

THE AMERICAN EXPLORING EXPEDITION.

SIR JOHN FRANKLIN.

The intrepid navigator, Sir John Franklin, if alive, says the *Journal of Commerce*, will soon enter upon his seventh winter in the Arctic regions. One of the

vessels fitted out from this port to rescue him and his gallant comrades from their perils, reached our harbor on the 30th Sept., and now lies at the Navy-Yard in good condition, having lost only her bulwarks and part of her false keel, in her long and hazardous voyage. The "Rescue," from which she parted in a gale on the 13th September, is expected soon. The expedition was unsuccessful in the humane and noble object for which it was set on foot, but the generous-hearted officers who went out in the *Advance*, still entertain hopes of the safety of the missing vessels, and trust that the benevolent exertions still in progress for their safety may be crowned with success. We have learned from them that there is abundant material, in food and fuel, in the game which migrate to the Arctic seas, and in the seal and other marine mammals found there, the latter furnishing both food and fuel.

An illustration of how easily life may be sustained in these latitudes, Surgeon Karr mentions that he fell in with a Dane over seventy years of age, who had spent fifty-five years of his life north of 73°, subsisting during that period entirely on birds, fish, bears, and other animal food. He had not seen a vegetable the whole time.

Although the expedition has not been successful in the object for which it sailed, the effort is creditable to the humanity of all, and should be continued until all hope is extinguished. To our fellow citizen, Mr. Henry Grinnell, a large debt of gratitude is due for his noble and well-planned endeavors. The two vessels, the *Advance* and *Rescue*, after being prepared with great skill to resist the pressure of the ice, sail from this port under the command of Lieut. DeFksen, on the 23d of May, 1850, with orders to return to this port during this fall. They were well fitted and equipped, and after sailing along the Greenland coast, and up Barrow Straits, reached the region of Arctic discovery in the month of August, 1850. They found at Beechy Island, or its vicinity, traces of Sir John Franklin, for it was here that three of his men had been buried; but nothing was ascertained to indicate the direction he took from that point, in search of the north-west passage. An attempt was made by Lieutenant DeHaven to reach the open sea which is supposed to exist at the extreme north, but it was unsuccessful. The vessels of this expedition were within about seven hundred miles of the supposed position of the *Enterprise* and *Investigator*, the two vessels which entered into this continent through the straits between it and Asia.

The rapid approach of winter forced the squadron to seek for winter-quarters, and they attempted to do so; but the ice gradually formed about them when off Wellington Channel, and on the 13th September, 1850, they were completely fastened in. The vessels then commenced what was wholly unexpected, a northern drift, and reached by the 1st of October, the high latitude of 75d. 23m., the highest latitude ever attained in that meridian.

The drift is owing to the combined action of the wind and tide, which, on the 1st of October, turned the vessels in a southern direction, in which they continued for the extraordinary period of nine months, and until they floated a distance of upwards of one thousand miles. The ice about them formed one vast plain, but it was subjected to occasional and powerful disruptions. On the 8th of December and 13th January, the vessels were exposed to constant dangers, and if they had been larger, or less carefully provided with double sides and heavy braces, their destruction would have been inevitable. The disruption was accompanied with a noise, described by the officers as resembling a locomotive whistle, and a very singular pulsation of the ice, accompanied by that noise, was constantly occurring. The drift was frequently at the rate of ten miles per hour, and occasionally the vessels would be carried near to bold and rocky promontories, from which there was much danger. Frequently, when the squadron was in peril, every kayak was filled with food, with which to retreat upon the ice, in case of the destruction of the vessels. During the eighty-one days of this hazardous time, the sun did not rise, and there was total darkness, except at midday, when for a few moments, a paper could be read, if held up towards the faint light that proceeded from the south. In February of this year, they were blessed with a return of daylight, which enabled their sick to take exercise upon the ice. It was then ascertained that they were ninety miles from land, and that the ice in which the vessels lay imbedded appeared to be stationary, although from astronomical observations no motion was known. On the 16th of June, by a severe explosion of the ice, the vessels were liberated, and they were once again sailing cheerfully upon the waters. See sickness, however—so long had they been free of motion—soon generally prevailed. They emerged from their imprisonment in latitude 65d. 30m. and immediately proceeded to the Greenland settlement for fresh provisions, which were obtained to a limited extent. They again proceeded northward along the Greenland coast, leaving to the west the masses of floating ice, and penetrated again into the upper regions of Baffin's Bay. Here a new and far more threatening disaster beset them. They were locked up in the midst of mere icebergs, which shut them out completely from view of the horizon. Some of them were two hundred and fifty feet high, and in the light of the sun, (it was now constant day,) the scene was spoken of as extremely gorgeous. They had now reached the 17th of August, and even with an open sea they could not have made Lancaster Sound before the ice would again turn, and it was determined that the expedition should reverse its steps. They did so, and soon afterwards reached our port.

The officers concur in stating that the winter of those regions exceed any cold within our conception; and they were astonished to find that the steam generated from their bodies and from cooking became condensed into water on their bedding, and froze it together so tight it could not easily be separated. The extensive waste of waters between the coasts of Greenland

and America become cemented together by ice, and all the region including Baffin's Bay, Labrador, and the Straits of Belle Isle becomes choked up, and for the Gulf Stream, it would belt in Newfoundland.

Such is the region through which numerous, expensive, and well planned enterprises have been sent by various governments of Franklin, of Baffin's Bay, Labrador, and the Straits of Belle Isle, becomes choked up, and for the Gulf Stream, it would belt in Newfoundland.

NEW BRUNSWICK SOCIETY FOR THE ENCOURAGEMENT OF AGRICULTURE, HOME MANUFACTURES AND COMMERCE THROUGHOUT THE PROVINCE.

At a Special Meeting of this Society, held on the 15th instant, in the County Court House, pursuant to notice, for the purpose of considering the propriety of taking measures for holding a Grand Exhibition of Agricultural Productions, Natural Resources, Arts and Industry, at the City of Fredericton, in the course of the year 1852.

The Resolutions will be published next week.

SOCIETY.—The best men of Indian Town have accepted the challenge of the Sand Cove Crew.

The Mystery and Bluebell, will be rowed on, their respective crews of young men from Carleton and Portland on Thursday next.

We understand that some of our citizens are endeavoring to raise money for a Begbie, to come off in our Harbour next week.

Report of Captain Kynster, R. N., on the Fisheries, &c. of the Bay of Fundy, is received. We shall notice this interesting Pamphlet, and publish extracts therefrom in our next number.

CALIFORNIA PAPERS.—We acknowledge the receipt of a file of San Francisco papers for which we are indebted to our old friend, John C. White, now of that ilk, and who has our best wishes for his prosperity. We return the compliment.

SANCTUARIES.—To the advertisement of Mr. Francis P. Sharp, we direct the attention of such of our readers, who are desirous of obtaining fruit trees adapted to our climate, and who are disposed to encourage domestic produce.

FIRE.—A fire occurred about 2 o'clock this morning at the Straight Shore, which consumed two dwelling houses. How it originated we have been informed.

The Engines of the Steamship Viceroy, wrecked last year near Cape Sable, and which were purchased by a Company in this place, have been sold in a firm in New York, and are now on board the Brig. Gipsy, about to sail for that Port.—Yarmouth Her.

AGRICULTURAL.—Three Ayrshire Cows and a bull, belonging to Mr. Chapman, of the County Agricultural Society, have arrived by the steamer at the port.

* * * It appears by the same time changed him to be aligned against the party of the Poor, who have fully felt the weight of Government—militant combination, as, while it was a good Government in its ranks the new Government might trade some of the members in the present Executive political experience and moral assistance to the former.

Second best a repetition of the first. Time not taken.

Second Race for Colts 3 and 4 years old—heav.

Isaac Farnsworth's b. c. Soltan 4 years 1 1
A. C. Evans' b. f. —— years 2 2
James Scott's b. c. —— 4 years 3
F. Farnsworth's b. c. —— 2 years 4

The race was an easy affair throughout, Satan had it all his own way, he was well bred Colt got up by Farnsworth, all through a thorough break mare.

The second race was occupied in running Sprentake, Borden, with many others, and the great deal of amusement was the result. The large assemblage of persons present, expressed themselves highly pleased with the sports of the day.

Mechanics' INSTITUTE.—We learn that the Lecture Season of this popular institution will be opened on the 10th instant with an address by the Rev. Edward Jackson, of the Princeton Theological Seminary. Several lectures will be given in this City and Fredericton, distinguished for their talents and scientific acquirements, have also accepted the invitation of the Board of Directors to deliver lectures on the ensuing winter, and, from what we learn from the papers, the Institute has a very fine collection of lectures.

One of the most important discoveries of modern science is the great ease of our Northern latitudes and the bright of domestic felicity and the happiness of the family. The author of the book, the mind of its entirety, and the eye of its brilliancy. It relates the form, dims the intellect, and plunges its victim into an early grave. The young and the old, the strong, and the weak, the city dweller, the country man, all in grey are its victims. Breathing in the moist air, and the cold and research formed as weapons to bid defiance to this "Dweller of the Threshold." He meets the applause and gratitude of ages; he shall have ours.

One of the most important discoveries of modern science is the ease of pulmonary affections, is the BALM OF WILD CHERRY, and the credit of its discovery is due to the celebrated Dr. Winter.

The Balm of Wild Cherry has restored thousands of patients to health, and is open to all forms of pain and suffering, and is of much more advantage to all its members. It gives us much pleasure to learn that all the Institute is now in a very prosperous state, and that its members are rapidly increasing. The Institute has started its annual calendar, and is giving a great deal of amusement in its various operations, through its library, reading room, lectures, &c.; though it is fit to pursue the course it has so successfully adopted during the present year, and especially a medical exhibition of some of the best physicians and surgeons, and a display of native industrial talent, it is yet destined to become more permanent and exclusively useful.

Provincial Mutual and General Insurance Company.

Established under the Act of Parliament at Toronto, C. W.

CAPITAL \$100,000.

THE STOCK of this Company is divided into the Mutual and Proprietary, each branch being held entirely distinct, and liable only for its own losses.

In the Proprietary Branch, Policies are issued in the usual way on Ocean and Inland Marine Risks, and on Fire Risks in Cities and Villages.

Underwriters' Risks only, covering losses from Fire, Lightning, the insured giving a Premium Note and a small sum in cash; these Policies run from one to five years.

Local Directors for New Brunswick:

W. H. STANLEY, Woodsway, and
C. M. MACLAREN.

The Security which this Company affords is as moderate and the Premiums will in all cases be as moderate as may be consistent with safety.

Applications for Insurance, Premiums and other Proprietary Business, will be made at the Office of the subscriber.

I. WOODWARD.
