OUR NATIONAL PRESERVE.
Plans for a Game Preserve in the Rocky Mountains.

Both the large and the small game of the various provinces of the Dominion will be represented in a national park which it is proposed to establish in the heart of the Rocky Mountains. Several reasons have combined to influence the Government to favor this project. In the first place the park is intended to serve as an asylum and breeding ground for those magnificent varieties of big game which there is reason to fear are about to become extinct. In this category are the buffalo and the mountain lion. The Rocky Mountain goat is also reported to be growing exceedingly scarce. Then the park is expected to be a great centre of attraction for visitors, especially those interested in the study of natural history, as well as to sportsmen. There is already a small park at Banff, where the national preserve is to be established, but at present it contains only about 250 square miles of territory, while the intention is to set apart a reserve of at least ten times that extent. The park will not contain less than about 3,000 square miles. The territory to be selected is admirably adapted for the purpose, for while it includes some of the wildest and grandest Canadian scenery, the land is entirely unfit for settlement. It consists of both mountain and dale, and includes the famous Yoho Valley. The Government will stock the park with every variety of wild animal known to be native of Canada.

About the ...House
FOR SPECIAL OCCASIONS.
The following recipes have been used for years and are without fault. They are so well known to be over a hundred years old.

Continental Cake—Two pounds flour sifted, 1 lb 3 oz butter, 1 lb 3 oz sugar, 1 lb 6 oz raisins seeded, 3 lb citron cut thin, 1 pt milk, 2 eggs, 1 large nutmeg, 1 gill hotted cider, 1 gill yeast. Stir butter and sugar to a froth. Boil the milk and pour it on the cider, put curds and whey that are strained and squeezed, dredging the fruit, add the eggs well beaten, the butter, butter and sugar, and the yeast. Let it rise till very light, then add remaining ingredients. Bake in a tin lined with paper. When light, add the spices which have been dredged with flour. Put it in baking pan and let stand till again light. This cake must be well beaten each time it is worked over.

Sister's Sweet Apple Pudding—One pint flour, 1 scant pint milk, 3 eggs, 1 teaspoon salt, 1 teaspoon baking powder, 1 tablespoon sugar, 2 nutmeg grated, 3 qts sweet apples. Slice the apples very thin, and measure one cup to a quart of flour. Mix the flour with the sugar, salt and powder mixed, then part of apples, move apples to covered jar. Let the flour and apples stand for 24 hours. Mix till no dry flour appears. Bake in flat pans till apples are soft, which will be about an hour. Do not have a very hot oven. Serve pudding hot with hard sauce, or plain butter and sugar. Very delicious.

Tomato Sauce—Simmer over a slow fire 6 whole tomatoes over slips, 2 onions and 2 small pieces of fat. Add 1 teaspoon salt, 1/2 teaspoon sugar, 1/2 teaspoon vinegar, 1/2 teaspoon Worcestershire sauce, 1/2 teaspoon paprika, 1/2 teaspoon cayenne, 1/2 teaspoon black pepper, 1/2 teaspoon red pepper, 1/2 teaspoon white pepper, 1/2 teaspoon mustard, 1/2 teaspoon horseradish, 1/2 teaspoon tarragon vinegar, 2 gills vinegar. Mix the ingredients well together and keep it on a low place. This is very fine.

Spiced Apples—Four pounds tart apples, 2 lbs brown sugar, 1 pt good cider vinegar, 1/2 teaspoon ground cinnamon, 1/2 teaspoon whole cloves, 1 teaspoon whole allspice or nutmeg, 1/2 teaspoon small pieces preserved ginger root. Pare apples and halve them if large; leave whole if small. Boil sugar, vinegar and spices together for 20 minutes. Then pour the mixture over the apples and ginger and let it stand for 24 hours. Cut in pieces about 1/2 inch thick. Boil gently till apples are tender, remove to covered jar. Add 1/2 cup of sugar, 1/2 cup of vinegar, 1/2 cup of water. Let it stand for 24 hours. Rub water that drains from them. Rub them through the muslin. Put in a wooden spoon or wooden bowl with a masher, the cores and skins will remain behind. Add 1/2 cup of sugar, 1/2 cup of vinegar, 1/2 cup of water. Add sugar and a hint of cinnamon to taste. The apples should be served in a bowl with a little of the syrup. Leave the apples in the dish, and serve cold with fruit and cream.

HINTS FOR WASH DAY.
Try washing red table linens in a mixture of soda and a little borax has been dissolved. Add a few drops of ammonia to the water to which the clothes. Clothes turned right as they fall. Fully folded and sprinkled, are half ironed. Sprinkle salt on a wine stain and pour hot water through till it is gone. Wet fruit stains with alcohol or pour boiling water through. Sprinkle Kerosene in the boiling water whitens clothes safely. Such as are yellow from lying. Put a tablespoonful to each gallon of such. For very yellow or grimy things, mix turpentine and turpentine in equal parts. Shake them together until they are well mixed. Dip the clothes in the mixture and wash them in the following plain: Make ordinary soap suds, starch as for starching clothes, only using the turpentine mixture. Set it away for a day, when the starch can be peeled off, leaving the clothes clean and white. Some times a second application is needed, if it is badly soiled, but usually one will suffice.

RESTLESS GOLD FISH.
It may not be generally known that there is cruelty in the keeping of gold fish. Half of such captives die from sheer want of rest. As fish have eyes so formed that they cannot endure the light, in a glass vessel they are in an entirely wrong place, as is evident from the way in which they dash about and go round and round until they wear out.

TOO INDULGENT MOTHERS.
Florida Vining writes as follows: It is barely possible I may be growing rusty myself, but I see children ten years old and upwards who monopolize the entire conversation at a dinner table, of their mothers and fathers, where there are guests, and fault with the food, and a good share of the time of the waiters is taken up in satisfying them. When I was a girl I had to sit still, say nothing, and be polite to my mother and father. I had to accept of my plate as I was obliged to eat. Children are not brought up like that these days. In ordinary circumstances can earn. The family of to-day don't seem to be so well brought up as the family of yesterday. It is the middle class that are the most extravagant. They have no more respect for a man with five or six children to live on the most extravagant way, and leave a woman alone to fight the battles of the world. Some of these families must depend upon their relatives and friends and those that are not so well off as those that have wasted.

PLASTER STATUES.
Many of the cheap plaster of Paris ornaments are in reality quite ornamental, but they soon show the effects of dirt and must be cast aside unless one knows how to clean them. They can be easily cleaned by the following simple and following plain: Make ordinary soap suds, starch as for starching clothes, only using the turpentine mixture. Set it away for a day, when the starch can be peeled off, leaving the clothes clean and white. Some times a second application is needed, if it is badly soiled, but usually one will suffice.

How to Know La Grippe.
The Symptoms and Dangers of This Deadly Disease Which is Driving so Many to Beds of Sickness—Effective Treatment by
Dr. Chase's Famous Remedies.
Chill followed by fever, quick pulse, severe pains in the eyes and forehead, and dull pains in the joints and muscles, mark the beginnings of la grippe. There is also hoarseness, inflamed air passages, and obstinate cough, rawness, distress in the stomach, and diarrhoea. The most noticeable feature of la grippe is the depressed spirits and weakness and debility of the body. With the very young and very old and with persons of low vitality, the dangers of la grippe are very great. Pneumonia of a violent and fatal form is a frequent result. It is also claimed that very many cases of consumption can be directly traced to la grippe. The after effects of la grippe are most often felt in the nervous system. The extreme debility in which this disease leaves its victims is more than most nervous systems can endure. The most successful doctors advise their patients to avoid exposure to cold or over-exertion, and recommend both general and local treatment, such as Dr. Chase's Nerve Food, to strengthen and tone the system. Dr. Chase's Syrup of Lined and Turpentine is the cough and protect the bronchial tubes and lungs from threatened complications. Any honest and conscientious doctor will tell you that this combined treatment recommended by Dr. Chase cannot be surpassed as a means of relieving and curing la grippe, and restoring the weakened and debilitated body to its accustomed vigor. Dr. Chase's Syrup of Lined and Turpentine is too well known as a cure for bronchitis and severe chest colds to need comment. Dr. Chase's Nerve Food seeks out the weak spots in the system and builds them up. It relieves the vitality of persons weakened by disease, worry or over-exertion, and cannot possibly be equalled as a restorative and reconstructant to hasten recovery from la grippe, and to prevent serious constitutional complications. For sale by all dealers, or Edmondson, Bates & Company, Toronto.

BOMBAS AS STIMULANTS.
Chocolates Said to Be a Long Way Ahead of Liqueur.

It is a well-known fact among certain business men and women who are apt to become tired before the end of the day's work that two or three chocolate creams or a piece of sweet chocolate eaten in the middle of the afternoon will have all the reviving effect of coffee and none of its deleterious results. "It has been determined by science that sugar is a more powerful stimulant than liquor of any sort," says the Worcester, Mass., Gazette. "An experiment was tried several months ago upon dogs, with some very remarkable results. The animals were a breed of runners, and two of equal speed and endurance were taken and especially trained for the purpose. One was given a regular allowance of whiskey, and the other a ration of sugar. After a period of time had elapsed two dogs were taken out for a long run, with the result that the sugar fed dog ran faster and further with less fatigue than his whiskey fed brother. At the time the various scientific journals made some considerable comment upon the experiment. Now the circumstances are again called to the public attention, owing to the fact that the soldiers in the Philippines have consumed 40,000 pounds of a certain kind of chocolate in a few months. The use of carbohydrates in the Philippines is explained by the army surgeons on the ground that in tropical countries plenty of sweet is necessary for the preservation of the health of the troops. The experiment made by him has proved the correctness of the theory."

BEYOND A DOUBT.
The soldier boys find that the feeling of a need of liquor is absent when they have plenty of chocolate or some kind of sweetness. "While liquor will undoubtedly be used for a long time to come, a substitute is so harmless in every respect will be welcomed not only by temperance people, but by those who need the stimulant to accomplish their daily toll in a world where the so-called strenuous life is almost a necessity for the struggle for existence. The old-time notion that sweet was unwholesome is as exploded as the notion that fact, many of the old ideas are being relegated to the rear of the car of progress. One of these seemingly strange theories was the furnishing of soldiers in the service of the Government with a regular allowance of grog. This was no army canteen, but a stiff glass of the ardent. It was supposed to give men the strength and necessary courage to go into battle and win. That was a long time ago, but the notion that chocolate distributed to the soldiers before the signal to begin firing is given. This is no idle dream, but the result of scientific investigation, which has shown that a soldier is healthier than his predecessor, and which should make the next one a better man. "A moderate indulgence in certain kinds of liquor will make their use a subject of discussion for those who need something to make possible the completion of their tasks, a greater stride has been taken in the direction of temperance than all of the various organizations for the promotion of that virtue have been able to make possible since first they began to agitate."

PRIVATE CARS.
Once a Luxury, Now Almost a Necessity.
"The private car," said a railway man, "is the best evidence in the world of the continued evolution of the business man." More and more private cars are being turned out every year, and where one person had a private car years ago, there are now ten or twenty who own them, or lease them for terms. "The presidents of railway companies were the first to have private cars. Then the heads of large concerns saw their possibilities, and followed their lead. The advertising is gone along with them. The wealthiest men, who have been able to get along with private cars, and lastly, the rich man who wanted comfort and privacy for himself or his family began to use the private car. "The head of a corporation or other large concern, who does much traveling, finds a private car a great convenience. It makes his car his office, and where he formerly lost a business day or two in travelling, he now loses little time. "A car built for the business man is practically a travelling office. Sleeping quarters are provided for the man himself, his secretary, stenographer, and servants. "A special car intended more as a vehicle for pleasure than business, contains staterooms, a kitchen and a dining-room. The beds are arranged, there is an extension dining-table and there are arm-chairs, desks, lounges, cabinets, wardrobes, and all the conveniences and luxuries that can be put in such a vehicle. Such a car may cost from \$25,000 to \$50,000, and sometimes even more."

NEW UNIFORMS.
The British Army's Future Fighting Kit.
The War Office has at last decided upon the new military uniforms in detail, and the transformation of a soldier is expected to commence about the middle of the year, says the London Daily Mail. The ceremonial dress will be the full dress at present used, and will be worn with cap for walking out, while the service dress—the fighting kit—will be an entirely new one, of special material, replete with the latest improvements, and designed alike for rough wear and comfort. The service dress is, in fact, designed with a view to furnishing a comfortable uniform, light enough to be worn on service abroad and in warm weather at home, and also with the addition of warm, under-clothing for wear in winter. It consists chiefly of a rain-proof drab mixture cloth. The great coat is to be light and supple, with a small cap attached, capable of being easily put on or taken off, and easily folded. The jacket is of a very light drab mixture serge of Norfolk pattern. It will have a turned-down roll collar, shoulder and hip patches, two breast pockets with flaps, and two strong pockets with flaps, placed at the waist and with a buttoned flap down the center of the back. It is intended to be loose fitting. Every man will wear on a particular colored ground the title of his unit. This will be a curved strip on the upper arm of the jacket and the great coat. A headpiece of new design of thick, with head band and ventilation.

THE TRIALS OF THE MIKASA.
The trials of the improved Elswick gun mountings for the barbette guns of the Japanese battleship Mikasa seem to prove that they are a long way in advance of anything yet in use in the British navy. From the after barbette, firing aimed shots, the gun was on one occasion loaded and fired in thirty seconds, an improvement of twelve seconds on the best previous performance. But the most remarkable result was achieved by the forward barbette, which, firing aimed rounds from one gun, got off three shots in a net period of five seconds, or at an average rate of one round in 33 1/3 seconds. As, however, the gun's crew was merely a scratch lot, it is probable that the Mikasa will put this performance in the future. She will at any rate approach the rate of two rounds per gun per minute, which means that from her four 12-inch guns alone she will be able to hurl three tons of steel at an opponent within that time. "I can't understand, Bobby," said his father, "why you should quarrel so much with Tommy White. Your mother tells me that you quarrel with him, but the time that I can't help it, pa," replied Bobby, thoughtfully. "I think I must get my disposition from you or ma."
