FROM the rapid and extensive sale with which The Nova-Scotia Almanack has been welcomed by the public, the proprietor feels that he ought, on his own part, to make such arrangements, as may tend to render that distinction more deserving. He therefore puts forth the Sixth Number in an entire new type; and has also made a variety of improvements, which his patrons will find little difficulty in discriminating. More than ordinary attention has been paid to obtaining correct Lists of those filling the various departments of our Provincial Government; the Calendar Pages—which have been calculated with the greatest care—are embellished with a new series of engravings; and much pains have been taken to improve the mechanical part of the work. In short, every addition has been made which experience and opportunity have placed within reach, as far as the limits of the Almanack would permit.

The publisher, grateful for the extensive patronage which his little annual for 1838 received, notwithstanding its many deficiencies, would apologise here, for its defects. He regrets that numerous typographical errors occurred; which he trusts will be readily excused when it is recollected that his establishment was in such a state of derangement from the fire, which occurred at the time his preparations for publishing were nearly completed, and in successful operation. He hopes however that the accuracy of the present number will retrieve the good name which THE NOVA-SCOTIA ALMANACK has generally maintained.

Monthly remarks on the Weather have been resumed, at the instance of a number, and from the disappointment evinced by many at its omission in the last publication. These remarks are founded on the time the Moon enters her several quadratures.

A reference to the pages will enable the reader to discover other improvements in this Almanack, which it may not be necessary to particularize, and which the publisher feels confident will render the present superior in many respects to any of the preceding numbers.

NOVA-SCOTIA ALMANACK.

IMPORTANCE OF ASTRONOMY.

WHETHER we consider the object which Astronomy sets before us, or the accuracy and precision of most of its proofs and calculations, or the service which, in various ways, it renders to the nations of the earth, it is, and ever will be, the most valuable, interesting, and sublime science, which can possibly engage the attention of man. This noble science not only deserves our regard as a matter of curiosity, or rather of astonishment and wonder, and as answering the most important purposes for the good of civil society; but still more so, as it opens a scene which impresses the mind with the most exalted, and consequently, the most just and correct ideas, of that eternal and omnipotent Being who contrived, made, and still upholds, the whole. When surveying those stupendous works which move with such order and harmony through the immeasurable fields of space, we are led to exclaim,

"These are thy glorious works, Parent of good,
Almighty! thine, this universal frame
Thus wondrous fair! Thyself how wondrous then!"

Although there have been many schemes or hypotheses concerning the heavenly bodies, yet there have been only four which have attained any thing like authority and permanence in the world. These are the Ptolemaic, the Tyconic, the Cartesian, and the fourth, which we do not hesitate to pronounce the true one, formerly called the Pythagorean, but now more significantly termed the Newtonian. This last system has been also styled the Copernican. In the latter part of the seventeenth century, flourished Sir Isaac Newton, a man endowed with a compass of soul, high, vast, and profound; with a penetration which could look through nature and scan her mighty laws; with an intellectual industry equal to the most gigantic enterprise; with a temper, calm, tranquil, and devout. Thus gifted, the immortal Newton rose far above the common level even of learned and scientific men; and, by his single power, reared a fabric of

mathematical and experimental philosophy, which forever must stand the boast of wisdom, and the terror of idleness, ignorance and pride.

Let our thought awake—let it take the lightning's wing, and glance from east to west, from pole to pole—behold “one sun by day; by night, ten thousand shine”—take its flight through the mighty range of the fixed stars,

“Those sov'reign glories of the skies,
Of independent, native lustre proud,
The souls of systems, and the lords of life:—

to the region of unassisted sight, add that of the telescope; and to what the telescope perceives, add what reason demonstrates; then ask, If such be the effect, what must be the Cause? if such the work, what must be the workman? if such the building, how wise, how mighty, the Architect, that reared and beautified, and still sustains the whole? To the Author of such a mass of wonders, who can forbear to say, “Great and marvellous are thy works!”

Nor let the mind stagger at the position, that all these worlds on worlds, and systems on systems, are inhabited; the residences of animated, and most likely of intelligent creatures! As far as analogical reasoning can go, no truth whatever is more certain. If the Author of nature has not left us a drop of water unpeopled; if over the whole surface of our earth, his bounty has sent the streams of happiness, flowing through millions of channels, to as many forms of life; can it be for a moment supposed, that he has left those innumerable regions—compared with which our earth is but a corner, an atom, a mere speck—waste, desolate, and void? Such a supposition is unworthy of our reason, and utterly inadequate to our conceptions of the Author of Nature. And what can possibly be more unreasonable than to suppose those shining orbs were formed merely to give light to the inhabitants of this earth, when, perhaps, not one in ten thousand of them is ever seen, and certainly a single moon would afford us more light than the whole host of them put together? However, therefore, the mind may labour under the stupendous conception, doubtless the fixed stars, and the thousands of thousands of worlds, that with such rapidity and yet with such calmness, revolve round them, are peopled with

myriads of intelligent creatures, formed for endless progression in perfection and felicity! Surely the favour of the Monarch who upholds and sways his benign and equitable sceptre over such an empire, is above all things to be sought; surely the displeasure of such a monarch, is above all things to be dreaded.

One other thought, and we have done. Let not the wise and good suppose that the contemplation of their Creator's Works will terminate with the present mortal state! That event, which is the terror of the wicked, and the lot of us all, will most certainly open to the righteous an arena of stupendous and infinitely varied beings, of which in this infancy of our existence, we cannot form the most distant conception.

"When e'en at last the solemn hour shall come,
And wing my mystic flight to future worlds,
I cheerful will obey; there with new powers,
Will, rising, wonders sing: I cannot go
Where universal love not smiles around,
Sustaining all yon orbs, and all their suns."

June 1st, 1838.

SAINT ANDREW.

THE tutelary Saint of Scotland, St. Andrew, was one of the Apostles, and the brother of St. Peter; the name of his father was James. He was a follower of John the Baptist, whom he left at the call of his Lord and Saviour, and was the first disciple whom Jesus is recorded to have received. Andrew introduced Peter to Jesus. But little is recorded of him in scripture, but ecclesiastical historians enter into a considerable detail of the latter part of his life. According to Theodoret, he employed himself for some years in journeying and preaching throughout Greece; but Eusebius and other writers speak of Scythia, as the province of his missionary labours. The common statement however, is, that he suffered martyrdom, at Patra, now Patras, in Achaia, having been put to death by order of Egeus the Pro-consul of that province. The year in which this event took place, is not mentioned; but both in the Greek and in the Latin church the festival commemorative of it, is held on the 30th of November. The notion that St. Andrew suffered on a cross, of the form of the letter X, appears to be of considerable antiquity; the oldest writers say, that he was nailed to an olive tree. They used to keep in the church of St. Victor, at Marseilles, what was affirmed to be the very cross on which he had been suspended; it was enclosed in a silver shrine, and was of the common form, that is, with one limb perpendicular, and the other horizontal.

The Scottish historian Fordun delivers a legend respecting the relics of St. Andrew, which several of his countrymen have co-

ped. In the middle of the fourth century, it seems, the bones of the saint, which still remained at Patras, were in the custody of Regulus, an abbot, or as other accounts style him, a bishop of the Greek church. In the year 345, the emperor Constantius 2d, gave orders that these precious remains should be brought to Constantinople; but on the third night before they were removed, an angel appeared to Regulus, and ordered him to abstract from the chest in which they were kept, the upper bone of one of the arms, three of the fingers of the right hand, and the pan of one of the knees. Some accounts add a tooth to the list of items. Regulus having done as he was commanded, was, some years after, directed by another vision to take his departure from Patras; and having accordingly set out, he was, after a long voyage, shipwrecked with his companions, in the Bay of St. Andrews, in Fifeshire, then forming part of the territory of the Picts. Heingus, the Pictish king, received the strangers with great hospitality, and by their instrumentality, he and his subjects were soon after converted, when a Christian church was erected at the place where the missionaries had been driven on shore, and was dedicated to the Apostle, the fragments of whose skeleton they had brought with them. Such is said to have been the origin of the city of St Andrews; and of the assumption of St. Andrew by the Scotch, as their patron saint.

ECLIPSES FOR 1839.

There will be but two Eclipses this year, both of the Sun; and both invisible in this part of the world.

The First will be a total Eclipse on March 15th, visible in Europe, Africa, and South America.

The Second will be an Annular Eclipse, on September 7th, visible in Asia and the North and South Pacific Ocean, and to a very small part of North America.

Gambart's Comet is expected to re-appear this year, and its perihelion passage is calculated to happen on July 23d. It was first discovered on the 26th February, 1826, and its elements found to be the same as those which appeared in 1789 and 1795; whence it is concluded to be the same body. It accomplishes its revolution in 2460 days.

ORIENTAL AND OCCIDENTAL STARS.

Venus will be an Evening Star from February to August, a Morning Star from October to the end of the year.

Mars will be visible every Evening until July; he will then come in opposition to the Sun.

Jupiter will be a Morning Star from January; an Evening and Morning Star from February till May; an Evening Star till July, and a Morning Star from November till the end of the year.

Saturn will be visible every Morning until April; then it may be seen every Evening and Morning until September, and seen again in the Morning, at the latter part of December.

We hail thee, Winter, once again,
 Though thou art stern, and pale and cold,
 Thou dost bestow rich gifts on men,
 Gifts richer far than gems or gold,
 Thy frosts will give the farmer bread,
 They break the clods, and loose the soil,
 And through the woods a pathway spread,
 To ease the woodsman's heavy toil.

The Poetr
been oblig
late of King

Come farmer! Fill your yard with wood—
 Get lumber out—you'll want to build—
 If the next harvest should be good
 Another barn may well be filled.
 Now is the time when snow is deep
 To lay your fence poles on the land:—
 Look to your stock—tend well your sheep—
 See that you've half your hay on hand.

Now the busy moments flying
 Wheel Sol's chariot to the Ram;—
 Blustering MARCH! thou com'st a lion,
 But thou shalt depart a lamb,
 Yet, before thy pow'r is finished,
 Call the South-wind from the main,
 That the snow-drifts, quick diminished,
 May be melted from the plain.

Changeful APRIL! now we greet thee,
Smiling, crying, cold and warm;—
Still the farmer joys to meet thee,
Still for him thou hast a charm.
Now the steer, well-fed and lusty,
Gives his shoulder to the toil,
And the plough disused and rusty
Takes a polish from the soil!

Come, joyous MAY!
 Come spread thy flowers along the plain
 Call forth the farmer's busy train
 And bid the earth be gay.
 Give heat by day
 And dews by night and gentle rain,
 And bid the fertile earth repay
 The Farmer's pain.

In the soft light of morning
 How sweet is the gale!
 How rich is the perfume
 The blossoms exhale!
 And the broad fields of clover
 Are fragrant and fair,
 And Creation rejoices
 God's bounty to share.

In the early light of dawn
 Mower seek the grassy lawn;—
 Now the air is pure and dry
 Bright and beautiful the sky;
 Smiling Nature seems to say
 "While the sun shines make your hay,—
 Ere the quickly ripening grain
 Call you to the fruitful plain."

Welcome, daughter of the sun!
 Lightly o'er our vallies run,
 Cheer with song the reaper train,—
 Fill our baras with yellow grain;—
 Now the new corn swells the ear—
 Now the berries bright appear—
 Providence with liberal hand
 Scatters blessings o'er the land.

Autumn has kept the promise of the Spring,
 Full are our barns and full our garner's too :—
 Lord of the harvest ! to thy throne we bring
 The gratitude and praise which are thy due ;—
 O ! may we still in Nature's bounties view
 The hand of Him whose promise ever stands—
 Seed time and harvest shall with order true
 Fulfil their rounds, and bless the teeming lands.

Hark! the busy flails resound
 Where the sunlight gilds the floor,
 And the chickens at the door
 Catch the rich grains scattered round.
 There the cider-press pours down
 Many a sweet and liberal stream,
 There the farmer loads his team
 For the distant market town.

PHASES OF THE MOON FOR OCTOBER, 1839.

Now the year is growing old,
 O'er the earth the rain clouds lower;
 Vapours, storms and early cold
 Each in turn exerts its power.
 Man looks up with thankful smile,
 Blesses God whose gifts he sees,
 Ends his toils, and seeks awhile
 Rest well earned, and needful ease.

Agricultural, Domestic Economy, etc.

Honour to Practical Agriculturists.—**NATIONAL BENEFACTORS.**—

The names of those who have enriched our gardens with useful and valuable plants, are deserving of record and remembrance. Sir W. Raleigh introduced the potatoe; Sir Anthony Ashley first planted cabbage in this country—a cabbage appears at his feet on his monument; Sir Richard Weston brought over clover grass from Flanders in 1645; figs were planted in Henry the Eighth's reign, at Lambeth, by Cardinal Pope—it is said the identical trees are still remaining; Spilman, who erected the first paper mill at Dartford, in 1590, brought over the first two thyme trees, which he planted; and they are still growing. Thomas Lord Cromwell enriched the gardens of England with three different kinds of plums. It was Evelyn, whose patriotism was not exceeded by his learning, who largely propagated the noble oak in this country, so much so, that the trees he planted have supplied the navy of Great Britain with its chief proportion of that timber.—Eng. paper.

Corn Stalks as Provender.—No one who may not have essayed an experiment to that effect, can form any idea of the vast amount which may be saved by the practice of a system of enlightened economy on a farm. Nor can he form any just estimate of the valuable purposes to which many things which are cast away as almost useless, may be applied. We were very forcibly struck with the force of these propositions a few days since, on seeing the fine condition of a Devon cow, which we purchased for a gentleman in South Carolina, and which had subsisted during the whole of the past winter on corn stalks and ruta бага.—Farmer and Gardener.

Ewes and Lambs.—The Genesee Farmer remarks that farmers sometimes experience a difficulty in making ewes own their lambs; and oftener perhaps when cases of twin lambs occur, than at other times. Those who desire to rear all their lambs may find a benefit in sprinkling a little fine salt over the disowned lamb. This will usually attract the mother, and when once the operation of licking has been performed, there is usually but little danger of desertion.

Fattening Chickens.—The following process of fattening chickens, we see highly recommended. Take rice and boil it over the fire in skimmed milk until the grain bursts. This food, if given to chickens five or six days, it is said, will make them plump and fat enough to grace an Alderman's table.

Scalding Hogs.—It is said that to dip hogs into cold water immediately before they are immersed in the hot, makes the hair and bristles come out with greater ease, and prevents them from "setting."

Recovering Frosted Plants.—It is well known that the injury caused to plants by early spring frosts, is not owing so much to the direct action of the cold, as to the sudden application of warmth afterwards. London nursery-men have availed themselves of the knowledge of this fact, in recovering plants affected by frost during the night. Their practice is simply to sprinkle them copiously with cold water before sunrise. This produces the same effect as the application of cold water to a frozen limb—abstracting the frost so gradually as to produce no injury to the affected parts.

Apple Trees.—A new plan for increasing plantations of apple trees has lately been carried into extensive practice by the horticulturists of Bohemia. Neither seeds nor grafting are required. The process is to take shoots from the choicest sorts, insert them in a potatoe, and plunge both into the ground, leaving but an inch or two of the shoot above the surface. The potatoe nourishes the shoot, while it pushes

out roots, and the shoot gradually grows up and becomes a beautiful tree, bearing the best fruit, without requiring to be grafted.

Whatever may be the success of the undertaking, its novelty is at least an inducement to give it a fair trial.

Toads.—We caution agriculturists, and especially gardeners, against destroying toads. They feed entirely on insects and reptiles, and a few dozen of them will clear an acre of ground from cabbage worms. Snakes are also useful in grass fields. They are great destroyers of field mice.

Flowers.—It is said if you fill flower pots about half full of quick lime, and cover over this a good mould, the flowers may thus be obtained in a very short time, and all the season. The earth should be kept slightly moistened, and pressed down whenever it rises by the swelling of the lime.

Industry.—It has been said with great truth, that man must have occupation or be miserable. Toil is the price of sleep and appetite—of health and enjoyment. The very necessity which overcomes our natural sloth, is a blessing. The whole world does not contain a briar or a thorn which divine mercy could have spared. We are happier with the sterility, which we can overcome by industry, than we could have been with spontaneous plenty, and unbounded profusion. The body and the mind are improved by the toil that fatigues them. The toil is a thousand times rewarded by the pleasure which it bestows. Its enjoyments are peculiar. No wealth can purchase them, no indolence can taste them. They flow only from the exertions which they repay.

Bricklaying.—Bricks should always be wet before they are laid. A wall twelve inches thick, built with good mortar, with bricks well soaked, is stronger than one sixteen inches thick, built with dry bricks. If the bricks are well saturated with water, they will not abstract from the mortar the moisture necessary for its crystallization, but will unite chemically with the mortar, and become almost as solid as a rock. On the other hand, if the bricks are laid dry, they absorb all the moisture from the mortar, and leave it too dry to harden.

To take Stains out of Mahogany.—Mix six ounces of spirit of salts, and half an ounce of rock salt of lemons, powdered together. Drop a little on the stains, and rub it with a cork till it disappears. Wash off with cold water.

To prevent wounds from Mortifying.—Sprinkle sugar on them. The Turks wash fresh wounds with wine, and sprinkle sugar on them. Obstinate ulcers may be cured with sugar dissolved in a strong decoction of walnut leaves.

Poison.—To cure the poison occasioned by the sting of a bee, wasp, hornet, &c. wash the part affected with the water of ammonia (hartshorne,) and if much diseased, dissolve a piece of carbonated ammonia (the size of a pea) in water and drink it. This remedy is said to have relieved persons when a sting had nearly caused mortification.

Sweet Fern.—An herb called sweet fern will cure the poison of the vine usually growing on old posts and trunks of trees, sometimes called mercury.

Felons.—To cure a felon, make a strong ley of hickory ashes, add a pint of beer, and thicken with wheat bran, then grease the poultice with lard and apply.

Freezing.—A young man in New Hampshire froze his foot, which was perfectly cured in less than twenty-four hours, by the application of yeast and Indian meal—it is equally beneficial when applied to a burn.

Newspapers.—Persons wishing to take the wrinkles out of their newspapers, may do so by spreading them out and sprinkling them with water thoroughly, and refolding while damp in the shape desired, then put under a press.

To make Hard Water Soft.—We take the hard water from our well, and into one bucket we put one ounce of the carbonate of soda, which dissolves immediately when the water is warmed, and it becomes at once as soft and harmless as the purest rain water.

Cement.—Isinglass, boiled in spirits of wine, will produce a fine transparent cement which will unite broken glass so as to render the fracture almost imperceptible, and perfectly secure.

Nankin colour.—A pail full of ley, with a piece of copperas half as big as a hen's egg boiled in it, will dye a fine nankin colour, which will never wash out. This is very useful for the linings of bed quilts, comforters, &c.

Sure Remedy for the Croup.—A distinguished medical friend of ours states, that whenever cynanche trachealis appears, he found a plaster of dry Scotch snuff, to be applied directly across the top of the thorax, invariably effectual. Dr. Shurtleiff of Boston also declares—“I have used the snuff in several cases of the croup, and (with the aid of five grains of the powder of ipecac and fifteen of calomel in commencement for an emetic), I have in no case failed in performing a cure. It is mixed with goose oil or lard, and spread on flannel sufficiently large to cover the neck and breast as low as the pit of the stomach.”—Philadelphia Mirror.

Coffee.—In making coffee, there are various recipes for preparing and refining it. The following is the best that has ever come under our view, and is available in all places:—Take the coffee fresh roasted, and not too brown, in the proportion of about two ounces for five persons, and grind it just before using. Put it in a basin, and break into it an egg, yolk, white, shell and all. Mix it up with a spoon to the consistence of mortar, place it with warm (not boiling) water in the coffee-pot, let it boil up and break three times, then stand a few minutes, and it will be as clear as amber, and the egg will give it a rich taste.

Hemlock Gum.—This article has become valuable for the market. The mode used in this neighbourhood is to cut the bark into small pieces, boil it, and strain out the resinous gum: every pound of it is worth 37 cents, (1s. 10d.) and it is totally lost in the ordinary mode of clearing land. The druggists, we believe, are giving enough to pay us well for taking care of it, and this circumstance connected with the price that the bark will command at the tanneries, is a powerful inducement to prevent the waste that is continually exhibited over a large extent of the United States and the British Provinces.—Am. pa.

Almanacks.—Almanacks originated with the Germans. In the 13th century a small book was written, called “Diagonun (?) *al Monach Guinklan;*” (?) that is, “Foretellings of Monk Guinklan.”

Singular Astronomical Notion.—The lower classes of the Chinese think that an eclipse is an animal resembling a frog with two fore paws and one hind leg, which swallows the sun and moon; on this account, the Priests in the Temples, and the people in the streets as well as the officers of the public courts, sound the drum. Just as the eclipse commences, every one sounds it as loud as he can, that the frog being alarmed at the noise, may instantly cast them forth. This is continued until the eclipse is gone by.

Bad Memory.—A village pedagogue, in despair with a stupid boy, pointed at the letter A, and asked him if he knew it. “Yes, sir.” “Well, what is it?” “I knows him very well by sight, but rot me if I can remember his name.”

SITTINGS OF THE SUPREME COURT.

County of Halifax.—At Halifax, 1st Tuesday of January, 3d Tuesday of April, 2nd Tuesday of July, and 3d Tuesday of October.

County of Colchester.—At Truro, 2nd Tues. of June and 3rd Tues. of Sept.

County of Pictou.—At Pictou, 3rd Tues. of June, and 2nd Tues. of Sep.

County of Sydney.—At Dorchester on the Tuesday next after the 4th Tuesday of September.

County of Guysboro'.—At Guysboro', on the 4th Tuesday of September.

County of Cumberland.—At Amherst, 4th Tuesday of June, and 4th Tues- day of September.

County of Hants.—At Windsor, last Tues. of May, and 4th Tues. of Sept.

County of King's.—At Kentville, 1st Tues. of June, and 3d Tues. of Sept.

County of Queen's.—At Liverpool, 1st Tuesday of July.

County of Lunenburg.—At Lunenburg, last Tuesday of June.

County of Annapolis.—At Annapolis, 2nd Tuesday of June, and 2nd Tuesday of September.

County of Shelburne.—At Shelburne, 2nd Tuesday of July.

County of Yarmouth.—At Yarmouth, 3d Tuesday of June.

County of Cape Breton.—At Sydney, 1st Tuesday of September.

County of Richmond.—At Arichat, 2nd Tuesday of September.

County of Inverness.—At Port Hood, 3rd Tuesday of September.

COURT OF CHANCERY.—Chancellor, his Excellency the Lieut. Governor ; Master of the Rolls, C. R. Fairbanks, Esq. Masters in Chancery, Lewis M. Wilkins, J. G. Marshall, and J. W. Nutting, Esqrs. ; Registrar, N. W. White, Esq. ;—Masters (extraordinary) under the Act of 1833—Cumberland, J. S. Morse ; Sydney, J. T. Hill ; Pictou, James Dickson ; Colchester, John Masters ; Lunenburg, John Creighton ; Kings, _____ ; Shelburne, W. H. Keating ; Cape Breton, E. M. Dodd, Esqrs.—Counsellors and Solicitors, the Barristers and Attornies of the Supreme Court. Roll's Court held on the first and third Monday of every month.

COURT OF ERROR, MARRIAGE AND DIVORCE.—Her Majesty's Executive Council. Advocates and Proctors, the Barristers and Attornies of the Supreme Court.

COURT OF VICE ADMIRALTY.—Judge, Charles Rufus Fairbanks, Esq.—Surrogate, N. W. White, Esq. ; Advocate General, S. G. W. Archibald, Esqr. L. L. D. ; Solicitor General, the Hon. J. W. Johnston, Esq. ; Registrar, J. P. Hood, Esq. ; Deputy Registrar, J. S. Tremain, Esq. ; Marshall, S. W. Deblois, Esq. ; Deputy Marshall, J. J. Sawyer, ; Advocates and Proctors, the Barristers and Attornies of the Supreme Court.

COURT OF ESCHEATS AND FORFEITURES.—Commisioner, J. W. Nutting, Esq. ; Registrar, Sir Rupert D. George, Baronet ; Deputy Registrar, Thomas W. James, Esq.

Nova Scotia Barrister's Society.—Patrons, the Chancellor, and the Chief Justice. Honorary Members, the Judges of the Supreme Court. Treasurer, and Secretary, James W. Nutting, Esq.

INFERIOR COURT OF COMMOM PLEAS.

Held at Halifax, on the second Tuesday of March, June, September and December. Justices James Forman, and _____ ; Esquires.

NOVA SCOTIA (40) ALMANACK.

Quarter Sessions of the Peace.—Sits at Halifax, on the First Tuesday of March, June, September and December. James S. Clarke, Clerk of Peace.

EASTERN DIVISION.—Chief Justice of the Eastern Division, and President of the Court of Sessions, W Q Sawers, Esqr. This Division includes the counties of Cumberland, Colchester, Pictou, Sydney and Guysborough.

County of Cumberland.—Interior court and sessions of the Peace, held at Amherst, on the second Tuesday of January, and third Tuesday of July, Assist. Justices, D McFarlen, R McG Dickey, W Baker and M Gordon, Esqs.

County of Colchester.—Held at Truro, on the third Tuesday of January and second Tuesday of July. Assistant Justices, Thomas I Brown and A Campbell, Esqrs.

County of Pictou.—Held at Pictou, on the first Tuesday of January and July. Assistant Justices, G Smith, Robert Lowden and A Patterson, Esqrs.

County of Sydney.—For the Upper District, held at Dorchester, on the last Tuesday of June and December. Assistant Justices, John Cunningham, H McDonald, and A Fisher, Esqrs.

County of Guysborough, held at Guysborough, on the Tuesday before the last Tuesday of June and December. Assistant Justices, Joseph Marshall Robert Hartshorne and Francis Cook, Esquires.

MIDDLE DIVISION.—Chief Justice of the Inferior Court of Common Pleas, and President of the Court of Sessions, T C Halliburton, Esqr. This division includes the counties of Hants, King's, Queen's and Lunenburg.

County of Hants.—Inferior court and sessions of the Peace held at Windsor, on the first Tuesday of January and first Tuesday of July. Assistant Justices, William Shey and John Elder, Esquires.

County of King's.—Held at Kentville, on the third Tuesday of May and second Tuesday of November. Assistant Justices, Wm Campbell, W A Chipman and J D Harris, Esquires.

County of Queens'.—Held at Liverpool, on the fourth Tuesday of April, and third Tuesday of October. Assistant Justices, Joshua Newton, Caleb Seeley and James R Dewolf, Esquires.

County of Lunenburg.—Held at Lunenburg on the second Tuesday of April and October. Assistant Justices, J Pernette, G Miller, E James, J C Rudolf and John Hunt, Esquires.

WESTERN DIVISION.—Chief Justice of the Inferior court of common Pleas and President of the court of sessions, Thomas Ritchie, Esq. This division includes the counties of Annapolis, Shelburne, Yarmouth and Digby.

County of Annapolis.—Inferior court and sessions of the Peace, held at Annapolis on the third Tuesday of April and first Tuesday of November. Assistant Justices, E Morton and C U Jones, Esquires.

County of Digby.—Held at Digby on the first Tuesday of July and third Tuesday of December. Assistant Justices, G Robinson and J R Lovett, Esqs.

County of Shelburne.—For the District of Shelburne, held at Shelburne on the second Tuesday of May, September. Assistant Justices, G White, J V Buskirk, Thomas Crowell, E Crowell and W B Sargent, Esquires.

County of Yarmouth.—Held at Tusket Village, on the first Tuesday of May, and at Yarmouth, on the third Tuesday of September. Assistant Justices, H G Farish and A Lent, Esquires.

COUNTY OF CAPE BRETON.—Chief Justice of the Inferior court of common Pleas and President of the court of sessions, John G Marshall, Esqr. Inferior court and sessions of the Peace, held at Sydney, on last Tuesday of March and 1st Tuesday November. Assistant Justices, T Crawley and W Ouseley, Esquires.

County of Richmond.—Held at Arichat, on the first Tuesday of April and second Tuesday of November. Assistant Justices, Clement Hubert, John Jean and Peter de Carteret, Esquires.

County of Inverness.—Held at Port Hood, on the second Tuesday of April and third Tuesday of November. Assistant Justices, W McKeen, Kenneth Chisholm and Andrew McDonald, Esquires.

COMMISSIONERS' COURT.—Sits at Halifax, on the First Monday of every month,—commissioners, James Foreman, senr. Richard Tremain, John Liddell and D S Clarke, Esqrs.—J S Clarke, Esqr. clerk.

County of Richmond.—Commissioners' court held at Arichat, on the first Monday of January, March, May, July, September and November. Commissioners, Andrew Madden, Lawrence Kavannagh, John Ballaine and William Chricton, Esquires.

The Conference will be held at Barrington, Cape Sable Island, the third Saturday in June.

□ Edward Reynolds and James Melvin whose names are inserted in the list of Christian Baptist Ministers, see page 55, do not belong to the Conference—that part of the Almanack being struck off before we received the above corrections.

Charles Kean, R: A, Worshipful Master of Royal Standard Lodge, No 564.

DIVISION OF THE PROVINCE. By alterations, recently made by the Legislature, in reference to the division of the Province, the County of Sydney has been divided into the Counties of Sydney and Guysborough; the County of Shelburne into the counties of Shelburne and Yarmouth; the County of Cape Breton, into the counties of Cape Breton, Richmond, and Inverness.

The County of Sydney comprises the Upper District of the former County; the County of Guysborough includes the Lower District; the County of Shelburne comprises that part of the former County, called the District of Shelburne.

The County of Yarmouth comprises “the Township of Yarmouth and Argyle, and also that part which lies north west of a line running north-east from the N. E. corner of a grant on the east side of the great Pulnico Lake, made to David Larkins and others, to the bounds of the County of Annapolis;” which was formerly the District of Yarmouth and Argyle.

The County of Cape Breton comprises that part of the Island, known by the name of the North-Eastern District. The County of Richmond includes that division formerly called the Southern District. The County of Inverness comprises what was formerly the North-Western District.

NAVAL AND MILITARY.

THE NAVY.—Honourable SIR CHARLES PAGET, KNIGHT, G. C. H. Vice Admiral of the White, Commander-in-Chief on the West India, Halifax, and Newfoundland Stations. Thomas Woodman, Esqr. Secretary. Charles Cooke Otway, Esqr. Flag Lieutenant.

ANSWERS AND QUESTIONS FOR 1838.

Questions from Joseph Owens, Royal Sappers and Miners.

1st—The Declination of a Star is required, which, at Halifax (in latitude 44. 40 N.) would shine during two-thirds of its continuance above the horizon upon the South-dial of the town-clock.

2nd—In any plane triangle if R, be the Radius of the inscribed circle and S the Semi-perimeter then—

$$\tan \frac{a}{2}, \tan \frac{b}{2}, \tan \frac{c}{2} = \frac{R}{S} \quad \text{Required a proof.}$$

3rd—Required the termination of Evening twilight at Halifax (in Lat. as above: Long 63 deg 15m west) on the 20th of August 1838, the Sun's apparent Declination for that day at the meridian of Greenwich being 12 52 10 7 N.

4th—Given (the Lat. of Halifax as above and) the interval between the times at which, the Sun rises and is east, (=x) to find his Declination.

QUESTIONS BY H. McI.

1.—A man brought a rectangular piece of ground, the compass 100 poles, he is to pay 1 dollar for each pole in length, and 3 dollars for each rod in breadth. Required the length, and breadth, so that the quantity of land may be had at the cheapest rate possible.

2.—How far must a ship sail on a S. W by S. course from a port in Lat. 38° 15 N. until her Lat. and difference of Longitude become equal.

3.—An Orifice being made in a cask filled with claret and at the same moment a supply of water was made to keep the vessel constantly full. This vessel contained 100 gallons, and the hole discharged one gallon of the mixture every 10 seconds. Suppose the liquors to be always equally diffused throughout the vessel, how much wine remained in the same one hour after the hole was made.

Solution of Problems for 1838.

By J. OWENS, Royal Sappers and Miners.

No. 1.—Let x = greatest part and $\frac{x}{10}$ = least.

Then $x + \frac{x}{10}$ 10. By Hypothesis

$10x + x = 100$ By Multiplication.

Hence $11x = 100$; therefore

$x = \frac{100}{11} = 9 \frac{1}{11}$ = greatest part

And $\frac{x}{10} = \frac{1}{10}$ of $\frac{100}{11} = \frac{100}{110} = \frac{10}{11}$, the east part. } Answer.

Solution by H. McIver, jr.

$3^2 = 9 \times .07958 = .71622$ = Area of Base,

71622×60 the length given 42.9732 or 43 = solid content of log,

Then say, as $2\frac{1}{2}$ inches the thickness of plank including the allowance for saw, is to 43 feet the solid content of log—So is 12 inches to 229 $\frac{1}{2}$ the No. of feet required, Or thus,

As $2\frac{1}{2}$ in. : 43 s. feet :: 12 in. : 229 $\frac{1}{2}$ the No. of feet required.

PROBLEMS No. 1. FOR YOUNG MECHANICS.

Solution by Joseph Owens, Royal Sappers and Miners.

The weight applied to the beam will be to the relative weight sustained by each supporter, in a direct proportion; As the whole length of the beam, is to the distance between the point to which the weight is applied; and the opposite supporter—thus;

	feet	feet	Ton	Ton	Cwt.
As	20	: 4	:: 8	: 1	12
	20	: 16	:: 8	: 6	8
Again, as	20	: 1	:: 3	: 0	3
	20	: 19	:: 3	: 2	17

Then by connecting the two extreme results together, we shall have 1 ton 12 cwt plus 2 ton 17 cwt = 4 ton 9 cwt = weight borne by one supporter.

Again—By c
plus 3 cwt =

Ans

$$\frac{380}{15} = 25\frac{1}{3}$$

$$25\frac{1}{3} \times 100 =$$

NOVA SCOTIA (67) ALMANACK.

Again—By connecting the two mean results we shall have 6 ton 8 cwt plus 3 cwt = 6 ton 11 cwt = weight borne by the other supporter.

Answers to Problems for Young Mechanics.

By J. Mc I. junr.

$$\frac{380}{15} = 25\frac{1}{3} \text{ feet per minute. Velocity of weight.}$$

$$25\frac{1}{3} \times 100 = 2533\frac{1}{3} \div 220 = 11\frac{17}{33} \text{— tons power required.}$$

$$\text{3rd—} \frac{90 \text{ lbs} \times 200 \times 40}{20 \times 60} = 600 \text{ lbs the weight drawn.}$$

$$\text{4th—} \frac{24 \times 16 \times 8 \times 1000}{16} = 192000 \text{ lbs — } \frac{2240}{7} = 85\frac{5}{7} \text{— tons the pressure of water.}$$

A side of any vessel sustains a pressure equal to the area of the side multiplied by half the depth, the sides and bottom of a cubical vessel sustains a pressure equal to three times the weight of water in the vessel.

Solutions to Mr. Owens' Questions.

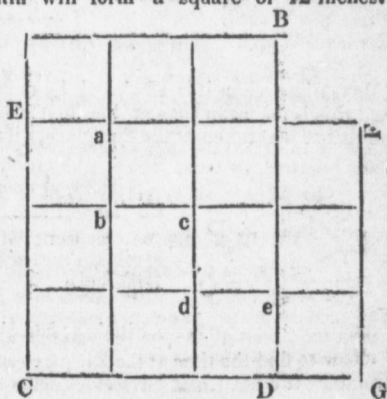

By our Correspondent H. Mc. I.

$$\text{No 1—} \frac{4}{5} \times \frac{5}{5} = \frac{9}{5} : 12 :: \frac{4}{5} \cdot 5 \text{ 20 the time past noon.}$$

2nd. By the 14th of Euclid's, 2nd Book. Make the square equal to the rectangle, and per 14th of 6th the sides are reciprocally proportional.

Let ABCD. be the breach 12 inches square, and EFCG the board or plank 16 by 9 inches. To cut the board into two sections which when united again will form a square of 12 inches.

I begin at a, and cut from a to b. from b to c, c to d, d to e, e to D. There are now two sections, by placing them so that G will be on e, and a on A will form the square required. Demonstrations: from the nature of proportionals if CD be a multiple of GD, EC will be a like multiple of EA, and when this is the case, the problem may be done as in the foregoing manner. It is easy, however, to conceive that when CD is not a multiple of DG the problem is impossible.

Joseph Owens is in possession of an *approximate formula* by which the section may be cut under any circumstances and the error be *indefinitely* small. The want of room sufficient for its insertion has prevented its appearance in this; but it will in all probability appear in next year's Almanack—Eo

NOVA SCOTIA (68) ALMANACK.

3rd. Let the figure be constructed.

With the distance of the observer from the S. end of the street, and the SSE. line there will be found by Trig for the base of the triangle D C B. 110. 8 which added to 810 = 921 8 with this last and perpen. D C = 45.92 or direct distance from the observer to the south extremity of 110.8. Then find the distance from the north end of the street to the observer = 921.84, the angle made with this line and the perpendicular let fall from the observer to the elongated extremity of the S. end of street = 87°.9', from which take 67°. 30' the compt. to 2 pts. the remainder = 19° 39' the angle made by two lines from the eye of the observer to the N. and S. ends of the street. Again, if this angle be added to that made in the street, and a line from the S. end thereof to the observer = 157° 30' that sum taken from 180° leaves 2° 51', made by the street, and a right line from the N. end thereof to the observer; this last added to the angle made by the two streets = 160. 21. By oblique trig., the angle made by the ray of light from the observer's eye, and the line therefrom to the N. end of the street = 0 56. This taken from 19°39' leaves 18°43', = the angle made by the said ray of light, and a line to lamp No 1. Then find the distance from said lamp to the intersection of the longest ray and the street between No, 18 and 19 = 584. 8. Also, having the semi-diameter of the lamp and angle made by the ray and the right line passing through the centre of the lamps = 3° 35' the distance between said intersection and No. 19 = 16. 15, which added to 584. 8 gives 600.9 = distance from 1st to 19th lamp.

yds lps yds
Thus say, as 600.9 : 19 :: 810 : 25. the No. of lamps. Fractions omitted.

Solution, of J. Owen's Astronomical Problem, No. 4.

By Hugh McIver, senior, Yarmouth.

On the 9th June, 1833, equation of time is	0 1 14
Mean time at apparent noon on that day is	11 58 46 a m
Time per Watch.	11 52 0
Error of Watch.	0 6 46

(Mean)time when it is 12 o'clock by the watch 12 6 4 from midnight, and this is the mean time at the first place of observation when the observation was taken at the 2nd place, (if the watch performed regularly.)

Sun's declination June 9th, } 1833, at noon	22° 55' 56 N = ES
Co Lat of Place	35 30 0 N = HE
Meridian Alt. of Sun's centre	58 25 56 = HS
Difference	22 0 0

Altitude at 2nd observation 36 25 56

Now to find the time at the 2d. place when the sun had this given altitude, We have, the three sides of the triangle Z P S:

ZS = 53° 34' 4" = Co-Alt.	} Co-declination at noon on the 17th July, 1833.
ZP = 68 44 10 =	
SP = 35 30 0 = Co-latitude.	
To find the hour angle ZPS = 56° 30' 32"	
= 3 hours 46 min. 2 sec. from noon.	

I have used
climations, at
observation do

to this departmen

NOVA SCOTIA (69) ALMANACK.

I have used in the preceding operation, tables calculated for the declinations, at the mean noon of Paris, and as Mr. Owens' first place of observation does not differ much in longitude from Paris, so the effect of this difference upon the result will be very inconsiderable.*

Then if the second observation was made before noon, we have

App. time at second place	8h. 13' 53"
Equation of time, July 17	0 5 43
<hr/>	
Mean time at second place	8 19 41
First	12 6 46
Diff. of time bet. the two places	3 47 5
<hr/>	
Difference of longitude	56 46 15
	= 3406' 25

Now if E be an ark of the equator and K, an ark of the parallel of $54\frac{1}{2}^\circ = l$ of lat intercepted by the same meridians we have

$$\frac{R}{E} = \frac{r}{K} = \cos l \quad K = E \cos l$$

and if E be expressed in geographical miles, or minutes of a degree upon the equator; $R = \frac{691}{660} E$

$\cos l$ in statute miles nearly. Hence if $E = 3406'$ 25 , $R = 2278.02 =$ distance between the two places

*[Mr. McI. in his MS. has given a formula by which the operation might be rendered perfectly correct: but as the tables as applied in this instance, are sufficiently correct for any practical purpose, so this portion of his MS. has not been inserted.]—Ed.

Solution of Question No. 5, by J. Owens, Royal Sap. & Miners.

This question is (in my opinion self-evident), for before I can proceed to its investigation, I must assume a right angled triangle whose base and perpendicular are respectively as 8 and 6, and if these are 8 and 6 the Hypotenuse will be 10 (Euclid 1 and 47) The area of this triangle is 24; and 24 is also the perimeter. Hence the question is solved.

ANSWER TO CHARADE.

The Poet sings, elate, the graceful VINE;
 The IVY tendrils round the turret twine;
 CHRYSANTHIUM buds adorn the winter's eve;
 The TOPAZ, gold-tinged, glows beneath the wave;
 In tropic groves the swelling ORANGE grows;
 The Nightingale, 'tis said, adores the ROSE;
 The INDIAN scowls, the chief of savage glen,
 And ANGELS are the link 'tween God and men.

The initials placed in order give a name,
 Already highest on the scroll of Fame,—
 And well VICTORIA claims the patriot's flame.

Roland.

Mr Mc Iver has furnished an Algebraical solution of Question No 5, for Young Mechanics. The solution would occupy more space than can be spared, and one much more brief has been furnished by another correspondent,—to whom, and to Mr McIver, we owe many thanks for their attention to this department—Ed:

SOCIETIES, &c.

NORTH BRITISH SOCIETY.—John Munro, President; James F Gray, Vice President; senr assistant Vice President, Edward Wallace; junr assistant Vice President, Alexander Frimrose; Treasurer, John Watt; Secretary, James Lessel; assistant Secretary, George Esson.

CHARITABLE IRISH SOCIETY.—Joseph Howe, President; Lawrence O'Connor Doyle, Vice President; W Skerry, Tres.; J Fitzgerald, Secretary.

CARPENTERS' SOCIETY.—William Marvin, President; Wm Cutlip, Vice President; Robert Richardson, Treasurer; John McPherson, Secretary.

NOVA SCOTIA PHILANTHROPIC SOCIETY.—Joseph Starr, Esquire, President; Peter McNab, junr VP; H Bazelgette, senr Assist VP; B Wier, junr Assist VP; Wm Caldwell, Treasurer; R M Barratt, Secretary; Samuel Caldwell, Assist Secretary; Messrs. Wm Donaldson, Steward. M Lounds, J Drillio, R Richardson, J Lee and J Bennett, Committee of Charity.

HALIFAX MASTER MARINERS' SOCIETY.—Formed May, 1837. Committee, Thomas Boole, Chairman; John Edward Lane, Charles R McLean, and James Morrison; Trustee, Mr Gasper Roast.

HIGHLAND SOCIETY OF NOVA-SCOTIA.—The Highland Society was instituted in London, in the year 1778, and incorporated in 1816; and the Highland Society of Nova Scotia was instituted at Halifax, on Thursday the 31st May, 1838. The principal object of this Society is the introduction of suitable Schoolmasters and the importation of books from the Mother Country into the eastern parts of the Province, and the Island of Cape Breton, so as to diffuse more widely among Scotsmen and their descendants, whether Highland or Lowland, Catholic or Protestant, the blessings of a sound practical and moral education. The annual subscription is ten shillings a year (in the town of Halifax.) Any person subscribing five pounds shall be a member for life.

His Excellency Sir Colin Campbell, Patron. William Young, Esq. President. The Right Rev. the Bishop of Tanen, the Hon. George Smith, the Hon. Alexander Campbell, Rev. Donald A. Fraser, Charles W. Wallace, Esq. Roderick A. McDonald, Esq. James McNab, Esq. Vice Presidents. Rev. John Martin, John Williamson, Esq. James F Gray, Esq. James Leishman, Esq. Alexander Keith, Esq. Andrew McKinlay, Esq. William Murdoch, Esq. William McDonald, Esq. 93d Regt. Archibald McDonald, Esq. Directors. Rev. James Macintosh and John McGregor, Esq. Secretaries. Charles W. Wallace, Esq. Treasurer.

HORTICULTURAL SOCIETY.—Patrons, Sir Colin Campbell. K.C.B. Lady Patroress, Lady Campbell. President, Hon. T. N. Jeffery. Vice Presidents, Hon. C. R. Prescott, Hon. J. Allison. Treasurer, Henry Pryor, Esq. Secretary, C. H. Wentworth, Esq. Royal Engineers.

AGRICULTURAL SOCIETY.—William Young, Esq. President; James Irons, Vice President; Daniel Mitchell, second V. P; Henry Wright, Treasurer; Archd. Sinclair, Secretary; John Artz, Chairman; Andrew Smith, J. Winters, J. Horne, A. McCulloch, W. Mitchell, and J. Longard, Committee.

HALIFAX MECHANICS' INSTITUTE.—Patron, Sir Colin Campbell, K C B; President, Andrew McKinlay, Esq; 1st Vice President, John Naylor; 2nd Vice President, Charles Young, Esq; Treasurer, James Forman, jr. Esq; Curator, Mr John McDonald; Secretary, Mr John S Thompson.

HALIFAX LITERARY AND SCIENTIFIC ASSOCIATION.—President, Thomas C James; 1st Vice President, William C Silver; 2nd Vice President, John A Bell; Treasurer, Charles E Patterson; Secretary, Martin G Black, jr; assistant Secretary, James B Leishman.

EXCHANGE READING ROOM.—Committee, Daniel Starr, chairman; Joseph Fairbanks, Edward Kenny, James A. Moren, John Duffus, P. Furlong; W. B. Hamilton, Sec'y; A. Wilson, superintendent.

KEEFLER'S READING ROOM.—This useful, and we may almost say, celebrated, establishment, has (we see by advertisement) entered on another year, commencing Oct. 1, 1838. Subscribers and visitors continue to speak highly of the Proprietor's attention and assiduity,—and we understand that he intends to make still further improvements.

COMPENDIOUS HISTORY OF NOVA SCOTIA
and other BRITISH NORTH AMERICAN PROVINCES.

The subscriber has to acknowledge several encouraging opinions and some orders for his proposed volume. He has been forced, for purposes of condensation and improvement, to re-write the work, and has been prevented by other avocations from getting it forward according to his hopes. He is, however, more anxious to make it approach perfection than to avoid reasonable delay,—and he trusts in due time to offer a volume which will deserve the favourable anticipations which have been expressed.

October 10, 1838.

JOHN S. THOMPSON.

HALIFAX.—Printed and Published by WILLIAM CUNNABELL,
Sackville Street, two doors below Mr. Wm. Northup's Country
Market; where he is prepared to execute BOUND and FANCY JOB
PRINTING, with neatness and punctuality.
