CANADA'S BILATERAL RELATIONS - SOME KEY STATISTICS

Attached you will find a selection of statistics covering certain of Canada's bilateral relations. These statistics, which were assembled by the Library, are intended to serve as a handy reference guide. Future editions will be developed and circulated annually by ACL. It is the Library's intention that this handbook be supplemented by a further volume containing a series of "country reports" which groups this same data on a country basis.

Reconciliation of U.S. - Canada Merchandise Trade
Statistics, 1980 - Advance Information

After completion of the reconciliation of the merchandise trade data for Canada and the U.S., Canada had an estimated \$1.4 billion (\$U.S.) surplus in 1980, up from \$0.6 billion in 1979. Published Canadian trade statistics show a 1980 deficit of \$0.2 billion (\$U.S.), \$1.6 billion less than the reconciliation figure; published U.S. statistics show a Canadian surplus of \$6.1 billion, \$4.8 billion higher than the reconciled figure.

Differences in the published figures of the two countries arise for several reasons, including the non-receipt of export documents, differences in definition and valuation of trade, inclusion of transportation charges, and differences in timing and the system of crediting trade to partner countries. The reconciliation process, which is done jointly by the two countries, allocates statistical discrepancies in published figures to these causes based on balance-of-payments principles.

BILATERAL TRADE (cont'd)

The largest reconciliation adjustment was the addition of \$4.9 billion (13.9%) to U.S. exports, representing non-receipt of export documents. In 1979, the non-response adjustment was \$4.5 billion or 13.6% of U.S. published exports. The equivalent adjustment for Canadian exports was \$1.2 billion, 2.8% of published Canadian exports, nearly double the 1979 value of \$614 million (1.6%). Other significant adjustments include a \$834 million reduction of U.S. imports to remove transportation charges, a \$635 million addition to U.S. imports representing merchandise trade transactions not in published U.S. statistics, and a \$710 million reduction of Canadian imports for goods priced above transaction value.

The U.S. measure of the Canadian surplus is consistently higher than the reconciled balance, while the Canadian measure is consistently lower. This occurs because of the underestimation of export statistics, largely because of non-filing of export documents and the overestimation of import statistics by recording higher than transaction values and including transportation costs. (However, in 1979 and 1980, U.S. imports have been understated because of the increased value of Canadian exports of electricity which is not defined as an import by the U.S.).

Rapprochement Canada/États-Unis des statistiques du commerce des marchandises, 1980 - Chiffres préliminaires.

Après rapprochement des statistiques du commerce entre le Canada et les États-Unis, l'excédent estimatif du Canada s'est élevé à 1.4 milliard de dollars (dollars américains) en 1980, comparativement à un excédent de 0.6 milliard de dollars en 1979. Les statistiques publiées par le Canada indiquaient un déficit de 0.2 milliard de dollars (dollars américains), soit 1.6 milliard de dollars de moins qu'après rapprochement, tandis que les statistiques des États-Unis faisaient état d'un excédent canadien de 6.1 milliards de dollars, soit 4.8 milliards de dollars de plus que le chiffre corrigé.

Les chiffres publiés par les deux pays diffèrent pour diverses raisons, notamment la non-réception de documents d'exportation, les différences de définition et d'évaluation des échanges, la prise en compte des frais de transport et les différences entre les périodes visées

ÉVALUATION (suite)

et les systèmes permettant d'attribuer les échanges commerciaux aux divers pays partenaires. Le processus de rapprochement, qui est établi en commun par les deux pays, répartit les écarts statistiques entre ces diverses composantes d'après les concepts de la balance des paiements.

La correction la plus importante a été une majoration de 4.9 milliards de dollars (13.9%) des exportations américaines attribuables à la non-réception de documents d'exportation. En 1979, cette correction avait été de 4.5 milliards de dollars, soit 13.6% des chiffres publiés pour les exportations américaines. Le redressement correspondant pour les exportations canadiennes s'établissait à 1.2 milliard de dollars, soit 2.8% des chiffres publiés, et près du double de la correction effectuée en 1979, qui s'élevait à 614 millions de dollars ou 1.6%. Parmi les autres redressements importants, mentionnons une réduction de 834 millions de dollars des importations américaines au titre des frais de transports, une addition de 635 millions de dollars aux importations américaines pour tenir compte des échanges commerciaux qui ne figurent pas dans les statistiques publiées des États-Unis et une réduction de 710 millions de dollars des importations canadiennes à l'égard des biens dont le prix inscrit était supérieur à la valeur de transaction.

La mesure calculée aux États-Unis pour l'excédent canadien est généralement supérieure au solde rapproché tandis que la mesure obtenue au Canada est régulièrement inférieure à ce chiffre. Ces écarts sont attribuables à la sous-estimation de statistiques d'exportation, due surtout à la non-présentation des documents d'exportation, et la surestimation des chiffres d'importation qu'entraînent l'inscription de prix supérieurs aux valeurs de transaction et la prise en compte des frais de transport. (Toutefois, en 1979 et en 1980, les importations américaines ont été sous-estimées par les États-Unis puisque ceux-ci ne définissent pas l'électricité, dont les exportations canadiennes avaient augmenté en valeur, comme une importation.)
