Technical and Bibliographic Notes / Notes techniques et bibliographiques

The Institute has attempted to obtain the best original copy available for filming. Features of this copy which may be bibliographically unique, which may alter any of the images in the reproduction, or which may significantly change the usual method of filming are checked below.

- Coloured covers / Couverture de couleur
- Covers damaged / Couverture endommagée
- Covers restored and/or laminated / Couverture restaurée et/ou pelliculée
- Cover title missing / Le titre de couverture manque
- Coloured maps / Cartes géographiques en couleur
- Coloured ink (i.e. other than blue or black) / Encre de couleur (i.e. autre que bleue ou noire)
- Coloured plates and/or illustrations / Planches et/ou illustrations en couleur
- Bound with other material / Relié avec d'autres documents
- Only edition available / Seule édition disponible
- Tight binding may cause shadows or distortion along interior margin / La reliure serrée peut causer de l'ombre ou de la distorsion le long de la marge intérieure.
- Blank leaves added during restorations may appear within the text. Whenever possible, these have been omitted from filming / Il se peut que certaines pages blanches ajoutées lors d'une restauration apparaissent dans le texte, mais, lorsque cela était possible, ces pages n'ont pas été filmées.
- Additional comments / Commentaires supplémentaires:

Pagination is as follows: p. [41]-160, [21]-40.
 La pagination est comme suit: p. [41]-160, [21]-40.
 There are some creases in the middle of the pages.
 Il y a des plis dans le milieu des pages.

L'Institut a microfilmé le meilleur exemplaire qu'il lui a été possible de se procurer. Les détails de cet exemplaire qui sont peut-être uniques du point de vue bibliographique, qui peuvent modifier une image reproduite, ou qui peuvent exiger une modification dans la méthode normale de filmage sont indiqués ci-dessous.

- Coloured pages / Pages de couleur
- Pages damaged / Pages endommagées
- Pages restored and/or laminated / Pages restaurées et/ou pelliculées
- Pages discoloured, stained or foxed / Pages décolorées, tachetées ou piquées
- Pages detached / Pages détachées
- Showthrough / Transparence
- Quality of print varies / Qualité inégale de l'impression
- Includes supplementary material / Comprend du matériel supplémentaire
- Pages wholly or partially obscured by errata slips, tissues, etc., have been refilmed to ensure the best possible image / Les pages totalement ou partiellement obscurcies par un feuillet d'errata, une pelure, etc., ont été filmées à nouveau de façon à obtenir la meilleure image possible.
- Opposing pages with varying colouration or discolorations are filmed twice to ensure the best possible image / Les pages s'opposant ayant des colorations variables ou des décolorations sont filmées deux fois afin d'obtenir la meilleure image possible.

This item is filmed at the reduction ratio checked below /
 Ce document est filmé au taux de réduction indiqué ci-dessous.

| | | | | | | | | | | | | |
|--|-----|--|-----|--|-------------------------------------|--|-----|--|-----|--|-----|--|

| | 12x | | 16x | | 20x | | 24x | | 28x | | 32x | |

The copy filmed here has been reproduced thanks to the generosity of:

Toronto Reference Library

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol \rightarrow (meaning "CONTINUED"), or the symbol ∇ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

Toronto Reference Library

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole \rightarrow signifie "A SUIVRE", le symbole ∇ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

SKETCH
OF
THE PRESENT STATE
OF
CANADA,

DRAWN UP EXPRESSLY FOR THIS WORK

BY

CHARLES FOTHERGILL.

UPPER CANADA GAZETTE OFFICE,
YORK.
1822.

111639

A SKETCH, &c.

The geographical position of this vast country may be thus generally stated.—It is bounded on the East by the Gulf of St. Lawrence and Labrador*;—on the North, by the Territories of Hudson's Bay; on the West, by the Pacific Ocean; on the South, by unexplored Indian countries; and east of the United States of America, viz *Missouri, Illinois, Indiana, Michigan, Ohio, Pennsylvania, New York, Vermont, New Hampshire, the District of Maine*, and by the British Province of New Brunswick.

These Boundaries describe a large and magnificent portion of the globe we inhabit; large enough for the foundation of an Empire which may become hereafter the mistress of the destinies of the new world, embracing with her mighty arm the whole width of the great continent of America.—Secured in her rear by the frozen regions of the north; and with her front to the south, it is impossible but, with the adoption of wise and decisive measures, she must be able to hold a far more imperious sway, in regard to the countries of the South, than was ever held by the Tartars (in their best days,) over Asia; or, by the northern herds of Europe, over the Empire of Rome, at the period of the overthrow of the then mistress of the world.—The *foundation stone* of this Empire has been laid by the Queen of the Ocean, and it depends upon the prudence and wisdom of her councils; and the loyalty, ambition, temper, skill, industry, bravery, high qualities, and perseverance of Canadians, no matter of what origin, how far the airy vision which is kindled up in fancy, may be realised.—But this is not a time—nor a place, for the indulgence of reverie, however splendid or enticing, and we must be content with present realities.—To the contemplation of these realities, forming also either so promising an embryo, let us proceed.

We have only to cast our eyes transiently over a map of North America to be immediately assured of the singularly advantageous

* *Labrador* has been strangely annexed (in 1819) to the Government of *Newfoundland* though the sea will continue to roll through the Straights of *Bellisle* in despite of artificial arrangements, and unnatural connexions.

situation of the settled parts of Upper Canada—Seated like a gem in the bosom of a country that is neither scorched by the sultry summers of the south, nor blasted by the hardy, biting winters of the north; surrounded by the most magnificent Lakes, and possessing the most extensive internal navigation in the known world, it would be difficult, perhaps impossible, to find, in any other region of the globe, a tract of country of the same magnitude with so many natural advantages, as that part of Upper Canada which lies between the Lakes Ontario, Erie and Huron, and the Ottawas, or Grand River, nine tenths of the whole extent of which are calculated for almost every description of farming.—A part of this tract of country, commencing in the neighbourhood of Kingston and running westward nearly 500 miles to the Sandwich frontier, by a depth, northward, of from 40 to 100 miles, is, *alone*, capable of supplying all Europe with grain of every description; besides being rich in cattle; and producing silver, lead, copper, iron, lime, marble, gypsum, marble, free stone, coal, salt, wool, hemp and flax (of the best quality,) tobacco, and timber of every description; besides furs, game, fish and many other valuable productions.

Much has been said, at a distance, against the climate of this fine country. Those however who have removed to it from Great Britain are agreeably disappointed in finding it more pleasant (because not so moist and unsettled) than that which they have left. It might be said, with no great impropriety, that the present inhabitants of Canada have but two seasons—Summer and Winter. For Winter has no sooner disappeared, which generally ceases by the middle of April, than the whole animal and vegetable creation starts into renewed life with a rapidity and vigour that leaves the season of spring with such doubtful limits as to be scarcely worth naming, again, in the fall of the year the months of September & October are generally so fine and summerlike, and these being succeeded by what is aptly termed the *Indian Summer* in November, (that month which is so gloomy in England, and said to be so fatal to Englishmen) that we should have great difficulty, were it not for an artificial calendar, in saying when it was Autumn.

To give a more just, and certain idea of the severity of an Upper Canadian Winter, it may be well to mention that the chain of shallow Lakes which run in an easterly, and southeasterly direction from Lake Simcoe, toward the Midland District, are sel-

* We say *present*, because we have no doubt of a further amelioration of climate.

† It must be understood that we are always speaking of the settled parts of Upper Canada, unless especially mentioned to the contrary.

dom or never frozen so hard as to bear a man, with any heavy burden until about *Christmas*; & they are again open before the middle of *April*. Through the want of a proper explanation by travelers, and others, an erroneous idea is formed in England that our great Lakes are frozen over in winter; whereas they are always open, frequently exhibiting a beautiful and striking phenomenon during the inclement season, by reason of the water being warmer than the atmospherical air; in consequence of which, an evaporation, resembling steam, and in every variety of shape, in clouds, columns, and pyramids, may be frequently observed ascending with uncommon grandeur and magnificence from the vast surfaces of *Ontario, Erie, Huron, and Superior*, as from so many immense boiling caldrons. We recollect an eminent Landscape painter and designer in England who, when called upon to design a landscape, was accustomed to seat himself in an armed chair, in the centre of a large room, and, by means of tobacco and a pipe, send forth column after column of tobacco smoke, in rapid succession, in order to assist his imagination in the combination of forms by noticing the new and singular and grotesque shapes into which the smoke would embody itself — All artists who require aids of this description would do well to secure some eminence overlooking one of the great Lakes just enumerated, whereon to build an observatory; for, nothing can be more grand than the spectacle to which we have alluded.

It is the small, and nearly stagnant, bays, and for a few yards only from the shores, where the water is shallow, that any part of the Great Lakes is frozen in winter. The earth too, is seldom frozen at a greater depth than from 12 to 18 inches, and the snow rarely lies in greater depth than from 18 inches to two feet, unless where it is drifted. It is very seldom the roads are in any permanent condition for the use of the *Sleigh* or *Carriole* before the second week in *January*, and they are again broken up towards the end of *March*, a fact which sufficiently indicates the duration of snow, and sharp frosts. It is, however, but just to remark that the winters of Lower Canada, (being in a higher latitude) are both more severe and of longer duration. There is a difference of at least one month in the length of the inclement season at Quebec and on the shores of Lake Ontario, and farther westward, to the Sandwich frontier, this favourable difference is still greater. In Upper Canada a labouring man may, if he chooses, at all times work out of doors; but, in the Lower Province there are days of particular severity, in the winter season, in which it would be impossible for him to pursue out doors-work.

There are natural phenomena in the climate of CANADA which remain unaccounted for, and are sufficiently puzzling even to the most philosophical genius. Of these, the *Indian Summer* which almost uniformly commences and terminates in the month of No-

CANADA which
ing even to the
Summer which
e month of No-

vember; and, the *tertian intervals* of fine winter, throughout the winter, after two or three nights of intense frost, deserve to be particularly mentioned.

The *Indian Summer*, as it is termed, consists of many days, (the Indians say there *must be fifteen serene days* to constitute one of these summers) of delightfully mild serene weather, with a misty, hazy atmosphere, though the haze is dry and soft, appearing to rest chiefly on the horizon — In the evening of these days the sun generally goes down with a crimson flush on the western heavens. The general temperature of the atmosphere, during this season, is singularly grateful to animal sensation; and, those of the feathered tribes who are directed by an infallible guide to seek other regions more to the southward, on the approach of hoary-headed winter, avail themselves of this charming season for the prosecution of their interesting journey, and it is at this time the rivers and lakes of Canada are covered by innumerable flocks of wild fowl of every species known to this quarter of the world, gathering with their families for winter quarters.

By what is termed *tertian intervals* of fine weather, through the winter season, is meant a very extraordinary and certain phenomenon that may be relied upon with the same surety as the diurnal motions of the planets. The greatest intensity of frost is *always remittant* at the end of the *third day*: that is, the inhabitants of Upper Canada never suffer the extreme severity of their climate for more than two or three days at any one time; being perfectly assured, on feeling any extreme cold that it will mitigate within three days, and that several days of mild weather will succeed — It may require several years attentive observation to ascertain the number and duration of the intervals that usually occur in a Canadian winter between the 37th and 49th degrees of North Latitude; but it must be a subject of very interesting and instructive inquiry to any gentleman of leisure in the country.

So many persons have been deterred from emigration to CANADA through a false notion of its climate being frightfully severe, that it seems to be a duty incumbent on those who speak or write for the instruction of others at a distance, to endeavour to remove the erroneous impression. Those who arrive from Europe, and settle in Upper Canada, uniformly express their satisfaction of the change, in this particular, at least. There is generally a clearness, dryness, and brilliancy in the atmos; here, so captivating, after the earthy moisture which envelopes the air of northern Europe, that it is impossible for the newly inducted emigrant not to rejoice in the change — whilst the starry hosts of heaven appear with a splendor far more dazzling than any thing he has before seen — and the mode of travelling in winter in carriages, or sleighs, the easiest and most delightful in the world, gives him ready access to distant markets, whether of business or pleasure.

It may be readily supposed that in such a vast extent of country every description of soil, and every variety of surface, as to mountains, hills, valleys and plains, must occur. Speaking of the inhabited parts of Canada, the Lower Province is the most mountainous, and the Upper the most level, and champaign; indeed, from the division line on Lake St. Francis to Sandwich, a distance of nearly six hundred miles, nothing like mountains occurs; although nearly the whole extent of country passed through, between those places, is gently undulated into pleasing hills, fine slopes, and fertile valleys. There is, however, a ridge of rocky and generally barren country, running north westerly, and south easterly, through the Newcastle and Midland Districts, towards the Ottawa, or Grand River, at the distance of from 50 to 100 miles from the northern shore of Lake Ontario, and the course of the River St. Lawrence; a ridge which divides and directs the course of innumerable streams, those on one side running to the northward, whilst those on the other run to the southward, and empty themselves into Lake Ontario or the River St. Lawrence.— This ridge has an elevation of not less than 1000 feet above the level of Ontario, and is rich in *Silver, Lead, Copper and Iron.*

Farther to the north, beyond the French River which falls into Lake Huron, are immense mountains, some of the most vast and unknown degrees of elevation. Many of the mountains which describe the great valley of the St. Lawrence, are from 3000 to 4000 feet, above the level of the river; and that part of the chain which approaches the City of Quebec, on the northern side of the river, is worthy the attention of geologists and mineralogists, in a particular manner, from the hope there is every reason to entertain that these mountains yield several rare, and valuable, kinds of earth for pigments, which may hereafter become articles of commerce.—When in Quebec, in the year 1816, the writer of this sketch was shown several fine specimens, in the Seminary of that City, which had been procured in these mountains at no great distance from Quebec,—in particular; a rich brown, resembling the *Vandyke brown* of artists; a yellow, equal to that of *Naples*; and an extraordinary fine blue, of a tint between that of *Indigo* and the costly *Ultra marine*. The subject is mentioned in this place with a view of exciting farther inquiry, and experiment; because at present the artists and colourmen of London are principally supplied with their most valuable pigments from Italy.—But, as the object of this little sketch is to give the stranger a general idea of the nature of that part of the country in which we are writing, we must go back to the soil of Upper Canada, and speak of its quality; which, in its wild or uncultivated state is known by the species, and fine growth, of the timber with which it is covered.

The best kinds are those which produce the *hardest* timber, such as *Oak, Maple, Beech, and Elm, Black Walnut, &c.* though *Bass-*

most extent of country of surface, as to the Spinking of the is the most mountainous; indeed, and with a distance mountain occurs; raised through, beautiful hills, fine, a ridge of rocky, westerly, and several Districts, towards of from 50 to 100, and the course of and directs the side running to the southward, and St. Lawrence — 100 feet above the Copper and Iron.

er which falls into the of a vast and mountains which are from 3000 to 4000 feet high, the part of the chain on the northern side of the mountains, in the opinion of mineralogists, is very reason to enter into valuable kinds of minerals, the writer of this work, in the Seminary of that country, at no great distance, resembling the mountains of Naples; and that of Indigo and other minerals, are found in this place in great quantity; because the soil is principally sulphate. — But, as the general idea of the soil, we are writing, we speak of its quality; and by the species, and the covered richest timber, such as the *White Pine*, &c. though *Bass-*

Wood, when of luxuriant growth, is also an indication of good land; and so is *Pine*, when it is large, clean, tall, and thrifty. — Many of the *Cedar-swamps*, where the cedars are not stunted, and are intermingled with *Ash* of large growth, contain soil of the richest quality, and are calculated for the finest *Hemp grounds* in the world.

It may give a just idea of the general richness of the soil to state, that we have frequently heard of instances where 50 bushels of Wheat per acre have been produced on a farm, even where the stumps (which would probably occupy one eighth of the surface of a field) have not been eradicated; and, in the District of Newcastle, many examples may be found wherein Wheat has been raised on the same ground, for 16 or 18 years successively, without the application of manure! The general average of the returns of Wheat crops, however, throughout Upper Canada, is not probably more than 25 bushells per acre, owing to the space occupied by stumps, and the indifferent skill of the ordinary farmers. The winter wheats are found most productive, and weigh the heaviest.

Of *Indian Corn*, or *Maize*, 60 bushells per acre, is not an uncommon return; and of *Pumpkins*, we have instances of more than a ton weight being produced from a single seed.

But there cannot be a more certain indication of the depth and richness of the soil than the fine growth of the timber which it produces; and, we have not infrequently measured particular trees of that species of *white oak* which grows in low moist places, and which is usually called *swamp oak*, that gave a circumference of 16, 17, and 18 feet, and an altitude of 36 and 40 feet to the first bough. And we have more than once, on the rich lands to the northward of *Fire Lake*, found *White Pine* trees that gave a diameter of *five feet* and an altitude of *two hundred*! These are facts that determine at once the depth, richness, and vegetative power of the soil, since these giants of the forest are not nourished by the heavens which they pierce, but by the earth from whence they proceed.

Vegetation is so rapid in this country that *Barley* sown the last week in *July*, has been reaped in the last week of *September*, for several years successively, and on land that was deemed poor and exhausted, and a more abundant crop has been seldom witnessed.

From every observation and experiment that has been made, no doubt can be entertained of the great fertility of this happy soil, not only every vegetable production which thrives in similar latitudes in Europe prosper here; but others, which require either greater heat, or greater care, are found to succeed in CANADA, without any particular attention. The finest *Melons* and *Cucumbers* are brought to perfection in the open fields, and *Tobacco* is cultivated with the greatest success. Even the *Wine* Grapes be-

come ripe by the first or second week in September, so that there is every reason to believe, if vineyards were cultivated, the inhabitants of this country might add a variety of choice wines to their list of articles of home consumption, and foreign trade.

It is remarkable, throughout this country, that the soil and growth of timber upon the immediate banks of the rivers and lakes, is inferior to that of the country farther back; and, it appears that all the larger rivers and lakes have a second bank at some distance behind that which at present bounds the waters. This is even the case with the St. Lawrence and the Great Lakes. On another occasion, where our limits are not so circumscribed as on the present, we may venture on an explanation of these phenomena.

In all newly discovered countries, that are thickly wooded, the navigable waters are the great thoroughfares along which the inhabitants must conduct their business. The first settlements are therefore formed along the banks of the principal rivers and lakes; extending backwards, only by slow degrees, as the lands in front are occupied. In Canada a remarkable exemplification of this kind of progress has been seen. A long straggling settlement from a hundred and fifty miles below Quebec, to Sandwich, being a distance of more than a thousand miles, was formed, before the people ever thought of penetrating into the interior for any other purpose than that of hunting, or bartering with the Indians. Even at this day the most remote settled Townships, from the frontier waters, with the exception of the road from York to Penetanguishene, is not more than from 40 to 60 miles. It is not therefore in this country as it is in the back parts of the United States, where an emigrant, purchasing land, has frequently the painful necessity of commencing his establishment at a vast distance from any neighbours. In Canada there is abundance of the most fertile land in every variety of situation, in the midst of, or closely adjoining to, active settlements, that may be had from Government on the payment of the undermentioned fees.

The Provincial Government have it not in their power to grant more than 1200 Acres to any single individual without a special order from the Imperial Government of Great Britain. The above fees are payable in three equal instalments; the *first*, on locating the land; the *second* on the completion of the settlement duty; (for the performance of which a period of two years is allowed,) and the *third*, when the Deed is executed, until which time a Location Ticket, given by the Surveyor General, is held by the occupant.*

There is a line of very fine Townships, beautifully watered, running through the Newcastle and Midland Districts, now under survey, that are to be granted on the *old fees*, as ordered in Council on the 5th of January 1819.—These townships are named

Some of these Townships are on the same level with, and others of them are even to the southward of, lands granted long

*It must be continually borne in mind that we are to be supposed as *always* speaking of the Upper Province.

ago ; so that, the advantages secured by those who may be inclined to settle in these new Townships, (on account of the low fees and the excellent water communication which they possess,) are important. Those of the above Townships which are situated upon the larger Lakes, and upon the river Otonabee, which falls into the Rice Lake are the most attractive to settlers whose pursuits are those of Agriculture.

Every facility is given to the Settler, who can take the numbers of vacant lots, in any particular Township, and go and judge for himself, as to the situation and quality of the land, before he makes his location ; so that, if he makes an improper choice, he has no one to blame but himself. To save trouble and expence to the poor emigrants who arrive in this country for the purpose of settlement, County Land Boards are established in every District where there are any vacant lands belonging to the Crown, for location ; and these Land Boards are empowered to grant Tickets for 50, 100, and 200 acres ; but not for a larger quantity.—If more than 200 Acres is required the applicant must petition the Land Council in York. The applicant must satisfy the Board that he is not an *Alien*, and he is required to take the Oath of Allegiance.

The New Townships are formed out of recent purchases by Government from the *Indians*, who receive their payments annually, in clothing, ammunition, and such articles as they require. It must be interesting to many readers to see a statement of some of these purchases, the following are the most recent :—

| | | |
|-----------------|---|------------------------------|
| 1818, October, | The LAKE HURON purchase, of 1,592,000 Acres | <i>per Annum.</i> £1,200. |
| | The MISSISSAUGA purchase, of 648,000 Acres, | 522 10 |
| November, | The RICE LAKE purchase, of 1,861,200 Acres, | 740 0 |
| 1819, April, | The LONG WOOD purchase, of 552,190 Acres, | 600 0 |
| 1820, February, | The MOHAWK purchase, (Midland District) of 27,000 Acres, | 450 0 |

Being 4,680,390 Acres at the annual charge of £3,512 10s, which is defrayed by an appropriation of part of the amount received for fees on the Grants of Land to Emigrants. This system prevents any complaints, or even a murmur of any kind, from the *Aborigines* of the country, who live on the best terms with their white neighbours.

Whilst engaged in this part of the subject it may not be amiss to give a word or two of advice to Emigrants of all classes, from one who has seen a good deal of the country.

of all classes, from

It must always be taken for granted that whoever leaves Eng-
land, no matter where he goes, he must experience some change
for the worse; for if he is no otherwise affected than in his feel-
ings he must suffer a temporary laceration that may prejudice ev-
ery first view he may take of the new country to which he goes,
and it is not pretended that even CANADA is so heavenly a land as
to do away at once with all such views and feelings, although the
writer of this account has but little hesitation in stating that it
speedily takes fast hold of the affections of the new owner; and,
that, if a fair comparison is made between the advantages and dis-
advantages possessed by the various Colonies of Great Britain in
different parts of the world.—these things coolly and carefully
weighed, the decision *must be* in favour of CANADA; which is, un-
doubtedly, one of the most fertile and magnificent regions of the
Globe; peopled by the subjects of Great Britain; in the full pos-
session of British laws, and immunities; and, with a Constitution,
nearly on an exact model of that of England; but, without the vexat-
ious operation of a *tythe system*, and with scarcely any taxes, be-
sides many other privileges it would be tedious to name on this oc-
casion.—Were it not for the difference of scenery and climate, a
man emigrating from England, to this country, would scarcely
feel sensible of an immediate change, since he finds the same
laws, manners, customs, language, and often the same faces he
had known at his former home.

With all these superior advantages and enjoyments, which are
such as can be had in no other colony, some individuals may be
found to undervalue them and be discontented, but these instances
serve as lessons to others.—Let one of them be here named.—A
man who arrived in this Province, from the north of England,
with a few pounds in his pocket, settled on a farm between York
and Lake Simcoe; the industry and economy of five or six years,
in this new situation, made him, comparatively, independent.—
He had a sufficient quantity of land cleared, and a saw mill, to
bring him a handsome income; and he lived at his ease, and with
plenty.—But it is the nature of man to be restless and dissatisfied;
so it was in this instance.—Although he had never enjoyed so
much affluence at any former period of his life, this man grew un-
easy; he thought of England, his former abodes, his home, his
ancient friends, his recollections became insupportable; he sold
his farm, his mill, his stock, and once more set his face towards
England:—the voyage was passed, a few hours brought him into
the midst of the scene of his youth; he again took a farm, stock-
ed it, again tried the fluctuations of markets and fairs, and was a-
gain bankrupt, *totally bankrupt*, for now there was *nothing left*, and
this foolish man ended his days in a work house! Frightful ex-
change for the ease and independence of a CANADIAN YEOMAN!

Those who are labouring under the bitter feelings of expatri-

tion should consider that the same sun, and the same moon and stars which shine on the scenes they have left behind, gladden our vision here; and that the GREAT FATHER OF ALL, who is the same yesterday, to-day, and for ever, is alike present every where. Let the beautiful reply of the immortal HOWARD, given to an ex-postulating friend on the eve of his departure for the south of Russia, where he died, be always in our recollection, "*The road to Heaven is quite as short from Cherson, as it is from London!*"! And let them consider themselves as the workmen employed by Omnipotence to lay the foundation of what is to become hereafter a mighty Empire, in which their children's children are to have an inheritance and a name, and that what are now the beautiful fields and gardens of England, once looked as a wilderness to the eyes of our forefathers. Of what value is that religion, or philosophy, which for ever chains its possessor down to present, and to painful, realities? Let us be wise, and know how to appreciate those advantages and blessings we actually enjoy in this our adopted country, and sorrow, regret, & despondency will be for ever banished from our dwellings!

But the instances of men taking the gloomy side of the question, (notwithstanding the exertions of some evil disposed persons to induce such a view,) in this fine country are rare; particularly amongst the lower class of society, to whom the advantages are great beyond what are afforded in any other country. His land, (a Freehold of Fifty Acres) costs him nothing; a few months labour for others, should he have no money at all, (at the high rate of wages, hitherto, in this country) enables him to stock his farm, on which he may keep a yoke of Oxen, or a pair of Horses, constantly employ'd, besides leaving timber sufficient for fire wood for many years. He should, however, be careful not to destroy his timber in a heedless manner, by burning it in large log heaps, after he has a few acres cleared. Some of the finest timber in the world is often considered so great an eye sore that the sooner it can be utterly destroyed so much is it thought the better; but, if, in making the clearance, the *top and under brush only*, were burnt in the field, and the heavy timber was cut into cord-wood, or split into rails, instead of being consumed in one universal conflagration, it would be much better for the small freeholder, and afterwards, when the whole projected clearance was made, and it became necessary to attack the reserved trees only to thin them out, as it is done in the wood lands of England, taking those trees only which have arrived at maturity, and leaving the young thrifty wood to improve, several generations must appear & disappear before any serious inconvenience could arise from the want of fuel. Of course there is not the same necessity for such economy on the larger grants. After all there is the comfortable assurance of abundance of coal in various parts of the country; and, from the many na-

and the same moon
 ave left behind, glad-
 THER of ALL, who is
 present every where.

 from the many na-

vigable waters intersecting it in almost every direction, that use-
 ful article can never be very expensive

For a great number of years to come there will be an ample
 range for a large stock of cattle and pigs in the woods, and on
 the plains; so that the small occupier will be freed from the ne-
 cessity of having any part of his fifty acres in pasture, unless it
 should be his choice to have it otherwise. Swedish Turnips are
 found to answer exceedingly well, and to stand the utmost severity
 of the climate; with a couple of acres under a crop of this inva-
 luable root, & the straw of his *Maize, Wheat, Barley, or Oats* he may
 maintain a large stock of horned cattle through the winter; and
 in summer the only expense attending them will be an occasional
 visit, to see that all are going on well. Pigs grow very fat whilst
 running at large in the woods, especially towards the fall of the
 year. All the taxes, or assessments, put together, which a man
 of this description has to pay, would not amount to more than a
 few shillings; and, as to raiment, it is customary to grow wool
 and flax sufficient for the clothing of his family. Sugar, he ma-
 nufactures himself, so that he has only a little tea to purchase,
 should he require, through custom the use of that luxury. Many
 of the people in country situations use the young shoots of the
Hemlock Tree; and others, herbs of the forests of agreeable flavour,
 in lieu of tea, without any bad consequences, or disrelish.

Wages, compared with what they are in Great Britain, are still
 very high in this country; and, hitherto, in the Upper Province,
 it has not been difficult to procure work. In many parts indeed,
 there is yet a scarcity of labourers. It is true that money is not
 now plentiful; but there is scarcely any thing that the older resi-
 dents have to spare in payment of wages, that is not useful, may
 absolutely necessary, to one going out to a new farm; and *two*
years being allowed by Government for the performance of settle-
 ment duty, (which in favourable weather may very often be done
 in *one month*) the poor emigrant has plenty of time to earn a yoke
 of oxen, and a cow or two, a few pigs, seed corn, and potatoes,
 &c. &c. besides the necessary provisions in pork and lard, until
 his own crops are ready; and should he not prove an expert axe-
 man, even to hire men to do his settlement duty for him, which is
 often the case. Several instances have occurred where English
 rustics, by *thrashing alone*, (where every *ninth* or *tenth* bushel was
 allowed for the labour) have earned wherewithal for the cropping
 and stocking their new farm.

In consequence of these advantages there are many individuals,
 particularly in the new settlements in the district of Newcastle,
 who have abundance and to spare, upon the smallest Grants, of
 Fifty Acres, after being no more than three years in the Province.
 All the poor emigrant, who arrives at Quebec or Montreal has to
 do, is to push forward as speedily as possible for the Upper Pro-

vince, he must not suffer himself to be deterred by its apparent distance, and he must stop his ears against all the insinuations and seductions that will be used in his passage up the country, especially by Americans along the whole course of the St. Lawrence, who will try every art to reduce him into the United States. Let him ever bear in mind what he may have been frequently told,— and with much truth, that Upper Canada is the best “*poor man’s country in the world*,” and let him determine on making actual experiment for himself, and if he has only *industry, perseverance, and integrity*, we will not only answer for his success; but, that neither himself nor children will ever have occasion to repent the choice which he has made. Such a man may, in a short time realize every object of a reasonable ambition, and become one of the most free and independent men on earth.

In many places, particularly at *Port Hope*, and at *Cobourg*, in the District of Newcastle, preparations have been made for the reception of poor Emigrants, by the erection of suitable buildings, and every facility being in readiness for securing an early location in a desirable situation amongst the new Townships back of the Rice Lake, to which there is an excellent road from Port-Hope — This fine part of the country is principally settled by persons from Scotland and Ireland, and from the English Counties of Yorkshire and Cumberland.

The Court-House, where the Land Board for the District sits regularly once in every fortnight, is between the two villages of *Cobourg* and *Port Hope*; in both of which there is a handsome church of the established Religion, besides a School house; and Fairs are held twice a year at both places. There are two excellent Grist Mills, one at each village; and, at *Port-Hope*, there are besides, a *Saw Mill, Oil Mill, & Fulling-Mill*, three *Breweries* and *Distilleries*; 2 *Tanneries*, a *Hat Manufactory*; Mill-wrights, several excellent *Stores*, in which every description of useful merchandize may be had on moderate terms; two *Blacksmith’s Shops*, *Print* and *Pearl Asheries*, *Cabinet Makers*, *Carpenters*, *Masons*, *Coopers*, *Shoemakers*, *Tailors*, and several other useful mechanics. *Cobourg* and *Port-Hope* are only seven miles distant from each other, by a good road; & between the two, another village, named *Amhurst*, in which the Court-House is situated, has been laid out by Capt. BURNHAM, in which are already two Taverns, several mechanics, and some neat houses.

Port Hope is the most convenient place of *depal* for the Townships in the rear of Hope and Hamilton, & for the Upper Ferry on Rice Lake, and is the place where the greatest trade is carried on; *Amhurst*, is the most convenient for the *Middle-Ferry* on the Rice Lake; and, for those who may have to ascend the River *Ontario*; *Cobourg*, in which there is excellent accommodation, and several good *Stores*; the most convenient for the Lower Ferry

on the Rice Lake, and to those who may have business in the lower parts of the Township of Otonabee and Asphodel, with the new Townships in their rear, and down the River Trent.

It will be seen, by a reference to a Map of this country, that the villages just mentioned are most advantageously situated nearly in the centre of the north coast of Lake Ontario; and it is impossible they can fail to become, with the gradual improvement of the country, places of great public consequence hereafter. It should not be forgotten, likewise to mention, that these villages, with their respective neighbourhoods, and the Rice Lake, already possess an extensive circle of good and even *polished* society.

We have been the more particular in these remarks because we are quite satisfied that the District of Newcastle offers the finest field for enterprize, & merits more attention from Emigrants, than any other part of Canada.

Should this slight and hasty *sketch* fall into the hands of any of the poorer class of Emigrants, before they can have made any settlement, it may be well to give them some idea of the expence they must be at, before they can be said to be at all comfortable. At the present time it will cost him pretty nearly as follows:—

| | £ s. n. |
|---|---------|
| For Building a Log-House, with a shade for his Oxen, } and Pig-stie, } | 7 10 0 |
| <i>(for this sum his house may have two apartments, a stone chimney, and hearth, & two glazed sash windows)</i> | |
| Clearing, Fencing and Sowing 5 Acres of } Land, if he has to pay cash for it, } | 15 0 0 |
| * A plough should not be required for several years. | |
| Seed for the first crop, with the Price of two oxen, two hoes, two brush hooks, two forks, one spade } and one shovel } | 4 0 0 |
| Yoke of Oxen and Chain, | 15 0 0 |
| An Ox Sleigh, | 1 10 0 |
| A Cow £3, Sow with Pigs £1 5, | 4 5 0 |
| Two Ewes with Lambs \$2 each, | 1 0 0 |
| Some necessary articles of Household Furniture, | 10 0 0 |
| Putting up a Log Barn, | 5 0 0 |
| Two Kettles for making Sugar, | 3 0 0 |
| From Cur'y.—£66 5 0 | |

* Because the best management of cleared lands is to sow down with good grass seed—either with the second or third crop, and to keep it in grass until the stumps begin to rot, when the plough may be put in with full effect.

Any able bodied man may earn the above amount within the two years allowed him for the performance of settlement duty, and if he should choose to work himself, with his oxen, in clearing, sowing, fencing, and erecting the buildings, a considerable part of the above amount may be saved. But it is now supposed the man is a stranger to the sort of labour required, and that he has no money but what he earns in this country. The two first crops, with the increase of his stock, ought to go far towards paying the whole of the above amount.

A friend of the author's has published a plan, in London, by which he conceives that a number of those people now subsisting on parochial relief in England may be removed to, and employed in this country with great advantage, both to the public and themselves.—The money required in aid of the scheme, is not to be paid to the people, but is to be laid out within two years in provisions and supplies of implements, and stock, under the direction of certain managers. The cleared lands to constitute a mortgage to secure the repayment of what is then the colonists' debt — "During the laying out of the money and the clearing of the Lands, some slight restrictions on the employment and alienation of the property will be imposed on the owners of it; but after the repayment of the capital employed, each individual in the settlement will be free from all interference. The time of such repayment, within ten years, will depend on the exertions of the settlers, who may receive their deeds on redeeming their lands."

The projector assumes a family, of the description he alludes to, to consist of five persons, and that the sum of £200 managed with ordinary prudence will enable such a family to acquire a prosperous settlement in CANADA, in two years, without any exposure to privations, and that within *ten years*, the money might be repayed without inconvenience by the family to which it was loaned. The author gives a detailed account of the expenses, with the manner in which he conceives the important business should be conducted, and sums up the total expenditure for 100 such families thus:—

| | |
|---|---------|
| For the journey to the coast for 100 families, at £20 } each family, 1st February, 1822, } | £2000 |
| For the voyage to Montreal, March 1822, } | 3000 |
| For the expenses to be incurred between May and } June 1822, } | 5000 |
| <i>Item</i> , between June and October, 1822, } | 4500 |
| <i>Item</i> , between October, 1822, and January, 1823, } | 2100 |
| <i>Item</i> , between January and May, 1823 } | 1500 |
| <i>Item</i> , between May and July, 1823, } | 1000 |
| <i>Item</i> , in July, 1824, } | 900 |
| | <hr/> |
| | £20,000 |
| | <hr/> |

"It appears to me impossible, that upon equal capital any set of men of the class here contemplated, can be placed so advantageously both to themselves and to the country, in any other part of the world as in UPPER CANADA

The author illustrates his argument by an example, after the following manner:—

"In 1795, the parish of Barkham, in Berkshire, contained 260 inhabitants, of whom about 40 besides the sick, received relief to the amount of £75 a year. The average expence of supporting the families of labourers in Barkham was then about £25 each; making the rate of £75 to be divisible amongst a number of people equivalent to three ordinary families, which may be said to be the number in excess of the want in employment.—If the parish could be dis-burdened of these three families, and employment should not vary, those left behind would receive wages equal to their full support, until paupers again super-abound.

"The means for settling three families in Upper Canada is assumed to be a loan of £600, to be repaid in ten years, as before stated, and this sum will be raised easily by a mortgage of the rates under the sanction of an Act of Parliament.—Thus the rates will be lowered forthwith to the interest of that loan; viz; to £30 a year from £75; and they will decrease continually in proportion as the loan shall be repaid; and as the town plot and other land apporoned to the parish shall become marketable. This will be variable in point of time; and the amount of the proceeds will depend on the general prosperity of the whole settlement; it can hardly fail of making a very considerable return within seven years of the colonists quitting England. According to the expenditure of Barkham, the rates for a surplus population of one hundred families is £2500 a year. Upon this income it would be easy to borrow £20,000 under the authority of an Act of Parliament. The interest on which being taken at £1000 a year, the parish from which the colonists could proceed would make a present annual saving of £1500

"To a settlement of this description, the managers should devote their whole attention; and a leader of intelligence would be amply remunerated by the share of wild lands to be apporoned to him in respect of a colony of from 500 to 2000 families." The necessity of a personal residence amongst the people during the time of distributing the lands, needs little illustration, after the excellent example shewn by Capt. Williamson in the settlement of a part of Sir W. Pulteney's estate in the Genesee country, in the State of New York, a short notice of which deserves a place here.

Mr. Morris had bought the land at 5 pence per acre, and, in 1791 sold one million of acres to Sir Wm. Pulteney at 1 shilling

per acre, or for £50,000. With other purchases, Captain Williamson, the manager, had possession of 1,500,000 acres of land, bounded on the north by Lake Ontario. After building 10 mills, with a great number of houses, and making several hundred miles of road 800,000 acres were resold at the price of from one to three dollars per acre before the summer of 1795. The produce not only refunded the purchase money and the whole amount of the other expense incurred, but also yielded a net profit of £50,000 Sterling.

The Plan here alluded to is not altogether original on the part of our friend B — since that famous Patriot Mr. Gourlay, projected a scheme nearly similar in the year 1817; and it has always been a subject of regret, to the writer of this sketch, that one so well qualified to promote the agricultural interests, and encourage fresh accessions to our population, from other parts of the British Dominions, should have intermeddled with politics; since, on many questions of political economy, and especially on the subject of the Poor laws of England, that eccentric Being, was a perfect adept, whilst in *Politics* he became not merely bewildered, but actually insane. However, as to the introduction of British Paupers into the forests of Canada, no one anxious to witness the prosperity of this country can have any objection, at least on this side the water, if they come as well provided as our friend B. — proposes, viz. with £200 Sterling, for each family of 5 persons; but we think the expences are over rated, and have no doubt that such a family, (particularly where this species of emigration was carried on extensively) could be removed, and settled down comfortably, with all that was necessary to preserve it from becoming any kind of burthen whatever to others, for £100 Sterling — We are quite certain there are many persons, on whom the most perfect reliance could be placed who would be very glad to undertake the removal and settlement, in this country, of 200 such families for the sum of £20,000 Sterling.

Whilst on this subject it ought to be mentioned that there is now a man in the District of Newcastle, who came out a little more than two years ago without a single shilling left in his pocket, his health and his hands were all his dependence. A short time since, this same man disposed of a yoke of capital Oxen and a fine Cow which he had earned over and above what he required upon his little farm, on which he had besides two excellent Cows and a large stock of Pigs, left for store pigs and for breeding, after having packed fourteen barrels of Pork. He had also purchased a Reserve-Lot from a neighbour on which he had sown several acres of Fall-Wheat; and in the following year (*his third*,) he proposes building a good, framed, house, together with a large barn. The means for accomplishing all these results, so vast for one in his originally mean circumstances, have been earned in an

honest and fair way by farming *on shares*. as it is here termed, that is, he has a certain share, as may be previously agreed upon, of the produce of a farm (whose owner cannot conveniently work it himself,) for his labour and expence in cultivating it, a practice that is common in many parts of Canada.

Here then is an instance of a man who, without friends, without capital, without credit, realizes what is, comparatively, a comfortable independence in three years!—Many more instances of a similar kind might be adduced, were it necessary, to show with what rapidity and ease, an industrious, honest, man, though poor, may elevate himself above the reach of want in this highly-favoured country; and, if a single, unaided individual can so prosper, surely, half the sum mentioned by our friend B— already alluded to, expended with prudence and economy, would establish a family of five persons in Canada, so as to be no longer burthensome to the parish who sent them out; or, to this country which received them into her bosom—Enough, it is conceived, has now been said to shew the advantages held forth in Canada to the poorer classes of society, on an occasion where the limits for discussion are necessarily so much narrowed by the necessity of regarding other subjects.

The field here presented to men of an higher order, and to capitalists, is so extensive, and requires so much detail, as well as argument, and illustration, to demonstrate; that we cannot pretend to enter upon it with any fullness on this occasion; nor would it, indeed, be altogether a fit subject for discussion in a mere *sketch* like this; However, as it is not improbable this little work may fall into the hands of persons anxious for *some* information on this head; a few brief remarks shall be added, reserving a fuller statement for another, and a more enlarged, opportunity.

Of the liberal professions, *Clergymen* are the most required, and *Lawyers* the least needed. Such a provision has been made by the Imperial Government for the established Church, without any demand, or *tythe*, from the people; as must eventually, (should things happily remain constituted as they now are,) make the *Canadian Clergy* the most powerful, weakly, & influential body to be found in any country, ancient or modern; no less than *one-seventh of the whole soil* being set apart for its use & support. It is true the income, at present, derived from this vast appropriation, is scarcely worth the naming; but, it is every day increasing, and it is impossible to say to what extent it may hereafter arrive. There are a great many situations in various parts of the Province, where such Clergymen as would be active in their important duties are much wanted.

An Act of the Provincial Parliament prevents English or Scottish Attornies from practicing here until they have served a *Clerk*

ship of the same duration as is required from *Law-Students* in this country, viz. *Five Years actual service*, under articles, to a Practising Attorney of this Province. Regular Barristers, however, or any person who has been called to practice at the Bar of any of His Majesty's Superior Courts, not having merely local Jurisdiction in England, Scotland, or Ireland, or in any of His Majesty's Provinces in North America, on producing testimonials of good character and conduct, to the satisfaction of the Law Society of this Province, may be called by the said Law Society to the degree of a Barrister upon his entering himself of the said Society, and conforming to all the rules and regulations thereof.

There are several openings in country situations, in different parts of the Province, where skilful *Medical Men* are much wanted, and in which they could scarcely fail to realize handsome properties; but the labour in such situations, is severe. A *Medical Board* is established at York to examine all candidates, who have not graduated in the regular manner at some eminent British, or Foreign, University; and no pretender to knowledge in this important profession is allowed to practice here without having previously satisfied the *Board* of his ability, and obtaining a licence for that purpose.

Of all professional men, or those of the middle ranks of Society who are not possessed of much wealth, there are none to whom so many advantages are offered in this country, as to the *Half pay Officers* of the British Army and Navy. They become immediately independent. Entitled by the regulations of Government to receive from 500 to 1200 acres of Land, according to their rank, from an Ensign to a Colonel, if in the Army; and, from a Midshipman to a Captain, if in the Navy; on payment of a Fee scarcely worth the naming (£2 18 8.)—they are immediately placed on a footing with the Country Gentlemen, as to their estate, whilst their half pay drawn at stated intervals gives them an advantage possessed by very few in this country.—Their Bills almost always bear a premium of from 5 to 10 per cent, this, with the difference of Currency, and the certainty that *One Hundred Pounds*, here, will go farther in the purchase of all the little luxuries for the table, and for the conveniences of life, than *Two Hundred Pounds* will obtain in England; besides the almost total freedom from Taxes, Assessments, and many other expences that now are incurred in Great Britain by Gentlemen of this class, altogether give them extraordinary advantages; and, we have often thought, that in no other part of the Globe could they settle down so advantageously as in this Province. Besides, by their attainments, and rank in life, they are immediately eligible for many honorable stations, and employments, which add to their influence, and consequence, if not to their wealth; and such Gentle-

then will have the additional satisfaction of finding much of the kind of society to which they have been accustomed, in almost every part of the Province, for there are now but few of the settled Townships in which there are not some half-pay Officers, either of the Army or Navy.

We purposely neglect saying any thing of Merchants and Traders, because if any such persons embark *speculatively* in this country without being previously well acquainted with it, and the mode of transacting business, it will be undoubtedly to their severe cost and loss.—Mechanics, of almost every description, are certain to do well if honest, *sober* and industrious.

To the small capitalist of from £5000 to £20,000, and upwards, the field that is opened in Upper Canada is *alluring, splendid & dazzling!* But it is such a subject that it is difficult to know where to begin, and still more so, where to stop! neither do we feel very willing to open the stores of our budget, in this particular, to the whole world, further than touching generally on a few of those subjects to which such a capitalist should direct his attention, and by earnestly requesting him “*to come and see.*” when we promise him he shall know more. Capital alone is wanting to place Canada in the rank which her natural wealth & position entitle her to maintain in the scale of nations; & as the right arm of Britain; and, we would venture to insure a certain number of capitalists to the amount above named, a *quadruple return* for the sum expended, within the term of *ten or a dozen years!* It cannot be expected we should state the mode of procedure on this occasion.

There is a great deal in knowing *the signs of the times*, and in being able to take advantage of those signs.—He who has a spare capital, and wishes to increase it, should be “*a discerner of the time.*”—General Washington is said to have excelled in this particular, and to have secured many advantages from the adroitness with which he managed his own interests in the fluctuations of the *land market*, which at a certain period engrossed the attention of all classes in the United States of America.

The buying and selling, the parcelling out and settling, and locating land, may be called *the staple business* of all new countries, and that in which both individuals and the State are the most deeply concerned. Much therefore, may, almost every thing, depend upon the way in which it is managed.—It is an idle and absurd opinion that Land jobbing is injurious to a country. When carried on extensively it is the very best thing that can happen to a young district, or territory, it imparts life, spirit, and enterprise, and converts what would otherwise become a stagnant putrid marsh, into a living fountain of all that gives strength and power to Empire. The whole history of the United States, and especially the account of the settlement of the *Genesee Lands*, in the State of

New York, to which we have already alluded, affords striking illustrations of this argument.

The usual mode of setting apart the *Crown*, and *Clergy-Reserves* in Upper Canada, is certainly very much *against* those *Capitalists* who may wish to embark in undertakings of this kind, and even against others who may desire to settle down together, and form a little community of their own. But it is probable the Provincial Government might be induced to vary from the common practice of allotting *Reserves*, on being convinced that it would be productive of public and private advantage, to any material extent, in any particular vicinity.

Sometimes an entire Township is offered for sale, as is the case at present, in the District of Newcastle, in that of *Seymour*, through which the River Trent, one of the finest streams in the Province and abounding with Mill-seats, runs in its course from the Rice Lake to the Bay of Quinte, in Lake Ontario. This Township is admirably calculated for the formation of a beautiful, and rich settlement; it is in the immediate neighbourhood of the *Marmora Iron Works*, and surrounded on all sides by thriving settlements; this tract of land, a great part of which is of the first quality, may now be purchased at a price, and on terms, that would insure a noble fortune to a *Capitalist* of sufficient means to carry the proper plan of settlement, and resale, into full effect.

But there is scarcely any part of the Province where a man of judgment, and with the necessary funds, might not lay out his money with a certainty of enormous advantage. As we have before hinted it would not be quite proper to go into *detail* on an occasion like this; but we should be rejoiced to hail the arrival of men of capital in this Province, not merely for their own sake, but for the general good of the country, that would naturally grow in wealth and power, in the same ratio with the success of private individuals.

To those who might wish to embark in a commerce of raw material, or in the extensive manufacture of staple articles of home consumption, there is here a fine field for enterprise. Since there are none of those restrictions which gave so much umbrage in the *United States* before their separation from the British Crown, & which were so much dwelt upon by the famous Dr. PRICE, in his work on *Civil liberty*, as being a just cause of discontent and remonstrance. Of the precious and valuable metals Government reserves *Gold and Silver*, only. Grantees are put into the full, free, and uncontrolled possession of all the *Copper, Lead, Iron, Tin*, or other *metallis*, or *mineral*, substances to be found on their lands, together with *Coal* and all other substances whatever; and, the more this country is searched, by men properly qualified, the richer it will be found in valuable mineral productions.

The history of the Establishment of the *Marmora Iron Works*, now the property of the enterprising, & patriotic CHARLES HAYES, Esquire, is alone sufficient to evince the liberality of Government, and the hopes that any other capitalist may reasonably entertain of success in laying the foundation, at least, of future wealth so far as the patronage, and encouragement of Government is concerned or desired.

There are many Manufactories of a domestic nature in which large capitals are required, the want of which is at present seriously felt by all classes of persons in this Province. Of these *Salt*, (which may be obtained by going to a sufficient depth in almost every part of the country) stands the first in the list of necessity, since the Upper Canadians are not only supplied with great irregularity, but they pay at least *double* what they ought to pay for this indispensable article, and are under the control, in this respect, to a serious and alarming extent, of a people who are *always* rivals, and *sometimes* enemies. At one period, during the last war, *SALT* was sold in this country at from \$10 to \$15 per bushel, and even now it is frequently 5, 6, & \$7 per barrel, in situations, where it ought not to exceed \$2 per barrel. The culture of *Tabacco*, *Hemp*, *Flax*, and *Wool*, and *Pape* for the manufacture of Oil for exportation, also, the establishment of *Paper Mills* (which are very much wanted;) of *Nail*, and *Screw* Factories; *Glass-Houses*; *Potteries*; and a *Manufactory of Comse Paint*. All promise abundant returns for the outlay of capital; and, to be of the most beneficial consequences to the country.

Nature has designed this country to become rich, not merely by her agricultural, but also, in her commercial advantages; for, no country in the world is possessed of so many public highways, by water communication, as Upper Canada. The rivers of a country may be compared to the arteries and veins of the human body, as being alike the channels of communication of health, and vigour, and life, between the respective parts.

The River ST LAWRENCE, which we shall here consider as arising from the Great and Magnificent Basin of LAKE SUPERIOR, (more than 1500 miles in circumference,) has a course to the sea of nearly 3000 miles, varying from 1 to 90 miles in width, of which distance, including the Lakes ONTARIO, ERIE, and HURON; it is navigable for ships of the largest class, very nearly 2000 miles, and the remainder of the distance is navigable for barges, batteaux, & vessels drawing little water, of from 10 to 15 and even 60 Tons burthen. Into this great artery, as it were, of the finest part of the country fall many other rivers of such extent as in any other country, would be esteemed waters of great magnitude and of the highest importance.

Some of these Rivers are the outlets of regions of vast extent that are watered by a countless number of Lakes and minor streams. Of these the *Saguenay* which falls into the St. Lawrence

below Quebec; and the Ottawas, or Grand River, whose embouchure is divided into two branches by the Island of Montreal; and, the Trent or Rive Otonabee, which is the outlet of a long chain of Lakes, in the north-west towards Lake Huron, and falls into Lake Ontario near Kingston, of which the Bay of Quiate may be termed the mouth, are the most considerable.

But it would be impossible in a *sketch* like this to mention or describe a fiftieth part of the Lakes & rivers which open and fertilize the extensive region of Upper Canada. No one looking at any existing map of the Province could form any idea either of their number or magnitude. Such a detail must be reserved for another occasion, and another work.

The principal *New Settlements*, that have been formed, are, the *Perth*, on the waters of the *Rideau*, in the District of *BATHURST*; the *Rive Lake* settlement in the District of *Newcastle*; and, the *Talbot* settlement in the *London* District. But, during the administration of the present Lieutenant Governor, nearly 50 new Townships, averaging upwards of 60,000 acres each, have been surveyed within a space of five years, and there are very few of these without some inhabitants. The population of Canada is increasing with great rapidity. Including the Military, and also the *Aborigines* of the Country, both Provinces cannot contain much less than *One Million of Souls*.

But it is very difficult to get at the truth, in this respect, notwithstanding an Act of the Provincial Parliament of Upper Canada compels the inhabitants of each Township, through their Town Clerk, to make an annual return. The Census is usually taken in so careless and slovenly a manner, in the country, that it is seldom or never accurate, and the error is always in underrating. In the Lower Province, the Census is generally made by the resident Clergy.

It is probable the settled parts of Upper Canada contain about 200,000 souls.—The largest towns are *York* and *Kingston*, of which *Kingston* is the most populous, containing about 2000 inhabitants. Many other towns are growing into note, of which the following are the principal,

| | | |
|-------------|------------------|-------------------|
| Cornwall, | Port Hope, | Newark or Niagara |
| Prescott, | New Market, | St Davids, |
| Lockville, | Penetanguishene, | Queenston, |
| Perth, | Dundas | Chippeway, |
| Gannanoque, | Ancaster, | Waterloo, |
| Bath, | Baron, | Port Talbot, |
| Brville, | Grimsby, | Amherstburgh, |
| Hallowell, | St. Catherines, | Sandwich, |
| Cobourg, | | |

The Militia of Upper Canada has become very formidable, not merely for numbers, but for *quality* and *metal*; and there are not more loyal, nor better disposed men towards the British Government in any part of the Empire: no, not in the heart of England:—and the last war with the United States having given them a crown of unfading triumph, their *spirit* is of so high and confident a character, that it will be extremely difficult for any foreign enemy to subdue it. It is no longer a problem whether the Upper Province could be an easy conquest to the United States of America. Fifty Thousand Canadian Militia as well disposed as they now are, under the orders of an able General, from the nature of the country they have to defend, may bid defiance to any number of men that may be brought against them.

The ABBE DU PRADT was never more mistaken than in his assertion, at p. 479, of his famous work on the Colonies, where he says, in his usual pompous and conceited, mis-ecology.—“*Scotia and Canada will have ceased to belong to England, on the day that the United States will be able to establish an army of 50,000 men.*” That Experiment has been tried; even whilst the Canadian Hercules was as an infant in its swaddling clothes. We hope it will be long before it may be necessary to evince a greater maturity of strength, either defensively or offensively.

Nothing is more tempting, and nothing is more dangerous and fallacious, to minds of a certain grasp than analogous reasoning.—It requires a penetrating and comprehensive genius, especially in politics, to apply such a mode of reasoning with any hope of drawing safe and just conclusions. DU PRADT adds to the assertion just quoted, “The English will find themselves in a position, with respect to the Americans, equivalent to that which they formerly found themselves in France. They will be in the same circumstances in Canada as they were in France during the time that they held possession of *Guicenne* and *Normandy*; as the Swedes were in Finland since a *Petersburgh* existed, but with this difference, that *Guicenne* and *Finland* are situated only at the distance of a few leagues from England and Sweden, whereas the United States are by the side of Canada, and England is distant a thousand leagues from it.”

This amusing and interesting Frenchman forgets a very important fact; that a given extent of country, (especially one like Canada possessing so much wilderness, with strong natural boundaries or barriers,) like a fortification of a certain extent, requires only a certain number of men to garrison it, more than the number wanted is generally an encumbrance, (when straightened in a siege,) rather than a benefit, as they only serve to consume the means of a protracted defence. We think it was the famous GUSTAVUS ADOLPHUS of Sweden, who said that he would not desire a

larger army than 40,000 men fit for actual service, to accomplish any military object; as such a force would always enable him to choose his positions. It is indeed worthy of remark how few men, comparatively, were actually engaged in all the most memorable battles, both of ancient and modern times. But to return. M. de PRAET never reflected that unlike *Guienne*, or *Normandy*, or *Finland*, Upper Canada was destined to become in a few years a match, single handed, against any neighbouring foe; and, of this fact there cannot now be much doubt, whilst nothing could be more preposterous than to suppose the two French provinces named were a match for all France; or, that Finland was capable of defending itself against the enormous power of the Russian Autocrat. Enough, however, has been said on this subject here.

The Exports of Canada are already considerable; and, from the great encouragement held forth by the "*Trade Act*" passed during the last Session of the Imperial Parliament, in favour of this Country it is but reasonable to expect they will be greatly increased in a short time. Since the last war with the United States the Exports from the two Provinces have averaged (including Furs and Peltry*) about £1,500,000, and from 5 to 600 ships are employed every year in the foreign and coasting trade. The Tonnage employed during the present year (1832) by the Custom-House returns at Quebec, is no less than 145,942!

The prices of Provisions in the Upper Province are at present (1822) low. In the York Market *Beef* and *Mutton* may be had from 1d. to 2d per lb.; *Veal* 2d. to 3d, *Pork* 2d 1-2, *Turkeys* 2s. 6d. each, *Geese* 1s. 10d. 1-2, *Ducks* 1s 10d 1-2; Fine grown *Chickens* 1s to 1s 3d. per pair; *Butter* 7d 1 2; *Eggs*, per dozen, 3d 1-2 to 6d; Fine Flour \$2 1-2 to \$3 per Barrel, and other articles of domestic consumption in proportion.

The domestic animals of Canada admit of great improvement, and it is strongly recommended, from the success of some experiments that have been already made, to attend to this improvement, rather by judicious *selection* and *crossing*, than by importing the fine breeds from the two highly refined stock of England; excepting only a few Stallions of the large improved Coach, or Cart, Horses of England, which are much wanted to give weight and power to the *spindleshanked*, *flimsy*, horses imported into the Upper Province from the United States; and, to give size to the tight, compact, hardy, invincible little horse of the Lower Province.

* These valuable products to a very large amount are annually carried into the United States, from various parts of Upper Canada, in a way that is unknown at Montreal or Quebec, and consequently do not appear in the Custom House Books there.

It has often been asserted that the *poney* of Wales, and the *Galloway* of Scotland are superior, for their size, to any other horses in the world. But the writer of this article has no doubt that horses can be found in Montreal and Quebec of 14 hand-high, and under, that, for drawing or carrying heavy weights, and for *bottom*, and sheer hardihood, would far surpass the horses of any other country, not even excepting any part of Great Britain; so justly renowned for the excellence of its *Pencys* as well as for the matchless character of its *Hunters* and *Race Horses*:—since the little horses of Lower Canada are every day performing what would be deemed great exploits, were they recorded in the *Sportsman's Magazine*. But, excellent as these horses are, their inferior size renders them unfit for many purposes of draught.

The horned Cattle of this country merely want *good wintering*, and more attention than is now generally paid to a judicious cross in breeding; to be every thing that a farmer could desire.

Sheep are, for the greater part, imported from the United States, and have more or less of the *Merino* in their breed, too much so, in our opinion, to be so profitable in this climate, and with the careless management they receive, as they might be. It is thought that the improved *Cherish*, whose fleece is weighty, and possesses a long staple, might be introduced into Canada with great success, and it is well worth while to make the experiment.

There are those who wish for an importation of the largest breed of English Hogs, to give *weight* to those of this country, as well as to render them of a *more kindly nature*, as a breeder would term it. But, there is not the smallest doubt that a skilful and attentive farmer, who is a good manager, may have a breed of Hogs, without leaving Canada, equal to every thing he may desire.

So much has now been said on subjects that may be deemed, in general, foreign to a publication of this nature, that the writer is afraid of enlarging this *sketch* until he knows how far it may prove acceptable to the Public. Should he have the happiness to find his plan approved of, he will undertake to work up, what is now nothing more than a rough outline, very hastily sketched, into a more finished picture, for a succeeding volume of this work, which he is desirous of rendering as useful a companion as he can make it to all ranks of people who visit, or who may intend to visit, as well as to those who reside, in this Province.

Before he concludes, however, as a great deal has been said, of late, in disparagement of the plan adopted by Government which grants no more than 50 Acres, without the payment of Fees, to ordinary applicants, the writer cannot help repeating that the liberality of the British Government, in this particular, is without a parallel in the history of the world, ancient or modern. What man has ever been more highly extolled than the famous WILLIAM

PENN? whom all writers, of all parties, and opinions, have agreed to characterize as a liberal, humane, and virtuous legislator; and, even PENN did not think fit, in that golden day of cheap gifts, in land matters, to part with portions of his vast territory without a price, which even then was deemed so trifling, as to be little more than nominal, and his fee upon his larger grants of 1000 acres was 430 *lires**; and to those who could not pay for more, he granted 50 acres, "for the annual quit rent of one sol, ten deniers and a half per acre, equal to one penny, or four shillings and two pence, on the whole fifty acres, annual quit rent—NOT A FREHOLD!"

The example of WILLIAM PENN is chosen because no one has ever yet objected to the wisdom of his policy.—However, not to go further into this subject on the present occasion, as the wealth of Upper Canada is at this time chiefly agricultural; we will conclude in the eloquent language of the author from whom we have just quoted.

"Every thing depends upon, and arises from the cultivation of land. It forms the internal strength of states; and draws riches into them from without. Every power which comes from any other source except the land, is artificial and precarious, either in natural or moral philosophy. Industry and commerce, which do not act immediately upon the agriculture of a country, are in the power of foreign nations, who may either dispute these advantages through emulation, or deprive the country of them through envy. This may be done either by establishing the same branch of industry among themselves, or by suppressing the exportation of their own unwrought materials, or the importation of those material in manufacture. But a state well manured, and well cultivated, produces men by the fruits of the earth, and riches by those men. This is not the teeth which the dragon sows to bring forth soldiers to destroy each other; it is the milk of Juno, which peoples the heavens with an innumerable multitude of stars."

In order to find the distance from any place, in the foregoing Tables and Lists, to another, deduct the smaller, from the larger, number of miles, and the product gives the distance:—thus, do you want to know how far it is from *York* to *Coteau du Lac*, by the main road? deduct 931 from 1253, and there remain 322 miles, the true distance; or, if it be a *Cross Road*, and you want to know how far it is from *York* to another place named.—say to *Raleigh*; see how far *York* is from *Halifax* (by the List that is given) and how far *Raleigh* is from *Halifax*,—deduct 1253 from 1427 and the result is 174 miles, the true distance from *York* to *Raleigh*.

As these Tables and Lists are taken from those used in the Post Office it must be presumed they are as correct as the present state of the country will admit of.

UNITED FRATERNITY OF FREE-MASONS.

PROVINCIAL GRAND LODGE OF UPPER CANADA.

- R. W. Simon McGillivray, Esq. *Provincial Grand Master*

NOTE.—No return of the Population having been made from many of the Townships for the last two years the *fourth Column* of the foregoing list is necessarily very imperfect. Those numbers to which an asterisk (*) is affixed are the returns of 1821. It is very much to be regretted that the Town Clerks of the various settled Townships are so remiss in their duty. The following table will shew the aggregate Population of Upper Canada, (exclusive of the Army and Navy, Strangers, and Indians,) as far as the actual returns have been made since the year 1820. But the total number here set down is, doubtless, far below the actual amount.

| DISTRICTS. | POPULATION. | IN WHAT YEAR. |
|--|-------------|---------------|
| Eastern | 13,670 | 1821 |
| Ottawa | 1,674 | 1820 |
| Johnstown (including the new District of Bathurst) | 17,860 | †1821 |
| Midland | 20,311 | 1821 |
| Newcastle | 8,678 | 1822 |
| Home | 13,870 | 1822 |
| Gore | 11,333 | 1822 |
| Niagara | 13,787 | †1820 |
| London | 15,277 | 1822 |
| Western | 6,251 | 1821 |

† A return for this District was made in 1822, but it was so partial as to leave out no less than 13 settled Townships—so that we preferred the return of 1821 as the most correct of the two, though far below the real number.

† A return for Niagara was made in 1821, but too imperfect to be admitted.

Not one of the above returns is really correct; but, the Table shews the best aggregate to be obtained from written, or official, documents.—The White Population of U. Canada cannot now be less than 150,000.

BREAD WEIGHT.

| | lb. | oz. | dr. |
|-------------|-----|-----|--------|
| A Half Peck | . | . | 8 11 0 |
| A Quarter, | . | . | 4 5 8 |

When a Quarter loaf wheaten is sold for 8d the Seconds should be sold for 7d the Household for 6d ; and so in proportion.

Wood is bought by the Cord, a stack or Chord of Wood, commonly in England, runs three feet high, three feet wide, and twelve long, or one hundred and eight cubic feet ; though some make it three, four, and eight, or ninety-six cubic feet. In Canada the usual measurement is four feet high, four feet wide, and eight long.

TIME.

| | | | | | |
|------------|------|----------|-----------|------|---------|
| 60 Seconds | make | 1 Minute | 7 Days | make | 1 Week |
| 60 Minutes | | 1 Hour | 4 Weeks | | 1 Month |
| 24 Hours | | 1 Day | 12 Months | | 1 Year |

MISCELLANEOUS.

A Barrel of Anchovies, about 15 lb.
 A Barrel of Gunpowder, is 112 lb.
 A Barrel of Herrings, No. 500.
 A Keg of ditto 60—two of which count a hundred.
 A Last of Hides, 12 dozen
 A Truss of Straw, 36 lb.
 A Truss of Hay, new, 60 lb.
 Ditto old, 56 lb.
 A Load of Hay, 36 trusses.
 A Load of Bricks, No. 500.
 A Load of Tiles, No. 1000.
 A Load of Timber, 50 ft, solid
 A Tun of Sweet Oil 236 Gallons
 A Fether of Lead, 19c 2 qrs.
 A Pkin of Butter, 56 lb.
 A Stone of Iron, Shot, or Horse man's weight, 14 lb.—Butcher's weight 8 lb.

VALUE OF GOLD AND SILVER COINS.

A Grain of Gold, about 2d.
 A Penny-weight, about 4s.
 A Grain of Silver, about half a Farthing.
 A Tenny weight, 3d.
 An Ounce, about 5s.
 According to the weight of English Coins, the Mint value of a lb. of Gold is 44 guineas and a half, or £46 14s 6d — a lb. of Silver, £3 2s—the oz. of Gold £3 17s 10 1/2d and the ounce of Silver 5s 2d. so that the value of the standard Gold is 15 times that of Silver and 1-14th more.
 *The value of a lb. of Gold as Bullion, in Oct. 1809, was £55 16s.

| A-h | 76 | - | - |
| Baiberry | 76 | - | - |
| Nut tree | 76 | - | - |
| English Oak | 75 | - | - |
| Beech | 74 | - | - |
| Elder | 73 | - | - |
| Pear tree | 73 | - | - |
| Mulberry | 71 | - | - |
| Walnut | 69 | - | - |
| Yew | 67 | - | - |
| Maple | 66 | - | - |
| Yellow Deal | 63 | - | - |
| Cherry | 61 | - | - |
| Norway Oak | 60 | - | - |
| Sallow | 59 | - | - |
| Sycamore | 59 | - | - |
| Elm | 50 | - | - |

N B All the Woods were very good of the sort, except the Elm, and all very dry; the measure is English, and the weight Avoirdupois

It is probable that the woods of Canada are lighter, (except those grown on plains and exposed situations,) than similar species produced in England.

GOLDEN RULES,

TO RENDER YOUNG TRADESMEN RESPECTABLE, PROSPEROUS, AND WEALTHY.

1. Choose a good and commanding situation, even at higher rent or premium; for no money is so well laid out as for situation: provided good use be made of it.

| 14 | 63.3-4 | 29 | 97.1-2 | 44 | 131.1-4 |

2. Take your shop door from off the hinges at seven in the morning that no obstruction may be opposed to your customers.

3. Clean and set out your window at eight o'clock and do this with your own hands, that you may expose for sale the articles which are most saleable, and which you most want to sell.

4. Sweep before your house; and, if required, open a footway from the opposite side of the street, that passengers may think of you while crossing, and that all the neighbours may be sensible of your diligence.

5. Wear an apron, if such be the custom of your business, and consider it as a badge of distinction, which will procure you respect and credit.

6. Apply your first returns of ready money to pay debts before they are due, and give such transactions due emphasis by claiming discount.

7. Always be found at home and in some way employed; and remember that your meditating neighbours have their eyes upon you, and are continually gauging you by appearances.

8. Re-weigh and re-measure all your stock, rather than let it be supposed that you have nothing to do.

9. Keep some article not usually kept, or sell some current article cheap, that you may attract customers and enlarge your intercourse.

No. 3

The dimensions of a Statute Acre may be learned by inspecting the following Table, which contains different breadths and lengths in statute perches and feet, of a quadrangular piece of ground containing an acre.

BREADTHS AND LENGTHS OF A STATUTE ACRE, IN
PERCHES AND FEET.

| BREADTH | | LENGTH. | | BREADTH | | LENGTH. | |
|----------|----|-----------------|---------------|----------|---|-----------------|----------------|
| Perches. | | Per Feet. | | Perches. | | Per Feet. | |
| 10 | 16 | 0 | | 28 | 5 | 11 | $1\frac{1}{4}$ |
| 11 | 14 | 9 | | 29 | 5 | 8 | $3\frac{1}{8}$ |
| 12 | 13 | $5\frac{1}{2}$ | | 30 | 5 | 5 | $\frac{1}{2}$ |
| 13 | 12 | $5\frac{1}{3}$ | | 31 | 5 | $2\frac{1}{2}$ | |
| 14 | 11 | $7\frac{1}{4}$ | | 32 | 5 | 0 | |
| 15 | 10 | 11 | | 33 | 4 | 14 | |
| 16 | 10 | 0 | | 34 | 4 | 11 | $\frac{1}{7}$ |
| 17 | 9 | $6\frac{2}{3}$ | | 35 | 4 | 9 | $\frac{3}{7}$ |
| 18 | 8 | $14\frac{2}{3}$ | | 36 | 4 | 7 | $\frac{1}{3}$ |
| 19 | 8 | $6\frac{1}{3}$ | | 37 | 4 | $5\frac{1}{3}$ | |
| 20 | 8 | 0 | | 38 | 4 | $3\frac{3}{8}$ | |
| 21 | 7 | $10\frac{3}{4}$ | | 39 | 4 | $1\frac{9}{13}$ | |
| 22 | 7 | $4\frac{1}{2}$ | | 40 | 4 | 0 | |
| 23 | 6 | $15\frac{1}{2}$ | $\frac{3}{8}$ | 41 | 3 | 14 | $\frac{7}{8}$ |
| 24 | 6 | 11 | | 42 | 3 | 13 | $\frac{5}{14}$ |
| 25 | 6 | $6\frac{3}{4}$ | | 43 | 3 | 11 | $\frac{7}{10}$ |
| 26 | 6 | $6\frac{7}{13}$ | | 44 | 3 | 10 | $\frac{1}{2}$ |
| 27 | 5 | $15\frac{1}{6}$ | | 45 | 3 | 9 | $\frac{1}{6}$ |

10. Keep up the exact quality or flavour of all articles which you find are approved of by your customers, and by this means you will enjoy their preference.

11. Buy for ready money as often as you have any to spare; and when you take credit, pay to a day, and unasked.

12. No advantage will ever arise to you from any ostentatious display of expenditure.

13 Beware of the odds and ends of stock, of remnants, of spoiled goods, and of waste, for it is in such things that your profits lie.

14 In serving your customers, be firm and obliging, and never lose your temper, for nothing is got by it.

15. Always be seen at Church or Chapel on Sunday; never at a gaming table; and seldom at the theatres or places of amusement

16. Prefer a prudent and discreet to a rich and showy wife.

17. Spend your evenings by your own fire side, and shun a public house or a sottish club as you would a bad debt.

18. Subscribe with your neighbours to a book club, and improve your mind, that you may be qualified to use your future affluence with credit to yourself, and advantage to the public.

No. 10.

A TABLE to shew how many Plants, or Trees may be planted on an Acre of Land, at different Distances.

In a square Acre are,

4 rods, each rod 40 rods, poles or perches
 160 rods, 16 feet and a half each,
 4 8-10 square yards, 9 feet each.
 43 550 square feet, 1-4 inches each.
 174 240 squares of six inches each, or 36 inches.
 6,272,640 inches, or squares of 1 inch each.

An Acre will contain

| <i>Trees or Plants.</i> | <i>Number of Feet asunder.</i> | <i>Square feet to each.</i> |
|-----------------------------|------------------------------------|---------------------------------|
| 108 and 360 feet over, | at 20 feet asunder, or | 400 |

| — Stone, 14 lb. | 12 970 |
| — Hundred, 112 lb. | 10,76 |

19. Take stock every year, estimate your profits, and do not spend above their fourth.

20. Avoid the common folly of expending your precious capital upon a costly architectural front; such things operate on the world like paint on a woman's cheeks—repelling beholders, instead of attracting them.

21. Every pound wasted by a young tradesman is two pounds lost at the end of three years, and sixteen pounds at the end of twenty-four years.

22. To avoid being robbed and ruined by apprentices and assistants, never allow them to go from home in the evening, and the restrictions will prove equally useful to servant and master.

23. Remember that prudent purchasers avoid the shop of an extravagant and ostentatious trader; for they justly consider that, if they must deal with him, they must contribute to his follies.

All the different denominations of the above Coins pass current *Two pence farthing* is allowed for every grain under or over weight, on English, Portuguese and American Gold; and *Two pence and one fifth* on Spanish and French—Payments in Gold above £20. may be made in bulk: *English, Portuguese, & American* at 89s per oz; *French and Spanish* at 87s 8 1/2; deducting *half a grain* for each piece.

A Powder for Rheumatism, when first coming — *Pulvis ipecacuanhe compositus*, of the last London Dispensatory. In common cases, with no violent pain, ten gr. at going to bed; in great pain, twenty gr.: wash down with diluting liquor.

No. 19.

To turn any given Currency into any Currency required.

Rule 1. Let the value of the Spanish Dollar be expressed in Shillings, or Pence, in each of the Currencies, writing them in form of a Fraction,

and making the $\left. \begin{array}{l} \text{required} \\ \text{given} \end{array} \right\}$ Currency the Numerator $\left. \begin{array}{l} \text{ } \\ \text{ } \end{array} \right\}$ of the Fraction.
Denominator $\left. \begin{array}{l} \text{ } \\ \text{ } \end{array} \right\}$

Reduce this Fraction to its *least terms*, and it will serve as a constant Multiplier, by which any such of the *given* Currency being multiplied, it will be converted into the Currency required.

N. B. When the Fraction is not an improper one the *Multiplier* will become a *Divisor*.

EXAMPLE — To form a rule for changing Sterling at 4s. 6d. per Dollar into New York at 8s. per Dollar.

Here *Sterling* is given and *York* required: The Dollar

in $\left\{ \begin{array}{l} \text{York is 8s. or 96 Pence Numerator,} \\ \text{Sterling is 4s. 6d. or 54 Pence Denominator.} \end{array} \right.$

Therefore $\frac{96}{54}$ is the Multiplier sought, which reduced to its least terms becomes $\frac{16}{9}$ or $1\frac{7}{9}$, therefore if Sterling be Multiplied by 16 and divided by 9 the result will be York, thus, $\frac{16}{9}$ is the same as 2 into $\frac{8}{9}$, but $\frac{8}{9}$ is the same as 1 less $\frac{1}{9}$, therefore 2 into $\frac{8}{9}$ is equal to 2 into 1 less $\frac{1}{9}$, which is that Rule, expressed shorter thus $\frac{16}{9} = 2 \times \frac{8}{9} = 2 \times 1\frac{7}{9}$.

| | | | |
|-----------------------|---------|----------------------------|------------------------|
| To turn Sterling into | { | Currency or Halifax, add | 1 9 |
| | { | Army, add | 1 27 |
| Currency into | { | Sterling, deduct | 1 10 |
| | { | Army pay, deduct | 1 15 |
| Army pay, | { | Sterling, deduct | 1 28 |
| | { | Currency, add | 1 14 |
| A Hundred is | £1 16 0 | Sterling , £2 0 0 | Curly , £1 17 4 |
| A Hundred is | 1 10 | 13 4 | 1 19 |
| A Dollar is | 0 4 6 | 0 8 0 | 0 4 8 |

CONCLUSION.

It was the intention of the Editor and Proprietor of this Work to have rendered it far more comprehensive, especially as to useful Tables and Receipts, than it will be now found to be: But, the shipwreck of his winter's supply of paper, and some other incidental causes of difficulty and delay, together with the lateness of the season, have induced him to send it forth in its present form.

Should, however, his plan be approved of by the Public, he will endeavor to have a more perfect work of the kind, for the year 1824, ready for delivery before the close of the present year; and which he hopes will be more free from those errors which are so apt to creep into a first essay of this nature.

Any useful information, or hints for improvement in future editions, will be thankfully received, as it is the wish of the Proprietor to render it a standard book of reference in the County.

G. Gazette Office,
January 31st: 1823.

Brief Annals of Public Events

FROM THE

DISCOVERY OF AMERICA

TO THE

DIVISION OF THE PROVINCE

OF

QUEBEC

INTO

Upper and Lower Canada.

IT has been judiciously remarked by the author of the *American Annals* that the remarkable discovery of a New World, (which has been receiving inhabitants from the old for more than three hundred years,) and those events, and actions, which are connected with it, can now be accurately ascertained, without having recourse to such legends as have darkened and diligured the early annals of most nations.

It is the purpose of the compiler of these *Annals* to confine himself, (after noticing the Discovery by *Columbus*;) to such events as relate to Canada only.

C. F.

Brief Annals,

&c. &c.

Anno Domini 1492, On the 3^d day of August CHRISTOPHER COLUMBUS set sail from *Pelos* in Spain, with three vessels and ninety men; and, on the 11th of October following, discovered land on one of the Bahama Islands. This was the first certain knowledge possessed by modern Europeans of any part of the New World.*

1497 Henry VII of England gave permission to John Cabot to take six ships, with all things necessary for a voyage of discovery in North America. Early in June in the same year, having his son Sebastian with him, he discovered part of Newfoundland; he next saw and named the island of St John; and, continuing a westerly course, he afterward arrived at the Continent, along the coast of which he sailed, northerly, as far as 67 and a half N. L.

It is remarkable that no further attempts towards discovery were made by the English for upwards of sixty years afterwards, if we except the proposed expedition of Elliot and Ashurst

1502 Hugh Elliot and Thomas Ashurst, merchants of Bristol, with two other gentlemen, obtained a patent from Henry VII. for the establishment of Colonies, in the countries then lately discovered by Cabot; but it is not known whether they availed themselves of this permission, or made any voyages to the New World.

1506 Jean Denys, a Frenchman, sailed with his pilot, Camart, a native of Rouen, from Honfleur to Newfoundland, and drew a map of the Gulf of St. Lawrence and the adjacent coast.

1508 Thomas Aubert, who made a voyage in this year from France to Newfoundland, was the first who sailed up the great river St. Lawrence to the country of Canada. This man carried off some of the natives, and exhibited them in Paris.

1517 The cod fishery on the banks of Newfoundland had, by this time, attracted the attention of several European nations, the first were fifty Spanish, French, and Portuguese ships employed in this year.

* We say *modern*, because we are believers in the success of the famous expedition of Madoc, from *Wales*, in the 12th Century. — *Ed.*

1522 Newfoundland, settled by different nations before any part of Canada, is said to have contained at this period about fifty houses.

1527 The scheme for discovering a passage to the East Indies by the northwest being resumed in England, a voyage was made by the advice of Robert Thorne of Bristol, with two ships, furnished out by Henry VIII; but it proved an unsuccessful, and even disastrous, for one of the ships was lost. Hakluyt says this Master Thorne was "a notable manber and ornament of his country," and that he exhorted the King with "very weightie and substantiall reasons, to set forth a discoverie even to the North Pole."

1535 Cartier discovering now the river of Canada, which gradually obtained the name of St. Lawrence, sailed up this noble stream more than three hundred leagues in a great and swift fall or rapid; formed alliances with the natives; took possession of the territory; built a fort; and wintered in the country, which he called *Nou France*. He at this time visited *Montreal*, which he called *Mont Royal* (afterwards *Montreal*), a large Indian settlement. This was the first attempt made by the French to form a settlement in America.

Charlevoix says the name of St. Lawrence was first given to the river, next to the Gulf, and then to the river of Canada.

On this expedition of Cartier's, he carried off *Dacaragoua*, a chief of the natives, and Hakluyt says, "The poor King of the country with two or three of his chief companions coming aboard the French ship, being required either to a banquet, was traitorously carried away into France, where he lived four yeeres, and then dyed a Christian there."

1536 A voyage was made from England to Newfoundland by 120 persons, 30 of whom were gentlemen of education, and character at the head of whom, according to Hakluyt, was "One Master Here of London, a man of goodly stature and of great courage, and given to the studie of Cosmographie, &c." Cape Breton was discovered during this voyage, but the expedition was eventually so disastrous, through famine, that the survivors were constrained to support life by feeding on the bodies of their dead companions.

1540 Francois de la Roque, Lord of Roberval, a nobleman of Picardy, and the King of France's Lieutenant General and Viceroy in Canada, sent out Cartier with two ships to Canada, this year, intending to follow him with two other ships, fitted out at his own expense, for the purpose of colonizing some part of the banks of the St. Lawrence.

1542 The Lord Roberval, himself, arrived in Canada this year, and built a fort, and wintered about four leagues above the Island of Orleans (which was at first called the Isle of

Bacchus.) Purchas says this fort was "fair and strong"

1548 The first Act of the English Parliament relating to any part of America was made this year,—this was to protect and encourage the English fishery on the banks of Newfoundland.

1549 In this year Lord Roberval, accompanied by his brother and a numerous train of adventurers, again embarked for the river St Lawrence; but they were never heard of afterwards.—a disaster which so discouraged the government and people of France, that for more than 50 years no further measures were taken for supplying the few settlers which remained in Canada.

1576 Martin Frobisher was sent out by Queen Elizabeth, with three small ships and discovered Elizabeth's Foreland, and the straits which still bear his own name. He entered a bay in N. L. 63 degrees, and carried off one of the natives, whom, Hakluyt says, "for very choleric and disdain'd bit his tongue in twaine within his mouth."

1577 The discovery of supposed Gold ore by Frobisher in his voyage of last year encouraged the Society of Adventurers to send him out with three other ships to explore the coast of Labrador and Greenland, with an ultimate view of discovering a passage to India; but he again returned without success, though he brought away nearly 200 tons of his supposed gold, and with it a man, woman, and child, of the natives.—But Stow says in his Chronicle that "neither the man, woman, nor child lived long; nor did his gold prove ore, but dross"

1578 Frobisher sailed again for this northern Continent with no fewer than *fifteen* ships in search of gold, and was foolish enough to carry home immense quantities of the same glittering stones (most probably *mundic, mica, or tale*.) to the utter in of many adventurers

1581 The French trade to Canada was renewed after an interruption of nearly 50 years.—The cause of which interruption was the carrying off the Indian king or chief in 1535 by Cartier, an outrage that could not be forgiven by the natives who would have no dealings, or intercourse with the French for 20 many years afterwards.

1583 Sir Humphrey Gilbert by virtue of a commission which he carried from Queen Elizabeth this year took possession of St. Johns in Newfoundland, and two hundred leagues every way around it, for the Crown of England, and published laws for the government of the territory. This formal possession, in consequence of the discovery by the Cabots, is considered the foundation of the right and title of the Crown of England to the territory of Newfoundland, and the fishery on its banks

The renewal of the French trade with Canada was so auspicious, that three ships, one of them of 180 tons, were employed this year in that trade.

1586 Sir Walter Raleigh introduced the fashion of smoking Tobacco in England. It had been carried thither for the first time in 1576 by Sir John Hawkins, but was then considered as a mere drug, and Stow says in his Chronicle that "*all men wondered what it meant*". But Raleigh, and a Mr Law, had learnt the practice of smoking, through pipes made of clay, from the Indians of Virginia. This singular plant appears to have been used in all parts of North America. In the account of Cartier's voyage in 1535, it appears that it was used in Canada, and a particular account is given of the manner of preserving it. "There groweth a certain kind of herbe, whereof in summer they make a great provision for all the year, asking great account of it, and only men use of it, and first they cause it to be dried in the sunne, then wear it about their neckes wrapped in a little beastes skine made like a little bagge, with a hollow piece of stone or wood like a pipe; then when they please they make powder of it, and then put it in one of the ends of the said cornet or pipe, and laying a cole of fire upon it, at the other ende sucke so long that they fill their bodies full of smoke, till that it cometh out of their mouth and nostriles, even as out of the tonnell of a chimney."—Hakluyt, iii 224

1591 The *Walrus* or *Morse* must have been common in and about the Gulf of St. Lawrence; for this year, we find that a fleet of ships was fitted out from the port of St. Malo, in France, for Canada, and to hunt for *Morses* about the bay of St. Lawrence, whose teeth were sold at a much dearer rate than ivory. They also obtained oil in vast quantity from the bodies of those animals.—An English Voyager in Hakluyt says, there were 1500 of these creatures killed, this year, by one small bark at Ramea, an island lying within the straights of St. Peter, back of Newfoundland, in N. Lat. 47.

George Drake, an Englishman, made a voyage up the Gulf of St. Lawrence to the Isle of Ramea, and carried the home intelligence of the profitable trade of the French and others in these parts of America.

1598 The Marquis de la Roche received a commission from Henry IV, to conquer Canada; but returned without doing any thing of consequence, and shortly afterwards died of vexation.

On the death of La Roche, his patent was renewed in favor of M. de Chauvin, who made a voyage up the St. Lawrence as far as *Tadousac*, where he left some of his people; and returned with a freight of *Furs*. The following year he sailed again and proceeded as far as *Trois Rivières*.

1603 Pierre du Gast, Sieur de Mouts, a Gentleman of the bed chamber to Henry IV. of France, received a patent of the American territory from the 40th to the 46th deg. N. Lat.

constituting him Lieutenant General of the country, with power to colonise it and subdue and convert the natives to Christianity.

Samuel Champlain of Brouage in France, anchored at Tadoussac this year, and made discoveries in the neighbouring territory.

1608 Champlain, being sent out at the head of a colony with three ships for the purpose of making a permanent settlement, this year laid the foundation of Quebec, the future capital of Canada, after having examined all the most eligible situations in Acadia and along the river St. Lawrence. Subsequent experience has proved the wisdom of his choice. Champlain says that *Quebec* was the Indian name of the place. "Trouvant un lieu le plus estroit de riviere, que les habitans du pays appellant *Quebec*, j'y bastir et edifier une habitation, et defricher des terres, et faire quelques jardinages."

1612 The English colony in Conception Bay, Newfoundland, this year consisted of 54 men, 6 women, and 2 children,

1621 This year Acadia first received the name of *Nova Scotia*, its whole territory being granted by that name to Sir Wm. Alexander, of Ministry, by King James I.

1627 The Colony of Quebec, by direction of Cardinal Richelieu, then sole Minister of France, was taken out of the hands of the French Protestants and, together with its trade, placed under the management of one hundred persons called the "*Company of One Hundred Associates*," at the head of which was the Cardinal himself, with the Mareschal Desfat, and other persons of eminence. Charlevoix thinks nothing could have been better planned; and that France would have been the most powerful colony in America had the execution been answerable to the design,

1729 A commission having been given by Charles I to David Kertk, and his valiant kinsmen, to conquer the American Dominions of France, Kertk had attacked Canada in July 1628, and still carried on his military operations with vigour.—Louis and Thomas Kertk, appearing again at this time off point Levi, sent an officer on shore to Quebec, to summon the city to surrender; Champlain, then in chief command, knowing his means to be inadequate to a defence, surrendered the city by capitulation. The terms of this capitulation were very favourable to the French colony; and they were so punctually and honourably fulfilled by the English, that the greater part of the French chose to remain with their captors, rather than go, as had been stipulated, to France.—"Thus was the capital of *New France* subdued by the arms of England, just one hundred and thirty years before its final conquest by the celebrated Wolf."

1632 Charles I by the treaty of St. Germain, resigned the right, which he had claimed to *New France, Acadia* and

Canada, as the property of England, to Lewis XIII King of France. CHALMERS says, the signal event of the capture of Quebec was unknown when peace was re-established in April, 1629; and assigns this as the reason why King CHARLES, at that treaty, absolutely restored to France, those territories generally and without limits; and particularly *Port Royal, Quebec, and Cape Breton*. From the restitution of these territories to France, may be dated the commencement of a long train of evils to the British Colonies, and to England— to this transaction, in the judgment of the able historian, last quoted, may be fairly traced back the colonial disputes of later times, and the American revolution.

1635 RENE ROHAULT, having become a *Jesuit*, resumed a project, which had been interrupted by the English conquest of Quebec, of founding a college in that city: a seminary that had been planned ten years before. This institution succeeded; and, it is said, was of essential service to the Colony—Many Frenchmen were now encouraged to embark with their families, for Canada.

M. CHAMPLAIN died at Quebec this year—he was justly regretted by the whole colony of New France, of which he might be said to be the parent. He had penetration, courage, constancy, probity, and patriotism—CHARLEVOIX says of him, that he was '*un historien fidele et sincere, un voyageur, qui observe tout avec attention, un ecrivain judicieux, un bon geometre, et un habile homme de mer.*'

1639 A nunnery of French Ursulines was founded at Quebec. Madame de la Peltrie, a pious Catholic lady, devoting both her time and fortune to this design, went to Quebec with three Ursulines, attended by Le Jeune Superior of the Jesuit mission into Canada.—Entering the city under a general discharge of cannon, they proceeded with much triumph, amidst the acclamations of the people, to the church, where *Te Deum* was sung, with great solemnity, for their arrival. CHARLEVOIX says that this Madame de la Peltrie had such zeal for the conversion and comfort of the native Canadians, that she actually cultivated the earth with her own hands, to increase her power of doing good.—The Hospital, called *L'Hotel Dieu*, was founded in the preceding year at Sileri, by Madame la Duchesse d'Aiguillon.

1642 MAISONNEUVE, a gentleman of Champaign, who, the preceding year, brought over several families to Montreal, now entered with them into possession of their new habitation, and Chapel, on this island, with many religious ceremonies.—In 1640, the French King had vested the property of the island in 35 associates, of whom MAISONNEUVE was one; and on the 15th of October, 1641, he was declared Governor, of the Island.—(*Charlevoix Nouv France.*)

1647 The French in Canada, in their trade with the neighboring Indians had, for several years, been obstructed by

the *Mohawks*. Unable to subdue that formidable tribe without assistance, about this time, they sent M. Marie as an agent to solicit aid from the Massachusetts, with offers of liberal compensation but the government of that colony rejected the alluring proposal. It is said this Marie was a *Jesuit* and offered a large sum for assistance; but the English gave the very wise answer that the *Mohawks* had never injured them, and they would have nothing to do with the business.

1648 The Colonists of New England sent to the Governor and Council of Canada a proposal of perpetual peace between the Colonies, though the mother countries might be at war, although the French were much pleased with the proposal, and anxious to conclude an agreement of this kind, the business terminated without success, because the English were firm in their determination not to assist the French against the *Iroquois*.

1649 In the month of March, One Thousand Iroquois suddenly attacked the Huron village of St Ignatius, containing 400 persons, all of whom, three only excepted, were massacred.

1654 About this period the *Eries*, a numerous tribe of Indians which inhabited the borders of Lake Erie, were so effectually exterminated by the Iroquois, that were it not for the name of the Lake, we should have no memorial of their former existence.—CHARLEVOIX calls them “la nation des Eriez, ou des *Chet*”

1655 The *Onondagas* sent deputies to Quebec to solicit Missionaries of the French, a number of whom were accordingly sent to that tribe, and many of the heads of it became converts to the Christian Religion.

1660 Francis de Laval, Abbot of Montigny, being appointed Bishop of Canada, came over and brought for the first time, some Monks of other orders besides the *Jesuits*

1674 The Rev John Elliot completed his translation of the Bible into the Indian language which was printed at Cambridge & entitled “*Mamusse Wunneethapanatamue* UP-BIBLUM GOD *Nonessee* NUKKONR TESTAMENT *Kah Wonk Wusew* TESTAMENT.”

1665 M de Courcelles being appointed Governor of New France, transported the regiment of Carignan Salieres to Canada this year. It consisted of 1000 foot, a great number of families, numerous mechanics, hired servants, horses (the first ever seen in Canada,) cattle, and sheep were brought to this country at the same time. The 100 associates in whom the property of the Colony was vested had grown weary of the expence of maintaining their colony; and from the year 1644 abandoned the Fur-Trade to the inhabitants, reserving to themselves, as their right of lordship, an annual payment of 1000 Beavers.—(reduced) at length to the number of 45 Associates, they made a total re-

signation of all their rights, in 1662, to the French King; who, soon afterwards, included New France in the Grant which he made of the French Colonies in America, in favour of the West India Company formed by the great Colbert.

1666 The Mohawks, having greatly annoyed the French, were attacked this year by a French army consisting of 28 companies of Foot and the whole Militia of the Colony — This formidable body of Troops marched upwards of 700 miles, in the depth of winter, from Quebec, into the country of the Mohawks, with a view of utterly destroying them. — But the Indians retired with their women and children, into the depth of the woods, leaving only a few ancient SAGUENS in the villages, who chose rather to die than desert their habitations. These were murdered by the French, and their villages burnt; yet, nothing of political importance was gained by this expedition, which was commanded by M de Tracy, in person, who was then upwards of 70 years old.

1667 Peace was at length established between the French and the Five Nations, which continued for several years, and they cultivated a mutual trade. — The Sieur Perot, a French Missionary travelled more than 1200 miles to the westward of Quebec, making proselytes amongst the Indians as he went along.

1670 A terrible disease broke out amongst the Indians in the northern parts of Canada, it swept off whole tribes, particularly the tribe of *Abitikamegues* which has never since been heard of. — Tadousac, the chief mart of the Indian Fur trade with the French, was deserted, as also Trois Rivières, where the small-pox carried off 1500 Indians at once.

1671 A grand Congress of the French, and of many Canadian Indians, was held this year at the Falls of St. Mary; where the Indians professed submission to the King of France, in a formal manner.

1672 M de Courcelles, Governor of Canada, built a Fort on the north side of the outlet of Lake Ontario, (near the modern Kingston) as a barrier against the Iroquois, pretending, however, that he merely intended it as a place of trade, and for their mutual accommodation.

1673 The Count Frontenac completed the Fort on L. Ontario, begun last year by Courcelles, and called it after his own name. The French likewise built a Fort at Michilimackinac, Father Marquette, in company with one Joliet, a citizen of Quebec, employed by M. Talon for the discovery of the Mississippi, entered that noble river on the 17th of June, and descended it to a point within three days journey of the Gulf of Mexico, when they returned to Canada. The French had received information of this river from the Indians. Ferdinand de Soto had discovered

(the country on the Mississippi 130 years before, but the Spaniards did not see fit to settle it.

1674. Quebec was made a Bishopric

1678 M. de Sale rebuilt the Fort Frontenac with stone. He also launched a Bark of ten tons on Lake Ontario, and in the year following another vessel of 60 tons on Lake Erie.—About this time he likewise inclosed a little spot of ground at Niagara with stockades, intended for a Fort.

1680 The Father Hennepin, with M. Dacan, sent out on discovery by M. de la Sale, ascended the Mississippi, from Canada, as far as the falls of St. Anthony

1682 M. de la Sale descended the Mississippi to the sea, and took possession of all the country watered by that mighty stream, in the name of Louis XIV; calling it, in honor of the King, *Louisiana*.

1683 The French erected a Fort between the Lakes Erie & Huron.

1684 M. de la Barre, with a large army from Canada, made an unsuccessful expedition into the country of the Five Nations. De la Barre found it necessary to conclude his campaign with a treaty. He was met, at the place appointed, by the *Oneidas*, *Onondagas* and *Cayugas*; the *Mohawks* and *Senekas* refusing to attend.—Seated in a chair of state, surrounded by his own Indians (principally the *Hurons* of Lorette) and the French Officers, he addressed himself to Garangula, an Onondaga Chief, in a very haughty speech which he concluded with a menace to burn the castles of the Five Nations, and destroy the Indians, unless the satisfaction, which he demanded, was given

Garangula, who sat at some little distance before his men, with his pipe in his mouth, and the *Great Calumet of Peace* before him, did nothing but look at the end of his pipe during this harangue.—When it was finished, after walking five or six times round the circle, in silence, he stood perfectly upright, and thus answered the French General:—

“ Onnuctio, I honour you, and all the Warriors who are with me honour you—Your interpreter has finished your speech.—I now begin mine.—My words make haste to reach your ears; hearken to them.—Onnuctio, in setting out from Quebec you must have imagined that the scorching beams of the sun had burnt down the forests, which render our country inaccessible to the French; or, that the inundations of the Lakes had shut us up in our castles; but now you are undeceived; for I and my warriors have come to assure you that the *Senekas*, *Cayugas*, *Onondagas*, *Oneidas*, and *Mohawks*, are yet alive.”—After ascribing the pacific overtures of the General to the impotence of the French, & repelling the charges brought against his countrymen, he added—“We are born free;

we have no dependence either on the Onnuntio or the Corlar** This speech, which affords an interesting specimen of the spirit and eloquence of the aboriginals, has this fine conclusion — " My voice is the voice of all the Five Nations,—Hear what they say ; open your ears to what they speak.—The *Senckas, Cayugas, Onondagas,* and *Mohawks,* say, that when they buried the hatchet at Cataracuy, in the presence of your predecessor, in the very center of the Fort, and planted the tree of peace in the same place, it was then agreed that the Fort should be used as a place of rendezvous for merchants, and not as refuge for soldiers.—Hear, Onnuntio, you ought to take care, that so great a number of soldiers, as appear now, do not choke the tree of peace, planted in so small a fort, and binder it from shading both your country and ours with its branches I do assure you, that our warriors shall dance to the Calumet of Peace under its leaves, and that we will never dig up the ax to cut it down, until the Onnuntio or the Corlar shall either jointly or separately endeavour to invade the country, which the Great Spirit had given to our ancestors —This belt confirms my words ; and this other, the authority, which the Five Nations have given me."

Enraged at this bold reply, De la Barre retired to his tent, and prudently suspended his menaces. Two days after, at the conclusion of the peace, the Indian chief and his retinue returned to their country, and the French army embarked in their canoes for Montreal.

1685 The inhabitants of Canada amounted to 17,000 ;— three thousand of whom were supposed to be capable of bearing arms. CHALMERS says these numbers were taken from an accurate account made by order of the Government.

1687 In this year the French Cabinet took measures to destroy, as was intended, at one blow, the whole British interest in North America. M. Denonville, who had succeeded De la Barre, took the field at the head of 1500 French and 500 Indians. The *Senckas*, who had refused to meet De la Barre at the late treaty, were known to be most firmly attached to the English, it was therefore determined either to extirpate that tribe, or so to humble them, as to render them examples of French resentment to all the other Indians.

Denonville commenced his march from Cataracuy on the 28th of June. In this campaign, the scouts of the French army had advanced as far as the corn of the villages without seeing a single Indian ; though they passed within pistol-shot of 500 *Senckas*, who laid on their bellies, and suffered them to pass and repass, without disturbing them. But, on a sudden, when the invading

*Titles given by the Indians to the Governors of Canada and of New York.

army had approached within a quarter of a league from the chief village of the Senekas, the war shout arose, in terrific effect, intermingled with a discharge of fire arms from all sides. This surprise threw the French into confusion, and the Senekas fell upon them with great fury; but the French Indians being rallied, in the end repulsed them. In this action there fell about 100 of the French, 10 French Indians, and 80 Senekas. The next day Denonville continued his march with the intention of burning the village; but he found it already in ashes. The Senekas had burnt it and fled. Two old men only were found in the castle, who were cut into pieces and hoiled, to make soup for the French allies.—(see *Colden*, p. 78.) The valor of the French army was next employed in destroying the corn of the Indian plantations, which they effectually accomplished; and thus ended the *extrépaign* campaign of Denonville!

Before Denonville returned into Canada he built a Fort, with four bastions, at Niagara, in which he left a garrison of 100 men, with provisions; but it was soon afterwards abandoned.

1689 On the 27th of June, the Senekas, Cayugas, Onondagas, and Oneidas, renewed their covenant with the English. *COLDEN* says this renewal was previous to the arrival of Count FRONTENAC, who came over on the 2nd of October, this year, as Governor of Canada, at the advanced age of 68 years, in the room of Denonville, who was recalled.

A body of 1200 Indians of the *Five Nations* invaded the Island of Montreal on the 26th of July, burnt all the plantations, and made a horrible massacre of men, women, and children; throwing the whole French colony into the utmost consternation; inso-much, that Valrenea, the commandant at Cataracuy was ordered by Denonville to abandon that place—*SMITH* (in his *N. York*, p. 56) says, that 1400 French were slain in this invasion, and 26 carried off and burnt alive. *CHARLEVOIX*'s account is horrible—“*Ils ouvroient le sein des femmes enceintes, pour en arracher le fruit, qu'elles portoient, ils mirent des enfans tout vivans a la broche, et contraignirent les meres de les tourner pour les faire rotir.*”

In a conference held this year between the English Colonies and the Five Nations, the latter promised to preserve “the chain (which united them) inviolable” and said “we wish that the sun may always shine in peace over all our heads, that are comprehended in this chain.”

1690 An unsuccessful attack on Quebec was made this year by the English forces, from the Colonies, under the command of Sir W. Phips. The fleet did not arrive before that fortress until the 5th of October. The largest ships carried 44 guns. A simultaneous attack on Montreal, by way of Lake Champlain, at the same time, was designed, but the army was compelled to retreat by sickness (as it is said;) and the fleet, after many disasters, arrived at Boston on the 19th of November.

1693 Count Frontenac invaded the country of the *Mohawks* from Canada, but his army, after encountering the greatest hardships, and losing 80 men killed, and 30 wounded, found it necessary to return without accomplishing any thing material. A great quantity of Furs had been accumulated by the French at Michilimackinac; but the *Five Nations* had so effectually blocked up the passage between that place and Canada, that they had remained useless for several years. At length, however, a fleet of 200 canoes, laden with furs, arrived at Montreal, and Colney says this arrival "gave as universal a joy to Canada, as the arrival of the *Galleons* give in Spain."

At this period Canada contained, by computation, 180,000 souls. There were six churches in Quebec.

1694 *Decanesora*, who had for many years the greatest reputation amongst the *Five Nations*, as a speaker, arrived in Canada, with many other deputies, to hold a treaty with the French. "This *Decanesora* was grown old," says COLNEY "when I saw him, and heard him speak; he had great fluency, and a graceful elocution that would have pleased in any part of the world. His person was tall and well made; and his features, to my thinking, resembled much the *husos* of CICERO."

It is not clear how this treaty terminated, or whether there was any made: for, we find this same *Decanesora* very soon afterwards assuring an English conference, at Albany, of a fact that could not be very satisfactory to the French. Addressing Gov. Fletcher of N. York, the orator gave the following passage, as part of his speech to the Gov. of Canada—"Omnuncio, we will not permit any settlement at *Cataracui*; you have had your fire there thrice extinguished. We will not consent to your rebuilding that Fort, but the passage through the river shall be free and clear. We make the sun clear, and drive away all clouds and darkness, that we may see the light without interruption."

1695 The *Five Nations* having now positively refused to accede to the terms proposed by the French, Count Frontenac determined to compel them to submission. Having previously sent out 300 men, in the hope of surprising them on their hunting ground, between Lake Erie and Cataracuy Lake (now Ontario), and at the same time to view the old French Fort there; he, in the summer of this year, sent out a considerable body of French and Indians, to repair the fortifications at Cataracuy, in which work they were completely successful, and restored its former name *Fort Frontenac*.

1696 The Count Frontenac having secured his Fort at Cataracuy resolved to make the *Five Nations* feel his resentment. Having assembled all the regular troops, and the militia, of Canada, at Montreal; together with the *Owasmagungs*, the *Qualoglies* of Loretto, the *Adirondacks*, *Sokokies*, *Nepitiriniens*,

the *Praying Indians* of the Five Nations, and a few *Utawawas*, he marched with this formidable army from that Island on the 4th of July. After twelve days march the French army arrived at *Cata-raquay*. On approaching *Onondaga*, the Indians hearing of the formidable power of the French, by a *Seneca* deserter, thought it prudent to retire, after setting fire to their poor fort and bark cottages. All the French did here was to destroy a very extensive field of corn. The *Chev. de Vandreul* was dispatched with 6, or 700 men to destroy another field of corn, belonging to the *Oneidas*, at no great distance, which was accomplished; and these feats, with the capture of 35 *Oneidas* who staid to welcome the French, in one of their little forts, were all the achievements of this grand enterprize. The fact was, the French experienced the insurmountable difficulty of supporting so large an army in a wilderness, and they were obliged to return to *Montreal* on the 10th of August, without doing anything more.

1698 Count Frontenac died, aged 78 years. CHARLEVOIX speaks thus highly of him. "He retained all the firmness, and all the vivacity of his best years; and died, as he had lived, beloved by most, esteemed by all, and with the glory of having, without scarcely any succours from France, sustained and augmented a colony, open and attacked on all sides, and which he had found on the point of ruin."

1699 M^{de} Calliers, succeeding the Count Frontenac, as Governor of Canada, terminated the disputes between the French, and the *Five Nations*, by agreeing to have an exchange of prisoners at *Onondaga*. COLDEN says this peace was esteemed by the Canadian, as the greatest blessing heaven could grant them, "for nothing could be more terrible than this last war with the *Five Nations*." When the French Commissioners came to *Onondaga*, *Decanesora* met them without the gate, and complimented them with three strings of wampum. "By the first he wiped away their tears for the French, who had been slain in the war; by the second he opened their mouths, that they might speak freely; by the third he cleaned the mat, on which they were to sit, from the blood that had been spilt on both sides."

1705 A recent misfortune of the Canadians, in the loss of a large and richly laden ship, proved eventually a signal benefit; for it compelled the colonists to raise hemp and flax which, by permission of the French Court, they manufactured into linens and stuffs, to the great advantage of the colony. This ship was called the *Seine* and was captured by the English. She was bound to *Quebec*, and had on board the Bishop of that *Cl.*; a great number of ecclesiastics and laymen of large fortunes, with a general cargo of the estimated value of 1,000,000 *livres*.

1709 A plan was formed by Lord SUNDERLAND, Secretary of State, for the subversion of the French power in Ca-

nada, Acadia, and Newfoundland, by joint forces from England, and her Colonies in America, but it was not carried into effect.

1710 Col Schuyler, impressed with a deep sense of the necessity for vigorous measures against the French, made a voyage from N York to England on purpose to convince the ministry of the absolute necessity of reducing Canada to the crown of Great Britain. He was accompanied by Five Indian Chiefs, who gave their assurances of fidelity to Queen ANNE and solicited her assistance against their common enemy, the French. The appearance of these *Sachems* in England excited much interest.

1712 The Merchants of Quebec raised 50,000 crowns for the purpose of completing the fortifications of that City.

1714 At this period Canada could raise no more than 4484 men able to bear arms, from the age of 14 to 60; but she had besides, 28 companies of marines, who were paid by the King of France, and these contained 627 soldiers.—(*Charlevoix*.)

1715 *Ginseng* was discovered in Canada this year, by Father LASITAN, a Jesuit.

1727 John Thomas, a praying Indian of the *Mohawks*, who had been amongst the first-converts to Christianity, and always a steady friend to the English, died this year at the advanced age of 110 years

1749 Acadia, being ceded to Great Britain by the treaty of *Nix-la Chapelle*, changed its name to Nova Scotia. Parliament, aware of its importance resolved to colonize it forthwith, and voted £40,000 in aid of that purpose. Advantageous terms being offered 3760 adventurers accepted them, and settled at the bay of Chebucto. Every soldier and seaman was allowed 50 acres; an Ensign 200; a Lieutenant, 300; a Captain, 460; and every officer of higher rank, 600 acres; together with 30 for every servant. They were furnished with instruments for fishing and agriculture, had their passage free, and provisions found them for the first year after their arrival.—(*Hewitt*)

At this time the Militia of Canada amounted to 12,000 men, the regular troops to 1000; and the companies of marines to 623. —(*Univ Hist XL 190*)

1755 This year was remarkable for a terrible Earthquake that was felt throughout a great part of America. Its motion was undulatory, and it occasioned a great deal of mischief in towns and villages. Its course was from the N. West to the S. East. Its extent upwards of 1000 miles, until it passed into the ocean in the direction of the West India Islands from the Chesapeake-Bay.

1756 M. de MONTCALEM succeeded the Baron Dieskau in the chief command of the French Forces in Canada.

1757 It was in this year, at the capture of Fort William Henry, that the horrible massacre of many hundred un-

armed British officers and soldiers, by the Indians in the French service, was permitted by MONTREAL and his officers; to their eternal disgrace, and in direct violation of a solemn compact — (*For a shocking account of this butchery see Carver's Travels.*)

At this period the whole colony of Louisiana is said to have contained no more than 10,000 souls, whites, and negroes.—*Montreal* contained about 5,000 inhabitants.

1758 By the acquisition of Fort William Henry, the French had now full possession of the Lakes Champlain and George; and, by the destruction of Oswego they had acquired the dominion of these other Lakes which connect the St. Lawrence with the waters of the Mississippi. The first afforded the easiest admission from the northern colonies into Canada, or from Canada into those Colonies; the last united Canada to Louisiana. But the strong arm of Britain had not yet been put forth with all the energy of its power, guided by the wisdom and foresight of the immortal CHATHAM, who had been recently placed at the head of a new administration, and it was not long before the aspect of affairs was changed in this part of the world.

Adm. BOSCAWEN arrived with a formidable fleet at *Halifax* and Gen. ABERCROMBIE was shortly at the head of 50,000 men, the most powerful army, till then, ever seen in America.

Louisburgh, and the whole of Cape Breton; *Isle Royal*; *St. John's*, and their dependencies, were speedily conquered and taken possession of by BOSCAWEN & Gen. AMHURST. *Fort Frontenac*, on *L. Ontario*, which then possessed 60 pieces of cannon, 16 mortars, a large number of small arms, and a vast quantity of provisions, military stores, and merchandize, surrendered at discretion to a force under Col. Bradstreet, who had been dispatched on this service by Gen. ABERCROMBIE, from before *Ticonderoga*. Nine armed vessels likewise fell into the hands of Col. Bradstreet, who destroyed both the Fort and the vessels, and such stores as he could not carry away. *Port du Quebec* was captured by Gen. FOUNNES, who named it *Pittsburg* in complement to the popular minister.

1759 This was a memorable year for CANADA; in which the vast and daring project which had been so often formed, and abandoned, was at length carried into effect: that of making an immediate, and entire, CONQUEST of the COUNTRY by GREAT BRITAIN; which was accomplished by the immortal WOLFE and his brave ASSOCIATES, in the TAKING OF QUEBEC. We cannot pretend to go into any detail of this famous achievement in a work like this.

Whilst the operations were carried on against Quebec, Sir Wm. JOHNSON secured the conquest of Upper Canada, by the capture of Niagara, and the defeat of the entire French force in that quarter.

Quebec contained, at the time of its capitulation about 10,000 souls.—(*Precis sur L'Amérique.*) Gen. WOLFE, who expired in the arms of victory, was only 33 years of age—He possessed those military talents, which, with the advantage of years and opportunity of actions, “to moderate his ardour, expand his faculties, and give to his intuitive perfection and scientific knowledge the correctness of judgment perfected by experience,” would have placed him on a level with the most celebrated generals of any age or nation.” After he had received his mortal wound, it was with reluctance that he suffered himself to be conveyed into the tent.—Leaning on the shoulder of a Lieutenant, who knelt down to support him, he was seized with the agonies of death; but, hearing the words “they run,” he exclaimed, “Who run?”—“The French,” replied his supporter, “Then I die happy.” said the General, and expired.—A death more glorious, says BELSHAM is to where to be found in the annals of history, MONTREAL was every way worthy to be a competitor of WOLFE. He had the truest military genius of any officer, whom the French had ever employed in America. After he had received his mortal wound, he was carried into the city; and when informed, that it was mortal, his reply was, “I am glad of it”—On being told, that he could survive, but a few hours, “So much the better,” he replied, “I shall not then live to see the surrender of Quebec.”

1760 The fall of Quebec did not produce the immediate submission of Canada. After the battle on the Heights of Abraham the French army retired to Montreal.—This army, the command of which devolved on M. de Lévi, still consisted of ten battalions of regulars, and it was reinforced, after the action, by 6,000 Canadian Militia, and a body of Indians. With these forces an attempt was made for the recovery of Quebec; but it was unsuccessful. On the 8th of September, Montreal, Detroit, Michilimackinac, and all other places within the government of Canada, were surrendered to his Britannic Majesty; and the destruction of an armament, ordered out from France in aid of Canada, completed the annihilation of the French power on the continent of North America.

1763 By the second article of the Treaty of Fontainebleau, France renounces and guarantees to Great Britain, all Nova Scotia and Acadie, and likewise CANADA, the Isle of Cape Breton, and all other Islands, in the Gulf and River of St. Lawrence—By the same article it was stipulated that the French in Canada may freely profess the Roman Catholic Religion as far as the laws of Great Britain permit; that they may enjoy their civil rights retire when they please, and may dispose of their Estates to British Subjects.

A Proclamation was issued by his Majesty the King of Great Britain, in the month of October, declaring the Government of

Quebec to be "bounded on the Labrador Coast by the River St. John, and from thence by a line drawn from the head of that river through the Lake St. John to the south end of Lake Nipissing;— from whence the said line, crossing the river St. Lawrence and the Lake Champlain in 45 degrees N. Latitude, passes along the highlands, which divide the rivers that empty themselves into the said river St. Lawrence from those which fall into the sea; and also the north coast of the Bay of Chaleurs, and the coast of the Gulf of St. Lawrence to Cape Rosiers, and from thence crossing the mouth of the river St. Lawrence by the west end of the island of Anticosti, terminates at the aforesaid river St. John.

In testimony of the "Royal sense and approbation of the conduct and bravery of the Officers and soldiers of the army and to reward the same,"—the Governors were empowered to grant lands, without fee or reward, to such reduced Officers as had served in America during the late war, and to such private soldiers, as had been, or should be, disbanded in America, and were actually residing there &c &c (see the Procl.)

At this time Canada contained upwards of 65,000 Inhabitants. — (Stokes.)

The exports from Great Britain to Canada amounted this year to £3,623, 15s. 11d.

1765 It may be remarked that Canada and Halifax submitted to the famous Stamp Act which occasioned so much turmoil in the Provinces now constituting the United States.

1773 The Shawanese Indians, including men, women, and children, were reduced to 600.—(Am Annals)

1774 A committee of the American Insurgents was appointed to seduce the Canadians from their loyalty to the crown of Great Britain; and ministers of the Gospel were employed, as agents, for this abominable purpose. The form of the circulars used on this occasion is preserved in the *American Annals*.

1775 The revolted Colonies, by a Public Address, called on the people of Canada to unite with them. Gen. Schuyler afterwards tells them that he has received positive orders from Congress "to cherish every Canadian"!

The famous discomfure of MONTGOMERY and ARSOLD, in their attack on Quebec, in which the former lost his life, occurred late (November) this year.

1776 Early in the summer Canada was entirely freed from the presence of the Insurgent Army of the Americans,

by the River St. Lawrence and the lakes Nipissing;— and also the Gulf of St. Lawrence, the mouth of the Gulf of Anticosti, ter-

mination of the continent, and to grant Officers as had such private sol-

1780 The 19th of May was distinguished by the phenomenon of a remarkable darkness in the northern parts of America; and is still called "the dark day" In most parts of the country where it prevailed, the darkness was so great that persons were unable to read common print, determine the time of day, dine, or manage their domestic business, without additional light. It commenced between 10 and 11 A. M. it appeared to grow by a succession of clouds from the northward and was most pitchy about 2 o'clock, P. M. The Mem. of Amer Acad. says, "Candles were lighted up in the houses; the birds, having sung their evening songs, disappeared and became silent; the fowls retired to roost; the cocks were crowing all around, as at day break; objects could not be distinguished but at a very little distance; and every thing bore the appearance and gloom of night."

1783 The Province of Quebec contained by enumeration, 113,000 Inhabitants, English and French; exclusive of 10,000 *Loyalists*, who had recently settled in the upper parts of the Province. (*Coll. Hist. Soc. VI. 49.*)

1786 Lord DORCHESTER (Sir Guy Carleton) arrived at Quebec, with the Commission of Captain General and Governor of Quebec, Nova Scotia, New Brunswick, and their dependencies, and the Island of Newfoundland.

1791 By an Act of Parliament, the Province of Quebec was divided into two separate Provinces, to be called, "The Provinces of Upper and Lower CANADA. On this occasion a very interesting debate took place in the House of Commons:—

Mr PITT said it appeared to his Majesty's Ministers, first that the only way of consulting the interest of the internal situation of the Province of Quebec, and of rendering it profitable to Great Britain, was to give it a Legislature, as near as circumstances would admit, according to the principles of the British Constitution. In the next place, he appeared to them that *there was no probability of reconciling the jarring interests and opposite views of the inhabitants, but by giving them two Legislatures.* It was conceived this form of Government was best adapted to put an end to all the difficulties of a legal system and to render the regulations more useful to the subjects of this country. *He believed there was such a rooted opposition of interests of one description and the other, that if there was a Constitution, consisting of a House of Assembly, in which the parties might be nearly balanced, the consequence, at least for a long series of years, would be a great degree of animosity and a great degree of confusion.* It seemed to his Majesty's servants the most desirable thing, if they could not give satisfaction to all descriptions of men to divide the Province, and to contrive that one division should consist, as much as possible of those

who were well inclined towards the English Laws, and that the other part should consist of a decided preponderancy of the ancient inhabitants, who were attached to the French Laws. It was in Upper-Canada particularly that they were to expect a great addition of English inhabitants. The consequence was, that if it was not divided from the rest, the *Canadians* forming a majority of five to one, the grievance would be every year increasing, in proportion as the population increased. It was intended to give a *free Constitution* to Canada, according to *British ideas of Freedom*. This could not be done without a division of the Provinces, to prevent the clashing of opposite interests, which must otherwise necessarily ensue.

Many of the difficulties and serious inconveniences, even at that time foreseen by Mr. Fox—as likely to arise from this division of interests in the *CANADAS*, having been actually experienced, (to such a degree as to render necessary an appeal to the Imperial Parliament, on the part of Upper-Canada.) It is now proposed, (1822) to re-unite the Provinces under one Legislature, and, it is expected, that this important question will be finally determined in the next Session of the British Parliament.
