

General News.

A CURSE CAME—We ask sympathy for John W. Cobb of this State. Being in jail he worked 84 days to dig out, and then rose up in the sheriff's bedroom, in front of a ticked audience of a dozen persons.—Detroit Free Press.

A German statistician reckons that the world contains 1,455,923,000 inhabitants, or 16,778,000 more than it did a quarter of a century ago. It allows \$24,707,000 to Asia, 315,929,000 to Europe, 250,679,000 to Africa, 95,405,000 to America, 4,121,000 to Australia-Polynesia, and 82,000 to the Polar regions.

In addition to the \$100 which Thomas Harrison, the popular revivalist, received for a week's services at a camp meeting, he has a profit from the sale of his photographs, hymn books, and biography. The managers of the camp at Acton, Ind., say they were well pleased with these terms, and voluntarily provided him with a tent furnished in the most luxurious manner.

The anguish with which one reads in the London papers that Dr. Truener had suffered an aneurism and inglorious death by falling down a flight of stairs in Amsterdam is augmented by the announcement that he is in the prospect of an excellent health and is about to be married. How the report of his death in the Dutch metropolis originated does not appear, but it is surmised that some unworthy compatriot of the great father, with a morbid passion for notoriety, had been flaunting bogus news of his starvation along the canals of Amsterdam.

Preserving Potatoes.—The St. John Sun says that two New York gentlemen, named Chinnock and Bell, are in that Province prospecting with a view of starting a factory for preserving potatoes and apples for shipment. They have been on a visit to Georgetown, Washington, and are expected to be back in Fredericton this week. The process of preserving is such that potatoes or apples can be reduced to less than one-fourth their original bulk and shipped to any country and will remain in a perfect state of preservation. The product is marketed in England and in the East and West Indies. The process is largely carried on in New York. The factory will require a supply of at least 100 bbls. of potatoes and the same quantity of apples daily.

LESS BRUSH, Sept. 9.—The following was sent to-night to Morton, Minister, Paris and, Lowell, Minister, London.—The President left Washington at half-past 6 this morning and reached Long Branch at 10 minutes past 11. He seemed to bear the journey well, though the heat was very oppressive. After his arrival he was for several days in a state of nervousness, and complained that his back had a bruised feeling. His pulse rose to 124 and temp. to 101.6 and 100. At this high half past ten, he is sleeping, and the fever is abating. The surgeons regard the symptoms as the necessary result of the journey, and expect a favorable change within the next two days. He earnestly desired to leave the White House, and his weary eyes welcomed the sight of sea.

Freight Report of D. W. R. Read and Co. PHILADELPHIA, Sept. 3rd, 1881. On change both here and in Baltimore, great excitement and speculation was caused this week by the Elevator Company giving notice of an intended advance in the storage rates. If the grain is not shipped.

The speculative elements that seemed to have taken possession of the market had reached such a stage that prices here were far above European ideas, and legitimate business had become almost impossible. The notice above referred to caused a decline of two or three cents per bushel, and more enquiry and speculation followed. The stocks of grain at the seaboard are immense, with a light supply of vessels, and we predict a decided improvement in grain freights within the next two weeks.

The business of the week here has been in Petroleum, and a very material advance has resulted. The Department of Marine and Fisheries has just issued a list of vessels in the registry books of the Dominion on December 31st, 1880. At that date there were 1,211,218 tons registered. Assuming the average value at \$30 per ton, the tonnage of Canada would be worth \$36,334,540. Canada ranks the fourth on the list of maritime nations, Great Britain being the first, the United States second, Norway third. Germany follows, and the United States takes tonnage of Canadian vessels under 100 tons is counted on her totals. The tonnage according to provinces is as follows:

New Brunswick, 236,276 tons. Nova Scotia, 359,440 tons. Quebec, 233,341 tons. Ontario, 137,481 tons. P. E. Island, 45,291 tons. British Columbia, 5,049 tons. Manitoba, 1,992 tons.

Irish Land Looking Up.—Next year is an Irish centenary. It was in 1782 that Henry Grattan, backed by the volunteers who had organized to defend the country against the French invasion, achieved the independence of the Irish Parliament. It is proposed to celebrate the anniversary of that event by an exhibition of Irish products at Dublin, with a view to still further stimulate home industries. The Dublin Freeman's Journal publishes eloquently for it. There are yet its insular, unutilized land factories in the North. There is lace at Limerick. Dublin shop-windows exhibit a native golden-hued hosiery and knitwear for Her Majesty the Queen. Blarney has its Irish tweeds; Belleek its far-famed pottery. There are marbles in Connemara and Killarney. There are cabinet-makers, and gun-makers, and saddle-makers, and rop-makers. There are Guinnesses and D'Arcys, Rosses and Jamesons. There are Cartells and Cochranes and Kernans who have won medals from Ireland to the antipodes. The newest and greatest telescope in the world went to Austria from her shores the other day. Turning aside from the political agitation, of which it is evidently weary, the Journal predicts that the home exhibition would be surrounded by that arch of peace which the national poet sighed for, of various tints uniting. The darkest hour is that before the dawn.—Baltimore American.

The New Haven Horror.

THE DEATH OF JENNIE CRAMER.

A strange, terrible story is now attracting the attention of the people of the United States, and engaging the best legal and detective talent in Connecticut to solve the mystery that surrounds it. Jennie Cramer was celebrated as the most beautiful girl in New Haven. She is described as having graceful figure, with beautiful complexion, deep blue eyes and glossy black hair. Her parents, who reside in New Haven, are highly respectable, and the breath of scandal had not tarnished her fair fame. Her disposition was gay and light hearted, and her prospects in life more brilliant than falls to the lot of most young women. She became intimate with a wealthy young man of New Haven, and they were generally regarded by those who knew them as engaged lovers. The young man's name is Malley, and he has a brother, and both of them are now in prison charged with the murder of the unfortunate girl. It appears that instead of marriage Malley determined to accomplish the ruin of the girl. In this vile purpose he secured a willing accomplice in his brother, who brought a prostitute from New York, whom he introduced to Miss Cramer as Blanche Douglas, and passed off as a lady of respectability. This woman soon established an influence over the girl, and one night the Malley brothers, Miss Cramer and the Douglas woman had supper at a restaurant. Here, it appears, a drug was administered to the unsuspecting girl, who was carried to the room occupied by her lover. Next day Jennie was missing, but the day following her body was found in the surf on the sea shore, tossed about by the waves. Inquiry into the circumstances of the supposed drowning, and a post mortem examination disclosed the presence of arsenic in the stomach. The Malley brothers were arrested, and shortly afterwards Blanche Douglas was also imprisoned as an accessory to the double crime that had evidently been perpetrated. Evidence has been given by one A. P. Sanford that Malley was seen driving with Miss Cramer the night before her body was found, and which has broken down the alibi which so far is the only defence set up by the accused. This evidence has been further strengthened by that of another witness named H. C. Allen. The story told by Blanche Douglas is a tissue of contradictions and evasions. She evidently knows more than she cares to tell, but the detectives are gradually following up the clues of the case, and will, there can hardly be a doubt, finally unravel the mystery. The coroner's jury has rendered a verdict that one of the Malley's caused the girl's death, and that the other Malley and Blanche Douglas are morally responsible for the crime.

Evaporated Apples.

The desiccated apples have quite taken the place of the old fashioned dried apples, having much more flavor, being light colored, and what is not a small matter, being free from the dirt of flies and other foul matter, which most of necessity accumulate upon apples dried on the old saw in the open air. As Nova Scotia is one of the greatest apple producing countries, any new process by which our surplus crop can be profitably utilized must necessarily be of interest to the country. Following is a description of the process of drying as it is pursued at an evaporating establishment at Spencerport, N. Y., in which 13,254 bushels of apples (making 53,328 pounds of beautiful white fruit) were dried last fall and winter, and shipped to Russia. Five of these evaporators are now put up in one building; and average work of each will be 150 bushels, or 750 to 800 bushels a day for all, and 40,000 to 70,000 bushels during the season. The fruit is pared, cored and sliced at the evaporator. Two girls work together in a team, one running the machine and the other trimming the slices and putting them on the tray ready for the evaporator. Each team prepares from twenty to twenty-five bushels a day, and thirty bushels have been done by one of the teams in nine hours. They receive six cents a bushel for their work. The evaporator consists of a tower sixteen feet high and five feet square. Under this tower is a hot air furnace enclosed in a double brick wall. An iron belt or chain on each side of the tower runs over a roller or pulley, up on the inside and down on the outside, with slats or cross bars five inches apart to receive and hold the trays containing the fruit. These trays are made of galvanized iron wire, and hold a bushel each, spread an inch and a half thick. There are thirty of them to each tower. When the thermometer indicates 230 degrees of heat a tray of fruit is laid on the lower slats and carried by means of a rope over the pulley five inches. In seven minutes and a half another tray is slid in, and so on during the twenty-four hours. When the first tray put in reaches the top in the second story of the building, it is taken off and emptied by a hand stationed there for that purpose. The fruit is bleached by burning limestone. It is then blown out from all part in every direction. The whole country is now arched and intense excitement prevails. The leader of the party answers the description of the leader of a party that reached the Chicago and Rock Island at Windsor on July 17. It is stated that the robberies of the party were twelve in number, armed with Henry rifles. The Governor has issued a proclamation calling upon the people of the Western States en masse to exterminate the train robbers. He has gone to Kansas City, Jackson, Lafayette, Clay, Bay, Clinton and Saline counties, and is now in the field under command of sheriffs and marshals.

Murder Will Out.

No little excitement has been created in Pettie River, Lunenburg County, by the confession of a murder said to have been committed in that place some ten years since. One Matilda Brown, formerly a servant girl at a hotel kept by Leuben Heckman, says that Heckman, one night about ten years ago, killed a sea-faring man who had put up at his house, and added by his wife and Matilda Brown, the body under the stable floor. Heckman died about a year after the asserted murder, but the business was continued until lately under the management of Mrs. Heckman. A few months since Mrs. Heckman joined the exodus removing to the States. Search has been made over the whole province for any evidence which might corroborate the girl's story, but nothing has been found. On the examination of Matilda Brown, which took place about a week ago, she repeated the story in the most straightforward manner. Many persons in the community refuse to give credence to the story, and Matilda Brown is now out to be a fraud. The affair is now in the hands of the superior court, and the case of Gannon vs. Bailey, J. Pugsley and Burbage, p. 324.

Marriages.

ANDERSON—JONES.—At Hotel Royal, Yarmouth, on the 3rd inst., by Rev. W. H. Harris, William H. Anderson, Esq., of Lynn, Mass., to Mrs. James E. Jones, of Glenisport.

Women Remember.

If the crabbled old bachelor who uttered this sentiment could but witness the investigation of women in determining the best medicines to keep their families well, and would only see the results of the investigation in keeping Hop Bitters at the best, and demonstrating it by keeping their families in perpetual health, at the expense of their own health, they would be forced to acknowledge that such sentiments are baseless and false.—Physician.

A Gigantic Enterprise.

It appears as though French money had determined to do more money in Canada. There have been announced many schemes of more or less magnitude, such as phosphate mine development, beet root sugar, etc., and many of them the Credit Foncier among the number. However, the most important of these is a scheme to build a canal through the Province from the St. Lawrence to the Gulf of St. Lawrence. The project is a grand one, and has attracted the attention of capitalists and of a large number of francs to lead upon movable property, such as furniture, machinery, or any other goods that offer as security. The fact is, that the information is a fearful secret to a sort of gigantic waterworks business without the petty vice of that business. The capital seeking investment will be content with fair rates of interest, say five per cent, and the new concern will likely prosper. It is well known that M. Legre has much to do with the organization of this project, and is now on the ocean upon his way hither.—Montreal Witness.

A Great Cattle Raiser.

Mr. J. P. Wier, M. P. of Prescott, one of the great cattle raisers of the Dominion, is now in this week. The result of his visit to the North West was the selection of 100,000 acres of grazing land on this side of Fort McLeod, at the junction of the Old Man, St. Mary, and the Belly Rivers, about 800 miles from Winnipeg, on which to establish a large cattle ranch. The Cochran Ranch Company, under the direction of Senator Cochran, have also secured 100,000 acres, at the junction of Jumping Pound creek, and Bow River. The company will put in about 9,000 head of cattle this fall, but Mr. Wier will not begin work before next year. The public sentiment has a few objections to the locality—the scarcity of grass during the winter season, scarcity of wood all over the country, and the existence on the American side of the line of bad water, being the principal difficulties. He has every confidence, however, in the success of his enterprise. Mr. Wier is to be congratulated for his energy, and we sincerely wish that his best hopes may be more than realized in this his latest departure.—St. John Sun.

During Robbery of a Mail Train.

ROCHESTER, N. Y., September 2.—This evening the Board of Health was called upon to investigate a horrible case. Frederick Beck, living on Holland street, is accused of killing dogs, healthy, sick and sore-eyed, and frying out the fat, which he has been selling as a remedy for consumption. His wife is accused of making dog meat into soup for their children.

President Garfield.

At the examination of the President at 8 a. m. the temperature was 98.5; pulse, 100; respiration, 17. The condition of the paralytic wound is improving. He was somewhat wakeful during the night, but not restless, and slept sufficiently. The enemata and stimulant have been suspended during the past 36 hours. On the whole, the past 24 hours give evidence of favorable progress.

President Garfield.

The following outfit is a very good one for people who are going to camp in the woods, or to the mountains, or to the prairies of insects. Aqua ammonia, for insect bites. Gloves, to protect yourself from bugs. Oil of pennyroyal, to keep insects away. A few rolls of mosquito netting, to keep the larger insects from destroying the smaller ones. A tin of disinfectant, to keep the camp clean. A tin of disinfectant, to keep the camp clean. A tin of disinfectant, to keep the camp clean.

THE subscriber offers for sale his Dwelling House & Property, situated near the business centre of the village of Bridgetown. Size of lot 90 feet deep, and 150 feet front. Price as suitable only. Building for first-class repair. House well insulated. The Garden is favorably situated, and is one of the best in the town, is thoroughly drained, and last year produced ten barrels of good apples, together with cherries, plums, peaches and small fruits in abundance. There is a never-failing well of water, filtered through a gravel and brick, with new pump. The property is too well known to need further description, and is in every way desirable for intending purchasers. A new and first-class COTTAGE PIANOFORTE, by the celebrated artist (late) Albert Weber in New York, can be bought on favorable terms from the subscriber. INSURANCE. In all 15 branches a specialty, and attended to promptly. Prices and loss of buildings are as frequent as late that property holders (insured) should insure when they can secure \$100,000 for a small premium of \$2.25 per annum, in first-class companies. Losses promptly settled. ALBERT MORSE, Broker-at-Law. Bridgetown, April 12th, 1881.
