A Letter From Boston. After a too brief excursion among some of the principal cities of the Atlantic coast, I find myself again in Boston, which, with the exception of a large hole burned in its business portion and a few more lines of electric cars in operation, seems to be about the same as when I left it.

It is a city of the future, and it yet without doubt this atmosphere of quiet respectability will hover over it so long as Boston sets on its three hills. Despite the wishes of some of its younger citizens, this city will never part on metropolitan air.

And the question comes, "Does it need it?" with the answer ringing in the negative. Boston's chief charm lies in the fact that it is the best residential city in America.

On the suburbs luxurious homes of retired business and professional men—not of this city, but of many others—grow numerically greater every year, making the environments the most beautiful of any city in the United States.

And to change this beneficent order of things for a little more rattle and roar in its streets, the adoption of foreign fads and follies, would indeed be dropping the substance for the bubble. Boston has one peculiarity, however, that will always strike the observer, and that is the sudden change from winter to summer and back to winter again.

Like the transition from day to night in equatorial climes, without any intervening twilight, so in its pleasure this city changes from winter to summer in a single day—and that is the fact. Then the harbor boats make their first excursion to the beaches, yachts are launched for the winter, and all-out-door sports are inaugurated for the season.

Book Notices. Wide Awake for April opens with a burst of Easter beauty and hope; the frontispiece, by W. L.
