Technical and Bibliographic Notes / Notes techniques et bibliographiques

The Institute has attempted to obtain the best original copy available for filming. Features of this copy which may be bibliographically unique, which may alter any of the images in the reproduction, or which may significantly change the usual method of filming are checked below.

- Coloured covers / Couverture de couleur
- Covers damaged / Couverture endommagée
- Covers restored and/or laminated / Couverture restaurée et/ou pelliculée
- Cover title missing / Le titre de couverture manque
- Coloured maps / Cartes géographiques en couleur
- Coloured ink (i.e. other than blue or black) / Encre de couleur (i.e. autre que bleue ou noire)
- Coloured plates and/or illustrations / Planches et/ou illustrations en couleur
- Bound with other material / Relié avec d'autres documents
- Only edition available / Seule édition disponible
- Tight binding may cause shadows or distortion along interior margin / La reliure serrée peut causer de l'ombre ou de la distorsion le long de la marge intérieure.
- Blank leaves added during restorations may appear within the text. Whenever possible, these have been omitted from filming / Il se peut que certaines pages blanches ajoutées lors d'une restauration apparaissent dans le texte, mais, lorsque cela était possible, ces pages n'ont pas été filmées.
- Additional comments / Commentaires supplémentaires:

L'Institut a microfilmé le meilleur exemplaire qu'il lui a été possible de se procurer. Les détails de cet exemplaire qui sont peut-être uniques du point de vue bibliographique, qui peuvent modifier une image reproduite, ou qui peuvent exiger une modification dans la méthode normale de filmage sont indiqués ci-dessous.

- Coloured pages / Pages de couleur
- Pages damaged / Pages endommagées
- Pages restored and/or laminated / Pages restaurées et/ou pelliculées
- Pages discoloured, stained or foxed / Pages décolorées, tachetées ou piquées
- Pages detached / Pages détachées
- Showthrough / Transparence
- Quality of print varies / Qualité inégale de l'impression
- Includes supplementary material / Comprend du matériel supplémentaire
- Pages wholly or partially obscured by errata slips, tissues, etc., have been refilmed to ensure the best possible image / Les pages totalement ou partiellement obscurcies par un feuillet d'errata, une pelure, etc., ont été filmées à nouveau de façon à obtenir la meilleure image possible.
- Opposing pages with varying colouration or discolourations are filmed twice to ensure the best possible image / Les pages s'opposant ayant des colorations variables ou des décolorations sont filmées deux fois afin d'obtenir la meilleure image possible.

This item is filmed at the reduction ratio checked below / Ce document est filmé au taux de réduction indiqué ci-dessous.

10x	12x	14x	16x	18x	20x	22x	24x	26x	28x	30x	32x
-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----

The copy filmed here has been reproduced thanks to the generosity of:

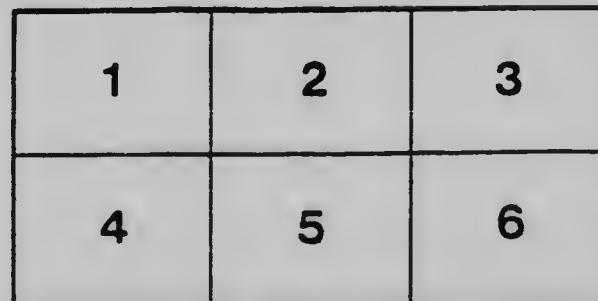

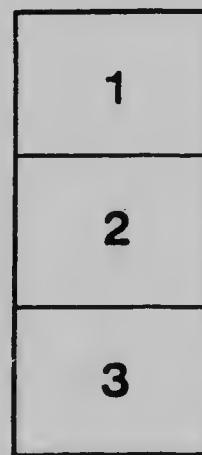

National Library of Canada

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol → (meaning "CONTINUED"), or the symbol ▽ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

Bibliothèque nationale du Canada

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole → signifie "A SUIVRE", le symbole ▽ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

...the time of the year when the sun is near the zenith. The air is
then very warm, and the heat of the sun is intense. This is
the time when the people are most exposed to the sun,
and when they are most liable to suffer from its effects.
The sun's rays are strongest at noon, and during the
afternoon, the heat becomes more intense, and the air
becomes more oppressive. In the evening, the heat
begins to decrease, and the air becomes more
refreshing. The sun's rays are weakest at sunrise and sunset,
but even then the heat is still considerable, especially
when the sun is low in the sky.

BULLETIN No. 142

MJLK

LABORATORY
OF THE
INLAND REVENUE DEPARTMENT
OTTAWA, CANADA

BULLETIN No. 142

MILK

OTTAWA, Sept. 24, 1907.

W. J. GERALD, Esq.,

Deputy Minister of Inland Revenue.

SIR,—Milk, which enters so largely into the food of people in health, and forms the almost exclusive food of infants and invalids, is without doubt, the most important single article of diet. When we take into account the ease with which it can be adulterated by skimming and watering, to say nothing of the use of preservatives, dyes, thickeners, and other modes of falsification, it follows that the control of milk production and distribution should receive the attention of the Department of Inland Revenue, as charged with the administration of the Adulteration Act.

This conclusion was evidently arrived at by the late Chief Analyst, Mr. Thomas Macfarlane, and the first official publication issued under his direction had reference to the establishing of a Standard for normal milk. Since October, 1887, when Bulletin No. 1 was issued, there have been 17 bulletins (including the present one) dealing with this subject, published by the Inland Revenue Department. Up to the present time, it has been found impracticable to define, legally, a standard milk. In order to aid in the fixing of such a standard, as well as to show that earnest efforts have been made by the departmental laboratory to secure trustworthy and sufficient data for such a step, I think it well to synopticize, as briefly as possible, the work recorded in departmental publications, during the past twenty years.

The subject of milk is dealt with in the following Bulletins, issued by this Department:—

No. 1 issued October, 1887.	No. 53 issued December, 1897.
" 2 " December, "	" 61 " January, 1899.
" 9 " June, 1889.	" 64 " May, 1899.
" 11 " October, "	" 74 " February, 1901.
" 17 " September, 1890.	" 20 " December, 1901.
" 21 " January, 1891.	" 93 " February, 1904.
" 28 " " 1892.	" 121 " June, 1906.
" 32 " March, 1893.	" 142 " September, 1907.
" 43 " January, 1896.	

Bulletin No. 1 contains a report upon 162 samples of whole milk, obtained in June, July and August, 1887, under expert supervision, from herds of not less than four cows. The following synopsis of results is of great interest and importance:—

	Nov. Scotia.	New Brunswick.	Quebec.	Montreal.	Ottawa.	Toronto.
Number of samples examined.....	32	11	20	33	29	37
Butter Fat—Highest.....	5·40	4·62	4·18	5·17	5·29	4·50
" Lowest.....	3·00	3·43	3·02	2·80	3·62	2·52
" Average.....	4·24	3·91	3·54	3·82	4·26	3·38
Non-fat solids.....	8·48	8·54	8·85	8·47	8·67	8·70
Total solids.....	12·72	12·45	12·39	12·20	12·93	12·08
Water.....	87·28	87·55	87·61	87·71	87·07	87·92

Based upon these results, the Chief Analyst suggested the adoption of the following constants for *Standard Quality Milk*:—

Total Solids.....	12 per cent.
Butter Fat.....	3·5 "
Solids other than fat.....	8·5 "

Bulletin No. 2 contains the results of analysis of 105 samples of market milk, as supplied to twelve towns and cities, in September 1887. Nine samples containing above 5·4 per cent fat, are classified as being "partly cream," the remaining samples show the following averages:—

City or Town.	Number of samples.	Water.	Fat.	Non-fat solids.	Total solids.
Halifax, N.S.....	12	88·22	3·51	8·27	11·78
Pictou, N.S.....	5	87·12	3·86	9·02	12·88
St. John, N.B.....	9	88·01	3·96	8·03	11·99
Quebec.....	17	87·84	3·94	8·22	12·16
Montreal.....	14	87·08	3·83	9·09	12·92
Sherbrooke.....	5	86·84	4·31	8·85	13·16
Ottawa.....	6	87·17	4·20	8·63	12·83
Kingston.....	6	88·70	3·15	8·15	11·30
Belleville.....	6	87·20	4·17	8·63	12·90
Toronto.....	5	88·04	3·52	8·44	11·96
Port Hope.....	5	87·74	3·60	8·76	12·26
Peterborough.....	6	88·01	3·87	8·12	11·90
Market Milk.....	96	87·60	3·82	8·49	12·31

Although this collection (from which all samples containing more than 5·4 per cent of fat have been excluded) includes nine samples which are adjudged as "skimmed" and twelve samples which are adjudged as "watered," the average content of butter-fat and total solids fully meets the standard set for genuine milk in Bulletin No. 1.

Bulletin No. 9 contains the results of analysis of 196 samples of market milk, collected in March and April, 1889. Omitting 5 samples which contained more than 5·4 per cent fat, and 41 samples found to be skimmed or watered, the remaining 150 samples give the following averages:—

Water.....	87·42 per cent
Butter-fat.....	3·79 "
Non-fat solids.....	8·79 "
Total solids.....	12·58 "

It therefore appears that the limit of 12 per cent for total solids, and 3·5 per cent for butter-fat, as proposed in Bulletin No. 1, cannot be regarded as too high for genuine milk.

Bulletin No. 11. This important report upon 58 samples of milk, obtained in May and June, 1889, is intended to meet the point raised by the Dominion Dalrymen's Association, that the standard of 12 per cent total solids, and 3·5 per cent fat proposed by Mr. Macfarlane, might be too high, so far as May and June milk was concerned; although satisfactory as regards the milk supply of other months.

Twenty four herds were examined, the average milk, morning and evening, being analyzed. Omitting one herd of pure Jerseys, whose milk averaged 5·54 per cent fat, and 15·08 per cent total solids, the mean results are:—

Water.....	87·38 per cent.
Butter-fat.....	3·66 "
Non-fat solids.....	8·96 "
Total solids.....	12·62 "

In this Bulletin there also appears the results of examining milk supplied to 16 cheese factories in the neighborhood of London, Ont. These milks include samples known to be skimmed or watered. The average results obtained are as follows:—

Water.....	87·42 per cent.
Butter fat	3·80 "
Non-fat solids	8·78 "
Total solids.....	12·58 "

When samples known to be skimmed or watered are omitted, these averages become:—

Water.....	87·26 per cent
Butter fat	3·93 "
Non-fat solids	8·81 "
Total solids.....	12·74 "

As a conclusion from these results, Mr. Macfarlane formally recommends the adoption of 3·5 per cent fat and 12 per cent total solids as a legal minimum for milk of standard quality.

Bulletin No. 17 gives the results of analysis of 165 samples of milk collected in the smaller towns of Ontario in July and August, 1890.

Judged on the basis of 3·5 per cent fat and 12 per cent total solids, the results are as follows:—

	Samples.	Per centage.
Adulterated or inferior.....	68	41
Genuine	97	59
Total.....	165	100

Bulletin No. 21 contains the result of analysis of 124 samples of milk from town supplies in Ontario and Manitoba in November, 1891. Judged on the basis of the proposed standard (3·5 per cent. fat and 12 per cent. solids) these were found to be as follows:—

	Analyst.	BELOW STANDARD.		GENUINE.		Total Samples
		Samples.	p. c.	Samples.	p. c.	
Towns in Ontario.....	Ellis.....	35	45	43	55	78
Towns in Manitoba.....	Kenrick.....	10	22	36	78	46
		45	36	79	64	124

Professor Ellis expresses the opinion that it is impossible to assert that a milk has been adulterated with water, if the solids not fat are higher than 8 per cent; or that it has been skimmed if the fat exceeds 2.5 per cent.

Professor Kenrick questions the propriety of adopting any single standard for the whole of Canada.

Bulletin No. 28 gives the results of examination of 133 samples of milk collected in October, November and December of 1891 in the Kingston and London districts of Ontario and in Manitoba and the Northwest. The results may be summarized as follows:—

Analyst.	BELOW STANDARD.		GENUINE.		Total.	
	Samples.	p. c.	Samples.	p. c.		
	—	—	—	—	—	
Kingston district.	Valade	8	30	19	70	27
London district	Harrison	11	20	43	80	54
Manitoba, &c.	Kenrick	10	20	42	80	52
		29	22	104	78	133

The classification has reference to a standard of 3.5 per cent butter-fat and 12 per cent total solids.

Bulletin No. 32. This contains the results of analysis of 186 samples of milk collected throughout Nova Scotia, Quebec and Ontario in August, September and October, 1892. The results are summarized as follows:—

	BELOW STANDARD.		GENUINE.		Total.
	Samples.	p.c.	Samples.	p.c.	
	—	—	—	—	—
Nova Scotia	21	50	21	50	42
Quebec	19	31	43	69	62
Ontario	20	35	55	65	84
	60	37	119	63	188

The classification is based upon a standard of 3.5 per cent fat and 12 per cent total solids.

Bulletin No. 43. This gives the result of analysis of 251 samples of milk collected throughout the Dominion during October, November and December of 1895. These are classified as follows:—

Genuine	181	72 per cent.
Watered	11	"
Partly skimmed	7	"
Under average in total solids	15	28 "
" cream	18	"
" non-fat solids	19	"
Total	251	100

The following important note, by Mr. Macfarlane, occurs in the text of this Bulletin:—

'For the information of the public, and in order to obtain greater precision hereafter, it may be well to explain the manner in which I have made use of the above expressions, as regards whole milk. The term *watered* is used, when the non-fatty

solids are under 8 per cent, and the butter percentage is below the average (3·5), or at least, not above it. When the "non-fat solids" show the normal percentage (8·5) and a lower amount of fat than 3 per cent, it is characterized as "partly skimmed". When a sample falls below 2 per cent butter fat, the word "skimmed" is used. The expression "under average" has been used for the purpose of indicating those samples whose adulteration cannot be pronounced upon with certainty, but which are, in point of quality, inferior to those marked genuine. "Under average in total solids" is the expression used when the latter fall below 12 per cent and the sample cannot be positively characterized as "watered". When the fat ranges between 3 and 3·5 per cent, the non-fat solids being normal, the sample is said to be "under average in cream"; and when the non-fat solids fall below 8·25 per cent the sample is said to be "under average" so far as regards the latter constituents.'

Bulletin No. 53. This Bulletin gives the results of analysis of 178 samples, collected throughout the Dominion in September and October 1897. The following is a synopsis:—

	Samples.	Per cent.
Genuine	115	65
Adulterated	19	11
Under average	44	24
	178	100

The classification is based upon the explanations given in Bulletin No. 43.

Bulletin No. 61 contains the results of examination of 74 samples of milk, obtained in towns of Ontario, in October, November and December of 1898. These were found as follows:—

	Samples.	Per cent.
Genuine	54	73
Adulterated	3	4
Under Average	17	23
	74	100

Bulletin No. 64 contains the results of analyzing 29 samples of milk, taken in Montreal, St. Hyacinthe and Sherbrooke, Que., in January and February, 1899.

	Samples.	Per cent.
Genuine	21	72
Adulterated	8	28
	29	100

This Bulletin also contains a study of the acidity of milk by A. L. Touachot; and some work on the determination of Lactose and Casein.

Bulletin No. 74 contains the results of analysis of 131 samples, obtained throughout the Dominion, in November and December, 1900.

	Samples.	Per cent.
Genuine	104	79
Adulterated &c	27	21
	131	100

Preservatives (especially borates) were looked for. None were found.

Bulletin No. 80 contains the results of analysis of 182 samples of milk, taken throughout the Dominion, in September and October, 1901.

	Samples.	Per cent.
Genuine	116	64
Adulterated	7	4
Doubtful	59	32
	182	100

In this Bulletin, the Chief Analyst gives more precise meaning to the term "Under average in non-fat solids"; applying it only in cases where the solids not fat are under 8·25 per cent; but the butter-fat above 3·75 per cent, and the total solids, not under 12 per cent.

Bulletin No. 93 gives the results of analysis of 224 samples of milk, collected in November and December of 1903, throughout the Dominion.

	Samples.	Per cent.
Genuine	159	71
Adulterated	23	10
Under average.....	42	19
	224	100

Bulletin No. 121. This Bulletin deals with the inspection of skim-milk, buttermilk and cream, as well as whole milk. Results of analysis of 332 samples of whole milk collected throughout the Dominion in April and May, 1906, are as follows:—

	Samples.	Per cent.
Partly cream.....	13	4
Genuine	189	57
Adulterated	45	14
Doubtful.....	85	25
	332	100

Comment.

Bulletins 1 and 11 contain the results of analysis of a very large number of authentic milks; representative of 165 herds of cows, containing from 4 to more than 50 cows each. The period represented, includes the months of May, June, July and August. The following resumé, gives the results at a glance:—

Locality.	No. of Herds.	No. of Cows.	Average Fat.	Average Total Solids.
Bull. No. 1	Nova Scotia	32	3·24	12·72
	New Brunswick	11	3·91	12·45
	Quebec	20	3·54	12·39
	Montreal and vicinity.....	33	3·32	12·29
	Ottawa and vicinity	9	4·26	12·93
Bull. No. 11, London and vicinity.....	Toronto and vicinity.....	37	3·38	12·06
	London and vicinity.....	23	3·66	12·62
		165	3·80	12·62
		2,067+		

About 2,500 cows are represented in this synopsis and it is evident that, so far as averages are concerned, the minimum limits of 3·5 per cent fat and 12 per cent solids, are fully justified.

Closer inspection of the results shows that 10 herds (comprising about 118 cows) yielded milk containing less than 3 per cent of fat. (Mean fat = 2·78 per cent) and less than 12 per cent total solids (mean total solids = 11·36 per cent).

The lowest butter-fat given by any herd is 2·52 per cent. This is from a herd of 10 cows in the vicinity of Toronto; and it is noteworthy that the Toronto district shews the poorest quality of milk, an average for 37 herds, numbering about 400 cows, being 3·38 per cent fat, and 12·08 per cent total solids.

Thirty-five herds (numbering about 380 cows) show butter-fat between 3 and 3·5 per cent, the average for this lot being 3·2 per cent. The total solids average about 11·8 per cent.

It will be noted that the work recorded in Bulletins 1, 2, 9 and 11, is made a basis for determining the limits, below which milk should be regarded as "adulterated" within the meaning of the Act. As a result of this study, the late Chief Analyst concluded that 3·5 per cent of butter-fat and 12 per cent. total solids was a reasonable standard. Individual cows failed to meet this standard; and, indeed, 45 out of 142 herds, reported in Bulletin No. 1, yielded milk containing less than 3·5 per cent fat; ten (10) of these falling below 3·0 per cent. The fact that the remaining herds yielded milk so much above 3·5 per cent. as to bring the whole up to 3·86 per cent, was held to prove that the average of 3·5 per cent fat could easily be reached by any dairyman who properly selected and properly cared for his stock; and that the dairyman who purposely selected his cows with regard to quantity of milk, and without reference to quality, should not be permitted, unchallenged, to compete with those who, (constituting the large majority in every province of the Dominion) furnished milk which fully met the requirements of 3·5 per cent fat, and 12 per cent solids.

The work in subsequent bulletins consists of the analyses of market milks, interpreted in terms of the recommended standard.

The following table presents a synopsis of the results, and is important as showing how the adoption of a standard of 3·5 per cent fat and 12 per cent solids, affects the classification of market milk, as sold in Canada.

Number of Bulletin.	Number of Samples.	Genuine (per cent.)	Doubtful (per cent.)	Adulterated (per cent.)
17.	165	59	19	22
21	124	64	26	10
28	133	78	7	15
32	184	63	22	15
43	251	72	21	7
53	178	65	24	11
61	74	73	23	4
64	29	72	11	17
74	131	79	18	3
80	182	64	32	4
93	224	71	19	10
121	332	57	29	14
	2,011	66	23	11

INSPECTION of 1907.

The work recorded in the tables now submitted, has been done upon 343 samples of whole milk, collected in July and August of this year. They represent all the inspectorial districts of Canada, with the exception of Manitoba.

I have applied to the interpretation of the analytical results the same standards for fat, total solids, and non-fat solides which my predecessor used in work of this kind. The following table shows, at a glance, the general conclusions.

Inspectorial district.	Total samples.	Genuine		Skimmed or partly skimmed.	Watered.	Doubtful.
		Normal.	Abnormal.			
Nova Scotia.....	30	21	4	1	4	0
P. E. Island.....	15	9	2	3	0	1
New Brunswick.....	30	22	5	1	2	0
Quebec.....	30	10	10	8	1	1
St. Hyacinthe.....	30	19	4	6	1	0
Montreal.....	30	9	20	1	0	0
Ottawa.....	30	19	11	0	0	0
Kingston.....	30	15	15	0	8	2
Toronto.....	30	3	10	7	0	0
London.....	28	15	13	0	0	0
Calgary.....	30	27	3	0	0	0
British Columbia.....	30	2	14	9	5	0
	343	171	111	36	21	4
			282			

The average percentage of genuine samples is 82, and is distinctly higher than at any previous inspection. The percentages of genuine samples for each district in regard to the total number of samples collected in that district, are as follows:—

District.	Samples examined.	Genuine.
Nova Scotia.....	30	83 per cent.
P. E. Island.....	15	73 "
New Brunswick.....	30	90 "
Quebec.....	29	69 "
St. Hyacinthe.....	30	77 "
Montreal.....	30	97 "
Ottawa.....	30	100 "
Kingston.....	30	100 "
Toronto.....	28	43 "
London.....	30	100 "
Calgary.....	30	100 "
British Columbia.....	30	53 "

It thus appears that the districts of Toronto and British Columbia stand out prominently as those in which the milk supply is of very low quality.

In conclusion, I am of opinion that the standard proposed by the late Chief Analyst in 1887, is a reasonable one, and can easily be met by any dairyman who pays proper attention to his herd. Nor can it be urged that this standard is inapplicable to the summer months. Evidence to the contrary is furnished not alone by the collection specially made for this purpose in 1889 (Bulletin No. 11), but by many subsequent collections, including that now reported.

It is, however, undeniable that some individual cows, and even some herds, yield milk containing less than 3·5 per cent fat. We have on record, ten herds (118 cows) whose milk averaged only 2·78 per cent, and one herd of 10 cows gave only 2·52 per cent fat.

These herds were in Toronto district (1889) and it will be noted that it is in Toronto district that the poorest showing occurs, in the present inspection. Dr. Ellis, Public Analyst at Toronto, has recorded his opinion that it is impossible to assert that a milk has been adulterated with water, if the *solids not fat* exceed 3 per cent, or that it has been skimmed, if the fat exceeds 2·5 per cent. This opinion is certainly justified, if certain herds in the Toronto district may be included among normal milk producers.

In the face of what has been recorded I am compelled to admit that while I believe the standards for milk recommended by the late Chief Analyst to be reasonable, and already attained throughout the greater part of Canada, it is impracticable that they could be enforced by legal enactment over the whole of Canada. Without going so far as to say that the cow must herself be consulted in the matter of quality of milk, it is undeniable that the existence of many herds, whose average milk shews less than 3 per cent of fat, and less than 11·5 per cent total solids, makes the universal adoption of a three and a half per cent standard impossible.

It remains, however, quite possible for towns and cities to fix local standards for their own milk supplies. And this, it seems to me, is the proper course to be pursued, at least for the present. In an appendix, I have given a list of cities and towns, in which by-laws regulating the quality of milk which may be sold therein, already exist. That the low quality of milk now produced in certain districts, could be raised to the proposed standard quality, by proper care on the part of dairymen, goes without saying. The natural incentive to needed improvement is, quite evidently, that the cities and towns purchasing such milk, should insist upon their supplies having a fixed minimum value in fat and total solids. The local authorities must of course, be charged with the responsibility of seeing that such enactments are enforced.

The work which this department can do, in aiding the improvement of this most important food substance, is apparently limited to an occasional inspection, throughout the whole country, with a view to ascertaining the general condition of milk supplies. To fix a lower standard than 3·5 per cent fat, and 12 per cent solids, would be to give endorsement to a quality of milk lower than the average quality now produced. I have already given my reasons for believing that it would be impracticable at present to enforce a standard of 3·5 per cent fat, and 12 per cent total solids, over the whole Dominion.

It is to be noted, in conclusion, that the work herein summarized has regard to the nutritive value of milk, i.e. its value as a food. But there is another aspect of the milk problem which ought not to be ignored. The cleanliness of market milk is second only in importance to its nutritive value. Apart from the disgusting character of the impurities which must be present in milk, unless the most scrupulous attention is paid to its production, the danger from disease germs present in it is very great indeed. It is not going too far to say that (omitting dessicated foods) just in proportion to the nutrient value of the material, is its suitability as a medium for the development of microbial life. It is at once apparent that milk may become a most efficient propagating medium for disease germs. The following quotation is from a recent publication of the Bureau of Animal Industry, Washington, D.C.

"EVIDENCE THAT MILK IS A CAUSE OF DISEASE."

1. It has been shown by the most painstaking investigation, extending over a long period of years, that certain diseases in the animal are communicable through the medium of the milk, this being especially true of tuberculosis, foot-and-mouth disease, anthrax and cowpox; and that diseases like garget, gastro-enteritis and septic fevers in the cow will render the milk morbid to men.

2. It has been shown that animals which have fed on poisonous forage plants or have been treated with strong medicaments are disqualified from producing a pure or sound milk.

3. During the past twenty-five years there have been published in the different medical journals the histories of 195 epidemics of typhoid fever, 99 of scarlet fever and 36 of diphtheria, all traceable to the milk supply.

In the recent exhaustive investigation conducted by the highest health authority in this country, viz., the United States Bureau of Public Health and Marine-Hospital Service, the commission definitely traced 85 of the 866 cases of typhoid fever (about 10 per cent) in the District of Columbia to the use of infected milk.

4. It has been shown in a former report that in the District of Columbia about one fourth, and in the country at large about one sixth, of all the children born perish before the completion of the first year; that nearly one-half of the deaths in children under 1 year of age are caused by gastro-enteric diseases, chiefly infantile diarrhoea; and that of the 54,047 infantile deaths which have been investigated at home and abroad with reference to feeding, 86·6 per cent had been artificially fed, all of which points with more than mere suspicion to the fact that the morbid agent is introduced into the body with the food (cow's milk).

This phase of the milk question must evidently be left to local action.

I have the honour to be, Sir,

Your obedient servant,

A. MCGILL,

Chief Analyst.

APPENDIX TO BULLETIN 142.

BY-LAWS TO LICENSE AND REGULATE MILK VENDORS IN THE FOLLOWING CITIES :

Halifax—No regulations so far.

Fredericton—No regulations so far.

Charlottetown—An inspector is appointed; inspection of milk as delivered; license fee of \$15 a year; penalties, \$30 or 30 days jail.

St. John, N.B.—Inspection of herds; inspection of premises; inspector appointed; inspection of milk as delivered; vendor shall notify of any disease in family or herd; penalties \$40 and license cancelled. Shall deliver statement of name and address, source or sources of milk supply, number of cows in his possession, quantity of milk disposed of, situation of dairies. Shall not offer skimmed milk unless asked for, and labelled with letters if not less than 2 inches long. Shall furnish certificate from Veterinary Surgeon that cows are free from disease, at least once a year.

Quebec—Has about the same regulations as St. John; but the license fee is only \$1 per annum; and there is a standard for fat of 3 per cent., 12 per cent. total solids and sp. gr. of 1029 to 1033 at 60° F. Penalties are \$20.

Montreal—Same as Quebec, but no specification for the sale of skimmed milk.

Hull—Same as above, but the standard for butter-fat is 3·25 and penalties from \$1 to \$50.

Ottawa—Same as Quebec, but 3·5 butter fat.

Kingston—3 per cent. butter fat and 12 total solids; penalty, \$1 to \$50, otherwise the same as Ottawa.

Toronto—3 per cent. butter fat and 12 per cent. total solids; inspector appointed and inspection of milk as delivered.

Brantford—3·5 butter fat and 12 total solids, and same as Toronto.

Hamilton—No standards, but has an inspector appointed for herds, premises, and milk as delivered, and a license fee of \$1 per annum.

Winnipeg—By-laws are in the hands of the printer.

Calgary—3 per cent. butter fat, and same as Hamilton.

Vancouver—Same as St. John, N.B.; 3 per cent. butter fat and a license fee of \$5 per annum and penalties from \$1 to \$100.

Regina—Has about the same regulations as St. John; the license fee is \$5 per annum; and there is a standard of 3·5 per cent for butter fat and 12 per cent. Total solids. Penalties are \$10 a day for each day after having been notified by the Health officer.
