THE MANUFACTURE OF GAS.

A Simple Explanation of the Way Illuminating Gas is Made.

How few people can intelligently explain some of the most ordinary things in every day life. An official of the city gas works was asked to say not long ago that if he might judge by the number of times he was asked for information, not more than two people in ten know how common illuminating gas is made. They all seem to understand, he said, that it comes out of soft coal, but they are ignorant of the process by which it is extracted. We do not doubt this at all, for it is the common things that we are apt to overlook in our search for information.

Now, let us give you a simple explanation of gas making. Break up a piece of bituminous coal into small fragments and fill the bowl of a clay tobacco pipe with them. Cover the mouth of the bowl with wet clay and then thoroughly dry it. Put the bowl of the pipe into a fire where it will get red hot, and you will soon see a yellowish smoke come out of the bowl. If you touch a light to the smoke it will burn brightly, for it is nothing more or less than gas from the coal.

You can purify and collect this gas in a simple way. Fill a bottle with water and turn it upside down in a bowl of water. Put the end of the pipe stem under the mouth of the bottle, and the smoke will bubble up into the water, gradually displacing the water, and if the pipe were large enough to take a great deal of gas the bottle would be entirely filled with it.

You have seen the immense quantities of coke which they have at the gas works; that is what is left of the coal after the gas has been burned out of it. Coke is carbon, only a small part of what was in the coal having gone off with the gas. Take the clay covering off your pipe and you will find the bowl filled with this coke.

Now, that is precisely the way gas is made in large quantities. The gas works. Instead of pipe bowls they use big retorts, and these are heated red hot by means of the coke. The gas which comes out of the retorts, heating coal red hot in a closed vessel, is different from burning it in the open air. A large pipe with the retort carries off the product of the coal, consisting of steam, tar, and ammonia, as well as gas. The ammonia and tar go into tanks, and the gas into casks, and then over the whole takes up the acids in the intense inner heat.

These holders are open at the bottom, and stand, or rather swing, tanks and the water, being adjusted by means of weights. As the gas comes into the tanks they rise up out of the water, but the bottoms are always submerged, so that the gas cannot escape. The large gas pipes, or mains as they are called, conduct the gas to the houses where it is used. The pressure is given to the gas by the weight of the iron holders, which are always bearing down on the gas they contain.

How to Use Lamp.
Milk is not always suitable as a dinner drink, especially when fish plays any part in the menu. Tea or coffee taken with milk is simply unpalatable. These hot beverages turn the most into something resembling lead, and the milk, after being freely with digestion. The man who desires long life must not give a place to "high life" in his daily programme. Of tea itself it can only be said that it is useless if not taken too often or made too strong. The American lady who after several calls and a cup of tea at each remarked that she could "take tea" very down another cup was probably unconscious of the mischief she was doing to herself. No one need totally abstain from tea if they only take the precaution to take it in moderation. It is not too much to let it infuse long, never to take it more than twice a day and to adjust it after 5 in the afternoon.

The morning tea is indispensable to all who wish to live a long and healthy life. It is true that there have been certain cases in which tea has been found to be of great value, but these are the exception, and not the rule. Walking is good, but it must not be overdone. It is good, but it must not be overdone. It is good, but it must not be overdone. It is good, but it must not be overdone. It is good, but it must not be overdone.

Between Aspinwall and Panama.

Aspinwall has risen like a Phoenix from its ashes. The last Colombian revolution, happily carried by Uncle Sam, has left the town scattered but still there. Aspinwall, or Colon, with a time on the "can," is not a beautiful place. There is a funeral train to Monkey Hill every day, sometimes twice a day. It is a hospital city, as well as a seaport, and the men who have been involved in delivering amid the treacherous marshes of the isthmus are filling coffins at the rate of eight or ten per diem, and one coffin does the duty for many. Men are cheap, but the coffins are done. As to the canal, all I can say is that there is more machinery going to Panama than there is to any other place.

In exact proportion as the Panama train recedes from Aspinwall does the faith of the traveler vanish into airy nothing. For the first ten miles all is well. Then things begin to take their natural shape. There are Americans, Europeans, Chinese, natives, gazing at the cars as they pass town after town on the line, but the faces of all bear the same impress. "All hope abandon, ye who enter here." Every man who goes to work or starts a store on the isthmian canal route is a silent partner with King Death. It is a lottery out of which the adventurer hopes to emerge a winner. But the winners—they crowded the depot at Panama—and what were they? For the most part hospital patients, or subjects for hospital treatment. I've been over every inch of those forty miles between Aspinwall and Panama. You breathed it in the air; you drank it in the water; you beheld it rank, pestiferous, and deadly in the surroundings of every palatial roofed hut, every large stone monument, every dwelling on the hills along that fatigued mile stretch.—Cor. San Francisco Chronicle.

The Holmstroms "White Lady." During the middle ages, a noble lady, surprisingly beautiful, of the house of Holmstrom, fell madly in love with a prince of the reigning house, and sent him a letter of love and devotion. The prince, however, was not so easily won, and he wrote her a letter of refusal. The lady, in a fit of rage, wrote him a letter of defiance, and she sent him a letter of defiance. The prince, however, was not so easily won, and he wrote her a letter of refusal. The lady, in a fit of rage, wrote him a letter of defiance, and she sent him a letter of defiance.

A terrible scene ensued between the prince and his murderous lady, after which he fled into exile, and she died of remorse. Since then her ghost is said to haunt the halls of the Holmstroms, and her appearance is a warning of death to some members of the family. The Holmstroms are a family of the highest rank in the city of Berlin, and the Holmstroms are a
