; while, owing to the low value of the potato as compared with most other things, the labourers would have less chance of preserving or acquiring a taste for animal food, or other necessaries and luxuries; and, consequently, of changing, at any future period, their actual condition for a better.

It is not easy to form any very accurate estimate of the profit and loss attending the cultivation of potatoes to the farmer, as compared with other crops. This is a point as to which the statements of those best qualified to give an opinion differ very considerably. Mr. Loudon says, "they require a great deal of manure from the farmer; while, generally speaking, little is returned by them; they are a bulky, unhandy article, troublesome in the lifting and carrying processes, and interfering with the seed season of wheat, — the most important one to the farmer. After all, from particular circumstances, they cannot be vended unless when raised in the vicinity of large towns; hence they are in most respects an unprofitable article to the agriculturist. To him, the real criterion is the profit which potatoes will return in feeding beasts; and here we apprehend the result will be altogether in favour of turnips and *rutabaga*, as the most profitable articles for that purpose."

It seems difficult to reconcile this statement with the rapid progress of the potato cultivation: but those who assent to what has been previously advanced with respect to the mischievous consequences that arise from the mass of the population becoming dependent on the potato as a principal article of food, will not regret though it should turn out to be accurate.

Dr. Colquhoun estimated the entire value of the potatoes annually consumed in Great Britain and Ireland at the end of the late war at *sixteen millions* sterling. But it is needless to say that there are no materials by which to form an estimate of this sort with any pretensions to accuracy. The one in question has been suspected, like most of those put forth by the same learned person, of exaggeration: and we incline to think that, had he estimated the value of the yearly produce of potatoes in the empire at *twelve millions*, he would have been nearer the mark. But on a point of this sort it is not possible to speak with any thing like confidence.

**POUND**, the name given to a weight used as a standard to determine the gravity and quantity of bodies. — (See **WEIGHTS AND MEASURES**.)

**POUND**, a money of account, = 20s.

**POWDER, GUN**. See **GUNPOWDER**.

**PRECIOUS METALS**, a designation frequently applied to gold and silver. We have given, under the articles **GOLD**, and **SILVER**, a short account of each metal; and we now propose laying before the reader a few details with respect to their supply and consumption.

To enter fully into this interesting and difficult subject would require a long essay, or rather a large volume. Mr. Jacob has recently published an "Historical Inquiry into the Introduction and Consumption of the Precious Metals," in which he takes up the subject at the earliest period, and continues it to the present day. This work, though neither so complete nor satisfactory as might have been expected, contains a good deal of valuable information, and deserves the attention of all who take an interest in such inquiries. We confess, however, that several of the learned author's statements and conclusions seem to us to be not a little wide of the mark. We shall notice one or two of them in the course of this article.

1. *Supply of the Precious Metals*. — Since the discovery of America, the far greater

part of the supplies of gold and silver have been derived from that continent. Previously to the publication of Humboldt's great work, *Essai Politique sur la Nouvelle Espagne*, several estimates, some of them framed by individuals of great intelligence, were in circulation, of the quantities of gold and silver imported from America. They, however, differed widely from each other, and were all framed from comparatively limited sources of information.\* But these have been wholly superseded by the more extensive and laborious investigations of M. Humboldt. This illustrious traveller, besides being acquainted with all that had been written on the subject, and having ready access to official sources of information unknown to the writers already alluded to, was well versed in the theory and practice of mining, and critically examined several of the most celebrated mines. He was, therefore, incomparably better qualified for forming correct conclusions as to the past and present productiveness of the mines, than any of those who had hitherto speculated on the subject. His statements have, indeed, been accused of exaggeration; and we incline to think that there are grounds for believing that this charge is, in some measure, well founded, particularly as respects the accounts of the profits made by mining, and of the extent to which the supplies of the precious metals may be increased. But this criticism applies, if at all, in a very inferior degree, to the accounts M. Humboldt has given of the total produce of the mines, and the exports to Europe. And, making every allowance for the imperfection inseparable from such investigations, it is still true that the statements in question, and the inquiries on which they are founded, are among the most valuable contributions that have ever been made to statistical science.

According to M. Humboldt, the supplies of the precious metals derived from America have been as follows:—

| From 1492 to 1500 |   | Dollars a Year at an Average. | From 1600 to 1700 |   | Dollars a Year at an Average. |
|-------------------|---|-------------------------------|-------------------|---|-------------------------------|
| — 1500—1545       | - | 250,000                       | — 1700—1750       | - | 16,000,000                    |
| — 1545—1600       | - | 3,000,000                     | — 1750—1803       | - | 22,500,000                    |
|                   |   | 11,000,000                    |                   |   | 35,300,000                    |

(*Essai sur la Nouvelle Espagne*, tome iii. p. 428. 2d ed.)

The following is M. Humboldt's estimate of the annual produce of the mines of the New World, at the beginning of the present century:—

Annual Produce of the Mines of America at the Commencement of the Nineteenth Century

| Political Divisions.         | Gold.             |         | Silver.           |         | Value of the Gold and Silver in Dollars. |
|------------------------------|-------------------|---------|-------------------|---------|--|
|                              | Mares of Castile. | Kilogs. | Mares of Castile. | Kilogs. |  |
| Vice-royalty of New Spain    | 7,000             | 1,609   | 2,338,230         | 537,512 | 23,000,000                               |
| Vice-royalty of Peru         | 3,400             | 782     | 611,090           | 140,478 | 6,240,000                                |
| Captain-generalship of Chili | 12,212            | 2,807   | 29,700            | 6,827   | 2,060,000                                |
| Vice-royalty of Buenos Ayres | 2,200             | 506     | 481,850           | 110,764 | 4,850,000                                |
| Vice-royalty of New Granada  | 20,505            | 4,714   | -                 | -       | 2,990,000                                |
| Brazil                       | 29,900            | 6,873   | -                 | -       | 4,360,000                                |
| Total                        | 75,217            | 17,291  | 3,460,840         | 795,581 | 43,500,000                               |

Taking the dollar at 4s. 3d., this would give 9,243,750*l.* as the total annual produce of the American mines. M. Humboldt further estimated the annual produce of the European mines of Hungary, Saxony, &c., and those of Northern Asia, at the same period, at about 1,000,000*l.* more.

The quantity of gold produced in America at the beginning of the century, was to the quantity of silver as 1 to 46; in Europe, the proportions were as 1 to 15. Latterly, the quantity of gold and silver were then in the proportion of 15 or 15½ to 1. Latterly, the quantity of gold produced has increased, as compared with the quantity of silver.

From 1800 to 1810, the produce of the American mines was considerably increased; but in the last-mentioned year the contest began, which terminated in the dissolution of the connection between Spain and the South American colonies. The convulsions and insecurity arising out of this struggle; the proscription of the old Spanish families, to whom the mines principally belonged, who repaired, with the wrecks of their fortunes, some to Cuba, some to Spain, and some to Bordeaux and the south of France; have caused the abandonment of several of the mines, and an extraordinary falling off in the amount of their produce. There are no means of accurately estimating the precise extent

\* Humboldt has brought these estimates together as follows:—

| Authors.  | Epochs.   | Dollars.      | Authors.   | Epochs.   | Dollars.      |
|-----------|-----------|---------------|--|-----------|---------------|
| Ustariz   | 1492—1724 | 3,536,000,000 | Gerboux  | 1724—1800 | 1,600,000,000 |
| Solorzano | 1492—1628 | 1,500,000,000 | The Author of the <i>Recherches sur le Commerce, Amst.</i> | 1492—1775 | 5,072,000,000 |
| Moncada   | 1492—1595 | 2,000,000,000 |  |           |               |
| Navarete  | 1519—1617 | 1,536,000,000 | 1779.  |           |               |
| Raynal    | 1492—1780 | 5,154,000,000 |  |           |               |
| Robertson | 1492—1775 | 8,800,000,000 |  |           |               |
| Necker    | 1763—1777 | 304,000,000   |  |           |               |

of this decline; but according to Mr. Jacob, who collected and compared all the existing information on the subject, the total average produce of the American mines, inclusive of Brazil, during the 20 years ending with 1829, may be estimated at 4,036,838*l.* a year; being less considerably than  $\frac{1}{2}$  of their produce at the beginning of the century! — (*Jacob*, vol. ii. p. 267.)

Since the publication of Mr. Jacob's work, some further light has been thrown on this subject, by the publication of returns obtained by the British consuls in South America, of the produce of the mines at different periods. They differ considerably from those given by Mr. Jacob. The following is an abstract of their results, comparing the 20 years ending with 1809 with the 20 years ending with 1829:—

| Mines.           | 1790 to 1809.          |                          |                          | 1810 to 1829.          |                         |                         |

|                  |                        |                          | <i>L.</i>                | <i>L.</i>              | <i>L.</i>               | <i>L.</i>               |
|                  |                        |                          |                          | 9,706,875              | 55,665,740              | 65,372,615              |

There are so many sources of error attached to all investigations of this sort, that these results, though deduced from what may be reckoned good authority, cannot be altogether depended upon. The consular returns contain no account of the produce of the Peruvian mines, except in so far as they come under the head of Buenos Ayres; and in this respect they differ very widely from the statements given by Mr. Jacob, who estimates the produce of the mines of Peru and Buenos Ayres, during the 20 years ending with 1829, at about 18,500,000*l.*! We also incline to think that the mines and washings in Colombia are not quite so neglected as they are said to be by the consul. It will be observed, too, that the above account does not include the produce of the Brazilian mines. They are supposed to have yielded, since 1810, about 1,500,000 dollars a year; but this is not more than adequate for the wants of the country. The produce of the Russian mines was comparatively trifling till 1810; but it has since increased, and is continuing to increase with considerable rapidity.

Adding to the produce of the American, that of the Russian mines, and separating the gold from the silver, their total produce, according to the consular returns, during each of the 4 decennial periods ending with 1829, has been about—

|                       | Gold.                  | Silver.                 | Both.                   |
|-----------------------|------------------------|-------------------------|-------------------------|
| Ten years ending 1799 | <i>L.</i><br>3,235,000 | <i>L.</i><br>59,200,000 | <i>L.</i><br>62,435,000 |
| 1809                  | 4,180,000              | 55,357,000              | 59,537,000              |
| 1819                  | 5,955,000              | 29,955,000              | 35,908,000              |
| 1829                  | 5,732,000              | 25,712,000              | 31,444,000              |

This gives 3,146,000*l.* for the average annual supply of the American and Russian mines during the 10 years ending with 1829. But the returns show that the produce of the Mexican mines had begun materially to increase in the latter years of this period; and we have to add to the above the produce of the Hungarian and Saxon mines. Hence, allowing for the increase that has taken place since 1829 in the productiveness of the Mexican and South American mines, exclusive of Brazil, and adding to their produce that of the Russian and other European mines, we may safely estimate (assuming the consuls not to have under-rated the American returns) the present annual supply of gold and silver from these sources at considerably more than 4,000,000*l.*

Exclusive of the sources now mentioned, the United States have recently begun to afford considerable quantities of gold. It was first discovered in North Carolina, in 1804; and from that period till 1829, about 109,000 dollars had been found. It has since been discovered in other States. The following Table exhibits the value of the gold annually produced in the United States since 1829. — (*American Almanac* for 1834.)

| States.        | 1829.                    | 1830.   | 1831.   | 1832.   |
|----------------|--------------------------|---------|---------|---------|
| Virginia       | <i>Dollars.</i><br>2,500 | 24,000  | 26,000  | 34,000  |
| North Carolina | -                        | -       | 294,000 | 458,000 |
| South Carolina | 134,000                  | 204,000 | 22,000  | 45,000  |
| Georgia        | 3,500                    | 26,000  | 176,000 | 140,000 |
| Alabama        | -                        | 212,000 | 1,000   | -       |
| Tennessee      | -                        | -       | 1,000   | 1,000   |
| Total          | 140,000                  | 466,000 | 520,000 | 678,000 |

This Table shows a considerable increase; the produce in 1832 being above 135,000*l.* It is principally obtained by washing the soil in the valleys. Taking this new supply into account, and including, as was done by M. Humboldt, the produce of

the Brazilian mines; and further adding 500,000*l.* to the sums given in the consular returns, to cover the deficiencies which they certainly involve \* ; we may safely estimate the entire annual produce of the American, European, and Russo-Asiatic mines, as amounting, at this moment, to about 6,000,000*l.* a year; being 6-10ths of their annual produce when greatest.

2. *Consumption of the Precious Metals.* — Gold and silver are supplied either to serve as coin, or are made use of in the arts. There are no means whatever by which to discover the proportion in which they are applied, at any given period, to these purposes; and the proportion is perpetually varying with the varying circumstances of each country; as, for example, with the greater or less abundance of paper money, and the degree in which the use of coins is saved by the various devices resorted to by means of banking and otherwise for economising currency, the greater or less wealth of the inhabitants, the fashion as to plate, the feeling of security at the moment, and a thousand other circumstances, — all of which are liable to great and sometimes sudden changes.

According to Mr. Jacob, the value of the precious metals annually applied to ornamental and luxurious purposes in Europe, may be estimated as follows; viz. Great Britain, 2,437,221*l.*; France, 1,200,000*l.*; Switzerland, 350,000*l.*; remainder of Europe, 1,665,499*l.*; making in all, 5,612,711*l.* And adding to this the sums directly applied to the same purposes in America, the whole will be about 5,900,000*l.*

The data upon which this estimate has been founded, are in the last degree vague and unsatisfactory. It can hardly, indeed, be looked upon as any thing better than a mere guess; and as such, we do not think that it is a very happy one. M. Chabrol (whose researches are far more worthy of confidence than those of M. Chaptal, to which Mr. Jacob refers) estimates the consumption of gold and silver in the arts at Paris at 14,552,000 francs a year — (*Récherches Statistiques sur la Ville de Paris*, 1823, Tah. No. 85.); which corresponds with the elaborate estimate of M. Benoiston de Châteauneuf — (*Récherches sur les Consommations de Paris en 1817*, 2de partie, p. 78.). Both these authorities agree that the consumption of the precious metals in the arts at Paris is double that of the rest of France; so that we have 21,828,000 francs, or 866,190*l.*, for the consumption of the whole kingdom, which is 333,810*l.* a year under Mr. Jacob's estimate.

We have been assured, by those who have good means of forming a correct opinion upon such a point, that the quantity assigned by Mr. Jacob for the consumption of Great Britain is over-rated in about the same proportion as the consumption of France, or about  $\frac{1}{4}$  part. There has, no doubt, been a considerable increase of late years in the consumption of plate and gilt articles; but it would require far better evidence than any hitherto laid before the public, to warrant the conclusion that so large a sum as 2,457,000*l.* is appropriated to such purposes.

The consumption of Switzerland, as set down by Mr. Jacob, is probably not far from accurate. But the sum assigned for the aggregate consumption of the rest of Europe seems to be quite as much exaggerated as that allowed for France and England.

According to this view of the matter, the consumption will be, — Great Britain, 1,842,916*l.*; France, 866,190*l.*; Switzerland, 350,000*l.*; rest of Europe, 1,204,118*l.*; in all, 4,263,224*l.* To this must be added 300,000*l.* for the consumption of America; making the entire consumption 4,563,224*l.*

Probably this valuation is still too high. According to M. Humboldt (*Nouvelle Espagne*, 2d edit. tome iii. p. 464.), the total consumption of the precious metals in Europe, for other purposes than those of coin, amounts to only 87,182,800 francs, equal, at the exchange of 25*·*20, to 3,459,714*l.*; and adding to this 300,000*l.* for the consumption of America, the grand total will be, in round numbers, 3,760,000*l.*; being 803,000*l.* under our estimate, and no less than 2,140,000*l.* under that of Mr. Jacob!

But a portion of the gold and silver annually made use of in the arts is derived from the fusion of old plate, the burning of lace, picture frames, &c. Here, however, we have to lament the impossibility of ascertaining the proportion the supply from this source bears to the total quantity wrought up. Mr. Jacob estimates it at only  $\frac{1}{2}$ th part, or 2 $\frac{1}{2}$  per cent.; but so small a sum seems to be quite out of the question. Most part of the precious metals employed in plating, gilding, &c. is certainly destroyed; but the quantity of metal so made use of is admitted by every one to be decidedly less than the quantity used in the manufacture of plate, watch-cases, and other articles of that description. And these, when they either become unfashionable, or are broken or injured, are, for the most part, sent to the melting pot. According to the statement of Necker, quoted and sanctioned by Humboldt, a *half* of the gold and silver used in France by goldsmiths and others in the arts, is supposed to be obtained from the fusion of old plate, &c. — (*Nouvelle Espagne*, tome iii. p. 467.)

But, notwithstanding the high authority by which this estimate is supported, we believe that it is nearly as much above the mark as Mr. Jacob's is certainly below it. Assuming, therefore, that, at a medium, 20 per cent. or  $\frac{1}{5}$ th part of the precious

\* Even with this addition, their produce is materially under the sum mentioned by Mr. Jacob.

metals annually made use of in the arts is obtained from the fusion of old plate, we shall have, by deducting this proportion from the 4,563,000*l.* applied to the arts in Europe and America, 3,550,000*l.* as the total annual appropriation of the new gold and silver dug from the mines to such purposes, leaving about 2,000,000*l.* a year to be manufactured into coin.

It is not much more easy to determine the consumption of the precious metals when manufactured into coin, than when in plate. Mr. Jacob has entered into some curious details (vol. ii. c. 28.) to determine the abrasion or loss of coins from wear, which he estimates at  $\frac{1}{800}$ th part a year for gold, and  $\frac{1}{200}$ th part for silver coins. This, however, does not give the total wear and tear of the coins. To determine the latter, the quantities lost by fire, shipwrecks, and other accidents, must be taken into account. The loss from these sources can only be guessed at; but adding it to the loss by abrasion, perhaps we shall not be far wrong in estimating the whole at 1 per cent.

It is singular that, in estimating the consumption of gold and silver, Mr. Jacob should not have made the slightest allusion to the practice which has uniformly prevailed in all countries harassed by intestine commotions, or exposed to foreign invasion, of burying treasure in the earth. Of the hoards so deposited, a very considerable proportion has been altogether lost; and there can be no doubt that this has been one of the principal means by which the stock of the precious metals has been kept down to its present level. Every one is aware that, during the middle ages, *treasure trove*, or money dug from the ground by chance finders, belonged to the Crown, and formed no inconsiderable part of the royal revenue of this and other countries. The practice has always prevailed to a very great extent in the East. — (*Bernier, Voyage de Mogol*, Amst. 1710, tome i. p. 209.; *Serafton on the Government of Hindostan*, p. 16. &c.) But it is not confined to that quarter. Wherever property is insecure, it is invariably resorted to. Mr. Wakefield tells us that it is common in Ireland. — (*Account of Ireland*, vol. i. p. 593.) It has always prevailed to a considerable extent in Russia and France; and in the latter, during the revolutionary anarchy, immense sums were buried, of which it is abundantly certain a large proportion will never be resuscitated. The wars and convulsions by which Europe was desolated for more than 20 years extended the practice to all parts of the Continent; withdrawing in this way from circulation a very considerable part of the increased produce of the mines. — (*Storch, Economie Politique*, tome i. p. 221. Paris, 1823.)

3. *Exportation of the Precious Metals to the East.* — It must be well known to all our readers, that from the remotest era down to a comparatively late period bullion has always formed one of the principal and most advantageous articles of export to the East. Humboldt estimated that, of the entire produce of the American mines at the beginning of this century, amounting, as already seen, to 43,500,000 dollars, no less than 25,500,000 were sent to Asia, — 17,500,000 by the Cape of Good Hope, 4,000,000 by the Levant, and 4,000,000 through the Russian frontier. — (*Nouvelle Espagne*, tome iii. p. 443.) Latterly, however, this immense drain has not only entirely ceased; but the current has, in fact, begun to set strongly in the opposite direction. Thus it appears that the total imports of gold and silver from Europe and North and South America into Bengal, Madras, and Bombay, during the 3 years ending with 1830–31, amounted to 479,388*l.*; whereas the total exports of the precious metals from these 3 presidencies to Europe and America during the same 3 years were 1,119,973*l.*, being an excess of 640,585*l.*; so that India, instead of importing, as formerly, very large quantities of bullion from the Western World, supplied, during the period in question, about 213,000*l.* a year to its markets. — (*Parl. Paper*, No. 390. Sess. 1833.) The same is the case with China. During the year ended the 31st of March, 1832, silver was exported from Canton to England to the amount of 1,976,930 dollars, or 390,000*l.*, besides about as much more exported to India! — (*See antè*, p. 237.) A considerable part of this large export consists of native silver, of which there are mines in several provinces. China has also mines of gold; and in some late years her exports of that metal have been considerable: she is, however, an importer as well as an exporter of gold, having for a lengthened period drawn considerable supplies of that metal from Borneo, Celebes, and the Malay peninsula. It appears, too, that the efflux of bullion from Russia to China has ceased; and that there, also, the current is setting the opposite way. — (*Jacob*, vol. ii. p. 320.) And if there be any sums still exported by way of the Levant, which is doubtful, they are certainly quite inconsiderable.

4. *Influence of the diminished Productiveness of the Mines on Prices.* — It has been customary in this country to ascribe almost the whole fall that has taken place in the price of most commodities since the peace, to the diminished supply of bullion from the mines. But we doubt whether this circumstance has not been fully counterbalanced by others, and whether it has had any influence in the way now mentioned. The cessation of the drain to the East, even admitting that M. Humboldt has somewhat over-rated its amount, would of itself have gone far to counteract the decreased pro-

ductiveness of the mines; but we have just seen that it has not merely ceased, but that we are, in fact, deriving considerable supplies from that very quarter. In addition to this, the greater security and tranquillity enjoyed on the Continent since the peace, has not only checked that burying of money, formerly so prevalent, but has caused the bringing to light of a good many of the subterranean hoards. The institution of savings-banks, now so common every where, has also, no doubt, tended to prevent hoarding, and to bring a good deal of coin into circulation, that would otherwise have been locked up. These circumstances, coupled with others that might be mentioned, such as the cessation of the demand for military chests, the greater employment of bills in mercantile transactions, &c., afford the best grounds for doubting whether the quantity of the precious metals annually applicable to the purposes of circulation be not as great at present, as in 1809 or 1810. It is further to be observed, that the falling off in the produce of the mines has been in silver only; and that the supply of gold, instead of being diminished during the last 10 years, has been *very materially increased*: and as gold is the standard of our currency, it is obviously false to affirm that its value has been increased from its being less abundant than formerly.\* It is contended, indeed, that in estimating the value of the precious metals, we cannot separate gold and silver; and that the fall that has taken place in the prices of *all* commodities since 1815, proves that the value of money has sustained a corresponding advance. But the value of gold is in no way dependent upon, or connected with, the value of silver. The exchangeable worth of each metal is wholly determined by the peculiar conditions under which it is supplied; and the circumstance of gold falling in value when silver is rising, is no more to be wondered at, than that lead should fall when iron rises, or conversely. Neither is it true that the fall in the value of commodities since 1815 has been universal. We admit it has been very general; but we venture to affirm that there is not, without any exception whatever, a single commodity that has fallen in price since 1814, the fall of which may not be satisfactorily accounted for without reference to the supply of gold and silver. — (See *antè*, p. 75.) Multiplied proofs of what is now stated, will be found in various articles throughout this work. And we have little doubt that those who investigate the matter with any degree of care, will agree with us in thinking, that, even without distinguishing between gold and silver, were the influence of the decreased productiveness of the mines on prices estimated at from 3 to 5 per cent., it would be very decidedly beyond the mark. We believe its influence has been hardly perceptible.

5. *Probable future Supply of Gold and Silver.* — Nothing but conjectural statements can be made as to the probable future supply of the precious metals. On the whole, however, we should think that a very considerable increase may be fairly anticipated. The anarchy in which the new South American States have hitherto been involved, will come to a close; and, with the increase of population and capital, renewed attention will, doubtless, be paid to the mines. It is reasonable also, we think, to anticipate that the supplies from the Russian mines will continue to increase.

#### PREMIUM. See INSURANCE.

PRICES. By the price of a commodity is meant its value estimated in money, or, simply, the quantity of money for which it will exchange. The price of a commodity rises when it fetches more, and falls when it fetches less money.

1. *Price of freely produced Commodities.* — The exchangeable value of commodities — that is, their power of exchanging for or buying other commodities — depends, at any given period, partly on the comparative facility of their production, and partly on the relation of the supply and demand. If any 2 or more commodities respectively required the same outlay of capital and labour to bring them to market, and if the supply of each were adjusted exactly according to the effectual demand — that is, were they all in sufficient abundance, and no more, to supply the wants of those able and willing to pay the outlay upon them, and the ordinary rate of profit at the time — they would each fetch the same price, or exchange for the same quantity of any other commodity. But if any single commodity should happen to require less or more capital and labour for its production, while the quantity required to produce the others continued stationary, its value, as compared with them, would, in the first case, fall, and in the second, rise; and, supposing the cost of its production not to vary, its value might be increased by a falling off in the supply, or by an increase of demand, and conversely.

But it is of importance to bear in mind, that all variations of price arising from any disproportion in the supply and demand of such commodities as may be *freely produced in indefinite quantities*, are *temporary* only; while those that are occasioned by changes in the cost of their production are *permanent*, at least as much so as the cause in which they originate. A general mourning occasions a transient rise in the price of black cloth: but supposing that the fashion of wearing black were to continue, its price would not

permanently vary; for those who previously manufactured blue and brown cloths, &c. would henceforth manufacture only black cloth; and the supply being in this way increased to the same extent as the demand, the price would settle at its old level. Hence the importance of distinguishing between a variation of price originating in a change of fashion, or other accidental circumstance — such, for example, as a deficient harvest — and a variation occasioned by some change in the cost of production. In the former case, prices will, at no distant period, revert to their old level; in the latter, the variation will be lasting.

When the *price* of a freely produced commodity rises or falls, such variation may evidently be occasioned either by something affecting its value, or by something affecting the value of money. But when the generality of commodities rise or fall, the fair presumption is that the change is not in them, but in the money with which they are compared. This conclusion does not, however, apply in all cases; and we believe that most part of that fall in the price of commodities, which has taken place since the peace, and which has been so generally ascribed to a rise in the value of money, occasioned by a decline in the productiveness of the mines, has been caused by the increased productiveness of industry, arising from the abolition of oppressive restraints on commerce, the opening of new and more abundant sources of supply, and the discovery of new means, and improved methods of production. — (See PRECIOUS METALS.)

2. *Price of monopolised Commodities.* — Exclusive, however, of the commodities now alluded to, there is a considerable class, whose producers or holders enjoy either an *absolute* or a *partial* monopoly of the supply. When such is the case, prices depend entirely or principally on the proportion between the supply and demand, and are not liable to be influenced, or only in a secondary degree, by changes in the cost of production. Antique statues and gems; the pictures of the great masters; wines of a peculiar flavour, produced in small quantities, in particular situations; and a few other articles; exist under what may be called absolute monopolies; — their supply cannot be increased; and their price must, therefore, depend entirely on the competition of those who may wish to buy them, without being in the slightest degree influenced by the cost of their production.

Monopolies are sometimes established by law; as when the power to supply the market with a particular article is made over to one individual or society of individuals, without any limitation of the price at which it may be sold; which, of course, enables those possessed of the monopoly to exact the highest price for it that the competition of the buyers will afford, though such price may exceed the cost of production in any conceivable degree. Monopolies of this sort used to be common in England, particularly in the reign of Elizabeth: but they were finally abolished by the famous act of the 21 Jac. 1. c. 3. — an act which, by establishing the freedom of competition in all businesses carried on at home, has been productive of the greatest advantage. — (See MONOPOLY.)

The corn laws establish a partial monopoly of the supply of Great Britain with corn in favour of the agriculturists; but, as competition is carried to as great an extent in agriculture as in any other business, this monopoly does not enable them to obtain a higher price for their produce than is sufficient to pay the expenses of its production; though, owing to the peculiar circumstances under which this country is placed, this price is higher than the price in the surrounding countries. Hence it results that the monopoly is injurious to the public, without being of any advantage to those engaged in the business of agriculture. Neither, indeed, can it be truly said to be advantageous to the landlords. — (See *antè*, p. 414.)

The rights conveyed by patents sometimes establish a valuable monopoly; for they enable the inventors of improved methods of production to maintain, during the continuance of the patent, the price of the article at a level which may be much higher than is required to afford them the ordinary rate of profit. This advantage, however, by stimulating invention, and exciting to new discoveries, of which it is the natural and appropriate reward, instead of being injurious, is beneficial to the public. — (See PATENTS.)

There are also partial monopolies, depending upon situation, connection, fashion, &c. These, and other inappreciable circumstances, sometimes occasion a difference of 30 per cent., or more, in the price of the same article in shops not very distant from each other.

Generally speaking, the supply of monopolised commodities is less liable to vary than those that are freely produced; and their prices are commonly more steady. But there are various exceptions to this rule, and of these the corn monopoly is one. The great variations in the harvests of particular countries, and their average equality throughout the world, exposes a nation which shuts foreign corn out of its ports to destructive vicissitudes of price, from which it would enjoy a nearly total exemption were the ports open. — (See *antè*, p. 412.) Sometimes the expiration of a monopoly — a patent, for example — has occasioned a sudden and extraordinary increase of supply, and consequent fall of price; entailing, of course, a serious loss on the holders of large stocks of goods produced under the monopoly.

3. *New Sources of Supply.* — The effects on prices produced by the opening of new markets, or new sources of supply, are familiar to every one. The fall that has taken place in the price of pepper, and of most sorts of commodities brought from the East, since the opening of the trade in 1814, is a conspicuous proof of what is now stated.

4. *Influence of War on Prices.* — The effect of war in obstructing the ordinary channels of commercial intercourse, and occasioning extreme fluctuations in the supply and price of commodities, is well known. In this respect, however, the latter part of the late war is, perhaps, entitled to a pre-eminence. We had then to deal with an enemy who had extended his sway over most part of the Continent; and who endeavoured, by every means in his power, to shut us out of the Continental markets. Mr. Tooke has given, in his elaborate and valuable work on *High and Low Prices*, a variety of details which strikingly illustrate the effect that the regulations then adopted by the belligerent powers had on prices. "Among the means," says Mr. Tooke, "devised by the ingenuity and enterprise of adventurers to elude or overcome the obstacles presented by the decrees of the enemy, one in particular, which was resorted to on an extensive scale, deserves mention, as illustrating in a striking manner the degree in which those obstacles were calculated to increase the cost to the consumer. Several vessels laden with sugar, coffee, tobacco, cotton twist, and other valuable commodities, were despatched from England at very high rates of freight and insurance to Salonica, where the goods were landed, and thence conveyed on mules and horses through Servia and Hungary to Vienna, for the purpose of being distributed over Germany, and, possibly, into France. Thus it might happen that the inhabitants of that part of the Continent most contiguous to this country could not receive their supplies from us, without an expense of conveyance equivalent to what it would be, if they were removed to the distance of a sea voyage twice round the globe, but not subject to fiscal and political regulations." And in consequence of these, and other causes of the same sort, Mr. Tooke mentions that the price of sugar in France, and other parts of the Continent, during the latter years of the war, was as high as 5s. and 6s. a pound; that coffee rose to 7s.; indigo to 18s., and so on.

But the sums charged for freight and insurance were the most extraordinary. Mr. Tooke states, that he has known instances in which the licence, freight, and other charges on account of a vessel of about 100 tons burden, making a voyage from Calais to London and back, have amounted to the almost incredible sum of 50,000l. A ship of which the whole cost and outfit did not amount to 4,000l., earned, during the latter period of the war, a gross freight of 80,000l. on a voyage from Bordeaux to London and back! The freight of indigo from London to the Continent does not at present exceed 1d. a pound; whereas it amounted, at the period referred to, to about 4s. 6d. — (*High and Low Prices*, 2d ed. p. 212.)

5. *Influence of Taxes on Prices.* — It is unnecessary to dilate on a topic so familiar to every one. When a tax is laid on a commodity, its price necessarily rises in a corresponding proportion; for otherwise the producers would not obtain the ordinary rate of profit, and would, of course, withdraw from the business. The rise in the price of several of the articles in the annexed Table, is principally to be ascribed to the increase of taxation.

These statements will probably suffice to give our readers a general idea of the principles which determine the value of commodities. To go deeper into the subject would involve us in discussions that belong to political economy, and are among the most intricate in that science. The influence of speculation on prices must not, however, be passed over in a work of this sort.

6. *Influence of Speculation on Prices.* — It very rarely happens that either the actual supply of any species of produce in extensive demand, or the intensity of that demand, can be exactly measured. Every transaction in which an individual buys produce in order to sell it again, is, in fact, a speculation. The buyer anticipates that the demand for the article he has purchased will be such, at some future period, either more or less distant, that he will be able to dispose of it with a profit; and the success of the speculation depends, it is evident, on the skill with which he has estimated the circumstances that must determine the future price of the commodity. It follows, therefore, that in all highly commercial countries, where merchants are possessed of large capitals, and where they are left to be guided in the use of them by their own discretion and foresight, the prices of commodities will frequently be very much influenced, not merely by the actual occurrence of changes in the accustomed relation of the supply and demand, but by the anticipation of such changes. It is the business of the merchant to acquaint himself with every circumstance affecting the particular description of commodities in which he deals. He endeavours to obtain, by means of an extensive correspondence, the earliest and most authentic information with respect to every thing that may affect their supply or demand, or the cost of their production; and if he learned that the supply of an article had failed, or that, owing to changes of fashion, or to the opening of new channels of commerce, the

demand for it had been increased, he would most likely be disposed to become a buyer, in anticipation of profiting by the rise of price, which, under the circumstances of the case, could hardly fail of taking place; or, if he were a holder of the article, he would refuse to part with it, unless for a higher price than he would previously have accepted. If the intelligence received by the merchant had been of a contrary description — if, for example, he had learned that the article was now produced with greater facility, or that there was a falling off in the demand for it, caused by a change of fashion, or by the shutting up of some of the markets to which it had previously been admitted — he would have acted differently: in this case he would have anticipated a fall of prices, and would either have declined purchasing the article, except at a reduced rate, or have endeavoured to get rid of it, supposing him to be a holder, by offering it at a lower price. In consequence of these operations, the prices of commodities, in different places and periods, are brought comparatively near to equality. All abrupt transitions, from scarcity to abundance, and from abundance to scarcity, are avoided; an excess in one case is made to balance a deficiency in another, and the supply is distributed with a degree of steadiness and regularity that could hardly have been deemed attainable.

It is obvious, from what has now been stated, that those who indiscriminately condemn all sorts of speculative engagements, have never reflected on the circumstances incident to the prosecution of every undertaking. In truth and reality, they are all speculations. Their undertakers must look forward to periods more or less distant; and their success depends entirely on the sagacity with which they have estimated the probability of certain events occurring, and the influence which they have ascribed to them. Speculation is, therefore, really only another name for foresight; and though fortunes have sometimes been made by a lucky hit, the character of a successful speculator is, in the vast majority of instances, due to him only who has skillfully devised the means of effecting the end he had in view, and who has outstripped his competitors in the judgment with which he has looked into futurity, and appreciated the operation of causes producing distant effects. Even in the securest businesses, such as agriculture and manufactures, there is, and must be, a great deal of speculation. An unlooked for change of season frequently disappoints the apparently reasonable expectations of those who undertake the former; while the equally capricious variations of fashion have to be encountered by those engaged in the latter; and each is, besides, liable to be affected by legislative enactments, by new discoveries in the arts, and by an endless variety of circumstances which it is always very difficult, and sometimes quite impossible, to foresee. On the whole, indeed, the gains of the undertakers are so adjusted, that those who carry them on obtain, at an average, the common and ordinary rate of profit. But the inequality in the gains of individuals is most commonly very great: and while the superior tact, industry, or good fortune of some enable them to realise large fortunes; the want of discernment, the less vigilant attention, or the bad fortune of others, frequently reduces them from the situation of capitalists to that of labourers.

The great cotton speculation of 1825 took its rise partly and chiefly from a supposed deficiency in the supply of cotton, partly from an idea that there was a greatly increased demand for raw cotton in this country and the Continent, and partly from a belief that the stocks on hand were unusually low. Now it is obvious, that the success of those who embarked in this speculation depended entirely on two circumstances; *viz.* first, that they were right in the fundamental supposition on which the whole speculation rested, that the supply of cotton was no longer commensurate with the demand; and second, that their competition did not raise the price so high as to diminish the consumption by the manufacturers in too great a degree to enable them to take off the quantity to be actually brought to market. If the merchants had been well founded in their suppositions, and if their competition had not raised the price of cotton too high, the speculation would certainly have been successful. But, instead of being well founded, the hypothesis on which the whole thing rested was perfectly visionary. There was no deficiency in the supply of cotton, but, on the contrary, a great superabundance; and though there had been such a deficiency, the excess to which the price was carried must have checked consumption so much as to occasion a serious decline. The falling off in the imports of cotton from America, in 1824, seems to have been the source of the delusion. It was supposed that this falling off was not accidental, but that it was a consequence of the price of cotton having been for a series of years so low as to be inadequate to defray the expenses of its cultivation. The result showed that this calculation was most erroneous. And besides, in entering on the speculation, no attention was paid to Egypt and Italy, — countries from which only about 1,400,000 lbs. of cotton were obtained in 1824, but from which no less than 23,800,000 lbs. were obtained in 1825! This unlooked-for importation was of itself almost enough to overturn the combinations of the speculators; and, coupled with the increased importation from America and other countries, actually occasioned a heavy glut of the market.

The risk to which merchants are exposed, when they either sell off any commodity at a reduced price in anticipation of a fall, or buy at an advanced price in anticipation of a future rise, is a consequence principally of the extreme difficulty of ascertaining the true state of the fact with respect to the grounds on which an abundant or a deficient supply, or an increasing or decreasing demand, may be expected. Rules can here be of no service; every thing depends upon the talent, tact, and knowledge of the party. The questions to be solved are all practical ones, varying in every case from each other; the skill of the merchant being evinced by the mode in which he conducts his business under such circumstances, or by his sagacity in discovering coming events, and appreciating their character and the extent of their influence. Priority, but, above all, accuracy of intelligence, is, in such cases, of the utmost consequence. Without well authenticated data to go upon, every step taken may only lead to error. The instances, indeed, in which speculations, apparently contrived with the greatest judgment, have ended in bankruptcy and ruin, from a deficiency in this essential requisite, are so very numerous, that every one must be acquainted with them. Hence the importance of selecting acute and cautious correspondents; and hence, also, the necessity of maturely weighing their reports, and of endeavouring, by the aid of information gleaned from every authentic accessible source, to ascertain how far they may be depended upon.

When a few leading merchants purchase in anticipation of an advance, or sell in anticipation of a fall, the speculation is often pushed beyond all reasonable limits, by the operations of those who are influenced by imitation only, and who have never, perhaps, reflected for a moment on the grounds on which a variation of price is anticipated. In speculation, as in most other things, one individual derives confidence from another. Such a one purchases or sells, not because he has any really accurate information as to the state of the demand and supply, but because some one else has done so before him. The original impulse is thus rapidly extended; and even those who are satisfied that a speculation, in anticipation of a rise of prices, is unsafe, and that there will be a recoil, not unfrequently adventure, in the expectation that they will be able to withdraw before the recoil has begun.

It may, we believe, speaking generally, be laid down as a sound practical rule, to avoid having any thing to do with a speculation in which many have already engaged. The competition of the speculators seldom fails speedily to render an adventure that might have been originally safe, extremely hazardous. If a commodity happen to be at an unusually reduced price in any particular market, it will rise the moment that different buyers appear in the field; and supposing, on the other hand, that it is fetching an unusually high price, it will fall, perhaps far below the cost of production, as soon as supplies begin to be poured in by different merchants. Whatever, therefore, may be the success of those who originate a speculation, those who enter into it at an advanced period are almost sure to lose. To have been preceded by others ought not, in such matters, to inspire confidence; on the contrary, it ought, unless there be something special in the case, to induce every considerate person to decline interfering with it.

The maintenance of the freedom of intercourse between different countries, and the more general diffusion of sound instruction, seem to be the only means by which those miscalculations, that are often productive of great national as well as private loss, can be either obviated or mitigated. The effects consequent to such improvident speculations being always far more injurious to the parties engaged in them than to any other class, the presumption is that they will diminish, both in frequency and force, according as the true principles of commerce come to be better understood. But, whatever inconvenience may occasionally flow from them, it is abundantly plain, that instead of being lessened, it would be very much increased, were any restraints imposed on the freedom of adventure. When the attention of many individuals is directed to the same line of speculation; when they prosecute it as a business, and are responsible in their own private fortunes for any errors they may commit; they acquire a knowledge of the various circumstances influencing prices, and give by their combinations a steadiness to them, which it is easy to see could not be attained by any other means. It is material, too, to bear in mind, as was previously stated, that many, perhaps it might be said *most*, of those who press so eagerly into the market, when any new channel of commerce is opened, or when any considerable rise of price is anticipated, are not merchants, but persons engaged in other businesses, or living, perhaps, on fixed incomes, who speculate in the hope of suddenly increasing their fortune. This tendency to gambling seldom fails to break out upon such occasions; but, fortunately, these are only of comparatively rare occurrence; and in the ordinary course of affairs, mercantile speculations are left to be conducted by those who are familiar with business, and who, in exerting themselves to equalise the variations of price caused by variations of climate and of seasons, and to distribute the supply of produce proportionally to the effective demand, and with so much providence that it may not at any time be wholly exhausted, perform functions that are in the highest degree important and beneficial. actuated only by a desire to advance their own interests; but the results of their operations are not less advantageous than those of the agriculturist who gives greater fertility to the soil, or of the mechanist who invents new and more powerful machines.

7. *Tables of Prices.*—It is superfluous, perhaps, to observe, that the precious metals are liable to all the variations of value already alluded to. Not only, therefore, are prices, as was already remarked, affected by variations in the cost and supply of commodities, but they are also affected by changes in the cost and supply of gold and silver, whether arising from the exhaustion of old, or the discovery of new mines, improvements in the art of mining, changes of fashion, &c. Hence it is, that Tables of the prices of commodities, extending for a considerable period, communicate far less solid information than is generally supposed, and, unless the necessary allowances be made, may lead to the most unfounded conclusions. The real value of any commodity depends on the quantity of labour required for its production; but supposing that we were to set about inferring this real value, or the ultimate sacrifice required to obtain the commodity, from its price, it might happen, (had the quantity of labour required for its production declined, but in a less degree than the quantity required to produce gold and silver,) that its value would appear to rise, when it had really been diminished. When, however, the rate of wages, as well as the price of commodities, is given upon authentic data, a Table of prices is valuable, inasmuch as it shows the extent of the command over the necessaries and conveniences of life enjoyed by the bulk of the community during the period through which it extends. The following Table (pp. 952, 953.) of the prices of various commodities, and of the wages paid to different descriptions of tradesmen, at Greenwich Hospital, for the last 100 years, is the most complete of the sort that has been published; and is one of the few that are founded upon data, the accuracy of which cannot be questioned. Unfortunately, it applies only to a small part of the country. But many important conclusions may, notwithstanding, be deduced from it. The reader will find, under the more important articles described in this work, pretty ample accounts of their prices. Sometimes, as in the case of corn, these accounts go back to a very distant period.

Those desirous of detailed information as to the prices of commodities in Great Britain, in remoter ages, may consult the elaborate Tables in the 3d volume of Sir F. M. Eden's work on the *Poor*; and the 4th volume of *Mucpherson's Annals of Commerce*. *Arbutnot's Tables of Ancient Coins, Weights, Measures, Prices, &c.* are well known; but the statements are not much to be depended upon. The *Traité de Métrologie* of M. Pauton, 4to, Paris, 1780, is the best work on this curious and difficult subject.

**PRICE CURRENT**; a list or enumeration of the various articles of merchandise, with their prices, the duties (if any) payable thereon when imported or exported, with the drawbacks occasionally allowed upon their exportation, &c. Lists of this description are published periodically, generally once or twice a week, in most great commercial cities and towns.—(For examples, see the articles CANTON, GENOA, HAVRE, SINGAPORE &c. in this work.)

**PRIMAGE**, is a certain allowance paid by the shipper or consignee of goods to the mariners and master of a vessel, for loading the same. In some places it is 1*d.* in the pound; in others 6*d.* for every pack or bale; or otherwise, according to the custom of the place.

**PRINTS**, impressions on paper, or some other substance, of engravings on copper, steel, wood, stone, &c., representing some particular subject or composition.

Prints, like paintings, embrace every variety of subject; and differ very widely in the manner in which they are engraved. Their prices vary according to the style of the engraving, the fineness of its execution, the goodness of the impression, its rarity, &c. The art seems to have taken its rise in the 15th century. But, as a dissertation on one of the most beautiful of the fine arts would be singularly out of place in a work of this sort, we have introduced it for the purpose merely of stating the law with respect to the copyright of prints.

This is laid down in the acts 8 Geo. 2. c. 13, 7 Geo. 3. c. 38, and 17 Geo. 3. c. 57. By these acts, the copyright of all sorts of prints, including maps and charts, is secured to the engraver, or author, for twenty-eight years. The last mentioned act declares that every individual who shall, within the said 28 years, engrave, etch, or work, or in any other manner copy in the whole or in part, by varying, adding to, or diminishing from the main design; or shall print, reprint, or import for sale, or shall publish, sell, or otherwise dispose of any copy of any print whatever, which has been or shall be engraved, etched, drawn, or designed in Great Britain, without the express consent of the proprietor thereof first obtained in writing, signed by him with his own hand, in the presence of, and attested by, two or more credible witnesses; then every such proprietor may, by a special action upon the case to be brought against the person so offending, recover such damages as a jury, on the trial of such action, or on the execution of a writ of inquiry thereon, shall give or assess, together with double costs of suit.

In questions as to the piracy of prints, the courts proceed upon the same principles that are followed in those with respect to the piracy of books.—(See Books; see also *Mr. Godson's* excellent work on the *Law of Patents and Copyright*, pp. 287—301.)

*Regulations as to Importation.*—Where prints or maps are contained in, and form part of a book, and serve merely to explain or illustrate the subject of such book, they are to be deemed a part of the work, and be charged with duty, by weight, as books; but when prints or maps are bound or stitched together with

PRICES.

contracted for in suits; and it is so stated in the account. It is also necessary to remark, that of a quality very inferior to the ancient pattern.

out letter-press, or when the letter-press is merely descriptive of the prints or maps, then they are to be charged with duty by tale, as prints or maps. — (*Min. Com. Cus.* 5th of Sept. 1833.) But if satisfactory proof be adduced, that prints or maps, although imported separately, do really form part of a work, they may be charged with the book duty by weight; but in other cases they are to be charged with duty by tale. — (*Treas. Order*, 2d of June, 1830.)

Pictures, sketches, and drawings, brought from the Continent, and accompanied by the proprietor, are to be admitted to entry free of duty, upon proof, by oath of the proprietor, that the same were wholly executed by him for his amusement, and not intended for sale in this country. — (*Treas. Order*, 5th of Aug. 1817.)

**PRISAGE, or BUTLERAGE**, was a right of taking 2 tons of wine from every ship importing into England 20 tons or more; which was changed by Edward I. into a duty of 2s. for every ton imported by merchant strangers, and called butlerage, because paid to the king's butler. The term is now fallen into disuse. — (*Blackstone*.)

**PRIVATEERS**, ships of war fitted out by private individuals, to annoy and plunder the public enemy. But before commencing their operations, it is indispensable that they obtain *letters of marque and reprisal* from the government whose subjects they are, authorising them to commit hostilities, and that they conform strictly to the rules laid down for the regulation of their conduct. All private individuals attacking others at sea, unless empowered by letters of marque, are to be considered pirates; and may be treated as such, either by those they attack, or by their own government.

1. *Policy of Privateering.* — The policy of this system is very questionable. It seems to be a remnant of that species of private war exercised by all individuals in early ages, but which gradually disappears as society advances. In wars carried on by land, the property of the peaceable inhabitants who take no part in the operations of the armies is uniformly protected; and it is difficult to discover any solid grounds why the same rule should not be followed at sea. Privateers rarely attack ships of war. Their object is merely to plunder and destroy merchantmen. They cause an infinite deal of mischief to individuals, and aggravate all the miseries of war, without having the slightest influence on the result of the contest. Experience has also shown that it is not possible, whatever precautions may be adopted, to prevent the greatest abuses from being perpetrated by privateers. The wish to amass plunder is the only principle by which they are actuated; and such being the case, it would be idle to suppose that they should be very scrupulous about abstaining from excesses. A system of this sort, if it be ever useful, can be so only to nations who have little trade, and who may expect to enrich themselves during war by fitting out privateers to plunder the merchant ships of their enemies. In all other cases it seems to be productive only of mischief; though it is, of course, most injurious to those states that have the greatest mercantile navy. Instead, therefore, of encouraging the practice of privateering, we think that a due regard to the rights and interests of humanity would suggest to the great powers the expediency of abolishing it altogether. A few efforts, have, indeed, been already made towards this desirable object. Thus, it was stipulated in the treaty between Sweden and the United Provinces, in 1675, that neither party should, in any future war, grant letters of marque against the other. In 1767, Russia abstained from licensing privateers; and in the treaty between the United States and Prussia, in 1785, a stipulation was inserted as to privateers, similar to that in the treaty between Sweden and the United Provinces in 1675. But nothing short of a convention and agreement to that effect amongst the great powers will be able to effect this desirable object. — (*Essai concernant les Armateurs*, par Martens, 1794.)

2. *Appointment of Privateers.* — The captain of a privateer is nominated by the owners, who may dismiss him at pleasure. The commission or letters of marque given to the owners, authorises them to attack and seize the ships of the power or powers specified therein; but they are not to look upon them as their property, or to appropriate them, or any part of them, to their own use, *ill they have been legally condemned*. Besides the stimulus afforded by the hope of booty, government has been in the habit of allowing them 5*l.* for every man on board such enemy's ships of war or privateers as they may capture. — (*33 Geo. 3. c. 64.*) A privateer cruising under letters of marque against one state may, on obtaining authentic information of hostilities being commenced by her government against another, capture its ships with full advantage to herself. The king has in all cases the right to release any prize previously to its condemnation; this being an implied exception in the grant of prizes by the Crown. — (*Chitty on Commercial Law*, vol. i. c. 8.)

In some privateering adventures, the crew are engaged on the terms of no prize no pay; and, in such cases, the produce of whatsoever prizes may be taken goes half to the ship (for the owners), and half to the men, divided among them according to the articles of agreement; but when the men sail for wages, the captures belong entirely to the owners, except a small share, which is commonly stipulated to be given to the crew, over and above their wages, in order to stimulate their enterprise. Both ways of arming are regulated by the articles entered into between the owners and crews.

Privateers are forbidden from doing any thing contrary to the law of nations, as to assault an enemy in a port or haven, under the protection of any prince or republic, be he friend, ally, or neutral; for the peace of such place must be preserved inviolable. — (*Molloy, De Jure Maritimo*, book 1. c. 3.)

When letters of marque are granted, it is usual, in most countries, to exact security that the regulations with respect to the conduct of privateers shall be observed. In Great Britain, a bond for 1,500*l.* must be given by responsible persons, not concerned in the ship, for all ships carrying less than 150 men, and 3,000*l.* for every ship carrying more, that they will give full satisfaction for any damage or injury they may commit at sea, contrary to the regulations under which they are to act, and to their duty as privateers.

If privateers wilfully commit any spoil, depredation, or other injury, on friendly or neutral ships, or on the ships or goods of their fellow subjects, they are to be punished, according to the crime, either with death, or otherwise; and the vessels are subject to forfeiture.

Whether a ship taken be lawful prize, or not, shall be tried in the admiralty; and no ship or cargo, or part of a ship or part of a cargo, is to be sold, or disposed of in any way, till after judgment has been obtained.

If ships with letters of marque accidentally meet with a prize at sea, though only one attack and take her, yet the other, being in sight, shall have an equal share of the prize, though he afforded no assistance in the capture; because his presence may be presumed to have struck terror into the enemy, and made him yield; which perhaps he would not have done, had his conqueror been single: so that all ships that are in sight, though they cannot come up to assist in the engagement, are entitled by the common law to a distribution of the spoil. — (*Beaves, Lex Mercatoria, art. Privateers.*)

If those to whom letters of marque are granted should, instead of taking the ship and goods appertaining to that nation against which the said letters are awarded, wilfully take or spoil the goods of another nation in amity with us, this would amount to *piracy*; and the person so offending would, for such fault, forfeit their vessel, and the penalties in which their securities are, according to custom, bound on taking out such letters. But such penalties would not follow, unless the capture were made in a piratical manner. For if the circumstances incident to the captured vessel were such as to afford a strong presumption that she really belonged to the country against which the letters were granted, the captors would not be liable to punishment, though they might be to damages. "It being impossible," says Beaves, "always to determine an affair of this sort at sea, it is allowable to bring a dubious capture into port, in order to more nice and just scrutiny and inspection; otherwise the goods of an enemy would often escape. However, to guard against unlawful seizures, the government have wisely directed sufficient caution to be given (as before-mentioned) for the due observance of the letters according to law, before they permit their issuing; and when there is a breach committed, the penalties are inflicted." — (*Lex Mercatoria, art. Privateers.*)

3. *Regulations for the Government of Privateers, &c.* — The following instructions to privateers were issued under an order in council, at the commencement of the last war with France, 16th of May, 1803: —

Art. I. *Against what, and where, Letters of Marque may act lawfully.* — It shall be lawful for the commanders of ships authorised by letters of marque and reprisals for the service of war, to set upon the forces of arms, to subdue and take the men-of-war, ships and vessels, goods, wares, and merchandises, belonging to the French republic, or to any person being subjects in the French dominions within any of the territories of the French republic: but so that no hostility be committed, nor prize attacked, seized, or taken within the harbours of princes or states in amity with us, or in their rivers or roads, within the limits of their channels, or jurisdiction of such princes or states, or their commanders or governors in chief of such places.

Art. II. *Captures to be brought into Port.* — The commanders of the ships and vessels so authorised as aforesaid, shall bring all ships, vessels, and goods, which they shall seize and take, into such port of England, or some other port of our dominions, as shall be most convenient in order to be tried by a court lawfully adjudged by our High Court of Admiralty of England, or before the judge of any other admiralty court, lawfully authorised, within our dominions.

Art. III. *Examination of the Captors after the Capture is brought into Port.* — After such ships, vessels, and goods shall be taken and brought into any port, the taker, or one of his chief officers, or some other person present at the capture, shall be obliged to bring or send, as soon as possibly may be, 3 or 4 of the principal of the company (whereof the master, supercargo, mate, or boatswain, to be always 2) of every ship or vessel so brought into port, before the judge of our High Court of Admiralty of England, or his surrogate, or before the judge of such other admiralty court within our dominions, lawfully authorised as aforesaid, or such as shall be lawfully commissioned in that behalf, to be sworn and examined upon such interrogatories as shall tend to the discovery of the truth, concerning the interest or property of such ship or ships, vessels, or of the goods, merchandises, and other effects found therein; and the taker shall be further obliged, at the time he produces the company to be examined, and before any motion shall be issued, to bring in and deliver into the hands of the judge of the High Court of Admiralty of England, his surrogate, or the judge of such other admiralty court within our dominions, lawfully authorised, or others commissioned as aforesaid, all such papers, passes, sea-briefs, charterparties, bills of lading, caskets, letters, and other documents and writings, as shall be delivered up or found on board any ship; the taker, or one of his chief officers, or some other person who shall be present at the capture, and saw the said papers and writings delivered up, or otherwise found on board at the time of the capture, making oath that the said papers and writings are brought and delivered in as they were received and taken, without any fraud, addition, subtraction, or embezzlement whatever, or otherwise to account for the same upon oath, to the satisfaction of the court.

Art. IV. *Not to break Bulk before Judgment.* — The ships, vessels, goods, wares, merchandises, and effects, taken by virtue of letters of marque and reprisals as aforesaid, shall be kept and preserved, and no part of them shall be sold, spoiled, wasted, or diminished, and the bulk thereof shall not be broken, before judgment be given in the High Court of Admiralty of England, or some other court of admiralty lawfully authorised in that behalf; that the ships, goods, or merchandises are lawful prize.

Art. V. *Privateers to assist Ships in Distress.* — If any ship or vessel belonging to us, or our subjects, shall be found in distress by being in light set upon or taken by the enemy, or by reason of any other accident, the commanders, officers, and company of such merchant ships or vessels as shall have letters of marque and reprisals as aforesaid, shall use their best endeavours to give aid and succour to all such ship and ships, and shall, to the utmost of their power, labour to free the same from the enemy, or any other distress.

Art. VI. *Application to the Admiralty for Letters of Marque.* — The commanders or owners of such ships and vessels, before the taking out letters of reprisals, shall make and sign an application in writing, subscribed with their hands, to our high admiral of Great Britain, or our commissioners for executing that office for the time being, or the lieutenant or judge of the said High Court of Admiralty, or his surrogate, and shall therein set forth a particular, true, and exact description of the ship or vessel for which such letters of marque and reprisals is requested, specifying the burden of such ship or vessel, and the number and nature of the guns, and what other warlike furniture and munition are on board the same, to what place the ship belongs, and the name or names of the principal owner or owners of such ship or vessel, and the number of men intended to be

put on board the same, and for what time they are victualled; and also the names of the commanders and officers.

Art. VII. *Correspondence with the Admiralty.* — The commanders of ships and vessels having letters of marque and reprisals as aforesaid shall hold and keep, and are hereby enjoined to hold and keep, a correspondence, by all conveniences, and on all occasions, with our high admiral of Great Britain, or our commissioners for executing that office for the time being, or their secretary, so as from time to time to render or give him or them, not only an account or intelligence of their captures and proceedings by virtue of such commission, but also of whatever else shall seem unto them, or be discovered and declared to them, or found out by them, or by examination of, or conference with, any mariners or passengers of or in the ships or vessels taken, or by any other ways or means whatsoever, touching or concerning the designs of the enemy, or any of their fleets, ships, vessels, or parties, and of the stations, sea-ports, and places, and their intentions therein; but no ships or vessels of the enemy bound out or home, or where cruising, as they shall hear of; and of what else material in these cases may arrive at their knowledge; to the end such course may be thereon taken, and such orders given, as may be requisite.

Art. VIII. *What Colours a Privateer is to wear.* — No commander of any ship or vessel having a letter of marque and reprisals as aforesaid shall presume, as they will answer it at their peril, to wear any jack, pendant, or other ensign or colours usually borne by our ships; but, besides the colours usually borne by merchant ships, they shall wear a red jack, with the Union-jack described in the canton, at the upper corner thereof, near the staff.

Art. IX. *Not to ransom any Capture.* — No commander of any ship or vessel, having a letter of marque and reprisals as aforesaid, shall ransom, or agree to ransom, or quit or set at liberty, any ship or vessel, or their cargoes, which shall be seized and taken.

Art. X. *To deliver their Prisoners to the proper Commissioners.* — All captains or commanding officers of ships having letters of marque and reprisals shall send an account of, and deliver over, what prisoners shall be taken on board any prizes, to the commissioners appointed, or to be appointed, for the exchange of prisoners of war, or the persons appointed in the sea-port towns to take charge of prisoners; and such prisoners shall be subject only to the orders, regulations, and directions of the said commissioners; and no commander or other officer of any ship, having a letter of marque or reprisal as aforesaid, shall presume, upon any pretence whatsoever, to ransom any prisoner.

Art. XI. *Commission forfeited for acting contrary hereto.* — In case the commander of any ship, having a letter of marque and reprisal as aforesaid, shall act contrary to these instructions, or any such further instructions of which he shall have due notice, he shall forfeit his commission to all intents and purposes, and shall, together with his bail, be proceeded against according to law, and be condemned to costs and damages.

Art. XII. *Copies of Journals.* — All commanders of ships and vessels having letters of marque and reprisals shall, by every opportunity, send exact copies of their journals to the secretary of the admiralty, and proceed to the condemnation of the prizes as soon as may be, and without delay.

Art. XIII. *To observe all Orders.* — Commanders of ships and vessels having letters of marque and reprisals shall, upon due notice being given to them, observe all such other instructions and orders as we shall think fit to direct from time to time, for the better carrying on this service.

Art. XIV. *Violating these Instructions.* — All persons who shall violate these, or any other of our instructions, shall be severely punished, and also required to make full reparation to persons injured contrary to our instructions, for all damages they shall sustain by any capture, embezzlement, discourages, or otherwise.

Art. XV. *Bail to be given.* — Before any letter of marque or reprisal for the purposes aforesaid shall issue under seal, bail shall be given with surties, before the lieutenant and judge of our High Court of Admiralty of England, or his surrogate, in the sum of 3,000*l.* sterling, if the ship carries above 100 men; or in the sum of 1,500*l.* sterling, if less; which bail shall be to the effect and in the form following: —

Which day, time and place, personally appeared \_\_\_\_\_ who, submitting themselves to the jurisdiction of the High Court of Admiralty of England, obliged themselves, their heirs, executors, and administrators, unto our Sovereign Lord the King, in

the sum of *Great Britain*, to this effect; that is to say, that whereas *is* duly authorised by letters of marque and reprisals, with the ship called the of the burden of about tons, whereof he the said master, by force of arms to attack, surprise, seize, and take, all ships and vessels, goods, wares, and merchandises, chattels and effects, belonging to the French republic, or to any persons being subjects of the French republic, or inhabiting within any of the territories of the French republic; excepting only within the harbours or roads within shot of the cannon of princes and states in amity with his Majesty. And whereas the the said hath a copy of certain instructions, approved of and passed by his Majesty in council, as by the tenor of the said letters of marque and reprisals, and instructions thereto relating, more at large appended: if therefore nothing be done by the said or any of his officers, mariners, or company, contrary to the true meaning of the said instructions, and of all other instructions which may be issued in like manner hereafter, and whereof due notice shall be given him; but that such letters of marque and reprisals aforesaid, and the said instructions, shall in all particulars be well and

duly observed and performed, as far as they shall the said ship, master, and company, any way concern; and if they shall give full satisfaction for any damage or injury which shall be done by them or any of them to any of his Majesty's subjects, or of foreign states in amity with his Majesty, and also shall be truly and lawfully paid, or cause to be paid, to his Majesty, or the customs or officers appointed to receive the same for his Majesty, the usual customs due to his Majesty, of and for all ships and goods so as aforesaid taken and adjudged as prize; and moreover if the said shall not take any ship or vessel, or any goods or merchandise, belonging to the enemy, or otherwise liable to confiscation, through consent or clandestinely, or by collusion, by virtue, colour, or pretence of his said letters of marque and reprisals, that then this bill shall be void of none effect: and unless they shall do so, they do all hereby severally consent that execution issue forth against them, their heirs, executors, and administrators, goods and chattels, wheresoever the same may be found, to the value of the sum of pounds before mentioned; and in testimony of the truth thereof they have herunto subscribed their names.

By his Majesty's command, (Signed) PELHAM.

**PROMISSORY NOTES.** See BANKS AND BANKING.  
**PROTECTION,** in mercantile navigation, a privilege granted to certain descriptions of seamen, by which they are protected from impressment. — (See IMPRESSMENT.)

**PRUNES AND PRUNELLOES,** a species of dried plums, of which there are many varieties. The finest are imported from France, in the south of which this fruit is very abundant. The best prunes are packed in hampers or baskets made of white osiers, weighing from 6 to 10 lbs. each; the second quality in quarters, and the third in puncheons. The entries of prunes for home consumption, in 1831 and 1832, amounted, at an average, to 6,285 cwt. a year. The duty is 1*l.* 7*s.* 6*d.* a cwt., being more than 50 per cent. upon the price of the inferior qualities. There cannot be a doubt that it would be more productive were it reduced to 10*s.* or 12*s.*

Prunes, the produce of Europe, may not be imported for home consumption except in British ships, or ships of the country of which they are the produce, or from which they are exported, on penalty of the forfeiture thereof and of 10*l.* by the master of the ship. — (3 & 4 Will. 4. c. 52. §§ 2, 22.)

**PRUSSIAN BLUE, or PRUSSIAN BLUE,** (Ger. *Berlinerblau*; Fr. *Bleu de Prusse*; It. *Azzurro Prussiano*; Sp. *Azul de Prussia*; Rus. *Lasor Berlinshuja*), a beautiful deep blue powder, accidentally discovered at Berlin in 1710. It is of considerable importance in the arts, being extensively used by painters: it is manufactured in this country. Many attempts have been made to render Prussian blue available for the dyeing of broad cloths, but without much success. The difficulty is to diffuse the colour equally over the surface; for, from its extraordinary vivacity and lustre, the slightest inequalities strike and offend the eye. Prussian blue resists the air and sun extremely well; but it cannot be used in the dyeing of cottons, or any sort of stuff that is to be washed with soap, as the alkali contained in the soap readily dissolves and separates the colouring matter. — (*Bancroft on Colours*, vol. ii. pp. 60—94.)

Blue is a favourite colour with the Chinese, and in 1810—11, the imports of Prussian blue into Canton from England amounted to 1,899 piculs, or 253,200 lbs. But, for some years past, the Chinese have not imported a single pound weight. The cause of the cessation of the trade deserves to be mentioned. A common Chinese sailor, who came to England in an East Indiaman, having frequented a manufactory where the drug was prepared, learned the art of making it; and on his return to China, he established a similar work there, with such success that the whole empire is now amply supplied with native Prussian blue! The West has derived many important arts from the East; but we incline to think that this is the first well authenticated instance of any art having ever been carried from the West to the East, by a native of the latter. But, in all that respects industry, ingenuity, and invention, the Chinese are incomparably superior to every other people to the east of the Indus.

**PUBLICANS,** are persons authorised by licence to retail beer, spirits, or wines. Under the term publicans are comprised innkeepers, hotel keepers, alehouse keepers, keepers of wine vaults, &c. An inn differs from an alehouse in this, — that the former is a place intended for the lodging as well as the entertainment of guests, whereas the latter is intended for their entertainment only. If, however, ale or beer be commonly sold in an inn, as is almost invariably the case, it is also an alehouse; and if travellers be furnished with beds, lodged, and entertained in an alehouse, it also is an inn. It is not material to the character of an innkeeper that he should have any sign over his door; it is sufficient that he makes it his business to entertain passengers and travellers, providing them with lodgings and other accommodations.

1. *Licensing of Publicans.* — The provisions with respect to the licensing of public houses are embodied in the 9 Geo. 4. c. 61., of which we subjoin an abstract.

*General Meetings.* — There shall be annually holden in county divisions, cities, and towns, a special session of justices, to be called the "General Annual Licensing Meeting," for the purpose of granting licences to persons keeping or about to keep inns, alehouses, &c.; such meetings to be held, in Middlesex and Surrey, within the first 10 days of the month of March; and in every other place between the 20th of August and the 14th of September, both inclusive.

*Notice of General Meeting.* — Within every division, 21 days before the annual licensing meeting, a petty session of justices to be held, a majority of whom shall fix the day and hour for holding the general annual meeting; and shall direct a precept to the high constable, requiring him, within 5 days after the

receipt thereof, to order the petty constables to affix on the door of the church, chapel, or other public place, a notice of such annual meeting, and give or leave at the dwelling-house of each justice acting for the division, and of each person keeping an inn, or who shall have given notice of his intention to apply for a licence to keep an inn, a copy of such notice. — § 2.

The annual meeting may be adjourned, but the adjourned meeting is not to be held on any of the 5 days immediately following the adjournment; and every adjournment to be held in the month of March in Middlesex and Surrey, and in August or September in every other county. — § 3.

**Sessions for Transfer of Licences.** — At the annual meeting, justices to appoint not less than 4 nor more than 8 special sessions, to be held as near as possible at equidistant periods, for the purpose of transferring licences. — § 4.

Notice of holding any adjourned meetings, or of any special session for the transfer of licences, to be given in the same manner and to the same parties as mentioned above. — § 5.

**Justices disqualified.** — No justice who is a common brewer, distiller, maker of malt for sale, or retailer of malt or any exciseable liquor, shall act or be present at any annual licensing meeting, or adjournment, or special session for transferring licences, or take part in the adjudication upon any application for a licence, or upon an appeal; nor in the case of licensing any house of which he is owner, or agent of the owner, or of any house belonging to any common brewer, maker of malt, &c. to whom he shall be, either by blood or marriage, the father, son, or brother, or with whom he shall be partner in any other trade; in any of these cases knowingly or wilfully to act, subjects to a penalty of 100*l.* But disqualification does not arise, where a justice, having no beneficial interest in a house licensed or about to be licensed, holds only the legal estate therein as trustee or for a charitable or public use. — § 6.

When in any liberty, city, or town, 2 qualified justices do not attend, the county justices may act. — § 7.

The power given to county justices not to extend to the Cinque Ports. — § 8.

Questions respecting licences to be determined, and licences to be signed, by a majority of the justices present. — § 9.

**Application for a Licence.** — Persons intending to apply for a licence to a house not before licensed, to affix a notice on the door of such house, and on the door of the church or chapel of the parish, and, where there shall be no church or chapel, on some other conspicuous place within the parish, on three several Sundays, between the 1st of January and the last day of February in the counties of Middlesex and Surrey, and elsewhere between the 1st of June and the last day of July, at some time between the hours of 10 in the forenoon and 4 in the afternoon, and shall serve a copy of such notice upon one of the overseers of the poor, and upon one of the constables or peace-officers of the parish, within the month of February in the counties of Middlesex and Surrey, and elsewhere within the month of July, prior to the annual meeting; such notice to be in a legible hand, or printed, and signed by the applicant. The application must state the Christian and surname of the party, with the place of his residence, and his trade or calling during the 6 months previous to the serving of the notice. — § 10.

**Notice to transfer Licence.** — Persons desirous of transferring a licence, and intending to apply to the next special sessions, must, 5 days previously, serve a notice upon one of the overseers and one of the constables of the parish. Persons hindered, by sickness or other reasonable cause, from attending any licensing meeting, and proof thereof adduced on oath, may authorise another person to attend for them. — § 12.

Licences to be in force, in Middlesex and Surrey, from the 5th of April; elsewhere from the 10th of October, for one whole year. — § 13.

**Provision for Death or other Contingency.** — If any person licensed shall die, or become incapable, or a bankrupt or insolvent, or if he, or his heirs, executors, or assigns, shall remove, or neglect to apply for a continuation of his licence, the justices at special session may grant a licence to the heirs, executors, or assigns of such party, or to any new tenant; or if any man's house should be, or be about to be, pulled down for a public purpose, or rendered, by fire, tempest, or other unforeseen calamity, unfit for the purposes of an inn, licence may be granted to the occupier, if he intend to open another house as an inn. Such transferred licences shall continue only in force to the end of the year; and in case of removal to another house, notice must be given on some Sunday, within 6 weeks before the special session, in the manner and form before described. — § 14.

**Fees for Licences.** — The clerk of the justices may lawfully receive from every person to whom a licence is granted, for trouble and all expenses, the following sums: —

|   |               |
|---|---------------|
|   | s. d.         |
| For constable or officer serving notices  | - - - - - 1 0 |
| For clerk of justices for licence   | - - - - - 5 0 |
| For precept to the high constable, and notices to be delivered by the petty constable | 1 6           |

Clerks demanding or receiving more than these fees, to forfeit 5*l.* — § 15.

No sheriff's officer, or officer executing the process of any court of justice, qualified to hold or use any licence under this act. — § 16.

**Excise Licences.** — No licence for the sale of any exciseable liquors, to be consumed on the premises, shall be granted by the excise to any person, unless such person be previously licensed under this act. — § 17.

**Penalties.** — Any person without a licence selling or exchanging, or for valuable consideration disposing of, any exciseable liquor by retail, to be consumed in his premises; or with a licence, and so selling in premises other than those specified in his licence, shall for every offence, on conviction before 1 justice, forfeit not exceeding 20*l.* nor less than 5*l.* with costs; but the penalty not to attach in case of death or insolvency, and sale by the heir or assigns, prior to the next special sessions. — § 18.

Every licensed person shall, if required, sell all liquors by retail (except in quantities less than a  $\frac{1}{2}$  pint) by the gallon, quart, pint, or  $\frac{1}{2}$  pint, sized according to the standard; in default thereof to forfeit the illegal measure, and pay not exceeding 40*s.* with costs, to be recovered within 30 days before 1 justice. — § 19.

In cases of riot, or probability of riot, houses licensed in the neighbourhood may be closed by the order of 2 justices. — § 20.

Any person convicted of a first offence, before 2 justices, against the tenour of his licence, to forfeit not exceeding 5*l.* with costs; guilty of a second offence within 3 years of the first, to forfeit not exceeding 10*l.* with costs; and guilty of a third offence within 3 years, to forfeit not exceeding 50*l.* with costs; or the case in the last instance may be adjourned to the petty sessions, or the annual meeting, or the general quarter sessions; and if the offender is found guilty by a jury, he may be fined 100*l.*, or adjudged to forfeit his licence, or both, and rendered incapable of selling any exciseable liquor in any inn kept by him for 3 years. — § 21.

Proceedings at the session in certain cases, may be directed by the justices to be carried on by the constable, and the expenses defrayed out of the county rates. — § 22.

Witnesses refusing to attend without lawful excuse, may be fined not more than 10*l.* — § 23.

Penalties against justices may be sued for in any court in Westminster; a moiety to the king, and a moiety to the party suing. — § 24.

Penalties adjudged by justices may be recovered by distress, or the party imprisoned 1, 3, or 6 calendar months. — § 25.

The next sections relate to the mode of prosecuting actions.

The last section of the act bears that the word "inn" shall include any inn, alehouse, or victualling house, in which is sold by retail any exciseable liquor, to be drunk or consumed on the premises; and the

wards excisable liquor are to include all such fermented or spirituous liquors as may now or hereafter be charged with any customs or excise duty. — § 37.

The act does not affect the two Universities, nor the privileges of the Vintners' Company, except those freemen who have obtained their freedom by redemption; and it does not alter the time of granting licences in the city of London.

Innkeepers are bound, by the tenour of their licence, to keep order in their houses, to prevent drunkenness and disorderly conduct, and gambling. If they fail in these respects, they forfeit their licence, and subject themselves to the penalties mentioned before. Allowing seditious or immoral books to be read in an inn, also forfeits the licence, and subjects to penalties. — (39 Geo. 3. c. 79. § 31.)

**2. Duties of Innkeepers.** — Innkeepers are bound by law to receive guests coming to their inns, and they are also bound to protect their property when there. They have no option to reject or refuse a guest, unless their house be already full, or they are able to assign some other reasonable and sufficient cause. Neither can they impose unreasonable terms on such as frequent their houses: if they do, they may be fined, and their inns indicted and suppressed. An innkeeper who has stables attached to his premises, may be compelled to receive a horse, although the owner does not reside in his house; but he cannot, under such circumstances, be compelled to receive a trunk or other dead thing. By the annual Mutiny Act, constables, or, in their default, justices of the peace, may quarter soldiers in inns, livery-stables, alehouses, &c., under the conditions and regulations set forth in the statute.

**3. Responsibility of Innkeepers.** — An innkeeper is bound to keep safely whatever things his guests deposit in his inn, or in his custody as innkeeper; and he is civilly liable for all losses, except those arising from irresistible force, or what is usually termed the act of God and the king's enemies. "It has long been holden," says Sir William Jones, "that an innkeeper is bound to restitution, if the trunks or parcels of his guests, committed to him either personally or through one of his agents, be damaged in his inn, or stolen out of it by any person whatever (except the servant or companion of the guest); nor shall he discharge himself of this responsibility by a refusal to take any care of the goods, because there are suspected persons in the house, for whose conduct he cannot be answerable: it is otherwise, indeed, if he refuse admission to a traveller because he really has no room for him, and the traveller, nevertheless, insist upon entering, and place his baggage in a chamber without the keeper's consent. Add to this, that if he fail to provide honest servants and honest inmates, according to the confidence reposed in him by the public, his negligence in that respect is highly culpable, and he ought to answer civilly for their acts, even if they should rob the guests that sleep in their chambers. Rigorous as this law may seem, and hard as it may actually be in one or two particular instances, it is founded on the great principle of public utility, to which all private considerations ought to yield; for travellers, who must be numerous in a rich and commercial country, are obliged to rely almost implicitly on the good faith of innholders, whose education and morals are usually none of the best, and who might have frequent opportunities of associating with ruffians or pilferers, while the injured guest could never obtain legal proof of such combinations, or even of their negligence, if no actual fraud had been committed by them. Hence the prætor declared, according to Pomponius, his desire of securing the public from the dishonesty of such men; and by his edict gave an action against them, if the goods of travellers or passengers were lost or hurt by any means except by inevitable accident (*damno fatali*): and Ulpian intimates, that even this severity could not restrain them from knavish practices or suspicious neglect." — (*Essay on the Law of Bailments*, 2d ed. pp. 95, 96.)

Even if an innkeeper bid the guest take the key of his chamber and lock the door, telling him that he cannot undertake the charge of the goods, still, if they be stolen, he is held to be responsible. In all such cases it is not competent to the innkeeper to plead that he took ordinary care, or that the force which occasioned the loss was truly irresistible. A guest is not bound to deliver the goods in special custody to the innkeeper, nor, indeed, to acquaint him that he has any. If he have property with him, or about his person, the innkeeper must be responsible for it without communication. But the innkeeper may require that the property of his guest be delivered into his hands, in order that it may be put into a secure place; and if the guest refuse, the innkeeper is not liable for its safety. The guest exonerates the innkeeper from liability, when he takes upon himself the exclusive custody of the goods, so as to deprive the innkeeper of having any care over them: thus, if a guest demand and have exclusive possession of a room, for the purpose of a shop or warehouse, he exonerates the landlord from any loss he may sustain in the property which he keeps in that apartment; but it is otherwise if he have not the exclusive possession of the room. The innkeeper cannot oblige the guest to take charge of his own goods; for this, in effect, would be a refusal to admit them into the inn. And it is no excuse for an innkeeper to say that he delivered the key of the chamber whence the property was stolen to the guest, who left the door open. A case of this sort occurred very recently, at Brighton. — A lady having left the door of her bed-room, of which she had the key, open for a few minutes, 50*l.* were abstracted from her reticule. The innkeeper contended that the plaintiff, by selecting particular apart-

ments, and the plaintiff's law of this was found company v. principle, as statute; *nam doretur cum hujusmodi* to prevent such as he think that as to the ol as much wi He was the

ments, and taking the key, had exonerated him from his liability. The jury found for the plaintiff; and upon a motion for a new trial, Lord Tenterden said, — “By the common law of this country, and also by the civil law, the principle of the liability of innkeepers was founded on two reasons: first, to compel the landlord to take care that no improper company was admitted into his house; and, secondly, to prevent collusion. — The principle, as stated in the civil law, was this — ‘*Ne, quisquam putet graviter hoc in eos constitutum esse; nam est in ipsorum arbitrio nequem recipiant; et nisi hoc esset statutum, materia daretur cum furibus, adversus eos quos recipiant, coeundi: cum ne nunc quidem abstinent hujusmodi fraudibus.*’ It was true that, in the present state of society, it was very difficult to prevent the intrusion of improper company into inns. But still the principle was such as he had stated it to be, and it would be dangerous to relax it; and he did not think that the taking rooms in this way was sufficient to discharge the landlord. Then, as to the objection that the cases did not extend to money, it was clear that money was as much within the principle as goods, and that no substantial distinction could be made. He was therefore of opinion that the verdict was right.” — Rule refused.

A landlord may exempt himself from liability, if he can show that the loss was occasioned by the misconduct of the guest; as, if his goods are stolen by his own servant or companion.

It has been decided that a man is a guest at an inn, if he leave his horse at it, though he has not gone into it himself. If a man come to an inn, and make a contract for lodging for a set time, and do not eat or drink there, he is no guest, but a lodger, and, as such, not under the innkeeper's protection; but if he eat and drink, or pay for his diet there, it is otherwise. Any innkeeper or alehouse keeper, knowingly receiving and harbouring any person convicted of an offence against the revenue laws, for which he has been in prison, or for which he has fled, shall forfeit 100*l.* and have no licence for the future.

**A Remedy of an Innkeeper against his Guest.** — An innkeeper may, without any agreement to that effect, detain the person of a guest who has eaten in his house, until payment; and he may do the same by the horses in his stable.

An innkeeper is not entitled to receive for spirits supplied to his guests, of the value of 20*s.* and upwards, unless supplied or contracted for at the time. — (23 *Geo.* 2. c. 40.)

By the custom of London and elsewhere, if a man commit a horse to an hostler, and the expense of his keep become equivalent to his price, the hostler may appropriate the horse to himself upon the appraisement of four of his neighbours, or may have him sold. But innkeepers in other parts of the country have no power to sell horses detained by them.

A horse committed to an innkeeper cannot be detained as a security for the board of his master.

It is enacted by 11 & 12 *Will.* 3. c. 15. that innkeepers, alchouse keepers, &c. refusing to specify in an account the number of pints or quarts for which demand is made, or selling in unmarked measures, shall have no power to detain any goods or other things belonging to the person from whom demand is made, but shall be left to their action for recovery of the same.

**PUMICE STONE** (Ger. *Bimstein*; Fr. *Pierre ponce*; It. *Pietra pomice*; Sp. *Piedra pomez*; Lat. *Pumex*), a light, spongy, vitreous stone, found usually in the neighbourhood of volcanoes. It is used for polishing metals and marble, and smoothing the surface of wood and pasteboard. It is said to form a good glaze for pottery. The lighter pumice stones swim on water, their specific gravity not exceeding .914. The island of Lipari, in the Mediterranean, is chiefly formed of pumice stone, and may be said to be the magazine whence all Europe is supplied with this useful article. There are several species of pumice stones; but those only that are light and spongy are exported. The price varies in the London market from 8*l.* to 10*l.* a ton.

**PUTCHOCK.** An article of this name is imported in considerable quantities from the north-west coast of India into China, and is regularly quoted in the Canton price currents. It is the root of a plant that grows abundantly in Sindh. When burned, it yields a fine smoke, and a grateful and offensive smell. The Chinese beat it into a fine powder, which they burn as incense in the temples of their gods. — (*Hamilton's New Account of the East Indies*, vol. i. p. 126.)

## Q.

**QUARANTINE**, a regulation by which all communication with individuals, ships, or goods, arriving from places infected with the plague, or other contagious disease, or supposed to be peculiarly liable to such infection, is interdicted for a certain definite period. The term is derived from the Italian *quaranta*, forty; it being generally supposed, that if no infectious disease break out within 40 days, or 6 weeks, no danger need be apprehended from the free admission of the individuals under quarantine. During this period, too, all the goods, clothes, &c. that might be supposed capable of retaining the infection, are subjected to a process of purification. This last operation, which is a most important part of the quarantine system, is performed either on board ship, or in establishments denominated *lazarettos*. — (See *post.*)

*Policy of Quarantine.* — The regulations as to quarantine are entirely precautionary: they have their origin in the belief that various diseases, but especially the plague, are contagious; and supposing such to be the case, the propriety of subjecting those coming from an infected or suspected place to a probation is obvious. Indeed, no government could, until the belief in question be proved to be ill founded, abstain from enforcing precautionary measures, without rendering itself liable to the charge of having culpably neglected one of its most important duties, — that of providing, by every means in its power, for the safety of its subjects. Latterly, however, it has been contended that the plague is never imported; that it is always indigenous; originating in some peculiar state of the atmosphere, or in something peculiar in the condition of the people; and that, consequently, quarantine regulations merely impose a heavy burden on commerce, without being of any real utility. But though there does not seem to be any reason for doubting that infectious diseases have originated in the way described, the fact that they have, in innumerable instances, been carried from one place to another, seems to be established beyond all question. Even if the evidence as to the importation of infectious diseases were less decisive than it is, or the opinions of medical men more divided, it would not warrant the repeal of the restraints on the intercourse with suspected ports. This is not a matter in which innovations should be rashly introduced; wherever there is doubt, it is proper to incline to the side of security. In some cases, perhaps, quarantine regulations have been carried to a needless extent; but they have more frequently, we believe, been improperly relaxed.

*Institution of Quarantine.* — The notion that the plague was imported from the East into Europe, seems to have prevailed in all ages. But it would appear that the Venetians were the first who endeavoured to guard against its introduction from abroad, by obliging ships and individuals from suspected places to perform quarantine. The regulations upon this subject were, it is most probable, issued for the first time in 1484. — (*Beckmann, Hist. of Invent. vol. ii. art. Quarantine.*) They have since been gradually adopted in every other country. Their introduction into England was comparatively late. Various preventive regulations had been previously enacted; but quarantine was not systematically enforced till after the alarm occasioned by the dreadful plague at Marseilles in 1720. The regulations then adopted were made conformably to the suggestions of the celebrated Dr. Mead, in his famous “Discourse concerning Pestilential Contagion.”

*Lazarettos or Pest-houses,* are establishments constructed to facilitate the performance of quarantine, and particularly the purification of goods. They have usually a port in which ships from a suspected place may anchor; and, when perfect, are provided with lodgings for the crews and passengers, where the sick may be separated from the healthy; and with warehouses where the goods may be deposited; all intercourse between the lazaretto and the surrounding country being, of course, interdicted, except by permission of the authorities. The lazarettos at Leghorn, Genoa, and Marseilles, are the most complete of any in Europe. The facilities they afford to navigation are very great; for, as ships from suspected places may discharge their cargoes in the lazaretto, they are not detained longer than they would be were there no quarantine regulations. The goods deposited in the lazaretto, being inspected by the proper officers, and purified, are then admitted into the market.

Compared with these, the quarantine establishments in this country are exceedingly defective. There is not, even in the Thames, a lazaretto where a ship from a suspected place may discharge her cargo and refit: so that she is detained frequently at an enormous expense, during the whole period of quarantine; while, if she have perishable goods on board, they may be very materially injured. It is singular that nothing should hitherto have been done to obviate such grievances. The complaints as to the oppressiveness of quarantine regulations are almost wholly occasioned by the want of proper facilities for its performance. Were these afforded, the burdens it imposes would be rendered comparatively light; and we do not know that many more important services could be rendered to the commerce of the country, than by constructing a proper quarantine establishment on the Thames.

*Bills of Health.* — The period of quarantine varies, as respects ships coming from the same place, according to the nature of their bills of health. These are documents, or certificates, signed by the consul or other competent authority in the place which the ship has left, describing its state of health at the time of her clearing out. A *clean* bill imports that, at the time of her sailing, no infectious disorder was known to exist. A *suspected*, or, as it is more commonly called, a *touché* bill, imports that rumours were afloat of an infectious disorder, but that it had not actually appeared. A *foul* bill, or the *absence of clean bills*, import that the place was infected when the vessel sailed. — (See *BILLS OF HEALTH.*) The duration of the quarantine is regulated by the nature of these instruments. They seem to have been first issued in the Mediterranean ports in 1665, and are obviously of great importance.

*Quarantine Regulations.* — The existing quarantine regulations are embodied in the act 6 Geo. 4. c. 78., and the different orders in council issued under its authority. These orders specify what vessels are liable to perform quarantine; the places at which it is to be performed; and the various formalities and regulations to be complied with. The publication in the *Gazette* of any order in council with respect to quarantine is deemed sufficient notice to all concerned; and no excuse of ignorance is admitted for any infringement of the regulations. To obviate, as far as possible, any foundation for such plea, it is ordered that vessels clearing out for any port or place with respect to which there shall be at the time any order in council subjecting vessels from it to quarantine, are to be furnished with an abstract of the quarantine regulations; and are to furnish themselves with quarantine signal flags and lanterns, and with materials and instruments for fumigating and immersing goods. The following are the clauses in the act as to signals: —

Every commander, master, or other person having the charge of any vessel liable to quarantine, shall, at all times, when such vessel shall meet with any other vessel at sea, or shall be within 2 leagues of the coast of the United Kingdom, or the islands of Guernsey, Jersey, Alderney, Sark, or Man, hoist a signal to denote that his vessel is liable to quarantine; which signal shall in the day time, if the vessel shall have a clean bill of health, be a large yellow flag, of 6 breadths of bunting, at the main topmast-head; and if such vessel shall not have a clean bill of health, then a like yellow flag, with a circular mark or ball, entirely black, in the middle thereof, whose diameter shall be equal to 2 breadths of bunting; and in the night time, the signal shall in both cases be a large signal lantern with a light therein (such as is used on board his Majesty's ships of war), at the same mast-head: and such commander, master, or other person, shall keep such signals hoisted during such time as the said vessel shall continue within sight of such other vessel, or within 2 leagues of the said coast or islands, and while so in sight, or within such distance, until such vessel so liable to quarantine shall have arrived at the port where it is to perform quarantine, and until it shall have been legally discharged from the performance thereof; on failure whereof, such commander, master, or other person, shall forfeit 100*l.* — § 8.

Every commander, master, or other person having the charge of any vessel on board whereof the plague or other infectious disease highly dangerous to the health of his Majesty's subjects shall actually be, shall at all times, when such vessel shall meet with any other vessel at sea, or shall be within 2 leagues of the coast of the United Kingdom, or the islands of Guernsey, Jersey, Alderney, Sark, or Man, hoist a signal, to denote that a vessel has the plague or other infectious disease; which signal shall be in the day time a flag of yellow and black, borne quarterly, of 8 breadths of bunting, at the main topmast-head; and in the night time, the signal shall be 2 large signal lanterns, commonly used on board ships of war, one over the other, at the same mast head: and such commander, master, or other person, shall keep such signal hoisted during such time as the said vessel shall continue within sight of such other vessel, or within 2 leagues of the coast or islands aforesaid, while so in sight, or within such distance, until such vessel shall have arrived at the port where it is to perform quarantine, and until it shall have been legally discharged from the performance thereof; on failure thereof, such commander, master, or other person, shall forfeit 100*l.* — § 9.

If any commander, master, or other person, knowing that the same is not liable to the performance of quarantine, shall hoist such signal, by day or night, such commander or other person shall forfeit 50*l.* — § 10.

But, instead of printing the act, and the various orders in council that have grown out of it, it will be sufficient to lay the following abstract of them before the reader. This abstract has been prepared by the Custom-house; and contains a distinct summary of the various rules and regulations to be complied with.

#### ABSTRACT OF QUARANTINE REGULATIONS.

It is in the first place to be observed, that all persons are presumed to know, and are bound to take notice, not only of the quarantine regulations established by act of parliament (as they are of any other public act), but likewise of every order in council made for the performance of quarantine, and published in the *London Gazette*; and as it is easily in their power to inform themselves of such regulations, and particular care is taken by this and other means to promulgate such of them as apply to their respective situations, *previously to their being actually put under quarantine*, when they will receive directions for their guidance from the quarantine officers, no plea of ignorance will be admitted as an excuse for any neglect, breach, or violation thereof; but for the sake of example, and for the security of the public health, the pains, penalties, and punishments of the law will be enforced with the utmost severity.

#### *Duty of Commanders and Masters of Vessels.*

Upon arrival off the coast of the United Kingdom, or the islands of Guernsey, Jersey, Alderney, Sark, or Man,

To deliver to the pilot who shall go on board, a written paper, containing a true account of the name of the place at which his ship loaded, and of all the places at which he touched on the homeward voyage.

Neglecting or refusing to deliver such papers, or making any false representation, or wilful omission therein, subjects him to a penalty of 500*l.*

Upon entering or attempting to enter any port, and being spoke by any quarantine officers, To give a true answer in writing or otherwise, and upon oath or not upon oath (according as he shall be required), to the preliminary questions put to him by such quarantine officer, for the purpose of ascertaining whether his vessel is or is not liable to quarantine. Neglecting or refusing to bring his vessel to as soon as it can be done with safety, in obedience to the requisition of the quarantine officer, subjects him to the penalty of 200*l.*

Refusing to answer such questions, or giving any false answer thereto (if not upon oath), subjects him to the penalty of 200*l.*

If upon oath, to the punishment for wilful and corrupt perjury.

If any infectious disease shall appear on board, the master is to repair to such place as his Majesty shall direct, and make known his case to the officer of customs, and he is to remain at that place until directions are given by the Lords of the Privy Council. He is not to permit any of the crew or passengers on board to go on shore, and he, his crew, and passengers, are to obey such directions as are received from the Lords of the Privy Council.

Not acting in conformity to the regulations herein directed, or acting in disobedience to such directions as shall be received from the privy council, he incurs the penalty of 100*l.*

If informed by the pilot that his vessel has become liable to quarantine, by reason of any proclamation made subsequent to his departure, to hoist and keep hoisted a like signal, under the same penalty of 100*l.*

To give to the pilot coming on board a written paper containing a true account of the different articles composing his cargo. Neglecting or refusing to do so, or making a false representation or wilful omission, subjects him to a penalty of 50*l*.

Masters of vessels liable to quarantine, and other persons on board them or having communication with them, are to repair to the appointed quarantine stations, and may be compelled to do so by force.

The master of any vessel having disease on board, on meeting with any other vessel at sea, or within 2 leagues of the coast of the United Kingdom, or the islands of Guernsey, Jersey, Alderney, Sark, or Man, is to hoist a signal to denote that his vessel has such disease on board, and is to keep such signal hoisted during such time as he shall continue within sight of such vessel, or within 2 leagues of the coast or islands aforesaid, while so in sight or within such distance, until the vessel shall arrive at the port where she is to perform quarantine, and until she shall be legally discharged from the performance thereof. Failing herein, the master incurs the penalty of 100*l*.

If he shall refuse or omit to disclose the circumstances of such infection prevailing either at any place at which he has been, or on board his vessel, in his answers to the preliminary questions put to him by the quarantine officer, or if he shall wilfully omit to hoist, and to keep hoisted, the proper quarantine signal to denote that his ship is liable to quarantine, he incurs the penalty of 300*l*.

Upon attempting to enter any port, which is not the port at which he ought to perform quarantine, he may be compelled to desist therefrom, in order that he may proceed to the proper quarantine ports, by guns being fired upon the ship, or any other kind of force being used that may be necessary for the attainment of that object.

Quitting or knowingly suffering any seaman or passenger to quit his ship, by going on shore, or by going on board any other vessel or boat, before discharged from quarantine, or,

Not repairing to the proper quarantine station within a convenient time after due notice given, incurs a penalty of 100*l*.

To repair in all cases to the proper quarantine port, as herein-after stated in the Appendix, according as he shall or shall not be furnished with a clean bill of health, and according to the port or place to which he shall be bound, as herein stated.

But if through ignorance, or by stress of weather, damage, loss, or accidents of the seas, he shall have passed the proper quarantine port, he may (having a clean bill of health on board, and upon giving satisfactory proof thereof upon oath, and by the oath of the pilot, if any on board, and that the same was not wilfully or intentionally done or occasioned) be permitted to proceed to some other quarantine port, in the discretion of the quarantine officer, keeping the proper quarantine signal hoisted during the whole time.

Upon his arrival at the proper quarantine port, to give true answers upon oath to all the quarantine questions, and to make oath to the truth of his log-book, and the times at which the entries were therein made: failing herein, he incurs the penalty of wilful and corrupt perjury.

He is also to repair to the particular station which shall be appointed by the quarantine officer for the said ship or vessel.

To deliver up to the quarantine officer his bill of health, manifest, log-book, and journal.

Wilfully refusing or neglecting so to do, subjects him to a penalty of 100*l*.

If not bound to any port of the United Kingdom, or the islands aforesaid, and attempting to enter any port thereof (except to wait for orders, or in consequence of stress of weather or accidents of the seas), he shall give satisfactory proof thereof to the quarantine officer, and give true answers upon oath to the preliminary questions, and strictly conform to all such directions as he shall receive from the quarantine officer, touching his continuance at such port, or departure from thence, or repairing to any other; and also with respect to all other quarantine regulations; in default of which, he may be compelled to proceed to sea by any means or by any kind of force that shall be necessary for that purpose.

Having performed quarantine in any foreign lazaret, the vessel is to be put under quarantine at some of the ports herein-after appointed, until the master shall produce to the quarantine officer the proper documents in proof thereof; upon production whereof the said vessel shall not be obliged to perform quarantine, but shall remain at such station until released by order in council.

Unshipping, or moving in order to unship, any goods from on board any vessel liable to quarantine, subjects to a penalty of 500*l*.

Clandestinely conveying, or secreting or concealing for the purpose of conveying, any letter, goods, or other articles, from any vessel actually performing quarantine, subjects to a penalty of 100*l*.

*Note.*—Every commander or master of any vessel clearing out or about to sail for any port or place in the Mediterranean, or in the West Barbary on the Atlantic Ocean, or for any port or place respecting which there shall at the time be any order of his Majesty in council in force, subjecting vessels coming from thence to quarantine, is to receive from the principal officer of the customs at such port or place, this printed Abstract of the Quarantine Regulations, which such commander or master is to cause to be affixed on some convenient and conspicuous part of his said vessel, and to remain so affixed until his return with his said vessel to some port or place in the United Kingdom or the islands aforesaid.

And every such commander and master is likewise to provide and take on board 1 at least of each of the proper quarantine signal flags and lanterns, and likewise materials and instruments for fumigation, and immersion, and to keep the same on board, to be used upon his return to the United Kingdom or the islands aforesaid.

#### *Duty of Pilots.*

Pilots are strictly to observe the following directions:—

To receive an account in writing from every commander or master of any vessel coming from foreign parts, of the places at which his vessel loaded, and at which he touched on his said homeward voyage.

To give notice to such commander or master of any proclamation, or order in council, made after the departure of such vessel from the United Kingdom or the islands aforesaid, and then in force, by which vessels coming from any place mentioned in such account shall be liable to quarantine. Neglecting or omitting to give such notice subjects them to a penalty of 100*l*.

To give a like notice of any proclamation then in force, by which vessels having on board any of the articles mentioned in the master's account shall be liable to quarantine. Neglecting or omitting to give such notice subjects them to a penalty of 100*l*.

To remain on board in the same manner as any of the officers, crew, or passengers, and not to quit the said vessel before or after the arrival, either by going on shore, or by going on board any other vessel or boat with intent to go on shore, until she is regularly discharged from quarantine; and they may be compelled by any persons whatsoever, and by any kind of necessary force, to return on board the same. If they offend herein they incur a penalty of 300*l*. and 6 months' imprisonment.

Not to bring any such vessel into any port or place other than the port or place appointed for the reception of vessels so liable to quarantine, as stated in the Appendix, unless compelled by stress of weather, adverse winds, or accidents of the seas, of which the pilot, as well as the commander or master of the vessel, is to give satisfactory proof upon oath. If they offend herein they incur a penalty of 200*l*.

To bring the ship to, as soon as it can be done with safety, in obedience to the requisition of the quarantine officer. Failing herein subjects them to a penalty of 100*l*.

#### *Duty of other Persons.*

When any infectious disease actually appears on board any vessel, all persons on board are to obey the direction of the privy council, under a penalty of 100*l*.

Not to quit such vessel, either by going on shore, or by going on board any other vessel or boat with intent to go on shore, until regularly discharged from quarantine; and if they quit the ship they may be compelled by any persons whatsoever, and by any kind of necessary force, to return on board the same; and are also liable to a penalty of 300*l.* and 6 months' imprisonment.

Whether liable to quarantine, or actually performing quarantine, or having had any intercourse or communication with any such persons so liable to or under quarantine, all persons are to obey all such orders as they shall receive from the quarantine officer, and to repair to the lazaret, vessel, or place appointed for the performance of quarantine. Willfully refusing or neglecting to repair forthwith, when required so to do by such officers, or escaping from or out of such lazaret, vessel, or place, may be compelled to repair or return thereto by any kind of necessary force, and are subject to a penalty of 200*l.*

Landing or unshipping, or moving in order to the landing or unshipping, of any goods, packets, packages, baggage, wearing apparel, books, letters, or any other articles whatever, from vessels liable to quarantine, are liable to a penalty of 500*l.*

Clandestinely conveying, or secreting or concealing for the purpose of conveying, any goods, letters, or other articles as aforesaid, from any vessel actually performing quarantine, or from the lazaret or other place where such goods or other articles shall be performing quarantine, are liable to a penalty of 100*l.*

Having quitted or come on shore from any vessel liable to or under quarantine, or having escaped from any lazaret or other place appointed in that behalf, may be seized and apprehended by any constable or other peace officer, or by any other person whatever, and carried before a justice of the peace, who may grant his warrant for conveying such person to the vessel, lazaret, or other place from which he shall have escaped, or for confining him in any place of safe custody (not being a public gaol) until directions can be obtained from the privy council.

Knowingly and willfully forging or counterfeiting, interlining, erasing, or altering, or procuring to be forged, &c., any certificate directed by any order in council touching quarantine, or publishing the same as true, or uttering any such certificate with intent to obtain the effect of a true certificate, knowing its contents to be false, are guilty of felony.

*What Vessels are liable to Quarantine.*

All vessels (as well ships of war as all others) with or without clean bills of health, coming — From or having touched at any place in the Mediterranean, or the West Barbary on the Atlantic ocean.

From any other place from which his Majesty shall from time to time adjudge it probable (and shall so declare by proclamation or order in council) that the plague, or any other infectious disease or distemper highly dangerous to the health of his Majesty's subjects, may be brought.

*Note.* — They are considered as liable to quarantine from the time of their leaving any of the said places.

All vessels having communication with any of the before-mentioned ships or vessels, or receiving —

Any person whatever from or out of such vessel, whether such person shall have come from any of the said places, or shall have gone on board of such vessel, either in the course of her voyage, or upon her arrival off the coast of the United Kingdom, &c. — Or,

Any goods, wares, or merchandise, packets, packages, baggage, wearing apparel, goods, letters, or any other articles whatever, from or out of such ship or vessel.

*Note.* — They are liable to quarantine from the time of their receiving any such persons or goods.

All vessels coming from any port or place in Europe without the Straits of Gibraltar, or on the continent of America, and having on board —

Any of the articles enumerated (a list of which articles see in the Appendix);

And not producing a declaration upon oath, made by the owner, proprietor, shipper, or consignee, stating either that such articles are not the growth, produce, or manufacture of Turkey, or of any place in Africa within the Straits of Gibraltar, or in the West Barbary on the Atlantic Ocean, or stating of what place they are the growth, produce, or manufacture.

All vessels and boats receiving —

Any of the said goods, wares, and merchandise, or other articles enumerated.

*Signals.*

For vessels with the plague or other highly infectious disease actually on board —

In the day time — A flag of yellow and black, borne quarterly, of 8 breadths of bunting, at the main topmast-head.

In the night time — Two large signal lanterns, with a light therein, such as are commonly used on board his Majesty's ships of war, one over the other, at the same mast-head.

For vessels with clean bills of health —

In the day time — A large yellow flag, of 6 breadths of bunting, at the main-topmast-head.

In the night time — A large signal lantern, with a light therein, such as is commonly used on board his Majesty's ships of war, at the same mast-head.

For vessels without clean bills of health —

In the day time — A large yellow flag, with a circular mark or ball, entirely black, in the middle thereof, whose diameter shall be equal to 2 breadths of bunting, at the main topmast head.

In the night time — Same as for vessels with clean bills of health.

*Note.* — Every commander or master of a vessel about to sail for the Mediterranean, or for any place respecting which an order in council shall be in force, subjecting vessels coming from thence to quarantine, to be provided with the quarantine signals above mentioned, and to keep the same on board, to be used on his return to the United Kingdom.

Any commander or master hoisting either of the said quarantine signals, by day or night, knowing that his vessel is not liable to quarantine, incurs the penalty of 50*l.*

APPENDIX. — A List of Articles enumerated considered as most liable to Infection.

|   |   |  |
|---|---|--|
| Apparel of all kinds  | Goats' hair   | Plating of bast, chip, cane, straw, or horse hair  |
| Artificial flowers  | Gold or silver on thread, cotton, hair, wool, or silk, or any other substance herein-before mentioned | Quills   |
| Hats, or any articles made thereof  | Gram  | Flags  |
| Heads, bracelets, or necklaces in strings                                     | Hats, caps, or bonnets of straw, chip, cane, or any other material                                    | Sails and sail cloths  |
| Hets and best ticks   | Horns   | Silk, viz. — crapes and tiffanies, husks and knubs, raw silk, thrown and organzine silk, waste silk, wrought silk                        |
| Books   | Hoofs   | Skins, hides, and furs, and parts or pieces of skins, hides, and furs, whether undressed, or in part or wholly tanned, tawed, or dressed |
| Brooms of all sorts   | Hair of all sorts   | Sponges  |
| Brushes of all sorts  | Leather   | Straw, or any article made or mixed with straw   |
| Burdets   | Linen   | Stockings of all sorts   |
| Cannets   | Lute strings, bathings, or harp strings   | Thread, tow, vellum, whisks, wool whether raw or anywise wrought   |
| Casvas  | Mats  | Yarn of all sorts  |
| Carmena wool  | Mattresses  | And all other goods whatsoever, if they shall have arrived in or with packages consisting wholly or in part of any of the said articles. |
| Carpets   | Mats and matting  |  |
| Corlidge not tarred   | Mohair yarn   |  |
| Cotton wool   | Nets, new or old  |  |
| Cotton yarn   | Paper   |  |
| Cotton thread   | Packthread  |  |
| All articles wholly made of or mixed with cotton, silk, wool, thread, or yarn | Parchment   |  |
| Down  | Pelts   |  |
| Feathers  |   |  |
| Flax  |   |  |
| Furriers' waste   |   |  |

21. When did you sail from the port or place from whence you took on board your outward cargo? and at what place did you touch before you arrived at the port or place where you took in your present cargo?
25. Did you carry any bill of health with you to the port or place where you took in the cargo you have now on board? From what place? Were the said bills of health clean, unclean, or suspected?

*Quarantine Questions.*

1. What is the name of the vessel, and the name of her commander or master?
2. Are you the commander or master?
3. To what port or place does she belong?
4. When did you sail from the port or place from whence you took on board your outward cargo? and at what places did you touch before you arrived at the port or place where you took in your present cargo?
5. Did you carry any bill or bills of health with you to the port or place where you took in the cargo you have now on board? From what places? Were the said bills of health clean, unclean, or suspected?
6. From what port or place does she now come? When did you sail from such port or place? and at what place or places have you touched in the course of the voyage?
7. Have you any bill or bills of health on board? From what place or places? Are the same clean, unclean, or suspected? From what place?
8. If the vessel shall have sailed from any port or place in Europe without the Straits, or on the continent of America.]
9. What articles does your cargo consist of? Have you on board any goods enumerated in this list?  
[Handling up a list of articles enumerated.]  
If you have, specify the same, and whether they are of the growth, produce, or manufacture of Turkey, or of any place in Africa, within the straits of Gibraltar, or in the West-India or the Atlantic Ocean, or of what other place. Have you any declaration to prove that they are the growth, produce, or manufacture?
10. At what place or places was the cargo of any part thereof taken on board? On what day did you arrive at the place or places where you took in the whole, or any, and what part of the cargo? And on what day did you sail from such place or places? And what part of your cargo was taken in at each place, and when?
11. Did the plague, or any other infectious disease or distemper prevail in any degree at the places from whence you sailed, or at any of the places at which your cargo was taken on board, or at which you touched? If at any, say at which, and when.
12. Did you hear of any report, or are you aware of any suspicion having existed, at the time of your sailing, that the plague or any other infectious disease prevailed at the place from whence you sailed, or at any other place in the Mediterranean (or in America or the West Indies, as the case may be)?
13. What number of officers, mariners, passengers, or other persons have you on board? Describe the number of each.
14. At what port did you take on board your passengers?
15. Were they residents at that place, or had they been embarked as passengers on board any other vessel from any other place? and from what places and at what time?
16. Do the said officers, mariners, passengers, and other persons, consist of the same individuals as were on board at the port from which you sailed upon your homeward voyage? If any other persons have been taken on board, or if any of your officers, crew, or passengers, have quitted your vessel since you sailed from such port, or before your arrival at this port, or at any other place, in the course of the voyage, have taken place, specify the same, and the causes and the time or times of such alterations.
17. What number of persons (if any) have died on board during the voyage outwards and homewards, or at any port at which you have touched? When, and in what part of the voyage did such person or persons die? Of what disease or distemper?

QUASSIA (Ger. *Quassienholz*; Fr. *Bois de quassie*; Sp. *Leno de quassia*), a beautiful tall tree (*Quassia amara*), growing in North and South America, and the West Indies. The wood is of a pale yellow colour, and inodorous; it, as well as the fruit and bark of the tree, has a place in the materia medica. Its taste is intensely bitter. It is said to have been sometimes used by the brewers in the preparation of beer, instead of hops; but the use of it for this purpose is prohibited, under severe penalties. — (See ALE AND BEER.) The price of quassia in bond varies from 1*l.* 4*s.* to 1*l.* 6*s.* a cwt. The duty is 8*l.* 17*s.* 6*d.*; it is of course intended to be prohibitory; and is one of the few imposed for such a purpose, against which no good objection can be urged.

QUEBEC, the capital of Canada, and of the British possessions in North America, on the north-west bank of the river St. Lawrence, about 340 miles from its mouth, in lat. 46° 48' 49" N., lon. 71° 10' 45" W. Population in 1831, 27,562.

Quebec is situated on a ridge, or promontory, formed by the St. Lawrence on the S. and W., and the river St. Charles on the E. The extremity of this headland, called Cape Diamond, is about 345 feet above the level of the water, and on it the citadel is built. The town extends from the citadel, principally in a north-east direction, down to the water; and is, from the difference of elevation, divided into the upper and lower towns. The fortifications, which are very strong, extend across the peninsula; the circuit within them being about 2½ miles. From their situation, many of the streets are uneven; they are also, for the most part, narrow; but they are either well paved or Macadamised. The greater number of the houses are built of stone, with shingle roofs. Some of the public buildings are elegant, and well adapted for their pur-

17. Have any of your officers, mariners, or other persons of your crew, who sailed with you on your outward voyage, died or left the vessel?
18. In the course of your voyage outwards or homewards, or at any port at which you have touched, have any persons on board suffered from sickness of any kind? What was the nature of such sickness? When did it prevail? How many persons were affected by it? Are there any convalescents on board? Or, are all persons on board at present in good health?
19. Were any of those who died, or who have been sick in the course of the voyage, or any part at which you have touched, infected, or suspected to have been affected, by any infectious disease or distemper? Were the bedding and clothes of such deceased and sick persons destroyed? If so, when and in what manner were any of the persons immediately employed about the sick afterwards taken ill? If so, of what disease? and in how many days after having been so employed?
20. At what precise time did such deaths happen? In how many days after being ill did they die? What were the most obvious appearances of the disease?
21. Have you spoken to or otherwise had any communication with any vessels at sea, during the voyage? What were the names of such vessels? and to what country, port, or place did they belong? From what ports or places were they coming, or at what ports or places had they touched on their voyage? and to what country, ports, or places were they bound? What was the nature of the communication held? What do you know respecting the state of health in board such vessels.
22. Have there been any letters, parcels, or other articles delivered out of or received into your vessel, from any vessel or boat met with on the voyage, or before or since your arrival at this place? And what were such letters, parcels, or articles? And what were the same delivered or received? and into or out of what vessel or boat?
23. Have you any packages or parcels which you have taken charge of? If so, what are their contents? and when and where did you take them on board?
24. What pilots or other persons from the shores of the United Kingdom, or from the islands of Scilly, Guernsey, Jersey, Alderney, Sark, or Man, have been or are now on board your vessel, or have had any communication whatever with the ship's company, or any of the passengers, during the voyage homewards, or before or since your arrival at this place? If any such pilots or other persons have come on board, and have afterwards quitted your vessel, specify the names of such persons, and the time, manner, and circumstances of their so quitting your vessel.
25. Did you leave any British vessels at any of the ports you sailed from? If you did, mention their names and the names of their commanders?
26. Were such vessels loading? were they then near their departure? and whither were they bound?
27. Did you meet with any British vessels at any of the places you touched at? If you did, say when, where, and what were the names and destinations of such vessels; and to what ports or places did they belong?
28. Do you know whether any foreign vessels loading at the port from which you sailed, were bound beyond the Straits of Gibraltar? And if so, what were they? and whither were they bound?
29. Do you know whether any person whatever employed in loading your vessel, or in bringing any articles into it, or having any communication on board thereof, was taken ill during such employment or communication? or whether, by the absence of such person or persons in the course of such employment, any suspicion was entertained of their having been ill? If so, of what disease?
30. Do you know whether or not your cargo, or any part thereof, had been long in warehouse before its being taken on board? If so, say how long. Have you any knowledge of its being packed or handled on shore, or conveyed from shore, or stowed on board, by persons affected with the plague or any other infectious disease or distemper?

|  | 17,285     |   |            |

The remaining exports consist of British fabrics, West India produce, and teas re-exported. Nine tenths of this trade is carried on from Quebec. A great proportion of the imports is, however, consumed in Upper Canada; and it also supplies a very large share of the exports; but it is impossible, owing to the inaccuracy of the returns, to discriminate the imports and exports on account of each province.

An Account of Arrivals at Quebec in the Years 1831 and 1832.

Rates of pilot water and poundage on pilot money are payable at the Naval Office, by masters and commanders of vessels, viz. —

For every foot of water for which masters or commanders of vessels are bound to pay their pilots, from Bic to Quebec, and from Quebec to Bic, 2s. 6d. currency per foot.

For vessels going to Three Rivers or Montreal,  
 Of 100 to 150 tons, inclusive . . . . . L. 2 currency.  
 Of 151 to 200 tons, inclusive . . . . . — 3 —  
 Of 201 to 250 tons, inclusive . . . . . — 4 —  
 Of 251 tons and upwards . . . . . — 5 —

On settling with pilots, masters or commanders of vessels, or the consignees of such vessels, are to deduct 1s. in the pound for the amount of the sums to be paid for pilotage, which will be exacted by the naval officer at clearing out; the same being founded by law, under the direction of the Trinity House, for the relief of decayed pilots, their widows and children.

Regulations for the Payment of Pilotage above Bic to Quebec.

At or above the anchorage of the Brandy Pots, 2-3ds of the present rate for a full pilotage.  
 Above the point of St. Roc, 1-5d do.  
 Above the Point aux Pins, on the Ile aux Grues and below Patrick's Hole, 1-4th do.

*Immigrants.* — The number of immigrants arrived at Quebec, in 1829, was 15,945; in 1830, 28,000; in 1831, 50,254; and in 1832, 51,744.

**MONTREAL**, the second city of Canada, is situated on the south side of an island of the same name, in the St. Lawrence, about 180 miles above Quebec, in lat. 45° 31' N., lon. 73° 57' W. Population 27,000. The harbour is not large, but it is safe and commodious; the facilities for navigation afforded by the noble river on which it is situated being such, that vessels of 500 tons burden may ascend thus far without difficulty. The North American fur trade principally centres in Montreal; which also enjoys the principal share of the commerce between Canada and the United States. It is increasing faster than Quebec, or than any city in British America. Imports and exports included in those of Quebec.

**QUERCITRON BARK**, the bark of a species of oak growing in many parts of North America. It is used in dyeing yellow colours. — (See **BARK**.)

**QUILLS** (Fr. *Plumes à écrire*; Ger. *Posen, Federkiel*; It. *Penne da scrivere*; Rus. *Stiroli*; Sp. *Canones para escribir*), the hard and strong feathers of the wings of geese, ostriches, swans, turkeys, crows, &c. used in writing. They are classified according to the order in which they are fixed in the wing; the second and third quills being the best. Crow quills are chiefly used for drawing. The goodness of quills is judged partly by the size of the barrels, but more by the weight; hence the denomination of quills of 14, 15, &c. lots, per mille, each mille consisting of 1,200 quills. The duty on goose quills produced, in 1832, 4,202l. 11s.; which, as the duty is at the rate of 2s. 6d. the 1,000, shows that the number of quills entered for home consumption that year must have amounted to 33,668,000. Quills are principally imported from the Netherlands and Germany; but those from Riga are the finest. The price of Riga quills in London, in February, 1834, duty paid, was as under: —

|                                  | £ s. d. | £ s. d. |    | £ s. d. | £ s. d. |

Hamburgh quills are about 40 per cent. lower.

R

**RAGS** (Du. *Lompen, Vodden*; Fr. *Chiffes, Chiffons, Drapeaux, Drilles*; Ger. *Lumpen*; It. *Strasci, Strazze*; Rus. *Trepje*; Sp. *Tropos, Harapos*), shreds or fragments of (generally decayed) linen, woollen, or cotton cloth. Though commonly held in little estimation, rags are of great importance in the arts, being used for various purposes, but especially in the manufacture of paper, most of which is entirely prepared from them. As the mode in which British rags are collected must be well known to every one, the following statements apply only to the trade in foreign rags.

**Woollen Rags.** — Woollen and linen rags are imported in considerable quantities from the continent of Europe, and from Sicily. The woollen rags are chiefly used for manure, especially in the culture of hops; but rags of loose texture, and not too much worn or decayed, are untravell'd and mixed up with fresh wool in the making of yarn; a practice more favourable to the cheapness than to the strength and durability of the fabrics into which this old wool is introduced. Woollen rags are also used for making flocks or stuffing for beds, &c.: this process is performed chiefly by the aid of the same kind of engines that prepare pulp for paper; these wash the rags thoroughly, at the same time that they grind and tear them out into separate threads and fibres. The chief importation of woollen rags is from Hamburgh and Bremen; and there are some got from Rostock, but the quantity is trifling. The total average importation varies from 300 to 500 tons; and the price ranges from 6l. to 7l. per ton, duty (7s. 6d.) and freight paid on such as are used for manure; and from 13l. to 15l. for coloured woollens of loose texture, and 18l. to 20l. for white of the same description.

**Linen Rags** are principally imported from Rostock, Bremen, Hamburgh, Leghorn, Ancona, Messina, Palermo, and Trieste. Their export from Holland, Belgium, France, Spain, and Portugal, is strictly prohibited. The imports usually amount to about 10,000 tons; worth, at an average, from 21l. to 22l. per ton, duty (5s.) and freight included. Exclusive of the very large quantity collected at home, all the rags imported were, until very recently, employed in the manufacture of paper; but the Americans, who have for some years been large importers from the Mediterranean and Hamburgh, have lately come into the London market, and purchased several cargoes: a circumstance sufficiently indicative of the languid state of the paper manufacture in this country, occasioned by the oppressive amount of the duties with which it is burdened, and of the duty on advertisements. — (See **PAPER**.)

The imported rags are coarser and inferior in appearance to the English; but, being almost exclusively linen, they are stronger, and bear a price disproportioned to the apparent difference in quality: this disproportion has been materially augmented since the introduction of the process of boiling the rags in ley, and afterwards bleaching them with chlorine, has rendered foreign rags fit for making fine paper, and, indeed, in some

respects preferable for that purpose, by their affording greater strength of texture combined with equal whiteness of colour.

There is considerable variety in the appearance of rags from different ports; but, in general, those from the north of Europe are darker and stronger than those from the Mediterranean ports. The latter are chiefly the remains of outer garments, and have become whitened by exposure to the sun and air; but since the improvements in bleaching, this does not much enhance their value in the British market. The rags shipped from Trieste are chiefly collected in Hungary. It is only within these few years that we have brought rags from this port, which now furnishes us with considerable supplies. Most part of the rags collected in the Tuscan states, to the extent of 10,000 or 12,000 bags a year, goes to America.

Freights are, at an average, about—Hamburg and Bremen, linen 20s. per ton, woollen, 25s.; Rostock, 40s.; Ancona and Leghorn, 38s. to 40s.; Trieste and Sicily, 45s. to 48s. Linen rags are almost all selected and assorted previously to their shipment from the foreign port. Their distinguishing marks and prices per cwt. in the London market, January, 1832, were as follow: viz.

|          | Rostock. |    |    | Hamburg. |    |    | Bremen. |    |    | Trieste. |    |    |   |    |    |

**RAIL-ROAD, TRAM or WAGON ROAD**, a species of road having tracks or ways formed of iron, stone, or other solid material, on which the wheels of the carriages passing along it run. The object in constructing such roads is, by diminishing the friction, to make a less amount of power adequate either to impel a carriage with a greater velocity, or to urge forward a greater load.

*Construction of Rail-roads.*—The friction on a perfectly level rail-road, properly constructed, is estimated to amount to from  $\frac{1}{10}$ th to  $\frac{1}{12}$ th only of the friction on an ordinary level road; so that, supposing the same force to be applied in both cases, it would move a weight from 10 to 7 times as great on the former as on the latter. But if there be a very moderate ascent, such as 1 foot in 50, which in an ordinary road would hardly be perceived, a great increase of power the rail-road is required to overcome the resistance that is thus occasioned. The result is, that the ordinary load on a level rail-road is about seven times as great as on a common turnpike road; so that when the force of gravity is brought into operation by an ascending plane, its opposing power, being *proportioned to the load*, is 7 times as great as on a common road. Hence the vast importance of having rail-roads either level, or as nearly so as possible.

It is also of great importance that rail-roads should be straight, or, at least, free from any abrupt curves. Carriages being kept on the road by *flanges* on the wheels, it is obvious, that where the curves are quick, the friction on the sides of the rails, and consequent retardation, must be very great. In the Manchester and Liverpool rail-road, the curves form segments of a circle which, if extended, would embrace a circumference of 15 miles.

Iron rail-roads, the kind now generally used, are of 2 descriptions. The *flat rail*, or *tram road*, consists of cast-iron plates about 3 feet long, 4 inches broad, and  $\frac{1}{2}$  an inch or 1 inch thick, with a flange, or turned up edge, on the inside, to guide the wheels of the carriage. The plates rest at each end on stone *sleepers* of 3 or 4 cwt. sunk into the earth, and they are joined to each other so as to form a continuous horizontal pathway. They are, of course, double; and the distance between the opposite rails is from 3 to 4 $\frac{1}{2}$  feet, according to the breadth of the carriage or wagon to be employed. The *edge rail*, which is found to be superior to the tram rail, is made either of wrought or cast iron; if the latter be used, the rails are about 3 feet long, 3 or 4 inches broad, and from 1 to 2 inches thick, being joined at the ends by cast metal sockets attached to the sleepers. The upper edge of the rail is generally made with a convex surface, to which the wheel of the carriage is attached by a groove made somewhat wider. When wrought iron is used, which is in many respects preferable, the bars are made of a smaller size, of a wedge shape, and from 12 to 18 feet long; but they are supported by sleepers, at the distance of every 3 feet. In the Liverpool rail-road the bars are 15 feet long, and weigh 35 lbs. per lineal yard. The wagons in common use run upon 4 wheels of from 2 to 3 feet in diameter. Rail-roads are either made double, 1 for going and 1 for returning; or they are made with *sidings*, where the carriages may pass each other.—(See the able and original *Essays on Rail-roads*, by Charles Maclaren, Esq., in the *Scotsman* for 1824, Nos. 511, 512, and 514; see also Mr. Booth's Pamphlet on the *Liverpool and Manchester Rail-road*.)

*Speed of Carriages on Rail-roads, &c.*—The effect of rail-roads in diminishing friction is familiar to every one; and they have long been used in various places of this and other

countries, particularly in the vicinity of mines, for facilitating the transport of heavy loads. But it is only since the application of locomotive engines as a moving power, that they have begun to attract the public attention, and to be regarded as of the highest national importance. These engines were first brought into use on the Darlington and Stockton rail-road, opened on the 27th of December, 1825. But the rail-road between Liverpool and Manchester is by far the greatest undertaking of this sort that has hitherto been completed. This splendid work, which is executed in the most approved manner, cost between 800,000*l.* and 900,000*l.*; and, as far as speed is concerned, has completely verified, and, indeed, far surpassed, the most sanguine anticipations. The road has the advantage of being nearly level; for, with the exception of a short space at Rainhill, where it is inclined at the rate of 1 foot in 96, there is no greater inclination than in the ratio of 1 foot in 880. The length of the rail-road is 31 miles; and it is usual to perform this journey in handsome carriages attached to the locomotive engines, in an hour and a half, and sometimes less! So wonderful a result has gone far to strike space and time out of the calculations of the traveller: it has brought, in so far, at least, as respects the facility of passing from the one to the other, Liverpool as near to Manchester as the western part of London is to the eastern part!

The extraordinary speed of carriages on rail-roads depends on the fact, that the *friction*, which on a perfectly level rail-road is the only resistance to be overcome, is *the same for all velocities*; so that, abstracting from the resistance of the air, which is so trifling as not to require to be taken into account, we have merely, in order to double or treble the velocity, to double or treble the power. But in vessels at sea, or in canals, which have to make their way through a comparatively dense medium, the resistance to be overcome increases as the *square of the velocity*; so that, to double the speed, the power must be multiplied by 4, and to treble it, it must be multiplied by 9, and so on.

*Comparative Advantages of Rail-roads and Canals.* — Astonishing, however, as are the results of the performances on the Manchester and Liverpool rail-road, we doubt much whether there be many more situations in the kingdom where it would be prudent to establish one. That carriages with passengers may be safely impelled along a perfectly level rail-road at a speed of 20 or 30 miles an hour, is a fact that is now proved experimentally; but before deciding at to the expediency of opening such a mode of communication between any two places, it is necessary to look carefully into the expense attending the formation of a rail-road with a suitable establishment of carriages, at the expense of keeping it and them in repair, and at the probable returns. The outlay, judging from what has taken place between Liverpool and Manchester, is quite enormous; the wear and tear of the engines, which is great under all circumstances, is increased in an extraordinary degree with every considerable increase of speed. We do not, therefore, consider the success that has hitherto attended the Liverpool and Manchester rail-road as at all warranting the construction of similar roads in most other places. The great size of these two tows, and still more their intimate connection, — Liverpool being, in fact, the port of Manchester and of the entire cotton district — occasions a very great intercourse between them: the number of passengers and the quantity of goods that are always in the course of being conveyed from the one to the other, is far greater than between any two equally distant places in the empire. If a rail-road had not succeeded in such a situation, it would have been madness to attempt the formation of one, at least as a mercantile speculation, anywhere else; and the fact that the dividend upon this very road has never hitherto exceeded  $\frac{8}{3}$  per cent., affords but a slender presumption in favour of the success of several of the rail-road projects now afloat.

No general estimate can be formed of the comparative cost of canals and rail-roads; as it must, in every given instance, depend on special circumstances. It is, however, certain, that the cost of rail-roads, and particularly of keeping up the locomotive engines, is far greater than it was supposed it would be a short time since. It is reasonable, indeed, inasmuch as these engines are only in their infancy, to suppose that they will be gradually improved, and that ultimately their expense will be materially reduced; but at present it is a heavy drawback from the other advantages of rail-roads.

In as far as respects the conveyance of heavy goods, we believe that, even between Manchester and Liverpool, canals are generally preferred. It is not very material whether a ton of lime, or coal, or of manure, be moved with a velocity of 3 to 10 miles an hour; at least, the advantage of superior speed would, in such a case, be effectually overbalanced by a small additional charge.

The wonderful performances of the engines between Liverpool and Manchester struck, in the first instance, every one with astonishment, and led to the most extravagant speculations. It was supposed that the whole country would be forthwith intersected by rail-roads; that locomotive engines would be as common as stage coaches; and that the only way in which the canal proprietors could escape ruin, would be by converting canals into rail-roads! Soberer and sounder views are now entertained. The price of canal stock has recovered from the depression which it suffered in 1826. And it seems

to be admitted by every one not expecting to profit by the prosecution of some scheme, that rail-roads between distant places, at least where a canal has already been constructed, must depend for returns chiefly on the conveyance of passengers and light goods; and that it would not be prudent to undertake their construction, except between places that have a very extensive intercourse together.

*Steam Carriages on common Roads.*— A late committee of the House of Commons collected a good deal of evidence as to the probability of advantageously using locomotive engines or steam carriages on common roads. Most of the witnesses seem to have been very sanguine in their expectations. Mr. Farey, a very eminent practical engineer, declares that "what has been done proves to his satisfaction the practicability of impelling stage coaches by steam on good common roads, in tolerably level parts of the country, without horses, at a speed of 8 or 10 miles an hour." Mr. Farey further states, that he believes "that steam coaches will, very soon after their first establishment, be run for one third of the cost of the present stage coaches." We suspect that the latter part of this statement is a good deal more problematical than the first; but since there is nothing better than conjecture on which to found an opinion, it would be useless to indulge in further speculations. We may, however remark, that though 3 years have elapsed since this evidence was given, there does not appear to be any material progress made towards realising the anticipations of the witnesses.

The subjoined list of the principal existing and projected rail-roads, showing the number and amount of the shares in each, the sum paid up, the selling price of the shares, &c., is taken from the *Share List*, for the 12th of October, 1833, published by Mr. Edmunds, Broker, No. 9, Exchange Alley, Cornhill.

**RAISINS** (Fr. *Raisins secs, ou passés*; Ger. *Rosinen*; It. *Uve passe*; Por. *Passas*; Rus. *Issum*; Sp. *Passas*), the dried fruit of the vine. They are produced from various species of vines; deriving their names partly from the place where they grow, as Smyrnas, Valencias, &c.; and partly from the species of grape of which they are made, as muscatels, blooms, sultanas, &c. Their quality appears, however, to depend more on the method of their cure than on any thing else. The finest raisins are cured in two methods;—either by cutting the stalk of the bunches half through, when the grapes are nearly ripe, and leaving them suspended on the vine till the watery part be evaporated, and the sun dries and candies them; or by gathering the grapes when they are fully ripe, and dipping them in a ley made of the ashes of the burnt tendrils; after which they are exposed to the sun to dry. Those cured in the first way are most esteemed, and are denominated raisins of the sun. The inferior sorts are very often dried in ovens.— (*Thomson's Dispensatory.*)

Raisins are imported in casks, barrels, boxes, and jars. The finest come in jars and 4 boxes weighing about 25 lbs. Some of the inferior sorts are brought to us in mats.

Of 216,283 cwt. of raisins imported in 1831, 105,066 came from Spain, 100,458 from Turkey, and 7,036 from Italy. Malaga raisins are in the highest estimation. The muscatels from Malaga fetch fully a third more than any other descriptive of raisins. The Smyrna black is the cheapest variety, and may average from 32s. to 35s. a cwt., duty included; muscatels vary from 80s. to 130s. duty included. But the price depends much on the season, and the period of the year.— (See MALAGA.)

The duty on raisins varies, according to the species, from 20s. to 42s. 6d. a cwt.; that is, it varies from about 130 per cent. on the cheapest sorts, to from 50 to 35 per cent. on the dearest. This exorbitant duty has confined the demand for raisins within very narrow limits, the entries for home consumption being, at an average of 1831 and 1832, only 150,254 cwt. a year. The fact, is that raisins are, at present, a luxury that can be enjoyed only by the rich; but were the duty reduced, as it ought to be, to 5s. a cwt. on the cheapest sorts, and 10s. or 12s. on the dearest, we are well assured that they would be very largely consumed by the middle classes; and that they would not unfrequently be used even by the lower. Nothing but the magnitude of the duties prevents them from becoming of very considerable importance as an article of food; and it is really quite monstrous, that the public should be debarred from the use of a desirable article, on the stale and stupid pretence of its being necessary, in order to keep up the revenue, that it should be loaded with an oppressive duty. We admit the importance of keeping up the revenue; but so far from exorbitant duties having such an effect, they contribute more than any thing else to its reduction. They either limit the consumption of the articles on which they are laid to the very richest

classes, or they cause them to be clandestinely supplied; reducing the revenue as well as the consumption far below the level to which it would attain were the duties moderate. But it is needless to reason speculatively on such a point. Have we not seen the revenue derived from spirits increased, by reducing the duty from 5s. 6d. a gallon to 2s. 6d. ? and the revenue derived from coffee trebled, by reducing the duty from 1s. 7d. per lb. to 6d. ? And, as neither of these articles was more grossly overtaxed than raisins, have we not every reason to expect that a like effect would be produced by an adequate reduction of the duties by which they are burdened ?

Exclusive of raisins, a considerable quantity of undried grapes is annually imported from Spain and Portugal, in jars, packed in sawdust. The duty on these grapes, which is 20 per cent. *ad valorem*, produced, in 1832, 1,720*l.*

Raisins, the produce of Europe, may not be imported for home consumption, except in British ships, or in ships of the country of which they are the produce, or from which they are imported, on forfeiture of the goods, and of 100*l.* by the captain of the ship. — (3 & 4 Will. 4. c. 54. § § 2, 22.)

No abatement of duty is made on account of any damage received by raisins. — (3 & 4 Will. 4. c. 52. § 32.)

**RANGOON**, a commercial port and town of the Burmese dominions, situated about 26 miles from the sea, on the left bank of the eastern branch of the river Irawaddy, in lat. 16° 42' N., lon. 95° 20' E. The town and suburbs extend lengthwise about 1 mile along the bank of the river, being about  $\frac{3}{4}$  of a mile in depth; but the houses are very unequally scattered over this area. The fort, or rather wooden stockade, which contains the town, properly so called, is a regular square about 14 feet high, composed of heavy beams of teak timber. It appears from a census, taken a short time previously to the commencement of the war in 1824, that the population was 18,000, which, probably, is not far from its present amount.

Rangoon is the chief, and, indeed, almost the only, port of foreign trade in the Burmese dominions, which extend from between the 15th and 16th, up to the 26th and 27th degrees of N. lat., and from the 93d to the 98th degree of E. lon., containing an area of about 184,000 square miles, with a population of about 4,000,000. Its situation is extremely convenient for commercial purposes, being situated so near the sea, and commanding the navigation of the Irawaddy, which extends to Ava, the capital, a distance of nearly 500 miles. Rangoon is accessible to ships of even 1,200 tons burden; the navigation, although somewhat intricate, being safe and practicable with the assistance of the ordinary native pilots.

The town has many advantages for ship building. At neaps the tide rises and falls about 18 feet; and at springs from 25 to 30 feet. The principal teak forests are, at the same time, at a comparatively short distance, and there is a water conveyance for the timber nearly the whole way. Ship-building has, in fact, been carried on at Rangoon since 1786, and in the 38 years which preceded our capture of it, there had been built 111 square-rigged vessels of European construction, the total burden of which amounted to above 35,000 tons. Several of these were of from 800 to 1,000 tons. Under the direction of European masters, the Burmese were found to make dexterous and laborious artisans; in this respect, greatly surpassing the natives of our Indian provinces.

There are 2 considerable markets, where the ordinary necessaries of life, according to Burmese usage, are cheap and abundant: these are rice, excellent fish, and poultry.

**Money.**—The Burmese currency consists, for small payments, of lead; for larger ones, of gold and silver, but chiefly of the latter. There are no coins. In every payment, the metal must be weighed, and very generally assayed.—a rude and very inconvenient state of things. The weights used in the weighing of money are the same as those used on ordinary occasions; the *kyat* or *tical*, and the *paiktha* or *vis*, being by far the most frequent. Silver may be considered as the standard. Gold is generally held to be about 17 times more valuable than silver. The weighing and assaying of the metals, used as currency, gives employment to a class of persons as brokers, money changers, and assayers. Every new assay costs the owner, if the metal be silver,  $\frac{2}{3}$  per cent.;  $\frac{1}{4}$  per cent. being the established commission of the assayers, while 1 per cent. is lost, or supposed to be lost, in the operation. If it be repeated 40 times, it follows that the original amount is wholly absorbed—a fact which shows the enormous waste of metal arising out of this rude substitute for coin.

**Weights.**—The weights in use at Rangoon, and throughout the Burman dominions, are as follow:—

|  |   |
|--|---|
| 2 Small <i>Rwés</i> (red beans) = 1 Large <i>Rwé</i> . | 2 <i>Mus</i> = 1 <i>Ma'th</i> .   |
| 4 Large <i>do.</i> = 1 <i>Rwé</i> .                    | 4 <i>Ma'th's</i> = 1 <i>Kyat</i> , <i>ru'lo</i> <i>Tical</i> .                            |
| 2 <i>Bals</i> = 1 <i>Rwé</i> .                         | 100 <i>Kyats</i> = 1 <i>Paiktha</i> , <i>ru'lo</i> <i>Vis</i> , = 365 <i>lbs.</i> avoird. |

**Measures of capacity are as follow:—**

|   |                                  |                                  |
|---|----------------------------------|----------------------------------|
| $\frac{2}{3}$ <i>Lanyets</i> = 1 <i>Lampé</i> . | 4 <i>Saldá</i> = 1 <i>Pyl</i> .  | 2 <i>Sarots</i> = 1 <i>Sah</i> . |
| $\frac{2}{3}$ <i>Lamics</i> = 1 <i>Saldé</i> .  | 2 <i>Pyls</i> = 1 <i>Sarot</i> . | 4 <i>Salts</i> = 1 <i>Ten</i> .  |

This last measure is what is usually called by us "a basket," and ought to weigh 16 *vis* of clean rice, or 58  $\frac{1}{2}$  *lbs.* avoirdupois: it has commonly been reckoned at  $\frac{1}{4}$  a *cwt.* All grains, pulses, certain fruits, natron, salt, and lime, are bought and sold by measure: other commodities by weight.

**Commercial Regulations.**—The following commercial treaty, entered into between the government of England and the Court of Ava, in 1823, regulates the intercourse between the two countries:—

Art. 1.—Peace being made, &c. &c.—when merchants with an English certified pass from the country of the English ruler, and merchants from the kingdom of Burma pass from one country to the other, selling and buying merchandise, the sentinels at the passes and entrances, the established gate-keepers of the country, shall make inquiry as usual, but without demanding any money; and all merchants coming truly for the purpose of trade, with merchandise, shall be suffered to pass without hindrance or molestation. The governments of both countries, also, shall permit ships with cargoes to enter ports and carry on trade, giving them the utmost protection and security. And in regard to duties, there shall none be taken beside the customary duties at the landing places of trade.

Art. 2.—Ships, whose breadth of beam on the inside (opening of the hold) is 8 royal Burman cubits, of 191 English inches each, and all ships of smaller size, whether merchants from the Burmese country entering an English port under the Burmese flag, or merchants from the English country, with an English stamped pass, entering a Burmese port under the English flag, shall be subject to no other demands beside the payment of duties, and 10 *ticals*, 25 per cent. (10 *sikas* *rupes*). However, when ships arrive, no shall pilotage be demanded, unless the captain voluntarily requires a pilot. In regard to vessels, whose breadth of beam exceeds 8 royal cubits, they shall remain, according to the 9th article of the treaty of Yandabo, without unshipping their mudders or landing their guns, and be free from trouble and molestation as Burmese vessels in British ports. Besides the royal duties, no more duties shall be given or taken than such as are customary.

Art. 3.—Merchants belonging to one country, who go to the other country and remain there, shall, when they desire to return, go to whatever country and by whatever vessel they may desire, without hindrance. Property owned by merchants they shall be allowed to sell. And property not sold, and household furniture, they shall be allowed to take away, without hindrance, or incurring any expense.

Art. 4.—English and Burmese vessels meeting with contrary winds, or sustaining damage in masts,

rigging, &c., or from the paying to those property may r

**Commerce.**—A considerable intercourse is carried on between the Burmese and Chinese dominions by an annual caravan, of which the merchants are all Chinese. The imports from China consist of manufactured articles, the chief export from Burma being cotton wool. The trade with foreign countries seaward is carried on with the ports of Chittagong, Dacca, and Calcutta, in Bengal; Madras and Masulipatam, on the Coromandel coast; the Nicobar Islands, in the Bay of Bengal; Penang, in the Straits of Malacca; and occasionally with the Persian and Arabian Gulfs. The largest trade is with Calcutta, owing to the great consumption of teak timber in the latter, and the facility with which she supplies the demand of the Burmese for Indian and British cotton goods. At an average of the 3 years ending with 1822-23, being those which immediately preceded the war with the British, there entered inwards at Calcutta, from the Burmese dominions, 22 ships, of the burden of 9,404 tons; and in the 3 years ending with 1829-30, 33 ships, of the burden of 8,920 tons. No direct trade has yet been carried on between Burma and any European country. The ships and tonnage which entered inwards at Madras from Burma were, in the 3 years ending with 1822-23, 5 ships, of the burden of 683 tons; and in the 3 years ending with 1829-30, 8 ships, of the burden of 1,170 tons. The articles exported to foreign countries from Rangoon are the following:—Teak wood, terra Japonica, or catechu, stick lac, bees' wax, elephants' teeth, raw cotton, orpiment, commonly called in India hortal, gold, silver, rubies, sapphires, and horses, or rather the small, hard pony of the country, which is much esteemed, particularly at Madras. By far the most important of these commodities is teak timber; the quantity of this wood annually exported is said to be equal to 7,500 full-sized trees, which, for the most part, consist of what India ship-builders call *shinbin*, which are planks hewn out of the log with the adze at an immense waste. The teak forests of Pegu are by far the most abundant in India. The teak is nowhere to be found in the low alluvial lands to which the tide reaches, but abounds in the high lands beyond its influence. It seems to be very generally disseminated throughout the Burmese dominions. In the territory ceded to the British in Martaban, there are some fine forests, the timber of which is cut down for exportation, and where it is believed that saw-mills have very recently been established by some European settlers. The most accessible and extensive forests of teak in the Burmese dominions are in the province of Sarawadi, about 150 miles to the north of Rangoon, with which there is a water communication. The principal imports into Burma are cotton, piece goods from India and Britain, British woollens, iron, steel, quicksilver, copper, cordage, borax, sulphur, gunpowder, saltpetre, fire-arms, coarse porcelain, English glass ware, opium, tobacco, cocoa and areca nuts, sugar, and spirits. Of these, by far the most important is cotton piece goods. The Burmese have few cotton manufactures of their own, and appear, from very early times, to have been furnished with the principal part of their supply from the Coromandel coast. To these were afterwards added the cheaper fabrics of Bengal; and both are now, in a great measure, superseded by British manufactures, the use of which has spread very rapidly since the opening of the trade in 1814. In 1826-27, the exports and imports of the port of Rangoon were estimated each at the rate of 300,000*l.*—(We are indebted for this valuable article to our esteemed friend, John Crawford, Esq., who ascertained the particulars on the spot.)

**RAPE**, a biennial plant of the turnip kind (*Brassica napus* Lin.), but with a woody fusiform root scarcely fit to be eaten. It is indigenous, flowers in May, and ripens its seeds in July. It is cultivated in many parts of England, particularly in Lincoln and Cambridge; partly on account of its seed, which is crushed for oil, and partly for its leaves as food for sheep. The culture of rape for seed has been much objected to by some, on account of its supposed great exhaustion of the land: but Mr. Loudon says that, where the soil and preparation are suitable, the after-culture properly attended to, and the straw and offal, instead of being burnt, as is the common practice, converted to the purposes of feeding and littering cattle, it may, in many instances, be the most proper and advantageous crop that can be employed by the farmer. The produce, when the plant succeeds well, and the season is favourable for securing the seed, amounts to from 40 to 50 bushels an acre. The seed is sold by the last of 10 quarters; and is crushed in mills constructed for that purpose.—(*Loudon's Ency. of Agriculture.*)

In addition to the rape-seed raised at home, we import considerable quantities, principally from Denmark. In 1831, our imports amounted to 407,275 bushels; of which 290,368 were from Denmark, 57,616 from Germany, 41,964 from France, with smaller quantities from Prussia, the Netherlands, and Italy. At an average of 1831 and 1832, the entries of foreign rape-seed for home consumption amounted to 494,798 bushels a year, producing an annual revenue of 3,107*l.* The price of English rape-seed in December, 1833, varied from 28*l.* to 29*l.* per last; the duty on foreign rape-seed is 10*l.* a last.

Rape-seed, the produce of Europe, may not be imported for home consumption, except in British ships, or in ships of the country of which it is the produce, or from which it is imported.—(*3 & 4 Will. 4. c. 54. s. 2. 22.*)

**RAPE CAKE**, is the adhering masses of the husks of rape-seed, after the oil has been expressed. They are reduced to powder by a malt mill or other machine; and are used either as a top dressing for crops of different kinds, or are drilled along with turnip seed. Rape cakes were worth, in December, 1833, from 5*l.* to 6*l.* a ton; and rape oil from 1*l.* 15*s.* to 1*l.* 17*s.* a cwt. In 1830, we imported about 330,000 cwt. of rape and other oil cake. It is charged with a duty of 2*d.* a cwt.

**RATTANS**, or **CANES**, the long slender shoots of a prickly bush (*Calamus rotang* Lin.), one of the most useful plants of the Malay peninsula, and the Eastern islands. They are exported to Europe, and above all to China, where they are consumed in immense quantities. For cane work they should be chosen long, of a bright pale yellow colour, well glazed, and of a small size, not brittle, or subject to break. They are purchased by the bundle, which ought to contain 100 rattans, having their ends bent together, and tied in the middle. In China they are sold by the picul, which contains from 9 to 12 bundles. Such as are black or dark coloured, snap short, or from which the glazing flies off on their being bent, should be rejected. When stowed as dunnage, they are generally allowed to pass free of freight.—(*Milburn's Orient. Com., &c.*) The imports into this country are very considerable. In 1830, the number imported was 2,414,562; in 1831, 3,908,423; and in 1832, 3,922,955.—(*Parl. Paper. No. 425. Sess. 1833.*)

"The rattan," says Mr Crawford, "is the spontaneous product of all the forests of the Archipelago; but exists in great perfection in those of the islands of Borneo, Sumatra, and of the Malayan peninsula. The finest are produced in the country of the *Bataks* of Sumatra. The wood-cutter, who is inclined to deal in this article, proceeds into the forest without any other instrument than his *parang* or cleaver, and cuts as much as he is able to carry away. The mode of performing the operation is this; — He makes a notch in the tree at the root of which the rattan is growing, and cutting the latter, strips off a small portion of the outer bark, and inserts the part that is peeled into the notch. The rattan now being pulled through as long as it continues of an equal size, is by this operation neatly and readily freed from its epidermis. When the wood-cutter has obtained by this means from 300 to 400 rattans, — being as many as an individual can conveniently carry in their moist and undried state, — he sits down, and ties them up in bundles of 100, each rattan being doubled before being thus tied up. After drying, they are fit for the market without further preparation. From this account of the small labour expended in bringing them to market, they can be sold at a very cheap rate. The Chinese junks obtain them in Borneo at the low rate of 5 Spanish dollars per 100 bundles, or 5 cents for each 100 rattans, or 27 for 1*d.* — He natives always vend them by tale; but the resident European residents, and the Chinese, by weight, counting by piculs. According to their quantity, and the relative state of supply and demand, the European merchants dispose of them at from 14 to 24 dollars the picul. In China, the price is usually about 34 dollars per picul, or 75 per cent. above the average prime cost. In Bengal they are sold by tale, each bundle of about 100 rattans bringing about 20*d.*" — (*Indian Archipelago*, vol. iii. p. 423.)

REAL, in the Spanish monetary system, is of two sorts; viz. a *real of plate*, and a *real vellon*. The former is a silver coin, varying in value from about 6½*d.* to 5*d.* — (See COINS.) A real vellon is a money of account, worth about 2½*d.*

REAM, a quality of paper. The ream of writing paper consists of 20 quires, each of 24 sheets; but the ream of printing paper, or, as it is sometimes called, the *printer's ream*, extends to 21½ quires, or 516 sheets. Two reams of paper make a *bundle*.

RECEIPT, is an acknowledgment in writing of having received a sum of money, or other valuable consideration. It is a voucher either of an obligation or debt discharged, or of one incurred.

The 35 Geo. 3. c. 55. enacts, that every note, memorandum, or writing whatever, given to any person on the payment of money, acknowledging such payment, on whatever account it be, and whether signed or not, shall be considered a receipt, and liable to a stamp duty. And every person who shall write, or cause to be written, any receipt for money on unstamped paper, (except in certain excepted cases hereafter enumerated,) or on a lower stamp than the proper one, shall forfeit 10*l.* if for a sum under 100*l.*; if above, 20*l.* Giving receipts for less than actually paid, writing off sums, or other fraudulent contrivances, penalty 50*l.*; but receipts may be stamped if brought within fourteen days after date, on payment of a penalty of 5*l.* on the duty; and if brought within one calendar month, on payment of a penalty of 10*l.* and the duty. Any person refusing to give a receipt upon demand, or to pay the amount of the stamp, is liable to a penalty of 10*l.*

Scale of Stamp Duties per 55 Geo. 3. c. 184.

REGISTRY, in commercial navigation, the registration or enrolment of ships at the Custom-house, so as to entitle them to be classed among, and to enjoy the privileges of, British built ships.

The registry of ships appears to have been first introduced into this country by the Navigation Act (12 Car. 2. c. 18. anno 1660). Several provisions were made with respect to it by the 7 & 8 Will. 3. c. 22.; and the whole was reduced into a system by the 27 Geo. 3. c. 19.

It may be laid down in general, that a vessel, in order to be admitted to registry, and consequently to enjoy the privileges and advantages that exclusively belong to a British ship, must be the property of his Majesty's subjects in the United Kingdom or some of its dependencies; and that it must have been built in the said United Kingdom, &c., or been a prize vessel legally condemned, or a vessel legally condemned for a breach of the slave laws.

The great, and, perhaps, the only original object of the registration of ships, was to facilitate the exclusion of foreign ships from those departments in which they were prohibited from engaging by the navigation laws, by affording a ready means of distinguishing such as were really British. It has also been considered advantageous to individuals, by preventing the fraudulent assignment of property in ships; but Lord Tenterden has observed, in reference to this supposed advantage, that "the instances in which fair and honest transactions are rendered unavailable through a negligent want of compliance with the forms directed by these and other statutes requiring a public register of conveyances, make the expediency of all such regulations, considered with reference

Previously to 1835 all receipts for sums of 2*l.* and under 5*l.* were charged with a stamp duty of 2*d.*; but the act 5 & 4 Will. 4. c. 63., exempts all receipts for sums under 5*l.* from the duty.

Exemptions. — Receipts exempted from stamp duty by any act relating to the assessed taxes. Receipts given by the Treasurer of the Navy, Receipts on account of the pay of the army or ordnance. Receipts by any officer, seaman, marine, or soldier, or their representatives. Receipts for the consideration money for the purchase of any parliamentary stocks or funds, and for any dividend paid on any share of the said stocks or funds. Receipts on Exchequer bills. Receipts given for money deposited in the Bank of England, or in the hands of any banker, to be accounted for on demand; provided the same be not expressed to be received of, or by the hands of, any other than the person to whom the same is to be accounted for. Receipts written upon promissory notes, bills of exchange, drafts, or orders for the payment of money. Receipts given upon bills or notes of the Bank of England. Letters by the general post acknowledging the safe arrival of any bills of exchange, promissory notes, or other securities. Receipts indorsed upon bonds, mortgages, or other security, or any conveyance whatever. Releases or discharges for money by deeds duly stamped. Receipts or discharges for drawbacks or bounties. Receipts or discharges for the return of duties of customs. Receipts indorsed upon any bills. Receipts upon victualling and transport bills. Receipts given solely for the duty on insurances against fire.

In 1832, the net produce of the receipt duty was as follows: — Great Britain, 1,911,501*l.* 10*s.*; Ireland, 17,956*l.* 7*s.* 9*d.*

to private benefit only, a matter of question and controversy."—(Law of Shipping, part 1. c. 2.)

The existing regulations as to the registry of ships are embodied in the act 3 & 4 Will. 4. c. 55., which, on account of its importance is subjoined nearly entire.

ACT 3 & 4 WILL. 4. c. 55., FOR REGISTERING OF BRITISH VESSELS.

**Commencement of Act.**—From 1st of September, 1833, except where any other commencement is herein-after particularly directed.

**No Vessel to enjoy Privileges until registered.**—No vessel shall be entitled to any of the privileges or advantages of a British registered ship unless the person or persons claiming property therein shall have caused the same to have been registered in virtue of the act 6 Geo. 4. c. 110., or of the act 4 Geo. 4. c. 41., or until such person or persons shall have caused the same to be registered in manner herein-after mentioned, and have obtained a certificate of such registry from the person or persons authorised to make such registry and grant such certificate as herein-after directed; the form of which certificate shall be as follows; viz.—

"This is to certify, that in pursuance of an act passed in the 4th year of the reign of King Will. 4. intitled, An Act (here insert the title of this act, the names, occupation, and residence of the subscribing owners), having made and subscribed the declaration required by the said act, and having declared that [to or the] together with [names, occupations, and residence of non-subscribing owners] [is or are] sole owner or owners, in the proportions specified on the back hereof, of the ship or vessel called the [ship's name] of [place to which the vessel belongs], which is of the burden of [number of tons], and whereas [master's name] is master, and that the said ship or vessel was [built and where built, or condemned as prize, referring to builder's certificate, judge's certificate, or certificate of last registry, then delivered up to be cancelled, and (name and employment of surveying officer) having certified to us that the said ship or vessel has [number] decks and [number] masts, that her length from the fore part of the main stem to the after part of

the stern post aloft is [number of feet and inches], her breadth at the broadest part [stating whether that be above or below the main masts] is [number of feet and inches] her [height between decks if more than 1 deck, or depth in the hold if only 1 deck] is [number of feet and inches], and that she is [how rigged] rigged with a [standing or running] bowsprit, is [description of stern] sterned, [carrel or citcher] built, has [whether any or no] gallery, and [kind of head, if any] head; and the said subscribing owners having consented and agreed to the above description, and having caused sufficient security to be given as is required by the said act, the said ship or vessel called the [name] has been duly registered at the port of [name of port]. Certified under our hands at the Custom-house in the said port of [name of port] this [date] day of [name of month] in the year [words at length].

[Signed] Collector.  
[Signed] Comptroller."

And on the back of such certificate of registry there shall be an account of the parts or shares held by each of the owners mentioned and described in such certificate, in the form and manner following.— § 2.

"Names of the several owners with mentioned.

[Name]  
[Name]  
[Name]  
[Name]

Number of sixty-four shares held by each owner.  
Thirty-two  
Sixteen.

Eight.

[Signed] Collector.  
[Signed] Comptroller."

**Persons authorised to make Registry and grant Certificates.**—The persons authorised and required to make such registry and grant such certificates shall be the several persons herein-after mentioned and described; (that is to say.)

The collector and comptroller of customs in any port in the United Kingdom, and in the Isle of Man respectively, in respect of ships or vessels to be there registered:

The principal officers of customs in the Island of Guernsey or Jersey, together with the governor, lieutenant-governor, or commander-in-chief of those islands respectively, in respect of ships or vessels to be there registered:

The collector and comptroller of customs of any port in the British possessions in Asia, Africa, and America, or the collector of any such port at which no appointment of a comptroller has been made, in respect of ships or vessels to be there registered:

The collector of duties at any port in the territories under the government of the East India Company, within the limits of the charter of the said company, or any other person of

the rank in the said company's service of senior merchant, or of 6 years' standing in the said service, being respectively appointed to act in the execution of this act by any of the governments of the said company, in respect of ships or vessels to be there registered:

The collector of duties at any British possession within the said limits, and not under the government of the said company, and at which a Custom-house is not established, together with the governor, lieutenant-governor, or commander-in-chief of such possession, in respect of ships or vessels to be there registered:

The governor, lieutenant-governor, or commander-in-chief of Malta, Gibraltar, Heligoland, and Cape of Good Hope respectively, in respect of ships or vessels to be there registered:

Provided that no ship or vessel to be registered at Heligoland, except such as is wholly of the built of that place, and that ships or vessels, after having been registered at Malta, Gibraltar, or Heligoland, shall not be registered elsewhere; and that ships or vessels registered at Malta, Gibraltar, or Heligoland, shall not be entitled to the privileges and advantages of British ships in any trade between the said United Kingdom and any of the British possessions in America: provided also, that wherever in and by this act it is directed or provided that any act, matter, or thing shall and may be done or performed by, to, or with any collector and comptroller of his Majesty's customs, the same shall or may be done or performed by, to, or with the several persons respectively herein-before authorised and required to make registry, and to grant certificates of registry as aforesaid, and according as the same act, matter, or thing is to be done or performed at the said several and respective places, and within the jurisdiction of the said several persons respectively: provided also, that wherever in and by this act it is directed or provided that any act, matter, or thing shall or may be done or performed by, to, or with the commissioners of his Majesty's customs, the same shall or may be done or performed by, to, or with the governor, lieutenant-governor, or commander-in-chief of any place where any ship or vessel may be registered under the authority of this act, so far as such act, matter, or thing can be applicable to the registering of any ship or vessel at such place.— § 3.

**Ships exercising Privileges before Registry to be forfeited.**—In case any ship or vessel not being duly registered, and not having obtained such certificate of registry as aforesaid, shall exercise any of the privileges of a British ship, the same shall be subject to forfeiture, and also all the guns, furniture, ammunition, tackle, and apparel to the same ship or vessel belonging, and shall and may be seized by any officer or officers of his Majesty's customs: provided always, that nothing in this act shall extend or be construed to extend to affect the privileges of any ship or vessel which shall, prior to the commencement of this act, have been registered by virtue of an act passed in the 6th year of the reign of his late Majesty George IV., intitled "An Act for the registering of British Vessels."— § 4.

**What Ships are entitled to be registered.**—No ship or vessel shall be registered, or having been registered shall be deemed to be duly registered, by virtue of this act, except such as are wholly of the built of the said United Kingdom, or of the Isle of Man, or of the islands of Guernsey or Jersey, or of some of the colonies, plantations, islands, or territories in Asia, Africa, or America, or of Malta, Gibraltar, or Heligoland, which belong to his Majesty, his heirs or successors, at the time of the building of such ships or vessels, or such ships or vessels as shall have been condemned in any court of admiralty as prize of war, or such ships or vessels as shall have been condemned in any competent court as forfeited for the breach of the laws made for the prevention of the slave trade, and which shall wholly belong and continue wholly to belong to his Majesty's subjects duly entitled to be owners of ships or vessels registered by virtue of this act.— § 5.

**Mediterranean Pass may be issued at Malta or Gibraltar for certain Ships only.**—No Mediterranean pass shall be issued for the use of any ship, as being a ship belonging to Malta or Gibraltar, except such as be duly registered at those places respectively, or such as, not being entitled to be so registered, shall

have wholly belonged, before the 10th day of October, 1827, and shall have continued wholly to belong, to persons actually residing at those places respectively, as inhabitants thereof, and entitled to be owners of British ships there registered, or who, not being so entitled, shall have so resided upwards of 15 years prior to the said 10th day of October, 1827. — § 6.

**Foreign Repairs not to exceed 20s. per Ton.** — No ship or vessel shall continue to enjoy the privileges of a British ship after the same shall have been repaired in a foreign country, if such repairs shall exceed the sum of 20s. for every ton of the burden of the said ship or vessel, unless such repairs shall have been necessary by reason of extraordinary damage sustained by such ship or vessel during her absence from his Majesty's dominions, to enable her to perform the voyage in which she shall have been engaged, and to return to some port or place in the said dominions; and whenever any ship or vessel which has been so repaired in a foreign country shall arrive at any port in his Majesty's dominions, as a British registered ship or vessel, the master or other person having the command or charge of the same shall, upon the first entry thereof, report to the collector and comptroller of his Majesty's customs at such port that such ship or vessel has been so repaired, under penalty of 20s. for every ton of the burden of such ship or vessel, according to the measurement thereof; and if it shall be proved to the satisfaction of the commissioners of his Majesty's customs that such ship or vessel was seaworthy at the time when she last departed from any port or place in his Majesty's dominions, and that no greater quantity of such repairs have been done to the said vessel than was necessary as aforesaid, it shall be lawful for the said commissioners, upon a full consideration of all the circumstances, to direct the collector and comptroller of the port where such ship or vessel shall have arrived, or where she shall then be, to certify on the certificate of the registry of such ship or vessel that it has been proved to the satisfaction of the commissioners of his Majesty's customs that the privileges of the said ship or vessel have not been forfeited, notwithstanding the repairs which have been done to the same in a foreign country. — § 7.

**Ships declared unseaworthy to be deemed Ships lost or broken up.** — If any ship or vessel registered under the authority of this or any other act shall be deemed or declared to be stranded or unseaworthy, and incapable of being recovered or repaired to the advantage of the owners thereof, and shall for such reasons be sold by order or decree of any competent court for the benefit of the owners of such ship or vessel, or other persons interested therein, the same shall be taken and deemed to be a ship or vessel lost or broken up to all intents and purposes within the meaning of this act, and shall never again be entitled to the privileges of a British built ship for any purposes of trade or navigation. — § 8.

**British Ships captured not to be again entitled to Registry, &c.** — No British ship or vessel which has been or shall hereafter be captured by and become prize to an enemy or sold to foreigners shall again be entitled to the privileges of a British ship: provided that nothing contained in this act shall extend to prevent the registering of any ship or vessel whatever which shall afterwards be condemned in any court of admiralty as prize of war, or in any competent court, for breach of laws made for the prevention of the slave trade. — § 9.

**Ships shall be registered at the Port to which they belong.** — No such registry shall hereafter be made, or certificate thereof granted, by any person or persons herein-before authorised to make such registry and grant such certificate, in any other port or place than the port or place to which such ship or vessel shall properly belong, except so far as relates to such ships or vessels as shall be condemned as prizes in any of the islands of Guernsey, Jersey, or Man, which ships or vessels shall be registered in manner hereinafter directed; but that all and every registry and certificate made and granted in any port or place to which any such ship or vessel does not properly belong shall be utterly null and void to all intents and purposes, unless the officers aforesaid shall be specially authorised and empowered to make such registry and grant such certificate in any other port by an order in writing under the hands of the commissioners of his Majesty's customs, which order the said commissioners are hereby authorised and empowered to issue, if they shall see fit; and at every port where registry shall be made in pursuance of this act, a book shall be kept by the collector and comptroller, in which all the particulars contained in the form of the certificate of the registry herein-before directed to be used shall be duly entered; and every registry shall be numbered in progression, beginning such progressive numeration at the commencement of each and every year; and such collector and comptroller shall forthwith, or within 1 month at the farthest, transmit to the commissioners of his Majesty's customs a true and exact copy, together with the number, of every certificate which shall be by them so granted. — § 10.

**Port to which Vessels shall be deemed to belong.** — Every ship or vessel shall be deemed to belong to some port at or near to which some or one of the owners, who shall make and subscribe the declaration required by this act before registry be made, shall reside; and whenever such owner or owners shall have transferred all his or their share or shares in such ship or vessel to the same, shall be registered *de novo* before such ship or vessel shall sail or depart from the port to which she shall then belong, or from any other port which shall be in the same part of the United Kingdom, or the same colony, plantation, island, or territory as the said port shall be in: provided always, that if the owner or owners of such ship or vessel cannot in sufficient time comply with the requisites of this act, so that registry may be made before it shall be necessary for such ship or vessel to sail or depart upon another voyage, it shall be lawful for the collector and comptroller of the port where such ship or vessel may then be to certify upon the back of the existing certificate of registry of such ship or vessel, that the same is to remain in force for the voyage upon which the said ship or vessel is then about to sail or depart: provided also, that if any ship or vessel shall be built in any of the colonies, plantations, islands, or territories in Asia, Africa, or America, to his Majesty belonging, for owners residing in the United Kingdom, and the master of such ship or vessel, or the agent for the owner or owners thereof, shall have produced to the collector and comptroller of the port at or near to which such ship or vessel was built, the certificate of the builder required by this act, and shall have made and subscribed a declaration before such collector and comptroller of the names and descriptions of the principal owners of such ship or vessel, and that she is the identical ship or vessel mentioned in such certificate of the builder, and that no forger, to the best of his knowledge and belief, has any interest therein; the collector and comptroller of such port shall cause such ship or vessel to be surveyed and measured in like manner as is directed for the purpose of registering any ship or vessel, and shall give the master of such ship or vessel a certificate under their hands and seals, purporting to be under the authority of this act, and stating when and where and by whom such ship or vessel was built, the description, tonnage, and other particulars required on registry of any ship or vessel, and such certificate shall have all the force and virtue of a certificate of registry under this act, during the term of 2 years, unless such ship shall sooner arrive at some place in the United Kingdom; and such collector and comptroller shall transmit a copy of such certificate to the commissioners of his Majesty's customs. — § 11.

**Persons residing in foreign Countries may not be Owners.** — No person who has taken the oath of allegiance to any foreign state, except under the terms of some capitulation, and who shall afterwards become a denizen or naturalised subject of the United Kingdom by his Majesty's letters patent or by act of parliament, nor any person usually residing in any country not under the dominion of his Majesty, his heirs and successors, unless he be a member of some British factory, or agent for or partner in any house or copartnership actually carrying on trade in Great Britain or Ireland, shall be entitled to be the owner, in whole or in part, directly or indirectly, of any ship or vessel required and authorised to be registered by virtue of this act; save and except that it shall be lawful for any person who was a member of the company of merchants trading to the Levant seas at the time of its dissolution, and who was a resident at any of the factories of the said company, to continue to hold any share or shares in any British registered ship of which at the time of such residence he was an owner or part owner, although such person shall continue to reside at any of the places where such factories had existed prior to the dissolution of the said company. — § 12.

**Declaration to be made by subscribing Owners previous to Registry.**—No registry shall henceforth be made or certificate granted until the following declaration be made and subscribed, before the person or persons herein-before authorised to make such registry and grant such certificate respectively, by the owner of such ship or vessel if such ship or vessel is owned by or belongs to 1 person only, or in case there shall be 2 joint owners, then by both of such joint owners if both shall be resident within 20 miles of the port or place where such registry is required, or by 1 of such owners if 1 or both of them shall be resident at a greater distance from such port or place; or if the number of such owners or proprietors shall exceed 2, then by the greater part of the number of such owners or proprietors if the greater number of them shall be resident within 20 miles of such port or place as aforesaid, not in any case exceeding 3 of such owners or proprietors, unless a greater number shall be desirous to join in making and subscribing the said declaration, or by 1 of such owners if all, or all except 1, shall be resident at a greater distance:—

"I, A. B. of [place of residence and occupation] do truly declare, that the ship or vessel [name] of [port or place], whereof [master's name] is at present master, being [kind of built, burden, &c. as described in the certificate of the surveying officer], was [when and where built, or, if prize or forfeited, capture and condemnation as such], and that I the said A. B. [and the other owners' names and occupations, if any], and where they respectively reside, viz. town, place, or parish, and county, or if member of and resident in any factory or foreign parts, or in any foreign town or city, being agent for or above in any house or copartnership actually carrying on trade in Great Britain or Ireland, the name of such factory, foreign town, or city, and the names of such house and copartnership] am [or are] sole owner [or owners] of the said vessel, and that no other person or persons whatever hath or have any right, title, interest, share or property therein or thereo; and that I the said A. B. [and the said other owners, if any] am [or are] truly and bond-

fide a subject [or subjects] of Great Britain; and that I the said A. B. have not [nor have any of the other owners, to the best of my knowledge and belief] taken the oath of allegiance to any foreign state whatever [except under the terms of some capitulation, describing the particulars thereof], or that since my taking [or his or their taking] the oath of allegiance [naming the foreign states respectively to which he or any of the said owners shall have taken the same] I have [or he or they hath or have] become a denizen [or denizens, or naturalised subject or subjects, as the case may be] of the United Kingdom of Great Britain and Ireland by his Majesty's letters patent or by an act of parliament [naming the time when such letters of denization have been granted respectively, or the year or years in which such act or acts for naturalisation have passed respectively]; and that no foreigner, directly or indirectly, hath any share or part interest in the said ship or vessel."

Provided always, that if it shall become necessary to register any ship or vessel belonging to any corporate body in the United Kingdom, the following declaration, in lieu of the declaration herein-before directed, shall be taken and subscribed by the secretary or other proper officer of such corporate body; (that is to say,)

"I, A. B. secretary or officer of [name of company or corporation] do truly declare, that the ship or vessel [name] of [port] whereof [master's name] is at present master, being [kind of built, burden, &c. as described in the certificate of the surveying

officer], was [when and where built, or, if prize or forfeited, capture and condemnation as such], and that the said ship wholly and truly belong to [name of company or corporation]."  
— Sect. 15.

**Addition to Declaration.**—In case the required Number of Owners do not attend.—In case the required number of joint owners or proprietors of any ship or vessel shall not personally attend to make and subscribe the declaration herein-before directed to be made and subscribed, then and in such case such owner or owners, proprietor or proprietors, as shall personally attend and make and subscribe the declaration aforesaid, shall further declare that the part owner or part owners of such ship or vessel then absent is or are not resident within 20 miles of such port or place, and hath or have not, to the best of his or their knowledge or belief, wilfully absented himself or themselves in order to avoid the making the declaration herein-before directed to be made and subscribed, or is or are prevented by illness from attending to make and subscribe the said declaration. — § 14.

**Vessels to be surveyed previous to Registry.**—Previous to the registering or granting of any certificate of registry as aforesaid, some one or more person or persons appointed by the commissioners of customs (taking to his or their assistance, if he or they shall judge it necessary, one or more person or persons skilled in the building and admeasurement of ships) shall go on board of every such ship or vessel as is to be registered, and shall strictly and accurately examine and admeasure every such ship or vessel as to all and every particular contained in the form of the certificate herein-before directed, in the presence of the master, or of any other person who shall be appointed for that purpose on the part of the owner or owners, or in his or their absence by the said master; and shall deliver a true and just account in writing of all such particulars of the build, description, and admeasurement of every such ship or vessel as are specified in the form of the certificate above recited to the collector and comptroller authorised as aforesaid to make such registry and grant such certificate of registry; and the said master or other person attending on the part of the owner or owners is hereby required to sign his name also to the certificate of such surveying or examining officer, in testimony of the truth thereof, provided such master or other person shall consent and agree to the several particulars set forth and described therein. — § 15.

**Mode of Admeasurement to ascertain Tonnage.**—For the purpose of ascertaining the tonnage of ships or vessels, the rule for admeasurement shall be as follows; (that is to say,) the length shall be taken on a straight line along the rabbet of the keel, from the back of the main stern-post to a perpendicular line from the fore part of the main stem, under the bowsprit, from which subtracting  $\frac{3}{5}$ ths of the breadth, the remainder shall be esteemed the just length of the keel to find the tonnage; and the breadth shall be taken from the outside of the outside plank in the broadest part of the ship, whether that shall be above or below the main wales, exclusive of all manner of doubling planks that may be wrought upon the sides of the ship; then multiplying the length of the keel by the breadth so taken, and that product by  $\frac{1}{2}$  the breadth, and dividing the whole by 94, the quotient shall be deemed the true contents of the tonnage. — § 16.

**Mode of ascertaining Tonnage when Vessels are afloat.**—In cases where it may be necessary to ascertain the tonnage of any ship or vessel when afloat, according to the foregoing rule, the following method shall be observed; (that is to say,) drop a plumb line over the stern of the ship, and measure the distance between such line and the after part of the stern-post at the load water-mark, then measure from the top of the plumb line, in a parallel direction with the water, to a perpendicular point immediately over the load water-mark at the fore part of the main stem, subtracting from such measurement the above distance, the remainder will be the ship's extreme, from which is to be deducted 3 inches for every foot of the load draught of water for the rake abaft, also  $\frac{3}{5}$ ths of the ship's breadth for the rake forward, the remainder shall be esteemed the just length of the keel to find the tonnage; and the breadth shall be taken from outside to outside of the plank in the broadest part of the ship, whether that shall be above or below the main wales, exclusive of all manner of sheathing or doubling that may be wrought on the side of the ship; then multiplying the length of the keel for tonnage by the breadth so taken, and that product by  $\frac{1}{2}$  the breadth, and dividing by 94, the quotient shall be deemed the true contents of the tonnage. — § 17.

**Engine-room in Steam Vessels to be deducted.**—In each of the several rules herein-before prescribed, when used for the purpose of ascertaining the tonnage of any ship or vessel propelled by steam, the length of the engine-room shall be deducted from the whole length of such ship or vessel, and the remainder shall, for such purpose, be deemed the whole length of the same. — § 18.

**Tonnage when so ascertained to be ever after deemed the Tonnage.**—Whenever the tonnage of any ship or vessel shall have been ascertained according to the rule herein prescribed (except in the case of ships or vessels which have been admeasured afloat), such account of tonnage shall ever after be deemed the tonnage of such ship or vessel, and shall be repeated in every subsequent registry of such ship or vessel, unless it shall happen that any alteration has been made in the form and burden of such ship or vessel, or it shall be discovered that the tonnage of such ship or vessel had been erroneously taken and computed. — § 19.

such ship or vessel was built, and also an exact account of the tonnage of such ship or vessel, together with the name of the first purchaser or purchasers thereof (which account such builder is hereby directed and required to give under his hand on the same being demanded by such person or persons so applying for a certificate as aforesaid), and shall also make and subscribe a declaration before the person or persons herein-before authorised to grant such certificate that the ship or vessel for which such certificate is required is the same with that which is so described by the builder as aforesaid. — § 25.

*Certificate of Registry lost or mislaid.* — If the certificate of registry of any ship or vessel shall be lost or mislaid, so that the same cannot be found or obtained for the use of such ship or vessel when needed, and proof thereof shall be made to the satisfaction of the commissioners of his Majesty's customs, such commissioners shall and may permit such ship or vessel to be registered *de novo*, and a certificate thereof to be granted: provided always, that if such ship or vessel be absent and far distant from the port to which she belongs, or by reason of the absence of the owner or owners, or of any other impediment, registry of the same cannot then be made in sufficient time, such commissioners shall and may grant a licence for the present use of such ship or vessel, which licence shall, for the time and to the extent specified therein, and no longer, be of the same force and virtue as a certificate of registry granted under this act: provided always, that before such registry *de novo* be made, the owner or owners and master shall give bond to the commissioners aforesaid, in such sum as to them shall seem fit, with a condition that if the certificate of registry shall at any time afterwards be found, the same shall be forthwith delivered to the proper officers of his Majesty's customs to be cancelled, and that no illegal use has been or shall be made thereof with his or their privity or knowledge; and further, that before any such licence shall be granted as aforesaid, the master of such ship or vessel shall also make and subscribe a declaration that the same has been registered as a British ship, naming the port where and the time when such registry was made, and all the particulars contained in the certificate thereof, to the best of his knowledge and belief, and shall also give such bond and with the same condition as is before mentioned: provided also, that before any such licence shall be granted, such ship or vessel shall be surveyed in like manner as if a registry *de novo* were about to be made thereof; and the certificate of such survey shall be preserved by the collector and comptroller of the port to which such ship or vessel shall belong; and in virtue thereof it shall be lawful for the said commissioners and they are hereby required to permit such ship or vessel to be registered after her departure, whenever the owner or owners shall personally attend to take and subscribe the declaration required by this act before registry be made, and shall also comply with all other requisites of this act, except so far as relates to the bond to be given by the master of such ship or vessel: which certificate of registry the said commissioners shall and may transmit to the collector and comptroller of any other port, to be by them given to the master of such ship or vessel, upon his giving such bond, and delivering up the licence which had been granted for the then present use of such ship or vessel. — § 26.

*Persons detaining Certificate of Registry to forfeit 100l.* — In case any person who shall have received or obtained by any means, or for any purpose whatever, the certificate of the registry of any ship or vessel (whether such person shall claim to be the master or to be the owner or one of the owners of such ship or vessel, or not), shall wilfully detain and refuse to deliver up the same to the proper officers of customs, for the purposes of such ship or vessel, as occasion shall require, or to the person or persons having the actual command, possession, and management of such ship or vessel as the ostensible and reputed master, or as the ostensible and reputed owner or owners thereof, it may and shall be lawful to and for any such last-mentioned person to make complaint on oath of such detainer and refusal to any justice of the peace residing near to the place where such detainer and refusal shall be, in Great Britain or Ireland, or to any member of the supreme court of justice or any justice of the peace in the islands of Jersey, Guernsey, or Man, or in any colony, plantation, island, or territory to his Majesty belonging in Asia, Africa, or America, or in Malta, Gibraltar, or Heligoland, where such detainer and refusal shall be in any of the places last mentioned; and on such complaint the said justice or other magistrate shall and is hereby required, by warrant under his hand and seal, to cause the person so complained against to be brought before him to be examined touching such detainer and refusal; and if it shall appear to the said justice or other magistrate, on examination of such person or otherwise, that the said certificate of registry is not lost or mislaid, but is wilfully detained by the said person, such person shall be thereof convicted, and shall forfeit and pay the sum of 100*l.*, and on failure of payment thereof he shall be committed to the common gaol, there to remain without bail or mainprize for such time as the said justice or other magistrate shall in his discretion deem proper, not being less than 3 months nor more than 12 months; and the said justice or other magistrate shall and he is hereby required to certify the aforesaid detainer refusal, and conviction to the person or persons who granted such certificate of registry for such ship or vessel, who shall, on the terms and conditions of law being complied with, make registry of such ship or vessel *de novo*, and grant a certificate thereof conformably to law, notifying on the back of such certificate the ground upon which the ship or vessel was so registered *de novo*; and if the person who shall have detained and refused to deliver up such certificate of registry as aforesaid, or shall be verily believed to have detained the same, shall have absconded, so that the said warrant of the justice or other magistrate cannot be executed upon him, and proof thereof shall be made to the satisfaction of the commissioners of his Majesty's customs, it shall be lawful for the said commissioners to permit such ship or vessel to be registered *de novo*, or otherwise, in their discretion, to grant a licence for the present use of such ship or vessel in like manner as is herein-before provided in the case wherein the certificate of registry is lost or mislaid. — § 27.

*Ship altered in certain Manner to be registered de novo.* — If any ship or vessel, after she shall have been registered pursuant to the directions of this act, shall in any manner whatever be altered so as not to correspond with all the particulars contained in the certificate of her registry, in such case such ship or vessel shall be registered *de novo*, in manner herein-before required, as soon as she returns to the port to which she belongs, or to any other port which shall be in the same part of the United Kingdom, or in the same colony, plantation, island, or territory as the said port shall be in, on failure whereof such ship or vessel shall, to all intents and purposes, be considered and deemed and taken to be a ship or vessel not duly registered. — § 28.

*Vessels condemned as Prize, &c.* — The owner or owners of all such ships and vessels as shall be taken by any of his Majesty's ships or vessels of war, or by any private or other ship or vessel, and condemned as lawful prize in any court of admiralty, or of such ship or vessels as shall be condemned in any competent court as forfeited for breach of the laws for the prevention of the slave trade, shall, for the purpose of registering any such ship or vessel, produce to the collector and comptroller of customs a certificate of the condemnation of such ship or vessel, under the hand and seal of the judge of the court in which such ship or vessel shall have been condemned (which certificate such judge is hereby authorized and required to grant), and also a true and exact account in writing of all the particulars contained in the certificate herein-before set forth, to be made and subscribed by one or more skilful person or persons to be appointed by the court then and there to survey such ship or vessel, and shall also make and subscribe a declaration before the collector and comptroller that such ship or vessel is the same vessel which is mentioned in the certificate of the judge aforesaid. — § 29.

*Prize Vessels not to be registered at Guernsey, Jersey, or Man.* — No ship or vessel which shall be taken and condemned as prize or forfeiture as aforesaid shall be registered in the islands of Guernsey, Jersey, or Man, although belonging to his Majesty's subjects residing in those islands, or in some one or other of them; but the same shall be registered either at Southampton, Weymouth, Exeter, Plymouth, Falmouth, Liverpool, or Whitehaven, by the collector and comptroller at such ports respectively, who are hereby authorized and required to register such ship or vessel, and to grant a certificate thereof in the form and under the regulations and restrictions in this act contained. — § 30.

*Transfers of Interest to be made by Bill of Sale.*—When and so often as the property in any ship or vessel, or any part thereof, belonging to any of his Majesty's subjects, shall, after registry thereof, be sold to any other or others of his Majesty's subjects, the same shall be transferred by bill of sale or other instrument in writing, containing a recital of the certificate of registry of such ship or vessel, or of the principal contents thereof, otherwise such transfer shall not be valid or effectual for any purpose whatsoever, either in law or in equity: provided always, that no bill of sale shall be deemed void by the existence of any error in such recital, or by the recital of any former certificate of registry instead of the existing certificate, provided the identity of the ship or vessel intended in the recital be effectually proved thereby.—§ 31.

*Property in Ships to be divided into Sixty-four Parts or Shares.*—The property in every ship or vessel of which there are more than one owner shall be taken and considered to be divided into 64 equal parts or shares, and the proportion held by each owner shall be described in the registry as being a certain number of 64th parts or shares; and no person shall be entitled to be registered as an owner of any ship or vessel in respect of any proportion of such ship or vessel which shall not be an integral 64th part or share of the same; and upon the first registry of any ship or vessel, the owner or owners who shall take and subscribe the declaration required by this act, before registry be made, shall also declare the number of such parts or shares then held by each owner, and the same shall be so registered accordingly: provided always, that if it shall at any time happen that the property of any owner or owners in any ship or vessel cannot be reduced by division into any number of integral 64th parts or shares, it shall and may be lawful for the owner or owners of such fractional parts as shall be over and above such number of integral 64th parts or shares into which such property in any ship or vessel can be reduced by division to transfer the same one to another, or jointly to any new owner, by memorandum upon their respective bills of sale, or by fresh bill of sale, without such transfer being liable to any stamp duty: provided also, that the right of any owner or owners to any such fractional parts shall not be affected by reason of the same not having been registered: provided also, that it shall be lawful for any number of such owners, named and described in such registry, being partners in any house or copartnership actually carrying on trade in any part of his Majesty's dominions, to hold any ship or vessel, or any share or shares of any ship or vessel, in the name of such house or copartnership, as joint owners thereof, without distinguishing the proportionate interest of each of such owners, and that such ship or vessel, or the share or shares thereof so held in copartnership, shall be deemed and taken to be partnership property to all intents and purposes, and shall be governed by the same rules, both in law and equity, as relate to and govern all other partnership property in any other goods, chattels, and effects whatsoever.—§ 32.

*Only Thirty-two Persons to be Owners of any Ship at One Time.*—No greater number than 32 persons shall be entitled to be legal owners at one and the same time of any ship or vessel, as tenants in common, or to be registered as such: provided always, that nothing herein contained shall affect the equitable title of minors, heirs, legatees, creditors, or others, exceeding that number, duly represented by or holding from any of the persons within the said number, registered as legal owners of any share or shares of such ship or vessel: provided also, that if it shall be proved to the satisfaction of the commissioners of customs that any number of persons have associated themselves as a joint stock company, for the purpose of owning any ship or vessel, or any number of ships or vessels, as the joint property of such company, and that such company have duly elected or appointed any number, not less than 3, of the members of the same to be trustees of the property in such ship or vessel or ships or vessels so owned by such company, it shall be lawful for such trustees or any 3 of them, with the permission of such commissioners, to make and subscribe the declaration required by this act before registry be made, except that, instead of stating therein the names and descriptions of the other owners, they shall state the name and description of the company to which such ship or vessel or ships or vessels shall in such manner belong.—§ 33.

*Bills of Sale not effectual until produced to Officers of Customs.*—No bill of sale or other instrument in writing shall be valid and effectual to pass the property in any ship or vessel, or in any share thereof, or for any other purpose, until such bill of sale or other instrument in writing shall have been produced to the collector and comptroller of the port at which such ship or vessel is already registered, or to the collector and comptroller of any other port at which she is about to be registered *de novo*, as the case may be, nor until such collector and comptroller respectively shall have entered in the book of such last registry, in the one case, or in the book of such registry *de novo*, after all the requisites of law for such registry *de novo* shall have been duly complied with, in the other case (and which they are respectively hereby required to do upon the production of the bill of sale or other instrument for that purpose), the name, residence, and description of the vendor or mortgagor, or of each vendor or mortgagor, if more than 1, the number of shares transferred, the name, residence, and description of the purchaser or mortgagee, or of each purchaser or mortgagee, if more than 1, and the date of the bill of sale or other instrument, and of the production of it; and further, if such ship or vessel is not about to be registered *de novo*, the collector and comptroller of the port where such ship is registered shall and they are hereby required to indorse the aforesaid particulars of such bill of sale or other instrument on the certificate of registry of the said ship or vessel, when the same shall be produced to them for that purpose, in manner and to the effect following; *viz.*

"The Custom-house [port and date; name, residence, and description of vendor or mortgagor] has transferred by [bill of sale or other instrument] dated [date; number of shares] to [name, residence, and description of purchaser or mortgagee]."  
A. B. Collector.  
C. D. Comptroller."

And forthwith to give notice thereof to the commissioners of customs; and in case the collector and comptroller shall be desired so to do, and the bill of sale or other instrument shall be produced to them for that purpose, then the said collector and comptroller are hereby required to certify, by indorsement upon the bill of sale or other instrument, that the particulars before mentioned have been so entered in the book of registry, and indorsed upon the certificate of registry as aforesaid.—§ 34.

*Entry of Bill of Sale to be valid, except in certain Cases.*—When and so soon as the particulars of any bill of sale or other instrument by which any ship or vessel, or any share or shares thereof, shall be transferred, shall have been so entered in the book of registry as aforesaid, the said bill of sale or other instrument shall be valid and effectual to pass the property thereby intended to be transferred as against all and every person and persons whatsoever, and to all intents and purposes, except as against such subsequent purchasers and mortgagees who shall first procure the indorsement to be made upon the certificate of registry of such ship or vessel in manner herein-after mentioned.—§ 35.

*When a Bill of Sale has been entered for any Shares, Thirty Days shall be allowed for indorsing the Certificate of Registry, before any other Bill of Sale for the same shall be entered.*—When and after the particulars of any bill of sale or other instrument by which any ship or vessel, or any share or shares thereof, shall be transferred, shall have been so entered in the book of registry as aforesaid, the collector and comptroller shall not enter in the book of registry the particulars of any other bill of sale or instrument purporting to be a transfer by the same vendor or mortgagor or vendors or mortgagors of the same ship or vessel, share or shares thereof, to any other person or persons, unless 30 days shall elapse from the day on which the particulars of the former bill of sale or other instrument were entered in the book of registry; or in case the ship or vessel was absent from the port to which she belonged at the time when the particulars of such former bill of sale or other instrument were entered in the book of registry, then unless 30 days shall have elapsed from the day on which the ship or vessel arrived at the port to which the same belonged; and in case the particulars of 2 or more such bills of sale or other instruments as aforesaid shall at any time have been entered in the book of registry of the said ship or vessel,

the collection of which registry, her absence by the said persons of days next or within her absence certificate and comp of the bill registry if mortgage property, over the instrument I said, but a provided a person who made by the Majesty's appear next or vessel in memorandum sale shall be giving the

the collector and comptroller shall not enter in the book of registry the particulars of any other bill of sale or other instrument as aforesaid unless 30 days shall in like manner have elapsed from the day on which the particulars of the last of such bill of sale or other instrument were entered in the books of registry, or from the day on which the ship or vessel arrived at the port to which she belonged, in case of her absence as aforesaid; and in every case where there shall at any time happen to be 2 or more transfers by the same owner or owners of the same property in any ship or vessel entered in the book of registry as aforesaid, the collector and comptroller are hereby required to indorse upon the certificate of registry of such ship or vessel the particulars of that bill of sale or other instrument under which the person or persons claims or claim property, who shall produce the certificate of registry for that purpose within 30 days next after the entry of his said bill of sale or other instrument in the book of registry as aforesaid, or within 30 days next after the return of the said ship or vessel to the port to which she belongs, in case of her absence at the time of such entry as aforesaid; and in case no person or persons shall produce the certificate of registry within either of the said spaces of 30 days, then it shall be lawful for the collector and comptroller, and they are hereby required, to indorse upon the certificate of registry the particulars of the bill of sale or other instrument to such person or persons as shall first produce the certificate of registry for that purpose, it being the true intent and meaning of this act that the several purchasers and mortgagees of such ship or vessel, share or shares thereof, when more than 1 appear to claim the same property, or to claim security on the same property, in the same rank and degree, shall have priority one over the other, not according to the respective times when the particulars of the bill of sale or other instrument by which such property was transferred to them were entered in the book of registry as aforesaid, but according to the time when the indorsement is made upon the certificate of registry as aforesaid: provided always, that if the certificate of registry shall be lost or mislaid, or shall be detained by any person whatever, so that the indorsement cannot in due time be made thereon, and proof thereof shall be made by the purchaser or mortgagee, or his known agent, to the satisfaction of the commissioners of his Majesty's customs, it shall be lawful for the said commissioners to grant such further time as to them shall appear necessary for the recovery of the certificate of registry, or for the registry *de novo* of the said ship or vessel under the provisions of this act; and thereupon the collector and comptroller shall make a memorandum in the book of registry of the further time so granted, and during such time no other bill of sale shall be entered for the transfer of the same ship or vessel, or the same share or shares thereof, or for giving the same security thereon. — § 36.

*Bills of Sale may be produced after Entry at other Ports.* — If the certificate of registry of such ship or vessel shall be produced to the collector and comptroller of any port where she may then be, after any such bill of sale shall have been recorded at the port to which she belongs, together with such bill of sale, containing a notification of such record, signed by the collector and comptroller of such port as before directed, it shall be lawful for the collector and comptroller of such other port to indorse on such certificate of registry (being required so to do) the transfer mentioned in such bill of sale, and such collector and comptroller shall give notice thereof to the collector and comptroller of the port to which such ship or vessel belongs, who shall record the same in like manner as if they had made such indorsement themselves, but inserting the name of the port at which such indorsement was made: provided always, that the collector and comptroller of such other port shall first give notice to the collector and comptroller of the port to which such ship or vessel belongs of such requisition made to them to indorse the certificate of registry, and the collector and comptroller of the port to which such ship or vessel belongs shall thereupon send information to the collector and comptroller of such other port, whether any and what other bill or bills of sale have been recorded in the book of the registry of such ship or vessel; and the collector and comptroller of such other port, having such information, shall proceed in manner directed by this act in all respects to the indorsing of the certificate of registry as they would do if such port were the port to which such vessel belonged. — § 37.

*If upon Registry de novo any Bill of Sale shall not have been recorded, the same shall then be produced.* — If it shall become necessary to register any ship or vessel *de novo*, and any share or shares of such ship or vessel, shall have been sold since she was last registered, and the transfer of such share or shares shall not have been recorded and indorsed in manner herein-before directed, the bill of sale thereof shall be produced to the collector and comptroller of his Majesty's customs, who are to make registry of such ship or vessel, otherwise such sale shall not be noticed in such registry *de novo*, except as hereinafter excepted: provided always, that upon the future production of such bill of sale, and of the existing certificate of registry, such transfer shall and may be recorded and indorsed as well after such registry *de novo* as before. — § 38.

*Upon Change of Property, Registry de novo may be granted.* — If upon any change of property in any ship or vessel, the owner or owners shall desire to have the same registered *de novo* although not required by this act, and the owner or proper number of owners shall attend at the Custom-house at the port to which such ship or vessel belongs for that purpose, it shall be lawful for the collector and comptroller of his Majesty's customs at such port to make registry *de novo* of such ship or vessel at the same port, and to grant a certificate thereof, the several requisites herein-before in this act mentioned and directed being first duly observed and complied with. — § 39.

*Copies of Declarations, &c. and of Extracts from Books of Registry admitted in Evidence.* — The collector and comptroller of customs at any port or place, and the person or persons acting for them, respectively, shall, upon every reasonable request by any person or persons whomsoever, produce and exhibit for his, her, or their inspection and examination any oath or declaration sworn or made by any such owner or owners, proprietor or proprietors, and also any register or entry in any book or books of registry required by this act to be made or kept relative to any ship or vessel, and shall, upon every reasonable request by any person or persons whomsoever, permit him, her, or them to take a copy or copies or an extract or extracts thereof respectively; and the copy and copies of any such oath or declaration, register or entry, shall, upon being proved to be a true copy or copies thereof respectively, be allowed and received as evidence upon every trial at law, without the production of the original or originals, and without the testimony or attendance of any collector or comptroller, or other person or persons acting for them respectively, in all cases as fully and to all intents and purposes as such original or originals, if produced by any collector or collectors, comptroller or comptrollers, or other person or persons acting for them, could or might legally be admitted or received in evidence. — § 40.

*Vessels or Shares sold in the Absence of Owners without formal Powers.* — If the ship or vessel, or the share or shares of any owner thereof who may be out of the kingdom, shall be sold in his absence by his known agent or correspondent, under his directions either expressed or implied, and acting for his interest in that behalf, and such agent or correspondent who shall have executed a bill of sale to the purchaser of the whole of such ship or vessel, or of any share or shares thereof, shall not have received a legal power to execute the same, it shall be lawful for the commissioners of his Majesty's customs, upon application made to them, and proof to their satisfaction of the fair dealings of the parties, to permit such transfer to be registered, if registry *de novo* be necessary, or to be recorded and indorsed, as the case may be, in manner directed by this act, as if such legal power had been produced; and also if it shall happen that any bill of sale cannot be produced, or if by reason of distance of time, or the absence or death of parties concerned, it cannot be proved that a bill of sale for any share or shares in any ship or vessel had been executed, and registry *de novo* of such ship or vessel shall have become necessary, it shall be lawful for the commissioners of his Majesty's customs, upon proof to their satisfaction of the fair dealings of the parties, to permit such ship or vessel to be registered *de novo* in like manner as if a bill of sale for the transfer of such share or shares had been produced: provided always, that in any of the cases herein mentioned, good and sufficient security shall be given to produce a legal power or bill of sale within a

reasonable time, or to abide the future claims of the absent owner, his heirs and successors, as the case may be; and at the future request of the party whose property has been so transferred, without the production of a bill of sale from him or from his lawful attorney, such bond shall be available for the protection of his interest, in addition to any powers or rights which he may have in law or equity against the ship or vessel, or against the parties concerned, until he shall have received full indemnity for any loss or injury sustained by him. — § 41.

**Transfer by way of Mortgage.** — When any transfer of any ship or vessel, or of any share or shares thereof, shall be made only as a security for the payment of a debt or debts, either by way of mortgage, or of assignment to a trustee or trustees for the purpose of selling the same for the payment of any debt or debts, then and in every such case the collector and comptroller of the port where the ship or vessel is registered shall, in the entry in the book of registry, and also in the indorsement on the certificate of registry, in manner herein-before directed, state and express that such transfer was made only as a security for the payment of a debt or debts, or by way of mortgage, or to that effect; and the person or persons to whom such transfer shall be made, or any other person or persons claiming under him or them as mortgagee or mortgagees, or a trustee or trustees only, shall not by reason thereof be deemed to be the owner or owners of such ship or vessel, share or shares thereof, nor shall the person or persons making such transfer be deemed by reason thereof to have ceased to be an owner or owners of such ship or vessel, any more than if no such transfer had been made, except so far as may be necessary for the purpose of rendering the ship or vessel, share or shares, so transferred, available by sale or otherwise for the payment of the debt or debts for securing the payment of which such transfer shall have been made. — § 42.

**Transfers of Ships for Security.** — When any transfer of any ship or vessel, or of any share or shares thereof, shall have been made as a security for the payment of any debt or debts, either by way of mortgage or of assignment as aforesaid, and such transfer shall have been duly registered according to the provisions of this act, the right or interest of the mortgagee or other assignee as aforesaid shall not be in any manner affected by any act or acts of bankruptcy committed by such mortgagor or assignor, mortgagors or assignors, after the time when such mortgage or assignment shall have been so registered as aforesaid, notwithstanding such mortgagor or assignor, mortgagors or assignors, at the time he or they shall so become bankrupt as aforesaid, shall have in his or their possession, order, and disposition, and shall be the reputed owner or owners of the said ship or vessel, or the share or shares thereof, so by him or them mortgaged or assigned as aforesaid, but such mortgage or assignment shall take place of and be preferred to any right, claim, or interest which may belong to the assignee or assignees of such bankrupt or bankrupts in such ship or vessel, share or shares thereof, any law or statute to the contrary thereof notwithstanding. — § 43.

**Governors of Colonies, &c. may cause Proceedings in Suits to be stayed.** — It shall and may be lawful for any governor, lieutenant-governor, or commander-in-chief of any of his Majesty's colonies, plantations, islands, or territories, and they are hereby respectively authorised and required, if any suit, information, libel, or other prosecution or proceeding of any nature or kind whatever shall have been commenced or shall hereafter be commenced in any court whatever in any of the said colonies, plantations, islands, or territories respectively, touching the force and effect of any register granted to any ship or vessel, upon a representation made to any such governor, lieutenant-governor, or commander-in-chief, to cause all proceedings thereon to be stayed, if he shall see just cause so to do, until his Majesty's pleasure shall be known and certified to him by his Majesty, by and with the advice of his Majesty's privy council; and such governor, lieutenant-governor, or commander-in-chief is hereby required to transmit to one of his Majesty's principal secretaries of state, to be laid before his Majesty in council, an authenticated copy of the proceedings in every such case, together with his reasons for causing the same to be stayed, and such documents (properly verified) as he may judge necessary for the information of his Majesty. — § 44.

**Penalty of 500*l.* on Persons making false Declaration, or falsifying any Document.** — If any person or persons shall falsely make declaration to any of the matters herein-before required to be verified by declaration, or if any person or persons shall counterfeit, erase, alter, or falsify any certificate or other instrument in writing required or directed to be obtained, granted, or produced by this act, or shall knowingly or willfully make use of any certificate or other instrument so counterfeited, erased, altered, or falsified, or shall willfully grant such certificate or other instrument in writing, knowing it to be false, such person or persons shall for every such offence forfeit the sum of 500*l.* — § 45.

**How Penalties are to be recovered.** — All the penalties and forfeitures inflicted and incurred by this act shall and may be sued for, prosecuted, recovered, and disposed of in such manner, and by such ways, means, and methods, as any penalties or forfeitures inflicted or which may be incurred for any offences committed against any law relating to the customs may now legally be sued for, prosecuted, recovered, and disposed of; and the officer or officers concerned in seizures or prosecutions under this act shall be entitled to and receive the same share of the produce arising from such seizures as in the case of seizures for unlawful importation, and to such share of the produce arising from any pecuniary fine or penalty for any offence against this act as any officer or officers is or are now by any law or regulation entitled to upon prosecutions for pecuniary penalties. — § 46.

**REPORT**, in commercial navigation, a paper delivered by the masters of all ships arriving from parts beyond seas to the Custom-house, and attested upon oath, containing an account of the cargo on board, &c. — (See *antè*, p. 657.)

**REPRISALS.** Where the people of one nation have unlawfully seized and detained property belonging to another state, the subjects of the latter are authorised, by the law of nations, to indemnify themselves, by seizing the property of the subjects of the state aggressing. This is termed making reprisals; and commissions to this effect are issued from the Admiralty. — (See **PRIVATEERS**.)

**RESPONDENTIA.** See **BOTTOMRY AND RESPONDENTIA**.

**REVENUE AND EXPENDITURE.** Though not properly belonging to a work of this sort, we believe we shall do an acceptable service to our readers by laying before them the following comprehensive Table of the revenue and expenditure of the United Kingdom in 1830, 1831, and 1832. It contains more information in a brief space than most parliamentary papers. It was originally framed according to the suggestion, and printed upon the motion of Mr. Pusey; and there are not very many members who have left so useful a memorial of their parliamentary career.

**RHUBARB** (Du. *Rhubarber*; Fr. *Rhubarbe, Rubarbe*; It. *Rabarbaro, Reo-barbaro*; Sp. *Rubarbo*; Rus. *Reuen*; Arab. *Rawend*; Chin. *Tu-hwang*), the root of a plant, a native of China and Tartary. Three varieties of rhubarb are known in the shops; viz. Russian, Turkey, and East Indian or Chinese rhubarb. The first two resemble each other in every respect. They are, in fact, the same article, being both derived from Tartary. The portion destined for the Petersburg market being selected and sorted at Kiachta, acquires the name of Russian rhubarb; while the portion that is sent from Tartary to Smyrna and other places in Turkey, is called Turkey rhubarb. The best pieces only are sent to Petersburg; and according to the contract with the government, on whose account it is bought, all that is rejected must be burnt; and that which is approved undergoes a second cleaning before being finally packed up for Petersburg. The best pieces of Russian and Turkey rhubarb are roundish, and perforated with a large hole, of a reddish or yellow colour on the outside, and when cut or broken exhibit a mottled texture, and alternate streaks of red and grey. Its odour is peculiar; and its taste nauseous, bitter, and astringent. It should not be porous, but rather compact and heavy. East Indian or Chinese rhubarb is in oblong flat pieces, seldom perforated; has a stronger odour, and is more nauseous to the taste than the other; it is heavier, more compact, breaks smoother, and affords a powder of a redder shade. — (*Thomson's Dispensatory*; *Ainslie's Mat. Indica*, &c.)

The total quantity of rhubarb imported in 1831 amounted to 140,395 lbs.; of which 6,901 lbs. came from Russia, and 133,462 from the East Indies. Of the quantity imported, 40,124 lbs. were retained for home consumption. The price of rhubarb in bond varies from 2s. per lb. for the inferior East Indian, to 8s. for the best Russian.

**RICE** (Fr. *Riz*; It. *Riso*; Arab. *Aruz*; Hind. *Chawl*), one of the most valuable of the cerea. grasses, the *Oryza sativa* of botanists. It is raised in immense quantities in India, China, and most Eastern countries; in the West Indies, Central America, and the United States; and in some of the southern countries of Europe. It, in fact, occupies the same place in most intertropical regions as wheat in the warmer parts of Europe, and oats and rye in those more to the north. Forming, as it does, the principal part of the food of the most civilised and populous Eastern nations, it is more extensively consumed than any other species of grain. It is light and wholesome, but is said to contain less of the nutritive principle than wheat. When rough, or in its natural state in the husk, it is called *paddy*. There is an immense variety in the qualities of rice. That which is principally exported from Bengal has received the name of *cargo rice*. It is of a coarse reddish cast, but is sweet and large grained, and is preferred by the natives to every other sort. It is not kiln-dried, but is parboiled in earthen pots or caldrons, partly to destroy the vegetative principle, so that it may keep better, and partly to facilitate the process of husking. Patna rice is more esteemed in Europe than any other sort of rice imported from the East. It is small grained, rather long and wiry, and remarkably white. But the rice raised on the low marshy grounds of Carolina is unquestionably very superior to any brought from any part of India.

The produce of lands naturally or artificially irrigated is, as far as rice is concerned, from 5 to 10 times greater than that of dry land having no command of water: and hence the vast importance of irrigation in all countries where this grain is cultivated. But it is worthy of remark, that, owing to the not unfrequent occurrence of severe droughts, there is a greater variation in the crops of rice than in those of any other species of grain. Those who, like the Hindoos, depend almost entirely on it for subsistence, are, consequently, placed in a very precarious situation. There can be no doubt that famines are at once more frequent and severe in Hindostan than in any other quarter.

A few years ago, England was principally supplied with cleaned rice from Carolina. Latterly, however, the imports of Carolina rice have been much reduced. An improved method of separating the husk, which throws out the grain clean and unbroken, has recently been practised in this country; and as the grain, when in the husk, is found to preserve its flavour and sweetness better during a long voyage than when shelled, large quantities are now imported rough from Bengal and the United States. Unquestionably, however, the oppressive discriminating duty of 14s. a cwt. on American and other foreign cleaned rice has done more than any thing else to increase the imports of rough grain; and the fact of the duty on paddy from Bengal being only 1d. per quarter, while that on paddy from Carolina is 2s. 6d. a bushel, sufficiently accounts for the increased imports from the former.

The consumption of rice increased rapidly after the reduction of the duty on the cleaned and rough grain from India in 1828. In 1830, the entries for home consumption amounted to 153,652 cwt. of cleaned, and 189,249 cwt. of rough grain. But, contrary to our anticipations in the former edition of this work, the consumption has since materially fallen off. The entries for home consumption in 1832 amounted to only 111,461 cwt. of clean, and 179,627 cwt. of rough grain, or paddy; and, during last year (1833), there was a still further decline. Mr. Cook ascribes this diminution to the reduction that has taken place in the price of wheat, which has fallen from 64s. 3d. in 1830 to 52s. 11d. in 1833. Mr. C. farther mentions that, in bad seasons, when grain is soft and damp, the millers consider it advantageous to grind a certain proportion of rice with it. — (*Milburn's Orient. Com.*; *Ainslie's Mat. Ind.*; *Cook's Com. of Great Britain* in 1833; and *private information*.)

The price of rice in bond in the London market, in January, 1834, was as under: —

|                               | L. s. d. | L. s. d. | Duty on paddy, the produce of, and imported from, British possessions, 1d. per quarter.                    |

RIGA, a city of European Russia, the capital of Livonia, situated on the Duna, about 9 miles from the sea, in lat. 56° 56' 5" N., lon. 24° 0' 4" E. Population about 47,000.

**Harbour.** — A light-house has been erected on Fort Comet, on the western side of the mouth of the river. It has 2 lights: the first, elevated about 104 feet (English) above the level of the sea, may be seen, under favourable circumstances, at the distance of 4 leagues; and the second, elevated about 24 feet, may be seen at the distance of 2½ leagues. The bar at the mouth of the river has usually from 12 to 13 feet water; and vessels drawing more than this frequently load and unload part of their cargoes by means of lighters at Bolderna, a small town on the west side of the river, near its mouth. There is a fair-way beacon without the bar, in 5 fathoms water; and within the channel, is buoyed with black and white buoys; the black being left on the right or starboard side when entering, and the white on the larboard. Vessels bound for Riga take pilots at Bolderna, who carry them to their anchorage. No ballast is allowed to be discharged, except at Poderagoe. Regulations as to clearing, &c. similar to those at Petersburg. — (*Coulier sur les Phares*, 2d ed.; and *Regulations published by the Russian Authorities*.)

**Trade.** — Owing to its advantageous situation near the mouth of a great navigable river, the trade of Riga is very extensive; being, of the Russian towns on the Baltic, in this respect second only to Petersburg. The trade is chiefly carried on by foreign merchants, particularly by the English. The principal exports are corn, hemp and flax, linseed, iron, timber, masts, leather, tallow, &c.; the imports are salt, cloth and cotton stuffs, silks, wine, sugar, coffee, and groceries of all sorts, indigo, dye woods, salted herrings, &c.

The mast trade is very extensive. The burghers of Riga send persons who are called mast brokers into the provinces to mark the trees, which are purchased standing. They grow mostly in the districts which border on the Dnieper, are sent up that river to a landing place, transported 30 versts to the Duna, when, being formed into rafts of from 50 to 200 pieces, they descend the stream to Riga. The tree which produces the largest masts is the Scotch fir. Those pieces which are from 18 to 25 inches in diameter are called masts; under those dimensions, spars, or, in England, Norway masts, because Norway exports no trees more than 18 inches in diameter. Great skill is required in distinguishing those masts that are sound from those which are in the least internally decayed. They are usually from 70 to 80 feet in length.

Hemp is brought from the Ukraine and Poland, and requires 2 years in its passage to Riga. The barks in which it is conveyed are from 250 to 300 tons burden, covered with mats sloping like a pent house roof, and have a false bottom. They ascend the Dnieper and the Duna; but on account of numerous shoals, can only pass the Duna in the spring, or about 3 weeks after the snow begins to melt; and, if they miss that time, are delayed till autumn. The hemp exported from Riga is considered the best in Europe, and is generally about 50 per cent. dearer than that exported from Petersburg. Riga hemp is chiefly used for the shrouds and stays of men-of-war. — (*Coxe's Travels in the North of Europe*, 5th ed. vol. ii. p. 231.)

The best kind of flax shipped from Riga is grown in White Russia, and is called Druana rakitzer; its colour is very white, and the threads long, fine, and loose, but it has sometimes black spots; the next quality, coming from the province of Troekie in Lithuania, is called Lithuanian rakitzer, and is very little inferior to Druana, but its colour is a little brown; of this kind the best sort is Thiesenhausen. The best kind of Courland flax shipped from Riga is Marienburgh; that grown in Livonia is of inferior quality. There are two kinds of linseed: that of the last crop, which is used for sowing; and that of former years, for crushing. To prevent deception, the year of its growth is stamped on the barrel by sworn inspectors (*bruckers*). Some hemp-seed is occasionally shipped, mostly to Holland. Riga wheat is very inferior to that of Dantzic. Two descriptions are shipped — one the growth of Russia, the other of Courland; the last is much the best, being larger bodied and of a brighter colour than the Russian; still, however, it makes but indifferent flour. Oats are of a good quality, and are largely exported; peas are also occasionally exported.

In shipping masts, the rest of the cargo generally consists of deals and wainscot logs; the latter are much exported to England, and are very superior. Tallow is not so cheap here as at Petersburg.

**Money.** — For the monies of Riga, see PETERSBURGH. The current rixdollar of Riga = 3s. 1d. sterling; hence 1l. sterling = 6 rixdollars 36 groschen currency; the Riga dollar being divided into 50 groschen.

**Weights and Measures.** — The commercial pound is divided into 2 marcs, or 32 loths; and also into halves, quarters, &c. It contains 6,452 English grains. Hence 100 lbs. of Riga = 92 1/2 lbs. avoirdupois = 41 8/10 kilog. = 86 3/10 lbs. of Hamburg = 84 6/10 lbs. of Amsterdam. The lispond = 20 lbs.; the shippond = 20 lisponds.

The loof is the measure for grain: 48 loofs = 1 last of wheat, barley, or linseed; 45 loofs = 1 last of rye; and 60 loofs = 1 last of oats, malt, and beans. According to Dr. Kelly, the loof = 197 1/2 Winchester bushel; and, consequently, the last of wheat = 11 625 quarters. Nelkenbrecher does not value the loof quite so high as Dr. Kelly.

The fuder, the measure for liquids, is divided into 6 ahms, 24 ankers, 120 quarts, or 720 stoofs. The anker = 10 1/2 English wine gallons.

The foot of Riga = 1079 English inches. The ell = 2 feet; the clafter = 6 feet.

RIO DE JANEIRO, the capital of Brazil, situated in lat. 22° 54' 15" S., lon. 43° 15' 50" W. Population about 160,000. The harbour of Rio is one of the finest in the world, both as respects capaciousness and security for all sorts of vessels. In coming from the N. E. it is usual to make Cape Frio, in lat. 23° 1' 18" S., lon. 42° 3' 19" W., being about 4 leagues nearly E. of Rio. The entrance to the harbour is marked by a remarkable hill in the form of a sugarloaf, 900 feet high, close to its west side; while on the east, or opposite side of the bay, at the distance of about 1½ mile, is the fort of Santa Cruz. But the wood-cut in the next page, taken from a chart published by order of the Brazilian authorities, gives a much better idea of this noble harbour than could be obtained from any description.

Entrance to the Harbour. — Vessels bound for Rio, coming from the N., should, after rounding Cape Frio, steer due W., keeping about 3 leagues from the coast, until they come within 5 or 6 miles of the *Illa Rasa*, or *Plat Island*, lying almost due S. from the mouth of the harbour, at the distance of about 3 leagues. A light-house, the lantern of which is said to be elevated nearly 300 feet above the level of the sea was erected on this island in 1829. The light is a revolving one, finishing its revolution in 3 minutes, and exhibiting alternately a white and a red light. There is also a light-house in the fort of Santa Cruz, the light of which is fixed and elevated about 30 feet above the level of the sea. — (*Coulier sur les Phares*, 3d ed.) Having got within 5 or 6 miles of the *Illa Rasa*, ships may enter by day or by night, the dotted line in the cut marking the fair-way into the harbour. There are no pilots to be met with; and as there are no hidden dangers of any kind, their services are not wanted. On entering, vessels must pass within hail of Fort Santa Cruz, to be ready to answer any questions that may be put to them. They then proceed to Fort Vilganho, below or opposite to which they must bring to, or come to anchor, allowing no boats to come alongside, but those of the government, until they have received *pratique*, when they will be permitted to proceed to the usual place of anchorage for the merchant shipping.

The sea breeze generally sets in about 11 A. M., and lasts till about sunset. It is strong enough to enable ships to overcome the ebb. High water at full and change at 2 in the afternoon.

Trade. — The trade of Rio is extensive, and has increased rapidly of late years. The principal articles of export are coffee, sugar, cotton, hides, rum, tallow, indigo, coarse cotton cloths, gold, diamonds, precious stones, tobacco, cabinet and dye woods, rice, &c. The imports consist principally of cottons, hardware, flour, dried fish, linens, woollens, soap and candles, wines, oils, &c. Until 1830, slaves formed one of the principal articles of import into Rio and other Brazilian ports; so many as 45,000 having been imported in one year, of which Rio received the greater proportion. But, according to a convention entered into with this country, this infamous traffic should have ceased in February, 1830: whether it has really done so is more than we can undertake to affirm.

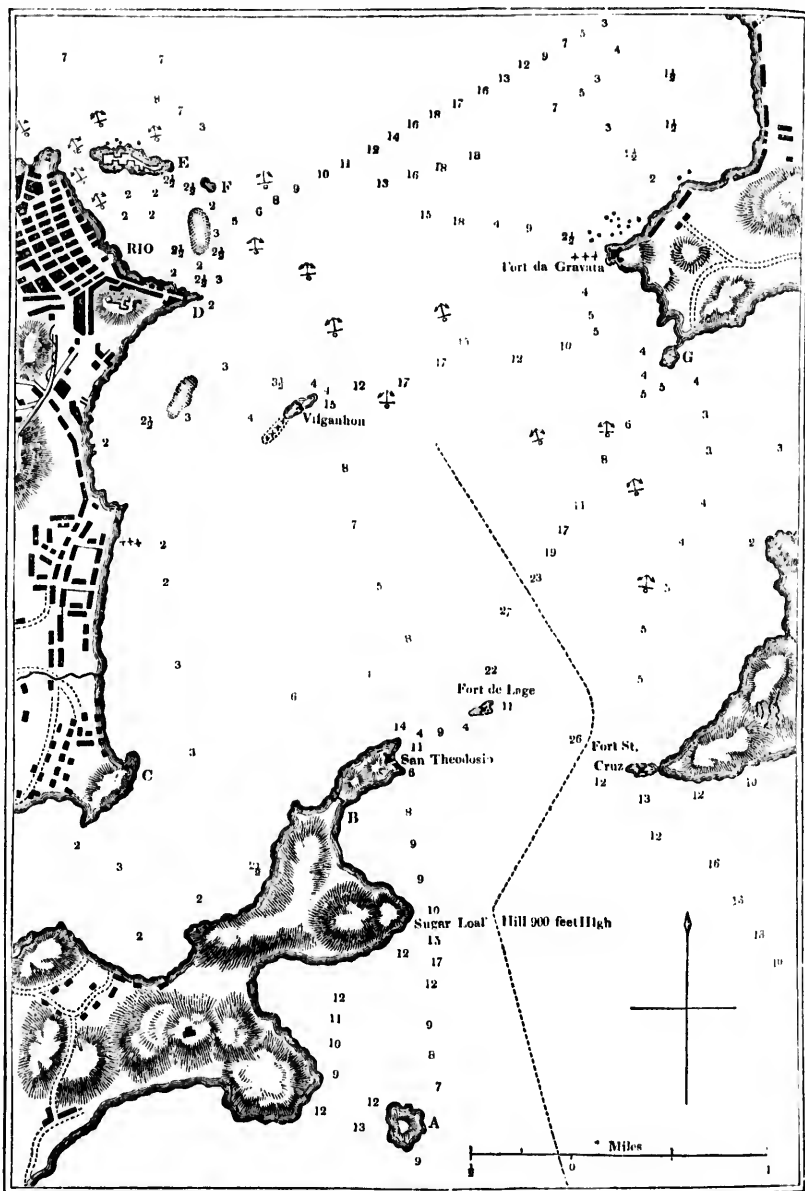

Comparative Monthly and Yearly Statement of the Coffee, Sugar, and Hides exported from Rio de Janeiro, during the Six Years ending with 1832.

The increase in the exports of sugar and coffee from Brazil during the last 10 years has been quite unprecedented. In 1822, the total export of sugar from the empire was only 40,000 tons, whereas it now amounts to about 75,000 tons. In 1821, the quantity of coffee exported from Rio did not exceed 7,500 tons; but in 1833 it amounted to more than 4 times that quantity, or to about 35,000 tons! The exports of cotton

have also increased. In 1831, were 3 reported that y

have also increased, but not so rapidly. The imports of cotton from Brazil to England in 1831, were 31,695,761 lbs., being between a 7th and an 8th of the total quantity we imported that year. In 1832, the imports declined to 20,109,560 lbs.

A considerable part of the extraordinarily rapid increase of the sugar and coffee cultivation in Brazil must be ascribed to the facility with which slaves have recently been imported; and it is possible that the cessation of their importation, supposing the convention to that effect to be executed, may check, for a while, the extension of cultivation in Brazil.

We have derived the following statements, as to the trade of Brazil, from the highest mercantile authority. Of their accuracy there can be no more question than of their interest and importance:—

Unfortunately, the government of Brazil does not publish any official statements of the trade of the different ports, not even of the amount of exports or imports, so that information on these points can only be drawn from private sources.

“ Estimated Amount of Brazilian Exports, with their Values at the Port of Shipment.

“ The imports are chiefly from Great Britain, consisting principally of our cotton, linen, woollen, hardware, and other manufactures, amounting annually to about 4,000,000*l.* The remainder of the imports consist of wines, brandies, &c. from Portugal and the Mediterranean; flour from the United States; cod fish from ditto and Newfoundland; with a comparatively small amount of French, German, Swiss, and Indian manufactures, and tea; the latter chiefly through the United States.

“ The duties on all imports, without exception, are 15 per cent. on the tariff value, which averages about 20 per cent. on the real value of British goods: those on exports vary at the different ports, and on every description of produce. On coffee they amount to about 10 per cent.; on sugar, 12 per cent. (½ being paid by the planter). The export duty on cotton has lately been reduced from 20 to about 3 per cent.

“ There are no commercial or discount banks in any part of Brazil; but at Rio there is one of issue, the whole of its transactions being with the government.

“ The usual mode of selling goods in Brazil is on an open credit of 4 to 8 months, and sometimes even 12 months, the parties paying by weekly or monthly instalments, as they effect sales, generally exceeding the stipulated credit, by 2, 3, and even 6 months, according to the state of markets, without allowing any charge for interest. On the other hand, all produce is bought by the foreign merchants for *cash* down, or, if any credit be given, the usual extra charge is 1 per cent. per month; in fact, the whole commerce of the country is on British capital.

“ The usual commissions are, 5 per cent. on the sale of goods; 2½ ditto for guarantee; with 2½ per cent. for the purchase and shipment of produce in return; 5 per cent. when purchased by credits on London: the usance being 60 days after sight.

“ The currency of Brazil is chiefly paper and copper, of a very depreciated and base kind, and varying in almost every province. The par of exchange, when the silver currency was maintained, was 67*d.* and the current rate always above it, say from 70*d.* to 72*d.*; but *now*, owing to the introduction of paper and copper, the exchange has fallen, at Rio, to 36*d.*, Bahia 32*d.*, Pernambuco 38*d.*, and Maranhão

\* Bag of coffee about 1 cwt. 1 qr. 14 lbs.

† Case of sugar about 15 cwt.

40*l.*; and, at one period, the exchange at Rio fell as low as 20*l.*, owing to the extensive issue of paper by the bank.

"The great difficulties under which our trade with Brazil labours are,—1st, The prohibitory duties chargeable on sugar and coffee, the chief productions of the country; which admit to consumption only cottons and hides, the latter not being wanted; so that, with an export of nearly 4,000,000*l.*, we have no direct means of return for 1.4th the amount, the other 3.4ths being forced into the hands of the Americans, Germans, Swedes, &c. who thus get employment for their shipping, and carry on an extensive commerce, entirely upon British capital, whilst the British merchant is compelled to transfer his property into their hands for 5 or 6 months, as the only means of getting payment for the manufactures he has exported; at the same time that the British consumer at home is compelled to pay, exclusive of the heavy duties, a decidedly higher price for sugar and coffee than is paid by the consumers of any other European state.

"The 2d grievance is the wretched state of the currency in Brazil, which occasions fluctuations in the exchange of from 10 to 20 per cent. in 2 or 3 months, and even 50 per cent. In the course of the year; so that the actual proceeds, in sterling, of any goods sold on credit can never be guessed at till the money is received; there being no discount banks or means of realisation, till the expiration of the credit.

"The Brazilian Regency have at length recommended their currency to the immediate attention of the Assembly; but it may be doubted whether they have either courage or honesty to take any effectual means to eradicate the evil: this can only be done by a return to a gold and silver standard, and a new coinage, calling in the old, one half of which is debased."—(13th of August, 1833.)

Account of the Trade of Great Britain with Brazil, for the Six Years ending with 1831, according to the Official Returns and Values.

| Years. | Exports.                        |                               | Totals.   | Imports from Brazil. |

In 1832, there arrived at Rio 591 vessels; and in 1833, 620. Of the arrivals during the last-mentioned year, 211 were English, including packets, and 161 American. Perhaps not more than 2-3ds of the 620 ships would land at Rio; many calling in quest of freights, and for orders, stores, &c. The returns do not include the native coasting vessels.

In order still better to illustrate the trade of Brazil, we take leave to subjoin the following details from Mr. Caldeugh's *Travels in South America*. They are neither, however, so recent, nor of such authority, as those already laid before the reader:—"The colonial system, which was strictly preserved until the arrival of the court, kept the country in a state of ignorance of many of those beautiful articles of English manufacture, now so greedily purchased by all. The Brazil trade may be considered as entirely in the hands of the British, as if an exclusive monopoly existed in their favour. Brazil takes from us every thing she requires, excepting wine from Portugal; and the importance of this trade to England may be well conceived, when it is mentioned, that, after the East and West Indies and the United States, it forms the greatest mart for our fabrics, and one that is most rapidly increasing.

"In 1820, the imports of British manufactures amounted to 1,860,000*l.*; in 1821, to 2,230,000*l.* The exports of 1820 were 350,000*l.*; in 1821, 1,300,000*l.*; showing a great and progressive increase.

"Of the amount of imports, about *three-fifths* are brought to the capital, owing to the greater consumption, and from its being in communication with the mines, the most inhabited districts of the interior.

"The other nations trading to Brazil exhibit a poor figure after Great Britain. By far the most active of them—the United States—exported to Brazil only to the amount of 320,000*l.*, chiefly in flour, fish, and minor articles. It is impossible to say what may happen, but at present it does not appear that England has much to fear in this quarter. The immense command of capital which our merchants possess strikes all foreigners with astonishment, and forces them to abandon all idea of competition. The trade carried on by the rest of the world amounts, in the aggregate, to little: that of France being chiefly confined to articles of dress and fashion; and of Sweden, to a few ship-loads of iron annually.

"The trade expressly confined to Brazilian vessels is the coasting and African. This latter traffic, it is well known, is now restricted, by treaty, to that part of Africa south of the line, which comprehends, in

Importan weights an lity to com progress of and the latr communicat point out in that exist in for a large coal, metals by sea, im

fact, almost the whole of the Portuguese possessions. The importation of negroes varies in amount; but of late years it cannot be estimated, on an average, at less than £1,000 into Ilho de Janeiro only. It affords too great a return of gain to be easily abandoned; more especially when, strange to say, patriotic feelings are considered, in this instance, to go hand in hand with profit; and when it is imagined, that the moment the trade is prohibited, the prosperity of the country must decay. When it is considered that this number is annually received into the capital, and that there are 3 other ports trading to the same extent, and that scarcely  $\frac{1}{3}$  of the negroes taken from the coast live to be landed, the number of negroes carried away by this outlet only in the course of the year appears prodigious.

"Many years since, a considerable capital was employed in the whale fishery. The black whale was extremely common near the mouth of the harbour; but an increasing traffic has driven this animal to the southward, and the only establishments at present are in the province of St. Catharine's. It forms another of the royal monopolies; and, in 1820, was farmed by some Frenchmen.

"The other trade carried on in Brazilian bottoms is very much confined to that with the mother country; its dependencies, as Madeira; and its possessions in Africa and the East. The traffic with China is still continued, but no longer in that way which made Portugal at one time the envy of all maritime nations.

"The internal trade is very much confined to the products of the district of the mines; and is carried on by means of large troops of mules, some of which, from the western provinces of Goaz and Matto Grosso, are 4 months on the journey. It is not easy to learn with accuracy the produce of the diamond mines; as they are worked by government, and strictly monopolised: much smuggling consequently prevails. In some years, the quantity recovered by government has amounted to as much as 1,000 octavas of 18 carats; but these are years of rare occurrence; taking the average, however, of some years, the number of octavas would come to near 1,200. In this quantity there would be, of course, many of large size, adding immensely to their value. It is calculated that about the same quantity is smuggled; and there are strong reasons to suppose, that if no difficulties were thrown in the way, owing to the facility with which they are obtained, the produce of Brazil diamonds, in every way as fine as the Oriental, would have considerable effect on the demand.

"With respect to the quantity of gold which comes from the mines, it is immersed in a certain degree of obscurity. The 1.5th due to government is the principal cause that I could never ascertain, in any mine which I visited, its exact produce. I shall have another opportunity of saying more on this head, and explaining why the produce of gold mines is on the decrease, which I certainly conceive to be the case.

"No silver is produced in Brazil. As there is lead, it would be too much to affirm that none exists; but probably the quantity would be trifling. The silver coin is mostly Spanish dollars, restamped into 5-patac pieces, by which a considerable profit is obtained on each.

"The quantity of precious stones shipped is now very considerable. In most cases they are sent to a losing market; being, in fact, more valuable in Brazil than in London or Paris. Aquamarines — (see *Beryl*) — of a very large size have been found. In January, 1811, one was found in the Ribeiro das Americas, near the diamond district, which weighed 13 lbs.; and in the same place, in the October following, one was discovered weighing 4 lbs. Topazes of fine quality, and seldom large, amethysts, and chrysolites, are also articles of exportation; and at times some fine specimens of these gems are to be met with in the jewellers' shops.

"Correctly speaking, there are no trading companies in Rio de Janeiro: there is a society for effecting maritime assurances, but no other.

"The Bank of Brazil has had very extensive concessions made in its favour, and ought to be in a flourishing state. It has the power of issuing notes; and all disputed monies and property of the deceased and absent (*mortes e ausentes*) must be placed in its hands, and 2 per cent. per annum charged for the care and trouble. This, in addition to the interest which might be obtained for the deposit, would alone, in an active mercantile country, form no inconsiderable revenue. Specie is prohibited from being carried coastwise: merchants who wish to deposit cash in one of the northern ports, where the largest purchases are made, are therefore forced to take hand bills, and pay a premium for them, varying from 3 to 5 per cent.

"Some enormous capitals have been amassed; but generally the speculations of the native merchants are conducted on a very limited scale.

"The legal rate of interest is 6 per cent.; but money can seldom be obtained under 12." — (*Cathleugh's Travels in South America*, vol. i. pp. 53 — 59.)

*Population of Brazil.* — The magnitude of the population of Brazil is involved in great uncertainty. One of the latest estimates is as follows: — Portuguese and creoles, 9,000,000; free mestizos, 600,000; enslaved mestizos, 250,000; free negroes, 180,000; enslaved negroes, 2,000,000; Indians, 450,000; making in all, 5,280,000. — (*Weimar Almanac*, for 1822.) But we incline to think that this estimate is rather beyond the mark.

**ROADS**, pathways formed through the country with more or less art and care, for facilitating the transit of individuals, carriages, &c. between different places. They are of every variety of form — from rude, narrow, rugged, and unformed paths, carried over mountains, interrupted by every petty rivulet, and almost impracticable to any but foot passengers, to smooth, broad, and level ways, formed of solid materials, winding round or cut through mountains, and carried over swamps and rivers at an immense expense, and admitting of the easy passage of carriages and of all sorts of goods.

The laying out of improved roads, and their construction, forms an important part of what is denominated the science of civil engineering. But as it would be quite foreign to our purpose to enter into any details as to the formation of roads, we shall satisfy ourselves with laying before the reader the following statements as to their importance in a commercial point of view.

*Importance and Utility of improved Roads.* — Next to the introduction of money, and weights and measures, the formation of good roads and bridges gives the greatest facility to commerce, and contributes more powerfully, perhaps, than any thing else to the progress of improvement. They have been denominated national veins and arteries; and the latter are not more indispensable to the existence of individuals, than improved communications are to a healthy state of the public economy. It were vain to attempt to point out in detail the various advantages derived from the easy means of communication that exist in Great Britain. There is not a single district that is not indebted to others for a large part of its supplies, even of some of the bulkiest commodities. Besides the coal, metals, minerals, timber, corn, &c. conveyed from one part of the empire to another by sea, immense quantities are conveyed from place to place in the interior, by roads

and canals; and every improvement effected in the means of conveyance has obviously the same effect upon the cost of commodities that have to be conveyed, as an improvement in the methods by which they are raised or manufactured.

Wherever the means of internal communication are deficient in a country, the inhabitants must unavoidably disperse themselves over the surface. Cities were originally founded by individuals congregating more, perhaps, for the purpose of national defence and protection, than for any other cause. But in countries where good government is established, and property is secure, men resort to cities only from a sense of the advantages they afford. The scale on which business is here conducted presents facilities that cannot be elsewhere afforded for making a fortune; and the extent to which the subdivision of employments is carried opens a field for the exercise of all sorts of talent; at the same time that it improves and perfects all sorts of arts, whether subservient to industrious or scientific pursuits, or to those of pleasure and dissipation. It is this that attracts the aspiring, the industrious, the gay, and the profligate, to cities, — that fills them with the best and the worst part of the species. The competition that takes place in a great town, — the excitement that is constantly kept up, the collision of so many minds brought into immediate contact, and all endeavouring to outstrip each other in their respective departments, — develops all the resources of the human mind, and renders a great city a perpetually radiating focus of intelligence and invention. There are, however, considerable clogs upon the continued increase of cities. The food and fuel made use of by the inhabitants, and the raw products on which their industry is to be exerted, must all be brought from the country; and according as the size of the city increases, the distances from which its supplies must be brought become so much the greater, that ultimately the cost of their conveyance may be so great as to balance or more the peculiar advantages resulting from a residence in town. Hence the impossibility of a large or even a considerable city existing any where without possessing extensive means of communication either with the surrounding country, or with other countries; and hence, too, the explanation of the apparently singular fact, of almost all large cities having been founded on or near the sea, or a navigable river. Had London been an inland town, 50 miles from the shore, it is abundantly certain that she could not have attained to one third her present size; but the facilities afforded, by her admirable situation on the Thames, for the importation of all sorts of produce from abroad, as well as from other parts of England, will enable her, should her commerce continue to prosper, to add to her colossal magnitude for centuries to come.

But all towns cannot be founded on the sea coast, or the banks of navigable rivers; and the growth of those in inland situations must, in all cases, depend on their means of communicating with the surrounding country. Without our improved roads, the great inland manufacturing towns with which England is studded, such as Manchester, Leeds, Birmingham, Sheffield, Bolton, Preston, &c., could not exist. They enable the inhabitants to obtain the rude products of the soil and the mines almost as cheap as if they lived in country villages. There is thus nothing, or next to nothing, to detract from the advantages which the inventive and enterprising artisan may expect to realise from resorting to these great hives of industry. And, owing to the gigantic scale on which all sorts of industry are conducted in them, the scope afforded for the employment of the most powerful machines, and the appropriation of particular sets of workmen to every separate process, however minute, manufacturing industry is carried to a degree of perfection that almost exceeds belief.

The influence that the growth of a large town has upon agriculture is great and striking. "In the neighbourhood," says Dr. Paley, "of trading towns, and in those districts which carry on a communication with the markets of trading towns, the husbandmen are busy and skilful, the peasantry laborious: the land is managed to the best advantage, and double the quantity of corn or herbage (articles which are ultimately converted into human provision) raised from it, of what the same soil yields in remoter and more neglected parts of the country. Wherever a thriving manufactory finds means to establish itself, a new vegetation springs up around it. I believe it is true, that agriculture never arrives at any considerable, much less at its highest, degree of perfection, when it is not connected with trade; that is, when the demand for the produce is not increased by the consumption of trading cities." — (*Moral Philosophy*, book vi. c. 11.)

But the fact of their being mainly conducive to the growth of cities, is not the only advantage which improved roads confer upon agriculture. Without their aid it would be impossible to carry to distant places sufficient supplies of such bulky and heavy articles as lime, marl, shells, and other manures necessary to give luxuriance to the crops of rich soils, and to render those that are poor productive. Not only, too, would inferior roads lessen the market for farm produce, and consequently the quantity raised, but a larger proportional number of horses or other cattle would be required to convey the diminished produce to market. It is plain, therefore, that good roads are both directly and indirectly a prime source of agricultural improvement; — directly, by

increasing the quantity and reducing the cost of manure, and by increasing the quantity and reducing the cost of conveying farm produce to market; and indirectly, by providing for the growth and indefinite extension of cities and towns, that is, of the markets for agricultural produce.

Increased speed of conveyance — one of the principal advantages that have resulted from the formation of good roads, the invention of steam packets, &c. Suppose that it takes 2 days to travel by an uneven, ill-made road between any 2 places; and that, by improving the road, the journey may be accomplished in 1 day: the effect is the same as if the distance were reduced  $\frac{1}{2}$ ; and there is not only a great saving of time to travellers, but also a great saving of cost from the more speedy conveyance of commodities. This latter is a point of much more importance than is commonly supposed. It is not possible to form any correct estimate of the value of the products that are constantly in the act of being carried from place to place in Great Britain and Ireland. It is certain, however, that it is very great; and every additional facility of conveyance, by bringing such products more rapidly to their destination, and enabling them to be sooner applied to the purposes for which they are intended, renders large quantities of capital available for industrious purposes, that would otherwise be locked up.

*Mode of defraying Costs of Roads.* — Roads of one sort or other must, of course, exist in every country emerged from barbarism, — but in England, the statute of the 28th of Philip and Mary, which is still in force, is the first legislative enactment in which a regular provision was made for the repair of the roads. The preamble to this statute declares, that the roads were tedious and noisome to travel on, and dangerous to passengers and carriages; and, therefore, it enacts, that in every parish 2 surveyors of the highways shall be annually chosen, and the inhabitants of all parishes obliged, according to their respective ability, to provide labourers, carriages, tools, &c. for *four* days each year, to work upon the roads, under the direction of the surveyors. This system, though in many respects exceedingly defective, was at the time justly considered a great improvement, and answered pretty well till the reign of Charles II., when, owing to the increase of carriages, particularly about London, it became necessary to adopt more efficient measures for the formation and repair of roads; and the plan of imposing tolls upon those who made use of them began then to be adopted. But this system was not carried into full effect, and placed upon a solid footing, till about 1767, when it was extended to the great roads to all parts of the country; the contributions of labour under the act of Philip and Mary being then appropriated entirely to the cross or country roads. A money payment is also very frequently made instead of a contribution in labour.

When the plan for extending turnpike roads from the metropolis to distant parts of the country was in agitation, the counties in the neighbourhood of London petitioned parliament against it, alleging that the remoter counties would be able, from the comparative cheapness of labour in them, to sell their produce in London at a lower rate than they could do; and that their rents would be reduced, and cultivation ruined, by the measure! Luckily this interested opposition proved ineffectual; and instead of being injurious to the counties adjoining the metropolis, the improvement of the roads has been quite as beneficial to them as to those at a distance, inasmuch as, by providing for the indefinite extension of the city, it has rendered it a far better market for their peculiar productions, than it would have been had its growth been checked, which must have been the case long ago, had the improvements in question not been made.

The plan of making and repairing roads by contributions of labour is not peculiar to England, but was at one period general all over Europe. By an act of the Scotch parliament, passed in 1669, all persons engaged in husbandry were obliged to labour 6 days each year, before or after harvest, upon the public roads; the farmers and landlords being, at the same time, obliged to furnish horses, carts, &c. according to the extent of land occupied by them. The inconveniences of such a system are many and obvious. Those who get no pay for their work, and who perform it against their will, waste their time and industry; and there is, besides, a great loss incurred by the interruption of the regular pursuits of the labourer. A sense of these disadvantages led, in the early part of the reign of George III., to a commutation of the labour contribution for a money tax on land, rated according to its valuation in the cess books. This measure has been productive of the best effects. Previously to its taking place, the roads, even in the best cultivated districts of Scotland, were in the worst possible state; now, however, they are about the very best in Europe.

A similar system has been followed on the Continent. When Turgot entered on his administration, he sent a circular letter to the road surveyors and engineers of the different provinces of France, desiring them to transmit estimates, framed on the most liberal scale, of the sums of money for which the usual repairs might be made on the old roads, and the ordinary extent of new ones constructed. The average of the estimates showed that a money contribution of about 10,000,000 livres a year would suffice for

these objects; whereas Turgot showed, that the execution of these repairs and constructions, by contributions of forced labour, or *corvées*, cost not less than 40,000,000 livres!—(Art. *Taxation*, *Supp. to Ency. Brit.*)

There is still, however, a great deal of labour performed on the cross and country roads of England, under the system established by the act of F. 10. and Mary. Its continuance is most probably to be ascribed to the want of any ready means for its commutation.

It is the duty of government to furnish assistance towards the formation of roads and bridges in parts of the country where they are necessary, and where the funds required for their formation cannot otherwise be obtained. But it is in such cases extremely desirable, in order to prevent government from being deceived by interested representations, that those more immediately concerned in the undertaking should be bound to contribute a considerable portion of its expense. This has been done in the case of the Highland roads. Down to a very recent period, large tracts in the Highlands were quite inaccessible, and were, consequently, in a great measure shut out from all improvement; while the rugged nature of the country and the poverty of the inhabitants rendered any attempt to construct improved roads an undertaking beyond their means. Under these circumstances, government came forward and engaged to advance  $\frac{1}{2}$  the expense of making roads and bridges in certain districts, on condition that the landlords and others interested should advance the other  $\frac{1}{2}$ , and that the work should be executed under the direction of parliamentary commissioners and engineers. This arrangement has been highly beneficial. Through its means about 600 miles of excellent roads have been constructed; and in consequence of the easy means of communication they afford, a spirit of improvement has been excited even in the wildest and least frequented districts.

Dr. Smith seems to have inclined to the opinion, that the roads of a country would be better attended to, and more economically managed, were they placed under the control of government, than when they are left to be planned and superintended by private individuals. But this opinion does not seem to rest on any good foundation. It is, perhaps, true that a few of the great roads between the principal towns of a county might be better laid out by government surveyors, than by surveyors appointed by the gentlemen of the different counties through which they pass. But these great roads bear but a very small proportion to the total extent of cross and other roads with which every county either is, or ought to be, intersected; and, besides, it is abundantly certain, that when the formation of the great roads is left, as in Great Britain, to the care of those who, either by themselves or their tenants, have to defray the greater part of the expense of their construction and repair, they will be managed, if not with greater skill, at least with far more economy than if they were intrusted to the agents of government. M. Dupin has set this matter in the clearest point of view, in the remarks he has made on the administration of the roads in France and England. In the former they are entirely under the control of government; and the consequence is, that while there is a useless expenditure upon a few great roads, the cross roads are almost entirely neglected, and the facilities of internal intercourse are incomparably inferior to ours.

Sir Henry Parnell, who has published by far the best treatise on road-making in the English language, while he approves of the system of local trusts, proposes that measures should be taken for increasing the responsibility of the trustees, and that every trust should be obliged to submit its accounts to the inspection of some public Board. We have no doubt that this plan would be in several respects advantageous. Perhaps, however, the object in view, in making accounts be submitted to a public Board, might be attained by the erection of local tribunals for their inspection. We should be extremely jealous of any plan, how advantageous soever in other respects, that might lead to the employment of government surveyors generally in the laying out of roads, or to any material abridgment of the powers of the private trusts.

*Length of Roads, Cost, &c.*—The following details, taken from the report of the committee of the House of Lords on turnpike road trusts, show that, in 1829, the total length of the different paved streets and turnpike roads in England and Wales amounted to 19,798 miles; that the direct expenditure by the trustees, on account of these roads, during the same year, was about 1,500,000*l.*, and the revenue about 1,455,000*l.* But, exclusive of this pecuniary outlay, the value of the work performed on these roads by parishes, and not brought into the charge, is estimated at 100,000*l.*; making the whole expenditure 1,600,000*l.* The length of the various cross roads and other highways is estimated at about 95,000 miles.

*Tolls.*—In fixing the rate of tolls, great care should be taken to keep them as low as possible. When they are either too much multiplied, or too high, they have a very pernicious influence. They then operate as a most oppressive and unequal tax on commerce; and obstruct that intercourse they are intended to promote. The same remark is applicable to all sorts of dock and harbour dues, light-house dues, &c. When confined within due bounds, they cannot justly be objected to; for nothing can be fairer than that those who benefit by such increased facilities and security in the prosecution of their business should pay for them. But whenever they exceed the proper limits, they tempt the navigator to resort to ports where the charges are lower, and to direct his course through more insecure but less costly channels.

*Improvement of Roads.*—It is not easy for those accustomed to travel along the smooth and level roads by which every part of this country is now intersected, to form any accurate idea of the difficulties the traveller had to encounter a century ago. Roads were then hardly formed; and, in summer, not unfrequently consisted of the bottoms of rivulets. Down to the middle of last century, most of the goods conveyed from place to place in Scotland, at least where the distances were not very great, were carried, not by carts or wagons, but on horseback. Oatmeal, coals, turf, and even straw and hay, were conveyed in this way! At this period, and for long previous, there was a set of single-horse traffickers (caddgers), that regularly plied between different places, supplying the inhabitants with such articles as were then most in demand, as salt, fish, poultry, eggs, earthenware, &c.: these were usually conveyed in sacks or baskets, suspended one on each side the horse. But in carrying goods between distant places, it was necessary to employ a cart, as all that a horse could carry on his back was not sufficient to defray the cost of a long journey. The time that the carriers (for such was the name given to those that used carts) usually required to perform their journeys, seems now almost incredible. The common carrier from Selkirk to Edinburgh, *thirty-eight* miles distant, required a *fortnight* for his journey between the two places, going and returning! The road originally was among the most perilous in the whole country; a considerable extent of it lay in the bottom of that district called Gala-water, from the name of the principal stream, the channel of the water being, when not flooded, the track chosen as the most level, and easiest to travel in.

Even between the largest cities, the means of travelling were but little superior. In 1678, an agreement was made to run a coach between Edinburgh and Glasgow,—a distance of 44 miles,—which was to be drawn by *six* horses, and to perform the journey from Glasgow to Edinburgh and back again in *six* days. Even so late as the middle of last century, it took  $1\frac{1}{2}$  day for the stage coach to travel from Edinburgh to Glasgow,—a journey which is now accomplished in  $4\frac{1}{2}$  or 5 hours.

So late as 1763, there was but one stage coach from Edinburgh to London, and it set out only once a month, taking from 12 to 14 days to perform the journey. At present, notwithstanding the immense intercourse between the two cities by means of steam packets, smacks, &c., 6 or 7 coaches set out each day from the one for the other, performing the journey in from 45 to 48 hours.—(*Robertson's Rural Recol.* pp. 39—44.)

The effects of this extraordinary improvement in the means of travelling have been as striking on the manners as on the industry of all classes. The remark of Dr. Smith, that "man is the least transportable species of luggage," is no longer true as applied to Great Britain. During spring, the metropolis is crowded with visitors of all ranks and orders from the remotest provinces; and during summer and autumn vast numbers of the citizens are spread over the country. Hence it is, that manners as well as prices are reduced nearly to the same standard. A respectable family in Penzance or Inverness live very much in the same way as a respectable family in London. Peculiarities of all sorts have disappeared; every thing is, as it were, brought to a level; the fashions

\* Exclusive of parish labour, valued at 100,000*l.*

and opinions of the metropolis are immediately diffused over every part of the country, while those that originate in the latter powerfully influence the former.

(These details have been partly borrowed from the treatise on *Commerce*, published by the Society for the Diffusion of Useful Knowledge, contributed by the author of this work.)

**ROPE**, consists of hemp, hair, &c. spun into a thick yarn, of which several strings are twisted together by means of a wheel. When made very small, it is called a cord; and when very thick, a cable. All the different kinds of this manufacture, from a fishing-line, or whip-cord, to the cable of a first-rate ship of war, go by the general name of cordage. — (See **CABLE**.)

**ROSEWOOD** (Ger. *Rosenholz*; Fr. *Bois du rose, de Rhode*; It. *Legno rosie*; Sp. *Leno de rosa*; Port. *Pão de rosado*) is produced in Brazil, the Canary Islands; in Siam, whence it is pretty largely exported by the Chinese; and in other places. It is in the highest esteem as a fancy wood. The width of the log imported into this country averages about 22 inches, so that it must be the produce of a large tree. Rosewood has a slightly bitterish, somewhat pungent, balsamic taste, and fragrant smell, whence its name. It should be chosen sound, heavy, of the deepest colour, in the largest pieces that can be procured, and of the most irregular knotty grain. The small, light-coloured and large shivered pieces should be rejected. The more distinct the darker parts are from the purple red, which forms the ground, the more is the wood esteemed. It is usually cut into veneers of 9 to an inch. — (*Milburn's Orient. Com.*, &c.)

Rosewood is one of the dearest as well as most beautiful of the fancy woods. Its price in bond varies from about 120l. to 125l. per ton; so that it is principally used in veneering. Its consumption has more than trebled since 1820. At an average of the 3 years ending with 1832, the entries for home consumption were 277 tons a year, whereas they amounted, during the 3 years ending with 1832, to 912 tons a year! This increase is principally to be ascribed to the reduction of the duty, in 1826, from 20l. to 10l. a ton, — a wise and judicious measure, by which the revenue as well as the consumption has been considerably increased.

**ROSIN**. "This substance is obtained from different species of fir; as the *Pinus abies, sylvestris, larix, balsamea*. It is well known that a resinous juice exudes from the *pinus sylvestris*, or common Scotch fir, which hardens into tears. The same exudation appears in the *pinus abies*, or spruce fir. These tears constitute the substance called *thus*, or frankincense. When a portion of the bark is stripped off these trees, a liquid juice flows out, which gradually hardens. The juice has obtained different names, according to the plant from which it comes. The *pinus sylvestris* yields common turpentine; the *larix*, Venice turpentine — (see **TURPENTINE**); the *balsamea*, balsam of Canada — (see **BALSAM**), &c. All these juices, which are commonly distinguished by the name of turpentine, are considered as composed of two ingredients; namely, oil of turpentine, and rosin. When the turpentine is distilled, the oil comes over, and the rosin remains behind. When the distillation is continued to dryness, the residuum is known by the name of common rosin, or *colophonium*; but when water is mixed with it while yet fluid, and incorporated by violent agitation, the mass is called *yellow rosin*. During winter, the wounds made in the fir trees become incrustated with a white brittle substance, called *barras* or *galipot*, consisting of rosin united to a small portion of oil. The yellow rosin, made by melting and agitating this substance in water, is preferred for most purposes, because it is more ductile, owing, probably, to its still containing some oil. The uses of rosin are numerous and well known." — (*Thomson's Chemistry*.)

**ROTTERDAM**, on the north bank of the Maese, in lat. 51° 55' 19" N., lon. 4° 29' 14" E. Population about 60,000. Rotterdam is the second commercial city of Holland. It is more advantageously situated than Amsterdam; being nearer the sea, and the canals which intersect it are so deep as to admit of the largest vessels coming up to the quays and warehouses of the merchants. Its commerce, during the last 15 years, has increased more rapidly than that of any town in Holland. The exports and imports are similar to those of Amsterdam. The white Zealand wheat shipped here is of a peculiarly fine quality; and it is the best market for madder and geneva. Our imports of madder from the Netherlands, in 1831, amounted to about 18,726 cwt., most of which came from Rotterdam. — (See **MADDER**.) Geneva is sold by the aam; but, for the convenience of smuggling to England, it is divided into ankers and  $\frac{1}{2}$  ankers. The legitimate imports of geneva from the Netherlands, in 1831, amounted to 210,038 gallons.

*N. B.* — The channel from the sea to Rotterdam is exhibited in the chart of the Dutch coast in the map of Europe in this work.

*Monies, Weights, and Measures.* — See the article **AMSTERDAM**, for an account of the current monies, weights, and measures of Holland.

Two different commercial lbs. were formerly used at Rotterdam: one was the Amsterdam weight, 100 lbs. of which = 108.93 lbs. avoirdupois; the other, used by retailers, was 5 per cent. lighter, 100 lbs. of it being = 103.48 lbs. avoirdupois.

The Rotterdam last of corn = 10.612 Winchester bushels. The aam = 40 English wine gallons very nearly. A hoghead of tax-seed contains from  $7\frac{1}{2}$  to 8 Winchester

bushels. Rock salt is sold per great hundred of 401 matten, containing from 21 to 22 tons. Coals per hoed =  $\frac{1}{2}$  a chaldron of Newcastle.

The liquid measures were divided in the same manner as at Amsterdam, but were larger; thus, 100 stoops of Rotterdam were = 67 $\frac{1}{2}$  English wine gallons. Brandies were sold per 30 vierfels; whale oil, per 90 stoops; vegetable oils per 500 stoops.

The ell is the same as at Amsterdam. 100 feet of Rotterdam = 109 $\frac{1}{2}$  feet of Amsterdam, or 102 English feet.

The number of ships entering the Maese and the Goué, chiefly destined for Rotterdam, in the 5 years ending with 1828, was as follows:—

| Years. | Ships. | Years. | Ships. |
|--------|--------|--------|--------|
| 1824   | 1,373  | 1827   | 1,751  |
| 1825   | 1,366  | 1828   | 2,285  |
| 1826   | 1,587  |        |        |

RUBY, a precious stone, very highly esteemed; but under this name a variety of minerals have not unfrequently been sold, which differ essentially in their characters.

The *Oriental Ruby* is, in fact, a red variety of the sapphire. When perfect, its colour is a cochineal red, presenting a richness of hue the most exquisite and unrivalled: it is, however, in general, more or less pale, and often mixed with blue; hence it occurs rose red, peach blossom red, and lilac blue, passing into the amethyst. It is harder than any other mineral, except the diamond. Easily frangible. Specific gravity from 3.916 to 4.283. Infusible before the blowpipe. Oriental rubies of 10 carats are extremely rare and valuable. One of 22 grains was sold for 160*l.* Rubies in lots, Indian cut, or small sizes, and of different qualities, are at all times to be had, and sell at from 15*s.* to 65*s.* a carat; but a perfect stone of a carat, or 6 grains, may be deemed rare, and falls little short of the value of the diamond: nay, in some cases, rubies of 2, 3, or 4 carats, if *very fine*, are much scarcer, and even more valuable, than diamonds of equal weight. The finest ruby in England, or, perhaps, in Europe, is in the collection of the late Mr. Hope, author of "Anastasius."

There are two other species of ruby, the *Spinelle* and *Balais*. When perfect, the Spinelle is a gem of great value and scarcity. Its colour is a fine full carmine or rose red, but it never presents that rich mellow tinge that attends the Oriental ruby. It is also inferior to the latter in hardness and specific gravity. Stones of 3 carats and upwards are very rare and valuable.

The *Balais Ruby* is a pale variety of the spinelle. It varies in colour from light red to yellowish red. Though not so rare as the spinelle, it is by no means common. It is much admired for its agreeable tinge of colour; and, when pure and perfect, fetches a very high price; though considerably less than the other varieties.

Rubies are not found in any considerable quantity except in Ava. — (See *SAPPHIRE.*) — (*Mawe on Diamonds*, 2d ed. pp. 90. 101.; *Thomson's Chemistry.*)

RUM, well known and highly esteemed spirituous liquor, imported from the West Indies, of which it forms one of the staple products. It is obtained, by means of fermentation and distillation, from molasses, the refuse of the cane juice, and portions of the cane, after the sugar has been extracted. The flavour and taste peculiar to rum are derived from the essential oils carried over in distillation. When the distillation has been carelessly performed, the spirit contains so large a quantity of the grosser and less volatile part of the oil as to be unfit for use till it has attained a considerable age. When it is well rectified, it mellowes much sooner. Rum of a brownish transparent colour, smooth, oily taste, strong body and consistence, good age, and well kept, is the best. That of a clear, limpid colour, and hot pungent taste, is either too new, or mixed with other spirits. Jamaica rum is the first in point of quality; the Leeward Island rum, as it is called, being always inferior to it, both in flavour, strength, and value. The price of the latter is usually 20 per cent. below that of the former. We import all our rum in puncheons, containing from 84 to 90 gallons each. It is customary, in some of the West India islands, to put sliced pine-apples in puncheons of rum: this gives the spirit the flavour of the fruit; and hence the designation, *pine-apple rum*.

Rum is said to be much adulterated by the retail dealers in England, sometimes with corn spirit; but if done with molasses spirit, the tastes of both are so nearly allied, that the cheat is not easily discovered.

*Consumption of, and Duties upon, Rum, &c.*—The following Tables show the quantity of rum consumed in Great Britain and Ireland since 1800, the rates of duty charged upon it, and the produce of the duties; the quantities derived from our different colonies last year, and the countries to which the excess of imports has been again exported, &c.

I. Account, stated in *Imperial Proof Gallons*, of the Rum annually entered for Home Consumption in the United Kingdom, from 1800 to 1832, both inclusive, distinguishing England, Ireland, and Scotland; the Rates of Duty payable respectively thereon; the Produce of the Duties; and the Price of Rum in Bond since 1814. (This account has been prepared partly from published, and partly from unpublished official documents. The column of prices has been supplied principally by Mr. Cook.)

| Years. | Quantities entered for Home Consumption. |           |           |                 | Rate of Duty payable (Customs and Excise). |             | Nett Produce of the Duties in Great Britain. |       | Nett Produce of the Duties in Ireland. |           | Price of Rum in Bond. |       |

Though rum has not been so much over-taxed as brandy, geneva, and wine, still it seems pretty clear that even, in its case, taxation has been carried far beyond its proper limits. During the 3 years ending with 1802, when the duty in Great Britain was about 9s. a gallon, and in Ireland 6s. 8 $\frac{1}{2}$ d., the consumption of the United Kingdom amounted to 3,150,000 gallons a year; while, notwithstanding the great increase of population, during the 3 years ending with 1823, when the duty in Great Britain was 13s. 11 $\frac{1}{2}$ d. a gallon, and in Ireland 12s. 8 $\frac{1}{2}$ d., the annual consumption amounted to only 2,307,000 gallons! The reduction of the duty in 1826 to 8s. 6d. increased the consumption from about 2,500,000 to above 3,600,000 gallons in 1830. But 6d. having been added to the duty in 1830, the consumption, influenced no doubt partly by this, but probably also by other circumstances, has since declined. The great demand for rum from 1811 to 1815 was occasioned chiefly by the high price and inferior quality of the British spirits that were then manufactured.

The decrease in the consumption of rum in Ireland is most striking. Unfortunately, however, this is not the only instance the sister kingdom affords of the destructive effects of oppressive taxes. The excessive additions made to the duties on brandy, wine, sugar, &c. since 1805, have had similar effects; the quantity of these articles consumed in Ireland being *decidedly less now than it was 30 years ago!* — (See BRANDY, SUGAR, &c.) Exorbitant taxes have gone far to deprive the Irish of every comfort; and, consequently, to take from them some of the most powerful incentives to industry and good conduct. The poverty of the people has set at nought the calculations of our finance ministers; every increase of taxation in Ireland having produced a diminution of revenue and an increase of crime! Surely it is high time to abandon so odious a system; particularly after the experience of the beneficial effects that have resulted from the diminution of the spirit duties. As a means of raising revenue, the taxation of Ireland is utterly ineffective; but the wit of man never contrived any thing better fitted to produce barbarism and disaffection.

Rum, the produce of the British possessions in America, is not liable to the duty charged on sweetened spirits, unless the actual strength exceed the strength denoted by Sykes's hydrometer by more than 10 degrees per cent.; and in lieu of such duty there shall be charged upon every degree per cent. more than 3 degrees, and not more than 10 degrees, by which the actual strength shall exceed the strength denoted

by Sykes's hydrometer, a duty of 9s. 6d. : provided, that if the Importer cannot make a perfect entry thereof for payment of duty on the actual strength, he may demand in writing, upon the entry, that trial be made of the actual strength (he paying the expenses of such trial), instead of entering such rum for the payment of duty upon any stated number of such excessive degrees of strength : provided also, that all trials of actual strength of such rum shall be made by some skilful person appointed by the commissioners of customs for such purpose. — (7 Geo. 4. c. 48. § 31.)

Rum, the produce of the British plantations, must be imported in casks containing not less than 20 gallons. — (3 & 4 Will. 4. c. 52.) But rum in casks capable of containing 20 gallons, may be imported on the officer being satisfied that the cask has been *wholly occasioned by absorption or leakage*, and not by abstraction. — (*Customs Mem.* 24th of March, 1831.)

Rum in bonded warehouses may be drawn off into casks containing not less than 20 gallons each, as stores for ships, and may be delivered into the charge of the searcher, to be shipped as stores for any ship, without entry or payment of duty, the same being duly borne upon the victualling bill of such ships respectively. — (3 & 4 Will. 4. c. 57.)

Rum of the British plantations in bonded warehouses may also be drawn off into reputed quart or reputed pint bottles, for the purpose of being exported from the warehouse. — (3 & 4 Will. 4. c. 57.)

On applications referring to a former order allowing the admixture of rums of different strengths for exportation, and praying that the rum remaining in the vats after the operation of racking might be admitted for home consumption, the Board were of opinion that the request might be complied with, to the extent of an ullage of 20 gallons, the legal quantity allowed to be exported, and that the duty should be paid, according to the strength, at the time of delivery of the said rum. — (*Min. Com. Cos.* 27th of Sept. 1827.)

Before any rum shall be entered as being the produce of any British possession in America, or of the Mauritius, the master of the ship importing the same must deliver a certificate of origin to the collector or comptroller, and subscribe a declaration that the goods are the produce of such place. — (3 & 4 Will. 4. c. 52. § 37.; see *anti*, 660.)

**RUSSIA COMPANY**, a regulated company for conducting the trade with Russia. It was first incorporated by charter of Philip and Mary, sanctioned by act of parliament in 1566. The statute 10 & 11 Will. 3. c. 6. enacts, that every British subject desiring admission into the Russia Company shall be admitted on paying 5*l.*; and every individual admitted into the Company conducts his business entirely as a private adventurer, or as he would do were the Company abolished.

Table of Duties payable to the Russia Company.

**RUSSIA LEATHER** (*Fr. Cuir de Russie*; *Ger. Jaften*; *It. Cuojo di Russia*; *Pol. Jachta*; *Rus. Jufst, Youst*; *Sp. Moscovia*), the tanned hides of oxen and other kine, denominated by the Russians *youfts*, or *juffs*, — a designation said to be derived from their being generally manufactured in pairs. The business of tanning is carried on in most towns of the empire, but principally at Moscow and Petersburg. Russia leather is soft, has a strongly prominent grain, a great deal of lustre, and a powerful and peculiar odour. It is principally either red or black : the former is the best, and is largely used in this and other countries in bookbinding; for which purpose it is superior to every other material. The black is, however, in very extensive demand in Russia; large quantities being made up into boots and shoes. The process followed by the Russians in the preparation of this valuable commodity has been frequently described; but notwithstanding this circumstance, and the fact that foreigners have repeatedly engaged in the business in Russia, with the intention of making themselves masters of its details, and undertaking it at home, the efforts made to introduce the manufacture into other countries have hitherto entirely failed. One of the best tests of genuine Russia leather is its throwing out a strong odour of burnt hide upon being rubbed a little. — (*Ricard, Traité Général du Commerce*, tome i. p. 275. ed. 1781.)

We borrow from Mr. Borrison's work on the *Commerce of Petersburg* the following details with respect to this article : — Russia leather forms one of the principal export commodities of Petersburg.

But since the ports of the Black Sea have been opened, the exports of leather from this port have considerably decreased; Italy, the principal consumer, supplying its wants from Odessa and T'agarog, more easily, cheaply, and expeditiously than from Petersburg. The chief exportation from the latter is to Prussia, Germany, and England. Frankfort on the Maine and Leipzig are of great importance as respects the trade in Russia leather, on account of the fairs held in them.

Juffs are never bought on contract, but always on the spot at cash prices. It nevertheless often happens that agents, in order to secure a lot of juffs, pay a certain sum in advance, and settle for the amount at the first market prices; no prices being fixed in the months of January, February, March, and sometimes even April.

Juffs are assorted or *bracked* when received, according to their different qualities, into *Gave, Rosval, Malja, and Domashna*. The three first sorts are again divided into *heavy and light Gave, heavy and light Rosval*, &c. *Domashna* is the worst, and consequently the cheapest sort. It often happens that juffs are bought unassorted, and then the prices are regulated according as the quantity of *Domashna* contained in the lot is greater or less. Persons well acquainted with the nature of Russia leather prefer purchasing it in this state.

Juffs are sold by the *pood*, which consists, as it is commonly expressed, of 4, 4½, 5, 5½, and 5¾ hides. By this is understood, that so many hides make a *pood*, calculated upon the whole lot; and it is to be observed that the lightest juffs are esteemed the best in quality. Heavy juffs, or those of 4 and 4½ hides, are shipped for Italy; the Germans, on the contrary, prefer the lighter sort.

Juffs are packed in rolls, each containing 10 hides; and from 10 to 15 of these rolls are packed together in a bundle, which is well secured by thick matting. There are red, white, and black juffs; but the red are most in demand. Their goodness is determined by their being of a high red colour, of equal size, and unmixed with small hides: they must also be free from holes, well stretched, and equally thin. In a well finished lot, no thick head or feet parts should be found. If spots resembling flowers are seen on the red hides, it is an additional sign of their good quality; and they are then called *bloomed juffs*. The inside should be clean, soft, and white, and, when taken in the hand, should feel elastic. The best connoisseurs of Russia leather can nearly determine the quality by the smell alone.

Great attention must be paid, in shipping juffs, to secure them from being wetted, as damp air alone is sufficient to injure them.

Sixty rolls of juffs make a last; 88 *poods* nett weight, when shipped for Italy, make a last; and 44 *pooda* a ton in England.

The exports of juffs from Russia, in 1831, were 463 bales, 261,240 skins, and 80,000 *poods*. Their aggregate value was 3,464,209 roubles.

RYE (Ger. *Rogken, Roeken*; Du. *Rog, Rogge*; Fr. *Seigle*; It. *Segale, Segala*; Sp. *Centeno*; Rus. *Rosch, Sel, Jar*; Lat. *Secale*), according to some, is a native of Crete; but it is very doubtful if it be found wild in any country. It has been cultivated from time immemorial, and is considered as coming nearer in its properties to wheat than any other grain. It is more common than wheat in many parts of the Continent; being a more certain crop, and requiring less culture and manure. It is the bread corn of Germany and Russia. In Britain it is now very little grown; being no longer a bread corn; and, therefore, of less value to the farmer than barley, oats, or peas.—(*Loudon's Ency. of Agriculture.*)

For the regulations as to the importation and exportation of rye, see CORN LAWS AND CORN TRADE.

S.

SABLE (Ger. *Zobel*; Fr. *Zibelline*; It. *Zibellino*; Rus. *Sohol*), an animal of the weasel tribe, found in the northern parts of Asiatic Russia and America, hunted for the sake of its fur. Its colour is generally of a deep glossy brown, and sometimes of a fine glossy black, which is most esteemed. Sable skins have sometimes, though very rarely, been found yellow, and white. The finer sorts of the fur of sables are very scarce and dear.—(See FUR TRADE.)

SADDLES (Fr. *Selles*; Ger. *Sattel*; It. *Selle*; Rus. *Sädla*; Sp. *Selles*), seats adapted to the horse's back, for the convenience of the rider. Those made in England are reckoned the best. Sherborne and Lynn are particularly remarkable for this manufacture. The hogskins, which, when tanned, are used for the seat of the saddle, are mostly imported from Russia.

SAFFLOWER, or BASTARD SAFFRON (Ger. *Safflor*; Du. *Saffloer, Bastard Saffran*; Fr. *Cartame, Saffran batard*; It. *Zaffrone*; Sp. *Alazor, Azafran bastardo*; Rus. *Polerroi, Prostoi schafran*), the flower of an annual plant (*Carthamus tinctorius* Lin.) growing in India, Egypt, America, and some of the warmer parts of Europe. It is not easily distinguished from saffron by the eye, but it has nothing of its smell or taste.

The flowers, which are sometimes sold under the name of *saffranon*, are the only parts employed in dyeing. They yield two sorts of colouring matter: one soluble in water, and producing a yellow of but little beauty; the other is *resinous*, and best dissolved by the fixed alkalis: it is this last which alone renders safflower valuable in dyeing; as it affords a red colour exceeding in delicacy and beauty, as it does in costliness, any which can be obtained even from cochineal, though much inferior to the latter in durability. The colour of safflower will not bear the action of soap, nor even that of the sun and air for a long time; and being very costly, it is principally employed for imitating upon silk the fine scarlet (*ponceau* of the French) and rose colours dyed with cochineal upon woollen cloth.

The fine rose colour of safflower, extracted by crystallised soda, precipitated by citric acid, then slowly dried, and ground with the finest tale, produces the beautiful *rouge* known by the name of *rouge végétale*.

Safflower should be chosen in flakes of a bright pink colour, and of a smell somewhat resembling tobacco. That which is in powder, dark coloured, or oily, ought to be rejected.—(*Hasselquist's Voyages* Eng. ed. p. 252; *Bancroft's Permanent Colours*, vol. i. pp. 286—289; *Milburn's Orient. Com.*)

Of 2,772 cwt. of safflower imported in 1831, 2,436 came from the East Indies; but we occasionally import considerable quantities from the United States and Egypt. The price of safflower in bond varies from 6*l.* to 9*l.* 10*s.* a cwt.

Notwithstanding the limited use of safflower, its recent history may be quoted in illustration of the beneficial effects of moderate duties. At an average of the 3 years ending with 1822, when the duty was 8*s.* 9*d.* a cwt., the entries for home consumption were at the rate of 1,597 cwt. a year. In 1825, the duty was reduced to 5*s.*, and in 1826 to 2*s.* 6*d.* a cwt.; and at an average of the 3 years ending with 1832, the entries for home consumption were 2,416 cwt. a year. The duty has since been reduced to 1*s.* a cwt.

**SAFFRON** (Ger. *Saffran*; Du. *Safran*; It. *Zafferano*; Sp. *Saffron*; Fr. *Azafran*; Rus. *Schafran*), a sort of cake prepared from the stigmas, with a proportion of the style, of a perennial bulbous plant (*Crocus sativus* Lin.) cultivated to a small extent in Cambridgeshire. It is also imported from Sicily, France, and Spain; but the English, as being fresher, more genuine, and better cured, is always preferred. When good, saffron has a sweetish, penetrating, diffusive odour; a warm, pungent, bitterish taste; and a rich, deep orange red colour. It should be chosen fresh, in close, tough, compact cakes, moderately moist, and possessing in an obvious degree all the above mentioned qualities. The not staining the fingers, the making them oily, and its being of a whitish yellow or blackish colour, indicate that it is bad, or too old. Saffron is used in medicine, and in the arts; but in this country the consumption seems to be diminishing. It is employed to colour butter and cheese, and also by painters and dyers. — (*Thomson's Dispensatory*; *Loudon's Ency. of Agriculture*.)

**SAGAPENUM** (Arab. *Sugbenuj*), a concrete gum-resin, the produce of an unknown Persian plant. It is imported from Alexandria, Smyrna, &c. It has an odour of garlic; and a hot, acrid, bitterish taste. It is in agglutinated drops or masses, of an olive or brownish yellow colour, slightly translucent, and breaking with a horny fracture. It softens and is tenacious between the fingers, melts at a low heat, and burns with a crackling noise and white flame, giving out abundance of smoke, and leaving behind a light spongy charcoal. It is used only in medicine. — (*Thomson's Dispensatory*.)

**SAGO** (Malay, *Sagu*; Jav. *Sagu*), a species of meal, the produce of a palm (*Metroxylon Sagu*) indigenous to and abundant in such of the Eastern islands as produce spices, where it supplies a principal part of the farinaceous food of the inhabitants.

The tree, when at maturity, is about 30 feet high, and from 18 to 22 inches in diameter. Before the formation of the fruit, the stem consists of an external wall about 2 inches thick, the whole interior being filled up with a sort of spongy medullary matter. When the tree attains to maturity, and the fruit is formed, the stem is quite hollow. Being cut down at a proper period, the medullary part is extracted from the trunk, and reduced to a powder like sawdust. The filaments are next separated by washing. The meal is then laid to dry; and being made into cakes and baked, is eaten by the islanders. For exportation, the finest sago meal is mixed with water, and the paste rubbed into small grains of the size and form of coriander seeds. This is the species principally brought to England, for which market it should be chosen of a reddish hue, and readily dissolving in hot water into a fine jelly. Within these few years however, a process has been invented by the Chinese for refining sago, so as to give it a fine pearly lustre; and the sago so cured is in the highest estimation in all the European markets. It is a light, wholesome, nutritious food. It is sent from the islands where it is grown to Singapore, where it is granulated and bleached by the Chinese. The export trade to Europe and India is now principally confined to that settlement. — (*Ainslie's Mat. Indica*; *Craufurd's East. Archip.* vol. i. pp. 383—393., vol. iii. p. 348.; *Bell's Review of the Commerce of Bengal*, &c.)

The consumption of sago has been about trebled during the last dozen years; having amounted to 1,339 cwt. a year at an average of the 3 years ending with 1822, and to 3,859 cwt. a year at an average of the 3 years ending with 1832. This large increase is wholly ascribable to the reduction in the interval of the oppressive duties by which the article was formerly loaded. — (*Papers published by the Board of Trade*.) The price of common sago in bond varies from 1*l.* to 1*l.*; while pearl sago fetches from 1*l.* 1*s.* a cwt.; but the price is liable to great fluctuation.

**SAIL**, a coarse linen or canvass sheet attached to the masts and yards of ships, the blades of windmills, &c., to intercept the wind and occasion their movement.

Foreign sails, when imported by, and fit and necessary for, and in the actual use of any British ship, are exempted from duty; but when otherwise disposed of, they pay a duty of 20 per cent. *ad valorem*. — (9 *Geo.* 4. c. 76. § 12.)

Sails and cordage of British manufacture, exported from Great Britain to the colonies, and afterwards imported into the United Kingdom, are in all cases, other than those in which they are imported by bill of store, to be deemed foreign; and such sails and cordage, although not liable to duty so long as the vessel continues to belong to the colony, become subject to the duties in question as soon as the vessel becomes the property of persons residing in this country. — (*Treasury Order*, 29th of Jan. 1828.)

**SALEP**, a species of powder prepared from the dried roots of a plant of the orchis kind (*Orchis mascula* Lin.). That which is imported from India is in white oval pieces, hard, clear, and pellucid, without smell, and tasting like tragacanth. As an article of diet, it is said to be light, bland, and nutritious. The plant thrives in England, but it is not cultivated to any extent; and very little is imported. — (*Ainslie's Mat. Indica*; *Milburn's Orient. Com.*)

**SALMON** (Ger. *Lachs, Salm*; Fr. *Saumon*; It. *Sermone, Salamone*; Sp. *Salmon*; Rus. *Lengui*). This capital fish is too well known to require any description. It is found only in northern seas, being unknown in the Mediterranean and other warm regions. In this country it is an article of much value and importance. It is exceedingly abundant in Japan and Kamtschatka.

"Salmon fisheries," Marshall observes, "are copious and constant sources of human food; they rank next to agriculture. They have, indeed, one advantage over every other internal produce, — their increase does not lessen other articles of human subsistence. The salmon does not prey on the produce of the soil, nor does it owe its size and nutritive qualities to the destruction of its compatriot tribes. It leaves its native river at an early state of growth; and going, even naturalists know not where, returns of ample size, and rich in human nourishment; exposing itself in the narrowest streams, as if nature intended it as a special boon to man. In every stage of savageness and civilisation, the salmon must have been considered as a valuable benefaction to this country."

Being rarely caught, except in estuaries or rivers, the salmon may be considered in a great degree as private property. The London market, where the consumption is immense, is principally supplied from the Scotch rivers. The Tweed fishery is the first in point of magnitude of any in the kingdom; the take is sometimes quite astonishing, several hundreds having been frequently taken by a single sweep of the net! Salmon are despatched in fast sailing vessels from the Spey, the Tay, the Tweed, and other Scotch rivers, for London, packed in ice, by which means they are preserved quite fresh. When the season is at its height, and the catch greater than can be taken off fresh, it is salted, pickled, or dried for winter consumption at home, and for foreign markets. Formerly, such part of the Scotch salmon as was not consumed at home, was pickled and killed after being boiled, and was in this state sent up to London under the name of Newcastle salmon; but the present method of disposing of the fish has so raised its value, as to have nearly deprived all but the richer inhabitants in the environs of the fishery of the use of salmon. Within the memory of many now living, salted salmon formed a material article of household economy in all the farm-houses in the vale of the Tweed; inasmuch, that in-door servants used to stipulate that they should not be obliged to take more than two weekly meals of salmon. Its ordinary price was then 2s. a stone of 19 lbs.; but it is now never below 12s., often 26s., and sometimes 42s. a stone! This rise in the price of the fish has produced a corresponding rise in the value of the salmon fisheries, some of which yield very large rents. The total value of the salmon caught in the Scotch rivers has been estimated at 150,000*l.* a year. There are considerable fisheries in some of the Irish and English rivers; but inferior to those of Scotland. — (*Loudon's Ency. of Agriculture*; *General Report of Scotland*, vol. iii. p. 327.)

*Decrease of the Supply of Salmon, Poaching, &c.* — The decrease of salmon in the English and Scotch rivers, particularly of late years, is a fact as to which there can be no manner of doubt. Much unsatisfactory discussion has taken place as to its causes, which are, probably, of a very diversified character. A good deal has been ascribed to the increase of water machinery on the banks of the different rivers; but we hardly think that this could have much influence, except, perhaps, in the case of the smaller class of rivers. *Weirs*, or salmon traps, have also been much objected to; though, as we have been assured, with still less reason. On the whole, we are inclined to think that the falling off in the supply of this valuable fish is principally to be ascribed to the temptation to over-fish the rivers, caused by the extraordinary rise in the price of salmon; to the prevalence of poaching; and, more than all, to the too limited duration of the *close time*. In 1828, after a great deal of discussion and inquiry, an act was passed (9 Geo. 4. c. 39.), which has done a good deal to remedy these defects — in so far, at least, as respects the Scotch fisheries. The rivers are to be shut from the 14th of September to the 1st of February; and every person catching or attempting to catch fish during that period is to forfeit not less than 1*l.* and not more than 10*l.* for every offence, besides the fish, if he have caught any, and such boats, nets, or other implements, as he may have made use of. Pecuniary penalties are also inflicted upon poachers and trespassers; and provision is made for the watching of the rivers. We understand that this act has had a very good effect; though it is believed that it would be better were the *close time* extended from the 1st of September to the middle of February.

It is enacted by stat. 1 Geo. 1. st. 2. c. 18., that no salmon shall be sent to any fishmonger or fish-seller in England, of less than 6 lbs. weight, under a penalty of 5*l.* The 58 Geo. 3. c. 43. authorises the justices at quarter sessions to appoint conservators of rivers, and to fix the beginning and termination of the *close time*. The penalty upon poaching and taking fish in *close time* is by the same act fixed at not more than 10*l.* and not less than 5*l.*, with forfeiture of fish, boats, nets, &c.

**SALONICA**, a large city and sea-port of European Turkey, at the north-east extremity of the gulf of the same name, in lat. 40° 38' 47" N., lon. 22° 57' 13" E. Population estimated at 70,000. There is no port at Salonica, but there is excellent anchorage in the roads opposite to the town. The access to them is by no means difficult. Pilots, however, are, for the most part, employed; and of these, some are always on the look-out. During that period of the late war when the anti-commercial system of Napoleon was at its height, Salonica became a great *dépôt* for British goods; whence they were conveyed to Germany, Russia, and other parts of Europe. At all times, however, Salonica has a considerable trade. The exports principally consist of wheat, barley, and Indian corn, timber, raw cotton, wool, raw silk, wax, and tobacco. The average exportation of cotton is said to be about 100,000 bales; of tobacco about 30,000 bales; each bale containing about 275 lbs. The export of wool is said to amount to about 1,000,000 lbs. The imports are sugar, coffee, dye woods, indigo, muslins, printed calicoes, iron, lead, tin, watches, &c.

*Arrivals.* — In 1831, there arrived at Salonica 535 vessels, of the burden of 31,205 tons. *Money, Weights, and Measures.* — Accounts are kept in piastres of 40 paras, or 120 aspers. The coins are those of Constantinople; which are the same as those of Smyrna, except that the kizloz, killow, or corn measure of Salonica, = 378 kizloz of Smyrna.

**SALT** (Ger. *Salz*; Du. *Zout*; Fr. *sel*; It. *Sale*; Sp. *Sal*; Rus. *Sol*; Lat. *Sals*; Arab. *Melh*; Chin. *Yen*; Hind. *Nimmuch*; Per. *Nuch*), the chloride of sodium of modern chemists, has been known and in common use as a preservative and preserver of food from the earliest ages. Immense masses of it are found in this and many other countries, which require only to be dug out and reduced to powder. In that state it is called

rock-salt. The water of the ocean also contains a great deal of salt; to which, indeed, it owes its taste, and the power which it possesses of resisting freezing till cooled down to 28.5°. When this water is sufficiently evaporated, the salt precipitates in crystals. This is the common process by which it is obtained in many countries. There are various processes by which it may be obtained quite pure. Common salt usually crystallises in cubes. Its taste is universally known, and is what is strictly denominated salt. Its specific gravity is 2.125. It is soluble in 2.82 times its weight of cold water, and in 2.76 times its weight of boiling water. — (*Thomson's Chemistry.*)

Besides its vast utility in seasoning food, and preserving meat both for domestic consumption and during the longest voyages, and in furnishing muriatic acid and soda, salt forms a glaze for coarse pottery, by being thrown into the oven where it is baked; it improves the whiteness and clearness of glass; it gives hardness to soap; in melting metals, it preserves their surface from calcination, by defending them from the air, and is employed with advantage in some assays; it is used as a mordant, and for improving certain colours; and enters more or less into many other processes of the arts. Many contradictory statements have been made as to the use of salt as a manure. Probably it may be advantageous in some situations, and not in others.

*Salt Mines, Springs, &c.*—The principal salt mines are at Wieltska in Poland, Catalonia in Spain, Altomonte in Calabria, Loowur in Hungary, in many places in Asia and Africa, and in Cheshire in this country. The mines at Wieltska are upon a very large scale; but the statements that have frequently been published of their containing villages, inhabited by colonies of miners who never saw the light, are altogether without foundation. These mines have been wrought for more than 600 years. — (*Coxe's Travels in the North of Europe*, vol. i. p. 149. 8vo ed.)

The salt mines in the neighbourhood of Northwich in Cheshire are very extensive. They have been wrought since 1670; and the quantity of salt obtained from them is greater, probably, than is obtained from any other salt mines in the world. In its solid form, when dug from the mine, Cheshire salt is not sufficiently pure for use. To purify it, it is dissolved in sea water, from which it is afterwards separated by evaporation and crystallisation. The greater part of this salt is exported.

Salt springs are met with in several countries. Those in Cheshire and Worcestershire furnish a large proportion of the salt made use of in Great Britain. The brine, being pumped up from very deep wells, is evaporated in wrought iron pans from 20 to 30 feet square and 10 or 12 inches deep, placed over a furnace.

Most of the salt used in Scotland previously to the repeal of the duty, was obtained by the evaporation of sea water nearly in the way now mentioned; but several of the Scotch salt works have since been relinquished.

In warm countries, salt is obtained by the evaporation of sea water by the heat of the sun; and the crystals of salt made in this way are more perfect, and purer, from the greater slowness of the process. French salt is manufactured in this mode, and it has always been in considerable demand in this and other countries; but the principal imports of foreign salt into Great Britain at present are from Portugal. They amount, at an average, to from 300,000 to 350,000 bushels a year.

*Consumption of Salt.*—The consumption of salt in this country is immense. Necker estimated the consumption in those provinces of France which had purchased an exemption from the *gabelle* (*Days francs réduites*) at about 104 lbs. (Eng.) for each individual. — (*Administration des Finances*, tome ii. p. 12.) From all that we have been able to learn on the subject, we believe that the consumption of the people of this country may be estimated a little higher, or at 22 lbs.; the difference in our food and habits, as compared with the French, fully accounting for this increased allowance. On this supposition, and taking the population at 16,500,000, the entire consumption will amount to 363,000,000 lbs., or 161,000 tons.

Exclusive of this immense home consumption, we annually export about 16,000,000 bushels, which, at 56 lbs. a bushel, are equivalent to 250,000 tons. The Americans are the largest consumers of British salt; the exports to the United States in 1831 having amounted to 3,130,250 bushels. During the same year we exported to the Netherlands, 1,934,601 bushels; to the British North American colonies, 1,559,630 do.; to Russia, 1,191,896 do.; to Prussia, 624,190 do., &c.

The cheapness of this important necessary of life is not less remarkable than its diffusion. Its present cost may be estimated, at a medium, at from 14s. to 16s. a ton.

*Duties on Salt.*—In ancient Rome, salt was subjected to a duty (*vectigal salinarum*; see *Burman, Dissertation de Vectigalibus Pop. Rom.* c. 6.); and it has been heavily taxed in most modern states. The *gabelle*, or code of salt laws, formerly established in France, was most oppressive. From 4,000 to 5,000 persons are calculated to have been sent annually to prison and the galleys for offences connected with these laws, the severity of which had no inconsiderable share in bringing about the Revolution. — (*Young's Travels in France*, vol. i. p. 598.) In this country, duties upon salt were imposed in the reign of William III. In 1798, they amounted to 5s. a bushel; but were subsequently increased to 15s. a bushel, or about forty times the cost of the salt! So exorbitant a duty was productive of the worst effects; and occasioned, by its magnitude, and the regulations for allowing salt, duty free, to the fisheries, a vast deal of smuggling. The opinion of the public and of the House of Commons having been strongly pronounced against the tax, it was finally repealed in 1823.

That the repeal of so exorbitant a duty has been productive of great advantage, no one can doubt; but seeing that a large revenue must be raised, we question whether government acted wisely in totally relinquishing the tax. Had the duty been reduced to 2s. or 2s. 6d. a bushel, and no duty free salt allowed for the fisheries, but a drawback given on the fish exported, a revenue of 1,000,000*l.* a year might have been derived from this source with but little injury. It was not the nature of the salt tax, but the absurd extent to which it had been carried, that rendered it justly odious. When at the highest, it produced about 1,500,000*l.* a year.

**SALTPETRE**, or **NITRATE OF POTASH** (Ger. *Salpeter*; Fr. *Nitre*, *Salpêtre*; It. *Nitro*, *Salnitro*; Sp. *Nitro*, *Salitre*; Rus. *Senitra*; Lat. *Nitrum*; Arab. *Ubkir*; Hind. *Shorah*), a salt well known in commerce, and of very great importance. It may be regarded both as a natural and an artificial production; being found on the surface of the soil in many parts of India, Egypt, Italy, &c.; but in these and other places all that is known in commerce is obtained by an artificial process, or by lixiviating earth that has been formed into *nitre* beds. The saltpetre consumed in England is brought from Bengal in an impure state, but crystallised, in bags, each containing 164 lbs. Saltpetre forms the principal ingredient in the manufacture of gunpowder; and is used in various arts. It is also of great utility in the commerce of India, from its fur-

nishing a large amount of dead weight for the shipping engaged in it. Saltpetre possesses considerable antiseptic power. That which is of the best quality and well refined, is in long transparent crystals; its taste is sharp, bitterish, and cooling; it flames much when thrown upon burning coals; it is very brittle; its specific gravity is 1.933. It is not altered by exposure to the air.

Beckmann contends, in a long and elaborate dissertation (*Hist. of Invcnt.* vol. iv. pp. 525—586. Eng. ed.), that the ancients were unacquainted with saltpetre, and that their *nitrum* was really an alkaline salt. But, as saltpetre is produced naturally in considerable quantities in Egypt, it is difficult to suppose that they could be entirely ignorant of it; though it would appear that they had confounded it with other things. It has been known in the East from a very early period. Beckmann concurs in opinion with those who believe that gunpowder was invented in India, and brought by the Saracens from Africa to the Europeans; who improved its manufacture, and made it available for warlike purposes. — (Vol. iv. p. 571.)

The consumption of saltpetre during periods of war is very great. Its price is consequently liable to extreme fluctuation. In remarking on the varieties in the price of saltpetre, Mr. Tooke observes, "It reached its greatest height in 1795, viz. 170s. a cwt.; in 1796, it fell at one time to 45s., and rose again to 96s. It seems to have been affected considerably by the scale of hostilities on the Continent. But in consequence of the discoveries in chemistry, by which the French were enabled to dispense with a foreign supply, and by the increased importation from India to this country, by which we were enabled to supply the rest of the Continent at a reduced cost, the price declined permanently after 1798-9, when it had reached 145s.; and never after was so high as 100s., except during the short interval of speculation in exports during the peace of 1814, and again upon the breaking out of the war terminated by the battle of Waterloo." The price of saltpetre in the London market varies at this moment (January, 1834) from 32s. to 40s. a cwt.

We are indebted for the following comprehensive statement of the importation, consumption, &c. of East Indian saltpetre to *Mr. Cook's State of the Commerce of Great Britain in 1833*:—

Imports, Deliveries, Prices, and Stocks of East Indian Saltpetre during the 10 Years ending with 1833.

| Years.              | Imports.              |                       |              | Deliveries.  |                             |              | Average Price during the Year. | Stock.       |

Within the last 3 years, a new species of saltpetre, under the denomination of *nitrate of soda*, has been received from South America. The imports of it have increased from 70 tons in 1831, to 1,450 in 1833. Though not applicable to all the purposes for which East Indian saltpetre is used, it is rather preferred by vitriol makers, and by some other classes of manufacturers. The deliveries of this description for home consumption have been in 1831, 70 tons; in 1832, 690 do.; and in 1833, 1,210. — (*Cook, in loc. cit.*)

**SALVAGE**, as the term is now understood, is an allowance or compensation made to those by whose exertions ships or goods have been saved from the dangers of the seas, fire, pirates, or enemies.

The propriety and justice of making such an allowance must be obvious to every one. It was allowed by the laws of Rhodes, Oleron, and Wisby; and in this respect they have been followed by all modern maritime states. At common law, the party who has saved the goods of another from loss or any imminent peril has a *lien* upon them, and may retain them in his possession till payment of a reasonable salvage.

1. *Salvage upon Losses by Perils of the Sea.*— If the salvage be performed at sea, or within high or low water mark, the Court of Admiralty has jurisdiction over the subject, and will fix the sum to be paid, and adjust the proportions, and take care of the property pending the suit; or, if a sale be necessary, direct it to be made; and divide the proceeds between the salvors and the proprietors according to equity and reason. And in fixing the rate of salvage, the court usually has regard not only to the labour and peril incurred by the salvors, but also to the situation in which they may happen to stand in respect of the property saved, to the promptitude and alacrity manifested by them, and to the value of the ship and cargo, as well as the degree of danger from which they were rescued. Sometimes the court has allowed as large a proportion as a *half* of the property saved as salvage; and in others, not more than a *tenth*.

The crew of a ship are not entitled to salvage, or any unusual remuneration for the extraordinary efforts they may have made in saving her; it being their duty as well as interest to contribute their utmost upon such occasions, the whole of their possible service being pledged to the master and owners. Neither are passengers entitled to claim any thing for the *ordinary assistance* they may have been able to afford to a vessel in distress. But a passenger is not bound to remain on board a ship in the hour of danger, provided he can leave her; and if he perform any *extraordinary services*, he is entitled to a proportional recompence.

\* Including from 600 to 1,000 tons annually exported in a refined state.

In the case of valuable property, and of numerous proprietors and salvors, the jurisdiction and proceedings of the Court of Admiralty are well adapted to further the purposes of justice. But, as the delay and expense necessarily incident to the proceedings of a court sitting at a distance from the subject will often be very burdensome upon the parties, in cases where the property saved is not, perhaps, very considerable, the legislature has endeavoured to introduce a more expeditious and less expensive method of proceeding.

The first act for this purpose is the 12 Ann. stat. 2. c. 18. It appears from the preamble, that the infamous practices, once so common, of plundering ships driven on shore, and seizing whatever could be laid hold of as lawful property—(see *WARRICK*)—had not been wholly abandoned; or that, if the property was restored to the owners, the demand for salvage was so exorbitant, that the inevitable ruin of the trader was the immediate consequence. To remedy those mischiefs in future, it was enacted, "that if a ship was in danger of being stranded, or being run ashore, the sheriffs, justices, mayors, constables, or officers of the customs, nearest the place of danger, should, upon application made to them, summon and call together as many men as should be thought necessary to the assistance, and for the preservation, of such ship in distress, and her cargo; and that if any ship, man-of-war, or merchantman, should be riding at anchor near the place of danger, the constables and officers of the customs might demand of the superior officers of such ship the assistance of her boats, and such hands as could be spared; and that, if the superior officer should refuse to grant such assistance, he should forfeit 100*l.*"

Then follows the section respecting salvage. It enacts, "that all persons employed in preserving ships or vessels in distress, or their cargoes, shall, within 30 days after the service is performed, be paid a reasonable reward for the same, by the commander, master, or other superior officer, mariners, or owners, of the ship or vessel so in distress, or by any merchant whose vessel or goods shall be so saved; and, in default thereof, the said ship or vessel so saved shall remain in the custody of the officers of customs, until all charges are paid, and until the officers of the customs, and the master or other officers of the ship or vessel, and all others employed in the preservation of the ship, shall be reasonably gratified for their assistance and trouble, or good security given for that purpose: and if any disagreement shall take place between the persons whose ships or goods have been saved, and the officer of the customs, touching the monies deserved by any of the persons so employed, it shall be lawful for the commander of the ship or vessel so saved, or the owner of the goods, or the merchant interested therein, and also for the officer of the customs, or his deputy, to nominate 3 of the neighbouring justices of the peace, who shall thereupon adjust the *quantum* of the monies or gratuity to be paid to the several persons acting or being employed in the salvage of the said ship, vessel, or goods; and such adjustment shall be binding upon all parties, and shall be recoverable in an action at law; and in case it shall so happen, that no person shall appear to make his claim to all or any of the goods that may be saved, that then the chief officer of the customs of the nearest port to the place where the said ship or vessel was so in distress shall apply to 3 of the nearest justices of the peace, who shall put him or some other responsible person in possession of the said goods, such justices taking an account in writing of the said goods, to be signed by the said officer of the customs; and if the said goods shall not be legally claimed within the space of 12 months next ensuing, by the rightful owner thereof, then public sale shall be made thereof; and, if perishable goods, forthwith to be sold, and, after all charges deducted, the residue of the monies arising from such sale, with a fair and just account of the whole, shall be transmitted to her Majesty's exchequer, there to remain for the benefit of the rightful owner, when appearing; who, upon affidavit, or other proof made of his or their right or property thereto, to the satisfaction of one of the barons of the coif of the exchequer, shall, upon his order, receive the same out of the exchequer."

By a subsequent statute, 26 Geo. 2. c. 19, it is enacted, "that in case any person or persons, not employed by the master, mariners, or owners, or other person lawfully authorised, in the salvage of any vessel, or the cargo or provision thereof, shall, in the absence of the person so employed and authorised, save any such vessel, goods, or effects, and cause the same to be carried, for the benefit of the owners or proprietors, into port, or to any near adjoining Custom-house, or other place of safe custody, immediately giving notice thereof to some justice of the peace, magistrate, or Custom-house or excise officer, or shall discover to such magistrate or officer where any such goods or effects are wrongfully bought, sold, or concealed, then such person or persons shall be entitled to a reasonable reward for such services, to be paid by the masters or owners of such vessels or goods, and to be adjusted, in case of disagreement about the *quantum*, in like manner as the salvage is to be adjusted and paid by 12th Anne, or else as follows:— And be it further enacted, that, for the better ascertaining the salvage to be paid in pursuance of the present act and the act before-mentioned, and for the more effectually putting the said acts into execution, the justice of the peace, mayor, bailiff, collector of the customs, or chief constable, who shall be nearest to the place where any ship, goods, or effects shall be stranded or cast away, shall forthwith give public notice for a meeting to be held as soon as possible, of the sheriff or his deputy, the justices of the peace, mayors, or other chief magistrates of towns corporate, coroners, or commissioners of the land tax, or any 5 or more of them, who are hereby empowered and required to give aid in the execution of this and the said former act, and to employ proper persons for the saving ships in distress, and such ships, vessels, and effects, as shall be stranded or cast away; and also to examine persons upon oath, touching the same, or the salvage thereof, and to adjust the *quantum* of such salvage, and distribute the same among the persons concerned in such salvage, in case of disagreement among the parties or the said persons; and that every such magistrate, &c. attending and acting at such meeting, shall be paid 4*l.* a day for his expenses in such attendance, out of the goods and effects saved by their care or direction.

"Provided always, that if the charges and rewards for salvage directed to be paid by the former statute and by this act, shall not be fully paid, or sufficient security given for the same, within 40 days next after the said services performed, then it shall be lawful for the officer of the customs concerned in such salvage to borrow or raise so much money as shall be sufficient to satisfy and pay such charges and rewards, or any part thereof then remaining unpaid, or not secured as aforesaid, by or upon one or more bill or bills of sale, under his hand and seal, of the ship or vessel, or cargo saved, or such part thereof as shall be sufficient, redeemable upon payment of the principal sum borrowed, and interest upon the same at the rate of 4*l.* per cent. per annum."

An act of the 53 Geo. 3. c. 87, continued and extended by the 1 & 2 Geo. 4. c. 76, contains some regulations supplying defects in former statutes. They enact, that goods of a perishable nature, or so much damaged that they cannot be kept, may, at the request of any person interested or concerned in the same, or in saving thereof, be sold with the consent of a justice, the money being deposited in the hands of the lord of the manor, and an account of the sale transmitted to the deputy vice-admiral. They also authorise the passage of horses, carts, carriages, &c. to the part of the sea coast where a vessel may be wrecked, over the adjoining lands, if there be no road leading as conveniently thereto, under penalty of 100*l.* the damages to be settled by two justices in the event of the parties not agreeing.—(1 & 2 Geo. 4. §§ 27, 29, 30.)

It is ordered by the same statute, that no lord of the manor, or other person claiming to be entitled to wreck or goods, shall appropriate or dispose of the same until he shall have caused to be given in writing to the deputy vice-admiral of that part of the coast, or to his agents if they reside within 50 miles, if not, then to the corporation of the Trinity House, a report containing an accurate and particular description of the wreck or goods found, and of the place where and time when found, and of any marks thereon, and

is sold, th

of such other particulars as may better enable the owner to recover them, and also of the place where they are deposited, and may be found and examined by any person claiming any right to them, nor until the expiration of 1 whole year and a day after the expiration of such notice: the deputy vice-admiral, or his agent, is, within 48 hours of receiving such report, to transmit a copy thereof to the secretary of the corporation of the Trinity House, upon pain of forfeiting, for every neglect to transmit such account, 50*l.* to any person who shall sue for the same; and the secretary is to cause such account to be placed in some conspicuous situation for the inspection of all persons claiming to inspect and examine it. — (1 & 2 Geo. 4. c. 75. § 26.)

It is further ordered by the same statute, that pilots and others taking possession of anchors, cables, or other wrecked or lost materials upon the coast, or within any harbour, river, or bay, shall send notice thereof, within *twenty-four* hours, to the nearest deputy vice-admiral, or his agent, delivering the articles at such place as may be appointed, under pain of being deemed receivers of stolen goods. The deputy vice-admiral, or his agent, may also seize *such articles as have not been reported to him*, and is required to keep and report them to the Trinity House as aforesaid; and if he seize them without previous information, he is to have 1/3*rd* of the value; if he seize in pursuance of information, the third is to be divided between him and the informer. If the articles are not claimed within a year and a day, they are to be sold, and the money applied as directed by the act of Queen Anne (12 Ann. stat. 2. c. 18., previously quoted), the deputy vice-admiral, or his agent, and the person who may have given information, being in such cases entitled to the salvage allowed upon unclaimed property. And it is further enacted, that if any dispute shall arise between the salvors of any goods found, lodged, and reported as aforesaid, and the owners thereof, as to the salvage to be paid in respect of the same, it is to be determined by the decision of 3 justices; or if they differ, by their nominee, who is to be a person conversant with maritime affairs. Masters and others bound to foreign parts, finding or taking on board anchors, goods, &c., knowing them to be found, are to enter the same in the log book, with the place and time of finding, and to transmit a copy of such entry, by the first possible opportunity, to the Trinity House, and to deliver up the articles on their return home, which, if not claimed, are to be sold within a year and a day, according to the aforementioned statute of Anne. Masters selling such articles incur a penalty of not less than 30*l.* and not more than 100*l.*

Pilots, boatmen, or other persons, conveying anchors and cables to foreign countries, and disposing of them there, are to be adjudged guilty of felony, and may be transported for 7 years.

The same statute authorises 3 justices, or their nominee, to decide upon all claims made by boatmen, pilots, and other persons, for services of any description (except pilotage) rendered by them to any ship or vessel, whether in distress or not.

Parties dissatisfied with the award of the justices or their nominee may appeal to the Court of Admiralty; but the justices are in such cases to deliver the goods to the proprietors, or their agent, on their giving good security for double their value. This act does not extend to Scotland.

None of the previously mentioned acts have any force within the *Cinque Ports*; but the Lord Warden is directed by stat. 1 & 2 Geo. 4. c. 76. to appoint 3 or more substantial persons in each of these towns, who are authorised to decide upon all claims for services of any sort or description rendered to any vessel, or for saving or preserving, within the jurisdiction, any goods or merchandise wrecked, stranded, or cast away, or for bringing anchors or cables ashore, &c. No commissioner can act for any other place than that in which, or within a mile of which, he is resident. Either party may, within 8 days of the award, declare his intention of bringing the matter before some competent Court of Admiralty; selecting, as he may judge best, the Admiralty of England or that of the Cinque Ports. The provisions in this statute have been justly eulogised by Lord Teunterden, for the cheap and easy means they afford for settling such questions.

It is impossible, as Mr. Justice Park has observed (*Law of Insurance*, c. 8.), to suppose 2 instances of loss by shipwreck, or other peril of the sea, so similar to each other, that the trouble, danger, and expense of the salvors should be exactly equal; and it would, consequently, be contrary to the first principles of justice to award the same sum for all possible cases of salvage. There was, therefore, no other resource but to appoint competent persons to decide as to the allowance due in any case of salvage that might arise, after taking the various circumstances with respect to it into account.

2. *Salvage upon Recapture.* — It was the practice of our courts, previously to any regulations on the subject, to order restitution of ships or goods, if retaken before condemnation, to be made to the original owners, on payment of a *reasonable salvage* to the recaptors; but by stat. 43 Geo. 3. c. 160. it has been adjudged, that "if any ship or vessel taken as prize, or any goods therein, shall appear, in the Court of Admiralty, to have belonged to any of his Majesty's subjects, which were before taken by any of his Majesty's enemies, and at any time afterwards retaken by any of his Majesty's ships, or any privateer, or other ship or vessel under his Majesty's protection, such ships, vessels, and goods shall, in all cases (save as hereafter excepted), be adjudged to be restored, and shall be accordingly restored, to such former owner or owners, he or they paying for salvage, if retaken by any of his Majesty's ships, *one eighth* part of the true value thereof, to the flag officers, captains, &c., to be divided as the same act directs; and if retaken by any privateer, or other ship or vessel, *one sixth* part of the true value of such ships and goods, to be paid to the owners, officers, and seamen of such privateer or other vessel, without any deduction; and if retaken by the joint operation of one or more of his Majesty's ships, and one or more private ships of war, the judge of the Court of Admiralty, or other court having cognisance thereof, shall order such salvage, and in such proportions, to be paid to the captors by the owners, as he shall, under the circumstances of the case, deem fit and reasonable; but if such recaptured ship or vessel shall appear to have been set forth by the enemy as a ship or vessel of war, the said ship or vessel shall not be restored to the former owners, but shall in all cases, whether retaken by any of his Majesty's ships or any privateer, be adjudged lawful prize for the benefit of the captors."

This act is decidedly more favourable to the merchants than the old law, which adjudged that all ships recaptured after sentence of condemnation should be the property of the captors.

In the case of neutral ships captured by an enemy, and retaken by British men-of-war or privateers, the Courts of Admiralty have a discretionary power of allowing such salvage, and in such proportions, as, under the circumstances of each particular case, may appear just; but there is no positive law or binding regulation to which parties may appeal, for ascertaining the rate of such salvage. "The maritime law of England," says Lord Stowell, "having adopted a most liberal rule of restitution on salvage, with respect to the recaptured property of its own subjects, gives the benefit of that rule to its allies, till it appears that they act towards British property on a less liberal principle; *in such a case, it adopts their rule*, and treats them according to their own measure of justice." — (1 *Rob. Adm. Rep.* 54.)

Salvage is one of those charges which are usually provided against by insurance. When, however, the salvage is very high, and the object of the voyage in so far defeated, the insured is, by the laws of this and all other maritime nations, allowed to abandon, and to call upon the insurer as for a total loss. — (See *ABANDONMENT*.)

For further information with respect to salvage, see *Abbott on the Law of Shipping*, part iii. c. 10.; *Park on Insurance*, c. 8.; and *Marshall on Insurance*, book i. c. 12. § 8.

**SAMPLE**, a small quantity of a commodity exhibited at public or private sales, as a specimen. Sugars, wool, spirits, wine, coffee, and, indeed, most species of merchandise, are sold by sample. If an article be not, at an average, equal to the sample by which it is sold, the buyer may cancel the contract, and return the article to the seller.

Subjoined is a list of most articles that may be warehoused, and of the quantities that may be taken out as samples. — (Customs Min. Oct. 11. 1825.)

**SANDAL WOOD**, the wood of a tree (*Santalum album* Lin.) having somewhat of the appearance of a large myrtle. It is of a deep yellow colour, and yields an agreeable perfume. The tree, when cut down, is usually about 9 inches in diameter at the root, but sometimes considerably more. After being felled, it is barked, cut into billets, and buried in a dry place for about a couple of months, during which time the white ants eat off the outer wood, without touching the heart, which is the sandal. It is then taken up and sorted, according to the size of the billets. The deeper the colour, and the nearer the root, the higher is the perfume. Reject such pieces as are of a pale colour, small, decayed, or have white wood about them; and take especial care that it be not mixed with wood resembling sandal, but without its perfume. — (*Milburn's Orient. Com.*)

Sandal wood is extensively employed by the Hindoos as a perfume, in their funeral ceremonies. But the Chinese are its principal consumers. They manufacture it into fans, and small articles of furniture, and use it, when ground into powder, as a cosmetic. During the year ended the 31st of March, 1832, there were imported by British vessels into Canton, 6,338 piculs (395 tons) of sandal wood, valued at 74,471 dollars (see *ante*, p. 237.); and the imports in some years are more than twice this amount. The average importation into Calcutta is about 200 tons a year. It grows principally in Malabar, in the mountainous country at a little distance from the low sea coast; in Timor; and in the Feejee Islands in the South Sea. Calcutta is principally supplied from Malabar, while China derives the larger portion of her supplies from Timor and the other islands. It is seldom brought to Europe, except by individuals for their own use, or as presents for their friends. — (*Hell's External Com. of Bengal*, pp. 49. and 85.; *Crawford's Indian Archipelago*, vol. i. p. 510., vol. iii. p. 421. &c.)

**SANDARACH**, a resinous substance, commonly met with in loose granules a little larger than a pea, of a whitish yellow colour, brittle, inflammable, of a resinous smell, and acrid aromatic taste. It exudes, it is said, in warm climates, from cracks and incisions in the common juniper bush. It is used as a varnish, dissolved in spirits of wine. — (*Ainslie's Mat. Indica.*)

**SAPAN WOOD** is obtained from a species of the same tree that yields the Brazil wood (*Casalpinia Sapan* Lin.). It is a middle-sized forest tree, indigenous to Siam, Pegu, the Philippine Islands, &c. It has been employed for dyeing in the greater part of Asia for many centuries. It found its way into Europe some time before the discovery of America; but very little is now imported. Its colouring matter differs but little from that of Brazil wood, but the best sapan wood does not yield more than half the quantity that may be obtained from an equal weight of Brazil wood, and the colour is not quite so bright. — (*Bancroft on Colours*, vol. ii. p. 329.) Its price in the London market varies from 8*l.* to 14*l.* a ton.

**SAPPHIRE** (Ger. *Sapphir*; Du. *Saffiersteen*; Fr. *Saphir*; It. *Zaffiro*; Sp. *Safiro*, *Safir*; Rus. *Juchant*; Lat. *Sapphirus*), a precious stone in very high estimation. Colours blue and red; also gray, white, green, and yellow. It occurs in blunt-edged pieces, in roundish pebbles, and crystallised. Varies from transparent to translucent. Refracts double. After diamond, it is the hardest substance in nature. The blue variety, or sapphire, is harder than the ruby, or red variety. Brittle. Specific gravity 4 to 4.2.

It is found in Bohemia, Saxony, France, &c.; but the red sapphire, or Oriental ruby, is not found in any considerable quantity anywhere except in Ava. Next to diamond, sapphire is the most valuable of

the gems. The white and pale blue varieties, by exposure to heat, become snow white, and, when cut, exhibit so high a degree of lustre, that they are used in place of diamond. The most highly prized varieties are the crimson and carmine red; these are the Oriental *ruby* of the jeweller; the next is *sapphire*; and last, the yellow or Oriental *topaz*. The *astrias*, or star-stone, is a very beautiful variety, in which the colour is generally of a reddish violet, and the form a rhomboid, with truncated apices, which exhibit an opalescent lustre.\* — (See *Italy*.)

Mr. Crawford gives the following details with respect to the sapphire and ruby mines of Ava: — "The precious stones ascertained to exist in the Burmese territory are chiefly those of the sapphire family, and the spinelle ruby. They are found at 2 places, not very distant from each other, called Mogat and Kyatpán, about 5 days' journey from the capital, in an E.S.E. direction. From what I could learn, the gems are not obtained by any regular mining operations, but by digging and washing the gravel in the beds of rivulets or small brooks. All the varieties of the sapphire, as well as the spinelle, are found together, and along with them large quantities of corundum. The varieties ascertained to exist, are the Oriental sapphire; the Oriental ruby, or red stone; the opalescent ruby, or cat's eye ruby; the star ruby; the green; the yellow and the white sapphires; and the Oriental and byss. The common sapphire is by far the most frequent, but, in comparison with the ruby, is very little prized by the Burmese, in which they agree with other nations. I brought home with me several of great size, the largest weighing no less than 3,630 grains, or above 907 carats. The spinelle ruby (zabu-gaong) is not unfrequent in Ava, but is not much valued by the natives. I brought with me to England a perfect specimen, both as to colour and freedom from flaws, weighing 22 carats. The sapphire and ruby mines are considered the property of the king; at least he lays claim to all stones that exceed in value a viss of silver, or 160 ticals. The miners, it appears, endeavour to evade this law by breaking the large stones into fragments. In the royal treasury, there are, notwithstanding, many fine stones of both descriptions. The year before our visit, the king received from the mines a ruby weighing 14 grains; and the year preceeding that 8 good ones, but of smaller size. No stranger is permitted to visit the mines; even the Chinese and Mohammedans residing at Ava are carefully excluded." — (*Journal of an Embassy to the Court of Ava*, p. 442.)

**SARCOCOLLA**, a subviscid, sweetish, and somewhat nauseous gum-resin. It is brought from Arabia and Persia in small grains of a pale yellow colour; the whitest, as being the freshest, is preferred. It is but seldom imported. — (*Milburn's Orient. Com.*)

**SARDINES**, or **SARDINIAS** (Ger. *Sardellen*; Fr. *Sardines*; It. *Sardine*; Sp. *Sardinas*), a species of fish of the herring tribe, but smaller. They are taken in considerable quantities on our coasts, and are exceedingly plentiful on the coasts of Algarve in Portugal, Andalusia and Granada in Spain, and along the shores of Italy. The small sardines, caught on the coast of Provence, in France, are esteemed the best. From 1,000 to 1,200 fishing smacks are engaged in catching these fish on the coast of Brittany, from June to the middle of October. The French frequently cure them in red brine; and, when thus prepared, designate them *anchoises*, or *anchovied sardines*. These are packed in vessels previously employed for holding wine, and exported to the Levant. When perfectly fresh, sardines are accounted excellent fish; but if kept for any time, they entirely lose their flavour, and become quite insipid.

**SARDONYX**, a precious stone, a variety of chalcedony.

The ancients selected this substance to engrave upon, no doubt from its possessing two peculiar and necessary qualities, viz. hardness and tenacity, by which it is enable of receiving the finest touch or stroke of the tool without chipping, and showing the art of the engraver to the highest perfection. — (*Mace on Diamonds*, 2d ed. p. 121.)

**SARSAPARILLA** (Ger. *Sarsaparille*; Fr. *Salsepareille*; It. *Salsapariglia*; Sp. *Zarzaparilla*), the root of the *Smilax Sarsaparilla*, a plant growing in South America and the West Indies. It is imported in bales. It is known in the London market by the names of Lisbon, Honduras, and Vera Cruz, but it is also brought from Jamaica. The Lisbon root, which is the produce of Brazil, has a reddish or dark brown cuticle, is internally farinaceous, and more free from fibre than the other kinds: the Honduras has a dirty brown, and sometimes whitish, cuticle; it is more fibrous, and has more ligneous matter than the Lisbon and Vera Cruz. It is in long, slender twigs, covered with a wrinkled brown cuticle, and has a small woody heart. The Jamaica differs from the others, in having a deep red cuticle of a close texture; and the red colour partially diffused through the ligneous part. The root is inodorous, and has a mucilaginous, very slightly bitter taste: the bark is the only useful part of the plant; the ligneous part being tasteless, inert, woody fibre. — (*Thomson's Dispensatory*.) The quantity imported in 1831 amounted to 176,854 lbs., of which 107,410 lbs. were retained for home consumption. The duty, which formerly varied, according as it was brought from a foreign country or a British possession, from 1s. 3d. to 1s. per lb., was reduced, in 1832, to 6d. per lb.

**SASSAFRAS** (Ger. and Fr. *Sassafras*; It. *Sassafrasso*; Sp. *Sasafras*), a species of laurel (*Laurus Sassafras*, Lin.) a native of the southern parts of North America, Cochin-China, and several of the Indian islands. Sassafras wood, root, and bark, have a fragrant odour, and a sweetish aromatic taste. The wood is of a brownish white colour; and the bark ferruginous within, spongy, and divisible into layers. Their sensible qualities and virtues depend on an essential oil, which may be obtained separate by distilling the chips or the bark with water. It is very fragrant, hot, and penetrating

\* Professor Jameson says, in his *Mineralogy*, that some peculiarly beautiful sapphires are found in the Capelin mountains, in Pegu. But we do not believe that there are any such mountains in any part of the world; and, in point of fact, there are no mountains in Pegu, nor have any precious stones been ever found in it.

to the taste, of a pale yellow colour, and heavier than water. It is used only in the *materia medica*. Very little is imported. — (*Thomson's Dispensatory*.)

**SAUNDERS (RED)** (Arab. *Sundal-ahmer*; Hind. *Ruckut-chundum*), the wood of a lofty tree (*Pterocarpus santalinus*) indigenous to various parts of India, Ceylon, Timor, &c. The wood is brought to Europe in billets, which are very heavy and sink in water. It is extremely hard, of a fine grain, and a bright garnet red colour, which brightens on exposure to the air. It is employed to dye lasting reddish brown colours on wool. It yields its colouring matter to ether and alcohol, but not to water. The quantity imported is but inconsiderable. The price in bond varies at this moment (February, 1834) from 13*l.* to 14*l.* a ton. — (*Thomson's Dispensatory*; *Bancroft on Colours*, vol. ii. p. 236.)

**SCAMMONY** (Ger. *Skammonien*; Fr. *Scammonée*; It. *Scammonia*; Sp. *Escamonea*), a gum-resin, the produce of a species of convolvulus, or creeper plant, which grows abundantly in Syria. When an incision is made into the roots, they yield a milky juice, which, being kept, grows hard, and is the scammony of the shops. It is imported from Aleppo in what are called drums, weighing from 75 to 125 lbs. each; and from Smyrna in cakes like wax, packed in chests. The former is light and friable, and is considered the best; that from Smyrna is more compact and ponderous, less friable, and fuller of impurities. It has a peculiar heavy odour, not unlike that of old cheese; and a bitterish, slightly acrid taste. The colour is blackish or bluish grey, changing to dirty white, or lathering when the surface is rubbed with a wet finger. Its specific gravity is 1.235. It is very liable to be adulterated; and when of a dark colour, heavy, and splintery, it ought to be rejected. It is used only in medicine. — (*Thomson's Dispensatory*.) The duty on scammony, which was formerly as high as 6*s.* 4*d.* per lb. was reduced in 1832 to 2*s.* 6*d.*

**SCULPTURES**, figures cut in stone, metal, or other solid substance, representing or describing some real or imaginary object. The art of the sculptor, or statuary, was carried to the highest pitch of excellence in ancient Greece. Fortunately, several of the works of the Grecian sculptors have been preserved; and serve at once to stimulate and direct the genius of modern artists.

*Models*, are casts or representations of sculptures.

The act 54 Geo. 3. c. 56. vests the property of sculptures, models, copies, and casts, in the proprietor for 14 years; provided he cause his name, with the date, to be put on them before they are published; with the same term in addition, if he should be living at the end of the first period. In actions for piracy, double costs to be given. The act 6 Geo. 4. c. 107. prohibits the importation, on pain of forfeiture, of any sculptures, models, casts, &c. first made in the United Kingdom.

**SEAL** (Lat. *Sigillum*), a stone, piece of metal, or other solid substance, generally round or elliptical, on which is engraved the arms, crest, name, device, &c. of some state, prince, public body, or private individual. It is employed as a stamp to make an impression on sealing wax, thereby authenticating public acts, deeds, &c., or to close letters or packets. Seals were very early invented, and much learning has been employed in tracing their history, and explaining the figures upon them. — (See particularly the work of *Hopkinck*, *De Sigillorum Prisco et Novo Jure*, 4to, 1642.) They are now very generally used.

The best are usually formed of precious stones, on which the crest or the initials of the person's name are engraved, set in gold. But immense numbers are formed of stained glass, and set in gilt copper. They are manufactured at London, Birmingham, &c., and are extensively exported.

**SEAL FISHERY**. The seal, an amphibious animal, of which there are many varieties, is found in vast numbers in the seas round Spitzbergen, and on the coasts of Labrador and Newfoundland. As it frequents the British shores, it is well known, and has been repeatedly described. Seals are principally hunted for their oil and skins. When taken in the spring of the year, — at which time they are fattest, — a full grown seal will yield from 8 to 12 gallons of oil, and a small one from 4 to 5 gallons. The oil, when extracted before putrefaction has commenced, is beautifully transparent, free from smell, and not unpleasant in its taste. The skin, when tanned, is extensively employed in the making of shoes; and when dressed with the hair on, serves for the covering of trunks, &c.

"To the Esquimaux the seal is of as much importance as bread to a European. Its flesh forms their most usual food; the fat is partly dressed for eating, and partly consumed in their lamps; the liver, when fried, is esteemed, even among sailors, as an agreeable dish. The skin, which the Esquimaux dress by processes peculiar to themselves, is made water proof. With the hair off, it is used as coverings, instead of planks, for their boats, and as outer garments for themselves; shielded with which, they can invert themselves and canoes in the water, without getting their bodies wet. It serves also for coverings for their tents, and for various other purposes. The jackets and trowsers made of seal-skin by the Esquimaux are in great request among the whale-fishers for preserving them from oil and wet." — (*Scoresey's Arctic Regions*, vol. i. p. 510.)

Seals in fine weather prefer the ice to the water, and vast herds of them are frequently found lying on the field ice; the places where they are met with being thence called "seal meadows." The seal hunters endeavour to surprise them while sleeping, and to intercept their retreat to the water. They attack them with muskets and bludgeons, but principally the latter, they being easily despatched by a blow on the nose.

The seal fishery has long been prosecuted to a considerable extent in the northern seas by ships from the Elbe and the Weser; but very few ships have been sent out for *sealing* only from England, though occasionally some of the whale ships have taken large quantities of seals. Latterly, however, the seal fishery has been prosecuted on a large scale, and with extraordinary success, by vessels of from 50 to 120 tons each, having crews of from 16 to 30 men, fitted out from the ports of Newfoundland, Nova Scotia, &c. The business is attended with a good deal of risk, and instances frequently occur of the vessels being crushed to pieces by the collision of the fields of ice. We borrow the following details from Mr. Bliss's late tract on the *Trade, Statistics, &c. of Canada and our North American Possessions*.

"There is another department of the colonial fishery which has originated within no distant period, and is now becoming of great extent and importance. The large fields of ice which, in the months of March and April, drift southward from the Polar seas, are accompanied by many herds of seals: these are found sleeping in what are called the seal meadows of the ice, and are there attacked and slaughtered in vast numbers. For this purpose the fishers of Newfoundland, from which island these voyages are principally made, without waiting till the return of spring shall have opened their harbours, saw channels through the ice for their vessels, and set sail in quest of those drifting fields, through the openings of which they work a passage, attended with great difficulties and dangers, till they encounter their prey on the seal meadows. This bold and hazardous enterprise seems well compensated by its success. The number of seals thus taken is almost incredible, and is greatly on the increase. There were captured by the Newfoundland fishermen, in 1829, 280,613 seals; in 1830, 553,435; and in 1831, 748,735; making a total catch during these 3 years of no fewer than 1,582,783 seals! The number of vessels employed in the fishery from Newfoundland, in 1831, was 115; and in 1832, 159; being an increase of about 3,400 tons." — (p. 70.)

Subjoined is a statement of the prices of the different sorts of fish oil in London, in January, 1834.

| Fish oils, cod, Newfoundland, per tun (Imp.) | L. s. |    | L. s. d. |   | Fish oils, southern fishery, pale, per tun (Imp.) | L. s. |    | L. s. d. |   |

Undressed seal skins are worth from 1s. to 1s. 6d. each.

See also *McGregor's British America*, 2d edit. vol. i. p. 197. &c. There is a good account of the seal in *Laing's Voyage to Spitzbergen*.

**SEALING WAX** (Ger. *Siegellack*; Fr. *Cire d'Espagne*, *Cire à cacheter*; It. *Cera Lucca*, *Cera di Spagna*; Sp. *Lucra*; Rus. *Sargutsch*), the wax used for sealing letters, legal instruments, &c. It is a composition of gum lac, melted and incorporated with resin, and afterwards coloured with some pigment, as vermilion, verditer, ivory black, &c.

**SEAMEN**, the individuals engaged in navigating ships, barges, &c. upon the high seas. Those employed for this purpose upon rivers, lakes, or canals, are denominated watermen.

A *British Seaman* must be a natural born subject of his Majesty; or be naturalised by act of parliament; or made a denizen by letters of denization; or have become a British subject by the conquest or cession of some newly acquired territory; or (being a foreigner) have served on board his Majesty's ships of war, in time of war, for the space of 3 years. — (3 & 4 Will. 4. c. 54. § 16.) But his Majesty may, by proclamation during war, declare that foreigners who have served two years in the royal navy, during such war, shall be deemed British seamen. — (§ 17.)

Various regulations have been enacted with respect to the hiring of seamen, their conduct while on board, and the payment of their wages. These regulations differ in different countries; but, in all, they have been intended to obviate any disputes that might otherwise arise between the master and seamen as to the terms of the contract between them, to secure due obedience to the master's orders, and to interest the seamen in the completion of the voyage, by making their earnings depend on its successful termination.

1. *Hiring of Seamen*. — To prevent the mischiefs that frequently arose from the want of proper proof of the precise terms upon which seamen engaged to perform their service in merchant ships, it is enacted by statute (2 Geo. 2. c. 36.), "that it shall not be lawful for any master or commander of any ship or vessel bound to parts beyond the seas, to carry any seaman or mariner, except his apprentice or apprentices, to sea from any port or place where he or they were entered or shipped, to proceed on any voyage to parts beyond the seas, without first coming to an agreement or contract with such seamen or mariners for their wages; which agreement or agreements shall be made in writing, declaring what wages each seaman or mariner is to have respectively, during the whole voyage, or for so long time as he or they shall ship themselves for; and also to express in the said agreement or contract the voyage for which such seaman or mariner was shipped to perform the same;" under a penalty of 5*l.* for each mariner carried to sea without such agreement, to be forfeited by the master to the use of Greenwich Hospital. This agreement is to be signed by each mariner within 3 days after he shall have entered himself on board the ship; and is, when signed, conclusive and binding upon all parties. By a subsequent statute, these provisions have been extended to vessels of the burden of 100 tons and upwards, employed in the *coasting trade*. — (31 Geo. 3. c. 39.)

The following is the form of the articles of agreement required by statute (37 Geo. 3. c. 73.) to be entered into between the masters and mariners of ships engaged in the West India trade. It is substantially the same with that which previously was, and still continues to be, in common use for all ships employed in foreign trade.

Ship

IT is hereby agreed between the master, seamen, and mariners of the ship \_\_\_\_\_ now bound for the port of \_\_\_\_\_ and the master or commander of the said ship, That, in consideration of the monthly or other wages against each respective seaman or mariner's name hereunto set, they severally shall and will perform the above-mentioned voyage: and the said master doth hereby agree with and hire the seamen and mariners for the said voyage at such monthly wages, to be paid pursuant to the laws of Great Britain; and they, the said seamen and mariners, do hereby promise and oblige themselves to do their duty, and obey the lawful commands of their officers on board the said ship or boats thereunto belonging, as become good and faithful seamen and mariners, and at all places where the said ship shall put in or anchor during the said ship's voyage, to do their best endeavours for the preservation of the said ship and cargo, and not to neglect or refuse doing their duty by day or night; nor shall go out of the said ship on board any other vessel, or be on shore under any pretence whatsoever, till the voyage is ended, and the ship discharged of her cargo, without leave first obtained of the master, captain, or commanding officer on board; and, in default thereof, they freely agree to be liable to the penalties mentioned in the act of parliament made in the 2d year of the reign of King George the Second, intituled "An Act for the better Regulation and Government of Seamen in the Merchants' Service;" and the act made in the 37th year of the reign of King George the Third, intituled "An Act for preventing the Desertion of Seamen from British Merchant Ships trading to his Majesty's Colonies and Plantations in the West Indies;" and it is further agreed by the parties to these presents, that 24 hours' absence without leave shall be deemed a total desertion, and render such seamen and mariners liable to the forfeitures and penalties contained in the acts above recited; that each and every lawful command which the said master shall think necessary to issue for the effectual government of the said vessel, suppressing immorality and vice of all kinds, be strictly complied with, under the penalty of the person or persons disobeying forfeiting his or their whole wages or hire, together with every thing belonging to him or them on board the said vessel: and it is further agreed, that no officer or seaman, or person belonging to the said ship, shall demand or be entitled to his wages, or any part thereof, until the arrival of the said ship at the above-mentioned port of discharge, and her cargo delivered, nor less than 20 days, in case the seaman is not employed in the delivery: and it is hereby further agreed between the master and officers of the said ship, that whatever apparel, furniture, and stores, each of them may receive into their charge, belonging to the said ship, shall be accounted for on her return; and in case any thing shall be lost or damaged through their carelessness or insufficiency it shall be made good by such officer or seaman, by whose means it may happen, to the master and owner of the said ship; and whereas it is customary for the officers and seamen, on the ship's return home in the river, and during the time their cargoes are delivering, to go on shore each night to sleep, greatly to the prejudice of such ship and freighters; be it further agreed by the said parties, that neither officer nor seaman shall, on any pretence whatsoever, be entitled to such indulgence, but shall do their duty by day in discharge of the cargo, and keep such watch by night as the master or commander of the said ship shall think necessary, in order for the preservation of the above: and whereas it often happens that part of the cargo is embezzled after being delivered into lighters; and, as such losses are made good by the owners of the ships, be it therefore agreed, by these presents, that whatever officer or seaman the master shall think proper to appoint, shall take charge of the cargo in the lighters, and go with the same to the lawful wharf, and there deliver his charge to the ship's husband, or his representative, or see the same safely weighed at the king's beam; and, in consequence of their true fidelity, such seamen shall be entitled to 2s. 6d. each lighter, exclusive of their monthly pay; and should it so happen that lighters are detained any considerable time at the quay before they can be unloaded, such officer and seaman so appointed shall in that case be entitled to 2s. 6d. for every 24 hours, exclusive of their monthly pay; that each seaman and mariner, who shall well and truly perform the above-mentioned voyage, (provided always, that there be no plunderage, embezzlement, or other unlawful acts, committed on the vessel's cargo or stores,) shall be entitled to their wages or hire that may become due to him pursuant to this agreement; that, for the due performance of each and every the above-mentioned articles and agreements, and acknowledgment of their being voluntary and without compulsion, or any other clandestine means being used, the said parties have hereunto subscribed their names, the day and month set opposite to their respective names.

| Place and Time of Entry. | Men's Names. | Quality. | Witnesses to each Man's signing. | Pay in the River. |       | Wages per Month, or for the Voyage. | Whole Wages. |
|--------------------------|--------------|----------|----------------------------------|-------------------|-------|-------------------------------------|--------------|
|                          |              |          |                                  | Whole.            | Half. |                                     |              |
|                          |              |          |                                  |                   |       |                                     |              |

The statutes do not render a verbal agreement for wages absolutely void; but impose a penalty on the master if a written agreement be not made. When a written agreement is made, it becomes the only evidence of the contract between the parties; and a seaman cannot recover any thing agreed to be given in reward for his services, which is not specified in the articles.

A seaman who has engaged to serve on board a ship, is bound to exert himself to the utmost in the service of the ship; and, therefore, a promise made by the master of a ship in distress, to pay an extra sum to a seaman, as an inducement to extraordinary exertion on his part, is held to be essentially void.

2. *Conduct of Seamen.* — It is essential to the business of navigation that the most prompt and ready obedience should be paid to the lawful commands of the master. To this effect it is covenanted in the articles of agreement previously quoted, that "each and every lawful command which the said master shall think necessary to issue for the effectual government of the said vessel, suppressing immorality and vice of all kinds, be strictly complied with, under the penalty of the person or persons disobeying forfeiting his or their whole wages or hire, together with every thing belonging to him or them on board the said vessel."

In case of disobedience or disorderly conduct on the part of the seamen, the master may correct them in a reasonable manner. Such an authority is absolutely necessary to the safe of the ship and of those on board; but it behoves the master to act in such cases with deliberation, and not to pervert the powers with which he is intrusted for the good of the whole to cruel or vindictive purposes. Masters abusing their au-

thority by the defence Ordinance either in mode But has no j him bef informa commit The foreign in all m "That to serve them." entered in he forfeit the maste of his reti commit th days." thority must answer at law for the consequences. In the case of actual or open mutiny by the crew, or any part of them, the resistance of the master becomes an act of self defence, and is to be considered in all its consequences in that point of view. The Ordinances of Oleron and Wisby declare that a mariner who strikes the master shall either pay a fine or lose his right hand; a singular as well as cruel alternative, unknown in modern jurisprudence.

But although the master may by force restrain the commission of great crimes, he has no judicial authority over the criminal, but is bound to secure his person and bring him before a proper tribunal. And all justices of the peace are empowered to receive informations touching any murder, piracy, felony, or robbery upon the sea, and to commit the offenders for trial. — (43 Geo. 3. c. 160.)

The *desertion* or absence without leave of seamen from a ship, while on a voyage to foreign parts, being attended with many bad consequences, has been provided against in all maritime laws. It was enacted in this country, by the 11 & 12 Will. 3. c. 7.,

“That all such seamen, officers, or sailors, who shall desert the ships or vessels wherein they are hired to serve for that voyage, shall for such offence forfeit all such wages as shall be then due to him or them.” By subsequent statutes (2 Geo. 2. c. 36., and 31 Geo. 3. c. 39.), it is enacted, that if, after having entered into the agreement previously referred to, a mariner deserts or refuses to proceed on the voyage, he forfeits to the owners all the wages then due to him, and a justice of the peace may, on complaint of the master, owner, or person having charge of the ship, issue a warrant to apprehend him; and in case of his refusal to proceed on the voyage, or of his not assigning a sufficient reason for such refusal, may commit him to hard labour in the house of correction for not more than *thirty* nor less than *fourteen* days. A mariner *absenting* himself from the ship without leave of the master or other chief officer having charge of the ship, forfeits *two* days' pay for every such day's absence, to the use of Greenwich Hospital. And in the case of foreign voyages, if, upon the ship's arrival at her port of delivery here, he leaves her without a *written discharge* from the master or other person having charge of the ship, or if in the coasting trade he quits the ship before the *voyage is completed and the cargo delivered*, or before the expiration of the term for which he engaged, or before he has obtained a discharge in writing, he forfeits 1 month's pay to the said hospital. But these provisions do not debar seamen from entering on board any of his Majesty's ships.

In order still further to discountenance desertion, a penalty of 100*l.* is imposed by the 37 Geo. 3. c. 73. on every master or commander of any British merchant ship who engages any seaman or other person to serve on board such ship, in the event of such master or commander being aware, at the time, that such seaman or person had deserted from any other ship or vessel.

For an account of the penalties imposed on the master for leaving seamen in foreign countries, or refusing to bring them back, see *MASTER*.

Neglect of duty, disobedience of orders, habitual drunkenness, or any cause which will justify a master in discharging a seaman during the voyage, will also deprive the seaman of his wages.

If the cargo be embezzled or injured by the fraud or negligence of the seamen, so that the merchant has a right to claim satisfaction from the master and owners, they may, by the custom of merchants, deduct the value thereof from the wages of the seamen by whose misconduct the injury has taken place. And the last proviso introduced into the usual agreement signed by the seamen, is calculated to enforce this rule in the case of embezzlement either of the cargo or of the ship's stores. This proviso, however, is to be construed individually, as affecting only the particular persons guilty of the embezzlement, and not the whole crew. Nor is any innocent person liable to contribute a portion of his wages to make good the loss occasioned by the misconduct of others.

The offences of running away with the ship, or voluntarily yielding her up to an enemy, or making a revolt, are punishable by death. The statute 11 & 12 Will. 3. c. 7. enacts,

“That if any commander or master of any ship, or any seaman or mariner, shall in any place, where the admiral hath jurisdiction, betray his trust and turn pirate, enemy, or rebel, and piratically and feloniously run away with his or their ship or ships, or any barge, boat, ordnance, ammunition, goods, or merchandises, or yield them up voluntarily to any pirate, or shall bring any seducing messages from any pirate, enemy, or rebel, or consult, combine, or confederate with, or attempt or endeavour to corrupt any commander, master, officer, or mariner, to yield up or run away with any ship, goods, or merchandises, or turn pirate, or go over to pirates; or if any person shall lay violent hands on his commander, whereby to hinder him from fighting in defence of his ship and goods committed to his trust, or that shall confine his master, or make or endeavour to make a revolt in the ship; shall be adjudged, deemed, and taken to be a *pirate, felon, and robber*, and being convicted thereof according to the directions of this act, shall have and suffer pain of *death*, loss of lands, goods, and chattels, as *pirates, felons, and robbers* upon the seas ought to have and suffer.”

The wilful destruction or loss of the ship is, in all countries, punishable by death. But doubts having been entertained whether the destruction of a ship that had been insured came within the scope of the previously existing statutes, they were repealed by the 43 Geo. 3. c. 113., and the following provision substituted in their stead:—

“That if any person or persons shall, from and after the *sixteenth day of July, 1803*, wilfully cast away, burn, or otherwise destroy, any ship or vessel, or in any wise counsel, direct, or procure the same to be done, and the same be accordingly done, with intent or design thereby wilfully and maliciously to prejudice any owner or owners of such ship or vessel, or any owner or owners of any goods laden on board the same, or any person or persons, body politic or corporate, that have or have underwritten or shall underwrite any policy or policies of insurance upon such ship or vessel, or on the freight thereof, or upon any goods

laden on board the same, the person or persons offending therein, being thereof lawfully convicted, shall be deemed and adjudged a principal felon or felons, and shall suffer death as in cases of felony, without benefit of clergy."

3. *Payment of Seamen's Wages, &c.* — In order to stimulate the zeal and attention of seamen, it has been the policy of all maritime states to make the payment of their wages depend on the successful termination of the voyage. "*Freight is the mother of wages; the safety of the ship the mother of freight.*" When, therefore, by any disaster happening in the course of the voyage, such as the loss or capture of the ship, the owners lose their freight, the seamen also lose their wages.

If a ship destined on a voyage out and home has delivered her outward bound cargo, but perishes in the homeward voyage, the freight for the outward voyage is due; so in the same case the seamen are entitled to receive their wages for the time employed in the outward voyage and the unloading of the cargo, unless by the terms of their contract the outward and homeward voyages are consolidated into one. If a ship sail to several places, wages are payable to the time of the delivery of the last cargo. Upon the same principle, where money had been advanced to the owners in part of the freight outwards, and the ship perished before her arrival at the port of delivery, it was held that the seamen were entitled to wages in proportion to the money advanced.

If, after seamen have been hired, the owners of a ship do not think proper to send her on the intended voyage, the seamen are to be paid for the time during which they may have been employed on board the ship; and in the event of their sustaining any special damage by breaking off the contract, it is but reasonable that they should be indemnified.

In the case of shipwreck, it is the duty of the seamen to exert themselves to the utmost to save as much as possible of the vessel and cargo. If the cargo be saved, and a proportion of the freight paid by the merchant in respect thereof, it seems, upon principle, that the seamen are also entitled to a proportion of their wages. And for their labour in saving the cargo, or the remains of the ship, they, as well as other persons, may be entitled to a recompence by way of *salvage*. The laws of Oleron rule, that if, in case of shipwreck, "the seamen preserve a part of the ship and lading, the master shall allow them a reasonable consideration to carry them home to their own country; and in case they save enough to enable the master to do this, he may lawfully pledge to some honest persons such part thereof as may be sufficient for the occasion."

By the laws of Wisby, "the mariners are bound to save and preserve the merchandise to the utmost of their power, and whilst they do so (*ce-faisant*, according to the *French* translation), ought to be paid their wages, otherwise not." By the Hanseatic Ordinance, if a ship happens to be cast away, the mariners are obliged to save as much as in them lies, and the master ought to requite them for their pains to their content, and convey them at his own charge to their dwelling places; but if the mariners refuse to assist their master, in such case they shall have neither reward nor wages paid them." It is not quite clear, from the language of these ancient ordinances, whether the payment directed to be made to seamen on those melancholy occasions, is to be a reward only for their labour in the salvage, or a recompence for their former services in the ship, for which, according to general principles, they are entitled to no payment, if no freight is earned. But Cleirac, in his *Commentary on the Laws of Oleron*, says, that by an ordinance of Philip II. of Spain, made in the year 1563, it is ordained, that the seamen shall save as much as they can from shipwreck; and, in that case, the master is bound to pay them their wages, and to give them a further reward for their labour out of the goods. And the Hanseatic Ordinance of the year 1614 expressly directs, that if so much of the ship be saved as equals the value of the wages of the seamen, they shall be paid their whole wages. In like manner, the Ordinance of Rotterdam and the *French* Ordinance also expressly direct the payment of wages out of the relics and materials of the ship. — (*Abbott on the Law of Shipping*, part iv. c. 2.)

"I have not been able," says Lord Tenterden, "to find any decision of an English court on the point, and the legislature has made no provision relating to it. As an inducement to the mariners to exert themselves in the hour of danger, it may not be unfit to hold out to them the prospect of obtaining their wages, if they save so much of the ship as shall be sufficient to pay them; but their claim upon the ship seems not to extend to a case, wherein, according to the principles of the law upon which their claim is founded, no wages are payable to them." — (Part iv. c. 2.)

The laws of Oleron, Wisby, and the Hanse towns, direct, that if a seaman die during the voyage, wages shall be paid to his heirs: but it is not clear whether the sum thus directed to be paid is to be understood as meaning a payment proportioned to the time of his service, or the whole sum that he would have earned had he lived till the conclusion of the voyage. This question has not been judicially decided in England; but by the act 37 Geo. 3. c. 73. it is ordered, that the wages due to any seaman, who has died on board any ship trading to the West Indies, shall be paid, within 3 months of

the arrival of such ship in Great Britain, to the receiver of the sixpenny duty for Greenwich Hospital; for the use of the seaman's executor or administrator. All masters neglecting or refusing to pay the same incur a penalty of 50*l.*, and pay double wages for each offence.

A seaman impressed from a merchant ship into the royal service, is entitled to receive the proportion of his wages due to him at the time of impressment, provided the merchant ship arrive in safety at the port of her discharge.

Policy requires that the wages of seamen should not be paid to them in foreign countries, as well to prevent desertion, as to preserve, for the benefit of their families, what might otherwise be spent in riot and debauchery. Conformably to this principle it has been enacted,

"That no master or owner of any merchant ship or vessel shall pay or advance, or cause to be paid or advanced, to any seaman or mariner, during the time he shall be in parts beyond the seas, any money or effects upon account of wages, exceeding *one moiety* of the wages which shall be due at the time of such payment, until such ship or vessel shall return to Great Britain or Ireland, or the plantations, or to some other of his Majesty's dominions, whereto they belong, and from whence they were first fitted out; and if any such master or owner of such merchant ship or vessel shall pay or advance, or cause to be paid or advanced, any wages to any seaman or mariner above the said moiety, such master or owner shall forfeit and pay double the money he shall so pay or advance, to be recovered in the High Court of Admiralty by any person who shall first discover and inform of the same."—(8 Geo. 1. c. 24.)

The time when wages should be paid has also been made the subject of parliamentary enactments. Thus, as to ships engaged in *foreign voyages*, it is ordered, that upon the arrival of any ship in Great Britain from parts beyond the seas, the master or commander shall be obliged to pay the seamen thereto belonging their wages, if demanded, in *thirty days* after the ship's entry at the Custom-house, except in cases where a covenant shall be entered into to the contrary; or at the time the seamen shall be discharged, which shall first happen, if demanded; deducting the penalties and forfeitures imposed by the act, "under the penalty of paying to each seaman or mariner that shall be unpaid, contrary to the intent and meaning of this act, *twenty shillings* over and above the wages that shall be due to each person, to be recovered by the same means and methods as the wages may be recovered; and such payment of wages aforesaid shall be good and valid in law, notwithstanding any action, bill of sale, attachment, or incumbrance whatsoever."—(2 Geo. 2. c. 36.)

And as to ships employed in the *coasting trade* in the manner before mentioned, it is enacted, that the master, commander, or person having charge of the ship, shall be obliged to pay the seamen their wages, if demanded, within *five days* after the ship shall be entered at the Custom-house, or the cargo be delivered, or at the time the seamen shall be discharged, which shall first happen, unless an agreement shall have been made to the contrary; in which case the wages shall be paid according to such agreement, deducting in every case the penalties imposed by this act, under the like forfeiture of *twenty shillings*, to be recovered in the same manner as with regard to ships coming from abroad; and such payment shall be good in law, "notwithstanding any action, bill of sale, attachment, or incumbrance whatsoever."—(31 Geo. 3. c. 39.)

Seamen have a threefold remedy for the recovery of wages; viz. against the ship, the owner, and the master; and they may proceed either in the admiralty courts or those of common law: in the former case all may join, and payment may be obtained out of the value of the ship. The contract remains in the custody of the master or owner, but they are bound to produce it when required, and it is conclusive evidence of the contract between the parties.

By the act 59 Geo. 3. c. 58., justices of the peace are authorised summarily to decide upon the complaint of any seaman as to the nonpayment of wages not exceeding 20*l.*; and if they find the claim well founded, may, in the event of its not being paid within 2 days, issue their warrant for the levy of the same by distress: parties dissatisfied may appeal to the admiralty.

4. *Payment to Greenwich Hospital.*—During the reign of George II. an establishment attached to Greenwich Hospital was erected (20 Geo. 2. c. 38.) "for the relief and support of maimed and disabled seamen, and the widows and children of such as shall be killed, slain, or drowned, in the merchant service. To provide a fund for this charitable institution, every person serving in any merchant ship, or other private ship or vessel, belonging to any of his Majesty's subjects in England, (except apprentices under the age of 18, persons employed in boats upon the coasts in taking fish which are brought fresh on shore, or in boats within rivers, or upon boats on the coast, and pilots (except persons employed in the service of the East India Company, and who are not entitled to the benefit of this institution, being provided for by a fund established by the Company),) pays *sixpence per month*, which is deducted out of his wages by the master, and by him paid over to the persons appointed under the authority of the act at the port to which the ship belongs, before she shall be allowed to clear inwards. For the management and distribution of this fund, a corporation was created, composed chiefly of eminent merchants, with power to purchase land and erect an hospital, and to provide for seamen

rendered incapable of service by sickness, wounds, or other accidental misfortunes, and decrepit and worn out by age, either by receiving them into the hospital, or by pensions; and also to relieve the widows and children of seamen killed or drowned in the merchant service, provided the children are not of the age of 14 years; or, if of that age and upwards, are incapable of getting a livelihood by reason of lameness, blindness, or other infirmity, and are proper objects of charity; and to make reasonable allowances to those who shall lose an eye or limb, or be otherwise hurt or maimed, in fighting, defending or working their ships, or doing any other duty in their service, in proportion to their hurt; so far forth as the income and revenues of the charity will extend for these purposes. But no person is to be provided for as a worn-out seaman, who has not been employed in the merchant service five years, and paid the contribution. And in providing for this class, a preference is given to such as have served longest and contributed most.

In order to ascertain the times of service and payment of the contribution, the master must keep a *muster-roll* of the persons employed in the ship, and before its departure deliver a duplicate to the collector of these duties at the port; and, during the voyage, enter the time and place of discharge, quitting, and desertion, and of receiving other persons on board, and of any hurt, damage, death, or drowning; of which he must also deliver a duplicate at his return, under the penalty of 20*l.*, to the truth whereof he may be examined upon oath by the collector. And in case any person employed on board any ship or vessel shall, in doing his duty on shore or on board, break an arm or leg, or be otherwise hurt or maimed, he is to be properly relieved until sufficiently recovered to be sent to the place to which the ship belongs.

But, notwithstanding the *principle* of this charity is excellent, it has been alleged, and, we apprehend, on pretty good grounds, that the conditions under which merchant seamen are admitted to participate in its benefits are too onerous, that they have not reaped from it an advantage equivalent to the sacrifice it imposes on them, and that the expenses of collection have been quite enormous.

The last part of this statement is, indeed, completely borne out by the first of the subjoined documents, which shows that the expense of collection is, in future, to be reduced to a *half* of what it has hitherto been; and we have been well assured that the reduction may be safely carried a good deal further.

The second of the subjoined accounts shows that there is not at present a single seaman in Greenwich Hospital, except such as have served in the navy; a circumstance which, considering the number of men in the merchant service, the large sum (26,000*l.*) annually paid by them to the hospital, and the period that has elapsed since the termination of the war, strikes us as not a little extraordinary. The subject is one that seems to require a thorough investigation. Merchant seamen ought to participate, equally with those in his Majesty's service, in the benefits of an institution to which they contribute so largely.

I. An Account of the Money deducted out of the Wages of Seamen employed in the Merchant Service of the Country, for the Years 1828 and 1829; showing the Gross Amount collected, the Nett Money paid to Greenwich Hospital, and the Amount and Rate per Cent. paid for collecting the same in each Year, and for what Purposes employed.

The monies paid to Greenwich Hospital are applied to the general purposes of the institution.

P. C. LE GEYT, Clerk of the Cheque.

The total expense of collecting amounted in the year 1828 to 20½ per cent., and in 1826 to 18 per cent. on the gross receipts; but arrangements are now ordered to be carried into effect, by which the whole expense will be reduced to about 10 per cent.

W. H. HOOPER, Secretary.

Royal Hospital, Greenwich, 10th of May, 1830.

III. Account of Children of Merchant Seamen in the School of Greenwich Hospital.

| Number of Children of Merchant Seamen whose Fathers have never served in the Navy. | Number of Children of Merchant Seamen whose Fathers have also served in the Navy. | Remarks.   |
|--|---|--|
| 89   | 23  | The original Greenwich Hospital school, to which the children of merchant seamen are eligible, consisted of 200 children, until, by a regulation of 1829, it was increased to 300. |

Royal Hospital, Greenwich, 9th of April, 1831.

R. G. KEATS, Governor.

For further details with respect to this important subject, see *Lord Tenterden's* work on the *Law of Shipping*.

SEAWORTHY, a term applied to a ship, indicating that she is in every respect fit for her voyage.

It is provided in all charterparties, that the vessel chartered shall be "tight, staunch, and strong, well apparelled, furnished with an adequate number of men and mariners, tackle, provisions, &c." If the ship be insufficient in any of these particulars, the owners, though ignorant of the circumstance, will be liable for whatever damage may, in consequence, be done to the goods of the merchant; and if an insurance has been effected upon her, it will be void.

But whether the condition of seaworthiness be expressed in the charterparty or not, it is always implied. "In every contract," said Lord Ellenborough, "between a person holding himself forth as the owner of a lighter or vessel ready to carry goods for hire, and the person putting goods on board, or employing his vessel or lighter for that purpose, it is a term of the contract on the part of the lighterman or carrier implied by law, that his vessel is tight, and fit for the purpose for which he offers and holds it forth to the public: it is the immediate foundation and substratum of the contract that it is so: *the law presumes a promise to that effect on the part of the carrier, without any actual proof*; and every reason of sound policy and public convenience requires that it should be so."

Not only must the ship and furniture be sufficient for the voyage, but she must also be furnished with a sufficient number of persons of competent skill and ability to navigate her. And for sailing down rivers, out of harbours, or through roads, &c., where either by usage or the laws of the country a pilot is required, a pilot must be taken on board. But no owner or master of a ship shall be answerable for any loss or damage by reason of no pilot being on board, unless it shall be proved that the want of a pilot shall have arisen from any refusal to take a pilot on board; or from the negligence of the master in not heaving to, for the purpose of taking on board any pilot who shall be ready and offer to take charge of the ship. — (48 Geo. 3. c. 164.)

A ship is not seaworthy unless she be provided with all the documents or papers necessary for the manifestation of the ship and cargo. Neither is she seaworthy, if, during war, she be not supplied with the sails required to facilitate her escape from an enemy.

It is only necessary, to guarantee the owners from loss, that the ship should be seaworthy at the time of her departure. She may cease to be so in a few hours, and yet they may not be liable. The question to be decided in such cases always is, whether the ship's disability arose from any defect existing in her *before* her departure, or from a cause which occasioned it *afterwards*. But if a ship, within a day or two of her departure, become leaky or founder at sea, or be obliged to put back, without any visible or adequate cause to produce such an effect — such as the starting of a plank or other accident to which the best ships are liable, and which no human prudence can prevent — the fair presumption is that she was not seaworthy when she sailed; and it will be incumbent on the owners to show that she was seaworthy at that time. They are liable for damage occasioned by every injury arising from any *original defect* in the ship, or from

bad stowage: but they are not liable for any injury arising from the act of God, the king's enemies, or the perils of the sea.

It is further to be observed, that how perfect soever a ship may be, yet if, from the nature of her construction, or any other cause, she be incapable of performing the proposed voyage, with the proposed cargo on board, she is not seaworthy. *She must be, in all respects, fit for the trade in which she is meant to be employed.* And it is a wholesome rule that the owners should be held to a pretty strict proof of this.

It has been already observed, that any defect in point of seaworthiness invalidates an insurance upon a ship. There is not only an express but an implied warranty in every policy, that the ship shall be "tight, staunch, and strong, &c.;" and the reason of this is plain. The insurer undertakes to indemnify the insured against the *extraordinary and unforeseen perils of the sea*; and it would be absurd to suppose that any man would insure against those perils, but in the confidence that the ship is in a condition to encounter the *ordinary perils to which every ship must be exposed in the usual course of the proposed voyage.*

By the old law of France it was directed, that every merchant ship, before her departure from the place of her outfit, should be surveyed by certain sea officers appointed for that purpose, and reported to be seaworthy, "*en bon état de navigation*;" and that previous to her return, before she took her homeward cargo on board, she should be again surveyed. Valin has shown — (*Tit. Fret*, art. 12.), that very little confidence could be placed in these surveys, which, he tells us, were only made upon the external parts, for the ship was not unsheathed; and, therefore, her internal and hidden defects could not be disclosed. This practice seems now to be abandoned by the French; at least, there is no allusion to it in the *Code de Commerce*. It is, one should think, much better to leave the question as to the seaworthiness of the ship to be ascertained, as in England, after a loss has happened, by an investigation of the true cause of such loss, than to permit so important a question to be decided upon the report of officers without any motive to enquire carefully into her actual condition. A ship may, to all appearance, be perfectly capable of performing a voyage; and it is only after a loss has happened, that her latent defects can be discovered, and her true state at the time of her departure rendered manifest. Indeed, the survey made by the French was not deemed a conclusive proof that the ship was, at her departure, really seaworthy; it merely raised a *presumption* that such was the case; but it was still open to the freighter or the insurer to show the contrary.

For further information upon this point, the reader is referred to the able and excellent works of *Chief Justice Abbott* (*Lord Tenterden*) on the *Law of Shipping*, part iii. c. 3., and of *Mr. Serjeant Marshall* on *Insurance*, book i. c. 5. § 1.

SEEDS, in commerce, the grains of several species of gramina. Those of most importance are clover seed, flax or linseed, hemp seed, mustard seed, rape seed, tares, &c.; for which, see the respective articles.

SEGARS, or CIGARS. See TOBACCO.

SENNA (Fr. *Séné*; Ger. *Sennablater*; It. *Senna*; Sp. *Sen*; Lat. *Cassia Senna*; Arab. *Suna*). The plant (*Cassia Senna*) which yields the leaves known in commerce and the *materia medica* by the name of senna, is an annual, a native of Upper Egypt, and Bernou in Central Africa. The senna, after being collected in Upper Egypt, is packed up in bales, and sent to Boullac, where it is mixed with other leaves, some of which are nearly equally good, while others are very inferior. After being mixed, it is repacked in bales at Alexandria, and sent to Europe. A great deal of senna is imported from Calcutta and Bombay, under the name of East India senna; but it is originally brought to them from Arabia. — (*Thomson's Dispensatory*.) Senna is very extensively used in medicine. The total quantity imported in 1831 amounted to 250,296 lbs., of which 190,222 lbs. were retained for home consumption. Of the imports, 42,519 lbs. came directly from Egypt; 200,990 lbs. from the East Indies; and a small quantity at second hand from Italy and other places. The imports of senna from India in 1832 amounted to 464,917 lbs. The duty was reduced, in 1832, from 1s. 3d. to 6d. per lb.

SHAGREEN (Ger. *Schagrin*; It. *Chagrin*; Rus. *Schagrim*, *Schagren*), a kind of grained leather, used for various purposes in the arts. It is extensively manufactured at Astrakhan in Russia. — (*See Tooke's Russia*, vol. iii. p. 403.)

SHAMMY, or CHAMOIS LEATHER (Ger. *Sämischleder*; Fr. *Chamois*; It. *Camoscio*; Rus. *Samschanii*, *Koshi*), a kind of leather dressed in oil, or tanned, and much esteemed for its softness, pliancy, and capability of bearing soap without hurt. The real shammy is prepared of the skin of the chamois goat. But leather prepared from the skins of the common goat, kid, and sheep, is frequently substituted in its stead.

SHARKS' FINS, form a regular article of trade to China; and are collected for this purpose in every country from the eastern shore of Africa to New Guinea. In the Canton Price Currents they are as regularly quoted as tea or opium; and the price of

late years has been, according to quality, from 15 to 18 dollars per picul, equal to from 50s. to 60s. per ewt.

**SHAWLS** (Ger. *Schulen*; Fr. *Chals, Chales*; It. *Shavuli*; Sp. *Scharalos*), articles of fine wool, silk, or wool and silk, manufactured after the fashion of a large handkerchief, used in female dress. The finest shawls are imported from India, where they are highly esteemed, and cost from 50 to 300 guineas. But the British shawls manufactured at Norwich, Paisley, and particularly Edinburgh, have recently been very much improved; and though still inferior, in point of quality, to the finest specimens brought from the East, they look well, and are much cheaper. The native shawl manufacture is of very considerable value and importance.

**Cashmere Shawls.**—The shawl manufacture is believed to have originated in the valley of Cashmere, the ancient Caspira, situated in the north-west of India, between the 34th and 35th degrees of N. latitude, and the 73d and 74th degrees of E. longitude. Though not so flourishing as it once was, the manufacture is still prosecuted in this province to a very considerable extent. The shawls are the very best that are made, possessing unequalled fineness, delicacy, and warmth. They are formed of the inner hair of a variety of the common goat (*capra hircus*), reared on the cold, dry table land of Tibet, elevated from 14,000 to 16,000 feet above the level of the sea. The goat thrives sufficiently well in many other countries; but in the sultry plains of Hindostan it has hardly more hair than a greyhound; and though in higher latitudes the hair is more abundant, it is for the most part shaggy and coarse. It is only in the intensely cold and dry climate of Tibet that it yields the peculiarly soft woolly hair that constitutes the material of the Indian shawl. We do not, therefore, suppose that the efforts to naturalise the shawl-goat in France will turn out well. On the contrary, we believe the chances of success would be about equal were an attempt made to breed beavers in a hot country, without water, or camels in a moist country, free from heat and drought.

The inner or fine wool is covered over and protected by a quantity of long shaggy hair, which is, of course, carefully separated from it before it is manufactured.

The genuine shawl wool has been imported into this country; and the finest Edinburgh and Paisley shawls have been produced from it. But it must be admitted that shawls have nowhere been made that can come, as respects quality, into successful competition with those of Cashmere. The manufacture has been established at Delhi and Lahore for some years; but notwithstanding it is carried on by native Cashmerians, and though the material employed be quite the same, the fabrics are said to want the fineness of those made in Cashmere, and to have a degenerated, coarse appearance. It is difficult to account for this superiority. It has been ascribed to some peculiar quality of the water in the valley of Cashmere; but it is most probably owing to a variety of circumstances, which, though each may appear of little importance, collectively give a character to the manufacture.

The following details as to the manufacture of Cashmere shawls are extracted from a recent number of an English paper published at Delhi:—

“The great part for the wool of which shawls are made, is at Kilghet, which is said to be a dependency of Ladak, and situated 20 days’ journey from the northern boundaries of Cashmere. There are 2 kinds of it: that which can be readily dyed is white; the other sort is of an ashy colour, which being with difficulty changed, or, at least, improved by art, is generally woven of its natural hue. About 2 lbs. of either are obtained from a single goat once a year. After the down has been carefully separated from the hairs, it is repeatedly washed with rice starch. This process is reckoned important; and it is to the quality of the water of their valley that the Cashmerians attribute the peculiar and inimitable fineness of the fabrics produced there. At Kilghet the best raw wool is sold for about 1 rupee a pound. By the preparation and washing referred to, it loses  $\frac{1}{2}$ , and the remainder being spun, 3 rupees’ weight of the thread is considered worth 1 rupee.

“Shawls are made of various forms, size, and borders, which are wrought separately, with the view of adapting them to the different markets. Those sent to Turkey used to be of the softest and most delicate texture. Carpets and counterpanes are fabricated of the hair or coarser part of the wool. From a variety of causes, among others the destruction of the Janissaries, who dressed much in shawls, the loss of royalty in Cabul, and the ruined finances of Lucknow, it is certain that the demand for this elegant commodity has greatly declined of late years. Under the Mogul emperors, Cashmere found work for 30,000 shawl looms. In the time of the Afghan kings, the number decreased to 18,000. There are now not more than 6,000 employed. I should attribute little of this diminution to the sale of English imitations among the Asiatic nations. When these counterfeits first appeared, the pretty patterns and brilliancy of the colours took the fancy of some, but their great inferiority in the softness and warmth which marks the genuine shawl, soon caused the new article to be neglected. A camel-load of them was lately put up at outcry in Delhi, when scarcely a native would bid for one!

“The average value of shawls exported from Cashmere amounts annually to 1,800,000 rupees. Runjeet Singh takes  $\frac{1}{3}$  in kind as part of the gross revenue of the province, which is about 25 lacs a year. His Highness is said to sell  $\frac{1}{2}$  of what he thus receives, and to keep the remainder for his own court. Of the rest disposed of by him and left for sale in the valley, 7 lacs’ worth go to Bombay and Western India; 3 to Hindostan, chiefly Oude;  $\frac{1}{2}$  a lac each to Calcutta, Cabul, Herat, and Balk, whence some pass on to neighbouring countries.

“A curious calculation of the successive exactions from Cashmere to Bombay inclusive, which magnify the price of shawls, is herewith subjoined.

“Actual cost for materials and labour in making a pair of reel shawls:—

|  | Fd. rs.       |   | Fd. rs.        |
|--|---------------|---|----------------|
| Four Furrukabad seers of wool                          | 12 8          | Total from Kilghet to Bombay, 171 18 and 85 12½   | 252 30½        |
| Cleaning, washing, and spinning                        | 50 0          | Prime cost  | 357 11         |
| Dyeing   | 11 0          | Proportion of carriage  | 0 12           |
| Wages to weavers                                       | 264 6         | Insurance   | 21 0           |
| <b>Total</b>   | <b>357 14</b> | <b>Total cost</b>   | <b>610 36½</b> |
| <b>Duties on the same.</b> —On sale and importation to |               |   |                |
| Cashmere   | 3 14          | “A pair of such shawls might sell for 500 rupees at Amritsar, and in Bombay for 900. The amount of the imports, and the sums levied by each government, will appear more in relief if stated as they affect a camel-load in its progress. It consists of 14½ cutchas maunds, and contains, on an average, 2,000 shawls of different kinds, valued, on reaching Bombay, at 24,500 Furrukabad rupees. |                |
| On the thread  | 125 0         | “The government of Lahore exacts Fd. rs. 1,554 6; Patalah, 61 0; Bikeneer, 43 0; Joudpote, 121 4; Bhowngur, 20 0;—total levied by native princes, 1,809 0; Bombay, 110 per cent. ad valorem 2,850 0.”—Quoted in Mr. Montgomery Martin’s <i>Asiatic Colonies</i> , vol. 1. p. 451.   |                |
| While the fabric is in the loom                        | 35 0          |   |                |

| <b>Total from Amritsar to Bombay</b>                   | <b>85 12½</b> |   |                |

**SHEEP** (Ger. *Schafe*; Fr. *Brebis, Bêtes à laine, Moutons*; It. *Pecore*; Sp. *Pecora, Ovejas*; Rus. *Ovezü*; Lat. *Oves*). Of the domestic animals belonging to Great Britain, sheep, with the exception of horses, and, perhaps, cattle, are by far the most important.

They can be reared in situations and upon soils where other animals would not live. They afford a large supply of food, and one of the principal materials of clothing. Wool has long been a staple commodity of this country, and its manufacture employs an immense number of people. "The dressed skin," says Mr. Pennant, "forms different parts of our apparel; and is used for covers of books. The entrails, properly prepared and twisted, serve for strings for various musical instruments. The bones, calcined (like other bones in general), form materials for tests for the refiner. The milk is thicker than that of cows, and consequently yields a greater quantity of butter and cheese; and in some places is so rich, that it will not produce the cheese without a mixture of water to make it part from the whey. The dung is a remarkably rich manure; inasmuch that the folding of sheep is become too useful a branch of husbandry for the farmer to neglect. To conclude; whether we consider the advantages that result from this animal to individuals in particular, or to these kingdoms in general, we may, with Columella, consider this, in one sense, as the first of the domestic quadrupeds." — (*Pennant's British Zoology.*) The importation of sheep from a foreign country is prohibited under pain of forfeiture. — (6 Geo. 4. c. 107. § 52.) — (See CATTLE, and Wool.)

The following Table exhibits a compendious view of the more prominent characteristics of the principal breeds of sheep in Great Britain:—

| Names of Breeds.             | Head.       | Colour of Face and Legs. | Wool.               | Wt. of Wethers. Fleeces per (Gr. |      | Age in Years. |
|------------------------------|-------------|--------------------------|---------------------|----------------------------------|------|---------------|
|                              |             |                          |                     | St.                              | Lib. |               |
| 1. Teeswater                 | No horns    | White face and legs      | Long wool           | 10                               | 28   | 2             |
| 2. Lincoln                   | No horns    | White face and legs      | Long wool           | 10                               | 25   | 2             |
| 3. Dishley, or New Leicester | No horns    | White face and legs      | Long wool (fine)    | 8                                | 22   | 2             |
| 4. Cotswold                  | No horns    | White face and legs      | Long wool (fine)    | 9                                | 21   | 2             |
| 5. Romney Marsh              | No horns    | White face and legs      | Long wool (fine)    | 8                                | 22   | 2             |
| 6. Dartmoor, or Bampton      | No horns    | White face and legs      | Long wool (fine)    | 9                                | 25   | 2             |
| 7. Esmoor                    | Horned      | White face and legs      | Long wool (coarse)  | 6                                | 16   | 2             |
| 8. Black-faced, or Heath     | Horned      | Black face and legs      | Long wool (coarse)  | 5                                | 15   | 2             |
| 9. Hereford, Ryeland         | No horns    | White face and legs      | Short wool (fine)   | 11                               | 11   | 2             |
| 10. Morf, Shropshire         | Horned      | Black and speckled       | Short wool (fine)   | 12                               | 12   | 2             |
| 11. Dorset                   | Horned      | White and speckled       | Short wool (fine)   | 11                               | 18   | 2             |
| 12. Wilt                     | No horns    | White and speckled       | Short wool (mid.)   | 5                                | 20   | 2             |

For details as to the number of sheep, the quantity and quality of wool, &c., see Wool.

**SHERRY.** See WINE.

**SHIPS.** Nautical men apply the term ship to distinguish a vessel having 3 masts, each consisting of a lower mast, a topmast, and top-gallant-mast, with their appropriate rigging. In familiar language, it is usually employed to distinguish any large vessel, however rigged: but it is also frequently used as a general designation for all vessels navigated with sails; and it is in this sense that we now employ it.

*Merchant Ships.* — It is hardly possible to divide merchant ships into classes, at least with any degree of precision. Their size, shape, the mode of their rigging, &c. depend not merely on the particular trade for which they are destined, but on the varying tastes and fancies of their owners. The ships employed in the China trade, by the East India Company, are the largest merchantmen belonging to this country; the private traders to the East and West Indies rank next; then follow the whale ships, those engaged in the trade to the Baltic and Canada, the Mediterranean, and a host of others of every variety of burden and shape.

The reader will find, in the articles NAVIGATION LAWS, and REGISTRY, an account of the peculiar privileges enjoyed by British ships, of the conditions and formalities necessary to be observed in order to acquire and preserve these privileges, of the mode of transferring property in ships, &c. And in the articles CHARTERPARTY, FREIGHT, MASTER, OWNERS, SEAMEN, &c., the law with respect to ships and ship-owners, in their capacity of carriers or public servants, and the reciprocal duties and obligations of the masters and crews, is pretty fully expounded. In this place, therefore, we shall content ourselves with laying before the reader some official statements exhibiting the progress and present magnitude of the mercantile navy of Great Britain.

*Increase of Shipping in England.* — It would be to no purpose, even if our limits permitted, to enter into any details with respect to the shipping of England previously to the Revolution. Those who wish to examine the subject, will find most of the scattered

\* Post majores quadrupedes ovilli pecoris secunda ratio est; quæ prima sit si ad magnitudinem utilitatis referas. Nam id præcipue contra frigidis violentiam protegit, corporibusque nostris liberiora præbet velamina; et etiam elegantiam mensas jucundis et numerosis dapibus exornat. — (*De Pæ. Pæneticæ, lib. vii. cap. 2.*)

notices of contemporary writers collected by Anderson, in his "Chronological History of Commerce." The mercantile navy of England first became considerable in the reign of Elizabeth; and gradually increased under her successors, James I. and Charles I. At the Restoration, the British shipping cleared outwards amounted to 95,266 tons; but such was the increase of navigation during the reigns of Charles II. and James II., that, at the Revolution, the British ships cleared outwards amounted to 190,533 tons. The war terminated by the treaty of Ryswick, in 1697, checked this progress. But commerce and navigation have steadily advanced, with the exception of 2 short periods during the war of 1739, and the American war, from the beginning of last century down to the present day.

The first really authentic account of the magnitude of the commercial navy of England was obtained in 1701-2, from returns to circular letters of the commissioners of customs, issued in January of that year. From these it appears that there belonged, at the period in question, to all the ports of England and Wales, 3,281 vessels, measuring (or rather estimated to measure) 261,222 tons, and carrying 27,196 men and 5,660 guns. Of these there belonged to

|          | Vessels. | Tons.  | Men.   |            | Vessels. | Tons. | Men.  |
|----------|----------|--------|--------|------------|----------|-------|-------|
| London   | 560      | 84,882 | 10,065 | Hull       | 115      | 7,564 | 187   |
| Bristol  | 165      | 17,378 | 2,339  | Whitby     | 110      | 8,292 | 571   |
| Yarmouth | 143      | 9,914  | 668    | Liverpool  | 102      | 8,619 | 1,101 |
| Exeter   | 121      | 7,167  | 978    | Seaborough | 100      | 6,860 | 606   |

None of the other ports had 100 vessels; and there is some mistake in the returns as to the tonnage assigned to Newcastle and Ipswich. Of the Hull vessels, 80 were at the time laid up, which accounts for the small number of men in that port. — (*Macpherson's Annals of Commerce*, anno 1701.)

The following Table of the British and foreign shipping cleared outwards from 1663 to 1811, both inclusive, is taken from the last edition of *Mr. Cladine's Comparative Estimate*. It gives a very complete view of the progress of the navigation of the country; and from the attention paid by the author to such subjects, and the facilities which his situation in the Board of Trade gave him for acquiring authentic information, its accuracy may be depended on.

I. Table of Ships cleared Outwards from 1663 to 1811.

N. B. — The falling off in the number of ships in 1827 is apparent only. The numbers returned in the previous years were those that appeared on the registers. But a ship, when once placed on them, remained till evidence was produced of her having been sold to foreigners, lost, or otherwise destroyed; so that a good many ships were at all times on the register, which, in fact, did not exist. The Registry Act passed in 1826 obliged all owners of ships to register them of new; when, of course, the names of those that had ceased to exist disappeared from the books. We have already noticed the enormous extent to which this sort of blunder was permitted to grow up in the United States. — (See ante, p. 845.)

VIII. An Account of the Number of Ships or Vessels belonging to the different Ports of the British Empire in 1832, stated in succession, agreeably to the Amount of Tonnage belonging to each; and specifying also the Number of the Crews. — (Obtained from the Custom-house, for this work.)

*Ship-building.* — The cost, including the outfit, of the ships built in 1832, may, we believe, be taken, at a rough average, at from 10*l.* to 12*l.* per ton, or 11*l.* at a medium, making their total value 1,302,237*l.* London, Sunderland, Newcastle, Liverpool, Hull, Yarmouth, &c. are the principal building ports. The business has increased with extraordinary rapidity at Sunderland; so much so, that while only 60 ships, of the burden of 7,560 tons, were built in that port in 1820, no fewer than 109 ships, of the burden of 24,519 tons, were built in it in 1832. Ships built at London, Liverpool, Bristol, and other western ports, are, however, in higher estimation than those built on the Tyne and the Wear, at least for those branches of trade where the best ships are required. Within the last few years, a great many steam boats have been built on the Clyde. — (As to building in the Isle of Man, see next paragraph.)

*State of the Shipping Interest.* — A great deal of evidence was taken by the Committee of the House of Commons on Trade, Manufactures, &c., in 1833, on the state of the shipping interest. The statements made by some of the witnesses differ very materially from those of others; but, on the whole, they go to show that it was then, and had been for some years, very much depressed. It is difficult, however, seeing the number of new ships that are every year built, not to suspect that the complaints of the ship owners are very much exaggerated. No doubt their profits are a good deal lower than they were during the war; but this, if it be really an evil, is one that is not peculiar to them, but equally affects agriculturists, manufacturers, and merchants; and is not even confined to this country, but extends to others. We have already shown the groundlessness of the clamour raised against the reciprocity treaties (*anté*, p. 822); which, far from being injurious, have been signally beneficial to our commercial and shipping interests. It is believed that, owing to the peculiar facilities afforded by means of docks and other devices for the loading and unloading of ships, the employment of steam tugs to bring them quickly to their moorings and to take them to sea, and the greater economy and despatch that now pervade every department of the business, 3 ships are able to perform, and do, in fact, perform, as much work as was done by 4 at the end of the war! There has, in this way, been a virtual addition of 400,000 or 500,000 tons to our mercantile navy. And this surely is enough, without looking at any thing else, to account for the decline in the rate of freight since 1815.

The fall in the value of ships has been a consequence of the still greater fall in the value of the timber, iron, hemp, &c. of which they are constructed; and, however injurious to those who happened to have bought or built ships during the high prices, it is in no ordinary degree advantageous to the public, and to the ship owners that are now engaging in the trade. The heavy discriminating duties on Baltic timber are, in fact, the only real grievance under which our shipping interest labours. Were it not for them, ships might be built cheaper in England than in any other country. Such, however, is the vast importance to a maritime nation like this of being able to build ships at the lowest possible rate, that we think they ought to be allowed to be built in bond, or, if that would be inconvenient, that a drawback should be allowed of the duty on every article used in their construction. A measure of this sort would give to the shipping of England the same superiority, in point of cheapness, that is now enjoyed by our cottons; and would do more than any thing else to consolidate and strengthen the foundations of our maritime ascendancy. It is entirely owing to the operation of the duties that so many ships are now built in the colonies. They are very inferior to those built in England; and were the latter built in bond, or were the duties on the articles used in their construction drawn back, they would also be the cheapest of the two.

It may be worth mentioning, as illustrative of the singular anomalies that have been allowed to insinuate themselves into our commercial system, that timber may be imported into the Isle of Man, or into any other British possession, without regard to its origin, on payment of an *ad valorem* duty of 10 per cent. It is remarkable that advantage was not earlier taken of this anomaly, to build ships in the Isle of Man. Latterly, however, several vessels have been built in it; and it is clear that, unless it be placed on the same footing as the other parts of the empire, it will become the grand seat of the ship building business. We hope, however, that the equalisation will be made, not by extending our timber laws to the Isle of Man, but by giving to Britain and Ireland the same advantages as it enjoys. There cannot be a doubt that the equalisation of the timber duties would be one of the greatest improvements which it is possible to make in our commercial system.

*Mercantile Navy of France.* — We have elsewhere given (see *anté*, pp. 641, 642.) very full details with respect to the navigation and shipping of France; but the subjoined classified account of the shipping belonging to that kingdom on the 1st of January, 1830, 1831, and 1832, may not be unacceptable to our readers.

Account of the Mercantile Marine of France on the 1st of January of each of the Three Years ending with 1832.

on board British ships; and, 2dly, those required by the law of nations to be on board neutral ships, to vindicate their title to that character. Mr. Serjeant Marshall, following M. Hubner (*De la Saïsie des Bâtimens Neutres*, tome i. pp. 241—252.), has given the following description of the latter class of documents:—

1. *The Passport, Sea Brief, or Sea Letter.*— This is a permission from the neutral state to the captain or master of the ship, to proceed on the voyage proposed, and usually contains his name and residence; the name, property, description, tonnage, and destination of the ship; the nature and quantity of the cargo, the place whence it comes, and its destination; with such other matters as the practice of the place requires. This document is indispensably necessary for the safety of every neutral ship. Hubner says, that it is the only paper rigorously insisted on by the Barbary corsairs; by the production of which alone their friends are protected from insult.

2. *The Proofs of Property.*— These ought to show that the ship really belongs to the subjects of a neutral state. If she appear to either belligerent to have been built in the enemy's country, proof is generally required that she was purchased by the neutral before, or captured and legally condemned and sold to the neutral after, the declaration of war; and in the latter case the *bill of sale*, properly authenticated, ought to be produced. M. Hubner admits that these proofs are so essential to every neutral vessel, for the prevention of frauds, that such as sail without them have no reason to complain if they be interrupted in their voyages, and their neutrality disputed.

3. *The Muster Roll.*— This, which the French call *rôle d'équipage*, contains the names, ages, quality, place of residence, and, above all, the *place of birth*, of every person of the ship's company. This document is of great use in ascertaining a ship's neutrality. It must naturally excite a strong suspicion, if the majority of the crew be found to consist of foreigners; still more, if they be natives of the enemy's country. — (See SEAMEN.)

4. *The Charterparty.*— Where the ship is chartered, this instrument serves to authenticate many of the facts on which the truth of her neutrality must rest, and should therefore be always found on board chartered ships.

5. *The Bills of Lading.*— By these the captain acknowledges the receipt of the goods specified therein, and promises to deliver them to the consignee or his order. Of these there are usually several duplicates; one of which is kept by the captain, one by the shipper of the goods, and one transmitted to the consignee. This instrument, being only the evidence of a private transaction between the owner of the goods and the captain, does not carry with it the same degree of authenticity as the charterparty.

6. *The Invoices.*— These contain the particulars and prices of each parcel of goods, with the amount of the freight, duties, and other charges thereon, which are usually transmitted from the shippers to their factors or consignees. These invoices prove by whom the goods were shipped, and to whom consigned. They carry with them, however, but little authenticity; being easily fabricated where fraud is intended.

7. *The Log Book, or Ship's Journal.*— This contains a minute account of the ship's course, with a short history of every occurrence during the voyage. If this be faithfully kept, it will throw great light on the question of neutrality; if it be in any respect fabricated, the fraud may in general be easily detected.

8. *The Bill of Health.*— This is a certificate, properly authenticated, that the ship comes from a place where no contagious distemper prevails; and that none of the crew, at the time of her departure, were infected with any such disorder. It is generally found on board ships coming from the Levant, or from the coast of Barbary, where the plague so frequently prevails.

A ship using false or simulated papers is liable to confiscation. — (*Marshall on Insurance*, book i. c. 9. § 6.)

**SHOES** (Du. *Schoenen*; Fr. *Souliers*; Ger. *Schuhe*; It. *Scarpe*; Rus. *Naschmaki*; Sp. *Zapatos*), articles of clothing that are universally worn, and require no description. The shoe manufacture is of great value and importance. The finest sort of shoes is made in London; but the manufacture is carried on upon the largest scale in Northamptonshire and Staffordshire. The London warehouses derive considerable supplies from Nantwich, Congleton, and Sandbach, in Cheshire. During the late war, the contractor for shoes generally furnished about 600,000 pairs annually. — (For an estimate of the value of the shoes annually manufactured in Britain, see LEATHER.)

**SHUMAC** or **SUMACH** (Ger. *Schmack*, *Sumach*; Fr. *Sumac*, *Rowre*, *Roux*; It. *Sommaço*; Sp. *Zumaque*; Rus. *Sumak*). Common shumac (*Rhus Coriaria*) is a shrub that grows naturally in Syria, Palestine, Spain, and Portugal. That which is cultivated in Italy, and is improperly called *young fustic*, is the *Rhus Cotinus*. It is cultivated with great care: its shoots are cut down every year quite to the root; and, after being dried, they are chipped or reduced to powder by a mill, and thus prepared for the purposes of dyeing and tanning. The shumac cultivated in the neighbourhood of Montpellier is called *rétoul* or *roudou*. Shumac may be considered of good quality when its odour is strong, colour of a lively green, is well ground, and free from stalks. Italian shumac

is used in dyeing a full high yellow, approaching to the orange, upon wool or cloth; but the colour is fugitive. Common shumac is useful for drub and dove colours in calico printing, and is also capable of dyeing black. — (*Bancroft on Colours*, vol. ii. p. 100.)

The entries of shumac for home consumption amounted, at an average of 1832 and 1833, to 138,241 cwt. a year. The imports are almost entirely from Italy.

Shumac, the produce of Europe, may not be imported for home consumption except in British ships, or in ships of the country of which it is the produce, or from which it is imported, under penalty of confiscation, and forfeiture of 100*l.* by the master of the ship. — (3 & 4 *Will. 4.* c. 54. §§ 2. and 22.)

SIERRA LEONE, an English settlement, near the mouth of the river of the same name, on the south-west coast of Africa, in lat. 8° 30' N., lon. 13° 5' W.

*Objects of the Colony.* — This colony was founded partly as a commercial establishment, but more from motives of humanity. It was intended to consist principally of free blacks, who, being instructed in the Christian religion, and in the arts of Europe, should become, as it were, a focus whence civilisation might be diffused among the surrounding tribes. About 1,200 free negroes, who, having joined the royal standard in the American war, were obliged, at the termination of that contest, to take refuge in Nova Scotia, were conveyed thither in 1792: to these were afterwards added the Maroons from Jamaica; and, since the legal abolition of the slave trade, the negroes taken in the captured vessels, and liberated by the mixed commission courts, have been carried to the colony. The total population of the colony in 1831 amounted to 31,627, of which 18,073 were males, and 13,554 females. The whites make but a very small fraction of the population.

*Success of the Efforts to civilise the Blacks.* — Great efforts have been made to introduce order and industrious habits amongst these persons. We are sorry, however, to be obliged to add, that these efforts, though prosecuted at an enormous expense of blood and treasure, have been signally unsuccessful. There is, no doubt, much discrepancy in the accounts as to the progress made by the blacks. It is, however, sufficiently clear, that it has been very inconsiderable, and we do not think that any other result could be rationally anticipated. Their laziness has been loudly complained of, but without reason. Men are not industrious without a motive; and most of those motives that stimulate all classes in colder climates to engage in laborious employments, are unknown to the indolent inhabitants of this burning region, where clothing is of little importance, where sufficient supplies of food may be obtained with comparatively little exertion, and where more than half the necessaries and conveniences of Europeans would be positive incumbrances. And had it been otherwise, what progress could a colony be expected to make, into which there are annually imported thousands of liberated negroes, most of whom are barbarians in the lowest stage of civilisation?

*Influence of the Colony upon the illicit Slave Trade.* — As a means of checking the prevalence of the illicit slave trade, the establishment of a colony at Sierra Leone has been worse than useless. That trade is principally carried on with the countries round the bight of Biafra and the bight of Benin, many hundred miles distant from Sierra Leone; and the mortality in the captured ships during their voyage to the latter is often very great. In fact, there is but one way of putting down this nefarious traffic; and that is, by the great powers declaring it to be piracy, and treating those engaged in it, wherever and by whomsoever they may be found, as sea robbers or pirates. Such a declaration would be quite conformable to the spirit of the declaration put forth by the Congress of Vienna in 1824. — (See *SLAVE TRADE*.) And were it subscribed by England, France, the United States, Russia, &c., the Spaniards and Portuguese would be compelled to relinquish the trade; but unless something of this sort be done, we are afraid there are but slender grounds for thinking that humanity will speedily be relieved from the guilt and suffering inseparable from the traffic.

*Climate of Sierra Leone.* — The soil in the vicinity of Sierra Leone seems to be but of indifferent fertility, and the climate is about the most destructive that can be imagined. The mortality among the Africans sent to it seems unusually great; and amongst the whites it is quite excessive. Much as we desire the improvement of the blacks, we protest against its being attempted by sending our countrymen to certain destruction in this most pestiferous of all pestiferous places. It would seem, too, that it is quite unnecessary, and that instructed blacks may be advantageously employed to fill the official situations in the colony. But if otherwise, it ought to be unconditionally abandoned.

*Commerce of Sierra Leone, and the West Coast of Africa.* — Commercially considered, Sierra Leone appears to quite a little advantage as in other points of view. We import from it teak wood, camwood, ivory, palm oil, hides, gums, and a few other articles; but their value is inconsiderable, amounting to not more than 40,000*l.* to 60,000*l.* a year. The great article of import from the coast of Africa is palm oil, and of this more than fifty times as much is imported from the coast to the south of the Rio Volta, several hundred miles from Sierra Leone, as from the latter. We doubt, indeed,

whether the commerce with the western coast of Africa will ever be of much importance. The condition of the natives would require to be very much changed before they can become considerable consumers of European manufactures. It is singular, that speculative persons in this country should be so much bent on prosecuting, without regard to expense, a trade with barbarous uncivilised hordes, while they contribute to the neglect or oppression of the incomparably more extensive and beneficial intercourse we might carry on with the opulent and civilised nations in our immediate vicinity. The equalisation of the duties on Canadian and Baltic timber, and the abolition of the existing restraints on the trade with France, would do 10 times more to extend our commerce, than the discovery of 50 navigable rivers, and the possession of as many forts on the African coast. If, however, an establishment be really required for the advantageous prosecution of the trade to Western Africa, it is abundantly obvious that it should be placed much further to the south than Sierra Leone. The island of Fernando Po has been suggested for this purpose; but after the dear-bought experience we have already had, it is to be hoped that nothing will be done with respect to it without mature consideration.

Exclusive of the above, we exported, in 1829, to the western coast of Africa, 161,431l. worth of foreign and colonial merchandise; of this amount, 43,550l. worth went to the coast south of the Rio Volta.

*Expenses incurred on account of Sierra Leone.* — The pecuniary expense occasioned by this colony, and our unsuccessful efforts to suppress the foreign slave trade, have been altogether enormous. Mr. Keith Douglas is reported to have stated, in his place in the House of Commons, in July, 1831, that “down to the year 1824, the *civil* expenses of Sierra Leone amounted to 2,268,000*l.*; and that the same expenses had amounted, from 1824 to 1830, to 1,082,000*l.* The naval expenses, from 1807 to 1824, had been 1,630,000*l.* The payments to Spain and Portugal, to induce them to relinquish the slave trade, amounted to 1,230,000*l.* The expenses on account of captured slaves were 533,092*l.* The expenses incurred on account of the mixed commission courts were 198,000*l.* Altogether, this establishment had cost the country nearly 8,000,000*l.*!”

The prodigality of this expenditure is unmatched, except by its uselessness. It is doubtful whether it has prevented a single African from being dragged into slavery, or conferred the smallest real advantage on Africa. The kings of Spain and Portugal have certainly turned their spurious humanity to pretty good account. We hope there is now, at least, an end of all attempts to bribe such monarchs to respect the rights of humanity, or the treaties into which they have entered.

For further details with respect to Sierra Leone, and the trade of Western Africa, see the *Report of the Select Committee of the House of Commons*, No. 661. Sess. 1830.

**SILK** (Lat. *Sericum*, from *Seres*, the supposed ancient name of the Chinese), a fine glossy thread or filament spun by various species of caterpillars or larvæ of the *phalæna* genus. Of these, the *Phalæna atlas* produces the greatest quantity: but the *Phalæna bombyx* is that commonly employed for this purpose in Europe. The silkworm, in its caterpillar state, which may be considered as the first stage of its existence, after acquiring its full growth (about 3 inches in length), proceeds to enclose itself in an oval-shaped ball, or cocoon, which is formed by an exceedingly slender and long filament of fine yellow silk, emitted from the stomach of the insect preparatory to its assuming the shape of the chrysalis or moth. In this latter stage, after emancipating itself from its silken prison, it seeks its mate, which has undergone a similar transformation; and in 2 or 3 days afterwards, the female having deposited her eggs (from 300 to 500 in number), both insects terminate their existence. According to Reaumur, the *phalæna* is not the only insect that affords this material, — several species of the *aranea*, or spider, enclose their eggs in very fine silk.

*Raw Silk* is produced by the operation of winding off, at the same time, several of the balls or cocoons (which are immersed in hot water, to soften the natural gum on the filament) on a common reel, thereby forming one smooth even thread. When the skein is dry, it is taken from the reel and made up into hanks; but before it is fit for weaving, and in order to enable it to undergo the process of dyeing, without furring up or separating the fibres, it is converted into one of three forms; viz. *singles*, *tram*, or *organzine*.

*Singles* (a collective noun) is formed of *one* of the reeled threads, being twisted, in order to give it strength and firmness.

*Tram* is formed of 2 or more threads twisted together. In this state it is commonly used in weaving, as the *shoot* or *weft*.

*Thrown Silk* is formed of 2, 3, or more *singles*, according to the substance required, being twisted together in a *contrary* direction to that in which the *singles* of which it is composed are twisted. This process is termed *organzining*; and the silk so twisted, *organzine*. The art of throwing was originally confined to Italy, where it was kept a secret for a long period. Stow says it was known in this country since the 5th of Queen Elizabeth, “when it was gained from the strangers;” and in that year (1562), the silk throwsters of the metropolis were united into a fellowship. They were incorporated in the year 1629; but the art continued to be very imperfect in England until 1719. — (See *post*.)

1. *Historical Sketch of the Manufacture.* — The art of rearing silkworms, of unravelling the threads spun by them, and manufacturing the latter into articles of dress and ornament, seems to have been first practised by the Chinese. Virgil is the earliest of the Roman writers who has been supposed to allude to the production of silk in China, and the terms he employs show how little was then known at Rome as to the real nature of the article: —

Velleraque ut foliis depectant tenuia Seres. — (*Georg.* book ii. lin. 121.)

But it may be doubted whether Virgil do not, in this line, refer to cotton rather than silk. Pliny, however, has distinctly described the formation of silk by the *bombyx*. — (*Hist. Nat.* lib. xi. c. 17.) It is uncertain when it first began to be introduced at Rome: but it was most probably in the age of Pompey and Julius Cæsar; the latter of whom displayed a profusion of silks in some of the magnificent theatrical spectacles with which he sought at once to conciliate and amuse the people. tance of China from Rome, and to the difficulties in the way of the intercourse with that country, which was carried on by land in caravans whose route lay through the Persian empire, and partly, perhaps, to the high price of silk in China, its cost, when it arrived at Rome, was very great; so much so, that a given weight of silk was sometimes sold for an equal weight of gold! At first it was only used by a few ladies eminent for their rank and opulence. In the beginning of the reign of Tiberius, a law was passed, *ne vestis sericea viros fedaret* — that no man should disgrace himself by wearing a silken garment. — (*Tacit. Annal. lib. ii. c. 33.*) But the profligate Heliogabalus despised this law, and was the first of the Roman emperors who wore a dress composed wholly of silk (*holosericum*). The example once set, the custom of wearing silk soon became general among the wealthy citizens of Rome, and throughout the provinces. According as the demand for the article increased, efforts were made to import larger quantities; and the price seems to have progressively declined from the reign of Aurelian. That this must have been the case, is obvious from the statement of Ammianus Marcellinus, that silk was, in his time (anno 370), very generally worn, even by the lowest classes. *Sericum ad usum antea nobilitium, nunc etiam infimorum sine ulla discretione proficiens.* — (*Lib. xviii. c. 6.*)

China continued to draw considerable sums from the Roman empire in return for silk, now become indispensable to the Western World, till the 6th century. About the year 550, two Persian monks, who had long resided in China, and made themselves acquainted with the mode of rearing the silkworm, encouraged by the gifts and promises of Justinian, succeeded in carrying the eggs of the insect to Constantinople. Under their direction they were hatched and fed; they lived and laboured in a foreign climate; a sufficient number of butterflies was saved to propagate the race, and mulberry trees were planted to afford nourishment to the rising generations. A new and important branch of industry was thus established in Europe. Experience and reflection gradually corrected the errors of a new attempt; and the Sogdoite ambassadors acknowledged, in the succeeding reign, that the Romans were not inferior to the natives of China in the education of the insects, and the manufacture of silk. — (*Gibbon, Decline and Fall, vol. vii. p. 99.*)

Greece, particularly the Peloponnesus, was early distinguished by the rearing of silkworms, and by the skill and success with which the inhabitants of Thebes, Corinth, and Argos carried on the manufacture. Until the 12th century, Greece continued to be the only European country in which these arts were practised: but the forces of Roger, king of Sicily, having, in 1147, sacked Corinth, Athens, and Thebes, carried off large numbers of the inhabitants to Palermo; who introduced the culture of the worm, and the manufacture of silk, into Sicily. From this island the arts spread into Italy; and Venice, Milan, Florence, Lucca, &c. were soon after distinguished for their success in raising silkworms, and for the extent and beauty of their manufactures of silk. — (*Gibbon, vol. x. p. 110.*; *Biographie Universelle, art. Roger II.*)

The silk manufacture was introduced into France in 1480; Louis XI. having invited workmen from Italy, who established themselves at Tours. The manufacture was not begun at Lyons till about 1520; when Francis I., having got possession of Milan, prevailed on some artisans of the latter city to establish themselves, under his protection, in the former. Nearly at the same period the rearing of silkworms began to be successfully prosecuted in Provence, and other provinces of the south of France. Henry IV. rewarded such of the early manufacturers as had supported and pursued the trade for 12 years, with patents of nobility.

*Silk Manufacture of England.* — The manufacture seems to have been introduced into England in the 15th century. Silk had, however, been used by persons of distinction two centuries previously. The manufacture does not appear to have made much progress till the age of Elizabeth; the tranquillity of whose long reign, and the influx of Flemings occasioned by the disturbances in the Low Countries, gave a powerful stimulus to the manufactures of England. The silk throwsters of the metropolis were united, as already observed, in a fellowship, in 1562; and were incorporated in 1629. Though retarded by the civil wars, the manufacture continued gradually to advance; and so flourishing had it become, that it is stated in a preamble to a statute passed in 1666 (13 & 14 Cha. 2. c. 15.), that there were at that time no fewer than 40,000 individuals engaged in the trade! And it is of importance to observe, that though the importation of French and other foreign silks was occasionally prohibited during the reigns of James I. and Charles I., the Protectorate, and the reign of Charles II., the prohibition was not strictly enforced; and, generally speaking, their importation was quite free.

A considerable stimulus, though not nearly so great as has been commonly supposed, was given to the English silk manufacture by the revocation of the edict of Nantes, in 1685. Louis XIV. drove, by that disgraceful measure, several hundreds of thousands of his most industrious subjects to seek an asylum in foreign countries; of whom it is supposed about 50,000 came to England. Such of these refugees as had been engaged

in the silk manufacture established themselves in Spitalfields, where they introduced several new branches of the art. When the refugees fled to England, foreign silks were freely admitted; and it appears from the Custom-house returns, that from 600,000*l.* to 700,000*l.* worth were annually imported in the period from 1685 to 1692, being the very period during which the British silk manufacture made the most rapid advances. But the manufacture was not long permitted to continue on this footing. In 1692, the refugees, who seem to have been quite as conversant with the arts of monopoly as with those either of spinning or weaving, obtained a patent, giving them an exclusive right to manufacture lustrings and *à-la-modes*,—the silks then in greatest demand. This, however, was not enough to satisfy them; for, in 1697, Parliament passed an act, in compliance with their solicitations, prohibiting the importation of all French and other European silk goods; and, in 1701, the prohibition was extended to the silk goods of India and China.

These facts show the utter fallacy of the opinion so generally entertained, that we owe the introduction and establishment of the silk manufacture to the prohibitive system. So far from this being the case, it is proved, by statements in numerous acts of parliament, and other authentic documents, that the silk manufacture had overcome all the difficulties incident to its first establishment, had been firmly rooted, and had become of great value and importance, long before it was subjected to the trammels of monopoly; that is, before the manufacturers were taught to trust more to fiscal regulations, and the exertions of Custom-house officers, than to their skill and ingenuity, for the sale of their goods.

The year 1719 is an important epoch in the history of the British silk manufacture; a patent being then granted to Mr. (afterwards Sir Thomas) Lombe and his brother, for the exclusive property of the famous silk mill erected by them at Derby, for throwing silk, from models they had clandestinely obtained in Italy. At the expiration of the patent, Parliament refused the prayer of a petition of Sir Thomas Lombe for its renewal; but granted him 14,000*l.* in consideration of the services he had rendered the country, in erecting a machine which, it was supposed, would very soon enable us to dispense wholly with the supplies of thrown silk we had previously been in the habit of importing from Italy: but instead of being of any advantage, it is most certainly true that the establishment of throwing mills in England has proved one of the most formidable obstacles to the extension of the manufacture amongst us. These mills could not have been constructed unless oppressive duties had been laid on thrown or organzine silk; and the circumstance of their having been erected, and a large amount of capital vested in them, was successfully urged, for more than a century, as a conclusive reason for continuing the high duties!

From this period down to 1824, the history of the silk manufacture presents little more than complaints, on the part of the manufacturers, of the importation of foreign silks; impotent efforts on the part of parliament to exclude them; and combinations and outrages on the part of the workmen. Of the multitude of acts that have been passed in reference to this manufacture, from 1697 to the era of Mr. Huskisson, we believe it would be exceedingly difficult to point out one that is bottomed on any thing like a sound principle, or that was productive of any but mischievous consequences. The French writers estimate the average exportation of silks from France to England, during the period from 1688 to 1741, at about 12,500,000 francs, or 500,000*l.* a year! In 1763, attempts were made to check the prevalence of smuggling; and the silk mercers of the metropolis, to show their anxiety to forward the scheme, are said to have recalled their orders for foreign goods! It would seem, however, either that their patriotic ardour had very soon cooled, or that they had been supplanted by others not quite so scrupulous; for it appears from a report of a committee of the privy council, appointed, in 1766, to inquire into the subject, that smuggling was then carried on to a greater extent than ever, and that 7,072 looms were out of employment. The same committee reported, that though the French were decidedly superior to us in some branches of the trade, we were quite equal, and even superior to them in others; but instead of proposing, consistently with their report, to admit French silks on a reasonable duty,—a measure which would have proved very advantageous to those branches of the manufacture in which we were superior, or nearly equal, to the French, without doing any material injury to the others, which were already in the most depressed condition,—they recommended the continuance of the old system; substituting absolute prohibitions in the place of the prohibitory duties that formerly existed! Whatever immediate advantages the manufacturers might have reaped from this measure, the ultimate tendency of which could not fail of being most injurious, were effectually countervailed by the turbulent proceedings of the workmen, who succeeded, in 1773, in obtaining from the legislature an act which, by itself, was quite sufficient to have destroyed even a prosperous trade. This, which has been commonly called the Spitalfields Act, entitled the weavers of Middlesex to demand a fixed price for their labour, which should be settled by the magistrates; and while both masters and men

were restricted from giving or receiving more or less than the fixed price, the manufacturers were liable in heavy penalties if they employed weavers out of the district! The monopoly which the manufacturers had hitherto enjoyed, though incomplete, had had sufficient influence to render inventions and discoveries of comparatively rare occurrence in the silk trade; but the Spitalfields Act extinguished every germ of improvement. Parliament, in its wisdom, having seen fit to enact that a manufacturer should be obliged to pay as much for work done by the best machinery as if it were done by hand, it would have been folly to have thought of attempting any thing new! It is not, however, to be denied that Macclesfield, Manchester, Norwich, Paisley, &c. are under obligations to this act. Had it extended to the whole kingdom, it would have totally extirpated the manufacture; but being confined to Middlesex, it gradually drove the most valuable branches from Spitalfields to places where the rate of wages was determined by the competition of the parties, on the principle of mutual interest and compromised advantage. After having done incalculable mischief, the act was repealed in 1824. Had it continued down to the present day, it would not have left employment in the metropolis for a single silk weaver.

But, as the effects of this act did not immediately manifest themselves, it was at first exceedingly popular. About 1785, however, the substitution of cottons in the place of silk gave a severe check to the manufacture, and the weavers then began to discover the real nature of the Spitalfields Act. Being interdicted from working at reduced wages, they were totally thrown out of employment; so that, in 1793, upwards of 4,000 Spitalfields looms were quite idle. In 1798, the trade began to revive; and continued to extend slowly till 1815 and 1816, when the Spitalfields weavers were again involved in sufferings far more extensive and severe than at any former period.

It appears from this brief sketch of the progress of the English silk trade, that from the year 1695, down to our own times, it has been exposed to the most appalling vicissitudes. The reason is obvious. The monopoly enjoyed by the manufacturers, and the Spitalfields Act, effectually put a stop to all improvement; so that the manufacture continued stationary in England, while on the Continent it was rapidly advancing. Whenever, therefore, the markets were, either from the miscalculation of the manufacturers, or a change of fashion, overloaded with silks, there were no means of disposing of the surplus profitably abroad, and the distress became extreme. Notwithstanding the unparalleled advances we had made in other departments of manufacturing industry, it was affirmed, in 1826, by the member for Coventry (Mr. Ellice), in his place in the House of Commons, "that there were in that city 9,700 looms; 7,500 of which were in the hands of operative weavers, who applied their manual labour, as well as their machinery, to the manufacture of ribands. These looms were, for the most part, of the *worst possible construction*; and it would scarcely be believed that the improved loom in France would, in a given time, produce 5 times as much riband as the common loom in England with the same manual labour! He could also state that there existed an improved manufacture in Germany, by which one man could make *forty-eight times as much velvet as could be made in an equal time by an English machine*. What chance was there that the English manufacturer could maintain such a competition?"

Perhaps these statements may be somewhat exaggerated; but there can be no doubt that they are substantially well founded. Surely, however, no one believes that the inferiority of the machinery used by the English manufacturers is to be ascribed to any thing except that the protection they enjoyed had made them indifferent to improvements. No one believes that the French or Germans are superior to the English in the construction of machines; on the contrary, their inferiority is admitted by themselves, and by every body else. That that spirit of invention, which has effected such astonishing results in the cotton manufacture, should have been wholly unknown in that of silk, is entirely to be ascribed to the fact of the former never having been the object of legislative protection. The cotton manufacturers were not bribed into the adoption of a routine system; they could not rest satisfied with mediocrity; but being compelled to put forth all their powers—to avail themselves of every resource of science and of art—they have, in a few years, raised the British cotton manufacture from a subordinate and trifling, to the very first place amongst the manufactures, not of this country only, but of the world!

*Change, in 1826, of the Monopoly System.*—At length, however, the impolicy of the system by which the silk manufacture had been so long depressed, became obvious to every intelligent individual. The principal manufacturers in and about London subscribed, in 1824, a petition to the House of Commons, in which they stated that "this important manufacture, though recently considerably extended, is still depressed below its natural level, by laws which prevent it from attaining that degree of prosperity which, under more favourable circumstances, it would acquire." Fortified by this authority, by the experience of 130 years, during which the prohibitive system had been allowed to paralyse the energies of the manufacturers, and by the sanction of parliamentary

committees, Mr. Huskisson moved, on the 8th of March, 1824, that the prohibition of foreign silks should cease on the 5th of July, 1826, and that they should then be admitted for importation on payment of a duty of 30 per cent. *ad valorem*. On this occasion Mr. H. observed — “The monopoly had produced, what monopoly was always sure to produce, an indifference with regard to improvement. That useful zeal which gives life to industry, which fosters ingenuity, and which in manufactures occasions unceasing efforts to produce the article in the most economical form, had been comparatively extinguished. *To the prohibitive system it was to be ascribed, that in silk only, in the whole range of manufactures, we were left behind our neighbours!* We have here a proof of that chilling and benumbing effect which is sure to be produced when no genius is called into action, and when we are rendered indifferent to exertion by the indolent security derived from restrictive regulations. I have not the slightest doubt, that if the same system had been continued with respect to the cotton manufacture, it would have been at this moment as subordinate in amount to the woollen as it is junior in its introduction into the country.” — (*Speeches*, vol. ii. p. 249.)

We have already alluded to the enormous duties imposed, in 1719, when Sir Thomas Lombe erected his throwing mill at Derby, on foreign organzine silk. These, though subsequently reduced, amounted, in 1824, to no less than 14s. 7½*d.* per lb. ! There was also, at the same time, a duty of 4s. per lb. on raw silk imported from Bengal, and of 5s. 7½*d.* per lb. on that imported from other places. Even had the manufacture been otherwise in a flourishing condition, such exorbitant duties on the raw material were enough to have destroyed it. Mr. Huskisson, therefore, proposed, by way of preparing the manufacturers for the approaching change of system, that the duty on foreign thrown silk should be immediately reduced to 7s. 6*d.* (it was further reduced to 5s. in 1826), and the duty on raw silk to 3*d.* per lb. These proposals were all agreed to; and considerable reductions were at the same time effected in the duties charged on most of the dye stuffs used in the manufacture.

It is to be regretted that Mr. Huskisson did not propose that the reduction of the duties on raw and thrown silk, and the legalised importation of foreign silks, should be simultaneous and immediate. During the interval that was allowed our manufacturers to make preparations for the change, the French had been accumulating a large stock of goods to pour into our markets. To quiet the alarm occasioned by this circumstance, a singular device was fallen upon. — The French had long been accustomed to manufacture their goods of a certain length: and, in the view of rendering their accumulated stock unfit for our markets, a law was passed in 1826, prohibiting the importation of any silks except such as were of entirely different lengths from those commonly manufactured by the French! No one can regret that this wretched trick, for it deserves no better name, entirely failed of its object. The French manufacturers immediately commenced, with redoubled zeal, the preparation of goods of the legitimate length: and the others, having become unsaleable at any thing like fair prices, were purchased up by the smugglers, and imported, almost entirely, into this country.

But no permanent injury arose from this circumstance; and, on the whole, the effect of the opening of the trade has been such as to justify all the anticipations which the advocates of the measure had formed of its success.

*Effects of the Change of 1826.* — We do not exaggerate, we only state the plain matter of fact, when we affirm that the silk manufacture has made a more rapid progress during the last 8 years, or since the abolition of the prohibitive system in 1826, than it did during the preceding century. So unprecedented has been its advance, that “the once existing disparity in quality between goods of French and English make has, with some very unimportant exceptions, not merely disappeared, but actually ranged itself on the side of the British artisan.” Some of our readers will, probably, be not a little surprised to learn, that the real or declared value of the silk goods of British manufacture exported to France, in 1832, amounted to 75,187*l.*

Most of the machines and processes known on the Continent have been introduced amongst us, and many of them have been materially improved. Nor, after what has taken place, can the least doubt remain in the mind of any one, that had the same freedom been given to the silk manufacture 50 years ago, that was given to it in 1826, it would now have ranked among the most important and valuable businesses in the kingdom, and would have had nothing whatever to fear from the admission of foreign silks, free of duty. It is the opinion of the most intelligent persons in the trade, that the existing duty of 30 per cent. on foreign silks ought to be reduced to 20 per cent.; and that it should be further reduced 1 per cent. per annum till it be brought to 12 or 15 per cent., at which it might be allowed to continue stationary, not as a protecting duty, but as a duty imposed for the sake of revenue. A measure of this sort, by increasing *fair* competition, would continue the impulse already given to the manufacture, and excite to new efforts of invention. Under such a system, we are well assured that, in a very few years, perhaps not more than 5 or 6, our superiority over France in

some important departments of the silk manufacture would be little less decided than in that of cotton.

"I maintain," said Mr. Poulett Thomson, in his excellent speech on the state of the silk trade (14th of April, 1829), — a speech equally distinguished for soundness of principle and beauty of illustration, — "I maintain, without fear of contradiction, that the very essence of commercial and manufacturing industry is freedom from legislative interference and legislative protection. Attempt to assist its course by legislative enactments, by fostering care, you arrest its progress, you destroy its vigour. Unbind the shackles in which your unwise tenderness has confined it — permit it to take unrestrained its own course — expose it to the wholesome breezes of competition, — you give it new life, you restore its former vigour. Industry has been well likened to the hardy Alpine plant; self-sown on the mountain side, exposed to the inclemency of the season, it gathers strength in its struggles for existence — it shoots forth in vigour and in beauty. Transplanted to the rich soil of the parterre, tended by the fostering hand of the gardener, nursed in the artificial atmosphere of the forcing-glass, it grows sickly and enervated, its shoots are vigourless, its flowers inodorous. In one single word lies the soul of industry — competition. The answer of the statesman and the economist to his sovereign inquiring what he could do to assist the industry of his kingdom was, 'Let it take its own way.' Such is my prayer. Relieve us from the chains in which your indiscreet tenderness has shackled us; remove your oppressive protection; give us the fair field we ask; and we demand no more. The talent, the genius, the enterprise, the capital, the industry of this great people will do the rest; and England will not only retain her present position, but she will take a yet more forward place in the race of competition for wealth and improvement which, by the nature of things, she is destined to run amongst the nations of the world. Place us in that condition, not by any violent change, but by slow and easy transition. Here we shall find security for our enterprise, and reward for our labours.

"Hic patet ingenilis campus; certusque merenti  
Stat favor; ornatur propriis industria donis."

It was not, however, to be supposed, that all departments of the silk manufacture would be equally benefited by the change of system that has taken place. — *Non omnia possumus.* The probability is, that the trade will in future be divided between the English and French. In point of substantial excellence, the plain silk goods manufactured in England are superior to those of France; and the difference in favour of the latter in point of *finish* is every day becoming less perceptible; while in all mixed manufactures, of silk and wool, silk and cotton, silk and linen, &c., our ascendancy is admitted by the French themselves. On the other hand, the ribands, figured gauzes, and light fancy goods, manufactured in France, are superior to those of this country. Even in this department we have made a very great progress; and fancy goods are now produced at Spitalfields, Coventry, and other places, contrasting most advantageously, in point of taste and beauty, with those produced previously to the introduction of the new system. Still, however, we are not sanguine in our expectations of our countrymen being able to maintain a successful competition with our neighbours in the manufacture of this class of articles. The greater attention paid to the art of designing in Lyons, the consequent better taste of the artists, and the superior brightness and lustre of their colours, give them advantages with which it will be very difficult to contend.

But, supposing that the trade is partitioned between the two countries in the way now stated, it is easy to see that the best share will belong to us, and that that share will be incomparably more valuable than the whole manufacture formerly was. The proofs of the accuracy of this statement are at hand. Notwithstanding the decline of the trade at Coventry and a few other places, the manufacture, taken as a whole, is rapidly increasing. During 1822 and 1823, when the restrictive system was in its vigour, the entries for consumption of all sorts of raw and thrown silk amounted at an average to 2,454,842 lbs. a year. But, in despite of all the sinister predictions indulged in with respect to the ruin of the manufacture, the entries amounted, at an average of 1832 and 1833, to 4,565,850 lbs.; being an increase of nearly 100 per cent. upon the quantity entered during the monopoly!

The increase in the exports of wrought silks affords, if possible, a still more decisive proof of the extraordinary improvement and extension of the manufacture. Instead of having any thing to fear from the competition of the French at home, we are actually underselling them in the heavier and more important species of goods, in every foreign market equally accessible to both parties. The exports of silks from France have been declining, while those from England have been increasing beyond all precedent. The declared value of our exports of silk goods, in 1823, amounted to 351,409*l.*, whereas in 1833 it amounted to 740,294*l.*, being an advance of more than cent. per cent. 1 Not only, therefore, are the statements as to the ruin of the silk manufacture proved to be wholly without even the shadow of a foundation, but the expectations of those who contended

that the repeal of the restrictive system would be the commencement of a new era of invention and improvement, have been realised to the fullest extent.

What has now been stated renders it obvious, that though the manufacturers of fancy goods may be obliged to change their employment, a new, and at the same time a more extensive and fruitful, field is opened for their exertions. We lament the hardships incident to the transition even from one department of the same business to another, but the suffering thence arising will speedily disappear; and when the change has been effected, the manufacturers will enter with fresh vigour on a new career of prosperity.

It is to be regretted, that it is not possible either to abandon a routine system, or to introduce new and improved methods of production, without injury to individuals. But because such is the fact — because the bridge cannot be built without displacing watermen, nor the plough introduced without superseding the spade, nor wine brought from abroad without diminishing the demand for ale and beer — is that any reason for proscribing inventions, and denying ourselves gratifications within our reach? To maintain the affirmative, would be evidently absurd, — it would be equivalent to maintaining that the interests of society are best promoted by perpetuating poverty, ignorance, and barbarism! The injury occasioned by the adoption of an improved method of production, or the opening of new markets whence cheaper supplies of any article may be obtained, is temporary only, and affects but a very small portion of the community; while the advantage is permanent, and benefits every individual, even those whom it may, in the first instance, have forced to resort to other businesses.

Those unacquainted with the history of the silk trade, who may have looked into the pamphlets and speeches of those opposed to the late alterations, will probably be disposed to think that, though more limited in point of numbers, the condition of the workmen engaged in the trade was better previously to 1825 than it has been since. But those who have looked, however cursorily, into the history of the trade, must know that such is not the fact; and that, speaking generally, the situation of those engaged in it has been materially improved since 1825. We have already adverted to the state of the trade in 1793 and 1816. At the last mentioned period, 7 years before any relaxation of the monopoly had been so much as thought of, the distress in the silk trade was infinitely more severe than it has ever been since the introduction of the new system. In proof of this, we may mention that, at a public meeting held for the relief of the Spitalfields weavers, at the Mansion-house, on the 26th of November, 1816, the secretary stated, that *two thirds* of them were without employment, and without the means of support; “that some had deserted their houses in despair, unable to endure the sight of their starving families; and many pined under languishing diseases brought on by the want of food and clothing.” And Mr. Fowell Buxton, M.P., stated, at the same meeting, that the distress among the silk manufacturers was so intense, that “it partook of the nature of a pestilence, which spreads its contagion around, and devastates an entire district.” Such was the state of the workmen under that monopoly system that has been the worthless theme of so much recent eulogy. But such, we are glad to say, is not their state at present. The trade, being now mostly diverted into those branches in which we have a superiority, is comparatively secure against revulsions; and it would be an absurdity to imagine, that measures that have about doubled the manufacture, should have reduced the rate of wages, or been otherwise than advantageous to the workmen.

We have already noticed the smuggling of foreign silks carried on in the early part and towards the middle of last century. The evil was not afterwards abated. The vigilance of the Custom-house officer was no match for the ingenuity of the smuggler; and at the very moment when the most strenuous efforts were made to exclude them, the silks of France and Hindostan were openly displayed in the drawing-rooms of St. James's, and in the House of Commons, in mockery of the impotent legislation which sought to exclude them. We doubt, indeed, whether the substitution of the *ad valorem* duty of 30 per cent., in place of the old system of prohibition, has been productive of any materially increased importation of foreign silks. “I have lately,” said Mr. Huskisson, in his famous speech in vindication of his policy as to the silk trade, “taken some pains to ascertain the quantity of smuggled silks that has been seized inland throughout the kingdom during the last 10 years; and I find that the whole does not exceed 5,000*l.* a year. I have endeavoured, on the other hand, to get an account of the quantity of silk goods actually smuggled into this country. Any estimate of this quantity must be very vague; but I have been given to understand that the value of such goods as are regularly entered at the Custom-houses of France, for exportation to this country, is from 100,000*l.* to 150,000*l.* a year; and this, of course, is exclusive of the *far greater supply* which is poured in throughout all the channels of smuggling, without being subjected to any entry. In fact, to such an extent is this illicit trade carried, that there is scarcely a haberdasher's shop in the smallest village of the United Kingdom, in which prohibited silks are not sold; and that in the face of day, and to a very considerable extent.

"The honourable member for Coventry (Mr. Ellice) has mentioned the silk goods from India as those against which any thing but prohibition would prove an unavailing protection. Now, in my opinion, it is scarcely possible to conceive a stronger case than those very silks furnish against the honourable member's own argument. I believe it is universally known that a large quantity of Bandana handkerchiefs are sold every year, for exportation, by the East India Company. But does any gentleman suppose that these Bandanas are sent to the Continent for the purpose of remaining there? No such thing! They are sold at the Company's sales, to the number of about 800,000 or 1,000,000 a year, at about 4s. each; they are immediately shipped off for Hamburg, Antwerp, Rotterdam, Ostend, or Guernsey, and from thence they nearly all illicitly find their way back to this country.

"Mark, then, the effect of this beautiful system. — These Bandanas, which had previously been sold for exportation at 4s., are finally distributed in retail to the people of England at about 8s. each; and the result of this prohibition is to levy upon the consumer a tax, and to give those who live by evading your law a bounty of 4s., upon each handkerchief sold in this country!" — (*Speeches*, vol. ii. p. 510.)

Indeed, one of the principal objections to the present duty of 30 per cent. on foreign silks is, that it is high enough to enable a considerable smuggling trade to be still carried on; the facility for smuggling being increased by means of the legalised importation. A duty of 12 or 15 per cent. would not, however, be so high as to balance the risks run in smuggling; and would, therefore, really afford the manufacturer a more efficient protection than he derives from the existing duty, at the same time that it would place all classes of dealers on the same footing; whereas the advantage is at present on the side of those who engage in fraudulent schemes.

*Regulations as to the Importation of Silks.* — Silk manufactures are not to be imported in any vessel under 70 tons burden, except by licence from the commissioners of the customs to vessels belonging to Dover, to import such manufactures direct from Calais, though such vessels may not exceed 60 tons burden. Silk goods, the manufacture of Europe, not to be imported except into the port of London or the port of Dublin direct from Bordeaux, or the port of Dover direct from Calais. — (3 & 4 Will. 4. c. 52. § 58; ante, p. 633.)

When the shoot or the warp only is of silk, the article is to be considered as composed of not more than one half part of silk, and subject to the *ad valorem* duty of 30 per cent.; but if the shoot or the warp be entirely of silk, and a portion of the other be of silk also, the article is to be considered to be composed of more than one half part of silk, and subject to the rated duties at per lb., or to the *ad valorem* duties, at the option of the officers. — (*Min. Com. Cus.* 14th of August, 1839.) But in all cases where the duties charged by weight upon mixed articles would manifestly exceed 30 per cent., by reason of the weight of the wool, or other ingredient thereof besides silk, the article is to be admitted to entry at value. — (*Min. Com. Cus.* 19th of December, 1831.)

For the regulations as to the smuggling of silks, see **SMUGGLING**.

I. Account, illustrative of the Progress of the Silk Manufacture, showing the Quantities of Raw, Waste, and Thrown Silk imported at different Periods. — (*Report of 1832 on Silk Trade*, p. 10., and *Parl. Papers*, No. 9. Sess. 1834.)

Note. — The distinction in the rates of duty between silks and ribands having ceased to exist in 1829, on the passing of the act 10 Geo. 4. c. 23, both articles have since been entered at the Custom-house under the general denominations of silk or satin, gauze and velvet, and are necessarily stated in the same manner in the above return.

IV. Account of the Official and of the Declared or Real Values of British Manufactured Silks exported from the United Kingdom since 1820, with the Bounty or Drawback paid thereon.

| Years. | Total British Silks exported Official Value. |           |           | Goods at Silk Declared Value. | Silk mixed with other Materials Official Value. | Total British Silks exported Declared Value. |           |           | Bounty or Drawback paid. |

The United States is our best customer for silk goods. Of the total quantity exported in 1831, they took nearly 4, or to the amount of 237,985*l.* of real value. During the same year, the exports to the British North American colonies were 93,013*l.*; to the British West Indies, 27,508*l.*; to France, 43,462*l.*; to Spain, 24,853*l.*, &c.

Sources of the Supply of Silk. — The following Table shows the sources whence we directly derive our supplies of raw and of foreign thrown silk, and the quantities brought from each in 1831 and 1832.

Imports of Silk.

| Turkey                     |             |             | 701         |             |                            |             |             |             |             |

It is necessary, however, to observe that this account does not exhibit the countries which really furnish us with silk, and the quantities we import from them. It merely exhibits the sources whence we immediately derive our supplies, without tracing them to their source. Hence it makes the imports of silk from China and Italy appear very much less than they really are, and those from India and France much larger. With respect to China, it would appear from this account that only 8,374 lbs. were imported from it in 1831; whereas it appears from another parliamentary paper, that the imports of Chinese silk in that year really amounted to 466,692 lbs.; and even this last is, we believe, under-rated (see *ant.*, p. 240.). The reason is, that by far the largest portion of the Chinese silk imported into England is carried, in the first instance, to Singapore, or to some port in India, and is thence imported under the name of Indian silk. During the year 1831-32, there were exported from Canton, in British ships, 8,451 piculs, or 1,126,800 lbs., of silk, costing at the port of shipment (Canton) 2,651,988 dollars; and of this, by far the largest portion

came to England. — (See *anté*, p. 237.) The silk exported from Canton consists of two leading varieties, known in commerce by the names of Canton and Nanking. The first, which is raised principally in the province of Canton, is divided into 5 sorts. At an average, the picul of Canton silk brought at Canton, in 1831-32, 158 dollars. The Nanking silk, produced in the province of Kiangnan, is divided into 2 sorts, known in commerce by the names of Tsatsee and Taysam. It is very superior to the other, and usually fetches more than double its price. It cost at Canton, in 1831-32, 368 dollars a picul. We have no doubt, now that the trade to China is thrown open, that the exports of Chinese silk will be materially increased; and that it will become an article of great commercial importance.

East India native silk comes wholly from Bengal. About the year 1760, the East India Company introduced the Italian mode of reeling silk, which was productive of a very great improvement in the quality of the article; but we are not aware that any subsequent improvement has been effected. According to the *Parliamentary Paper*, No. 425. Sess. 1833, the imports of raw silk from all places to the eastward of the Cape of Good Hope, except China, were, in 1830, 1,736,231 lbs.; in 1831, 1,725,650 lbs.; and in 1832, 1,814,819 lbs. But, notwithstanding this exception, we believe that a very considerable quantity of the silk so imported was the produce of China; being brought to us partly from Singapore, and partly from the Indian ports. Some of it was also the produce of Persia, shipped, in the first instance, from Bushire for Bombay. The silk goods brought from India are not only inferior, in point of quality, to those of Europe, but also to those of China. The quantity imported of late years is specified in the Table, No. 11.

A good deal of the silk brought from Turkey is supplied by Persia. Some considerable part of the Persian silk that used to be exported from Bushire and other ports on the Persian Gulf, is now exported by way of Trebisond; which promises to become an important emporium for Persian and Turkish silk. — (See *TREBISOND*.)

By far the greatest part of the raw and thrown silk that comes to us from France, is not the growth of that country, but of Italy; being principally conveyed by the canal of Languedoc and the Garonne to Bordeaux, whence it is shipped for England. So much is this the case, that it appears from the official accounts published by the French government, that while the aggregate value of the French and foreign raw and thrown silk exported from France in 1831 amounted to 45,102,654 fr., the value of the portion which was of French origin was only 2,692,776 fr. — (*Administration des Douanes*, for 1831, p. 33.)

The reader will find, under the article *VENICE*, an account of the exports of silk from the Venetian provinces in 1829, 1830, and 1831. Since the article *NAPLES* was printed, we have obtained the following authentic statement of the exports of silk from that city during the 6 years ending with 1833, and of the stocks on hand: —

| Years. | Exports.    |             |             |             |             | Stocks on the 31st of December. |             |             |

**SILVER** (*Ger. Silber*; *Du. Zilver*; *Da. Sölv*; *Sw. Silfver*; *Fr. Argent*; *It. Argento*; *Sp. Plata*; *Port. Prata*; *Rus. Серебро*; *Pol. Srebro*; *Lat. Argentum*; *Gr. ἄργυρος*; *Arab. Fazzeh*), a metal of a fine white colour, without either taste or smell; being in point of brilliancy inferior to none of the metallic bodies, if we except polished steel. It is softer than copper, but harder than gold. When melted, its specific gravity is 10.474; when hammered, 10.51. In malleability, it is inferior to none of the metals, if we except gold. It may be beaten out into leaves only  $\frac{1}{100000}$  of an inch thick. Its ductility is equally remarkable: it may be drawn out into wire much finer than a human hair; so fine, indeed, that a single grain of silver may be extended about 400 feet in length. Its tenacity is such, that a wire of silver 0.078 inch in diameter is capable of supporting a weight of 187.13 lbs. avoirdupois without breaking. Silver is easily alloyed with copper by fusion. The compound is harder and more sonorous than silver, and retains its white colour even when the proportion of copper exceeds  $\frac{1}{2}$ . The hardness is at a maximum when the copper amounts to *one fifth* of the silver. The standard or sterling silver of Britain, of which coin is made, is a compound of 12 $\frac{1}{2}$  parts silver and 1 copper. Its specific gravity is 10.2. The specific gravity of Paris standard silver, composed of 137 parts silver and 7 copper, is 10.175. The French silver coin during the old government was not nearly so fine, being composed of 261 parts silver and 27 copper, or 9 $\frac{3}{4}$  parts silver to 1 part copper. The Austrian silver coin contains  $\frac{11}{25}$  of copper. The silver coin of the ancients was nearly pure, and appears not to have been mixed with alloy. — (*Thomson's Chemistry*.)

The most productive silver mines are in America, particularly in Mexico and Peru. There are also silver mines in Hungary, Saxony, and other parts of Europe, and in Asiatic Russia. — (See *PRECIOUS METALS*.)

Besides being used as coin, or money, silver is extensively employed in the arts. The value of the silver plate annually manufactured is very considerable. Large quantities are also used in plating. — (See *PLATE*.) For an account of the quantity of silver coined at the British mint, since 1790, see *anté*, p. 320.

**SINGAPORE**, an island and recent British settlement at the eastern extremity of the Straits of Malacca. The town is in lat. 1° 17' 22" N., lon. 103° 51' 45" E.

The island is of an elliptical form, about 27 miles in its greatest length, and 15 in its greatest breadth, containing an estimated area of 270 square miles. The whole British settlement, however, embraces a circumference of about 100 miles; in which is included

\* Two lbs. avoirdupois are equal to about 2 $\frac{1}{2}$  libri Napolitani.

about 50 desert islets, and the seas and straits within 10 miles of the coast of the principal island. Singapore is separated from the main land by a strait of the same name, of small breadth throughout, and scarcely, indeed,  $\frac{1}{2}$  of a mile wide in its narrowest part. In the early period of European navigation, this channel was the thoroughfare between India and China. Fronting the island, on its southern side, and at the distance of about 9 miles, is an extensive chain of islands, all desert, or at least inhabited only by a few wild races, of which nothing is known but their mere existence. The intervening channel is now the grand route of the commerce between the eastern and western portions of maritime Asia; the safest and most convenient track being so near to Singapore, that ships in passing and repassing approach close to the roads. The town is on the south side of the island, and is situated on a river, or rather salt creek, navigable by lighters for about  $\frac{3}{4}$  of a mile from the sea. Ships lie in the roads, or open harbour, at the distance of from 1 mile to 2 miles from town, according to their draught of water. The assistance of a number of convenient lighters, which are always in readiness, enables ships to load or unload, with scarcely any interruption, throughout the year. The river or creek is accessible to the lighters, and the goods are taken in and discharged at convenient quays, at the doors of the principal warehouses. — (See *Chart of the Island of Singapore in the Mercator's Chart* in this work.)

The climate of Singapore is hot, but healthy. Fahrenheit's thermometer ranges from 71° to 89°. In a place only about 80 miles from the equator there is, of course, very little variety in the seasons. There is neither summer nor winter; and even the periodical rains are short, and not very well marked — moderate showers of rain falling for about 150 days each year. The settlement of Singapore was formed in February, 1819, and its sovereignty and property, in their present extent, confirmed to the British government in 1825, by a convention with the king of the Netherlands, and a treaty with the Malay princes of Johore, to whom it belonged. When taken possession of by the English, it had been inhabited for about 8 years by a colony of Malays, half fishermen and half pirates. When the first census of the population was taken, in January, 1824, it was found to amount to 10,683. In 1828, it had increased to 15,834: in both cases, exclusive of troops, camp followers, Indian convicts, and a floating population of about 3,000. The following statement of the censuses taken on the 1st of January, 1832, and the 1st of January, 1833, shows the different classes of inhabitants, and their proportions to each other: —

|                                    | 1832.  |          | 1833.  |          |                       | 1832.  |          | 1833.  |          |

The principal merchants and agents are Englishmen, of whom also there are a few shopkeepers, auctioneers, &c. There are also some respectable Chinese merchants; and the bulk of the shopkeepers, with the most valuable part of the labouring population, consist of Chinese. About 5,000 adult males arrive annually from China by the junks; about 1,000 of whom remain at Singapore, the rest dispersing themselves among the neighbouring Dutch, English, and Malay settlements. The boatmen are chiefly natives of the Coromandel coast; and the Malays employ themselves as fishermen, in cutting timber, and in supplying the settlement with the rude produce of the neighbourhood. There are 2 good daily markets, open at all hours, and well supplied with vegetables, fruits, grain, fish, pork, and green turtle; the latter the cheapest animal food that can be procured. At Singapore there are no export or import duties levied, nor anchorage, harbour, light-house dues, or any fees; but a register is kept of all exports and imports. Reports must be made to the master attendant by the masters of vessels, and invoices delivered to the superintendent of imports and exports.

**Currency, Weights, Language, &c.** — The currency and weights are simple and convenient. Merchants' accounts are kept in Spanish dollars, divided into 100 parts, represented either by Dutch doits, or by English copper coins of the same value. The weights in use (and almost every thing is sold by weight, as in China) are the Chinese picul of 100 catties, or 133½ lbs. avoirdupois. Rice (the produce of Siam and the Archipelago) and salt are sold by the cooyan of 40 piculs. Gold dust is sold by a Malay weight called the bungkal, which weighs 2 Spanish dollars, or 832 grains Troy. Bengal rice, wheat, and pulses of the same country, are sold by the bag, containing 2 Bengal maunds, or 164½ lbs. avoirdupois. Piece goods, &c. are sold by the corgé or score. English weights and measures are frequently used in reference to European commodities. The mode of transacting business among the European merchants is simple and efficient. Instead of trusting their affairs to native agents, as in other parts of India, they transact them in person, with the occasional assistance of a Chinese creole as an interpreter and broker. The European merchants transact business on their own account; but a great deal of their employment consists in acting as agents for houses in London, Liverpool, Glasgow, Amsterdam, Antwerp, Calcutta, Bombay, Madras, Canton, and Batavia. They are also agents for various insurance offices at Calcutta and elsewhere, and policies of insurance to any extent may be effected without difficulty. The language of commercial intercourse, where any of the natives of the East are concerned, is universally Malay, — a simple and easy dialect, of which all the resident merchants have a sufficient acquaintance for the transacting of ordinary business. A newspaper, the *Singapore Chronicle*, is published once a week, and contains a price current, an account of arrivals and departures of shipping, and an official detail of all the exports and imports of the preceding week. The administration of justice is entirely English, there being a recorder's court for the settlement, in common with the two neighbouring ones of Penang and Malacca.

**Commodities and Prices.** — Singapore is chiefly an *entrepôt*, having, with the exception of pearl sago manufactured on the spot from the raw material imported from the north coast of Sumatra, implements

The following are the rates of commission and warehouse rent charged at Singapore, except in cases of special agreement:—

- On all sales or purchases, except the following, 5 per cent.
- On purchases of goods or produce for returns, 2 1/2 per cent.
- On sales or purchases of opium, 5 per cent.
- On sale or purchase of ships, vessels, houses, or lands, 2 1/2 per cent.
- On sale, purchase, or shipment of bullion, 1 per cent.
- On sale or purchase of diamonds, jewels, &c., 2 per cent.
- On returns in treasure, bullion, or bills, 1 per cent.
- On all goods consigned and withdrawn, 1/2 commission.
- On sale, purchase, or negotiating of bills not serving for purchase of goods or produce, 1 per cent.
- On all goods sold by auction by the agents themselves, in addition to the above, 2 1/2 per cent.
- On del credere, or guaranteeing sales when specially required, 2 1/2 per cent.
- Shroffage, 1 per cent, per mille.
- On all advances of money for the purpose of trade, whether the goods are consigned to the agent or not, and where a commission of 5 per cent. is not charged, 2 1/2 per cent.
- On ordering goods, or superintending the fulfilment of contracts whence no other commission is derived, 2 1/2 per cent.
- On guaranteeing bills, bonds, or other engagements, and on becoming security for administrations of estates, or to government or individuals for contracts, agreements, &c., 2 1/2 per cent.
- On acting for the estates of persons deceased as executors or administrators, 5 per cent.
- On the management of estates for others, on the amount received, 2 1/2 per cent.
- On procuring freight, or advertising as the agent of owner or commanders, on the amount of freight, whether the same passes through the hands of the agent or not, 5 per cent.
- On chartering ships for other parties, 2 1/2 per cent.
- On making insurance, or writing orders for do., 1/2 per cent.
- On settling insurance losses, total or partial, and on procuring return of premium, 1 per cent.
- On debts, when a process at law or arbitration is necessary, 2 1/2 per cent.—And if received by such means, 5 per cent.

- 23. On bills of exchange noted or protested, 2 per cent.
- 24. On collecting house rent, 5 per cent.
- 25. On ship's disbursements, 2½ per cent.
- 26. On negotiating loans on respondents, 2 per cent.
- 27. On letters of credit granted for mercantile purposes, 2½ per cent.
- 28. On purchasing or selling government securities, or on exchanging or transferring the same, ½ per cent.
- 29. On delivering up doo, ½ per cent.
- 30. On all advances not punctually liquidated, the agent to have the option of charging a second commission, as upon a fresh advance, provided the charge be only made once in the same year.
- 31. On transhipping all goods or produce, except the following, 1 per cent.
- 32. On transhipping whole chests of cassia, cassia buds, aniseed, capphor, nankens, and gunny bags, per package, 1 dollar.
- 33. At the option of the agent, on the amount debited or cre-

ditied within the year, including interest, and excepting only such items, on which at least 2½ per cent. has been charged, 1 per cent.

This charge not to apply to paying over a balance due on an account made up to a particular period, unless such balance is withdrawn without reasonable notice.

Warehouse Rent per Month.

- Chests of opium or silk, bales of woollens, pipes of wine or brandy, leaguers of arrack, &c., 1 dollar.
- Bales of Indian piece goods, cotton, and gunny bags, 50 cents.
- Cases of European piece goods, trusses of woollens, &c., 25 cents.
- Hoop-heads of liquor, ½ chest of wine, &c., 40 cents.
- Pepper, rice, coffee, sugar, saltpeetre, &c., 10 per cent.
- Iron, tin, tinetags, victrol, copper, lead, &c., 5 per cent.
- All other goods not mentioned, to pay accordingly, or by measurement, at the rate of, per ton of 50 cubic feet, 1 dollar.

Trade of Singapore. — The following Tables are taken from the official statements published in the Singapore Chronicle, 27th of September, 1832. The sums are expressed in sicca rupes, at the fixed exchange of 210½ sicca rupes per 100 Spanish dollars.

I. Total Account of Imports and Exports at Singapore for the Years 1823 to 1831-32.

| Years.    | Imports.                 | Exports.*               | Years.    | Imports.                | Exports.                |

Trade of Java. — Since the article BATAVIA was printed, we have received a number of the *Singapore Chronicle*, containing the following account of the quantities of the principal articles exported from Java in 1830, 1831, and 1832. It shows a very rapid progress. There wants nothing but good management to render Java by far the most valuable of all the Eastern possessions belonging to any European power.

| Articles. | 1830.   | 1831.   | 1832.   | Articles.     | 1830. | 1831. | 1832.  |

(See *Journal of an Embassy to Siam and Cochin China*, by John Crawford, Esq., chap. xix; *Return of the Population of British India*, in *Report of the Select Committee of the Commons*, 1831; *Report of the Select Committee of the Commons*, for 1830; and *Singapore Chronicle*, passim.)

SINOPE, a town of Asia Minor, on the S. coast of the Black Sea, lat. 42° 2' 30' N., lon. 35° 9' 45" E. Population uncertain, probably from 8,000 to 10,000. Sinope is situated on a low narrow isthmus, connecting the high rocky promontory of Ada with the main land. Its port, which is the best on this coast, on the south side of the town, is protected from the N. and N.E. gales by the isthmus and promontory already mentioned. Ships anchor within ½ mile of the town, in from 13 to 17 fathoms; or nearer to it, in from 5 to 7 fathoms. There is a roadstead on the north side of the isthmus, but it is open and exposed. Sinope is one of the principal stations of the Turkish fleet; and there are docks and arsenals for its accommodation and outfit. Its exports are inconsiderable, the principal being timber, salt, cordage, fish oil, &c.

In ancient times, Sinope was a city of great wealth, magnitude, and importance. It was the birthplace of Diogenes the Cynic; and Mitridates made it the capital of his dominions. After its conquest by the Romans under Lucullus, it became the seat of a colony; and continued for a lengthened period to enjoy a good deal of consideration.

Should civilisation and the arts once more revive in the ancient Pontus, and the other countries to the south of the Black Sea, the excellence of its port could not fail to restore to Sinope some portion of its former grandeur. Even now a considerable intercourse is beginning to take place with the countries E. and S. of Sinope. Diarbeker, on the Tigris, in lat. 37° 54' N., lon. 39° 53' 45" E., is one of the principal seats of Eastern commerce; and caravans set out regularly from it for Aleppo, Smyrna, and Constantinople; but any one who consults a map of Asia Minor, and of the contiguous countries, will see at once that Trebisond and the neighbouring ports on the S. E. coast of the Black Sea are the natural channels through which Armenia, Koordistan, and the north-western parts of Persia may best maintain an intercourse with Europe. We shall afterwards show that the danger to vessels in the roads of Trebisond has been very much exaggerated. — (See TREBISOND.) In the event, however, of the commerce with the countries referred to becoming of any considerable importance, Sinope would be an advantageous entrepôt to which goods might be brought, and whence they might be conveyed in proper vessels, and at proper times, to the other ports. At all events, it is of material importance that a direct intercourse with the southern coast of the Black Sea should be established, and that the trade with it should not be carried on, as hitherto, through Odessa. — (For further particulars as to Sinope, see *Tournefort, Voyage du Levant*, tom. ii. pp. 202-212; and *Norie's Sailing Directions for the Black Sea*. See also the article TREBISOND, in this work.)

SKINS. The term is applied in commercial language to the skins of those animals, as calves, deer, goats, lambs, &c., which, when prepared, are used in the lighter works of book-binding, the manufacture of gloves, parchment, &c.; while the term hides is applied to the skins of the ox, horse, &c., which, when tanned, are used in the manufacture of

shoes, harness, and other heavy and strong articles. Lamb and kid skins are principally used in the glove manufacture; 120 skins being supposed to produce, at an average, 18 dozen pairs of gloves.

Account of the Skins imported in 1831, specifying the Countries whence they came, and the Numbers brought from each.—(*Part. Paper*, No. 550. Sess. 1833.)

| Countries from which imported.  | Skins.                  |                  |                  |                  |                 |                |                  |                  |

**SLATE (ROOF)**, Ger. *Schiefer*; Fr. *Ardoise*; It. *Lavagna, Lastra*; Sp. *Pizarra*, a fossil or compact stone (*argillaceous schistus*), that may be readily split into even, smooth, thin laminae. There are several varieties of this valuable mineral, the prevailing colours being grey, blue, and brown. But the tints are very various; and slates are often marked with streaks of a different colour from the ground. Slate is principally used in the covering of houses, for which purpose it is infinitely superior to thatch or tiles, and is far less expensive than lead. Good roofing slate should not absorb water; and it should be so compact as not to be decomposed by the action of the atmosphere. When properly selected, roof slates are of almost perpetual duration; but those which are spongy and imbibe moisture speedily get covered with moss, and require, at no very distant period, to be renewed.

The use of slates in the covering of houses is entirely European. From the Hellespont to China inclusive there is not a single slated house; and this does not arise from any want of slate, which is as abundant in Asia as in Europe.

Slates carried by land have never been subjected to any duty; but those carried coastwise were, until 1831, charged with duties varying according to their size and species. The injustice of this distinction, and the impolicy of laying any duty on an article of this sort, are obvious. The revenue it produced was quite inconsiderable, not exceeding 35,000*l.* a year. It was repealed at the same time as the duty on coal carried coastwise.

Since the repeal of the duty, the consumption of slate has been materially increased; and it is now extensively employed for various purposes to which it was not formerly made applicable, such as the flooring of warehouses and vaults, the paving of streets, the formation of cisterns, the covering of worn or decayed floors, and of the walls of houses in exposed situations, &c. The slate used for these purposes is cut by the circular saw into pieces of from  $\frac{1}{2}$  an inch to 2 inches thick. Many hundred tons have been used in the course of the last 2 years in paving, flooring, &c. at the London Docks; and, we believe, with much advantage to the company. Large *deposits* of slates are now formed in London and other great towns.

The principal slate quarries in Great Britain are in Caernarvonshire. Those belonging to Mr. Pennant (formerly Lord Penrhyn's), near Bangor, employ about 1,500 men and boys, and are the most extensive and valuable in the empire. The other quarries in the same county employ about 1,620 men and boys;

and there are some in other parts of Wales. There are also extensive quarries at Ulverstone, in Lancashire; and others, of inferior magnitude, in various parts of Westmoreland and Cumberland.

The principal slate quarries in Scotland are at Eastdale and Balachulish, in Argyleshire. Speaking generally, the Scotch quarries do not afford slates of the size and smoothness of those obtained from the Welsh quarries; and the wood-work of the roofs covered with them requires to be stronger.

Roofing slates are of different sizes, and are denominated Imperials, Queens, Princesses, &c. Their price, supposing their quality to be in other respects equal, depends partly on their size and partly on their weight. The subjoined account explains the mode in which it is determined.

Account of the Prices of the different Sorts of Slate on Shipboard at Bangor, in January, 1834.

**SLAVES AND SLAVE TRADE.** A slave, in the ordinary sense of the term, is an individual at the absolute disposal of another, who has a right to employ and treat him as he pleases. But the state of slavery is susceptible of innumerable modifications; and it has been usual, in most countries where it has been long established, to limit in various ways the power of the master over the slave. The *slave trade* is, of course, the business of those who deal in slaves.

*Origin of Slavery.* — A great deal of learning has been employed in tracing the history of slavery, though the subject is still far from being exhausted. It seems most probable that it originally grew out of a state of war. In rude uncivilised communities, where the passion of revenge acquires a strength unknown in more advanced states of society, captives taken in war are adjudged to belong to the victors, who may either put them to the sword, or reduce them to a state of servitude. In antiquity the ideas of war and slavery were inseparable. Probably, in very remote ages, prisoners were most commonly put to death; but the selfish gradually predominated over the more passionate feelings, and for many ages it was usual to reduce them to the condition of slaves; being either sold by their captors to others, or employed by them as they might think fit. "*Jure gentium,*" says Justinian, "*servi nostri sunt, qui ab hostibus capiuntur.*"—(*Justit. lib. i. 5.*)

The practice of reducing men to a state of slavery, having once begun, was extended in various ways. The progeny of slaves, or of women in a state of slavery, were slaves; men born free might sell themselves as slaves; and parents had authority, in Judaea and Rome, to dispose of their children for the same purpose. — (*Michaelis on the Laws of Moses*, vol. ii. p. 163. Eng. ed.) It was the law of Rome, and of most other ancient states, that the persons of debtors who had contracted obligations which they could not discharge, should become the property of their creditors.

*Treatment of Slaves.* — The treatment of slaves in antiquity, as in more modern times, differed very widely in different countries and periods, and among different classes of slaves in the same country and at the same time. A great deal also depended on the character of particular masters. Slaves bred up in the house or family of the masters were uniformly treated with greater indulgence than others, and became entitled, by custom, to several important privileges. At Athens, slaves appear to have been better treated than in any other ancient state; and Demosthenes mentions, in his second Philippic, that "a slave was better off at Athens than a free citizen in many other countries." In republican Rome, the masters had the power of life and death over their slaves, who were often treated with the most detestable barbarity. It was not an uncommon practice to expose old, useless, or sick slaves to starve in an island in the Tiber! We may, as Mr. Hume has justly remarked, "imagine what others would practise, when it was the professed maxim of the elder Cato, to sell his superannuated slaves at any price, rather than maintain what he esteemed a useless burden."—(*Plutarch, in Vita Catonis.*)

*Ergastula*, or dungeons, where slaves were confined and chained at night, and where they were sometimes made to work in the day, were common all over Italy. Columella advises that they be always built under ground — (lib. i. c. 6.) ; and remains of them are still seen in the lower stories of ancient buildings in Italy and Sicily. Hundreds of slaves were sometimes put to death for the crime of one only ; and they were exposed, when they committed any petty fault, to all the violence of the most capricious and unrestrained despotism.

It was not uncommon in the barbarous ages to immolate captives on the tomb of such chiefs as had fallen in battle ; and magnificent games were celebrated on these occasions.\* The gladiatorial exhibitions, so common at Rome after the Punic wars, seem to have grown out of this practice. These were contests between slaves, denominated gladiators, trained to fight in public for the amusement of a ferocious populace, who took the greatest delight in their sanguinary combats. Thousands of unfortunate wretches were annually sacrificed in this inhuman sport. After his triumph over the Dacians, Trajan exhibited spectacles, in which no fewer than 11,000 wild beasts of different kinds were killed, and 10,000 gladiators fought! — (*Adam's Roman Antiquities*, p. 317.)

The cruelties inflicted on the slaves occasioned frequent revolts, attended by the most dreadful excesses. Spartacus, a Thracian captive, destined for the profession of a gladiator, headed a rebellion of gladiators and slaves, which continued for 3 years, and required all the force of the republic to suppress. When finally defeated by Crassus, about 6,000 of his followers were nailed to the cross, in double rows, that extended almost from Capua to Rome. — (*Ferguson, Rom. Republic*, c. 16.) No one acquainted with the manners of the Romans can be surprised at the atrocities of so many of the emperors. The worst of them treated the citizens better than the latter treated the slaves. Humanity could not be looked for in the rulers of a state in which human life was held in contempt, and human suffering made the subject of popular sport.

In consequence partly of their ill usage, and partly of its being accounted cheaper to buy than to breed slaves, vast numbers were annually imported into Italy. Thrace and the countries round the Black Sea furnished large supplies of the best slaves ; and numbers were obtained from Egypt, Syria, Cappadocia, and other places. Delus in Cilicia was the greatest slave market of antiquity ; as many as 10,000 slaves have been sold there in a single day. — (*Strabo*, lib. xiv.)

Besides its brutalising influence on the manners of the people, the institution of slavery was in other respects productive of the worst effects. The best Roman writers bear testimony to the negligence, waste, and bad conduct of slaves. — (*Columella*, lib. i. § 8 ; *Plin. Hist. Nat.* lib. xvii. § 3.) The inferiority of the ancients in most of the useful arts is principally to be ascribed to the prevalence of slavery, which not only extinguished all emulation and invention on the part of most of those engaged in industrious employments, but made the employments be considered in some measure disgraceful. In the ancient world agriculture and arms were the only occupations that were reckoned worthy of a freeman. The mechanical arts were carried on either wholly by slaves, or by the very dregs of the people ; and remained for ages in the same stationary state.

The establishment of Christianity contributed more, perhaps, than any thing else, first to mitigate, and finally to suppress the abomination of slavery. But within no very long period after its abolition had been completely effected in every part of Europe, its horrors began to be inflicted on America.

*African Slave Trade.* — This infamous traffic was commenced by the Portuguese, in 1442. The trade, however, was but of trifling extent till the commencement of the sixteenth century. In consequence, however, of the rapid destruction of the Indians employed in the mines of St. Domingo or Hayti, Charles V. authorised, in 1517, the introduction into the island, of African slaves from the establishments of the Portuguese on the coast of Guinea. The concurrence of the emperor was obtained by the intercession of the celebrated Las Casas, bishop of Chiapa, who, contradictorily enough, laboured to protect the Indians by enslaving the Africans. The latter were certainly more vigorous and capable of bearing fatigue than the former. But this circumstance affords no real justification of the measure, which, at best, was nothing more than the substitution of one species of crime and misery in the place of another. — (*Robertson's Hist. America*, book iii.)

The importation of negroes into the West Indies and America, having once begun, gradually increased, until the extent and importance of the traffic rivalled its cruelty and guilt. Sir John Hawkins was the first Englishman who engaged in it : and such was the ardour with which our countrymen followed his example, that they exported from Africa more than 300,000 slaves between the years 1680 and 1700 ; and between 1700 and 1786, 610,000 Africans were imported into Jamaica only ; to which adding the imports into the other islands and the continental colonies, and those who died on their passage, the

number carried from Africa will appear immense. — (*Bryan Edwards, Hist. West Indies, vol. ii. p. 64.*) The importations by other nations, particularly the French and Portuguese, were also very great.

It is not easy to say whether this traffic has been more injurious to Africa or America. In the former it has perpetuated and multiplied every sort of enormity and abuse. The petty princes have been tempted to make war on each other, that they might obtain captives to sell to the European traders; and when these could not be found, have seized and sold their own subjects. Many, too, have been kidnapped by the crews of the slave ships; nor is there any sort of crime known among pirates and banditti, which, for more than 3 centuries, the civilised inhabitants of Europe have not perpetrated upon the unoffending natives of Central Africa. In the West Indies, and those parts of America into which slaves have been largely imported, its effect has been equally disastrous. It has led to the most violent antipathy between the whites and the blacks; and been the fruitful source of crimes, convulsions, and disorders, of which it is difficult to see the termination. — (There are some good remarks on slavery as it exists in America, and on the multiplied evils of which it is productive, in a volume entitled "Excursion of an English Gentleman through the United States and Canada," published in 1824.)

It would be to no purpose to enter into any examination of the sophisms by which it was formerly attempted to justify the slave trade. We shall not undertake to pronounce any opinion upon the question as to the inferiority of the blacks; though it does not appear to us that the statements of Mr. Jefferson on this subject, in his "Notes on Virginia," and similar statements made by others, have received any sufficient answer. But supposing the inferiority of the negroes were established beyond all question, that would be no justification of the infamous cruelties inflicted upon them. Did any one ever think of vindicating a robber, because he happened to be stronger or cleverer than his victim?

*Abolition of the Slave Trade.* — Notwithstanding the sanction it received from parliament, and the supineness of the public, the slave trade was frequently denounced by distinguished individuals, in this and other countries, as essentially cruel and unjust. Of these, Montesquieu is, perhaps, the most conspicuous. He successfully exposed the futility of the different pleas put forth by the advocates of slavery — (*Esprit des Loix, liv. xv.*); and the extensive circulation of his great work, and the deference paid to the doctrines advanced in it, contributed powerfully to awaken the public to a just sense of the iniquity of the traffic. The Quakers early distinguished themselves by their hostility to the trade; of which they were always the consistent and uncompromising enemies.

The first motion on the subject in parliament was made in 1776; but without success. The subject was not taken up systematically till 1787, when a committee was formed, of which Mr. Granville Sharp and Mr. Clarkson, whose names are imperishably associated with the history of the abolition of the slave trade, were members. This committee collected evidence in proof of the enormities produced by the trade, procured its circulation throughout the country, and succeeded in making a very great impression on the public mind. After a number of witnesses on both sides had been examined before the privy council, Mr. Wilberforce, on the 12th of May, 1789, moved a series of resolutions condemnatory of the traffic. They were supported by Mr. Burke in one of his best speeches; and by Mr. Pitt and Mr. Fox. But, notwithstanding the resolutions were carried, nothing was done to give them effect. The friends of the trade having obtained leave to produce evidence at the bar of the house, contrived to interpose so many delays that the session passed off without any thing being done. In the following sessions the great struggle was continued with various success, but without any definite result. At length the triumph of humanity and justice was finally consummated in 1807; a bill for the total and immediate abolition of the slave trade, having been carried in both houses by immense majorities, received the royal assent on the 25th of March, being the last act of the administration of Mr. Fox and Lord Grenville. "Thus ended," says Mr. Clarkson, "one of the most glorious contests, after a continuance of 20 years, of any ever carried on in any age or country: a contest, not of brutal violence, but of reason; a contest between those who felt deeply for the happiness and the honour of their fellow creatures, and those who, through vicious custom, and the impulse of avarice, had trampled under foot the sacred rights of their nature, and had even attempted to efface all title of the divine image from their minds."

America abolished the slave trade at the same time as England.

But notwithstanding what had been done, further measures were soon discovered to be necessary. The Spaniards and the Portuguese continued to carry on the trade to a greater extent than ever; and British subjects did not hesitate, under cover of their flags, to become partners in their adventures. An effectual stop was put to this practice in 1811, by the enactment of a law introduced by Mr. (now Lord) Brougham, that made trading in slaves punishable by transportation for 14 years, or by confinement to hard labour for a term of not more than 5 years nor less than 3 years.

The British laws relative to the slave trade were consolidated by the act 5 Geo. 4. c. 113. But, as the greater part of this act has been superseded by the late statute for the extinction of slavery (3 & 4 Will. 4. c. 73.), we shall merely lay before our readers the clauses still in force relating to the dealing in slaves.

*Dealing in Slaves in the High Seas, &c. to be deemed Piracy.*— And if any subject or subjects of his Majesty, or any person or persons residing or being within any of the dominions, forts, settlements, factories, or territories, now or hereafter belonging to his Majesty, or being in his Majesty's occupation or possession, or under the government of the United Company of Merchants of England trading to the East Indies, shall, except in such cases as are by this act permitted, after the 1st day of January, 1825, upon the high seas, or in any haven, river, creek, or place, where the admiral has jurisdiction, knowingly and wilfully carry away, convey, or remove, or aid or assist in carrying away, conveying, or removing, any person or persons as a slave or slaves, or for the purpose of his, her, or their being imported or brought as a slave or slaves into any island, colony, country, territory, or place whatsoever, or for the purpose of his, her, or their being sold, transferred, used, or dealt with as a slave or slaves; or shall, after the said 1st day of January, 1825, except in such cases as are by this act permitted, upon the high seas, or within the jurisdiction aforesaid, knowingly and wilfully ship, embark, receive, detain, or confine, or assist in shipping, embarking, receiving, detaining, or confining, on board any ship, vessel, or boat, any person or persons for the purpose of his, her, or their being carried away, conveyed, or removed as a slave or slaves, or for the purpose of his, her, or their being imported, or brought as a slave or slaves into any island, colony, country, territory, or place whatsoever, or for the purpose of his, her, or their being sold, transferred, used, or dealt with as a slave or slaves; then and in every such case the persons so offending shall be deemed and adjudged guilty of piracy, felony and robbery, and being convicted thereof shall suffer death without benefit of clergy, — and loss of lands, goods, and chattels, as pirates, felons, and robbers; and the seas ought to suffer. — § 9.

*Persons dealing in Slaves, or exporting or importing Slaves, &c. guilty of Felony.*— And (except in such special cases as are by this act permitted) if any persons shall deal or trade in, purchase, sell, barter, or transfer, or contract for the dealing or trading in, purchase, sale, barter, or transfer of slaves, or persons intended to be dealt with as slaves; or shall, otherwise than as aforesaid, carry away or remove, or contract for the carrying away or removing of slaves or other persons, as or in order to their being dealt with as slaves; or shall import or bring, or contract for the importing or bringing into any place whatsoever, slaves, or other persons, as or in order to their being dealt with as slaves; or shall, otherwise than as aforesaid, ship, tranship, embark, receive, detain, or confine on board, or contract for the shipping, transshipping, embarking, receiving, detaining, or confining on board of any ship, vessel, or boat, any person or persons, for the purpose of their being carried away or removed, as or in order to their being dealt with as slaves; or shall ship, tranship, embark, receive, detain, or confine on board, or contract for the shipping, transshipping, embarking, receiving, detaining, or confining on board of any ship, vessel, or boat, slaves or other persons, for the purpose of their being imported or brought into any place whatsoever, as or in order to their being dealt with as slaves; or shall fit out, man, navigate, equip, despatch, use, employ, let or take to freight or on hire, or contract for the fitting out, manning, navigating, equipping, despatching, using, employing, letting, or taking to freight or on hire, any ship, vessel, or boat, in order to accomplish any of the objects, or the contracts in relation to the objects, which objects and contracts have herein-before been declared unlawful; or shall knowingly and wilfully lend or advance, or become security for the loan or advance, or contract for the lending or advancing, or becoming security for the loan or advance of money, goods, or effects, employed or to be employed in accomplishing any of the objects, or the contracts in relation to the objects, which objects and contracts have herein-before been declared unlawful; or shall knowingly and wilfully become guarantee or security, or contract for the becoming guarantee or security, for agents employed or to be employed in accomplishing any of the objects, or the contracts in relation to the objects, which objects and contracts have herein-before been declared unlawful, or in any other manner to engage, or contract to engage, directly or indirectly therein, as a partner, agent, or otherwise; or shall knowingly and wilfully ship, tranship, lade, or receive or put on board, or contract for the shipping, transshipping, lading, receiving, or putting on board of any ship, vessel, or boat, money, goods, or effects, to be employed in accomplishing any of the objects, or the contracts in relation to the objects, which objects and contracts have herein-before been declared unlawful; or shall take the charge or command, or navigate, or enter and embark on board, or contract for the taking the charge or command, or for the navigating or entering and embarking on board of any ship, vessel, or boat, as captain, master, mate, surgeon, or supercargo, knowing that such ship, vessel, or boat is actually employed, or is in the same voyage, or upon the same occasion, in respect of which they shall so take the charge or command, or navigate or enter and embark, or contract so to do as aforesaid, intended to be employed in accomplishing any of the objects, or the contracts in relation to the objects, which objects and contracts have herein-before been declared unlawful; or shall knowingly and wilfully insure, or contract for the insuring of any slaves, or any property or other subject matter engaged or employed in accomplishing any of the objects, or the contracts in relation to the objects, which objects and contracts have herein-before been declared unlawful; or shall wilfully and fraudulently forge or counterfeit any certificate, certificate of valuation, sentence, or decree of condemnation or restitution, copy of sentence or decree of condemnation or restitution, or any receipt (such receipts being required by this act), or any part of such certificate, certificate of valuation, sentence or decree of condemnation or restitution, copy of sentence or decree of condemnation or restitution, or receipt as aforesaid; or shall knowingly and wilfully utter or publish the same, knowing, if to be forged or counterfeited, with intent to defraud his Majesty, or any other person or persons whatsoever, or any body politic or corporate; then, and in every such case the persons so offending, and their procurers, counsellors, aiders, and abettors, shall be deemed and adjudged guilty of felony, and shall be transported for a term not exceeding 14 years, or shall be confined and kept to hard labour for a term not exceeding 5 nor less than 3 years, at the discretion of the court before whom such offenders shall be tried. — § 10.

*Seamen, &c. serving on Board such Ships guilty of Misdemeanour.*— And (except in such special cases, or for such special purposes as are by this act permitted) if any persons shall enter and embark on board, or contract for the entering and embarking on board of any ship, vessel, or boat, as petty officer, seaman, marine, or servant, or in any other capacity not herein-before specifically mentioned, knowing that such ship, vessel, or boat is actually employed, or is in the same voyage, or upon the same occasion, in respect of which they shall so enter and embark on board, or contract so to do as aforesaid, intended to be employed in accomplishing any of the objects, or the contracts in relation to the objects, which objects and contracts have herein-before been declared unlawful; then, and in every such case, the persons so offending, and their procurers, counsellors, aiders, and abettors, shall be guilty of a misdemeanour only, and shall be punished by imprisonment for a term not exceeding 2 years. — § 11.

*Abolition of Slavery.*— We have already alluded (*antè*, p. 356.) to the ever memorable act of 1833, for the ABOLITION OF SLAVERY throughout the British colonies. In enacting this celebrated statute, parliament endeavoured, and we think successfully, to reconcile the apparently conflicting claims of humanity and justice, by providing for the emancipation of the slaves, without prejudice to the just rights and claims of their pro-

prietors which is act. The right right be others, reflects British We sul

proctors. This was effected by assigning to the latter the sum of *twenty millions* sterling, which is to be distributed amongst them on their complying with the provisions of the act. This is the greatest sacrifice ever voluntarily made by any nation in vindication of the right of property. But it was not too great for the object in view; for had that right been violated in this instance, a precedent would have been set for its violation in others, and the consequences would have been most disastrous. The measure, in fact, reflects quite as much credit on the wisdom and honesty, as on the generosity, of the British nation.

We subjoin a full abstract of such parts of this important statute as seem to be of general interest.

ACT 3 & 4 WILL. 4 c. 73, FOR THE ABOLITION OF SLAVERY THROUGHOUT THE BRITISH COLONIES; for promoting the Industry of the manumitted Slaves; and for compensating the Persons hitherto entitled to the Services of such Slaves.

*Slaves to become apprenticed Labourers from 1st of August, 1834.* — After reciting, that it is expedient that the slaves in the British colonies should be manumitted and set free on compensation being made to those entitled to their services, the act goes on to declare, that from and after the 1st day of August, 1834, all persons who, in conformity with the laws now in force in the said colonies, shall, on or before the 1st day of August, 1834, have been duly registered slaves in any such colony, and who, on the said 1st day of August, 1834, shall be actually within any such colony, and who shall by such registries appear to be, on the said 1st day of August, 1834, of the full age of 6 years or upwards, shall by force and virtue of this act, and without the previous execution of any indenture of apprenticeship, or other deed or instrument for that purpose, become and be apprenticed labourers; provided that, for the purposes aforesaid, every slave engaged in his ordinary occupation on the seas shall be deemed and taken to be within the colony to which such slave shall belong. — § 1.

*Who entitled to Services of the Slave.* — During the continuance of the apprenticeship of any such labourer, such person or persons shall be entitled to the services of such labourer as would for the time being have been entitled to his or her services as a slave if this act had not been made. — § 2.

*All Slaves brought into U. K. with Consent of Possessors, free.* — All slaves who may at any time previous to the passing of this act have been brought with the consent of their possessors, and all apprenticed labourers who may hereafter with the like consent be brought, into any part of the United Kingdom, shall from and after the passing of this act be absolutely and entirely free to all intents and purposes whatsoever. — § 3.

*Apprenticed Labourers to be divided into prædial attached, prædial unattached, and non-prædial.* — And whereas it is expedient that such apprenticed labourers should, for the purposes herein-after mentioned, be divided into 3 distinct classes; the first consisting of prædial apprenticed labourers attached to the soil, and comprising all persons who in their state of slavery were usually employed in agriculture, or in the manufacture of colonial produce or otherwise, upon lands belonging to their owners; the second consisting of prædial apprenticed labourers not attached to the soil, and comprising all persons who in their state of slavery were usually employed in agriculture, or in the manufacture of colonial produce or otherwise, upon lands not belonging to their owners; and the third consisting of non-prædial apprenticed labourers, and comprising all apprenticed labourers not included within either of the 2 preceding classes: be it therefore enacted, that such division shall be carried into effect in such manner and form, and subject to such rules and regulations, as shall for that purpose be established by such acts of assembly, ordinances, or orders in council as are herein-after mentioned: provided always, that no person of the age of 12 years and upwards shall be included in either of the said 2 classes of prædial apprenticed labourers, unless such person shall for 12 calendar months at the least next before the passing of this act have been habitually employed in agriculture or in the manufacture of colonial produce. — § 4.

*Apprenticeship of the prædial Labourers limited.* — No person who, by virtue of this act, or of any act of assembly, ordinance, or order in council, shall become a prædial apprenticed labourer, whether attached or not to the soil, shall continue in such apprenticeship beyond the 1st day of August, 1840; and during such apprenticeship, no such prædial apprenticed labourer shall be bound or liable to perform any labour in the service of his or her employer or employers for more than 45 hours in one week. — § 5.

*Apprenticeship of the non-prædial Labourers.* — No person who, by virtue of this act, or of any act of assembly, ordinance, or order in council, shall become a non-prædial apprenticed labourer, shall continue in such apprenticeship beyond the 1st day of August, 1838. — § 6.

*Labourer may be discharged by his Employer.* — If before such apprenticeship shall have expired, the person or persons entitled during the remainder of any such term to the services of such apprenticed labourer shall be desirous to discharge him or her from such apprenticeship, it shall be lawful for such person or persons so to do by deed or instrument; which deed or instrument shall be in such form, and shall be executed and recorded in such manner and with such solemnities, as shall be prescribed under authority: provided that, if any person so discharged from apprenticeship by voluntary act as aforesaid shall at that time be of the age of 30 years or upwards, or shall be then labouring under any such disease or mental or bodily infirmity as may render him or her incapable of earning his or her subsistence, the person or persons so discharging such apprenticed labourer shall continue and be liable to provide for his or her support and maintenance during the remaining term of the apprenticeship, as fully as if such labourer had not been discharged. — § 7.

*Apprenticed Labourer may purchase his Discharge.* — It shall be lawful for any apprenticed labourer to purchase his or her discharge from such apprenticeship, even without the consent, or in opposition, if necessary, to the will of the person or persons entitled to his or her services, upon payment to such person or persons of the appraised value of such services; the appraisement being effected, the purchase money being paid and applied, and the discharge being given and executed, in such manner and form, and subject to such conditions, as shall be prescribed by competent authority. — § 8.

*Apprenticed Labourers not removable from the Colony.* — No apprenticed labourer shall be subject or liable to be removed from the colony to which he may belong; and no prædial apprenticed labourer who may become attached to the soil shall be subject or liable to perform any labour in the service of his or her employer or employers except upon the works and business of the plantations or estates to which he or she had been attached, or on which he or she had been usually employed previously to the said 1st day of August, 1834: provided that, with the consent in writing of any 2 or more justices of peace holding such special commission as herein-after mentioned, it shall be lawful for those entitled to the services of any prædial apprenticed labourer or labourers to transfer his or their services to any other estate or plantation within the same colony belonging to them; which written consent shall in no case be given, or be of any validity, unless such justices of the peace shall first have ascertained that such transfer would not separate any such apprenticed labourer from his or her wife or husband, parent or child, or from any one reputed to bear such relation to him or her, and that such transfer would not probably be injurious to the health or welfare of such labourer; and such written consent to such removal shall be expressed in such terms, and be in each case given, attested, and recorded in the manner prescribed for that purpose. — § 9.

**Right to the Services of apprenticed Labourers to be transferable.**—The right or interest of any employer or employers to the services of any apprenticed labourers shall be transferable by bargain and sale, contract, deed, &c., according to such rules and in such manner as shall for that purpose be provided as herein-after mentioned; provided that no apprenticed labourer shall, by virtue of any such bargain, sale, &c., be subject to separation from his or her wife or husband, parent or child, or from any one reputed to bear such relation to him or her. — § 10.

**Employer to supply the Labourer with Food, &c.**—During the continuance of such apprenticeship, the person or persons entitled to the services of every apprenticed labourer shall be and is required to supply him or her with such food, clothing, lodging, medicine, medical attendance, and such other maintenance and allowances as, by any law now in force in the colony to which such apprenticed labourer may belong, an owner is required to supply to any slave of the age and sex as such apprenticed labourer; and in cases in which the food of such apprenticed labourer shall be supplied, not by the delivery to him or her of provisions, but by the cultivation by such labourer of ground set apart for the growth of provisions, those entitled to his or her services shall and are required to provide such apprenticed labourer with ground adequate, both in quantity and quality, for his or her support, and within a reasonable distance of his or her usual place of abode, and to allow such labourer, from and out of the time during which he or she may be required to labour, after the rate of 45 hours per week, in the service of his or her employers, such a portion of time as shall be adequate for the proper cultivation of such ground, and for the raising and securing the crops thereon grown; the actual extent of which ground, and the distance thereof from the place of residence of the apprenticed labourer for whose use it is allotted, and the length of time to be deducted for the cultivation of the said ground from the said annual time, shall, in each of the colonies aforesaid, be regulated as herein-after mentioned. — § 11.

**All Slaves in the British Colonies emancipated from the 1st of August, 1834.**—Subject to the obligations imposed by this act, or to be imposed by any act of general assembly, ordinance, or order in council as herein-after mentioned, upon such apprenticed labourers, all and every the persons who, on the 1st day of August, 1834, shall be holden in slavery within any British colony, shall, from and after the said 1st day of August, 1834, become and be to all intents and purposes free and discharged of and from all manner of slavery, and shall be absolutely and for ever manumitted; and the children thereafter to be born to any such persons, and the offspring of such children, shall in like manner be free from their birth; and from and after the said 1st day of August, 1834, slavery shall be and is hereby utterly and for ever abolished and declared unlawful throughout the British colonies, plantations, and possessions abroad. — § 12.

**Children may be apprenticed.**—Whereas it may happen that children who have not attained the age of 8 years on the 1st of August, 1834, or that children who after that day may be born to female apprenticed labourers, may not be properly supported by their parents, and that no other person may be disposed voluntarily to undertake their support, and it is necessary that provision should be made for the maintenance of such children; be it enacted, that if any child who, on the 1st of August, 1834, had not completed his or her 8th year, or if any child to which any female apprenticed labourer may give birth on or after the said 1st of August, 1834, shall be brought before any Justice of the peace holding such special commission as herein-after mentioned, and if it be made to appear to the satisfaction of such Justice that such child is unprovided with adequate maintenance, and that such child hath not completed his or her age of 12 years, it shall be lawful for such Justice, and he is hereby required, to execute an indenture of apprenticeship, binding such child as an apprenticed labourer to the person or persons entitled to the services of its mother, or who had been last entitled to her services; but in case it be made to appear to such Justice that such person or persons is or are unable or unfit to enter into such indenture, and properly to perform the conditions thereof, then such Justice is required to bind such child to any other person or persons approved by him, who may be willing and able properly to perform such conditions; and every indenture of apprenticeship shall declare whether such child shall thenceforward belong to the class of attached prædial apprenticed labourers, or to the class of unattached prædial apprenticed labourers, or to the class of non-prædial apprenticed labourers; and the term of apprenticeship of such child shall be made to continue in force until such child shall have completed his or her 21st year, and no longer; and every child so apprenticed shall, during his or her apprenticeship, be subject to all rules and regulations respecting work or labour, and respecting food and other supplies, as any other apprenticed labourers: provided always, that the indenture of apprenticeship shall contain sufficient words of obligation upon the employer to allow reasonable time and opportunity for the education and religious instruction of such child. — § 13.

**His Majesty, or any Governor, may appoint Justices of the Peace.**—This clause authorises his Majesty, or any governor of any colony, to appoint special Justices of the peace for carrying this act into effect. — § 14.

**His Majesty may grant Salaries to special Justices.**—This clause authorises his Majesty to grant salaries, not exceeding 300*l.* a year, to such special Justices; providing that no person in the receipt of half-pay from his Majesty's land or naval forces shall forfeit or lose the same on being appointed a Justice under this act. It also directs lists of such Justices to be laid before parliament. — § 15.

**Recital of various Regulations necessary for giving Effect to this Act.**—Whereas it is necessary that various rules and regulations should be established for ascertaining, with reference to each apprenticed labourer, to what class he or she belongs, and for determining the manner in and the solemnities with which the voluntary discharge of any apprenticed labourer may be effected, and for prescribing the manner in and the solemnities with which the purchase by any apprenticed labourer of his or her discharge from such apprenticeship, without, or in opposition, to the consent of those entitled to his or her services, shall be effected, and how the necessary appraisalment of the future value of such services shall be made, and how and to whom the amount of such appraisalment shall be paid and applied, and in what manner and by whom the discharge shall be given, executed, and recorded; and it is also necessary, for the preservation of peace throughout the said colonies, that proper regulations should be established for the maintenance of order and good discipline amongst the said apprenticed labourers, and for insuring the punctual discharge of the services due by them to their employers, and for the prevention and punishment of insolence, or the neglect or improper performance of work by any apprenticed labourer, and for enforcing the due performance by such labourer of any contract into which he or she may voluntarily enter for any hired service during the time in which he or she may not be bound to labour for his or her employer, and for the prevention and punishment of insolence and insubordination on the part of such apprenticed labourers towards their employers, and for the prevention or punishment of vagrancy, or of any conduct on the part of any such apprenticed labourers injuring or tending to the injury of the property of any employer, and for the suppression and punishment of any riot or combined resistance of the laws on the part of such apprenticed labourers, and for preventing the escape of such apprenticed labourers, during their term of apprenticeship, from the colonies to which they may belong; and whereas it will also be necessary for the protection of such apprenticed labourers, that various regulations should be framed and established in the said colonies for securing punctuality and method in supplying them with food, clothing, lodging, medicine, medical attendance, and such other maintenance and allowances as they are entitled to receive, and for regulating the amount and quality of all such articles; in cases where the laws at present existing may not have made any regulation or any adequate regulation for that purpose; and it is also necessary that proper rules should be established for the prevention and punishment of any frauds which might be practised, or of any omissions or neglects which might occur, respecting the quantity or the quality of the supplies so to be furnished, or respecting the periods for the delivery of the same; and whereas it is necessary, in those cases in which the food of any such prædial apprenticed

labourers as aforesaid may either wholly or in part be raised by themselves by the cultivation of ground set apart and allotted for that purpose, that proper regulations should be made and established as to the extent of such grounds, and as to the distance at which such grounds may be so allotted from the ordinary place of abode of such pradial apprenticed labourers, and respecting the deductions to be made from the cultivation of such grounds from the annual time during which such pradial apprenticed labourers are declared liable to labour: and whereas it may also be necessary, by such regulations, to secure to apprenticed labourers the enjoyment for their own benefit of that portion of their time during which they are not required to labour in the service of their respective employers, and for securing exactness in the computation of the time during which such labourers are required to labour in the service of their employers; and it is also necessary that provision should be made for preventing the imposition of task-work on any apprenticed labourer without his or her free consent to undertake the same; but it may be necessary by such regulations in certain cases to require and provide for the acquiescence of the majority of the pradial apprenticed labourers attached to any plantation or estate in the distribution and apportionment amongst their whole body of any task-work which the majority of them shall be willing and desirous collectively to undertake; and it is also necessary that regulations should be made respecting any voluntary contracts into which any apprenticed labourers may enter with their respective employers or with any other person for hired service for any future period, and for limiting the greatest period of time to which such voluntary contract may extend, and for enforcing the punctual performance of such contracts on the part both of such labourers and of those engaging for their employment and hire; and it is also necessary that regulations should be made for the prevention or punishment of any cruelty, injustice, or other wrong or injury done to or inflicted upon any such apprenticed labourers by those entitled to their services; and it is also necessary that proper regulations should be made respecting the manner and form in which indentures of apprenticeship shall be made on behalf of children, and respecting the registering and preservation of such indentures: and whereas it is also necessary that provision should be made for insuring promptitude and despatch, and for preventing unnecessary expense, in the discharge by the justices of the peace of the jurisdiction and authorities committed to them, and for enabling such justices to decide in a summary way such questions as may be brought before them in that capacity, and for the division of the colonies into districts for the purposes of such jurisdiction, and for the frequent and punctual visitation by such justices of the apprenticed labourers within their respective districts; and it is also necessary that regulations should be made for indemnifying and protecting such justices of the peace in the upright execution and discharge of their duties: and whereas such regulations could not without great inconvenience be made except by the respective governors, councils, and assemblies, or other local legislatures of the said respective colonies, or by his Majesty, with the advice of his privy council, in reference to those colonies to which the legislative authority of his Majesty in council extends; be it therefore enacted and declared, that nothing in this act contained extends or shall be construed to extend to prevent the enactment by the respective governors, councils, and assemblies, or by such other local legislatures as aforesaid, or by his Majesty, with the advice of his privy council, of any such acts of general assembly, or ordinances, or orders in council as may be requisite for making and establishing such rules and regulations, or for carrying the same into full and complete effect: provided nevertheless, that it shall not be lawful for any such governor, council, and assembly, or for any local legislature, or for his Majesty in council, to make or establish any enactment, regulation, provision, rule, or order in anywise repugnant or contradictory to this present act, but that every such enactment, regulation, &c. shall be and is declared to be absolutely null and void. — § 16.

*Such Colonial Acts may not authorise the whipping or Punishment of the Labourer.* — It shall not be lawful for any such governor, &c., or other colonial legislature, or for his Majesty in council, by any such act, ordinance, &c., to authorise any one entitled to the services of any apprenticed labourer, or any person or persons other than justices of the peace holding special commissions as aforesaid, to punish any apprenticed labourer for any offence committed or alleged to have been committed, by the whipping, beating, or imprisonment of his or her person, or by any other personal correction or punishment whatsoever, or by any addition to the hours of labour herein-before limited; nor to authorise any court, judge, or justice to punish any apprenticed labourer, being a female, for any offence by her committed, by whipping or beating her person; and that every enactment, regulation, &c. for any such purpose is hereby declared to be absolutely null and of no effect: provided always, that nothing in this act contained doth or shall extend to exempt any apprenticed labourer from the operation of any law or police regulation in force for the prevention or punishment of any offence, such law or police regulation being in force against and applicable to all persons of free condition. — § 17.

The next 2 sections provide that none but special justices, holding commissions as aforesaid, shall act in execution of this act, or interfere between apprenticed labourers and their employers; but reserving to the supreme courts such powers in relation hereto as may now be vested in them.

*Apprenticed Labourers not to be subject to Prolongation or Renewal of Apprenticeship.* — No apprenticed labourer shall, by act of assembly, ordinance, or order in council, be rendered liable, in respect of any offence, or upon any pretext whatsoever, except hereafter is mentioned, to any prolongation of his or her term of apprenticeship, or to any new or additional apprenticeship, or to any such additional labour as shall impose upon such apprenticed labourer the obligation of working in the service or for the benefit of those entitled to his or her services for more than 15 extra hours in the whole in any 1 week, but every such enactment, regulation, provision, &c. shall be and is null and void and of no effect: provided nevertheless, that any act of assembly, ordinance, or order in council, may contain provisions for compelling any apprenticed labourer, who shall, during his or her apprenticeship, wilfully be absent from the service of his or her employer, either to serve such employer after the expiration of his or her apprenticeship for so long a time as he or she shall have so been absent from such service, or to make satisfaction to his or her employer for the loss sustained by such absence (except so far as he or she shall have made satisfaction for such absence, either out of such extra hours as aforesaid, or otherwise), but nevertheless so that such extra service or compensation shall not be compellable after the expiration of 7 years next after the termination of the apprenticeship of such apprentice. — § 20.

*Apprenticed Labourers not to be compelled to work on Sundays.* — Neither under the provisions or obligations imposed by this act, or any act of general assembly, ordinance, or order in council, shall any apprenticed labourer be compelled to labour on Sundays, except in works of necessity, or in domestic services, or in the protection of property, or in tending of cattle, nor shall any apprenticed labourer be hindered from attending anywhere on Sundays for religious worship, at his or her free will or pleasure, but shall be at full liberty so to do without let, denial, or interruption whatsoever. — § 21.

*Nothing herein to interfere with certain Colonial Laws.* — Nothing in this act extends or shall be construed to extend to interfere with or prevent the enactment by the governors, councils, and assemblies, or by such other local legislature of any colonies, or by his Majesty in council in reference to such colonies as are subject to the legislative authority of his Majesty in council, of any acts, ordinances, &c. for exempting any apprenticed labourers, during the continuance of their apprenticeship, from any civil or military service, or for disqualifying them during the continuance of any such apprenticeships from the enjoyment or discharge of any political franchise, or for exempting them during the continuance of such apprenticeships from being arrested or imprisoned for debt. — § 22.

*Acts passed by local Legislatures with similar but improved Enactments to this Act to supersede this Act.* — In case the governor, council, and assembly of one or more colonies shall, by any act or acts of general assembly for that purpose, substitute for the several enactments herein contained, or any of them, any enactments accomplishing the several objects in such enactments respectively contemplated as fully and to the like effect, but in a manner and form better adapted to the local circumstances of such colonies

or colony, and in case his Majesty shall, by any order in council, confirm and allow such act or acts of assembly, and shall in such order recite and set forth the provisions and enactments of this present act for which such other enactments shall have been substituted, then and in such case so much and such parts of this present act as shall be so recited and set forth in any such order in council shall be suspended and cease to be of any force in such colony from and after the arrival and proclamation therein of any such order or orders in council, and shall continue to be so suspended so long as any such substituted enactments shall continue in force, and no longer. — § 23.

*The Treasury may raise Loans, not exceeding 20,000,000L.* — This section recites, that towards compensating the persons at present entitled to the services of the slaves to be manumitted and set free by virtue of this act for the loss of such services, the Commons of Great Britain and Ireland in parliament assembled have resolved to give and grant to his Majesty the sum of 20,000,000L sterling. Authority is then given to raise such 20,000,000L, and to grant annuities for the same. Directions are also given how the same is to be paid; and the interest and charges are made chargeable upon the consolidated fund. — §§ 24—32.

*Commissioners to be appointed for distributing Compensation.* — It shall be lawful for his Majesty from time to time, by a commission under the great seal, to constitute and appoint such persons, not being less than 5, as to his Majesty shall seem meet, to be commissioners of arbitration for inquiring into and deciding upon the claims to compensation which may be preferred to them under this act. — § 33.

Sections 34. to 43. inclusive, regulate the appointment of, meetings, and manner of proceeding before, the commissioners.

*No Part of Compensation to be applicable to any Colony unless his Majesty declare that adequate Provision has been made by the Legislature thereof.* — No part of the said sum of 20,000,000L sterling shall be applied for the benefit of any person now entitled to the services of any slave in any of the colonies, unless an order shall have been first made by his Majesty in council, declaring that adequate and satisfactory provision hath been made by law in such colony for giving effect to this present act by such further and supplementary enactments as aforesaid, nor unless a certified copy of such order in council shall have been transmitted to the commissioners of his Majesty's treasury for their guidance or information; and every such order shall be published 3 several times in the *London Gazette*, and shall be laid before both houses of parliament within 6 weeks after the date thereof, if parliament shall be then in session, and if not, within 6 weeks from the next ensuing session. — § 44.

*The Commissioners to apportion the Compensation Fund.* — The said commissioners shall proceed to apportion the said sum into 19 different shares, which shall be respectively assigned to the several British colonies or possessions, viz. the Bermuda Islands, the Bahama Islands, Jamaica, Honduras, the Virgin Islands, Antigua, Montserrat, Nevis, St. Christopher's, Dominica, Barbadoes, Grenada, St. Vincent's, Tobago, St. Lucia, Trinidad, British Guiana, the Cape of Good Hope, and Mauritius; and in making such apportionment of the said funds among the several colonies, the commissioner shall and are required to have regard to the number of slaves belonging to or settled in each of such colonies, as the same may appear and are stated according to the latest returns made in the office of the registrar of slaves in England, appointed under the authority of the act 59 Geo. 3. c. 120, intitled "An Act for establishing a Registry of Colonial Slaves in Great Britain, and for making further Provision with respect to the Removal of Slaves from British Colonies;" and the said commissioners are further required, in making such apportionment, to have regard to the prices for which, on an average of 8 years ending the 31st day of December, 1830, slaves have been sold in each colony, excluding from consideration any sales in which they shall have sufficient reason to suppose that slaves were sold or purchased under any reservation, or subject to any express or tacit condition affecting their price; and the said commissioners shall then proceed to ascertain, in reference to each colony, what amount of sterling money will represent the average value of a slave therein for the said period of 8 years; and the total number of the slaves in each colony being multiplied into the amount of sterling money so representing such average value of a slave therein, the product of such multiplication shall be ascertained for each colony separately; and the said 20,000,000L sterling shall then be assigned to and apportioned amongst the said several colonies rateably and in proportion to the product so ascertained for each respectively. — § 45.

*No Compensation to be allowed for Persons illegally held in Slavery.* — In case it shall appear that any persons in respect of whom claims for compensation shall have been made have been registered and held in slavery in any colony mentioned in this act contrary to law, in every such case the commissioners shall deduct from the sum to be appropriated as compensation to the proprietors in such colony, such sums as shall correspond with the estimate value and number of the value and number of the slaves so held in slavery; and all such sum or sums which may be deducted as herein-before provided shall be applied towards defraying the general expenses of the commission: provided always, that for the purpose of ascertaining in what cases such deductions shall be made, every question arising in any colony respecting the servile condition of any persons registered as slaves shall be inquired of and determined by the commissioners to be appointed under this act, according to such rules of legal presumption and evidence as are or shall be established by any law in force or which shall be in force in any such colony. — § 46.

*Commissioners to institute Inquiries, &c.* — It shall be the duty of said commissioners, and they are hereby required, to institute a full and exact inquiry into all the circumstances connected with each of the said several colonies which in their judgment ought, in justice and equity, to regulate or affect the apportionment within the same of that part of the general compensation fund which shall be assigned to each of the said colonies; and especially such commissioners shall have regard to the relative value of praedial slaves and of unattached slaves in every such colony; and they shall distinguish such slaves, whether praedial or unattached, into as many distinct classes as, regard being had to the circumstances of each colony, shall appear just; and such commissioners shall, with all practicable precision, ascertain and fix the average value of a slave in each of the classes into which the slaves in any such colony shall be divided; and the commissioners shall also inquire and consider of the principles according to which the compensation to be allotted in respect to any slave or body of slaves ought, according to the rules of law and equity, to be distributed amongst persons who, as owners or creditors, legatees or annuitants, may have any joint or common interest in any such slave or slaves, or may be entitled to or interested in such slave or slaves, either in possession, remainder, reversion, or expectancy; and the commissioners shall also inquire and consider of the principles and manner in which provision might be most effectually made for the protection of any interest in any such compensation money which may belong to or be vested in any married women, infants, lunatics, or persons of insane or unsound mind, or persons beyond the seas, or labouring under any other legal or natural disability or incapacity, and according to what rules, and in what manner, and under what authority, trustees should, when necessary, be appointed for the same custody, for the benefit of any person or persons, of such compensation fund, or of any part thereof, and/or regulating the duties of such trustees, and providing thereon with a fair and reasonable indemnity; and the commissioners shall so inquire and consider upon what principles, according to the established rules of law and equity in similar cases, the succession to such funds should be regulated upon the death of any person entitled thereto who may die intestate; and the commissioners are also required to consider of any other question which it may be necessary to investigate in order to establish just and equitable rules for the apportionment of such compensation money amongst the persons seized of, or entitled to, or having any mortgage, charge, incumbrance, judgment, or lien upon, or any claim to, or right or interest in, any slave or slaves to be manumitted as aforesaid, at the time of such their manumission; and having made all such inquiries, and having taken all such matters and things as aforesaid into their consideration, the said commissioners shall draw up and frame such general rules, regard being had to the laws and usages in force in each colony respectively, as to them may seem best adapted in each colony for securing the just and equitable distribution of the said

funds and for the framed, and trans- such as a them. —

funds amongst or for the benefit of the several persons aforesaid, and for the protection of such funds, and for the appointment and indemnification of such trustees as aforesaid; and such general rules, when framed, and agreed upon by the commissioners, shall be subscribed with their respective hands and seals, and transmitted to the president of council, to be laid before his Majesty; and so from time to time as often as any further general rules should be so framed and agreed to for the purposes aforesaid, or any of them. — § 47.

*Rules to be published in the London Gazette.* — The general rules to be transmitted as aforesaid to the said Lord President shall be forthwith published in the *London Gazette* on 3 several occasions at least, together with a notice that all persons interested in or affected by them may, by a time to be in such notice limited, appeal against any such rules to his Majesty in council; and it shall be lawful for the Lords of his Majesty's privy council, or for any 3 or more of them, by any further notice or notices published in the *London Gazette*, to enlarge the time for receiving any such appeals. — § 48.

Section 49. enacts that his Majesty in council may hear such appeals, and thereupon confirm or disallow any general rule so appealed against.

Section 50. enacts that, in absence of appeal, his Majesty in council may confirm, rescind, or amend such rules.

The remaining sections respect the enrolment of rules, and the proceedings under appeal to his Majesty in council; the mode in which sums awarded by the commissioners are to be paid, &c.

*Foreign Slave Trade.* — At the congress of Vienna, in 1814, the plenipotentiaries of the great powers agreed to a declaration that the slave trade was "repugnant to the principles of humanity and of universal morality; and that it was the earnest desire of their sovereigns to put an end to a scourge which had so long desolated Africa, degraded Europe, and afflicted humanity."

But notwithstanding this memorable declaration, the immediate abolition of the trade was not agreed to. France was allowed to continue it for five years. It is, besides, abundantly certain that, though the trade nominally ceased in 1819, it has since been clandestinely carried on to a great extent in French ships, if not with the connivance, at least without much opposition, on the part of the late government of France. There is now, however, reason to hope that it will be effectually suppressed; for according to a recent arrangement (Nov. 30. 1831) made with his Majesty Louis-Philippe, the right of search is reciprocally conceded, within certain limits, by the French and English; so that French ships suspected of being engaged in the trade may be stopped by British cruisers.

Considering the efforts Great Britain made in behalf of Spain and Portugal, and the influence she might have been supposed to have acquired with the restored monarchs of those countries, it may well excite astonishment that our negotiators (whether from the intractability of those with whom they had to deal, or from want of address and firmness on their parts, we leave it to others to decide), were unable to prevail on these powers to renounce the trade till after the lapse of a considerable period. They succeeded, indeed, in inducing them to exempt that portion of the African coast north of the Equator from their piratical attacks; and for this concession, and damages alleged to have been sustained by their slave ships from our cruisers, Great Britain has paid them no less than 1,230,000*l.*! — (See SIERRA LEONE.)

The Spanish slave trade was to have finally ceased, according to the stipulations in the treaty between Spain and this country of the 5th of July and 28th of August, 1824, in 1820. But within these 2 years, and, perhaps, at this very moment, slaves have been publicly fitted out from Cuba, and immense numbers of slaves have been imported into that island, with the open connivance of the authorities. A mixed commission court, consisting of British and Spanish commissioners, has been established at Havannah, for the condemnation of vessels proved to have been engaged in the slave trade. But we are officially informed by Mr. Macleny, one of the commissioners, that since the establishment of the court no seizure of a slave vessel has ever taken place, but on the interference and denunciation of the British commissioners; and even then such seizure has only been made, to be instantly followed by a perfect acquittal in the Spanish tribunals! — (*Parl. Paper*, No. 120. Sess. 1831, p. 53.)

Slaves were freely imported in immense numbers into Brazil, till February, 1850, when the trade was to cease, conformably to the convention entered into with this country on the 23d of June, 1826. — (See RIO DE JANEIRO.) But whether the clandestine and illegal, as well as the open and legitimate importation of slaves, be at an end is more than we can undertake to say.

On the whole, we are afraid that nothing short of a declaration by the great powers, making the slave trade piracy, will be sufficient entirely to rid humanity of its guilt and horrors.

SMALTZ, or SMALT (Ger. *Schmaltz*; Du. *Smalt*; Fr. *Smalt*; It. *Smalto azzurro*, *Smaltino*; Sp. *Esmalte*, *Azul azur*; Rus. *Lasor*), an oxide of cobalt, melted with siliceous earth and potash. It is a sort of glass, of a beautiful deep blue colour; and being ground very fine, is known by the name of powder blue. The colour of smaltz is not affected by fire; and it is consequently in great demand in the painting of earthenware. It is also employed in the colouring of paper, and for other purposes in the arts. Beckmann has proved that the process used in the preparation of smaltz was invented about the end of the 15th or the beginning of the 16th century; and that the blue

glass of the emeralds owes its colour, not to the presence of cobalt or of smaltz, but to that of iron. — (*Hist. of Inventions*, vol. ii. art. *Cobalt*.)

Smaltz is principally manufactured in Germany and Norway. Of 391,523 lbs. imported into Great Britain in 1831, 206,840 lbs. came from Norway, 160,705 from Germany, and 23,978 from the Netherlands. At an average of 1831 and 1832, the entries of smaltz for home consumption amounted to 319,408 lbs. a year. The duty on smaltz has recently been reduced from 6*d.* to 4*d.* per lb.

**SMUGGLING**, the offence of defrauding the revenue by the introduction of articles into consumption, without paying the duties chargeable upon them. It may be committed indifferently either upon the excise or customs revenue.

*Origin and Prevention of Smuggling.* — This crime, which occupies so prominent a place in the criminal legislation of all modern states, is wholly the result of vicious commercial and financial legislation. It is the fruit either of prohibitions of importation, or of oppressively high duties. It does not originate in any depravity inherent in man; but in the folly and ignorance of legislators. A prohibition against importing a commodity does not take away the taste for it; and the imposition of a high duty on any article occasions a universal desire to escape or evade its payment. Hence, the rise and occupation of the smuggler. The risk of being detected in the clandestine introduction of commodities under any system of fiscal regulations may always be valued at a certain average rate; and wherever the duties exceed this rate, smuggling immediately takes place. Now, there are plainly but two ways of checking this practice, — either the temptation to smuggle must be diminished by lowering the duties, or the difficulties in the way of smuggling must be increased. The first is obviously the more natural and efficient method of effecting the object in view; but the second has been most generally resorted to, even in cases where the duties were quite excessive. Governments have uniformly almost consulted the persons employed in the collection of the revenue with respect to the best mode of rendering taxes effectual; though it is clear that the interests, prejudices, and peculiar habits of such persons utterly disqualify them from forming a sound opinion on such a subject. They cannot recommend a reduction of duties as a means of repressing smuggling and increasing revenue, without acknowledging their own incapacity to detect and defeat illicit practices; and the result has been, that, instead of ascribing the prevalence of smuggling to its true causes, the officers of customs and excise have almost universally ascribed it to some defect in the laws, or in the mode of administering them, and have proposed repressing it by new regulations, and by increasing the number and severity of the penalties affecting the smuggler. As might have been expected, these attempts have, in the great majority of cases, proved signally unsuccessful. And it has been invariably found, that no vigilance or the part of the revenue officers, and no severity of punishment, can prevent the smuggling of such commodities as are either prohibited or loaded with oppressive duties. The smuggler is generally a popular character; and whatever the law may declare on the subject, it is quite ludicrous to expect that the bulk of society will ever be brought to think that those who furnish them with cheap brandy, geneva, tobacco, &c. are guilty of any very heinous offence.

“To pretend,” says Dr. Smith, “to have any scruple about buying smuggled goods, though a manifest encouragement to the violation of the revenue laws, and to the perjury which almost always attends it, would, in most countries, be regarded as one of those pedantic pieces of hypocrisy, which, instead of gaining credit with any body, seems only to expose the person who affects to practise them to the suspicion of being a greater knave than most of his neighbours. By this indulgence of the public, the smuggler is often encouraged to continue a trade, which he is thus taught to consider as, in some measure, innocent; and when the severity of the revenue laws is ready to fall upon him, he is frequently disposed to defend with violence what he has been accustomed to regard as his just property; and from being at first rather imprudent than criminal, he, at last, too often becomes one of the most determined violators of the laws of society.” — (*Wealth of Nations*, vol. iii. p. 491.)

To create by means of high duties an overwhelming temptation to indulge in crime, and then to punish men for indulging in it, is a proceeding completely subversive of every principle of justice. It revolts the natural feelings of the people; and teaches them to feel an interest in the worst characters — for such smugglers generally are — to espouse their cause, and avenge their wrongs. A punishment which is not proportioned to the offence, and which does not carry the sanction of public opinion along with it, can never be productive of any good effect. The true way to put down smuggling is to render it unprofitable; to diminish the temptation to engage in it: and this is not to be done by surrounding the coasts with cordons of troops, by the multiplication of oaths and penalties, and making the country the theatre of ferocious and bloody contests in the field, and of perjury and chicanery in the courts of law; but by repealing prohibitions, and reducing duties, so that their collection may be enforced with a moderate degree of vigilance; and that the forfeiture of the article may be a sufficient penalty

upon the smuggler. It is in this, and in this only, that we must seek for an effectual check to illicit trafficking. Whenever the profits of the fair trader become nearly equal to those of the smuggler, the latter is forced to abandon his hazardous profession. But so long as prohibitions or oppressively high duties are kept up, or, which is, in fact, the same thing, so long as *high bounties* are held out to encourage the adventurous, the needy, and the profligate, to enter on this career, we may be assured that armies of excise and custom-house officers, backed by the utmost severity of the revenue laws, will be insufficient to hinder them.

*Smuggling in France and England.* — The recently printed *Report* of Messrs. Villiers and Bowring, on the commercial relations between France and Great Britain, contains some very curious and instructive details as to the smuggling carried on between them. They afford the most satisfactory and convincing proofs of the incapacity of restrictions and prohibitions to secure a real monopoly of any extensive market; and show that their principal effect is to promote illicit traffic; and to make that ingenuity and invention be exerted in devising means to defeat and elude the law, which, under a more liberal system, would be exerted to improve the methods of production. The introduction of prohibited goods is more easily effected by land than by sea; and smuggling into France is, in consequence, carried on principally through her north and east frontiers. Considerable quantities of prohibited or overtaxed goods are, however, introduced by sea. A regular tariff of risks is established; and persons of undoubted solidity contract, for certain premiums, which for the most part are abundantly moderate, to deliver any prohibited article in any part of France. Owing to the system of *octrois*, or of the collection of duties at the gates of large towns, where an inspection of the goods may also be made, the cost of smuggling into Paris and other populous places is considerably greater than that of smuggling into villages. At an average, however, most foreign goods may be delivered in Paris at a charge of from 25 to 30 per cent. *ad valorem* on their real value.

Notwithstanding the advantage of a sea frontier, a coast guard, and a most efficient Custom-house establishment, the facts embodied by Messrs. Villiers and Bowring in their *Report* show that smuggling is in quite as flourishing a condition on the shores of England as on the land frontier of France. The premium on the illicit introduction amongst us of prohibited or overtaxed goods varies from 15 to 40 per cent. *ad valorem*, according to the description of the article. The parties employing the smugglers run no risk. The latter, or their agents, attend regularly upon 'Change; and "it is their constant practice to deposit the value of the goods confided to their care in a banker's acceptance, as a security to the owner!" — (*Report*, p. 54.) It could hardly, indeed, have been otherwise. Brandy, which is the favourite article for smuggling speculations, may be bought for shipment in France at from 3*s.* 6*d.* to 5*s.* a gallon. It is highly popular amongst us; but instead of admitting it to consumption under a moderate duty, or even under the high duty of 8*s.* or 10*s.*, we load it with the oppressive and exorbitant duty of 22*s.* 6*d.*; that is, with a duty varying from 450 to 650 per cent. *ad valorem*! Had those who originally imposed this duty, and those by whom it has been kept up, been deeply interested in smuggling adventures, their conduct would have been intelligible; but, as no such excuse can be made for them, it has been in the last degree irrational and absurd. The temptation to the illicit introduction of brandy, occasioned by the exorbitancy of the duty, has roused all the energies of the smuggler, who has defeated the utmost vigilance of the revenue officers, and eluded or defied the multiplied pains and penalties of the customs laws! Messrs. Villiers and Bowring estimate, from a comparison of the shipments of different articles from France for England with the imports into the latter, and other authentic data, that the total amount of duties evaded by the fraudulent importation of overtaxed French articles (exclusive of tobacco, whole cargoes of which are sometimes introduced into Ireland) into this country amounts to about 800,000*l.* a year. — (p. 54.) Of this sum, the loss on brandy makes by far the largest item; and is said to be "*considerably more than 500,000*l.*!*" — (p. 57.) It is plain, therefore, that, as a means of raising revenue, this system is signally unsuccessful; but it is so in a far greater degree than appears even from the above statements: for, in addition to the vast quantity of overtaxed articles clandestinely introduced, and on which a reasonable duty would be paid, it occasions the overloading of the market with spurious, counterfeit articles, by which the public health as well as the revenue is materially injured. Nor is this all. In order to render oppressive duties productive of any revenue, it is necessary to organise and keep constantly on foot a very numerous and costly customs establishment. It is abundantly certain that we lose, by the clandestine importation of brandy, Geneva, and tobacco, from France, Belgium, and Holland, above 1,500,000*l.* a year of revenue; and it is admitted, on all hands, that, but for the oppressive duties on these articles, a saving of 500,000*l.* a year might be effected in the customs department. Nothing, therefore, can be more futile than to attempt vindicating exorbitant duties on the pretence of their being required to keep up

the revenue. In point of fact, such duties are about the most efficient engines that can be devised for its reduction. The revenue derived from coffee has been trebled by reducing the duty from 1s. 7d. to 6d. per lb. — (see *COFFEE*); the revenue derived from British spirits was materially increased by reducing the duty from 5s. 6d. to 2s. 6d. the wine gallon — (see *SPIRITS*); and Mr. Pitt increased the duty derived from brandy, geneva, &c., in 1786, not by adding to, but by taking 50 per cent. from, the duties with which they had previously been loaded! There cannot, indeed, be the shadow of a doubt that the revenue derived from brandy and geneva would be very largely increased by reducing the duties to 8s. or 10s. a gallon. A measure of this sort, coupled as it ought to be with a reduction of the duties on tobacco — (see *TOBACCO*), — would do what neither coast guards, preventive services, revenue cruisers, or customs acts will ever do, — it would go far to annihilate smuggling; and would enable the services of a large number of revenue officers to be dispensed with.

But the demoralising influence of an extensive smuggling system is the worst consequence of oppressive duties and prohibitions. They make the smuggler be regarded as a public benefactor, and procure for him the sympathy of all classes, and the strenuous support of those in the lower walks of life. No one acquainted with the state of the peasantry in extensive districts of Kent and Sussex, will believe that it is easy to exaggerate the evils that spring from this source. The whole body of labourers may be said to be in combination with the smugglers; and numbers of them are every now and then withdrawn from their usual employments to assist in their desperate adventures. Lawless, predatory, and ferocious habits are thus widely diffused; and thousands, who, but for this moral contamination, would have been sober and industrious, are trained to despise and trample on the law, and to regard its functionaries as enemies whom it is meritorious to waylay and assault.

Such being the operation and result of those oppressive duties and absolute prohibitions to which smuggling owes its origin, it is not surely too much to hope that the former may be modified, and the latter repealed. When this has been done, smuggling will cease; but not one moment sooner. Till then it will continue, in despite of all the impotent efforts that may be made for its suppression, to scatter its seeds, and spread its roots on all sides; impoverishing the fair and enriching the illicit dealer — emptying the public treasury of the state, and filling its goals with criminals!

*Smuggling by Dogs.* — The following extract from the *Report* of Messrs. Villiers and Bowring develops one of those ingenious devices by which mischievous customs laws are sure to be defeated.

"The director of the Custom-house made, on the 30th of July, 1831, some very curious statements to the minister of finance on the subject of the fraudulent introduction of articles by means of dogs. He says, that since the suppression of smuggling by horses, in 1825, dogs have been employed; that the first attempts were made in the neighbourhood of Valenciennes, and that it afterwards spread to Dunkirk and Charleville; that it has since extended to Thionville and Strasburgh; and, last of all, in 1828, to Besançon.

"In 1823, it was estimated that 100,000 kilogrammes of goods were thus introduced into France; in 1825, 187,315; and in 1826, 2,100,000 kilogrammes; all these estimates being reported as rather under the mark: the calculation has been made at 2½ kilogrammes 'pro rata' per dog. The dogs sometimes carry 10 kilogrammes, and sometimes even 12. The above estimate supposes that 1 dog in 10 in certain districts, and in others 1 in 20, is killed; but these calculations must necessarily be very vague. In the opinion of many of the Custom-house officers, not more than 1 dog in 75 is destroyed, even when notice has been given, and the dogs are expected.

"Tobacco and colonial produce are generally the objects of this illicit trade; sometimes cotton twist and manufactures. In the neighbourhood of Dunkirk, dogs have been taken with burdens of the value of 600, 800, and even 1,200 francs. Publications hostile to the government have not unfrequently been so introduced.

"The dogs which are trained to these 'dishonest habits' are conducted in packs to the foreign frontier; they are kept without food for many hours; they are then beaten and laden, and at the beginning of the night started on their travels. They reach the abodes of their masters, which are generally selected at 2 or 3 leagues from the frontiers, as speedily as they can, where they are sure to be well treated and provided with a quantity of food. It is said they do much mischief by the destruction of agricultural property, inasmuch as they usually take the most direct course across the country. They are dogs of a large size for the most part.

"The *Report* states, that these carrier dogs, being so tormented by fatigue, hunger, and ill usage, and hunted by the Custom-house officers in all directions, are exceedingly subject to madness, and frequently bite the officers, one of whom died in consequence in 1829. They have also been trained to attack the Custom-house officers in case of interference." — (p. 47.)

Various efforts have been made to suppress this species of smuggling, but hitherto without success. It is ludicrous, indeed, to suppose, seeing the vast extent of the land frontier of France, that any means should ever be adopted capable of excluding cheap foreign products in extensive demand. Nothing short of surrounding the country by Bishop Berkeley's wall of brass could accomplish such an object. The director-general of the French customs says that smuggling is carried on to an extent that is *vraiment effrayante*; and he may truly say so, when it is estimated that English hobbinet, though prohibited, is introduced into France to the extent of 10,000,000 fr., or 400,000*l.*, a year; cotton twist, and various other prohibited articles of British produce and manufacture, are also every where met with.

Thus it is that the two greatest and most civilised nations of Europe, by upholding vicious and destructive systems of commercial and financial legislation, mutually injure

each other. France and England, by their proximity, and the difference and variety of their products, are fitted to carry on a far more extensive and beneficial commerce than is carried on by any other two nations. But owing to their jealousy of each other's advancement, and the prevalence of unfounded theories as to the causes of national wealth, their intercourse has been subjected to the most oppressive fetters, and confined within the narrowest limits; most part, too, of what is actually carried on, has been diverted into illegitimate channels; so that what would, if left to itself, have been the most prolific source of wealth, and the most powerful incentive to genius and invention, has been made principally productive of crime and demoralisation. This conduct is as much opposed to their duty as to their interest. *Homines hominum causâ sunt generati, ut ipsi inter se aliis professe possint. . . Sed ut magnas utilitates adipiscimur conspiratione hominum ac consensu, sic nulla tam detestabilis pestis est, quæ non homini ab homine nascatur.* — (Cic. De Officiis, lib. ii. c. 5.)

*Law as to Smuggling in England.* — The penalties imposed on illicit dealing in commodities subject to duties of excise have been specified in the articles on such commodities. The following formidable statute, with its multiplied provisions and penalties, refers entirely to customs duties. The importance of the subject has induced us to give it nearly entire.

ACT 3 & 4 WILL. 4. c. 53., FOR THE PREVENTION OF SMUGGLING.

VESSELS AND BOATS.

*Commencement of the Act.* — First of September, 1853. — § 1.

*Certain Vessels found within certain Distances of the U. K. to be forfeited.* — If any vessel not being square-rigged, or any boat, belonging in the whole or in part to his Majesty's subjects, or having  $\frac{1}{2}$  the persons on board subjects of his Majesty, shall be found or discovered to have been within 100 leagues of the coast of the United Kingdom; or if any vessel belonging in the whole or in part to his Majesty's subjects, or having  $\frac{1}{2}$  the persons on board subjects of his Majesty, or any foreign vessel not being square-rigged, or any foreign boat, in which there shall be 1 or more subjects of his Majesty, shall be found or discovered to have been within 4 leagues of that part of the United Kingdom which is between the North Foreland on the coast of Kent, and Beachy Head on the coast of Sussex, or within 8 leagues of any other part of the coast of the United Kingdom; or if any foreign vessel or boat shall be found or discovered to have been within 1 league of the coast of the United Kingdom; or if any vessel or boat shall be found or discovered to have been within 1 league of the islands of Guernsey, Jersey, Alderney, Sark, or Man respectively, or within any bay, harbour, river, or creek of or belonging to any one of the said islands; any such vessel or boat so found or discovered, having on board or in any manner attached thereto, or having had on board or in any manner attached thereto, or conveying or having conveyed in any manner, any spirits not being in a cask or package containing 40 gallons at the least, or any tea exceeding 6 lbs. weight in the whole, or any tobacco or snuff not being in a cask or package containing 450 lbs. weight at least, or being packed separately in any manner within any cask or package, or any cordage or other articles adapted and prepared for slinging or sinking small casks, or any casks or other vessels whatsoever of less size or content than 40 gallons, of the description used for the smuggling of spirits, then and in every such case the said spirits, tea, tobacco, or snuff, together with the casks or packages containing the same, and the cordage or other articles, casks, and other vessels of the description aforesaid, and also the vessel or boat, shall be forfeited. — § 2.

*Any Vessel or Boat arriving within any Port of the U. K. having prohibited Goods on board, forfeited, unless there was no Want of Care in the Master or Owner.* — If any vessel or boat whatever shall arrive or shall be found or discovered to have been within any port, harbour, river, or creek of the United Kingdom, not being driven thereto by stress of weather or other unavoidable accident, having on board or in any manner attached thereto, or having had on board or in any manner attached thereto, or conveying or having conveyed in any manner, within any such port, harbour, river, or creek, any spirits not being in a cask or package containing 40 gallons at the least, or any tobacco or snuff not being in a cask or package containing 450 lbs. weight at least, or being packed separately in any manner within any cask or package, every such vessel or boat, together with such spirits or tobacco or snuff, shall be forfeited: provided always, that if it shall be made appear to the satisfaction of the commissioners of his Majesty's customs that the said spirits, tobacco, or snuff were on board without the knowledge or privity of the owner or master of such vessel or boat, and without any wilful neglect or want of reasonable care on their or either of their behalves, that then and in such case the said commissioners shall and they are hereby authorised and required to deliver up the said vessel or boat to the owner or master of the same. — § 3.

*Certain Cases in which Vessels shall not be forfeited.* — Nothing herein contained shall extend to render any vessel liable to forfeiture on account of any tobacco or snuff from the East Indies being in packages of 100 lbs. weight each at least, or on account of any segars being in packages of 100 lbs. weight each at least, or on account of any tobacco made up in rolls, being the produce of and imported from the State of Colombia, and in packages containing 320 lbs. weight each at least, or on account of any tobacco of the dominions of the Turkish empire which may be separated or divided in any manner within the outward package, provided such package be a hoghead, cask, chest, or case containing 450 lbs. weight net at least, or on account of any rum of and from the British plantations in casks containing 20 gallons at the least, or on account of any spirits, tea, or tobacco really intended for the consumption of the seamen and passengers on board during their voyage, and not being more in quantity than is necessary for that purpose, or to render any square-rigged vessel liable to forfeiture on account of any tea, or of any spirits in glass bottles, being really part of the cargo of such ship, and included in the manifest of such ship, or to render any vessel liable to forfeiture if really bound from one foreign port to another foreign port, and pursuing such voyage, wind and weather permitting. — § 4.

*Vessels belonging to his Majesty's Subjects, &c. throwing overboard any Goods during Chase, forfeited.* — When any vessel or boat belonging in the whole or in part to his Majesty's subjects, or having  $\frac{1}{2}$  of the persons on board subjects of his Majesty, shall be found within 100 leagues of the coast of this Kingdom, and shall not bring to upon signal made by any vessel or boat in his Majesty's service, or in the service of the revenue, hoisting the proper pendant and ensign, in order to bring such vessel or boat to, and thereupon chase shall be given, if any person or persons on board such vessel or boat so chased shall, during the chase or before such vessel or boat shall bring to, throw overboard any part of the lading of such vessel or boat, or shall stave or destroy any part of such lading, to prevent seizure thereof, then and in such case the said vessel or boat shall be forfeited; and all persons escaping from such vessels or boats, or from any foreign vessel or boat, during any chase made thereof by any vessel or boat in his Majesty's service or in the service of the revenue, shall be deemed and taken to be subjects of his Majesty, unless it shall be proved to the contrary. — § 5.

*Vessels in Port with a Cargo, and afterwards found in Ballast, and Cargo unaccounted for, forfeited.*— If any vessel or boat whatever shall be found within the limits of any port of the United Kingdom with a cargo on board, and such vessel or boat shall afterwards be found light or in ballast, and the master is unable to give a due account of the port or place within the United Kingdom where such vessel or boat shall have legally discharged her cargo, such vessel or boat shall be forfeited.— § 6.

*Regulations as to Vessels sailing from Guernsey, Jersey, Alderney, Sark, or Man, wholly or in part to His Majesty's subjects shall sail from Guernsey, Jersey, Alderney, Sark, or Man, without a clearance, whether in ballast or having a cargo; and if with a cargo, the master shall give bond to His Majesty, in double the value of the vessel or boat and of the cargo, for duly lading the same at the port for which the vessel clears; and every such vessel or boat not having such clearance, or which, having a clearance for a cargo, shall be found light or with any part of the cargo discharged before delivery thereof at the port specified in the clearance (unless through necessity or for preservation of the vessel or boat, to be proved to the satisfaction of the commissioners of His Majesty's customs), shall be forfeited.— § 7.*

*Vessels to bring to on being chased by Vessels or Boats of the Navy or in Preventive Service.*— In case any vessel or boat liable to seizure or examination under any act or law for the prevention of smuggling shall not bring to on being required so to do, on being chased by any vessel or boat in H. M. navy having the proper pendant and ensign of H. M. ships hoisted, or by any vessel or boat duly employed for the prevention of smuggling, having a proper pendant and ensign hoisted, it shall be lawful for the captain, master, or other person having charge or command of such vessel or boat in H. M. navy, or employed as aforesaid, (first causing a gun to be fired as a signal,) to fire at or into such vessel or boat; and such captain, master, or other person acting in his aid or assistance, or by his direction, shall be indemnified and discharged from any indictment, penalty, action, or other proceeding so doing.— § 8.

*Vessels belonging to His Majesty's Subjects not to hoist any Pendant, Ensign, or Colours usually worn by His Majesty's Ships.*— If any person or persons shall, from and after the passing of this act, wear, carry, or hoist in or on board any vessel or boat whatever belonging to any of His Majesty's subjects, whether the same be merchant or otherwise, without particular warrant for so doing from His Majesty, or the High Admiral of Great Britain, or the commissioners for executing the office of High Admiral of Great Britain, H. M. jack, commonly called the Union jack, or any pendant, ensign, or colours usually worn by H. M. ships, or any flag, jack, pendant, ensign, or colours resembling those of His Majesty, or those used on board H. M. ships, or any other ensign or colours than the ensign or colours by any proclamation of His Majesty now in force or hereafter to be issued prescribed to be worn, then and in every such case the master or other person having the charge or command thereof, or the owner or owners on board the same, and every other person so offending, shall forfeit and pay the sum of 50*l.*; and it shall be lawful for any officer or officers of H. M. navy or full pay, or for any officer or officers of customs or excise, to enter on board any such vessel or boat, and to seize any such flag, jack, pendant, ensign, or colours, and the same shall thereupon be forfeited.— § 9.

*Vessels and Boats used in Removal of run Goods to be forfeited.*— All vessels and boats made use of in the removal, carriage, or conveyance of any goods liable to forfeiture under this or any other act relating to the revenue of customs, shall be forfeited.— § 10.

*Boats of Vessels to have thereon the Name of Vessel, Port, and Master.*— The owner of every vessel belonging in the whole or in part to any of His Majesty's subjects shall paint or cause to be painted upon the outside of the stern of every boat belonging to such vessel, the name of such vessel, and the port or place to which she belongs, and the master's name within the transom, in white or yellow Roman letters, not less than 2 inches in length, on a black ground, on pain of the forfeiture of such boat not so marked, wherever the same shall be found.— § 11.

*Boats not belonging to Ships to have Name of Owner, &c. thereon.*— The owner of every boat not belonging to any vessel shall paint or cause to be painted upon the stern of such boat, in white or yellow Roman letters of 2 inches in length, on a black ground, the name of the owner or owners of the boat, and the port or place to which she belongs, on pain of the forfeiture of such boat not so marked, wherever the same shall be found.— § 12.

*Vessels and Boats used in piloting or fishing to be painted Black.*— The owner or owners of every vessel or boat employed on the coasts of the United Kingdom in piloting or fishing shall paint or tar every such vessel or boat, or cause the same to be painted or tarred, entirely black, except the name or other description now required by law to be painted on such vessel or boat; and every such vessel or boat not so painted or tarred, and every boat so painted as to resemble any boat usually employed for the prevention of smuggling or in any other employment in H. M. service, shall be forfeited: provided always, that nothing herein contained shall extend to prevent any distinguishing mark being placed on any vessel or boat, or to be otherwise painted, if the commissioners of customs think proper to allow the same, expressing it so in the licence of said vessel or boat.— § 13.

*British Vessels having secret Places, &c. forfeited.*— All vessels and boats belonging in the whole or in part to H. M. subjects, having false bulkheads, false bows, double sides or bottoms, or any secret or disguised place whatsoever in the construction of the said vessel or boat adapted for the purpose of concealing goods, or having any hole, pipe, or other device in or about the vessel or boat adapted for the purpose of running goods, shall be forfeited, with all the guns, furniture, ammunition, tackle, and apparel belonging to such vessel or boat; and all foreign vessels or boats, not being square-rigged, coming to any port of the United Kingdom, having on board any goods liable to the payment of duties, or prohibited to be imported, concealed in false bulkheads, false bows, double sides or bottoms, or any secret or disguised place in said vessel or boat, shall be forfeited.— § 14.

*Goods concealed on board forfeited, and all Goods packed therewith.*— If any goods which are subject to any duty or restriction in respect of importation, or which are prohibited to be imported into the United Kingdom, shall be found concealed in any manner on board any vessel, or shall be found, either before or after landing, to have been concealed in any manner, in such case all such goods, and all other goods packed with them, shall be forfeited.— § 15.

*LICENCES.*— *N. B.* The clauses of this act, with respect to the licensing of ships, from § 16. to § 27., both inclusive, are given under the word LICENCES.

#### VESSELS AND GOODS.

*Goods unshipped without Payment of Duty, and prohibited Goods, liable to Forfeiture.*— If any goods liable to the payment of duties be unshipped from any vessel or boat in the United Kingdom or the Isle of Man (customs or other duties not being first paid or secured), or if any prohibited goods whatsoever be imported into any part of the United Kingdom or of the Isle of Man, or if any goods warehoused or otherwise secured in the United Kingdom, for home consumption or exportation be clandestinely or illegally removed from any warehouse or place of security, then and in every such case all such goods shall be forfeited, together with all horses and other animals, and all carriages and other things, made use of in the removal of such goods.— § 28.

*Spirits and Tobacco found without a Permit to be deemed run.*— All spirits or tobacco which shall be found removing without a legal permit for the same shall be deemed to be spirits or tobacco liable to and unshipped without payment of duty, unless the party in whose possession the same be found or seized prove to the contrary.— § 29.

*Restricted Goods to be deemed run.*— All goods the importation of which is in any way restricted, which are of a description admissible to duty, and which shall be found and seized in the United Kingdom under any law relating to the customs or excise, shall, for the purpose of proceeding for the forfeiture

of them, or for any penalty incurred in respect of them, be described in any information exhibited on account of such forfeiture or penalty as goods liable to and unshipped without payment of duties. — § 30.

*Prohibited Goods shipped or waterborne, with intent to be exported, &c. forfeited, &c.* — If any goods prohibited to be exported be put on board any vessel or boat with intent to be laden or shipped for exportation, or be brought to any quay, wharf, or other place in the United Kingdom to be put on board any vessel or boat for the purpose of being exported, or if any goods prohibited to be exported be found in any package produced to the officer or officers of the customs as containing goods not so prohibited, then and in every such case, not only all such prohibited goods, but also all other goods packed therewith, shall be forfeited. — § 31.

*Vessels, Boats, and Goods may be seized by Officers and Persons herein mentioned, &c.* — All vessels and boats, and all goods whatsoever, liable to forfeiture under this or any other act relating to the revenue of customs, may be seized in any place, either upon land or water, by any officer or officers of the army, navy, or marines, duly employed for the prevention of smuggling, and on full pay, or by any officer or officers of customs or excise, or by any person having authority to seize from the commissioners of customs or excise; and all vessels, boats, and goods so seized shall, as soon as conveniently may be, be delivered into the care of the proper officer appointed to receive the same. — § 32.

*Penalty on Officers, &c. making collusive Seizures or taking Bribes, and on Persons offering them.* — If any officer or officers of the customs or excise, or of the army, navy, or marines, employed for the prevention of smuggling, and on full pay, or any other person or persons whatsoever duly employed for the prevention of smuggling, make any collusive seizure, or deliver up, or make any agreement to deliver up or not to seize, any vessel or boat or any goods liable to forfeiture, or take any bribe, gratuity, recompence, or reward for the neglect or non-performance of his duty, every such officer or other person shall forfeit for every such offence 500*l.* and be rendered incapable of serving his Majesty in any office whatever, either civil or military; and every person who shall give or offer, or promise to give or prore to be given, any bribe, recompence, or reward to, or shall make any collusive agreement with, any such officer or person as aforesaid, to induce him in any way to neglect his duty, or to do, conceal, or connive at any act whereby any of the provisions of any act of parliament relating to the revenue of customs may be evaded, shall forfeit the sum of 200*l.* — § 33.

*Vessels and Persons may be searched within the Limits of the Ports.* — It shall and may be lawful for any officer or officers of the army, navy, or marines, duly employed for the prevention of smuggling, and on full pay, or for any officer or officers of customs, producing his or their warrant or deputation (if required), to go on board any vessel within the limits of any of the ports of this kingdom, and to rummage and search the cabin and all other parts of such vessel for prohibited and uncustomed goods, and to remain on board such vessel during the whole time that the same shall continue within the limits of such port, and also to search any person or persons either on board or who shall have landed from any vessel, provided such officer or officers have good reason to suppose that such person or persons hath or have any uncustomed or prohibited goods secreted about his, her, or their person or persons; and if any person obstruct any officer or officers in going or remaining on board, or in entering or searching such vessel or person, every such person shall forfeit and lose the sum of 100*l.* — § 34.

*Before Persons are searched, they may require to be taken before a Justice, &c.* — Before any person shall be searched by any such officer or officers, it shall be lawful for such person to require the officer or officers to take him or her before a justice of the peace, or before the collector, comptroller, or other superior officer of the customs, who shall determine whether there is reasonable ground to suppose that such person has any uncustomed or prohibited goods about his or her person; and if it appear to such justice, collector, &c. that there is reasonable ground to suppose that such person has any uncustomed or prohibited goods about his or her person, such justice, collector, comptroller, or other superior officer of customs shall direct such person to be searched in such manner as he shall think fit; but if it shall appear to such justice, collector, comptroller, &c. that there is not reasonable ground to suppose that such person has any uncustomed or prohibited goods about his or her person, then such justice, collector, &c. shall forthwith discharge such person, who shall not in such case be liable to be searched; and every such officer or officers is and are authorised and required to take such person, upon demand, before any justice, collector, &c., detaining him or her in the meantime; provided always, that no person being a female shall be searched except by a female duly authorised by the commissioners of customs. — § 35.

*Penalty on Officers for Misconduct with respect to Search.* — If any such officer or officers shall not take such person with reasonable despatch before such justice, collector, comptroller, or other superior officer of customs, when so required, or shall require any person to be searched by him, not having reasonable ground to suppose that such person has any uncustomed or prohibited goods about his or her person, such officer shall forfeit and pay the sum of 10*l.* — § 36.

*Penalty on Persons denying having Foreign Goods about them.* — If any passenger or other person on board any vessel or boat shall, upon being questioned by any officer of customs, whether he or she has any foreign goods upon his or her person, or in his or her possession, deny the same, and any such goods shall, after such denial, be discovered upon his or her person, or in his or her possession, such goods shall be forfeited, and such person shall forfeit treble the value of such goods. — § 37.

*Officers, authorised by Writ of Assistance, may search Houses for prohibited Goods, &c.* — It shall and may be lawful for any officer or officers of customs, or person acting under the direction of the commissioners of customs, having a writ of assistance under the seal of the Court of Exchequer, to take a constable, headborough, or other public officer inhabiting near the place, and in the daytime to enter into and search any house, shop, cellar, warehouse, room, or other place, and in case of resistance to break open doors, chests, trunks, and other packages, there to seize and from thence to bring any uncustomed or prohibited goods, and to put and secure the same in the Custom-house warehouse in the port next to the place whence such goods shall be taken; provided always, that for the purposes of this act any such constable, headborough, or other public officer, duly sworn as such, may act as well without the limits of any parish, ville, or other place for which he shall be so sworn as within such limits. — § 38.

*Duration of Writs.* — All writs of assistance so issued from the Court of Exchequer shall continue and be in force during the whole of the reign in which such writs have been granted, and for 6 months from its conclusion. — § 39.

*Officers may, on probable Cause, stop Carts, &c., and search for Goods.* — It shall be lawful for any officer of customs or excise, or other person acting in his or their aid or assistance, or duly employed for the prevention of smuggling, upon reasonable suspicion, to stop and examine any cart, wagon, or other means of conveyance, for the purpose of ascertaining whether any smuggled goods are contained therein; and if no such goods be found, the officer or other person stopping and examining such cart, wagon, &c. having had probable cause to suspect that smuggled goods were contained therein, shall not, on account of such stoppage and search, be liable to any action at law on account thereof; and all persons driving or conducting such cart, wagon, &c. refusing to stop when required so to do in the King's name, shall forfeit 100*l.* — § 40.

*Police Officers seizing Goods to carry them to Warehouse.* — If any goods subject or liable to forfeiture under this or any other act relating to the customs be stopped or taken by any police officer or other person acting by virtue of any act of parliament, or otherwise duly authorised, such goods shall be carried to the Custom-house warehouse next to the place where the goods were stopped or taken, and there delivered to the proper officer appointed to receive the same, within 48 hours after the said goods were stopped and taken. — § 41.

*Goods stopped by Police Officers may be retained until Trial of Persons charged with stealing them.* —

If any goods be stopped or taken by a police officer on suspicion that the same have been feloniously stolen, it shall be lawful for the said officer to carry the same to the police office to which the offender is taken, there to remain to be produced at the trial of said offender; and in such case the officer is required to give notice in writing to the commissioners of customs of his having so detained the goods, with the particulars of the same; and immediately after the trial all such goods are to be deposited in the Custom-house warehouse, to be proceeded against according to law; and in case any police officer making detention of any such goods neglect to convey the same to such warehouse, or to give notice of having stopped the same as before described, he shall forfeit 20*l.* — § 42.

*Commissioners of Treasury, &c. may restore Seizures.* — It shall and may be lawful for the commissioners of the treasury, or any 3 or more of them, or for the commissioners of customs or excise, by an order for that purpose, to direct, or to cause, any vessels, boats, goods, or commodities under this or any act relating to the customs or excise, or to the trade or navigation of the United Kingdom, or to any of His Majesty's possessions abroad, to be delivered to the proprietor or proprietors, whether condemnation have taken place or not, upon such terms and conditions as they may deem expedient, and which shall be mentioned in the said order; and it shall be also lawful for the said commissioners of the treasury, and of the customs and excise, to mitigate or remit any penalty or fine which shall have been incurred, or any part of such penalty or fine incurred under any such act: provided always, that no person shall be entitled to the benefit of any order for delivery or mitigation unless the terms and conditions expressed in the said order are fully and effectually complied with. — § 43.

## PENALTIES.

*Persons unshipping, &c. any prohibited or uncustomed Goods, to forfeit Treble the Value, or 100*l.** — Every person who shall, either in the U. K. or the Isle of Man, assist or be concerned in the unshipping of any goods prohibited to be imported into the U. K. or into the Isle of Man, or the duties for which have not been paid or secured, or who shall knowingly harbour, keep, or conceal, or knowingly permit or suffer to be harboured, kept, or concealed, any goods which have been illegally unshipped without payment of duties, or which have been illegally removed, without payment of the same, from any warehouse or place of security in which they may have been deposited, or any goods prohibited to be imported, or to be used or consumed in the U. K. or in the Isle of Man, and every person, either in the U. K. or the Isle of Man, to whose possession any such uncustomed or prohibited goods shall knowingly come, or who shall assist or be in anywise concerned in the illegal removal of any goods from any warehouse or place of security in which they have been deposited, shall forfeit either the treble value thereof, or the penalty of 100*l.*, at the election of the commissioners of customs. — § 44.

*How Value is to be ascertained.* — In all cases where any penalty, the amount of which is to be determined by the value of any goods, is directed to be sued for under any law now in force or to be made for the prevention of smuggling, or relating to the revenue of customs or excise, such value shall be taken to be according to the rate and price which goods of the like sort or denomination and of the best quality bear at such time, and upon which the duties due upon importation have been paid. — § 45.

*Persons insuring the Delivery of prohibited or uncustomed Goods to forfeit 500*l.** — Every person who by way of insurance or otherwise shall undertake or agree to deliver any goods to be imported from beyond the seas into any port or place in the U. K. without paying the duties due on such importation, or any prohibited goods, or who in pursuance of such insurance shall deliver or cause to be delivered any uncustomed or prohibited goods, and every aider or abettor of such person, shall for every such offence forfeit 500*l.* over and above any other penalty to which he may be liable; and every person who shall agree to pay any money for the insurance or conveyance of such goods, or shall receive or take them into his custody or possession, or suffer them to be so received or taken, shall also forfeit 500*l.* over and above any penalty to which he may be liable on account of such goods. — § 46.

*Penalty on Persons offering Goods for Sale under Pretence of being run or prohibited.* — If any person or persons offer for sale any goods under pretence that the same are prohibited, or have been unshipped and run on shore without payment of duties, in such case all such goods (although not liable to any duties or prohibited) shall be forfeited, and the person or persons, and every of them, offering the same for sale shall forfeit the treble value of such goods, or the penalty of 100*l.*, at the election of the commissioners of customs. — § 47.

*Persons found to have been on board Vessels liable to Forfeiture subject to a Penalty of 100*l.** — Every person, being a subject of His Majesty, who shall be found or discovered to have been on board any vessel or boat liable to forfeiture under this or any other act relating to the customs for being found or discovered to have been within any of the distances, ports, or places in this act mentioned, from or in the United Kingdom, or from or in the Isle of Man, having on board or in any manner attached thereto, or having had on board or in any manner attached thereto, or conveying or having conveyed in any manner, such goods or things as subject such vessel or boat to forfeiture, or who shall be found or discovered to have been, within any such distance as aforesaid, on board any vessel or boat: from which any part of the cargo or lading of such vessel or boat shall have been thrown overboard, or staved or destroyed, to prevent seizure, shall forfeit 100*l.*; and every person, not being a subject of His Majesty, who shall have been on board any vessel or boat liable to forfeiture for any of the causes aforesaid, within 1 league of the coast of the United Kingdom or of the Isle of Man, or within any bay, harbour, river, or creek of the said island, shall forfeit for such offence 100*l.*; and it shall be lawful for any officer or officers of the army, navy, or marines, being duly employed for the prevention of smuggling, and on full pay, or any officer or officers of customs or excise, or other person acting in his or their aid or assistance, or duly employed for the prevention of smuggling, and he and they is and are hereby authorised, empowered, and required, to detain and to carry and convey every such person before any justice of the peace, to be dealt with as herein-after directed: provided always, that any such person proving, to the satisfaction of any justice or justices before whom he may be brought, that he was only a passenger in such vessel or boat, and had no interest whatever either in the vessel or boat, or in the cargo or goods on board the same, shall be forthwith discharged by such justices. — § 48.

*Persons unshipping, &c. Spirits or Tobacco, to forfeit 100*l.*, &c.* — Every person whatsoever who shall unship, or be aiding or concerned in the unshipping, of any spirits or tobacco liable to forfeiture under this or any other act relating to the customs or excise, in the U. K. or the Isle of Man, or who shall carry, convey, or conceal, or be aiding, assisting, or concerned in the carrying, conveying, or concealing of any such spirits or tobacco, shall forfeit for such offence 100*l.*; and every such person may be detained by any officer of the army, navy, or marines, duly employed for the prevention of smuggling, and on full pay, or by any officer or officers of customs or excise, or other person acting in his or their aid or assistance, or duly employed for the prevention of smuggling, and taken before any justice of the peace, to be dealt with as herein-after directed. — § 49.

*Persons carrying, &c. Tea or manufactured Silk to forfeit Treble the Value, &c.* — Every person whatsoever who shall unship, or be aiding, assisting, or otherwise concerned in the unshipping, of any tea or foreign manufactured silk of the value of 20*l.*, liable to forfeiture under any act relating to the customs or excise, or who shall carry, convey, or conceal, or be aiding, assisting, or concerned in the carrying, conveying, or concealing of such tea or silk, shall forfeit for every such offence treble the value thereof; and every such person shall and may be detained by any officer of the army, navy, or marines, duly employed for the prevention of smuggling, and on full pay, or by any officer of customs or excise, or by any other person acting in his aid or assistance, or duly employed for the prevention of smuggling, and taken before any justice of the peace, to be dealt with as herein directed: provided always, that it shall be lawful for such detained person to give security in treble the amount of the goods seized, to the satis-

*A Justice may order Persons taken before him for Offences relating to the Customs to be detained a reasonable Time.* — Where any person or persons shall have been detained by any officer of the army, navy, or marines, employed for the prevention of smuggling, and on full pay, or by any officer of customs or excise, or any person or persons acting in his or their aid or assistance, or duly employed for the prevention of smuggling, for any offence under this or any other act relating to the customs, and shall have been taken and carried before any justice of the peace, if it shall appear to such justice that there is reasonable cause to detain such person or persons, he may and he is authorised and required to order such person or persons to be detained a reasonable time, and at the expiration of such time to be brought before any 2 justices, who are authorised and required finally to hear and determine the matter. — § 51.

*Any Person liable to Arrest making his Escape, may be detained by any Officer of Customs.* — If any person or persons liable to be detained under the provisions of this or any other act relating to the customs shall not be detained at the time of so committing the offence, or after detention shall make his or their escape, it shall be lawful for any officer or officers of the army, navy, or marines, employed for the prevention of smuggling, and on full pay, or for any officer of customs or excise, or any other person acting in his or their aid or assistance, or duly employed for the prevention of smuggling, to detain such person at any time afterwards, and to carry him before any justice of the peace, to be dealt with as if detained at the time of committing the said offence. — § 52.

*Persons making Signals to Smuggling Vessels at Sea, on Conviction to forfeit 100*l.*, &c.* — No person shall, at sunset and before sunrise between the 21st day of September and the 1st day of April, or after the hour of 8 in the evening and before the hour of 6 in the morning at any other time in the year, make, aid or assist in making, any signal in or on board or from any vessel or boat, or on or from any part of the coast or shore of the United Kingdom, or within 6 miles of any part of such coasts or shores, for the purpose of giving any notice to any person on board any smuggling vessel or boat, whether any person so on board such vessel or boat be or be not within distance to notice such signal; and if any person, contrary to the intent and meaning of this act, make or cause to be made, or aid or assist in making, any such signal, such person shall be guilty of a misdemeanour; and it shall be lawful for any person to stop, arrest, and detain the person or persons who shall so offend, and to carry any such person or persons before any 1 or more justices of the peace residing near the place where such offence shall be committed, who, if he sees cause, shall commit the offender to the next county gaol, there to remain until the next court of oyer or terminer, great session, or gaol delivery, or until such person or persons shall be delivered by due course of law; and it shall not be necessary to prove on any indictment or information that any vessel or boat was actually on the coast; and the offender or offenders being duly convicted thereof shall, by order of the court before whom they are convicted, either forfeit and pay the penalty of 100*l.*, or, at the discretion of such court, be committed to the common gaol or house of correction, there to be kept to hard labour for any term not exceeding 1 year. — § 53.

*Proof of a Signal not being intended, to lie on the Defendant.* — In case any person be charged with or indicted for having made or caused to be made, or been aiding or assisting in making, any such signal, the burden of proof that such signal so charged as having been made with intent and for the purpose of giving such notice as aforesaid was not made with such intent and for such purpose shall be upon the defendant. — § 54.

*Any Person may prevent Signals.* — It shall be lawful for any person whatsoever to prevent any signal as aforesaid being made, and to enter upon any lands for that purpose, without being liable to any indictment, suit, or action for the same. — § 55.

*Persons resisting Officers, or rescuing or destroying Goods to prevent Seizure, forfeit 100*l.** — If any person whatsoever shall obstruct any officer or officers of the army, navy, or marines, employed for the prevention of smuggling, and on full pay, or any officer or officers of customs or excise, or any person acting in his or their aid or assistance, or duly employed for the prevention of smuggling, in the execution of his or their duty, or in the due seizure of any goods liable to forfeiture, or shall rescue or cause to be rescued any goods which have been seized, or shall attempt or endeavour to do so, or shall before or after any seizure, stave, break, or otherwise destroy any goods, to prevent the seizure thereof or the securing the same, then and in such case the party or parties offending shall forfeit for every such offence 100*l.* — § 56.

*Penalty on Persons procuring others to assist in unshipping prohibited Goods.* — Any person or persons who shall by any means procure or hire any person or persons, or who shall depute, authorise, or direct any person or persons to procure or hire any person or persons, to assemble for the purpose of being concerned in the landing or unshipping or carrying or conveying any goods prohibited to be imported, or the duties for which have not been paid or secured, shall for every person so procured or hired forfeit 100*l.* — § 57.

#### FELONIES.

*Three or more armed Persons assembled to assist in the illegal Landing of Goods, &c. deemed guilty of Felony.* — If any persons to the number of 3 or more, armed with fire-arms or other offensive weapons, shall, within the U. K. or within any port, harbour, or creek thereof, be assembled in order to aid and assist in the illegal landing, running, or carrying away of any prohibited goods, or any goods liable to any duties which have not been paid or secured, or in rescuing or taking away any goods, after seizure, from the officer of the customs or other officer authorised to seize the same, or from any person or persons employed by or assisting them, or from the place where the same have been lodged by them, or in rescuing any person who shall have been apprehended for any of the offences made felony by this or any act relating to the customs, or in the preventing the apprehension of any person guilty of such offence, or in case any persons to the number of 3 or more, so armed, shall, within the U. K. or within any port, harbour, or creek thereof, be so aiding or assisting, every person so offending, and every person aiding, abetting, or assisting therein, shall, being thereof convicted, be adjudged guilty of felony, and suffer death as a felon. — § 58.

*Persons shooting at any Boat belonging to the Navy, &c. deemed guilty of Felony.* — If any person shall maliciously shoot at any vessel or boat belonging to H. M. navy, or in the service of the revenue, within 100 leagues of any part of the coast of the U. K. or shall maliciously shoot at, maim, or dangerously wound any officer of the army, navy, or marines, employed for the prevention of smuggling, and on full pay, or any officer of customs or excise, or any person acting in his aid or assistance, or employed for the prevention of smuggling, in the due execution of his office or duty, every person so offending, and every person aiding, abetting, or assisting therein, shall, being lawfully convicted, be adjudged guilty of felony, and suffer death as a felon. — § 59.

*Any Person in company with 4 others having prohibited Goods, or with 1 other armed or disguised, guilty of Felony.* — If any person being in company with more than 4 other persons be found with any goods liable to forfeiture, or in company with 1 other person, within 5 miles of the sea coast or of any navigable river leading therefrom, with such goods, and carrying offensive arms or weapons, or disguised in any way, every such person shall be adjudged guilty of felony, and shall, on conviction of such offence, be transported as a felon for the space of 7 years. — § 60.

#### OFFICERS.

*Persons assaulting Officers by Force or Violence may be transported.* — If any person shall by force or violence assault, resist, oppose, molest, hinder, or obstruct any officer of the army, navy, or marines, employed for the prevention of smuggling, and on full pay, or any officer of customs or excise, or other

person acting in his or their aid or assistance, or duly employed for the prevention of smuggling, in the due execution of his or their office or duty, such person, being thereof convicted, shall be transported for 7 years, or sentenced to be imprisoned in any house of correction or common gaol, and kept to hard labour, for any term not exceeding 3 years, at the discretion of the court before whom the offender shall be tried and convicted as aforesaid. — § 61.

**Commanding Officers of Vessels in the Service may haul their Vessels on Shore without being liable to any Action for so doing.** — It shall be lawful for the commanding officer of any vessel or boat employed for the prevention of smuggling to haul any such vessel or boat upon any part of the coasts of the United Kingdom, or the shores, banks, or beaches of any river, creek, or inlet of the same (not being a garden or pleasure ground, or place ordinarily used for any bathing machine or machines), which shall be deemed most convenient for that purpose, and to moor any such vessel or boat on such part of the aforesaid coasts, shores, &c. below high water mark, and over which the tide flows on ordinary occasions, and to continue such vessel or boat so moored for such time as said commanding officer shall deem proper; and such officer, or person or persons acting under his direction, shall not be liable to any indictment, action, or suit for so doing, any law, statute, custom, or usage to the contrary notwithstanding. — § 62.

**Officer, if wounded in the Service of the Customs, to be provided for, &c.** — In all cases where any officer or seaman employed in the service of the customs or excise shall be killed, maimed, wounded, or in any way injured in the due execution of his office, or if any person acting in his aid, or duly employed for the prevention of smuggling, shall be so killed, maimed, wounded, or in any way injured while so aiding such officer or seaman, or so employed, it shall be lawful for the commissioners of customs and excise to make such provision for the officer or person so maimed, wounded, or injured as aforesaid, or for the widows and families of such as shall be killed, as they shall be authorised and empowered to do by warrant from the Lord High Treasurer or commissioners of the treasury. — § 63.

**Vessels and Goods seized to be disposed of as the Commissioners direct.** — All vessels and boats, and all goods whatsoever, seized and condemned for breach of any law relating to the customs, shall be disposed of as soon as conveniently may be after the condemnation thereof, in such manner as the commissioners of customs shall direct. — § 64.

#### REWARDS.

**Rewards to Officers for detaining Smugglers.** — It shall be lawful for the commissioners of customs, and they are hereby authorised and empowered, to award, to any officer or other person detaining any person liable to detention under this or any other act relating to the revenue of customs, to be paid upon the conviction of such person, any reward they may think fit to direct, not exceeding the sum of 20l. for each person. — § 65.

**Rewards to Officers where pecuniary Penalties are recovered.** — It shall be lawful for the commissioners of customs, and they are hereby authorised, to order the following reward to be paid to any officer or persons by whose means any pecuniary penalty or composition is recovered; (that is to say),  $\frac{1}{2}$  part of the penalty or sum recovered, except in seizures of silk goods, in which case the officers may receive  $\frac{1}{3}$  the penalty or sum recovered. — § 66.

**Rewards to Officers making Seizures.** — It shall be lawful for the commissioners of customs, and they are hereby authorised, to order to be paid, in respect of any seizure made under this or any act relating to the customs or to trade and navigation, to the person or persons making the same, the following rewards; (that is to say)

In the case of seizures of spirits or tobacco: —

If all the parties concerned in the act which occasions the seizure, being above the age of 16 years, are detained and convicted, the whole value thereof, such value to be fixed and settled by the Lords of the Treasury, or by the commissioners of his Majesty's customs, as herein-after directed:

If 2 or more of such parties, not being the whole, are so detained and convicted,  $\frac{3}{4}$ ths of such value:

If 1 such party, not being the whole of them, but being a seafaring man, is so detained and convicted,  $\frac{3}{4}$ ths of such value:

If 1 such party, not being the whole of them, is detained and convicted, and the vessel or means of conveyance is or are seized and condemned,  $\frac{3}{4}$ ths of such value:

If 1 such party, not being the whole of them, nor being a seafaring man, is so detained and convicted,  $\frac{5}{8}$ ths of such value:

If the vessel or means of conveyance is seized and condemned without any person being detained,  $\frac{1}{5}$ d of such value:

If all the goods are seized, and all the parties concerned as aforesaid are subsequently convicted in consequence of such seizure, and by the exertion of the seizures,  $\frac{1}{2}$  of such value:

If the goods only are seized, 1-8th, or such other part as the commissioners of the customs shall think proper, not exceeding 1-1th of such value: —

In the case of seizures of other goods, not silks: —

If the vessel or other means of conveyance is or are seized and condemned, or if any person is prosecuted to conviction on account of the same,  $\frac{1}{2}$  of the produce, exclusive of the duties: —

If the goods only, 1-1th of such produce:

In the case of limited tobacco, snuff, or other goods destroyed, such reward as the Lords of the Treasury or the commissioners of his Majesty's customs may think proper to direct, not exceeding a moiety of the duty payable on such goods in case the same had been sold for home consumption: —

In the case of seizures of silk goods, the whole value of such goods, exclusive of the duty thereon: —

In the case of seizures of vessels and loads: —

If sold, a moiety of the produce:

If taken into the public service or broken up, a moiety of the value: —

In the case of seizures of cattle and carriages, in all cases  $\frac{3}{4}$ ths of the produce of the sale. — Sect. 67.

**The Treasury, &c. to fix the Value of Spirits & Tobacco.** — The value of spirits and tobacco seized as aforesaid shall in all cases be deemed and taken to be such as the Lords of the Treasury or the commissioners of customs may think fit to fix the same at per gallon or per pound weight, for the purpose of rewarding the officer; and all the before-mentioned rewards shall be paid subject to a deduction of 10l. per cent. on account of law charges and other expenses. — § 68.

**All Rewards, &c. payable to Officers of Army, &c. to be regulated by H. M. Orders in Council.** — Every such reward, or part or share of any such seizure or of the value thereof, as shall be payable to any officer or officers, non-commissioned officers, petty officers, seamen, or privates of the army, navy, or marines, or acting under the orders of the Lord High Admiral or commissioners of the admiralty, shall be divided and distributed in such proportions, and according to such rules, regulations, and orders, as his Majesty shall be pleased to direct and appoint. — § 69.

**Commissioners may distribute Shares of Seizures so as to reward Persons not actually present.** — It shall be lawful for the commissioners of customs or excise respectively, in case of any seizure of vessels, boats, or goods, or of the apprehension of any parties, under this or any other act relating to the customs, to distribute the several shares of such vessels, boats, or goods, or of any penalties or rewards, that may be recovered on account of any seizure, in such manner as to enable any officer or officers, or other person or persons through whose information or means such seizure shall have been made, or penalty recovered, or party apprehended, and who may by them be deemed to be so entitled, to participate in such proportion as the said commissioners shall respectively deem expedient. — § 70.

**In case Officers act negligently or collusively.** — Upon proof being made to the satisfaction of the commissioners of customs or excise that any officer or officers or person or persons as aforesaid have acted collusively or negligently in the making of any seizure, the said commissioners may direct that the whole or any part of the proportion of such seizure be applied to the use of his Majesty. — § 71.

**None except Officers to take up Spirits in small Casks sunk or float upon the Sea.** — No person or persons whatsoever, being a subject or subjects of his Majesty, other than an officer or officers of the navy, customs, or excise, or some person or persons authorised in that behalf, shall intermeddle with or take up any spirits, being in casks of less content than 40 gallons, found floating upon or sunk in the sea within 100 leagues of the United Kingdom; and if any spirits shall be so intermeddled with or taken up, the same shall be forfeited, together with any vessel or boat in which they are found. — § 72.

**Rewards to Persons giving Information of Goods floating or sunk in the Sea.**—If any person or persons shall discover any spirits, being in casks of less content than 40 gallons, floating upon or sunk in the sea, and give information to any officer of the customs, or other person or persons authorised to make seizure of such spirits, so that seizure be made of the same, the person or persons giving such information shall be entitled to and shall receive such reward as the commissioners of customs may deem expedient to direct. — § 73.

**Allowance to poor Persons confined for Offences against Laws of Customs and Excise.**—For the necessary subsistence of any poor person confined in the United Kingdom or in the Isle of Man, under or by virtue of any exchequer or other process for the recovery of any duties or penalties, upon bond or otherwise, sued for, under or by virtue of any order of the commissioners of customs or excise, it shall be lawful for said commissioners respectively to raise an allowance, not exceeding the sum of 7 *sd.* and not less than 4 *sd.* per day, to be made to any such poor person, out of any money in their hands arising from the duties of customs or excise, as the case may require. — § 74.

#### JURISDICTION.

**Penalties and Forfeitures how to be sued for.**—All penalties and forfeitures incurred or imposed by this or any other act relating to the customs, or to trade or navigation, shall and may be sued for, prosecuted, and recovered by action of debt, bill, plaint, or information in any court of record at Westminster, or at Dublin, or at Edinburgh, or in the royal courts of the islands of Guernsey, Jersey, Alderney, Sark, or Man, in the name of the attorney-general or of the lord advocate of Scotland, or in the name or names of some officer or officers of customs, or by any one or more of the justices of the peace in the U. K., or before any governor, deputy governor, or commander in the Isle of Man. — Sect. 75.
