EXECUTIVE SUMMARY

This study reviews the product and service opportunities in the New York State wastewater treatment market for Canadian firms. The report thoroughly covers all the factors relevant to market entry and makes specific recommendations for an action plan.

Historically N.Y.S. has had the second highest expenditures in the U.S. for environmental expenditures after Pennsylvania and typically ranks in the top five for all states. The wastewater treatment market in Upper New York State has passed its peak, as all states have, in terms of major capital expenditure for new facilities. However, billions of dollars are being spent for repairs, renovation, upgrades and some new facilities and the recently released Great Lakes Water Quality Guidance limits will require billions in additional expenditures. The fundamentals to keep in mind are the market is large, growing between 10 - 20 % per year and is likely to exhibit strong growth in the future, which presents Canadian firms with good market opportunities for their leading edge technologies.

The biggest market (67% of expenditures) is in the industrial sector, where a great deal of work is underway to perform waste minimization through process changes. This is also the easiest to enter since there are virtually no entry barriers to a foreign firm. The second largest sector is the municipal, which accounts for approximately 17% of expenditures. In the municipal sector the treatment and disposal of sludge is the major focus as land fills for hazardous wastes are becoming expensive and in some regions difficult to find. Prices have eased recently but this is still a priority area.

The variety of situations at the various wastewater treatment facilities in N.Y.S. make all the decisions relative to customer needs site specific. This is an ideal situation for a Canadian firm that can offer auditing services, engineering services and products. Not only can these services be sold, but also, other products and services can be identified for that specific customer. Canadian companies with limited products or services may want to consider partnerships with Canadian or U.S. firms to offer as many complementary products as possible.

Numerous studies, as well as interviews with Canadian companies that have successfully penetrated the market, all suggest a U.S. corporation or subsidiary and a physical presence is needed for the following reasons:

- 1) Service is essential and the closer the office the better the psychological feeling of support.
- The U.S. is litigation oriented and wants to have access in the event something goes wrong. This should not be a discouragement. Insurance typically is 3% of sales and the trend is to discourage lawsuits or settle out of court.

- 3) It is important to have local staff who are familiar with regulations, can stamp drawings, and win contracts.
- 4) Government funded projects may require some local content.

However, this does not prevent companies who want to enter the market in increments from a Canadian base from doing so, particularly if the company is selling products versus services.

It is imperative that a company currently in the wastewater services field stay within its market niche for several reasons. First, it is the largest market segment and is expected to remain so. Second, any firm entering a new market must stay with their strength to avoid a bad experience. Third, deviating from experience increases the risk and a mistake can destroy credibility for a long time.

It is also recommended that any Canadian firms located in Ontario or Quebec, focus their sales efforts in the northeast U.S. This area has the largest market potential, and will allow the effort to have a higher chance of success, compared to using a shotgun approach towards the whole U.S. A key ingredient to success will be a demonstration customer to showcase to others. This can best be managed in the border states closest to the Canadian facilities. There are plenty of market opportunities and reputation can't be stressed enough.

There are a number of distribution channels open to the Canadian firms to sell goods and services to the U.S. market. Where financial resources and personnel commitment are available it is recommended a direct employee be used as a New Business Development Manager to direct sell and maximize the penetration. This individual can be someone from the company, or a person in the U.S. and should have an engineering background, computer literacy, knowledge of the environmental industry as well as experience in marketing and sales. In more distant territories or where budgets restrict hiring a direct employee manufacturers' agents can be engaged.

Due to the long lead times associated with selling high technology products, significant sales will likely not begin until after the second year. Therefore, companies trying to penetrate this market must be prepared to enter the market to stay, and have the financial resources to cover the entry period. To gain market share will require commitment, a carefully organized action plan and well executed strategies.

MARKET ANALYSIS OF WASTEWATER TREATMENT IN NEW YORK STATE

1. PREFACE

The Canadian Consulate in Buffalo, New York has commissioned this study to provide information about the opportunities in Upstate New York in the field of Wastewater Treatment.

The basic marketing information concerns the opportunities in the marketplace. Since this sector is a legislative driven industry, focus was on New York State Department of Environmental Conservation (NYSDEC) Regulations.

2. OBJECTIVES OF THE STUDY

a. Conduct a Situation Analysis

Define the current state of the market, market trends and approximate sales potential over the next 5 years in New York State for municipal and industrial waste water plants and modifications to the existing facilities.

b. Determine Opportunities in the Marketplace

Identify the technologies, services and products that are likely to be required of new and existing municipal and industrial waste treatment facilities for the next 5 years and markets with the best potential for Canadian firms.

c. Provide Information on the Major Customers and Specifiers

Identify where the major existing Wastewater Treatment
Facilities (WWTF) are and what distribution channels are used

to reach potential customers.

d. Prepare an Action Plan

Make recommendations to penetrate the market including selling methods and promotional activities.

3. STUDY METHODOLOGY

- a. Available New York State Department of Environmental Conservation documents were reviewed to determine:
 - 1) The current and future regulations that would affect the activities of the industrial and municipal waste water treatment plants.
 - 2) The location and size of the wastewater treatment plants in New York State.
 - 3) The problems currently encountered by water treatment plants in their operation.
 - 4) The intended projects for capital expenditure for wastewater treatment in New York State over the next 5 years.
 - 5) The regulations covering the licensing or permitting of companies or municipalities who wish to discharge their waste streams into public bodies of water.
- b. Comments From Individuals in Various Organizations

A large number of individuals were interviewed to obtain their opinion of the market and where future market opportunities exist. Their comments, incorporated throughout the report, can be found in their entirety in Appendix 1.

A list of the agencies and firms follows:

- 1) Municipal wastewater treatment plant operators or engineers to determine current problems and plans and where they feel improvements are needed in their operations. They also discussed their method of operation. Plants were contacted in the following cities:
 - a) Buffalo
 - b) Rochester (Monroe County)
 - c) Syracuse
 - d) Amherst
 - e) North Tonawanda
 - f) Niagara Falls
- 2) Environmental Consultants companies that perform analyses of wastewater treatment plants and industrial plants and recommend steps to be taken for these organizations to become compliant with the current regulations:
 - a) ODNY
 - b) Wastewater Technologies
 - c) Malcolm Pirnie
 - d) SAIC

- 3) Engineering firms who design systems that meet the specifications established by the environmental consultants or their customers:
 - Acres International
 - b) O'Brien and Gere
 - c) Blasden Engineering
 - d) Babinsky and Kline
 - e) URS Consultants, Inc.
 - f) C & S Engineering
- Firms that sell products into the market:
 - Eco-tec a)
 - Wicker Technologies b)
 - c) Aftek, Inc.
 - d) Polytec, Inc.
 - Warren Jones
 - Anderson Associates f)
- Firms that supply market or economic information:
 - Environmental Economics
 - New York State Environmental Facilities corporation
 - c) Environmental Specialist Publications
 - Environmental Economics, Inc.
 - William T. Lorenz & Company
 - Water Pollution Control Federation
- 6) Law firms:
 - a) Damon & Morey
 - Saperston and Day
 - c) Hiscock and Barclay
- Industrial firms: 7)
 - a) Eastman Kodak
 - b) Harrison Radiator
 - c) American Brass
 - Duriron d)
- In addition to the above interviews the following publications were used:
 - 1) New York State Department of Environmental Conservation Report, "Intended Use Plan Project Priority System, Project Priority List, Federal Fiscal Year 1992". (Appendix 2)
 - Canadian Government funded report, Opportunities For Ontario Environmental Protection Products and Services". (Appendix 3)

- 3) NYSDEC Division of Water "Annual Report, Fiscal 90-91". (Appendix 4)
- 4) NYSDEC Division of Water "Descriptive Data of Sewage Treatment Systems in N.Y.S." 1987. (Appendix 5)
- 5) Canadian Government funded report, "Penetrating the U.S. Environmental Market: Prospects and Strategies for Canadian Consulting Engineers".

 (Appendix 6)
- 6) NYSDEC Division of Water Organization and Phone Directory. (Appendix 7)

NYDEC Divison of Water publishes a number of publications including a quarterly "Water Bulletin" and "Non-Compliance Report" which contains updates on DEC programs. A complete list of NYSDEC Publications can be found in Appendix 8.

REGULATIONS INFLUENCING THE WASTEWATER CONTROL MARKET 4.

a. Introduction

The United States has developed a system of wastewater discharge standards, permits and enforcement mechanisms that require substantial levels of treatment prior to discharge. There are two types of discharge: direct and indirect. Direct discharges are to surface waters or groundwater. Indirect discharges are to publicly owned treatment works (POTW).

Direct discharges are governed by the National Pollutant Discharge Elimination System (NPDES) regulations. The wastewater permits have minimum standards, but are also commonly based on the receiving water quality considerations. Therefore, different dischargers may have to meet different effluent standards depending on their specific geographic location.

In addition, there are Federal effluent guidelines and standards which are industry specific technology, e.g. discharge standards based on "best available technology".

New York State is an agreement state, which means the state has taken the responsibility from the federal government to enforce the federal regulations as well as the state's regulations. In New York the Bureau of Wastewater Facilities Design has the responsibility for managing N.Y.S. Pollution Discharge Elimination System (SPEDES) permits.

Regulations control the contents of wastewater streams generated from point sources. The sources are generally divided into three types:

- Industrial sources
- 2) Publicly owned treatment works (POTW)
- 3) Utilities

Industrial sources often discharge into waterways that flow into POTWs. In this case the POTW establishes the discharge criteria for the effluent from the industrial source and issues the discharge permit. Once this water has been treated by the POTW it is discharged into a publicly owned body of water, wherein its discharge is controlled by a permit issued by either the Federal Environmental Protection Agency or the State Department of Environmental Conservation.

- The Primary Federal Regulations of concern are: b.
 - The Federal Water Pollution Control Act of 1948
 - The Clean Water Act of 1977
 - The Federal Water Pollution Control Act Amendments of 3) 1972
 - The Safe Drinking Water Act 4)
 - The Federal Water Quality Act of 1987 5)

- Proposed EPA Great Lakes Water Quality Guidance. This is legistlation likely to be implemented to meet the International Joint Commission (Canada/U.S.) recommendations.
- The Primary State Regulations of concern are:
 - New York State Water Quality Regulations
 - Amendments to the New York State Water Quality 2) Regulations
 - The New York State SPEDES Program 3)
- Proposed Regulations d.

The Federal Regulations can be found in the Code of Federal Regulations - CFR 40. Copies can be ordered from any of the government book stores listed in Appendix 9. N.Y.S Regulations are available from the N.Y.S. Division of Water Publication List. (Appendix 8)

5. THE WASTEWATER TREATMENT MARKET

a. The Overall Market Size FY 1992

The total U.S. environmental market sales were estimated at \$ 130 The largest market segment was water and billion in 1991. wastewater which accounted for \$ 52 billion. The U.S. government predicts \$ 60 billion will be spent over the next 8 years to meet the requirements of the Clean Water Act amendments of 1987. Currently there are 15,000 municipal WWTF in the U.S. and an additional 5000 are projected in the next 20 years. The importance of WWTF industrial market has 300,000 WWTF. market is also drawn to attention by the EPA where the largest portion of the EPA budget is for sewage treatment construction grants which account for \$ 2.1 billion. The proposed EPA Great Lakes Water Quality Guidelines, which are likely to implemented, are projected to generate tens of billions of dollars in upgrades and new plants. There are plenty of additional market statistics and projections. The fundamentals to keep in mind are the market is large, growing between 10 - 20 % per year and is likely to exhibit strong growth in the future.

Historically N.Y.S. has had the second highest expenditures in the U.S. for pollution controls after Pennsylvania and typically ranks in the top five for all states.

In order to identify the potential expenditures for wastewater treatment the New York State Water Pollution Revolving Fund Intended Use Plan 1992 was used. This document provides a listing of the facilities that are eligible to receive low cost loans, subsidized by the Federal and New York State governments. N.Y.S. Bureau of Wastewater Facilities Design has responsibility for reviewing and approving engineering design plans to ensure that SPDES permit conditions are met. For the Federal Fiscal Year (FFY) 1992, which runs from September, 1991 through September 1992, there is US\$ 271.0 million available for loan projects. Through leveraging and utilization of FFY 1991 carry over money approximately US \$1.24 billion of financing will be available for municipal water pollution control projects. In addition projects to be funded in New York City are taken from a separate budget, which means even more money will be available.

This above projection represents only money to be loaned to municipalities for which projects have already been identified and approved. It is estimated that an additional 30% will be spent by private industry for the same purpose, since in many municipalities the wastewater treatment plants are forcing the upstream industrial polluters to improve the quality of their effluent to minimize extra costs to the treatment plant.

Projects not involving Revolving Fund monies are managed by the N.Y.S. Bureau of Wastewater Facilities Operations.

The Overall Market Size Through the Year 2000

To help municipalities statewide achieve and maintain compliance with Federal and State water quality standards the New York State Water Pollution Control Revolving Fund projects a need for US \$8.3 Billion over the remainder of the decade.

Using the same ratio shown above, of subsidy money to total money to be spent, indicates that a total of over US\$ 36.8 billion is projected for this expense through the year 2000. This includes refinancing of projects that have incurred building costs from the past, as well as projects that are to be built through the year 2000 and private industrial projects.

As mentioned earlier, N.Y.S. has the second highest environmental expenditures of the east coast states which may seem odd considering the population growth has been stagnant over the last The explanation is a very proactive enforcement of federal as well as state environmental laws due to the publicity and public awareness associated with Love Canal.

The Market Expenditures by Category

The Canadian report on opportunities for Ontario Environmental Protection Products and Services describes the categories of the market for wastewater treatment systems segregated into:

- Municipal
- Industrial
- Utilities
- 1) Capital Expenditures for Various Market Segments:

In 1987 capital expenditures on wastewater treatment were into the following estimated to be roughly divided percentages:

- Municipal plants a) 66.28 Industrial plants b)
- 16.9% Electric Utilities -C)

Municipal Wastewater Treatment Plants

The expenditures for municipal wastewater plants can be further segregated by allocation of funds for:

- Capital spending to meet growth caused by increases in population.
- Capital spending to meet new regulations b)
- Capital spending to optimize an existing facility, e.g. decrease energy costs, decrease sludge disposal costs, decrease odors.

3) Industrial Wastewater Treatment Plants

The expenditures for industrial plants is convoluted since they are at the end of the pipeline. The driving force for capital expenditures at industrial wastewater treatment facilities are changes to, or stricter enforcement of regulations. If the POTW doesn't have the equipment to meet the new state or federal standards it can simply force the industrial plant to install the equipment. Forcing industries to make the expenditures has been the recent trend as government budgets are declining and loans have replaced grants for municipal POTW. This explains why 66% of capital expenditures are made by industrial plants.

4) Utility Wastewater Treatment Plants

The market for products to these facilities is similar to that of the industrial plants.

- 5) Expenditure Distribution by Vendor Market Segment
 - a) Based on the Canadian study referenced above, it was estimated that the money spent on wastewater treatment in recent years was divided among the industrial, utility and municipal treatment plants in proportions of 66.2%, 16.9% and 16.9% respectively.
 - b) Within the various types of expenditures the breakdown projected for 1993 is as follows:
 - 1) Municipalities

(a)	Design/engineering	11.2%
	Equipment	17.1%
(c)	Instr. and Control	2.7 %
(d)	Construction and Labor	69.0 %

2) Electric Utilities

(a) Design/engineering	6.1%
(b) Equipment	21.0%
(c) Instr. and Control	2.6%
(d) Construction and Labor	70.3%

3) Industry

(2)	Design/engineering	8.3%
(4)	Design/engineer	23.2%
(a)	Equipment	6.0%
(c)	Instr. and Control	
(d)	Construction and Labor	62.5%

d. The Industries by Segment

The largest segments in N.Y.S. are:

1)	Chemical	18%
2)	Metals	16%
3)	Machinery	14%
4)	Pulp and Paper	8%
5)	Food	78

6. MARKET TRENDS

a. Introduction

During the 70's there was an extensive amount of water treatment plant construction in New York State. The facilities in place at this time are adequate in most cases to handle the existing and expected population growth, therefore the need for for new plants is relatively small. However, age and obsolescence have taken a toll on existing facilities and there is a sizable market for renovation projects worth several billions of dollars over the next 8 years. Company products and services that lend themselves to this market should consider N.Y.S a prime market.

b. Financing of Wastewater Treatment Facilities in N.Y.S.

1) Historical

After the Federal Water Pollution Control Act and its amendments were passed in 1972, 1977 and 1987, an extensive grant program was established to help finance the construction of the water treatment facilities needed to allow the municipalities to meet these regulations.

2) Current

In 1987, the New York State Water Pollution Control Revolving Fund (SRF) was established to provide low cost loans to municipalities to finance the construction of water pollution control facilities. The money from this fund is allocated based on set guidelines and allows money to be borrowed using the following formula for allocation of funds for projects:

- a) Local funds provide 12.5 % of the total
- b) State funds provide 12.5 % of the total
- c) Federal funds provide 75% of the total

c. Regulatory changes

1) Restrictions on materials exiting into waste streams

New Water Quality Regulations for Surface Water and Groundwater were published in September 1991. These regulations, denoted as 6NYCRR, Parts 700-705, describe the

different classes of waters, their quality, relative to their usage, the limits of discharges into the water and the restrictions on effluents into the waters. Although the new regulations provide stricter control over the total suspended solids, biologically active effluent and halogenated compounds that can be in waste streams, most wastewater treatment plants built previously in New York State had the capacity to handle these situations. Therefore growth in the marketplace due to the legislative changes may not be as significant as some expect. However, the proposed EPA Great Lakes Water Quality Guidelines and 1993 changes to the federal Clean Water Act will require a great deal of money to be spent as they become implemented.

2) Air regulations affecting wastewater treatment

The new regulations regarding contamination of the air have caused wastewater treatment facilities to reconsider their use of incinerators as an acceptable method of sludge removal. In addition, any part of the wastewater treatment process that allows odors or undesirable effluents into the environment has to be reevaluated to ensure compliance with the clean air regulations. Therefore, alternative methods of dealing with the sludge generated by treatment plants, provide a market to be explored.

3) Stormwater Management Program

The new U.S. federal program regarding storm water control and proper disposition will lead to a much greater emphasis on this subject. Therefore, any products produced by Canadian companies that provide stormwater management and control technologies should be reviewed for applicability and marketability to the customer base addressed in this report.

e. Priority Needs

The price of treatment materials, quickly escalating costs of solid and hazardous waste disposal, changes in regulations and general operating costs are putting new demands on WWTF to become more efficient.

Two specific trends mentioned to solve immediate problems are:

- 1) Use of improved sludge dewatering techniques. This decreases the need for incinerators to burn sludge to meet Clean Air Act regulations and reduces operating costs.
- 2) Use of a treatment plant incinerator that includes a method of separating the organics and metals in the process of burning the sludge. The benefit is metals that could be recovered through refining processes and sludge that could be used on land for fillers for road construction or similar applications.

f. Stricter Enforcement of Regulations

The EPA and most states are substantially increasing enforcement. One quarter of all EPA civil fines ever collected were obtained in 1990. Bristol Meyers - Squib in Syracuse, N.Y. has just received the second largest fine after the Exxon Valdez and have announced plans to build a large WWTF which is an important opportunity to explore.

7. DISTRIBUTION CHANNELS

a. Organizations Selling to Wastewater Treatment Facilities

There are a large number of participants that influence, specify, and sell products to this market, each important in reaching the end user. The various types and their roles are listed below:

1) Environmental Compliance Firms

Compliance firms assist wastewater treatment facilities that have been given citations by the DEC to develop a plan for compliance, and depending on the degree of vertical integration, may even get into system design and performance specifications.

2) Engineering Consulting Firms

Once it has been decided what work is to be done to attain compliance, it is the responsibility of these companies to define the wastewater flow and concentration of pollutants therein, and evaluate the costs of construction and operation of various alternatives to meet the prescribed effluent quality and disposal of residue sludge. They will perform the detailed designs and develop the equipment specifications for the engineering construction firms. On some occasions these companies will do the work of the engineering construction firm described below, or perform supervision of contractors or the customers own maintenance personnel.

3) Construction Firms

These firms bid on the drawings and specifications prepared by the organizations described in paragraph 2), and are responsible for construction of the actual facility based on the report prepared by the engineering consulting firm.

In some cases, the consulting engineering and construction is being done as a turnkey project by a firm commonly referred to as a design and build.

Once the design is firm and approved by the necessary parties, the process of going out to bid the contract for building the facilities must be undertaken.

4) Manufacturers' Sales Representatives

These companies are independent agents, operating in an assigned territory, trained by the manufacturers in sales and service of their products. Their product lines are usually more commodity based such as chemicals, filters, etc. They tend to avoid any complex equipment with long lead times. However, a few dabble in equipment but rely on the company sales engineers to help in design, selling, closing.

5) Equipment and Systems Distributors

They perform a role similar to a rep's, except they take title to products and stock parts which have a high turnover. Their product lines typically include pumps, valves, screens, filters and instrumentation.

6) Manufacturers' Sales Personnel

Most manufacturers of complex systems employ their own sales engineers to sell products or services. Quite often the sales engineer, who provides detailed information on the equipment to be used in the facility, will work closely with both the consulting and construction engineers to insure that equipment is specified when it goes to bid by the construction firms.

The potential relationships Canadian firms may form with each of these types of firms is discussed later in this report.

8. MARKET OPPORTUNITIES

a. Product and Service Opportunities

The variety of situations encountered at the various WWTF in New York State, whether municipal, industrial or utilities, make all decisions relative to customer needs site specific.

Therefore, it is best for any individual or organization that is selling their company's capabilities to use a needs analysis of the company first, as a means of targeting the products and services that are most appropriate for that specific customer. The products and services with the greatest potential are described in the following paragraphs.

b. Pollution Control Systems Optimization

The current situation in most public and private facilities is the lack of capital for projects. During these times of decreased fund availability, optimization of systems is the most cost effective way to accomplish pollution control goals within minimum cost. The optimization process includes: elimination of processing bottlenecks, improving design efficiencies that reduce energy costs, reducing chemical consumption, automating systems and training personnel to get the most out of existing systems. In addition, steps are taken to insure that toxic pollutants do not compromise operational integrity or the regulatory compliance of the customer's facility.

Any product that provides the capability for wastewater treatment facilities to optimize their control systems has excellent potential.

c. Waste Management

1) Waste Characterization

Any company that can provide customers with an analytical service to identify the toxic constituents of various waste residues, investigate their leachability, assess methods for conducting leaching tests, or advise on proper disposal methods for various waste residues has market opportunities in New York State. However, a major decision must be made concerning the method of introducing the capability of selling this type of service, since the person or company who sells this service must be able to participate in detailed technical discussions with the customer.

The sales presentation would have to include a brief review of the customer's process specifics in order to discuss the benefits of the service offered.

2) Waste Minimization

Any customers who will be interested in waste characterization services will also be a candidate for waste minimization studies. Therefore, if Canadian firms that feel it is appropriate to develop individuals who can perform the characterization analyses, they should also be able to participate in the waste minimization programs.

3) Sludge Management

The generation of sludge in wastewater treatment facilities is a major problem because:

- (a) The sludge should be as dry as possible to allow the liquid portion to be properly treated before disposal. WWTF must insure that all ingredients are within compliance limits before the liquid is released into public waterways.
- (b) If the sludge is to be incinerated it must be as dry as reasonably possible to minimize energy used to dispose of the water during the incineration process.
- (c) If the sludge is going to a landfill it must be as free of toxins and moisture as possible. Disposal costs depend on both the amount of sludge and type of contamination. Syracuse, N.Y. for instance has to truck their sludge at great expense to Niagara Falls, N.Y. for disposal. Any means to reduce sludge are closely being examined.

The sludge treatment systems have a definite potential in this market.

d. Target Customers

1) Municipal Facilities

The number of wastewater treatment facilities in Upper New York State is quite large. Appendix 5, NYSDEC Descriptive Data of Sewage Treatment Systems, 1987, is a complete list of municipal facilities that provide service to the general populous. Private facilities and municipal facilities which provide service other than the general populous e.g. subdivisions, institutions are not included. This list is currently being updated by NYSDEC and can be ordered as explained in Appendix 8. Detailed information on municipal facilities that have applied for loans can be found in NYSDEC Intended Use Plan Project Priority System, 1991, Appendix 2, NYSDEC Intended Use Plan Project Priority System, 1992. Project information for municipal projects can also be found using the references in the next section.

2) Industrial Facilities and Utilities

Due to the sensitivity of environmental concerns within industrial organizations and utilities, no one chose to discuss their plans to expand or make major investments. However, Appendix 10 lists all the major permitted municipal, utility and industrial facilities. This list, the NYSDEC Quarterly Non-Compliance Report, the Environmental Company Directories (Appendices 11,12 & 13), and the Dodge Report (Appendix 14), and The Green Book Report (Appendix 15) should be adequate to target potential customers in any of the sectors. Ordering information for these publications can be found in the appendices.

3) Other Potential Customers

One of the major potential opportunities is to sell audit services to environmental compliance and engineering firms. These services would consist of computerized methods for monitoring and recording perforamence of the processes occurring in wastewater treatment plants.

9. COMPETITIVE ENVIRONMENT AND ENTRY BARRIERS FOR A FOREIGN COMPANY

a. Competitive Environment

The market in New York State is now considered mature, relative to new systems being built. However, as noted previously, billions of dollars are being spent to meet specific needs for new facilities, upgrades and replacements or renovations.

Competitive pricing for products and services will likely be of a secondary or tertiary concern, with benefits and cost savings the primary considerations.

b. Entry Barriers

1) Private and Utility

The industrial and utility markets are relatively free of entry barriers to Canadian firms and this is where the initial efforts should be concentrated. Regardless, to be successful in any market segment it is recommended to have a physical presence, even if it consists of a U.S. mailing address and phone for the following reasons:

- a) Service is essential and the closer the office the better the psychological feeling of support.
- b) The U.S. is litigation oriented and wants to have access in the event something goes wrong. This should not be a discouragement. Liability insurance typically is 3% of sales and the trend is to discourage lawsuits or settle out of court.

- c) It is important to have local staff that are familiar with regulations, can stamp drawings, and win contracts.
- d) Government funded projects may require some local content.

2) Municipal and Government

Public Law 95-217, December 27, 1977 amended the Clean Water Act and inserted Buy American requirements. However, calls to lawyers, companies selling equipment and services, and state government officials overseeing contracts to municipal WWTF which used federal loans, failed to identify many instances where it had been a problem. It must be considered though when accepting orders. Detailed publications on Buy American and Non-Defence government procurement can be obtained from Judy Bradt, at the Canadian Embassy in Washington, FAX 202-682-7649.

10. STRATEGIES

a. Summary of Major Findings

For the many reasons cited in the report, the market potential in N.Y.S. for environmental products will be several billion dollars in the next decade. There are good opportunities for leading edge technologies to get in the market during the beginning of a growth cycle, when pricing is not a major consideration and competition is not as keen.

The method of selling the Canadian products and services depends on the type of product. Its complexity and standardization will determine whether it must be sold by direct sales people or by sales reps who carry other products.

Specific Findings

- 1) The wastewater treatment market in Upper New York State has passed its peak in terms of major capital expenditure for new facilities. However, billions of dollars will still be spent for upgrades, which means significant opportunities for the products sold by Canadian firms.
- 2) The biggest market is in the industrial sector. A great deal of work is underway to perform waste minimization through process changes that change the amount of chemicals used and the types of chemicals used.
- 3) Selling to the wastewater treatment facilities is complex, but a carefully structured marketing and sales plan should be successful in Upper New York State and the U.S.

- 5) The treatment and disposal of sludge is a major problem and will continue to be a major problem since land fills are becoming extremely expensive and difficult to find.
- 6) Storm water discharges are one of the EPA's latest targets and any Canadian companies that service this market should be exploring this new opportunity.
- 7) The channels of marketing may be limited by the complexity of the product that the Canadian firms are trying to sell. There are firms that sell systems to the wastewater treatment industry. These firms might be able to handle the sale of the Canadian products directly to industrial firms and large wastewater treatment facility engineers. However, in most cases there would be a large amount of education and support effort needed in the field, before any firm can independently handle the product, or will handle the product.
- 8) It is important to remember that any independent firm has existing products and principals that are demanding their time and the Canadian company's must give them an incentive to handle theirs.
- 9) Buy American provisions reportedly are part of any projects with federal loans or funds, but as a sub-contractor of equipment or services they do not appear to be an obstacle.
- 10) There are a number of documents available from the state that could be used for target marketing of end users at the appropriate time. Most have been included as appendices.
- b. Distribution Channel Options

There are a number of ways to market the Canadian wastewater treatment products in Upstate New York and the United States.

- 1) Direct sales through a full-time Canadian sales engineer to selected large potential customers.
- 2) Use an existing rep force or distributors who know the customers and the basic technology. The complexity of the products and the lead times required to develop a sale would define how practical using reps or distributors would be. Typically a finders fee is more commonplace for complex products, where they receive a small commission for identifying customers and doing liaison work. Services are almost always sold direct.

The representative from the Canadian firm would be expected to make individual or joint calls to explain the intricacies of the products and services.

3) License the products or form a Joint Venture with a U.S. partner

c. Recommendations

It is recommended that any Canadian firm selling into this market develop a multi-step marketing plan consisting of the following specific recommendations:

- 1) For a number of reasons, including a U.S. image, liability, insurance, and Buy American provisions on government projects it is recommended that a U.S. corporation be established. Selling from Canada can be done, but the obstacles will be greater particularly for service companies. Those companies that have had the most success in the U.S. have done so with a U.S. branch office.
- 2) It is imperative that any Canadian company selling into this market stay with products that it knows. The wastewater treatment market is a large market segment and is expected to remain so. The current trend is towards process improvements, so products that meet this need are preferred. In addition, the U.S. is litigation oriented when resolving disputes and deviating from experience increases the risk. Bad news travels fast and a mistake can destroy creditability for a long time.
- 3) It is also recommended that penetration into the U. S. market should start in one geographical region. There are plenty of market opportunities which will be here for a long time. Credability can't be stressed enough.
- 4) A full time individual should be hired to penetrate the U.S. market, to initially conduct further market research and quickly begin selling. This individual can be someone from the company, or a person in the U.S. hired as the New Business Development Manager (NBDM). This person should have an engineering background with knowledge of the environmental industry as well as experience in marketing and sales.

His/her specific responsibilities should include the activities described below:

- a) Performing in-depth market research to define the market potential for the various products and services.
- b) Locating a demonstration partner for each product or service that can be used as a testimonial to other potential customers.
- b) Direct sales to specifiers and large end users.
- c) Education of potential customers through their participation in seminars.

- 5) Once the initial work has been done by the New Business Development Manager the company can decide on other methods of selling specific products on a national basis. There are several products and markets and it is important to remain flexible and identify the channel best suited for the product and market.
- 6) Fully define the costs related to selling the product in the new market, including marketing, sales and distribution costs.
- 7) Carefully monitor the Buy American provisions of contracts. While research did not reveal it as a major obstacle at this time, it may be in the future which could dictate either partial U.S. manufacturing or licensing to meet the Buy American contract requirements.

11. PROMOTIONAL ACTIVITIES

a. Literature and Space Advertising

High quality literature and collateral material should be a priority. The better the sales presentation on the literature, the easier the presentation and initial contact. Literature is usually the first introduction to a company's products and services and it is important to create a favorable impression of capabilities and quality. Testimonials from satisfied customers should also be part of this package. Emphasis in sales presentations and promotional material should be the attributes and payback. Canadian firms must determine what the market will bear to maximize profits keeping in mind that everything has a ceiling price.

National space advertising would be a waste of time and money until the Canadian firm has sales representation in most major territories. Initially, activities should be oriented toward direct contact with potential customers. Regional advertising to create potential user awareness has some merits. This program, however, would have to be carefully analyzed because of the high cost of advertising and the limited market available. It might be best to provide "institutional advertising" that promotes all of the capabilities of the Canadian firm, with the specific products included.

b. Seminars and Articles

Maximize free publicity by participating in technical exchanges at seminars or presentations to selected groups, wherein management personnel from target customers are invited to attend.

In addition, publish articles in technical journals to solicit comments and dialogue about the processes and hopefully uncover interest in a purchaser or partner.

c. Trade Shows

There are no major trade shows in Upstate New York devoted strictly to waste water. Many local trade association chapters have mini trade shows which are often an inexpensive and cost effective method of reaching this audience.

d. The Role of Professional Societies

The various trade associations and publications provide an important forum for promotion. Many of them sell membership directories and buyers quides. Those mentioned during the interviews as being in the forefront in N.Y.S. are reviewed below:

1) Water and Sewer Distributors of America P.O. BOX 34595 Bethesda, Maryland 20827 301-897-3191

Members are distributors of products to the municipal water and sewer markets.

- Water and Wastewater Equipment Manufacturers Association Box 17402, Dulles Int'l Airport Washington, D.C. 20041 703-444-1777
- 3) Association of Metropolitan Sewerage Agencies 1000 Connecticut Ave NW, Suite 1006 Washington, D.C. 20036 202-833-2672

This organization is the lobby for the largest municipal organizations in the United States. They have a membership of top level personnel from the various sewer authorities in the country and provide reports on the latest legislation pending regarding clean water.

4) New York Water Pollution Control Association 90 Presidential Plaza, Ste. 122 Syracuse, N.Y. 13202 315-422-7811

Affiliated with Water Pollution Control Federation. Membership covers a wide range of individuals involved in design, operation, and maintenance of WWTF. e. Trade Publications

The following trade publications are those most often read in the industry:

1) POLLUTION ENGINEERING LOCATOR ISSUE
Cahners Publishing Co.
Div. of Reed Publishing U.S.A.
1350 E. Touhy Ave., Box 5080
Des Plaines, IL 60018.
Phone: 708-635-8800 Fax: 708-390-2636.

THE POLLUTION ENGINEERING LOCATOR consisting of 4 sections: The Suppliers Directory, Product Directory, Consultants/Services Directory, and the Market Place.

2) JOURNAL AMERICAN WATER WORKS ASSOCIATION BUYERS' GUIDE American Water Works Association 6666 W. Quincy Ave. Denver, CO 80235

Phone: 303-794-7711 Fax: 303-794-7310

JOURNAL AWWA BUYERS' GUIDE is a reference book with three sections. Section one is a classified index of products and services supplied by AWWA associate members, plus directories of associate, consultant, contractor, and manufacturer's agent members of AWWA. Section two includes a catalog directory, which is a compilation of supplier catalogs indexed by product. Section three is supplier catalogs indexed by product. Section three is the catalog of publications, books, standards, manuals and public relations aids available through the AWWA.

3) RESEARCH JOURNAL OF THE WATER POLLUTION CONTROL FEDERATION Water Pollution Control Federation 601 Wythe Street Alexandria, VA 22314 Phone: 703-684-2439

The RESEARCH JOURNAL OF THE WATER POLLUTION CONTROL FEDERATION is a research journal for the dissemination of fundamental and applied research in water quality, hazardous wastes, sludge management, industrial wastes, hazardous csciences, reuse and recycling, ground and surface waters and wastewater treatment systems.

4) WATER ENGINEERING & MANAGEMENT
Scranton Gillette Communications, Inc.
380 Northwest Hwy.
Des Plaines, IL 60016
Phone: 708-298-6622
Fax: 708-390-0408

WATER ENGINEERING & MANAGEMENT is dedicated to the advancement of technology and the transfer of information in the field of municipal, county and regional water supply and water pollution control for consulting sanitary engineers and managers of water/wastewater facilities who specify/buy products and service.

5) GALE ENVIRONMENTAL SOURCEBOOK 835 Penobscot Bldg. Detroit, Mich. 48226 Phone: 313-961-2242

Most comprehensive guide to organizations, agencies, programs, publications, data bases and other resources in the environmental sector.

6) ENVIRONMENTAL EXECUTIVE DIRECTORY 1058 Thomas Jefferson Street NW Washington, DC 20077-0007 Phone: 202-333-8620

Has 12,000 environmental executives from 5000 companies in all sectors. Indexed by company and SIC.

7) THE GREEN BOOK ENVIRONMENTAL RESOURCE DIRECTORY - N.Y./N.J.
155 West Street
Wilmington, MA 01887
Phone: 617-221-7501

Very comprehensive region directory of enironmental products and services, trade associations, publications and on line services. Includes complete contacts of federal and state environmental regulators.

APPENDIX 1

INTERVIEW COMMENTS

1) Kevin Farmer of O'Brien and Gere discussed the state of the art from his perspective. A summary of his comments follows. In the past, municipal treatment plants (MTP) were designed and built to handle the effluent from the industrial concerns that fed into the plants. In the future, the treatment plants will rarely increase capacity to accommodate a single industrial user; therefore, the users must be sure their effluent is compatible with the restrictions imposed by the POTW. Most food processing plants currently discharge to MTP. Since the MTP have limits on the allowable effluents that are lower than previous values, the processing plants are now being forced to install biological pretreatment.((1))

Many of the restrictions for wastewater treatment in the future will be in regard to the nutrients, nitrates and phosphates that will be allowed into public waters; therefore, accommodations will have to be made to remove these ingredients in the near future. ((1))

- 2) A review of quarterly violations during the period of April 1, 1991 through June 30, 1991 showed that the following types of violations were common:
 - a) excessive total suspended solids
 - b) excessive phenolics and benzene compounds
 - c) excessive halogenated compounds
 - d) excessive harmful bacteria
 - e) excessive percentages of BOD

A review of the overall compliance statistics showed that the non-municipal dischargers had a generally higher rate of being in compliance than the municipal treatment plants. ((2))

- 3) Gerard Palumbo, a senior environmental engineer with the NYS DEC, indicated that the next major problem will be with the control of stormwater overflow, which will be regulated by the federal stormwater control regulations that are scheduled to go into effect in October, 1992. New York State is not ready to handle this problem. The individual interviewed felt that compliance and enforcement could be so costly and complex that in most cases the enforcement will focus on proper housekeeping by industrial sites in order to avoid contaminants running into sewers. ((3))
- 4) Mr. David Smith from Malcolm Pirnie, one of the leading environmental compliance and engineering firms, will not work with companies that supply equipment to the environmental industry in order to avoid a conflict of interest situation. Therefore, although they would be a primary candidate to sell the

certain technical products they would not be allowed to based on their corporate policies.

Per Mr. Smith, there is instrumentation and software available to perform the data gathering and analysis for chemical processes, but a system that combines both methods is not readily avalailable.

The general use of these types of products should be explored throughout the chemical industry, because a lot of the focus on decreasing hazardous waste now involves waste minimization through process change. In addition, the costs involved in using this type of system must be in line with the magnitude of the project involved, in order to justify the system costs.

The industrial side of the market now has the greater potential and much more activity is underway, because of the regulations.

One system that could have a special market niche is one that can integrate process changes on the air effluents from the system, so the clean air act regulations can be addressed as well as the wastewater. These concurrent system changes must be understood in order for industry to best utilize the capital it expends on compliance.

Mr. Smith feels that the years of wastewater expenditures have peaked and the market is now mature or even declining relative to where it has been. In addition, the aerospace companies are now entering the market and making competition even tighter. For Canadian firms this may mean that software products that help canadian firms this may have a big market, since they would more with process audits may have a big market, since they would more likely sell to the service companies than to the end users. The problem is to establish the system's credibility with the potential user and make its use simple enough that a great deal of front end investment is not needed prior to reaping its benefits (the training session has to be as short and effective as possible).

Regarding the possibility of Canadian companies marketing directly to U.S. customers, Mr. Smith felt that differences in the regulations and the market, required a U.S. presence to enter and develop the U.S. market.((4))

5) Per Craig Slater of Saperston & Day, the next major problem to be addressed relative to wastewater treatment is handling of the combined sewer overflow. This problem will not be discussed in this paper, but may present some opportunities in the area of measurement and monitoring of industrial sites.

Tightening of the content of the inflow is now occurring because state and federal regulators are not allowing individual treatment facilities to compensate for excessive pollutants in waste streams. This practice is causing industrial plants to modify their processes to decrease pollutant generation. ((5))

- 6) Jim Jensen from the State University of New York at Buffalo discussed projects related to wastewater treatment currently underway at the University. The following were mentioned ((6)):
 - a) Pilot plant work is underway on biologically activated carbon, in which the absorption characteristics of the carbon are united with biologically active organisms to enhance the activation processes.
 - b) Work is being done on advanced oxidation processes that use highly reactive oxidizing chemicals, such as hydrogen peroxide and ozone, to cause rapid conversion of oxidizable chemicals. The effort is directed toward the water stream with the organics in it, to minimize the sludge created and preclude the sludge removal process, i.e. convert long chain organics directly to CO2 and H2O, which dissipate in the air.
 - c) Efforts are also underway on new adsorption and filtration techniques.
- 7) Dr. Michael Ryan from the UB Hazardous Waste Management Center said that the only wastewater effort in their group is focused on process modification, in conjunction with waste minimization efforts discussed with other individuals. Dr. Ryan is very interested in learning about the computer simulation models of the processes, to see if they can be tied into his efforts.((7))
- 8) Discussions with Jim Somers of Wicker Technologies, a rep firm that sells instrumentation and control systems, revealed that although they would have an excellent understanding of the software and process auditing systems, they don't feel it would be practical to sell the product unless they had a great deal of training and joint field calls to help them learn how to handle the products with customers. However, since he also revealed that he sells to customers in response to bid requests, his channels of distribution would be too far down the decision process to allow the products to be sold. Once again the marketing/sales direction was towards engineering companies or end users as part of their efforts to define the user needs. He did ask good questions regarding the computers on which the systems run and the interface with existing measuring devices.

Jim feels that computers are used in many of the plants that he visits. He also said there are a lot of programmable controllers in today's plants. In addition, companies such as Allen Bradley, who previously were primarily involved in electrical controls are now moving into the field of computerized controls. This rep sold primary sensing devices, with the computer end of the system supplied by local supply houses who also provided the hook-ups and operational support.

Monitoring and control systems are provided by some very large firms such as: ABB Ken-Taylor Inc., Chemtrac Systems Inc. and

others. Most of his contacts in the industry are with engineers.((8))

- 9) Discussions with Jim Goss the President of Aftek, Inc., an equipment sales firm, revealed that he gets most of his marketing information from engineering firms that request quotes on items needed for jobs. He feels there is a lot of opportunity for new business based on the age of the systems that are currently in the field. Most of the systems were built in the 70's and are now breaking down or becoming inefficient because of age. In addition, at a meeting with Mr. Goss and one of his clients that produces Sequencing Batch Reactor Systems for treating sludge, there was an indication that a significant amount of activity is developing in Pennsylvania, since it is trailing New York State in its compliance activities.
- Mr. Goss sees new types of aeration processes being introduced because of imposed BOD limits, and improved filtration activity because of the tighter limits on solids. He organized a seminar regarding products manufactured by two of his principals and invited a number of engineering and design firms to get them acquainted. The reps promote themselves through a great deal of word of mouth contact and participation in mini-trade shows. ((9))
- 10) Discussions with the Senior Engineer of a NYS manufacturer of metal products revealed his major problems focused on interpretation of permitting rules for his wastewater treatment facility. He was so bogged down in legal hassles that he couldn't address technical issues at the time. (Name withheld due to confidentiality). His situation may provide an opportunity for confidentiality). His situation may provide an opportunity for the process audit system to give him a tool for control and documentation that would be important in follow-up with the government (10))
- 11) Dan Bull, from CPI Equipment Co. indicated most of his sales come from upgrading of existing systems. There were a number of opportunities for discussions, but the actual expenditure of funds is very limited. The products he sells are mainly bread and butter items, such as pumps. When asked about new products to sell he said, "I have as much as I can handle now".((11))
- 12) James Gormley of Damon & Morey indicated that a lot of focus is on upstream control to decrease the load on the wastewater treatment plant. He feels the EPA is fairly critical of municipal sewer facilities and fines them if they are out of compliance.
- This is consistent with comments received from a wastewater treatment operator who said they determine their compliance plans from the direction of the local DEC who monitors their compliance.((12))
- 13) Mr. Warren Jones of Jones Mac Crea, indicated that many small plants use programmable controllers. In many large plants they have internal engineering departments. In these cases the

customers specify what equipment they need and his company just provides it. Sometimes the manufacturer will actually set up small systems for the users themselves. Often when primary sensors are established for a system, the actual linkage with the company computer system is done by a local vendor who sells and services the computers. Companies such as Fisher and Porter and Honeywell, who have always been in process control business are active in this market. ((13))

14) Karen Schmitz, the Manager of Environmental Systems for the Duriron Company which manufactures and sells wastewater treatment equipment, indicated that most of the facilities they sell to were in compliance years ago. However, they are now getting involved in the permitting of their manufacturing facility to control storm water run-off.

They have given presentations showing new sludge dryers that will provide the user with a pay-back in 6 months, yet ran into reluctance by the customer to make the capital commitment. This is another indication of the tightness of the market for new equipment.

Karen sees a trend in the industry towards microfiltration to remove the highest possible amount of sludge and allow clean water to be drawn off the mixture. The popularity of belt filter presses is increasing, in order to get higher percentages of solid in the sludge for final processing efficiencies. In addition, efforts are underway to separate the metals from the organic portions of the sludge in order to allow the metal to be separated and recovered. ((14))

- 15) Discussions with an environmental supervisor from the Harrison Division of General Motors indicated that most of the wastewater treatment work they have underway is related to previous regulations. They are currently upgrading the plant to:
 - a) reduce organic content of the water
 - combine the analysis of the processing operation and the wastewater treatment plant in order to comply with the permits at the POTW.
 - c) reduce the amount of chlorinated solvents used in order to comply with the air, water and OSHA regulations simultaneously.

They are currently undergoing an expansion in their facility and are exploring various options regarding the handling of sludge. He is definitely interested in learning about the activities of the Canadian companies with potential products. ((15))

16) Mr. Chris Rau informed me that Eastman Kodak is in the process of updating their discharge permit and he was not able to discuss much of what they had underway. Mr. Rau did indicate they are working on a number of projects, but did not wish to discuss anything without a letter describing who I am and what I am trying to determine. In response to his request a letter was sent to the director of their environmental group, but as of the date of this report contact had not been established with this individual.

Due to the size of the facility involved they are worth a follow-up call.((16))

17) A spokesperson from Congressman Nowak's office indicated that most of New York State's facilities are at the secondary level of treatment with 85% of the BOD removed.

In addition, it is felt that there are still major issues to be addressed about cleaning-up the waters that flow into the Great Lakes. There is a great deal of concern about how the new federal regulations regarding control of storm sewer run-off will be implemented in New York State and its effect on industry and municipalities.((17))

18) John Gratz of ODNY described his company's role as environmental consultants in the cycle of pollution control. They identify the actions to be taken for the customer to meet the environmental regulations and help them perform whatever tasks are needed to meet their goal, except for building or operating the facilities themselves. The broad nature of their activities would make them an excellent source for detailed analysis of the products offered by the Canadian companies.((18))

One important factor revealed in the meeting with Mr. Gratz was the responsibility to the industry assumed by the various organizations involved in environmental services. His company will define what regulations have to be met, what has to be done to meet the regulations and even design and spec the system that is needed. The engineering companies will design the details of the system to be installed, including which equipment and instrumentation and controls are needed, and the specifications for the purchase of the components. However, the warranties of the product coming out of the system will only be provided by an organization that sells the entire system. The engineers spec the equipment and what it should do, but only a firm that supplies total systems will guarantee the product itself that comes out of His organization, organizations like his, and engineering firms cannot sell or promote individual products to the system. the market. However, they could possibly be customers for the auditing tools if they find them the most cost effective way to perform their analyses. ((18))

19) James Garen of Polytec indicated that they feel there are no specific technology needs at the current time. However, there are audits being done at many facilities in the industrial market to decrease the costs of operation. He feels that the biggest market is the industrial side because it is more sensitive to items such as minimization of chemical use. His company sells waste

treatment equipment, including ion exchange recovery systems, processing units and metal fabricated products.((19))

- 20) John Gorton of URS Consultants, Inc., whose company designed and built the Erie County Southtowns advanced wastewater treatment plant, feels that the market is now virtually gone. His company now has little or no work in the market. This lack of work may be due to their emphasis on hazardous waste remediation or market research in the wastewater treatment field, it was not made clear. ((20))
- 21) Jim Burke, from the New York State DEC located in Syracuse, indicated they are getting into increased use of activated sludge and rotary biological contractors for treating sludge more effectively. He indicated they are currently focusing on the reduction of pathogens in the sludge. He feels there is a lot of work yet to be done in sludge treatment and disposal. The DEC role in the purchasing cycle is relatively significant, since they detect non-compliance of the rules and determine the enforcement measures needed. They usually obtain consent orders from the municipality relative to work to be done, then monitor to ensure that the work is done.

The municipality in all cases is required to hire a consulting firm to do the evaluation and make specific recommendations, then get bids for the work to be done. The DEC inspects all facilities annually and generates a report on their findings. A copy of the report for Region 7 was requested.((21))

- 22) Paul Drof of the North Tonawanda wastewater treatment plant indicated they are well within the guidelines on all discharges and do not anticipate much change in their system. ((22))
- 23) The Water Environment Federation, formerly the Water Pollution Control Federation, was identified as a potential source of information, but none of their staff have a strong background concerning current activities.((23))
- 24) Mr. Frank DeMasschio, the Plant Engineer from the Buffalo Sewer Authority, has a lot of work underway. They are focusing on evolutionary changes that allow them to find more efficient ways to get the wastewater treatment done. Questions about their stream sampling and control systems revealed they have an on stream sampling system, but there is a significant lag before they get data on the contents of the waste streams that have been sampled.

Therefore, they are interested in any system that can give them better information for controlling the process that will make it more efficient. Their sludge is dried with belt filters now, but they recently installed an evaporator to decrease the water content of the sludge even more, allowing them to decrease substantially the energy used in the incinerators. It has the added benefit of emission of less toxic materials, which are

related to use of the incinerator. The ash disposal after the incineration process has to be addressed and any help in resolving this problem would be of interest.

The New York State Department of Energy is involved in the incineration project and may be a possible source of funding for some Canadian projects or may be a good partner to work with in targeting opportunities for audit analyses.

There is a study underway to decrease the electricity used by the blowers in the aeration process. The contractor on this job, Malcom Pirnie, is a good source of follow-up.

The driving force for changes to their operation, in addition to cost saving, is compliance with orders from the DEC. ((24))

25) A visit was made to the Amherst wastewater treatment and discussions were held with the plant superintendent, Mr. Anthony Cana and the Computer Operations Manager, Steve Norman.

Their operation is relatively modern, with their biggest near term problems being the need to dechlorinate the effluent and control the odor from the sludge, which is trucked offside for disposal.

They have computer monitoring of the system. All the flows are monitored and they now have a system that links all of the instrumentation readings to PCs that allow them to set up flow parameters on screen without having to use the large boards and displays built many years ago. There is a program they use for monitoring, but the operators are not comfortable with automatic control and prefer to be in the loop, because of negative experiences with earlier systems. One big benefit of the PC

Executive Summary

New York State Department of Environmental Conservation Division of Water Annual Report April 1, 1991-March 31, 1992 (SFY 1991/1992)

The Division of Water faces the challenge of balancing three strong needs: maintaining and enhancing the state's water resources; responding to the state's overall economic requirements and, increasing program efficiencies in response to funding constraints.

Three Visions guide the water programs:

- Waters virtually free of contaminants
 - from SPDES point source discharges
 - from controllable nonpoint sources
- Reliable supplies of water available when and where needed
- Flood losses of life and property reduced to the maximum extent possible

To realize these Visions, water program managers set goals and objectives for their bureaus in an annual workplan to establish activities for central and regional water staff to accomplish during the fiscal year ahead. The year's activities are summarized in an annual report.

This annual report summarizes the planned activities accomplished and not accomplished during SFY 1991/1992. A companion document, the Annual Data Report, published in August, 1992, details staff time spent on specific program elements for the same period.

Summary of significant accomplishments in SFY 1991/1992:

- Began development of a comprehensive Division of Water safety program.
- Reviewed and approved a nomination document to include the Peconic Estuary in the National Estuary Program.
- Developed water quality guidance values for toxic substances, including PCBs and halogenated solvents.
- Completed a new manual for local officials, titled "Reducing the Impacts of Stormwater Runoff from New Development."
- Completed model ordinances combining stormwater and erosion/sediment control provisions for locally based stormwater programs.
- Developed an Environmental Benefit Permit Strategy to streamline renewal of all State Pollutant Discharge Elimination System (SPDES) permits.
- SPDES permits: Drafted 73 municipal and 240 industrial permits, 327 significant minor facility permits. Modified 16 SPDES permits to meet policy of no net increase of pollutant loadings to Long Island Sound. Expanded generic SPDES permit to control zebra mussels in all fresh waters of the state. Completed data report on all 560 municipal sewage treatments systems.
- Monitored overall SPDES compliance for 1492 significant facilities.
- Monitored 56 approved pretreatment programs covering 91 Publicly Owned Treatment Works (POTWs) for basic implementation.
- Issued the Rotating Basin Study (RIBS) Report for 1989-90, covering the Seneca-

Oneida-Oswego, Mohawk, Genesee, Lake Ontario and Allegheny River Basins.

■ Issued the 1991 Priority Water Problem List (PWP) of approximately 1500 waterbodies with use impairments or serious water quality problems.

- Issued the 1992 New York State 305(b) Water Quality Report, which is based on the RIBS and the PWP.
- Filed regulatory packages for stream reclassifications in three major drainage basins.
- NYS Water Resources Planning Council submitted a resolution to the Governor and Legislature supporting development of a dedicated fund to finance water resources management and protection in NYS.

■ Developed and printed a list of more than 10,000 certified water-saving plumbing

fixtures.

■ Promulgated final Great Lakes water withdrawal registration regulations.

■ Issued public water supply permits for all 160 applications received; this was the first year of no backlog increase since 1982.

■ Conducted eight sessions of the NYS InterAgency Drought Management Task Force to address drought contingencies in southeastern and western NYS.

■ Completed construction of the Hammondsport Flume.

■ Completed 104 Community Assistance Visits (CAV) to assess local administration and enforcement of the floodplain management regulations required under the National Flood Insurance Program (NFIP).

Summary of significant planned actions not accomplished in SFY 1991/1992:

■ Unable to hold public hearings on nine basin reclassification proposals.

■ Unable to complete regulations for the NYS Nonpoint Source Law.

■ Unable to perform planned work to revise Best Professional Judgment (BPJ) guidance to support the SPDES permit program.

Fiscal problems with Regulatory Sampling Program funds delayed the completion of the third annual sampling (final) round for the NYC Baseline Toxics Report until March 1992; the report will therefore be delayed until 1993.

■ Unable to complete development and implementation of the 13 substate water

resources management strategies.

■ Unable to complete a Water Conservation Manual.

■ Unable to promulgate water-saving plumbing fixtures regulations, which are now almost two years late.

■ Unable to significantly reduce the backlog of public water supply permit applications.

Core programs At the core of the Division of Water's program are four interdependent functions essential to carrying out all of its activities under the Clean Water Act and the other federal and state mandates. They are:

■ Program planning and development, including establishing classifications, standards and criteria;

 Program implementation, including regulating, through permits, activities that have an impact on the environment;

Compliance with permits and standards;

Surveillance and monitoring of the state's waters.

These core programs are the controls and measures for water quality, the basis for both quantity and quality management. They are linked like four interlocked sections of a circle. A decrease in any element of the core program will adversely affect the other elements, and thus will affect water quantity and quality management.

Staffing: During the period of this report, an ideal level of 571 work-years were needed to accomplish all the planned actions. Allowed (targeted) positions numbered 323 and actual staff levels averaged 310, or 54 percent of the staff needed to fully accomplish objectives. Program managers are tackling the disparity between optimal and actual staffing levels by marshalling their professional and management forces to provide the best service possible. At the same time, the Division of Water continues to maintain the high professional standards that have always characterized the water program, while providing the best possible level of environmental protection.

Fiscal trends: Total expenditures for SFY 1991/1992 were \$21,592,300; of that amount, \$17,567,500 was in personal services, \$4,024,800 in non-personal services. Cutbacks in federal special revenue fund and state purposes funds have already had a serious impact on programs; further funding restrictions are anticipated. The mix of funding is also changing, with a trend towards increased use of monies targeted for specific projects and less available for unrestricted use or to support core programs. The challenge is to maintain the quality of high-priority programs while absorbing the cutbacks and seeking new funding mechanisms.

Regulatory trends: Federal and state laws and regulations mandate 40 elements of the water program, such as flood control projects or water quality surveillance. In SFY 1991/1992, the Division of Water is satisfactorily fulfilling mandates for 20 of these mandated elements, partially fulfilling 15 of the mandates, and not fulfilling five. Full implementation would require staffing at the ideal level, (shown in Chapter 2) with sufficient funding to support the necessary non-personal services.

Public participation: Protecting New York's waters will take a team approach, involving individuals, businesses, organizations, schools and governments. Each sector can take action at the appropriate level - at home, school, work, and in government. People can work towards realizing the water quality and quantity Visions by becoming better informed, taking volunteer or professional action, and by participating in government decision-making.

Call the Public Participation Section at (518) 457-0669 to find out how you can get involved in protecting the waters of our state.

FOREWORD

A pamphlet containing descriptive data on public sewer systems and sewage treatment plants in New York State was first published in 1927 and subsequently revised and updated in 1929, 1935, 1941, 1952, 1976, 1978, 1981, 1983 and 1987. Previously known as the New York State Health Department Bulletin No. 20 for the years 1927 - 1952, these publications satisfied a general demand for the descriptive information that is contained in the document. The 1981 issue represented the first time data had been computerized, facilitating accessibility in meeting user needs. The present issue is an updating of the 1987 edition and contains information which is current through April 1992. This update process included a survey of all POTW's. We obtained a response rate of 93 percent. Included in the appendix is a sampling of the various statistical comparisons that can be developed from the stored data. The following tables compare the types of facilities and plant design sizes contained in this pamphlet with those that were shown in the 1952, 1980, 1985 and 1987 issues:

Table A

Treatment		No.	of Facil	lities		Total Design Flow (MGD)

Totals	298	509	550	543	573	2,059.95	3,229.59	3,422.21	3,472.95	3,556.41

Table B

	Number of Plants					
Plant Design Size	1952	1980	1985	1987	1992	
0100 .101 - 1.000 1.001 - 10.000 10.001 - 100.000 100.001 - 999.000	45 161 66 22 4	86 248 137 31	136 · 243 131 32 8	131 236 136 32 8	156 237 135 37 8	
Totals	298	509	550	543	573	

The large increase in the number shown in the < primary category for 1980 to 1985 is due to the fact that the 1985 figure includes raw discharges, sewer system overflows and a scavenger holding tank which were not identified in prior issues. The purpose of this "accounting change" is to improve the usefulness, flexibility, and compatibility of the Descriptive Data inventory.

No matter how sophisticated a management information system is designed, if the accuracy of the data is questionable, the usefulness of the system is compromised. The data base containing the descriptive data is updated on a continuous basis. If you notice any inaccuracies or have any questions, comments, or suggestions, it would be appreciated if this information were sent to:

DIVISION OF WATER PUBLICATION LIST

January 1992

Thank you for your interest in the publications produced by the Division of Water. Some are highly technical and specialized. Some are for general audiences. Attached is a list of currently available publications, including regulations and the Technical and Operational Guidance Series (TOGS). To place an order, contact the office listed for the publication you want. If there is a fee, send check or money order in the correct amount, made payable to NYSDEC. All bureaus are at 50 Wolf Road, Albany, NY 12233. Add the extra four digits to the zip code to direct mail to the appropriate office. Publications will be sent postpaid.

Zip	Code add-on
BPRA Bureau of Program and Regulatory Activities	3501
BTSR Bureau of Technical Services and Research	3502
BMA Bureau of Monitoring and Assessment	3503
BWR Bureau of Water Resources	3504
BWFD Bureau of Wastewater Facilities Design	3505
BWFO Bureau of Wastewater Facilities Operations	3506
BFP Bureau of Flood Protection	3507
BWQM Bureau of Water Quality Management	3508

For publications available from HES, send check or money order in the correct amount payable to Health Education Services, including both the cost of the publications and postage and handling. Postage and handling charges for US destinations are listed below. If you are ordering from Canada or other countries, inquire about rates before ordering.

Health Education Services PO Box 7126 Albany, NY 12224 Telephone: (518) 439-7286

HES Orders	Shipping/Handling
up to \$10.00	\$2.00
\$10.01-20.00	3.00
20.01-30.00	5.00
30.01-50.00	6.00
50.01-100.00	8.00

For each \$100 increment over \$100.00, add an additional \$6.00

This list is up to date. However, it is advisable to telephone the indicated numbers before ordering to be sure the publications are available and the price is current. There is a \$.25 per page charge for photocopying some publications.

The technical level codes referred to on the list are as follows:

- 1 = for a specialized professional/technical audience
- 2 = for a general professional/technical audience
- 3 = non-technical, but college-level audience
- 4 = high school level of readability and technical content
- 5 = grammar school level of readability and technical content

*Make check payable to the N.Y.S. Department of Environmental Conservation. Mail to: N.Y.S. Department of Environmental Conservation, 50 Wolf Road - Room 310, Albany, N.Y. 12233-3501

Cost of 1 complete set is \$135.25

Recent reorganization in the department has transferred the Bulk Storage TOGS (4.1.1 through 4.1.13) from the Division of Water to the Division of Construction Management. Therefore, they have not been included on the attached Table of Contents.

Bulk Storage TOGS formerly listed can be obtained by calling the Bureau of Spill Prevention, Division of Construction Management at 457-7363. The Bulk Storage TOGS have been renamed SPOTS (Spill Prevention Operational & Technical Series).

All other items remain as TOGS.

U.S. FEDERAL GOVERNMENT BOOK STORES

You can also buy the 1992 U.S. INDUSTRIAL OUTLOOK quickly and efficiently overthe-counter or by mail order for only \$32 from your U.S. Government bookstores.

GPO operates U.S. Government bookstores all around the country where you can browse through the shelves and take your books home with you. Naturally, these stores can't stock all of the more than 21,000 titles in our inventory, but they do carry the ones you're most likely to be looking for. And they'll be happy to order any Government book currently offered for sale and have it sent directly to you. All of our bookstores accept VISA, MasterCard, and Superintendent of Documents deposit account orders. For more information, please write to your nearest U.S. Government Bookstore.

Total '92 Revenue: \$271 mil.; '92 C/E-Revenue: \$177 mil.
U.S. Offices: 50; Foreign Offices: 19; '92 ET100 ranking: 14
Services: Environmental and waste management services in and water quality, contamination assessment and remediation, prevention, health risk assessment, life cycle analysis, and environmental master planning.

INTRODUCTION

When Industrial and Hazardous Waste Management Firms was introduced in 1984, it focused on commercial industrial and hazardous waste facilities and transportation services. Over the years, as the industry grew, the directory grew with it. In 1987, the directory added spill response services. In 1988, consultants, laboratories, and drilling services were added. In 1989, asbestos services and underground tank services were included in the national edition. It has become an overall environmental service directory. This year, Environmental Information, Ltd. has changed the directory's name to El Environmental Services Directory to reflect its broad scope

There have been some changes in the organization of the directory to accommodate the expansion in coverage. Each state section now contains in order: hazardous and industrial waste facilities, transportation services, spill response/clean-up services, consultants, laboratories, and soil boring/well drilling services. Indexes are located at the back of the national edition to help the user find specific services. In addition, listings of asbestos services, drum reconditioner services, mobile treatment services and underground tank services can be found at the back of the national edition.

The information on the firms included in the directory was obtained from the firms themselves through written surveys. For the 1991 edition, thousands of inquiries were again made to locate new services for inclusion in the directory. Every effort has been made to ensure that each profile accurately and reliably describes a firm's environmental services. Confirmation copies of profiles were provided to the listed firms as a final check.

Copies of all entries in the 1990 directory were sent back to the firms to review and update for inclusion in the 1991 directory. Changes in regulatory status, expansion of services or service areas have been included. Firms that did not respond to our inquiries were kept in the directory, but so noted. If a firm discontinued services or had not responded to our inquiries since 1989, their listing was deleted from the directory. Over two-thirds of the entries from the 1990 directory were revised. Summaries of state regulatory programs were developed and updated through written surveys and telephone interviews with regulatory agency staff.

With the recognition that the directory is composed of summaries which necessarily exclude details which could affect a directory user, it is recommended that directory users always confirm important information using the telephone numbers provided. The remainder of this introduction is devoted to explaining the directory's organization and the format for different types of entries.

Overall Company Services

The company provides environmental and industrial hygiene consulting services.

Consulting Services

air quality emission control design, air quality sampling, asbestos monitoring, computer modeling, environmental assessments, environmental audits, ground water treatment, ground water quality investigations, hazardous waste sampling, hazardous waste treatment systems design, health and safety plans, incinerator design, industrial hygiene, landfill design, remedial feasibility studies, remedial investigation, risk assessments, sanitary or storm sewer design, surveying, underground tank testing, wastewater sampling, wastewater treatment plant design

Full-Time Environmental Staff

architects 0(4), attorneys 0(3), biologists 1(43), chemical engineers 2(93), chemical experts 0(209), civil/sanitary engineers 4(112), computer programmers 0(118), draftsmen/designers 9(64), ecologists 1(32), electrical engineers 0(11), economists 0(11), environmentalists 3(200), estimators 0(15), geologists/hydrogeologists 5(167), hydrologists 0(18), hazardous waste specialists 0(200), industrial hygienists/health experts 6(122), laboratory experts 0(110), mechanical engineers 1(41), mining engineers 0(4), nuclear engineers 0(4), oceanographers 0(3), planners (urban/regional) 0(9), soil scientists/engineers 0(24), structural engineers 0(23), surveyors 2(8), toxicologists 4(6)

Company Background

The company was founded in 1951.

NEWYCON32

SANDLER OCCUPATIONAL MEDICINE ASSOCIATES, INC.

Sales Offices

275 Broadhollow Rd., Suite 302 Melville, NY 11747 516/385-1910

Overall Company Services

The company provides environmental and industrial hygiene consulting services.

Consulting Services

air quality emission control design, air quality sampling, computer modeling, environmental assessments, environmental audits, ground water quality investigations, hazardous waste sampling, health and safety plans, industrial hygiene, risk assessments, wastewater sampling

Full-Time Environmental Staff

biologists 21(21), botanists 1(1), chemists 2(2), industrial hygienists 1(1), toxicologists 12(12), occupational physicians and medical subspecialists 20(21), environmental litigation specialists

Company Background

The company was founded in 1983, and this office opened for business in 1985.

The company provided this information for the 1990 edition.

NEWYCON73

SHELDON LICHT, A.I.A.

Sales Offices 211 E. 46th St. New York, NY 10017 212/688-2922

Overall Company Services

The company provides environmental consulting services.

Consulting Services

air quality emission control design, environmental assessments, environmental audits, hazardous waste treatment systems design, incinerator design, remedial feasibility studies, remedial investigation, risk assessments, spill prevention plans, wastewater treatment plant design

Full-Time Environmental Staff

architects 1(1), chemical engineers 0(1), environmental engineers 0(1), mechanical engineers (1), nuclear engineers 0(1), structural engineers 1(1)

Company Background

The company opened for business in 1978.

The company provided this information for the 1990 edition.

LABORATORIES

ACTS TESTING LABS, INC.

Sales Office 25 Anderson Rd. Buffalo, NY 14225 716/897-3300

Environmental Services

analysis of contaminated soil/waste, water samples

Laboratory Facility and Equipment

The laboratory occupies 3,000 sq.ft. (exclusive of office space). It is equipped with AA 2(2), FTIR 1(1), GC (3(4), HPLC 0(1), ICP 1(4), and UV/VIS 1(1).

Full-time Laboratory Staff

chemical technicians 4(8), chemists (B.S./M.S.) 4(5), chemists (Ph.D.) 1(2), biologists (B.S./M.S.) 2(3)

Types of Samples Analyzed

contaminated soils, ground water, hazardous wastes, wastewater

Types of Analysis Performed

acid fraction, base neutral fraction, corrosivity, extraction procedure for oily wastes, extraction procedure toxicity, ignitability, metals, paint filter test, pesticides, phenolics, polychlorinated biphenyls, polynuclear aromatic hydrocarbons, volatile fraction

Reporting and Record Keeping

A report is typically provided in 2-15 days. A more

rapid turn-around can be arranged. The laboratory maintains copies of the results for 10 years.

Laboratory Certification

The laboratory is certified to conduct environmental analysis in NY.

Laboratory Background

The laboratory opened for operation in 1976.

NEWYLAB19

ADIRONDACK ENVIRONMENTAL SERVICES, INC.

Company Offices

298 Riverside Ave., PO Box 265 Rensselaer, NY 12144 518/434-4546; FAX: 518/434-0891

Environmental Services

sampling of contaminated soil/waste, wastewater, ground water, air emissions, for industrial hygiene; analysis of contaminated soil/waste, water samples, air samples

Laboratory Facility and Equipment

The laboratory occupies 7,000 sq.ft. (exclusive of office space). It is equipped with AA 3(3), GC 8(8), GC/MS 2(2), HPLC 1(1), ICP 1(1), TOC 1(1), TOX 1(1), UV/VIS 1(1), SEM 1(1), and TEM 1(1).

Full-time Laboratory Staff

chemical technicians 18(18), chemists (B.S./M.S.) 12(12), biologists (B.S./M.S.) 4(4)

Types of Samples Analyzed

air emissions, contaminated soils, ground water, hazardous wastes, wastewater

Types of Analysis Performed

acid fraction, asbestos, base neutral fraction, corrosivity, extraction procedure for oily wastes, extraction procedure toxicity, ignitability, metals, paint filter test, pesticides, phenolics, polychlorinated biphenyls, polynuclear aromatic hydrocarbons

Reporting and Record Keeping

A report is typically provided in 10-20 days. A more rapid turn-around can be arranged. The laboratory maintains paper or microfiche copies of the results for 10 years and computer records for 10 years.

Laboratory Certification

The laboratory provides inorganic and organic analyses in the Contract Laboratory Program. It is certified to conduct environmental analysis in CT, MA and NY.

Laboratory Background

The laboratory was first opened in 1984.

The company provided this information for the 1990 edition.

Company Offices PO Box 29 Canton, NY 13617 315/386-4578

PO Box 356 Cicero, NY 13039 315/699-5281

PO Box 569 - Union Station Endicott, NY 13760 607/757-9326

Environmental Services

sampling of contaminated soil/waste, wastewater, ground water; analysis of contaminated soil/waste, water samples

Laboratory Facility and Equipment

The laboratory occupies 2,200 sq.ft. (exclusive of office space). It is equipped with AA 1(1), GC 1(1) and UV/VIS 1(1).

Full-time Laboratory Staff

chemical technicians 12(12), chemists (B.S./M.S.) 4(4), biologists (B.S./M.S.) 4(4), toxicologists (B.S./M.S.) 1(1)

Types of Samples Analyzed contaminated soils, ground water, hazardous wastes, wastewater

Types of Analysis Performed metals

Reporting and Record Keeping

A report is typically provided in 1-14 days. A more rapid turn-around can be arranged. The laboratory maintains paper or microfiche copies of the results indefinitely.

Laboratory Certification

The laboratory is certified to conduct environmental analysis in NY.

Laboratory Background

The laboratory was first opened in 1967. The environmental section of the laboratory was opened in April 1987.

NEWYLAB2

C. T. MALE ASSOCIATES

Company Offices 50 Century Hill Dr. Latham, NY 12110 518/785-0976

Environmental Services

sampling of contaminated soil/waste, wastewater, ground water, for industrial hygiene; analysis of contaminated soil/waste, water samples, air samples, aquatic toxicology

Laboratory Facility and Equipment.

The laboratory occupies 2,700 sq.ft. (exclusive of office space). It is equipped with AA 1(1), GC 6(7), GC/MS 2(2), HPLC 1(1), TOC 1(1), UV/VIS 1(1), IR 1(1).

Full-time Laboratory Staff chemists (B.S./M.S.) 10(10), chemists (Ph.D.) 1(1)

Types of Samples Analyzed

air emissions, contaminated soils, ground water, hazardous wastes, wastewater

Types of Analysis Performed

acid fraction, aquatic toxicity, base neutral fraction, corrosivity, extraction procedure for oily wastes, extraction procedure toxicity, ignitability, metals, pesticides, phenolics, polychlorinated biphenyls, polynuclear aromatic hydrocarbons, TCDD

Reporting and Record Keeping

A report is typically provided in 10 days. A more rapid turn-around can be arranged. The laboratory maintains paper or microfiche copies of the results for 10 years and computer records for 10 years.

Laboratory Certification

The laboratory is certified to conduct environmental analysis in CT, NH, NJ, NY.

Laboratory Background

The laboratory was first opened in 1970.

The company provided this information for the 1990 edition.

Types of Analysis Performed

acid fraction, base neutral fraction, corrosivity, extraction procedure for oily wastes, toxicity characteristic leaching procedure, total organic carbon, ignitability, metals, paint filter test, pesticides, phenolics, polychlorinated biphenyls, polynuclear aromatic hydrocarbons, TCLP, volatile organics

Reporting and Record Keeping

A report is typically provided in 5-10 days. A more rapid turn-around can be arranged. The laboratory maintains paper copies and computer records of the results indefinitely.

Laboratory Certification

The laboratory is certified to conduct environmental analysis in NY.

Laboratory Background

The laboratory opened for operation in 1986.

NEWYLAB18

GENERAL TESTING CORP.

Company Offices 710 Exchange St. Rochester, NY 14608 716/454-3760

Environmental Services

sampling of contaminated soil/waste, wastewater, ground water; analysis of contaminated soil/waste, water samples

Laboratory Facility and Equipment

The laboratory occupies 10,000 sq.ft. (exclusive of office space). It is equipped with AA 4(4), GC 14(14), GC/MS 4(4), HPLC 1(1), TOC 2(2), TOX 2(2), UV/VIS 1(1), portable field GC, EP TOX extractors. The firm has 1 mobile laboratory. The mobile laboratory is tailored to suit project needs.

ecology and environment

Full-time Laboratory Staff

chemical technicians 15(15), chemists (B.S./M.S.) 10(10), biologists (B.S./M.S.) 10(10)

Types of Samples Analyzed

contaminated soils, ground water, hazardous wastes, wastewater

Types of Analysis Performed

acid fraction, base neutral fraction, corrosivity, extraction procedure for oily wastes, extraction procedure toxicity, ignitability, metals, paint filter test, pesticides, phenolics, polychlorinated biphenyls, polynuclear aromatic hydrocarbons, volatile fraction

Reporting and Record Keeping

A report is typically provided in 21-28 days. A more rapid turn-around can be arranged. The laboratory maintains paper or microfiche copies of the results for 5 years and computer records for 5 years.

Laboratory Certification

The laboratory is certified to conduct environmental analysis in CT, MA, NJ and NY.

Laboratory Background

The laboratory was first opened in 1971.

NEWYLAB7

HUNTINGDON ANALYTICAL SERVICES, A DIVISION OF EMPIRE SOILS INVESTIGATIONS, INC.

140 Telegraph Rd. Middleport, NY 14105 716/735-3400

Parent Corporation

Empire Soils Investigations, Inc. 119 W. South St. Groton, NY 13073 607/898-5891

Environmental Services

sampling of contaminated soil/waste, wastewater, ground water, air emissions, and for industrial hygiene; analysis of contaminated soil/waste, water samples, air samples, pesticide residue

Laboratory Facility and Equipment

The laboratory occupies 33,000 sq.ft. (exclusive of office space). It is equipped with AA 1(1), GC 12(12), GC/MS 3(3), HPLC 7(7), ICP 1(1), TOC 1(1), TOX 1(1), UV/VIS 1(1), flow injection analyzer 1(1), ion chromatograph 1(1).

Full-time Laboratory Staff

chemical technicians 13(13), chemists (B.S./M.S.) 22(22), chemists (Ph.D.) 3(3)

Types of Samples Analyzed

contaminated soils, ground water, hazardous wastes, wastewater

Types of Analysis Performed

acid fraction, asbestos, base neutral fraction, corrosivity, dioxin scan, extraction procedure for oily wastes, extraction procedure toxicity, ignitability, metals, pesticides, phenolics, polychlorinated biphenyls, polynuclear aromatic hydrocarbons, TCDD, volatile fraction

Reporting and Record Keeping

A report is typically provided in 14-21 days. A more rapid turn-around can be arranged. The laboratory maintains copies of the results for 3 years and computer records for 3 years.

Laboratory Certification

It is certified to conduct environmental analysis in NJ, NY, PA, UT.

Laboratory Background

The laboratory opened for operation in 1985.

The company provided this information for the 1990 edition.

NEWYLAB22

H2M LABS, INC.

Company Offices 575 Broad Hollow Rd. Melville, NY 11747 516/694-3040

Parent Corporation H₂M Group 575 Broad Hollow Rd. Melville, NY 11747 516/756-8000

Environmental Services

sampling of contaminated soil/waste, wastewater, ground water, air emissions; analysis of contaminated soil/waste, water samples, air samples, leachate

Laboratory Facility and Equipment

The laboratory occupies 10,000 sq.ft. (exclusive of office space). It is equipped with AA 4(4), GC 7(7), GC/MS 4(4), ICP 2(2), TOC 1(1), TOX 1(1), UV/VIS 2(2), Technicon 4-channel auto analyzer, Kjeldahl nitrogen analyzer (TKN), Gel chromatography system, HPLC 1(1).

Full-time Laboratory Staff

lab technicians 6(6), chemists (B.S./M.S.) 23(23), biologists (B.S./M.S.) 18(18)

Types of Samples Analyzed

air emissions, contaminated soils, ground water, hazardous wastes, wastewater

Types of Analysis Performed

acid fraction, base neutral fraction, corrosivity, extraction procedure for oily wastes, extraction procedure toxicity, ignitability, metals, pesticides,

phenolics, polychlorinated biphenyls, polynuclear aromatic hydrocarbons, TCLP, volatile fraction

Reporting and Record Keeping

A report is typically provided in 10-14 days. A more rapid turn-around can be arranged. The laboratory maintains paper or microfiche copies of the results for 7 years and computer records for 3 years.

Laboratory Certification

The laboratory is certified to conduct environmental analysis in CT, DE, NJ, NY, and PA.

Laboratory Background

The laboratory was first opened in 1957. It operated under the name of H₂M Laboratory/Holzmacher, McLendon and Murrell, P.C. until January 1987.

NEWYLAB1

KEMRON ENVIRONMENTAL SERVICES, INC.

Company Offices 755 New York Ave. Huntington, NY 11743 516/427-0950

Parent Corporation

KEMRON Environmental Services, Inc. 7926 Jones Branch Dr., Suite 1100 McLean, VA 22102 703/893-4106

Environmental Services

sampling of contaminated soil/waste, wastewater, ground water, air emissions, for industrial hygiene; analysis of contaminated soil/waste, water samples, air samples

Laboratory Facility and Equipment

The laboratory occupies 1,200 sq.ft. (exclusive of office space). It is equipped with GC 2(3), HPLC 1(1), phase constrast microscope (5), polarized light microscope (3).

Full-time Laboratory Staff

chemical technicians 2(2), chemists (B.S./M.S.) 4(4), biologists (B.S./M.S.) 13(13), biologists (Ph.D.) 2(2), toxicologists (B.S./M.S.) 1(1)

Types of Samples Analyzed

air emissions, contaminated soils, ground water, hazardous wastes, wastewater

Types of Analysis Performed

animal toxicity, asbestos, metals, pesticides, phenolics, polychlorinated biphenyls, polynuclear aromatic hydrocarbons

Reporting and Record Keeping

A report is typically provided in 5-14 days. A more rapid turn-around can be arranged. The laboratory maintains paper copies of the results for 5 years.

Laboratory Certification

The laboratory is certified to conduct environmental analysis in NY and OK.

recycled paper

Here's How You Can Use Dodge Reports..

Pre-Planning

- Project is contemplated.
- Owner is identified.
- No architect selected

Office Building 5 Main St., Mahwah NJ. (Bergen Co.)	Pre-planning
Status: Proposed construction, site pur- chased, architect to be selected in one month.	\$3,000,000
Method of contracting: GC to be competitively bid. Owner Grant Development Company. Andrew Smith (Vice President), 2160 Louis Road, Ft. Lee NJ 07470, (201-694-6070). Architect To be selected. Structural information: 3 stories above grade / 30,000 total square feet.	Dodge Reports

Action Steps

- Contact the Owner to pre-sell or negotiate an agreement for product, service or trade.
- Mail product literature.
- Relay the information to an architect with whom you work.

- Architect has been selected.
- Plans are in progress.

Office Building		Planning
5 Main St., Mahwah NJ. (Bergen Co.) Buttus: Architect selected, preliminary plans in progress, scheduled for bids in February.	metal deck with concrete decking / floor sup- port: metal joists / roof construction: metal deck with concrete topping / stair system:	\$3,000,000
Method of contractings GC to be competitively bid. Owner Grant Development Company. Andrew Smith (Vice President), 2160 Louis Road, Ft. Lee NJ 07470, (201-694-6070). Arabtect Michael Miller, 3301 Elm St., Paramus NJ 07652, (201-999-1010), Fax:	steel plate.	New
201-123-4567. Btructural ampinoor: Paul Beck Assocs., 122 Parish Dr., Wayne NJ 07470, (201-694-6070).		For Poer Constructor Co.
Biructural Information: 3 stories above grade / 30,000 total square feet / site work: land- scaping / foundations: spread footings / slab- basement: slab-on-grade / building frame: structural steel frame / floor construction:		

This Report: tells you the architect and structural engineer have been named, gives you their names, addresses (including zip codes), telephone numbers and fax numbers and lists more data on the project, including a description of the project's content.

- Contact the Architect and/or Engineer to review product applications, obtain product approval or influence specifications.
- Provide project manager with pertinent product literature
- Ask for follow-up time frame. Suggest an, appointment to discuss ideas, applications.
- Contact owner.
- Determine if project is not "right" for you—pass up marginal jobs.
- Use personal calls or direct mail attempt to negotiate a contract.

...And Take Actions At Every Step...

- **b** Project is within 6 months of bid or start date.
- Specifications are being written.
- Product decisions are being made

This Report: gives you names and addresses of additional engineers, tells you the job will be ready for bids within a month:

Action Steps

- Obtain product approval:
- Try for an exclusive specification.
- Get qualified for bidders list,
- Schedule for bidding or negotiation

Bidding

- Plans and specifications are completed and available from SCAN or in the local Dodge Plan Room.
- Owner is taking bids for prime contract.
- Prospective bidders on prime contract are listed.
- Bid date is listed.

This Report: provides a list of prime contractbidders Additional bidders are listed at weekly intervals. This Report also tells where plans can be obtained (plans will also be available on Dodge/SCAN), and gives time and place to submit bids

- Review plans and specifications.
- Make takeoffs
- Prepare quotations
- Contact bidders.
- Increase profit and reduce estimating cost by selective bidding

...That Will Build Your Sales...

Negotiating

- This project is not competitively bid.
- Private negotiations with general contractors are in progress

This Report: provides names of general contractor(s) involved in negotiations for the construction contract.

Action Steps

- Contact the negotiating general contractors to submit a price for your trade or material.
- Negotiate for the order.
- Obtain subcontractor names:

PLANNING .

■ Architect And Engineering Services

Project Estimate: TBD

Type: A/E Services; Radioactive Waste Analysis

Location: West Valley, NY

Owner: D. H. Pritchard, West Valley Nuclear Services Company Incorporated, 10282 Rock Springs Road, P.O. Box 191, West Valley, NY 14171, (716) 942-4544

Project No.: 19-69391-Q-LH

Specifications: A/E services are needed for the upgrade and modification of existing nuclear facilities. Services include seismic analysis and compliance with the National Environmental Policy Act.

Notes: CBD: 09-16-1993. Interested firms should

submit SF 254 and 255.

■ Asbestos Abatement: Hartwell Hall Project Estimate: TBD

Type: Asbestos Abatement

Location: SUNY Brockport, NY

Owner: State University Construction Fund, Room N-223, 2nd Floor, 353 Broadway, PO Box 1946,

Albany, NY 12201, (518) 443-5697 Project No.: 02210

Specifications: Project calls for asbestos abatement at Hartwell Hall, SUNY Brockport.

Notes: Bid date is expected to be in August.

Groundwater Treatment & Disposal System

Support

Project Estimate: TBD

Type: Groundwater Treatment

Location: Picatinny Arsenal, NJ

Owner: C.G. Harrison, Division Engineer, US Army Engineer Div., Hunstsville, Attn: CEHND-CT-D, PO Box 1600, 106 Wynn Dr, Huntsville,

AL 35807, (205) 955-1575 Project No.: 89-C-0091

Specifications: Provide a ground water treatment system, equipment, labor and operation of the facility.

Notes: CBD: 9/14/93 PLEASE INDICATE LETTER OF INTEREST BY OCTOBER 8TH. No bid schedule set.

■ Indef Delivery Contracts 1 & 2 For Engr

Project Estimate: TBD

Type: A/E Services

Location: Passaic River Basin, NJ

Owner: Willien Cunningham, Procurement Asst, NYD US Army Corps Of Engineers, 26 Federal Plaza, Attn: CENAN CT, New York, NY 10289,

(212) 264-9123

Project No.: DACA51-CBD3-0010

Specifications: Engineering designs needed for a main tunnel, spillways, steambank restoration, fish and wildlife mitigation measures, flow restrictors and various other project elements.

Notes: Submission of FORM 255 is due OCTOBER 14th.

■ Landfill Closure

Project Estimate: TBD

Type: Landfill Closure

Location: Easton, NY

Owner: Ken Wheeler, Project Engineer, Washington County Department of Public Works, Building A, 383 Upper Broadway, Fort Edward, NY 12828, (518) 746-2440

Specifications: Project calls for the closure of a 13 acre landfill in Easton.

Notes: Clough Harbour & Associates are the engineers. Project is in the planning stages.

■ Landfill Closure

Project Estimate: TBD

Type: Landfill Closure

Location: Fort Ann, NY

Owner: Ken Wheeler, Project Engineer, Washington County Department of Public Works, Building A, 383 Upper Broadway, Fort Edward, NY 12828, (518) 746-2440

Specifications: Project calls for the closure of a 6

acre landfill in Fort Ann.

Notes: Clough Harbour & Associates are the engineers. Project is in the planning stages.

■ Landfill Closure: Queensbury

Project Estimate: TBD

Type: Landfill Closure Services

Location: Queensbury, NY

Owner: Town of Queensbury, Town Office Building, Bay Road, Lake George, NY 12845, (518) 745-4400

Specifications: Project calls for the closure of a

portion of the Queensbury Landfill.

Notes: Awaiting DEC approval. Possible bid date by September.

■ Recycling Plant For Cardboard Project Estimate: \$220,000,000

Type: Recycling Plant

Location: Westfield, NY

Owner: Domtar Corporation, 66 Schomcliffe Road, Toronto, Ontario, CN M8Z5K, (416) 231-

22

Specifications: Project calls for a new recycling plant for cardboard in Westfield.

Notes: Project awaiting approval.

■ Well Equipment Enclosures

Project Estimate: TBD
Type: Well Services

Location: Montclair, NJ

Owner: Linda Wanat, Twp Of Montclair, 205 Claremont Ave, Montclair, NJ 07042, (201) 744-

1400

Specifications: Construct three well enclosures

for water purification equipment.

Notes: Project may be bid November, 1993. Engineer selected, M Disko Assoc, PO Box 1627,

Union, NJ 07083 908-687-7400

Additions To Waste Water Treatment Plant

Find New Business Opportunities With

THE GREEN BOOK REPORT

- Northeast Edition (including ME, VT, NH, MA, CT, RI, NY, NJ)
- Southeast Edition (including Florida, Georgia, S. Carolina)

The first and only publication to offer complete, up-to-date listings of Local, State, Federal and Private environmental projects ... Every Week.

10 Good Reasons to Subscribe

- 1. Comprehensive Offers Local, State, Federal & Private Listings.
- 2. Complete Listings include key facts dates, contacts, figures, project scope and more.
- 3. Regional Covers projects throughout the respective regions because most of your business is local or regional.
- 4. Easy-To-Use Clean design, easy-to-read, with clear organization based on project stage
- and type.
- 5. Up-To-Date Updated weekly. You hear about most projects within days of first announcement.
- 6. Authoritative From the publisher of *The Green Book* an established resource in the industry.
- 7. Lists Private Jobs— The only environmental publication that does this.
- 8. Saves Time Everything you need in one place. No more combing through dozens or hundreds of pages in other publications.
- 9. Makes Money Just one job could pay for your subscription many times over. (And a lot more, besides!)
- 10. Valuable Marketing Tool Gives you an edge in the increasingly competitive environmental marketplace.

 Mid-Atlantic Edition (including VA, WV, DC, DE, MD, NJ, NY, PA)

- Southern California Edition

- Mid-West Edition (including OH, IN, MI, WI, MN, IL)

The growing environmental industry is already estimated at \$150 Billion a year. It's expected to grow at an annual rate of 12% for the next three years to as high as \$225 billion — nearly 5% of our national GNP! By comparison, construction is right now at \$500 billion a year; health care at \$550 billion a year.

New Businesses Entering Field

At the same time, an increasingly large number of new businesses are entering the field. Thousands nationwide will open their doors over the next few years.

Referrals Down, Competition Up

New regulatory activity and legislation have caused a drop in referrals and thrown open projects to companies who can compete.

Your Competitive Advantage

The Green Book Report is your competitive edge in an increasingly competitive marketplace. Without it, you play catch up. With it, you stay ahead of the game. It's that simple.

Subscribe Today and See

Take a moment now to subscribe. It's easy — whether you choose to return the order form, call our toll-free number, or fax your order. You can pay now or we'll be glad to bill you later. Whatever you decide, act today and put *The Green Book Report* to work for your business immediately.

Notes: \$10,000 bid bond. \$50 fee for plans (plus 6% sales tax).

Specifications: This contract will be for the removal and encapsulation of asbestos and for

Bid Due: Wednesday, March 10, 1993 1:00 pm

re-insulation.

Restrictions, if any, and necessary information are provided.

Use of the Project
No. helps pinpoint the correct job.

Use this heading

to target specific

jobs for your

company.

Specific project details outline what's expected from yendors.

The Green Book Report helps savvy businesses stay on top of new job opportunities throughout the region.

For the benefit of firms accepting work outside of the region, all known requests for laboratory analysis and equipment purchases will be listed regardless of location.

Jobs are tracked through the Planning, For Bid, Bid Opening and Award stages.

Planning: This section lists proposed projects that are not currently up for bid. Projects may be on hold awaiting regulatory approval or funding.

For Bid: This section provides enough information to obtain specifications and place bids, if eligible, on a variety of projects. Prior to bid date, this section also lists prospective bidders obtaining documents from the awarding authority.

Bid Openings: This section lists projects whose bids have been opened but the results of which have not been released.

Bid Results: Names of bidders are listed when released by the awarding authority, along with the amount of each bid.

Awards: When projects are awarded, the successful bidder and the amount of the bid are listed.

Do you have the environmental competitive edge?

The Green Book Environmental Resource Directory

The comprehensive directory of environmental information developed specifically for EPA regions. The Green Book provides critical, hard-to-locate data.

The Green Book Report

The Green Book Report is the only weekly publication of environmental contract opportunities. It saves you time and increases your business.

The Green Book List Service

The Green Book environmental data bank is the most comprehensive data bank of names of environmental executives and companies. This bank is available for list rental, research and sales. For details, contact Steve Rock at (800) 527-2204, Ext. 230.

The Green Book Employment Bank
The Green Book Employment Bank — a
service for subscribers of the Green Book
Report. Positions available and positions
wanted.

Green Book Reprints

Reprints of important government reports. We cull through the information, saving you the time and expense.

Green Book Speakers Bureau

A variety of individuals with knowledge in many environmental areas are available to address eager students, industry groups and organizations. Persons interested in serving as speakers should call (800) 527-2204.
