**Vessels, &c. and Goods seized, what the duties to be demanded, unless otherwise provided in a claim.**—All vessels, boats, and goods which have been or shall be heretofore seized as forfeited under any law relating to the customs, and which have been or shall hereafter be ordered to be sold by the commissioners of customs, shall be deemed and taken to be condemned, and may be sold in the manner directed by law in respect to vessels, boats, and goods seized and condemned for breach of law relating to the customs, unless the person from whom such vessels, boats, and goods have been seized, or the owner of them, or some person authorised by him, shall, within 1 calendar month from the day of seizure the same, give notice in writing, if in London, to the person seizing the same or to the secretary or solicitor for the customs, and if elsewhere, to the person seizing the same or to the collector and comptroller or other chief officer of the customs, at the nearest port to which the vessel, boat, or goods, or he intends to claim them. — Sect. 76.

**Offences on the High Seas deemed to have been committed at the Place to which the Offender is brought, or to which he is bound.**—In case any offence be committed upon the high seas against this or any other act relating to the customs, or any penalty, or forfeiture be incurred upon the high seas for any breach of such acts, as if committed in the place to which the offender is deemed and taken to have been committed, and such penalties and forfeitures to have been incurred, at the place on land in the U. K. or the Isle of Man into which the person committing such offence or incurring such penalty or forfeiture shall be taken, brought, or carried, or in which such person shall be found; and in case such place on land is situated within any city, borough, liberty, division, franchise, or town corporate, as well as any justice of the peace for such city, borough, liberty, division, franchise, or town corporate, as any justice of the peace of the county within which such city, borough, liberty, division, franchise, or town corporate is situated, shall have jurisdiction to hear and determine all cases of offences against such act so committed upon the high seas, any charter or act of parliament to the contrary notwithstanding: provided always, that where any offence shall be committed at any place upon the water not being within any county of the U. K., or where any doubt exists as to the same being within any county, such offence shall, for the purposes of this act, be deemed and taken to be committed upon the high seas. — Sect. 77.

**Justices may summon Offenders, and the Summons may be left at his last Place of Residence, or on board any Ship to which he belongs.**—Upon the exhibiting any information before any justice of the peace for any offence against this or any act relating to the customs or to trade or navigation, for which the party charged is not liable to be detained in manner hereinbefore mentioned, such justice is hereby required to issue a summons for the appearance of the party against whom such information is exhibited before 2 justices of the peace; and such summons, directed to such party, being either at his or her last known place of residence, or on board any ship or vessel to which such party may belong, shall be deemed to have been sufficiently served. — Sect. 78.

**Two Justices may, upon Appearance or Default of the Party, proceed to the Hearing.**—Upon the appearance or default of any party so summoned, it shall be lawful for any 2 justices of the peace to proceed to the examination of the matter complained in such information, and upon due proof thereof, either upon the confession of such party or upon the oath of 1 or more credible witness or witnesses, to convict such party in the penalty or penalties provided for by such information; and in case of nonpayment thereof, such justices, or 1 of them, or some other justices or justice of the peace, are hereby authorised and required, by warrant under hand and seal, to commit such party to any of His Majesty's gaols, or to any other gaol or prison, there to remain until the penalty or penalties shall be paid. — Sect. 79.

**Warrants shall and may be executed in any part of the United Kingdom.**—Sect. 80.

**Justices empowered to mitigate Penalty.**—Where any party shall or may be convicted before any 2 or more of His Majesty's justices of the peace in any penalty or penalties incurred as aforesaid, except as is herein-after provided, it shall and may be lawful for the said justices, in cases where upon consideration of the circumstances they shall deem it expedient so to do, to mitigate the payment of the said penalty or penalties, or as the sum to be paid by such party be not less than 1 *4th* of the amount of the penalty in which such party shall have been convicted. — Sect. 81.

**As to Persons committed for Penalties under 100*l.***—Where any person shall have been so committed by any justices or justice of the peace to any prison for nonpayment of any penalty less than 100*l.*, the gaoler or keeper of such prison is hereby

authorised and required to discharge such person at the end of 1 calendar month from the commencement of such imprisonment. — Sect. 82.

**Married Women may be committed to Prison.**—Where any party so convicted before 2 justices of the peace shall be a married woman, such party shall be liable to be committed to prison in manner herein-before mentioned, notwithstanding her coverture. — Sect. 83.

**Modes of Proceeding before Justices.**—When any information shall have been exhibited before any 2 justices of the peace for the forfeiture of any goods seized under this or any act relating to the customs, it shall be lawful for the said justice, and he is hereby authorised and required, to summon the party to whom such goods are belonged, or from whom they were seized, to appear before any 2 justices of the peace; and such summons, directed to such party, being left either at his or her last known place of residence or on board any ship to which such party may belong, shall be deemed to have been sufficiently served; and upon his, her, or their appearance or default, any 2 justices may proceed to the examination of the matter, and, upon due proof thereof, to convict such party, and to condemn the same, or any act relating to the customs, may condemn the said goods. — Sect. 84.

**Persons on Conviction to forfeit 100*l.*, or if seafaring Men to be sent into the Navy for 5 Years.**—It shall be lawful for any 2 or more justices of the peace before whom any person liable to be detained, and who shall have been detained, for any offence against any act relating to the customs, shall be brought, either on the confession of such person or on the oath of 1 or more credible witness or witnesses, to convict such person of any such offence; and every such person so convicted shall, immediately upon such conviction, pay into the hands of such justices, for the use of His Majesty, the penalty of 100*l.*, without any mitigation whatsoever, for any such offence of which he shall be so convicted as aforesaid; or in default thereof the said justices shall be authorised and required, by warrant under their hands and seals, to commit such person so convicted, and making such default, to any gaol or prison, there to remain until such penalty be paid: provided, that if the person convicted of such offence be a seafaring man, and fit and able to serve in His Majesty's naval service, and shall not prove that he is not a subject of His Majesty, it shall be lawful for any such justices, and they are hereby required, in lieu of such penalty to order any officer of the army, navy, or marines, employed for the prevention of smuggling, and on full pay, or any officer of the army, navy, or marines, or convey or cause to be carried or conveyed, such person on board any of His Majesty's ships, in order to his serving in the naval service for the term of 5 years; and if such person shall at any time within that period desert from such ship, he shall be deemed to have deserted at any time after he was to be again arrested and detained, and delivered over to complete his service of 5 years: provided also, that if it shall be made to appear to any such justices that a convenient arrangement cannot be made at the time of the conviction of the said party for immediately carrying or conveying such seafaring man so convicted on board any of His Majesty's ships, it shall be lawful for such justices to commit such convicted seafaring man to any prison or gaol, there to remain in safe custody for any period not exceeding 1 month, that time may be given to make arrangements for conveying him to one of His Majesty's ships; provided also, that the commissioners of the treasury, or any 3 or more of them, shall have full power to remit or mitigate any such penalty, punishment, or service, whether the parties be seafaring men or otherwise. — Sect. 85.

**Justices may amend Informations.**—If any person shall be proceeded against under this or any other act relating to the customs or excise, and the information exhibited against such person shall charge him as being a seafaring man, and fit and able to serve His Majesty in His naval service, and it shall appear to the justices before whom such person is brought that he is guilty of the offence with which he is charged, but that he is not fit to be sent to the naval service, then and in such case it shall be lawful for such justices, and they are hereby required, to amend such information accordingly, and to convict such person in the penalty of 100*l.*, as if proceeded against as not being a seafaring man, or fit for the naval service. — Sect. 86.

**If Persons convicted, and sent on board H. M. Ships, be found unfit, they may be again conveyed before Magistrates, and convicted in the Penalty of 100*l.***—If any person so convicted as a seafaring man, and carried on board any of His Majesty's ships, within 1 month after being so carried on board, be deemed to be unfit, and shall be refused on that account to be received into His Majesty's service, such person shall, as soon as conveniently may be, be conveyed before any justice of the peace, and upon proof that he has been refused to be received on board any of His Majesty's ships as a seafaring man, such justice shall and he is hereby authorised and required to commit upon the said person the penalty of 100*l.*, without hearing any evidence other than such proof as last aforesaid; and in default of immediate payment of the same to the said justice, for the use of His Majesty, to commit the said person to any gaol or prison, till such penalty be paid: provided always, that no person so convicted, and ordered to serve on board any of His Majesty's ships, shall be sent away from the U. K. on board such ship less than 1 month from the date of such conviction. — Sect. 87.

**As to Jurisdiction in Boroughs.**—Where any offence against this or any other customs act shall be committed in any city

copy of any process served upon, any officer of the army, navy, epines, customs, or excise, or against any person acting under the direction of the commissioners of customs, for any thing done in the execution of or by reason of his office, until 1 calendar month next after notice in writing has been delivered to him, or left at his usual place of abode, by the attorney or agent for the party who intends to sue out such writ or process, in which notice shall be clearly and explicitly contained the cause of action, the name and place of abode of the person who is to bring such action, and the name and place of abode of the attorney or agent; and a fee of 20s. shall be paid for preparing or serving every such notice, and no more.— Sect. 105.

**No Evidence to be adduced but what is contained in the Notice.**—No plaintiff in any case where an action shall be grounded on any act done by the defendant shall be permitted to produce any evidence of the cause of such action, except such as shall be contained in the notice to be given as aforesaid, or shall receive any verdict against such officer or person, unless he prove on the trial of such action that such notice was given; and in default of such proof, the defendant shall receive a verdict and costs.— Sect. 104.

**Officer may tender Amends.**—It shall be lawful for any officer or other person to whom such notice has been given, at any time within 1 calendar month after such notice, to tender amends to the party complaining, or to his, her, or their agent or attorney, and in case the same is not accepted, to plead such tender in bar to any action brought against him, grounded on such writ or process, or in bar to the plea of Not Guilty, and other pleas, with leave of the court; and if, upon issue joined thereon, the jury shall find the amends so tendered to have been sufficiently tendered, they shall give a verdict for the defendant and in such case, or in case the plaintiff shall become nonsuited, or discontinue his, her, or their action, or in case judgment shall be given for such defendant upon demurrer, then such defendant shall be entitled to the fees costs as he would have been entitled to in case he had pleaded the general issue only; but if, upon issue joined, the jury shall find that no amends were tendered, or that the same were not sufficient, or shall find against the defendant in such other plea or pleas, then they shall give a verdict for the plaintiff, and such damages as they shall think proper, together with his, her, or their costs of suit.— Sect. 103.

**Applying to tender Amends, may pay Money into Court.**—In case such officer or other person shall neglect to tender any amends, or shall have tendered insufficient amends, before the action brought, it shall be lawful for him, by leave of the court, at any time before the trial of the said action, to pay into court such sum of money as he shall see fit, whereupon such proceedings, orders, and judgments shall be had, made, and given in and by such court as in other matters where the defendant is allowed to pay money into court.— Sect. 102.

**Action to be commenced within 6 Months after Cause of Action arises.**—If any action or suit be brought or commenced as aforesaid, such action or suit shall be brought or commenced within 6 months next after the cause of action shall have arisen, and not afterwards, and shall be laid and tried in the county or place where the facts were committed, and not in any other county or place; and the defendant or defendants shall and may plead the general issue, and give the special matter in evidence, at any trial had thereupon; and if the plaintiff or plaintiffs be nonsuited, or discontinued by, her, or their action or suit, or if, upon a verdict or demurrer, judgment be given against them, the defendant or defendants shall or may receive treble costs, and have such remedy for the same as any defendant or defendants in other cases where costs are given by law.— Sect. 107.

**Judges of the King's Bench may issue Warrants for apprehending Offenders.**—Whenever any person shall be charged with any offence in this act relating to the customs, or for which he or she may be prosecuted by indictment or information in the Court of King's Bench, and the same shall be made appear to any judge of the same court, by affidavit or by certificate of an information or indictment being filed against such person in the said court for such offence, it shall and may be lawful for such judge to issue his warrant under his hand and seal, and thereby to cause such person to be apprehended, and brought before him or some other judge of the same court, or before some 1 justice of the peace, in order to his or her being bound, with 2 sufficient sureties, in such sum as in the said warrant shall be expressed, with condition to appear in the said court at the time mentioned in such warrant, and to answer to all and singular indictments or informations for any such offence; and in case any such person shall neglect or refuse to become bound as aforesaid, it shall be lawful for such judge or justice to commit such person to the common goal of the county, city, or place where the offence has been committed, or where he or she shall have been apprehended, to remain until he or she shall become bound, or be discharged by order of the court in term time, or of 1 of the judges of the court in vacation; and the recognizance to be taken shall be returned and filed in the said court, and shall continue in force until such person shall be acquitted of such offence, or in case of conviction shall have received judgment for the same, unless order be made by the court to be discharged; and where any person, either by virtue of a warrant or commitment aforesaid, or by virtue of any writ of *capias* or *respondentum* issued out of the said court, is now detained, or shall be committed to and detained in any goal for want of bail, it shall be lawful for the prosecutor of such indictment or information to cause a copy thereof to be delivered to such person, or to the gaoler, keeper, or turnkey of the goal wherein such person is detained, with a notice thereon indorsed, that unless such person shall, within 8 days from the time of such delivery of said copy, cause an appearance and also a plea or demurrer to be entered in court to such indictment or information, an appearance and the plea of Not Guilty will be entered thereto in the name of such person; and in case he or she shall not do so within the space of 8 days after the delivery of a copy of such indictment or information, neglect to cause an appearance, and also a plea or demurrer, to be entered in the said court to such indictment or information, it shall be lawful for the prosecutor upon affidavit being made and filed in the court of the delivery of a copy of such indictment or information, with such notice indorsed thereon as aforesaid, to such person, or to such gaoler, keeper, or turnkey, as the case may be, which affidavit may be made before any judge or commissioner of the court authorized to take affidavits, to

cause an appearance and the plea of Not Guilty to be entered to such indictment or information for such person; and such proceedings shall be had thereupon as if the defendant appeared and pleaded Not Guilty, according to the usual course of the court; and if, upon trial, any defendant so committed and detained be acquitted of all the offences therein charged upon him or her, it shall be lawful for the judge before whom such trial shall be had, although he may not be one of the judges of the King's Bench, to order that such defendant be discharged absolutely, as to his or her commitment as aforesaid, and such defendant shall be thereupon discharged accordingly.— Sect. 109.

**When Recognizance is given, and the Party shall not plead, a Copy of the Information or Indictment may be delivered to his Attorney or Agent.**—Where any person, arrested by virtue of a warrant issued as aforesaid, enters into a recognizance, and appears in court at the return of the said recognizance, but does not afterwards plead to the information or indictment, it shall be lawful for the prosecutor to cause a copy thereof to be delivered to such person, or to his or her attorney or agent, or to be left at his or her last place of abode, with a notice thereon indorsed, that unless such person shall, within 8 days from the time of such delivery, cause a plea to be entered in court to such information or indictment, the prosecutor will enter a plea of Not Guilty on his or her behalf; and upon affidavit being made and filed in the court of the delivery of a copy of such information or indictment, with notice indorsed thereon as aforesaid, to such person, or to his or her attorney or agent, or at his or her last place of abode, as the case may be, it shall be lawful for the prosecutor to cause the plea of Not Guilty to be entered to such information or indictment on behalf of such person, and such proceedings shall be had thereupon as if the defendant had pleaded according to the usual course of the said court.— Sect. 108.

**Carriage Articles not to be loaded until the Order of the City of London is obtained.**—If all or any part of the description of hrein-after mentioned, that is to say, pork, beef, mutton, veal, cheese, fish, eggs, salt, fruit, roots, catkale, and olives, brought customed into the port of the said city, and which are liable to the said duties, be laden or unshipped, or taken on board the said port before a proper certificate of the payment of the said duties shall have been obtained, such goods shall be forfeited, and may be seized by any officer of customs empowered to seize goods liable without the duty; and such letters may be sued for, prosecuted, and recovered by action of debt, bill, plaint, or information in any court of record at Westminster, in the name of the chamberlain of the said city, on behalf of the mayor, commonalty, and citizens, or either of them.

**When Offenders are arrested and give Bail, the Bail Taken to be assigned to his Majesty.**—If any person shall be arrested by a writ of *capias* or *respondentum* issuing out of any court of record, or out of any of the superior courts of record of either of the counties palatine, at the suit of his Majesty, and the sheriff or other officer shall take bail from such person, he shall, at the request and costs of his Majesty, his heirs, or successors, take bail from such person, by indorsing the same, and attesting it under his hand and seal, in the presence of 2 or more credible witnesses, which may be done without any stamp, provided the assignment so indorsed be duly stamped before any seal be committed thereupon; and if such bail bond be forfeited, such process shall thereupon issue as in bond of recognizance made to his Majesty, his heirs and successors, and the court at which such bail bond is put in suit may give such relief to the defendant or defendants as is agreeable to justice and reason.— Sect. 111.

**Indictments to be preferred by Order of the Commissioners.**—No indictment shall be preferred or suit commenced for the recovery of any penalty or forfeiture under this or any other act relating to the customs or excise, except in the name of the detained and carried before 1 or more justices in pursuance of this act, unless such suit be commenced in the name of the attorney-general, or of the lord advocate of Scotland, or unless such indictment be preferred under the direction of the commissioners of customs or excise, or unless such suit be commenced in the name of some officer of customs or excise, under the direction of the said commissioners respectively.— Sect. 112.

**The Attorney-general or Lord Advocate may sign a Noli prosecute.**—If any prosecution whatever be commenced for the recovery of any fine, penalty, or forfeiture incurred under this or any other act relating to the customs or excise, it shall be lawful for the attorney-general, or for the lord advocate of Scotland, if he is satisfied that such fine, &c. was incurred without any intention of fraud, or that it is inexpedient to prosecute in the said prosecution, to stop all further proceedings by entering a *noli prosecute*, or otherwise, on such information, as well with respect to the share of such fine, penalty, or forfeiture to which any officer or officers may be entitled, as to the king's share thereof.— Sect. 113.

**Proof of Payment of Duties, or of the lawful Importation of Goods, to be on the Owner.**—If any goods be seized for nonpayment of duties, or other cause of forfeiture, and may dispute arise whether the customs, excise, or inland duties have been paid for the same, or the same have been lawfully imported, or whether the place where such goods were brought, the proof thereof shall be on the owner or claimer of such goods, and not on the officer seizing and stopping the same.— Sect. 114.

**No Justice connected with the Collection of the Revenue to interfere in summary Convictions.**—No justice of the peace being a collector or comptroller, or otherwise connected with the customs or excise, shall take cognizance of any matter relating to summary convictions of persons offending against this or any other customs act.— Sect. 115.

**Arrest of certain Matters to be sufficient.**—In case of any information or proceedings had under any act relating to the customs, the arrestment that the commissioners of customs or excise have directed or elected such information or proceedings to be instituted, or that any vessel is foreign, or belonging wholly or in part to H. M. subjects, or that any person detained or found on board any vessel or boat liable to seizure is or is not a subject of his Majesty, or that any person detained is or is not a seafaring man, or fit or able to serve in the naval service, or that any person is an officer of customs, and where the offence is committed in any port in the U. K., the naming of such port in any information or proceedings, shall be sufficient,

without proof as to such fact or facts, unless defendant prove to the contrary. — Sect. 116.

*Persons preventing Smuggling to be deemed duly employed.* — All persons employed for the prevention of smuggling under the commissioners of customs, or of any officer or officers in the service of the customs, shall be deemed and taken to be duly employed for the prevention of smuggling; and the agreement, in any information or suit, that such party was so duly employed, shall be sufficient proof thereof, unless the defendant prove to the contrary. — Sect. 117.

*Vid. voce Evidence may be given.* — If upon any trial a question shall arise whether any person is an officer of the army, navy, or marines, duly employed for the prevention of smuggling, and on full pay, or an officer of customs or excise, evidence of his having acted as such shall be deemed sufficient, and such person shall not be required to produce his commission or deposition, unless sufficient proof be given to the contrary; and every such officer, and any person acting in his aid or assistance, shall be a competent witness upon the trial of any suit or information on account of any seizure or penalty, notwithstanding such officer or person may be entitled to the whole or any part of such seizure or penalty, or to any reward upon conviction of the party charged in such suit or information. — Sect. 118.

*What deemed sufficient Evidence of an Order of Commissioners of Customs or Excise.* — Upon the trial of any issue, or upon any judicial hearing or investigation touching any penalty or forfeiture under any laws relating to the customs or excise, or to the law of navigation, where it may be necessary to give proof of any order issued by the commissioners of the treasury, or by the commissioners of customs or excise, the letter or instructions officially received by the officer of customs or excise at the place or district where such penalty or forfeiture

was incurred, or shall be alleged to have been incurred, for His government, and in which such order is mentioned or referred to, and under which instructions he shall have acted, shall be admitted and taken as sufficient evidence and proof of such order to all intents and purposes whatsoever. — Sect. 119.

*Within what Time Suits, &c. are to be exhibited.* — All suits, indictments, or informations exhibited for any offence against this or any other act relating to the customs in any court of record at Westminster, or in Dublin, or in Edinburgh, or in the royal courts of Guernsey, Jersey, Alderney, Sark, or Man, shall and may be had, brought, sued, or exhibited within 3 years next after the date of the offence committed, and shall and may be exhibited before 1 or more justices of the peace, within 6 months next after the date of the offence committed. — Sect. 120.

*Information may be exhibited any Time after 6 Months.* — Where any person shall have been detained for any offence against this or any other customs act, and shall have made his escape from custody, an information may be exhibited before 1 or more justices of the peace against such person, for such offence, at any time afterwards, although more than 6 months have expired. — Sect. 121.

*Judgments or Informations may be tried in any County.* — Any indictment or information for any offence against this or any other customs act shall be inquired of, examined, tried, and determined in any county of England where the offence is committed in England, and in any county in Scotland where the offence is committed in Scotland, and in any county in Ireland where the offence is committed in Ireland, in the same manner and form as if the offence had been committed in the said county where the said indictment or information shall be tried. — Sect. 122.

SMYRNA, a large city and sea-port of Asiatic Turkey, on the western side of Asia Minor, lat.  $38^{\circ} 25' 36''$  N., lon.  $27^{\circ} 6' 45''$  E. Population, probably, about 120,000; of whom 60,000 may be Turks, 40,000 Greeks, and the remainder Armenians, Franks, Jews, &c. Smyrna is situated at the bottom of a deep gulf; the entrance to which lies between the island of Mytilene on the north, and Cape Carabourun, in lat.  $38^{\circ} 41' 30''$  N., lon.  $26^{\circ} 21'$  E., on the south. The woodcut on the next page gives a better idea of the gulf of Smyrna than could be derived from any description. The dotted line shows the course inwards. The passage between James' Castle (D) on the south and the opposite sand-bank is narrow; but there is from 9 to 10 fathoms water, with a blue clay bottom. Merchant ships anchor abreast of the city in from 7 to 8 fathoms; but the water is so deep that they may come close to the quays. The *inbat*, or sea breeze, blows from morning till evening, and is always waited for by ships going up to the city. There is excellent anchorage in most parts of the gulf, merely avoiding the shoals on the north side. Smyrna is a place of great antiquity. The excellence of its port, and its admirable situation, have made it be several times rebuilt, after being destroyed by earthquakes. On approaching it from the sea, it has the appearance of an amphitheatre: the castle is at the back of the town, which it commands, on the top of the hill; but it is in a state of decay, and could oppose no resistance to an invading force. The interior of the city does not correspond to its external appearance; the streets being, for the most part, narrow, dirty, and ill paved. Owing to the want of cleanliness, and of all sorts of precautions, on the part of the Turks, Smyrna is frequently visited by the plague. So late as 1814, from 50,000 to 60,000 of the inhabitants are said to have been cut off by this dreadful scourge. The trade of this city is more extensive than that of any other in the Turkish empire. The caravans from Persia are chiefly composed of Armenians. They arrive and depart at fixed periods, which are nearly identical with those of the arrival and departure of most of the foreign ships frequenting the port. Bargains are principally effected by Jew brokers, many of whom have amassed considerable fortunes. The principal articles of import consist of grain, furs, iron, butter, &c. from Odessa and Taganrog; and of cotton stuffs and twist, silk and woollen goods, coffee, sugar, cochineal, and dye woods, iron, tin and tin plates, rum, brandy, paper, cheese, glass, wine, &c. from Great Britain, France, Italy, the United States, &c. The exports consist principally of raw silk and cotton, fruits — particularly raisins; opium, rhubarb, and a variety of drugs and gums; olive oil, madder roots, Turkey carpets, valonia, sponge, galls, wax, copper, hare skins, goats' wool, safflower, &c. — (For further details, see *Tournefort, Voyage du Levant*, tome ii. pp. 495—507. 4to edit.; and *Macgill's Travels in Turkey*, vol. i. Letters 5, 6, 7, 8, and 9.)

*References to Plan.* — A, Partridge Island, on the south side of which there is excellent anchorage in from 15 to 7 fathoms, muddy bottom. B, a mud point. C, Pelican Point. D, James' Castle. E, Low narrow islands. Soundings, except where otherwise marked, in fathoms.

*Monies, Weights, and Measures*, same as at Constantinople; which see. Accounts are kept in piastres of 40 paras, or medini. The value of the piastre fluctuates according to the exchange. It has been very much degraded; and is at present worth about  $\frac{1}{4}$ d. The *oke* is the principal weight used. It is equivalent to 2 lbs. 13 oz. 5 dr. avoirdupois; 45 *okes* = 1 *kinta* = 100 *rotkolas* = 12748 lbs. avoirdupois. The *kinta* of Constantinople is only 44 *okes*. A *teffee* of silk = 4½ lbs. avoirdupois. A cheque of opium = 1½ lb.; a cheque of goats' wool =  $\frac{1}{2}$  lb. Cern is measured by the *kilow* = 1456 Winch. bushel. The *pie*, or long measure, = 27 Eng. inches. — (*Kelly's Cambist*, &c.)

**COMMERCE OF SMYRNA.** — The following details with respect to the commerce of Smyrna with Western Europe are copied from a letter addressed by an intelligent English merchant, established in Smyrna, to his correspondent in London, to whom we are indebted for it. Nothing so complete or satisfactory has ever been published as to the trade of this emporium. It is right, however, to mention, that since 1828, when this paper was drawn up, the commerce of Smyrna has lost some of its importance. Syria, the islands of the Archipelago, the eastern parts of Greece, &c. used formerly to derive a considerable part of their supplies of foreign produce at second hand from Smyrna; but they now, for the most part, are either supplied direct from England, Marseilles, &c., or indirectly from Syria, which is become a considerable *depôt*.

**Charges on Selling and Buying.** — As we conceive that a correct list of selling and buying charges is an essential piece of information for those interested in the commerce of the Levant, we annex the same, including every item of expense, namely: —

| On Selling.  |           | On Buying.  |           |
|--|-----------|---|-----------|
|  | Per cent. |   | Per cent. |
| Freight (according to the rate agreed upon in England)             | -         | Custom duty (according to the quality of the article)   | - 1 to 5  |
| say  | 2         | Porterage (included in the cost of packages, which vary according to the quality of the goods packed) | -         |
| Custom duty (on general goods)                                     | - 3       | Hourly street brokerage   | - 1       |
| Porterage from 1 to 2 piastres per package (according to the size) | -         | Commission (except on figs, which is 6 per cent.)   | - 1       |
| Shroffage  | -         | Warehouse rent  | - 0       |
| House and street brokerage   | - 0       |   |           |
| Commission for effecting sale                                      | - 2       |   |           |

With regard to the cost of packages, those for silk are about 24 piastres each; for galls, 18 do.; gum mastic, tragacanth, &c., 20 do.; scammony, 18 do.; opium, 30 to 36 do.; raisins, 12 to 14 do.; figs, 25 to 30 paras; cotton wool, from 12 to 20 piastres, &c.

We learn from ———, that your firm deals largely in skins and furs, but he does not state the quality of either; the latter article is, however, of a very limited and ordinary nature with us, and chiefly consists of hare skins, which are abundant and shipped in considerable quantities for the German and French markets. They are most plentiful during the winter season, when they are also cheaper and keep better than in the hot months of the year. Sheep, goat, lamb, and kid skins are plentiful, and are often in request for America; particularly the 2 latter when in season, which is, for lamb skins from the middle of March to the beginning of June, and for goat skins from November until April. We have no want of ox and cow hides, both dried and salted, the leather of which is said to be more pliable than those of Europe. They are now and then sent to Marseilles in small parcels; but as it would be difficult to convey, by a written description, the exact quality of those skins, we intend making up a little bale of such kinds as may for the moment be met with, and to forward it by an early vessel to London, when it shall be submitted to your inspection, with an invoice, and remain, if you think proper, at your disposal.

We now proceed to make you acquainted with the manner in which our sales, purchases, and barter are effected, together with the nature of sales made on credit or for cash, &c.

**Sales** are effected in this country between our house's brokers, and what is termed a street or out-door broker; the former receiving their instructions from us, and the latter acting on behalf of the buyer. When the terms are mutually agreed upon, the real buyer and seller personally meet; and a bond or obligatory note stating the terms and amount of the transaction is drawn out and signed by the buyer, and when not much approved of, one or more signatures are required to the bond, who individually and collectively become responsible for the fulfilment of it.

**Purchases** are similarly made, except that the purchaser or agent himself, in the first instance, and his brokers, inspect the goods he is about to treat for: cash down is generally expected; and it is but seldom that a short credit of 1 or 2 couriers is obtained: it not unfrequently happens, also, that  $\frac{1}{2}$  or even  $\frac{1}{3}$  of the purchase amount is advanced to the seller, when an insufficient quantity of the article wanted by the buyer is in the place, and which must then be procured from the interior or place of growth. The money advanced (which is to be returned if the quality does not suit) is sent by a confidential person on the part of the purchaser, accompanied either by the seller in person, or by some one representing him.

**Barter** are generally attended with delay, impediments, and sacrifices to the European agent who exchanges his constituents' goods for native produce, and are never completed without his paying a large portion in cash, which is mostly  $\frac{1}{2}$ , sometimes even  $\frac{3}{4}$ , but never less than  $\frac{1}{3}$  of the full amount; besides always paying a higher price for the produce than if it were bought for ready money. On the other hand, so far as the agent's transaction goes in goods, the price of which he also advances, it is equal to an advantageous cash sale, deducting a discount; but still he loses, as we have just stated, on that part of the operation which subjects him to the necessity of giving ready money for such part of the produce as remains above the counter-value given in goods, at a higher rate than it is worth in the open market. Thus the advantage is all in favour of this country, and against the agent. Indeed, barter are seldom undertaken unless when a profitable result is anticipated, when European goods are difficult to be placed upon saving conditions, either from the want of demand or a glutted market, or when (which is mostly the case) the holder of such goods has orders from the owners of them to remit them in produce, and thus realise their property, if not upon profitable terms, at least without the risk arising from bad debts; sometimes, also, outstanding bonds are taken in part payment, to the extent occasionally of  $\frac{1}{3}$ ; another  $\frac{1}{3}$  is taken in goods at an advance of from 5 to 10 or 12 per cent. above current prices; and the remaining  $\frac{1}{3}$  in cash against produce, at from 5 to 10 per cent. more than it fetches in the bazaars. However, it is by barter alone that any extensive transaction ever takes place, or that it can be either readily or safely effected.

**Sales on Credit.** — The terms of credit vary considerably, and depend entirely upon the quality of the goods which the agent sells: for current or demanded merchandise, 2 couriers (or 2 periods of 15 days), and two and three 31 days, are the present terms; which are extended to four, five, and six 31 days for articles not much in request. Couriers mean most days; of which we have 2 in each month; at each courier, and 31 days, a proportionate payment becomes payable; for instance, on a credit of six 31 days, 4th falls due at the expiration of the first month; and if paid, is noted accordingly on the bond, and so on until the remaining 5 periods are expired: it must, however, be observed, that payments are by no means punctually made, except by a few of our more wealthy bazaar buyers, although for the first 3 or 4 periods of a long credit some regularity is observed; but as the time begins to shorten, payments are proportionably retarded, so that two 31 days on a bond of credit for 6 months may be considered as a fair average of time in addition to the limited term.

**Sales for Cash.** — These very seldom occur, indeed, and then only when money is abundant, or the article sold scarce and in great demand; in fact, not 1 sale in 100 is made on these terms; and in about the same ratio is a discount taken off from a bazaar bond at even an exorbitant rate, however

*Character of Dealers.*—Before entering upon the articles of commerce, we are desirous of making you acquainted with the character and customs of our bazaar dealers. The Greek dealers are in general petty shopkeepers, very cunning, and very bad payers. The Jews have similar defects, but are well supported by their brethren, who generally become guarantee for each other. The Armenians are by far the largest traffickers both for buying and selling; and though hard bargainers, are mostly all solvent, and honourable as well as honest. The Turks are, however, as far superior to the foregoing races in all moral qualities, as they are inferior to them in means and commercial abilities; yet they sometimes deal largely, and their bond is as punctually discharged, in general, as the day comes when it falls due. The laws in this country mostly favour the debtor at the expense of the creditor; and so far they encourage dishonesty. The number of insolvent native dealers was at one time excessive, but of late the means of each individual buyer have been so carefully investigated, that at present we are not aware that there is one bazaar dealer who is not able to meet the demands of those from whom he has purchased. The European consuls, who enjoy much consideration in the Turks, protect the interests of their countrymen in disputed points; and, in general, questions of a commercial nature are submitted to the decision of a Turkish tribunal, where very little pleading, but a good deal of plain straight forward justice, goes forward; except that, perhaps, the European is, if any thing, rather less favoured than the native.

We now proceed to offer some observations on the leading articles of our imports and exports for your government, the correctness of which may be relied upon.

#### IMPORTS.

*Coffee.*—This is by far the most current article received here, and is sent from England, France, Holland, Trieste, Marseilles, Leghorn, Genoa, and America; but first, and principally of late years, from the latter country; the vessels of which are frequently laden with coffee, and always partly so: the next in point of quantity comes from England; but is shipped mostly in small parcels at a time, of from 500 to 600 sacks, although occasionally that amount is doubled. France follows, but on a less extensive scale; and Austria, Holland, and the small ports in the south of Europe, do not together export more than what is received from England alone. We have 4 different qualities of coffee in our markets; namely, Mocha, St. Domingo, Havannah, and Brazil: the first is sent from Alexandria, and by American vessels, and but seldom from Europe; the consumption is, however, limited, and does not exceed 60,000 okes annually. At Constantinople, about 3 times that quantity is sold yearly. We never remember to have known such heavy importations of West India coffee as within these last 6 months (written in November, 1827); the consequence of which has been such an excess beyond the wants of the place, that not only buyers are fully supplied for some time to come, but also the heavy stock in first hands can only be diminished either by forced or ruinous sales, or must wait for 2 or 3 months, until the demand again comes round; which is, however, certain to take place, as coffee forms one of the necessities of life in this country: in short, an Asiatic cannot do without his coffee; and it is well known that in Smyrna alone not less than perhaps 400,000 cups of it are daily drunk, which, computed at the cost price of 2 paras each, amount to 20,000 piastres! The St. Domingo and Havannah coffees are preferred to the Brazil, although, when the latter is of a fair round quality, there is not more than 5 per cent. difference in price; the small green West India berry certainly commands a ready sale; but, for the finest sort, not more than 6 or 8 per cent. can be obtained above the middling and sound quality. Coffee is amongst the very few articles which occasionally meet with a partial and entire cash sale and short credit; and is, moreover, from the means and character of the dealers in it, the least liable to risk from insolvency. It is also the easiest through which an advantageous barter can be effected, as a much larger quantity of coffee will be taken in exchange for produce than almost any other item of European merchandise. Annual consumption, about 3,000,000 okes.

*Sugar* is the next in consequence. This article is supplied from the same sources as coffee, and is attended in its disposal with similar results. We receive the following qualities:—White crushed, white Havannah, brown do., white East India, refined in small loaves of 4 lbs. and in large of 8 lbs. each: the 2 latter are mostly shipped from America and England. The brown and ordinary sorts are not so current. Annual consumption, 10,000 kintals.

*Indigo* follows the 2 preceding articles, not so much in extent as meeting a ready sale always, and not infrequently a profitable one: it is attended likewise with all the advantages and facilities attached to coffee and sugar, and is furnished by Europe and America, but principally by England. The qualities we receive consist of East India purple and copper, the common, and Guatemala. The first of the 3 is the kind best adapted for our markets, and is placed higher and better than the other 2; but, as is the case with coffee, the very fine will not pay cost price, and ought therefore never to be sent. The pieces suited for our buyers ought to be good sized, with about an equal proportion of purple and copper in each piece. The few chests on sale are all ordinary, and consequently dull; and the first arrival of 15 or 20 chests (and not more ought ever to be shipped at one time) of fair East India will meet with a ready and favourable sale at 20 piastres per oke. Annual consumption, 80 chests.

*Manufactures.*—This is, in point of amount, the most extensive branch of trade carried on in Turkey. We have, as you will perceive from our price current, a numerous assortment of British and East India cotton goods and English shalloons. The white or unprinted cotton goods are most in demand during the warm weather, and the coloured or printed stuffs during winter, although a considerable quantity of all sorts is regularly and largely sold throughout the whole year. The East Indian manufactures are supplied by America and England exclusively; the latter country also sends fair imitations of the East India loom, in long cloths, seersuckers, &c. The native consumers are exceedingly fastidious in their choice of designs and colours, which ought very frequently to be altered, in order to meet their capricious taste. Manufactured goods are always sold at long credits, but large barterers are often effected through them. A person desirous of entering into this item of our commerce is almost certain ultimately to reap an advantage; but he must have patience, a large capital, and must not be disheartened at the first or second result of his enterprise, should it disappoint his hopes of profit. He must also enter into the thing with spirit, and keep his agent always supplied with the goods he may recommend; and he is to remember that many months must elapse before he can expect a return by bills of exchange, but sooner if he order a barter. The capital employed must also at least be to the amount of £4000, to do any good; and further, this sum ought to be disbursed by him without any pecuniary embarrassment or inconvenience. For a person willing to undertake such a step, he would require to be regularly furnished with patterns, and advices of the manner in which they ought to be printed and varied; and we again repeat, that with competent means, a real desire to follow the branch up firmly, and full information hence of what is required, a most extensive and finally lucrative business would be done; and we recommend the matter strongly to your best consideration. Annual consumption of all kinds (British), about 367,300 pieces.

*Cotton Twist* forms no inconsiderable article in our trade, and is supplied exclusively from England. Mule twist has, however, superseded, in some degree, the demand which formerly existed for water twist, and is consequently more in request. Water twist is nevertheless saleable, and both qualities ought to be of rather high numbers. This article is often given in barter, but mostly sold at rather long credits, and hardly ever for cash. Annual consumption of water twist, 10,000 okes; ditto of mule ditto, 28,000 okes.

*Iron in Bars*, English, was formerly largely consumed; but from the buyers being plentifully supplied,

it is at present but little demanded, even at the losing price of the day. Barterers are very frequently effected through irons of all descriptions, and command a short credit, and sometimes a cash sale. Annual consumption, 16,000 to 18,000 kintals.

*Iron Plates* are generally employed for building purposes, and store doors.

*Iron Rods* are always saleable.

*Iron Hoops* are most saleable in August, September, and October, for fruit and other export barrels.

*Iron, Russia, and Swedish Bars.*—These kinds are sent in rather large parcels, particularly the former, and fetch a higher price than the English, owing to their malleable qualities, which render labour easier, and by that advantage command a preference: though the high price, beyond the English make, puts the two qualities upon a level, and commands a larger consumption of the latter. Annual consumption, 5,500 kintals.

*Tin in Bars* is a good, steady, saleable article; is often given on fair terms in barter, always disposed of on short credit, and now and then placed for cash. It comes from England exclusively. Annual consumption, 830 to 1,000 barrels of 4 cwt. each.

*Tin in Plates* is attended with the foregoing advantages, and is also supplied by England alone. Annual consumption, 1,200 double boxes.

*Lead in Sheets, Pigs, and Shot.*—These 3 items have lately, particularly shot, been sent from Germany, and prove dangerous competitors with the English; in consequence of which the thing is overdone, and we have more in market than meets the demand at losing prices.

*Lead, Red and White.*—These 2 articles have lately been much in request for the formation of paint. Some large parcels of red have lately arrived, and sell well and currently, but we are altogether without white. The consumption of all sorts of lead has, however, considerably decreased of late years, and no longer forms an item of any great consequence in our trade.

*Rum and Brandy.*—Leeward Island and Jamaica are furnished by America and England; the former particularly in the lower qualities, of which we have a full market at low prices. The better kind and Brandy are supplied from England, but do not obtain a proportionate advance compared with the common sorts. Brandy is but of limited demand, and 2 or 3 puncheons are sufficient at a time. It ought, as well as rum, to be deeply coloured. Annual consumption of rum, 300 puncheons.

*Spices* are all saleable in small parcels at a time, particularly pepper and pimento; the latter of which, in small sound berries, is demanded at good prices. Nutmegs are very abundant, and offering very low without finding purchasers. France, America, and England supply us with spices, but France more so in cloves than in other kinds; and it may be remarked that the qualities received from England are preferred. Credit on selling is generally short.

*Cochineal* is a fair article now and then in small qualities; and, when in demand, at times fetches good prices, occasionally a cash sale, and always one of the shortest credits. Annual consumption, 4,500 oke.

In concluding our observations on imports, we could wish to impress the conviction, that a poor man's purpose cannot be answered in speculating to this country; for, should his circumstances require a speedy remittance in bills, he must submit to a heavy sacrifice, in order to meet his wants, by selling his property for whatever it may fetch in cash; and such a measure cannot but be attended with very heavy loss. On the contrary, when an opulent person finds that his property cannot be realised at saving prices, he can afford to wait until a more favourable moment presents itself; and such a moment, in less than 12 months, is almost certain to arrive, when he retires his money with an advantage more than equal to any interest he could obtain for it in Europe.

That the rate of exchange has regularly advanced, and will continue to advance, is the natural result of the continual deterioration of the Turkish specie. We remember when the piece of money denominated 'Mahmoudia,' passed at about its value, or nearly so, of 10 piastres; it rose to 25 soon afterwards; and the few which remain are at present worth 38 each. At the period we allude to (1812), the exchange on London was at 25 piastres the pound sterling; and until lately (owing to the great stagnation of trade, and to political events, which have lowered it), the rate has been up to 60! It cannot, however, increase beyond that rate more than 5 per cent., as it then will nearly be on a par with the value of the gold and silver current coin of the realm, when it will be better to remit in specie than by a bill at 63 piastres for 61 days' sight. \* The rates of exchange fluctuate considerably, and a difference of  $\frac{1}{4}$  to 1 per cent. often occurs between one post day and another, and are attributable to the quantity or scarcity of paper in market: it is for this reason that the rate always decreases during the fruit season, which takes place at the latter end of August, and continues until the middle of October; when it rises again to meet the limited wants of drawers, and the larger demands of those remitters who did not ship fruit, and invest the funds of their employers in that article. These observations lead us to submit the question of the advantage which a person in Europe has in receiving from this country, instead of sending to it. Late extensive barterers have proved to us, and which we have endeavoured to show you, the unprofitable terms upon which they are conducted, were it only in paying, and that in cash too, for at least  $\frac{1}{3}$  of the amount, at a higher rate than was current; now this higher rate is, in itself, supposing the produce taken in barter to meet with a saving sale in Europe, of no small consideration;—then you have the advantage of drawing at a high exchange in making a purchase; and again you have the choice of selecting the good part of the produce, and of rejecting the inferior,—a choice which is not allowed in taking it in barter; lastly, the principal advantage in buying over bartering is, that you can avail yourself of a depression in the produce market, and effect your purchase upon easy terms; whereas, when a barter is proposed, it has the immediate effect of producing a general rise in the whole market, and also of engendering the most absurd pretensions on the part of produce holders, who are too conversant with commerce not to see that either the European house, wishing to barter, is in want of procuring returns for his principal, or else that the articles of produce wanted are in great demand in Europe—without which, the European agent would never submit to take produce at so much higher a price than he could procure it for with cash! The only time in which the person sending to this country can calculate upon a profitable return, is during the fruit season; and for that reason he ought to forward his shipments from Europe so as to meet the demand, and to be cashed by the beginning of August. A vessel from England hence is in general from 40 to 50 days in performing her voyage; sometimes much less, and but seldom longer: goods ought, if possible, always to be shipped in a fast and first class ship.

We now continue our remarks on the articles of our trade, and the following are some of them sent hence, and deserving of serious attention.

#### EXPORTS.

*Silk.*—This is the richest raw article in our export trade with Europe in general, but almost exclusively with England, which consumes nearly our entire produce. There are 3 different qualities, viz. fine, middling, and coarse. Bales, adapted for the English market, are composed of the 3 qualities, but the lesser quantity is of the coarse kind; at one time, all coarse was in request in London, but at present an assortment of the 3 qualities is preferred. When an order is given, it ought to be accompanied by a

\* The exchange, partly from the further degradation of the coin, and partly from the balance of payments being against Smyrna, is now (February, 1834) 98 piastres to the pound sterling! This variation of the exchange renders the holding of property upon a speculation for an advance very hazardous.

description of the quality required; and it is necessary to state that, for all of the finest, without being mixed, a higher price is demanded. A bale contains 40 tefees; and, before being packed, is carefully examined and approved of by competent native Judges. Silk is produced at Brussa, a large city about 200 miles distant from Smyrna, whence it is forwarded by caravans to the different places of consumption, which are Constantinople and this town. Until very lately, almost the entire crop of silk came for sale to Smyrna, but at present the most considerable part is sent to Constantinople, where the price is higher; we have therefore here an advantage, not only in price, but also in our manner of packing, which fetches 5 or 6 per cent. more in England than if packed in the capital. Silk is mostly a ready money article, though it sometimes may be had in small quantities at a short credit; or half cash and half 1 or 2 couriers; it is also now and then given in barter. Annual average produce, 2,500 bales, or about 480,000 lbs.\*

*Opium*, in point of value, and as an article of speculation, hardly gives way to silk; but as it is largely shipped by Americans, and sent in smaller quantities to Holland, and the south of Europe, it is subject to much competition and variation of price, although we have invariably observed that the opening price of the new crop is always the lowest, which, however, is in some measure counterbalanced by the decrease in weight which occurs by keeping. This is also a cash article, and indeed subject to the same conditions as purchasing or bartering for silk; it nevertheless has one inferiority, which the silk is not liable to—namely, a difference in the quality of the crop: last year, for instance, opium was of a very bad kind, and hardly saleable in England; this year, though small, it is fine. On the Continent and in America, the small sort is preferred to the larger sized. We observe that, in England, the prices of opium fluctuate considerably; but we are not aware that, by holding it, any loss has ever happened,—another reason why a wealthy man only should embark in the Turkey trade. It would be impossible, or at least difficult, and attended with much expense, to obtain a monopoly of the opium crop, as it is produced through some thousands of individuals, each one (and they are all poor) adding his produce; and when collected in sufficient quantities, it is brought to market by the natives, having each of them 1 or 2 baskets for sale. What might be done is this:—Send a person to the place of growth with ready money to purchase a certain but limited quantity, and which he can do easily, if not hurried, to the extent of 50, or even 100 baskets, and upon terms of advantage, from the simple fact that the collectors of it prefer to receive a remunerating price on the spot of growth, rather than perform a long and expensive journey, with the chance of not finding purchasers immediately. Opium is produced at sundry places in the interior, of from 10 to 50 days' distance hence; but that grown at Caissar, about 600 miles from Smyrna, is the most esteemed, from its cleanness and good quality; it comes to market in June, and finishes about December or January. Annual average produce, 3,000 baskets, or about 400,000 lbs.\*

*Drugs and Gums* form one of our principal branches of commerce, and is almost entirely in the hands of the Jews. At present, gum Arabic and mastic are exceedingly scarce; and it is only when that is the case, or the demand for exportation is very brisk, that much variation exists in the price of drugs. Trieste, and occasionally America, consume a considerable portion of gums, but the largest quantity goes to the English markets. Barbers are often effected through this medium; but it is not attended with much advantage, as they are conducted by a race who never lose in any transaction they undertake. It is impossible to ascertain the quantities of drugs received in Smyrna, and equally so to know the quantity remaining, as they are dispersed all over the city, and consumed so irregularly in Europe, as bids defiance to all regular calculation.

*Sponges* have been, and still are, an article of considerable moment, particularly for the English markets, and are found about the islands in the Grecian Archipelago, brought here, and cleaned for exportation. They vary in price from 6 to 90 piastres per oke, according to fineness and quality: the better sort alone answers for speculation, and which, it would appear, from the considerable quantity sent to London, turns to good account. The produce depends so entirely on chance, that no correct estimate of the yearly quantity can be formed; however, we are seldom in want of a moderate supply.

*Galls* are shipped in considerable quantities for the English, German, and French markets; the two former, however, being the largest consumers: for England, the blue galls are those principally sent; though the market there for their sale being dull and low, prices with us, moderate as they are compared to last year, will still further decline, should a demand not spring up, of which there is no appearance. Annual produce of all sorts, 5,500 kintals.

*Cotton Wool*, of which we have several qualities, is chiefly exported to Trieste and Marseilles. The demand at present for all kinds of this produce is extremely limited, and we expect that prices will go lower with us before long, when perhaps something good might be done in Soubougeas to England, which generally receives only that quality. Barbers are made to a large extent in cottons. Annual average produce of all sorts, 60,000 kintals.

*Valonia* employs more British shipping for full cargoes of only one article, than any other species of produce, if we except, perhaps, fruit: it is also sent to Dublin and to the German markets in considerable quantities. Almost any supply can be obtained, and it is shipped generally near the places of growth, which are numerous, although there is never any want of it in the Smyrna market. It is much resorted to as a means of making barbers, which perhaps are as easily effected, upon pretty fair terms, as with any other article of produce. The annual produce is sufficient to meet the wants of all Europe. It can be had to any extent, and at all periods.

*Fruit*.—This is an article which occupies the attention of all Smyrna, more or less, and produces, during the season, great interest and activity. Figs come to market early in September, and raisins are ready for shipping early in October: the former are procurable only at Smyrna, where the latter in all their qualities may be procured; but the shipments are generally made at Cesme, Vouria, Cabourina, Usbeck, &c., from which ports the name of the raisin takes its origin. Large sums are frequently gained in fruit speculations; and when the demand in England is brisk, and the prices and quality fair with us, it very seldom happens, indeed, that any loss is sustained: it is, however, attended with risk; must be shipped dry; and ought only to go in a very fast, sound vessel, as much depends upon a fast, or at least an early arrival, which obtains in general a higher price than the later arrivals. The quantity produced is always uncertain.

For the remaining articles of exports hence, we refer you to our price current. Carpets are produced to the extent of about 80,000 to 100,000 pikes a year. Oil (olive), to the amount of 10 to 15 middling sized cargoes, from the islands of Mytilene, Candia, &c., is generally shipped for America and France; seldom

\* Since the period when this paper was drawn up, a considerable change has taken place in the silk and opium trade of Smyrna. A few years ago, the Turkish government so far receded from the free principles which pervade its commercial policy—(see *CONSTITUTION*),—as to attempt the establishment of monopolies of silk and opium; by compelling the producers of these articles to sell them at a fixed and low price to the government agents, by whom they were afterwards disposed of at an advanced rate. But a plan of this sort could not be carried into effect in such a country as Turkey; and had, consequently, to be abandoned. A duty of nearly 10 per cent. has, however, been imposed on the silk and opium exported to foreign parts. And in order to facilitate the collection of this duty, the whole of these articles intended for exportation are required to be brought to Constantinople! This regulation has done considerable injury to Smyrna; but it seems so very absurd, and its enforcement is so obviously impossible, that it is not likely it will be maintained for any considerable period.—(*Urquhart on Turkey and its Resources*, p. 189.)

for England; the season commences in September, but the crops of olives fluctuate exceedingly in point of quantity; hence arising dear and cheap years; last year was a high one, and it is expected to be lower this. Copper, old and new, may be computed at 30,000 okes, which are generally bought up as soon as offered, for Europe. Hare skins are computed at from 330,000 to 400,000 annually. Madder roots at 12,000 kintals. Pelicans, at 12,000 to 15,000 cheques. Goats' wool of all kinds may be calculated per year at 45,000 to 50,000 cheques; sheep's wool at 25,000 kintals. Wax (yellow), 1,600 kintals.

We have now finished our general remarks on the exports and imports of the place, and in concluding them, we beg to state that, upon an average of all of them, (with the exception of fruit from, and of iron to, Turkey,) the selling charges may (excluding del credere commission) be calculated at about 12 per cent., and on purchasing at about 8 per cent.

**SNUFF** (*Ger. Schnupftaback*; *Fr. Tabac en poudre*; *It. Tabacco da naso*; *Sp. Tabaco de polvo*; *Rus. Nosowoi tabak*), a powder in very general use as an errhine. Tobacco is the usual basis of snuff; but small quantities of other articles are frequently added to it, to vary its pungency, flavour, scent, &c. Though substantially the same, the kinds and names of snuff are infinite, and are perpetually changing. There are, however, 3 principal sorts: the first, granulated; the second, an impalpable powder; and the third, the bran, or coarse part remaining after sifting the second sort. Unless taken in excess, no bad consequences result from its use.

Dealers in tobacco and snuff are obliged to take out a licence, renewable annually, which costs 5*s*. They are also obliged to enter their premises, and have their names written in large legible characters over their door, or on some conspicuous part of their house, under a penalty of 50*l*. The dyeing of snuff with ochre, amber, or any other colouring matter except water tinged with colour, is prohibited under a penalty of 100*l*.; and its intermixture with fustic, yellow ebony, touchwood, sand, dirt, leaves, &c. is prohibited under a penalty of 100*l*. and the forfeiture of the article. — (1 & 2 *Geo. 4. c. 109*.) If snuff be found to contain 4 per cent. of any substance, not being tobacco, and other than water only, or water tinged with colour, or flavoured only, such snuff shall be deemed adulterated, and shall be forfeited, and the parties subjected to a penalty of 100*l*. over and above all other penalties and forfeitures. — (*Ib.*) No quantity of snuff weighing above 2 lbs. shall be removed by land or water without a permit. — (29 *Geo. 3. c. 68*.) — (See Tobacco.)

**SNUFF-BOXES** are made of every variety of pattern, and of an endless variety of materials. We only mention them here for the purpose of giving the following details, not to be met with in any other publication, with respect to the manufacture of Laureneekirk or Cumnock boxes. These are made of wood, admirably jointed, painted, and varnished.

These beautiful boxes were first manufactured at the village of Laureneekirk, in Kincardineshire, about 40 years since. The original inventor was a cripple hardly possessed of the power of locomotion. In place of curtains, his bed (rather a curious work) was supported with benches and receptacles for tools, in the contrivance and use of which he discovered the utmost ingenuity. The inventor, instead of taking out a patent, confided his secret to a joiner in the same village, who in a few years amassed a considerable property; while the other died, as he had lived, in the greatest poverty. The great difficulty of the manufacture lies in the formation of the hinge, which, in a genuine box, is so delicately made as hardly to be visible. Peculiar, or, as they are called, secret tools, are required in its formation; and though they must have been improved by time and experience, the mystery attached to their preparation is still so studiously kept up, that the workmen employed in one shop are rigorously debarred from having any communication with those employed in another.

About the beginning of this century, an ingenious individual belonging to the village of Cumnock, in Ayrshire, of the name of Crawford, having seen one of the Laureneekirk snuff-boxes, succeeded, after various attempts, by the assistance of a watchmaker of the same village, who made the tools, in producing a similar box; and by his success, not only laid the foundation of his own fortune, but greatly enriched his native parish and province. For a while, the Laureneekirk boxes were most in demand; but Mr. Crawford and his neighbours in Cumnock not only copied the art, but so improved and perfected it, that, in a very few years, for every box made in the north there were, probably, 20 made in the south. In 1826, the Cumnock trade was divided amongst 8 master manufacturers, who employed considerably more than 100 persons. The demand at that time equalled the supply, and it was calculated that the trade yielded from 7,000*l*. to 8,000*l*. annually, — a large product for a manufacture seemingly so insignificant, and consisting almost exclusively of the wages of labour. Plane is the wood in common use, and the cost of the wood in an ordinary sized box does not exceed 1*s*.; the paints and varnish are rated at 2*s*.; and though something is lost by selecting timber of the finest colour, the whole expense of the raw material falls considerably short of  $\frac{1}{2}$  per cent. on the return it yields!

Snuff-box, like tin making, admits of subdivision of labour; and in all workshops of any size 3 classes of persons are employed, — painters, polishers, and joiners. At the period alluded to, an industrious joiner earned from 30*s*. to 40*s*. weekly, a painter from 45*s*. to 3*l*., and a polisher considerably less than either. When Mr. Crawford first commenced business, he obtained almost any price he chose to ask; and many instances occurred, in which ordinary sized snuff-boxes sold at 2*l*. 12*s*. 6*d*., and ladies' work-boxes at 2*l*.. But as the trade increased, it became necessary to employ apprentices, who first became journeymen and then masters; and such have been the effects of improvement and competition, that articles such as are specified above may now be obtained at the respective prices of six and twenty-five shillings. While the joiner's part of the art has remained pretty stationary, that of the painter has been gradually improving. By means of the *Pentagraph*, which is much employed, the largest engravings are reduced to the size most convenient for the workman, without injuring the prints in the slightest degree; and hence a snuff-box manufacturer, like a Dutch mill weaver, can work to order by exhibiting on wood his employer's coat of arms, or, in short, any object he may fancy within the range of the pictorial art. Some of the painters display considerable talent, and as often as they choose to put forth their strength, produce box-lids, which are really worthy of being preserved as pictures. At first, nearly the whole subjects chosen as ornaments, were taken from Burns's poems; and there can be no doubt, that the "Cotter's Saturday Night," "Tam O'Shanter," "Willie brewed a peck o' maut," &c. &c., have penetrated in this form into every quarter of the habitable globe. Now, however, the artists of Cumnock take a wider range; the studios of Wilkie, and other artists, have been laid under contribution; landscapes are as often met with as figures; and there is scarcely a celebrated scene in the country that is not pictured forth more or less perfectly on the lid of a Cumnock snuff-box. A few years ago, the art in question was much affected by the long-continued depression of the weaving business; so much so, that many left it for some other employment; and some of those who emigrated, having made a good deal of money, instead of being cooped up in a workshop, are now thriving proprietors in Upper Canada. But after a brief interval the trade rallied; and though prices are low, it is now more flourishing than ever. In Cumnock, the number of hands has increased considerably, and in Manichluie there is one workshop so extensive that it may almost be compared to a cotton mill or factory. In other quarters the trade is extending, such

as Helensburgh snuff-boxes are exported to Scotland, and manufactured, favourable to neighbours; the evils which most innocently in which the wretched imitator can deceive to extreme.

as Helmsburgh near Greenock, Catrine, Maxwelltown, Dumfries, &c. The principal markets for the snuff-boxes are London, Liverpool, Glasgow, and Edinburgh. At one time, large lots of boxes were exported to South America, and probably are so at present. Cummock, in a word, in regard to its staple manufacture, is in that palmy state so well described by a modern writer:—"The condition most favourable to population is that of a laborious frugal people ministering to the demands of opulent neighbours; because this situation, while it leaves them every advantage of luxury, exempts them from the evils which accompany its admission into a country. Of the different kinds of luxury, these are the most innocent which afford employment to the greatest number of artists and manufacturers; or those in which the price of the work bears the greatest proportion to that of the raw material." Some very wretched imitations of Cummock boxes have been produced in different parts of England; but they can deceive no one who ever saw a genuine box. The hinge, as well as the finishing, is clumsy in the extreme.

\* \* We are indebted for this curious and instructive article to our esteemed friend, John M'Diarmid, Esq., Editor of the *Dumfries Courier*, one of the best provincial papers in the empire.

**SOAP** (Ger. *Seife*; Fr. *Savon*; It. *Sapone*; Sp. *Jabon*; Rus. *Milo*; Lat. *Sapo*). The soap met with in commerce is generally divided into 2 sorts, *hard* and *soft*: the former is made of soda and tallow or oil, and the latter of potash and similar oily matters. Soap made of tallow and soda has a whitish colour, and is, therefore, sometimes denominated *white* soap: but it is usual for soap makers, in order to lower the price of the article, to mix a considerable portion of rosin with the tallow; this mixture forms the common *yellow* soap of this country. Soap made of tallow, &c. and potash does not assume a solid form; its consistence is never greater than that of hog's lard. The properties of soft soap as a detergent do not differ materially from those of hard soap, but it is not nearly so convenient for use. The alkali employed by the ancient Gauls and Germans in the formation of soap was potash; hence we see why it was described by the Romans as an unguent. The oil employed for making soft soap in this country is whale oil. A little tallow is also added, which, by a peculiar management, is dispersed through the soap in fine white spots. The soap made in countries which produce olive oil, as the south of France, Italy, and Spain, is preferable to the soap of this country, which is usually manufactured from grease, tallow, &c. — (*Thomson's Chemistry*.)

London, Liverpool, Newcastle, Bristol, Brentford, Frodsham, and Glasgow, are the great seats of the British soap manufacture. Thus, of 119,579,037 lbs. of hard soap made in Great Britain in 1832, London furnished 29,627,735 lbs.; Liverpool, 28,878,466 lbs.; Newcastle, 6,982,049 lbs.; Bristol, 6,861,467 lbs.; Brentford, 5,573,074 lbs.; Frodsham, 4,933,355 lbs.; and Glasgow, 4,167,354 lbs. Of 10,350,763 lbs. of soft soap, made during the same year, Liverpool furnished above  $\frac{1}{4}$ ; the rest being supplied by Glasgow, London, Bristol, Hull, &c.

The use of soap as a detergent is well known; it may, in fact, be considered as a necessary of life. Its consumption in most civilized countries is immense. Pliny informs us that soap was first invented by the Gauls; that it was composed of tallow and ashes; and that the German soap was reckoned the best. — (Lib. xviii. c. 51.)

**Regulations as to the Manufacture.** — Soap is charged with a duty of excise, and its manufacture is consequently regulated by several provisions intended for the protection of the revenue. No person is permitted to make soap within the limits of the local office of excise in London, unless he occupy a tenement of 10l. a year, and is assessed to and pays the parish rates; nor is he, unless he is assessed and pays to church and poor; and every soap-maker is required to take out a licence to be renewed annually, for which he is to pay 1l.; but persons in partnership require only 1 licence for 1 house. They are also required to provide sufficient wooden covers for all coppers and other utensils which they use, and which covers are to be locked and sealed down by the officer whenever any soap is left in the same; and the furnace door, cover, and the ash-hole door is also to be locked and sealed at all times except when the same is at work. Regulations are also made for preventing the use of any private conveyances or pipes; empowering officers to break up the ground to search for the same, and cut them up if found; if not, the officers must make compensation for the injury done. On cleansing or taking soap out of the coppers, the makers are required to give notice; and certain spaces of time are limited for completing the cleansing and taking out of the soap, according to the kind of soap, and the number of frames into which the same is put. Coppers and other utensils must be cleaned once in every month. The frames used in making hard soap, for cleansing and putting the same into when taken out of the vessel when boiled and prepared, must be either square or oblong, and the bottom, sides, and end of such frames are to be 2 inches thick and not more than 45 inches long, and 15 inches broad, the same being marked and numbered at the expense of the soap-maker. The making of

yellow or mottled soap is regulated by 59 Geo. 3. c. 90., by which every maker is required, as soon as the same is cleaned or taken out of the vessel in which it has been made, to add and put into the copper or vessel all the fat and skimmings taken out of the same, and also grease, in the proportion of at least 10 cwt. of grease for every ton of yellow or mottled soap which the copper or vessel shall be by the officer computed to hold or make, and immediately reheat such grease in the presence of the officer of excise. No less fat for the making of soap may be manufactured for sale; nor may any lard be ground or pounded for sale; nor when ground or pounded be sold exceeding the weight of 28 lbs. of such lard at one time. In the removal of soap exceeding the quantity of 28 lbs., the word "seep" must be painted or marked in large letters of at least 2 inches long on every chest, basket, box, cask, or package containing the same; and the same word must be painted or marked in letters of at least 5 inches in length on every wagon, cart, or other carriage carrying more than 28 lbs. in some conspicuous and open part of the same, unless it is carried by a person being a known and public or common carrier of goods and merchandise from one part to another; officers may inspect the soap and the accompanying certificate. Soap-makers are also to keep books, and enter therein all quantities of soap sold exceeding 28 lbs. Every barrel of soap must contain 256 lbs. avoirdupois; every 4 barrel 128 lbs.; every kirk 64 lbs.; and every 4 firkin 32 lbs.; besides the weight and tare of the cask. Soap-makers must keep scales and weights, and assist the excise officers in the use of them, and must weigh their materials for making soap before the officer, on penalty of 50l. — (*Whitty's Com. Law*, vol. II. pp. 418—420.)

**Exports of Soap and Candles.** — We annually export, from 10,000,000 to 12,000,000 lbs. of soap and candles, worth from 250,000l. to 300,000l. Nearly  $\frac{1}{4}$  are exported to the British West Indian and American colonies. A very large quantity is also exported to Brazil.

**Oppressiveness of the Duty.** — The direct duty charged on hard soap, which is by far the most extensively used, amounted, till June, 1833, to 3d. per lb. or 2s. per cwt., while the price of soap rarely exceeded 6d. per lb., or 5s. per cwt., so that the direct duty was fully 100 per cent. But besides this enormous duty, the substances of which soap is made, viz. tallow, barilla, and turpentine, or rosin, were respectively charged with duties of 3s. 4d., 2s., and 4s. 4d. a cwt.; and taking these indirect taxes into account, it may be truly stated that soap was taxed from 120 to 130 per cent. *ad valorem*! The imposition of so exorbitant a duty on an article that is indispensable to the prosecution of many branches of manufacture, and to the comfort and cleanliness of all orders of persons, was in the last degree inexpedient. There were good reasons, too, for thinking that in consequence of the encouragement which this excessive duty gave to smuggling and fraud, the revenue derived from it was not much greater than it will be now that it is reduced to  $\frac{1}{4}$  its former amount. During the 5 years ending with 1832, the consumption of duty-paid soap was nearly stationary; though there can be no doubt, from the increase of manufactures and population during that period, that it would have been very considerably extended, but for the increase of smuggling. This baneful practice is facilitated by the total exemption which Ireland enjoys from this duty; for it not infrequently happens that the soap made in this country, and sent to Ireland under a drawback, is again clandestinely introduced into Great Britain. It is, perhaps, needless to say that nothing but the effectual

reduction of the duty could put a stop to the smuggling and fraud that has been so generally practised. So long as the profit to be made by breaking the law was so high as 120 or 130 per cent., so long was it sure to be broken, in despite of the multiplication of penalties and the utmost activity and vigilance of the officers. But now that the duty has been reduced  $\frac{1}{2}$ , the temptation to smuggle will be most materially diminished. And it may be fairly concluded that the increased consumption that will, no doubt, follow this reduction of duty, will go far to render the low duty as productive as the higher one; so that the advantages resulting from the diminished temptation to smuggling and fraud, and the influence of the reduced price of the article in facilitating manufacturing industry, and in promoting habits of cleanliness, will, most probably, be obtained without any considerable loss of revenue.

The entire repeal of the soap duty would be a popular measure; but, seeing that a large amount of revenue must be raised, and that those taxes only are productive which affect all classes of the community, we should not be disposed to recommend such a measure. It is not the tax itself, but the oppressive extent to which it was carried that made it objectionable. Instead of proposing its repeal, we think it ought to be extended to Ireland. The exemption of one part of the empire from a duty of this sort imposed on another part, is contrary to all principle, and is fraught with the most pernicious results. It will be impossible to get rid of smuggling so long as this unjust distinction is suffered to exist. Were the duty extended to Ireland, the necessity for granting drawbacks on the soap exported to it, and of laying countervailing duties on that imported from it, would, of course, fall to the ground. And we feel confident that, though a still further deduction were made from the rate of duty, its productiveness would not, under such circumstances, be impaired even in England.

I. Account of the Quantity of *Hard and Soft Soap* charged with Excise Duty in Great Britain, in each of the Eleven Years ending 5th of January, 1833; the Rates of Duty; and the *Gross and Nett Produce of the Duties.* — (Compiled from different *Parliamentary Papers.*)

SOUTH SEA DUTIES. The act of the 9 Ann. c. 21., establishing the South Sea Company, conveyed to them the exclusive privilege of trading to the Pacific Ocean, and along the east coast of America, from the Orinoco to Cape Horn.

This privilege was taken away by the 47 Geo. 3. c. 23.; and in order to raise a guarantee fund for the indemnification of the Company, a duty of 2 per cent. *ad valorem* was imposed by the 55 Geo. 3. c. 57. on all goods (with the exception of those from Brazil and Dutch Surinam\*); and with the exception of blubber, oil, &c. of whales, or fish caught by the crews of British or Irish ships) imported from within the aforesaid limits. A duty of 1s. 6d. per ton was also imposed on all vessels (except in ballast or importing the produce of the fishery of British subjects) entering inwards or clearing outwards from or to places within the said limits. The duties are to cease when the guarantee fund is completed.

SOY, a species of sauce prepared in China and Japan from a small bean, the produce of the *Dolichos soja*. It is eaten with fish and other articles. It should be chosen of a good flavour, not too salt nor too sweet, of a good thick consistence, a brown colour, and clear; when shaken in a glass, it should leave a coat on the surface, of a bright yellowish brown colour; if it do not, it is of an inferior kind, and should be rejected. Japan soy is deemed superior to the Chinese. It is worth, in bond, from 6s. to 7s. a gallon. It is believed to be extensively counterfeited. — (*Milburn's Orient. Com.*)

brain of the *physeter macrocephalus*, a species of whale inhabiting the Southern Ocean. The brain being dug out from the cavity of the head, the oil is separated from it by dripping. The residue is crude spermaceti, of which an ordinary sized whale will yield 12 barrels. After being brought to England, it is purified. It then concretes into a white, crystallised, brittle, semitransparent, unctuous substance, nearly inodorous and insipid. On being cut into small pieces it assumes a flaky aspect. It is very heavy; its specific gravity being 9.433. It is used in the manufacture of candles, in medicine, &c.

**SPICES** (Ger. *Spezereyen*; Du. *Specerijen*; Fr. *Epiceries, Epices*; It. *Spezi, Spezierie*; Sp. *Espicias, Especerías*; Port. *Especiaria*; Rus. *Pränie korenja*). Under this denomination are included all those vegetable productions which are fragrant to the smell and pungent to the palate; such as cloves, ginger, nutmegs, allspice, &c. These will be found under their proper heads.

**SPIRIT OF WINE.** See **ALCOHOL**.

**SPIRITS.** All inflammable liquors obtained by distillation, as brandy, rum, geneva, whisky, gin, &c., are comprised under this designation. The term *British spirits* is applied indiscriminately to the various sorts of spirits manufactured in Great Britain and Ireland. Of these, gin and whisky are by far the most important.

The manufacture of spirits is placed under the *surveillance* of the excise, and a very large revenue is obtained from it. The act 6 Geo. 4. c. 80. lays down the regulations to be followed by the distillers in the manufacture, and by the officers in charging the duties. This act is of great length, having no fewer than 151 clauses; it is, besides, exceedingly complicated, and the penalties in it amount to many thousand pounds. It would, therefore, be to no purpose to attempt giving any abstract of it in this place. Every one carrying on the business of distillation must have the act in his possession, and must be practically acquainted with its operation.

1. *Spirit Duties. Consumption of British Spirits in Great Britain and Ireland.* — There are, perhaps, no better subjects for taxation than spirituous and fermented liquors. They are essentially luxuries; and while moderate duties on them are, in consequence of their being very generally used, exceedingly productive, the increase of price which they occasion has a tendency to lessen their consumption by the poor, to whom, when taken in excess, they are exceedingly pernicious. Few governments, however, have been satisfied with imposing moderate duties on spirits; but partly in the view of increasing the revenue, and partly in the view of placing them beyond the reach of the lower classes, have almost invariably loaded them with such oppressively high duties as have entirely defeated both objects. The imposition of such duties does not take away the appetite for spirits; and as no vigilance of the officers or severity of the laws has been found sufficient to secure a monopoly of the market to the legal distillers, the real effect of the high duties has been to throw the supply of a large proportion of the demand into the hands of the illicit distiller, and to superadd the atrocities of the smuggler to the idleness and dissipation of the drunkard.

During the latter part of the reign of George I., and the earlier part of that of George II., gin drinking was exceedingly prevalent; and the cheapness of ardent spirits, and the multiplication of public houses, were denounced from the pulpit, and in the presentments of grand juries, as pregnant with the most destructive consequences to the health and morals of the community. At length, ministers determined to make a vigorous effort to put a stop to the further use of spirituous liquors, except as a cordial or medicine. For this purpose, an act was passed in 1736, the history and effects of which deserve to be studied by all who are clamorous for an increase of the duties on spirits. The preamble is to this effect: — "Whereas the drinking of spirituous liquors, or strong beer, is become very common, especially among people of lower and inferior rank, the constant and excessive use of which tends greatly to the destruction of their health, rendering them unfit for useful labour and business, debauching their morals, and inciting them to perpetrate all vices; and the ill consequences of the excessive use of such liquors are not confined to the present generation, but extend to future ages, and tend to the destruction and ruin of this kingdom." The enactments were such as might be expected to follow a preamble of this sort. They were not intended to repress the vice of gin-drinking, but to root it out altogether. To accomplish this, a duty of *twenty shillings* a gallon was laid on spirits, exclusive of a heavy licence duty on retailers. Extraordinary encouragements were at the same time held out to informers, and a fine of 100*l.* was ordered to be rigorously exacted from those who, were it even through inadvertency, should vend the smallest quantity of spirits which had not paid the full duty. Here was an act which might, one should think, have satisfied the bitterest enemy of gin. But instead of the anticipated effects, it produced those directly opposite. The respectable dealers withdrew from a trade proscribed by the legislature; so that the spirit business fell almost entirely into the hands of the lowest and most profligate characters, who, as they had nothing to lose, were not deterred by penalties from breaking through all its provisions. The populace having in this, as in all similar

cases, espoused the cause of the smugglers and unlicensed dealers, the officers of the revenue were openly assaulted in the streets of London and other great towns; informers were hunted down like wild beasts; and drunkenness, disorders, and crimes, increased with a frightful rapidity. "Within 2 years of the passing of the act," says Tindal, "it had become *odious and contemptible*, and policy as well as humanity forced the commissioners of excise to mitigate its penalties."—(*Continuation of Rapin*, vol. viii. p. 358. ed. 1759.) The same historian mentions (vol. viii. p. 390.), that during the 2 years in question, no fewer than 12,000 persons were convicted of offences connected with the sale of spirits. But no exertion on the part of the revenue officers and magistrates could stem the torrent of smuggling. According to a statement made by the Earl of Cholmondeley, in the House of Lords—(*Timberland's Debates in the House of Lords*, vol. viii. p. 388.), it appears, that at the very moment when the sale of spirits was declared to be illegal, and every possible exertion made to suppress it, upwards of SEVEN MILLIONS of gallons were annually consumed in London, and other parts immediately adjacent! Under such circumstances, government had but one course to follow—to give up the unequal struggle. In 1742, the high prohibitory duties were accordingly repealed, and such moderate duties imposed, as were calculated to increase the revenue, by increasing the consumption of legally distilled spirits. The bill for this purpose was vehemently opposed in the House of Lords by most of the bishops, and many other peers, who exhausted all their rhetoric in depicting the mischievous consequences that would result from a toleration of the practice of gin-drinking. To these declamations it was unanswerably replied, that whatever the evils of the practice might be, it was impossible to repress them by prohibitory enactments; and that the attempts to do so had been productive of far more mischief than had ever resulted, or could be expected to result, from the greatest abuse of spirits. The consequences of the change were highly beneficial. An instant stop was put to smuggling; and if the vice of drunkenness was not materially diminished, it has never been stated that it was increased.

But it is unnecessary to go back to the reign of George II. for proofs of the impotency of high duties to take away the taste for such an article, or to lessen its consumption. The occurrences that took place in the late reign, though they would seem to be already forgotten, are equally decisive as to this question.

*Duties in Ireland.*—Perhaps no country has suffered more from the excessive height to which duties on spirits have been carried than Ireland. If heavy taxes, enforced by severe fiscal regulations, could make a people sober and industrious, the Irish would be the most so of any on the face of the earth. In order to make the possessors of property join heartily in suppressing illicit distillation, the novel expedient was here resorted to, of imposing a heavy fine on every parish, town land, manor land, or lordship, in which an unlicensed still was found; while the unfortunate wretches found working it were subjected to *transportation for seven years*. But instead of putting down illicit distillation, these unheard-of severities rendered it universal, and filled the country with bloodshed, and even rebellion. It is stated by the Rev. Mr. Chichester, in his valuable pamphlet on the *Irish Distillery Laws*, published in 1818, that "the Irish system seemed to have been formed in order to perpetuate smuggling and anarchy. It has culled the evils of both savage and civilised life, and rejected all the advantages which they contain. The calamities of civilised warfare are, in general, inferior to those produced by the Irish distillery laws; and I doubt whether any nation of modern Europe, which is not in a state of actual revolution, can furnish instances of legal cruelty commensurate to those which I have represented."—(Pp. 92—107.)

These statements are borne out to the fullest extent by the official details in the *Reports of the Revenue Commissioners*. In 1811, say the commissioners (*Fifth Report*, p. 19.), when the duty on spirits was 2s. 6d. a gallon, duty was paid in Ireland on 6,500,361 gallons (Irish measure); whereas, in 1822, when the duty was 5s. 6d., only 2,950,647 gallons were brought to the charge. The commissioners estimate, that the annual consumption of spirits in Ireland was at this very period not less than TEN MILLIONS of gallons; and, as scarcely three millions paid duty, it followed, that seven millions were illegally supplied; and "taking one million of gallons as the quantity fraudulently furnished for consumption by the licensed distillers, the produce of the unlicensed stills may be estimated at six millions of gallons."—(*Ib.* p. 8.) Now, it is material to keep in mind, that this vast amount of smuggling was carried on in the teeth of the above barbarous statutes, and in despite of the utmost exertions of the police and military to prevent it; the only result being the exasperation of the populace, and the perpetration of revolting atrocities both by them and the military. "In Ireland," say the commissioners, "it will appear, from the evidence annexed to this Report, that parts of the country have been absolutely disorganised, and placed in opposition not only to the civil authority, but to the military force of the government. The profits to be obtained from the evasion of the law have been such as to encourage nu-

To put an end to such evils, the commissioners recommended that the duty on spirits should be reduced from 5s. 6d. to 2s. the wine gallon (2s. 4d. the Imperial gallon), and government wisely consented to act upon this recommendation. In 1823, the duties were accordingly reduced; and the following official account will show what has been the result of this measure:—

An Account of the Quantities of Spirits made in Ireland, which have paid the Duties of Excise for Home Consumption; stating the Rate of Duty paid, and also the Nett Amount of Revenue received in each Year, since the Year 1820.—(Part. Paper, No. 340, Sess. 1829, No. 61. Sess. 1851, &c.)

| 1833   | 8,168,536                | Ditto.  | 1,360,769               | 6  | 8  |

It may appear, on a superficial view of this Table, as if the consumption of spirits in Ireland had been nearly trebled since 1823; but, in point of fact, it has not been in any degree increased. The reduction of the duties substituted legal for illicit distillation, and freed the country from the perjuries and other atrocities that grew out of the previous system; but it would be wholly erroneous to say that it increased drunkenness. We have already seen that the commissioners, who had the best means of obtaining accurate information, estimated the consumption of spirits in Ireland, in 1823, at TEN millions of gallons; and it was not more in 1828 and 1829. The measure was, therefore, in every point of view most successful; and it is much to be regretted that it was interfered with in 1830, by raising the duties from 2s. 10d. to 3s. 4d. The above Table shows that this increase has materially diminished the quantity of spirits brought to the charge. We do not, however, believe that it has occasioned any diminution of consumption. The truth is, that 2s. 10d. was as high a duty as the article would bear; and the additional 6d. has again thrown the balance in favour of the smuggler, and led to a partial revival of illicit distillation. The evidence taken before the commissioners of excise inquiry has completely established this fact; and sound policy would, therefore, suggest that the duty should be once more reduced to 2s. 10d. At all events, we trust that no senseless, though well-meant clamour about the prevalence of drunkenness, and no pecuniary necessity, will ever tempt ministers to add further to the duties on spirits. Such a measure would not bring a shilling into the public treasury, nor cause any diminution of the vice of drinking; it would merely add smuggling and its attendant evils to the other disorders with which Ireland is afflicted.

*Duties in Scotland.*—The experience of Scotland is hardly less decisive as to this question. The exorbitancy of the duties produced nearly the same effects there as in Ireland. Mr. John Hay Forbes, formerly sheriff-depute of Perthshire, now one of the Lords of Session, stated in evidence before the commissioners, that, according to the best information he could obtain, the quantity of illegally distilled spirits annually produced in the Highlands could not amount to less than two millions of gallons. In corroboration of this he stated, that, in 1821, only 298,138 gallons were brought to the charge in the Highlands; and of these, 254,000 gallons were permitted to the Lowlands, leaving only 44,000 gallons for the consumption of the whole country;—a supply which, we are well assured, would hardly be sufficient for the demand of 2 moderately populous parishes. In a letter of Captain Munro of Tcaninich to the commissioners, it is stated that, "at Tain, where there are upwards of 20 licensed public houses, not one gallon had been permitted from the legal distilleries for upwards of twelve months," though a small quantity of smuggled whisky had been purchased at the excise sales, to give a colour of legality to the trade. The same gentleman thus expresses himself in another part of his letter:—"The moral effects of this baneful trade of smuggling on the lower classes is most conspicuous, and increasing in an alarming degree, as evidenced by the multiplicity of crimes, and by a degree of insubordination formerly little known in this part of the country. In several districts, such as Strathconon, Strathcarron, &c., the excise officers are now often deforced, and dare not attempt to do their duty; and smuggled whisky is often carried to market by smugglers escorted by armed men, in defiance of the laws. In short, the Irish system is making progress in the Highlands of Scotland."

To arrest the progress of demoralisation, government, pursuant to the judicious advice of the commissioners, reduced the duties on Scotch to the same level as those on Irish whisky; and the consequences were equally salutary. The subjoined official statement shows the effect of the reduction of the duty in 1823, and of its subsequent increase in 1830:—

An Account of the Quantities of Spirits made in Scotland, which have paid the Duties of Excise for Home Consumption; stating the Rate of Duty paid, and also the Nett Amount of Revenue received in each Year, since the Year 1820. — (*Part. Paper*, No. 343. Sess. 1829, No. 61. Sess. 1831, &c.)

This Table sets the impolicy of the increase of duty in 1830 in nearly as striking a point of view as it does the policy of its reduction in 1823. There is no denying the fact, that this uncalculated measure has diminished the consumption, and given a powerful stimulus to illicit distillation. We understand that the commissioners of excise inquiry mean to recommend that the duty be again reduced to 2s. 10d.; and every one, not anxious for the prevalence of smuggling, will be desirous that this recommendation should be carried into effect.

*Duties in England.*—Previously to the reduction of the duty on Irish and Scotch spirits, the duty on English spirits had been as high as 10s. 6d. a gallon. This high duty, and the restrictions under which the trade was placed, were productive of the worst effects. They went far to enable the distillers to fix the price of spirits, "and consequently," (we quote the words of the commissioners) "to raise it much beyond that which was sufficient to repay, with a profit, the cost of the manufacture and the duty advanced to the Crown." And, in proof of this, the commissioners mention, that in November, 1825, "when corn spirits might be purchased in Scotland for about 2s. 3d. a gallon, raw spirits could not be purchased in England for less than 4s. 6d. ready money, and 4s. 9d. credit, omitting, in both cases, the duty." In consequence of this state of things, the adulteration of spirits was carried on to a great extent in England; and the large profits made by the smuggler occasioned clandestine importation in considerable quantities from Scotland and Ireland. To obviate these inconveniences, and at the same time to neutralise the powerful additional stimulus that the reduction of the duties in Scotland and Ireland would have given to smuggling, had the duties in England been continued at their former amount, the latter were reduced, in 1825, to 7s. a gallon, facilities being at the same time given to the importation of spirits from the other parts of the empire. It is of the effects of this measure that so many complaints have been made, though nothing can well be imagined more completely destitute of foundation. The commissioners estimated the consumption of British spirits in England and Wales in 1823, at 5,600,000 gallons.—(*Sup. to Fifth Report*, p. 8.) and it appears from the subjoined account, that it amounted, for the year ending the 5th of January, 1834, to 7,577,303 gallons; producing 2,893,884. 12s. 6d. of revenue; so that, making allowance for the increase of population, and the check given to adulteration and smuggling, the increase must appear very trifling indeed; and we are warranted in affirming that the reduction of the duties has been as eminently successful in England as in either Scotland or Ireland.

Account of the Quantities of British, Colonial, and Foreign Spirits, which paid the Home Consumption Duty for England, Scotland, and Ireland, from the Year 1821 to 1832 inclusive. — (*Part. Paper*, No. 184. Sess. 1831.)

The extraordinary increase in the consumption of brandy in 1832 is wholly ascribable to the alarm occasioned by the breaking out of the cholera, and the prevalent, but now exploded, notion that brandy potations were an antidote to the disease. As soon as the alarm subsided, the consumption of brandy declined to its old level; the entries for home use in 1833 not having exceeded 1,356,620 gallons.

**Taxes on Spirits.**—No spirits made in England, Scotland, or Ireland, shall be conveyed from England to Scotland or Ireland, or from Scotland or Ireland to England, otherwise than in casks containing eighty gallons at the least, and in vessels of not less than fifty tons burden.

All persons whatsoever, not being licensed distillers, rectifiers, or compounders, having more than eighty gallons of spirits in their possession, shall be deemed dealers in spirits, and subject to the survey of the officers of excise, and to all the regulations, penalties, &c. to which such persons are liable. — (16 Geo. 4. c. 80. sect. 122.)

Dealers in British spirits are prohibited selling or having in their possession any plain British spirits, except spirits of wine, of any strength exceeding the strength of 45 per cent. above hydrometer, or of any strength below 17 per cent. under hydrometer proof; or any compounded spirits, except shrub, of a 3y greater strength than 17 per cent. under hydrometer, under pain of forfeiting all such spirits, with the casks. — Sect. 124.

Dealers in foreign and British spirits are to keep them separate, in casks, vaults, or other places specially entered for that purpose, under a heavy penalty; and any person mixing, selling, or sending out any British spirits mixed with foreign or colonial spirits, shall forfeit 100l. for every such offence. — Sect. 126.

No retailer of spirits, or any other person licensed or unlicensed, shall sell or send out from his stock or custody any

quantity of spirits exceeding 1 gallon, unless the same be accompanied by a true and lawful permit, under pain of forfeiting 500l.; and any retailer, compounder, or dealer in spirits, receiving the same into their stock, or allowing any one else to receive it, and any carrier, boatman, or other person, knowingly carrying the same, shall forfeit the sum of 200l., with the lout, horse, cart, &c. used in the carriage. — Sect. 116.

No licence to be granted for retailing spirits within gaols, houses of correction, or workhouses for pauper's use; nor are spirits to be used there, except medicinally prescribed by a regular physician, surgeon, or apothecary. Penalty for a first offence of this sort committed by gaolers, &c., 100l.; a second offence to be deemed a forfeiture of the office. — Sect. 151.

Persons buying spirits to forfeit them and 100l.; and if the penalty be not immediately paid, they are to be committed to the house of correction for 3 months, or until paid. — (Sect. 128.) Any person is authorized to detain a hawkers of spirits, and give notice to a peace officer, who is to carry the offender before a justice. — Sect. 130.

Any officer of excise, or other person employed in the excise, taking any sum of money or other reward from, or entering into any collusion agreement with, any person, to act contrary to his duty, to forfeit 500l., and be incapacitated; and any person offering such reward or proposing such agreement, to forfeit 500l. — Sect. 135.

For the regulations as to the importation, &c. of foreign spirits, see BRANDY, GIN, & RUM.

**SPONGE** (Ger. *Schwamm*; Fr. *Eponge*; It. *Spugna*; Sp. *Espanja*), a soft, light, very porous, and compressible substance, readily imbibing water, and as readily giving it out again. It is found adhering to rocks, particularly in the Mediterranean Sea, about the islands of the Archipelago. It was formerly supposed to be a vegetable production, but is now classed among the zoöphytes; and analysed, it yields the same principles as animal substances in general. The inhabitants in several of the Greek islands have been trained from their infancy to dive for sponges. They adhere firmly to the bottom; and are not detached without a good deal of trouble. The extraordinary clearness of the water facilitates the operations of the divers. Smyrna is the great market for sponge. The price varies from 6 to 16 pinstres per oke for ordinary and dirty, and from 80 to 100 pinstres per oke, for fine and picked specimens. Sponge is also fished in the Red Sea. — (*Ure's Dictionary*; *Savary's Letters on Greece*, Eng. ed. p. 109.; and *private communications*.)

Sponge is used in surgery, and for a variety of purposes in the arts. The duty on it, in 1832, produced 2,097,481*l.*; but it has since been judiciously reduced from 2s. to 6*d.* per lb. when brought from a foreign country, and from 6*d.* to 1*d.* per lb. when brought from a British possession. The far greater portion comes from the former. No deduction is made from the duty on account of sand or dirt, unless it exceed 7 per cent., and then only for the excess above 7 per cent.

**SQUILL** (Ger. *Meerzwiebel*; Fr. *Scille*, *Oignon marin*; It. *Scilla*, *Cipolla marina*; Sp. *Cebolla albarraza*), or, as it is sometimes denominated, the *Sea onion*, is a plant with a large bulbous root, which is the only part that is used. It grows spontaneously on sandy shores in Spain, and the Levant; whence we are annually supplied with the roots. They should be chosen large, plump, fresh, and full of a clammy juice: some are of a reddish colour, and others white; but no difference is observed in the qualities of the 2 sorts. The root is very nauseous, intensely bitter, and acrimonious; much handled, it ulcerates the skin. The bulbs are brought to England, preserved fresh in sand. The acrimony of the roots, on which their virtue depends, is partially destroyed

by drying and long keeping, and is completely destroyed by exposure to heat above 212°. Squill is one of the most powerful and useful remedies in the materia medica. — (*Lewis's Mat. Med.; Thomson's Dispensatory.*)

STADE, a small city of Hanover, on the Schwinge, 22 miles W. by N. of Hamburg, lat. 53° 36' 32" N., lon. 9° 28' 34" E. It has very little trade; and would be quite unworthy of notice in a work of this sort, except for the circumstance that a toll or duty, charged by the Hanoverian government on all goods imported into Hamburg, whether for consumption or transit, is paid at the castle of Brunshausen, contiguous to this town. The duty is generally about  $\frac{1}{2}$  per cent. *ad valorem*. It is rated according to a tariff; and is computed from the ship's manifest, bills of lading, cockets, &c., which must be left at Brunshausen for that purpose. The duties are paid in Hamburg; and no vessel is allowed to unload, till a receipt, subscribed by the Hanoverian authorities in that city, be produced for the duties. We have already — (see HAMBURG) — expressed our surprise that an obstruction of this sort should have been tolerated for so long a period. The duties fall heavily on certain descriptions of goods; particularly on some manufactured articles; and are, at an average, decidedly higher than the duties charged in Hamburg. They are most objectionable, however, from their requiring many troublesome regulations to be complied with; the unintentional deviation from any one of which exposes the cargo to confiscation, and never fails to occasion a great deal of delay, trouble, and expense. As the principal part of the foreign trade of the Elbe is in our hands, we are, of course, principally affected by the Stade toll; and, considering the source of the nuisance, it is really not a little astonishing it should not have been abated long ago. The sum which the Hanoverian government derives from the duties is but trifling compared with the injury they inflict on our trade; it would, consequently, be good policy for the former to sell, and for the British government to buy, an exemption from so vexatious a duty; and we are well assured that few things would do more to extend our trade with Hamburg than the completion of an arrangement of this sort.

Previously to 1736, English ships passing up the Elbe had to come to an anchor opposite Brunshausen: but they were then allowed, under certain conditions, to pass on to Hamburg. The proclamation to this effect, and which contains an epitome of the regulations that have still to be observed, is subjoined.

1. That all English vessels be exempted from coming to an anchor before the river Schwinge, and allowed to sail directly up to Hamburg.
2. Such English vessels shall be obliged, at their approach, within about  $\frac{1}{4}$  of a league thereof, to hoist their colours, to lower their sails, and only to drive, (till the legitimation is made at the king's frigate lying there.)
3. The master of the ship, or a proper person fully provided with the necessary documents, is to go on board the frigates, and afterwards to the Custom-house at Brunshausen and Stade; and there to produce on exact manifest, and the original bills of lading, cockets, &c.
4. The documents being produced, the accounts shall be stated, and all duties must be paid at Brunshausen, Stade, or Hamburg.
5. The clearance shall be given at Brunshausen to the person sent (either by the master of the vessel; or by whom it must be delivered to the King's commissary in Hamburg, together with the documents of the cargo, and a specification of the parcels, bales, casks, &c. which were received on board at the port of lading, whether destined for Hamburg or other places.
6. Bulk must not be broken till all this has been performed, except the King's commissary in Hamburg permits, in urgent cases, the unloading.
7. The vessels being thus allowed to pass the frigate without being searched, in case of suspecting any fraud, the masters shall be obliged to sign a proper oath; and the merchants in

Hamburg, who receive effects by these vessels, shall make an exact report thereof, and give a certificate in lieu of an oath — that they neither have received nor expected more goods than have been specified, — which must be delivered to His Majesty's commissary in Hamburg, to enable him to examine the report made by the master.

8. No master is to depart from Hamburg before he has taken a certificate from His Majesty's commissary, proving that all has been duly performed; which is to be sent to the king's frigate, near Brunshausen.

9. The signals mentioned in the second article are likewise to be made when the ship repasses Stade.

10. The taking cognizance of, and punishing misdemeanors, frauds, and mismanagements, as well as the neglecting of the preceding articles, remains in the Court of the King's Customs at Stade; so that both merchants and masters of ships, who may be called to an account, shall, when summoned, appear before the said court, and submit to its decisions; but they have the liberty of appeal to the superior courts for a revision and relief.

11. As to all other points not expressly mentioned in the foregoing articles, they shall be observed at the King's Custom-houses at Brunshausen, Stade, and Hamburg, according to the regulations and customs heretofore practised.

12. His gracious concession is hereby granted, only *durante bene placito*; the king reserving to himself and his successor, in his German dominions the right of revoking it, and making any alterations or new orders, whenever they shall see reason.

The following statement, taken from the books of a Hamburg merchant, shows, in parallel columns, the amount of the Stade and Hamburg duties paid on certain articles imported into Hamburg. It is clear from it, the more though there were no burdensome regulations to be complied with, the amount of the Stade duties must be a very serious drawback on the trade of the Elbe.

A List, showing the Amount of Stade Duties, and the Amount of Hamburg Duties paid on the same Goods imported into Hamburg.

is usually concreted in longish masses; it has scarcely any smell, and very little taste. When kept dry, it continues for a long time uninjured, though exposed to the air. It is insoluble in cold water; but combines with boiling water — forming with it a kind of jelly. It exists chiefly in the white and brittle parts of vegetables, particularly in tuberos roots, and the seeds of the gramineous plants. It may be extracted by pounding these parts, and agitating them in cold water; when the *parenchyma*, or fibrous parts, will first subside; and these being removed, a fine white powder, diffused through the water, will gradually subside, which is the starch. Or the pounded or grated substance, as the roots of potatoes, acorns, or horse chestnuts, for instance, may be put into a hair sieve, and the starch washed through with cold water, leaving the grosser matters behind. Farinaceous seeds may be ground and treated in a similar manner. Oily seeds require to have the oil expressed from them before the farina is extracted. Potato starch goes a good deal further than wheat starch — a less quantity of it sufficing to form a paste of equal thickness, with water. It has a very perceptible crystallised appearance, and is apparently heavier than common starch. — (*Thomson's Chemistry; Ure's Dictionary.*)

Starch is charged with a duty of 3½ *l.* per lb.; and its manufacture is, consequently, placed under the control of the excise. Every maker of starch for sale must take out an annual licence, which costs 5*l.* Notice must be given to the excise of the erection, and of all changes in the construction, of workshops, implements, &c. used in the manufacture of starch, under a penalty of 200*l.* All starch, before it is put into any stove or place to dry, must be papered and sealed or stamped by the officer, under a penalty of 100*l.* Any person forging or counterfeiting such stamp or seal is guilty of felony, but with the benefit of clergy. Any person knowingly selling any starch with a forged or counterfeit stamp, &c. forfeits 500*l.* No quantity of starch exceeding 28 lbs. to be removed from one place to another, unless the word *starch* be marked on the package in legible letters 3 inches long, under forfeiture of the package, and of the cattle and carts conveying the same. Any dealer in starch receiving any quantity exceeding 28 lbs. not marked as above, shall forfeit 200*l.* Starch-makers are to make weekly entries of the starch made by them, under a penalty of 50*l.*; and are to make payment of the duties within a week of such entry. Cockets granted for shipping starch to be carried coastwise are to express the quality, quantity, weight, the mark of the package, by whom made and sold, and to whom consigned; and if shipped without such cocket, it may be seized. No starch is to be imported, unless in packages containing at least 224 lbs. stowed openly in the hold, on pain of forfeiture and of incurring a penalty of 50*l.* No starch is to be exported, unless the package as originally sealed or stamped by the officer be entire, and unless the officer mark the word *exportation* upon it. The duties must have been paid on all starch exported; but the exporter is entitled to an excise drawback of 3½ per lb. — (*Burn's Justice of the Peace, Marriott's ed., tit. Starch.*)

An Account of the Number of Pounds of Starch that paid the Home Consumption Duty in Great Britain, the Rate of Duty, and the Gross and Nett Produce of the Duty, in each of the Three Years ending with the 5th of January, 1833.

STEEL (Fr. *Acier*; Ger. *Stahl*; It. *Acciajo*; Lat. *Chalybs*; Rus. *Stal*; Sp. *Acero*; Sw. *Stål*), is iron combined with a small portion of carbon; and has been, for that reason, called carburetted iron. The proportion of carbon has not been ascertained with much precision. It is supposed to amount, at an average, to 116th part. Steel is so hard as to be unmanageable while cold; or at least it acquires that property by being immersed, while ignited, in a cold liquid: for this immersion, though it has no effect upon iron, adds greatly to the hardness of steel. It is brittle, resists the file, cuts glass, affords sparks with flint, and retains the magnetic virtue for any length of time. It loses this hardness by being ignited, and cooled very slowly. It is malleable when red hot, but scarcely so when raised to a white heat. It may be hammered out into much thinner plates than iron. It is more sonorous; and its specific gravity, when hammered, is greater than that of iron — varying from 7.78 to 7.84. Steel is usually divided into 3 sorts, according to the method in which it is prepared; as *natural steel*, *steel of cementation*, and *cast steel*. The latter is the most valuable of all, as its texture is the most compact, and it admits of the finest polish. It is used for razors, surgeons' instruments, and similar purposes. Steel is chiefly employed in the manufacture of swords, knives, and cutting instruments of all sorts used in the arts; for which it is peculiarly adapted by its hardness, and the fineness of the edge which may be given to it. — (*Thomson's Chemistry*; and see *Iron*.)

STOCKHOLM, the capital of Sweden, situated at the junction of the lake Maelar with an inlet of the Baltic, in lat. 59° 20' 31" N., lon. 17° 54' E.; a well-built, handsome city. Population 80,000. The entrance to the harbour is intricate and dangerous, and should not be attempted without a pilot; but the harbour itself is capacious and excellent, the largest vessels lying in safety close to the quays. Stockholm possesses half the foreign trade of Sweden; but this is confined within comparatively narrow limits, in consequence of the impolitic efforts of the government to promote industry by excluding foreign products. Iron, timber, and deals form the great articles of export. Swedish iron is of very superior quality, and is extensively used in Great Britain; the

Regulations as to the working of Mines in Sweden.— The following paper, which we have received from Sweden, and on the authenticity of which our readers may rely, shows the nature of the obstructions laid on the principal branch of industry carried on in that kingdom. They appear to us to be in the last degree absurd and oppressive. It might be proper to enact regulations to prevent the waste of the forests; but having done this, every one ought to be at liberty to produce as much iron as he pleased, without being subject to any sort of regulation or control. We are surprised that so intelligent a government as that of Sweden should think of imposing such preposterous regulations.

Sweden has at present from 330 to 340 smelting furnaces, which produce annually from 90,000 to 95,000 tons of pig iron. In converting the pig into bar iron, about 23 per cent. is allowed for waste; and as near as can be ascertained, the annual manufacture of bar iron is from 63,000 to 65,000 tons. The number of iron works is between 420 and 430, having about 1,100 forges (hearthstoves). The annual exportation of bar iron, at an average of the 10 years ending 1831, was 49,568 tons; of which were, for—

| Great Britain   | 10,000 tons. |
| United States   | 20,000 —     |
| Germany, Holland, France, and Portugal                          | 15,000 —     |
| The remainder to Brazil, and a very little to the Mediterranean | 4,568 —      |

Total . 49,568

The smelting furnaces and iron works are licensed for particular quantities, some being as low as 50 tons, and others as high as 400 or 500 tons; and some fine bar iron works have licences for 1,000 tons each. These licences are granted by the College of Mines, which has a control over all iron works and mining operations. The iron masters make annual returns of their manufacture, which must not exceed the privileged or licensed quantity, on pain of the overplus being confiscated. The College has subordinate courts, called Courts of Mines, in every district, with supervising officers of various ranks. All iron sent to a port of shipment must be landed at the public weigh-house, the superintendent of which is a delegate of the college; and his duty is to register all that arrives, and transmit a quarterly report thereof to the college, so that it is impossible for an iron master to send more iron to market than his licence authorises. Many, however, sell iron to inland consumers at the forges, of which no returns are ever made out, and in so far the licences are exceeded; but we do not suppose that the quantity so disposed of exceeds 2,000 or 3,000 tons a year. Every furnace and forge pays a certain annual duty to the Crown. Its amount is fixed by the College when the licence is granted; and care is taken not to grant a licence to any one, unless he has the command of forests equal to the required supply of charcoal, without encroaching on the supply of this material required for the existing forges in the neighbourhood. As the supply of pig iron is limited\*, the quantity licensed to be made being never exceeded, the College, in granting new licences to bar iron works, always takes into consideration how far this may be done without creating a scarcity of pig iron. Hence, the erection of new forges depends— 1st, on having a supply of charcoal, without encroaching on the forests which supply your neighbours; and, 2dly, on the quantity of pig iron which the College knows to be disposable. The courts of the mines decide all disputes that arise among the iron masters regarding the exceeding of their licences, encroachments, &c.; an appeal to the College lying from their decision, and ultimately to the king in council, or to the supreme court of the kingdom. In 1824 the mines produced 850 tons of copper, 50 tons of brass, 40 tons of lead, 1,700 tons of alum, 46,629 lbs. of cobalt, 3,000 lbs. of silver; and of late years several mines of manganese have been worked, the produce of which may be from 300 to 400 tons."

STOCKINGS, as every one knows, are coverings for the legs. They are formed of only 1 thread entwined, so as to form a species of tissue, extremely elastic, and readily adapting itself to the figure of the part it is employed to cover. This tissue cannot be called cloth, for it has neither warp nor woof, but it approaches closely to it; and for the purposes to which it is applied, it is very superior.

1. *Historical Sketch of the Stocking Manufacture.*— It is well known that the Romans and other ancient nations had no particular clothing for the legs. During the middle ages, however, hose or *leggins*, made of cloth, began to be used; and at a later period, the art of knitting stockings was discovered. Unluckily, nothing certain is known as to the individual by whom, the place where, or the time when, this important invention was made. Howell, in his *History of the World* (vol. iii. p. 222.), says, that Henry VIII. wore none but cloth hose, except there came from Spain by great chance a pair of silk stockings; that Sir Thomas Gresham, the famous merchant, presented Edward VI. with a pair of long silk stockings from Spain, and that the present was much taken notice of; and he adds, that Queen Elizabeth was presented, in the third year of her reign, with a pair of black knit silk stockings, and that from that time she ceased to wear cloth hose. It would appear from this circumstantial account, that the art of knitting stockings, or at least that the first specimens of knit stockings, had been introduced into England from Spain about the middle of the 16th century; and such seems to have been the general opinion, till an allusion to the practice of knitting, in the pretended poems of Rowley, forged by Chatterton, caused the subject to be more strictly investigated. The result of this investigation showed clearly that the practice of knitting was well known in England, and had been referred to in acts of parliament, a good many years previously to the period mentioned by Howell. But it had then, most probably, been applied only to the manufacture of woollen stockings; and the general use of cloth hose

\* We do not mean that the manufacture of pig iron is limited; for any one can get a licence to smelt, who can prove he has a sufficiency of charcoal at his disposal; but the quantity licensed is never exceeded, but is often less.

STORAX. See BALSAM.

STORES, MILITARY AND NAVAL, include arms, ammunition, &c. It is enacted, that no arms, ammunition, or utensils of war, be imported by way of merchandise, except by licence, for furnishing his Majesty's public stores only. — (6 Geo. 4. c. 107.)

STORES, in commercial navigation, the supplies of different articles provided for the subsistence and accommodation of the ship's crew and passengers.

It is laid down, in general, that the surplus stores of every ship arriving from parts beyond seas are to be subject to the same duties and regulations as those which affect similar commodities when imported as merchandise; but if it shall appear to the collector and comptroller that the quantity of such stores is not excessive, nor unsuitable, under all the circumstances of the voyage, they may be entered for the private use of the master, purser, or owner of such ship, on payment of the proper duties, or be warehoused for the future use of such ship, although the same could not be legally imported by way of merchandise. — (3 & 4 Will. 4. c. 52. § 35.)

A List, by which to calculate the Amount of Stores, of the estimated Average Number of Days' Duration of a Voyage from the United Kingdom to the different Ports enumerated, and back.

For such places as are not included in the List, the same allowance should be granted as is given to the place nearest thereunto.

No stores shall be shipped for the use of any ship bound to parts beyond the seas, nor shall any goods be deemed to be such stores, except such as shall be borne upon the victualling bill. — (3 & 4 Will. 4. c. 52. sect. 61.)

Goods delivered into the charge of the searchers to be shipped as stores, may be so shipped without entry or payment of any duty, for any ship of the burden of 70 tons at least bound upon a voyage to foreign parts, the probable duration of which out and home will not be less than 40 days: provided such stores be duly borne upon the ship's victualling bill, and be shipped in such quantities, and subject to such directions and regulations, as the commissioners of customs shall direct and appoint. — (3 & 4 Will. 4. c. 57. sect. 16.)

Hum of the British plantations may be delivered to the searcher, to be shipped as stores for any ship, without entry or payment of any duty; and any surplus stores of any ship may be delivered to the searcher, to be re-shipped as stores for the same ship, or for the same master in another ship, without entry or payment of any duty, — such rum and such surplus stores being duly borne upon the victualling bill of such ships respectively; and if the ship, for the future use of which any surplus stores have been warehoused, shall have been broken up or sold, such stores may be so delivered for the use of any other ship belonging to the same owners, or may be entered for payment of duty, and delivered for the private use of such owners or any of them, or of the master or purser of the ship. — Sect. 17.

The searchers in London, on clearance of vessels coastwise to take in cargoes for foreign parts, are to apprise the collectors and controllers at the outports where the vessels are to be bound, of the quantity and description of the goods which may have been shipped on board such vessels, and that no part of such stores shall be consumed by the crews, or any package opened or altered, until the vessels have actually been cleared on their foreign parts; and the collectors and controllers at the out-ports are in like manner to cause a similar communication to be made to the ports where the outward cargoes are to be taken on board, and the officers at such ports are to take care to ascertain that the several goods so shipped are actually on board the vessels on their arrival, and have neither been consumed or run on shore during the coasting voyage; and if so, to report the same to the Board. — (*Act. by Com. of Customs, 19th of Feb. 1853.*)

*Lid of Foreign Goods allowed to be shipped as Stores, from the bonded Warehouses free of Duty.* — (Custom's Minute, 29th of Nov. 1852.)

Tea,  $\frac{1}{2}$  of an oz.; coffee or cocoa, 1 oz. per day for each person on board, with the option to ship the entire quantity required for the voyage, if the several articles of these articles are actually on board, the tea being considered equal to one oz. of coffee or cocoa; the tea to be shipped in the original packages in which it was imported.

Wine, 1 quart per day for the master, each mate, and cabin passenger.

White bottled in the bonded warehouses for exportation may be shipped as stores, in packages containing not less than 5 doz. reputed quart, or 6 doz. reputed pint bottles.

Spirits, viz. brandy, geneva, rum (British plantation),  $\frac{1}{2}$  pint per day for each person on board.  
British plantation rum to be in the proportion of  $\frac{1}{3}$  of the whole quantity of spirits shipped. Each description of spirit intended as stores to be shipped in one cask capable of containing the entire quantity of brandy, or of geneva or rum, allowed for the voyage, or in cases containing not less than 10 gallons of brandy or geneva, or 20 gallons of British plantation rum, as the case may be; provided that if spirits shall have been imported in bottles, or bottled in the bonded warehouse for exportation, the same may be shipped as stores, in packages containing not less than 3 doz. reputed quart or 6 doz. reputed pint bottles.

Rum Sugar and Molasses (together or separate), 2 oz. per day for each person on board.  
Dried Fruits, 2 lbs. per week for each person on board.  
Rice, 2 lbs. per week for each person on board.

Foreign Segars,  $\frac{1}{2}$  oz. per day for the master, eachmate, and each cabin passenger.  
The entire quantity of foreign segars, allowed as stores for each voyage to be shipped in one package.

*A List of British manufactured Goods to be allowed to be shipped as Stores on the usual Bounty or Drawback.*

British refined Sugar, 3 oz. per day for the master, each mate, and each cabin passenger.

British manufactured Tobacco,  $\frac{1}{2}$  oz. per day per man.  
British ericazelle Goods, viz. beer, ale, and porter (together or separate), 1 quart per day for the master, each mate, and each passenger.

Vinegar,  $\frac{1}{2}$  pint per week for each person on board.

Soup, 3 oz. per day for each person on board. The same indulgence, in respect of the shipment of stores, which has been granted to merchant vessels under the 2 & 3 Will. 4. c. 81., and by subsequent orders, is granted to transports under the following conditions, viz.: — On a certificate being produced for each embarkation, from the office of a controller for victualling and transport services, setting forth the destination of the vessel, and the number of the crew and passengers on board, who are not to be messed by the victualling shipped by the public; and as respects soldiers embarked as guards in ships chartered for the transportation of convicts, on a certificate being produced from the proper department, specifying the number of soldiers to be embarked in each case; but no indulgence can be granted in regard to the article of soup. — (*Trans. Ord. of 6th of March, 1853; see also Elliot's British Tariff for 1853 and 1854, — an accurate and useful publication.*)

STRANDING, in navigation, the running of a ship on shore, or on the beach.

It is the invariable practice to subjoin the following memorandum to policies of insurance executed by private individuals in this country: — “ N. B. — Corn, fish, salt, fruit, flour, and seed, are warranted free from average, unless general, or the ship be stranded; sugar, tobacco, hemp, flax, hides, and skins, are warranted free from average under 5l. per cent.; and all other goods, also the ship and freight, are warranted free of average under 3l. per cent., unless general, or the ship be stranded.”

It is, therefore, of the greatest importance accurately to define what shall be deemed a stranding. But this is no easy matter; and much diversity of opinion has been entertained with respect to it. It would, however, appear that merely striking against a rock, bank, or shore, is not a stranding; and that, to constitute it, the ship must be upon the rock, &c. for some time (how long?). — Mr. Justice Park has the following observations on this subject: — “ It is not every touching or striking upon a fixed body in the sea or river that will constitute a stranding. Thus Lord Ellenborough held, that in order to establish a stranding, the ship must be stationary; for that merely striking on a rock, and remaining there a short time (as in the case then at the bar, about a minute and a half), and then passing on, though the vessel may have received some injury, is not a stranding. Lord Ellenborough's language is important. — *Ex vi termini* stranding means lying on the shore, or something analogous to that. To use a vulgar phrase, which has been applied to this subject, if it be touch and go with the ship, there is no stranding. It cannot be enough that the ship lie for a few moments on her beam ends. Every striking must necessarily produce a retardation of the ship's motion. If by the force of the elements she is run aground, and becomes stationary, it is immaterial whether this be on piles, on the muddy bank of a river, or on rocks on the sea shore; but a mere striking will not do, wherever that may happen. I cannot look to the consequences, without considering the *causa causans*. There has been a curiosity in the cases about stranding not creditable to the law. A little common sense may dispose of them more satisfactorily.”

This is the clearest and most satisfactory statement we have met with on this subject; still, however, it is very vague. Lord Ellenborough and Mr. Justice Park hold, that to constitute a stranding, the ship must be stationary; but they also hold, that if she merely remain upon a rock, &c. for a short time, she is not to be considered as having been stationary. Hence every thing turns upon what shall be considered as a short time. And we cannot help thinking that it would be better, in order to put to rest all doubts upon the subject, to decide either that every striking against a rock, the shore, &c. by which damage is done to the ship, should be considered a stranding; or that no striking against a rock, &c. should be considered as such, provided the ship be

got off within a specified time. Perhaps a tide would be the most proper period that could be fixed.

The insurance companies exclude the words, "or the ship be stranded," from the memorandum. — (See INSURANCE, MARINE.)

**STURGEON FISHERY.** The sturgeon is a large, valuable, and well known fish, of which there are several species, viz. the sturgeon, properly so called, or *Acipenser sturio*; the beluga, or *Acipenser luso*; the sevruga, or *Acipenser stellatus*, &c. The sturgeon annually ascends our rivers, but in no great number, and is taken by accident in the salmon nets. It is plentiful in the North American rivers, and on the southern shores of the Baltic; and is met with in the Mediterranean, &c. But it is found in the greatest abundance on the northern shores of the Caspian, and in the rivers Wolga and Ural; and there its fishery employs a great number of hands, and is an important object of national industry. Owing to the length and strictness of the Lents in the Greek Church, the consumption of fish in Russia is immense; and from its central position, and the facilities afforded for their conveyance by the Wolga, the products of the Caspian fishery, and those of its tributary streams, are easily distributed over a vast extent of country. Besides the pickled carcases of the fish, caviar is prepared from the roes; and isinglass, of the best quality, from the sounds. The caviar made by the Ural Cossacks is reckoned superior to any other; and both it and isinglass are exported in considerable quantities. The belugas are sometimes of a very large size, weighing from 1,000 to 1,500 lbs., and yield a good deal of oil. The seal fishery is also pretty extensively prosecuted in the Caspian. The reader will find a detailed account of the mode in which the fishery is carried on in the Caspian, and in the rivers Wolga and Ural, in *Tooke's Russia*, vol. iii. pp. 49—72. We subjoin the following official statement of the produce of the Russian fisheries of the Caspian and its tributary streams in 1828 and 1829:—

| Year. | Number of Persons employed. |                   | Number of Fish taken. |          |         |                |        | Products of Sturgeon. |                        |                       |
|-------|-----------------------------|-------------------|-----------------------|----------|---------|----------------|--------|-----------------------|------------------------|-----------------------|

**SUCCORY, or CHICORY,** the wild endive, or *Cichorium Intybus* of Linnæus. This plant is found growing wild on calcareous soils in England, and in most countries of Europe. In its natural state the stem rises from 1 to 3 feet high, but when cultivated it shoots to the height of 5 or 6 feet. The root runs deep into the ground, and is white, fleshy, and yields a milky juice. It is cultivated to some extent in this country as an herbage plant, its excellence in this respect having been strongly insisted upon by the late Arthur Young. But in Germany, and in some parts of the Netherlands and France, it is extensively cultivated for the sake of its root, which is used as a substitute for coffee; and it is this circumstance only that has induced us to mention it. When prepared on a large scale, the roots are partially dried, and sold to the manufacturers of the article, who wash them, cut them in pieces, kiln-dry them, and grind them between fluted rollers into a powder, which is packed up in papers containing from 2 oz. to 3 or 4 lbs. The powder has a striking resemblance to dark ground coffee, and a strong odour of liquorice. It has been extensively used in Prussia, Brunswick, and other parts of Germany, for several years; but as it wants the essential oil and the rich aromatic flavour of coffee, it has little in common with the latter except its colour, and has nothing to recommend it except its cheapness. It is only lately that succory powder began to be used in England; but, within the last 3 years, considerable quantities have been imported from Hamburgh, Antwerp, &c. We believe, too, that a small quantity has been produced in the Isle of Thanet. — (*Loudon's Encyc. of Agriculture; Rees's Cyclopædia; and private information.*)

Succory, when first imported, being an unenumerated article, was charged with a duty of 20 per cent. *ad valorem*. But the average price of British plantation coffee may be taken at 80s. per cwt. in bond; and the duty, being 5s. per cwt., is equivalent to an *ad valorem* duty of about 70 per cent.; so that coffee was taxed more than three times as much as succory. Had coffee been always sold unground, this distinction in the duties would have been less objectionable; but as the lower classes, who are now the great consumers of coffee, have no facilities for roasting and grinding it at home, they uniformly buy it in the shape of powder; hence it is plain that the discriminating duty in favour of succory must have acted as a premium upon, and an incentive to the adulteration of coffee by its intermixture. We are, therefore, glad to have to state that it has been abolished, and that succory is now subjected to a duty of 6d. per lb. The imposition of different duties upon *convertible articles* is quite subversive of every sound principle; and, whether it be so intended or not, is calculated only to promote adulteration and fraud.

**SUGAR** (Fr. *Sucre*; Ger. *Zucker*; It. *Zucchero*; Russ. *Sachar*; Sp. *Azucar*; Arab. *Sukhir*; Malay, *Soola*; Sans. *S. karā*), a sweet granulated substance, too well known to require any particular description. It is every where in extensive use; and in

this country ranks rather among the indispensable necessities of life, than among luxuries. In point of commercial importance, it is scarcely a very few articles. It is chiefly prepared from the expressed juice of the *arundo saccharifera*, or sugar cane; but it is also procured from an immense variety of other plants, as maple, beet root, birch, parsnep, &c.

I. *Species of Sugar.* — The sugar met with in commerce is usually of 4 sorts; — brown, or muscovado sugar; clayed sugar; refined, or loaf sugar; and sugar candy. The difference between one sort of sugar and another depends altogether on the different modes in which they are prepared.

1. *Brown, or Muscovado Sugar.* — The plants or canes being crushed in a mill, the juice, having passed through a strainer, is collected in the clarifier, where it is first exposed to the action of a gentle fire, after being "tempered" (mixed with alkali), for the purpose of facilitating the separation of the liquor from its impurities. It is then conveyed into the large evaporating copper, and successively into two others, each of smaller size; the superintending boiler freeing it, during the process, from the scum and feculent matters which rise to the surface. The syrup then reaches the last copper vessel, called the "striking tache," where it is boiled till sufficiently concentrated to be capable of granulating in the cooler, whence it is transferred with the least possible delay, to prevent charring. Here it soon ceases to be a liquid; and when fully crystallised, is put into hogsheds (called "potting"), placed on their ends in the curing-house, with several apertures in their bottoms, through which the molasses drain into a cistern below. In this state they remain till properly cured, when the casks are filled up, and prepared for shipment.

2. *Clayed Sugar* is prepared by taking the juice, as in the case of muscovado sugar, when boiled to a proper consistency, and pouring it into conical pots with the apex downwards. These pots have a hole at the lower extremity, through which the molasses or syrup is allowed to drain. After this drain has continued for some time, a stratum of moistened clay is spread over the surface of the pots; the moisture of which percolating through the mass, is found to contribute powerfully to its purification.

3. *Refined Sugar* may be prepared from muscovado or clayed sugar, by redissolving the sugar in water, and, after boiling it with some purifying substances, pouring it, as before, into conical pots, which are again covered with moistened clay. A repetition of this process produces *double refined* sugar. But a variety of improved processes are now resorted to.

4. *Sugar Candy.* — Solutions of brown or clayed sugar, boiled till they become thick, and then removed into a hot room, form, upon sticks or strings put into the vessels for that purpose, into crystals, or candy.

II. *Historical Notice of Sugar.* — The history of sugar is involved in a good deal of obscurity. It was very imperfectly known by the Greeks and Romans. Theophrastus, who lived about 320 years before the Christian era, the first writer whose works have come down to us by whom it is mentioned, calls it a sort of "honey extracted from canes or reeds." Strabo states, on the authority of Nearelus, Alexander's admiral, that "reeds in India yield honey without bees." And Seneca, who was put to death in the 65th year of the Christian era, alludes (Epist. 84.) to the sugar cane, in a manner which shows that he knew next to nothing of sugar, and absolutely nothing of the manner in which it is prepared and obtained from the cane.

Of the ancients, Dioscorides and Pliny have given the most precise description of sugar. The former says, it is "a sort of concreted honey, found upon canes, in India and Arabia Felix; it is in consistence like salt, and is, like it, brittle between the teeth." And Pliny describes it as "honey collected from canes, like a gum, white and brittle between the teeth; the largest is of the size of a hazel nut: it is used in medicine only." — (*Saccharum et Arabia fert, sed laudatius Indiu; est autem mel in arundinibus collectum, gummiu modo candidum, dentibus fragile, amplissimum nucis avellanae magnitudine, ad medicinae tantum usum.* — Lib. xii. c. 8.)

It is evident, from these statements, that the knowledge of the Greeks and Romans with respect to the mode of obtaining sugar was singularly imperfect. They appear to have thought that it was found adhering to the cane, or that it issued from it in the state of juice, and then concreted like gum. Indeed, Lucan expressly alludes to Indians near the Ganges, —

*Quique bibunt tenera dulces ab arundine succos.* — (Lib. iii. l. 237.)

But these statements are evidently without foundation. Sugar cannot be obtained from the cane without the aid of art. It is never found native. Instead of flowing from the plant, it must be forcibly expressed, and then subjected to a variety of processes.

Dr. Mosley conjectures, apparently with much probability, that the sugar described by Pliny and Dioscorides, as being made use of at Rome, was sugar candy obtained from China. This, indeed, is the only sort of sugar to which their description will at

all apply. And it would seem that the mode of preparing sugar candy has been understood and practised in China from a very remote antiquity; and that large quantities of it have been in all ages exported to India, whence, it is most probable, small quantities found their way to Rome. — (*Treatise on Sugar*, 2d edit. pp. 66—71. This, as well as Dr. Moseley's *Treatise on Coffee*, is a very learned and able work.)

Europe seems to be indebted to the Saracens not only for the first considerable supplies of sugar, but for the earliest example of its manufacture. Having, in the course of the 9th century, conquered Rhodes, Cyprus, Sicily, and Crete, the Saracens introduced into them the sugar cane, with the cultivation and preparation of which they were familiar. It is mentioned by the Venetian historians, that their countrymen imported, in the 12th century, sugar from Sicily at a cheaper rate than they could import it from Egypt. — (*Essai de l'Histoire du Commerce de Venise*, p. 100.) The crusades tended to spread a taste for sugar throughout the Western world; but there can be no doubt that it was cultivated, as now stated, in modern Europe, antecedently to the era of the crusades; and that it was also previously imported by the Venetians, Amaliphitans, and others, who carried on a commercial intercourse, from a very remote epoch, with Alexandria and other cities in the Levant. It was certainly imported into Venice in 996. — (See the *Essai*, &c. p. 70.)

The art of refining sugar, and making what is called loaf-sugar, is a modern European invention, the discovery of a Venetian about the end of the 15th or the beginning of the 16th century. — (*Moseley*, p. 66.)

The Saracens introduced the cultivation of the sugar cane into Spain soon after they obtained a footing in that country. The first plantations were at Valencia; but they were afterwards extended to Granada and Murcia. Mr. Thomas Willoughby, who travelled over great part of Spain in 1664, has given an interesting account of the state of the Spanish sugar plantations, and of the mode of manufacturing the sugar.

Plants of the sugar cane were carried by the Spaniards and Portuguese to the Canary Islands and Madeira, in the early part of the 15th century; and it has been asserted by many, that these islands furnished the first plants of the sugar cane that ever grew in America.

But though it is sufficiently established, that the Spaniards early conveyed plants of the sugar cane to the New World, there can be no doubt, notwithstanding Humboldt seems to incline to the opposite opinion (*Essai Politique sur la Nouvelle Espagne*, liv. iv. c. 10.), that this was a work of supererogation, and that the cane was indigenous both to the American continent and islands. It was not for the plant itself, which flourished spontaneously in many parts when it was discovered by Columbus, but for the secret of making sugar from it, that the New World is indebted to the Spaniards and Portuguese; and these to the nations of the East. — (See *Laftau*, *Mœurs des Sauvages*, tome ii. p. 150.; *Edwards's West Indies*, vol. ii. p. 238.)

Barbadoes is the oldest settlement of the English in the West Indies. They took possession of it in 1627; and so early as 1646 began to export sugar. In 1676, the trade of Barbadoes is said to have attained its maximum, being then capable of employing 400 sail of vessels, averaging 150 tons burden.

Jamaica was discovered by Columbus, in his second voyage, and was first occupied by the Spaniards. It was wrested from them by an expedition sent against it by Cromwell, in 1656; and has since continued in our possession, forming by far the most valuable of our West Indian colonies. At the time when it was conquered, there were only 3 small sugar plantations upon it. But, in consequence of the influx of English settlers from Barbadoes and the mother country, fresh plantations were speedily formed, and continued rapidly to increase.

The sugar cane is said to have been first cultivated in St. Domingo, or Hayti, in 1506. It succeeded better there than in any other of the West Indian islands. Peter Martyr, in a work published in 1530, states that, in 1518, there were 28 sugar-works in St. Domingo established by the Spaniards. "It is marvellous," says he, "to consider how all things increase and prosper in the island. There are now 28 sugar-presses, wherewith great plenty of sugar is made. The canes or reeds wherein the sugar growth are bigger and higher than in any other place; and are as big as a man's wrist, and higher than the stature of a man by the half. This is more wonderful, that whereas in Valencia, in Spain, where a great quantity of sugar is made yearly, whensoever they apply themselves to the great increase thereof, yet doth every root bring forth not past 5 or 6, or at most 7 of these reeds; whereas in St. Domingo 1 root beareth 20, and oftentimes 30." — (Eng. trans. p. 172.)

Sugar from St. Domingo formed, for a very long period, the principal part of the European supplies. Previously to its devastation, in 1790, no fewer than 65,000 tons of sugar were exported from the French portion of the island.

III. *Sources whence the Supply of Sugar is derived.* — The West Indies, Brazil, Surinam, Java, Mauritius, Bengal, Siam, the Isle de Bourbon, and the Philippines, are the principal sources whence the

supplies required for the European and American markets are derived. The average quantities exported from these countries during each of the 3 years ending with 1833 were nearly as follows:—

|   | Tons.         |
|---|---------------|
| British West Indies, including Demerara and Berbice   | 190,000       |
| Mauritius   | 30,000        |
| Bengal, Isle de Bourbon, Java, Siam, Philippines, &c. | 60,000        |
| Cuba and Porto Rico                                   | 110,000       |
| French, Dutch, and Danish West Indies                 | 95,000        |
| Brazil  | 75,000        |
|   | 560,000 tons. |

Loaf or lump sugar is unknown in the East, sugar candy being the only species of refined sugar that is made use of in India, China, &c. The manufacture of sugar candy is carried on in Hindostan, but the process is extremely rude and imperfect. In China, however, it is manufactured in a very superior manner and large quantities are exported. When of the best description, it is in large white crystals, and is a very beautiful article. Two sorts of sugar candy are met with at Canton, viz. Chinchew and Canton; the former being the produce of the province of Fokien, and the latter, as its name implies, of that of Canton. The chinchew is by far the best, and is about 50 per cent dearer than the other. Chinese sugar candy is consumed, to the almost total exclusion of any other species of sugar, by the Europeans at the different settlements throughout the East. There were exported from Canton, in 1831-32, by British ships, 32,279 piculs (38,427 cwt.) of sugar candy, valued at 242,000 dollars; and 60,627 piculs (72,175 cwt.) of clayed sugar, valued at 318,256 dollars; and during the previous year the exports were about 50 per cent. greater. — (See *ante*, pp. 237, 238.) The exports by the Americans are also considerable. At an average, the exports of sugar from Canton may be taken at from 6,000 to 10,000 tons; but of this only a small quantity finds its way to Europe. The exports from Siam and Cochin-China are estimated at about 12,500 tons.

Consumption of Sugar in Europe, &c. — Mr. Cook gives the following Table of the imports of sugar into France and the principal Continental ports in 1831, 1832, and 1833, and of the stocks on hand on the 31st of December of each of these years:—

|             | Imports. |         |         | Stocks, 31st of December. |        |        |
|-------------|----------|---------|---------|---------------------------|--------|--------|
|             | 1831.    | 1832.   | 1833.   | 1831.                     | 1832.  | 1833.  |
|             | Tons.    | Tons.   | Tons.   | Tons.                     | Tons.  | Tons.  |
| France      | 97,450   | 82,000  | 73,300  | 23,370                    | 9,350  | 10,840 |
| Trieste     | 17,950   | 22,400  | 14,800  | 6,500                     | 11,900 | 6,840  |
| Genoa       | 9,500    | 10,500  | 6,800   | 1,500                     | 2,200  | 2,180  |
| Antwerp     | 5,240    | 8,780   | 12,800  | 2,000                     | 2,000  | 5,100  |
| Rotterdam   | 10,700   | 11,600  | 8,650   | 1,800                     | 3,900  | 3,350  |
| Amsterdam   | 18,370   | 22,380  | 20,100  | 2,200                     | 3,400  | 5,300  |
| Hamburg     | 38,800   | 37,930  | 30,000  | 9,000                     | 13,400 | 9,820  |
| Bremen      | 12,380   | 12,500  | 7,350   | 3,230                     | 5,800  | 3,550  |
| Copenhagen  | 5,350    | 5,850   | 5,560   | 800                       | 2,370  | 1,830  |
| Petersburgh | 11,170   | 27,100  | 18,500  | 8,440                     | 11,660 | 15,600 |
|             | 226,910  | 237,040 | 203,000 | 61,740                    | 65,980 | 64,020 |

This Table does not, however, give the imports into any of the ports of the Peninsula. But the consumption of Spain, only, has been estimated, apparently on good grounds, by M. Montveran (*Essai de Statistique sur les Colonies*, p. 92.), at 45,000,000 kilog. (41,050 tons). This may appear large for a country in the situation of Spain; but the quantity is deduced from comparing the imports with the exports; and it is explained partly by the moderation of the duties, and partly by the large consumption of cocoa, and other articles that require a corresponding consumption of sugar. Mr. Cook's Table also omits the imports into Leghorn, Naples, Palermo, and other Italian ports. Neither does it give those into Stettin, Königsberg, Riga, Stockholm, Gottenburgh, &c. It is, besides, very difficult, owing to transshipments from one place to another, accurately to estimate the real amount of the imports. On the whole, however, we believe that we shall be within the mark, if we estimate those for the whole Continent at from 285,000 to 310,000 tons, including what is sent from England.

The following Table, compiled from the best authorities, exhibits the total consumption of colonial and foreign sugars in France at different periods since 1788, with the population, and the average consumption of each individual. — (See *Montveran, Essai de Statistique*, p. 96., and the authorities there referred to.)

| Years.               | Consumption. | Population. | Individual Consumption. |
|----------------------|--------------|-------------|-------------------------|
|                      | Kilog.       |             | Kilog.                  |
| 1788                 | 21,300,000   | 23,600,000  | .906                    |
| 1801                 | 25,200,000   | 31,000,000  | .813                    |
| 1812                 | 16,000,000   | 43,000,000  | .372*                   |
| 1816 to 1819 average | 36,000,000   | 30,000,000  | 1.200                   |
| 1819 — 1822          | 47,000,000   | 30,833,000  | 1.566                   |
| 1822 — 1824          | 47,250,000   | 31,103,000  | 1.513                   |
| 1824 — 1825          | 55,750,000   | 31,280,000  | 1.782                   |
| 1826 — 1827          | 62,500,000   | 31,625,000  | 1.976                   |
| 1830                 | 67,250,000   | 31,845,000  | 2.126                   |

This, however, is independent of the consumption of indigenous sugar — (see *post*), and of the sugar introduced by the contraband trade, — both of which are very considerable. The entire consumption of all sorts of sugar in France in 1832, including from 8,000,000 to 9,000,000 kilog. of beet-root sugar, and allowing for the quantity fraudulently intro-

duced, may be estimated at about 88,000,000 kilog., or 193,000,000 lbs.; which, taking the population at 32,000,000, gives an average consumption of 6 lbs. to each individual, being about  $\frac{1}{4}$ th part of the consumption of each individual in Great Britain! This extraordinary discrepancy is no doubt ascribable to various causes;—partly to the greater poverty of the mass of the French people; partly to their smaller consumption of tea, coffee, punch, and other articles that occasion a large consumption of sugar; and partly and principally, perhaps, to the oppressive duties with which foreign sugars are loaded on their being taken into France for home consumption.

The United States consume from 70,000 to 80,000 tons; but of these, from 30,000 to 40,000 tons are produced in Louisiana.

About 170,000 tons of sugar are retained for home consumption in Great Britain, and 17,000 tons in Ireland; exclusive of about 12,000 tons of bastards, or inferior sugar obtained by the boiling of molasses, and exclusive also of the refuse sugar and treacle remaining after the process of refining.

On the whole, therefore, we believe we may estimate the aggregate consumption of the Continent and of the British Islands at about 500,000 tons a year; to which if we add the consumption of the United States, Turkey, &c., the aggregate will be nearly equivalent to the supply. The demand is rapidly increasing in most countries; but as the power to produce sugar is almost illimitable, no permanent rise of prices need be looked for.

Taking the price of sugar at the low rate of 1*l.* 4*s.* a cwt., or 24*l.* a ton, the prime cost of the article to the people of Europe will be 12,000,000*l.* sterling; to which adding 75 per cent. for duty, its total cost will be 21,000,000*l.*! This is sufficient to prove the paramount importance of the trade in this article. Exclusive, however, of sugar, the other products of the cane, as rum, molasses, treacle, &c., are of very great value. The revenue derived by the British treasury from rum, only, amounts to nearly 1,600,000*l.* a year.

*Progressive Consumption of Sugar in Great Britain.*—We are not aware that there are any authentic accounts with respect to the precise period when sugar first began to be used in England. It was, however, imported in small quantities by the Venetians and Genoese in the 14th and 15th centuries\*; but honey was then, and long after, the principal ingredient employed in sweetening liquors and dishes. Even in the early part of the 17th century, the quantity of sugar imported was very inconsiderable; and it was made use of only in the houses of the rich and great. It was not till the latter part of the century, when coffee and tea began to be introduced, that sugar came into general demand. In 1700, the quantity consumed was about 10,000 tons, or 22,000,000 lbs.; at this moment, the consumption has increased (bastards included) to above 180,000 tons, or more than 400,000,000 lbs.; so that sugar forms not only one of the principal articles of importation and sources of revenue, but an important necessary of life.

Great, however, as the increase in the use of sugar has certainly been, it may, we think, be easily shown, that the demand for it is still very far below its natural limit; and that, were the existing duties on this article reduced, and the trade placed on a proper footing, its consumption, and the revenue derived from it, would be greatly increased.

During the first half of last century, the consumption of sugar increased five-fold. It amounted, as already stated—

|                         |                      |                             |                     |
|-------------------------|----------------------|-----------------------------|---------------------|
| In 1700, to 10,000 tons | - or 22,000,000 lbs. | In 1754, to 53,270 tons     | or 119,320,000 lbs. |
| 1710, - 14,000 —        | - 31,360,000 —       | 1770—1775, 72,500 (average) | - 162,500,000 —     |
| 1734, - 42,000 —        | - 94,080,000 —       | 1786—1790, 81,000 —         | - 181,500,000 —     |

In the reign of Queen Anne, the duty on sugar amounted to 3*s.* 5*d.* per cwt. Small additions were made to it in the reign of George II.; but in 1780 it was only 6*s.* 8*d.* In 1781, a considerable addition was made to the previous duty; and in 1787 it was as high as 12*s.* 4*d.* In 1791 it was raised to 15*s.*; and while its extensive and increasing consumption pointed it out as an article well fitted to augment the public revenue, the pressure on the public finances, caused by the French war, occasioned its being loaded with duties, which, though they yielded a large return, would, there is good reason to think, have been more productive had they been lower. In 1797, the duty was raised to 17*s.* 6*d.*; 2 years after, it was raised to 20*s.*; and, by successive augmentations in 1803, 1804, and 1806, it was raised to 30*s.*; but in the last-mentioned year it was enacted, that, in the event of the market price of sugar in bond, or exclusive of the

\* In Marin's *Storia del Commercio de' Veneziani* (vol. v. p. 306.), there is an account of a shipment made at Venice for England in 1319, of 100,000 lbs. of sugar, and 10,000 lbs. of sugar candy. The sugar is said to have been brought from the Levant.

duty, being, for the 4 months previous to the 5th of January, the 5th of May, or the 5th of September, below 49s. a cwt., the Lords of the Treasury might remit 1s. a cwt. of the duty; that if the prices were below 48s., they might remit 2s.; and if below 47s., they might remit 3s., which was the greatest reduction that could be made. In 1826, the duty was declared to be constant at 27s., without regard to price; but it was reduced, in 1830, to 24s. on West India sugar, and to 32s. on East India sugar.

The duty on foreign sugars is a prohibitory one of 63s. a cwt. Sugar from the Mauritius is, however, by a special provision, allowed to be imported at the same duty as West India sugar.

I. Account of the Quantity of Sugar retained for Home Consumption in Great Britain, the Nett Revenue derived from it, and the Rates of Duty with which it was charged; and the Price, exclusive of the Duty, in each Year from 1789 to 1832, both inclusive.

| Years. | Quantities retained for Home Consumption. | Nett Revenue.   | Rates of Duty.            |  |                | Price of Jamaica Brown or Muscovado Sugar in Bond, per Gazette Average. |

\* Sugar used in the distilleries included in these years.  
 † Previously to 1820, the importation of East India sugar was comparatively trifling, and does not at this moment amount to above 190,000 cwt. The imports from the Mauritius have increased rapidly during the last 5 years, more especially since 1826, when the duty on sugar from that island was reduced to the same level as that on sugar from the West Indies.—(See *ant*, p. 929.)  
 ‡ N. B.—These quantities include the sugar refined in Britain for exportation to Ireland.

II. Account of the Revenue of the Duties on Sugar.

| Years. | Revenue. |

| 1833   | 4,167,269                   | 609,552  | 157,487     | 191   | 4,934,098               | †  | †                       |

N. B. — The rates of duty in this Table are the same as those in Table No. I.

\* These quantities are exclusive of the coarse sugar and bastards remaining from the process of refining; and they are also exclusive of the coarse sugar obtained by boiling molasses. The quantities of the latter taken for home consumption, in 1831, were 8,020 tons; in 1832, 11,450 do.; and in 1833, 13,970 do. — (*Cook's Commerce of 1833*, p. 6.)

† The drawback in 1833 was 504,797l.; but not having learned the amount of the repayments on over entries for that year, we are unable to specify the nett produce of the duties; but it will be very near 4,400,000l.

V. Account of the Quantity of Raw and Refined Sugar exported from the United Kingdom, in the Year ended 5th of January, 1833; reducing the Quantity of Refined into its Proportion of Raw; distinguishing the several Sorts of Sugar, and the Countries to which the same was exported.—(N. B.—Lbs. are omitted in the Columns, but allowed for in the Totals.)

| Countries to which exported.                           | Raw Sugar.                  |                 |                     |                             |                     | Refined Sugar.          |   |                                       |

**Influence of the Duties.**—The price of sugar, exclusive of the duty, may be taken, at an average of the last few years, at from 24s. to 35s. a cwt. But to lay a tax of 24s. on a necessary of life costing from 28s. to 35s., including 8s. per cwt. freight and charges, is obviously a most oppressive proceeding. Indeed, there does not seem to be much room for doubting that the consumption, and consequently also the revenue, would be very greatly increased by reducing the duty to 16s. or 18s. This may be pretty confidently inferred from the increase of consumption that has invariably followed every fall in the price of sugar. During the 3 years ending with 1808, when the price of brown or muscovado sugar, inclusive of the duty, was about 66s. a cwt., there were, at an average, 2,640,741 cwt. retained for home consumption. During the 3 years ending with 1816, the price was about 93s., and the average quantity retained for home consumption fell off to 2,038,373 cwt. But during the 3 years ending with 1829, the price having fallen to about 57s., the average quantity retained for home consumption rose to 3,267,561 cwt.; being an increase of more than fifty per cent. upon the quantity consumed during the previous period!

It will be observed that the duty was either the same, or very nearly the same, in those 3 periods; but had it been imposed on an *ad valorem* principle, or made to vary directly as the price, the reduction in the last-mentioned period would have been proportionately greater, and there would, consequently, have been a still greater increase of consumption.

The reduction of 3s. a cwt. from the duty, in 1830, was too trifling to have much effect; and it is difficult to say what portion of the increased consumption that has since taken place is to be ascribed to it, and what to other things. But if, instead of reducing the duty from 27s. to 24s., it had been reduced from 27s. to 16s. or 18s., the reduction would have had a powerful influence; and would certainly have occasioned a great increase in the consumption of the lower priced sugars, particularly in Ireland.

The quantity of sugar consumed in Great Britain is, at present, allowing for the quantity sent to Ireland, more than double what it was in 1790. But had the duty continued at 12s. 4d., its amount in 1790, there cannot, we think, be much doubt that the consumption would have been quadrupled. During the intervening period, the population has been little less than doubled; and the proportion which the middle classes now bear to the whole population has been decidedly augmented. The consumption of coffee—an article in the preparation of which a great deal of sugar is used in this country, by all who can afford it—is more than 22 times as great now as in 1790; that is, it has increased from under 1,000,000 lbs. to above 22,000,000 lbs. The consumption of tea has about doubled; and there has been a vast increase in the use of home-made wines, preserved and baked fruits, &c. Instead, therefore, of having done little more than increase proportionally to the increase of the population, it may be fairly presumed that the consumption of sugar would, had there not been some powerful counteracting cause in operation, have increased in a far greater degree. Instead of amounting to little more than 3,000,000, it ought to have amounted to 6,000,000 cwt.

Taking the aggregate consumption of Great Britain at 400,000,000 lbs., and the population at 16,500,000, the average consumption of each individual will be about 24 lbs. This, though a far greater average than that of France, or any of the Continental states, is small compared with what it might be were sugar supplied under a more liberal system. In workhouses, the customary annual allowance for each individual

is, we believe, 34 lbs.; and in private families, the smallest separate allowance for domestics is 1 lb. a week, or 52 lbs. a year. These facts strongly corroborate what we have already stated as to the extent, to which the consumption of sugar may be increased; and others may be referred to, that are, if possible, still more conclusive. Mr. Huskisson stated, in his place in the House of Commons, on Mr. Grant's motion for a reduction of the sugar duties, 25th of May, 1829, that "in consequence of the present enormous duty on sugar, the poor working man with a large family, to whom peace were a serious consideration, was denied the use of that commodity; and he believed he did not go too far when he stated, that two-thirds of the poorer consumers of coffee drank that beverage without sugar. If, then, the price of sugar were reduced, it would become an article of his consumption, like many other articles—woollens, for example, which are now used from their cheapness—which he was formerly unable to purchase."—(*Speeches*, vol. iii. p. 455.) "There are no grounds for thinking that this statement is in any degree exaggerated; and it strikingly shows the very great extent to which the consumption of sugar might be increased, were it brought fully under the command of the labouring classes.

It is in Ireland, however, that we should anticipate the greatest and most salutary effects from a reduction of the duties on sugar. The direct importations into Ireland do not exceed 15,000 tons; and if we add to these 6,000 tons for the second-hand importations from Great Britain, which, we believe, is quite as much or more than they amount to, the entire consumption of that country will be 21,000 tons, or 47,000,000 lbs., which, taking the population of Ireland at 8,000,000, gives about 5 7/8 lbs. to each individual; or about 1-4th part of the average consumption of each individual in Great Britain. So singular a result must, we believe, be ascribed, in a considerable degree, to the comparative poverty of the Irish; but there can be no doubt that it is partly, if not principally, owing to over-taxation. The direct imports of sugar into Ireland were twice as great 30 years ago as they are at this moment; and there is no reason for thinking that the increase in the second-hand imports has been equivalent to the increase in the population. Hence, in order to diffuse a taste for so necessary an article as sugar among the population of Ireland, it would be very desirable, if possible, to reduce the duties even as low as 12s. a cwt.; and we are well convinced that such reduction, though it might occasion an immediate loss, would, in the end, be productive of a great increase of revenue, besides being attended with other and still more beneficial consequences. The "one thing needful" in Ireland is to inspire the population with a taste for the conveniences and enjoyments of civilised life; but how is it possible to do this while these conveniences are burdened with oppressive duties, that form an insuperable obstacle to their being used by any but the richest classes? Hence, the first step towards supplying what is confessedly the grand desideratum in the case of Ireland, is to reduce the duties on articles of convenience and luxury, so that they may become attainable by the mass of the people. If this be done, we may rest assured that the desire inherent in all individuals of improving their condition, will impel them to exert themselves to obtain them. A taste for the articles in question will be gradually diffused amongst all ranks; and, ultimately, it will be thought creditable to be without them.—(*Parl. Paper*, No. 97. Sess. 1831.)

We have already seen that the imports of sugar from the British West Indies and the Mauritius will be estimated at 216,500 tons, and the consumption of Great Britain and Ireland at about 184,000 tons, exclusive of bastards; but of this quantity, about 6,000 tons is Bengal sugar,—making the net consumption of West India and Mauritius sugar 178,000 tons, leaving 38,000 tons of the latter for exportation, exclusive of the surplus of Bengal sugar.

The duty on East India sugar ought to be reduced to the same level as that on West India sugar. It is difficult to imagine that there can be any good reason why all the productions of the different dependencies of the empire should not be allowed to come into the home market on paying the same duty. The admission of Mauritius sugar at a duty of 24s. is, indeed, a full concession of the principle; for there is not a single argument that could be alleged in favour of admitting Mauritius sugar at the same duty as West India sugar, that will not equally apply to Bengal sugar. However, we do not think that this point is of so much practical importance as is generally supposed. East India sugar has not, as yet, made any way in the Continental markets, most of which are open to it on the same terms as to other sugars; and unless its quality be materially improved, or its price considerably reduced, there is but little prospect of its being able to come into competition with the sugars of Jamaica, Brazil, and Cuba.

**Bounty on the Exportation of Refined Sugar.**—The business of refining sugar for exportation has been carried on to a considerable extent in this country; but it may be doubted whether its prosecution has ever been productive of any material national advantage. It had long been suspected, — and the fact seems now sufficiently established, — that the drawback allowed on the exportation of refined sugar has been greater than the duty charged on the raw sugar used in its manufacture; the excess being, in fact, a bounty paid to those engaged in the trade. Previously to 1826, the drawback on double refined sugar was 46s. a cwt. : it was then reduced to 43s.; but there is reason to think that it is still considerably above the mark. The average price of sugar in bond in this country, for several years past, has been from 5s. to 6s. a cwt. above what sugar of the same quality has brought on the Continent; a difference which, as we export sugar, could not have been maintained, had it not been for the bounty. The same conclusion has been established by the trials made under the superintendance of Dr. Ure at a sugar house taken for the purpose by government. It is said to be the intention of ministers to reduce the drawback to what may be supposed to be the fair equivalent of the duties paid on the raw sugar; a measure, of the expediency of which no doubt can be entertained. It has been the practice, in making up returns to parliament, to reduce the refined sugar exported into raw sugar, by allowing 34 cwt. of the latter to 20 of the former. But the export of sugar is thus made to appear greater than it really is: for, though 34 cwt. of raw may be required to produce 20 cwt. of refined sugar, the whole of the molasses and bastards that remain (about 13 cwt.) are consumed at home. We subjoin those clauses of the act 3 & 4 Will. 4. c. 58. which refer to the allowing of a bounty on refined sugar.

**Bounties upon the Exportation of Refined Sugar.**—So long as the duties which are now payable upon the importation of sugar until the 31st of April, 1834, shall be continued, there shall be allowed upon the exportation of refined sugar made in the United Kingdom the several bounties set forth in the Table herein-after contained; (that is to say),

| Refined sugar, viz.—   | L. s. d. | L. s. d.  |         |
|--|----------|---|---------|
| Bastard sugar or refined loaf sugar broken in pieces, or being ground or powdered sugar, or such sugar pounded, crushed, or broken, exported in a British ship, for every cwt. | 1 4 0    | being of a uniform whiteness throughout, or such sugar pounded, crushed, or broken, and sugar candy, exported in a British ship, for every cwt. | 1 15 10 |
| exported in a ship not British, for every cwt.   | 1 3 0    | exported in a ship not British, for every cwt.  | 1 15 9  |
| Other refined sugar in loaf, complete and whole, or lumps duly refined, having been perfectly clarified and thoroughly dried in the stove, and                                 |          | Double refined sugar, and sugar equal in quality to double refined sugar, additional bounty for every cwt.                                      | 0 6 4   |

— § 2.

**Bond to be given for the due Exportation.**—The exporter of goods in respect of which any bounty is claimed under this act, or the person in whose name the same are entered outwards, shall, at the time of entry and before cockpit be granted, give security by bond in double the value of the goods, with 1 sufficient surety, that the same shall be duly exported to the place for which they are entered, or be otherwise accounted for to the satisfaction of the commissioners of customs, and shall not be re-landed in the United Kingdom, or landed in the Isle of Man, unless expressly entered to be exported thereto.— § 3.

**Candy in Packages of ½ Cwt.**—No bounty shall be given upon the exportation of any refined sugar called candy, unless it be properly refined and manufactured, and free from dirt and seum, and packed in packages, each of which shall contain ½ cwt. of such candy at the least.— § 4.

ACT 3 & 4 WILL

**Sugar crashed for Exportation.** — If any sugar in lumps or loaves is to be pounded, crashed, or broken before the same be exported, for the bounty payable thereon, such lumps or loaves shall, after due entry thereof, be lodged in some warehouse provided by the exporter, and approved by the commissioners of the customs for such purpose, to be then first examined by the officers of customs while in such lumps or loaves, as if for immediate shipment, and afterwards to be there pounded, crashed, or broken, and packed for exportation, in the presence of such officers and at the expense of the exporter; and such sugar shall be kept in such warehouse, and be removed thence for shipment, and be shipped under the care and in the charge of the searchers, that the shipment and exportation thereof may be duly certified by them upon the debenture, according to the quality ascertained by them of the same while in such lumps or loaves. — § 5.

**Different Sorts of crashed Sugar to be kept separate.** — The different sorts of such sugar shall be kept apart from each other in such innanner and in such distinct rooms or divisions of such warehouse as shall be directed and appointed by the commissioners of the customs; and if any sort of such sugar shall be found in any part of such warehouse appointed for the keeping of sugar of a sort superior in quality thereto, the same shall be forfeited; and if any sort of such sugar shall be brought to such warehouse to be pounded, crashed, or broken, which shall be of a quality inferior to the sort of sugar expressed in the entry for the same, such sugar shall be forfeited. — § 6.

**Sugar Refiners to provide Sample Loaves of Double Refined Sugar.** — There shall be provided by and at the expense of the committee of sugar refiners in London, and by and at the expense of the committee of merchants in Dublin, as many loaves of double refined sugar, prepared in manner herein-after directed, as the commissioners of customs shall think necessary; which loaves, when approved of by the said commissioners, shall be deemed and taken to be standard samples; 1 of which loaves shall be lodged with the said committees respectively, and 1 other with such person or persons as the said commissioners shall direct, for the purpose of comparing therewith double refined sugar, or sugar equal in quality to double refined sugar, entered for exportation for the bounty; and fresh standard samples shall be again furnished by such committees, whenever it may be deemed expedient by the commissioners: provided always, that no loaf of sugar shall be deemed to be a proper sample loaf of double refined sugar, if it be of greater weight than 14 lbs., nor unless it be a loaf complete and whole, nor unless the same shall have been made by a distinct second process of refinement from a quantity of single refined sugar, every part of which had first been perfectly clarified and duly refined, and had been made into loaves or lumps which were of a uniform whiteness throughout, and had been thoroughly dried in the stove. — § 7.

**Sugar entered not equal to the Standard shall be forfeited.** — In case any sugar which shall be entered in order to obtain the bounty on double refined sugar, or sugar equal in quality to double refined sugar, shall, on examination by the proper officer, be found to be of a quality not equal to such standard sample, all sugar so entered shall be forfeited and may be seized. — § 8.

**Refining in Bond.** — If any further proof, in addition to what has been stated above, were required to show that the trade of refining in this country has been at all times mainly dependent on the bounty, it would be found in the circumstances that have occurred under the late act authorising refining in bond. In 1828, 1829, 1830, and down to July, 1831, foreign sugars were allowed to be refined on the same terms as British sugars — that is, they paid the same duty and were entitled to the same drawback. The quantity of foreign sugar so refined amounted, in 1830, to 2,105 tons, and in the first half of 1831, when the privilege ceased, to about 4,500 tons. The renewal of this system was strongly advocated in 1831 and 1832; but it was successfully opposed by the West India merchants, who considered the scheme injurious to their interests. Last year (1833), however, the refiners having pressed upon parliament the expediency of allowing them to refine foreign sugars *in bond*, which excluded, of course, the possibility of the revenue losing any thing by the drawback exceeding the duty, their request was complied with. The result, however, has shown that the trade had formerly been mainly artificial, or that it had depended principally on the drawback being above the duty. "Out of 65 houses in London, 4 only have availed themselves of the permission to refine in bond; and of these 4, 2 are now about to give up working; and the total quantity that has been used is 100 tons Siam, 100 tons Havannah, and 470 tons Brazil; in all, but 670 tons. A statement has, also, been recently put forth, which shows that, notwithstanding the aid of a bounty, the export had declined from 611,000 cwt. in 1818, to 344,000 in 1828; and although it has since fluctuated between these quantities, it has amounted during the first 3 quarters of the present year (1833) to 195,271 cwt. only, against 382,479 cwt. in the same period of the last year, and 432,222 cwt. in the previous one, notwithstanding there has been abundance of foreign sugar to be had at low prices, and that all the powers of chemical science have been at work to improve the process of refining." — (*Cook's Commerce of Great Britain for 1833*.)

This unfavourable state of things is owing, no doubt, to a concurrence of causes; but principally, we believe, to the exaggerated opinions entertained by most foreign nations as to the importance of the sugar refining business. We have no wish, certainly, to deny, to duty, their request was complied with. The result, however, has shown that the trade had formerly been mainly artificial, or that it had depended principally on the drawback being above the duty. "Out of 65 houses in London, 4 only have availed themselves of the permission to refine in bond; and of these 4, 2 are now about to give up working; and the total quantity that has been used is 100 tons Siam, 100 tons Havannah, and 470 tons Brazil; in all, but 670 tons. A statement has, also, been recently put forth, which shows that, notwithstanding the aid of a bounty, the export had declined from 611,000 cwt. in 1818, to 344,000 in 1828; and although it has since fluctuated between these quantities, it has amounted during the first 3 quarters of the present year (1833) to 195,271 cwt. only, against 382,479 cwt. in the same period of the last year, and 432,222 cwt. in the previous one, notwithstanding there has been abundance of foreign sugar to be had at low prices, and that all the powers of chemical science have been at work to improve the process of refining." — (*Cook's Commerce of Great Britain for 1833*.)

This unfavourable state of things is owing, no doubt, to a concurrence of causes; but principally, we believe, to the exaggerated opinions entertained by most foreign nations as to the importance of the sugar refining business. We have no wish, certainly, to deny, to duty, their request was complied with. This unfavourable state of things is owing, no doubt, to a concurrence of causes; but principally, we believe, to the exaggerated opinions entertained by most foreign nations as to the importance of the sugar refining business. We have no wish, certainly, to deny, to duty, their request was complied with. The result, however, has shown that the trade had formerly been mainly artificial, or that it had depended principally on the drawback being above the duty. "Out of 65 houses in London, 4 only have availed themselves of the permission to refine in bond; and of these 4, 2 are now about to give up working; and the total quantity that has been used is 100 tons Siam, 100 tons Havannah, and 470 tons Brazil; in all, but 670 tons. A statement has, also, been recently put forth, which shows that, notwithstanding the aid of a bounty, the export had declined from 611,000 cwt. in 1818, to 344,000 in 1828; and although it has since fluctuated between these quantities, it has amounted during the first 3 quarters of the present year (1833) to 195,271 cwt. only, against 382,479 cwt. in the same period of the last year, and 432,222 cwt. in the previous one, notwithstanding there has been abundance of foreign sugar to be had at low prices, and that all the powers of chemical science have been at work to improve the process of refining." — (*Cook's Commerce of Great Britain for 1833*.)

Prussia, and most parts of Germany, to which we formerly exported large quantities of refined sugar, no longer admit it except at a high duty. Any even in those Continental markets that are still open for its importation, under moderate duties, we have formidable competitors in the Dutch and Belgian refiners, whose governments continue to allow pretty high bounties.

On the whole, therefore, we are afraid that the refining business in this country is in a rather precarious state. Improvements in the process seem to be the only source of relief to which the refiners need look with much hope of advantage. The idea of attempting to bolster up the business by the aid of bounties is not one that can be any longer entertained.

We subjoin the act 3 & 4 Will. 4. c. 61., allowing sugar to be refined in bond.

ACT 3 & 4 WILL. 4. C. 61., FOR ADMITTING SUGAR TO BE REFINED FOR EXPORTATION WITHOUT PAYMENT OF DUTY.

**Commissioners of Customs may approve Premises for Bonded Sugar Houses.** — Upon application to the commissioners of customs of any person actually carrying on the business of a sugar refiner in the ports of London, Liverpool, Bristol, Hull, Greenock, or Glasgow, or any other port approved by any 3 Lords of the Treasury, it shall be lawful for the commissioners of customs to approve of such premises as bonded sugar houses for the refining of sugar for exportation only, on it being made appear to the satisfaction of said commissioners that the said premises are fit in every respect for receiving such sugars, and wherein the same may be safely deposited. — § 1.

**Officers of Customs empowered to deliver Sugars Duty-free, to be there refined for Exportation only.** — On the approval of any premises as bonded sugar houses, it shall be lawful for the officers of the customs

at the ports where such premises are situated to deliver, without payment of duty, to the party or parties so applying as aforesaid, on entry with the proper officer of customs, any quantity of foreign sugar, or of sugar the produce of any British possession, for the purpose of being there refined, under the locks of the Crown, for exportation only; and all sugars so delivered shall be lodged and secured in such premises, under such conditions, regulations, and restrictions as the said commissioners shall from time to time direct: provided, that it shall be lawful for the commissioners to revoke or alter any order of approval of any such premises. — § 2.

*Refiner to give Bond that Sugar received be refined and exported, or delivered into Bonded Warehouse.* — Upon the entry of sugar to be refined in any premises approved of under the authority of this act, the refiner on whose premises the same is to be refined shall give bond, to the satisfaction of the officers of the customs, in the penalty of double the amount of the duty payable upon a like quantity of sugar of the British plantations, with a condition that the whole of such sugar shall be actually subjected to the process of refinement upon the said premises, and that within 4 months from the date of such bond the whole of the refined sugar and treacle produced by such process shall be either duly exported from the said premises, or delivered into an approved bonded warehouse, under the locks of the Crown, for the purpose of being eventually exported to foreign parts. — § 3.

*Regulations as to Importation, &c. of Sugar.* — No allowance is to be made for damage or increase of weight by water, on sugar, without special permission.

*Duties on British plantation sugar: —*

|                  |    |                                 |

| 8 — and under 12 | —  | 1 cwt. each cask.               |
| 12 — — — — —     | 15 | 1 cwt. 1 qr. 12 lbs. each cask. |
| 15 — — — — —     | 17 | —                               |
| 17 — and upwards | —  | 1 3 0 —                         |

*Certificates of Growth* are required before any sugar can be entered as the produce of a British possession in America, or of the Mauritius; and before it can be entered as the produce of any British possession within the limits of the East India Company's charter. — (See the clauses in the act 3 & 4 Will. 4. c. 52. ante, p. 650.)

**BET ROOT SUGAR.** — The manufacture of sugar from beet root is carried on a very considerable extent in several parts of the Continent, particularly in France, where the annual produce of the sugar from this source may at present be estimated at about 8,000 tons. This branch of industry began during the exclusion of colonial products from France in the reign of Napoleon. It received a severe check at the return of peace, by the admission of West India sugars at a reasonable duty; and would, it is most probable, have been entirely extinguished, but for the oppressive additions made to the duties on colonial sugars in 1820 and 1822. It is supposed by some, that at no distant period the manufacture of sugar from beet root will be so much improved, that it may be able to stand a competition with colonial sugar at the same duty; but we have no idea that this supposition will ever be realised. It is of importance, however, to bear in mind, that were the culture of beet root sugar to be extensively carried on at home, it would be quite impossible to collect a duty upon it; so that the large amount of revenue that may be advantageously derived from a moderate duty on imported sugar, would be almost entirely lost. — (For an account of the beet root cultivation in France, see the article on the *French Commercial System*, in the *Edinburgh Review*, No. 99.)

We understand that a few small parcels of beet root sugar have recently been produced in this country; and with the present enormous duty on colonial sugar, we are not sure that the manufacture may not succeed. But, as the preservation of the revenue from sugar is of infinitely more importance than the introduction of this spurious business, the foundations of which must entirely rest on the miserable machinery of Custom-house regulations, sound policy would seem to dictate that the precedent established in the case of tobacco should be followed in this instance, and that the beet root sugar manufacture should be abolished. Inasmuch, too, as it is better to check an evil at the outset, than to grapple with it afterwards, we trust that no time may be lost in taking vigorous measures, should there be any appearance of the business extending.

**MAPLE SUGAR.** — A species of maple (*Acer saccharinum* Lin.) yields a considerable quantity of sugar. It grows plentifully in the United States and in Canada; and in some districts furnishes the inhabitants with most of the sugar they make use of. Though inferior both in grain and strength to that which is produced from the cane, maple sugar granulates better than that of the beet root, or any other vegetable, the cane excepted. It is produced from the sap, which is obtained by perforating the tree in the spring, to the depth of about 2 inches, and setting a vessel for its reception. The quantity afforded varies with the tree and the season. From 2 to 3 gallons may be about the daily average yield of a single tree; but some trees have yielded more than 20 gallons in a day, and others not more than a pint. The process of boiling the juice does not differ materially from what is followed with the cane juice in the West Indies. It is necessary that it should be boiled as soon after it is drawn from the tree as possible. If it be allowed to stand above 24 hours, it is apt to undergo the vinous and acetous fermentation, by which its saccharine quality is destroyed. — (*Bouchette's British America*, vol. 1. p. 371. ; *Timber Trees and Fruits, Library of Entertaining Knowledge.*)

*Prices of Sugar.* — The following statement of the prices of sugar in the London market, on the 21st of February, 1834, is taken from the *Circular of Messrs. Corrie and Co.* of that date.

ACCOUNTS OF SALES OF SUGAR. — Subjoined are *pro forma* accounts of sales of sugar from Jamaica, Brazil, Bengal, Mauritius, &c. These accounts are interesting, inasmuch as they exhibit the various charges affecting this necessary article, from the time it is shipped in the colonies till it finds its way into the hands of the grocer; and our readers may rely on their authenticity. It will be observed, that the duties are very much greater than the sums received by the planters.

*Pro Forma* Sales of 100 Hogsheds Jamaica Sugar, per "Jean," Captain Yates, by Order and for Account of Thomson & Co.

But there is some uncertainty as to these returns. At present, the population of the colony may safely be taken at above 50,000.

*Climate.* — The climate of such parts of New South Wales as have been explored by the English is particularly mild and salubrious. The high summer heat indicated by the thermometer has not the relaxing and enfeebling effect that a similar high temperature has in India and many other countries. Fearless of damps, and unmolested by noxious insects, the traveller may throw himself under the shade of the first tree that invites him, and sleep in safety. On the other hand, however, the climate has the serious defect of being too dry. It seems to be subject to the periodical recurrence of severe droughts. These prevail sometimes for 2, 3, or even 4 years together. The last "great drought" began in 1826, and it did not terminate till 1829! Very little rain fell during the whole of this lengthened period, and for more than 6 months there was not a single shower! In consequence, the whole surface of the ground was so parched and withered, that all minor vegetation ceased; and even culinary vegetables were raised with much difficulty. It well nigh ruined many of the settlers; nor is the colony as yet quite recovered from its effects. — (*Breton's Excursions in New South Wales*, p. 296.; *Sturt's Southern Australia*, vol. i. p. 2.) This is, in fact, the great drawback upon the colony; and were it more populous, there is reason to think it would expose it to still more serious difficulties.

*Soil, Products, &c.* — The fertility of the soil in most parts of New Holland that have been explored with any care, is very far, indeed, from corresponding with the glowing descriptions of some of its casual visitors, whose imaginations seem to have been dazzled by the magnificence of its botanical productions, and the clearness and beauty of the climate. The truth is, that the bad land seems to bear a much greater proportion to the good in New Holland, than in almost any other country with which we are acquainted. Different theories have been framed to account for the fact; but of the fact itself there seems no manner of doubt. Of course, it is not to be supposed but that in a country of such vast extent there are many fertile districts; but along the east coast, with which we are best acquainted, these seem to be much more confined than might have been expected; and the little experience we have had on the west side, at Swan River and other places, seems to lead to still more unfavourable conclusions. Only a comparatively small part of the interior has as yet been explored. On the whole, however, the fair inference seems to be, not only that New South Wales, but that New Holland generally, is much better fitted for becoming a pastoral than an agricultural country. Sheep succeed remarkably well; and notwithstanding the colony continues to derive part of her supplies of corn from Van Diemen's Land and other places, she has already a very large export of wool; and from the great and growing attention paid to the improvement of the breed of sheep, their rapid multiplication, and the extraordinary increase in the quantity of wool exported, there seems little doubt but that, at no distant period, New South Wales will be one of the principal wool-growing countries in the world. In 1822, the exports of wool amounted to only 152,880 lbs.; in 1825, they had increased to 411,600 lbs.; in 1828, they were 834,343 lbs.; and in 1832, 1,336,000 lbs.!

The following statements show the progress of cultivation in the colony, from 1819 to 1828: —

|               |   | The Stock was |          |
|---------------|---|---------------|----------|
|               |   | In 1819.      | In 1828. |

| In 1819                  | -      | 37,114                       | -         |
| Of which were cultivated | 47,973 | Of which were cleared        | 231,373   |
|                          |        | And cultivated               | 71,523    |

*Imports and Exports.* — The total value of the imports from all places into Sydney in 1832, excluding those from the Whale Fishery and New Zealand, which are almost entirely the produce of the industry of the colonists, was estimated at 510,733*l.*; of which the imports from Great Britain amounted to 424,489*l.* Of the latter, the principal articles were — cottons, 1,319,000 yards, value 48,266*l.*; apparel and shawls, 32,955*l.*; casks and staves, 13,592*l.*; hardware and ironmongery, 28,375*l.*; haberdashery, 27,505*l.*; hats, caps, bonnets, &c., 14,022*l.*; spirits, about 340,000 gallons, value 58,547*l.*; stationery and books, 10,734*l.*; woollens, 19,629*l.*; wines, 10,293*l.*, &c. The principal foreign and colonial imports were sugar and wheat.

The estimated value of the exports during the same year was 371,174*l.* Of these, the principal articles of native produce were — wool, 1,336,414 lbs., value 73,944*l.*; hides, 10,309; spermaceti oil, 2,231 tons 190 gals., value 112,027*l.*; black whale oil, 944 tons, value 21,227*l.*; salt provisions, 18,001*l.*, &c. Exclusive of these, there were re-exported of British produce and manufactures, 53,762*l.*; and of the produce of British and foreign colonial settlements, 23,816*l.* We have thus —

|                         |   |           |
|-------------------------|---|-----------|
| Total amount of imports | - | £ 510,733 |
| of exports              | - | 371,174   |
| Balance of imports      | - | £ 139,559 |

But from this we have to deduct 115,659*l.*, being the amount of the bills drawn by the insular commissariat on the government at home for the maintenance of the military and convict establishments, leaving an apparent balance against the island of 23,940*l.* It should be observed, that in these statements no account is taken of the precious metals imported or exported. — (*New South Wales Calendar and Directory for 1833*, pp. 305—312.)

In 1832, 186 ships, of the burden of about 40,000 tons, entered Port Jackson. During the same year, 38 ships, of 12,231 tons burden, entered British ports inwards from New South Wales, Van Diemen's Land, and Swan River; and 89 ships, of 30,494 tons burden, cleared outwards for the same.

**Whale Fishery.** — The statements given above show the great importance of the whale fishery to New South Wales. The *Physeter macrocephalus*, or black-headed spermaceti whale, being particularly abundant in the Southern Ocean, the situation of Sydney gives its whale ships advantages for the prosecution of the fishery that are not enjoyed by those either of England or America. The latter have a long voyage to make before they reach the fishing stations; whereas those belonging to New South Wales reach them without loss of time, and return home with equal facility for fresh supplies, or to repair any damage they may happen to meet with. No wonder, therefore, that the colonists should have eagerly embarked in this field of enterprise. They have prosecuted it with much success, and have now many valuable ships engaged in it.

The trade carried on between New South Wales and New Zealand is daily becoming of more and more importance. The imports of flax from the latter into this country are now, as we have already seen, of considerable value and importance.

**Income and Expenditure.** — We subjoin an account of the revenue of New South Wales for the 6 years ending with 1831, and for part of 1832.

Revenue of New South Wales, from the 1st of January, 1826, to the 31st of October, 1832.

According to the *Papers published by the Board of Trade* (vol. i. p. 250.), the total expenditure of the colony in 1830 amounted to 242,891*l.*, of which 80,174*l.* were civil expenses; and the remainder, being 162,717*l.*, were the charges incurred by the colony for the convict and military establishments; and which has, of course, to be defrayed by the mother country. In fact, were it not for the heavy expenses necessarily incurred on account of the conveyance and superintendence of convicts, the revenue of the colony would be adequate to meet the outgoings.

**Monies, Weights, and Measures.** — Accounts are kept in sterling money; but Spanish dollars are most abundant. They pass current at 5*s.* each. The weights and measures are the same as those of England.

**Rate of Agency, Commission, and Warehouse Rent, agreed to at a Meeting of the New South Wales Chamber of Commerce, 1828.**

*Commission.*

1. On all sales or purchases of ships and other vessels, houses, or lands, where no advance on them has been made, 2*½* per cent.
- On all other sales, purchases, or shipments, 5 per cent.
- On goods consigned and afterwards withdrawn, or sent to public auction, if no advance on them has been made, 2*½* per cent.
2. On giving orders for the provision of goods, 2*½* per cent.
3. On guaranteeing sales, bills, bonds, or other engagements, 2*½* per cent.
4. On the management of estates for others, 5 per cent.
5. On procuring freight or charter, and on freight collected, 5 per cent.
6. On insurances effected, ½ per cent.
7. On settling losses, partial or general, 1 per cent.
8. On collecting remittances, or purchasing, selling, or negotiating bills of exchange, 1 per cent.
9. On the recovery of money, 2*½* per cent. If by law or arbitration, 5 per cent.

10. On collecting house rent, 5 per cent.
11. On attending the delivery of contract goods, 2 per cent.
12. On becoming security for contracts, 5 per cent.
13. On ships' disbursements, 5 per cent.
14. On obtaining money on respondentia, 2 per cent.
15. On letters of credit granted, 2 per cent.
16. On purchasing, selling, receiving from any of the public offices, lodging in ditto, delivering up or exchanging government paper or other public securities, ½ per cent.
17. On all items on the debit or credit side of an account, on which a commission of 5 per cent. has not been previously charged in the same account, including government paper, 1 per cent.
18. On entering and clearing ships at the Custom-house, each 1 guinea.
19. On the dishonour of foreign bills, exclusive of protest and other law expenses a re-exchange of 2*½* per cent.

*Warehouse Rent.*

- On all measurement goods, 1*s.* per ton of 40 cubic feet, per week.
- On liquids, 1*s.* 3*d.* per tun of 252 gallons (old measure) per week.
- On sugar, rice, salt, and similar articles, 6*d.* per ton per week.
- On grain, 4*d.* per bushel for first month, and 3*d.* per bushel per month afterwards.
- On iron, lead, &c. 4*d.* per ton per week.

And at corresponding rates from other places. Double and treble letters to be charged

proportionably to the aforesaid rates. Letters the weight of an ounce to be charged 4 times the rate of postage of a single letter.

**Newspapers** printed in New South Wales or Van Diemen's Land, 1d. each.

**Letters from and to New South Wales and Van Diemen's Land** to pay a sea postage of 3d., and all other Ship Letters a sea postage of 4d. in addition to the inland postage payable thereon.

**Parcels of Newspapers, printed Prices Current, or other periodical Publications**, exported or imported, to be charged a sea postage at the rate of 1d. for every 4 ounces of their weight.

**Auction Duty.** For each and every 100l. arising from the sale by auction of any estate, goods, or effects whatsoever, 1l. 10s.

**Licence.** Auctioneers, annually 25 0 Beer and spirits, to retail, do. 25 0 Distilling, do. 25 0 Hawkers, do. 20 0 Caris 0 5

**Emigration to New South Wales, Rate of Wages, &c.**—Were it not for the heavy expenses attending emigration to so distant a country as New South Wales, the advantages it holds out to the industrious emigrant are considerable. Labour is in great demand, the rate of wages high, provisions moderately cheap, and the climate mild and not unsuitable to European constitutions. The great drawbacks are the general inferiority of the soil, the want of water, and the immense distance from Europe. The commissioners for facilitating emigration (that is, for contracting with individuals or parishes willing to defray the expense of removing voluntary emigrants to the colonies), issued the following

INFORMATION WITH RESPECT TO THE AUSTRALIAN COLONIES.

**Price of Passage.**—The commissioners for emigration have reason to expect, from the result of the inquiries which they have made on this subject, that passages can be provided for people of the working classes, including their maintenance during the voyage, at a charge not exceeding 16l. for adults, and 8l. for children. More exact particulars, and the precise charge for which passages can be provided, will be stated at the time of entering into the agreements with such persons as may apply to the commissioners for that purpose.

**Probable number of Emigrants to the several Colonies.** The following rates of wages paid to com obtaining 5s. Sydney Gaz Sydney, as

It is not necessary to mention the price of passage to persons of the working classes, however, of the charge of labouring class

**Probability of Employment, and Rates of Wages.**—The commissioners have examined a considerable number of letters upon these subjects from respectable inhabitants of New South Wales and Van Diemen's Land; and they find that all concur in representing the existence of a great demand for labour. These representations are further confirmed by official reports received from those colonies by the secretary of state.

The following general statements, collected from a variety of sources, will afford a view of the average rates of wages in the Australian colonies:—

Twenty-five or thirty pounds a year, besides board and lodging, seem to be the wages which are usually paid to common labourers; artisans of very ordinary qualifications are reported to find no difficulty in obtaining 50*l.* a year, besides board and lodging. The following advertisement, which appeared in the Sydney Gazette of the 12th of August, 1830, contains a list of several descriptions of workmen wanted at Sydney, as well as an account of the high wages which some of them might obtain:—

Wanted, in Sydney, New South Wales, the following Tradesmen and Mechanics:—

|                           |                   |                        |                         |
|---------------------------|-------------------|------------------------|-------------------------|
| Bread and biscuit bakers. | Dairywomen.       | Milliners.             | Sail makers.            |
| Bucblers.                 | Blasblers.        | Malsters.              | *Slaters and shinglers. |
| *Boat builders.           | *Engineers.       | Mustard makers.        | Shepherds.              |
| *Brick makers.            | Farriers.         | Milkmen.               | Sheephearers.           |
| *—layers.                 | Flax dressers.    | Nurserymen.            | Soap makers.            |
| Bellows makers.           | Fencers.          | Nailers.               | Sign painters.          |
| *Blacksmiths.             | Fellmongers.      | Painters.              | Salters.                |
| Bell hangers.             | Glaziers.         | Parchment makers.      | Sail cloth makers.      |
| Brass founders.           | Glass blowers.    | Pump makers.           | Sieve makers.           |
| Brewers.                  | Glue makers.      | Punch makers.          | Starch makers.          |
| Boatmen.                  | Gilders.          | Potters.               | Straw plaiters.         |
| *Cigar makers.            | *Gunsmiths.       | Paper makers.          | Straw hat makers.       |
| Confecioners.             | Hairdressers.     | *Hatters.              | Turners.                |
| Chair makers.             | Hat makers.       | Ploughmen.             | *Tanners.               |
| *Carriers.                | —finishers.       | Provision curers.      | Tailors.                |
| *Carpenters.              | *Harness makers.  | Plumbers.              | Tin plate workers.      |
| *Caulkers.                | Horse breakers.   | Printers and pressmen. | Tobacco pipe makers.    |
| *Coopers.                 | Hoop makers.      | Quarrymen.             | Tobacco growers.        |
| Cart makers.              | *Joiners.         | Quill preparers.       | Tallow melters.         |
| Coch makers.              | *Japaners.        | Rope makers.           | Vine dressers.          |
| Computers.                | Ironmongers.      | Reapers.               | Wholesalers.            |
| Candle makers.            | Iron founders.    | Saddlers.              | Wagon makers.           |
| Cabinet makers.           | Leather dressers. | Shoemakers.            | Wool sorters.           |
| Chase makers.             | Loach burners.    | Shipwrights.           | Whalers.                |
| Coach spring makers.      | Locksmiths.       | *Stone masons.         | Weavers of blankets and |
| Cooks.                    | Millers.          | *Stone cutters.        | coatse woolen.          |
| Collers.                  | Mosinens.         | Stone setlers.         | Wire drawers.           |
| *Coppersmiths.            | *Millwrights.     | Stone quarrymen.       | Wood splitters.         |
| Cutlers.                  |                   |                        |                         |
| Dyers.                    |                   |                        |                         |

Those marked thus (\*) are particularly wanted, and earn 10*s.* a day and upwards, all the year round; and engineers and millwrights earn 50*l.* a day.  
All articles of provision are very cheap: beef and mutton, 2*d.* per lb. by the joint, and 1*d.* per lb. by the quarter or carcass. Tea (green), 1*s.* 6*d.*; sugar, 3*d.* Indian corn, 1*s.* 6*d.* per bushel, &c. &c.

The agent for New South Wales and Van Diemen's Land, in a letter addressed to the Chairman of the Emigration Committee in the year 1827, since which period the price of labour is understood to have risen, stated the rates of wages as follows:—

|                        |           |          |                              |   |           |          |     |
|------------------------|-----------|----------|------------------------------|---|-----------|----------|-----|
| Common labourers       | - - - - - | Per Day. | 3 <i>s.</i>                  | And to mechanics of peculiar qualifications, or agricultural labourers capable of managing a farm in the capacity of bailiffs | - - - - - | Per Day. | 17. |
| Common mechanics       | - - - - - |          | 7 <i>s.</i>                  |   |           |          |     |
| 2 <i>d.</i> rate ditto | - - - - - |          | 8 <i>s.</i> to 12 <i>s.</i>  |   |           |          |     |
| 3 <i>d.</i> rate ditto | - - - - - |          | 12 <i>s.</i> to 15 <i>s.</i> |   |           |          |     |

**Market Prices at Sydney.**—The commissioners have collected from newspapers published in New South Wales, the following accounts of the market prices at Sydney on the 1st day of each month during the year 1830:—

| Articles.              | Jan.   | Feb.         | March.      | April.      | May.         | June.       | July.       | August.     | Sept.       | October.    | Nov.        | Dec.        |
|------------------------|--------|--------------|-------------|-------------|--------------|-------------|-------------|-------------|-------------|-------------|-------------|-------------|
| Wheat - per bush       | 0 6 0  | 0 8 0        | 0 8 0       | 0 8 0       | 0 8 0        | 0 7 0       | 0 7 0       | 0 6 0       | 0 6 0       | 0 5 0       | 0 4 0       | 0 3 0       |
| Maize - - - - -        | 0 5 0  | 0 3 0        | 0 3 0       | 0 3 0       | 0 3 0        | 0 3 0       | 0 2 0       | 0 2 0       | 0 2 0       | 0 1 0       | 0 1 0       | 0 1 0       |

It is not necessary that emigration to the Australian colonies should be confined to any particular season; and the commissioners for emigration will therefore be ready immediately to afford their assistance to persons desirous of going to New South Wales and Van Diemen's Land. In consequence, however, of the state of the population in the Australian colonies, the commissioners do not propose to take charge of the conveyance of any but married men and their families, or of females belonging to the labouring classes.

Rations for Convicts. — The weekly rations of the convicts are 12 lbs. of wheat, or 9 lbs. of flour, or 3 lbs. of maize, and 9 lbs. of wheat, or 7 lbs. of 2d flour; 7 lbs. of beef or mutton, or 4 lbs. of salt pork; 2 oz. of salt; 2 oz. of soap.

The clothing to which they are entitled consists of 2 frocks or jackets; 3 pair of shoes, of stout and durable leather; 3 shirts; 2 pair of trousers; 1 hat or cap.

We subjoin, in illustration of the sort of statements put forth to allure immigrants, the following extract from the *Sydney Gazette* of the 22d of May, 1830:—

“Here, then, is a country prepared to our very hands for all the purposes of civilised life. While England is groaning under a population for which she cannot provide bread, here is an unmeasured extent of rich soil, that has lain fallow for ages, and to which the starving thousands of the North are beckoned to repair. The great want of England is employment; the great want of New South Wales is labour. England has more mouths than food; New South Wales has more food than mouths. England would be the gainer by lopping off one of her superfluous millions; New South Wales would be the gainer by their being planted upon her ample plains. In England, the lower orders are perishing for lack of bread; in New South Wales, they are, like Jehu, “waxing fat and kicking” amid superabundance. In England, the master is distracted to find work for his men; in New South Wales, he is distracted to find men for his work. In England, the capitalist is glad to make his 3 per cent.; in New South Wales, he looks for 20. In England, capital is a mere drug,—the lender can scarcely find a borrower, the borrower can scarcely repay the lender; in New South Wales, capital is the one thing needful,—it would bring a goodly interest to the lender, and would make the fortune of the borrower.

“Then let the capitalist wend his way hither, and his 1 talent will soon gain 10; and his 10, 20. Let the labouring pauper come hither; and, if he can do nothing but dig, he shall soon be welcome to 23s. a week, and shall feast on fat beef and mutton at 1d. or 2d. a pound! Let the workhouses and jails disgorge their squalid inmates on our shores, and the heart-broken pauper and the abandoned profligate shall be converted into honest, industrious, and jolly-faced yeomen.”

This is a striking, but an exceedingly exaggerated, paragraph. Those who emigrate in the expectation of finding an El Dorado in New South Wales, or in any part of Australia with which we are acquainted, will meet with nothing but disappointment. Industry and good conduct are not more necessary to the success of individuals in England than they are to the success of those who emigrate to New Holland. There, as here, man must “eat his bread in the sweat of his brow.”

In order to provide a fund for defraying the expenses of emigration to Australia, government has resolved to impose a tax of 1l. each upon the convicts assigned to private individuals. Doubts, however, may be entertained as to the policy of any such tax. A duty upon labour is certainly a novel expedient for increasing the prosperity of a colony; though, perhaps, under the peculiar circumstances of the case, it may be justified.

*Granting of Land in Australia.* — We have previously given (*ante*, p. 359.) a copy of the terms on which lands are henceforth to be granted to emigrants to New South Wales and Van Diemen's Land. They are not very explicit. The colonial secretary's letters to the governor merely tell him that in future all land is to be sold by auction; that the *minimum* or upset price is to be 5s. an acre; and that he has a *discretionary power* of fixing a higher minimum price on superior lots, and of declining to sell them till that price be obtained. Even were there nothing to object to the *principle* of this plan, if any thing so very vague deserve that name, we have very little doubt that in its practical operation it will generate every species of abuse. The local government, having the power of limiting the quantity of land to be put up to auction, has it completely in its power to fix its price; for it may either increase the quantity of land so that it shall fetch no more than the upset price, or it may limit it so that it shall fetch any greater sum. Such auctions must in reality be a mere farce; it is not possible that they can be conducted on a fair principle. The price must, in every instance, really depend on the pleasure of the sellers, and not on the competition of the buyers. Supposing the local authorities to be uniformly actuated by the sincerest desire to deal fairly by every one, by what test are they to discover the probable number of offerers at different

periods, the amount of their funds, and the intensity of their desire to purchase? And yet, without knowing all these things, they cannot decide upon the quantity of land to be put up, so as to have any thing like a fair sale. And supposing them to be influenced by the partialities and weaknesses incident to humanity, how easy, when they wish to oblige, will it be for them to increase the number of lots put up, and conversely! To obviate, in some degree at least, the chance of such abuses, the better way would be to get a large tract of country divided into lots, and to fix prices on these according to the estimate formed of their various advantages, assigning them in absolute property to the first applicant ready to pay down the price, and to conform to the regulations as to occupancy, &c. It is to no purpose to contend that the plan of selling land by auction is adopted in America. What is there in common between the political condition of Australia and the United States? Jobbing, that would be instantly detected and put down in the latter, may attain to the rankest luxuriance in the former. The influence of a government and a public on the spot is altogether different from that of a government and a public many thousand miles distant. It is easy to set a *minimum* price upon land; the real desideratum is the establishment of some certain, fixed, and *fair* principles for fixing its *maximum* price.

We confess, however, that we entertain serious doubts as to the soundness of the principle involved in this plan, even supposing it could be fairly carried into effect; and these doubts have not been in any degree lessened by the extravagant eulogies lavished upon it. It would seem, indeed, to be supposed that all the evils incident to colonisation have resulted from the settlers getting land on too easy terms; and that all that was required for the establishment of a colony on the best possible foundation, was, to sell its land at a high price; in other words, to make it as like an old country as possible! It says little for the public discernment, that opinions of this sort should have obtained much currency. We concede, indeed, that nothing can be more injurious to a colony than the making of large grants of land to individuals who either do not intend to settle upon them, or are unable to clear and bring any considerable portion of them into cultivation. But because such inconveniences have resulted from the injudicious granting of land, it does not, therefore, follow that it should be sold at high prices, or even at any price at all. In making grants of land, regard ought to be always had to the means and the intentions of the grantee; that is, the grant should depend partly on the probable amount of his available capital, and partly on the purposes to which he means to apply it. And it might be properly enough stipulated, that if, at the end of some fixed period, certain improvements were not made, buildings erected, &c., it should revert to the Crown. But the more we reflect upon the subject, the greater are our doubts as to the policy of exacting any price for land, particularly in such a country as New South Wales. Considering the very inferior quality of most of the land in that colony, it seems to us that 5s. an acre is quite extravagant as a minimum price; and that, instead of being made the lowest point in the scale, it should rather have been made the highest. At all events, if an upset price of 5s. an acre be not a great deal above the mark in New Holland, it must be a great deal below it in Upper Canada. It would not really be more absurd to set about establishing a uniform rate by which to regulate the sale of land in Essex and the Hebrides, than it is to apply the same scale to all our colonial possessions. If this preposterous scheme do not discourage emigration, it will assuredly turn the tide from our own colonies to the United States. And though it had no such effect, it would still be highly objectionable; inasmuch as it cripples the resources of the colonist at the very moment when they are the most indispensable; and deprives him of funds which he would have laid out better than, it is easy to suppose, they can be laid out by government. The mode of letting land by fine, that is, by the receipt of a large sum of money on the tenant's entry to a farm,—the rent during the currency of the lease being proportionally small,—has been severely censured by all the best agricultural writers; and for the very sufficient reason, that it deprives the tenant of the greater part of his capital, and disables him from undertaking any considerable improvement. And yet we are loudly called upon to do the same thing by the settlers in a new colony,—who, for the most part, emigrate only because they have little or no capital,—that is so justly condemned at home. This precious project has actually been trumpeted forth as a signal discovery that was to be productive of the very greatest utility; and a society has been formed to promote colonisation, on the avowed principle of rendering it much more difficult than it has ever hitherto been for a colonist in the lower walks of life to acquire land and become independent! If slaves could be imported into a colony of this sort, there might be some chance of its succeeding. But while land of the very best quality may be had in Illinois for 2 dollars an acre, and even less, we think better of the common sense of our countrymen, than to suppose that they will resort to Australia under the auspices of any company of the sort now alluded to.

In compiling this article we have made use of the *Report of Mr. Blythe on the Agriculture and Trade of New South Wales*, being *Parl. Paper*, No. 136. Sess. 1823;

*Report of Commissioners of Inquiry, Parl. Paper, No. 328. Sess. 1831; Papers laid before the Finance Committee; New South Wales Calendar and Directory for 1833; and the works of Messrs. Sturt, Breton, and others.*

SYRA, the ancient Seyros, one of the islands of the Greek Archipelago, in the group called the Northern Cyclades. It is from 7 to 8 miles long, and 4 broad. Though rugged, it is tolerably well cultivated, and produces corn, wine, cotton, olives, figs, &c. The population in 1830 is set down by Mr. Urquhart at 4,500; but we have been assured that it is, at present, little if at all short of 7,000. Phereydes, one of the most celebrated of the ancient Greek philosophers, the disciple of Pittacus, and the master of Pythagoras, was a native of this island.

The port is on the east side of the island, in lat.  $37^{\circ} 26' 30''$  N., lon.  $24^{\circ} 55'$  E. It affords excellent anchorage for vessels of light draught, and is capable of accommodating a few even of the largest ships. In consequence, partly of the advantages it enjoys through the possession of its port, but more of its central situation, Syra has recently become a considerable commercial *entrepôt*; and has attracted a good deal of the carrying trade that formerly centered at Smyrna, Constantinople, &c.

A few miles to the east of Syra, lies Delos. This island, regarded in antiquity with peculiar veneration, from its being the birthplace of Apollo and Diana, is no less celebrated in the commercial than in the religious history of ancient Greece. Its sacred character, by insuring its immunity from hostile attacks, and its central situation, made it a favourite mart for the products of the states of Greece, Asia Minor, Phœnicia, Egypt, &c. Religion, pleasure, and trade had all their votaries at its festivals; which were famous throughout the ancient world for the splendour of the rites and processions, and the magnitude of the business transacted. It were too much to expect that Syra should ever attain to equal importance, even as an *entrepôt*. But as she enjoys most of those advantages of position that contributed to render Delos one of the principal emporiums of antiquity, it may be hoped, now that there is a reasonable prospect of good order and freedom being again established in Greece, that she may also acquire some commercial celebrity. It may be worth while mentioning, as strikingly evincing the mutability of human affairs, that, at present, both the great and the little Delos are uninhabited. And Tournefort states, that the inhabitants of Mycone were, in the early part of last century, in the habit of holding the greater Delos for the purposes of pasturage, paying to the Grand Seigneur a rent of 20 crowns a year for that famous island! — (*Tournefort, Voyage du Levant*, 4to ed. tome i. pp. 290—325. There is a good account of the religious rites celebrated at Delos, though but a very indifferent one of its commerce, in the *Travels of Anacharsis*.)

## T.

TACAMAHAC, a resin obtained from the *Fugara octandra*; and likewise, it is supposed, from the *Populus balsamifera*. It is imported from America in large oblong masses wrapt in flag leaves. It is of a light brown colour, very brittle, and easily melted when heated. When pure, it has an aromatic smell, between that of lavender and musk; and dissolved completely in alcohol; water having no action upon it. — (*Thomson's Chemistry*.)

TAGANROG, a city of European Russia, on the north coast of the Sea of Azof, near the mouth of the river Don, lat.  $47^{\circ} 12' 40''$  N., lon.  $38^{\circ} 39'$  E. Population from 7,000 to 8,000. It has a naval hospital, a lazaretto, &c.; and there are annual fairs in May, August, and November. Taganrog is a place of considerable commercial importance. It owes this distinction to its situation, which makes it the emporium of the extensive countries traversed by the Don (the ancient *Tunais*), one of the principal European rivers; and which, there is reason to think, will at no very distant period be connected with the Wolga, and consequently with the Caspian Sea, by the completion of the canal projected by Peter the Great. Civilisation is in a very backward state in these regions; but it is making a constant, though not a very rapid progress; and as it proceeds, Taganrog will necessarily rise in importance. The principal exports are grain, particularly wheat, of which large quantities are sometimes shipped; iron and hardware from Tula; with cordage, linen and sail-cloth, copper, tallow, leather, furs, wax, ashes, caviar, isinglass, &c. The imports are comparatively trifling, and consist principally of wine, oil, fruit, dry-saltries, cotton and woollen goods, dye stuffs, tobacco, sugar, coffee, &c. By far the largest part of the trade is carried on with Constantinople, Smyrna, and other Turkish ports; but a good deal is also carried on with the different Italian ports. We subjoin an

The Turkish vessels are generally of but small burden.

*Monies, Weights, and Measures*, same as those of Petersbourg; which see.

*Sea of Azof.*—The navigation of this sea, the *Palus Mæotis* of antiquity, is impeded by numerous shoals, and can neither be entered nor safely navigated by vessels drawing more than 11 or 12 feet water. Its greatest depth in the middle is about 7 fathoms; but it shoals gradually to the sides, and at Taganrog there is only from 9 to 10 feet water. Its depth is, however, materially affected by the direction and strength of the winds. The only entrance to this sea is by the Straits of Yenikalé, the *Bosphorus Cimmericus* of the ancients, a narrow and difficult passage, having in some places not more than 13 feet water. Owing to the great quantity of fresh water poured into the Sea of Azof, and its limited magnitude, its water is brackish merely. It is unnavigable from November to April, during the greater part of which time it is generally frozen over.—(*Navig. Sailing Directions for the Mediterranean and Black Seas; Annuaire du Commerce Maritime* for 1833, p. 161. &c.) We avail ourselves of this opportunity to lay before our readers the following details with respect to the

#### TRADE, ETC. OF THE CASPIAN SEA.

Quantity and Value of the Articles imported from Foreign Ports into the Russian Ports of the Caspian, in 1831.

N. B.—Of the vessels here described, only 1 Persian arrived, and 1 ditto departed, of burden unknown.

*Magnitude of the Caspian Sea. Ports, &c.* — The Caspian Sea, or rather lake (the *Mare Hyrcanum* of the ancients), extends lengthwise from N. to S. about 740 miles, varying in breadth from 112 to 275 miles. In some parts, particularly on the southern shores, it is so very deep that a line of 450 fathoms will not reach the bottom; whereas, in the northern parts, and opposite to the mouths of the Wolga, it is comparatively shallow; and owing to the frequent occurrence of shoals, it is not safely navigated by vessels drawing more than 10 or 12 feet water. Its level had been variously estimated by Olivier and Lowitz, at from 64 to 53 feet below that of the Black Sea; but according to the recent observations of M. Humboldt, the difference of level between them is no less than 300 feet! We confess, however, that we are not without our doubts as to the perfect accuracy of this statement; and would not have been inclined to attach much weight to it had it proceeded from any inferior authority. The water of the Caspian is not salt, but brackish merely; it has no tides, but gales of wind raise a very heavy sea. It is extremely prolific of fish and seals. The value of the sturgeon caught in the Russian fisheries amounts to a very large sum. (See *STURGEON FISHERY*.) They proceed in shoals up the rivers, where they are captured without the least apparent diminution of their numbers. The salmon is remarkably fine; and herrings are in such abundance, that, after a storm, the shores of the Persian provinces of Ghilan and Mazunderan are nearly covered with them.—(*Kincair's Memoir of the Persian Empire*, p. 6.; *Memoir on the Caspian Sea*, in *Malte Brun's Geography*; *Humboldt, Fragmens de Géologie*, &c.)

Astrakhan is situated on an island of the Wolga, more than 50 miles from the mouth of that river; and owing to the extensive command of internal navigation it possesses, it is a place of very considerable commercial importance. Baku, acquired by the Russians in 1801, is, however, the best port on the western side of the Caspian. It is situated on the southern shore of a peninsula that projects far into the sea, in lat. 40° 22' N., lon. 51° 10' E. The harbour is spacious and convenient; and its central and advanced position gives it superior advantages as a trading station. Prodigious quantities of naphtha are procured in the vicinity of Baku. It is drawn from wells, some of which yield from 1,000 to 1,500 lbs. a day. It is used as a substitute for lamp oil; and when ignited emits a clear light, with much smoke and a disagreeable smell. Large quantities are exported in skins to the Persian and Tartar ports on the south and east shores of the sea.

*Vessels.* — The largest class of vessels by which the Caspian Sea is navigated are called by the Russians *schuyts*, and belong wholly to Astrakhan and Baku; their burden varies from 90 to 150, and, in some instances, 200 tons. They are not built on any scientific principle, and are constructed of the worst materials, that is, of the timber of the barks that bring grain down the Wolga to Astrakhan. There are supposed to be, in all, about 100 sail of these vessels. There is a second class of vessels employed in the trade of the Caspian, called *razghives*. They carry from 70 to 140 tons, and sail better than the *schuyts*. Their number is estimated at about 50. Exclusive of the above, there are great numbers of small craft employed in the coasting trade, in the rivers, in the fisheries, and in acting as lighters to the *schuyts*. Steam boats have been introduced upon the Wolga; and one has been launched on the Caspian itself. The masters and crews of the vessels employed on this sea are, for the most part, as ignorant as can well be imagined. They are generally quite incapable of making an observation, or of keeping a reckoning; so that accidents frequently occur, that might be avoided by the most ordinary acquaintance with the principles of navigation. — (These statements are made, partly upon official, and partly upon private authority; the latter may, however, be safely relied on.)

The trade of this great sea is entirely in the hands of the Russians; by whom it is carried on from the ports of Astrakhan and Baku, with the Persian ports of Astrabad, Balloosh, &c. on the south; and with the Tartar ports of Mangishlak, Balkan, &c. on the east. It is very insignificant, compared with what it ought to be. On the whole, however, a gradual improvement is taking place; and whatever objections may, on other grounds, be made to the encroachments of Russia in this quarter, there can be no manner of doubt that, by introducing comparative security and good order into the countries under her authority, she has materially improved their condition, and accelerated their progress to a more advanced state.

TALC, a species of fossil nearly allied to mica. It is soft, smooth, greasy to the feel, and may be split into fine plates or leaves, which are flexible, but not elastic. It has a greenish, whitish, or silver-like lustre. The leaves are transparent, and are used in many parts of India and China, as they were used in ancient Rome — (*Plin. Hist. Nat. lib. xxxvi. c. 22.*) — in windows instead of glass. In Bengal, a seer of talc costs about 2 rupees, and will sometimes yield a dozen panes 12 inches by 9, or 10 by 10, according to the form of the mass, transparent enough to allow ordinary subjects to be seen at 20 or 30 yards' distance. It should be chosen of a beautiful pearl colour; but it has, in general, either a yellowish or faint blue tinge. Its pure translucent flakes are frequently used by the Indians, for ornamenting the baubles employed in their ceremonies. Talc is employed in the composition of *rouge végétal*. The Romans prepared with it a beautiful blue, by combining it with the colouring fluid of particular kinds of testaceous animals. Talc is met with in Aberdeenshire, Perthshire, and Banffshire in Scotland; and in various parts of the Continent, where rocks of serpentine and porphyry occur. The talc brought from the Tyrolean mountains is called in commerce Venetian talc. Several varieties are found in India and Ceylon. — (*Thomson's Chemistry; Rees's Cyclopædia; Milburn's Orient. Com.; Ainslie's Mat. Indica.*)

TALLOW (Fr. *Suif*; Ger. *Talg*; It. *Sevo, Segio*; Rus. *Salo, toplenoe*; Sp. *Sebo*), animal fat melted and separated from the fibrous matter mixed with it. Its quality depends partly on the animal from which it has been prepared; but more, perhaps, on the care taken in its purification. It is firm, brittle, and has a peculiar heavy odour. When pure, it is white, tasteless, and nearly insipid; but the tallow of commerce has usually a yellowish tinge; and is divided, according to the degree of its purity and consistence, into candle and soap tallow.

Tallow is an article of great importance. It is manufactured into caudles and soap; and is extensively used in the dressing of leather, and in various processes of the arts. Besides our extensive supplies of native tallow, we annually import a very large quantity, principally from Russia. The exports of tallow from Petersburg amount, at an average, to between 3,500,000 and 4,000,000 poods, of which the largest portion by far is brought to England; the remainder being exported to Prussia, France, the Hanse Towns, Turkey, &c.

We borrow from the work of Mr. Borrison, on the Commerce of Petersburg, the following details with respect to the tallow trade of that city: —

Tallow is divided into different sorts; namely, white and yellow *candle tallow*, and common and Siberian *soap tallow*; although it is allowed that the same sort often differs in quality.

Tallow is brought to Petersburg from the interior; and the best soap tallow from Siberia, by various rivers, to the lake Ladoga; and thence, by the canal of Schlüsselburg, to the Neva.

An *ambare*, or warehouse, is appropriated to the reception of tallow, where, on its arrival, it is selected and assorted (*bracked*). The casks are then marked with three circular stamps, which state the quality of the tallow, the period of selecting, and the name of the selector (*bracker*).

The casks in which white tallow is brought have a singular appearance; their form being conical, and their diameter at one end about  $2\frac{1}{2}$  feet, and at the other only  $1\frac{1}{2}$  foot: the casks of yellow tallow are of the common shape. There are also others, denominated  $\frac{1}{2}$  casks.

To calculate the tare, the tallow is removed from a certain number of casks, which are weighed, and an average tare is thence deduced for the whole lot. A cask weighs  $8\frac{1}{2}$ , 9, 10, or 11 per cent., but the average is generally about 10 per cent. of the entire weight of tallow and cask.

Yellow candle tallow, when good, should be clean, dry, hard when broken, and of a fine yellow colour throughout. The white candle tallow, when good, is white, brittle, hard, dry, and clean. The best white tallow is brought from Woronesch. As for soap tallow, the more greasy and yellow it is, the better the quality. That from Siberia is the purest, and commonly fetches a higher price than the other sorts.

Formerly the oil and tallow warehouses were the same; and this occasioned great difficulties in shipping, because all vessels or lighters taking in tallow or oil were obliged to haul down to the *ambare*, and wait in rotation for their cargoes. The consequence was, that when much business was doing, a vessel was often detained for several weeks at the *ambare* before she could get her cargo on board. Now the tallow and oil warehouses are separated, and every article has its own place. When a shipment of tallow is made, the agent is furnished by the selector (*bracker*) with a sample from each cask.

Captains, in order to obtain more freight, usually load some casks of tallow upon deck; but it is more for the interest of the owner to avoid this if possible, because the tallow loses, through the heat of the sun, considerably both in weight and quality.

One hundred and twenty poods of tallow, gross weight, make a Petersburg last, and 63 poods an English ton.

Of 1,177,968 cwt. of tallow imported in 1829, 1,164,180 came from Russia, 6,143 from the United States, 3,789 from Turkey, 1,992 from France, and 1,626 from Sweden.

We subjoin an official account of the export of tallow from Russia in 1832.

Exports of Tallow from Russia in 1832.

| Total       | 4,205,919 |                            |           |             |           |

The exports of tallow from Petersburg, in 1833, amounted to above 4,100,000 poods (see ante, p. 898.), being the largest quantity ever shipped in 1 year. The shipments to Great Britain were about 3,500,000 poods. Supposing the tallow to have been worth, when delivered to the shipper, 35*l.* a ton, its total value will have been 2,306,150*l.*! This statement shows the great importance of this trade.

The price of tallow fluctuated very much during the war. This was occasioned, principally, by the obstacles that were at different periods thrown in the way of supplies from Russia. The price of tallow is also affected by the state of the seasons. Some very extensive speculations have at various periods been attempted in tallow; but seldom, it is believed, with much advantage to the parties.

Account of the Price of Tallow in the London Market, in the Month of January each Year, from 1813.

**TALLY TRADE**, the name given to a system of dealing carried on in London and other large towns, by which shopkeepers furnish certain articles on credit to their customers, the latter agreeing to pay the stipulated price by certain weekly or monthly instalments.

In the metropolis there are about 60 or 70 tally-shops of note; and from 500 to 600 on a smaller scale. They are also spread over the country to a considerable extent, particularly in the manufacturing districts. The customers of the tally-shops are mostly women; consisting, principally, of the wives of labourers, mechanics, porters, &c., servant girls, and females of loose character. Few only of the more respectable classes have been infatuated enough to resort to them. Drapery goods, wearing apparel, coals, household furniture, hardware, &c. are furnished; and even funerals are performed; but few or no articles of food, except tea, are sold upon the tally plan.

We believe that this is the very worst mode in which credit is afforded. The facility which it gives of obtaining an article when wanted, and the notion so apt to be entertained that the weekly or monthly instalments may be paid without difficulty, makes those who resort to the tally-shops overlook the exorbitant price, and usual bad quality, of the articles they obtain from them; and generates habits of improvidence that seldom fail to involve the parties in irremediable ruin. It is not going too far to say that nine tenths of the articles supplied by tally-shops might be dispensed with. As already observed, women are the principal customers; and it is not easy to exaggerate the mischief that has been entailed on the families of many industrious labourers by their wives having got entangled with tally-shops. They buy goods without the knowledge of their husbands; and these are not unfrequently pawned, and the proceeds spent in

\* The ships receive, at Elseneur, orders for their ultimate destination, and most of them are for Great Britain.

gln. So destructive, indeed, is the operation of the system, that the establishment of a tally-shop in any district is almost certain to occasion an increase in the paupers belonging to it. Even the unmarried females who do not pay are demoralised and ruined by the system; because, if a woman who buys 3 gowns, pays for the 2 first, and runs away from the payment of the last, she gains nothing *in point of saving*, while she becomes indifferent to an act of dishonesty. As tally debts can only be collected whilst a supply of goods is kept up, as soon as that supply is stopped, the debtor either flies to another district, or awaits a summons. Where the wife has contracted the debt, she usually appears before the commissioners, who in general order the debt to be paid by weekly or monthly instalments. But it often occurs, from the wife not being able to keep up such payments, that execution issues, and the poor husband is frequently arrested and lodged in prison for a debt, of the existence of which he was entirely ignorant. In this way, numbers of the working classes are completely ruined; they lose their employment, and themselves and families are reduced to beggary. The intelligent keeper of Whitecross-street prison (Mr. Barrett) states, that from 150 to 200 persons are annually imprisoned there for tally-shop debts, in sums of from 10s. to 5*l.*, and that in one year 30 prisoners were at the suit of one tally-shop alone! Such imprisonments, however, are now much decreased, in consequence, as is believed, of the Court of Requests, discouraging the tally system, by ordering claims of *this* kind to be paid by *extremely small* instalments, and these at *very distant* intervals; and also in consequence of no composition being allowed by the charities for the relief of poor prisoners with reference to such debts.

It is estimated that in London alone about 850,000*l.*, or nearly 1,000,000*l.* sterling, is annually returned in this trade. From his large profits (generally from 25 to 40 per cent.), it is obvious that in a few transactions the tally-shop keeper becomes independent of the existing debt; and with capital and good management, it is said that some have realised considerable sums of money in this business.

According to the custom of the trade, Mondays, Tuesdays, Wednesdays, and Thursdays, are the days set apart for collecting money from the customers. The tally-man sends round his collector through the different "walks," and the amount of a collection, which keeps the collector engaged from morning till night, even in a good tally concern, seldom exceeds 4*l.* a day. The payments are invariably made in *shillings* and *siapences* — but the people seldom or never pay at the tally-shops; they rarely call there unless something else is wanted. The tally-shop keeper trusts one party on the recommendation of another; but guarantees are never required — certainly no *written* guarantees; and a verbal guarantee is, according to Lord Tenterden's act, not binding. It is part of the collector's business, besides getting money, to beat up for fresh customers in his walk.

The greater number of the small tally concerns are kept by Scotchmen; it is a curious fact, that when a "Tally-walk" is to be sold, which is often the case, a Scotchman's walk will bring 15 per cent. more than an Englishman's! It is believed to contain a better description of customers.

From the causes above mentioned, assisted, perhaps, by the salutary influence of Savings' Banks, this obnoxious trade is understood to be rather on the wane. It will never, however, be completely rooted out, except by adopting the plan we have previously suggested — (see CREDIT,) — for placing all small debts beyond the pale of the law; and the fact, that the adoption of this plan would have so beneficial a result, is an additional and powerful recommendation in its favour. In cases where failures take place, the creditors of a tally-shop keeper are in general *terrified* into the acceptance of a small composition. The very sight of the tally Ledgers, from 10 to 20 in number, containing debts from 5*s.* to 5*l.*, dotted over the pages, like a small pattern on a piece of printed cotton, and spread over every district in and round London, determines the creditors to accept of any offer, however small, rather than encounter the collection of such disreputable assets. In an affair of this kind recently concluded, where the business was under the management of a respectable accountant in the city, the whole debts due to the concern, good, bad, and doubtful, amounted to 8,700*l.*, while the number of debtors was 7,600! giving an average of 22*s.* 10*d.* each.

N. B. — This article has been compiled wholly from *private*, but *authentic*, information.

TAMARINDS (Ger. *Tamarinden*; Fr. *Tamaris*; It. and Sp. *Tamarindo*; Arab. *Umblic*; Hind. *Tintiri*), the fruit of the *Tamarindus Indica*, a tree which grows in the East and West Indies, in Arabia, and Egypt. In the West Indies the pods or fruit, being gathered when ripe, and freed from the shelly fragments, are placed in layers in a cask, and boiling syrup poured over them, till the cask be filled: the syrup pervades every part quite down to the bottom; and when cool, the cask is headed for sale. The East India tamarinds are darker coloured and drier, and are said to be preserved without sugar. When good, tamarinds are free from any degree of mustiness; the seeds are

hard, flat, and clean; and the strings tough and entire; and a clean knife thrust into them does not receive any coating of copper. They should be preserved in closely covered jars. — (*Thomson's Dispensatory.*) The duty on tamarinds produced, in 1832, 788*l.* 12*s.* 10*d.*

**TAPIOCA**, a species of starch or powder prepared from the roots of the *Jatropha manihot*, an American plant. The roots are peeled, and subjected to pressure in a kind of bag made of rushes. The juice which is forced out is a deadly poison, and is employed by the Indians to poison their arrows; but it deposits gradually a white starch, which, when properly washed, is innocent. What remains in the bag consists chiefly of the same starch. It is dried in smoke, and afterwards passed through a kind of sieve. Of this substance the cassava bread is made. — (*Thomson's Chemistry.*)

**TAR** (Fr. *Goulron*; Ger. *Theer*; It. *Cutrame*; Pol. *Smola gesta*; Rus. *Degot*, *Smolu shikhaja*; Sw. *Tjären*), a thick, unctuous substance, chiefly obtained from the pine, and other turpentine trees, by burning them in a close smothering heat.

The tar of the north of Europe is very superior to that of the United States, and is an article of great commercial importance. The process followed in making it has been described as follows by Dr. Clarke: — "The inlets of the gulf (Bothnia) every where appeared of the grandest character; surrounded by noble forests, whose tall trees, flourishing luxuriantly, covered the soil quite down to the water's edge. From the most southern parts of Westro-Bothnia, to the northern extremity of the gulf, the inhabitants are occupied in the manufacture of tar; proofs of which are visible in the whole extent of the coast. The process by which the tar is obtained is very simple: and as we often witnessed it, we shall now describe it, from a tar-work we halted to inspect upon the spot. The situation most favourable to the process is in a forest near to a marsh or bog; because the roots of the fir, from which tar is principally extracted, are always most productive in such places. A conical cavity is then made in the ground (generally in the side of a bank or sloping hill); and the roots of the fir, together with logs and billets of the same, being neatly trussed in a stack of the same conical shape, are let into this cavity. The whole is then covered with turf, to prevent the volatile parts from being dissipated, which, by means of a heavy wooden mallet, and a wooden stamper worked separately by two men, is beaten down and rendered as firm as possible above the wood. The stack of billets is then kindled, and a slow combustion of the fir takes place, without flame, as in making charcoal. During this combustion the tar exudes; and a cast iron pan being at the bottom of the funnel, with a spout which projects through the side of the bank, barrels are placed beneath this spout to collect the fluid as it comes away. As fast as the barrels are filled, they are bunged, and ready for immediate exportation. From this description it will be evident that the mode of obtaining tar is by a kind of distillation *per descensum*; the turpentine, melted by fire, mixing with the sap and juices of the fir, while the wood itself, becoming charred, is converted into charcoal. The most curious part of the story is, that this simple method of extracting tar is precisely that which is described by Theophrastus and Dioscorides; and there is not the smallest difference between a tar-work in the forests of Westro-Bothnia, and those of ancient Greece. The Greeks made stacks of pine; and having covered them with turf, they were suffered to burn in the same smothered manner; while the tar, melting, fell to the bottom of the stack, and ran out by a small channel cut for the purpose."

Of 10,752 lasts of tar imported in 1831, 7,770 were brought from Russia, 1,086 from Sweden, and 1,243 from the United States. The last contains 12 barrels, and each barrel 31½ gallons.

Tar produced or manufactured in Europe is not to be imported for home consumption, except in British ships, or in ships of the country of which it is the produce, or from which it is imported, under penalty of forfeiting the same, and 100*l.* by the master of the ship. — (3 & 4 Will. 4. c. 54.)

**TARE**, an abatement or deduction made from the weight of a parcel of goods, on account of the weight of the chest, cask, bag, &c. in which they are contained. Tare is distinguished into *real tare*, *customary tare*, and *average tare*. The first is the actual weight of the package; the second, its supposed weight according to the practice among merchants; and the third is the medium tare, deduced from weighing a few packages, and taking it as the standard for the whole. In Amsterdam, and some other commercial cities, tares are generally fixed by custom; but in this country, the prevailing practice, as to all goods that can be unpacked without injury, both at the Custom-house and among merchants, is to ascertain the real tare. Sometimes, however, the buyer and seller make a particular agreement about it. We have, for the most part, specified the different tares allowed upon particular commodities, in the descriptions given of them in this work. — (For the tares at Amsterdam, Bordeaux, &c., see these articles; see also **ALLOWANCES.**)

**TARE, VETCH, or FITCH**, a plant (*Vicia sativa*, L.in.) that has been cultivated in this country from time immemorial; principally for its stem and leaves, which are used in the feeding of sheep, horses, and cattle; but partly, also, for its seed. Horses thrive better upon tares than upon clover and rye grass; and cows that are fed upon

them give most milk. The seed is principally used in the feeding of pigeons and other poultry. In 1829, we imported 87,101 bushels of tares, principally from Denmark and Prussia.

**TARIFF**, a Table, alphabetically arranged, specifying the various duties, drawbacks, bounties, &c. charged and allowed on the importation and exportation of articles of foreign and domestic produce.

We intended at one time to have given the tariffs of some of the principal foreign states, and had some of them translated for that purpose; but, as the duties and regulations in them are perpetually changing, they would very soon have become obsolete, and would have tended more to mislead than to instruct. The circulars issued by foreign houses usually specify the duties on importation and exportation. But the reader will find, under the articles **DANTZIC**, **HAVRE**, **NEW YORK**, **TRIESTE**, &c., pretty full details as to the principal foreign tariffs. Subjoined is the British tariff.

**TARIFF (BRITISH). — 1st of January, 1854.**

**DUTIES OF CUSTOMS INWARDS.**

**Duties Inwards.** — The first column of the following Table contains an account of the existing duties payable on the importation of foreign products into Great Britain for home use, as the same were fixed by the act 3 & 4 Will. 4. c. 56. The next column exhibits the duties payable on the same articles in 1819, as fixed by the act 59 Geo. 3. c. 52; and the third and last column exhibits the duties as they were fixed in 1787, by Mr. Pitt's Consolidation Act, the 27 Geo. 3. c. 13. The reader has, therefore, before him, and may compare together, the present customs duties with the duties as they stood at the end of the late war, and at its commencement. No Table of the sort is to be met with in any other publication. We owe it to the kindness of Mr. J. D. Hume, of the Board of Trade, under whose direction it has been prepared. The duties are rated throughout in Imperial weights and measures.

A Table of the Duties of Customs payable on Goods, Wares, and Merchandise imported into the United Kingdom from Foreign Parts.

*Note.* — Goods on which duties are payable by measures of capacity, are rated according to the Imperial gallon and bushel.

| No drawback allowed on silver watch cases, chains, necklaces, beads, lockets, filigree work, shirt buckles or brooches, stamped medals, and spoons for china, stone, or earthenware teapots, whatever the weight; nor on tippings, swages, or mounts, not weighing 10 dwts. of silver each, and not being necks or collars for castors, or cruetts, or glasses, appertaining to   |          |  |          |  |

COUNTERVAILING DUTIES.

Schedule of countervailing duties payable on the importation of certain articles, the growth, produce, or manufacture of Great Britain and Ireland respectively; and of the drawbacks allowed on exportation from either country to the other. The following duties are payable on Irish articles brought for consumption into Great Britain, and the like amount is drawn back on the exportation of similar British articles to Ireland, except in the case of British hops sent to Ireland, on which no drawback is allowed.

|  | L. s. d. |  | L. s. d. |
|--|----------|--|----------|
| Bottles, of stone, not exceeding 2 quarts in measure, or the mouth or neck of which shall not exceed in diameter, in the narrowest part of the inside, 3 inches; or if made for blacking, and shall not exceed 1 pint in measure, and the mouth or neck of which shall not be less than 1 1/2 inch in diameter in the narrowest part of the inside, and which shall be permanently stamped with the words "blacking bottles," per cwt. | 0 5 0    | Plate, of wrought silver, per oz. Troy   | 0 0 6    |
| Bricks, not exceeding 10 inches long, 3 inches thick, and 5 inches wide, per 1,000   | 0 5 10   | Soap, viz. hard, per lb.   | 0 0 11   |
| exceeding the above dimensions, per 1,000  | 0 10 0   | soft, per lb.  | 0 0 1    |
| smoothed or polished on 1 or more sides, not exceeding 10 inches long by 5 inches wide, per 1,000  | 0 12 10  | Spirits, made and extracted in Ireland, and warehoused there without payment of duty and imported into England, for every 100 gallons Imperial measure, of spirits of the strength of proof, as denoted by Sykes's hydrometer, and so in proportion for any greater or less degree of strength, or any greater or less quantity.—(16 Geo. 4. c. 80. & Will. 4. c. 49.) | 37 10 0  |
| not exceeding 10 inches square, per 100  | 0 2 5    | duty paid in Ireland, and imported into England, per gallon  | 0 4 2    |
| exceeding 10 inches square, per 100  | 0 4 10   | Starch, or British gum, or any preparation of or from starch, per lb.  | 0 0 5    |
| Hops, per lb.  | 0 0 2    | All other articles, the growth, produce, or manufacture of Great Britain or Ireland, to pass from either country to the other without duty or drawback   |          |
| Plate, of wrought gold, per oz. Troy   | 0 16 0   |  |          |

Remarks on Duties Inwards. — The Table of duties inwards previously laid before the reader, affords copious materials for reflection and comparison. Excepting a very few articles, such as silk, linens, gloves, &c., that were prohibited, the highest duties in 1787 seldom exceeded 27. 10s. per cent. *ad valorem*. In the interval between 1787 and 1819 a good many changes were made in the mode of assessing the duties; several of those that were charged on the *ad valorem* principle at the former epoch, being changed into rated duties at the latter. The extraordinary rise of duties in the interval referred to is, however, the most striking circumstance. The fact, that in the arithmetic of the customs, 2 and 2, instead of always making 4, sometimes make only 1, was then totally forgotten.

During the war, it does not seem to have once occurred to any of our finance ministers, that every increase of price necessarily lessens consumption; and that, were twice the quantity of a commodity made use of, under a duty of 1s. or 5s. per lb., cwt. &c., that would be made use of under a duty of 2s. or 10s., the revenue would gain nothing by the increase, while the comforts of the consumers would be materially lessened. They proceeded on a more compendious plan; and concluded that, because an article subjected to a duty yielded a certain revenue, it would yield twice, three, or four times as much were the duty doubled, trebled, or quadrupled! Consistently with this principle, if we may so term it, the duties on tea were raised from 12½ to 100 per cent.; those on sugar from 12s. 4d. to 30s. a cwt.; on pepper from 3d. to 2s. 6d. per lb.; on brandy and geneva from 6s. to 22s. 6d. a gallon; on port wine from 37l. 16s. to 114l. 13s. a tun, &c.; while the *ad valorem* duties were mostly all either doubled or trebled! Mr. Van-~~ort~~ carried this system to an extreme; so much so, that the enormous additions made during his administration to the duties, by checking consumption, or diverting it into illegitimate channels, or both, in most cases added nothing whatever to the revenue, and frequently even occasioned its reduction! Since 1825, however, a very great improvement has been made in the system of duties. Many of those that were most oppressive have been materially reduced, while not a few have been wholly repealed; and we are glad to have to add, that in every instance in which oppressive duties have been adequately reduced, a greater amount of revenue has been derived from the lower rate of duty than from the higher. — (See COFFEE, MALT, SPIRITS, WINE, &c.) The existing tariff is, in fact, in many respects, preferable to that of 1787. The most objectionable of the present duties are those on timber, corn, brandy, geneva, sugar, tobacco, currants, and a few others; and of these, the first-mentioned 4 are not really imposed for the sake of revenue, but to bolster up peculiar interests. We have elsewhere pointed out the practical operation of the duties in question, and their mischievous influence on the public interests. — (See TIMBER, CORN LAWS AND CORN TRADE, BRANDY, &c.) It is not surely possible that these duties can be allowed to continue much longer on their present footing. Experience has shown that, instead of increasing, excessive duties powerfully contribute to diminish revenue; at the same time that they give rise to a vast amount of smuggling and demoralisation, which it is impossible to get rid of otherwise than by their reduction. It is, besides, the bounden duty of government to make the interests of the few submit to those of the many; and there is plainly neither sense nor justice in inflicting an injury on the public by imposing duties, not for the sake of revenue — the only legitimate purpose for which they can be imposed — but to enable a limited number of individuals to linger on in disadvantageous businesses. The change from a bad to a better system ought, no doubt, to be cautiously and gradually brought about. But the longer the period required for the transition, the less ought to be the delay in entering upon it.

*Drawbacks.* — The fewness of the drawbacks at present, compared with their number a few years ago, is a consequence of the extension of the warehousing and bonding system. When goods of all sorts may be freely imported and lodged in warehouses without paying any duty, the necessity of granting drawbacks is obviated; and, while all commercial operations are facilitated, frauds are prevented.

TARTAR. See ARGAL.

TATTA, a town in the territory of Sinde, situated about 60 miles in a direct line from the sea, at a short distance from the western bank of the river Indus, in lat. 24° 44' N., lon. 68° 17' E. Population uncertain, probably about 10,000. The streets are narrow and dirty; but the houses, though built of mud, chopped straw, and timber, are superior to the low huts seen in the adjoining towns and villages.

*Trade.* — Being situated a little above the part where the Indus divides into the two great branches by which its waters are poured into the Indian Ocean, it might be supposed that Tatta would be a place of great trade. But, owing to the unwholesomeness of the climate, the barbarism of the tribes on its banks, and other causes, its commerce has never corresponded with what might have been anticipated, looking at its position on the map. It had probably attained the acmé of its prosperity in the beginning of the 16th century. In 1555, the Portuguese, by way, as they stated, of avenging the treachery of the king of Sinde, inhumanly massacred 8,000 of the inhabitants, and burned the town. — (*Conquêtes des Portugais*, tome iv. p. 183.) It is probable that Tatta never fully recovered from this dreadful blow; but Mr. Hamilton mentions, that in the 17th century it was extensive and populous, possessing much commerce, with manufactures of silk, wool, and cabinet ware. The decayed state in which we now find it, has been a consequence of the misgovernment and rapacity of its present rulers, the Amers of Sinde, under whose sway it fell more than 40 years ago.

In 1635, the English established a factory at Tatta, in the view of facilitating the disposal of woollens and other goods in the countries traversed by the Indus; and the building occupied by the factory, though far from magnificent, was recently, if it be not still, the best, not in Tatta only, but in the whole country of Sinde.

The chief exports are rice, shawls from Cashmiers, opium from Malwah, hides, ghee, cotton, goats' wool, carpets, drugs, &c. Putchock, an article largely consumed in China, is a peculiar export of Sinde. The imports comprise a variety of articles, but the quantities are trifling; they consist principally of spices, dye stuffs, hardware, tin, iron, &c., broad cloths, English cottons, silks, &c. But at present the trade is quite inconsiderable; and no one could believe, *a priori*, that the natural emporium of so noble a river as the Indus, traversing many rich and extensive countries, would cut so insignificant a figure in the trading world.

**Indus.**— Its navigation by Alexander the Great has conferred on the Indus a classical celebrity not to be matched by any other river of the East. Its magnitude, too, is worthy of its fame. It may be navigated by flat-bottomed boats as far as Attock; and its tributary stream, the Ravee, one of the Punjab rivers, is navigable as far as Lahore; both places being fully 1,000 miles from the sea. Unluckily, its mouths are much encumbered by sand banks; and, owing to the violence of the bore or tide, their navigation is attended with considerable difficulty and danger. This is no doubt the reason that at present the navigation through the delta of the Indus is quite deserted: all the products brought down the river destined for exportation by sea, being conveyed from Tatta over-land to Curachee, a sea-port a little to the north of the most northerly mouth of the river, about 60 miles in a direct line from Tatta. Above this city the current of the river is not rapid. The boats by which it is navigated are called *domains*, seldom exceeding 50 tons burden; and drawing, when laden, about 4 feet water. They have two masts, and, with a good wind, make their way against the stream at the rate of about 3 miles an hour. They are a sort of floating houses; resembling in this respect the Chinese junks.

There would seem to be no river in the world where steam navigation might be applied more advantageously than the Indus. But until the country near its embouchure fall under the sway of some more enlightened and less rapacious rulers than those by whom it is now possessed, little improvement need, we are afraid, be expected. But should Sindh be conquered by some civilised people, or should its present rulers learn to respect the right of property, and to encourage industry, it would not be easy to exaggerate the importance of the Indus as a commercial highway. The navigable rivers of the Punjab that fall into it, lay open a vast extent of rich and fruitful country, with great commercial resources. It is not, indeed, possible to estimate the extent of the trade that would be carried on by the channel of the Indus, did security and good order prevail on its banks; and there is reason to think that some progress is making towards their establishment.

The delta of the Indus has little in common with the delta of the Nile, except its shape. Not a fourth part of it is cultivated, and its few inhabitants principally lead a pastoral life. It is overgrown with tamarisks and other wild shrubs; and, though intersected by the numerous mouths of the river, its surface is dry and arid, and it is in a great degree destitute of fresh water. The unfavourable appearance of this tract of country does not, however, generally speaking, depend on any infertility of soil, but on the neglect of cultivation arising out of the oppression under which the people live. Mr. Burnes says, that in most places it requires little or no labour on the part of the husbandman to prepare the land; and the seed, scattered without care or attention, yields a plentiful harvest. But where property is insecure, even this little labour is not expended. — (See a *Memoir on the Indus*, by Lieut. Burnes, in the 3d vol. of the *Journal of the London Geographical Society*; *Hamilton's East India Gazetteer*, articles *Indus*, *Tatta*, &c.)

**Money, Weights, and Measures.**—Accounts are kept in rupees, carlavs, and pice: 12 pice = 1 carlav; 50 carlavs = 1 rupee. Cowries are current in Sindh, 40 cowries = 1 pice.

**Small Weights.**—24 Mobas = 1 Ruttee.  
6 Ruttees = 1 Massa.  
12 Massas = 1 Toiah.

**Gross Weights.**—4 Pice = 1 Anna.  
16 Annas = 1 Pucca seer.  
40 Seers = 1 Maund, or 73 lbs. 5 oz.  
7 dwts. avoirdupois.

**Long Measure.**—1 Garce = 2 inches.  
16 Garces = 1 Guz; but 1 guz cloth = 24 inches at Tatta.

**Grain Measure.**—4 Puttons = 1 Twier.  
4 Twiers = 1 Cossa.  
60 Cossas = 1 Carval of wheat; or 22 Pucca maunds, or 21 Bombay paras.

Diamonds and pearls are sold by hubbas and ruttees—8 hubbas = 1 ruttee, about 2 grs. Troy. — *Milburn's Orient. Com. merc.*

**TEA** (in one dialect of Chin. *Cha*; in another *Te*; Du. *Te*; Fr. *Thé*; It. *Te*; Rus. *Tchai*; Hind. *Cha*; Malay, *Teh*), the leaves of the tea tree or shrub (*Thea viridis* Lin.).

#### I. DESCRIPTION OF THE TEA PLANT. — TEA TRADE OF CHINA.

#### III. EAST INDIA COMPANY'S MONOPOLY — INFLUENCE OF, ON THE PRICE OF TEA — CONDITIONS UNDER WHICH IT WAS HELD — ABOLITION OF.

#### IV. DUTIES ON TEA. — CONSUMPTION OF, ON THE CONTINENT AND IN THE UNITED STATES, ETC.

#### I. DESCRIPTION OF THE TEA PLANT. — TEA TRADE OF CHINA.

**Description of the Plant.**— *Places where it is cultivated.*— The tea plant ordinarily grows to the height of from 3 to 6 feet, and has a general resemblance to the myrtle, as the latter is seen in congenial situations in the southern countries of Europe. It is a polyandrous plant, of the natural order *Columnifera*, and has a white blossom, with yellow style and anthers, not unlike those of a small dog-rose. The stem is bushy, with numerous branches, and very leafy. The leaves are alternate, on short, thick, channelled footstalks, evergreen, of a longish elliptic form, with a blunt, notched point, and serrated except at the base. These leaves are the valuable part of the plant. The *Camellias*, particularly the *Camellia Sasanqua*, of the same natural family as the tea tree, and very closely resembling it, are the only plants liable to be confounded with it by a careful observer. The leaves of the particular camellia just named are, indeed, often used in some parts of China, as a substitute for those of the tea tree.

The effects of tea on the human frame are those of a very mild narcotic; and, like those of many other narcotics taken in small quantities, — even of opium itself, — they are exhilarating. The green varieties of the plant possess this quality in a much higher degree than the black; and a strong infusion of the former will, in most constitutions, produce considerable excitement and wakefulness. Of all narcotics, however, tea is the least pernicious; if, indeed, it be so at all in any degree, which we very much doubt.

The tea shrub may be described as a very hardy evergreen, growing readily in the open air, from the equator to the 45th degree of latitude. For the last 60 years, it has been reared in this country, without difficulty, in greenhouses; and thriving plants of it are to be seen in the gardens of Java, Singapore, Malacca, and Penang; all within 6

degrees of the equator. The climate most congenial to it, however, seems to be that between the 25th and 33d degrees of latitude, judging from the success of its cultivation in China. For the general purposes of commerce, the growth of good tea is confined to China; and is there restricted to 5 provinces, or rather parts of provinces, viz. Fokien and Canton, but more particularly the first, for black tea; and Kiang-nan, Kiang-si, and Che-kiang, but chiefly the first of these, for green. The tea districts all lie between the latitudes just mentioned, and the 115th and 122d degrees of East longitude. However, almost every province of China produces more or less tea, but generally of an inferior quality, and for local consumption only; or when of a superior quality, like some of the fine wines of France, losing its flavour when exported. The plant is also extensively cultivated in Japan, Tonquin, and Cochin-China; and in some of the mountainous parts of Ava; the people of which country use it largely as a kind of *pickle preserved in oil!*

Botanically considered, the tea tree is a single species; the green and black, with all the diversities of each, being mere varieties, like the varieties of the grape, produced by difference of climate, soil, locality, age of the crop when taken, and modes of preparation for the market. Considered as an object of agricultural produce, the tea plant bears a close resemblance to the vine. In the husbandry of China, it may be said to take the same place which the vine occupies in the southern countries of Europe. Like the latter, its growth is chiefly confined to hilly tracts, not suited to the growth of corn. The soils capable of producing the finest kinds are within given districts, limited, and partial. Skill and care, both in husbandry and preparation, are quite as necessary to the production of good tea, as to that of good wine.

The best wine is produced only in particular latitudes, as is the best tea; although, perhaps, the latter is not restricted to an equal degree. Only the most civilised nations of Europe have as yet succeeded in producing good wines; which is also the case in the East with tea; for the agricultural and manufacturing skill and industry of the Chinese are there unquestionably pre-eminent. These circumstances deserve to be attended to, in estimating the difficulties which must be encountered in any attempt to propagate the tea plant in colonial or other possessions. These difficulties are obviously very great; and, perhaps, all but insuperable. Most of the attempts hitherto made to raise it in foreign countries were not, indeed, of a sort from which much was to be expected. Within the last few years, however, considerable efforts have been made by the Dutch government of Java, to produce tea on the hills of that island; and having the assistance of Chinese cultivators from Fokien, who form a considerable part of the emigrants to Java, a degree of success has attended them, beyond what might have been expected in so warm a climate. The Brazilians have made similar efforts; having also, with the assistance of Chinese labourers, attempted to propagate the tea shrub near Rio de Janeiro; and a small quantity of tolerably good tea has been produced. But owing to the high price of labour in America, and the quantity required in the cultivation and manipulation of tea, there is no probability, even were the soil suitable to the plant, that its culture can be profitably carried on in that country.

It might probably be successfully attempted in Hindostan, where labour is comparatively cheap, and where the hilly and table lands bear a close resemblance to those of the tea districts of China; but we are not sanguine in our expectations as to the result.

*Species of Tea.* — *Manner in which they are manufactured.* — The black teas usually exported by Europeans from Canton are as follows, beginning with the lowest qualities: — Bohea, Congou, Souchong, and Pekoe. The green teas are Twankay, Hyson skin, young Hyson, Hyson, Imperial, and Gunpowder. All the black teas exported (with the exception of a part of the bohea, grown in Woping, a district of Canton) are grown in Fokien — a hilly, maritime, populous, and industrious province, bordering to the north-east on Canton. Owing to the peculiar nature of the Chinese laws as to inheritance, and probably, also, in some degree, to the despotic genius of the government, landed property is much subdivided throughout the empire; so that tea is generally grown in gardens or plantations of no great extent. The plant comes to maturity and yields a crop in from 2 to 3 years. The leaves are picked by the cultivator's family, and immediately conveyed to market; where a class of persons, who make it their particular business, purchase and collect them in quantities, and manufacture them in part; that is, expose them to be dried under a shed. A second class of persons, commonly known in the Canton market as "the tea merchants," repair to the districts where the tea is produced, and purchase it in its half-prepared state from the first class, and complete the manufacture by garbling the different qualities; in which operation, women and children are chiefly employed. A final drying is then given, and the tea packed in chests, and divided, according to quality, into parcels of from 100 to 600 chests each. These parcels are stamped with the name of the district, grower, or manufacturer, exactly as is practised with the wines of Bordeaux and Burgundy, the indigo of Bengal, and many other commodities; and, from this circumstance, get the name of *chops*, the Chinese

term for a seal or signet. Some of the leaf-buds of the finest black tea plants are picked early in the spring, before they expand. These constitute pekoe, or black tea of the highest quality; sometimes called "white-blossom" tea, from there being intermixed with it, to give it a higher perfume, a few blossoms of a species of olive (*Olea fragrans*), a native of China. A second crop is taken from the same plants in the beginning of May, a third about the middle of June, and a fourth in August; which last, consisting of large and old leaves, is of very inferior flavour and value. The younger the leaf, the more high flavoured, and consequently the more valuable, is the tea. With some of the congous and souchongs are occasionally mixed a little pekoe, to enhance their flavour; and hence the distinction, among the London tea dealers, of these sorts of tea, into the ordinary kinds and those of "Pekoe flavour." Bohea, or the lowest black tea, is partly composed of the lower grades; that is, of the fourth crop of the teas of Fokien, left unsold in the market of Canton after the season of exportation has passed; and partly of the teas of the district of Woping in Canton. The green teas are grown and selected in the same manner as the black, to which the description now given more particularly refers; and the different qualities arise from the same causes. The gunpowder here stands in the place of the pekoe; being composed of the unopened buds of the spring crop. Imperial, hyson, and young hyson, consist of the second and third crops. The light and inferior leaves, separated from the hyson by a winnowing machine, constitute hyson skin,—an article in considerable demand amongst the Americans. The process of drying the green teas differs from that of the black; the first being dried in iron pots or vases over a fire, the operator continually stirring the leaves with his naked hand. The operation is one of considerable nicety, particularly with the finer teas; and is performed by persons who make it their exclusive business.

*Tea Trade in China.*—The tea merchants commonly receive advances from the Hong merchants and other capitalists of Canton; but, with this exception, are altogether independent of them; nor have the latter any exclusive privilege or claim of pre-emption. They are very numerous; those connected with the green tea districts alone being about 400 in number. The black tea merchants are less numerous, but more wealthy. The greater part of the tea is brought to Canton by land carriage or inland navigation, but chiefly by the first: it is conveyed by porters; the roads of China, in the southern provinces, not generally admitting of wheel carriages, and beasts of burden being very rare. A small quantity of black tea is brought by sea, but probably smuggled; for this cheaper mode of transportation is discouraged by government, which it deprives of the transit duties levied on inland carriage. The length of land carriage from the principal districts where the green teas are grown, to Canton, is probably not less than 700 miles; nor that of the black tea, over a more mountainous country, less than 200 miles. The tea merchants begin to arrive in Canton about the middle of October, and the busy season continues until the beginning of March; being briskest in November, December, and January. Tea, for the most part, can only be bought from the Hong or licensed merchants; but some of these, the least prosperous in their circumstances, are supported by wealthy *outside* merchants, as they are called; and thus the trade is considerably extended. The prices in the Canton market vary from year to year with the crop, the stock on hand, and the external demand, as in any other article, and in any other market. After the season is over, or when the westerly monsoon sets in, in the month of March, and impedes the regular intercourse of foreigners with China, there is a fall in the price of tea, not only arising from this circumstance, but from a certain depreciation in quality, from the age of the tea; which, like most other vegetable productions, is injured by keeping, particularly in a hot and damp climate.

*Foreign Trade in Tea.*—There seems to be little mystery in the selection and purchase of teas; for the business is both safely and effectively accomplished, not only by the supercargoes of the American ships, but frequently by the masters; and it is ascertained from the sales at the East India House, that there is no difference between the qualities of the teas purchased by the commanders and officers of the Company's ships, without any assistance from the officers of the factory, and those purchased for the Company by the latter. An unusual degree of good faith, indeed, appears to be observed, on the part of the Chinese merchants, with respect to this commodity; for it was proved before the select committee of the House of Commons, in 1830, that it is the regular practice of the Hong merchants to receive back, and return good tea for, any chest or parcel upon which any fraud may have been practised, which sometimes happens in the conveyance of the teas from Canton on board ship. Such restitution has occasionally been made even at the distance of 1 or 2 years. The Company seem to enjoy no advantage over other purchasers in the Canton market, except that which the largest purchaser has in every market, viz. a selection of the teas, on the payment of the same prices as others; and this advantage they enjoy only as respects the black teas; for the Americans are the largest purchasers of green teas.

We subjoin a Table for calculating the cost of tea:—

II. Account of the Quantity of Tea remaining for Home Consumption in Great Britain from 1711 to 1780, obtained by deducting the Quantity exported from the Quantity sold at the Company's Sales.

| Year | Lbs.      | 1740 | Lbs.      | 1765 | Lbs.      | 1782 | Lbs.       |
|------|-----------|------|-----------|------|-----------|------|------------|
| 1711 | 141,905   | 1740 | 1,302,549 | 1765 | 4,906,546 | 1782 | 4,166,854  |
| 1715 | 180,059   | 1745 | 2,379,183 | 1770 | 7,235,538 | 1783 | 3,167,611  |
| 1720 | 257,004   | 1750 | 2,114,922 | 1775 | 5,475,498 | 1784 | 8,608,473  |
| 1725 | 286,494   | 1755 | 2,758,131 | 1780 | 5,588,315 | 1785 | 13,163,715 |
| 1731 | 537,016   | 1760 | 2,993,613 | 1781 | 3,578,499 | 1786 | 13,985,501 |
| 1735 | 1,380,199 |      |           |      |           |      |            |

N.B. — We have extracted this account from that given from the Company's records in *Milburn's Oriental Commerce* (vol. ii. p. 534). There is an account, furnished by the Excheq. of the quantities of tea retained for home consumption from 1725 to 1832, in the *Appendix to the First Report of the Commissioners of Excise Inquiry*. It appears, however, to involve some very material errors. Thus, it represents the consumption from 1768 to 1772, both inclusive, as under 300,000 lbs. a year, at the same time that it makes the consumption, in the immediately preceding and subsequent years, above 4,000,000 lbs. A statement of this sort is obviously inaccurate; and yet it is not accompanied by a single remark or explanation of any sort.

III. A Return of the Quantities and Prices of the several Sorts of Tea sold by the East India Company, in each Year during the present Charter (1st of May to 1st of May).

It appears from the first of the foregoing Tables, making allowance for the increase of population, that the consumption of tea in Great Britain has been about stationary, or has rather diminished, from 1800 to the present period. This has been occasioned partly, perhaps, by the increased use of coffee; but more, we think, by the enhanced price arising out of the increase of the duty, and the operation of the monopoly. In Ireland, the consumption has been about stationary since 1801, notwithstanding the population has more than doubled in the interval.

### III. EAST INDIA COMPANY'S MONOPOLY — INFLUENCE OF, ON THE PRICE OF TEA — CONDITIONS UNDER WHICH IT WAS HELD — ABOLITION OF.

From its origin down to the present year (1834), the tea trade has been monopolised by the East India Company. Considerable quantities of tea have, indeed, been at different times smuggled into the country; but no British subject, not authorised by the Company, was ever allowed openly to import tea. Being thus the *only sellers*, they had it in their power, by limiting the quantity brought to market, to raise its price above its natural elevation, and to realise immense profits at the expense of the public. They might, no doubt, have declined availing themselves of this power; but no such forbearance could be rationally expected from the Company, or from any other body of men. All individuals and associations exert themselves to obtain the highest price for whatever they have to sell: and it is found that those who are protected from the competition of others, or who have obtained a monopoly of any market, invariably raise the price of their commodities to a very high pitch. The East India Company have done this, probably, to a less extent than most other bodies that have enjoyed such exclusive privileges. Still, however, it is an undoubted fact that *the teas sold by them of late years cost the people of Britain upwards of 1,500,000*l.* a year more than they would have cost had they been sold at the price at which teas of equal quality were sold, under a system of free competition, in New-York, Hamburg, Amsterdam, &c.* — (For proofs of this statement, see former edition of this Dictionary, p. 1031.)

The legislature endeavoured, at different periods, to prevent the Company from abusing their monopoly, by enacting regulations as to the sale of tea; and though no longer of any practical importance, it may still be worth while briefly to notice some of the more important, and the means by which they were defeated. In 1745, for example, a very great deduction was made from the amount of the tea duties; and by a statute passed in that year (18 Geo. 2. c. 26.), it was enacted, in order to prevent the Company from depriving the public of the benefit of this reduction, that in case the tea imported by the East India Company shall not always be sufficient to answer the consumption thereof in Great Britain, and to *keep the price of tea in this country upon an equality with the price thereof in the neighbouring Continent of Europe*, it shall be lawful for the said Company, and their successors, to import into Great Britain such quantities of tea as they shall think necessary from any part of Europe: and by another section of the same statute, it is enacted, that if the East India Company shall, at any time, neglect to keep the British market supplied with a *sufficient quantity of tea at reasonable prices*, it shall be lawful for the Lords of the Treasury to *grant licences to any other person or persons, body politic or corporate, to import tea into Great Britain from any part of Europe*.

Had this statute been enforced, it would certainly have restrained the demands of the Company within reasonable limits; but it was very soon forgotten, and the Company continued, as before, to sell their teas at an enormous advance as compared with their prices in Hamburg and Amsterdam.

The same well-founded jealousy, which dictated the act of 1745, was again displayed in the proceedings at the reduction of the duties in 1784. It was then enacted (24 Geo. 3. c. 38.), that the East India Company should make 4 sales of tea every year, as near as conveniently may be at equal distances of time from each other, and should put up at such sales such quantities of tea as may be judged sufficient to supply the demand; and at each sale, the tea to be put up shall be sold without reserve to the highest bidder, provided an advance of 1*d.* per lb. be bid upon the price at which the same is put up. By another clause it was enacted, that it should not be lawful for the East India Company "to put up their teas for sale at any price which shall, upon the whole of the teas so put up at any sale, exceed the prime cost thereof, with the freight and charges of importation, together with lawful interest from the time of arrival of such teas in Great Britain, and the common premium of insurance as a compensation for the sea risk incurred thereon." The Company were further ordered to keep a stock, equal to at least 1 year's consumption, according to the sales of the preceding year, always beforehand. And they were bound to lay before the Lords of the Treasury, copies of the accounts and estimates upon which their orders for importation, prices for sale, and quantities put up to sale, should be grounded.

The object of these conditions is obvious. They were intended to secure a plentiful supply of tea to the public, and to prevent its being sold at an oppressive increase of price. But monopoly and low prices are altogether incompatible. The conditions now referred to were, as to all practical purposes at least, quite inoperative.

1. In the first place, the Company made various additions to the prime cost, and consequently to the putting up price of their tea, which they ought not to have made, but which the Lords of the Treasury, had they been so disposed, could hardly disallow.

They always, for example, charged the cost of the factory at Canton the price of tea. This establishment consisted of about 20 persons, and cost at an average about 100,000*l.* a year! We do not presume to say that it was altogether useless. Undoubtedly, however, it might have been conducted at half the expense. It is a fact, that the whole American business at Canton has been transacted by the captains of the ships; and every one knows that they have had fewer disturbances with the natives than the English.

2. In the second place, it was established by the evidence taken before the select committee of 1830, that the Company had for many years thrown the whole losses arising from their outward investment upon tea, by estimating the value of the tael, or Chinese money in which the accounts are kept, at the price which it cost for the purpose of being vested in tea. This was a complete evasion of the provisions of the statute; but it was one which it was very difficult, if not impossible, to defeat.

3. In the third place, the obligation imposed on the Company, of keeping a year's supply of tea in their warehouses, contributed both to raise its price, and deteriorate its quality. From a return made to an order of the select committee of the House of Commons in 1830 (*First Report*, App. p. 23.), it appears that the shortest time any tea sold by the Company had been in store was 14 months; and that, at an average, all the teas sold during the 3 years ending with 1829 had been 17 months in store. But, according to the evidence of the most respectable American witnesses, the black and coarser kinds of tea are depreciated at least 5 per cent. by being kept a twelvemonth, and are, indeed, hardly saleable after the arrival of fresh teas from China. Adding, therefore, warehouse rent, interest of capital, and insurance for 17 months, to the deterioration in point of quality, we may estimate the loss to the public, by this well-meant but most injudicious interference of the legislature, at 15 per cent. upon the price of all the teas sold.

4. In the fourth place, it is obvious, even supposing the prime cost of the Company's teas had not been improperly enhanced, that the regulation obliging them to be sold at an advance of 1*d.* per lb. if offered, on the putting-up price, could not be otherwise than nugatory. Had the trade been open, private merchants would have undersold each other, until the price of tea like that of sugar or coffee, had been reduced to the very lowest point that would yield the sellers the customary rate of profit. But the Company was in an entirely different situation. Being the *only sellers*, they invariably *understocked* the market. Instead of bringing forward such quantities of tea as might have occasioned its sale at a small advance upon the upset price, they adjusted the supply so that the price was raised to a much higher elevation. Now, it will be observed, that all that this system of management put into the Company's coffers consisted of *extra profit*; for the putting up price embraced every item that could fairly enter into the cost of the tea, including both *interest* on capital and insurance, and including also, as we have seen, several items that had but little to do with it. To show the extent to which this source of profit was cultivated, we may mention, that at the June sale in 1830, the Company put up congo at 1*s.* 8*d.* and 2*s.* 1*d.* per lb.; the lowest sort, or that put up at 1*s.* 8*d.*, being sold partly at 2*s.* 1½*d.*, being an advance of *twenty-two and a half* per cent., and partly at 2*s.* 5*d.*, being an advance of *forty-five* per cent.; while the highest sort, or that put up at 2*s.* 1*d.*, was sold partly at 2*s.* 2*d.*, being an advance of *four* per cent., and partly at 3*s.* 7*d.*, being an advance of no less than *seventy-two* per cent. above the upset price; that is, above a price calculated to yield *ordinary profits*. Mr. Mills, an intelligent and extensive wholesale tea merchant, in a paper laid before the recent committee of the House of Lords on East India affairs, showed, that the advance on the teas sold at the Company's June sale in 1830, above the putting-up price, amounted to 122,177*l.* 18*s.* 1*d.*; and as there are 4 such sales in the year, the total advance must have been about 500,000*l.*; and this was considerably under what it had been a few years previously!

These statements show generally how the Company defeated the provisions of the act of 1784, and, indeed, turned them to its own advantage. But, as already observed, nothing else could be expected. It is nugatory to attempt to combine monopoly with low prices and good qualities. They never have existed, and it is not possible they ever should exist, together. Monopoly is the parent of dearness and scarcity; freedom, of cheapness and plenty.

Great, however, as was the sacrifice entailed on the people of Britain by the Company's monopoly, it is doubtful whether it yielded any considerable amount of revenue to the Company. Every one, indeed, must be satisfied, on general grounds, that it was impossible for the Company to make any thing like the same profits by the privileges conceded to them, that would have been made by private individuals enjoying similar advantages. "The spirit of monopolists," to borrow the just and expressive language of Gibbon, "is narrow, lazy, and oppressive. Their work is more costly and less productive than that of independent artists; and the new improvements so eagerly grasped by the competition of freedom, are admitted with slow and sullen reluctance, in those

proud corporations above the fear of a rival, and below the confession of an error. We have no doubt that the directors of the East India Company were disposed to extend its commerce, and to manage it according to the most approved principles, but they were wholly without the means of giving effect to their wishes. They had to operate through servants; and is it to be imagined that the *employés* of such bodies will ever display that watchful attention to their interests, or conduct the business intrusted to their care with the unsparing economy practised by private merchants trading on their own account, superintending their own concerns, and responsible in their own private fortunes for every error they may commit? The affairs of the Company, notwithstanding the efforts of the directors to introduce activity and economy, have always been managed according to a system of routine. Their captains and mercantile agents were, we doubt not, "all honourable men;" but it were an insult to common sense to suppose that they may be compared for a moment with individuals trading on their own account, in the great equisites of zeal, conduct, and skill.

Several gentlemen of great knowledge and experience, who have carefully inquired into the state of the Company's affairs, have expressed their decided conviction, that they made nothing by the tea trade! — the increased price at which they sold the article not being more than sufficient to balance the immense expenses incident to the monopoly! Perhaps this statement may be somewhat exaggerated, though we incline to think it is not far from the mark.—(See *antè*, p. 535.) Taking, however, the accounts laid by the Company before the late committee on Indian affairs, as they stand, it would appear that the profits realised by them during the 3 years ending with 1827-28 amounted to 2,542,569*l.*, being at the rate of 847,523*l.* a year. — (*Appen. to Second Report of Select Committee of 1830*, p. 95.) But we have already seen that the excess of price received by the Company for their teas, over the price of similar teas sold at New York and Hamburgh, has been above 1,500,000*l.* a year; so that, according to the Company's own showing, their monopoly occasioned an *absolute loss* of 652,477*l.* exclusive of its mischievous influence in lessening the consumption of tea, and in excluding our trade with China to less than a third of what it will probably amount to under a system giving free scope to the energies of individual enterprise.

The renewal of a monopoly productive of such results was, therefore, wholly out of the question. There was hardly, indeed, in 1833, an individual in the empire out of the pale of the Company who was not anxious for the opening of the trade to China; and the act 3 & 4 Will. 4. c. 93.—(see *antè*, p. 241.)—abolishing the Company's monopoly, and making it lawful for all individuals to import tea, was passed with almost no opposition.

#### IV. DUTIES ON TEA. — CONSUMPTION OF, ON THE CONTINENT AND IN THE UNITED STATES, ETC.

Down to the 22d of April, 1834, the duty on tea was an *ad valorem* one, being 96 per cent. on all teas sold under 2*s.* a pound, and 100 per cent. on all that were sold at or above 2*s.* Seeing that tea may now be considered almost as a necessary of life, this was, certainly, a high duty; though, as a large amount of revenue must be raised, we do not know that it could be fairly objected to on that ground. But under the monopoly system, the duty was, in fact, about 200 per cent. *ad valorem*! For, the price of the tea sold by the Company being forced up to nearly double what it would have been had the trade been free, it followed, inasmuch as the duty varied directly as the price, that it also was doubled when the latter was doubled. The price of con tea at Hamburgh, for example, varies from 1*s.* 2*d.* to 1*s.* 4*d.* per lb.; and had the Company supplied our markets with congou at the same rate, it would have cost us, duty included, from 2*s.* 2*d.* to 2*s.* 8*d.* per lb. But instead of this, the congou sold by the Company has been, at an average, a good deal above 2*s.* per lb.; and, the duty being as much, it has invariably cost us from 4*s.* to 5*s.* per lb. Hence, though the duty was only 100 per cent. on the Company's price, it was really above 200 per cent. on the price of tea in an open market! The mischief of the monopoly was thus aggravated almost beyond endurance; inasmuch as every addition made by it to the cost of the article, made an equal addition to the duty on it.

But this system is now happily at an end. The *ad valorem* duties ceased on the 22d of April, 1834; and all tea imported into the United Kingdom for home consumption is now charged with a customs duty as follows: —

|   |   |   |   |                                 |
|---|---|---|---|---------------------------------|
| Bohea   | - | - | - | 1 <i>s.</i> 6 <i>d.</i> per lb. |
| Congou, twankay, hyson skin, orange pekoe, and campoi   | - | - | - | 2 <i>s.</i> 2 <i>d.</i> —       |
| Souchong, flowery pekoe, hyson, young hyson, gunpowder, imperial, and other teas not enumerated | - | - | - | 3 <i>s.</i> 0 <i>d.</i> —       |

If we compare these duties with the prices of tea at New York and Hamburgh, they will be found to be exceedingly heavy, particularly on bohea and congou. It is pretty certain, that, at no distant period, bohea will be sold, exclusive of the duty, at or under

1s. per lb. \*; and supposing this to be the case, the present fixed duty will be equivalent to an *ad valorem* duty of 150 per cent. ! But to impose such a duty on an article fitted to enter largely into the consumption of the lower classes, seems to be in the last degree oppressive and absurd. It will go far to neutralise the beneficial effects that would otherwise result from the abolition of the monopoly; and cannot fail, by confining the consumption of the article within comparatively narrow bounds, to render the duty less productive than it would be were it lower. Nothing can be more injurious, both in a commercial and financial point of view, than the imposition of oppressive duties on articles, the consumption of which would be materially extended by a fall of price; and that such is the case with bohea is beyond all question. The Company, by reducing its price from about 2s. 6d. to 1s. 10½d. per lb. (which was, of course, accompanied by a corresponding reduction of duty), increased the consumption from 1,873,881 lbs. in 1822-23, to 6,474,838 lbs. in 1831-32. Here we have the consumption more than trebled by a fall of about 1s. 3d. per lb. And we have not the slightest doubt that a further fall of 1s. 3d. would, by bringing the article fairly within the command of a vastly greater number of consumers, extend the demand for it in a much greater degree. But it is hardly possible that such a reduction should take place, unless 6d. be taken from the duty. We trust, however, that this may be done. At 1s. per lb., the duty would undoubtedly yield more than it will ever do at 1s. 6d. We may also add that nothing would do so much to weaken the pernicious habit of gin-drinking, as a fall in the price of tea, coffee, &c. And it is not to be endured that the price of such desirable articles should be raised to an exorbitant height by duties, that would be more productive of revenue were they effectually reduced.

It has been wholly owing to their exorbitant prices, that notwithstanding the English are the richest people in the world, and that the taste for tea is so very generally diffused amongst us, we consume very little of the superior qualities! Indeed, some of the finest are not to be met with in our markets; and while about a dozen kinds of tea are regularly quoted in the *Hamburgh*, *Amsterdam*, and *New York Price Currents*, there are never more than 7, and sometimes only 6, species to be met with here. *Imperial*, a very fine green tea, regularly imported into *America*, and all parts of the *Continent*, is unknown in the *English market*. *Singlo*, once imported by the Company, has disappeared for about 50 years. *Pekoe* and *gunpowder*, the finest qualities of black and green, are little known in the *English market*; and have been only imported in small quantities by the officers of the Company's ships.

The abolition of the monopoly will, no doubt, introduce a greater variety of teas; and, by lowering their price, will materially extend the demand for those of a superior quality. The fixed duty on the finer teas is, when compared to their prices, a good deal less than that laid on bohea and congou. But a preference of this sort ought not to exist, or to exist only in favour of the coarser teas, or of those consumed by the mass of the people. A duty even of 1s. on bohea would be very decidedly higher than a duty of 3s. on imperial and gunpowder.

We subjoin an abstract of the act 3 & 4 Will. 4. c. 101. regulating the tea duties.

*Tea importable into the U. K. from the Cape of Good Hope, &c.* — From and after the 22d of April, 1834, it shall be lawful to import any tea into the United Kingdom from the Cape of Good Hope, and from places eastward of the same to the Straits of Magellan, and not from any other place. — § 1.

*Tea importable into British Possessions, &c.* — It shall be lawful to import any tea into any of the islands of Guernsey, Jersey, Alderney, or Sark, or into the British possessions of America, from the Cape of Good Hope and places eastward of the same to the Straits of Magellan, or from the United Kingdom, and not from any other place. — § 2.

*Duties.* — From and after the 22d of April, 1834, the duties of excise payable upon tea shall cease and determine, except as hereafter provided, and in lieu of such duties, there shall be paid the duties of customs set forth in the Table following; and such duties shall be raised, levied, collected, and paid unto his Majesty, and shall be appropriated and applied in like manner as if the same had been imposed by an act passed in the present session of parliament for granting duties of customs; viz.

Table of Duties on Tea in Warehouse, or imported into the United Kingdom :

| Tea, viz.  | L. s. d. | L. s. d.  |
|--|----------|---|
| Bohea, per lb.   | 0 1 6    | Souchong, flowery pekoe, hyson, young hyson, gunpowder, imperial, and other sorts not enumerated, per lb. |
| Congou, twankay, hyson skin, orange pekoe, and campol, per lb. | 0 2 2    | 0 3 0   |

Provided, that nothing herein contained shall alter or affect the duties payable upon tea sold by the East India Company at their public sales, prior to the said 22d of April, 1834; provided also, that the allowance commonly called draft, made by the commissioners of excise in the weighing of tea, shall be made by the commissioners of customs under the authority of this act. — § 3.

*Abatement for Sea Damage not allowed.* — No abatement of duty shall be made on account of damage received by tea during the voyage; but it shall be lawful for the importer to separate the damaged parts, and to abandon the same to the commissioners of the customs for the duty. — § 4.

*Mixed Tea liable to highest Duty.* — If different sorts of tea mixed together be imported in the same package, the whole shall be liable to the highest rate of duty to which any of such sorts would be separately liable; and if 2 or more sorts of tea not perfectly mixed together be imported in 1

\* The price of bohea in the *New York market*, in *January, 1834*, was from 13 to 16 cents per lb.; that is, about 7½d. Should the price of bohea sink to this level in *London*, the duty would be nearly 300 per cent. on its value! — (See *post*.)

package, the same shall be forfeited, and may be seized, sued for, recovered, and dealt with in the same manner as any forfeiture incurred under any law relating to the customs. — § 5.

**Importation of Tea to be under the Customs.** — From and after the passing of this act, it shall be lawful for the Lords of the Treasury, by warrant under the hands of 3 or more of them, to order and direct that the importation of tea, and the duties thereon, shall be under the management of the commissioners of customs, instead of the commissioners of excise; and from and after the time specified in such warrant, the same shall be transferred accordingly; provided, that until the transfer of such management, and of the custody of tea in warehouse, shall be fully made under the directions of the Lords of the Treasury, any act, &c. done or performed by, to, or with the commissioners of excise, or their officers, shall have the same effect in law as if it had been done or performed by, to, or with the commissioners of customs, or their officers, under the authority of this act; but nothing herein-before contained shall alter or affect any law of excise relating to licences for the sale of tea, or to permits for its removal, or to the internal management of tea by the excise, after the import duties have been paid, and after it has been delivered out of the charge of the officers of the customs. — § 6.

**Treasury may discontinue Permits for Tea and other Goods.** — It shall be lawful for the Lords of the Treasury, by warrant or order under the hands of 2 or more of them, to discontinue the practice of issuing permits for the removal of tea, and to make and establish any other rules, regulations, and restrictions in lieu of such practice, as shall appear to them necessary for the security of the revenue; and all rules, regulations, and restrictions so made and established, shall have the force of law, as fully as if they were embodied in this act, and shall be obeyed and enforced in like manner as any rules, regulations, &c. are or can be obeyed or enforced under the provisions of any act or acts of parliament relating to the customs, or to the excise; and copies of such rules, regulations, &c. shall be laid before parliament. — § 7.

**ASSESSMENT OF THE DUTIES.** — A good deal of discussion has recently taken place with respect to these duties. It has been contended, that it will be impossible to assess them fairly; and that it would be better to establish a uniform duty of 2s. a pound. We understand, however, that the *ad valorem* duties formerly charged on teas imported into the United States, were collected with considerable fairness; and we do not see why the same may not be done here. But whatever device may be fallen upon to obviate frauds upon the revenue, or to facilitate the collection of the duties, we protest against its being attempted by an equalisation of the duties. The real objection to the present scale is, not that the duties differ too much, but that they differ too little — that the duty on bohea is much too high, as compared with that on the finer teas. The equalisation of the duties would, indeed, be a proceeding too glaringly opposed to every fair principle, to be tolerated. Should it, however, be found necessary to make any alteration in the duties, on account of the difficulty in the way of their assessment, the better way would probably be, to admit congou at the duty of 1s. 6d. It is only in the substitution of congou for bohea, that any considerable frauds can take place; and this would, of course, effectually obviate them. This plan is objectionable, no doubt, from its leaving the duty on bohea too high; but, as we have only to choose among difficulties, it is, perhaps, as good a one as could be made.

**Port Charges in China.** — We expressed, in a previous article, (see *ante*, p. 241.) our doubts as to the policy of the clause in the act opening the China trade, which authorised the imposition of peculiar duties on the ships and goods engaged in the trade, for the purpose of defraying the cost of the establishment to be kept up at Canton. Soon after that paragraph was printed, an order in council, was issued, fixing the duties in question at 2s. per ton of tonnage duty, and 7s. per cent. on the value of the imports into and exports from China. These were heavy charges; and as the American and other foreign ships resorting to Canton are not liable to any claims of the sort, their imposition on British ships would have been most injurious to them. The order in council, being, in consequence, loudly and justly objected to, was very properly withdrawn. An arrangement has since been made, by which the expense of the factory is to be defrayed,  $\frac{1}{3}$  by the British government, and  $\frac{2}{3}$  by the East India Company; so that British ships will not be liable to any charges, except such as are imposed by the Chinese, and which fall on all foreigners alike. — (For an account of these charges, see *ante*, p. 234.)

**Capacity of China to furnish additional Supplies of Tea.** — It has been sometimes contended, that the tea trade being thrown open, were the duties materially reduced, the increased demand of this country could not be supplied, and that the reduction of the duty would not really benefit the British consumer, but the Chinese government. Our readers will hardly expect that we should enter at any length into the refutation of so absurd a notion. At the commencement of last century, the entire annual consumption of tea in this country, the Continent, and America, did not certainly amount to 500,000 lbs.; whereas the consumption of Great Britain, the Continent, and United States, amounts at present to about 50,000,000 lbs.; and yet every one acquainted with the history of the trade is aware, that though the consumption has increased a *hundred fold*, the prices in all open markets have been regularly declining, and even at the Company's sales they have lately been a good deal less than they were 50 or 60 years since. We may, therefore, rest quite easy upon this point. The production of tea is rapidly extending in China; and the vast extent of that empire, its capacities for raising unlimited quantities of tea, and the extent to which it is there used, negative the idea that any conceivable increase of the consumption of this country should have any perceptible or permanent influence on its cost price.

**Retail Dealers in Tea.** — Retailers of tea are obliged to take out a licence, which costs 11s. a year. In 1832, their numbers were, in England 76,713, in Scotland 13,701, in Ireland 11,273; making, for the United Kingdom, a grand total of 101,687!

**ADULTERATION OF TEA.** — It might have been fairly enough anticipated, from the high price of, and the high duty on, tea, and the facility with which it may be mixed up with foreign substances, that it would not escape adulteration; and the records of the courts of justice show that such is the case; several dealers having been convicted of this pernicious practice. The adulteration is usually effected either by the intermixture of sloe or ash leaves with fresh teas; or by mixing the latter with tea that has been already used. The penalties on such offences are stated below; but the best, or rather the only, security on which any reliance can be placed, is to be found in the character and respectability of the parties dealing in tea. Even were he influenced by nothing else, it would be extreme folly in any person carrying on an extensive business to engage in such dishonest practices; for they can hardly fail of being detected; and the ruin of his business, that would follow such exposure, would far more than balance whatever gains he could hope to make by his fraudulent schemes.

**Penalties on Adulteration.**—If any dealer in or seller of tea dye or fabricate any aloe or other leaves in imitation of tea, or mix or colour leaves of tea with terra Japonica or other ingredient, or vend or expose to sale, or have in possession the same, he shall forfeit for every pound of such adulteration, 10*l.* — (17 Geo. 3. c. 11. s. 11.)

Every person, whether a dealer in or seller of tea, or not, who shall dye or fabricate any aloe leaves, liquorice leaves, or the leaves of tea that have been used, or the leaves of the ash, cedar, or other tree, shrub, or plant, in imitation of tea, or who shall mix or colour such leaves with terra Japonica, copperas, sugar, molasses, clay, logwood, or other ingredient, or who shall sell or expose to sale, or have in custody, any such adulterations in imitation of tea, shall for every pound forfeit, on conviction, by the oath of 1 witness, before 1 justice, 5*l.*; or, on nonpayment, be committed to the house of correction for not more than 12 nor less than 6 months. — (17 Geo. 3. c. 11. s. 1.)

Any person having in possession any quantity exceeding 6 pounds of aloe, ash, or elder leaves, or the leaves of any other tree, plant, or shrub, green or manufactured, and shall not prove to the satisfaction of the justice hearing the matter that the same were gathered with the consent of the owner of the

trees, &c., and that they were gathered for some other purpose than that of being fabricated in imitation of tea, shall forfeit 5*l.* for every pound in his possession, or, on nonpayment, be committed to prison. — Sect. 2.

If an officer of excise, or other person, make oath that he suspects herbs dyed, or otherwise prepared in imitation of tea, are hid or lodged in any place, a justice may have a warrant for seizing the same by day or night, (in the night, in presence of a constable,) together with all wagons, trolleys, and packages in which they may be contained; the herbs may be directed to be burnt, and the wagons, &c. sold, and, after deducting expenses, the proceeds to be shared,  $\frac{1}{2}$  to informer, and  $\frac{1}{2}$  to poor of the parish. Obstructing such seizure subjects the offender to a penalty of 50*l.*, or not less than 6 nor more than 12 months' imprisonment. — Sect. 3.

Herbs not to be burnt, if owner can prove, within 24 hours, that they were gathered with consent of proprietor of trees, plants, or shrubs, and that they were not intended to be fabricated in imitation of tea. — Sect. 4.

Occupier of premises where herbs are found, liable to the penalties, unless he can prove they were lodged without his consent. — Sect. 5.

**Consumption of Tea on the Continent and in the United States.**—Of the Continental states, Russia and Holland are the only ones in which the consumption of tea is considerable. In 1832, the imports of tea into Russia amounted to 179,474 pounds, or 6,461,064 lbs. The imports consist almost entirely of black tea. The consumption of tea in Holland amounts to about 2,800,000 lbs. a year; the duty on which varies from 1*½*d. to 4*½*d. per lb. The consumption of France is not supposed to exceed 230,000 lbs. The importations into Hamburgh vary between 1,500,000 and 2,000,000 lbs., the greater part of which is forwarded to the interior of Germany. The imports into Venice and Trieste do not exceed a few cwt. a year.

The consumption of the United States exceeds 8,000,000 lbs. a year. Duties on tea used to form one of the largest items of American revenue, having in some years produced 650,000*l.* Their magnitude, however, was justly complained of; and it is probably owing to this circumstance that, while the consumption of tea was for several years pretty stationary in the United States, that of coffee increased with even greater rapidity than in England. — (See *antè*, p. 310.) The secretary of the treasury of the United States, in his Report for 1827, observed, — “The use of tea has become so general throughout the United States, as to rank almost as a necessary of life. When to this we add that there is no rival production at home to be fostered by lessening the amount of its importation, the duty upon it may safely be regarded as too high. Upon some of the varieties of the article it considerably exceeds 100 per cent., and is believed to be generally above the level which a true policy points out. A moderate reduction of the duty would lead to an increased consumption of the article, to an extent that, in all probability, would, in the end, rather benefit than injure the revenue. Its tendency would be to enlarge our trade and exports to China; a trade of progressive value, as our cottons and other articles of home production (aside from specie) are more and more entering into it. It would cause more of the trade in teas to centre in our ports; the present rate of duty driving our tea ships, not unfrequently, to seek their markets in Europe, not in the form of re-exportation, but in the direct voyage from China. It would also serve to diminish the risk of the United States losing any portion of a trade so valuable, through the policy and regulations of other nations.” These judicious suggestions could not fail to command attention; and the flourishing state of the revenue having admitted of a very great reduction of duties, those on tea have been wholly repealed. As was to be expected, the consumption has since begun rapidly to increase. We subjoin an account of the

Quantity and Value of the different Sorts of Tea imported into and exported from the United States during the Year ended 30th of September, 1832. — (Papers laid before Congress, 15th of February, 1833.)

| Different Sorts of Tea.             | Imports.    |                 | Exports.    |                 |

The following is a statement of the wholesale prices of tea in New York on the 15th of January, 1834.

|             | <i>Cents.</i> | <i>Doll.</i> | <i>Cts.</i> |         | <i>Cents.</i> | <i>Doll.</i> | <i>Cts.</i> |      |
|-------------|---------------|--------------|-------------|---------|---------------|--------------|-------------|------|
| Imperial    | 65            | to           | 1 0         | per lb. | Hyson skin    | 25           | to          | 0 50 |
| Gunpowder   | 66            |              | 1 0         |         | Souchong      | 25           |             | 0 40 |
| Hyson       | 56            |              | 0 88        |         | Bohea         | 13           |             | 0 16 |
| Young hyson | 53            |              | 0 80        |         |               |              |             |      |

**TEAK WOOD, OR INDIAN OAK,** the produce of the *Tectona grandis*, a large forest tree, that grows in dry and elevated districts in the south of India, the Burman

empire, Pegu, Ava, Siam, Java, &c. Teak timber is by far the best in the East; it works easily, and, though porous, is strong and durable; it is easily seasoned, and shrinks very little; it is of an oily nature, and, therefore, does not injure iron. Mr. Crawford says, that in comparing teak and oak together, the useful qualities of the former will be found to preponderate. "It is equally strong, and somewhat more buoyant. Its durability is more uniform and decided; and to insure that durability, it demands less care and preparation; for it may be put in use almost green from the forest, without danger of dry or wet rot. It is fit to endure all climates and alternations of climate."—(See *Tredgold's Principles of Carpentry*, p. 206.; *Crawford's East. Archip.*, vol. i. p. 451.; *Rees's Cyclopadia*, &c.)

The teak of Malabar, produced on the high table land of the south of India, is deemed the best of any. It is the closest in its fibre, and contains the largest quantity of oil, being at once the heaviest and the most durable. This species of teak is used for the keel, timbers, and such parts of a ship as are under water; owing to its great weight, it is less suitable for the upper works, and is not at all fit for spars. The teak of Java ranks next to that of Malabar, and is especially suitable for planking. The Rangoon or Burman teak, and that of Siam, is not so close grained or durable as the others. It is, however, the most buoyant, and is therefore, best fitted for masts and spars. Malabar teak is extensively used in the building-yards of Bombay. Ships built wholly of it are almost indestructible by ordinary wear and tear; and instances are not rare of their having lasted from 80 to 100 years; they are said to sail indifferently; but this is probably owing as much to some defect in their construction, as to the weight of the timber. Calcutta ships are never wholly built of teak; the timbers and framework are always of native wood, and the planking and deck only of teak. The teak of Burma, being conveyed with comparatively little difficulty to the ports of Rangoon and Martaban, is the cheapest and most abundant of any. It is largely exported to Calcutta and Madras.—(See RANGOON.)—(Private information.)

A species of timber called African teak is pretty largely imported into England, from the west coast of Africa. But, in point of fact, it is not teak, and it is destitute of several of its most valuable properties. It is, however, for some purposes, a useful species of timber.

**TEASEL, or FULLERS' THISTLE** (Ger. *Weberdistel, Kratzdistel*; Fr. *Char-don à carder*; It. *Cardo da cardare*; Sp. *Cardeucha, Cardo peinador*). This plant, which is cultivated in the north and west of England, is an article of considerable importance to clothiers, who employ the crooked awns of the heads for raising the nap on woollen cloths; for this purpose they are fixed round the periphery of a large broad wheel, against which the cloth is held while the machine is turned. In choosing teasels, the preference should be given to those with the largest bur, and most pointed, which are generally called *male teasels*. They are mostly used in preparing and dressing stockings and coverlets; the smaller kind, commonly called the fullers' or drapers', and sometimes the *female teasels*, are used in the preparation of the finer stuffs, as cloths, rateens, &c.

**THREAD** (Ger. *Zwirn*; Du. *Garen*; Fr. *Fil*; It. *Refè*; Sp. *Hilo, Torzal*; Rus. *Nitki*), a small line made up of a number of fibres of some vegetable or animal substance, such as flax, cotton, or silk; whence its names of linen, cotton, or silk, thread.

**TILES** (Ger. *Dachziegel*; Fr. *Tuiles*; It. *Tegole, Embrici*; Sp. *Tejas*; Rus. *Tscherepiza*), a sort of thin bricks, dried in kilns, and used in covering and paving different kinds of buildings. The best brick earth only should be made into tiles.—(See BRICKS AND TILES.)

**TIMBER** (Ger. *Bauholz, Zimmer*; Lu. *Timmerhout*; Fr. *Bois de charpente, Bois de bâtir*; It. *Legname da fabbricare*; Sp. *Madera de construccion*; Rus. *Striewoi Gess*; Pol. *Cembrowina*), the term used to express every large tree squared, or capable of being squared, and fit for being employed in house or ship building. In the language of the customs, when a tree is sawn into thin pieces, not above 7 inches broad, it is called batten; when above that breadth, such thin pieces are called deal. Wood is the general term, comprehending under it timber, dye woods, fire wood, &c.

Timber is generally sold by the load.

The following are the contents of the loads of different species of timber, hewn and unhewn:—

|                         |                        |                         |                        |
|-------------------------|------------------------|-------------------------|------------------------|
| A load of timber unhewn | - - - 40 cubic feet.   | A load of 2½ inch plank | - - - 240 square feet. |
| squared timber          | - - - 50               | 3 inch plank            | - - - 200              |
| 1 inch plank            | - - - 600 square feet. | 3½ inch plank           | - - - 170              |
| 1½ inch plank           | - - - 400              | 4 inch plank            | - - - 150              |
| 2 inch plank            | - - - 300              |                         |                        |

|     |                      |   |
|-----|----------------------|---|

**TIMBER TRADE.** Having, in separate articles, described those species of timber most in demand in this country, we mean to confine ourselves in this article to a few remarks on the policy of the regulations under which the trade in timber is conducted.

**1. Importance of a cheap Supply of Timber.** — It is surely unnecessary to enter into any lengthened statements on this head. If there be one article more than another with which it is of primary importance that a great commercial nation like England should be abundantly supplied on the lowest possible terms, that article is timber. Owing to the deficiency of our home supplies, most of the timber, with the exception of oak, required for building ships and houses; and most part, also, of that employed in the construction of machinery; is imported from abroad. Any individual acquainted with the purposes to which timber is applied, but ignorant of our peculiar policy with respect to it, would never, certainly, imagine that such an article could be made the subject of oppressive duties, and of still more oppressive preferences. Timber is not to be looked at in the same light as most other commodities. It is against all principle to impose duties on materials intended to be subsequently manufactured; but timber is the raw material of the most important of all manufactures — that of the instruments of production! Suppose it were proposed to lay a heavy tax on ships, wagons, looms, or workshops when completed, would not such a monstrous proposal be universally scouted? And yet this is what is really done. The finished articles are not, indeed, directly taxed; but the principal material of which they are made, and without which they could not be constructed, is burdened with an exorbitant duty! To dwell on the absurdity of such a tax would be worse than useless. Of all things essential to the prosperity of manufacturing industry, improved and cheap machinery is the most indispensable. Most individuals amongst us are ready enough to ridicule the contradictory conduct of the French government, who, at the very moment that they are endeavouring to bolster up a manufacturing interest, lay enormous duties on foreign iron, and thus double or treble the price of some of the most important manufacturing implem<sup>ts</sup>. Timber is, however, of quite as much importance in this respect as iron; and our conduct in burdening it with exorbitant duties partakes as largely of the *felo-de-se* character as that of our neighbours! Indeed, as will be immediately seen, it is decidedly less defensible. Some plausible, though inconclusive, reasonings might be urged in defence of duties on iron and timber, were they imposed for the sake of revenue: but even this poor apology for financial ignorance and rapacity cannot be set up in defence of the iron duties of France or the timber duties of England. The former, however, are the least objectionable; they were imposed, and are still kept up, to encourage the production of iron in France: whereas the duties on timber in England have been imposed for the sake, principally, of promoting the lumber trade of Canada, and of forcing the employment of a few thousand additional tons of shipping! We do not sacrifice the goose for the sake of the golden eggs, but for the sake of the offal she has picked up.

**2. Origin and Operation of the discriminating Duty in favour of American Timber.** — The practice of encouraging the importation of the timber of Canada and our other possessions in North America, in preference to that of foreign countries, is but of recent growth. It took its rise during the administration of Mr. Vansittart, and bears in every part the impress of his favourite policy. The events that took place in 1808 having seriously affected our previous relations with the Baltic powers, a deficiency in the accustomed supply of timber began to be apprehended; and the ship owners and

Canada merchants naturally enough availed themselves of this circumstance, to excite the fears of the ministry, and to induce them to change the fair and liberal system on which the trade in timber had been conducted down to that time, by granting extraordinary encouragement to its importation from Canada. Even as a temporary expedient, applicable to a peculiar emergency, the policy of giving any such encouragement is extremely doubtful. Supposing timber not to have been any longer obtainable from the north of Europe, its price would have risen, and it would, of course, have been imported from Canada, the United States, or wherever it could be had, without any interference on the part of government. But, in 1809, a large addition was made to the duties previously charged on timber from the north of Europe, at the same time that those previously charged on timber from Canada and our other possessions in America were almost entirely repealed; and in the very next year (1810), the duties thus imposed on Baltic timber were *doubled*! Nor did the increase of duties on such timber stop even here. In 1813, after Napoleon's disastrous campaign in Russia, and when the free navigation of the Baltic had been restored, 25 per cent. was added to the duties on European timber! The increase of the revenue was pleaded as a pretext for this measure; but we believe it was really intended to augment the preference in favour of Canada timber; for how could it be supposed that an increase of the duties on an article imported from a particular quarter of the world, that was already taxed up to the very highest point, could add any thing considerable to the revenue, when a convertible article might be imported from another quarter duty free? The various duties laid on European timber amounted, when consolidated by the act 59 Geo. 3. c. 52., to 3*l.* 5*s.* per load.

Admitting, for the moment, that the peculiar and unprecedented aspect of things in 1808 and 1809 warranted the giving of some preference to the importation of timber from Canada, such preference should plainly have ceased in 1813. So long as the communication with the bridge is interrupted, we may be forced to use a boat to cross the river; but when the communication is again opened, and when there is not the remotest chance of its future interruption, it would be a singular absurdity to refuse to resume the use of the bridge, and to continue the costly and inconvenient practice of being ferried over! This, however, is exactly what we have done in the case of the Canada trade. Because a fortuitous combination of circumstances obliged us, upon one occasion, to import inferior timber at a comparatively high price, we resolve to continue the practice in all time to come! The history of commerce affords no parallel display of gratuitous folly.

The absurdity of this conduct will appear still more striking, if we reflect for a moment on the peculiar situation of the countries in the north of Europe. The nations round the Baltic have made little progress in manufacturing industry. They abound in valuable raw products; but they are wholly destitute of the finer species of manufactured commodities, and of colonies. Nor have they any real inducement to attempt supplying themselves directly with the former, or to establish the latter. Their iron and copper mines, their vast forests, and their immense tracts of fertile and hitherto unoccupied land, afford far more ready and advantageous investments for their deficient capital, than could be found in manufactures or foreign trade. Russia and Prussia have, indeed, been tempted, by our corn and timber laws, to exclude some species of manufactured goods; but it is not possible that they should succeed in materially limiting our exports to them, provided we do not second their efforts by refusing to admit their products.

Of all the countries in the world, there is obviously none which has so many facilities for carrying on an advantageous trade with the North as Great Britain. We have a surplus of all those products of which Russia, Prussia, Sweden, Denmark, and Norway stand most in need; and, on the other hand, they have a surplus of many of those of which we are comparatively destitute. The immense traffic we carry on with the Baltic does not, therefore, depend in any considerable degree on artificial or accidental circumstances. It does not rest on the wretched foundation of Custom-house regulations or discriminating duties, but on the gratification of mutual wants and desires. It has been justly remarked by the Marquis Garnier, the excellent translator of the "Wealth of Nations," that no inconsiderable portion of the increased power and wealth of England may be traced to the growing opulence of Russia. But the Russian empire is yet only in the infancy of civilisation; she must continue for a very long period to advance in the career of improvement, and it will be our own fault if we do not reap still greater advantages from her progress.

Such is the nature of that commerce against which the discriminating duties on timber from the north of Europe aimed a severe blow! In 1809, when this system began, 428,000 tons of British shipping entered inwards from the Baltic. In 1814, the year after the 25 per cent. of additional duty had been imposed on Baltic timber, and when all the ports of that sea were open to our ships, only 242,000 tons of British

shipping entered inwards, — being little more than the half of what it amounted to when the system began. In 1816, the British shipping entered inwards from the Baltic amounted to 181,000 tons. It was materially augmented in 1818 and 1819, in consequence of the failure of the crops in this country in 1817 and 1818; but even in 1819 the entries inwards were 55,000 tons under what they had been 10 years before!

By diminishing our imports from the northern nations, the high discriminating duty on timber necessarily diminished our exports to them in the same proportion.

The following extract from the evidence of Mr. Edward Patzcker, a merchant of Memel, given before the committee of the House of Commons on the foreign trade of the country, in 1821, shows the effect that the increased duties on timber had on the commerce with Prussia: —

"Has there been a great alteration in the timber trade between Memel and this country of late years?" — "Since the war, a great alteration; before the war we used to have 950 to 1,000 English ships in 1 year, and since the war we have had from 200 to 300 only."

"When you talk of 900 ships, do you mean 900 ships trading between Great Britain and Memel?" — "Yes."

"Do you mean that number of cargoes were loaded in the year for England?" — "Yes."

"How many cargoes were loaded for Great Britain during the last year (1820)?" — "About 270 or 280 cargoes; there have not been more."

"To what cause do you attribute that diminution in the trade?" — "To the high duties in England; for formerly the duties were only 16s. and some pence; now they are 3*l.* 5*s.* in a British, and 3*l.* 8*s.* in a foreign ship."

"Has that diminished trade in timber produced a great alteration in the circumstances of the people of Prussia?" — "Yes: for it is the only trade which we can carry on; wheat and all the rest of our articles cannot be brought here; *timber* is the only one that can be brought, and the trade from Poland has very much ceased in consequence of the diminished demand for it; the people cannot sell their goods and we cannot take such quantities of timber as we used to do; and, therefore, they cannot take English goods from us."

"If such an alteration was to take place in the duties on timber in this country, as to give the Prussians a larger share of the trade than they at present enjoy, do you think that would produce increased friendly feelings on the part of the people of your country to the people of this country?" — "It would. *They would certainly take far more goods from hence*, as they could get better rid of them. The Poles, also, would take more of them." — (*Report*, 9th of March, 1821, p. 107.)

The effect that the increased duties had on the trade with Norway and Sweden, aggravated as they in some degree were by an absurd method of charging the duty on deals, was still more striking and extraordinary. These countries had few products, except timber and iron, to exchange for our commodities; and as neither of these could be advantageously imported into England under the new system, the trade with them almost entirely ceased; and they were reluctantly compelled to resort to the markets of France and Holland for the articles they had formerly imported from us. In proof of this, we may mention, that the exports to Sweden, which had amounted in 1814 to 511,818*l.*, declined in 1819 to 46,656*l.*; and the exports to Norway, which had in 1815 amounted to 199,902*l.*, amounted in 1819 to only 64,741*l.*\* — (*Lords' Report on the Foreign Trade of the Country*, 3d of July, 1820, p. 34.)

This extraordinary falling off in so very important a branch of our commerce having been established beyond all question by the evidence taken before the committees now referred to, an approach to a better system was made in 1821, when the duty on timber from the north of Europe was reduced from 3*l.* 5*s.* to 2*l.* 15*s.* per load, at the same time that a duty of 10*s.* per load was laid on timber from British America. This, however, was a comparatively inefficient measure. It was stated, to be sure, at the time, that the 2*l.* 5*s.* per load of excess of duty that was thus continued on Baltic timber over that laid on timber imported from Canada, was not more than enough to balance the higher prime cost, the greater freight, and other charges consequent upon the importation of the latter; and that it would, therefore, be in future indifferent to a merchant whether he imported timber from Memel or Miramichi! In point of fact, however, the discriminating duty continued in favour of Canada timber has been far too high to allow of this equalisation being effected. So much so is this the case, that there have been instances of ships loading with timber in the north of Europe, carrying that timber to Canada, and then bringing it to England as Canada timber; the difference of duty having been about sufficient to indemnify the enormous expense of this round-about voyage! We do not mean to say that this has been a common practice; but what are we to think of a commercial regulation that admits of such an adventure being undertaken with any prospect of success? Admitting, however, that the duty had been adjusted so as to have had the anticipated effect, could any thing be more preposterous and absurd than to impose it on such a principle? There are mines of coal in New Holland; but

\* Even at present, the official value of the total exports, including colonial produce, from the United Kingdom to Sweden, does not exceed 160,000*l.* a year. Our exports of all sorts to Norway amount to about 150,000*l.* a year, while our imports hardly amount to 85,000*l.* In fact, were it not that Norway finds means of paying us by drafts on Holland, into which her produce is admitted, she could import almost nothing from England. The injury done to our commerce with these two nations, by our heavy discriminating duties on the principal equivalent they have to give in exchange for commodities brought from abroad, was placed in a very striking point of view by Lord Althorp, in the debate on the timber duties, the 18th of March, 1831.

what should we think, were an attempt made to impose such duties on coals from Newcastle as should render it indifferent to a London merchant whether he imported a cargo of coal from the Tyne or Botany Bay? Now, the case of the timber duties is, in point of principle, precisely the same. We may obtain timber from countries so near at hand that our ships may make 3, 4, 5, and even 6 voyages a year to them\*; and we refuse to admit it unless loaded with a duty that raises its price to a level with what is brought from the other side of the Atlantic—a voyage which our ships cannot, at most, perform above twice a year!

The following official account shows the extent to which the system of preference has been carried:—

An Account of the Rates of Duty payable in Great Britain on the Principal Articles of Wood.

So long as the foreigner can lay his finger on such a Table as this, it will not be easy to convince him that our commercial system has lost so much of its exclusive character as it really has done during the last few years. Having set such an example to the Russians and Prussians, need we wonder at their having attempted to shut several of our peculiar productions out of their markets? Could we expect that they were to follow our precepts rather than our practice?

3. Comparative Quality of Baltic and Canada Timber.—Had the timber of Canada been decidedly superior to that of the north of Europe, something might have been found to say in favour of the discriminating duty: for it might have been contended, with some show of reason, that it was of the utmost consequence, considering the application of timber to ship and house building, and other important purposes, to prevent the importation of an inferior species, even though it might be cheaper. But the system we have adopted is of a totally different character. We have not attempted to shut out an article which, though cheap, is inferior; but have committed the twofold absurdity of shutting out one that is at once cheap and superior!

The committee of the House of Lords observe, in their *Firs. Report on the Foreign Trade of the Country*, that "the North American timber is more soft, less durable, and every description of it more liable, though in different degrees, to the dry rot, than timber of the north of Europe. The red pine, however, which bears a small proportion to the other descriptions of timber, and the greater part of which, though imported from Canada, is the produce of the United States, is distinguished from the white pine by its greater durability. On the whole, it is stated by one of the commissioners of his Majesty's navy, most distinguished for practical knowledge, experience, and skill, that the timber of Canada, both oak and fir, does not possess, for the purpose of ship building, more than half the durability of wood of the same description, the produce of the north of

\* According to the evidence of Mr. J. D. Powles, an extensive ship and insurance broker, ships can make six voyages from Norway, 3 or 4 from Prussia, and 2 from Russia, in a season.—(Commons' Report, p. 89.)

*Europe.* The result of its application to other purposes of building is described by timber merchants and carpenters to be nearly similar." — (p. 4.)

We subjoin the following extracts from the evidence of Sir Robert Seppings, the commissioner alluded to by the committee, whose great intelligence and experience render his opinion of the highest authority: —

"Can you state to the committee the result of any observations that you or others in his Majesty's service have made, on the durability of timber, the produce of the North American colonies, or timber imported from the north of Europe, applied to the same purposes?" — "About the year 1796, there were a certain number of frigates built of the fir of the Baltic, and their average durability was about eight years. About the year 1812, there were a considerable number of frigates built also, of fir of the growth of North America, and their average durability was not *half* that time."

"You have stated that Canada timber is peculiarly subject to the dry rot, and the dry rot is known to have prevailed lately to a great degree in the navy; has that prevailed principally since the application of Canada timber to the uses of the navy?" — "I believe *the navy has suffered very considerably from the introduction of Canada timber*, or timber of the growth of North America; and in consequence, from experience, we have *entirely discontinued the use of it*, except for deals and masts." — (p. 56.)

Mr. Copland, an extensive builder and timber merchant, being asked by the committee what was his opinion with respect to the comparative qualities of American and Baltic timber, answered, — "The timber of the Baltic in general, speaking of Norway, Russian, Prussian, and Swedish timber, is of very superior quality to that imported from America; the bulk of the latter is *very inferior in quality, much softer in its nature, not so durable, and very liable to dry rot*; indeed, it is not allowed by any professional man under government to be used, nor is it ever used in the *best* buildings in London; it is only speculators that are induced to use it, from the price of it being much lower (in consequence of its exemption from duty) than the Baltic timber; if you were to lay two planks of American timber upon each other, in the course of a twelvemonth they would have the dry rot, almost invariably, to a certain extent." — (p. 56.) And many passages to the same effect might be produced, from the evidence of persons of the greatest experience in building.

Now, we would beg leave to ask whether any thing can be more absolutely monstrous, than to force, by means of a system of discriminating duties, a large proportion of the public to use that very timber in the construction of their ships and houses, which government will not use for either of these purposes, and which the most experienced engineers and builders pronounce to be utterly unfit for them? This is not to impose duties on a fair and equal principle for the sake of revenue, but for the sake of securing a preference to a worthless article: it is not imposing them in the way in which they may be least, but in that in which they are certain to be *most injurious* to those who have to pay them.

It appears from the official account subjoined to this article, that, at an average of the years 1828 and 1829, the revenue would have gained considerably more than 1,500,000*l.* a year, had the same duty been laid on Canada timber that is laid on timber from the north of Europe; and this, therefore, may be considered as the amount of the pecuniary sacrifice we consent to make, in order that our ships and houses may be inoculated with dry rot!

4. *Apologies for the discriminating Duty.* — If any thing ought, more than another, to make legislators pause before enacting a restrictive regulation, it is the difficulty of receding from it. After it has been enforced for a while, a variety of interests usually grow up under its protection, which may be materially injured by its repeal. *All*, however, that the persons so interested can justly claim, is, that sufficient time, and every possible facility, should be afforded them to prepare for a change of system. Because the interests of a comparatively small portion of the community may be injuriously affected by the abolition of a regulation ascertained to be in the last degree inimical to the public, is it, therefore, to be contended that we ought, at all hazards, to continue to enforce the regulation we have so unwisely enacted? To maintain the affirmative, would be to give perpetuity to the worst errors and absurdities; and would be an effectual bar to every sort of improvement. No change, even from a bad to a good system, ought to be rashly set about: but when once the expediency of an alteration has been clearly established, it ought to be resolutely carried into effect.

It is objected to the abolition of the discriminating duties on timber, that it would be injurious to Canada and the shipping interest. We believe, however, that the injury would not be nearly so great as has been represented; that it would, in fact, be quite inconsiderable. So far from the *lumber trade* — or the trade of felling wood, squaring it, and floating it down the rivers to the shipping ports — being advantageous to a colony, it is distinctly and completely the reverse. The habits which it generates are quite subversive of that sober, steady spirit of industry, so essential to a settler in a rude country; to such a degree, indeed, is this the case, that lumberers have been described as the pests of a colony, "made and kept vicious by the very trade by which they live." — But abstracting altogether from the circumstances now alluded to, Mr. Poulett Thomson showed, in his unanswerable speech on the timber question (March 18. 1831), that the

abolition of the lumber trade would materially benefit the real interests of the colonies. It is ludicrous, indeed, seeing that not one tree in a hundred is fit for the purposes of being squared for timber, to suppose that the discontinuance of the trade could be any serious loss. But the fact is, that when trees are cut down by lumberers, for export as timber, instead of being burnt down, so great a growth of brushwood takes place, that it actually costs more to clear the ground where the lumberers have been, than where they have not been. Mr. Richards, who was sent out by government to report on the influence of the lumber trade, represents it as most unfavourable; and observes, that, "when time or chance shall induce or compel the inhabitants to desist from this employment, agriculture will begin to raise its head." The statements of Captain Moorsom, in his *Letters from Nova Scotia*, are exactly similar. He considers the depression of the timber market, although a severe loss to many individuals, a "decided gain to the colony," from the check it has given to the "lumbering mania." — (p. 53.)

The statements that have been made as to the amount of capital expended on saw-mills, and other fixed works for carrying on the lumber trade, have been singularly exaggerated. Mr. Thomson, who had the best means of acquiring accurate information on this point, made the following statement with respect to it in his speech already referred to: — "From the means I have had of calculating the amount of capital embarked in these saw mills, I believe it is about 300,000*l.*: I am sure I may say that if 500,000*l.* were taken as the amount, it would be a great deal above rather than under the real value; but, after all, this description of property is not to be sacrificed by the arrangements proposed, even if they were carried to the fullest extent. I am ready at once to admit, that the consequence of the proposed alteration may be, that it will diminish the exports of timber from Canada to England, and affect the productiveness of the capital vested in the mills to which I have referred; but the committee ought not to lose sight of the fact, that though in this one branch of industry there will be a great falling off, yet the same amount of labour might be applied to much greater advantage on land in the colonies; and the mills, which will be rendered useless for their original purposes, may be converted into useful auxiliaries to the agricultural and other pursuits of the colonists; so that the enormous losses that have been placed in so frightful a point of view, will, as I have shown, be absolutely next to nothing."

So far, therefore, as the interests of the colonies are concerned, it is plain they would not really lose, but gain, by a repeal of the discriminating duties on foreign timber. They would still continue to possess a respectable branch of the trade; for their timber, though unfit for more important purposes, is well suited, by its softness and freedom from knots, for the finishing of rooms and cabins, the manufacture of boxes, &c.; and in the mast trade, it is believed, that they would be able to maintain a successful competition with Riga. It might also be expedient to assist in turning the industry of the colonies into the profitable channel of agriculture, by giving their corn and flour a still more decided preference than they now enjoy in our markets. In our opinion, it would be good policy to admit them, at all times, duty free.

The ship owners would undoubtedly have more cause to complain of injury from the equalisation of the duties; but even as respects them, it would not be nearly so great as is commonly supposed. The statement usually put forward by those who represent the timber trade to North America as of vital importance to the shipping interest, is, that it employs 1,800 ships, of 470,000 tons, navigated by 20,000 sailors. But Mr. Poulett Thomson showed, in his previously quoted speech, that this statement is utterly erroneous. The entries inwards of British ships from our possessions in North America correspond with the sums now stated; but, at an average, every ship employed in the trade makes 1½ voyage a year; so that, in point of fact, only 1,028 ships, of 270,000 tons and 11,427 men, are employed in the trade.\* From this latter number must, however, be struck off ships employed in other branches of trade; for no one pretends that the only trade we carry on with British North America is the importation of timber. We believe that the number to be so struck off may be safely estimated at 200 ships, of 54,000 tons and 2,200 men, leaving about 800 ships, of 216,000 tons and 9,200 men, to be affected by the change. Inasmuch, however, as about a third part of the timber now brought from Canada would most probably continue to be brought for the purposes already referred to, were the duties equalised, only 534 ships, of 144,000 tons and 6,134 men, would be forced to change their employments. Now of these, a half, at least, would be immediately employed in bringing from the Baltic the same quantity of timber that is brought from America; and as the price of timber would be materially lowered by the reduction of the duty, the demand for it would no doubt materially increase; so that it is abundantly plain that very few, if any, ships would be thrown out of employment by the abolition of the discriminating duties. It

\* It is singular that Mr. Bouchette should have fallen into the common but palpable error on this point. — (See the Preface to his valuable work on British America.)

is material, too, to observe, that whatever temporary inconvenience the shipping interest might sustain from the change, its future consequences would be singularly advantageous to it. The high price of timber employed in the building of ships is at present the heaviest drawback on the British ship owners; but the equalisation of the duties would materially reduce this price; and we have the authority of the best practical judges for affirming, that were the duty (as it ought to be) entirely repealed, ships might be built decidedly cheaper in England than in any part of the world.

It would be desirable, however, to secure the interests of so important a class as that of the ship owners from any chance even of temporary loss or inconvenience from an equalisation of the duties. And it is fortunate that this object may be attained, not only without any loss, but with certain benefit to the public. The expediency of encouraging emigration to the colonies, as a means of relieving parts of England and Ireland from that mass of paupers by which they are burdened, is no longer questioned; and we incline to think that no more effectual means of promoting emigration could be devised, than the giving a bounty to the owners of ships landing emigrants in Canada, the Cape of Good Hope, or New South Wales. We have already seen that the number of emigrants to British North America, in 1832, amounted to about 66,000 (*ant*, p. 881.); and supposing that a bounty of 30s. or 40s. a head were in future to be paid on the arrival of emigrants at Quebec, it would more than indemnify the ship owners for any inconvenience resulting from a new arrangement of the timber duties; at the same time that the stimulus it would give to emigration would be of the utmost importance to Great Britain and to the colonies.

5. *Alteration proposed in the Timber Duties in 1831.* — To suppose that the timber trade should be allowed to continue on its present footing, seems to be quite out of the question. We have already seen that the discriminating duties impose a pecuniary sacrifice of 1,500,000*l.* a year on the British public, besides forcing the use of a comparatively worthless article where none but the very best ought to be employed. We have also seen that this sacrifice produces no real benefit to the colonies; and that the benefit it does produce to the ship owners is but trifling, and may be more than made up to them without loss to the public. The existing government seems to have been early satisfied of the propriety of attempting to introduce a less objectionable system; and on the 18th of March, 1831, Lord Althorp moved that the duties on Baltic timber should be reduced 6s. a load on the 1st of January, 1832; 6s. more on the 1st of January, 1833; and 3s. on the 1st of January, 1834; making the total reduction 15s. a load, and leaving a protection in favour of Canada timber of 30s. a load. The only real objection to this scheme was, that it did not go far enough; that "it scotched the snake, without killing it." There is not the shadow of a ground on which to justify the granting of a bounty (for such is the real operation of the duty) to force the use of an inferior and more costly article; and even if a reasonable bounty could be justified, one of 30s. a load is quite excessive. But singular as it may seem, this proposal, moderate as it certainly was, encountered a very keen opposition. Some of those who had previously expressed their concurrence in the expediency of some measure of the sort, thought proper to vote against it; and, upon a division, it was lost by a majority of 46. Lord Althorp seems to have been much discouraged by the result of this motion; for, during the lengthened period that has since elapsed, he has made no attempt to effect any modification of the duties. But notwithstanding these unfavourable appearances, we do not believe that a system so destructive of the public interests will be upheld much longer. It were much to be wished that the duties could be wholly dispensed with. Timber is about the very worst subject for taxation; but, at all events, an end must be put to the discriminating duties. It is not to be endured, that so essential an article — that *the prime necessary of manufacturing industry* — should be loaded with exorbitant duties, imposed, not for the sake of revenue, but for the sake of those who either reap no advantage from them, or none that is material.

I. Account of the Amount of Duties paid in the United Kingdom on Timber and other Articles of Wood, Imported from the British Provinces of North America, in each of the Years ending the 5th of January, 1828, the 5th of January, 1829, and the 5th of January, 1830; and of the Amount of Duties which would have been paid on such Timber and other Articles of Wood, if they had been charged with the Rates of Duty payable on similar Articles Imported from the Baltic.

|                                    | Amount of Duty paid in the United Kingdom on Timber, Deals, and other Articles of Wood, Imported from the British Provinces in North America. |    |    | Amount of Duty which would have been paid upon such Timber, Deals, and other Articles of Wood, if they had been Imported from the Baltic. |    |    |

TIN (Ger. *Bleeh*, *Weissbleeh*; Fr. *Fer blanc*; It. *Latta*, *Banda stagnata*; Sp. *Hoja de lata*; Rus. *Blücha*, *Siest*; Arab. *Resas*; Sans. *Trapu* and *Ranga*), a metal which has a fine white colour like silver; and when fresh, its brilliancy is very great. It has a slightly disagreeable taste, and emits a peculiar smell when rubbed. Its hard- ness is between that of gold and lead. Its specific gravity is 7.29. It is very malleable; tin-foil, or tin leaf, is about  $\frac{1}{1000}$ th part of an inch thick; and it might be beat out into leaves as thin again, if such were required for the purposes of art. In ductility and tenacity it is very inferior. A tin wire 0.078 inch in diameter is capable of supporting a weight of 34.7 pounds only without breaking. Tin is very flexible, and produces a crackling noise when bent. It may be readily alloyed with copper, zinc, &c., forming very valuable compounds. — (Thomson's Chemistry.)

The ores of this metal are found in comparatively few places; the principal, and perhaps the only, ones are Cornwall, Galicia, Erzgebirge in Saxony, Bohemia, the Malay countries, China, and Banca in Asia. They are peculiar to primitive rocks, generally in granite, either in veins or beds, and are often associated with copper and iron pyrites.

Tin is much used as a covering to several other metals: iron is tinned, to prevent its rapid oxidation when exposed to air and moisture; and the same process is applied to copper, to avoid the injurious effects to which those who are in the habit of employing cooking utensils made of this metal are always liable. The solutions of tin in the nitric, muriatic, nitro-sulphuric, and tartaric acids, are much used in dyeing, as giving a degree of permanency and brilliancy to several colours, to be obtained by the use of no other mordants with which we are at present acquainted: tin forms the basis of pewter, in the composition of which it is alloyed with lead; when rolled into thin sheets, it is called tin-foil, and is applied, with the addition of mercury, to cover the surface of glass, thus forming looking-glasses, mirrors, &c.; and in combination with sulphur, it constitutes what is called mosaic gold. — (Joyce's Chem. Min.)

TIN PLATES, known in Scotland by the name of *white iron*, are applicable to a great variety of purposes, and are in very extensive demand. They are formed of thin plates of iron dipped into molten tin. The tin not only covers the surface of the iron, but penetrates it completely, and gives the whole a white colour. It is usual to add about 1-10th of copper to the tin, to prevent it from forming too thick a coat upon the iron. — (Thomson's Chemistry.)

*Historical Notice of the British Tin Trade.* — The tin mines of Cornwall have been worked from a very remote era. The voyages of the Phœnicians to the Cassiterides, or tin islands, are mentioned by Herodotus (lib. iii. c. 115.), Diodorus Siculus (lib. iv. p. 301. ed. 1604), and Strabo (*Geog.* lib. iii.). Some difference of opinion has, indeed, been entertained as to the particular islands to which the Phœnicians applied the term Cassiterides; but Borlase (*Account of the Scilly Islands*, p. 72.), Larcher (*Herodote*, tome iii. p. 384. ed. 1802.), and the ablest critics, agree that they are the Scilly Islands, and the western extremity of Cornwall. After the destruction of Carthage, the British tin trade, which was always reckoned of peculiar importance, was carried on by the merchants of Marseilles, and subsequently by the Romans. Besides Britain, Spain furnished the ancients with considerable quantities of tin. We have no very precise information as to the purposes to which they applied this metal. It has been supposed that the Phœnicians, so famous for their purple dyes, were acquainted with the use of the solution of tin in nitro-muriatic acid in fixing that colour. The best of the ancient mirrors, or *specula*, were also made of a mixture of copper and tin; and tin was used in the coating of copper vessels. — (*Watson's Chemical Essays*, vol. iv.)

In modern times, the tin mines of Cornwall and Devon have been wrought with various degrees of energy and success. Queen Elizabeth brought over some German miners, by whom some of the processes were improved. During the civil wars, the mines were much neglected. At the commencement of last century, however, the business of mining was carried on with renewed vigour; and from 1720 to 1740, the annual produce was about 2,100 tons. The produce went on gradually increasing, till it amounted, in the 10 years from 1790 to 1800, to 3,254 tons a year. During the next 15 years, the produce fell off; and for the 5 years ending with 1815, it was always considerably under 3,000 tons a year. But in the last-mentioned year, a considerable increase took place; and since 1816, the produce has been, with the exception of 1820, always above 3,000 tons a year; and in 1827 and 1828, it was very near 5,000 tons. The present average produce of the mines may be estimated at 4,500 tons a year. We subjoin from the papers published by the Board of Trade and other authorities, an

Account of the Quantities of British Tin coined and exported, and of the average Price of the same, in each Year from 1820 to 1832, both inclusive; exhibiting, also, the Imports and Exports of Foreign Tin during the same Period.

The price of British tin, at an average, from 1811 to 1815, inclusive, was about 7 $\frac{1}{2}$  a cwt. Its fall from 1815 to 1820, and its comparatively low price since, have been owing to a variety of causes; partly to improvements in the art of working the mines, partly to the increased supply of metal obtained from them, and partly and principally to the competition of the tin of Banca and of the Malay countries. Previously to 1814, we had in some measure a monopoly of the market of the world. But since then the Banca mines have been wrought with unusual spirit; and their produce has been so much increased, as not only fully to supply the market of China, to which we formerly exported from 600 to 1,000 tons, but to meet us in every European market. It appears, from the foregoing Tables, that Malay tin is now very extensively imported, for warehousing, into England, at the same time that large quantities are carried direct to Holland, where there are refining houses. Hence, notwithstanding the fall of price, and the increased produce of the Cornish mines, our exports of tin have continued nearly stationary, or have rather fallen off; having been less in 1831 and 1832, when the produce of the mines exceeded 4,000 tons a year, than in 1820 and 1821, when it was only about 2,000 tons a year.

*Duty on British Tin.* — All tin produced in Cornwall has been subject, from a very remote period, to a coinage duty of 4 $\frac{1}{2}$  a ton, payable to the Duke of Cornwall; the tin raised in Devonshire is subject to a similar duty of 1 $\frac{1}{2}$  13s. 4d. a ton. This duty produces from 16,000 $\frac{1}{2}$  to 20,000 $\frac{1}{2}$  a year; and is felt to be a serious grievance, not only from its amount, but from the vexatious regulations under which it is collected. Though the orders sent the miner were for tin of a peculiar description, he is not allowed to smelt it at once into the required form, but is obliged to cast it, in the first instance, into *blocks*. This regulation being complied with, it might be expected that the tin would be surveyed by officers at the smelting-house, and the duty charged accordingly; but instead of this the miner is obliged to convey it sometimes as far as 8 or 10 miles, to one of the *coinage towns*, where it is, (and where only it can be) coined; that is, a small piece is struck off one of the corners, and the block is impressed with the arms of the duchy, and the duty paid. This useless ceremony being gone through, the tin has frequently to be carried back, before it can be shipped, to the very place whence it was taken to be coined! Another grievance is, that the coinage is only performed quarterly; so that, however pressing the demand for tin may be in the interim, the miner cannot supply it. There are also certain fees payable on the coinage, particularly if it take place during the Christmas and Ladyday quarters; so that if we add to the duty of 4 $\frac{1}{2}$  a ton, those charges, and make a reasonable allowance for the expense of carriage, and for the trouble and inconvenience to which the miner is put, the whole may be moderately estimated at 5 $\frac{1}{2}$  a ton.

It is surely high time that this tax, and the proposterous regulations connected with it, were abolished. So long as we enjoyed a sort of monopoly of the tin trade, the duchy duty was comparatively little felt; but now that we have to sustain a competition that has already sunk the price of tin about 50 per cent. and that is every day becoming more severe, it is found to be quite oppressive. And it is not to be endured that the existence of an ancient and important branch of industry, supposed to afford employment for about 20,000 persons, should be endangered, that the Crown may gain a paltry revenue of from 16,000 $\frac{1}{2}$  to 20,000 $\frac{1}{2}$  a year. This is a subject which calls loudly for the interference of the legislature; and should another edition of this work be called for, we trust we shall then have to announce the abolition or commutation of the tin duty. — (For further particulars, see an excellent little tract entitled the *Tin Duties*, (ascribed to Sir Charles Lemon) published in 1833. There is a useful and instructive paper on the tin trade in the *Spectator*, No. 217.)

**TIN, ORIENTAL** (Malay, *Tina*; Hind. *Kalai*; Siamese, *Dibuk*; Burmese, *Kye-p'kyu*, white copper), in commercial language usually called Banca tin, is found in several provinces of China; but the most extensive and, probably, richest tin district in the world, exists in the Malay countries. This comprehends the whole of the peninsula, from the extreme cape to the latitude of 14 $\frac{1}{2}$  on its western side, and to 11 $\frac{1}{2}$  on its eastern, and comprehends several of the small islands lying in the route between the peninsula and Java, as far as the latitude of 3 $\frac{1}{2}$  south; so that the whole of this tin district has an extreme length of near 1,200 miles. By far the greater number of the mines within these limits are as yet unwrought and unexplored. It was only in the beginning of last century that the mines of Banca, the most productive at present worked, were accidentally discovered. The whole tin of the Malay countries is the produce of alluvial ores, or what is called, in Cornwall, "Stream-work;" and from the abundance in which the mineral has been found by the mere washing of the soil, no attempt has hitherto been made at regular mining, or obtaining the ore from its rocky matrix. Malay tin, consequently, is grain tin, or tin in a very pure state; that being the species which alluvial ore uniformly produces. The mines, or rather excavations, are perpendicular pits of from 15 to 25 feet deep; and when the soil and a superstratum of common clay are removed, the bed containing the ore, consisting of quartz and granitic gravel, is reached. The sand and gravel are separated from the ore by passing a stream of water through the whole materials. The ore so obtained is preserved in heaps, and smelted periodically with charcoal in a blast furnace. The mine or pit is kept clear of water by the Chinese wheel. No cattle are used in any part of the process; human labour being had recourse to throughout the whole of its stages. The most imperfect part of the process is the smelting. The stream ores of Cornwall, which are generally poor, afford from 65 to 75 per cent. of grain tin; whereas, owing to the imperfection of the process, from those of Banca not more than 55 or 60 are usually obtained. The difference in the produce suggested, a few years ago, the practicability of sending the ore to England for the purpose of being smelted; and the experiment was tried; but our customs regulations not allowing the produce to be bonded and re-exported without duty, rendered the scheme abortive.

With very trifling exceptions, the whole tin of the Malay islands is mined and smelted by Chinese settlers; and before their skill and enterprise were applied to its production, the metal seems to have been obtained by the inhabitants of the countries which produced it, by processes hardly more skillful than those by which the precious metals were procured by the native inhabitants of America, prior to the introduction of European skill and machinery. The following estimate has been given of the annual produce of the principal states and places producing tin: —

|                                     | Piculs.              |   | Piculs.              |
|-------------------------------------|----------------------|---|----------------------|
| East coast of the Malay peninsula — |                      | West coast of the Malay peninsula and islands — |                      |
| Junk Ceylon                         | 5,000                | Sungora and Patani                              | 5,000                |
| Queda                               | 2,000                | Tringanu  | 7,000                |
| Pera                                | 3,000                | Pahang  | 3,000                |
| Salangora                           | 3,000                | Singkep   | 5,000                |
| Malacca                             | 4,000                | Banca   | 35,000               |
| <b>Total</b>                        | <b>Piculs 17,000</b> | <b>Total</b>                                    | <b>Piculs 55,000</b> |

This can be considered only as a rough estimate; but we believe it is not far wide of the truth. At an average of the 2 years, 1826-27 and 1827-28 the exports of Singapore amounted to 16,342 piculs, or about

370 tons. The most considerable port of exportation is Batavia; from which there is sent annually, either directly, or through orders from the Dutch government or the authorities at Banca, 2,000 tons. From Prince of Wales Island there is also a considerable quantity exported; and a smaller one direct to China in junks, from several of the native ports on the eastern shore of the Malay peninsula. The great marts for the consumption of tin are China, Hindostan, and the continent of Europe. The quality of the different descriptions of Malay tin, although there may be some inconsiderable difference in the quality of the original ores, seems to be derived chiefly from the greater or less skill with which the process of smelting is conducted; and this, again, necessarily depends upon the extent of capital, and goodness of the machinery employed. The mining operations of Banca have long been conducted upon a larger scale, and with more skill, than in any other of the Malay countries; and consequently, the metal produced in this island is superior by from 10 to 12 per cent.: in the market of Canton it is called "old tin," in contradistinction to "new tin," the produce of the other Malay countries. Next, in point of quality, to the produce of Banca, are those of Trinaganu and Singkep, which are not more than 5 per cent. inferior to it. The tin of the state of Pera, a considerable part of which is produced by the natives themselves, without Chinese assistance, is the worst, and usually about 15 per cent. below that of Banca. The native tin of China is 10 per cent. inferior to that of Banca, and is probably block tin like the greater part of that of Cornwall; and, like it, the produce of regular mining operations, and not alluvial. The produce of the Chinese mines is said of late years to have greatly decreased; probably owing to the great increase which has recently taken place in the produce of the Malay countries, and the cheapness and abundance with which it finds its way to China. It should be added, that of late years, and chiefly owing to the very low price and abundance of German spelter (zinc) in the Indian market, this commodity has occasionally been fraudulently mixed with tin. The Chinese brokers of Canton, however, are sufficiently expert to detect the adulteration; and it is believed that this discreditable practice has lately ceased.

The price of tin, taking the market of Singapore as the standard, has fluctuated of late years from 14 to 20 Spanish dollars per picul; equal, at the exchange of 4s. per dollar, to 47s. and 67s. per cwt. At an average of these prices, the annual value of the whole Malay tin will be about 240,000l. per annum. — (*Crawford's History of the Indian Archipelago*; *Dr. Horsfield's MS. Statistical View of the Island of Banca*; *Singapore Chronicle*; *Canton Register*, &c.)

**TOBACCO** (Da. *Tobak*; Du. *Tabak*; Fr. *Tabac*; Ger. *Taback*; It. *Tabacco*; Pol. *Tobaka*; Rus. *Tabak*; Sp. *Tabaco*; Arab. *Bujjerbhung*; Hind. *Tumbākū*; Malay, *Tambāco*), the dried leaves of the *Nicotiana Tabacum*, a plant indigenous to America, but which succeeds very well, and is extensively cultivated, in most parts of the Old World. The recent leaves possess very little odour or taste; but when dried, their odour is strong, narcotic, and somewhat fetid; their taste bitter and extremely acrid. When well cured, they are of a yellowish green colour. When distilled, they yield an essential oil, on which their virtue depends, and which is said to be a virulent poison. The leaves are used in various ways; being chewed, smoked, and ground and manufactured into snuff. It is in the last mentioned form that tobacco is principally used in Great Britain; and, though the contrary has been often asserted, its use does not seem to have been productive of any perceptible bad consequence.

1. *Historical Sketch of Tobacco.* — The taste for tobacco, though apparently administered only to a frivolous gratification, has given birth to a most extensive commerce, and been a powerful spur to industry. Being a native of the New World, its introduction into Europe dates only from the early part of the 16th century. Seeds of the plant were sent, in 1560, from Portugal, to Catharine de' Medici, by Jean Nicot, the French ambassador in that country, from whom it has received its botanical name. The notion, at one time so general, that the specific appellation tobacco was derived from its having been imported from Tobago, is now universally admitted to be without foundation. Humboldt has shown, that tobacco was the term used in the Haytian language to designate the pipe, or instrument made use of by the natives in smoking the herb; and the term, having been transferred by the Spaniards from the pipe to the herb itself, has been adopted by the other nations of the ancient world. — (*Essai Politique sur la Nouvelle Espagne*, vol. iii. p. 50. 2d edit.) Tobacco is believed to have been first introduced into England by the settlers who returned, in 1586, from the colony which it had been attempted to found in Virginia, under the auspices of Sir Walter Raleigh, in the preceding year. Harriott, who accompanied this expedition, gives, in his description of Virginia, an account of the tobacco plant, and of the manner in which it was used by the natives; adding, that the English, during the time they were in Virginia, and since their return home, were accustomed to smoke it after the fashion of the Indians, "and found many rare and wonderful experiments of the virtue thereof." — (*Hakluyt*, vol. i. p. 75.)

Raleigh, and other young men of fashion, having adopted the practice of smoking, it spread amongst the English; as it had previously spread amongst the Spaniards, Portuguese, French, and other Continental nations. But it made its greatest progress in this country after the foundation of the colony at James Town in Virginia, in 1607. The soil of the colony being found particularly well fitted for the culture of tobacco, considerable quantities were raised and sent home; and the numerous individuals interested in the colony contributed to introduce that taste for it which was diffused amongst all classes with astonishing rapidity.

James I. attempted, by repeated proclamations and publications, some of them couched in very strong terms, to restrain the use of tobacco. But his efforts had very little effect; and the settlers in Virginia continued to experience a more rapidly increasing and better demand for tobacco than for any other product of the colony.

During the earlier part of the reign of Charles I., the trade in tobacco was mono-

polished by the Crown. This monopoly was not, however, of long continuance, and totally ceased at the breaking out of the civil war.

Tobacco plants had been early introduced into England, and were found to answer remarkably well. Their cultivation was, indeed, prohibited by James, and afterwards by Charles, but apparently without effect. At length, however, the growing consumption of tobacco having excited the attention of the government financiers, it was seen that, by imposing a duty on its importation, a considerable revenue might be raised; but that, were it allowed to be freely cultivated at home, it would be very difficult to collect a duty upon it. In 1643, the Lords and Commons imposed a moderate duty, for the sake of revenue, on plantation tobacco; but instead of directly prohibiting the use of native tobacco, they burdened it with such a duty as, it was supposed, would occasion its culture to be abandoned. The facility, however, with which the duty was evaded, soon satisfied the republican leaders that more vigorous measures were required to stop its cultivation, and consequently to render its importation a source of revenue. Hence, in 1652, an act was passed, prohibiting the growth of tobacco in England, and appointing commissioners to see its provisions carried into effect. This act was confirmed at the Restoration, by the act Charles 2. c. 34., which ordered that all tobacco plantations should be destroyed. These measures were believed, at the time, to have been principally brought about by the solicitations of the planters; but their real intention was not so much to conciliate or benefit the latter, as to facilitate the collection of a revenue from tobacco; and, considered in this point of view, their policy seems quite unexceptionable.

This act did not, however, extend to Ireland; and, of late years, the cultivation of tobacco made considerable progress in that country. Had this been allowed to continue, there can be no question, that in a few years the revenue from tobacco, amounting to about 3,000,000*l.* a year, would have been materially diminished; for it would be quite visionary to suppose that any plan could have been devised for collecting a duty even of 100 per cent. upon tobacco — (see *post.*) — supposing it to have been generally cultivated in Ireland. No one, therefore, can question the wisdom of the late act prohibiting its growth in that country, and of rigorously enforcing its provisions. Any advantage Ireland might have gained by its cultivation, would have been but a poor compensation for the sacrifice of revenue it must have occasioned.

In some countries, as England, tobacco is principally used in the form of snuff; in others it is principally chewed; but in one form or other it is every where made use of. So early as 1624, Pope Urban VIII. issued a bull, excommunicating those who smoked in churches! The practice of smoking was at one time exceedingly prevalent in this country; but during the reign of George III. it was well nigh superseded, at least amongst the higher and middle classes, by the practice of snuff taking. Latterly, however, smoking has been in some measure revived, though it is still very far from being so extensively practised as formerly.

We quote the following statement as to the universality of the use of tobacco from a learned and able paper on its "Introduction and Use," in the 22d volume (p. 142.) of the *Asiatic Journal*: — "In Spain, France, and Germany, in Holland, Sweden, Denmark, and Russia, the practice of smoking tobacco prevails amongst the rich and poor, the learned and the gay. In the United States of America, smoking is often carried to an excess. It is not uncommon for boys to have a pipe or cigar in the mouth during the greatest part of the day. The death of a child is not unfrequently recorded in American newspapers, with the following remark subjoined: — 'supposed to be occasioned by excessive smoking.' If we pass to the East, we shall find the practice almost universal. In Turkey, the pipe is perpetually in the mouth; and the most solemn conferences are generally concluded with a friendly pipe, employed like the *calumet of peace* amongst the Indians. In the East Indies, not merely all classes, but both sexes, inhale the fragrant steam; the only distinction among them consisting in the shape of the instrument employed, and the species of the herb smoked. In China, the habit equally prevails; and a modern traveller in that country (Barrow) states, that every Chinese female, from the age of 8 or 9 years, wears, as an appendage to her dress, a small silken purse or pocket to hold tobacco, and a pipe, with the use of which many of them are not unacquainted at this tender age. This prevalence of the practice, at an early period, amongst the Chinese, is appealed to by M. Pallas as an evidence that 'in Asia, and especially in China, the use of tobacco for smoking is more ancient than the discovery of the New World.' He adds — 'Among the Chinese, and amongst the Mongol tribes who had the most intercourse with them, the custom of smoking is so general, so frequent, and has become so indispensable a luxury; the tobacco purse affixed to their belt so necessary an article of dress; the form of the pipes, from which the Dutch seem to have taken the model of theirs, so original; and, lastly, the preparation of the yellow leaves, which are merely rubbed to pieces and then put into the pipe, so peculiar; that they could not pos-

sibly derive all this from America by way of Europe; especially as India, where the practice of smoking is not so general, intervenes between Persia and China."

This, however, is a very doubtful proposition. It seems sufficiently established that the tobacco plant was first brought from Brazil to India about the year 1617; and it is most probable that it was thence carried to Siam, China, and other Eastern countries. The names given to it in all the languages of the East, are obviously of European, or rather American, origin; a fact which seems completely to negative the idea of its being indigenous to the East.

*Sources of Supply. Importation into Great Britain.*—Tobacco is now very extensively cultivated in France and other European countries, in the Levant, and in India; but the tobacco of the United States is still very generally admitted to be decidedly superior to most others. It is much higher flavoured than the tobacco of Europe; a superiority attributable in some degree, perhaps, to a different mode of treatment; but far more, it is believed, to differences of soil and climate.

Previously to the American war, our supplies of tobacco were almost entirely derived from Virginia and Maryland; and they are still principally imported from these states; so much so, that of 33,107,679 lbs. of unmanufactured tobacco imported in 1831, 32,712,108 lbs. came from the United States. Mr. Jefferson, in his *Notes on Virginia*, has given a very unfavourable view of the effects of the tobacco culture. It was, indeed, well known to be a crop that speedily exhausted all but the very best lands; and in addition to this, Mr. J. says that "it is a culture productive of infinite wretchedness. Those employed in it are in a continued state of exertion, beyond the powers of nature to support. Little food of any kind is raised by them; so that the men and animals on these farms are badly fed, and the earth is rapidly impoverished."—(English ed. p. 278.)

Tobacco is extensively cultivated in Mexico, but only for home consumption. It might probably, however, were it not for the restrictions under which it is placed, form a considerable article of export from that country. Under the Spanish government, the tobacco monopoly was one of the principal sources of revenue; yielding from 4,000,000 to 4,500,000 dollars, exclusive of the expenses of administration, amounting to about 800,000 dollars. No tobacco was allowed to be cultivated, except in a few specified places. Commissioners, or *quintas de tabaco*, were appointed, whose duty it was to take care that all tobacco plantations without the privileged districts should be destroyed. The government fixed the price at which the cultivators of tobacco were obliged to sell it to its agents. The sale of the manufactured tobacco was farmed out; and *cigars* were not allowed to be sold, except at the royal *estancos*. No one was allowed to use cigars of his own manufacture. This most oppressive monopoly was established in 1764. It has been continued, from the difficulty of supplying the revenue which it produces, by the present government.—(*Humboldt, Nouvelle Espagne*, vol. iii. p. 49.; *Poinsett's Notes on Mexico*, note 116. Lond. ed.)

Cuba is celebrated for its tobacco, particularly its cigars. These consist of the leaves, formed into small rolls, for the purpose of smoking. Formerly their importation into this country was prohibited; but they may now be imported on paying the exorbitant duty of 9s. per lb. Havannah cigars are usual; reckoned the best. Previously to 1820, the cultivation and sale of tobacco were subjected to the same sort of monopoly in Cuba as in Mexico; but, at the period referred to, the trade was thrown open. In consequence of the freedom thus given to the business, the production and exportation of tobacco are both rapidly increasing, though hardly, perhaps, so much as might have been expected; the culture of sugar and coffee being reckoned more profitable. In 1828, the declared value of the tobacco exported from Cuba amounted to 868,000 dollars; but there is good reason to think that its real value considerably exceeded this sum. At present, the total real value of the exports of tobacco from the Havannah and other ports is probably not much under 2,000,000 dollars. The tobacco used in Cuba by the lower classes is chiefly imported from the United States.

*Consumption of Duty-paid Tobacco in the United Kingdom.*—It appears from the following official account, that the consumption of duty-paid tobacco in Great Britain has increased from about 8,000,000 lbs. in 1789, to 16,214,000 lbs. in 1833; the duty having fluctuated during the same period from 1s. 3d. to 4s. and 3s. per lb. There are, however, sufficient grounds for thinking that the consumption would have been at least one fourth part greater, had the duty been less. But, whatever difference of opinion may exist as to the influence of the duty in Great Britain, there can be none as to its influence in Ireland. The subjoined Table shows that during the 5 years ending with 1798, when the duty was 8d. a pound, the annual average consumption of duty-paid tobacco was 7,337,217 lbs. Since 1798, the population of Ireland has been more than doubled; and yet, during the 5 years ending with 1833, when the duty was 3s. per lb., the annual average consumption has been only about 4,266,000 lbs.; which, making allowance for the increase of population, shows that the consumption has sunk to little

more than a fourth part of what it amounted to at the former period! This statement warrants the conclusion, that were the duty on tobacco in Ireland reduced to 1s. per lb., the consumption would be so much increased, that the revenue would gain, and not lose, by the reduction.

*Smuggling.* — The price of tobacco in bond varies from 3d. to 6d. per lb.; so that the duty of 3s. amounts to 1,200 per cent. on the inferior, and to 600 per cent. on the superior qualities. Now, though the use of tobacco be a frivolous, it is, at the same time, an innocent gratification; and we do not really see any reason whatever for loading it with such oppressive duties, even supposing it were possible to collect them. The more the wants and desires of men are multiplied, the more inventive and industrious they become; and so far from preventing luxurious indulgences, a wise government should exert itself to increase their number, and to diffuse a taste for them as widely as possible. But supposing it to be otherwise, still the magnitude of the tobacco duty is altogether indefensible: it is neither calculated to produce the largest amount of revenue, nor to eradicate the taste for the article. Its exorbitancy is advantageous to the smuggler, and to him only. With the exception of brandy and geneva, tobacco is the principal article clandestinely imported. If, as one might be half inclined to suspect, the duty were intended to give life and activity to the nefarious practices of the illicit traders, it has completely answered its object; but in every other point of view, its failure has been signal and complete. "According," said Mr. Poulett Thomson, in his admirable speech on the taxation of the empire, on the 26th of March, 1830, "according to all accounts laid before the house on this subject, smuggling in this article in England, Ireland, and Scotland, is carried on to the greatest possible extent. I have heard it stated, and I have the fact upon the best authority, that numbers of vessels are constantly leaving the ports of Flushing, Ostend, &c., carrying contraband tobacco to this country. It is a fact which was established in evidence before a committee of this house, that seventy cargoes of tobacco, containing 3,644,000 lbs., were smuggled in 1 year, on the coast of Ireland, from the port of Waterford to the Giant's Causeway alone! In Scotland, smuggling in this article is also carried on to a great extent. There is no doubt," added the Right Honourable gentleman, "that the only mode of meeting this system of smuggling consists in fairly reducing the duty upon the article. I believe, that were the duty upon it reduced to 1s. or 1s. 6d. per lb., the public would be greatly served, and smuggling put down."

We question, indeed, whether, allowing for the clandestine importation, the consumption be relatively less at this moment, in Ireland, than at any former period. Under the present system, government collects an exorbitant duty upon about a fourth part of the tobacco consumed in Ireland, the other three fourths being supplied by the smuggler; the duty being at once an incentive to his energies, and a premium to indemnify him for his risks! A fourth part of the demand of Great Britain is, probably, supplied in the same way.

Account of the Number of Pounds' Weight of Leaf Tobacco, manufactured Cigars, and Snuff, that paid Duty in the United Kingdom, for the Year ending the 5th of January, 1834; with the Rates of Duty and Total Amount of the same. — (Parl. Paper, No. 212. Sess. 1834.)

Regulations as to Importation. — Tobacco is not to be imported in a vessel of less than 150 tons burden; nor unless in hogsheads, casks, chests, or cases, containing at least 100 lbs. nett weight, if from the East Indies; or 450 lbs. weight, if from any other place; or 100 lbs. weight, if cigars; except tobacco from Turkey, which may be packed in separate bags or packages, provided the outward package be a hogshead, cask, chest, or case, containing 450 lbs. nett at least; and except Guatemala and Colombian tobacco, which may be imported in packages of not less than 90 lbs. Tobacco is not allowed to be imported, unless into the following ports; viz. London, Liverpool, Bristol, Lancaster, Cowes, Falmouth, Whitehaven, Hull, Glasgow, Port Glasgow, Greenock, Leith, Newcastle, Plymouth, Belfast, Cork, Drogheda, Dublin, Galway, Limerick, Londonderry, Newry, Sligo, Waterford, and Wexford. A rent of four shillings is charged upon every hogshead, cask, chest, or case of tobacco, warehoused in every warehouse provided by the Crown; 2s. being paid immediately upon depositing the tobacco in the warehouse, and 2s. more before the tobacco is taken out for home consumption, or exportation; it may remain for five years in the warehouse without any additional charge for rent. No abatement is made from the tobacco duties on account of damage; but the merchant may, if he choose, abandon the tobacco, which is to be destroyed. The allowance of duty-free tobacco for each sailor on board his Majesty's navy, and for each soldier on foreign service, is fixed at 2 lbs. per lunar month. Tobacco that has been exported, cannot be reimported, without being subject to the same duty as if it were imported for the first time. Tobacco cannot be entered for exportation in any vessel of less than 70 tons burden. — (See a full statement of the regulations in *Ellis's British Tariff for 1833-34*.) When tobacco is reshipped for exportation, an allowance is made for shrinkage, from the seller to the buyer, of 30 lbs. per hhd. on Virginia and Kentucky, and 15 lbs. per hhd. on Maryland, on the landing weights; the draft of the former 8 lbs. and of the latter 4 lbs., with a tret on all sorts of 4 lbs. per 104 lbs.

TON, an English weight containing 20 cwt.

TONNAGE, in commercial navigation, the number of tons burden that a ship will carry.

The mode in which the tonnage of British ships is at present, and has hitherto been, ascertained, is specified in the Registry Act, 3 & 4 Will. 4. c. 55. §§ 16. & 17. (see *antè*, p. 977). This mode has, however, led to very inaccurate conclusions; and as most shipping charges depend on the tonnage, it has occasioned the building of ships of an improper form for the purposes of navigation, in order that, by measuring less than their real burden, they might evade a part of the duties. It, therefore, has long been felt to be desirable that some change should be made in the plan of measuring ships. But the practical obstacles in the way of any change are much greater than is commonly supposed. The accurate estimation of the tonnage of a ship is a very difficult problem indeed; and it is indispensable that any system to be adopted in practice be not very complex; for if so, it will either be wholly inapplicable, or it will be sure to be incor-

rectly applied. At best, therefore, only an approximative measurement can be obtained. A committee of scientific and practical gentlemen were appointed some time since to consider the subject; and at their recommendation a bill has been introduced into parliament, embodying a plan for the more correct measurement of ships. As it is probable it will be passed into a law, we subjoin its more important clauses. As much, we believe, has been done to simplify it, as was, perhaps, practicable; but it still appears to us to be abundantly complex.

*New Mode by which Tonnage of Vessels is to be ascertained.*—The tonnage of every ship or vessel required to be registered, shall be measured and ascertained while her hold is clear, according to the following rule; viz. divide the length of the upper deck between the after part of the stem and the fore part of the sternpost into 6 equal parts. Depths: at the foremost, the middle, and the aftermost of those points of division, measure in feet and decimal parts of a foot the depths from the under side of the upper deck to the ceiling at the timber strake. In the case of a break in the upper deck, the depths are to be measured from a line stretched in a continuation of the deck. Breadths: divide each of those 3 depths into 5 equal parts, and measure the inside breadths at the following points; viz. at 1-5th and at 4-5ths from the upper deck, of the foremost and aftermost depths; and at 2-5ths and 4-5ths from the upper deck, of the midship depth. Length: at  $\frac{1}{4}$  the midship depth, measure the length of the vessel from the after part of the stem to the fore part of the sternpost; then to twice the midship depth add the foremost and aftermost depths for the sum of the depths; add together the upper and lower breadths at the foremost division, 3 times the upper breadth, and the lower breadth at the midship division, and the upper and twice the lower breadth at the after division, for the sum of the breadths; then multiply the sum of the depths by the sum of the breadths, and this product by the length, and divide the final product by 3,500, which will give the number of tons for register. If the vessel have a poop or  $\frac{1}{4}$  deck, or a break in the upper deck, measure the inside mean length, breadth, and height of such part thereof as may be included within the bulkhead; multiply these 3 measurements together, and, dividing the product by 924, the quotient will be the number of tons, to be added to the result as above found. In order to ascertain the tonnage of open vessels, the depths are to be measured from the upper edge of the upper strake. — § 2.

*Mode of ascertaining Tonnage of Steam Vessels.*—In ascertaining the tonnage of vessels propelled by steam, instead of deducting the length of the engine-room from the length of the vessel, as is at present by law established, an allowance for the same shall be made by an abatement of one-fourth of the whole tonnage of the vessel, to be ascertained in manner aforesaid; but inasmuch as the tendency of every improvement in the construction of such vessels is to diminish the space occupied by the engine, it shall be lawful, by royal proclamation, published in the *London Gazette*, to alter the proportion of allowance to be made in respect of the engine-room, as shall be found just and expedient, according to such diminution of space occupied by the engine as shall from time to time take place in such vessels. — § 4.

*For ascertaining Tonnage of Vessels when Laden.*—For the purpose of ascertaining the tonnage of all such ships, whether belonging to the United Kingdom or otherwise, as there shall be occasion to measure while their cargoes are on board, the following rule shall be observed; viz. measure, 1st, the length on the upper deck between the after part of the stem and the fore part of the sternpost; 2dly, the inside breadth on the under side of the upper deck at the middle point of the length; and, 3dly, the depth from the under side of the upper deck down the pump-well to the skin; multiply these 3 dimensions together, and divide the product by 130, and the quotient will be the amount of the register tonnage of such ships. — § 5.

*Amount of Register Tonnage to be carved on main Beam.*—The true amount of the register tonnage of every merchant ship or vessel belonging to the United Kingdom, to be ascertained according to the rule by this act established in respect of such ships, shall be deeply carved or cut in figures of at least 3 inches in length, on the main beam of every such ship or vessel, prior to her being registered. — § 6.

The tonnage of goods and stores is taken sometimes by weight, and sometimes by measurement; that method being allowed to the vessel which yields the most tonnage. In tonnage by weight, 20 cwt. make a ton. In tonnage by measurement, 40 cubic feet are equal to a ton. All carriages, or other stores measured by the tonnage, are taken to pieces and packed so as to occupy the least room. Ordnance, whether brass or iron, is taken in tonnage at its actual weight; as are musket cartridges in barrels or boxes, ammunition in boxes, &c.

**TOOLS AND MACHINES.** Under this designation are comprised all sorts of instruments employed to assist in the performance of any undertaking, from the rudest and simplest to the most improved and complex. But we only mention them here for the purpose of making one or two remarks on the restrictions to which the trade in them is subjected.

*Importation and Exportation of Tools and Machines.*—Tools and machines being instruments of production, it is obviously of the utmost importance that they should be as much improved as possible, and hence the expediency of allowing their free importation. Their exclusion, or the exclusion of the articles of which they are made, would obviously lay every branch of industry carried on in a nation less advanced than others in their manufacture, under the most serious disadvantages. And supposing the implements it employed to be superior to those of other countries when the exclusion took place, the absence of foreign competition, and of the emulation which it inspires, would most probably, in a very short time, occasion the loss of this superiority. The injury arising from the prohibition of most other articles is comparatively limited, affecting only the producers and consumers of those that are prohibited. But a prohibition of machines strikes at the root of every species of industry: it is not injurious to one, or a few branches, but to all.

The question, whether the exportation of machinery ought to be free, is not so easy of solution. It is the duty of a nation to avail itself of every fair means for its own aggrandisement; and supposing the machinery belonging to any particular people were decidedly superior to that employed by their neighbours, and that they had it in their power to preserve this advantage, their generosity would certainly outrun their sense, were they to communicate their improved machinery to others. We do not, however, believe that it is possible, whatever measures may be adopted in that

view, for one country to monopolise, for any considerable period, any material improvement in machinery or the arts: and on this ground we think that the existing restraints on the exportation of machinery had better be abolished. Drawings and models of all sorts of machines used in Manchester, Glasgow, and Birmingham, are to be found in most parts of the Continent; and at Rouen, Paris, &c., numbers of the best English workmen are employed in the manufacture of prohibited machines. Now, it does certainly appear not a little reproachful to prevent the exportation of a machine, at the same time that we allow (it could not, indeed, be prevented) the free egress of the workmen by whom it is made! The effect of this absurd policy is, not to secure a monopoly of improved machines for the manufacturers of England, but to occasion the emigration of English artisans to the Continent, and the establishment there of machine manufactories under their superintendance. The prejudice that must arise from this state of things to the interests of England, is too obvious to require being pointed out. It is plain, therefore, that the exportation of all sorts of machinery, on payment of a moderate duty, ought to be allowed. A policy of this sort would afford a much more efficient protection to our manufacturers than they enjoy at present; at the same time that it would tend to keep our artisans at home, and make England the grand seat of the tool as well as of the cotton manufacture.

For an account of the restrictions on the exportation of machinery from Great Britain, see *anté*, p. 668.

Account of the Value of the Machinery exported from Great Britain, during the Six Years ending with 1829. — (*Parl. Paper*, No. 373. Sess. 1830.)

| Years. | Steam Engines and Parts of Steam Engines. | Mill Work of all Sorts allowed by Law to be exported. | Machinery of all other Kinds allowed by Law to be exported. | Machinery exported under Licence from the Treasury or Privy Council. | Total.               |

**TOPAZ** (Ger. *Topas*; Fr. *Topase*; It. *Topazio*; Sp. *Topacio*; Rus. *Topaz*). The name topaz has been restricted by M. Haiiy to the stones called by mineralogists Occidental ruby, topaz, and sapphire; which, agreeing in their crystallisation and most of their properties, were arranged under one species by M. Romé de Lisle. The word topaz, derived from an island in the Red Sea, where the ancients used to find topazes, was applied by them to a mineral very different from ours. One variety of our topaz they denominated Chrysolite. Colour, wine yellow. From pale wine yellow it passes into yellowish white, greenish white, mountain green, sky blue: from deep wine yellow into flesh red and crimson red. Specific gravity from 3.464 to 3.641. — (*Thomson's Chemistry*.)

"*Yellow Topaz*. — In speaking of the topaz, a gem of a beautiful yellow colour is always understood: it is wine yellow of different degrees of intensity; and the fairer and deeper the tinge, the more the stone is esteemed. In hardness it yields to the spinelle.

"There are few gems more universal favourites than the yellow topaz, when perfect: the rich warm tone of its colour, the vivacity of its lustre (which it retains even by the side of the diamond), and its large size, compared with many others, are characters which deservedly entitle it to distinction; it bears accordingly a high price when of good quality.

"It is chiefly employed for necklaces, ear-drops, bracelets, &c. in suit. No little skill and taste are required in cutting and duly proportioning this gem; the table should be perfectly symmetrical, and not too large, the bezel of sufficient depth, and the collet side should be formed in delicate steps. It works easily on the mill, and the lapidaries are in general tolerably well acquainted with it; yet it is uncommon to meet with one well cut.

"The yellow topaz varies in price according to its beauty and perfection. A superlatively fine stone, perfect in colour and workmanship, sufficiently large for an armet, or any other ornament, and weighing nearly 80 carats, was sold for 100*l.*

"Topazes have become more common since our intercourse with Brazil; consequently they are less in demand, and lower in price. A fine stone of 80 carats may be purchased at from 30*l.* to 35*l.*; and smaller, calculated for ring stones, at from 2*l.* to 5*l.*; but it is not usual to sell them by weight.

"*Pink Topaz*. — This is made from the yellow, which, when of intense colour, is put into the bowl of a tobacco pipe or small crucible, covered with ashes or sand: on the application of a low degree of heat, it changes its colour from a yellow to a beautiful pink. This is performed with little hazard; and if the colour produced happens to be fine, the price is much augmented.

"*Red Topaz*. — This beautiful gem, which very seldom occurs naturally, is of a fine crimson colour, tinged with a rich brown; it is extremely rare, and generally taken to be a variety of ruby, for which I have seen it offered for sale. Its price, from its scarcity, is quite capricious; it has an exquisite pleasing colour, very different from the glare of the artificial pink topaz.

"*Blue Topaz*. — is also a beautiful gem, of a fine celestial blue colour. It has occurred of considerable magnitude; the finest specimen known, I brought in the rough from Brazil; when cut and polished, it weighed about 1½ oz. Smaller specimens are not uncommon, and, when light-coloured, are often taken for aqua-marinas, from which they may always be distinguished by their greater weight and hardness, &c.

"*White Topaz*. — is familiarly called *Minas Nova*. It is a beautiful pellucid gem, and is used for bracelets, necklaces, &c. It possesses greater brilliancy than crystal; and, from its hardness, has been used to cover paste, &c., and to form doublets. — (*Mason on Diamonds*, &c. 2d ed. p. 108—112.)

**TORTOISESHELL** (Fr. *Ecaille de Tortue*; It. *Scaglia de Tartaruga*; Ger. *Schilpad*; Malay, *Sisik kurakura*), the brown and yellow scales of the *Testudo imbricata*, or tortoise, a native of the tropical seas. It is extensively used in the manufacture of combs, snuff-boxes, &c., and in inlaying and other ornamental work. The best tortoiseshell is that of the Indian Archipelago; and the finest of this quarter is obtained on the shores of the Spice Islands and New Guinea. When the finest West Indian tortoiseshell is worth, in the London market, 46s., the finest East Indian is worth 60s. per lb. Under the latter name, however, a great deal of inferior shell is imported, brought from various parts of the East Indies. The goodness of tortoiseshell depends mainly on the thickness and size of the scales, and in a smaller degree on the clearness and brilliancy of the colours. Before the opening of the British intercourse with India, the greater part of the tortoiseshell which eventually found its way to Europe, was first carried to Canton, which then formed the principal mart for the commodity. It is still an article of trade from that city; the value of the tortoiseshell exported by British ships, in 1831 and 1832, having amounted to 19,017 dollars. At present, however, Singapore is the chief mart, the exports from it in 1831 and 1832 having amounted at an average to 208 piculs. The price at Singapore varies from 750 and 900 to 1,000 to 1,600 dollars per picul, according to quality. — (*Crawford's Indian Archipelago*; *Singapore Chronicle*; *Canton Register*.)

The imports of tortoiseshell into Great Britain from all places eastward of the Cape of Good Hope, except China, were, in 1830, 32,189 lbs.; in 1831, 30,902; and in 1832, 39,004. — (*Parl. Paper*, No. 427, Sess. 1833.) The duty, which is 2s. per lb. on the shells imported from foreign countries, and 1s. per lb. on those imported from a British possession, produced, in 1832, 438l. 1s. 7d. nett.

**TOYS** (Ger. *Spielzeug*, *Speilsachen*; Du. *Speelgoed*; Fr. *Jouets*, *Bimbelots*; It. *Trastulli*; Sp. *Dijas*, *Juguetes de ninnos*; Rus. *Igrushki*), include every trifling article made expressly for the amusement of children. How frivolous soever these articles may appear in the estimation of superficial observers, their manufacture employs hundreds of hands, and gives bread to many families in London, Birmingham, &c. The greatness of the demand for them may be inferred, from the fact, that a manufacturer of glass beads, and articles of that description, has received a single order for 500l. worth of dolls' eyes! — (*Fourth Report, Artisans and Machinery*, p. 314.) Considerable quantities are also imported from Holland; which supplies us with several sorts of wooden toys on more reasonable terms than we can afford to produce them. But of late years, these have been made in greater abundance in England than formerly. The duty on toys, which is an *ad valorem* one of 20 per cent., produced, in 1832, 3,469l. 1s. 7d., showing that the value of the toys imported for home use amounted to 17,345l.

**TRAGACANTH**, a species of gum, the produce of the *Astragalus Tragacantha*, a thorny shrub growing in Persia, Crete, and the islands of the Levant. It exudes about the end of June from the stem and larger branches, and soon dries in the sun. It is inodorous; impressing a very slightly bitter taste as it softens in the mouth. It has a whitish colour; is semitransparent; and in very thin, wrinkled, vermiform pieces; it is brittle, but not easily pulverised, except in frosty weather, or in a warmed mortar. It should be chosen in long twisted pieces, white, very clear, and free from all other colours; the brown, and particularly the black pieces, should be wholly rejected. — (*Thomson's Chemistry*; *Dr. A. T. Thomson's Dispensatory*; *Milburn's Orient. Com.*)

The entries of tragacanth for home consumption in 1831 and 1832, were at the rate of 43,836 lbs. a year. In March, 1834, tragacanth sold in the London market at from 11l. 10s. to 16l. per cwt., duty (6s.) included.

**TREATIES (COMMERCIAL)**. By a commercial treaty is meant a treaty between two independent nations, for facilitating, and most commonly, also, regulating, the commerce carried on between them.

*Origin, Objects, and Policy of modern Commercial Treaties.* — During the middle ages, and down, indeed, to a comparatively recent period, foreigners resident in a country, whether for commercial or other purposes, were, for the most part, subject to very harsh treatment. At one time, it was usual in England to make aliens liable for the debts and crimes of each other; and the practice, formerly so common, of laying heavier duties on the goods imported and exported by aliens than by British subjects, is not even yet, we grieve to say, altogether abandoned. In France, and some other countries, during the 14th and 15th centuries, a stranger was incapable of bequeathing property by will; and the whole of his personal as well as real estate fell, at his death, to the king or the lord of the barony. This barbarous law was known by the name of *Droit d'Aubaine*, and was not completely abolished in France till a very late period. — (*Robertson's Charles V.* vol. i. note 29.) Previously to last century, the laws with respect to shipwreck, though infinitely more humane than they had been at a more remote period, were calculated rather to promote the interests of the sovereign of the country, or the feudal lords on whose territories shipwrecked vessels might be thrown, than those of the unfortunate

owners or survivors. — (See WARE.\*) The most serious obstacles were then, also, opposed, by the prevalent insecurity, and the arbitrary nature of the tolls which the lords were in the habit of exacting, to the transit of commodities through the territories of one state to those of another.

Under such circumstances, it became of much importance for commercial states to endeavour to obtain, by means of treaties, that protection and security for the persons and properties of their subjects, when abroad, against unjust treatment and vexatious exactions, which they could not have obtained from the laws of the countries in which they might happen to reside. Thus, it was stipulated by Edward II., in 1325, that the merchants and mariners of Venice should have power to come to England for 10 years, with liberty to sell their merchandise and to return home in safety, "without having either their persons or goods stopped on account of other people's crimes or debts." — (Anderson, anno 1325.) The commercial treaties negotiated during the 15th, 16th, and 17th centuries, are full of similar conditions; and there can be no doubt that, by providing for the security of merchants and seamen when abroad, and suspending, with respect to them, the barbarous laws and practices then in force, they contributed materially to accelerate the progress of commerce and civilisation.

Commercial treaties were also negotiated at a very early period for the regulation of neutral commerce during war; and for defining the articles that should be deemed contraband, or which it should not be lawful for neutral ships to convey or carry to either belligerent. These are obviously points that can only be decided by express stipulations. †

Instead, however, of confining commercial treaties to their legitimate and proper purposes — the security of merchants and navigators, and the facility of commercial transactions — they very soon began to be employed as engines for promoting the commerce of one country at the expense of another. For more than 2 centuries, those engaged in framing commercial treaties have principally applied themselves to secure, either by force or address, some exclusive advantage in favour of the ships and products of their particular countries. Hence these compacts are full of regulations as to the duties to be charged on certain articles, and the privileges to be enjoyed by certain ships, according as they were either produced by or belonged to particular countries. It was in the adjustment of these duties and regulations that the skill of the negotiator was chiefly put to the test. It was expected that he should be thoroughly acquainted with the state of every branch of industry, both in his own country, and in the country with which he was negotiating; and he was to endeavour so to adjust the tariff of duties, that those branches in which his own country was deficient might be benefited, and those in which the other was superior might be depressed! The idea of conducting a negotiation of this sort on a fair principle of reciprocity is of very late origin; success in circumventing, in over-reaching, or in extorting from fear or ignorance some oppressive, but at the same time worthless privilege, was long esteemed the only proof of superior talent in negotiators.

In an able tract, attributed to Mr. Eden, afterwards Lord Auckland, published in 1787 (*Historical and Political Remarks on the Tariff of the French Treaty*), there is the following outline of the qualifications necessary to the negotiator of a commercial treaty: — "Besides a general knowledge of the trade and reciprocal interests of the contracting parties, he ought to be precisely acquainted with their several kinds of industry and skill; to discover their wants, to calculate their resources, and to weigh with nicety the state of their finances, and the proportionate interest of their money: nay, further, he should be able to ascertain the comparative population and strength of each country, together with the price and quality both of first materials, and also of the labour bestowed upon them: for this purpose he should inquire into the operations of every class of merchants and manufacturers concerned in the trade; should consult their expectations on each of its several branches; and collect their hopes and fears on the effect of such a commercial revolution, on the competition of rival nations. A good treaty of commerce, independent of the art of negotiation, is pronounced, by one who well knew the extent and difficulty of the subject, to be a '*masterpiece of skill*.'" — (p. 10.)

Had Mr. Eden concluded by stating, that no individual, or number of individuals, ever possessed, or ever would possess, the various qualifications which in his estimation were required in negotiating a "good commercial treaty," he would only have affirmed what is most certainly true. We believe, however, that he had formed a totally false

\* The practice of confiscating shipwrecked property continued in France till 1681, when it was abolished by an edict of Louis XIV. It was at one time common in Germany, to use the words of M. Bouchaud, "pour les prédicateurs de prier Dieu en chaire, qu'il se fasse bien des naufrages sur leurs côtes!" — (*Théorie des Traités de Commerce*, p. 118.) And the fact, that the celebrated jurist Thomasius wrote a dissertation in defence of such prayers, affords, if possible, a still more striking proof of the spirit of the period.

† There is a good collection of treaties as to this point, in the Appendix to the excellent work of Lampreli, *Del Commercio de' Popoli Neutrali*. — (See CONTRABAND.)

estimate, not only of the qualifications of a negotiator, but of the objects he ought to have in view. It was the opinion of the Abbé Mably — (*Droit Public de l'Europe*, tome ii. p. 561.) — an opinion in which we are disposed, with very little modification, to concur, — that when a few general rules are agreed upon for the effectual security of trade and navigation, including the importation and exportation of all commodities not prohibited by law; the speedy adjustment of disputes; the regulations of pilotage, harbour, and light-house duties; the protection of the property and effects of merchants in the event of a rupture, &c.; all is done that ought to be attempted in a commercial treaty. It may, indeed, be properly stipulated that the goods of the contracting powers shall be admitted into each other's ports on the same terms as "those of the most favoured nations," — that is, that no higher duties shall be charged upon them than on those of others. But here stipulations ought to cease. It is an abuse and a perversion of commercial treaties, to make them instruments for regulating duties or prescribing Custom-house regulations.

We admit, indeed, that occasions may occur, in which it may be expedient to stipulate for a reduction of duties or an abolition of prohibitions on the one side, in return for similar concessions on the other. But all arrangements of this sort ought to be determined by a convention limited to that particular object; and a fixed and not very distant term should be specified, when the obligation in the convention should expire, and both parties be at liberty to continue or abandon the regulations agreed upon. Generally speaking, all treaties which determine what the duties on importation or exportation shall be, or which stipulate for preferences, are radically objectionable. Nations ought to regulate their tariffs in whatever mode they judge best for the promotion of their own interests, without being shackled by engagements with others.\* If foreign powers be all treated alike, none of them has just grounds of complaint; and it can never be for the interest of any people to show preferences to one over another. Those, for example, by whom we may be most advantageously supplied with foreign products, require no preferences; and if we exclude them, or give a preference to others, we incontestably injure ourselves: and yet 19 out of 20 of the regulations as to duties in commercial treaties have been founded on this preposterous principle. They have been employed to divert trade into channels, where it would not naturally flow; that is, to render it less secure and less profitable than it would otherwise have been.

A great deal of stress has usually been laid upon the advantages supposed to be derived from the privileges sometimes conceded in commercial treaties. But we believe that those who inquire into the subject will find that such concessions have, in every case, been not only injurious to the party making them, but also to the party in whose favour they have been made. The famous commercial treaty with Portugal, negotiated by Mr. Methuen in 1703, was almost universally regarded, for a very long period, as admirably calculated to promote the interests of this country; but it is now generally admitted, by every one who has reflected upon such subjects, that few transactions have taken place by which these interests have been more deeply injured. It stipulated for the free admission of British woollens into Portugal, from which they happened, at the time, to be excluded; but in return for this concession — a concession far more advantageous to the Portuguese than to us — we bound ourselves "for ever hereafter" to admit wines of growth of Portugal into Great Britain at  $\frac{2}{3}$ ds of the duty payable on the wines of France! Thus, in order to open an access for our woollens to the limited market of Portugal, we consented, in all time to come, to drink inferior wine, bought at a comparatively high price! — (See WINE.) This, however, was not all: by excluding one of the principal equivalents the French had to offer for our commodities, we necessarily lessened their ability to deal with us; at the same time that we provoked them to adopt retaliatory measures against our trade. It is owing more to the stipulations in the Methuen treaty than to any thing else, that the trade between England and France — a trade that would naturally be of vast extent and importance — is confined within the narrowest limits; and is hardly, indeed, of as much consequence as the trade with Sweden and Norway. — (See *anté*, p. 644.)

It is visionary to imagine that any nation will ever continue to grant to another any exclusive advantage in her markets, unless she obtain what she reckons an equivalent advantage in the markets of the other. And if a commercial treaty stipulating for an exclusive privilege be really and *bonâ fide* observed by the country granting the privilege, we may be sure that the concessions made by the country in whose favour it is granted are sufficient fully to countervail it. Those who grasp at exclusive privileges in matters of this sort, or who attempt to extort valuable concessions from the weakness or ignorance of their neighbours, are uniformly defeated in their object. All really beneficial commercial transactions are bottomed on a fair principle of reciprocity; and that nation

\* This principle is laid down as fundamental by a very high authority, Sir Henry Parnell, in his tract *Sur les Avantages des Relations Commerciales entre la France et l'Angleterre*.

will always flourish most, and have the foundations of her prosperity best secured, who is a universal merchant, and deals with all the world on the same fair and liberal principles.

The justness of these principles, we are glad to observe, is now beginning to be very generally admitted. Stipulations as to duties and Custom-house regulations are disappearing from commercial treaties; and it is to be hoped that, at no distant period, every trace of them may have vanished.

A good work on the principles, style, and history of commercial treaties is a desideratum. The best we have seen are *Mascovius De Fœderibus Commercialium*, 4to. Leipsic, 1735.; and *Bouchaud, Théorie des Traités de Commerce*, 12mo. Paris, 1777. But these are principally works of erudition, and were written before the sound principles of commercial policy had been unfolded. There is no good collection of treaties in the English language; but Mr. Hertlet's work is valuable, as containing the recent treaties in an accessible form. A work containing new treaties and state papers is annually compiled at the Foreign Office; it used to be distributed to a few official personages only, but it is now sold to the public.

We subjoin copies of some of the commercial treaties and conventions existing at this moment between Great Britain and other powers.

## AUSTRIA.

*Convention of Commerce and Navigation between His Britannic Majesty and the Emperor of Austria, signed at London, December 21, 1829.*

Article 1. From the 1st day of February, 1830, Austrian vessels entering or departing from the ports of the United Kingdom of Great Britain and Ireland, and British vessels entering or departing from the ports of his Imperial and Royal Apostolic Majesty's dominions, shall not be subject to any other or higher duties or charges whatever than are or shall be levied on national vessels entering or departing from such ports respectively.

2. All articles of the growth, produce, or manufacture of any of the dominions of either of the high contracting parties, which are or shall be permitted to be imported into or exported from the ports of the United Kingdom and of Austria, respectively, in vessels of the one country, shall, in like manner, be permitted to be imported into and exported from those ports in vessels of the other.

3. All articles not of the growth, produce, or manufacture of the dominions of his Britannic Majesty, which can legally be imported from the United Kingdom of Great Britain and Ireland into the ports of Austria, in British ships, shall be subject only to the same duties as are payable upon the like articles if imported in Austrian ships; and the same reciprocity shall be observed in the ports of the United Kingdom, in respect to all articles not the growth, produce, or manufacture of the dominions of his Imperial and Royal Apostolic Majesty, which can legally be imported into the ports of the United Kingdom in Austrian ships.

4. All goods which can legally be imported into the ports of either country shall be admitted at the same rate of duty, whether imported in vessels of the other country or in national vessels; and all goods which can be legally exported from the ports of either country shall be entitled to the same bounties, drawbacks, and allowances, whether exported in vessels of the other country or in national vessels.

5. No priority or preference shall be given, directly or indirectly, by the government of either country, or by any company, corporation, or agent, acting in its behalf, or under its authority, in the purchase of any article the growth, produce, or manufacture of either country, imported into the other, on account of or in reference to the national character of the vessel in which such article may be imported; it being the true intent and meaning of the high contracting parties, that no distinction or difference whatever shall be made in this respect.

6. In respect to the commerce to be carried on in Austrian vessels with the British dominions in the East Indies, or now held by the East India Company in virtue of their charter, his Britannic Majesty consents to grant the same facilities and privileges, in all respects, to the subjects of his Imperial and Royal Apostolic Majesty, as are or may be enjoyed under any treaty or act of parliament by the subjects or citizens of the most favoured nation; subject to the laws and regulations which are, or may be, applicable to the ships and subjects of any other foreign country enjoying the like facilities and privileges of trading with the said dominions.

7. All the possessions of his Britannic Majesty in Europe, except the British possessions in the Mediterranean Sea, shall, for all the purposes of this convention, be considered as forming part of the United Kingdom of Great Britain and Ireland.

8. That clause of article 7. of the convention concluded at Paris on the 5th of November, 1815, between the courts of Great Britain, Austria, Prussia, and Russia, which relates to the commerce between the dominions of his Imperial and Royal Apostolic Majesty and the United States of the Ionian Islands, is hereby confirmed.

9. The present convention shall be in force until the 18th day of March, 1836; and further, until the end of twelve months after either of the high contracting parties shall have given notice to the other of its intention to terminate the same; each of the high contracting parties reserving to itself the right of giving such notice to the other, on or at any time after the said 18th day of March, 1836; and it is hereby agreed between them, that, at the expiration of 12 months after such notice shall have been received by either party from the other, this convention, and all the provisions thereof, shall altogether cease and determine.

10. The present convention shall be ratified, and the ratifications shall be exchanged at London, within 1 month from the date hereof, or sooner if possible.

In witness whereof the respective plenipotentiaries have signed the same, and have affixed thereto the seals of their arms.

Done at London, the 21st day of December,  
in the year of our Lord 1829.

ESTERHAZY.

Austrian ships may import from the dominions of his Majesty the Emperor of Austria into any of the British possessions abroad, goods the produce of such dominions, and export goods from such British possessions abroad, to be carried to any foreign country whatever. — (*Order in Council*, April 7. 1830.)

## DENMARK.

*Convention of Commerce between Great Britain and Denmark, signed at London, the 16th of June, 1824.*

Article 1. From and after the 1st day of July next, Danish vessels entering or departing from the ports of the United Kingdom of Great Britain and Ireland, and British vessels entering or departing from the ports of his Danish Majesty's dominions, shall not be subject to any other or higher duties or charges whatever, than are or shall be levied on national vessels entering or departing from such ports respectively.

2. All articles of the growth, produce, or manufacture of any of the dominions of either of the high contracting parties, which are or shall be permitted to be imported into or exported from the ports of t.

United Kingdom and of Denmark respectively, in vessels of the one country, shall, in like manner, be imported into and exported from those ports in vessels of the other.

3. All articles not of the growth, produce, or manufacture of the dominions of his Britannic Majesty, which can legally be imported from the United Kingdom of Great Britain and Ireland into the ports and dominions of the King of Denmark, in British ships, shall be subject only to the same duties as are payable upon the like articles if imported in Danish ships; and the same reciprocity shall be observed with regard to Danish vessels in the ports of the said United Kingdom of Great Britain and Ireland, in respect to all articles not the growth, produce, or manufacture of the dominions of his Danish Majesty, which can legally be imported into the ports of the United Kingdom in Danish ships.

4. All goods which can legally be imported into the ports of either country, shall be admitted at the same rate of duty, whether imported in vessels of the other country, or in national vessels; and all goods which can be legally exported from the ports of either country, shall be entitled to the same bounties, drawbacks, and allowances, whether exported in vessels of the other country, or in national vessels.

5. No priority or preference shall be given, directly or indirectly, by the government of either country, or by any company, corporation, or agent, acting on its behalf, or under its authority, in the purchase of any article the growth, produce, or manufacture of either country imported into the other, on a count of or in reference to the character of the vessel in which such article was imported; it being the true intent and meaning of the high contracting parties, that no distinction or difference whatever shall be made in this respect.

6. The high contracting parties having mutually determined not to include, in the present convention, their respective colonies, in which are comprehended, on the part of Denmark, Greenland, Iceland, and the islands of Ferroe; it is expressly agreed that the intercourse which may at present legally be carried on by the subjects or ships of either of the said high contracting parties with the colonies of the other, shall remain upon the same footing as if this convention had never been concluded.

7. The present convention shall be in force for the term of 10 years from the date hereof; and further, until the end of 12 months after either of the high contracting parties shall have given notice to the other of its intention to terminate the same; each of the high contracting parties reserving to itself the right of giving such notice to the other, at the end of the said term of 10 years; and it is hereby agreed between them, that, at the expiration of 12 months after such notice shall have been received by either party from the other, this convention, and all the provisions thereof, shall altogether cease and determine.

8. The present convention shall be ratified, and the ratifications shall be exchanged at London, within 1 month from the date hereof, or soon after if possible.

In witness whereof, the respective plenipotentiaries have signed the same, and have affixed thereto the seals of their arms.

Done at London, the 16th of June, 1823.

GEORGE CANNING,  
W. HUSKISSON,  
C. E. MOLTRE.

#### Separate Article.

The high contracting parties reserve to themselves to enter upon additional stipulations for the purpose of facilitating and extending, even beyond what is comprehended in the convention of this date, the commercial regulations of their respective subjects and dominions, upon the principles either of reciprocal or equivalent advantages, as the case may be. And in the event of any articles or article being concluded between the said high contracting parties, for giving effect to such stipulations, it is hereby agreed, that the article or articles which may hereafter be so concluded shall be considered as forming part of the aforesaid convention.

#### Additional Article.

Their Britannic and Danish Majesties mutually agree, that no higher or other duties shall be levied in either of their dominions (their respective colonies being excepted from the convention of this date), upon any personal property of their respective subjects, on the removal of same from the dominions of their said Majesties reciprocally, either upon the inheritance of such property, or otherwise, than are or shall be payable in each state, upon the like property, when removed by a subject of such state, respectively.

#### FRANCE.

*Convention of Commerce between His Britannic Majesty and the Most Christian King, together with two additional Articles thereunto annexed, signed at London, January 26, 1823.*

Article I. French vessels coming from or departing for the ports of France, or, if in ballast, coming from or departing for any place, shall not be subject, in the ports of the United Kingdom, either on entering into or departing from the same, to any higher duties of tonnage, harbour, light-house, pilotage, quarantine, or other similar or corresponding duties, of whatever nature, or under whatever denomination, than those to which British vessels, in respect of the same voyages, are or may be subject, on entering into or departing from such ports; and, reciprocally, from and after the same period, British vessels coming from or departing for the ports of the United Kingdom, or, if in ballast, coming from or departing for any place, shall not be subject, in the ports of France, either in entering into or departing from the same, to any higher duties of tonnage, harbour, light-house, pilotage, quarantine, or other similar or corresponding duties, of whatever nature, or under whatever denomination, than those to which French vessels, in respect of the same voyages, are or may be subject, on entering into or departing from such ports; whether such duties are collected separately, or are consolidated in one and the same duty;—his Most Christian Majesty reserving to himself to regulate the amount of such duty or duties in France, according to the rate at which they are or may be established in the United Kingdom; at the same time, with a view to diminishing the burdens imposed upon the navigation of the two countries, his Most Christian Majesty will always be disposed to reduce the amount of the said burdens in France, in proportion to any reduction which may hereafter be made of those now levied in the ports of the United Kingdom.

2. Goods which can or may be legally imported into the ports of the United Kingdom, from the ports of France, if so imported in French vessels, shall be subject to no higher duties than if imported in British vessels; and, reciprocally, goods which can or may be legally imported into the ports of France, from the ports of the United Kingdom, if so imported in British vessels, shall be subject to no higher duties than if imported in French vessels. The produce of Asia, Africa, and America, not being allowed to be imported from the said countries, nor from any other, in French vessels, nor from France in French, British, or any other vessels, into the ports of the United Kingdom, for home consumption, but only for warehousing and re-exportation, his Most Christian Majesty reserves to himself to direct that, in like manner, the produce of Asia, Africa, and America, shall not be imported from the said countries, nor from any other, in British vessels, nor from the United Kingdom in British, French, or any other vessels, into the ports of France, for the consumption of that kingdom, but only for warehousing and re-exportation.

With regard to the productions of the countries of Europe, it is understood between the high contracting parties, that such productions shall not be imported, in British ships, into France, for the consumption of that kingdom, unless such ships shall have been laden therewith in some port of the United Kingdom; and that his Britannic Majesty may adopt, if he shall think fit, some corresponding restrictive measure,

with regard to the productions of the countries of Europe imported into the ports of the United Kingdom in French vessels: the high contracting parties reserving, however, to themselves the power of making, by mutual consent, such relaxations in the strict execution of the present article, as they may think useful to the respective interests of the 2 countries, upon the principle of mutual concessions, affording each to the other reciprocal or equivalent advantages.

3. All goods which can or may be legally exported from the ports of either of the 2 countries, shall, on their export, pay the same duties of exportation, whether the exportation of such goods be made in British or in French vessels, provided the said vessels proceed, respectively, direct from the ports of the one country to those of the other. And all the said goods so exported in British or French vessels, shall be reciprocally entitled to the same bounties, drawbacks, and other allowances of the same nature, which are granted by the regulations of each country, respectively.

4. It is mutually agreed between the high contracting parties, that in the intercourse of navigation between their 2 countries, the vessels of any third power shall, in no case, obtain more favourable conditions than those stipulated, in the present convention, in favour of British and French vessels.

5. The fishing-boats of either of the 2 countries, which may be forced by stress of weather to seek shelter in the ports, or on the coast of the other country, shall not be subject to any duties or port charges of any description whatsoever; provided the said boats, when so driven in by stress of weather, shall not discharge or receive on board any cargo, or portion of cargo, in the ports, or on the parts of the coast where they shall have sought shelter.

6. It is agreed that the provisions of the present convention between the high contracting parties shall be reciprocally extended and in force, in all the possessions subject to their respective dominions in Europe.

7. The present convention shall be in force for the term of 10 years, from the 5th of April of the present year; and further, until the end of 12 months after either of the high contracting parties shall have given notice to the other of its intention to terminate its operation; each of the high contracting parties reserving to itself the right of giving such notice to the other, at the end of the said term of 10 years; and it is agreed between them, that, at the end of the 12 months' extension agreed to on both sides, this convention, and all the stipulations thereof, shall altogether cease and determine.

8. The present convention shall be ratified, and the ratifications shall be exchanged in London, within the space of 1 month, or sooner if possible.

In witness whereof the respective plenipotentiaries have signed the same, and have affixed thereto the seals of their arms.

Done at London, the 26th day of January, in the year of our Lord 1826.

GEORGE CANNING.

WILLIAM HUBRISSEAU.

LE PRINCE DE POLIGNAC.

#### Additional Articles.

Article 1. French vessels shall be allowed to sail from any port whatever of the countries under the dominion of his Most Christian Majesty, to all the colonies of the United Kingdom (except those possessed by the East India Company), and to import into the said colonies all kinds of merchandise (being productions of the growth or manufacture of France, or of any country under the dominion of France), with the exception of such as are prohibited to be imported into the said colonies, or are permitted to be imported only from countries under the British dominion; and the said French vessels, as well as the merchandise imported in the same, shall not be subject, in the colonies of the United Kingdom, to other or higher duties than those to which British vessels may be subject, on importing the same merchandise from any foreign country, or which are imposed upon the merchandise itself.

The same facilities shall be granted, reciprocally, in the colonies of France, with regard to the importation, in British vessels, of all kinds of merchandise, (being productions of the growth and manufacture of the United Kingdom, or any country under the British dominion), with the exception of such as are prohibited to be imported into the said colonies, or are permitted to be imported only from countries under the dominion of France. And whereas all goods, the produce of any foreign country, may now be imported into the colonies of the United Kingdom, in the ships of that country, with the exception of a limited list of specified articles, which can only be imported into the said colonies in British ships, his Majesty the King of the United Kingdom reserves to himself the power of adding to the said list of excepted articles any other, the produce of the French dominions, the addition whereof may appear to his Majesty to be necessary for placing the commerce and navigation to be permitted to the subjects of each of the high contracting parties with the colonies of the other, upon a footing of fair reciprocity.

2. French vessels shall be allowed to export from all the colonies of the United Kingdom (except those possessed by the East India Company), all kinds of merchandise which are not prohibited to be exported from such colonies in vessels other than those of Great Britain; and the said vessels, as well as the merchandise exported in the same, shall not be subject to other or higher duties than those to which British vessels may be subject, on exporting the said merchandise, or which are imposed upon the merchandise itself; and they shall be entitled to the same bounties, drawbacks, and other allowances of the same nature, to which British vessels would be entitled, on such exportation.

The same facilities and privileges shall be granted, reciprocally, in all the colonies of France, for the exportation, in British vessels, of all kinds of merchandise, which are not prohibited to be exported from such colonies in vessels other than those of France.

These 2 additional articles shall have the same force and validity as if they were inserted, word for word, in the convention signed this day. They shall be ratified, and the ratifications shall be exchanged at the same time.

In witness whereof the respective plenipotentiaries have signed the same, and have affixed thereto the seals of their arms.

Done at London, Jan. 26. 1826.

GEORGE CANNING.

WILLIAM HUBRISSEAU.

LE PRINCE DE POLIGNAC.

#### HANSE TOWNS.

*Convention of Commerce between His Britannic Majesty and the Free Hanseatic Republics of Lubeck, Bremen, and Hamburg, signed at London, Sept. 29. 1825.*

Article I. From and after the date hereof, British vessels entering or departing from the ports of the free Hanseatic republics of Lubeck, Bremen, or Hamburg; and Lubeck, Bremen, or Hamburg vessels entering or departing from the ports of the United Kingdom of Great Britain and Ireland; shall not be subject to any other or higher ship duties or charges than are or shall be levied on national vessels entering or departing from such ports respectively.

2. All goods, whether the production of the territories of the free Hanseatic republics of Lubeck, Bremen, or Hamburg, or of any other country, which may be legally imported from any of the ports of the said republics into the United Kingdom of Great Britain and Ireland in British vessels, shall, in like manner, be permitted to be imported in Lubeck, Bremen, or Hamburg vessels; and all goods, whether the production of any of the dominions of his Britannic Majesty, or of any other country, which may be legally exported from the ports of the United Kingdom in British vessels, shall, in like manner, be permitted to be exported from the said ports, in Lubeck, Bremen, or Hamburg vessels. And all goods, which may be legally imported into or exported from the ports of Lubeck, Bremen, or Hamburg, in national vessels, shall, in like manner, be permitted to be imported into or exported from the ports of Lubeck, Bremen, or Hamburg, in British vessels.

3. All goods which can be legally imported into the ports of the United Kingdom directly from the ports of Lubeck, Bremen, or Hamburg, or either of them, shall be admitted at the same rate of duty, whether imported in British vessels, or in vessels belonging to either of the said republics; and all goods which can be legally exported from the United Kingdom, shall be entitled to the same bounties, drawbacks, and allowances, whether exported in British or Hanseatic vessels. And the like reciprocity shall be observed, in the ports of the said republics, in respect to all goods which can be legally imported into or exported from any or either of the said ports in vessels belonging to the United Kingdom.

4. No priority or preference shall be given, directly or indirectly, by any or either of the contracting parties, nor by any company, corporation, or agent, acting on their behalf or under their authority, in the purchase of any article, the growth, produce, or manufacture of their states respectively, imported into the other, on account of or in reference to the character of the vessel in which such article was imported; it being the true intent and meaning of the high contracting parties that no distinction or difference whatever shall be made in this respect.

5. In consideration of the limited extent of the territories belonging to the republics of Lubeck, Bremen, and Hamburg, and the intimate connection of trade and navigation subsisting between these republics, it is hereby stipulated and agreed, that any vessel which shall have been built in any or either of the ports of the said republics, and which shall be owned exclusively by a citizen or citizens of any or either of them, and of which the master shall also be a citizen of either of them, and provided 3/4ths of the crew shall be subjects or citizens of any or either of the said republics, or of any or either of the states comprised in the Germanic Confederation, such vessel, so built, owned, and navigated, shall, for all the purposes of this convention, be taken to be and be considered as a vessel belonging to Lubeck, Bremen, or Hamburg.

6. Any vessel, together with her cargo, belonging to either of the three free Hanseatic republics of Lubeck, Bremen, or Hamburg, and coming from either of the said ports to the United Kingdom, shall, for all the purposes of this convention, be deemed to come from the country to which such vessel belongs; and any British vessel and her cargo trading to the ports of Lubeck, Bremen, or Hamburg, directly or in succession, shall, for the like purposes, be on the footing of a Hanseatic vessel and her cargo making the same voyage.

7. It is further mutually agreed, that no higher or other duties shall be levied, in any or either of the states of the high contracting parties, upon any personal property of the subjects and citizens of each respectively, on the removal of the same from the dominion or territory of such states, (either upon inheritance of such property, or otherwise,) than are or shall be payable, in each state, upon the like property when removed by a subject or citizen of such state respectively.

8. The high contracting parties reserve to themselves to enter upon additional stipulations for the purpose of facilitating and extending, even beyond what is comprehended in the convention of this date, the commercial relations of their respective subjects and dominions, citizens and territories, upon the principle either of reciprocal or equivalent advantages, as the case may be; and, in the event of any article or articles being concluded between the said high contracting parties, for giving effect to such stipulations, it is hereby agreed that the article or articles which may hereafter be so concluded shall be considered as forming part of the present convention.

9. The present convention shall be in force for the term of 10 years from the date hereof; and further, until the end of 12 months after the King of the United Kingdom of Great Britain and Ireland, on the one part, or the governments of the free Hanseatic republics of Lubeck, Bremen, or Hamburg, or either of them, on the other part, shall have given notice of their intention to terminate the same; each of the said high contracting parties reserving to itself the right of giving such notice to the other at the end of the said term of 10 years; and it is hereby agreed between them, that, at the expiration of 12 months after such notice shall have been received by either of the parties from the other, this convention, and all the provisions thereof, shall altogether cease and determine, as far as regards the states giving and receiving such notice; it being always understood and agreed, that, if one or more of the Hanseatic republics aforesaid shall, at the expiration of 10 years from the date hereof, give or receive notice of the proposed termination of this convention, such convention shall, nevertheless, remain in full force and operation as far as regards the remaining Hanseatic republics or republic which may not have given or received such notice.

10. The present convention shall be ratified, and the ratification shall be exchanged at London, within 1 month from the date hereof, or sooner if possible.

In witness whereof the respective plenipotentiaries have signed the same, and have affixed thereto the seals of their arms.

Done at London, Sept. 29. 1825.

GEORGE CANNING.  
W. HUSKISSON.  
JAMES COLQUHOUN.

MEXICO.

*Treaty of Amity, Commerce, and Navigation, between Great Britain and Mexico, signed at London, December 26. 1826.*

Article 1. There shall be perpetual amity between the dominions and subjects of his Majesty the King of the United Kingdom of Great Britain and Ireland, and the United States of Mexico, and their citizens.

2. There shall be, between all the territories of his Britannic Majesty in Europe and the territories of Mexico, a reciprocal freedom of commerce. The inhabitants of the two countries, respectively, shall have liberty freely and securely to come, with their ships and cargoes, to all places and rivers in the territories aforesaid, saving only such particular ports to which other foreigners shall not be permitted to come, to enter into the same, and to remain and reside in any part of the said territories respectively; also to hire and occupy houses and warehouses for the purposes of their commerce; and, generally, the merchants and traders of each nation, respectively, shall enjoy the most complete protection and security for their commerce.

In like manner, the respective ships of war, and post-office packets of the 2 countries, shall have liberty freely and securely to come to all harbours, rivers, and places, saving only such particular ports (if any) to which other foreign ships of war and packets shall not be permitted to come, to enter into the same, to anchor, and to remain there and reef; subject always to the laws and statutes of the two countries respectively.

By the right of entering the places, ports, and rivers, mentioned in this article, the privilege of carrying on the coasting trade is not understood, in which national vessels only are permitted to engage.

3. His Majesty the King of the United Kingdom of Great Britain and Ireland engages further, that the inhabitants of Mexico shall have the like liberty of commerce and navigation stipulated for in the pre-

ceding article, in all his dominions situated out of Europe, to the full extent in which the same is permitted at present, or shall be permitted hereafter, to any other nation.

4. No higher or other duties shall be imposed on the importation into the dominions of his Britannic Majesty, of any article of the growth, produce, or manufacture of Mexico, and no higher or other duties shall be imposed on the importation into the territories of Mexico, of any articles of the growth, produce, or manufacture of his Britannic Majesty's dominions, than are or shall be payable on the like articles, being the growth, produce, or manufacture of any other foreign country; nor shall any other or higher duties or charges be imposed in the territories or dominions of either of the contracting parties, on the exportation of any articles to the territories of the other, than such as are or may be payable on the exportation of the like articles to any other foreign country; nor shall any prohibition be imposed upon the exportation of any articles the growth, produce, or manufacture of his Britannic Majesty's dominions, or of the said territories of Mexico, to or from the said dominions of his Britannic Majesty, or to or from the said territories of Mexico, which shall not equally extend to all other nations.

5. No higher or other duties or charges on account of tonnage, light or harbour dues, pilotage, salvage in case of damage or shipwreck, or any other local charges, shall be imposed, in any of the ports of Mexico, on British vessels, than those payable in the same ports by Mexican vessels\*; nor, in the ports of his Britannic Majesty's territories, on Mexican vessels, than shall be payable, in the same ports, on British vessels.

6. The same duties shall be paid on the importation into the territories of Mexico, of any article the growth, produce, or manufacture of his Britannic Majesty's dominions, whether such importation shall be in Mexican\* or in British vessels; and the same duties shall be paid on the importation into the dominions of his Britannic Majesty, of any article the growth, produce, or manufacture of Mexico, whether such importation shall be in British or in Mexican vessels. The same duties shall be paid, and the same bounties and drawbacks allowed, on the exportation to Mexico of any articles of the growth, produce, or manufacture of his Britannic Majesty's dominions, whether such exportation shall be in Mexican or in British vessels; and the same duties shall be paid, and the same bounties and drawbacks allowed, on the exportation of any articles the growth, produce, or manufacture of Mexico, to his Britannic Majesty's dominions, whether such exportation shall be in British or in Mexican vessels.

7. In order to avoid any misunderstanding with respect to the regulations which may respectively constitute a British or Mexican\* vessel, it is hereby agreed that all vessels built in the dominions of his Britannic Majesty, or vessels which shall have been captured from an enemy by his Britannic Majesty's ships of war, or by subjects of his said Majesty furnished with letters of marque by the Lords Commissioners of the Admiralty, and regularly condemned in one of his said Majesty's prize courts as a lawful prize, or which shall have been condemned in any competent court for the breach of the laws made for the prevention of the slave trade, and owned, navigated, and registered according to the laws of Great Britain, shall be considered as British vessels; and that all vessels built in the territories of Mexico, or captured from the enemy by the ships of Mexico, and condemned under similar circumstances, and which shall be owned by any citizen or citizens thereof, and whereof the master and 3/4ths of the mariners are citizens of Mexico, excepting where the laws provide for any extreme cases, shall be considered as Mexican vessels.

And it is further agreed, that every vessel, qualified to trade as above described, under the provisions of this treaty, shall be furnished with a register, passport, or sea letter, under the signature of the proper person authorised to grant the same, according to the laws of the respective countries (the form of which shall be communicated), certifying the name, occupation, and residence of the owner or owners, in the dominions of his Britannic Majesty, or in the territories of Mexico, as the case may be; and that he, or they, is, or are, the sole owner or owners, in the proportion to be specified; together with the name, burden, and description of the vessel as to built and measurement, and the several particulars constituting the national character of the vessel, as the case may be.

8. All merchants, commanders of ships, and others, the subjects of his Britannic Majesty, shall have full liberty, in all the territories of Mexico, to manage their own affairs themselves, or to commit them to the management of whomsoever they please, as broker, factor, agent, or interpreter; nor shall they be obliged to employ any other persons for those purposes than those employed by Mexicans, nor to pay them any other salary or remuneration than such as is paid, in like cases, by Mexican citizens; and absolute freedom shall be allowed, in all cases, to the buyer and seller, to bargain and fix the price of any goods, imported into or exported from Mexico, as they shall see good, observing the laws and established customs of the country. The same privileges shall be enjoyed in the dominions of his Britannic Majesty, by the citizens of Mexico, under the same conditions.

The citizens and subjects of the contracting parties, in the territories of each other, shall receive and enjoy full and perfect protection for their persons and property, and shall have free and open access to the courts of justice in the said countries, respectively, for the prosecution and defence of their just rights; and they shall be at liberty to employ, in all causes, the advocates, attorneys, or agents of whatever description, whom they may think proper; and they shall enjoy, in this respect, the same rights and privileges therein as native citizens.

9. In whatever relates to the succession to personal estates, by will or otherwise, and the disposal of personal property of every sort and denomination, by sale, donation, exchange, or testament, or in any other manner whatsoever, as also the administration of justice, the subjects and citizens of the 2 contracting parties shall enjoy, in their respective dominions and territories, the same privileges, liberties and rights, as native subjects; and shall not be charged, in any of these respects, with any higher imposts or duties than those which are paid, or may be paid, by the native subjects or citizens of the power in whose dominions or territories they may be resident.

10. In all that relates to the police of the ports, the lading and unlading of ships, the safety of merchandise, goods, and effects, the subjects of his Britannic Majesty, and the citizens of Mexico, respectively, shall be subject to the local laws and regulations of the dominions and territories in which they may reside. They shall be exempted from all compulsory military service, whether by sea or land. No forced loans shall be levied upon them; nor shall their property be subject to any other charges, requisitions, or taxes, than such as are paid by the native subjects or citizens of the contracting parties in their respective dominions.

11. It shall be free for each of the 2 contracting parties to appoint consuls for the protection of trade, to reside in the dominions and territories of the other party; but, before any consul shall act as such, he shall, in the usual form, be approved and admitted by the government to which he is sent; and either of the contracting parties may except from the residence of consuls such particular places as either of them may judge fit to be excepted. The Mexican diplomatic agents and consuls shall enjoy, in the dominions of his Britannic Majesty, whatever privileges, exceptions, and immunities are or shall be granted to agents of the same rank belonging to the most favoured nation; and, in like manner, the diplomatic agents and consuls of his Britannic Majesty in the Mexican territories shall enjoy, according to the strictest reciprocity, whatever privileges, exceptions, and immunities are or may be granted to the Mexican diplomatic agents and consuls in the dominions of his Britannic Majesty.

12. For the better security of commerce between the subjects of his Britannic Majesty and the citizens of the Mexican States, it is agreed that if, at any time, any interruption of friendly intercourse, or any

\* See additional articles at the end of this treaty.

rupture, should unfortunately take place between the 2 contracting parties, the merchants residing upon the coasts shall be allowed 6 months, and those of the interior a whole year, to wind up their accounts, and dispose of their property; and a safe-conduct shall be given them to embark at the port which they shall themselves select. All those who are established in the respective dominions and territories of the 2 contracting parties, in the exercise of any trade or special employment, shall have the privilege of remaining and continuing such trade and employment therein, without any manner of interruption, in full enjoyment of their liberty and property, as long as they behave peaceably, and commit no offence against the laws: and their goods and effects, of whatever description they may be, shall not be liable to seizure or sequestration, or to any other charges or demands than those which may be made upon the like effects or property belonging to the native subjects or citizens of the respective dominions or territories in which such subjects or citizens may reside. In the same case, debts, between individuals, public funds, and the shares of companies, shall never be confiscated, sequestered, or detained.

13. The subjects of his Britannic Majesty, residing in the Mexican territories, shall enjoy, in their houses, persons, and properties, the protection of the government; and, continuing in possession of what they now enjoy, they shall not be disturbed, molested, or annoyed, in any manner, on account of their religion, provided they respect that of the nation in which they reside, as well as the constitution, laws, and customs of the country. They shall continue to enjoy, to the full, the privilege already granted to them of burying, in the places already assigned for that purpose, such subjects of his Britannic Majesty as may die within the Mexican territories; nor shall the funerals and sepulchres of the dead be disturbed in any way, or upon any account. The citizens of Mexico shall enjoy, in all the dominions of his Britannic Majesty, the same protection, and shall be allowed the free exercise of their religion, in public or private, either within their own houses, or in the chapels and places of worship set apart for that purpose.

14. The subjects of his Britannic Majesty shall, on no account or pretext whatsoever, be disturbed or molested in the peaceable possession and exercise of whatever rights, privileges, and immunities they have at any time enjoyed within the limits described and laid down in a convention signed between his said Majesty and the King of Spain, on the 14th of July, 1786: whether such rights, privileges, and immunities shall be derived from the stipulations of the said convention, or from any other concession which may, at any time, have been made by the King of Spain, or his predecessors, to British subjects and settlers residing and following their lawful occupations within the limits aforesaid: the 2 contracting parties reserving, however, for some more fitting opportunity, the further arrangements on this article.

15. The government of Mexico engages to co-operate with his Britannic Majesty for the total abolition of the slave trade, and to prohibit all persons inhabiting within the territories of Mexico, in the most effectual manner, from taking any share in such trade.

16. The 2 contracting parties reserve to themselves the right of treating and agreeing hereafter, from time to time, upon such other articles as may appear to them to contribute still further to the improvement of their mutual intercourse, and the advancement of the general interests of their respective subjects and citizens; and such articles as may be so agreed upon, shall, when duly ratified, be regarded as forming a part of the present treaty, and shall have the same force as those now contained in it.

17. The present treaty shall be ratified, and the ratifications shall be exchanged at London, within the space of 6 months, or sooner if possible.

In witness whereof the respective plenipotentiaries have signed the same, and have affixed thereto their respective seals.

Done at London, the 26th day of December, in the year of our Lord 1826.

WILLIAM HUSKISSON,  
JAMES J. MORIER.

SEBASTIAN CANACHO.

#### Additional Articles.

1. Whereas in the present state of Mexican shipping, it would not be possible for Mexico to receive the full advantage of the reciprocity established by the articles 5, 6, 7. of the treaty signed this day, if that part of the 7th article which stipulates that, in order to be considered as a Mexican ship, a ship shall actually have been *built* in Mexico, should be strictly and literally observed, and immediately brought into operation; it is agreed that, for the space of 10 years, to be reckoned from the date of the exchange of the ratifications of this treaty, any ships, *whosoever built, being bona fide* the property of and wholly owned by one or more citizens of Mexico, and whereof the master and 3/4ths of the mariners, at least, are also natural-born citizens of Mexico, or persons domiciliated in Mexico, by act of the government, as lawful subjects of Mexico, to be certified according to the laws of that country, shall be considered as Mexican ships: his Majesty the King of the United Kingdom of Great Britain and Ireland reserving to himself the right, at the end of the said term of 10 years, to claim the principle of reciprocal restriction stipulated for in the article 7. above referred to, if the interests of British navigation shall be found to be prejudiced by the present exception to that reciprocity, in favour of Mexican shipping.

2. It is further agreed that, for the like term of 10 years, the stipulations contained in articles 5. and 6. of the present treaty shall be suspended; and in lieu thereof, it is hereby agreed that, until the expiration of the said term of 10 years, British ships entering into the ports of Mexico, from the United Kingdom of Great Britain and Ireland, or any other of his Britannic Majesty's dominions, and all articles the growth, produce, or manufacture of the United Kingdom, or of any of the said dominions, imported in such ships, shall pay no other or higher duties than are or may hereafter be payable, in the said ports, by the ships, and the like goods, the growth, produce, or manufacture of the most favoured nation; and, reciprocally, it is agreed, that Mexican ships entering into the ports of the United Kingdom of Great Britain and Ireland, or any other of his Britannic Majesty's dominions, from any port of the States of Mexico, and all articles the growth, produce, or manufacture of the said States, imported in such ships, shall pay no other or higher duties than are or may hereafter be payable, in the said ports, by the ships, and the like goods, the growth, produce, or manufacture of the most favoured nation; and that no higher duties shall be paid, or bounties or drawbacks allowed, on the exportation of any article the growth, produce, or manufacture of the dominions of either country, in the ships of the other, than upon the exportation of the like articles in the ships of any other foreign country.

It being understood that, at the end of the said term of 10 years, the stipulations of the said 5th and 6th articles shall, from thenceforward, be in full force between the two countries.

The present additional articles shall have the same force and validity as if they were inserted, word for word, in the treaty signed this day. They shall be ratified, and the ratifications shall be exchanged at the same time.

In witness whereof the respective plenipotentiaries have signed the same, and have affixed thereto their respective seals.

Done at London, the 26th day of December, in the year of our Lord 1826.

WILLIAM HUSKISSON,  
JAMES J. MORIER.

SEBASTIAN CANACHO.

An order in council, dated September 3. 1827, orders, that vessels of the United States of Mexico, entering the ports of the United Kingdom of Great Britain and Ireland in ballast, or laden direct from any of the ports of Mexico, or departing from the ports of the said United Kingdom, together with the cargoes on board the same, such cargo consisting of articles which may be legally imported or exported,

shall not be subject to any other or higher duties or charges whatever than are or shall be levied on British vessels entering or departing from such ports, or on similar articles when imported into, or exported from, such ports in British vessels; and also such articles, when exported from the said ports in vessels of the United States of Mexico respectively, shall be entitled to the same bounties, drawbacks, and allowances that are granted on similar articles when exported in British vessels.

*N. B.*—Treaties similar to the above have been negotiated with Colombia, Buenos Ayres, &c.

## NETHERLANDS.

*Treaty between His Britannic Majesty and the King of the Netherlands, respecting Territories and Commerce in the East Indies, signed at London, March 17, 1824.*

Article 1. The high contracting parties engage to admit the subjects of each other to trade with their respective possessions in the Eastern Archipelago, and on the continent of India, and in Ceylon, upon the footing of the most favoured nation; their respective subjects conforming themselves to the local regulations of each settlement.

2. The subjects and vessels of one nation shall not pay, upon importation or exportation, at the ports of the other in the Eastern seas, any duty at a rate beyond the double of that at which the subjects and vessels of the nation to which the port belongs, are charged.

The duties paid on exports or imports at a British port, on the continent of India, or in Ceylon, on Dutch bottoms, shall be arranged so as, in no case, to be charged at more than double the amount of the duties paid by British subjects, and on British bottoms.

In regard to any article upon which no duty is imposed, when imported or exported by the subjects, or on the vessels, of the nation to which the port belongs, the duty charged upon the subjects or vessels of the other shall, in no case, exceed 6 per cent.

3. The high contracting parties engage, that no treaty hereafter made by either, with any native power in the Eastern seas, shall contain any article tending, either expressly, or by the imposition of unequal duties, to exclude the trade of the other party from the ports of such native power; and that if, in any treaty now existing on either part, any article to that effect has been admitted, such article shall be abrogated upon the conclusion of the present treaty.

It is understood that, before the conclusion of the present treaty, communication has been made by each of the contracting parties to the other, of all treaties or engagements subsisting between each of them, respectively, and any native powers in the Eastern seas; and that the like communication shall be made of all such treaties concluded by them, respectively, hereafter.

4. Their Britannic and Netherland Majesties engage to give strict orders, as well to their civil and military authorities, as to their ships of war, to respect the freedom of trade, established by articles 1, 2, and 3; and, in no case, to impede a free communication of the natives in the Eastern Archipelago, with the ports of the 2 governments, respectively, or of the subjects of the 2 governments with the ports belonging to native powers.

5. Their Britannic and Netherland Majesties, in like manner, engage to concur effectually in repressing piracy in those seas: they will not grant either asylum or protection to vessels engaged in piracy, and they will, in no case, permit the ships or merchandise captured by such vessels, to be introduced, deposited, or sold, in any of their possessions.

6. It is agreed that orders shall be given by the 2 governments, to their officers and agents in the East, not to form any new settlement on any of the islands in the Eastern seas, without previous authority from their respective governments in Europe.

7. The Molucca Islands, and especially Amboyna, Banda, Ternate, and their immediate dependencies, are excepted from the operation of the 1st, 2d, 3d, and 4th articles, until the Netherland government shall think fit to abandon the monopoly of spices; but if the said government shall, at any time previous to such abandonment of the monopoly, allow the subjects of any power, other than an Asiatic native power, to carry on any commercial intercourse with the said islands, the subjects of his Britannic Majesty shall be admitted to such intercourse, upon a footing precisely similar.

8. His Netherland Majesty cedes to his Britannic Majesty all his establishments on the continent of India; and renounces all privileges and exemptions enjoyed or claimed in virtue of those establishments.

9. The factory of Fort Marlborough, and all the English possessions on the island of Sumatra, are hereby ceded to his Netherland Majesty; and his Britannic Majesty further engages that no British settlement shall be formed on that island, nor any treaty concluded by British authority, with any native prince, chief, or state therein.

10. The town and fort of Malacca, and its dependencies, are hereby ceded to his Britannic Majesty; and his Netherland Majesty engages, for himself and his subjects, never to form any establishment on any part of the peninsula of Malacca, or to conclude any treaty with any native prince, chief, or state therein.

11. All the colonies, possessions, and establishments which are ceded by the preceding articles, shall be delivered up to the officers of the respective sovereigns on the 1st of March, 1825. The fortifications shall remain in the state in which they shall be at the period of the notification of this treaty in India; but no claim shall be made, on either side, for ordnance, or stores of any description, either left or removed by the ceding power, nor for any arrears of revenue, or any charge of administration whatever.

12. It is agreed that all accounts and reclamations, arising out of the restoration of Java, and other possessions, to the officers of his Netherland Majesty in the East Indies, — as well those which were the subject of a convention made at Java on the 24th of June, 1817, between the commissioners of the 2 nations, as all others, — shall be finally and completely closed and satisfied, on the payment of the sum of 100,000*l.* sterling money, to be made in London on the part of the Netherlands, before the expiration of the year 1825.

13. The present treaty shall be ratified, and the ratifications exchanged at London, within 3 months from the date hereof, or sooner if possible.

In witness whereof the respective plenipotentiaries have signed the same, and affixed thereto the seal of their arms.

Done at London, the 17th day of March, in the year of our Lord 1824

GEORGE CANNING. CHARLES WATKINS WILLIAMS WYNN. H. FAGEL. A. R. FALCK.

## PORTUGAL.

*Treaty of Commerce between Great Britain and Portugal, signed at Lisbon, December 27, 1763.*

Article 1. His Sacred Royal Majesty of Portugal promises, both in his own name and that of his successors, to admit, for ever hereafter, into Portugal, the woollen cloths, and the rest of the woollen manufactures of the Britons, as was accustomed till they were prohibited by the laws; nevertheless, upon this condition;

2. That is to say, that her Sacred Royal Majesty of Great Britain shall, in her own name and that of her successors, be obliged for ever hereafter to admit the wines of the growth of Portugal into Britain; so that at no time, whether there shall be peace or war between the kingdoms of Britain and France, any thing more shall be demanded for these wines, by the name of custom or duty, or by whatsoever other title, directly or indirectly, whether they shall be imported into Great Britain in pipes or hogshheads, or other casks, than what shall be demanded from the like quantity or measure of French wine, deducting or abating a third part of the custom or duty; but if at any time this deduction or abatement of customs, which is to be made as aforesaid, shall in any manner be attempted and prejudiced, it shall be

just and lawful for his Sacred Royal Majesty of Portugal again to prohibit the woollen cloths, and the rest of the British woollen manufactures.

3. The most excellent Lords the plenipotentiaries promise, and take upon themselves, that their above named masters shall ratify this treaty, and that within the space of 2 months the ratifications shall be exchanged.

Given at Lisbon, the 27th of December, 1703.

JOHN METHUEN.

MARCUS ALEGRETENSIS.

*Treaty of Commerce and Navigation between Great Britain and Portugal, signed at Rio de Janeiro, the 15th of February, 1810.*

1. Peace established.

2. There shall be reciprocal liberty of commerce and navigation between the respective subjects of the 2 high contracting parties, in all the territories and dominions of either. They may trade, travel, sojourn, or establish themselves, in all the ports, cities, towns, countries, provinces, or places whatsoever, belonging to each of the 2 high contracting parties, except in those from which all foreigners whatsoever are generally and positively excluded, the names of which places may be hereafter specified in a separate article of this treaty. Provided, however, that it be thoroughly understood that any place belonging to either of the two high contracting parties, which may hereafter be opened to the commerce of the subjects of any other country, shall thereby be considered as equally opened, and upon correspondent terms, to the subjects of the other high contracting party, in the same manner as if it had been expressly stipulated by the present treaty. And his Britannic Majesty, and his Royal Highness the Prince Regent of Portugal, do hereby bind themselves not to grant any favour, privilege, or immunity in matters of commerce and navigation, to the subjects of any other state, which shall not be also at the same time respectively extended to the subjects of the high contracting parties, gratuitously, if the concession in favour of that other state should have been gratuitous, and on giving, *quam proximè*, the same compensation or equivalent, in case the concession should have been conditional.

3. The subjects of the 2 sovereigns respectively shall not pay, in the ports, harbours, roads, cities, towns, or places whatsoever, belonging to either of them, any greater duties, taxes, or imposts (under whatsoever names they may be designated or included), than those that are paid by the subjects of the most favoured nation; and the subjects of each of the high contracting parties shall enjoy, within the dominions of the other, the same rights, privileges, or exemptions, in matters of commerce and navigation, that are granted, or may hereafter be granted, to the subjects of the most favoured nation.

4. His Britannic Majesty and his Royal Highness the Prince Regent of Portugal do agree, that there shall be a perfect reciprocity on the subject of the duties and imposts to be paid by the vessels of the high contracting parties, within the several ports and anchoring places belonging to each of them; to wit, that the vessels of the said Britannic Majesty shall not pay any higher duties or imposts (under whatsoever name they be designated or implied), within the dominions of his Royal Highness the Prince Regent of Portugal, than the vessels belonging to the subjects of his Royal Highness the Prince Regent of Portugal shall be bound to pay within the dominions of his Britannic Majesty, and *vice versa*. And this agreement shall particularly extend to the payment of the duties known by the name of *Port Charges, Tonnage and Anchorage Duties*, which shall not, in any case, or under any pretext, be greater for British vessels within the dominions of Portugal, than for Portuguese vessels within the dominions of his Britannic Majesty, and *vice versa*.

5. The 2 high contracting parties do also agree, that the same rates of bounties and drawbacks shall be established in their respective ports upon the exportation of goods, whether those goods be exported in British or Portuguese vessels; that is, that British vessels shall enjoy the same favour in this respect, within the dominions of Portugal, that may be shown to Portuguese vessels within the dominions of his Britannic Majesty, and *vice versa*. The 2 high contracting parties do also agree, that goods coming respectively from the ports of either of them, shall pay the same duties, whether imported in British or Portuguese vessels; or otherwise, that an increase of duties may be imposed upon goods coming into the ports of the dominions of Portugal from those of his Britannic Majesty in British ships, equivalent, and in exact proportion, to any increase of duties that may hereafter be imposed upon goods coming into the ports of his Britannic Majesty from those of his Royal Highness the Prince Regent of Portugal, imported in Portuguese ships. And in order that this matter may be settled with due exactness, and that nothing may be left undetermined concerning it, it is agreed, that Tables shall be drawn up by each government, respectively, specifying the difference of duties to be paid on goods so imported; and the Tables (which shall be made applicable to all the ports within the respective dominions of each of the contracting parties) shall be adjudged to form part of this present treaty.

In order to avoid any differences or misunderstandings with respect to the regulations which may respectively constitute a British or Portuguese vessel, the high contracting parties agree in declaring, that all vessels built in the dominions of his Britannic Majesty, and owned, navigated, and registered according to the laws of Great Britain, shall be considered as British vessels; and that all vessels built in the countries belonging to Portugal, or ships taken by any of the vessels of war belonging to the Portuguese government, or any of the inhabitants of the dominions of Portugal, having commissions or letters of marque and reprisal from the government of Portugal, and condemned as lawful prize in any court of admiralty of the Portuguese government, and owned by the subjects of his Royal Highness the Prince Regent of Portugal, and whereof the master and 3-4ths of the marines, at least, are subjects of his Royal Highness the Prince Regent of Portugal, shall be considered as Portuguese vessels.

6. The mutual commerce and navigation of the subjects of Great Britain and Portugal, respectively, in the ports and seas of Asia, are expressly permitted, to the same degree as they have heretofore been allowed by the 2 Crowns: and the commerce and navigation thus permitted, shall be placed on the footing of the commerce and navigation of the most favoured nation trading in the ports and seas of Asia; that is, that neither of the high contracting parties shall grant any favour or privilege in matters of commerce and navigation to the subjects of any other state trading within the ports and seas of Asia, which shall not be also granted, *quam proximè*, on the same terms, to the subjects of the other contracting party. His Britannic Majesty engages not to make any regulation which may be prejudicial or inconvenient to the commerce and navigation of the subjects of his Royal Highness the Prince Regent of Portugal within the ports and seas of Asia, to the extent which is or may hereafter be permitted to the most favoured nation. And his Royal Highness the Prince Regent of Portugal does also engage not to make any regulations which may be prejudicial or inconvenient to the commerce and navigation of the subjects of his Britannic Majesty within the ports, seas, and dominions opened to them by virtue of the present treaty.

13. Packets shall be established for the purpose of furthering the public service of the 2 courts, and facilitating the commercial intercourse of their respective subjects. A convention shall be concluded forthwith on the basis of that which was signed at Rio de Janeiro, on the 14th day of September, 1808, in order to settle the terms upon which the packets are to be established, which convention shall be ratified at the same time with the present treaty.

15. All goods and articles whatsoever of the produce, manufacture, industry, or invention of the dominions and subjects of his Britannic Majesty, shall be admitted into all the ports and dominions of his Royal Highness the Prince Regent of Portugal, as well in Europe as in America, Africa, and Asia, whether consigned to British or Portuguese subjects, on paying, generally and solely, duties to the amount of 12 per cent. according to the value which shall be set upon them by a tariff or Table of valuations, called in the Portuguese language *pauta*, the principal basis of which shall be the sworn invoice cost of

the aforesaid goods, merchandise, and articles, taking also into consideration (as far as may be just or practicable) the current prices thereof in the country into which they are imported. This tariff or valuation shall be determined and settled by an equal number of British and Portuguese merchants of known integrity and honour, with the assistance, on the part of the British merchants, of his Britannic Majesty's consul general, or consul; and on the part of the Portuguese merchants, with the assistance of the superintendent, or administrator general of the customs, or of their respective deputies. And the aforesaid tariff shall be made and promulgated in each of the ports belonging to his Royal Highness the Prince Regent of Portugal, in which there are or may be Custom-houses. And it shall be revised and altered if necessary, from time to time, either in the whole, or in part, whenever the subjects of his Britannic Majesty, resident within the dominions of his Royal Highness the Prince Regent of Portugal, shall make a requisition to that effect through the medium of his Britannic Majesty's consul general, or consul, or whenever the trading and commercial subjects of Portugal shall make the same requisition on their own part.

If any British goods should hereafter arrive in the ports of the Portuguese dominions without having been specifically valued and rated in the new tariff or *passeta*, they shall be admitted on paying the same duties of 15 per cent. *ad valorem*, according to the invoices of the goods, which shall be duly presented and sworn to by the parties importing the same. And in case that any suspicion of fraud, or unfair practices, should arise, the invoices shall be examined, and the real value of the goods ascertained by a reference to an equal number of British and Portuguese merchants of known integrity and honour; and in case of a difference of opinion amongst them, followed by an equality of votes upon the subject, they shall then nominate another merchant, likewise of known integrity and honour, to whom the matter shall be ultimately referred, and whose decision thereon shall be final and without appeal. And in case the invoice should appear to have been fair and correct, the goods specified in it shall be admitted, on paying the duties above mentioned of 15 per cent.; and the expenses, if any, of the examination of the invoice, shall be defrayed by the party who called its fairness and correctness into question. But if the invoice should be found to be fraudulent and unfair, then the goods and merchandises shall be bought up by the officers of the customs on the account of the Portuguese government, according to the value specified in the invoice, with an addition of 10 per cent. to the sum so paid for them by the officers of the customs, the Portuguese government engaging for the payment of the goods so valued and purchased by the officers of the customs within the space of 15 days; and the expenses, if any, of the examination of the fraudulent invoice shall be paid by the party who presented it as just and fair.

17. Articles of military and naval stores brought into the ports of his Royal Highness the Prince Regent of Portugal, which the Portuguese government may be desirous of taking for its own use, shall be paid for without delay at the prices appointed by the proprietors, who shall not be compelled to sell such articles on any other terms.

If the Portuguese government shall take into its own care and custody any cargo, or part of a cargo, with a view to purchase, or otherwise, the Portuguese government shall be responsible for any damage or injury that the same may receive while in the care and custody of the officers of the Portuguese government.

18. His Royal Highness the Prince Regent of Portugal is pleased to grant to the subjects of Great Britain the privilege of being *assignantes* for the duties to be paid in the Custom-houses of his Royal Highness's dominions, on the same terms, and on giving the same security, as are required from the subjects of Portugal.

On the other hand, the subjects of the Crown of Portugal shall receive, as far as it may be just or legal, the same favour in the Custom-houses of Great Britain as is shown to the natural subjects of his Britannic Majesty.

19. His Britannic Majesty does promise and engage, that all goods and articles whatsoever, of the produce, manufacture, industry, or invention of the dominions or subjects of the Prince Regent of Portugal, shall be admitted into the ports and dominions of his Britannic Majesty, on paying generally and only the same duties that are paid upon similar articles by the subjects of the most favoured nation.

If any reduction of duties should take place exclusively in favour of British goods imported into the dominions of Portugal, an equivalent reduction shall take place on Portuguese goods and merchandises imported into his Britannic Majesty's dominions, and *vice versa*; the articles upon which such equivalent reduction is to take place being settled by previous concert and agreement between the 2 high contracting parties.

It is understood, that any such reduction so granted by either party to the other, shall not be granted afterwards (except upon the same terms and for the same compensation) in favour of any other state or nation whatsoever. And this declaration is to be considered as reciprocal on the part of the 2 high contracting parties.

20. But as there are some articles of the growth and production of Brazil, which are excluded from the markets and home consumption of the British dominions, such as sugar, coffee, and other articles similar to the produce of the British colonies; his Britannic Majesty, willing to favour and protect (as much as possible) the commerce of the subjects of his Royal Highness the Prince Regent of Portugal, consents and permits that the said articles, as well as all others the growth and produce of Brazil, and all other parts of the Portuguese dominions, may be received and warehoused in all the ports of his dominions, which shall be by law appointed to be warehousing ports for those articles, for the purpose of re-exportation, under due regulation, exempted from the greater duties with which they would be charged were they destined for consumption within the British dominions, and liable only to the reduced duties and expenses on warehousing and re-exportation.

21. In like manner, notwithstanding the general privilege of admission thus granted in the 15th article of the present treaty by the Prince Regent of Portugal, in favour of all goods the produce and manufacture of the British dominions, his Royal Highness reserves to himself the right of imposing heavy, and even prohibitory duties on all articles known by the name of *British East Indian Goods* and *West Indian Produce*, such as sugar and coffee, which cannot be admitted for consumption in the Portuguese dominions, by reason of the same principle of colonial policy which prevents the free admission into the British dominions of corresponding articles of Brazilian produce.

But his Royal Highness the Prince Regent of Portugal consents that all the ports of his dominions, where there are or may be Custom-houses, shall be free ports for the reception and admission of all articles whatsoever, the produce and manufacture of the British dominions, not destined for the consumption of the place at which they may be received or admitted, but for re-exportation, either for other parts of the dominions of Portugal, or for those of other states. And the articles thus received and admitted (subject to due regulations) shall be exempted from the duties with which they would be charged, if destined for the consumption of the place at which they may be landed or warehoused, and liable only to the same expenses that may be paid by articles of Brazilian produce received and warehoused for re-exportation in the ports of his Britannic Majesty's dominions.

22. His Royal Highness the Prince Regent of Portugal is pleased to declare the port of St. Catherine to be a *Free Port*, according to the terms mentioned in the preceding article of the present treaty.

23. His Royal Highness the Prince Regent of Portugal is pleased to render Goa a *Free Port*, and to permit the free toleration of all religious sects whatever in that city and its dependencies.

24. All trade with the Portuguese possessions situated upon the eastern coast of the continent of Africa (in articles not included in the exclusive contracts possessed by the Crown of Portugal) which may have been formerly allowed to the subjects of Great Britain, is confirmed and secured to them now, and for ever, in the same manner as the trade which has hitherto been permitted to Portuguese subjects in

the ports and seas of Asia is confirmed and secured to them by virtue of the 6th article of the present treaty.

25. His Britannic Majesty consents to waive the right of creating factories or incorporated bodies of British merchants, within the dominions of Portugal: provided, however, that this shall not deprive the subjects of his Britannic Majesty, residing within the dominions of Portugal, of the full enjoyment, as individuals engaged in commerce, of any of those rights and privileges which they did or might possess as members of incorporated commercial bodies; and also that the commerce and trade carried on by British subjects shall not be restricted, or otherwise affected, by any commercial company whatever, possessing exclusive privileges and favours within the dominions of Portugal. And his Royal Highness the Prince Regent of Portugal does also engage, that he will not permit that any other nation or state shall possess factories or incorporated bodies of merchants within his dominions, so long as British factories shall not be established therein.

26. The two high contracting parties agree, that they will forthwith proceed to the revision of all other former treaties subsisting between the 2 Crowns, for the purpose of ascertaining what stipulations contained in them are, in the present state of affairs, proper to be continued or renewed. It is agreed that the stipulations contained in former treaties concerning the admission of the wines of Portugal on the one hand, and the woollen cloths of Great Britain on the other, shall at present remain unaltered. In the same manner it is agreed, that the privileges and immunities granted by either contracting party to the subjects of the other, whether by treaty, decree, or *ahara*, shall remain unaltered, except the power granted by former treaties, of carrying in the ships of either country goods of any description whatever, the property of the enemies of the other country, which power is now mutually and publicly renounced and abrogated.

27. The reciprocal liberty of commerce and navigation, declared by the present treaty, shall be considered to extend to all goods whatsoever, except those articles the property of the enemies of either power, or contraband of war.

28. Under the name of contraband or prohibited articles shall be comprehended not only arms, cannon, arquebuses, mortars, petards, bombs, grenades, saucissons, carcasses, carriages for cannon, musket-rests, bandoliers, gunpowder, match, saltpetre, ball, pikes, swords, head pieces, helmets, cuirasses, halberds, javelina, holsters, belts, horses, and their harness, but generally all other articles that may have been specified as contraband in any former treaties concluded by Great Britain or by Portugal with other powers. But goods which have not been brought into the form of warlike instruments, or which cannot become such, shall not be reputed contraband, much less such as have been already wrought and made up for other purposes, all which shall be deemed not contraband, and may be freely carried by the subjects of both sovereigns, even to places belonging to an enemy, excepting only such places as are besieged, blockaded, or invested by sea or land.

29. In case any vessels of war, or merchantmen, should be shipwrecked on the coasts of either of the high contracting parties, all such parts of the vessels, or of the furniture or appurtenances thereof, as also of goods as shall be saved, or the produce thereof, shall be faithfully restored upon the same being claimed by the proprietors or their factors duly authorised, paying only the expenses incurred in the preservation thereof, according to the rate of salvage settled on both sides (saving at the same time the rights and customs of each nation, the abolition or modification of which shall, however, be treated upon in the cases where they shall be contrary to the stipulations of the present article); and the high contracting parties will mutually interpose their authority, that such of their subjects as shall take advantage of any such misfortune may be severely punished.

30. It is further agreed, that both his Britannic Majesty and his Royal Highness the Prince Regent of Portugal shall not only refuse to receive any pirates or sea-rovers whatsoever into any of their havens, ports, cities, or towns, or permit any of their subjects, citizens, or inhabitants, on either part, to receive or protect them in their ports, to harbour them in their houses, or to assist them in any manner whatsoever; but further, that they shall cause all such pirates and sea-rovers, and all persons who shall receive, conceal, or assist them, to be brought to condign punishment for a terror and example to others. And all their ships, with the goods or merchandises taken by them, and brought into the ports belonging to either of the high contracting parties, shall be seized, as far as they can be discovered, and shall be restored to the owners, or the factors duly authorised or deputed by them in writing, proper evidence being first given to prove the property, even in case such effects should have passed into other hands by sale, if it be ascertained that the buyers knew or might have known that they had been piratically taken.

31. If at any time there should arise any disagreement, breach of friendship, or rupture between the Crowns of the high contracting parties, which God forbid (which rupture shall not be deemed to exist until the recalling or sending home of their respective ambassadors and ministers), the subjects of each of the 2 parties residing in the dominions of the other, shall have the privilege of remaining and continuing their trade therein, without any manner of interruption, so long as they behave peaceably, and commit no offence against the laws and ordinances; and in case their conduct should render them suspected, and the respective governments should be obliged to order them to remove, the term of 12 months shall be allowed them for that purpose, in order that they might retire with their effects and property, whether intrusted to individuals or to the state.

At the same time it is to be understood that this favour is not to be extended to those who shall act in any manner contrary to the established laws.

32. The present treaty shall be unlimited in point of duration, that the obligations and conditions expressed or implied in it shall be perpetual and immutable; and they shall not be changed or affected in any manner in case his Royal Highness the Prince Regent of Portugal should again establish the seat of the Portuguese monarchy within the European dominions of that Crown.

33. But the 2 high contracting parties do reserve to themselves the right of jointly examining and revising the several articles of this treaty at the end of 15 years, counted in the first instance from the date of the exchange of the ratifications thereof\*, and of then proposing, discussing, and making such amendments or additions, as the real interests of their respective subjects may seem to require. It being understood that any stipulation which at the period of revision of the treaty shall be objected to by either of the high contracting parties, shall be considered as suspended in its operation until the discussion concerning that stipulation shall be terminated, due notice being previously given to the other contracting party of the intended suspension of such stipulation, for the purpose of avoiding mutual inconvenience.

34. The several stipulations and conditions of the present treaty shall begin to have effect from the date of his Britannic Majesty's ratification thereof; and the mutual exchange of ratifications shall take place in the city of London, within the space of 4 months, or sooner if possible, to be computed from the day of the signature of the present treaty.

Done in the city of Rio de Janeiro, on the 19th day of February, in the year of our Lord 1810.

STRANGFORD.

CONDE DE LINHARES.

*Agreement between the British and Portuguese Commissioners, on Four Points connected with the Execution of the Treaty of 1810. Signed at London, 18th of December, 1812.*

1. The official certificate of registry, signed by the proper officer of the British customs, shall be deemed sufficient to identify a British built ship; and on the production of such certificate she shall be admitted as such in any of the ports within the dominions of Portugal.

\* These ratifications were exchanged in London, on the 19th of June, 1810.

2. Upon the importation of any goods from the United Kingdom, into any of the ports in the dominions of Portugal, all such goods shall be accompanied by the original caskets, signed and sealed by the proper officers of the British customs at the port of shipping, and the caskets belonging to each ship shall be numbered progressively, the total number stated on the first and last casket, by the proper officers of customs, at the final clearance of each vessel at the British port; and it is further agreed, that prior to the final clearance by the searchers at the shipping port, the caskets for each ship must be collected and fastened together, to which shall be annexed a paper, with the number of the caskets, sealed with the official seal, and signed by the searchers; the caskets, so collected, shall be produced, together with the manifest sworn to by the captain, to the Portuguese consul, who shall certify the same on the manifest; the caskets, thus secured together, and the manifest, so authenticated, to be returned to the searcher, in order to the final clearance of the ship.

3. It is agreed to place the Portuguese merchant on the same footing with the British, both with regard to the duties of seavage and package payable to the corporation of London, and the duties payable on shipping to the corporation of the Trinity House in London. To effect this, and at the same time to preserve the chartered rights of the corporation of London, and of the Trinity House, it will be necessary that those duties should, in the first instance, be paid as at present; and in all cases where it shall appear that the Portuguese merchant shall have paid more than the British, the difference to be returned without expense, in such manner as the British government shall direct.

4. The importer shall, on making the entry at the Portuguese Custom-house, sign a declaration of the value of his goods, to such amount as he shall deem proper; and in case the Portuguese examining officers should be of opinion that such valuation is insufficient, they shall be at liberty to take the goods, on paying the importer the amount, according to his declaration, with the addition of 10 per cent., and also returning the duty paid.

The amount to be paid on the goods being delivered to the Portuguese officer, which must be within 15 days from the first detention of the goods.

London, 18th of December, 1812.

R. FREWIN.  
Wm. BURN.

PRUSSIA.

*Convention of Commerce between His Britannic Majesty and the King of Prussia, signed at London, April 2, 1824.*

Article 1. From and after the 1st day of May next, Prussian vessels entering or departing from the ports of the United Kingdom of Great Britain and Ireland, and British vessels entering or departing from the ports of his Prussian Majesty's dominions, shall not be subject to any other or higher duties or charges whatever, than are or shall be levied on national vessels entering or departing from such ports respectively.

2. All articles of the growth, produce, or manufacture of any of the dominions of either of the high contracting parties, which are or shall be permitted to be imported into or exported from the ports of the United Kingdom and of Prussia, respectively, in vessels of the one country, shall, in like manner, be permitted to be imported into and exported from those ports in vessels of the other.

3. All articles not of the growth, produce, or manufacture of the dominions of his Britannic Majesty, which can legally be imported from the United Kingdom of Great Britain and Ireland, into the ports of Prussia, in British ships, shall be subject only to the same duties as are payable upon the like articles if imported in Prussian ships; and the same reciprocity shall be observed in the ports of the United Kingdom, in respect to all articles not the growth, produce, or manufacture of the dominions of his Prussian Majesty, which can legally be imported into the ports of the United Kingdom in Prussian ships.

4. All goods, which can legally be imported into the ports of either country, shall be admitted at the same rate of duty, whether imported in vessels of the other country, or in national vessels; and all goods which can be legally exported from the ports of either country, shall be entitled to the same bounties, drawbacks, and allowances, whether exported in vessels of the other country, or in national vessels.

5. No priority or preference shall be given, directly or indirectly, by the government of either country, or by any company, corporation, or agent, acting on its behalf, or under its authority, in the purchase of any article, of the growth, produce, or manufacture of either country, imported into the other, on account of, or in reference to, the character of the vessel in which such article was imported; it being the intent and meaning of the high contracting parties, that no distinction or difference whatever shall be made in this respect.

6. The present convention shall be in force for the term of 10 years from the date hereof; and further, until the end of 12 months after either of the high contracting parties shall have given notice to the other of its intention to terminate the same; each of the high contracting parties reserving to itself the right of giving such notice to the other, at the end of the said term of 10 years; and it is hereby agreed between them, that, at the expiration of 12 months after such notice shall have been received by either party from the other, this convention, and all the provisions thereof, shall altogether cease and determine.

7. The present convention shall be ratified, and the ratifications shall be exchanged at London, within 1 month from the date hereof, or sooner if possible.

In witness whereof the respective plenipotentiaries have signed the same, and have affixed thereto the seals of their arms.

Done at London, the second day of April, in the year of our Lord one thousand eight hundred and twenty-four.  
GEORGE CANNING. W. HUSKISSON. WERTHER.

An order in council, dated May 25, 1824, directs that from May 1, 1824, Prussian vessels entering or departing from the ports of the United Kingdom of Great Britain and Ireland, shall not be subject to any other or higher duties or charges whatever than are or shall be levied on British vessels entering or departing from such ports; that all articles of the growth, produce, or manufacture of any of the dominions of his Prussian Majesty, which are or shall be permitted to be imported into or exported from the ports of the United Kingdom of Great Britain and Ireland in British vessels, shall, in like manner, be permitted to be imported into and exported from the said ports in Prussian vessels; that all articles not of the growth, produce, or manufacture of the dominions of his Prussian Majesty, which can legally be imported from Prussia into the ports of the United Kingdom in Prussian vessels, shall be subject only to the same duties as are payable upon the like articles if imported in British ships; that all goods which can legally be imported into the ports of the United Kingdom, shall be admitted at the same rate of duty, when imported in Prussian vessels, that is charged on similar articles imported in British vessels; and that all goods which can be legally exported from the ports of the United Kingdom, shall be entitled to the same bounties, drawbacks, and allowances, when exported in Prussian vessels, that are granted, paid, or allowed on similar articles when exported in British vessels.

A Treasury letter, dated October 13, 1824, directs, that with respect to pilotage and all other duties charged on vessels belonging to Prussia, Sweden, and Norway, Denmark, Hanover, and Hamburg, which have entered, or which may enter, the ports of the United Kingdom, either from stress of weather or from any other causes, it was the intention of the Lords of the Committee of Privy Council for Trade, that such dues should not be higher than are charged upon British vessels, and that it is only to the case of goods imported into this Kingdom, and not brought direct from the country to which the vessel belongs that the equality of duty does not apply.

An order in council, dated May 3, 1823, states, that his Majesty is pleased to declare, that the ships of and belonging to the dominions of his Majesty the King of Prussia are entitled to the privileges granted by the law of navigation, and may import from the dominions of his Majesty the King of Prussia, into any of the British possessions abroad, goods the produce of such dominions, and may export goods from such British possessions abroad, to be carried to any foreign country whatever.

## RUSSIA.

*Convention between His Britannic Majesty and the Emperor of Russia, signed at Petersburg in February, 1825.*

Article 1. It is agreed that the respective subjects of the high contracting parties shall not be troubled or molested, in any part of the ocean commonly called the Pacific Ocean, either in navigating the same, in fishing therein, or in landing at such parts of the coast as shall not have been already occupied, in order to trade with the natives under the restrictions and conditions specified in the following articles.

2. In order to prevent the right of navigating and fishing, exercised upon the ocean by the subjects of the high contracting parties, from becoming the pretext for an illicit commerce, it is agreed that the subjects of his Britannic Majesty shall not land at any place where there may be a Russian establishment, without the permission of the governor or commandant; and, on the other hand, that Russian subjects shall not land, without permission, at any British establishment on the north-west coast.

3. The line of demarcation between the possessions of the high contracting parties, upon the coast of the continent, and the islands of America to the north-west, shall be drawn in the manner following:— Commencing from the southernmost point of the island called Prince of Wales Island, which point lies in the parallel of 54 degrees 40 minutes north latitude, and between the 131st and 133d degree of west longitude (meridian of Greenwich), the said line shall ascend to the north along the channel, as far as the point of the continent where it strikes the 56th degree of north latitude; from this last mentioned point, the line of demarcation shall follow the summit of the mountains situated parallel to the coast, as far as the point of intersection of the 141st degree of west longitude (of the same meridian); and, finally, from the said point of intersection, the said meridian line of the 141st degree, in its prolongation as far as the Frozen Ocean, shall form the limit between the Russian and British possessions on the continent of America to the north-west.

4. With reference to the line of demarcation laid down in the preceding article, it is understood;

1st. That the island called Prince of Wales Island shall belong wholly to Russia.

2d. That wherever the summit of the mountains which extend in a direction parallel to the coast, from the 56th degree of north latitude to the point of intersection of the 141st degree of west longitude, shall prove to be at the distance of more than 10 marine leagues from the ocean, the limit between the British possessions and the line of coast which is to belong to Russia, as above mentioned, shall be formed by a line parallel to the windings of the coast, and which shall never exceed the distance of 10 marine leagues therefrom.

5. It is moreover agreed, that no establishment shall be formed by either of the 2 parties, within the limits assigned by the 2 preceding articles to the possessions of the other; consequently, British subjects shall not form any establishment either upon the coast, or upon the border of the continent comprised within the limits of the Russian possessions, as designated in the 2 preceding articles; and, in like manner, no establishment shall be formed by Russian subjects beyond the said limits.

6. It is understood, that the subjects of his Britannic Majesty, from whatever quarter they may arrive, whether from the ocean, or from the interior of the continent, shall for ever enjoy the right of navigating freely, and without any hindrance whatever, all the rivers and streams which, in their course towards the Pacific Ocean, may cross the line of demarcation upon the line of coast described in article 3. of the present convention.

7. It is also understood that, for the space of 10 years from the signature of the present convention, the vessels of the 2 powers, or those belonging to their respective subjects, shall mutually be at liberty to frequent, without any hindrance whatever, all the inland seas, the gulfs, havens, and creeks, on the coast mentioned in article 3., for the purposes of fishing and of trading with the natives.

8. The port of Sitka, or Novo Archangelsk, shall be open to the commerce and vessels of British subjects for the space of 10 years from the date of the exchange of the ratifications of the present convention. In the event of an extension of this term of 10 years being granted to any other power, the like extension shall be granted also to Great Britain.

9. The above-mentioned liberty of commerce shall not apply to the trade in spirituous liquors, in firearms or other arms, gunpowder, or other warlike stores; the high contracting parties reciprocally engaging not to permit the above-mentioned articles to be sold or delivered, in any manner whatever, to the natives of the country.

10. Every British or Russian vessel navigating the Pacific Ocean, which may be compelled, by storms or by accident, to take shelter in the ports of the parties, shall be at liberty to refit therein, to provide itself with all necessary stores, and to put to sea again, without paying any other than port and light-house dues, which shall be the same as those paid by national vessels. In case, however, the master of such vessel should be under the necessity of disposing of a part of his merchandise in order to defray his expenses, he shall conform himself to the regulations and tariffs of the place where he may have landed.

11. In case of complaint of an infraction of the articles of the present convention, the civil and military authorities of the high contracting parties, without previously acting or taking any forcible measure, shall make an exact and circumstantial report of the matter to their respective courts, who engage to settle the same, in a friendly manner, and according to the principles of justice.

12. The present convention shall be ratified, and the ratifications shall be exchanged at London, within the space of 6 weeks, or sooner if possible.

In witness whereof the respective plenipotentiaries have signed the same, and have affixed thereto the seals of their arms.

Done at St. Petersburg, the 28th [16th] of February, 1825.

STRATFORD CANNING.  
THE COUNT DE NESSERLODE.  
PIERRE DE POLETICA.

## THE TWO SICILIES.

*Treaty of Commerce and Navigation between His Britannic Majesty and the King of the Two Sicilies, signed at London, September 26, 1816.*

Article 1. His Britannic Majesty consents, that all the privileges and exemptions which his subjects, their commerce and shipping, have enjoyed, and do enjoy, in the dominions, ports, and domains of his Sicilian Majesty, in virtue of the treaty of peace and commerce concluded at Madrid on the 10th of May (23d of May), 1667, between Great Britain and Spain; of the treaties of commerce between the same powers, signed at Utrecht, the 9th of December, 1713, and at Madrid, the 13th of December, 1715; and of the convention concluded at Utrecht, the 8th of March, 1712-1713, between Great Britain and the Kingdom of Sicily, shall be *abolished*; and it is agreed upon in consequence, between their said Britannic and Sicilian Majesties, their heirs and successors, that the said privileges and exemptions, whether of persons, or of flags and shipping, are and shall continue for ever abolished.

2. His Sicilian Majesty engages not to continue, nor hereafter to grant, to the subjects of any other power whatever, the privileges and exemptions abolished by the present convention.

3. His Sicilian Majesty promises that the subjects of his Britannic Majesty shall not be subjected, within his dominions, to a more rigorous system of examination and search by the officers of customs, than that to which the subjects of his said Sicilian Majesty are liable.

4. His Majesty the King of the Two Sicilies promises that British commerce in general, and the British subjects who carry it on, shall be treated throughout his dominions upon the same footing as the most favoured nations, not only with respect to the persons and property of the said British subjects, but also with regard to every species of article in which they may traffic, and the taxes or other charges payable on the said articles, or on the shipping in which the importation shall be made.

5. With respect to the personal privileges to be enjoyed by the subjects of his Britannic Majesty in the kingdom of the Two Sicilies, his Sicilian Majesty promises that they shall have a free and undoubted right to travel, and to reside in the territories and dominions of his said Majesty, subject to the same precautions of police which are practised towards the most favoured nations. They shall be entitled to occupy dwellings and warehouses, and to dispose of their personal property of every kind and description, by sale, gift, exchange, or will, and in any other way whatever, without the smallest loss or hindrance being given them on that head. They shall not be obliged to pay, under any pretence whatever, other taxes or rates than those which are paid, or that hereafter may be paid, by the most favoured nations in the dominions of his said Sicilian Majesty. They shall be exempt from all military service, whether by land or sea; their dwellings, warehouses, and every thing belonging or appertaining thereto for subjects of commerce or residence, shall be respected. They shall not be subjected to any vexatious search or visits. No arbitrary examination or inspection of their books, papers, or accounts, shall be made under the pretence of the supreme authority of the state, but these shall alone be executed by the legal sentence of the competent tribunals. His Sicilian Majesty engages on all these occasions to guarantee to the subjects of his Britannic Majesty who shall reside in his states and dominions, the preservation of their property and personal security, in the same manner as those are guaranteed to his subjects, and to all foreigners belonging to the most favoured and most highly privileged nations.

6. According to the tenor of the articles 1. and 2. of this treaty, his Sicilian Majesty engages not to declare null and void the privileges and exemptions which actually exist in favour of British commerce within his dominions, till the same day, and except by the same act, by which the privileges and exemptions, whatsoever they are, of all other nations, shall be declared null and void within the same.

7. His Sicilian Majesty promises, from the date when the general abolition of the privileges according to the articles 1, 2 and 6. shall take place, to make a reduction of 10 per cent. upon the amount of the duties payable according to the tariff in force the 1st of January, 1816, upon the total of the merchandise or production of the United Kingdom of Great Britain and Ireland, her colonies, possessions, and dependencies, imported into the states of his said Sicilian Majesty, according to the tenor of article 4. of the present convention; it being understood that nothing in this article shall be construed to prevent the King of the Two Sicilies from granting, if he shall think proper, the same reduction of duty to other foreign nations.

8. The subjects of the Ionian Islands shall, in consequence of their being actually under the immediate protection of his Britannic Majesty, enjoy all the advantages which are granted to the commerce and to the subjects of Great Britain by the present treaty; it being well understood that, to prevent all abuses, and to prove its identity, every Ionian vessel shall be furnished with a patent, signed by the Lord High Commissioner or his representative.

9. The present convention shall be ratified, and the ratifications thereof exchanged in London, within the space of 6 months, or sooner if possible.

In witness whereof the respective plenipotentiaries have signed it, and thereunto affixed the seal of their arms.

Done at London, the 26th of September, 1816.

CASTLEREAGH.

CASTELCICALA.

*Separate and Additional Article.*

In order to avoid all doubt respecting the reduction upon the duties in favour of British commerce, which his Sicilian Majesty has promised in the 7th article of the convention signed this day between his Britannic Majesty and his Sicilian Majesty, it is declared, by this present separate and additional article, that by the concession of 10 per cent. of diminution, it is understood that in case the amount of the duty should be 20 per cent. upon the value of the merchandise, the effect of the reduction of 10 per cent. is to reduce the duty from 20 to 18; and so for other cases in proportion. And that for the articles which are not taxed *ad valorem* in the tariff, the reduction of the duty shall be proportionate; that is to say, a deduction of a tenth part upon the amount of the sum payable shall be granted.

The present separate and additional article shall have the same force and validity as if it had been inserted word for word in the convention of this day—it shall be ratified, and the ratification thereof shall be exchanged at the same time.

In witness whereof the respective plenipotentiaries have signed it, and have thereunto affixed the seal of their arms.

Done at London, the 26th of September, 1816.

CASTLEREAGH.

CASTELCICALA.

TURKEY.

*Capitulations and Articles of Peace between Great Britain and the Ottoman Empire, as agreed upon, augmented, and altered, at different Periods, and, finally, confirmed by the Treaty of Peace concluded at the Dardanelles, in 1809.*

SULTAN MEHEMED,

MAY HE LIVE FOR EVER.

"Let every thing be observed in conformity to these capitulations, and contrary thereto let nothing be done."

1. The English nation and merchants, and all other merchants sailing under the English flag, with their vessels and merchandise of all descriptions, may pass safely by sea, and go and come into our dominions, without any the least prejudice or molestation being given to their persons, property, or effects, by any person whatsoever, but they shall be left in the undisturbed enjoyment of their privileges, and be at liberty to attend to their affairs.

2. If any of the English coming into our dominions by land be molested or detained, such persons shall be instantly released, without any further obstruction being given to them.

3. English vessels entering the ports and harbours of our dominions shall and may at all times safely and securely abide and remain therein, and at their free will and pleasure depart therefrom, without any opposition or hindrance from any one.

4. If it shall happen that any of their ships suffer by stress of weather, and not be provided with necessary stores and requisites, they shall be assisted by all who happen to be present, whether the crews of our Imperial ships, or others, both by sea and land.

5. Being come into the ports and harbours of our dominions, they shall and may be at liberty to pur-

chase at their pleasure, with their own money, provisions and all other necessary articles, and to provide themselves with water, without interruption or hindrance from any one.

6. If any of their ships be wrecked upon any of the coasts of our dominions, all boys, cadis, governors, commandants, and others our servants, who may be near or present, shall give them all help, protection, and assistance, and restore to them whatsoever goods and effects may be driven ashore; and in the event of any plunder being committed, they shall make diligent search and inquiry to find out the property, which, when recovered, shall be wholly restored by them.

7. The merchants, interpreters, bankers, and others, of the said nation, shall and may, both by sea and land, come into our dominions, and there trade with the most perfect security; and in coming and going, neither they nor their attendants shall receive any the least obstruction, molestation, or injury, either in their persons or property, from the boys, cadis, sea captains, soldiers, and others our slaves.

17. Our ships and galleys, and all other vessels, which may fall in with any English ships in the seas of our dominions, shall not give them any molestation, nor detain them by demanding any thing, but shall show good and mutual friendship the one to the other, without occasioning them any prejudice.

19. If the corsairs or galliots of the Levant be found to have taken any English vessels, or robbed or plundered them of their goods and effects, also if any one shall have forcibly taken any thing from the English, all possible diligence and exertion shall be used and employed for the discovery of the property, and inflicting condign punishment on those who may have committed such depredations; and their ships, goods, and effects, shall be restored to them without delay or intrigue.

21. Duties shall not be demanded or taken of the English, or the merchants sailing under the flag of that nation, on any piastres and sequins they may import into our sacred dominions, or on those they may transport to any other place.

33. English merchants, and all others sailing under their flag, may, freely and unrestrictedly, trade and purchase all sorts of merchandise (prohibited commodities alone excepted), and convey them, either by land or sea, or by way of the river Tanais, to the countries of Muscovy or Russia, and bring back thence other merchandise into our sacred dominions, for the purposes of traffic, and also transport others to Persia and other conquered countries.

38. Should the ships bound for Constantinople be forced by contrary winds to put into Caffa, or any other place of those parts, and not be disposed to buy or sell any thing, no one shall presume forcibly to take out or seize any part of their merchandise, or give to the ships or crews any molestation, or obstruct the vessels that are bound to those ports.

40. On their ships arriving at any port, and landing their goods, they may, after having paid their duties, safely and securely depart, without experiencing any molestation.

41. English ships bound to Constantinople, Alexandria, Tripoli of Syria, Scanderoon, or other ports of our sacred dominions, shall in future be bound to pay duties, according to custom, on such goods only as they shall, of their own free will, land with a view to sale; and for such merchandise as they shall not discharge, no duty shall be demanded, neither shall the least molestation or hindrance be given to them.

44. English and other merchants navigating under their flag, who trade to Aleppo, shall pay such duties on the silks, brought and laden by them on board their ships, as are paid by the French and Venetians, and not one asper more.

53. The Imperial fleet, galleys, and other vessels, departing from our sacred dominions, and falling in with English ships at sea, shall in no wise molest or detain them, nor take from them any thing whatsoever. English ships shall no longer be liable to any further search, or exaction at sea under colour of search or examination.

70. English ships coming to the ports of Constantinople, Alexandria, Smyrna, Cyprus, and other ports of our sacred dominions, shall pay 300 aspers for anchorage duty, without an asper more being demanded of them.

72. No molestation shall be given to any of the aforesaid nation buying camlets, mohairs, or program yarn, at Angora and Beghazar, and desirous of exporting the same from thence, after having paid the duty of 3 per cent., by any demand of customs for the exportation thereof, neither shall one asper more be demanded of them.

75. That it being represented to us that English merchants have been accustomed hitherto to pay no custom or excise duty, either on the silks bought by them at Brussa and Constantinople, or on those which come from Persia and Georgia, and are purchased by them at Smyrna from the Armenians; if such usage or custom really exists, and the same be not prejudicial to the empire, such duty shall not be paid in future.

(N. B.—These capitulations may be found entire in *Hertslet's Treaties*; and in *Chitty's Commercial Law*, vol. ii. pp. 290—311. Appen.)

*Treaty between Great Britain and the Sublime Porte, concluded at the Dardanelles, the 5th of January, 1809.*

1. From the moment of signing the present treaty, every act of hostility between England and Turkey shall cease.

5. In return for the indulgence and good treatment afforded by the Sublime Porte to English merchants, with respect to their goods and property, as well as in all matters tending to facilitate their commerce, England shall reciprocally extend every indulgence and friendly treatment to the flags, subjects, and merchants of the Sublime Porte, which may hereafter frequent the dominions of his Britannic Majesty for the purposes of commerce.

6. The last Custom-house tariff established at Constantinople, at the ancient rate of 3 per cent., and particularly the article relating to the interior commerce, shall continue to be observed, as they are at present regulated, and to which England promises to conform.

10. English patents of protection shall not be granted to dependants, or merchants who are subjects of the Sublime Porte, nor shall any passport be delivered to such persons, on the part of ambassadors or consuls, without permission previously obtained from the Sublime Porte.

Done near the Castles of the Dardanelles, the 5th of January, 1809, which corresponds with the year of the Hegira 1223, the 19th day of the Moon Zulkaade.

SEYD MEHEMMED EMIN VAHID EFFENDI.  
ROBERT ADAIR.

UNITED STATES.

*Convention of Commerce between Great Britain and the United States of America, signed at London, the 3d of July, 1815.*

Article 1. There shall be between all the territories of his Britannic Majesty in Europe, and the territories of the United States, a reciprocal liberty of commerce. The inhabitants of the 2 countries respectively shall have liberty freely and securely to come with their ships and cargoes to all such places, ports, and rivers in the territories aforesaid, to which other foreigners are permitted to come, to enter into the same, and to remain and reside in any part of the said territories respectively; and also to hire and occupy houses and warehouses for the purpose of their commerce; and generally the merchants and traders of each nation respectively shall enjoy the most complete protection and security for their commerce; but subject always to the laws and statutes of the 2 countries respectively.

2. No higher or other duties shall be imposed on the importation into the territories of his Britannic Majesty in Europe, of any articles, the growth, produce, or manufacture of the United States, and no

higher or other duties shall be imposed on the importation into the United States, of any articles, the growth, produce, or manufacture of his Britannic Majesty's territories in Europe, than are or shall be payable on the like articles, being the growth, produce, or manufacture of any other foreign country; nor shall any higher or other duties or charges be imposed in either of the two countries on the exportation of any articles to his Britannic Majesty's territories in Europe, or to the United States, respectively, than such as are payable on the exportation of the like articles to any other foreign country; nor shall any prohibition be imposed upon the exportation or importation of any articles, the growth, produce, or manufacture of the United States, or of his Britannic Majesty's territories in Europe, to or from the said territories of his Britannic Majesty in Europe, or to or from the said United States, which shall not equally extend to all other nations.

No higher or other duties or charges shall be imposed in any of the ports of the United States on British vessels, than those payable in the same ports by vessels of the United States; nor in the ports of any of his Britannic Majesty's territories in Europe on the vessels of the United States, than shall be payable in the same ports on British vessels.

The same duties shall be paid on the importation into the United States of any articles, the growth, produce, or manufacture of his Britannic Majesty's territories in Europe, whether such importation shall be in the vessels of the United States, or in British vessels; and the same duties shall be paid on the importation into the ports of any of his Britannic Majesty's territories in Europe, of any articles, the growth, produce, or manufacture of the United States, whether such importation shall be in British vessels, or in vessels of the United States.

The same duties shall be paid, and the same bounties allowed, on the exportation of any articles, the growth, produce, or manufacture of his Britannic Majesty's territories in Europe, to the United States, whether such exportation shall be in vessels of the United States, or in British vessels; and the same duties shall be paid, and the same bounties allowed, on the exportation of any articles, the growth, produce, or manufacture of the United States, to his Britannic Majesty's territories in Europe, whether such exportation shall be in British vessels, or in vessels of the United States.

It is further agreed, that in all cases where drawbacks are or may be allowed upon the re-exportation of any goods, the growth, produce, or manufacture of either country respectively, the amount of the said drawbacks shall be the same, whether the said goods shall have been originally imported in a British or American vessel; but when such re-exportation shall take place from the United States in a British vessel, or from the territories of his Britannic Majesty in Europe in an American vessel, to any other foreign nation, the 2 contracting parties reserve to themselves, respectively, the right of regulating or diminishing, in such case, the amount of the said drawback.

The intercourse between the United States and his Britannic Majesty's possessions in the West Indies, and on the continent of North America, shall not be affected by any of the provisions of this article, but each party shall remain in the complete possession of its rights, with respect to such an intercourse.

3. His Britannic Majesty agrees that the vessels of the United States of America shall be admitted and hospitably received at the principal settlements of the British dominions in the East Indies, viz. *Calcutta, Madras, Bombay, and Prince of Wales' Island*, and that the citizens of the said United States may freely carry on trade between the said principal settlements and the said United States, in all articles of which the importation and exportation respectively, to and from the said territories, shall not be entirely prohibited; provided only, that it shall not be lawful for them, in any time of war between the British government and any state or power whatever, to export from the said territories, without the special permission of the British government, any military stores, or naval stores, or rice. The citizens of the United States shall pay for their vessels, when admitted, no higher or other duty or charge than shall be payable on the vessels of the most favoured European nations, and they shall pay no higher or other duties or charges on the importation or exportation of the cargoes of the said vessels, than shall be payable on the same articles when imported or exported in the vessels of the most favoured European nations.

But it is expressly agreed, that the vessels of the United States shall not carry any articles from the said principal settlements to any port or place, except to some port or place in the United States of America, where the same shall be unladen.

It is also understood, that the permission granted by this article is not to extend to allow the vessels of the United States to carry on any part of the coasting trade of the said British territories; but the vessels of the United States having, in the first instance, proceeded to one of the said principal settlements of the British dominions in the East Indies, and then going with their original cargoes, or any part thereof, from one of the said principal settlements to another, shall not be considered as carrying on the coasting trade. The vessels of the United States may also touch for refreshments, but not for commerce, in the course of their voyage to or from the British territories in India, or to or from the dominions of the Emperor of China, at the Cape of Good Hope, the island of St. Helena, or such other places as may be in the possession of Great Britain, in the African or Indian seas; it being well understood, that, in all that regards this article, the citizens of the United States shall be subject in all respects to the laws and regulations of the British government from time to time established.

4. It shall be free for each of the 2 contracting parties respectively to appoint consuls, for the protection of trade, to reside in the dominions and territories of the other party; but before any consul shall act as such, he shall in the usual form be approved and admitted by the government to which he is sent; and it is hereby declared, that in case of illegal and improper conduct towards the laws or government of the country to which he is sent, such consul may either be punished according to law, if the laws will reach the case, or be sent back, the offended government assigning to the other the reasons for the same.

It is hereby declared, that either of the contracting parties may except from the residence of consuls such particular places as such party shall judge fit to be so excepted.

5. This convention, when the same shall have been duly ratified by his Britannic Majesty and by the President of the United States, by and with the advice and consent of their Senate, and the respective ratifications mutually exchanged, shall be binding and obligatory on his Majesty and on the said United States for 4 years from the date of its signature; and the ratifications shall be exchanged in 6 months from this time, or sooner if possible.

Done at London, the 3d of July, 1815.

FRED. J. ROBINSON,  
HENRY GOULBURN,  
WILLIAM ADAMS.

JOHN Q. ADAMS,  
H. CLAY,  
ALBERT GALATIN.

This convention was subsequently prolonged by conventions for that purpose in 1818 and 1827.

TREBISOND, anciently Trapezus, from its resemblance to a trapezium, a town of Asia Minor, on the south-east coast of the Black Sea, lat. 40° 1' N., lon. 39° 44' 52" E. Population variously estimated at from 15,000 to 30,000. The town is built on the declivity of a hill rising gently from the sea. It is a place of great antiquity; and, from the year 1203 to the final subversion of the Eastern empire by Mohammed II., in the 15th century, was the seat of a dukedom, or, as it was sometimes called, an empire, comprising the country between the Phasis and the Halys. Its fortifications are still of considerable strength, at least for a Turkish city. The space included within the walls

is of great extent; but it is principally filled with gardens and groves. The houses are mean in their outward appearance, and comfortless within. — (*Tournefort, Voyage du Levant*, tome ii. pp. 231—239; *Kinncir's Journey though Asia Minor*, &c. p. 338.)

**Harbour.**—Trebisond has two ports, one on the W. and one on the E. side of a small peninsula, or point of land, projecting a short way into the sea. That on the east is the best sheltered, and is the place of anchorage for the largest ships. It is, however, exposed to all but the southerly gales; but it does not appear, that, with ordinary precaution, any danger need be apprehended. The ground, from 4 to 1/2 a mile E. from the point, is clean, and holds extremely well. Ships moor with open hawse to the N., and a good hawser and stream anchor on shore, as a stern-fast. At night, the wind always comes off the land. Captain Middleton says that the only bad weather is from the N. W.; but that, though the swell be considerable, it does not cause any heavy strain upon the cables. — (*Nautical Magazine*, vol. ii. p. 181.)—At Platana, near Trebisond, and quite as exposed, Turkish vessels have from time immemorial rode in safety the whole winter; a satisfactory proof that the dangers supposed to be incident to the roads along the coast are wholly visionary. — (*Ibid.* p. 214.)

**Navigation of the Black Sea.**—We are happy to have this opportunity to state that Captain Middleton, who has been repeatedly in the Black Sea, agrees entirely with Tournefort — (see *ant.*, p. 860) — as to the groundlessness of the notions that have got abroad of its navigation being peculiarly dangerous. He shows that the "thick weather," supposed to prevail in this sea, is "quite imaginary."—"There are fogs in it occasionally, but these never last long; and, like fogs every where else, are unaccompanied by much wind. Gales sometimes occur, but they rarely amount to storms, and their duration is short. Except on its northern coast, it has deep water all over. It may, in fact, be considered a sea almost without a hidden danger." The only difficulty attaching to its navigation consists, as formerly observed (*ant.*, p. 860.), in making the Bosphorus. But this, also, has been much exaggerated; and ships able to keep out to sea, and properly navigated, quit it without encountering any considerable risk.—(For further particulars as to this interesting subject, the reader is referred to Captain Middleton's paper in the 2d volume of the *Nautical Magazine*,—a useful and excellent publication, well entitled to the public patronage.)

**Trade.**—In antiquity, and in more modern times, previously to the conquest of Constantinople by the Turks, and the exclusion of all foreign vessels from the Black Sea, Trebisond was the seat of an extensive trade. Any one, indeed, who casts his eye over a map of Asia, must be satisfied that this city is the natural emporium of all the countries to the S. E. of the Black Sea, from Kars on the east, round by Diarbeker to Amasia on the west. Erzeroum, the principal city of Armenia, is only about 135 miles S. E. from Trebisond. Its merchants are distinguished by their superior attainments, and by their enterprise and activity. For a lengthened period, they have derived most part of their supplies of European commodities by way of Smyrnia or Constantinople: nothing, however, but the impossibility of obtaining them at so convenient a port as Trebisond, could have made them resort to such distant markets as those now mentioned; and it may well excite surprise, considering the period during which the Black Sea has been open, that efforts were not sooner made to establish an intercourse with Armenia, Georgia, and the north-western parts of Persia, through this channel. We are glad, however, to have to state, that within these few years this has been done; and notwithstanding the difficulties that necessarily attach to every attempt to open new channels of commerce with semi-civilised nations, the experiment has proved more than ordinarily successful.

The policy of Russia has recently, also, given to Trebisond an importance it did not formerly possess. Previously to 1831, foreign commodities were admitted at the low duty of 5 per cent. into the Russian port of Redoukhalé, and others on the coast of Mingrelia, whence they were distributed over Georgia, and as far as Persia. But a ukase, issued at the epoch referred to, put an end to all the immunities with respect to duties enjoyed by the Russian provinces to the south of Mount Caucasus, and extended to them the same customs regulations that obtain in the other parts of the empire. Considerable deductions are, it is true, made from the duties charged on certain articles imported into these provinces, provided they be carried in the first instance to Odessa, and there reshipped for Mingrelia; but those that go direct to the latter are subjected to the same duties and conditions as if they went to Petersburg or Riga. Printed cottons, and some other important articles, are in all cases prohibited.

The opening of a port on the S. E. extremity of the Black Sea, to which goods might be sent direct from Europe, and be thence conveyed to Armenia, Persia, &c. &c. under these circumstances, become an object of a good deal of interest to the commercial world. There can be no doubt, indeed, did any thing like order or regular government prevail in the Turkish provinces of Asia Minor, Armenia, &c., that Trebisond would speedily become a considerable emporium. At present, however, and for a long time back, these beautiful provinces, in common with most other parts of the Turkish empire, have been in a state of extreme disorder; and, owing to the imbecility and ignorance of the government, there seems but little prospect of improvement so long as it is suffered to exist.

The principal articles of import are manufactured cottons, mostly from Great Britain, sugar, coffee, rum, salt, tin, wine, &c. Cottons are sold at long credits; sugar, coffee, &c. are sold at shorter credits, and are more regularly paid. The exports consist of silk, sheep's wool, tobacco, shawls and carpets, galls, and drugs of various sorts, box wood, nuts, &c. There are very rich copper mines in the mountains to the south of Trebisond; but they are but little wrought; and the Turks are so blind to their own interests, as to prohibit the exportation of copper, as well as of corn, and wax. It is difficult, therefore to obtain return cargoes. More than half the articles imported, are destined for Persia. In 1832, no fewer than 9,189 packages passed through Trebisond for Tabreez; and it is believed, that of these, fully 5,000 consisted of British manufactures.

**Money, Weights, and Measures,** same as at Constantinople; which see.

**Arrivals.**—In 1832, there arrived at Trebisond, 6 ships under the British flag, of the burden of 718 tons. — (*Parl. Paper*, No. 756. Sess. 1833.)—During the same year, there arrived 19 foreign vessels, of the burden of 4,438 tons: of these, 10 were Austrian; 5 Sardinian; and 4 Russian. The total imports may, perhaps, be valued at about 300,000*l.* The exports are comparatively trifling.

**TRIESTE**, a large city and sea-port of the Austrian dominions, the capital of a district of Illyria, situated near the N. E. extremity of the Gulf of Venice, lat. 45° 38' 37" N., lon. 13° 46' 27" E. Population 48,000. It is divided into the old and new towns. The former is built upon elevated ground; the latter, which is lower down, is laid out with greater regularity, and is partly intersected by a canal, into which vessels not drawing more than 9 or 10 feet water enter to load and unload.

**Harbour.**—The harbour of Trieste, though rather limited in size, is easy of access and convenient. It is protected from southerly gales by the *Molo Teresiano*, so called from the Empress Maria Theresa, at the extremity of which the new light house, mentioned below, has been constructed. The port, with the mole, forms a crescent 1 1/2 mile in length, being a continued quay, faced with heavy stones, with stairs and jetties for the convenience of embarkation. On the north side of the port is a dock or harbour, appropriated exclusively for vessels performing quarantine. It is walled round; and is furnished with hotels, warehouses, and every sort of accommodation required for the use of passengers and goods. Ships under 300 tons burden lie close to the quays; those of greater size mooring a little further out.

The principal defects of the port are, its limited size, and its being exposed to the N.W. winds, which sometimes blow with much violence, and throw in a heavy sea. The gales, however, are seldom of long continuance; and the holding ground being good, when the anchors are backed and proper precautions taken, no accidents occur. The tide at Trieste is scarcely perceptible; but the depth of water is influenced by the wind, being increased by a long continued sirocco or S.E. wind, and diminished by the prevalence of the E. N.E. wind, known by the name of *Bora*. The access to the port is not obstructed by any bar or shallow; and there is good anchorage in the roads, in from 6 to 8 and 10 fathoms water. A good sailing vessel may beat in by night or by day, except it blow hard from the N.E. or E. N.E., when she had better anchor in the Bay of Roses, or Pirano, where she will ride in perfect safety.

**Pilots.**—Ships bound for Trieste are under no obligation to take pilots; but those entering the port for the first time would do well to take one on making the coast of Istria. Boats are always hovering off Rovigno; they are not manned by regular pilots, but by fishermen, who, though unfit to be trusted with the management of the ship, know the bearings of the places and the depth of water. The fee usually paid them for pilotage is 20 dollars; in addition to which, they are supported at the ship's expense during the performance of quarantine.

**Lighthouses.**—The light-house at the extremity of the Theresian mole is 106 feet (Eng.) high. The light is intermittent; and may be seen, supposing the eye of the observer to be elevated 12 feet above the level of the sea, about 12 nautical miles, or from Pirano on the side of Istria, and the shoals of Grado on the Italian coast. A light-house has also been erected on the point of Salvoze, bearing from Trieste W. by S., distant about 15 miles. The lantern is elevated about 103 feet above the level of the sea. From this point Pirano Bay opens, where vessels may anchor in safety in all sorts of weather.

**Money.**—Mercantile accounts are usually kept at Trieste in what is commonly called *convention money*, from an agreement entered into with respect to it by some of the German princes, in 1763. The current coins that are legal tender are dollars,  $\frac{1}{2}$  dollars or florins, and zwanzigers, or pieces of 20 kreutzers. Ten dollars are coined out of the Cologne marc (3,608 gr. Eng.) of pure silver, so that the value of the dollar is 48. 3d. sterling.

The florin, or  $\frac{1}{2}$  dollar = 2s. 11d. sterling; zwanzigers, or pieces of 20 kreutzers (60 to the marc) = 8d. sterling. Hence it follows that 1s. sterling = 25 $\frac{1}{2}$  kreutzers (60 to a florin); and the pound sterling = 9s. 2d. 3kr., or, as it is commonly taken, 9s. 25kr. All contracts are either expressly declared, or are understood, to be in silver money; gold coins, not being legal tender, pass only as merchandise.

**Weights and Measures.**—Those chiefly in use at Trieste are those of Vienna and Venice. The commercial pound contains  $\frac{3}{4}$  quarters, 16 ounces, or 32 loths; it is = 8,659 English grains. Thus, 100 lbs. at Trieste = 1236 lbs. avoirdupois; or 904 lbs. of Trieste = 112 lbs. avoirdupois.

The principal dry measure is the stajo or staro = 234 Winchester bushels. The Vienna metzen, which is sometimes used, = 1723 Winchester bushel. The polonick = 0861 Winchester bushel.

The principal liquid measure is the orna or eimer = 40 boccali = 15 wine or 12 $\frac{1}{2}$  Imperial gallons very nearly. The barile = 1733 English wine gallons.

The orna of oil contains 5 $\frac{1}{2}$  caiffis, and weighs about 107 commercial pounds. It is = 17 wine or 14 $\frac{1}{2}$  Imperial gallons.

The ell woollen measure = 266 English inches. The ell for silk = 252 English inches.

**Trade.**—Trieste has no command of internal navigation; but being the most convenient, or rather the only sea-port, not merely of the Illyrian provinces, but of the duchy of Austria, and the greater part of Hungary, she possesses an extensive commerce. This has been increased by the facilities afforded to all sorts of mercantile transactions by the privilege of *porto franco* conferred on the town, and a considerable extent of contiguous country. Under this franchise, all goods, with but very few exceptions, may be imported into and exported from the city free of all duties whatever. Foreign products, when taken for consumption into the interior, are subject to the duties mentioned under the head *Tariff*, in a subsequent part of this article.

**Exports.**—These are very various, consisting partly of the raw, and partly of the manufactured products of Austria Proper, Illyria, Dalmatia, Hungary, and Italy; with foreign articles imported and warehoused. Among the principal articles of raw produce may be specified, corn, chiefly wheat and maize, with rice, wine, oil, shumac, tobacco, wax, &c.; silk, silk rags and waste, hemp, wool, flax, linen rags, hides, furs, skins, &c.; the produce of the mines makes an important item, consisting of quicksilver, emulinar, iron, lead, copper, brass, litharge, alum, vitriol, &c.; the forests of Carniola furnish timber, for ship building and other purposes, of excellent quality and in great abundance, with staves, cork wood, box, hoops, &c.; marble also ranks under this head. Of manufactured articles, the most important are, thrown silk, silk stuffs, printed cottons from Austria and Switzerland, coarse and fine linens, and all sorts of leather; under this head are also ranked soap, Venetian treacle, liqueurs, &c., with jewellery, tools and utensils of all sorts, glass ware and mirrors, Venetian beads, refined sugar, and a host of other articles. Of foreign articles imported and reshipped, the most important are sugar, coffee, and dye stuffs. Trieste is also a considerable depot for all sorts of produce from the Black Sea, Turkey, and Egypt.

It is not possible to obtain any accurate account of the quantity and value of the exports; but Mr. Money, the British consul, who has carefully inquired into the subject, supposes that they may amount in all, exclusive of those shipped for Venice, Fiume, and other Austrian ports, to about 1,800,000 $\frac{1}{2}$  a year, which he divides as follows:—

|   |                    |
|---|--------------------|
| <b>Raw Produce, viz.</b> —Grain, rice, oil, honey, wax, shumac, tobacco, &c.  | £ 550,000          |
| Silk, hemp, wool, rags, hides and skins   | 350,800            |
| Metals, mineral and other products; as, quicksilver, iron, lead, copper, brass, zinc, litharge, argol, antimony, arsenic, alum, vitriol, potash, turpentine, marbles, &c. | 230,000            |
| Timber, plank, boards, &c.  | 180,000            |
| <b>Manufactures of silk, cotton, wool, linen, leather, &amp;c.</b>  | 235,000            |
| Soap, candles, Venetian treacle, and medicines  | 80,000             |
| Tools, machinery, arms, &c.   | 25,000             |
| Household furniture, musical instruments, glass and glass wares, porcelain, &c.   | 20,000             |
| <b>Foreign Articles reshipped for exportation, exclusive of those for Lombardy and the Papal States</b>   | 300,000            |
| <b>Total</b>  | <b>£ 1,800,000</b> |

Mr. Money further supposes that these articles are distributed amongst the countries trading with Trieste, as follows:—

|  |                    |
|--|--------------------|
| To Turkey and the Levant               | £ 350,000          |
| Egypt                                  | 300,000            |
| Greece, the Ionian Islands, and Malta  | 130,000            |
| the Kingdom of the Two Sicilies        | 350,000            |
| Ports in France, Sardinia, and Tuscany | 100,000            |
| Spain, Portugal, and Barbary           | 120,000            |
| Great Britain                          | 220,000            |
| Ports in the North of Germany          | 150,000            |
| the United States of America           | 30,000             |
| South America and the West Indies      | 20,000             |
| <b>Total exports</b>                   | <b>£ 1,800,000</b> |

Perhaps these estimates are a little below the mark. We have been assured by high mercantile authority, that the entire value of the exports from Trieste to foreign countries is not under 2,000,000, a year.

**Imports.**—There is a great difference between the imports into and the exports from Trieste; the value of the former being certainly not less than 4,000,000 sterling. The excess of imports is explained, partly by the fact that large quantities of foreign goods imported into Trieste are subsequently transported by coasting vessels to Venice, Fiume, and other ports, partly by the residence of English and other foreigners at Vienna, and partly by there being an excess of exports as compared with imports from other parts of the empire. The great articles of import are sugar, cotton goods and raw cotton, oil, coffee, wheat, silks, indigo and other dye stuffs, valonia, &c. The following Table contains all the information that can be desired as to the import trade of Trieste in 1829, 1830, and 1831:—

Statement of the Quantity and Value, in British Money, Weights, and Measures, of the principal Articles imported into Trieste during each of the Three Years ending with 1831, specifying the Quantity and Value of those furnished by each Country.

| Countries from which imported. | Articles.    | 1829.                      |           |                 |                            | 1830.     |                 |                            |           | 1831.           |                            |           |                 |
|--------------------------------|--------------|----------------------------|-----------|-----------------|----------------------------|-----------|-----------------|----------------------------|-----------|-----------------|----------------------------|-----------|-----------------|
|                                |              | English Weight or Measure. | Quantity. | Value Sterling. | English Weight or Measure. | Quantity. | Value Sterling. | English Weight or Measure. | Quantity. | Value Sterling. | English Weight or Measure. | Quantity. | Value Sterling. |
| Great Britain                  | Coffee       | cwt.                       | 20,360    | 38,900          | cwt.                       | 26,290    | 51,442          | cwt.                       | 12,990    | 25,470          |                            |           |                 |
|                                | Sugar        | gallons                    | 74,788    | 109,283         | gallons                    | 92,662    | 129,640         | gallons                    | 76,501    | 96,878          |                            |           |                 |
|                                | Spices       | lbs.                       | 15,300    | 4,533           | lbs.                       | 31,266    | 3,380           | lbs.                       | 41,200    | 5,100           |                            |           |                 |
|                                | Indigo       | lbs.                       | 63,000    | 24,170          | lbs.                       | 70,000    | 25,900          | lbs.                       | 52,300    | 13,500          |                            |           |                 |
|                                | Drugs        | cwt.                       | 12,000    | 16,120          | cwt.                       | 25,000    | 18,451          | cwt.                       | 19,000    | 17,816          |                            |           |                 |

**Tariff.**—Trieste being a free port, goods destined for its consumption, and that of the adjoining territory, pay no duties whatever, and are exported and imported without notice by the customs. Goods brought from the interior for export at Trieste, are charged an export duty on passing the Custom-house line. Goods imported at Trieste, to be conveyed through the Austrian dominions to those of any other power, are charged a small transit duty. The principal foreign goods taken for consumption in the interior of the empire, pay the duties specified in the subjoined Table.

See Table in next page.

Gunpowder, salt, and tobacco, being articles monopolised by government, are not allowed to be imported into Trieste except for sale to the government or its contractors. Vessels arriving with gunpowder on board, deliver it at the arsenal, and on their clearing out it is returned to them free of expense. The utmost vigilance is exerted to prevent the introduction of tobacco; but with very little effect. The only article, the exportation of which from the Austrian dominions is at present prohibited, are gold and silver in bars, and silk cocoons.

Statement of the Customs' Duties on the principal Articles imported from Trieste into the Interior of the Austrian Empire.

N. B. — Trieste being without the line of customs, these duties on exportation are payable on goods entering the territory or liberties of the port, whether for consumption or for exportation by sea. The duties on raw and thrown silk are tantamount to a prohibition.

*Smuggling.* — In consequence of the prohibition of tobacco, and of the high duties imposed on refined sugar, coffee, &c., these articles are very extensively smuggled into the Austrian dominions. Most part, too, of the cotton goods sent from this country to Trieste and Venice, are sold to smugglers, by whom they are introduced into the interior with very little difficulty. It would be absurd, indeed, to suppose, seeing the extent to which smuggling is practised in England and France — (see *ante*, p. 1055), — that it should not be in a flourishing condition in Austria, whose frontier is so much more difficult to guard. It is, in fact, carried on to a very great extent: prohibited and overtaxed goods being introduced with the greatest regularity, either by defeating the vigilance of the officers, or which is said to be the more common case, by making their parties to, and gamblers by, the fraud. The transit of foreign goods through the Austrian states gives considerable facilities to the smuggler. But, independently of this, their introduction is so very easy, that nothing but the repeal of the existing prohibitions, and the effectual reduction of the duties, can give any considerable check to smuggling.

We would vain hope that the Austrian government is becoming sensible of this truth. Its commercial policy is, in many respects, far from liberal; and the alterations recently made in the tariff have contributed to facilitate importation. The slightest reflection must, indeed, satisfy every one, that in such a country, restrictions on importation can be of no real advantage to the home producers; and that their only effect is to divert trade into illegitimate channels, to deprive the public treasury of the revenue it might derive from moderate duties, and to enrich those who despise and trample on the law, at the expense of the sober and industrious citizen.

Considering the vast variety of valuable and desirable products furnished by Lombardy, Hungary, Austria Proper, and the other Austrian States, it is not easy to estimate the extent to which their commerce might be carried, under a free system that should develop all the resources of the country. A

present, however, there is, in Austria and most other parts of the Continent, a strong disposition to believe that our recommendations of a freer system of commercial policy are dictated solely by selfish, interested motives. They naturally attach greater weight to our practice than to our professions. So long, indeed, as our present corn laws and timber duties are suffered to pollute our statute book, so long shall we make but few practical converts to our doctrines. Such a modification of the former as would render our ports always open to the importation of corn under reasonable duties, combined with the equalisation of the timber duties, and the reduction of the exorbitant duties on olive oil and cheese, would show that we are disposed to practise those liberal doctrines we so freely recommend to others; and would do more to extend our trade with Italy and Austria than any measure it is in our power to adopt.

**Shipping.**—Since the loss of Flaniers, the mercantile navy of Austria has been confined wholly to the ports on the Adriatic. But it is, notwithstanding, very considerable; and engrosses at this moment a very large share of the trade of the Mediterranean and Black Sea. The oak timber of Carniola and the Dalmatian coast is reckoned about the very best in the world; so that the Austrian ships, being built of it, are very strong, at the same time that they are particularly handsome. They are also well manned and provided. The seamen are expert, temperate, and orderly; and Mr. Money says, that the laws for the regulation of the merchant service are excellent.

By far the greater number of vessels of large burden belong to Trieste. The rest belong to Venice, Fiume, Ragusa, and the Boeche di Cattaro. On the other hand, the smaller vessels employed in the coasting trade, which is very considerable, are more equally divided; Venice having, probably, as many as Trieste, while a good number belong to the ports of Istria, Hungary, and Dalmatia.

The foreign trade of this port comprises all voyages beyond the limits of the Adriatic; and may be divided as follows:—

1. The Levant trade, including the Ionian Islands, Greece, Constantinople, Smyrna, Odessa, &c., the ports in Syria, Cyprus, Candia, and Egypt, more especially Alexandria.
2. The *ponente* or Mediterranean trade, in the west, comprising the coast of Barbary, Spain, France, and Italy; being principally carried on with Marseilles, Genoa, and Leghorn.
3. The commerce on the ocean, which the Austrian merchants have attempted with considerable success. Several ships sail for Brazil, the United States, England, Hamburg, &c.

The number of Austrian vessels at present employed in foreign trade is believed to be about 780, of the burden of about 153,000 tons, manned by about 15,000 men and boys. In the coasting trade about 200 vessels are employed, averaging 40 tons each. The fishing trade is inconsiderable.

There has been no sensible increase or diminution in the tonnage for the last 5 years; but there is every probability of a gradual increase in future, proportioned to the anticipated improvement of trade in the Mediterranean, which has of late years been interrupted and depressed by political events.

The following Table shows the number of ships, and their tonnage, arriving at, and sailing from Trieste during each of the 3 years ending with 1831, specifying the number and tonnage of those under each flag.

Movement of Shipping at Trieste, during each of the Three Years ending with 1831.

**Customs Regulations.**—The Custom-house at Trieste has nothing whatever to do with the entry, reporting, &c. of vessels. When a ship arrives, she is reported to the Health Office; which publishes a list of arrivals and departures, with a statement of their cargoes, as they appear in the manifests. Ships are cleared by the same office; the masters being assisted by the consuls of the country to which they belong. As soon as a vessel has performed quarantine, she loads or unloads without any interference or inspection by the customs' officers, or by any one else. Goods unexposed to contagion may be landed during quarantine.

Being a free port, the bonding and warehousing system is, of course, unknown at Trieste. **Port Charges.**—These are paid at the office of the harbour master on clearing out. They are the same, whatever may be the ship's stay; and are, perhaps, the most moderate of any in Europe.

**Port Charges paid by Austrian and Foreign Ships.**

| Austrian, and foreign privileged ships: | Fl. kr. | Foreign ships not privileged:   | Fl. kr. |
|---|---------|---|---------|
| Anchorage, per ton admeasurement        | 0 4     | Anchorage, light-house, and cargo as above, per ton admeasurement                 | 0 5     |
| Light-house                             | 0 5     | Cargo duty, per ton weight of goods   | 0 10    |
| Cargo duty, per ton weight of goods     | 0 5     | New tonnage duty, per ton admeasurement   | 0 16    |
|   |         | A boraggio, payable by ships departing in ballast, or with less than half a cargo | 0 9     |

Comparative Statement of the Port Charges paid at Trieste, respectively, by a Native and privileged Foreign Ship, and a Foreign ship not privileged, each of 300 Tons Burthen, with mixed Cargoes.

| Native and privileged:   | Fl. kr.     | Foreign, not privileged:                 | Fl. kr.     |
|--|-------------|--|-------------|
| Anchorage and light, as above, 300 tons, at 7 Kreuzers per ton admeasurement | 35 0        | Anch. and light and cargo duty, as above | 50 0        |
| Cargo duty, 300 tons, at 5 Kreuzers  | 15 0        | Tonnage duty, 300 tons, at 10 Kreuzers   | 30 0        |
| <b>Total</b>   | <b>50 0</b> | <b>Total</b>                             | <b>80 0</b> |

or about 4l. 18s. sterling.  
 or about 19l. 10s. sterling.  
 If the ship depart in ballast or with less than a cargo, there is a further charge of 9 Kreuzers per ton, or 35 florins; making in all, 175 florins.

**Imports and Arrivals of 1833.**—The following statement is interesting, as it exhibits the principal articles imported into Trieste from America, the West Indies, and Western Europe, in 1833, specifying the quantities furnished by each country, and the ships by which the same was imported. If ships that Austrian ships are pretty extensively employed in the Transatlantic trade.

Principal Importations and Arrivals during 1833.

**Great Britain.**—In 42 British, 1 Sardinian, and 1 Austrian vessel: coffee, 2 tons Jamaica, 162 tons Havannah, 88 tons St. Jago, 168 tons Rio, 7 tons Surriam, 5 tons Alocha, 7 tons Cheribon, and 11 tons Triage; sugar, 146 casks refined, 2,256 casks crushed; 400 boxes white Havannah, 185 cases Bahia, 288 cases Pernambuco, 116 tierces white, and 65 cases muscovado Brazil; cocoa, 15 tons; cassia lignea, 155 tons; cinnamon, 3 tons; pepper, 230 tons; pimento, 22 tons; ginger, 39 tons; cochineal, 4 serons; rum, 628 puncheons, indigo, 268 chests and 8 serons; logwood, 50 tons; Nicaragua wood, 21 tons; tin, 3,769 ingots, 423 barrels bars, 1,544 boxes plates; iron, 377 tons; lead, 151 ingots; cotton, 719 bales American; nankeens, 21,000 pieces; manufactures, 5,842 packages; herrings, 1,629 barrels; pilchards, 1,600 barrels; hides, 41,784.

**United States.**—In 23 American and 6 Austrian vessels: coffee, 203 tons Havannah, 111 tons St. Jago, 530 tons Rio, 110 tons Heribce, 76 tons Alocha, 187 tons Porto Rico, 365 tons St. Domingo, and 101 tons Triage; sugar, 47 casks crushed, 304 boxes yellow Havannah, and 497 bags Manila; cocoa, 2 tons; pepper, 560 tons; pimento, 50 tons; cassia lignea, 27 tons; indigo 131 chests; rum, 231 puncheons; logwood, 255 tons; Nicaragua wood, 147 tons; fustic, 90 tons; nankeens, 4,500 pieces; cotton, 5,911 bales; hides, 29,656.

**Brazil.**—In 12 British, 4 American, 1 Hamburg, 3 Danish, 1 French, 1 Neapolitan, 3 Sardinian, 3 Swedish, 1 Swedish, and 11 Austrian vessels.—68 vessels from Rio, 29 Bahia, 10 Pernambuco, 1 Para, and 2 from Santos): coffee, 3,704 tons Rio, 124 tons Bahia; sugar, 2,203 cases, 267 barrels, 1,511 bags white, and 1,000 muscovado; indigo, 131 cases, 145 barrels white, and 2,087 cases muscovado Bahia; 2,510 cases, 1,806 barrels, 54 bags white, and 127 cases muscovado Pernambuco; and 9,061 bags Santos; cocoa, 116 tons Para; rum, 138 puncheons; cotton, 302 bales Bahia; 20 bales Para; fustic, 45 tons; hides, 39,483.

**Cuba.**—In 2 British, 6 American, 1 Belgian, and 2 Spanish vessels.—9 vessels from St. Jago, and 2 from Matanzas: coffee, 1,192 tons St. Jago, 421 tons Matanzas; sugar, 172 boxes white, 1,621 boxes yellow Matanzas, 168 boxes white, 819 boxes yellow St. Jago; logwood, 15 tons; fustic, 117 tons.

**St. Domingo.**—In 1 British vessel: coffee, 158 tons; cotton, 41 bales; logwood, 3 tons.

**Siam.**—In 2 American vessels: pepper, 550 tons.

**Mexico.**—In 1 French, 22 Austrian, 4 Neapolitan, 7 Roman, and 4 Sardinian vessels: coffee, 91 tons St. Jago, 212 tons Rio, 4 tons Jamaica, 61 tons Porto Rico, 96 tons St. Domingo, and 5 tons Triage; sugar, 4,218 casks refined, 100 cases white Bahia, cocoa, 5 tons; pepper, 65 tons; pimento, 51 tons; cloves, 263 packages; cinchona, 1 ton; cassia lignea, 1 ton; cochineal, 21 serons; cotton, 270 bales; logwood, 716 tons; Nicaragua wood, 85 tons; rum, 55 puncheons; nankeens, 4,000 pieces; lead, 9,168 ingots; hides, 9,167.

**Bordeaux.**—In 4 French and 1 Swedish vessel: coffee, 21 tons Havannah; 216 tons St. Jago; sugar, 50 boxes white Havannah; pepper, 8 tons.

**Gibraltar and Malta.**—In 6 British, 9 Austrian, and 1 Roman vessel: coffee 4 tons Havannah, 3 tons Porto Rico; sugar, 20 cases white Bahia, 16 cases muscovado Brazil; cocoa, 11 tons; pepper, 23 tons; pimento, 5 tons; rum, 4 puncheons; logwood, 41 tons; cotton, 126 bales; hides, 1,685.

**Spain.**—In 9 Spanish, 1 Austrian, and 1 Russian vessel: coffee, 18 tons Porto Rico; lead, 8,761 ingots; hides, 500.

**Portugal.**—In 2 British, 7 Austrian, 1 Danish, and 2 Sardinian vessels: coffee, 91 tons Rio; sugar, 167 cases Bahia, 133 cases Pernambuco, 121 cases Rio, and 201 barrels white, 3,905 cases muscovado Brazil; cocoa, 220 tons; cotton, 3,303 bales; cassia lignea, 1 ton; hides, 15,397.

**Hamburg.**—In 3 Austrian, and 3 Bremen vessels: sugar, 12 casks refined; fish oil, 1,741 barrels; calf skins, 231 bales; zinc, 11,192 bars; herrings, 51 barrels.

**Holland.**—In 2 Austrian, and 1 Danish vessel: sugar, 113 casks refined, 176 casks crushed; tobacco, 164 bales; cheese, 117 packages; sandal wood, 3,127 pieces; tin, 50 ingots.

**Norway.**—In 1 British, 4 Hanoverian, 1 Danish, and 1 Dutch vessel: stockfish, 1,465 tons.

**Sweden.**—In 2 Swedish vessels: tar, 2,314 barrels.

Statement of Lang, Freedland, & Co.

Quarantine is strictly enforced at Trieste, and the establishments for facilitating its performance are complete and efficient. The Board of Health at this port is the central or principal one for the Austrian States; and maintains an active correspondence with all the principal ports, both in the Mediterranean and elsewhere. There are 2 lazarettos,—the latter called *la casa*, or Lazaretto Nuovo, is appropriated to vessels from the Levant and Egypt, which are, for the most part, subjected to the long or full quarantine of 40 days. It is spacious, and properly guarded; having a sufficient number of military and medical officers and assistants; with extensive quays and magazines for housing and airing of military and medical stores, and apartments for resident officers and passengers, &c. It is, in fact, one of the most perfect establishments of the kind in existence. The other, or old (*Fecchia*) lazaretto, contiguous to the great mole, is appropriated to ships and passengers performing a quarantine of not more than 28 days; and, though inferior to the former, is sufficiently capacious and convenient. The sanitary offices, including that of harbour master, are near the centre of the port; where also are moored vessels under observation for a term not exceeding 8 days. Here also are facilities for communicating *visu voce* with persons under quarantine; and spacious warehouses, with adequate guards and other officers. But, notwithstanding these conveniences, if a vessel arrive having an infectious malady on board, she is not allowed to enter either lazaretto at Trieste, but is sent to an island near Venice, fitted out for the purpose, where assistance may be afforded with less risk of propagating infection.

The ordinary Board of Health consists of a president; two assistants, one of whom is a doctor of medicine; and three provisors, two of whom are merchants.

Quarantine Charges payable at the Port of Trieste, by all Ships.

**Quarantine Dues payable on Goods.**—Non-susceptible goods pay *ad valorem* at the rate of 6 kreutzers per 100 forins or 1 mille. Susceptible goods pay an extra charge, according to tariff, or to circumstances. Besides the above *ad valorem* duty, goods not susceptible pay 4 kreutzers (12d.) per every 1,000 lbs. weight of Vienna. Grain is subject to an extra charge of about 1 per cent.

**Brokers, Commission Merchants, Brokerage, &c.**—There are a few exceptions to the freedom generally enjoyed of settling and exercising any trade at Trieste. Brokers, for example, are limited in number, and appointed by the Chamber of Commerce. They are obliged to give security, are under various regulations, and may not themselves trade as principals. They are of 3 classes: 1st, brokers for the sale and purchase of merchandise, who are again subdivided into particular classes, according to the articles they are conversant with, as grain, oil, cotton, drugs, hides and leather, colonial produce, manufactures, &c.; 2d, bill brokers, or exchange agents; and, 3d, ship and insurance brokers. Such authorized brokers are alone allowed to extend contracts, certificates, surveys, or other documents; and they are considered as public functionaries, whose depositions are received as legal evidence.

Any one may be a commission merchant or factor, but he may not issue printed circulars or lists of prices; nor will his books, however regularly kept, be considered as evidence in a court of justice, unless he is *matriculated*, for which the possession of a certain amount of capital is required. This, however, is little more than mere form, and a great deal of business is done by persons acting both as merchants and brokers, without being duly authorised.

The usual rate of a merchant's or factor's commission on the purchase of goods is 2 per cent. On sales, 1/2 per cent.; *del credere* is sometimes added.

A merchant's commission for collecting freights, and doing other shipping business, is 2 per cent. on the inward cargo; and by custom of the place, the house to which a ship is consigned or recommended by the charterers, is entitled to a commission of 2 per cent. on the outward cargo, whether it has or has not been instrumental in procuring the goods that are laden outwards.

A broker's commission for freighting a ship, or procuring a charter, is 2 per cent. This does not include the charge for writing charter, or for any other services performed in the clearance. In case of general

**carriage**, when the broker has to collect goods from different merchants, he charges 3 per cent. commission. A bill broker's commission (courtage) is sometimes 1 per mille, more commonly  $\frac{1}{2}$  per mille. Brokerage for the sale or purchase of merchandise varies from  $\frac{1}{4}$  per cent. to 1 per cent., according to circumstances, and the nature of the article.

**Insurance.**—The insurance of ships is carried on to a considerable extent at Trieste. The security is unexceptionable, the terms more moderate than in England, and losses are said to be adjusted promptly and liberally. The oppressive duties on policies of insurance in England have been the cause that most insurances on ships for the Adriatic, that were formerly effected in London, Liverpool, &c., are now effected at Trieste. The insurance of houses is universal; and that of lives is also, of late years, practised to a considerable extent. House insurance is carried on by joint stock companies, of limited responsibility.

**Bankruptcy** is not of very frequent occurrence at Trieste. The laws with respect to it do not differ much from those in force in most other countries. Frauds are punishable by imprisonment; but here, as elsewhere, they are very difficult to detect. Honest bankrupts are discharged, on making a complete disclosure of their affairs, and a surrender of their assets. Property settled on a wife is not affected by the debts of the husband; a regulation which, it is evident, must lead to fraud.

**Communications by Land.**—The intercourse between Trieste and Austria, Hungary, &c. is necessarily all carried on by land. The roads leading to Vienna, and to the Hungarian towns, particularly the first, are kept in good repair, and the tolls are moderate; but owing to the rugged nature of the country, the ascent is in some places very considerable. The diligence from Trieste to Vienna, 340 English miles, performs the journey in 72 hours. The draught horses employed on the roads are excellent; but, in some of the mountainous districts, bullocks are used.

Repeated surveys have been made of the country between Vienna and Trieste, in the view of forming a canal. But the difficulties in the way of such a project seem to be all but insuperable. The ground is not only rugged, but the subsoil of the country stretching northwards to a considerable distance from Trieste is so very porous, that, unless precautions were taken to obviate it, the water in the canal would speedily escape. A rail-road has been proposed, and it might, no doubt, be accomplished. But the expense would be so very great, that it is extremely problematical whether it would ever yield any thing like a return. We subjoin a statement of the

Rates of Land Carriage from Trieste to various Places.

**Carrening, Stores, &c.**—Trieste at Trieste is excellent, workmen good, and their wages moderate; so that it is a very favourable place for carrening and repairing. Water is very good, but rather scarce; so that, if a large supply be required, due notice must be given. Ships are served in regular rotation. Beef is very good, but rather high priced. Butter and cheese are dear; and fuel is excessively so. On the whole, therefore, Trieste cannot be considered as a favourable place for the provisioning of a ship. Subjoined is an account of the

Average Prices of the principal Articles of Provisions at Trieste in 1831.

**Banking.**—There are no public banks at Trieste. The Bank of Vienna has an office here, but it is merely for the exchange of its notes for cash, or, more frequently, of large notes for small ones. These notes, being guaranteed by government, are legal tender, and in general circulation, but no other company is allowed to issue notes to be used as a circulating medium. There is not, however, any deficiency of currency. Banking business is transacted by private companies, or by individuals, who are subject to certain regulations, and are obliged to lay before competent authority an attested statement of the capital embarked in their concerns. Their business principally consists in procuring bills of exchange from other places for the use of the merchants of Trieste, or in discounting, (in which latter operation they have many private competitors,) at the rate of from 4 to 6 per cent. per annum, according to the nature of the paper offered, and in proportion to the scarcity or abundance of cash.

The principal bankers of Trieste are of undoubted solidity, and do not indulge in dangerous speculations; and notwithstanding the apparent want of great banking establishments, the business of buying and selling, and of making payments and remittances, whether in bills or specie, is transacted at this port with great facility; and there seldom arises any distress, pressure, or stagnation, from want of money or credit.

It is not usual for respectable bankers to give interest on deposits. The partners in joint stock companies, banks, &c. are, in general, responsible only to the extent of their declared capital; and the individuals composing them are only liable each to the extent of their share. The same individual is frequently a general merchant, a partner in a banking house, and a member of an insurance company. All these businesses may at present be said to be prosperous.

*Credit.*—Goods imported into Trieste are sometimes sold for ready money, a discount being usually understood, and allowed in such case, of 2 or 2½ per cent. But they are commonly sold at 3 months' credit, that is, by bills of that date; occasionally, but rarely, they are sold at 6 months.

Bills thus obtained, though offering no other guarantee than the signature of the drawer or acceptor, may be discounted or insured at a moderate rate by companies who dedicate themselves to this branch of business, and who, from their extensive dealings, are good judges of the risk. This practice has become almost universal; and it not only facilitates sales, but its credit is, by this mode of trial, soon ascertained. It is difficult for a house long to conceal its insolvency; and its credit is, by this mode of trial, soon ascertained.

*Tares.*—Real tare is allowed on most articles of export; and on all articles of import, except cotton and sugar. The tare on Brazil sugar in chests depends on their length and size, but in general it amounts to from 15 to 18 per cent.; on Brazil sugar in bags the tare is 3 per cent.; on Havannah sugar a tare is allowed of 62 lbs. English per box, being from 13 to 14 per cent.; on Jamaica sugar the tare is 14 per cent. Tare on American cotton, 4 per cent.

The answers to the *Circular Queries* by Mr. Taylor Money, consul general at Milan, are amongst the most valuable that have been received, and reflect the greatest credit on his industry and talent for observation. We have been largely indebted to them.

**TRINITY HOUSE.** This society was incorporated by Henry VIII., in 1515, for the promotion of commerce and navigation, by licensing and regulating pilots, and ordering and erecting beacons, light-houses, buoys, &c. A similar society, for the like purposes, was afterwards established at Hull; and also another at Newcastle-upon-Tyne, in 1537; which 3 establishments, says Hakluyt, were in imitation of that founded by the Emperor Charles V. at Seville in Spain; who, observing the numerous shipwrecks in the voyages to and from the West Indies, occasioned by the ignorance of seamen, established, at the *Casa de Contratacion*, lectures on navigation, and a pilot-major for the examination of other pilots and mariners; having also directed books to be published on that subject for the use of navigators.

Henry VIII., by his charter, confirmed to the Deptford Trinity House Society all the ancient rights, privileges, &c. of the shipmen and mariners of England, and their several possessions at Deptford, from which it is plain that the Society had existed long previously. The corporation was confirmed, in 1685, in the enjoyment of its privileges and possessions, by letters patent of the 1st of James II. by the name of the Master, Wardens, and Assistants of the Guild or Fraternity of the most glorious and undivided Trinity, and of St. Clement's, in the Parish of Deptford Strond, in the County of Kent. At first, the corporation appears to have consisted of seamen only; but many gentlemen, and some noblemen, are now amongst its members, or elder brethren. It is governed by a master, 4 wardens, 8 assistants, and 31 elder brothers: but the inferior members of the fraternity, named younger brethren, are of an unlimited number; for every master or mate, expert in navigation, may be admitted as such. Besides the power of erecting light-houses, and other sea-marks, on the several coasts of the kingdom, for the security of navigation — (see *LIGHT-HOUSES*), — the master, wardens, assistants, and elder brethren are invested by charter with the following powers; viz. the examination of the mathematical scholars of Christ's Hospital, and of the masters of his Majesty's ships; the appointment of pilots to conduct ships into and out of the Thames; the amercement of such unlicensed persons as presume to act as masters of ships of war, or pilots, in a pecuniary fine; settling the several rates of pilotage; granting licences to poor seamen, not free of the city, or past going to sea, to row on the river Thames for their support; preventing aliens from serving on board English ships without licence; hearing and determining the complaints of officers and seamen of British ships, subject to an appeal to the Lords of the Admiralty, &c. To this company belongs the Ballast Office, for clearing and deepening the Thames, by taking up a sufficient quantity of ballast for the supply of all ships that sail out of the river, for which they pay certain rates. — (See *BALLAST*.) The corporation is authorised to receive voluntary subscriptions, benefactions, &c.; and to purchase, in mortmain, lands, tenements, &c. to the amount of 500*l.* per annum. The ancient Hall of the Trinity House at Deptford, where the meetings of the brethren were formerly held, was pulled down in 1787, and an elegant building erected for the purpose in London, near the Tower.

*Trinity House Revenues, &c.*—The gross revenue under the management of the Trinity House amounts to about 135,000*l.* a year; but the net revenue is rather under  $\frac{1}{2}$  that sum. It arises from the dues payable to the corporation on account of light-houses, buoyage and beaconage, and ballastage; and from the interest of money in the funds, and the rent of freehold property. In 1811, the receipts were as under:—

| <i>Rent of Land and houses, dividends on account of funded property, &amp;c., all charges deducted</i> |           |           |           |           |           |           |           |
| <i>Total net revenue</i>   |           |           |           |           | 52,229    | 1         | 73½       |

\* This includes a sum of 10,174*l.* laid out on new light-houses, and 1,015*l.* of incidental charges.  
† See *Parl. Paper*, No. 88. Sess. 1833. For an account of the light-house revenue, see this work, p. 759, for buoyage and beaconage, see p. 190.; and for ballastage, see p. 60.

By far the greater portion of this large sum is laid out on pensions to poor disabled seamen, and on the maintenance of their widows, orphans, &c. We have seen the number of persons so relieved stated at 3,000; and we believe that the fund is both judiciously and economically administered. Still, however, as we have remarked in another article — (*ante*, p. 758.) — it does appear to us, considering the vast importance to a maritime nation like this of keeping the charges on shipping as low as possible, that it would be good policy to provide otherwise for the poor persons now dependent on the Trinity House, and to reduce the charges on account of lights, &c. to the lowest sum that would suffice to maintain the establishment in a proper state of efficiency. No one, certainly, would wish to see the poor seamen deprived of any part of the pittance they now receive; but a larger amount might be given them from other sources, and be, at the same time, less felt by the public. Every one knows that nothing contributes so much to facilitate a commercial intercourse by land as good roads and low tolls; and good lights, buoys, beacons, &c., and light charges, have precisely the same influence at sea.

TRIPANG, or SEA SLUG (*Biche de Mer*), a species of fish of the genus *Holothuria*, found chiefly on coral reefs in the Eastern seas, and highly esteemed in China, into which it is imported in large quantities. It is an unseemly looking substance, of a dirty brown colour, hard, rigid, scarcely possessing any power of locomotion, or appearance of animation. Sometimes the slug is as much as 2 feet in length, and from 7 to 8 inches in circumference. A span in length, and 2 or 3 inches in girth, is, however, the ordinary size. The quality and value of the fish, however, do not by any means depend upon its size, but upon properties in it neither obvious to, nor discernible by, those who have not been long and extensively engaged in the trade. In shallow water the animal is taken out by the hand, but in deeper water it is sometimes speared. When taken it is gutted, dried in the sun, and smoked over a wood fire; this being the only preparation it receives. The fishery is carried on from the western shores of New Guinea, and the southern shores of Australia, to Ceylon inclusive. Indeed, within the last few years it has been successfully prosecuted on the shores of the Mauritius. The whole produce goes to China. In the market of Macassar, the great staple of this fishery, not less than thirty varieties are distinguished, varying in price from 5 Spanish dollars a picul (133½ lbs.) to 14 times that price, each variety being distinguished by well known names! The quantity of tripang sent annually to China from Macassar is about 7,000 piculs, or 8,333 cwt.; the price usually varying from 8 dollars a picul to 110 and 115, according to quality. — (*Crawford's Indian Archipelago*, vol. iii. p. 441.) There is also a considerable export of tripang from Manilla to Canton.

Besides tripang, *fish-maws* and *sharks' fins* are exported to China from every maritime country of India.

TROY WEIGHT, one of the most ancient of the different kinds used in Britain. The pound English Troy contains 12 ounces, or 5,760 grains. It is used in the weighing of gold, silver, and jewels; the compounding of medicines; in experiments in natural philosophy; in comparing different weights with each other; and is now (by 5 Geo. 4. c. 74.) made the standard of weight.

TROY WEIGHT, *Scotch*, was established by James VI. in the year 1618, who enacted that only one weight should be used in Scotland, viz. the French Troy stone of 16 pounds, and 16 ounces to the pound. The pound contains 7,000 grains, and is equal to 17 oz. 6 dr. avoirdupois. The cwt., or 112 lb. avoirdupois, contains only 103 lb. 2½ oz. of this weight, though generally reckoned equal to 104 lb. This weight is very nearly identical with that formerly used at Paris and Amsterdam; and is generally known by the name of Dutch weight. Though prohibited by the articles of Union, it has been used in most parts of Scotland in weighing iron, hemp, flax, and other Dutch and Baltic goods, meal, butcher's meat, lead, &c. — (See WEIGHTS AND MEASURES.)

TRUCK SYSTEM, a name given to a practice that has prevailed, particularly in the mining and manufacturing districts, of paying the wages of workmen in goods instead of money. The plan has been, for the masters to establish warehouses or shops; and the workmen in their employment have either got their wages accounted for to them by supplies of goods from such *depôts*, without receiving any money; or they have got the money, with a tacit or express understanding that they were to resort to the warehouses or shops of their masters for such articles as they were furnished with.

*Advantages and Disadvantages of the Truck System.* — A great deal of contradictory evidence has been given, and very opposite opinions have been held, as to the practical operation and real effect of this system on the workmen. Nor is this to be wondered at, seeing that every thing depends on the mode in which it is administered, and that it may be either highly advantageous or highly injurious to the labourer. If a manufacturer of character establish a shop supplied with the principal articles required for the use of the workmen in his employment, and give them free liberty to resort to it or not as they please, it can, at all events, do them no harm, and will, most likely, render them material service. The manufacturer, having the command of capital, may, in general, lay in his goods to greater advantage than they can be laid in by the greater number of retail tradesmen in moderate-sized towns; and not being dependent on the profits of his shop for support, he is, even though he had no advantage in their purchase, able to sell his goods at a cheaper rate than they can be afforded by the majority of shopkeepers. Sometimes, also, a factory is established in a district where shops either do not exist at all, or are very deficient; and in such cases the master consults the interest and convenience of those dependent on him when he provides a supply of the principal articles required

for their subsistence. It is easy, therefore, to see, that the keeping of shops by masters for the use of their workmen may be very beneficial to the latter. But to insure its being so, it is indispensable that the masters should be above taking an advantage when it is within their reach, and that their conduct towards the workmen should not be in any degree influenced by the circumstance of the latter dealing or not dealing with their shops.

Such disinterestedness is, however, a great deal more than could be rationally expected from the generality of men; and hence, though many instances may be specified in which the truck system was advantageous to the workmen, those of a contrary description were, unfortunately, far more numerous. It is obvious, indeed, that a practice of this sort affords very great facilities for fraudulent dealings. Under the old law, a manufacturer who had a shop, had means, supposing he were inclined to use them, not possessed by any ordinary shopkeeper as respects his customers, for forcing upon his workmen inferior goods at an exorbitant price. They are at first supplied on liberal terms, and are readily accommodated with goods in anticipation of wages, till they get considerably into debt. The pernicious influence of this deceitful system then begins fully to disclose itself. The workmen cease to be free agents; they are compelled to take such goods and at such prices as the master pleases; for, were they to attempt to emancipate themselves from this state of thralldom by leaving their employment, they would be exposed to the risk of prosecution and imprisonment for the debts they had incurred. It is not easy to imagine the extent to which these facilities for defrauding the labouring class were taken advantage of in various districts of the country. In many instances, indeed, the profits made by the shops exceeded those made by the business to which they were contingent; and thousands of workmen, whose wages were nominally 30s. a week, did not really receive, owing to the bad quality and high price of the goods supplied to them, more than 20s., and often not so much.

*Abolition of the Truck System.* — A system of dealing with the labouring classes, so very susceptible of abuse, and which, in point of fact, was very extensively abused, was loudly and justly complained of. A bill was in consequence introduced for its suppression by Mr. Littleton, which, after a great deal of opposition and discussion, was passed into a law — 1 & 2 Will. 4. c. 32. — (*See abstract subjoined.*)

Those who opposed this act did so on two grounds; — 1st, that it was improper to interfere at all in a matter of this sort; and, 2d, that the interference would not be effective. The first of these objections does not appear entitled to any weight. In suppressing the truck system, the legislature did nothing that could in anywise regulate or fetter the fair employment of capital: it interfered merely to put down abuse; to carry, in fact, the contract of wages into full effect, by preventing the workman from being defrauded of a portion of the wages he had stipulated for. The presumption no doubt is, in questions between workmen and their employers, that government had better abstain from all interference, and leave it to the parties to adjust their disputes on the principle of mutual interest and compromised advantage. Still, however, this is merely a presumption; and must not be viewed as an absolute rule. Instances have repeatedly occurred, where the interference of the legislature to prevent or suppress abuse, on occasions of the sort now alluded to, has been imperiously required, and been highly advantageous. Those who claim its interposition are, indeed, bound to show clearly that it is called for to obviate some gross abuse, or that it will materially redound to the public advantage; and this, we think, was done in the completest manner, by the opponents of the truck system. Regard for the interests of the more respectable part of the masters, as well as for those of the workmen, required its abolition; for, while it continued, those who despised taking an advantage of their dependants were less favourably situated than those who did. It is ludicrous, therefore, in a case of this sort, to set up a cuckoo cry about the "freedom of industry." The good incident to the truck system was in practice found to be vastly overbalanced by the abuses that grew out of it; and as these could not, under the existing law of debtor and creditor, be separately destroyed, the legislature did right in attempting to suppress it altogether.

It was said, indeed, that this would be found to be impracticable; that the manufacturers would enter underhand into partnerships with the keepers of shops, and that the system would really be continued, in another and, perhaps, more objectionable form. This anticipation has, we believe, been in some degree realised; but the system has notwithstanding been in many places abandoned, and is nowhere practised to any thing like the extent to which it was carried previously to the passing of Mr. Littleton's act. It will not, however, be completely rooted out, till all small debts, however they originate, be put beyond the pale of the law. We have already vindicated the expediency of this measure on other grounds — (*see CREDIT*); and the influence it would have in effectually destroying whatever is most pernicious in the truck system, is a weighty additional recommendation in its favour. Were all right of action upon debts for less than 50*l.* or 100*l.* taken away, no master would think of acquiring a control over the free agency of

his workmen, by getting them in debt to him; and no workman would, under such circumstances, submit to be directed in his choice of shops or goods. The case of the Scotch colliers affords a curious illustration of what is now stated. Down to 1775, these persons were really *ubscripti glebae*, or predial slaves; that is, they and their descendants were bound to perpetual service at the works to which they belonged,—a right to their labour being acquired by any new proprietor to whom the works were sold! The 15 Geo. 3. c. 28. was passed for the emancipation of the colliers from this state of bondage. It, however, failed of practically accomplishing its object; for the masters speedily contrived, by making them advances in anticipation of their wages, to retain them as completely as ever under their control! To obviate this abuse, the 39 Geo. 3. c. 56. was passed; which most properly took from the masters all title to pursue the colliers for loans, unless advanced for the support of the collier and his family during sickness. This not had the desired effect; and the colliers have since been as free as any other class of labourers. — (See my edition of the *Wealth of Nations*, vol. ii. p. 186.) In fact, were small debts put beyond the pale of the law, it would not be necessary to interfere directly with the truck system; for it would not then be possible to pervert it to any very injurious purpose.

The following are the principal clauses in the act 1 & 2 Will. 4. c. 37., entitled, "An Act to prohibit the Payment, in certain Trades, of Wages in Goods, or otherwise than in the Current Coin of the Realm:"—

1. In all contracts hereafter to be made for the hiring of any artificer in any of the trades hereinafter enumerated, or for the performance by any artificer of any labour in any of the said trades, the wages of such artificer shall be made payable only in the current coin of this realm, and not otherwise; any contract to the contrary being illegal, null, and void.
2. If such contract contain any stipulations as to the manner in which the wages shall be expended, it is void.
3. Wages must be paid to the workman in coin only. Payment in goods illegal and void.
4. Artificers may recover wages, if not paid in the current coin.
5. In an action brought for wages, no set-off shall be allowed for goods supplied by the employer, or by any shop in which he is interested.
6. No employer shall have any action or suit in equity against his artificer, for goods supplied to him on account of wages, or supplied by any shop in which he is interested.
7. If the artificer, or his wife or children, become chargeable in the parish, the overseers may recover any wages earned within the 3 preceding months, and not paid in cash.
8. Nothing in this act is to invalidate the payment of wages in bank notes or drafts on any bankers within 15 miles, if artificer consents.
9. Any employer of any artificer in any of the trades hereinafter enumerated, who shall, by himself or by the agency of any other person, directly or indirectly enter into any contract, or make any payment hereby declared illegal, shall for the first offence forfeit a sum not exceeding 10*l.*, nor less than 5*l.*, and for the second offence any sum not exceeding 50*l.*, nor less than 10*l.*, and for a third offence he shall be guilty of a misdemeanour, and be punished by fine only, at the discretion of the court, so that the fines shall not in any case exceed 100*l.*
10. Offences shall be inquired of and fines recovered before 2 justices, and the amount of the fines shall be in the discretion of such justices, or in case of a misdemeanour, of the court before which the offence may be tried; and in case of a second offence, it shall be sufficient evidence of the previous conviction, if a certificate, signed by the officer having the custody of the record, be produced, stating in a compendious form the general nature of the offence. But a second or third offence shall only be punished as a first or second offence, if committed within 10 days after the prior conviction; and a fourth or any subsequent offence shall be punished as a third offence. But no second or third offence shall be prosecuted after more than 2 years from the commission of the next preceding offence.
11. Justices may compel the attendance of witnesses, on the request of the parties. Penalties for non-attendance without excuse, and after proof of due service of summons at the usual place of abode for such persons, 24 hours at the least before the time appointed for appearance, a commitment to some prison within the jurisdiction of the justices, without bail or mainprize, for not exceeding 14 days, or until such person shall submit to be examined.
- Sections from 12. to 18. inclusive, regulate proceedings.
19. Act only in the following trades:—Making, casting, converting, or manufacturing of iron or steel, or any parts, branches, or processes thereof; working any mines of coal, ironstone, limestone, sand, rock, or working or getting stone, slate, or clay; or making or preparing saw, bricks, tiles, flues, or quarries; or making or manufacturing any kinds of nails, chains, rivets, axils, &c., keys, &c., or any other articles or hard wares made of iron or steel, or of iron and steel combined, or of any plated articles of cutlery, or of any spools or wares made of brass, tin, lead, pewter, or other metal, or of any japanned goods or wares whatsoever; or making, spinning,

- throwing, doubling, winding, weaving, combing, knitting, bleaching, dyeing, printing, or otherwise preparing any kinds of woollen, worsted, yarn, stuff, kersey, fust, or cloth, serge, cotton, leather, fur, hemp, flax, mohair, or silk manufactures whatsoever, or any manufactures whatsoever made of the said last mentioned materials, whether the same be or be not mixed one with another; or making or otherwise preparing, ornamenting, or finishing any glass, porcelain, china, or earthenware whatsoever, or any parts, branches, or processes thereof; or any materials used in any of such last mentioned trades; or making or preparing of bone, thread, silk or cotton lace, or of lace made of any mixed materials.
20. Not to extend to any domestic servant, or servant in husbandry.
21. No one engaged in any of the trades or occupations enumerated, or his father, son, or brother, shall act as a justice.
22. County magistrates to act in cases where those of towns are disqualified as above.
23. Not to prevent any employer from supplying or contracting to supply to any artificer any medicine or medical attendance, or any fuel, or any materials, tools, or implements to be by such artificer employed in his trade or occupation, if such artificer be employed in mining, or any hay, corn, or other provender to be consumed by any horse or other beast of burden employed by any such artificer in his trade and occupation; nor from dealing to any artificer employed in any of the trades or occupations enumerated the whole or any part of any tenement at any rent; nor from supplying or contracting to supply to any such artificer any food, or refreshment, or under the roof of any such employer, and there consumed by such artificer; nor from making or contracting to make any deduction from the wages of any artificer for any such rent, or medicine or medical attendance, or fuel, materials, tools, implements, hay, corn, or provender, or such victuals, or for any money advanced to such artificer for any such purpose; but such deduction shall not exceed the true value of such fuel, materials, tools, implements, hay, corn, and provender, and shall not be in any case made from the wages of such artificer unless the agreement for such deduction shall be in writing and signed by such artificer.
24. Not to prevent any such employer from advancing to any such artificer any money to be by him contributed to any friendly society or bank for savings, or for his relief in sickness, or for the education of any child of such artificer, nor from deducting or contracting to deduct any money from the wages of such artificer for the education of any such child, provided the agreement for such deduction shall be in writing and signed by such artificer.
25. Workmen, labourers, and other persons in any manner engaged in any employment or operation, in or about the several trades and occupations aforesaid, shall be deemed "artificers;" and all masters, halliis, foremen, managers, clerks, and other persons engaged in the hiring, employment, or superintendance of the labour of any such artificers shall be deemed to be "employers;" and any money or other thing paid or contracted to be paid, given, or a remuneration for any labour done or to be done, whether within a certain time or to a certain amount, or for a time or an amount uncertain, shall be deemed to be the "wages" of such labour; and any agreements, understandings, devices, contrivances, collusion, or arrangements whatsoever on the subject of wages, whether written or oral, whether direct or indirect, to which the employer and artificer be parties, or are assenting, or by which they are mutually bound to each other, or whereby either of them shall have endeavoured to impose an obligation on the other of them, shall be deemed a "contract."

TRUFFLES, a sort of vegetable production, like a mushroom, formed under ground. A few have been found in Northamptonshire; they are pretty abundant in Italy, the south of France, and several other countries. They are reckoned a great delicacy. The *pâtés au truffes d'Angoulême* are highly esteemed, and are sent as presents to very distant places. — (*Rees's Cyclopædia.*)

TUNIS, the capital of the regency of the same name, on the northern coast of Africa, the Goletta fort being in lat. 36° 48' 30" N., lon. 10° 25' 45" E. The bay of Tunis is somewhat in the form of a horseshoe. Its western extremity, Cape Carthage,

is situated about 4 miles N.E. from the Goletta; and its eastern extremity, Capo Zafra, bears from Cape Carthage E. by S., distant about 13 miles. The bay is about 16 miles deep, and has good anchorage all over, in from 10 to 4 fathoms water. It is exposed to the N. and N.E. gales; but they seldom occasion any damage. Tunis lies on the west side of the bay, being separated from it by a large lagoon, having, where deepest, about 7 feet water. The port is at the Goletta, or channel, passing through the narrow belt of land separating the lagoon from the sea; the entrance to it is by a canal, in which there is at all times 15 feet water; and ships may use it on paying a fee of 3 dollars a day. It is not, however, much resorted to; all vessels of considerable burden loading and unloading from their moorings in the lny, by means of lighters. The population of Tunis has been variously estimated; and may probably amount to 100,000, being the most populous of any African city after Cairo. The streets are narrow, unpaved, and filthy. The buildings, though of stone, are mean and poor; and the inhabitants present the picture of poverty and oppression. There is a fort at the Goletta, of considerable strength.

*Trade.*—Notwithstanding the various drawbacks arising out of the nature of the government, and the ignorance and prejudices of the people, commerce and industry are in a more advanced state in Tunis, than in any other part of Northern Africa, Egypt excepted. Though subject to droughts, the climate is, on the whole, excellent. The soil still preserves that exuberant fertility for which it was famous in antiquity.

Non quicquid Libyæ terit  
Fervens aræ messibus. — (*Sænc. in Thyest.*)

It seldom receives any other manure than that of sometimes burning the weeds and stubble; and yet, in despite of its slowly culture, the crops are luxuriant; and there is generally a considerable excess of wheat and barley for exportation. Corn is principally shipped at Biserta, about 50 miles W. of Tunis. Olive oil is one of the principal articles of export. It is of various qualities; some good, and some very indifferent. Susa is said to be the best place for its shipment. Soap of an excellent quality is largely manufactured in the regency. It may be had either soft or in wedges. The soft is made of barilla and pure oil, and is much esteemed. The hard soap is made from the lees of oil, and is reckoned very strong. The principal soap-works are at Susa. Little, however, is prepared on a speculative anticipation of a demand for exportation; but any quantity may be had by contracting for it a few months before the period when it is wanted. A sort of woollen scull-caps are largely exported. They are in extensive demand all over the Levant, and are nowhere made in such perfection as here. Ivory and gold dust, hides, wax, morocco leather, sponge, barilla, coral, dates, ostrich feathers, &c. are among the articles of export.

The imports from Europe consist of woollens, coarse German and Irish linens, cotton stuffs, hardware, sugar, coffee, spices, tin plates, lead, alum, dye stuffs, wine, silk, Spanish wool, &c. There is very little direct trade between Tunis and England; but a good deal is indirectly carried on, through the intervention of Malta and Gibraltar. Marseilles has probably the largest share of the trade with the regency. In 1830, there entered the different ports of Tunis 194 ships, of the burden of 20,747 tons, exclusive of those engaged in the trade with the other African states and Turkey.

Exclusive of the trade by sea, a considerable trade is carried on between Tunis and the interior of Africa, by means of caravans. These import slaves, gold dust, ivory, feathers, drugs, &c. They carry back cotton stuffs, linens, hardware, spices, cochineal, &c.

Naval and military stores imported into Tunis pay no duty. Other articles pay a duty of 3 per cent. *ad valorem* on a rated tariff. Obstructions arising out of monopolies, &c. are occasionally thrown in the way of exportation; and in general it is necessary, before proceeding to ship, to obtain a *fishery*, or licence to that effect from the bey. That, however, may be, for the most part, procured without much difficulty.

*Money.*—Accounts are kept in piastres of 16 carobas or 52 aspers. The piastre is worth about 1s. 3d. sterling. The asper is an imaginary money. The value of foreign coins depends on the state of the exchange.

*Weights.*—Gold, silver, and pearls are weighed by the ounce of 8 melleas; 16 of these ounces make the Tunis pound = 2,773½ Eng. ozs. The principal commercial weight is the cantaro, containing 100 lbs., or rotoli, being equivalent to 111½ lbs. avoird., or 50½ kilog. The asper is

*Measures.*—The principal corn measure is the cafiz, divided into 16 whibas; and the whiba into 12 sahas. One cafiz = 1½ Imperial bushels.

The wine measure is the millerolle of Marseilles = 14-1 Imp. gallons, or 64-53 litres. It is divided into 6½ mitres.

The principal oil measure is the metal or mettar = 5-125 wine gallons, or 19-33 litres; but it is of different dimensions in different parts of the country; and is larger at Susa, whence most of the oil is exported, than at Tunis.

The pic, or principal long measure, is of 3 sorts; viz, the pic woollen measure = 26½ Eng. inches; the pic silk measure = 21 8 do.; and the pic linen measure = 18-6 do.

For further particulars, see that chapter of *Shaw's Travels in Barbary*, &c. (one of the most learned and excellent works of the kind in the English language), that treats of the kingdom of Tunis; *Maclellan's Account of Tunis*, passim; *Jackson's Commerce of the Mediterranean*, pp. 55-56; *Kelly's Cumulative*, &c.

**RUINS OF CARTHAGE.**—The famous city of Carthage, one of the greatest emporiums of the ancient world, long the mistress of the sea, and the most formidable enemy of Rome, was situated near the cape which still bears her name, about 10 miles N.E. from Tunis. Such, however, have been the alterations on the coast, that the port of the city, within whose ample expanse whole navies used to ride, is now wholly filled up; antiquaries differ as to its situation; and the sea has in some places receded from 2 to 3 miles from the ruins of the buildings by which it was formerly skirted. The common sewers are still in a very perfect state, as are several cisterns, public reservoirs, and other remains of that sort, with the fragment of a noble aqueduct that supplied the city with water. But besides these, and a very few Punic inscriptions that have been dug up, there is nothing left to attest the ancient grandeur and magnificence of the city, or to identify it with the illustrious people by whom it was founded and occupied till its destruction by Scipio Nasica. There are no temples, no triumphal arches, no granite columns or obelisks covered with Phœnician characters, and no ancient entablatures. These have all fallen a sacrifice to hostile attacks, or to the destroying hand of time.

Nunc passim, vix reliquias, vix remina servans,  
Obvult, propterea non agnoscenda ruinis.

Such mutilated fragments of buildings as still remain, are evidently the work of a later age; of those who occupied the city between the period when a colony was sent to it by Augustus, and its final subversion by the Saracens in the 7th century.

**TURBITH**, or **TURPETIL**, the cortical part of the root of a species of *Convolvulus*, brought from different parts of the East Indies. It is a longish root, about the thickness of the finger, resinous, heavy, of a brownish hue without and whitish within. It is imported cloven in the middle, lengthwise, and the heart or woody matter taken out. The best is ponderous, not wrinkled, easy to break, and discovers to the eye a large quantity of resinous matter. At first it makes an impression of sweetness on the taste; but, when chewed for some time, betrays a nauseous acrimony. It is used in medicine, but only to a small extent. — (*Lewis's Mat. Med.*)

**TURBITH (MINERAL)**, the name given by chemists to the subsulphate of mercury.

**TURBOT** (*Pleuronectes maximus*), a well known and highly esteemed species of fish. Very considerable quantities of turbot are now taken on various parts of our coasts, from the Orkneys to the Land's End, yet a preference is given in the London markets to those caught by the Dutch. The latter are said to have sometimes drawn as much as 80,000l. in a single year, for turbot sold in London.

Fresh turbot, however taken, or in whatever ship imported, may be imported free of duty. — (See *FISII*.)

**TURMERIC**, the root of the *Curcuma longa*. It is externally greyish, and internally of a deep lively yellow or saffron colour; very hard; and not unlike, either in figure or size, to ginger. That should be preferred, which is large, new, resinous, difficult to break, and heavy. It is imported from Bengal, Java, China, &c.; but some of a superior quality is said to have been brought from Tobago. Small quantities of it have also been grown in England. It has a somewhat aromatic, and not very agreeable smell; and a bitterish, slightly acrid, and rather warm taste. It used to be in considerable estimation as a medicine; but in Europe it is now used only as a dye. It yields a beautiful bright yellow colour; which, however, is extremely fugitive, and no means have hitherto been discovered of fixing it. It is sometimes employed to heighten the yellows made with weld, and to give an orange tint to scarlet; but the shade imparted by the turmeric soon disappears. The Indians use it to colour and season their food. — (*Lewis's Mat. Med.*; *Bancroft on Colours*, vol. i. p. 276.)

The imports of turmeric from all places eastward of the Cape of Good Hope were, in 1830, 1,867,764 lbs.; in 1831, 1,292,028 lbs.; and in 1832, 1,904,045 lbs.

Its price in bond in the London market, in March, 1834, was — Bengal, per cwt, 15s. to 16s.; Java, 24s. to 25s.; China, 25s. to 26s.

The duty on turmeric is 2s. 4d. per cwt. on that brought from a British possession, and 10s. per cwt. on that from a foreign country. The only effect of this injurious distinction is to force the use of an inferior article.

**TURPENTINE** (Ger. *Turpentin*; Fr. *Térébenthine*; It. *Trementina*; Rus. *Skidjar*; Pol. *Terpentina*). There are several species of turpentine, but all of them possess the same general and chemical properties.

1. *Common Turpentine*, is a resinous juice which exudes from the Scotch fir or wild pine (*Pinus sylvestris*). The trees which are most exposed to the sun, and have the thickest barks, yield it in the greatest abundance. They begin to produce it when about 40 years old. The bark of the tree is wounded, and the turpentine flows out in drops, which fall into a hole, or sort of cup, previously dug at the foot of the tree, holding about 1½ pint. It is purified by being exposed to liquefy in the sun's rays, in barrels perforated in the bottom, through which it filters. In the United States, the collection of turpentine is confided chiefly to negroes, each of whom has the charge of from 3,000 to 4,000 trees. The process lasts all the year, although the incisions are not made in the trees till the middle of March, and the flow of the turpentine generally ceases about the end of October. The boxes are emptied 5 or 6 times during the year; and it is estimated that 250 boxes will produce a barrel weighing 320 lbs. Turpentine has a strong, somewhat fragrant odour, and a bitter disagreeable taste; its consistence is greater than that of honey; its colour dirty yellow; and it is more opaque than the other sorts. We import it almost entirely from the United States.

2. *Venice Turpentine*, is the produce of the larch (*Pinus Larix*). It is obtained by boring a hole into the heart of the tree about 2 feet from the ground, and fitting into it a small tube through which the turpentine flows into vessels prepared for its reception. It is purified by straining through cloths, or hair sieves. It is more fluid, having the consistence of new honey, a yellowish colour, and is less unpleasant to the smell and taste, than the common turpentine. Genuine Venetian turpentine is principally obtained from the forests of Baye, in Provence; but much of that to be found in the shops comes from America, and is, perhaps, obtained from a different species of fir.

3. *Canadian Balsam*, or *Turpentine*, is obtained from incisions in the bark of the *Pinus Balsamea*, a native of the coldest regions of North America. It is imported in casks, each containing about 1 cwt. It has a strong, not disagreeable odour, and a

bitterish taste; is transparent, whitish, and has the consistence of copaiva balsam. — (See BALSAM.)

4. *Chiaa*, or *Cyprus Turpentine*, is obtained from the *Pistacia Terebinthus*, a native of the north of Africa and the south of Europe, and cultivated in Chios and Cyprus. It flows out of incisions made in the bark of the tree in the month of July; and is subsequently strained and purified. It has a fragrant odour, a moderately warm taste, devoid of acrimony or bitterness, and a white or very pale yellow colour; it is about as consistent as thick honey, is clear, transparent, and tenacious. From its comparative high price, Chian turpentine is seldom procured genuine, being for the most part adulterated either with Venetian or common turpentine. The different species of turpentine may be dissolved in rectified spirit, or pure alcohol; and, by distillation, they all give similar oils, which, from their being distilled (and not from any resemblance to alcohol, or spirits properly so called), are vulgarly termed spirits of turpentine. If the distillation be performed with water, the produce is an essential oil, the common spirit of turpentine; and if the distillation be carried on in a *retort*, without water, the product is more volatile and pungent, — a concentrated oil, as it were, — and is called the ethereal spirit of turpentine. The residuum that is left, in both cases, is a brownish resinous mass, brittle, capable of being melted, highly inflammable, insoluble in water, but mixing freely with oils: it is the common rosin of commerce. — (*Lib. of Entert. Knowledge, Vegetable Substances; Thomson's Dispensatory.*)

The entries of turpentine for home consumption in 1831 and 1832 amounted, at an average, to 322,233 cwt. a year. It is almost entirely imported from the United States; so much so, that of 317,895 cwt. imported in 1831, 317,095 were supplied by them: the residue came from France.

**TURPENTINE, OIL OF** (Ger. *Terpentinöl*; Fr. *Eau de rose, Huile de térébenthine*; It. *Acqua di rosa*; Sp. *Aguarras*), the essential oil drawn from turpentine by distillation. There are two sorts of this oil: the best, red; and the second, white. It is very extensively used by house painters, and in the manufacture of varnish, &c. The distillers have been charged with using it in the preparation of gin. Oil of turpentine is very often adulterated.

**TURQUOISE** (Ger. *Türkiss*; Fr. *Turquoise*; It. *Turchina*; Sp. *Turquesa*), a precious stone in considerable estimation. Its colour, which is its principal recommendation, is a beautiful celestial blue, which migrates into pale blue, and is sometimes tinged with green. Specific gravity, 3.127. It is destitute of lustre, opaque, and does not admit of a very high polish. It is much worn in necklaces, and in every part of ornamental jewellery, from the size of a pin's head to that of an almond: it contrasts beautifully with brilliants, or pearls, set in fine gold, and appears to most advantage when cut spheroidal. — (*Mawe on Diamonds*, 2d ed. p. 129.)

Real turquoises are exclusively furnished by Persia. The mines whence they are obtained are situated near Nishapore. They are the property of the Crown, and are farmed to the highest bidder. They bring a rent of from 2,000, to 2,700, a year. — (*Frascr's Travels on the Shores of the Caspian*, pp. 343—347.)

**TUTENAG**, the name given in commercial language to the zinc or spelter of China. — (See ZINC.) This commodity used to be smuggled from China (the exportation of unwrought metals from that empire being prohibited) to Hindostan, the Malay Archipelago, and neighbouring countries, to the amount, it is supposed, of about 50,000 cwt. a year. In 1820, the British free traders introduced German spelter for the first time into the Indian market. In 1826, the importation of tutenag from China into Calcutta ceased; and it has now been totally superseded throughout India by spelter. Of this latter commodity there were exported from Great Britain to all places eastward of the Cape of Good Hope, except China, at an average of the 3 years ending with 1832, 49,946 cwt. a year, besides the quantities furnished by Hamburg, Rotterdam, Antwerp, and other continental ports.

**TYRE**, the principal city of Phœnicia, and the most celebrated emporium of the ancient world. This famous city was situated on the S. E. coast of the Mediterranean, where the inconsiderable town of Tsour now stands, in lat. 33° 17' N., lon. 35° 14' 35" E. The trade that is at present carried on at Tsour is too trifling to deserve notice; but as this work is intended to give some account, however imperfect, of the revolutions in the channels of commercial enterprise, we may, perhaps, be excused for submitting a few statements with respect to the commerce carried on by so renowned a people as the Tyrians.

Tyre was founded by a colony from Sidon, the most ancient of the Phœnician cities. The date of this event is not certainly known, but Larcher supposes it to have been 1,690 years before the Christian era. — (*Chronologie d'Hérodote*, cap. ii. p. 131.) It is singular, that while Homer mentions Sidon, he takes no notice of Tyre, whose glory speedily eclipsed that of the mother city; but this is no conclusive proof that the latter was not then a considerable emporium. The prophets Isaiah, Jeremiah, and Ezekiel, who flourished from 700 to 600 years before Christ, represent Tyre as a city of unrivalled wealth, whose "merchants were princes, and her traffickers the honourable of

the earth." Originally, the city was built on the main land: but having been besieged for a lengthened period by the Babylonian monarch Nebuchadnezzar, the inhabitants conveyed themselves and their goods to an island at a little distance, where a new city was founded, which enjoyed an increased degree of celebrity and commercial prosperity. The old city was, on that account, entitled Palatyre, and the other simply Tyre. The new city continued to flourish, extending its colonies and its commerce on all sides, till it was attacked by Alexander the Great. The resistance made by the Tyrians to that conqueror showed that they had not been enervated by luxury, and that their martial virtues were nowise inferior to their commercial skill and enterprise. The overthrow of the Persian empire was effected with less difficulty than the capture of this single city. The victor had not magnanimity to treat the vanquished as their heroic conduct deserved. In despite, however, of the cruelties inflicted on the city, she rose again to considerable eminence. But the foundation of Alexandria, by diverting the commerce that had formerly centered at Tyre into a new channel, gave her an irreparable blow; and she gradually declined till, consistently with the denunciation of the prophet, her palaces have been levelled with the dust, and she has become "a place for the spreading of nets in the midst of the sea."

*Commerce, Colonies, &c. of Tyre.* — Phœnicia was one of the smallest countries of antiquity. It occupied that part of the Syrian coast which stretches from Aradus (the modern Rouad) on the north, to a little below Tyre on the south, a distance of about 50 leagues. Its breadth was much less considerable, being for the most part bounded by Mount Libanus to the east, and Mount Carmel on the south. The surface of this narrow tract was generally rugged and mountainous; and the soil in the valleys, though moderately fertile, did not afford sufficient supplies of food to feed the population. Libanus and its dependent ridges were, however, covered with timber suitable for ship building; and besides Tyre and Sidon, Phœnicia possessed the ports of Tripoli, Byblos, Berytus, &c. In this situation, occupying a country unable to supply them with sufficient quantities of corn, hemmed in by mountains, and by powerful and warlike neighbours, on the one hand, and having, on the other, the wide expanse of the Mediterranean, studded with islands, and surrounded by fertile countries, to invite the enterprise of her citizens, they were naturally led to engage in maritime and commercial adventures; and became the boldest and most experienced mariners, and the greatest discoverers, of ancient times.

From the remotest antiquity, a considerable trade seems to have been carried on between the Eastern and Western worlds. The spices, drugs, precious stones, and other valuable products of Arabia and India, have always been highly esteemed in Europe, and have exchanged for the gold and silver, the tin, wines, &c. of the latter. At the first dawn of authentic history, we find Phœnicia the principal centre of this commerce. Her inhabitants are designated in the early sacred writings by the name of Canaanites, — a term which, in the language of the East, means merchants. The products of Arabia, India, Persia, &c. were originally conveyed to her by companies of travelling merchants, or caravans; which seem to have been constituted in the same way, and to have performed exactly the same part in the commerce of the East, in the days of Jacob, that they do at present. — (*Gen.* xxxvii. 25. &c.) At a later period, however, in the reigns of David and Solomon, the Phœnicians, having formed an alliance with the Hebrews, acquired the ports of Elath and Eziongeber, at the north-east extremity of the Red Sea. Here they fitted out fleets, which traded with the ports on that sea, and probably with those of Southern Arabia, the west coast of India, and Ethiopia. The ships are said to have visited Ophir; and a great deal of erudition has been expended in attempting to determine the exact situation of that emporium or country. We agree, however, with Heeren, in thinking that it was not the name of any particular place; but that it was a sort of general designation given to the coasts of Arabia, India, and Africa, bordering on the Indian Ocean; somewhat in the same loose way as we now use the terms East and West Indies. — (See the chapter on the *Navigation and Commerce of the Phœnicians*, in the translation of Heeren's work.)

The distance of the Red Sea from Tyre being very considerable, the conveyance of goods from the one to the other by land must have been tedious and expensive. To lessen this inconvenience, the Tyrians, shortly after they got possession of Elath and Eziongeber, seized upon Rhinoculura, the port in the Mediterranean nearest to the Red Sea. The products of Arabia, India, &c., being carried thither by the most compendious route, were then put on board ships, and conveyed by a brief and easy voyage to Tyre. If we except the transit by Egypt, this was the shortest and most direct, and for that reason, no doubt, the cheapest, channel by which the commerce between Southern Asia and Europe could then be conducted. But it is not believed that the Phœnicians possessed any permanent footing on the Red Sea after the death of Solomon. The want of it does not, however, seem to have sensibly affected their trade; and Tyre continued, till the foundation of Alexandria, to be the grand emporium for Eastern products, with

which it is abundantly supplied by caravans from Arabia, the bottom of the Persian Gulf, and from Babylon, by way of Palmyra.

The commerce of the Phœnicians with the countries bordering on the Mediterranean was still more extensive and valuable. At an early period, they established settlements in Cyprus and Rhodes. The former was a very valuable acquisition, from its proximity, the number of its ports, its fertility, and the variety of its vegetable and mineral productions. Having passed successively into Greece, Italy, and Sardinia, they proceeded to explore the southern shores of France and Spain, and the northern shores of Africa. They afterwards adventured upon the Atlantic; and were the first people whose flag was displayed beyond the pillars of Hercules.\*

Of the colonies of Tyre, Gades, now Cadiz, was one of the most ancient and important. It is supposed by M. de St. Croix to have originally been distinguished by the name of Tartessus or Tarshish, mentioned in the sacred writings. — (*De l'Etat et du Sort des Anciennes Colonies*, p. 14.) Heeren, on the other hand, contends, as in the case of Ophir, that by Tarshish is to be understood the whole southern part of Spain, which was early occupied and settled by Phœnician colonists. — (See also *Huet, Commerce des Anciens*, cap. 8.) At all events, however, it is certain that Cadiz early became the centre of a commerce that extended all along the coasts of Europe as far as Britain, and perhaps the Baltic. There can be no doubt that by the Cassiterides, or Tin Islands, visited by the Phœnicians, is to be understood the Scilly Islands and Cornwall. — (See *Tis.*) The navigation of the Phœnicians, probably, also, extended a considerable way along the western coast of Africa; of this, however, no details have reached us.

But, of all the colonies founded by Tyre, Carthage has been by far the most celebrated. It was at first only a simple factory; but was materially increased by the arrival of a large body of colonists, forced by dissensions at home to leave their native land, about 883 years before Christ. — (*St. Croix*, p. 20.) Imbued with the enterprising mercantile spirit of their ancestors, the Carthaginians rose in no very long period to the highest eminence as a naval and commercial state. The settlements founded by the Phœnicians in Africa, Spain, Sicily, &c. gradually fell into their hands; and after the destruction of Tyre by Alexander, Carthage engrossed a large share of the commerce of which it had previously been the centre. The subsequent history of Carthage, and the misfortunes by which she was overwhelmed, are well known. We shall only, therefore, observe, that commerce, instead of being, as some shallow theorists have imagined, the cause of her decline, was the real source of her power and greatness; the means by which she was enabled to wage a lengthened, doubtful, and desperate contest with Rome herself for the empire of the world.

The commerce and navigation of Tyre probably attained their maximum from 650 to 550 years before Christ. At that period the Tyrians were the factors and merchants of the civilised world; and they enjoyed an undisputed pre-eminence in maritime affairs. The prophet Ezekiel (chap. xxvii.) has described in magnificent terms the glory of Tyre; and has enumerated several of the most valuable productions found in her markets, and the countries whence they were brought. The fir trees of Senir (Hermon), the cedars of Lebanon, the oaks of Bashan (the country to the east of Galilee), the ivory of the Indies, the fine linen of Egypt, and the purple and hyacinth of the isles of Elishah (Peloponnesus), are specified among the articles used for her ships. The inhabitants of Sidon, Arvad (Aradus), Gebel (Byblos), served her as mariners and carpenters. Gold, silver, lead, tin, iron, and vessels of brass; slaves, horses, mules, sheep, and goats; pearls, precious stones, and coral; wheat, balm, honey, oil, spices, and gums; wine, wool, and silk; are mentioned as being brought into the port of Tyre by sea, or to its markets by land, from Syria, Arabia, Damascus, Greece, Tarshish, and other places, the exact site of which it is difficult to determine.†

Such, according to the inspired writer, was Tyre, the "Queen of the waters," before she was besieged by Nebuchadnezzar. But, as has been already remarked, the result of that siege did not affect her trade, which was as successfully and advantageously carried on from the new city as from the old. Inasmuch, however, as Carthage soon after began to rival her as a maritime and mercantile state, this may, perhaps, be considered as the era of her greatest celebrity.

It would not be easy to over-rate the beneficial influence of that extensive commerce from which the Phœnicians derived such immense wealth. It inspired the people with whom they traded with new wants and desires, at the same time that it gave them the means of gratifying them. It every where gave fresh life to industry, and a new and powerful stimulus to invention. The rude uncivilised inhabitants of Greece, Spain,

\* Mons Calpe and Mons Abyla, the Gibraltar and Ceuta of modern times.

† There is, in Dr. Vincent's *Commerce and Navigation of the Ancients in the Indian Ocean* (vol. ii. pp. 624—652), an elaborate and (like the other parts of that work) prolix commentary on this chapter of Ezekiel, in which most of the names of the things and places mentioned are satisfactorily explained. — (see also Heeren on the Phœnicians, cap. iv.)

and Northern Africa acquired some knowledge of the arts and sciences practised by the Phœnicians; and the advantages of which they were found to be productive secured their gradual though slow advancement.

Nor were the Phœnicians celebrated only for their wealth, and the extent of their commerce and navigation. Their fame, and their right to be classed amongst those who have conferred the greatest benefits on mankind, rest on a still more unassailable foundation. Antiquity is unanimous in ascribing to them the invention and practice of all those arts, sciences, and contrivances that facilitate the prosecution of commercial undertakings. They are held to be the inventors of arithmetic, weights and measures, of money, of the art of keeping accounts, and, in short, of every thing that belongs to the business of a counting-house. They were, also, famous for the invention of ship building and navigation; for the discovery of glass — (see GLASS); for their manufactures of fine linen and tapestry; for their skill in architecture, and in the art of working metals and ivory; and still more for the incomparable splendour and beauty of their purple dye. — (See the learned and invaluable work of the President de Goguet, *Sur L'Origine des Loix*, &c. Eng. trans. vol. i. p. 296., and vol. ii. pp. 95—100.; see also the chapter of Heeren on the *Manufactures and Land Commerce of the Phœnicians*.)

But the invention and dissemination of these highly useful arts form but a part of what the people of Europe owe to the Phœnicians. It is not possible to say in what degree the religion of the Greeks was borrowed from theirs; but that it was to a pretty large extent seems abundantly certain. Hercules, under the name of Melcartus, was the tutelary deity of Tyre; and his expeditions along the shores of the Mediterranean, and to the straits connecting it with the ocean, seem to be merely a poetical representation of the progress of the Phœnician navigators, who introduced arts and civilisation, and established the worship of Hercules, wherever they went. The temple erected in honour of the god at Gades was long regarded with peculiar veneration.

The Greeks were, however, indebted to the Phœnicians, not merely for the rudiments of civilisation, but for the great instrument of its future progress — the gift of letters! No fact in ancient history is better established than that a knowledge of alphabetic writing was first carried to Greece by Phœnician adventurers: and it may be safely affirmed, that this was the greatest boon any people ever received at the hands of another.

Before quitting this subject, we may briefly advert to the statement of Herodotus with respect to the circumnavigation of Africa by Phœnician sailors. The venerable father of history mentions, that a fleet fitted out by Necho king of Egypt, but manned and commanded by Phœnicians, took its departure from a port on the Red Sea, at an epoch which is believed to correspond with the year 604 before the Christian era, and that, keeping always to the right, they doubled the southern promontory of Africa; and returned, after a voyage of 3 years, to Egypt, by the Pillars of Hercules. — (*Herod. lib. iv. § 42.*) Herodotus further mentions, that they related that, in sailing round Africa, they had the sun on their right hand, or to the north, — a circumstance which he frankly acknowledges seemed incredible to him, but which, as every one is now aware, must have been the case if the voyage was actually performed.

Many learned and able writers, and particularly Gosselin (*Recherches sur la Géographie Systématique et Positive des Anciens*, tome i. pp. 204—217.), have treated this account as fabulous. But the objections of Gosselin have been successfully answered in an elaborate note by Larcher (*Hérodote*, tome iii. pp. 458—464. ed. 1802.; and Major Rennell has sufficiently demonstrated the practicability of the voyage (*Geography of Herodotus*, p. 682. &c.). Without entering upon this discussion, we may observe, that not one of those who question the authenticity of the account given by Herodotus, presume to doubt that the Phœnicians braved the boisterous seas on the coasts of Spain, Gaul, and Britain; and that they had, partially at least, explored the Indian Ocean. But the ships and seamen that did this much, might, undoubtedly, under favourable circumstances, double the Cape of Good Hope. The relation of Herodotus has, besides, such an appearance of good faith; and the circumstance which he doubts, of the navigators having the sun on the right, affords so strong a confirmation of its truth; that there really seems no reasonable ground for doubting that the Phœnicians preceded, by 2,000 years, Vasco de Gama in his perilous enterprise.

*Present State of Syria.* — The principal modern ports on the coast of Syria are Alexandretta, Latakia, Tripoli, Beyrout, Seyde, and Acre. The commerce which they carry on is but inconsiderable. This, however, is not owing to the badness of the ports, the unsuitableness of the country, or to any natural cause, but wholly to long continued oppression and misgovernment. There is a passage in the dedication to Sandys' *Travels*, that describes the modern state of Syria, Asia Minor, Egypt, &c. with a force and eloquence which it is not very likely will soon be surpassed: —

“Those countries, once so glorious and famous for their happy estate, are now, through vice and ingratitude, become the most deplorable spectacles of extreme misery; the wild beasts of mankind having broken in upon them and rocted out all civillie, and the

pride of a sterner and barbarous tyrant possessing the thrones of ancient and just dominion. Who, aiming only at the height of greatness and sensuality, hath in tract of time reduced so great and goodly a part of the world, to that lamentable distress and servitude under which (so the astonishment of the understanding beholders) it now faints and groineth. Those rich lands at this present remain waste and overgrown with bushes, receptacles of wild beasts, of thieves and murderers; large territories despoiled or thinly inhabited; goodly cities made desolate; sumptuous buildings become ruins; glorious temples either subverted, or prostituted to impietic; true religion discountenanced and oppressed; all nobility extinguished; no light of learning permitted, nor virtue cherished: violence and rapine insulting over all, and leaving no securities save to an abject mind and unlooked or poverty."

Those who compare this beautiful passage with the authentic statements of Volney — incomparably the best of the modern travellers who have visited the countries referred to — will find that it is as accurate as it is eloquent.

## U. V.

VALONIA, a species of acorn, forming a very considerable article of export from the Morea and the Levant. The more substance there is in the husk, or cup of the acorn, the better. It is of a bright drab colour, which it preserves so long as it is kept dry: any dampness injures it; as it then turns black, and loses both its strength and value. It is principally used by tanners, and is always in demand. Though a very bulky article, it is uniformly bought and sold by weight. A ship can only take a small proportion of her registered tonnage of valonia, so that its freight per ton is always high. The price in the London market, in March, 1834, varied from 12*l.* to 15*l.* per ton.

The entries of valonia for home consumption in 1831 and 1832 amounted, at an average, to 146,846 cwt. a year. Of 134,307 cwt. of valonia, imported in 1831, 102,226 were brought from Turkey and Continental Greece, exclusive of the Morea; 17,645 cwt., mostly at second hand, from Italy and the Italian islands; 7,461 cwt. from the Ionian Islands; 3,116 from the Morea and the Greek islands; and 3,859 cwt. from the Philippines.

VALPARAISO, the principal sea-port of Chili, in lat. 33° 1' 48" S., lon. 71° 31' 8" W. Population uncertain, perhaps 6,000 or 7,000. The water in the bay is deep, and it affords a secure anchorage, except during northerly gales, to the violence of which it is exposed; but as the holding ground is good, and the pull of the anchor against a steep hill, accidents seldom occur to ships properly found in anchors and cables. There is no mole or jetty; but the water close to the shore is so deep, that it is customary for the smaller class of vessels to carry out an anchor to the northward, and to moor the ship with the stern ashore by another cable made fast to the shore. Large ships lie a little further off, and load and unload by means of lighters. The best shelter is in that part called the Fisherman's Bay, lying between the castle and fort St. Antonio, where, close to a clear shingle beach, there is 9 fathoms water. In the very worst weather, a landing may be effected in this part of the bay. — (See *Miers's Travels in Chili and La Plata*, vol. i. p. 440., where there is a plan of Valparaiso.) The harbours of Valdivia and Concepcion are much superior to that of Valparaiso; the former being, indeed, not only the best in Chili, but second to few in any part of the world. But Valparaiso, being near the capital, Santiago, and being the central *dépôt* for the resources of the province, is most frequented. The town is inconveniently situated, at the extremity of a mountainous ridge; most of the houses being built either upon its acclivity or in its breaches. Large quantities of corn and other articles of provision are shipped here for Callao and Panama, but principally for the former. Exclusive of wheat, the principal articles of export are tallow and hides, copper, the precious metals, indigo, wool, sarsaparilla, &c. It appears from the accounts laid before the reader in another article — (see *ante*, p. 943.) — that the produce of the gold mines of Chili had materially increased during the 20 years ending with 1829, as compared with the previous 20 years. At present, the average produce of both the gold and silver mines may, we believe, be taken at about 175,000*l.* a year. There is a great want of capital in the country; and the anarchy and insecurity that have prevailed since the commencement of the revolutionary war have been very unfavourable to all sorts of industry. There can, however, be no doubt that Chili has already gained considerably, and that she will every day gain more, by her emancipation from the yoke of Old Spain. The trade we carry on with this distant country already amounts to above 1,000,000*l.* a year; and there can be no doubt that it will become far more extensive. In 1831, the declared or real value of the exports of British produce and manufactures from this country to Chili amounted to 651,617*l.*; of this sum, the exports of cotton goods amounted to about 460,000*l.*, those of woollens to 158,000*l.*

linen to 19,000. &c. Chill also imports spices, tea, wine, sugar, coffee, tobacco, &c. A small part, however, of the imports are re-exported for Peru.

A country with a scanty population, which imports so extensively, cannot be in the wretched condition that Mr. Miers and other disappointed travellers would have us believe. The candour and good sense of M. de la Perouse are above all question; and every one who compares his remarks on the condition of Chili with what has now been stated, must see that its commerce, at least, has gained prodigiously by the revolution.

"The influence of the government is in constant opposition to that of the climate. The system of prohibition exists at Chili in its fullest extent. This kingdom, of which the productions would, if increased to their maximum, supply all Europe; whose wool would be sufficient for the manufactures of France and England; and whose herds, converted into salt provisions, would produce a vast revenue;—this kingdom, alas! has no commerce. Four or five small vessels bring, every year, from Lima, tobacco, sugar, and some articles of European manufacture, which the miserable inhabitants can obtain only at second or third hand, after they have been charged with heavy customs duties at Cadiz, at Lima, and lastly, at their arrival in Chili; in exchange they give their tallow, hides, some deals, and their wheat, which, however, is at so low a price, that the cultivator has no inducement to extend his tillage. Thus Chili, with all its gold, and articles of exchange, can scarcely procure sugars, tobacco, stuffs, linens, cambrics, and hardware, necessary to the ordinary wants of life."—(*Perouse's Voyage*, vol. i. p. 50. Eng. ed.)

Instead, however, of 4 or 5 small ships from Lima, in 1831, 43 British ships, carrying 8,281 tons, entered Valparaiso only, besides several at the other ports! All sorts of European goods are carried direct to Chili, and are admitted at reasonable duties. The advantages resulting from this extensive intercourse with foreigners, and from the settlement of English adventurers in the country, have been already immense, and will every day become more visible. It was impossible, considering the ignorance of the mass of the people, that the old system of tyranny and superstition could be pulled to pieces without a good deal of violence and mischief; but the foundations of a better order of things have been laid; nor can there be a doubt that Chili is destined to become an opulent and a flourishing country.

*Monies, Weights, and Measures* of Chili are the same as those of Spain; for which, see CADIZ. The quintal of 4 arrobas, or 100 lbs., = 101.44 lbs. avoirdupois. The fanega, or principal corn measure, contains 3,439 English cubic inches, and is therefore = 1599 Winch. bushels. Hence 5 fanegas = 1 Winch. quarter very nearly. The vara, or measure of length, = 33.384 Eng. inches.

VAN DIEMEN'S LAND, a large island belonging to Great Britain, forming part of Australia, lying between 41° 20' and 43° 30' S. lat., and 144° 40' and 148° 20' W. lon. It is supposed to contain about 15,000,000 acres.—(See the *Mercator's Chart* prefixed to this work.)

This land was discovered by the Dutch navigator Tasman, in 1642, and was named in honour of Anthony Van Diemen, at that time governor-general of the Dutch possessions in the East Indies. Previously to 1798, it was supposed to form part of New Holland, but it was then ascertained to be an island. It was taken possession of by the British in 1803; and in 1804, Hobart Town, the capital, was founded.

The surface is generally hilly and mountainous; but, though none of the land be of the first quality, there are several moderately fertile plains, and a good deal of the hilly ground is susceptible of being cultivated. On the whole, however, it is not supposed that more than about a third part of the entire surface of the island can be considered arable; but about a third more may be advantageously used as sheep pasture. As compared with New Holland, it is well watered. The climate, though very variable, is, generally speaking, good, and suitable for European constitutions; and it is not exposed to the tremendous droughts that occasion so much mischief in New South Wales. Wheat is raised in considerable quantities. Wool, however, is at present the staple produce of the colony.

Van Diemen's Land, like New South Wales, was originally intended to serve as a penal colony, and convicts are still sent to it; latterly, however, it has received a very considerable number of free settlers. In 1830, the total population of the island, exclusive of aborigines, amounted to 23,169, of whom about 10,000 were convicts. The disparity between the sexes is not quite so great here as in New South Wales.

The prosperity of the colony was formerly a good deal retarded by the enormities committed by a banditti of runaway convicts, known by the name of bush-rangers; and more recently by the hostilities of the natives. Vigorous measures have, however, been adopted for the suppression of such outrages, by confining the natives within a limited district; and it is to be hoped that they may be effectual.

Hobart Town is situated in the southern part of the island, on the west side of the river Derwent, near its junction with Storm Bay, in lat. 42° 54' S., lon. 147° 28' E. The water is deep, and the anchorage good. A jetty has been constructed, accessible to the largest ships. The situation appears to have been very well chosen; and the

town has been judiciously laid out. In December, 1832, the district of Hobart Town contained 10,101 inhabitants, of which were, *free*, males 3,850, females 2,776; *convicts*, males 2,699, females 776. The population of the town itself, at the epoch referred to, was about 9,600. The houses are supposed to be worth, at an average, 50*l.* a year. There are several printing establishments in the town, and no fewer than 9 or 10 newspapers, some of them very well conducted. There is also a Book Society a Mechanics' Institute, and several respectable schools and academies. The Van Diemen's Land Banking Company, the Derwent Bank, and the Commercial Bank, have each offices in Hobart Town. They are joint stock companies.

Launceston, the second town in the island, is situated in the northern part, at the head of the navigable river Tamar, which falls into Port Dalrymple. Its population may amount to about 5,000. It has a considerable trade with Sydney and Hobart Town, and recently it has begun to trade direct to England.

*Trade of Van Diemen's Land. — Imports. —* Malt liquors, rum, brandy, and wine, form the principal part of the imports into the colony. Next to them are piece goods, hardware, tea, sugar, &c.

Account of the Exports from the United Kingdom to Van Diemen's Land during each of the Five Years ending with 1831.

| Wines  | 55,532 | 30,158  | 15,198 | 16,081 | 18,118  |

Exclusive of the imports from the mother country, Van Diemen's Land imports sugar from the Mauritius, wine and fruit from the Cape, tea from China or Singapore, piece goods from India, tobacco from Brazil, and beef, bacon, cheese, hoots, &c. from New South Wales. According to the statement in the papers published by the Board of Trade (vol. i. p. 251.) the total value of the imports in 1830, was 255,084*l.*; of which, 153,478*l.* was supplied by Great Britain, 93,251*l.* by British possessions, and 8,564*l.* by foreign states.

*Exports. —* Wool forms by far the principal article of export, and next to it is wheat, principally sent to Sydney, whale oil, whalebone, timber, mimosa bark, live stock, potatoes, &c. The increase in the exports of wool is quite extraordinary. It is almost wholly brought to England.

Account of the Imports of Wool from Van Diemen's Land into the United Kingdom from 1827 to 1833, both inclusive.

| Years. | Lbs.    | Years. | Lbs.    | Years. | Lbs.      | Years. | Lbs.       |
|--------|---------|--------|---------|--------|-----------|--------|------------|
| 1827   | 192,075 | 1829   | 925,320 | 1831   | 1,359,203 | 1833   | 1,547,201* |
| 1828   | 528,816 | 1830   | 993,379 | 1832   | 951,131   |        |            |

In 1831, the imports of whale oil from Van Diemen's Land amounted to 848 tons; and during the same year, 39,264 cwt. of bark were imported. The total real value of the articles exported in 1830 was estimated at 170,000*l.*, distributed as follows: —

| Articles.       | Amount. | Articles.                  | Amount. |
|-----------------|---------|----------------------------|---------|
| Wool            | 48,000  | Hides                      | 600     |
| Wheat           | 40,000  | Seal skins                 | 400     |
| Oil             | 17,000  | Opossum and kangaroo ditto | 400     |
| Whalebone       | 6,000   | Mimosa bark                | 2,000   |
| Flour           | 3,000   | Timber                     | 1,000   |
| Live stock      | 5,000   | Unenumerated goods         | 41,600  |
| Potatoes        | 4,500   |                            |         |
| Barley and oats | 200     | Total                      | 170,000 |

*Coins, Weights, and Measures*, same as in England. The Spanish dollar circulates at 4*s.* 4*d.*

*Shipping, &c.* — In 1830, there belonged to the island 26 vessels, of the aggregate burden of 2,151 tons.

\* The imports of wool from New South Wales in 1833, were 1,969,508 lbs.; making the total imports from Australia in that year, 3,516,869 lbs.

**Arrivals at Hobart Town in 1832.**—There arrived during the year, 51 ships, of the burden c 18,214 tons; 25 brigs, of 4,301 tons; and 29 schooners, of 1,948 tons; making in all, 105 vessels, of the burden of 24,363 tons. Of these, were from England 41; New South Wales 35, India and China 3, Swan River 3, New Zealand 6, fishery 2, Mauritius 2, Launceston 10, and Desolation Island 1.

**Revenue, &c.**—The customs duties collected in the colony amount to about 50,000*l.* a year, and the whole ordinary revenue is about 70,000*l.*; to which has to be added, the revenue derived from the sale of land, and other sources. Government contributes about 120,000*l.* a year in aid of the colonial revenue, to defray the expenses of the convict establishments, &c.

For the regulations as to the granting of land in Van Diemen's Land, &c., see SYDNEY.

**Immigrants.**—Of these there arrived at Van Diemen's Land, during 1832, men 926, women 760, children 416; in all, 2,131.

**Prices of Provisions at Hobart Town, December, 1832.**

|                        | s. | d. | e. d. | The average prices during the year 1832 were— |    |       |
|------------------------|----|----|-------|---|----|-------|
| Beef, per lb.          | 0  | 9  | 0     | s.  | d. | e. d. |
| Mutton, do.            | 0  | 2½ | 0     | 0   | 4  | 10    |
| Veal, do.              | 0  | 8  | 0     | 0   | 4  | 0     |
| Pork, do.              | 0  | 8  | 0     | 0   | 8  | 0     |
| Goose, do.             | 0  | 10 | 0     | 0   | 9  | 0     |
| Turkey                 | 12 | 0  | 14    | 0   | 9  | 0     |
| Head, the quarter loaf | 0  | 8  | 0     | 0   | 9  | 0     |

By comparing these prices with those of Sydney (*ant.* p. 1104.), the greater cheapness of the principal necessities of life at the latter is obvious; house rent is also higher at Hobart Town. But it would appear that wages are rather higher in Van Diemen's Land than in New South Wales. Drunkenness is the great vice of the free, as well as of the convict population; and it is this, and not the facility of acquiring land, that renders it so difficult to procure good servants in Australia. Lieutenant Breton says, that the free women sent to the colony by government have proved no great acquisition, except by increasing the population; but we hardly think that this can be the case.

**Encouragement to Emigrants.**—Government has recently come to a resolution to advance, by way of loan, a sum not exceeding 20*l.* each, to a given number of young and married agricultural labourers, intending to emigrate to Australia with their wives and families. The following are the conditions as to this advance:—

**Conditions under which Government will make advances to Emigrants to New South Wales and Van Diemen's Land.**—No advance will be made except to young and married agricultural labourers, who intend taking their wives and families with them; and a strict inquiry will be instituted into their character and habits of industry, before the assistance they solicit will be granted to them.

No family will be allowed an advance exceeding 20*l.*; and it will be useless therefore for parties, who may not possess the remainder of the sum requisite for defraying the expense of their passage, to apply for assistance.

Every person desirous of receiving the proposed advance must fill up, and send back to the Under Secretary of State for the Colonial Department, the Return hereto annexed. (Copies of this Return may be had from any of the agents for emigration mentioned below.) If the information contained in this Return, and the answers to the inquiries which may be addressed to the parties who certify the correctness of the returns, shall be considered satisfactory, the applicant will receive notice to that effect. He may then proceed to make his agreement with the owners or masters of ships proceeding to New South Wales or Van Diemen's Land; and as soon as any ship owner or master shall notify (in a form which will be provided for that purpose) that the emigrant has taken the other necessary steps for engaging his passage, an order will be granted for the payment, in the colony, of 20*l.* to the agent or master of the vessel in which this emigrant may arrive. The emigrant will of course be able to obtain a corresponding deduction from the amount to be paid by himself in this country.

The order for payment will be intrusted to the master of the vessel in which the emigrant is to proceed, and will consist of a sealed despatch to the governor, containing the name and

description of the party on whose account the money is to be paid, and enclosing a promissory note, which he will be required to sign in acknowledgment of his debt;—which note must be witnessed by the captain and chief mate of the vessel. The arrangements will be made, by which the payment of this order will not take place in the colony, until the captain shall have returned the parties, on whose account it is to be made, before the officer appointed for that purpose; and they shall have entered into a fresh obligation for the repayment of the advance made to them. For it is the intention of His Majesty's government, and cannot be too clearly understood by all persons who may accept this loan, that repayment of the debt (in such proportions, and at such intervals, as may not be unavailing to the circumstances of each emigrant) shall be strictly enforced, by means of the ample powers which the laws of the colony render available for that purpose.

Government agents for emigration have been appointed at Liverpool, Bristol, Dublin, Cork, Limerick, Belfast, and Greenock; who have been instructed to afford gratuitous information to all persons applying to them, as to the best means of carrying their schemes of emigration into effect. Parties, therefore, who may reside in the neighbourhood of these agents, are requested to apply to them either personally (or if by letter, post paid) for information on this subject.

All applications for the assistance of government must be made by letter only, addressed to R. W. Lyall, Esq., Under Secretary of State, London; and should the number of applications be greater than the funds at their disposal will enable them to comply with, priority of date will form the rule of selection among applications in which there shall appear no other ground of distinction.

Downing Street, 6th April, 1831.

**CUSTOM-HOUSE REGULATIONS, RATES**

**Custom-house Regulations.**

(Hours for public business from 10 to 3 daily, excepting on Saturday, from 10 to 12.)

|   | L. | s. | d. |
|---|----|----|----|
| Entry of a British vessel, not colonial, with merchandise | 1  | 10 | 0  |

**Warehouse Rent and Charges.**—A government order published the 7th of February, 1826, fixes the following rents on spirits and tobacco, in the king's bonded stores, viz. 1st. All spirituous liquors, *ls.* 3*d.* per ton of 252 gallons, for every week, or any period less than a week, during which the same shall be smoked.

2dly. Tobacco, 6*d.* per ton for every week, or any period less than a week, during which the same shall be deposited.

3dly. The amount of all such warehouse rent, in respect of any cask or package required to be delivered, must be paid before the same can be so delivered.

4thly. No allowance whatsoever will at any time be made, in respect of, nor will the government be answerable for, any loss by fire, leakage, robbery, or casualty of any kind.

Government Order, 28th of February, 1825.—Representations having been made to the lieutenant governor, of the incon-

Vanilla and delay attending the stowing and unstowing of goods in the bonded warehouse, a gang of men has been appointed to be employed under the stor-keeper for this purpose exclusively, and the following scale of charges will be required to be paid:—

For Spirits.—Per pipe, ½ pipe, or puncheon, each, stowing 9d., unstowing 1s. 6d.  
Per ½ pipe, hoghead, or barrel, stowing 6d., unstowing 3d.

Per case containing 3 or more dozen bottles, stowing 3d., unstowing 4d.

Per case containing a less quantity than 3 dozen, stowing 2d., unstowing 3d.

For Tobacco.—In large serons, each, stowing 6d., unstowing 9d.

In cases, each, stowing 3d., unstowing 4d.

In kegs, each, stowing 2d., unstowing 3d.

In baskets, rolls, or small serons, stowing 1d., unstowing 1d.

In consequence of this arrangement, it is to be understood that no labourers are to be admitted into, or employed at, the bonded warehouse, except the stor-keeper's gang.

Goods intended to be warehoused under bond must be landed before 12 o'clock.

Hours of attendance at the Custom house quay, from 8 o'clock till 4 from the 1st of September to the 30th of April, and from 9 till 4 from the 1st of May till the 31st of August.

The appointed days for opening the landing warehouse for the delivery of goods, are, Mondays and Thursdays in every week, at 1 o'clock, on which days the duties must be paid prior to 12 o'clock. Tobacco is landed on the same days, from 10 to 12 o'clock.

*Rates of Pilgrage at the Derwent.*

These details have been principally derived from *An Account of Van Diemen's Land*, published at Hobart Town in 1833; and partly from Lieut. Breton's book, and different *Parliamentary Papers*.

**VANILLA**, the fruit of the *Epidendrum Vanilla*, a species of vine extensively cultivated in Mexico. It has a trailing stem, not unlike the common ivy, but not so woody, which attaches itself to any tree that grows near it. The Indians propagate it by planting cuttings at the foot of trees selected for that purpose. It rises to the height of 18 or 20 feet; the flowers are of a greenish yellow colour, mixed with white; the fruit is about 8 or 10 inches long, of a yellow colour when gathered, but dark brown or black when imported into Europe; it is wrinkled on the outside, and full of a vast number of seeds like grains of sand, having, when properly prepared, a peculiar and delicious fragrance. It is principally used for mixing with and perfuming chocolate; and is, on that account, largely imported into Spain; but as chocolate, owing to oppressive duties, is little used in England, vanilla is not much known in this country.

Vanilla is principally gathered in the intendency of Vera Cruz, in Mexico, at Misantla, Colipa, Vacuatla, and other places. It is collected by the Indians, who sell it to the whites (*yente de razon*), who prepare it for market. They spread it to dry in the sun for some hours, then wrap it in woollen cloths to sweat. Like pepper, it changes its colour in this operation—becoming almost black. It is finally dried by exposing it to the sun for a day. There are four varieties of vanilla, all differing in price and excellence; viz. the *vanilla fina*, the *zacate*, the *rezacate*, and the *pasura*. The best comes from the forests surrounding the village of Zentila, in the intendency of Oaxaca. According to Humboldt, the mean exportation of vanilla from Vera Cruz may amount to from 900 to 1,000 millares, worth at Vera Cruz from 30,000 to 40,000 dollars.—Vanilla is also imported from Brazil, but it is very inferior. The finest Mexican vanilla is extremely high priced. All sorts are subjected in this country to a duty of 5s. per lb.—(See *Humboldt, Nouvelle Espagne*, 2d edit. tome iii. pp. 37. 46.; *Poinsett's Notes on Mexico*, p. 194. &c.)

**VELLUM**, a species of fine parchment.—(See **PARCHMENT**.)

**VENICE**, a famous city of Austrian Italy, formerly the capital of the republic of that name, situated on a cluster of small islands towards the northern extremity of the Adriatic, in lat. 45° 25' 53" N., lon. 12° 20' 31" E. Population about 100,000. The commerce of Venice, once the most extensive of any European city, is now comparatively trifling; and the population is gradually diminishing both in numbers and wealth. Her imports consist of wheat, and other sorts of grain, from the adjoining provinces of Lombardy and the Black Sea; olive oil, principally from the Ionian Islands; cotton stuffs and hardware from England; sugar, coffee, and other colonial products from England, the United States, Brazil, &c.; dried fish, dye stuffs, &c. The exports principally consist of grain, raw and wrought silk, paper, woollen manufactures, fruits, cheese, &c., the products of the adjoining provinces of Italy, and of her own industry; but her manufactures, so famous in the middle ages, are now much decayed.

*At Port Dalrymple.*

Proceeding above Whirlpool Reach. Remaining below Whirlpool Reach.

|                        | L. s. d. | L. s. d. |
|------------------------|----------|----------|
| 7 feet and under       | 2 5 6    | 1 10 4   |
| Above 7 feet, per foot | 0 6 6    | 0 4 4    |

If the pilot does not board the vessel outside the middle ground at the Heads of George Town, or, the weather not permitting his going outside, if he be not ready to show the channel by keeping his boat in the fair way until the ship can be heaved, he shall forfeit the pilotage upwards.

For every number of inches below 6, no charge is to be made for a foot and upwards, 1 foot is to be charged. Colonial vessels are exempted from the payment of pilotage, unless the master shall make the signal for a pilot and accept his service.

*Harbour Dues of the Derwent.*

|   | L. s. d. |
|---|----------|
| For mooring and unmooring a vessel within the harbour, per register ton | 0 0 1    |
| For actual removal of the ship within the harbour, per register ton     | 0 0 1    |

Colonial vessels under 80 tons per register, to be exempted from the payment of the foregoing dues, unless the services of the harbour master be specially required.

*At Port Dalrymple.*

|   | L. s. d. |
|---|----------|
| For each removal of a ship or vessel from anchorage or moorings, to other anchorage or moorings, under 200 tons | 0 15 0   |
| 200 tons and under 300  | 1 0 0    |
| 300 tons and under 400  | 1 10 0   |
| 400 tons and under 500  | 2 0 0    |
| 500 tons and upwards  | 2 10 0   |

Each vessel entering the harbour will be charged with 4 removals.

Vessels belonging to the port are not to pay harbour dues. No vessels to be deemed colonial that are not registered in Van Diemen's Land.

*Port.* — The islands on which Venice is built lie within a line of long, low, narrow islands, running N. and S., and enclosing what is termed the lagoon, or shallows, that surround the city, and separate it from the main land. The principal entrance from the sea to the lagoon is at Malamocco, about  $\frac{1}{2}$  league S. from the city; but there are other, though less frequented, entrances, both to the S. and the N. of this one. There is a bar outside Malamocco, on which there are not more than 10 feet at high water at spring tides; but there is a channel between the western point of the bar and the village of San Pietro, which has 16 feet water at springs, and 14 at neaps. Merchant vessels usually moor off the ducal palace; but sometimes they come into the grand canal which intersects the city, and sometimes they moor in the wider channel of the Giudecca. Vessels coming from the south for the most part make Pirano or Rovigno on the coast of Istria, where they take on board pilots, who carry them to the bar opposite to Malamocco. But the employment of Istrian pilots is quite optional with the master, and is not, as is sometimes represented, a compulsory regulation. When one is taken, the usual fee from Pirano or Rovigno to the bar is 20 Austrian dollars, or about 4*l.* On arriving at the bar, ships are conducted across it and into port by pilots, whose duty it is to meet them outside, or on the bar, and of whose services they must avail themselves. — (For the charges on account of pilotage, see *post*.)

*Money.* — Formerly there were various methods of accounting here; but now accounts are kept, as at Genoa, in lire Italiane, divided into centesimi, or 100th parts. The lire is supposed to be of the same weight, fineness, and, consequently, value as the franc. But the coins *actually in circulation*, denominated lire, are respectively equal in sterling value to about 5*s.* and 4*d.* The latter are coined by the Austrian government.

*Weights and Measures.* — The commercial weights are here, as at Genoa, of two sorts; the *peso sottile* and the *peso grosso*. The French kilogramme, called the *libbra Italiana*, is also sometimes introduced.

|   |   |
|---|---|
| 100 lbs. <i>peso grosso</i> = 105·186 lbs. avoirdupois. | 100 lbs. <i>peso sottile</i> = 66·428 lbs. avoirdupois. |
| — 127·830 lbs. Troy.                                    | — 80·728 lbs. Troy.                                     |
| — 47·698 kilogrammes.                                   | — 30·123 kilogrammes.                                   |
| — 98·485 lbs. of Hamburg.                               | — 62·196 lbs. of Hamburg.                               |
| — 96·569 lbs. of Amsterdam.                             | — 60·866 lbs. of Amsterdam.                             |

The *moggio*, or measure for corn, is divided into 4 *staja*, 16 *quarte*, or 64 *quartaroli*. The *staja* = 2·27 Winchester bushels.

The measure for wine, *anfora* = 4 *bignoni*, or 8 *mastelli*, or 48 *sechil*, or 192 *bozze*, or 768 *quartuzzi*. It contains 137 English wine gallons.

The *botta* = 5 *bignoni*. Oil is sold by weight or measure. The *botta* contains 2 *migliaje*, or 80 *miri* of 25 lbs. *peso grosso*. The *miro* = 4·028 English wine gallons.

The *braccio*, or long measure, for woollens = 26·6 English inches; the *braccio* for silks = 24·8 *do.* The foot of Venice = 13·68 English inches. — (*Nelkenbrecher*, and *Dr. Kelly*.)

*Historical Notice.* — Venice was the earliest, and for a lengthened period the most considerable, commercial city of modern Europe. Her origin dates from the invasion of Italy by Attila in 452. A number of the inhabitants of Aquileia, and the neighbouring territory, flying from the ravages of the barbarians, found a poor but secure asylum in the cluster of small islands opposite to the mouth of the Brenta, near the head of the Adriatic Gulf. In this situation they were forced to cultivate commerce and its subsidiary arts, as the only means by which they could maintain themselves. At a very early period they began to trade with Constantinople and the Levant; and notwithstanding the competition of the Genoese and Pisans, they continued to engross the principal trade in Eastern products, till the discovery of a route to India by the Cape of Good Hope turned this traffic into a totally new channel. The crusades contributed to increase the wealth, and to extend the commerce and the possessions of Venice. Towards the middle of the 15th century, when the Turkish sultan, Mahomet II., entered Constantinople sword in hand, and placed himself on the throne of Constantine and Justinian, the power of the Venetians had attained its maximum. At that period, besides several extensive, populous, and well cultivated provinces in Lombardy, the republic was mistress of Crete and Cyprus, of the greater part of the Morea, and most of the isles in the Egean Sea. She had secured a chain of forts and factories that extended along the coasts of Greece from the Morea to Dalmatia; while she monopolised almost the whole foreign trade of Egypt. The preservation of this monopoly, of the absolute dominion she had early usurped over the Adriatic, and of the dependence of her colonies and distant establishments, were amongst the principal objects of the Venetian government; and the measures it adopted in that view were at once skilfully devised, and prosecuted with inflexible constancy. With the single exception of Rome, Venice, in the 15th century, was by far the richest and most magnificent of European cities; and her singular situation in the midst of the sea, on which she seems to float, contributed to impress those who visited her with still higher notions of her wealth and grandeur. Sannazarius is not the only one who has preferred Venice to the ancient capital of the world; but none have so beautifully expressed their preference.

Viderat Adriacis Venetam Neptunus in undis,  
Stare urbem, et toto ponere jura mari,  
Nunc mihi Tarpeias quantumvis, Jupiter, arces  
Objice, et illa tua moenia Martis, ait;  
Si Tiberim pelago praefers, urbem aspice utramque,  
Illam homines dicas, hanc possuisse Deos.

Though justly regarded as one of the principal bulwarks of Christendom against the Turks, Venice had to contend, in the early part of the 16th century, against a combination of the European powers. The famous league of Cambray, of which Pope Julius II. was the real author, was formed for the avowed purpose of effecting the entire subjugation of the Venetians, and the partition of their territories. The emperor and

the kings of France and Spain joined this powerful confederacy. But, owing less to the valour of the Venetians, than to dissensions amongst their enemies, the league was speedily dissolved without materially weakening the power of the republic. From that period the policy of Venice was comparatively pacific and cautious. But notwithstanding her efforts to keep on good terms with the Turks, the latter invaded Cyprus in 1570; and conquered it after a gallant resistance, continued for 11 years. The Venetians had the principal share in the decisive victory gained over the Turks at Lepanto in 1571: but owing to the discordant views of the confederates, it was not properly followed up, and could not prevent the fall of Cyprus.

The war with the Turks in Candia commenced in 1645, and continued till 1670. The Venetians exerted all their energies in defence of this valuable island; and its acquisition cost the Turks above 200,000 men. The loss of Candia, and the rapid decline of the commerce of the republic, now almost wholly turned into other channels, reduced Venice, at the close of the 17th century, to a state of great exhaustion. She may be said, indeed, to have owed the last 100 years of her existence more to the forbearance and jealousies of others than to any strength of her own. Nothing, however, could avert that fate she had seen overwhelm so many once powerful states. In 1797, the "maiden city" submitted to the yoke of the conqueror; and the last surviving witness of antiquity — the link that united the ancient to the modern world — stripped of independence, of commerce, and of wealth, is now slowly sinking into the waves whence she arose.

The foundation of Venice is described by Gibbon, c. 35, and in his 6th chapter he has eloquently depicted her prosperity in the year 1300. Mr. Hallam, in his work on the *Middle Ages* (vol. I. pp. 470—487), has given a brief account of the changes of the Venetian government. Her history occupies a considerable space in the voluminous work of M. Sismondi on the *Italian Republics*; but his details as to her trade and commercial policy are singularly meagre and uninteresting. All previous histories of Venice have, however, been thrown into the shade by the admirable work of M. Daru (*Histoire de la République de Venise*, 2d ed. 8 vols. 8vo. Paris, 1821.) Having had access to genuine sources of information, inaccessible to all his predecessors, M. Daru's work is as superior to theirs in accuracy, as it is in most other qualities required in a history.

*Trade, Navigation, and Manufactures of the Venetians in the 15th Century.* — The Venetian ships of the largest class were denominated galleasses, and were fitted up for the double purpose of war and commerce. Some of them carried 50 pieces of cannon, and crews of 600 men. These vessels were sometimes, also, called argosies or argosies. They had early an intercourse with England; and argosies used to be common in our ports. In 1325, Edward II. entered into a commercial treaty with Venice, in which full liberty is given to them, for 10 years, to sell their merchandise in England, and to return home in safety, without being made answerable, as was the practice in those days, for the crimes or debts of other strangers. — (*Anderson's Chron. Deduction, Anno 1325.*) Sir William Monson mentions, that the last argosie that sailed from Venice for England was lost, with a rich cargo and many passengers, on the coast of the Isle of Wight, in 1587.

In the beginning of the 15th century, the annual value of the goods exported from Venice by sea, exclusive of those exported to the states adjoining her provinces in Lombardy, was estimated, by contemporary writers, at 10,000,000 ducats; the profits of the out and home voyage, including freight, being estimated at 4,000,000 ducats. At the period in question, the Venetian shipping consisted of 3,000 vessels of from 100 to 200 tons burden, carrying 17,000 sailors; 300 ships with 8,000 sailors; and 45 galleys of various size, kept afloat by the republic for the protection of her trade, &c., having 11,000 men on board. In the dock-yard, 16,000 labourers were usually employed.\* The trade to Syria and Egypt seems to have been conducted principally by ready money; for 500,000 ducats are said to have been annually exported to these countries; 100,000 were sent to England. — (*Daru, tome ii. p. 189. &c.*) The vessels of Venice visited every port of the Mediterranean, and every coast of Europe; and her maritime commerce was, probably, not much inferior to that of all the rest of Christendom. So late as 1518, 5 Venetian galleasses arrived at Antwerp, laden with spices, drugs, silks, &c. for the fair at that city.

The Venetians did not, however, confine themselves to the supply of Europe with the commodities of the East, and to the extension and improvement of navigation. They attempted new arts, and prosecuted them with vigour and success, at a period when they were entirely unknown in other European countries. The glass manufacture of Venice was the first, and for a long time the most celebrated, of any in Europe; and her manufactures of silk, cloth of gold, leather, refined sugar, &c. were deservedly esteemed. The jealousy of the government, and their intolerance of any thing like free discussion, was unfavourable to the production of great literary works. Every scholar is, however, aware of the fame which Venice early acquired by the perfection to which

\* This is the statement of the native authorities; but there can be no doubt that it is much exaggerated; — 1,600 would be a more reasonable number.

she carried the art of printing. The classics that issued from the Aldine presses are still universally and justly admired for their beauty and correctness. The Bank of Venice was established in the 12th century. It continued throughout a bank of deposit merely, and was skilfully conducted.

But the policy of government, though favourable to the introduction and establishment of manufactures, was fatal to their progressive advancement. The importation of foreign manufactured commodities into the territories of the republic for domestic consumption was forbidden under the severest penalties. The processes to be followed in the manufacture of most articles were regulated by law. — “*Dès l'année 1172, un tribunal avoit été créé pour la police des arts et métiers, la qualité et la quantité des matières furent soigneusement déterminées.*” — (Daru, tome iii. p. 153.) Having, in this way, little to fear from foreign competition, and being tied down to a system of routine, there was nothing left to stimulate invention and discovery; and during the last century the manufactures of Venice were chiefly remarkable as evincing the extraordinary perfection to which they had early arrived, and the absence of all recent improvements. An unexceptionable judge, M. Berthollet, employed by the French government to report on the state of the arts of Venice, observed, “*Que l'industrie des Vénitiens, comme celle des Chinois, avoit été précoce, mais étoit restée stationnaire.*” — (Daru, tome iii. p. 161.)

M. Daru has given the following extract from an article in the statutes of the State Inquisition, which strikingly displays the real character of the Venetian government, and their jealousy of foreigners: — “If any workman or artisan carry his art to a foreign country, to the prejudice of the republic, he shall be ordered to return; if he do not obey, his nearest relations shall be imprisoned, that his regard for them may induce him to come back. If he return, the past shall be forgiven, and employment shall be provided for him at Venice. If, in despite of the imprisonment of his relations, he persevere in his absence, an emissary shall be employed to despatch him; and after his death his relations shall be set at liberty!” — (Tom. iii. p. 150.)

The 19th book of M. Daru's history contains a comprehensive and well-digested account of the commerce, manufactures, and navigation of Venice. But it was not possible, in a work on the general history of the republic, to enter so fully into the details as to these subjects as their importance would have justified. The *Storia Civile e Politica del Commercio de' Veneziani*, di Carlo Antonio Marin, in 8 vols. 8vo, published at Venice at different periods, from 1798 to 1808, is unworthy of the title. It contains, indeed, a great many curious statements; but it is exceedingly prolix; and while the most unimportant and trivial subjects are frequently discussed at extreme length, many of great interest are either entirely omitted, or are treated in a very brief and unsatisfactory manner. The commercial history of Venice remains to be written; and were it executed by a person of competent attainments, it would be a most valuable acquisition.

*Present Trade of Venice.* — From the period when Venice came into the possession of Austria, down to 1830, it seems to have been the policy of the government to encourage Trieste in preference to Venice; and the circumstance of the former being a free port, gave her a very decided advantage over the latter. Latterly, however, a more equitable policy has prevailed. In 1830, Venice was made a free port; and has since fully participated in every privilege conferred on Trieste. But, notwithstanding this circumstance, the latter still continues to preserve the ascendancy; and the revival of trade that has taken place at Venice has not been so great as might have been anticipated. The truth is, that except in so far as she is the *entrepôt* of the adjoining provinces of Lombardy, Venice has no considerable natural advantage as a trading city; and her extraordinary prosperity during the middle ages is more to be ascribed to the comparative security enjoyed by the inhabitants, and to their success in engrossing the principal share of the commerce of the Levant, than to any other circumstance. Still, however, the trade is far from inconsiderable. But, unfortunately, there are no means by which to ascertain its precise amount. The statements subjoined are to be regarded merely as rough approximations; they have, however, been obtained from the best sources, and come as near the mark as it is perhaps possible to attain. By far the largest part of the exports from Venice are made through Trieste by coasting vessels, that are every day passing between the two cities. The smuggling of prohibited and overtaxed articles into Austrian Lombardy is also practised to a great extent. It is believed that fully 20ds of the coffee made use of in Lombardy is clandestinely introduced; and sugar, British cottons, and hardware, with a variety of other articles, are supplied through illegitimate channels. The facilities for smuggling, owing to the nature of the frontier, and the ease with which the officers are corrupted, are such, that the articles passing through the hands of the fair trader affords no test of the real extent of the business done. It is to be hoped that the Austrian government will take an enlightened view of this important matter. It cannot but be anxious for the suppression of smuggling; and it may be assured that this is not practicable otherwise than by a reduction of the duties. The regulations as to the payment of the duties on goods destined for the interior, the clearing of ships, &c., are the same at Venice as Trieste; which see.

*Shipping.* — There belonged to Venice in 1832—

| Vessels.         | No. | Tonnage. | Men.  |
|------------------|-----|----------|-------|
| In foreign trade | 101 | 21,811   | 1,114 |
| coasting do.     | 117 | 8,308    | 616   |
|                  | 211 | 30,119   | 1,730 |

Fishing boats are not of a size to be rated as vessels of tonnage; but Mr. Money thinks that not less than 16,000 of the population subsist by fishing near the port and over the lagoon. The tonnage of Venice has not recently been either on the increase or the decline. Its inconsiderable amount, compared with what it once was, is a striking proof of the decline of this famous emporium.

Arrivals of Ships in the Port of Venice during the Years 1829, 1830, and 1831.

A steam-packet has been established between Venice and Trieste; but it is of indifferent construction, and has not succeeded so well as might have been expected.

Shipping Charges in the Port of Venice on Ships of different Nations, of the Burden of 300 Tons.

| Description of Charge.   | If Austrian, or of a Nation having a Treaty of Reciprocity with Austria. |          | If of a Nation not having a Treaty of Reciprocity with Austria. |          |
|--|--|----------|---|----------|
|  | Austrian Livres.   | L. s. d. | Austrian Livres.  | L. s. d. |
| <i>Pilgrage.</i>   |  |          |   |          |
| From the bar to the place of finally mooring   | 61 57  | 2 1 0½   | 61 57   | 2 1 0½   |
| Out of the port of departure   | 61 57  | 2 1 0½   | 61 57   | 2 1 0½   |
| <i>Tonnage Duty.</i>   |  |          |   |          |
| One Austrian livre (8d. sterling) per ton (Originally levied on all ships not Austrian.)   | Free.  | —        | 300 0   | 10 0 0   |
| <i>Clearing Charges.</i>   |  |          |   |          |
| If to a port out of the Gulf of Venice (but if to a port in the Gulf, 1s. 3½d. less in all cases)  | 2 30   | 0 1 6½   | 16 78   | 0 11 2½  |
| <i>Quarantine Charges.</i>   |  |          |   |          |
| If performing 7 days, being the usual time for vessels from England  | 39 27  | 1 6 2    | 53 38   | 1 15 7   |
| Total of ordinary charges  | 161 71   | 5 9 9½   | 493 20  | 16 8 10½ |
| If in long quarantine, all ships pay extra   | 23 74  | 0 17 2   | 25 74   | 0 17 2   |
| <i>Charges on cargo.</i>   |  |          |   |          |
| If departing in ballast, or with less than ½ a cargo, all ships, not Austrian, or not under treaty to be charged as such, pay extra tonnage duty, 45 cents (about 3½d. sterling) per ton, being, on a 300 ton ship | Free.  | —        | 135 0   | 4 10 0   |
| Total of extreme charges   | 190 45   | 6 6 11½  | 653 94  | 21 16 0½ |

IMPORTS. — A Statement of the Quantity and Value in British Sterling Money, Weights, &c. of the different Articles furnished by each of the subjoined Places, and imported into Venice, during the Years 1829, 1830, and 1831.

**Banking Establishments.** — The old bank of Venice was founded so far back as 1171, being the most ancient establishment of the kind in Europe. It was a bank of deposit; and such was the estimation in which it was held, that its paper continued to bear an agio as compared with coin down to 1797, when the bank fell with the government by which it had been guaranteed. At present there are no corporate banking establishments in the city; and no bank notes are in circulation. There are, however, several private banking houses, which buy, sell, and discount bills; and make advances on land and other securities. They are under no legal regulations of any sort, except formally declaring the amount of their capital to the authorities when they commence business. The legal and usual rate of interest and discount is 6 per cent. It is not the practice to allow interest on deposits. Bills on London are usually drawn at 3 months, and on Trieste at 1 month.

**Brokers, Commission, &c.** — The number of brokers is limited, and they are licensed by government; but the business of commission merchant and factor is open to every one. Before, however, commencing any trade or profession at Venice, a petition must be presented for leave to the authorities; but this is more a matter of form than any thing else; its prayer being rarely, if ever, refused.

The usual rate of commission and factorage on the purchase or sale of colonial produce is 2 per cent., and on manufactured goods 3 per cent., inclusive of broker's commission, 1 per cent. A ship broker's commission on the freight of a whole cargo is 2 per cent., and on a general cargo 4 per cent. By the custom of the place, merchants charge 2 per cent. on the inward, and 2 per cent. on the outward, freight of all ships consigned to them; and this, though they had done no more than recommend the master to a broker: A bill broker's commission is  $\frac{1}{2}$  per mille. Merchants and bankers charge a commission on internal bills of  $\frac{1}{2}$  per cent., and on foreign do. of 1 per cent.

**Insurances** are effected by companies and individuals. The government charges no duty on the policies.

**Communications with Lombardy** are effected by flat-bottomed vessels, which, passing through the lagoon, enter the canals and rivers, and make their way through most part of the country watered by the Po and its tributaries. The freight of goods from Milan to Venice, distant about 170 miles, is about 12 per ton. The principal products they bring down are grain, silk, hemp, and flax, cheese, rhubarb, &c. The country to the north of Venice affords large quantities of deals, which are shipped for Malta, Sicily, and the Levant.

**Quarantine** is enforced here the same as at Trieste. Ships coming from without the Straits of Gibraltar, provided there be no infectious disease on board, are admitted to *pratique* on performing a short quarantine of 7 days in a part of the lagoon, about a mile from the city. Long quarantine is performed a little farther off. The lazaretto, and establishments for passengers, &c. performing quarantine, are among the best in Europe. Ships having foul bills, or coming from suspicious places, are sent thither from Trieste.

— For the quarantine charges, see *tarif*.  
**Provisions, Ships' Stores, &c.** — These articles may all be had at Venice of excellent quality, but not cheap, with, perhaps, the exception of bread. Water is conveyed to the city by lighters, and is, consequently, pretty dear; fuel is very scarce, and very high priced. We subjoin an account of the

Average Prices in Sterling Money, per Imperial Quarter, of the several Sorts of Grain at Venice for the Ten Years ending with 1831.

**Tares.** — On goods leaving the free port of Venice for the interior of the Austrian states, the Custom-house allows no tares; but cases, casks, and other coverings go into the scale with their contents, and the duty is levied on the gross weight. Wine, spirits, &c. consumed in this city, being liable to an excise duty to cover the municipal expenses, have an allowance, if in iron-bound casks, of 13 per cent. on the weight; and if not in iron-bound casks, of 12 per cent. The tares allowed between merchants are as follow: —

|                                   |   |   |             |
|-----------------------------------|---|---|-------------|
| Cotton wool, Pernambuco and Bahia | — | — | 2 per cent. |
| East India, &c.                   | — | — | 1           |

|  |   |   |                    |
|--|---|---|--------------------|
| Sugar, Brazil  | — | — | 15 to 18 per cent. |
| Jamaica, muscovado                                       | — | — | 14                 |
| Bourbon, brown and yellow, and East India of all colours | — | — | 5                  |
| refined, crushed   | — | — | 12                 |
| Brimstone  | — | — | 10                 |
| Italian hemp   | — | — | 2                  |
| Madder root  | — | — | 4                  |
| Hungary potash   | — | — | 10                 |

On other articles, real tares are usually taken.

These details with respect to the present trade of Venice have been mostly derived from the well-digested and very valuable answers returned by the consul-general, Mr. Money, to the *Circular Queries*.

VERA CRUZ, the principal sea-port on the western coast of Mexico; lat.  $19^{\circ} 11' 52''$  N., lon.  $96^{\circ} 8' 45''$  W. Population (supposed) 16,000. Opposite the town, at the distance of about 400 fathoms, is a small island, on which is built the strong castle of St. Juan d'Ulloa, which commands the town. The harbour lies between the town and the castle, and is exceedingly insecure; the anchorage being so very bad, that no vessel is considered safe unless made fast to rings fixed for the purpose in the castle wall: nor is this always a sufficient protection from the fury of the northerly winds (*los nortes*), which sometimes blow with tremendous violence. Humboldt mentions, in proof of what is now stated, that a ship of the line, moored by 9 cables to the castle, tore, during a tempest, the brass rings from the wall, and was dashed to pieces on the opposite shore. — (*Nouvelle Espagne*, ed. 2de, tome iv. p. 59.) Its extreme unhealthiness is, however, a more serious drawback upon Vera Cruz, than the badness of its port. It is said to be the original seat of the yellow fever. The city is well built, and the streets clean; but it is surrounded by sand hills and ponds of stagnant water, which, within the tropics, are quite enough to generate disease. The inhabitants, and those accustomed to the climate, are not subject to this formidable disorder; but all strangers, even those from Havannah and the West India islands, are liable to the infection. No precautions can prevent its attack; and many have died at Xalapa, on the road to Mexico, who merely passed through this pestiferous spot. During the period that the foreign trade of Mexico was carried on exclusively by the *flota*, which sailed periodically from Cadiz, Vera Cruz was celebrated for its fair, held at the arrival of the ships. It was then crowded with dealers from Mexico, and most parts of Spanish America; but the abolition of the system of regular fleets in 1778 proved fatal to this fair, as well as to the still more celebrated fair of Portobello.

A light-house has been erected on the N.W. angle of the castle of St. Juan. The light, which is a revolving one of great power and brilliancy, is elevated 79 feet above the level of the sea.

The distance in a direct line from Mexico to Vera Cruz is about 70 leagues; but by the road it is about 93. Mexico being situated on a *plateau* elevated about 8,000 feet above the level of the sea, and the country being in many places very rugged, the road originally was so bad as to be hardly practicable, even for mules. During the last 30 years, immense sums have been laid out on its improvement; and a considerable part of it has been completed in the best, and, indeed, most splendid manner; but in many places it is still rough and unfinished, and does not admit of carriages being used. M. Humboldt seems to think, that were this road completed, wheat and flour brought from the table land of Mexico might be shipped at Vera Cruz, and sold in the West Indies cheaper than the wheat and flour of the United States. But we agree with Mr. Poinsett in regarding any such expectation as quite chimerical. Though the advantage on the side of Mexico in respect of superior fertility of soil and cheapness of labour were decidedly greater than it really is, it would not balance the enormous expense of 300 miles of land carriage upon such bulky and heavy articles, more especially as the wagons would, in most cases, have to return empty. It is plain, however, that the advantage of getting the produce of the mines, and the peculiar productions of the country, as cochineal, indigo, sugar, vanilla, tobacco, &c., conveyed with comparative facility to market, and of receiving back European goods at a proportionally less expense, will more than indemnify all the outlay that may be required to perfect the road, and will be of the very greatest importance to the republic; but it is quite out of the question to imagine that Vera Cruz is ever destined to become a rival of New Orleans in the exportation of corn and flour.

For a considerable period after the town of Vera Cruz had thrown off the Spanish yoke, the castle of St. Juan d'Ulloa continued in possession of the Spaniards. During this interval, the commerce of Vera Cruz was almost entirely transferred to the port of Alvarado, 12 leagues to the south-east. Alvarado is built upon the left bank of a river of the same name. The bar at the mouth of the river, about  $1\frac{1}{2}$  mile below the town, renders it inaccessible for vessels drawing above 10 or 12 feet water. Large ships are obliged to anchor in the roads, where they are exposed to all the violence of the north winds, loading and unloading by means of lighters. Alvarado is supposed, but probably without much foundation, to be a little healthier than Vera Cruz. The trade has now mostly reverted to its old channel.

But within these few years, Tampico has risen to considerable importance as a commercial sea-port. It is situated about 60 leagues N. N.W. of Vera Cruz, in lat.  $22^{\circ} 15' 30''$  N., lon.  $97^{\circ} 52'$  W., being about 104 leagues from Mexico. Hitherto it is said to have been free from fever. The shifting of the bar at the mouth of the river, and the shallowness of the water on it, which is sometimes under 8, and rarely above 15 feet, are serious obstacles to the growth of the port. Vessels coming in sight are boarded by pilots, who conduct them, provided they do not draw too much water, over the bar. Those that cannot enter the port load and unload by means of lighters;

mooring so that they may get readily to sea in the event of a gale coming on from the north.

*Exports and Imports.* — The precious metals have always formed the principal article of export from Mexico. During the 10 years ending with 1801, the average annual produce of the Mexican mines amounted, according to M. Humboldt, to 23,000,000 dollars — (*Nouvelle Espagne*, tome iv. p. 137.); and in 1805, the produce was 27,165,888 dollars. — (*Id.* tome iv. p. 83.) But during the revolutionary war, the old Spanish capitalists, to whom most of the mines belonged, being proscribed, emigrated with all the property they could scrape together: and this withdrawal of capital from the mines, added to the injury several of them sustained by the destruction of their works during the contest, the interruption of all regular pursuits which it occasioned, and the insecurity and anarchy that afterwards prevailed, caused an extraordinary falling off in the produce of the mines. Within these few years, however, a considerable improvement has taken place. The efforts, and the lavish expenditure, of a few of the companies formed in this country for working the mines, have been so far successful, that some of them have been got again into good order, and that a large increase of produce may be fairly anticipated, provided they are permitted to prosecute their operations without molestation. But, as we have elsewhere stated (see *antè*, p. 803.), some of the parties who sold or leased the mines, began to put forward claims never heard of before, the moment they perceived that there was a reasonable prospect of the companies succeeding; and in some instances they have not scrupled to enforce their claims by violence! It is to be hoped that the Mexican government will exert itself to repress these outrages. If it have power to put down, and yet wink at or tolerate such disgraceful proceedings, it will make itself responsible for the consequences; and will merit chastisement as well as contempt.

The total quantity of gold and silver coined in the different Mexican mints during the 4 years ending with 1829, was —

|  |   |                    |         |   |                    |
|--|---|--------------------|---------|---|--------------------|
| In 1826                                      | - | 8,608,278 dollars. | In 1828 | - | 9,982,905 dollars. |
| 1827   | - | 10,619,217         | 1829    | - | 11,787,133         |
| ( <i>Parl. Paper</i> , No. 538. Sess. 1833.) |   |                    |         |   |                    |

Besides the precious metals, cochineal, sugar, flour, indigo, provisions, leather, sarsaparilla, vanilla, jalap, soap, logwood, and pimento, are the principal articles exported from Vera Cruz.

The imports consist principally of linen, cotton, woollen, and silk goods, paper, brandy, cacao, quicksilver, iron, steel, wine, wax, &c.

According to the statement published by the Mexican government, the value of the Imports and exports at Vera Cruz and Alvarado, in 1824, was as follows: —

|                                       | Dollars.   |
|---------------------------------------|------------|
| Imports from other Mexican ports      | 284,087    |
| from American ports                   | 4,380,568  |
| from European and other foreign ports | 7,437,375  |
| Total                                 | 12,082,030 |
| Exports for other Mexican ports       | 202,042    |
| for American ports                    | 3,022,422  |
| for European and other ports          | 1,468,093  |
| Total                                 | 4,592,557  |

This account is exclusive of the imports by government on account of the loan negotiated in London.

According to Humboldt, the imports at Vera Cruz, before the revolutionary struggles, might be estimated, at an average, at about 15,000,000 dollars, and the exports at about 22,000,000 ditto.

It must, however, be observed that this statement refers only to the *registered* articles, or to those that paid the duties on importation and exportation. But exclusive of these, the value of the articles clandestinely imported by the ports on the Gulf, previously to the revolution, was estimated at 4,500,000 dollars a year; and 2,500,000 dollars were supposed to be annually smuggled out of the country in plate and bars, and ingots of gold and silver. A regular contraband trade used to be carried on between Vera Cruz and Jamaica: and notwithstanding all the efforts of government for their exclusion, and the excessive severity of its laws against smuggling, the shops of Mexico were always pretty well supplied with the products of England and Germany. — (*Humboldt, Nouvelle Espagne*, tome iv. p. 125.; *Poinsett's Notes on Mexico*, p. 133.)

M. Humboldt states, that the total population of Mexico, exclusive of Guatemala, may be estimated at about 7,000,000. Of this number  $\frac{1}{2}$  about are Indians, the rest being Europeans, or descendants of Europeans, and mixed races. But notwithstanding this large amount of population, the trade we carry on with Mexico is very inferior to that

which we carry on with Brazil. The following is an account of the real or declared value of all sorts of British produce and manufactures exported to the States of Central and Southern America in 1831:—

|           |   |   |   |           |                               |   |         |
|-----------|---|---|---|-----------|-------------------------------|---|---------|
| Mexico    | - | - | - | 728,858   | States of the Rio de la Plata | - | 339,870 |
| Guatemala | - | - | - | nil       | Chill                         | - | 651,617 |
| Colombia  | - | - | - | 248,250   | Peru                          | - | 469,003 |
| Brazil    | - | - | - | 1,238,371 |                               |   |         |

The imports of British goods at second hand into Mexico and Colombia, from Jamaica, and the other West India islands, are no longer of any considerable importance; but considerable quantities are imported from New Orleans.

Mexico being, with the exception of the United States, the richest and most populous of all the American countries, the smallness of its trade with England may justly excite surprise. It originates principally, we believe, in the want of good ports and large cities on the coast, and the distance and difficulty of the roads from Vera Cruz and other ports to the healthy and elevated part of the country. These circumstances, coupled with the obstacles which the restrictive policy of the Spaniards threw in the way of the importation of foreign products, led to the establishment of manufactures in the interior. Previously to the commencement of the revolutionary struggles, some of these manufactures were in a very advanced state; and were sufficient to supply the population with most of the clothes and other articles required for their consumption. They have since declined considerably; but as it is pretty certain that the wealth of the inhabitants has declined still more, this circumstance has had little effect in increasing importation.

**Revenues.**—The revenues of Mexico have been, during the years (ended 30th of January),

|      |   |            |          |      |   |            |          |
|------|---|------------|----------|------|---|------------|----------|
| 1826 | - | 13,715,801 | dollars. | 1830 | - | 14,493,189 | dollars. |
| 1827 | - | 13,389,682 | —        | 1831 | - | 18,922,299 | —        |
| 1828 | - | 10,494,299 | —        | 1832 | - | 16,413,060 | —        |
| 1829 | - | 12,232,385 | —        |      |   |            |          |

Of these sums, about  $\frac{1}{4}$  have been produced by the customs duties. The latter amounted, in 1832, to 8,802,930 dollars. During the same year, the duties on imported cottons were 1,150,000 dollars, and those on the exportation of the precious metals 309,472 dollars. The total receipts of the Custom-house of Vera Cruz, in 1832, were 2,962,299 dollars, and those of Tampico 1,428,992 dollars.

**Port Charges.**—Foreign ships pay in the port of Vera Cruz—

|                             |   |   |   |   |    |   |
|-----------------------------|---|---|---|---|----|---|
| Tonnage duty, &c. (per ton) | - | - | - | - | 2  | 1 |
| Pilotage on entering        | - | - | - | - | 15 | 4 |
| — on leaving                | - | - | - | - | 19 | 0 |

A 5th part, or 20 per cent., is deducted from the duties on all commodities brought from a foreign port in Mexican ships. The Mexican Congress is, at this moment, engaged in discussions respecting a modification of the tariff.

**Monies, Weights, and Measures,** same as in Spain; for which, see CANIZ.

**Duties, &c. at Vera Cruz.**—The Mexican Congress issued, on the 16th of November, 1827, a new tariff, to which the following regulations were prefixed:—

*Regulations as to the Mexican Tariff.*

Vessels of all nations in amity with the United States of Mexico will be admitted to entry at the privileged ports of the republic, upon payment of the duties, and subject to the regulations to be observed at the maritime Custom-house, according to this tariff.

The anchorage duty is abolished, and all vessels arriving from foreign ports are to pay 2 dol. 1 real per ton tonnage duty.

Foreign vessels will not be allowed to trade coastwise with the ports of the republic.

All vessels putting into any of the ports of this republic, by stress of weather or for refitment, will be allowed the requisite time to complete their repairs or provisions, and will only have to pay such charges as are customary.

All vessels on their arrival are to present their manifests by triplicate, specifying the marks and numbers of the packages, with the particulars of their respective contents.

The duties will be levied on all goods according to their specification in the manifest, whether they are landed or not; and any article that shall be found not specified in the manifest, or any alteration in the quantity or quality, will subject such goods to seizure.

The weights and measures designated in the tariff are those used in Mexico; and any article exceeding the maximum annexed to the same shall, for every  $\frac{1}{2}$  of such excess in measurement, pay  $\frac{1}{2}$  increase of the duty affixed to the said article.

All articles not specified or enumerated in the tariff shall pay a duty of 40 per cent. on the valuation that may be fixed on the same at the port of entry; and for every such valuation, 3 brokers shall be appointed, 1 of whom is to be chosen by the importer, and the other 2 on the part of the Custom-house.

The *averia*, and all other duties lately payable in this republic under various denominations (excepting the State duty), are abolished.

The importer shall be liable for the whole amount of the duties;  $\frac{1}{4}$  of which is to be paid within 90 days from the day the goods are landed, and the other  $\frac{3}{4}$  within 90 days after the expiration of the latter period. No article will be allowed to be taken out of the Custom-house until the duties shall have been paid, or security given for the due payment of the same, to the satisfaction of the proper authorities.

All articles imported prior to this law taking effect are liable to the international duties as before.

After the duties have been once paid, no deduction or allowance whatever can be made on the same, excepting in cases where an error may have occurred.

No article will be allowed to be re-exported without previous payment of the import duties.

All goods that may arrive damaged shall be examined in presence of the proper authorities, and an allowance made according to the damage such goods shall have sustained.

All goods arriving direct from the place of their growth or manufacture, in vessels under the Mexican flag, are to pay 1-5th less duty than in foreign vessels.

The tariff may be altered at any time, whenever the Congress shall deem it expedient so to do; but no alteration which may be prejudicial to commerce in general shall be put in force until 6 months after such alteration shall have been decided upon.

The basis contained in the preceding articles are not intended to interfere with any separate treaty of commerce which has or may be entered into by this nation.

These regulations are to be put in force within 60 days from the date hereof.

*Articles admitted into Mexico Duty free.*

|                                  |   |   |
|----------------------------------|---|---|
| Quicksilver.                     | Philosophical, mathematical, and optical instruments. | Instruments for agriculture, mines, and artificers. |
| Carts upon foreign construction. | States of all sorts.                                  | Carding wire.                                       |
| Wooden frames for houses.        |   | Plants and seeds                                    |
| Printed books, maps, and music.  |   |   |

*Articles prohibited to be imported into Mexico.*

|                                      |  |                                       |
|--------------------------------------|--|---------------------------------------|
| Antiseeds, cummins, and caraways.    | Tallow.  | Flour and wheat.                      |
| Rum and molasses.                    | Soft, hard or soft.  | Vermicelli.                           |
| Sugar, raw or refined.               | Epaulets, gold and silver lace, galloons, &c.                        | Cotton thread, under No. 20.          |
| Coffee and chocolate.                | Tapes of cotton.   | Stone ware.                           |
| Rice.                                | Shawls of silk or cotton.  | Trunks and portmanteaux.              |
| Leather.                             | Beds, bedding, and bed linen, made up of every kind and description. | Woolen cloths, coarse and ordinary.   |
| Boots and shoes.                     | Copper, in sheets or pigs.   | Archment.                             |
| Knidery of every description.        | Lead, in sheet, pigs, or shot.                                       | Wearing apparel of every description. |
| Salted and dried meats of all kinds. | Biscuit.   | Common salt.                          |
| Lard.                                |  | Hats, common, stuff, and leather.     |
| Wax, wrought.                        |  | Tobacco, in leaf or manufactured.     |

*Export Duties.* — All articles, the growth and produce of this republic, are free of duty on exportation, excepting gold in coin, or wrought, which pays 2 per cent. *ad valorem*; silver in coin, or wrought, which pays 3 per cent. *ad valorem*.

*N. B.* — Gold and silver ore, or in Ingots or dust, are prohibited under penalty of seizure.

*Notices to Masters of Vessels and Passengers proceeding to any Mexican Port.*

Notice is hereby given to all masters of vessels proceeding from London to any port or ports of the United States of Mexico, that the passengers they take out should be provided with passports, signed by his Excellency the minister of the republic, otherwise the vessels will be liable to detention on their arrival at those ports, and the passengers on board unprovided with such passports will not be permitted to land in the ports of Mexico. No plea for the want of them will be admitted.

Masters of vessels proceeding to and from those States are required to have on board all necessary papers and vouchers, which, according to the orders conveyed through his Excellency the Mexican minister plenipotentiary at the court of his Britannic Majesty, to this consulate, ought to consist of, besides the regular ship's papers, all the invoices of shippers, with the corresponding bills of lading. Merchandise found on board, which should not appear inserted in the invoices certified by the consul, or that otherwise is falsely described, either in quality or quantity, shall be considered and dealt with as contraband.

A bill of health, certified by the consul, will also be required from vessels on arrival, by the authorities at the Mexican ports.

The above regulations are to be in force from the date of this notice, Nov. 28. 1850.

Notice is hereby given, that the Congress of the United States of Mexico decreed, the 12th of October of the last year, that the Mexican envoys and consular agents must henceforward charge for each passport to Mexico 2 dollars, and for each certification and signature 4 dollars.

20, Austin-fruars, 9th of Jan. 1831.

The Vice-Consul, J. SCHEIDNAGEL.

**VERDIGRIS** (Ger. *Grünspan*; Fr. *Vert-de-gris*, *Verdet*; It. *Verderame*; Sp. *Cardenillo*, *Verdete*, *Verde-gris*; Rus. *Jar*), a kind of rust of copper, of a beautiful bluish green colour, formed from the corrosion of copper by fermented vegetables. Its specific gravity is 1.78. Its taste is disagreeably metallic; and, like all the compounds into which copper enters, it is poisonous. It was known to the ancients, and various ways of preparing it are described by Pliny. It is very extensively used by painters, and in dyeing; it is also used to some extent in medicine. The best verdigris is made at Montpellier; the wines of Languedoc being particularly well suited for corroding copper, and forming this substance. It is generally exported in cakes of about 25 lbs. weight each. It is also manufactured in this country, by means of the refuse of cider, &c.; the high duty of 2s. per lb. on the foreign article giving the home producers a pretty complete monopoly of the market. The goodness of verdigris is judged of from the deepness and brightness of its colour, its dryness, and its forming, when rubbed on the hand with a little water or saliva, smooth paste, free from grittiness. — (*Thomson's Chemistry*; *Rees's Cyclopaedia*.)

**VERJUICE** (Ger. *Agrest*; Fr. *Verjus*; It. *Agresto*; Sp. *Agraz*), a kind of harsh, austere vinegar, made of the expressed juice of the wild apple, or crab. The French give this name to unripe grapes, and to the sour liquor obtained from them.

**VERMICELLI** (Ger. *Nudeln*; Du. *Meelneepen*, *Proppen*; Fr. *Vermicelli*; It. *Vermicelli*, *Tagliolini*; Sp. *Aletrias*), a species of wheaten paste formed into long, slender, hollow tubes, or threads, used amongst us in soups, broths, &c.

Vermicelli is the same substance as maccaroni; the only difference between them being that the latter is made into larger tubes. Both of them are prepared in the greatest perfection in Naples, where they form the favourite dish of all classes, and the principal food of the bulk of the population. The flour of the hard wheat (*grano duro*) imported from the Black Sea is the best suited for the manufacture of maccaroni. — Being mixed with water, it is kneaded by means of heavy wooden blocks wrought by levers, till it acquires a sufficient degree of tenacity; it is then forced, by simple pressure, through a number of holes, so contrived that it is formed into hollow cylinders. The name given to the tubes depends on their diameter; those of the largest size being maccaroni, the next to them vermicelli, and the smallest fedolini. At Genoa, and some other places, the paste is coloured by an admixture of saffron; but at Naples, where its preparation is best understood, nothing is used except flour and water; the

best being made of the flour of hard wheat, and the inferior sorts of the flour of soft wheat. When properly prepared and boiled to a nicety, Neapolitan macaroni assumes a greenish tinge. It is then taken out of the caldron, drained of the water, and being saturated with concentrated meat gravy, and sprinkled with finely grated cheese, it forms a dish of which all classes from the prince to the beggar are passionately fond. But the macaroni used by the poor is merely boiled in plain water, and is rarely eaten with any condiment whatever. The macaroni usually served up in England, is said, by those familiar with that of Naples, to be a positive disgrace to the name it bears. When properly prepared, macaroni is nutritious and easy of digestion. The lazzaroni pique themselves on the dexterity with which they swallow long strings of macaroni and vermicelli without breaking them! (We have derived these details from an excellent article on macaroni in the *Penny Magazine* for the 10th of August, 1833.)

VERMILION. See CINNABAR.

VINEGAR (Ger. *Essig*; Du. *Azyn*; Fr. *Vinaigre*; It. *Aceto*; Sp. and Port. *Vinagre*; Rus. *Ukzuz*; Lat. *Acetum*).—(See ACID (ACETIC), for a description of vinegar.) A duty being imposed on vinegar of 2*d.* the gallon, its manufacture is placed under the control of the excise. A licence, costing 5*l.* and renewable annually, has to be taken out by every maker of vinegar, or acetous acid.

All places for manufacturing or keeping vinegar must be entered, under a penalty of 50*l.* No vinegar maker is to receive any vinegar, or acetous acid, or sugar wash, or any preparation for vinegar, without giving 12 hours' notice to the excise, under penalty of 100*l.* Any person sending out or receiving vinegar shall, unless the duty on it be paid, and it be accompanied by a permit, forfeit 200*l.* All vinegar makers are to make entries at the next Excise-office of the quantity made within each month, and are bound to clear off the duties within a month of such entry, on pain of double duties.—(See 58 *Geo.* 3, c. 65, and *Burn's Justice of the Peace*, Marriott's ed.)

VITRIOL, OIL OF. See ACID (SULPHURIC).

ULTRAMARINE (Ger. *Ultramarin*; Fr. *Bleu d'outremer*; It. *Oltramarino*; Sp. *Ultramar*; Rus. *Ultramarin*), a very fine blue powder made from the blue parts of *lapis lazuli*. It has the valuable property of neither fading, nor becoming tarnished, on exposure to the air, or a moderate heat; and on this account is highly prized by painters. Owing to its great price, it is very apt to be adulterated. It was introduced about the end of the fifteenth century.

USANCE, a period of *one, two, or three* months, or of so many days, after the date of a bill of exchange, according to the custom of different places, before the bill becomes due. Double or treble usance, is double or treble the usual time; and  $\frac{1}{2}$  usance is  $\frac{1}{2}$  the time. When a month is divided, the  $\frac{1}{2}$  usance, notwithstanding the differences in the lengths of the months, is uniformly 15 days. Usances are calculated exclusively of the date of the bill. Bills of exchange drawn at usance are allowed the usual days of grace, and on the last of the 3 days the bill should be presented for payment.—(See EXCHANGE.)

USURY. See INTEREST AND ANNUITIES.

W.

WALNUTS, the fruit of the *Juglans*, or walnut-tree, of which there are several varieties. The walnut is a large, handsome tree, with strong spreading branches. The fruit is a pretty large, smooth, ovate nut, containing an oily kernel, divided into four lobes. The nut has been always held in high estimation; it was called by the Romans *Jovis glans*, the acorn or mast of Jove, and hence the name of the tree. The walnut tree is indigenous to Persia and the countries bordering on the Caspian Sea. It has long been introduced into Great Britain; but the fruit seldom ripens in the more northerly parts of the island. Previously to the very general introduction of mahogany, the wood of the walnut tree was extensively used amongst us in making of furniture; and it continues to be largely employed for that purpose in many parts of the Continent. It is

much used by turners; and is superior to every other sort of wood for the mounting of guns; a circumstance which caused great devastation among our walnut plantations during the latter years of the war. Great numbers of walnut trees are annually consumed in the Haute Vienne and other departments of France, in the manufacture of the wooden shoes or clogs used by the peasantry. The nuts are either gathered when ripe, being served up at desserts without any preparation; or they are plucked green, and pickled. — (*Foiret, Histoire Philosophique des Plantes*, tome vii. p. 213.; *Rees's Cyclopaedia*, &c.)

Account of Walnuts imported, exported, and retained for Home Use, during 1831 and 1832, with the Nett Duty thereon, and the Rate of Duty.

WANGHEES, sometimes called JAPAN CANES, a species of cane imported from China. They should be chosen pliable, tough, round, and taper; and the knots at regular distances from each other; and the heavier the better. Such as are dark-coloured, badly glazed, and light, should be rejected. — (*Milburn's Orient. Com.*)

WAREHOUSING SYSTEM. By this system is meant the provisions made for lodging imported articles in public warehouses, at a reasonable rent, without payment of the duties on importation till they be withdrawn for home consumption. If re-exported, no duty is ever paid.

1. *Expediency and Origin of the Warehousing System.* — It is laid down by Dr. Smith, in one of his justly celebrated maxims on the subject of taxation, that "Every tax ought to be levied at the time and in the manner that is most likely to be convenient for the contributor to pay it." — (*Wealth of Nations*, vol. iii. p. 368.) No one can doubt the soundness of this maxim; and yet it was very strangely neglected, down to 1803, in the management of the customs. Previously to this period, the duties on most goods imported had either to be paid at the moment of their importation, or a *bond*, with sufficient security for their future payment, had to be given to the revenue officers. The hardship and inconvenience of such a system is obvious. It was often very difficult to find sureties; and the merchant, in order to raise funds to pay the duties, was frequently reduced to the ruinous necessity of selling his goods immediately on their arrival, when, perhaps, the market was already glutted. Neither was this the only inconvenience that grew out of this system; for the duties having to be paid all at once, and not by degrees as the goods were sold for consumption, their price was raised by the amount of the profit on the capital advanced in payment of the duties; competition, too, was diminished in consequence of the greater command of funds required to carry on trade under such disadvantages; and a few rich individuals were enabled to monopolise the importation of those commodities on which heavy duties were payable. The system had, besides, an obvious tendency to discourage the carrying trade. It prevented this country from becoming an *entrepôt* for foreign products, by hindering the importation of such as were not immediately wanted for home consumption; and thus tended to lessen the resort of foreigners to our markets, inasmuch as it rendered it difficult, or rather impossible, for them to complete an assorted cargo. And in addition to all these circumstances, the difficulty of granting a really equivalent drawback to the exporters of such commodities as had paid duty, opened a door for the commission of every species of fraud.

But these disadvantages and drawbacks, obvious as they may now appear, did not attract the public attention till a comparatively late period. Sir Robert Walpole seems to have been one of the first who had a clear perception of their injurious influence; and it was the principal object of the famous *Excise Scheme*, proposed by him in 1733, to oblige the importers of tobacco and wine to deposit them in public warehouses; relieving them, however, from the necessity of paying the duties chargeable on them till they were withdrawn for home consumption.

No doubt can now remain in the mind of any one, that the adoption of this scheme would have been of the greatest advantage to the commerce and industry of the country. But so powerful was the delusion generated in the public mind with respect to it, that its proposal well nigh caused a rebellion. Most of the merchants of the day had availed themselves of the facilities which the existing system afforded of defrauding the revenue; and they dexterously endeavoured to thwart the success of a scheme which would have given a serious check to such practices, by making the public believe that it would be fatal to the commercial prosperity of the country. The efforts of the merchants were powerfully seconded by the spirit of party, which then ran very high. The political opponents of the ministry, anxious for an opportunity to prejudice them in the

public estimation, contended that the scheme was only the first step towards the introduction of such a universal system of excise as would inevitably prove alike subversive of the comfort and liberty of the people. In consequence of these artful misrepresentations, the most violent clamours were everywhere excited against the scheme. On one occasion Sir Robert Walpole narrowly escaped falling a sacrifice to the ungovernable fury of the mob, which beset all the avenues to the House of Commons; and, after many violent and lengthened debates, the scheme was ultimately abandoned.

The disadvantages of the old plan, and the benefits to be derived from the establishment of a voluntary warehousing system, were most ably pointed out by Dean Tucker, in his "Essay on the Comparative Advantages and Disadvantages of Great Britain and France with respect to Trade," published in 1750. But so powerful was the impression made by the violent opposition to Sir Robert Walpole's scheme, and such is the force of prejudice, that it was not till 1803 that this obvious and signal improvement — the greatest, perhaps, that has been made in our commercial and financial system — could be safely adopted.

2. *Regulations as to Warehousing.* — The statute of 43 Geo. 3. c. 132. laid the foundation of this system; but it was much improved and extended by subsequent statutes, the regulations of which have been embodied in the act 3 & 4 Will. 4. c. 57., which took effect on the 1st of September, 1833.

This act empowers the commissioners of the customs, under the authority and direction of the Lords of the Treasury, to nominate the ports at which goods may be warehoused without payment of duty, and the warehouses in which particular descriptions of goods may be deposited. It also fixes the time during which goods are allowed to remain in the warehouse; and prescribes the regulations as to their removal from port to port, their sale and stowage in the warehouse, the remission of the duties in case of loss by accident, the allowances for waste, &c. But as this statute is of much importance, we subjoin a full abstract of it.

#### ABSTRACT OF THE ACT 3 & 4 WILL. 4. c. 57. FOR THE WAREHOUSING OF GOODS.

*Commencement of Act.* — Act to commence the 1st day of September 1833, except where any other commencement is particularly directed. — § 1.

*Treasury to appoint warehousing Ports.* — It shall be lawful for the commissioners of the treasury to appoint the ports in the U. K. which shall be warehousing ports for the purposes of this act; and it shall be lawful for the commissioners of customs, subject to the directions of the commissioners of the treasury, to appoint in what warehouses or places of special security, or of ordinary security, as the case may require, in such ports, and in what different parts or divisions of such warehouses or places, and in what manner any goods, and what sorts of goods, may be warehoused and secured without payment of any duty upon the first entry thereof, or for exportation only, in cases wherein the same may be prohibited to be imported for home use; and also to direct in what cases (if any) security by bond shall be required in respect of any warehouse so appointed by them. — § 2.

*Warehouse of special Security by Appointment.* — Whenever any warehouse shall have been approved by the said commissioners, as being a warehouse of special security, it shall be stated in their order of appointment that it is appointed as a warehouse of special security: provided, that all warehouses connected with wharfs for the landing of the goods to be lodged therein, and enclosed together with such wharfs within walls, such as are or shall be required by any act for the constructing of such warehouses and wharfs, and being appointed to be legal quays, shall, without any order of the commissioners of the customs, be warehouses for the purposes of this act, for all goods landed at such wharfs or quays at any port appointed by the commissioners of the treasury to be a warehousing port, and all such warehouses shall be warehouses of special security. — § 3.

*Bonds given previous to Act to continue in force.* — All appointments of warehouses made under the authority of any other act in force at the commencement of this act shall continue in force as if the same had been made under the authority of this act, and all bonds given in respect of any goods warehoused under any act in force at the commencement of this act shall continue in force for the purposes of this act. — § 4.

*Commissioners to provide Warehouses for Tobacco.* — The commissioners of customs shall, out of the monies arising from the duties of customs, provide from time to time warehouses for the warehousing of tobacco at the ports into which tobacco may be legally imported: provided, that for every hogshhead, chest, or case of tobacco so warehoused the importer or proprietor thereof shall pay, for warehouse rent, such sum or sums, not exceeding any sum payable under any act in force at the commencement of this act, and at such periods and in such manner as the commissioners of the treasury shall direct; and all such sums shall be paid and appropriated as duties of customs. — § 5.

*Power to revoke or alter an Appointment.* — It shall be lawful for the commissioners of the treasury by their warrant, and for the commissioners of the customs by their order, to revoke any former warrant or any former order, or to make any alteration in or addition to any former warrant or any former order made by them respectively. — § 6.

*Publication of Appointment in Gazette.* — Every order made by the commissioners of customs in respect of warehouses of special security, as well those of original appointment as those of revocation, alteration, or addition, shall be published in the London Gazette, for those appointed in Great Britain, and in the Dublin Gazette for those appointed in Ireland. — § 7.

*Warehouse-keeper may give general Bond.* — Before any goods be entered to be warehoused in any warehouse in respect of which security by bond is required, the proprietor or occupier of such warehouse, if he be willing, shall give general security by bond, with 2 sufficient sureties, for the payment of the full duties of importation on all such goods as shall at any time be warehoused therein; or for the due exportation thereof; and if such proprietor or occupier be not willing to give such general security, the different importers of the separate quantities of goods shall, upon each importation, give such security in respect of the particular goods imported by them respectively, before such goods be entered to be warehoused. — § 8.

*Sale of Goods in Warehouse by Proprietor to be valid.* — If any goods lodged in any warehouse be the property of its occupier, and be *bonâ fide* sold by him, and upon such sale there shall have been a written agreement, signed by the parties, or a written contract of sale made, executed, and delivered by a broker or other person legally authorised on behalf of the parties respectively, and the amount of

the price stipulated in the said agreement or contract shall have been actually paid or secured to be paid by the purchaser, every such sale shall be valid, although such goods shall remain in such warehouse; provided a transfer of such goods, according to such sale, shall have been entered in a book to be kept for that purpose by the officer of the customs having the charge of such warehouse, who is hereby required to keep such book, and to enter such transfers, with the dates thereof, upon application of the owners of the goods, and to produce such book upon demand made. — § 9.

*Storage in Warehouse to afford easy Access.* — All goods warehoused shall be stowed in such manner as that easy access may be had to every package and parcel of the same; and if the occupier shall omit so to stow the same, he shall for every such omission forfeit the sum of 5*l.*; and if any goods be taken out of the warehouse without due entry of the same with the proper officers of the customs, the occupier of the warehouse shall be liable to the payment of the duties due thereon. — § 10.

*Goods fraudulently concealed or removed, forfeited, &c.* — If any goods warehoused be fraudulently concealed in or removed from the warehouse, the same shall be forfeited; and if any importer or proprietor of any goods warehoused, or any person in his employ, shall by any contrivance fraudulently open the warehouse or gain access to the goods, except in the presence of the proper officer acting in the execution of his duty, such importer or proprietor shall forfeit and pay for every such offence the sum of 500*l.* — § 11.

*Examination on Entry and landing.* — Within 1 month after any tobacco shall have been warehoused, and upon the entry and landing of any goods to be warehoused, the proper officer of the customs shall take a particular account of the same, and shall mark the contents on each package, and shall mark the word "prohibited" on such packages as contain goods prohibited to be imported for home use; and all goods shall be warehoused and kept in the packages in which they have been imported, and no alteration shall be made in the packages or the packing of any goods in the warehouse, except in the cases herein provided. — § 12.

*Goods to be carried to Warehouse under Authority of Officers of Customs.* — All goods entered to be warehoused, or to be re-warehoused, shall be carried to the warehouse under the care or with the authority or permission of the proper officer of customs, and in such manner, and by such persons, and by such roads or ways, and within such spaces of time, as the said officer shall authorise, permit, or direct; and all such goods not so carried shall be forfeited. — § 13.

*Goods to be cleared in 3 Years, and Ship's Stores in 1 Year.* — All goods which have been warehoused shall be duly cleared, either for exportation or for home use, within 3 years, and all surplus stores of ships within 1 year from the day of the first entry thereof (unless further time be given by the commissioners of the treasury); and if any such goods be not so cleared, it shall be lawful for the commissioners of customs to cause them to be sold, and the produce shall be applied to the payment of warehouse rent and other charges, and the overplus, if any, paid to the proprietor; and such goods, when sold, shall be held subject to all the conditions to which they were subject previous to such sale, except that a further time of 3 months from the date of the sale shall be allowed to the purchaser for clearing such goods from the warehouse; and if the goods so sold shall not be duly cleared within such 3 months, the same shall be forfeited; provided, that if the goods so to be disposed of shall have been imported by the East India Company, or be of the description called "piece goods," imported from places within the limits of their charter into the port of London, the same shall, at the requisition of the commissioners of customs, be duly exposed to sale by the said company at their next ensuing sale, and shall be sold for the highest price then publicly offered for them. — § 14.

*In case of Accident, Duty to be remitted.* — If any goods entered to be warehoused, or entered to be delivered from the warehouse, be lost or destroyed by any unavoidable accident, either on shipboard or in the landing or shipping of the same, or in the receiving into or delivering from the warehouse, the commissioners of customs shall remit or return the duties payable or paid on the goods so lost or destroyed. — § 15.

*Entry for Exportation or Home Use.* — No goods which have been warehoused shall be taken or delivered from the warehouse except upon due entry, and under care of the proper officers for exportation, or upon due entry and payment of the full duties payable thereon for home use; except goods delivered into the charge of the searcher to be shipped as stores, and which shall and may be so shipped without entry or payment of any duty for any ship of the burden of 70 tons at least, bound upon a voyage to foreign parts, the probable duration of which out and home will not be less than 40 days: provided that such stores shall be duly borne upon the ship's victualling bill, and shall be shipped in such quantities and subject to such directions and regulations as the commissioners of customs shall direct and appoint. — § 16.

*Run for Stores and surplus Stores may be shipped without Entry.* — Any run of the British plantations may be delivered into the charge of the searcher, to be shipped as stores for any ship without entry or payment of any duty, and any surplus stores of any ship may be delivered into the charge of the searcher, to be reshipped as stores for the same ship, or for the same master in another ship, without entry or payment of duty, such run and such surplus stores being duly borne upon the victualling bills of such ships respectively; and if the ship for the future use of which any surplus stores have been warehoused shall have been broken up or sold, such stores may be so delivered for the use of any other ship belonging to the same owners, or may be entered for payment of duty, and delivered for the private use of such owners, or any of them, or of the master or purser of such ship. — § 17.

*Duties to be paid on original Quantities, except in certain Cases.* — Upon the entry of any goods to be cleared from the warehouse, if the same be for home use, the person entering such goods inwards shall deliver a bill of the entry, and duplicates thereof, in like manner as is directed in the case of goods entered to be landed, as far as the same is applicable, and at the same time shall pay down to the proper officer of the customs the full duties of customs payable thereon, and not being less in amount than according to the account of the quantity first taken of the respective packages or parcels of the goods in such entry at the examination thereof at the time of the first entry and landing of the same, without any abatement on account of any deficiency, except as by this act is otherwise provided; and if the entry be for exportation or for removal to any other warehouse, and any of the packages or parcels of the goods be deficient of their respective quantities, according to the account first taken, a like entry inwards shall also be passed in respect of the quantities so deficient, and the full duties shall be paid on the amount thereof before such packages or parcels of goods shall be delivered or taken for exportation or removal, except as by this act is otherwise provided; and if any goods so deficient in quantity shall be such as are charged to pay duty according to the value thereof, such value shall be estimated at the price for which the like sorts of goods of the best quality have been last or lately sold, either at any sale of the East India Company, or in any other manner, as the case may be. — § 18.

*Duties on Tobacco, Sugar, and Spirits to be charged on Quantities delivered, except in certain Cases.* — The duties payable upon tobacco, sugar, and spirits respectively, when taken out of warehouse for home use, shall be charged upon the quantities ascertained by the weight, measure, or strength of the same actually delivered; except that if the sugar shall not be in a warehouse of special security, no greater abatement on account of deficiency of the quantity first ascertained, as aforesaid shall be made than shall be after the rate of 3 per cent. of such quantity for the first 3 months, and 1 per cent. for every subsequent month during which such sugar shall have been warehoused; and except that if the spirits (being any other spirits than rum of the British plantations) shall not be in a warehouse of special security, no greater abatement on account of deficiency of the quantity or strength first ascertained as aforesaid shall be made than shall be after the several rates of allowances following; viz.

For every 100 gallons, hydrometer proof, viz.  
 For any time not exceeding 6 months . . . . . 1 gallon  
 For any time exceeding 6 months and not exceed-  
 ing 12 months . . . . . 2 gallons  
 For any time exceeding 12 months and not ex-  
 ceeding 18 months . . . . . 3 gallons

For every 100 gallons, hydrometer proof, viz.  
 For any time exceeding 18 months and not ex-  
 ceeding 2 years . . . . . 4 gallons  
 For any time exceeding 2 years . . . . . 5 gallons

Provided that no abatement shall be made in respect of any deficiency in quantity of any spirits occasioned either by leakage or accident, and not by natural evaporation, in whatever warehouse the same may be, except as by this act is otherwise specially provided. — § 19.

*Importer may enter Goods for Home Use, &c., although not actually warehoused.* — If after any goods have been duly entered and landed to be warehoused, and before the same have been deposited in the warehouse, the importer shall further enter the same or any part thereof for home use or for exportation as from the warehouse, the goods so entered shall be considered as virtually and constructively warehoused, although not actually deposited in the warehouse, and may be delivered and taken for home use or for exportation, as the case may be. — § 20.

*Goods may be removed to other Ports to be rewarehoused.* — Any goods which have been warehoused at some port in the U. K. may be removed by sea or inland carriage to any other port in the same, in which the like goods may be warehoused upon importation, to be rewarehoused at such other port, and again as often as may be required to any other such port, to be there rewarehoused, subject to the regulations hereinafter mentioned; viz. 12 hours notice in writing of the intention to remove such goods shall be given to the warehouse officer, specifying the particular goods intended to be removed, and the marks, numbers, and descriptions of the packages in which the same are contained, in what ship imported, when and by whom entered inwards to be warehoused, and, if subsequently rewarehoused, when and by whom rewarehoused, and to what port the same are to be removed; and thereupon the warehouse officer shall take a particular account of such goods, and shall mark the contents on every package in preparation for the delivering of the same for the purposes of such removal, and previous to the delivery thereof may cause the proper seals of office to be affixed thereto: provided that tobacco, and the produce of the British possessions in America or of the United States of America, and purchased for the use of his Majesty's navy, may be removed by the purser of any ship of war in actual service to the ports of Rochester, Portsmouth, or Plymouth, to be there rewarehoused, in name of such purser, in a warehouse approved for that purpose by the commissioners of customs. — § 21.

*Entry of Goods for Removal.* — Before such goods be delivered to be removed due entry of the same shall be made, and a proper bill of such entry, with duplicates thereof, be delivered to the collector or comptroller, containing the before-mentioned particulars, and an exact account of the quantities of the different sorts of goods; and such bill of entry, signed by the collector and comptroller, shall be the warrant for the removal of such goods; and an account of the same, containing all such particulars, shall be transmitted by the officers of the port of removal to the officers of the port of destination; and upon the arrival of such goods at the port of destination due entry of the same to be rewarehoused shall in like manner be made with the collector and comptroller at such port, containing all the particulars and accounts before mentioned, together with the name of the port from which such goods have been removed, and the description and situation of the warehouse in which they are to be warehoused; and the bill of such entry, signed by such collector and comptroller, shall be the warrant to the landing officer and the warehouse officer to admit such goods to be there rewarehoused, under such examination as is made of the like goods when first warehoused upon importation from parts beyond the seas; and the particulars to be contained in such notice and in such entries shall be written and arranged in such form and manner as the collector and comptroller shall require; and the officers at the port of arrival shall transmit to the officers at the port of removal an account of the goods so arrived, according as they shall upon examination prove to be, and the warehouse officers at the port of removal shall notify such arrival in their books. — § 22.

*Bond to rewarehouse, which may be given at either Port.* — The persons removing such goods shall at the time of entering the same give bond, with 1 sufficient surety, for the due arrival and rewarehousing of such goods within a reasonable time, (with reference to the distance between the respective ports, to be fixed by the commissioners of customs), which bond may be taken by the collector and comptroller either of the port of removal or of the port of destination, as shall best suit the residence or convenience of the persons interested in the removal of such goods; and if such bond be given at the port of destination, a certificate thereof, under the hands of the collector and comptroller of such port shall, at the time of entering the goods, be produced to the collector or comptroller of the port of removal. — § 23.

*Bond how to be discharged.* — Such bond shall not be discharged unless such goods shall have been duly rewarehoused at the port of destination within the time allowed for such removal, or shall have been otherwise accounted for to the satisfaction of the said commissioners, nor until the full duties due upon any deficiency of such goods shall have been paid, nor until fresh security have been given in respect of such goods as herein-after provided, unless such goods shall be lodged in some warehouse in respect of which general security has been given by the proprietor or occupier, or in some warehouse in respect of which no security is required. — § 24.

*Goods rewarehoused held on Terms of the first Warehousing.* — Such goods when so rewarehoused may be entered and shipped for exportation, or entered and delivered for home use, as the like goods may be when first warehoused upon importation, and the time when such goods shall be allowed to remain rewarehoused at such port shall be reckoned from the day when the same were first entered to be warehoused. — § 25.

*On Arrival, after Forms of rewarehousing, Parties may enter to export, &c.* — If upon the arrival of such goods at the port of destination the parties shall be desirous forthwith to export the same, or to pay duty thereon for home use, without lodging the same in the warehouse for which they have been entered and examined to be rewarehoused, it shall be lawful for the officers of the customs at such port, after all the formalities of entering and examining such goods for rewarehousing have been duly performed (except the actual labour of carrying and lodging the same in the warehouse), to consider the same as virtually or constructively rewarehoused, and to permit them to be entered and shipped for exportation, or to be entered and delivered for home use, upon payment of the duties due thereon; and the account taken for the rewarehousing of such goods may serve as the account for delivering the same as if from the warehouse, either for shipment or for payment of duties, as the case may be; and all goods so exported, or for which the duties have been so paid, shall be deemed to have been duly cleared from the warehouse. — § 26.

*Removal in the same Port.* — Any goods which have been warehoused in some warehouse in the port of London may, with the permission of the commissioners of customs first obtained, be removed to any other warehouse in the said port in which the like goods may be warehoused; and any goods which have been warehoused in any other port may, with the permission of the collector and comptroller of such port first obtained, be removed to any other warehouse in the same port in which like goods may be warehoused, under such regulations as the commissioners of customs shall direct. — § 27.

*Goods and Parties subject to original Conditions.* — All goods which shall have been removed from one warehouse to another, whether in the same or in a different port, and all proprietors of such goods, shall be subject to all the conditions to which they would have been subject had such goods remained in the warehouse where they were originally warehoused. — § 28.

*Goods sold, new Owner may give Bond.* — If any goods have been warehoused in respect of which general security by bond shall not have been given by the proprietor or occupier, and particular security, as in such case is required, shall have been given by the importer of such goods, and the goods shall have

been sold or disposed of, so that the original bonder shall be no longer interested in or have controul over such goods, it shall be lawful to admit fresh security to be given by the bond of the new proprietor of such goods, or persons having the controul over the same, with his sufficient surety, and to cancel the bond given by the original bonder, or to exonerate him and his surety to the extent of the fresh security so given. — § 29.

*Bond of Remover to be in force until Bond be given by new Owner.* — If the person removing any goods from 1 port to another, and who shall have given bond in respect of such removal and rewarehousing, shall continue to be interested in such goods after the same have been duly rewarehoused, and such goods shall have been so rewarehoused in some warehouse, in respect of which security is required, and the proprietor or occupier of the same shall not have given general security, the bond in respect of such removal and rewarehousing shall be conditioned and continue in force, for the rewarehousing of such goods, until fresh bond be given by some new proprietor or other person, in manner herein-before provided. — § 30.

*To sort, separate, and repack in same or equal Packages.* — It shall be lawful in the warehouse to sort, separate, pack, and repack any goods, and to make such lawful alterations therein, or arrangements thereof, as may be necessary either for the preservation of such goods, or in order to the sale, shipment, or legal disposal of the same; provided that such goods be repacked in the same packages in which the same goods, or some part of the whole quantity of the same parcel of goods, were imported, or in packages of entire quantity equal thereto, or in such other packages as the commissioners of customs shall permit (not being less in any case, if the goods be to be exported or to be removed to another warehouse, than may be required by law for the importation of such goods); and also in the warehouse to draw off any wine, or any rum of the British plantations into reputed quart bottles or reputed pint bottles, for the purpose only of being exported from the warehouse; and also to draw off any such rum into casks containing not less than 50 gallons each, for the purpose only of being disposed of as stores for ships; and also to draw off any other spirits into reputed quart bottles, under such regulations as the commissioners of customs shall from time to time direct, for the purpose only of being exported from the warehouse; and also to draw off and mix with any wine any brandy secured in the same warehouse, not exceeding the proportion of 10 gallons of brandy to 100 gallons of wine; and also to fill up any casks of wine or spirits from any other casks of the same, respectively secured in the same warehouse; and also in any warehouse of special security to rack off any wine from the lees, and to mix any wines of the same sort, erasing from the casks all import brands; and also to take such moderate samples of goods as may be allowed by the commissioners of customs, without entry and without payment of duty, except as the same may eventually become payable, on a deficiency of the original quantity. — § 31.

*No Alteration in Glass or Package but according to the Commissioners direct.* — No alteration shall be made in any goods or packages, nor shall any wine, rum, brandy, or spirits be bottled, drawn off, mixed, or filled up, nor shall any samples be taken except after such notices given by the respective importers or proprietors, and at such times and in such manner, and under such regulations and restrictions, as the commissioners of customs shall require and direct. — § 32.

*Repacking in proper Packages.* — Whereas it may happen, that after the repacking into proper packages of any parcel of goods which have been unpacked and separated or drawn off from the original package in any of the cases herein-before provided for, there may remain some surplus quantities of the respective parcels of such goods, which may not be sufficient to make or fill up any 1 of such proper packages, or it may happen that some part of such goods, when separated from other parts, may be such refuse, or in so damaged a state as to be worthless, or that the total quantity of such parcel of goods may be reduced by the separation of dirt or sediment, or by the dispersion of dust or otherwise; and whereas the duties payable on such goods may have been levied at a rate having regard to a just allowance for the state in which such goods are imported, and it is not proper that any manufacturing process should be performed in such warehouse to the detriment of the revenue; it is therefore enacted, that after such goods have been repacked in proper packages, the commissioners of customs, at the request of the importer or proprietor of such goods, may permit any of such refuse, damaged, or surplus goods not contained in any of such packages, to be destroyed; and if the goods be such as may be delivered for home use, the duties shall be immediately paid upon any part of such surplus as may remain, and the same shall be delivered for home use accordingly; and if they be such as may not be so delivered, such surplus as may so remain shall be disposed of for the purpose of exportation in such manner as the commissioners shall direct; and thereupon the quantity contained in each of such packages shall be ascertained and marked upon the same, and the deficiency shall be ascertained by a comparison of the total quantity in such packages with the total quantity first warehoused, and the proportion which such deficiency may bear to the quantity in each package shall also be marked on the same, and added to such quantity, and the total shall be deemed to be the imports, and shall be held subject to the full duties of importation, except as otherwise provided by this act: provided that it shall be lawful for the commissioners of customs to accept the abandonment, for the duties, of any quantity of tobacco, coffee, pepper, cocoa, lees of wine, and also of any whole packages of other goods, and to cause or permit the same to be destroyed, and to deduct such quantity of tobacco or coffee, or pepper, or cocoa, or the contents of such whole packages, from the total quantity of the same importation, in computing the amount of the deficiency of such total quantity. — § 33.

*No Foreign Casks, &c. to be used for repacking.* — No foreign casks, bottles, corks, packages, or materials whatever, except any in which some goods shall have been imported and warehoused, shall be used in the repacking of any goods in the warehouse, unless the full duties have been first paid thereon. — § 34.

*Silks, Linsens, &c. to be delivered out of Warehouse, to be cleaned.* — It shall be lawful for the commissioners of the customs to permit any stuffs or fabrics of silk, linen, cotton, or wool, or of any mixture of them with any other material, to be taken out of warehouse to be cleaned, refreshed, dyed, stained, or calendered, or to be bleached or printed, without payment of duty of customs, under security, nevertheless, by bond to the contents of such packages, that such goods shall be returned to the warehouse within the time that they shall appoint; and it shall be lawful for the said commissioners, in like manner and under like security, to permit any rice, the produce of places within the limits of the East India Company's Charter, to be delivered out of warehouse to be cleaned, making such allowance for waste as to the said commissioners shall appear to be reasonable. — § 35.

*Copper Ore may be taken out of Warehouse to be smelted.* — It shall be lawful for the importer or proprietor of any copper ore warehoused to give notice to the proper officers of his intention to take such ore out of warehouse to be smelted, stating in such notice the quantity of copper computed to be contained in such ore, and delivering to such officers sufficient samples or specimens for ascertaining by proper assays, at the expense of the proprietor, such quantity of copper, and giving sufficient security by bond for returning such quantity of copper into the warehouse; and if such officers shall be satisfied of the fairness of the samples or specimens of such ore, and of the assays made of the same, and of the security given, they shall deliver such ore for the purpose of being smelted: provided that if any copper ore intended to be so smelted shall be imported into any port where such ore or where copper cannot be warehoused, the same may be entered as being to be warehoused at the port at which the copper after smelting is to be warehoused, and such ore shall thereupon be taken account of and delivered for the purposes aforesaid, in like manner as if the same had been warehoused: provided also, that all copper so produced by smelting shall be deemed to be copper imported, and shall be warehoused as such. — § 36.

*Goods in Bulk delivered.* — No parcels of goods so warehoused which were imported in bulk shall be delivered, except in the whole quantity of each parcel, or in a quantity not less than 1 ton weight, unless by special leave of the proper officers. — § 37.

**Packages to be marked before Delivery.**—No goods so warehoused shall be delivered, unless the same or the packages containing the same shall have been marked in such distinguishing manner as the commissioners of customs shall from time to time direct. — § 38.

**Decrease and Increase may be allowed, under Regulations of the Treasury.**—It shall be lawful for the commissioners of the treasury to make regulations for ascertaining the amount of the decrease or increase of the quantity of any particular sorts of goods, and to direct in what proportion any abatement of duty payable under this act for deficiencies shall, upon the exportation of any such goods, be made on account of such decrease: provided, that if such goods be lodged in warehouses of special security, no duty shall be charged for any amount whatever of deficiency of any of such goods on the exportation thereof, except in cases where suspicion shall arise that part of such goods has been clandestinely conveyed away, nor shall any such goods (unless they be wine or spirits) be measured, counted, weighed, or gauged for exportation, except in such cases of suspicion. — § 39.

**Allowances for Waste of Wine, Spirits, &c. in Warehouses not of special Security.**—For any wine, spirits, coffee, cocoa nuts, or pepper lodged in warehouses not of special security, the following allowances for natural waste, in proportion to the time during which such goods have remained in warehouse, shall be made upon the exportation thereof; viz.

|  |           |  |           |
|--|-----------|--|-----------|
| Wine, upon every cask; viz.                                  |           | Spirits, upon every 100 gallons hydrometer proof; viz.                                     |           |
| For any time not exceeding 1 year                            | 1 gallon  | For any time exceeding 12 months, and not exceeding 18 months                              | 3 gallons |
| For any time exceeding 1 year, and not exceeding 2 years     | 2 gallons | For any time exceeding 18 months, and not exceeding 2 years                                | 4 gallons |
| For any time exceeding 2 years                               | 3 gallons | For any time exceeding 2 years   | 5 gallons |
| Spirits, upon every 100 gallons hydrometer proof; viz.       |           | Coffee, cocoa nuts, pepper, for every 100 lbs., and so in proportion for any less quantity | 2 lbs.    |
| For any time not exceeding 6 months                          | 1 gallon  |  |           |
| For any time exceeding 6 months, and not exceeding 12 months | 2 gallons |  |           |

— § 40.

**Embezzlement and Waste by Officers to be made good to Proprietor.**—In case any embezzlement, waste, spoil, or destruction shall be made of any goods or merchandise warehoused in warehouses under the authority of this act, through any wilful misconduct of any officer of customs or excise, such officer shall be deemed guilty of a misdemeanor, and shall upon conviction suffer such punishment as may be inflicted by law in cases of misdemeanor; and if such officer shall be so prosecuted to conviction by the importer, consignee, or proprietor of the goods or merchandise so embezzled, wasted, spoiled, or destroyed, no duty of customs or excise shall be payable for such goods or merchandise so embezzled, &c., and no forfeiture or seizure shall take place of any goods and merchandise so warehoused in respect of any deficiency caused by such embezzlement, waste, spoil, or destruction, and the damage occasioned by such embezzlement, &c. of such goods or merchandise shall be repaid and made good to such importer, consignee, or proprietor by the commissioners of customs or excise, under such orders as shall be given by the commissioners of the treasury, or any 3 of them. — § 41.

**On Entry outwards Bond for the shipping and landing shall be given.**—Upon the entry outwards of any goods to be exported from the warehouse to parts beyond the seas, and before cocket be granted, the person in whose name the same be entered shall give security by bond in double the value of such goods, with 1 sufficient surety, that such goods shall be duly shipped and exported, and shall be landed at the place for which they be entered outwards, or otherwise accounted for to the satisfaction of the commissioners of customs. — § 42.

**Bond for Beef and Pork exported from Warehouse.**—Upon the entry outwards of any salted beef or salted pork to be exported from the warehouse to parts beyond the seas, and before cocket be granted, the person in whose name the same be entered shall give security by bond in treble the value of the goods, with 2 sufficient sureties, of whom the master of the exporting ship shall be 1, that such beef or pork shall be duly shipped and exported, and that no part thereof shall be consumed on board such ship, and that the same shall be landed at the place for which it be entered outwards; and that a certificate of such landing shall be produced within a reasonable time, according to the voyage, to be fixed by the commissioners of customs, and mentioned in the bond, such certificate to be signed by the officers of the customs or other British officer, if the goods be landed at a place in the British dominions, or by the British consul, if the goods be landed at a place not in the British dominions, or such goods shall be otherwise accounted for to the satisfaction of said commissioners; and such master shall make and sign a declaration that such beef or pork is to be laden on board such ship as merchandise, to be carried to and landed at parts beyond the seas, and not as stores for the said ship; and if such ship shall not have on board at the time of clearance outwards a reasonable supply or stock of beef or pork, according to the intended voyage, borne upon the victualling bill, the master of such ship shall forfeit the sum of 100*l.* — § 43.

**Restriction as to the Isle of Man.**—No goods shall be exported from the warehouse to the Isle of Man, except such goods as may be imported into the said island with licence of the commissioners of customs, and in virtue of any such licence first obtained. — § 44.

**Goods removed from Warehouse under Care of Customs' Officers.**—All goods taken from the warehouse for removal or for exportation shall be removed or carried to be shipped, under the care or with the authority or permission of the proper officer of customs, and in such manner, and by such persons, and within such spaces of time, and by such roads or ways as he shall authorise or direct; and all such goods not so removed or carried shall be forfeited. — § 45.

**Ships to be not less than 70 Tons for exporting warehoused Goods.**—It shall not be lawful for any person to export any goods so warehoused, nor to enter for exportation to parts beyond the seas any goods so warehoused, in any ship not of the burden of 70 tons or upwards. — § 46.

**Goods landed in Docks liable to Claims for Freight as before landing.**—All goods or merchandise which shall be landed in docks, and lodged in the custody of their proprietors, under this act, not being goods seized as forfeited, shall be subject or liable to the same claim for freight in favour of the master and owner or owners of the respective ships or vessels, or of any other person or persons interested in the freight of the same, as they were subject and liable to before landing; and the directors and proprietors of such docks are empowered and required, upon due notice in that behalf given to them, to detain and keep such goods and merchandise, not being seized as forfeited, in the warehouses belonging to the said docks, until the respective freights to which the same are subject and liable be duly paid, together with the rates and charges to which the same shall have been subject and liable, or until a deposit be made by the owners or consignees of such goods or merchandise, equal in amount to the demands made by the master, owner or owners of the ships or vessels, or other persons, on account of freight; which deposit the directors or proprietors of such docks, or their agents are directed to receive and hold in trust, until the claim or demand for freight upon such goods shall be satisfied; upon proof of which, and demand made by the persons, their executors, &c. by whom the said deposit has been made, and the rates and charges due upon the said goods being paid, the deposit shall be returned to them by the said directors or proprietors. — § 47.

**Warehousing Ports, &c.**—Certain ports only are warehousing ports; nor may all sorts of goods be warehoused in every warehousing port. We subjoin a list of the warehousing ports in Great Britain and Ireland, and a specification of the goods that may be warehoused in each, classed in tables.

ENGLAND.

Arundel — Goods in Table C.  
 Barnstaple — All goods except tobacco, East India goods, and goods in Table F, other than sugar.

TABLE A.

|   |                                |         |
|---|--------------------------------|---------|
| Annotto-rocon   | Cocoa nuts                     | Sugar   |
| Casia fistula   | Coffee                         |         |
| Not being the produce of, nor imported from, any place within the limits of the East India Company's charter. |                                |         |
| Angustura bark  | Indigo                         | Pimento |
| Cotton wool   | Mahogany                       | Rum     |
| Ginger  | Molasses                       | Wine    |
|   | Imported from the West Indies. |         |
| Cocoa nuts  | Indigo                         | Pimento |
| Coffee  | Mahogany                       | Rum     |
| Cotton wool   | Molasses                       | Sugar   |
| Ginger  |                                |         |

The growth and produce of, and imported direct from, any of the territories or dominions of the crown of Portugal.

TABLE B.

|   |          |         |
|---|----------|---------|
| Brandy  | Rice     | Tobacco |
| Geneva, & other spirits   | Shrub    | Wine    |
| Not being the produce of, nor imported from, any place within the limits of the East India Company's charter (spirits and wine excepted), or not being imported from the West Indies. |          |         |
| Cocoa nuts  | Indigo   | Pimento |
| Coffee  | Mahogany | Rum     |
| Cotton wool   | Molasses | Sugar   |
| Ginger  |          |         |

Being the growth or produce of, and imported direct from, any of the territories or dominions of the crown of Portugal.

Spirits and wine

Being the produce of any place within the limits of the East India Company's charter, and imported otherwise than by the said Company.

TABLE C.

|  |                   |                  |
|--|-------------------|------------------|
| Brimstone  | Kelp              | Staves           |
| Cork   | Linseed           | Tallow           |
| Hemp, undressed  | Mahogany          | Tar              |
| Iron, in bars or slit, or hammered into rods, & iron drawn | Marble blocks     | Timber           |
| or hammered less than 3/4 of an inch square.               | Oil of turpentine | Tow              |
|  | Pitch             | Turpentine       |
|  | Reseased          | Wood             |

**WATCHES** (Ger. *Uhren, Taschenuhren*; Fr. *Montres*; It. *Oriuoli da tasca, o da aaccoccia*; Sp. *Relojes de faltriquera*; Rus. *Karmannüe tschasiü*), portable machines, generally of a small size and round flat shape, that measure and indicate the successive portions of time; having, for the most part, their motions regulated by a spiral spring. When constructed on the most approved principles, and executed in the best manner, a watch is not only an exceedingly useful, but a most admirable piece of mechanism. It has exercised the genius and invention of the most skillful mechanics, as well as of some of the ablest mathematicians, for nearly 3 centuries. And, considering the smallness of its size, its capacity of being carried about uninjured in every variety of position, the number and complexity of its movements, and the extraordinary accuracy with which it represents the successive portions of time as determined by the rotation of the earth on its axis, we need not wonder at Dr. Paley having referred to it as a striking specimen of human ingenuity.

Spring watches are constructed nearly on the same principle as pendulum clocks. Instead of the pendulum in the latter, a spring is used in the former, the isochronism of the vibrations of which corrects the unequal motions of the balance.

*Historical Notice.* — The invention of spring watches dates from about the middle of the 16th century, and has been warmly contested for Huygens and Hooke. The English writers generally incline in favour of the latter. Dr. Hutton says — (*Mathematical Dictionary*, art. *Watch*), that the words "Rob. Hooke invent, 1658," were inscribed on the dial plate of a watch presented to Charles II. in 1675. But Montucla affirms (*Histoire des Mathématiques*, tom. ii. p. 413. ed. 1800), that Huygens made this "*belle découverte*" in 1656, and presented a spring watch to the States of Holland in 1657. Comparing these statements, it certainly appears that the claim of Huygens to the priority of the discovery is the better established of the two. We do not, however, believe that either of those distinguished persons owed, in this respect, any thing to the other. The probability seems to be, that the happy idea of employing a spring to regulate the motion of watches occurred to them both nearly at the same time.

*Improvement of Watches.* — Owing to the facility with which the longitude may be determined by the aid of accurately going watches, it is of great importance to have them made as perfect as possible. In this view liberal premiums have been given to the makers of the best marine watches, or chronometers, by the governments of England, France, Spain, &c. In the reign of Queen Anne, parliament offered a reward of 20,000*l.* to any one who should make a watch, or other instrument, capable of determining the longitude at sea, within certain limits. This magnificent premium was awarded, in 1764, to the celebrated John Harrison, for a marine watch, which, being tried in a voyage to Barbadoes, determined its longitude with even more than the required accuracy. Other premiums, though of inferior amount, were subsequently given to Messrs. Mudge, Arnold, Earnshaw, &c. Since 1822, 2 prizes, one of 300*l.* and one of 200*l.*, have been annually given to the makers of the 2 chronometers adjudged to be the best, after having been submitted to a twelvemonth's trial at the Royal Observatory at Greenwich. And to such perfection has the manufacture attained, that some of the chronometers employed by navigators, though carried into the most opposite climates, have not varied to the extent of 2 seconds in their mean rate of going throughout the year.

*Watch Manufacture.* — The watch-making business is carried on to a great extent in London; the artists of which have attained to an unrivalled degree of excellence in this department. There are about 14,000 gold and 85,000 silver watches annually assayed at Goldsmith's Hall, London — (*Jacob on the Precious Metals*, vol. ii. p. 413.) — the aggregate value of which is, probably, not much under 600,000*l.* The manufacture is also carried on to a considerable extent at Liverpool, Coventry, Edinburgh, &c. Watch movements used to be extensively manufactured at Prescot in Lancashire; but latterly, we believe, the manufacturers have been withdrawing to Liverpool.

On the Continent, watches are principally manufactured at Paris, Geneva, and in Neuchâtel. Some of the French and Swiss watches are excellent; but, generally speaking, they are slight, and inferior to those made in London. Paris and Geneva watches are largely exported to foreign countries; and are every where in high estimation, particularly among the ladies.

Watches impressed with any mark or stamp, appearing to be or to represent any legal British assay mark or stamp, or purporting by any mark or appearance to be of the manufacture of the United Kingdom, or not having the name and place of abode of some foreign maker abroad visible on the frame and also on the face, or not being in a complete state, with all the parts properly fixed in the case, may not be imported into the United Kingdom, even for the purpose of being warehoused. — (3 & 4 *Will. 4. c. 52. § 58.* See *ante*, p. 662.)

*Watches in China.* — Pretty considerable numbers of European watches are imported into China; and we anticipate, now that the monopoly is put down, a large increase of the trade. It may be worth mentioning, that those among the Chinese, as well as among some other Eastern nations, who can afford it, uniformly wear watches in pairs! This sort of extravagance is not, however, confined to watches, but extends to a variety of other articles. Shawls, for example, are invariably worn in India in pairs of exactly the same pattern; and it is hardly possible, indeed, to find a native dealer who will sell a single shawl.

In 1832, there were exported from Great Britain 18,678 watches of British manufacture; of these, 13,379 were silver, 4,187 metal, 435 gold, 671 being without cases. The duty on foreign watches and clocks is an *ad valorem* one of 25 per cent., and no account is kept of the numbers of each imported. In 1832, their aggregate value amounted to 25,332*l.*; the total value of the foreign clocks and watches exported during the same year being 1,054*l.* — (*Parl. Paper*, No. 490. Sess. 1833.)

**WATER.** It may be thought unnecessary, perhaps, to say any thing in a work of this sort with respect to a fluid so well known and so abundant. But, besides being an indispensable necessary of life, water is, in most large cities, an important commercial article. It is in the latter point of view, principally, that we mean to consider it. — Inasmuch, however, as the mode of supplying different places with water, and its price, necessarily vary in every possible way, we shall limit our remarks on these subjects to the metropolis only. The few remarks we intend to offer of a general nature will apply indifferently to any populous place, the supply of which with water occasions a considerable expense.

1. *Quality of Water.* — Dr. Ure has made the following statements with respect to the quality of water: — "Water," says he, "is a very transparent fluid, possessing a moderate degree of activity with regard to organised substances, which renders it friendly to animal and vegetable life, for both which it is, indeed, indispensably necessary. Hence it acts but slightly on the organs of sense, and is therefore

said to have neither taste nor smell. It appears to possess considerable elasticity, and yields in a perceptible degree to the pressure of air in the condensing machine.

<sup>3</sup> Native water is seldom, if ever, found perfectly pure. The waters that flow within or upon the surface of the earth contain various earthy, saline, metallic, vegetable, or animal particles, according to the substances over or through which they pass. Rain and snow waters are much purer than these, although they also contain whatever floats in the air, or has been exhaled along with the watery vapours.

<sup>4</sup> The purity of water may be known by the following marks or properties of pure water:—

"1. Pure water is lighter than water that is not pure.

"2. Pure water is more fluid than water that is not pure.

"3. It has no colour, smell, or taste.

"4. It wets more easily than the waters containing metallic and earthy salts, called hard waters, and feels softer when touched.

"5. Soap, or a solution of soap in alcohol, mixes easily and perfectly with it.

"6. It is not rendered turbid by adding to it a solution of gold in aqua regia; or a solution of silver, or of lead, or of mercury, in nitric acid; or a solution of acetate of lead in water.

"Water was, till modern times, considered as an elementary or simple substance; but it is now ascertained to be a compound of oxygen and hydrogen."

2. *Supply of Water.*—London was very ill supplied with water previously to the early part of the 17th century, when the New River water was introduced into the city. This exceedingly useful work was planned and carried into effect by the famous Sir Hugh Middleton, who expended his whole fortune on the project; having, like many other public benefactors, entailed poverty on himself and his posterity by embarking in an undertaking productive of vast wealth to others, and of great public utility. The New River has its principal source near Chadwell, between Hertford and Ware, about 20 miles from London; but the artificial channel in which the water is conveyed is about 40 miles in length. Sir Hugh Middleton encountered innumerable difficulties during the progress of the undertaking, which it is probable would have been abandoned, at least for a time, but for the aid afforded by James I. The New River Company was incorporated in 1619, 6 years after the water had been brought to the reservoir at Islington. The undertaking yielded very little profit for a considerable number of years; but it has since become extremely profitable; so much so, that an original 500*l.* share has been sold for 13,000*l.*!

The Chelsea Water-Works Company was formed in 1723, and (with the aid of 3 smaller companies, none of which are now in existence) it, and the New River, supplied all that part of the metropolis north of the Thames with water, down to the year 1810. In that year, however, 3 new companies, the East London, West Middlesex, and Grand Junction, were established, under the authority of different acts of parliament. At this moment the metropolis is supplied with water by the following companies:—

New River,  
Chelsea,  
East London,  
West Middlesex,

Grand Junction,  
Lambeth,  
Vauxhall, or South London, and  
Southwark Water Works.

The following statements with respect to these companies are taken from Mr. Wade's valuable treatise on the police of the metropolis. The Report of the commissioners appointed by government in 1827, to inquire into the state of the supply of water in the metropolis, is the principal authority on which they are founded.

"The *New River Company* get their supply from the spring at Chadwell, between Hertford and Ware. It comes in an open channel, of about 40 miles in length, to reservoirs at Clerkenwell. There are 2 reservoirs, having between them a surface of about 5 acres, and an average depth of 10 feet. These reservoirs are 84 feet above low water mark in the Thames; and, by means of steam engines and a stand-pipe, an additional height of 60 feet can be given to the water, so that all the mains belonging to this Company are kept full by a considerable pressure of water. The highest service given by the New River is the cistern on the top of Covent Garden Theatre. The aqueduct by which the water is brought has only a fall of 2 inches per mile; thus it wastes, by evaporation, during the drought of summer, and is impeded by frost in the winter. At these times the Company pump an additional supply from the Thames, at Broken Wharf, between Blackfriars and Southwark Bridges. To this, however, they seldom have recourse; and their engine, erected since the works at London Bridge were broken down, has worked only 176 hours in the year. The New River Company supply 66,600 houses with water, at an annual average of about 1,100 hogsheads each, or, in all, about 75,000,000 hogsheads annually.

"The *East London Water Works* are situated at Old Ford, on the river Lea, about 3 miles from the Thames, and a little below the point to which the tide flows up the Lea. By the act of parliament, this Company must take its water when the tide runs up and the mills below have ceased working. The water is pumped into reservoirs and allowed to settle; and a supply of 6,000,000 gallons is daily distributed to about 42,000 houses. This Company supply no water at a greater elevation than 30 feet, and the usual height at which the delivery is made to the tenants is 6 feet above the pavement; they have 200 miles of iron pipes, which, in some places, cost them 7 guineas a yard. This and the New River are the only companies which do not draw their supply of water entirely from the Thames.

"The *West Middlesex* derive their supply of water from the Thames, at the upper end of Hammer-smith, about 94 miles above London Bridge, and where the bed of the Thames is gravel. The water is forced by engines to a reservoir at Kensington, 309 feet long, 123 wide, and 20 deep, paved and lined with bricks, and elevated about 120 feet above low water in the Thames. They have another reservoir on Little Primrose Hill, about 70 feet higher, and containing 88,000 hogsheads of water, under the pressure of which the drains are kept charged, in case of fires. They serve about 15,000 tenants, and the average daily supply is about 2,250,000 gallons.

"The *Chelsea Water Works* derive their supply from the Thames, about  $\frac{1}{2}$  of a mile east of Chelsea Hospital; and they have 2 reservoirs—one in the Green Park and another in Hyde Park—the former having an elevation of 44 feet, and the latter of 70. These reservoirs, till within these few months, had never been cleaned, nor had there been any preparation made for that purpose in their construction. About  $\frac{1}{2}$  of the water served out by this Company is allowed to settle in these reservoirs, and the remaining  $\frac{1}{2}$  are sent directly from the Thames. Latterly, the Company have

been making preparations for filtering the water; and also for allowing it to settle in reservoirs, at Chelsea, before it is delivered into the mains. The Chelsea Company serve about 12,400 houses, and the average daily supply is 1,760,000 gallons.

"The Grand Junction Company derive the whole of their supply from the Thames, immediately adjoining Chelsea Hospital; thence it is pumped, without any filtration or settling, into 3 reservoirs at Paddington. These reservoirs are about 71, 86, and 92 feet above high water mark in the Thames; their united contents are 19,355,840 gallons; and by means of a stand-pipe, the water is forced to the height of 147 feet, or about 61 feet above the average height in the reservoir. The number of houses supplied by the Grand Junction Company is 7,700, and the average daily supply is about 2,800,000 gallons.

"The Lambeth Company take their supply from the Thames, between Westminster and Waterloo Bridges. It is drawn from the bed of the river by a suction pipe, and delivered to the tenants without being allowed to subside; there being only a cistern of 400 barrels at the works, as a temporary supply, until the engines can be started. The greatest height to which the Company force water is about 40 feet; the number of houses that they supply is 16,000, and the average service is 1,244,000 gallons daily.

"The South London, or Vauxhall Company, take their supply from the river Thames by a tunnel, which is laid 6 feet below low water mark, and as far into the river as the third arch of Vauxhall Bridge. At that particular place, the bed of the Thames is described as being always clean, and without any of those depositions of mud and more offensive substances that are found in many other places. Besides the greater purity of the bed of the Thames here than where any other Company on the south side take their supply, the Company allow the water to settle in reservoirs. The Vauxhall Company supply about 10,000 houses with about 1,000,000 gallons of water daily.

"The Southwark Water Works (the property of an individual) are supplied from the middle of the Thames, below Southwark and London Bridges; and the water thus taken is sent out to the tenants without standing to settle, or any filtration further than it receives from passing through wire grates and small holes in metallic plates. The number of houses supplied by these works is about 7,000, and the average daily supply about 720,000 gallons."

The results may be collected into a Table, as follows:—

| Companies.        | Services. | Average per Day, Gallons. | Gallons Annually. | Average per House, Gallons. |
|-------------------|-----------|---------------------------|-------------------|-----------------------------|
| 1. New River      | 67,000    | 13,000,000                | 4,056,000,000     | 192                         |
| 2. East London    | 42,000    | 6,000,000                 | 1,872,000,000     | 143                         |
| 3. West Middlesex | 15,000    | 2,250,000                 | 702,000,000       | 150                         |
| 4. Chelsea        | 13,400    | 1,780,000                 | 549,120,000       | 142                         |
| 5. Grand Junction | 7,700     | 2,800,000                 | 873,600,000       | 263                         |
| 6. Lambeth        | 16,000    | 1,244,000                 | 388,128,000       | 77                          |
| 7. South London   | 10,000    | 1,000,000                 | 312,000,000       | 100                         |
| 8. Southwark      | 7,000     | 720,000                   | 221,340,000       | 102                         |
| Total             | 183,100   | 28,774,000                | 8,977,388,000     | 157                         |

Average per house north of the river - 196 gallons.  
Average per house south of the river - 93 ditto.

It would appear from this Table, as if the supply of water were either excessive on the Middlesex side of the river, or very deficient on the Surrey side. But this discrepancy is more apparent than real. The inhabitants in the northern district are, speaking generally, decidedly richer than those in the southern district; they have, particularly in the west end of the town, larger families, and a much greater number of horses. There is also a much larger expenditure of water upon the roads in Middlesex than in Surrey. Still, however, we believe that there is a more liberal supply in the former than in the latter.

*Monopoly of the Water Companies.*—The sanction of parliament was given to the 3 new companies formed in 1810, not so much in the view of increasing the actual supply of water, as of checking monopoly, and reducing the rates by their competition. But these expectations have not been realised. For a while, indeed, the competition of the several companies was exceedingly injurious to their interests, and occasioned the total destruction of some of the inferior ones; but no sooner had this happened, than the others discovered that their interests were in reality the same, and that the true way to promote them was to concert measures together. In furtherance of this object, the 5 companies for the supply of that part of the metropolis north of the river proceeded to divide the town into as many districts, binding themselves, under heavy penalties, not to encroach on each other's estates; and having in this way gone far to secure themselves against any new competitors, their next measure was to add five and twenty per cent. to the rates established in 1810; and these have, in several instances, been still further augmented! The benefits that were expected to result from their multiplication have, therefore, proved quite imaginary; and though the supply of water has been increased, it is neither so cheap nor so good as it might have been under a different system.

The following statement of the rates and profits of the 5 principal Water Companies in 1820 and 1827, is extracted from the Report of the Select Committee of the House of Commons on the supply of water in 1828:—

Comparative Returns of 1820 with 1827.

| Years. | Houses. | Average Rate per House. | Gross Annual Income. |       | Gross Expenditure. |       | Nett Profit. |       | Remarks.   |
|--------|---------|-------------------------|----------------------|-------|--------------------|-------|--------------|-------|--|
|        |         |                         | L.                   | s. d. | L.                 | s. d. | L.           | s. d. |  |
| 1820   | 10,350  | 47                      | 24,252               | 6 10  | 9,000              | 0 0   | 15,252       | 6 10  | There was also a non-permanent expenditure in 1827, amounting to 25,217l. 18s. 2d. |
| 1827   | 14,500  | 51                      | 37,000               | 0 0   | 15,000             | 0 0   | 22,000       | 0 0   |  |
| 1820   | 17,180  | 57                      | 20,155               | 11 7  | 8,916              | 6 5   | 11,237       | 5 7   |  |
| 1827   | 7,509   | 61                      | 24,702               | 5 0   | 10,674             | 8 4   | 14,027       | 16 3  |  |
| 1820   | 8,631   | 35                      | 15,150               | 7 11  | 12,255             | 11 0  | 2,894        | 16 11 |  |
| 1827   | 12,409  | 30                      | 18,589               | 16 1  | 12,532             | 2 9   | 6,057        | 13 4  |  |

Total South of the Thames. — Returns not complete.

The truth is, as we endeavoured to show in the article COMPANIES, that certain restrictions ought, in almost all cases, to be imposed on companies for the supply of water to a large city. These are not undertakings that can be safely trusted to the free principles that may generally be relied upon. If there be only one set of springs adjacent to a town, or if there be certain springs more conveniently situated for supplying it with water than any other, a company acquiring a right to such springs, and incorporated for the purpose of conveying the water to town, would thereby gain an *exclusive advantage*; and if no limits were set to its dividends, its partners might make an enormous profit at the expense of the public, and without its being possible materially to reduce them by means of competition. What has happened in the case of the New River Company sufficiently evinces the truth of what has now been stated. Had its dividends been limited to any thing like a reasonable profit, the water that is at present supplied by its means might have been furnished for a small part of what it actually costs. But in cases of this sort, priority of occupation, even without any other peculiar advantage, goes far to exclude all regular and wholesome competition. A company that has got pipes laid down in the streets may, if threatened by the competition of another company, lower its rates so as to make the latter withdraw from the field; and as soon as this is done, it may revert to its old, or even to higher charges. It is not, in fact, possible, in cumbrous concerns of this sort, to have any thing like competition, in the ordinary sense of the term; and experience shows that whenever it is attempted, it only continues for a limited period, and is sure to be in the end effectually suppressed. We are, therefore, clearly of opinion, that no company ought ever to be formed for the conveyance of water into a large city, without a maximum being set both to the rates and the dividends; giving the company an option, in the event of the maximum rate yielding more than the maximum dividend, either to reduce the rate, or to apply the surplus to the purchase of the company's stock; so that ultimately the charge on account of the dividends may be got rid of.

We are glad to have to add, that we are supported in what is now stated by the *Report of the Select Committee of the House of Commons on the supply of water for the metropolis, printed in 1821*. It is there said — "The public is at present without any protection even against a further indefinite extension of demand. In cases of dispute, there is no tribunal but the Boards of the companies themselves, to which individuals can appeal; there are no regulations but such as the companies may have voluntarily imposed upon themselves, and may therefore at any time revoke, for the continuance of the supply in its present state, or for defining the cases in which it may be withdrawn from the householder. All these points, and some others of the same nature, indispensably require legislative regulation, where the subject matter is an article of the first necessity, and the supply has, from peculiar circumstances, got into such a course that it is not under the operation of those principles which govern supply and demand in other cases."

"The principle of the acts under which these companies were instituted, was to encourage competition; and certainly in this, as in other cases, it is only from competition, or the expectation of competition, that a perfect security can be had for a good supply. But your committee are satisfied, that, from the peculiar nature of these undertakings, the principle of competition requires to be guarded by particular checks and limits in its application to them, in order to render it effectual, without the risk of destruction to the competing parties, and thereby, ultimately, of a serious injury to the public." And the committee proceeds to remark — "The submission of their accounts annually to parliament, for a few years, would necessarily throw light on this part of the question."

We think it would be highly expedient to adopt the suggestion of the committee, by calling upon the companies to lay annually detailed statements of their affairs before parliament. They should be obliged in these statements to give an account of the rates charged by them, and to make a special report as to every case in which they have withdrawn water from a householder. It is to no purpose to repeat, in opposition to this proposal, the common-places about competition securing for the citizens a sufficient supply of water at the lowest prices, in the same way that the competition of bakers and butchers secures them supplies of beef and bread! The statements already made show that there is no analogy whatever in the circumstances under which these articles are supplied. If a man be dissatisfied with any particular butcher or baker, he may go to another; but it is not possible for him to change his water merchant, unless he also change the place of his residence. No water company will encroach upon the district assigned to another; and supposing an individual unlucky enough to quarrel with those who have the absolute monopoly of the supply of the district in which he resides, he must either migrate to another, or be without water, unless he can get a supply upon his own premises! Such being the actual state of things, it is quite ludicrous to talk about competition affording any real security against extortion and abuse. Even the publication of the proceedings of the companies would be a very inadequate check on their conduct; but such as it is, it is perhaps the only one that can now be resorted to; and as it would have considerable influence, it ought not, certainly, to be neglected.

3. *Quality of the London Water.* — All the companies, with the exception of the New River and East London Companies, derive their supplies of water from the Thames; and in consequence of their taking it up within the limits in which the tide flows, it is necessarily, in the first instance, loaded with many impurities. But the reports that were recently so very prevalent, with respect to the deleterious quality of the water taken from the river, have been shown to be very greatly exaggerated. The statement of Dr. Bostock, given in the *Report of the commissioners*, shows that by far the greater part of the impurities in the Thames water are mechanically suspended in, and not chemically combined with, it; and that they may be separated from it by filtration, or by merely allowing it to stand at rest. Most of the companies have recently made considerable efforts to improve their water; and though they have not done in this respect as much as they might and ought to have done, a considerable improvement has, on the whole, been effected: and notwithstanding all that has been said to the contrary, we have been assured, by those best qualified to form an opinion on such a subject, that, though not nearly so pure as a little pains would render it, there is not the slightest foundation for the notion that its impurities have been such as to affect, in any degree, the health of the inhabitants.

4. *Water for Ships.* — Various improvements have been made in the art of preserving water on board ships. Of these, the principal are the charring the inside of the casks in which the water is kept, and the substitution of iron tanks for casks. The latter, being made of the required shape, may be conveniently stowed into any part of the ship. In men-of-war, the iron tanks serve as ballast; the water being brought up by a forcing pump. Water is found to preserve better in them than in any other sort of vessel. Drip-stones may be employed with much advantage in the purification of water. When water is taken on board from a river into which the tide flows, it should, of course, be raised at low ebb.

WAX (Ger. *Wachs*; Fr. *Cire*; It. and Sp. *Cera*; Rus. *Wosk*), a vegetable product. Several plants contain wax in such abundance, as to make it worth while to extract it from them. But bees' wax is by far the most generally known. The honey is first

pressed from the comb, and the wax is then melted into cakes. It has a slight odour of honey, is insipid, and of a bright yellow hue. It is brittle, yet soft, and somewhat unctuous to the touch. It is often adulterated with earth, pea meal, resin, &c. The presence of the former may be suspected when the cake is very brittle, or when its colour inclines more to gray than to yellow; and the presence of resin may be suspected when the fracture appears smooth and shining, instead of being granulated. Wax, when bleached or purified, is white, perfectly insipid, inodorous, and somewhat translucent; it is harder, less unctuous to the touch, heavier, and less fusible, than yellow wax. It is sometimes adulterated with the white oxide of lead to increase its weight, with white tallow, and with potato starch. The first is detected by melting the wax in water, when the oxide falls to the bottom; the presence of tallow is indicated by the wax being of a dull opaque white, and wanting the transparency which distinguishes pure wax; and starch may be detected by applying sulphuric acid to the suspected wax, as the acid carbonises the starch, without acting on the wax. — (*Thomson's Chemistry*, and *Dr. A. T. Thomson's Dispensatory*.)

Notwithstanding the large supply of wax produced at home, a considerable quantity is imported from abroad; and there can be no doubt that the import would be much greater, were it not for the magnitude of the duty, which, notwithstanding its late reduction, still amounts to 1*l.* 10*s.* per cwt. The total quantity imported, in 1831, amounted to 7,203 cwt.; of which 3,892 cwt. came from Western Africa, 1,551 cwt. from Tripoli, Barbary, &c., 910 cwt. from the United States, and the rest from Russia, Germany, &c.

Account of the Imports and Exports of Wax, the Quantities retained for Home Use, the Rates of Duty thereon, and the Net Produce of the Duty, in 1831 and 1832. — (*Papers published by the Board of Trade*, vol. ii. p. 29.)

The price of wax varies (duty included) from 5*l.* to 10*l.* a cwt.

**WEIGHTS AND MEASURES.** Weights are used to ascertain the gravity of bodies, — a quality depending partly on their magnitude, and partly on their density. Measures are used to determine the magnitude of bodies, or the space which they occupy.

(For an account of the weights and measures used in foreign countries, and their equivalents in English weights and measures, see the notices of the great sea-port towns dispersed throughout this work. Thus, for the Russian weights and measures, see **PETERSBURGH**; for those of China, see **CANTON**; &c.)

Neither the magnitude nor the weight of any one body can be determined, unless by comparing it with some other body selected as a standard. It is impossible, indeed, to form any idea in respect of magnitude or weight, except in relation to some definite space or weight with which we are acquainted. We say that one article weighs 1 pound, another 2 pounds, a third 3, and so on; meaning not only that these weights are to each other as 1, 2, 3, &c., but also that the weight or specific gravity of the first is equal to the known and determinate weight denominated a pound, that the second is equal to 2 pounds, and so on.

*Standards of Weight and Measure.* — Standards of lineal measure must have been fixed upon at the earliest period, and appear to have consisted principally of parts of the human body, — as the cubit, or length of the arm from the elbow to the tip of the middle finger: the foot; the *ulna*, arm, or yard; the span; the digit, or finger; the fathom, or space from the extremity of one hand to that of the other, when they are both extended in opposite directions; the pace, &c. Large spaces were estimated by measures formed out of multiples of the smaller ones; and sometimes in day's journeys, or by the space which it was supposed an ordinary man might travel in a day, using a reasonable degree of diligence.

But lineal measures can only be used to determine the magnitude of solid bodies; the magnitude of bodies in a liquid or fluid state has to be determined by what are called measures of capacity. It is probable that, in the infancy of society, shells, or other hollow instruments afforded by nature, were used as standards. But the inaccuracy of the conclusions drawn from referring to them must soon have become obvious; and it early occurred, that to obtain an accurate measure of liquids nothing more was necessary than to constitute an artificial one, the dimensions, and consequently the capacity, of which should be determined by the lineal measures previously adopted.

The determination of the gravity or weight of different bodies supposes the invention of the balance. Nothing is known of the steps which led to its introduction; but it was used in the remotest antiquity. It seems probable that, at first, cubes of some common lineal measure, as a foot, or the fraction of a foot, formed of copper, iron, or some other metal, were used as standards of weight. When the standard was selected, if it was de-

sired to ascertain the specific gravity or weight of any given article, all that was necessary was to put it into one of the scales of the balance; and as many cubes, or parts of cubes, on the other, as might be necessary to counterpoise it.

Weights have, however, been frequently derived from grains of corn. Hence, in this, and in some other European countries, the lowest denomination of weight is a *grain*; and 32 of these grains are directed, by the ancient statute called *Compositio Mensurarum*, to compose a pennyweight, whereof 20 make an ounce, 12 ounces a pound, and so upwards.

In every country in which commercial transactions are extensively carried on, the importance of having weights and measures determined by some fixed standard becomes obvious to every one. But as the size of different parts of the human body differ in different individuals, it is necessary to select some durable article, — a metallic rod, for example, — of the length of an ordinary cubit, foot, &c., and to make it a standard with which all the other cubits, feet, &c. used in mensuration shall correspond. These standards have always been preserved with the greatest care: at Rome, they were kept in the temple of Jupiter; and among the Jews, their custody was intrusted to the family of Aaron. — (*Paucton, Métrologie*, p. 223.)

The principal standards used in the ancient world, were, the cubit of the Jews, from which their other measures of length, capacity, and weight were derived; and the foot of the Greeks and Romans.

In England, our ancient historians tell us that a new, or rather a revived, standard of lineal measure was introduced by Henry I., who ordered that the ulna, or ancient ell, which corresponds to the modern yard, should be made of the exact length of his own arm, and that the other measures of length should be raised upon it. This standard has been maintained, without any sensible variation. In 1742, the Royal Society had a yard made, from a very careful comparison of the standard ells or yards of the reigns of Henry VII. and Elizabeth kept at the Exchequer. In 1758, an exact copy was made of the Royal Society's yard; and this copy having been examined by a committee of the House of Commons, and reported by them to be equal to the standard yard, it was marked as such; and this identical yard is declared, by the act 5 Geo. 4. c. 74., to be the standard of lineal measure in Great Britain. The clause in the act is as follows: —

"From and after the 1st day of May, 1825 (subsequently extended to the 1st of January, 1826), the straight line or distance between the centres of the 2 points in the straight brass rod, now in the custody of the clerk of the House of Commons, whereon the words and figures 'STANDARD YARD, 1760,' are engraved, shall be the original and genuine standard of that measure of length or lineal extension called a yard; and the same straight line or distance between the centres of the said 2 points in the said gold studs in the said brass rod, the brass being at the temperature of 62° by Fahrenheit's thermometer, shall be and is hereby denominated the 'IMPERIAL STANDARD YARD,' and shall be and is hereby declared to be the unit or only standard measure of extension, wherefrom or whereby all other measures of extension whatsoever, whether the same be lineal, superficial, or solid, shall be derived, computed, and ascertained; and that all measures of length shall be taken in parts or multiples or certain proportions of the said standard yard; and that 1-3d part of the said standard yard shall be a foot, and the 12th part of such foot shall be an inch; and that the pole or perch in length shall contain 5½ such yards, the furlong 220 such yards, and the mile 1,760 such yards." — § 1.

The superficial measures are formed on the basis of the square of this standard; it being enacted, that

"The rood of land shall contain 1,210 square yards, according to the said standard yard; and that the acre of land shall contain 4,840 such square yards, being 160 square perches, poles, or rods." — § 2.

*Uniformity of Weights and Measures.* — The confusion and inconvenience attending the use of weights and measures of the same denomination, but of different magnitudes, was early remarked; and there is hardly a country in which efforts have not been made to reduce them to the same uniform system. Numerous acts of parliament have been passed, having this object in view, and enjoining the use of the same weights and measures, under very severe penalties. But, owing to the inveteracy of ancient customs, and the difficulty of enforcing new regulations, these statutes have always had a very limited influence, and the greatest diversity has continued to prevail, except in lineal measures. But the statute of 5 Geo. 4. c. 74. seems to have, at length, effected what former statutes failed of accomplishing. It is, perhaps, indebted for its success in this respect to the moderate nature of the changes which it introduced. We have already seen that it made no alteration in the lineal measures previously in use. Neither did it affect the previously existing system of weights: both the Troy and the Avoirdupois weights having been preserved.

"The Troy weight," says Mr. Davies Gilbert, President of the Royal Society, "appeared to us (the commissioners of weights and measures) to be the ancient weight of this kingdom, having, as we have reason to suppose, existed in the same state from the time of St. Edward the Confessor; and there are reasons, moreover, to believe, that the word Troy has no reference to any town in France, but rather to the monkish name, given to London, of Troy Novant, founded on the legend of Brute. Troy weight, therefore, according to this etymology, is, in fact, London weight. We were induced, moreover, to preserve the Troy weight, because all the coinage has been uniformly regulated by it; and all medical prescriptions or formulae now are, and always have been, estimated by Troy weight, under a peculiar subdivision, which the College of Physicians have expressed themselves most anxious to preserve."

It was resolved, therefore, to continue the use of Troy weight; and also, on account of the accuracy of the Troy standard, to raise the Avoirdupois weight from this basis.

"We found," said Mr. Davies Gilbert, "the Avoirdupois weight, by which all heavy goods have been for a long time weighed (probably derived from Avoirs (Averia), the ancient name for goods or chattels, and Polds, weight), to be universally used throughout the kingdom. This weight, however, seems not to have been preserved with such scrupulous accuracy as Troy weight, by which more precious articles have been weighed; but we had reason to believe that the pound cannot differ by more than 1, 2, or 3 grains from 7,000 grains Troy; some being in excess, and others, though in a less degree, in defect, but in no case amounting to above 1, 2, or 3 grains. It therefore occurred to us, that we should be offering no violence to this system of weights, if we declared that 7,000 grains Troy should be hereafter considered as the pound Avoirdupois."

In accordance with these views, it was enacted,—"That from and after the 1st day of May, 1825, the standard brass weight of 1 pound Troy weight, made in the year 1758, now in the custody of the clerk of the House of Commons, shall be, and the same is hereby declared to be, the original and genuine standard measure of weight, and that such brass weight shall be, and is hereby denominated, the Imperial Standard Troy pound, and shall be, and the same is hereby declared to be, the unit or only standard measure of weight, from which all other weights shall be derived, computed, and ascertained; and that 1-12th part of the said Troy pound shall be an ounce; and that 1-20th part of such ounce shall be a pennyweight; and that 1-24th part of such pennyweight shall be a grain; so that 5,760 such grains shall be a Troy pound; and that 7,000 such grains shall be, and they are hereby declared to be, a pound Avoirdupois, and that 1-16th part of the said pound Avoirdupois shall be an ounce Avoirdupois, and that 1-16th part of such ounce shall be a dram."

The measures of capacity were found to be, at the period of passing the late statute, in the greatest confusion; and a considerable change has consequently been made in them. The wine gallon formerly amounted to 231 cubic inches, the corn gallon to 268.8, and the ale gallon to 282. But these are superseded by the Imperial gallon, which contains 277.274 cubic inches, or 277 1/4 very nearly. It is deduced as follows:—

"The standard measure of capacity, as well for liquids as for dry goods not measured by heaped measure, shall be THE GALLON, containing 10 lbs. avoirdupois weight of distilled water weighed in air, at the temperature of 62° of Fahrenheit's thermometer, the barometer being at 30 inches; and a measure shall be forthwith made of brass, of such contents as aforesaid, under the directions of the Lord High Treasurer or the commissioners of his Majesty's treasury; and such brass measure shall be, and is hereby declared to be, the Imperial standard gallon, and shall be, and is hereby declared to be, the unit and only standard measure of capacity, from which all other measures of capacity to be used, as well for wine, beer, ale, spirits, and all sorts of liquids, as for dry goods not measured by heap measure, shall be derived, computed, and ascertained; and all measures shall be taken in parts or multiples or certain proportions of the said Imperial standard gallon; and the quart shall be 1/4th part of such standard gallon, and the pint shall be 1/2th of such standard gallon, and 2 such gallons shall be a peck, and 8 such gallons shall be a bushel, and 8 such bushels a quarter of corn or other dry goods, not measured by heaped measure."—§ 6.

We subjoin a Table showing the contents of the different gallons, both in measure and weight.

|                 | Cubic Inches. | Avoirdupois Weight. |     | Troy Weight. |     |      |
|-----------------|---------------|---------------------|-----|--------------|-----|------|
|                 |               | Lbs.                | oz. | Lbs.         | oz. | grs. |
| Imperial gallon | 277.274       | 14                  | 0   | 12           | 1   | 16   |
| Corn gallon     | 268.8         | 9                   | 10  | 11           | 9   | 12   |
| Wine gallon     | 231           | 8                   | 5   | 10           | 1   | 9    |
| Ale gallon      | 262           | 10                  | 2   | 12           | 4   | 6    |

**Heaped Measures.**—The greatest blemish, by far, in the new act, is the continuance and legitimation of the practice of selling by heaped measure. We are astonished at the toleration of such a barbarous custom. All articles that may be sold by heaped measure ought to be sold by weight. In Scotland, indeed, the use of heaped measure was legally abolished above 200 years since; and the present ill-advised attempt to revive a practice productive of nothing but fraud has been universally rejected in that country. The clauses in the act as to heaped measure are as follow:—

The standard measure of capacity for *coals, culm, lime, fish, potatoes, or fruit, and all other goods and things commonly sold by heaped measure*, shall be the aforesaid bushel, containing 80 lbs. avoirdupois of water as aforesaid, the same being made round, with a plain and even bottom, and being 19 1/2 inches from outside to outside of such standard measure as aforesaid.—§ 7.

In making use of such bushel, all coals and other goods and things commonly sold by heaped measure, shall be duly heaped up in such bushel, in the form of a cone, such cone to be of the height of at least 6 inches, and the outside of the bushel to be the extremity of the base of such cone; and 3 bushels shall be a sack, and 12 such sacks shall be a chaldron.—§ 8. It was further enacted, by stat. 6 Geo. 4. c. 12, that from and after the 1st of January, 1826, all such heaped measures shall be made cylindrical, and the diameter of such measures shall be at the least double the depth thereof, and the height of the cone or heap shall be equal to 1/3th of the depth of the said measure, the outside of the measure being the extremity of or base of such cone.—§ 9.

**Measure of Weight, or Heaped Measure, to be used for Wheat.**—Provided always, that any contracts, bargains, sales, and dealings, made or had for or with respect to any coals, culm, lime, fish, potatoes, or fruit, and all other goods and things commonly sold by heaped measure, sold, delivered, done, or agreed for, or to be sold, delivered, done, or agreed for, by weight or measure, shall and may be either according to the said standard of weight, or the said standard for heaped measure; but all contracts, bargains, sales, and dealings, made or had for any other goods, wares, or merchandise, or other thing done or agreed for, or to be sold, delivered, done, or agreed for, by weight or measure, shall be made and had according to the said standard of weight, or to the said gallon, or the parts, multiples, or proportions thereof; and in using the same the measures shall not be heaped, but shall be stricken with a round stick or roller, straight, and of the same diameter from end to end.—(5 Geo. 4. c. 74. § 9.)

**Models.**—The 12th section of the act directs models of the standard weights and measures to be kept in the different counties, cities, burghs, &c. for the verification of the weights and measures in use in such places.

**Contracts for Sale, &c. by Weight or Measure.**—All contracts, bargains, sales, and dealings, which shall be made or had within any part of the United Kingdom, for any work to be done, or for any goods, wares, merchandise, or other thing to be sold, delivered, done, or agreed for, by weight or measure, where no special agreement shall be made to the contrary, shall be deemed to be made and had according to the

standard weights and measures ascertained by this act; and in all cases where any special agreement shall be made, with reference to any weight or measure established by local custom, the ratio or proportion which every such local weight or measure shall bear to any of the said standard weights or measures shall be expressed, declared, and specified in such agreement, or otherwise such agreement shall be null and void. — § 15.

*Existing Weights and Measures may be used, being marked.*— And as it is expedient that persons should be allowed to use the several weights and measures which they may have in their possession, although such weights and measures may not be in conformity with the standard weights and measures established by this act; it is therefore enacted, that it shall be lawful for any person or persons to buy and sell goods and merchandise by any weights or measures established either by local custom, or founded on special agreement: provided that, in order that the ratio or proportion which all such measures and weights shall bear to the standard weights and measures established by this act shall be and become a matter of common notoriety, the ratio or proportion which all such customary measures and weights shall bear to the said standard weights and measures shall be painted or marked upon all such customary weights and measures respectively; but nothing herein contained shall extend to permit any maker of weights or measures, or any person or persons whomsoever, to make any weight or measure, at any time after the 1st of May, 1825, except in conformity with the standard weights and measures established under this act. — § 16.

*False or deficient Weights, &c.*— The 21st section declares that all the powers, rules, and regulations in force by former acts for preventing the use of false and deficient measures are to be applied and put in execution, except such as are expressly repealed or altered by this act.

*Invariable or Natural Standards.*— As the standards adopted in most countries have been in a great degree arbitrary, it has long been the opinion of scientific men, that, to construct a more perfect system of weights and measures, some natural and unchangeable basis should be adopted. It has, indeed, been contended by Pauetou and Bailly, that the measures of the ancients were deduced from a basis of this sort; and that the *stadium* always formed an aliquot part of the earth's circumference, that part differing amongst different nations and authors. But no learning or ingenuity can induce any one to believe what is so obviously incredible. The ancients had no means of determining the earth's circumference with any thing like the accuracy required to render it the great unit of a system of measures; and, what is equally decisive, no ancient author ever makes the slightest allusion to any such standard.

In more modern times, however, the idea of seeking for a unit of weight and measure in some unchanging natural object has been practically carried into effect. The standards that have been usually proposed for this object, have been some aliquot part of the quadrant of the meridian, or the length of a pendulum vibrating seconds in some given latitude. The latter has been in so far adopted into the existing system of weights and measures established by the act of 1823, that the length of the standard yard, as compared with that of a pendulum vibrating seconds in the latitude of London, is specified in the act as follows:—

“Whereas it has been ascertained by the commissioners appointed by his Majesty to inquire into the subject of weights and measures, that the said yard hereby declared to be the Imperial standard yard, when compared with a pendulum vibrating seconds of mean time in the latitude of London, in a vacuum at the level of the sea, is in the proportion of 36 inches to 39 inches and 1,333 ten-thousandth parts of an inch: be it therefore enacted and declared, that if at any time hereafter the said Imperial standard yard shall be lost, or shall be in any manner destroyed, defaced, or otherwise injured, it shall and may be restored by making, under the direction of the Lord High Treasurer, or the commissioners of his Majesty's treasury of the United Kingdom of Great Britain and Ireland, or any 3 of them for the time being, a new standard yard, bearing the same proportion to such pendulum as aforesaid, as the said Imperial standard yard bears to such pendulum.”

TABLES OF ENGLISH WEIGHTS AND MEASURES, ACCORDING TO THE NEW OR IMPERIAL STANDARD.

IMPERIAL TROY WEIGHT.  
The standard pound containing 5,760 grs.

|                 |         |                 |
|-----------------|---------|-----------------|
|                 | 1 Grain | French Grammes. |
| 24 Grains       | -       | = 1.5552        |
| 90 Pennyweights | -       | = 31.1027       |
| 12 Ounces       | -       | = 373.2330      |

Troy weight is used in the weighing of gold, silver, jewels, &c. It is also used in ascertaining the strength of spirituous liquors; in philosophical experiments; and in comparing different weights with each other.

APOTHECARIES' WEIGHT.

|            |         |           |
|------------|---------|-----------|
|            | 1 Grain | Fr. Gram. |
| 20 Grains  | -       | = 1.296   |
| 3 Scruples | -       | = 3.888   |
| 8 Drams    | -       | = 31.102  |
| 12 Ounces  | -       | = 373.233 |

This weight is essentially the same as Troy weight, but differently divided. It is chiefly used for medicinal prescriptions; but drugs are mostly bought and sold by avoirdupois weight.

**DIAMOND WEIGHT.**—Diamonds and other precious stones are weighed by carats, the carat being divided into 4 grains, and the grain into 16 parts. The diamond carat weighs  $\frac{3}{8}$  grains Troy: thus,

|          |                 |              |                     |
|----------|-----------------|--------------|---------------------|
|          | Diamond Weight. | Troy Weight. | Decigrammes.        |
| 16 Parts | -               | 1 Grain      | = 51 $\frac{1}{10}$ |
| 4 Grains | -               | 1 Carat      | = 205 $\frac{1}{4}$ |

IMPERIAL AVOIRDUPOIS WEIGHT.

|                |        |               |
|----------------|--------|---------------|
|                | 1 Dram | Fr. Gram.     |
| 16 Drams       | -      | = 1.771       |
| 16 Ounces      | -      | = 28.346      |
| 28 Pounds      | -      | = 453.544     |
| 4 Quarters     | -      | = 12.689 kil. |
| 4 Hundred wt.  | -      | = 50.796 —    |
| 20 Hundred wt. | -      | = 1015.920 —  |

The dram is subdivided into 3 scruples, and each scruple into 10 grains; the pound, or 7,680 grains avoirdupois, equals 7,000 grains Troy, and hence 1 grain Troy equals 1.007 grains avoirdupois.

Hence also 144 lbs. avoirdupois = 175 lbs. Troy, and 192 oz. ditto = 175 oz. ditto.

The stone is generally 14 lbs. avoirdupois weight, but for butcher's meat or fish it is 8 lbs. Hence the hundred weight (ewt.) equals 8 stone of 14 lbs. or 14 stone of 8 lbs.

A stone of glass is 5 lbs. A seam of glass 24 stone, or 120 lbs.

Hay and straw are sold by the load of 36 trusses. The truss of hay weighs 56 lbs. and of straw 36 lbs. The truss of new hay is 60 lbs. until the 1st of September.

The custom of allowing more than 16 ounces to the pound of butter used to be very general in several parts of the country.

WOOL WEIGHT.

Like all other bulky articles, wool is weighed by avoirdupois weight, but the divisions differ; thus,  
 7 Pounds = 1 Clove. | 61 Tods = 1 Wey.  
 2 Cloves = 1 Stone. | 2 Weys = 1 Sack.  
 2 Stone = 1 Tod. | 12 Sacks = 1 Last.

A pack of wool contains 240 lbs.

CHEESE AND BUTTER.

8 Pounds = 1 Clove.  
 32 Cloves = 1 Wey in Essex.  
 42 do. = 1 do. in Suffolk.  
 56 Pounds = 1 Firkin of Butter.

IMPERIAL LONG MEASURE.

|   |                 |              |
|---|-----------------|--------------|
|   |                 | Fr. Metres.  |
| 12 Inches                                       | = 1 Foot        | = 0.3048     |
| 3 Feet  | = 1 Yard        | = 0.9144     |
| 5 1/2 Yards                                     | = 1 Pole or Rod | = 5.0291     |
| 40 Poles  | = 1 Furlong     | = 201.1682   |
| 8 Furlongs                                      | = 1 Mile        | = 1609.3459  |
| 3 Miles   | = 1 League      | = 4827.9179  |
| 6 1/2 Geographical, or }<br>69 1/2 Eng. Miles } | = 1 Degree      | = 11120.7442 |

Besides the above, there are the palm, which equals 3 inches; the hand, 4 inches; the span, 9 inches; and the fathom, 6 feet.

IMPERIAL SUPERFICIAL MEASURE.

|                     |                 |                 |
|---------------------|-----------------|-----------------|
|                     |                 | Fr. Sq. Metres. |
| 144 Inches          | = 1 Square foot | = 0.0929        |
| 9 Square feet       | = 1 Square yard | = 0.8361        |
| 30 1/2 Square yards | = 1 Square pole | = 2.9216        |
| 40 Square poles     | = 1 Rod         | = 1011.6682     |
| 4 Rods              | = 1 Acre        | = 4046.8648     |

The inch is generally divided, on scales, into 10ths, or decimal parts; but in squaring the dimensions of artificers' work, the duodecimal system is adopted, the inch being divided into 12 parts or lines, each part into 12 seconds, and each second into 12 thirds.

Land is usually measured by a chain of 4 poles, or 22 yards, which is divided into 100 links. Ten chains in length and 1 in breadth make an acre, which equals 160 square perches, or 4,840 square yards.

CUBIC OR SOLID MEASURE.

|   |                     |                     |
|---|---------------------|---------------------|
|   |                     | Fr. Cubic Metres.   |
| 1,728 Cubic inches                                  | = 1 Cubic foot      | = 0.0283            |
| 27 Cubic feet                                       | = 1 Cubic yard      | = 7.645             |
| 40 Feet of rough timber, or }<br>50 Feet hewn do. } | = 1 Load or ton     | = { 1.326<br>1.4157 |
| 42 Cubic feet                                       | = 1 Ton of shipping | = 1.3592            |

By cubic measure, marble, stone, timber, masonry, and all artificers' works of length, breadth, and thickness, are measured, and also the contents of all measures of capacity, both liquid and dry.

IMPERIAL LIQUID AND DRY MEASURE,

Deducted from the Standard Gallon, containing 10 lbs. weight of distilled water, temperature 62°, barometer 30 inches.

| Weight of Water. | Cubic Feet. | Cubic Inches. | Gills. | Pints. | Quarts. | Parties. | Gallons. | Pecks. | Bushels. | Coomb. |
|------------------|-------------|---------------|--------|--------|---------|----------|----------|--------|----------|--------|
| 5 oz.            |             | 8.665         | 1      |        |         |          |          |        |          |        |
| lbs. 1 1/2       |             | 31.659        | 4      | 1      |         |          |          |        |          |        |
| 2 1/2            |             | 69.318        | 8      | 2      | 1       |          |          |        |          |        |
| 5                |             | 138.637       | 16     | 4      | 2       |          |          |        |          |        |
| 10               |             | 277.274       | 32     | 8      | 4       |          |          |        |          |        |
| 20               |             | 554.548       | 64     | 16     | 8       |          |          |        |          |        |
| 80               | 1.2837      | 2218.191      | 256    | 64     | 32      | 16       | 8        | 4      | 1        | 1/2    |
| 320              | 5.1347      | 8872.763      | 1,024  | 256    | 128     | 64       | 32       | 16     | 4        | 1      |
| 640              | 10.2694     | 17745.526     | 2,048  | 512    | 256     | 128      | 64       | 32     | 8        | 2      |

The dimensions of the Imperial standard bushel are as follows:—The outer diameter 19 1/2 inches,

and the inner diameter 18 1/2. The depth is 8 1/2, and the height of the cone, for heaped measure, is 6 inches. The contents of the Imperial heaped bushel are 2815.4887 cubic inches. The subdivisions and multiples are in the same proportion.

OLD MEASURES SUPERSEDED BY THE IMPERIAL SYSTEM.

OLD WINE MEASURE.

|            |                  |              |             |
|------------|------------------|--------------|-------------|
|            |                  | Cub. In.     | Fr. Litres. |
| 1 Pint     | =                | 28.875       | = 0.4731    |
| 2 Pints    | = 1 Quart        | = 57.75      | = 0.9463    |
| 4 Quarts   | = 1 Gallon       | = 231        | = 3.785     |
| 42 Gallons | = 1 Tierce       | = 5,614 feet | = 158.9673  |
| 2 Tierces  | = 1 Puncheon     | = 11,228     | = 317.9345  |
| 63 Gallons | = 1 Hoghead      | = 8,421      | = 238.1509  |
| 2 Hogshds. | = 1 Pipe or Butt | = 16,842     | = 476.3018  |
| 2 Pipes    | = 1 Tun          | = 33,684     | = 952.6036  |

The pint is subdivided into halves and quarters; the latter is called a gill. A rundlet is 18 gallons, and an-anker 9.

Conversion of Old Wine Measure into Imperial Measure.—The old wine gallon contains 231 cubic inches, and the Imperial gallon 277.274 ditto. Hence, to convert wine gallons into Imperial gallons, multiply by  $\frac{231}{277.274}$ , or by .8311; and to convert Imperial gallons into wine gallons, multiply by the reciprocal fraction  $\frac{277.274}{231}$ , or by 1.20032. But for most practical purposes, wine measure multiplied by 5 and divided by 6 will give Imperial measure with sufficient accuracy, and conversely.

N. B.—The multipliers and divisors employed to reduce old wine, ale, &c. measures to Imperial measure, serve also to reduce prices by the former to the latter.

We subjoin, from the very complete and valuable work of Mr. Buchanan, of Edinburgh, on Weights and Measures, a

Table of English Wine Gallons, from 1 to 100, with their Equivalents in Imperial Gallons.

**Conversion of Old Ale and Beer Measure into Imperial Measure.**—The old ale gallon contains 282 cubic inches, and the Imperial standard gallon 277.274 ditto. Hence, to convert ale gallons into Imperial gallons, multiply by  $\frac{282}{277.274}$  or by 1.0170445; and to convert Imperial gallons into ale gallons, multiply by the reciprocal fraction  $\frac{277.274}{282}$  or by .9832411. Unless extreme accuracy be required, the first 3 decimals need only be used. And for most practical purposes, ale measure multiplied by 59 and divided by 60 will give Imperial measure with sufficient accuracy, and conversely.

Table of English Ale Gallons, from 1 to 100, with their Equivalents in Imperial Gallons.

| 2 Pottles  | 1 Gallon      | 268.8      | 4.40428     |
| 2 Gallons  | 1 Peck        | 537.6      | 8.80856     |
| 4 Pecks    | 1 Bushel      | 2150.42    | 35.23420    |
| 4 Bushels  | 1 Coom        | 4.977 feet | 140.93721   |
| 2 Cooms    | 1 Quarter     | 9.954      | 281.87443   |
| 5 Quarters | 1 Wey or Load | 49.770     | 1409.37216  |
| 2 Weys     | 1 Last        | 99.540     | 2818.74432  |

The Winchester bushel is 19 1/2 inches wide, and 8 inches deep. Corn and seeds are measured by striking the bushel from the brim, with a round piece of light wood, about 2 inches in diameter, and of equal thickness from one end to the other. All other dry goods are heaped.

**Conversion of Winchester Bushels into Imperial Bushels.**—The Winchester bushel contains 2150.42 cubic inches, and the Imperial standard bushel 2218.192 ditto. Hence, to convert Winchester bushels into Imperial bushels, multiply by  $\frac{2150.42}{2218.192}$ , or by .969447; and to convert Imperial bushels into Winchester bushels, multiply by the reciprocal fraction  $\frac{2218.192}{2150.42}$ , or 1.0315157. For practical purposes, multiply Winchester measure by 31 and divide by 32 for Imperial measure, and the contrary.

In some markets, corn is sold by weight, which is the fairest mode of dealing, though not the most convenient in practice. Even where measures are used, it is customary to weigh certain quantities or proportions, and to regulate the prices accordingly. The average bushel of wheat is generally reckoned at 60 lbs.—of barley 47 lbs.—of oats 38 lbs.—

**French System of Weight and Measures.**—The new metrical system established in France subsequently to the Revolution. is founded on the measurement of the quadrant

peas 64, beans 63, clover 68, rye and canary 53, and rape 48 lbs. In some places, a load of corn, for a man, is reckoned 5 bushels, and a cart load 40 bushels.

Table of Winchester Quarters, from 1 to 100, with their Equivalents in Imperial Quarters.

COAL MEASURE.

Coals were formerly sold by the chaldron, which bears a certain proportion to Winchester measure.

- 4 Pecks - - - = 1 Bushel.
- 3 Bushels - - - = 1 Sack.
- 3 Sacks - - - = 1 Vat.
- 4 Vats - - - = 1 Chaldron.
- 21 Chaldron - - - = 1 Score.

The coal bushel holds 1 Winchester quart more than the Winchester bushel; its contents being 2217.62 cubic inches. It is 19 1/2 inches wide from outside to outside, and 8 inches deep. In measuring coals it was heaped up in the form of a cone, to the height of at least 6 inches above the brim (according to a regulation passed at Guildhall in 1806), the outside of the bushel being the extremity of the cone, so that the bushel should contain at least 2814.3 cubic inches, nearly equal to the Imperial heaped bushel. Hence the chaldron should measure 58.64 cubic feet.

But the sale of coals by measure has, in consequence of the frauds to which it led—(see ante, p. 208).—been abolished; and they are now sold by weight.

**Of Wood Fuel, English Measure.**—Wood fuel is assized into shids, billets, faggots, fall wood, and cord wood. A shid is to be 4 feet long, and, according as they are marked and notched, their proportion must be in the girth; viz. if they have but 1 notch, they must be 16 inches in the girth; if 2 notches, 23 inches; if 3 notches, 28 inches; if 4 notches, 33 inches; and if 5 notches, 38 inches about. Billets are to be 3 feet long, of which there should be 3 sorts; viz. a single cask, and a cask of 2; the 1st is 7 inches, the 2d 10 inches, and the 3d 14 inches, about; they are sold by the 100 of 5 score. Faggots are to be 3 feet long, and at the band 24 inches about, besides the knot of such faggots; 50 go to the load. Bavins and spray wood are sold by the 100, which are accounted a load. Cord wood is the bigger sort of fire wood, and it is measured by a cord, or line, whereof there are 2 measures; that of 14 feet in length, 3 feet in breadth, and 3 feet in height. The other is 8 feet in length, 4 feet in height, and 4 feet in breadth.

MEASURES OF WOOD.

- 1,000 Billets of wood - - = 1 Cord.
- 10 cwt. of ditto - - - = 1 Cord.
- 1 Cord of wood - - - = 1 Chaldron of coals.
- 100 lbs. of wood - - - = 1 Quintal of wood.

of the meridian, or of the distance from the pole to the equator. This distance having been determined with the greatest care, the ten-millionth part of it was assumed as the *mètre*, or unit of length, all the other lineal measures being multiples or submultiples of it, in decimal proportion. The *mètre* corresponds pretty nearly to the ancient French *cune*, or yard, being equal to 3·07844 French feet, or 3·281 English feet, or 39·3708 English inches.

The unit of weight is the *gramme*, which is a cubic centimètre, or the 100th part of a *mètre* of distilled water of the temperature of melting ice; it weighs 15·434 English Troy grains.

In order to express the decimal proportion, the following vocabulary of names has been adopted, in which the terms for multiplying are Greek, and those for dividing are Latin.

For multipliers, the word

|                            |   |           |
|----------------------------|---|-----------|
| <i>Deca</i> prefixed means | - | 10 times. |
| <i>Hecto</i>               | - | 100       |
| <i>Kilo</i>                | - | 1,000     |
| <i>Myria</i>               | - | 10,000    |

On the contrary, for divisors,

|                                    |            |
|------------------------------------|------------|
| the word <i>Deci</i> expresses the | 10th part. |
| <i>Centi</i>                       | 100th      |
| <i>Milli</i>                       | 1,000th    |

Thus, *Decimètre* means 10 *mètres*.

|                   |   |                                   |
|-------------------|---|-----------------------------------|
| <i>Decimètre</i>  | = | the 10th part of a <i>mètre</i> . |
| <i>Kilogramme</i> | = | 1,000 grammes, &c.                |

The *are* is the element of square measure, being a square decamètre, equal to 3,955 English perches. The *stère* is the element of cube measure, and contains 35·317 cubic feet English.

The *litre* is the element of all measures of capacity. It is a cubic decimètre, and equals 2·1135 English pints. 100 litres make the hectolitre, which equals 26·419 wine gallons, or 2·838 Winchester bushels.

SYSTEME USUEL, OR BINARY SYSTEM. — This new system has the metrical standards for its basis, but their divisions are binary, that is, by 2, 4, 8, &c.; and instead of the new vocabulary, the names of the ancient weights and measures are used, annexing the term *usuel* to each. Thus the half kilogramme is called the *livre usuelle*, and the double *mètre*, the *toise usuelle*.

The following Tables show the proportions between the new or metrical French system and the English system:—

COMPARISON OF FRENCH AND ENGLISH WEIGHTS AND MEASURES, containing the New or Metrical Weights and Measures of France, with their Proportion to those of England, both according to the Decimal System and the *Système usuel*.

DECIMAL SYSTEM.

Long Measures.

|              |   |                                |
|--------------|---|--------------------------------|
| French.      |   | English.                       |
| Millimètre   | - | 0·03937 inches.                |
| Centimètre   | - | 0·39371                        |
| Decimètre    | - | 3·93710                        |
| <i>Mètre</i> | - | 39·37100                       |
| Decamètre    | - | 32·80916 feet.                 |
| Hectomètre   | - | 328·09167                      |
| Kilomètre    | - | 1093·63890 yards.              |
| Myriamètre   | - | 10936·38900                    |
|              |   | or 6 miles 1 furlong 28 poles. |

Measures of Capacity.

|                                       |   |   |   |
|---------------------------------------|---|---|---|
| Millitre                              | - | = | 0·06103 cubic inches.                     |
| Centilitre                            | - | = | 0·61028                                   |
| Déclitre                              | - | = | 6·10280                                   |
| <i>Litre</i> (a cubic }<br>decimètre) | - | = | { 61·02803                                |
| Décalitre                             | - | = | { or 2·1135 wine pints.                   |
|                                       |   | = | 610·28028 cubic inches,                   |
|                                       |   | = | or 2·642 wine gallons.                    |
| Hectolitre                            | - | = | 3·5317 cubic feet, or                     |
|                                       |   | = | 26·419 wine gallons, 22 Imperial gallons, |
|                                       |   | = | or 2·839 Winchester bushels.              |
| Kilolitre                             | - | = | 35·3171 cubic feet, or                    |
|                                       |   | = | 1 tun and 12 wine gallons.                |
| Myrialitre                            | - | = | 353·17146 cubic feet.                     |

Ancient Weights and Measures. — This subject is involved in considerable difficulty; and to enter fully into it would be quite inconsistent with our objects and limits. But the following details, abstracted from the best authorities, may be useful to such of our readers as have occasion to look into any of the ancient authors.

Superficial Measures.

|                                 |   |   |                               |
|---------------------------------|---|---|-------------------------------|
| Centiare                        | - | = | 1·1960 sq. yards.             |
| <i>Are</i> (a square decamètre) | - | = | 119·6046                      |
| Décare                          | - | = | 1196·0460                     |
| Hectare                         | - | = | 11960·4604                    |
|                                 |   | = | or 2 acres 1 rood 35 perches. |

Solid Measures.

|                                      |   |   |                    |
|--------------------------------------|---|---|--------------------|
| Décistère                            | - | = | 3·5317 cubic feet. |
| <i>Stère</i> (a cubic <i>mètre</i> ) | - | = | 35·3174            |
| Décastère                            | - | = | 353·1741           |

Weights.

|                |   |   |  |
|----------------|---|---|--|
| Milligramme    | - | = | 0·0154 grains.                           |
| Centigramme    | - | = | 0·1543                                   |
| Décligramme    | - | = | 1·5434                                   |
| <i>Gramme</i>  | - | = | 15·4340                                  |
| Décagramme     | - | = | 154·3402                                 |
|                |   | = | or 5·64 drams avoirdupois.               |
| Hectogramme    | - | = | 3·2154 oz. Troy, or                      |
|                |   | = | 3·527 oz. avoirdupois.                   |
| Kilogramme     | - | = | 2 lbs. 8 oz. 3 dwt. 2 grs. Troy,         |
|                |   | = | or 2 lbs. 3 oz. 4·428 drams avoirdupois. |
| Myriagramme    | - | = | 26·795 lbs. Troy, or                     |
|                |   | = | 22·0485 lbs. avoirdupois.                |
| Quintal        | - | = | 1 cwt. 3 qrs. 25 lbs. nearly.            |
| Miller, or Bar | - | = | 9 tons 16 cwt. 3 qrs. 12 lbs.            |

SYSTEME USUEL.

Comparison of Weight.

|                      |          |                   |              |
|----------------------|----------|-------------------|--------------|
|                      | Grammes. | Troy Weight.      | Avoirdupois. |
|                      |          | lbs. oz. dwt. gr. | lbs. oz. dr. |
| Kilogramme           | 1,000    | = 2 8 3 2         | 2 3 44       |
| <i>Livre usuelle</i> | 500      | = 1 4 1 13        | 1 1 104      |
| Half                 | 250      | = 8 0 18 5        | 8 13 1       |
| Quarter              | 125      | = 4 0 9 25        | 4 6 4        |
| Eighth               | 62·5     | = 2 0 4 5         | 2 3 1        |
| Once                 | 31·3     | = 1 0 2 25        | 1 1 1        |
| Half                 | 15·6     | = 10 1 125        | 8 1          |
| Quarter              | 7·8      | = 5 0 5           | 4 1          |
| Gros                 | 3·9      | = 2 12 25         | 2 1          |

Comparison of Linear Measures.

|                      |                   |                            |
|----------------------|-------------------|----------------------------|
|                      | Mesures usuelles. | English Measure.           |
|                      |                   | Mètres. Feet. Inch. Parts. |

WELD, or DYERS' WEED (Ger. *Wau*; Du. *Wouwe*, *Wouwe*; Fr. *Gaule*; It. *Guadarella*; Lat. *Luteola*), is an imperfect biennial, with small fusiform roots, and a leafy stem from 1 to 3 feet in height. It is a native of Britain, Italy, and various parts of Europe; and is cultivated for the sake of its stalk, flowers, and leaves, which are employed in the dyeing of yellow, whence its botanical name *Reseda luteola*. Weld requires the growth of nearly 2 summers before it comes to maturity; and the crop is liable to fail from so many causes, and is besides so exhausting, that its cultivation is by no means profitable, and is only carried on, in this country at least, to a small extent, principally in Essex. Weld is preferred to all other substances in giving the lively green lemon yellow. It is, however, expensive; and it is found, when employed in topical dyeing, to degrade and interfere with madder colours more than other yellows, and to stain the

parts wanted to be kept white. Hence quercitron bark is now employed in calico printing, to the almost total exclusion of weld. It is still, however, employed in dyeing silk a golden yellow, and in paper staining. — (*Loudon's Encyc. of Agriculture; Bancroft on Colours*, vol. ii. pp. 95—100.; *Rees's Cyclopaedia*.)

**WHALEBONE**, a substance of the nature of horn, adhering in thin parallel laminae to the upper jaw of the whale. These vary in size from 3 to 12 feet in length; the breadth of the largest at the thick end, where they are attached to the jaw, is about a foot. They are extremely elastic. All above 6 feet in length is called *size bone*.

Whalebone bore anciently a very high price, when the rigid stays and the expanded hoops of our grandmothers produced an extensive demand for this commodity. The Dutch have occasionally obtained 700*l.* per ton, and were accustomed to draw 100,000*l.* annually from England for this one article. Even in 1763, it brought 500*l.*; but soon fell, and has never risen again to the same value. During the present century, the price has varied between 60*l.* and 300*l.*; seldom falling to the lowest rate, and rarely exceeding 150*l.* Mr. Scoresby reckons the price, in the 5 years ending with 1818, at 90*l.*; while at present (April, 1834), it is stated to be from 130*l.* to 145*l.* This is for what is called the *size bone*, or such pieces as measure 6 feet or upwards in length; those below this standard are usually sold at half price. It may appear singular that whalebone should rise, while oil has been so decidedly lowered; but the one change, it is obvious, causes the other. Oil, being the main product of the fishery, regulates its extent; which being diminished by the low price, the quantity of whalebone is lessened, while the demand for it continuing as great as before, the value consequently rises. — (*Polar Seas and Regions*, p. 321., *Edin. Cab. Lib.*)

It may be worth while to remark, as evincing the ignorance that at one time prevailed with respect to the whale, that, by an old feudal law, the *tail* of all whales belonged to the queen, as a perquisite, to furnish her Majesty's wardrobe with whalebone! — (*Blackstone*, vol. i. p. 233.)

**WHALE (COMMON)**, the *Balæna mysticetus* of Linnæus, a marine animal of the cetaceous species, and the largest of all those with which men are acquainted. The whale has sometimes, it is affirmed, been found 160 feet in length; but this is most probably an exaggeration. In the Northern seas, it is at present seldom found above 60 feet long: being now, however, generally killed before it arrives at its full growth, this is no proof that the animal may not formerly have attained to a much larger size. The bodies of whales are covered, immediately under the skin, with a layer of fat or *blubber*, which, in a large fish, is from 12 to 18 inches thick. In young whales, this fatty matter resembles hog's lard; but in old ones it is of a reddish colour. This is the valuable part of the whale; and the desire to possess it has prompted man to attempt the capture of this mighty animal. The blubber yields, by expression, nearly its own weight of a thick viscid oil (train oil). The common whale is now rarely found, except within the Arctic circle; but at a former period it was not infrequently met with on our coasts. There is a good account of the common whale, and of the manner in which the fishery is carried on, in Mr. John Laing's "Voyage to Spitzbergen;" one of the shortest, cheapest, and best of the innumerable books published on this hacknied subject.

The *Physeter macrocephalus*, or black-headed spermaceti whale, is chiefly found in the Southern Ocean. It usually measures about 60 feet in length, and 30 in circumference at the thickest part. The valuable part of the fish is the spongy, oily mass dug from the cavity of the head; this is crude spermaceti; and of it an ordinary sized whale will yield about 12 large barrels.

**WHALE FISHERY.** We do not propose entering, in this article, into any details as to the mode in which the fishery is carried on; but mean to confine ourselves to a brief sketch of its history, and value in a commercial point of view.

It is probably true, as has been sometimes contended, that the Norwegians occasionally captured the whale before any other European nation engaged in so perilous an enterprise. But the early efforts of the Norwegians were not conducted on any systematic plan, and should be regarded only in the same point of view as the fishing expeditions of the Esquimaux. The Biscayans were certainly the first people who prosecuted the whale fishery as a regular commercial pursuit. They carried it on with great vigour and success in the 12th, 13th, and 14th centuries. In 1261, a tithe was laid upon the tongues of whales imported into Bayonne, — they being then a highly esteemed species of food. In 1388, Edward III. relinquished to Peter de Puayanne a duty of 6*l.* sterling a whale, laid on those brought into the port of Biarritz, to indemnify him for the extraordinary expenses he had incurred in fitting out a fleet for the service of his Majesty. This fact proves beyond dispute that the fishery carried on from Biarritz at the period referred to must have been very considerable indeed; and it was also prosecuted to a great extent from Cibourre, Vieux Boucan, and subsequently from Rochelle and other places.\*

\* See *Mémoire sur l'Antiquité de la Pêche de la Baleine*, par Noel, 12mo. Paris, 1795.

The whales captured by the Biscayans were not so large as those that are taken in the Polar seas, and are supposed to have been attracted southward in pursuit of herrings. They were not very productive of oil, but their flesh was used as an article of food, and the whalebone was applied to a variety of useful purposes, and brought a very high price.

This branch of industry ceased long since, and from the same cause that has occasioned the cessation of the whale fishery in many other places—the want of fish. Whether it were that the whales, from a sense of the dangers to which they exposed themselves in coming southwards, no longer left the Icy Sea, or that the breed had been nearly destroyed, certain it is, that they gradually became less numerous in the Bay of Biscay, and at length ceased almost entirely to frequent that sea; and the fishers being obliged to pursue their prey upon the banks of Newfoundland and the coasts of Iceland, the French fishery rapidly fell off.

The voyages of the Dutch and English to the Northern Ocean, in order, if possible, to discover a passage through it to India, though they failed of their main object, laid open the haunts of the whale. The companions of Barentz, who discovered Spitzbergen in 1596, and of Hudson, who soon after explored the same seas, represented to their countrymen the amazing number of whales with which they were crowded. Vessels were in consequence fitted out for the Northern whale fishery by the English and Dutch, the harpooners and a part of the crew being Biscayans. They did not, however, confine their efforts to a fair competition with each other as fishers. The Muscovy Company obtained a royal charter, prohibiting the ships of all other nations from fishing in the seas round Spitzbergen, on pretext of its having been first discovered by Sir Hugh Willoughby. There can, however, be no doubt that Barentz, and not Sir Hugh, was its original discoverer; though, supposing that the fact had been otherwise, the attempt to exclude other nations from the surrounding seas, on such a ground, was not one that could be tolerated. The Dutch, who were at the time prompt to embark in every commercial pursuit that gave any hopes of success, eagerly entered on this new career, and sent out ships fitted equally for the purposes of fishing, and of defence against the attacks of others. The Muscovy Company having attempted to vindicate its pretensions by force, several encounters took place between their ships and those of the Dutch. The conviction at length became general, that there was room enough for all parties in the Northern seas; and in order to avoid the chance of coming into collision with each other, they parcelled Spitzbergen and the adjacent ocean into districts, which were respectively assigned to the English, Dutch, Hamburgers, French, Danes, &c.

The Dutch, being thus left to prosecute the fishery without having their attention diverted by hostile attacks, speedily acquired a decided superiority over all their competitors.

When the Europeans first began to prosecute the fishery on the coast of Spitzbergen, whales were every where found in vast numbers. Ignorant of the strength and stratagems of the formidable foe by whom they were now assailed, instead of betraying any symptoms of fear, they surrounded the ships and crowded all the bays. Their capture was in consequence a comparatively easy task, and many were killed which it was afterwards necessary to abandon, from the ships being already full.

While fish were thus easily obtained, it was the practice to boil the blubber on shore in the North, and to fetch home only the oil and whalebone. And, perhaps, nothing can give a more vivid idea of the extent and importance of the Dutch fishery in the middle of the 17th century, than the fact, that they constructed a considerable village, the houses of which were all previously prepared in Holland, on the Isle of Amsterdam, on the northern shore of Spitzbergen, to which they gave the appropriate name of *Smeerenberg* (from *smeeren*, to melt, and *berg*, a mountain). This was the grand rendezvous of the Dutch whale ships, and was amply provided with boilers, tanks, and every sort of apparatus required for preparing the oil and the bone. But this was not all. The whale fleets were attended with a number of provision ships, the cargoes of which were landed at *Smeerenberg*; which abounded during the busy season with well-furnished shops, good inns, &c.; so that many of the conveniences and enjoyments of Amsterdam were found within about 11 degrees of the Pole! It is particularly mentioned, that the sailors and others were every morning supplied with what a Dutchman regards as a very great luxury—*hot rolls* for breakfast. Batavia and *Smeerenberg* were founded nearly at the same period, and it was for a considerable time doubted whether the latter was not the more important establishment. — (*De Reste, Histoire des Pêches*, &c. tome i. p. 42.)

During the flourishing period of the Dutch fishery, the quantity of oil made in the North was so great that it could not be carried home by the whale ships; and every year vessels were sent out in ballast to assist in importing the produce of the fishery.

But the same cause that had destroyed the fishery of the Biscayans, ruined that which

was carried on in the immediate neighbourhood of Spitzbergen. Whales became gradually less common, and more and more timid and difficult to catch. They retreated first to the open seas, and then to the great banks of ice on the eastern coast of Greenland. When the site of the fishery had been thus removed to a very great distance from Spitzbergen, it was found most economical to send the blubber direct to Holland. Smeerenberg was in consequence totally deserted, and its position is now with difficulty discoverable.

But though very extensive, the Dutch whale fishery was not, during the first 30 years of its existence, very profitable. This arose from the circumstance of the right to carry it on having been conceded, in 1614, to an exclusive company. The expense inseparable from such great associations, the wastefulness and unfaithfulness of their servants, who were much more intent upon advancing their own interests than those of the company, increased the outlays so much, that the returns, great as they were, proved little more than adequate to defray them, and the fishery was confined within far narrower limits than it would otherwise have reached. But after various prolongations of the charter of the first company, and the formation of some new ones, the trade was finally thrown open in 1642. The effects of this measure were most salutary, and afford one of the most striking examples to be met with of the advantages of free competition. Within a few years the fishery was vastly extended; and though it became progressively more and more difficult from the growing scarcity of fish, it proved, notwithstanding these disadvantages, more profitable to the private adventurers than it had ever been to the company; and continued for above a century to be prosecuted with equal energy and success. The famous John de Witt has alluded as follows to this change in the mode of conducting the trade:—

"In this respect," says he, "it is worthy of observation, that the authorised Greenland Company made heretofore little profit by their fishery, because of the great charge of setting out their ships; and that the train oil, blubber, and whale fins were not well made, handled, or cured; and being brought hither and put into warehouses, were not sold soon enough, nor to the Company's best advantage. Whereas now that every one equips their vessels at the cheapest rate, follow their fishing differently, and manage all carefully, the blubber, train oil, and whale fins are employed for so many uses in several countries, that they can sell them with that convenience, that though *there are now few ships that formerly sailed out of Holland on that account*, and consequently each of them could not take as many whales as heretofore, and notwithstanding the new prohibition of France and other countries to import these commodities, and though there is greater plenty of them imported by our fishers—yet those commodities are so much raised in the value above what they were whilst there was a company, that the common inhabitants do exercise that fishery with profit, to the much greater benefit of our country than when it was (under the management of a company) carried on but by a few."—(*True Interest of Holland*, p. 63. 8vo ed. London, 1746.)

The private ships sent by the Dutch to the whale fishery were fitted out on a principle that secured the utmost economy and vigilance on the part of every one connected with them. The hull of the vessel was furnished by an individual, who commonly took upon himself the office of captain; a sail-maker supplied the sails, a cooper the casks, &c. The parties engaged as adventurers in the undertaking. The cargo being brought to Holland and disposed of, each person shared in the produce according to his proportion of the outfit. The crew was hired on the same principle; so that every one had a motive to exert himself, to see that all unnecessary expenses were avoided, and that those that were necessary were confined within the narrowest limits. This practice has been imitated to some extent in this and some other countries, but in none has it been carried so far as in Holland. It appears to us that it might be advantageously introduced into other adventures.

When in its most flourishing state, towards the year 1680, the Dutch whale fishery employed about 260 ships, and 14,000 sailors.

The English whale fishery, like that of Holland, was originally carried on by an exclusive association. The Muscovy Company was, indeed, speedily driven from the field; but it was immediately succeeded by others, that did not prove more fortunate. In 1725, the South Sea Company embarked largely in the trade, and prosecuted it for 8 years; at the end of which, having lost a large sum, they gave it up. But the legislature, having resolved to support the trade, granted, in 1732, a bounty of 20s. a ton to every ship of more than 200 tons burden engaged in it; but this premium being insufficient, it was raised, in 1749, to 40s. a ton, when a number of ships were fitted out, as much certainly in the intention of catching the bounty as of catching fish. Deceived by the prosperous appearance of the fishery, parliament imagined that it was firmly established, and in 1777 the bounty was reduced to 30s. The effects of this reduction showed the factitious nature of the trade, the vessels engaged in it having fallen off in the course of the next 5 years from 105 to 39! To arrest this alarming decline, the bounty was raised to its old level in 1781, and of course the trade was soon restored to its previous state of apparent prosperity. The hostilities occasioned by the American war reduced the Dutch fishery to less than half its previous amount, and gave a proportional extension to that of England. The bounty, which had in consequence become very heavy, was reduced, in 1787, to 30s. a ton; in 1792 it was further reduced to 25s.;

and in 1795 it was reduced to 20s., at which sum it continued till 1824, when it ceased.

It appears from accounts given in Macpherson's *Annals of Commerce* (vol. iii. p. 511., vol. iv. p. 130.), that the total bounties paid for the encouragement of the whale fishery, in the interval between 1750 and 1788, amounted to no less than 1,577,935*l.* It will be seen from the official account which follows, that there are no means of furnishing any accurate account of the sums paid as bounties from the year 1789 to 1813 inclusive; but it is, notwithstanding, abundantly certain that the total bounties paid during the period from 1789 to 1824 considerably exceeded 1,000,000*l.* Here, then, we have a sum of upwards of TWO MILLIONS AND A HALF laid out since 1750 in promoting the whale fishery. Now we believe, that if we estimate the entire average value of the gross produce of the Northern whale fishery (and it is to it only that the preceding statements apply), during the last 3 or 4 years, at 375,000*l.* a year, we shall be about the mark. But had the 2,500,000*l.* expended in bolstering up this branch of industry been laid out as capital in any ordinary employment, it would have produced 125,000*l.* a year of net profit; and deducting this sum from the above, there remains only 250,000*l.* to replace the capital wasted and ships lost in carrying on the fishery, and to afford a clear national profit! Whatever, therefore, may be the value of the whale fishery as a nursery for seamen, it is absurd to regard it as contributing any thing to the public wealth. The remark of Dr. Franklin, that he who draws a fish out of the sea draws out a piece of silver, is ever in the mouths of those who are clamouring for bounties and protection against competition. But we apprehend that even Franklin himself, sagacious as he was, would have found it rather difficult to show how the wealth of those is to be increased, who, in fishing up one piece of silver, are obliged to throw another of equal value into the sea. We subjoin

An Account of the Number of Ships annually fitted out in Great Britain for the Northern Whale Fishery, of the Tonnage and Crews of such Ships, and of the Bounties paid on their Account, from 1789 to 1824.

It is not even certain whether the expenditure of 2,500,000*l.* upon bounties would really have had the effect of establishing the whale fishery upon a solid foundation, but for the occupation of Holland by the French, and the consequent hostilities in which she was involved with this country. These did more to promote and consolidate the British fishery than any thing else. The war entirely annihilated that of the Dutch: and our government having wisely offered to the fishers of Holland all the immunities enjoyed by the citizens of Great Britain in the event of their settling amongst us, many availed themselves of the invitation, bringing with them their capital, industry, and skill. In consequence of this signal encouragement, the whale fishery of England was prosecuted with greater success than at any previous period: and at the termination of the late war, in 1815, there were 134 valuable ships and about 5,800 seamen engaged in the Northern fishery, and about 30 ships and 800 men in that to the South.

After peace was restored, the English capitalists and others became apprehensive lest the Dutch should engage anew with their ancient vigour and success in the whale fishery. But these apprehensions were without any real foundation. The Hollanders, during the 30 years they had been excluded from the sea, had lost all that practical acquaintance with the details of the fishery, for which they had long been so famous, and which is so essential to its success. The government attempted to rouse their dormant energies by the offer of considerable premiums and other advantages to those who embarked in the trade. Three companies were in consequence formed for carrying it on; 1 at Rotterdam, 1 at Harlingen, and 1 in South Holland. But their efforts have been very limited, and altogether unfortunate. In 1826, the company of South Holland was dissolved, while that of Harlingen despatched 4 ships, and that of

Rotterdam 2. In 1827, Rotterdam sent only 1 ship, and Harlingen 2; and in 1828, 1 solitary ship sailed from Holland — a feeble and last effort of the company of Harlingen!

Such has been the fate of the Dutch whale fishery. The attempts to revive it failed, not because the ships sent out were ill calculated for the service, but because they were manned by unskilful seamen. In the early ages of the fishery, this difficulty would have been got over, because, owing to the fewness of competitors, and the scanty supply of oil and whalebone, even a small cargo brought a high price; but at present, when the fishery is prosecuted on a very large scale and at a very low rate of profit by the English, the Americans, the Hamburgers, &c., no new competitor coming into the field could expect to maintain himself unless he had nearly equal advantages. The Dutch have, therefore, done wisely in withdrawing from the trade. Any attempt to establish it by the aid of bounties and other artificial encouragements would be one of which the ultimate success must be very doubtful, and which could lead to no really useful result. During the 20 years preceding the late French war, the fishery of Holland was gradually declining, and had, in a great measure, ceased to be profitable. It would be folly to endeavour to raise anew, and at a great expense, a branch of industry that had become unproductive at a former period, when there is no ground for supposing that it would be more productive at this moment.

We have already noticed several changes of the localities in which the whale fishery has been carried on at different periods; within these few years another has taken place even more important. The seas between Spitzbergen and Greenland are now nearly abandoned by the whalers, who resort in preference to Davis's Straits and Baffin's Bay, or to the sea which washes the coast of West Greenland. The Dutch fishers first began to frequent Davis's Straits in 1719; and as the whales had not hitherto been pursued into that recess, they were found in greater numbers than in the seas round Spitzbergen. Even about this period it was usually resorted to by about 3-10ths of the Dutch ships. It was not till a comparatively late period that Davis's Straits began to be frequented by English whalers; and even so late as 1820, when Captain Scoresby published his elaborate and valuable work on the whale fishery, that carried on in the Greenland seas was by far the most considerable. But within the last few years, the Greenland fishery has been almost entirely deserted. The various discoveries made by the expeditions recently fitted out by government for exploring the seas and inlets to the westward of Davis's Straits and Baffin's Bay, have made the fishers acquainted with several new and advantageous situations for the prosecution of their business. What further revolutions the fishery may be destined to undergo, it is impossible to foresee; but there can be little doubt that the same results that have happened elsewhere will happen in Davis's Straits, and that it will be necessary to pursue the whale to new and, perhaps, still more inaccessible haunts.

The sea in Davis's Straits is less incommoded with field ice than the Greenland and Spitzbergen seas, but it abounds with icebergs; and the fishery, when carried on in Baffin's Bay and Lancaster Sound, is more dangerous, perhaps, than any that has hitherto been attempted.

The following Table gives a view of the produce of the Northern whale fishery during the 3 years ending with 1827:—

| Years. | No. of Ships despatched. | No. of Whales captured. | Quantity of Oil. |       | Quantity of Whalebone. |
|--------|--------------------------|-------------------------|------------------|-------|------------------------|
|        |                          |                         | Tons.            | Tons. | Tons.                  |
| 1825   | 110                      | 501                     | 6,597            | 360   |                        |
| 1826   | 94                       | 510                     | 7,087            | 390   |                        |
| 1827   | 88                       | 1,155                   | 13,179           | 732   |                        |

It appears from this and the previous Table, that the number of ships sent out has declined nearly one half since 1820. The bounty was repealed in 1824, and the ships fitted out have since fallen off in the ratio of 112 to 88 or 90. This is a sufficient proof of the insecure foundation on which the trade had previously rested.

The whale fishery has for a lengthened period partaken more of the nature of a gambling adventure than of a regular industrious pursuit. Sometimes the ships do not get half a cargo, and sometimes they come home *clean*. The risk of shipwreck is also very considerable. It appears from Mr. Scoresby's Tables (vol. ii. p. 131.), that of 586 ships sent to the North during the 4 years ending with 1817, eight were lost. This period was, however, uncommonly free from disaster. It would seem, too, that the risk of shipwreck is greater in Davis's Straits than in the seas to the east of Greenland. In 1819, of 63 ships sent to Davis's Straits, no fewer than 10 were lost; in 1821, out of 79 ships, 11 were lost; and in 1822, out of 60 ships, 7 were lost. But 1830 has in this respect been the most disastrous. — Of 87 ships that sailed for Davis's Straits, no less than 18, or 22 per cent. of the whole, were totally lost; 24 returned *clean*, or without having caught a single fish; and of the remainder, not 1 had a full cargo, only

# WHALE FISHERY.

1243

1 or 2 being *half fished*! If we estimate the value of the ships cast away, including the outfit, at 7,000*l.* each, the loss from shipwreck only will be 126,000*l.* The following Table exhibits a detailed account of the fishery in 1832:—

Account of the Northern Whale Fishery in 1832; exhibiting the Number and Tonnage of the Ships sent out by each Port, with the Number of Fish taken, and the Quantity of Oil and Bone.

| Ports.        | No. of Ships. | Tonnage.      | Fish.        | Oil.          | Bone.      |            |

*Estimated Value.*—12,610 tons of oil, at 20*l.*, 252,200*l.*; 676 tons of whalebone, at 12*l.*, 81,120*l.*; making in all, 336,700*l.*

There has been a somewhat singular change in the ports from which the fishery is chiefly carried on. In London were undertaken all the discoveries which led to its establishment; and for some time a complete monopoly was enjoyed by the great companies formed in that city. Even between the years 1780 and 1790, the metropolis sent out 4 times the number of vessels that sailed from any other port. It was observed, however, that her fishery was, on the whole, less fortunate than that of the new rivals which had sprung up; and her merchants were so much discouraged, that in Mr. Scoresby's time they equipped only 17 or 18 vessels. They have since almost entirely abandoned the trade, employing in 1832 not more than 3 ships.

Hull early became a rival to London, having sent out vessels at the very commencement of the fishery. Although checked at first by the monopoly of the great companies, as soon as the trade became free she prosecuted it with distinguished success. In the end of the last century, that town attained, and has ever since preserved, the character of the first whale-fishing port in Britain.

Whitby engaged in this pursuit in 1753, and carried it on for some time with more than common success; but her operations have since been much limited. Liverpool, after embarking in the undertaking with spirit, has now entirely relinquished it. Meantime the eastern ports of Scotland have steadily carried on, and even extended, their transactions, while those of the country at large were diminishing. The increase has been most remarkable at Peterhead; and indeed this town, as compared especially with London, must derive a great advantage from avoiding, both in the outward and homeward voyages, 600 miles of somewhat difficult navigation.

The following summary has been collected from Mr. Scoresby, as the average quantity of shipping fitted out in the different ports for 9 years, ending with 1818; and the comparison of it with the number sent out in 1832 will show the present state of the trade:—

| Average of<br>1810—18. |    | 1832. |                        | Average of<br>1810—18. |           | 1832. |  |

Hardly a ship now goes to Greenland.

We have already seen that, as a source of national wealth, the whale fishery is of exceedingly little importance. Neither does it seem to be of so much consequence as a nursery for seamen as is commonly supposed. The number employed in the Northern fishery does not exceed 4,500; and it may be doubted whether the casualties to which they are exposed do not, in a public point of view, more than balance the increased skill and hardihood they acquire in so perilous an occupation.

There seems no reason to apprehend any deficiency in the supply of oil from a falling off in the fishery. We have seen from the foregoing statements, that the fish oil imported in 1832 amounted to 12,610 tons. But at present nearly half this quantity of olive oil is annually imported; and as olive oil is loaded with a duty of 8*l.* 8*s.* a tun, it is obvious that if this duty were reduced, as it ought to be, to 2*l.* or 3*l.* a tun, the increased quantity imported would go far to balance any falling off in the supply of train oil. When a coarser species is required, rape and linseed oil may be advantageously substituted for that of the whale. Tallow may also be applied to several purposes, to the exclusion of train oil. Although, therefore, the whale fishery should decline, we need not fear that any material injury will thence arise to the industry of the country: and it would be most impolitic to attempt to bolster it up, either by resorting to the exploded

system of bounties, or by laying heavy duties on oil or tallow imported from other countries.

The South Sea fishery was not prosecuted by the English till about the beginning of the American war: and as the Americans had already entered on it with vigour and success, 4 American harpooners were sent out in each vessel. In 1791, 75 whale ships were sent to the South Sea; but the number has not been so great since. In 1829, only 31 ships were sent out, of the burden of 10,997 tons, and carrying 937 men. The *Macrocephalus*, or spermaceti whale, is particularly abundant in the neighbourhood of the Spice Islands; and Mr. Crawford, in his valuable work on the *Eastern Archipelago*, (vol. iii. p. 447.), has entered into some details to show that the fishery carried on there is of greater importance than the spice trade. Unluckily, however, the statements on which Mr. Crawford founded his comparisons were entirely erroneous, neither the ships nor the men employed amounting to more than 1-5th or 1-6th part of what he has represented.

But errors of this sort abound in the works of those who had better means of coming at the truth. Mr. Barrow, in an article on the fisheries, in the *Supplement to the Encyclopædia Britannica*, states the number of ships fitted out for the Northern whale fishery in 1814 at 143, and their crews at 7,150; and he further states the number of ships fitted out for the Southern fishery in 1815 at 107, and their crews at 3,210. In point of fact, however, only 112 whale ships cleared out for the North in 1814, carrying 4,708 men; and in 1815, only 22 whale ships cleared out for the South, carrying 592 men! How Mr. Barrow, who has access to official documents, should have given the sanction of his authority to so erroneous an estimate, we know not. In the same article, Mr. Barrow estimates the entire annual value of the British fisheries of all sorts at 8,300,000*l.* But it might be very easily shown that, in rating it at 3,500,000*l.*, we should certainly be up to the mark, or rather, perhaps, beyond it. — (See FISH.)

We annex a detailed account of the progress of the Southern whale fishery since 1814.

An Account of the Number of Ships annually fitted out in Great Britain, with their Tonnage and Crews, for the Southern Whale Fishery, and of the Bounties on their Account, from 1814 to 1824, both inclusive.

| Years. | Ships. | Tons.  | Men.  | Bounties paid. | Years. | Ships. | Tons.  | Men.  | Bounties paid. |
|--------|--------|--------|-------|----------------|--------|--------|--------|-------|----------------|

Office of Registrar General of Shipping,  
Custom-house, London, Dec. 16, 1830.

JOHN COVEY,  
Reg. Gen. of Shipping.

*American Whale Fishery.* — For a lengthened period, the Americans have prosecuted the whale fishery with greater vigour and success than, perhaps, any other people. They commenced it in 1690, and for about 50 years found an ample supply of fish on their own shores. But the whale having abandoned them, the American navigators entered with extraordinary ardour into the fisheries carried on in the Northern and Southern Oceans. From 1778 to 1775, Massachusetts employed annually 183 vessels, carrying 13,820 tons, in the former; and 121 vessels, carrying 14,026 tons, in the latter. Mr. Burke, in his famous speech on American affairs in 1774, adverted to this wonderful display of daring enterprise as follows: —

“As to the wealth,” said he, “which the colonists have drawn from the sea by their fisheries, you had all that matter fully opened at your bar. You surely thought these acquisitions of value, for they seemed to excite your envy; and yet the spirit by which that enterprising employment has been exercised ought rather, in my opinion, to have raised esteem and admiration. And pray, Sir, what in the world is equal to it? Pass by the other parts, and look at the manner in which the New England people carry on the whale fishery. While we follow them among the trembling mountains of ice, and behold them penetrating into the deepest frozen recesses of Hudson’s Bay and Davis’s Straits; while we are looking for them beneath the Arctic circle, we hear that they have pierced into the opposite region of polar cold; that they are at the antipodes, and engaged under the frozen serpent of the South. Falkland Island, which seemed too remote and too romantic an object for the grasp of national ambition, is but a stage and resting-place for their victorious industry. Nor is the equinoctial heat more discouraging to them than the accumulated winter of both poles. We learn, that while some of them draw the line or strike the

harpoon on the coast of Africa, others run the longitude and pursue their gigantic game along the coast of Brazil. No sea, but what is vexed with their fisheries. No climate that is not witness of their toils. English enterprise, ever carried this most perilous mode of hardy industry to the extent to which it manhood."

The unfortunate war that broke out soon after this speech was delivered, checked for a while the progress of the fishery; but it was resumed with renewed vigour as soon as peace was restored. The American fishery has been principally carried on from Nantucket and New Bedford in Massachusetts; and for a considerable time past the ships have mostly resorted to the Southern seas. "Although," says Mr. Pitkin, "Great Britain has, at various times, given large bounties to her ships employed in this fishery, yet the whalers of Nantucket and New Bedford, unprotected and unsupported by any thing but their own industry and enterprise, have generally been able to meet their competitors in a foreign market." — (*Commerce of the United States*, 2d ed. p. 46.) The following statement may not be uninteresting.

Account of Vessels at Sea, from the United States, employed in the Southern, or Sperm Whale Fishery, on the 1st of January, 1833.

| Owned in Massachusetts.         |          | Owned in other States.       |          |
|---------------------------------|----------|------------------------------|----------|
|                                 | Vessels. |                              | Vessels. |
| At New Bedford and Fairhaven    | 90       | At New London, Con.          | 18       |

| Total absent from Massachusetts | 166      | Total Owned in Massachusetts | 37       |
|                                 |          | Total                        | 203      |

The produce in oil, of the sperm whale fishery, in 1832, was as follows: —

| Barrels.                                    |        | Barrels.                               |         |
|---|--------|--|---------|
| Imported in ships from the Pacific Ocean, — |        | At Sag Harbour                         | 1,000   |
| At New Bedford and Fairhaven                | 30,476 | Bristol                                | 200     |
| Nantucket                                   | 30,450 | Warren                                 | 225     |
| Newport                                     | 4,120  | Sent home by various merchant ships    | 2,000   |
| Plymouth                                    | 2,120  | Taken in the Atlantic by small vessels | 1,500   |
| Imported in ships from the Brazils, —       |        | Total of sperm oil in 1832             | 78,749  |
| At New Bedford                              | 5,550  | Imported in 1831                       | 107,752 |
| New London                                  | 703    |  |         |
| Nantucket                                   | 407    |  |         |

*French Whale Fishery.* — France, which preceded the other nations of Europe in the whale fishery, can hardly be said, for many years past, to have had any share in it. In 1784, Louis XVI. endeavoured to revive it. With this view he fitted out 6 ships at Dunkirk on his own account, which were furnished with harpooners and a number of experienced seamen brought at a great expense from Nantucket. The adventure was more successful than could have been reasonably expected, considering the auspices under which it was carried on. Several private individuals followed the example of his Majesty, and in 1790 France had about 40 ships employed in the fishery. The revolutionary war destroyed every vestige of this rising trade. Since the peace, the government has made great efforts for its renewal, but hitherto without much success. At present there are only from 12 to 15 ships engaged in the fishery.

(This article has been principally taken from the *Foreign Quarterly Review*, No. 14., to which publication it was contributed by the author of this work.)

**WHARF**, a sort of quay, constructed of wood or stone, on the margin of a roadstead or harbour, alongside of which ships or lighters are brought for the sake of being conveniently loaded or unloaded.

There are 2 denominations of wharfs, viz. *legal quays* and *sufferance wharfs*. The former are certain wharfs in all sea-ports, at which all goods are required by the 1 Eliz. c. 11. to be landed and shipped; and they were set out for that purpose by commission from the Court of Exchequer, in the reign of Charles II. and subsequent sovereigns. Many others have been legalised by act of parliament. In some ports, as Chepstow, Gloucester, &c. certain wharfs are deemed legal quays by immemorial practice, though not set out by commission, or legalised by act of parliament.

Sufferance wharfs are places where certain goods may be landed and shipped; such as hemp, flax, coal, and other bulky goods; by special sufferance granted by the Crown for that purpose.

**WHARFAGE**, the fee paid for landing goods on a wharf, or for shipping them off. The stat. 22 Chas. 2. c. 11., after providing for the establishment of wharfs and quays, makes it lawful for any person to lade or unlade goods, on paying wharfage and cranage at the rates appointed by the king in council.

**WHEAT** (Ger. *Weitzen*; Du. *Tarw*; Da. *Hvede*; Sw. *Hvete*; Fr. *Froment*, *Bled*, *Blé*; It. *Grano*, *Formento*; Sp. and Port. *Trigo*; Rus. *Pscheniza*; Pol. *Pszenica*) a species of bread corn (*Triticum Lin.*), by far the most important of any cultivated in Europe. We are totally ignorant of the country whence this valuable grain was first derived; but it was very early cultivated in Sicily. It is raised in almost every part

of the temperate zones, and in some places as high as 2,000 feet above the level of the sea.

The kinds of wheat sown are numerous, but they may be classed under 4 heads: viz. cone or bearded wheat, which, however, is now little cultivated; white wheat, of which there are innumerable varieties, the *white Dantzic* being considered one of the best; red wheat, which is seldom sown where the climate is good and early, and the land in proper condition; and spring wheat. A greater number of people are nourished by rice than by wheat; but owing to the greater quantity of gluten which the latter contains, it makes by far the best bread. Rye comes nearer to wheat in its bread-making qualities than any other sort of grain; still, however, it is very inferior to it. The finest samples of wheat are small in the berry, thin skinned, fresh, plump, and bright, slipping readily through the fingers.

Being very extensively cultivated on soils of very various qualities, and frequently with very imperfect preparation, the produce of wheat crops in Great Britain varies from about 12 to 56 bushels per acre.

The counties most distinguished for the quantity and quality of their wheat are, Kent, Essex, Suffolk, Rutland, Hertfordshire, Berkshire, Hampshire, and Herefordshire, in England; and Berwickshire, and the Lothians, in Scotland. In the northern counties it is, speaking generally, of an inferior quality; being cold to the feel, dark coloured, thick skinned, and yielding comparatively little flour. In the best wheat counties, and in good years, the weight of a Winchester bushel of wheat is from 60 to 62 lbs. In the Isle of Sheppey, in Kent (where, perhaps, the best samples of wheat sent to the London market are produced), this grain, in some favourable seasons, weighs 64 lbs. a bushel. Where the climate is colder, wetter, or more backward, or in bad seasons, the weight of the bushel of wheat is not more than 56 or 57 lbs. It is calculated that the average weight of the bushel of good English wheat is 58½ lbs.; and that the average yield of flour is 13 lbs. of flour to 14 lbs. of grain. — (See Mr. Stevenson's very valuable article on *England*, in *Brewster's Encyclopædia*, vol. viii. p. 720; *Loudon's Ency. of Agriculture*, &c.)

For a view of the regulations with respect to the importation and exportation of wheat, &c., see CORN LAWS AND CORN TRADE. The price of wheat in 1833 was 52s. 11d. per quarter.

WHISKY, a spirit obtained by distillation from corn, sugar, or molasses, though generally from the former. Whisky is the *national spirit*, if we may so term it, of Scotland and Ireland; but that distilled in the former is generally reckoned superior to that of the latter. — (See SPIRITS.)

WINE (Ger. *Wein*; Fr. *Vin*; It. and Sp. *Vino*; Port. *Vinho*; Rus. *Wino*, *Wino-gradnoe winoe*; Lat. *Vinum*; Gr. *Ovos*; Arab. *Khumr*), the fermented juice of the grape, or berries of the vine (*Vitis vinifera*).

The vine is indigenous to Persia and the Levant; but it is now found in most temperate regions. The limits within which it is cultivated in the northern hemisphere of the Old World vary from about 15° to 48° and 52°; but in North America it is not cultivated farther north than 38° or 40°. It is rarely grown at a greater altitude than 3,000 feet. From Asia the vine was introduced into Greece, and thence into Italy. The Phœceans, who founded Marseilles, carried the vine to the south of France; but it is doubtful whether it was introduced into Burgundy till the age of the Antonines.\* The species of *Vitis* indigenous to North America is very different from the *Vitis vinifera*. In favourable seasons, the vine ripens in the open air in England; and in the eleventh and twelfth centuries, considerable quantities of inferior wine were made from native grapes. Vineyards are now, however, unknown in this country; but the grapes raised in hot-houses, and used in desserts, are excellent.

The vine grows in every sort of soil; but that which is light and gravelly seems best suited for the production of fine wines. It succeeds extremely well in volcanic countries. The best wines of Italy are produced in the neighbourhood of Vesuvius; the famous Tokay wine is also made in a volcanic district, as are several of the best French wines; many parts of the south of France bearing evident marks of extinct volcanoes. Hermitage is grown among the *débris* of granite rocks. The most favourable situation for a vineyard is upon a rising ground or hill facing the south-east, and the situation should not be too confined;

————— apertos  
Bacchus amat colles.

The art of expressing and fermenting the juice of the grape appears to have been practised from the remotest antiquity. The sacred writings tell us that Noah planted a vine-

\* The ancient writers give the most contradictory accounts with respect to the introduction of the vine into Gaul. — (See the learned and excellent work of Le Grand d'Aussy, *Vie Privée des Français* tome li. pp. 329—333.) The statement given above seems the most probable.

yard soon after the deluge — (*Gen. ix. 20.*); and a modern Latin poet ingeniously represents the vine as a gift from Heaven, to console mankind for the miseries entailed upon them by that grand catastrophe!

Omnia vastatis ergo quum cerneret arvis  
Desolata Deus, nobis felicia vini  
Dona dedit; tristes hominum quo munere fovit  
Reliquias, mundi solatus vite ruinam!

*Vanicrii Præd. Rusticum, lib. xi.*

*Species of Wine.* — There are many varieties of vines; and this circumstance, combined with differences of soil, climate, mode of preparation, &c., occasions an extreme variety in the species of wine. But even between places immediately contiguous to each other, and where a cursory observer would hardly remark any difference, the qualities of the wines, though produced by the same species of grape, and treated in the same way, are often very different. A great deal evidently depends upon the aspect of the vineyard; and it is probable that a good deal depends on peculiarities of soil. But whatever may be the cause, it is certain that there are wines raised in a few limited districts, such as Tokay, Johannisberger, Constantia, the best Burgundy, Champagne, claret, &c., that no art or care has hitherto succeeded in producing of equal goodness in other places.

*ANCIENT WINES.* — The wines of Lesbos and Chios among the Greeks, and the Falernian and Ceeban among the Romans, have acquired an immortality of renown. Great uncertainty, however, prevails as to the nature of these wines. Dr. Henderson thinks that the most celebrated of them all, the Falernian, approached, in its most essential characters, near to Madeira. In preparing their wines, the ancients often inspissated them till they became of the consistence of honey, or even thicker. These were diluted with water previously to their being drunk; and, indeed, the habit of mixing wine with water seems to have prevailed much more in antiquity than in modern times.

*MODERN WINES.* — The principal wines made use of in this country are port, sherry, claret, Champagne, Madeira, hock, Marsala, Cape, &c.

*Port,* — the wine most commonly used in England, — is produced in the province of Upper Douro, in Portugal; and is shipped at Oporto, whence its name. When it arrives in this country, it is of a dark purple or inky colour; has a full, rough body, with an astringent bitter-sweet taste, and a strong flavour and odour of brandy. After it has remained some years longer in the wood, the sweetness, roughness, and astringency of the flavour abate; but it is only after it has been kept 10 or 15 years in bottle, that the odour of the brandy is completely subdued, and the genuine aroma of the wine developed. When kept to too great an age, it becomes tawny, and loses its peculiar flavour. During the process of melioration, a considerable portion of the extractive and colouring matter is precipitated on the sides of the vessels in the form of crust. In some wines this change occurs much earlier than in others.

A large quantity of brandy is always mixed with the wine shipped from Oporto for England. Genuine unmixed port wine is very rarely met with in this country. We have been so long accustomed to the compounded article, that, were it possible to procure it unmixed, it is doubtful whether it would be at all suited to our taste. According to Mr. Brande's analysis, on which, however, owing to the differences in the quality of the wine, no great stress can be laid, port, as used in England, contains about 23 per cent. of alcohol. In 1833, 2,596,530 gallons of port were retained for consumption in the United Kingdom.

*Oporto Wine Company.* — The quality of the wine shipped from Oporto has been materially injured by the monopoly so long enjoyed by the Oporto Wine Company. This company was founded in 1756, during the administration of the Marquis Pombal. A certain extent of territory is marked out by its charter as the only district on the Douro in which wine is to be raised for exportation: the entire and absolute disposal of the wines raised in this district is placed in the hands of the Company; who are further authorised to fix the prices to be paid for them to the cultivators, to prepare them for exportation, and to fix the price at which they shall be sold to foreigners! It is obvious that a company with such powers cannot be any thing else than an intolerable nuisance. What could be more arbitrary and unjust than to interdict the export of all wines raised out of the limits of the Company's territory? But even in its own district, its proceedings have been most oppressive and injurious. The Company annually fix, by a fiat of their own, 2 rates of prices — one for the *vinho de feitoria*, or wine for exportation, and the other for *vinho de re*, or wine for home consumption — at which the cultivators are to be paid, *whatever may be the quality of their wines!* They have, therefore, no motive to exert superior skill and ingenuity; but content themselves with endeavouring to raise, at the least possible expense, the greatest supply of *vinho de feitoria*, for which the Company allow the highest price. All emulation is thus effectually extinguished, and the proprietors who possess vineyards of a superior quality invariably adulterate their wines with inferior growths, so as to reduce them to the average standard. "In this way," says Dr. Henderson, "the finer products of the Douro vintages have remained in a great measure unknown to us: and port wine has come to be considered as a single liquor, if I may use the expression, of nearly uniform flavour and strength; varying, it is true, to a certain extent in quality, but still always approaching to a definite standard, and admitting of few degrees of excellence. The manipulations, the admixtures — in one word, the *adulterations* — to which the best wines of the Cimo do Douro are subjected, have much the same effect as if all the growths of Burgundy were to be mingled in one immense vat, and sent into the world as the only true Burgundian wine. The delicious produce of Romanée, Chambertin, and the Clos Vougeot, would disappear, and in their places we should find nothing better than a second-rate Beaune or Macon wine." — (*History of Ancient and Modern Wines*, p. 210.)

Not only, however, have the Oporto Wine Company deteriorated the quality, but they have also raised the price of their wines to an enormous height. Secured against the competition of their countrymen, and enjoying, down to 1831, a nearly absolute monopoly of the British markets by means of the high duties on French wines, they have filled their pockets at our expense. At the very moment when the Company have been shipping wine for England at 40*l.* a pipe, they have frequently shipped the same wine to other countries at 20*l.*! — (*Fleetwood Williams on the Wine Trade.*) And the authentic Tables published by Dalbi show that the price of wine has been trebled or quadrupled under the management of this corporation. — (*Essai Statistique sur le Royaume de Portugal, tome I. p. 157.*)

But though the abuses inherent in the constitution of the Company have been carried of late years to an enormous extent, it is long since its injurious effects on the commerce of this country were distinctly perceived and pointed out. So far back as 1767, the Board of Trade laid a memorial before his Majesty in council, in which they state, "With respect to many particular regulations of the Oporto Company, which we think justly objected to by the merchants as highly grievous and oppressive, we have not thought it necessary to enter into a minute description of them, being of opinion that one general and fatal objection lies against them all; viz. — that they all contribute to establish in the Company a monopoly against your Majesty's subjects, from which by treaty they have a right to be exempted."

But notwithstanding this authoritative exposition of the injury done to the English by this monopoly, and the experience which every subsequent year afforded of its mischievous influence, such has been the inveteracy of ancient prejudice, that it was not till the session of 1831 that we took the only step by which we could hope to rid ourselves of its evils, as well as of a host of others, by equalising the duties on French and Portuguese wines, and putting an end to the absurd and injurious preference in favour of the latter established by the Methuen treaty.

England and Brazil are the only countries to which any considerable quantity of port wine is exported. Our imports amounted, at an average of the 10 years ending with 1833, to 22,121 pipes a year; of which, however, a portion is subsequently exported; while the exports from Portugal to all other countries, Brazil inclusive, have not recently amounted to 3,000 pipes. It has been supposed, now that there is no discriminating duty in favour of port, that its consumption in this country will gradually fall off, its place being filled by French and other wines; but though such a result be not improbable, it derives no confirmation from the pretty gradual decrease in the quantities of port retained for home use since 1827, the French wines retained for the same purpose having declined still more rapidly.

Sherry is of a deep amber colour; when good, it has a fine aromatic odour; its taste is warm, with some degree of the agreeable bitterness of the peach kernel. When new, it tastes harsh and fiery; it is mellowed by being allowed to remain 4 or 5 years or longer in the wood; but it does not attain to its full flavour and perfection until it is kept for 15 or 20 years. It is a very strong wine, containing about 19 per cent. of alcohol. It is principally produced in the vicinity of Xeres, not far from Cadiz, in Spain. It is very extensively used in this country as a dinner wine. Dry sherry, or *amontillado*, when genuine and old, fetches a very high price. Perhaps no wine is so much adulterated as sherry. With the exception of Marsala, the consumption of sherry has been far more influenced than that of any other wine by the reduction of the duties in 1825. In 1833, the quantity retained for home consumption amounted to 2,246,085 gallons, being more than double the quantity retained for consumption at an average of 1823 and 1824! — (*See post.*)

*Claret*, — the term generally used in England to designate the red wines, the produce of the Bordelais. Of these, Lafitte, Latour, Château-Margaux, and Haut-Brion, are so generally esteemed, that they always sell from 20 to 25 per cent. higher than any others of the province. The first mentioned is the most choice and delicate, and is characterised by its silky softness on the palate, and its charming perfume, which partakes of the nature of the violet and the raspberry. The Latour has a fuller body, and at the same time a considerable aroma, but wants the softness of the Lafitte. The Château-Margaux, on the other hand, is lighter, and possesses all the delicate qualities of the Lafitte, except that it has not quite so high a flavour. The Haut-Brion, again, has more spirit and body than any of the preceding, but is rough when new, and requires to be kept 6 or 7 years in the wood; while the others become fit for bottling in much less time.

Among the second-rate wines, that of Rozan, in the parish of St. Margaux, approaches in some respects to the growth of the Château-Margaux; while that of Gorce, in the same territory, is little inferior to the Latour; and the vineyards of Leoville, Larose, Bran-mouton, and Pichon-Longueville, in the canton of Pauillac, afford light wines of good flavour, which, in favourable years, have much of the excellence of the finer growths. In the Entre-deux-Mers, the wines of Canon and St. Emilion, in the vicinity of Libourne, are deemed the best, being of a full body and very durable. When new, these wines are always harsh and astringent; but they acquire an agreeable softness, and are characterised by a peculiar flavour, which has been not unaptly compared to the smell of burning wax. The aroma of the first growths is seldom fully developed till at least they have been kept 8 or 9 years: but the secondary qualities come to perfection a year or two sooner. The colour often grows darker as the wine advances in age, in consequence of the deposition of a portion of its tartar; but, when well made, and thoroughly fined, it seldom deposits any crust.

(These particulars are borrowed from the excellent work of Dr. Henderson, on *Ancient and Modern Wines* (p. 184.). We have given, in a previous article — (*see BORDEAUX*), — full and authentic details as to the trade in claret. We beg, also, to refer the reader to that article for some observations on the wine trade of France, and on the injury done to it by the restrictive system of commerce.)

There is generally a very good supply of claret in bond in the docks in London. Its price varies from about 15*l.* per hogshead for the inferior, to 50*l.* and 55*l.* per hogshead for the superior growths. What are called cargo or shipping clarets may be bought at from 1*l.* to 10*l.* per hogshead. The finest case claret sells in bond at about 50*s.* per dozen; but parcels of very well flavoured wine may be bought at 25*s.*

*Champagne*, — so called from the province of France of which it is the produce, — is one of the most deservedly esteemed of the French wines. The wines of Champagne are divided into the 2 grand chasses of white and red wines; and each of these again into still and sparkling; but there is a great variety in the flavour of the produce of different vineyards. Sillery is universally allowed to be the best of the still wines. It is dry, of a light amber colour, has a considerable body, and a charming aroma. "Le corps," (says M. Jullien,) "le spiritueux, le charmant bouquet, et les vertus toniques dont il est pourvu, lui assurent la priorité sur tous les autres." — (*Topographie de tous les Vignobles*, p. 30.) Dr. Henderson agrees with M. Jullien, in considering it as one of the wholesomest of the Champagne wines. The sparkling wines are, however, the most popular, at least in this country. Of these, the wine of Ay, 5 leagues south from Rheims, is, perhaps, the best. It is lighter and sweeter than Sillery, and has an exquisite flavour and aroma. That which merely crems on the surface (*deuxi-mousseux*) is preferred to the full frothing wine (*grand-mousseux*). Being bright, clear, and sparkling, it is as pleasing to the eye as it is grateful to the palate.

"Cernis micanti concolor ut vitro  
Latex in auras, gemmeus apicis,  
Scintillet extincti; utque dulces  
Naribus illecebras propinet

"Succel latentis proditor halitus!  
Ut spuma motu lactea turbido  
Crystallinum letis ferre  
Mox oculis properet nitorem."

Hautvilliers, about 4 leagues from Rheims and 1 from Epernay, used formerly to produce wine that equalled, and sometimes surpassed, the wine of Ay. But it is no longer cultivated with the same care; so that, though still very good, it now only ranks in the 2d class.

The best of the red wines of Champagne are those of Verzy, Verzenay, Mailly, Bouzy, and St. Basle. "Ils ont une belle couleur, du corps, du spiritueux, et surtout beaucoup de finesse, de sève, et de bouquet." — (*Jullien*, p. 27.) The Clos St. Thierry, in the vicinity of Rheims, produces wine which, according to M. Jullien, unites the colour and the aroma of Burgundy to the lightness of Champagne.

The province of Champagne produces altogether about 1,100,000 hectolitres of wine; of which, however, the finest growths make but a small part. The principal trade in wine is carried on at Rheims, Avise, and Epernay. The vaults in which the vintages are stored are excavated in a rock of calcareous tufa to the depth of 30 or 40 feet. Those of M. Moët, at Epernay, are the most extensive, and few travellers pass through the place without going to see them. The briskest wines (*grands-mousseux*) keep the worst. — (*Jullien*, p. 34.)

*Burgundy*. — The best wines of this province, though not so popular in England as those of Champagne, enjoy the highest reputation. "In richness of flavour and perfume, and all the more delicate qualities of the juice of the grape, they unquestionably rank as the first in the world; and it was not without reason that the dukes of Burgundy, in former times, were designated as the *princes des bons vins*." — (*Henderson*, p. 161.) M. Jullien is not less decided: — "Les vins des premiers crus, lorsqu'ils proviennent d'une bonne année, réunissent, dans de justes proportions, toutes les qualités qui constituent les vins parfaits; ils n'ont besoin d'aucun mélange, d'aucune préparation, pour attendre leur plus haut degré de perfection. Ces opérations, que l'on qualifie dans certains pays de *soins qui aident* à la qualité, sont toujours nuisibles aux vins de Bourgogne." — (p. 104.)

Romané-Conti, Chambertin, the Clos Vougeôt, and Richebourg, are the most celebrated of the *ten* wines of Burgundy. Chambertin was the favourite wine of Louis XIV. and of Napoleon. It is the produce of a vineyard of that name, situated 7 miles to the south of Dijon, and furnishing each year from 130 to 150 puncheons, from an extent of about 65 acres. It has a fuller body and colour, and greater durability, than the Romané, with an aroma nearly as fragrant.

The white wines of Burgundy are less numerous, and, consequently, less generally known, than the others: but they maintain the highest rank among French white wines, and are not inferior to the red either in aroma or flavour.

The entire annual produce of wine in Burgundy and Beaujolais may at present be estimated, at an average, at nearly 3,000,000 hectolitres, of which about 750,000 suffice for the consumption of the inhabitants. Since the Revolution, the cultivation of the vine has been greatly extended in the province. Many of the new vineyards having necessarily been planted in comparatively unfavourable situations, a notion has been gaining ground that the wines of Burgundy were degenerating. This, however, is

not the case. On the contrary, the quantity of *bons crus*, instead of being diminished, has increased considerably; though, as the supply of inferior wines has increased in a still greater degree, the fine wines bear a less proportion to the whole than they did previously to the Revolution. —(Jullien, p. 90.)

The principal trade in Burgundy is carried on at Dijon, Gevrey, Châlons-sur-Saône, &c.

Besides the above, France has a great variety of other excellent wines. Hermitage, Sauterne, St. Péry, &c. are well known in England; and deservedly enjoy, particularly the first, a high degree of reputation.

Account of the Quantity and Value of the Wines exported from France in 1831; distinguishing between those of the Gironde and those of other Departments, and between those exported in Casks and Bottles; and specifying the Quantity and Value of those sent to each Country. — (Administration des Douanes for 1831, p. 240.)

Exclusive of the above, there were exported from France, in the same year, 2,753,499 litres of *vin de liqueurs*, valued at 4,130,250 francs.

The total produce of the vineyards of France is estimated at about 35,000,000 hectolitres (770,000,000 Imp. gallons), worth 540,000,000 francs (21,600,000*l.*). We beg to refer the reader to the article BORDEAUX, for an account of the influence of the French system of commercial policy on this great department of industry.

*Dispute as to the Comparative Merit of Champagne and Burgundy.* — The question, whether the wines of Champagne or of Burgundy were entitled to the preference, was agitated during the reign of Louis XIV. with extraordinary keenness. The celebrated Charles Coffin, rector of the University of Beauvais, published, during this controversy, the classical ode, partly quoted above, in which Champagne is eulogised, and its superiority vindicated, with a spirit, vivacity, and delicacy worthy of the theme. The citizens of Rheims were not ungrateful to the poet; but liberally rewarded him with an appropriate and magnificent donation of the wine he had so happily panegyrised. Gréneau wrote an ode in praise of Burgundy; but, unlike its subject, it was flat and insipid, and failed to procure any recompense to its author. The different pieces in this amusing controversy were collected and published in octavo, at Paris, in 1712:—(See *Le Grand d'Aussy, Vie Privée des Français*, tom. iii. p. 39, and the *Biographie Universelle*, tom. ix. art. *Coffin (Charles)*.) Erasmus attributes the restoration of his health to his having drunk liberally of Burgundy; and has eulogised it in the most extravagant terms. An epistle of his, quoted by *Le Grand d'Aussy*, shows that Falstaff and he could have spent an evening together less disagreeably than might have been supposed:—“Le premier qui enseigna l'art de faire ce vin (Bourgeois), ou qui en fit present, ne doit-il point passer plutôt pour nous avoir donné la vie que pour nous avoir gratifié d'une liqueur.” — (*Vie Privée des Français*, tom. iii. p. 9.)

*Consumption of French Wine in England. Discriminating Duties.* — Owing to the intimate connection subsisting between England and France for several centuries after the Conquest, the wines of the latter were long in almost exclusive possession of the English market: but the extension of commerce gradually led to the introduction of other species; and in the reigns of Elizabeth and James I., the dry white wines of Spain seem to have been held in the highest estimation. This, however, was only a temporary preference. Subsequently to the Restoration, the wines of France regained their former ascendancy

In 1687, their importations amounted to 15,518, in 1688 to 14,218, and in 1689 to 11,106 tons. It is exceedingly doubtful whether so much as a single pipe of port had ever found its way to England previously to this period — (Henderson, p. 313.) ; and it is most probable that the wines of France would have continued to preserve their ascendancy in our markets, had not their importation been artificially checked.

The trade with France had occasionally been prohibited previously to the accession of William III. ; but it was not until 1683 that any distinction was made between the duties payable on French and other wines. But Louis XIV. having espoused the cause of the exiled family of Stuart, the British government, in the irritation of the moment, and without reflecting that the blow aimed at the French would infallibly recoil upon themselves, imposed, at the period above-mentioned, a discriminating duty of 8*l.* a tun on French wines, and in 1687 increased it to 33*l.* ! In consequence of this enormous augmentation of duty on French wines, the merchants began to import wine from Oporto as a substitute for the red wines of Bordeaux, excluded by the high duties. It is probable, however, that these discriminating duties would have been repealed as soon as the excitement which produced them had subsided, and that the trade would have returned to its old channels, had not the stipulations in the famous commercial treaty with Portugal, negotiated by Mr. Methuen in 1703, given them permanence. Such, however, was unluckily the case: for, according to this treaty, we bound ourselves to charge in future one third higher duties on the wines of France than on those of Portugal; the Portuguese, by way of compensation, binding themselves to admit our woolsens into their markets in preference to those of other countries, at a fixed and invariable rate of duty.

Though very generally regarded at the time as the highest effort of diplomatic skill and address, the Methuen treaty was certainly founded on the narrowest views of national interest, and has proved, in no country degree, injurious to both parties, but especially to England. By binding ourselves to receive Portuguese wines for two thirds of the duty payable on those of France, we, in effect, gave the Portuguese growers a monopoly of the British market, and thereby attracted too great a proportion of the deficient capital of Portugal to the production of wine; while, on the other hand, we not only excluded one of the principal equivalents the French had to offer for our commodities, and proclaimed to the world that we considered it better to deal with two millions of poor beggarly customers, than with thirty millions of rich ones, but we also provoked the retaliation of the French, who forthwith excluded most of our articles from their markets!

The injurious effects of the regulations in the Methuen treaty were distinctly pointed out by Dr. Davout and Mr. Godeau. The latter, in his *Essay on the Balance of Trade*, published in 1752, says, "Our jealousy and hatred of France are without bounds. These passions have occasioned innumerable barriers and obstructions on commerce, where we are commonly accused of being the aggressors. But what have we gained by the bargain? We lost the French market for our woollen manufactures, and transferred the commerce of wine to Spain and Portugal, where we buy much worse liquor at a much higher price! There are few Englishmen who would not think their country almost absolutely ruined, were French wine sold in England so cheap, and in such abundance, as to supplant ale and other home-brewed liquors. But, would we lay aside prejudice, it would not be difficult to prove that nothing could be more innocent; perhaps, more advantageous. Each new acre of vineyard planted in France, in order to supply England with wine, would make it requisite for the French to take an equivalent in English goods, by the sale of which we should be equally benefited."

In consequence of the preference so unwisely given to the wines of Portugal over those of France, — a preference continued, in defiance of every principle of sound policy and common sense, down to 1831, — the imports of French wine were for many years reduced to a mere trifle; and notwithstanding their increased consumption, occasioned by the reduction of the duties in 1825, the quantity made use of in 1833 did not exceed 232,500 gallons; while the consumption of Portuguese wines amounts to about 2,600,000 imperial gallons! This is the most striking example, perhaps, in the history of commerce, of the influence of customs duties in diverting trade into new channels, and altering the taste of a people. All but the most opulent classes having been compelled, for a long series of years, either to renounce wine, or to use port, the taste for the latter has been firmly rooted; the beverage that was originally forced upon us by necessity having become congenial from habit. We have little doubt, however, now that the discriminating duty in favour of port is abolished, that the excellence of the French wines will ultimately regain for them some portion of that favour in the English market they formerly enjoyed.\*

**Madeira**, — so called from the island of that name, — is a wine that has long been in extensive use in this and other countries. Plants of the vine were conveyed from Crete to Madeira in 1421, and have succeeded extremely well. There is a considerable difference in the flavour and other qualities of the wines of Madeira: the best are produced on the south side of the island. Though naturally strong, they receive an addition of brandy when racked from the vessels in which they have been fermented, and another portion is thrown in previously to their exportation. This is said to be required to sustain the wine in the high temperature to which it is subjected in its passage to and from India and China, to which large quantities of it are sent; it being found that it is mellowed, and its flavour materially improved, by the voyage. It does not, however, necessarily follow that the wines which have made the longest voyages are always the best. Much must obviously depend on the original quality of the wine; and many of the parcels selected to be sent to India are so inferior, that the wine, when brought to London, does not rank so high as that which has been imported direct. But when the parcel sent out has been well chosen, it is very much matured and improved by the voyage; and it not only fetches a higher price, but is in all respects superior to the direct importations. Most of the adventitious spirit is dissipated in the course of the Indian voyage.

Madeira wines may be kept for a very long period. "Like the ancient vintages of the Surrentine hills, they are truly *firmissima vina*, retaining their qualities unimpaired in both extremes of climate, suffering no decay, and constantly improving as they advance in age. Indeed, they cannot be pronounced in condition until they have been kept for 10 years in the wood, and afterwards allowed to mellow nearly twice that time in bottle: and even then they will hardly have reached the utmost perfection of which they are susceptible. When of good quality, and matured as above described, they lose

\* The mischievous operation of the Methuen treaty, and of the discriminating duty on French wines, were very strikingly exhibited by Mr. Hyde Villiers, in his able speech on the 15th of June, 1830. It is highly deserving of the reader's attention.

all their original harshness, and acquire that agreeable pungency, that bitter sweetishness, which was so highly prized in the choicest wines of antiquity; uniting great strength and richness of flavour with an exceedingly fragrant and diffusible aroma. The nutty taste, which is often very marked, is not communicated, as some have imagined, by means of bitter almonds, but is inherent in the wine."—(*Henderson*, p. 253.)

The wines of Madeira have latterly fallen into disrepute in England. The growth of the island is very limited—not exceeding 20,000 pipes, of which a considerable quantity goes to the West Indies and America. Hence, when Madeira was a fashionable wine in England, every sort of deception was practised with respect to it, and large quantities of spurious trash were disposed of for the genuine vintage of the island. This naturally brought the wine into discredit; so that sherry has been for several years the fashionable white wine. It is difficult, however, to imagine that adulteration was ever practised to a greater extent upon Madeira than it is now practised upon sherry. It is not, therefore, improbable, that a reaction will take place in favour of Madeira. The quantity entered for home consumption in 1827 amounted to 308,295 gallons, whereas the quantity entered for home consumption in 1833 only amounted to 161,042 gallons.

Malmsey, a very rich luscious species of the Madeira, is made from grapes grown on rocky grounds exposed to the full influence of the sun's rays, and allowed to remain on the vine till they are over-ripe.

The trade in Madeira wine is carried on at Funchal, the capital of the island, in lat.  $32^{\circ} 37' N.$ , lon.  $17^{\circ} 6' W.$  *Weights and Measures* same as at Lisbon.

*Teneriffe* wine, — so called from the island of that name, — resembles Madeira, and is not unfrequently substituted in its place; but it wants the full body and rich flavour of the best growths of Madeira.

*German Wines.* — The wines of Germany imported into England are principally produced on the banks of the Rhine and the Moselle. The Rhine wines constitute a distinct order by themselves. They are drier than the French white wines, and are characterised by a delicate flavour and aroma, called in the country *gäre*, which is quite peculiar to them, and of which it would, therefore, be in vain to attempt the description. A notion prevails, that they are naturally acid; and the inferior kinds, no doubt, are so: but this is not the constant character of the Rhine wines, which in good years have no perceptible acidity to the taste, at least not more than is common to them with the growths of warmer regions. Their chief distinction is their extreme durability. The wines made in warm dry years are always in great demand, and fetch very high prices.

The Johannisberger stands at the head of the Rhine wines. It has a very choice flavour and perfume, and is characterised by an almost total want of acidity. The vineyard is the property of Prince Metternich. The Steinberger ranks next to the Johannisberger. It is the strongest of all the Rhenish wines, and in favourable years has much flavour and delicacy.

The produce of certain vineyards on the banks of the Moselle is of superior quality. The better sorts are clear and dry, with a light pleasant flavour and high aroma; but they sometimes contract a slaty taste from the strata on which they grow. They arrive at maturity in 5 or 6 years; though, when made in a favourable season, they will keep twice that time, without experiencing any deterioration. — (*Henderson*, p. 226.)

*Tokay*, — so called from a town in Hungary near which it is produced, — is but little known in England. It is luscious, possessing at the same time a high degree of flavour and aroma. It is scarce and dear; and very apt to be counterfeited.

*Marsala.* — The Sicilian white wine called Marsala, from the town (the ancient Lilybœum) whence it is shipped, and near which it is made, is now pretty largely consumed in England; the entries for home consumption having increased from 79,686 gallons in 1823, to 312,993 in 1833; an extraordinary increase, particularly when it is considered that during the same period the consumption of most sorts of wine has been nearly stationary. Marsala is a dry wine; the best qualities closely resembling the lighter sorts of Madeira; but the increasing demand for it seems to be owing as much to its cheapness as to any peculiarity of quality. It is, however, an agreeable dinner wine. Marsala has been brought to its present state of perfection and repute by the care and exertions of 2 Englishmen, the Messrs. Woodhouse, established in Sicily, who have an extensive factory in the neighbourhood of Marsala. The wine is shipped in large quantities for America; whence a considerable quantity is again conveyed to the West Indies, where it is not unfrequently disposed of as real Madeira.

With the exception of Marsala, very little wine either of Sicily or Italy is imported into England. The wines of those countries are, indeed, without, perhaps, a single exception, very inferior to those of France. The natives bestow no care upon the culture of the vine; and their ignorance, obstinacy, and want of skill in the preparation of wine, are said to be almost incredible. In some districts, the art is, no doubt, better understood than in others; but had the Falernian, Cœcuban, and other famous ancient wines,

not been incomparably better than the best of those that are now produced, they never would have elicited the glowing panegyrics of Horace.

*Wines of Greece and Cyprus.*—The soil in most parts of Greece and of the Grecian islands is admirably fitted for the growth of the vine; and, in antiquity, they produced some of the choicest wines. But the rapacity of the Turks, and the insecurity of person and property that has always prevailed under their miserable government, has effectually prevented the careful cultivation of the vine; and has occasioned, in many places, its total abandonment. It may, however, be fairly presumed, now that Greece has emancipated herself from the iron yoke of her oppressors, that the culture of the vine will attract some portion of that attention to which it is justly entitled; and that, at no distant period, wine will form an important article of export from Greece.

Nowhere, perhaps, has the destructive influence of Turkish barbarism and misgovernment been so apparent as in Candia and Cyprus. While these 2 renowned and noble islands were possessed by the Venetians, they supplied all Europe with the choicest dessert wines. Bacci affirms, that towards the end of the 16th century, Candia sent annually 200,000 casks of malmsey to the Adriatic; whereas at present it hardly produces sufficient to supply the wants of its few impoverished inhabitants. — (*Henderson*, p. 243.) The wines of Cyprus, particularly those produced from the vineyard called the Commandery, from its having belonged to the Knights of Malta, were still more highly esteemed than those of Crete. In the earlier part of last century, the total produce of the vintage of the island was supposed to amount to above 2,000,000 gallons, of which nearly  $\frac{1}{3}$  was exported; but now, the wine grown and exported does not amount to  $\frac{1}{10}$ th part of these quantities! The oppression of which they have been the victims, has reduced the peasantry to the extreme of indigence. The present population of the island is not supposed to exceed 60,000, — a number insufficient to have peopled one of its many ancient cities; and small as this number is, it is constantly diminishing by the inhabitants availing themselves of every opportunity of emigrating. Recently Cyprus has passed into the hands of Mohammed Ali; but unless the Pacha establishes a different government in it from what he has established in Egypt, the miserable inhabitants will gain nothing by the change. — (There is a brief but good account of Cyprus in *Kinneir's Travels in Asia Minor*, &c. pp. 176—197.)

*Cape Wines.* — Of the remaining wines imported into England, those of the Cape of Good Hope form the largest proportion; the quantity annually entered for home consumption being about 540,000 Imperial gallons. The famous Constantia wine is the produce of 2 contiguous farms of that name, at the base of Table Mountain, between and 9 miles from Cape Town. The wine is very rich and luscious; though, according to Dr. Henderson, it yields, in point of flavour and aroma, to the muscadine wines of Languedoc and Roussillon. But, with this exception, most of the Cape wines brought to England have an earthy disagreeable taste, are often acid, want flavour and aroma, and are, in fact, altogether execrable. And yet this vile trash, being the produce of a British possession, enjoys peculiar advantages in our markets; for while the duty on Cape wine is only 2s. 9d. a gallon, that on all other wines is 5s. 6d. The consequences of this unjust preference are doubly mischievous: in the first place, it forces the importation of an article of which little is directly consumed, but which is extensively employed as a convenient menstruum for adulterating and degrading sherry, Madeira, and other good wines; and, in the second place, it prevents the improvement of the wine; for, while the legislature thinks fit to give a bounty on the importation of so inferior an article, it is to be supposed that the colonists should exert themselves to produce any thing better? It is not easy to imagine a more preposterous and absurd regulation. The act enforcing it ought to be entitled, an act for the adulteration of wines in Great Britain, and for encouraging the growth of bad wine in the Cape colony!

*Consumption of Wine in Great Britain. Duties.* — We have repeatedly had occasion, in the course of this work, to call the reader's attention to the injurious operation of unequal and exorbitant duties. Perhaps, however, the trade in wine has suffered more from this cause than any other department of industry. We have already endeavoured to point out some of the effects resulting from the inequality of the duties, or from the preference so long given to the inferior wines of Portugal and Spain over the superior wines of France. But the exorbitance of the duties was, if possible, still more objectionable than the partial principle on which they were imposed. It appears from the subjoined Table, that during the 3 years ending with 1792, when the duty on French wines was 3s. 9d., and on Portuguese 2s. 6d. per wine gallon, the consumption in Great Britain amounted, at an average, to 7,410,947 gallons a year, producing about 900,000*l.* of revenue. It is probable, had the increase taken place gradually, that these duties might have been doubled without any material diminution of consumption. But in 1795 and 1796 they were raised to 8s. 6d. per gallon on French, and to 5s. 8d. per gallon on Portuguese and Spanish wine; and the consequence of this sudden and inordinate increase, as exhibited in the Table, was, that the consumption fell from nearly 7,000,000 gallons in 1795, to 5,732,383 gallons in 1796, and to 3,970,901 in 1797! But this unanswerable demonstration of the ruinous effect of heavy and sudden additions to the duties did not prevent them being raised, in 1804, to 11s. 5d. on French, and to 7s. 8d. on Portuguese and Spanish wine. They continued at this rate till 1825; and such was their influence, that, notwithstanding the vast increase of wealth and population since 1790, and the general improvement in the style of living, the total consumption of wine, during the 3 years ending with 1824, amounted, at an average, to only 5,248,767 gallons a year; being no less than 2,162,180 gallons under the annual consumption of the 3 years ending

with 1792! It may, therefore, be truly said, *asking allowance for the increase of population, that the consumption of wine in Great Britain fell off more than fifty per cent. between 1790 and 1824*

Had Mr. Vansittart continued in power, it is difficult to say when this system might have terminated; but no sooner had Mr. Robinson (now Lord Ripon) become Chancellor of the Exchequer, than he resolved upon the effectual reduction of the wine duties. In pursuance of this wise determination, Mr. Robinson took, in 1825, nearly 50 per cent. from the previously existing duties; and notwithstanding the spirit duties were at the same time reduced in a still greater degree, the consumption of wine in Great Britain has been increased from little more than 4,150,000 to about 5,200,000 Imperial gallons, while the loss of revenue has been but inconsiderable. We are, therefore, justified in affirming that this measure has been very successful, and that it is a most valuable example of the superior productiveness of low duties.\*

The duties, as reduced by Mr. Robinson, were 7s. 3d. per Imperial gallon on French wines, 4s. 10d. per do. on all other foreign wines, and 2s. 5d. on those of the Cape of Good Hope. They continued on this footing till the equalisation act (1 & 2 Will. 4. c. 30.), which imposes a duty of 5s. 6d. per Imperial gallon on all foreign wines, and of 2s. 9d. on those of the Cape.

But the equalisation effected by this act ought not to have been brought about by adding any thing to the duties on port, sherry, &c., but exclusively by reducing those on French wines to their level. The subjoined Tables show that the consumption of wine in the United Kingdom was about stationary from 1835 to 1831; and the addition of 8d. a gallon, that was then made to the duties on all sorts of foreign wine except French, from which 1s. 9d. was deducted, appears to have sensibly affected the consumption of 1832. Considering, indeed, the increasing wealth and population of the British empire, and the more generally diffused use of wine, the small increase of the quantities retained for consumption is not a little surprising. A good deal is, we believe, ascribable to adulteration. It is certain, however, that the duties are still too high; but they are principally objectionable from the mode of their assessment. The trade will never be placed on a proper footing till the duty is imposed on an *ad valorem* principle. The imposition of the same duty on inferior and cheap wines, worth 10l. a hogshead, as on the choicest Burgundy and Champagne, worth 50l. or 60l. a hogshead, is so utterly subversive of all principle, that one is astonished it should be maintained for an instant. Its absurdity would not be exceeded, were the same duty charged on small beer that is charged on gin! The effect of this apparently equal, but really most unequal duty, is to exclude all low priced wines from the English markets; and to deprive the middle classes of the gratification derivable from their use. Commercially speaking, Bordeaux is much nearer London than Paris; and, but for this preposterous system, the cheap wines of the Gironde, Languedoc, and Provence might be bought here at a less price than in most parts of France. Were it necessary for the sake of revenue to continue the present system, it might be reluctantly submitted to; but it is abundantly certain, that a fairly assessed *ad valorem* duty would, by increasing the consumption of the middle classes, yield a much larger amount of revenue than is produced by the constant duty; and it is not to be endured, that the trade of the country should be deeply injured, and the enjoyments of the great bulk of the community materially impaired, for no purpose of public utility, but merely that injustice and absurdity may be prolonged! It is said, indeed, that the imposition of an *ad valorem* duty would lead to the commission of fraud; but we have been assured, by those familiar with the customs, that such precautions might easily be adopted as would prevent any danger on this head. And though it were otherwise — though a few thousand gallons of wine were admitted for home consumption at a somewhat lower duty than they ought to have paid — the injury would be of the most trivial kind, and would hardly, indeed, deserve a moment's attention. In the United States, most duties are imposed on an *ad valorem* principle; and it is not alleged that any real difficulty has to be encountered in their collection.

*Consumption of Wine in Ireland. Duties.*—In 1790, the duties on wine consumed in Ireland were considerably below the level of those imposed in Great Britain, and the average annual quantity of all sorts retained for home consumption in that country amounted to about 1,160,000 Imperial gallons, producing about 138,000l. a year of revenue. Had those to whom the government of Ireland was intrusted possessed the slightest knowledge of the merest elements of finance, or of the condition of the Irish people, they would not have attempted to add to the public revenue by augmenting the duties on wine. Owing to the limited number of the middle classes in Ireland, an increase of duty could not be expected to be productive; and though it had yielded 50,000l. or even 100,000l. a year additional revenue, that would have been no compensation for the injury it was sure to do in checking the diffusion of that taste for luxuries and enjoyments so essential to the improvement of the people. But those who had to administer the affairs of Ireland were insensible to such considerations; and never doubted that 2 and 2 make 4 in the arithmetic of the customs as well as in Cocker! Such, indeed, was their almost incredible rapacity, that in the interval between 1791 and 1814, they raised the duty on French wine from 3s. 7s. a tun to 144l. 7s. 6d.; and that on port from 22l. 4s. 8d. to 95l. 11s. 1 This was a much more rapid increase than had taken place in England; and as the country was far less able to bear even the same increase, the consequences have been proportionally mischievous. In 1815, the quantity of wine retained for home consumption in Ireland had declined, notwithstanding the population had been doubled, to 608,000 Imperial gallons, or to about half the quantity consumed in 1790; and in 1834, the consumption had fallen to 467,000 gallons, while the revenue only amounted to 185,000l. 1

It is unnecessary to make any commentary on such statements. But it is mortifying to reflect, that the legislature of a civilised country like Great Britain should have obstinately persevered in such a system for about ½ of a century. We venture to affirm, that those who ransack the financial annals of Turkey and Spain, will find nothing in them evincing in every part greater rapacity, ignorance, and contempt for the public interest, than is displayed in the history of Irish taxation from 1790 to 1819.

The reduction of the duties in 1825 has nearly doubled the consumption of wine in Ireland, and has added considerably to the revenue. The duties are still, however, oppressively high as compared with the means of the population; and hence, notwithstanding the population of Ireland has more than doubled, and the wealth of the country been materially increased in the interval, the quantity of wine retained for home consumption in 1790, exceeded that retained for the same purpose in 1832, by more than 390,000 Imperial gallons! The Irish are particularly attached to French wines; and supposing the duty were fixed on an *ad valorem* principle, so that it should be 3s. 6d. or 4s. a gallon on the finer wines, we have no doubt whatever that the consumption would be speedily doubled or trebled, not only in Ireland, but also in Britain. We subjoin

An Account of the Quantities of all Sorts of Wine retained for Consumption in IRELAND, during the Four Years ending with 1832, and of the Nett Revenue accruing thereon.

**Adulteration of Wine.** — We have already alluded to this practice. It was prosecuted to a very great extent previously to the reduction of the duties in 1825, and is still very far from being suppressed. It has been affirmed, but we are inclined to suspect the statement of exaggeration, that at this moment wines are every day offered for sale at prices at which every one conversant with the trade knows they could not be afforded were they genuine. Mr. Fleetwood Williams has given, in his valuable pamphlet on the *Wine Trade* (1824), some curious details on this subject.

The imposition of the duties on an *ad valorem* principle, by allowing genuine wine to be sold at a low price, would put an effectual stop to the practices of the adulterators. The increase of the duties in the reigns of William and Anne first gave birth to this discreditable fraternity — (see a curious paper of Addison's, *Tatler*, No. 131.); and it will continue to flourish as long as the duties are maintained on their present footing.

The only security against being imposed upon, is to deal only with respectable houses; with those largely engaged in the trade; and to whom a reputation for selling good wine is of ten times more importance than any thing they could expect to make by adulteration.

Account of the Quantity of French and other Sorts of Wine retained for Home Consumption in GREAT BRITAIN from 1789 to 1832; specifying the Produce of the Duty, and the Rates of Duty thereon.

Measures. — According to the system of wine measures that prevailed down to 1826, the gallon contained 231 cubic inches; the tierce, 42 gallons; the puncheon, 84 gallons; the hoghead, 63 gallons; the pipe or butt, 126 gallons; and the tun, 252 gallons. But in the new system of measures introduced by the act 5 Geo. 4. c. 74, the Imperial standard gallon contains 277.274 cubic inches: so that the tierce = 35 (very nearly) Imperial gallons; the puncheon = 70 (very nearly) do.; the hoghead = 52½ (very nearly) do.; the pipe or butt = 105 (very nearly) do.; and the tun = 210 (very nearly) do. — (See WEIGHTS AND MEASURES.)

A very great quantity of wine is sold to the consumer in dozens; much more, indeed, than is sold in any other way; and yet there is no regulation as to the size of bottles, — a defect which has occasioned a great deal of abuse. No one doubts the propriety of making all gallons, bushels, &c. of the same capacity; and why should not similar regulations be enforced in the case of measures so universally used as bottles?

The produce of Europe may not be imported for home consumption, except in British ships, or in ships of the country of which the wine is the produce, or of the country from which it is imported, on forfeiture thereof, and 100*l.* by the master of the ship. — (3 & 4 Will. 4. c. 54.)

No abatement of duties made on account of any damage received by wine. — (3 & 4 Will. 4. c. 52.)

Wine from the Cape must be accompanied by a certificate of its production. — (See *ant.*, p. 660.)

Wine exported to foreign parts, from the bonded warehouses, must be shipped in vessels of not less than 70 tons burden. — (3 & 4 Will. 4. c. 57.)

Wine for Officers of Navy. — For the quantity of duty-free wine to be allowed to officers of the navy, and the regulations under which it is to be allowed, see *ant.*, p. 667.

Regulations as to mixing, bottling, &c. in Warehouses. — 1. Wines, when deposited in warehouses of special security, or in warehouses situated near the places of landing and shipping, and declared in the order of approval to be substantially built, and capable of affording general accommodation to the trade, may be allowed to be fitted up, fined, and racked, as often as the owners may deem necessary, the lees to be destroyed without payment of duty, the quantities destroyed being correctly ascertained for the purpose of being eventually deducted from the official accounts.

2. Bonded brandy may be allowed to be added to wine in the bonded stores for its preservation or improvement, and the whole to pay duty as wine upon being taken out for home consumption, provided the whole quantity of brandy contained in the wine, at the time of entry for home consumption, do not exceed 20 per cent.; and that a proper sample for the purpose of ascertaining the strength be allowed to be taken out by the proper officers.

3. Wines may be allowed to be mixed with wines of the same description as often as necessary for their preservation or improvement; provided that wine so mixed be kept separate from other wine, and that the packages containing the same be branded as mixed wine, and the brand or other marks of the original shipper be effaced. — (Treasury Order, 20th of May, 1830.)

Wine may be bottled for exportation in a bonded vault appropriated for the purpose, upon giving 24 hours' notice; but no foreign bottles, corks, or packages may be used, except those in which the wine may have been imported and warehoused, unless the full duties shall have been paid on the same; and not less than 3 dozen reputed quarts, or 6 dozen reputed pint bottles, shall be exported in each package; and if any surplus or sediment remain, it is to be immediately destroyed in the presence of the officer, or the full duties paid upon it. — (3 & 4 Will. 4. c. 57., and *Customs Act*, 31st of Dec. 1828.)

The brands or marks on the casks into which wines or spirits may be racked at the bonded warehouses are to be effaced, and no other brand or mark to be retained thereon than those which were on the casks when originally imported. — (Treasury Order, 29th of June, 1830.)

fusiform fibrous root, and smooth branchy stem, rising from 3 to 5 feet in height. Woad is indigenous to most parts of Europe; and was extensively used from a very remote period, down to the general introduction of indigo, in the dyeing of blue. It is still cultivated to a considerable extent in France; but in this country its cultivation is chiefly restricted to a few districts in Lincolnshire. After being bruised by machinery, to express the watery part, it is formed into balls, which ferment and fall into a dry powder, which is sold to the dyer. Woad is now seldom employed without a mixture of indigo. By itself, it is incapable of giving a bright and deep blue colour; but the colour which it does give is very durable. The best methods of conducting the fermentation and preparation of woad are still so very ill understood, that the goodness of any parcel of it can never be ascertained till it be actually used; so that it has the disadvantage of being purchased under the greatest uncertainty as to its true value. At the proper age, indigo plants yield about 30 times as much colouring matter, and of a far superior quality, as an equal weight of woad; so that there is no prospect that any improvement that may be made in its preparation will ever render it, either in goodness or cheapness, a rival of the former. — (*London's Ency. of Agriculture; Banerft on Colours*, vol. i. p. 167.) We have previously — (see INDIGO) — given some account of the efforts made by the woad growers to prevent the use of indigo.

WOOD. See TIMBER.

WOOL (Ger. *Wolle*; Du. *Wol*; Da. *Uld*; Sw. *Ull*; Fr. *Laine*; It. and Sp. *Lana*; Port. *Lã, Lãa*; Rus. *Wolna, Scherst*; Pol. *Wolna*; Lat. *Lana*), a kind of soft hair or down. The term is not very well defined. It is applied both to the fine hair of animals, as sheep, rabbits, some species of goats, the vicuna, &c.; and to fine vegetable fibres, as cotton. In this article, however, we refer only to the wool of sheep, — an article which has continued, from the earliest period down to the present day, to be of primary importance — having always formed the principal part of the clothing of mankind in most temperate regions.

*Species of Wool.* — It has been customary in this country to divide wool into 2 great classes — long and short wools; and these again into subordinate classes, according to the fineness of the fibre.

Short wool is used in the cloth manufacture; and is, therefore, frequently called clothing wool. It may vary in length from 1 to 3 or 4 inches: if it be longer, it requires to be cut or broken to prepare it for the manufacture.

The *felting* property of wool is known to every one. The process of hat making, for example, depends entirely upon it. The wool of which hats are made is neither spun nor woven; but locks of it, being thoroughly intermixed and compressed in warm water, cohere and form a solid tenacious substance.

Cloth and woollen goods are made from wool possessing this property; the wool is carded, spun, woven, and then being put into the fulling mill, the process of felting takes place. The strokes of the mill make the fibres cohere; the piece subjected to the operation contracts in length and breadth, and its texture becomes more compact and uniform. This process is essential to the beauty and strength of woollen cloth. But the long wool of which stuffs and worsted goods are made is deprived of its felting properties. This is done by passing the wool through heated iron combs, which takes away the lamina or feathery part of the wool, and approximates it to the nature of silk or cotton.

Long or combing wool may vary in length from 3 to 8 inches. The shorter combing wools are principally used for hose, and are spun softer than the long combing wools; the former being made into what is called hard, and the latter into soft worsted yarn.

The fineness of the hair or fibre can rarely be estimated, at least for any useful purpose, except by the wool sorter or dealer, accustomed by long habit to discern those minute differences that are quite inappreciable by common observers. In sorting wools, there are frequently 8 or 10 different species in a single fleece; and if the best wool of one fleece be not equal to the finest sort, it is thrown to a 2d, 3d, or 4th, or to a still lower sort, of an equal degree of fineness with it. The best English short native fleeces, such as the fine Norfolk and Southdown, are generally divided by the wool sorter into the following sorts, all varying in fineness from each other: — viz. 1. Prime; 2. Choice; 3. Super; 4. Head; 5. Downrights; 6. Seconds; 7. Fine Abb; 8. Coarse Abb; 9. Livery; 10. Short coarse or breech wool. The relative value of each varies, according to the greater demand for coarse, fine, or middle cloths.

The softness of the fibre is a quality of great importance. It is not dependent on the fineness of the fibre; and consists of a peculiar feel, approaching to that of silk or down. The difference in the value of 2 pieces of cloth made of 2 kinds of wool equally fine, but one distinguished for its softness and the other for the opposite quality, is such, that, with the same process and expense of manufacture, the one will be worth from 20 to 25 per cent. more than the other. Mr. Bakewell showed that the degree of softness

depends principally on the nature of the soil on which sheep are fed: that sheep pastured on chalk districts, or light calcareous soils, usually produce hard wool; while the wool of those that are pastured on rich, loamy, argillaceous soils, is always distinguished by its softness. Of the foreign wools, the Saxon is generally softer than the Spanish. Hard wools are all defective in their *felting* properties.

In clothing wool, the colour of the fleece should always approach as much as possible to the purest white; because such wool is not only necessary for cloths dressed white, but for all cloths that are to be dyed bright colours, for which a clear white ground is required to give a due degree of richness and lustre. Some of the English fine woolled sheep, as the Norfolk and Southdown, have black or gray faces and legs. In all such sheep there is a tendency to grow gray wool on some part of the body, or to produce some gray fibres intermixed with the fleece, which renders the wool unfit for many kinds of white goods; for though the black hairs may be too few and minute to be detected by the wool sorter, yet when the cloth is stoved they become visible, forming reddish spots, by which its colour is much injured. The Herefordshire sheep, which have white faces, are entirely free from this defect, and yield a fleece without any admixture of gray hairs.

The cleanness of the wool is an important consideration. The Spanish wool, for example, is always scoured after it is shorn; whereas the English wool is only imperfectly washed on the sheep previously to its being shorn. In consequence, it is said that while a pack of English clothing wool of 240 lbs. weight will waste about 70 lbs. in the manufacture, the same quantity of Spanish will not waste more than 48 lbs. Cleanness, therefore, is an object of much importance to the buyer.

Before the recent improvements in the spinning of wool by machinery, great length and strength of staple was considered indispensable in most combing wools. The fleeces of the long woolled sheep fed in the rich marshes of Kc. and Lincoln used to be reckoned peculiarly suitable for the purposes of the wool-comber: but the improvements alluded to have effected a very great change in this respect; and have enabled the manufacturer to substitute short wool of 3 inches staple, in the place of long combing wool, in the preparation of most worsted articles. A great alteration has, in consequence, taken place in the proportion of long to short wool since 1800; there having been in the interim, according to Mr. Hubbard's calculations — (see *post*) — an increase of 132,053 packs in the quantity of the former produced in England, and a decrease of 72,820 in the quantity of the latter.

Whiteness of fleece is of less importance in the long combing than in clothing wool, provided it be free from gray hairs. Sometimes, however, the fleece has a dingy brown colour, called a *winter stain*, which is a sure indication that the wool is not in a thoroughly sound state. Such fleeces are carefully thrown out by the wool sorter; being suitable only for goods that are to be dyed black. The fineness of heavy combing wool is not of so much consequence as its other qualities.

The Merino or Spanish breed of sheep was introduced into this country about the close of last century. George III. was a great patron of this breed, which was for several years a very great favourite. But it has been ascertained that, though the fleece does not much degenerate here, the carcase, which is naturally ill formed, and affords comparatively little weight of meat, does not improve; and as the farmer, in the kind of sheep which he keeps, must look not only to the produce of wool, but also to the butcher market, he has found it his interest rather to return to the native breeds of his own country, and to give up the Spanish sheep. They have, however, been of considerable service to the flocks of England; having been judiciously crossed with the South-down, Ryeland, &c.

*Deterioration of British Wool.* — It appears to be sufficiently established, by the evidence taken before the House of Lords in 1828, and other authorities, that a considerable deterioration has taken place in the quality of British wool, particularly during the last 30 years. The great object of the agriculturist has been to increase the weight of the carcase and the quality of the wool; and it seems very difficult, if not quite impossible, to accomplish this without injuring the fineness of the fleece. Mr. Culley says, that the Herefordshire sheep that produce the finest wool are kept lean, and yield  $1\frac{1}{2}$  lb. each; he adds, "if they be better kept, they grow large and produce more wool, but of an inferior quality." This would seem to be universally true. The great extension of the turnip husbandry, and the general introduction of a larger breed of sheep, appears, in every instance, to have lessened the value of the fleece. Speaking of the Norfolk fleeces, Mr. Fison, a wool sorter, says, that 25 years ago the weight was  $2\frac{1}{2}$  lbs. a fleece, and that now it is 3 lbs. or  $3\frac{1}{2}$  lbs. — (*Report*, p. 356.) But according to a Table furnished by the same gentleman, containing the results of his experience, it appears that of 15 tods, or 420 lbs., of clothing wool grown in Norfolk in 1790, 200 lbs. were prime, while, in 1823, the same quantity of Norfolk wool only yielded 14 lbs. prime! — (*Ibid.* p. 207.) The statements of other witnesses are to the same effect. — (*Ibid.*

pp. 388. 640. and 644.) According to the estimate in Mr. Lucecock's *Treatise on English Wool* which has always enjoyed the highest reputation, the produce of all sorts of wool in England, in 1800, was 384,000 packs, of 240 lbs. a pack. But Mr. Hubbard, a very intelligent and extensive wool-stapler at Leeds, has shown, that, supposing Mr. Lucecock's estimate of the number of sheep to be correct, the quantity of wool now produced cannot, owing to the greater weight of the fleece, be estimated at less than 463,169 packs; being an increase of 20 per cent. ! It is, therefore, probable, notwithstanding the decline in the price of wool, that, taking into account the greater weight of the carcase, and the greater weight of the fleece, sheep produce more at present to the farmer than at any former period.

*Number of Sheep in Great Britain.* — It is not possible to form any accurate estimate, either of the number of sheep, or of the quantity of wool annually produced. With the exception of Mr. Lucecock's, most of the statements put forth with respect to both these points seem much exaggerated. But Mr. L.'s estimate, which is considerably under any that had previously appeared, was drawn up with great care; and is supposed to approach near to accuracy. According to Mr. Lucecock, the

In some parts of England there has been an increase in the number of sheep since 1800, and in others they have decreased. But we have been assured by competent judges, that, on the whole, the number has not materially varied in the interim.

During the last half century a very decided increase has taken place in the number of sheep in Scotland, and a very great improvement in the breed, particularly in the Highlands. In this district, many of the proprietors have let their estates in large farms to *store farmers*, who have introduced the Cheviot breed of sheep, in the place of the small black-faced heath breed that was formerly the only one to be met with. We may remark, by the way, that a good deal of unmerited odium has attached to the patrons of this system; for, though it be true that, in a few instances, the peasantry were rudely ejected from their little possessions, there can be no doubt that it has, on the whole, been decidedly advantageous. Besides rendering large tracts of country more valuable to the proprietors and the public generally, the condition and habits of the peasantry have been materially improved. Instead of loitering away more than half their time, as was their former practice, they have now either become the servants of the large farmers, or have resorted to towns and villages, and been metamorphosed into industrious tradesmen, fishermen, &c. A very small proportion of the whole has emigrated; and the country is more populous at present than before the sheep farming system began.

In the *General Report of Scotland* (vol. iii. Appen. p. 6.), the number of sheep is estimated at 2,850,000; and, allowing for the increase that has taken place since 1814, we may, perhaps, estimate the total number of sheep in that part of the empire at this moment at 3,500,000.

According to Mr. Wakefield, there is not a single flock of breeding sheep in the whole province of Ulster. — (*Account of Ireland*, vol. i. p. 341.) And though there be considerable flocks in Roscommon and other counties, we believe that, if we estimate the whole number of sheep in Ireland at 2,000,000, we shall be a good deal beyond the mark.

On the whole, therefore, if we are right in these estimates, the total number of sheep in Great Britain and Ireland may be taken at about 32,000,000. This estimate is 10,000,000 under that given by Dr. Colquhoun for 1812; but that learned person assigns no grounds whatever for his estimate, which is utterly inconsistent with all the really authentic information on the subject. It is curious enough to observe the German statistical writers referring to Dr. Colquhoun's statements, as if they were of standard authority. They would be about as near the mark, were they to quote the "Arabian Nights" in proof of any disputed historical fact.

*British Trade in Wool.* — From 1660 down to 1825, the export of wool was strictly prohibited. A notion grew up towards the end of the 17th, and continued to gain ground during the first half of last century, that the wool of England was superior to that of every other country; that long wool could not be produced anywhere else; and that, if we succeeded in keeping the raw material at home, we should infallibly command the market of the world for our woollen manufactures. In consequence,

innumerable statutes were passed, — the enactments in some of which were the most arbitrary and severe that can be imagined, — to prevent the clandestine exportation of wool. Mr. John Smith was one of the first who, in his excellent work, entitled *Memoirs of Wool*\*, exposed the injustice and absurdity of this system, by proving, that whatever advantages the manufacturers might gain by preventing the exportation of wool, were more than lost by the agriculturists. But in despite of Mr. Smith's reasonings, which were enforced by many later writers, and which experience had proved to be in all respects accurate, the prohibition of the exportation of wool was continued till 1825, when Mr. Huskisson happily succeeded in procuring the abolition of this miserable remnant of a barbarous policy. The improvement of machinery, by enabling short or clothing wool to be applied to most of those purposes for which long or combing wool had been exclusively appropriated, had annihilated the only apparently tenable argument on which the prohibition of exportation had ever been vindicated; and even this, it will be observed, applied only to a small proportion of the whole wool produced in England.

Down to 1802, the importation of foreign wool into Great Britain had been quite free; and, being the raw material of an important manufacture, the policy of allowing it to be imported free of duty is obvious. In 1802, however, a duty of 5s. 3d. a cwt. was laid on all foreign wool imported. In 1813, this duty was raised to 6s. 8d.; and in 1819, Mr. Vansittart raised it to the enormous amount of 56s. a cwt., or to 6d. per lb. ! Had English wool sufficed for all the purposes of the manufacture, such a duty would have been less objectionable; but the very reverse was the case. The use of foreign wool had become, owing to the deterioration of British wool, and other circumstances, quite indispensable to the prosecution of the manufacture: and as our superiority over the foreigner in several departments of the trade was by no means decided, it is plain that the imposition of a duty which amounted to about 50 per cent. upon the price of a considerable quantity of the wool we were obliged to import, must, had it been persevered in, have ruined the manufacture. It occasioned, indeed, during the period of its continuance, a considerable decline of the exports of woollens, and was productive of other mischievous effects, from which the manufacture suffered for a considerable period after it was repealed.

The evidence as to the absolute necessity of employing foreign wool, taken before the Lords' committee, was as decisive as can well be imagined. Mr. Gott, of Leeds, one of the most extensive and best informed manufacturers of the empire, informed the committee, that, in his own works, he used only foreign wool. On being asked whether he could carry on an export trade to the same extent as at present, if he manufactured his cloth of British wool, Mr. G. replied, that, in certain descriptions of cloth, "he could not make an article that would be merchantable at all for the foreign market, or even for the home market, except of foreign wool." We subjoin a few additional extracts from the evidence of this most competent witness.

"Can you give the committee any information with respect to the competition that now exists between foreigners and this country in woollen cloths?" — "I think the competition is very strong. In some instances the foreigner has, probably, the advantage; and in others, the superiority of the British manufacture, I think, has greatly the advantage; that would apply, I should say, particularly to the fine cloths of Great Britain compared with foreign cloths; in some descriptions of low cloths, the foreigners are nearly on a footing, and in some instances, perhaps, superior to us."

"Speaking of the finer cloths, is the competition such as to render an additional duty on the importation of foreign wool likely to injure the export trade." — "I have no doubt, speaking on my oath, that it would be fatal to the foreign cloth trade of the country. I would say further, that it would be equally injurious to coarse manufactures of all kinds made of English wool. The competition now with foreigners is as nearly balanced as possible; and the disturbing operation of attacks of that description would necessarily enable the foreigner to buy his wool cheaper than we should do it in this country: the result would be, that foreigners would, by such a premium, be enabled to extend their manufactures, to the exclusion of British manufactures of all descriptions."

In another part of his evidence, Mr. Gott says, — "If 2 pieces of cloth at 10s. a yard were put before a customer, one made of British wool, the other of foreign wool, one would be sold, and the other would remain on hand: I could not execute an order with it. If any person sent to me for cloth of 7s. or 8s. a yard, and it were made of English wool, it would be sent back to me, and I should resort to foreign wool, or foreign mixed with British, to execute that order."

On Mr. Gott being asked whether, in his opinion, the price of British wool would have been higher, had the duty of 6d. per lb. on foreign wool been continued, he answered, — "My opinion is, that the price of British wool would have been less at this

time; the demand for British wool would have been very much less. *British manufactures would have been shut out of every foreign market; and the stock of wool would have accumulated, as it will do if ever that duty be imposed again.*"—(Mr. Gott's Evidence, pp. 292, 293.)

The view taken by Mr. Gott of the effect of the importation of foreign wool on the price of British wool was supported by the concurrent testimony of all the manufacturing witnesses examined by the committee. Blankets, flannels of all sorts, baizes, carpets, bearskins, &c. are made principally of English wool; and the command of foreign wool enables the manufacturers to use a considerable quantity of English wool in the manufacture of certain descriptions of cloth, which, if made entirely of it, would be quite unsaleable. On Mr. Goodman, a wool-stapler of Leeds, being asked whether, i. a duty were laid on foreign wool, it would force the use of English wool in the manufacture of cloths, from which it is now excluded, he answered,—"Certainly not: we could not get people to wear such a cloth; they want a better, finer cloth; it is so much handsomer in its wear, and so much more durable."—(Report, p. 241.) Mr. Francis, of Heytesbury, declared that there was no demand for cloth made wholly of British wool; that it was principally applicable to the manufacture of blankets, baizes, &c.; and that the exclusion of foreign wool would only injure the manufacture, without raising the price of British wool.—(p. 268.) Statements to the same effect were made by Mr. Webb (p. 270.), Mr. Sheppard (p. 294.), Mr. Ireland (p. 319.), and, in short, by every one of the witnesses conversant with the manufacture.

The history of the manufacture since 1828 has completely confirmed the accuracy of the statements made by Mr. Gott and the other witnesses. Its progress from that period down to the present time has been one of uninterrupted prosperity; and so far from having been injured by the immense importations that have been made of foreign wool, the price of British wool is higher at this moment (March, 1834,) than at any former period! We believe, indeed, that it has now attained an unnatural elevation; and that its extreme high price, by making a corresponding addition to the price of cloth, will react on the manufacture, and will, consequently, by occasioning its depression, lower wool to a more moderate level.

*Foreign Wool imported into England.*—A very great change has taken place, within the course of the present century, both as respects the quantity of foreign wool imported, and the countries whence it is derived. Previously to 1800, our average imports of wool did not much exceed 3,000,000 lbs., mostly brought from Spain; the wool of which has long maintained a high character. In 1800, our imports amounted to near 9,000,000 lbs.; and they have since gone on gradually increasing, till they now amount to between 25,000,000 and 40,000,000 lbs. Instead, however, of being principally derived from Spain, as was the case down to 1814, the greater part of this immense supply of foreign wool is now furnished by Germany. The late king of Saxony, when elector, introduced the breed of Merino sheep into his dominions, and exerted himself to promote the growth of this valuable race of animals. His praiseworthy efforts have been crowned with the most signal success. The Merino sheep seem to succeed better in Saxony and other German states than in Spain; and have increased so rapidly, that the Spanish wool trade has become insignificant compared with that of Germany! The importations of German wool were quite trifling during the war—amounting, in 1812, to only 28 lbs.; but since the peace they have increased beyond all precedent. In 1814, they amounted to 3,432,456 lbs.; in 1820, they were 13,442 lbs.; in 1825, they reached the enormous amount of 28,799,661 lbs.; but this being a year of overtrading, they declined, in 1826, to 10,545,232 lbs. They have since, however, recovered from this depression; and, in 1833, amounted to 25,370,106 lbs.—(There is a very good account of the German wool trade in the *Foreign Quarterly Review*, No. xi. art. 8.)

The breed of sheep that was carried out to New South Wales and Van Diemen's Land has succeeded remarkably well; and Australia promises, at no distant day, to be one of the principal wool-growing countries of the world. The imports into Great Britain have been rapidly increasing. In 1833, they amounted to 3,516,869 lbs., while the imports from Spain only amounted to 3,339,150 lbs. The Spanish flocks suffered severely during the campaigns in Spain; and the best Spanish wool does not now bring more than  $\frac{1}{2}$  the price of the best German wool.

I. Number of Sheep and Quantity of Sheep's Wool produced in England, according to Mr. Luccock's Tables, revised by Mr. Hubbard, and made applicable to 1828.

| County.                   | 1800.                       |                    |                  | 1828.                      |                    |                                |                               |

**WOOLLEN MANUFACTURE**, the art of forming wool into cloth and stuffs. This has always ranked as an important branch of national industry; and, until it was recently surpassed by the cotton manufacture, was decidedly the most important of all the manufactures carried on in England.

*Rise and Progress of the British Woolen Manufacture. Exports.*—There can be no doubt that the arts of spinning wool, and manufacturing the yarn into cloth, were introduced into England by the Romans,—the inhabitants being previously clothed only in skins. From the period of the Romans quitting England, down to the 10th century, there are no notices of the manufacture; and those relating to the period from the 10th to the 13th century are but few and imperfect. It is certain, however, that the manufacture of broad cloths was established soon after the year 1200, if not previously.—(*Smith's Memoirs of Wool*, vol. i. p. 17.) But the woollen manufactures of Flanders being at this period, and long afterwards, in a comparatively advanced state, English wool was exported in large quantities to Bruges and other Flemish cities, whence fine cloths and other products were brought back in exchange. Edward III. took the most judicious measures for improving the English manufacture, by inviting over Flemish weavers, fullers, dyers, and others, and protecting them from the assaults of the rabble. Shortly after the first emigration of Flemings, or in 1337, an act was passed, prohibiting the wear of any cloths made beyond sea, and interdicting the export of English wool.—(*Ibid.* vol. i. p. 25.) But in these turbulent times such restraining acts were little better than a dead letter; and this, indeed, was soon after repealed.—(*Ibid.* vol. i. pp. 32. 39.) From this remote period the manufacture has always been regarded as of primary importance, and has been the object of the especial solicitude of the legislature. It may be doubted, however, whether it has derived any real advantage from the numberless statutes that have been passed in the view of contributing to its advancement. With the exception, indeed, of the prohibition of the export of English wool, which was finally put a stop to in 1660, the other acts, being mostly intended for the regulation of the manufacture, could not be otherwise than mischievous; and the benefit derived by the manufacturers from the prohibition was more apparent than real; inasmuch as it occasioned a diminished growth of wool, at the same time that it was impossible to prevent its clandestine exportation. Mr. Smith has proved that the manufacture made a far more rapid progress during the reign of Elizabeth, when wool might be freely carried out of the kingdom, than it ever did during any equal period subsequent to the restriction on exportation. Foreign wool began to be imported in small quantities in the 13th century.

At first, the manufacture seems to have been pretty equally distributed over the country. In an insurrection that took place in 1525, more than 4,000 weavers and other tradesmen are said to have assembled out of Laneham, Sudbury, and other towns in Suffolk. The manufacture had been previously introduced into Yorkshire. In 1533, an act was passed (34 & 35 Hen. 8. c. 10.), reciting, "that the city of York afore this time had been upholden principally by making and weaving of coverlets, and the poor thereof daily set on work in spinning, carding, dyeing, weaving, &c.;" and enacting, as a remedy for this evil, that henceforth "none shall make coverlets in Yorkshire, but inhabitants of the city of York!" This may be taken as a fair specimen of the commercial legislation of the time. Indeed, it was enacted, nearly at the same period, that the manufacture should be restricted, in Worcestershire, to Worcester and 4 other towns. Worsted goods, so called from Worsted, now an inconsiderable town in Norfolk, where the manufacture was first set on foot, were produced in the reign of Edward II., or perhaps earlier; but Norwich soon after became, and, notwithstanding the competition of Bradford, probably is still, the principal seat of this branch of the manufacture. In an act of Henry VIII. (33 Hen. 8. c. 16.), worsted yarn is described as "the private

commodity of the city of Norwich." In 1614, a great improvement took place in the woollen manufacture of the west of England, by the invention of what is called medley or mixed cloth, for which Gloucestershire is still famous. During the reign of Charles II., there were many, though unfounded, complaints of the decay of the manufacture; and by way of encouraging it, an act was passed (30 Car. 2. st. 1. c. 3.), ordering that all persons should be buried in woollen shrouds! This act, the provisions of which were subsequently enforced, preserved its place on the statute book for more than 130 years!

Towards the end of the 17th century, Mr. Gregory King and Dr. Davenant — (*Davenant's Works*, Whitworth's ed. vol. ii. p. 233.) — estimated the value of the wool shorn in England at 2,000,000*l.* a year; and they supposed that the value of the wool (including that imported from abroad) was quadrupled in the manufacture; making the entire value of the woollen articles annually produced in England and Wales, 8,000,000*l.*, of which about 2,000,000*l.* were exported. In 1700 and 1701, the official value of the woollens exported amounted to about 3,000,000*l.* a year. Owing to the vast increase in the wealth and population of the country, the manufacture must have been very greatly extended during the last century; but the increase in the amount of the exports was comparatively inconsiderable. At an average of the 6 years ending with 1789, the annual official value of the exports was 3,544,160*l.* a year, being an increase of only about 540,000*l.* on the amount exported in 1700. The extraordinary increase of the cotton manufacture soon after 1780, and the extent to which cotton articles then began to be substituted for those of wool, though it did not occasion any absolute decline of the manufacture, no doubt contributed powerfully to check its progress. In 1802, the official value of the exports rose to 7,321,012*l.* being the largest amount they ever reached till last year, when they amounted to 7,777,952*l.* During the last 3 years, indeed, every part of the manufacture has been in a state of unexampled improvement and extension. It is probable that the extraordinary rise in the price of wool may give a temporary check to the manufacture; but it cannot be of long continuance. During the 5 years ending with 1833, the official and the declared or real values of the woollen manufactures exported from the United Kingdom have been as under: —

|   | 1829.       | 1830.       | 1831.       | 1832.       | 1833.       |
|---|-------------|-------------|-------------|-------------|-------------|
| Official value of woollen manufactures exported | £ 5,372,490 | £ 5,538,709 | £ 6,097,558 | £ 6,544,576 | £ 7,777,952 |
| Declared or real value of ditto - -             | 4,661,259   | 4,856,884   | 5,927,701   | 5,239,992   | 6,289,649   |

*Value of the Manufacture. Number of Persons employed.* — The most discordant estimates have been given as to both these points. For the most part, however, they have been grossly exaggerated. In a tract published in 1739, entitled *Considerations on the Running (Smuggling) of Wool*, the number of persons engaged in the manufacture is stated at 1,500,000, and their wages at 11,737,500*l.* a year. Dr. Campbell, in his *Political Survey of Great Britain*, published in 1774, observes, — "Many computations have been made upon this important subject, and, amongst others, one about 30 years since, which, at that time, was thought to be pretty near the truth. According to the best information that can be obtained, there may be from 10,000,000 to 12,000,000 sheep in England, some think more. The value of their wool may, one year with another, amount to 3,000,000*l.*; the expense of manufacturing this may probably be 9,000,000*l.*, and the total value 12,000,000*l.* We may export annually to the value of 3,000,000*l.*, though one year we exported more than 4,000,000*l.* In reference to the number of persons who are maintained by this manufacture, they are probably upwards of 1,000,000. Sanguine men will judge these computations too low, and few will believe them too high." — (Vol. ii. p. 158.) But the moderation displayed in this estimate was very soon lost sight of. In 1800, the woollen manufacturers objected strenuously to some of the provisions in the treaty of union between Great Britain and Ireland, and were allowed to urge their objections at the bar of the House of Lords, and to produce evidence in their support. Mr. Law (afterwards Lord Ellenborough), the counsel employed by the manufacturers on this occasion, stated, in his address to their Lordships, on information communicated to him by his clients, that 600,000 packs of wool were annually produced in England and Wales, worth, at 11*l.* a pack, 6,600,000*l.*; that the value of the manufactured goods was 3 times as great, or 19,800,000*l.*; that not less than 1,500,000 persons were immediately engaged in the operative branches of the manufacture; and that the trade collaterally employed about the same number of hands. — (*Account of the Proceedings of the Merchants, Manufacturers, &c.* p. 34.)

It is astonishing that reasonable men, conversant with the manufacture, should have put forth such ludicrously absurd statements. We have already seen that the quantity of wool produced in England and Wales, in 1800, did not really amount to 400,000 packs; and the notion that three out of the nine millions of people then in the country were directly and indirectly employed in the manufacture, is too ridiculous to deserve notice, though it was generally acquiesced in at the time. — (See *Middleton's Survey of*

Middlesex, 2d ed. p. 644.; Adolphus's Political State of the British Empire, vol. iii. p. 236.)

Mr. Stevenson, who is one of the very few writers on British statistics to whose statements much deference is due, has given the following estimate of the value of the woollen manufactured goods annually produced in England and Wales, and of the interest, &c. of the capital, and the number of persons employed in the manufacture:—

|   |   |            |             |
|---|---|------------|-------------|
| Total value of manufactured articles  | - | -          | £18,000,000 |
| Value of raw material   | - | £6,000,000 |             |
| Interest on capital, sum to replace its wear and tear, and manufacturers' profits | - | 2,400,000  |             |
| Wages of workmen  | - | 9,600,000  |             |
|   |   |            | £18,000,000 |

Number of people employed, 480,000, or perhaps 500,000.

But even this estimate requires to be materially modified. Taking Scotland into account, and allowing for the increase of population and of exportation since Mr. Stevenson's estimate was made, the total value of the various descriptions of woollens annually produced in Great Britain may, at present, be moderately estimated at from 20,000,000*l.* to 22,000,000*l.*, or 21,000,000*l.* at a medium. We have further been assured by the highest practical authorities, that Mr. Stevenson's distribution of the items is essentially erroneous; and that, assuming the value of the manufacture to be 21,000,000*l.*, it is made up nearly as follows:—

|                                      |   |            |             |
|--------------------------------------|---|------------|-------------|
| Total value of manufactured articles | - | -          | £21,000,000 |
| Value of raw material                | - | £7,000,000 |             |
| Oil, soap, dye stuffs, &c.           | - | 1,450,000  |             |
| Wear and tear of capital, and profit | - | 4,250,000  |             |
| Wages                                | - | 8,300,000  |             |
|                                      |   |            | £21,000,000 |

At present, the average wages of the people employed may be taken at about 25*l.* a year, making the total number employed 332,000. And, however small this may look as compared with former estimates, we believe it is fully up to the mark, if not rather beyond it.

Most of the innumerable statutes formerly passed for the regulation of the different processes of the manufacture have been repealed within these few years; and the sooner every vestige of the remainder disappears from the statute book, the better.

L Account of the Quantities of each Description of Woollen Manufactures exported from the United Kingdom in 1833; specifying the Quantities and Total Value of those sent to each Country.

WRECK, in navigation, is usually understood to mean any ship or goods driven ashore, or found floating at sea in a deserted or unmanageable condition. But in the legal sense of the word in England, *wreck* must have come to land; when at sea, it is distinguished by the barbarous appellations of *flotsam, jetsam, and ligan*. — (See *FLOTSAM*.)

In nothing, perhaps, has the beneficial influence of the advance of society in civilisation been more apparent than in the regulations with respect to the persons and property of shipwrecked individuals. In most rude and uncivilised countries, their treatment has been cruel in the extreme. Amongst the early Greeks and Romans, strangers and enemies were regarded in the same point of view. — (*Hostis apud antiquos, peregrinus dicebatur*. — *Pomp. Festus*; see also *Cicero de Offic. lib. i. c. 12.*) Where such inhospitable sentiments prevailed, the conduct observed towards those that were shipwrecked could not be otherwise than barbarous; and in fact they were, in most instances, either put to death or sold as slaves. But as law and good order grew up, and commerce and navigation were extended, those who escaped from the perils of the sea were treated in a way less repugnant to the dictates of humanity: and at length the Roman law made it a capital offence to destroy persons shipwrecked, or to prevent their saving the ship; and the stealing even of a plank from a vessel shipwrecked or in distress, made the party liable to answer for the whole ship and cargo. — (*Pand. 47. 9. 3.*)

During the gloomy period which followed the subversion of the Roman empire, and the establishment of the northern nations in the southern parts of Europe, the ancient barbarous practices with respect to shipwreck were every where renewed. Those who survived were in most countries reduced to servitude; and their goods were every where confiscated for the use of the lord on whose manor they had been thrown. — (*Robertson's Charles V. vol. i. note 29.*) But nothing, perhaps, can so strongly evince the prevalence and nature of the enormities, as the efforts that were made, as soon as governments began to acquire authority, for their suppression. The regulations as to shipwreck in the Laws of Oleron are, in this respect, most remarkable. The 35th and 38th articles state, that "Pilots, in order to ingratiate themselves with their lords, did, like faithless and treacherous villains, sometimes willingly run the ship upon the rocks, &c.;" for which offence they are held to be accursed and excommunicated, and punished as thieves and robbers. The fate of the lord is still more severe. "He is to be apprehended, his goods confiscated and sold, and himself fastened to a post or stake in the midst of his own mansion house, which being fired at the four corners, all shall be burned together; the walls thereof be demolished; the stones pulled down; and the site converted into a market place, for the sale only of hogs and swine, to all posterity." The 31st article recites, that when a vessel was lost by running on shore, and the mariners had landed, they often, instead of meeting with help, "were attacked by people more barbarous, cruel, and inhuman, than mad dogs; who, to gain their monies, apparel, and other goods, did sometimes murder and destroy these poor distressed seamen. In this case, the lord of the country is to execute justice, by punishing them in their persons and their estates; and is commanded to plunge them in the sea till they be half dead, and then to have them drawn forth out of the sea, and stoned to death."

Such were the dreadful severities by which it was attempted to put a stop to the crimes against which they were directed. The violence of the remedy shows better than any thing else how inveterate the disease had become.

The law of England, like that of other modern countries, adjudged wrecks to belong to the king. But the rigour and injustice of this law was modified so early as the reign of Henry I., when it was ruled, that if any person escaped alive out of the ship, it should be no wreck. And after various modifications, it was

decided, in the reign of Henry III., that if goods were cast on shore, having any marks by which they could be identified, they were to revert to the owners, if claimed any time within a year and a day. By the statute 27 Edw. 3. c. 13., if a ship be lost and the goods come to land, they are to be delivered to the merchants, paying only a reasonable reward or SALVAGE (which see) to those who saved or preserved them. But these ancient statutes, owing to the confusion and disorder of the times, were very ill enforced; and the disgraceful practices previously alluded to, continued to the middle of last century. A statute of Anne (12 Ann. st. 2. c. 18.), confirmed by the 4 Geo. 1. c. 12., in order to put a stop to the atrocities in question, orders all head officers and others of the towns near the sea, upon application made to them, to summon as many hands as are necessary, and send them to the relief of any ship in distress, on forfeiture of 10*l.*; and in case of any assistance given, salvage is to be assessed by 3 justices, and paid by the owners. Persons secreting any goods cast ashore, are to forfeit treble their value; and if they wilfully do any act whereby the ship is lost or destroyed, they are guilty of felony without benefit of clergy. But even this statute seems not to have been sufficient to accomplish the end in view; and in 1753, a new statute (26 Geo. 2. c. 19.) was enacted, the preamble of which is as follows:—"Whereas, notwithstanding the good and salutary laws now in being against plundering and destroying vessels in distress, and against taking away shipwrecked, lost, or stranded goods, many wicked enormities have been committed, to the disgrace of the nation, and the grievous damage of merchants and mariners of our own and other countries, be it," &c. : and it is then enacted, that the preventing of the escape of any person endeavouring to save his life, or wounding him with intent to destroy him, or putting out false lights in order to bring any vessel into danger, shall be capital felony. By the same statute, the pilfering of any goods cast ashore is made petty larceny.

By statute 1 & 2 Geo. 4. c. 75. it is enacted, that any person or persons wilfully cutting away, injuring, or concealing any buoy or buoy rope attached to any anchor or cable belonging to any ship, whether in distress or otherwise, shall be judged guilty of felony, and may, upon conviction, be transported for 7 years.

(For an account of the sums to be paid to those assisting in the saving of wreck, see art. SALVAGE in this Dictionary; see also the chapter on Salvage in Mr. Abbott's (Lord Tenterden's) work on the *Law of Shipping*.)

*Number of Shipwrecks.*—The loss of property by shipwreck is very great. It appears from an examination of *Lloyd's List* from 1793 to 1829, that the losses in the British mercantile navy only amounted, at an average of that period, to about 557 vessels a year, of the aggregate burden of about 66,000 tons, or to above 1.40th part of its entire amount in ships and tonnage. The following account of the casualties of British shipping in 1829 is taken from *Lloyd's List*:—

*On Foreign Voyages*—157 wrecked; 284 driven on shore, of which 224 are known to have been got off, and probably more; 21 foundered or sunk; 1 run down; 35 abandoned at sea, 8 of them afterwards carried into port; 12 condemned as unseaworthy; 6 upset, 1 of them righted; 27 missing, 1 of them a packet, no doubt foundered. *Coasters and Colliers*—109 wrecked; 297 driven on shore, of which 121 known to have been got off, and probably many more; 67 foundered or sunk, 4 of them raised, 6 run down; 13 abandoned, 5 of them afterwards carried in; 3 upset, 2 of them righted; 16 missing, no doubt foundered. During the year, 4 steam vessels were wrecked; 4 driven on shore, but got off; and 2 sunk.

Of the prodigious number of ships that are thus annually engulfed, many are laden with valuable cargoes; and besides this immense loss of property, there is also a very great loss of life. It is believed, that a little more strength in the building, and care in the selection of the masters, would obviate many of these calamities. And nothing, we are assured, would contribute so much to improve the fabric of ships, as the adoption of the plan we have elsewhere recommended (p. 1024.), of allowing them to be built in bond, free of all duty.

During the last war with France, 32 ships of the line went to the bottom, besides 7 fifty-gun ships, 86 frigates, and a vast number of smaller vessels. And the losses sustained by the navies of France, Spain, Holland, Denmark, &c. must have very greatly exceeded those of ours. Hence, as Mr. Lyell has observed, it is probable that a greater number of monuments of the skill and industry of man will, in the course of ages, be collected together in the bed of the ocean, than will be seen at one time on the surface of the continents. — (*Principles of Geology*, 2d ed. vol. ii. p. 265.)

**YARD**, a long measure used in England, of 3 feet, or 36 inches. — (See WEIGHTS AND MEASURES.)

**YARN** (Ger. *Garn*; Du. *Garen*; Fr. *Fil*; It. *Filato*; Sp. *Hilo*; Port. *Fio*; Rus. *Prasha*), wool, cotton, flax, &c. spun into thread.

## Z.

**ZAFFER**, or **ZAFRE**. After the sulphur, arsenic, and other volatile parts of cobalt have been expelled by calcination, the residuum is sold, mixed or unmixed with fine sand, under the above name. When the residuum is melted with siliceous earth and potash, it forms a kind of blue glass, known by the name of smaltz — (see SMALTZ), — of great importance in the arts. When smaltz is ground very fine, it receives in commerce the name of *powder blue*. Zaffer, like smaltz, is employed in the manufacture of earthenware and China, for painting the surface of the pieces a blue colour. It suffers no change from the most violent fire. It is also employed to tinge the crystal glasses, made in imitation of opaque and transparent precious stones, of a blue colour. It is almost wholly brought from Germany.

Account of the Zaffer Imported, exported, and retained for Home Consumption, with the Nett Duty thereon, in 1831 and 1832.

| Years. | Imports.    | Exports.    | Retained for Consumption. | Duty.     |
|--------|-------------|-------------|---------------------------|-----------|
|        | <i>Lbs.</i> | <i>Lbs.</i> | <i>Lbs.</i>               | <i>£.</i> |
| 1831   | 227,512     | 115         | 227,982                   | 950       |

ZEA, INDIAN CORN, OR MAIZE. See MAIZE.

ZEDOARY (Ger. *Zittwer*; Fr. *Zédoaire*; It. *Zedoaria*; Sp. *Cedoaria*; Arab. *Juhwar*; Hind. *Nirbisi*), the root of a plant which grows in Malabar, Ceylon, Cochinchina, &c., of which there are 3 distinct species. It is brought home in pieces of various sizes, externally wrinkled, and of an ash colour, but internally of a brownish red. Those roots which are heavy and free from worms are to be chosen; rejecting those which are decayed and broken. The odour of zedoary is fragrant, and somewhat like that of camphor; the taste biting, aromatic, and bitterish, with some degree of acrimony. It was formerly employed in medicine; but is scarcely ever used by modern practitioners. — (*Milburn's Orient. Com.*)

ZINC, OR SPELTER (Ger. *Zink*; Fr. *Zinc*; It. *Zinco*; Sp. *Zinco*, *Cinck*; Rus. *Schpiauiter*; Lat. *Zincum*), a metal of a brilliant white colour, with a shade of blue, composed of a number of thin plates adhering together. When this metal is rubbed for some time between the fingers, they acquire a peculiar taste, and emit a very perceptible smell. It is rather soft; tinging the fingers, when rubbed upon them, with a black colour. The specific gravity of melted zinc varies from 6.861 to 7.1, the lightest being esteemed the purest. When hammered, it becomes as high as 7.1908. This metal forms, as it were, the limit between the brittle and the malleable metals. Its malleability is by no means to be compared with that of copper, lead, or tin; yet it is not brittle, like antimony or arsenic. When struck with a hammer, it does not break, but yields, and becomes somewhat flatter; and by a cautious and equal pressure, it may be reduced to pretty thin plates, which are supple and elastic, but cannot be folded without breaking. When heated to about 400°, it becomes so brittle that it may be reduced to powder in a mortar. It possesses a certain degree of ductility, and may, with care, be drawn out into wire. Its tenacity is such, that a wire whose diameter is equal to  $\frac{1}{10}$ th of an inch, is capable of supporting a weight of about 26 lbs. Zinc has never been found in a state of purity. The word zinc occurs for the first time in the writings of Paracelsus, who died in 1541; but the method of extracting it from its ores was not known till the early part of last century. — (*Thomson's Chemistry.*) The compounds of zinc and copper are of great importance. — (See BRASS.)

*Manufacture of Zinc, &c.* — There used to be 2 smelting-houses for the preparation of zinc near Bristol, and 3 near Swansea, but they have been all abandoned, with the exception of 1 of the latter. The material used by the English manufacturer is blende, or black jack (sulphuret of zinc); it is commonly found with lead, and is procured of the best quality in Flintshire and the Isle of Man. Besides its employment in the manufacture of brass, bell metal, and other important compounds, zinc has of late years been formed into plates, and applied to many purposes for which lead was formerly used, such as the roofing of buildings, the manufacture of water-spouts, dairy pans, &c. Foreign zinc, being less brittle, is better fitted for rolling than that of England.

The duties on spelter, which were formerly prohibitory, have been reduced to 2*l.* a ton on that formed into plates, or cakes, and to 10*s.* on what is not in cakes; and, in consequence, considerable quantities are now imported, partly for home use, and partly for re-exportation to India and China. Foreign zinc is principally made at Gleinitz, in Upper Silesia; whence it is conveyed by an internal navigation to Hamburg. The freight from the latter to Hull and London is nominal merely; the wool-ships being glad to take it as ballast. Hainault, near Namur, has also some part of the spelter trade. A good deal of spelter is shipped from Hamburg for France and America.

Zinc is produced in the province of Yunnan, in China; and previously to 1820, large quantities of it were exported from that empire to India, the Malay Archipelago, &c. But about that time the free traders began to convey European spelter (principally German) to India; and being, though less pure, decidedly cheaper than the Chinese article, it has entirely supplanted the latter in the Calcutta market; latterly, indeed, it has begun to be imported even into Canton. — (See TUTENAG.) During the 3 years ended with 1832, the exports of foreign spelter from this country for India and China were, in 1830, 62,356 cwt.; 1831, 51,609; 1832, 37,499. And, exclusive of these, considerable quantities were exported from Amsterdam, Rotterdam, &c. We subjoin an

Account of the Zinc or Spelter imported, exported, and retained for Home Consumption, and the Duties thereon, in 1831 and 1832.

| Years. | Imports.       | Exports.       | Retained for Consumption. | Duty.        |
|--------|----------------|----------------|---------------------------|--------------|
| 1831   | Cwt.<br>76,413 | Cwt.<br>62,684 | Cwt.<br>21,526            | £.<br>10,196 |
| 1832   | 68,76†         | 49,740         | 25,214                    | 5,78†        |

The price of spelter declined within the last 3 or 4 years, from about 15*l.* to 9*l.* a ton; but it has recently rallied, and is now (April, 1834) about 11*l.* 10*s.* a ton in bond.

# SUPPLEMENT.

OCTOBER, 1834.

*N. B.*—We intend publishing a larger Supplement in September or October, 1835; and we earnestly entreat our various friends at home and abroad to transmit to us, through Messrs. Longman and Co., such information as they conceive may enable us to correct, add to, improve, or supply any article. We shall carefully observe any stipulations as to the use of such communications.

**ABATEMENT OF DUTIES.**—No abatement is to be made, on account of damage on the voyage, from the duties payable on the following drugs, viz. cantharides, cocculus Indicus, Guinea grains, ipecacuanha, jalap, nux vomica, opium, rhubarb, sarsaparilla, and senna. — (4 & 5 Will. 4. c. 89. § 5.)

**ALE AND BEER.**—In consequence of the complaints, whether well or ill founded, of the inconveniences arising from the increase of beer shops—(see *Dict.* p. 14.), a material change has been made in the mode of licensing houses for the sale of beer. Under the act 1 Will. 4. c. 64.—(*Dict.* p. 14.), the commissioners of excise, or other persons duly authorised, were bound to grant licences, costing 2*l.* 2*s.* a year, to all persons not excepted in the act, empowering them to sell ale, beer, porter, cider, &c. to be drunk indifferently either on or off the premises. But the act of last session, 4 & 5 Will. 4. c. 85., has made the obtaining of a licence to retail beer to be drunk on the premises contingent on the applicant being able to produce a certificate of good character, subscribed by certain persons rated at a certain amount to the poor: it has also raised the cost of such licence to 3*l.* 3*s.*; and reduced the cost of a licence to sell beer not to be drunk on the premises to 1*l.* 1*s.* We subjoin a full abstract of the act:—

*Persons applying for a Licence to sell Beer to be drunk on the Premises, to deposit a Certificate of good Character, &c.*—Every person applying for a licence to sell beer or cider by retail, to be drunk in the house or on the premises, shall, in addition to the application setting forth the particulars required by the act 1 Will. 4. c. 64., annually produce to and deposit with the commissioners of excise, collector, or other person authorised to grant such licence within the parish or place in which the person applying intends to sell beer or cider by retail, a certificate signed by 6 persons residing in and being and describing themselves to be inhabitants of such parish, place, &c., and respectively rated therein to the poor at not less than 6*l.*, or occupying a house therein rated to the poor at not less than 6*l.*, none of whom shall be maltsters, common brewers, or persons licensed to sell spirituous liquors or beer or cider by retail, nor owners or proprietors of any houses licensed to sell liquor, beer, or cider by retail, stating that the person applying for the licence is of good character, and at the foot of such certificate one of the overseers of the parish, township, or place shall certify (if the fact be so) that such 6 persons are inhabitants respectively rated as aforesaid; and such certificate shall respectively be in the form of the schedule annexed to this act: provided always, that in any parish, township, or district maintaining its own poor, in which there are not 10 inhabitants rated to their relief to the amount of 6*l.* each, or not occupying houses respectively rated to the poor at 6*l.* each (not being maltsters, common brewers, or persons licensed to sell spirituous liquors or beer or cider by retail), the certificate of the majority of the inhabitants of such parish, township, or district maintaining its own poor, as are rated to the amount of 6*l.* each, shall be deemed to be a sufficient certificate for the purposes of this act. — § 2.

*Penalty on Overseers.*—Any overseer who shall, without due cause, refuse to certify that the persons who have signed the certificate are respectively rated to the poor's rate as aforesaid, to forfeit not more than 5*l.* — § 3.

*Beer drunk in Sheds.*—Any person licensed under the act 1 Will. 4. c. 64., to sell beer, cider, &c. not to be consumed on the premises, who shall employ, permit, or suffer any person or persons to take or carry any beer, &c. from his house or premises, to be drunk or consumed for his benefit or profit, in any other house, tent, shed, &c. belonging to, or hired, used, or occupied by such licensed person, such beer, &c. shall be held to have been consumed on the premises, and the person selling the same shall be subject to the like forfeitures and penalties as if it had been actually drunk or consumed in a house or upon premises licensed only for the sale thereof. — § 4.

*Billeting.*—Provisions for billeting soldiers under mutiny acts to extend only to those licensed to sell beer or cider to be drunk in the house or on the premises, and not to extend to those licensed to sell beer not to be consumed on the premises. — § 5.

*Justices to regulate the Opening and Closing of Houses.*—Justices in petty sessions are authorised to fix the hours at which houses and premises licensed to sell beer under this act shall be opened and closed; but any person thinking himself aggrieved by any such order may appeal at any time, within 4 months from its date, to the justices in quarter sessions, on giving the justices making the order 14 days' notice of his intention; and the decision of the justices in quarter sessions shall be final: provided, however, that the hour to be fixed for opening any house shall not in any case be earlier than 5 o'clock in the morning, nor for closing the same later than 11 o'clock at night, or before 1 o'clock in the afternoon on Sunday, Good Friday, Christmas Day, or any day appointed for a public fast or thanksgiving; and the hours so fixed by the justices, with reference to the districts within their jurisdictions, shall be taken to be the hours to be observed and complied with under this act as fully as if the same had been specially appointed by it. — § 6.

*Constables, &c. to visit licensed Houses.*—All constables and officers of police are authorised to enter into all houses licensed to sell beer or spirituous liquors to be consumed upon the premises whenever they

shall think proper; and if any person licensed as aforesaid, or any servant or person in his employ or by his direction, shall refuse to admit such constables, &c. into such house or premises, the person having the licence shall for the first offence forfeit and pay any sum not exceeding 5*l.*, together with the costs of conviction, to be recovered within 20 days before 1 or more justices; and it shall be lawful for any 2 or more justices, upon any person being convicted of such offence for the second time, to adjudge (if they think fit) that such offender be disqualified from selling beer, ale, porter, cider, or perry, by retail, for 2 years after such conviction, or for such shorter space as they shall think proper. — § 7.

**Penalty for making or using false Certificates.** — Persons certifying any matter having reference to this act as true, who knows the same to be false, or using any certificate, knowing the same to be forged, shall, on conviction of such offence before 2 or more justices, forfeit and pay the sum of 20*l.*; and every licence granted to any person making use of any certificate to obtain the same, such person knowing such certificate to be forged, or the matters certified therein to be false, shall be void to all intents and purposes; and any person using such certificate shall be disqualified for ever from obtaining a licence to sell beer or cider by retail. — § 8.

**No Licence to be granted without a Certificate.** — No licence for the sale of beer or cider by retail to be consumed or drunk in the house or on the premises shall be granted, except upon the certificate hereby required: provided, that in all extra-parochial places the certificate required by this act may be signed and given by inhabitants rated to the poor at 6*l.* in any adjoining parish or parishes. — § 9.

**Retailers to produce their Licences on Requisition of 2 Magistrates.** — In case any complaint be laid before 2 justices against any licensed person for an offence against the tenor of his licence, or against this act or the act 1 Will. 4. c. 64., the said justices may require such person to produce his licence before them for their examination; and if he wilfully neglect or refuse so to do, he shall forfeit for such offence any sum, not exceeding 5*l.*, the said justices shall think proper; and such person may be convicted, proceeded against, and dealt with for such offence in the same manner, *mutatis mutandis*, as is directed by the act 1 Will. 4. c. 64. with regard to persons guilty of a first offence against said act; and the penalty imposed for such offence is to be applied in the manner that a penalty for a first offence against said act is directed to be applied. — § 10.

**Continuance of Powers, &c.** — The powers, provisions, and penalties of 1 Will. 4. c. 64. to apply to persons licensed under this act, and to their sureties, &c. — § 11.

**Act 1 Will. 4. c. 64. to continue in force, except as hereby altered.** — § 12.

**Duties on Beer Licences under the 1 Will. 4. c. 64. repealed, and new Duties granted in lieu thereof.** — From and after the passing of this act, the duties payable on excise licences for the sale of beer by retail under the act 1 Will. 4. c. 64. shall cease, and in lieu of such duties there shall be paid upon the licences hereby authorized to be granted the duties following; viz.

For and upon every licence to be taken out by any person for the sale of beer by retail, not to be drunk or consumed in or upon the house or premises where sold, the annual sum of 1*l.* 1*s.* For and upon every licence to be taken out by any person for the sale of beer by retail, to be drunk or consumed in or upon the house or premises where sold, the annual sum of 2*l.* 5*s.* — Sec. 13.

The duties to be under the management of commissioners of excise, and to be recovered and accounted for under the provisions of the act 1 Will. 4. c. 64. — § 14.

**Not to affect Duty on Licences to retail Cider and Perry.** — Nothing in this act shall affect the amount of duty payable under the 1 Will. 4. c. 64. on licences to retail cider and perry; but every such licence shall specify whether it be granted for the sale of cider and perry by retail not to be drunk in the house or premises where sold, or for the retail of the same to be drunk in the house or premises where sold. — § 15.

**Licences under this Act not to authorise Persons to sell Wine.** — No licence granted under the act 1 Will. 4. c. 64. and this act shall authorise any person to take out or hold any licence for the sale of wine, spirits, or sweets or made wines, or mead or metheglin; and if any person licensed under the act 1 Will. 4. c. 64. and this act shall permit or suffer any wine, spirits, &c. to be brought into his house or premises to be drunk or consumed there, or shall suffer them to be drunk or consumed in his house or premises, he shall, over and above any excise penalties to which he may be subject, forfeit 20*l.* — § 16.

**Penalty on unlicensed Persons.** — Such persons selling beer and cider by retail to be drunk off the premises, 10*l.*; to be drunk on the premises, 20*l.* — § 17.

**Board over the Door.** — Every person licensed to sell beer, cider, or perry, by retail, under the authority of the act 1 Will. 4. c. 64. and this act, shall, on the board required by the former act to be placed over his door, paint and keep thereon, after the words "licensed to sell beer or cider by retail," the additional words "not to be drunk on the premises," or "to be drunk on the premises," as the case may be, on pain of forfeiting the penalty imposed by such act for not having such board over the door. — § 18.

**What is retailing of Beer, &c.** — Every sale of beer, or of cider or perry, in any less quantity than 4½ gallons, shall be deemed and taken to be a sale by retail. — § 19.

**Penalties for selling Spirits or Wine without Licence.** — Persons licensed to sell beer or cider under the act 1 Will. 4. c. 64. and this act, who sell spirits or wine, sweets, &c. without being licensed, are liable to the penalties imposed by the laws of excise for selling spirits or wine, sweets, &c. without licence. — § 20.

**Certificate not to be required for Houses in certain Situations, if Population exceed 5,000.** — The before-mentioned certificate shall not be required as to any house situated within the cities of London and Westminster, or within any parish or place within the bills of mortality, nor within any city or town corporate, nor within the distance of 1 mile from the place used at the last election as the place of election or polling place of any town returning a member to parliament, provided that the population, determined according to the last parliamentary census taken in such city, town, &c., shall exceed 5,000: provided, that no licence for the sale of beer, ale, porter, cider, or perry by retail on the premises in the cities of London and Westminster, or in any parish within the bills of mortality, or in any such city or town corporate, or town returning a member to parliament as before mentioned, shall be granted after the 5th day of April, 1836, unless the house or premises specified as those in which beer or cider is intended to be sold shall be of the value of 10*l.* per annum. — § 21.

**Service of Summons.** — Summons or orders not legally served unless by some constable or other peace officer. — § 22.

**Commencement.** — Act shall commence and take effect from and after the 10th day of October, 1834. — § 23.

*Form of Certificate referred to in § 2.*

We, the undersigned, being inhabitants of the parish [or township, as the case may be] of \_\_\_\_\_ and respectively rated to the poor at the annual value of \_\_\_\_\_ being common brewers, or persons licensed to sell spirituous liquors, or being licensed to sell beer or cider by retail, do hereby certify, That A. B., dwelling in street [here specify the street, lane, &c.] in the said parish [or township, &c.] is a person of good character.

[Here insert the day of signing the certificate.]

(Signed)

- E. F.
- G. H.
- I. K.
- L. M.
- N. O.
- P. Q.

[Here state the residence of each of the persons signing.]

I do hereby certify, That all the above-mentioned persons whose names are subscribed to this certificate are inhabitants of the parish [or township, &c.] of \_\_\_\_\_ rated to 6*l.* to the relief of the poor of the said parish.

C. D.  
[Overseer of the parish or township, &c.]  
Date.

**APPLES** — Duty on, reduced from 4s. to 2s. a bushel. — (4 & 5 Will. 4. c. 89. § 15.)

**BARILLA**. — The duties on barilla used in the bleaching of linen are to be repaid to the persons using it, under such regulations as the commissioners of customs may issue. — (4 & 5 Will. 4. c. 89. § 14.)

**BOOKS**. — Under the late law, such books as might be imported were admitted, provided they were of editions printed in or since the year 1801, on payment of a duty of 5*l.* a cwt.; but this duty is now reduced to 2*l.* 10*s.* a cwt., with the additional proviso, that the books, besides being printed in or since 1801, are in *foreign living languages*. — (4 & 5 Will. 4. c. 89. § 15.) This condition was inserted principally to obviate the risk of dictionaries, or the class books used in our schools, being supplied from the Continent; the booksellers contending that the 2*l.* 10*s.* a cwt. of duty was insufficient to balance the influence of the paper duty, and the peculiar burdens incident to the getting up of books in this country. It has been alleged, indeed, that it will not effect its purpose; because, as is contended, both Latin and Greek are living languages; the former being spoken in certain parts of Hungary and Poland, and the latter in Greece! But the intention of the legislature is too obvious to admit of its being defeated by any quibbling of the sort now mentioned. By a living language is meant a language spoken by a nation or people, and not by a few learned individuals; and the dialect of the modern Greeks is abundantly different from that of their ancestors. The duty of 1*l.* a cwt. on foreign books printed prior to 1801 ought to be repealed; it throws obstructions in the way of their importation, at the same time that it is quite unproductive of revenue.

*Smuggling of English Books from abroad*. — Very considerable loss is sustained by literary men and booksellers, by the clandestine importation of English works printed abroad, of which the copyright has not expired. There is hardly, in fact, one of our popular authors, copies of whose works, printed in France or America, may not be readily procured in London; and as those by whom they are printed have neither copyright nor paper duty to pay, they are able materially to undersell the native article. It is surely unnecessary to say, that every practicable effort should be made to hinder such an invasion of private property; and in this view we beg to suggest, that the permission given to persons coming from abroad to bring with them single copies of all prohibited works, ought to be withdrawn. It opens a door for smuggling and fraud; and there is neither sense nor justice in allowing any individual to invade the rights of another, merely because he has been across the Channel. A specific penalty, recoverable by a summary process, ought also to be imposed on every individual offering such books for sale. This would be much more effectual in preventing such practices than the existing law. — (See *Dict.* p. 141.)

**BOTTLES (STONE)**. — In 1812, a duty of 2*s.* 6*d.* a cwt., increased in 1817 to 5*s.*, was imposed upon stone bottles. The average nett produce of this duty has not recently exceeded 3,500*l.* a year. But, to collect this insignificant sum, the manufacture had to be placed under the surveillance of the excise, and those engaged in it subjected to various troublesome and vexatious regulations. The duty did not extend to Ireland, so that a drawback had to be granted on bottles exported to that country, and a countervailing duty charged on those imported from it. This unproductive and troublesome duty was imposed at the instance of the glass bottle manufacturers, who contended, that if stone bottles were exempted from duties, they would be used instead of glass bottles, to the injury of those engaged in manufacturing the latter. But the purposes to which stone bottles and glass bottles are applied, are so very different, that it would require a much greater reduction of the price of the former than could possibly be occasioned by the abolition of the duty, to make them be substituted, to any extent worth mentioning, in the place of the latter. These views were ably enforced by the Commissioners of Excise Inquiry; and, having been adopted by government, the duty has been abolished. — (4 & 5 Will. 4. c. 77.; see also *Fifth Report by Commissioners of Excise Inquiry*.)

It is to be hoped that the duty on glass bottles may, also, be speedily put an end to. It produces about 110,000*l.* a year. We noticed (*Dict.* p. 1256.) the propriety of enacting and enforcing some regulations as to the size of bottles. The bottle is, in fact, a very important measure; a great deal of wine and other liquors being sold by the dozen. But there is, at this moment, the greatest discrepancy in the size of bottles; and it appears to us that it would be highly expedient, in order to obviate the numerous frauds arising from this source, to enact that all bottles be made to contain not less than a certain specified quantity, and to place them under the acts relating to weights and measures.

**COAL**. — We are glad to have to state, that the duty on coal exported in English ships has been repealed; and that the duty on all descriptions of coal exported in foreign ships has been reduced to 4*s.* a ton. The increased exportation of coal this measure will occasion, cannot fail of being highly advantageous. Ships that might otherwise have had to go out in ballast, will now have an opportunity of taking with them what may prove a profitable cargo; at the same time that the cost of conveying the mineral abroad operates as a premium in favour of our own manufactures. The fact, too, that there is, in South Wales alone, a supply of coal sufficient to meet the present demand of the empire for more than 2,000 years, shows the futility of imagining that the measure can be injurious, by its hastening the exhaustion of the mines.

#### 4 COMPANIES (PUBLIC SCOTCH). — CURRANTS.

COMPANIES (PUBLIC SCOTCH). — The following Table can hardly fail of being interesting. It was drawn up by Mr. Gray, accountant and stock-broker, Glasgow, and may, we believe, be safely relied on. It shows the periods when almost all the great joint stock associations now existing in Scotland were established; the amount of paid up capital held by each; the dividend thereon; the period when the dividend is paid; and the amount of each share; and the prices the shares brought on the 1st of January, 1834.

| Description of Stock.             | When formed. | Capital paid in. | Dividend.         | When payable. | Shares.  | Prices, 1st January, 1834. |                  |
|-----------------------------------|--------------|------------------|-------------------|---------------|----------|----------------------------|------------------|
|                                   |              |                  |                   |               |          | l. s. d.                   | l. s. d.         |

CURRANTS. — The exorbitant duty of 44s. 4d. a cwt. on currants has been reduced to half that amount, or to 22s. 2d. a cwt. — (4 & 5 Will. 4. c. 89. § 15.) But this reduction, considerable as it is, is not enough. The duty ought not to exceed 10s., or at most 12s. The price of currants in bond usually varies from 20s. to 25s.; so that the duty, as fixed by the late act (4 & 5 Will. 4. c. 89.), will still be equal to about 100 per cent. *ad valorem*. But such a duty is obviously oppressive; the more especially as currants, if low-priced, would be largely consumed by all classes in this country; and as they form the principal equivalent the inhabitants of the Ionian Islands and of the Morea have to offer in exchange for foreign products. We are satisfied, too, that had the duty been reduced to 10s. a cwt., it would, in a few years, have yielded more revenue

than it will ever yield at its present rate. Such a reduction would have brought currants within the command of a much greater number of persons; and would, in fact, have gone far to render them an article of general consumption; whereas, the duty of 22s. 2d. will still confine their use to the wealthier classes.

It has been said, that a reduction of the duty from 4s. 4d. to 10s. a cwt. would not have made a corresponding reduction in the price of the article; and that the measure would have redounded more to the advantage of the growers of currants than of the consumers in this country. That such might have been in some degree the case, at the outset, we admit; but the greater advantages derived by the raisers of currants would have made them be produced in much larger quantities, so that at no distant period we should have reaped the full advantage of the reduction in the rate of duty, at the same time that our trade with the Ionian Islands and the Morea would have been increased proportionally to the increase in the imports of currants. However, we are grateful for what has been done; and it may be fairly presumed that the beneficial effect of the reductions already made will lead to others on a still greater scale.

FIGS. — The duty on figs has been reduced from 21s. 6d. to 15s. a cwt. Nearly the same may be said of this reduction as of that of the duty on currants. It is too trifling to have much effect on consumption; and there can, we apprehend, be little doubt that a duty of 10s. would, by stimulating the latter, be more productive of revenue than a duty of 15s.

FLAG. — Any of his Majesty's subjects hoisting the Union Jack in their vessels, or any pendants, &c. usually worn in his Majesty's ships, or any flag, jack, pendant, or colours whatever in imitation of or resembling those of his Majesty, or any ensign or colours whatever other than those prescribed by proclamation, 1st of January, 1801, shall forfeit for every such offence not more than 500*l.* (*sic in orig.*) — (4 & 5 Will. 4. c. 13. § 11.)

FUNDS. — The act 4 & 5 Will. 4. c. 31. directs that the "Four per cent. annuities created 1826" (*Dict.* p. 588.) be paid off. The holders of every 100*l.* of such 4 per cent. annuities are entitled to receive, in lieu thereof, 100*l.* new 3½ per cent. annuities, or, if they dissent from this, 100*l.* in cash, and proportionally for every greater or less sum. The interest on the new 3½ per cent. stock created under this act, is to be paid half-yearly, at the Bank of England, on the 5th of January and the 5th of July each year; and the new stock is not to be redeemable till the 5th of January, 1840. The annuities so to be created are to be added to the existing *New 3½ per cent. annuities.* — (*Dict.* p. 587.) Bonds and contracts to transfer a given amount of 4 per cent. annuities to be deemed satisfied by the transfer of an equal amount of new 3½ per cent. annuities; but lenders of 4 per cent. annuities, on contract to replace, may demand 100*l.* in cash for every 100*l.* annuities so lent. Trusts, &c. as to 4 per cents. shall extend to 3½ per cents. Commissioners for the reduction of the national debt may advance money to pay off dissentients.

FUNDS (AMERICAN). — The subjoined statement will not, we hope, be uninteresting. It gives a view of the most prominent facts with respect to the public funds of the principal American States; exhibiting, amongst other particulars, their respective amounts, the periods when they are redeemable, the objects for which they were created, and their price in London in August, 1834.

Account of the United States Debt, and of the separate Debts of each State.

|                                       |                           | 1856             | —                    | —                | Do. do.                              | 800,000                   | 1863             |                         | —                |
|                                       |                           | 1861             | —                    | 110              |                                      |                           | 1845             |                         | 100              |
| Do. do.                               | 500,000                   | 1866             | —                    | —                | Virginia do.                         | 500,000                   | 1850             |                         | —                |
|                                       |                           | 1871             | —                    | —                |                                      |                           | 1851, 1852       |                         | —                |
|                                       |                           |                  | —                    | —                | Do. 6 per cent.                      | 400,000                   | 1844             |                         | —                |

IMPORTATION AND EXPORTATION. — The commissioners of customs, agreeably to the powers given them to that effect by the 3 & 4 Will. 4. c. 52. § 135. — (see *Dict.* p. 669.) have appointed the undermentioned places, within the several ports of the United Kingdom, at which vessels coming into or departing out of such ports shall bring to, for the boarding or landing of customs officers. Every master of a vessel failing to comply with the provisions of said act in this respect forfeits 100*l.*

| Ports.                    | Stations for bringing to.  |
|---------------------------|--|
| Lochgilthead              | Lochgilthead Roads, at the east end of the Crinan Canal, lying and being within Ardriahig Point, on the western side of Lochgilthead and Kilnary Point, on the eastern side of the said loch.  |
| INVERNESS                 | The harbour.   |
| INVER                     | The harbour.   |

| Dungarvan       | The harbour.   |
| WESTPORT        | The anchorage ground at Annagh Head, in Clew Bay.  |
| WEXFORD         | South Bay, about 10 miles from Wexford.  |

LISBON. — In return for the privilege conceded to the Portuguese under the Methuen treaty (*Dict.* p. 1177.), of admitting their wines to entry for consumption in Great Britain, at 2-3ds the duty charged on French wines, British woollens were admitted into Portugal at a duty of 15 per cent. This rate of duty was afterwards extended to all British articles; and, since 1782, it has been charged according to a tariff or valuation fixed that year. But, with the exception of goods from Brazil, all other foreign goods consumed in Portugal paid a duty of 30 per cent. These distinctions are now, however, at an end; the subjoined decree having fixed the duty on *all* goods admitted to consumption in Portugal, without regard to their origin, at 15 per cent. This regulation was a good deal complained of here, but without reason. Having judiciously equalised the duties on French and Portuguese wines, we had no right or title to expect that the Portuguese should continue to render us the stipulated equivalent of what we had ourselves withdrawn. In so far, too, as we are concerned, the change is not really of any material importance, and will not sensibly affect our trade with Portugal. We subjoin the decree referred to: —

I. All goods and merchandise, of whatever nature and origin, and under whatever flag they may be imported, are admitted into the Custom-house of Lisbon and Oporto, to be despatched for consumption.

SECT. 1. Live pigs, gunpowder, and foreign olive and turnip oil, are excepted from the foregoing article.

SECT. 2. The importation of grain will be regulated by a special law; and in the mean time the existing dispositions thereunto relating will continue in force.

SECT. 3. Tobacco, soap, and orchilla weed, continue subject to the laws and conditions of the state contracts.

SECT. 4. Wine, vinegar, brandy, and other spirits of whatever quality they may be, are only admitted in bottles or jars of half a *canada*, Lisbon measure, and in boxes containing 2 dozens of bottles each. Itum, however, is admitted in casks of any size.

II. Goods admitted to consumption by the present decree, if imported in Portuguese vessels from the country in which they are produced, or in ships of that country coming direct, will pay 15 per cent., levied upon the tariff valuation, and where there is no tariff, *ad valorem*. In the contrary case, will pay the duty hereby established increased by 4 of the same duty.

SECT. 1. Vinegar, wine, brandy, and all other spirits will pay 300 reis per bottle or jar. The decree of the 7th of December, 1825, remains in full force as regards rum, whatever place it comes from. The goods comprehended in this paragraph remain subject to the clauses of the preceding article, as far as they are applicable.

Palace of Necessidades, 18th of April, 1831.

OLIVE OIL. — In consequence of petitions and representations from the woollen manufacturers, setting forth the serious injury they sustained from the oppressive duty of 8l. 8s. a tun laid on olive oil (*Dict.* p. 862.), it has been reduced 50 per cent., or to 4l. 4s. a tun. — (4 & 5 Will. 4. c. 89. § 15.) The reduction does not, however, extend to oil brought from Naples or Sicily; but his Majesty is empowered, if he see cause, to reduce the duty on such oil to 4l. 4s. a tun, by an order in council. This exception is understood to have been made in the view of facilitating the negotiations now in progress with the King of Naples for a reduction of the exorbitant duties laid on pilchards and other British articles imported into his dominions. It is to be hoped that these negotiations may be speedily brought to a satisfactory conclusion; for the largest portion by far of the olive oil made use of here being brought from Naples (Gallipoli, see *Dict.* p. 863.), the continuance of the high duties on it goes far to nullify the measure. Those who take into view the importance of olive oil in the arts, particularly in the woollen manufacture, and are aware that the revenue derived from it has not exceeded 50,000l.

a year, will probably join with us in opinion, that the duty should either be repealed, or reduced to, at most, 2*l.* 2*s.* a tun.

**POST-OFFICE.** — The inconveniences complained of in *Diet.* p. 936., with respect to the transmission of newspapers by post, have been almost entirely obviated by the act 4 & 5 Will. 4. c. 44.

It relates partly to the conveyance of newspapers to and from the colonies, and partly to their conveyance to and from foreign parts. At present, 1*d.* each is charged on all British and Irish newspapers sent by packet to any of the colonies; and 3*d.* on all colonial newspapers sent by packet to Great Britain and Ireland. But these charges are to cease on the 1st of October, 1834; and from and after that date the Post-office is to receive British and Irish newspapers duly stamped, and to convey them to the colonies free of postage; and the colonial postmasters are to receive newspapers printed within the colonies, and to transmit them by packet to Great Britain and Ireland; the General Post-office being bound to deliver them to their address within the kingdom free of postage. — § 2. and 3.\*

The following clauses relate to the conveyance of newspapers to and from foreign parts: —  
**Newspapers to and from Foreign Parts.** — From and after the 1st day of October, 1834, the Post-office shall receive any printed newspapers duly stamped for conveyance by packet boats from Great Britain and Ireland to any foreign port, and forward the same accordingly free of postage; and newspapers printed in any foreign kingdom or state, and brought into the U. K. by packets, shall (if printed in the language of the foreign kingdom or state from which the same shall be forwarded, but not otherwise) be delivered by the General Post within the U. K. free of postage: provided, that before any newspapers to or from any foreign port be conveyed or delivered free of postage, under the provisions of this clause, satisfactory proof be laid before the postmaster-general that printed newspapers sent from Great Britain or Ireland are allowed to pass by post within such foreign kingdom or state free of postage, and also that newspapers addressed to any person or place in Great Britain or Ireland from the same are allowed to pass by post within it free of postage; and it is hereby declared, as to every newspaper put into the post-office within Great Britain or Ireland for conveyance by packet, addressed to any foreign kingdom or state in which printed British newspapers are not allowed to pass by post free of postage, the postmaster-general (until such satisfactory proof be laid before him) and his deputies shall demand and take 2*d.* for the conveyance of every newspaper to any foreign port, to be paid when it is put into the post-office; and as to every newspaper addressed to Great Britain or Ireland, and brought into the U. K. from any foreign kingdom or state in which such newspapers are not allowed to pass by post free of postage, it is declared that the postmaster-general (until such satisfactory proof be laid before him) and his deputies shall demand and take for the conveyance of every such newspaper by post 2*d.*, to be paid on delivery thereof to its address, over and above any postage charged thereon by any foreign Post-office, provided such paper be in the language of the kingdom or state from which it is forwarded. — § 4.

**Re-imposition of Postage.** — The postmaster-general, with consent of the Lords of the Treasury, is authorised to re-impose the duty of postage in the event of the conditions as to reciprocity not being complied with. — § 5.

**Newspapers to be sent in Covers, open at Sides, &c.** — Every newspaper sent by post under this act, must either be sent without a cover, or in a cover open at the sides; nothing is to be printed on the paper after it has been published, nor is any writing or mark to be made upon such paper, or the cover thereof, other than the name and address of the person to whom it is sent, nor is any paper or thing to be enclosed or concealed in such paper or its cover. — § 6.

**Limitation of Time for Postage.** — Newspapers to be posted within 7 days after date of the same; otherwise may be detained, or charged with postage as a letter. — § 7.

**Newspapers addressed to Persons who have removed may be re-directed, and sent to them free of Extra Charge.** — But if any newspaper shall have been opened or used, it shall, on re-direction, be charged with the rate of a single letter, from the place at which it shall be re-directed to the place at which it shall be ultimately delivered. — § 8.

**Postmaster-general, with Consent of the Treasury, may contract with Editors, &c. of unstamped Publications for forwarding the same by Post, on Payment of a yearly Sum for each Publication.** — § 9.

**Power to Search.** — The postmaster and his deputies may examine and search printed papers sent in covers, open at the sides, and in case any words or communication be found to be printed on any such paper after the same was published, or any writing or mark be found on it or the cover thereof other than the name and address of the person to whom it is sent, or any other paper or thing be enclosed or concealed in or with it, or any printed words or communication be found upon its cover, or in case any newspaper brought into the U. K. from any foreign kingdom or state be not printed in the language of such kingdom or state, every such packet shall be charged with treble the duty of letter postage; and as to every paper or packet going out of the U. K., the postmaster-general or his deputies may either detain it, or forward it by post, charged with letter postage; and in case any newspaper printed and posted in the U. K., and sent by post under this act, shall appear not to be duly stamped, it shall be stopped and sent to the commissioners of stamps at London or Dublin.

The other clauses are of no importance.

**Inland North American Postage.** — The act 4 Will. 4. c. 7 places the regulation of the inland postage of the North American colonies, and the appropriation of the revenue arising from the same, wholly in the power of the provincial or colonial legislatures.

**RAISINS.** — The duty on all raisins, without distinction of quality, brought from a foreign country, has been reduced to 1*s.* a cwt.; and to half that sum on those brought from a British possession. — (4 & 5 Will. 4. c. 89. § 15.) This measure will, no doubt, materially increase the consumption of raisins. The tax ought, however, to have varied with the quality. A duty of 1*s.* a cwt. is not too much on Malaga muscatels; but, to be in proportion, the duty on Smyrna blacks should not exceed 5*s.* a cwt.

**SEAMEN.** — The reader will find in the body of this work, p. 1015., a notice of the corporation established by the act 20 Geo. 2. c. 38. for the relief and support of maimed and disabled merchant seamen, and of the widows, children, &c. of such seamen as were killed or drowned in the merchant service. But, as the funds at the disposal of the corporation have been very limited, it has not been much heard of. Under previous acts, 6*d.* per month was deducted from the wages of all seamen in the merchant service; the produce of which assessment was paid over to the trustees of Greenwich Hospital, in the benefit of which institution such seamen were to be allowed to participate. But this

\* N. B. — The old regulations still continue in force as to all newspapers conveyed to and from the colonies otherwise than by packet.

arrangement has latterly been much objected to, and apparently not without good reason; for it appears from the official returns (*Diet.* pp. 1016, 1017.), that, though the contributions from merchant ships to Greenwich Hospital in 1828 and 1829 exceeded 20,000*l.* a year, there was not on the establishment a single individual who had been exclusively employed in the merchant service! The heavy expenses attending the collection of the duty were, also, much objected to.

*Repeal of the 6d. a Mouth Greenwich Duty.* — To obviate these complaints, the 4 & 5 Will. 4. c. 34. directs that the contribution of 6*d.* per month by seamen in the merchant service to Greenwich Hospital shall cease from the 1st of January, 1835; and that 20,000*l.* a year shall be advanced from the consolidated fund to the Hospital, to make good the deficiency caused by the cessation of such contribution.

*New Establishment for Support of Merchant Seamen, &c.* — And to provide still more effectually for the relief and support of maimed and disabled merchant seamen, and of the widows, &c. of those killed or drowned in the merchant service, the act 4 & 5 Will. 4. c. 52. has been passed. This act repeals the 20 Geo. 2. c. 38., except in so far as it relates to the establishment of the corporation of president and governors for the relief of maimed, &c. merchant seamen, and of the widows and children of seamen killed or drowned in the merchant service; and it also repeals as much of the act 37 Geo. 3. c. 73. as relates to the wages of seamen dying while employed in ships trading to the West Indies. Having thus cleared the way for a new system, it goes on to enact: —

*President and Governors empowered to relieve disabled Seamen, &c.* — The said president and governors and their successors are authorised to provide, in their hospital, for such seamen as are rendered incapable of service by sickness, wounds, or other accidental misfortunes, and those who shall become decrepit or worn out by age, or to allow them certain pensions, or otherwise, as the president and governors deem meet and most for the advantage of the said charity; and also to relieve the widows and children of such seamen as shall be killed, slain, or drowned in the said service; and also to relieve the widows and children of seamen dying after having contributed during a term of 21 years to the funds of this corporation; provided such children are not of the age of 14 years, or if of that age or upwards, not capable of getting a livelihood by reason of lameness, blindness, or other infirmities, and are proper objects of charity; and also to relieve the widows and children (such children being proper objects of charity) of such seamen as at the time of their death shall have been receiving or been entitled to pensions, under and by virtue of this act, from the fund hereby to be created, as decrepit or worn-out seamen: provided that no widow shall be entitled to any benefit under this act, who shall not have been the wife of such seaman or pensioner before he became entitled to relief under its provisions: provided nevertheless, that no seaman shall be entitled to any provision or benefit of this act, on account of any hurt or damage received on board any ship or vessel, unless he produce, or cause to be produced, a certificate of the said hurt or damage from the master, mate, boatswain, and surgeon, or so many of them as were in the vessel to which he belonged at the time of his receiving such hurt or damage, or of the master and 2 of the seamen, if there be no other officers, or in case the master shall die, or be killed or drowned, then of the person who shall take upon him the care of the ship or vessel, and 2 of the seamen on board the same, under their hands and seals, thereby signifying how and in what manner such seaman received such hurt or damage, whether in fighting, defending, working, loading, or unloading the said ship or vessel, where and when he entered, and how long he had served on board the same; and the parties so signing and sealing such certificate are hereby required to make oath to the truth thereof before some justice of the peace, if given in Great Britain or Ireland, or the chief officer of the customs of the port or place where there is no justice of the peace, or before the British consul or resident in any foreign country where such certificate is executed (who are respectively authorised and required to administer the same without fee or reward); and in case of sickness, whereby such seaman shall be rendered incapable of service, a certificate signed, sealed, and authenticated in like manner, signifying that he was healthy when he entered on board such ship or vessel, and that such sickness was contracted on board the same, or on shore in doing his duty in the service of the ship, and not otherwise, and expressing the time and place he entered on board such ship or vessel, and how long he had served therein: and that no widow, child, or children of any seaman killed, slain, or drowned in the said service, shall be relieved or entitled to any allowance by virtue of this act unless she or they, or some person on her or their behalf, shall produce a certificate, signed, sealed, and authenticated in like manner, signifying how and in what manner such seaman lost his life in the service of the said ship or vessel, the time and place he entered on board, and how long he had served therein; and that no widow, child, or children of any seaman in the said service shall be entitled to any relief by virtue of this act, unless she or they shall produce, or cause to be produced, a certificate under the hands and seals of the minister and churchwardens and overseers of the poor of the parish, township, or place, or any 2 of them, or under the hands and seals of the minister and overseers of the poor of the parish, township, or place, or any 2 of them, where there are no churchwardens, or if in Scotland, by the minister and elders, or if in Ireland, by a justice of the peace for the parish, township, or place where such widow, &c. shall at the time reside, and if such widow, &c. are some of the people called Quakers, then by any 2 reputable persons of that persuasion, of the parish, township, or place where such widow, &c. have a legal settlement, or do inhabit and reside, to be attested by 2 or more credible witnesses, that such widow was the lawful wife and real widow, and that such child or children was or were the lawful child or children of such deceased seaman as aforesaid, and that such child or children is and are under the age of 14 years, or if of that age or upwards, not capable of getting a livelihood by reason of lameness, blindness, or other infirmities, and is or are proper objects of charity; and that no seaman shall be provided for by a pension or otherwise, as decrepit or worn out, unless he have served in the merchant service for the space of 5 years, and have during that time paid the monthly duty out of his wages, imposed by the act 20 Geo. 2. c. 38., or by this act required to be henceforward paid and deducted, as the case may happen, for the uses and purposes herein provided. — § 2.

*Forgery of Certificate.* — Forged certificates to be null and void; and those knowingly using them to be liable to the punishment of an incorrigible rogue. — § 3.

*Courts.* — The president and 5 assistants to make a court, who are to meet weekly. The court may apply the monies of the corporation, and appoint the officers and their salaries, and do all other matters and things necessary. — § 4.

*All Masters and Owners of Merchant Ships or Vessels, &c. to pay 2s. per Month.* — For effecting the ends and purposes aforesaid, every master of any merchant ship or vessel belonging to any British subject, and every owner, being a British subject, navigating or working his own ship or vessel, whether the said ship or vessel be employed on the high sea, or coasts of Great Britain or Ireland, or in any port, bay, or creek of the same, shall, from and after the 31st day of December, 1834, pay 2*s.* per month, and propor-

tionably for a lesser time, during the time he or they shall be employed in such merchant ship or vessel, for the uses and purposes aforesaid: provided always, that such masters or owners, or their widows and children under 14 years of age, or being objects of charity as aforesaid, shall be entitled to a proportionate increase of the pension or allowance, by this act provided, according to the difference between the amount of the monthly duty paid by other seamen, mariners, and pilots, in case such master or owner shall have paid the 2s. per month for a period of 5 years or 60 months before any application to the said president and governors for relief under this act; but in case any such master or owner be killed or drowned, or become decrepit, maimed, or disabled, before he or they shall have paid such increased rate of 2s. per month for the full period of 5 years or 60 months as aforesaid, then such masters or owners, or their widows and children, shall be entitled to such smaller pension or allowance as the said president and governors, or the trustees to be appointed, shall think fit. — § 5.

*All Seamen, or other Persons serving on board such Ships or Vessels, to pay 1s. per Month.* — Every seaman or other person whatsoever who shall serve or be employed in any merchant ship, or other private ship or vessel, belonging to any British subject, whether employed on the high sea, or coasts of Great Britain or Ireland, or in any port, bay, or creek of the same, and every pilot employed on board any such ship or vessel, shall, from and after the 31st day of December, 1834, pay 1s. per month, and proportionably for a lesser time, during the time he or they shall be employed in or belong to the said ship or vessel, for the uses and purposes aforesaid: provided that this act shall not be construed to extend to any person employed in taking fish, in any boat upon any of the coasts of Great Britain or Ireland, or the islands of Guernsey, Jersey, Alderney, Sark, and Man, nor to any person employed in boats or vessels that trade only from place to place within any river of Great Britain or Ireland. — § 6.

*Masters of Ships to keep in their Hands 1s. per Month out of Seamen's Pay.* — The master, owner, or commander of every such merchant or private ship or vessel is hereby required to deduct out of the wages, shares, or other profits payable to seamen or other persons employed on board such ship or vessel (other than those hereby excepted), the said monthly duty, and shall pay the same, together with the amount of the duty owing from himself, to such officer or officers as shall be lawfully appointed at any of the out-ports for collecting the said duty of 1s. per month, if such seamen or other persons be entitled to any such wages, shares, or profits. — § 7.

*Appointment of Receivers.* — President and governors, with the concurrence of commissioners of customs, to appoint such persons to receive the monthly duties at the out-ports as they may think fit, making them a reasonable allowance for their trouble, which is not, however, in any case, to exceed 5 per cent. on the gross sum collected. — § 8.

*Master Roll.* — Every master is to keep a true and faithful muster roll of the crew of his ship, specifying in writing the name of every one of the crew, including apprentices, with the various particulars as to the place of each person's birth, the place and time of his entry to the ship, the place and time of his discharge from or leaving the same, and if he be discharged or left, with the other particulars specified in the subjoined formula, in the event of his being hurt, killed, &c.: —

A List and Account of the Crew (including the Master and Apprentices) of the Ship of the Port of \_\_\_\_\_ whereof \_\_\_\_\_ is Master, at the Period of her Departure from the Port of \_\_\_\_\_ in the United Kingdom, and on her Return to the Port of \_\_\_\_\_ in the United Kingdom, and also of those who have joined the Ship at any Time during the Voyage.

| Men's Names. | Place of Birth. | Place and Time of Entry. |        |       | Place and Time of Discharge, or leaving the Ship. |        |       | When and where received hurt or maimed. | Whether or drowned, or died a natural death. | Wages at Time of Death. | What Clothes or other Effects received when has left. | Amount of Monthly Duty. |
|--------------|-----------------|--------------------------|--------|-------|---|--------|-------|---|--|-------------------------|---|-------------------------|
|              |                 | Day.                     | Month. | Year. | Day.  | Month. | Year. |   |  |                         |   |                         |
|              |                 |                          |        |       |   |        |       |   |  | L. s. d.                |   |                         |

Duplicates of this account are to be delivered to the collectors of the duties at the port where the vessel discharges; and any master or commander neglecting to keep such muster roll, and neglecting or refusing to deliver it to the collectors of the duties, shall forfeit for every such offence the sum of 5*l.* The collectors are to transmit to the president and governors the duplicates received from such vessels as do not belong to the port of discharge; and the latter are to transmit them to the same. Collectors neglecting to transmit such duplicates incur a penalty of 5*l.* — § 9.

*Masters to deduct Penalties from Wages.* — The master of every ship coming within the provisions of this act shall deduct out of the wages of the seamen thereof the amount of all forfeitures incurred by any such seamen, and every master is hereby required truly to enter the same in a book to be kept by him for that purpose, which shall be signed by the master and the person next in command, both of them certifying that it contains all the forfeitures which have been incurred by the seamen of the ship during the voyage, to the truth whereof the master shall make oath when required before the officer of the president and governors in London, or before their collectors at the out-ports; and the said book, or a true copy thereof signed and certified as aforesaid, shall, within 1 calendar month after the ship's return from her voyage, be delivered to the said officer by the master, together with extracts from the log-book of the vessel, therein of the causes of the several forfeitures; and every master who shall refuse or neglect to deliver such account shall forfeit and pay the sum of 20*l.* — § 10.

*Examination of Masters, &c.* — Collectors may summon masters of vessels, and examine them upon oath as to the truth of the muster rolls; masters refusing to appear or to answer, to forfeit 10*l.* — § 11.

*Regulations as to Government Ships.* — Secretaries, &c. of public government offices to give in a list of ships and vessels employed in their service, and of the seamen or other persons employed in such ships or vessels; and the treasurers, &c. of such offices are to pay no wages or freight to any master, &c. until he produce an acquittance signed by receiver of duties. — § 12.

*Payment of Duties.* — The said monthly duties are to be paid at the port where the ship or vessel unloads her cargo, before she be cleared inwards, and all officers are interdicted from granting any caskets, transire, &c., or permitting any vessel to go out of any port, unless it appear by the acquittances of the collectors of the said duties that they are not more than 3 months in arrear of the same; every officer acting contrary to this regulation to forfeit 10*l.* But masters or owners may agree with the trustees and collectors for half-yearly payments. — § 13.

*Prevention of Delay.* — To prevent unnecessary delay, it is enacted, that if masters fail to produce proper acquittance or certificate of agreement, tidewaiters to be continued on board at their expense. — § 14.

*Penalties by this act recoverable before a magistrate.* — § 15.

*Appointment of Trustees, &c.* — From and after the 1st day of October, 1834, it shall be lawful for the owners, masters, and commanders employed on board ships and vessels belonging to any of the out-ports to assemble and meet at any time and place within the same that shall be appointed by any 5 or more

of them, by giving 10 days' previous notice, to be fixed at the Custom-house, wharf, quay, or other public place; and such persons, or the greater part of them, being so assembled, are authorised from time to time to nominate and appoint, by an instrument in writing under their hands and seals, 15 persons to be trustees for such out-port, for receiving, collecting, and applying the said duties, which trustees shall continue to act until the 20th day of December, 1835, and until new trustees are nominated and confirmed; and that within 10 days after the 20th day of December in each succeeding year, the owners, masters, &c. at such out-ports shall have power to meet and choose 15 persons to be trustees for the year ensuing, by an instrument in writing under their hands and seals, or the majority of them so assembled, having given previous notice in the manner before directed; which said respective trustees shall continue from time to time until new trustees are nominated, &c. as aforesaid; and the said instrument shall be sent, free of expense, to the president and assistants or committees of the said corporation, who are required to confirm the same under the common seal of the corporation, without fee or reward, within 15 days after the receipt thereof; which trustees when so confirmed (and whereof five shall be a quorum) shall have the same powers and authorities to make by-laws, and to revoke or alter the same, and to receive, and apply any sums of money which shall be contributed, devised, or bequeathed by any well-disposed persons for the purposes aforesaid, and to appoint receivers and other officers, and to collect, receive, pay, and apply the said duties of 2s. per month and 1s. per month so to be allowed and paid by the seamen or other persons serving on board any ship or vessel belonging to such persons, at such out-ports, according to such rules, orders, and regulations as are or shall be established by virtue and in pursuance of this act, or have been established and continued under the provisions of the act 20 Geo. 2. c. 38., so far as the same are not inconsistent with or repealed or varied by the provisions of this act; and the said receivers and other officers shall have the same powers and authorities as the other receivers and officers appointed in pursuance of this act, and shall be liable to the same penalties and forfeitures: provided always, that if the instrument of trust be not sent to the president and assistant or committees within 60 days after every appointment of trustees, the trust thereby created shall be considered void, and the trustees appointed under it as discharged from the same; and that the president and governors shall have power to appoint a receiver or receivers for the port or place from which such instrument of trust has not been sent, for collecting the forementioned duties and allowances payable at such port or place aforesaid; and the said president and governors shall have power to demand from the outgoing trustees of such port or place an account in writing of the former management of such void trust, and also to demand payment from such trustees of any balance which may at the time of such default be in their hands, who are hereby required to pay the same to such receiver appointed as aforesaid, together with the books of account and other books belonging to such trustees relative to such trust. — § 16.

**Appointments on Default.** — These are not to be revocable within 5 years. — § 17.

**Former Trustees.** — Trustees previously appointed at the several out-ports to be subject to the provisions of this act. — § 18.

**Trustees in Bristol.** — The corporation of the Merchants Venturers of Bristol are appointed trustees for the duties, &c. received there; and empowered to hold lands, &c. for the purpose of this act. — § 19.

**Hull Trustee.** — The guild of the Trinity-house of Kingston-upon-Hull appointed trustees for the duties, &c. received there. — § 20.

**Greenock and Glasgow, &c.** — The ports of Glasgow, Greenock, and Port Glasgow, &c. to be deemed one united port, and masters of ships belonging thereto to elect trustees for collecting duties, &c. — § 21.

**Transmission of Accounts.** — Trustees of out-ports to transmit accounts of the yearly receipts and expenditure to president and governors. — § 22.

**Transmission of Muster Rolls.** — Collectors appointed by trustees or corporations aforesaid, are excepted from sending duplicate of muster rolls to the president and assistants. — § 23.

Sections 24. and 25. enact that no seaman shall be entitled to the benefit of this act unless he pays the duty; and that those seamen who have served longest shall be first provided for.

**Maimed Seamen** to be provided for at the port where the accident happens. — § 26.

**Disabled Seamen** having served and paid 5 years to be provided for where they have contributed most. — § 27.

**Seamen shipwrecked, or made prisoners by the enemy,** may be relieved. — § 28.

**Where regular Certificates cannot be obtained, others may be admitted.** — In all cases where the certificates directed to be produced by this act for the purpose of entitling parties to relief and support cannot be obtained, such other certificates as shall be satisfactory to the president and governors or trustees respectively shall be received and allowed, so as to entitle the party producing the same to the pensions or other relief provided by this act. — § 29.

**Wages of deceased Seamen to be paid to the Trustees.** — All sums of money due for wages to any seaman, mariner, or other person engaged on board any British merchant ship in any port or ports in Great Britain or Ireland, who shall have died on board during the voyage, shall, within 3 months after the arrival of such ship in any port of Great Britain and Ireland, be paid to the trustees of the said port appointed in pursuance of this act, or to the receiver or collector or other authorised agent of the said president and governors, where there are no such trustees, to and for the use of the executors or administrators of the seaman or other person so dying; and in case no claim shall be made on the said trustees by such executors or administrators on account of such wages, within 1 year after the same have been paid over, then the said trustees shall remit the same to the collector or receiver or other their authorised agent, of the president and governors at the port of London, in such manner and times as the said president, &c. shall direct, to and for the use of the executors or administrators of the seaman, or other person so dying; and in case no claim shall be made on the said president, &c. by the executors, &c. of such seaman, on account of such wages within 1 year after the same shall have been first paid over to their collector, then it shall be lawful for them to direct such wages to be paid over (but without interest for the same) to the widow, or if there be no widow claiming, then to the lawful issue (respectively, or such persons as by virtue of the statutes of distribution of intestates' effects shall be entitled to the same; and if any master or commander of any merchant ship neglect or refuse to pay over to the said trustees, or the receiver or collector at the port aforesaid, all such sums of money within the time before limited, he shall forfeit for every such offence double the amount of the sums of money due to any seaman or other person for wages. — § 30.

**Wages if not demanded in 3 years** by representatives to go to the use of the president and governors, or the trustees of the respective ports. — § 31.

**Payment to Seaman's Hospital in London.** — President and governors to pay 5 per cent. out of duties received by them from seamen in the port of London to the Seaman's Hospital Society in that port. — § 32.

**Deductions from gross Amount.** — It shall be lawful for the receiver or collector or other authorised agent of the president and governors at the port of London, and he is hereby authorised, to deduct and receive from the gross amount of such sums of money as shall be derived from the unclaimed wages of deceased seamen, received by him in respect of such wages, 5 per cent. in satisfaction of all expenses and trouble he may be put to in the receipt, collection, or transmission thereof. — § 33.

The contributions to the new fund will, most likely, amount to about 50,000*l.* a year; so that, if it be discreetly and economically managed, it will afford the means of suitably providing for a large number of disabled merchant seamen, as well as for the wives

and children of those who have lost their lives in that service. The distressing consequences of those accidents and casualties to which seamen are so peculiarly liable, will thus be materially reduced; so that the service will, in fact, be rendered less hazardous, and more respectable.

**SLATE.** — Slate and chalk laden on board any ship or vessel bound for foreign parts shall be deemed ballast; and all such ships or vessels having on board only slate, or slate and chalk, shall be deemed to be departing in ballast; and if, on the return of any such ship or vessel, any slates or chalk be remaining on board, they shall be deemed to be her ballast. — (4 & 5 Will. 4. c. 89. § 3.)

**SMUGGLING.** — The 85th clause in the act 3 & 4 Will. 4. c. 53., for the prevention of smuggling (*Dict.* p. 1061.), authorising justices to sentence seafaring men, convicted of smuggling, to serve in the navy for 5 years, has been repealed. Persons convicted of such offences are now to be committed to the house of correction, to hard labour, for not less than 6 months for the first offence, 9 for the second, and 12 for the third. — (4 & 5 Will. 4. c. 13. § 2.)

**SPIRITS.** — The reader will find, in the body of this work (art. SPIRITS, p. 1075.), a statement of the smuggling and other pernicious consequences resulting in Ireland from the oppressive duties laid on spirits previously to 1823; of the good effects of the reduction of the duty to 2s. 10d. the Imperial gallon in that year; and of the influence which the addition of 6d. to the duty in 1831 had in reviving that illicit distillation, the preceding reduction had gone far to put down. The view we took of the necessity of making a fresh reduction of the duty was approved and strongly recommended by the Commissioners of Excise Inquiry; and has, we are glad to say, been acted on by government; the act 4 & 5 Will. 4. c. 75., introduced by Lord Althorp, having reduced the duty on British spirits, entered for home consumption in Ireland, to 2s. 4d. a gallon.

It was contended, when this measure was before parliament, that the reduction should be extended to all parts of the empire; and that, by confining it to spirits used in Ireland, a new temptation would be created to smuggle from that country into England and Scotland. This no doubt will be, in some degree, the case; and we hope that no long period will be allowed to elapse till the measure be generalised. We do not, however, think that there is much probability of its giving birth to any considerable amount of smuggling; and it is not to be denied that the reduction was much more urgently required in Ireland than anywhere else. Scotch whisky carried to Ireland is admitted for consumption at the low duty.

**Spirit Licences.** — The act 4 & 5 Will. 4. c. 75. made certain additions to the duties on spirit licences, which are now as follows: —

|                        |   | 10l. per annum, shall pay |    | L. s. d. |   | 0 per annum of licence duty. |  |
|------------------------|---|---------------------------|----|----------|---|------------------------------|--|
|                        |   | L.                        | s. | d.       |   |                              |  |
| At 10l. and under 20l. | — | 6                         | 6  | 0        | — |                              |  |
| 20l. — 25l.            | — | 9                         | 9  | 0        | — |                              |  |
| 25l. — 30l.            | — | 11                        | 0  | 6        | — |                              |  |
| 30l. — 40l.            | — | 12                        | 12 | 0        | — |                              |  |
| 40l. — 50l.            | — | 14                        | 3  | 6        | — |                              |  |
| 50l. and upwards       | — | 15                        | 15 | 0        | — |                              |  |

The spirit licences of grocers in Ireland, not selling spirits to be consumed on the premises of said grocers, not to be affected by this act. — § 8.

All houses licensed at the passing of the present act to continue to be deemed of the same value, so long as the present persons hold them, and the premises remain unaltered; afterwards, their annual value is to be determined according to the mode prescribed in 6 Geo. 4. c. 81. § 9.

**STARCH.** — The injurious influence of the duty on starch, the nett produce of which, in 1833, was only 91,517l. 18s. 2½d., was most ably exposed, and its abolition strongly recommended, by the Commissioners of Excise Inquiry, and we are glad to have to add that, agreeably to this recommendation, the duty has been abolished. — (4 & 5 Will. 4. c. 77.)

### STEAM VESSELS.

Account of the Number and Tonnage of Steam Vessels; distinguishing the Countries to which they belonged, which entered Inwards and cleared Outwards, stating whether they conveyed Goods or Passengers, or both, in 1833 and 1834. — (*Parl. Paper*, No. 320. Sess. 1834.)

| Countries to which the Vessels belonged. | Year ending 4th January, 1834. |       |          |        |                       |         |          |         |                                 |           |          |           |
|--|--------------------------------|-------|----------|--------|-----------------------|---------|----------|---------|---------------------------------|-----------|----------|-----------|
|  | With Goods only.               |       |          |        | With Passengers only. |         |          |         | With both Goods and Passengers. |           |          |           |
|  | In.                            |       | Out.     |        | In.                   |         | Out.     |         | In.                             |           | Out.     |           |

Note. — Vessels with passengers only are not compelled to enter and clear at the Custom-house.

**SWEETS.** — An excise duty was imposed on sweets — that is, on home-made wines, mead, or metheglin, &c. — manufactured for sale, so early as 1696. In 1803 it amounted to 49s. a barrel; the produce of the duty varying from that year to 1816 from about 21,000*l.* to about 33,000*l.* a year. But in 1816 it fell off to little more than half its previous amount. This sudden decline was doubtless occasioned by the great increase in the consumption of Cape wine, consequent to the reduction of the duty on it, in 1814, from about 6*s.* to about 2*s.* 6*d.* a gallon. In 1817 it was attempted to revive the manufacture of home-made wine, by taking a third from the duty on sweets; which amounted, after the reduction, to about 1*s.* 0*d.* a gallon; and in 1826 it was further reduced to 6*d.* But the ease with which the article may be made by private individuals, and the decisive check given, by the introduction of Cape and other cheap foreign wines, and the use of home-made substitutes, prevented these reductions from having any material influence; and in 1832 the duty had dwindled to 3,721*l.* Under these circumstances, the Commissioners of Excise Inquiry wisely recommended the abolition of the duty, which has been effected by the act 4 & 5 Will. 4. c. 77. — (*Fifth Report by Commissioners of Excise Inquiry*, p. 18. &c.)

**SYDNEY.**

**Population.** — There is, in the *Diet.* p. 1099, an account of the population of the colony of New South Wales, according to the census of 1825, accompanied with an intimation that doubts were entertained as to its accuracy. These have since been fully confirmed by the returns obtained under a census taken on the 2d of September, 1833. It appears from them that the population of the colony of New South Wales, exclusive of aborigines, amounted at that date to 60,261; of which were —

|         | Free.  | Convict. |         | Total. |
|---------|--------|----------|---------|--------|
| Males   | 22,817 | 21,815   | Males   | 44,632 |
| Females | 13,475 | 2,098    | Females | 15,573 |
|         | 36,318 | 23,943   |         | 60,261 |

Of the free population, 5,265 males and 4,944 females were under 12 years of age. The total population of Sydney, in September, 1833, was 16,232, of which 13,492 were free.

The census of 1828 made the population of the colony only 36,598. The total immigrants from the 1st of July, 1828, to the 31st of December, 1833, have been, men 2,531, women 2,223, children 1,846; in all, 6,600. Now, if we add this number to the population as given by the census of 1828, it would follow, had that census been accurate, that the colonial births, during the intervening 5 years, had exceeded the deaths by about 17,000. But an increase of this sort, taking the magnitude of the female population into account, is evidently impossible; and shows that the population had been materially underrated in 1828.

**Wages in New South Wales.** — Every one in any degree familiar with such subjects is aware of the extreme difficulty of obtaining accurate accounts of the rate of wages. But in the case of colonies, this difficulty is materially increased; it being the object of those interested in the encouragement of emigration, to set its advantages, of which high wages are probably the greatest, in the most striking light, and conversely. Hence we did not venture to lay any details as to the rate of wages at Sydney before the reader, except those given by the late Emigration Commissioners; and as these gentlemen mentioned that their statements had been obtained from the colonial agent, and other authentic sources, we had no doubt of their accuracy. — (*Diet.* p. 1103.) We regret, however, to be obliged to say that this confidence, though apparently well founded, seems to have been not a little misplaced. The Rev. Henry Carmichael, one of the professors in the Australian College, Sydney, has shown, in his valuable tract, entitled *Hints to Emigrants to New South Wales*, that the statements put forth by the Emigration Commissioners were "calculated very seriously to mislead;" and that, in point of fact, they have misled very many individuals, who, on arriving at Sydney, found the wages far below what they had been made to expect.

A committee, consisting of the most intelligent persons of the class referred to, have drawn up a report on the eligibility of New South Wales as a place of resort for emigrant mechanics, in which, among other things, they declare that the account of the rate of wages (see *Diet.* p. 1103.), published by the Emigration Commissioners, "is extravagant and ridiculous." "Common labourers," they say, "do not earn more than 7*s.* to 5*s.* per week, with rations and lodgings; mechanics, out of Sydney, do not average more than 15*l.* to 20*l.* per annum, with rations, &c.; mechanics of the highest qualifications, in Sydney, do not average more than 2*l.* per week the year round. Agricultural labourers, capable of managing a farm in the capacity of bailiff, not more than 15*l.* to 20*l.* per annum, with rations, and but to live in; and persons of higher grades and similar occupations, cannot get more than 40*l.* to 50*l.* per annum, and rations."

In corroboration of the accuracy of these statements, Mr. Carmichael gives the substance of a letter from William M'Pherson, Esq., collector of the annual revenues, and secretary of the Emigrants' Friend Society, dated the 18th of June, 1833.

"Hood mechanics can earn, in Sydney, from 30*s.* to 40*s.* per week, without board or lodging; and in the country, from 20*l.* to 30*l.* per annum, with house and rations."

"Common labourers in Sydney obtain about 14*s.* per week, without board or lodging; and in the country, about 12*l.* per annum, with house (or rather hut) and rations."

"Wages given to farm servants vary with their qualifications; 50*l.* to 60*l.*, with a house and rations, may be considered the highest wages given to overseers of a superior description, and 20*l.* to 25*l.* to those of humbler pretensions."

"Their being married or single makes, in general, no difference in the rate of wages, unless where the females are expected to perform any domestic duties; but rations are usually given to the wife and children of a married overseer as well as to himself."

"Good ploughmen, or shepherds, obtain from 15*l.* to 20*l.*, with a house and rations."

"Wages of domestic servants are — from L. 12 to L. 20

Of a single man . . . . . 8 . 15

Of a married couple . . . . . 20 . 30

"N.B. — A married pair of emigrants may easily find a small house, containing 2 apartments, to accommodate them on their arrival, at a weekly rent of from 7*s.* to 10*s.*; and an unmarried man may lodge and board for 10*s.* 6*d.* per week." — (*Carmichael's Tracts*, p. 52, 53, Lond. ed.)

These statements certainly differ very widely from those of the Emigration Commissioners. The greater mildness and salubrity of the climate appears to be the principal, or rather, perhaps, the only recommendation in favour of emigrating to Australia rather than to Canada or the United States; but whether this be a sufficient counterpoise to the vast distance of Australia from Europe, the heavy expense of the voyage thither, the chances of drought, and the high price and general bad quality of the land, is a point as to which we do not presume to decide; but it is one that deserves the serious attention of every one who is projecting a visit to the antipodes.

\* The rations allowed to free labourers may be rated per week as follows, viz. —

|                 | Lbs. oz. |         | Lbs. oz.  |
|-----------------|----------|---------|-----------|
| Four            | 10 0     | Tobacco | 0 2       |
| Beef and mutton | 10 0     | Salt    | 0 2       |
| Tea             | 0 2      | Soup    | 0 2       |
| Sugar           | 1 0      | Milk    | 7 quarts. |

† This latter (the milk), being given in lieu of tea and sugar. So that labourers, if well behaved and industrious, are sure to raise themselves above the station which they occupy at home.

**TARIFF.** — Instead of the customs duties on the undermentioned articles, imposed by the act 3 & 4 Will. 4. c. 56., given in the first column of the Table entitled **TARIFF** in the *Dictionary*, the act 4 & 5 Will. 4. c. 89. § 15. has substituted the following: —

|   | L. | s. | d. |                | L. | s. | d. |
|---|----|----|----|----------------|----|----|----|
| Apples, dried   |    |    | 0  | the bushel     |    |    | 0  |
| Books in the foreign living languages, being of editions printed in or since the year 1801, bound or unbound  | 2  | 10 | 0  | the cwt.       | 10 | 10 | 0  |
| Bottles of earth or stone, viz. empty   | 0  | 0  | 6  | the dozen      | 0  | 0  | 6  |
| Bronze, viz. all works of art made of bronze, the value   | 1  | 0  | 0  | the cwt.       | 1  | 0  | 0  |
| Other manufactures of bronze, for every 100 <i>l.</i> of the value  | 30 | 0  | 0  | the cwt.       | 30 | 0  | 0  |
| Cassava powder or starch, the produce of and imported from any British possession in America  | 0  | 1  | 0  | the cwt.       | 0  | 1  | 0  |
| Currants  | 1  | 2  | 2  | the cwt.       | 1  | 2  | 2  |
| Figs  | 0  | 15 | 0  | the cwt.       | 0  | 15 | 0  |
| Grapes, for every 100 <i>l.</i> of the value  | 5  | 0  | 0  | the cwt.       | 5  | 0  | 0  |

| Prunes  | 0  | 7  | 0  | the cwt.       | 0  | 7  | 0  |
| Raisins   | 0  | 15 | 0  | the cwt.       | 0  | 15 | 0  |
| the produce of and imported from any British possession   | 0  | 7  | 6  | the cwt.       | 0  | 7  | 6  |
| Seal skins of British taking, imported direct from the fishery or from a British possession, the doz. skins   | 0  | 0  | 1  | the doz. skins | 0  | 0  | 1  |
| Spirits, viz. liquors, the produce of and imported from the British possessions in America, viz. not being of greater strength than the strength of proof Syke's hydrometer | 0  | 9  | 0  | the gallon     | 0  | 9  | 0  |
| being of greater strength   | 0  | 13 | 6  | the gallon     | 0  | 13 | 6  |

TEA. — The commissioners of customs have, by a minute dated the 10th of July, 1834, issued the following regulations with respect to the warehousing of tea, and its removal from the original port of importation to any other warehousing port, for the purpose of being warehoused for home consumption.

- That the warehouses which may be approved for the deposit of tea, be exclusively appropriated to that purpose.
- That the article be weighed and examined at the time of importation, the officers taking care that all the packages imported in each vessel be "scribed" with a progressive number, with the initials of the vessel's and master's names, and the gross landing weight; and that the duty be charged according to the quantity and quality then ascertained.
- That no packages be allowed to be divided into smaller packages (except for the purpose of stores), nor the mixing of tea, of any sort or sort, be permitted in the warehouses, either for home consumption or exportation.
- That the packages be sorted and arranged in the warehouse by the occupier, according to their respective "chops" or "beds," so as to enable the officers to select from each the required number of packages for taring, and to ascertain the proper tare to be allowed on the packages in each "chop" or "bed;" and that the rate to be observed, as to number of chests to be turned out in each "chop" or "bed," being of the same size and description of tea, be as follows, viz. —
 

|                 |   |               |
|-----------------|---|---------------|
| 1 to 5          | 5 chests of the same size and description of teas | 1 turned out. |
| 6 to 40         | 40  | 3 ditto       |
| 41 to 80        | 80  | 4 ditto       |
| 81 to 120       | 120   | 5 ditto       |
| 121 to 200      | 200   | 6 ditto       |
| 201 to 300      | 300   | 8 ditto       |
| 301 to 500      | 500   | 10 ditto      |
| 501 to 800      | 800   | 12 ditto      |
| 801 and upwards |   | 16 ditto      |

 And that in addition to the tare, an allowance for draft be made of 1*lb.* upon each package weighing 25 *lbs.* gross, to be deducted from the foot of the landing account.
- That tea entered for exportation be previously weighed, and any deficiency of the landing quantity charged with duty, unless such tea be deposited in a warehouse of special security.
- That the officers be authorised, under the 124th section of the Regulation Act, to draw samples of tea, not exceeding 5 ounces of each description and quality, unless under special circumstances, such samples to be disposed of as the Board may see fit to direct. And that the merchants or proprietors of the goods be allowed to take the like quantity as samples, under the 31st section of the General Warehousing Act.
- That the removal of tea from the original ports of importation to any other warehousing port in the United Kingdom, for the purpose of being re-warehoused for home consumption, do take place under the regulations and conditions specified in the General Orders of the 14th of June, 1831, and 3d of November, 1832, in regard to the removal of articles the produce of the East Indies; and that tea so removed be allowed to be deposited in warehouses or floors which may have already been approved for other goods.
- When tea, or other East India goods, shall be imported into either of those ports for the Glasgow market, and transhipped into craft properly secured, for removal to Glasgow in charge of the officers of the revenue, under such regulations for the security of the revenue as may appear necessary in such cases, the examination of the goods, for the purpose of ascertaining the duty thereon, may take place at Glasgow instead of the port of importation.

In all other cases, goods shall be examined at the time of importation, for the purpose of fixing the amount of duty to which they may be liable, and the duty so ascertained shall be assessed on the goods at whatever future period they may be delivered for home consumption.

Under these arrangements, there will be no objection to the goods being removed from the original port of importation to any other warehousing ports in the United Kingdom, for the purpose of being re-warehoused for home consumption, under the same regulations and restrictions now applicable to the removal of articles the produce of the East Indies.

The ports of London, Liverpool, Bristol, Hull, Newcastle, Leith, Glasgow, Greenock, Port Glasgow, Dublin, Belfast, and Cork, have been declared ports into which tea may be imported and warehoused.

VAN DIEMEN'S LAND. — *Population.* — Including military, the total population of Van Diemen's Land amounted, on the 1st of January, 1834, to 31,551. The males are to the females in the proportion of 22 to 9, and the free to the convict population nearly as 18½ to 12½. The total estimated value of the articles of colonial produce exported from the colony in 1833 was 152,967*l.*; of which 81,881*l.* worth were shipped from Hobart Town, and the residue from Launceston, which is rapidly rising in point of commercial importance. The total imports into the island during the same year, consisting chiefly of British manufactures, were valued at 352,894*l.*; of which those imported into Hobart Town were supposed to be worth 249,312*l.*, and those into Launceston 103,082*l.* — (*Hobart Town Almanac for 1834.*)

UNITED STATES (TRADE OF). — The following statements in relation to the trade and navigation of the United States during the 3 years ending the 30th of September, 1833, have been extracted from the official returns printed by order of Congress: —

I. Statement showing the Quantity and Value of the Cotton Wool annually exported from the United States, since 1821.

| Years. | Sea Island. |             |                | Other Sorts. |             |                | Value.     |
|--------|-------------|-------------|----------------|--------------|-------------|----------------|------------|

## WAREHOUSING SYSTEM. — WEIGHTS AND MEASURES. 15

It appears from this statement, that though the quantity of cotton exported from the United States in 1825 did not much exceed half the quantity exported in 1833, its value, owing to the exorbitant price it then fetched, was greater than at present.

II. Statement showing the comparative Values of the Articles, arranged in Classes, exported from the United States during each of the 3 Years ending the 30th of September, 1833; with the Total Value of the Imports during the same Years.

| Articles.                      | 1831.             | 1832.           | 1833.           |

WAREHOUSING SYSTEM. — The act 4 & 5 Will. 4. c. 89. § 20. has the following important proviso: —

The commissioners of customs shall remit or return the duties payable or paid, on the whole or any portion of wine, spirits, or other fluid, which shall be lost by any unavoidable accident in the warehouse in which it was deposited according to the provisions in the act 3 & 4 Will. 4. c. 57. or any other act to be passed for the warehousing of goods; and the duties upon the following articles, deposited in warehouses of special security, viz. wine, currants, raisins, figs, hams, cheese, and mahogany, when taken out of warehouse for home use, shall be charged upon the quantities actually delivered.

WEIGHTS AND MEASURES. — The act 4 and 5 Will. 4. c. 49. passed during last session, repeals some of the clauses in the acts 5 Geo. 4. c. 74. and 6 Geo. 4. c. 12., establishing the new system of weights and measures, and enacts others in their stead; it also puts an end to the mischievous practice of selling by heaped measure. It sets out with repealing the provisions in the acts referred to, that require that all weights and measures shall be models and copies in shape or form of the standards deposited in the exchequer; and those allowing the use of weights and measures not in conformity with the Imperial standards established by the said acts; or that allow goods or merchandise to be bought or sold by weights and measures established by local custom, or founded on special agreement. — § 1. It then goes on to enact: —

*Weights and Measures stamped at the Exchequer declared legal.* — Weights and measures verified and stamped at the exchequer as copies of the standard weights and measures, corresponding in weight and capacity with those established by the said acts, shall be deemed legal weights and measures, and may be used for comparison as copies of the Imperial standard weights and measures, although not similar in shape to those required under the provisions of the said acts. — § 2.

*Superintending Officer of Exchequer may verify and stamp Weights, &c.* — The auditor or comptroller-general, or other superintending officer of the exchequer, may compare, verify, and stamp as correct standard measures of a yard, standard weights, and standard measures of capacity, any weights and measures which correspond in length, weight, and capacity with the standards, or parts or multiples thereof respectively, deposited in the exchequer under the act 5 Geo. 4. c. 74., though such weights and measures may not be models or copies in shape or form of the standards so deposited. — § 3.

**Abolition of Heaped Measure.** — From and after the 1st day of January, 1835, so much of the said acts as relate to heaped measure is hereby repealed, and the use of heaped measure is abolished, and all bargains, sales, &c. made by heaped measure after the said 1st day of January, 1835, shall be null and void; and thereafter no weight made of lead or of pewter shall be stamped or used. — § 4.

**Copies of the Imperial Standards to be provided, &c.** — At the general quarter sessions next after the passing of this act, the magistrates of every county or county of a city in England and Wales, and in Scotland the justices of the peace at meetings to be called for the purpose by the sheriffs and the magistrates of each royal burgh, within 3 months after the passing of this act, shall respectively determine the number of copies of the Imperial standard weights and measures which they deem requisite for the comparison of all weights and measures in use within their counties, counties of cities, and burghs respectively, and shall direct that such copies, verified and stamped at the exchequer, be provided for the use of the same, and be deposited at certain central and convenient places, under the care of an inspector or inspectors of weights and measures, to be by the said magistrates appointed and dismissed as occasion may require. — § 5.

The next 6 clauses relate to the furnishing of copies of the Imperial standard weights and measures to the different counties, cities, &c.

**Stone Weight, Hundred Weight, and Ton.** — From and after the 1st of January, 1835, the weight denominated a stone shall in all cases consist of 14 standard pounds avoirdupois, the weight denominated a hundred weight shall consist of 8 such stones, and the weight denominated a ton shall consist of 20 such hundred weight; and all contracts made by any other stone, hundred weight, or ton, from and after the 1st day of January, 1835, shall be null and void.

**All Articles to be sold by Avoirdupois Weight, except as herein stated.** — From and after the 1st day of January, 1835, all articles sold by weight shall be sold by avoirdupois weight, excepting gold, silver, platinum, diamonds, or other precious stones, and drugs when sold by retail; and such excepted articles, and none others, may be sold by Troy weight.

**All Weights and Measures to be stamped by Inspectors.** — In England and Wales the magistrates at quarter sessions, and in Scotland the justices of the peace at a meeting called by the sheriff, and in Ireland the grand jury of each county and county of a city or town, shall procure, for the use of the inspectors, stamps for the stamping or sealing all weights and measures used in such county, which stamp shall be the stamp for such county, and no other shall be considered legal; and all weights and measures used for buying and selling, or for the collecting of any tolls or duties, or for the making of any charges on the conveyance of goods or merchandise, shall be examined and compared with one of the copies of the Imperial standard weights and measures provided under the authority of this act by the inspectors appointed as aforesaid, who shall stamp such weights and measures when examined and compared, if found to correspond with the said copy, the fees for which examination shall be according to the scale contained in the annexed schedule; and all persons who, after the 1st of January, 1835, in England and Wales and in Scotland, or after the 1st of July, 1835, in Ireland, shall make any weights or measures other than those authorised by this act, or shall sell or use any weights or measures not stamped as aforesaid, or which shall be found light or otherwise unjust, shall on conviction forfeit a sum not exceeding 5*l.*; and any contract, bargain, or sale made by such weights or measures shall be wholly null and void, and all such light or unjust weights and measures shall be seized, forfeited, and condemned. — § 14.

**Regulations as to Fair Prices.** — In Scotland, from and after the 1st day of January, 1835, the fair prices of all grain in every county shall be struck by the Imperial quarter, and all other returns of the prices of grain shall be set forth by the same, without any reference to any other measure whatsoever; and any sheriff clerk, clerk of a market, or other person offending against this provision, shall forfeit not more than 5*l.* nor less than 1*l.* — § 15.

The inspectors are further directed to give security to the extent of 100*l.* for the due and punctual performance of the duties of his office. Power is granted to magistrates to examine weights and measures, to order such as are light or otherwise unjust to be forfeited and destroyed, and those using them to be subjected to a penalty not exceeding 5*l.*; and a similar penalty to be imposed on those refusing to produce weights and measures for inspection, or obstructing the magistrates. All persons forging or counterfeiting any stamp or mark used in the stamping or marking weights or measures, incur a penalty of not more than 50*l.* and not less than 10*l.* each offence; and persons knowingly selling or uttering the same, forfeit not more than 10*l.* and not less than 2*l.* each offence. — § 16, &c. The schedule of fees is as follows: —

## SCHEDULE OF FEES

To be taken by all Inspectors of Weights and Measures (except those appointed for the Cities of London and Westminster, or under the Authority of the Founders' Company), and by all Weighmasters in Ireland.

For examining, comparing, and stamping all brass weights, within their respective jurisdictions —

|                                      | <i>s.</i> | <i>d.</i> |
|--------------------------------------|-----------|-----------|
| For each half hundred weight         | 1         | 6         |
| For each quarter of a hundred weight | 0         | 9         |
| For each stone                       | 0         | 6         |
| For each weight under a stone        | 0         | 13        |

For examining, comparing, and stamping all iron weights, or weights of other descriptions not made of brass, within their respective jurisdictions —

|   | <i>s.</i> | <i>d.</i> |
|---|-----------|-----------|
| Each half hundred weight                      | 0         | 6         |
| Each quarter of a hundred weight              | 0         | 3         |
| For each stone, and all weights under a stone | 0         | 2         |

For examining, comparing, and stamping all wooden measures, within their respective jurisdictions —

|                          | <i>s.</i> | <i>d.</i> |
|--------------------------|-----------|-----------|
| Each bushel              | 0         | 6         |
| Each half bushel         | 0         | 3         |
| Each peck, and all under | 0         | 2         |
| Each yard                | 0         | 6         |

For examining, comparing, and stamping all measures of capacity of liquids, made of copper or other metal, within their respective jurisdictions —

|                      | <i>s.</i> | <i>d.</i> |
|----------------------|-----------|-----------|
| Each five gallon     | 1         | 8         |
| Each four gallon     | 1         | 4         |
| Each three gallon    | 1         | 0         |
| Each two gallon      | 0         | 8         |
| Each gallon          | 0         | 4         |
| Each half gallon     | 0         | 2         |
| Each quart           | 0         | 1         |
| Each pint, and under | 0         | 03        |

**WINE.** — The Oporto Wine Company, described in the *Dict.* art. WINE, p. 1247., has been abolished by a decree dated Lisbon, 30th of May, 1834, of which the following are the principal clauses: —

Art. 1. All the privileges, authorities, prerogatives, and immunities of whatever nature or denomination granted to the Wine Company of the Alto Douro, and to the junta of its administration, from the time of its establishment to this day, are abolished.

Art. 2. The free disposal of their vineyards and wines is accordingly restored to the cultivators of the Upper and Lower Douro, as to those of all other parts of these kingdoms.

Art. 3. All imposts hitherto laid on the wines of Oporto, with the exception of the subsidio literario, and of the duties on consumption in the city of Oporto and its district, as well as that of 12,500 rees on each pipe exported from the Foz of the Douro, are abolished.

Art. 4. The subsidio literario shall be received, as in every other place, by the receiver general or his deputies.

Art. 5. The duties on consumption shall be received in the same manner; but those on exportation will be paid at the Custom-house of the city of Oporto, on the manifests which are to be presented to the sellers and exporters, under the penalties ordered in such cases.

Art. 7. All ordinances and regulations whatever contrary to the present decree are abolished; as if they were expressly mentioned. The ministers of the interior and finance are charged with the execution of the present decree.

**WOOLLEN MANUFACTURE.** — The exemption from the export duty of 10s. per cent. enjoyed by woollen goods, or goods of wool and cotton or wool and linen, exported to places within the limits of the East India Company's charter, has been repealed by the 4 & 5 Will. 4. c. 89. § 18.

**A DICTIONARY, PRACTICAL, THEORETICAL, and HIS-**

**TORICAL, of COMMERCE and COMMERCIAL NAVIGATION.** By J. R. McCulloch, Esq. 1 large vol. 8vo. Maps and Plans, 2d Edition, greatly enlarged and amended, with a SUPPLEMENT to October 1834, 2l. 10s. bus.

This edition contains a full account of the late arrangements with respect to the BANK OF ENGLAND, the EAST INDIA COMPANY, and the TRADE to INDIA and CHINA. Copious abstracts are given of the new CUSTOMS ACTS, the ACT abolishing SLAVERY, &c.; and the modifications of the Law that bear upon Commercial Transactions are carefully specified. Much valuable information as to the Trade, Commercial Regulations, Shipping Charges, &c. in FOREIGN PORTS, has been obtained from the British Consuls, and from other sources. The GAZETTEER department has been greatly augmented, and, it is hoped, materially improved; two new Maps are added (exhibiting the Canals, Rail-roads, and Light-houses of Britain, the Mouths of the Mersey and Dee, with the country from Liverpool to Manchester), and Plans of several of the principal British and Foreign Sea-Ports are given.

\*\*\* The SUPPLEMENT separately, price 6d.

**CONVERSATIONS on POLITICAL ECONOMY.** 12mo. 6th Edit. 9s. bds.

**MALTE BRUN's SYSTEM of GEOGRAPHY; with an INDEX of 44,000 Names.** Complete in 9 vols. 8vo. price £7, bds.

In the translation now offered to the public, many important corrections and additions have been introduced. The additions to the Description of Great Britain and Ireland are more especially extensive: in fact, this portion of the translation has been entirely re-written, and rather merits the title of an original work. The GEOGRAPHICAL INDEX will be found to be the most accurate and comprehensive work of the kind in our language: it is so constructed as to be a complete Table of Reference to the whole work, while it forms an extensive and useful GAZETTEER.

"The translators of M. Malte Brun's Geography have done great service to the public, by rendering so valuable a work accessible to the English reader."—*Edinburgh Review.*

"Infinitely superior to any thing of its class which has ever appeared."—*Literary Gazette.*

By the same Author,

**PRINCIPLES of MATHEMATICAL, PHYSICAL, and POLITICAL GEOGRAPHY.** In 1 Vol. 8vo. Second Edition, improved by the addition of the most recent information derived from various sources, 15s. bds.
