§ III. COURSE OF STUDY.

ORDINARY COURSE FOR THE DEGREE OF B. A.

First Year.—Classics; French or German; English Literature; Pure Mathematics; History; Elementary Chemistry.

Second Year.—Classics; French or German; English Literature; Logic; Pure Mathematics; Botany.

Third Year.—Classics; English Literature; Mental and Moral Philosophy and Rhetoric; Mixed Mathematics; Experimental Physics; Zoology.

Undergraduates are required to study either French or German for two years, (viz., in the First and Second Years,) taking the same language in each year. Any student failing to pass the Examination at the end of the second year, will be required to pass a Supplemental Examination, or to take an additional Session in the Language in which he has failed. In addition to the obligatory, there are other Lectures, attendance on which is optional.

The Lectures in Modern Languages will be so arranged that Students competent and desirous to take in the same year the Lectures in French and in German may do so.

Students who intend to join any Theological school, on giving written notice to that effect at the beginning of the First Year, may take Hebrew instead of French or German.

The Faculty may permit any student to take Spanish instead of French or German.

Undergraduates are arranged according to their standing, as Students of the First, Second, Third, and Fourth Years; and, are required to attend all the Courses of Lectures appointed for their several years, under the regulations as to attendance and conduct stated in § VII. The only exceptions are those in favour of Honour and Professional Students stated below.

HONOUR COURSES.

At the examination for the Degree of B. A., Honours are given in the following subjects, for which special Honour Courses are provided:—(For details see under § X.)

1. *Classics.*
2. *Mathematics and Physics.*
3. *Logic and Mental and Moral Philosophy.*
4. *English Language, Literature and History.*
5. *Natural Science.*

Students taking B. A. Honours in any of the above Courses may omit two of the ordinary subjects in the Degree Examination, under the conditions stated in § IV. 4.

In Mathematics and Physics, Honours are also given in the First, Second, and Third Years, and in Classics in the Third Year.

§ IV. EXAMINATIONS.

COLLEGE EXAMINATIONS.

There are two examinations in each year; one at Christmas, and the other at the end of the Session. In both of these, Students will be arranged according to their answering, as 1st Class, 2nd Class and 3rd Class.

Students who fail in any subject in the Christmas Examination, are required to pass a Supplemental Examination in that subject before admission to the Sessional Examinations.

Students who fail in one subject in the Sessional Examination, are required to pass a Supplemental examination in that subject. Should they fail in this, they will be required in the following Session to take the Lectures and pass the Examination in the subject in which they have failed, in addition to those of the ordinary Course, or to pass the Examination alone without attending Lectures, at the discretion of the Faculty

Failure in two or more subjects at the Sessional Examinations involves the loss of the Session. The Faculty may permit the Student to recover his standing by passing a Supplemental Examination at the beginning of the ensuing Session. For the purposes of this regulation, Classics and Mathematics are each regarded as two subjects.

The time for the Supplemental Examinations will be fixed by the Faculty; and such Examination will not be granted at any other time, except by special permission of the Faculty, and on payment of a fee of \$5.

Students entering for practical purposes will be required only to satisfy the Professor of their fitness for the studies of the class.

Candidates for Honours will be expected to attain such proficiency as to be able to undertake original investigations, in some at least of the subjects of study.

The Lectures will include:—

1. An advanced course in General Geology and Palæontology, in connection with which the Students will be required to read Dana's Geology and Owen's Palæontology.
2. Methods of observation and of Conducting Geological surveys. Applications of the science to Mining, Engineering and Agriculture.
3. Canadian Geology, in connection with which the Students will read Logan's Report of the Geological Survey of Canada, and Dawson's Acadian Geology.
4. Practical Palæontology and determination of species; with books of reference from the College Library, and specimens from the Museum.
5. Excursions for Field work will be undertaken when practicable.

In addition to the above, the Student will be examined in any two of the following subjects:

1. The Systematic part of Botany, as in Gray's "Text Book" and "Manual," and specimens illustrative of these books from the Museum.
2. Owen's Lectures on the Invertebrate Animals, and specimens illustrative thereof from the Museum.
3. Dana's Mineralogy, and specimens illustrative thereof from the Museum.

§ XI. LIBRARY, MUSEUM, APPARATUS AND OBSERVATORY.

I. THE LIBRARY.

The Library of the Faculty of Arts contains about 6,000 volumes of standard works, selected with especial reference to the wants of Professors and Students, and open to their use during the Session.

The most important addition recently made to the Library is the "Redpath Historical Collection," consisting of 554 of the more rare and valuable works relating to English History.

(The above statement does not include the Library of the Medical Faculty which contains upwards of 4,000 volumes.)

II. THE MUSEUM OF NATURAL HISTORY.

1. ZOOLOGY. In this department the Museum contains a general collection of type specimens, illustrating the Orders and characteristic Genera of the Animal Kingdom, the whole arranged and labelled in such a manner as to correspond with the College course on the subject. There are also the following special collections.

1. The Carpenter Collection of Shells, being the general collection of Dr. Philip P. Carpenter, presented by him to the University, and shortly to be arranged in a separate room.

2. The Carpenter Collection of Mazatlan Shells.

3. The Couper Collection of 2,400 Canadian Insects.

4. Collections of Canadian Fresh water and Land Shells.

2. BOTANY. The Herbarium consists of the Collection of the late Dr. Holmes, of Montreal, presented by him to the University; and with the additions recently made to it, affording a nearly complete representation of the Flora of Canada. There are also collections of European, Arctic and Alpine Plants, and of specimens of Woods, Fungi, &c.

3. GEOLOGY AND MINERALOGY.—The general collection consists of a series of the characteristic Fossils of all the great geological periods, with additional suites of specimens, illustrating in greater detail the formation represented in Canada. There is also an extensive collection of Rock specimens, and collections are being formed representing the principal Mineral Regions of Canada.

The Mineralogical Cabinet consists principally of the "Holmes Collection," containing about 2,000 specimens of Canadian and Foreign Minerals. A large portion of these are displayed in glass cases for the use of students, under the arrangement of Dana's Manual of Mineralogy.

All of the above Collections are used to illustrate the lectures, or are open to the inspection of students, who are also entitled to access to the large and valuable collections of the Natural History Society of Montreal.

III. PHILOSOPHICAL APPARATUS.

The value of the Apparatus is about \$4000. Of this more than two thousand dollars' worth has been lately added by means of a personal subscription amongst some of the Governors. The collection is now very valuable for purposes of illustration in the departments of Mathematical and Experimental Physics. Besides instruments to illustrate Mechanics, (Statics and Dynamics) and Optical instruments, such as Microscopes, a Telescope, Sextant, &c., there is a good collection for Hydrostatics and Pneumatics, another for Heat, and a very full collection for Magnetism and Electricity, (Statical and Dynamical) including Electro-magnetism, Magneto-electricity, Dia-magnetism, Thermo-electricity, the Measurement of Electric Resistance. The collection for Light from Duboscq of Paris, besides apparatus illustrative of the common phenomena of optics, includes the best instruments for exhibiting on a large scale with the aid of the electric light the phenomena of Interference, Diffraction, Polarization and Double Refraction. There is a good collection for Sound (made by Koenig). The apparatus for Dynamical Electricity and Heat has been made by Messrs. Elliot Brothers, of London, makers of the apparatus used by the Committee on Electrical Standards of the British Association for the Advancement of Science.

IV. CHEMICAL LABORATORY.

The Laboratory is furnished with the Apparatus, Specimens and Chemical Reagents necessary to illustrate the class lectures in Chemistry; and is also fitted up with all the necessary appliances for the work of a class in Practical Chemistry and for Chemical Analysis.

V. METEOROLOGICAL AND MAGNETIC OBSERVATORY.

The Basement of the Building is devoted entirely to the observations on Terrestrial Magnetism.

The Ground Story and Leads are the portions of the Building devoted to Meteorological observations.

The Transit tower is for the purpose of furnishing time to the City, and to the Ships in the Harbour, and is connected by Electric Telegraph with a "Time Ball" at the wharf. Connection by Electric Telegraph having also been established between the Observatory and the Government Buildings at Ottawa, mean time is furnished daily at noon, and made known there by the firing of a Cannon.

The principal Meteorological Instruments are: Thermometers for determining the Temperature of the Air; Barometers for ascertaining the atmospheric pressure; Psychrometers for the purpose of determining the Elastic force of Aqueous Vapour, the relative Humidity and Dew Point; Instruments for recording the Solar and Terrestrial Radiation. Rain and Snow Gauges for indicating the amount and duration of Rain and Snow; Ozonemeter for recording the amount of Ozone.

The direction and velocity of the wind are registered by a modification of Dr. Robinson's Anemometer.

Observations on Storms, Auroras, Haloes and most of the Natural Phenomena which mark the variation of Climate are duly recorded.

The Instruments in the Basement of the Building are for determining the Magnetic Elements; and consist of, (1) a Declinometer for measuring the Declination or Variation of the Magnet; (2) an Unifilar Magnetometer consisting of an apparatus for deflection and vibration, for ascertaining the horizontal Magnetic force; (3) an Inclinometer or Dip-needle (No. 30 used in the Magnetic Survey in Great Britain) for showing the Inclination or Dip. From these observations are reduced the absolute value of the Magnetic Elements.

The whole are under the supervision of Professor Smallwood, M. D., LL.D., D. C. L.

Matriculation Examiner of the Faculty,—Professor H. ASPINWALL HOWE, M.A.

The thirty seventh Session of the Medical Faculty of the McGill University will be opened on Tuesday, 2nd November, 1869 : with a general introductory Lecture at 11 A.M. : the regular Lectures will commence on Wednesday the 3rd Nov. at the hours specified in the time table, and be continued during the six months following.

The class tickets for the various courses are accepted as qualifying candidates for examination before the Universities and Colleges of Great Britain and Ireland, and also before the Medical Boards of the Army and Navy.

To meet the circumstances of General Practitioners in British North America, where there is no division of the profession into Physicians and Surgeons exclusively, the degree awarded upon graduation is that of "Doctor of Medicine and Master in Surgery." This designation is also appropriate, as it agrees with the general nature and character of the previous curriculum demanded of the candidates for this double rank, as is fully specified hereafter. The degree is received by the College of Physicians and Surgeons of Lower Canada.

To intending students desirous of information upon the best man-

ner of pursuing their studies, the following suggestions are made by the Faculty :—

(1.) Exclusively of general education, professional reading for some time previously to matriculation is advised as a preparation, whereby familiarity with technical terms will be gained, and an insight obtained into the subjects to be brought under notice during lectures.

(2.) Though three years constitute the shortest time required for College attendance, yet the student is at liberty to extend this as much farther as he pleases; the addition of a year, or even two, is considered to be a great benefit, for it obviates the crowding of branches within too brief a term, and permits of a more extensive attainment of the topics they embrace.

(3.) Attention is recommended to be given during the first Session to the primary branches entirely; during the Second Session an increase is proper, and two of the final courses may be profitably conjoined with such of the antecedent as are required; while during the remaining period further advance is to be made by completing the curriculum required of the candidate for graduation. Clinical courses should not be taken out during the first Session.

Matriculation is necessary every Session: it is required upon entrance or as nearly afterwards as possible, and always before any class tickets are procured. The time fixed for closing the Register is annually in the month of December. Class tickets are payable in advance, and if not taken out within the prescribed period of the current session, will not be granted after its expiration.

The ample and varied means which are placed at the disposal of the student by this school, together with the large hospitals in connection with it, are briefly referred to in the following pages.

COURSES OF LECTURES.

The number of Professors in the Faculty is nine; the number of Classes, ten; two of the classes (often conjoined in European Schools) being held by one Professor.

1. ANATOMY.—[Prof. Scott]—The fresh subject is chiefly employed in the illustrations of the Lectures in this branch, aided however, by dried preparations, wax models, plates, full size of life, &c.

2. CHEMISTRY.—[Prof. Craik]—Inorganic Chemistry is fully treated; and a large portion of the course is devoted to Organic Chemistry and its relation to Physiology. The branches of Physics bearing upon or connected with Chemistry, also engage the attention of the class. For experimental illustration, abundant apparatus is possessed by the Professor, among which may be enumerated, a powerful Air Pump—Oxy-Hydrogen Microscope—Polariscope—extensive series of Crystal models—Electrical and Galvanic apparatus, &c., &c.

3. MATERIA MEDICA.—[Prof. Wright]—This course is illustrated from a cabinet of Pharmacological objects; by plates of Medicinal Plants, [Wagner, Roque, Stevenson and Churchill]—by dried specimens; by carefully prepared Microscopical objects, &c., &c. Analytical experiments with the ordinary re-agents are also shown; and diagrams with other illustrations, are used. *

4. INSTITUTES OF MEDICINE.—[Prof. Fraser]—In this course are comprised *Histology, General Pathology, and General Therapeutics*. The minute Structure and Composition of the various Organs, and the Fluids and Tissues of the body in health and disease, are explained and illustrated by Microscopic Preparations, Plates and Preparations from the Museum.

5. PRACTICE OF MEDICINE.—[Prof. Howard]—The extensive series of plates contained in the Library, (Lebert, Cruveilhier, Carswell, Hope, Alibert, Willan, Bateman, &c., &c.) will be employed; also Morbid preparations and models of diseased parts.

6. SURGERY.—[Prof. Campbell]—Divided into Principles and Practice, including Surgical Anatomy and Operative Surgery, exhibited on the subject. Quain's large plates, Maclise, Dalrymple, &c. The various surgical instruments and apparatus exhibited, and their uses and applications explained and practically illustrated.

*The Professor's herbarium has been enriched during the present year, 1869, with a number of beautifully prepared specimens of medicinal plants indigenous to the Ottawa country,—the gift of Dr. Sidney P. Cooke, Ottawa, formerly a member of the class and one of this year's graduates, by whom they were collected and mounted.

7. MIDWIFERY.—[Prof. McCallum]—Including diseases of females and infants, illustrated by a series of drawings on a large scale; by humid preparations; by models in wax; and by the use of the artificial Pelvis.

8. MEDICAL JURISPRUDENCE.—[Prof. Fenwick]—Includes Toxicology—the modes of testing for poisons are exhibited, and post-mortem appearances illustrated by plates—Insanity, Public Hygiene, and Medical Police are touched upon.

9. CLINICAL MEDICINE.—[Prof. Drake]—Taught by lectures and at the bedside—Physical Diagnosis taught practically, and each pupil invited to take part in it. Examinations of the urine, chemically and microscopically explained and illustrated.

10. CLINICAL SURGERY.—[Prof. Fenwick]—Taught in similar manner. For both these classes ample material is afforded by the cases at the Montreal General Hospital.

11. BOTANY AND ZOOLOGY.—[Prof. Dawson]—In addition to the above classes, Students are required to attend one course of Botany, on which subject separate Lectures are delivered to Medical Students. Medical Students will also have access to the Lectures in Zoology in the Faculty of Arts. For details see announcement of the Faculty of Arts.

Prizes will be awarded at the end of each Session, to Students in Botany and Zoology, of the class of the previous Session, for the best *Named Collections* illustrative of the Flora of Canada or of Fossil Invertebrata, Insects or Marine Invertebrata. The collections, or duplicates of them, to remain in the College Museum.

LIBRARY AND MUSEUM.

The Library contains upwards of 4,000 volumes, including the most useful books of reference, as well as the most elementary ones: the works of the older authors as well as the most recent. It is open to the Students without charge, under necessary regulations for the care of the books. The museum contains a large number of preparations, chiefly Pathological; also, wax and papier maché models.

Faculty of Law.

The Principal (ex officio.)

Professors---BADGELY,
ABBOTT,
TORRANCE,
LAFRENAYE,
LAFLAMME,
CARTER.

Lecturer,—TRENHOLME.

Dean of the Faculty,---HON. J. J. C. ABBOTT, Q.C., D.C.L.

The several courses of Lectures in the Faculty of Law comprise every branch of Legal Study.

The Educational Officers of the Faculty have felt that the Law of this Province, though in many of its details purely local, retains as its leading characteristics, the noble and imposing features of the civil law, and that the principles established in the Roman jurisprudence, still form the groundwork of many of its departments. The Lectures, therefore, though prepared with especial reference to the Law of Quebec, have been, as far as consistent with their primary object, divested of any purely sectional character, and are made to inculcate such comprehensive principles, as form, to a great extent, the basis of every system of jurisprudence.

It is considered that this system will afford to students of the Laws of Quebec, a better foundation for their subsequent studies, and tend to give them a more extended and comprehensive grasp of legal subjects, than a course of instruction conducted solely with reference to local law; while it is hoped, in view of the increased importance which the study of Roman law is everywhere assuming, that the advantages offered, and the mode of education adopted by this Faculty, will open to it an extensive field of usefulness.

The promulgation of the Civil Code of Lower Canada marks an important epoch in the history of the laws of the now Province of Quebec.

It is the intention of the Professors, so far as practicable, to explain to the Students, the more important articles of this Code (2615 in number) in the complete course of study as indicated below.

The promulgation of the Code of Civil procedure, marks another important epoch in the history of our laws. Attention will be specially drawn to its provisions in this course.

The enactment of these Codes as law, it is believed, will lighten much the labors of professors and students, who need no longer view the study of the profession as a vast and ill-digested whole, wanting coherency and certainty. On the contrary, the study of the texts will afford a good stand-point from which the subtle questions of jurisprudence will be the most easily and satisfactorily discussed and finally settled.

The Faculty congratulate the students that their entry into a noble but arduous profession will be much facilitated by the conspicuous land-marks planted by the new Codes; and while intense study and application will still be demanded from the true lover of his vocation, the future of the young juriconsult of the Province of Quebec may be regarded as opening under the happiest auspices.

The complete course of study in this Faculty extends over three years; but may be shortened to two years, when the student matriculates in the third year of his indentures.

This School offers the higher kind of instruction and the mental training which together constitute the foundation of a *Liberal Education*. As a Department of the University, it offers a thorough preparation for the College Course.

The Course of Instruction includes the *Latin, Greek, English, French and German Languages; Geography and History; Arithmetic, Algebra, Plane Geometry, Plane Trigonometry*, with the use of

Logarithms, Mensuration, and the Elements of Natural Philosophy; Writing and Book-keeping; Drilling and Gymnastics. A Drill Association has been formed of the elder Boys and is recognized by the Military Authorities. The *Religious Instruction* is not sectarian, and attendance upon it is required only from Pupils who are Protestants. Details of the above Course are subjoined in the Programme for the year. An examination of it will shew that, whilst the Latin and Greek Languages have that prominence which necessarily belongs to them in Higher Education, provision is made to impart at the same time a thorough English and Commercial Education, and that French, as being one of the colloquial languages of the country, is much cultivated.

The complete course extends over a period of six or seven years; but Pupils are admitted for any portion of that time into any Form for which, upon examination, they are found qualified.

The Session, which is divided into four equal Terms, commences on the 1st September, and with the exception of a fortnight at Christmas and a few days at Easter, continues to the 1st July.

The full School hours are from 9 to 12½ o'clock, a. m., and from 2 to 4 p. m., every day in the week except Saturday, but the time for the Preparatory and First Forms is shorter by an hour each day.

The School is divided into Seven Forms. The Preparatory Form is a Lower School, in which young boys receive the training necessary to fit them for the commencement of the regular Curriculum.

For admission into this Form, it is required that the Pupil shall have attained the age of seven years, and be able to read moderately well. Regular early training is of so great importance that the entrance of a pupil should not be delayed beyond the age of nine. The best time for entrance is at the commencement of the Session, when owing to the promotions that take place, the classes are remodelled for the year.

The Pupils of the First, Second, Third and Fourth Forms next above the Preparatory are not allowed any option in their studies, but must take the whole course of instruction prescribed for them. The Pupils of the Fifth and Sixth Forms are divided into two "Sides." The "Classical Side" is intended for those boys who desire a more

extended and accurate knowledge of the ancient Languages. The "Commercial Side" is adapted for those who are to enter upon mercantile pursuits. When a pupil has reached the Fifth Form his Parent or Guardian may select either of these sides for him; but the choice having been made, the pupil must pursue all the course of instruction appointed for the side to which he belongs.

Special Reports are sent, whenever it seems necessary, to the Parent or Guardian of any pupil who has been absent, negligent of any study, or incorrect in his conduct. A Quarterly Report is made of the progress, attendance, and conduct of every Pupil, shewing his rank in his Form for each study.

At the end of each term, Class Examinations are held, both Written and Oral, and at the close of the Session, a public Examination takes place, followed by a Distribution of Prizes, and Award of Honours, the lists being published. The Highest Honour is the Davidson Gold Medal, which is awarded to the Head Boy of the School for the year, provided that the Examiners are satisfied that his attainments reach a certain standard.

A special Examination is annually held of Candidates for the School Certificate issued by the University. The Conditions regarding this may be seen by reference to the Calendar of the University.

The Pupils are required to prepare themselves every evening in their work for the ensuing day, as exhibited in a Time-table. *As their progress will depend very much upon the diligent performance of this duty, Parents are particularly requested to allow no arrangements to interfere with it.* Parents having sons at the School are earnestly invited to frequent intercourse with the Masters, so as to aid them in securing that regularity and industry so necessary to success in education.

The School Building is in a healthy and airy situation, and has convenient interior arrangements, with those modern improvements which secure proper warmth and ventilation. A very good Gymnasium has been erected in the play ground adjoining the School.

The Rector, who resides a short distance from the City, has made arrangements to receive a limited number of Pupils of the High School to board with him. Mr. Rodger and Prof. Darey, Masters of the School, have also accommodation for Boarders.
