Pages wholly or partially obscured by errata slips, tissues, etc., have been refilmed to ensure the best possible image/ Les pages totalement ou partiellement obscurcies par un feuillet d'errata, une pelure, etc., ont été filmées à nouveau de façon á obtenir la meilleure image possible.

This item is filmed at the reduction ratlo checked below/
Ce document est filmé au taux de réduction indiqué ci-dessous.

The copy filmed here has been reproduced thanke to the generosity of:

National Library of Canada

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or lliustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shail contain the symbol $\rightarrow$ (meaning "CONTINUED"), or the symbol $\nabla$ (meaning "END"). whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following dlagrems illustrate the method:

L'oxemplaire filmd fut reprodult grace ila géndrositd de:

Bibliothèque nationaie du Canada

Les images suivantes ont étó reproduites ajec ie plus grand soin, compte tenu de la condition et de la nettet' de l'exemplaire filmd, et en conformite avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier ast imprimée sont filmbes en commençant par lo premier plat et en terminant soit par la dernidre page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le ces. Tous les autres exemplaires originaux sont filmós en commençant par la premidre page qui comporte une empreinte d'impression ou d'illustration ot en terminant par la dernidre page qui comporte une telle empreinte.

Un des symboles suivants apparaitra sur la dernitre image de chaque microfiche, selon le cas: le symbole $\rightarrow$ signifie "A SUIVRE", le symbole $\nabla$ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmes à des taux de réduction diffírents. Lorsque le document est trop grand pour étre reproduit on un soul clichd, il est filme al partir de l'angle suṕrieur gauche, de gauche à droite, ot de haut en bas, on prenant le nombre d'ímages nécessaire. Les diagrammes suivants illustrent la méthode.

## CASI'IAN SEA

CASPIAN SEA (the Mare Hyrcomum of the un$35^{\circ} 35^{\prime}$ and $47^{\circ} 25^{\prime} \mathrm{N}$. Int., num $165^{\circ} 15^{\prime} \mathrm{man} 55^{\circ} 10^{\prime}$ J. long. It is wholly inelowed, lusving no outhet whatever to the oceai, and is surronmed by Tartary, I'ersia, the Cuncastan countries, nuid the Russian governments of Astraklan and Oremburg. Ite direction in from N. by W. $\frac{1}{2}$ W. to S. ley E. $\frac{1}{2}$ Ji., but at its N. cud it tirris due Ji., terminating in a considerable gulf ealled Mervii Kultuk, or the lead Sea. It is here almost 400 m . from lis. to W.. but in general it is not muell more than ling that width, and at its narrowest part (about. $10^{\circ} 90^{\prime} \mathrm{N}$.) it does not exceed 120 m , actuss: its greatest length from N. to S. is $\mathbf{7} 60 \mathrm{~m}$., and its Hren may le estimated at 119,000 or $120,000 \mathrm{sq} . \mathrm{m}$. (Hunway's Travels, i. 34., \&c.; Grent Russinn Mnp, 1 sivo; Remnell's Gen. View of W. Asin, 11. (i, til, 12 ; Arrowsmith's Atlas.)
The const of the Caspian is considerably broken, but its gulfs and bays are more remarkable for their number than their size; the most important ufter Mervoi, is the lialkhan Gulf, or loke, as it is sometimes, though improperly, ealled, which projects from the main body of the sea, near its SLE. corner, and stretelies E. over nearly $2^{\circ}$ of long. The others are mostly little more than very large harbours, nearly surrounted by the land; such ns Alexander May, Karabogas Lake, Astrabad Gulf, and others on the 1. . coast ; the gulfs of Kezilgateh, Agrakhan, Kolpichi, and others on the W. The S. coast has an almost unbroken line, but the N . is lirittered in pieces, especially towards the W., by a countless number of sandy marshy islands, the shores and positions of which are continually changing. The depth of the Caspian is very variable; on the N. shore there is nowhere more than 12 ft , and usually not more than 5 ft , water; and this extraordinary shallowness continues for more than 20 m . from the land; on the E., W., and S . shores, on the other hand, the depth is gometimes 150 ft.; though here, also, shonl water is far from uncommon. In the middle the bottom has not been reached nt a depth of $2,800 \mathrm{ft}$. From thie general result of the soundings it would appear that, in some part - at least, the bed of the sea descends by terraces; for, on the SE. const, the depth lies very regularly hetween 12 and 15 ft . for some distance from the land, when it sudilenly increnses to 40 or 50 ft ., at which depth thie soundings run in a line, equal in extent and parallel to the former one. A similar phenomeYol. II.
now is ohserved on the N. shore, and in several other parts. (fecorgi, Geog. I'hys. and Stat. des Rinsw, i. 25i-2lin; (imelin's licise durell linsshund, iii. 231, se. ; Hanway's 'Truvels, i. 135, 15in, $3\left(\begin{array}{ll}2 \\ 1 & , 8 c \\ \hline\end{array}\right)$

The busin of this sea ls extremely limited on the s., as well as on the 1., side. On the s. the Eillury mombains press nol clesely oll the water that the lact of their ithowing a pinsange for the romd at one puint on the sW. corner is remurked as a singularity, -the romds mud passes being generally so imprinticalle that many lises are cunumlly lowt in travelling them, withont reckoning thase whor finl vietims to the rohher pupulation. (1lanwny, i. 2:21-227, \&(c.) It seems that there is gean renson to believe that the Cawimin was furnorly much more extended towardis the E, hat it is how shut in, in thant direction, by high clifts and smod hills close to its shores, beyond which a that desert, full 90 ft . higher than its present surfice, stretehes to the shores of Lake Aral. (llanway, i. 133, et seqf. ; Pallas's Trav. in S. hissia, i. 80, \&e.) On these shles, therefore, the drainage is insigniticant ; the lifbury, indeell, gives forth a great many streams, but they are all of the nature of mountnin torrents; and in the dreary desert to the E., scarcely a single rivulet is found between the Attruck, at the SE. comer, and the Yembn, at the extreme NL. (Hanway, i. 130-138.)

The W. shore presents a singular appearance. As high as $43^{\circ}$ of lut. the whole space between this sea and the Euxine is filled by the immense masses of the Caucasus; yet from this region the Caspian receives rivers which have their sourecs at nearly 300 m . distant from its cuasts; they tlow, however, over high plateaux, and through narrow ravines, apparently cut by their own action, and whicl are sometimes seareely wide enough to afford them passage. (Col. Monteith, Geog. Journ., iji. 39, et puss.) Col. Monteith helieves the narrow bed of the Terck to be the l'ile Caspie of the ancients; and it answers exactly, in both description and situation, to the pass which Pliny says (vi. 11-13) was erroneously so called; but the true Caspian gates were an artiticial opening cut through the Eilburz momutains on the $S$. coast (See Caccasus.) N. of the Caucasus, the country W. of the Caspian spreads into a wide flat; but, renarkably enough, between the Terek nad the Wolga, there is only cne river mouth, that of the Kuma (an. Cambyses or Cdon); for the land

 98; 'Jonke's linswia, ii, J.f; I'allas, i. 91.) W'ith respect to lis hasin and drainage, therethere, the Caspian is murh more of a limronean thon min Asintio: lake: the former is extemsive only on the sido of Ërrope, ind the latere carries ofl at heast I-tilh of all the romilig water Belonginge to that divisions of' the worht, 'lhe rivers which descemed from the tinnenwins momitains, the only ones of ronserguence which the Cinspinn recerives from Asia, are quite insignillennt when eompared with such stremms as the Wolign and Ural; the former of Which alone drains $140,000 \mathrm{sq}, \mathrm{m}$. (lichelnstein's ('usmog., i, 328.)

There are, of course, no tides in this close lake, nor do there noem to be may reqular eurronts, in the usual acceptation of the worl; but, limm the freedonn with which the wind bhws over so large ntarlice, many comsidarahlo and very irregalar changes are elleeted lin its motions and character, A at romp breeze from the S . drives the whters oper the low lames of the N. coant, nometimes to the distance of several miles; vossels, at such times, ure said to have been carried so firr inland, that, on the retiring of the sen, it was finnd necessary (1) break them uj) where they lay, from the inpossibility of transporting them baek to the shore, It mast be remombered, however, that these vessels are of pecouliar construction, the momeroms and extensive shoals preventing the genernl use of any (on the N. coast) that wonld require muel depth of water. Such a wind, too, by driving the sea into the menths of the grent rivers, canses lhese to rise in their beds, mal, consegnently, when the wind subsides, 1 vary violent $S$. current is prodinced by the water returning to its usum level. A N. wind produces the same effect on the S. shore; only, from the wature of the coast, the water cannot extend so fir over the neighbouring land; but it is froquently mised from 3 to 4 ft . above its natural level: the return to whieh, therefore, cmises a rushing and confused motion of the waters to all points of the compass. Vessels drawing 9 or 10 lt. are, during these changes, exposed to mreat hazard, and, as the winds are extremely mucertain, the mavigation of the Caspian, like that of most contined sheets of water, is one of very eonsiderable danger. (In mway, i. 14: , 393, \&c, ; (icorgi, i. 208 ; Monteith, G. J., iii. 23.)

Thore is mother motion of the aen much mote $n$ -

 Ixek, it limi vory mensilily decrensed (Col. Mon-
 celed trom the N, shore fill min yaris, (Iharues's 'I'ruseln (o Ibokharn, ii. 12!.) li is clear that, in the 11 yenes betweren the ofservations of Itamway mand forater, there had been time, upen the antive hypollesis, fir the wen to rongh its grontent deprension, mal begin agnin to rive. At all evelte, the fines, mergre an they are, memen to wirrant the conchavion of periadic variations; thongh what law these follav, the data are at present fir too limited to determine, If a conjecture may be hazarded, they probably depend ipon meteorologiand canses, and the fromern! state of the atmoshere. llamay (thongh he distielieves the priom die variation) appears to luhd mopinion similar to this ; for he remarks, that the summers, from the time of Peter the (irent to that of his own observations, lind been less loot than formerly; that consiquently evijuration hind heen bess, while the suplly of witer linal contimed the same. (i. listi,) It womld be a corroboration of this theory, conld it be extallished that, from 1811 to INis, whent the Caspian was muncestionably and rapidly sinkfing, the summer heat lud been peculiarly great ; but on this print mothing ecrithin is known. In the meantime it in worthy of remurk, that, het ween the observations of llawnay and those of Monteith and lburnes, 90 years (a multiple of the assorted poriod) had elapsed; that the time during which the sea was known to he constantly rising In the one ease, and sinking in the other, was the same, namely, 21 years: nud that, on the supposition of the trigentemial altermation of the phenomena, it shonld linve becn finnd sinking, as it was, by the last named travellers. That there is something very peculiar in the atmonphere of this region is evident. Monteith fomme its extra pressure to the equivalent to $n$ column of 390 ft . in height ( iechr. Jomrn, iii. 22 ) ; Burnes, some 4 or $^{2}$ 5 years later, to one of 800 ft . (Travels, ii, 122.) These resnlts were obtained, not by the barometer, but by the boiling poist of water; the difference of pressure would, however, catase a rise of nearly $\frac{1}{3}$ an inch in the former (Nettleton, Whil. Trans., xxxiii. 308), and consequently $n$ depression of alnost 7 inches in the surfince of the Caspina. 'This co-existence of phenomena is similar to that observed in the lantic, only much more powerful and longer contimed; it is, therefore, at least probable, that in both cuses the varying level de-

(larrot, Voy, in l'irarnt, ii, l!a!.) To detarmine the queation, the limsalan government, in ixilt, lespatched un expedition, which, after two rears' lilosir, completed, in INBK, a Nolemdid neries of trigomometrieal levellinis; from Which it "ppears that lhe Caspian is latez [rossion ft, (abont itt ft . Vinglish) helow the Minck Sin. (lieer, Journ, viii, 1:1\%.) The kmown elevation of the desort ntepre li. of the Caspian will. aceorling fo this survey, place the kon of Iral very benrly on a level with, or even something higher than, the Finxine.

Comsidering its lat.. that of S. France amd Italy, the tempernture of this sea amd its neirhlenthoul is extremely low; the N. part is very treguenty frozen, and the ice in the month of the Wistin (lat. $4 i^{\circ}$ ) does mot nsmally break up till $A$ prif. (lamwy, i. 1.10 ; l'allas, i. 8!!, We.) Even the Arnl, as low an $45^{\circ}$, is sometimes frozen; moll the inhabitants have a tradition thant one or its islands was peopled in a colomy which erossed the ice, with all their thocks und herds. (13urnes, ii. 18!.) This fact is the more remarkable, from the low, level, and S. aspect of the repion ronnd the Cinspian; but the want of mombains towarals the $\mathbf{N}$. exposes it to the influence of chillinf winds from the Arctie Sea, while the intervention of snoweapped ranges on the $S$. prevents the cominterbalancing effeets of the bot breezes from the equator. The summer heat is, however, generally great, and is towarils the S. attemed with a lumidity, which remers it very mbeallhy; though, from this very canse, the $s$. mad siw. districts present a luxuriance of vegetation strongly contrasted with the bare salt deserts on the NiV., N., and E. Lice, muize, cotton, fruts
of all kinds, and a countless variety of forest trees, are annong the productions of these clistricts; whleh, with the exception of the Russian colony in the steppe of Astraklian, are the ouly parts of the coast possessing a settled population; but such is the deadly nature of the climate, that all who are able lenve the towns in the beginning of summer, and retire to the mountains, where the atmosphere is of course more salubrims. The deserts are occupied by the wantering Kalmueks, Kirghis, and Turkomans, who preserve unaltered the roving and preliatory lanalts of their earliest ancestors. (Pallas, i. 92, 115, de.; Frazer's Trav. on the S. Bunk of Casp., 11, 15, \&c.; Conolly's Narrative, i. $35-49,140$, dc. ; Burnes, ii. 100-127, (8.)
The waters of this sea are less salt than those of the ocean, and considerably less so near the mouths of rivers than at a distance from the shore. The waters of Lake Arnl are even drinkable (Burnes, ii. 189); but all have a litter taste, ascribed by some to the great quantities of naphtha with which the soil abounds, but by others to the presence of glauber salts, nmong the substances held in solution. The fish are prineipally salmon, sturgeons, and sterlets: a kind of herring is also found, and there are likewise porpoises and seals. It has been alreaily sail, that the same inhabitauts are found in the wnters of the Caspian, Aral, and Bluck Scas. The fisheries employ many vessels annually, and the shores abound in aquatic fowl, sturks, herons, bitterns, spoonbills, red geese, red ducks, \&c. (Gmelin, iii. 233-257; Pallas, i. pass.; Tooke, i. 238, sc.)
It is somewhat remarkable that, though situnted on the confines of Europe, this sea should have remained nearly unknown, except by name, till the beginning of the last century. It is scareely less remarkable that the oldest observer, Herodotus, described it truly as an ocean by itself, communicating with no other and of such size that a swift-oared boat would traverse its length in fifteen days, its greatest breadth in eight days. (Clio, 203.) These proportions are accurate according to the hest modern observations, and at 50 m . per day for the swift boat's progress, would rive the actual measurement. After this clear account, it is startling to tind the Caspian transformed by Strabo into a gulf of the Northern Ocean, and otherwise distorted, according to a theory which must be regarded as purely fanciful. (Geg., xi. 507.) Ptolemy restored the Caspian to its late-like form: he had some knowledge of the Wolga, which he calls Rha; but he gives the greatest length of the sea from $E$. to $W_{\text {., and }}$ nd makes it a vast deal too large. (v. 2, vi. $9,13, \& \mathrm{c}$.) It is to be remarked, that Herodotus does not state in what direction lay the greatest length; but it may be very readily deluced, from his descriptions of the surrounding countries, that he meant it to be understood as stretching N . and S . The authority of Ptolemy remained paramount and unquestioned for many centuries; and the first modern account of the Caspian, at all consisterit with the truth, is due to Anthony Jenkinson, an Englishman, who, in 1558, traversed its waters, and gave an account of its dimensions and bearings, agreeing in all its main points with the more brief deseription of Herodotus. (Hakluyt's Voy., i. 326329.) Jenkinson's voyage did not, however, gain mueh attention; and in 1719 a regular survey was commenced, by command of Peter the Great. Vanverden's map, the result of that survey, and which was partly eonstructed by the emperor himself, is still, and justly, held in high estimation. The voyages of Hanway had for their object the establishment of a trade (in English hands) be-
tween Russia and Persia. The failure of that object was owing to the ambition of a Mr. Elton, who, attachlug fimself to the I'ersian court, gave such offenee to that of Russin, that the latter eventually prohibited the English commerce on the Caspiun. (Hanway, ii. 279, et pass.) A maws of valuable information was, however, collectel, during these transactions, by Llanway himself, Eiton, Woolroffe, and others. The more modern travellers; (imelin, Georgi, Pallas, Engleharitt, Parrot, Forster, Frazer, Conolly, Burnes, Monteith, Fuss, Sabler, and Sawitch, have atded immessurably to that information; but mueh still remains to be done; and as the liussian govemment seems fully alive to the importnnec of accurate kuowleilge on geographical subjects, and as their power or influcnee is nearly established on all parts of this sea, it may be reasonnbly hoped thint every year will make $W$. Europe better acquainted with this very remarkuble region.
The largest elnas of vessels that navig \& the Caispian, are ealled by the Russlans schuyts, and belong wholly to Astrakhan and Bakn; thcir burden varies from 90 to 100 , and sometimes 150 tuns. They are not built on any scientific principle, and are constructed of the worst materialsthat is, of the timber of the larks that bring corn down the Wolga to Astraklinn. There are supposed to be in all nbout 100 snil of these vessels. A sceond class of yessels, called razchives, employed on the Caspian, earry from 70 to 140 tons, and sail better than the schuyts, and there aro great numbers of small craft employea in the rivers, in the fisheries, and as lighters to the schuyts. But stenmbonts will, no doubt, in the end supersede most of these vessels; they have already, indeed, been introduced, not only upon the rivers, but upon the Caspian itself. The trade of the sea is entirely in the hands of Russia; and, whatever objections may, on other grounds, be made to her conquests in this quarter, it is certain that, by introlucing Europenn arts and seielices, and comparative gool order and securicy, into countries formerly immersed in barbarism, she has materially improved their condition, and accelerated their progress to a more advanced state.
 203), is the oldest name of this water. It was derived from the Caspii, a people who inhabited its banks; as the more mociern term Hyrcanian Sea, Өגлабба'Ypкалia (Strabo, xi. 507), was similarly derived from the more important Hyrcanii, a principal brauch of the great Persian family. In the present day it is called More Guulenskoi, by the Russians; Kulsum, by the Persians; Balir Kurzum, by the Arabs; Kulzum Denghis, by the Turks; and Akdinghis, by the Tartars. (Tooke, i. 232.)

CASSANO, a town of Southern Italy, prov. Cosenza, cap. cant., in the concave recess of a steep mountain, round an insulated roek, on which are the ruins of an ancient castle, 7 m . ESE. Castrovillari, and 10 m . from the Gulf of Tarentum. Pop. 8,125 in 1862. The town is well built; is the residence of a bishop; has a cathedral, four convents, a seminary, and a workhouse. The inhabitants are industrious, and manufacture maccaroni, stamped leathers, and table-linen. Cotton and silk are also grown, spun, and woven; and the environs are productive of excellent timber, fruits, and corn.

Cachar. Area ahout $7,000 \mathrm{sq}, \mathrm{m}$. Cassay consists of a central fertile valley, of comparatively small extent, surrounded oll every side by a wild nud mountainous country. The Naga mountnins bound it N., averaging in height 5,000 or $6,000 \mathrm{ft}$. above the sea; although in some parts they are as much as 8,000 or $9,000 \mathrm{ft}$. high. Two branches, passing S. from the Narra mountains, inclose the Cissay valley E. and W., and the S. boundary, from the contuence of the Chikoo nullah, or rivilet, with the Barak, is formed by the same ranges which run E. and W., bounding Cachar S., and Tipperah NE. The W. mountain range is more elcvated and extensive than any other, and runs from the banks of the Barak SSW. for 80 m ., steep and precipitous, towards Cachar; but in some parts almost eleared of forest, and annually cultivated with rice and cotton. This range has nine principal peaks, varying in height from 5,790 to $8,200 \mathrm{ft}$. above the sea, whleh, from su perstitlons motives, are left covered with wood by the inhabitants of the hills, and are often capped with a dense stratum of clouds. The E. hills vary from 4,900 to $6,730 \mathrm{ft}$, above the sea. The valley thus inclosed is about 36 m . long and 18 m . broad, having an area of 650 sq . m . of rich alluvial soil, 2,500 feet above the level of the sea.

The chief rivers are the Khongta, or Munneepoor river, Eeril, and Thobal. The first rises in the Nagat mountains, in lat. $25^{\circ} 12^{\prime}$ N., long. $94^{\circ}$ E.; it completely traverses the central valley N. to S. and falls into the Ningthee or Kyen-dwem river. It is the only outlet for the waters of the Cassay valley; and, as the latter is 2,000 feet above the Ningthee, it is probable there are several considerable falls in its course through the mountains. Almost all the centre of the Cassay valley is a series of jeels and marshes ; there is a small lake (Logta) at its SW. corner; compact sandstone, slate, and limestone are the prevailing geological features of this region.

Iron is the only metal found in Cassay; it is met. with under the form of titaniferous oxide, and is detected by thrusting spears into the ground, and, where iron is present, small partieles soon adhere to them. (Pcmberton.) The Cassay valley is rich in salt springs, especially on its E. side; and more than enough salt for home consumption is made. The climate of the valley is lower by many degrees than in Calcutta, but not so low as might have been expected from the elevation. There are more rainy days in the year, but less rain falls than at Calcutta: from March the showers become continual: the permanent rise of the streams begins in May, and continues till the middle of Octover, from which time they rapidly decrease. From Nov. to Jan. fogs settle during the whole night in the valley, and hour frosts prevail on the hills; yet the climate of the former region is decidedly salubrious, and peculiarly healthy to European constitutions. The surrounding mountains are, in most instances, covered with the noblest varieties of forest trees, common both to tropical and coller climates; and, according to Capt. Pemberton, there is no part of India where the forests are more varied and magnificent ; but, from the small number of streams, und the want of good roads, their utility is entirely local; there being at present no means of conveying the timber to any distance. The valley is perfectly free from forest, though every village is surrounded by a grove of fruit-trees: the soil of the detached hills, and their S. faces especially, are highly adapted to the culture of fruit. Herds of wild elephants are constantly scen in the glens and defiles of the N.: wild hogs and deer of the largest size abound evcrywhere; and the chase is a fa-
vourite sport with the Cassayers. Tigers are not common, and have retired to the mountain fnstnesses: there are no jackals; but widd dogs, grently resembling that animal, abound on the hills, where they hunt in packs. With the exception of woollen oloth, thls country furnishes every article essential to the comfort and prosperity of its inhabitants. All the tribes N., W., and E. of the central valley partake strongly of the Tartar countenanee, and are probably the descendants of a Tartar colony who passed hither from the NW. borders of Clina, during the sanguinary struggles for supremacy between the Chinese nid Tartar dynasties, in tho 13th and 14th centuries. They have much more affinity, both in person and manners, with the Hindoos, than with the Burmese, to which latter race they bear little slmilarity. They difler from the Kookies of the S. hills in their superior height, finer complexions, higher forebeads, inharmonious voices, and harsh language. They are highly lngenious, and are good horsemen, on which account they ware formerly exclusively employed in the Birmese cavalry service. The upper classes are worshippers of Vishnu, and this country may be regarded as the extreme E. limit of Brahminism: the Cassay tongue is, however, widely different from Sanserit. There are many other distinct tribes in different parts of Cassay and its neighbourhood. All cultivate tobacco, cotton, ginger, and pepper, and mantifacture cloths; which articles they barter for others with the inhabitants of the neighbouring plains of Bengal, Assam, and Birmah. In the central valley rice is the chief object of agriculture, and the land there is well irrigsted, and lighly suited to it : but scarcely $\frac{1}{4}$ part of the iand available for it is under culture, owing to a , ancity of intabitants. The whole pop, of the valiay in 1835 was barely 20,000 . Tobaceo, sugar-caine, indigo, mustarl, chal, and opium are also frown, and each house is surrounded by a little garden, in which culinary vegetables are rais? in large quantity. Almost all the garden produce of Europe is found here, having been introduced by the British since the Birmese war; and the pea and putato are found so acceptable, that their culture is nearly universal, and they are constantly exposed for sale in the bazaars. The pine apple attains an excellence in Cassay not surpassed in any part of the world. Buffaloes are used for ploughing; there are about 3,000 in the central valley, and perhaps an equal number of bullocks, which are superior, both in size and symmetry, to those of Bengal.

The ponies of Munncepoor are much and deservedly esteemed, by both the Cassayers and Birmese, who use them for the élite of their cavalry. They average from 12 to 12.3 hands, and are rarely more than 13 hands in height: they ure hardy and vigorous, and have a pceuliar blood appearance, but are now nearly extinct ; and scarcely more than 200 could be found fit for active service. Formerly, every inhab. had two or three; and the Cassayers affirm that, in a military sense, they have lost one of their arms by the decrease of the breed. Sheep were unknown till introduced by the British; they thrive on the slopes of the central valley: goats are bred by the Naga tribes on the hills, but invariably deteriorate if brought into the lowlands: poultry are plentiful in the latter districts, and the mountaineers purchase fowls thence at a very high price. The chief manufactures are coarse white cottons; a very soft and light muslin; a coarser kind, used for turbans and jackets; silks, remarkable for the brilliancy of their colours, and which are much prized nt Ava; iron articles; and salt. The chief iron articles made are axes, hoes,
ploughshares, spear and arrow heads, for home nee; and blades, 1 or 2 ft . in leurth, which, fixed into wooden or other handles, form the duo, the inseparable companion of the Cassnyer, Shan, and Singpho. Salt is got from wells, sunk in the valley to about 40 or 60 ft ; all of whleh are the property of the rajah, who levies a tax of $1-5$ th upon the water drawn. The quantity of salt obtained by evaporation is ahout $1-20 t h$ the weight of the water, or nearly double the quantity obtained by evaperation from sea water at Newcastle: the labourers engaged are paid in salt to the value of 3 or 4 rupees a month each, which they burter for other commodities. Wax, cotton, and elephants teeth, form part of the tribute of the hill tribes; the same articles, with ponies, de., are bought ly the Chinese merchants of Yun-nan; and similar products, with silks, iron, dammer, wood, oil, san-dal-wood, camphor, thread, \&c., were taken in lieu of monev payments by the British, for assistance to the rijah nbout the midille of the last century.
The records of Cassay bear some character for trutl, and, it is said, reach back to a remote epoch. In 1475 , the Kubo valley was annexed to Cassay hy conquest; and in 1738, the Cassayers conquered Birmah, and twok its then capital, Sakaing. Subsequently, Cassay was frequently invaded and devastnted by the Birmese; and from 1774 to 1824 was subject to Ava. By the treaty of Yandabeć, in 1826, it became independent. In 1833, the valley of Kubo was ceded to the Birmese by IBritish authority.

CASSEL (anc. Castellum Cattorum), a town of W. Germany, prov. Lower Hesse, of which, and of the electornte of Hesse Cassel, it is the cap., and residence of the elector. It is finely situated on both sides the Fulda, 72 m. S. by W. Hanover, and 89 m . NNE. Frankfurt-on-the-Mayne, on the main line of railway from Frankfurt to Berlin. Pop. 38,920 in 1861. The town is divided into three separate parts, and has three suburbs. The Old Town and Upper New Town, with the Willielmshöhe and Frankfurt suburbs, are built on the left or W. bank; while the Lower New'Town, and the Leiprigs suburb, are on the E. bank of the river. The two divisions are connected by a stone bridge across the Fulda, 273 Germ. feet in length. Cassel is walled, and has numerous gates; it was formerly well fortified, but its ramparts were demolished in 1764. The Old Town, by the river, consists of narrow dirty streets; but the Upper or French New Town, so called because originally built by French refugees, on a height above the former, is one of the best laid out and handsomest towns in Germany. It contains, among others of less dimensions, the largest square in any German city (the Friedrichs Platz), and one street, nearly a mile in length, and proportionally brond. Houses in the New Town and the Wilhelmshöhe suburb, generally well and tastefully built. In this quarter of Cassel are the elector's palace, a structure nowise remarkable; the museum, the handsomest building in the city, containing a library with 70,000 volumes ; an observatory; and cabinets of natural history, mineralogy, coins, artificial curiosities, statuary, and antiquities; the latter comprising several interesting Roman relics found in Hesse Cassel ; a picture gallery, containing some valuable paintings by Rembrandt, Rubens, and Vandyke; the Bellevue palace, with others belonging to the electoral family; the electoral stables, and riding-school, mint, town-hall, arsenal, old and new barracks, and an opera-house. In the Old Town are the Kattenburg, a large unfinished structure, begun npon the site of the old electoral palace destroyed by fire in 1811; the old townhall; government offices ; and St. Martin's, the
principal church in the city, and the burial-placo of the sovereigns of Cassel. The Lower New Town contains the castle, an unclent fortress, now used as a state prison; and several other prisons.
Cassel has 9 cliurches, 7 of which belong to tho Lutheran or Reformed faith; and 1 synagogue. It has altogether 20 edifices devoted to military purposes, and 51 other public bulldings. Amongst the institutions for public education are, a lyceun, academles of painting anil design, a teachers' seminary, a military school, and a selsool of mechanical employments, called the Bau-und-Handwerksschule. There are societies for tlie promotlon of agriculture, trade, and manufactures, and numerous charitable establishments; the latter includes the Wilhelms Institut, at which many poor are provided for, and taught dilferent trades. Notwithstanding the Fulda is navigable, and that Cassel is on all sides surrounded by large commercial towns and districts, with which it has abundant railway communication, its own trade is not very considerable. It possesses manufactures of cottons, silk and woollen fabrics, leather, hats, carpets, snuff, gold and silver lace, porcelain, earthen and lacquered ware, playing-cards, wax-lights, chemical products, dyes (Cassel yellow and black), soap, starch, hardware, musical instruments, linen, damask, chicory, and some machinery. It has two fairs annually. S. of the Upper New Town is the Kurlsaue, or Augarten, a fine park containing an orangery, a pheasantry, and a marble bath; but the last is overlonded with ornament, and in bad taste. A straight and handsome road, shaded by an avenute of limes, 3 m . in lenth, conlucts from the Wilhelmshöhe gate to Wilhelmshöhe, the summer palace of the elector, a magnificent residence, with costly fountains and waterworks, sometimes called the German Versailles.

During the short period that Jerome Bonaparte was on the throne of Westphalia, Cassel was the cap. of his king. and the place of his residence.
Cassel, a town of France, dép. Nord, cap. cant., on an isolated mountain in the middle of an extensive plain, 28 m . NW. Lille. Pop. 4,260 in 1861. The town is well built, and, notwithstanding its situation, is well supplied with epring water. It has fabrics of lace, thread, hats, oil, and earthenware. It is very ancient, having been the capital of the Morini when Cessar invaded the country. It was united to France in 1678, by the treaty of Nimeguen. Several battles have been fought in its vicinity.
CASSIS, a sen-port town of France, dép Bou-ches-di-Khone, in n narrow valley on the Mediterranean, 10 m . SE. Marseilles, on the railway from Marscilles to Toulon. Pop. 2,035 in 1861. The town has a tribunal of prud'hommes, an oflice of health, a workhouse, and yards for the building of small vessels. Its port is contined, and admits only vessels of small burden. The figs and grenades of Cassis are held in much estimation ; and it has a considerable trade in excellent muscatel wine, produced in the environs. This is the native country of the learned and excellent Abbé Barthelemy, author of the 'Voyage d' Anacharsis,' who was born here on the 20 th of January, 1716.

CASTEL-A-MARE, a city and sea-port of Southern Italy, prov. Naples, on the Gulf of Naples, $15 \mathrm{~m} . W$. Salerno, on a branch line of the railway from Naples to Salerno. Pop. 25,843 in 1862. It is the seat of a bishopric, and the residence of a sott' intendente; and is well built, partly along the shore, but principally on the site of the mountain, rising immediately from it. It has a royal palace, a cathedral, 5 churches, several convents, a military hospital, fine barracks a royal dockyard, and hot baths. There are manufactures wer New Sown rese, now used prisons. t belong to tho 1 synaggegue. ed to military ags, Amongst are, a lyceunl, a teachers' school of mecha-au-und-Mandthe promotion res, and numelatter includes y poor aro proles.  the Gulf of $h$ line of the p. 20, 843 in and the resiwell built, $y$ on the site from it. It ches, several acks a royal hanufacturesof linen, silk, and cotton, with tnnneries. The port, which is small, is defended by two forts. Jeing exprosed to the N., and elevated, Castel-a-mare has acquired great celebrity as a summer residence, in consequence of its coolness, the salubrity of its nir, and the beauty of its environs. Ilut in autumn it becomes damp, chill, and disagreeable.

Castel-a-mare is built on the site of the ancient Stabice, which, having been destroyed by Sylla during the civil wars, was afterwards principnlly occupied by villas and pleasure-grounds. It was bere, A.c. 79 , that the elder Pliny, wishing to apjroach as near as possible to Vesuvins during the drealful eruption that overwhelmed Herculaneum and l'ompeit, fell a victim to his curiosity and thirst for knowledge.
Castei-a-Male, a sen-port town of Sicily, prov. Trapani, eap. cant., on a gulf of its own name, © m. NW. Alcamo; lat. $38^{\circ} 1^{\prime} 51^{\prime \prime}$ N., long. $12052^{\prime} 43^{\prime \prime}, \mathrm{E}$. lop. 11,959 in 1862 . It is a mean dirty town, with a castle falling fnst to decay. The lay is spacious, but it is not safe with northerly winds which throw in a heavy sea. The neighlouring country is well cultivated; and considerable quantitics of wine, fruit, grain, manna, and opium are exported.

CASTELLON, or CASTELLON - DE-LA PLANA (an. Castalio), a town of Spain, Valencia, cap. dep., 4 m . from the coast, and 41 m . NNE. city of Valencia, on the railway from Valencia to Barcelonn. Pop. 19,340 in 1857. The town is finely situated in a well-watered, extensive, and fertlle plain. This fertility is entirely the result of industry, the water which gives life and verdure to the plain being brought by an aqueduct, eut in great part through the solid limestone rock, from the Mijares, which flows nbout 5 m . S. from the town. This great work has been ascribed to the Romans and Moors; but others assert that it was constructed, about 1240, by James the Conqueror, king of Aragon. The town, which is well built, lass 3 churches, 6 convents, 1 hospital, 2 houses of charity, and a public granary. The beauty of the situation, the mildness of the climate, and the abundance and excellence of the fruits, make this one of the favourite residences in the prov.

CASTELNAUDARY, a town of France, dép. Aude, cap, arrond., in an elevated fine situation, contiguous to the Canal du Midi, 21 m . WNW. Carcassonne, on the railway from Toulouse to Narbonne. Pop. 9,584 in 1861. The town is very indifferently built, and there are few edifices worth notice, except the church of St. Michael, said to be the finest in the dep. It has a tribunal of primary jurisdiction, a departmental college, and a philotechnic society. The canal has a superb basin contiguous to the town, surrounded by fine quays and warehouses, which, with the vessels by which it is sometimes crowded, give it the appearance of a sea-port. The publie promenade commands this basin and a fine view extending as far as the Pyrences. There are here manufactures of cloth and silk, with establishments for the spinning of cotton, print-fields, and tanneries; and a considerable trade is carried on in the manufactures of the town, and the proluce of the adjoining country.

In 1632, in an encounter under the walls of the town, the Duc de Montmorenci, commanding the troops of Gaston, duc d'Orleans, was wounded and taken prisoner; and being conveyed to Toulouse, was convicted of treason, and executed in the same yeat.

CASTELO BRANCO, a city of Portugal, prov. Reira, on a hill on the Liria, 51 m . NE. Abrantes. I'op. 5,893 in 1858 . The town is the see of a bishop, and the residence of the enptain-general of

Lower Beira. Streets narrow and steep, and the houses mean, except some modern ones without the walls; the latter are dotble, and tlanked with sevell towers. The cathedral also is withont the city; and there is an old ruined castle on the summit of the hill on which the town stands. It has a college and two collegiate churches.

CASTLEL-SARRASIN, a town of France, dóp. Tarn-et-Garonne, cap. arrome., pleasantly situnted in a fertile plain on the Songuine, 1 m . from its confluence with the Garonne, 13 m . W. Montauban. l'op. 6,838 in 1861. The town is well built, and the walls and ditches by which it was surrominded have been converted into promenndes. It is the sent of a court of primnry jurisdiction, and of a. departmental college; and has manufactures of serges and other woollen stuffs, hats, and tanneries.
CASTLELVETRANO, n town of Nicily, prov. Trapanl, cap. cant., on a hill 6 m . from the sea, and 12 m . E. Mazzarn. Pop. 14,540 in 1862. The town is well built with stone, the streets being spacions, and disposed with some attention to regularity; and there nre several chnrches and convents. It has a rood trade in wine and olives, the former grown in the neighbourhood, and much renowned.

CASTIGLIONE-DELLE-STIVIEIRE, $n$ town of Northern Italy, prov. Brescia, on h hill 22 m . NW. Mantua. Pop. 5,237 in 1862. The town is surrounded by a low wall, and contains several churches, the ruins of a castle, and a conventual seminary; but is chiefly noted for a decisive victory gained here by the French over the Austrians, 5th Angust, 1796; from which Marslial Augereau derived his title of Duc de Castiglione.

CASTILE, the central and largest division of Spain, lying hetwee: lat. $38^{\circ} 25^{\prime}$ and $42^{\circ} 50^{\circ} \mathrm{N}$. and long. $1^{\circ} 2^{\prime}$ and $5^{\circ} 37^{\prime}$ W.; it has, N. and NE., the territory of Reinesa, Alava, and Navarre; E., Aragon and Valencia; SE., Murcia; S., Andalısin ; W., Estremadura and Leon : length about 306 m . from N. to S. ; mean breadth about 160 m . Area about $48,600 \mathrm{sq} . \mathrm{m}$. It is divided into two parts by a range of high mountains, called in different parts Urbians, Carpetanos, Sierra de Guadarama, Gata, Somosierrn, and de Estrella. The country to the $N$. of the ridge, having been the first recovered from the Saracens, is called Old, whilst that to the S . is named New Castile. Old Castile comprises the modern provinces of Burgos, Soria, Segovia, and Avila, so named after their chief towns. New Castile comprises the provinces of Madrid, Guadalajara, Cuença, Toledo, and La Mancha, each also so called after the names of their chief towns, except La Mancha, whose cap. is Ciudad Real. Principal towns, exclusive of the capitals, are Osma, Calahorra, Logroño, Caizada, Haro, Alfaro, Miranda, Briviesca, Almazar, Toledo, Aranjuez, Alcala de Henares, Talavera de la Reina, Illescas, Zurita, Tembleque, Villanueva, \&c. The Ebro, Douro, Tagus, and Guadinna have their sources in this province. The first flows SE., along the NE. boundary, to the Mediterranean; the Douro and Tagus, to the Atlantic ; and the Guadiana, WSW. to the same. There are many other rivers, affluents of the above. The Xucar, flowing E. to the Mediterranean, also rises in this province. Besides the chain of mountains that separate Old and New Castile, there are three other important chains that truverse these provinces. First, the Sierra de Toledo, which winds semicircularly past Daroca, from the Castilinn chain, and then ruus SW. nearly parallel to it, to the hills of Sunta Cruz, near Merida. Next, the Sierra Morena, or Black Monntains, beginning above Alcarez, ncar the source of the Guadalquivir, and running like the two former, nearly SW., to the narrow pass of

Montegil. Lastly, the Sierra Nevaln, or Snowy Monntains, that commence between the sources of the Xucar, Gauliana, and Guadalquivlr, and extend into Aadalusia. These last are here extremely steep and bare, mostly schlstose, and often conted with limestone. They have white quartz in considerable veins; and valuable dark green, and a profision of other marbles. The NF. part of the Sierra Morena is of considerable height, and rather resembles table-land than a ridge of hills. The seasons are very different on the tivo sides of this range. In Andalusia, the vines are all in lenf, and the fruit is set, when, on the $N$. side, harilly a leaf is to be seen, or a bud to be found in the vineyards. There are here a few remains of former forests, which might have existed when Cervantes made theso parts the acene of the exploits of his hero; and $n$ variety of tlowering shrubs, particularly the rock-rose, or gum cistus, from which manna is procured, and sumach. In this clanin are vertical beds of argillaceous schist, and beds of grained quartz, with entire hills of pudding stone, and some porphyry, and the finest jusper. It is the richest in minerals of any in the kingdom; and lias veins of gold and sllver. The quicksilver mines at Almaden have been worked for nearly 3,000 years, and furnished the vermillion sent to ancient Rome. They produce annually $2,000,000$ lbs. of quicksilver. (Bowles, IIstoria Natural de lispaña, p. 12; A Year in Spain by a Young American, i. 199.). The Castilian mountains are composed of gneiss granite, which often terminates in peaks of great height; schist, limestone, sandstone, breccia, quartz, marble, gypsum, \&c. The Guadarama mountains, about 20 m . NW. Madrid, are bleak, dreary and barrennear their summits, which, in many places, are covered with nearly perpetual snow. indicating that they must be 8,000 or 9,000 ft . above the level of the sea; the limit of perpetual snow in these latitucles being about $9,900 \mathrm{ft}$. The height of Moncayo, the highest mountain in Castile, is estimated at $9,600 \mathrm{ft}$. The rock, being partly decomposed, forms a light soil that produces the juniper europeus, Daphne mezereon, matricaria suavis, genista, thyme, and a great many other aromatic herbs. The cistus tribes abound at every level on the granite monntains, not covered with snow : pines appear on the summits; the noble oak and the elm near their bases. (Townsend, ii. 106.) The scenery is often of the wildest descrip-1 tion; the mountains full of deep cuts and ravines, mostly the beds of winter torrents; aged and stunted pines hang upon their edges, and are strewn upon the brown acclivities around; and bare rocks frequently project over the passes, and force them to the very edge of undefended precipices. (Inglis, i. 355.) The quality of the soil is various; in some parts a blackish or brown nitrous clay, which is extremely fertile; in others, light and stony, and little productive. New Castile is in great part clayey, and covered with ratchil. Besides the minerals mentioned above, the Castiles produce calamine, ochre, bole armeniac, fine emery, rock erystal, salt, many curious stones and fossil shells, hot and cold saline springs; and in the monntains are many remarkable caverns, that contain beautiful stalactites, in a variety of fantastic forms. Near Molina is the hill of La Platilla, which has a remarkable mine of copper, in masses of white quartz. Though the ore is near the surface, the hill is covered with plants. Townsend had 110 doubt that there is tin near Daroca. (i. 218, 219, 303 ; ii. 106 ; Miñano, Diccionario Geografico, ii. 467, et seq. ; Dillon's Travels through Spain, p. $110,112,115,196,202,205-207,237,239$; Antillon, Géographie d'Espagne, p. 8-14.)

The climate of the Castiles is in gencral healthy;
that of Old Castile is rather cold and moist. In new Castile it is excessively dry ; but rendered liealthy by the purity of the prevailing winds, and the great elevation of the country ; but this altitude sometimes exposes it to strong dry winds, which, not meeting with the thick woods by which they were formerly tempered, are found very unpleasant, and at times even dangerous, at Madrid, In winter, by producing pulmonary eomplaints. The helght of the plutean of Castile reluces the mean temperature to 59 Fahr., while on the coasts of Spain it is from $65^{\circ}$ to $75^{\circ}$. The ordinary extremes of temperature, in Madrid, are $90^{\circ}$ Fahr. in summer, and $32^{\circ}$ in winter; bat the thermometer often rises to above $100^{\circ}$, and falls below $14^{\circ}$.

Products.-The principal product of the Castiles is corn, some of which they export to Valencia, Andalusia, and Estremadura. No other province of Spain has wines so strong, and yet so sweet, though but little exported, or known abroad. The most celebrated is that of the Val de Peñas, or 'Valley of Stones,' In La Mancha. It is a dry, strong, red wine of the Burgundy species, and is said to be so plentiful and cheap that a bottlo may be had in the country for $1 \frac{1}{2} d$. It is drunk by the better classes all over the Castiles; but in the greatest perfection in its native district, on account of the taint given it by the skins in which it is carried to a distance. The Castiles produce also pulse, and some fruit and oil. Hemp, flax, madder and saffron are partially cultivated. Garden stuffs are not abundant. On the mountains and in the pastures considerable numbers of black cattle, sheep, and mules are raised; but the increase of the latter has almost annihilated the race of good liorses in the Castiles. There are fallow deer, wild boars, wolves, hares, peacoeks, and all kinds of poultry and small game in abundance. The larger game has decreased through the breaking up of the land near the royal seats during the absence of Ferdinand VII. Bears are seen in some parts, and lynxes are not uncommon in the high mountains. Not only the fallow land, but the cultivated fields in New Castile, are full of two species of broom (genista spharocarpa and monosperma), and the Daphue gnidium. They grow to nearly six feet in helght, and have a great effect on the prospect. These plants, with the asphodelius ramosus, and several other bulbons plants that abound in the pasture fields, give a peculiar character to the landscape of Spain. There is a want of trecs, which is partly attributable to the flat and unsheltered nature of the plains, and the dryness of the climate, but chiefly to a prejndice against them, entertained from time immemorial; the peasantry thinking that they are good for nothing, unless it be to attract and shelter vermin. They dislike them so much that they destroy those planted by government along the high roads. It is believel that the want of trees to attract humidity has promoted that drought which, next to bad government, is the curse of the Castiles. From the Douro to the Tagus there is not a stream ankle deep, except when swollea by floods. Agriculture is in the most backward state: the consequence of a comparatively thin population, having little interest in the soil, which is monopolised by the clergy and nobility. Irrigation, which in such a country is indispensable, is but verylittle practisel, and even manuring is all but neglected: and thus, whi'e three-fourths of the country remain fallow, the rest produces only poor crops of grain or potatoes. The great distance between the towns, the badness of the roads, and still more the insecurity of life and property, which prevents

the farmer from living insulated on his farm, are additional checks to agriculture. Eight or ten miles frequently intervene withont a siugle bahitation, and the conutry looks poor and miserable in the exireme. Nothing can be more gloomy than the apperirance of the towns, with oldfushioned towers projecting out of a dismal groups of housen plastered over with clay. At the entrance of each is a gate for receiving the daties on all articles that pass; and in the centre a square, round which are the buildings ocenpied by the ayuntamiento, or municipality, the posnila, or inn, and the butcher, baker, tailor, colbber, and village surgeon, or barber. Most of the towns exhibit every symptom of declinc. (Slidell, i. 136; Inglis, $i$. 56 .) Hefore the construction of railwnys, there was nearly a total want of free communiention, all but the main road to France belng neglected. The old road between Madrid and Toledo was mostly carricil over ploughed fielis, sometimes with hardly a visible track. The new iron roals, estallished eliefly by English enpital, and built by Englishl 'navvies,' have grently improved this state of things, and bid fair to raise even Castile from its state of poverty and misery. (Sce Spain.)

Manufactures, though formerly consideruble, are now at a very low ebb. The cloths of Segovia were once the best in Europe; and there are still some woollen fabrics, among which is the famous vigogna cloth and coarse camlets, serges, and flannels, and some of wrought silks, silk stockings and gloves, galloons, blond lace, coarse linens, hats, caps, soap, saltpetre, gunpowder, the celebrated plate-glass of St. Ildefonso, white earthenware, tannel leather, and paper, but they are all inconsiderable. Castile has little coinmerce: wool is the staple commodity. The exportation of sheep was always strictly forlidden, till by the treaty of Basle the French were allowed to purchase 5,000 Merino rams and as many ewes; and from this stock, and subsequent exportations from Spain, the quality of the wools of France, England, Germany, and other parts of the world, has been grently improved.
The following table shows the area and popuLation of the two Castiles according to the census nil 1857. Valladelid and Valencia are sometimes inchuded in the Castiles; but they did not formerly belong to them, and are excluded in this table.

The Castilians have the character of probity, sobriety, and moderation : they are serions and contemplative, which makes them, at first, scem gloomy and haughty; but, after a time, they are found uot deficient in the agreeable qualities.

They have to boast of many illustrious men ; nt the hend of whom stand Cervantes, the inimitable author of Don (Quixote, and Lopez de Vega. They are not what wonld le enlled hospitable, bitt they are, notwithstanding, generons. The middle and upper classes aro fomd of display and ontentation to an extruordinary degree, while inconslderateness and carelessness are conspicnous in the charncters both of the lower and middle classes. Almost every one llves up to his income; even the employies, whose tenure of ofllee is so uncertain, seldon lay by anything, and gencrally die penniless. But the love of case and pleasure, and proneness to indolence, is less marked, perhaps, in Castile, than in the sonthern provinces. Their want of Industry is the result of the circumstances under which they have been placel, and of their vicious institutions. No man will be industrions, where industry does not bring along with it a corresponding reward; and this it very rarely does in Spain. Hal the Castllians the menus of improving their condition by labour, their apathy and listlessness would speedily give place to netivity and enterprise. In Madrid, and generally in Castile, there is something more of luxiry at the table than in the $\mathbf{N}$. provinces, thongh the Spaniards in general are abstemions, and little addicted to its pleasures. The dining-room is generully the meanest apartment; but the houses of respectablo persons are scrupulously clean, particularly the kitchens and bel-rooms. Female ellucation begin: to improve ; besides embroidery and music, a little history and geography is taught in the schools though not in the convents, where the higher orders are educated. In the time of the constitution of the Cortes, there were two Lancastrian schools for boys and one for girls at Madrid; lut those for the boys were suppressed on the king's return. The influence of the regular elergy is diminished much more than that of the monks, who are still, through the ansterities they practise, and the alms they distribute at the convent doors, held in considerable yeneration, except in Madrid, where less attention is paid to religious ceremonies and processions than in any other city of Spain. The large towns have a sombre aspect, the women being nearly all in black, without a bonnet or a riband. Every one has a mantilla or scarf thrown over the shonlders, which varies in quality with the station of the wearer. Besides a waistcont and jacket of cloth, covered with abundance of silver buttons, the men usinally wear a sheepskin jacket with the woolly side outwards; or, insteal of this, an ample brown cloak, the right fold of which is thrown over the left shoulder with a Roman air The head is covered with a.pointed cap of black velvet, the ends of which being drawn down over the ears, leave exposed a high forehead anil manly features. They have tight breeches, sustaine above the hips by a red sash, and fastened the whole way down the outside of the thigh by bell buttons, woollen stockings, stout shoes, and leather gaiters, curiously embroidered, and fastened at top with a gay-coloured string. The love of dancing is universal among them: the ladies usually dance well, but in a style quite different from the French; they langh and talk while they dance, and are strangers to that burlesque silence and gravity that prevail among the quadrillers of France and England. Music is much cultivated; nnd it is rare to find a female even in the middle ranks who is not a good pianist. Among their amusements, the bull-fights, to which all classes are passionately addicted, must not be forgotten. These have been prohibited several times; and the cruelties practised at them may seem sufficient to stamp them with the chnracter of brutality and barbarism. Yet there is
nothing of deliberate eruelty in the character of the Spminuls, and they have as little, perhape, of hari-heartedisess as other people. The nase of the tolodo, or bravo, to revenge private wrongs, is now unknown. Horse-racing was attempted to be introdinced by the Duke of San Carlas, at Multid, in 1830, with an English horse agrainst a Spanish one; but the Fuglish horse was beaten by foul play, nad the duke insulted as he left the ground.

The Castilian is the standard dialect of the Apanish langunge. During the struggles with the Moors, many dinlects of the Romanzo, or mixture of the Latin with the Germanic tongues, grew up in Spain, which finally melted into three-the Galician, Castilian, and Catalonion. On the murringe of Isabella, queen of Castile, with Ferdinand of Arngon, the Custilinn Romanzo became the langunge of the court, and has maintained its pre-eminence ever since.

History.-The Castiles anciently formed parts of Cantabria, and the country of the Celtiberi, Oretani, and Carpentani ; and, like the rest of Spain, were successively overrun by Romnns, Goths, nnd Snracens. After the expulsion of the Saracens, nad varions vicissitudes, the sovereignty of Cnstile conme by marriure to Sancho III., king tof Navarre, whose son Ferdinand was made king of Castile in 1034. He marrled the sister of Veremond III., king of Leon, but afterwarils killed his father-in-law in battle, and was himself crowned king of Leon, in 1037. The crowns of Castile and Leon were afterwards separated and again united several times, till, by the marriage of Isabella, who held beth crowns, with Ferdinand, king of Arngon, in 1479, the three kingdoms were, as nt present, consolidated into one. Castile, as well as the rest of Spain, has for a lengthened period been exposed to the scourge of a civil war carried on without \%eal on elther side, but with the most detestable pertidy and cruelty.
CASTILLON, a town of France, dép. Gironde, enp. cont., on the Dordogne, 11 m . ESE. Libourn. Pop. 3,516 in 1861 . In 1451, an obstinate engagement wns fought under the wnlls of this town between the English and French, when the latter were victorious. In the communc of Castillon are the remains of the Château de Montaigne, to which the illustrious essayist of that name retired in 1572, and where he breathed his last on the 13 th of September, 15 C 2.

CASTLEBAR, an inl. town of Ireland, prov. Connaught, co. Mayo, at the N. extremity of the lake of the same name, 126 m . W. by N. Dublin, on the Midland-Great-W'estern railway. Pop. 6,373 in 1831, and 3,022 in 1861. The town was taken by a French force under General Humbert, which landed at Killala in 1798, but was shortly after evacuated on the approach of the main army of the British under Lord Cornwallis. It is the assize town of the co., and consists of a square, and a long strect with some branches. The par. church and a R. Cath. chapel are new, large and elegant buildings; there are also a meeting-house for Methodists, a large parochinl school, a national school, an infirmary, and two dispensaries. There are barracks for artillery and infantry, fit to accommodate 650 men. The constabulary and the revenue police have stations here. By a charter of James I. in 1613, the corporation consists of a portreeve, 15 burgesses, and a commonaity, which returned 2 mem. to the Irish $H$. of C. till the Union, when it was disfranchised. The assizes for the co, are held here; also gencral sessions in Jan. and Oct., and petty sessions every Saturday. The court-house is a well-arranged building. The county prison, erected on the radiating principle, has 128 cells, and 33 other sleepnig rooms. Linen
and linen yarn are manufactured to mome extent, and sold ln the linen-hall; there are almo tobacen and sonp inanuffactories, a tannery, and a brewery. There is an extensive trade in grain, and other agricultural produce. Markets on Saturday: fairs, 11 th of May, 9th of July, 16th of Sept., and 18th of November.

CASTLECOMER, an inland town of Irelnud, prov. Lelnster, co. Kilkenny, on the Deen, nin alluent of the Nore, 52 in. SE. Dublin. Pop. 2,416 in 1831, and 1,435 in 1861. The town, which suffered much in an unsuccessful attack by the insurgents in 1798, consists of a main street planted on ench side, and of some others branching from it, and is remiarkable for neatness and good order. The par. church on a neighbouring hill, a large IR. Cath. chnpel, a convent, a Methodist meeting-house, $n$ court-house, $\boldsymbol{n}$ dispensary, and a barrack, are the principnal bililings. Little trade is carried on, the place deriviug its support chiefly from the neighbouring collieries, which furnish a copions supply of fuel to the aljoining connties. The mineral is of the carbonnceous or stone conl species, which burns withont flnme, being the slaty, glantz conl of Werner. Fairs are held ou Mar. 27, May 3, June 21, Aug. 10, Sept. 14, Oct. 28, and Dec. 14. General sessions in June, and petty seasions every Friday ; also a manorial court for small debts.
CAS'TLEDOUGLAS (formerly Carlinwark, from the name of a lake in its immediate vicinity), in inland burgh or barony of Scotland, co. or stewartry of Kirkcudbright, jar. Kelton, on the railwny from Dumfries to Portpatrick, 18 m . from the former, and 68 from the latter. Pop. 2,261 in 1861. The town is neat and well built, and consists of a mnin strect along the road, with several lesser streets running at right angles or parallel to it. It is quite a modern town, and is wholly indelted for its existence and prosperity to the arlvancing wenlth of the thriving agricultural district by which it is surrounded. Its consequence has been of late years materially increased by the transfer to it of the weekly corn and cattle markets, the most important in the co., originally held at Rhone Heuse, a small village, distant $1 \frac{1}{2} \mathrm{~m}$. The famons horse-fair of Kelton Hill is still held at Rhone Ifouse; but it has lost much of its original innportance, as horses from Irelnnd, which formed its staple, are now generally sent direct to the fairs in England by stcam, instend of taking a circuitous land route by Kelton Hill. It has an extensive retail trade, but no manufactures.

CASTLETON, a par. of England, co. Dcrly, hund. High Peak. Area, 10,100 acres. Pop. 1,157 in 1861. The village is 143 m . N. by W. London. The vale of Castleton is in the heart of the Penk (istrict, about $1,000 \mathrm{ft}$, below the level of the surrounding hill ranges, and is 6 m . in length, and from 1 to 2 m . in width, with several smaller dales opening to it on the $N$. and S . It is a fertile tract watered by several rivulets, and approached from the Chapel-le-Frith side, through a long and deep chasm, crossing the mountain range, and called the ' Winnets,' or windgates, from the strong gusts and currents of air that usually prevail: the road winds down a considerable declivity, between precipices rising upwards of $1,000 \mathrm{ft}$. on each side, and opens, by a sudilen turn, on the vale, in which there are three villages, Hope, Brough (both in the parish of Hope), and Castleton. The latter is at the base of a steep rock, whose summit is crowned by the ruins of the Castle of the Penk, considered a genuine specimen of the Saxon period; though the traditions of the neighbourhood ascribe it to Wm. Peverell, n natural son of the Norman Conqueror. The keep is still nearly en-

Carlinwark, from te vicinity), an d, co. or stewart, on the railway m , from the forp. 2,261 in 1861. ind consists of a In several lesser or parallel to it. wholly indelited , the alvancing ural district by quence has been d by the transfer tle markets, the ly held at Rhone m . The famous held at Rhone its original imwhich formed its direct to the fairs of taking a cir1. It has an exfactures. land, co. Derhy, acres. Pop. 1,15 T. by W. London. eart of the Peak level of the surn . in length, and eral smaller dales It is a fertile tract approached from a a long and deep range, and called a the strong gusts prevail: the road ity, between preft. on each side, the vale, in which Brough (both in eton. The latter whose snmmit is astle of the Peak, of the Saxon pehe nelghbourhood hatural son of the is still nearly en-
tire, and nome portions of the outer walls, in many places 20 ft . lugh and 9 ft . thick. The chureh is small, but considered a very interesting relic of the carly jninted style: here are also a Wealeyan chapel, and an endowed charity achool, in which 23 seholars are educated. The inhabitants are chictly employed in the mines of the surrounding district, which produce lead, calamine, and the coloured fluor spar called 'blue John,' much in request for vases and other ornaments. 'The whole of the calcareous strata in the veinity are remarkably deranged, and are also characterised by numerons cavemous thsures and the frequent disappearmice of streams (through what are termed swallow-holes), which, after subterranean courses of various lengths, again emerge to the light. 'The outer chamber of the Great I'eak, or Devil's Cavern, has a natural arch of about 120 ft . span ; several small cottages have been built in it. The rest of the chambers are only to be explored by torches ; they extend abont $2,300 \mathrm{ft}$. from the entrunce to the innermost end, where, though there are probably others beyond, the rocks closo down so near a subterranean stream as to prevent further access: this stream has to be crossed two or three times in proceeding, and at one part a small boat is kept for the purpose. The average deptli from the floors to the upper surface of the mountain is about 650 ft . The strata abound in marine fossil remains. 'The Eldon hole, 8 m . W. of Castleton, is of a similar character, and also that apjroached by the level of the Sheedwell mine, near the Winnets. 'Ihis mine has been given up; but the Udin mine, in the vicinity, which was worked in the Sixon period, is still productive. Mam 'Iorr, or the Slivering Mountain, rises $1,300 \mathrm{ft}$. above the vale, and is composed of alternating strata of shale and micaceous grit. There is an meient encampment on its summit, and liritish nnd other ancient remains are frequeut in the distriet, which is one of the most remarkable in the kingdom for its picturesque character, and the abundance of natural oljects and phenomena interesting to science. On the attainder of the grandson of William Peverell of the Peak (for poisoning the Earl of Chester), the castle was granted by Henry II. to his son, afterwards King John: subsequently Edward III. gave it to John of Gaunt; since which it has formed part of the luchy of Lancaster, and is at present leased by the Duke of Devonshire.

CAS'l'RES, a town of France, dép. Tarn, cap. arrond., in an agreeable and fertile valley, on the Agout, 23 m . SSE. Alby, on the railway from Nlby to Narbonne. Pop. 21,538 in 1861. This, though not the capital, is the principal town of the dép., and is thriving and industrions. It is divided in to two parts by the river, over which it has two bridges. It is but indifferently built, and the streets are narrow and winding. The principal building is the old episcopal palace, now the sous prefecture; it has also barracks, workhouses, an exchange, a theatre, and a tine promenade. It is the seat of a court of primary jurisdiction ; and has a model school, a diocesan seminary, with 113 pupils, a Protestant consistorial church, a class of lisear design, and a public library with 6,500 volumes. There are here extensive manufactures of cloth and woollen stuffs, with establishments for the spinning of cotton, linen fabrics, paper fabrics, dye-works, bleach-fields, and tanneries. It has also copper forges and foundries.

Castres espoused, in the 16 th century, the Protestant party, and Henry IV. resided in it for a lengthened period. Its ramparts were demolished by Lonis XIII., and the bishopric was suppressed at the Kevolution. It is the birthplace of Dacier
the critic, of Rapin the listorian of England, and of the Able Sabntier.

CASTRO, a neaport town of Southern Italy, prov. Lecce, on the Adriatic, 28 m . SSki. Iecce, with which it is connected by railway. I'op. $\overline{5,1101}$ in 1862. The town has an old castlo and a cathedral, and is the seat of a bishopric. It was ancked by the Turks in the 16th century; nul since then has suffered much from the inroals of Ilarbury cruizers. Its harbour admits only amull vessels. The environs are productive of corn, wine, cotton, and fruits.

CASTRO DEL RIO EL LEAI (an, Cuatra Julia), a town of Spain, prov. Cordova, on the Guadijos, 16 m . SE. Corlova. Pop. 8,945 in $185^{7} 7$. The town has two churehes, two hospitals, a foundling hospital, two seminaries for the elncation of boys and girls, and a castle; with manufactures of wool and hemp.

CASTKOGIOVANNI (an, Finna), a town ot Sicily, prov. Catania, cap. cant., almost In the centre of the island, 65 m . ESE. Palermo, in a plain abont 5 m . in circ., being the summit of a lofty and almost inaccessible mountain, more than $4,000 \mathrm{ft}$. above the level $\mathrm{c}_{6}^{6}$ the nea. Pop. 18,717 in 1862. This city, colebrated in antiquity as the birthplace of Ceres, and the site of her most sacred teinple, is now one of the poorest towns in the island. It still, however, commands an extensive and delightful prosucet, is well supplied with excellent water, and has a clear salubrious atmosphere. The surromiling country, which is very fertile, was, in antiquity, ornamented with innumerable groves and temples, appropriated to the worship of Ceres and I'roserpine, Livy has correctly described the city as built in eacelso loco ac prarnpto; and Cícero has given an eloquent description of the town, temple, and statne of Ceres, carried off by the wholesale plumderer, Verres: 'Simulacrum Cereris Eune ex snâ sede ac domo sustulit, quod erat tale, ut homines, quum viderent, aut ipsam videre se Cererem, aut effigien Cereris, won humanâ manu factam, sed ceelo delapsam, arbitrareutur.' But all traces of the temple, as well as of the worship of the gooldess, have disappeared. The castle in the modern town, which is going fast to ruin, is evidently of Saracen or Norman origin.

About 5 m . from the town, at the foot of the mountain, is the fumous lake, on the borders of which

Herself a Proserptne gathering flowers,
Herself a fairer flow'r, by gloomy Dis
The orators and poets of antiquity have exhausted their powers in describing the beauty and sublimity of this famous lake. (See, among others, Cicero in Verrem, iv. § 48 ; Ovid, Met. lib. v., lin. 385.) But it no longer wears the livery of perpetual spring; its groves have been cut down, and its temples levelled with the dust ! All is desolate and deserted:-

Pro mollt viola, pro parpureo narcisso, Carduus, et spinis surgit palturus acutis.'
Its naked borders are foetid and loathsome, and in the summer months exhale a pestilential air.
' Tantum wvi longinqua valet mutare vetustas.'
Enna was the head-quarters of the revolted slaves under Eunus, during the first servile war in Sicily. Here they defied for several years the power of Rome, and defeated three Pratorian armies. At last they were entirely defeated under the walls of Messina, by the consul Piso; and Enna was subsequently taken by the consul Rupilius, and the slaves put to the sword or crucificd.
CATALONIA (Span. Cataluna), an old prov. of

Spmin, oceupying the NE. portion of the kingdem, hetween ini. $40^{\circ} 8: 30^{\prime}$ nuld $42^{\circ} 51^{\prime} \mathrm{N}$., and tong. $10^{\circ}$ $16^{\prime}$ nind $3^{\circ} 21^{\prime} \mathrm{E}$. It in of a triangular Nhape, and hans the E., l'yreneen, which sepnate it from Frunce on the N.; the Mediterrancall on the E.; and Aragon, and a amall part of Valeneia on the W. Greatest length and breudth, 140 and 130 m ; aren nlout 12,180 нq. m., inclualing Andorre. Olmets from the l'yreneen spread themaclves through the whote prov. from N. to $\mathrm{S}_{\text {, }}$ forming valleys of larger or smaller extent, like those of Ampuridan, Urgel, Aran, numl L.erida. Towards the middle of the prov., 29 m . NW. from Iarcelona, is the celebrated Montserrat, $4,500 \mathrm{ft}$. in helght ; nid farther s., on the Eibro, in the sierra de la Llena. The l'yrenees are not so rugged on this as on the French side, and dencend graiuntly towarta the Mediterranenn. They are mostly granitic. The other monntains of Catalomin are in many respects similar. The mountain of Cardonn, 17 m . NW. Montserrat, almost in the centre of the prov., in a
mans of pure rock-salt, without the least cre-
or tissure, between 400 and 500 ft . high, and 3
in circ. This prolligions mass of sult is umparalleled in burope, and perhaps in the world. In nlmost nny other conntry it would be turned to grent nceount, and be made the menns of an extensive trade; but here, owing to the badness of the roads and the difficulty of access, this inexhaustible source of wealth is bre little known, and comparatively neglected. (Dillon's Travels in Spain, p. 300.) Near Olot, in thls prov., about 55 m . N . l lareelona, is a remarkable district of extinct volcanos, that has been visited nnd deseribed by Mr. Lyell. It contains about 14 distinct conen, with craters. The grentest number of perfect cones are elose to Olot; and the level plain on which the town stands has clearly, necurding to Mr. Lyell, been proluced by the flowing down of lavn from the adjoining hills. Nost of these volcanos are as entire as those near Naples, or on the Hanks of Ditma. Some of them contain enverns called bufadors, from which a current of cold air blows during summer. There is no record of any eruption here; but the town of Olot was nearly destroyed by an enrthquako in 1421. (l'rinciples of Geology, ii. 38, 3d. ed.) The mountnins in the S . of tho prov., near the coast, are limestone. On the $\mathrm{b}_{6}$ of Cervern gypsum only is met with; but more to the W. it gives place to chalk. The const is mostly bold and rugged. In the N . is Cape Creus, the most E. point of Spain, belug the extremity of $\boldsymbol{n}$ rocky peninsula stretching out into the sea, and separating the Gulf of Lyons from that of Rosas, lat. $42^{\circ} 19^{\prime} 53^{\prime \prime}$ N., long. $8^{\circ} 20^{\prime} 16^{\prime \prime}$ E. The prov, is well watered. One of the affluents of the Fbro, the Naguera, forms for nearly 60 m . the line of demarcation between it and Aragon. The Ebro itself enters the prov, at Mequinenza, and flowing through its most S. portion by Tortosn and Amporta, falls into the Mediterrancan 15 m . E. from the latter. The Segre, with its affluents, unites with the Ebro at Mequinenza. The principal rivers, uncomected with the Ebro, are the Lobegrat and Ter, the one flowing SE., and the other E., to the Mediterranear.
The lyrenees furnish iron, opper, zine, and manganese. There are lead mines in various districts. Coul is abundant, but much difficulty has always been encountered in working it, from the want of capital and of improved means of communication. Townsend says, that copper and silver abound in the valley of Aran, and that coal, silver, and gold, have all been found in the vicinity of Lerida. There is abundance of alum in the valley of Aran; nitre is produced spontaneously in the plains of Urgel, and cathartic
salts at Cervern. The momntatu of rock-malt at Cardona has been alrendy noticed. There aro marbles, jaxper, nud other atomes nseful in arehitecture nind senlpture; alalinater, amethynts, topazen, and eoloured rock crystal; ; quartz, barytio apa, tinor spa, limestone, chulk, nul ky рмит, in all varieties ; umianthus, talc, serpentine, and chatcedony. Therenre many mincral waters and hot springs.

The nir in dry and ummanlly bright and elear in the interior; lont on the const it in variable and moist; and in summer pestilentinl diseases not unfrequently prevail. The momstains are everywhere covered with nnow during the winter, and in the l'yrences frequently even in June.

Sail and 1'rodure.-Abont half the surface is ansceptible of cultivation, the rest consinting of rocks, naked burren hills, und woodtand. The mountain land is stony, nad full of fragments of granite; but the valleys nre mostly fertile. All sorts of grain are grown, vi\%. whent, rye, maize, harley, eats, nul millet. The plalns of Ampuridan are anitable for rice; but its cuitivntion is prohibited, as pryjudicinl to health. (Miñno.) l'ulse is produced lin all parts. Hemp, Hax, saffron, madder, woad, anise, llquorice, and burilin are ulno produced. The E. districts yield goad strong wines, which are frequently employed to give body to the wines of other provs, sind are sometimes exported for that purpose to Cette, and thence to Borleaux. Oranges, lemons, and citrons, are found on the ceast ; figs and almonds are grown in the plain of Tarragrona; and apples, pears, cherries, quinces, medlars, apricots, peaches, walmits, ehestnuts, and fillerts, in all the plains. Oil, though not of the best quality, is produced in all the warmer parts of the const district. Silk, heney, and wax are also produced in considerable quantities. Timber is plentiful, especially the roble-onk, beech, fir, elm, evergreen poplar, corktree, de. Nuts and cork constitute important articles of export from the prov., being in this respect second only to linen and cotton goods and brandy. lears and wolves are sometimes neell in the Pyrences. Laborde eatimated the produce of wool at 30,000 quintals.

Catnlonia is the best cultivated, and the people the most industrious, of any of the Spanish provs. This is owing to a variety of causes, but principally, verhaps, to its exemption from the alcavala and other oppressive imposts (Sce Spain), and to the mode in which lands are occupied. Generally, throughout Spain, the land is divided into vast estates, held under a system of strict entail, and administered by stewards on nccount of the proprietors. The disastrous influence of this system is apparent in the low state of agriculture, and the wretchelness of the peasantry, in most parts of the monarchy. Hit in Catalonia its intluence is materially moditled by the landlords hnving power, by what is called the emphyteutic contract, to lease a portion of their estates. This they may do for a term of years, either absolute or conditional, for lives or in perpetuity ; always reserving a quit-rent, as in the English copyholi, with a relief on evrry succession, $n$ fine on the alienation of the land, and other scignioral rights dependent on the custom of the district. The reserved rent is commonly paid in money; but the ngreement is often for wine, oil, corn, or poultry. If the tenant quis before the end of his term (which he may do), he loses all claim for improvements, for which lie must otherwise be paid. Persons oceupying land under this tenure have an obvious interest in its profitable cultivation; and wherever it prevails the country is in a comparatively flourishing state.

Irrigation is the leading feature in the husbaniry of the prove, and in carried to a great extent liv menns of eanals and tronches cut from every inallable sonree : the maintenanee of which, together with the dnatributhon of the water, in commitied to the care of a partienlar junta. (ireat mumberm of farms are almo watered by means of the nurin, a mnchine Intrulacel by the Sarucens fir raising water from wells. The soll is in parts no very light that it in phonghed with a comple of oxall, and momet lmes withome home, or even mine: luit with the help of the winter it in rendered ferthe, and produces on the same eqot corn, wine, urangem, and olives.

Tlie wilk aud woollen manufuetures of Catalonin were formerly carried on to a great extent, and are atill of considerable valne mind inportance. In the later part of last century the cotton manifacture was introduced; but it has not ancteeded.
 aleal of lisen is made, with paper, hate, mul eordnfe, All klads of weaving are carried on "pous the slopies of the I'yreneen, where wages are lowewt, the webs being bronght to barcelona to be bleached and printed. Jeather is largely manifactured, und shoe-making used to bo one of the principal emplayments. In 1i8t, the export of whoes from Ifarcelona only wos extimnted at T00,000 pairn, montly for the colonies. Since the cmumeipation of the latter, this trade has grently dechined. Distillation is extensively earried on; the exports of bramly amomating, on the average, to 35,000 pipes a year. Cimmon and sinall arms, sonp, flass, sheet-iron, and eopler utensils, are nlas problued. Women, in the agrieultural districts, are employed in the making of blond and other lnces. The shiphilding, formerly carried on ut Barcelona, Matiro, and other places on the const, where timber was cleap, has nearly ceased. 'Tarrafona is the chlef place in the prov. for the export of mits, almonds, wines, brandy, cork wood, and cork bark. (Nee T'arimagona.)

The pop, of Catalonia was extimated in 1788 at 814,412. According to the census of 1857, it contnined $1,652,291$ inhabitants. Catalonia is now divided into the four provinces of Barcelonn, 'Turragona, Lerida, and Gerona. The principal towns are Barcelona, 'Tarragona, Gerona, Leridn, Lieus, Manrean, and Tortusa.

The langnage of the Catalans is a dialect of the Romance or l'rovençal, at one time the common langrage in the S. of France, and in some ollier purts. But it is now a good deal intermixed with Custilian and other words. Letters were successfilly cultivated at the court of Barcelona; and some of the counts attained to distinction as tronbadours.

Catalonia had for a lengthened period its states, composed of the elergy, nobility; and commons, who shared the legislative power with the sovereign. It had, also, particular and very extensive privileges, and a peculiar form of jurisdiction in the hands of magistrates, called viguierus, whose distriets are named vignieries. The highest court of appenl was the royal council established in Cntalonia. Their contributions to the king were not considered as imposts, but as voluntary gifts; the Catalans were to be tried by the laws of Catalonia only, and by native judges; and their estates were never to be confisceted, unless for treason. But these privileges were suppressed by Philip V. when he sublued the province; and the laws of Catalonia were then assimilated to those of Castik. They have always been exempted from the alcuvala, cientus, and millones, in lieu of which they pail 10 per cent. on all rents, whether belonging to individuals or communities,
and on the mippowed galus of merchants and mechantes.
The Catalans are harily, aetive, and induatrious; nul usent to log distinguinhed by their attnehment to their privilegren, and their oppowition to arhitrary juwer. Ifat in this renpuet they sewin to have undergone a material chmige, leing now dintinguinhed by their voneration for the aponfolical party in church and state- $n$ consequenea probably of thajr fignorunce and submervienser tu the prienthood. 'I'here seems, indeed, to be little or ito jrovinjon mase for edicution, Dhilip V. sapprosed the univornitien of Ihresomm, lerida, and lierona, and extablished in their stend only thint of Cervera. There are ncademies in tho prineipal towns: but the grent luik ol the peopile appear to be withont the means of inatruction. 'lheir inproved condition is not therefore in any degree owing to their suprerior intelligenee, lut to the eomparatively favourable circomatancen under which they liave, in other rempeta, been pheced.

The diffrence lnetween the cottanes of Catnlonia and those of the other provincen of Spain is very visihle. The howsen and cottagen here linve an air of convenience and confort ; there is glass in the windows, nud the lisides display thes articles of furniture in common use. No heggars, and lew ruged people, are seen : indastry is every Where active; stones are removed from the gromid and collected in beape; fences are moro general and more nently constructed; noboly is seen basking ln the sun ; even the women and giris who attend the cattle do not sit ille, wrupped up in their plaids, but every one has her spindle in lier hand.

Catalonin anciently made a part of the IIspanius Turaconensis of the liomans. The (iotlis were its next masters, who sprend themselves from it over the rest of Spnin. On the fall of the Gothicempire, the Catalans submitted to the Moors, bit the dominion of the latter was not of long duration. In the 8 th and 9 th conturies, Catalonia, with the adjoining eonntry of Ronssillon, became an independent state, subject to the counte or carls of llarcelona. Under their government, liberal institutions were established in the prov, ; it was distinguished by its naval power, commerce, and protleiency in the arts; and its lleets and urmies frequently interfered with decisive effect in the contests of the time. In 1137, Cntalonia was united with Aragon by the marriage of one of its counts with the heiress of the latter ; but the Catalomians retained their separate legislature, and distinet privileges. In 1640 the prov, revolted against Jhilip I V., and was not recovered till I659. In the war of the succession, the Catalonians were the most zealous adherents of the Archduke Charles; and even after Englund and Austria hal withdrawn from the contest, they refused to suhmit, and defended Barcelona with an obstinacy of which there are but few examples. On its cap)ture, their ancient cortes, and most of their peculiar privileges, were suppressed.

CATANIA, an ancient and celebrated city and sea-port of Sicily, cap. prov. same name, on the E. const of the island, at the foot of Momit Ninn, at the extremity of a vast plain, 31 m . NNW. Syracuse, on the railway from Messina to Syrnense. l'op. 64,396 in 1862 . The city, though it has suffered much from enrthquakes, by one of which, in 1698, it was all but totally destroyed, has always risen from its ruins finer and more magnificent than ever. Catania has a noble appearance from the sen; and what is rare in an Italian town, the effect is not diminished on landing ; for the streets are regular, spacious, and handsome ; and the nimmerous churches, convents, palaces, and public

CATANZARO
entabilinhmenth, principally comatructed of lava, faeed with magnexinn limentone from Malta and Syracuse, and eariched with marblen from the ruilns, are mapuitheent. The city is nolly nituated, on the rooth of Atha, lit dempoiler nuid lis benefactor. Overwhelmed, an it has offen been, by torrenta of liquld Ifre, it has risen, like the phomix, soore aplendid from les nahes, The very milomanice which otece ravaged its platime luns, by lien own decomporition, covered them with noil fertile as the tinbled garien of the Llesperidee; and on all sides the material of dentructlon in turied to the purfomen of ornament and utllity. The atreets are paved with lava; homsen, palaces, and churches, are built of hava; of lava they form ornamental chimuryapleces, inhlen, nud a variety of coys: whilnt a natural mole of hava defends the shippling from the fury of the tempent. The eathedrnl, fommed in lugd, was relmilt on a slomple and grund scale, after the enrthquake of 1093 ; the senate-honse, momte di pietì, theatre, and mowt of the munhidpul estabilishments, are also the, approprinte buildiugn, Near the cuthedral is a thue square, ormamented with an antique statue of an clephant heuring on les buck an obellak, It has 49 churehes, of which that of St. Maria dell' Ajntu, and several othern, ure magnilicent structures; it has almo 10 conventes for men, and 11 for women. The lhenellicthe convent of San Nicolo d'Arena has loug been Justly celebrated forits vast extent, superb clureh, exeellent organ, large muneum, ancient mosaics, and great riches. Among the charitalle extublinhments, exclusive of the monte di pietà, are several hospitals, a workhouse, in foundling hospital, a lying-in honpital, and a Mapdalen asylum. The university, founded in 1415 by Alphomso of Arugon, is an extensive foumdation with mu unual revenne of above 2,0001 . It has able professors, and is well attended: its librury sud musemus are open on holydays to the public. The heirs of 1 'rinen llisearl mid others have also the musenms. Cataula la the seat of a bishopric, of a court of appeal, a criminal court, a civil court, and of the provincinl nuthoritles; and enjoys extensive privileges. The humanity, hospitality, and good-breeding of the inhabitants have been eulogised by all travellers. On many oceasions they have shown a singular unanimlty in pmblic affairs; they had the courage to practise moculation so early as 1742, and to introluce the potato while an ignorant prejudice existed against it among their neighbours. The principat manufacture is that of silk, which is largely carried on. The working of the yellow amber found on the S. const of the island affurils employment to some thousands of the population. The snow of Mount Nitn is also a great source of wealth. The harbour is not equal to the importance of the city ; but it is generally full of small craft that resort thither for corn, macaroni, potatoes, olives, figs, silk, wine, almonds, cheese, oil, soda, manna, cantharides, amber, snow, and lava. The environs are fruitful, and well cultivated.
Catania is very ancient. It is believed to have been founded by the Chalcidians, and had Charondas for its early legislator. Under the Romans, it was the resilence of a pretor, and was adorned with many noble buildings. Owing, however, to the repeated occurrence of earthquakes, and the irruption of lava from Ntna, its ancient monuments have been mostly destroyed ; but the remains of its amphitheatre, the circumference of which exceeds even that of the colosseum, as well as of its theatre, odeum, hippodrome, temples, aqueducts, baths, \&c, attest its former extent and magnificence.
CATANZARO, a town of Southern Italy, prov.

Cosenzn, in a henlthy muld arreenile nituation, on a momntain near the Gulf of Squilnce, $29 \mathrm{~m}, \mathrm{SSL}$ : Coseniza. 1'op. 11,404 in 1862. The town nufferel very weverly from the drealful earthyuake of 1783 , whleh civerthrew several of lis prineipna buildings; it at Ill, however, lina a enthedran, neveral churchem anil couvente, a sembinary, a moynl neademy of selence, a lyceum, a fommiling hioplital, a momie di pieti, and two hospltaln ; nuid is defented by a cantle. It in the neat of a bishopric, of one of the four great civil courta of the khugiom, of a eriminnl court, nul of ans oriluary cevil tritmmal. There are considernhle manufuctures of allk, velvet, nuil cloth, and a groud ileal of trade is carried inn in sllk, corn, cattle, whe, and oil. The Inhahitants are allible nod industrious, and the women are reckemed the handmoment in the three Calalirias.
CATEAU-CAMBHESES, a town of France, dep. du Nord, cap. cant., on the sulle, 15 m. liss:. Cambray, on the Northern ruilway. l'op, $9, \geq 12$ In 186t, The town was Gurmerly fortitied; and has manifnetures of atareh, sonp, and tobaceo, with tannerles, and sonne trule in luce. It is celebrated in Ilplomntie hlxtory for the treaty concluded in it, in 1559, between France and Spain,
CATHERINA (SANTA), or NOSSA SENHORA DO DESTERKO, a marit. eity of Brazil, eal. prov. St. Catherine, on the W. slide of the inland of same name, on the narrow ntrait neparating it frum the malnlaud, 520 m . SW, 1kio Janelro; lat. $27^{\circ} \quad 36^{\prime}$ N., long. $48^{\circ} 40^{\prime} \mathrm{W}$. $\mathrm{I}^{\prime}$ (op. probalily from 5,000 to 6,000 . From the landin! place in the harbour, which is at the loottom of a veriant nlope of abont 500 y yards, the town has a mont beautiful appearance, and the perspective is nobly crowned liy its the enthedral. The green is interypersed with orango trees, and forms an agreenhle parade. The hotsen are wel! built, have two or three stories with hoarded thoon, and are provided with neat gardens well stueked with excellent vegetables and flowers. Hevides the chureh of Nossa Senhora do Desterro, which gives name to the place, there were some years ago two chapeels, a convent, an hospicio, and good barrneks. Notwithstanding its excellent port and convenient situation, the trade of the town is not very consillerable; but it is frequently visiteel by ships passing to and from the l'acific, and by those in the S. Sea whale-fishery. Sperm-whales used to be frepuent on this const, null even in the buy of St. Catherine, but they are now comparatively rare. There are some munufactures of coarse cotton and lineus stuffis, and earthenware.
The ixland of St. Catherine may be entirely circumsavigated, and many good nuchornges are found between its W. const and the continent; but the $N$. part of the chamnel is the only one suitable for large vessels. Here they anchor in 5 fathoms on a mud bottom which holds well, and are protected from all winds, except from the NE., which are rarely dangerous. Opposite to the town tho channel narrows, and the depth of water decreases to 2 fathoms. The roadstead is defendel by two forts. This is one of the very best places at which to rellit : excellent water may be had in any quantity for nothing, and provisions of all kinds are cheap and abundant.

The island of St. Catherine is nbout 35 m . in length, N. to S., and from 4 to 8 m . in width. Its shores rise abruptly from the sea to such a height, that in fair weather it is visible 45 m . off, Its most N . extremity, Point Ruph, is in lat. $27^{\circ} 022^{\prime}$ $31^{\prime \prime}$ N., long. $48^{\circ} 32^{\prime} 7^{\prime \prime}$ W. The surface of the island is singularly varied, presenting granite mountains, fertile plains, swamps fit for the growth of rice, lakes stocked with tish, and several
mmall atrenma. Mandione and tlax are the chlef articles of culture; but wheat, majae, pulse, whiona, rice, sugar, cotton, indlyo, and an abmislance of fruit are also grown, 'The ellmate in ruther humbl, but tempernte minl saluhiomin.
(EA'MANOOO, ur K\|A'MANHU, an inlan! dity of N. Hindostan, enp) of the Nepaul doma. loilt in a monntainosas roglom, 15.1 m . NNW, Intom, and $4, \boldsymbol{i n f}$ It, ahove the lovel of the phans
 for abont I III, along tho losink of a rlver $\{$ and eonsthins many wosklen nul briek templen, with the palace of the Nequal rajah. The houses are numily monn brick or tile lonililingn, oftentiree or four storien ligh; atreets narrow and dirty,
CA'TISINE, a manufncturing town of Seotlams, co, Ayp, puriali Sorn, on the N. bank of the Ayr H2 m, 8. Glapgow. I'op, 2,18: in 18cil. Contoinworkn were crected hore by a compliny as early as 17xit, and a bleaching-work in INLI. Whth works are carried on by menns of water-power, but in casa of a cleflicient supply of water, steam-engines make goon the loflefelney, The bleaching establishment, in addition to what is manufactured at Catrine, bleaches all the eotom produced at the other mills belonging to the anme company, the quantity varyiug from 15,000 to 25,000 yurila per day. Every part of the process is carried on within doorn, and without intermption, at al Nensons of the year. There are neven nehools six of which are supported by the sclool fees, anil one maintained by a tixed salary paid by the company; four libraries, one of which in attached to a Suiday-nchool; and several places of worship commected with the established charch, or belongiug to l'resbyterian dissenters.
C.AT'TARO, a town of the Austrian states, enp. cire, of same name, at the Sli. extremity of the Ginlf or Jlecce di Cuterro, 210 m . SE. Zarn; lat. $.12^{\circ} 25^{\prime} 26^{\prime \prime}$ N., loug. $18^{\circ} 40^{\prime} 16^{\prime \prime}$ L., $l^{\prime}$ op, 3,970 in 18.57. The town is walled, and is farther defended by a fort built on an adjoining eminence. Strects narrow, lark, and gloomy, Notwithstanding its small size, jt has a cathedral, a collegrate chureh, seventeen other Roman Catholic churebes and clapels, a Greek chureh, six convents, and a losspital. It is the seat of the administration of the circle and of a bishop, and has a government high-schonl. The harbour is one of the best in the Allriatic. At its month there are two rocks dividing the entrance into three separnte channels, two of which admit the largest ships. Internally the gulf is spacious and seenre, though little frequented by shipping. The trade of Catturo is chiefly with the Turkish dintrict of Montenegro. I'le vicinity is very pieturesque; but from being surrominded on three sides by mountains, Cattaro has this disadvantage, that the sinl rises an hour later and is lost an hour earlier than in other places under the same latitude. The district of Cattaro was the seat of a Roman colony; but the town itself only dates from the 6th century. It has suffered much from earthquakes, enpecially in 1563 and 1667 . It was long the cap, of a small republic, which, falling into debt, placed itself under the government of Venice on the single condition of having its debts pain. I'revionsly to the treaty of Tilsit this town was for sone time in the occupation of the Russians.

CATTEGAT, or KATTEGAT, a portion of the N. Sea, or of the Baltic, between Jutland and Sweden. (See Baltic.)

CAUBU L, or CAISUL (an. Aria and Arachosia), an extensive region of Central Asia, formerly the centre of a powerful kingdom reaching from Meshed to Cashmere, and from the Oxus to the ocean, but now comprising only the country be-
tween lat. $28^{\circ}$ and $37^{\circ} N_{14}$ and longe. $89^{\circ}: 30^{\circ}$ and
 inololent of each other, viz, thone of its principal citlem, Canlonl, L'eshawur, Candihar, and Ilerat. Cimibul, In lta extenced nense, incilulem this proater partions of Affiganiation, Scintan (an. Irrumionna), anil Kewestan, with purte of K'horanwali, ('aulirintan (tho Kohintan), anil lahure: lemgth ami bremith each ahont hion mb . Thas [M]. was eatimated hy Mr. Wilphinatone, in 180! at about $14,000,(000$, hut this emtituate is liwlievel to have heen too high when it was framed; and winee that perian civil wans and foreiga eomguents bave deprivel Canluil of the provs. of lleloochintan, Sinde, Monltan, Damini, Cushmers, Halkh, de., and have diminished the popp. to little mure than $\delta, 000,000$. At present, lesidens the citiew alrealy maned, the chief townare, Ghiznee, Duoshak, and Fiurrali.

The N. anil b. portion of Canbul in a lofty table-land, its monitains belonging to the Himon Koosali (or Inilian Cancusus), and two of its ollisetx. viz, the Solimain and l'uropmosanan rangem. Than Koosh monintain, abont long, the liog gives ita unme to the runge which extenis from ft buth W. and E.., and heyond the Indis is continnons with the Ilimalaya, rumuing senerally SW, to NL: and in the Kohistan forming the N. henmiary of Canhinl. Ihetween long, $70^{\circ} \mathrm{mul} 72^{\circ}$ it makes a remarkuble curve to the S., opposite to which the lolor-Tagh (or elouly monntainas) nites with or appromehes it, from Hudukhalian on the N The lighent, as well as the most S. polnt of this curve, is apparently a mountain, called Coond, or Kooner, near long. $71^{\circ}$, where the Aftigham belleve the ark to have reated after tho deluge; a tradition current, however, respecting the Tuklite Solimunin nino. The Koosh is covered with perpetual snow; its paaks are visible from Bactria, Indin, and even Tartary, and one of them, measured by Sir A. lluries, was found to be $20,493 \mathrm{ft}$. high. Mr. Elphinstone observed at l'eshawur three inferior mountain rangen, pnogresslvely decreasing in height beneath the former; the description of witich will serve, he says, to give an lidea of the rent of the Koosh chain; the lowest range was dentitute of now, and its sides were clothed with forests of pine, oak, and wild olive, luropean fruits and tlowers, fern, and clegant nlirubs. The tops of the second range are covered with snow, and the thirl aro so to half their height. On the high central rango Mr. Elphinstone observel that ' no diminution in the snow could be perceived in any part in the month of June, when the thermometer in the plain of Peshawur was at $113^{\circ}$ Falir.' 'The Koh-i-Maln range, between Caubul and Iaumian, is the conttinuation W. of the Koosh; but its peaks are not so lofty, probably not more than $18,000 \mathrm{ft}$. (Burnes, iil. 203), although 'covered with eternal snow for a considerable distance benenth their summits.' The passes of Hajeegnk and Kaloo on this range are respectively 12,400 and 13,000 ft . above the sea; the other passes are none more than 9,000 ft. in height, and all, withont execption, are free from snow by the end of June. In the defiles the road often winds at the base of a mural precipice, rising to 2,000 or $3,000 \mathrm{ft}$. perpendicularly, and in one part, called Dura-izundan, or the 'Valley of the Dingeon,' the height is such as to exclude the sun at noonday: at the lieight of $10,000 \mathrm{ft}$., however, the ground in some parts is ploughed when the show disappears, the grain sown in May being reaped in October. The ranges $\mathbf{N}$. of the Koh-i-Baba are much inferior in height, and often free from snow, but rise from the plains of Balkh in a bold and
precipitous line, $2,800 \mathrm{n}$. high, The valley of then C'anliml river meparaten the Kondh from the 'Treera mesentaina, which min in a parallel direetlon, decreasing In aize to the E.; but in their higher parts are covered with perpetual anow, anill are certainly an much un $16,0,00$ ) f , high, ( Blumen, ii. 105.) Whe Nollimanin range commencer with then Sufuen :oh, S, of the Caubul valley : acrome which it $\mathrm{n} y$ be considered an econnecting linelf with the Koombi, ly meaun of erosn rangen, canslug many enacader anit ncelivitien in the led of the river. Thin rauge ptretchem from nearly in $1^{\circ}$ to 240 N . lat,, where it beemmen eminested with the high tulile-Jand of Kelat (ledocochlwang). It in not mis hiph ax the Kensh! Ite prineipal puilute are the Suffued-Kill, or ' White Mountulu, anil the 'Twkhte Sollimam, or 'Throne of Suloman,' the last near lat. $81^{\circ} 30^{\prime} \mathrm{N}, 1$ the firmer la always eoverend with nouw, and the latter nol for three momithe in the yenr, between thene two pointa thin runpre decrenaes consilerulily in hilight, enpecinily where it is intemected by the dimmil river. The Solimmun chain han reveral parallet rligen, and pives aff many lateral nad other ranges, eepeefinly a remarkuble we to the sW., beluding the Kingele Amran lilles; a hroad range, though of no great altitule, whith appeates to join the talile-land of kelat. On the E:, a high nand broad rnnge, alnumating In walt, passen off near the T'eera monentains, nerose the Indus, finto the l'unjulb, with n El:, direetion. The P'aropaminan monntains (for which an $n$ whole there in no modern name) necupy a largo space of comintry,
 W. of the Komsh, and between the Ilelimuad river nul Toorkistan. They are a innze of mountains, dillteult of accens, nall little frequented; their 1:. jertion is cold, rugged, and harren, although nowhere covered with perpetual snow: in the W. they contain rather wiler valleys, and are somewhat better cultivnted. Their grentest declivity is on the N. wide, from which they gend oll' several rauges towarin lialkh; the slope of the whole tract is towards the W.

The Koonll, collectively called the Caubul Kohistnu, or 'Land of Momintains,' contains, in its higher ranges, a number of narrow valleys; in its lower portions the valleys are of some nize; Mr. EIphinstone culling them 'plains.' Many open literally into the valley of Caubul, which occuples the spance between the Indian Cancasum and the Solimaun and 'Teera mountnins, nud which in fome places is 25 m , wide. The narrow plain, or valley of the Swaut river, is well watered; yields two liarveats of mont sorts of grain ; and abounds in orchards, mulberry-garilens, and plane-trees: others are ly no means so wide or proluctive, and are often bounded by a mumber of narrow glens. 'I'here are many fertile and well-watered valleys on both sides the Solimaun range.

Berides those of the devert, which extend over the S. and W. parts of Caubul, there are many extensive and prolluctive plains: that of Peshawur, ubout 35 m . in dinm., is well watered; its strenms fringed with willows and tamarinks; and has numerous gardens and orchards acnttered over it: the latter contain a profusion of apple, plum, peach, pear, quinee, and pumegranate trees. The greater part of this plain is lighly cultivated and irrigated by cannls, and the uncultivnted parts covered with a thick elastic son, seareely equalled, except in lingland: its villages are generally large, very elean and neat, and surrounded with groves of date, peepul, and tamarisk. The valley of Cunbul encloses some small plains, of which that of Jellalabnd is the principal. Most of the cities and large towns are in fertile plains; one of

Erent luxuriance murroundala Ilerat ; and the nite of Furrali, nutil other placen tin the $\mathrm{W}_{\text {., }}$ an well an the bankn of the IIcimund, neem 'rich manes In the midnt of a waste.' 'The denert in Seintan, Ciurmmeer, and Shorawuk, han an ill-iefined lewusilary, and often eneroachen on the habitalile conitry.
The Indin furma, for a nhort slistance, the E: Imoundary, nuil excepting it, there in no river which in not furialite throughout itn coume fior the greater part of the year. The principul of the minur rivent nre the Chalbul, Dichunil, Furrah-Minel nail lava. The only lake of any inpurtance in that of Selatan, or \%urrali ( Aria loius), which receives the waters of the Helmund (Biymumeder).

The Climute varlos with the elevation; the temperature in mueh higher at l'esliawur anill Cinninhar than at Caulail nud Ginzace; but, genernlly speaking, the average licat of the year dieen mot equal that of Imilin, wur the colld that of Bingland. At Caubinl the nnow llex ont the gronind for the momilha, and hurnes fimuld the thermumeter stownd nus higher than $14^{\circ}$ Fulir, during the hottent periond of the day in the month of May. The prevaillug wiuls thronghout Chubul are wenterly. The rinins bronght by the SW, monaosina are much dhaninIshed in puwer by the the they renelh the Nt:, part of the conatry, where the rainy scason in limited to a moniti of elouly weather, and ocenslonal showers. At Candahar the inthence of this monsoman is not folt in the least depree: at Canbul there is nu, regular wet scason ; bit showers are frequent at nll times of the yeur, as in EugInat. At l'enhawur, by the tirat week in March, peaph and plum trees begin to blosemm, and by the end of that month are in full fulinge: from July to Septr, the weather is clomily; the winter lavis from the later month till Feb. Canhul generally in henlthy ; the mowt prevalent diseases are feveni, amall-pox, and ophthinlmia. Sir A; Burnes founil the inliahtants of the Koush, at $10,000 \mathrm{ft}$. above the ren, quite free from goitre, so common in the lower ranges of the Himalnya.
Geology and Alinerala,- A core of granite, and resthg on It a deep bed of alate, are the prominent geologleal features of the Koosh: the slate formatimin inclucles gneiss, mica, and clay-slate, chlorite, carboute of Jime, and quartz; pneins generally occupying the lower portlon. The Solimann chain is cumposed of a harid black stone; its accompanylug ranges on the E., of an equally hard red stovie, and a frinble grey andstone: tho hills between Herat and Doonliak consist partly of a mixed reddish and black rock, streaked with ore, and partly of greywucke slate. Iron, lead, copper, antlmony, tin, and zinc are fonud in various parts of the mountail، region, and 10 or 12 lead mines near llaumian, and elsewhere, aro worked; pold is washed down by the rivers that come from the Hindoo Koosh; there are extensive deposits of sulphur in Seistan, at Cohut, de.; coal, naphtha, and petroleum are met with in the latter district; salt in the l:. part of the country, both in springs and bels; and saltpetre is procured from the soil in many places.
Many of the forest trees, and most of the finer fruits of Europe grow wild. The timber in the mountain region consixts chiefly of pine, oak, eedar, gigantic cypress, and wild ollve : the Hindor, Koosh is destitute of wood, and in many places of verilure. Some of the hills produce the birch, holly, hazel, and mastic, the wild vine, berberry, Wackberry, and muny other bushes bearing edible berries; the valleys abound with extensive orchards, particulurly of apricot-trees; the other trees most common on the plains are the mulberry, tamarisk, plane, willow, and poplar. The ansafietidn plant grows luxuriantly at an elevation of

Ricers of Sfen,-The Affyhana, who enll themselvas l'onditom, bear a comalderable rewemblance Io the Juwn: und, thomgh they consider it a rafironch to be called Jow, they claim dencent from asoll of Sanl. Sir W. Jomen and Sir A. Jhamen contend fir their dewixh origin; Mr. lilphlastone Ilsoredita it. They aro ilivided into a momber of triber, uftell at war with ench other, ewpecially those in the li, of Comimh, and each umber the nit thorlty of a chicf, who, however, is usually anainted by a commol (jeerga), consintinge of llo lumde of the tribe. Mr. Wiphinatone comecives their political comelition to benr astrong malogy to that of tho scottlalt clans, in former times; lint the genins of the Atighans in more dediledly republiean: thoy reaint every enerondiment of their rulers, and hinve $n$ lsildnems and elevation of clanracter unknown to most other Asiatic nutions They are Mohammedans of the Soonite neet, but use the I'ersian alphabet: their liternture bears n similarity to that of the I'ersians; lut it has n nurerior dignity and rethement, and in many respects is not unlike thint of Europe. The Afighnins are hoxplable, and tolerant in rellgion; but ex remely waprostitions and addicted to natrology, divination and alehemy, They are phamlerem by profession ; in the W, they live in tents, in the E . In tixed habitations; only a few of them reside in the large towna. 'Their chief annusemente are the chase, feasting, songe and recitntious: they have slaves, but tratic very little in them. (Siee Affgilanistan.)

The Eimaukn and ITazaurehs, two races of Tartar origin, although using tinlecta of the l'ersian tongue, inhabit the l'arupanisun monntains. The Eimauka, who are divided into four principal tribes, subdivided into numerous clans, each goverucd by its chicf, occupy tho lower parts of the country, between Caubul city and Iterat; Mr. Elphinstone entimated their number at about 450,000. In war they are ferocious and cruel : they retain many Myryl customs, mixed with others of Persian origin; they live almost entirely in camps, and use the same kind of food as the Alfghans, with the addition of horse-1lesh and bread of an oily kind of nut. 'They cultivate wheat, barley, and millet

Vol. $1 I$.
of many aheep, and rear a small hit active breed of hornasat they are Mohammedann of the Anninite neet, 'The ifaznurulin liave lreen eatimated at alont $\mathbf{3 5 0 , ( 1 0 0 )}$; they inhabit a higher rughon than the Eimankn, a cold and sterlle eomintry, whern little cort call he arown : their nheep, uxell, homen, anill the prisluce of the chane, firiinh them with their primeipal arilolen of fowal : mugar and walt are the foreign eommonition mont in drmand amongat thoun. Thay llve in vilimgen of thatehed hommem and are divided into diffrent cianm, conwtantly a war with each other, and each soverned by at d'aulute chiof. 'The Ilazanreho bave atromg 'Tartar featul and many mimilaritien in cinalomm and fresen with the ligiseks the women, who are fregiently gorad-looking, jamman an unexampled license anil ancendancy over their hushmida. Thene people are felsimmate, tickle, and emprichma: bint (tonvermatile, howpitulter, ami very fomil of misic recitation, vinithge, mul ullief mociablo kluin of anlumement, Many of then are performers on a ghitar, puets, and emprocimoturi. They belonis to the mevt of All, The Taljikn, of 'I'mulikn (nee Thokilaba), are probably divecomlants of the orichal l'erslan inlinh, of the connitry, and of the Arulon who conuluered it in the timt revitury nftere the Jlegira. 'They live mondy in and ronimd thes ingerer towna, nul everywhere renide in fixed habjthtlons, having mettled emphoymentu. They are zanloms Sonnees, mild, aher, putcoable, and hidustrions; and assimilate mueh more with the $\mathbf{A}$ fiphana than their brethren of llokhara do with the lyar.k. The Thiljikn are mont nimierome towarila the WV. of C'mibul; an the Jlinikeon (llimion, Juts, Sindiame) are towarts the E. 'Then Ithdoom arr, however, to loe met with all over the conntry, ehiefly as monerchangers mid trudewmen; they are mowtly of the Kalinatriya or militury cante. The Kinazillmahem, or l'ersian Tourkn, Inhahit the towns; the Jlonochen are generally alinont comtheil to the N. 1 theres are alont 2,060 Arab finmilios, besiden Armonions, Alywminiane, Jinfopman Turks, Jewa, und Cnutirs mmongese the population.

Ayriculture,-1'luero are tlve clansea of cultiva-tors-Int, proprietors, who coltivate their own land; End, telnuts, who pay a lixed ront fin money, or a proportion of the prodine: ; 3rd, buzgurn, of meenyers; 4th, hired labonrers; bth, rillim, who enltivate thelr lorila' lnale withont wages. The Inades are more equnlly divited in Caubul than in most cominties, and the tirst elasm, or thint of mand proprietors, is very large, an by the Mohnmmednn anw every man's estate is at his denth divided equally amongst his sons. The class of temmits is not nomferons. Leases are generally from 1 to $\sigma$ yente, and the rent varies from 1-10th part to half the produce; the lanillord genernlly providing the aced, catile, and farm inmplements. Labonirers no principally employed by the buzyurs; they are fed and elothed by their employers, and paid for 9 montlas work about 80 rupees, The villeinn are many of them of foreign descent, and always at tached to the service of some master; they ane mabject to taxation, and even death-punishment irom their lord, but have the privilege of removing from the service of one master to another: they are mont numerous amongst the linofzyes and other Aflighan tribes in the NE, There are two harvesta in the year ; one crop, consisting of rice, millet, jouraree, and maize, is sown in the sprints, and reaped in autumn; the other, which consisto of whent, barley, and legumes, is sown at the end of autumn, and reaped in summer. Hice is grown in most parts of the country, but wheat is the common food of the people : barley is usually given to horses. The vegetables anil pot-herbs of Liurope and India are cultivated largely, especially turnips
mol carrots; melons and encumbers are abundantly grown in the neightwurhood of the towns; and pinger, turmeric, and the sugar-cane in the E.; but the latter plant is confined to rich plains, and most of the sugar, as well as the cotton, used in Caubul is hrought from India. The palma Christi, seanmum, and mustarl, are grown for the sake of their oil; tobacco is cultivated in most parts; madder alounds in the W.; and Cnubul furnislies to India its chicf supply of that article: lucerne and other artificial granses are sown for the cattle. Much of the land fit for culture has been brought into that state by irrigations undertaken by individuals singly, or associnted for the purpose. Cultivable land in Caubul is generally valued at from nine to twelve years' purchase. Irrigation is effected hy means of canals and subterrancan conduite, lieneath the slopes of hills, termed cauraiz, which are common in Persia. The plough is henvier and makes deeper furrows than that of India, but still only employs one pair of oxen. All grain is sown broadeast; and drill husbandry is unknown. The place of a harrow is supplied ly a plank dragged over the fleld, on which a man stands. The sickle is the only instrument used for reaping. The tlail is unknown; and the corn is trolden out by oxen, or forced out by a frame of wood filled with branches, on which a man sits, and is dragged over the straw by eattle. It is winnowed by being thrown ngainst the wind, and, when cleaned, is $\mathrm{kej} \mathrm{p}^{\mathrm{t}}$ in linmpers plastered with mud, unbakel eurthen pots, and coarse hair-cloth bags.

For grinding the corn, windmills are used in the W., but these are very different from ours, for the sails are inside, and there is an opening in the erection to admit the wind. Wnter-mills are not minkown, but handmills are most generally used. The manure employed is composed of dung, straw, and ashes, but the dumg of camels is carefully avoided. Horses are employed in ploughing only ly the Fimauks; in Seistan cameiv, pertorm this work. There are no carts. The horses of Herat are very fine, and somewhat similar to the Arabian breed; and there is a strong and niseful breed of ponies, especially about Baumeean. Mules preferable to those of India; but asses, camels, and dromedaries mostly are used fir earringe. The ox resembles that of India; sheep chiefly of the broadtailed kind; and the goats, which are numerous, have often long and tortuous horns. The greyhounds and pointers are excellent. A great number of horses are annually sold in the N. and W. of India, under the name of Caubul and Candahar breeds; but no horses are bred in large numbers in Caubul, nor are those of Candahar exported in any quantity.

Trade.-Exports.-The principal foreign trade is with ludia, Persia, and Toorkistan : the exports to the first-named country are principally horses and ponies; furs, shawls, chintz; madder, assafetida, tobacco, and fruits: those to Toorkistan are shawls, turbans, chintz, white cloth, indigo, and other Indiun produce: to Pecsia the same articles, with the carpets of Herat. The latternamed article, with woollens, furs, madder, cheese, and some piece-goods, are sent from the W. to the E. prove. ; and Bhawupoor and Mooltan cloths, silk, cotton, and indigo, are sent back in retum. Iron, salt, alum, sulphur, and the other natural produce, are also exported.

Imports.-From India are coarse cotton cloths, worn by the mass of the people; muslins, silks, and brocade; indigo, in great quantitics; ivory, chalk, bamboos, wax, tin, sandal-wood, sugar, and spices: from Toorkistan, horses, gold, and silver; cochineal, broad cloth, and tinsel: cast-iron pots, cutlery, hardware, and other European articles,
from Russin, niai Bokhara. Silks, cottons, emloroidery, and Indian clintz come from P'ensia; slaves from Aralia and Ahysslnia; silks, satins, tea, porcelain, lyes, and the precious metals, from the Chinese dominions; and dates and cocoa-muls from Beloochistan. The merchants are chletly Tarljiks, Persians, or Affghans, and Hindkees in the E.; but no Affghan ever keeps a shop, or exercises any handicraft trade. Caubul is the great mart for the trade with 'Toorkistan; Peshawur for that with the I'unjab; and Candahar and Herat for that with I'ersis. The demand for British manufactures has inereased so much latterly, thut Russia, which before 1816 supplied a great many articles, now only sends nankeen and broal chint\%, of a description not manufactured in Britain, into the market. The greater part of the trade between India, Caubul, and Bukhara is comlucted by the Lohances, a pastoral tribe of Affghans, often of considerable wealth. Alwout 1,000 enmel-loads of Indian goods are anumally consumed in Caubul. The Caubul merehants have latterly begun to froquent the anmual fairs on the borders of the Russian lominions, and most of the Russian trade with Buklara has fallen into their hands. Sir A. Bumes remarks, that were such frirs to be established on our NW. frontier, and encouragement given to the Lolanee merclinnts, who are every way deserving of it, a large export of llritish manufactures would take place.
Roats.-In an inland country, without navigalle rivers, and not suited to wheeled carringes, truffic must be carried on by means of heasts of burden ; camels are the principal of these in Canbul, and constitute great part of the wealth of many individuals, as they are let out to merchants ly those who cannot afforl to trade themselves. The merchants commonly travel in bodies, called caravans, and place themselves generally under the conduct of some chief whom they elect as a canfila baushee, or an officer with absolnte command over all the arrangements of the joumey. There are but two great routes through the country; one from Balkh across the mountains at Banmeean, through Caubul to Peshawur, and thence into the P'unjab; and the other from Herat to Candahar: on this line there are few obstacles to oppose a European army, and the latter city could furnish abundant supplics. From Candahar there are two routes; the former through Ghiznee to Caubul, not difficult for nine months in the year, but next to impassable in the winter, from the snow and intense cold; the second through the valley of Pishoon and Quetta to Shikarpere in Sinde; a country furnishing supplies of food, but deficient in wood and water. There is another road across the Solimaun range from Candahar to Dera Ghazee Khan, in Damaun; but it is said to be hardly practicable for a European army, and is not travelled by merchants. The Khyber Pass from Peshawur to Cauhul has, in consequence of enormous exactions on merchandise at the former place, been deserted by traders, and is unsafe. Camels, horses, mules, \&c., are cheap enough throughout Caubul; but fuel is very scarce and dear, and water is not generally to be had in abundance: two great drawbacks in travelling. (Conolly, ii. 323.)
The Public Revenue, in settled times, amounts, according to Mr. Elphinstone, to nearly 3,000,000l. i but, before the revolution which dethroned Shah Shoojah, 1 -3rd part was remitted to different tributary princes, who consented to hold their dominions as grants from the khan of Caubul: of the rest, half was assigned for military services to the chiefs, and the remainder for the maintenance of moollahs and dervises. ed times, amounts, nearly $3,000,0001$.; ch dethroned Shah ted to different tri1 to hold their dohan of Caubul: of military services to or the maintenance the chief sources of
the revenue under the present khan are, the land, the tribute of certain tribes, the town duties and customs, certain flnes and forfeiturea, and the profits of the mint. The land revenue is collected foy the head man of each village, and paid cither through the head of the tribe, or the hakim or governor of the province: great peeulation is oftell practised by the hakim, as the current expenses are paid before the balance is sent to the treasury.

Government.-Under the monarchy, the crown was hereditary in the family of the Suddozyes, who belonged to the tribe of the Dooraunces, said by Mr. Elphinstone to be the greatest, bravest, aini most civilised of all the Affghan tribes. The right of succession was not always vested in the eldest son; but the futuse heir was determined cither by the relguing sovereign or a council of the great oflicers of state.

Justice is administered in the cities by the cauzy (or cadi), assisted by muftis ansl other oflicers; but where the khan happens to reside, criminal complaints are made to him. The canzies have deputies over the whole country. The police of towns is managed nuler one head, in three departments, viz. Watchmen, inspectors of public morals, and superintendents of weights and measures. In the country the people to whom the lanil belongs are answerable for the police. In cases of robbery and theft, if the ehief of the village or of the division of a tribe in whose lands a crime was committed, fail to proluce the thief, he pays the value of the property stolen, and levies it on the people under him. The police is very bad, and does not interfere in murlers for cetaliation, except in towns and their vicinity.
Religions Establishnent. - Moollahs or priests lways fill the chaties of inspectors of public morals: under the police established in the country, they have grants of land from the head-man of the fribe, amil a tax similar to tithes, but by no means dquivalent to them in amount: in the towns they ire maintained by fees on marriages and burials, and the gifts of their congregations. A superintentent priest and a registrar are established in ench city; several are connected with the royal household; and at the visit of Mr. Elphinstone, there was a professor and a body of stndents in theology at the king's palace, each of whom received a daily allowance for his support.
Armed force is chietly cavalry, 3-4ths of whom are Kuzzilbashes. They are collected in bodies, varying in number from 6 to 300, under their several chiefs, and tolerably mounted. Their dress is a loongee or turban, one end of which is tied under the throat in the field; a kummerbund or parment, which serves for a coverlid at night; a boorla or shirt, ulkaliq (low trowsers), and boots to the knees, and over all a caftan or cloak: their rms are a sabre, a gin, with a good flint lock, nil long bayonet; a powder and ball pouch round he waist, and always a shield : their saddles are igh both behind and betore, and they all carry a ope with a twisted chain attached, by which they an secure their horses at any: place or time. There are about 12,000 infantry, all Affghans, rmed with a sworl, shield, and match-lock, which earries twice as far as a musket; but being too beavy to be bronght up to the shoulder, is firnished with a prong or rest, which is fixed in the ronnd. These troops are but skirmishers, and bight generally in ambush : there are besides two regiments raised seven years ago in Bombay, one of 800 , and the other of 300 men, dressed in European aniform, but ill paid and disciplined; and vretchel artillery of about fifty field-pieces of diferent sizes, only half of which are used.

History.-Caubul was amongst the countries invaded by Alexaniler, and several spots may be almost confilently identifled with those mentioned by the historians of that conqueror. $\mathbf{A}$ remarkable rock near llujour is grobably the celelorated Aomus; Jellalabal is supuosel to be in the neighbonrhood of the spot where Alexmaler revelled in imitation of llacelns; many topes or artiflelai mounds are situated along the skirt of the mountain ridges, and on the banks of the Caubul river, some of which having been opened, have been fonnd to contain Grecian coins, gems, bones, cups, lamps, \&e. A. D. 907 Cnubnl was compnered by the Tartars muler Sebuctarhi, whose successory exteuded their empire over \&reat part of ludin, Khorassan, 13alkh, and ludukshan. In 1737 Nadir Shali possessed himself of the comntry ; and in 1747 Ahmed Shah Abralli, the fonnder of the Doorannee dynasty, was crowned at Candahar. Ilis successor Timour Nhah died in 1793 without naming an heir, ancl, in consequence of the uncertainty of the succession, a protracted civil war broke out among his three sons. One of then, Shah Shoojah-nl-Moolk, having suecreded in placing himself on the throne, was lefented and deposed, in 1809 , by Futtel Khan, chisf of the 13auricksye family, who espoused the canse of Malmond, brother of Shah Shoojal. Hut notwithstanding his great services, Futteh Khan was treacheronsly murdered, in 1818, by Mahnoud. On this event taking place, the brothers of Finteh Khan, who hat been made trovernors of provinces, revolted; and one of them, Dost Mohamed Khan, established himself on the throne of Canbul. Runjeet Singh seized about the same time on Cashmero and Peshawnr; and Iterat and its dependencies were the only part of the ohl monarehy that continued in the possession of the Doorannee dynasty. Dost Mohamed having assisted the Persians in their attempts on IIerat ; and having, it is alleged, on various occasions evinced his hostility to British interests, the Indian government determined upon dethroning him, and on placing Shah Shoojah on the musmud. For this purpose a powerful army crossed the Indus, and advanced as far as Ghiznce without meeting any opposition, other than that arising from the nature of the conntry, and the deficiency of supplies. The latter having been taken by storm, alter a short but sharp contest, on the 23rd June 1839, a panic seized the troops of Dost Mohamed, who immediately disbanded themselves; and Shah Shoojah was shortly after enthroned at Caubul, whence he had been driven thirty years before. But he was unable to maintain himself on his slippery elevation even with the assistance of the strong British force left in Canbul. We have elsewhere noticed the singularly disastrons retreat of that force from that city early in 1842; with the subsequent invasion of the conntry by the British, and their final withdrawal from it. (See Affgilanistan in this Diet.; Elphinstone's Caubul, passim; Conolly's Journcy"to India; Burnes' Trav. into Bokhara, 1835.)

Caunul, the ancient cap. of the above country, under the Dourausee dynasty, situated in the plain, and on both banks the river of sane name, $6,600 \mathrm{ft}$. above the level of the sea; 56 m . NNE. Ghiznee, 140 m . WNW. Pesbawir: lat. $34^{\circ} 22^{\prime}$ N., long. $69^{\circ} 15^{\prime} \mathrm{E}$. Pop. about 60,000. The city is compactly built : on three sides it is enclosed by a semicircle of low hills, along the top, of which runs a weak wall, with an opening surrounded by a rampart towards the E., by whieli the principal road enters through a gate, after passing a bridge over the river. The Balla llissaur, or 'palace of the kings,' which stands on the
part of the hill N . of this entrance, is a kind of citulel, and contains severnl halls, distingulshed with the royal ornament of a gilded cupola: there is an upper citadel, formerly used as a state prison for princes of the bloon ; bit as fortresses both are contemptible. In the centro of the city is an open square, whence issue four bazaars, with shops about two stories high; the houses are constructed of sun-tried bricks and wood, but few of them have any pretensions to elegance. Canbul is, however, $a$ bustling place; the chief mart of trade in the conntry; and its bazaars are superior to most in the E.: the great bazaar is a handsome roofed arcade $\mathbf{t} 60 \mathrm{ft}$. long by 30 ft . broal. Each dilferent trade has its separate quarter. l'rovisions in summer are molerate, but both woot and grain are dear in winter. Its climate, and the scenery around it, are both very fine; the banks of its river are benutifully alorned with poplar, willow, and mulberry; but the most pleasing spot in its vicinity is the tomb of the Emperor luber, who made Caubul his capital. His grave is marked by two erect slabs of white marble, situated in a small garilen at the summit of $n$ hill overlooking the city: outside Caubul also stands the tomb of 'IMmour Shal, an unfinished octagonal brick building 50 ft . high.

In the 7th century of our ara, the Arabian writers mention Caibul as the residence of a Ilindoo prince; it was, ins already stated, the enpital of the empire of Baber, nud taken by Nutir Slanlı in 1739. At his death it wis taken by Ahmed Ghah Abdalli, and remained the capital of Aflghanistan till the destruction of the monarehy.
The chiefship of Caubul extends $N$. to the Ilindoo Koosh and Inamecan; L. to Neemln half way to Peshawur: S. to Ghiznee, which city it includes; and W. to the country of the Hazaurehs. Much of the country is mountainous, and of grent natural strength but small resources; there is plenty of fruit, and forage for cattle, but grain grows scantily. The revenues of Canbul amount to 18 lacs rupees a year: those derived from the city customs are 2 lacs annually, which amount they have reached in consequence of the encouragenient given to trade by the lately deposed khan.

CAUCASUS, a great mountrin-range, extending in a NW. and SE. direction, between the Black and Caspian Seas. Its extreme points are those of the main ridge or back bone of the system, which, commencing at Annpe, on the Black Sca, in lat. $44^{\circ} 50^{\prime} \mathrm{N}$., runs first SE. as far as the parallel of $42^{\circ} 50^{\prime}$, and meridian of $40^{\circ} 45^{\prime}$; then almost due F. to the long. of $46^{\circ}$, and finally', again SLe. to Baku, on the Caspinn Sea, in lat. $40^{\circ} 20^{\prime}$, where it terminates. The direct distance between Anape and Baku is 690 m ., but, following its windings, the ridge of the Cancasus measures 800 m . The extent of the mountains towards the N. is very well marked by the courses of the rivers Knban and Terek; the one flowing W., along the hasis to the Ilack Sen, the other E. to the Caspian. The nntural S. limit is the Araxes; so that the breadth of this range, in its widest part, is about $5^{\circ}$, or nearly $350 \mathrm{~m} . ;$ and in its narrowest, along the shores of the Caspian, not much short of 250 m . The area enclosed by these twe scas and three rivers, taken as the boundaries of the Cancasian system, is not less than $100,000 \mathrm{sq}$. m., but it must be remarked, that within these limits there is, though not much, some level land; and that the least elevation is found, not in the bed of the Araxes, but in that of the Kur. (Klaproth's Trav. in Cauc. and Georg., p. 158, et seq.; Mignan's Winter

Journey through Rnasia, 1. 27, et seq. Col. Monteith's ' (ient. Journ., iii. 21-57.)
The lighest jenk of the Caucasus attains an altitule of $17,780 \mathrm{ft}$, which is more than $2,000 \mathrm{ft}$. ligher than Mont Blane. (Bontzkoffakoi's Lettres sur le Cnucasse, p. 23.) This peak, or rather mountnin-knot, is found nearly at tho intersection of the 43 rd parallel with the 42 nd merislian. Among Luropean geographers it has been called, improperly enough, Er.bouns, Esnunz, or lif.biouz; a name which, in the spread of informution concerning E. countries, is likely to bo proninctive of 110 little confusion. It is already applied to a peak of the Caucasus, and a range on the S . of the Caspian Sea, and may, unless care be taken, be multiplied indethitely; since it is not a proper name, but a common designation for any mountain which reaches the snow line. (Klaproth, p. 170.) From this point, as from a centro, the mountains descend in all directions, but much more rapidly towards the N. and W. than towards the E. and S. (Klaproth, p. 276.) The Mquinvari peak, to which the Russtans have improperly given the name of Kasbek, is said hy Klaproth to attain an elevation of 4,419 metres, or of $14,500 \mathrm{ft}$. (Lettres sur la Caucasse, p. 40.) Farther E., the ridge declines towards the Caspian; and where it approaches that sea, as in the Crpe of Absliaron, or at the town of Derbend, the eminences do not probably exceed 1,500 or $2,000 \mathrm{ft}$. 'The ridge W. from Elbours is very considerably lower, and presents fewer peaks; it appears to desceud gradisally, till at Anape, on the Black Sea, its clevation is only about 180 feet above the water ; but this height rises perpendicularly, and the face of the rock is continued downwards for several hundred fathoms; such being the depth of the sea at this point. The $N$. ranges rim nearly parallel to the main ridge, and extend about 100 m ., when they suddenly and abruptly terminate in the low steppe of the Den anil Wolga. This frontier, as it may be termed, of the Cancasus, is called the Black Mountains (Schernye Gory). The Bechtag, the lighest point, is probably not less than $6,000 \mathrm{ft}$. in height, and there are several summits which appear to have a nearly equal clevation; extreme ruggedness is, however, a stronger characteristic of these hills than altitude. The Elbours (Osha Makhua) appeared to Pallas to rise in the horizon to more tlian double the height of the Bechtag, when viewed from a station very uear the base of the latter. $S$. of the main chain, the country spreads into table-lands, terraces, and slopes, broken and intersected by transverse ranges and peaks, of which last the lighest is Ali Guz, in $401_{2}^{\circ} \mathrm{N}$., $444^{\circ}$ E., its elevation being about $15,000 \mathrm{ft}$. About 50 m. S. of this, but on the other side of the Araxes, is Mount Ararat ; but it cannot with any propriety be reckoned as part ot the Caucasus. Towards the SE., between the Kur and Araxes, the mountains spread into a level but considerably elevated plain, 24 m . in width, and terminated by a strong defile towards Erivan. The various plains, valleys, and defiles of this part of the mountains seem to vary between 4,000 and 6,000 ft . in height. On the N . the Caucasus is absolutely unconnected with any other mountainrange, unless the chain of the Crimea may he regarded as an exception ; but on the S . it mingles with the high land of Azerbijan; on the SW. it combines with the mountains of Armenia, and through them with the Taurus; and on the SE, its offishoots appear to be continued by the mountains of Ghilan and Mazunderan, to the Elbour (Persian), Paropamisan, Hindoo Koosh, and Llimalayas. 1. 433, et seq., ii. 23, et seq.; Gmelin, Jelse dureh fiussland, ifi. 34, et seq.; Aunales des Voy., xii. 5, et seq., 167, et seq.; 1'allas, i. 330, et seq. ; Klaproth, 158, et eqq; Monteith's Geog. Journ., iil. 81, et seq.)

The above results as to the extent and elevation of the Cancasus are deduced from a very full comparimon of the anthorities cited, and of others not named. It is right, however, to state that they cannot be wholly depended upou. There is the most extraordinary disereprancy among aulthorities as to the extent of the mountain-system, its elevation, de.; but the above results seem to be those on which most reliance may be placed.

The ancients mention two principal passes of the Caucasus, the Caucasian Gates and the Albunian Gates; of which the former is at present the great, indeed almost the only frequented pass. It rins close by the base of the Kusbek mountain, in lat. $42 \frac{1}{3}^{\circ}$ N., long. $44 \frac{1}{2}$ F.., and is, in fuet, a deep ravine, through which the Terek seens to have cut its way in a channel, sometimes scarcely wide eneugh to allow of its passage. The commencement of this cleft on the S . is 4.000 ft ., and it continues to rise, till, at the neck of the pass, it is full $8,000 \mathrm{ft}$. above the sea. Ire(cipitous walls of porphyry and sehist, $3,000 \mathrm{ft}$. in height, press upen its sides; and awful abysses ofen beneath it, sometimes, it is sain, to the depth oif $10,000 \mathrm{ft}$. Avalanches are frequent in this pass, carrying with them not only any unfortunate travellers who may be in the detile, but very often the roal itself, and even when the snow does not descend in masses, its meltings in the spring and summer cause occasional floods, which earry every thing before them. The direct length of this detile may be about 120 m ., from Mosdok to (iory; and some idea may be formed of its ditliculty from the fact that Strabo (xi. 500) deseribes it as ocenpying foar days in the passage. This must be understood also of summer travelling, since in winter the pass was wholly unapproachable. The Russians have, however, made it passable even for carriages; and in Jamuary, 1830 , it was crossed by the Persian embassy, but this winter transit employed six days. (Mignan, i. 46.) Abont midway stands the old castle of Dariel, in the narrowest and highest part of the gorge, where the statement of Pliny (vi. 2), that an iron gate would be suflicient to close the opening, seems to be any thing but an exaggeration. This castle is therefore, in all probability, the fortress which, according to the Roman naturalist, was called, thourh improperly, the Pyla Caspia. (Klaproth, p. 311 ; Monteith, G. J., iii. 39.) The Albanian Gates appear to answer to a pass between Georgia and Dashestan, in lat. $42^{\circ} \mathrm{N}$. , long. $47^{\circ} \mathrm{F}$. (P'olemy, v. 9; Lapie's Map; An. Voy., xii. 1.) This is, however, very little known; it is almost wholly in the possession of the native tribes, and probably is not passable except for hunters, and in the summer. Ptolemy's F . Sarmatian Gates (Geog. v. 9) appear to be the pass of Derbend, on the Caspian Nea: this is always available; its narrowness makes it a strong military position, and the swampy nature of the shore renders travelling along it often difficult. A similar remurk applies still more forcibly to the pass between the W. termination of the Caucasns and the Jlack Sea. Along this road lrince Gortschakoff, in the last war, succeeded in marching an army, with incredible diffienlty, from Anape to Sokhumkulla (about 150 m .) ; but here he found it equally impossible to advince or retreat, and wascompelled to return by sea. (Monteith, G. J., iii. 37.) The impediments to the coast roads appear, however, to consist only in the number
and power of the mountain torrents, which, without bridge or boat, are quite impassable; and as a very wide bank of hard sand stretches along the while shure, it may be pructicable to llurow bridges over all the streams; but very consideralle helght and strength will be necessary to aceure them from the effects of sulden thoods. These are all the passes over the main ridge, anil the transverse raiges do not seem to be better provided; one only appears to exist between Imeritia and Georyia, and that has been rendered avaliable only within modern times, and is still encumbered with great difficulties.

Geology.-The basen of the Caucasus on the N. serm to be covered with sand or a sandy marl frus which the first eminences rise in low but ubrupt hills of sundstome, tufa, aud iron-stonc. These are rupidly succeeded by higher and more mountainous elevations of white calcareous limestome, many of which exhibit unquestionable evidence of decay, the rivers that flow through and round them depositing thick layers of a yellow and grey saudy consistence. Occasionnlly the limestone rises into great rocky peaks and ridges, between which marshy plains of sandy mud are not unfrequent, appurently formed by the abloris of the monntains themselves. This limestone, of which the Bechtag, the Metsluka, and nearly all the frontier line of the Caucasus is formen, is very ancient, and exbibits searcely any petrifuctions; behind this rises a ridge of slate, from the appearance of which the term Black Mountain is given to the range. The higher ranges, which rise to the snow line, consist of basalt, schistus, porphyry, granite, and other old formations, so that whether its actual materiel, or the absence of organic remains, be considered, it is probable that the Caucasus is one of the ollest mountain systems in the world. The $S$. slope exhibits the same succession of formations, as far as regards the three principal strata, but mach less rapidly. Sandstone is far less abundant in the $S$. than in the $N$., but, on the other hand, calcareous spar, milk-quartz, and other fossils, are frequently met with, indicating a much greater degree of wealth in mincral ores. Lava and other volcanic matter is common enough among the formations; but, though mul volcanos exist in various parts of the Caucasus, igne. ons eruptions are unknown ; and neither Klaproth nor Pallas could come to any satisfactory conclusion as to their former existence. Monteith is of opinion that the volcanic rocks are rather to be ascribel to the sudden rise of a great extent of country, than to emissions from particular mountuins, (Gullenstadt, i. 434-411, î. 23-29) ; Pallas, i. 337, 347, 358, 365, \&c. ; Klaproth, 1 p. 386-390; Monteith, G. J., iii. 49.)

Hydrography.-The Caucasus, like the Alps, does not form the dividing line between rivers Howing in opposite directions; other ranges rise immerliately on its $S$., which shut it out from communication with the Persian Gulf and the Meliterranean ; while, on the N., the great plain of the Wolga and Don, after rising from the beds of those rivers for some distance $\mathbb{S}_{\text {., }}$, subsides again, leaving a positive, though scarcely perceptible, ridge between the sources of Mantyeh and Sarpa and the bases of the Caucasus, with a positive though very gentle slope towards the latter. In consequence of this formation, every drop of water from the Cancasus falls into the Black or Caspian Sea. The principal streams, besides the Kuban, Terek, and Araxes, already mentioned, are the Kur (an. Cyrus), and the Phasis, rising on opposite sides of the transverse range which divides Imeritia from Georgia, and running, the first SL. to the Araxes, the other W. to the Black Sea, The

Shorak or Jorak (an. Apsarus) is another tolerahly lurge river, running to the Illack Sea, and the Koisu (un, Cassius), n ntill larger, falling into the Caspian. The torrents that ran short courses to these seas from the tlanks of the momitains in their neighbourhood are quite innumerable, as are the afluents of the principal streams which pour from the monntain sides in every direction, sometimes with respectable length of conrse, and always in immense volume. It may, iuleed, be reasonably concinded that the store of moisture in the Cancasus cannot possibly be exceeded ly that of any other country of like extent ; and since, from the canses before named, it is preventel from sprending heyond the bounds of the mountains, it follows necessarily that no land can be more aibundantly waterei. Most of the streams are tlooded by the meling of the winter snows; and their action on the substance of the mountains is at all times very violent, especially on the slate and limestone. The former is brought down in the form of a black flistening sand, the latter, in that of a soft white substance, so fine and so abundant, that it is used ly the matives, in its natural state, for whitening their houses. (Klaproth, p. 386; I'allas, i. 365.)

I'here is, perlaps, no other mountain region in the wurld so destitute of lakes as Caucasus. The lake of Sevan or Goukcha, between the Kur and Araxes, is the only one of any size in the whole region, and it can liartly be regarded as belonging 10 the Cancasus. It is a salt lake, of the kind so common in Central Asia, without any outlet, and ocenpying nearly the whole oxtent of a small elevatei plain about 48 m . long, by 12 m . in wilth, $5,300 \mathrm{ft}$. above the sea. (Pallas, i. 337, \&c. ; Klaproth, pp. 159, 241-407, ©c.; Monteith, G. J., iii. 43, et seq. ; Spencer, pass.)

Climate.-Tlis, of course, varies with the elevation; but perhaps still more with the degree of shelter afforded by the neighbouring ranges from the different winds. Some of the N. valleys, notwithatanding their exposure to the bleak gusts from the Snowy Mountnins, are so perfectly protected from the N. wind, that their winter is as mild as in the S. parts of the Crimea. (Pallas, i . 339.) They are suljeet, however, to sulden and fierce, thongh brief, vicissitudes; and the very shelter which they possess, by confining the air, makes them unhealthy: With the sharp ascent of the land, the temperature rapidly decreases, and a few hours serves to convey the traveller from the climate of the temperate zone to that of everlasting winter. The cold in the upper ranges is intense; but observations are wanting on which to found any conclusion as to its average ; Mignan, at a comparatively low part, of the rance, found it, in Jan. 1830, a very cold winter, at $4^{\circ}$ Fahr., or $28^{\circ}$ below the freczing point. (i. 35.) A better idea may, perhaps, be formed on this point, from the quantity of snow deposited in the defiles: 1,400 men were employed a fortnight in cutting a road for the Persian embassy, which, after all, was scarcely passable. (Mignan, i. 40.) Notwithstanding this intensity of cold, the plague is very common on the mountains.
On the $S$., the countries on the Black Sea and Caspian may be described as warm ; those of Imeritia and Georgin as rather cold; but this, again, must be taken with considerable limitation, the $\mathbf{N}$. parts of the two seas being subject to winter frosts. The melting of the ice in them frequently causes chilly summers on their sliores, while, on the other hand, some of the higher valleys are among the ottest spots in the Caucasus. The abundance of ruming water, and the neighbourhood of the two bounding sens, cause a great accumulation of vapour; indeed, so extensive is the exhalation
constantly groing on, that it may be sald every wind, if long conthued, brings with it a mist, whilch nothing can disperse except a storn. These last are, consequently, frequent and terrible. Jackily, however, the cause that produces them gives warning of their approach ; the vapours, when grows too heavy for the atmosphere, collect themselves in dense masses round the siden and tops of the mountains; and the Caucaslans, warned by this clothing of their Alpa, prepare for the explosion, which they know, by long experience, will speedily follow. They wrap themselves in their tehaoukas (large cloaks made of wool anil goat's hair, and petfectly waterproof ), and under a low tent made of felt, expressly for such emergencies, or under the lee of a rock or tree, await, generally in safety, the passing of the tempest. (Spencer' W. Cauc., p. 129.) Sometimes, however, the falling of the cliff or tree destroys those who have sought its shelter; but these accilents are of rare occurrence, as it is not often that the natives are compelled, for want of their felt tents, to run such risks; but to strangers unprovided with the menns of combating these storms, the ellect is sure to be iltimately futal. One or, at most, two years' exposure to the varying influence of a Cnucasian climate, sends the Kussian soldier either to his grave or to the hospital, with a constitution irrecoverably broken. The uncertain temperature and the humidity of the atmosphere appear indeed to make it very unhealthy to strangers, especially on the slopes nind flats towards the sea. Intermittent and bilious fevers of a very grave kind are endemic, and exceedingly obstinate ; and the plagne, as before observed, is also very common. (For a singular statement connected with the climate of the Caucasus, see Herodotus, Clio, p. 105 ; Klaproth, p. 160.) The varying lumidity, or some other cause, seems likewise to impress the nir with very peculiar qualities; observations of altitude by the barometer, or the boiling point of water, give very inconslstent results at different times (see Caspian Sea), and the extent of horizontal vision is frequently quite startling. The Caspian Sea is sometimes seen from the summit of the Bechtag, 164 m . distant; and the Snowy Mountains from Sarepta, on the Wolga, a length of 322 m . (Pallas, 1.370 ; Klaproth, p. 158.) The distance of the visible horizon, exclusive of refraction, would be in the first case about $94 \frac{1}{2} \mathrm{~m}$., in the second about $163 \frac{1}{2} \mathrm{~m}$. ; the amount of refraction is, therefore, equal to more than 10 , and nearly $2 k^{\circ}$ respectively ; but, in ordinary states of the atmosphere, the maximum being only 33', the excess of $27^{\prime}$ and $1^{\circ} 57^{\prime}$ indicates a variable density in the medium which is truly surprising. Some of the larger clefts are said, in the traditions of the natives, to have been eaused by earthquakes; but there are no authenticated records of these phenomena. (Guldenstadt, i. 217-432; Pallas, i. $340,358,447$, et pass. ; Gmelin, iii. pass. ; Klaproth, pp. 163, 165, 309, 333, \&c. ; Chardin, p. 165 ; Spencer, W. Cauc., p. 125, et seq., 320, \&c.; Círcass., i. 286, \&c. ; Monteith, G. J., iii. 81, \&c.)

Productions,-1. Minerals.-Except in its deficiency of lakes, the Caucasus has many points of resemblance to the Alps; among others, an apparent poverty of mineral treasures. It is true that this, in the case of the Cancasus, may be apparent only. The ancients unquestionably believed these mountains to be rich in the precious metals, but this they also believed of most other districts that were but slightly known to them; and the limited observations of scientific men in modern times tend to the opposite conchision. A yellow mineral, called cat gold, is indeed found, which may,
tay be sald every with it $\pi$ mist pt a storm. These it and terrible ut produces them ach; the vapours, tmosphere, collect ind the sides and laucaslana, warned prepare for the exlong expertence, ap themselves in made of wool and roof ), and under a ly for such emerrock or tree, await, ig of the tempest. Sometimes, howtree destroys thoso jut these accidents not often that the of their felt tents, angers unprovided these storms, the fatal. J., iii. 31,

Except in its deas many points of s others, an appnIt is true that , may be apparent bly believed these ecious metals, but ther districtsthat ; and the limited in modern times in modern times minemud, which may,
perhaps, have nccasioned the stories as to the gold mines of the Caucasus; but it is perfeetly worthless. Iron, copper, saltpetre, sulphur, and lead, are found, the last in tolerably large quantities. Salt is almost wholly wanting, and of gems there does not appear to be any vestige. Indientions of coal have lately been discovered; and, from the enormons quantity of llme deposits, It is likely that marbles may be fomil. (Pallas, i. 429; Gilldeustalt, i. 441, 456 ; Klaproth, p. 391 ; Spencer, W. Canc., i. 331.)
2. Vegetables.-In amount and variety of vegetation, the Cancasian regions seem to be unrivalled. Charilin, writlng In 1692, says, 'Mount Caucasus, till ye come to the very top of it, is extremely fruitful; ${ }^{\prime}$ and Spencer, in 1838, says, "However high the ascent, we see luxurions vegetation, mingling even with the snow of centuries.' Nearly every tree, slirub, fruit, grain, and flower, found from the limit of the temperate zone to the pole, is native to or may be raised in the Caucasus. The N . bases consist of arable land of an excellent quality, meadows of the finest grass, and dwarf wood in great abundance. At a very hittle distance the increase of wood indientes a higher and colder country, but the plants which delight in a warm situation still continue to be very numerous. From the more rapid rise of the ground, bare rocks are more numerons on the $N$. than on the $S$., but every shelf, however limited, is marked by a rich vegetation to a height almost incouceivable. The S. slopes and table-lands are still more abumelant and varied in their productions than those on the N.; to say nothing of the swampy shores of the Fuxine and Caspian, which are, in most cases, nearly impenetrable jungles of the rankest and most varied vegetation. The rising country consists of a succession of small tlats, each covered with a most productive earth. The monntain sides and higher plains are clothed with dense forests, and the rivers are frequently unnppronchabie for a great distnnce. The forest trees consist of oaks of every species, cedars, cypresses, beeches, savins, junipers, hazels, firs, boxes, pines, alders, and a hust of others. Among the standurd fruits are found the date palm, the jujube, quince, cherry, olive, wild apricot, and willow-leaved pear. Pomegranates, tigs, and mulberries grow wild in all the warmer valleys; and vines twine round the standard trees to a very grent elevation up the monutains. A harl-wood tree, called by the natives outchelia, is apparently peculiar; it is of a dicep rose colour, very closely grained, and susceptible of an extremely high polish. In addition to the vine, the other climbing plants are innumerable, which mixing with the standards, the bramble fruits, such as raspierries and blackberries, and other dwarf woods, form a density of vegetation which it is impossible to penetrate, unless a passage be hewn with the hatchet. Rye, barley, oats, wheat, and millet are abundantly raised, even as high as $7,500 \mathrm{ft}$. above the sea; and besides these grains, the warmer plains and valleys produce flowers of every scent and dye, cotton, rice, flax, hemp, tobacco, and indigo, with every variety of cueumber and melon. This list is of necessity very imperfect, as will be evident when it is stated that Guldenstadt has filled cighteen quarto pages with the mera names of the various plants seen by him on the banks of the Terek and in Georgia. (i. 188-197, 418-430.) It may serve, however, to exhibit the vegetnble riches of a region which seems to produce everything necessary for the existence, and, with the exception of salt, even for the luxurions accommodation of man. (Guldenstadt, as above, et puss.; Gmelin, iii. 22-58, et pass.; Pallas, i. 340, 3̄̄̄̄,

364, 368, 379, Rec; Klaproth, pp. 167, 309, 391, de. $;$ Spencer, Circassin, i. $317 \overline{3}, 330$, ii. 233, 818 , 357, de.; W. Cnuc., i, 29, 188-105, 216, de.; Monteith, G. J., iii. 81-35.)
3. Arimals.-Animal life in the Caucasus is on a senle of magnitude and variety equil to its vegetation. Wolves, bears, lynxes, jackals, foxen, wild ents, n peculiar beast of prey called chums, together with many varietles of deer, wander in the forests and on the sides of the monntains. The smaller fur-bearing tribes are also common, as weasels, polecats, ermines, and moles of many varietics. Ilares and every other species of gane abound, with chamois and goats, of which the Cauensian goat (Capra Caucassica) seems peculiar. Sheep with peeuliurly long wool are numerous; and it is even doubtful if, among the monntains, this crenture be not yet living in $\boldsymbol{n}$ state of nature. Thls also is one of the homes of wild enttle; the largest species (the aurochs) being fountil in its forests; while of the domesticnted kinds the varieties are numerous and serviccable. The horses of the Cancasis have been famous from a very high antiquity, the Bechtag Mountain liaving formerly been called Hippicon ('I $\pi n i \kappa \omega \nu$ ), from the number of these animals which were grazed upon its sides, (Polemy, v. 9.) 'They are not less numerous in the present day, and are among the very thest varicties of the species. Of birls there are pheasants, partridges, groase, and the whole tribe of mountain gane, a great variety of the crow kind, nearly every species of birds of prey and passage, and some of the leest specimens of the domestic varieties. Among insects, the bee and silkworm claim pre-eninense: they are both numerons, and their proluctions, particularly the honey, formed a consideruble branch of trade with l'urkey, till the power of Russin sealed the ports of the Black Sea. Other insects are equally numerous, as are also the reptile tribes, among which are some tine species of tortoises and sunkes, both harmless and venomous. (Gıldenstndt, i. 418, et passim; Gmelin, iii. 58, et passim; Pallas, i. 341, 410, \&c.; Klaproth, p. 344, \&c.; Spencer, passim.)

Inhabitants.--There is probably no other part of the world, except Afrien, $S$. of the Sahara, where so many nations and languages are collected within so small a space as in the Caucasus. Guldenstadt gives a list of seven different natious, besides Tartars, who speak languages radically different, and who are again subilivided into almost inntr. merable tribes, among whom the varieties of dialects are nearly infinite. The principal nations he thus enumerates:-1. Georgians; 2. Basians; 3. Abchasians; 4. Tcherkessians; 5. Okesians; 6. Kistiens ; 7. Lesghians; 8. Tartars. (leise, i. 458-495.) Of these the most numerous and important are the Georgians and Circassians or Tcherkessians; but the Abchasians and Okesians, called by Pallas and Klaproth Abassinns and Osetians, are also powerful tribes. In habits and manners a strong resemblance is observed among them all; they are usually wandering hunters and warriors, for which occupations their country is peculiarly fitted, and only in an inferior degree shepherds or agriculturists. A partial exception must, however, be made to this general character in favour of the Georgians, who reside in towns, and have long possessed a fixed form of government and internal polity; but, for the rest, thoy appear to possess the erratic disposition, reckless courage, boundless hospitnlity, and much of the predatory habits which mark the Arab and other half barbarons people. (See Circassia, Georgia, \&c.) It is well known that Blumenbach looked here for the origin of his first and most intellectual
race of men (the Cancasian); but for this, na has ween privelt, there is not a particle of evidence, histurieal or thilological. The Caucasians, though surroundel by the means of improvement, and occupying a country more favourably situated than that of Switzerland, have made no progrese either in arts or arms; and continue to this day the same unlettered Dartiarians as in the days of Herolotus. (Clio, 203.) They have fine physical forms, but their' mental cudownents are of the most inferior deecription.
Name.-This has in all ages been the aame among neighbouring nations, though, accorling to Strato (xi. 500 ), the range was called by the nativea Kárrov opos (Casynan Mountains). The names Caspian and Caucensus have, in the opinion of Klaproth (p. 169), a a imimiar ctymology, namely, Koh-Chuf' or Chusp, the mountain of Ckasp, so called from the Caspiii, a powerfinl peqple on its silees. (See Caspian Sea.) lliny (vi. 2) derives the name, but with no great appearnnce of lirubability, from Gramcams, whieh, he says, in the Seythian tongue, menna nive candidus. At present the term Cumcassus is but little used by the Asiatics, the name for the mountains among the Tarturs being Jal-bus; among the Turks, Ckafdughi (Mount Ckaf); and among the Armenians, Juilbssi-sear, a moditication of the Tartar tern; but Caucasus is still in use among them.
CAUDEBEC, a sea-pmrt town of France, dép. Seine Inferieure, cap. cant., on the Seine, at the mouth of the Caudebee, 6 m. S. Yvetut. Pop. 2,164 in 1861. The parish ehurch, luyilt in the ioth century, is renarkable for the boldness and delicacy of its architecture. It has some manufactures of cotton goonds. Previously to the reyocition of the edict of Nantes, it was comparatively tlourishing; but that disastrous measure gave a hlow to its manufactures and commerce, from which it has not recovered. Its port, though sufe, conmodious, and advantageously sltunted between Havre and Kouen, is but little frequented.
CAUDETE (an. Biggera), a town of Spain, prov. Murcia, 8 m. NNW. Villena, 12 m . NE. Yecla. Pop. 6,572 in 1857. The town was formerly fortilied; and has a church, 2 convents, a hospital, several distilleries, and a palace of the bistop of Orihuela. On the heights in the vicinity a battle was fought in 1706, the day after the great victory gained by the Duke of Berwick at Almanza, between a detachment of the combined Frencli and Spanish forees and those of the Arelhduke Charles, which ended in the defeat of the latter.
CAUFIRISTAN, or CAFFRISTAN, a region of Central Asia, occupying a great part of the Hindoo Koosh and a portion of the Bolor Tagh mountains, chiefly between lat. $35^{\circ}$ and $36^{\circ} \mathrm{N}$., and long. $70^{\circ}$ E. and the W. limits of Cashmere; having N. Budukshan, E. Little Thibet, S. the dom. of the Panjab and Caubul, and W. those of Caulbul and Koondooz. The hills N. of Bajour and Kooner form its S . limit ; its other boundaries have been very imperfectly defined. The whole of this country is a lotty Alpint tract of snow-capped mountains, deep pine forests, interspersed with small but fertile and often populous valleys, and tahlelands sometimes 10 or 15 m . across. Torrents and rivers are numerous, and are crossed by stationary wooden bridges or hanging bridges of rope and osiers. The cold of the winter is severe, but the valleys afford an abundance of grapes and other fruits, and the hills good pasture for sheep and groats. The Caufirs (infidels) who inhabit this region are an independent nation, said by Baber and Abul Fazel, and believed by themselves, to be descended from the troops of Alexander the Great.

They nre suppesed by some to have been driven thither from the valley of the Oxus, on its being overrun by the Molammedans, but Sir A. Hurries and Mr. Elphinatone auppose they had emigmted, thruugh a similar cause, from the neightbourliomi of Candahar. They are remarkable for the fairness and benuty of their complexions; are liberal, mocial, and extremely hospitable t they never combine in war against their neighthours, but retaliate invasious tiercely, and fight with great' bravery and determination. They indulge an unceasing hatred against Muhammeluns, and a Cautir adils an addilitional ornament to his dress, or another trophy to a high pule befure his door, for each Mussulinan he has sllial. All wear tight elothew those of sume tribes maile of black gont skins, nud of others of white eotton : all suffer their hair to hang over their shoulders, nud each books uplont every one elve as a lirather who wears rirglets num drinks wine : to the latter they are mueh addicieted, and grape juice is given to eliildren at the bremat. They eat the flesh of all kiuls of nuimals, excerpt the dog and jackna, and use both tables nadd cluirm of a rule construction : the women, perfirm the business of tillage, as well ns all laborious domestic oceupations. Fine rice, whent, and barley are the principal grains cultivated; hamey, vinegar, cheese, butter, milk, bread and fruit, coustitute the rest of their foml. Both sexes drink wine to excess Their dwelling-houses are usually built of woxi upon hill-slopes, the roof of one row of houses forming the street to those above it : the only ronds in the country are footpaths. Their weapons are spears, scimitars, and bows nall arrows. After thatle the victors are erowned with chaplets of mulberry-leaves. Both sexes wear ornmments of gold, silver, and other metals; and drinking-eups of the precious metals are often used, and much prized by them. Their langunge is unintelligible to Hindoos, Usbecks, or Affyhans; it contains a mixture of worls from the Hindoo, Affrbanl, and Persian tongues; but the major part of its roots are different from either: they have no books, and neitler umderstand reading nor writing. They adore a supreme being, whom they cull Dogain, and to whom they sacrifice both cows and grants but address themselves to surbordinate deities, represented ly idlols of wood or stone, who, they sny, intercelie with the elief deity in their behalf: fire is a requisite in every religious ceremony, although no veneration is paid to that clement itself.' They neither burn nor bury their dead, but oxpose the corpse in an open coffin, in a forest jungle or on a mouutain, and after a certain time collect as many of the bones as possible, and deposit them in a cave: these ceremonies are solemnized with triumplo, dances, and ssecrlfices. Music, danciug, which is cagerly practised by ali classes, conversation, and carousals, form their chief amusements. They have pricsts, but they do not possess an extensive influence: they live under different chiefs, but little further is known respecting their government. The slavery of such as have lost their relations is universal : some of the Caufirs possess many slaves and cattle, and mueh land. By old writers this region is often named Kuttore: it was invaded by 'Timour, and in 1780 , unsuceessfully, by a confederacy of the surrounding Mohammedan nations. (Elphinstone's Caubul, ii. 373-377; Jurne's Trav., iii. 183-185.)
CAUNES (LeS), a town oi France, dép. Aude, on the Argent-Double, 11 m . NE. Carcassone Pop. 2,347 in 1861 . The town has a fine parish church, formerly belonging to the Benedietine abbey suppressed at the revolution; with distilleries, tanneries, dye-works, marble-works for

France, dép. Ande, NE. Carcassone. has a fine parish the Benerictino ntion; with dis-marble-works for
working the marble found in the neighbouring mountains
CAUSSADE, a town of France, clep. Tarn-et(iaronne, cap. cant, in a fertile country, near the Caude, 18 m . NE. Montauban, on the railway from Montuuban to Viviers. Pop, 4,033 $\ln 1841$. The town is handsome, well-built, and has hroad and straight streets; has numerous llour-mills, with manufactures of woollen and linen stuffis, and carries on some trade in com, saffron, and trutlles.
CAVA, a town of Sunthern Italy, prov. Salerno, cap. cant., In the middle of the agreeable valley of Fenestra, 26 m. ESE. Naples. 1'op. 24,878 in $18 i t e$. The town has a cathedral, three other churches, a convent fur noble ladies, a charity workhouse, a hospital, and a seminary. Silk, cotton, ani woollen stuftis are manufactured in the town and the adjucent villages. The territory is not vory fruitful, but the inhabitants have beeome rich liy their industry and commerce. About a mile from the town is the magnificent lenedictine convent of la Trinita, with a the library.

CAVAILl.ON (ame. Cabellio), a town of France, dép. Vancluse, cap. cant., on the Durnuce, near where it is joined by the Coulon, at the foot of a mountain, 13 m . SE. Avignon. l'op. 7,797 in 1861. The town is mostly ill-built, with narrow and dirty streets, The fortifications by which it was formerly surromided were destroyed during the revolution; the bishoprie of which it was the seat has been also abolished. It has a considerable trade in itried fruits and preserves, shoes, and nuts.
Cavaillon is a very ancient town. The liomans are belioved to have planted a colony in it, and, at all events, they embellished it with several maguiticent editlees. llut having been since repeatedly overrun and pillaged by barbarians, and having sutfered much from an earth!uake in 1731, comparatively few remains of anticuity are to be found either in the town or its vicinity. Tho best preservel, though even that is mach dilapidated, is in fragment of a triumphal arch supposed to belong to the age of Augnstus.
CAVAN, an inl. co. of Ireland, prov. Ulster, having N. Fermanagh, E. Monaghan, S. Longford, Meath, and Westnieath, and W. Leitrim and Lougford. Aren, $473, \overline{7} 49$ imperial acres, of which 30,000 are unimproved mountain and bog, and 21,087 water, consisting principally of louglis Shillin, Kamor, and Ougliter. The Shannon has its principal soturee in the NW. part of this co., and it is traversed by the Erue, Annalee, de. Surface hilly, and soil generally poor. 'Ihere are sone large estates, but the greater number are of moderate size. About $4-5$ ths of the land under tillage. Agriculture in the most depressed state; loldings generally small, and the competition for them excessive. Spadecultivation is very general, so much so that in some parishes there is hardly a ploigh. Oats and potatoes principal crops, but some wheat is raised, and flax. Cottiers have generally pigs and goats ; the former being sold to pay the rent, and the latter kept for their milk. linen manufacture widely diffusel, having not a little contributed to the subdivision of the co. It is aftirmed that the condition of the peasantry has been materially deteriorated during the last 20 years. Minerals little known. Cavan is divided into 7 baronies and 30 parishes, and sends 2 mems. to the H. of C. for the co. liegistered electors $5,9: 9$ in 1865. Principal town Cavan. The co. lua a population of 243,262 in 1841 ; of 174,260 in 1851; and of 153,906 in 1861. These statistics of population tell, more than words can do, a sad history of decline.

Cavan, an inland town of Ireland, co. Cavan, prov. Ulster, 60 m . NW. Dublin, on the railway
from Dublin to Enniskillen. l'op, 8,209 in 1861. Cavan, though the assize town, is with few exceptions meanly built, long lines of sulurbs leing formed of thatehed muil calins. The public buildings are a large prish church and Rom. Cath, chapel; an enclowed sehool of royal foumdation, having accommodntion for 100 resident students ; a fine court-honse, a co. prisun on the radiating plan, and an intirmary. A garien of Loril Farnham's, near the town, has been thrown open as a promenale for the inhahitants. The corporation, unler a charter of James I., in 1610 , consisted of a sovercign, 2 portreeves, 2 burgesses, and an unlimited commonalty; lint laving been deprlved at the Union of the right of sending mem, to the II. of $\mathbf{C}$., it has fallen into ilesuetude. The assizes for the co., gencral atesions at llilary and Midsummer, and petty sessians every week, are lield hero. 'Trade inconsiderable, mal chietly in onts uud butter. Murkets are held on 'Tuesdays; fairs on Feb. I. April 4, May 14, June 30, Aug. 14, Sept. 25, and Nov. 12.
CAVERY, a river of S. Ilindostan, the most considerable and useful S , of the Krislua; botlı Mysore and the Curnatic owing much of their agricultural wealth to the water it cllstributes. It rises in Coorg, bounds Coimbatoor NE., and after a winding course of 450 m ., chietly in a E . direction, falls into the sea by various months in the district ol' Tanjore, where it is industrlonsly made use of for irrigation. It is filled by both monsoons, but is not navigable for large vessels.

CAVERYI'NUK, a town of IIndostan, prov. Carnatic, 57 mi . WSW. Malras, in the neighbourhood of which is an lmmense tank 8 m . long ly 3 m . brond, faced with lnrge stones, and supported ly a mound of eartl 30 ft . high. This is one of the finest works construeted for the purpose of irrigution throughout the $S$. of Inilia.
CAVI'E', a town of luzin, one of the Philipphe Islands, in the Bay of Manilla, 3 m . SW. that city, of which it is the port ; $1 \mathrm{ll} .14^{\circ} 34^{\prime}$ N., long. $120^{\circ} 48^{\prime} \mathrm{E}$. Estimated pop. 5,0 In. It is the naval depott of all the Spanish possessions in the East, and is built on the E. extremity of a low bifurcated peniusula, stretehing into the sen for about 3 m. , having between its two extremities the outer harbour, while the inner harbour is situnted to the S. of the town : neither has more than four falhoms water, though very large ships moor in the inner harbour. The houses of Cavite, which are two stories high, are luilt chietly of work, their witudlows being furnished with a semi-transpareut shell instead of glass. It has an arsenal, a marine hospital, some well-built churches, and several convents; but has of late years greatly decreased in size and importance.
CAWNPORE, or CAUNPOOR (Khanpura), a district or eollectorate of Hindostan, prov. Allahabad, presid. Bengal, composed of cessions from the nabob of Oude, lietween lat. $26^{\circ}$ and $27^{\circ} \mathrm{N}$., and long. $79^{\circ} 30^{\prime}$ and $80^{\circ} 30^{\prime}$ E., having NW. the distrs. of Etawah, Belah, and Furruckabad, NE: the Oude reserved territories, SL. the Fultehpoor and Kalpec distrs., and SW. Bundlecand. Area 2,650 sq. m. Pop. probably nearly a million. This distr. is bounded NE. by the Ganges, and intersected in its entire length by the Jumna: it is therefore almost wholly comprised within the Doab. Surface flat; soil highly proluctive, and upon the whole tolerably well cultivated, though in some parts there are extensive wastes. Maize, barley, and wheat, turnips, cabbuges, and other Furupean vegetables; grapes, peuches, \&ce, are grown, and the sugar-cane flourishes in great luxuriance. Agriculture prospers in the neighbourhood of the cap., owing to the presence of a Luro-
jean market, and conaequent high priees. The unsessment on the land is high, and the prov, wan on ita first coming finto IIritish porsenaion very much over-anseased, and sufferad greatly in conasquence. Thers are nbout 2,000 villages in thin distr., which possens lancin; but the perjetual settlement is also cotablished. Nearly all the pup, are lifindoos, the healls of the villagen leing mostly of the Rajpoot easto. Offences aro frepuent, hut yearly diminiahing an the effieiency of the wolice increanes; ducoity, or grang-robbery, was formerly frequeut, but was committed only by gruges out of the Oude reserved territory. Thugqee, or murier hy professional murdenve, also prevalled greatly in this distr, ; and from 1830 to 1840 tho average was about 10 thuggees yearly. The principal towns are Cawnpore, the cap., Resoulabad, Jaugemow, and Acberpoor.

Cawnponf, the cap. town of the above dintr., and chief Irritiah military station in the ceded provincen, on the W. bank of the Ganges, 38 m . SW. Lucknow, and 100 m. NW. Allahabad; lat. $266^{\circ} 30^{\prime}$ N., long. $80^{\circ} \quad 18^{\prime} \mathrm{E}$. The town extends irregularly for 6 m . along the bank of the river, which is here a mile broad, and lined by the bungalows of Euronean ollicers. It is bullt in a very atraggling manner, with the exception of a tolerable main street nearly parallel with the military lines, compused of well-built brick houses two or three stories high, with wooden balconies in front. Jxcepting its size, few circumstances about Cawnpore attract much notice; the European public buildings are of simple architecturs, and conflued to works of absolute necessity ; the chief are the military hospital, gaol, assenibly-room, and cus-tom-house. A l'rotestant chirch has been erected by public subscription within the last fow years: nost of the other religious edifices are mosques, some of which are hnudsome. Shops large and tolerably well supplied, provisions being abont half the price they bring in Calcutta. The European private houses are roomy, one story high, with aloping roofs, first thatched and then tiled. The officers' bungnlows along the banks of the Gnnges are encircled by gardens surrounded by mud walls. At the NW. extremity of the town are the public marazince protected by a slight entrenchment; und farther on, in the same direction, is the old town of Cawnpore, a place of no consequence, and containing no interesting relics of antiquity. A free-school was established here in 1823, whitch is nttended by Europeans, Mohammedans, and Hindoos, who receive instruction together, and the progress of which is most satisfactory. It is supppurted partly by a government grant of 4,800 rupees a year. Cawnpore is not a pleasant place of residence for liuroneans. Its great heat and the clonds of dust to which it is subject are represented as most distressing.

Cawnpore derived a sad notoriety during the Indian mutiny of 1857. The small British force stationed in this town having surrendered, by capitulation, to Nana Sahib, they were allowed to leave; but had no sooner embarked in their boats, on the 17 th of Jane, when they were fired upon, nid nearly all cruelly murdered. A number of women and children esenped the slanghter only to be killed, soon after, with unexampled brutality. The tale of these horrors is perpetuated by a monument erected at Cawnpore.

CANAMARCA, a city of Peru, cap. prov. of same name, in a fertile and well-cultivated valley in the Andes, 370 m . NNW. Lima; lat. $7^{\circ} 8^{\prime} 38^{\prime \prime}$ S., long. $78^{\circ} 36^{\prime} 15^{\prime \prime}$ W. Pop. about 7,000, chicfly Indians and Mestizoes. Its name is equivalent to 'place of frost,' and has been probably derived from its being sometimes visited by frosty winds from
the F. $;$ hut, in general, the climate is excellent. Mont of the housen are tiled and whitewashed. The churchea, which are numerons and handsome, are luilt of atone richly cut, anil are omamented with aplren and domen. They were formerly celolirated for the quantity of gold and silver decorations they eouthined. There are also some convents and nunnerien. The luhab. are industrious, and ennsidered the beat silver and iron workern in P'ern. 'I have,' nays Mr. Atephenson, 'seen many very handsome sword-blarlen and daggers made here; pocket-nteels and bridle-bits most curiously wronght, besides several well-finished pistol and gun locks. Literature would prosper here, were it properly cultivated; the natives are fond of inatruction, aud scholars are not rare; many of the richer inhab. end their children to Truxillo and Jima to be elucated.' (Stevenson's Peru, fi. 182.) The inhab. of the interior reaort thither to sell their own proluce and manufuctures, and to purchase such other as they may require. Hence u eonsiderable trade is carried oll with Lamhayeque, and other places on the conat, to which Caxamarea furnishes manufactured goods, such as balzes, coarse cloth, blankets, and flannels; and receives In return European manufactures, sonp, sugar, cocoa, brandy, wine, indigo, J'araguay tea, saltfish, Iron, and steel. Some of the shops are well stored with European goods, The markets are well supplied with fresh meat, poultry, bread, vegetables, fruit, butter, and cheese, at very low prices. About a league $\mathbf{F}$. from the city are some hot and cold springs, which were used by the ineas for baths, and are still employed for the same purnose.

Caxamarea is a place of considerable celebrity in the history of leru, and of Spanish atrocity. The incas had a palace here; and it was here that Friar Vincente Valverle delivered his famous harangue to the Inca Atahualpa, which was immediately followed by the butchery of the Peruvians, and by the imprisonment, accusation, and murder of the inca.

CAYLINNE, a sea-port town of French Guyana, cap. of that colony, at the NW. extremity of the isl. of same name, at the month of the Oyague; lat. $4^{\circ} 50^{\prime} 15^{\prime \prime}$ N., long. $52^{\circ} 14^{\prime} 45^{\prime \prime} \mathrm{W}$. Pop. 6,230 in 1861 . The town covers a surface of abonit 70 hectarcs, and contains about 600 houses, mostly of wood. It is divided into the old and new towns: the former, which is ill-built, contains the goverument house and the ancient Jesuits' college: it is separated from the new town by the llace d'Armer, a large open space planted with orangetrees. The new town is larger thin the old, and was laid out at the end of the last century; its streets nre wide, straight, mostly prved, and clean; it has a handsome church, with some large warehouses and good private residences. The old town is commanded by a fort, which, with some low batteries, protects the entrance of the harbour. The latter is shallow, but otherwise good, and well adapted for merchant-vessels of moderate size. There are two quays for loading and unloading. The roadsteal at the mouth of the Oyaque, though small, is the best on the cosast. Its holding-ground is grood, and it has everywhere from 12 to 13 ft . water; trading vessels lie in it within 1 m . of the land, and 2 m , of the town. Ships drawing more than 15 ft . water anchor about 6 m . from Cayenne, near a rocky islet called 'L'Enfant Perdu,' Cayenne is the centre of the whole trade of the colony. (See Gijayana, Fiencir.) It is the seat of a royal court, a court of assizes and of tribunals of the peace and original jurisdiction. The town was founded about 1635. The Emperor Napoleon 1Il., on establishing himself on the throne of France,

Caybnig. See (Zuyama (Finench).
CAYiLUS, a town of France, ilép. Tam-et-Garoune, near the right bank of the fonnette river, aul the high road leetween Montaubun and Illioalez, $2 \cdot 1 \mathrm{~m}$. NF. the former city. l'op. 4,973 in ixili. It has a considerable trade in com, and olevert fulm amumally.

CAYALIA, a town of Spain, prov. Seville, on the erest of the Siorra Morena, 18 m . SLi, Gumalcamal. I'op. 6,852 in 1857. The town lian a churh, the monasterien, anil two hospitala. Ita cuvironn have many loman and Arablo antiquithes, and ruins of eomitry reshlencen of more moclern date| with mines of silver, iron, sulphur, umiantlus, and copper; and quarrles of benutifilly variegated murbles. The momitalus are the resort of will thons and wolves, which make much havac among the cattle.

Caliblisi, a town of France, dép. Haute Garonne, eap. cunt., on the Garomne, $\mathbf{3 1} \mathrm{m}$. SW. 'toulumse. l'op, 2,613 in 1861. A handsome promenado separntes the town from the mulurbs. There are fabrics of hats, with dye-works and tanheries,
CliFALU, a sea-port town of Siclly, prov. Palermo, on the Tyrrhencan Sea, at the foot of a ruek, 40 m. VSE. P'alermo ; int. $38^{\circ} \mathrm{N}$, long. $14^{\circ} 13^{\prime} 57^{\prime \prime}$ E. Pop. 11,183 in 1861. The town Is surrounded by a bastioned line wall, but the works are oll and weak. The streets are tolerably regular, and there is a good catherlral and some other elurehes, with a sehool of navigation. The port is sinall, and the trale of the place but inconsidernble. On the summit of the lill above the town are the mins of a Saracenic castle.

CEIIEJIN (Segisa), a town of Spain, prov. Mircia, on the river Caravaca, 3 m . L. Caravaca town, and 40 m . WNW. Mureia. Pop. 8,710 in 185\%. The town is situatel in a well cultivated aud fertlle tistrict. The principal streets are well pived, and the honses gool-some of them magnilkent, marhle being abmilant in the neighbourhood. It has a chureh, a convent, and an meient castle, with several distilleries, and mannfactures of coarse paper, linen, and sandals.

CELANO, a town of Southern Italy, prov. Aquila, cap. cant., near the lake Fucino or Celano, 20 in. Ssti. Aquila. Pop. 6,525 in 1861. The town has one colleginte and some other churches, and a mmonfactory of paper. For an account of the Lake of Celano see Fucino (Lake of).
CELEHES, a large island of the E. Archipelago, forming the centre of its 2nd division; stretehing from lat. 20 N . to nearly $6^{\circ} \mathrm{S}$., and from long. $119^{\circ}$ to $125^{\circ} \mathrm{J}$. ; having N. the Sen of Celebes, W. the Straits of Macassar, E. the Mohncea and litt's l'assages, and S, the Flores Sea. Area estimated nt $75,000 \mathrm{sq} . \mathrm{m}$. l'op. supposed to be letween $1,500,000$ nad $2,000,000$. Its shape is singularly irregular; it is deeply indented by three great bays, separated by four peninsulas, viverging N., F., and S.
Celeber, unlike most of the other great islands of this urehipelago, abounds in extensive grassy plains, free from torests, which are lookel upon as the common property of the tribes who live upon them, by whom they are carefully guariled from the intrusion of aliens. There are only three rivers of any consequence; the Chinrana, which rises near the centre of the island, and running $S$. throngh the state of lioni, fills by several mouths into the bny of the arme name; a second stream, laving a $N$. direction; and a third, which discharges itself on the W. coast. S. of Macassar.

The Chiurann is unvigable for shipa to mome alistance; and native boats pess up it eonsiderulily farther luto a fresh-water lake. Volsmos are mail to extat in the N. ilvinien of the inlanit. Cioli in fomil in Colelen; bint in a less quanity than lin limenes, anil elidelly in the mande of the streama. Tlinker is not very plentiful; tenk-trees are generally few; lint a large forost of them exinta in one part of the inland, which the natives repart to have been raimel from imported meed. The vant plains affonl abomdant pantire and cover for a variety of the hent game, deer, will hoge, der, 'I'lie ther and leupari, thongh common in thin W. parta of the archipelage, are hero unknown. The hurses of Celelses, thongh seldom exceeding is hanis high, are larger bullt, nud inlte a greater hhare of blood and atrength than any other breed of the l:. inlanis; they are regularly tralaed for lumiting, and are noted for fleetneas and perseverance. Ilice, maize, and cassava, with cotton and tobneco, aro the chlef articlen grown. The S. peninsula being the most healthy, is by fur the must extenaively peoplet, anil contains the two principal states of tho islanil, those of Jhoni and Macassar. The centre of the island is aild to be inhalited by 110raforas (hee E. Arcitipelacio), sujposed to be alorigines: the brown race consisty of a number of tribes, agreeing remarkably in person, but diviled into four or tive difierent mations, of which that of the lhigis is by far the most considerable. They are usually squat, rulust, and somewhat heavily formed, though not ill built; their medinm height is a little above 5 ft : faces rount; clieekbones high; nose small, and neither very prominent nor flattened; month wide, and teeth fine, when not discoloureal by nrt. They are more distinguished for a revengeful disposition than any of the other nutives of this archipolago. Notwithstancling most of the tribes have long passed that stage of society in which the chase is pursued for subsistence, they follow it with great ariour; and no sooner is the rice seed cast into the gromul, than the chiefs and thelr retainers turn with enthusiasm to the sports of the fleld, in parties of frequently not less than 200 horsemen.

The Warlju, or Tuwalju tribe, inhabiting the body of the island, are distinguished as a commercial and enterprising people. The natives of Celebes and Bali are the most celebrated in the archipelago for their manufactures of eloth, their fahrics ranking before all others for fineness and durability: they are, however, ignorant of the art of printing eloths, or of giving them the brilliant colours of the fabrics of the Asiatic continent. The inhabitants import cotton, birds' nests, tripang, sharks' fins, tortvise shell, agar-woml, \&c.; and, together with gold in small quantities, aud lides, re-export these articles to China, by the junks which amually trade to Celebes. The several chiefs have often a monopoly of some article of produce, as brass, betel-nut, opinm, anil snlt.

The varions independent nations of Celebes have cach their peculiar form of government; but these are for the most part limited monarchies, the sovercign being controlled by the suburdinate chicftains, and these again frequently by the mass of the people. The federal state of Boni consists of cight petty states, each governed by its own hereditary despot; while the general goveroment is vested in one of the number elected from amoug the rest, bit who can do nothing withont the assent of the others.

In the state of the Goa Matassars, the king is chosen by ten electors, who also choose an officer invested with powers similar to those of the mayors of the palnce of Firance, or the ancient justiza of Aragon, and who can, of his own anthority,

## CEPIIAI,ONIA

remove the king himasif of any one of the conndil, and direct the electurn to proceed to a new election.

In the luggan atate of Wailjn, forty chilefn conatitute the great conncil of the nation, which in allviled into three chambera, from eneli of which two members are nominatel, who, in thoir turu, clect the chief of the confederacy. The 'Comeli of Forty' deedide of all questions of peace and war. Women or infants of the privilogen familien in Colebes are commonly ellgible to the throne; and women very frequently aehally exureise the powers of soverolgnty; they aro throughout the island associated on terms of equality with the men, taking active eoncem in all the business of life. They appear in pulillo withont menindal, and are oftell consulted on publle affinirs. Though the tushand invariahly jaya a price for hils wife, she is never Irented with eonitempt or cliselain.

Not withstanding the symutoms of a considernhle advance in civdlinnthon now ennmorated, a great deal of midenexs and harburity exhibit themselves amonge the finhbitarta. Crimes are frequent; thefts and robberies extremely ao: a total ilsregarid of himman lifo seems to jrevall, and murder nud asmassination for hire are ly no means rare. Mohammedminm ls the predominant religion, enpecially in the S. part of the island ; it was introduced by the Malays; but the linhab. genernily nre by no means strict as to its injunctinns. The langumges spoken belong to the great l'olyneainn fumily, but differ from those common in the W. of the archlpelago, in being more soft and vocnlie, and having lessintermix ture of Hanserit : the twodlaleets of the lhugis and Macassars are the principnl, and amongst the most improved tongues of the archijelage: the llugis have a liternture by no means contemptilile. In their costume, the people of Celelen avoill showing the knee; they wear a long coloured cloth, the end of which they throw over the shoulder. They blacken the teeth, and use uncthous cosmeties: their omanents are thowers, gold trinkets, and diamonds, krisses, betel-boxes, dic. They appear to have uns seientitic treatines; but are not wholly ignorant of some of the constellations, by the observation of which they navigate their prowe.

Celebes was first visited by the Portuguese in 1512, who were expelled by the Ditch in 1660 . In 1811 the territuries belonging to that nation fell under the Britiah dominion; bint in 1816 were restored. The principal Duteh settlement is Maeassar, which contains Fort Rotterlinm, the residence of the governor. The Dutch have other settlements on the bays of Tolo and'lominie; and most of the native states are sulordinate to them. (Crawfurl, Hist. of the Indian Archijelago, 3 vols.)

CEPHALONIA (an. Cephallenia), an isl. in the Mediterranean, and the largest of those composing the former Ionian republic, now forming part of the kingdom of Greece, near the W. coast of Greece, opposite the Gulf of Patras: between lat. $38^{\circ} 3^{\prime}$ and $38^{\circ} 29^{\prime}$ N., and long. $20^{\circ} 21^{\prime}$ and $20^{\circ} 49^{\prime}$ E.; 8 m . N. Zante, 5 m . S. Santa Maura, and 64 m. SSE. Corfu. Length, NNW. to SSE.., 32 m ; breadth, very unequal. Area $348 \mathrm{sq} . \mathrm{m}$. I'op. 70,120 in 1860. Its aspect is generally mountainous and barren, and though some spots are rich and fertile, the soil is, for the most part, only scantily spread over the limestone rock, of which the country consists. The sliores are indented by numerons bays, of which that. of Argostoli in the SW. is the principal. It extends for 7 or 8 m . inland, and has, in most parts, deep water and good anchorage. In the interior of the island an elevated range, called the Black Mountnin, runs NW, to SE., the highest point of which (an. M.

## CERIONOLA

Oinos), fa $5,000 \mathrm{ft}$. alwove the level of the nea. Nurfnee generally uneven! the only plain in in flien SW. near Argontoli, which in alwa the mowt derneely Inlialited part of the islanil. Climate milil; loit. atorms and heavy ralus, nudiden changen of teme jerature, and earthyuakew are frequent. The islanil containa alsout 40,1001 morem of cultivated, minl 181),000) neres of unellifated land. Wheat, Indifil and other com, pulse, elirmits, ollve oil, wine, cotton, finx, and walt, constitute the chief prombuets. The jrincipal article of export in currantes ; and next to lt , wine and oil. The anmual jurohince of currants in entimated at from $\delta,(0010,(10)$ to $0,000,(0) \%$ lbs, The Valonea oak aloominds, T'enuras of lund are montly annual, on the metuyer nystem, l'roperty is much divided, fow proprietors having a revenue of $1,000 \%$. a year. Cephatonia in repremented by ten depuilion in the parlinment of the kingilom of Gireece. Argestoll and Lixuri are the ehief towns; they are sitmated on chicer alile the llay of Arpostoli. At the month of thin infet there is a lighthomse; and at lixuri, a mole for tho necurity of traling vemels has been constructed. Near Argostoli, a eurlous underwhot water-mill was built loy an English merchont in 1835. The roads were formerly very had, hut have leen greatly improved during the time that the ishund was mular liritiah protection. Nost of the pup. belong to the (ireek ehurela; the remninder are clietly lloman Cath. Lixuri is the aent of a Roman Cath, bishop). 'The inhabitants of thin fisland are netive, enterprising, and noted for their industry and commercinl spisit. A \&reat number of them are pliyHicians ; and, like many other of their countrymen, emigrate and settle elsewhere. The island was anciently known ly several nime3: Thucyiliden calls it Tetrupolis, from its fy! , rincip.1 cities, Samon, Pali, Krani, and Pronos, remalns of whieh still exist. The site of Samos exhibits very extensive nlins, amongst which many medals, vases, statues, de. have been found, and Dr, Ilolland traced the Cyclopean walls of Krani, at tho head of the Ginlf of Argostoli, in almost their entiro extent. Cephalonia belonged successively to the Byzantine empire, Normmus, Vonetians, 'Turks, and Venctians agnin; from whom it was taken by the French in 1799 . In 1815 it was, with the rest of the lonian Islands, placed under the protectornte of Great liritain, but ceded to the kingiom of Greece in 1864.

CERAM, a considerable island of the E. Areliipelago (third division), chiclly bet ween lat. $3^{\circ}$ ami $45^{\circ}$ S., and long. $128^{\circ}$ and $131^{\circ}$ E. ; length, F. nud W., about 185 m . by 80 m . avernge brentiti ; nrea $5,500 \mathrm{sq} . \mathrm{m}$. A mountain chain runs b. numl W. through the centre of the island, the highest peak of which is apparently about $7,000 \mathrm{ft}$. above the level of the sea. Ceram is chietly distingulshed for its large forests of sago-palm and its the wonds for cabinet-work; in one portion of it great quantities of nutmegs and eloves were formerly produced; but the trees were extirpated by the Dutch about 1657. The shores of Ceram abound with rare and beautiful shells; its interior is peopled by tribes of Horaforas. (Sec Ahchileleagu, Easteis.) A cluster of small islauls, called Ceram Lant, lies off the E. end of Ceram.

CELREI, a town of France, dép. Pyrenées Orientales, cap, arrond., near the Tech, 15 m . SSW. Perpignan, and 5 m . from the frontier of Spain. Pop. $3,5 \times 5$ in 1861. The town is the seat of a departmental college and of a court of primary jurisdiction. It was here that the plenipotentiaries met to fix the limits between Franco and Spain, in 1660 .

In Imbl. It is a well-huilt town, with a college, meveral conventa, and a humpital. lit the mopli-
 dova galinal a dedixiva vidtory over the French firecen eommaniled by the Duc do Nemunrs, who waskilled in the action.

CBKItiO) (ail. Cythera), the mont sontherly of the mevon priseljal lonlan inlands, which formarly connticuted the lomian repubile, nituated at a conmidernile dintance from tha othern, near the 5 , extrimity of the Morma, Inetween lat. $83^{\circ} 7^{\prime}$ anid

 is monutalusis, roeky, ami mostly unenstivated; lat mome parts of it prolluce whent, maize, pulaw, motion, flax, whe, and olive oil ; the latter of which is highly esteomed. The honey of Cerigo is aimo af very goosl quality. It luas a grenter number of horned cattle than miy of the other indande. The whures are ubrujt ; the men round Cerigo is much diaturbed by enirrente: and galen dangerons to mhippiag are fropuent. The best nuchoruge in at it. Nicolo, oll the E. coast. The principal town in Kapmali, at the S. extrenity, witlin appo of ubont K,000 ; honsen mownly of woul andili-hinilt. Thongh uow comparativaly insigulteant, Cythera wan formariy a jilace of considerable importance, and probably of wenlth, if we many jultre from the rulins atill extant in varions parts of the ishinil. It was hie birthplace of Helen, and stared to Venns, in hunomr of whom a temple, said to have been comiled by Nhens, was erected. (Larcher, Mémoire mar Venus, 1.1.4.) Cythera was originally culled Porphyris, from the sature of its rocks. It was lonig a naval station of the Lacellemonians; and beloniged successively to Macedon, Eigypt, lome, and Venice. The little island of Cerigotto, (an. Ogilia) 4 mm . long, and inhabited by alsont thirty fimilien, lies midway between Cerigo and Crete, abont 20 m . from either.

CLBHE'TO, a town of Sonthern Italy, prov. Benevento, cap. cant., on the declivity of Mont Mintern, near the Cusamo, 10 m . DiSLi. L'iedimonte. l'up. 6,981 in 1862. It is well built, and is one of the most arrecable towns in the jrovince: it has n the cathedral ornamented with superb pletures, a collegiate church, three convents, a seminary, nul considerable mamufactures of course cloth. In 1 inist it was wasted by the plagne, and in 1688 an eartignake dentroyed great part of the town.

CRLRVEIAA, a city of Spain, prov, Catnlinia, on an eminence, 57 m . NW. Barceloma, 102 m . E. saragonsa. Pop. 4,499 in 1857. The town stands on a considerable eminence, is surronnded by walls, and has an ancient decayed castle. It has a chureli, live convents, a hospital, and five colleges. Some of its streets are well paved. The church is a Gothie building, with three naves; and the univenity, established in this city by l'hllip. V., is a lurge, magniticent ntructure. The vicinity produces wine, oil, almonds, grain, pulse, cattle, and plenty of game.

CLERVLA, a town of Central Italy, prov. Ravenna, near the Adriatic, with which it communlcates by a canal, $11 \frac{\mathrm{~h}}{\mathrm{~m}}$. SE. Ravenna. I'op. 5,733 in 1862. The town is a sent of a bishopric; is regalarly built; has a cathedral and several churches and convents. To the W. of the town is a vast marsh, called the Vulle di Cervia.

CESENA, a town of Central Italy, prov. Ferrarn, on the Sario, at the foot of a mountain, 10 m . Sle. Forli. P'op), 33,752 in 1862. The town is the seat of a bishopric; is well built; has a cathedral, a handsome lown-house, fourteen convents for men, and seven for women, a seminary, a society of agricalture and of arts, with silk tilatures, and a con-
alicrable trale in wine and min, proluced in its territurv.
 Il cranlt, cap. cait., on the marcow ling gio of cinl meparathg the lagism of Tlin a from thes men, anil olt the declivity and at the fiont of a culeur oun hili, which advances into the Meditarrmean lin the form of a peninanla, is m. SW. Montgallier, on the railway from Montpeiller to Narlamine. lops. $2:, 13 \times$ in lxtll. 'The town is well bnilt, bit it cleriven its chief importance from its hartoor, and from its leing the jwirt, on the Mediterraneun nide, of the Canal du Midi. 'The harisur in formed liy two latoral molen, with a breakwater suross the entranee. Theres ary forta on lasth these inolen, nui on the principal in a lighothonse, the lanterin loing elevated $\mathrm{N} \boldsymbol{f}$ f. above the level of the mea. The harbour is perfectly safe in all weathers ; has from 10 to 19 ft . water 1 and can accommoslate abomt 400 sail of large and sinall shipm. A brond and deep canal, boriered with quays, entablishes a comminication between the prort annl the lagon of 'Thun; and, consequently, with the Canai tin Midi on the ene hand, and with the canale leading to the Khone on the other. Cette in the centre of a great deal of tratle, partienlarly of the conating descripition; mid frinn about tho mindie of November to the end of Mareh freighte aro genernily to be met wills. 'Thare in regular steambont comnmuniontion with Algiers and the chief girts on the easteril const of Spin; but the princibul articles of exjort null impart are those comveyol by the canal. About 316,000 toms of wine, anil 4,0001 tons of brindy, are ammally exported. A good deal of Ilenienrlo wine from spalu, fur mixing with claret, is imported. It has a court of nummary jurindiction, a sehool of mavigation, unt exchange, barracks, and a thentre. Ships are bilit liere, nul there are glass, soap, aul tobaceo-works, with distilleries, and a manufactory of highly estecmei liguenrs. The tishery of nartines is nuccessfilly carried on along the conat ; and the salt-works on the alljoining lagoon are extennive, and furniwl employment to many individuals. Cette is of modern date, having been foumded in $\mathbf{1 6 6 6}$, to serve as a port for the great canal.

CEU'RA (an. Arptum or Septa), a sen-port town of N. Afrien, in the poseression of Spain, const of Moroceo, lirectly opposite Gibraltar, and at the SE. extremity of the struits, on a nurrow peninsula stretching about 3 m . ENL: into the Meiliterranean, and having a capacious bay on its S., and a smaller one on its N. sile. I'op. 7,144 in 1857. The E. part of the peninsula is occupied by the monntain of Almina, on the highest point of which is the castle of Centa, 14 m . S. by E. from Varopa I'oint ; lat. $35^{\circ} 54^{\prime} 4^{\prime \prime}$ N., long. $5^{\circ} 17^{\prime} \mathrm{W}$ This monntain, which, towards the sea, is fencel round by inaccessible rocks, is the Abyla I'roper of tho ancients, and. is fumous as one of the pillars of IIercules; the rock of Gibraltar (Mons Calpe) being the other. The citadel, a very strong fort is built across the narrowest and lowest part of the peninsula, at its junction with the mainland. The town, immedintely to the E. of the citadel, is situated at the foot and on the declivity of the mountain. Ceuta has many points of resemblance with Gibraltar, and, like it, if properly garrisoned, would be all but impregnable. It is well supplied with water; is the seat of a bishopric; has a cathedral, two convents, a hospital, and a bagne or prison for criminals employed on the publio works. It is also used as a place for the continement of state prisoners. It is the most important of all the Sjanish presidios or settlements in Africa, and is the seat of a military governor, a royal tribunal, and a financial intendant. Most
of the provimions and other necesaariea requireol fur the mupily of the town ami garrimen are lirnught from Spaint. Couta wan takein from the Mones liy dothr, king of Portugal, in 1H15, Since lifil it has belomged to spitio. It has herent mevernl timen beniegent lyy lhe Alricana, expeecially in 169\%.

CLVVA (nic. Celvi), ant finl, town of Nurthern faly, prov. Cunco, enjp, manio, at the conithense of the Cevecta with the' 'Tnuare, 10 m . Bi, Dy N. Momelovi. I'op, 4,620 in 1862. It is built, nt the fint of a rowek, tionnerly summomited ly a ceastle, which wan used an nsate prisen previousty to lia dentruction ley the French revolutionary furrew, The town was firmeriy aurrominded with walla; but thene were in kreat part dextroyed by an lamidatlon of the 'Tanari, In 1best, It containn a chureh, nuid neverul contventa; mome furgen, and nilk factorien; and, in lath ancient and mosiern timen, hus been celebrated fur ita cheemen.
 longing tu Grent Irimin, neur the $\mathbf{S}_{0}$ extromalty of Ilinilowtan, lenering the like relations to the Judian that sicily doees to the Italian peninsila.

The Cimasts, on the N. nind NW., nre low and that ; thome on the S. and E. Lrold nud rocky, and in mone places fipheed with reefin: in nany purts they aredereply indented by the nen, and present numie lapge and many wimall harbours. Trincomnnlee harbour, on thie Nis. const, in one of the finent anywhere met with. Point de linlle, in the S., is the next lin lmpmertmee; the lifferior harlanurs are llatienlon, Maturn, and Caltura, on the S. and E., and Negumbo, Chilaw, Culpenteen, Manuar, and Point Pedro, on the W. conats. The deep water along the E., shores adintes the snfe approach of large vessels, but the harbours on the N. and NW. are full of sande and shallows, whose position varies with the mousoons. Columbo, the marit. enp., has merely a ronistead, which in practieable for large ships only from the beginning of Dec. to the latter end of Mareh. So large a number of inlets canses a corresponding proportoon of small falands, promontories, and peninsulas; of the latter the prineipal are the peninsulas of Jaffinapatam, on the NW, and that of Calpenteen, on the W. eonst. At its N. extremity especinlly, the nhores of Ceylon are stulded with numerous small rocky and verdant inlets. 'The ridge of sanilbnuks called Adam's lirilge, which crosses the Gulf of Manaar from Ceylon to the island of Ramisseram, near the opposite const of Indin, is connected by the natives with a variety of curious traditions, and forms a great obstacle to the more speedy communication with the continent, by its hiuderance to navigution. It consists of loose sand, resting on ilrm foundations, but constantly varying in firm from the action of the monsoons. There are three principal openings or channels through this ridge; one near the island of Mannar, naother 8 m . farther to the $W$., and a third about 11 m . from the island of Kamisseram ; but all of them are impracticable except for small native boats in fine weather, nadeven then the navigation is uttended with some danger. Near these openingy the bank rises above the water for some miles, broken occasionally by smaller channels,
but townets the centre it is mowily eovered hy water, the depth iff which down not la any part excerel a few feet, lly the late acomita (men) Aniat, Journ, April, Isíis), nttempits at enlarging the panngge terween Hanimeranin andi the consthent are now in progreme.

The momintan are generully in continuous rauges, and are seldom or never found lashatell. Thin region in akirted by a hilly comentry, from 10 to 20 mm . whle, nad varylng in elevition from 100 to biof f ., with ocensional atammits of mote than twiee that height. Ilhis tract is dentitutes of the ravines and other boll features of the momatainoss country.

Rivers and Lakes-Ceylon has numerous small rivers nnid peremilal netrenms; lut few of them ure navigable, even hy a camue, to many miles from their months. The prineipal ts the Mahnvilly Ganign : it rises near the highest part of the centril table-land, about 30 m . S. Candy; and, having received many tributuries, falls into the sen, a lintle S . of 'Trincomalee, after a counse of about 200 m . It is the only, river navigable for any considerable distance. The next most important river is the Kalani-Gangn, whleh has its sonrce in the country at the foot of Adlam's Penk, and empties itself into the ocean by severnl mouths in the neighbourhood of Culumbo: it is made conslderable use of for internal trunlle.
There are no lakes of any consequence in the interior, the largest bcing no more than 4 m . across; but along the E. coast, from Batticnlon northward, there are severnl extensive lagoons, which, by menns of artiticial channels, are mate serviceable to traffic: other lafoons exist in the nelghbourlood of Negumbo and Columbo. (Davy's Account of the Interior of Ceylon, pp. 1-6; l'ercival's Account, pp. 5.5-60.)
Geoligy and Minerals,-The rocks met with in Ceylon are inostly primitive, and consist, with little exception, of granite or gneiss, with large veins of quartz, hornblende, and a snow-white dolomite: llmestone occurs only in Jaftinapatam, and the N, districts. A belt of grey or black sandstone, together with cornl formatious, nearly encompass the whole island. The upper suil is in general sandy, with but a small mixture of clay, nud chiefly derived from the disintegration of primitive rucks: the cinnamua soil near Co-

Animala，－Coylon has been from an early perioul celchated for its breed of elephants，which，though inferior in size to thome of other countries，aro moro valued for their greater strength and docility． The clase of these animals has always been wih the Singalese an object of great importance；but the avility with which they have been pumurd has greatly dimiluixhed their numbers，nult they are now chietly conthed to tho N，and Nili，ilim－ tricts．The royal tiger is not met with，luit bears， leoparis，the cheta（a small apeciss of leoparit）， hywnas，jackals，and tiger－cats are mumeroun： besldes elks，deer，gazelles，buffaloes，wild hogs， and monkey．Near Jafina a large buboon la very abundant，and fearless：a lurgo variety of the monkey tribe，porcupines，racoons，armadilloes， squirrels，and mungerses，are met with．There are no foxes；but the tlying fox and rats aro very common and troublesoine．I＇hensants，nnipes，rel－ legged partridgen，pigeons，peacocks，and a great varlety of birids；with merjents，alligaturs，nund reptiles of nll sorts，are abundantly plentiful．The ilnhing of the pearl oyster is an important branch of industry．
People．－The pop．of Ceylon，exclusive of the various colonists who have at dillerent times pus－ sessed themselves of the coants，may be diviled into four classes ：－18t，the native Singalese or Ceylonese，who may be again subrlivited into those occupying the Canclian territories，and those of the coasts；2nd，the Moors，who are found in all parts of the island，and form the chief population of the district of l＇ultam；3rd， the Veddahs，a savage race，who are supposed to
le the aborigines, and inhabit the mountainous regions and unexplored fastnesses, almost in a state of nature; 4th, the Malabar and other IIindoos, who are chiefiy confined to the N. and F. cousts. The Singalese of the coasts, whose complexion, features, language, and manners closely resemble those of the Maldivians, are nbout 5 ft .8 in , in height, of a slim figure and falr complexiun, especially the women; they are represented as remarkably mild, bashful, and timid, and rather deficient in intellect. The Candian Ceylonese are in all reipects superior to those of the consts, and differ from Europienns less in feature than in colour: they are taller, better made, and more robust, than the Singalese; and for Indians are stout, with large chests and broad shoulders. They have small bones, rather short but muscular legs and thighs, and small hands and feet; heads well formed, and, like those of other Asiatics, longer than those of Europeans; features often handsome. The colour of thicir skin, eyes, and hair varies from brown to black ; they have a profinsion of hair, which is allowed to grow to a considerable length. The Candian character differs cssentinlly from that of the Singalesc, having none of the effeminacy and timidity which distinguish the latter, and there is a certain haughtiness and independence in their whole bearing and demennour. They will not generally, however, nttack an enemy in the open ficld; but resort to nmbish, in the sume manner as the Singalese. Indolence, hypocrisy, mad revenge may be regarded as national vices. Some traits may be recognised as common to the natives of Ceylon with the Bengalese, but they are still more closely allied, both in physienl and moral characteristics, as well as langunge, religion, and traditions, with the Indo-Chinese nations, and especially the Birmese. The Malabars of Ceylon differ but little in any respect from those of the continent, though varying somewhat in their manners and customs. They retain, in grent mensure, the religion and manners of their congeners of S. Indin, and are much less numerous than formerly. The Moors have a tradition that they are the descendants of a tribe of the posterity of Hashem, expelled by Mohammed from Arabia. They retain many customs similar to those of the ancient Jews.

Of the Veddahs little more is known than that they chiefly inhabit the great forests which extend from the $S$. to the $E$. and $N$., and also the most inaccessible parts of the central table-land, having neither clothing nor habitations, subsisting upon wild fruits and animnls, and having the branches of large trees for their resting-places. They are conjectured by some to be a portion of the original inhabitants, who, upon the invasion of the island, retreated to the inaccessible haunts in which they are now found. They are divided into two tribes, -the Village and the Forest Veddahs; the former, who are the more civilised, occasionally go down into the lower districts to exchange their game and cattle for rice, cloth, and iron. They live in huts and cultivate the ground; though, in common with their more savage brethren, they seek their chief subsistence in the forests. They are peaceable and inoffensive, never commencing, although easily persuaded to join in any insurrection; and in times of disturbance they have occasionally been employed as mercenaries.

The other inhabitants of the coast consist of Dutch, Portugucse, and English colonists : some Cafires and Javinese; a fow Chinese and Parsee traders; and a various pop., sprung from the intermixture of these with each other and with the native races. The burghers, many of whom fill public offices and subordinate situations under
government, are the descendants of Europeans and half-castes. The distinctions of caste are recognised, and in some instances serupulously preserved, by the Ceylonese; but they respent them only in their civil, rejecting their religious, intluences.
Till latterly, the pop, had been diminishing for four or five centuries. But a considerable increase lias taken place in the pop. of the maritime provinces during the last thirty or forty year. Several parts of the interior are, however, very thinly peopled, there being, in some districts, not more than four, five, or six persons to a square mile. In the central prov. the pop, is dense in certnin parts: but with the exception of the country round Candy, and the districts of Ouvn and Mattele, seven-eighths of the ground is covered with wood and jungle, and nearly unpeopled.

Ceylon is now divided into six provinces, the area and population of which, according to a census taken in the year 1862, is shown in the following table:-

| Provinces | Ares in Square Milen | Populatioa |
| :---: | :---: | :---: |
| Western | 8,820 | 725,812 |
| North-Western | 8,362 | 204,924 |
| Southern | 2,147 | 384,769 |

Not includer in these population returns nre 4,647 military persons, which added make the total population $2,079,881$.

It will be seen, from the preceding table, that the pop. of Ceylon is very unequally distributed, the western province being the densest populated part-190 inhabitants per square mile-and the eastern province the least dense-only seventeen inlinbitants on the square mile. This inequality is only partly explained by differences of soil and climate.

Agriculture.-The tract of country near the Coromandel coast is only in some parts fit for tillage, the ground for many miles exposing only a barren and naked surface. The soil of the central parts is capable of producing luxuriant crops were it properly cultivated. All products requiring a moist soil and climate flourish most in the SW., and rice is grown chietly in the level lands there, or in the valleys of the hill region, but often also on the slopes, on account of the facilities the; present for irrigation. Around the fields, on the level lands intended for its reception, small embankments, about three feet in height, are raised, and water let in upon them; ihey are afterwards trodden over by buffaloes or turned up with a sort of light plongh. On the hill slopes the rice-fields are dammed up, and form a succession of terraces, for irrigating which the water is conveyed sometimes for a mile or two along the mountain sides, and let off from one terrace to another, as the state of the grain requires it. There are two rice harvests duing the year; the first crop is sown from July to October, and reaped from January to March ; the second is sown from March to May, and reaped from August to October. What is called a plough consists of a piece of crooked timber shod with iron, which tears rather than ploughs up the ground. After the first ploughing, the fields are fooded; then ploughed again, and carefully weeded. Rice is industriously cultivated by the Malabars of the N. and NE. districts; but the produce is insufficient for the consumption of the island, and large quantities are annually

imported from loth the Malabar and Coromaniel consts. Ilemp is raised In abunlance, the sanily woil of the maritime listriets being well adnpted for it. Cotton of difierent sorts grows with the greateat facility, the buils ripening within four nonths after being sown. Each village or lut has lts sugar and tobacco plantation: coffee is raised of a very superior quality.

As cimumon forms a chief article of export and revenue in Ceylon, its cultivation is one of great interest, and is conducted with much care. The neighbourhood of Colombo is particularly favourable for its growth, being well sheltered, and having a high and equable temperature. About 2,1000 neres of land, chictly near that town, are luid out ln cinnamon plantations, furnishing employment to 30,000 individuals, and yiclding anHuilly about 500,000 lbs, of bark, worth $138,000 l$. sterling. In its wild state the plant grows to the size of a large apple-tree; but when cultivated, is not allowed to attain to more than 10 or 12 ft . in height, after seven or eight years' growth. May and June are the months for stripping the burk from the plant, which is done by two methods. In the first, the rough bark is removed with knives, and the iuner rinds stripped off by a peenliarly shaped instrument; by the other method, the outer bark is not artificially removed, but the process of fermentation which the sitrips undergo when tied together in large quantities spontaneously removes it. The bark, in drying, gradually contracts, and rolls itself into a quill-like form; and, after being subsequently dried in the sun, the smaller are inserted in the larger picces, and the whole are made up inte bundles of about 30 lhs. weight. Layers, shoots, and transplanted stumps are the best means of extending the growth of the ciunawon plant.
Wages are considerably highcr, and provisions proportionally denrer, in C'eylon than in Bengal. Those of the poorer classes, whe possess small portions of land, rarely derive their support from it exelusively, but employ themselves in fisheries, trades, manufactures, and the petty traffic of the conntry; the wages of mechanics and artisans are proportionally higher than these of the labouring population, but still very moderate. A very minute subdivision of property often exists, and the inheritance of one person will sometimes consist of $9-10$ ths of a scer of rice land, 5-12ths of the produce of a cocoa-nut-trec, or 2-3rds of that of a jack-trec. Notwithstanding this, the peasnutry of Ceylon are generally in better circumstances than those of the adjoining continent. They are not under either a zemindary or ryotwarry settlement, and the demands of the government on the land rarely exceed $1-10$ th part of the proluce, and are sometimes less. Under the Candyan government, the tenures of land were of three kinds. Some lands belonged wholly to the sovereign; others were cultivated by individuals at a government rent, of some fixed proportion of the produce ; and others, again, were granted as payment for the performance of specific services to the headmen of different districts, chiefs, and reverted again to the crown on the death of such individuals. The latter conld neither be mortgaged nor alienated; the second class of lands night be transferred in any way as long as the permanent rent continued to be paid. The lands belonging to the sovereign himself were cultivated on his account, or let out to the highest bidder, and sometimes brought a rent of $1-3$ rd or half the produce. The plan of redeeming the whole rent, above 1-10th part of the produce, has been adopted ly the British government with much success, and in those districts where the practice
Vol. II.
las provailed the revenue has increasel rather than diminished: fur moro lands liaving leent brought into cultivation, 1-10th part of the crops now yields as much as 1 -ind or 1-4th part formerly did. Donnestic animals are not numerous. The loorse is a degenerate breed, nud not aboriginal; oxen, though small, aro well tasted, and the chief food of the lBritish troops, though eaten by none else: poultry of all kinds are abundant.
Pearl Fishery.-The pearl fishery in the Bay of Condatchy, which was formerly a government monopoly, is now frec; but, whether from the banks laving been over-fished, or otherwise, the proluce ls now of comparatively little importance. The pearl banks are formed by coral ridges from is to 10 m , off shore, and of a varialle depth, lut commonly from five to seven fathoms below the surface. The oysters are attached by fibrous bands to these ridges, from within a short time of their bursting from the epg, to about $6 \frac{2}{2}$ years old, when they loose their hold, and drop to the sandy bottom, where they lic in lieaps. Soon after attaining the age of seven years, the animals are sail to perish. As many as sixty pearls have been found in one oyster; but such instances are rare, as is, indced, the presence of pearls generally: The season commences in Feb. and fillishes in April: six weeks or two months, at the utmost, is the time allowed for its continunnce. Each of the boats carries a tindal, or master, and twentythree men, ten of whom are divers, and relievo each other, flve divers being constantly at work during the hours of fishing. After they are taken out of the boats, the oysters are left to open spontancously, dic, and rot, the stench of their putrefaction filling the air for many miles round Condatchy, till it is swept off by the SW. monsoons. The Ceylon pearls are whiter than those of Ormuz, or the Arablan coast; and the natives are extremely expert in cutting and drilling them. The usual Ceylonese boats are like the cntamarans of Madras and other parts of the peninsula. A great number of chank shells are found, and exported to India from the N. shores of Ceylon. (Raschenberger, Dr., in Martin's Statistics, p. 400 ; Percival, pp. 86-100; Sturt, in Phil. 'Iransac., iii. 3.)

Salt is a government monopoly, and its mannfacture, in leeways and pits on the sen-shore, is carried on to a great extent in the N. and E., where it is of fine quality, and may be procured in greater abundance than the goverument requires, or has been able to collect. Before the Dutch monopoly existed, this coast supplied Bengal with salt ; and, indeed, the Ceylon salt may he imported at Calcutta for two-thirds the price of the salt produced in India. There are no other manufactures of any extent or importance, except that of arrack, which is distilled from the blossoms of the cocoa-nit-tree, as torldy and jagl: ary are from the juice; while ropes, brishes, basketis, brooms, matting, rafters, and thatch for cottages are obtained from the various parts of the tree, in addition to the valuable oil now in extensive use in England. Snltpetre is made from the clipping of rocks, in which nitrate of lime is prevalent, mixed with wood ashes; the mixture washed, and the liquor evaporated to a concentrated solution, and suffered to crystallise. Lime of excellent quality, and possessing a power of adhesion much greater than that procured from shells, is made by burning the coral found upon the shores. Gunpowder is made by a rude process; the native pottery is coarse and unglazed. Little progress has been maile in weaving; the loom is somewhat similar to the primitive loom of Ireland; all the
cloths used are of domestic manufacture; no muslins are woven, nor indeed anything but conrse cottons, and some silks. Rude images and implements of husbandry are made of the native metals, and the Singnlese can work with dexterity and taste in gold and silver. They are generally more capable of setting gems than cutting them; and excel in the manufacture of lacquered ware.

Trade.-Since the Dutch monopoly system has been abandoned, both the internal truffic and forelgn trade have greatly incrensed. Suljoined is a table of the imports and exports of Ceylon, in the two yenrs 1862 and 1863 :-

Both the imports and exports of Ceylon have enormonsly increased since the year 1850. In this year, the imports were $1,488,678 l$., and the exports $1,246,956$. The rise took place very gradually, but in imperts was chiefly visible in grain, and in exports in coffce.

There is a canal between Calpenteen and Columbo, by which cargoes are conveyed during tho SW. monsuon. A flne road has been constructed from Columbo to Candy, on which a mail-conch runs; carriage-roails also extend from Columbo N. to Chilaw, and S. to Matura. Many rapid nul unfordable streams have had iron and wooten bridges thrown neross them, amongst which is that of Paradeinia, across the Mahavilly Gangn, which consists of a single arch, with a span of 205 ft , principally composed of satin-wood.
Engllsh weights, mensures, and moneys are becoming universal in Ceylon.
The pullic revenue of Ceylon consists chiefly of import duties on merchandise and indirect taxes. It nmounted to 767,101l. in 1860 ; to $7 \mathrm{bl}, 097 \mathrm{l}$. in 1861 ; and 750,1361. in 1862. The public expenditure is principally for costs of administration, and was 705,440l. in 1860; 635,230l. in 1861; and 626,654l. in 1862. •The cost of governor and principal officers amounted to 57,8651 . in 1862 ; while thero were expended th the same year for works and buildings 23,8961 ., and for roads, streets, and bridges 94,1671 .
The alministration of the colony is vested in tho hands of a British governor, assisted by a council of European civil servants, selected either by the governor himself or the secretary of state for the colonies; but the power of the council is limited, and subservient to the authority of the governor. The governor has complete control over the financial department in the interior, while in the maritime provinces he is restricted to a certain sum for contingent expenditure, unless authorised in exceeding it by his council, to whom, except on this point, he refers, or not, at pleasure, being empowered to carry into effect any law without their concurrence. All laws, before being acted upon, are published in the official gazette, for the purpose of their gencral diffusion, with translations into the Singalese and Malabar languages.
The active business of the government is conducted by individuals of three different clnsses. Offices of the first and second classes are usually filled by Europeans; the subordinate situations ly natives; but, by recent regulations, any person judged to possess sufficient qualifications may fill the most important offices withont reference to nation or faith; a knowledge of the English langunge being, however, considered indispensable. Each village and caste has its elected headman, who is recognised by the government, which commonly selects native servants from amongst this class of poople; the modeliars of corles, or licutenants of districts, are appointed from this body.

Armed Force.-Exclusive of native troops there are in Ceylon, on the average, some $\mathbf{3 , 0 0 0}$ British troops. The cost of these is chiefly borne by the home government, and amounted to 110,2681 . in 1862. The contribution of the colony towards this military expenditure was only 24,0001 . in this year 1862.

Justice.-A supreme court of justice is established at Columbe, with powers equivalent to those of the Court of Queen's Bench and Court of Chancery. It is presided over by three English judges, aided by two other functionarics, all of whom are appointed from England. Trial by jury was introduced into Ceylon by Sir A. Johnston, and is now established in every district. Exclusive of Colombo, the whole island is divided into three circuits, viz. the N., S., and E.; the last of which comprises the old kingdom of Candy, with all the country to the E. of it. The circuits are subdivided into many districts, each of which has its own court, with a judge and three assessors,

Exeluisland is divided iato S., and E.; the last of gdom of Candy, with $f$ it. The circuits are cts, each of which has e and turee assessors,
and with jurisctiction in all cases not punishable with more than a fine of $10 l$, one yeur's imprisortment, or 100 lashes. The supreme court in Cullumbo is the sole court of appeal. Excepting in the maritime provinces, where arrack driaking is prevalent, atrocious crimes are in general rare; so that the courts are more occupied with petty litlgations than serious offences.
The Religion of the singalese is Buddhism; but the upper classes profess Christianity, and many of the others have been converted to Mohammedanism. There are 16 Protestant churches in the island, subordinate to the archdeacon of Colombo, and 32 dissenting places of worship. Roman Catholic chapels are very numerous, and 10 years ago it was believed that half the Ceylomese popuIntion were Christlans, following the ritual mostly of the Romish and Duteh churches. There is a tradition amongst the natives that Buaddh himself visited this island, which, before his advent, had been inhabited by demons. There are numerous temples to that deity in the island, especially in the.eentral parts, where the Buddhic sect is most prevalent; and the British government, having succeeded to the temple patronage and other privileges belonging to the old kingdom of Candy, has the appointment of the lladdhic pricsts. When the palace of Candy was taken by the British, a eclehrated relic, believed by the natives to be a genuine tooth of Budld, was captured; the possesslon of which is considered to insure its possessors the sovereignty of the whole island. This relle is annally exposed with great state and ceremony, and is worshipped by multitudes flocking from all parts of the country, and bringing offerings of various kinds to the priests, who thereby realise considerable sums. (Journal of the Asiat. Soc., iii. 101.)

Public Education.-Education is making great progress in Ceylon. There werc, in 1862, above 800 sehools in the colony, attended by 25,408 pupils. Of these, 5,518 were in 'public;' 49 in 'orphan;' 822 ia 'regimental;' 13,511 in 'free;' ond 5,008 in 'private' schools. Unfortunately, the benefit of this eduration did not inclule the female sex. In 1862 there were but 876 females in the 'publie;' 24 in the 'orphan;' 35 in the 'regimental;' and 148 in the 'private' schools. The free schools, which had 13,511 male prpils, were not attended by a single female. The public schools are supported by government. The others have been established by the Church Missionary and Dissenters' Missionary societies. Free elementary education in the English language, arithmetic, and geography is given in these schools. The government schools are chiefly in the Singalese maritime districts. At Columbo there is a superior academy, where the usual branches of a classical and mathematical education are taught.

Civilisation and Arts.-In civilisation the Singnlese appear to be nearly, if not quite, on a par with the Hindoos; in courtesy and polish of manners they are inferior to none, but in intelleetual acquirements, and proficiency in the arts and sciences, they have made little advancement. Many of the male Singalese read and write in their own tongue, but this is no part of female education. They write with a sharp iron style, on talipot leaves, and colour the traces afterwards with lamp-black. They excel more in lacquered painting than in any other art. Their statuary is better than their pictures, thongh the figures of Buddh have been subject to no innovation of style, and are always in the same posture, of whatever material they may be formed. The Singalese colour the statues of their gods, and give a pupil to the eye; which last ceremony is supposed to
confer all the holiness belonging to the figure, and is done with much mystery and solemnity. Thero seems to be no peculiar national style of architecture; the Buddhic temples are liko Tartar structures. Thu Ceylonese rise at dawn, and retire at nine or ten o'clock at night ; they sleep elther on mats on the floor, or on conches. Their meals ars short and unsocial, the men and women not often cating together; there are two principal meals, one taken at noon, and the other at seven or eight o'elock in the evening. The standing dish consists of rice with curry; some eat eggs and poultry; but beef is never eaten excepting by a very low class, who are in consequenco held in great abhorrence: milk, gliee, oil, and fruits are the other important articles of diet. The best of their houses are eommonly of mud, with tiled roofs, and a single story in height; built on a low terrace, presenting outwardly dead walls, and having in the interior an open space, into which the rooms open by doors, which, as well as the windows, are very narrow. The tloors are eomposed of elay plastered with manure, to keep off the insects, and the walls are covered with the same material, or a coat of white clay: lime is used for the walls of temples only. The furniture of tho houses consist of two or three stools, a few mats, and poreclain dishes, a stone hand-mill, a pestle and mortar for rice, a rattan bag for compressing seeds to procare their oil, and a fow other indispensable articles. The dress of the men is a handkerchief wrapped like a turban round the head, leaving the top exposed, and a long eloth, called topetty, reaching from the loins to the ankles. That of the women is very similar; they leave the liead uncovered, but the end of their iress is thrown across the left shoulder. On oeeasions of eeremony, both sexes wear a small jacket. Rings, and silver and erystal bugles, and other ornnments, are commonly worn, and certain privileged persons are permitted to wear gold and silver chains and trinkets; but the Ceylonese look with extreme jealousy on every assumption of dress which is not strietly in conformity with the caste of its wearer. Like the Hindoos, they admit of the four ehief subulivisions of castes, viz, the religious and military orders; Toicssea, cultivators, merchants, \&c.; and Rshoolras, artisnns: the first two ranks have, however, scareely any actual existence in Ceylon, and all the honours and hereditary rank in the island are monopolised by the cultivators, at the head of tho third class, with whom all Eutopeans are ranked, while the Moors are elassed with the fishermen at the head of the fourth order. The male Singalese marry generally at the are of eighteen or twenty, the females carlier. Matehes are determined on and coneluded by the parents of the parties to be affianced : the dowry of the women generally consists of household grods, or cattle ; sel.lom of laml: the husband always pays a price for his wife. The women seldom have more than four or five children; but sometimes suckle them for as many years: the latter are in consequence very backward, and often neither speak nor walk till upwarls of two years old. Infidelity is little regarded, provided it be not an intrigue with a person of inferior caste: concubinage and polygamy are indulged in by the men, but plurality of hitsbands is more common than that of wives, one woman belonging equally to several brothers of the same family. This, as well as other usages, is, however, fast disappearing before new habits, acquired by the extending intercourse with Europeans. The Ceylonese appear to be sincere and warm in their attachments. Dr. Davy disbelieves the report of the practice of exposing female infants, ' excepting in the wildest parts of the country, and then
nover from choice, but necessity, and when the parenta are on the brink of starving.' The sick and dying, thongh not openly exposed, are certainly removed to temporary buildings. Every respectable family burns its dead; low castes are not allewed to de so, but bury them with the hend towards the west. Immediately after a decease, the relations, with their hair dishevelled, and beating their breasts, cry and embrace each other, giving utterance to lamentations of a highly pretical nature. (See Journal of Asiatic Society, ii. 63, 64.) A common exhortation Is, 'When I die, pay me duc honours.' The common language of the Singalese is a dlalect of the Sanscrit; the sacred langunge, like that of the Birmans, is the Pall. (For further details of Ceylon, see the works of Sir G. Emerson Tennent :-'Christianity in Coylon,' 1850 ; 'Sketches of the Natural History of CeyIon,' 1861; and the admirable and most exhaustive 'Ceylon, an Account of the Island, Physical, Historical, and Topographical, 6th edit. 1864.)

Autiquities and History.-The proper name of this Island is Singhala; but there is censidernble uncertainty whence the people originated who gave it that name, nud who are called Singalese. They have a tradition that their ancestors came hither from the enstwarl nearly 2,400 years ago; some modern authors think, on the other hand, that they were a colony of Singhs, or Rajpoots, who arrived here about 500 years B.c. Toijeya (perhaps of the royal house of Sakya Singh, of Magadha, the native country of Buldh, but evidently the same as the Sanserit Vijaya) is the first king of Ceylon mentioned in history. The numerous ruins of cities, tanks, aqueducts, extensive canals, bridges, temples, \&c., show that Ceylon had been, at a remote period, a rich, populous, and comparatively civilised conntry. In 1505 the Portuguese formed settlements on the W. and S. coasts, and received a tribute of cinnamon from the king of Candy, on condition of defending Ceylon agrainst the Arabian pirates. They, as well as the Duteh who expelled them, after a long and sanguinary struggle in the next century, and the English, who superseded the latter, became, soon after the conquest of their first enemies, involved in hostilities with their uative allies. In 1815 the Candyans entreated the interference of the British, to drive a tyrannical sovercign from the ihrone. This was soon effected, and Candy has since berome a part of the British dominions.

CHABLIS, a town of France, dép. Yonne, cap. cant., on the Seray, 10 m . E. Auxerre. Pop. 2,335 in 1861. The town is principally distinguished by its excellent white wines, which the French epicures take with oysters.
CHAIBAR, or KHEIBAR, a town of Arabia, in El-Hedjaz. Lat. $25^{\circ}$ N., long. $39{ }^{\circ} 30^{\prime}$ E., 150 m . NE. Medina. Pup. said to be 50,000 . It is the cap. of, and gives name to, an independent sovereignty of Jews, the descendants, according to their own assertion, of the Trans-Jordanic tribes, Reuben, Gad, and Manasseh. They have a character for bravery and learning; but the term Beni-Chaibar is so odious among Mohammedans that its application is regarded as an insult. In manners and appearance the Jews of Chaibar do not differ from other Arabs: their state has existed upwards of 1,100 years; and though the town was captured by Mohammed in the 7th Hejira, A.d. 628, it is still said to be flourishing and powerful. It was here that Mohammed received from a Jewess a poisoned egg, professedly to test his prophetic powers, which laid the seeds of the disorder under which he finally sank, about four years afterwards.
CHALONS-SUR-MARNE, or CHALONS, a
the mildle of extensive mealows, 27 m . SE. Rheims, on the railway firm I'arla to Strasiourg. Pop. 11,575 in 1861 . The Marme formerly traversel the town, but since 1788 it has skirted it in a new channel dug for the purpose, and crossed by a magnificent stone bridge. Twe sinall afluents of the Marne run through the town. It is surrounded by old walls in pretty goonl preservation. With this exception of that whic! leads fromn the bridge to the IIôtel de Ville the streets are narrow and crou'red; houses generally mean, net a few being of wood. The cathedral, censecrated in 1147, and rebuilt in 1672 , is a large fabric, partly of Greek and partly of Gothic architecturo. The IIOtel de Ville and the Hotel de Prefecture aro both tine buildings: the Porte St. Croix has a good effect, and there is a splendid promenade, called the Juri. It is the seat of a bishopric, and has a court of primary jurisdiction, a commercial tribunal, a departmental collego, a primary normal school, a diocesan seminary, a school of practical geometry, a botanical garden, a socicty of agriculture, commerce, and a public library, with 20,000 vols. Bat the most important establishment lolonging to the town is the public school of arts and trades, at which 450 pupils are maintained, at the exjense of government, exclusive of those who pay. It has also a theatre. Different branches of the woollen, linen, and cotton mnnufactures are carried on in the town ; there are also extensive tamneries, and a good deal of trade is carried on with Paris in wine, conn, wool, hemp, and rape-oil. La Cnille, the astronomer, and D'Ablancourt, the translator, were natives of Chalons.
This is a very ancient town: it has been repeatedly taken and pillaged, and was onee much more considerable than at presont. Attila was defeated under its walls in 451. In 1591 and 1592 it burned the bulls of l'ope Giregory XIV. and Clement VIII. against IIenry 1V. In 1814 it was for a while the central point of the operations of Napolcon.

CIIALONS-SUR-SAONE, or CIIALLON, a town of France, dép. Saône-et-Loire, cap. arrond., in a fertile plain, on the right bank of the Saôue, which here forms an island, in which is situnted the suburb St. Laurent, 34 m. N. Macon on the railway from Paris to Lyon. ${ }^{\prime}$ 'op. 19,709 in 1861. The town is pretty well built, but the streets are narrow and ill paved: it has a fine quay on the Saônc, and is connected with its suburb by a stone bridge of five arches. There is a cathedral, and a hôtel de ville; but the objects most woriny of attention are the Hospice St. Laurent, in the suburb of that name, and the IIôpital St. Louis, both large establishments, and exceodingly well managed. The latter is an asylum for indigent old persons and orphans. There are some fine promenades, one of which, at the head of the Canal du Centre, is ornamented with an obelisk in honour of Napoleon. The bishopric has been suppressed; but it has a court of primary jurisdiction, a tribunal of commerce, a dep. college, a school of design, a public library with 10,000 volumes, and a theatre.
Chalons is very favourably situated for a conmercial entrepôt, communicating with the Mediterranean by the great line of railway from Paris to Marsoilles, which has a station here, as well as by the Rhone and Saône, and the canals connected with them, and with the North Sea by the canal of the centre, constructed in 1792.

The town is very ancient, and was for some time the capital of the kingdem of Burgundy. It suffered severely during the civil wars of the 16th century, and not a little from the invasion of the allies in 1814. It was formerly very unhealthy; but in this respect it has been materially im-

$t$, and was for some om of Burgundy. It civil wars of the 16 th a the invasion of the erly very unhealthy; been materially im-
proved, by the better drainage of the surrounding country, and the greater attention paid to cleanlinews in the town, though in both these respects it might still be very considerably improved. The funions Abelard died here in 1142.

CHAMAS (S'T.), a town of France, ciep. Bouches-eli-Rlione, on the N. bank of the larown de Berre, $\because 3 \mathrm{~m}$. NW. Marseilles. I'op. 2,602 in 1801. The town is well huilt, has a handsome church, and is celobrated for its oils aud olives, which it ships from its port on the lagoon. It is divided into two portions by a hill, through which a large tunuel has been cut for a chamel of communication. It lus an important powiler magazine, which supplies Toulon and the fortresses dependent upon it. In the vicinity is a lloman brlige, of a single arch, having a triumphal arch at each extremity.

CIIAMBERTIN, a famous vineyard of Franco, dép, Côte t'Or, a few miles NE. Ileaume. It occupies nbout twenty-five hectares, and produces at an average from 130 to 150 pipes of burgundy. Chambertin was the faveurite wine of Louis XIV. and of Napoleon.

CHAMBERY, a city of France, dép. Savoie, eap, of dép., on the left bank of the Aysse, in an elevatel and fertile valley, 110 m . WNW. Turin, nul 43 m . SSW. Geneva, on the railway from l'aris to Mont Cenis, which is to be prolongenl, liy menas of a gignntic tunnel under the Alps, to Turin. Pop. 19,050 in 1861. The city presents little worthy of notice; it has one good street, but most of the others are crooked, dark, and sombre. There are several squares adorned with fountains; and most of the houses are three stories in height. Chief public luildings, the enthedral, the Hôtel Dieu or principal hospital, the barracks constructed by the French, and the manufactory of silk-gauzes, for which Chambery has long been celebrated. The palnce is an old castle, in no way remarkable. The churches exhilit gatady decorations; in one, however, there is some good painted glass. The city was formerly fortified; but the wails have been removed, and the space they ocenpied is laid out as public walks.
Chambery is the seat of the superior judicial tribunal, and of an archbishop. It has societles of agriculture and commerce, a public library, theatre, public baths, and many charitable institutions. llesides gauze, other silk fabrics, lace, hats, lenther, and soap are manufactured; and there is some trade in liqueurs, wines, lead, copper, and various other articles. The environs abound in vincyards, woods, and picturesque scenery. Near Chambery is the country house of Les Charmettes, once the residence of Mad. de Warens and Roussenu. The city is supposed to stand near, though not upon, the site of the ancient Lemincum. It was taken by the French in 1792, who made it the cap. of the dép, of Mont IBlane, and retained it till the second treaty of Paris, in November, 1815 , when it was made over to the king of Sardinia, who, however, gave it up, together with the whole province of Savy, to France, in 1861.
CHAMBOLD, a village and famous castle of France, dép. Loire-et-Cher, on the Cosson, 10 m . E. Blois. The village-pon. 327 in 1801 -is inconsiderable, and the place derives its entire importance from its castle, one of the most magnificent and best preserved in France. This noble edifice was commenced by Francis I., after his return from Spain. He is said to have employed 1,800 workmen for twelve years upon it; and here, in 1540 , he entertained his illustrious rival Charles V. The building was still further enlarged by Henry II., and ilnished by Louis XIV., who frequently inhabited it during the carly part
of his reign. The Bowrgeois Gentilhomme of Moliere was acted, for the first time, at a fete given here by Lonis, in Octoher, 1670. Sinnimlaus Leczinsky, king of l'oland, occupied this eastlo for nine years previously to his being put in possession of the duchy of Lorraine. In 1748 it was assigned by Louis XV. to Marshal Saxe, who spent in it the evening of his days in aimost regal splendour. After many vieissitudes, it was given ly Napoleon to Mnntial Jerthier; and having been suld by his widow, in 1820 , it was bought by aubscription for the Due de lomleaux, to whom Its possession has since been contrmed by a decision of the courts. Since the expulsion of the elder line of the Hourbons from France, the head of the family has taken his name from this property.

The castle is buried in deep woorls, and its situation is rather low and damp. It is of vast extent, in the Ciothic style, and has a profision of towers, turrets, and minarets. 1Seing lnilt of black stone, it has a heavy nppearnnce. The interior is very magnificent. The grand stairease is so contrived that persons ascending and descending do not see ench other; it lias two fine chapels, and many spacious apartments and splendid ceil ings. Its gorgeous furniture was sold by auction during the levolution; and the beautiful tapestry that adorned the apartments of Francis I., Lous XIV., and Marshal Saxe, was burned, as the surest way of getting at the gold and silver with which it was embroidered; but the enstle itself was not injured. The park is of great extent, comprising above 12,000 arpents.

CHAMOND (ST.), a town of France, dep. Loire, cap. cant., in a fine valley at the confluence of the Gier and the Ban, 8 m. NE. St. Etienne. Pop. 11,620 in 1861. It is a thriving, industrious town, is well built, has a handsome promenade, $a$ departmental college, a fine parish church, and public baths. On a hill above the town are the ruins of the ancient castle, destroyed during the revolntion. The manufncture of ribbons and lacets (laces) is very extensively carried on. It has, also, considerable cast-iron and nail-works.

CHAMOUNY, or CHAMOUNIX, a celebrated valley of the Alps, dép. Haute-Savoie, France, immediately NW. of Mont Blanc, by which and others of the Pennine Alps, it is bounded on its S. and E. sides, and on the W. and N. by Mont lireven and the Aiguilles Rouges. Its length, NE. to SW., from the base of the mountains, is abeut 12 m ., and its breadth at the bottom in most parts exceeds a mile; but including the mountain slopes and sides, it is as much as 9 m . in breadth, and may be reckoned 22 m . in length from its head at the Col-dellalme to its outlet at the torrent of the Dioza, near Servoz. The average height of this valley above the sea is about $3,400 \mathrm{ft}$; the Arve rises at its upper end, and intersects it in its entire length, escaping into the valley of Servoz through a ridge of granitic rock. The pines and larches which elothe the lower parts of the mountains give a sombre appearance to the W. end of the valley; and this effect is increased by the unvaried sncws of Mont Blane, which hang over it. llut after passing the priory of Chamounix, the scene changes, and to this dreary magniticence succeeds a series of majestic pyrnmids, called Aiguilles, or needles, of astonishing height, and too steep to admit of the snows resting on them at any season. The valley, which becomes natrower, is richly ornamented with trees; and the Arve, rushing between finely-clothed rocks and precipices, adds life and beauty to the scenc. The little village of Argentiere, with its church and
clittering apire, and the two Aiguilles above it, together with the cheerful appearance of cultivation, form a landscape sublimely picturesque. The average height of the mountain-range on the S. side of Chamounix is about $5,000 \mathrm{ft}$; but the prinelpal Aiguilles on this side, viz, those of Charmon; the A. Verte, de Dru, d'Argentiere, and do In Tour, rise from 11,000 to $18,000 \mathrm{ft}$. above the level of the sea. Between these Aiguilles are situated the numerous glaciers which constitute the chief interest of the valley, to the very bottom of which they descend. Nowhere elee in the Alps are the glaciers of equal magnitude.

Thene mountains of lce are formed by the consolidation of the snow looged in the high Alpine valleys. As the surface of the snow thaws and percolates through the mass, it is again frozen, and acts as a cement; nnd by a repetition of this jroeess ; the whole mass is converted into solid ice; not so compact, however, as that of rivers or Inkes : for it is full of alr-bubbles, owing to the mole of its formation. Entering the valley from the SW., the first glaciers met with are those of 'l'aconny and de Boissons, sueceeling which are the more considerable entes of Montanvert, de Bois, d'Argentiere, and dela Tour. The glaclerde Bols, at the foot of the Aiguille de Dru, and about a league E. of the village of Chamounix, is the largest of nll : it is upwards of 7 m . in length, and in some places more than a mile broad; it is, in fact, the terminus of the Mer de (Blace. (See Mont Hianc.) Near its foot, the Arveiron, a trilutary of the Arve has its source in an ice cavern, which varies in size at different periods of the year ; but is sometimes as much as 100 ft . in height. On the W. sitle of the valley, Mont lireven, and the Aiguilles Rouges (so called from their reddish colour) form nn unbroken ridge, but of $n$ much less elevation than that on the opposite side of Chamouny. The Col-de-Balme, at the NE, end of the valley, and $3,000 \mathrm{ft}$. above it, affords a full and magnificent view of the gigantic group. Across this mountain one of the roads from Chamouny into the Valais passes. The climate is rigorous: the winter in the valley of Chamounix lasts from October to May, during which season the snow usually lies to the depth of 3 ft ., while at the village of Tour, the highest in the valley, it often attains the depth of 12 or 13 ft . In summer, the thermometer at noon commonly stands no higher than from $57^{\circ}$ to $63^{\circ}$; it rarely reaches $68^{\circ}$ Fahr. Barley and other kinds of corn, pulse, hemp, and some fruits, are grown, and a good many cattle are reared. The honey of Chamonnix is of a very fine quality. The total pop. of the valley was about 4,000 in 1861 . There are several small villages: that of Prieure, or Chamounix, par excellence, on the right bank of the Arve, towards the centre of the valley, has a pop. of about 1,700, and several good inns. It originated in a Benedictine convent, founded here at the end of the 11 th century by Count Aymon of Geneva. The other chief villages are Onches, Argentiere, Le Boissons, and Tour.

CHAMPAGNE, the name of an old prov. of France, in the E. part of the k. adjacent to Franche Comté and Lorrainc, now distributed among the depts. of the Ardennes, Marne, Haute Maine, Aube, Gonne, and Seine-et Marne. Champagne is also the name of several small towns in different parts of France.
CHANIPLAIN (LAKE OF), a long and narrow lake, principally in the U. States of N. America, between New York and Vermont, and having ita N. extremity in Lower Canada. This lake oceupies a considerable part of what has been called the Great Glen of N. America; that is, the remarkable hollow or chasm; stretching N. from

New York to the 8 . Laurence, a distance of about 300 m . The glen is occupied from New York to (ilen's Falls, 100 m ., by the Hulkon ; thence for 21 or 22 m . to Lake Champlain, hy a table-land whicl, in it higheat part, is only 140 ft . above the level of the thes in the IIudson. The lake extends $\mathrm{N}_{\mathrm{o}}$. and $\mathrm{S}_{\mathrm{C}} .110 \mathrm{~m}$., with a breadth varying from $\frac{4}{}$ to $14 \mathrm{~m}_{\mathrm{i}}$; hitit is, In general, very narrow: the distance, 67 or 70 m . from the lake to the $\mathbf{S t}$. I.nurence, is traversed hy the river Itichellen, or Chambly, the outlet of the lake, which is partly navigable by vessels of 150 tons, and throughout by river bargea. A canal has been constructed unitlng Lake Champlain and the navigable portion of the Hudson; so that there is now a direct inland navigntion, which, by a little ontlay on the Richelien, might be made suitable for steamers, from New York to the St. Laurence, between Montrenl and Quebec. (Darby; Gordon's Gaz. of New York.)

CHAMI'ON, ar CHOOMPIIOON, an inl, town of Lower Sinm, on the roal between Ligor nad Bankok, on the E. bank of a river about 7 m . W. the Gulf of Siam ; lat. $10^{\circ} 61^{\prime}$ N., long. $99^{\circ} 23^{\prime} \mathrm{N}$. Estimated pop. 8,000. In 1826 it was stockaded, and considered by the Siamese an important military post. Tin, good timber for ship-building, and excellent rattans, are found in its vicinity.
CHANDA, an inl. town of Ilindostan, prov. Gundwannh, esp. distr, of same name, between two small rivers, 62 m . S. Nagpoor ; lat. $20^{\circ} 4^{\prime}$ N., long. $79^{\circ} 22^{\prime}$ E. Its walls are 6 m . in circuit, and from 15 to 20 ft . in height, built of freestone well cemented and flanked by round towers. Its interior consists of straggling streets, letached houses, gardens, and plantntions. In 1803 it contained 6,000 houses ; in 1822 only 2,800 . In its centre there is a fort called lBala Killa. Chanda was taken by the British in 1818, when it was found to contain a good deal of treasure and valuable property, brought thither for security.

ClIANDERNAGORE, a marit. town of Mindostan, prov. Bengal, belonging to the French, built on the W. bank of the Hooghly river, 16 m . NNW. Calcutta, and in point of situation, in every respect superior to that city; lat. $22^{\circ} 49^{\prime}$ N., long. $88^{\circ} 26^{\prime} \mathrm{E}$. In 1814 it had a pop. of 41,000 , but which has be in reduced now to less than half that number. The strects are atraight and well-paved, but present a scene of solituda and desertion ; and the trade, formerly so flourishing, is almost annihilated. There are some manufactures of cotton clothe ; the commerce is chiefly in opium. The territory originally attached to this town extended to 2 m , along the river, and 1 m . inland : about 2 m . below Chandernugore are the ruins of a superb house, the country residence of its former governors. The French, in 1676, obtained permission to establish this settlement, which they subsequeutly appropriated and fortificl. In 1707 it was taken by the British, who destroyed the fortifications.

CHANDOKE, a considerable inl. town of Hindostnn, prov. Candeish, presid. Bombay, 68 m . WNW. Aurungabad, lat. $20^{\circ} 19^{\prime} \mathrm{N}$. , long. $74^{\circ} 19^{\prime}$ E. It has a most formidnble position on a rock, commanding one of the best passes on the rango of hills on which it is situated, and is quite inaccessible everywhere but at the gateway, where it is strongly fortified. It however surrendered without much resistance to the British arms, both in 1804 and 1818.

CHANTIBUN, a large inl. town of Siam, cap. of the rich distr. of the same name, at the foot of the monntain chain separating it from Camboja, on the S . bank of a river 18 m . E. the Gulf of Siam, and 150 m. SE. Bankok ; lat. $12^{\circ} 45^{\prime}$ N., long.
a distance of about from New York tw Hudson ; thence for in, ly a table land ly 140 ft . above the son. The lake exa breailth varying neral, very narrow the lake to the St. river litchelien, or ike, which is partly ins, and throughout is been constructed the navigable prorhere is now a direet little outlay on the itable for steamers, Laurence, between rby ; Gorion's Gaz.
[IOON, an inl. town between Ligor and river about 7 m . W. N., long. $99^{\circ} 23^{\prime}$ lid. 26 it was stockaded, 3 an important milior ship-building, and its vicinity. of Hindostan, prov. me name, between Vagnoor ; lat. $20^{\circ} 4^{\prime}$ 3 are 6 m . in circuit, it, built of freestone $y$ round towers. Its ig streets, detached itlons. In 1803 it 822 only 2,800 . In laala Killa. Chanda 1818 , when it was of treasure and valu-- for security. narit. town of Minming to the French, Hooghly river, 16 m . int of situation, in it city ; lat. $22^{\circ} 49^{\prime}$ 14 it had a pop. of reduced now to less e streets are straight a scene of solitude formerly so flourishhere are some manucommerce is chiefly ally attached to this the river, and 1 m . handernagore are the country residence of rench, in 1676, obsh this settlement, propriated and forby the British, who
le inl. town of Hinid. Bombay, 68 m . $19^{\prime}$ N., long. $74^{\circ} 19^{\prime}$ position on a rock, passes on the range 1 , and is quite inace gateway, where it er surrendered withritish arms, both in
town of Siam, cap. name, at the foot of If it from Camboja, E. the Gulf of Siam, . $12^{\circ} 45^{\prime}$ N., loug.

CHARENTE INFERIEURE
$1020^{\circ} 18^{\prime} \mathrm{F}$. It is a place of considerable trade; its chief export is pepper, to the amount of 30,000 or 40,000 piculs yearly. Cardamoms, rosewoorl, dye woods, ship timber, hides, honns, ivory, lac, and benzoin, are products of the Chantibuu distr. Near the town are mines of precious stones.
CIIAN'TILLY, a neat town of France, dep. Oise, on the Nouette, and on the roal from Paris to Amiens. 24 m . N. of the former, on the Northern railway, l'op. 2,930 in 1861. It has a fline hospital, endowed by the last prince of Conde. This town is distingulshed by its industry and manufactures of entton and porcelain; but it owes its celebrity to its having been, since 1632, the seat of the family of Conde, and to the vast sums they expended on the formation and embellishment of its castle, park, and gardens. The castle was one of the largest and fliest structures of the kind in France; the 'grand Conde' lived here in regal magnillcence; und the entertainments given by him to Louls XIV. were so splenided as to excite the jealousy of the monarel. But the glories of Chantilly have disappeared, and cotton-inills occupy the sites where Racine, Mollere, and Boileau nued to recite their chefs d'aucres amid the applauses of all that was beantiful and chivalrous in France.
The Grand Chateau, rebnilt in 1779 , was destroyed during the revolution, and all that now remaias is the Petit Châtean, the Châtean $d^{r}$ Enghieu, and the stables; the latter, constructed between 1719 and 1735, aro unequalled in Europe. The remains of the Admiral de Coligni, bntehered at the massacre of St. Bartholomew, are interred in the parish church of Chantilly. The forest of Chantilly occupies a space of about 3,806 hectares.
CHAPEI-LN-LE-FRITH, a market town and par., England, co. Derby, hund. High Peak, on the declivity of a hill rising from an extensive and fertile vale, surrounded by lofty eminences, 11 m . NW. by W. Derby, 167 m . NW. by N. London. Pop, of par. 4,264 in 1861. The town is only partially paved. There is one cotton mill, employing about 120 hands, and many of the lower classes are employed in weaving for the Manchester houses. At Whito Hall Mill is a considerable manufactory of paper. There is a brewery in the town, and nails are also made. Here is an establishment for warchousing goods, the place being a medium of communication by iween Mauchester and Sheffield, and having in consequence a large carrying trade. The town is one of the polling places for the election of mems. for the N. div. of the co. Besides the par. church, a neat edifice with a square tower, there is a chapel for Wesleyan Methoulists. There is also an endowed school at Chapel-en-le-Frith, and another at Bowden's Edge. Lead and coal mines and quarries are worked in the vicinity. The Peak Forest lime-works lie 3 m. F. of this town, and communicate by railway with the Peak Forest canal. The par. includes the townships of llowden's Edge, Bradshaw's Edge, and Combe's Edge.

CHARD, a town and bor. of England, co. Somerset, hund. Kingsbury East, in an elevated situation, near the S . border of the $\mathbf{c o} ., 11 \mathrm{~m} . \mathrm{N}$. Lyme Regis, and 170 m . WSW. London, by London nnd South-Western railway. Pop. of bor. 2,276, and of par, 5,316 in 1861. The old municipal bor. which is a parish of itself, comprised an area of fifty-two acrec; but the area of the new municipal bor. has been increased. It has an old town-hall, an extensive market-place, a church with a tower and bells, a well-endowed hospital for the maintenance of old and infirm persons belonging to the parish, and is well supplied with water. Fairs, 1st Wednesday in May, August, and November.

Market-day, Monilay. Chard was made a bor. by Eilward In, and elected mems, to nine parliaments, when it lost the privilege.

CHAREN'IES, an inland dep. of France, dintr, of tho W., formed prinelpally out of the ancient prov. of Angoumois: it takes ita name from the Charente, by which it is travened; and has N. the Denx Sévres and Vienne, Fi. Iante Vienne, S. Dorilugne, and W. the Chisrente Inférieure. Aren 591,238 hectares, or 3,270 Eng. sq. m. ; pop. 379,081 in 1861. Surface diversified by a grent number of little hills. Soil various, being mostly thin or clayey, and encumbered with moisture; the latter provails in the arrond. of Confulens, where there are no fewer than sixty-two slallow lakes, or itangs, some of them of considerable extent; there is also in the latter arrond., and in that of llarbezieux, a large extent of hefath and waste land. l'rincipal corn crops, wheat, maslin (a mixture of wheat and rye), maize and millet, rye, barley, and onts; but, owing to the inferiority of the soil, the returns are anong the poorest in Frauce, and tho produce is insutficient for the consumption. The principal wealth of the def. consists in its vineyards, which eover about 100,000 hectares. T'heir produce is mostly converted into eau-de-vie, the superiority of that made at Cognac being unlversally acknowledged. Hemp, flax, and potatoes are exteusively cultivated. The wools cover about 74,000 hectares; and the produce of chestnuts averages 200,000 hectolitres. Truthes are abundant, the vulue of those sold being estimated at about $300,000 \mathrm{fr}$ a year. There are, comparatively, few lorses; but cattle, sheep, and hogs are abundant: wolves, foxes, and otters are pretty common, but wild buars have become rare. The minerals are antimony, lead, iron, and gypsum; the last two being wrought to a considerable extent. Hesides the iron-works, there are very extensive distilleries, with paper-works (sec Angouleme), tanueries, and manufactures of linen, canvas, cordage, cloth, hats, and earthenware. The dép. is divided into five arrondissements. The principal towns are Angoulême, Cognac, Ruffec, and Confolens.

CHARENTE INFE/RIEURE, a maritime dép. of France, on the W. coast, deriving, like the forecoing, its name from the Clarente, by which it is intersected; having N. Vendée, NE. Deux Sévrea, E. Charente, S. the Gironde, and W. the Atlantic: Ocean. Aren, including that of the islands of Oleron, Ré, and Aix, 682,569 licetares, or 3,763 sq. m. ; pop. 481,060 in 1861. Snrface flat, and in part marshy; soil partly light, calcarenus, and gravelly, and partly heavy and clayey. Principal crops, wheat, maslin, rye, barley, maize, millet, and oats. The rotation is. 1st year, wheat; 2nd rye, or some other grain; during the 3ril year the ground remains untilled, serving as a kind of pasture for sheep; in the 4th year the old routine recommences. Rent of arable and pasture land varies from 8s, to 36s. an acre. About half the tlep. is cultivated by proprietors, who possess from 50 to 100 and 150 acres; the other half is occupied by farmers, whose farms may vary from 300 to 700 acres, and who are said to be prosperous. About 112,000 hectares are occapied by vineyards, whose product, like those of the Charente, is mosily converted into eau-de-vic or brandy. The forests cover nbove 70,000 hectares. Pastures extensive and excellent, furuishing food for a great number of cattle, excellent horses, and sheep. Minerals not of much importance; but there are in the dép. very extensive salt marshes, particularly in the neighbourhood of Marennes, which furnish large quantities of salt. In summer, the marshes are unhealthy, bnt otherwise tle climate is mild and

## UHARLESTON

malulorious. This tifp, han great facilities for commerce. It has several decp bays and excellent portn, and, exclusive of the Charente, which has Hocliefort near its mouth, It is watered by the navlyable rivers Seudre and Xévre, from the latter of which there is a canal to La Jochelle, and is skirted on the S . by the Gironde. The fishery of marillnes and oysters is extensively carried on, and veswels are also fitted out for the cod fishery, La lischelle, Ilochefort, and the other ports have also n considerable share of the coloninl and coasting trade of France. With the exceptlon of the salt manufacture and distillation, manufncturing finclustry is not prosectited on a large seale; but coarse woollen stuffs, soap, ilne earthenware, and glass are pronlueed; and there are also tanneries and sugar reflineries. The dép. Is ilivided into six arroul. I'rincipal towia, La Rochelle, I Rochefort, Sninten, and St. Jean d'Angely.
CHARENTON-LE-ION'T, a town of France, dep. Scine, cap. cant., agreeatily situated on the Mirne, near its contlnence with the Seine. 4 m . Sli. I'aris, on the railway from l'arls is Troyes. Pop. 5,53I in 186I. The town has neveral country lunses, among which is the one ocenpied by the famons Gabriollo d'Jistrces. The Marne is here crosned by a bridge, the possession of which has alwuys been regariled as of minterial importance to the defence or attack of I'arla; and it has frequently been the seene of obstinate contlicts, the last of whlch took place in 1814, when it was forced hy the allies. The brlige unites the town with the village of Charenton St. Mnurice. There is here an excellent linatic asylnm, founded in 1741, and capable of accommodating $\mathbf{4 0 0}$ patients. The I'rotestunts lind formerly a larye church in this village, in which synorls were held in 1623, 16i31, and 1644; but it was demolislied in 1605, after the ravocation of the edict of Nantes.

CHARI'TE' (LA), a town of France, dep. Nièvre, cap. cant., at the foot of a hill planted with vines. The Southern railway has a station here, Pop. 5,297 in 1861. The town is situated on the right lank of the Loire, over which tisere are two bridges. It was formerly fortified, and much more considerable than at present. It is celebrated for its manufactures of coarse jewellery, buttons, glass, carthenware and woollen stuffs.

CHARKOFF. See KHARKOFF.
CHARLEROY, or CHARLEROI, a fortified and important manufacturing town of the prov. of Hainault, in Belgium, on the navigable river Sambre, 38 m . S. of Drussels, on the railway from Brussels to I'aris. Pop. 10,800 in 1856. The town is built on the side of a steep hill, and the inhab. are ocenpied chiefly in working the extensive coal mines of the district, and in numerous iron foundries and glass works. The town is in the centre of the great coal-basin of Charleroy. Adjacent quarrles of slate and marble are also important sources of industry and wealth; and the neighbourhood contains numerous mills for sawing marbles. The manufactures of glass comprise all kinds of vessels and sheet glass, of various qualities; and the iron works include the manufacture of fire-arms, cutlery, tools, and utensils, There are, besides these principal establishments, several factories for spinning wool and weaving woollen eloths; dye-houses, tanneries, snuff mills, rope walks, soap-houses, salt and sugar refineries, breweries, distilleries, and brickyards. The communication with Brussels by means of the railway, as well as the Charleroy canal, affords great facilities for commerse. Between 200 and 300 capacious barges are constantly employed in exporting from Charleroy to Brussels coal, iron, blate, glass, and soap. A large fair for cattle and
merchandise in held during 10 days, cammeneing on the Bth of Aug.
The fortress of Charleroy wan built in 1060, by Isodrigo, Spmish gov, of the Netherlands, ani named after Charles II, king of Spain. T'he lowir and milille town were adiled liy Louls XIV. in 1670. Churleroy lins austained several memorable slegea; and by various treaties has been transferred from Spain to France, from France to Spain, from Spain to Austria, and from Austria to E'runce. The fortlilentions were materially improved under the ellrection of the Duke of Wellington, after the campalign of I815. Near Charleroy are the nilun of the magnilleent abbey of Alne, in a beantifully romantic solitude, about 0 m . from the towi. The chisters of this superb eatablishment wero supported by 800 columns of eoloured marble, and its revenue nmoninted to $\mathbf{2 5 0 , 0 0 0}$,
CHARLliS'TON, a eity and men-port of the U. States, one of the prinelpal in the S. part of the Union, and the largest town of S. Carolini, on a low polit of land at the contluence of the Cooper and Asliley rivers, 6 m . W. Hy N. the nearest polut of the Atlantic, 118 m . NF. Sayunnalh, ani 590 m . SSW. Jaltimore; lat. $32^{\circ} 46^{\prime} \mathrm{N}_{\text {., }}$, long. $79^{\circ} 49^{\prime}$ W. $I^{\prime}$ op. 51,200 in 1860 . Charleston was, till 1787, the seat of the state government. This eity was visited, in 1888, by a mont destrustive flre, which raged with great fury in its most populous part, destroying meveral streets and an immense numount of property. I'reviously to this disaster, the streets, which were rather harrow, crossed ench other at right angles, and wero often planted with pride-of-Indin trees (Melia azederachu): the houses were mostly of brick, and generally furnished with veramlahs. Churleston was partly destroyed a seeond time in 1804, when it was taken possession of by the troops of the Urited States, after having been for four years in the hauls of the Confederate government, serving ns the elicef port of entry for foreign vessels into the Southern States, and the principal reluge of ' blockade runners.' The town has a enllege, townhall, exchunge, enstom-housc, guarchonse, theatre, cireus, orphan nsylum, hospital, two markets, two ursennls, and nuinerous churehes. The college, ostablished in 1785, was reorganised in 182.1: it possesses a commodious edillec, with a library and philosophical apparntus, There aro two medical sehools, and various leamed and charitable societics. The harbour is large and convenient, but rather difficult of access, in consequence of its entrance being obstructed by a range of sandbanks. Through these there are but two channcls suitable for ships of large burden. In the principal or S. chanmel the depth of water in the shallowest part, 8 m . SE. from the town, nt ebl tide, is only about 12 ft ., and at flood tide from 17 to 18 ft . A. lighthouse, 80 ft . high, with a revolving light, has been erected on a small island bearing $2 \frac{1}{3} \mathrm{~m}$. NW. from the bar, at the entrance to the S. channel. After crossing the bar, there is deep water up to the city, where vessels lie moored alongside wharfs or quays. Charleston is a place of very extensive traile, it being the port whence more than three-fourths of the whole foreign tracle of S . Carolina is carried on. Its exports cunsist chiefly of cotton and rice. Most of the imports are from the $N$. and middle states, and consist of wheat and flour, fish, shoes, and all kinds of manufneturel goods. The fureign imports are mostly brought at second hand from Now York, and consist of cottons, woollens, linens, hardware, iron and steel, coffee, sugar, tea, wine, and spices. Like most other cities in the $S$. part of the United States, Charleston formerly had a large slave pop., and the slaves were treated with a severity ievolting

## CILARLEVILIE

to those whe lived in coumtries free from this moral conitamuation. Inppily all this has ceased by the emanelpation of the mlaves in 1sats, lin conseguence of the grent civil war In the Unitell States, The yellow fuver ocensionaliy commite great ravages bere; but it is more fatal to forelgners than to the native pop. The fever is ampowed to be owing, in a consileralle degree, to tho maraliy puture of the soll on which a part of the town has leen built; but the swampy ravines by which It was formerly intersected have been graclually tilled up nul drahel, nud the eity han, In consequesee, become much more healthy. The town in bally amplied with water, having mostly to depenil on the raln water collectell in ciaterns. Clinarleston was fommided lin 1680, and wan the sent fgovernment till the building of Columbia, in 1787.

CLIABLEVILLEE, an inland town of Irelanil, rov. Munster, N. extremity co. Cork, $22 \mathrm{~m} . \mathrm{S}^{2}$ Cinerick, on the rnilway from Limerick to Cork. Pop, 4,766 in 1831, nad 2,468 in 1861. The town minista of furr maln atreets crousing ench other $i$ right angles. In it are the par. clureh, $n$ large Enth, chapel, a bnilding for public meetings, mational selood, and min endowed grnmmar howl. The compration, under a clurter of Charles l., in 11i71, consists of a sovereign, two bullifis, welve burgesses, and an indellifite commounlty. $t$ returned two memhers to the Irish II. of C. till he Union, when it was disfranchiseed. $A$ manor ourt lins jurisdiction in plens to the amount of (1)01., and as n civil bill conrt. ['etty sesslons are eld on alternate Mondays. The court nall maret honse are in the snme building. Thaning and lanket making are carried on to some extent, and there are two large tlour mills. Markets on Inturilays; fiuirs on 10th Jan., 16th March, 12 th Iny, Ióth Aug., 10th Oct., and 12th Nov. The wn is a constabulary station.
Chameville, a town of France, dép. ArCunes, on the Meuse, at a short distance from Cexiers, on the railway from Chalons to Namur. op. 9,907 in 1861. The town is extremely well nilt; streets struight nal broad, intersecting ench Wher at right nugles; houses nearly all of tho tme height, and slated, having a comfortable, mappearance. In the centre of the town is a ne spuare, surrounded by areades, and ornsmentel fith a superb fommtnin. The river is cros ed by a nappension bringe. It is the seat of $\boldsymbol{n}$ court of prianry jurisdiction, and of a commercial tribunal; od has a departmental college, a primary normal thool, a secondary eeclesiastical sehool, a courso geonetry and mechanics applied to the arts, a nulic library, with 24,000 vols., a cabinct of tural history nul antlquities, and a theatre. he royal manufactory of arms, formerly cestabheel here, has been transferred to Tille and hâtellernult; but arms are still largely manuctured on account of individuals, The nailorks produce about $3,500,000$ kilog. of nails a ar; and there are, besides, copper foundries, ere large quantitics of copper-wire, and plates, proluced, with soap-works and tanneries. It a a commodious port on the Meuse, and a conlerable trade in wine, spirits, coal, iron, slates, arble, and manufectured goods. Through the nal of Ardennes, ns well as the railway, it has so an ensy communlcation with Paris.
The foundations of Charleville were laid in S05, by Charles of Gonzaga, duke of Mantua evers, who gave it his name. Having passed om his heirs to the house of Bourbon, the fortifitions were razed, in 1686, by order of Louis XIV. CHARLOTTENBURG, a town of Prussia, rov. Brandenburg, on the left bank of the Spree,

5 m . W. Jlerlin, with which it in connected by rallway. Pop, 12,431 in 1861. The tuwn consists chiefiy of villas and taverns, the aummer reslicuce of the rich, anil the reaort of the humbler classes from lerlin; is well built, ami han handisome atraight streets, omnmented with rows of treen. There is a mannificent palace, built hy Freicrick the tirent, and fumbishel with a collection of antiquitien. The ganieus, whieh are tinely laid ont, aro always open to the public, and are much visited by Suminy partien nud strollers from the capital. Withlin the gardeus is the mausoleum, erected by King Frelerick Willinm III., over the remalns of his benutiful and unfortunato queen, Louisn of Mecklenburg. It contalns the celebrated recumbent marble statue of Louisa, by lianch, admltted to be not only the masterplece of that emhent sculptor, but one of the thest modern works of nrt.
Challolles, a town of Firance, dép. Snônc-et-Loire, enp. arronil., at the conthence of the Semence and the Reconce, 28 n. WNW. Natem. 1'op. $3,28.4$ in $18(11$. The town is agreentily sltuatel, neat, nul well built; has a commumil college, tribunals of primary Jurisilletion and commerce, an agricultural society, iron forges, and fibrics of earthenware, nul cmubles, A hill nhove the town in cruwred with the picturesque ruins of the olic castle of the comuts of Chamolais. Onc of these, a prince of the blood roynd, wholived during the reign of Louis XV., achieved an inlinmous notorlety.
CHARTRES, n city of France, dép. Eure-etLaire, of which it is the cupital, on the Eure, 18 m . SW. Paris, on the rnilwny frum I'nris to Nanter. I'op. 19,531 in 1861. The town is surrounded by walls and ditches, anl is situated partly on a hill, nuld partly on low ground. The Eiare, which here diviles into two branches, rums through nad encircles thes lower town. Strecte narrow and crooked; those forming the communicntion hetween the upper nal lower towns beling so very steep as to be inacteswible to carringes. The entheiral is reckoned one of the finest Gothic elifices in limuce. Here are, also, two tino steeples, a monument to Genernl Marecan, barracks, a thentre, and some tine promenales. It is the neat of a bishopric ; has a court of ansizes, tribunals of primary jurisiliction and commerce, a departmental college, $\boldsymbol{n}$ public library, with 30,000 vols., a school of design, and a botanical garilen. Tho manufnetures consist principally of hosiery and hats, and there aro nlso tanneries and dyeworks. Chartres is the centre of the corm trale of the dep., its corn-markets being among the most important in France, and providiug in a great mensure for the supply of laris. It is the native comntry of Regnier the poct, of Brissot, and Petion, members of the convention, and of General Marcean.
This is a very ancient city, being reckonel before the Roman cenquest, as the cnpital of Celtic Gaul. It was for a considerable time in the possession of the English. Henry IV, was crowned hero in 1594.

CHARTREUSE (LA GRANDE), a famous monastery of France, dép. Isère, 14 m . N. Grenoble, among rugged mountains, at an elevation of 3,281 ft . ( 1,000 metres) above the level of the sea. The nccess to it is very difficult. This monastery was fonnded in 1084; but having been several times pillaged and burnt town, the present building has been erected sinco 1676. It is of vast extent, nud has cost an immense sum. During the revolution, the monks were driven out, ant their property, including their valuable library, confiscated and solis. But, in 1826, the building, which had escaped the revolutionary tempest, was restored to its original

## CIIARYBDIS

destination. Some of the old monks, accompanied by severnl neopliyten, returmed to the buitiling? and the Chartretime existed once more, but shoni of its old luntre, impirtance, and wealth.

CIIAlkyblig. Hee Suybla and Chatirmitn,
CIIATEAUBKIANT, a town of Franeo, dip. Idire Inféreure, cap. cant., on the Chere, near the pond or lake of Cirnuil IJeu, 26 m . W NW. Aucenis. $\mathbf{I}^{\prime} \mathrm{op}$. 1,686 in 1863 . The town in old and meanly inift, round the ruins of the ohl cantle, founded in 1015, whence it deriven lts nume. Francolse te Folx, celebrated for her benity and gallantrien with Francis I., ilied here in 1637, and wan burled in the chureli of the Trinity, with all epitapis on lier tomb written by Clemesit Marot. The town lian a court of primary jurisiliction, an apricultural moclety, anil manufnctnres of coarse woollen stuffis, and lis pastry and compitures are held in high eatimution. It has sume traile In iron, coal, and wood, anul a conslderahle corn-market.

CHATLAU-CHINON, or CHINONVILLED, a town of France, def. Nlèvre, cap. arronl., near the Yomne, in the midde of mountains, at an elevation of 1,0688 f. ( 600 metres) above the level of the sea, 20 m. WNW. Autun. Pop. 2,960 in 1861. The town was formerly surrounded by fortiflentions, and was defented by a vast castle, of wheh there exlat considernble rilins. It has n court of primary juriseliction, an agricultural soclety, and some fabries of coarse woollens and llnens. Ilaving been taken by the royalists in 1591, after an obstinato resintance, the girrlson and the greater part of the inliabitants were pat to the sworl.
CIIATEAUDLN, a town of France, dép. Fure-et-Loire, cnp. arrond., near the lelt bank of the Ioire, 25 m . SSW. Chartres, Pop, 0,710 in 1841. Having been almost wholly burnt down in 1723, it has been rebuilt on a regular plan, with broal atrniglit streets, and uniform houses. The principul equare, the Hôtel de Ville, and the buildings of the communal college, are worthy of notice. Wesides the college, it has n court of primary jurisdiction, a public lilurary, with 6,000 vols., and some manufactures of woollens, and tanneries. On a rock, commnnding the town, are the remains of the olil castle of the Counts of Dunois, the chapel attached to which has the tomb of the famoits general of Chnrles VII., and some other tombs of less distinguished mombers of the family.

CHAT'EAU-GONTHER, a town of France, dep. Mnyenne, capl. arrond., on the Mayenne, $18 \mathrm{~m} . \mathrm{S}$. Javal. Yop. 7,214 in 1861. Tho town is badly laid out, but well built; has a stone bridge over the river, by which it is united to its principal suburb, a fine Gotlic chureh, $n$ communal college, 3 loospitnla, public baths, an ngricultural society, \& c. ; and is the scat of a court of original jurisdiction. It has considerable manufactures of fine linen and linen thiend, with extensive bleachfields; is the entrepot of a great proportion of the wines, winte, conl, and tufn of the dep.; and the centre of the trade in fine thread. The town was formerly surrounded by walls, and had a castle, whence it took its name. It suffered a good deal during the wars of Vendée.

CHATEAULIN, a town of Frnince, dép. Finlstère, cap. arrond., in an agrecable valley, on the Aulne, which there takes the name of Châtcaulin, 22 m . SE, Brest, on the rnilway from Brest to (2uimpar. Pop. 2,892 in 1861. The town is illlinilt; has a court of primary jurisdiction, and an ngricultural society. Vessels of from 60 to 80 tons come up to the town, which has a good deal of trade in slates, procured from quarries in the neighbonrhood, cattle, and butter.

CIIATEAUNEUF-DE-RANDON, an inconsiderable town of France, dép. Lozère, cap. cant, on

## Chatellerault

a mountain, $12 \mathrm{~m}, \mathrm{NF}$, Mende. Pop. 1,405 in 1861. The town wan formerly fortlifel; anil an linglinh garriaon wan beaieged in it, in I1180, by a Fremeh foree under the farmoun comatable Ilyguenellin; the constalile liavligg dled diring the connme of the siegre, the Engllali govemor laid on his cotlin the keys of the town, which he lind engrugel to deliver up to lim if not relleved withln fifteen days, A monument was erected here in [820) to the memory of Juguemelln.

CHATLAUNFOF-SUR-CIIARENTE, a town of France, defp, Charente, cap, carit., on the Charente, 12 m . WSW. Angouleme. J'op. 8,506 lu 1861. The town has a conslderable trade in whe, lrnnily, and anlt. It wan anciently called lierdeville, and was defended by a castle burnt down in 1081. A new eastle having been built to replace the former, the town took from it the name of Cliâteanneuf.

CHATliAUROUX, a town of France, dép, Indre, of whleh it is the capo, in an extensive plalin on the left bank of the Indre and on the rallway from I'arls to Ilordeaux. I'op. 10,176 in 1801. Though materially improved Chatenuroux eontinuea to le one of the worxt billt towns in France, Streeta narrow, crooked, and ill-paved; houses small, irregularly billt, and gloomy, It has, however, some flnely shmiled agreeable promenaden, and some gool builillings. It is the weat of a court of assizes, of triluunals of primary jurlsdiction and commerce 3 and has $n$ thentre, a puhlic library, a publio garden, a soclety of agriculture, science and arts, and an annual oxhibition of the products of tho industry of tho dep. The cloth manufacturo is very extensivoly carried on; cotton hosiery and hats aro also produced, and there are establishments for the spinniug of wool, with tanworka, and tile-works.
Chateauronx was founded in 050 ; was burned down in 1088, and rebuilt shortly after. Lonis XIII. erected it into a duchy; and it was given by Louls XV. to one of his mistresses, Malnme de Mnilly, better known by the name of the Duchess de Cliátenuroux.
CHATEAU-THIERRY, a town of France, deip, Aisne, cap. arrond., on the Marne, 25 m . S. Soissons, on the railway from I'aris to Soissons. I'op. 5,925 in 1861. The town is built on tho declivity of $n$ hill, the summit of which is surmounted hy its ancient castle, a vast mass of thlck walls, towers, and turrets. It hns a considerable suburi on the left bank of the Marne, the communication between them being kept up by a handsomestone bridge of three arches. It has a court of primary jurisdiction, a communal college, an establishment for the spinning of cotton, and tanneries. The famous poet La Fontaine, not less original by his character and conduct than by his talent nail genius, was born here on the 8th of July, $16 i 61$. The house which he inhabited is still preserved; and a marble statue was erected to his memory on the end of the bridge in 1824. ChâtcauThierry suffered considerably during the campaign of 1814.
Cliateliceraulit, a town of France, dép Vienne, cap. arrond., on the Vienne, 20 m . NNE. Poiticrs on the railway from Paris to Poitiers and Bordeaux. Pop. 14,210 in 1861. The town is situated in a fertile, agrceable country, but is ill built. It is joined to its suburb on the opposite side of the river by a stone bridge, built by the Duc de Sully. Besides soveral churches, it has a cominunal collcge, a theatre, an exchange, a hospital, and a royal manufacture of arms, the buillings of which are among the finest in the town; and some fine promenades. This town has beell long famous for its cutlcry, and has manufactures of

It ls the ment nals of primary jurisvas $n$ theatre, $\boldsymbol{n}$ public oclety of arriculture, ual exhibition of the the dep. The eluth cly earried on; cotton olluced, and there are ing of wool, with tar-
d in 950 ; was bumed shortly after. Louis i ; and it was given by iastresses, Madame de o name of the Duchess
a town of France, deip. Marne, 25 m . S. Soisaris to Soissons. I'up. built on the declivity ich is surmountel liy mass of thlek wall, a considerable suburb ie, the communication b by a handsome stone ins a court of primary lege, an establishment and tanneries. The ot less original by his an by his talent and the 8th of July, 1661 . ited is still preserved; rected to his memory in 1824. Châtenubly during the cam-
town of France, dép, c Vienne, 20 m . NNE n l'aris to Poitiers nud 1861. The town is ble country, but is ill suburb on the opposite te bridge, built by the cral churches, it has a e, an exchange, a hos. ure of arms, the buillthe finest in the town; This town has beell nd has manufactures of

Slowks and watchen, and lice. It aerren an a kinil Of entrugit fir the town of the $S_{\text {, and the }}$ N. of France: particularly for winen, givita, aalt, Alaten, frin, eom, lemp, and timiser. The Beoteli Farl of Arran, anceator of the Jhikes of IIamilton, wan arrated luo de Chitellerault in 1848 .
CIIATIIAM, $n$ par., town, parl. bor., naval tremal, atul mea-port of Eugiand, eo. Kent, lathe Avlewfonl, on the Medway, 28 m . Fi. liy 8 . Dovidon, rumi, and 34.1 m . by lonilon, Chatham and ouver ruilway. pop. of parl, lour, 80,177 in 1861. Chatham in sepjarated from the city of Slochenter $y$ a merely artiticial line : and the latter lieing nnuetel with Stroud by a brilge, the three towna mm a continuoun mircet of upwards of 8 m . along e uld lhover ruad from Iondon. For alout of m . low liochenter, tho town extenin along tho bank the river, which there lesula NND:, and Fi. by - till it falla into the nustuary of the Thamen Shecrmes. Notwithatanding the nhortnesa of coume, the Medway lian very deep water. At hatham the tille risen 18 ft . at apringen, and 12 ft . neajem ; and from Sheerneas to Chatham there ls ter to tloat tho largent mhipm ; and the ${ }^{\circ}$ grounti jug moft, and the renchen sloort, It forms an adrrible harlour for men-of-war: and it is to its cilitien In this respect that Chatham and the ntignous towns are mainly indebted for their

The principal elurch, a plain brick atrueture, as rebuilt in 1788; min a mure monlern one was ected in 1821, by the parlinmentary commisonens. Several more churches have sinee been ilt, as mano n mumber of dimsenting ehapels, a tional seliool, a proprictary classleal seliool, a ilomojhical mul literary institution, to which a aneum is attachen, nad two public subacription rarica. Here is also a chapel, on the site of unc fached to a monastery; fonnded in 1078, the enwiment of which supports four brothers, two of m in orders. Sir J. Inwkins' hospital for deed sermen and shipwrights, chartered in 159.4, ports 10 indiviluals. There are three or four hor claritien. 'Chatham chest,' whieh origlfed with Sir l'. Drake and Sir J. Hawkins, after Spanish Armata, and at first consisted of luntary contributions from scamen, soon became mpulsiry, and was ultimately removed, in 1803, Greenwich. Down to the 4th Wm. IV. it was pported by ileductlons from the monthly wages neannen, but an act of that session made it argenble on the consolldated fund. The town is considerably improved under an act passed in 72, but many parts of it still remalu narrow and egular. It Is in the jurisdiction of the co, magistes, with the exception of a small part, comsed within the mninicipal limits of Rochester. e lieform Act, which made it a borough, coned on it the privilege of returning one member the 1I. of C. The limits of the parlinmentary ough inclucle a considerable aren S. and F. of town. Registered electors 1,741 in 1865. rket-day, Saturday ; annnal fairs, May 10 , tember 10, each lasting three days: annual es in August. The town is almost wholly dependent on the t navnl and military establishments at Brompin its immediate neighbourhoocl, hut separated it by a line of fortitications. The dockyard, Bch lies along the E . side of the river, ls, inding the arsenal, above 1 m . in length; and is Ended by Gillingham Furt, Upnor Castle, and reral bastions. Fort Pitt, on tho S. or land side the town, was creeted in 1803. The dockyard htains between 500 and 600 houses for the artiers employed in the different works, and is undantly supplied with every means and ac-
commolation requirel for the builling and fitiong out of the largent shipm, It han five largo tillo doekn, cepable of receiving firat rate men-of-war, aud nix lmidiling-aliju for vemseln of the largeat dimenaionn ; a mant-honac, attachel to which aro gaw-mills worked hy ateam, and two Inrge flonting luasing, for the recepition of the timber for the mantas a smithery, where anchom of the largeat alze are forged; a mope-houme, where eables alove 100 futhomn in length, and 25 inches dlameter, aro twisted by jowerfil machinery i a sall-houne, and numarous warwhommen, cuntaining every article required for the building nald equipment of alipm of war. Here also in a sjuare net of lrunel's block machinery, in the event of that at lortmmenth getting out of onier ; dwellings for the eivil oflicers of the extablisliment, and a hanimome chapel. Near the entrance (which is a apacioun gatewny tlanked liy two towens) is a general marine luse pital, built in 1824, and eapalle of receiving $\mathbf{3} \mathbf{3} 10$ patients, Four luilkn moored off the dockyaril, one for juvenilo, two for ailult oflenders, and one as a hompital, form the conviet estublimhment, usiually containing from 900 to 1,000 individuals, emploverd in the common drulgery of the arwetal. Thin orinanee wharf, to the W. of the dockyarl (on tho wlip of land between the chureh and river, quarter of a m. from the high atreet of Chatham), contains the guns belonging to each vessel respectively, In separate tiers, piles of shot and ahells, a wellnrranged armoury, and a large building in which lead is rolled and paint gronind by steam minchinery. The military establinlimente, comprised within the lines, consinst of large infantry, marine, engineer, and artillery barrucks, with a park ol artillery. There is also a sehon, entablished in 1812, where young engineering officers and recruits are trained to n pmetical acquaintance with their duties, The naval arsenal was firnt formed a short time previously to the Spaninh Armada, on the site of the present ordnance wharf: Upnor Castle was also bullt alsent the same time. The dockyard was removed to its present site $\mathrm{b}_{\mathrm{y}}$ James $I_{\text {on }}$ and was subsequently enlarged and improved, lyy the fornation of flonting locks, by Charles I., at which period Gillligham Fort was built; but the present establishments were priscipally formed subserfuently to 1758, when an act was passed for their constructlon. Previously to this, the security of the arsenal depended mainly on the river forts, especially that of Sheerness; and on the guarl slips stationed in the river. These, however, were not adequate for its protection. A memorable instance of their insufficiency oceurred in 1ti67, when a powerful Dutch Heet, muder De Ruyter, having suddenly appeared in the Thames, took Sheerness, broke a strong chain that had been drawn across the Nelway, and, sailing up the river as fur as Chatham, destroyed several sail of the llue and a great quantity of stores. The Dutch accomplished this brilliant and daring achlevement without incurring any material luss; but the fortifications were soon after very materially strengthened, and are now such as to render any coup de main of this sort quite out of the question
To shorten the distance by water, and facilitate the communication between London and Chatham, an open canal and tunnel was made, at the begrining of tho present century, from the Thames, opposite Tilbury Fort, to Cbatham, a distance of nbout 9 m ., of which about 2 m . are tunnelled. Hut notwithstanding the obvious importance of this channel of communication as a means of saving clistanee, the too grent height of the rates prevented it from being much used, and it was ultimately sold to the North Kent railway

eompany, who ueel the tumel for the railmoal. Cetcham, or the Village of Cottapew, in the name of Chathum in Domenday, and many IVritish and lamman remalus have bieen funuad lis len vieinity: hut the grenice part of the moileris town han ineen huilt nince the wign of Eilizaiveth. Chatham han given the tithe of earl to the P'ite family.

CHIA'LILI.ON-SU It-I.OIN(I, a towi in Franee, adép. Lairet, enp, eant., oll the Loing, 14 m . SNE. Montargin. 1 lope 2, bet in 1861 . Thim town belunged to the family of Collpay ; nnd in lin old cantle, on the lith of Felimary, 1517, wan horn the fiamoin Adiniral de Colignil, the most Hlinstrioun vietim of the manamere of St . Jartholonew. 'the inaugled remainn of the admiral having been deppwited, by the care of some of hin servante, in the elingel of the eantle of Chatillon, were trannterred, in 1786, to Maupertuis, where a monument was ereeted to hin memory.

CIIATLLI,ON-sUUR-NliNE, a town of Franee, del. Cote d'Or, eap, arromi., on the Selne, 28 m . NNL: Semur-en-Auxuin, on the railway from J'arin to Mulhoume, l'op, 4, 836 in 1861. The town In neat, well built, and well laid out ; it has a flne contle, a communal college, a minall publile library, a hospital, and a mehool of denign, a noclety of apriculture. It has also fubrics of eonase cloth, Intin, Jowellery, Iron-platen, glans, beet-root sugar, nud' cauks. There was furnerly, within the purk belomging to Marsinal Marmonit, a very perfect ngricinltural establishoment, and an extablimhment for the prepuration of iron and hardware articlea: but since the cienth of the marshal, the establishmente in quention have been dimmantled and the articles sold. Chatillon was, in 1814, the sent of the unmucecessful negociations between Napoleon mil the Allies.

CHAThE: (LA), a town of France, dép. Indre, enp. arromi., on the left bruk of the Jndre, 22 m . Sli. Chateauroux. 1'op, $5,0: 18$ in 1861. The town is agreenbly situnted on the side of a hinl, and was firmerly defended by an immense castle, now in ruins, and of which one of the towers nerves for a prisoll. It bas a handsome church, and a line promenade ; with a court of primary jurisdiction, a communal cullege, very exiensive tanneries and lenther munufactures, nind falurics of serge and other coarso woollen stuffis Chestmuts are very plentiful in its vicinity ; and it has a considerable trale in them, and in cattle, wool, and lieies.
CHATSK, a town of Ruspin in Europe, gov. Taunbof, cap. distr., on the Chateha, 95 m . N. Tambof. Listim. pop. 8,000. The town was founded in 1553, and peopled with Strelity, Pouchgars, and Cossneks, and was formerly fortified; and has a good deal of trade in corn, cattle, tallow, honey, hemp, and iron.
CMA'TSWORTH, a famous seat belonging to the Duke of Devonshire. See Bakewell.
CHATTELHOOL, a town of Hindostan, province Allahabad, about 140 miles WSW. that city, formerly a flourishing place, and still possessing extensive manufactures of coarse cotion wrapper.

Cflaudes-aigues, a town of France, dép. Cantal, cap, cant., in a narrow, deep gorge, on one of the affluents of the Truyere, 14 m . SSW. St. Flour. l'op, 1,050 in 1861. This town is indelted for whatever importance it may possess to its hot springs, which were known to the Lomans, by whom they were called Aqua Culentes, of which its molerit name is a translation. Their temperature varies from $30^{\circ}$ to $80^{\circ}$ Reaumur. In winter, the houses are warmed with the hot water conveyed through the strects and into the houses in wooden pipes. It is alsosuccessfully employed in the incubation of various species of eggs. It
lina nome traile in ininglana, and carrien on aome liranelien of the womllen mumufucture.
CLIAUMON'S' (firmerly Chammont-en- Dhamipmy), a town of France, didy, Dlauto Marne, of which is is the enjh, in a heiritht between the Mariue mist the Nuize, alnuit it m . from the eemithence of thees riven, 18 ml , NNW, L, angren, l'op, 7,140 in Imil. The tuwn in indifferently built, mereseta ntraight and clean, but mome of them steep; and of diftieule access, It funnerly labomreal under a delieiency of water; but now it jwmeswem severill line fumitalun, aupplied by meann of a hydraulle machine. It has meveral groud publie bulfiling"; and in the ppper part of the town are nome thiee promenailes Loibin XII., Francin I., and Ilenry It., murroumded it with walls and ditchen ; but thene are in a ntate of disrepair, nud in mont placen, indeed, are thrown down and tilled up, It hum tribunala of primnary jurlistictlon and of commerce ; a departmental college, a meciety of nuriculture, commerce, nuil artin; a publle librury, with 35,0 ons voluman ; a themfry, a honpital, and a homse of correetion; manulactures of conrso woollens and drugzets, with limportant falrien of hosiery and gloves; and a considerable trade in Iron aide cutlery. The emperurs of Austria numl llussia, and the king of l'russia, slgned here, in 1814, a trenty againat Nupoleon.

CILAUNY, n town of France, dép. Aisme, eap. eant., nt the polut where the Oise in joined hy the canal of St. (luentin, halt the town loing binilt on an inland in the river, 18 m . W. Laum, on the railnay from 1'aris to Mona. 1 'op, 8,163 in 18(i). I grood deal of cisler ly made in the town, which has alno a considerable amount of trade, being favourably situnted for commerce.
CHAVES, a fortifled frontler town of Portugal, prov. Tras os Montes, on the right lank of the Tamega, over which it has a Roman brilgre of eighteen arches, 40 m . W. Ilragnan., l'op, fi, itil) In 1858. The town has mineral buth, which, were formerly much frequented. It wan taken by the French, under Marshal Noult, on his entry lifto Portugal in 1808 , but was recaptured by the Spaniaris In the following year.
CLIAYENL'OOR, a town and distr, of Nepail. N. Hindostan; the former is fortilled, nad is 130 m. E. by S. Cutmandoo. The distr, is altogethet mountuinons ; it exports to Thibet rice, whenh, oil, butter, iron, corper, cotton and woollen cloth planks, splices, Indigo, tobnceo, sugar, furs, and pearls; and imports thence, salt. golli, silver, musk musk deer skins, chowries, blankets, Chinese silky borax, and medicinal herbs.

CHEADLE, $n$ market town and par. of Eng. land, co. Stafford, S. div., hund Totmonelow, INify m. NW. London, by London and North-Wextem railway. lop, of town 3,191, and of par. 4,803 ie 1861. The town is pleasantly seated in the mosi fertle part of the Moorland, in a vale surrounded by hills, planted with forest trees, and in a distrit abounding with coal. It consists of one prinepui and four small streets, and is intersected by the ruails from Newcastle to Ashbourn, and from Led to Uttoxeter. The church is an ancient structure in the decorated style of English church architeo ture. The chapel of ense, a neat building, wa erected by subscription in 1832. The town is governed by a constable and headborough, nominated annually at the eourt-leet, held by the lor' of the manor. It is also a station for receiving votes at the election of mems, of the H. of C. fit the N. div. of the eo. The living is a rectory, it the archdeaconry of Stafford, and diocese of Jich field and Coventry. Patron, master and fellow of Trinity College, Cambridge. Thers are variove chapels for dissenters and 1R. Catholics. It has freo school, endowed in 1685; a national schal
and carries on nome uffucture.

CIIliLSESA, a tuwn and par., furming part of the W. suhurbs of the netropolis of Fhglanil, co. Midillesex, hund. Osaulatom, Kensiugtun div: 1'op, of par, 32,371 in 1831; 10,179 in 1ल.11; nul 63, 439 in 1861. Chelsea is situated on the N. bank of the Thames, along the willest of its renches abovo London lriuge, and is commected with llatterwen by a moderis sumpension, and an old wooden bridfe. Thu lower, or old town, is irregularly built, and on the whole of mean appearance: its bent houses are those of Cheyne Waik, along the sile of the river aloove the hospital, anciently a fashionable resurt, where many distinguished individunls rewidel. 'The upper and moro molern town, which extends towards Hyde Park, and comprises Slonne Ntreet and Square, Cadogan Place, anil part of Knightsbridge, consists of handsome and regularly built houses. The original parish church near the river (the oldest part of which is of the 14th contury) contains many interesting monuments; amongst others, one to Sir Thomas More, and in its churehyard is one to Sir Hans Sloane, who resided here, and was lord of the manor. This original chureli has now become a chapel of ease to a splendid church, built in 1824 , in the decurated anil later Gothic style, of which it is a very tine specimen: it has 927 free sittings, in consequence of tho parliamentary commissioners having contributed several thousand pounds towards its ercetion, There are numerous other religions editices, among them an episcopal chapel in Park Street, built in 1718; another in Sloane Street, in the Inter pointed style, in which there are 650 free sittings: gevernl dissentling chapels, a charity school founded in 1694, in which 40 scholars are educated, and 30 of the number clothed; a national school behind the church, and others connected with the I'ark and Sloane Street chapels; besides several minur charities. The most important public estab., however, is that of tho military hospital, finished in

1690, on a plan of Sir C. Wren, at an expense of 150,0001 , it is of brick, with stone quoins, columns, and cornices, and forms three quadrangles in the centre of extensive grounds; those at the back of the strueture being planted with avenues, those in front, occupied by garlens which extent to the river, to which the central quadranglo opens, forming the S. front, with wings on either side, ornamented with porticos and piazzas. The estab, has a governor and lieutenant-governor, and usually abrout 550 in-pensioners, consisting of veteran soldlers, who, besides fool and clothing, receive weekly pay, varying aceording to rank and serviee. The affairs of the hospital are managed by a board of commissioners. Sir Stephen Fox, the chicf promoter of this noble institution, contributed 13,000l, towards its formntion. York Hospital is connected with the Royal IIospital, having been built for the reception of wounded soldiers from forcign stations, who are taken into the other as vacaucies oceur. A military asylum was established by the Duke of York in 1801, for soldiers' orphans, and the children of those on foreign stations. It is a linndsome building, not far from the Koynl Hospital: 700 boys and 300 girls being mnintained, clothed, and educated in it on Bell's plan : the boys, on leaving, enter the army; the girls are apprenticed. Between Chelsea Hospital and Cheyne's Walk are the botanical gardens of the Apothecaries' Company, eccupying four ncres on the bank of the river, granted by Sir H. Slonne, whose statue by Rysbrach is placed there : a hothouse green-houses, and library are connected with them, and nmmual lectures are given. There are similar gariens near Sloane Street, estab. in 1807, comprising six acres, in which lectures are also given in May and June: the plants are arranged in comprirtments on the Linnican system.

Chelsea continued, through the 17th and 18th centuries, a favourite and fashionable resort, and was noted for its taverns and public gardens: the Ranelngh Gardens, adjoining those of the Royal Hospital, were closed in 1805 .
CHELTENHAM, a town, parl. bor. and fashionable watering-place of England, co. Gloucester, hund. Clieltenham, in a fertile vale opening to the S. and W., at the base of the Cotswold Hills, on the Chelt, a small stream, whence it derives its name; 9 m . NE. Gloucester, 97 m . WNW. London by road, and $121 \frac{1}{2} \mathrm{~m}$. by Great Western railway. Pop. of parl. bor., which is identical with the parish, 39,693 in 1861. The increase of the town since the commencement of the present century, occasioned by the great influx of wealthy invalids and others, attracted by the eelebrity of its spas, the mild and equable temperature of the site, and the beauty of the surrounding neighbourhood, has been quite extraordinary. In 1801 the pop. amounted to only 3,076 ; in 1811 it had increased to 8,325 ; in 1821 , to 13,396 ; in 1831 , to 22,492 ; and in 1841, to 31,411. 'I'he High Street, running NW. and SE., is upwards of $1 \frac{1}{2} \mathrm{~m}$. in length; several others branch from it at right angles, on each side, leading to the various squares, terraces, detached villas, and spas; each of the latter being surrounded by extensive pleasuregrounds. On the N. side of the town, amongst other fine ranges, are Columbia Place, St. Margaret's Terrace, and Pitville Lawn; on the S. the Upper and Lower Promenades (on the plan of the Louvre), and the Crescent; and up the ascent in that direction, Lansdown Place, Crescent, and Terrace, commanding fine views of the Malvern Hills. The spas, to which the town is indebted for its rapid growth and celebrity in the fashionable world, originate in a considerable number of saline springs, rising in different parts of the vale,
and having their source in the new red sandstone formation, which appears nt the surface nt the lnve of Coombe Hill, NW. of the town, whence it dips gradually, und is about 700 ft . bencath the surface of the chief streets and squares. In all the springs, chloride of solium is the predominating ingre. dlent, and prevails the most where the red sandstone is approached the nearest. The other mineral components consist eliefly of the sulphates of soda, magnesia, and lime, oxide of iron, nul chloride of manganeso-the three last in smaller proportions. lodine and bromine have also been detected in several of the springs. Though the ground hns been bored to the depth of 260 ft., none of the present wells exceed 180 ft . in depth. The waters, not only of different springs, but those of the same spring, at diffurent times, probably vary much in their analysis, as several eminent clicmists have arrived at different results. The varions ingredients, except chloride of sodium, are sulpposed to be derived from the lias incumbent ont tho red sand, the waters becoming impreguated in their aseent through the different marls and elnys of that formation. They are chiefly efficacious in bilious and dyspeptic cnses; and nre taken as aperients, usually to the extent of 2 or 3 half-pint glasses before breakfast, at intervals of a quirter of an hour between each. The alknline form the most numerous class; the magnesian occurs in ? or 3 wells of recent origin; and at the old wells and Montpellier are sulphurous springs used in cases of scrofula. The enrliest of these saline springs first attracted attention in 1716, and was subsequently enclosel and resorted to by a few invalids. It was not, however, till the visit of George III. in 1778, that the waters obtained any extellsive repute; since which period, or a little lnter Cheltenham has increased, with singulnr rapidity and with every prospect of its still continuing a favourite resort of the fashionable world, and of wealthy invalids from the E. Indies, and other hot climates. The Original Establishment, or Old Well, has been greatly extended and improved; it is approached by a fine avenue, and has the crest of a pigeon on various parts of the strueture, in allusion to the discovery of the first spring, from its being resorted to by flocks of those birds. 'The Montpellier Spa (about $\frac{1}{3} \mathrm{~m}$. S. of the town) was first opened in 1809; this has also been greatly augmented, and is at present the most fashionable resort during the season, which, at all the spaz, begins May 1 and ends Oct. 31. During this pe riod they are opened at 6 in the morning; and at Montpellier there is a numerous band in attendance from 8 to 10 o'clock, the usual time for drinking the waters and promenading, The evening musiral promenades at the same spn are algo amongst the principal attractions of Cheltenhnm; and, during the season, the weekly sssemblies take place in the rotunda of this spa. In winter they are held at a splendid suite of rooms in the High Street. The Montpellier baths comprise every variety of warm, cold, vapour, nir, and shampooing and adjoining them is an extensive laboratory for manufacturing the various kinds of 'Chelteninnm Salts.' They form altogether an extensive range of buildings, and are supplied with the mineral water of 80 different wells, conducted by one main pipe to the establishment. The monthly exhibi. tions of the Horticultural and Floral Society are held at the Montpellier and Pittville Spas. The Litter is in the Grecian style, and is a splendid structure, on an eminence N. of the town, commanding fine prospects, with extensive walks nnd drives round it. A few public breakfasts are given at this spa during the season, but hitherto the southern quarter of Cheltenham has always been
the new red sandstone the surface at the hase town, whence it dips 0 ft. bencath the surfine tares. In all the spriags, predominating ingrest where the red mandarest. The other mineefly of the sulphates of oxide of iron, and chlotree last in smaller pronine have also been desprings. Though the he depth of 260 ft ., none 180 ft . in depth. The nt springs, butt thore of at times, probably vary $s$ several eminent cheent results. The varions ide of solium, are supthe lias incumbent on ecoming impregnated in lifferent marls and clays are chietly efticacious in s; and are taken as apetent of 2 or 3 half-pint intervals of a quarter The alknline form the magnesian occurs in " 1 ; and at the old wells ilurous springs used in earliest of these saline ention in 1716, and wn 1 resorted to by a few in er, till the visit of Georg ters obtained any exten period, or a littlo later 1 , with singular rapisity of its still continuing a ashionable world, and of E. Inclies, and other hot Establishment, or Odd tended and improved; it venue, and has the crest brts of the structure, in of the first spring, from locks of those birds. The m . During this pein the morning ; and at merous band in attendck, the usual time for romenading, The eveat the same spa are also ractions of Cheltenham; a weekly assemblies take his spa. In winter they te of rooms in the High baths comprise every ur, air, and shampooing, extensive laboratory for s kinds of 'Cheltenham her an extensive range plied with the mineral conducted by one main

The monthly exhibiand Floral Society sre d Pittville Spas. The tyle, and is a splendid N. of the town, comth extensive walks and blic breakfasts are given ason, but hitherto the nham has always been
the most frqquented and fashionable. The Pittville establishment was opened in 1830 , having cost in all about 60,000 l. The Cambray $S_{1 a}$ is a amall Gothic structure, built over a chalybeate pring. The whole of these spas are more or less requented thronghont the year: thero are also good public baths in tho High Street. The parish church is an ancient Gothle building, wlth a lofty pire, in the milist of an extensive churchyari, planted with noble avenues. There aro also 6 modern clurches; built partly by private sulscripdion, and partly by grant from tho commissioners; Catholic, and varions dissenting chapels. A free raminar school was founded in 1586 , for at least 0 boys; but grammar being held to menn Latin, hough the scholars are instructed gratuitously in bat language, they have to pay for instniction in nglish. Varions efforts have been made to obiato this anomaly and get tho sehool placed on improved foothg. It has 2 cratu: Irma at Pem roke College, Oxford, worth a!i c $\because$; and 4 hurch livingsare excluslvely open to the scholars this school who have obtained exhibitions. A arrity school was founded in 1682 , for boys of his and several other purs, who, on leaving, have on nurrentice fee allowed them; a national school, stablished in 1817, has between 500 and 600 chilren daily, and 200 on Sundays; a female orphan ssylum, founded in 1806 by Queen Charlotte, naintnins and educates about 27 children.
But the principal educational establishment connected with the town is the Proprietary College. It was set va foot by a large body of subscribers, vith the view of furnishing a complete course of classical instruction to the sons of the upper classes. The building, a magniticent fabric in the Tudor tyle, opened in 1843 , has a frout 240 ft . in length, with a tower rising to the height of about 80 ft Inside it has a school-room 90 ft . by 45 do., a gymbasium of the same dimensions, and lecture-rooms.
The principal charitablo institutions are, the meneral hospital, accommodating 100 patients from ell parts; the dispensary and casualty hospital, established 1813; the benevolent and anti-menjicity society, established in 1827, and affording relief in kind, by means of tickets; the Cobourg (for women in child-birth), Dorcas, and numerous others; alms-houses, founded 1574 , for six old people; and several minor charities. There aro public libraries and reading-rooms at each of the spas, and five or six others in the town; a literary and philosophical institution, established 1833, at which lectures are frequently given, with a good library and museum ; and zoological gardens. The General Association for Scientific and Literary Instruction has weekly meetings and courses of lec-tures-it is on the plan of a Mechanics' Institute. There is a neat thentre, usually open in summer, but enjoying no great share of patronage. The swembly rooms in Regent Street, opened in 1816 cost $60,000 \mathrm{l}$. The ball-room is 87 ft . by 40 , and 0 ft . high. The market-place is an extensive tructure, built in 1823, with an entrance, through in arcade, from the High Street. Market, Thurs. and Sat.; there is usually an abundant supply, at noderate prices. Annual fairs for cattle and clicese re held the 2nd Thursday in April, August 5, 2nd Tuesday in Sept., and 3rd Thursday in Dec.; there are also two statute fairs, on Thursday before and nfter Old Michaelmas Day. Malting is carried on to some extent, but the chief trade of the place is caused by the great influx of visitors to the spas, and by its being a considerable thoroughfare Cheltenham is connected by railways with nill parts of the country, and has profited much by the consequent facility of commmication. Coals and other articles of general consumption are brought,
by a railway, from the Gloucester and Berkeloy Ship Canal to the W. side of the town ( 9 m .) where there are convoniont wharfs and warehouses. Water, fur domestic uso, ls conluctel from sources in tho Cotswold Hills to a largo reservoir, and thence, hy pipes, to the upper stories of most of the houses: this and the gas (with which the whole of the town nud suburbs are well lighted) are supplied by privato companies, The Reform Act conferred on Cheltenham, for the first time, tho privilege of returning 1 mem. to the $1 I$. of $\mathbf{C}$. The limits of the parl, bor, coincide, as already mentioned, with those of the par. Registered electors, 2,664 in 1862. Gross annual vulue of real property, 201,098l. in 1857, anl 216,169l, in 186\%. The government of the town is vested in commis. sioners. The scenery in every direction is very beantiful, and nightingales abound in the vicinity Bennal's Wood, abont 1 m . from the town, has been named, from the numbers that frequent it Nightingale Grove. From some of the neighhouring summits extensive prospects are commaudel especially froom Cleeve Cloud, Birdlip, Charlton Deer Park, and 'the Castles,' so named from the remains of some ancient encampments. Sudeley Castle, a splendid old ruin; Southam, a curions specimen of tomestic architecture of the Tudor period; Witcombe, where the remains of a Roman villa were discovered in 1818 (Archroolog., vol. ii.) and Toldington, a splendid modern seat, aro is the vicinity.

CHELVA, a town of Spain, prov. Vulencia, on a river of the same name, 39 m . NW. Valencin. Pop, 4,499 in 1857. There are vestiges of an ancient Roman aqueduct, on the NE. of this town, that servel to convey water to Liria. The neighbourhood is plantel with mulberries and vines, and produces wheat, barley, rye, oats, maize, wine and oil.

CHEMNITZ, a town of the k. of Saxony, circ. Zwickau, cap. distr. of same name, on the Chemnitz river, 20 m . ENE. Zwickau, and 37 m . WSW Dresden, on the railway from Dresten to Nuremberg. Pop. 45,432 in 1861. The town was formerly walled, but its fortifications have been levellerl, and their site is now laid out in public walks. It has some good streets and squares, $n$ castle, five churches, four hospitals, a town hall, cloth hall, lyceum, and school of design, and has handsome and thriving suburbs. Chemnitz is the principal manufacturing town of the kingdom. It has extensive cotton manufactures, and that of cotton hosiery, mitts, \&c., to which it is mainly indebted for its rapid growth, is said to employ from 15,000 to 20,000 looms in Chemnitz and the neighbouring villages. The stockings and mitts manufactured here are now very widely dillused over the states comprised within the German Customs League; and considerable quantities are also shipped for the U. States. In 1862, there were in the town 51 factories of woollen stuffs; 18 factories for stockings and mitts; and 16 for cotton. There were also, at the same date, 4 iron foundries, and 20 establishments for the manufacture of spinning machinery, with which it supplies a considerable part of the Continent. The town has besides manufactures of linens, and dyeing and bleaching establishments. The district of Chemnitz contains fourteen villages, and had, in 1861, a pop. of above 80,000 inhab., most of whom are employed in the above branches of industry. Chemnitz was for 400 years a free imperial city. It was the birthplace of Puffendorf.

CHENONCEAUX (CASTLEOF). See Blené.
CHEPSTOW, a sea-port town and par. of England, co. Monmouth, hund. Caldecot; on the Wye, $2 \frac{1}{2} \mathrm{~m}$. from its embouchure in the Severn, 110 m .

## CHERBOURG

W. Lond. by road, and 141 m . by Great Western railway. 1op. 3,364 in 1861. The town stands on a gradual slope ietwixt bold cliffs rising from the W . bank of the river, and is surromuded by some of the finest seencry in lingland. Strects broad, well paved, and lighted with gas, but bailly supplied with water. There are many good houses, and the town looks neat and cheerful. The church has a fine Norman entrance, and many curious specimens of the carly pointed style. It has also a Cath. and several diss, chapels; an endowed charity school for thirteen chilliren; a national school, two ancient hospitals, in which twenty-five aged persons are supported; and several minor charities. Market, Wed. and Sat. Fairs, Frid. alld Sat. in Whitsun-week; Sat. before June 20, Aug. 1, aud Frid. before Oct. 29. It has no manufactures; bit a considerable trade, leing the chicf port of most of the places on the Wye and Lug, Encluding Herefordshire and the E., part of Monmouth. Ship-buikling is carried on to some extent; and alout 70 vessels, of the aggregate tonnage of 4,600 tons, belong to the port. The tide runs with great rapidity in the river, making its nnvigation a little daugerous; and it rises at ordinary springs between 40 and 50 ft ., and at high springs it sometimes reaches between 50 and 60 ft.; hence very large ships mny come up to the town, and barges of 30 tons burden ascend the river to Hereford. $A$ handsome iron bridge was thrown over the river in 1816 at the joint expense of the two cos, separated by the Wye. The castle, on a steep cliff overhanging the Wye, dates from the 11 th century; though most of the existing remains, which occupy a considerable space, appear to be of more recent origin: it was alternately in the hands of both parties during the last civil wan; and atter the restoration, Henry Martyn, the regicide, was imprisoned for life in one of its towers, where he died after thirty years' confinement. The co. magistrates hold petty sessions in the town, and a small theatre is occasionally opened.

CHER, an inl. dép. of France, reg. Centre, formed of part of Berri and Bourbonnais, naving N. the dép. Loiret, E. Nivêre, S. Allier and Crense, and W. Indre and Loire-et-Cher. Area, 720,880 hectares, or 2,853 Eng. sq. m. Pop. 323,393 in 1861. It derives its name from the Cher, by which it is intersected, and is included in the basin of the Loire, which, with the Allier, forms its E. boundary. Sturface generally Hat. Soil various : in the $\mathbf{E}_{\mathbf{L}}$, and along the Loire, it is very fertile; S . it is of a medium quality, while in the $\mathbf{N}$. it is sandy, and covered in great part with heath. Agriculture backward. Principal crops, whent, maslin, ryc, barley, and oats. Hemp is largely cuitivated, the crop being estimated at about 750,000 kilog. a year. The natural meadows, which are extensive and valuable, are principally depastured ly sheep and cattle. The stock of sheep is estimated at about 500,000 head, producing annually 570,000 kilog. of wool. The stock of black cattle is estimnted at 85,000 head. In the reign of Henry IV., the horses of Berri enjoyed a liigh reputation; but the breed is now greatly deteriorated. Hogs and goats numerous. The forests occupy alout 120,000 hectares; and furnish timber for the navy. The vineyards cover nearly 13,000 hectares; those in the arrond. of Sancerre furnish the best wines. Iron is abundant, and is pretty extensively wrought. The cloth manufacture, once the staple of the dep., has greatly fallen off; and the glass works that were formerly to be met with have ceased to exist. The cutlery of Bourges is much esteemed; and there are fabrics of coarse cloth and linen, with earthenware manufactures, brewerics, and tanneries.

The dep. is divided into thrce arrondissements. Principnl towns, Bourges, St. Amand, Vierzon, and Snncerre.

CIIELASCO, an inl. town of N. Italy, pror. Cunco, advantageousi . situated on a point of hud between the Sturn and Tanaro, near their confluence, 31 m . SSE. Turin. Pop. 8,852 in 1861. The town was formerly an important military post, and is still surrounded with walls ; but its citadel was dismantled in 1796. It is well built and lald out, and supplied with water by a conal cut from the Sturn, which also turns several silk mills. Trade chietly in wlie and silk.
CILERBOURE, a principal sea-port and fortified town of France, dép. Manche, on 1ts N. shore, nearly opposite the W. extremity of the Inle of Wight, at the bettom of a bay formed by Cape Levi on the E., and Cape La Hogue onits extreme $W_{\text {., at }}$ at the mouth of the Divette, 41 m . NW. St. Lo, and 185 m . WNW. Paris, at the terminus of the Paris-Cherbourg railway. Pop, 41,812 in 1861. The strcets are narrow and dirty, notwithstanding there are many public fountains. Houses mostly of stone and slated. Chicf publie buildings: the military and marine arsenals; a spacious marine and scveral other hospitals; the parish church, a singular editce; the town hall and prison, both new and handsome buildings; a theatre; public baths and barrncks. From its advanced position in the English Chamnel, it las long been a favourite object with the French government to render Cherbourg n great naval arsenal, and a secure asylum for ships of war; and, to accomplish this, vast sums have been expended upon it. The harbours for merchantmen and shirid of war are quite distinct from cach other. The last, which was constructed by the Emperor Napoleon 1 ,, is a magniticent work. It is mostly excivated out of the solid rock, is 328 ynrds long ty 250 wide, and is capable of accommolating 50 ships of the line, which may enter it at all times, there being 25 ft . water at low ebb. It has four fine covered granite docks, 85 ft . deep, for the building of shipe, and a basin for those undergoing repair. Near the naval port is the dockyard of Chantercync for the building of frigates, containing a large timber yard, and a rope walk 546 yds. in length. The commercial port, formed by the mouth of the Divette, and ensy of access, consists of an outer harbour and a basin, the former 262 yds. long, by 218 wide; the latter 446 yds. long, by 138 wide. Between the two divisions is a sluice: the outer harbour communicates with the sea by a canal 656 yds. long, and 54 wide, bordered in its whole length by a granite jetty, within which a depth of 19 ft . water is always retninel. The roadstead of Cherbourg is one of the best in the Channel, and capable of contnining 400 sail. It is defeuded on all sides by batteries, and is protected from the northerly winds, which would otherwise throw in a heavy sea, and -1 a great measure also from the Chinnel currents, by a vast artiticinl digue, or breakwater, similar to that in Plymouth Sound, constructed in the centre of the bny, opposite to, and about $2 \frac{1}{2} \mathrm{~m}$. from, the mouth of the river. This great work, formed for the most part of granite and sandstone, was commenced under Louis XVI., in 1784, and continued till 1791 ; it was re-commenced by Napolcon I. in 1802, agnin discontinued in 1813, and finally completed by the Emperor Nnpoleon III, in 1864. lts foundation was laid by sinking many massive wooden frames, which were afterwards filled with blocks of stone. The length of the digne is 3,768 metres ( 4,120 yards) ; breadth at its base, 262 ft , at its summit, 101 ft . On its centrnl part, which is $9 \frac{1}{2} \mathrm{ft}$. above the water at the highest spring

Cherbourg is the seat of a tribunal of original jursaliction, of a marit. tribunal and prefecture, and is the cap. of the Ist naval arrondissement. It has a departmental college, a royal academical society, a public library with 3,500 vols., a naval library, and several muscums. Cherbourg, which is very ancient, was in the 10 th century called Carusbur. It was long in the possession of the English, and was the last place they retained in Normanly.

CIIERIBON, a aca-port town of Java, cap. div. and jrov., nt the head of a wlde bay on the $N$. coast of the isl., 128 m . SE. by E. Hatavia; lat. $f^{\circ}{ }^{\circ} 48^{\prime} \mathrm{S}$., long, $108^{\circ} 37^{\prime} \mathrm{E}$. In the early purt of the present century it suffered from a jestilence, which lestroyed more than a third of its inhab.: and, from this and other causes, it is said to have declined of late; but it still continues to be the resilence of a Dutch governor, and enjoys considerable trade. The town and harbour are protected by a fort. The distrlet of Cheribon is remarkable for its fertllity, and the excellence of its cuffec, inuligo, teak and timber.
CHERSO and OSERO (an. Crepsa and Alsorus, thgether called Absyrtides), two contiguous, long and narrow isls, of the Adriatic, belonging to Illi ria, gov. Trieste; between lat. $44^{\circ}$ g $0^{\prime}$ and $45^{\circ} 20^{\prime} \mathrm{N}$, and long. $14^{\circ} 15^{\prime}$ and $14^{\circ} 30^{\prime} \mathrm{F}$. , separated from Istria by the Gulf of Quarncro; united length nearly 50 m ., breadth varying from 1 to 8 m . Area 95 sq . m. Pop, of Cherso, 17,200 ; of Osero, 3,535 in 1857 . Surface generally mountainous, stony, and barren; but in some parts the olive, vine, fig, and various other fruits, and a little com, are grown, and in several parts there are good pasture lauds for sheep. Oil is the most valuable product of Cherso, wine of Osero. In the N. part of the former island there are some fine woods; and shrubs and plants for dyeing are very sbundant. The breed of sheep is very indifferent, and the wool bad. Other domestic aniauls are few. Many of the pop. subsist by the tumy and anchovy fisherics. There are a few manufactures, cliefly of coarse woollen cloth and liqueurs; and vessels are built at the principal towns :-these are Cherso, Osero, Lossin Grande, and Lossin Piccolo. Cherso, the cap., on the W. side of the islnnd of same name, has a good theugh small harbour, and 3,000 inhab. It contains a cathedral and numerous other churches; its streets are narrow and dirty; but its inhab. clean and industrious. Osero, also on the W. side of the island of Cherso, in an unhealthy situation, has only 1,500 inhab.; but it has a eathedral with a fine stceple, and was formerly the seat of a bishopric. It was sacked by the Saracens in 840. Its inhab. have some trade in timber. Lossin Grande and Piccolo are two insigniticant towns on the island of Osero. The two islands are connected by a bridge.

## CHERSON. See Khenson.

CHERTSEY, a town and par. of England, co. Surrey, hund. Godley, $22 \frac{1}{4} \mathrm{~m}$. SW. London, by the London and South Western railway. Pop. of town 2,910, and of par. 6,589 in 1861. The town, situated on the S. bank of the Thames, is neatly built of brick, partially paved, and well supplied with spring water, but not lighted. It is connected with the Middlesex side of the river by a stone bridge of 7 arches, built in 1785, at the joint expense of the two counties. The church, a handsome structure, erected in 1808, in the later pointed stylc, contains a tablet to the memory of the celebrated statesman C. J. Fox, who resided Voln II. for a lengthened period at St. Ann's Hill, near the town. There are also several dissenting chapels, and a school, founded in 1725, for 50 children of this and three aljoining parishes; its present revenue is above 4001. a year, anil it has been arranged on Beil's plan, and now educates 230 buys and 180 girls, of whom 30 of either sex belonging to Chertsey are clothed. Market day, Wedncestay. Fairs, Flist Monday and Tuesday in Lent, for cattle; May 14, for sheep ; Aug, 6 and Sept. 25, for pleasure and pedlery. The chief business of Chertsey consists in the manufacture of malt, flcur, iron hoops, and brooms: great quantitios of bricks are also mado in the nefghbourhood; and vegetablea are largely cultivated for the London murkets. Cæsar is supposed to have crussed the Thames near this place to attack Cassibelaunus; the stakes then driven Into the bed of the river by the Britons to obstruct the passage of the Romans are noticed by Bede as remaining in the 8th century; and vestiges of them are still tracenble $\frac{1}{4}$. below the brige. During the Heptarcliy, Chertsey was the residence of the S. Saxon kings: at Hardwick Court, in the par. (now a farm), Henry VI. resided when a child; and in an ancient monastery (founded by Edgar, and existing till Henry VIII.) he was privately interred, though his remains were subsequently removed to Windsor. Cowley the poct died is this town, where his study is still preserved.
CIIESAPEAKE BAY, a noble bay on the Atlantic side of the U. S. of N. America, having its embouchure on the coast of Virginin, between Cape Charles, lat. $37^{\circ} 7^{\prime}$ N., long. $76^{\circ} 2^{\prime}$ W., and Cape Henry, lat. $36^{\circ} 56^{\prime}$ N., long $76^{\circ} 4^{\prime}$ W., about 13 m . apart. It stretches nearly due $\mathrm{N}^{\prime}$. from Cape Henry to the mouth of the Susquehannah river, in $39^{\circ} 35^{\prime} \mathrm{N}$., a distance in a direct line of above 180 m . Its avcrage breadth N . of the Potomac river, in lat. $38^{\circ}$, is about 10 m .; but S . of that point it is about 25 m . Its const line is very irregular, inasmuch as it branches out on both sides into an immense number of bays; but including these, and its numerous islands, its area is estimated at 3,600 sg. m. (Darby.) It is wholly within the states of Virginia and Maryland. Chesapeake Bay differs from the other sounds on the Atlantic slope of the U . States in having only one outlet, as well as in its greater depth of water, which is generally about nine fathoms, affording many commodious liarbours, and a safe and casy navigation for ships of the largest burden. At its head it receives the Susquehannah; and on its W. site the Potomac, Rappahannock, York, and James rivers. On the same side are Baltimore, Annapolis, Norfolk, Hampton, \&c. ; and on its E. shore, Chester and Cambridge. Dismal Swamp canal connects Chesapeake Bay with Albemarle Sound; the Chesapeake and Ohio canal, from the tide water of the Potomac to Pittsburg, was commenced in 1828.
CHESHAM, a town and par, of England, co. Bucks, hund. Burnham, in a fertile vale, through which a small brook flows to join the Coln. Area of par., 11,880 acres. Pop. of town 2,208, and of par. 0,985 in 1861. The town, 26 m . NW. London, consists of three strects. The church, an ancient cruciform structure, has an embattled tower and spire; there are also four dissenting chapels, an almshouse for four old people, and a national school. Market on Wednesday for com, Saturday for general provisions. Fairs, April 21 and July 22, for cattle; a statute fair Sept. 28. Chesham was formerly noted for the manufacture of wooden turneryware, which, though still carricd on, lias greatly declined. The lace manufacture is wholly discontinued. Shoemaking, for the supply of the
metropolis, is the chief business; but the making of straw plait employs many females: there are also several paper-mills, and a small silk-mill in the vichity.

CIIESIfIIRE, a marit. co, of England, laving N. the Irish Sea, the cestuary of the Mersey, Jancashire, and a small part of Yorkshire ; E. the con. Derby and Stafford; S. Silop, and a portion of Fliut; and W. Denbigh, Flint, and the astuary of the Dec. Area, 6 ä 3,280 acres, of which abonit 600,000 are supposed to be arable, meadow, and pasture. I'op. 470,174 in 1861. The surface is fencrully low and that, with some considerable hills along its E. border, and a broken ridge on its W. side extending from Malpas to Frodshum ; in this ridge, near 'Tarporley, is the insulated rock of linston. It is watered by the Dee, Weaver, and other streans, and the Mersey forms the line of demareation between it and lancashire: it is also intersected by several canals. It has mines of conl, copper, lead, and cobalt; but its most valuable mineral cousists of an inexhanstible supply of rock-salt, vast quantities of which are annually ding up, and used partly for home consumption and partly for exportation; $n$ creat quantity of salt is also procured from the brine springs contignous to Northwich, Midellewich, \&c. The soil consists, for the most part, of a red, rich, sandy or clayey luam, much improved by nurling, and pencrally very fertile. The climate is mild and humid; and the comotry being low and well sheltered, and divided by hedges and hedge-row trees, is remarkable for its verlure num the luxnriance of its pastures. Ience Cheshire is one of the finest grazing districts in Englund, and has been long celebrated for its dairies. Cheese is the priscipal product ; and is not only highly esteened throughout England, where it is consumed in immense quantities, but nalso in many parts of the Continent and of America. Arabie lusbandry is a secondary object, and is less suited to the climate; but potatoes are grown in large quantities. Estates for the most jirt large ; this is one of the cos, in which the least change has taken place, for a lengthened period, in the ownership of land: farms mostly small, a great many noder 10 acres; but, excluding these, the average is probably abont 70 acres. Though there are but few extensive woods, Cheshire has, owing to the prevalence of liedge-row trees, a very woody appearance, and a large supply of available timber. Manufactures of cotton and silk are carried on with great spirit und success at Macclesfield, Congleton, Stockport, and other places. Cheshire has 7 hund. and 90 par., exclusive of the city of Chester. It sends ten members to the H. of C., viz. four for the co., and two each for the city of Chester, and the bors, of Macclestield and Stockport. Regist. electors for the co. 13,184 in 1865, of whom 6,303 for the northern and 6,881 for the sonthern division. Gross anmunl value of real property-in the northern division, 838,416 $l$. in 1857 , and 932,7771 . in 1862 ; in the sonthern division $1,144,0231$. in 1857 ; and $1,067,523 l$. in 1862 .

Cheshire is called a co. palatinc, from the sovereign power in it being formerly exercised by the Earl of Chester as filly as ly the king. But it has been long held by the crown. It had, however, separate courts and luw officers till the passing of the Welsh Juristiction Act of Geo. IV., when they were abolished, and its courts assimilated to those of the rest of the kingdom.
CHESTER, a city, co., parl. bor., and scaport of England, locally in the co. of Chester, hund. Broxton, on a rocky elevation on the N. bank of the Dee, by which it is lalf encircled, on the $S$. border of the co., about 6 m . above the confluence
of the Dee with its restuary, 27 m . S. by F. Liverpool, 164 m . NW. London, by road, and 1781 m . by Jondon and North Western railway. Pogo 31,110 in $18: 1$. The city is enclosed within an oblong quadrangle by walls of great antiquity, and which are most probably built on the site of those constructed by the IRomans. They make in all a circuit of 2,670 yaris, and are of great thickness, and kept in a complete state of requair. The ancient gateways linviug been removed and replaced by molern arches, a continnous walk on the top of the walls, 6 ft . wide, defended on one side ly a parapet, and on the other by a railing, extends all round the city, and alliords a great variety of fine prosprects. 'The form of the city,' says Mr. l'emant, 'evinces its Roman origin, being in the fignre of their camps; with four gates, four principal streets, and a variety of lesser, crossing the other at right augles, so as to divide the whole into lesver squares. The structure of the four principul streets is without parullel; they run direet from E. to W. and N. to S.; and linve heen excavated out of the carth, and sunk several feet below the surface. The carriages drive far below the leved of the kitchens, on a line with ranges of shops; over which, on ench sille of the streets, passengers walk from end to end, secure from wet or heat, in galleries (or rous, as they are called) purloined from the Hoor of each house, open in front, and balustraled. The back courts of all these houses are level with the rows; but to go into any one of these four streets it is necessary to lescend a flight of several steps.' (Tour in Wales, i. 117, 8 vo. ed.) The city has of late years been much modernised and improved, and a handsome nef street lias been fonmed from near the centre of the town to Grosvenor Bridge,-a noble stone stmicture of a single arch, 200 ft . in span, with a roalway 33 ft . in width. Previonsly to the ereetion of this bridge, the communication across the river was by an old, narrow, and inconvenieut bridge of seven arches. The suburbs have also been considerably extended. The whole is payed, liglited by gas, and supplied with water, raised by a steam-engine, from the Dee, and conducted by pipes to a large reservoir. The cathedral is a large Gothic pile, with a low massive tower; the interior is fine, with several lateral chapels in the earlier, and a cleristory in the later pointed style: the bishop's throne, and several ancient monuments, are highly interesting. Coutiguous to the cathedral are the remains of st. Werburgh's Abbey, which for nearly neven centuries was one of the wealthiest in the kinglom. The bishop's palace (rebuilt 1752), the prebendal, and other good modern houses (forming the Abley Square), ocenpy the rest of the precinct. There are nine parish churches, and two others not parochial. St. Jolm's church is a magnificent specimen of Saxon architecture; in 'Trinity Church are monuments to Parnell, the poet, and Matther Heury, the celebrated commentator, interred within its walls. It has nlso a Catholic and several dissenting chapels; a grammar-school, fonnded in 36 Hen . VIII. for 24 boys, from whom the cathedral choristers are selected: its aunual revenue is 1081., and it lins one exhibition to either university; two charity schools founded in 1717, on the site of the nncient hospitnl of St. John, one for 38 boys, of whom 28 are also mailltained; the other for a like number of girls; tho Marquis of Westminster's school, establishel in 1811, and wholly supported by him, educating between 400 and 500 children; a diocesan school, on Bell's plan, for 150 boys; three infant schooks and severnl large dissenting and Sunday schwols.

The co. each liay it lias a ritndle b Jomes's) shared by The old 1 one tower cent co, hi harracks, the site. style, and form threo trance to purtico. There two others nut is a magniticent in Trinity Church oet, and Matthew entator, interred a Catholic and grammar-schoul, boys, from whom ected: its annual ne exhibition to schools fonndel nt hospital of St. 28 are also mainnumber of girls; chool, established y him, educating a diocesan school, ee infant schools Sumlay schools.

The en. infirmary, and the co. lunatic asylum, each have accommolatlon for 100 patients; and It lias a lying-in hospital, a house of industry, severul sets of alma-honses, and various chasritahle bequeste,-the chief of which (enlled Jones's) prosluces about 400l, a year, which is alared ly the members of the ancient city guilds. The old Norman eastle (with the exception of one tower) was removed in 1790, and a magniltcent co. hall and guol, together with goverument harracks, aud an armoury, subsequently built ou the site. These structures are in the Grecian style, and linve great architectnral merit; they form three sides of a large qualrungle, the elltramo to the area beling by a splendid Dorie portico. The city courts of justice are held, and corporation business tranasacted in the Exclange, a plain brick edifice on pillars. There are three conmercial halls; one huilt by the Irish Linen Company, in 1780, for their trade, lint at present used for the cheese fairs,-that of linen, once so cousiderable, having wholly ceased; a second hall, built in 1809 by the Nanchester mannfacturers for their business; nud a third, in I81:, for general [urposes, as a private speculation: they are all ou the same plan, forming a qualrangle, round which are pillared arcales nid shops. There are also commercial rooms, comprising a goorl public library, news-room, a small thentre, and a good molern market-place. Narket, Wednesday and Saturday. Fairs, last Thursilay in Feb. for horses and cattle; July 10 and Oet. 10 for general merchandise: these last are of great antiquity, and continne several days: there are also cight annual cheese fnirs of recent origin; and the eity being situnted in the principnl cheese-making district of the empire, these fairs lave become of considernble importance. Anmual races are held in the lirst elear week of May on 'the liood-Dee,' a level pasture tract of about 80 acres at the base of the city walls. Manufaetures incousiderable: skins and gloves once formed the staples; but these have greatly diminished : there are a few small falories of tobaceo-pipes, large flour-mills by the old bridge, and a shot-tower beside the eanal, on the N . side of the city, where also are several wharfs and warchouses, chiefly for the convenience of the traffic between the city and Liverpool; articles of general consumption being now chiefly supplied from the latter.
At the ara of the Conquest, and for long after, Chester was a place of very considerable importance as a eomnercinl and shipping port ; but the gradual filling up of the channel of the river, and latterly the superior facilities enjoyed by Liverpool, have proved destructive to its trinle. In 1737, in order to obviate the difficulties of the river navigation, an artificial channel was excavated, on a plan suggested long previously by the eelebrated Andrew Yarranton, from Chester to the sea. It has since been improved, and vessels of 300 tons may now ascend to the city ; but it has not recorered any portion of its former importance as a maritime town.
Chester is a bor. by prescription ; its three earliest eharters are withont date, but were probably granted in the early part of the 13 th century. There are many others, the latest of which dates in 44 Geo. 1II. ; the governing clarter (previously to the Municipal Keform Act), in 21 IIen. VIl., considerably extended the former privileges, and made Chester a distinct co. : under it were a mayor, deputy mayor, 24 aldermen, nnd 40 common councillors. The governing body were self-elective, despite the provisions of the charter, and of much litigation, which in the twenty years preceding

1832, cost upwards of 20,000 . Chenter has returned two mem, to the 11. of C., since 1541. Previonsly to the Reform Aet, the elective franchlse vested in the goveming borly and in the resident freemen. The limits of the prarl. lur. luclude the greater part of the townslify of 3roughton and some other patches, the registered constltuency numbering 2,395 in 18122 , of whom 1,086 olil freemen. The limits of the municipal have since been male to eolnciole with thowe of the parl. lor.: and it is now divided into the wnris, and governed by a mayor, 10 alderincit, and 30 eoniseillors. 'Tho gross ammal volue of real property assessed to income trix, in the city, amominted to 553,1 iotil. in 1857, and to 174, 6itil. in 186:2. There are $\mathbf{2} 1$ ancient guilds or trades still sulsisfing, though at present prosessing suarcely any property or importanee, except that of the foldsmiths, who lave an assay master and oltice, and claim the examination of all plate manathetured for sule in Cheshire, Chester, Lancashire, mal N. Wales. The crown mote is the crimiual cuurt, with jurisiliction over the highest oflences; the port-mote is the chicf eivil conrt where netions to any anount are trien ; the pentice and passage courts are suborilimate to the latter, the shorifl presiding in them. There are three generul sessions n year, held in the superior courts, attended by tinrristers, and presided over by the reeorder ind mayor; petty sessions for the eity are held twice a week.

The city is most probably of Roman origin. Originally it had the name of Deva, from its sitnation on the Dee, and subsequently of Cestria, from its being a custrum, or camp. It was the head-quarters of the 20th legion, whiel came into liritain previously to A.1. 61 ; and not only does the figure and eonstruction of the town attest its lioman origin, but fragments of lioman arches and other luildings existed down to a recent period, and probably some still remain; and paveinents, many eoins, mul an altar dediented to Jupiter Tanarus by the primipilus (prineipal centurion) of the 20th legion, have been dug ipp. Willimm the Congueror bestowed the title of Earl of Chester, with sovereign power over the whole of Cheshire, on his nephew Hugh d'Avranches, or Lupus; and his successors to the reign of Henry 111. continued in the exereise of like authority. In the last civil war Chester sustained a memorable siege muler Lord liyron, by whom it was ultimntely surrendered on honourable terms. In 1745 it was garrisoned against the l'retender, which is the last event of any importance in its listory.

Laton IInll, the magnifieent seat of the Marquis of Westminster, is about 3 m . S. of Chester ; its ehief approneh being by a triple avenue of limes extending from the end of the new Grosvenor Bridge (where there is a Gothic lorlge) to the principal front, through a park abounding in fine forest trees. The structure is an adaptation of the pointed ecelesinstical style to modern domestie purposes; that of Lelward III., as seen in York Minster, is eliefly followed, and emblazoned shields are profusely dispersed ; in the compartments of some of the windows are several fine portraits executed from cartoons by singletom: nmong sthers those of the six first carls of Chester, who held sovereign power previously to the title being hestowed by Hen. III. on his eldest son ; since which period it lins uniformly been conferred on the eldest sons of his successors.
CILESTER-LE-ST'REET, a township of England, eo. Durham, near the Wenr, 5 m . N. Durham. l'op. of th. 3,013, and of par. 23,076 in 1861 . It stands in a valley, on the line of the Roman way called Ermine Street, leading to Newenstle. The Saxons called it Cunceustre, or Cimeagrester, and
under that name it was the sent of the episcopal mee of Durham for 118 yeurs, till its removal to Durliam in 995 . The town is nearly 2 m . In leurth, and has a bridge over the Wear, opened in 1821. The church, formerly collegiate, and iledicated to St. Mary and St. Cuthbert, has a tower surmounted by a very fine spire 160 ft . high, and contnins monuments with effigies of members of the Lumley finily from the Conquest to the time of Eiliznbeth. The Independents and I'rimitive and Wesleyan Methodists have places of Worship. An endowed school edncenten twelve children. A mechnuics' institute is held in a handzome luilding erected for the jurpose. Copyhold courts are lueld in April nnil Nov., in which debts unier 40a. are recoverable; and petty sessioms are held on alterunte Thursiays. The place is $n$ stathon for recelving voten at elections for the S . div, of the co. The manufueture of nnils, ropen, and tiles is carred on liere; lint the inhab, are mostly employed in the surroumding eollieries and other worke.

CHES'TERFIELD, a bor, and market town of lingland, co. I erly, hand. Scarsinte, $20 \mathrm{~m} . \mathrm{N}_{\mathrm{t}}$ 1)erhy, 130 m . NW. by W. London hy road, and 1514 m . liy the Midland railway. Fop. of bor. 9,836 , and of par. 18,970 in 1861. The town, which is irregularly built, covers a considerable extent of ground, and is pleasantly situnted between the rivers lather and Hyper, in the vale of Nenralale. The ehurch, a beautiful and spachons celitlee of the 18 th century, is remarknible for its crooked spire, 230 ft . ligh. There is almo an elegant assembly-room, and near the town is a racecourse, out which races are munually run in the autumn. There are two or three manufnctorles of silk and cotton, hat they are not considerul)e. Just ont of the bor. there are some large iron-works. The chicf source of support for the town is the weekly market for agricultural prodnce, which is well attended. It is governed by four nidermen and twelve conncillors, but is not divided lnto warils. The lord of the manor holds n court leet in Oct., when $n$ constable is chosen; nnd a court of recond for the recovery of debts not exceeding 201. The petty sessions for the division are helid hero in the town-hall, on the ground-floor of which there is a prison for lebt rrs. Chestertleld is one of the polling places at the election of M.P. for the N. division of the co. The town is lighted under an act passed in 1825. There are various places of worship for dissenters, a free arnmmar-school, founded 2 Eliz., and formerly well attended, was closed in 1832. It has still, however, infant, Sunday, and national schools; several well-endowed nlms-houses, a'dispensary, a savings' bank, a mechanies' institute, and a literary and philosophical institution. The N. Midland railway between Derby and Leeds passes by Cliesterlicld. It gives the title of earl to a brancli of the Stanhope family. Market-lay, Saturlay. Fairs, Jan. 27, Feb. 28, first Snt. in April, Mny 4, July 4, Sept. 20゙, Nov. 28. The par. of Chesterfield includes an area of 13,160 acres

CHEVIOT HILLS, a ridge of hills in Great Britain, on the confines of England and Scotland, partly in Northumberland and partly in Roxburghshire. They extend from Kirknewton N. to Carter Fell on the S., where they unite with the hills that stretch across Dumfriesshire and Gallowny. The hill to which the nmme Cheviot is eapecially given, is in Northumberland, on the borders of lioxburghshire, 8 m . SSW. Wooler, and is $2,658 \mathrm{ft}$. in height. The Cheviot hills are mostly pointed, the sides smooth and rapidly sloping, and their bases separated by deep narrow glens. They are mostly covered with a close green sward; buit in a few instances, us in that of the Cheviot itself,
there are considernble tracts of heath. These hills are depastured by the valuable and peenline hreed of sheep called the Cheviotn, now whidely difineid over bingland and Scotland.
CHIAI'A DOS INDIOS, a considerable inl, town of Mexico, state of Chiaprs, alvantareonnly placed it a valley near the Tabrseo, 80 m . WNW: Ciulad de Ias Casas. It is chletly inhabited by Indians, whence its name, of whom there are anil to be as many as 4,000 families. It is the largest town in the atate, the chief trade of which it engrosses. Its principal export is logwood, which is sent down the river to Trabasco, on the Gulf of Mexico; but a good deal of sugar is nlso grown in its neighbourhool. Its inhab, are said to be rich. Chinpa enjoys many privileges : it was founded in 1827.
CHIARAMONTE, a town of Sicily, prov. Syracuse, cap. cant., on a hill, $11 \frac{1}{2} \mathrm{~m}$. NNW. Mortica. 1'op. 8,995 in 1861. The town is regularly built, with brond and stright streets. From the Cnpirchln convent there is one of the finest and most extensive vlews in Stelly: The environs produce geoll wine, and the towit is thriving.

CIIIARI, a town of Northeri Italy, prov. Brencia, enj. clintr., near the left bank of the Oglio, 15 mI . W. ly S. Brescin. L'op. 9,430 ln 1861. The inliabitants are chiefly occupied in spinning silk and tanning lenther. Tho town preserves some remalns of its ancient fortillcations, and has a handsome colleginte and many other churches, a hospitul, and a jublic library.

CHIIAROMONTE, a town of Southern Itnly, prov. Potenza, cap. cant., on a high momatnin. Pop, 2,921 in 18til. It has two parish churches, $\boldsymbol{n}$. convent, and a seminary. Its environs produce wine and silk, and there is a fine chartreuse abont 3 m . off.

CHIIAVARI, n marit. town of N. Italy, pror. Genon, cap. prov., at the lead of the llay of Knpallo, 22 m . ESE. Genon. Jop. $10,501 \mathrm{in} 1 \times 6 \mathrm{i}$. It is a handsome and flourishing place, surrounded by hills, the rich produce of which supplies a profitable commerce. The Genoese, from the carliest times, appreciating its natural adviatages, surrounded it with a strong wall, and gnve it muny privileges to encourage the resort of merchnnts. It has a hospital and many fine editices, nod several lace and silk twist factories. Marble and slate are quarried in its neighbourhood, and it has a productive anchovy fishery.

CHICAGO, a town of the U. States, Illinois, at the embouchure of the Chicago river, in the SW. corner of Lake Michigan; lat. $42^{\circ}$ N., long. $87^{\circ} 37^{-}$ W. Pop. 4,853 in $1840 ; 29,963$ in 1850 ; nud 109,260 in 1860. The river, which is formed of two branches that unite abont $\frac{3}{4} \mathrm{~m}$. from the lakc, divides the town into three portions, the principal sent of business being on the S. side of the muin stream. The growth of Chicago has been quite extraordinary, ns will be seen from the preceding statistics of population, and there is every probability that it will continue rapilly to increase fur many years to come. It is indebted for this wonderful development to its situation and the enterprise of its inhnbitants. It is the natural entrepot for the trade between the flourishing state of Illinois and the vast regions watered by the grent lakes; its importance in this respect having been very greatly increased by its having been united by a canal, of the largest elass, with the navigable waters of the Illinois river, an affluent of the Mississippi ; so that it communicates, on the one hand, with New Orleans and the Mexicau Gulf, and, on the other, with Quebec and the St. Lawrence. Hence the value of its exports and imports, which, in 1840 , were respectively $228,630^{\circ}$
and 562 and 4,13 artitleial tremity froin the port emp Hug voser The sith the finun ntrectio er wooden 1 way to haiadsom clementar academs, ferent lin most impe line, 220 line, conne sippi river 218 m , lon Visconsin relelority h the Uniter Chicngo.

anlil Sf2, 106 dollars, hail risen, in 18tio, to 3,576,450 anid $\cdot 1,139,761$ dollars. The harbour, which in partly artilteial, is formed hy means of piens, at the extrumity of one of which in a lighthouse, projecting from the river into the lake. The traie of the purt employa a great number of ateamers and anilinig vewels, many of which belong to the town. The situation, though low, is above the level of the Inundations, aml in saill to be henlthy. The ntrecis crows each other at right angles, and the wooden buidlings of the first settlers have given way to substantial brick elliflees. It has gome haidsome churches, a medical college, varions elementary and superior schuols, a merchants' academy, banks and insurance officen. Five rlifferrent lines of railhway centre at Chicago. The mast important of them are the Chicapo and Alton line, 220 m . long; the Chicago and Roek-Inland line, comnecting Lake Michignn with the Mississippi river; and the Chicago and North-Western, 213 m . long, extending from Chicago to Appletom, Wivennsin. Fort Dearborn, which acquired some relelrity lin the last war between this conntry and the Unitel Statee, is in the immediate vicinity of Chitengo.
CIICLIESTER, a city, co., and parl, bor. of Fingland, co. Sussex, 55 m . SW. by S. London by rwach, anil 79 m , by London, Brighton, and SouthConst ruilway. l'op, 8,059 in 1861. The city is alout $1 \frac{1}{2} \mathrm{~m}$. E. from the extreme NE. angle of the hay or arm of the sea called Chichester IIarbour. It is situated on a geutle eminence, gloping in every direction, amidst the widest part of the plain named from it. The Lavant (a small rivnlet usually lry in summer) bounds it on the E. and S. Its walls, forming a circuit of about 1 f m ., are still in tolerable preservation, within which a mound extenils all round in the Roman fashion, planted in parts with ilne elms. Chichester is well built, lighted, watered, and drainel. It consists chiefly of four principnl streets, liverging at right angles from a common centre, occupted by an octagonal cross, erected towards the elose of the 15th century, and sniul to be the most beautiful of this class of structures in the kingdom. The present enthedral was built in the 13th century, on the site of an oller one founded in 1108. It is an inferior building of its class, partly in the Norman, and partly in the carlier pointed style; the old tower and spire of the 14th century fell in Fel. 1861, and a new spire was completed in 1865 . The catheiral coutains many ancient and several woll-executel molem monuments; among the latter is one to the memory of the poet Collins, a native of the towa. The eollegiate establishment was, from the first, for secular canons, and so left unaltered at the Reformation; it consists of a dean, thirty prebendaries, and other ecclesiastical officers. The see comprises the entire co. of Sussex, with the exception of twenty-two parishes, which are peculiars: the episcopal palace is within the city walls, and has finc gardens attached to it. Except that of St. Paul, which is a handsome modern structure in the pointed style, the other churches are small, mean buildings. There is a grammar school, founled in 1497, and a blue-coat school, founded ia ti02. There are several charitable institutions, the most ancient of which is that of St. Mary's Hospital, with a chapel attached to it. The other public buildings are the guildhall, town-hall, market-house, and corn exchange; the buildings of the mechanics' institute, of the Literary and l'hilosophical Society, and a small theatre.
There are no manufactures, the town principally depending on the surrounding agricultural district. Market-lays, Wedncsday and Saturday; the former for corn, the latter for general provisions: an im-
portant cattle-market in hell every seconil Wed nemiay; and four large cattle amd liune fuirn, Mry 4, Whit-Mmaday, Oct. 10 and 20. The transit of corn throngh the town th the metrupolia and to the W. of Enghand is also eonsiderable. The hurlonur is rather difileult of access; but at springtilen vensels of 170 or 180 tums reach the !uny, about if m . below the town; but its communicatlon with the sea is kept up by the Arundel anil Portsmonth Canal, a branch from which la carried to the city. It is iliviled into two waris, and goverued by a mayor, aix aldermen, nul elghtent coumeillors. Chichester has returned two memn, to the 11. of C. from the 221 rl of Jidw. I. I'revionmly to the Reform Aet the franchise was vested in the corporation and freemen nall scot-and-lot payers within the bor. The Bomilary Act extemed the limits of the parl. bor., which is identical with the municipal bor., so ns to embrace the suburbs. Registered electors, 58 is in 1815 . Annual value of real property, 42,7341, in 1857, and 37,4091, in 186!. Chichester is supposell to oceupy the site of the Regmum of the Roman perionl. It was destroyed by lilin in the 5 th century, anil restorel by his son Cissa, whence the name. Some alditional impertance was given to it by the removal of the nee from Selsea thither, after the Conquest. It gives the title of carl to the l'elham family.
CHICACOLE, or CICACOLE, tun inl. town of Itindostan, formerly the cap. of the N . Cirear of same name, on the high N. bank of the river Chicacele, 4 m . NW. the bay of Bengal, and 50 m . NE. Vizagapatam. It is of considerable size, but irregularly built, being a collection of all sorts of hounes and huts. It contains some neat liuropean barracks, several large bazars, and numerous mosques and other Mohammedan buildings,

CIIICLANA, a town of Spain, Anilalusin, prov. Cadiz, 12 m . SE. Cadiz. Pup. 9,097 in 18077. 'The town is situated letween two hills, on one of which are the ruins of au ancient Moorish castle; has two churches, two convents, a hospital, a workhouse belonging to Caliz, a theatre, and some good private houses. It is much resortel to by the wealthy elasses of Caliz, who have here conntry resldences and pleasure grounds. The aljoining heights command $a$ fine view of Caliz and its bay, the isle of Leon, se. on one sile; anll, on the other, the ancient eity of Medina Sidonin, and plains of Andalusia, townrels Algesiras and Gibraltar. The battle of Barossa, in which, after an obutinate engagement, the Anglo-Spanish nrmy under Sir Thomas Gralam (Lord Lynedoch) defeated a French force uuder Marshal Victor, was funght, a few m . S. from Cliclana, on the 5th of March, 1811.
CHIERI (an. Carrera Potentia), an inl. town of N. Italy, prov. Turin, cap. maml., on the declivity of a vint-clad hill, 8 m . SE. Turin, on the railway from Turin to Alessandria. Pop, 15,033 in 1861. The town is well built, has four handsome spuares, and a collegiate chureh, said to have been originally a temple of Minerva. Its fortress, La Rochetta, was destroyed in the lith century. It has some cotton and linen thrcad and woollen-cloth factories.

CHIETI, a city of Southern Italy, prov. Chieti, of which it is the cap., on the narrow crest of a range of hills, on the right bank of the Pescara, about 10 m. from the Ailriatic, on the railway from Ancona to Nuples. Pop. 20,192 in 1861. The streets of the town are generally narrow and crooked, and in many parts dark and dirty; but the houses and shops are good, and approach nearer to the standari of the metropolis than those of most provincial towns. It has a large cathedral, and four other churches ; a lyceum, or college; a large seminary ;

## CHILI

numeronis convents ; a mocinty of agriculture, arta, and commeres; a hoopital; a workhouse; anl a Inandanme thentre. It in the seat of an arehbishopric, of the civil and crimimi trilmmals of the prov. : and has munufuctures of woollens and silk. The murroundlug conintry la well cultivated and fertile, and the pepmiathon linve an appearance of eane, cheerfingens, and netivity. The Abind (ialiani wan a mative of Cligeti, laving leen born here lin 1728 ,

Chieti in very ancient, being built on the site of Teute, the capital of the minall but not unilinportant tribe of the Naruccini. Silfas Italicun calls it Mfoymum et Charum, The remains of a theatre of comsilierable dimensions, a large pulbic ediflce, two temples, a gateway nud Mosaie pavement, with numerons colins and inseriptlons, evince its micient magnitule and inswrtance.

CHIIIIUA11UA, n elty of Mexleo, state of Chilumanim, of which it is the enp. ; 740 m. NNW. Mexico, 490 m. L., (funyman, and 500 mi from the month of the litio (iranile del Norte: lat. $28^{\circ} 47^{\prime}$ N., long. $107^{\circ}: 10^{\prime} \mathrm{W}$. It is situated in an arid plain, on a rivulet which fulls lito an ailluent of the liou (irande. I'ulb, at une period andid to liave heren 70,160 ; in $1 \times(13,11,100$; at jresent estlimated at. 11,000). Streets regninar; honses well built and well sulpplied with water, conveyed to it by an agueluct is m. long. The catheiral, a very harge and lighly ornamented structure, was erected at an expense of $1,500,000$ doll., rajed by a duty on the produce of the miljohniug mines. The town is chietly malntanined by supplying necessaries to the surrounding mining districts; and froun being a depôt for goods to and from Guaymas. Clurconl is conveyed thither for the mines and domestic purposes from a distance of 30 leagnes. There are acveral harge monasteries in the town; but they ure much diminished in their income and in the splendour of their buidings and establishments since the revolition. The comntry surrounding the city is oceupied by extensive haciendas, or fiarme, in which large lierds of mules, horned eattle, and sheep, are pastured. But, notwithstanding the great eapnbilities of the soil, ngriculture is in n very depressed state, the mines being the great ajjects of uttention. Of these the most celchrated for the quantity of the precious metals drawn from it is Lil I'arral, in the SLD. part of the state; luit it is now in so dilapidated a condition, that the amount of eapital required to re-establish it is tuo great to justify a w $\mathbf{w} \cdot 1$-grounded expectation of its returus being sufficient to repay the outhy. Hatopilas, 80 lengues W. of Parras, once one of the most productive of the Mexicun mines-a single mass of pure silver weighing $42 . \mathrm{l}$ los. haviug been found in it-is lut feelly worked. One of its veins was discovered by an Indinn, who, on swimoning across a branch of the Rio del Finerte after a flood, perceived the erest of a rich Inde laid bare by the force of the current, the grentest part pure silver, sparkling in the sun. Sunta Eulalia in the E. has long been abandoned. The pop. of the plain country is almost wholly of Europenn descent, the natives laving retired before them into the mountainous recesses of the Bolson de Mapimi. Their principal tribes are the Apaches, Conannches, and Chichimeques.

CHILI, or CHILE, a repmblic of S. America, in the SWV. part of that continent, consisting of a long and narrow strip of comitry between the Andes and the ocean, extending from lat. $25^{\circ} 20^{\prime}$ to $42^{\circ} \mathrm{S}$., and between long. $70^{\circ}$ and $74^{\circ} \mathrm{W}$.; having N. the sonthern extremity of Bolivia, E. the territ. of La P'lati, SE. and S . Patagonia and the Gulf of Ancul, and Strait of Chaeno (which separate it from the Archipelago of Chiloi'), and W. the Pacitic. Length, N. to S., 1,150
m. 1 average hrealth hetween 110 and 120 m . Fintimated area $2411,052 \mathrm{mp} \mathrm{m}_{\text {c }}$ I'op. $1,4119,1211$, aceoriling to the censum of Apiril 19, 18tat; aml $1,0.18,894$ necording to oflleinal returns of the year 1861. The country in divined into fifteen jurovinees, the pop. of which, by the eensus of ldith, was as follows:-

lhemides these torritorien, the islamis of Juan-Fermamlez, Morlia, and some others in the l'ucile belong to Chile.

Topugruphy. - The camntry risen successively from the coast to the Grent Cordillera of thin Andes ; but nut by a number of suceesnjve terracess ruming parallel to eneh other and to the sea, except in the N. 'Elsewhere, the surface,' na Mr. Miers says, 'is not formed by a series of table heights, reaching from the sea to the foot of the Cordillera; but it is $n$ broal expansion of the monntainous Andes, which spreals forth its ramitlentions from the central longitullnal ridge towards the sea, diminishing contlmually, but irregularly, till they reach the occan. . . . . These mountain branches are of considerable height, being seldom less than $1,000 \mathrm{ft}^{2}$, and more generally 2,001 ft . above the bottom of the valleys which intersect them : it may, therefore, be readily conceived that there is but little level country between the smaller branches of these chains; the more valuable portions were formed by the berls of the rivers now compuratively amall, although there is evidence of their having been once the courses of grenter struans, Some of those valleys present broall expransions of surface, such, by way of illustration, as that portion of the conntry called the Valley of Acomcagua. These are the patches which constitute the tinest and bonsted portlons of the middle portion of Chile.' (Miers' 'Trav. in Chile, i. 378, 379.)

The Great Cordillers of the Andes has in $S$. Chile a menm elevation of 13,000 or $14,000 \mathrm{ft}$. alove the level of the ocean; but it presents many peaks which rise to a considerably grenter height. These peaks, most of which are volcanic, begin to be numerous beyond lat. $30^{\circ}$, nud inerense in number as we proceed farther S . The principal one is that of Aconcagun, about lat. $32^{\circ} 10^{\prime}$, which has been proved to be at lenst $23,200 \mathrm{ft}$. in height (Capt. Fitzroy's Paper in Geog. Journ, vii. 143), nul therefore ranks first among the mountains of $S$. Amerien. At intervals it is an active voleano, N. of $33^{\circ} 30^{\prime}$ the Cordillera is divided into two separnte ranges, cuclosing the immense valley of Uspallata, so celebrated for its mineral riches, and other valleys. The principul road across the Andes -from Santiago and the Vale of Aconcagin to Mendoza-crosses Uspallata; several other passes from Chili into the La Ilata territories exist farther S. (See Andes.) Between the ramilications $v_{0}^{\sim}$ the mountain chains and the sea some small plains line the coast. The shores are mostly high,

The rivens of the mikile and S. prove nre miffledently ninserons, list. they are aill sumill. The N. part iff the comutry is seareely wilered ly nny ; nuil 'from Maypo to Atneumn, in
 tygether would not firmn no emmidiernilibe a lonty of water as that with which the blhume entern the 1ake of Genevn, or ns that of the Thames at stuiney.: (Schmiltemeyer's Trav., p. 28.) The rivend retalu, pretty mueh the mame quantly of water thrmunghont the year: they aronot ankmented mucth at myy particular season by the melting of the snown, since, while lin the nummer the sulow min the upper momintain rangen melts, that on the lourer heights liquetles even in the winter. They ane Eruerally unilt for the purposes of traile. In the S. there is no stream navigrable for laden Inath for more than ${ }^{6} \mathrm{~m}$. Inlanul: in the middle prove. the Manle is the only one which brigs of 160 tons hurlen enu enter at high tide, and these camot aseend far; anll in the S. the Callacalla, or river of Valdivia, is the only one eapable of being entered with safety by ships carrying 60 ginis. Some lakes, or rather lagunes, are scattceel over the country; they are most numerons in the S., and in the prov, of Valdivia and in Arancanian are of some alze. $A$ few aro $\mathbf{i 0} 0$ or 70 m . in cireumberence.

Climate is equahle nod healthy: epidemie diseases are rare. The interior is lootter than the const: in the former, during Jan. nnd Feh., the thermometer often rises to $90^{\circ}$ and $95^{\circ}$ Fahr. in the whale; on the latter, nt the same season, it rises to about $85^{\circ}$ in the day, and sluks to $70^{\circ}$ or $75^{\circ}$ in the night. At Santingo the mean sammer heat from December to March at millay is about $811^{\circ}$, and at night $58^{\circ}$. A cool and pleasant breeze arises at sunset. Winter begins in June. No snow falls on the coast, nnd frost is rare; on the Andes the suows remain from Jume to November. About April the rains set in, and fall at intervals till Aug. but this is only in the S. provs. N. of Santiago the rainy season is limited to a few occasional showers, and in the arid prov. of Coquimbo no rain whatever fulls, the want of it being ocensionally supplied by heavy night dews. The N. prove. being at a distance from the volcanoes of the Cordillera, which apparently act as safety-valves, are enfecially suhject to earthguakes. Shocks are felt in some parts almost daily, and the country is continually desolated hy them. In 1819 the town of Copinpo was totally destroyed; and in 1835 Concepcion, and other towns on the coast in the middle provs., were nearly ruined by an earthquakc. (Miers, i. 378-399; Schmidtmeyer, p. 25, de.; Campbell's Geog. Jonrn., vol. vi. ; Molina; Voyage of the Adventure and Beagle, \&c.)
Cicology,-According to Sclimidtmeyer, the high chain of the Andes is chiefly composed of argillaceons schist, while the lower chains and mountain groups are principnlly granite. Sienitic, bnsaltic, and felspar porphyries, serpentines of various colours, quartz, hornblende and other slates, pud-ding-stone, gypsum, abound in the Cordillera, and fine statnary marble is said to abound in the department of Copiapo. Chili is extremely rich in metals: silver is found there at a greater elevation than any other metal; it is nlso met with in the valleys or bowls in the lower ranges, but, generally spenking, its quantity decreases in proportion to its distance from the Andes. Gold is most frequently situated at a much less elevation than
wilver it in found chiefly in the 'Imowle,' and periname few of the lower monntain mangen thronghont Chill are whionit $\mathrm{it}^{2}$. Nost, or jerliapw all the riven, wanh down golid. The eopper mine are one of the chief nomiteen of intlomal wealth. tami nul iron are foninil In almulanee, but neitlier ls mneli noupht nfter. لinc, nutimony, mankanpse, arvenic, tin, anlphur wo pure an inot to require rething, alıun, aalt, mul nitre, are plentifil. Conl mines linve lwen openeil near Concepcion t the conl inproven with the depth of the mine, ind has alromily become $n$ eonmilernble artlele of tride and consiningtion int Valpuralso. The meil of the N. prowso is mandy and saline; mul lis the opinion of Mr. Miens, not $1-50$ )th part of the N. half of (bhilf enat avor bo eultivated. Some of the valleys in the centrul prova., na that of Aconeagua, present broal and firtile expanmions of anffuce, and othom, loing conalderably inelined, admit of irrigntlon wherever water enti be prowirel; bit the hilly parts beligs dried and parched during the greater part of tha year, are incapable of culture. $N$. of the river Manle, however, the propertion of culat $\quad$ ie lnail is larger, the soil liocoming progressivety moro ntiff alnl loamy. (Miers; Sithmideneyor.)

Vegetable Products.-Fertility incranes In proportion ns we proceed $\mathrm{S}_{\mathrm{o}}$ Cupt. Ihusil Ilall whserves: 'At Concepcion, in the S. of Clitil, the eyo is delighted with the richest and mont linxurlint foliage: at Val paraisn, which liea between 100 mill 200 m . farther N., the hills ure poorly clal with a stunted brishwood, and $n$ faint nttempt at grass, the ground looking everywhere starved and naked: at Coquimbo even this brishavool is grone, nul nothing in left to sipply its place lint $n$ wretelied sort of prickly pear bush, and a scunty sprinkling of wiry grasses. At Ghased, there in not a trace of vegetation to be seen, all the hills and phains being covered with bare sand, excepting where the little solitary stream of water, caused by the melting of the snow amongst the Andes, gives animation to the channel which conclucts it to the sea. The respective lntitules of these places are $37^{\circ}, 33^{\circ}, 30^{\circ}$, and 2810.' (1Iall's Extracts from a Journal, in Constnble's Misc., iii. 9, 10.) Extensive forests cover Araucania and the S. provs. The flanks of the Andes also exhibit a profuse vegetntion. The Mimosa farnesiana flourishes over most of the country, and the algarob is nearly as common. The quillai, the bark of which proluces n natiral sunp, is brought to the towns as an article of trade; laurels, myrtles, cypresses, and other evergreens, grow to such a size as to be highly useful for their timber. Most European fruits tlourish, lust tropical plants are few. Schmidtmeyer observes, that the numerous groves of palin and cinnamon trees, spoken of by Molina, have disnppeared since his time. Chili produces many hard woods, which, in a great measure, supersede the use of iron in the country; and Mr. Miers says that 'the herbaceous plants und tlowers are so rich, various, benutifin, and novel, that to a lootanist no treat can be grenter than a journey through the Cordillera.'

Animals.- The coguar or puma, the jngunr, llama, gumaco, numerous monkeys, and other wild animals common to this continent, inhabit Chili. A kind of beaver (Castor huidibrius) frequents the rivers, and the chiuchilla abounds in the desert comintry of the N.; both are hunted for their fur, which is much prizel. The grent contor, several vultures, pelicans, and many other water fowl, flocks of parrots, parroquets, \&e., are among the birds; whales, dolphins, cod, pilchards, \&c. are caught around the coasts. The skunk, which, when pursued, emits an intolernble odour, is a native of Chili; but in other respects this country enjoys a singular frecdom from annoying or ve-
nomoin quailniperla, noxious Ineects, and reptiles. (Miers, vul, i.s Schmiltmever.)

Agriculture aml Cuttle Breeding.-The elimate and moll of the 8 . anil central parta of Chill are highly auitable for the culture of liuropean grains, S . of Int. $\mathrm{HIO}^{\circ}$, the limit at which they ceame to attalu perfection varion from 8,700 to $6,2000 \mathrm{f}$. nixive the ocenin ; bit at the helght of $1,000 \mathrm{f}$. the linevents are extremely gocsl, Only the mialile prove.g lowever, prosluce suffleient corn for exjortation, ifter snuphlying the wanta of their inhanh. Aconengui in by lar the best cultivated prov., anil that which exports mont com. It prisluce goea chlefly to the market of Valparaino. Wheat in the staple, and in the $\mathrm{N}_{\text {, almont the only grain culti- }}$ vated. Ilarley in grown in the S.; maize, lutekwheat, nul onts are lut little rained, and rye in unknown. Klilney beains are exported to ['eru, and oecasionally to Jrazil; ull kliuls of pulae nre common; and motatoen are extenslvely eultivated, thongli they fall in tinvour. Culinary vegetnblea ure ruised, expecially near the towns. Wínter melons ure very fine, and gourila of $\boldsymbol{n}$ goosl flavour are proilused in great abmidance; the lntter are appeniluges to every Chilinin dish of builed ment. IIemp of good quality is grown chielly in Aconcourua. The sugar-cane lins been tried, bit doen not sucseed. Rice nud encmo aro lmported. At Quillota there are some gonal gramens i in Aconengun prov. the vincyaris and olive gromile vield an nonudinnce of gosel fruit; and in that of Concepcion, which was ance celelirated for its whe, the vincyards are atill exteusive, and the grapes thue-tlavoured. Elamewere, according to I'oppplg (Relse in Chili, i. 125-127), both orehard nnd gariten cultivation is in the back-grouncl. The ollve crops are rosk, but the oil is ruined by a bad mode of trentment, and renilered unfit for Europenn markets. Little care is taken in the culture of corn. The art of agriculture is greatly in nrrenr. The plough, which is everywhere alike throughout the country, consists of inly a part of the trunk of $n$ tree, with a cruoked liranch which serves as a handle, the forepart of the trunk being werlgeshaped, and having nailed to it 'a somewhat pointed flat plate of iron, which performs the necessary operation of conlter and share, neither of which were ever heard of by the natives.' (Miens.) The yoke is fastened not to the shoulders, but to the homs, of the oxen, according to the approved nucient Spanish method. The substitute for a harrow is a heap of bushes weighed down with stones ; the turning up of the soil by spade digging and the use of the Euglish hoe are unknown; and what litile weeding is practised is performed by tho hand or the bladebone of a sheep. Lands are cultivated intil worn out, with the interval of a fallow every f:nur or five years: no manure is used. The productiveness of the soil in Chili appears to have been formerly much overrated. Mr. Miers observes, that a picce of ground recently cleared ' may produce to the extent of 100 or even 200 fold during the first year ; but such lands are now senree in the cultivated parts of Chili;' and the average of the wheat fields may be from 8 to 12, or of the best crops, from 12 to 20 fold. (Miers, i. 371.) Reaping ls performed by means of a rough sickle; and the corn, in quantities of about 100 or 150 quartors at a time, thrashed out in a hard dry spot of ground, by being galloped over by horses. It is then generally left in the open air for some months, not being housed till the rainy season begins.

Few furms are wholly arable, and such as are so nre sinall and situated in narrow valleys, Cattle loreeding is the most important branch of rural industry. In the middle provs. the haciendas, or
farma, feed often from 10,000 to 15,000 heal of enttle, in monne casen an many an $\mathbf{2 0 , 0 0 1 1}$; mill of the amalleat yrazlige farmas froin 4,000 to 8,1000 henil are rearel. The liack cattle lit mome parts are atrongend bany, lint in the N. small! they are dull, and nelther the beef nor milk they ylelil in very good. The hornes of Santiago are malil tule excellent, well broken, and more ilocile than thome of Jhenon Ayres. Thome of the country gencrally are well maile, and gallop, thonght they to hat trot, well. Sehmiltneyer mayn ('Trnv, po. 08) thint they are ' oo ntrong aid liardy as to lie abile to curry their plilern alsove 80 m . n day nt a gallop, with very little rest, and no other forod thinn lu-
 aize, linaly and atronk the former aro the genernl beasts of lumien, anil are enjucially umed lin truvelling across the Curillilern. Gionis are plantifin, being more fitted than wisep, for the pantures of Chill. 'Ithe sheep are nilal tole very liferior, nind both the mitton nad wisil bond. "lloge are not very growl, and very llttle of their tlesh lis conmmed. In the dry senson that ratile nru often reduced to great atruils for wuit of fool. (l'oejplig, i. 121-124.)

After lith conquest by the Spaniards, Chili was divided into 360 portions, which weregiven to ns many individuals ; and though loy the Sjouinh law of successlon theme portloms have leeen, nuid continne to le, mubliviled frequently, most estates still remnin very large. The priprietors of these large grazing estntes usually reside with their familles in the towns, and keep on their furms a major-dome or stewaril, under whom are a head and a few aulorilinate herimmen, nud these are asslated sometimes by a fow tenants who holl their dwellings under the proprietor ly a kind of feulal tenure, leing oblged to give their aervices in any kind of labour that is required of them, without pay, or for a very small remuncration. Land is never leased out to the ngricultural tenunts, but from yenr to year: the lntter have neither oxen for ploughing, mares for thrashiug, nor capital toget in their crops; and all these, and all other kinds of nssistance, come from the proprietor, who is repaid out of the produce of the land, which he besides generally huys up nt twothirds or half what the former might sell it for, could he command the necessary fumls to liarvest it. The cultivator, in short, is rather worse of than the day-labourer, and is even in the habit of hiring himself out as such at times to recruit his meaus. He is destitute of most comforts, cun seldom real or write, nor has any menns within his reach of educating his children. The moment his harvest or the produce of his garden is renped, the landlord enforces hls right to the stubble anid pasture for the benefit of his cattle, and large droves are even frequently turned in before the produce is cut, either utterly destroying the crops, or obliping them to be gathered lialf ripe. The tenant is scarcely ever allowed to builal his but on cultivated grounds, to enclose his rented land with fences, or to possess any cattle; and a multitude of other arbitrary practices tend to keep the peon in that state of servitude in which it is the oljeet of the proprietor to retain him. .(See especially Miers, i. 341-i76.)

Fisheries,-The consts present gool fishing ground, and with good boats, goorl nets, and good government regulations, the Chilians might be made tolerable fishermen; but, owing in part to some ill-advised measures adopted by the govemment, Mr. Miers nthirms that in his time the fishers were the most abandoned, lazy, and worthless class in the country. They seldom tish more than a mile from shore, using ouly canoes of the rudest

I'he country lise abiminance of minerala, of the richent qualliy, from which, however, little proflt is drawn, owing to the conatant elvil atrife nad pultional dinturbanees under which the republie in nuthering. Neverthelens, neveral minen of allver, foll, and copper are being worked in the province of L'inuimbo, and, nince the year 1850, nume valuable eonl minea are worked at Lota and Conomel, ins the prov. of Taica. At lata the whole of the inines are the property of Moswm. Cousino nnil Son, antlues of Chili, and are wrought by Englinh and native conal miners on the Fuglinh ayntem, with the anmistance of railwayn, stenm engrinen, nind wharyen, nud are now formed into a very complete entablisliment, at an exjense to the ownem of upwaris of $1,000,000$ dolmrs. The establish ment was commencel in 1862, but only got into proper working order during the yenr 1850. The proluce of the mines in at present from 4,000 to 0,100 tons of clenn coal per month, and can be greatly incrensed when more lnbourern can be obtained. The conl of thene mines is beint mined, sereened, nud embarked by contract, and nt current jricen leaves a clear profit to the owners of more than three dollars aid a-half per Finglinh ton. Mennrs, Cousino and Son havo also furnaces for the purfone of smelting eopper ore with the refuan or amnll coal. The mines of Coronel are being wrought by several indivilunis to a miteh greater extent than even the mlines of Lota, nul the proluce is greater. Samples of very rich silver ore, goll quartz, and copper ore have been found in the Arancanian territory; but nothing ean be done with either, until the Indians come unler the dominion of some eivilised govermment. (Report ly Mr. Cumningham, British Vice-Consul at Talcnhuano, Chili, in ' Consmlar Reports,' 1863.)

It is a common snying in Chill, that 'a dillgent man who works a copper mine is sure to gain ; that he who opens one of silver may either gain or lose; but that if the mine be of gold, he will certainly be ruined.' This is owing in great part to the circumstance of many mines having been opened or wrought by persons without capital, who are very suon obliged to suspend their operntions; land carrlage being difficult and laborious, and fuel, whter, and folder very scarce in those districts which are the richest in ore. The mines are mostly wrought by two parties, one the propretor of the mine, who supplies the labour, the other the habilitudor, who advances the capital. The proprietor, who usually resides on the spot and superintends the works, is seldom wenlthy enough to conduct them on his own resources, and it is generally the habilitador, or moneyed individual, who resides at the port where the metal is shipped, who alone derives any ultimnte bencfit from the mine. (Meyen; Hall; Schmiltmeyer.)

Munufactures and Trade. The Chilinos are good potters, and make light and strong earthenware jars, which ring like metal. Hempen eloths, indillerent hemp, cordage, suap, copper wares made in a very rough manner, leather, brandy, tnllow, and charcoal, are amongst the chicf articles manufactured. The rest are mostly domestic, and conducted by women.

Chili is supposed to be the only American state, fomerly subject to Spain, whose commerce has incrensed since the sepnration from the mother conntry. Most of the forcign trade is with Great Britain, the imports from which, consisting chictly of cotton and woollen goods, hardware, iron, de., ameunted, in 1835, to 606,176l.; in 1838, to 413,647l.;
in 18.00, to $1,510,1761.1$ nnd, in 1R68, to $1.17 .1,0411$ A portlon of the merchanilise importeil from (irent IVritain is nusmequentiy ant to othor parta of Amerien.  $2,416,81251$. in 1801; and of $2,288,80121$. In 18133 . Cupler was the jrincipnil artiele of thene expurts, furnishing about three-fourthe of the vilue. Valpuraiso is the chlef port, and centre of the foreign trule.
Hut little accommodation exiata for internal commerce. The only towns of any importance, execpt the eap. Santlago, viz. Valimenino, Coçuimion, Concepclon, and Valdivia, nre near the sell, mini it a great illatance from ench other; and, extept between Valparniso and smitingo, the Intter city nuid Talen, there aro no good romls. Latterly, however, the want of ordinary roads has to some extent been mitigated by the construction of ruilwnys. In the year 18 th3 there existed nearly 400 milles of rallway, amony then lines from Valpuruiso to Santingo, from Santiago to Sin Fernamio, frum Cuhlera to l'abellon, and from Coquimbo to Las Carins.

Government.-The publie revenne, which, in 1831, nmounted to $1,517,537$ dollars, has wiwe beens progressively incrensing in amonit, nud in 1800 had riwen to $7,494,750$ dollirs, or $1,498,950)$. 'The expenditure, in the latter year, numbited to $7,507,025$ dollars, or $1,501,405 \%$. There wins $n$ public debt, at the end of the year 1861 , of $10,2 \mathrm{j} 1,600$ dollars, or $3,050,320$.
Chili is a republic under a president, elected for a term of yenrs. It has a cougress of 56 members elected by the diflerent prove. The expeutive power is in the hands of the president und $n$ council of ministers.

The natlomal rellgion is the Roman Catholic. The clergy nre not numerons; they are subordinute to the bishop of Samtiago. Other religions are tolerated; but the excreise of their public worship is not allowed.

People-are mostly of Spanish and Indian doseent, but there are some negroes anil mulnttoes. 'The Chilians,' nays Mr. Miers, ' though they may be said to possess in no degree a single virtue, have the credit of possessing fewer vices than other crcoles; there is a passiveness, an evemess about them approaching to the Chinese, whom they strongly resemble in muny respects: even in their physiognomy, they linve the broal low firehead and contracted eyes; they have the same cunning, the same egotism, and the same disposition to petty theft.' (Travels, ii. 223, 224.) 'They are moderate in their food, but frequently vory dissipated and profligate in their habits, and in the towns very fond of dress and displing. Highway robbery is rare, and so are murlers in tho country, but not in the towns. Education, or mey taste for the fine arts, have hitherto made but little progress.

History.-Previously to the Spanish conquest, Chili belonged to the incas of Peru. In limsi Pizarro sent Almagro to invade the country, and

The tributarien recelved into thita river cluring its courne, which is about $2,300 \mathrm{~m}$., are innumerable ; and, with the cannls, conneet it with the whole empire. lkoth the rivers, enpecially the llonug-lo, which han a very rapicl conime, oceanionally overtlow thio banks, anly, in aple of many atrong artilleinl monnds, cane the most deatrictive innumations. The river next in importance in the Fin-ho or Yin-liang river, which tlows NE. till it joins tho l'ei-ho or l'ekin river: the latter rjaes in the monntains NW. of Pokin, near which efty it becomes navigahie for boats ; and is, during the rest of its conrme, the nuont prifilons netrenm of in conntry where a large propartion of matives live upon the water in juuks; their united witers tlow ints the sen in the most W. angle of the Pe-che-lee finlf. The Ta-si-Kinng, Choo Kimg, or Cunton river, riming in the prov. of Yim-mun, tnken an E.c coume to the plains of C'miton, and liaving received the I'e-ki-ang, the Th-ho, und other smaller strenms, forms an estunry known ais the Jlocca Tigria, by which it in finally discharged Into the Chinm Sea, alter a course of $6,00 \mathrm{~m}$. There are $n$ vist nomber of other rivers, some of which fall into the won, and others into the great lakes. The lirahmaputra, Irawnldy, Thaluen, Menum, Re., have their aontreen in the SW. jarts of China, (Jourmal liognl Geog. Soe., iii. 30:5; Lindsay's Voyage in the Laril Amherst, passint; Gutalafi's Vovitre, passim; China Opened, 1. 25 and 61-168; Milte13rıun, ii. 655-5557.)

The princijul lake in Chinn is the Tunting-hoo, 220 m . in circ. It receives the waters of many considerable riven, and furnishes an importasit utlluent to the Yang-tse-Kiang, which passes near its N. extremity. After a further course of be-
tween 200 and 300 m ., this great river receives the surplus waters of the P'o-Yang-hoo lake, which nlso is of great dimensions, and is the recipient of many consdderable streams. This lake is surrounded hy picturesque and tinely-wooded hills. ludeel, its scenery is so much admired, that Its shores are the favourlte spot where Chinese pocts muse and write their verslfied prose. It is, however, suliject to sudden tempests, which render its mavigation dangerous. The environs of the Taihoo lake, near the E. const, lat. $31^{\circ} \mathrm{N}$., long. $120^{\circ}$ 1., are even more picturesque than those of the lo-yang, having gainel the uame of the 'Chinese Arcudin.' The llong-tse-hoo, being situated near the junction of the Grand Canal with the Yellow Liver, is much frequented on account of its advantagcous position. All the lakes, in fact, furvish intermedia of communication, and are abundantly stocked with fish. China contains severnl smaller lakes, but the whole do not occupy any great proportion of her vast surface. (China Opened, i. 31; Barrow, ii. 387, 391, iii. 12.)
Coest.-The coast of China has yet to be described. If our statement be correct, that the seaconst extends for $2,500 \mathrm{~m}$., there is only one mile of coast to every $5: 19 \mathrm{~m}$. of territory ; but internal navigation is carried on so extensively that this deficiency has no ill effect upon Chinese commerce. Commencing at the NE., the coast opposite Corea is bold and rocky, but, on approaching the Gulf of I'e-che-lee, presents a low and sandy shore, scarcely perceptible from the sea. The bar formed in this bay, at the mouth of the Pei-ho, makes its bed inconveniently narrow, and, when the S . winds blow, the whole adjacent country is overflowed to a great extent. The const of the Shantung peninsula is bold and rocky, so indented as to afford excellent harbours; but, once rounded, the low swampy character of const is again presented as far ns the Tchusan islands. Meantime, the two great rivers have brought down their immense dleposits from the interior, which give its name to the Yellow Sea. The mud is so thick as to retard the headway, and affect the steering of slips; and this grent gulf will, in process of time, hecome a vast alluvinl district, like Bengal and Egypt. 'The present inclination of the bottom is abont a foot in a geographical mile, or somewhnt less than 1 in 5,000 ; and it is probable that the bottom of the Yellow Sea, as it rises, will likewise gradually approximate to a horizontal plain.' (Hall's Voynges, i. 27.) This sea is nearly surromnded with islands. Tho const down to the strait of Formosa continues low, and, except where it fuces the Tchusan islands, and in the prov. of Fokien, is but little indented. The strait itself abounds with headlands, and is also so thickly studded with islands, which are but imperfectly notified even in the best eharts, that navigation is, by Captnin Hall's nccount, ' exceedingly trying to the nerves.' The Quang-tong shore is bold and high, except in the recesses of the numerons bays and harbours. A narrow peninsula is thrust out far into the sea at the W. extremity of Quanglong, and forms, with the island of Hainan, a narrow chamnel, which is shoal, full of sand banks and rocks, so that even the native flat-bottomed jumks ure exposed to great dangers. The rest of the shore is washed by the Tonquin Gulf, which is studded with small islunds. (Hall's Voyages, 12mo. edit. i. 29-46; Gutzlaft's Voyage, passim; Lindsay's Voyage ; Journal Geog. Soc., iii. 297310.)

Public Works.-Aspect of Cities and Touns.An amount of human labour, probably unmatched ly any other nation in the world, except ancient Ligypt, has been expended on the public works of

China, ly which the natural aspect of the country hus been muturially varied. The first anul most stupendons of these is the grent wall, huilt several hundred years before the Christian era, to protect China from Tartar incursions. It exteads along the whole N. frontier, from the Gulf of Leatong, in $120^{\circ}$, to the NW. extremity of tho empire, in about $99^{\circ} \mathrm{E}$. long., and $40^{\circ} \mathrm{N}$. Int., being, includiug its windings, about $1,250 \mathrm{~m}$. in length! it is carriell over the tops of the highest mountains, through the deepest valleys, and continued by bridges over rivers, Its height varies from 15 to 30 ft . It is, 15 ft . across at the top; and, at short intervals, squaro towers are erected, some of them 37 ft , ligh. The wall is composed of earth fuced with masonry, the top or platform being pared with square tiles. It is now in a state of deeny, hein! no lonker required, since the muion of the Tritar with the Chinese territory, for its original purpose. (Davis, i. 136; Bell's Travels, ii. 88.)
The Great Canal commences at Hang-telon, near the mouth of the Teling-tang-chiang river, in abont $30^{\circ} 22^{\prime} \mathrm{N}$. lat., and $119^{\circ} 45^{\circ} \mathrm{E}$. lowng., mul, extending N., tunites first with the Ynug-tseKiang, and then with the Hoang-ho, terminating at Lin-tcing, on the Eu-ho river, in abont $37^{\circ} \mathrm{N}$. lat., and $116^{\circ} \mathrm{E}$. long. The direct distance betwen the extreme limits of the canal is about 512 m ., but, ineluding its bends, it is above 6500 m , in length; and as the Eu-ho, which is a navigule river, unites with the lei-ho, also navigable, an internal water communication is thus established between Hang-tchou and l'ekin, across $10^{\circ}$ of lat. And by the junction of smaller canals and numerous rivers, the Great Canal not only assists in the irrigation of immense tracts of land, but afforis a ready means for conveying its produce to all parts of the empire. But, npart from its utility, the Great Camal does not rank high as a work of art. A vast amount of labour has, however, been expended upon it: for though it mostly passes through a flat country, and winds about to preserve its level, its bed is in parts cut down to a considerable depth, while in other parts it is carricd over extensive hollows, lukes, \&c., on vast mounds of earth and stonc. (Barrow, 511.) The sluices, which keep its waters at the necessary level, are all of very simple construction. In the pmblic roads, and where rugged steps are only accessible by means of laboriously formed passes, Clinese industry is fully npparent. Three mountain pathis traverse the Nun-liug; one, $\mathbf{N}$. of Canton, is estimated by Sir G. Staunton to rise $8,000 \mathrm{jt}$. above the sea; yet vast quantities of goods are conveyed over this pass from Canton to the interior ly coolies or porters. The obstacles to communication presented by the $\mathbf{P e}$-ling and T'a-pn-ling ranges are greatly diminished by an artificial rond sometimes conducted over yawning elefts ly arches, ill other places deeply cut through high mountains, and extending altogether for 150 m . In short, wherever intercourse is expedient between any two parts of China, no naturnl impediments are too gigantic, no labour or expense too great, to overcome them.
The following summary of the general appearnance of the cities and towns of China is supplied by Gutzlaff:-'The districts on the sen-coast are generally the best inhahited and the richest; the tracts nlong the Yang-tse-Kiang the most fertile, Large and flourishing cities are found only where a ready water communication with other parts of the empire can be carried on. The greatest sameness exists in all the cities. In the larger ones are a few well paved streets, lined with shops; but the greater part of the streets are very narrow, extremely filthy, and planted with mere hovels.

The suburls of many cities are much larger than the cities themsclves; and it in by no means extroorlinary to see an immense walled space without any houses, where formerly a city stood. Villuges and hamlets have a benutiful appearance at a listance; but on enteriug them one sees nothing hut a heap of honses irregnlarly thrown tongether. the outside fair to behold, but the fuside withont furniture or comforts, and more tilthy even than a stable. This does not apply to one district only, but it is common to most. Although the fiekls aud gurdens are beantifully laid out, there yet appears in them little attention either to elegnuce or pleasure. The gardens are very few; nud a Chinese grnudee delights more in artificial landsenpes laid out in a small compasa, than in an extensive park or a flower-garilen, Utility is studied in preference to pleasure. The grandenr of naturnl scenery is in many parts of China as striking as iu many parts of the world. Moututains, crogs, rivulets, and valleys, both pieturesque and romantic, are found in most provinces. Commanding situations are chosen for temples, the haunts of superstition and idolatry. These serve likewise for taverus, stayes, public halls, and gambling-liouses. The buidling of houses is regulated by law ; none are allowed to exceed a certain dimension. Public halls have little to recommend them; tho Chinese were never great architects; they understond the building of dwelling houses, but not of palaces.' (Chiam Opened, i. 57, 58.)
Clinute.-Connected with this subject there are some singular circumstances. Situated between the $20 t h$ and 42 nd degrees of $N$. lat., and the most ji. long. of any part of the Odd Workd, the tempernture of China is very low for its geographical jowition. Its climate may also be said to be one of extremes; and while at l'ekin, which is nearly $1^{\circ}$ firther S. than Naples, the mean temperature is that of Brittany, the scorching heats of summer are greater than at Cairo, and the winters as rigorous as in the northern provinces of Sweden. But in so extensive a territory there are necessarily many variations. The W. districts are much influencel by the colds diffused by the monntains, while the elimate of the maritime provinces is modified by the ser. At Canton, which is under the tropic, the heat duriag July, August, and September, is excessive: then occur those frightful tormadoes, enlled typhoons, spreading devastation in their course, which, however, do not extend far beyonil Canton. At the breaking up of these hurricunes, the transitions from the heat of day to cold and foggy nights are more violent and sudden than in any other part of the globe. The N. winds set in about November, and bring with them cold as intense as the preceling lieats. The mean tempernture of Canton is $76^{\circ}$ Fahr. The elimate of the interior is not however, with few exceptions, so extreme, particulurly towards the N. frontier, where the summers are genial; and though the winter be cold, it is dry, and does not elieck the growth of fruit ; but the N. winds bring clouds of white sand, which atHict the natives with ophthalmin. The W. frontier districts of Yun-nan and Sze-chuen are said to be unhealthy, and are selectel as places of banishment for Chinese convicts. The central provinces present a striking contrast to those already named. There the climate exhibits a happy melium between the rigour of the N . regions and the enervating lieats and sudlen colds of the $S$. The Kiang-tse is the most favoured in this respect. The fall of rain in China varies considerably in different years. Humboldt states-without naming on what anthoritythat the average quantity per an. is 70 ill . ; though it has been known to exceed 90. Many violent
eartliquakes have been felt in China. (MalteIlrun, art.'Chiua'; China Opened, i. 31, 60, (10), 16is, 163, 185; The Fan-qul in China, by C. T. Downing, Esq., i. 191, 192; Lyell's Geology, ii. 50.)

Popmation.-China has long been very generally believed to be the most densely peopled conntry of any considerable extent in the worlil. The Jesuit Semedo, writing in 1645 , remarks that, after living in the country twenty-two years, he was no less surprised on leaving than on lis first arrival, at the immense number of persons he met with, not only in the towns and cities, but on the highways, 'where,' says he, 'there is at all times as large a erowd as is usually to be met with on some great festival or public occasion.' The Jesuit Amiot, founding on othicial documents, estimated the pop. in 1743 at alont $143,000,000$, which, alding for somo classes that he had omitted, may be carried to alynt $150,000,000$; and in 1792, Lorl Macartney was informed, by a mandarin, 'a pluin, unatfectel, honest man, whose statement is snid to have been made on the authority of oflicial documents, that the pop. was $333,000,000$, and later accounts carry it up to nbove $360,000,000$.

It must be confessel, however, that, with the exception of that of Amiot, these statements ap)pear altogether ineredible, and that, in point of fact, there is no certain information as to the pop. of China. According to the statements in Chinese othicial works, the pop. of the empire amounted, in 1393 , to $60,545,000$; and in 1578 to $60,699,000$. It is supposed to have continned at or about this amonnt till the 'lartar concuiest in 1641, a year before the publication of Semedo's work. But it appenrs from an imperial prochamation quoted in the 'Clinese Repository,' issued in 1792, and said to be fonnded on ofticial duta, that the pop, hat heen reduced in 1711 to $28,605,716$ ! (vol. i. p. 35ti, Canton, 1833.) This extraordinary diminution is attempted to be explained in the work referred to, by the mortality occasioned liy the long and bloonly wars that accompanied the establishment of the Manchoo dynasty, by the fact of some of the provs. in the S. not having been fully subilned when this census was taken ; and by the cirenmstance of a poll-tax being then imposed, which made it for the interest of individuals to escapo being enrolled in the census. But even admitting the force of some of these statements, and allowing that but for the wars oceasioned by the Tartar conquest, and the imperfectly subslied state of parts of the country, a correct census taken in 1711 would have given a pop, of sixty or seventy millions, still it can scarcely be credited that tho pop. should have increased from even that amount in 1711, to above $300,000,000$ in 1792. Had China been a new country, or had the Tartars, by whom she was overrun in the 17 th century, been distinguished by their superior intelligence and industry, an increase of this sort might have been possible. But the reverse of all this is the fact. China has been settled and civilised for many centuries; the great works undertaken and completed by her iuhabit. at a very remote period, show that she had then been pretty thickly peopled; and it is admitted, on all hands, that in China the arts have been for ages in a nearly stationary state. The Tartars imparted to her little that was new. They were, in truth, mere roving herdsmen; and though they might have given the Chinese some instruction in prelatory warfare, they could communicate to them no useful art, science, or invention. Under these cireumstances it must be admitted either that the former official accounts of the pop. were grossly underrated, or that the later ones were grossly ex-
aggerated. (For a further discussion of this subject, see De Guignes, Voyages à P'eking, iii. $65-8(i$.

Suljoined is an account of the area of the difforent provs. as given by Lorl Maeartuey, and their pop, as given by Amiot in 1743, by Lond Nacartney in 1792, and by the ollicial returns in 1813.

The census for 1813 adds an additional $1,413,982$ souls as the pop. of Shing-king, Keilh-lin, Turlan, Lobnor, and Formosa; and 188,1326 families as engaged in the service of the emperor. Supposing the latter to consist of four members cach, the total pop, accorling to the census of that year, will be $362,447,183$.

A glance at the above table will show that the account of the pop. furnished to Lord Macartney, in 1792, and the census of 1813, cannot both be accurate. The last shows an excess over the former of 294 millions in the aggregate; but it would appear that in the majority of the provinees there has been no increase; but, on the contrary, a diminution. In the evidence adduced before the British parliamentary committees, in 1830, 1831 , and 1832, the area of China was computed at 1,372,452 English statute square miles, and the number of inhabitants at $141,470,000$, or 103 to the square mile; to which was added $1,182,000$ for the standing army, and $12,000,000$ for 'Tartary. But the intormation was very obscure with regard to the population. Thibet, Korea, the Manchoo, and other Tartar and Monfolian states, were computed to have a population of more than $30,000,000$, which wonld increase the whole population of China and its assumed dependencies to nearly $400,000,000$ inhabitants.
Local Divisions.-Though the geography of the world be not much studied in the 'Celestial Empire,' the more minute deta:'s of loeal topegraphy are no where better understood. The survey of the Jesuits, made by order of the emperor Kang-he, is said to be very correct; and every district of any importance has since found a geographer, who deseribes it, if not so scientifically as the Catholic missionaries, with the utmost minuteness, so that, with little dilificulty, a library of 3,000 vols. might be collected treating exelu-
sively of Chinese grography. Nothing ean be more systematie than the manner in which the whole empire is divided. Each prov. is portioned oll into provincial distriets ; whilo the towns and cities are dlivided into the 1st class ( $f$ cos), 2 nill class (tchon), and 3rid class (heën). Formerly China Proper consisted of ifteen provs. ; but in KelnLung's time the largest were bisected, and there are now eighteen.

Northern Provinces.-1. Pe-che-lee (the independent:) is sulxtiviled into sixteen districts, the most W. of which are very flat; the central onex somewhat hilly; while those on the sen-evast alourg tho l'e-che-lee Gulf are low and marsly. I'ekin, the metropolis of Northem China and residence of the court, is situated in this prov., about 60 m . from the great wall, and 100 m . from the sea, The l'ei-ho flows through Pe-che-lee, disemboguing at the small sea-port of Takoo. The chief ports are Tong-choo and Tein-sing. It is a curions fact, and one which does not square well with the popular notions of absentecism, that, despite the residence of the court, the bulk of the population are probably more depressed in this thall in any other prov. (Barrow, 495.) 2. Shal-se, or Chanl-se (west of the mountains,) is dividel from Mongolia by the great wall, a branch of which (the inner great wall) separates its E. limit from Pe-che-lee. It is suid to have been the most carly occupied part of China. Its mountainons portions are not, however, habitable, and many other localities afford but a seanty subsistence. Hence it has no large or remarkabie cities. 3 . Shen-se, or Chen-se (west of the pass), is also separated from the Mongolian borders by the great wall, which in this place is kept in good repuir. The memitains in this prov., which are more rugged than high, contain gold mines, but these are not allowed to be workel, lest the attention of the people should be withdruwn from agriculture. The valleys through which the Hei-ho and the Han-Kiang run are fertile in millet, wheat, and pulse, but are too dry to prodnce much rice. Swarms of locusts frequently appear in Shen-se. destroying the harvest, and converting smiling valleys into wastes. The chief town is Se-ganfoo, one of the largest in the empire. 4. Kan-suh (voluntary awe) and Shen-se, formerly united, mate one large prov., extending over a space of $154,008 \mathrm{sq} . \mathrm{m}$. Kan-sulh consists principally of a narrow neck of land thrust out upon the eilge of the great Gobi desert; hence the soil is cold and barren. Kan-suh forms the NW. limit of Chima, the great wall ending at Shwang-lan.

Central Provinces.-5. Ho-nan (south of the river) is one of the most fertile provinces of the great plain, and is called the garden of China. Shen-se, Pe-che-lee, and a part of Shan-tung juin its N. boundary, while branches of the l'e-ling enclose it to the W. The Hoang-ho, or Yellow River, rums nearly parallel with the N. boundary, and intersects the finest parts of the prov. 6 . Kiang-se (west of the river) has its boundaries well defined by the Nan-ling range and its branches, which surround it on three sidles, the W., S., and E. Its N. part eomtains the great Poo-Yang lake, and its contiguous marshes, said by Mr. Barrow to be the sink of China. It has, however, many well cultivated valleys, in which rice, cotton, indigo, and sugar, are proluced. It has also extensive manufactures, amongst which must not be forgotten the Chim-ware, so highly esteemed all over the world, till European imitators exceeted the original manufacture in beauty and cheapness. Still, however, no fewer than a million persons are said to be exclusively employed in this manufacture, which is elietly

Hoo-nan (sonth of the river), form the ancient prove of Hoo-K wang, divided into two parts by the Yaug-tse-Kiang. The former is divided into eleven and the latter Into thirteen districts; the whole covering an area of $1 H, \pi i=0$ sq. m . Hoth provs, are extremely fertile, and the capital of $1 l$ oo-pilh yields to few cities of the empire in extent anid prosperity. The ten grown in its nelghbourhood is of superior quality, and the bambo-paper manufacturel widhiil its walls is extensively exported. This city is called Woo-chang-for. Hoo-um benrs a great resemblance to the Ilc-nan prov., but is richer in mineruls. A very active trale is carrieal oul, oul both bunks of the Yang-tee-Kiang. Hoopih aud Iloo-mun are both within the great plain. I, Kwi-chow has been designated tho switzerland of Chima, being traversed by the highest portion of the Nau-ling range. To the $S$. it is peopletl loy wihl and intructable highlanders (Meau-tze), who, thongh in the centre of the enpire, prescrve their independence, and frequuntly make predatory descents on the aljoining provinces. Kwi-chow has no large towns, but several fortresses.
Maritime aml Sunthern Provinces.-10. Slantung (east of the momntnins) is partly in the great plain aml partly consists of a promontory jutting into the Yellow Sen, $S$. of 1'e-che-lee, aud NE: of Ho-nan. Its W. part is truversed by the Grent Canal, but the country is poor, and the climate, though bracing, bleak. There are, however, some valuable eonl mines, which supply the sihole empire with that article. The const is bold, and affords good shelter. The principal port is 'Tong-cheon-foo. 11 \&12. The Kiangsuio (river Soo) and Gan-hwny (lixed excellence) prow. were once united under the name of Kiangnang. The twe great rivers, the Hoang-ho and limg-tse-Kiang, cross both districts, and fall into the sen $2^{\circ}$ npart, forming the Chinese relta. Ganluray has 13 districts, and the Kinng-soo 11; their unitell extent bejug $92,961 \mathrm{sq} . \mathrm{m}$. 'If we consider,' remarks Gutzlaff, 'their agricultural resources, their great manufnctures, their varions productions, their excellent situntion on the banks of the two largest rivers in China, their many canals, and amongst them the Great Canal and tributary rivers, they are doubtless the best territory of China.' Einjoying these blessings, ehictly conferred by their two great rivers these provinces aro also the most liable to the evils they produce, namely, frequent and destructive inundations. The staple products are grain, cotten, green teas, and silk. Niee suits almirably with the black marshy loam of which most of the soil consists. Nanking (capital of the $S$.) is situated on the $S$. bank of the Yang-tse-Kiang, but at the distance of a lengue from the strenm (Naukin). The Kiang-soo prov. only faees the ocean. The scene which appeared at the junetion of the Yang-tseKiang and Great Canal is thus described by Burrow:- 'The multituile of ships of war, of burlen, and of pleasure; some gliding down the stream, others sniling against it; some moving by oars, and others lying at anchor; the banks win either side covered with towns and houses as far as the eye could reach; presented a prospeet more varied and cheerful than uny that had hitherto occurren. Nor was the camal on the opposite side less lively. For two whole days we were continually passing among tleets of ships of different construction and dimensions. Cities, towns, and villages were continned along the baiks without intermission. The face of the
country was beautifully diversified with bill and dale, and every part in a high state of cultivathen.' (p. 616.) 13. The Che-Kiang (river Che), or Tehe-Klang, is the smallest Chinese prov. It oecuples the SE. corner of the great phain. The Yun-ling chain enis here in innumerable low liills, the most barren of which produce ahundance of tea. In fact the whole dastrict is nost assiduously ladd nuider contrihution by the inhabitants, every inch of gromul being tenamtel. At the port of Cha-poo, a large trade is carried on with Japan. 14. Fo-Kien (happy estublishment), which forms the W. shore of the Formosa chunnel, is monutninous. Barren hitls ani sundy plains are, in trith, the nutural elaracteristies of Fo-Kien, but Chinese industry has made the lund fruitful. The tea-plant thrives in perfection, anul the 'China orange' is chietly derived from this prov. The maritime commerce of Fo-Kien is extensive, its merchants monopolising most of the Clinese shipping trale. Emigratien though discouraged by the govermment, is here very provalent. 15. Qumn-tong (eastern brealdi) joins Fo-Kien to the k.; its shores stretel along the whole S. const of China, to the boriders of Cochin Chinn, the N. boundary being formell hy the Nun-ling mountaius. Quan-tong has 13 disistricts, and an equal mumber of trading emporinms, and to this prov, alone are Europeans allowed to trale. It has many wide valleys, particularly the plain aromed Canton, which is of grent extent, and many valuable prolucts; but, though it be the great entrepot for ten, that article is not of the number. The capital, Kwang-choo-foo (Canton), is the greatest emporium of the E. 16. Kwang-se (westeru breadth) joins the W. limits of Quang-tong, the Nan-ling range divides it from lloo-num on the N., while its $S$. border unites it with the Cochin Clinese prov. of Tonkin. The monntainons portions of the prov.-ly far the grentest part of it-are said to contain gold and other metals: the lowlands nud valleys produce riee, silk, and timber. Both the lnuguage and manners of the inlabitants diffier from those of their comitrymen. 17. Yun-nan (sonth of the clonuls), the most W. of the S. provs. ; is conterminons on the S . with Coclin Chima and the llirman empire ; and towards the W. with Thibet. Its mountains, which are remarkably ligh aud bold, furuish the copper that supplies the currency of China. It is in Yun-nan that the Yang-tseKiang enters China; and by the aid of a high road, which has been made parallel to its banks for a great distanee, communication between it and the rest of the empire is rendered constant and ensy. The same road branching off to the S., extends into the heart of the Birman empire.

The western province, Sze-6huen (five rivers), is the largest in China. Plains, mountains (the Yun-ling), and extensive deserts are its principal components. The Yaug-tse-Kiang having taken a N. benl at the Yun-mm frontier, traverses its whole extent; and, during this part of its course, receives several tributaries. The capital, Chingtoo, was once the metropolis of an imlependent state, which then surromuled it; and its inhal). still boast of greater iudependence of eharucter than their neighbours; which they evince by frequent rebellious. (China Opened, i. 15̄̄-14i\%.)
Natural Productions of' China.- '1'he climate of China, exhibiting occasionally such severe eolld, forbits the presence of some members of the animal kingdom met with in the similar latitules of lndia. The universal cultivation of Chima. l'roper, and the thickness of its population, have long expelled most of the wild animals which still abound in the surrounding regions. There
are also fewer domestic ones than inhabit most Jiuropean countries. Jleasts of burien are in a great degree superseded by the means of transit so eopiously afforiled by canals and water-coursea, and by that tlne race of men the coolies or porters: whilo the canal boats ure dragged along by trackers. Add to this, that animal food is considerahly less in use among the Chincese than veretable diet. There are no mendows for feeding cattle; and even if there were, the natives liave a singular aversion to butter and milk. 'Tigers, though they have been seen in the forests of Yun-nnn, are searely known; and the lion is almost deemed fabulous in Clima. There are wild ents, which are caught, confined, and fed in cages, and consldered a dainty for the table. Noonkeys are foumd in the southern districts. The Chiluese horse and ass are small anlul spiritless, anul so is the buffalo, which is sometimes employed in ploughing. Dromedaries are much nsed between Pekin and Tartary. Pigs are rearell with great care; sheep are smaller than those of Jingland, and coats, of various colours, have uniformly stralght horis. The dog of China is about the size of a spuniel, and is uniformly met with of the same variety. Rats emigrate occasionally from one place to another in large troopls, when they devour crops and harvests: they are very large, and are used by the common people as an article of food. There is a genus of rat peculiar to China, which bears some resemblance to the bamboo rat of Sumatra. The ornithology of China presents, in the first place, the eagle, which frequents the mountainous districts; the haetsin, a kind of falcon, abounding in the province of Che-kcang, is considered imperial property, while the magpie; which is so numerous as to be the farmer's worst muisance, is considered sacred by the reigning family. Crows and sparrows are also abundant in China. Among others of their manifold stratagems for catching fish, the Chinese have trained the fishing cormorant; but that the bird may not help itself too bountifully, the owner puts an iron ring round its neek, which obliges il te deliver up a portion of its prey. Curlews and quails are found in great gumatities in the $\mathrm{N}_{\mathrm{s}}$ : the latter are esteemed chiefly for their fighting qualities, as cocks used to be in England; and, when tamed, good fighting quails sell at enormous prices. Larks are numerous, and sing admirably: But the greatest boast of Chinese ornithology is its splendid varieties of pheasants. One, the medallion pheasant, takes its name from a membrane of brilliantly coloured fenthers, which are displayed or contracted at the will of the bird. The gold and silver pheasants have also a most brilliant appearunce, and are so jlentiful as, in some districts, to furnish the tables of the poor with an excellent dish. Pigeons of different sorts are not rarc, but the matives seldom domesticate them. Aquatic birds are naturally invited to a country which has so many lakes and rivers. The most celebrated of these is the mandarin duck, a species of teal, so celebrated for the strong mutusl affection between the male and female that it is used by the Chinese as an emblem of conjugal fidelity: their plumage is beautiful. The snow-white ricebird of Siam is of great use in China in extirpating vermin from the marshy rice-fields; which it is enabled to accomplish by means of its long legs mind long beak.
From the fishes peculiar to China we derive the goll and silver fish, which are kept there, as in Eurone, for ornament iu glass globes. The edible tish peculiar to China are, first, one of a yellowish colour, caught in the Yang-tse-Kiang, which,
while frenh, is insipid; but is considered a grest delicacy after having been kept for a time in ice. The zhang-tung, sea-eel, and a sort of rock emp, called taung-yu, are also much esteemed, and so are sturgeon, mullet, carp, perch, sea-bream, \&e. Crab tish of various kinds are plentiful. On parts of the rocky coast, oysters are successfully preserved and fattened in oyster-beels.
Though the larger species of reptiles are unknown in China, the smaller lizard tribes are numerous in the hot months; several fresh water tortoises have been discovered, and also two new species of frogs. Venomous serpents are but little known. The insect tribes of China furmish its greatest plague and its greatest blessing. The plague of locust-swarms is terribly inilicted upnon the N. and W. prov. Nothing can exceed their voracity; and it is not uncommon for them to occasion so much destruction, ns to reduce thousands of human beings to starvation; while another insect, the silk-worm, furuishes employment and riches to an immense part of the pop. In rearing these profitable worms, the Chinese excel all other nations. Scorpions and centipedes are plentiful. A spider, peculiar to China, which inhabits trees, devours small birils, after elltangling them in its enormous web. Butterflies of gigantic size, and brilliant colours, abound E ., of Canton. Multitudes of white ants are very destructive in the S .; and the mosquito is fonnd in most parts of the country during the summer months. There is a singular sort of bee, callell the white-wax insect, which furnishes the whole nation with that article, which it deposits upon s particular sort of tree, furnished by the natives with nests to attract the insects.
The vegetable kingdom of China is remarkable for not containing any very large trees, and timber is consequently scarce. The oak is seldom seen, fir trees chiclly supplying its place, every ridge of mountain where it is likely to grow being planted with the fir. Palms, laurel, cassia, nud caper trees are often met with, especially in the S. provinces, and the cultivator grows together the bunana, guava, orange, papaw, cocon, liteli, peach, apricot, vine, pomegranate, and chestnut. There is also a singular production called the tallow-tree, which resembles the birch, but the bark is white, and the branches slender: the fruit, growing in bunches, is enclosed in a brown capsule, which encloses three kerncls, all coated with tallow, themselves containing an oil much used for the lamp, while the tallow is convertel into candles. There is also the tse, or varuish tree, resembling the ash, which exudes a valuable essential oil, but proluces a cutancous discase if dropped upon the skin. It is the white blossoms of the le-pih which attract the wax-fly. The camphor laurel is extremely productive of that drug in China. The kwan-lan contains a pith which, when ground to powder, answers all the purposes of Hour. A species of sycamore, the koo-ihoo, supplies paper to the Chinese from the rind; thin, riband-like strips are peeled and made into paper. Mulberry trees, as food for silk-worms, bave much pains bestowed on their culture.
We come now to the shrub which has brought China into nearer contact with foreigners than her sages ever desired, or her government seem willing to render closer. The tea-plant, called by the natives cha, rises from four to five feet in height, and bears a strong resemblance to the myrtle, but the flower is not unlike small white helge roses. Although European botanists have only discovered two varieties, black tea and green tea, native writers enumerate as many humirels; an obvious exaggeration. Though this plant will

hich has brought h foreigners than government scem tea-plant, called our to five feet in semblance to the mlike small white an botanists have lack tea and green many hundreds; ugh this plaut will
grow in the most sterile grounal, the quality of the leaves depends upon the soil which nourishes them, and the age of' the tree. 'Ihe best are takens from three year ohd shrubs. There are three inpatherings of the leaves ; the first in early spring, the secoud at the commencencont, and the thiril at the end of the simmer. They ure carefilly manipulated, dried in various ways, und then packed. The coarsest leaves are beatern into cakes and exported, principally into 'lurtary, under the name of haicl-cha, or brick tea. lbit the ther descrijtions of tea require a vast deal of labour in their preparaion, and eondil only be proluced in a country where the inhabitants are universally industrious, and wages low. That giant of the grass tribe, the bamboo, is most extensively used; besides being an important instrument for ellforcing the laws, the Chinese builh cuttages and fashion all sorts of furniture with it. The tender shoots make an exeellent food, aud supply the material for a conrse sort of puper. Tolsaceo, the cotton plant, anil surgareures, are also profitably eultivated. The growth of garilen flowers is nut much encouraged, every available inch of gromend being used for the production of edible plants. Even the more opulent natives are content with a few flower-pots, with some pretty flower for the sake of ornament. The water-lily not only prodiness a benatilul flower, but its fruit provides an excellent meal, not unlike grucl, in much request among the Chinese. They luve almost unlimited varieties of the camellia, $A$ plant, the nume of which has not yet reached this country, furnishes that delicate inaterial for drawing upon, and making into artiticial tlowers, falsely called rice-pnoer.

The great pop. of China, and the fondness of the people for vegetables, cause a great number of table-phants to be reared. 'Turnjun, carrots, swect potatoes, and pot-herbs of every kind, are produced in ubundance. A white cabbuge, called pih-tsue, and not unlike the Roman lettuce, constitutes the principal food of every chass, and is really delicions, Of grain, the plenitude of water int China causes rice to be so suecessfully cultivated, that it is brought to greater perfection there than in any other part of the globe. Indeced, there is saarcely any sort of grain but may be fumul in some part of the comatry or other. No medical root is in such high favour as the gitzseng, which is administered as a sort of universal puracen, and is a good tonic. It was formerly fumel only in Shan-tung, Leao-tugg, and Tartary; and bronght a very bigh price. llut it has been discovered in different parts of America, and is now extensively imported into Canton by the American traders. The ti-uang, a plant very similar to liguorice, is also much used as a resturative. The other roots are Rudix Chime (a sort of truffe), galangal, rhabarls, giuger (often exported as a sweetmeat), and poppy, whose juice is made a substitute for opium, mud is extensively cultivated in spite of the strictest goverument rerulations to the contrary.
But scanty information is to be obtained of the mineral hingdom of China; but the portion of the monutain distriets that has been explored is found to porsess great mineral riches. The gold mines are workel exclusively by gevernment, but their situation is kept a seeret, though that metnl is supposed to be derived from the Kwei-ehoo and fur-uan mountains. Gold-dinst is found in the Yaug-tse-Kiaug during its course through Szechaci. Iron is produced throughont the empire. Several sorts of copper are fonnd in abundance, the mest famous of which is the pe-hiny, or white copper, dur up in Yun-num. Mercury is also very
lol., II.
common, as are ansenie, colalt, and orpiment. 'There are coal mines in varions purts of Chima. The benatiful hypis luswli is met witl in the W. provinces. Sialt, produced from the eurth, and by the evaporation of sea-water, is an articlo of great traflic: it is callected in inmense moumb, chictly on the banks of the l'ei-lus. Chima also farmishes the aryatal, ruby, mincthys, senphire, topita; bit dimmonds are little vilued. Thare are stomes resembling lasalt, which, when strick, give ont a souml. Marble, prophyry, and jasper are produced from the quarries of $s$. Chinn, heside exodlent granite and quart\%. (1)r. Abel's Narrative of a Journey into the laterior of China, messim; Downing's Fan-(2ui in China, ii. 140-1ite; Chima Opened, i, 33-5.4; Mate Brın, art. 'Chinn.')

Trude and Comanerve-The Chinese are limoms for their lindustry. Of the hmmense territory they inhabit, there is sarcely a rood of arable gromin that is not assiduonsly cultivated; and such importance do they attach to agrienlture, that oneo a year the sovereigu of the Calestinl Empire--so seldom seen in public-exhihits himself holding a plongh. But it is the misfortune of the Chinese that their patient enduring industry is allowed to usurp the place of ingenity and science. Their farming instrments are of the most primitive kind, their plourlis being inferior to the very worst of ours. Owing to the smalluess of the farma, there is no room for the sublivision of employments; and ugriculture, as a science, is but little advanced in China. But they aceomphish all that can be effected lyy the most persevering industry. They spare no pains in the collection and preparation of manure; and they are superior to every other people in the irrigating of land. I3y the aid of chain-pomps, they draw water from the momerons camals mad rivers, while the highest monntains are ent into terraces so constricted as to retain the requinite quantity of water, and to allow what is superiluots to phes off: by these mems, mul a good system of manuring, they are able, in many parts, to produce two cropis a year, withont intermission.
Bhat notwithstanding their remarkable indastry and economy, the bilk of the pophation have usially so little to spare, and are so completcly withont the ability to retrench in periods of distress, or to resort to a less expensive species of food, that the failure of a erop never fails to involve them in the extremity of want ; and, despitos the supplies brought from other parts of the comitry, it lrequently oceasions the death of vast numbers, and the committal of all sorts of outrages. 'There can, in fiet, be no real security for a eomentry at all apmroaching to the condition of China, unless the fool of the penple in ordimary circmustances be such as to promit of their retrenching in adverse seasons, and thus comitervailing the deficieney of the crops by increased economy.

As a manufacturing people, the Chinese are highly distinguished: the fubric of porcelain originated entirely with them; and thangh the forms of their articles will not bear a eomparison with those of the classic ages of antiquity again bronght into use in modern Euroue, the fabric is excellent, and the colours inimitable. The art of spiming silk was also given to the $W$. world by the Chinese; and that light eotton staff we eall nankeen derives its name from the ancient eapital of China. The laequered ware, though eclipsed by that of Japan is very beatiful; but it is in the minute arts of earving and inlnying that the Chinese excel. The article's bronght here in mother-of-pearl and ivory are too well known to need deseription. Guil powder, thongh a Chinese invention, is manufac-
tured only on a amall acale, and is exccedingly bad; which, indeed, could hurdly le otherwise, as it is a purt of the soldier's empiloyment to make his own gunpowiler. (Barrow, p. 800.) l'aper is ulsw a Chinese invention, and seems to have been first manufnetured $A, D, 9 \overline{5}$. The minterials used in making it are very varions. It is thin, silky, and very absorbent of ink. Chinese books are printed only on one side the leaf. The govermment is jenfons of everything new ; but the perple discover no lack of genius to conceive, or of dexterity to exeronte. Their talent for lmitation is well known. During the course of the present century, $n$ Chinese nailor, who eame to lingland in an Indinman, frequenterl a manufnetory in Southwurk where l'ruskian blue was prepared; and having mado himself master of the process, without exciting the suspicion, or attructing the notice of anyoue, he established, on lis return home, a similar work; and so well has it succeeded, that the whole empire in now supplied with uative l'russian bluc, whereas it was formerly whelly imported.

Money in China consists of the errsh, about the alze of an linglish farthing, made of eopper; from 720 to $\mathrm{I}, 100$ of them being, according to thelr qumlity, equal to a dollar. Silver is employed rather as an article of trullic than as a cirenlating medium; that used as money is cast into the shape of a horse's hoof, and calleel tuel, heing equal to an little over (is. of Singlish money. Gold is also sehtom used as currency; but when it is, comes into the market heaten into thin leaves. Credit is little known, except at Cantom; consequently paper money has not $n$ very extensive circulation. There are, however, hanks in the large eommercial towns, which issue paper. The Clinese trade has the peeuliarity of being for the most part internal, the comitry supplying most articles necessary for the subsistence or luxary of its inhabitamts, and is carried on by means of canal and river hoats. The primitive expedient of barter is still resortel to on accomnt, perhaps, of the inconvenience of the circulating medium. Salt may he almost designated the standard commodity, as being an article of the mont extensive commerce.

The forcign trade of Chima is chiefly in the hands of the English and Americans. The first attempt on the part of Great britain to open a trade with China was made in 1637, when four merchunt vessels arrived at Macao; but through the intrignes of the l'ortuguese there established, the enterprise failed. Afterwarls the Einst ludin Compmay carried on a small traffic at the different maritime ports, and chiefly at Canton. In 1792, Lord Macartney's embussy attempted to put the trade on a more liberal basis, but with little success. In 1816, Lord Amlerst's mission for a similar purpose also failed, though the Euglish trate continued for the next twenty years. In 1834 the exclusive trade of the East India Company with China terminated, and the country was thrown open to general traders. However, the government placed many obstacles in the way of trale, and, in 1839, went as far as to confiscate 20,000 chests of opium belonging to English merehants at Canton. This led to wnr with Great Brition, ending in the Treaty of Nankin-concluded August 29, 1842-which virtually unlocikel, for the tirst time, the gates of the Celestial Eisphas.
The following is the official return of the deelared amual value of lisitish produce and manufuctures exported to China and Hongkong, from 1834-the year when the distinetion was first made in the Custom-honse records between the exports to Chima and to ludia-to 1863 :-

There ts no separate record of the exports to Hongkong prior to 1843.
13y the terms of the commercial treaty signel on August 29, 18.12, by the plenipotentiaries of the Queen of Great Britain anll the Emperor of China, tive ports of the empire were opened to Liuropenn trade. The five ports are those ol Canton, Amoy, Foochowfoo, Ningpo, and Shanghai. Swue minor ports were alded to these by the treaty peace of June 26,1856 . The exports from Chiniameluding Hongkong-to the United Kingiomare of great value, and consist of two principul articles namely, tea and silk, to which lately there has been added a third in cotton. The total value if the exports amoment to $9,014,310 \mathrm{l}$. in 18,9 9,323, , 641 . in $1860 ; 9,070,4451$ in $1861 ; 12,137,10931$ in 1862; and 14,186,310l, in 1863. The sole artide tea ligures to the amonnt of two-thirds in the sum total of these exports. The computed real value of tea exported from China to the United Kins. dom amounted to $\overline{0,528,6601}$ in 1859 ; to $1 ;, 601, \times 941 /$ in 1860 ; to $6,449,5401$. in 136t ; to $8,659,7631$ in 1862; and to 10,051,803l. in 1863. Comparel with this article, the other exports of China to Cirat 13ritain seem insiguificant. Of raw silk, the exports amounted to $3,031,2801$. in 1862 , but only to $1,626,539 l$. in 1863 . On the other liand, the esport of raw cotton was but of the value of $108,993$. in 1862, and rose to $2,164,9951$. in 18663 . In return for the vast quantities of tea, silk, and cotton which China sends to the United Kingdom, sle aceepts little else but a few mannfactured cotum goods of about one-thirl the value. This, the principal article of Iritish imports into China, was of but the value of $1,162,5051$. in 1863, while the tea exports amounted to $10,051,8031$.

History, Government, and Lumes.-It may be almost said that China has no history, for she has so few revolutions or politicnl changes to recorl that her ammals rise but in a snall degree aluse the limits of chronology. The antiquity whieh the Chinese have claimed for their origin, is mur, even by the enlightened among themselves, ennsidered fabulous. Almost the first names mentioned in their annals are Shing-noong, 'the diviue

Lans.-It may be history, for she has $l$ changes to reenth small derree above lhe antiguity which their origin, is $1 \mathrm{~m} / 5$, ng themsolves, cone tirst names nem-t-noong, 'the divine
hunanadman,' who tanght their ancestors the arts of urrieulture; and llomug-ty, who partitioned their lando, and contrived a eycle of 60 yenra, to ruable them to register evenin, and to mark the progress of the seasins. 'Thencomen the jerion of the 'tlve kinges' the lnat two of whin, Imon and Shum, are lichif up) as patterins for fulures sovereligns, Ining the exemplars of royalty down to the present rcign. Y'u, the successor of Shun, mule himwiff consplenous by his transendent merit in draning the comery that liad withered trom a great drhige. The Chinese linve no existing reeords alder than the com cilations of Confucius (burn biol n.c.), which mus: have been made from trudition, From that pediod the mamis of the empirs have leen carefiliy noted and preservel, ani descend in min unbroken line down to the present day. Thene,' the successive lalumirs of twenty-ome histerians, consiast of 500 vols. Furmed into n prosperons and comprarat ively civilised community, under the 'I'sin dymasty, the Chlnese lecame objects of ellvy to thirir neiphlanors, of whom the Turtars were the most tronlilesmene; nud, to guarl ngainst their inenershans, the great wall was huilt. A.D. Ik.t wis the cra of the 'three ntates,' into which the empire was divided; but in bxs it was argin mited under one ruler. The 9 th and foth ceuturies were much ocenpied in eivil wars, enned by the contending elaims of several axpirants to the throne; but these were thatly uljusted A.b. 950 , by the consolitation of the Soong dymasty, under The-tsoo. Thin wan the tirst grent liturary age of Chinese history; mill printing linving leen invented 500 yonrs lefion it was known to Fiuropenoss, authors nid looks were moch multipliend. Under this dynasty the Chinese, muhle to resist the 'Iartars, called in the aid of the Mourfuls; and they, by a policy of which history allords numerous exanples, soon ex ehanged the charactor of allies for thint of comguesos; mit, moter the famons Kublai-Khan, fomuled the Moupul dynasty: This able siovereign established the sent of his govcimment at l'ekin, or Kambaln, as it is called by Marco I'olo, and eonstructed the grent caunl. lhat his sucesesors rapidly degencrated; and the linth Mongnl inonareh surrendered the throme to a Chinese, A.1, l3ist, Twelve emperors of this native dynasty of Ming reigned in comfarative peace ill, in 1618 , dirring the wway of Wan-lie, the 13 th in succession, the Manchons, a race sprugg from the expelled Momgnls and the Kin or E. T'artars, after a war of twenty-seven years, established themselves tirmly in the empire. The seventh in clescent from Khmeliy, the tirst of the Ta-thsing clymasty of Tartars, oceupies the throne of China at this day. (Bavis, i . 105, 188.) The most conflieting statements have been made with respect to the government of China: while some writers have represented the whole empire as trembling under the yoke of a capricions despot, others have represented the fovernment ns miministered aceording to the intlexible rules of jinstice, and with the greatest moleration and humanity. Both these representations seem to be alike inconsistent with the facts. According to the theory of the constitution, the emperor is absolute; his will is law; and he is not responsible to any earthly tribunal for any of his actions. In China, as in ancient Home, fathers have full power over their families, and, on the same prineiple, the emperor is helal to be the fiather of the entire Chinese people; and to have the sume molimited power over them that each individual has over his own children. Dractically, however, his nower is comparatively circumscrilied. In China everythint is determined ly custom, or by immemorial ractice, from which it would be highly dangerons
for even the emperor in depart. The Chinese is emplimically a govermment of precedent; and his celentlal majesty in, in renlity, the crenture of enstom and et liquette. All ennployments are heatowed, aceorling to Axed rules, om thowe who lave obstahed certitheates of jrotheinelicy ufter pasaing thrir examinathon. The penal lavin of the empire aras Irinted lin a clanp form, unil widely dillused; and ohe of the sixtern disooumes mimally reme to the pulhire, insulentes the proprioty of every man makiag himself nerpuinted with them, mil with the permaltien cumsequent on their infruction. Althongh, therefore, the government of Chine le despotieni in its form, mind every device lie collployed to sive to the emperor not mercly a
 necording to lonk-entahisished roles; and with probubly un little ministure of dexpotlem as is to be found in most goverinments.

The grent deffect of the Chinese, an of all similarly comstituted govermmente, is the whut of nuy albetuml control ower the inferior agents. The emprrar is not onniseient ; and notwithantanding the varionsilevieas jent in motion to lenrn the real combinet of the suborininte anthoritles, mid their liability to punishmont if they abmse thelr power, it wonlid recm that these chroks are, in many instunees, of comparatively little nvail; innd that much injustice nmi oppression on the part of pernoths in power, escmpe detection und pmishment.
'The emperor is culled ' Ihe son of heaven' ('L'cientsye), mid the mumbarins und othor matives not iilly pristrate themselves when in his preseluee, but also before a tablet, with the inseripition' the lord of a myrial years' (Winsuy-yay). In his charmeter ol patrinreh, his imperial mujesty is not mily looked yomat as the finther of that m:aitudinous family, the gop, of his compire. Int is also considered the sule dispronser of the blessings of henven; lior the prime criou of heliaf in, that 'the duty of nlloriling to the pople sustemane mind instruetion is ingused on The One Man:' while, on ocensions of nationnl ealanity, he publicly confesses his errurs, and neknuwhedges hiv miscomiuct to be the cume al the divine dixplensure. (?umrterly lieview, xxv. d16.) The parallel letworn the relations in which every persom stamels to his own jarents and to the emperor is carried ont liom the most important functions of the lugislature, down to the minntest oleservances of ceremons, nll of which are regularly preseribed by law. (Inavis, i. 201.) The ninion of the avenger with the father, in the emporor, is well illostrated by Davis. A man and his wife had severely ill used the mother of the former, which circumstance was reported to the emperor. The very place where the crime was committed was male necursed. The principal offenders were put to death; the mother of the wife was bambooed, branded, and exiled, for the danghter's erime; the seholars of the district were not permitted to attend the public exammations for three years; and their promotion was thereby stopped. The masistentes were deprived of their office, and banished, 'For,' says the edict published on the occasion,' I intend to reuder the empire filial.' Livery device is employed to crente the impression of awe. Dressed in a robe of yellow, the colour worn, say the Chinese, by the sun, the emperor is surrounded by all the pageantry of the highest dignity in the world. All ranks must bow the head to a yellow screen of silk; in the preat man's presence no one dares speak but in a whisper, though his person is too saered to be often exhibited in public, and an imperial dispatel is received by the burning of incense and prostration. lout with a!l this he is not allowed to lean back in public ; to smoke, to change lis dress, or, in lict,
to indulge in the least relaxation from the fatiguing silinsirt of his dignity. (thinese Hivt. : Duvis: Quinterly Review, Ivi. He9, Eillis's Aceomet of lared Amhernt's Eimhansy, p. imiz.)
Next, nfter the cmpurcur, the eroirt ls eomposed of fivir prinulpul mindsters, two Tartars anil two thinese, who form the preat comucil of stme, assisted by certain neseswurs from the Han-lin or firent Colloge, who have studied the sarered brinss of t'mitiecins, which hirm the havis of Chinewe haw. There muy he comsidered us the cabhinet; but the real business of the empire is exsented hy the
 of ottleinl mifnintmente, which han cognismence of
 bonril of revemue, which regulates wil tiscul mat-
 which enforses the ellatome to be observed ly the jecple; 4. l'ing-pos, military hoarl; 5. Hing-pwe, or mipreme eourt of criminul Jurimbiction ; ti. Kumgpoo, homrd of pubbie works. There is aloo a colo-nial-othice, composed of Mnehehes and Monguls, so that the respective tributary princes may have conthlence in referring whentever concernis their interests to thair own comintrymen. 'To each of the prows, a vieeroy is apminited by the chief, or 1, e-poov honal ; and overy town is presided over by a magistrate, who takes rank aceording an he is at, the head of a fine, theno, or herën. Sulordinate willeers sugperintenil the leser divisions. All these filuetionaries are remowed every three years; nuld that nu ties of kindrod may interfere with the strict diselarge of their duties, the veceroys and magistrutes are forbidilen to form any mairimonlal conneetion with a fimily within the limits of their rule. It is honourable to the Clinewe that, for these and other state olllees, merit alone is the qualiflcation ; the son of the piorest peasant or artideer may offer himself as a cmadlate, and, by tulent mad ipplication, rise to the lighest employmputs. $A$ singular expedient is nolopted to usecerthin with what lidelity the vicerous nad magistrates pertiom their daties. There is a bouril, hembed ly a 'Turtar and a Chinese, on whom it formerly devolved to watell uver the words mal netions of the emperor, and freely censure him for any misalemennour! The dities fir whick this ollice was origimally established huve, for reasoms easily understoonl, long fullen into disuse ; and the meinhers are now employed as censors for the emperor, being sent as inspectors lato the provs. to see how the viceroys and magistrates do their dinty, nud to report their delinguencies. But these functionaries are less formiduble than might be silphused. If they did their duty honestly; they wonld, no doult, be of singular advantage ; but in Chinn, as elsewhere, it is usually fomme that inspectors look with an indulgent eye on the faults of those in anthority ; and it has been donbtel whether their visits be not as often the means of stitiling the comphiuints of the public, nnd of preventing and deliy:mug justice, as of fucilitating its course. Nothing can be more hucid nud metholieal than the code of laws promulgated for the guldance of the boaris and their subordimate officers. Each district has a separate cole, adupted to the habits and disposition of those for whom it is framed; and offences, with their puishments, are classed under six different heads, corresponding with the six boards, so that each case is referred to the tribmal agninst whose anthority the offene may have been committed, unless it be one admitting of summary pranisluneut.
The Thsing Leu Lee, being the fundamental laws, and a selection from the supplemental statutes of the pennt code of China, lins been auly translated by Sir George Staunton, 'The most
remarkable thing in this exte is ita grent reasonableness, elearness, nad comanistency; the businese. like lirevity and directness of the varioms provishime and the phaniness and mosleration of the lamgange In which they ure expreseed. There is nothing hen of the monstrous cerbienge of mont obluer Anfintic productions: uene of tho supumatitions deliratinn, the miserable incolurence, the tremembens mimarequitures, and eternal repertitions of thome ornenlar pertirmances: wothing even of the thrgil adu-
 self-pruise of other eastern denpotisms ; but ncleat, romelese, ami distinet series of emartments, savouring thronghomit of pratical julgment null Eurroman
 improsere mutions of expeolleney in this comutry, In generna npironeling to them more nearly than the coules of most other nations. (Bidin, liev, $x$ si.)
This is highl, hat not undeservel praise. At the snme time, however, the Chineses corle is not without very serimes defeets. There is an dalamente uttentions to trilles; nud a perpethal interferentre on the part of the legislator to enforeo dinties amm ehservances of no Jupsortanue, or that hall hetter he left to the descrection of individuals. Llut its greatest delect is the vagneness of semme off is clanses: so that a person may be pumishad if his condinct he 'coutrary to the silintry of the hure!' The frequency of corpural pminhmenit neemase. traurlinary tis Europsuns. It in, in faet, the miversal pematy: offences the most trivina and tie gravest, whether, committed by persons in the highest or the lowest walks of life, being visitel by so many stroken of the bumbeo! These, home. ever, are not always Indicted. Persons mudht iffeen or above keveuty, or mimell, may rellema themselves from all but eapital pmisthments, ly a small the; in other instances the punishment may be commuted by paying a sum of money proputtioned to the number of blows. But there ate crimes for which even those who are rich enough to ewenpe whitpping for orlinary offinces are ait suftered to make n preculiary compromise. Indeel the lnmboo seems in universal refuisition, from the empleror down to the mennest of lis subjects; and not only the number of blows, but the lougth and thickness of the inst rument to be used for eath offence, are minutely preseribed. The prorngative of mercy is not mfrequently extended, with, horrever, one exception. In in conutry which has preserved its institutions unchanged, and its lawx inulterel, for 2,000 years, it is not surprising llat s..ititions offences stionld be severely dentt with The erime of trenson is visited with remorseles severity. In 1803, Mr. Dnvis states, a simple assassin nitempted the life of the emperor. He was condemned to a lingering denth; and the criminal's sons, being of tender age, were 'mercifully'strangled ; for it seems to be the peeculist barbirity of the Chinese criminal ever, that is involves the innocent family of an offender ia the retribution for his erime. There is much in use a sort of pillory, called the caugue; and torture is employed to extort comfession. The police al China is said to be vigilmut and efficient ; hut, as a safeguard against oppression, the name of ceery person is any way comnected with the goverument is published in a sort of hed look, of which a currected ellition appears fuur times a year.

Amother type of the patriarchal form of the Chinese government is to be fonmel in the mode in which the state revenue is producenl; it consists principally of tithes: not paid in the mature od taxation, but as rent, the emperor uniting the clasructer of universal landlord with that of king and father: but though the whole pop, be tenantsal-

The revenine in paid partly in monay anil partly lin kind, 'The grontont powsilile disurepancy exintanamgant the patimnten that have beron given of its amonint. It is lelieved, however, that the entire revenue remitted to the imperina trenwury may monnt to about $\mathbf{1 2 , 0 0 0}, 0011$, nterling,
 probluce. Hut it. is esmentinl to lever in mlide that thin is not the whole nmount of Chinese taxation, limamich as the expenmen of a collectlon, anid many local and provinclal clingese, are dedicted hefure any remittance be male to the ingerini Iramiry.
The Militury service of China is nombally compmod of $1,000,1+10$ moldiers, besides the militin nud aumerous stabiards of Mougul envalry ; but from this vast number many namen must lie deducted which are meroly entered in the bosks, num porhaps the whole force does not exccel (a) , inti), Thesoldiors are enrolled in the corpan quartered in the provinces in which they are horn, nud which aro never quartered nny where else; the Chinese guvernment heing impressed with the copinion, that suldiers living with their families, and being, in fact, more than linalf citizens, will exhihit greater beavery in the defence of their conntry, whonld any occasion arime for their servicen, than if they were conped up in barracks or fortrensen, nul suljected at all times to strict diselplias and martial haw. The trouss are only embodied at certnin senmins, befing at other perionls their own misters, The Tartar troops, inammich as they belomg to a sanaling army nt a distnnce from home, receive hifher pay, nud are more etheient soldiers than the native Chinese; thongh they nlao seem to be enervatel by their long residence in this tramguil rygion, The whole army is divided into standarils, distinguished by their different borders anme culuirs. These corps-not unlike our brignilesare sublivided into camps and wings; the right, lefi, and midelle. The otlleers are all rused from the ranks, and are lonked nom by the civilinus as lithe better than police ngents; hit, like the latter, are obliged to take their regular degrees to obtain promotion, which is rapid. Their grades are prerisely similar to ours, from the Le-tuh, coms-maniter-in-chief of the forces, down to the Waewej, or serjeant. The principal weapons are bows und arruws; but they also use clumsy match-locks and iron guns, without carriages, and, more rerently, have imported tolerably good rifles and supenor ordunace from Enrope, The theory of tacties is well understood; but the practice is very deticient. In so peaceful a country there is but little occasion for military skill; nnd without intelligent officers, or improved wenpons, it is not to le supposed that they shonld make any effectual opprosition to buropean troops, A standing army, in the luropenn sense of the word, is not in existence. The solliers de rot live in larracks, lut in their own houses, pursuing ns cliefbusiness some civil occupation, frequently that of daylabourers, and meeting only on certain occasions, pursuant to orilers from the militnry chieftains. Moger, Marquis de, Recollections of 'Baron (iros's Limbassy to China, Lond. 1860.)
The Chinese Nury is extensive, but ineflicient; it includes, perhaps, 1,000 sail; but the men-of-
war are mare junks, whleh mount a fow guns ; antil there are fres lirge vemeds. This imporini havy is commanded by iliree high ndoifale now their inferior olllerers, ill of whonil are su arofinmilly iginorant of their hosiouse, that tho marihant juinks are better manuged than the lingerinl erninern. In the emmatruction of river craft, the Chinese are more akilful; muny of these vessels are indedillonting habitntinms, and thomsands of fimblien live in them during their whole lives, (Skoteh of Chinese Ilist. hy liatalati,
 l.en-lee, or Criminal Cole; Davin's Chineme, $i, 204$ et sey,; (Lunterly Review, No. vi.)

Character and Noncial Condition,-The Chinese are saill by Mr. Duvls to he a nution of ' incurable: onservatives.' Their rule is to nilhore to all that. is established, and to reject nll that is new. 'They are the very tranacript of the nurient world living in the present diny; they wear the anme costume, aresuliject to the same lnws, whidh are mimlnisterel precisely in the name way, mul they exist to all intents and purposes in the smme social nul intellectual condition an their forefnhbers did 2,1010 years ngo. IThis unlformity may he nlmont mail to bave been ordained hy nature, for it is a remarkable fuct that the Chinese are so mola tike anch other in personal mpenrance, that it is dillende for a liurupean to diatimpuish letween them. Wo thal no diversity in the colour al their lanir, to" variety of eye, no prominent and atriking lionture which indicuten the pace of their hirth, (Chinn Opened, i. 2!3.) They have black, still mil strong hair, sliavel so as to leave a mith cherished tail depending from the crown; $n$ depiresseal fince, wherein the dist inguishing fentures are not wimgly marked, a flat nose, amull angular eyes, round ninit prominent cheeks, n pointed chin, thin eyelids, small beards, midille stature, and strong boues. Long ears and plumpness form their becuidend of beanty; consequently, to attain the latter, they exetcise lint little agility. (ll|. p. 2!3.) 'The arintocracy of rank and wealth are nuknown in Chinn. Distinction is solely to be obtained hy learning; nnd dignity is only conferred by oflice. Even the sons of the emperor and their families merge into the common mass, should they not stuly, so as tu become qualitied for some otheial empiloyment. The mandarins, or literary aristocrats, do not ol-tnin their rank exeept by passing repented examinations, as to the farmess of which no dombt has ever been surmised, and establishing their superiority over their competitors to the antinfaction of the Board of Examination. There are nine degrees of mandarins: the highest being vicerovs or governors, and the lowest, eollectors of the revenue, dc.; promotion can only be obtained ly nuperior proficiency in the study of the law. The different functionaries are distinguished ly the mimber of buttons in their caps, nul other variations of costume. As the pay of all persoms in otlice is unreasonably small, they often resort to

## CIIINA

extortion to make up this deficieney, and there is menrerly a mumber of the 'Perkin Cinzette,' thant dows lut recoril some linstance of a pmblife ottlecr heing degrablewl for that crime. The maturnl characterbatiex of the Chinese are summed up hy Davitho these worils:- "The advantageons fentires of their
 ableneses, sulwaidiuntlon, and renpert for the mgeit,

 The lower orders are pmssimuntely adidieded to gamblige, for whileh thay have their premian earis amid illere. That homesty is mares valued than prat:tised has heen buferred from the notiteation to hes frempently neen in shop whindow, thent 'there is no cheatinge here,' and Irom a emitiom phacaried in mont pmblies eonveryncer for trweellers, to 'take eare of their purmen;' bit we donbt whether sueh matieen pally go for midh, The inslacerity nind
 really exint, ure the matural bomserpeneres of the restrainto, moder whioll they are Inid from infanes, of the interferenee of the law with all their netions, mand of their heing obligeol to sulperese nate conaceni thome feelinges nuad emotiones tol whelh, in other comutries, fill vent wonld begiven. Their nttention to etipurte is a consequence of the same principle. Even when peramante vivit emeh other, complimentary curls-the size of which intermines the rank of the sumler-and polite answers are exchangel. ' (on the arrival if the gurest, conshiderable difllenley is foumd in arranging who shinll make the lowest bow, of first enter the dowr, of take the highest seat, or assume prececoleney it table, thomgh the host contrives to place his ginest int the most mevated mastion. When comvernation commences, the mutual asemt to every propowition, the serilpulous avoldauce of all comerndiection, mal the entire nherenee of every olfonsive expression or molancholy allowion, show what a senses therse people entertain of pulitences.' (Menthurst's Chinu: its state, I'rownects, (xe., isis. ) The romblition of the pow is wretched in the extreme: they are frequently dextitute of final, and many ares siid to perish in the winter senson from colif; lior wint of fiel. (tintalall"s Voyages. p. fit.) Whgeing is cemmon in the large cities, but not more an tham in Burign. It is a curions fater, that thomgh the thinese be remarkatle fir assisting each other, partionlarly their own relntions, with monery or fund, they will ons materomet step outt of their wey, in case of accilent, to wave a fellow-ereatures life; but this arises from their laws making the premon last seem neer a eorpse maswerablef for the denth. Roblery is not macommon, but is very soldom necompunied with muriler. The people, penerally no quiet and sulmissive, when once ronsed by the oppression of an intolermat maristrate, will rise en masse against him, and sulifeet him to lyneh law: in such ensen the goverument of l'ekin gelurally comelndes that the magistrate has heron in fanle; and the mutrage is allowed quietly to fall into oblivion. The drowning of inliunts, purticularly of females, has been sulid to be costomary in ('hima; but this is a monst mufinumbed statement. That an enormity of this sont is momotiones committed is certuinly true; but we believe that it is of execedingly rare occurrenee. Mr. Davis says, that 'the Chinese in feneral are exceerlingly fond of their children, and the attachuent secmes to be mutual.! (i. 246.)
The whole of the Chinese nation is divided into fanilies, each of which hear the smine surmame, and comsider each other cousins. These clans are bunnal to nesist eneh other in my way that may be requirenl; aud the most powerfinl of them ath as a salutary check upon localdespetism, The remen

Hrligiom,-There is no religion in China netually winmited by the wtate, anif $\boldsymbol{V} u$, the doctrine of Cinfucion, is the suly one eonntemane by it. Int there are two other mecte; F'o, or lhidilhinim, nud Them, or that of the 'rationilints.' 'The Ilrat mehamblodres a Stapreme Ileing, nimi believes the emperur his sole viegrerent on eartls. Henceln, earth, the elements, Confuelis, gods of varions attributom, sainto, the emperor, de., are whjecta of wombin: the rites in performing which nre watelsed over with the mont fenhous eure by the Seepere, ir lhard of lites. The dectrine of Confucins thls the world with genli, demons, and the spirits of Anepsed worthies, whon are supposed to have carli thoir sepurnte cluties and intuencess naskined to them. Do worship in so strietly oloserved ins that of ancestry, no that illint phety in carried to thit exess, even beyond the grove, The religions allllees of the Fu sect aresnidl to be very aplenilid. They chietly comsist of one large hall appronelied luy step, with the didol pliced upom an nltar, or salle; the walls are ndorned with pietures, mud the ceiling with gilaled gritlis and dragome An apparatus for sacritleing varions animals is also frisuided. There is no eongregrational worship. limblliom is a dexpised ereed in Clima, amel ls entirnly mopported by the mendieancy of its priests. The latter practise celitncy, olress in a similar manner to momks, nud the devotees nse holy water, and a ronnry to keef aeconnt of their prayors, Mr. Mnleolin, the missionnry, has given a very favourable view of Ihulilhism. 'It has no myinology of obscene and ferocions deities; no snuguinary or impure olservances; no self-intlicted tortures; no Iyrammising priest hool; no confounting of right anil wrong, ly making certain iniguities laulable in worship, In its moral corle, its descriptions of the purity and peace of the first ayes, of the shortness of man's life because of his sins, de., it seems to have followed gennine traditims. In almost every respect it seems to be the lest relizion man ever invented.' ('Travels, i. 322.) The professors of Taonism pretend to magic, alchemy, and to be possessed of the clixir of lomg life; practise glaring impositions, and inculcate the most puerile superstitions. 'They encourage a helief in ghosts and evil spirits; make use of spells and talismans, lucky and minlueky birds, and a system of trieks ealled fung-shaey, by which they pretend to choose lneky situations for builling honses and tombs, and a humired other fallacies, by which these impostors contrive to fill their purses. Religion, of whatever kind, has always, we believe, been reekoned a matter of secondary importance in China. Hut this is a suljecet as to Which our information is eomparatively little to be rolied on. 'The ancient and modern missionaries,
how mirli monver they may liave mimirel many bartsuf the Chinese charmetcr intil institutions, have gonerally represented their morala mind religion in the mome nufinvarable point of view, 'llant thers
 tninly trioe; luit it is su obvionsly the literent of the iniswlomaries, liy depreciating the moral niml reflgions ehnrmeter of those they are lalentiting
 nad to justify their clalmes to thes pherongige nowi atplast of the ('hristian fililie, that their whatsmedits can harilly be mplosed to bo free from bias. Many enceavoura linve leen male to intruluce Chirintinnity into Chinn, but with lems sureows thme lins attended similar ethuris in other nintinns. it was fient introndered be the Nontorinins in the lïth custury: Ihens were follosved hy the desulta, whose mlamionitices wero more suceresfinl than those of any uthor seat; for at the Thatar livaslin there were no fiwer than thirty Cuthole charches ins the provhice of Kivany-min inlone; the dirnt of the 'lurtar prinees upenily expontaed thes

'The late I)r. Murrisom was the tirnt I'ritextant miveionury who landed in Chinag lie come piled a dietionary (linving been preceded in thit
 lated the Soriptures into the Chinese lamguage, nul establishay primting-preswes at tminton, from Whith a jublichous selection of tracts has inathed. 'I'hese pions elfirts lime heen ably secombed by Mr. Mine and the liev. Charles (Gutalnil', thes latter ul whom has puhlished several valuahle works on China, of which we have made eonsideruble use. The Mohnmmednu, Jewish, mad muny other religions are to le fomme in Chlina, lint in a very languishing condition. A semi-politiena, kemirelligions movement, which broke out in China nbont the year 18000 , nul, necording to nome reports, threntened for atime the sentruction of the netmal government, was lomge believed to be owing to the teaching of Cliristian miswiomaries. Ihat this belief was searcely fommed on fact. 'The insurgents, commonly called 'lappings, whintever their religions fuith, were certainly not Chriatians, for the many ntrocious nets committed by themaets completely inexcusnble even by the direst necessities of warline, and warfure in ita bitterest form, civil shite-showed them entirely macquaninted with the findimental precepts of the divine Guspel of Christ. This, ton, was the conviction of the leading statesmen of Jurope, with whose help, and the aid of Britivh and American ollicers, the 'laepings were fimally erushed in $1860^{\circ}$. The valuable help thus nftorded weint fir to reemcile the Chinese govermment to Jinropenn progress, and to enter uron a liberal filtilment of the treaty: of peace concluded with (irat Iritain, dume 2f, 1850; by the terms of which Christianity will be tulerated throughout the whole of the Chinese empire.

Langnage, Fduration, and Literature.-Distiset as the Chinese are from the rest of mankind in habits, manmers, and religion, their totnl dissimilarity in rendered contplete by heir language; which, arrested betwern the hicroglyplic mal alphabetic systems, presentina singular phenomenon. The most obvinus expedient for expressing substantive inleas otherwise than by speceh, would be to ligure a representation of the object intended to be expressed; and this was tulguestionably the plan first adopited by man to commmicate anul record what he thought through the medimm of

long. $8802 R^{\prime} \mathrm{E}$. In apponrance it has quite a lhitch elaracter. There are mung amall urat homses, with green doors and windows. A pretty little sciure, with grass-plot mad promemades, shaded loy trees; a fortuled fuetury ; and a glow, my old-fanhioned government-house, are the more remarkable features.
CHIO. See Scto.
CHIOGGA, or CHIOZ:ZA (perlaps the Portus Fidre of the ancients), a sea-port town of Austrian ltaly, prov. Vemice, eatjo distr., on an inland of the sulue name, at the S. extremity of the lagoon of Yenice, 14 m , S. that city. Pop. $2 t, 800$ in 1858. The town is abont 2 m . in circuit; well built; contains a wide and handsome street iined with porticos, a cuthedral, hosplital, orphan asylum, nad thentre; and is comnected with the maninland ly a stone lridge of forty-three arehes. It hus a harbour with 17 ft . water, protected by two firts: there ure other batteries, and Chioggin is deemed wie of the most stromgly defenled points of the Yenetian lugron. It is a bishoprie, aud has an episeopal pulace, a gymnasium, a high seminary, conventunl female school, and an evening rudimentul sehool attended by nearly 300 poor chitdrell. In its vicinity are some importunt saltworks, which, together with the manufacture of cordare, the building of vessels, for which there are thirty-six slips, navigation, and fisting, ocenpy many of the inlabl. Trude active in ltalian and German produce, and ficilitated by conals communienting with the llrenta, Alige, and I'o.
CHIPPLENHAM, a parl. bor., town, and par. of Enghud, co. Wilts, huml. Chipqenham, 87 m . W. lomilom, 20 m. E. Bristol, on the Great Western railway. 1'op. of municipal bor. 1,603, and of parl, bir, 7,075 in 1861. The town is situated on the $A$ von, which is here crossed by a hridge of twenty-t wo arches. It is well built, paved, lighted with gas, mul nmply supplied with water. Frem its situation at the intersection of two grent roads, the Mabmeshury and the London and Bath lines, many daily conches formerly used to pass it, and it hind a bustling appearance. It is now on the line of the Great Wextern railway, and a branch of the Berks and Wilts canal termic ites in the town, The church is a spacions structure of varions dates, some portion being as old as the 12th eentury: there are also several dissenting chapels, a free school for twelve children, and other charituble and benevolent institutions. The market, which was furmerly very extensive, is held on priday. There are large cattle-fairs, Mny 17, Jume 22, Oct. 29, and Dec. 11.
Though one of the oldest towns in the kinglom, Clippenham reecived no charter till 1554 . Under the Municipal Reform Act, it is gorerned by four aldermen and twelve counsellors, and the limits of the bor. have been extended for mavicipal purposes, so as to include the whole town and a pop. of about 4,000 . The corporation revenue amounts to ahout 3501, a year, derived principally trom an estate left for the maintenance on the brilge and of a road to Derrylill in the vicinity. A court of requests for debts umder 40s. sits suceessively here and at Calne and Corsham.
Chippenham has sent two members to the H. of $C$ : . from the reign of Edwaril ]. Previonsiy to the Reform Act, the right of voting was restricted to the occupiers of 129 dergage tenements within the ancient bor. The extension of the limits of the purl. bor. by the Bounlary Act has been noticed above. liegistered electors, 375 in 1865.
CIILPING NORTON, a town and par, of England, co. Oxford, humd. Chadlington, $85 \mathrm{~m} . \mathrm{NW}$. Loudon by Lombon and North Western railway. 1'op. 3,137 in 1861. The town is built partly on
low amu partly on high ground. It has a large biothe churel, whith a low tower; a free selnom, fombed by Edward VI.; n subseription seliond, fir eduentiug and elothing forty girls; mad almoshonsee fionuded in 16:10. It retirned two members to the H. of C. in the ath of Edward I., and the 32 nd and disrl of Edward lll. Its bailiffe were empowered by a churter of Jamea I. to decile nctions muder 10 s.

Alont 8 m . from Chipping Norton is the Rowldrieh momment, formed of upright stones, arrunget in a nearly circular form. This momunent is uscribed ly Dr. Stukeley, though probully without any grool foumdation, to the Druids. (See Avenutr.)
CLISWICK, a par. and village of Englame, co. Middlesex, Kensiugtom div. of Ossulstam lumal., on the N . hauk of the Thames, $4 \frac{1}{3} \mathrm{~m}$. from Ilyde lark corner hy road, and $8 \frac{\mathrm{l}}{\mathrm{m}}$. from Waterion Bridge ly London and Sonth Western ruilway. Pop, of par. 8,500 in 1861. The chured, whicll has been frequently repaired and nltered, has several interesting monuments; and in the churdyard is the tomb) of 1logarth. There are many the villas; but the great ornament of the phace is Chiswick llouse, belonging to the Duke of Devoushire. It was built after the model of a villa by Palladio, by the famous Earl of lharlingtom, and has a choice collection of paintings. The illustrions statesmen, C. J. Fox and George Canning, breathed their last in this villa.
CHITORLL, a city and strong fortress of llindostmi, prov. Rajpooinna, and formerly the calp, uf the ragahship of Odeypour, 6.4 m . 1:NE. that city. The fortress, situated upon a rock searped by mature and art to the height of from 80 to 120 ft , is surronaded ly a rude wall with semicirenlar tastions, the cirenit of which is said to he 12 m ., hut which incloses only a narrow, irterular, and disproportionately small area. Its entworks are hassive and striking, and its appearnnce picturesplue: its interior contains mumerous temples, several palaces, some minarets, one of which is a square tower of white marble, nine stories high, and surmounted ly a cupola; and many wells, fountains, and cisterns. All the public buidlings are of tlindoo origin, excepting one erected by a som of Allrumgzelie. The town, seated below the fortress, is chietly inhabited by weavers and dealers in grain.
ChltTAGONG (Chaturgrama), a dist. of India beyond the Ganges aud Bralimapmitra, but included in the prov, of Bengal, of which it forms the si:. extremity, lying chietly between lat. $21^{\circ}$ and $23^{\circ}$ N., and long. $91^{\circ} 50^{\prime}$ and $93^{\circ} \mathrm{E}$., having N. ' Tippernh, E. the country of the indep. Kliyens, s. Arracan, and W. the Buy of Bengnl. Length, X. to S ., about 165 m .; breadth meertain. Pop. estimuted at 790,000 . The islands of Hattia, Sundeep, mad Hameeny, with Mascal and others contiguous to its shores, are under its jurisdiction, Its coast, S. of the mouth of the Karnaphuli ir Chittageng river, abounds with openings mad harbours; but umfortmately none of them are available for ships of any size, their mouths being choked up with sandibanks and shoals. Surfice along the coast low and fat ; the interior is hilly; and the E., frontier is furmed by the same extensive mountain chnin which bounds Sylhet, Tipperah, and Arracan, to the E., nul which in this portion of its extent varies from 2,000 to $5,600 \mathrm{ft}$. in height. In this region many streams arise which disembogne on the Chittagong coast. Climate in many respects similar to that of helgal; but the rains set in earlier, and last longer: in the hill region the crops often sulfer from the inmand tions of the mountain torrents, ns they do on the

Clio that of lengal; ast longer: in the from the inumataas they to on the
conat from invasions of the sea. Chittagong is in muny parts particularly healthy, mul is, therefore, oltof irequented by Europeans from Bengal. Muny ol the valteys mul phans possess so tertile a mot that very little labour insires redimilant crops. Mach of the conntry is overgrown with jungle, and the whole of the momstain chain is covered with lofty furests. The hilly region, when chenred is helleved to lie well adapited for the culture of collee, pepper, and spices. The low hills are interspersel with many hambets inhabited by Mughs, who emigrated thither ufter the compuest of Arrnean hy the Birmese in 1783, in the neighhourhome of which, on small plots of cleareal land, they raise phantains, ginger, betel-lenf, the sugar-enue, rotton, lindigo, tobseco. and capsienm. The hills in the N. are inhabited by Tripurah, Joomea, nul wher tribes, uparently without any olependence (in) particular chiefs; who enltivato coton and rive, and rear hors, coats, mul poultry, which they exchange with the Bengalese for sult, irom, enrthenware, and tish.

Notwithstanding the fertility of its soil, Chittngong is, upon the whole, but thinly inhabited: fowards the end of last century it was entimated that there was twice as mola unprolnctive haily country as enltivated arable land. Landed property is mostly divided into very small portions, amoing numerons proprictors, The waste lands, when cleared, become thable to assessment under the deceminal land settlement. Except on the sen-ronst, towns and villages are very searce. The Murhs or Arracnuese inhabit either tempornry hambets, which they change together with the sputs they cultivate, or else permanent dwellings about 10 'th. loug by 2t) bront, elevated on posts several feet from the gromil, after the fashion of some Ultra-(itugetic nations, aspemided by a ladeder or not herd stick, aul much more conntortable in their interior than the lints of the Bengalese pensamtry. The male Mugh prop. have mopted the ifress and habits of Bengal, white the females retinin those of Aracan and Ava: all are Bulithists. The Jolommerkms in this dist, are to the Ilimhos as 3 to 2 ; but are extromely tolerant, and have mopoted many llindou habits and enstoms. The chidf exports of Chitagong are timber, planks, mavas, eoarse cloths, storkings, mobrethas, \&e.; on the sea const salt, which is a govermment monumbly, is extensively manulictured. Coal is believill to exist, hat no mines have vet been worked. The elephants of Chittagong have been celehrated Inoth for size and excellence, They are admirably mapted lor the camp and the chase, and lumting them still forms a chief oceupation of some of the furest inhabitants. Many were formerly calasht and exported, yielding a eomsiderable proit to the sovereign ; the trade in them is now farmed by the poverument to a contractor.
Chittagong probalby once formed part of the extensive kiugiom of Tripural. In the sisterenth century it was sutcessively possessed by the NIfghan kings of Bengal and the Arracm rujah; in 1760 it was finally ceded by its mabob to the British.

C'IITTTELDNOOG (Situla durga, the spotted gastle), an inland town and fortress of Hindostan. prow. and dom, of Mysore, but oceupied by a linitish garrison; cap. of a dist., on a chaster of rucks at the extremity of a rilge of hills, 110 m . NNE. Seringapatam, 280 m . WNW. Malras; lat. $1.1^{\circ} t^{\prime}$ N., Jong. $75^{\circ} 30^{\prime} \mathrm{E}$. The town, which stretches along the base of the droog or fortress at the NE.., is surromaded by ilidapidated ramparts of gramite with romul towers at intervals, a spacions ditel excavated from the rock, and a wide-sproal glacis: it is neither very large nor pobulaus, but
its prineipal street is remarkably spacions. The fort, enclosed ly the town, is probnbly tho most elaborate specimen of a defended rock to be fomal in S. Indin; an embless labyrinth of walls of solid inasoury wiuls irregularly up to the summit, gharling every accessible point, and forming enclownre witlin enclosnre; the more exposed points are crowned with batteries, and the ascent js partly ly ateps, and partly by supurtleinl notehes ent In the roek, and sealed with great ditlenlty. Sucti is the intricney of the works, that an enemy might be master of the outer walta and yet not materially advanced towards the rednetion of the fort. The lower enclosure contains the former poligar's palace, now ocempted by the British commamlant, ather ancient structures, the oflicers' bungalows, amd a reservoir of grood water which supplies all the town: in the other emelosures there are two other tunks, various lliudoe temples, a deep magazime sumk in the rock, and a depôt for ghee. At a short distance $\mathbf{W}$. of Chitteldrong is a curions suite of sulterrmean chambers, apparently the former habitations of devotee worshippers of Siva. This station is noted above all others in Imdia for the great variety und excellence of its frnits.

CHIUSA, an inl. town of N. Italy, prov. Coni, eap, manl., on the I'esio, 7 m . Sli. Coni. Pop. 6,31-t in 18til. The inhabitants are chiefly ocenpied in the manufncture of silk goods and mirrors, and vine cultivation. The town is well buitt. A contimuation of the ancient linilian why passes through its vicinity.

ClllVASSO, an inl. town of N. Italy, prov. Turim, cap. Mand., on the P'o, in a fertile plain, 13 m. NE. 'liurin. P'op. 8,734 in $18 t 11$. The town was formerly one of the strongest places in I'iedmont, but is now surrommed by only a simple wall with two gates lealing to two subirbs. It has a square, a church, and sceveral convents, and some trule in corn and cattle.
CliOLF'S, or CllOLLET, a town of France, drip. Maine-et-Toire, cap, eant., on the Maine, 12 m . SSE. Beauprean, on the railway from I'aris to Nautes. l'op. 12,'ins in 1861. 'the town is tinely situated, and had formerly several religions louses and a smorb eastle, ilestroyed harimg the revolation. Extensive manfactures of cottons were established here and in the neighboumgr commmes during the last century; but the town having been the theatre of a battle, in 1793, between the Vendéans and the repmblicans, the manufactures were all but destroyed, and the workmen either put to dleath or dispersed. In 1705, however, after the lirst pacitication of Vendec, the expatriated manufacturers returnel to Cholet; and, instead of being dispirited by their disasters, entered with fresh vigonr on a new eareer of inclastry, and have succeden in carrying the mannfactures of the town aml its vicinity to a higher piteh of prosperity than ever. At present there are establishments for the spiming of eotton and wool, with extenswe bleach-fiehls and dye-works. A great variety of cotton, linen, and other goods are prohliced in the town.

CIIOLCLA, an inl. town of Mexico, state of La l'uebla, in a fertile plain S. of the Conlillera of the Malinche, 8 m . W'NW. Puehla, and $\mathrm{ti} 4 \mathrm{~m} . \mathrm{SE}$. Mexico; lat. $19^{\circ} 2^{\prime} 0^{\prime \prime}$ N., long. $9 x^{\circ} 13^{\prime} 15^{\prime \prime} W^{\prime \prime}$. Pop., when visited by IIumbolit, 16,000; but it has fallen off in the interval. It was compared ley Cortez, in the carly part of the lith centnry, with the most populous cities of Spain ; but it deelined with the rise of l'uebla. It still, however, eovers a large space of gronnd, and the size of its great square indicates its past importance. It contains many churches, nuil regular mud bronul streets; the honses are mostly of one story, and that roofed.

There are some manufnctures of cotton cloth, The principal extant relie of its mocient grame is a luge pyramid, or teoralli, to the E. of the town, now eovered with prickly-pear, eypress, and other evergreen shiruhs, and looking at a distance like a matural comienl-slaged liill. As it is aprproached, however, it is seen to consist of four dixtinet pyramidical stories, the whole built with altermite layers of clay ant stin-dried bricks, and crowned with a smull chareh. Aceorting to Humboldt, ench side of its base mensures $4: 9$ metres $(1,410 \mathrm{ft}$.), being ilmost double the base of the great pyramid of Cheops (which stands on ant area equal to that of Lincoln's Inn liedels); its height, however, is only 50 metres ( 1 if ft .). It appeurs to have been eonstructed exnetly in the direction of the fonr cardinal puints. The ascent to the platform on the sumuit is by a flight of 120 steps. This elevited aren comprises 4,240 sq. metres ( $5,023 \mathrm{sc}$. . yids.). The chapel prected on it is in the shape of a cross, about 90 ft . in length, with two towers and a dome. It wastedicated to the Virgin by the Spaninrds, and has succeeded to a temple of Quetzaleoatl, the god of the air. This pyramilal pile is, however, comjectured to have seryed for a cemetery, as well as for the purposes of religion; and Humbohlt and other nuthorities regard it as bearing a remarkable analogy to the temple of Belus, nad other ancient structures of the Oriental world. The Indians believe it to be hoolow, and have a tradition that during the abode of Cortez at Cholnla a number of armed warriors were concealed within it, who were to have fillen suddenly upon the Spanish army. At all events, it is certain that Cortez, having some suspicion or information of such a plot, mexpectedly assautted the citizens of Chohnta, 6,100 of whom were killed. In making the present road from Puebla to Mexico, the tirst story of this pramid was ent through, and a square stone chamber diveovered, destitute of an outlet, supported by benme of cepress, and built in a remarkable way, every succecting course of bricks passing beyond the lower, in a maner similar to some rude sulstitutes for the areh met with in ecrtain beyptian edifices. In this chanmer, two skeletons, some idols in hasalt, and some enriously varuished aud painted vases, were founl. There are some other detached masses of clay and muburnt brick in the immediate vicinity, in one of which, apparently an uncient fortress, many human bones, carthenware, and wenpons of the aneient Mexiens, have been fomm. The view from the great pyramid, embrucing the Cordillera, the volennoes of La Puelba, and the cultivated plain beneath, is both extensive and magnilicent Cholula is surromaled by corn tiells, nlue plantations, nud neatly cultivated grardens. (IIumbohlt, Researehes, i. 88, Eug. Trims.; Mhllock; Six Months in Mexico, pp. 114-116; Ward, Antiq. of Mexico.)

CLIOOROO, an inl. town of Hindostan, prov. Rajoutmm, in a naked tract of sand hills. 100 m . SNE. Bicamere; lat. $28^{\circ} 12{ }^{\prime}$ N., loug. $74^{\circ} 35^{\prime} \mathrm{E}$ : It is $1 \frac{1}{2} \mathrm{~m}$. ml cire., exclusive of its suburbs, and has a very handsme external appearmee. The houses are all terraced, and, as well as the walls of the town, are buill of a kind of limestone fomm in vast quantities in this part of the prov., of a very pure white, but soft, and apit to crumble. In 1817 Choorno was phundered by one of Meer Khan's sirdurs; in 1818 it was visited by a British detachment, and afterwards transferred to the rajah of Biemere: its chinf, however, is rather a dependent than a sulject of that prince.

CHOHLEY', a par. and market to. of England, co. Lancashire, huml. Leyland, on the Chor, 20 m . NW. Manchester, 8 m. N. Wigan, and 175 m .

NWN. London, by London and North Westen railway. Pop. 15,0 i3 in 1861. This thriving town, which takes its name from the stream near the somree of which it is situated, stmuls on a rising gromal about 1 m mile alove the confluence of the Chor nad Yurrow. It is well built ; strents broad, lighted with gas, and almmlantly supplied with water from a reservoir, into which the stream i thrown up, by steam machinery. The pur, church of St. Lanrence is an ancient structure in the Norman style; that of St. George, a haulvome edifice, was lmilt by the parl, commissioners in 18:35, at an expense of 13,7001 . The Indenendents, Unitarians, Methodists, and If. Catholies hare places of worship, to some of which Sunday-sehouls are attached. $\Lambda$ free grammar school was fonniled in I634, and a natioual school in 1824. The towa is goverued ly a comstable chosen amuanly at a court leet. The inerense of population-from 4,516 in 1801 -is a comsequence of the still more rapid increase of the cotton trale. As early nu 1790, spinuing-mills began to he crected in the town. Exclusive of yarn, the fabries principally produced are muslins, jackonets, and faney goods Bleach-greens and print-works are established on the banks of the neighbouring streams. The conl mines in the neightimorhood have contributed greatly to the improvement of the town; there are also valuable quirries of slate, and gritstone fur mills, with lend and iron mines. The Liverpool and leeds camal, which passes within half a mile of the town, and is joine d by that from Lancaster and l'reston at a short distance from it, ulfords great facilities for conveying the produce of the lactories mad mines throughont all the N. comaties Markets are held on Tuesday; fairs on 26 ith Mturelh and bth May for horned entile; 2lst Octoher fir horses; and 4th, 5th, and 6th Sept. for woollens and geuernl parposes.
CIIOWBLETT, or ATHERTON, a township of Encland, co. Ianeashire, hund. W. Derly, bar. Levigh, 10 m . WNW. Mnuclester, and 6 m . Wh:. Wigan. I'op. 5,907 in 1861 l . This is a thriving place. I'reviously to the Ameriean war, the making of mails was extensively carried on here; and, thongh the manufacture has deelined, considerable quantities are still made for exportation. It is also remarkable for seceral inventions and improvements in cotton machinery; and it is saill that the value of the application of leat in the broduction of some kinals of cotton falsries was discovered here. The holton and Laigh railway passes within a short distance of the town. Fnirs, at which preminms for the best eattle are given, take place on the lirst Saturday in May, and the last Saturilay in October.

CIIBISTCDULECH, a parl. bor. and par. of Euglame, co. Ihants, New Forest, W. div., huml. Christehureh, 99 m . SW. London ly hamdon aut Somth Western railway. P'op. of parl. bor. 9,3 if, and of par. 7,012 , in 1861. It is situated at the conlluence of the Avon and Stour, nbout 1 m . from where their mited streams fall into Christehureh Hay, 90 m . SW. Londen. The town presents 110 symptums of activity or industry. No trade nor mannfacture is carricl on. The chureh was the collegiate one of the ancient priory, nad is a large, tine structure ; the older part in the Norman, the rest in the earlier and later pointed styles: the line tower is of the ifteenth century. It has a very ancient and coriously carved attar, and many beantiful ehapels. There are also two episenpal chapels (owe of them built by parliamentary graut in 1x:33, with 4 (i2 free sittings), a Roman (athotic chapel, a dissenting ditto, a free sehool of uncertain fomblation, cducating ten beys, a matimal and a lancastrian school, anid several small chat-

rities, Market on Mondays: fium, Trinity Thursday, and Det. 17, for liorses and entle. It returisel (wion numbers to the II. of C. in 35th Edw, I, num in the ound Bidw. II. No other returu apuears till the 13 th of Biziz, ; since which periond it regularly returned two members, till the lieform Act deprivel it of one of them. The Irmachise, previmaly to thls act, was vested in the corporation, which consisted of a mayor mul an mimited number of burgesses. Thie homudary Aet very materinly extended the limits of the parl. bor. hegistered electors, 3ial in 186i. The harbour hasa shifting bur, with not more thun 5 or 0 ft . water over it, wo that it is accessible only at spring tides for the smatler class of consters. There are several breweries in the town; and the manufacture of watch springs employs a few humus. The name is derived from its ancient priory, of very remote origin. There are traces of many ancient camps aul larrows in its vicinity.
Cllistidania, a sea-port town of Norway, of which it is the eap., ou the Agger, at the bottom of a very deep gulf or thord, to which it gives name; 162 m . BSE. Hergen, 242 m . S. ly E , brumtheim, aud 255 m . W. ly N. Stucklohm, Pop. H, 21: in 1860. The town is surromaled by aul amphitheatre of hills, and its situation is extromely pieturesiue. It is well haid out ; streets spacious nad regular, and some of them even handsome. Houses in the town all brick or stone; thase of wood having heen prohibited, on aceomut of the former frequency of tires. They are airy and well built, thongh seldom more than two stories high. In the best quarters they are built mund an open square conrt, and are generally oerupien by several fumilies, It is the residence of the viceroy, and the seat of the diet; has a cathedral, nud three other churches; a military and a huatic hospital, two orphan nsylums, a honse of currection, a new town hall and exclunge, and two theatres; but noue of the public buildings in any wise remarkable. Four suburbs part from the town as a centre, one of which is the old town of Opslo, from which Christinnia originated. In these, wooden houses are not prohilited; nud, as thu suburbs are mostly inhabited by the lower class 3 , the dwellings are chielly of wood. $A$ short distence beyond the walls is the royal palace, a phain brick building of motern constrnction. The whole ricinity of the town is sprinkled with the country houses of citizens. The gulf of Christiamia unites with the farthest N. point of the Skagerae: though in parts marrow, and difficult of navigation, it has deep water throughont, there being 6 or 7 fathoms close to the quay. Christiania is the seat of the higher courts of law, and a miversity. The latter is attemled by about 600 stulents, and has attached to it a public library, with 1150,000 volumes, collections of natural histury and mineralogy, a museum of northern antiquities, an observatory, and a botanic garden. Here is a military school, with schools of commerce and design, elementary schools, and several leaned mud philanthropic societies. Manufactures nut very extensive; the chief are those of woollens, tolneco, glass, hardware, soap, leather, and cordage. Principal exports, timber, deals, glass, irm and nails, smalt\%, bones, oak-bark, and sattel and piekled fisl, a staple mostly sent to Bergen. The deats of Christimia have always been held in the highest estimation, in consequence of the sap leing carefully ent away. Christiania was built by Christian IV.. king of Denmark, in 1624.
(HBISTlANSAND), a spa-port aml fortilied town of Norway, near its S. extremity, cap. diocese of same name, thist. Mandahi, on the Skagerac, at the head of a deep liord, $160 \mathrm{~m} . \mathrm{SW}$.

Christiania. Pop. 10,536 in 1860. The town is regularly haid ont; streets long and wide, honses generally built of wood, and separnted by garderns, Chief public builallng the eathedral, n Gothle ntruchure, mal, next to that of Dronthum, the thest eceleninstical elifico in Norway. Here is an asyhum for the poor, a suil-eloth maninactory, nul doeks for the construetion of vessels, ship, builhing being the prineipal branch of industry. The harthour is very secure, and sheltered on neurly every sido by lifty and rooky heights. It is well supplied with fish; and lobsters are taken in great numbers, and experted to the Lanlon markets, Timber is another principal articlo of export Claristiansand ranks as the fourth town in Norway; it is a bishopric, and the residence of a goverinor. It was fommed in 1641 by Christian IV., king of Denmark, who intended to make it the brimeipal naval pert of his dimiuions.
CHBLSTOPHELS' (ST.), or S'T. KITT'S, one of the W. India islmuds belonging to Great Iritain, lying abont lat. $17^{\circ} 20^{\circ} \mathrm{N}$., and long. $62^{\circ} \cdot 10^{\prime} \mathrm{W}$. , and nhout ion m. W. by N. Ant Lgun, of the government of which island it constitutes a part. Lengeth, NW. to SE., alout 15 m ; breaith in gencral about 4 m ., but no more than 3 m . towards its Ski. extremity, where it is divided by only a narrow chamel from the istand of Nevis. Total area 1133 kq . m. ; pop. 2: 2,177 in 18.51, and 24,140 in istil. The istand comtains many rupged precipirese and harren mountains, the principmit of which, Mount Misery, an extinct voleano, rises to 1, all ft . alove the sea. The climate is healthy, but violent hurricmes sometimes secur. of $4,7,20$ acres of land, the extent of the surface of the island, it is estimated that nearly halt is untir fur culture. The soil of the plains, bowever, whis:l is of a voleanic origin, intermixed with a tine loam, makes amends ly its fertility for the barrenness of the monntnins. Sugar is the great articlof cultivation, the only articles raiserf in addition to it being a little cotion, colfee, and arrow-ront. The value of the principal articles of produce imported into the U. Kinglom from St. Christopher's amonnted to 68,3281 . in 1850: to 134,3281 . in 185\%; to 166,6391, in 1860; and to 148,929 in 1863. The expurts from the U. Kingilonn to St. Chisistopher's were of the value of 92,1191 . in 18.50 ; of $2[5,0951$. in 18:55; of 158,0311 . in 1860; and of $151,8 \times 5.5$. in 18ti3. The island is divided into nine parishes, and contains four towns, Rasseterre, Sandy l'oint, Old Roml, mul Jeep Bay. The tirst two are port's of entry established by law. Basseterre, in the $S W$., is the cap. It contains about 800 houser, and, as well as Samly l'oint and some other parts of the island, is defended by several batteries. St. Christopher's was discoverel, in 1493, liv Columbus, who gave it the name it bears; but it was not settled tifl 1623, when a party of Engrish took possession of it. After many disputes for its oeconpation with the French and Spmiards, it was finally ceted to Great Britain at the peace of Utrecht in 1713.
CILUDLAEItilf, a town and par. of Eagland, co. Deven, hund. Fxminster. Area of par., 6,230 aeres. l'op. of ditto, 2,108 in 1861. The town, on an acelivity near the Teign, 8 m . S. by W. Exeter, consists chielly of one wide street of well-milt honses, being part of the main line of roal from Exeter to l'lymonth. The church is an ohd structure amidst tine trees; the vicarage in the patronage of such of the parishioners as have freeholls to the amount of 50 a y year and upards. There are two dissenting chapels, a grammar sehool, founded 1668 , with a resildence for the master, and three exhibitions to the miversity of Cambridge, a mationa? school, and several charities.

CIIDMBC1. (supposed to be the Sambus of Arrinn), a river of Ilindostan, which rises lin Malwah prov, and falls into the Jumma river, alont $25^{5} \mathrm{~m}$. below Etaweh, after a course of abont 500 m., generally in a NL: dirediom.

CIIUMDANEFIR, a town and large district of Ilindostan, prov. (injerat: the former, called also P'ownighur, stands on a searped rock 25 m . NL: Harrola, and is supposed to lave been the chp. of a llindoo principulity, before the Mohummedan rule in Indin. The rematins of an ancient eity stretelt for several miles on either side of it. 'Ihis town was taken by llumayoon in 153.1, and by the Iritish in I803.

CHIUl'RALI, a town of Hinlostah, prov. Bahar, distr. Sarmi, of which it is the eap., on the N. site of the Ganges, along which it extemuls for nearly a mile; 33 m . W. by N. l'atian. l'op aboit 30,000 . It has some trade in cotton and sugur.
CIIUQUISACA (formerly La Plutuor Chareus), an inland city of s. Amseren, cap. Iholivin, in a small plain surrounded by heights, on the N. bunk of the Cachimnyo, and on the ligh rond between Potosi mad Santa Cruz de la Sierra, 55 m . ENL:. the former, and 220 m. SIW. the latter; lat. $19^{\circ}$ $29^{\prime} \mathrm{S} .$, long. $66^{\circ} 40^{\prime} \mathrm{W}$. Estimented pop. 10,010 , pretty equally divided amongst spaniurds, Indians, and mixed races. The city comains a large and handsome eathedral, with some rood paintings and decorntions, several monastic establishments with splendid ehurches, a convential hospital, three numeries, and a university. The best houses are but one story in height, but roony, mad have pleasant gardens: it is supplied with water from severnl public fountains. The climate is mild; but the ruins are of long continumee, and during the winter violent tempests are not unfrequent. Cluquisaca was fommed in 1539 , made $n$ bishopric in 1551 , the sent of a royal audiencia in 1559 , and an archbishopre in 1608.

Cll:ZA, or ZIEZA (an. Catita, or Cartela), a town of Spain, prov. Mureia, on the Segrura, in a rich well-cultivated plain, 2.4 m . NW. cal. l'op. 9,516 in 1857. The town has eonvents for both sexes, a workhouse, public gramary, de. ; witl manufactures of conrse linens. On the opposite side of the river are ruins supposed by some to be those of the ancient Carteja.

CINCINNATI, a city of the U. S. of Amernen, Ohio, cap. co. llamilton, and, next to New Orleans, the largest and most flourishing commercial sown in the W. part of the Union, on the N. hank of the Ohio, about 410 m . W. by N. Washington. Pop. 24,831 in $1830 ; 46,338$ in $1840 ; 115,436$ in 1850 ; and 161,044 in 1860. The town is built on two inclined platenux rising from the river, one about 50 ft . higher than the other, and both rumning parallel to the Ohio. It is regularly laid out; strects wide and clean, and intersecting cach other mostly at right angles. They are generally lined with trees on either side, and most of the houses hive a suall enclosure in front tilled with howering shrubs. Houses mostly of red and particoloured brick; but many are stuccoed, and a few are of stone. $A$ sepunre in the centre of the eity is appropriated to public mildings. Here, and in other parts of the town, are mumerous

onveyed to France, is usinally deseribed as the Cunvention of Cintra.
('ItITA'L' (Lad), a sea-port town of France, dry. lhurlies du khôme, cajp cunt., on the W. side of the lhy of Lapues, 15 m . SE: Marseilles, on the railway from Marselles to Tonlon, l'op. X,4-4 in |atil. The town is surromaded by an ancient rampart of consalderable extent, and in a tolerably perfect condition. Sitcets regular, and weil puvel; homses well built. It possesses suriegool guays, a lurge par. church built. in the lith centquays, nud a the public promenale, lont is ill-sup)fied with water. Its jort, sheltered by a mole and defemed ly a fort, is commodions, secure, and aceessible to vessels of 300 tons burden. A lishthomse, in the fort, hus the lantern elevated dit, above the level of the sen. Ships are buit, and oil is manntactured here; and it lus a considerable trade in whes and dried fruits, the vicinity beink interspersel with vineyards, olive groumis, and plantatons of oranges and flgs. Ia "iotat is sainl to oceupy the site of the anciont Citharista; the modern town was, lowever, limuded in the 13 th century, and did not necuire municipal rights till 1420.
Cllicalis (NOLI'LlikN), a large marit. prov. of llindostan, extenting ulong its F , const for $4 \pi 1 \mathrm{ml}$., hetween lat. $16^{\circ}$ mad $20^{\circ}$ N., and home gio and $80^{\circ} \mathrm{E} \cdot \mathrm{i}$; having N . mal W. ()rissa, (imme wamah, and lyoderibad, and S. and E. the Carmatic and the bay of bengal. It comprises purtions of the ancinent territories of Orissa and Tedingana, and, previonsly to the British rule, ansisted ol' tive divisions or 'circars:' viz. Guntour, Condapilly, Ellore, Injamundry, and Cicacule. At present it is wholly included widhin the territories of the Madras presidenoy. Area $2 \mathrm{a}, 760 \mathrm{sq}$. m. : poj). estimated at $8,000,000$. The treritory is bounded W. by a clunin of mometains continuons with the li, Glauts, bat no where of any grat height. Vizaribuatan, between lat. $17^{\circ}$ and $19^{\circ}$ Ni., is the 1 me . monntainons district, and contains a considerable range of hills, ruming marallel to the former and to the const, often closely approaching the latter, and enclosing an extensive and fertile valley, trgether with the priacipal range. From Ganjam to Coringa, the cuani qenerally appears monntamons, hat thence is 1 rif, flat, anil sandy, with mumerois small coast streans. Chief rivers, the Godivery and Krishna; the tirst has an extensive and fertile delta at it month below Rajnmundry. The Chilka lake constitutes the N. limit of the prov.; the only other lake of note is that of Cohair in the Masuliphtane dista, ; but several lagomes of some size are met with on the shores. $\Lambda$ black soil prevails in the S. parts of the prov. highly suitable to the eultivation of cotton. S. of the Godavery the climate is extremely hot, and for a month preeding the rains, the thermometer in the country ronad the mouth of the Krishan sometimes stanils for a whole week at $110^{\circ}$ Fulir. ; in other parts it has been known to stand at $112^{\circ}$ at 8 oclock in the evening, and at modnight as high as $108^{\circ}$. At such times, wood of all kinds readily warps, and glass cracks and tlies in pieces; in all the hilly regions and round Masulipatam, a very noxions state of the air prevails throughout the difterent sensons of vegetation.
The circars are extremely productive of grain, and have long been the granary of Madras during the NL: monsoon, though at present the distr, of Masulipatam innnaally imports large quantitics of nice from Calcatta and Aracan for home eonsminption. Large crops of paddy and dry grains, cotton, and tobaceo of excellent quality, the sugar-cane, and esculent vegetables, are produced in the S.;
the same articles, with ginger, yams, furmerio, chilies, de., in the central parts; a great ileal of sugar la the delta of the didavery; mul whent, maize, the supar-eane, and an abindance of rice and other arans in the N .

Agrientare is lonst manced in Vizagapatann. owing chiedy to mi oppresslve revenue assessment: muny of its lills are will, mind lestitute of vegetation. In Masulijatam distr. there nre extensive tracts of grass, 'The total mimber of black catile in the circars is alont $1,180,000$, of sherel 609,000. The (ianjan distr. is linterspersed with mineroms bamboo jungles. The forests of Liajammulry ubomd with teak, which tree is fumd no where else on the Eis side of IIindostan. The chiel'manaliactures are chintzes, carpets, and cotton stufli, in the eentral : and indigo, punjun eloths, mmslins, and silks, in the N. 1 listr, : the plece gomls of the cirenss, which were formerly their staple, ure now rather oljects of enriosity than maile in any eonsiderable quantity. lino was furmerly distilled in the N.; the sugar of (ianjam is in much request, and exported in large juantities: the other exports are wax, salt, pepper, horns, ivory, indigo, tobncen, and other akricaltural produce. The extermal trade is chietly with Madrins, Calenta, Hyderabad, and the central becen. The exports to Burope are chictiy tine cotton ronds: all the raw silk nsed is importen. The natives are mostly llindoos; Mohnmmedans are few. The Orissa gind Tolinga races have beeome much intermixed, thongh they still retain dimtinct dialects, and have distimet traits mal enstoms. The villages consist of mulluts mad houses; bit the peasantry are not on the whole incommodionsly lodged, The roads are amongst the worst in India, and undit for wheeled marriages; there are but few truks, bridges, or forry-luats. The lands apyear for a long period past to have helomged either to the govermbent or to zemindars ; for mo instance has oecurred since the llritish hape come into possession of the prov, of any ryot claiming those cultivated by him. The chici towns of the circars are,-Chicacole, Pillore, Coringa, \&ir. hesides those which bear the numes of the severial districts. Religions temples are not mmerons: but in (ianjan. whore duggernant is the favourite: object of worthip, their arehiteeture is peentiar they consist of groups of low buildinge, each with a grabnated pyamidical roof, terminating in an ornamented conical cupola. In 1571 , the rajals of 11 yilerabad conguerel this prov., which, tugether with IIyderabad, fell miler the dom, of Aurmig zebe, in 1687: it however became agnin inderendent of the Mognl enteire in 172. The Eme inh obtained the fomr mu N. cirears in $176{ }^{3}$; the French had become possessed ol Guntoor in 1752; but it also came into liritish possession in 1788.

CIRCASALA, more properly TCLEELKESNIA, or TCLEFRKRSKAM, the largest and most inprtant comity in the Cancasis, of which mom-tain-range it vecupies nearly the whole N. sloje; exteming from $42030^{\prime}$ to $45^{\circ} \cdot 10^{\prime}$ N. lat., mud from $37^{\circ}$ to $45^{\circ} 48^{\prime} \mathrm{k}$. long. $\Lambda$ its NW. corner it reaches the Black Sen, but, with this exception, it is bommed on the S. and W. by the main ridge of the monntains which divide it from Georsia, Miugrelia, Imeritia, and Great Abchasia. The N. limit is formed by the rivers Kuhan and Terek, which separate it from the lowlands of the Cossacks, 'lurkmans, Nogny Chartars, and the Russian colonies in the Cameasian stepre; towards the li. it terminates at the jumetion of the little river Sunshan with the 'I'rek, at which point a lowit of small streams divide it from the conntry of the Tchetrhentzes. In extreme lengtli, from NW. to SE., Circassia is about 470 mm ; in its greatent

 Klaprotlis 'I'ruv. In Comeanits and fieorgin, pp. 25: 311, de.; Laplif, Aumales des Voy., xii, 36.)

Political Divisions,-The C'irensilans are divided into a great number of tribes, who lead a parthally wambering life, so that no very precise urrumgement can be made with regard to the districts of their eonntry. 'The lis, purtion, or that enclosed by the Terek, is tivided by linsshan geographers Gito two provinces-Gireat Kabardah, to the SW., and Little Kibbarduh, to the NE. Thene divisions are mot, however, recognised ly the Circassians, who know but of one Kalnurdali, nud that ln the SW. portion, called liy the linswinas Grrat. (Kln)ruth, p. 354.) Between the somrees of the Kilban and Terok, mad along the conrses of those rivers, as far an they rum N ., the land is wholly accupied by a tribe called the Ablasines or Absne; and forms the Iittle Abesa of l'nllas, the Altikeseh Abchossia of (Bulicustailt. 'The Great Ahase of l'allas, Busiana of (iuldenstadt, ocrupies likewise a very considerable part of the Kulmaian Circassin; among the rest, the Nottakhaitai ilistrist, mentioned by Sieneer. It ajperirs, indeed, that the Absme are the lawful proprietors of all Kubanima Cireassia, and that the C'irenssimes have muly the right of conquent to the $W$. jortion of their eomintry; that right is, however, very fully established, not only on the N. slopes of the monntains, but even to in very grent degree on the W. side, nlong the shores of the Black Sen (the Great Abrhasia of Guhlenstalt). Spencer makes but little distinction between the Absie and Circassians, and frequently spenks ol' them as one people : this must, however, be an error, since the former display a very prenliar physical conformntion, and their language, with the exception of a few Cireassian worls, is totally unlike that of their conquerors, and of every other known people, Europenin or Asintic. The Cirenssian princes are cruel and oppressive tyrants to their Abassian sulyjects, so much so, that the latter have in many instances songht the protection of the liussian government; but it does not appear that they are in any moral atcribute superios to their taskmasters, since in every age they have been infinmons for their robberies by land, their piracies by sea, and their reckless cruelties everywhere. (Gulilenstatit, i . 160, 463, 466, 469; Pallns, i. 383-391; Klaproth, 1p). 2-47-2183, 2833, 311 ; Spencer's Circnssia, ii. 442, \&e.; W. Caneasus, i. 20, 200, 212, 217, \&e.)

Physical F'eutures.-These have been gencrally described in the article Caucasus (which sec), and what is peculiar to Cireassia is only the consequence of that comintry's oceapying the N. slope of the monntains. With the exception of the lowlands on the loniks of the Kuban and 'lerek, the whole territory is broken into precipitons momtains, small trible-lands, and valleys of the most pieturesque and romantic description. Its hydrograpliy belongs to two systems, the waters of Kabariah being all conveyed by the 'rerek to the Caspian, and those of W. Circessia by the Kinbm to the Ilack Sea. The former river rises neur the Kazibeek, and, foreing its way throngh the pass of Dariel (an. C'ancasian Gate), receives, directly or indirectly, thirty-live streams hefore it quits the Circassian eountry. Of these, the Malk, which joins it at its I. hend, is scarcely inferior in size to the principal river. It rises near the li. bases of the Ellomrs (Osha Makhua), and is itself the recipient of a considerable munber of tributuries.

The Kitban rises on the N . lase of the Eltomin, not far from the sonuries of the Malk, anil recgeives the whter of more thin lifty rivers, thirty of which liall drreally lito lis bed. It has every reasin to be considered, exelosively, и Cireussian river: fir thongh no part of Its N. lank be inhabited by Circussimns, it lloen not recelve a single drup of wnter, in its whole course, that dues not rise within thrir territury, A similar remark will "pyly, in a morlilled sense, to the 'lerek, which, like the Kuban, choen not recuive a single strcan limon the N., mind only one of conseguence after entering the Tartar country Ji, of Little Kabarilah. The comutry between the sources of the Malk nul Kuban is whtered by varions streams; and when it is recollected that, in aldition to these, finmmerable torrents pour from the upper rangen of the momintalns, it will be evilent that no land can be letter irrigated. The water is in gemeral elearamy good, but ceeasionally impregnated with mineral and other extraneons matters. The trlbutury streams become thooled in winter, and extremely shallow during the lients of summer; the currints of all are extromely rapid, as are those also of the Terek and Kulan, except, where the latter fonms mornsses, which it does in some parts of the llat comutry, when its conrse becomes slugerisl, and its water thick anil modlly. (Gnldenstailt, i. Itit, and map; Klaproth, pp. 2.42-2.17, 255, 25!, 26i1, 3.3, de.; l'allas, $i_{1}$, Bxi-ils!, 413-417; Sjencer's W'. C'measus, i. 106 ; Circussia, ii. 112, et jassim.)

Climate, Suil, and Nutural I'rodnetions.-'These are also the same with those of the Cinueasus generally (see Caucasus), but the temperature is rather lower than on the S. slopes, exeept on the lunks of the Knbin, where the grenter depression more than compensates for the difference of aspect, and where the extensive marshes and the exilherant vegetation create minama, which render it more pestilenting than any other district in the whole region. (Splencer's W. C'anco, i. LUt; C'ircassia, ii. 30.4.) There is a geater proportion of bare rock in Cirenssia than in lieurgia and the other countries S . of the main ridse, bat on every sholf and in every rift, trees, grain, vegretabiben, and fruit of alinost every kind, are produced from most fertile soil. The animals, also, ate on the same seale of abundance amd variety, whether ahe wild or domesticated tribes he considered; the quadrupeds, birds, tishes, insects, or reptiles. (Sce Cavcasus.) The Cireassinn horses are nearly an famons, and quite as good as those of Arabia, Cattle of all kinds are abondant in the extreme, and in adilition to the herds forming the numernus stocks of the pastoral population, the anroclis and argali (widd ox and sheepl) still wamder among the menntains, with the ibex, mad another beantiful varicty of the goat. Game of all kinds, winged, howfed, or clawed, are fomad in equal ibmadame, but diflering in kind, in tie mountains mul plaids; nor are beasts of prey, as jackals, wolves, hears, byxes, and tiger cats, de., nuch less mumerms, though they do not seem to be much regraridel lis the natives. Wild loars are fomm, esprectall: amonge the swamps of the Kuban, and it is aftirmet that the tiger is not wholly manown. The rytile and insect tribes are equally numerous. In one of the late compaigns of the linssians, hesitus the thonsands who fell victims to the land ait, numbers died from mortified bites of mosquitues, (Spencer's Circassia, ii. 3I7.) Butii natives and liussinns believe that the monntains abound in fold and silver, but npparenty on no good wrombs, (Sce Caucases.) Iron, however, lead, and copla are found; and saltpetre is very abmalaut. Sall is nowhere found within tise limits of Cireasia: and since linssia has exchoded the natives from

Inhobitants,-The Circonsians have long been proverlinal for their beanty of form and fleure, aspercially the women, aud thongh it neems they luve in this respeet heen eonfominded with the theorghan, who are a totally distimet mation, yet all the watconente of th, moileri, nind most mecuriste trivellen, coneur in reserihing them as an extremely hundsume jeople, tall, thely furmend, slemier in the hins, smali in the foot and hand, clegimely fentured, with fresh eomplexions, and extremely in-
 pussim, de.) It wonld be well did their mornd mid intelle thal attainments correspond with their plosshol appearmee: lat it is obvions, eveln foom the statemente of thrir malogists, that they are nere semi-harharianas, whase charling oceupation is rohlury and plonder, and who werm to be radieally delicient in most of the remuinites mecessary 10 firm a civilised and ilomrishing commanty. They lave many prints in common with the Aralis: and, li'se the sums of Islimnel, are quite as harbarous at the present day as in nutiquity.

The Cireassians are divited into bive classes. Pschi, or pswhech (ןrinees) ; 5. Uork (ancient wheres); 3 , the freednen of these prineres mal muctent mobles, who, by their manumission, twe come themselves noble, uind are ealled work of work; I. the freedmen of these new nobles, called bermalia; and is, the vasala or thhlohl. Hetween the ancient and recent nobility there is no real distinction, except that, in military service, the latter are still auder the command of their former masters; nor is there any preat practieal dillerence between the begualia and the teho'kolt, or vissuls. The latter are, of course, the labourers: and are subdivided into mich as are engared in ingrienlture, and such as serve the smperior classes in the capacity of menial servants, Of the former, many are wealthy, not is the state of any, the of great degradation, since there are very few, if any, ollices of lahour which prinee or noble wonld consider as derogntory to himself. T'o every princely honse belonges a certain mumber of nork, or usien, as they are called In the linswians; and the linter are the rlirect prosprieturs of the vassals. Of these last, though all are unguestionably slaves, those enguged in agriculture camot be sold wingly ; and the sale of any is so rare as almost to be prohibited by castom. (ia the other hand, it appears the vassal may transfer his duty to another usien ; which is, of eomrse, a great protection from ill usare. The vassals pay no money tax, and thongh they are compelled to supply ther lord with all he wains, yet this, from the check upon the noble's power just alluded to, extends no farther, usually, thin to bare necessaries; since, shouh the hatter carry his demands too fir, he runs the risk of losiner his vassal altogether. the relation between prinee and usden is precisely the same as that between usden and vassal; the moble must supply the mecersitios of his soverreing; but shonld the exactions of the latter hecume excessive, the former may transfor his alleriance to another prince. The asden must pay the dehts of their prinee, aml the vassals those of lieir usden; and, in ench case, the inferior must make good all losses sustained by his superior, whether from robbery or aceident; ly which araugement it is evident that all losses or expenses fre defrayed, ultimately, by the viseal. The lecad $f$ the princely house is the leader in war; and his Vol. 11.
mim to ntienl him with all thelr reinduers, or an tmay as maty be required. There is no people, not even the Arabs, annoug whom prifle of birth la carrled to a greater horight than manorg the Cirenswians, expechally thome of $\mathfrak{K}$ alardah. In this disarict, if' mil uxdeli were to mary or seduce a prinerens, he would liorfalt his llfe withiont merey; mill the nime result would attent the nttempt of $\boldsymbol{a}$ begralia or vasal to ally himself to a moble honse; an Masslan prince is, in this respect, considered equal only ton Circmasinn usden, mad enn obtain a Cireassian wife only from that chase. Ther rigorous enforeement of this constom has preserved the diflerent ranks very distinct, thongh l'allas has observed, evert in the Kinhardahs, some traces which indiente a deseent Irom Tartar mothers, ( i , $3!18$. ) It mast be olisurved, howerer, that there does not appear to be miy restriction "poll a man's taking a wife or comenbine from im inferior class; and the iswne of such conswexions take rank from the fallier, hat are bot ate-
 from both parents. Thas there are primeres of the 1 st , 2 d , mid 3 d elass, dere, meroming to the remar or less dereree of intertor hood which they inherit from their matermal ancentors. 'This state of' sucioty, chosely resembling the fembal institutions of the dothie ages, seems to imply the division of the Clrotasians into two distinct peophe, a comurering and "ronguered ruer ; but when or how the present rolations were establinled is insolved in obs
 402: Spencer, passim.)
('ustoms, Ilibits, and Mrumers of the Cirverssians. -The whole of the C'ireassimi and Mbelasian tribes live in small villages senttered here mad there, without the slightest apprateh to anything resombling $n$ city or walled town; indeed, the prince or noble has an unconyurable aversion to any eastle or place of artificial strengeth, which he repards as only fitted to restrain hisstate of wihl freviom. Ile lives, therefore, an the rentre of his village, which usmally comsists of 40 or 50 houses, or rather lants, formed of phated osiers, pastered within and without, eovered with straw or grass, and arranged in a circle, within the area of which the cattle are secured at night. These primitive dwellings, which strongly resemble, in form and appearance, the hombler residences in Arabian towns, have, however, the prediar recommendation of heine unsexeptionaly clem, which is also the case with the permons, iress, and cookery of the immates. From the slender mature of the builnings, they are evidently unt formed for long endarance and a Circhssian village is, in fate by no menns a fixture. 'The aceumulation of dirt in their neightomituod, the insecurity of the position, and frequently even the caprice of the inhalitants enose them to be from ti:ne to thme abmaned. On such occasions the dwellings are destroyed, the hosushohd utensils packed up, and the whole colong migrate in search of a new nome. While stationary : however, ibere is math emonfort in a cireassian's howed, for those who can dispense with superthities; but, as may be suppesed, their domestic ardangements are of the most ample kind. The nsual ucenpations of itue higher classes are the chase and war, on which expedtitions, or on those of a predatury kind, they depart with me other provisom than a little milhet, or wheat, mad that withont the shergtest lear of suffering from want, sine every man who possesses and can use a rille is sure of timbing provinions on every hetse. In these experlitions the Cireassians carry with them tent covers of telt, Int chictly fir the jimpose of protecting themselves from suiden stomens (see Caccases), as, in tine wenther, the harily moun-
-
taineer throws himaelf on the ground, and slecpa with no wther coverhig than the heaveris, While In his lint, the C'ireasslan of whatever rank is his owi curpenter, weaver, eurver, mul shopherul. It dowes not njperar, however, that the highor classes often take part in agrienlenral purnuits, not wo much hereanse it is coninidered derugatory, ins from that niecien of infolence (quite cominitent with gruat weadomal exertion) whilill reenils from regular and couthouna labour. 'The oeropations of tha womben ennast in milating and needle-work. They make the clothes of thele homeholid down to the very shoes, nul nimo malille-cinshions, housluge, and horse trappinges, and ahentlos for the whrrlors' wwords and peniards. 'I'hry frepuently exrel in embruidery, are wkilful dairy-women, anil somethmes even moblew mond may be seen takling a part in tlelid labour. As lu other half-langharons sorindien, the greater purtion of hatour fulls upen the females; lat their comdition is far muperior in Cirensmia to what it is in most ofher Einstem countrios. As Mohnmmedanisin is little more thum in profension among these people, their habits, with the exception of some formal observances with regiril to food, have mindergome lint little change loy its introhliction. The vexes mix freely tugether while unmarried, and, moder the restriction of enste, love matches are probably as numeromes here as in ather parts of the worli,. The hasband has, however, to purehase his bride of her fither, nul neither lumband hor wife, from the moment of their union, is permitted to appear in the presence of the parmits for a year, or till the birth of the tirst chilid. It is astill more remarkable custom, that the husband mist never be seen in company with his wife; and thongh the latter in permitteil to receive without restraint the visits of stringors, yet the former is never present on sueh oremolons, amithe matrimonial correspondcure is always carried on by stealth, and in the utmont serresy.

The grentest insult that can be offered to a prince, or usilen, is to inguire after the health of his wife or family. The son of a prince is committed, at the agre of three dnys, to the care of ant nasden, ly whom he is brompht up, aul never again seen by his father till he is married; the son of an usden remains in the paternal houselohd till he is three or four years old, when he, in like mamer, is consigned to the care of a stranger. The foster father stands in every respeet in the phace of the matural parent. He rcecives no piryment for his tronble, but elaims all the duty and service of his ward. Ihe canse of this very remarkable enstom is said to be the wish to prevent the eftect of indilgence consequent on a home colucation, in mervating the eharacter; lint thongh it olestroys the usual afteertion subsisting between fiather and son, it establishes another not leown stroug between the guardian and his ward, which is pomally as intense as any exhibited in the social connections of other countries. The danghtors are brought up at home, nud at the age of toll or twelse years have their wnists enclosed by tiphot-fittinge stays, or a broad band of untanaed lather, which is never removed nor loosened till they are married. On the wedding night the hridegroom euts this bodilice open with his dagger, an operation which is freguently attended with danger. As a tinn waist is considered the great beauty of a Circassian, men are also subjected to a very heavy compression on that part, lunt nothing to that which the females endure. The firille remains on the latter for a period varying from two to six years, (a girl nnmarried at seventeen larely obtains in hushand, during which the victin is growing, mul, in addition to this,
they are, atill further to improre the form, in Nimringly ful, that the young unmarried femaifo liave generally a look of III health. The thent lonkling women are tho young wives.

The ifens of looth sexes is rather longe, that of the men comaisthig of shift, tunte, and clonk, mueh rewembling those of the Kalmuck Tartans, lont formed of leetter materialn, and lit general richer ; the female costime in not very diflerent, excepit lin being longer. Aecording to the plate (18, p, 398) in 1':Ilan's trat vol., the onter mole renches to the instep, and is furnished with hanes its sleeves. The mell shave or erol) the heal, leaving only a single lock of hair lianging from the erown; they wear thick mustachios, and the levrned classes (priests and pliysicians) sultir the whole lorard to grow. The women's hends have luxuriant trenses, lat lath mexen ermicute even иןpearmme of hair on all other parts of then bonlios, by means of a conatic minment of unNlaked lline and orphont. 'The prinees and usden ruroly fo ont cuarmed, and in his cont of mail, helmet, musket, platols, bow, quiver, and shimh the Circansian chief forms a most imponing and plethrengine object. In this iresn they giny theit visite of state, and in this also they rile out en their warlike ur predntory expeditions. I'he ('it: masian, like the Arat, is a strange mixture of ferocity and hospitality; the unfortumate traseller who appronches his country without mecuring the protection of some chlef, is selzed as a slare by the first native who meets him; bint, on the other hand, should this protection be extended the whole power of the host, or komah, as he if called, is atraned to procure not only the safen! but aceommodation, of the groest. The furm of granting proteetion is remarkable. The wifen the komak gives the stranger her breast to surk, aftur which ceremony he is regariled as lowe man and the whole tribe as his adopted brethren Robbery and plander are honournble ocenpations: but the charge of theving is aceonnted an insedt, because it implies detection. The eustom of blome revenge is precisely similar, in all its details, $t_{1}$ the same custom in Arabia (nee Allallia), and is known by a name thili-uasu, which is said tu be similar in etymology to the thar of that eountr: The ransom ly the in, aceording to l'allas (i. (10.i), never taken; lat Spencer (Círeass., ii. 3*2), on the contrary, aflims, that it is almost always pe. forred. Thie exelusive nature of Circassini marrimges has been alrealy noticed It is, huwever, a little inconsistent, that white a Cireassian prinus would monhesitatingly slamghter an nisten of his own tribe, or Abchasian, who shonld presmane to wed his danghter, be will whesitutimgly sell her to 'Turk, P'ersian, Turcoman, Nogay 'lirriar, or Kalmuck! Spencer, who professes to almire ceery institution of these people, has ingenionsly dicovered (Cirenss., ii, 378) that this practice has temed to refine and rivilise the inhahitants of the Cancasiss! He admits, indeed, that it has ocessioned wars and feuds inmmerable among the petty tribes, from the rapacity with which they hance wermin each other's territory in search if beanty for the foreigin market. The greater ${ }^{\text {anf }}$ tion of the females thos sold have, howeve: alwhys leen Tmeritians, Georgians, and Mingme lians; the Cirenssian shve trale having lee chietly confined to the male sex, from which they supplied the Mamelukes and other slave troopsid EFYDt and Turkey, The fact is, that the sur pression of this infumous traffic by the linsians has been one of the main canses of the resistane made to their government by the Circasima chices. (l'allns, i, 396-409) Interiamo, la Vitade Zichi, \&e., p. 1-10; Klaproth, pp. $315-3: 0,3 \pm 2$

Tavn.-'Thene might have been inchaded in the layt article, wime they rest only on long-entalslidied enstum. Thry are ndministerivl lin a comincil of chlers, hut not always by the reigulug prince of the tribe, if nuy other of his rank possens the requixite qualities in a higher degree. 'the comucil consind nut of princes and undell only, but alao of the wallhier and more aged vassmla, wha, in the
 with the higher clamsen. The laws themselves are lased upon the principle of retaliation, und the binsinems of the comitt merms to eomsist of litile rive than the amsensment of Inmages. Ifohbery of a prince in puninheal hy than restitutlon of nine times the property ntolen: of min uslen loy shmple rewtifition, and uthe of thirty oxem. The grinee or naiden can menperely commit a robhery on a visssal, whe his abstract right to all the property of the latier in tacitly neknowledged, and the punimiment of rolbhery by one vasal of another mivears to vary with the cirrminathuces of the chase. Fine. as aming the Arabs, neems nlmost the universal puninhment, except in coses of morilar and moliotery: in troth which conses the punishment is left in the hands of the injured purty. The offendintis wife has her hemi shaved, her curs slit, the sloevess of her garment cut ofl, and in this trlm is sent Inck, oil horselmek, to hot father, who, if he cannut sell, gemerally kills her. J'he juramour is ertain of denth, heing a marked man liy all the husband's tribe. l'olytramy is nllowed, but vers rately practised, The Cirenssinus are very attenitive to their breeds of honses, and have distinet marks to slow the noble rases from which they have deseconded. The stamplige a false mark upon a tilly is a forgery, for which nothing but life cun

Lurwing is a complete blank. The people, from whm Bhinmenbach took it into his hend to sultpose that the baropeans aro mostly all dencemden, have not even an ulpabet, and consequently neither book nor maniseript in their own laisgunge. The fow who renl, and they are very fow, use the Tartar or Arabie tongues, both of which, the former expecially, are very generally undestood. The Circassinu language is itself tutally different from any other at present known, and what is singular, considering the total absence of letters, there is a seeret dialect, appurently an old lmrbarons gibberish, peenliar to the princes and usden, nod used by them chictly on their prelatory exeursions. (Klaproth, 1 , 321 ; Pullas, i. 408.)

Arts, Manyfuctures, Commerce,-These also are at the lowest ebb; the doctors are simply conjururs or saints, who profess to cure clisenses by chams and the romghest applientions of aeturil cautery. Their success may be nurmised from the fact, that notwithatanding the length and inveteracy of the war with the Russians, searedy n single instance of a maimed Cireassian warrior is to be met with: to be wombled imong these people is to die. Of artifleers and skilled mechnnies there are only cutlers, armourers, and poldsmiths, who, however, exhibit great ingennity in the construetion and decoration of the warriors' arms. The art of preparing gumpowler has heen known for ages in the Caneasus, aud the abundance of saltpetre renders the inhabitants independent of other comntries for this important element of warfare; their mode of manufacture is, however, very primitive, It has already been stated that the Women are the great manufacturers of clothes, which may be said to be the only manufaeture
which these people posmen. They firmerly truled with l'ersin ant l'urke:" fir thelr chain and other armour, and with 'l'nrtar trilsen morthwned for widt, the equivalentes on their gurts being their ehildren and cattle. The linmainins have minihilated luth trmien; nind this, as alrendy statest, is one grent cunse of the haspal aitertained naniont them by

CLAUS'THAL, or KLAUS'THAL, il town of the k. of Hanover, caje of the minimg emptainey (Berpharipturenия haft) of the sume mame, nud the prineipal mining town of the Jart\%; in a hare inid bleak region on the top and slopes of a hill 1.7.10 ft, nbove the sen, 26 m . NE. (;ítingen, and 5 f m . SW. by S. Hamover. 1'up, 8,918 in Ixlih. The inhab, are mostly miners or persons connected with the mines and smelting-houses. The town has a desolate apyenrmuse; its houses are chiclly of wool, and even its prineipat clumbly is of tho same matorial. It conlains a maingr-selool, sipported by the kiap, and possessing an extensive collection of models of nimes, miling builiturs, machinery, and a cabinet of the Hariz mincrals 1'he ehief lead and silver mines in the Ilart\% are in the neighhmormond, next to which are the sil bersegen. The slanft of one of these mines reaches to $2,000 \mathrm{ft}$. below the level of the Bnitic. 'The

## CLITHEROE

mines are drained by a tunuel, cut through the momitain to the small town of Grumb, a distance of $t \mathrm{il}$. The total length of this tumin, however, with its bramehes, is nearly double this distance: it was combunced in 1775 , mul tinished in 1799. Nearly all the machinery used in the mines being set in motion by water-power, every little stream around Clmasthal is carefully male use of to form a resurvoir; and the ctunals conducting the water thence to the different mills, madhines, \&ee, are said to lave an ngigregate length of 125 m . 'There are munerous forfes; besides which, eamlets, and a few other articles are manufactured.

CLERAONT-DE:LODEVE (sce LODEVE). 'There are many other small towns in France numed Clermont; lat none of any importance.

CLERMONT-FELRLAND (an. Augustomenetum), a city of France, dép. I'ıy-de-Dòme, of which it is the cap., on an atlluent of the Allier ; 82 mi . W. Lyons, amil 208 in . S. by E. Jaris, on the ralway from bourges to Le P'uy. Pop. 32,275 in 18tis. The city is finely situated on an eminence, surrounded on the S. and W. by an amphithentre of monntains, of which the luy-de-Dome is the (alminating point, and overlooking on the N. amb L. the pieturesplue and rich plan of the Limarne. The city itself is about $1 \frac{1}{2} \mathrm{~m}$. in cirenit, being separated by a boulevard, partially planted with trees, from several consinkrable subiurbs. Though it lias some tine structures, it is in feneral bally laid out ; streets crookel. narrow, und dirty ; houses lofty, mostly old, and gloomy looking from being built of the lava fonme in the neighbomonood, with which also the streets are paved. The more morlern buidings, however, which are rapidly increasing in Clermont and its snburhs, have a more cherrfil and agreatile asject. It las several spuares ormanented with haturdsome foumtans, and is exceedingly well supplied with good water, conveyed to it by subterranenn combuits from Koyat, a leage distant. The principal edifice is the eathedral, a work of the l3th century, and the third, according to Hugn, which has been eonstrueter in this city. Lixternally it has nothing to recommend it, leeing untinished, and erowded amomerst a number of mean buildings ; but its interior is considered one of the tinest existing. sixerimens of Gothie architecture. It is luailt of Folvic lava, a material well in keeping with its style, and has a choir, and chapels of great beauty, a number of handsome columass supperting a lotity bave and aisles, and much elegant carving and stained glass. Of the five towers it possessed hefore the revolution, only one romains. Ot the other churches, that of Notre Dimue du Port, built in SES, is the most ancient, and is claturately ormanented externally with mosaic work, bats-reliefs, de. The corn ami linsu halls, the ancicut collewe, town-hall, cavalry barracks, Hôtrl Dieu, and another hospital, the prefeetur a pomblic librarywith 16,000 vols., fimaled by Massithom, and the theatre, are the other principal publie buildings. It las also a botanic grarden, museums of natural history and antiquities, and a cahinct of mineralogy, particularly rich in specimens of the voleanic products of the neighbourhood. It is the seat of a bishopric which has to bast of Massillon for one of its incumbents, and of tribunals of original jurisdiction and commerce; and las a royal college of the third class with about 350 pupils, a primary school, aud an academy of sciences and belles lettres. Trale consillcrable, it being the entrepot for the produce of the surrounding deps., consisting of hemp, flax, com, wines, cheese, leather, and lincu fabrics, and for a part of the merchandise of Proveuce and Languedot intended for Paris, hesiles leing on the great line of communication between

Bordeanx and Lyons. Four large fairs are hedd anmually. Manufinctures not very impurtant; the. chief are those of silk stoekings, ilrughets, timted paper, coarse wobllens, linen, cutlery, purcelain, cotton yarn, twine, sweetoneats, presirved fruits, mul chemical products. Thero is also a saltyetre refinery. In and round Clermont there are numerous warm chalybeate springs, holdiug in salution carbonates of lime, and whieh, on coolin: deposit. very extensive sediments. The most ri: markable of these is in the suburb of St. Allyre, where a streamlet having raised its bed to a considerable height ly means of successive depusits, and sulosequently formed a cascade over anothes streamlet into which it hal previonsly run, has eflected the formation of a natural bridge over the latter, 21 ft . in leugth loy 16 ft . high. The little town of Mont-ferrand, formerly containing the stronghold of the Comonts of Auvergne, is now alle of the suburbs of Clermont, with whleh it is canneeted by a tine avenue of willow and walnut trees.

Anterior to the Roman conquest, this city was named Nemosns, and was the cap. of the Arverini: Augnstus embellished it, and grave it his name. In the 3 rol century it was erected into a hishopric, It was several times demolished in the suceecding: ages. and especially by Pepin-le-]lef. The comats of Clermont and Anvergne afterwarls [insessal it. It was here that the celebrated comeil, whid bears its name, was leld in 1095 , when the firs crusade was resolved on. Philip Aurustus muitenl this city to his dominions in 1212. Clermont has been the hirtioplace of many illustrious men, anoug whom may he specitical Gregory of Tours; Jaseal, boru here on tho 19th June, Jifis; 'Thoma, Chmmfort, Delitle the poet, and General Dessis, in honour of whem in obelisk has been ereetedia one of the sepuares.

CLEVELAND, n town of the U. States, Ohin, on the S. shore of Lake Eric, at the month of the Cuynloga river. I'op. 36,125 in 1860. The tura -which lind only a pop. of 6,071 in 18.10 -lats grown-n! very rapidly, owing to its advantagenss commercial position, and at the point where the Grand Camal, conneeting the Ohior river (and cunsequently the Mississippi) with Lake Liric unitw with the latter. The opening of this caual has made Cleveland, which was previously quite anknown, a place of much importance, heightenad by the subsequent eonstruction of several lines of railway, anong them the Cleveland, Columbis and Cincinuati, 1.11 m . long, and the Cleveland and Toledo, $x 7 \mathrm{~m}$. long, which place the town in direct commonication with the whole railwal! system of the Unitel States.
CLDVES, an anciont town of the I'russinn states, Rhine prov., formerly the caj. duchy of Cleves, and now of a circ., on the railway frem Cologne to Utrecht and Ainsterilam. Pop. 9, 㛺 in 1861 . The town stands on the deelivity of sume hills, nearly at the NW. extremity of the prow alout $2 t \mathrm{~m}$. from the Shine, with which it is mited by a canal. It is neatly built in the Intich style, and surronneded by walls, but is not a place of any strength. It has a rymmasium or collen. a hanilsome town-honse, with iron fonudries, and mannfactures of flanuel and cotton.

CLITHELOE, a town and parl. bor, of Englam co. Lancaster, lumd. Blackburn, on the libblle, is m . NW. by $\mathrm{N}_{\text {. }}$ London, and 20 m . SE. by E. Laneaster, on the Lancashire and Yorkshire railway Pop. of town $6,9 \mathrm{E}^{1}$, and of parl. bor. $10,864 \mathrm{tw}$ 1861. The town stands at the foot of Pendil-hill, which rises $1,800 \mathrm{ft}$. above the level of the sat The honses are of stone; the strects paved, well kept, and plentifilly supplied with water frou
springs. Th

In the charchyard is the free grammar-school endowed by Quech Mary in Lomb Elitheroe is a bor. by preseription, and has returned $\because$ mem, to the 11 . of Com, since 1 Elizabeth. Pinder an oriler of the 11. of Com., in 169t, the gight of election was vested in the hurgesses and fremen, who held in right of freehold in louses of fand within the bor.; out-burgesses, holding free burage temures in the bor., luad also the right of rating. l'reviously to the Reform Act, the momher of hurgage temures was 192, of which not mupe than a lalf were occupied by burgesses, and in lact it was a more nominntion bor. The leform let deprived it of one of its members; and the deetoral limits were at the same time extended so ax to comprise varions andjuining chapelries and furnahips. Registered electors 496 in 1865 . Under the new municipal corporation act, the bor, consists of one ward, and is governed by 4 aldermen and 12 counsellors. Several branclies of the cottun mannfucture are extensively carried on; they pansist juincipally of the wenving of calicoes by had mad power looms, cotton spiming, and ealico printing. In the neighbourhood ure extensive berls of limestone, of which large quantities are burnt for manure and building. A mineral spa near the town is much resorted to. In 1669, the thwn and neighbourhood suflered severely from an extraurdinary outbreak of water from the higher part of Pendil-hill. Markets are held on Tuesdny ; attle shows on alternate Tnesdays ; fuirs on 2-Ith and esth March; 1st and 2nd Aur. ; Thursday and liriday before the fourth Saturday after 29 h Sept. : anl 7 th and 8th Dec.
CLONAKIL'I'Y, a marit. town ot Ireland, co. Cork, prov. Munster, at the bottom of the bay of the same name; 10 m . SW. Cork. Pop, $3,087 \mathrm{in}$ $1 \times 11$, and 3,108 in 1861 . The town is formed of four streets, that meet in the centre, and of a square. It las a par. church, a R. Catholic chapel, a Methodist meeting-louse, an endowed grammarsthool, a dispensary, a public library, three read ing-rooms, a conrt-honse, brideweil, linen-hall, and market-house. The corporation, inder the charter of James I. in 1613, consists of a sovereign, twenty-four burgesses, and a commonalty. It returned two mems. to the Irish H. of $\dot{C}$. till the l'nion, when it was disfranchised. A manor court, held every third Wednesday, has eognismec of heas to the amount of 21 . Markets, Fridays: fairs on 5th April, 1st June, 1st Aug., 10th Oct., and 12th Nov. A party of the constabulary is stationed here. The trade is mich limited by the badness of the harbour, which is nearly impracticable for vessels of any size, in consequence of its shallow and shifting bar. Sea-sand is raised here in large quantities, and carried to the adjoinung country for manure. Corn is exported to tork, and coal received in return, chietly viâ Kinsale, from which there is a railway to Cork.
CLONES, an inl. town of Ireland, eo. Monaghan, prov. Ulster; 66 m, NW. by N. Dublin. Pop. 2.381 in 1831, and 2,390 in 1861. The town consists of a triangular market-place, in which is an ancient stone cross, and a few streets with mean thatehed houses. It has a par. church, a R. Cath. chapel, two l'resbyterians and two Methodist meeting-houses, and two dispensaries ; and is a constatulary station. A manorial court is held moathly, and petty sessions on alternate Fridays fairs are held on the last Thursday of every month. The Ulster canal passes near the town.
CLONMEL, an inl. to. and parl. bor. of Ireland, prov. Munster, partly in 'Tipperary and partly
 lin, and 26 m . NW. by W. Whterfard, on the railway from Whterford to limerick. l'op), 18,012 in 18.11 ; 13,50:3, in 1811 ; und 11,77. in 1861. 'Tho town chiefly lies on the $N$. side of the river in Tipperary; the commmicntion with the other portion in Waterford being maintained by three stone bridges. The struets, which consist if a main thoroughfare upwaris of a mile in longth, intersected by several smaller, are well pavid mul lighted with gras. The eor, clab honse is at the li, end of the town, and near it are extensive larracks lor cavalry, infantry, and artillery. It has a prish church, 1 motern building, with some food monuments, two Rem, Catholic par. chapels, a Francisean and a I'resentation chapol, and meetiug honses for Presbeterian Calvinists, Uuitarimes, Baptists, I'rimitive and W'esleyan Methodists, mad Qunkers. An endowed nehool has been rebuilt at an expense of 5,0001 ; besides which there are parochial schools for boys and girls, and others are naintnined by volnitary contributions. The co, intirmary and dispensary, the fever hospital and the house of industry for the reception of well-condncted paupers and the continement of varrints, are in the town, as are two orphan establishments, a mendicity association, and a savings' bunk. Here also is the district lunatic usylum for the co., built to accommodate 120 patients.

The bor, was incorporated at a very early period, but its ruling charter was grmated by James I. in 1608. The governing body eonsists of a mayor, two bailills, twenty other burgesses, and an unlimited number of frecmen: the right of freedon is enjoyed by the cldest son, by apprenticeship or hy marringe with a frecman's daniliter. Previously to the Union, the bor. sent two mem, to the lrish 1I. of C., and it now sends one mem. to the imperial H . of C . The elective franchise is vested in the hurgesses and fremen resident within 7 m ., and in the $10 l$. honseholders. No. of registered electors 166 in 1862 . The electoral bomminry comprises 331 acres, bat the municipal juristiction for other purposes extends over 4,800 Irish acres, of which 1,000 are on the Tipuerary side, and the remainder on the Wuterford side of the siver.

The woollen manufacture was introduced into the town in 1667, when a number of German manufacturers were induced to remove thither: it declined at the lievolution, and has never revived. The cotton mannfacture has been introduced, and there are extensive flour mills in the town and its vicinity. The town is well situated for inland trate, being on the main lines of road from 1)ullin to Cork, and a chicl" station on the railway from Waterford to Limerick, and havine the advantare of river navigation for barges of 50 tons burden to Waterford, a distance of 23 m . There is an extensive salmon fishery on the Suir, aml the influence of the tide is perceptible beyond Clonmel. The principal trade is in grain, provisions, cattlo, und butter, with all which it supplies the Liverpool, London, and Bristol markets. A considerible portion of the produce goes to Waterford, and mumerous carriers conduct the inland trade with all the surrounting country. The butter market is a spacions bnilding, with suitable ollices for inspecting and marking the article before it is exposed for sale. Market-lays, Tuesdays and Saturdays: fairs are held on 5th May and 5th Nov., and on the first Wednesday of every other month; they are chiefly for cattle.

CLOSTER-SEVEN, a small village of Hanover, duchy of Bremen, on the Aue, 26 m. NE. Hremen. It deserves notice only from its being the place where the famous convention, which bears its
name, was agreed to on Sept. 10, 1757, by which an army of $\mathbf{1 x , 0 0 0}$ Hanoverlans and liessians, commaided by Willhun, Dake of Cumberlaud, was disuresed and sent into vantomments. This romvention was alike mupopular in Vaghand and in France: in the dirst it was looked upon as the result of imbecility and miseouduct; and in the latter it was believed, and probably on pood kromids, that had Marshal lichelien mot assented to the eonvenion, the Duke of Cumberlaman mat lave anrremberel at disoretion. (The comvention is piven in smollett's llist, of Eing., iii, Ilit.)

CloliNe, an int, town, or rather eity, of Ireland, co. dork, prov. Manster, int a fertile valley, 8 m. E. Cork harl., with wheh it is comaeeted by
 The town, which is small, irrepularly bults, and far from prospronas, has a harge olil erncilorm cathedral, in which are some goorl monnments; amony others one to Dr. Woodward, hishop of Cloyne, who died in $17!1!$, mat was one of the rarliest advocates for the introbluction of poor laws into Jrehand. A little distance from the cathedral is one of those extraurdinary robind towers, the orimill and whjest of which have given rise to mueh learned conjecture. It is 10 : It $^{\prime \prime}$. in height. The old episeopal patace at the b. end of the town is now a private residence: the bishoprie of Cloyne having, on the denth of Dr. Brinkley, the last bishop, in 1835 , been merged in that of Cork. 'The himons Dr. Berkeley, one of the subtlest of metuphysicians, aul most imiahle of men, was bishop "f Chove from 1732 to 1753 , The R. Cath. cathedril is a plain huilding, withont any pretensions to architectural beanty. Crowe's charitysehool, founded in 171!, gives instruction to if pupils in reading, writing, and arithmetic. There is here a constabulary station. Market-lay Tlumsidas. A conrt leet is letal ammally ; a manor court every week; and petty sessions on alternate Wednesdays. At Carrigacramp, near the town, is a quarry of dove-marble, of which from 2,000 to $(6,000)$ tons are raised ammally.

CLYDE, a river of scolaud, and the only important one on the W, coast of that part of the U. Kingrlom. It. has its source near the S. extremity of Lanarkshire, on the borders of Dum-fries-sbire and l'eebles-shite, in the highest part of the S. mountain-land of seotlatid, contignous to the sources of' the 'Iweed and Anman. Its course is at brst N., with a litale inclination to the b., till near lligerar it turus NW.; it then makes a sweep round by the ski., till, being joined at Harperfick by the Dongrias-water, it re-ansmmes its NW. course, amd. passing by Lanark, Hamitoon, and Gltusuow, unites with the Frith of Clyole, a little below Dmmarton. The distance in a direct line, from its source to Dumbartom, is only about. 52 m. , luat including its windings, the course of the river is near 75 m . Suon after its junction with the Donglas, it is precipitated over a series of falls celebrated for their pieturesque beanty : of these the principal are the falts of Bonington, Corehonse, Dindaff, and Stonebyres. The distance from the highest to the lowest fall is about 6 m .; during the whole of which the river dashes along with great impetnosity, Corehonse Fall is about 70 ft . in height. The Clyde has been rendered navigable at high water as far as Ginsgow for vessels of 350 and 400 tons. (See Glangow.)
COAS'' CASTLE (CAPE), or CABO CORSO, the calp of the IBritish settlements on the Gold Coast of Africa, empire of Ashantee ; lat. $5^{\circ} 6^{\prime}$ N., long. $1^{\circ} 51^{\prime} \mathrm{W}$. The first colonial establishment formed here was by the lortuguese in 1610 , but the Dateh dislodged them after a short period.

Finally the Britist obtained possession of the selthement, in whose hands it. has remained since lifi.

The cast/e is built upon a roek about 50 ft . high, projeetlug into the soa, its walls being washed by, the surf that rolls impetaonsly along the convo. It is of a qumdrangular shape, with hastions at each angle; has harricks, with accommodations for 16 otlicers and 200 ment but is of litile strength, the wally being out of repair, and eothmaniled lo every direction by the adjarent huights (lint on some if these forts have feen erected). 'I'le water lior the garrisan is obtained from tank, in which the rain from the buildinges is collected, (Captain Tulloch's Leport on W. Alricis.)

The tow $a$ is sitmated bedind the castle, and presents a dirty and irresular appearance. The mative honses lave a lew small rooms seantily furnished witl mats abl stools; the fires are made in a corner, with soo other esenpe for smoke than a hole in the roof. There are, however, some sinperior rewidences bolongring to binropeans, and the merchatits have linilt. themselves a meat clabhonse. 'The scenery of the neirghborrhood has been described by a late distinguished temale poet, Mrs. Maclean, better known as L. L. L. whose molancholy death at this place, in 18:17, has given an interest to it which it did not previonsly possess. "The land view, witli its coua and paim trees, is very striking-it is like a scelle in the Arabian Nights. The mative hats I lirst took for ricks of lay, but those of the hetter sint are pretty white houses with green blinds. The English gentlemen resident here have very large honses, quite mansions, with galleries rimning round. Generally speaking, the vegetation is su thick that the growth of the shribs rather resembles a woll. The hills are covered to the typ with what we should call calf-weed, bat here it is called bush.'.

The climate of this settlement is characterisel by excessive humidity. The heat is, however, not so great as might be supposed. In the hotest weather, owing to the tempering intluence of the sea breeze, the thermometer sellom rises above $86^{\circ}$ Falir., and rarely, in the coldest, falls belor $76^{\circ}$. It has genernily been deseribed as exceelingly unhealthy, and the officinl statements show that such is the fact. During the four year; curting with 1826, tue-thirds of the white tropis in garrison died annually; and in $182 \cdot$ the mortality was in the enormons ratio of $982 \cdot 2$ in $1,0 \mathrm{~m}(\mathrm{n}$. It is true that these were simgularly unlieatly scasons, and that the vice and intemperance prevalent among the troops added considerably to their sickness and mortality. IBut still, to nise Captain Tulloeh's words, 'there is unquestionable evitence that in every year, and to all classes of Europeans, the elimate jroves extremely fatal.'

The improrts consist of cottons, hardware, and gunpowder, from Great Britain; sugar, rum, and tobacco l'rom the colonies; and of foreign produes, beads, silks, and tobacco. The exports are gold dust, ivory, palm-oil, pepper, cam or clye-wood, tortoiseshell andmaize. But the value of the trade is incorsiderable. The total exports from the Gold Coast to the United Kingidom amounted to 42,763/, in 18,3:; to 74,4661 . in 1861 ; and to 89,2881 . in 1868. The imports were of the value of 65,9051 . in $1859 ;$ 144,1941 . in 1861 ; and 80,849 in 1863.

COBLLN'IZ (the Coufluentes of the liomans), a town and fortress of the Prussian states, prof: lhine, cap. rerg, and cire, on the railway from Cologne to Mayence. 1'(1). 28,52.5 in 1861, exclus. of 5,810 military persons. The town stands in : beautiful situation on the point of land at the comtluence of the Lihine and Moselle. It has a therstone bridge across the latter, and one of boats
across the Rl and mnny of hut, being a little advant merce. The niticent castl Treves, It Fruneli ; but ased for the courts. Cobls geney, a the Catholies, aur Commerce pr the tate prime Coblenta.

It has a frotand one of boats
across the Rhine. The streets nre mostly regular, and may of the mblic linilulags are handsome; but, being a fortress, Coblentz has derived but lithe alvantuge from its thae situation for commerce. The principal publice buidtins is the murniticent castle, erected in 1779 for the elector of 'freves. It was converted into barrneks by the Frearh; but has since been repaired, and is now used for the holding of the civil noll eriminal courts. Coblentz has a conrt, of appenl for the regreney, a theatre, a gymmasimm or college for Catholies, and some other literary ednblishments. L'onmerce pretty extensive. Prince Metternich, the late prime minister of Anstrin, was at native of Coblentz.

Coblentz has heen rendered one of the sfrongest places in the I'russiun momarehy, and is decuned one of the principal bulwarks of fiermany on the site of France. The fortilications by whieh it is surromiled are constricted partly on the system of Vauhan, and partly on thint of Montalembert. They enclose a large extent of gromil, mul are eapable of accommodating 100,000 men. Elirenbreitsteia, 'the Gibraltar of the Rhine,' ont the right bank of the river, the lortitientions of which had been blown up by the French, has been rendemenstronger than ever, and is one of the principal outworks of Coblentz.
CollURS, or more properly SAXE-COBURGGot'lla, a duchor of Central (iermany, and the most S , of the indep, Saxom principalities, consist ing of severnl small detached portions of territory ; between lat. $50^{\circ} 780^{\prime \prime}$ and $51022^{\prime}$ N., und longr. $10^{0} 15^{\prime}$ and $12^{\circ} 40^{\prime} \mathrm{E}$., surrounded mostly ly the territories of lavaria, D'russia, Saxony, Meiningen, Ilihdburghansen, and Weimar. The area and pop. of its two great divisions are, accorting to the census of Dee. 1861 :-

Coburg Proper is on the S. side of the Thllringer Wald ('Thuringian Forest), and is inchuded within the basin of the Rhine, having a general slupe to the $S$. Gotha and Altenburg are situated wholly on the N. side of the 'Thitinger Wald, and belong to the busins of the Elbe and Weser. The most momintanous parts of the country are the X. of Coburg aud the S. of Gotha; through these the Thiringian forest-range passes, the highest summits of which,-the Beerburg, $3,265 \mathrm{ft}$., nud the Schneekopf (snow-cap), $3,2+3 \mathrm{ft}$. in elevation, -are in the latter prineipality, Both divisions are, however, interspersed with fine valleys and fertile plains: Gotlun is watered by the U.nstrut, Gern, llörsel, and Saale; and Coburg by the Itz, a tributary of the Mayn, and other rivers. Climate henlthy aid mild, especially S . of the mountains, The principal oceupations of the people are tillage and cattle breeding; but the mountains, which are covered with pine forests, contain little cultirable land, and the forest economy there forms the chief branch of industry. In the valley of the ltz, the vine is cultivated, and hops, flax, and hemp, are also grown in the $\mathrm{S}_{\text {, }}$ : the other agricultural products are corn, pulse, culinary vegetables, fruits, anisecd, coriander, cummin, safflower, and other medicinal plants: potatoes are a prineipal article of nourishment. Many loges are fattened in the woods and sent down the Mayn to Frakifurt and elsewhere: considerable quantities of timber, pitch, tar, clarcoal, and putaslı are ob-
thined from the forests. Iron, coal, excellent millstones, marble, uhbaster, gypanu, jotter's clay, and salt ure mined or qumrried. Agriculture thomrishes most in Coburg, minulacturing industry in (Bothm. T'he principal manufactures are those ol liment cloth, tick, linen, thrend, woollen mud cotton fabries, leather, stecl, iron, anal copper Whres, ghas, enrthenware, tuttons, and piper. 'There are also numerous suwing-mills, linenbearhing factories, breweries, and distilteries; nuil ereat numbers of toys are male at Nenstadt in Coburg. A grood deal of advritage necrues from the transit trade, the duchy being on the road between Leiprig and lrankfurt. Gotha is the prineipal traling town, amel has several contsiderable mermatile establishmonts. The goverinment is a constitutional monareliy; ench of the principulitics has its own elective assembly, and the two unite into one chamber, composed of 30 members. Every man above the age of zi, who pays taxes, has a vote, and any citizen nbove 310 may be electel a deputy. New elections taka place every four yars, lor which period also the milget is voted. The mumal public revemue for
 to $8: 3,4251$, and the ammal expenditure to $57,851 /$. The greater part of the surplus this prolnced went. into the private purse of the reigning dake.
biducation is well attended to in the dnchy. There are th gymnasiums and classical schools, 1 academical gymnasium, 2 seminaries for schoolmasters, 35 town schools, amil abont 350 village schools in the duchy. The dheal honse, nind nearly all the pope, profess the Lutheran relignon, there being only abont 2,000 Lioman Catholics and 1,000) Jews. Ditherence of religion, lowever, does not affect the equal enjoyment of politiond rights. The Duke of Suxe-Coburg-Gotha holis, together with the Inke of Saxe-Altenburg and the Duke of Saxe-Meiningen, and the (irand buke of Saxe-W cimar, the twellth place in the German diet; and the duchy is bound to furnish a contingent of 1,860 men for the service of the confederation. Coburg belonged successively to the comits of llenneberg, the homse of Saxony, and that of Saaltield. In 1816, its territorics were enlarged by the cession of the principality of liehtenberer, on the left bank of the Rhine; but the reigning dhlte disposed of that possession to Prussia. In consequence of the extinction of the line of Gotha in 1826,the Duke of Saxe-Coburg became possesseal of the territories of Gotha and Altenburg, for which, by a family compact, Saultield was exclunged. 'The honse of Saxe-Coburg is famona as one of the most fortunate of all the existing great fumilies ol Europe in! respect to marriages. The late king leopold married, first, the heiress to the lbritish throne, next a daughter of the King of the French, and was then seated on the throne of Helgium, after having refinsed that of Greere. lrince Ferdinand married one of the richest heiresses of the Austrian empire, and his son became king-consort of lortugal. One princess married the Grand Duke Constantine, heir presumptive to all the liussias; another becnme tho Duchess of Kent; and, tinally, the late l'rince Albert, in wedling the sovereign of the British realms, became progenitor of a uew race of kings'futher of our kings to be.' (Tennyson).
Convis, a town of Central Germany, cap. of the above duchy, on the left bank of the Itz, 106 m , E. by N. Framkfurt-on-the-Mayn, and 130 m . SW. 1)resilen, on a branch line of the railway from Framkitor to Dresden. Popr. 11,110 in 1816 'Ihe streets of the town are mostly narrow and. uneven; but it is surrounded by some agreenble public walks, which separate it from its suburbs
and has several haudsome publie buildings. The Whrenberg palace, built in 1519, contains a collection of pictures, a library of e2t,000) vols., bund some ajartments adorned witis thgures in alto-rehieeo, the finest of whleh is a state langucting-room, ealeol the Salle de Cibuns, froms some colossal earyatides which surfonnd it. On an eminence commanding the town stanmls an ancient castle of the dukes of Coburg, now la part converted into a prisun and lonse of correction, but containing almo a collection of armonr, and some rooms once oceupied by lather, with the bedstemel on whish he slepit. This custle was unanceessfully besieged during the Bo yeurs' war by Wallenstein, who had for some time lis head-quarters here. Coburg eontains flve churehes, th govermment honse, a gymasibm, with tur observatory, and two libruries, a superior laties' sehool, a teachers' seminary, a large workhonse, and other charitable instlintions, and a ridingrsehool. The principal places of amisement are the theatre, cusino, redonte, and musical clab. 'The town is the seat of gev., and of the high lomal of taxation for the duchy, and of the superior jurlicial courts and chureh eonsistory for the prineip. of Coburg. It has manafactures of woollen, linen, and cotton fabries, poreclain, carthenware, and rold mad silver articles; with blenching and dyeworks. The line seat of the duke, liosennu, is in the immedinte neighbourhood.

COCLEN'LINA, a town of Spain, prov. Alicante, 30 m . N. Alicante. 1'ops, 7,369 in 1857 . 'The town has 2 churehes, 2 convents, a hospital, and a homse of charity for poor travellers. Neither the atreets nor the houses correspond with the number and wealth of the inhabitants, who are more intent "pon increasing their substance by agrienltural and manufacturing industry, than on beantifying the town. They mannfacture cloths, thlleties, hatidkerchiefs, and other articles. Their tields, which ure well irrigated, produce wheat, maize, pulse, wine, oil, and silk.

COCHIN, a small rajahship of Hindostan, near its $\mathrm{S}_{\mathrm{t}}$ extrenity, extending nlong the Malabar const, chictly between lat. $9^{\circ} 30^{\prime}$ and $10^{\circ} 30^{\prime} \mathrm{N}$., and long, $76^{\circ}$ and $77^{\circ}$ E.; having N. and E. the territory of the Madras presideney, S. Travancore, and W. the ocean: average length and breadth abont 45 m . each; area, $1,088 \mathrm{sq} . \mathrm{m}$. lts E. boundury is formed by the W. Ghants, which are here covered with forests of teak and citi (a black wood), of Iarge dimensions, whieh obliges both to he eut into short logs, in order to reachin the coast; with poon, jack, and iron woods, de. Towards Cincadu the hills are covered with grass instead of trees; but though their soil appears good, they are but little cultivated: in the N. there ure marrow and well-watered valleys, in which rice is rilised, and sometimes two crops a vear are reaped. The houses of the cultivators are often embosomed in groves of palms, mangoes, jacks, and plantains, A considerable portion of the rajah's revenue is derived from the teak forests, the timber of Cochin being in great demand in Bencal, and, since 1814 , having been sent to the dockyards of Bombay, from which, previously to that period. it was excluded. 'There are many villages inhalhited by Christians and Jews; the latter are settled mostly in the interior, bat have a syuagogne at Cochin town. This comntry was for a long period badly governed, and its inhab. much ypressed. The rajah for a time was tributary to 'lijpoo Sahib, and subsequently became subject to the lbritish.

Cocinn (Cach'hi, a morass), a marit. town of Ilindostan, prov. Malabar, on a small island near the S. extremity of Intia; formerly cap. of the above rajuhship, but since 1790 it has belonged to
the Britisli. Next to Ibombay, it is the most elicible port on the Malnhar const ; it is lin) m, NW. Cape Comorin, Kom. SSES. Calicut : lat, yo $61^{\prime}$ N., loug. $75^{\circ} \frac{17^{\prime}}{} \mathrm{E} \cdot$; and is built on the S . extrenity of the inhand, along the entrance from the sea to the 'lhekwater,' an inh. harbour or lagoon, which extends nearly 120 m. , bring sepmrated from the sea by a mirrow peninsulated tract, Under the l'ortugnese and Diteh, hy whom it was shecessively possessed, Cochial was a thourishing, town; bit sluce it has lelonged to the Jinglisth, Who in 1 sut demolished the fortiflentions and manr ol' the buildings, it has progressively decllned, anid the inhah, are now very mueh inpoverished; it still, however, trales with the rest of the Mulabar const, (hina, the fi, Arehijelago, and the Arabian and Persinn Gulfs. Large supplies of teak doated by the rivers from the lorests into the lhackwater, are shipied for the ports of the two last-mimed conntries; the other exports are sandal woonl, pepper, enrdamoms, cocoin nuts, coir, corlage, eassin, nud fish-maws. It is the only place on the const S. of limmbay where ships of any size ran be built. Under the walls of the old fort there is atways from 25 to 30 ft . water, aur ships obtain supplies of fresh water withont difliculty. I'rovisions are extremely clieap, aul as a port, as woll as a place of trade, it is mainl to be minch sulpering to Calicat. Jews of both tho black aud white castes are numerons, and have a syungogue in Cochin, almost the only one in India. Cochin is also the see of a Roman Catholic bishop, whose diocese includes Ceylon, mal comprises more than 100 churches. Herein 1503 Albuquerque erceted the first fortress possessed by the l'ortuguese in ludia,
COCIIIN-CHINA, a prov. of the empire of Anam, whielase.
COCKERMOUTII, a market-town and parl, bur, of Eugiand, co. Cumberland, at the contlinence of the Cotker and Derwent; 2.4 m . SW. Carlisle, 12 m , NE. Whitehaven, 306 m . NW. London by rom, and 319 m . by London and North Western railwas, P'op. of town 5,388 , nud of parl, bor. $7,057 \mathrm{in} 1866^{\circ}$. Cockermouth las but few houses of a betier sort, and little seems to have been done towaris its improvement, The streets are narrow in maky places, with a want of foot-pavement everywher": and thongh the lower classes seem to be better of than in many other towns in the same co., yat there appears to be little about the place tending to improvement. There are bridges over luth rivers, that over the Derwent being 270 ff . lung. Though unpaved, the streets are clean, and will supplied with water. A castle on a hill over the town, built shortly after the Conquest, was takea nad razed by the parl. forces in the war of leth. The chureh of All Sinints, erected in the time of Edward 11I., was rebuilt in 1711, and enlarged m 1825. St. Mary's church, rebuilt in 1850, has a memorial window to the poet Wordsworth, whe was n native of the town. The Independents. Methodists, and Society of Friends have places of worship. There are also a free grammar sehool and some almshouses. The borough returned two mom, to the H. of C. in 23 Eluward I., after which the privilege was not excreisod till 16 Charles $l_{\text {, }}$ since which it has been uninterruptedly enjoyed. Previonsly to the Reform Act, the franchise was exclusively vested in the holders of burgage tenures in the town of Cockermouth. The boundaries of the parl. bor. were then extendel, Kegistered electors 413 in 1865. The bor, is aliv n polling-place nt elections for mem. for the 11 . div. of the co. There are collieries at Greysouthem and Broughton, abont 3 m . distant.

It is a place of considerable trade, especinlly in f'amesun cherse, and has some silk manulictures. Neur this town the Austran troopswere defented, in 17.16 , by the Spaniaris, and in 1796 by the French.
Cogidisllald., a town amd par, of lingland, co. Brsex, lund. Lexden, the town being on a hith on the NE: bunk of the Blackwater, $10 \mathrm{~m} . \mathrm{W}$.
 ill-huilt; and the elothing trade, particularly the mumbincture of bite, formerly carried on, lias aluust wholly disappeared; but some brunches of the silk munufneture have been introndncent; and a frw of the inhab, are engaged in the making of town. The church, a spricious structure, in the purpendicnlar style, has a large square tower. The river is here crosseal by an nncient bringe of three arches. It has an eddowed seloon, three mendowed almshousers; aud mannity of 1501 a parr, payable ly Pembroke Jall, Cambridge, goes to the suppert and eduention of the poor. The cistercian monks lind an abbey here, a portion of the muns of which still remains.
COtiNAC, a town and river port of France, lep. Charente, cap. arrond., on the navigable riser Clurente, $22 \mathrm{~m} . \mathrm{W}$. by N. Angonleme. l'op. $x, 167^{7}$ in 1861 . The town is ill-built, and contains no alitice worthy of notice, except an ancient mastle, now converted into warehonses. The hramly, for the shipment of which the town is calehrated, and which is everywhere known by its name, is made from white wine: that made from ral wine in very inferior. In good years wine yidds about 1-5th part of its volume of eau-de-vie, whereas in bad yeurs it does not yield more than from 1-!th to $\mathbf{1 - 1 l t h}$ part. All the brmaly of ('harcate is sold under the name of Cognac; but the best qualities are produced in the canton of that name, nud in those of Blanzac, Jaruac, louillac, Nigre, and luilice. The park belonging to the eastle is an agreatble publie promenade, and in it is a bronze statue of Frmeis 1., crected on the spot where he was born, in 1494. Three conucils have been held in Cognac.
COLMBATOOLS, a llritish prov. of S. Hindostan, presid. Madras, between lat. $10^{\circ} 8^{\prime}$ and $12^{\circ}$ ts' N., and long. $76^{\circ}$ o $00^{\prime}$ and $78^{\circ} 10^{\prime}$ E., havinir N. the Mysore dom., E. the provs. Salem and Camatic, S. the latter, and W. Coblin and Malahar; aren, 8,392 sq. m. I'op. estimated at near $1,000,000$. Generally it is a that open country, with a medium height of 900 ft above the sea; its surfince grablually aseending from the Cavery on the L. to the Ghants mul Neilgherry hills on its W. borders. The W. Gliants rise from 1,500 to $2,000 \mathrm{ft}$. above the Combatoor plain, and have in one place a remarkable opening, abont 31 m , in length, called the I'alighanteherry l'ass, presenting a clear level way from the Malabar to the Coromandel coast. Next to the Cavery the primeipal rivers are the Bowany, Noyel, and Amherawatty, all which run more or less E., and join the Cavery before it leaves the distr. Climite on the whole healthy and pleasant; and except in that part facing the Palighauteherry Pass, this prov. is protected by the Giliauts from the violence of the SW. monsoon. There ure some marshes in the S.and in the vicinity of the hills; but the wil in general is dry, and well adapted for the $d r y$ grain culture, to which nearly ten times as much land is appropriated as is ocenpied by well, and twenty times as much as is occupied by uet, cultivation. In the N. rice is the chief crop; cot-
toll of several klods is grown in comsideruble quantitios both ulove and below the dimuts, annl almost all the tobaceo that supplies Mababar comes Irom this distr. There are altogether about $67!, 700$ neres of pasture land; enttle und sherp) minerons. Chief mineral prodicts, salt mad mitre, which are oceasiomally obtained from certain earths impregmated with muriates and nitratos abundantly sentered throughont the distr. In 18/8, แn пquamarine mine was opened and worked. Weaving is the only art that has nttained any perfection. Some of the towas are large and well huilt; lint, excepting in these, mud cottages with red tiled or thintelied roofs are almost the only honses. The peasantry, however, are contented, and enjoy compmative comfort. l'agoulas or temples are not numerous ; and exeepting that of I'eowra, a little W. of the cap., which contains some well-carvel granite figures, they linve little notoriety. The areas in front of most of them are ommented with gigmatic aromps in pottery covered with chuman of caparisomed horses, elephants, and grotesque tigures. Nenr the Ghantes the ox is adored, and every village possesses one or two bulls, to which weekly or monthly worship is puil. The prov, became sultject to the Mysore rajahs nearly 200 years ago, and to the British in 1799. It was greatly depopulated by an epidemic fever, which prevailed from 1809 to 1811 .

Cobmationen, an inl. town of S. Iliudostan, cap. of the above distr, and sent of a collector of revenue under the Mairas presid., in an elevated situation on the N. bank of one of the alluents of the Cavery, 90 m . SNE. Mysore, mad 270 m. NW. Madras; lat. $10^{\circ} 52^{\prime}$ N., longr. $77^{\circ} 5^{\prime}$ E. It is tolerably well built, and hats a mosque erected by Tippoo, who sometimes resided here. The water is brackish, and 2 m , off both salt and nitro are procured by lixiviating the soil. Five $m$, to the N . irom is smelted from black samd. I'eowra, not far distant, has a temple delicated to Sivn, highly ormmented with Ilind'so tigures, but destitute of clegance, which was spared by Tipjoos when he demolished most other idolatrous buildings. In 1783 and 1790 Coimbntoor was taki!n by the llritish, to whom it las permanently belonged since 1790.

COIM13LAA, a city of Portugal, prov. Leyra, cap. distr., and see of a bishop, partly on a stecp; rocky precipice, and partly on a plain contiguons to the Mondero, 115 m . NNL: Lisbon, on the ralway from Lisbon to Oporto. P'op. $15,710 \mathrm{in}$ 1858. The town was fortified at a very arly perion, and has mulergone many sieges. The ancient walls and towers still remain, and form its only defence. It has an imposing appearanco when seen at a distance, the summits of the anjoining heights being crowned with couvents and public buildings; but the interior of the town ly no means corresponds with the exterior view, the strects being narrow, steep, crooked, and dirty. The principal public building is the miversity, the only one in I'ortugal, transferred thither from Lisbon in 1306. It consists of eighteen collegres, and is divided into six faculties, viz. those of theolory, the canon law, civil law, medicine, matural philosophy, and mathematics. It lus also attached to it grammar sehools, with schools of philosophy and rhetoric, ecelesiastical and civil colleges or seminaries, and a royal college of arts, at which those who intend entering at the miversity complete their preliminary studies. Different degrees are taken in the respective facultios, the student applying himself primcipally to the particular branch most connceted with his intended profession, which, as Lord Caemarvon sur-
misen, is probably an improvement upon the Ehglinls system of college colneation, where the sume degree ls taken ly all, withont refurence to the nature of their future ocempations. (Chermarvon's P'orthgal and (ialicin, $\mathrm{i}_{\text {. }}$ (2.) The collection of sulyjects of natural history is tolerahly good, the observitory complete, and the instruments in perfoet order, the grenter part having heen male: in Jomdon and I'aris. The present system of edueution was introdiced by the Margiais l'ombal, In 17大il; it in, however, indebted, for virinus innprowements la the comrse of atady, to linglishment, who have heen instructors; lut, with all this, it is still very finr belimel: nud many limportane branches of knowledge are either not thught at nll, or are taught in the worst possihle munner. The university is extremely wedl endowed; and the inferior class of mobles nre sometimes competitors for the vacmint chairs. The nmmul exjenses of the stindents do nut exreed $b 0 \%$, ench, any excess being delfayd from the revemues of the institution. I'he library consists of three large maloons, containing about 30,000 vols., lint they are nearly all of ancient date, The Cullege of Arts, which formerly belonged to the'. lesulten, is a remarknbly handsome luidding. The mos nastery of Sinta Cruz, nn immense Gothie building in the worst taste, lefongs to the order of Augustines, who, in addition to mmorons important privileges, mjoy the right of uppointing their prior to the othece of chancellor of the miversity. The monks are, for the most purt, of noble descent and polished manuers, and are often seretn momated on tine horses splendidly ruparisoned, leing forbiden by the regulations of the momastery to appear on foot beyond its walls. (Lord Caernarvon, i. 43.) On a hill opposite to the town is the superb convent and church of the mums of St. Clara. Besides these public buildings, there are the cathedral and eight churehes, tive of which are collegiate, with soveral other convents, hospitals, \&e. There is a line stone bridge over the Mondego, whose hed, which is progressively rising, is nearly alry in the enmmer, while in the winter it becomes an impetuous torrent, and owertlows the surromiding comentry. The town it well smplied with water, conveyed to it hy an uqueduct. Near Comblra, on the S. bunk of the river, is the Quinta das Layrimas, or Villa of Tents, the residence of the benutifil Inez the Castro, whose murder forms the sulject of the tine 'plisode in the third look of the 'Lusiad.' Warthenware of goonl quality is prodneed here, with woollen and linen cloths.

Coimbra is said to occupy the site of Comimbrica, fonnded by the Romans 300 yeurs is.c. It suflered severely by the earthouake of 1755 , and was a seene of great distress in 1810, when the Juke of Wellington retreated on the lines of Torres Vealras.

COlAABBA, an island on the Malabar or W, const of Ilindostan, immediately S. the Island of Bombay, with which it is commected by a canseway, and on which a tine lighthouse mal cantonments for the British troops have been erected. (See llomhay.)

COLALOOLS, a small rajahship of IFindostan, in the presidency of Ihombay, partly nhove and partly below the W. Ghants, including the towns of Colnpoor, P’arnellah, Maleapoor, and Culgong. The rajah of Colapoor is clescended from the clilest branch of the family of Sevajee, the founder of the Malaratta empire. He fomerly possessed Malwan, and some other ports on the Malabar coast ; but his subjects being notorions for piracy, the british compelled him to cede these places in 1812; nul in 1829 assimed the government, of the comitry.

Colal'oone, an inl, town of Hindostan, cap, of
the preceding "listr., in a valley surroumiled on three sides hy hills; 125 m . SNE: I'oomuly ; lat.
 its shief protection is in two hill forts in the vicinity. The town is neatly lmilt, and eonstaning some lifty trees, gurlens, mid good tanks.

Col. lililid, a fortibed sea-port town of I'riswa, reg. Coslla in l'mmerning, on the I'onante, near where it falls into the linltid, sud wh the terminus of the rullwny from lierlin to the Inaltiesiea. I'opo II, itio in Intil, exchns, of a gurrison of 1, ,izes. The primeipal pablice buildings are the conthedral, townhumso, nuil the mpueduct for supplying the town with water, 'Ihere is in the aneient ducul enstle a fomudation for the danghters of nobless mul burgesses. It has a gimmasimm, a house of correctlon, and some manafactures; but its sulame and limprey flsheries, and its shipping, are the principal sources of wealth. There are salt springe In the vicinity; bit, owing to the want of cond and timber, they are of comparatively little use.
COLCllbstlik, a pmrl, bor, and river purt of Eughand, co. Benses, illv. Colchester, himad. Leyden; bil m. NE. Landon ly road, and bl $\frac{1}{2}$. b direat Dantern railwny. lop. $28,80!$ in Ikiti. The town stumels on the declivity of a hill rising from the Colne, which euts off is small suburb. It is well lmilt, has several groml strects, is paved, lighted with gan, and aderpiately supplieal with water. Groat inprovements in its interior liave beve c.lleceted, mind are still going ont. There are three briblges over the river. $A$ part of the remains of the ancient mastle, said to have been founded by Biward the Elder, is oecasionally used as a prisoii, There are eight parish charches: St. Ieter's, huilt previonsly to the Compuest, has been modemixed nud enlarged; St. Jhmes's dates previonsly to Eidward II., Hud is a hmulsome structure; si, Leonaril's is also large and convenient: besides these, there are a French mul a Dutch I'rotestant chureh, and nine dissenting chapels. The remains of the church of St. Botolph's priory, fonmedel in the early part of the 12th coutury, are said to afford some of the linest specimens of Norman urehitecture in the kingilom.
Colchester has a free grammar school, fominded in the 2hth of Elizalreth, with one seholarship, in St. John's college, Cambridge, annexed to it; two others, in the sanme eollere, revert to this selnow on failure of applieants of the sumame of Cillogt (that of founder) or Torbington; and fonr fomuded in I'embroke college, Cambridge, on failure of auy boys leing sent from the Ipswich grammar selond, It educates from thirty to forty scholars; two charity schools, fonnded in 1708 , have been joinel to the nationnl school, in which abont 400 bors are educated, of whom 1.18 are elothed by the charity; a Lancastrian school, and an endowd school fomuded in 1816, for children of Quakers. with a library attached to $i t$. Tho principal claritable institutions are, a hospital, fonmed ly James I.; several nlmshouses; and the Essex and Colchester Hospital, built in 1820. A commodious thentre was erected in 1812; and there are literary and philosophical, medical, botanieal, and musieal societies, all in a tlourishing state. Market-days, Wednesdays and Suturdays: the latter a large corn market; but fencral provisions are on sale daily in the large and commolious market-plare. There are large ammal cattle fairs on the 5 th and 6th of July, 23rul and 2.lth of the same month, and 20th Oct. and three following days.

Colehester is a bonding port, but the foreign imports are comparatively insignificant ; they consist chictly of wine, oil-cake from Holland, and timber from the Baltic. The trade constwise is more extensive, the inports being chicfly colonial

proluce, and home manifnetures, from Tamion; with couls, de. from the northern comintien: the expurts, corn and malt. The river is mavigable fir vessela of 100 tons to 'The IIythe,' a little beluw the town, where there is a elistom-honse and
 and timber gurds; larger vessels (chicely colliers) diveluarge it Wivenhoer, still lower down, into lightens. (In Imi. I, 18id, there leelongend to the juith, of rather river, exactly 300 vessule ; hat of them no fewer than 202 were miler 00 tons burfent and their megregate tomage mad that of the is vessels of above so toms, momonted to only jhi, 16 tons. The oyster thaliery ol' the river hins Inew bong celebrated, mid was gramed to the burapses by lichard I.; it employs a comsiderable number of the inhab., and a large proportion of the amall craft belongring to the town. There is a harge distilleny nt llythe. A silk manufatory in the fown employs between 30月) and $\mathbf{1 0 0}$ hamis chietly females. 'rite weaving of haize (introbluced by the lilemings int the reign of lilizabeth) nsed fimerly to be enrried on tos some extent, but has wholly censed. At present, the prosurity of the tuwn imainly depends on its retail trale, liy which an extemaive ugrienltural dist rict is supplind. During the last war a harge military extatbishment was stationed here, the withirawal of which emmenl some deterioration to the borongh, Under the Municipal Aet its tommlaries are contracted to an ara of about 2,000 aeris inmediately ronnd the town; and it is divided into two wards, and governed by a mayor, nix aldermen, mud eightern comeillors. Borongh revente $3,(3701$, in 1862 , of which about one-fourth from rates,
Colchester has (with some interruption) returned two mem, to the 11 . of C. from the e3ral of lidward l. I'revionsly to the lieform Aet the right of dection was vented in the free burgesses not rereving alms. The parl, bor, (co-extensive with, the ancient libertiss) extends ower a space of $11, \vec{a} 10$ asres, divided by the Colne into two nearly rqual parts. Number of registered electors, 1,314 in $1866^{2}$, of which 113 are freemen. Ann, val, of real prop, assessed to income-tax 66,3201 , in 1857, and 85,7271 in 1862.
Colchester has chams to high antiquity, and is supposed by some to have been the Cameloduam of the Roman preriod, thongh this lins been disputel. There is, however, no place in the kingdom where more numeroms lioman remains have Inell diseovered. It had mony monastic institnLions previomsly to the Reformation; of these, sit. Juhn's Abbey, of which the noble gateway is the sole relic, was the chicf.
Coldhester was made the seat of a suffragan linhop in the き6th Heury VIII. There were two consecrations onty, the tirst in 15a6, the other in lity; on the denth of the last diocesan, in 1607, no successor was nominated. In 16.18 the town was hrld by insurrectionary roynlists, and endured a siege, by Fairfax, of eleven weeks, when it was starved into surrender, and the leaders hung: half the tine subsequently levied appears to lave been pail by Dateh refiggees, who had escaped from the Duke of Ava's persecution. It gives the title of baron to the Abbot family.
COLDS'TREAM, one of the border towns of Scotland, co. Herwick, on the Tweed, 14 m . SW. Mrwick-upon-Tweed. Pop. 1,834in1861. Formerly the communication between Eigland and Scothad was here effected by a forl, by which Edw. 1. entered the latter with a powertil army in 1206 ; and it continued to be the chief passage for the Scotish and English armies till the union of the eruwus in 1603. It was by this forl, also, that the Covenanters entered England in 16.10. A bridge
of flee arches spana the river, which formed one of the greatent thoronghfares betwerll the two kimgsomen previonsly to the eomstruction of ralways. At preacit, the iron rombs hase completely thrown the oll highway finto the shamb, mini Cohlatrean bridge lies silemt and deserted. 'The town is irregtlarly lonilt, and yuite sooteli in upuenrance. It las a weekly cort-market, and a monthly sheep mil entele market, both of eonsiderable immortance. There ls a par, charch and two l'rendivterian disventing ehajels, three sulserigiton librarien, and fintr friendly nociedies. 'The manns of edncation are proml. Gemernl Monk resided nt Coliseremm In liabl-bit, previonsly to his going to lingland mad eftecting the lessorntion. During his stay here, the raised a horse rigiment, to which he gave the name of the 'Coldstremm (inards,' Which name the ruriment still retains.
CORLIRAINE, a marit. town and parl, bor, of Irelam, prov. Elster, em. Lomdonderry, on the Lower lhnna, 4 m . from its mouth, and 47 m . N.NW. Welfinst, on the ruilwny from lhilfast to
 $6,0: 11$ in $1 \times 81$. The town was buitt and fortithed liy the Irish Siciety of Lomblon, to whon the district was gramted by Janes I., in 1613. The town comsists of a square, ealled the Diamome, it main street, and several others, in which are many wellbuilt homses. A wooken bridier, comstructed in 1716, and removated in 17.13 , commets it with the suthrb of Killowen or Waterside, on the W. bank of the lhonn. The par. church is a large phatit buililig. The Linn. Cath. chapel, an elegrant struthre, is in killowen. The other piaces of worship are, two for l'reshyterims, and one ench for Methodists, Independente, and Seceders. The manndietures in the town and immediate neighbomrhood are tritling; a few papor-mills and some smbll tameries. It has an indowed sehool, built by the Irish Suciety; a town-hah, with a disuensary, lom find, and a mendiedty nswociation. The corporation, consisting of a mayor, 12 ndermen, 2l burgesses, and ant unlimited munder of fremen, is becone extinct; and its property is now vested in eommissioners. Its jurisdiction extended over the town and liberties, the limite of which were lixed by the charter nt 3 m . in every slirection trom the centre of the town. The town returned two members to the Irish H. of C. until the Union, since which it has sent one member to the Imperial 11. of C. Registeral electors, 274 in 18i5.

There are namerons bleach-greens in the neighbourhool. The $\cdot 6 z 301$ nul eel tisheries on the lam, in the , $\because$ of the town, are valuable. The prineipal 4. is in the export of corn and menl, provisions, acluling pork, and linens of a fine kim, called "Coleranes," 'The entries nt the jort, in the year 1863 , comprised six British vessels, of 1, isis tons, and three forcign vessels, of Tthe tons. The customs duties received umonnted to $7,511 l$. in $1859 ;$ to $7,2-411$. in 1861 ; and to $6,168 /$. in 18tia. Formerly, the trade of the town was much impeded by the bar at the month of the river, which had but 4 ft . water over it at springs, and 5 at nenjs; but this defect has been in a great degree obviated by the formation of a harbonar at P'ortrush, 4 m . NE. from the mouth of the Bann, in which vessels urawing 17 ft . water mav anchor, being sheltered by n projecting roek from the swell of the ocean. The ontlay on this harbour amounted to abont 13,0001 . ; and it affords great facilities to the trade of Coleraine, there being also a railway from the town to Portrish.

COLESHILLL, a town and par, of England, co. Warwick, Birmingham div., hund. Kemlingham; 116 m . NW. London by London and North West-
c.m railway. l'oflo of par. 2,003 in 18 ct 1 , The town iderives its anme frim ite lering situateal on a hill, nemr the Cule. It has a bundemme Gomble chmreh with a lufty puire, several good homsers, and
 inlunk, after the dissolution of the momasterien.

COLSHMDION, ur CLDLOMELON, n town and par. of Bimglami, co. Devom, humd. Hayridge,
 Girent Western railway. folpo of town 2,206 , mad
 extensive vale heside the Culm, n trihutury of 'lie lixe, and comante of one large ntrect, aling the rond from Exeter to Math, and of several smuller atrects diverging from it ons either side; muny of the homsers are naclest, anil momo of them finvournhle specimens of their day. The chureh, originally ceollegiate, is a spacions structure, in the later puíuted style, with a lofty and highly ormmemed tower, anil a heautiful chapel nttached. There nre neven dissenting chapels; $n$ mutional nehowl, in whieh nhove 3 mon boys and girls are elluented; with ohber nehools, mil several extensive charitien. Market, Saturdays; fairs, tirst Wednesplays in May and Nos., for entle mat cloth. Thure is a woillen mill; mul the munufneture of murrow woulden elothas mad serpers cmplays a cousidernble purtion of the pop, thouph the binsiness bas mueh deedinet. There is ulso, in the immediate vicinity, a pajer-mill, two large thomr-mills, and four thityarils. A momthly session for the district is hechl in the tuwn.
COLMAR (an. Columberia, or Colmuria, n city of l'rance, alsp. Inate Rhini; of which it is the enp., in a fertile phain, on the banks of two tributarien of the III; 36 m . NNE. Strashomigr, and $2: 1 \mathrm{l}$ m. ESLL. Paris, on the railway from Stranhourg to Mulhouse and Kasel. Pיpl. E2, (i,2? in Intil. The eity was lirtitied previonsly to lizis, when Lonis XiV., having taken it from Germany, destroyed its defences, and united it to the domintoms on the lirench erown. The eity is now surromuded only by houlevards, phated with trees, mal serving fir juiblic walks. It is tolerally well built, but contains few public editices deserving of notice. The principal are the eatheiral, built in 186:3, the theatre, nad prison. 'The other pmblic bullilings nud entablishments are the hall of justice, eity hall, prefecture, college, with a puilibe library combanmag 60,000 vols. mud several pmintings by Alkert Durer and others; the deaf and dimb nsylum, civil nud military hospitals, chureh of the Dominican convent, now a curn-lall, l'rotentant church, and museuns, containing, amongst other curiosities, a remurknble aérolite, which descended neur limsisheim in 1492, and originally weighed 2100 prounds.
Colinnt is environed by pleasant walks, garilens, nall country houses; and pussesses an orangery mad departmental nursery gromads. It is the sent of' a royal court, and of tribumals of primary jurisdiction and commerec. It han mumerous manifinetures of cottous stuffis and printed foorks, a large cotton and silk ribbon fictory, besides others of eutlery, paper, brushes, combs, and leather; and an extensive trade in iron, spices, drugs, and wine, which, with its manufactured goods, it exports largely to Switzerland. The Columbaria of the Romans is believed to have replaced the more ancient Argentuaria. This town was several times destroyed by the barbarians, nall in after times sulfered greatly during the wars between the lowses of Hapsburg anil Nassau. The Sivedes took it in 1632.
COLaiEnar DE OREJA, a town of Spain, prov. Madrid, 13 m . ENE. Aranjuez. Pop. 4,833 in 1857. The town contains a tine churel, two
convento, and two hospleals; and in finely sitho ated in a plalin prowluctlve of wine, oil, muil friit It lins manufictures of woillens, wiltury, anil Stauinh rush: anil mill-stones, nud dhe white stome fir huilding, are funnd in the vidinity.

I'lomgh lisely sitmated will the binks of $n$ whble river, oft a wiphty elevated gromit, Colugne has many woud houses, ame is ill-huilt, huving herol lail ont lin the Nindle Ages, when the dibject of urehitects was mure directed towneds defonce againat extenal cinemies than interior confort nid laranty, The city has a grent many finterenting bildinge, chaf among them the entheiral or minster of St. ferter, a vist and imposing hint lieomplete liothle
 lieif ft . in lemgith, mid the chair risen to the height of 180 ft . To eomplete the vast. structure anil mid to it a smitable tower, lus been the objecet of all Cismmy firr the last forty or tifty yents, and larse sums have been eollected for the purpose. The chareh of Sit. Mary is remarkable lior its antiguity, ami that ol' St. D'eter fire the famous alturppiece pulated by linhens. Several of the other churehes are alsa interesting, particularly that of St. dicroon. The lown-homse is a fine whil lmilding. The hall tior the comrts of justice was erected in 182.I. In the arsemal mre preserved many eurions specimens of nncient armonr. Cologne is the sent of an archbishopric, of the provincial anthorities, and ol the colirts of append for the province. Its maiversity, estiblished in lask, was suppressed during the ocengation of the conimtre hy the Fronch. The city has two rymmasilums af colleges-one for Catholies, to which is nttached a very valuable library, and one for Protestants; there is besides marchiepiseopal semlnary for the edwation of clergymen, a normal selunil, a eommercial selona, a publice library, with muncroms literary institutions, anil a thentre, Manufinctures important; they colisist principally of cotton yarn and stufls, woollen stockings, bombets, silks, velvits, tobiceco, somp, liats, lace, Hireal, and elocks. There are tan-works and several alistilleries, the most estecmed prodict of the latter being the well known enu ile Cologue. The city has a very gaxi port on the Ithine, anal is the principal entrepot of the extensive and incrensing commarce between the Netherlands and the combtries inchaded within the German customs' mion. lintliens was born in Cologne in 15i7, and several of its churches are ornamented with his chofderurres.
Cologne was anciently called Oppidum Ubionum, from its being the ehieftown of the Ubii, a German tribe. A Roman colony was planted in it by Agrippina, the daughter of Germanicus, why was lum in it; hence it oltained the name of Ayrippina Cidowia, and latterly of Colonia and Colorne. (Theit. Amml., lit, xii. § 27; Cellarii Notit. Orlis Antiqui, i. p. 327.) In the midalle ares, Colugne was much more populons and wealthy than at prosent. It was for a lengthened neriod one of the nost important cities helonging to the Hanseatic League. It suffered much at different priods from the intolerance of its magistrates, by whom all Protestants were expelled from the city in 1618.

 all eovered with perpetun! shows, from umilst. which torrents of thate and liva have lrequently burst, mul desolated the surroniming combry. These two ranges afterwards unite, bit near 10 N. ugaln neparate, chelosing the lofty valley of l'nstos, bonnted by the still active volenmores of Aznlial mal Gambal, and the extinct one ot Chiles. Jleyond liastos, the Corrlilleriss consist of three rallges, the mont W., the clevation of which is generally less than $\delta, 000$ ft., follows the const of the Pacitic, tual terminates in the lathmas oil I'anama; the central range is intermosel hetween the villeys of the Cinien and Magialena rivers, and terminates near Mompox, between lat. $9^{\circ} \mathrm{mml} 10^{\circ} \mathrm{N} . ;$ and the thirl, being the mast E . and highest range, extends to the extremity of the Jarian promontory, in long. $6 \geq 0 \mathrm{~J}$, This last-mamed range divides the whters which flow into the Orinoes on its lis, from the Magdalena, Kulia, 'locuyo, \&e., and their atllents, on its W' side. Many of its summits reach above the limit of perpetual snow; and it has mumerous lower summits, called paramos, which rise to 111,010 or $12,0100 \mathrm{ft}$, alove the level of the sea, mad are constantly enveloped in danp and thick foge. The city of Bugoti, $8,100 \mathrm{ft}$. nlove the sen, is built on a talle-land formed by this monntain rance; as are the towns of Nirgua, Sau Felipe el Fuerte, larquesimeto, and Tociyo; lint these are at a much lower elevation than logrota, the mountains decreasing in height very considerably $N$. of Merida. The menn elevation of the Andes in Colombia is about $11,100 \mathrm{ft}$. their altitude is greatest near the equator. In Venemela, between the parallels of $3^{\circ}$ and $7^{\circ} \mathrm{S}$. lat., there is another monntain system, unconnected with the Andenn, from which it is separated by the Orinoco and the plains of Caraceas, Varinas, and those in
the E. parte of New Gramadn. Thia syatem hum lacell ralleel the Corrililern, or Sierra of D'arhma. It is lows a chain than a collection of krunithe

 ulpurids of 8 , ime fi, ulowe the level of the men.

Phana, - Colombin inchodes the momt northerly of the three great lamina of the S. Ameriean enio
 like the l'ampura of lluenos Ayres, comsinta off suvamaila or steppes devolid of harge trees. Theres,
 as an bumilless extent of verilure, bat lin thane of dromeht they nre a comilete desert. Ilumbolidr remarks, that ' there in momething awfint, bint mil mat rhamy, ill the mailiorm naperet of these steppers.' 'I know not,' he suys, 'whether the first sifhit of the Llmusa excites less matonimhment than that of the Aulles. The phatins of the W. and S. of Diurope presesit but a fieble binuge of these. All aroand un the phine sermed to asernil townter the sky mul thint vant mad profomal solltude nipeared lihe nu oecan coveral with sul-weeds.' 'T're dinef chatrasteristle of these steppes, like these of X. Anha, is the olbsolate wat of hills and ine gualitios. An milnterripted tint of $1 \times 0$ lengines extendes from the mentlis of the Orinare to Armure mind (Oxpilump and from tima Curlos to the savinnulis of the Cimpleth for 200 tengues. 'This resembinnce to the surfare of the sean striber the inaghation most powerfully where the plains are nltogether dentitute of palnitrees, nud where the momathins of the shore mad of the 0 rinowo ure so distant that they camot be seef. Oecoslomilly, however, fractured strith of sanilstome, or compact lithestone, stmid 4 or 5 ft . higher than the phain, mide extend fir three or four lentrues nloug it; nul comvex eminences, of a very trifling helght, sepurate the streams which flow to the eonat from those thint join the Orhoes. The phenomena of the miruye, and the apparlthons of harge lukes, with an uminhating surface, muy trequently be observed. These savimumis are witered liy the numerons stremms whelh form the Meth, the Apare, and thally the Orinoeo; and the periodical overllowings of which eonvert the whole conntry, during four months of the yenr, bato nu inland sen. The equally well-watered plains of Wicuador ure intersected lav mumermas large brnuches of the Amazom, nowl form a purt of the freat central basin of the conthent. (Humbuldt's P'ers. Narr.; 11all, p. 8; Mol. Trav., P1. 19-21, 22210-230.)
Rivers,-The chief are the Amazon, which, in the earlier part of its course, runs almont entirely through Ecuador, near its S. border; mad the Orimene, which, togrether with all its branches, is wholly included within the territories of Venezoela nond New Granuda. Besides thene, there are the Magidalema, Canen, Atrato, Zalia, Toenyo, and Guarapiche, whase waters go to the Caribbema Sea; the l'atia, Mira, Esmeralda, mad Gunyaquil rivers falling into the lowitie; the Yapura, Putumayo, Napo, l'iguena, l'astaga, Marona, Santiago, Huallara, \&e., afluents of the Amazon; the Giunviure, Metn, Arumea, Apure, with its numerons bramehes, Ventunri, Canra, mad Carony, which diseharge themselves into the Orianco; and the C'aymi, whieh pusses into the territory of British Guiana,

Lakes.- The most considerable is that of Marneaybo, which is rather a kind of inland fresh water sei, and commmicates with the gulf of the same name by a chamel about 2 lengues bromd and 8 long. (Sice Maracaybo.) The Iake of Valencia,

Peurl Fizheries，－Along the eonst many of the inhabitants subsist as fishermen，bartering the fish
they eatel for maize and other inland prowluce. There are three pearl tisheries; two on the shores of the Atlantic, amil one on those of the Pacitle. The flrst are situated on the const of tha islands Margarita, Cubugua, and Coelle, and at the month of the Rio Ihacha; in the lith century they were much celdirated, mal yiedled pearls to the value of half a million tholhirs mmmatly, The pearls of this conast are remurkable for their beautilial play of light, in which they are much superior to those of the East, 'The other lishery is at Pranama: all of them are now much neglected, and to not yield more thin 180,000 dollars a year. The Indians of Cariaco have a singular method of entching wildfowl, which may here be noticed: they leave calabashes continually floating on the water, that the birds may be aceustomed to the sight of them. - When they wish to cutch any of these wild fowl, they go into the water with their heads covered ench with a calabash, in which they make two holes for secing through. They thus swim towards the birds, throwing a handfil of maize on the wnter from time to time, the grains of which scatter on the surface. 'The birds approach to feed on the maize, and at that moment the swimmer seizes them by the feet, pulls them unler water, and wrings their neeks before they can make the least movement, or, by their noise, spreal an nlarm among the flock. . . ., Many lanve no other trule in the neighbouhood of large towns, and daily take multitules of these birls, which they sell at a low rate.' (Humboldt's l'ers, Narr., ii. 2if1, 276 ; l'resent State of Colon bin, $p \mathrm{p}$. 322,323 ; Hall's Colombin, $1 p .28,24$; Mol. Trav., xxvii. 30, 54 , 55, de.)

Munufuctures.-Such of these as are not merely lomestic are chiefly leather, hammocks, bnizes, blankets, coarse cloths of various kinds, hats, and salt ; but none of them is of any importance. The prineipal salt works are at Araya and Smian Martha. The whole process is ieft to muture, and consists simply in the washing of the muriatiferons soil by the rains, into shallow hasins, where the salt is foum inerusted, alter evapuration, in a state of great purity. The common pottery is rude, and made by Indian women only. At Caripe, oil is manufactured by the Indians, from the fat of young guachero birds; and on the Magdalena, the negroes stuff their pillows with the wool obtained from the fritit of the mahagua (bombaic). Such expedients often supply the place of better manufactures, all of which mast be procured from abroad, and are comparatively scarce and dear. (Mod. Trav.; Humboldt; Hall's Columbia, de.)
Trude.-The ports of La Guayrn, Rio del Hacha, Santa Martha, Cartagena, Chagres, Puerto-Cabello, Janama, nud Guayaquil are those mont frequented by foreign traders. The value of the imports and exports ot the three states of Colombia from and to the United Kingdom, in the years 1 k 6 l and 1862 , is shown in the subjoined state-ment:-

The internal trade of the Colombian states is of no great importance. The want of internal communication is a considerible disadvantage: throughont the whole combtry there is scarcely a ruad passable for wheel carriages; and every species
of commolity is convered on mules. The war: genernlly are mere tracks, formed by the treadid suceessive travellers, and even in what were for. merly termed royal roads, nll that has been llone is to cut down the trees. Bridges are few, anil execpt those of Valencin and Cupitange, convia of" only " few rough plauks, with branchess hai acrows; or of ropes, upon which a suappended baket is mude to ruil from one end to the other. In the more precipitons and dhangerons pases, where mules can seareely be used, it is censtomary fit travellers to be carried in chairs fastened to the backs of men, who obtuin a miserable livelihom by continunlly exposing themselves to risks, sueh as those which beset the chamois-hunter. (Sise Avies.)

Goverument is vexted, in each of the states, ins senute and a house of representatives, both comsisting of members electel by the cantonal de puties of the provinces, ir a provisional assembly hell once in funr years. an Colomlia, previous in its partition, the right of sulfrage in the cleetion of ileputies required the paroclial voter to bes Colombinim, above the age of 21 , the owner of prom perty worth 100 dollars, or exercising some trade or profession, and able to real and write (this lay qualilication to be peremptory after 1840). Tole a cantonal elector, it was repuisite to be a mative of the canton, possessed of property worth 500 iths. or an income of 300 dollars: to be a senator, it was necossary to have an income of 500 dollars, ort be of a learned profession. The executive powe was vested in a president and vice-prevident, the furmer of whom could not contimue in ollice longe than eight yeurs snceessively; and neither he, un any of the ministers, coula be members of the congress. With some variations, this goverument hai been adopted by the existing states. The pollt tical grovernment of each department is, by law vested in the hands of un intendente, appointed by the president, with the sauction of the comgres with anthority over the administration of justice police, tinance, and defence; but without the command of an armed military force. The provines are under the administration of governors, with powers similar to those of the intendente; the cantons and parisless have ench their own offices
The civil nad criminal coles are an ill-digeted collection of the laws of Castile and of the Indies royal ordinances and other Spanish decress, and colonial regulations; and their administration is very unfavourably spoken of. The julges wer clected by the congress, from lists given by : president. Trial by jury, and the liberty of the press, were amongst the first enaetments of tio Culombian congress.
Religion, the Roman Catholic, the ceremonix and festivals of which are celebrated with gnal splendour. The Inquisition was abolished in |x:l! but the elergy still possess considernble power, aud though general toleration is afforded to personse other creeds, they are not at liberty to periime their rites in public. The clergy are paid by the state : convents are still numerous, but diministing, and dissent from Catholicism is spreading. Many Indians have embraced Christianity.
The ranks of the different armies are filled wib Indians and mixed races, in a tolerable state d discipline. In addition to these, there is a militia consisting of the whole male population betreat 16 and 40 yearn of age. Consitlerable pains hare been taken by the states of Colombia to raise navy; but their maritime force is inconsiderable A marine sehool has, however, been established 4 Carthagena.
During the Spanish regime elementary eduastion was satly neglected, and all the more impar.

tant branches of useful knowledge professed at the miversities of the Carnccas, Bogrota, and Quito, were so taught as to be really worse than useless; and instend of expanting and enlightening the minul. served rather to imbine it with the grosisest prejutices, But considerable progress has since beil made townrils the establishment of a letter orier of things. Primnry schools were orlered to be established in every parish, by the comgress of 1821 ; Lancastrian selools exist in the prineipal towns, and the universities linve been remondelled. The Colombinm comgress npplied certain propery fummerly belonging to the elergy to the aid of public education; and the legislatures of the premeat repablics lave been ansions to carry mono affeet the system alopted by it. Several puhlie jumuala are established in dillerent purts of the country.

Architecture has male but little progress, and almost the only specimens worth notice are conthed to Buguta. I'uinting is successfully cultivated in that city and Quito, and music in Caraceas; but, fenerally speaking, the tine arts are in a very backwaril state. The besetting vice of the Colonilians is indolence, which retards all their social frugress: they are courteous, hospitable, and, when mimately known, friendly and corlial ; tempernte in their habits. anil grave in their deportment; but suspicions, reserved, slow, and imbned with much nutional pride. The manners, dress, habits, and amusements of those of European descent resemble those of their Spanish ancestors.

Ilistory.-Ecuador, and especially the valley of (), uito, contains many monnments of the sway of the Ineas. Venezuela was the first part of the new continent discovered by Columbus in $1 \cdot 1!8$. The Spaniarls found more difliculty in conquering this than any other part of their American turrituries: but, before the midule of the 16 th ecntury, buth Venezuela and New Giranala liad been erected into captaincies, governed by viceroys from spain. In 1808, after the invision of Spain by Napoleon, a spirit of insubordinution broke ont in these culonies; in 1811, their independence was declared; and, in 1819, Venezuela and New Granuda united into one republic, under the name of Co lombin. In 1822, the royalists in Eeuador were defeated by Gen. Sucre; Bolivar headed the rerolutionists elsewhero; and in 1823 the struggle anded with their complete independence. In $18: 29$, Yenezaela separated from the other states; rejuned them for a short period in 1830; but in Nov. 1831 separated anew; since which period Colombia has remained divided into the above three republics. But such is the state of inseeurity in which all these governments exist, that it is highly probable that, for the sake of gaming the necessury power to resist foreign aggression, they will, before long, be again consolidated into one united state of Colombia.
COLUMB (ST. MAJOR), a town and par. of Fugland, co. Cornwall, hund. Pyiler. Aren of par, 11,080 acres. Pop. of ditto, 2,879 in 1861 . The town is situated on an eminence, at the foot of which is a small river, 4 m . from the sea, and 1 mm , NE. Truro. It had formerly a communication with the sea by means of a canal, now fallen into disuse. It has a large old church, and two methodist chapels. Market-lay, Thursday. COLUMBIA, a distr. of the U. S. of America, lying between the states of Virginia and Maryland, on both sides the Potomae, about 120 m . from its mouth; length and brealth, 10 m . each; area, 100 sq . m. Pop. 75,080 in 1860 ; and 39,8:4 in 1830. Surface gently undulating; soil naturally thin, sandy, and sterile. Climate liealthy; nean temp, of the enp. about $55^{\circ}$ Fahr. The $\mathbf{F}^{5}$,
tomac traverses the distr, ehletly in a SF., direstion, receiving in its way throngh it a ributary from the li., by its jumetion with which a preninsuln is formed, on which the city of Wiashmgtom is built. At the eomalhence of the two rivers there is an excellent harbour and a navy-yard, to which ships of the largest tomage may aserimo. 'Tlos yord covers a space of 17 acres, mad in it are mande ill the anchors, cables, und blocks repuired for the service of the $\mathrm{J}, \mathrm{S}$. navy.
Washington is the cap. of the If. States, the seat of the gencral government, and the residenes: of the president and other prineipal oblieers of state. (Lie Wisumontos.) The other chicf towns are (ieorgetown and Alexandria; the lormer is separated from Winshington ly lionek C'repli, another ntlluent of the Dotomuc. Noxamdrials on the right bank of the river, 7 m . below Wiashington.
Considerable quantities of ileur and other domestic proluce are brought down the Piotomne, but neither the commereo nor slipping of the distr, are of great importance. Alexmadria mal Georgetown have tugether abont $1!1,000$ toms shipping. There are three colleges in the tistrict, all in active operation:- the Columbia Institute at Washington; the Roman Catholie miversity at Georgetown; and the theologieal seminary at Alexandria; emmected with which is a medical department, and a preparatory sehool. The district is umber the immediate forarmment of eongress. It was ceded to the U. States by Marylmind and Virginia in 1790 ; mind in 1801 it was cracten that he laws of these states shonld contime in force in the portions ceded by cach. Congress first met here in 1800.
Conumbia, a town of the U.S. of America, cap. S. Carolina, and seat of the state povermment, in an elevated phan near the centre of the state, near the Congaree river; 100 m . NNW. Charleston, and $68 \mathrm{~m} . N \mathrm{~N}$. . Nugusta, P'op, 7,05: in 18tis. The streets, which are 100 ft . wide, intersect each other mostly at riglit angles, and it has many good houses. It has a state-house, court-honse, fral, and several places of worship. The S. Carolina college, fonnted in this trivu in 180.4, has two large brick edifices, and possesses a philosophical apparatus, cabinet of minerals. and library of 10,000 vols. Here is also a theological seminary, established in 1849. Columbia was founded in 1787.

COLUMBIA RIVER, a large river of N. America, the principal in the Oregon territory, with an extremely tortuous course. It rises in the Rocky Monntains, in about the 51st deg. of N. lat., and the 116 th deg. of W. long. lts course is first NW. till abont the 58rd deg. lat. ; and then nearly $S$. for abont 245 mm , till its junotion with the Flatheal, or Clarke's river. It then pursmes a WSW. course, being precipitated over some very ligh falls, biil it reaches Fort Okaneran, in about $48^{\circ} \mathrm{N}$. lat. and $120^{\circ} \mathrm{W}$. long., when it Hlows S. to Fort Neperces, a distance of 150 m. , where it is joined by the Great suake river from the SE. After receiving the latter it turns to the W.; and pursuing that direction daring the remainder of its conrse, it fills into the Pacific Ocean, between Cape Disappointment on the $N$. and Point Adams on the S., in $46^{\circ} 18^{\prime}$ N. lat. and $124^{\circ} \mathrm{W}$. long. Its embouchure is 5 or $\mathbf{1} \mathrm{m}$. in width. It has not, where deepest, more than from $4 \frac{1}{2}$ to 5 fithoms over its bar, on which the sea breaks with considerable violence, making its ingress and egress, to stuling vessels, a work always of considerable ilifliculty, and practieable only, it is said, int certain seasons. Vessels of 4100 tons may ascend the river to Fort Vaneonver,
about 100 m . (dir. dist.) from its mouth; and sloops may ancend it for about 80 milles farther. At the Long Narrows, by which the navigation is first interrupted, the river is precipltated over an uppor and a lower fall resuectively 20 ans 8 ft. in heipht.

COLDMBO, a sea-port town of Ceylon, the molern cap. of the island, and seat of government, on the W. const, townrdes its S. extremity; lat. $6^{\circ} 6 \overline{0}^{\prime}$ N., long. $79^{\circ} 40^{\prime} \mathrm{B} . \mathrm{B}$ : pop, estimated at G0,000. The town has a fort, defeuled by walls flanked with several bastions, and is built upon a peninsula projecting into the sea, having on the land side a lresh water lake of some size. It centtains the residences of the governor and most of the Ifritish inhabitants. The pettah, or inuer town, a few humdred yarils l:. from the fort, has a mixed pop. of Ihteli, Portuguese, and their descembants. The nutive Ceylonese reshle chictly in the suburbs. The town within the walls is regularly laid ont, and built in the European style; houses, chiclly of stone, olny, and lime, are seldom more thum a story in licight, hut each has in front a large woolen verandah. The Euglish have substituted Venctian blinds in their houses for the glass wiudows used by the Duteh. The fort eontains the govermment honse, a handsome building of two stories, the linglish church, courthouse, library, museum, several botels, and a lighthouse $97^{\circ} \mathrm{ft}^{\circ}$. high. There are also in Columbo a Dutch aud a J'orturuese church, several Protestnat dissenting chajels, with missiouary and other schools. 'To the N. of the fort is n small semicirenlar bay, on which a wooden quay has been built, but the depth of water is not sutheient to almit of vessels above 100 tons burden coming alongside. The bay is sheltered and defended by a projecting rock on which two batteries are crectel; but from this rock a bar of slifting sand stretehes neross the month of the bay, within which the larger class of ships can venture only doring the fine weatior of the safe seasom. Besides its smull bay, Columbo has an open roadstead, which, however, is safe only during the NE. monsomn: were the town more favoured in this respect, it would be the most eligible port in the island, since it is placed in the centre of the cinnamon conntry, is the depot for nearly all the forcign trade of the island, and has a somewhat extensive traflic by means of internal navigation. Columbo is ill supplied with water. Its climate is lealthy; thouglr damp and destructive of books, clothing, \&e. The Portugnese crected a fort here in the carly part of the 16th century, of which the Duteh dispessessed them in 1656 ; and the town was taken from the latter by the English in 1796, which change of masters was afterwards ratified by the peace of Amiens.

COLUMBUS, a city of the U. States, cap. Obio, of which it is nearly in the centre, on the banks of the Sicioto, immediately above the point where it is joined by the Whetstone river, 100 m . NE. Cincimati; lat. $39^{\circ} 47^{\prime}$ N., long. $83^{\circ} 3^{\prime}$ W. Pop. 18,500 in 1860 . The town was founded so late as 1812, the land on which it stands having previously been a wilderness. It is well situnted on land rising gradually from the river; the streets, which are brond and straight, cross eneh other at right angles, being for the most part lined with suibstantial houses. It has a square which comprises 10 acres; and a convenient wharf extends along the margin of the river. But the navigation of the latter (an alluent of the Ohio) being liable to interruption, the city is united by a canal to the Ohio eanal, which opens an easy communication with the lakes on the one land, and the Mississippi on the other: and its trade is farther
promoted by its being on the line of railway fom
Indinuopolis to Zanesville. $A$ bridge nerose th river unites the city with the suburb of Frunk. linton. The publle buildings comprise a state honse, eommanding a line view of the surromming conntry; an edilice for the accommo. dation of the oflleers of the state; $a$ state penitentiary; a lunatic asylum, and asylums for the bilind, and for deaf and dumb pers. sons; a Lutherin theological seminary, and me. merons choreles. Ifere, as in the other tomms of the U. Stutes, there is nmple provision for the education of the young in elementary and superlan sclamols. The town has factories of various, sors, with tanneries, breweries, distilleries, and jrinting. otlices.
COMBOOCONUM, an iul. town of Ilindostan, prov. Carnatic, alistr. 'anjore, 20 m . Nb. that city; Pop. extimated at 40,000 . It was anciently the cup, of the Cloolas, me of the most ancient Ifinues dyuastion in the S. of India of which any traces have been discovered, and who gave their name to the whole const of Cholamundul or Coromandeh Its ancient splenclour is evinced by its pagowas and tanks. It is ehictly inhabited by lrulunins,

COMILLAH, an inl, town of IEindostnn, prut: lengal, distr. Tipperah, of which it is the eap., on the S. bank of an afluent of the lirahmaputa river, 50 m . SF.. Dacca. The romils round it have been much improved by the habour of convicts. Six m. W. of Comillah are the remnins of naur brick buildings, and of a fort 200 ft . square, the residence of the former rajalis of 'lipjerah.
COMO (ClTY OF) (an. Comum), a city of Northern Italy, cap. of the province of nnme name, at the SW. extremity of the Lake of Como, 23 m . NNW. Milan, with which it is comected by railway. Pop. 20,014 in 1861 . The eity is encirele hy an amphitheatre of hills, one of which to the $s$ is surmonnted by the old fort of laradello. It is defeuded by double walls, flanked with massire towers, and lias four gates. Its interior is crowded with dark strects, munerous old eluurches, and dis. mantled dwellings of the cittadini. The sulorts however, in which more than half the pop, resides, contain many good strects and buildings; Brow de Vico, the chicf, stretches along the shore of the lake for a considerable distance, and is adorned with the Odescalchi and Iovian palaces, berids numerous other handsome editices. Como las it: churches, the prineipal of which, the cathedral commencel in 1396 and finished in 1513 , is an imposing building, notwithstanding its incongruous character. It is of white marble, the front is of light and not inelegant Gothic, the nave is supported by Gothie arches, the eloir and transeps are adorned with composite pillars, and a dome rises over the centre. In front of the cathedral is a statue of I liny the younger, a native of Com, with a bas-relief allnding to his writings, and an inscription to his honour on each side the grand entrance. In one of the squares a monument i erected in honour of Volta, also a native of this city. Como possesses a lyceum erected by the French, with some time philosophienl apparatus and a lihrary of $15,000 \mathrm{vols}$., an ceclesiastical cut lege, 3 gymuasia, 2 female seminaries, a hospital workhonse, orphan asylum, and many other chs: ritable institutions, a cabinet of nat. history, and botanic garden, a new theatre, and an amphis. theatre. Como is a bishopric, and the seat of the provincial council, and of civil, eriminal, and commercial tribumals. At one period it, was the principal seat of the Inquisition. It has mamufacturs of woollen eloths, silks, cot ton yarn, and soap, fir which latter artiele it is celebrated. Its trade, which is fucilitated by a port on the lake, is chietty
with the many, to factured agess, liee as hawk and they verulors

The artlsans of Como have, in all ages, heen noted for their disposition to emigrate as hawkers of goobls, or in seareli of employment, and they may be met with all over burope, as vembon of telescopes, spectacles, aud barometers. The the climate and situation of Como attract many visitors. Como is sail to have heen fonmed by the Orobii, the carliest inhab, of this district. It was taken by the liomans $1!6$ R.c.; and owed its principal importance undor them to a colony of tireeks planted in it by Julius Gusar, when it tork the nume of Nocumeomum. Near it is the Villn d'liste, once the property nnd residence of Queen (aroline of Eugraud. In the middle ages it belonged to the Ghibelline party, and was the rival of Milan. Uuder the French it was the cap. of the dép, of the Lario.
COMO (LAKに OF), (It. Lago di Como, an. Larius Lacus), a famous lake of N. Italy, which, in modern times, has derived its name from the above eity. 'lhis llue sheet of water is very irregularly shaped, being divided by the triangular district which has Bellagio at its apex, into three great arnis, one of which stretches from lhellagio Sil: to Como, another N. to liva and Novate, near the mouth of the Maria river, ami a third SE. to Leceo, anil the outlet of the Aldn. These divisions of the lake are sometimes called from the clicf towus on their banks, the lakes of Como, lellano, and lecco. Its greatent length, following its wintings, may be abont 45 m . ; but it is 110 where above 4 m . in width. The depth is snid to vary from 40 to 600 ft . It receives the waters of the Cpper Adda, and severnl other rivers, but its only ontlet is by the Lower Alda. Owing to the great height of the surrounding mountains, which expose it to sudden squalls, and the influence of eurrents, its navigation is rather dangerous to sailing yessels; but steamers traverse it in all clirections with ease and expedition. The climate roma the lake is mild and delightful ; and, except in its more N. part, near the mouth of the Upper Aida, its banks are remarkably healthy. Throughont its whole extent its banks are forined of precipitous monntains, from 2,000 to $3,000 \mathrm{ft}$. high; in some places overhanging the water, and in others partially elothed with woon, and studded with hamlets, eottages, villas, chapels, and convents. The most heantiful point of view is at Bellagio. The npper waters are there seen winding up to the very foot of the higher clain of the Alps, and terminating within a short distance of the terrific pass of the Splugen; the loftier hills that border the lake of Lecco rise on one side, and on the other the wider expanse of the lower lake retires behind the beautifnl foreground, rocks, and hanging woods that form the point of Bellagio.
The younger Pling hal several seats on the border of this lake. The principal of these stood, one upon a height commaniling a view of the lake, and the other so close to its edge as to admit of fishing lines being thrown into the water from the bed-rooms. (Epist., lib. ix. § 7.) Nany attempts, but very unsnecessfin ones, have been made to identify the site of these villas. The Villa Pliwiana, 5 m. NE. from Como, is, from its having near it an intermittent fountain, usually supposed to occupy the site of one of these villas. But Pliny does not say that the intermitting fountain which he describes was on his estate, or near his sent (iv. s. 30 ) ; and there is no real ground for supposing that the Villa Pliniana, which was built near the middle of the 16 th century, has anything in common with either of the villas described by Pliny.
COMORIN (CAPE), a prowontory forming the
S. extremity of Ilindostan, in 'Travancore, 188 m NW. Colmmo, in Ceylon; lnt. $8^{\circ} 1^{\prime}$ N., long. $77^{\circ}$ $4 y^{\prime} 30^{\prime \prime} \mathrm{l}$. Its approachen are beset with rocks. Notwithatanding its remarkable position, it never attracted the leant attention from the lliniongeographers; and, what is more siugular, modern nuthorities differ considerably as to its lat. The above is that given by Heywood.

COMORN (Ilungar. Komurom), a fortitied town of Jungary, in the NW. part of that kiug., 1 ap. co. of the same hame, on a point of land formed by the conflume of the Wang with the Dumbe; di m . WNW. Buda, on the railwny from liulal'esth to V'imma. lop. 12,175 in $1 \times 58$, exel, of garrinon. T'he citadel, built by Mathins Corvinus, in the 15 th century, is liede to be improguable, and its works have been so much strengthened during the present century, that it is now one of the strongest fortressen in limrope. The town is irregularly built, and the streets are narrow hand dark. It contains 4 Catholic and 2 1'rotestant ehurches, a Greek church, nud a symugnue, a eominty hall, town eomeil home, many large magnaines nul harracks, a lospital, Cath. and l'rut. high schools, and an assurance-otlice for vessels navigating the Danube, which river is here crossell hy both a flying bridge and a brialge of bonte. It has mamufactures of woollen cloths, and considerable trade in coms, wine, honey, thsh, nut timber, ly the Dambe. There are numerous vincyards in its neighbonrhoorl.
COMDIEGNE, a town of France, dép, Gise, eap. arromil., on the Oise, which is here crossed hy a hundsome bridge of three arches; $38 \mathrm{~m} .12 . \mathrm{l} y \mathrm{y}$. Beauvais, on the railway from Paris to St. Quentin. Pop. 12,137 in 1861. The town is ill laid out and ill built, lunt contains many puhlic aud private edifices worthy of notice; ainongst them the town-hall, a curions Gothic building, and several churches. But the glory of Compiegne is its royal palace, one of the most remarkable in France for extent and mngniticence. A palace was originally built here by the Merovingian kings; but the present edifice was commenced under Louis XV., finished by his successor, and renovated by Napoleon. It has a noble front towards the forest of Compiegue, 623 ft . in length; all the apartments are on a single floor, communicating with each other. The peristyles, salles des gardes, bull-room, theatre, and a superb gallery, are especially deserving of admiration. The gardens surrounding this palace are much more extensive than those of the 'ruileries, which they rival in beauty. Compiegne contains a public library with 28,000 vols., and a thentre. It was formerly fortitied by walls flanked with towers, and entered by seven gates. Charles the laild established an abbey here, and gave the town the name of Carlopolis, after which it rose considerably in importance, and beame the seat of many national councils and assemblies, as well us the burial-place of several of the French kings. Jhit. in proportion as the consequence of St. Denis inerensed under the kings of the third race, that of Compiegne declined. It was at the siege of this place, in 1430 , that the famous heroine Joan of Arc fell, through the mean jealousy of the governor, into the power of the English.

COMI'OSTLELLA, an inl. town of Mexico, state Guadalanara, $\mathbf{3 6} \mathrm{m}$. from the Pacific Oceam, and 100 m. W. by S. Guadalaxara. lu its ricinity there are some silver mines; and to the NW. of it, tobacco of a superior quality was formerly grown.

CONCAN, a marrow tract of country, prov. Bombay, comprising a portion of the ancient Hindoo subiliv. of Kankam, whence its nume. It extends both N. and S . of that city, along the

Malabar coast, hetween lat. $15^{\circ} 50^{\prime}$ and $20^{\circ} 15^{\prime} \mathrm{N}$., und long. $72^{\circ}$ 410' and $73^{\circ}$ bit E., having N. the collectorate of Surat, and a detueled purtion of the Guirowar's dom, ; E. the distr. Ahmedungerr und I'ownh and the Sut turah ilow. ; from which it is separnted by the $W$. Ghants; s, a prortion of the Sattarah territory, and W. the ocean. Lengith N. to S. 310 m . ; breath varying to umarly 60 m . The territory is commonly divided into Southern and Northern Comem, the former with an area of $18,2 \pi 1)$ and the latter of 5,500 sif. m . The general usperet, thugh there ure many fertile truets, is that of th eougreries of steep mad rocky monntails, int termixad with a maltitude of ravines mad chasms, nudinterxpersed with jungle. It formerly nhomuded in fortitied heights, diflleult of aceess, most of which luve been dismuntled by the British since their compuest of the comatry in 1819. The const has on very straight general ontline, hut is bruken by a great monber of shallow harbours, which, previously to the British rule, were the resort of mamerons pirates. The W. Ghauts, which bonal the Conean to the l.,. rise to the elevation of from 2,000 to $1,000 \mathrm{ft}$., with an abrugt face towards the W. The passes over them are impracticable for wheclenl carringes. They are mostly composed of primitive trap-rosks; hut their summits are covered with a thick ernst of laterite or terrugimoms claystome, of which material much of the surface of the Conean is composiel. In the S. shelly samelstone is met with. There are muny monutnin streams, hat none deserving the name of a river. Conean proftices all the graius of Mahahar, but is chiefty celebrated for its luemp and cocon-mats, Oil grains, the sugar-cme, turmerie, ginger, de., are grown in the $S$. The lame in $s$. Conean is ansessed on the ryotwar, and in the N . on the village system. In some instances ill-cultivated tracts of humd are allotted for a term of years at a low rent to a speculator for the purpose of improvement. A large proportion of the inlab, are Hindoos, and Sattees (burnings of widows) are said to buve been more frequent here than in any other part of India, llengal excepted. Many Iheels mad Cooties inhalit the Ghaints and N. Conean. $A$ large portion of the Bombay native army was formerly, and to some extent is still, recruited from these distriets. The Augria family once possessed nearly the whole of Conenn; it subsequently belonged to the Peishwa, on whose fall it cane into the possersion of the British.

CONCLiPCLON, a city ol Chili, in the $S$. part of the liepublic, cap. prov. of same name, on the right bimk of the lhiobio, 8 m . E. from its mouth, nod about 270 m . SSW. Santingo; lat. $36^{\circ} 43^{\prime} 25^{\prime \prime}$ S., long. $73^{\circ} 5^{\prime} 33^{\prime \prime}$ W. Listimated pop. 12,000. It stmeds upon a low neck of land between the Biobio and the SLE angle of the Bay of Concepçion, and occupies a surfice of about a sq. mile. Streets intersect cach other at right angles; houses mustly only one story in height in consequence of the great frequency of earthquakes, and many are luilt entirely of unbaked bricks. Conceppecion was firmerly a flourishing town, containing severnl frool buildings, and 20,000 inhab.: and. previonsly to 1833 , it possessed a massive eathedral, but this :und the greater part of the eity weee in that year tutally destroyed by an earthruake. It is the residence of a bishop and the military governor of the prov. Manufactures and trade are said to be at present of little importance.

The bay of Concepicion is a large square inlet, open on the $N$, while the $S$. nud $W$. sides are formed ly a high promontory jutting ont from the main land, and bending into the shape of an elbow, eath side being 3 or 4 leagnes long. The diarater of the space thus enclosed is nbont 5 m . The
mouth is diyided by the island Cuirinqulan, whirh lies across it, into' 2 channels; the N. entrance has 30 fathoms water, diminisling grudually to l? futhoms in the middle of the liny; the $S$. entrunce has $\mathbf{3 0}$ futhoms int its commenerment, nad II futhoms at ity entrance into the 'ralcaluano anchoruge. There are 8 harlours; that of Taleahumus, elose to the small fortilled town of the same mame, under the promontory in the silw; augle, is the must secure from winds, and that in which shipes generally lie. Full 12 futhoms water are foumd in all purts of the lay within $\frac{3}{3} \mathrm{~m}$. of the bench; the leoliting fromul ls excellent, and the button free from rocks.
Conerpgion was fonmed in 1763, after the destruction of the old sity of I'enco by inmondation, during an earthquake.
CONCORI, u town of the U. S. of Amerien, cap. New llamplishire, and seat of the state govemment, eo. Rockinghum, out the Merrimac, 13 in. NSW. Boston. Pop, 0,890 in 18 siou. The town consists chi fy of two streets, extenting for alonve 2 m , aloug the W . side of the river, whielh is here crossed by two lorilges. It containe the statehurse, a handsome stone building, and the state prism. The courts were rumoved to Coneord from lortsinomth in 1823. It is a town of considerable trade, and has a water commuication with Boston by means of the Merrimac and Midtllesex canal.
CONDE', a town of Frnuce, dep. du Nord, eap. eant., at the confluence of the Hagne with the Liseant (Scleldt), $\sum_{i=1 \mathrm{~m} .}$ SE. Lille, on the railway from Lille to Vilenciennes. Pop, 5,804 in 186i. The town is strongly fortified ly works constructed by Vauban : is well built, and contains a handsome town-hall nul a tine arsenul. A camal, 15 m , in length, connects Conule with Mons, in the Netherlands. It was tuken by Lonis XI. in 1478.
CONDE' SUR NoliREAU, $n$ town of France, dép. Calvados, eap. eant., on the road between Caen and Domfront, 23 m . SSW, the fomer, l'op. 7,234 in 1861. The luildings are generally heavy ; the town contains, however, two olit clurches worthy of notice. It formerly possessed a castle with a lurge tower, but little now remius of that edifice. It has some commercial netivity, and fabrics of woollen, cotton, and linen articles, and entlery.
CONDOM. a town of France, dép. Gers, cap. nrronul, om $n$ lieight the foot of which is washel ly the llnise, whith is here crossed by two bridges, 23 m . NW. by N. Auch. Pop. 8,070 in 18 sil. The town is ill-built, latt improving; is surrounded by boulevards planted with trees, and has numerous vilhs in its environs. In its centre is a large oppa space, in which is the parish chureh, formerly the cathedral, which, lespite the mutilations it has undergone, is still a maguificent Gothic edifice. l'ens, corks, earthenware, brandy, woollen yan, and leather are proluced here ; nnil there is a brisk trade in corn, flour, mud wines. It has a tribunal of original jurisdietion and a communal college It owes its origin to a monnstery, which existed in the 9 th century, but was of n much earlier date. It was formerly the seat of a bishopric, once tifled by Bossuct.
CONDRIEU, a town of France, dép. Khone, at the S . extremity of which it is situated, eap cant., on the Rhone, 21 m . S. Lyyens. Pop. $2,56 \mathrm{jbi}$ in 1861. The town has nequired some celebrity for excellent white wines, the original plants priducing which were, it is said, brought thither from Dalnntia by order of the emperor Probss.

and North Weatern and North Stalfordwhire rallway. l'op. $12,34 \mathrm{in} 1861$. The town stands in a romarkably healthy sltuation, on the lane, in a depp valley borilering on Stationdsh. 'The principal nareet is upwarifs of a mile in length, paved, aud lighted with gas: it contains many ancient bonses of timber framing and plaster; int the $W$. fold are many detached mansions, surrounded by pardens and shrubseries, and chietly oceupied by the more opolent hanufncturers. It has an episcopal chapel, in the patroninge of the corporation: a Cutholie and several lare illssenting chapels; a graminar-schowi, nominally free for the sons of burgesses; an infint school, established in 1835; several large Numiay-schools ; and many charitable institutions anil bequests, the latter chiefly hede in trast by the eorporation ; a town-hall ; and public assembly-rooms, built in $1 \times 22$, contignons to which is a modern market-pluce. Sill is the staple manufacture of the town; the silk-mills bring mostly erected nlong the bunks of the river. The trade comsists chiefly in the throwing of raw silk, the spiniting of waste ditto, the manufacture of thrown silk into plain ribands by power looms, of which there are about 25.4 in the town, and the weaving of ribands and bromi cloths loy handlunns. There are also cotton spinning finctories, and a few tumeries and leather-manufnetories. Certain lands reserved nuder an enclosure act are leed in trust for the bencfit of the poor. The bor. is divided into 3 wards, and governed by 6 aldernen and 18 counsellors.
CONGO, otherwise LOWER or S. GUINEA, $n$ conntry in SW. Africa, to whleh various bonmaries hase heen assigned by the olil and more recent travellers. The Portugnese, who diseovered it in $148^{\circ}$, included in Congo all the coast of W. Alrien from Cape Lopez Gonsalvo (Loango), in lat. $0^{\circ} 37^{\prime}$ S., long. $803 \mathrm{~s}^{\prime}$ Ji, to Cape Negro, in lat. $15^{\circ} 50^{\prime}$ S., loug. $11^{\circ} 55^{\prime} \mathbf{J .}$; for they formd the whole of that tract inlabited by negro tribes, resembling anch other in every respect, mul snlject to one paramount chief, ealled Mani-Congo (Soverelgn of Congo) ; but in process of time this empire became dismembered; inferior chiefs threw off their allefiance and erected separate kingdoms, which are at present known as Angola (a name now more frequently applied to the district over which all these kingloms extend), Loango, Benguela, and lastly Congo Proper.
The bonndaries of Congo Proper are at present markel N. by the river Congo or Zaire, which at abont lat. $6^{\circ} 5^{\prime}$ separates it from Loango; S. by the river Dindo, in lat. $8^{\circ} 20^{\prime}$ S., dividing it from Angola; W. the Congoese coast is washed by the S. Atlantic ocean, while to the E. it has the unknown countries of Fugeno and Matamba, the Mountains of the Sun, \&e. According to the inrestigations of Rittor, Congo consists of two distinct regions: that next to the sen, or the littoral, is low nud flat, is traversed by many streams, and abounds in sandy deserts, but is elsewhere very fertile. The climate in this region is exceedingly unfavourable; and pestileutial emanations, and swarms of noxious animals, expose the lives of the inhab. to perpetual danger. The other region consists of the terraces, or acclivities, ascending from the plain to the ligh table-land in the intefior. This is by far the tinest part of the comntry, aind the richest and most populous. The river /aire, which descends from the interior to the caast, has its great cataracts in passing through this region.

This river is a most conspieuous olject in the topugraphy of Congo: it is a magnificent stream, particularly towards its embouchmre : it overtlows during the rainy season, and fertilises the sur-
ronnting comintry; but thene rimings take place also in the sly season, clevating the current -ft ., -inereased to 12 ft . by the rinins. It is excendingly leep; Massey's sonnding-machino lonving indicuted 118 fathoms, and yet the lend hail not tonched the lottom. In the upuer parte, the enrrent varies in strength from $2 \frac{1}{2}$ to 5 m . an hour, but is suticiently strong in the channel to prevent a transport entering the river withont the aid of a powerful sea-breeze. At alout 1.10 m , from its month, the Zaire narrows to from 3100 to 500 y y/s. fur about 10 m. ; its bnnks bristling with precipitons masses of slate, which sometimes intereept the stream, and form rapids and catarnets, calleal ly the intives yellulu. Hevond these cragey reglons, the Zaire expands in breadth to 2,8 , and even to 4 m ; and wenr the place where Capitain Tuckey was compellenl to abanion his journey, the width and majestie appearanco of the river, the verilure of the lami, which was here well peophend, eombined to render the wecono ugreeatile in the highest degree. ('I'uekey's Expedition, pp, 3:37$34 x$; Journ. Koyal (Geog. Soe., iii, 220.)

The lanks of the Zairr, from its mouth to Embomma (about 6t m.), are elothed with a most exuberant vegetation, presenting to the eye a contimed forest of tall und majestic trees, clothed with foliage of never-fuling verdure.
The supposed ilentity of the Congo with the Niger was long a question aritated among gengraphers; and its lecision was one of the objects of Thekey's experlition. Ihis question hav been, as every one knows, net at. rest by the Messrs. Lamer. But it is sutheiently clear from the information colleeted by Tuekey, that the Zaire, it no great distanco from the point to which he had aseended, divides into two grent arms, the most $\mathbf{N}$. of which has its source in a lake or marsh.

The uatura? productions of Congo lave been atmirably arranged by I'rofessor Smith, a member of 'Tuckey's expedition (who unhappily lost his life in the course of it), and Mr. Brown. Large trees are only fomil in the valleys, or thinly sprinkled over the sides and summite of the hills, and eonsist for the most part of the Adinsonia, Bombax pentandrum, Anthocleista, Musanga (native term, but allied to Cecropia), Dilais guiniensis, Ruphia vinifera, and Pundunus cuudelubrum. Intermixed with these, on the alhurial banks of the Quorra, large patches of the ligyptian papyrus form a granil feature in the vegetation. The edible productions are maize, casnaya, sweet and bitter, two kinds of pulse, the Cytisus cajan, a species of Phuseolus, and groumd nuts (Alachis hyporaar). The common yam, besides another species of Dioscoror, so bitter as to require four days boiling before it be eatable, with the sugar-cane, eapsicum, and tobacco, are alimentary plants of secondary importmace. The most valuable fruits are plantains, papaws, limes, oranges, pine-npples, pumpkins, tamarinds, and a fruit about the size of a small plum, called safu. The plant, however, of most inportance to the natives is the oil palm (Ela is guiniensis), from which is extracted the best palm wine; this and two other species of palm (Raphia vinifera and a $H_{y p} h a a$ ) are to the Congoese what the cocoa-tree is to many of the Asiatic islanders. The indigenous fruits are the Auona senegalensis, Sarcocephalus, a species of cream-fruit, Chrysobalamus, lcaco, a specios of Nimeniu, and another of Antidesina. (I'rofessor Smith's Journal in 'Tuckey's work, with remarks thereon by Mr. Brown, passim; Quarterly Heview, xviii. 350, 35L.)

The animals appear to be those chiefly which are foume in every part of this great continent ; lions, leopards, elephants, bnffaloes, antelopes, wild hogs, porcupines, hares, and monkeys. The river abounds
with good fish, and also with those huge monsters the hipponotnmus and crocodile. Domestic animuls are few nul searee; those mostly met with are hogss, Louts, fowls, Miseovy ducks, amed pigeons, and a few sheep, generally sjotted with linir instead of wosl. The natives ent these animals in in manner quite ehnracteristic of their rooted lnziness. They remove neither skin, fenthers, nor hair; and senreely warming then ly the fire, tear the ment in pieces with their teeth. (Dr. Lench and Mr. Cronel, in Appentix to Tuckey's work; Quarterly Review, xviii. 351. )

Goverament and Population.-If we may depend on the truditions of the people, who have neither aunals nor history, Congo was formerly a powerfin empire under a single sovereign, or ruther absolnte despot. Bet it is evident, from the accomints of the early travellers, little as they are, in muny respects, to he depended on, that, when first visited hy linropeans, the groverument of Congo did not diflier muterially in its form from what we lholl it at the present day; and that it consisted of a sort of comfederncy of small states under a principal sovereign. (1'revost, llistrire Générale des Voyages, v. 1-7.) It would appenr, however, to be pretty eertain that the power of the superior monarch has materinlly deelined during the last 200 years. At all events, Congo is uow split into in infinite number of pettystate 3 or ehcuonships, each governed by a chemou or chicf. These clieftainships would, in Eurple, he said to be lleff, held noder a principal sovereign, called lindy or blindy $N^{\prime}$ Congo, residing at lanza Congo. But it woull seem that most of these chiefs affect a nearly total independence; nad being all despots in their own himited spheres, and frequently at war with each other, and with the principal sovereign, the country is uniformly nlmost in a state of the mont frightiful auarchy. At the death of a cherom, it is not his son, but his brother or materual nucle that succeeds him.
The mhat. nre said to he a mixed race; but the Portuguese nerer visited the country in such numbers as to produce any impression on the physical charneter of the people; and the Congoese are certminly one of the least favoured negro varieties. Speaking generally, they seem to be stmak in the lowest state of degradation. They are incorrigibly indolent; have little or no clothing; and though they raise Indiun corn, ugriculture is in the lowest state, and they frequently suffer the extremity of faunine. Their religion is the grossest species of feticism. T'The Portuguese having establishel missions in different purts of the country, the natives sometimes exlibit in their religion an olious mixture of Cliristianity and idolatry. They are prone to all sorts of excesses and debauchery. The women are degraded to the condition of beasts of burden; and prostitution to strungers is considered as a necessary part of hospitality. Still, however, they are not wholly destitute of gool qualities; and are said to be sincere, hospitable, and compassionate. Having been long a principnl seat of the slave trade, a considerable part of the disorders that prevail in the country are with much probability ascribed to the ensirmities growing out of that detestable trathic, This is said to isolate one petty state from aiiother, and to occasion perpetual wars; the slaves being mostly prisoners taken in battle, or kidnapped on the public ronds. But, admitting the influence of these canses, still we apprehend that the intelleetual inferiority of the negro race is at bottom the real cause of the degraded condition of Congo, and of all the other negro states. The Congoese are said frequently to decapitate their prisoners, and burn their bodies; and if such barbarity be practised when the prisoners may be sold, the presumption would seem
to le that it would hecome mueh more prevalouis were the tralle put an end to. (See 'Tnekes, passim ; and Bitter's Geography of Africa, Frend transhathon, i. 873-387.)
The comutry hus been represented as very pmppo lous, and as studded with towns and villation swarming with lihab, Carli, one of the carly missionaries, gravely reports that a king of Cony marehed ayninst the Portuguese at the hend of an army of 900,100 men. (irevost, uhisupriu.) lius it is evident that a colutry in the state we have dessaribel cannot be thickly peopled; and, in point of fact, 'Tuckey states that the most considecrable humza, or cap., of a petty state that he visited dild not contain more than 100 huts and $6(x)$ perwons, In Eimbornma he forund 60 huts, with b00 hinub,: and at Inga (0) honses, in which not more that 300 persous resited. It is truc that his olluercrations in the interior were not very extended; and he admits that the upper banks of the Zaire (where his operntions unhappily ented) were considerabiy mure pepulous than those towards the const; luit still it is abnudantly certain that the aceonuts of the extraordinary pop, of the country have no better foumdation than the imarination of the writers. According to the statements of the misimaries, the cap., of the country, which they divided into six provinces, was buiilt on a momb. tain about 150 m , from the sea, and was calledly them St. Salvador. They speak in the most extravagant terms of the beauty and salubrity of the situation.
CONGOON, a sea-port town of Persia, pros: Fars, on the l'ersian Gulf, 130 m. S. by E. Schirn, Pop. from 6,000 to 7,000. It has an excellent roulstead, where a frigate may ride in safety in the most tempestuous weather, and good water and firewood may be procured in abundance. (Killneir's I'ersian Empire, p. 81.)
CONI, or CUNEO, a town of N. Italy, cap. dis. and prov., on a hill at the confluence of the Stum and Gesso, $45 \mathrm{~m} . \mathrm{S}$. by W. Turin, with which it is comected by railway. Pop. 22,510 in 1861 . This was formerly a strong fortress, and sustained without capture various sieges, till being delivered up to the French they dismantled it in 1801. It is still, however, surrounded by a wall, with two gates; it has a eathedral, three other churches, royal college, hospital, workhonse, and some putlie baths. Its principal street is wide and hamd. some, and is lined throughout with porticoes: the other streets are, in fact, mere lanes. Comi is the sent of a court of primary jurisdietion and a bishopric, and the residence of the inteudente and military commandant of the div. It has some silk fabrics, and carries on a considerable trade, being a sort of entrepôt to Turin and Nice.

is fertile, contains many sulstantial tanlia, and appenm in a prosporoms state.
CONSAU(iH'S, ome of the four provs, into which Ireland is divided, on Its W. const, contanining the foo, of' Galway, Lecitrlm, Mayo, Roscommon, and Nligo, (See Inki.aNo.)
CONSLC'ICL'T, one of the smallest of the It. States, in the N. purt of the Union, between lat. $41^{\circ} 5 x^{\prime}$ and $42^{\circ} 2^{\prime}$ N., and longr. $71^{\circ} 53^{\prime}$ und
 thand, W. New York, mul S. looug Island Somud; bugiti, li. to $W$., $9 t$ m.; average brendils, about
 The state ranks thiri lin the Union as to density of pop, having 98 individuals to the sq. $m$. Surface generally umbluting. A chain of monatains of inconsiderable helght runs N. and $\mathrm{S}_{\mathrm{o}}$ throngh the W. part of the etate. The principal river is the Connecticnt: it rises in New Hampshire, and having passed throurh Massachusetts, intersects this state nearly in its eentre; and then bending to the Li., falls into Lomg Island Somind, a little helow Newhaven, alter a conse of 410 m . 2 o 0 of which have been made navigable by menns of locks and eanals. Along the const aro severnl excellent harhours; the best are those of New lamion and Newhaven. Climate very variable: an extreme degree of hent and colif are experienced at different suasons; but the sky is usually serene, and the eountry healthy. There are some sterile districts; but the soil is for the most part fertile, aud (for America) well eultivated. Europenn grains, Indimn eorn, flax, hemp, and culinary vegetables, are ruised in abundance; orclurds are numerons, and apples so plentilul that cider is a considerable product. The pasture-lands are grool; large heris of cattle are reared, and butter and cheese are mute in large quantities. Farms vary in size from 50 to 200 acres. There are mines of iroa ore, lead, and copper ; but, exenpting the first, none of them are wrought. Marble, black-lead, porcelain clay, and freestone, are found in many patts. The chalybeate waters of Stalford are celebrated. Manufactures occupy more attention than rural iadustry, and are more considerable, in propartion to the population, than in any other state of the Union, Rhode Island excepted. The principal are those of cotton and woollen stuffs, iron and tin ware, leather, tire-arms, carriages, powier, clocks, fin, and snutf. There were 49 savings banks on April 1, 1863, with an invested capital of 23,46,436 dollars. A considerable coasting trade and tratfic with the W. Indies are maintained. The principal articles of export are cattle, horses, nules, grain, fish, candles, soap, butter, and cheese. The state is divided into eight counties. Hartford is the chief city, and is, in conjunction with Newhaven, the seat of governm.; the other principal towns are Middletown, New London, and Norwieh. These contain several colleges, learned socicties, andpublic sehools. The state sehool-fund, foumled in 18:21, is the most considerable of any in the Union; the capital amounted, Feb. 28, 1863, to $2,049,426$ dollars, while the revenue was 132,589 dollars. Yale College, founded at Saybrook in 1700), and removed in 1716 to Newhavels, contains the finest cabinet of minerals in the Union, and an extensive library. The legislature of the state consisted, in 1863 , of a senate of 21 mems., ant a II. of Representatives of 237 members. The senators, representatives, governor, and lient.-governor are all elected every year, on the first Monday in A 1 ril, by the vote of all male citizens who have resided one year in the state, and lave attained the age of 21 . The julges of the supreme courts are appointed by the assembly, and hold their ollices during good behaviour, or until they are
years of age, when they minst retire. Connec tient sends four mems. to the mational 11 , of lice presentatives, and two semators to the national wemate. 'This portion of the Unlon was ifrat colonised in lomis and ltids, by two eolonies mited in 1665. Its subsequent progress has heen one of almost unintarrupted prosperity.

CONS'TANCt: (an, Comstaniar, Germ. Komstanz or Costnitz), in eity of the grnill duchy of Dathin, cap, circ, name nume, or Soekrois (Lake Cirrle), flnely sitnated on the Rhine, at the pennt where it emerges from the lake of Comstance, 100 m. S.il:. Carlaruhe, 24 m. F. Shellhansen, on the terminis of the Hasel-Constme railway. l'口p. 7,416 in 1861. Constance in a highly interesting city, from Its historical associations. In the 15th century it in said to have contained from $30,0(1)$ to 40,1010 inhal.; and its streets mud many of its luildings remain matered sine that period, thomgh several of then are wholly, or ninost whilly, deserted. It is fortilied by a will tlanked with towers, nul surrommell by a ditels; han three suburbs, one of whel, l'etershansel, is on the opposite hank of the Rhine, but ecmmunicates with the city loy a long eoveren wooden bridge built unon stone piers. The eathedral or minater, hegron in 105: is a handsome Gothic siructure with a lolty stequle, commanding an extensive view of the lake and country, as far as the momitnins of Vorarlberg and the (irisoms. The doors of the main portal are curiously earved; and the choir is supported by sixteen pillars, each of a single block. A the high altar, and several interesting tombs and relies, attest tho ancient wealth and grandeur of the see, which was formerly the most considernhle in Germany, nut had large possessions in, and jurisiliction over, Switzerland. A plate of metal let into the flow of this cathedral, near the entrance, marks the spot where Jolin Huss stood when lie wns condemned in 1415. The Francisean convent, the first prison of IJuss, is now a ruin ; and the Duminican convent, to which he was afterwards removel, has been converted into a cotton factory. The kauf haus (market-hall), erectell in 1388, is interesting, as being the place of meeting of the famons Council of Constance, lied from 1414 to 1418. The concourse of ecelesinsties and other,'s, from all parts of Christendon, at this council was such that not only the houses in the town were erowded, but booths were erected in the streets, while thousands of pilgrims were encanped in the adjacent fields. Relipious processions, dramutic representations, and entertainments of every deseription, hourly succeeded each other; and thousands of individuals were employed solely in transporting thither the choicest delicacies of Europe. The great object of this comneil was to vindicate the authority of general councils, to which the Roman pontitr was declared to be amenable. And having done this, the council proceeded to depose three popes or antipopes, Jolm XX1II., Gregory XII., and Benediet XIII. ; they next elected Martin V., and thus put an end to a sehism which liad lasted forty years. But, notwithatanding its merit in these respects, the Conneil of Constance is justly infamous, for the treacherous seizure and exceution of John iluss and Jerome of Prague, notwithstanding the safe-conduet granted to the former by the Limperor Sigismush, the president of the asseinbly, who wanted power or inclination effectually to vindicate his pledge. IIuss suffered at the stake, on the 6th of July, 1415 ; and Jerome, who had attended him to the council, was burnt on the 30th of May, 1416. The opinions of Wyeliffe were also condemned; and an orter was isseled to eommit his works and bones to the flames. Varions relies of this period, and a collection of

 abuve a millions.
Conatantinople is shaped womewhat like a hurp: the longest side of the irinugle being towarils the wa of Marmora, nini tho shortent towaris the 'Ciohlen Horn.' Ita lougth, E.. to W., is ulant itg mi, hiensth varlew from I tos 1 m . Its cire, has hien surionsly extimated at frum it to 24 mm ; lut measured upen the mups of Kinuflier minl le (Chemalier, it appener to be alosit I2b m, in circuit, and contalins, aceurding to Dablaway mud tilinon, an area of alant 2,1000 arres. Like lione, Conatautimple has beren luilt on seven lills, six of which may be oloserved, distinetly enomgh, from the $\mathrm{p}^{\mathrm{sit}}$, io rine progressivaly nlow ench other from the level of the sen $0 \mathbf{2} 200 \mathrm{ft}$, uluve it ; the meventh bill, to the SW. of the whiers, nevuples mure than one-third of the entire aren of the city. Farl of these hills affords a site to, mome conifirnoms edithee. The first is oceppied by the frumblio; the seeond crowned with the lharnt pillar, erected by Constantlie, and the mosque of Othman; the inowques of the sultans Solymin, Mohammed, and selim stand on the summits of the third, fourth, and Iffli; the W, walls of the rity rum along the top of the sixtion and the l'illar of Areadius was crected ipwon the seventh.
'Jlis amplitheatre of peopled hills, with its innumerable cupolas nud minarets interppersed with tall dark cypresses, mid its almost unrivulled port, criwded with the vessels of all mutions, has, externally, a most imposing aspeet, to which its interior forms a lamentable contrast. Ihe expecantons of the stranger are, perhajs, nowhere more deveived. The streets are narrow, crooked, steep, dark, ill-paved or not paved at all, and dirty; though, by reason of the alope of the gromul on either side townrds the sea and harbour, and the great number of pinblic fountains, much of the filth is convenlently eleured awny, Alrianople fitreat, running from the gate of the sanne name to the Scraglio, is the only one deserving the nume of street ; the rest are mere lanes. 'I'lie hoines are mostly smail and low, being built of wowl, curth, or, at the best, of rough or tulhewn stone, It is the palaces, mosques, mugnios, bazars, khans, de. that make so splendid a show at a distance. Jhallaway (Constantinople, p. 70) and Sir J. Hobhouse believe that its streets were anciently not more regnlar than at present; and that from the frquent and sudden devastntions by fire, menfinned by the llyzantine historians, its honses were formerly, as now, built mostly of wood or wher frugile materinls. Abont a century after its restoration, Constantinople is reported (Gibbon, (ch. xvii.) to lave contrined a a cupitol, or school of leaming, a circus, 2 theat res, 8 public and 103 private baths, 52 porticos, 5 gramaries, 8 aqueducts, hit reservoirs of water, 4 sjucious halls for the metings of the senate or courts of justice, 14 churchen, fourteen squares, 344 strects, and 4,388 Diouses, which for their size or benuty leserved to le distinguished from the multitude of piebeian habitations. It contains, nt present, 14 royal and 2in2 other morques, or houses of Nohummednu wirship, 40 colleges of Mohammedan priests, 183 lospitals, 36 Christinn churches. several synaFugues, 130 public baths, nearly 200 khans, and hamerous cotfec-houses, caravansernis, and public fumtains; besides some extensive subterranean fisterns, the aquediuct of Valens, several remarkalle pillars and obelisks erected by the Greek emperus, and other monuments which, together with he walls, the castle of 'Seven Towers,' \&c., are uteresting remains of antiquity, and for the most
part in a tolerable atate of preservation. (Andró-
 b. ien; llahonse.)

Constauine murrommed the rity with walle, chietly of frewnonie, tianked at variable distancen by towera. 'liem have berils, in many parta, demalishad at dificront periols by the violence of the ara, and by freguent earthyinaken, and ont the side fincilig the port nre expecinily in a very ruillonis state. The city was hicrensed towarix the W. hy Therolosins 11 ., who buite the walle on the land sille which atill hear his unue. 'I'tese consist of a triple range, rising one alsuve another, alsuthtis ft. apart, and defended on the outstide ly a ditch 25 to : 510 ft. hemel, and 12 to 16 it . deep. The onter wall is now vary mueh dibuphdisted, nud in muny places is only a little niove the level of the elge of the diteli; it sewins never to have hal niyy towers. The second wall is about 12 ft . in lejghit, mud furnished with towers of varions shiapes, from [ill to l(10) yards apart. The third wall is above 20 ft high, and its towers, which anwwer to thome of the second, are well proportioned. These walla are constructed of alternate conraen of brick and stone; and the finner ones, notwithstandinp the ravages of time, earthifunkes, and uumeroins slegen, nre sill tolerably verfict. On luth the other sillew of the clty the walls are only douhle, and, generally spenking, not wo lofty: They are frequently adorned with crosses nat other ornaments, which have not been removed by the 'lurks; nud in many parts there are bas-reliefs, anil inserijifions by the tireck emperarn who have bullt or repmireal the reveral portions. When Dr. Charke visited the place, he suys there were in nil 478 mural towers, and probably about the same number still exist.

Constantimople originally possessed 43 gates, 18 of which opened on the land side, 12 towards the Golden IIorn, and 13 towaris the I'ropmintis. Only 7 gates now exiat, or are at present ined, on tho land wide, the centre one of which, the Top-Kiapoussi, or Cannon (iate, is the Porta Sumeti Romati, through which Mohammed II, made his trinmplai entry into the city. Near the SW. ankle of the elty is the Heptupyrgium, or castle of 'Seven Towers' (thongh it has now but four towers), an irregular fortress, supposed to have been built abont the year 1000 . It was enlarged in succeeling ages, and in great part rebnilt by Mohammed II., who mate it a siate prison, it being useless an a fortress. The (iohden liate, erceted by Theniosius to commemorate his victory over Maximns, was originally profisely ormmenited with beaten gold, and surmounted by a gilled brones statue of Victory. Molummed II, wallod it up. When Wheeler snw it, it was still adurned with bas-reliefs, in white marble, representing su!veral scenes of classic mytholugy ; bit these minst have disappeared, since more recent travellers speak of it as only an orlinnry arch between two large marble pillars, and ormamented with Corinthian pilasters, 'l'un style assez meiliocre.'

The ancient Byzantinm, finniled by Byzas the Megrarean, n.c. $65 t$, and ultimately destroved by Seserus, not long before the intilding of Constantinopile, occupied the tirst hill or npex of the triungle, at present the site of the Seraglio. Its walls, according to Ilerodian, were Cyclopean, and so skilfully aljusted that they seemed like one entire mass. Most authors say that there are no vestiges of Byzantium; but Dr. Walsh aftirms that 'part of the walls of this very ancient city are netually standing, and ent off the gardens from the ailjoining streets.' The Seraglio, which is believed to be of about the same extent as the ancient Byzantium, is nearly triangular, about 3
III. in eirenit, and entirely nurrounted by wallw: those of the city firmhing ite hommidary towarida the port mal sea of Marmarn, while on the W. it in alint lin ly a lofty wall with gutea naid towern, Imilt hy Mohmment II., nown atter the eapture of Comatantinuple. Ita whole surfince in - irregularly covered with detached mititew of apmetmente, landis, mompuex, kiosha, gnalens, nuid groven of evpreme. 'The apartments are chietly on the top of the hill, anid the gurdens lelow, wretching to the men. Though externally pheturespue, from the celitraxt of Its light mal glegant mimarets with ite lark, nullomin, nuid ntately treew, the Surnglion in minnarkeil hy anything to clingneterise it as che halitution of rigaliy. Thie prenter purst of its interior is isut open to the pulbie; hut thone nequainted with it moy that it containe little worthy of minirntion, abil that that little has heen impurteol frums 1:nropie. The palace comeshetn of varimes purts built at different timen, and necurding to the tuate of sueremalve sultans, withont miy reguril to mifirmity or architecturnl rulo; mid it is, therefire, a herajo of homeses chastered tugether without miy kind of order. Gutside are two courts, the firmt if which is free to all persens, and in entored ly the llab-a-hoomajuin or sublime Pbore, the principal of the gates on the eity sile, - $n$ pondermis, intniphatly structure, coverell with A rabicin inscriptions, guarded ly difty porters, and having a niche on either side in front, in which the hemels of state oflenders are publicly exposed. The irregular Inut spucious aren into whech thin gate leads, fiomery the Forum Auyusti, contalus the mint, the vizier's divan, nul other state otheen, the intlimurles for the klek belonging to the Seraglio, mail the charch of St. Irene, helieved to have been built by ConNantine, and in which the secomil general conneil was hedd by Theodowins, (Andréossy, 16.) This clurch resembles St. Suphia on a small meale, ami contains much marble and mownle work: the Turks have converted it into an arsenal. The second qualrmagle is smaller, beligg ubout 300 paces only in diameter; but is mure regular and handsome than the furmer. It is laid out in turf, hitersected by paved walks, and supplied with fomnmins. On the left hand are the trensury, the divar, or hall of justice, and the smalter stnbles (the larger stables, containing, according to 'Tuurnefort, 1,000 horses, are in another place, faclug the sea of Marmura). On the right are the offices of the attendants, nine kitchens, and the entrance to the private apartments. All round the court runs a low gallery, covered with lead, and sup)ported by columas of marble. At its farther end is the tall Corinthian column ereeted by Theorlosias the Great to commemorate his vietury over the Goths; and near it are the Maba-Sandi, 'Gates of health and hapyiness,' which lead to the thrmehall, the royal library, the apartments of the sultan, the lurem, and other nuites of rooms, embellished with a costly but tasteless magniticence. The throne-hall is isolated, lofty, built in great part of marble, and adorned with handsome marble columus und stained frosss windows. The throne itself is a canopy of velvet fringed with jewels, supported by tiour colnmas covered with gold, pearls, and precions stones; but its effert is destroved by horse-tails, and other paltry ormaments, suspended from the roof. The state apartments closely resemble each other; their chief furniture consists of sofas, carpets, and mirrors. The walls are wainseotted with jasper, mother-of-pearl, and venecred ivory inlnide with mosaic flowers, landscapes, and sentences in Arnbic. The pavilions of the harem are built upon arehes, and roufed by domes coverell with lead or spires with gilded ereseents. They have many balconies, gal-
lerice, cablineta, dec. Intha of marble and mamo

Nowt travellers agree in preferring the mosfines if shlyat the Magniflecint umb Achanet tor St. siphia. The former of these, ralled the Solymana, was built lit IBinh, of the rinins of the eloreh of $太 \mathrm{~S}$. Bimphemin at Chaleedons. It in 216 ft. in
 dome, supported on four colanins of Thelaide granite, bill It, hggh, pavements, galleries, de, of marhe, ververal minor ripulas, four the minarits at the nugles, a macelous court-yarit lealing to it nith gallerios of green marhle oth chler stele, and twenty-engith lembed cupolan, and a very lumbsome fate of entranme ascended to by a tighit of at lenst trenty marble steps. The whole of this inomene is lit rery food taste. Jhehind it, in an inclowed cimrt shaded with trees, is the mansolenin of Solynam, an oetogonal buldiag, and the handmomest of all the roynl nepmeliral moniments, which are very numeromes in the eity. The mosque of Achmet l., between St. Sophia and the I'ropontis, was roinstrueted in 16i0, and lans a very benatiful uarble purement. It is the only mosigue whieh dosessen six minarets. 'Ihene are of extraurdinary height anit beanty, and eneh has three Saracenic galleries surrommding it. The Osmanle, or mosgue if Oiliman, completed in 175\%, has a light and elegant dome, and is tasteffilly ormomented. The wher principal mosques are those of Mohammed II., Majazet, Selim II., Mustnphin Jll., the Validea, de. The last named, fumided by the mother of Mohammed IV., contains a double row of the marble pillars, chictly bronglit from the ruins of Trov, Another mosque has become all object of curisity, from its containing a sarcophages, suppused to have been that of Constantine the Great. Many of the mosques have, like St. Suphin, been furnerly Greek chirches; the remainfler lanve been erected mostly by the Turkish sovereigns, the vigiess, or wealthy indiviluals. The ruyal foundatious comprise a college, with a publie library, a hospital, and an alonshouse; and the mosques in general have attached to them some charitable institutions. They derive their revenues from villages and lands belonging to them, and held by a tenure not dissimilar to that of our churehlands. The incomes of some of the mosques are very large; that of St. Sophia lins heen mail to amount to 800,000 livres animally (Hobhotse) ; Dallaway says 3,0001 . (p. 58.)

The largest space in Constantinople is the AlMridan, or Honse-course, the ancient Ilippodrome It is at present 300 yards long by ibo witle. (Biliott.) In it formerly stood the celebrnted group of four horses, originally transported thither from lome, and afterwards removed to the enthedral of St. Mark. at Venice. It still contains the granite obelisk from Thebes, set up by Theodosius the Great ; the broken pyramid of Constantine Porphyregenitus, shorn of its bronze plates; and between the two, the hollow spiral brass column, whish originally supported the golden tripod in
the temple of Delphi. The last conaista of threu
 it as lwing at prosent alsint is ft, high, imitilateml at the top, anil mith injured in the eentro. Closes (1) the Ilijpuitume formorly stowi tho finperiai phlare, the menate-fenise, and the formin. (itihom, eli. xvii.) The statue antil thrue of the blockn wern thrown down by lighoing in IIS0, and the whole helght in now onily (0) It, In the eenitre of the city the pillar of Stareinn may be seen, enolosed in a private garden, It is of granite, with a Corinthian capital of white marble, nurmonntel by III urn of the anme materlal. The thest of atl, tho Arenilint or Ilistorical colnom, erected early in the ith century, and coverod with a series of has-reliefs, represciting the vietor ies of 'I'leodesins the lirent, was taken down at the end of the lith cchinry, nind only 14 ft , of at aro now alsove Gromid. (Dallaway, ple 113,114 .) Dallaway rendily trmed the vestlgen of the Bomeohon palace, built by Theodosins II., opposite the sea of Marmoris.

The means for the supply of Constantinople witl witer are worthy of remark. The niguedict of Valens, which eommonientes with another and more extnasive, though similarly eonstructed aqueduct, beyond the walls, contimies, as anciently, to donvey water into hie rity. It was oripinally Inilt by the Pimueror Indrian ; and robuilt first by Valens, and again: by Solyman the Magnificent. It runs from the summit of the third to that of the fumrth lifl, eonsisting of a donble tier of forty Gothie arches lin alternate layers of stone and brick. It is in some parts considerably dilapindated, and its lis, extremity especially is much injured. Andreossy entimates that it was oririnally nearly $1,2 \times 0$ yards in length; it is now, he says, 669 yards lonf, and about $74 \mathrm{ft}^{\text {, in leight. }}$ (Andréosny, p. 4i32.) There are several other agueducts on both sides the port, which, as well as the beults, or reservoirs, withont the walls, were chiedly the work of the (ireck emperors, thongh they have been anginented and kept in repair by the Turkish sultans. All the water that supplies Constantinople comes from Ilelgrade, $a$ village a little to the NE. of the city. An American traveller (Sketches in Turkey in 18:31-32) has eatimnted the quantity brought into the eity at $\mathbf{1 5 , 0 0 0 , 0 0 0}$ gall, every twenty-four hours, and states that tho varions water-courses about Constantinople must exceed 50 m . in length. The whole of these inportant works are under the superintendence of an oflicer with great powers, and are anmually inspreted by the siltan.

The Greck emperors constructed many large cisterns within the walls, both open and subterranean : the former have been gradually tilled with earth, aud converted into gardens; but several of the subterrnnean ones still remain entire. The principal are contiguons to the Hippodrome. 'The largest, or Cisterna Basilika, is a vault of brickwork, covered with terrace composition, 336 ft . in length by 182 ft . brond, and supported by 336
marble pillary, each 40 n, 8 in beight. (Clarke, 1if. 176, 1il.) It atill affirila wheter to the ill-

They are inifiminly nopure, with a epout at enels mide aud a lendei ronf; and are cencrally gililed, puinted, fomeribed with mentences from the koran, or otherwise decorated. I'bo pubilie lintlis are binilt muntly uf marble, on a unifurm plan, and eovered with littlo that domen: their listerior in generally hanisome mad apusloun: anil the price of a linth, the tirat of orlental lisxurien, in no low that a fane minis con enjoy a loot butif for a peeming. In the better surt, eothee, sharliet, and pifas are firmixhed to the buthers. Few houmes of eonsequestce are usprovided with a eommorlionis buth.

The areater number of the khoms (bnzanrw) anil bezpatina (or changen) are built of ktinse ur brick. The hhamanal sernin, or innn, are for the most part royal or charitable endowments, each equable of necommonlatligg from 100 to 1,000 persons, They conisint of opwil squires, surrounided by rooms, lis нeveral ntorien, anid ponseнs recommeniations for ontweighing their what of archituetural elegrance. Mont of them are iatended for travelling merchusts. Jixeeptling a amall present to the servint int ileparting, strangers are gratultously longed in then, mul ilurhig their resilence lin the city are masters of their rooms, of which they keep the keys. "They are for all men, of whatever quality, comilition country, or religion mever, mal the enmatruction of them has contributed to uttract the merchnnilise of the furthest bumbluries of Africa and Asia to the capital of Turkey. During firen or insurrectionn, their lron gates are closed, and they afford complete neeurity to the persone as well as goods of the merehantr." (Hoblonse.)

The covered bazuars have more the "ppenrince of a row of bootlis in a fair, than a street of shopm, dach is appropriated to a separate article of merchandise. The shopis are nll open in fromt, and under cover of a common roof; the sills of the windows as in ancient l'ompeli, forming the cominters, (Elliott.)

The better sort of coffec-houses are open on one side, and have a fountain playing in the midst of a runge of marble seats, aul recesses furnishel with pillows, mnts, anil stuffel carpets. A row of them, near tho Solymania, is frequentel by opiums caters; but there are not nearly so many of these individuals in the 'lurkish eapital as is generally imagined. All the public buldings of Constantinople are cruwned by cupolas, in consequence of which, their number, at a distance, seems to be as great as that of the private loonses. The domes, as well as the minarets of all the sacred structures, are terminated by a crescent.

The houses of opulent Turks are built, like the khans and most other large houses in the En, round a court, which has always a fountain playing in its centre. Occasionally these residences are not ill-constructed; but the common dwellings are mere comfortless woolen boxes, with unglazed

Winduw, and withont firm-placem. 'Amid the novelties that strike the Earoplan on his arrival, mithing surprises him morn than the silence that pervailew so large a capital. Il hours now mine of eurts or carriages rathling thromgh the mereets: fir there are now wheded vohkeles in the city, except a very few pminted carts, called
 wimally take the nir in the sulnurlow, mid which go only it a fiout-pace. The comitront is atill more etrongly narked at night. Hy ten o'choek every humun voire is binshedl.' Constantinuples is not a heathy place of residence for atrangers; it is sultfeet to suldent changen of temperature; and the atronge ressium or N. whinds, which previil in the numuner, and do hogary to trade, liy preventing the aceven of ships from the Aggean nind Mediterranem, are also detrimental to public health nud emmfort. Sarthymakes, the plugue, nad devantathug tires, often comsuming 2,000 or $\mathbf{1 , 0 0 t}$ homsew, eanse great dextruetion of life and property. In other respects, too, it is a most minheasant phace of restidence to a Europem or other stranger. In mony cases property is not secure, justice is nomorimanly corrupt, the prolice is bad, the place is haliested with chns, rats, asid, as moust truvellers may, with herils of will dogs, mill birils of prey, which aet na senvengers. Sir J. Hobhonse states, that 'Constantingple is distinguinhed from every other capital in Vinrope, by having no dumen to its streets, no lamps, midno powt-oflice.'
The history of this renowned city for a lengthened perioul is given by Gibbon. It was originally Ponuded by lyzas, from whon it derived the name of' Byzımfium, anno bāt n, с.; muld having been destroyed hy Severus, was reluilt, A. D. $3: 8$, by Constantine, who made it the eng. of the limman enpire. On the sulbjugation of the Western enypire by the barbarians, Constantinople comtinued to be the cajp, of the Eastern empire. Its wealth and magniticence were celebrated daring the middlo ages. It han sustnined mumerous sieges, but has anly been twice taken; first, in 1204, by the Crinmallers, who retained it thll 1261; and, lastly, by the Tarks, ander Mehamined II., May 29,1453 when the last reniment of the Roman empire was tianally suppressed.

CONSU EGLin, a town of Spain, prov. Toledo
 in 1857. The town ha' 2 churches, 3 convents, a
palace, and a varicty of loman inseriptions and antiquities. On a neighbouring hill are the remains of its ancient castle. Streets tolerably regular, but narrow and steep. The vicinity prothees grnin, wine, vil, barilla, and soda, and has quarries of azure-coloured marble, jnsper, and other stones. It has fabrics of coarse stutfs, buize, aud nerge

CONWAY, a town and parl. hor. of N. Wales, co. Caernarvon, hund. Inaf, on the restuary of the Conway rlver: 15 m . NW. by W. from the Menai Bridge, and 224 f m . NW. London by the London and North Western railway. l'op. of par. 1,855 , and of parl. bor. 2,523 in 1861 . The town, which is of a triangular shape, stands on a stecp, slope, and is surromeded by lolty walls, fenced with 24 round towers. The lower fuce of the triangle borders on the river; and at its fartheat angle, on the verge of a slate rock, its magnificent castle

## ' Frowns o'er old Conway's foaming flood.'

This nolle structure was built by Edward I. in 1284. 'A more beantiful fortress never arose. Its form is oblong, placed in all parts on the verge of the precipitous rock. One slde is bounded by the river; another by a creek full of water at every tide, and most beautifully shaded by hanging wools. The other two sides fnce the town. Within are two courts; and on the outside project eight vast towers, each with a slenter one of amazing elegance issuing from its top, within which had been a winding staircase. In one of the great towers is a fine window, in form of an arched recess, or bow, ornamented with pillars. The great hall suited the magnificence of the founder. It extended 130 ft . in length, was 32 broad and of a fine height. The roof was supported by eight noble arches, six of which still remain. There were two entrances into the fortress, one from the river, and one from the town. (Pennant's Tour in Wales, iii. 123, 8vo. ed.) The town is poor and inconsiderable, without trade or manufacture of any sort. Much of the ground within the walls is used for gardens. The bor. is one of the contributary bors. io Caernarvon in returuing a mem. to the H. of C. The limits of the bor. extend to a considerable distance beyont the walls of the town. The port dries at low water.

The old and dangerous ferry over the river has been superseded by a magnificent suspension loridge completed in 1826. The length of the bridge between the centre of the support:om t wers is 327 ft . ; and it is elevated 18 ft . above highwater mark. The construction of this and the Menai Bridge, and the excavations and improvements that have been made at Penmanmawr and other places, have made the road, formerly so dangerous, from St. Asaph and Conway to Bangor and Anglesea, one of the best and safest in the empire.

COOCH-BAHAR, or VIHAR, a rajahship of Hindostan, prov. lengal, between lat. $26^{\circ}$ and $27^{\circ}$ N., long. $89^{\circ}$ and $90^{\circ} \mathrm{E} . ;$ having N. Bootan, and on all other sides the distr. of Rungpore, with which it is incorporated; length about 90 m ; greatest breadtb, 60 m . Its rajah also possesses some tracts beyond the Mogul limits of ISengal, not subject to tribute, and on which opium is extensively cultivated. The S. part of this comntry is fine and fertile, but $N$. of the cap. it is low, marshy, and interspersed with jungle o ud coarse rank vegetation. The Cooch or Rajbangsi tribes eat various kinds of flesh, and are considered by the liengalese and other Hindoos as very low and impure. Notwithstanding provisions are cheap as compared with other districts, and rents low, many of the natives, especially in the $N$., are so indigent
as to lie frequently obliged to sell their children for slaves. Hoe-cultivation is common. In lowe, Abul liazel relates that the chicf was a powerful sovercign, having Assam and Camroop unter liin forernment, and ablo to bring lito the tleld l, 0 on horse and 100,000 foot ; in 1661 this territory wan conquered by the Mognls, and devolved, with the rest of Ilengral, to the British in $\mathbf{1 7 6 5}$.

COOKST'OWN, an inl. town of Ireland, pror, Ulster, co. Tyrone, on the Ballinderry river, 9 m . W. from Lough Neagh. Iop. 2,883 in 1831, and 3,257 in 1861 . The town consists of one longstreet, planted on each side, with it transverse strett crossing it. The par. church is a large Guthir structure : there are three meeting-houses for Presbyterians, two for Metholists, and near the town is a Rom. Cath. chapel. There is also a dispensany and a constabulary station. Linens are manufactured here, and bleached in the vicinity. Markets for grain are held ou Tueslays, and for general sales on Saturdays; fuirs on the first Saturday of every month.

COORG (Horloogoo), an anc. rajahshlp of Hiadostan, prov. Mysore, formerly inclependent, but now muler the pres. of Marlras. It lies for the most part hetween lat $12^{\circ} \mathrm{and} 13^{\circ} \mathrm{N}$., and intersected by the $76 t h$ parallel of E . Jong.; having.${ }^{\text {I }}$ and 1E. the Mysore territories, and on all ather sides those of the Madras presidency; length $\underset{\text { d }}{ }$. to S. about 70 m ., brealth very irregular: arei $2,340 \mathrm{sq} . \mathrm{m}$. To the W. it is bounded ly the W . Ghants, parallel to which there is a succession if lofty narrow ridges, enelosing valleys of varions extent. The chief elevations are, 'radiandamule $5,781 \mathrm{ft}$., and Soobramany 5,682 ft. above the sea: the principal valley is that between Markara and Naknaad, 18 m . loing, by 15 m . broad, with an extremely nneven surface, in the lowest part of whieh runs the Cavery. The geology of Coorg strougly resembles that of the Neelgherries; the principal rocks being sienite, granite, and greenstone, and the subordinate ranges miformly eapped with the detritus of these, cemented ly argillaceous carth, and coloured by oxide of iron: porcelain clay frequently occurs. The whole country, with fer exceptions, is covered with forests, but not orerlonded with jungle, excepting in the vicinity of the Mysore dominion ; where elephants, game, and other wild animals are found. Sandal and other valuable woods abound. Both the botany and zoology of this region offer a rich field to observers, but have hitherto been but little stadied From the greater elevation, the temperature is much below that of either Malabar or Alysore, and remarkable for its equality. The climate is, in general, highly suitable to European constitutions, though the monsoon rains, from June to Septh often fall with great violence. The Coorgas area Nair tribe of martial habits; they have few towas, or even villages, of any size, preferring to live in jungles and wilds. They cultivate rice in the valleys, which are very productive, though the quantity of land under culture be very trifling, The pastures are excellent, and cattle are abundaat Manufactures limited to the blankets worn by the pop. Cotton cloths are imported. Contrary tothr custom in Malabar on the other side of the Ghauts hereditary rights and possessions in Coorg descead in the male line, and some family disputes arose in 1808, in consequence of Beer Rajendra (who had expelled the troops of Tippoo from Coont) having left, at his death, the government of his dom. to his daughter, to the prejudice of his brother, who was ultimately established in posseision by the British government. The eountry wa annexed to the lhritish dominions in 1832.

town of Ireland, prot

Ilster, co. Cavan, on a small river of the same name, 26 m . W. by N. Dundalk. I'op. 2,178 in 1831 , and 1,994 in 1861. The town consists of four broad streets, neatly luid out and well kept. It has a par. church, a Rom. Cath. chapel, two l'resbyterian meeting-houses, places of worship for Moravians, Quakers, and Methodists : a markethnuse, a court-house, and a bridewell. 'Here is an extensive trade in grain and coarse linens. The corn markets arc held on Saturdays, the general matkets on Fridays ; and fairs on the second Friday in every month.
COPPNHAGEN (Kiobenhavn, merclants' havea), the eap. of Denmark, a well-built city, prinelpally on the E. coast of the island of Zeafand, but partly also on the contiguous small island of Amak, the channel between them forming the port. Jop. 155,143 in 1860. The town is well fortified. The ramparts, which extend for about 5 m ., are flanked with bastions, and surrounded by a deep ditch filled with water. It is also defended by a very strong eitadel, and by the Three Crowns lattery, constructed at the entrance of the port on a bank of sand, about 1,500 lathoms from shore. The city is usually divided into the old town, the new town, and Christianshavn. The fint is the largest and most populous, and having at different periods suffered much from fire, most part of it has been rebuilt on an improved plan, though some of the strcets are still narrow, rrooked, and inconvenient. In the new town the sireets are straight and broad, though generally ill-paved, the squares regular and spacious, and the private honses and public buildings the flnest in the city. The part called Christianshavn, from its being built by Christian IV., stands on the island of Amak. It is intersected liy various canals, and communicates with the other parts of the town by lridges. Public buildings numerons, and many of them superb. Among others may be specified the castle of Christiansborg, destroyed by fire in 1795 , and since rebuilt. It has a picturegallery, comprising a eomplete collection of Danish fictures, with a fine collection of the Duteh school; a chapel ornamented by bas-reliefs from the chisel of Thorvaldsen ; and the royal library, one of the lest in Europe, containing, exclusive of manuscripts, above $450,000 \mathrm{volnm}{ }^{2}$. The part of the new town called Amalicuborg was entirely rebuilt ly Frelerick V. between 1745 and 1765 . It confists chiety of an octagon, divided by four broal rectangular strects, in which is the palace of the king. In the centre is a bronze equestrian statue of Frederick V., erected by the East India Company. There are also the royal palaces of Rosenburg and Charlottenborg, appropriated to public purposes; the university, the town-house, the theatre, the exchange, and the barracks. The cathedral church of Notre Dame, nearly destroyed during the bombardment in 1807, has been rebuilt; and is enriched by statues of Clirist and the Apostles, by Thorwaldsen. The tower of the chureh of the Trinity, 115 ft . in heiclit, is used as an observatory : it also contains the lihrary of the university, and the great globe of Tycho Brahe. The church of Our Saviour is reckoned the tinest in the town : its spire, nearly 300 ft . in licight, is a masterpiece of art. The educational, literary, and scientific establishments of Copenhagen, rank with the first of their class, and reflect intinite credit on the government and the people. Besides the unifrsity, to which we have elsewliere alluded, there is a polytechnie school, a metropolitun school, a tual school of marine, a royal school for the ligher military sciences, and a normal school. There is, also, a royal society similar to that of london, a Scandinavian society, and a society of
Yoc. II.
northern antiquaries. The academy of arts is and has long been in a flourishing condition. Besides the royal llbrary in the palace of Cliristiansborg, the university library has above 100,000 volumes, and a large collection of manuseripts. The Classen library, bequeathed to the public by the genernl of that name, is mainly devoted to science and natural history ; and, exclusive of these, there are several other minor but still valuable collections.
The hospitals are mumerous and well conducted. The most splendil is that of Frederick $V$. The lying-in hospital has attached to it a school of midwifery and a fonudling hospital. The royal institution for deaf and cumb admits paticuts from all parts of the kinglom.

If distillation be excepted, the mamufactures of Copenhagen are neither very extensive nor important. There are about 258 distilleries, moxtly on a small seale, and about 50 breweries, with sugar refineries, tohncco manufactories, and soap-works. Cotton and woollen goods, llnens, silks, gloves, and lats are also jroduced, but in linited (juantities.

The trade of the port is considernble. There arrived, in $1860,4,015$ vessels, of 115,502 lasts (of ? tons ench) ; in 1861, 3,252 vessels, of 127,224 lasts, and, in $1862,8,233$ vessels of 121,862 lasts. Of these, there were 13ritish vessels 120 in $1860 ; 160$ in 1861 ; and 249 in 1862 . The principal articles of import are-anehors, piteh, and tar, from Sweden and Norway; flax and hemp, masts, sail cloth, and cordage from liussia; tobaceo and rice, from the United States; wines and brandy from France; and coal, earthenware, cot tons, und eolonial produce from England.

The harhour is formed, as alrealy stated, by the elamel or arm of the sea running between healand nal the opposite island of Amak. The entrance to it is Harrow ; but the water is sufficiently deep to admit the largest men-of-war. There are dry docks, and every facility for the buikling and repairing of slips. Copenhugen is the station of the Danish navy. The bank of Copenhagen, founded in 1736, was remodelled in 1818: it is now a private institution. The charge of the public health is entrusted to a commission. The police is under a special establishment; and besides the garrison, the citizens are formed into a national guard.
Copenhagen is not a very ancient city, having been founded in 1168. It has at different periods suffered severely from fires, particularly in 1728 , 1794 and 1795; but how clisastrous soever at the time, these visitations were in the end advantageous, the narrow streets and wooden houses of which the town formerly consisted having been replaced by broad streets and handsome stone buildings. Besides the loss of her fleet Copenhagen suffered severely from the bombardment by the English in 1807, and by an inundation in 1824. But she has fortunately recovered from both these disasters, and by her literary and other establishments has placed lierself at the head of civilisation in the north of Europe.

The environs of Copenhagen are celebrated for their beauty. Fredericksberg, a magniticent casthe, the summer residence of the king, stands on a rising ground within a moderate distance of the eity. Its gardens are open to the public, and are a favourite resort. Fredericksborg, another royal residence, is situated about 21 m . N. Copenhagen It is a vast, but incongruous pile, partly brick and partly stone, and partly of Greek and partly of Gothic architecture. It has some fine pictures and a series of portraits (partly imaginary) of the sovercigns of Denmark.

COPLAPO, the most N. town of Chili, formerly the cap. of the prov, of same name, now incor

## 114

COQUIMBO
poristed with that of Coquimbo. the right bank of the rivulet of Cophanis on from the Jacillc, and. 178 m . N.VE. Coquimbo; lat. $2^{7 \circ} 10^{\prime} \mathrm{S}$., long. $71^{\circ} 5^{\prime} 15^{\prime \prime} \mathrm{W}$. I'op, estimated at 3,000 . The town is connected by railway with Caldera. Most of the liouses are built of sun(lried bricks whitewashed; and, the better to rasist earthquakes, used to be constructed with great solidity; but in 1810 it was destroyed by the earthquake thit caused such devastation thronghont a great part of Chili. In 1822 it suffered severely from another eartliquake. The lurbour of Copiapo on the Pacific is goon; and at a small village on the shore most of the ore from the mines of the prov. is smelted, and the metal is exported.

COQUIM13O, or LA SERENA, a sea-port town of Chili, in the N. part of the republic, cap. of the prov, of same name, on the Chuapa, near its mouth; 270 m . NNW. Santiago; lat. $29^{\circ} 53^{\prime}$ $43^{\prime \prime}$ S., long. $71^{\circ} 18^{\prime} 40^{\prime \prime}$ W. Estimuted pop. 7,000. The town is clean, and tolerably well hiid out; streets intersect each other at right angles; houses mostly of sun-dried bricks, and only one story in licight, but interspersed with numerous gardens of ['ruit-trees and evergreens. It has several churches and convents, a public school, and a hospital. It is the seat of the intenclent of the prov., and is the residence of many families, and in some sort the cap, of N. Chili, as well as the chief mercantile port. The exports amounted to $8,201,266$ dollars in 1863 , anid to $4,898,870$ dollars in 1864; the imports to 318,356 clollars in 1863 , and to 678,041 dollars in 186.1. (Report by Mr. Consul Tait, dated March 18, 1865.) The harhour or bay of Coquimbo is large, well-sheltered, and secure at all seasons. 'There is sufticient depth of water for ships of large burden, 9 fathoms being found 300 yards off shore, and nearly 3 finthoms close in shore. A railway connecting Coquimbo and Serena with Las Cardas and the mines in the interior was opened on 26th April, 1862. The line was entirely constructed and is worked by Englislımen. Coquimbo was founded by Valdivia in 1544. About 25 m . up the valley of Coquimbo are some singular parallel roads, of which Captain Hall has given an account.

CORI)OVA (an. Corduba and Colomia Patricia), a famous city of Spain, cap. prov, and kinglom of the same name in Andalusia, on the Gualalquivir, 73 m . NE. Seville, and 185 m . SsW. Madrid, on the railway from Madrid to Seville and Cadiz. Pop. 12,909 in 1857. The city occupies a large oblong space of sloping ground, enclosed by walls flanked with towers originally erected by the Romans, and afterwards, repaired, strengthened, and extended by the Moors. But a great part of this space is now covered with gariens and ruined buildings, and but little remains of its ancient grandeur. Streets narrow, crookel, and dirty ; aud a few either of the public or private huildings are conspicuons for their architecture; the latter seldom exceed two stories in height. The great square, Plaza Real, or de la Constitution, is, however, large and regular; the bouses surrounding it are lofty, and furnished with porticoes and bateonies. There is a suburb of some extent on the S. bank of the river, with which the city communicates by means of a stone bridge of 16 irregular arches, 860 ft . in length, and 23 ft . in width, constructed by the Moors towards the close of the 8th century, and the approach to which is guarded by an old Saracenic castle, still maintained in a state of defence. The city contains a cathedral, 13 parish churches, about 40 convents, 7 hospitals, a foundling and another asylum city-hall, bishop's palace, 3 colleges, be-

## CORDOVA

sides other schools. 13y far the most remarkabife public ediffice is the eathicilral or mezquita, formerly a mosque, built by the Moors at the latter ead if the 8th century upon the ruins of a Gothic church, which is itself believed to have replaced a lioman temple. lboth of these edillees have apparently furnished many pillars and other materials fir the present building. The mezquita extermally in unprepossesslag, and little calculated to nttram notice; but the singularity of its interior strikes every one with astonlshment. It is a glewmy labyrinth of pillars, 356 ft . in length N. to S ., liy 394 ft . Iroad E. to W., and lighted only by the few doors that remain open, and some small cipmolas in dlifferent parts of the roof, which lattet is flat, and only 35 ft , above the pavement; leing supported in most plices ly a kind of doubie arcule of horse-shoe urches. The columns supporting these arehes, and which amonnt to several lumilreds, nre of jasper, marble, porphyry, tranite, virrl-antique, and various ot lier materials, and differ as much in their architectural as in their geological claracter. They are all, however, of the amme height; ' for the Arabs, having taken them from Rousan buillings, served them in the same manmer that Procrustes did his guests: to the short ones they elapped on monstrous capitah and thick hases; those that were too long for their purpose lind their base chopped off nutd diminutive shallow bounet placed on their heal (Swiuburne's 'Travels, ii. 89.) The number of aisles or naves is lengthwise 19 , and transverelr from 32 to 35. A considerable suace at the $\$$ cul was parted off for the use of the Imans, and now serves for the chapter-house, sacristy, and treasury of the cathedral. In the front of this space is what is called the zanearron, an octavon Moorish sanctuary, 15 ft . in diameter, richy ornamented without and within, and domed oves by a single block of uhite marble, carved into the form of a scallop-shell. Adjoining this, in 1815, another small apartment was brought to linht preserving, in a remarkable degree, its pristine decorations. The gorgeonsness of this little chamber will perhaps give an idea of that of the building generally in the time of the Moors; for the splendour of almost all the rest of the mezquito has entirely disappeared; the gilding and uruaments of the roof, the arabesques and inscriptions on the walls, and the mosaics of the pavement, have nearly all vanished; and of the $2 . \mid$ gate formerly plated with brass, and curiously emhosed only 5 remain open. The sacristy contains some tolerable paintings, and the church is very nid in jewels, plate, and silks. The mezquita stands within a court planted with orange-trees, palmis, and cypresses, and surrounded with n cloister, on the N. side of which a square belfiry has been built
The bishop's palace is a large and rather haadsome building, containing a suite of state apartments, in one of which there is a large collection of portraits of the bishops of Cordovn. Previoustr to the late civil war, 2,000 poor persons were daily supplied with food from the bishop's kithen, which mistaken bounty accounts sufficiently fo: the swarms of begerars with which the towa is infested. The famous palace of the Moorish sovereigns is now unoceupied; it hat been converted into a royal stnd-house, where the bet horses in Spain were reared: the stables are 110 empty. The manufactures have participated in the general decay of the place; there are at presen: only some trifling fabries of ribands, lace, hats, baize, and leather after the Moorish fashion: the latter article was formerly very extensivels manufactured; and was known in commeree ty the name of cordovan, and from it the tero

## CORDOVA

COREA
115
ennlwainer has been deriver. In 1833, a hand rume quay was ereeted above the bridge, lint sa there is but little trade, and the river is for 9 months in the year navigable only for lynts, the quay would seem, like many other public works in Spain, to be more for show than piof use.
Cordova is sald by Strabo to have been founded ,0" the Romans urider Marcellis ; but as there were several dlatinguished jpersons of that mume, this leaves the epuch of its foumdation uncertain. Do mention is mate of it before the age of Ciesar nod l'ompley, but it soon after attained to great distincthon ins a rich und populons city, and n cat of leuming. (Cellarii, Not. Orbis Antiqui, (80.) In $5 \overline{7} 2$ It was taken by the Goths, and in 692 by the Moors, under whom it berame the splendid cup. of the 'Culiphnte of the West,' and subsequently of the kinglom of Curdura. In 123f, however, it wis taken antil nlmost duvally destroved by the impolitic zeal of Ferlinaid III, of Castile, nul has never since reeoseefl its previous prosperity. Cordova laas given irth to some illustrious men, among whom may be precified the two Seneens, Lucan the poet, and the amous Arabic physicians, Avicenna and Averves.
Comova, an inl. town of Mexico, state Vern Cruz, at the E. fuot of the volemino of Orizaba, andon nue of the roads between Vera Cruz and La P'uebla; Inm.SW. the former, and 72 m . ESE. the latter city. Extimatel pop. 6,000. Strects wile, regular, and rell paved; honses huilt mostly of stone. In the cutte of the town there is a large square, three fides of which are ornamentel with Gothic rrades; the fourth is oceupied by the principal luurch, an elegant structure, richly decorated fithin. Cordova contains two convents, eael ith a hospital attached; many of its edifices are domes, towers, or steeples. Cotton and ooullen fabrics nad leather are made here; and here are besides numerous distilleries, sugarfills, snd bee-hive farms; but the prineipal emloyment of the inhab. is the culture of tobacco ad coffee. The ricinity is extremely fertile, alabounds in fruits, timber, game, and fish.
COREA (called by the natives, Chaon-Seen, by te Chinese, Keaom-le, and by the Maneloo Tarrs Sol-ho), a marit. country of NE. Asia, tribury to China, consisting of a large oblong-shaped eninsula, with an adjoining portion of the conneent, and a vast number of islands, which are pecially numerous on the W . coast. The whole the dominions lie between lat. $33^{\circ}$ and $43^{\circ} \mathrm{N}$., ad long. $123^{\circ} 50^{\prime}$ and $129^{\circ} 30^{\prime} \mathrm{E}$.; having E. the a of Japan; S. the Straits of Corea; W. the ellow Sea and Gulf of Leao-tong; NW. the ov. Leao-tong; and N. Manchoo Tartary. From e latter it is separated by a mountain ehain, and c Thu-men-Kiang river, and from Leao-tong ostly by a wooden wall or palisade. Length, W. to SE., 550 m ; avernge breadth of the pensula, sbout 130 m . Total area, inclusive of ands, probably about $80,000 \mathrm{sq} . \mathrm{m}$. Corea is merally monntainous. A mountain range runs romgh it longitudinally, much wenrer its E. than W. coast. The E. cleclivity of this range is ep and rugged; its W. one declines gradually to a fertile and well-watered country. All the ineipal rivers run W., and discharge themselves to the Yellow Sea; the chief is the Ya-lu-kiang the NW., which is navigable for large ships to ont 22 m ., and for small vessels for a distance of arly 120 m . above its mouth. The coasts, as well the islanils as of the continent, are generally eky and difficult of necess; thongh there are me spacions and secure harbours. The climute
of the N . is very rigorous ; the Thu-men-kiang, for six months in the year, is thickly frozen over, and barley is the only kind of com capable of being eultivated in that region; even the S., theugh in the same lit. with Sicity and Mnlta, is said to experienee snmetimes yery heavy falls of snow. The climnte of this part of Corea, however, must be on the whole mild, since cotton, riee, and hemp are staple proluets; nul Gutzanit conjectures (Voyuges, dee, p. 319), that many other phants, commom to the S. of Eurupe, tloarish. Gatzlaff observes, In point of vegetation, the coast of Corea is finr sulperior to that of Chlna, where barren rocks oftent precluile any inttempt it cultivition; but here, where the hand is fertile, the linhah. do not plough the grouncl.' (p. Alit.) Agrienlture may be hetter farther inlund, but on the coast it is much neglected: whent, millet, and ginseng are amongst the chief articles cultivated. Tobaceo was introdinced by the Japmese about the begimuing of the 17th eentury, and potatoes, by Gutzlaft' and lindsuy, in 1832. The orange, eitron, hazze-nut, pear, chesnut, peach, millierry, Murus pupmrifera, Fuens stecharinns, and the wild grape, are common; but the art of making wine from the latter seems to be umknown. An ardent liquor is, however, made from rice. The nomintainous parts of the $\mathbf{N}$. are covered with extensive forests : pines are very abondant on the consts; and in the interior there is a species of palm praducing a vahable gum, from which a varuist, giving an appearunce little inferior to gilding, is made. Oxen, hogs, and other domestic animals common to Enrope are reared: there is a spirited breel of dwarf horses not exceeding 3 ft . in height ; panthers, bears, wild boars, cats, and dogs, sables (whose skins form an important article of tribute), (leer, nul an abundance of game, storks, and water-fiowl of many sorts, are found; eaymans of 30 or 40 ft . in length are said to be met with in the rivers, and venomons serpents are not rare. In the winter, whales, seuls, de. visit the shores. The minernl kinglom produees gold, silver, iron, rock salt, and coul.
People.-The pop. has been estimated nt $15,000,000$, bit there are no real grounds for this estimate, which, we lanve little doubt, is greatly beyond the mark. Gutzlaff represents the consts ns thinly inhalited. We have elsewhere stated that the Corenns ure superior in strength and stature to the Chinese and Japanese, but that they are inferior to either in mental energy nnd capacity. (See Asis.) They are gross in their habits, eat voraciously, and drink to excess. The dress of both men and women is very similar to that of the Chinese, though the Coreans do not, like that people, cut off their hair. Their houses are also like those of China, being built of bricks in the towns, nnd in the country are mere mud hovels; each house is surrounded by a wooden stockalle. Their language or languages are peenliar, differing from those of their immediate neighbours. In writing they use alphabetic characters, though the symbolic characters of the Chinese are also understood and sometimes resorted to. They have a copious literature, and are very fond of reading, as well as of music, clancing, and festivities. Polygnmy is permitted, but the women do not appear to be under such restraint as in China. (M•Leod.) The religion of the upper orders is that of Confucius, while the mass of the people are attached to Buldhism; but neither appears to have much intluence. Christianity, which was introduced by the Japanese, nppearel to be extinet when Gutzlatf visited Corea in 1832.
Manufactures and Trade.-The manufactures are few : the principal nre a kind of grass-cloth, straw-plait, horse-hair eaps, nul other artieles for
clomestic use: a very fine and tranaparent fahric woven from filaments of the Urtica japonica, cotton cloth, and a very strong kind of paper made of cotton, and rice-paper ; which articles, together with giuseng, skins, some metals, horses, and silk, constitute the clief exports. What trade there is, is principally with Jnpan, from which they import pepper, aromatic wools, alum, huffaloes', gonts', and bucks' horns, and Duteh and Japanese manufactured goods. There is, however, some trade with China carried on at Fungwang-ching (the Phanix-tou'n), beyond the Leao-tong borler; but this trade is conducted with grent secrecy, in consequence of the jealousy of the goverument of any intercourse with foreigners. This jealousy is so, great, that no Chinese is allowed to settle in Coren, nor any Corean to leave his own country; Europeans are scarcely ever suffered to land, or remain any length of time on the const; and the N. frontier is abandoned for many miles, in order that no communication should take place with the Manchoo 'Jortars. Little skill in ship-building is clisplayed by the Corenns; their junks do not carry more thin 200 tons, and are quite unmanagenble in a lianvy sea. In the construction of their fishing-bouts not a nail is used. Metallic articles and money are rare. The only coin in circulation is of copper, but payment is often made in silver ingots.

Corea is divided into 8 provs. King-lii-tno, the enp, is placed on the Kinng river, in about $37{ }^{\circ} 40^{\prime}$ N . lat., and $127^{\circ} 20^{\prime} \mathrm{E}$. long., or about the centre of the kingd. The gov, is said to be despotical: most of the landed property in the country belongs to the kiug, of whom it is held in different portions as fiefs, which revert to the sovereign at the decease of the occupier. Besides the revenues from these domains, a tenth part of all kind of produce belongs to the king. Justice is in many respects very rigid. Rebeliion, as in China, is pmished by the destruction of the rehel with his entire family, and the contiscation of their property. None but the king mny order the death of nn official person: the master has always power over the life of his slave. For minor crimes the genernl punishment is the bnstinado, which is pretty constantly at work. The Chinese interferc but little with the intermal administration of Corea; but the king can neither assume the government, nor choose his successor or collengue, without the authority of the court of Pekin, to which he sends tribute four times a year : the tribute consists of ginsengroot, sable-skins, white cotton paper, silk, horses, and silver ingots. The Corean ambassador is treated at Pekin with but little consideration. There seemer reason to believe, that, like some other states in Asia, Corea is tributary to the more powerful nations on either side, and that it also sends a yearly tribute to Japan, consisting of ginseng, lcopards, skins, silks, white cotton fabrics, and horses; but for which an acknowledgment is made in gold articles, fans, tea, and presents of silver to the ambassadors

History.-Corea was known to the Chinese from a very early period, and is reported to have been civilised by the Chinese sovereign Khil-su, about 1,120 years before our ara. After experiencing several revolutions, it was invaded and conquered by the Japanese in 1692, who, however, abandoned their conquest in 1698. The Coreans having called in the aid of China during that struggle, Corea has since formed a subordinate part of the Chinese empire.
CORELLA, a city of Spain, prov, Navarre, in a fertile plain on the Alama, 13 m . W. Tudela, 12 m . SE. Calahorra. Pop. 5,023 in 1857 . The town has two chmrehes, 4 convents, a hospital, und some
remains of an ancient enstle. The inhahitants an employed in the extraction of liquorice and madde juice, and in the manufacture of brandy, oil, and flour.

CORFE-CASTI.E, a market town and bor, d England, co. Dorset, Blandford div.. hund. llaiset in the 1sle of l'urbeck, 32 m . SSW. Salisbury Pop of par. 1,901 in 1861. The town is most pa bably indebtel for its origin to its castle, on a steep rocky hill, a little to the N., formerly a place d considerable strength. But its importauce, it more molern times, was owing to its having en joyed the privilege of returning two mems. to the H. of C. from the 14 th of Elizabeth down to the passing of the leform Act, by which it was dis franclised. The inhab. nre mostly employel i the neighbouring clay-works and quarries.

CORFU (an. Corcyra), an island in the Mediterranean, forming (since 1864) pasi of the kinglow of Grecce, and the most important, though not th largest, of the Ionian Islands. It lies between hat $34^{\circ} 20^{\prime}$ and $39^{\circ} 50^{\prime} \mathrm{N}$, and long. $19^{\circ} 35^{\prime}$ nnd 200 E.; off the S. part of the const of Albnnia, from which it is sepmirated by a chnnmel only 3 -5thsed n m . wide at its N . extremity, 6 m . at its S . ertremity, and 15 m , in the centre. The shape Corfu is elongated; the island describes a cume the convexity of which is towards the W.; lengt NW. to $S E .41 \mathrm{~m}$. ; breadth grentest in the X where it is 20 mn ; but it gradually tapers towark its S. extremity. Area, $227 \mathrm{kq} . \mathrm{m}$. I'ol. 69, 1 ll in 1860 , including 5,765 aliens and strnugers. The native pop., ilı 18180, was composed of 33,520 male and 30,129 females-a rather remarkable prepor derance of the male sex, particularly in a seafains population. Surface hilly, particularly in the SII, where the peak of St. Snlvalor rises $2,979 \mathrm{ft}$. alons the level of the sea. The strenms watering it ar few and smanl, and mostly dried up in summe Climate mild; the mean maximum temp. in the open air for the five years ending December, 183 was about $88^{\circ}$ Fahr.; and the avernge minimus $31^{\circ}$ Fahr. ; but Corfu is sulject to sudilen tranj tions from heat to cold, owing, amongst othe cnuses, to the proximity of the snowy mountris of Epirus. Eartliquakes also are frequent. Th more elevated lands are rugged and barren, ba the plains and valleys are fertile, and productire of wheat, maize, oats, olive-oil, wine, contton, thas and pulse. Corfu yields no eurrants. Oil is the great staple of this isl., which has, in fact, the pearance of a continuous olive wood, a consequens partly of the extraordinary encouragement fo merly given to the culture of the plant by Venetinns. There is an oil harvest every year, be the great crop is properly biennial, the trees beim suffered to repose for a year. Next to oil, sh: obtnined from saltpans along the shores, oranga citrons, and other fruits, besides honey and way are the other chicf articles produced. Corfui divided into 6 cantons; it sends 12 mens, to tw legislative assembly of Greece. Corfu, the capn: the only town worthy of mention ; the rest 4 . mere villages.

The city and port of Corfin lie on the E. sided the island, on the channel between it and the opposite const, which is here about 5 nI . wide; ${ }^{2}$ $34^{\circ} 37^{\prime} 39^{\prime \prime}$ N., long. $19^{\circ} 56^{\prime} 34^{\prime \prime} \mathrm{E}$. It consix of the town and citadel, both fortified; and the several suburbs, one of which is supposed to occuff. the site of the ancient city of Corcyra, founded the Corinthians about the same time with Sir cuse. commissioner, now the seat of the Greek governinent, und a lighthouse erected upxom a point 2:13 flablove the level of the sea. The town lias three rates towarils tho sea, and one on the land side. it is not well built ; streets narrow nod irregular and houses nostly smull and ill-contrived. Corfu is strengthened by two other fortresses besides its ritadel-Fort Neif and Vido. The latter is built on a small island of the same name (an. Ptycha), nearly 1 m . N. frum the city, and lins hat much pains and (British) expense bestowed on its improvenumt. Corfu coutains a cathedral, and several Greek anil Roman Catholic churches and chapels, a university, pymnashum, ecclesiastical seminary, and several primary schools. Arounal it there are wuure pleasme walks, interesting from classical associations; the esplanade is well planted with trees, and forms an agrecable promenade. The town is well supplied with water, which is conveyed by means of iron plpes from Benizza, a distaince of 7 m . Roads have been male from Corfu to most of the principal towns and villages in the islaul. The harbour between the island of Vislo and the city is sale and commodious, anul vessels auchor in from 12 to 17 fathoms water. The eanal, or clammel of Corfu, is a little dillicult of navigation, but has deep water throughout; there is a lighthouse on the rock of Tignoso at its N. entennce, sind a floating light is moored off the point of Leschimo uear its S. extremity. The city of Corfu is the seat of the supreme court of justice, the cliief special courts for the island, and of a Greek archbishop. In 1716 it was unsuccessfully besieged by the Turks, and lid not fall into their hands mintil the curd of last century.
Corfu is the chicf seat of the exterunl trade of the Ionian Islands. The roads in it are gooni, having been greatly improved since it has been under British protection. Most of the inhub. helong to the Greek church. It is believed to be the country of Phaucia, or Scheria, mentioned by Homer, on which Ulysses was wrecked, and afterwards hospitably entertained by King Alcinous. li became afterwarls a celebrated colony and naval station of the Corinthians, and a quarrel between it and the mother country led to the Peloponnesian war. It was also an important naval station under the Romans. It belonged successively to the Eiastern Empire, the Normans, and Venetians, and thared the fate of the Venetian ropublic in 1799. The island, with the rest of the Ionian republic, was placed under the protectorate of Great Britain ov the congress of Vienna, but ceded to Greece in $186 \%$. A Greek garrison arrived at Corfu, and took possession on the 28th of May, 1864.
CORINGA (Caranga), a considerable sea-port town of Hindostmm, prov. N. Circars, distr. Rajahmundry, and 33 m . SE. that town; lat. $16^{\circ} 40^{\circ} \mathrm{N}$., ong. $8^{\circ}{ }^{\circ} 44^{\prime}$ E. Excepting Blackwood's Harbour, Coringa Bay contains the only smooth water to be found on the W. side of the Bay of Bengal, during he SW. monsoon. A wet dock has been formel, nd many small vessels are annually built here. In 1784, a remarkable inumdation of the sea took Hace, destroying much property and many inhapitants.
CORINTH (KópıथOs), a famons city of Greece within the Morea (an. Peloponnesus), near the vilimus of the same name, between the gulfs of lepanto (Corinthiacus Sinus) on the W., and of tgina (Saronicus Sinus) on the E., 7 m . from the tearest point of the latter, and 2 m . from the fearest point of the former; lat. $37^{\circ} 53^{\prime} 37^{\prime \prime} \mathrm{N}$., ong. $22^{\circ} 52^{\prime} 5^{\prime \prime}$ E. Pup. 2,150 in 1860. The town fsituated at the N . foot of a steep rock, $1,336 \mathrm{ft}$. nheight, the Acrocorinthus or Aeropolis of Corinth, lle summit of which is now, as in antiquity, occu-
pied by $n$ fortress. The present town, though thinly peoplent, la of considerable extent, the houses beling placed wide apart, and muela space oceupted with grridens. Tho only (irceinn rinin at present to be found in Corlath is a Doric temple, with but a few columns standing. There are some shapeless and uninterestlug Romau remains, supposed to have been baths; but there is nothing approaching to a well-delined building, and we may exclaim with the peet,-
'Whero is thy grandeur, Corinth ? ahruuk from sight, Thy anclent treasures, and thy rampart's helgit;
Thy gotilike fanea and pataces -Oh, where
Thy mighty myrials and majestio fair 1
Relentless war has pour'd around thy wall,
And hardly spared tho traces of thy fall!'
The situation of Corinth is extremely advantageons, being placed on a narrow isthmus between the seas that wash the E. and W. slures of Greece, she eould harilly fail to become an important emporium ; while the Acrocorinthus, if properly fortified, would be all but impregnable, and the possession of the isthmus would enable her to command all access by land between the two great divisions of Greece. No wonder, therefore, that Corinth was early distinguished by the wealth, commerce, luxary, and refinement of her citizensIn the earlier ages of antiquity, the attempt to sail round the Peloponnesus, or to double Cape Malen, was regarded as an undertaking of the greatest hazard; and to obviate this danger, the usual practice was to land goods, coming from the W. shores of Greece, Italy, and Sicily, destined for the E., nt the harbour of Lechucum (the nearest point to Corinth), on the Corinthian Gulf, and to convey them across the isthmus to Cenchreex, on the Saronic Gulf, where they were again shippel for their final destination. The products of the E. coasts of Greece, Asia Minor, and the Black Sen, destined for the W. parts of Greece, Italy, \&c., were conveyed through the Corinthian territory in an opposite direction; so that the city early became the seat of perhaps the most important transit trade carried on in antiquity. In addition to this, Co rinth at an early period founded Corcyra, Syracuse, and other important colonies; established within her walls varions manufactures, particularly of brass and carthenware; had numerous tleets, both of ships of war and merchantmen; and was the centre of an active commerce that extended to the Black Sea, Asia Minor, Phœnicia, Egypt, Sicily, and Italy. In the magnificence of her public buildings, and the splendour of the chefs-d'auvre of statuary and painting by which they were adorned, she was second only to Athens. The opulence, of which she was the centre, made her a favourite sent of pleasure and dissipation, as well as of trade and industry. Venus was her principal deity, and the temple and statue of the gordess were prominent objects in the Acropolis. Lais, the most famous of the pricstesses of Venks, though of Sicilian origin, selected Corinth as her favourite residence; and so highly was she esteemed, that a magniticent tomb (described by Pausanias) was erected over her remains, and medals struck in commemoration of her beauty! In consequence, Corinth became not only one of the most luxurious, but also one of the most expensive places of antiquity, which gave rise to the proverb-
' Non cuivis homint contingit adire Corinthum.'
Hor., Epist. i. 17.36.
The Acropolis is one of the most striking objects in Greece. It has some famous springs, and is in most parts precipitous. Livy calls it, 'Arx inter onnia in immanem altitudinem edita, scatens fonti-
bus' (lib. 45, § 28) ; and Statlus says, that it throws its shuclow over botlo seras-

- 'quanmmas enput Acrocorinthos in nuras T'ullit, et ulterna geminim mire protegit umibra.' Theb., lit, 7. Iin, 10\%.
If properly fortifled, it would remder all access to the Noren by land impracticable; anal as a fortress, it might be renilered not less necure than (iiltraltar. (Clarke, vi. Bif8, 8vo. ell.) It is, in fuct, one of the keys of Greete; nud was, therefore, uptly snill by the orncle to be one of the hurns which $n$ congueror should lay hold of to secure that valuable heifer the l'eloponnesus. The view from its summit is one of the most extensive, aul at the sume time richest in classical anoociatioms, of any in Greece. Athens is seen in the dlstance: and the eye wanders over six of the most celebratel of the Grecim states,-Attlen, Achain, Iheotin, Locris, Phocis, nul Argolis.
The goverument of Corinth, like that of the other Greeman stntes, was originally monarchical. It then became subject to the olignarely of the Bnechide, and was agnin, after a period of ninety years, subjected to kings or tyraits. Periander, the early part of whose relgn was that of a Titus, and the latter of a Tiberius, was the Inst of its sovereigns. At his death the Corinthians establishel a republlean form of government, inelining, however, more to aristocracy or oligarehy than democracy. It seems to have been judiciously devised; and the pmblic tranquillity was less disturbed in Corinth than in most Grecian states.

When the Achaeas beeame involved in a war with Rome, Corinth was one of their principal strongholds. Though the Roman seunte land resolved upon the destruction of the city, Metellus was anxious to avert the catastrophe; but his offiers to bring about a reconciliation, which might have saved Corinth, were coitemptuonsly rejected, and his deputies thrown into prison. The Corinthians suffered severely for this inconsiderate conduct. The consul Mummius, having superseled Metellus, appeared before Corinth with a powerfinl army ; and after defenting the Achuenns, entered the city, which had been left without any garrison, and was deserted by the greater number of its inhabitants. It was lirst saekel, and then set on tlre; and it is said that the necidental mixture of the gold, silver, and copper, melted on this occanion, furmishel the tirst specimens of the Corinthian brass, so much esteemed in subsequent ages ! Not satisfied with the total destruction of the city, the natives of Corinth who had escaped were carefully hunted out and sold as slaves, their lands being at the same time disposed of to strangers, imostly to the Sicyonians. The destruction of Corinth took place ame 146 n.c.; and it is worthy of remark that this also was the epoch of the destruction of Carthage, both these great cities having been sacrificed nearly at the same moment to the insatiable rapacity and ambition of Rome. Aceording to Strabo, the tinest works of art which ndorned Rome in his time had been brought from Corinth; but it seems pretty clear that many, if not the greater number, of these masterpieces had been destroyel. Polybius, who wis present at the destruction of the city, had the mortilication to see the Roman soldiers playing at dice on a picture of Aristides, a contemporary of Apelles, for which Attalus king of Pergamus subsequently offerel 600,000 sesterces, or nbout 5,0001 . of our money. . (Strabo, lib. viii, ; Plin. Hist. Nat., lib. $\frac{85}{5}$, cap. 4, dc.) We need not, indeed, be much surprised that the soldiers should have made use of such a dice-boarl, when we find the consul himself assuring the masters of the vessels se--
lected to convey the pieturea nad atatuen of Rome, that if my of them were loat or hujured, hag shonud compel then to supply others in their ateal at thecir own cost! (Velleius Puterenlus, libi cap. 13.)

Curinth remained in the ruinous state to which it had been reduced hy Mummius, till a colhaty was sent thither by Jullus Cisesmr. Under ita aner musters it once more became a considerable citr. $\mathrm{a}_{\mathrm{N}}$ is eyident from the account given of it br Phasanias (lib. ii.), nal is much distinguished in the gospel history. After theing sacked by Alatic, it cume, on the fill of the Eastern empire, into the possession of the Venetians. The 'lurks tork it from the latter in 1458; the Venetians, howere. retook it in 1687, but. lost it again to the 'Turk m 1710. It is now a principal place in the monardy of Argolis and Curinth, kinglom of Greece. Ft some time after the establishment of Greek inde. pendence, the city prospered, but it was almos entirely destroyed by an earthqume in 1408.
COLINTH (ISTIIMUS OF'). Where ne. rowest, about ti m . li. from Corinth, this celetrate istlumus is about 5 m . neross. The alvanta, ${ }^{\text {m }}$ that would result to Corinth, and to the connmete of Greece, by cuttling a caual or navigable clunnel through this isthmus, were perceived at a ven early period; nand attempts to accomplishl so bene ticial a work were made by l'eriauder, Demetrius Poliorectes, Julius Ciesar, and other Ronamem. perors: all of them, however, proved abortive thongh parts of the excavations are still visible This want of success has been variously accounted for; but we incline to think that it was wholy owing to the difficulty of the ground. The istlimic is ligh and rocky ; and at a period when the win struction of locks was unknown, the canal mus either have been excavated to the recuired level or been partly excavated and partly tumadled either of which operations would have been a but impracticable. As the next best resoure shipis were drawn by means of machinery fitu one sen to another; but it is clear that none bes the smnller class of vessels cduld be so conveyed

The istlimus has been repeatelly firtiticel The lirst instance of this of which we have any certain accounts took place on the invasion Grecee by Xerxes. It was afterwarls furtitiel by the Spartans and Athenians in the time d Epaminondas. During the decline of the Easten cunpire, the defence of the Peloponnesus phis:pally depended on this bulwark, which ws strengthened and renovated under Justinian. was restored for the last time by the Venetias. in 1696. (See Dodwell's Greece, ii. 185, and tin authorities there quotel.)
The 1sthmus of Coriuth was also famous in antiquity for the games celebrated there, ever: fifth year, in honour of Neptune and of l'alemid or Melicertes, with the utmost splendour and mar: niticence. They contimued in vogue atter tix Olympian and other public games hal fallen into disuse. After the destruction of Corinth the Romans committed the superintendence of the Isthmian gumes to the Sicyonians; but on is restoration by Julius Cessar, Corinth recovered its ancient presidency. Dr. Clarke discovered at tie purt of schenus, on the E. side of the isthms the remains of the temple of Neptune, the theatis stadium, and other public buildings, described ty Pausanias an co.nected with the Isthmial slemnities.

CORK, a marit. co. of Ireland, prov. Murster in the SW. part of the island, having S. : George's Chamel, E. Wnterford and Tipperam: N. Limerick, and W. Kerry and the Atlaniz Ocean. It is the most extensive of all the lind

freland, prov. Murster island, having S. k aterford and 'lipperim, Kerry and the Atlanti extensive of all the trin
cas, containing 1,260, ithis imp, acres, of which abuat one-third are unimproved momentain mad lugh. It has every variety of surfnee null soil; in the $W$. it is rugged and momntuinous, but the N . and E., dlatricts are cllstingulshed by their richness and fertility. There is a great defleiency of timber, otherwise the comatry would be eminently beautifal. Climate extremely mikl, but moilat. I'romerty prinelpally in very large entates. "fillage farms for the most purt small; those of latger size are frequently held in purtuership, of lave leen divided amongst the family of the ncrupant. Where such practices prevail, agriculture cannot bo otherwise than in a very backwari state. l'otntoes engross a great part of the attention and labour of the amaller chass of ocenpiers; and after them the gromind used to be sulbjected to a series of corm crops, as long as it was capable of bearing any thing. lhut an improved system bas been introluced of late yenrs on several large estates; and better implements and lireeds of enttle are now generally met with. Oats is the principal corn erop, but wheat is also extensively produced. 'There are extensive dhiries in the vicinity of Cork and in other distriets; and the exports of corn, flomr, provisions, mud other articles of agricnltural produce from Cork, are very extensive. The averuge value of land, per 100) ares, was 1081. in 1841 ; 132l. in 185) ; nud liaisl. in 1861. (Census of Ireland, part v. IN6t.) Different branches of the linen manufneture have been established at Cork and other towns, and there are mome large distilleries. The eonst of (iork is decply indented by the sea, and has nome olf the finest bays and harbours in the worlil, among which Mantry Hay and Cork Marbonr are pre-eminent. I'rincipal rivers, Lee, Bandon, Blackwater, llen, Funcheon, Brile, and Awheg. Principal towns, Cork city, Yonghal, Jhamlon, Kinsale, Mallow, Fermoy. Cork contans, exclusive of the city of the co., 23 baronies and 269 parishes, and returns eight members to the II. of C., viz, two for the co., two for the city of Cork, aud one each for the bors. of Youghal, Sandon, Mallow, and Kinsale. Registered clectors for co. 15,716 in 1861 . In 1841, the co. of Cork had a pilpulation of 775,360 ; in 1851 , of 565,754 ; and in leist of 464,697 . The pop. per aquare mile wis :966 in 1841 ; 225 in 1851 ; mid 189 in 1861 . Conecpuently the decrease of pop, from 1841 to 1861 anmunted to 107 per square mile.
Conk, a city and river-port of Ircland, prov. Mhaster, on the Lee, 11 m , above where it discharges itself into Cork harbour ; $136 \mathrm{~m} . \mathrm{SW}$. bublin by rond, and $164 \frac{3}{3}$ by Great Southern and Westem railwny, l'op. 85,745 in 1851 , and 80,121 in 1861. Cork is the third city of lrchand in respect of pop. and conmercial importance, and forms a co, in itself, having a lecal jurisdiction separate from that of the co. of Cork, by which it is surrounded. The co. of the city extends over 48,006 actes, of which 2,683 are comprised within its municipal boundaries. The city lies in the vale of the river Lee, and is surrounded by hills of considerable elevation, which render the climate muist, though not unhealthy. It owes its origin to a religious establishment foumded at a remote period. Previously to the arrival of the English, it was inhnbited by a colony of Danes, and then, and for a long time after, consisted of a single street in an island formed by the river. Lven so lately as the reign of Elizabeth, it is described as 'a little trading town of much resort,' but comsisting of a single street. After the revolution it began to improve, and at length, chiefly in consequence of its vicinity to Cork harbour, a principal place of rendezvous for the Channel tleet
during wars with lirance, and its being a grent nart for the supply of the tleets athl colonies with provisions, it rose rupidly to wealth and importance, until it became the second city of Ireland. The pop. in $18: 21$ nmomited to 100, tifs somis, anil in l831 to 107,016; after this period, in decline set in, and continued steadily to the present time, as shown in the statisties of popr. alove given.

The eity, situate on the river Lee, which here diverges mito several liranches, and lorms an island, is 11 miles inland from the entrance of the river into Cork harbour. 'The public bulldings are, the cathedrul, 6 parish churches, and 2 chapels of ense, 4 Ibman Catholie parochial chupels, 4 monnsteries, and 2 maneries, with a chapel attuched to eneh; 2 l'renhyterian, I Metholint, I Ihatist, I lmbepemdent, and 1 Friends' meeting-lomsen; the epincopal palace of the bishop of the consolidnted dioceses of Corh, Cloyne, and Ross; tho diocesan librury; the county court-house; the military harrack; the queen's eollege ; the connty and city prisons; the house of correction: the bunk of Ireland, provincial, national, ame savings banks; the north and sonth intirmaries; the lamatic asylum ; the custom honse; the commercial buidings; the chamber of commerce; and the Ruyal Cork Institution. 'I'he hend-ımartern and stafif of the Cork or southern militury elistrict of Ireland are stationed here. Near the city is it cemetery, after the plat of l'ere La Chaise, on the site of the old botaniegrilen. The New Whall is a picturespue public walk, $1 \frac{1}{2}$ miles in length along the S, lank of the river, from Albert (Qniny to the pier opposite the eonvent at Hackrock; mul the Murdyke, a publie walk, a mile in lengeth, on the W. of the eity. A park lus been enclosed, containing about 2.10 neres, extending firom the Victorin-rond along the sonth bank of the river to Hhackrock. Thero are 9 bridges over the river mad its branches; and in l'atriek. Street there is a handsome bronze statue to the memory of Father Mathew, the apostle of temperance.

The corporation cent: ists of the mayor, 16 aldermen, and 48 town evincillors. The momber of burgesses on the roll in the year 1804 wns 1, Ni00; and the revenue of the city in $1863,11,7931$. The borongh returns 2 members to parlianent; constituency 3,143 in 186 ă. The assizes for the connty and city are held here.
'I'he principal manufactures are tanning, distilling, brewing, iron foundries, gloves, ginghams, and friezes. The trade is extensive, chictly in grain, provisions, and butter; and there are 12 murkets in different distriets.

The harbour, pre-eminent for its capacity and snfety, is situate 11 miles below the city; it is 3 miles long, 2 broad, completely land-lucked, and capable of sheltering the whole Ilritish mavy. Its entrance is by a chanmel, 2 miles long and 1 broad, defended by batteries on each side, and by others in the interior. I'he upper portion extends for about 5 miles below the city to Inssuge, and this part since 1820 has been considerably deepened by steam dredging, so that vessels of 600 tons can unload at the quays, where at low water there is a depth of 7 feet. The tide flows up $\frac{1}{2}$ miles above the eity. Within the harbour are Great Island, Little Island, Foaty Island; Spike Island, on which is a bomb-proof artillery barrack, and where a convict depôt has been lately established for the reception of persons sentenced to transportation; IIawllowline Island, containing an ordnance depôt, and Rocky island, in which there aro 2 powder magazines, excavated from the rock. The number of vessels entered inwards in 181is was 375 - tomnare, 115,631 ; and the number cleard outwards, 93-tonnage, 28,691 . 'The Great

## CORK

Southern and Weatern railway connecta the city with Dublin. The Cork, Wlackroek, and l'assuge ruilway runs along the river through the eity park, from the romil nenr the Moneren marsh; the Cork, Handon, and Kinsale railwny terminates at Albert Quay; and the Cork, Queenstown, and Youghal, at Summer Hill.
The net ammal value of property uniler the Trenement Valnation Act is 122,1141, nund the property and income tax for the year ended bth April, isibs, amounted to 22,0 ishl. (Thom's Directory, 1865.)
The corporation derived its privileges from $n$ series of clarters, commencing with one from King John, when Earl of Morton and viceroy of 1 relnad. The mayor, recorder, and aldermen are justices for the city. The corporate business is trausacted by the court of common councll, composed of the mayor, recorder, sheriffs, and aldermen; and by the caurt d'oyer hundred, fiomed of the freemen at large. The mayor resides in the munsion-house, a large and elegant building on the Mardyke. The courts are those of the mayor and sherifts, which have jurisulietion in pleas to any amount alove 40s.; those of a lower rate are nujumbented in the court of conseience. The former of these courts sits weekly, as lues the city sexsions court, for crlminal cases. The mayor, sheritlis, recorder, and aldermen are the recognisel juilges of thene eourts; but virtually the recorder presiles. A poliec-othice, or magistrates' court, is niso held. The city court-honse is a tine buikting erected nt nn expense of $20,000 \mathrm{l}$. The prison is divited into 32 wards, besides day and work-rooms.
There is also a bridewell for the temporary eonfinement of persons under examination. assizes for the co., and one of the general sessions for its li, riding, are held here. The county gaol and house of correction are situated a short distruce from the eity. A female convict depôt, fir the reception of prisoners from all parts of the commtry, till the arrival of the transport ship to convey them to their destination, is in the $S$. suburb.
The foreign trale is carried on with Portugal, whence wines and salt are brought; with the Mediterranean, for wine and fruit; and with the Baltic, for timber and articles for naval equipment; timber is also imported from Halifax nud Cumath. The West Indin trule has declinell, in consequence of the grent facilities for supply from those colonies through the Einglish ports. During war, Cork harbour is a grent naval station, and the place of renalezvous for most of the out-ward-bound convoys. Naval arsenals and stores, which have now become noarly useless, having been abnadoned by the govermnent, though in the best state of preservation, were fitted up on its smaller islands.
The appearance and habits of the citizens of Cork are exclusively mereantile. The attempts that have been made to elevate the city in the scale of literature and science have not had that success which their more sanguine promoters anticipated; though they have probably succeedel better than a eareless observer might suppose. Some rather distinguished persons have been natives of Cork, nmong whom may be specified Arthur O'Leary, O'Keefe, Barry the artist, Maelise the artist, and Sheridan Knowles. The newer part of the city indicates an increasing stnte of prosperity; in it are the town residences of the wealthy merchants; while the adjoining country, for several miles round, is studded with their villas nud country seats. But, on the other hand, several extensive districts of the suburbs evince the existence of comparative destitution; lines of eabins being built and peopled like those in the sur-
ronnding rurnl villages. Hut improvement in not wlthatnundlug, anid to he advanuchag, even in those quarters lil which there is the greatert po verty, und where old hable noul prijuclieses an sure to linger lomgent. 'T he foun of the working classes consists chictly of potatoen, which in all but equivalent to maying thint their wages are low, and their condilitom alike degraling nad preparions: Several remuius of nutiquities, chiefly monastic, are to he traced, an are comsiderable remains of thi nucient walls, some parts of which are in a perfect state. Colins struck int a royal mint in the timen Edward I. have been occasiomally fommel.
CORLEONE, an inland town of Sicily, pome l'alermos, cay., dist., near the somree of the belini on the dedivity of a hill rising from a fruiffinh well-cultivated plain; 22 m . N. by W. l'alemm near the railway from lalermo to (iirgenti, i'tp 13,123 in 1861. The town is well buitt, and has several churches and convents, a royal collegea prison, and some other puiblic buidtings.
COINNWALL. a marit, co, of limplamd, forning the extremity of the SW. peuinsula, heing ever. where surfounded by the sea, except on the $\hat{f}$ where it nuljoins Devonshlre, from which it is se. parated nenrly in its whole length by the faame Aren, $851,2 t 10$ neres; of which about 650,000 me arable, mendow, and pnature. In many parts Comwall is ruggel and moorish; but though its gene rul aspect be bleak and dreary, it has mometus valleys of great benuty and fertility. The tmperature is particularly equal, being so far emmer somen in the Atlantic thit it is neither so colld in winter, nor so warm in summer, as the cos, muw to the E.. The winls, however, are very variable. and often violent; mad the nir being surcharyed with moisture, harvests are late, and fruit is inferig in flavour to that raised in the E., and midlandens The raising of corn and potatoes are the princind objects of Cornish agriculture, which has betn much improved of late years. Property muth livided and 'vexntiously intermixed.' Farms fn the most part small, nind held mader leave for 1 or 21 years. The principal wealth of Comwallis lerived from its mines of tin and copper. It in believed that the Phenicians traded thither for tin, and that the mines have been wrought ever since. The total quantity of tin produced in Comwoll amounts to about 5,000 tons a year. lite Cornish copper mines, though they were nol wrought, with spixit or success, till the begiuning of last century, are now become of great valia and importance. Their produce, which a century ago did not exceed 700 tons pure metal, amonnuiu at present to about 12,000 tons. The coppiper and tin mines number abwut 240 , giving empluymen to 60,000 persons. Ores of lead, antimony, matganese, \&c., are also met with. Gold is someines found in the stream-uorks, or places where the alluvial deposits are washed in order to promure grain tin. Silver is also found intermixel wrid the lead ores, and is extracted to a consideralik extent. Alout 5,000 tons of soapstone, and akatt 7,000 tons of China clay, are annually sliipped fo the Potteries and other seats of the porcelain manufacture. The miners and others engaged in the Cornish mines are under the especinl jurisdiction of the stannary courts: these were much improred hy a late act, and are said to transact the businas brought before them expeditionsly, chenply, and well. The oppressive duties formerly imposed ios the coinage of tin were repealed in 1837. The pilcharl fishery is extensively carried on along the Cornish coests, particularly at St. I ves, Mounts Bay, and Megavissey; and is a considerable sount of employment and of wealth to the co. lrime pal towns, Truro, Helston, Penzance, St. Tres

 and 369,304 ) in 1861. (ifosn anminal value of real property asmenhed to income tax-in onstapn divi-

 in 186i2. Comwall is divided into 9 lumitrets; 203 whole parishes, with parts of 3 others: 14 registry districts; 13 poor-luw unions; and 11 county courts.
COllo, a marit. eity of Veneznela, cap. prov, of the same name, in a sandy and arid plain, neat the head of lil Gufete, an arm of the dinlf of Maracaybo, 3 m . SW. the Caribbenn Sen, and 210 mm . W'NiW. Carnens ; Int. $11^{\circ} 23^{\prime}$ N., longg. $19^{\circ} 48^{\prime} \mathrm{W}$. Fistimated pop. 10,000. It is well sithated for connmeree, anil has had a considerable trude with the West India Islamls, especinlly Curnçon, in mules, goats, hides, sklins, cheese, and pottery; but this has now very much dwindled, nud the inhabitants are poor. The streets of Coro are regular, but unpaved, and the houses mean: the only public huildings are, two chirelies, a convent, several chnpels, and a hospital. I'he elimate is dry and hot, but not unlienltiy ; so preat, lowever, is the seareity of water, that it has to be brought thither daily, on the backs of mules, a listance of 2 m . Coro was the secoul Buropens settlement formed on this coast, and was considered the enuital of Veneznela till the transference of the seat of government to Caracas, in 1506 .
COROMANDEL (Cholomandela), COAS'T OF, forming the E , shore of $1 l$ indostun, from Point Calymere, lat. $11^{\circ} 20^{\prime}$, to the month of the Krishna river, $10^{\circ} 50^{\prime} \mathrm{N} .$, probably deriving its mame frum the Choln dynanty, who formerly ruled in Tanjore. It is destitute of any food harbonrs, and, from the great surf, it is usually difflenit anywhere to efleet a landing. The numsoons on this const are always in a contrary direction to those on that of Malabar. Frum the midalle of Oetober to the middle of April, winds from the NLi. prevail, during which period the storms are so violent and dangerous that all 13ritish ships of war are ordered to quit the coast by the l5th of Oetober. In the middle of April the SW. winds set in, and n period of great ilrought commences.
CORLEZE, a dép. of Frunce, reg. South, formerly part of the Limousin, having N. the teps. llaute Vienne and Creuse, Li. l'uy-de-Dôme and Cantal, S. Lot, and W. Dordogne. Aren, ö $86,(6 i) 9$ hectares. Pop, 310,118 in 1861. Surface hilly and mountainous. Its N. part is intersected by a monntain elonin, dividing the basin of the Loire from that of the Dorlogne. The latter, whiel nuns through the SE. part of the lép., is the only navignble stream, the Corrize, from whieh the dép. derives its name, being available only for rafts and boats. Climate comparatively cold; soil stony and inferior, except in some of the larger valleys. Heaths and wastes occupy more of the surface than the arable lands; snfheient com, however, chiefly rye and buckwheat, is grown for home consumption. Agriculture is in a backward state, partly owing to the obstinate attachment of the cultivators to ancient routine practices, and partly to want of capital, and to the minute division of the land. Chestunts, buekwheat, and potatoes constitute the principal dependence of a large pro-
portion of the pop. 1 and when these fall, the inhahitants sulfir severely. Vinegaris ocenpy nomut 10,201 ) hectares. Some of the winms are tolernhly gowsl, and though nog grent gimintity of wine lm prodiced, still, as few of the lalxurinig chassen cant athord to drink it, some in exported. 'I'les membows are extensive, nul considerible ummbers of oxen are penred for the l'aris market and the plongh.

 kilegr. of wonl. I'roperty much sulallvilled, there not leing in the whole rejp. noove a dozen jriopertien which pay a government tax of $1,000 \mathrm{ir}$ Corrèze las minues of coppur, iron, argentili rons lend, mitimony, mil eonl; but, with the exieption perlapis of cond at laphan, wone of them arn wrompht to any consldernile extont. Manufarturing liminstry is even in in lean prosperomes stato than arricolture. Thero la, however, a lareo gun manufnetury at 'Indrs, and a cotton mill at llrives. 'lulle is generally supposed to be that grand seat of the manufineture of the species of point lace ealled point de T'ulle; in point of lact, however, thery is not $n$ single lase-worker in the dip., nor has there been, time immemorial, a lace-frame in Tulle. Trade chletly In eattle, wine, poultry, agricultural prosluee, and truilles. The def, is clivided into threo arromes. Chief towns, Thlle, the cap., Ifrives, and Ussel. There exists a general nampe (for it is inconsistent with the lnw of Frame) in this dép., wherely tho eldeat som becomes entitled to a clear fourth of the patermal property, over and above an equal share with each of the other children. The peasnintry exlibit a remurkable dislike to enter the militury service, but prove afterwards very fool solllerts. Marmontel, Cnbmis, and Latreille were natives of this alép.

COHNHAM, a par. and village of Jingland, co. Wilts, hund. Chippenham; $\mathbf{9 8} \mathrm{f}$ m. W. London by Great Western railway, Pop. of par, 3,196 in 1861. The village, in an opelt pleasmit illstrict, 8 m . NE. Ihath, conslats chiefly of one long street of neatly-built honses, with a murket-honme near the centre, ereeted in 1784 . The church is n cruciform Gothic ntructure, with a tower. There are nlso two dissenting ehapels; and an nlmshonse, founded in 1688 , at present supporting six old women. A free school for boys and girls was buit by the Methuen fumily, to which the manor belongs; and who have a line mansion, with a groul collection of pictures, near the village. The mannfacture of woullens, formerly earriel on to a considernble extent, lins long been discontimued, arriculture being now the chief employment of the inhabitants. Sir R. Ibackmore, the anthor if various epic poems, now known only by the satirical allusions made to them by lope and other wits of the time, was a native of Corsham.
COLSLICA (l'r. Corse), a large island of the Mediterranean, belonging to France, of which it forms a dép.; between lat. $41^{\circ} 27^{\prime}$ and $43^{\circ} 1^{\prime} \mathrm{N}$., nud long. $8^{\circ} 37^{\prime}$ and $9^{\circ} 30^{\prime} \mathrm{E}$. Its S , extremity is $10 \mathrm{~m} . \mathrm{N}$. Sardinin, from which it is separated by the Strait of Bonifacio. Piombino, about $55^{\circ} \mathrm{ni}$. distant, is the nearest town in ltaly, and Antibes, 120 m . NW., the nearest proint in France. Shnpo somewhat oval, with a projecting appendage at the NL. extremity: length, $\mathrm{N}_{\text {. }}$ to N., 100 m ; greatest brealth, 44 m. ; area, 874,741 hectares. Pon. 252,889 in 1861.
'The E. shores of Corsica are generally low and sandy, and in many parts marshy ; the W. shores are more lofty, and indented with several extensjve harbours or bays, the principal of which are thise of Valineo, Ajnceio, Sagone, Porto, Calvi, and St. Florent. Corsica has several small islets,
equecinlly at its $S$. extromity. It in, genomblly ngeaking, hilly. A chain of momintilns thaverses it from lia N. II ita S. extremity, fir the minst part neareer to its W. Hane to ite El: coment ; he hiphest summita of thin chanin are Monte lionomilo, N, t till fi., null Monte I'(Oru (the Moma Aurens uf l'tulemy), $x, 700 \mathrm{f}$. nlwove the level of the seat. The dedivities of the eentrul clunin ure steep: it
 reppling in the lower hill ramges, and event there they are narrow. The phalins alome the E., comat manomiting to alsout $1-2$ lth purt of the whole surfince, thonghin rich mind idelisely puopted in the time of the lhmmos, are mow mosily abmilonerl. W'ere they dratined and entiventerd, iliey would he again, na of old, the leset part of the island. The mat Jurtity of the rivers rimi W... lant the two bargest,
 of them are mure torrente, mend none of them are mavigalife or minpted even fur rafte, hy reasim of their rapidity. There are a few insigniticant lakes in the centre of the indund; but the largent collections of waters are nome lugnues on the F. conast, a toprographical feature which this part of Corsica shares with the oppowite const of the Tuscan Maremme mad the Campugna di Roma. 'These stagrant waters remider the ailjneent. pirts minhealdy, giving rase to intermittent fevers, fre, similar to those of the correspomiling Italim whures ; but elsewhere the elimate is sultieiontly sulubirions. The tempernture of emuse varies with the elevation; in the low huds the mnximum is $010 \rho$ Palir., in the momatains the minimum is $25 f^{\circ}$ Finhr, The most prevalent winds are-the wriroces, or SE., wheh bringes rain; the N., whieh ulten brings snow; and the SW., which is commonly very violent. The aspeet of the comintry is, in the words of Hugo, 'a vast elevited region, the culnmating points of whech are eovered with show, surrounded by lower ranges of momatains, their summits lare, but their sides covered with thiek firests of flr and ouk; narrow and dark glens, through whieh roll impethons torechts; and here and there an isolated human linlitation, prechend on some solitary erag, like the innecessible eyrie of an engle. As we approach nearer the sea the valleys cularge, and whow traces of enl ture, und villages berin to enliven the banks of the rivulets ; the hill-sides are covered with olive, orange, and lanrel trees; while their tops are crowned with woods of chestnut, whone time-homoured trinks, notwithstanding the litte depth of soil they grew in, have attained an enormons size. On the sea-shores, obsenred by an unhealthy fog, ruinel habitations, corn-lands, makis (elose copses), and marsices alternate with each other, and the traveller hastens to quit this pestiferous tract lior a brighter sky and a purer nir uןon the uplaudy.' Granite, mica, porphyry, alabaster, and marble of varions eolours, serpentine, jasper, mad nallestos of remarkubly loug fibre, are plemiful in Corsica. The island probably contnins neither gold, silver, nor copper; but there is a vein of lead at liurbaggio, and iron mines are worked in severa! plates: the proluce of the last oceupice ten forges at Catalame, (Guarries of stathary marble aro worked; pipe-clay, emeralils, and globular masses of granite and porphyry are foumd; the last, which are prized as gems, have been litherto met with no where but in the bed of one of the torrents. There are an abundance of warm, mineral, and saline springs. The upper aoils consiat chiefly of decomposed granite and siles, with a small proportion of elaik mid other caleareons matters, and the remains of animal and vegetable substanees. In many parts the land is very fertile; agriculture is, however, in a very
hnekward state, and artitcinal irrigation almant miknıown.
1.maled property in Comsiea is extromely mbor divither, muld is almost nll ocelpied by ownen - Fior cemturies the laws have promoted an semal suceresiont nmomp childrent the thenowese, when rulem, aleettel this system, and the French has of snecerexion, which found Comien lin an extra. vignatly pmreelled state, has contirmed anil agkra. vatell it. The forents are remarkably flue, and abound with timber of the heat quality, nad which map
 but such is th: indolence of the inhab., that this momree of wealtin is compuratvely neglected. The makim, previontily nentionel, nre dense thickets of eystus, bay, w yrile, mnd thorn, which rapitly krow up on rict untilleci landa, into inextrlanlice masses of 3 to 12 fi . in hecight, and which, wiua burnt-the asuml mode of getting rid of themform almirable mamure. The orambe, citron, and pmomegramate grow in the open nir, and yidt excellent fruit. The olive is budly managel: hut mueh more oil is prolluecd than is required in the island, mad is therefore exportel. The vine is tolerally well cultivated in most of the cantons; and, notwithstanding that but little net is diplayed in the manufncture of wines, the red wine of Suri, and the white of Cape Corsica, are sefy Lood, and exported to the Continent. The cuth Lrown is not adequate to the demana, but its de. flciency is made up by the abmadant supply cliexthints. Vist quantities of honey are primuliced in the island. The honey has a bitterish taste supposed to be imparted by the abundance of box. woul and yew. A great portion of the immene qumutity of honoy consumed in France is supplined from Corsica. The ishand produced so much was in ancient times that the Romans imposed on it an amnal trilnate of $100,000 \mathrm{ll}$. weight. Subse quently the inhabitants revolitel, and they were punished by the tribute beligg raised to 200 , ino th weight amually, which they' were able to sumply. Wax is to honey in Corsica as one to tifteen, so that the inhabitants must have gathered 3,000, gut kilugrammes of honey. When Corsica bepane. dependency of the papal court it paid its taxes in wax, and the guantity was sullicient to supply the consmmption not only of the chnrehes in the cily of liome, but those in the P'apal States. Jrittang likewise supplies a great quantity of honey, hut of inferior quality to that of Corsica. The anmal value of the honey and wax proluced in Coxia is estimated at $5,000,000$ f., or $200,000 \%$. Tobacen, though little cultivated, is said to be preferable to that of France, and the mulberry and tlax axe grown with advantage. Cattle constitute the

In 1 Ïn3 Cornica wos divided linto two depart-ments-those of Golo and Liamone; but aince INIt those have been agnin moited; the seat of the prefecture is Ajaccio. i royal court is entab)lished in the capital; there are tive conits of orifinal jurivelictlon, one in each arromble, and three tribunals of commeree, viz. nt Xaceio, Ihastia, and lle-Rouse. There are no churches hut those of the Catholic estnbliahment in Consica $\ddagger$ the dep. is a bishopric sultragnu to Aix. Comien forms the lith military division of France: it contains ten fortresses,
In person, habits, and disposltion, the Corsicans bear a considerable resemblance to the natives of laily. They are brave, solver, and hompitable; but sulject to violent gusts of passion, and in the last degree revengefin ind inplacuble. This, in fact, is the distinguishing trait of their charneter, and has been supposed to indicate a peenliar ferocity of disposition. It appears, however, rather to have uriginated in the lomg-continued inisgrovermment of the Genoese, when the grossest corruption prevailed, and money or interest conld procure impanity for the most atrocious crimes. Under such cireumstances, the avenging of injuries became, as it were, a private cluty; and the Corsicna wonld have considered himself degraded who had not obtained that redress for himself that was denied by lnw. It is needless to point ont the sanguinary practices, crimes, and enormities to which such it state of things must necessarily lead. The improved and more vigorous grovernment introduced by the Fronch has, however, done a good deal to lessen the temptations to vengennce; though it will be long before the passion be wholly subdued

 and sea-port of Sumeliern Italy, prov. Catanzario, enp. diatrlet and cont., near the mouth of the linaro (an. SEsurus), on the Ionian N'u. I'川. 5,910 in 1861. The town is nurrommed by walls nud defended by a sirong eitadel. 'The latter f'ronts the sen, and is мeparated from the town by a ditel and irawhrige. It has a enthedral and nevernt other churches, 2 convonte, a seminary, and 2 hospitals. The harbour is protected on the S. by the projecting tongote of land ont the side of whial tho town is built, and on the N. by a mole; but it is too shallow to mimit of vessels of considerable size, und is not very sufe.

Cortomn was once one of the richest, most pophe lous and powerfal cities of Marpan Grivcia. Vorions necounts have been given of its origin, lint it is nuflicient to say that it was founded by emigrants from Grecce nt a very remote period. It sperelily rose to eminence. I'ythagoras resinled here for in considerable period after leaving Sumos; fombled a very extenxive school; mid is suid, by his example and his precepts, to huve eflected a vory consideratile change in the manners and eonduct of the inhab. It had nlso al celebrated sehool of medicine. Ancient writers have praised its invigorating air, which was said to give sulperior Ntrength to the men, and bematy to the women, Milo, fimoms alike fur his smecess as a wrestler ut the Olympian and P'ythinn games, mind for his tragrical end, wis a mative of Crotona. It prodnced many other celebrated wrestlers, so that it beeame n proverhind saying, that the last wrestler of Crotoma was the tirnt of the other Greeks. (Strabo, ii. 21;2.) The morle which Zenxis took to paint. his famons pieture of llelon is a suthicient compliment to the beauty of the fair Crotomeans. ('The curions reader will flad this subject thoroughly disenssed in 1Bayle, art. 'Kenxis.') In the thiril year of the 6 th Olympind, some exiles from Sybaris, having taken refuge in Crotonn, the latter, on refusing to give then up, was attacked by 30,000 Sybarites ; and though the Crotoniats are said to have been able only to bring 10,000 men into the field, they grained a complete victory over
the Sybmriten, mull rook and wheched their city. (Anedent t'miveranl Ilintory, vi. 121 , Nvo. ellit.) Ilut their sunceen in this cumatliet in maid to lave lwen followed by a renewal of that corronption of morala whish l'y flugesuras hand donem no murli to. eorrect, num by a decline of the marting virtuen. Syout 6 m . Sli, From Crotoma, at the extremity of the narrow jrujecting tongue of hand, buw called Capo Nai or Velle Columne (the Laciniam Promonduriem of the ancientn), stised in famous temple of Junu, hence frequently callen liva Jarimia. It is snid by Livy to be matile trmplum, ipmit urbe nutrilius. It was of great antiguity, was aurrounded by magndilicent groven, and wan held In surh venerntion that it was munilly remurted to lyy erowids of pilgrime from all parts of lanly nund iirecee. The lielen of Zeuxis was placed, with many other articlew of great rarity nul value, in thin sncred ediflce, whome snnetity was respected tuoth ly P'yrrhus and Ihunibal. Lhut sueceedling conquerurs have had tess firbearmuce; and a solitary Doric collum in now all that remmins of this once venernted and apleadid edilice.

Contona, a town of Centrni Linly, prov. Firenze, on the declivity of a steep hill, wheh commnuda a magnithecut prowpect of the Thranimene lake, the momutains of liadieofnini, and the wile and variegatel vale of Chinin, bit m. SE. Florence, and 22 m . NW. Perugia, on the ruilway from Fhorence to l'erugia. 1'op. 27,960 in 1861. This, which was one of the 12 principme cities of Etrurin, is supposed to have been founded by the l'elasgi, and is probably among the most ancient towns in ltaly. 'Its original walle still nppenr round the city, na foundations to the molern, which were built in the 13 th century. Those lit rusenn works are most entire towards the $\mathbf{N}$. Th eir huge, uncenented blocks liave renisted, on hat side, the aturms of near 3,000 winters; while cu the S. they hanve yielded to the silent erowion of the givoced. None of the stones run paralled ; most of then are finced in the form of trapezits; some are indented und inserted in each other like dove-tnil. This construction in peculiar to the ruins of Tuscany: it is far more irregular, and theretore, 1 previme, more ancient than the Etruscan work of Rome, No part of thene wallm is fortitiel.' (Forsyth's Italy, p. 99.) The town is commanded ly a cantle built by the Medici, on the summit of the hill on which it stands. It has a cathedral, which posseases some tine works of nrt, several uther churches, and a theatre. There is a temple of Bnechus, and the remains of nome baths ornamented with mosaic work. Next to the city walls, however, the most interesting relic of antiquity is a small sepulchral chamber a little below the town, lormed of harge blocks of sandstone, the construction of which proves that the architects of the

Fimumenn periocl were aequainted with the prin. cigle of the nech. Cortoma in the remilane of himherp! it has nit exclemiantleal atri! minise othef neminarien, and was the seat of the litrusem ara-

Chief towns St. Brleuc, the eap., Dinan, Guln. gnmp, Lannion, and Loudenc. The Bhy-Mretonis the language commonly spoken, but most of the upper classes undentanil French. Many Celtie nud Roman antiquities are seatteredi over this dep of which the temple of Lanleff is the principal.

COTIIEN (Germ. Köthen), a town of Central Germany in the duchy of Auhalt, on the Ziethe, 76 m . SW. Berlin, and 33 m . NW. Leipzic, on the railway from Leipzie to Magdebirg. Pop. 11,112 in 1861. Cbthen is divided into the old and nem town, and is well bullt. Among the public builid. ings are the old ducal palace, with a gallery of puintings, cabinet of naturul curlosities, and a good library ; the new duend Schloss-former msidence of the reiguling firmily of Anhalt-COthen, which became extinct in 1847-three churches, a synagogue, orphnu and female nsylums, a tenchen' seminary, and a sehool for the indigent. Goldand silver lace, woollen eloth, linens, tolneco, and lea. ther are manufnetured here; and there is some trade in corn, butter, cheese, and wool.

COTOPAXI, a celebrated voleano of S. America, in the republic of Ecuador (Colombin), belouking to the E. or more inland chanin of the great Corliilern of the Ancles ; in lat. $0^{\circ} 40^{\prime} \mathrm{S}$., a.ad loug. ivo $39^{\prime}$ W., 34 m . SSE. (Quito. Its shape is a perfect cone; it consists chiefly of mica, hut in part of olsidian; its absolute height is $18,878 \mathrm{ft}$. ahare the level of the ocenn, the upper 4,400 of which are covered with perpetual suow. Its summit is not more than about $9,800 \mathrm{ft}$. alove the great longitudinal valley hetween the two clanins of the Corilillera; but such is its steepness that lumboldt was unnble to aseend it above the point at which the perpetunl snows commence. The crater appears to be surrounded by a kind of eireulat wall, whieh, especially on the $\mathbf{S}$. side, has the aspect of a parapet ; and, probnbly owing for the most part to the heat, this summit of the cone is never covered with snow, and looks at a distance like a dark stripe. On the SE. side of the mountain, near the snow-limit, there is a comparaticely small projecting mass of roek, studded with piintis, and called the 'Head of the Inen' by the Jndians, who have a popular tradition that it formed onginally a part of the summit of Cotopaxi. Humboldt himself inclines to the belief that the cone supporting the present crater, like the somma on Vesuvius, is composed of a great number of strata of lava heaped upon enel other. 'Cotopaxi is the most dreadful voleano of the kuugdom of Quite, and its explosions are the most frequent and diastrous. The mass of scorix, nnd the huge pieces of rock thrown ont of this voleano which are spread over the neighbouring valleys, covering a surfice of several square lengues, would form, were ther heaped together, a colossal mountain. In 173í, the flames of Cotopaxi rose nine hundred metree (41 furlongs) above the brink of the crater. In 1744, the roarings of the voleano were heard as far as Honda, a town on the borders of the Magdalena, and at the distance of 200 common leagues. On the 4th of A pril, 1768 , the quantity of nenes gigetell was so great that in the towns of Hambato and Tacunga dny broke only at three in the afternoon. The explosion that trok place in the mouth of January, 1803, was preceded by a dreadful phenomenon, the sudden melting of the snows that covered the mountain. At the port of Guayaquil, 52 leagues distant in a straight line from the crater, we heard day and night the noises of the volenno, like continued discharges of a battery; we rlistinguisherl these tremendous sounds even on the Pacific Occan, to the SW. of the island of 1'una.' (Humboldt's Researches, English trans, i. 115-12\%.)

COTTIUUS (Germ. Kutthus), a town of Prussin, tov. Brandenburg, cap. circ. same name, on the pithree, 42 m. S. by W. Frankfurt-on-the-Oder, aind Nitree, SES. Herlin, on a branch line of the railwny from llerlin to llreslan. 1'op. 11,112 in 1861. The frounn is walled, and has four churehes, two hospithils, a gimusaium, and library, an orphan asylum, taul a girls' scheol. It has three sulburbs, ind is ammanded by a castle built on a height to the E. conthus is the sent of the councll for the eire., caul of a nunicipal court. There are considerable fallrics of woollen and linen stuffs and stockings, with breweries and distilleries. This town was with brewerie l'russin by the congress of Vienua,
made over to maderionsly to which it belonged to Saxony.
COIE OF COLSK. (See Qumesstown.)
Coventry, a co, and city of Eugland, within he co, of Warwick, 10 m . NNE. Wurwick, 18 m . h.SE. Birmingham, 85 m . NNW. London, and 94 fi. by Loutdon and North Western railway. I'op. of mun. city 40,936 and of parl. city 41,617 in wwi. Coventry stands on a gentle declivity on the $X$. Western railway, and is watered by the thalford and Sherborne l,rooks. Streets of the dald town (with the exception of Cross Cheaping, where the splendid cross formerly stood, and which is now used as a corn market), generally narrow and ill-paved, and the upper parts of a few of the houses, which are high, project nud present a sumbre appearance. Within the last forty years, lowever, the suburbs have been considerably extended, several new lines of strects laving leen hiild out, nul many new houses erected. The principal buildings are, St. Michael's chureh, one of the tinest specimens of the lighter Gothic in lingland, with a beantiful steeple, 303 f. in hieight; St John's and Trinity cluurches, Christ Church, attached to the old and benutiful spire of the Greyfriars' monastery ; a Catholic chapel; several dissenters' meeting-houses; the county hall, crected in 1785 ; St. Mary's hall, erected (llenry VI.) for the Trinity guild, now used for meetings of the town cosincil, and public concets; a neat and commolious theatre; the drajershall; the caual office; the free school; the grol, and the barracks. Coventry was, conjointly with Diehtield, the see of a bishop, but on the recommendation of the ecclesiastical commissioners, it las been joined to the diocese of Worcester.
Under the Municipal Corporation Aet the city divided into six wards; and is governed by a mayor, 10 aldermen, and 30 counsellors. The jurisdietion of the corporate nuthorities extends wrer the city and the co. of the city, inclucling, in all, an area of 15,070 acres. The recorler holds scourt of quarter sessions, and a court of record fit the recovery of debts to any amount. The theriff holds a county court monthly. Coventry lins regularly sent 2 mems. to the H. of C. since 1433. Previously to the Reform Act the right of rotiug was exclusively in the freemen of the city whe had served a seven years' appenticeship in the city or suburbs. Registered electors 5,576 in DV6.2. The limits of the parl. bor. correspond with the ancient limits of the pars. of St. Michael and the Foly Trinity, except that it does not inclute the hamlet of Kercstey. It embraces an area of 4,920 acres. The municipal boundary is co-extelsive with the co.
Coveatry has been the seat of 12 parliaments: oue (Henry IV.) in 1404, called, from lawyers peing excluded, parliamentum indoctum; the vther (Henry VI.) in 1459, called parliamentum Hiablicum, from its numerous acts of attainder. The city was incorporated by Edward III., and the first mayor chosen in 1345. It was erected futo a county by Ilenry Vl., with the hamlets
belonging thereto, and lylng within the vill, or township.

This city has many extensive and well-endowed charities; of these, one of the most celehruted is the free school, fuunded by John Hales in thes relgn of Henry VIII., in which the celebrated antiquary, Dugdale, receivel the early part of his elucation; it has a revemue of 8oow. a yeur, and exhibitions to both mivensities. Ilere are also varlous charity, nutionnl, and infant schools, as llonds' hospital, at llabluke, for 45 old men, with a revenue of 1,0501 . n year; and Whentley's selool and hospital, at the same place, for 40 poor hoys, with nearly finol. a year; Ford's hospital, in Grey-friars-lhac, for 35 old women; Fairfin's school, in St. John's par., lor 40 boys; Mrs. Catharine Bniley's school, in St. Michael's par., for 35 boys; the Blue Cout school in Trinity par., for 50 girls; White's charity, amounting to nhout 2,5001. per annum; and the House of Industry, formeriy the White-driars' monustery. A library was establinhed here in 1791; it is reguiated by a committee. A mechanics' institute was founded in 18:28. Here is ulso a society for the diflision of religious nud uscful knowledge; general nad self-supporting dispucusurics, and a public hospital.
l'reviously to 1436 , woollen eloth caps and bonnets were an iouportant article of manufacture. In the enrly part of the 1 ith century, Coventry hecume famous for the production of a blue thread, called 'Coventry true blue.' But this was given川, before 1581, after which woollen and bromd cloths continuel the staple until the destruction of the Turkey trade in 169. The manufacture of striped and mixed tammies, camlets, shalloons, and calimancoes, flourished during a part of the last century, but is now almost discontinued. This was succeeded by silk throwing and ribant weaving, now the staple business of the place, and wateh making. When first introducel, about a century and a half ngo, the riband trade was for some time contined to a few hauds, but it afterwards inereased so as to exceed that of every other town in England. The alteration of the law as to the silk trade in 1826, and the commercial treaty with France of 1860 , though productive of considerable loss and injury at the time, have, by introducing a spirit of competition, and stimulating the manufacturers to call all the resources of science and ingennity to their aid, been the causes of grent improvenent. Late-strings may now be purchased more cheaply in Coventry than in France. Plain goods of English mautacture are fully equul to those of the French; but the Intter have the advantage in style and fashon, and in the brilliancy, though not in the permanency, of their colours. It is the general practice for the work to be given out to se excentel in the houses of the workmen. The manufacturers employ girls and young women, who work together on the premises of the manufacturers, in winding and warping the silk for the out-door weavers. In 1839 it appenred, from the report of Mr. Fletcher to the commissioners of inquiry into the condition of the hand-loom weavers, that the operative loom owners in the city and suburban villages lield 3,967 looms, of which 3,145 were worked by members of their own families, and the remaining 822 by journeymen and half-pay apprentices. It further appears from the same report, that 27 master manufacturers employed in loom shops or factories 1,862 looms. No official report of the state of manufactures in Coventry has been made since that time, and it is probable that no great changes have taken place. Large quantities of ribauds are exported but the prin-
cipal demand is for the London and country markets. There are several large dyehouses, fir dyeing the silk, employing from 800 to 500 hinds.

The manufacture of watches was introduced about a century ago, and has continued progressively to increase. Large quantities arc prepared for the home and foreign markets; some manufaeturens employing, when the trade is in a state of activity, great numbers of hands. 'The wages of the workmen vary from 15 s , to 70 s . per week, the larger amounts heing paid to those only who are proticients in working at the patent lever and other superior watelies, which are now produced liere equal in quality to thise made in Lomdon. Coventry is advantageonsly situnted for eominercinl operations, lying nearly in the centre between the four greatest ports of the country-London, Bristol, Liverpool, and Hull, and laving direct communicatlon by railroads and canals with the metropoiis and prineipal towns in the kingrlom. Corp. revenue, 14,988 in 1862. Gross amual value of real property assensed to income tax $120,9312$. in 1857 , and 167,3421 . in 1862 .

During the monastic uges, Coventry had a splendid monastery, and a large and heautiful enthedral, similar to that at Lichtield. The latter was destroyed by a larbarous order of Henry VIII., and only a few fragments of it now remain. The city was formerly surrouncled with walls of grent strength and grandeur, with 32 towers and 12 gates. It has been always renowned for its pageants and processions, and particularly, in the monastic ages, for the performance of Mysteries. The legend of I'eeping 'Tom, ant the Lady Gotiva, is too well known, throught the exquisite poem of Tennyson, 'I waited for the train at Coventry,' to require any special notice. An effigy of the over-inquisitive tailor may be seen in the upper part of a house at the corner of IIertford Street. The tradesmen of Coventry were formerly famed for their aflluence. In 1448 , they equipped 600 men armed for the public service. Many eminent persons have either been born or bred at Coventry, among whom were, Nehemiah Grew, curntor, in 1672, to the Royal Society for the anatomy of plants, and in 1677 , sec. to the Royal Society. Coventry gives the title of earl to the descendants of John Coventry, mayor of Lomion in 1425. Market-days, Wednesdays and Fridays. The principal fair, held first Friday after Trinity Sunday, is called Show Fair, and continues eiglit days, on the first of whieh the representation of the countess Godiva's procession is sometimes enactel.

COVILHA, a town of Portugal, prov. Beyta, on the E. slope of the Sierra de la Estrella; 20 m . SW. Guarda. I'op. 6,158 in 1858. The town rises amphitheatrewise between two streams. In the upper part there is an antique castle and tower, and in the lower part, on the margin of one of the strcams, is a manufactory of fine cloths, druggets, and baizes, carried on by a company in Lisbon, containing above 120 looms. There are nine churches, with a hospital and $t$ workhouse.

COURLAND, a government of Ruscinin Europe, on its W. frontier, having N. the Gulf of Riga and Livonia; E. the gov. of Witepsk; S. that of Wilne, and a small portion of Prussia; and $W$ the Baltic. Area about $10,000 \mathrm{sq}$. m. Pop. 553,300 in 1846 , ard 567,078 in 1858 . Near Mittau, and along the shores, the surface is flat, and is overspread with marshes and sandy heaths; but the interior is mostly undulating, there being a chain of hills along the bank of the Duna, which sends ramitications over the whole country. The Duna forms the E. and a part of the N. boundiary: the other prineipal rivers are the Aa and Vindau. There are
many lakes. Speaking generally, the atmonphem is damp, the aky cloudy, and the temperature hor and variable. Soil generally light and sandy, nequiring much munare; it is most fertile towands the E.: two-flfths of the surface is occupied by forests, chletly of pine, itr, bireli, alder, with a considerable intermixture of oaks. Agriculture is the priscipal occupation of the people, and notwith. standing the badness of the soil, has advanced more than in any of the neighborring provs. More corn is grown than is necessary for home consump tion; it is chietly rye, barley, and oats. Flax and hemp, and a few fruits and pulse, besides a little tobacco, are also cultivated. Pasturage is scarce, and but few cattle are renred; the oxen and hose are both of a bad quality, and the sheep yield onls a coarse species of wool. Bees are kept only toi tritling extent. Iron, lime, and turf, and occasionally amber, are fombl. Manufactures quite insigniticant, and mostly domestic: in respect to them, Courlani ranks nearly last amongst the Russian govs. There are a few of paper, coppes articles, anil earthenware, and some brandy dis tilleries and tile factories. Mittau, the cap., is the only town of any size: the principal sea-purts an Leban and Vindan, hoth on the W. coast. The exports, whieh are prisicipally corn, thax, hemp and hemp-seed, skins, and salted meat, are said io amotunt to about $2,500,000$ roubles a year, and the imports about 600,000. The inland trade is almet entirely in the hands of the Jews, of whom there are about 20,000 in the gov. Most of the poptare Lutherans, and of Letion origin. Courland was anciently a part of Livonia, and was coniquered in the 13th century by the Teutonic Knights; in 1561 it became a fief of Poland. After the fall of that power, it remained for a short time independent under its own dukes; but in 1795 it ws united to Russia.

COUR'THAY, or COURTRAI (Flem. Koringh, Lat. Cortoriacum), a fortified and manufacturing town of W. Flanders, 17 m . S. Ypres, $25 \mathrm{~m} . \mathrm{s}$ Bruges, on the railway from Ghent to Toumar. Pop. 24,652 in 1856. The town is situated on the navigable river Lys, by whieh it commanicates with the principal towns of Flanders. Houses well built; streets spacious and remarkably elran. The principal public buildings are the town house and the cathedral of Notre Dame, which are tine dd Gothic edifices beautifully ornamented. The churd of St. Martin is also a handsome structure. There is a nunnery, a collegiate sehool, an excellent arademy of design, two orphan asylums, a saving bank, and an exchange and a chamber of commerce. The spinning of linen thread, and the weaving of plain and damask linens, employ 1 large portion of the inhabitants. The fine linens of Courtray are known throughout Europe. Nearty all the weaving is performed on the hanillow it home, and much of it by cottage farmers. The annuul quantity of unbleached linen brought to the Courtray market is about 30,000 pieces, trothirds of which are bought by the merchants of the town, and the rest by those of Belgium, France and England. The spinning of eotton yarn, and the manufacture and dyeing of various cotto fabries, constitute an important branch of industry. Courtray has also establishments for the manufacture of suap, candles, salt, tobaeco, chicory, chowlate, oil, wax, paper, and pottery; besides numerous breweries and tanneries.

The surrounding plain is abundantly productire of all kinds of field and garden erops, especially tlax, of which immense quantities are grown of the finest lescription, and the vieinities of the town are picturesquely varied by numerous bleaching fields. Courtray was first built in the 6th century.

It Tas anciently known under the name of Corfornacum, and in the 7 th century it was a minicipal city. Jike the other towns of Flanders, it has been subject to many vicissitudes, has sustained severnl memorable sieges, and been burnt anil plumilered in war. Under İts walls was fought, in 1302, the fanous battle of the Spurs, between 0,000 Flemings, consisting chiefly of weavers of fihent and 13ruges, and a French army composed (f7,000 knights and nollemen, and 40,000 infantry. In this contlict the flower of the French chivalry was slain, and the victorions Flemings collected from the battle-field about 6,000 pairs of gold spurs wom by their prond and defeated foes. Among the antiquities that have been found, are numefons medals of the Cesars. Fairs for all kinuls of merchandise are numerously attended on Easter Nonday and Aug. 24.
COL'TANCES (an. Comstintia), n town of France, dep. La Manche, enp. arronl., on a hill on the $N$. bank of the Soulle, $6 \mathrm{~m} . \mathrm{E}$. from the sea, nul 16 m. WSW. St. Lô. Iop. 8,06i2 in 1861. Streets narmor, steep, and ill-paved; honses mostly of narron,
ktone, rofed with slate. It contains several old churcies worthy of notice, especially a Gothic enthedral, laving two spires in front, aud a large square tower surmonntiug the centre of the cross; it is a conspicuous olject, and a landmark for ships in the Chamel. The town has a bishop's palace, a communal college, a public library with 5,000 rolumes, and a small theatre. Druggets, cutlery, and parchments are produced here; it has also marble-works, ant a brisk trade in corn, butter, paultry, flax, hemp, and horses. In its immediate vicinity are the remains of an ancient aqueduct, with many of the arehes still very perfect. Coutances was the birthplace of the Abbe de St. 1 'ierre.
COWES (WEST), a town and sen-port of England, co. Ilants, Isje of Wight, liherty West Medina, par, Northwood, $75 \mathrm{~m} . S W$. London, 10 m . II. Jortsmouth, on the aeclivity and summit of $a$ hill rising immediately from the W. bank of the Medina, at its embouchure in the clammel between the lsle of Wight and the opposite coast of Ilampshire. Area of par., 4,270 acres: pop. 4,091 in 1861. Streets narrow and very irregular; but, as the houses rise above each other from the water's elge to the summit, they have a striking effect, many of the upper and more andern ones being bandsome structures commanding splendid and ex-. tensire views. In the immedinte neighbourhood are numerous clegant villas. The town, which is mouch resorted to as a fashionable sea-bathing place, possesses ample accommodations for visitors, in hotels, lorlging-houses, assembly-rooms, and rearling-rooms. A crescent-shaped battery, defending the entrance to the harbour, has some hany piec $: 1$ of ordnance and accommodation for acompany of artillery. E. Cowes, on the opposite side of the river, $\frac{3}{4} \mathrm{~m}$. from W. Cowes, is a small iregular built hamlet, of the par. of Whippenham, at the foot of a hill. Pop. 1,954 in 18161. Here is the custom-house of the port. The harbour and roadstead of Cowes are amongst the best and most envenient in the English Channel, and form the rendezvous of the Koyal Yacht Club, and the station where their annual regatta is held. Many merchant vessels and yachts are built in the harbour. Many large ships, outward or homeward lound from or to London, are accustomed to tonch at Cowes before proceeding on their voyage. It has also a considerable consting trade. The exports consist chiefly of agricultural produce and mait; the imports of eonls, manufactured goods, rolonial produce, and other articles of general consumption. There are hourly steamers to l'ortsFion II.
mouth anil Southampton, and passage boats to Newpirt, up to which the tide tlows.

CKACOW, $n$ small aul formerly-until Nov. 16. 18:ti-a nominally independ, state of Central Europe, once part of the k. of l'oland, at the present time a circle of Galicia; between lat. $50^{\circ}$ aud $50^{\circ}$ $16^{\prime}$ N., and long. $19^{\circ} 8^{\prime}$ aud $20^{\circ} 12^{\prime} \mathrm{E}$. Latugth, E. to $W$., 46 m . ; brealth varying from 5 to 15 m . Area, 488 нr. m. Surface generally undulating, consisting of the last ramifications of the Carpathian monntains. The Vistula, which bounde it on the $S$. in its whole extent, receivesseveral small streams from the N . in this part of its course, one of which, the Brinica, forms the W. bonudary of the Cracow territory. Climato healthy and temperate; mean aunuai temp. $472^{\circ}$ Fuhr. Soil very fertile, producing sufficient corn for home consumption, and an abuudance of pulse, culinary vegetables, and fruit. The territory contuins rich mines of conl, vinc, and alum; some iron is als: found; and there are quarries of marble, building stone, and freestone. lly the third partition of Poland, in 1795, Cracow passed under the dominion of Anstrin; but it was reconquered by the l'oles in 1809, and incorporated with the grimed ducliy of Warsaw. At the Congress of Viemm, in 1815, the territory was ereeted into an indejendent neutral republic, under the protection of Russia, Austrin, and I'russin. Aprecably to the nmended constitution of $18: 33$, the government was vested in a senate composed of $n$ president nonl eight senators, two of whom were elected for life, and the other six, as well as the president, for six yoars. One of the latter was elected by the clergy (chapter) of Crncow. 'There was a legislative chamber connposed of two senutors (one of whom, chosen ly the chamber, presided at its deliberations), 4 justices of the pence, 2 delegntes of the clergy, i of the university, and 20 representatives, chosen by the clectoral colleges of the city and territory. This assembly was convoked every three years to vote the budget, to inquire into the administration of the public funds, to elect the members of the sennto and the different tribumnls, and to discuss the laws presented for its sanction by the senate. Hut from 1826 to 1846 the territory was garrisoned by Austrian troops; and at the latter date, as alove stated, it was incorporated into the Austrian empire.
Cliacow (an. Carrodunum), a city of Central Europe, previously to the 17 th century, the metropolis of the k . of I'oland; on the N. bank of the Vistula, where it is joined by the Kulawn, 160 m . SSW. Wnrsaw, nud 200 m . NE. Vienna, on the ruilway from Vienna to Lemberg. Pop, 41,086 in 1857, excl. of garrison. The city is divided into three portions, one of which, the Jews' quarter, is built on an isl. in the Vistuin. The city has, besides, several suburbs. Cracow has near it Mount Wawel, a rock of moderate elevation, but eonsiderable extent, on which are the eastle and cathedral ; and two barrows, said to be the burial-places of the founder of the city and of his daughter Venda. The city itself is old, and irregnlarly built; but its streets are broal, and its churcles and other public buildings, having many of them interesting monuments, and being associated with some of the most important events in Polish history. invest it with much interest. It was formerly fortitied, but the ramparts have been converted into public walks. The royal castle of Cracow, built in the 14th century, and formerly the residence of the kings of Poland, thongh not in ruins, is greatly deenyed. It has been partly destroyed by fire at ditlerent times, and imperfectly restored; but it has suffered more from the effects of war, having been in great part demolishod by Cliarles XII. in

1702, and still more from its change of masters : at one the it was used by the Austrinns fur barracks, and now serves for it workhonse. Of the 76 churches formerly in Cracow, ahout 40 are in ruins; the enthedral alone lias retained its splendour and eostly ciecorations, for which, and for lts monnments, it is celebrated. Around itr interior are 20 smnli chnpels, crowned with domes in the liyzantine style. Most of the l'olish kings and many illustrious men are buried in it; ameng others it contains the tombs of Casimir the Cireat, of John Sobieaki, the deliverer of Vienna, and of the 'last of the Polen,' Koscinsko and Ponintowski. 'The other churches and pulaces have the paintings, statues, and ancient monuments. The episcopal palace is the most striking of the moleru editlees, its walls being alomed with paintinge in fresco, representing the most remarkable events of Jolish history.

I'lie university, fonnded and endowed hy Cnsimir the (irent, and improved by Lallislaus Jaghellon, has lost most of its ancient importance. Cracow contains a college, a school of arts, an neademy of painting, a public librury with 30,000 vols. and $4,500 \mathrm{MSS}$. , an observatory, and a botumical garden. The articles of export and import eonsist principally of skins, linen, wax, eorn, wood, Hingarian wines, and mannfactured articles from Fingland and Germany.

About $n$ league $W$. of the city is an artificial :amulus crected to the memory of Kosciusko. - On the 1 tith of Oct. 1820, the sennte of Cracow, accompanied by vast mumbers of the nobles and the people from all the adjneent provinces, proceeded to deposit the first load of earth upon an eminence not far from the walls of the city, which had been sclected to bear a mountain tumulus in honour of the patriotic gencral. For four years this great work was engerly pursued; citizens of every rank toiled at the wheelbarrow; parcels of the sacred soil were sent to join the mass from all the great battle-tields which had been sprinkled with I'olish blool; and the mound gradually rose to an altitude of nlont 150 ft . This monument of clay, planted on the soil which has been most frequently and grievonsly convalsed by political revolutions, will probably maintain its place as long as the world is habituble by men. Of all the structures of our age, if structure it can be called, this alone seems raised for all time-a thing lasting in itself, lasting by the name it bears, and lasting by the spirit which made it, when thuse who raised it shall all be scattered in uncollected dust.' (Reeve's Sketches of Bohemia.)

The city is said to have been built about the year 700, by Krak, a Polish dluke, from whom it derivel its name. It successively belonged to the Moravians and Bohemians, and was taken from the latter at the end of the 10th century by Boleshus the Great, who made it the cap. of Poland. In the 16 th century it contained three times its present number of inliab.

CRAlL, a royal and parl. bor. of Scotland, co. Fife, 2 m . from the East Neuk of Fife, or Fife Ness. Pop. 965 in 1861. It is a decayed place, destitute of trade or manufactures. Many of the houses, however, are of that massive description that indicates former greatness. David I. had a palace here, which is now entirely demolished. The par. church was once collegiate, with a provost, sacrist, and ten prebendaries. The fanmous Jnmes Sharp, afterwards archbishop of St. Andrew's, murdered by the Covenanters on Magus Muir in 1679 , was once minister of Crail. Coal is abundant in the nerghbourhood.

CliANBOURNLE, a town and par. of England, co. Dorset, dir. Nhastom. Area of par., 13,730
acres, Pop. of ditto, 2,656 in 1861. The town in situnted in an open pleasant district, 12 m . SSIII, Sulishury. The church is a fine old structure partly in the Norman, and partly in the earling (lothic, with a noble tower in the later Gothin style. There is an almshouse for three old people, and a few smaller charities. The ribbon mann facture, formerly carried on here, has deelined, and the inhabitants are now cliefly employed in ayniculture. This par. is the supposed arena of the battlo between the British, under Boarlicea, and the Romnns. Numerous barrows are disperwed over it, in which bones and urns have been found On the Castle-hill, S. of the town, ure the remain of a circular fortitication, enclosing an area of si acres. Cranbourne Clinse, a tract extending near: ly to Salisbury, was celebrated during both the Anxon and the Norman periods. An old embattled mnnor house, callen the Castle, still exists, which was occasionally the royal residence: in its hall courts were helil; and there is a clungeon for the continement of those who infringel on the game laws. Bishop Stillingtleet was a native of Cranbourne.

CRANBROOKF, a town and pnr. of Eaglamd co. Kent, lathe of Serny, hund. Cranbronke, Ares of par., $10,4 t i 0$ neres. Pop. of clitto, 4,128 in $186 b^{\circ}$. The town, on the Crane (a small stream travering the Weald district), $38 \mathrm{~m} . \mathrm{SSE}$. London, consits of a main street, nenrly 1 m . in length, ands smaller one diverging from it. Many of the honis are well built, and it is partially paved and lightel and amply supplied with water. The church, $n$ built about 1730, in the later Gothic style, has lofty embattleal tower. There are also six dissenting chapels; a grammar-school, endowed by (\}ueen Elizabetlı; a writing-school, founded in the some reign, with a small endowment; and a national subscription school. The woollen trade, introduad here by Edward III., and long considerable, has disappeared; and the trade in hops is now the staple business of the place. Sir R. Baker, the antiquary, and Huntington, the founder of a religions sect, were natives of this place.

CRAYFORD, a town and par. of England, 0 , Kent, lathe Sutton-at-llone; 11 m. E. by S. London by roal, and 143 m . by Louilon, Chatham, and Dover railway. Area of par., 2,380 acmes Pop. of ditto, 3,013 in 1861 . The town, situated on the Cray, about 4 m . above its contiuence with the Darent, and on the great road from London to I artford, consists of a long irregular street. The church is a good modern structure, on nu neclivity at the higher end of the town. lts market has been long discontinued, but an annunl fair is held Sept. 8. Until a recent period, extensive printworks were carried on a little below the tomm; and a mill for flattening iron and splitting ina into hoops, one of the tirst of its sort constructed in England, was, until recently, in operation. Ia the parish are numerous artificial caves, upwards of 100 ft . in depth, increasing in magnitude as they recede from the earth's surface. Some d them contain several distinct apartments, excavatel in the chalk, supported by pillars left at intervals for the purpose. Their origin is a mattet of dispute; some having supposed them to be mene chalk quarries, while by others they are supposed to be places of security excavated by the rucient britons or Saxons as receptacles for their families and goods during periods of danger. The Boman station Noviomagus is supposed to have been neat Crayford, contiguous to which, A.p. 457, was fought the great battle between Hengist and Vortigern, whieh ended in the total defeat of the Britons.

CRECY, an inconsiderable village of France, dép. Somme, 11 m. N. Abbeville, famous in history

The Romat osed to have been nea ich, A.1. 40 T, was fought Hengist and Vortigen eleat of the Britons. ble village of Frane eville, famous in historn
fir the victory gained here on the 25th of August, (isho, by the English forees under Edward III. over dier French under their king Ploilip of Valois. The tieneh army is believed to have nmounted to nbout (10), M00 men, while that of the English was under Hi,000: but the superior discipline and good order of the latter mure than counterbalnnced their infrenurity in point of numbers, and enabled them to fathieve onc of the greatest victories of which we lave any account. The loss of the French, in the lattle and pursult, has been estimated at 1,200 knights, 1,400 gentlemen, 4,000 men at arms, and amout 30,000 inferior troops. Besides the king of Frane, there were in the defented army the kings of Boliemia and Majorea, both of whom were billel. The crest of the former, consisting of three eatich fenthers, with the motty, Ich Dien (I serve), was alopted by the Black Irince, the eldeat son of Edwarl, whose bravery was most conspichuus on this oceasion; nnd has been continned as the crest and motto of all subsequent prinees of Walcs domn to the present times. The loss on the part of the English was comparatively trifling. It has been said that cannon were first employed by the Lingllidi in this battle, and that they contributed not a little to their success. (Rapin's Hist, of Englanil iii. 458, 8vo. edit.; Hume's ditto, cap. 15.). CREDI'TON, a town and par. of England, co. Devan, hund. Crediton, 7 m . NW. Excter, on the London and South Western railway. Area of par., 11,40 acres. Pop. of town, 4,048, and of par., 5,731 in 1861. The town is situatell in a narrow vale betwen two steep ridges, throngh which the Creedy fows and joins the Exe a little lower down. It is dirided into two distinct parts, the E. or ancient town, and the W. more modern and larger part, consisting ehiffly of a broad strect along the principal line of road from Exter to N. Devon. The church, a nolle building in the later pointed style, with a fine theer springing from the centre, was rebuilt in 2 Henry VII. There are four dissenting chapels; a free grammar sehool, founded by Elward VI., for bors of Crediton and Sandford par.,-it has three exhibitions to either university; a blue-coat school, founded 1730 , and ineorpornted with a national school established 1814, in which 150 boys are instueted, 80 of whom are clothed; a mathematical school, foundell 1794, for 12 boys; two sets of ancient almshouses ; and severil minor charitics. The majority of the labonring pop. are now employed in agriculture. Formerly there were serefal large woollen and serge manufactories: at present, however, there are no resident manufactures, though many females wenve long ells at their own dwellings, for manufacturers resident in X. Towton. This town sent memiers to the parl. at Carlisle, in Edward I. (Willis's Not. Parl.) It was several times the head-quarters of ench party dinning the last eivll war. In 1743 it was nearly destroyed by fire, and was also seriously injured by fire in 1769 .
CREETOWN, a nent marit. village of Scotlnnd, co. or stewartry of Kirkcuibright, par. Kirkmatreck, at the head of Wigtown Bay, where it receives the Cree, and on the road between Dumfries and Portpatrick. Pop. 969 in 1861. The hills in the neighbourhood of Creetown seem to be almost entirely composed of granite; and an extensive granite quarty, within 2 m . of the village, has fumished materials for the Liverpool Docks. There wed formerly to be large beds of sen shells in the vieinity, the shipment of which for manure to other places was a considerable source of employment; but these are now nearly exhausted. The late Dr. Thomas Brown, the celelrated ethical philosopher, was born here in 1780, his father being minister of the parish.

CREFELD, a thriving town of Rheniah Prussin, cap, clre. same name, in a fertile phain, 6 m . W. from the Rhine, nnd 13 m . NW. Dusseldarf, on the railway from Cologne to Utrecht and Amsterdnm. Pop. 50,584 in 1861. It is the prineipal town in the Prussian dom. for the manufacture of silks, silk velvets, and silk thread. It has also fabrics of woollen, cotton, and llnen stuffs, lace, oilcloth, camlets, and carthenwire ; with tanneries nad distilleries. The town is well bullt, with whle streets anil neat houses. It has four churches, anlorithan and a deaf and dumb nsylum, a hosspital, a high sehool, police and commercial courts, and is the seat of a court of justice. In its vicinity is an old castle, now used for $n$ silk-dyeing establishment. In the latter half of the seventeenth and beginning of the eighteenth centuries, its pop, was greatly nugmented by many reformists and Mennonites, expelled from the neighbouring duchy of Juliers, and who, in return for their hospitable reception, introduced those manufactures to which the town owes all its prosperity.

CREMA, a town of Northern ltaly, prov. Cremona, on the Serio, 25 m . ESE. Milan. 1'op. 8,240 in 1861. The town is surrounded by a brick wall, a diteh, and some other old fortificntlons, and has a castle, which, before the use of artillery, was considered one of the four strongest fortresses in Italy. It is well built; streets spacious; palnces and public edifices numerons, including a cathedral and many other churches, a hospital, three separate charitable asylums, and two theatres. It has manufactures of lace, hats, linen thread, and silks, and is celebrated for the excellence of its flax. Very good wine, fruit, and flsh are obtnined in its vicinity. Crema was founded about 570 A.D., during the reign of Alboin, the first Lombard king of Italy. In 1159 it was sacked by Fred. Barbarossa; it was taken by the French in 1797, the day nfter the capture of Looli.
CREMONA, a eity of Northern Italy, enp. deleg. same name, on the left bank of the Po, 46 m . SE. by E. Milan, and 26 m . NW. Parma, on a branch of the railwny from Milan to Venice. Pop. 28,591 in 1861. The town is of an oval shape, about 6 m . in circ.; is surrounded by walls, bastions, and wet ditches, and defended by a citadel. It is well laid out, but has a melancholy appenrance, from the evident signs of decny, and large tracts of grass being seen in many of the broad and regular streets. Among its 44 churehes, the Duomo nlone has any particular attractions. This is an ancient edifice in the style of architecture appronehing to saxon, mixed with a sort of mongrel Itnlian. If not beautiful, it is at least picturesque; and its lofty tower, 372 ft . in height, is singularly so, being adorned with a sort of rich open work : it is one of the highest in Italy. The interior is composed of a nave with two aisles, divided by eight immense pillars, above which are a series of paintings by Lordenone. Near the cathedral is an octagon baptistery, said to hnve been once a temple of Minerva. In the town-hall, among others, there is a fine picture by Paul Veronese.
Cremona is the residence of the delegate of the prov. and seat of a bishopric ; it has civil, criminal, and commercial tribunals, a lyceum, gymnasium, superior and female schools, several well-attended infant schools, which were the first institutions of the kind opened in Italy, a public library, numerous collections of works of art, two theatres, barraeks, a monte-di-pietà, nnd several hospitals, asylums, and other charitable institutions. The manufactures of silk and cotton fabrics are considerable, and there are others of porcelain and earthenware, lyes, and chemical products. During
the $\mathbf{1 7}$ th, and the eariier part of lant century, Crcmona was highly celebrated for its musical liatruments, especially its violins mule ly the Amati and Straduarius. Instruments ly these makers aro now very senece, and feteh an extraordinary price; and the manufneture of violins and strings has greatly declined. Cremona has a brisk trade in corn, flax, cheese, silk, oil, honey, wax: de. : the flax grow: in its vicinity is much esteemed. This eity in very ancient : it was prolably founded originally by the Ginuls, and, together with I'lacentia, was the seat of the first culony established by the Romans tu Cisalpine Gaul: but its antiquities have been swept away by the suceessive revolutions it has unilergone. Ifaving espoused the canse of Jrutus, Augustus divided its territory among his veterans; and this being insufficient for the purpose, he added to it the territory of Mantua, as is well known from the line of Virgil :-

- Mantua ve miscrie nimlùm victna Cremonel'

Eclog. ix. 28.
But it sueedily recovered from this disaster, and rose to great wealth and eminence. Certainly, lowever, it was, as Tacitus says, 'bellis civililms infelix.' In the struggle between Vitelliss and Vespasian it was oceupied by the troops of the former, and, being aken by thone of the latter, it was sacked and burnt by the infuriated soldiery. (Theit. Ilist., lib, iii. $\$ \$ \mathbf{2 6 - 3 3}$.) It was again, in as far as practicable, restored by Vespnsian. From the 12 th century, downwards, its history is identified with that of Milan. In 1796 it opened its gntes to the Freneh; and from 1800 to 1814 was the cap. of the dép. Alto-Po. Vida, bishop of Alba, ont of the best modern Latin poets, was born at Cremona in 1490.

CRBIE (rulg. CANDIA), a large and celebrated isl. of the Mediterranean, belonging to the Grecian Arehipelago, of which it forms the S. boundary. It lies letween $34^{\circ} 57^{\prime}$ and $35^{\circ} 41^{\prime} \mathrm{N}$. lat., and $23^{\circ}$ $29^{\prime}$ and $26^{\circ} 20^{\prime} \mathrm{E}$. long., its NW. extremity being 80 m. SE. Cape Matapan, in Grecee, and its NW. termination 110 m . SW. the nearest point of Asia Minor. It is long and narrow, its length from E. to W , being about 160 m ., with a breailth varying from 6 to nearly 50 m ., but averaging about 20 m . Area, $3,200 \mathrm{sq} . \mathrm{m}$. I'op. estimated at 158,000 ; of whom 100,000 are native Greeks, 44,000 Turks, and the remainder Hellenes, Jews, and other forelgners. Previously to the breaking out of the Greek Revolution, the pop. was estimated at about 270,0100. At the period when it was aequired ly the Venetians, Crete had probably a pop. of 500,000 or 600,000 , but it fell off greatly under their oppressive sway. Its fertility, and the number and magnitude of its ancient cities, warrant the supposition that the pop. in antiquity may have amounted to $1,000,000$ or $1,200,000$. (Pashley, ii. 326.) The isl. at present belongs to Turkey, and is divided into the three prov. of Candia, Retimc, and Canea, so named from their respective eapitals. These prov. are sublivided into 20 eparchies, or districts, of which Candia comprises 11, Retimo 4, and Canea 5.

Topography.-Crete is almost wholly covered with mountains. A serrated range stretehes through its whole extent E. to W.: in the E., although rugged and barren, it attains no great elevation; but as it proceeds westward, its peaks increase in height, and are covered with snow even in June. At the W. extremity of the island, the range of the White, or Sphakian mountains, rises to perhaps $5,000 \mathrm{ft}$., and Idn (now Psiloriti) the loftiest as well as the most farious of the Cretan mountains, nearly in the centre of the island, is, aceorling to Sielor $7,674 \mathrm{ft}$. high. Ida, however,
has littlo lresides ita height and classical celchrioy to recommend jt. The different motutain fangen abound with grottos and caverna, some of whimh are allke extensive and celebrated. Every chavical reader must le acguainted with the histury of the famous labyrinth in which Mloos kejot the Minotaur killed by Themeus. A cavern of grai extent and intricacy, and which answers in all the mont easential particulars to the accousts given of the labyrinth, in a hill at the $\$$. forot of Mount Ida, abonit 3 m . from the ruins of Ciortyia, has been visited and demeribed by Tountefort (i, $\mathrm{B}_{\mathrm{i})}$, Cockerell (Walpole's Memoins, i, 405), and othen It has been supposed by some that this carem which consists principally of many long, winding and narrow passages, which can only be affely explored by means of a clue, was a quarry whence the stones used in the building of Cnossusand Gortyna liad lieen derived; but any such suppwition neems wholly out of the question; it is now posmilile to imagine, had it been a quarry, that i should have been excavated in narrow whading passages, as that would have added immeasurably to the diticulty and cost of procuring the stonex Tournefort has supposed it to have leen originally a natural cavern, and that it hat been im. proved and perfected by art, to make it a placed concenlment, or refuge, in periods of distress,

On every side of the island, but especially on the S., the mountain region extends quite to the const, which is generally lofty and inaccessibld. The $N$. shores present several remarkable head. lands, as capes Busa (Corycum), Spada (l'sacoai, Melek (Cyamon Pr.), St. John, Salmone, \&e, aad are indented by many extensive bays, the chif of which are those of Kisamos, Khania, Sudha Armyro (Amphimalle) and Mirabel. There are some tolcrable harlours on this shore; but of these the S. coast is entirely destitute, and presents only one point worthy of notice, Cape Matala, the mos southerly of all, bclonging to Europe. Sevenal small islands surround Crete, as Grabusa, Dhis Gozo, dre, and in the Bay of Sudha are the Leuce, supposed to lie the isles of the Syrens celebrated by Homer. The plains are few; the chief are those in the N. of Crete, surrounding the towns of Canea, Candia, dec, and the larger one of Gort yna or Messara in the S., throngh which the Messara, the largest stream, flows. There am no rivers of any importance, but every litle ravine in the furrowed sides of the monntains bears its tribute of melted snow to the rich alluvial valleys lying at their feet, rendering them abundantly fertile. At the E. and W. extremities of Crete there are a few unimportant lakes.

Climate and Natural Products.- In the lowet parts of the country it never freezes, and in summer the heat would be intolerable if not tempered by N. winds, which are then prevalent. Rains occur mostly in the spring and autumn. 'The country is gencrally healthy, and subject to few endemic discases. Granite, sehist, slate, scc. are amongst the primary roeks of the mountains, but calcarcous formations, as in Grecee, are the moit common. Crete is not rich in metals; there are no mines, though Diodorus Siculus nnd other ancient writers preserve the tradition that ind wns first discovered here. The mountains are clothed with woods of oak, chesnut, walnut, and pine trees, and the plane, cypress, myrtle, will olive, vine, carob, aloe, arbutus, ficus indicus, and a multitude of fine fruits and vegetsbles ghim spontaneously, while the ground is fragrant with aromatic herbs. For luxuriant vegetntion it prosents a wide and favourable contrast with some of the arid regions of continental Greece. The wild boar, wild gont, wolf, dre. are met with in the
firests, an linish of pros flashley, Agricult the worst war, and th nevivel, it poph has be tationa and duwn, and asergrown the mowt culture of however, is revolution, ruflicient co ion, and Cr in Egypt al rilk, wine, r lemons, wax and thax are many of th mates. The wild c. are met with ill the
frmenta, and gnme of various kinds is plentiful. linhs of proy are numerous, but reptiles are fow. (l'ashley, Seott, dic.)
Agriculture-From 1821 to 1830, Crete suffered the worst evils of a sanguinary and devastating war, aad though its agriculture be now sumewhat nrivel, it is still in a deplorable stnte. Its male pup, has been more than decimated, its olive plantations and vineyards uprooted, its villages burned duwn, and much of its most productive iand been overgrown with rank vegetation. The soil is for (he most part light, and but little adapted for the culture of grain. Wheat, harley, and oats are, however, grown, and, previuusly to the Greek revolution, wheat was annually exported; but pulficient corn is net produced for home consumpnion, and Crete is obliged to depend for supplies on Egypt and Ilarea. The chief products are oil, pilk, wine, raisins, carobs, valonea, wool, oranges, lemons, wax, honey, linseed, and almonds. Cotton and thax are alse cultivated, and in the mountains many of the fruits and vegetables of colder cli. mates, The oil is good. Cretan wine is frequently culogised by ancient authors. In the middlo ages it held the tirst place amongst the exports, and under the names of Malmsey and Muscaline, considerable quantities were sent to England. The pastures are tine, and cattle of all hinds are reared, but their exportation is prohibited. Poultry are everywhere plentiful. Almost every peasant has his own farm; those who hare not, cultivate the lands of the aga, or district curemor, on a kind of metayer system, the lessor frumishing the seed and all the necessaries of hasbandry, and dividing the crops in equal proportiuns with the cultivator, after deducting the keventh, to be paid to the government, and the need previously advanced. T'hn Mussulman rural population has been diminishing ever since the island fell under the Egyptian mile. Finding they fare no longer able to obtain the forced labour of the Greeks, they are continually selling their lands, which are as eagerly purchased by the Greeks, Who often borrow money for the purpose at an finterest of 20 to 30 per cent. per ann. Landed ptnperty gives at an average a nett profit of 8 to 10 per cent. per amm.
Commerce and Trade.-The subjoined table exhilits the exports of the island (Report by Mr. Consil Fiank Hay on the Trade of the Island of (rete, dated April 26, 1865) for the year 1864:-

The manufactures of the island are inconsiderable. The chef are those of sonp, lesther, and pirits : the rest consist only of domestic manufac-
turen, as coverlidn, making, nul coarse cloths, woven by whinen and children. 'Thore are twentyfour soap manufactorien at work, enpalile of producing 0,000 tuns a yeur, thonyh litte more thant linif that quantity is made. The article is of goml quality, highly esteemed in the Levant, nul fetcles the highest price ill the market at Trieste.

Government.-Crete is govemed by a pumia, and each province by a president with a large salary, who is either a Europern or Asiatio Turk. In each province there is a counchl consisting of the cadi, treasurer, and other functionaries, and of a Turkish and a Greek representative from each of its districts, choven however not by the diastrict they represent, but by the paslia himself, from whom they receive a salury. These councils docide on all judicial questions witlin their respective provinces, and professedly nccorlling to tho code Napoleon. The will of the president determines the conneil.

The urmed force amounts to about $4,000 \mathrm{men}$, chietly Arabs and Albunians. There are elghit fortresses, mounting altogether 468 pleces of cannon. The fortifications of the principial towns are kept in good order; but those of the others are in the must neglected state.

Before the Greek revolution, the Christians and Mohammedans were nearly equal as to nurnbers; the balanee is now greatly in lavour of the former. The island is divided into eight bishopries, the metropolitan bishop residing at the town of Candia. There are thirty large monasteries and many small ones in the island; and, like the mosques, they are all endowed, and possess extensive lands. 'The patriareh of Constantinople receives annually from Crete about 250,000 pinstres ( 2,5001 .). The priesthool are generally very ignorant.

Phople.-The Cretans are stronger built than the inhab. of the other Greek islands; but it is said that gencrally they have not the sams intelligence or vivacity. They are frugal, inoffensive, and superstitions in the extreme. Hoth ancients and moderns have accused them of being excessively addicted to lying and thieving; but Pashley (i. 86 ) thinks that in the interior, at least, they hardly deserve this character. They are polite and ceremonious, and dress like other Greeks, except that the men nll wear high boots, and the women, when abroad, cover the face. Their dwellings are mean and comfortless; the food of the peasantry consists mostly of barley bread, cheese,olives, pulse, and vegetables, cooked with an abundance of oil. The language is modern Greek.

Antiquities und History.-Crete is highly interesting from its classical associations. Its history leads us back to the carliest mythological ages. It was the birthplace of Jupiter, 'kuig of gods and men.' Adventurers from l'houicia aul Egypt introduced arts and sciences into Crete, while Greece and the rest of Europe were involved in the darkest barbarism. The laws of Minos sorved as a model to those of Lycurgus; so that Crete became, as it wore, a channel by which the civilisation of the East wos trausferred to Europe. Its wealth, and the number (100) and flourishing condition of its cities, particularly those of Cnossus, Gortyna, Cydonia, dec., are repeatedly referred to by Homer. Unluckily, however, the most violent animosities usually subsisted among the principal cities of the island, which formed so many independent republics; and Crete was thus prevented from playing any conspicuous part in the affairs of Greece, or from making that figure in history it could hardly have failed to make had it been a single state. It was conquered by the Romans, after an obstinate resistance, anno 67 B.c. After being possessed for a while by the Byzantine

emperon, the Saracens tosok it in the 9th ecistury; hilt being expelled in 0652 , it was again restored to the Eanteril eupire. The fienceno, and the Marquin of Montserrat, afterwarils nitecessively ponacммед it. The Venctians bought it of the latter in I201; and in 166!, after a 24 yenrs' war, it wan couquered loy the Turkn. The revolition in Grecee wis followed by one in C'nete, which deacrved, and wonld doubtlean have obtained, a happier insite hal not the allien conflrmed the gift of the inlming, in 18:30, by the sultan, to Mehemet Ali, fur his services during the war. Before the ontbreak of the Cireek revolution, Crete vas the worat governed and most oppressed province of the Turkish empire. Sine it has belonged to Egypt, notwithatanding the tyrannieal rulo of tho viceroy, some ameliorntion has been experienced; but the Cretana atIII nigh to be nnited to Greece, or to be taken under the protection of some Europenn power,' a protection to which their ancient fume, and their sncriflees in the cause of fredom, givo them a well-founded claim.

CRLSUSE, a dep. of Frnnce, reg. centre, having N, the déps. Iuire cact Cher, Fi. Alliter and Puy-te-Dîme, S. Corrèze, and W. Hante Vienne. Area, bō6,830 hectares; pop. $270,055 \mathrm{in}$ 1861. Surface mostly mountainons, with a genernl slope towards the N. Some of its monntains are so environed with volcanie prodnets as to leave little donbt that they were formerly active volernoes. Plains of any extent few. Hivers numerous, including the Creuse (whence the dep. has lts name), Cher, 'Tarles, de., but none navigable. Climnte rather severe; the summer being comparntively short, and the winter long and rigorous. Soil, except in the valleys, snndy and litilo productive. Aruble lands occupy about 240,000 hect., phstures, 132,000 do., and heaths, wastes, \&e., 122,000 do. Agriculture is in general very backwnrd, and is no where pursued on a large scale. Corn, thr chief part of which is rye, is not grown in sufficient quantity for home consumption. Fruits of various kinds are eultivated, but wine is furnislied from the neighhouring déps. Cattle-breeding is rather an important branch of industry. The oxen, which are of a middle size, fatten rendily, and form a portion of the supply for the Paris market. The sheep supply anmually about 350,000 kilog. of wool, but it is mostly of inferior quality. Hogs are reared both for home consumptiun and for exportation. The management of bees is well understood, and the honey and wax are excellent. Property is here very much subdivided; more than three-fourtlis of the estates in the lép. being assessed below 20 fr. a year. Some coal mines, and quarries of granite, building-stone, and plastic elay, are worked. Mnnufuctures very few: the chief are those of carpets, at Aubusson and Felletin; a porcelain factory at Bourgancuf, and some fabrics of paper, conrse woollen and linen cloths, glase, earthenware, and leather. The exports are limited to some thousnind head of cattle, timber, coarse woollens, carpets, and pottery, with a very eurious article, namely, hair, which the females of this dép. supply in exchange for articles of dress, to the extent of many cwt. a year, sent to the coiffeury of Paris. The imports include most articles of prime necessity, including all the wine and nearly all the wheat consumed, with iron, salt, colonial prochee, horses, silks, and drugs. The depressed state of ngriculture and manufactures, and the consequent want of employment, occasion the annual emigration of from 22,000 to 28,000 labourers, who resort to other parts of the kingdom in search of work and wages. They leave home in small parties of from 4 to 12 , which sometimes augment on the roud to 300 . Each of these parties travels under
the comluet of a master, who tuilertaken work, and engagen and pays thome whotruvel with hin. The perisil of emigration is froin March to December, Crense in divided linto 4 arronil, 25 cantons, and 269 communes. Chiof tuwns, tineret, the eap, Auhuman, Thourganenf, and Felletin. Generally apenking, this dej, is remarkably free from rrime The whole ane poor and ecomomical, but excenively litigions. The women share in the mims luborions oceupations.

CHEWKERNE, a town and par. of linglan near the $S$. border of the co, of Somernet; in a vien watered by the I'arret and Axe, 16 m . Sli.'Taumbon, on the Londoin and South Wentern railway, das of jar., 6,810 acres. P'op. of town, 3 , ritili, and of par., 4,705 in 1861. The town consint chiefly the streets, diverging from a central market-pilare anad is paved, Hghted with gas, and amply nuplide with whter. 'The chureh, a eruciform structure in the later Gothic style, hins a the elalnorately-umsmented tower, and the windows nud interiur alm present rich specimens of tracery. A free gram-mnr-mehool, founded in 14!!!, hinanin ninunal revenua of 3001 , and there are four exhil. from it nny college in Oxforl. There is also a nationa subseription school, and two sets of nimshoume formed in 1707; the one for six old meen, the other for six old women. There are manufactures of sall-cloth, dowlas, nud stockings, each of which employs a considerable number of haudn.

CRICKLADE, a parl. bor, of Eingland, m Wilts, hunds. Highworth, Cricklade, and Staple, in an open level tract, at the junction of the Chum and Key with the Isis; 75 m . WNW. Londun, by rond, and 81 h m. by Great Western railway, rio Purton station. Pop. 36,803 in 1861. The borough consists chiefly of one long street of meanly built houses, pused, hut not lighted, and very inadequately supplied with water. It comprises two par., St. Mary nud St. Nampson. and township, including in all an area of 0,840 acres The church of the former par, is small and antique, while that of St. Sampson is a spacius cruciform building, with a lofty and highly onnmented tower. It has numerous escutcheons bearing the cognisances of the carl of Warwik and other eminent individuals, and is a fine specimen of the (iothic. In the churchyard is a well preserved cross, with canopied niches, which wa removed from the High Street, and placed hem when the old town-hall was demolished. Tlie remains of a priory, founded in the 1st of Heury III., are now used as tenements for parpens 'There are two national schools, supported by sulpscription; formerly an ancient free school existed, but the endowment has been lost; a chanitr producing 125l. a year from land, is nppropinted to the apprenticing of poor children. The Thames and Severn cannl passes through the N. end of the town; and a branch, joining the Wilts and lherks eanal nt Swindon, crosses within 1 m . of it, The inhab. are chiefly engaged in agriculture.

Cricklade returned 2 mems, to the 11. of C . from the 21st of Eilwaril I. to the lat of Ilenry II with some interruptions; and from the latte reign, continuously to 1780 , the right being esclusively vested in frecholders and copyholders of the bor. lands, and leascholders of the same for not less than 3 years. In 1780 (after a contested election) the bor., in consequence of its notonins corruption, was thrown open, and the frechollers of the 5 adjoining divisions of Highworth, CrickInde, Staple, Kingsbridge, and Malmesbury, ad mitted to a participation in the elective franchise Registered electors, 1,749 in 1861. The hailifit of Cricklade is returning officer. This town has calt siderable claims to ani!quity; but the story of the

CHIEFF, a burgh of linrony of Seotland, co. Perth, on a gentle acclivity on the $N$. bank of the fanı (a tributary of the Tay), 17 mn . W. J'erth.
 of fie Gramplan Hills, at the mouth of one of the important paneen to the Mghlandin, nul in the mepond tow'll in the co. It formed, more than unce, the hend-yuniters of the Dake of Montrowe, during the civil wars In the regin of Clinrles I., and was burnt by the 11 ighhnilom in 1715 . It was fumprly the grentest eattle market in sioutland, hut that was trunsferred to Falkirk in 170.0. Its chief distinction now consists in Its mannfineturing induatry. There nre lin Criefl' about $\mathbf{b} 00$ hand-lowm wervers, chlefly empluyed in the miton trade. There is, almo, a considernble trade in trubsuring and tlowering webo for the (blungow manufacturers, earried on by femmles. Alout 300 scren of limal in the immediate vicinity of the town are let to the inhnb. in small jutches, technieally called acres; or in still ammilher portions, called pecks. 'I'here are thrue pinces of worshlp commeted with the established chureh, and several cliajels lelongiug to l'resbyterian dissenters, and an episcopal chajel.
CRIMEA, the Chersonesus Taurica of the ancients, a peninsula of Russin in burope, government of 'Taurida; between $44^{\circ} 28^{\prime}$ and $46^{\circ} \mathrm{N}$. Int., and $32^{\circ} 33^{\prime}$ and $34^{\circ} 22^{\prime} \mathrm{E}$. loug. It is united on the N . to the mainland by the isth. of l'erekoj, ${ }_{5} \mathrm{~m}$, in width, and lins on its E. the Nicarhe, or l'utrid Sen (which see), the Sea of Azoif, and the Sitaits of Yenicale, by which it is neparated from the Isle of T'mman, being everywhere else nurrounded by the J3inek Nen. It is estimated to contain about $15,000 \mathrm{sq}$. m . Pop, estinnated. in $1 \times 58$, at 500,000 . The Crimea is divided into two distinct parts, one lying $N$. and the other $S$. of the river Snlghir, which Hows from W. to E., and is the only stream of any importance in the peninsula, The former consists almost entirely of rast plains, or steppes, destitute of trees, but corered with luxuriant pasture, except where they are interspersed with henths, salt-lakes, and marshes. The climate of this region is far from gadi being cold and damp in wi tter, and oppresively hot, and very unhealthy in summer, partieularly along the Putrid Sea. 'The aspect und dimate of the other, or S. portion of the penineula, are cutirely different. It presents a succession of lofy monntains, picturesque ravines, chasms, and the most beautiful slopes and valleys. The momntains, formed of strata of calcareous rocks, stretch along the S. const from Catia, on the E., to Balaclava on the W. The Tchadyadag, or Tent momitain, the highest in the chain, rises to the beight of about $\overline{5}, I 10 \mathrm{ft}$. above the level of the sa, and several of the other summits attain to a considerable elevation. The climate of the valleys, and of the slopes between the mountains and the sea, is said to be the most delicious that can be imagined; and, besides the common prolucts, such as corm, fax, hemp, and tobacco, vines, olives, fiftrees, mulberry - trees, pomegranates, and ranges, flourish in the greatest profusion. Pallas, Dr. Clarke, and others, have given the most glawing descriptions of this interesting region. decording to Clarke, ' $1 f$ there exist a terrestrial paradise, it is to be found in the district intervenby between Kutchukoy and Sudak, on the S. cwast of the Crimea. Irotected by encircling alps from every cold and blighting wind, and only ven to those breezes which are wafted from the
S., the inhabitanif enjoy every anvaninge if dimute mul of nituation, C'ontimual atroninas of crystal water pour down from the monntains "1san their garilens, where every sureelen of 'irult known in the rewt of Winrops, und many that are not, attaln the highest perfection. Velther intwholemone exhalathon, nor chilling winds, nor venomons lisecets, nor poimonomis reprilen, mor honstile neiginsours, lufent their hleswed torritory. The life of lite fulinhitnote resembles that of tho gohlen nge. 'The soil, like a hot-hed, rnjuilly puts forth such variety of spontmeons produce, that labour hecomes merely an amusing exerchec. Peace nul plenty crown thelr hoard; while thos repose they so minels almire is only luterriyited by harmless thander, reverberating on rocks alowa them, or liy the murmar of the waves on tho beach below: (Clarke, li. p. 2idy, Xvo. ed.) Ilıt if this deserigition le as fuithful an it is eloquent. It will not certainly apjly to my other portion af the Crimen, not even to the finmons villey of Bnidar. At certain mensons of the year the fincos. protes of the peninsula are infested with swarmas of loensts, which frequently commit the most Ireadful devastations, nothing exenjing thenin, Proin the lenves of the forest to the herbs of tha plain. Tarıntulas, centipeles, ncorpions, and other venomons lusects, are also met with in most parta; and even to the $N$. of the momintnins the nir in antumn is not everywhere nalubrious, and inallgnant fevers nre not incommon.

Owing to the thimend of the population, and their want of industry, the Crimen, which in mutlquity was the granary of Athena, and whose naturna fertility is nowise dimlinished, does not jroduce a tenth part of what it might do. 'The steppe, or N. portlon, is in general more suitnliag for grazing than for tillage, and is depastured by immense numbers of shecpl, hones, mal black cattle. Sume of the rich Nrigal 'lintars are snial to have as many as 50,000 sheep, and 1,000 horres; and the poor classes have 100 of the former and 10 of the latter. Thonsunds of cattle olten belong to n niugle individual : camels also are abondant. Breed of horsen improved by crossing with Arabs. Sheep mostly of the largetailed species peculiar to the Kirghises. The butialo is domesticated, and yields $n$ rich milk; and the culture of bees is a good denl attended to. Though they have renomnced their migratory habits, the Jartars, who constitute the bulk of the populntion, linve little liking to, or skill in, husbandry. Exclusive of milk nul other nuimal food, they nubsist chictly on millet, producing, however, in some years, as much is 150,000 chetwerts of whent for exportation. The molntainons, or S. portion of the peninsula, furnishies Inrge quantities of indifferent wine, with flax, fruits, timber, honey, and wax; but the cultivation of com is so little attended to, that even in the best years its inhabitants have to import a large projortion of their supplies. The most impurtant and valunble prodact of the Crimen is the snlt derived from the salt-lakes in the vicinity of Perekop, Kaffa, Koslow, and Kertsch. It is monopolised by the gov., and yields a considerable revenue. The quantity exportel from the lake's near Kerisch amounts to from $1,500,000$ to $2,000,010$ poods a year: the lakes of Perekop are even more productive. At Koslow there is only a single lake. Abont 13,000 men are employed in the works; each pood costs the treasury 4 copecks, or thereabonts, the expense of production being seldom greater than from 6 to 10 copecks. Government sells this salt at 80 copecks per joud, except the portion destined for the consumption of the peninsula, which only pays 15 ecopecks.

Dixilusive of salt and eom, the other primeipal artheles of export are where, honsey (of nin excedlent quality), was, morneres lenther, hidem, A emanidernhle guantity of liferior wonl, with lamb-akins, which are highly emteremed.  perilimala, is ome of the chief ntutions of the liassimis tleat. Ihaktehimerni was the roppital under thag khans; Simpherymal is, lowerver, the numleris etupitul, int of the Crimea only, bit ol the entire give of 'Taurila.

Then jopulation eonminte of Turtary, Rassianm, fireekn, (iurmans, Juws, Armeninns, nul gijwles, 'I'le variety of dillipent mintions foninul lin the Crimen, anif the finct that enchi Ilves as in ite owin conntry, practining its peenlinr enmeones, and promerving lis rellghons riten, in one of the rematkitile circumatances thint render the peininnila no curfois to a ermuger. 'The nimbler of 'Turturn has deelined commiderably, by embration and otherwise, whee the ceengmition of the conntry by tha Rinse sians; lut they ntill form the unclens and muln bangy of the pupmlation. They cominist, Int, of Nogal 'Tartars, llving in villages, whop plgne themmelves ont their pure Mongolian blood; 2d, of 'Iarturs of the steppe, of lewn pure demerint; and id , of those imhabiting the $S$, eonat, a mixed lireed, largely alloyed with (ireek and Thrkinlı blown, nini despised by the others, who beatow on them the eontemptions dewignation of T'ut, or renegade. They are all nttached to the Mohammedna fuith, ani Simpheropol is the sont of one of the two muftis of the Rassimin empire, The Tartars are tivided linto the clinsen of nobles (mosirzus), of whom there are ninnit 2000, prients (malluhas), mid peanants. A mullah in at the head of every pirish, and mothing is undertaken withont his consent. 'I'le prensunts plough his lmal, sow and reup his corn, and carry it lame; and it is seldam that the proprietor takew tithe of the priest. In nimmer the feet and legs of the peasaility are bare, but in winter they are elothed after the Russinn linshion. 'They are simple it their manmers and Irass; and their solitiety, chastity, cleanliness, and hospitality have been highly enhogised, and prohubly exurgerated; they live principally on the prodnce of their flucks and herils; are wedded to rontine practices; and if they be not, as l'ulliss necms to have supposed, decidedly averse from luburar, they at all events are but little disposed to be industrions. 'The emigration that took place nfter the necupation at the comintry by the Rinsians was owing guite ins much to the efforts of the latter to convert the 'Tarturs into husbundmen, as to the excesnes they committed. (kenilly, p. 176.) In their diet they make great use of honey, nud are much addieted to smoking. Every fimmily lens two or more copies of the Korm, which the chideren are tanght to rend; but in despite of this, und of the selinols estahlished in thenr villages, they nre, for the most part, exceedingly ignorint.

The Greeks established themselves in the Crimea, and fonnded several colonies upon its consts, nearly six centuries before the Christian era. 'The country fell snccessively into the possemsion of Mithridates, and of the Komnns, (iothes, and Hinns. In 1237 it was taken possession of by the T'artars. Abont the same time its ports were much resorted to ly the Venctians und Genoese: the latter of whom rebuilt Cuthin, the ancient Theodosia, and made it the centre of their power and of the ox-

CliOMF(IRI), a chopelry and town of Englami, co. Derby, huml. and par. of Wirksworth, on the Derwent, neur the S, enil of Mutlock Inle; 18 m . N. by W. Lerby, and $145 \mathrm{~m} . \mathrm{NW}$. Jondon by Milland rallway. l'op. 1,291 in 1831 , and 1,140 it 186t. The town is montly on the $N$, side of the stream, and is surrouncled on the N., S., and W. by lofty calcarcous rocks: the honses are mostly small neat buildings, oceupied by work-people employed in the aljoining cotton fretories. There is a nent episeopal chapel, louncled by Sir li. Arkwright; a Wesleyan ehapel ; two gewel schoolrooms, built in 1883; and almshouses for six poor wilows. The town owes its rise to Sir R. Arkwright, the grent fonmiler of the British cottonmnnufncture, who built here two large cotton mills-(the flrst in 1771, the other a few yenrs subsequently) - where his great improvements were brought into successful oneration : these and another fictory are still in the possession of his family. Lead and lime mines are worked in tho immerliate vicinity, The $S$, terminus of the Cromford and Peak Forest railway is at this town; and from it a canal extends to the Erewash cana] near Langley lhidge.

CRONS'I'AD'I' (Ger. Kronstadt; Hung. Brasso), a town of 'Transylvanin, near its SE, extremity, being the largest and most populous, as well as the principal mannfneturing and commercial town in that country ; cap, co. of the same name in the 'Saxon-land,' in a narrow valley, 120 m . SE.

CSABA, a large market town of Ilnngary, In the Great Ilumgarian pilnin beyonil the 'Thelow, itis m. SSW. Dehrceain. Jop, 27,865 in 1857. ' The linlinh. are mostly I'rotestants. I'reviously in 18.10, Canban was biut a village, 'the largent village III limgary:' It has an extensive trade in corn, wine, cattle, fruit, hemp, and lax.
CSANAI, a town of Hungary beyond the Theiss, enp, es, of same name, un the Maros, 7 m . Sl:. Mako. I'up. 2,903 in 1857. It was liormerly a populons mid flourishing place; but its enstle is now in ruins, ita bishop con-renilent, anul the county meetings have been transferred to Mako.
CSONGRAD, a market town of IItungary, letween the Danmbe and Theiss, on the right bank of the latter, immedintely after the inflix of the Körös; 31 m . N. Sagredin, on the railway from Szegredin to Pesth. 1'oj, 16,200 in 1857. The town is well built, mud contains the ruins of an anclent castle. It was the original cap, of the cu. of same nume; but the county meetings are now held at Szpgeden.

CUBA, an isl. belonging to Spain, being the largest, most flourishing, and importnnt of the Antilles, or W. Indian isls. It was discoverel by Columbus, Oct. 28, 1492; and was first calluil Juann, in lioneur of Prince John, son of F'erdinmal
mud Isnleella; afterwards l'erdinando, in memory of the Coulholic king; then successively Snntiago and Ave Maria, lu deference to the patron saint of Spain and the Virgin; and by Spanish geographers La lengua de pájaro, as being descriptive of jts form. The name Cubue was that in use among the aborigines at the time of its discovery.

Form, Position, and E.xtent.-Its tigure is long nnd narrow, approaching to that of a crescent, with its convex side looking towards the Arethe Pole; its W. portion, lying between Florida nud the peninsula of Yucatan in Mexice, leaves two entrances into the Gulf of Mexico; the clistance from Cape St. Antonio, the most W. point of the island, In lat. $21^{\circ} 54^{\prime} \mathrm{N}$. , long. $84^{\circ} 57^{\prime} 15^{\prime \prime} \mathrm{W}$. , to the nearest puint in Yueatun, is 125 m . across; and that from l'oint leacos, the most $\mathbf{N}$. point in the inlund, in lat. $233^{\circ} 10^{\prime} \mathrm{N}$., long. $81^{\circ} 11^{\prime} 45^{\prime \prime \prime} \mathrm{W}$. to Cape Tancha, the S. extremity of Florida, being 180 m . across. I'oint Maysi, the E. extremlty of Cubn, lat. $20^{\circ} 16^{\prime} 40^{\prime \prime}$ N., long. $74^{\circ} 7^{\prime} 53^{\prime \prime}$ W., is 49 m . NE. ly E. from Cupe San Nicholns Molf, in Inayit; and Cape Crua, in Cuba, is about 95 m . N . from the neurest point of Jnmaica. The greatest length of the islnul, following its curve, is alout 800 m . ; its breadth, which is very irregular, varies from 130 to 25 m . The total area of the island is stated, in the census of 1861 , to embruce $48,489 \mathrm{sq}$. miles, or about as large ns Belgium, Hollancl, Denmark, and Switzerland taken tofether. Its coasts are very much indentel, and it is surrounded by many islands, islets, and reefs. Notwithstanding the general difficulty of approaching its shores, it has several excellent harbours, that of the Havanuah being one of the best in the world. The land along the sea-shore, almost all round the islanil, is so low and flat as to be scarcely raised above the level of the sea, which Hrently increases the difficulty, especially in the miny season, of communicating with the interior. In the lagoons, near the shore, especinlly on the N . side of the island, which are fillel with sea wuter during spring tides, suflicient salt is collected for the use of the inhal. A cordillera stretches from the one end of the isl, to the other, dividing it into two unequal sections, that on the N . side being for the most part the narrower of the two. Of the geology little is known beyond what may be found in Humboldt. The cordillera is one great calenreous muss, which is found to rest on a schistose formation. Its summit presents a naked ridge of barren rocks, occasionally interrupted by more gentle undulations. It attains, in some parts, to an elevation of about $7,000 \mathrm{ft}$.

Climate.-In the W. balf of the isl. the climate is such as to be expected along the $\mathbf{N}$. limit of the torrid zone, presenting many inequalities of temp. from the near neighbourhood of the American continent. The seasons are spoken of as the rainy and the dry, but the line of demarcation is not very clearly defired. The warmest months are July and August, when the mean temp. is from $28^{\circ}$ to $29^{\circ}$ of the centigrade, or from $82^{\circ}$ to $84^{\circ}$ Fahr. The coldest months are Dec. and Jan., when the mean temp, is nearly $10^{\circ}$ Fahr. less than under the equator. During the rainy season the heat would be insupportable but for the regular alternation of the land and sea breezes. The weather of the dry season is comparatively cool and agreeable. It never snows, but hail and hoar frost are not uncommon ; and at an elevation of 300 or 400 ft . above the level of the sea, ice has been found several lines in thickness, when the N. wind has hnppened to prevail for severnl weeks in succession. Hurricanes are not so frequent as in Hayti and the other W. Indian isls., and seldom do much damage on shore. In the E. part of the isl,, par-
ticulnrly in the neighbourhool of Santingo, earthquakes are not minfrequent. The most sivere on recurd are those which took place in $1675,160_{2}$, 1766, and 18:26.
Animal Kinydom.-The only indlyenous quad. ruped known in the island is the jutia or hutio, shapel liked a rat, but from 12 to 18 in . in length exclusive of the tail; of a clear black coloun, feeding on leaves ant fruits, and inhabiting the hollows aml elefts of trees. Its fiesh, though int sipid, is sometimes enten. Amphibions oviparues mimals, the crocodile, cayman, mannti, turtoie, and jicotea; the first on the coast, and the others in the rivers and lagoons. The perro jilaro is the domentle dog restored to a state of nature. It becomes fierce and cnrnivorons, though not so mudh so as the wolf of Europe; never attacking man until pressed in the chase. Whatever be thein original colour, they miformly degenerate intor dllty black, with a very rough coutt. In spite of the effirts made to extippate them, they lnerease in numbers, and do grent damage among the cattle. The domestic cont, called the gato jibara, when it becomes wild, commits similar depredations on the poultry yari. The most valuable of the domestic animals are the cow and pig. The sheep, goat, and ass are not in such general use, although within these few years the great jackas of the peninsula has been introluced with some success, for the purpose of breetling mules. The feathered race are remarkable for the beanty of their plumage; but are far too numerous for sepsrate notice. The rivers, though not large, are well supplied with excellent fish, as are the bays am inlets with the natives of the deep. Oysters and other shell-fish are also numerous, but of inferiur quality, and allhere to the branches of the mantgrove trees which surround the coast. Snakes of a large size are of rare occurrence, thongh some have been seen 10 or 12 ft . long, and 7 or 8 in. in diameter. Of insects the bee is turued to valualle account by the exportation of its wax, and the use made of its honey. The mosquito tribe are tronblesome, and the phosphorescent family are remarkable for the brilliancy of the coloured lights they exlibit.

Vegetable Kingdom.-The forests are of rai extent. Mahugany and other hard woods are indigenous, and several sorts are well suited for ship-builling. The palm tribe are as remarksble for benuty as utility, and of vines there is great variety, some of such strength as to destrov the largest of the forest trees in their parasitical embrace. The tropical fruits are plentiful and various; of these the pinc-npple, orange, and its varieties, are the most highly valued. Of the alimentary plants, the platano, or plantain, is by far the most important. Next in order come the sweet and bitter yuca, the sweet root being eaten as a vegetnble, and the bitter converted into bread after its poisonous juice has been extracted. The sweet potato, the yam, and other farinaceons roots are also known, although not in such general use as in the British West Indies. The maize or indian corn is indigenous, and in extensive use the green lenves for fodder, under the name od malloja, and the grain in various forms for mall and beast. Rice is cultivated in cousiderahle quantity ; and a varicty of beans, especially the garbanzo, so well known in the peninsula. Gardea stuffis are scarcely known, except in the Havannah and other large towns, and there only in the dry season. The culture of flowers is still less attendel to.

Mineral Kingdorn.-The pursuit of the precions metals was the grent object of the first discorerers but if gold was found at all, it was probably in

Gardea except in the Havannah and there only in the of flowers is still les
e pursuit of the precious tt of the first discoverers, all, it was probally in
nabing the sands of some of the rivers, ns no traces of the supposed mining operations are now to be found. The gold and silver sent to Sjain from Cuba, IIayti, and Jamaien, soon after the disovery and conquest of these islands, consisted, nuwt likely, of the aceumulations of the aborigines. In the course of the 17 th centiny, the eopper mines near Santiago, in the E. part of the island, were wrought with some succens, but were abandoned upwards of 100 years ago, from the imperfect knowledge which then existed, of the art pef extracting the metal from the ore. When the mines were abandonell, a large quantlity of the mineral, amounting to several hundred tons, was left out the spot as worthless, but having been suljected to analysis by one of the present English proprictors, it was found to be so rich in metal as amply to repay the expense of sending it to as amply for smeltin i. $n$ at isequence of this diseorery, the old wo.:- .-. were explored, and companies formed for the purpose of renewing the miung operations on a scale of considerable magnitude. One of these, called the linglish Compmy, has been highly suecessful, employing many miners and labourers, some of them slaves, some emigrants from the Canaries, and some articled sorvants from Cumwall. Powerful steam engines have been ereeted by this company to assist in preparing the ure for shipment at Santiago. In the neighbourhad of Santa Clara, another copper-mine has heen opened by an American company. At first, the mineral thence obtained was sent to be smelted at New York; but latterly, like that from Cobre, it has been slipped to the great shelting-houses iil Wales. Of 51,307 tons, of copper-ore imported into the U. Kingdom in 1848, no fewer than 30,679 tons were brought from Cuba. Coal of tolerable quality has been found in the neighbourhaul of the Havannah, but though several pits have been opened, the English coal, earried out in the sugar ships as ballast, may still be sold at a cheaper rate. The eoal of Cuba is highly bituminous, and in some places degenerates into a form revenbling the asphaltum which is found in the pitch lake of Trinidad, and in various parts of Europe. The slijps of the discoverers were careened with this bitumen, which is often found hear the coast in a semi-liquid state, like petroleum or naphtha. Marbles and jaspers, of various culours, and susceptible of a ligh polish, are found in many parts of Cuba, and in its chief depenleney, the Isle of Pines. The mineral waters of San Diego, Madringa, and Guanabacao have obtainel some celebrity, but with the exeeption of the last, which is within a few miles of the Harananh, they are difficult of aecess, and therefore not much resorted to.
Population and Industry.-There have been rarious censuses of the population : the first in aiij, when it amounted to 170,370 ; a second in 199, when it was 272,140 ; a thirl in 1817, when it was 551,998 , and with transient persons, 80,980 ; and a fourth in 1827, when the permament population was 704,487 , and with transient persons, 730,562. According to the last census, of the year 1861, the pop. numbered 1,396,530; mong them 793,484 whites. The coloured population, numbering 603,046, was divided into 2:5,, 843 free persons, 6,650 called 'emancipated,' and 370,553 slaves.
The increase of the slave population has been rery rapid, being due chiefly to the continued importation of slaves from Africa. In some years, sinee the peace of 1815 , as many as 30,000 blacks re believed to have been imported into Cuba in a ingle year. Spain had indeede agreed by treaty III 18:20 to abolish the trade; but this treaty was
little better than a dead letter, and it is only since 1835, when a more effieient treaty with Spain was entered into, that the trade nustained any considerable diminution. It is highly probalile that slavery will soon entirely cease in Cuba, having lost lts chicf support in the United States, by the downfall of the slave-holding Southern states in 1865.

The raising of sugar constitutes by far the most important branch of iuclustry earried on in Cuba. Its culture has advanced with extraordinary rapidity, especially since 1809 , when the ports of the island were freely openel to foreigners. It is principally shipped from the Havamah; and its export from that city, which in 1760 amounted to about $5,000,000 \mathrm{lbs}$., had increased in 1800 to above $40,000,000$ lbs., in 1820 to above $100,000,000$ lbs., and in 1849 to $240,800,000$ lbs. The exports from the whole island in the year 1861, amounted to $1,127,351,750$ libras, or $10,065,640$ ewts., valued at $67,641,105$ pesos, or $14,373,7361$.

The culture of coffee alvanced for a while with equal or even greater rapility than that of sugar, In 1800 there were bit 80 plantations in the island; In 1817 there were 779 ; and in 1827 there were no fewer than 2,067 , of at least 40,000 trees each. Ihat the low priees of coffee which subsequently prevailed, not merely eheeked this astonishing progress, bat oceasioned the abandonment of a great many coffee plantations. While, in 1837, the exports of coffee exceedel $53,000,000 \mathrm{lbs}$, they mly amounted to $17,353,425 \mathrm{lbs}$, in 1848 . In 186 i , the total exports of coffee amounted to $150,277 \mathrm{cwts}$., valued at 2,523,300 pesos, or 536,202l. More important than that of coffee is the cultivation of tobaceo, celebrated for its excellence in all purts of the world. The exports of tobaceo, in 1861, wece no less than $6,163,396$ cwts., valued at $16,912,500$ pesos, or $3,593,9061$. Since the outbreak of the civil war in the American Union, cotton, once an important article of enlture, but subsequently neglected, has bcen again raised in small quantities. Indian corn, rice, beans, plantains, and even wheat, are also raised, but not in anything like sufficient quantities for the demand, flour and rice being, in particular, very largely imported. Cattle lave become extremely numerous, being estimated at about $1,300,000$ heal ; but while hides form a large article of export, fresh and salted meat, and jerked beef, nevertheless, occupy a prominent place among the imports. Horticulture is very little attended to. Of manufactures, the most important are the making of sugar, molasses, and rum, the preparation of coffee, the making of cigars, the bleaching. of wax, and the manipulation of the minor staples of the island.

Internal Communication.-Down to a recent period the means of communication between the different parts of the island were very delicient. The common roads were in general badly constructed; and during the rainy season were, for the most part, impracticable for wheel carriages. The long narrow shape of the island, by lessening the distance from the interior to the sea coast, obviated in some degree these difficulties. IBut down to a very late period it was customary in most parts for the negroes to be employed in tho severe drudgery of carrying produce in baskets on their heads to and from the estates, to the senports, or to the public roads. Within these few years, however, this system has been wholly abandoned by the introduction of a very well-planned system of railways. At the commencement of 1865, there were 27 different lines, of a length of 818 miles, either finished, or in course of construction. The principal line, as well as the tirst con-
structed, runs from Havannah to Guines and La Union: it was commenced as early as November, 1885. Another important line, from Cardenas to Macagua, was started in 1838 ; and a branch, from Curdenas to Jucaro, in 1839. The other lineswere constructed since 1840, and the whole of them afford the most rapid and perfect means of comminication to the inhabitants of every importnnt place in Cuba. The carriages on some of the railways are drawn by horses, so that they have leen constructel at a comparatively small cost. They have, however, been of the greatest servlee to the island; and may, perhaps, be regarded as the principal cause of the late extraorlinary extensions of cultivation and general prosperity of Cuba.

Currency.-Paper money is unknown. The coins in use are Spanish doubloons or ounces, which are a legal tender for 17 hard clollars, and at the exchange of $8 \frac{4}{37}$ per cent. are worth 31.10 s .10 d. ; also the subdivisions of these doubloons, the half being $8 \cdot 4$ dols.; the quarter, 4.2 dols.; the eighth, $2 \cdot 1$ cloll.; and the sixteenth, $1 \frac{1}{2}$ doll. Mexican and Columbian doubloons, or ounces, are also in circlllntion, aud are legnl tender for 16 hard dollars, equal to $3 l .6 s .8 d$. ; they are sometimes in demand for exportation, at a premium. Their aliquot parts are worth eight, four, two, and one dollar respectively. Of silver coins, the Spanish pillar dollar is worth $4 \mathrm{~s} .2 d$. ; and is only legral tender at its nominal worth; but it is generally in demand for export, at a premium of from 2 to 5 per cent. Mextcan, U. States, and S. American dollars are also legal tender at their n:-merienl value, and are occasionally in demand, at $n$ trifling premium. For small payments, the coins in circulation are the four, two, one and half reat pieces, which are equal to the half, quarter, eighth, and sixteenth of a dollar respectively.

Trade.-The total exports of Cubn, in the year 1861 , amounted to $104,887,001$ pesos, or $22,288,487 l$. As already stated, sugar is the principal article exported, engrossing about two-thirds of the value of the whole. Next follows tobacco ; then coffee, wax, and honey. The total value of the miscellnmeous articles exported in 1861, was 14,748,746 jesos, or $22,288,487 \%$. The experts of Cuba to the United Kingdom are not separately given in the Board of Trade returns, but figure together with those of Porto Rico. For both they amounted to $4,271,793 l$. in 1861. There is no olstacle whatever to the establishment of foreigners as merchants in the island. The law says that those who are naturalised in Spain may freely carry on trade with the same rights and obligations as the natives of the kingdom, and that those who have not been naturalised, or have a legal domicile, may still carry on trade under the regulations stipulated in the treaties in force between the respective governments; and in default of such conventional relations, the same privileges are to be conceded as those enjoyed by Spaniards carrying on trade in the country of which such foreigners are natives. In practice this last condition is not much attended to, as foreigners are allowed to establish themselves as merchants without any inquiry as to the rights or privileges enjoyed by Spariards in the country they come from.

Government and Nocial State.-Public Education is not much attended to; but in this respect there las recently been a great improvement. Elementnry schools have been extended; and an institution has recently been established for the instruction of engincers. There are two colleges in the Havnmal, with numerous and eminent professors, and literary societies. Several daily newspapers, some of them conducted with considerable ability,
towns.

Vorals and Religion aro both at a low ebb, consequence partly and principally of the Ingui.i thon and of the degrading superstition so longe tablished in the island, and partly of the institutive of slavery. But improvement is not less perceptible in the elarncter and conduct of the people than in their industry and physical comforts.

As respects its civil jurisdiction, Cuba is dividen into three provs., of which the Ilavauuah, Santiago, and 'rinilad are the cups. The captain grueral, governor, or supreme military ehief of the island, is, at the same time, civil govemor of the W. prov.: but, except in military matten, the governors of the other prov. are perfeetly indepent dent of the captain-genernl, and ar? responsible only to the court of Malrid. The lslaud $i$ is al. clivided into three military divisions-a westem central, and castern ; the chiefs of which are, it course, subordinate to the captain-genernl. The royal court (Real Audiencia) of P'uerto Principe of which the captain-general is the ex officio pre sident, has the supreme jurisdiction in ail civiland criminal affairs. In the primeipalities there as Ayuntamientos, and in the rural districts Juem Pedaneos, who combine the exercise of judicia functions with those of police commissionets Spuin ordinarily keeps a marine force of from 4 to 50 vessels, most of them smull vessels, statione at the island. In 1864, the navy thus employen consisted of 4 frlgates, 15 steamers, and 32 small craft.

CUCKFIELD, a market-town and par, of Eng land, co. Sussex, rape Lewes, the town being in a commanding situation, on the ligh roail from London to Brighton, 34 m . S. from the former, and 13 m. N. from the latter. Aren of par., lo,ive acres : pop. of do., 3,539 in 1861 . It is a neat litile town. The churel, a spncions structure, has a lofty spire, covered with wooden shingles, the have assumed the colour and appearance of blo slate. It has a free grammar school, founded it the reign of Queen Elizabeth.

CUCU'TA (formerly Rosario, or San Juse Cucuta), an inl. town of New Granada, prov. Pamplona, near the border of Venezuela, 28 m . NNE Pamplona; lat. $70^{\circ} 37^{\prime} \mathrm{N}$., long. $72^{\circ} 14^{\prime} \mathrm{W}$. lu situation is extremely pleasant ; it is well-bailt neat, and clean; strects paved, with currents of water running through them. The par. church celebrated as the place in which the first congree was held, and the constitution of Colombia furmed in 1820. It is of Moorish arehitecture, aud contains a respectable copy of one of Raphael's Madumai by a Mexican artist.

CUDIDALORE, a marit. town of Hindastan Carnatic, S. div. A "wot, and one of the most es tensive and popurous towns in the S . of India, m. SSE. Madras; lat. $11^{\circ} 43^{\prime} 24^{\prime \prime}$ N., long. $79^{\circ}{ }^{\prime}$ J. It is naturally strong, being enclosed betwee two arms of the Pannaur. Streets broad, nad i contains many houses of the better class. N. the Pannaur is a suburb called the New Town, with large Portuguese church, and some handsome Fir ropenn dwelling-houses and other buildinga; an beyond this is a large and beautifully sitnated the fice, formerly the residence of the chicf-goveno of the British settlements on this coast. Sma English looms have been established in this tons and a paper manufactory. Cuddalore was takea by the British in 1760, but obliged to surrender! the French in 1782. It was restored to the Britiod in 1795 .

Yaitras. It has a muil fort, contalning the palace of the former nabobs, now converted into a court of justlec, and a prison for both debtors and felous. Cuidgyah is not a place of much trade; it was the capp of un indep. I'atan state, which survivell the destruction of the other Deccany kingloms: a treat deal of sugar and jaghery is made in its vicinity.
CUENCA, a city of Spain, cap. prov. same name, of a high mountain, between two others higher sill, and separatei from them by the deep, beds of the Jucar and tile Iineenr rivers, near their conthente; 86 m. SSE. Madriu, 136 m. SW. Sarafaish Pop. 7,61 I in 1857. The town is surroundel by high walls, f.nd its streets are extremely steen, crooked, and narrow. It has seven gates; six britges over the Muecar, and two over the Jucar, nine of the latter being of very superior consruction. Cuença is the see of a bishop, and the rsillence of the principal authorities of the prov., ${ }_{\text {rend }}$ contains a vast cathedral built by Alphonso ix. in the 12th century; $n$ fine episcopal palace; It parish churches; 13 convents, some of them luilt on precipices overlaanging the river, and containing paintings of great merit; 3 colleges, and an ecclesiastical seminary; 2 hospitals fur the sick, and Ifor fomendlings; a public granury, and several public funtains. It has some fabrics of paper saal wool. The latter were furmerly much more considerable than at present; and the town was also much more populous and important. It is the native commtry of the painter Salmeron, and of the famous Jessuit Molina. Cuença was given in dowry by the Moorish king of Seville, IBen Abut, with bid daughter Zaida, to Alphonzo VI., king of Casfile, when he left the cloisters to succeed his brother in 1072. The Moors again retook it, but it was finally wrested from them in 1176.
Cuence, an inl. town of Ecuador, cap. prov. ame name, in a spacious plain, nearly $9,000 \mathrm{ft}$. thove the level of the sea, $186 \mathrm{~m} . \mathrm{S}$. Quito; lat. $2^{\circ}$ ${ }_{6}{ }^{\prime} \mathrm{S}$, long. $74^{\circ} 12^{\prime} \mathrm{W}$. Pop. estimated at 30,000 , ff whom about $\mathbf{3 , 0 0 0}$ are Indians. Its strects are Irouid snd straight ; but the houses are low, and muilt of unbunit brick. It contains a cathedral, Iro par. churches, several monasteries, a college, and a hospital ; has manufuctories of confecionery, clieese, and hats; and some trade in these, ogeether with grain, cinchona, bark, and other roductions of its vicinity. Its climate is tempeaue as to heat, but it is subject to violent storms. A little to the S . is the Mountain of Farqui, chosen sy the French astronomers for their merilian in 1t2. In its neighbourhood there are several -emains of the works of the Peruvian incas.
CUEVAS, a town of Spain, prov. Castellon, 51 n. NE. Almeria. Pop. 3,096 in 1857. The town almost surrounded by the river Almanzor, and here are between the town and the Mediterranean, buut 8 m . distant, $n$ number of very deep cave:ns nt the mountains, supposed to have been opened $y$ the Moors, in search of minerals or water; rom these the town takes its name. It contains clurch, a convent, and a public granary. There s castle on the coast, and a small island belongIg to the town.
cULIACAN (an. Hueicolhuacan, Mex.), an inl. own of Mexico, state of Sonora, on the right bank f the river of the same name; 105 m . ESE. Cialaa, snd 170 SE. El Fuerte. Pop. 10,925 in 80j8. It is a depôt for goods passing to and from he port of Guaymas, on the Gulf of Calitornia. During the Spauish rule it was the cap. of a prov. the country around is well watered and highly roductive.
CLLLLEN, a marit. royal, and parl. bor. of Scotmad, co. Bantif, on an eminence at the month of a
little rivulet, 12 m . W. Banff. 1'op, 8,543 in 1861. Though an ancient burgh, the present town is comparatively new, the old town having been superseled, and the site on which it stood enclosed within the park of Cullen Honse, the mansion of the Earl of seatleld. The linen manufucture, so common on all the E. coast of Scotlancl, N. of DunIlce, has found its way to Cullen, but is carried on to an inconsiderable extent. The inhab, engage in the herring fishery, and in that of cod, sknte, ling, and haddock, which abound on their shores; so that dried or cured tish form their chief export. The harbour is bad, and the town, on the whole, not tlourishing.
Cullen unites with Banff, Inverury, Kintore, and Peterhead, in returning a mern. to the II. of C. Registerel electors, 44 in I86.4.

CULLERA, a sea-port town of Spain, Vnlencia. It lies on the Jucar, nenr its mouth, and to the S. of the mountaln and cape of the same name, on the Mediterranean coast, $25 \mathrm{~m} . \mathrm{S}$. Valentia. P'up. 9,814 in 1857. The town has a clurch, a convent, a hospital, a public granary, and burracks for troops on their march, being on the shortest and most frequented roal from the const to the capitul. It carries on a considerable coasting trade, as many as forty or fifty vessels being sometimes seen at a time, principally about 30 tons burlen, taking in fruit for France, rice for the Balcaric Islnnds, and the coasts of the Peninsula. The neighbourhood proluces rice, wheat, maize, muscatel ruisius, wine, oil, and garden stuff.

CULPl:LE, an inland town of Hindostan, prov. Bengal, in a jungly and unbealthy situntion, on the left bank of the Hooghly river, about 30 m . SSW. Caleutta ; lat. $22^{\circ} \mathbf{6}^{\prime}$ N., long. $88^{\circ} 25^{\prime}$ E.
CULBOSS, a royal and parl. bor. and marit. town of Scotland, in a detached comer, co. Perth, on a steep acclivity on the N. shore of the Frith of Forth, about 16 m . NE. E. Linburgh. Pop. 517 in 186 I . Culross was made a royal burgh by James VI, in 1588; and though it had once a considerable trade in salt and conl, the latter of which was wrought at a very remote period, trade of every kind has now entirely left it, except, perhaps, in little traffic in fish caught in the Forth, and a little damask weaving for manufacturers in Dunfermline. There are vestiges of an old harbour; but the smallest yawls can now approach the town only at high water. But thongh of no molern importance, Culross can boast of many remains of antiquity, which throw an air of interest over n place otherwise mean and decajed. At the E. end of the town once stood a chapel dedicated to St. Mungo or Kentigern, said to have been born here. A monastery, dedicated to the Virgin and St. Serf, was founded here in 1217, by Malcolm earl of Fife, for Cistercian monks; of which considerable remnins are extant, a part of it serving as the parish church. Culross Abbey, occupving a magniticent terrace overlooking the sea, and successively the scat of the Bruces and the noble family of Dundonall, is now the property of the leirs of the late Sir Robert Preston, Bart. The present parish church is collegiate, having two clergymen.

Culross unites with Queensferry, luverkeithing, Dunfermline, and Stirling, in sending a mem. to the H. of C. Registered electors, 23 in 1864.
CUMANA, a city of Venezuela, cap. of the dép. and prov. Cumana, in an arid and sandy plain on the E. bauk of the Manzanares, and near the mouth of the Gulf of Cariaco, about 1 m . from the sea-shore, and 180 m. E. Caracas ; lat. $10^{\circ} 28^{\prime} \mathrm{N}$. , long. $64^{\circ} 16^{\prime} \mathrm{W}$. Pop. 8,500 in 180 z . The city is commanded by Fort St. Antonio, built on the extremity of a hill immediately to the E.: the Manzanares encompasses the town on the S. and
W., lividing it from its principal suburbs. It has two parish churehen, two conventh, andi a thentre. Ilaving suffered greatly at different times from earthquakes, its builinges are generally low ; but lin the early part of the present century great improvements were introduced into the buildings, and its prosperity was much augmented by the juilleious conduet of its governor. It has a readstead capable of receiving all the navies of Europe, with excelient anchurage for large ships. It is protected by a shoal and the battery of Iboca at its entrance. Exports-inules, eattle, smoked ment, nalted fish, cneno, und other provisions ; 1ish, wild fowl, and other necessaries, are obtained here int great plenty, and very cheap. Climate intensely hot, from June to October the tempernture being usually $90^{\circ}$ or $95^{\circ} \mathrm{F}$. during the day, and seldom so low even as $80^{\circ}$ in the night. The inhab, are distinguished for their assidluity in business, and their polished manners. This is the oldest European eity in the New Continent, lhaving been built by Diego Castellon in 1523. It was totally destroyed by the earthquake of 1766 .

CUMANACOA, an inl. town of Venezuela, prov. Cumana, in a valley surrounded by lofty heights, 21 m. SE. Cumana, and noted for the prodigions difference between its climate and thint of the latter city ; lat. $10^{\circ} 15^{\prime}$ N., long. $64^{\circ} 5^{\prime} \mathrm{W}$. Pop. 2,470 in 1858. Cumanacoa has seven montlis of wintry weather, though only 730 ft . nlove the level of the sea. It is small, ill-built, with houses mostly of wood.
CUMBERLAND, a marit. co. of England, having N. Scotland and the Solway Frith, E. Nortlumberland and Durham, S. Westmorcland and Lancashire, and W. the Irish Sen. Aren 1,565 sq. m., or $1,001.273$ acres, of which abont 300,000 acres are mountain and lake. The co, has some of the highest mountains in the kingdom: on its E . border, adjoining Northumberland and Durham, these consist of a portion of the l'emine or grent central chain; while the $W$. group has received the name of the Cambrian range, from their being principally in this co.; the two ranges are divided by the plain of the Eden (see England for an account of these mountains, and of the lakes interspersed among them). Principal rivers, Elen, Esk, Irthing, Derwent, and Caldew. Soil in the lower districts, and in parts of the W. mountains, light, and well adapted to the turnip husbandry ; but there is also a good deal of wet loam on a clay bottom. The soil of the E. or central moors and monntains is mostly peat earth, and they are bleak, heathy, and extremely burren. Climate rather humid. I'rincipal crops, wheat and oats, Agriculture is much improved; a judicious rotation is observed ; and turnips are extensively cultivated according to the most approved principles of the drill-husbandry. Property is much divided. There are a few large estates, but by far the greatest portion of the co, is rlivided into small properties, worth from 10l. or 20l. to 200l. a year, belonging to 'statesmen,' or ' lairds,' formerly distinguished by their attachment to routine practices, their supplying themselves with all sorts of domestic manufactures, and their economy and independence. But their habits have materially changed during the present century : domestic munufactures have been wholly abandoned, and their habits approach much more nearly than before to the common level of cultivators. There are valuable coal mines near Whitchaven, and in other places; plumbago, or black lead, is found in the greatest perfection in Borrowdale in this co.; and limestone and slate are abundant. The cotton manufacture is extensively carried on at Carlisle and Penrith; and corduge and canvas are made, and ships built, at

Whitehaven and other places, Principal towns Carlisle, Whltelaven, Workington, and Cocker. mouth.

Cumberland is divided into 5 wards and mos pars. It returiss 9 mem, to the 11 . of $\mathrm{C}_{1}$, viz,t for the en., 2 each for Carlisle and Cockermouth and 1 for Whitehaven. liegistered electors fis the co. 10,164 in 1865; of which number the $E_{\text {. }}$ division hall 5,441 , and the W. division 4, in $^{2}$ I'rp, 205,276 in 1861, inhabiting $40,51 / 2$ housen Annual value of real property asmessed to incume tax: in E. division 462,574l. in 1857, and 47", itas) in 1862 ; nuil in $W$. division $420,296 \mathrm{l}$. in $183 \mathrm{~m}_{\text {, }}$ and 511,2721 , in 1862 .

CUMBERNAULD, a manufacturing village of Scotland, co. Dumbartou, 13 m . E. Glasyow, on the highway lending from that city to Falkirk and Stirling. Pop. 1,561 in 1861. The chief emplop. ment of the people is cotton weaving. The fivith and Clyde canal runs within $\mathrm{a} \& \mathrm{~m}$, of the tonn; and the Edinburgh and Glasgow railroad has: station liere. Cumberunuld was erected into a burgh of barony in 1649 ; and has for tive centuries been the property of the family of Flemint whose seat is in its immeliate vicinity.

CUMNOCK, or OLD CUMNOCK, a village of Scotland, co. Ayr, on the Lugar water, $12 \mathrm{~m} . \mathrm{E}_{\text {n }}$ Ayr. Pop. $2,316^{\circ}$ In 1861. This place has leen frmous for nlove 80 years for the manufacture of what are known by the name of Cumnock, of Lawrencekirk, snuffi-boxes. An artist of the name of Crawford cuught the first iden of them from a box male at Lawrencekirk, which hal been sent him to repair. The excellence of the Cum nock sunff-boxes lies in the hinge, which is butit ingenious in point of contrivance and delicate in point of execution; so that it is styled the 'in visible wooden hinge.' The woorl naed in the manufacture is plane, by reason of its peculiarly close texture. One set of artists make the boxes another set paint those dewigns that embellish the lids; while women and children are employed in varnishing and polishing. The principle on which the linge is formed, as well as the instnments employed in making it, were for many ycasked secret. 'The manufncture exists also in the neighbouring village of Manchline, as also, to a less degree, in Lawrencekirk, Montrose, and onc or tho other places.

CUPAR-ANGUS, a burgh of barony of Sootland, partly in co. Perth, and partly in Angus, on the Isla, a tributary of the Tay, on the high nad between Perth and Aberleen, about $12 \frac{1}{2} \mathrm{~m}$. from the former. Pop. 8,694 in 1861 . The place is neatly built, well paved, and lighted; has a townhouse and jail, an elegant parish church, tro chapels belonging to Presbyterinn dissenters, and an episcopal chapel ; a weekly cattle-market, and five annual fairs. The town enjoys its share of the weaving of the coarser kinds of linen fabrics, for the manufacture of which the varions towns and villages of Angus are distinguished. The wels are generally olitained from Dundee. It has ak extensive bleach-fichlds and tan-pits; but weaving is the staple employment of the place.

CUPAR-FIFE (so called to distinguish it from Cupar-Angus), a royal and parl. bor. of Scotland co. Fife, of which it is the cap., 25 ft . above the level of the sea, in the centre of the Houe of Fife, and on the 1 . bank of the Eden, $10 \mathrm{~m} . \mathrm{W}$. St Andrew's. Pop. 5,029 in 1861. Though ancient Cupar has all the characteristic appenrunces of modern town. The streets seem as if they hal been recently built; and are wide, well builh, lighted with gas, and partially paved. The county-hall is a lundsome modern structure. The manntacture of the coarser fabries of linen finm

the alaple trade of the town. There are also corn larler; anil flour mills, reckoned the best in the ch, is snuffi-mill whleh manufactures $60,000 \mathrm{lbs}$, of aluff a yenr, a washing or fulling mill, a glue manufictury; three breweries, two tan-works, a tile nal brick work, at which eonrwe earthenware is male, nud a rope-work. Cupar has loug had a flurrishigg joint-stock neademy, with unmerous other schonis; there is a bequest by Dr. 13ell of fin000 for educational purposes according to the laulras system. Ibesides the par. church, there are Preshyterian dissenting chapels, one Eipiscopal and one (ilassite chapel. Cupar is associnted with St, Indrew's, the two Anstruthers, Crail, Kilrenny, nail littenweem, in returning a mem, to the H . of C. Repistered electors 224 in 1865. Corporation prenue, $150 \%$. The lorough is governed by a provost, 3 bailies, and 23 commsellors. Cupar was royal bor. so far back, at lenst, as the reigr: of inarid II. Oa a momil at the E. end of the town alled the Cnatle-hill, formerly stood a castellated firtres, the ehief reaidence of the family of Masfuff, the fendal thanes or earls of Fife. At the int of this mound was a convent of Dominican or Hack Friars, founded by the Mnedutfs, and afterrarla amexed to St. Monance in the same co. keith's Scot. Hishops, el. 1824, p. 445) ; but of hese two buildiugs no trnces are now extant. The patrimonial estate of the famons Scottish het, Sir David Lindsay of the Mount, was within shurt distance of Cupar ; and on a verdant esplaale, still colled the Ilay Fiele, in front of Macuff castle, was acted, in 10.5 , his witty drama of he 'fhrce liatates,' a popular sntire on the priestmol, and which is thought to have had no mean ffect In hastening the Keformation.
CLRACOA, or CURASSAO, an isl. in the ariblean Sen, belonging to the Netherlands, off he X. const of Venezuela; between lat. $12^{\circ}$ and ${ }_{2} 13^{\prime} \Sigma_{\text {., }}$ and long. $68^{\circ} 44^{\prime}$ and $69^{\circ} 13^{\prime} \mathrm{W}$. ength, NW. to SE., about 43 m. ; average railth about 14 m ; ; area, $600 \mathrm{sq}, \mathrm{m}$. I'op. 10,596 1861, of whom about one-thirl slaves. The nres of the island are bold, and its interior is in ints billy. It has several harbours, the chief of bich is that of Santa Amme, in the SW., where principal town is buitt. The soil is ingeneral wir nul rocky, and there is a great deficiency of ater; but by the industry of the iuhab., some toceo, sugar in considerable quantities, and indige grown; nad a grool deal of salt is obtained om the marshes. Maize, cassava, tigs, ormines, runs, and most European eulinary vegetables, entivated; but provisions are not produced on cisland in sutfieient guantity for its inhab. The vernment is conducted by a stadtholder, assisted a ciril and military conncil. Wilhelmstadt, e cap. and sent of govermment, is one of the atest cities in the W. Indies; its public buildwhre maynificent, the private houses commomis, and the elean streets remind the traveller of secin the Duteh towns. The purt of Curaçon, Barlhara, has a marrow entrance, but is large 1 safe. It is proteeted by the fort of Amstera and other batteries; but was taken by a nairon of four English frigates in 18177. Two ather islands, one on either side, Buen Ayre and wha, also belong to the Duteh. 'Their inhab. elielly eattle-breeders. Curaçoa was discovered the S.pauiards, but taken from them by the teh in 1632 . Great llritain toek possession of nling, but returnel it to Holland in 1814.
CSTRIN, or KUS'ILIN, a strongly fortified n of Brussia, prov. Brandenturg, ou the Oder, ere it is juined by the Warti, ind in. E. Jerlin, the railway from Berlin to Kianigsberg. Iop.
 in

Oder is here crossed by a liridge nearly 000 ft . in length, uniting the citalel with the town: being surrounded by masshes, it is strong as well hy nature as by art. The liussians humt the town without, however, taking the fort in $1 \% 58$. It was mon after rehuilt on a greatly improved plati. The fortifleations have been much improved since the peace of $181 \%$.
CUTCH-GUNDAVA, an inl. prov. of lheloochistan, differing in some important respects from all the others, leing by fur the most valuable portion of that comutry, and its only prov, li, the lrahooick mountains. It lies between int. $27^{\circ}$ $40^{\prime}$ and $29^{\circ} 15^{\prime}$ N., and long. $67^{\circ} 20^{\prime}$ and $6 y^{\circ} 110^{\circ}$
 habitahle and fertile jart a little more than 60 m . having N. Sewestan (Canbul), E. and S. Sinde, and W. the prov. Thalawin!. It is for the most part a pinin, bonmded by deserts on the N., S., anil L.; and watered by several rivulets communienting by numerous aqueducts. Suil rich and loamy, and so exceedingly productive thant it is sald, wero it all cultivated, the crops would be more than sufficient to supply all Beloochistan; as it is. considerable quantities of grain, besides cotton, indigo, and oil, are exported. It is alleged, but probnbly without foundation, that rice will not grow in Cuteh-Guntava, notwithatnneling the luxuriance of nll other crops, and the plentiful supply of water. Climate oppressively hot throughont the summer, when the simoom is frequently experienced; during winter it is so mild thit the chiefs nud principal inhabitants of the adjoining W. provinces resort thither. The bulk of the pop. are Juts; there are a few Hindoos in the towns and villages, who live by barter, and transporting grain Villages extremely numeroms. The chief towns are Gundava, the cap., Dadur, Bling, and Lheree.

CUTTACK, a large marit. dist, of IIndostnn, prov. Orissn, presid. Bengal, between lat. $190 \quad 10^{\circ}$ and $21^{\circ} 40^{\circ}$ N., and long. $84^{\circ} 310^{\prime}$ and $87^{\circ} \mathrm{L} . \dot{1}$ having $N$. the dist. Midnapore and the llerar celed districts, W. the latter, S. Ganjam, and L. the Bny of Bengal. Aren $9,000 \mathrm{sq}$. m. Iop. 1,0xl,600. It consists of three different tracts of country, the marshy coast, the dry central region, and the hilly conntry to the W. The latter nbounds with trees, valuable either for cabinet-work, dyeing, or varmish-making. Rivers numerous; the chief are the Mahanuldy, Iraliminy, Coyle, aud Subunreeka; all these are of consideralile size, abl even the minor streams swell, during the rnins, to an enormons marnitude, rendering the ennstrictinn of extensive and solid embankments necessary in many parts of the dist. The periotienl rains nre not so early here as in lengal; the summer heats are very oppressive, and the forests of Cuttack are generally highly insalubrions. They are also much infested with ferocions will animals, especially leoparls; and reptiles, many of which are venomons. Liee of different qualities, wheat and mnize, in the lilly tracts, the sugar-cane, pulse, aromatic roots, spices, and dyeing drues are the chicf articles of culture. Several kinds of granite, slate, and iron ore are fonud, and gold dust in the beds of the mountain torrents. The land is not nssessed under the permanent settlennent, as is the case in the adjoining prov. of lhengal; thit an agreement is usiually made between the goverimont and the land-holders for a certain term, the amount of the land-tax being by no means fixed. A considerable proportion of the territory in the W. or monntanons regrion is in the possession of a number of nearly independent zemindars, each of whom maintains a kind of sovereign state, and pays but a light tribute. A more vnluable source

## cyPRUS

if revente to the goverument than the land-tax has bern the monopoly of salt, maseh of which, remarkable for whiteness and purity, is male on the ronat of this district. The chief towns are Suttnek the caple, Inlasore, midi duggermat, the sent of the cedebrated tomple of that same. (See debabincaut.) Cutack was aequired hy the British, oll the expulsion of the Mahratan, und the reluction of the Juggernant rajuh in Isia3-4. In 1817, the too rapid introlluction of the revenue mad julichal systems extablished in Jhengul nmongst the rude and barbarous inhabltunts of Cattack, together with the evils of over-asseswment and mismanugement, exeited a rebellion in this clist., which was substued in the ensulng yenr, but int the expense of much treasure, mid the loss of many lives.

Currack (Catak, a royal rewidence), a town of Hiadlustan, cap, of the above dist., seat of its principal judicinl ecurt, dee, on the Mahnumdly, and in the raluy season insulated ly two of its brinches.
 E. Pop, extimated it 40,000 , Its principal street is well built, and it has many houses two mut three stories high, $n$ spacions inarket-place, some hanusome Mohammedmustructures, and some militury emntomments. The dwellings of the eivil exulablidument are dispersed over the enviroms. This town is secural from inmadation by large and solid embankments along the river: the value of these was sutticimetly proved in 1817, when during the heary rains the waters of the river rose in one night 18 ft., or 6 ft . above the genera! level of the town, which was omly preserved by their menns, Cuttack is believed to lave been in capital ny carly ns the 10 th century.

CUXIIAVEX (Germ. Curhufin), a sen-port town of $N$. Germany; immedintely within the ethary of the Pllie, on its siW. side, in a detnehed fortion of territory belonging to Hamburgh, from which it is distant 5 m m . WFW.; Int. $53^{\circ} 52^{\prime} 21^{\prime \prime}$ N., long. 8043 ह. P'op. 1,410 in 1861 . The town has a gool harbour, with deep water, a lighthouse, and is $n$ quarmatine station. It was formerly the rendezvous of most parsengers to amd from England and the Elbe; but since the establishment of steam-pnekets, they are convered direst to and from Hamburgh, Vessels entering the Elhe gencrally heave to opposite Cuxhaven for pilots, by whon it is mostly inhabited. In summer it is resorted to by sen-hathers.

CUZCO, in inland city of Pern, formerly the cup. of the empire of the incas, at the foot of some hills, having an extensive valley opening to the NE:, $11,3 \times 0 \mathrm{ft}$. above the level of the seat, abont
 $7204^{\prime}$ 10" ${ }^{\prime \prime}$. 1'opo. $4 \overline{5}, 231$ in 1858 , mostly lindians. The enthedral and convent of St. Mugustine ure suid to rank amongst the finest religioms ediiices in the New Wordd; and it has besides six churehes, eight convents, four well- endowed hospitals, three momasteries, a miversity, and three collegiate schools. Ihut Cuzco derives most part of its interest from the historical associntions connected with it, and from its remains of the architreture of the incns. Even a great mumber of the private houses belong to that era; and live the size of the stones, and the finenese and pec⿻ibiarity of the buildings, frive to the eiry an imposing air. The Domiuicm comvent, a magnificent structure, is raised on walls that firmed part of the famons temple of the sum, destroyed ly the fanationd zeal of the Spuiarts. Ulloa ( Yoyare d'Amerigue, $i$. $\hat{607}$ ) says that the high altar stimels on the very spot formerly oceupied ly the golden image of the sum. Lion $a$ hill to the $N$. of the city are the ruins of a very extensive fortress, the wink of the
ineas, the wally of which are of the sypecies named Cyclogenon, and lave a striking manlogy to the en called structures fonnd in varions parin of Gireeo and Italy. Some of the stones, which are all mugnilar nliappes, are of suech an elsormous size that their welght is said ta exceed 150 tums, mull, thonted no cement be used in the buililing, tiny are? aimimably jointed nail iltted together, thant the in terstices are hardly pereeptible. It in very difí cult to inngine how suels vast lyocks coulit han been conveyed from the quarries nund hapent the walls without the alid of powerfinl machineng In the plain to the s. of the elty are extensif remains of ancient califlees in the same styic ; an it is suid by Alceeto that a subterrancan pos. led from thie pulace of the incoss to the firmenm mil that a rond was constructed from the city Lima.
The inhahitmuts are industr?
in cmbroidery pindug and and exed ins embifoidery, paintlug, and nenljiture. The are maninctures of cottom, limen, mul wemla stullis, and of leather nud purchanent. A on silerable trade is carried on in these and in il products of the andjneent district.
Cuzeo is the most ancient of the Peravian ciit its origin dating from the ern of Mnneo Capar, foumter of the empire of the incus, probaliny the 12th century. lizarro took possession of th 155.5, mad was shortly after besiered in it bytu whole P'eruvinn forece During this siege a pat part of the town was destroyed. The city; as as the ;rovince, of Cazeo, after being tom for the Spanish dominion, formed pirt of Peru frat 1821 to 1836 ; it then fell to lhulivin, but wase wh sequently agnin mited to l'eru.
CYPliUS, or KHBRIS, a fimons and convide able island, in the NE. angle of the Meliterrane between Asia Minor and Syria, at present beloer ing to Turkey, 44 m . S. Cape Anmmour in the f mer, 65 m . W. Latakin in the latter, nall 300 O E. Crete: between lat. $31^{\circ} 31^{\prime}$ and $35^{\circ} 0^{\circ} 2^{\prime} \mathrm{X},{ }^{\prime \prime}$ lomg. $32^{\circ} \quad 18^{\prime}$ and $35^{\circ} 37^{\prime} \mathrm{EE}$. Shupe smment ownl, with a considerable promontory projett ENE. from the main looly of the islaml: greas length 132 m . ; average breadth from 30 to 30, Pop, estimated nt 110,000, of whom about e holf are Greeks. The island is intersected lemy ways, or from E. to W., by a range of monni the highest point of which, St. Cruee (an: Olympis), is about 15 m . S. Nieosin. The pia mil river, J'edin (mm, Pedens), consists of two mis brimehes: it flows E. thromigh the centre of island, having its embouchure near the nilus Constantia, on the E. const ; but this, like mmed the other rivers, is but of limited dimensil nud is nearly dried up in summer. Cyprusis, otherwise ifl supplied with water, that obtais from most of the wells being bratekish. The eipml phains lie along the banks of the Pecian the S. coast of the ishmod. The elimate differs dillerent parts: along the N . shore it is compu tively tennperate; the winds coming from the monitainosas districts of Asia Minor temper hent in summer, and in winter produre piet colds on the momitains, which are coverd snow for several months. But it is othervise the plains along the S. and E.c consts: these dist, fior the most pairt, of a whitish soil which an oftensive ghare, anil being defended frun the and NW. winds by the momtains, at the es time that they nre expmeed to the full smed the E., SE., anil S. winds from the Syrian, Araly and lybian deserts, they have a higher teng uire than nuy other place in the Levant. Jut it is otherwise nond E. coasts: these e l' it whitish soil which beingr defended from the e mountains, at the a posed to the fill swe Is from the Syriam, And ey have a lighter temb ce in the Levimt. Dai ria is frequently gene bined with the want 1 t of irrigation, not
mante destroy the erons. The moil is naturally fuitul, and, in antiguity, Cypris wns famons for infertility, lud the variety ami excellence of ith minucts. Fiven now, though only a very mmall prion of the land lie cultivated, and that in the pout wretchel manner, the merchants of larnien manally expurt several cargoes of excellent wheat to Spala amil l'ortugal. The best as well as the mest agricalle parts of the island are in the vifinity of Cerina and Halla, the ancient I'aphos. Sel llafra.)
Conton of $n$ superior quality is prosluced in the ishand. The cultlyation was much exteuded after the ontloreak of the American elvil war, and in jater the total produce amounted to 8,000 bales if $2 \pm$ ewt., or $2,016,000$ pounds. (lieport of Mr. live-Consul White ou the Trade of Cyprus, lated Hay 10, 186\%.) Cyprus was formerly famous for its cotton, and, under the Venetians, the island annually exported alonit 30,000 bales. It then alan expmoted considerable fuantities of surar, prolucel from plantations of canes in the vicmity of Limasol and lhaffa. There are extensive frosts of oak, beech, and pines; qroves of olives and phatations of mulberries. It is resmarkable for the theness of its frnits, and its rich sweet rine, oil, and silk. The latter in of two kines, rellow and white, but the former is preferred. The wheat is of a superior quality, nfforiling exrellent bread; and rice, madeler, and nn entlens ariety of other valuable products, might be culirated ln several parts of the island.
The wines of Cyprus, partleularly those profued from the vineyard called the Commandery, finm its having loclonged to tho knights of Malta, rene formerly more highly prized for elesserts han even those of Crete. In the earlier p,art of ast century, the total produce of the vintage ras suppened to amonnt to nhove $2,000,000$ gralmin, of which nearly lialf was exported ; int hut, the wine grown and exported does not mount to a teisth part of these qumatities. 'l'erapa,' says Itr. Clarke, 'there is no part of the frrtd where the vine yiehls such redinilant and Huions fruit: the juice of the Cyprinn grape repables $n$ eoncentrated essence. 'The wine of the land is famons all over the Levant. Englishhea, luwever, do not eonsider it as a fayourite areage ; it requires nearly a century of age to eprive it of that sickly swectness which renilers repuguant to their palates. Its powerful perient quality is also not likely to recommend When it has remained in bottles for 10 or 12 ras, it acquires a slight elegree of fermentation moneposine to the air; and this, adled to its retaess and high colour, canses it to resemble ohay haore than any other wine. It will keep easks, to which the air lins access, for my nmher of years. If the inhabitants were indusinms, and capable of turning their vintage to ebest accomet, the red wine of the island misht peadered as famons as the white, nul, perbaps, tter suited for exportation. ('Travels, iv. 19.) Cyprus was furmerly fir more densely pupuled tham it is at preaent. In nntiquity, the pop. Mably fell little short of $1,000,000$; and in iil, when it was comurered by the Turks, it had [ap. of abont 400,0)0), or nenrly four times its ment amount. 'Nowhere,' as Mr. Kinneir states (maney through Asia Minor, pp. 176, \&c.), 'is e baleful influence of the Ottoman dominion ore conspicuons than in Cypros, where it las erally turned cities into miserable villages, and itivated tields into arid deserts.' In describing a jurncy from Larnica to Nicosin, Dr. Clarke fracks, iv. 55) observes, "I'he soil everywhere libited a white marly elay, said to be cxeced-
ingly rlch in ita nature, although neglected. The Sireeks are mo oppreased hy their 'lurkish masters, that they dare not cultivate the lanil: the harvent would justantly be taken from them if they did. Thelr whole nim seems to be to scrape together sufficient, in the course of the year, to pay their tax to the governor. The omission of this is punished by torture or liy death; and, in cases of their inability to supply the impost, the linhab. tly from the island. So many emiprntions of this wort happen during the yeur, that the pop, of all Cyprus searcely exceds $\$ 0,000$ jersems, a t.bimber formerly insuflicient to have peppled one of its many cities. The governor resiles nt Nieosia. His appointment is anmal, and as it is olvaned by purchase, the highest billuer succeeds: ench striving, after his arrival, to surpass his prudecessor in the enormity of his exactions, From this terrihle oppression, the consuls nud a lew ohor families are free, in consequence of a protection granted by their respectivo mations.'

Mr. Kimmeir (dourney, pl. 182-8) states, that 'the governor and the nrehbislop deal more largely in corn than all the other people of the island pit together: they freguently seize unun the whole yearly prodice, at their own valnation, and eithrer export or retail it at an alvanced price; may, it hapnened more than onee, duriug the war in Spmin, that the whole of the corn was purchased in this mamer by the merelannts of Malta, anil exported withont leaving the lower oriers a morsel of breal.' More recently, the condition of the people seems to have somewhat improved, to julge from consular and other reporis. The as ports of produce aro also steadily inereasur. 'The totnl amount of exports for 1863 was $276,700 l$, being ant increase of 88,5650 . upon the preceding vear, ehietly due to nugmented culture of cotton. The total amonint of imports in 18 i33 was $120,001 /$. exceeding that of the yent 1862 by $20,000 \rho^{2}$. Grece is the elief importing eninitry, next Aistria and then Irance. (Heport of Mr. ViceConsul White on the Trude of Cyprus, inted May $10,1864$.
Sheep nud eat tle are bred in considerable numbers. There is ahmolance of game, such as partridges, qunils, woodcocks, and suiges: there are no wild qualrupeds, excepting foxes and hares, but many kinds of serpents, and the tarnutula. Clouds of locusts sometimes devastate the coumery. The ancient mines of Cyprus now wholly neglected, afforded large guantities of the finest eopper (Ass Cypriuin), whence, though that be very doubtful, the name of the island has been supposed to be derived. It is also said to contain ores of gold, silver, and other metals, and lins a species of rock-erystal called I'nphos diamond. Aminnthus, or asbestos, of a very superior quality, is found near lintin; it is flexible as silk, white, and more delicately tibrous than that of any other country. Mariti states that a village, called Amianthos, existed in Cypris in lis tine: and it was most probably the spot where the Amiantlins or incombustible eloth, uset by the ancients to wrap up the boties of distiuguished persons when Inid on the fumersal pile, was prinetpally prosluced. ('Iravels, i. 177.) Salt is olftained by evaporation at varions places on the S . coast. The inlab. mnnufacture small carpets, some silk and cotton fabries, and excellent 'lurkey leather. Uuder the 'lurks this ishand was divided into three sanjiacks -those of Baffa, Cerina, and Nicosia, Nicosia, in the eentre of the island, is the cap. The other principal towns are Lamica, on the site of the nucient Citium, Limasol, Famagnsta on the V:. Cerina (an. Cerinia) on the N., and llafla (Paphos) on the W. coast. Even the ruins of most of the
ancinut eities mentioned by straloo have dixnp-
 meir tracel the cire, of the nuclent walla, mul the finumidutiona of mome bmililinge; and at Lamien medala and other antlipuitien aro frecpuently dug ul. The remaine of a mumatery, huilt hy à printcess of the houne of Lamignun, stanif alyint tim. SE, C'erima. ('yprus wna originally peopiled liy

D.ICCA. or DHAK., an inl. city of Hindowtan, prov. Ibingal, formerly very cixtensive, pumloms, mid rich, and atill one of the prineipml eftien of the Ihengal presideney, and the arent of a court of cireuit mud appenl for the seven L:, distr. of hemgul. If extromis, with its sulurlow, for if im. along a river which, maiting with the Ciangen on the use hand anil the lirabumpuita on the other, uffiseris the greatest theilities to cominurere:
 cutta, with which it is comnected hy the liant Bengal railwny. I'op, entimated at 7 li, wom. Like ofl 'r mative towns, it is a misture of brick, thatel, num mul housen, with narrow and arowed treets. The bulk of the homses ure so very commastible, that they are usmally burned down once a yenr. Deworting to Helser, bnean is like the worst part of Calentth, near Chitpoor, But with somer really line ruins interminglesl with the huts, which eover three-fourtin of its aren. There are fen Liuropean houses, mal these mostly sonali mad mena, compared with those of Caleitta. Some fireek bnildings, which were the fincomrite residence of the late mabob, were ruined by the enerouchments of the river. In the lithi century Ishmm Khan built a palnee and fort here, the ruing of whieh furm inl imposing object; and toward the emit of the sane century a gramison of Auringzebe coms:zonced and finished a magnitieent pulace, now also in ruins. The pagolas are few and small, owing to the ascendmacy of Mohammedanism, nand almost every brick building han its Persian or Arabic inseription. There is a smant hut protty (iothic: Finglish chureh: nad $n$ burial ground nibost a mile from the seity, contaniang same hambanac tomis, both Cliristiai mul Mussufman. There are several olselisks in nand around the city; and nbout 4 m . off is a beautiful Gothie hridge, said to lave heen constructel by a Frenchman, lant, like most of the other publice ellifiess, in n state of ruin. All the buildings beyom the
inhabled portion of the city ure nurrommend ruins and rank vegetationi and the rastle, if torien, and churehes, of the Dutch, French, a Portuguene, have all fallen into decay. ling goonis and mznufnetures, or imitations of the are to be met with in the hmzanas: bat no veem larger than small comentry-lmilt brigs come upit river. 'The trade of the city, however, hns greal improved in recent years by the estab) ishment the Enstern Dengul ruilway, a line rumning fan Caleuttu to Dacene via libibna, with a limanh lessore. The tutal lengeth of this railwny is ll m., null it wns oprened chroughout on the is November, Istiz. 'The striped and thowerel $m$ lins of Dacea were formerly regnrded as inimital and were in great recuest at the dlugul court, a other untive Indian comrts, he well as at the court of Frume. 'The mumufacture was herelita in several tamilies, but has heen numihilatemb the dentruction of the native courts and : wealthy mative mobles. lts loss lias been re generally ascribed to the importation of of cheaper muslins of Encland, but thisis a mistai it was wholly suppressed before a ynrd of brith muslin or calico found lte way is Indin. T manufacture, in fact, was never carried on up a large scale; and being one of huxury onlf, fell with the fall of the wenlthy class, who ald purchased its products. The cotton grown int district is now mostly exportel to Engly There are some respectable direek, l'orturnaz and Armeninn merelanits. The comutry min Ducea being always covered with verdure duan the iry months, it is comparatively free fry violent heats, and is reckoned one of the healhi stations in llemgal.
Darea is comparatively modern : it is not ms timed by Dbul Fazel. firom 1008 to 1639 it the metropolis of Bengal, mud again attrimed that dignity in $16: 5$, the cummencement in rera of its greatest splemiour, when, julging fi

 ror, hor is it cenmected with misthluy timblar efleminute in the character of the 'ineoplo. It resta on a blind and ildatronion venermion for the perven of the anverelgn, ma lor that of a maperior heing. Ile is the abmolute nontor $a^{\circ}$. S lives and proper ties of hin sulijecte, anil dimpmea of them at pleasine. It in a erime in the intter to mipmone: that the king eate, driuks, wleeps, or prarforms may of the functions of an ortinary mortal. A move relgn of the hame of thowa having meereded to the thirone, canmed all the proramin of the name name In his tomimions to lee put to dentli, consceiving it to lee an anpmalomable premmontion that any sulject monld bear the sunie name with his master. The grentent lords cenin mily appronch the kligg lying Jlat on their fineen. und rolling their heads in the inst. 'l'he nttemptes thos made tu inspire the proplo whll reverance for their monarilh, suem to bave lwen completoly suceestial. 'Ihe Dahoman rushes to batele in olsedience to the orders of his king with a blind, mithlnking, lirute emithience. Nurris having asked in Dalomman hefore inttle if he did not think the: enemy tow mamerume : the latter repliad, 'I think of my kiag, and then I dare corgue the of the enemy myself: Itr dechared his inditference whether he survived or not; adding. - It is not material; my head belonge tio the king, not to myrelf; if he pleanes to semid for it I min ready to resign it ; or if it is shot throngh in buttle, it is no difference to me, 1 am natisfled.' It is not aurprising, therolore, to learn that luman akulls form the finvourite ormament in the construction of the palneen and temples. 'The king's aleeping chamber has the floor paved with the sknlls, and the roof omamented with the jawbones of chiotis whom he las overeome in buttle. Every yeur a grand fentival is held, which lasts for several weeks, and during which the king wnters the graven of his ancentors with the blowd of hosts of' human victims. The bolies of those unhupy men nre not even interred, hit are suspended by the feet to the walls, and left hangings till they jutrefy. I'he ceremony is known as the 'grand enstom.'
I'erhaps the most extraorillunry fact connected with this barbarons horle is, that all tho women are monopolised by the suveruigur and that lu individunl can pessens hlonself of either a wije or a concubine exeppt by gift of, or purchase frum, the kug; and whether the lary lee young or old, handsome or the reverse, she mist be equally acenptable to the slave to whom she in given or sold. The king kecpa a vast scraglio for himself; and at his death lis wives and concubines lall to murdering ench other, till the carnage be stopped by the interference of the new king. Atter these sfatements, it will only appear consistent and naturnl that the tiger slumble be the prineipal fetiche, or olject of worship, among the Dahomans,

DILILCSHLSA, a pros. of sweden, whith see.
IWI.KEIT'I, a hor, uf harony and nurket-town of Acoilmul, en. Mil-Lothlan, on the rual Irom Diliuburgh to Coldetrean, is m. SE. Vidinhurgh, on the bidhinargh mad Iawlek rallway. l'oppo $3,16!$ in Istll. The town is situnted on it peninsular neek of laud between the N. nul S. Liaks, whlelf sulte abont a mile Fio, and fill into the Frith of Forth at Musselhurgh. It is 14 clemn, well-hailt town; the prineipml street, which is wide and hamisome, rons Irom Lia to W., nul there are soveral soboridinate streeta. Its puiblic buildillgs are, -n pariah churels (ant whd Gothice editlee, nised an a collegriate chareh before the liefurmations), three chapele lelomging to I'resployterinu dinnentern, and one belonging to tho Inderendents, A new parish choreh was erected in 1830 . Dalkeith has long been eminent for its eduentional instituthons, particularly its chassical school. This town, like other burghis of barony, was origianlly ualer the exelusive management of the baron or stperior and his bailic; but, in 1759, an act of purlimnent whe oltained, upphatiag certain trustres to superintend the paving, cleaning, and lighting the atreets, to supply the burgh with water, and to provite a revenue for theso purposes ly imposiug a small tax on the ale, porter, and beer ensumed in the parish. Dalkeith is chietly celebrated for its grain market, which is helil every 'Thurselay, and is reckoned the largest market of the kinil in Scotlund. The Dalkeith nul Edinturgh railroad, which commects these towna, was conmeneed as early as 1827 , and opened for goods and phasengers in 1831. The Duke of Buccleach at his own expense, brought the Dalkeith line into the centre of the burph, prolonging it, by a vialuct over the N. Esk, so as to eommminicate with eonl mines in that quarter. Coal abounds throughout the whole neighbourhood of Dalkeith. Dalkeith Palace, the priseipal residence of the Duke of Buecleuch in Scotland, is within 300 yarils of the E. termination of the town. This palaee, which formerly belonged to the Dourlasses carls of Morton, was acquired, in 1649, by the family of liuceleuch, who still retain it, and are superiors of the burgh. Anne, heiress of Buecleuch, was married to the Duke of Monmouth, a natural son of Charles II., beheaded for rebellion in 1685. George IV., on his visit to Scotland in 1822, reslded in Dalketth House. The parliamentary electors of the burgh unite with the comnty constituency in returning a member to the II. of C .

Dalmatia, like the other prove, of the Anstrian empire, has a provincial diet or reprementative ass нembly, instinted ly imperinh diplomm of (het, こu, 1xili), followed liy the 'I'ntent' of Feh, 2n, IN(i). (hee Austum.) lbesider, certuin ol' its towns mad
 Spmatro, retnin their own juristlictim, and the sune privileges they poswosed before their mion with Austria. 'lhe highest anthority in I anhmatin is the governor, whor resides at \%arn, the ment of the Gubrruinu. In this rity the eourt of apjuals and the highest driminnl eont ara established, with depembent connts in the funr circle towns, Zara, Spalatro, liagusa, and Catturo, Jineh circle has neveral distriets, the chief muristrate in which is momed jratur, and takes ebgnisance of julicinl amb police athinirs, besilles directing the riral economy of the distriet. The elistriets divide into grentur and lenser parlahes or communes under headhoronghs (Capi vilh mul 1 'owlesta), who recence no silary, but are exempted from taxation, as are nlan the Sarileri a deserijntion of gens-a'urmes, firmed by the govermment ont of the peamantry. The gunding of the frontiers towaris Thokey is an importmat charge in Dulmatia. and a strict watel is also kept along the coant. For purposes of trade, 6 bazaars or markets are hell on the frontier, nud 7 rastelle, or parhatoria, at intervening stations. Lazarets are estublished at Zarn, Spalatro, Iingusa, unil C'astelmono.
Dalmatia formed, from the commencement of the l2th centiry down to 1.119 , a pertion of the kingilom of llingary: at the list-named epoch it. passed under the swny of the Venetians, who hat made themselves masters of Ragisa nearly 100 years previously. Duriug the lith and 1 ith centuries this comintry wos the comstant seat of wars between the Venetians nud Turks, until it was finally conquered by the latter, who helld it till 1797, when it was ceded to Austria. In 180.i, Austria gave up Balmatia to the Freneh, who incorporated it into the kingrion of Italy. Napolenn I. made it a duchy, and conferred the title of duke ol Dalmatia on Marsial Sunlt. On the downfall of Napoleon it reverted to Anstria.

Damascus is very ancient! it in mentionen it Gen. xiv. 15, as exiallug 1918 years n.c., and wn then, as subsequently, probably the capital of os Independent Syrian kiugilom. It was sulwlued by David (2 Sam, vili, 6), but recovered ita indpendence, if not earlier, at least diuring the nigno Solomon. ( $1 \mathrm{King} \times \mathrm{xl}, 24$.) It then became the capital of the kingdom of len-hailad and his wies cessora ( 1 Kinga xy. 18), and remained so till its subjugation by 'Ilplati-l'ilewer, about $742 \mathrm{~s}, \mathrm{c}_{2}$ little before the downfall of its rival Samarit (2 Kinge xvi. 9.) From this time it followed l furturies of the rest of Syria, falling successivet under the power of the Persians, Greeks, Kumans, As a komsn city it attained gev eminence, anil flgures very conspicuously in in listory of the apostle I'aul. (Acts ix.)

Damascus was taken by the Saracena in 602 after a siege of aeven montha, anll was for many years the cap, of the khalifate. It was unsurese fully besiegel by the Crusaders in 11.48 , captum by Timour lee or Tamerlane in 1400, sand dstroyed by an accidental fire in the following retu In 1510 it. fell into the hands of the Turks, wh retained it till 1832, when it was captured by lurahim Pacha of Egypt.

Damascus is remarkable as being the only city of the East which has not dwindled from its fomis greatness. Its pop, seems to be as yreat row ever: while Babylon, Nineveh, and Palmyra her wholly vanished, and Antioch and Alejpo are bu the shaclows of their ancient glory.

Damascus is one of the eacred cities of the X hammerlans, and its inhal. hal formerly the des racter of being the most intulerant nuid fanatrof of all the proplict's followers. 'I'll within the las

The catheiral chureli of St. Mary is the prinelpal pubtic building ; it was flnished in 1bll: and has a the bruss fiont and a magniflcent picture of the last judpment. The town-house, arsoumb, and the Archushuf or exchange, also deserve nutice. There are 16 Jutheran churches and chapels, 1 Catholic churches, and $n$ chapel, 2 nynagognes, and an linglish cliurch, whth several monaxteries and convents. The town has also a gymmasium, two grammar-achools, and many inferior sehools, with schooln of navigation, midwifery, and commerce; a school of arts and traden, a goorl publle library, an observatory, a muscun, a suclety of natural philosophy, an orphan and fomudliug hoapital, a large workhouse, and various hospitals.

Dantaic is the seat of the provincial nuthorities, of a court of appent for the circle, $\boldsymbol{n}$ council of mimiralty, and a tribunal of commerce. It has a vast number of distilleries and breweries, the latter of which produce the black-lseer in such genernl demand; it has also large establishments for grinding flour, with dye-works, sugar-rofincries, and mamufictures of ilre-arms, tobacco, silks, vitriol, de., and some jewellery business. The harbour, called Neufiahruasser, is at the mouth of the river; but vessels drawing 8 or 9 ft . come up to the city. 13eing the emporium of the extensive and fruitfin conntries traversed by the Vistula and its a!hucnts, Dautzic has a very extensive commerce; and is, after Odessn, at the head of all the corn-shipping ports, not of Europe only, but of the worli, Whent forms the principal article of export; it is of the

## DANUBE:

best quality, amd very large quantities are exported, as many us 500,000 qumrters having been shipped in a single yeur. There is also a large exportation of thour, rye, lmarley, pease, and oats, with timber inferlor only to that of Memel, linseed and rapeseed, staves, pearl ashes, bomes, rinc, tlax nud lump, linens, fenthers, beer and spirits. The subjowinel table-compiled from the othicial report of Mr. Lowther, II. M,'s secretary of embassy, dated Iferlin, July 28,1864 -shows the exports of Dattrig during the year 1xtiz, the lirst collumn giving the total expmorts, and the second the exports to the tinited Kingdom:-

The principul articles of import censist of woolIens, cottoms, mad other munulautured goods, colonial produce, dye-stull's, wine, oil, spice, fruit, salt, mad conls. This importation of the last-named article from Grent Britain is increasing from year to year. In 18tis, the imports of conl from this eomatry amounted to $2,185,8-18$ centacr, or about 110,010 toms.

The harbour aecommolation of Dantzig is very good. The usial depth of water at the river's month is from 13 to 14 f . ; but in the roads, which are protected ly the long, low, narrow tongue of land called the theel, there is growd anchorage for ships of any hurien. The greater part of the trade of Dantzic is in the hands of foreigners, particularly English. The granaries for storing the corn brought down the Vistula nre generally seven stories high ; and these, with the warchouses for linens, ashes, hemp, fe., are all situated on a small island surrounded by the Motlan.

Dantzic was founded in the 10th century. It was occupied ly the kuights of the Teutonic order in 1310, and was held by them till 1454, when it emancipated itself from their yoke, and became a free independent state, moder the protection of Poland. For a lengthened period Dantzic was a principal member of the Hanseatic Confederacy, and had under it severnl other cities. During its independence, the citizens were engaged in frequent contests with the roles, Swelles, and Russlans ; and notwithstanding the protection of England, Lolland, and Prussia, Peter the (ireat exacted from them considerable contributions. The pretension of Dantzic to the explusive navigation of the Vistula, or to demand a toll from such ships as passed in and out of the river, was at all times submitted to with reluctance. After the lirst partition of P'oland in 1771, Frederick the Great, hating acquired a large accession of territory on the

Vistula, nppromeching almost to the gates of Dant zic, elaimed for his sulijects the right of free nave gation on the river. This having leeur refued b the eltizens, gave rive to some aets of hostility, an to lengthened necotiations. These, however, wer cot short in 17833 by the second partitimo of $\mathrm{l}^{\prime}$ land, when Dantzic was assigned tol 'rusila During the invasion of France, the eity was uecu. pied for several years by a French gurrisun ant sufferen much from the hostilities and cexartivn to which she was exposed; but since the peate if 1815 she hins recovered much of her ancient jom perity. The firtitications have been also greatl strengthened and improved, mod magnititeve wurks have been comstructel, by which the whold adjacent territory may he laid under water.
Durnug the inilependence of Dantzir, there wer attached to lt the Wereler, aunalluwial island firme ly the Vistula and the Motlan, and the Frisel Xinhrong, a long narrow tongue of hund betree the lirische In ifl and the sea. The former is ser fertile, lant the latter comsists principally of samul.
DANUBE: (an. Danubius, nud in the lower par of its course Ister, (ierm. Donan, Ilung. Inual, celebrated river of Central and SE. Eiuropre, hains though inferior in point of size to the Whima, it every other respeet the thent amomg Eurnpen rivers, Its general course is from W . to L., extends between long, $8^{\circ} 10^{\prime}$ and $29^{\circ} 40^{\prime}$ E., i extreme N. point of hat. being $4!102^{\prime}$, and its ex tremes. pwint $48^{\circ} 38^{\prime} \mathrm{N}$. 1ts total conrse from i source to its mouths, on the W . shore of the Blat Sen, is from 1,750 to $1,800 \mathrm{~m}$. ; during whieh passes throurh the territories of Baden, Wirtem berg, Bavaria, and the Austrian empire, an divilles 'Iurkey from Wallaclia, Moldavia, an liussin. It receives nlove 30 navigable and a rat number of inferior tributaries, the principal bein the Isar, 1 mn , Iruve, Save, Theiss, Moruva, Seret and I'ruth. The cities of Ulm, Ratisbon, J'assu Linz, Vienma, Presburg, Comorn, ( (ran, Waitze Budn, I'esth, I'eterwardein, Nensatz, Scmilin, Bel grade, Semendria, Widin, Nicopoli, Sistow, Rum chnk, Silistriit, Brahilov, and Galack, are situate upon its banks.
The basin of the Danube and its tributaries ha been estimated to comprise about $1-13$ th part the entire surface of Earope. It is lommed S . b the Alps and the Balkhan; and on the N. at tirs by the Black Forest and some minor Alpine ranye and aftervards by the Bohemian Forest and Car pathian Mountains, It includes the phains Bavarin, Hungary, and Turkey in Europe; and the course of the Damube has heen generally eour sidered under three grand divisions, eneh embra cing one of these plains: As this division is nu only natural hat convenient, we shall adhere to in the following statements.
The Danube originates in two streams, the line gach and the Brege, which have their soures on the 1. declivity of the Black Forest, in the gran duchy of Baden, in about $48^{\circ} 10^{\prime} \mathrm{N}$. lat., and $1^{\prime}$ ' E. long. These streams having united a Donaueschingen, where they are nugmented by spring sometimes regarded as the head of the river, the united stream takes the name of the Danube. It thence proceeds at first SE ., lont after wards in a NE. direction as far as Katisbon, new which city it attains its extreme N. lat. It the rums again in a SE. direction to about long. $15^{\circ}$ and from that point mostly E, to Vienna, wher the first division of its course may be said to ter minate. Within this division it receives on the right hand the streams of the Iller, Gunz, Mindel Lech, Isar, Inn, Trann, Ens, \&e. ; many of whict are navigalle for a considerable distance. it aflluents on the opposite side are, on the contrary

n two streams, the Br h have their sources on eck Forest, in the gramt $48^{\circ} 10^{\prime}$ N. lat., andi ans having mited a ey are anginented by a l as the head of the takes the name of the ls at tirst sib., but after as far as liatishom, near xtreme N. lat. It then on to about long. $15^{0}$ ly E. to Vienna, wher rise may be said to terjion it rereives on the he lller, Giunz, Nindeh s, \&e.; many of whic deratble distame. It le are, on the contrary
namally small; and indeed, thronghont the whole oper hatf of its course, the principal tributaries of the Danube (excepting the 'Theins) are from thes. oright side, while, 11 the lower division, those fond the N. or lel't wide are by liar the most conikrable. It receives, however, Irom tha: N. in te first division of its comrse, the Suly, Altmilhl, jask, and legen, all of which are naviguble amams. At its sonrce the Damule is 2,178 it. twe the level of the sea, and rums through an Wine conntry to Ulm, where its elevation is Lide ft. Froin I Manawiorth to J'assan it trarives the llavarian plain; its height above the ar leime at the former 1,125 ft., and at the latter aid ft . At l'assan it leaves the Iavarian tom. and thence to Vienma, intersects a secomel momssimbers region. At Lin\% Its elevation is 73is lit., ant at Vienne 512 ft . At Uhm, the Danube Ifrst hewnes navirable for flat-hottomed vessels of fora 60 to fto tons burden, though its slepth ture measures litule more than if ft , and its walth little more than 100 ft . Through the bavarian plain its averuge depth is 10 ft . 'This iateases considerably when it becomes agnin endised between the monntains at l'issan; bat dowe Vienna its navigatiom is rendered diflicult, ant only by its genernl shallowness, but by its rpidity; and the frequent rucks, sheals, and whirlpals in its channel.
la the second division of its course, the Danube at first runs generally lis. to Preshorg, next throurh the lesser Hougarian plain SE. to its eonfluenec with the lianb, and then F . to Waitzen. At this wint it turns S . throngl the great llumgarian pain, nud runs parallel with the Theiss for nemrly po of lat. to its junction with the Drave, abont at. $4 j^{\circ} 30$. Hore it turns SE., in which general ditection it continues to Orsova, where it leaves the Austriam dom.; the second division of its curse terminating at the cataract or pass called de 'Iron Gate,' about 4 m . lower down. It is mithin this division that the hambe receives its largest and most important tributaries, including the Raab, Drave, Save, and Morava on its right, and the March, Waag, and Theiss on its left side. at Presburg, its waters are 331 ft ., at lluda, 230 ft ., oul at lelgrade, 203 lt . above the level of the sea. from Viema to the mouth of the Drave, the Danube rums through an expanse of plain country troken ouly in a few places, as at l'restourg, Buda, mil Waitzen. Near the latter it passes through a nuiue formed in a chain of momitains, separating the two Inngarian plains. From its umon with the Drave, its S . banks in Slavonia and Servia are sually monntainous, while its N . continue low and marshy as far as Mohlova. Previonsly to its maching lhula, it is about 700 yards wide; soen sfter passing that city it attains a wilth of upwards of 1,000 yards; and by the time it lias arrived at Belgrade it is considerably more than $\frac{3}{4}$ of a mile acros. (Dict. Geog.) lrom Vienna to l'esth, its bed is sprinkled with rocks, but they are not such impediments to navigation as in the upper portion f its course. Shifting sand banks, which jrevail all down the river as far as Moldova, are grenter obstacles; but when the water is tolerably high, they may generally be avoided by good pilotage. (Austria and the Austrians, i. 327.) At Gönyei, 70 m , above Pesth, the Dambe tirst becomes navigalle for veasels ilrawing more than from 2 to $2 \frac{1}{2}$ ft. water. Near Moldova, a mountain range from the Balkhan, and another from the Carpathians, begia to confine the river on either side as far as (ihalova in Servia. 'Tliroughout this distance, about 810 m ., it is greatly contracted in width, abounds with rapids, and is beset with rocks. Near the termination of this detile, a short distance below

Orniva, is the fimoons pass of the 'Jron (inte? ('Turk, Demi-Kitui), already alluded to. This is a gorge about 2,000 yards in lemgth, enclowed on either side loy a momntain of nicaceons slate, $n$ materlal very dillealt to break or blast, through which the river rushes with grent velocity, over an luclined plane, with a lill ol'abont 15 ft . a mile. The roeks here livide it into three channels. The centre one is of coasiderable whith, and vessels ot dot) tons may pass down it, when the river is very linll ; the two others are but shallow; and that on the Wallachian or li, side is never used. Aceoriling to Strubo (vii, 212), It was here that the Jhunubins ended, and the later commened; but there is a great diserepancy as to this point anomer the ameient anthorities.

In the third division of its conrse, the janule runs at tirst generally S. by lis to Widlin; thenes its direction is mostly W. by S. to near Sistow, where it attains its most s. lat.; and from this point E.NE. to liassova. It then turns N. to Cialacz, and tinally mons trom this town generally E, to its ellinx in the Black sea, abont lat. $4 i^{\circ}$ As far as Galacz, it limons the bomalary between Turkey and Wallachia and Moldavia; and hetween Galnez and the sea it is the bomalary betwe en Rassia and Turkey, its principal N. and central months being includel within the Russian territory. While the Dannbe is ruming S. hy li.., its riglit bank is mountainoms, but the elevated lands soon afterwards recede from its banks, nat throughont the rest of its course the river tlows through a low plain, which E. of Silistria becomes marslyy. In this division it receives on its left side the Schyl, Aluta, Vode, Arsis, Jalommitza, Sercth, and l'ruth. Its aflluents on the opposite side are much less considerible ; the prineipal are the Isker, Osma, 'hoban, de. lu its progress through 'lurkey, the Danube varies in breadth from 1,100 to 2,100 yarils; and its average depth is upwards of 20 ft . Ships of large size ascend as far as Silistria. About 50 m . from the Black sea, it divides into three principal ams, besides givinus origin to a considerable lake (linssein) on its S. side, from which severnl minor arms proceel. The Ilelta of the banube is a vast swampy flat, interspersed with lapoons covered with bulrushes, the resort of vast flocks of water fowl. The N. principal arm of the river (Kilia) and the S. (Edrillis), which forms the bomdary between the linssian and Turkish dominions, are shallow and of little value; but the midille one (Sulineh) has from 10 to 12 ft . water over the bar at its month. This is said, however, to be gradually tilling up from the deposit of mud brought down by the river, which the current has not sufficient strength to clear away, its fall and rapidity leing very much diminished during the last 2000 m , of its cuurse.

Were it not for the rapids between Moldova and (ilalowa, the Damule would be at all times naviguble from Ulm to its mouth. Great efforts have been made at varions periosls to overeme this interruption. The Roman emperor Trajan constructed, with great labour and sagacity, a road along the eilge of the Servian sitle of the river, to facilitate the towing of ships against the current. Some remains of this extraordinary work still exist, with part of an inscription in honour of 'Irajan. In more recent times, attempts have been made to deepen the chammel of the river. and to cut lateral canals in the most dangerons places; but these, owing to the almost insuperable obstacles to be overcome, have had but little success. Looking at the map, the best way would appear to be to cut a navigable canal from opposite Moldova to Berza P'alanka, below the 'Iron Gate,' which would not only avoid the

## 1 is

## D.ANCBE

rupids, but shorten the distance, by avoiting the great leend of the river by Orsova. But the nafure of the ground is said to oppose insurmountable onstaclen to sueh a project, thongh probably it would admit of the construction of a road, or, hetter still, a ruilway. 'The IInugarima government has constructed an excellent mad very expensive road irmm Moldova to Orsova, alomg the left bauk of the river. Unfortumately it termiuntes nlweve the ' Iron Gate; and passengers going dlown the river, unless when it is sulliciently high to almit of flat-bottomed bonts going through the 'gute,' have to be ferried over to the Servim side of the river, where, after a hand journey of about ${ }^{5} \mathrm{~m}$., they re-eniburk. Thuse aseending the river have also to eross at Orsova.

The Dunule abounds with islands. They are expecially numerons and large in the middle part of its course. The (ireat schutt island extencs Inetween two anms of the river, from I'restburg to Comorn, a distrace of 6.1 m . The Czepel and Marguta islands, helow Buda, formed in a similar way, are also of considerable size. The Danube hus been suid to wind more than other Europenn rivers; this is peculiarly the case in its progress S. through the great Hungarinn pluin. It is also one of the swiftest rivers in Europe; its rapidity is sueh as in some places to renter any navigation argainst its current inupossible, exeept by the aneney of stemm. According to Mr. Quin (Steam Navigation, i. 210) it rushes througle the 'Iron Gate, nt the rate of not less than 8 m . an hour; but it is cleur that the velocity must vary matrially with the volume of water. This rapility fir a long time grevented the erection of my stone bridge on the Danube below liatishon; nor was there a permment bridge of my other kind below linz previuusly to the commeneement of that constructed at liuda. There are flying bridges at I'resburg and Comorn, and bridges of boats at l'esth and Peterwardein : beyond the latter place (16) direct communication between the opposite hanks exlsts. In antiquity, however, it was very different. Abont 3 m . below Gladova, Trajan constructed his famous bridge, the remains of which are still visible, and form one of the most interesting and remarkable monuments of the must brilfiant dera of imperial liome. This great structure consisted of 20 or 22 stone piers, with wooden arches. The greatest depth of the river is here 18 ft ., and the length of the bridge between the pillars or buttresses that still remain on either bank was about 3,100 English feet. lint the breadth of the river is less than this; and at present does not exceed 2,800 feet. This neighbourthood of Gladova is one of the widest parts of the river; and was no doubt selected fior the site of the bridge partly on account of the ample channel that was thus afforded to earry off the sudden floods to whieh the river is suliject: its bed is here also sound, and its depth less than in most other parts. When lowest, the heads of some of the piers are seen above the surlace of the water. The noble work was destroyed by Adrian, the successor of Trajan, lest the be:burians should overpower the Roman troops in Dacia, and make use of the bridge to invade the empire. (Eutrop, in Adrian.) But it was not Adrian, but Aurelium, who abandoned Dacia.

The steam navigation of the Danube is of paramount importance. This undertaking was first actively commenced by Count Szechenyi, who, in 1830, established a joint stock company for the purpose, of which he was the managing director. The Austrian gevernment soon afterwards took up the scheme, greatly enlarged the plans of the company, granted it a charter for

## DARDANELLES

the exclisive navigution of the river for a mumber of years, and accortel it the privildge of trawin, grituitonaly, the necensary supplies uf cual frum the imperial mines of Moldova, on the banks of the river. The tirst steamboat was launched on the Danube, it Viemm, in 1830. The ententise proved most sucecessfinl, and led to the firmation if several other establishments of the same nuture alter the monopoly of the first cumpuny had ceased. 'The barges and ortinary patkel? boats on the Dnmube are unwichay tlat-buttulued honts, eovered with sheds ol' rough plamks; the ralits in use are large and clumsy fabrics of line rudest kind; sails nre unknown on the $\mathcal{L}_{\text {plog }}$ Danube; and the buats ure stecred only ly. paddles.
So far back as the 8th century Charlemaghe contemplated uniting the Daube and the Mine by means of a cunal; and the remains of a work commenced with that view are still visille at Wessenberg. Alter the lapse of more than 1,0 , 4 years, an undertaking of a similar kind was coria menced under the nuspices of the Bavarian yovernment, and completed in the reign of Kill Ludwig I,, after whom it was named the Ladwif's Canal. The canal commences at Banberg, onithe Maine, and runs $1 u$ a slight curve, by way of Forthheim and Erlangen to Nuremberg, and from thence, in a larger curve, to Dietfurt, on the river Alt: mulh, where it ends, the Altmuhl being a tributary of the Damube. 'The canal is from 34 to 5 thit broad, and 5 ft . deep throughout. It has 69 loth and on its lighlest print it is 630 ft , above the river Maine at lamberg, and 270 ft . above the junction of the Altunulit and the Danule.
DARABJERD, a town of Persia, prov. Fars, 183 m. SE. by E. Shiraz. It is tinely situated on the banks of a river, and in an extensive plain, surrouncled with groves of orange and lemon trew which yield such an abundance of fruit that the juice is exported to all parts of Lersia. Though much fallen off from its former splendour, and partially in ruins, it has still a pop. of from 15,000 to 20,000 . The culture of tobacco is here carritel to a great extent.
DARDANELLES (an. Hellespontus), the narrur strait
'Lougus In angustum qua clauditur Heliespontus.'
connecting the Sea of Marmora with the Eyrean, and separating part of the SE. coast of Europe from the most W. part of Asia. Its modern name is derived from the castles, called the Dardanelles, built on its banks. Its general direction is NE . and SW. Length about 40 m ; breadth unequal, but where least, not more than $\frac{3}{7} \mathrm{~m}$. across. Being, is it were, the key to Constantinople and the Black Sea from the $\mathbf{W}$., this strait is pretty strongly fortified. The entrance is 2 m . wide, and defendel by a fort on either side; that of the Asiatic coast (Koum Kalessi) mounting 80 guns and 4 morask, and that on the Eurupean side (Sertil Bahr Krt lessi) mounting 70 large guns and 4 mortars. The adjacent heights are also crowned with Uatteries, and nbout 3 m , nbove the New Castle of Earyo there is one mounting 12 guns. Proceeding onirard 12 m . above the New Castles, are the Dardanelles or Old Castles of Europe mad Asia; these defend the narrowest part of the strait, which is here only $\frac{3}{3} \mathrm{~m}$. wille. The Sultanieh Kalessi, or Asiatic castlit is the strongest, and is the residence of the sern:kier pacha, whose authority extends over the liots on both sides. It has 2 comnected forts, and 192 gums, 18 of which are of the largest calibre. The European castle is built in the form of a crescents and in 1832 was firmished with $6 \cdot 1$ guns; it has? collateral batteries recently built; the most S . ut

mora with the Egean, SE. const of Europe sia. Its noodem name called the Dardauelle, ral direction is NE, and breadth unequal, but 3 m . across. Being, as htinople and the lhack is pretty strongly forn, wide, and defendel at of the Asiatic coast 0 guns and 4 mortax, side (Sertil Balir Kit$s$ and 4 mortars. The rowned with batteries, New Castle of Eurpo s. Proceeding onwand s, are the Dardanelles, hd Asin; these defend ait, which is here only lessi, or Asiatic casth, esidence of the serasextents over the futts inected forts, and 19 ? largest calibre. The he form of a crescent, ith 64 cruns; it has? built ; the most S . l
which monnts 18 , and the N .30 giuse. $1 \neq \mathrm{m}$ further on the Asintic side is a battery of ti; guns; and 3 m . above the Enropean cnstle is a battery alled Kiamleh Binuroun, with 30 guns, near the amall town of Mnito, supposed to oceupy the site of the ancient Mrulutus. The last forts on both inles are Bovalli Kalessi, on the site of the ancient Scatos, and Nagara, near . Alyyelos, which see. The difeet distanee between them is nobot $1 \nmid \mathrm{~m}$. $\boldsymbol{A}$ trong current runs always from the Sea of Marmoth, through the Dardanelles, at the rate of from :tutm, an hour, nccorling to circumstances. The wind also generally sets in the same direction There are shoals in some places; but deep water is verywhere to be found in some part of the channel. The Asiatic shore presents the most beautiful scenery; that of liurope is, on the contrnry, generally Hep and rigged, To each of the Dardanelles a awn is altached: the Asintic is the larger, and contains 2,000 houses ; but the streets are narrow, ill paved, and dirty, and almost all the buildings are of wool. It has manufactures of pottery. lisllipoli is the principal town on this strnit, which see. This strait has been famons from the remotest perioh. It derives its name from Ifelle,性ghter of Athanus, kiug of 'Thebes, Irowned in in (Ilyrin., l'oet. Astron., lib. ii. § 20.) It is ulso memorible as the seene of the deatli of Leander, and of the impotent rage of Xerxes, whose illf.ted hest crossed over it on a bridge of boats betwem Seatos and Alyydos.
D.SFFUR, in country of Central Ifrica, hetween $11^{0}$ and $16^{\circ} \mathrm{N}$. Int., and $21^{\circ}$ and $30^{\circ} \mathrm{E}$. long. It lies between Bornon nud Abyssinia; almost due $S$. frum lisypt, and W. of Semanar, whence it is sepamaed by Kordolian. Standing, however, like an nasis in the midat of the Grent Saharn desert Darfur is situnted at a grent distance from all the above-named territories. The country is of the most dreary charncter, without rivers, lakes, or much cultivable lnud, with a few mountnins rising frum its sandy plains.
Of the topography and real extent of Darfür we posess but limited informntion. The principal town appears to be Cobbé, in lat. $14^{\circ} 11^{\prime}$, nud long. $2 \times 2 R^{\prime}$, which is 2 m . in length, from N. to S., but very narrow, each house being sepnrated from the nthers by a cultivated enclosure. The inhab, are supplied with water from shallow wells dug, in most instances, beside their houses, but so unskilfully that the soil often collapses, and the same well is reldom of use longer than four montlis at a time. This place is chicfly inhabited by merchants, and from it a enravan starts at irregular intervals to Cairo. 6,000 persons are said to reside t Cobbé. A neighbonring village, called El Fashar, is the residence of the sultan and his court. hweini, another Futrinn town, lies almost N. of Cobbe, at the distance of abont two diy's diligent travelling, and in the direct rond to Egypt ; hence it is principally resorted to by merchants. Its mwirons are more fertile than those of Cobbe, and when the jelabs (traters) remain there, it boasts f a daily inarket. Cubenbin, due W. from Cobbé, it a distanee of $2 f$ dnys, is $n$ more considernble plaee, being the depot of marehandise brought from the W . It his also n manufactory for leather and f tokens, a coarse cotton cloth from 5 to 8 yards Ing, and abont 22 in . wide, which form the covering of all the lower class of both sexes. 'The other tomns are liil, Cours, Shoba, Gidid, and Gellé. (Brorne's Travels, pp. 26(j-276.)
The inholb, of Jartitr, which have been generally eatimated not to exceed 200,000 jn numberDr. Wenry Barth says (Jonrnal of Royal tieogrnphien Society, 18tio, xiii. p. 123), ' not more thitt , 9 gh, $0 \% 0$ inhabitants, und perhaps much less'-
are a mixtire of Arabs and Negracs. They are poverneal lyy a sultan, whose prower is not altogether alsolute, he beiug, iu aome degree, amenalile to the kukara, or ecclesinstice, nad frequentlstandiag in some awe of hils own troops. His power is delegated in the provs. to governors, called melehs. Though the Fitrians are higuted Mohnmmedans, they do not absinin from intoxicating liquors; the crime of drimkenness. committed by menns of a decoction of hemp, is frequent among them. Siuilind tobuceo appear to be alimust necessaries of their existence; but for the enilurance of liunger nul thirst they are unequalled even by the intinl. of surrounding arid regions, amonfs whom such a qualitication is so essentinl. They are not remarkably clemily in their persons ; andi, laving no baths, rub their bodies with n kind of frinaceons paste as a sulostitute, The Fírinas are, unlikn other Moslems, jovinl, and even licentious, in their manners, and are particularly fond of clancing, each tribe having a dance peenliar to itself. At Cobbe education is in some degree proviled for by four or five mectelss (schools), where reading and writing are tanght. A knkara niso lectures occasionally on the koran, and what they call elun, philosophy. The language is a dialect of the Arabic peciliar to the Furians.

Agriculture in Darlitr is at a very low eblo ; indeed, the soil which was presented to Mr. Browne's observation, consisting of hare rocks, sand, n small portion of elay, and a still smaller part of vegetable mould, seemed to offer no encomragement. in that respect. Entirely devoid of rivers or lakes, the country solely derives irrigntion from heavy periodion ruits, which are preserved in numeron: water-courses. At the commencoment the limmer digs innumernble holes in his tields, into which lie throws the seed, nud covering it over with his foot, leaves it without fitther care until the grain becomes ripe. (Ibid. p. 291.) The harvest is gathered by women and slaves, who break otl the eurs with their hands; so that the farming implements of the Fîrinns are few and rude. 'The grains chiefly raised are whent dokn (Holcrss dochna, Forskianl), kassob, and sesamutu (simsin, Arabic term); the pulse consists of kidncy-heans, a bean called füt, nud another denominated $s / i \hat{u} h$, tugetlier with other leguminous plants peculiar to that part of Africa. The occasional drought is not favourable to water-melons, thuugh many are grown. Tamarinds, dates of an inferior quality, the Rhamnus nabecca of Forskainl, and tobnceo, which is said to be indigenous, are all cultivated in Darfür. (Browne, pp. 306-313.)

Commerce.-Althourh the Furians have bit a limited variety of articles to exchange for those necessaries of life which their own conntry does not proluce, yet commerce, from their ceitrical situation, affords the chief means of support to the nation. Many of their towns are entirely peopled by merchants. The caravans from Esypt, Sennnar, \&e. are laden with jewellery, swords, tireurms, cotfee, raw and manufactured silks, slooes, writing paper, Syrian sonp, French and lefyptian cloths, with ludian muslins and cottons, wire, briss, silver, se. For these the Fitrians give in exchange slaves, camels, ivory, ostrich feathers, gunn, pimento, tamariuls, leather sacks for water (ray), others for dry articles (geranb), parroquets, monkeys, and guinea fowls. (Browne. pp. 346, 349.)

The climate of Darfir is clictly.influenced by the perenninl rains, which fill from the midille of Jume till September with frequency and violence, and sudienly invest the face of the conntry, till then dry and sterile, with a dehephthal verdure. July appears to be the hotest mumth, for, necording to Browne's meteorological joumal, kept during:

## DALIEN

the years 1794-5, the thermometer never sunk below $00^{\circ}$ at $31 . \mathrm{m}^{2}$, hit more frequently rose to 980. In the April of 1794, however, it rangel Iroms $!4^{\circ}$ to $101^{\circ}$, while the mame month of the nucowellug year exhibits an avergre far below that of either of the July months. The thermometer soliloms sulak, accordiag to lirowne's register, lower ut $8 \mathrm{P} . \mathrm{m}$. than $70^{\circ}$, or at 7 A.m. below $55^{\circ}$, which happened inost frefuently in lebruary: I cecmber mul Jnmuary, also, exhilit low degrees. N. and NW. winds are those which blow with the greatest frequency over Dartür. (Appendix to Browne's 'I'ravels, 1p. 581-588.)

Among the maimals to be found in Darfitr are horses, of which there are not many; sheep, which ulso are scarce, yicld ment of a poor quality; gonts are more mumerons; lint horned cattle form the chief wealth of the Forrians, as in the more S. Afriem mations. The milk of the cows ls not very pralatable; but the beef is gool. Camels of every variety of breed are exceeliagly numerous: but the (ierab camel is much subject to the mange; the males are sometimes eastrated. Dogs are employed both in hunting the antelope and for guardung sheep; the honsehold cat is also met with. 'The wild animals are the lim, leopard, wolf, jackal, wild bultino, dec. Elephants assemble in large herds of four or fle humilred: though they are much sualler than the Asiatic elephant, the mimal is a source of great prolit to the lionians, whomake a lucrative sale of his tusks, holl his tlesh in great estecon as food, and manufacture the fat into a minch-ased miguent. Several sorts of monkeys, mud the civet-cat, aro also mentioned by Browice. Ostriches, vultures, parroquets, partringes, pigeons, uni quails, were also seen by him. Locusts, hooded surpients, minquitos, and white ants, infest the country in large numbers. ('Travels, pp. 298-304.) Of the minernls found in Darfir, the best is copper; lout iron is prodnced in the greatest abumance. mul is formed into domestic utensils and arms. All the silver, leal, and tin is brought from ligypt. 'the other geologgical features of Darfür are scarcely lanown.

WARIEN. See Panama (Isthmes of).
DARLINGTON, a market-town and bor, of lingland, co. Durhum, Darliugton Ward, S. div., on the skome, an atllnent of the 'Tees, 215 m . N. by W. London ly rond, and 286 m , hy Grent Northern railway, via York. Pop. 15,789 in 1861. 'Ihe town consists of several well-built and well-lighted strects, which branch out from a spacions market square. The river is crossed by a bridge of three arches. The chureh, formerly collegriate and dedicated to St. Cuthbert, was hiblt about 1160 ; it has a tine tower and spive 180 ft . high. The l'rim. anm West. Methoulists, Independents, R, Catholies, and Sore of Friends, have places of worship. A gram-mar-school was fomeded by (2. Eliz. in 1567, and a blue eoat school by Lady Cialverley in 1715. There are also Lancastrian, mational, and Sumay sehools, a dispensary, lying-in churity, and two alms-honses It is a bor. by prescription, governed by a baitill; who holds a court twice a year for the manor of Bondgate, and a bor. court also twice a year, at both of w! ich debts muler 40 s are recoverable. Petty sessions are helil on altermate Mondays in the town-lunl, n neat buikling laving a house of correction comnected with it. The election for members for the S. division of the cominty is held here. The manufacture of limen, which was formerly carried on to such an extent as to give empleywent to 500 lomens, has deelined, but it is still piretty considerable. A good many persons ate also employed in wod-eombing; and there are several tan-yards, rone-walks, loreweries, and iron and brass works. 'The Stockion and Darlington

d par. of Euyham, en , humad. Axtom. Darthe harent, about I m Thames, $15 \mathrm{~m} . \mathrm{ES}$ n. ly North Kent, ut ip. of town, $5.31 \cdot 1$, , nud c town, situated in a ly of one main streeth rom Londen to Doreth
and of two amaller ones loranching from it. The" and ine is crussed, at the E. cme of the town, ly a finilye of the era of Bdow. III, widened and repairel in the last century. The church is a large struture, with two burial-yards, one surromuling it, the other on the summit overlooking its tower. There are several dissenting chapels; a free gramnarrschool, fommed in 157ti, for eight boys; n national schonl, mul two sets of almshouse. There in a co. bridewell near the town, and sessions for the upper div. of the lathe are held in it. During ile rempo of Elizabeth, the eos, nssizes were frepurnuly held here; and at present a comut of requests tir deltes under $5 \%$, whose jurisdiction extends wher the town of Gravesend ind four aljoining juudrets. Market, Saturday; fair, August 2, for hurees and enttle. The chici business of the town i. cavsel by the numeroms large ginpowder, paper, with and flour mills on the Datrent: there is also n hate stean-engine manufactory, and a fombiry conlected with it. The river is uavigable for bonts ti the tww, where there is a small wharf, used diuelly by the eolliers which supply the neighbourinef fictories, The Roman Whtling Street is traceable near the town. In one of the chalk hills between which it stands are several ancient excavitinns, suppowed to huve been seooped out for gramaries during the Saxin period. There are some renuin of an Augustine numery, subseprently made a roval residence by Heury Vill. and by Elizabeth. burfirid was the source of the insurrection headed hr Wat Tyler, who, being a blacksmith in the turn, killed the poll-tax eollector by a blow of his lammer, for an insult offered to his daughter.
Dabivools. (See livaland.)
DAMTMOUTH, a pari. ber, town, and sea-port of England, co. Devon, hand. Culeridge; 170 m . $W \mathrm{SW}$. London by road, nad 225 m . by Great Nestern ruilway, viá Brixham Road station. Pop. t.il4 in 1861. The town is situated on the W. hank of the estuary of the Dart, near its emInnchare in the Dinglish Chamel, where it forms a spacious harbour, capable of containing several humbed sail of vepsels of the largest size. The enrance to the harbour is narrow, and protected Fif a battery on its W. side, on the site of an aukient castic, from which to a castle on the opposite bauk (now in rums) a chain used to be extendel for the purpose of defence. The streets, which are narrow and irrcgular, rise from the maxgin of the river, and parallel with it, one over aublher, along a stcep acelivity, being mostly connected by tlights of steps; houses mostly auticue, wilh projecting upper stories; the whole is paved, well supplied with water, tud partinlly lighted with gas. There are three principal charchesst Saviour's, built 1372, a curtious old structure, nsully called the Mayor's Chapel; Town-hall Chapel, on the summit beyond the town, with a twer forming a sea-mark; and St. Petovex's, alljoning the hattery at the entrance to the harbour. There are also several dissenting ehapels; two sets of almshouses, one of which, fonnded 1 ifit, is for deayed mariners; and several minor charities. There ure large tide-docks, allipted for the repair and luilding of vessels, and some activity in shipbuildiug. There are also extablishments for sail aut rope-making, a spacions quay, and several prisate wharfs. The exports consist eliefly of woullen goods and cider, sent thither from the interine, and shipped emast-wise; ;und of varimes arides of general sup,ly fir the Labrador fisharies, in which several vessels belongiag to the part are directly engaged, thourgh this trade has freatly declined from its ancient importance. there are regular stemmers up the river to 'Totness. There belunged to the port on the 1st of din. Istit,

166 sailing vessels of moler 50, and 262 sailing yessels of above 50 toms. There were also trelougting to the port, at the same period, nix simall steamers, of a total burden of lin tons. In ancient times, lowever, its mercantile marine was compuratively math more considerable, as is evident from the fact of its haviug furnished in vessels mid 757 seamen to the ileet of Sdward 111. agalust Calnis. The port is a bonding one, its jurishliction extending alkout 40 m . along the const (from the Teign to the Erme), and up the Dart to Totness bridge ( 10 m .). The Dart is nuvigable thus far for vessels of 150 tons, the channel having been deepened and improved.
Bartmouth claims to be a bor. by preseription, maler the name of Clifton-bartmouth. It reguinrly sent two members to the 11. of C. from tha 11th lidw. 11I. down to the Reform Aet, which deprived it of one member. The elective franchise had been previonsly vested in the corporation and In the freemen minte ly them, the inlatio of the bor. not being entitled to their freedom in right of birth, servitude, or residence. lhat the lieform Act, besides giving the framelise to the 101. honseholders, exteuled the limits of the bor, to the dimensions already stated. Registered eleetors, 250 in 18ti5. The inmicipal bor. is governed by a mayor, four aldermen, and twelve councillors. The income of the corporation, chictly derived from lands and houses, is about 1,100). a year. The scenery around Dartmonth is extremely picturesque. Flavel, an eminent Calvinistie writer, and Newcomen, the iuventor of the atmosplicric engine, were natives of this town; which also gives the title of carl to the Legre family.
DAVESTRY, a bor. and par. of Englam, co. Northanpton, humb. Fhwsley, 68 m. XV. London by road, and 73 m . by Lomlon rud North Western railway, via Weedon statiom, from which it is disfant 4 m . $1^{1}$ op. $4,12 \cdot 4$ in 1861 . The town is situated on the higli road from London to Birminghan, near the soarce of the Nen. It has a good madern ehurch, a free sehool, fonuded in 15int five boys are also elucated by memus of a legacy of Loril Crew, bishop of lurbam, and twelve at the expense of the corporation. The remains of apriory, fomuder in 1090, are now occupied as dwellings by the poor. Though incorporated at an early date, the bor. does not appear ever to have beren represented in the 1H. of C . On a neighbouring lolty eminence, ealled brough hill, is als encanpmentit ocempying the whole of the summit. A sprong rises in the outer ditch of the encampment, which, according to Dr. Stukcley, is one of the highest in Eughand. (Stukeley's Itinerariun Curiosum, ii. 18.)

DAVID's (ST.), a small decayed eity of Whles, eo. Pembroke, hund. Dewishand, near the extreme IV. point of the principality, on a small strean ealled the Allan, about 1 m . from the sea, and 16 m. NW. Milford llaven. The par, an extensive one, had in 1861 a pop, of 2.199 , of which the 'cathedral close' had 37. A bishopric was established here at a very enrly periad; and to that circumstance the place is most probably indebted for its origin. The cathedral, the bishop's palace, St. Mary's college, mad oither buildiugs appropriated to parposes comected with the establishment and the residence of the clergy, are cuclosed within a lofy wall above I,200 yards in cire. The cathedral, which vecupies the site of me more ancient destroyed by the Danes, was completed in the reign if King John. It is a cruciform structure, 307 it . in length within the walls, with a spuatre tower at the W. end; it has many interesting monmments, lat is, in preat part, in ruins. The binhop's palace, reckonal one of the most magni-

Heent edillees of the kind in the kingolum, is also In rulins: as is St. Mary'n college, fomuded by Johu of Ciaunt in 1865. The entheelral emitains the tombe of St. David, the patron saint of Wales, of (Giraldus Cambrensis, nud Llishop Anselin; aud these, and the great nutiquity of the phace, cennferred on it a preenline sanetity, which in the middle uras muife it be resurtel to loy crowids of piligrims. The bishop now rewides at Abergwilly, near Cuermurthen. The town is at present fuhabitel by the lew elergy who perform the duties at the cathedral, anil by the farmers and others who hold Iand in the immediate vicinity. There is very little trale, and the place may be sald to be mither increasing nor falling off. The conntry romol is poor aul unimproved, num the acuess to it is very had. The poor's rute is high, but honse rent is extremely low. The inhab. elect a mayor numially, whose duty it is to see that no encrinchments lo made on $n$ eonmon hell under lense from the bishop and chapter, and to collect a rate for puyment of its rent.
DAVIS's stlinits, the sea stretehing NNW. and SSiE., and unitlog Barllies Bay with the N. Athantic ocean, having (ireenhand on its Li. and Cunherland Ishund on its W. side. Where narruwest, under the Aretic circle, it is from 150 to 1100 m . across; but its length is not aceurately determincl. It derives its mune from Davis, ly
 Strong currents set towards the N. from this struit, which is also much encumbered with iee and iecbergs. It has been for many years past the principal resurt of the ships engaged in the N . whale fishery; the whales having been nearly extermimated in the seas round Spitzbergen, the original sent of the flahery. (See art. Bafkin's llay.)
DAUPHINE, one of the provs. into which France was dividel previounly to the revolition. It is now distributed among the déps. of Isère, Drome, und linutes A'pes.
DAX, AX, or A(iS, a town of France, dép. Landes, cnp. arrmul., in a fertile plain on the Adlonr, 29 m . SW. Mont-le-Marsan, on the railway from lordeans to Bayonne. Pop, 9,8:5 in 18iki. The tuwn is well built, is surrounded by walls of loman construction, and has men ancient episeopal palace, catheiral, hall of justice, and prison. Dax is, however, chiefly celebratel for its mumerous hot saline springs, aceounted efficacious in rheumatikm and paralysis; and which being known to the Romans, they gave it the mane of Apua: Auguste. The principal of these springe pours its witers into a large basin in the centre of the place, and the evaporation from it is no great, that in cool mornings the whole town is sometimes involved in a logg. There are several hathing extablishments contignous to the town. Sax commanicates ly a bridge aeross the Adour, with a suburb on the opposite side of the river. It has a trimmal of primary jurisdiction, a chamher of commerce, a commumal college, ami a theatre. Manufictures of earthenware, pitch, wil, ihread, vinegar, leather, and some trade in com, wine, brandy, and wood.

DEAD SLCA (Lat. Lacus Asphaltites, Aral, Bahr-el-Lout), a lake of l'alestine, celebrated in seripture history, in about $31 \mathrm{~g}^{\circ} \mathrm{N}$. lat., anul $3: 5^{\circ}$ $40^{\circ} \mathrm{E}$. long. Its dimensions have been varimsly stated, but it is probnbly about 40 m . in lenfth, and $1: 3$ in extreme width. On the E. mud W. it is Lommed by lofty mountains; on the N. it opens to the plain of Jericho and the valley of the Jorlan; on the S. the valley of lil-libor extends, as if it were a contimation of its been, thengh with a gradual rise, to the Gulf of Akabah. (See Jombins.)

## DEAD SE.L

Nothing ean be more treary than the meene. aronuld this fummens lake! the temperature is ren high; the noll, impreguated with malt, is withmu vegetntion, the nir is londed with saline pwiticice nad the hare crugs of the surronuling munutaing furninh no liond fur elther heast ur biril. Henve it nelghbourlowil is genorally desurted ly animater beings, and the dreary stilfuess of the junce in in crensed by the nature of the linke itself. Jitemed salt, its waters are nut moved by a guntle brema mil, owing to the hollowneess of ites buxin, bring seldom alfectel by a strong one, its usmul nimeat. muco is that of staguntion, agreelug woll with the elenth-like atilluess and desolation uromend.
This alsence of life luns given to the lake its poppular dexignation of Denul Sen, and is the monns of the common tralition that its waters are fatal to lish, nuid its exhulathons to birclas aned oulioe aulmals. This is, however, incorreet; hiride the over its surface muinjured; and Maumirell framil upone its shores somio shells, which seemen th imply that it was not altogether tenauthess, The witer is very limpla, but extremsly hitter and naiscons, the sulnatances hefl in solhition amoumfug to a hourth part of its whole weight :-

DFi.ll, a parl. bor. and sen-port town of lingland, co, Kent, lathe St. Auguatlne, hund. lhews-
 is South Fantern railway. l'op. 7,531 in $18 t i 1$. the town is situated on tho lio const of Kent, ofthe town Goodwis Sands, mind about hali way eetwen Ramagate and the S. Foreland. It conants of Upier, Milille, and Lower Deal. The hater, contaning the grent builk of the jops., is will, principally in threo parullel streets, clowe to de shingly peach, extendiug aloug the roandstend salled the Downs. Streets montly marrow mud mynar, but paved and lighted. $\Lambda$ row of houses winectiog the lower with the mpper village, confitutes Diddle Deal: in these last the houses are teteched, and are mostly oceupied by the wealthier class. The par. chureh is in Upper Theal: there is a chnuel of ease in the lower town, weral dissenting chapels, and a national sehool. framer forms a contimuation of Lower Denl, and wes its rise to the naval arsennl, hospital, nund armeks, formed thero duriug the last war. Since he Muaicipal Reform Act, it has been included an the bor, of Denl (of which it forms a ward); nal the lieform Aet conferred on both parishes, in majunction with Sandwich, the privilege of reuning two mems. to the H. of C. legistered lectors, 1,011 in 1862. Deal was annexed to the lingue l'orts soon after the Conquest; a lecree rempting it from co. taxation shows it to have kell so in 1299 : a charter of 11 th Win. III, mate f a bor. independent of Sandwich, Walmer inladed. It is now divided into three warils, furened by six ahlermen and eighteen commonmancilmen. There are no manufactures, the inalitants beine mostly shopkeep,ers, pilots, flshernen, siat boatmen, mnis!ly dependent on the wort of shipping to its fanons roadstead, the bowns. The latter is a spacions and convenient nelarage, bounded senwird by the Goodwin ands, and tolernbly safe, except in heavy falow wou the N. aud E. Most outward and homewardwund vessels touch here to take or land pilots, tters, and passengers. This business, however, ha greatly fallen off since the lnst war with fance, when tho Downs was much resorted to - men-of-war and merchantmen waiting for Hroy. The shipping belonging to the port of eal consisted, on Jan. 1, 1864, of eight sailing esels under 20, and three vessels over 20 tons; he total tomin, re of the former being 132, and of be latter 309 tons. There were no steamers. als form almost the only article of import. Of He rears, Walmer has been resortel to as a seathimg place, and there are several good lodgingouses for the reception of visitors during the seao. Denl Castle, on the W. side of the town, is sound tower, built by Hen. VIII., with a mont Ndrawbridge. Deal is supposed to be the spot bere Cesar effected a landing on invading Great nitain.
DEBRECZIN, a town of Hungary, and, next Pesth, the largest in the kingrom, cap. co. thar, in a flat, sandy, and arid plain, 114 m .1 l. sth, and 110 m . NW. Clausenburg, on the railay from Pesth to Kasehau. Fop. 37,850 in 67. Debrecain is one of the most singular hees in Europe. Notwithstanding its size, its neral appearance is rather that of a large village an a town; and notwithstanding its manufacres and trade, both of which are considerable, ne of the advantages ordinarily met with in we commercial cities are here to be found. Its lub. II.
strects are broal, inpaved, and in rainy weather a mass of liquid mud. Nennoly my of the honsers are above one story in halght, and few are buitt on any regnlar plan. 'The gronter part are thatched, which has rumbered Dehreczin subject at varions times to severe ravnges from Ilre. In the apring of 1811 , not fower thinn 2,0100 linditutions were reduced to nshes in the comrse of six hours. I'here are, however, tive churches, three huspilals, two infirmaries, an orphan asylum, and in town-hall. 'The prineipal eollege of the Calvinista in Ilumgary, with a library of 20,000 vols., and upwards of 1,000 students, is at Dehrecain. It hus also a l'inrist college, a Catholic high nelool, and a momastery. Nhoes are manufictured in large quantities, ns nlso tohaceo-jipes, prepared sheej-skins, conrse woollen cloth, $n$ aponary kind of sonp greatly esteemed throughont the dustrian emplry, with lenther, furs, combs, coopers' nul turuery wares. There is an extensive market for all these artleles, as well as for oxen, sheeph, horses, hogs, whent, millet, wine, tolaceo, whter-melons, lard, wax, honey, and varions other kimls of prodnce, especially at the fairs held nt Dehrecein every three months. On these oceasions the eomitry round the town is eovered to $m$ extent to which the cye can scarcely reach, with flocks and whrgons, bales and casen, tents and huts, romind which thousands of people are comstantly gathered; presenting, in fact, all the appearnince of min immense heril of nomades. A great dea' of business is transacted at thene fairs. I eborecain is, indeed, the great mart for the prosluce of the $N_{\text {. }}$ and E. parts of llungary. l3y far the greater part of the pop. are Magyars; and it is here that the trie Magyar character may be most alvaitageansly studied. Juring the rov-rlution of $18.48-9$, Jelirceain became the lust seat of the Himgarian parlinment, but being an entirely open phace, it was taken without resistnnce by the Austrian troops.

DECCAN (Daks-hina, the South), a term of Sanserit origin, and formerly applied to the conntry comprising all that part of India to the $S$. of the Nerbudda river; lat since the Mohammedan invasion, the term has been restricted so as to apply only to the countries between the Nerbudin and Krishna, that is, between the parnllels of lat. 16; and $23^{\circ}$ N., extending from the Arabian Sea to tho Bay of Bengal, and including the provs. Candeish, Aurungabad, Beeder, It ylerabad, Bejnioor, Berar, Gumbanah, Orissa, and the N. Circars. British Decean comprises the collectorates of Candeish, Ahmednuggur, Poonah, and Darwar, under the presidency of Bombay ; and the ceded districts on the Nerbuda under the presidency of Bengal. The remainder of this rerion is mostly comprised within the dominions of the rajah of Derar, the nizam, the rajal of Sattarali, the Guicowar, and Scindia. (For farther particulars, see the varions provs., districts, and states referred to under their respective heads.)

DEF, a river of England, which has its source in Baln Lake, co. Merioneth, N. Wales. At first it pursues an easterly course throngh the benutiful valo of Llangollen, till it passes Wymestay. It then takes a uortherly direction, and forms the line of demarcation lietween the cos. of Denbigh and Flint in Wales, and Cheshire in lingland. It nearly encompasses the ancient city of Chester and is thence conveyed by an artiticial channel, about 8 m . in length, to its spacious estuary on the Irish Sea. Its principal tributary is the Alwyn, which unites with it at Holt. lts estuary is much encumbered with sund banks.

The Dee is also the name of two considerable Scotch rivers, one of which fills into the N. Sea at

Alerideen, and the other into the Jrimh Sea at the Little lions, absut 6 m . below Kirkeudtright. The latter is navigulle as far as Tonglaul-bringe, 2 m . above Kirkeuiliright, fur vessels of harge burden.

DHLAWABE, the of the U.S. of Amerlea, mil, exteriting Ihede lalami, the smaliest of the Union. It ocemples a part of the peulnsula, bing between the bays of Chesanmake and Delaware; exteniling from lit. $38^{0}: 10^{\prime}$ to $39^{\circ} 50^{\prime} \mathbf{N}$, and long. $\mathrm{T}^{\circ} \mathrm{F} 5^{\prime}$ to $755^{\circ} 17^{\prime}$ W.; havlug N. l'emneyivania, W. and S. Maryland, and L: Delaware bay ani river. Length,

 in the X ., more level fin the S., and how allavial, anI marshy along the const. One of the most elevated riliges in the pendinala passes through this state, divining the waters that flow inte either bay. 'The ehief river, the Delaware, rises in New Cork, rums mostly S., and, after dividing that state and New Jerwey from l'ennylyanla, falls into the llay of Delawite, near the N. extremity of the state, aftur a comrse of alont 310 m . It recelves suverral tributaries, and is mavigable for ships of the preatest burden to Ploiladelphia, $\overline{\mathrm{b}} \mathrm{in}$. from its bouth; and for small stemu-vensels and bonats, to nearly lisis m. higher, The other rivers are inromsilerahle. There are no harbmars on the sencoast ; the mily one in the state is that of Neweastle, bm, alove the montlo of the Delaware river. The climato is lienthy; but the degree of cold expericucel in the N. is much greater, compared with that of the S ., than could be expected from a difference in lat. of only $1^{\circ} 2(1)^{\prime}$. The noil in the $\mathbf{N}$. is a rich chay ; in other parts, anl especially along the shore, it is sandy, and of inferior fertility; hut it is everywhere well eultivatel, at least fire Amerim. P'rinejpal erops, wheat, Indian earn, rye, harley, onts, tlax, and buckwheat. The flour is if superior quality, and mueh estecmed for its nulthens mul whiteness, The Cypress Swamp, a traet I2 m . in length and 6 in brealth, in the S . purt of the state, has supplied a great denl of the timher. Few minerals are met with, excepting large masses of bor iron along the banks of the smaller streams. Mmufactures have male considerable progress. The mills situmted on lirandywine Creck are emsidered the linest in the $U$. States; vessels are built, aul there are ironfoumdries and other extensive works at Wilmingtom. Wheat and flour are the principal articles of export.
The state is divided into three cos., and eight juticial circuits. Dover is the cap., but yields to Wilmington and Neweastle in size, trade, and pop. There is me college in th- atate; one plamed in 1803 at Wilmingtom has not come into operation; but there are good acalemies in this and in neveral of the other towns. The state has a find for the support of free seliools, which in 1864 hat a capital of 411,392 dollars; and the objeets of which are assistel by volumtary contributions from the difflerent distriets. The total taxation in $186 i 3$ amounted to 116,1041 dollars, the Jargest item, the county tax, proclucing $85,6 \mathbf{j}_{2}$ dollars. A eanal 14 m . in length, and mavigable for small seavessels, minites the Delaware river near its mouth with the head of Chesapeake Bay.
The legislature consists of a senate and house of representatives, each co. sending three senators and seven representatives; the former are electel fir four, and the latter for two years, by all the male citize 3 above twenty-one years of age who have resil ;l in the state for a year, and paid taxes for si: . anonths preerding the election. The executive power is exercisel by a governur chosen by the citizens, who retains othice for funr years, but is not re-eligrible. Judges retain othice during 'ap-

Nij) mena, Jolke the other Mohammerlans sonimiths G lutha, this prose is not a molorn mombivishon Ender the liritisli rule: the eollectorates whish ave been furmed out of it are suburilinate to the surt of Bareilly, the jumbial enpltal in the Epher FIV. provinces. The Jurishliction of I Whai nt prefat extends only over the eomintry W, the Jumin. lat of this prov. is flat; but at ivuzecrabul, ar lellit vity, legeins the lomge range of hills gat extents thromph the Macherry dom, towardis repmor. The chief rivers are the filliges, Jumun, angur, Chittung, amb, in the NW, the almost finet Sereswati, furmerly a distinguished stremm: ef pincipal of thes. run throngli the prow, in $n$ t. direction. 'Ilie lani is mostly arid and mandy, Inl in the W. suflers grently froin ilrought in the It seasm, when the water, which is of a brackish vality, from the mintron and other salts with which whand is impruguated, can be procured only finn 120 to 2100 ft. below the surfince. Still, usever, no part of Hiudostan is susceptiblo uf matre improvement by irrigation. The British wemment has latterly directed much attention to ac restorntion of ancient comals mine the construcof new ones in this prov. The cannl of Ali ctaa Khan, which had been previomsly choked for 100 non , was reopened in 1820, at an expense tasesu; ; nind, as its waters gradnally adranced, remontry for $\mathbf{o}^{\text {on }}$ or 6 m . on either side became rilised in a most astonishing manner, anul unrants wells, previously thought useless, hecone ain serviceable. The camil of Sultan Feroze hal, the bed of which passes from the fommer W. fuygh Ilurrimin to the frontiers of Bicanere, has en also surveyed preparatory to its restoration. considerable tract between the Jumum and the miges, though now sterile and waste, was forfrlh highly coltivated and populous, having heen rilised by the great Doab camal. Jetween the tran and Sutlege mango trees are mumerons, Hite soil produces wheat, barley, and other dry aias; but the periodical rains are not sutheicut insure a crop. During the rainy season the murary streqms overtlow, after which the pasfe is good, mad the climate tolerably healiny a temperate; but in the loot season the heat cumes so oppressive that the natives are often tyed to seek refuge from it in mulergromind haations. The land is ussessed umler it modifienan of the village system: lint the mocmedim, or alman, is not responsible for the payment, but parely the agent for the rest of the village, re-
movalde nt their pleasure, and not holding his wllee by nay kind of hereditary temure. Nefther loes ho derive "pluruntly miy emolument from lis sillie, nor is he malugens to the zeminder in the lower provinces, or the putail in other parte; there leving here no midatle man to enfoy any porthon of the land-tax, ntaniling leotween the periphla mill the povernment, which lant reveiven from onefourth pirt to a hulf perliajow of the probluce of the lomb, aceoriling to cireumstaneos, atter the shares of the village functhmaries, und certnin ofher village expensen, have been dedinted. The pmachayet nextem of arhitration ls in common nas. In the aillals conrts the lintupunin juluges are an-
 allicors, but the people in this jros. da not meem sor disposed 10 litluation as in mome others: they nre, on the conitriry, contentel, orilorly, mind prosperons. At the conmmencement of the lifitish rule, in 180)3, there were almont bion villages doserted, the inhableants of inost of which lind, before |x21, rotirned, and clnimed nal enltivated the lmuls they fimmerly jossessel; and loth the jop. and revenine lind it thint poriont very eomsiderit)ly linerensed. Molummedans are most numerons in Dellif elty, but llindoos everywhere else, except In the NW., where the Soik relighon is predontimint, nud the comitry is almast entrely welupiad by petty Selk states, 'The chisef towns are Dellif, Ihareilly, Dillibheet, Shalijelatupor, Jiampor, Mormbibal, Anopishelor, nud Mecrat.
 city of Ilindostan, preshl, Bengal, Hentemurey of Agra, cajb, of the above prov., and ancirintly the metropolis of the l'atan and Mognl enpires, in the Jumita; $112 \mathrm{~m}, \mathrm{~N} N \mathrm{~W}$. Agra, d25 m. NW: Ilenares, mad 8:3t mo, in the same directlon from Calenttr, with which it is rommectel by the bast Inlinn railway. Listimated pop, $\mathbf{1 6 0 , 0 0 0}$. That belli, lit its period of splendour, was a city of vast extent and magnificence is sufliciently evineed hy its ruins, which are suplosed to cover nearly as Inrge a surfice as Lomblon, West niaster, and Sonthwark. The present inlıabitel city, fi. and N. the ruins, luilt by the emperor Shah Jehan, nud called by him Sliahjehambad, about 7 m. in circuit, is situated on a rocky range of hills, unil is surromuded ly an embattled wall, with many lastions and intervening martello towers, finced along its whole extent with sulastantial masonry, and recently strengiliened with a mont and glacis hy the brifish govermment. It has many goonl houses, chiefly of brick: the strects are in genern] narrow, hit the principal are wide, hamisume, amb, for an Asiatic city, remarkably clenn; the haznars have a good appearnnce. There were firmerly two very noble streets; but houses have been built down their centre and neross, so as to spoil them: nlong one of these, rumning from the palace S. to the $\mathrm{A}_{\mathrm{gra}} \mathrm{gate}$, is the aqueduct of All Merdan Khan, reopened $\operatorname{ly}$ Captain H1ane in 1820, The princiun public builitings are the palace, the Jumina Musjeed, or chiel mosque, many other mosques, the tombs of the emperor llimayoon mal of Sefdar Jung, and the Cutinb Minar; and, within the new city, the remains of many splendid palaces belonging formerly to the grent dignitaries of the Magul empire. Almost all these structures are of red granite, inhait in some of the ormamental parts with white marble: the general style of building is simple, yet elegrant; those of Patan arehitecture are never overdone with ornaments so as to intertere with their generally severe and solemn character. The palace, as seen from a distance, is a very ligh and exteusive chaster of tathic towers and battlements, towering above the other builitings. It was built by Shuh Jehan,
is nurrinmeded ly a moat and an embinttled wnil, which, townarl the atreet in whileh it stande, in biit ft high, and han severnt mall romad towers and two neble galeways. Stomes of the apartmente are mugniticent, eveif in the ruhomen atate in which they nuw are. Thure are ramba fined whoth white marble, infalid with thowers nad liavere of greet
 pavilione of marlle, with mony musme painthigs, of biridm, anlmals, unel thowerv. The shalimur gurdens (so) highly extolled in 'Lalla Jimekh') were ulan formed hy Shali Jehan, and are midid to have eowt a millimi sterllugg bint 'huughlug Ceres has reasamed her reckn,' the gardens having lxeen reconserted to agriculcural purpuses. The Jumma Muyjeed, the largest uill humikument place of Musallumu worship in indlin, was buili lin mix years by Slank Jelum, at an expronee of ten laen of rupeew. It atands on a small rocky eminence, mentrued for the purpowe; the nseent to it in liy a
 way of red atome, the charn of which are covered wifh wrunght brass. The terrnee on whleh It is hallt is about 1,100 yards suture, and surrommient ly un arehed colominade, with setagoin pavillons ni convenient distanees. In the evitre is a harge murble reservoir, supplied by muehinery from the cman. On the W . aide is the mosume itself; of mo chlong form, 261 ft . In lenirth; its whole front conted with ingre slalis of whito marble, will contipartments in the cornice inhaid with Arabias lins.riptions in black. It is approndied ley noothor tlight of atepow, and entered hy three Gonliie ardhew, ench surmomited by a marble dome. At the llanks are two minurets, 130 ft . harh, of bhek marble and rid atone altermutaly, eneh huving three projeeting gullories, and thair summits crowned with lichit mavilions ol' white murble, the aspent to which is ly a windiug stairroses of 180 stepus of red stome. I'lis molle strueture is in tolerably goowl repmir, beting maintained by in grant from the british forverument. Nit far from the pmace is a mosplpe of rell stone, surmoninted with three gilt domen, In which Nalir shath sat nud witnessed the massarre of the untortumate iuhblitunts, 'There are nhove forty other mosques; one, erected by the daughter of Aurumgechr, contuins the tomb int which whe was interred in 1710: wome bear the murks of great nutiquity, expecially the Kaha Musjeed, we black mosque, built of dark-enloured granite hy the first l'atmen comquerurs. It is exaetly ont the plan of the originad Aralian masques. The prospect $s$, the Shalimar gurdens, an far us the eye cillin rench, is covered witl the remains of extensive gnatens, pavilions, mosques, and sepulehres, comnectiog the villape of Cuttulb with the new city of Dellii, from which it is neurly 10 m . distant sW., and exhibiting one of the most striking scenes of desolation to he anywhere met with. The celebrated Cuttub Ninar is a very haudsome romml tower rising from a polygon of 27 sides, in 5 stages, gradaully diminishing in eireumference, to the hefght of 242 ft : its summit, which is crownel by a majeatic cupola rising from 4 arcales of red granite, is asecoded by a spiral stairense of 38.4 stepis, num between eneh stage a balcony runs round the pillar. The old Patan palace, a mass of ruin larger than the others, has been a solid fortress in a plain and mornamented style of architecture: it contains a high black pillar of enst metal of Hindoo construction, nud originally covered with Hindoo churacters, but which Feroze Shah afterwards enclosed within the court of his palace, covering it with Arabie nul Persian inseriptions. The tomb of Ilumayoon is of Ciothic arelitecture, surrmuded by a large grarden with terraces mud fountains, nearly all of which are
now gone to decay. The garien is surrominton ber

DH:I, 'III, DN:LPIIOS, or PYTIIO (at prement Cuntri), a himous elty of abriont fireece, the cap, of 1hocin, and the seat of by far the most celehrated orncle of the anclent worlil ('romииине hишии! ge-. neris arueulum;' Liv, lih, IK, $8,5 \mathrm{H})$, at the S . fout of Monint Pothansias, tis m. NW. Corlith, and Xb m. NL. from the neareat foint of the Crimanat Hen
 that coulid inveat it with interent and finglire awe. It was supposed to be silnated in the centre of the worlil, was built in the declivity of the moniltain on successive terracen formed of Cyclopremt manonry, and rising nlove ench other like the mentes in $n$ thentre, Overhanging the city on the N. rone the two famons peaks of l'arinmans, the chanm between them allonling an outlet for tho waters of the Cuatulian spring, the monrece of poetienl inspirntion. If we aid to thene untural advantages, the fact that Defphi was the chosen abrale anal principal ornele of $\Delta$ pallo; that wha was the reat of the commeil of the Amphirtyoms, and the place where the l'ythinn grames wero celebrated, we need not wonder at the extraordinnry respect and venemtion in which she was hohl. Nhe was not fortilled liy wallw. bint hy precipices, and the expecial protection of Apello; so that the nncients recknied it ilonbtfin 'utruos munimentum loci, an mujestes dei plus hie almirutimis hubent.' (Justin., lib, 24, §'ti.)

The origin of this fimnons city, and of the oracle to which it owed nll its flory, are horied in infpetetrnhte obseurity, The most probable aseount neems to be, that a mephitic vapuor, nimilar in some degree, perhaps, to that of the Grotfo det Cime at Naples, having iswued from one of the clefts of the roek, violently affected those by whom it was inhaled, making them utter atrunge incoherent majings On this narrow fotmdation was bullt one of the most extrmorlinary fibbries ever raised by superstition, frand, and imposture. The raviugs of those aflected by the vapour wer believed to be indications of fiture events: they were said to be inspired; and the cjaculations which they uttered were affirmed to luve been owing to their being filled with the brenth of spirit (divinus uffluths) of Apollo, the guardinn god of the place: the fiame of the oracle rapilly incrensed, find it was soon seen how rich il harvest misht be derived from it. 'The nacred envern was forliwith enclosed; a tripoil was placed over the chasm whence the vapour issued; priesta nul priestesses were appuinted for the serviee of the god; and a series of temples, ead more magniticent than itn predeceswir, were ereeted in his honour. States and princes were anxions to learn their fate, or the success of any contemplated entorprise, from the respouses of the oracle; mad private individunls crowiled to the city for the same purpose. The nuswers of the goal were not gratuitous; and it would seem that an opiniou had enrly gained ground, that the nature of the responses was to a consilerable extent dependent upon the value of the offerings! IIence there arose a kiad of competition among those consult-

DENDEBAII (the T'yntyrut of the Greekn), n rulned town of Upiper liaypt, celetirnted fir fis temple, the hent-preserved of all the remamian of nntigulity with which Lapy pe, partieularly the Said, almumas: near the W. bank of the Nile, :31 m. N.
 The thinn, if m. E. from the temple, ntande in an extensive nal well-cultivated phin, whidh expauds un both alides the Nile, num is surromedend hy momatalne, mo an to give it the appurance of a benutiful cirenlar Imxin, sladed ty thiek groven of palin treen. The temple atmida in the very verge of the Ly-hian desert, the encromehments of whith have buried a Inrge portion of the buildinges mader henpon of sand: lout elough is still vlsible to indiente its magnithile and magnilicence, nuid to hanprows the apectator with the deepest senne of the wealth, power, and civilisntion of the illantrions but long extinct people ly whom no noble a fubric was ruised. The temple and the lotilings appertaining to 1 , with the exception of one propylon, nre caclosed within $n$ square wall of sum-itried bricks, ench wide mensuriug 1,1001 fit, and in some parta 35 ft . high, and 15 ft , thidek. After passing a smanll stone-building, and a gateway or proivton entirely covered with woll-exectited sculptures and hieroglyphies, the nopetutor, froceeding through the dromos (avemue lined on ench side with aphynaes) urrives at the tenple. It is nearly in the form of the letter ' 1 ': and its simplicity, vnetness, the durability of its structure, and its ormaments nul senlptures, in perfect preservation, thungh mo longer intelligible, excite the strongest feelings of awe and astonishment, The fromt of the promass, or portico, is adorued with a benutiful cornice, supported by six square columus, with capitals formed of colossal lieads of Isis. Within, twenty-four cylindrical columus, ranged in six ruws of four deep, support the roof: the eapitals of these columus are gundrangular, and exhibit on ench fince the representation of a temple with a divinity mender the porice of the sanctuary; letween the copital and the shaft, lenda of Isis
atain appear ; incluting their hase and eapitals, the height of the columns is about 46 ft . : the slufts are senlptured with hieroglyphies and thgures in bussu-relievo, as ure the front and ceiling; the designs on which last have been supposed to he iutended to represent a \%odiac. Indeed there is no where in the whole apartment a space of 2 ft . that is not covered with seulptures, in how relief, of luman beings, animuls, plants, emblems of ugriculture or of religious ceremony. The temple, which is equally euriched with sculptures, consists of severnl nyartments, partially lighted by circulur holes eut in the ceiling. The sanctuary is, however, quite dark. Aceess is provided to the roof liy means of a staircase, with steps so low that prisusts might conver up und down the weighty paraphemalia of suerillec. But the most remarkable olject, in the estimation of Europenns, helonging to the temple, was the ceiling of an upper chamber, cxhiljiting in twelve compartments, like that of the promas, a variety of mythologieal fligures, which correspond vory closely with the Greek signs of the zodine: it was enclosed within three comentrie cireles, mid supjorted by eight male figures kneeling, and four females stmuding, most harmonibusly grompel. 'The remuins of a smaller temple stimed to the right of the propylom, supposed to have been dedicated to the nalignant deity, Typhon.

A great deal of curious mid learued disenssion has taken place with respeet to the antiquity of the zolianc of Denderah. (Notice sur le Zodiaque de Deaderall, par. M. St. Martin, Paris, 18\%2.) Dupuis, Fourier, and other writers, concludell, from the phaces of the ligures of the constellations on it, compared with their present places, and the precession of the equinoxes, that it had been comstructed aboti 5,000 years ago, But Littrow, Phy fair, ana some otlier learned astronomers, infierred from the same data, and with intinitely more of probability, that the age of the zodiace did not exceed 3,228 years. Sulsequent researches by Visconti, Letroime, St. Marth, and others, hiave, however, gone for to show that the caleulations referred to had ao real foundation, and that the tigures on the so-called zoxliae are probably natrological or mythological representations, and have nothing of inn astronomical or scientitic character. At the sane time. however, it must be admitted, that the purpose of the supposed zodiac, and its antiquity, are still involved in the greatest uncertainty. With respect to the temple itself, it would seem, from its beng one of the most perfect and beautiful in the country, to belong to the period of the later Egyptimn kings, when the arts had attained to their lighest perfection ; but there are not, perhe ls, muy really good grounds for the notion that it is of so late a date as the era of the I'tolemies, though alterations may then have beena effecter in it. The zodiac, or planisphere, that gave rise to thes discussions, is now in Paris. The pacha having eonsented to the desecration of the temple, this extraordinary monument was skiffully cut out, and conveyed to France, in 1822, by a M. Lelorain. It was sulsequently purehased by the Freuch government for 15,000 ir., and placed in the touvre.

DENDERHONDE (Belg. Termonae), a forUified town of Belgiam, prov. E. Flanders, cap. as rond.. on the Scheldt, at the point where it is joined by the Derdre, $15 \frac{1}{2} \mathrm{~m}$. F. Gilent, on the railway from Ghent to Malines. Pop. 9,530 in 1856. The town has 4 churches, 5 chapels, a town-hall, a hospital, lumatic mod orphan asylums, 2 convents, a college, II sehools, und a prision. It is defended by a citadel constructed cuider the Duke of Parma in 1581; is the seat of a court of
original juristiction; and has manufactures of woollen stullik, cotton yarn, hats, lace, tolmach soap, oll, and cartheuware; bleaching auld dee lounes, brewerles, listilleries, aud thour and othe mills, with a considerable trade in corn, hems llax, and oil. It is believed to have been founded 110 earlier than tho stin century, though manr Romun antiquities have been dug up in it at dif. ferent periocls. It was unsuccessfully hexigegelly. Louis XIV. in 1667, but fell into the hands of the French in 17.4.5, It suffered severely from an inundation in 1825.
DENIIOLA, a manufacturing village of Smot laml, co, Roxburgh, 4 m . NE. Hawiek, on a rining gromad 1 m . S. Prom the river Teviat. P'op, it in 1861. The linhab, are almost entirely engmow in the weaving of woollen stockings, on acemint of the Hawiek manufacturers. There is a thond mill here; as also a dissenting chapel, and a satseription library. I)r. Jolin Leyden, the cele brated puet and linguist, was a native of this phace
DEXIS (S'P.), a town of Frasce, dep. Seine cap. arrond., in a fertile phain uear the seine, and on the canal whieh unites that river with the cmual of Ourq, 5 m . N. Paris on the Northem railway. 1'op. 22,052 in 1861. The town is chielly remarkable for its albey-churel, built in the 7 th century by Dagobert I., who was huried within its walls ; since which time it has leat the enstomary burial-place of the kings of Frane: It was materinlly improved by Suger, allont d St. Denis, in 1130, and has been further enlarand by dilferent sovereigns in sueceeding ages, so tha it has a great variety of architectural style. It an inpoosing Gothic edilice, in the form of a crom $415 \frac{1}{2} \mathrm{ft}$. in length, by $106 \frac{1}{2} \mathrm{ft}$. broald, and $8 . j \mathrm{fi}$ high. Its front has two towers, one of which: surmounted by a spire. Moss of the tombls of the kings of the first, second, and third racen are int subterrancan vailt. In 1793, during the revola. tion, many of these tombs were destroyed, and the remains they enclosed, not excepting even thoe of Henry IV., were thrown together aml lunied under a heap of earth in the environs of Paris The demolition of the building itself was sube quently ordered, but this was not effected. The town lias some good infiutry barracks, na estibu lishment for the edueation of 500 girls, orphans \& members of the Legion of Honour, foumted ly Nupoleon, which oceupies the celebrated ablerid St. Denis, founded by Dagohert I. in $613 ;$ a pullic library, and theatre. St. Denis is well built:if is the seat of a sub-prefeet; has manuffactures if woollens, cottons, aum leather; and a brisk trate in flour, wine, vinegar, wool, and timber.

DENMALK, one of the secondary Europan kingloms, ons the south side of the entrance to the Baltic, between $53^{\circ}$ and $58^{\circ} \mathrm{N}$. hat., and $x^{\circ}$ and $13^{\circ} \mathrm{E}$. long. It consists partly of the penimsula, stretching from the river Königsane, " Kongeaae, the northern frontier of Schlestis, to the Skaw or Skagen, and comprising the proved Jutland; and partly of the Danish Archipelay or of the islauls of Zealant, Fimen, Lalam, hal. ster, \&c., between the Baltic and the Cattergit and the island of Bornholm, in the Baltic. Exefes on the S., whore it is bomaded by the duchy Schleswif, continental Denmark is everywime surrounded by the sea, having F . the Baltic the Little Belt, and the Cattegat; N, the Skagera; and W. the North Sea. Iecland, the Ferve INsa part of Greenland, and some possessions in the : and W. Indies, belong to Denmark. Exclusire of these, the kingiom contains an area of $14,19{ }^{1 / 2}$ sq. m., with a pop. of $1,600,551$, aecording to the census of 1860.

Surfuce and Soil.-There are no mountains in

penmark, and the few hills ly winich it is marked are little more than imblulations. It is generally low and level, the consts being seldom elevated much alove the sea. In parts of the W. coast of Juthund, the country, which has partly been whested lrom the sen, is defended, as in Ilollnud, against its irruptions by immense mounds or dikes, mnnaged by a goverument board. Soil rarions. In extensive dists. purticnlarly in the sill. part of Jutland, it is exceeding fertile, being rery rich marsh-land, problucing the flnest pasture ani excelient crops. In other parts, more especially in centrul and NW. Jutland, the suil is arill, sumdy, und harren, large tracts being heath. The suil of the islands consists of clay mixed with sand and lime.
Rirers and Lakes.-Denmark having no monntains, and every part of it being within a sloort distance of the sea, han no rivers of any marnitule. Froll water lakes inumerous, but not large. The must remarkalle feature in the physical gengraphy of Denmark is the munber and extent of the inlets of the sea, or rather lugoons, by which the contthental part of the conntry is intersected. The primeipal of these lagoons, the Lymiourl, formerly commuinated only by a marrow chamel with the Cattegat, stretching thence in a W. direction, with long windings, and expanding in varions places into immonse sheets of water, encompassing large Whands, across the peninsula of Juthaid almost to the North Sea. In 1825, however, cluring a violent sturm, the inthmus between the North Sea and the lamiond was broken down in two places, so that it nuw isolates the $N$. portion of finthand ; but the newly opened channel is too shallow to be of much use for the jurposes of navigution, and the depth of the opmening to the Catterat has also deereased, ka as only to admit vessels of comparatively small burden. There are other tiords, but none so extanive as this. Ther: as well as the hays and nivers, are well stocked with tish, the ishery being a principul business and depentence of the inhab.
Animal and Vegetuble Products.-'These aro almost the same in Denmark as in Great Britain. The horses and cattle of W. Jutland ure amonrst the best that are anywhere to be met with; those that belong to the islands and N. dutiad are of a smaller breed, but strong and active. The wool of the sheep is short and coarse: lut latterly it has been a guod deal improved by musing with merinos. The feeding of pigs is proHented to a preat extent, and quantities of bacon ate yearly exported. P'oultry is so abundant that their feathers alone make an article of export. Ill the common grasses, with potatues, flax aud hemp, madder, and tobneco, are raised in Denmark. The forests are not very extensive. They lie principally along the eastern shores of Jutland, and in Zeahand and Funen; consisting principally of birch, but also of ash, alder, and oak. L'ine and fir are rare.
Wineral Products, in Denmark, are but of little ralue. The subsoil chiefly eomsists of sand and day, and no metals inve been diseovered that winld repay the expense of working. There is a brine spring near Oldersloc; but it loes not firmish salt sutlicient for the consumption of the biugdon. The want of coal is in part compensated by the abundance of turf.
Climate.-Being almost everywhere surrounded or the sea, the climate is humid, and in its principal features approaches pretty closely to that of fouthan. The transition from winter to summer, anil from sumner to winter, is, however, a good deal more abrupt, so much so, indeed, that springr ani atumm, particularly the tirst, are but faintly marked; the licat of the summer is, at the same
time, greater than in Scotland, and the cold of tho winter more severe. 'These diflerences arive from the greater proximity of Demmark to the continent. The winds not being broken by any monntains, often sweep ulong witligreat violeme. The NW. wind, called Skai, which is especinlly felt in May and June, is so severe on the W. consto Jutland, as to wither the tops of the trees. Tho Sound is sometimes frozen over; but this is suid to arise more freguently from the drifting of ice formed in ligher latitules than from the intensity of the cold at the place. In 1659, the Swedes marched an army on the ice aeross the Nound to besiege Copumhagen. Fings are very prevalent.

Agrienlture,-In Demmark, as in most wher European countries, the pensantry or occupiots of the soil were at no very distant period in the most depressed state imnginable. 'In Zealand,' says Lord Molesworth, and the same observations then applied to the rest of the kinglom, 'they are all as alsolute slaves as the negroes are in harladoes; but with this dillerence, that their fare is not, wo goorl. Neither they, nor their posterity to all renerations, can lenve the land to which they belong; the gentlemen comuting riches by their stocks of boors, as lere with us by our stocks of eattle, und the more they have of them the richer they are. In ease of purchase, they are sold ins belouging to the frechold, just as timber trees are with us. There is 110 computing there by mumbers of acres, but by mumbers of boors: who, with all that helongs to them, appertain to the piroprictor of the land. Yeomanry, which is the strength of England, is a state not known nor heard of in Denmark; but these poor Irndiges, after they lave laboured with all their might to raise the king's taxes, must pay the over;hus of the protits of the lamis and their own toil to the lamdords, who ure almost as poor as themselves. If any of these poor wretches prove to be of a diligent and improving temper, who endeavours to do a little hetter than his fellows, and to that end has repaired his farm-house, making it convenient, neat, and pleasant, it is forty to one but he is presently transplanted from thence to a naked and uncomfortable labitation, to the end that his griping landlord may get more rent by placinis another on the land that is thes improved: so that in some years'tis likely there will be few or no farm-honses, when those alrealy built are fatlen through age or neglect.' (Account of Denmark in 16i92, 4th ed. p. 64.) In 1761, the queen Sophitit Magdalen had the bonour of being the first to set a better example to the Danish proprietors, by publicly enframelising the peasantry on her estates; and the example was soon after followed by Comet lhermstorff and others, At this period about a sixth part of the land was supposed to belong to the crown; bat the crown estates were soon after divided into firms of a moderate size, and a large portion of them disposed of to any one who chose to become a purchaser. I'revionsly to this puriod very few peasants were proprietors; but their number now began speedily to mucrease, purtly in consequence of the sale and division of the crown estates, and partly of their purehasiug in their leases from their lords. In 1788 , the peasantry of Denmark, that is of Jutland a ad the islands, were tinally emancipated from all political bondage; and a commission was nt the same time appointed to regnlate the rents and services to be paid by those tenants holding hereditary leases, or leases for lives, where the parties conhl not come to an agreement. In 1791 and 1799 fresh ordinances were issued on the same sulbjeat, haviner for their object to reluce the number of such tenants, by converting them, under equitable con-

## DENMARK

litions, into proprietors, and for restraining the right of ince wiy.

In consegucice of these measures a very great clange has taken place in the distribution of property in Denmark. Latge estaten have been so much broken down, that at this moment at least one-lanlf of the soil of the kingdom belongs to petty proprietors. The division of property has heni groing on at an increasing rate since the yeur 1850, when the last priviloges attaching to the possesslon of laniled estates were takell awny. from an oflleial return of the year 181:1, it appears that at that time thare were in the whole kingdom little more than a thonsand hovedyumerde, that is, estates taxed at above 12 tons of hartkom, against nearly 80,000 bomerguarde, or cottage-firms, taxal mider 12 toms of hartkorn. The ton of hartkorn represents an aren of wo deflite size, varying according to the mature of the soil and its fertility, the tom, or barrel, of grain being equal to arx imperial bashels. On the arerage, the ton of hardeorn may be asid to be equivalent to 5 n neres. It will thus be seen that the parcelling out of the hand has gone very far, and, indeed, it is generally manitted that the principal drawbacks njon agriculture in Denmark are the great division of property and the consequent want of eapital. (As regards the tixation of land, sec Finances below.)

The average carnings of ordinary agricaltural labourers in Denmark may vary from 15l. to 201. a year. Their situntion is recidedly emmlortable. Mr. Macgregor, British conshl at lilsinemr, an he telligent and earefial observer, gives the following detulls illustrative of their command over necessqries and comforts :- "The Dames are great eaters, and they eat at all fimes of the day. The following quantities of food are asumlly allowed to mate farm servants per month : bread, 60 lbs. ; potatoes, half a busliel; gronts, half a bushel; butter, $4 \mathrm{ll} . ;$ buent, 10 lb ; ment, 4 lb. ; salted herrings, 30 ll. ; sult lish, 2 llss.; beer, 60 quarts; milk, cel libitum. The Dmish peasants make 5 meals a day in summer. Barly in the morning they have, ast, lreakfast, consisting sometimes of coflee, but gronerally of warm milk and bread; 2d, at 9 oclock, follows bread and butter and a dram; 3i, at l2 o'rlock, limmer, the introluction to which consists of spoon-meat, such as milk porridge, beer somp, enrds with warm milk or heer, or of tish, boiled gronts, cheese, greens or dricd peas, after which follows fresh or dried tish, lneon or meat, with potatoes or other vegetables, or boiled or poached eggas, or pancakes; Ith, at 5 o'clewk, bread and butter and a dram or two, especially in harvest time; 5 th, supper after sumset, sour groats, curds, with milk or buttermilk. In winter, when thry get uplater, they have one lreakfast, amb consequently, they only make 4 meals a duy. The poorer frmilnes sedom boil their kale upon meat, but upon a piece of hog's lard or bacon. In most of the cottares a sheep or a lamb is killed before the winter. The more substantial peasants kill a pig, a cow, or an ox, and they dispose of what they do not reyuire themselves to their neighbors. 'I'hey also kill a certain number of geese aud ducks. salting them down for the winter, and using the fathers for their beds. This mode of living applies chietly to peasants in districts of a middling soil, but where it is richer, they have more of bacon, meat, and tish, in lien of of her dishes; also is the beer they alrink of greater strength. Fish is almost their diurnal food in villages adjacent to the seal, and they often use dried fish instead of bread, especially whore the rye crops have fililed, when their rye bread is often found mixed with barley. Amongst the poorer cottagers who have no land, it
would sometimes liappen that they must empent themselves with a crust of iry bremi, and milk aniol water in lien of beer; but such cases are nut of frequent oceurrence; at least, all the reports on the agricultural state of the conntry which have $l_{n+n}$ publisheil these later years, concur in stating thas the gromerality of peasants are wall off, aud thot there is plenty of amployment in the conntry foe all habourers that choose to work.
'I shall couchude these observations by stating the ammal expenditure of a buburer with a wife aud three children in this neighbourhowl (Eles. neur), the several items reduced into sterling:-

"This is uearly labsur woudd produce, provided they be emplowed during an average number of days in the year At a certain distance from the large towns, be items of coflece, sugar, and brandy must in a great measure be omitted, by which the whole expenditure would be reduced to about $15 /$. sterlugge anıum.'
larley, oats, and wheat are largely cultimatel in Denmark. Wheat, thongh phomp, is coarse and damp; the barley is heary; oats of a medium quality; rye, being the principal bread com the country, especially of Juthand, is मrown in large quantities; this also is the case with tape, beans, tares, buck-wheat, and potatocs, parieularly the first, which is a leading article of export to Holland and England. But the principal attention of all the more exten ive and in-
 fatting, and the dairy. The pastures 11 many parts are little, if at all, inferior to those of litcolnshire. Ilorses, cattle, salted pork and beth butter, wool (which has been much improvel, and other animal prodnets are. in faet, in onlinary years, the prinepal article of export fum the comatry. It appears from an ollicial retum ('Statistical Tabnes relating to Foroign Comatrics part ix.') that there were at the end of 1 and, in the whole of the kingdom, $324,5 \overline{3} 0$ hone: $1,118,7 \bar{t}$ catte; $1,751,!50$ sheep; and 3010 . 6 swine. The dwelling-honses of the farmers ats their oflice houses ure generally eontiguons in the same building, but they are notwithistanding suthiciently distimet; and the bouses of the hette? class of firmers are neatly and comfortally fure nished.

Mamfitchures in Denmark are not prosecutedea a comsidurable seale, nor is their combition at all prosiperous. The peasantry in most parts of the kingdom spin and weave linens and woullons, and knit stockimes for their own nse. Woollens, ilk cottons, and linens are mantafactured at Ccpenhaten and other towns; but the business is han guishing and unprofitable. Distillation and brefr ing are prosceuted to a great extent, and wit more suceess than any other brancla of inelustry in the capital. Coarse carthenware is mate in varions places, and a porechain manufacture is carried of upoin account of the crown, atro an might be expected, to its luss. There are alx

not prosecutedo - condition at all nost parts of the nid wootlens, min Woollens, silks etured at Cepect hatiness is tar Hation and lrent xtent, and with anch of industry ware is made in manufacture i crowin, anto There are ab
sugar rellacrien, paper mills, soap works, tanneries, and hat manufnetories. With the exception of the manulacture of cammon and arms at Fremerickswerk and Hellebeck, the iron and hardware works are quite unimportant. Within recent years numbers of flour mills have been constructed, and large quantities of flour are now exported from Copenhagen and Flensborg.
The low state of manufncturing industry is accibable partly and principally to natural, and partly to politleal causes. Demmark is essentially an agrienltural country. Being nearly destitute of enal, of water power, and of the usefil minerals, she has no nutural facillties for the successful prosecution of mumfactures ; and, in adlition to this, she las little capital, amd is deprived of the indispensable stimnlus of domestic competition. All, or aearly all, the branches of imlustry carried on in the kingdom are subjected to the fovernment of guilds or corporations. No person can engage in any business mitil he has been authorised by its particular guild ; and as this is rarely oltanined withont a considerable sacrifice, the real effect of the systen is to fetter competition and improvement. Llowever, the education of mechanics is beginaing to be improved by the formation of mechanies' institutes amb similar extablishments.
Trude aud Commerce. -Snlyoined is an acconnt of the quantity of the principal articles, the produce of Denmark, exported from that kingdom in eadi of the years 1861 and 1862 :-

fhe commerce of Denmark is less than what might be expected from its insular position, sermonaled by excellent harbours on every side. lut from the earliest times the people, notwithstanding their advantageous situation, conlal harlly, having but little native produce to exputt, chgage extensively in any branch of foreign trate, except as carriers for others, and in this department they were far surpassed, tirst by the Itanse Towns, and afterwarils by the Dinteh. Huwerce, since the peace of stockholm, in 1720 , the commeree and navigation of Demmark have madually ionproved. During the war hetween Frace and Great Britnin, down to 1807, the neurality enjoyed by the Janes gave them great adsantages, and ocensioned a considerable increase of their mercantile navy. But the attack on Cipenhagen by the English in the bast-mentinned year, and the lostilities in which the

Danes were consequently involved, deprived thens of these advmitages, and materially depressod their trade. The loss of Norway, at the gemeral peace of 1815 , though it detructed little, if any thing, from the real strength of the momarely, greatly diminished the importanee of Denmark as a naval power, which was again much depressed by the loss of the duchies in 1864. In fact, since the latter perionl, the commerce of the kingrom has heen anything but progressive. At. the end of 1812, the mereantile navy comprised 2,763 saillug vessels, of a total burthen of $\mathbf{6 x , t a 3}$ lasts (of two tons each), anll 44 steamers, of 2,001 lasts, and 2,512 horse power.

Colonies.-In the Weat Indies, the Danes posspss the small but well-coltivated islmal of $\mathrm{Si}_{\mathrm{t}}$. Croix, producing ammally abont $25,010,010$ Ilos. of sugar, and $1,400,000$ gralls. of rum. Previonsly to 1803, when the Dnnes, much to their honour, supressed the slave trade, they had a comsiderable intercourse with Africa. But this has since nearly ceased. The trade with the liast was formerly in the hands of a company, winch was dissolved in 1838. The actual colombal possessions of Wenmark consist of the islands of Faroe, Icelami, and Gremanal in Europe; the tirst-mamed-17 in mumber-having a jopulation of 8,165$]$; leceland of $t, 1,603$; and Greenland of $9,8!2$ souls. The West India possessions, Sit. C'roix, St. Thomas, and St. Johm, with a number of smaller islnuds, have a popmation of $37.1: 37$, according to the censuls of 1860. The establishmments on the eoast
 varions other places, were ceded to (irnat Britam, hy purchase, in 18:0. The town of 'Jrampuchar with the surromuling distriet. an the (oromandel coast, reded to Demmark by the rajah of 'Tanjore, in 1620, and the small teritory of SeramporeDanish Fredericksnagor-in Bengral, fommed by the Damish East India Company in 17ajo, were transferrel to treat Britain in 18 lis. The Nieobar Islamis, in the Bay of Bengal, were taken possession of by the D:mish govermment in 175t, and for some tione were in a flourishing state, the population amomating to ahove 6,000 in the year 1810. Eight yeurs later, however, in l8ls, they were abandoned as useless, nominally on acconit of their insalubrity.

Races.-Population.-The prov. of Jutlaad received in antiquity the name of Cimbrica Chersonesus, from the earliest iuhahitants beins ('imbri or Cetts, the ancesturs of the Welsh. The Goths, in ther progress from the N. and F., took possession of the comotry of the Cimbri ; nud the expat riated inhabitants having been joined by some other displaced tribes, were wandering in juest of settlements, when they were met and entirely defeated by Marius in two great emgarements, ibout 100 years before the Christian wra. After the expulsion of the Cimbri, the peninsula was pareceled anong severat Gothie tribers, who also took possession of the islands, now forming the principal part of the kingilom of Demmark.

The increase of pojulation has been very considerable for a lomg time past, and particularly since the beginning of the present century. During the latter period, it was owing, no donbt, to the emancipation of the peasantry; the breaking down of large estates, and the consequent increase of small propertics and farms; the enclosure of commons and the progress made in arriculture; the introdnetion of vaceination; and the improved comblition of the bulk of the people. The increase of pop, in the towaships has exceerled that in the merely rural districts; but the town pop, js not very considerable; in thet, if we exerpt Copenhagen and Odense, no town in the kinglom
lus 12,000 inlubitants, and but very few approneh nearly to that moonits.

The propurtionate inerease in the populntion of Denmark for the last ten years lias leeen larger in the towns than in the emuitry districts. In Copenlagen it has been 80.0 per cent, in the other combmercial towns together $10 \cdot 29$ per cent., whilst in the country districts it has only been b:09 per cent.
'1he titles of nobility in the kingrlom of Denmark ure only two, count, or earl, umd baron; but there is a large intitled moblesse, consist ing of the most ancient fanilies in the comitry, which runk higher in publice estimation than many of the mouleri honses emobled by the crown.
The ocenpations of the people are stated as follows in the censiss of listit. Ont of an average of 1,001 people, 1195 live exchasively ly nariculture: 22k hy manufactures and trades; 187 are day labourers; 53 are commercial men; 29 mariners; 20 panpers; 16 ministers and selooimasters, or connected with educntion; 15 pensioners, or people living on 'altagt' (an allowance to thase who cede their farms from old age, \&e.); 13 servonts; letween 11 and 12 hold uppointments in the civil ofllees; 9 are commissioned and nom-commissioned otlicers in the army and navy; 9 eapitalists; 7 foblow scientific und literary pursuits (including students at the Universities) : nlont i have no fixed means of living; anul a little over 1 are in prison for crimes or misdemeanours. The inerense in the population by births has, on an average, been at the rate of lifa children to every 1,000 women between 20 and 00 vears of age. Out of the above number of ehililren, 1 in every 10 or 11 has been illegitimate, and between 4 nind 5 per cent, still-horn.

Government.-Previously to 1660, the crown of Demmark was elective. The supreme legislative muthority was vested in a diet, or assembly, comnposed of deputies chosen by the mobility, clorgy, amel commons. But the iithence of the nobles predonuinated very much in this assembly; und they also shared the executive power with the ling and enjoyed many immunities. The dissatisfaction of the people with this distribution of power, and still more with the opressions they too frequently sullered at the hands of the nobles, was greatiy influmed, nt the period referred to, ly the limmiliating treaty conchaded in the course of the year with sweden, and by the refisal of the nobles to submit to bear an equal share of the burdens required by the state of public athirs. In this crisis the partisams of the crown prevailed on the deputies of the clergy and the commons to make a voluntary surrenciar of their rights, and an the only way of putting nu end to the existing dissensions, and of rescuing themselves from the tyrany of the nobles, to confer absolnte hereditary power on the sovercign. The mobitity, taken by surprise, and mable to make nuy eflectual opposition, were reluctantly compelted to concur with the clergy and the combuotis.

It is due to the sovercigns of Denmark to state llint they excreised these great powers with singular moxleration, and thene enn be uo question that the mass of the people were gainers by the revolution of 1660 , the results of which were emboried in all subsequent chariers and forms of constitutions. The changes in thes forms were many ; the last of them, sanctioned June $\overline{5}_{2}, 1819$, witl moditications adopted in Jamuary, 1860 , contaning the constitution now in forece, According to this charter, the excentive power is in the king and his respensible ministers, and the right of making and amending laws in the Rigsdag, or

Tlict, acting in conjunction with the soverigu The king must be a member of the evangetiad Luthorna chireh, which is declared to be the redigion of the state. The Rigscluy conkists of the Landsthing and the Folhsthing, the furme being a senute or upler honse, nidi the latter a loonse of commons. The Lhaulathing consista of it 9 members. Of these, 19 are nomlunted by the crown for the term of 12 years, and the ret are elected. To the Cundsthing any male sulp ject is eligible who is forty-one years of wape who does not labour moder mental incajacisy and who either pays 200 rixilollars, or $2.2 / 1 \cdot 1 \mathrm{~s}$, 2,1 , direct taxes, or has a yearly finome of 1 , \%n rixdlollars, or 13A\%. Es. 'jo the Folhsthing, cutio sistimg of 101 members any honseholder twentytwe years of age is eligible, provided he does nit lnboir mader mey inenpucity which wonh dpyrive him of the right of voting. This ripht belungs to every citizen who has reashed his thirtieth year, who is not in the notual receipt of pulbic charity, or who, if he has at any former time been in receipt of it, has repiail the sums so peceived, and who does mot labour muler mental ineapacity. The clected members of the lambse thing low their seats lor eight, and those of the Folhsthing for three years.

At the side of these two houses of parliamentthe lords and commons of Denmark-is placell a third boty, calied the Rigsraut, or supreme comai of the nition. It consists of 47 members, appoiated as follows:-

The Rigsraut sits every second year fir two months. 1t may lee prorogucd once in two years for a period not exceeding finur months; and the king can dissolve it at his plansure. If diasolvel it must be reassemblerl within four months, and more than two dissolutions camuot take phay within a perion! of two years. The quahticatimes for at seat in this comsil are-complete citizendiny (that is, the possession of all rights and privilems to which a native-hom subject is, as such, entitled) in mblemished personal cluracter, and the absene of auy legal elaim upon such property as the candidate may possess. The qualification for the difet electoral franchise is, in addition to the first abor named condition-thitry yenrs of age, and the annunl payment of 200 rixitollars, or alout $2 j /$ iu lirect tixes; or, an anumal income of 1,200 rixdollars, equal to 135\%. I'rivate members of the liigsraad cannot introduce bills, but can petition the crown for their introduction. The ministers take part in the debntes of this body in vitue of their oifice, but cannot vote maless they ate menibers.
The executive goverument is conducted, mbet the king, by a privy comeil, nud by departmens or eollegres, each having a minister at its heat, in which the public business is transacted. Thepro vinces are all divided into stifters or dioceses, pud these again into amter or bailiwicks; hut in the lirst the goverument and the administration of justice is committed to different purties, wheras the bailic, amtman (prefect), or chief of the administration in the duchies, is also chicf jublre in theit civil nud criminal courts. The lowest courts consist of a julge and a secretary, ehosen by the pro prieturs of the distriet, and contirmed hy the king. From these an appe?' may be made to the prom vincial courts, and thence to the supreme court

appal at Copenhagen. lint in order to diminial the expense of justice, all chil eases must in the ont instance be enrried hefore a commission of' concilution, composed of the most intelligent unil reypetable men of the vicinuge. Its sittings are private. If loth parties ngree to abide by the pivion of this commission, it is registered, ant has the effect of law ; if not, either is at full liberty to proced in a conrt of justice. The procuedings of the commission are upon instamped paper, unil (Hust be concluded within tlfteen days.
The latheran is the established religion, and thuygh the most perfect toleration be practised, ine numbers uttached to other seets is quite heondiverable. The bishops are nominatel by the ctorin.
Fiducation in Denmark is very widely iliffused, there being very few persons, even among the lurest classes, minablo to real and write. Itevides the university of Copenhagen, there aro grammar achands and academies in all the considernhle towns. Parochial sehools are almost everywhere estatlished; aul here, as in P'russia, attendance at sehool is nut optional; lior, by a lav, all children from the ase of seven to forrteen years mint attemb some pablic sehool. Children whose parents are unable to pay the usial school fees are educated at the puthic expense. The instruetion in these schools whales, besides reading, writing, and arithmetic, li-fory, geography, and natural history. The grammar and parish schools are umder the superfutendence of a royal eollege or commission, consisting of three assessors and $n$ president. This commission regulates the course of stuly, and npwints all professors in the miversity of Copenhagen as well as the masters in the grammar chands. The miversity of Copenharen was famded in 1479, by Cbristian 1., and has been augmented nul nmply endowed by bis snceessurs. It is divided into theologrieal, medical, juridical, and phitosophienl faculties. The professors are dither ordinary or extraordinary, their total momber teing generally nbont thirty. The examinutions are strict, and the proliciency of the pupils very considerable. It is attended by abont 6 bit stadents. There is also an asylum for the elacation of the deaf and dimb in Ciprenlaren, with two seminaries for the education of scltoolmasters, and two for cadets.
Army and Navy.-'The army consists partly of mandar troops, and partly of a militia or laneducehr that is only occasionally called out to be exercised. The peasantry are all, with few exceptions, liable to compulsory service in the army for six yars, during t'vo of which they are eonstantly on iluty; white during the other four ther are only on dity for a month each year. At the end of the six years they may be enrolled in the militia. A extain number of soldiers are annually chosen by lot, in each district, aceording to its popalation, and the exigencies of the state. At present the regular arny nominally amoments to $25,000 \mathrm{men}$; bat latterly it has been much more considerable. lhring the war with Austria and 1'russin, 186:3-1, thete were in the tield 49,300 infantry, 10,600 cavalry, and 9,000 artillery, with 144 guns.
The uary consisted in September, I86.4, of 19 saiting vessels, carrying 704 grms, and of is stemers, with 3.40 guns. It was manned by very nearly 2,000 men. Since then, however, great reductions have been made in the naval establishment,
Finunces.-l'reviously to the late war, the rerenue of Demmark, inc. that derived from the duchies, amounted to about $1,850,00051$. a year. It consisted of excise and enstoms datien, a laud-tax which produced nearly $400,000 l$ a year, a house-
tax, the Somid dues amonting of late years to nhmot 217,0001 ., mul other ltems. Ihit the serions falling off in the amomin of the pmblie revenne ennsed by the loss of the thehies, mat the herensed charge the crown has had to sustain on meronite of the war, have orrasioned consilerable flameind embarmesment, and the mblition of large sums to the national teln. The flanelal entimates for the year commencing April I, 186 tan , anl enting March :11, 18i6t, which were linil before the Folksthing Octoher x , 180 4 , qive the calenlated revenno at $8,22,2,(10) 1$ rixdollars, or $969,1+11$, and the expentiture at $6,161,2 \times 1$ rixtlollars, or $68 ., 5 \times 7$. Tho lons of Schleswig-Holstein anyl Lamenburg, it mppears from these estimates, lirought down the revenne of Denmark to ome-hall of the formar amomet. The ammal budirets of Demant show largo delleits, amomnting, in $18+9$, to $10,285,911$ rixdollars; in 1890 , to $9,888,817$ rixilollais, mal little less in the following years. The kingolom was saved from timancial ilisorder by the payment, in 18 ith, of the sim of $30,176,420$ rixilolars, or $3,121,1832 /$., given in purchase of the Somal dhes. To this sum Great litain cont ributed the primeipal share, amomiting to exaetly me-third, 'l'he eapital was ehietly employed to pay oly a part of the nutional debt. There still remained, on Mareh:31,
 to which was adedel, in dnnuary, le64, a new lonn of $1,200,0001$., to cover the cost of the war.
As already stated, from 1-5th to 1-ith part of the pmblic reveme is derivel from a lamitas, which is chargel necording to the quantity and quality of the latd which ench eultivator possesses, and which is measured in toms of hurleorn. The Danish acre, or tom of lamd, is equivalent to $\overline{\delta 6}, 1610$ sq. Binish l't., ind I such acres are equal to a stanhard ton of hardeorn, one of the later being consequently equal to $\boldsymbol{\sigma}_{3}^{1}$ Einglish acres. Nut as the sume amomint of tax is laid on each tom of lamedern, the size of the latter varies according to the lertility ol the lami, from $22 \cdot 1,000$ th. to $2,2+10,0100$ ft. 'The ton ol' lardeorn is therefore, in fact, min imaginary meanare, which eontracts as the quality of the land to which it is applied improves, mid rapminds as it teteriorates.
Provision for the Poor.- A compulsory provision for the support of the destitute poor was introtuced into Denmark early in the present centurs: Einch market-town, of which there are dis, and eath parish, forms a separnte poor distriet, the alliniss relating to the poor of which are manared by a particular board. Every man residing for three years in a jarish acquires a settlement in it, and a right to be supported in the event of his beeoming mable to support himself; but the principle of the law is, that the panper shall be supplied only with those things that are absolutely necessary lor lis support. All berping is strictly prohilited. Opinions diller as to the inthence of this law. It took eflect in 1 sou, and the rate is said to have since progressively angmented. The too great multiplication of cottares has beenspecified as one of the principal canses of the maltiplication of the poor. But the probability seems to be, now that the fembal system has bern subverted, and that a large portion ot the comery has got into the hands of small proprietors, that the increase of cottages would have been greater had there not been an assesmment for the support of the poor. Savings' banks were introduced into lenmark in 1816 ; and siace then upwards of ten millions of dollars, or above one million sterling, lias been lodged in them. It very rarely happens that any one of the petty proprictors either solicits or obtains parish relief.

History,-The carly history of Denmark is ob-

DENNY
seure and mulnteresting. In 1385, Margaret, danghter of Wuldemar king of Denmark, mid wifo of Haguin king of Norway, asecmided the throne of these kingiloms: in 138!' she was chowen by the Swales their soverelgis ; the three crowins being minited, it was supposed, for ever, in 1397, by the treaty of Calmar. Thin preat princess, whic has been styled the Semiramis of the North, and whose reign is the most glorions in the ammals of inenmurk, died in 1412. After her death the Swedew began to evince their eliscontent with the union witl Jlemmark; and, ufter a lengthened struggle, flumly emancipsted themsches from the Danish yoke in 162\%, In 14.48 the race of the macient kings of Denmark liaving heeome extinct, Christion I., of the house of Oldenburg, was raised to the throne, which his posterity still powsess; and by this means the valuable provinces of sleswlek und Jlolstein huve heen muited to the crown, the Ilrat immedintely, and the latter in 1761 and 1773. The reformed fiith was established in Denmark with little difliculty. Luthermism laving been introluced in 1623 , Cutholicism was suppressed in 158\%, the chureh lunds being at the same time ammexed to the crown. We lave alroaly noticed the memornble revohntion of $\mathbf{1 6 6 0}$, whieh had been preceded by a disustrons war, and the loss of the provinces previonsly held by the Danes in the smoth of Sweden. From thence down to a late presol, there is little of interent in Danish history, other thin the introduction of the reformas already ulluthed to, and the events of the last war. The attrek on Coprenhagen by the liritishi in 1807, which ended in the eapture of the Danish fleet, was on art of very questionable policy on our part, and of which no suflicient justiticution cither lias been or perhaps cun be made. From this period down to the genernl paeitiontion in 1815, the Danes were amongst our litterest enemies. At the conclusion of the war Norway, which had been so longr mited with Denmark, was assipued to Sweden; the former ohtnining in exchange the duehy of Lavenburg and a sum of money. The Danes felt this sacrifice very acutely; but it was one of apparent rather than of renl power. A loss certninly greater was that of the duchies of Schleswig-Molntein and Lanenlurg, attached to the crown of Denmark for centurios. Unwise legislation on the part of the government, mul particularly interference with the langunge of the majority of the population-a matter on which all subject nationalitien are more or less sensitive-brought abont a rising in these German provinces in the revolutionary year 18.18. But thongh I'russia took the part of the duchies, the matter was satisfactorily settled in $18 \mathrm{sin}^{2}$, Dleven years after, however, on the 15 th of September, 18is3, oceurred the denth of king Frelerick VII., last of the direet line of the house of Oldenburg. 'Then a new rising took place in the duchies, and Prussia and Austria sending large armies to aid the insurgents, both Schleswig-llolstein and Lauenburg were wrested, after a sanguinary struggle, from the crown of Denmark. 'The cession of these provinces was legally confirmed by the trenty of Vienna of Oct. 30, 1864, followed by a prochamation of the kinge of Demmark, of Nov. 17, releasing the inhabitants of the duchics from their alleginnce.
1)WNNY, a market town of Seotland, co. Stirling, 7 m . S. Stirling, and 14 m . Ne. (ilaspow, on the S. bank of the river Carron, which falls into the Firith of Forth at (irangemonth. P'op. 1,194 in 1861 . It is irregularly built. The only public buildings are, a parish church mud a dissenting chapel; but it is eminent for the various manmactures carried on either within its lomunds or in its vicinity, viz. paper-mills, print-fields, mills for
apinning wool, one for preparing tiye-sfuft, ant collierios. Ifundloom weaving, in connetion with the Glasgow market, is also carried on to a cum siderable extent.

1) liJ'TFORS, a town and naval arsenai of Fing. land, montly in co. Kent, Intle Silton-at-llonie, hund. Hackheath, a part being in co. Surter, limid. Irixton, on the liavensbourne, at its cyin. finence with the Thames, 4 m . ESSL. Iomilom, on the railway to (ireenwlels. Pop. of the park of beptford, St. Nieholns, ln Kent, $8,13 m$, aul of Depiffurl, St. Paul, in Surrey, $37,8: 14$ in ${ }^{\times(6) \mid}$ Deptforl is contignous to (ireconwich, the two ap. pearing to make only one large town. The lowet town, next the river, has narrow irregular street, and is meanly built, but the upper town is mueh superior in these resuects, and has many handsome modem housen; the whole is lightend by gas, is paved, nul supplied with water from the Kent water-works. The old church of St. Nicholas was rebuilt in 1697; that of St. I'nul, a linnumme structure in the Greeinn style, was built in lian at which period Deptiord was divided into 2 pas, There are also severnl disacnifing clajuls, twio churity schools, a dispensury for the pror of the town aud neighlourlood; a saviugs' bank; a meclanice' institute; and two sets of almslounses fir decayed pilots and masters, or their widows; one fomiled in the reign of Ilenry VIII., with $9 t$ dwellings; the other at the end of the 17th centurs; with bit. 'I'his society was lncorporated ly charter In Ith Henry VIII., when the ancient rights and privileges of the company of the murimers of limp. hand was conflrmed to them, and they were stylel the master, wordens, and assistants of the guild of the IIoly Trinity, in St. Clement's, in Jeptfind Strond. Other charters were franted them br Eliza and Chans. II. 'They are now governed by a master, 4 wardens, and 18 other elder hrethen; the master and 2 wardens heing chosen amualiy: from among the edder brethren, who are electend for life. The number of yonnger brethren is unlimited, any master or mate sufficiently skilled in navigation heing admissible ; What they take nopart in the business of the corporation, though, like the elders, they enjoy certain immunitics, such as exemption from serving on juries, duc. I'he prinitpal chartered functions of the sucicty are-the exnmination of the mathemutical students of Christchureh, und of masters in the roval navy; the apmointment of pilots for king's ships, as well as for piloting merchant vessels on the soveral coasts and ports of England, except such as are suredidy placed under other jurisaliction (such as those of the Cinque Ports and the lBristol (Chamel), and of tixing the rates of pilotage; the crection andmantenanee of lighthouses, bencons, buose, sum othet sea-marks (with the exceptions previonsly stated): and the hearing and determinng complaints be tween merchant oflicers and seamen, the appeal from them leing to the Admirulty Court. Tley have also the power, under certain cirrmastances of licensing scamen to ply on the 'Ilames. Their revenue is lerived from incient endowments, cunstingent benefactions, and lighthouse and othet ducs, and the surplus, after chefraying the expense of mantaning these and other sed-marks, and other necessary expenses, is, by their charters, to be approprinted exelusively to the relief of decayed seanen! and their widows. Jetween 2,000 and 3,000 is the usual number anmunly recciviug periotical or casunl relief, to varions amounts. Their antars were comblueted at Deptford till lixi, when the Old Trinity Ilomse was pullod down, and they removed to the present structure on Tower-lith. The govermment dockyard is menclosed area of 31 acres, with a donble aud single

Denenv, $n$ town and Ior, of Encland, in the above co., of which it is the col., being loently in the humd. ol Marlistom, lat possessing separato jurishlictiom, on the berwent, in a the valley; ls in. SSli, Mnnchester, $119 \mathrm{~m} . \mathrm{N} N \mathrm{~W}$. Lomdon by ront, nud 127 m. hy Milland railway, Pop, of bor. di, 091 in lsisi. llesides the Derwent, the town is traversed by the Markeaton brook, both of them heing erossed by several handsome bridges. It is a very thriving place, and lus of Inte vears been mieli improved. The streets in the older parts are narrow and crooked: but all of them are clenn, well paved, and well lighted with gras. 'I'here is here a commty-hall, a town-hall, assembly rooms, a co. gaol, which is one of the best in the kingdom, an intirmary, and theatre. I'le most extensive, and one of the finest, bnildings in Derhy is the Athentemm, also containing the lost OHice. It stmuls in the centre of the town, is of (irecian arelitecture, has two fronts, ome of 98 , and one of 185 ft . 'The market place is a large open space in the centre of the town, and there is also n good covered market. There are fourtern churches. All Suints' Church is a koman Dorie erlitice; the tower, erected about the time of Ilemry Vlli., is in the perpendicular buplish style, 7 is ft . high. The original church of St. Werlmareh is supposed to have been built prior to the Complest. The churelo of St. John's is a tine Gothic buihiner: and notable also are St. Alkmund's, relyilt $\mathrm{kN} \cdot \mathrm{H}$, with a spire 30. ft . high; and Sr. Michael's, upened 1858. There are chapels for most classes of l'rotestant dissentera, and the Catholics have a chapel with a dine Gothice tower. Derly has received many charters; the first from lolin; its last and (jrior to the passing of the Mimicipal heform Aet) froverning charter from Charles 11 . It elaims to le a bor. Iov presciption. Under the new municipal act, it is tivided into 6 wards, and has 12 ahdermen and it combilmen. Corp. resemuc, $!1, \frac{12}{2} \%$ in $18(62$. Ammal valne of real projerty assessed to income tax, 14.,.510\%, in 18.57, amid lis, 1333 . in 1862 . Dorby has sent two members to the II. of C . sine the 23 ril ldhward 1 . I'reviously to the Reform Act, the right of voting was
vestell in the freemen null aworn burgeasen. Jle-
 place apprinted fir the election of the nembers lior the N. div. of the ce.

The town ham many excellent eharitahle, edientioninl, literary, seiontille, mid other instlintions. Amongst theon aro the intrmary; a the structure, erected by sulameription at a cost of abont $18,001 /$., and is replete with every convenlence; the melfsuppurthig charitable und paroehlal dispensary ; a laly's charity, fur assintlug poor women durlius their conthement; severul frienally masieties and bemeft clubs; almalonses, some of whleh were fumbleal by the Conintens of Shrowshury, in 169!, for elpht men and four women; othors by R, Wilmot, in 1638 , for slx men and four women, now four of each; Large's Ilonplial, foumded 170:3, by Bdward Large, for tive clergymen's widows, sulseppently curlelied by similry domatioms; and lis neat aud substantial nlmshousen, erected from the fund of a charity bequeathed $\mathbf{3 0 0}$ years ago by Robert IJversnge to the par. of St. l'eter; with varions bencfinctions for different purposes. There are, nlso, nationul, infant, Sumlay, and other schools, furnishing instruction to great mumbers of chiliren. A free school, fommed in tho reign of Heury II., is supposed to be one of the mont nucient endowments of the kiud in Dinglanal. It was formerly in a very flomishling state; nubsequently, however, it fell off very mueh; hat it lins latterly been getting into somewhat better repute. The liternry nud seientille linstituthons are the Philosophicen Sneiety (orighally held in the lomse of Dr. Darwin), whth a good library, a collectlon of fossils, and mathematical anm philosophical apparatus; the Town and Comintry Librury, which has been moch enlarged, and hins a jublie news-room and museum attached te it ; mud the Mechnuies' Institute.

The town is remarkably well situnted for mannfactures, having an extensive command both of water jower and coal ; and mills for the manufncture of silk and cotton have been entablished either ill it or its immediate vicinity. Early in the begiming of last century, Mr, John Lombe, who Jud, at considerable risk, and by dint of great infromity and application, made limself aceuainted with the machinery in Italy, erected at Derloy a mill for throwing silk on n very large seale; bund the town has ever since continned to be a principal soat of the silk-throwing business. The other mmufnetures comprise stockiug, lace, tape, pottery, mils, needles, paper, and railway carringes. The cotton manufacture is not carried on to nenrlythe same extent as that of silk; bat of late years it has been increasing very rapidly in the co.

The town was formerly a great wool mart, and the art of dyeing woollen eloth was supposed to be practised here with peeuliar advantage, in consequence of the water of the Derwent being specially mapted for that purpose. Hosiery has longr been an important bnsiness in Derby. There are also large manufactures of bobbin net; and the weaving of silks and velvets has been introluced of late years. The manufacture of porcelain was originnily established here abont the year 1750 . The ware is not, perhnps, of equal tineness with the French and Snxon, but :ts workmanshipand ormaments are at least equal. The manufacture of figures and ornaments, in what is termed biscatit, is extensively carried on. The fluor spar, or 'blue John,' of the vicinity, is wronght into vases nud other ormaments; and the black marble of Ashiord into vases, colnmis, and ehimney-pieces. Various other factories, besides those specitied, are comblucted here on a large seale, such as for patent shot, for the construction of stean-engines, for
slitting and rolling iron, for smelting ectiper op, for nukhing thin platen. There are almo rol hal, colonar, dini varnikh works; blenclinge-gminaly, hat which the processes are perfurned hy chembith; tanmerien; sonjeries; extenslve naltiug connem; and corn milla.
Derhy conmminicates loy rallways and canala witli nil purts of Fiuglantl. The river was, wis ral yeurs slice, mude muvigable from the town to Its function with tho Treut ; but, nluce the ofma. ilig of the Derly eanal, the navigithom has been dismsed. This chanl brmeles from the 'l'reutand Morney caunal at Swarkentone, a few miles Sid Derhy, runs N., anil intornects the Derwent at Derly, a towing bridge being thrown neross that river. The Durby canal supplies the thwn with conls, bmilding stone, gypsum, Bud other thing Throe rallways meat it Darliv:-1. The lath and Ilirminglinm; 2. The Midland Conuties railo way, which conmeets I Pe:ly; mid Nottiughum with enels other, nall both with the lomlon and Sumbo Western ruilway at llughy; 3. The North Mid luml railway, whilis eonmeets Derby with leek York, fro. Derby, in fuct, is one of the centers railway communiention in Euglaut.
Many learied persinis have citlier been nativen or inhabitants of this town ; anuong whom mary be specilled Dr. Thlos. Linurre, a learned physichat in the relgn of Ilenry VIII.; Joseph Wright, 2 in eminent painter; William Hutton, an inhlustrins antipuary and topograpler; Flamstead, the ceh brated astronomer, said to liave been educatel in the free seluol; the dirst liarl of Maselestlehil, whey after jractislor here as an attorney, rose to the highest rmak fu his jrofession, having been lon chancellor; John Whitehurst, a scientitie mechanist; and the celderntel Dr. Inrwin.

IDEREIIAM (FAS'5), or MARKE'I DERE IbAM, a town nud par. of Englinal, co. Nofills, hunl. Mitford, 15 m . NW. from Norwich, and E : NEN. Lomdon ly Gireat liastern railway, Lres of pur. 5,550 neres. I'op. of do. 4,368 in lxid The town having suffered much from tires at different periods, las been rebuilt on an improvel plan, and is neat mad clean. The churdh, a ver ancient structure, with $n$ tower in the centre, lis some interesting relies; and in it were lepusited in 18(0), the remains of Cowjer the poet. There are two numal fairs.
DERG (l.OU(il1), n lake of Ireland in the SE nugle of the co. Donegnl, abont 9 m . in cira This lake, cr rather a small island in it, is famols in the history of Irisli superstition. In this island there was formerly a cave, ealled St. Patridi' l'urgatory, a pilgrimage to which was long hell to be of the greatest eflicacy. The cave was, however, shut up in 1630 , by order of govemment, the chapel on the island demolished, and the munks dispersel. It was supposed that this rougle tratment had put an end to the delusion ; and lwate, writing som after, says that 'the pilgrimage to purgatory has quite come to nothing, and neva hath been since undertaken.' (Boate's Nat. Hia, of Irelamd, p. 75, ed. 1652.) But if so, the pras tice revived at no distant period, and the island continues, down even to the present day, to be ammally visited by crowds of pilgrims. I'le Benelict XIV. wrote a sermon recommending the pilgrimage; and, in I8830, the Catholie bishop of the diocese publicly notitied that he would hold a 'station' here. The 'station,' or period for the resort of pilgrims, begins on the ist of Junc, and terminates on the 15th of Augnst. The averate annual number of pilgrims are estimated at from 18,000 to 20,000 . $\Lambda t$ present the rites ate performed in a cave, but in a chapel. A riva called Derg falls into this lake.

conick. It comasists of two parts,-the town groperly so called, mad its milourli of Le Pollet, nepmrated lrom it by the port, bit commanicating with the lown hy a bridge. Dirppe is well supplied with water, which is eomvered hy an aquedtect exenvated in solid rock for $\mathrm{It}_{\mathrm{i}}$ in., imil distributed to tis amblic, mind above 200 prlvite, fominims. Its port, cuclosed lye two jettion, and surromaded by ghay, in enpable of necommodating a great number of veseols of from till to tion toms: lint it dries ats low water, is with dificonlty kept from tilling up, and is rather of dungermis acesesn from its marronviess and the rapinlity of the current botli inwaris and untwards. It. is protected by an old enstle on a "liff' to the W. of the town, mad by some hatteries. The town has a wo churches, froin the sterpile of one of which, St. Jacques, the linglish const may be seen. Since $18 \cdot \mathrm{l}$, when a handsome establishment fir wen-lathing was tormed, Dippe has becone a favourite watering-plase, mind the number of vinitors has continamed to incrense. It is the seat of a court of origimal jurisuliction ; has a commumal college with a pibhlic library containing 1,100 vols., a schoul of mavigation, a hospital, mil a theatre. Joory urticles are made here in grenter perfection perhipis than in my other purt of Finrope: and there are nome sugur-relineries, tanneries, rope-wnlks, and building decks for trading vessels. 'The mumbincture of' lace, for whieh this town was mee distinguished, has now much dimsnished. Vieppe is an entrepoit forsalt mul colomial prodinee, and lins considernble trable; but ly fiar the greatest pertion of the inhab, hepund for support on the fisheries, especially those of wackerel nand herrings, for the supply of the apital. Vessels are also fitted ont for the cod nind whale tishcries. I'here are two oyster-hanks, whenee about $12,000,000$ uystors are ammally sent to l'aris. $A$ regular intercourse is kept ius ly stean-boats between Newhaven, near lbrighton, and Dieppe; and as the journey to l'aris by land is mum shorter ly this tham by Calais or Imonlogne, it is jorferred by many travellers. Dieppe was bombarded and all lut destroyed by the Einglish and Duteh in 16914. The inhab. have been distinguished by their enterprise. They diseoverel Canada, founded lnebee, and explored the coasts of Africa to some distame a century previously to Vaseo de (iamu. Bruzen Ie la Martiniere, the anthor of the Grand Dictionnaire (ieographique, was a nutive of lieppe.

DIES'1', a town of Belgiom, prov. S. Brabant, cal, cunt., on the bemer, and on the railway from Antwerp to Jlege, is m. ENE. Brussels. D'(j). $x_{0} 521$ in ,18056. The town is about a lengue in circ., but this spuce is in great part ocenpied with ticlds and gardens, It has a college, manufactures of stockings, woollens, fre, and some excellent breweries. It was taken by the Duke of Marlhorongh in 1705, lut retaken and dismantled by the Frend in the same year.

DJGNE (an. Dina or Dinia), a town of France, rlep. Alpes-liasses, of which it is the eap.; at the font and on the deelivity of a hill, on the bleone, $\therefore \mathrm{in}^{\mathrm{m}}$. NE. Aix, 78 m . SSW. Grenoble, and 373 m . SE. Paris. l'op. $5,34 t$ in 1861. The town is enrireled by ancient walls ilanked with square towers, Streets gemerally narrow, and the honses mean. In its vicinity are some suline bathe, serviceable in rhenmatic, paralytic, and cutancous affections and gunshot womils. Ono of the avemuen to the town is planted with rees and bordered with handsome houses. Digne is the soxt of a court of primary jurisdiction, a conrt of assize, a tribunul of commerce, a communal collere, and a bishoprie: bnt. neither its jrincipal ehureh nor episcopnl palace reserve notice. it has a pmblic library with 3,000 vols, a society of agriculture, departinental nur-
sory groumrs, tameries, ani some trate in pronec uhmonds, corri, hemp, cloth, eattle, and leather.
DIIHON (an. Disio), $n$ celelirated town of Frame, dij. Cote d'Or, of which it is the cajn, as it wa fomerly of the duchy and prov. of Ihurgunly, in a tertile plain at the foot of the Côte d'Ur dionn. tnius, on the Onche, at the conflinener of the Suzon: 105 m. N. Lyons, and $160 \mathrm{~m} . \mathrm{SE}$. Jarix, the railwny from loris to Lyons and the Meliter. runean. P'up, $\boldsymbol{\beta}^{5}, 051$ in l by ramparts planted with trees, nud is for the mant pirt well built. Its streets are brond, wall javesh, and clean; nud it contuins several large and fine squares, Its enviroms are extremely Imautiful, mul fow towns in France ponsess sundi fine pullic walks. The Sizan, mmning tis various suliter. runcan chamels through diflerent quarters, cmo tributes to the cleanliness for which lijinn is conspicmons. In the Plure Royale, constructed in the lorm of a horse-shoes, is the pabnee which lav suceceded to the ancient enstle of the duker of Burgundy, the greater part of which was destrow by tire in 1502. A large nquare tower formerly belougring to this enstle, and ealled La Trrasw, now surves an an olservatory: the palare, which was tinished in 1784, was destined for the reopr tion of the statcs of the province, and for the residence of the l'rinces of Conde', who, nadertio old régime, were ifs hereditary governors; its mat, nificent suite of apmriments is now occupied by tive muselums of painting and seupture. The casth of Bijon, commencad ber Lonis XI., and terninated under Lanis XII. in 1513, beeame in the lift century a state-prison, in which the Iuchess, Muine. Mirabenn, and other distingnished peram were conlined; it now serves for the guarter-i the gens-d'rormes. Siveral of the churchesare will worthy of notice. That of St. Bénigne, in whid the installation of the dakes of Burghusly tont place, was founded in the 5 th century, and robnit III Illl. It suffered materially daring the nom lution; latt its epire is still stunding, and reade to the lieipht of 98 metres, or $3: 1 \frac{1}{3} \mathrm{ft}$, atury gromol. The eharches of Notre Dame and : Michnel are remarkable alike for their antiguits the beanty of their arehiteeture, and the mapit eence of their ornaments. The church of St. Anm is an elegant modern structure, with a tine dome The hall of justice is a large ancient edifice, ant the theatre is, next to that of Bordeaux, the handsomest in France out of Jaris. There on two public libraries, one of which has 40,000 printel vols., and 500 or 600 MSS ; a cobinet of natur history, and a botanic garilen, 2 hospitals, a (1) the prefecture and academy, and many pina residences built dhring the independence of the dnchy, which give to the city a venerable and in teresting appearance. Dijon is the seat of an im perial conrt for the répts. Côte d'Ore, Hant Marne, and Saone et Loire, a court of assize, tif binals of primary jurisdiction and of commene und of a bishopric; and is the head-quarters of! military division. It has an academie unirm taire, with faculties of law, science, and literature a roynl and 7 other colleges, a superior selonda the tine arts, a secondary sehool of mediciaes primary normal school, and momerous leaned cieties. It has some fabries of linen, cotron, a woollen stnfis, vinegar, mistaril, for which it famotas, wax-candles, hats, carthenware, sap, basides sugar and wax retineries, tmueries, a breweries: but its primeipal dependence is on wine trade, it being the principal depôt and mark lor the sale of Burgundy, 'I'bis town existedpn viously to the period of Roman domination : ill fortified, and. according to some, rebuilt by Dara

Rajishaye; fingth X . to $\mathrm{S} .105 \mathrm{~m} .$, lirealth $\mathrm{X}: \mathrm{m}$. ; arem, $33 i 4 \mathrm{sq} . \mathrm{m}$; pop. estimated at $2,500,000$, nearly wo-thifis of whom are Mohmmmedans. The district contains no monntains, hor even hills; but its surface is mudulating: it is every where interwited by rivers, the priacipal of which ary the Whanomda. Atreyi, and wther tributaries of the liangen, There ure no lakes, but in the rainy sean some of the rivers swell out into extensive markies; and as they are constantly changing their courses, their deserted chanmels often contain a cinsiderable expanse of stagnunt water. The wiuls are mere variable here than in any other bart of India, but fir the most part li. The rainy eeson commonly lasts from the middle of June tio the middle of Oct. Towards the end of this season the uights are hot and oppressive, but the maxipaum heat is not so great as at Calcutta. From Siv, to Feb. the natives often sutfer much from oull, and tires are agreeable to Enropeans. The fin wiads are aceounted very unbealthy; und intermitent and other fevers anmually destroy a great many of the pop. The soil is in some parts a mul and stiff clay, unsual in lengal ; but lyy fir the larger portion is light and aslo-eolomred. Nitre was formerly made in this district, but the soil is whe peediarly adapted for it , and its manufacture lisi lieen removed to more favomrable situntions. The banyul, mango, areea, fer. Hourish; palins, graerally do not thrive. There are some small Nul forests; bint, genernlly speaking, timber is finfeior, and useless for boat-building. There are fies tigers or leoparis, no wolves or hyenas, and the wide elephant or rhinoceros is very rnmely seen. Detr, hares, purcupines, ichneumons, otteris, dec., are very plentiful; and wild hogs and buthalas do jauch danage to the crops. Birds are abundant. and so are lish; the last form by far the greater fart of the animal food consumed. Crocortiles are hot uncommon, but are little dreaderl; tortoises, and some lizards, are eagerly songht for as articles of diet: insects are not very troublesome. Abont fro-thirds of the land is filly oecupied und eultiratel; rice is the principal article of culture, but. is interior to that of Patha; wheat, barley, millet, legumes, and oily seeds are successively the produce next in importance. The cotton rused in the N . is very bad, but that of the S . is tiner than hat imported from the W. of India; the sugarcane is largely cultivated, and is of a good quality; whigo and tobaceo are also raised, but the latter not in sufficient quantity for home consumption. The husbandry of the distriet is deplorable; the hough is withont a coulter or monld-board, and atsme parts wants even the share; all the other san implements are nearly as bad; and 6s. will Aur all that are deemed necessary for the culture If tive acres of land. Hoth the oxen and horses re wretehed, exeept $\boldsymbol{a}$ breed of ponies from Bootan: Il cattle are, however, ill fell, and on none but atural pastures. There are very few carts or anreyances of any kind in the district. The farms re genernlly smail ; about one farmer only in sixfoll may rent from 30 to 100 acres; estates are III a state of bregary, and such is aro so are readily: relievad, the disponition uf the people generally being charitable. Vixcept thone of Eiropenas, anil sonte Mohmmerlans, bo honses have any other than a thatehed roof: mud walis are most common; but, In some instances, the lints ure wholly constructed of st raw and reeds. 'lhe firmiture of buth Mohummedans and Himions is unorly ailke, and the whole, mmongst the labouring classes, not worth more than a minec. Most of thene einssas sleep ous sackeloth or mats on the gromad. They are genernily very ill-clothed, but both llimdooss and Mohminedius wear many ornmments; the: women of both ruens eolour their eyelids with lampback. For foom, the people are generally better ofl" than for lothing, furniture, or clothing ; inni few are distrensed by homprar, nithomgh their fowl is seldom very monrishing: the lower classes are obliged to use the ashes of the phantain ront, \&o. for salt, and often want for tobaceo, their linvonrite and aboust only stinulus. Slaves are few, und servants, espucibily lemale ones, searer: for carly marringes are so taivarsal, that nearly evors woman is married by the perios of pabert $y$, or is else subjeet to a stigma. The inliab,, as nught be: expeeted irony their poverty, are tiehle, siekly, and sulject to varions diseases; abl are abo ignorant. mendacions, ami necasionully mparions, bacoity was formerly a very prevalent crime. Edueation has proeeeded to very little more than rudimental instruction anomg nbout $[$ in 1 fi of the mate sex. Chrisimuity lias mate but little progress.
I)inalationi! (Diadipar, the aborle of heggars), an inl. town of llindostan ; cal. of the above distl., ; seat of the British judicial mid revenne conrts: between two tribntaries to the (ianges; 1 ij m. Bisl:. Purneah, and 8t m. NNF. Monrshedabal: lal. $25^{\circ} \quad 3{ }^{\prime \prime}$ N., long. $88^{\circ}$.13' li. I'op. estimut, at 30,000 , ehiefly Mohammedans. It is, as its name implies, a very poor place; its homses are chietly thatebed hats, thore lieing, accorling to the latest acconnts, hat eight lrick flwellings out of in,(un). exclusive of the European residences and pulbli: othices, which are binit in the worst Anglo-ludian styt. Its most densely poopled portion has menr its centre a mquare surmunded with shops; in the linglish quarter, anil other portions, the honses are detached from each other, nod intermixed with gardens and pisture lamls. What miny be considered the port of the town, on the bank of the F'unabhoha, is necupied by merchants nnd warehouses. It is clean and well watched, but not lighted; the ronds ronnd it are kept in gokd repair by convicts, but bridges are wanted. It contains no puhlie building of any importance, excepting the louse of the late rajah, built in 1780, a strange mixture of European, Moorish, and Hindoostyles, surromided by a diteli and rampart; lout now in great measure gone to decny. The vieinity of Dinagepoor has a sandy soil, is ill supplied with water, and ehietiy oecmpied by pastures.

DINAN, a town of France, dép. Cotes-du-Norl: cap. arrond., beantifinly situated on a height oit the left bank of the lanee, 13 m . F.. St. 13rienc, on the Northern railway. l'op. $\mathrm{X}, 089$ in 1861 . The town is surrounded by walls of extroordinary height and thickness, the works ontside of which are now converted into gardens, and luid ont as public: walks. Streets mostly ill built, narrow, and dirty : though of late years some parts of the town have been much improved. The principal public buildings are,-a castle, built about 1300 , now used as a prison, two churches of Gothic architecture, the town-hall, elock-tower, hospital, and concert-hall. Vessels of from 70 to 90 tons conue up to Dinan at

DINANT
hifh water: it communleates with Rennes ly the camal of tle and lance, the river being navigable omly as far as this town. Dinm is the sent of a tribmal of primary jurisdiction, and of a commumal colloge: it lias a sellow, of devign, ot pulhie librury, and a society of ngriculture, with mannfiectures of suil-cloth, cotton stulls, thamelle, shoes, mod hats for the tropis and colonies, leather, wetrimet sugar-factories; mal has some trade in butter, luyp, and threme.
DINANT, n town of helgium, prov. Nomur, eap. arroml., on the Mense, 14 m . S. by F. Nimur, on the railway from Namur to Laxembourg. P'op. 7,210 in Isini. The town is built on the declivity of a rorky hill, on the smmmit of which ls its enstle. It is divited into the 'Thown-proper' mad the 'Island,' and hus a submrl, a Gothic cathe tral, several other churches, two horpitals, and a Latin school. It manufiectures are chicfly woollens, hats, cutlery, carts, verjuice, mead, gingerbread, pmper, aind plass; butt it has several oil, thour, nual hemp mills, with mills for cutting and polishing marble, and monermes salt-refineries, tameries, and breweries, It is the seat of a court of primary jurisdictiom, and the rexidence of a military commandant. Dinumt is very ancient. In the 14 th century it was a prosperons commercial town; in $1466^{\circ}$ it was sucked and burnt by Duke Philip of Burgundy; und again sacked in 1504 by the Duke of Nevers.
D1NAPOOL, min inl. town, and lritish military station in Hindostan, prov. Muhar, on the s. side of the Gauges, It m. W. Patna; lat. $2 ; \mathrm{j}^{\circ} 37^{\prime} \mathrm{N}$., long, $85^{\circ} 5^{\prime} \mathrm{F}$ :, The cantenments are large nud hamisome, with a tine guay, three extensive squares of barracks for the European troops, unifurmly built, of one lofty ground story, well raised, stuccoed, and furnished with arcales; there are also large barracks for the native troups. The garrison consists of about 6,000 men, one-fourth of them Europeans. The town is well supplied with European goods ; and in its neighbourhood potatoes are largely cultivated by both Europems and matives.

DIN(iLLE, a marit. town of Ireland, co. Kerry, prov. Munster. on a slope at the bottom of Dingle Harbour, on the N. side of Dingle Bay, 26 m . W. ly S. Trale. 1'op. 4,327 in 1831, and 2,260 in 186t. Many of the houses ure built in the Spamish fashion, it having formerly maintained an intimate communication with Spain. The par, chureh and Rom. Cath. chapel are modern buildings; a second chapel is uttached to a numery; and a large national school-house has been erected. It has a dispensary, and is a constabulary and coastguard station; and is frequented during summer as a bathing-place. The harbour is tit only for small vessels, which lic aground on mud at low water. The corporation, under a charter of Jas. I., in 1607 , consists of a sovercign, I2 burgesses, and a commonalty. lt has jurisdiction over a district of land extending 2 Irish $m$. in every direction from the par. chireh; and that of the sovereign, as almiral of the harbour, is determined by the flight of an arrow discharged from the harbours of 1ingle, Ventry, Smerwiek, and Ferriter's Creek. It returned 2 mems. to the Irish H. of C. till the Uniun, when it was disfranchisel. General sessions are held twice a year, and petty sessions on alternate Fridays. The linen manufacture, which formerly flourished here to a considerable extent, is now confined to that of coarse cloth in smail quantitics: grain and butter are the chief articles of trade. The fishery, also, which had been very productive, large numbers of herring, flat and ronnd tish, having been taken, is in a very depressed state, so mueh so, that the town is supplied with eured tish from foreign markets.

DINGWALL, a royal and parl, bor, and mo. port town if soctlani, cor. Rass, om the W.es. tremity of the Cromurty Frith, 19 m . NNif. D. verness, un the railway from Inverness to latien gordon. l'op. 1.739 in 1811, and $2,10 \mathrm{~s} 4$ in $\mid \mathrm{xiil}$, The Lown is built in the Duteln fashinan, and in rather nent, consistlug of one lembling street, with several inferior ones branching from it. The liar bour was origimally at an intonvenient distanter but in 1815-17, a canal was formed (at un expene of $4,8(51$.$) , by which vessels of consideralle lumiten$ are now hrought to the inmediate vicinity of the Imrgh. The ammal reveme derived from the cama is about 1301., which is not mure thm sullicient w keep it in repair. The benutiful valley of Strath petlier, at the head of which is a fumoms mineral spring, stretches W. 5 m . from Dingwall. The town-louse is a vencrable editice, with a pyire and clock: a plain pmrish chureh and a paut are the only other buildings worth notice. Dingwall is, place of little or no trade. There are but fer vessels belouging to it; and its exports casab exclusively of wheat and other comutry prownere and its imports of lime and coals. The charten its erection into a royal burgh was grmet in lem, by Alexnuder 11. On the 1. of the town man still be seen the remains of the Cantle of lingrall a fortified place, long the chief residence of ise nolle family of lioss. Near the churelh, on a artificial mound, stands an obelisk is ft , ligh crected an a frmily burial-place by Creurge, ifin earl of Cromurty, secretary of state for Scotlawh in the reign of Queen Ame. Dinkwall mite with Wick, Cromurty, Dornoch, Kirkwall, and Tuin, in sencing a member to the 1 I , of C , and had 112 registered voters in 1864.

DIOS, NOMBREL DE, a town of Mexico, stal Durango, on the road between Durango aul Som. brerete, 40 m . SE. the former city. Pop. estim. (i,000. Its chief source of wealith is an extensie trade in Vino Mescal, a spirit obtained frum the American alue.
DIZIER (ST.), a town of France, lép. Haut Marne, cap. cant., on the Marne, at the wimis where it becomes navigable, 47 m . NNW. clas mont, on the railway from Vitry to Chaumon Pop, 8,077 in 1861. The town was formerly wel fortified, and in 1544 sustained a memorable singe by the emperor Clarles V.; but its ramparts hare been converted into agrecable promenades, Itia a handsome town, with broad streets, and hows mostly of stonc. The town-hall, of recent catstruction, is much admired. It has a hospitil the ruins of an ancient custle, with cotton fabis iron-foundries, and a considerable trade in wow Many vessels are built here for the navigationit the Marne, the town being environed by a fons whence the materials are easily procured. A an of the allied army which invaled Frnnec in 1 估 was defeated with great lass at St. Dizier on the 27th Jan. and the 27 th March by Napuleon. was here also, after the breaking up of the cungrai of Chatillon, that the Due de Vicenza (Caulincourt) announced to Napoleon that he must alac. don all hope of treating with the allied soveredim

brblus was a considerable sen-part under the Gireck kings of Syria, but the existing remnins are mosely of the Litman period. It was a fiavourite with the emperor Adrian, who applears to have been peeuliarly attached to the worship, of Adonis (we beturenes), and to whom m inscription near the land-gate still exists in good preservation. It an early period of the Crusades, it was captured ty the Christians, who built its present walls ; but iin the furions wars of that fnumticnl age, the port and trate of Djebail shared the ruin of the other aities of the coast. Still, in its decay, it is the eall of the Kesraman (the coast between Tripoli and Beiront) and the see of a Marome bishop. (Mrilh, xri. Täs ; Laciam, De beâ Syrià, 2 ; Milliam of" Tyre, xi. caps. 9 and 14; Maundrell, 41-16; Volney, ii. 148 ; Burckhardt's Trav. Syr., 15: ; lobinson, ii. 44-52.)
WHIDDA, or JIDDA, a marit. city of Arabia, in FI-lledjaz, being the port of Meecn, and one of the ehief entrepots for foreign commerce in the pruinsula. Lat. $21^{\circ} 32^{\prime} 42^{\prime \prime}$ N., long. $39^{\circ} 6^{\prime \prime} \mathrm{E}$. Hesident pop., according to Ali liey, 5,000 , but this number is often much increased by the influx of itrangers. The inhab, are nearly all foreigness, or settlers from other parts of Arulia; the only natives being a few sherift fumilies attached exdhusively to the oflices of religion and law. live mosques, poor and mean, the governor's house, and a small castle, monuting nine or ten guns, are the only public buildings, except the khums, which are numerous and handsome. The honses in the town, built of stone and madrepore, are, finn the perishnble nature of the material, not very lasting; but in the sulmurbs they are mere mus, constructed of reeds and brushwool, inhalited principally by Bedouins. The streets are ulpared ; but Dijddia is, notwithstanding, cleaner, and in other respects superior to most Eastern citing of equal size. It is one of the holy places Wohammedanism. and its sanctity is increased y the neighbourhood of the reputed toml of Eve, a mude stone structure, about 2 m . to the N . The surrounding country is a bare desert, destitnte of numing streams ; and thongh well water is easily
oromerable, it is generally lat, The inhab, collect. the rain in cisterns, uid the commonest neeressaries are bromght imom a distanese. Corn, rice, butter, sugur, tolacen, ofl, chathime, de., ure inported in vory large quantitics from Esypt, the Mysssinian coist, mide (excepting hutter) eveu from Persin and India. Djidda depends, therefure, fior its existence 1101 its trade, which is very extensive, and wholly of the transit kind. From the tinterior daten, and the celebrated halm of Meecm, are bromght for shipment westwarl; mosk, civet. nad incense are procured from Abyssinia; mislins, eloths, cambries, teak timber, cocon-muts, cocon-nut sil, pepper, ginger, turmeric, shawls. and tissue, are brought from India; the Malny INamls send spices and female slaves for ale it the Mecea market. The collee trade, which, next to that of grain, was formerly the most important. has much declined of late, purtly owing to the frese admissiom of American proluce to the Mediterrmean, but procipally to the impolitic exactions of the pacha of Ligypt upon this brauch of commerce. A trade in slaves is carried on with the Mozambigue coast ; and, altogether, it is enlenlated that the port of Djidda employs 250 vessels, great and small. The imported articles are conveyed by ships to Suez, whence they find their way to the Mediterranean ports, or loy caravans to Mecea and Medima, from which cities they ar: arain dispensed to Syria, Asia Minor, and Thrkey. The caravans to Mecea start daily, those to Medina every forty or tifty days; but, besides these, Djidda carries ion no land trade, except occasionnlly with N. Yemen for corn. The dities upont coffee were formerly $7 \frac{1}{2}$ per cent., they are how donble that amomt; those upon Indian goods are from 6 to 10 per cent. according to quality ; the trade in grain is monopolised by the ligyptian government. Twice at least in every year Djidda is crowled with strangers, viz. on the arrival of the Indian Heet (nbont May), when merchants from all quarters pour in to purchase at the first haud; and during the hadj, when pilgrims come from all the African ports in vast numbers. In some years above 20,000 pilgrims land either at I)jidda or Yembo, hat mustly at the former. There is no manufacture in the town; everything, for nse as well as for consumption, is imported, and the occupations of the poorer ns of the richer inlab. cousist almost exclusively of barter

Ahnl-lieda (Ar. Des., $\dot{0} 0$ ), sulpmes Ijjidda and its neighbourhood to be the Badeo Regimu (Bade.s.
 with more reason believes the ground on which the city stands, to have been recovered from the sea within a short period. At some distance from the shore, he describes high sand hills, full of shells and corals; and the general appearance of the const makes it impossible, in his mind, that the molern town can oechpy the same site with its namesake, in the days of Mohammed. : 1)jidda.; he says, 's'avancera de plus en plus vers l'onest ; and in fact, although a city of this name has been. for ages, the port of Mecca, yet the town how existing is evidently of moderu origin. The sultan sheriff of Mecea, as sovereign of the Beled-elHarem (Iloly Land), has possessed Djidda sinee: the tirst days of Islamism; a pacha, first appointed by the caliphs, and then by the grand signior, as head of the Mohammedan faith, was indeed the nominal governor ; and, professedly, the customs were to be divided equally between him and the sultan sheriff. The latter, however, in the declining day's of Turkish power, paid little regard to this arrangement, and in the end expelled the Turks entirely from El-Hedjaz. Scarcely was this effected when the growing power of the Wahabees

## 18.

## DNIEPR

became more formidable than that of the porte Mecea and Melima were taken, and the sheritf, shut up in Djidda, made a public bot doubtfui prufession of the Wahabee fuith, In 1811, Mehomet All establlahed his jower in Fil-IIedjaz, the reigning sherifl was earried to Cairo, and hiss successor, uppolited by the Egyptian pacha, retained only a shadow of authority, with a monthly stipridid in lien of the port dues. (Atul-Feda, Ar. Jes., 59, 1j0: Nichuhr, Des, de l'Ar., 310:1-309; Voy, Ar., i. 217-2.28; lord Valentia, iii. 3101-333; Ali ley, ii. 40-16; l3urckharit, i. $1-100$; Wellstedt, II. 268-289.)

DNILill? (lie Borysthenis of the ancients), a large river of buronem latsia. It has its sontce near the village of Dnieproosk, in the government of smolensk, aul, pursuing a S. course pust Sinthonsk, where it becomes navigable, Mogheleff; Kieff; liknterinoslall, und Kherson, unites with the Black sea about (jo) in. below the latter, after a course of aluove $1,200 \mathrm{~m}$. Its principal atilnents are the l'ripet, Beresina, and I)enia. It is broad and deep, and may be mavigated with ease and safety, from Sumolensk as far as Ekaterinoslaff; but from the latier to Alexamirofsk it is interrupted by cataracts, which emmot be passed by any sort of crutt, except in spring after the debacle, and in the litter part of autumn. Works were begun in 1833 for olviating these obstructions, an ohject of vast importance to S. Rinssia; but we have not leurned what has been their suceess. What is cnlled the bar of the Dhiepr lies about 15 m . below Kherson, and between it and the town the water is shallow, and the channel encumbered with shifting sands. There are valuable fisheries below Kherson, and in other parts of the river. (See Kilenson; see, also, Hagemeister's Report on the Black Sea, p. 69, English truns.)

DNLESTR (the Tyras, or Danaster, of the ancients), a large river of Sli, Europe. It has its source in the Carpathian mountains in Galicia, and flowing in a SSE. direction along the E. fromtier of Bessarabia, falls into the Black Sca between Ovidiopol and Akerman, after a course of about 500 m . It has no very considerable afluents, and being in most parts shallow and rupid, it is of little service to internal navigation, except during spring and altumn.
DODONA, a town of Epirus, famous in antiquity for its being the seat of an oracle of Jupiter, the most ancient in Grecee, and second only to that of Delphi in eelebrity and importance. It appears to have been instituted by emigrants from Egypt ; at least this is the opinion of Heroclotus, and seems to carry with it the greatest probability. (Lib. ii. $\S \S 5 \mathbf{2}^{2}-58$.) The temple was enriched by vast numbers of costly statues and other offerings, presented by the states and individuals who had consulted the oracle. Adjoining the temple was a grove sacred to Jupiter; and in it was a divine or prophetic oak, by which the responses of the god were sometimes manifested! The imposture carried on here was, in fact, even more gross and glaring than at Delphi. There the priests framed a response from the ravings of the I'ythia; hut at Dodona the priestess went into the sac:ed forest, and listening to the cooing of the doves, or the rustling of the leaves or branches of the sacred tree, drew thence her auguries! Sometimes she deduced them from the sounds emitted by the clashing of copper basins hung round the temple, and from those emitted by a bruzen vessel placed on the top of a column, and struck by the figure of a child put in motion by the wind! The responses, in ordinary cases, were, of course, characterised by the usual ambiguity, so that, let the event be what it might, the

## DOIGFLI.:

credlt of the oracle slould be preserved; but hem as at Delphi and elsewhere, a rieh or puwerful it dividual had little diffleulty in getting much an answer as he wished for, (See Ancient Universol Hestory, x. 67, 8vo. ed.; Voyage d'Aaachanic eap. 36, de.) The site of thin famous orale uow matter of dispute among the learned. It is tixed by some at l'rotopapas, near the lake laln ehistas, 12 m . NNW. Yammina; but others place it "grood deal nearer the const.
I)(OllU1) (turo, frontiers), un inl, town of lin dostan, on the boundary of Mnlwah and Gijemit Itolcar's dom. ; lat. $22^{\circ} 55^{\prime}$ N., long. $74^{\circ} 2 t^{\prime}$ L It is of some size, well built and well supplian with grain and water; is much frequented by traders, being on the ligh roud between liphet lindostan and the Gulf of Cambuy; and emmmunds the prineipal pass into Ciujerat from the NE. It lass a fort said to have been iutilt by Aurungzebe.

DUL, a town of France, dép. Ille-et-Vilaine cap, cant., on an eminence among marshes whith have been dried, and are very fortile; $13 \mathrm{~m}, \mathrm{Ni}$ St. Malo, and 30 N. Rennes, on the railway from St. Malo to lienues. I'op, 4,191 in 18 tif. The town is surrounded by walls and ditehes, the remains of its old fortifications; it having for merly been a bulwark of Srittany againat the livasious of the Normans. The glacis of the ramparts laas been converted into a the prome nade. It is ill built, and has but one tolerable street; but its cathedral is one of the largest an tinest in the prov. Dol was a bishopric us early as tho 6th century.

DULE, a town of France, dép. Jura, cap. armone flnely situated at the foot of a hill planted with vines, on the I)oubs, and on the canal betwen the Khone and Khise; 28 m . N. Lons-le-Sauluief, on the railwny from l'aris to Besançon. l'us $10,605 \mathrm{in}$ 1861. The town was formerly fortition, but its defences have been long since destroyed Its ehief public buildings are the cathedral, with a large square tower and three lofty naves, sur ported by enormons columns; the new prisom Hôtel Dien, general hospital, tower of Vergy, laill of justice, barracks, the old college of the Jesuit. and thentre. The bridge over the Doubs, andilie port on the canal, are also worthy of notice. bed has several loman remains, including those of an amphitheatre, some aqueducts, and part of the superb Koman road leading from Lyons to the banks of the Rhinc. It is the seat of tribunasw primary jurisdiction and of commerce; has depôt de mendiciti, an orphan asylum, a communa college, a gratuitous school of design, painting, schools of geometry and music, a public libran with 6,000 vols., and a socicty of agriculture: has, also, manufactures of straw-hats, leather, ehemical products, and africultural implements; and a considerable trade in agricultural produce, Dôle is very ancient: in the 12th century it le came the oceasional residence of the emperor $\mathrm{F}_{\mathrm{r}}$ derick Barbarossa, and in 1422 had a parl, and university of its own. In I479 it was taken lif the troops of Louis XI., when most of its buik. ings were destroyed or damaged, and many of the inhab. put to the sword. It subsequently came into the possession of the Spaniards, and being re built by Charles V., many of its houses preserte the Spanish style of architecture. Ultimatelf it was united to France, in the reign of Louis XII,

The town hus long been poted for the manulacture of a coarse woollep falric, culled urehs, principally shipped for Amerien. Widis were formerly mate in different purts of Nontgemeryshire, but the manufacture is now Butinly eontined to this town and neighbourhome. The name of the town is derlved from lts sitation in a dale, abundant ln hazels.
1HLLAAK, a villape of Scotland, co. Clackmanman, 12 m. E. by N. Stirling, on the Seottish Central railway. Pop. $1,5-10$ in 1861 . The village is noteworthy as the suat of an nendemy, estaWisied liy Mir. M•Nab a native of the place, who appropriated nearly 100,000). for its fommdation. The acudemy, a benutiful Grevian building, was arected in lei9. The hrmelies tanght in it, in adition to limplish, writing, arithmetic, and geouraldy, are ilraving, mathematies, and natural philosophy, French, Italian, and German, Latin, bireck, and the Oriental languages. An infant nula female school are attached to the institution, and a library. The sesslon commences on Wct. l., and terminnites on the third Wednesday of Iugust. The academy is governeal-under 11811 Vict. e. 16 -by a body of trustees, comprising the lord-licutenant of the county and whet eminent met.

## HOMIN(BO (S'L'). See Havtr.

yOMINICA, one of the Windward Islanils in the W. Indies, belonging to Cirent Britain, situated between the islands of Guadaloupe and Martinique, 2x m. from either; in lat. $15^{\circ} 12^{\prime}$ to $15^{\circ} 36^{\prime} \mathrm{N}$., and long. $61^{\circ} 17^{\prime}$ to $61^{\circ} 3 z^{\prime}$ W. Length N. to S., nkout 29 m . ; greatest breadth 16 m . : area 186,436 arres, Pop, 25,04i5 in 1861. The islamel is the most elevitel of the lesser Antilles, and cominins many high nud rugged hills, iuterspersed with fertile and well-watered valleys. The soil is, however, generally very light, and more fitted for the growth of colfee than of sugar. Maize, cot ton, cirou, and tobaeco, are amongst tho other staples. The higher parts produce abundance of rose and ther woods used in cabinet-making. Hogs, pultry, aud game aro plentiful: the fisheries on the coast are very productive: and bees, supposed to have been introduced from Europe, abonnd in a wihl state. The island bears unequivocal marks of rulcanie action, and sulphur is found in great phenty. The principal exports are sugar, rum, mulases, coffee and cocoa. The total value of exports, in the year 1863 , amounted to 72,7261 ., and of imports to 47,755 . The public revenue, in Itits, nmounted to $12,787 l_{\text {. }}$, and the expenditure to 12,0951 . The government is under a lieutenant-governer-subordinate to the governor-in-chief at Aatigua-an exceutive council of seven members, appointed by the crown, and a representative assumbly of nineteen members. The island is deticient in good harbours ; that of Roseau on the W., and Prince Rupert's Bny on the N. coast, are the ouly tolerable ones. Koseau and St. Joseph are the priucipal towns. Dominica was diseovered by Columbus in 1493, ceded to England by France in 1763 , retaken by the French in 1778 , but restored at the peace of 1783 .
DOMREMY LA PUCELLE, a small village of France, dép. Vosges, 7 m . N. Neufehâteau. Pop. 339 in 1861 . Domremy is celebrated as the birtliplace of the famous Joan of Arc, bom here in 1412. The house onee inlabited by the heroine is still extaut. It has been porchased by government, and is preserved with a kind of religions care and vencration. Opposite to it, in 1820, a
hanisome monument, surmounted by a colossal bont of Joan, and bearing an approprinte Inseriptiont, was erseted to her inemory by the dén.; nal, nt the same time, $n$ soluol of mutunl inatruction for youmg girls was fommed in thet villuge. I'his village also gave birtl to a femalo of a very different charucter from, Jonn, Madane Dubarry, the mistrens of Lonis XV.

UON' (the anc. Thucis), a lurge nad eelebrated river of linssin in liurope. It rises in tho distr, of Epifan, in the goverment of 'Iula; and passing. by the town of Lebedian, tlows $S$. to Voronnge and Kalltyn; it then turns to the E., till, at Kntchalinsk, it approaches within about 36 m . of the Wolpa; here it takes a WSW. direction, which it pursues till it fulls, by varions moubles, into the NE: corner of the Sen of Azotl; a little helow the town of the same name. Altogether, lts course, which is very circuitous, may be about $1,000 \mathrm{~m}$. Irinelpal atllients, Dunetz, Sosma, Voronh, Medveditza, drc. Its turbid and unwholesome wuters are well stocked with tish. Its months are so entcumbered with sand banks that they only ulmit of boing entered by flat-bottomed vessels drawing from 5 to 6 ft . water; and in sunmer it is in most parts so very shallow that it is of little consequence as n channel of intermal unvigation, exeepit. during spring aud nutunin, when the products of the varioms provinces it triverses are brought. down to Rostof, Nakhitelevan, and Taganrog. (Hagemeister on the Commerce of the Black Sea, p. 30. English trans.) Peter the Grent projectel a canal hetween the IDon and the Wolga, where they approaeh nearest to each other; but, owing to the difficulty of the gromm, it lias not yet been accomplished. The former is, however, connected near its source liye a cannl with the Oka, an nitluent of the Wolga, and, consequently, by a very circuitons conrse with the latter. Europe is now generally and properly extended, on the S., to the ridge of the Cumcasus; but in antiquity the Don (Tanais) was held, during the latter part of its course, to be the line of demareation between Europe and Asia. Lucan notices this cireumstance, as follows:-

DONAGIIADEE, a sen-port town of Irelame, co. Down, prov. Ulster, on the nearest point of the coast to Portpatrick, in Scotland, from which it bears SW., distant 22 m . Pop. 2,986 in 1831, and 2,671 in 1861. The town, which is 19 m . E. Belfast by railway, is built like a crescent, on one side of the harbour, which has been much improved by a new pier carried out so as to have a depth of 16 ft . at low water, and having a lighthouse at its extremity. The par. church is an ancient cruciform structure; and there aie two meeting-houses for Presbyterians, and one for Methodists, an infirmary, and a dispensary. A manor court, with jurisdiction to the amount of 20l., is held in the court-house, as are a court lect nnnually, and petty sessions every Wednesday. The constabulary and coast-guarl have stations here. The embroidering of muslin is carried on to a considerable extent, and there are numerous flax-mills in the neighbourhood. The port is $n$ ereek to Belfast, and a station for the regular steumers to Portpatrick, the voyage being usually made in less than three hours.

Nom, whish, ineluding a braneh called the Ches wold, is crussed by two the stone lirilges, 162 im , NX'V. L.ondon liy road, mad lsat m. liy (irent Sorthern railway, Jop, Jib, 40 in in |sitil. 'I'he town, which is appronched from the s. by a marniflent ramge of elon trees, is exiremely well binilt, and the High Street, extending abont a mile on the (irent N. Road, lins a remarkably the "ppenames. It la a phace of moth importance hoth in its civil mad edelesinsical eharneter, thrmugh the whole freriot of IBritlsh history, Ai the polit where the town now stande, one of the froit lioman highways erossed the river. Thlis ruad commected two great stations, lineoin and York; and was an inproved British track-way, used for a eommuniention betwen lineotashire mul the interior of the lifigantian territory. It is the station Dunmin in the 'ltinerary' ol' Antoninus, In the midille ages it had in convent of Comellter und White Frimes, and received the grant of a charter from lichanrd I. The pronerty belonging to the corporation of Domenster nmomits to nemrly !, Hin!, a yeur. During the old corporation it was hreater. Hut that betly laving incorred a delt of nlove $100,0(6)$., the new municipal boily sold the Jiossington estate to Jmmen lirown, esq., of Leeds, lir the sum of $\mathbf{1 2}, 5001$, to pay off the debt; the pureluse was completed in 18i3. The income is jirincipally expemided on objects of publie utility as the paving, lighting, clenning, and watehlng of the town, mid supplying it with water ; the supfort of cducutimnl and charitable hastitutions; with the erection of buildings for the porroses of public utility and amusemont, and the attraction of visiturs. The par, ehureh, dedicated to St. George, is a large inmosing structure, in part very muclent, with a beuntifut suare tower 140 ft. high. There is another church, built by bernest from Joln Jarratt, emp., a mative of the town, at the expense of' $13,000 \%$. The Wesleyans, I'rimitive Methodists, Unitarians, Independents, Quakers, and Catholics have also phees of worship. Jxclusive of the churehes and chapels, the principal jublic buildings nre-the mansion-honse, a limalsome structure, erected in $17 \cdot 14$, bat improved in 1800 ; the town-hall, the thentre, giol, public libury, news-room, mil lyeenm, with the splendid hatting-room, 90 ft . in lengtl, which, except durimer the races, is used for coneorts, lectures, and exhibitions. Amonge the ednentional institutions are a grammar-sichool hir the sons of freemen, supported by the corporation; a national school, a Jritish sehool, and Sundny schools, supported by subscription. Of the charitable institutions the principal are-St. Thomas's Hospital, founded in 1585 , by 'Thos. lillis, for deenyed housekeepers, with a revenue of about 3 ajol. a year; Ǩay's and Jurratt's charities; n dispensary, ant sundry minor chanties, The Yorkshire Institution for alenf and dumb, a flourishing charity, is situated aljoining the race-gromind and the workhouse for the Dunenster union is near the town. Under the Municipal Aet the town is divided into three wards, and has two aldermen and six councillors for each.

Doneaster is not a manufneturing town, but it has some small iron-foumblies; a large water corn-mill on the Don bridge, and a steam commill on the opposite bank. It is in the centre of a rich and highly cultivated district, nud hins min extensive retail trade. The Don is navigable as far as shetheld by vessels of 50 tons burden. Doncaster used to derive considerable advantage from its situation on the Great N. Koad, and the number of travellers, by coaching and posting, passing through it But since the opening of the Great Northern railway the infiux of travellers has
ereatly diminished. 'J'he Iron ronds, however, wis Which Ionorantar la now combectod, have given mis nellitional impetus to trade, and more thans amo pensate for the loss of the firent N. Romb.

Doncoster is prineipally indehted fur its cepe. brity to its races, alul the hlghestation which they Jolld in the sporting world. The races were omalale lishod in 170is, atod from a smail beghonine lime Ineone ahnust unrivnlled: they are helif fatip tember, mad lave treen zealonsly patronised by the eorporntion, the surtounting notility and gentry, mid the flrat mones in tirf' ammals, fa 1776, the limouss St. Deger stakes were astablishet by Conlonel St. Lacer, whu residenl it lout Hik urar the town: heme their mone. The lirst rave was won by the Marquis of lionckinghum; and the llast of wimers inchider the theat horeses tha: lanve beren bred in lingtand. 'l'he rime-enife, aboit 1 ml . Sk, from the town, aljoining liwe Great N. Rond, is, in every respect, the of the finest in the kingion, The eonreve, bearly $2 \mathrm{~m}_{\mathrm{n}}$ is ruiled round: it is ormamented with it mawalilesint grand stand, for the nerommonation of the princijui company; the noblemen's stmul, tik stewards' or julpe's stand, eommodiens bextha minor stamis, and rubbing-houses. The intere excited by these races is quite extrourdinary; they attrnct visitors from all parts of Great lintain and treland, and even from foreign comuries
DONEGAL, a eo. of Irehmal, prov. Listre, ${ }^{4}$ which it forms the NW. purtion; linving $X$ and W, the Atlantic, E. the connties of 'lyrone and Londonderry, and S. Fermatugh and bonegd Bny. Aren, 1,165, 107 acres, of which till, Sil are mountainons and bog. It is deeply indentel ty buys and arme of the sera; and its surfine io, in most purts, rugged, mountainous, and dreary, It has, however, some extensive trnets of good level lnad, which, under good management, would be exceedingly productive. Climate very wet, and unfavourable for the ripening of frain. I'roperty in very large astates, but sone of them are let it interminable leases; firms of varions sizes, in the low grounds from 3 to 30 acres; in the momman. 018 districts from 30 to 500 do. I'artnentip leases common, but on the decline. Agriculture in the worst possible state. Potatoes, oats, and Ilnx the principal erops, the tirst being the main dependence of the farmer. More work is dune with the loy or spade than with the phayd. Average rent of land 5 s , an rere, being the lowet of any in Ireland. Bulk of the people very budy off: Emglish little spoken in some districts. The limen mannfacture was widely diflused, but it b on the decline. Fishing earried on to some ex. tent in some of the bays along the coast, The barony of Imishowen, fimons for its smuggled whinky, oceupies the NL. purtion of this eo, between Lough Foyle and Lough Swilly. Donegal has tive baronies, nad forty-two parishes, and itturns two members to the House of Commines both for the county. Registered electors $\$, 300^{i m}$ 1865. 1'up. 296,540 in 1841; 255,237 in 1x 31 and 237,395 in 1861. Gross annual value of res property nssessed to ineome-tax, 263,011l. in 18ii, and 248,6881 . in 1962.
DONERAILE, an inland town of Irelnad,, Cork, prov. Munster, on the Awbeg, in affluent d the Blaekwater, $6 \frac{1}{2}$ m. NNE. Malone, and 33 m . N. by W. Cork. Jop. 2,652 in 1831, and 1,4is in 1861. The town consists of a long street, in whid are the par. chureh, a spicious Rom. Cath. chapen a nunnery, market-house, and dispensary. kiicolman Castle, in the vicinity, was some time the residence of Spencer, the poet. The town, thongh not incorporated, sent two memlicrs to the lnish H. of C., but was disfranchised at the Unive

 of that purtion of tho valley of the Nilo which lies ludwer"l $1 x^{\circ}$ and $18^{\circ}: 80^{\prime} \mathrm{N}$. lat., boumbled on the S. by Maloses, nind on the S. by the comatry af the sheygya negroes; lint, like ill the fertife divricts restited trom the marrounding deserts by the inamataben of the Nile, Dongola is extrumely airrow, only in ono hastance exceeding if in. in hrowith.
The Nile, which enters this prove at about 1n0 15', uear Kortl, fluss at tirst in a S. directiom, lud, immediately taking a circular benid to the W. and S., travernes the rest of Domgola parallel to its former couras, und with lat trilling deviations continases to follow the samo lise down to the Fighuian delta. 'Ihe wident portion is that neararo its llest enirame into Dongrola; and at 'high Wille; the Red, or low lames of the prove, are suljecet in inmulations similar to those of Lower ligypt. The tirur makes its exit into the Nuhian prove of Shatass, ut the islaud of 'Tumbos, whose rocky and rughel suriace fiorms the third cataract, falat. $11^{\circ}$ B0'. (W'alilington's Visit to nome parts of Ithemin, p. 10 ; Jharcklardt's Nubia, p. 66 ; Map if Subia in Arrowsmith's Atlas.) Nuvigntion is ascedingly ditlicult in this part of tho Nile, lor, lasides a sirouge current which the upward voyager has to comteni agniast, the bed is slatlons and hisistles with rocks. (Narrative of Ismael Puda's Eixpedition to Domgola and Senaar, ly an Ameri(an in the service of' the l'acha, pussim.)
The montains of tomgola are a conthnation of the sane elanins which, with slight interruptions, aceumpany hoth sldes of the Nile durugr its whole rouse. P'erhajs the most extensive of theso inturvals overs hero at the immense and fertile Whonglese plain, which forms the exception to the ohberwine narrow brealth of the prov. $A$ large selitary hill, about 4 m . 1:, of the river, called Monat Arambo (many-colonired, or chanebent, has from time immemorial marked the boundary betweem Mahass and Dougola. The great phin then intervencs, and the mountains recommenee near New Dongola, and stretel beside the tiver without liurther interruption to the S. frontier; thase on the E. bank being by far the most considerable. Here the mountains are two hours' jnumey in bremlth, rach close to the river, and femm natural boundary to Sheygya. Granite and numdstone are the chitef coniponents of these hills. (Waddington and Hanbury; p. 61 ; Burekhardt's Journey in Nulia, 1. 68.)
'lie Valley of' the Nile lies for the most part in dis distriet, on the W. bank; for the samds of the deart, enerunching close upon the water's opposite edife, render the li. side barren and unproductive, while the more finvoured district has generally a harder surface. S. of the town of Hasinek commances the great plain of Dongola, called Wady darjar, which can hardly be exceeded in richness and fertility. At the period of the inundation it presents a watery surface of from 12 to 15 m . in hrealth (Burckharits, p.66); while at low Nile, the niver, bursting from its banks through small chanels, seems as if it hatd divided itself into nataral canals to irrigate as much ground as possible, and save man the troulle of cultivation, (Warldington, p. 43.) This plain is covered with acneia trees as far us the eye can reach. Further S , the momntains contract the valley, which to Wady llemnowah is lertile and separated into well-cultirated patches by rows of acacias. Ruins of towns and tombs of Moslem saints are frequently met winh in this portion of the valley, which is much infested with hordes of the Nubian wolf (Canis

Anthus, Rilpyell). Wady Jebrinh, situntel towarils

In sliameter at fis largest oxtremity. It is purtinlly baried lin the samb. The prosaniry spilinter ofl Irugnemis, and use them for gim flintes and to ntrike a liplat.

None of the ishends with which the river is stmbled in its compse thromig Dumpola is sur celebrated as Argo, situated ubove the Jsland of 'lumluns, and a largu granite rock ealled lladjar-el1)ahab) (the rolden stome). Argo is upsarils of 30 mi. loug, and is one of the most beantiful isfands that sprhin "p from the bed of the Nile. The scenery is highly pieturespue, primeipally composed of small phains cholosed by rows of nyeninore trees. Siveral remains of antigulty nro strewed over the ishand, the most remarknible of which are two colossal stathen ent in groy granite the healless form of a fimale semptareal ant of black granite, mal the thares of four hippejuthai stumding side liy side. The ealossi are loroken into frugments, lying elose tugether, mad 'really look as white mul elear, mad as free from the injuries of time, ns if they were now fresli from the hamd of the sculjter.' (Waddingtom, p. 46.) A preenlime breed of masginitues, not mo large nor sob molsy us uthers, munoy the inhabitnits of Ario. Several other ishames oceur at short intervals, amomer which may be enumerated Solgèn, 'Thínger, inal (iurík, na the most important and fertile. At the ishand of Tinrtomi, near Ainbukol, the Dongolese comstry censes.

The towns and villages are thickly scattered along the murgins of the Nile, most frequently on the J. bank. The first of any consequence is the town of Hannek, opprosite the isle of 'Iumbos, where the cotton plant is said to be prodnetively cultivated. But hy fur the most important is Mitrákah, or New Jongola (sitnated, according to Limmat, in $19^{\circ} 7^{\prime}$ i $10^{\prime \prime}$ N. lat., and $25^{\circ} 5 \cdot y^{\prime} 35^{\prime \prime} \mathrm{E}$. loub. ; but placel by Rtippell in lat. $19^{\circ} 10^{\prime} 19^{\prime \prime}$, and lomg. $30^{\circ} 22^{\prime} 15^{\prime \prime}$ E.), the present pop. of which Ias been estimated at 6,000 , including 100 Cop. The bazaar is daily increasing, mad is sil. $\because$ Prom Cairo with shoes, printed cottons, calicu : cugar, rice, eloth, hariware, \&c.; but. on accomic of a henvy duty levied upon all articles of consumption, they are four times the price that they are in Cairo. Dongola boasts of a colleehonse and a manufactory for indigo; the government is also builling baths. The thermometer on Chris.mas day, 1836 , stoml, in the shate at 2 r.m., nt $86^{\circ}$, and at 8 p.s. at $80^{\circ}$. (Journal Geog. Soc'. ix, 164.) Property is valued according to the number of water-wheels an individual possesses, and he is taxed accordingly. (Burckhardt's Nubin, p. 66.) The chicf places from New to Old Dongola are the dilapidated town of Handek, Basleyn, and Rodohol; between which nmmerous villages intervene, many of them in ruins. Tonga, or Olı Dongrola, the cap. of what was once a poweriul Christian kingiom, is now a miserable ruin, situated on a rock which slopes down to the water's edge; it is covered with sand, a large mass of which has evidently buried the centre of the town, and divided the remains into two sections; the $S$. part ouly is inhabited by about 300 persons. Tho
sand is of a liright yoilow colour, and has neenmulateal in sur:h quantities that ita nurface in level with the ruifs of unuty of the lomones, the nully entranee: to which is through the ceilinges of the runne. (Geeng. Jonrual, ix, 10t.) 'there is a musplue, oll rather nut relevated stie, which commanily a gund vlew of the nurrounding eountry. This comasiats prineipally of Irifted sami, with, int rume Intervals, a feiv feet of eultivable suil. Ainlukno, the last Dongulese town, ls one of little impurtance.
bomgola is now an apprendinge to ELeypt, together with Lawer Nilbin, which territurien were conlquered by the late celelirated ruler of Eaypt, Mehemet All. It was formerly one of the nuberons kingetums divided between the Sheygya Arabs, amonget whom, at their expmlsion froin ligypt, the Mamelukes nonght refuge. The fugitives, however, had senrecly been a month at Argob when, ufon some slight pretext, they murdered their benefuetor, the sheygyn king, nnd sprend themselves over the country, establishing a governenent of thelr own at New Dougolin. The prelin of E\&ypt, upon pretence of punishlug this lirench of justice and houpitality, sent an expelition into the conntry, ani, meeting with little resistance, towk possensionn of it, which he has Invietly retained ever since 1820 . (llurekhardt's Nulia, p. (ī̆̃; (Qunrterly Leview, xxvii. 217.) 'I'lie prople possens the same characterlstics an the rest of their comintrymen (see Nunia), except that, they are unusinilly 'dirty, inle, nud ferochous' (Nirrntive of Ismael Pacha's E:xpeedition, p. 189); but they are also, in common with their neighbours, extremely hospitathle. Mr. Whddington describes the wumen us ugly in person, amd unfeminine in conversation and manners: they wenr scurcely any elothlor.

The Dongolese horse must not be passed over withont paricular nutiee, though the natural history of this region must be sonught for in the art. Numa. This nuimal, so celebrated nll over the Einst, possesses the beauty of the thest Arabian lireeds, with greater size and more bone. The mares are seldom rliden, and tho stallions feteh a high price; from tive to ten slaves being the value usually given for them. Most of them are fed for ten monthes in the yeur on little else than strav, aul in spring upon green erops of barley. (Burekharll's Nubia, p. 67.)

DONOBEN, an inl. town of the Birmese empirf, Pegn, on the E. arm of the Irravadi, 60 m . NW. Hangeon; lat. $17^{\circ} 8^{\prime} \mathrm{N}$., lorge. $95^{\circ} 55^{\prime}$ E. In 1895, its stuckade extended for nenr)y a mile along the bank of the river ; in 1827, the liritish embnssy. found this place considerably enlarged and strengthened. It is noted for the action, in the ifrst named year, in which Bunhoola, the Birmese lender, was killeel by a stray bomb.

DOON(IURPOOK, an inl. town of IIIndostan, prov. Gujerat, 82 m . NE. Ahmedabad; lat. $23^{\circ} 64^{\prime}$ $\mathrm{N} . \mathrm{l}, \mathrm{ng} .73^{\circ}{ }^{\circ} 0^{\prime} \mathrm{E}$. Little is recorded respecting this town or its territory; the mounds enclosing the Doongurpoor lake are saill to be built of solid blocks of marble. 'The rajahs are acknowlelged to be the senior branch of the reigning sovereigns of Odeypor ; the majority of their subjects are Bhecls. Bands of Arubs and Sindies, previously in the service of the rajah, harassed and laid waste this district, till $a$ stop was put to their ravages by the British troops.

DOOSHAK, a town of Persia, prov. Seistan, of which it is the cap., near the IIelmunb, and about 50 m . E. from Zurrah; lat. $31^{\circ} 8^{\prime}$ N., long. $63^{\circ} 10^{\prime}$ E. The modern city is small and compact, but the ruins cover a vast extent of ground. It is populons, has a good bazaar, and the inhab., who dress
 pararanco than the ofler intiven of Nerintam. The comintry in the, vichuty is !pent, well-colitivation, nucl prinituces whieat anid liariey lin nutticivent quan. tities to be expwited to Hernit the puaturnum in "ulso groxi atud ubuminut. Its ruins sluw that if was formerly of much greater extent than at ime sent; and fir supprosed to be inientical with the Zarmign of Ptolemy.
DOlLCLILST'Lill, a parl, bor, and town of lin; land, cup. Co. Dornet, liv. Dorchester, hund. I' gencombe, on a gento elevation arljuining tim Frome, 125 m . SW. by W. Latilon by rinal, ani 1.40才 m. by L.onilon nind Sonth Wenteris railwas, P'up, $0,8: 23$ In 1861. The town consists chlethy id three wide streets, diverging from a central inm In the directlon of thes linese of roand to Lumbmen lixeter, and Weymouth. It is well huilt, part tinlly pnvel, and lighted with gna; alud is very clean. It is more than two-thlrits surinomuld hin a flue nvenue, cammaniling extensive and divent tied views. Forlington Field, an unenclosed imat of fertle $\ln 1 \mathrm{l}, 7 \mathrm{~m}$. In elre., atjoins the town em the S. : it is partly arable, partly pusture, mail hell an liven froun the duchy of Cornwall. There an a clurchen-2 modern, on ancient sites, and 1 wh witl many curius monumeuts, aud a lofty pinaa cled tower; 4 dissenting chapels ; a free gramman
 Jahn's Coll., Cambridge, and one to cither miver sity ; 3 nets of almanouses; a small theitre; town-hall built in 1 İ!!, with a market-place unter it ; a shire hall, in which the county assizen ant quarter sessions are hold, nad a coniuty faul and house of correctiom, bullt on Hownri's jilan at an expense of above 16,0011 ., and oceupying the site of the anclent eastle. There are large barrucks in the vicinlty. Market, Sat, and Weal. Kain, Canillemas ilay, 'Trinity Monday, st. Jolln's day. St. Jumes's clay. Thene are Inrpe sheep aul laril) faira; large thicks of $\mathfrak{a}$ valuable breed, umell frum the place, being kept on the extensive sheep walls, of the vicinity. Formerly the town was a ensiderable seat of the woollen manulacture : butat present its chief lependence is on commercial bus.ness. It has breveries noted for the superimity of their nle; and there are annual races in syntember. Dorchester has returned 2 mems. to the li. of C. from the 21st Edw. I. Previously to lhe Keform Act, the franchise was coutheed to inhabit ants of the bor. paying to church and poor in to. speet of their personal cstates, and to such persmis as paid to church and poorr in respect of their rad estates within the bor. Registerel electors tissin 1865. Uuder the Municipal Aet it is govemed by 4 aldermen and 12 colineillors: its municipal limits coincide with the parl. ones. Annual ralue of renl property assessed to income tax, 23,3141 in 18i57, and 25,515l. in 1862.
Dorchester was oue of the principal stations of the Romans in England. It was ealled by them Durnoruriu and Dunium, and has still to bosset many interesting relics of its Roman mases They had surrounded it with a wall and a fose part of the former having been standing solate a 1802, and 'grent part' of it was standing in $17 i$ when visited by Stukeley. (Itinerarium Curioum p. 163.) Maiden Castle, nbout 1 mile SW. of die town, is also supposed to have been constructed by the Romans as a summer camp, castra estita. If is an irregular ellipse, surreunded ly double ditches and ramparts ; the former of great depth and the latter high and steep. The inuer area compriob about 44 acres. Poundbury Castle, nenrer the town, on its NW. side, is nlso supposed to be a lioman work ; but, though of the same claractet it is of very inferior dimensions to Maiden Caste

'Tha conntry round la remarkulaly beoutiful; it is well wouded, minl presents a miccession of fine lold hills and rich valleys, with a great number of line acata. The church in a large anclent structure, and there is a good town-fiall and some alimshousea in the vicinity. Horking han the thent lireed of fowla in lingland; they linve nix clawn, and the cupons fatten to 1 il inumene aize. The custom of Borough Binglish, by which the youngent aon aucceeda to copyliold jruperty, prevails in thin manor.
1)(ORNOCH, n market-town, and the only royal burgli in Sulberhuid, Seothame, on a law namily heach, NL: cenat of the Jurnoch Frith, is m. N. luvernesa. I'op. $4 \times 3$ in 1861. The nea ap, ronehes to about 150 yaris of the town, yet dews not conter on it the advintuges of a sen-point, there licing no harhour. It is a mean-looking town, with many marks of pererty and deray. It lam no somerce if municipal revenie, excent the customs levted at six namual fuirs; bit an these are on tho derline, the income of the town is sullerinf necorlingly. It was made a royal burgh by Claurles I, in lized. Dornoch is chielly remarkable for its entheelrul, nad as having once been the seat of the lishous of (Jaithmess. The cathedral is mipposed to have been built by Richard Murray, bishoup of the sece, who died in $124 \overline{5}$, nal who whs aftervards canomised. (Keith's Scotlish Bishops, 182.I, F. 20!!.) The remains of the hildings are extensive and magnidcent. The present parish church consists of three aisles of be old cathevlral: and underneath it is the burying-place of the noble family of sutherland. A portion of the bishop's palaco serves as the comity court-roon and gacl. A monastery ol Jeal Friars was founded here by Sir Patrick Murray in 1271, of which the ruines have entirely disappenred. (lb, 397.) Dornoch unites with Vick, C'romarty, Dingrall, 'Tnin and Kirkwall, in sending a mem, to the 1I, of C.
1)ORP'AT, or DERP'I' (linss. Jourief'), a town of liussin in Europe, gov. Kign, cap. distr., on the Embach, and on the hight road between Riga aml Petcrsburg, 150 m . NE. the former, and 170 m . SL. the latter city. Pop. 14,650 in 1858. The town, which is well built, is divided into three separate portions-Dorpat Proper, and the suburbs of Riga and l'etersburg. It has a fino marketplace, a stome bridge over the Embach, nad a eathedral, now partly in ruins, but which formerly lad a nave supported by 24 arches and surmominted by two towers. The old fortitientions, with some of the ditches, have been converted into ornamental pardens, shrubberies, and public walks. It is surromded by hills, which, na well as the banks of the river, otler many tine points of view.

The harlour ilries at low water; but vessels drawing 10 ft . water may enter it at high-water neaps, and those drawing 14 ft . at high water Nprings. The anchornge in stormy weather isobut inliflerent. The parish ehurch is 2 m . from the town; but it lias three other churches, one of which is a handsome structure, with ehapels for Cntholies, Methodists, ant Independents. It lins also assembiy-rooms, a public library, a laneasIrian schond, and severnl charitable foundathons. The custom-house is one of its best buildings.

DOULILSNS, or IOULLENS, a town of France, dép. Somme, cap. arronil., on the Anthie, $16 \mathrm{~m} . \mathrm{N}$. Amiens. Pop. 4,932 in 1861. Its citadel, formerly considered one of the bulwarks of Picardy, was repuired by Vauban, and is very strong. The chureh of St. Martin is remarkable for benity and lightness of style: the town has two hospitals, a theatre, ansl n larise cotton-spimuing factory.

DOUNE, $n$ market town of Sentlimul, co. Perth, on the N. hank of the Teith, a tributary of the Forth, 7 m . NW. Stirling. Pop. 1,256 in 1861. The town consists of three streets, radiating from in centre where the market-cross stands. Its only public bulhing is the parish church, a Gothic elithee with a handsome tower. It is famons for its annual cattle, sheep, and borse fairs, six in number, one of them lasting three days. The cuttle and sheep are from the highlants, and are lemn, nud purchased to be fattened either in the 1,owlands of Scotland os in Eugland. The cotton manufactory of Deanston is within less than $n$ mile of the town, on the bank of the Teith, and is driven by water. It belongs to a Glasgow compnny, and gives employment to $\mathbf{0 0 0}$ indiviluals in spinning, weaving, and bleacling. Doune Castle, which is within $n$ few hundred yards of the town, on an elevated peninsula formed by the junction of the Ariloch with the 'Ielth, was one of the strongest scottish fortresses. It was originally the seat of the earls of Menteith. It was oceasionally the residence of Mary Queen of Scots. It was, for a while, in the huints of the rebels in 17.15. It gives the second title to the noble family of Moray, whose property it las long heen. It bas a square tower 80 ft . high; the walls are 10 ft . thick. The bridge of Teith, in the immediate vicinity of the town, was built in 1535 by Robert Spittal, tailor to Margnret, wife of James IV. and elanghter of Henry ViI.
1)(ULRO (Span. Ducro, an. Durius), one of the principal rivers of Spain and I'ortural, through the N. part of hoth which it Hows. It rises in the Sierra de Olbion, prov. Soria, Old Constile, abont lat. $42^{\circ} \mathrm{N}$. and long. $2^{\circ} 50^{\prime} \mathrm{W}^{\prime}$. At first it runs SE. and then S. to near Soria, but thence onward its direction is generally W., through the kingdoms of Leon and Portugal to its mouth in the Atlantic: in lat. $41^{\circ} 8^{\prime}$ N., long. $8^{\circ} 38^{\prime}$ W., 2 n. W. Oporto. From near Miranda to beyond Torre de Moncorvo, however, it flows almost due SW., forming the boundary between the Spanish prov. of Salamanca and the Portugnese prov, of Tras-os-Montes. It afterwards separates the lntter prov. and Minho from Beirn. The length of its entire course is estimated nt 500 m . ; it. receives the I'isuerga, Neguilla, Esla (its principal tribntary), Nabor, Tua, and Tamega on the right, and the Gralo, Eresma, Tormes, Agucda, Con, Tavorn, l'aiva, \&c., on the left side: its basin may be considered the most extensive in the whola peninsula. It rums for the most part through deep and narrow valleys; its bed is generally narrow, and its current very ropid. It is, how-
ever navigable ns far as San Joho le P'osquien about 70 m . F., by N. Oporto ; aul since the Wime Company of the Upper Donro liavo partlally re. moved some obstacles that existed at that pribt, it has been rendereal available for that-hottumpol bonts as high an Torre de Moncorvo, 100 m , fatm the ocean. It has a bar at its mouth, aind ita uavigntion is liable to be seriously affected lip freshes, or sudilen swelllogs, occasloned by raing se., to which it ls very sulyject. (See Oinotro. Sorin, Aranda-de-1 Mero, Toro, and Zamotra in Spuin: and In Portugni Miranda, San Joun de Pempuicra, and Oporto, are situated on its lanks, Sixteen stone brilges cross it at various points besides whieli it prevents numerous fords.

DOVLR (vulgarly DOVOR), a Cinque Pom, parl. borungh, and tewn of lingland, co, Kent, lathe St. Augustine, huml. lewsborough, 69m SE. Lonton by road, and 88 mm , by South Eastem railway. Pop. 25,325 in 1801 . The town stande on th; .jF, shore of the co., on the straite of Dover, in a valley formed by the depression of the chalk strata, 27 m. NW. by W. Calais, and 21 m . from the nearest part of the French coast. It is traversed by a small stream, which empties itstll into the harbour. The town consists of one priascipal street, extending upwards of a mile in the inrection of the valley, shorter ones braneling from it on each side, and runges of houses on the shore. What may be called the New Tuwa d Dover, built ehietly for the reception of oceaviunal visitors dhring the bathing season, is under the castle clitls on the E.: the old part of the turnis irregnlar, and the streets narrow; but the whole is improving. In conseguence of the increasen building, the villages of Charlton and Inuthland have become continuous portions of the town. It has two ancient par. churches, St. Mary's and \& James's, the former reluilt in 1844 ; another st , James, erected in 1862 , at a cost of 10,10001 , and twelve dissenting chapels. There is also a schowh fonnded in 1789, for forty-flve boys and thirtyfour girls, now incorporated with a national shlinit which educates 400 chililren; a girl's school industry, established 1819 ; an infant school: a savings' bank; a dispensary, and many mine charities; a town-hall and gaol ; theatre and assembly roems, built in 1790 ; public librares reading-rooms, and baths, on the Marine Pataie, The harbeur, formed by the mouth of the smatl stream which runs through the town, called the Dour or Plat, eonsists of an imer and outer har bour, of $6 \frac{1}{3}$ and $7 \frac{1}{2}$ neres ressectively. Vesslon 200 tons can come up to the quays, and thase ff 400 toms can enter the port. There is a greas Harbour of Refuge outside the port, formal bra gramite pier a mile in length, known as the dimiralty pier. The mail steamers to and from France lnnd and discharge passengers at this piet, nud the railway trains run along it, close to the boats. 13y a charter of James l., the lord wardea of the Cinque Ports, and ten other commissiones were appointed conservators of the harbour. (n an eminence bounding the SE. side of the valler stands the castle, in inmense collection of ancient and modern works, occupving ant area of about thirty neres; it is approached by a bold ascult, but is itself commandel by the higher gromen the W. and SW. There are remaius of rumpars and of $n$ temple, bath, and Pharos, supposed tole of Roman eonstruction. Previonsly to the lis French war, the works were much dilnpidnt but they were then repaired. and greatly arti mented. There are upper and lower courts, sith rounded (except towards the sea) by curtains and large dry ditches; in the centre of the former ist spac ious kcep, built by IIenry III., and now futm-
ing a bomb-pr liweer court is ton towers of built br linrl times during sulterranean dithe : there ar exmated to $t$ warky consist ensemates, cover in the chalk, a 2,010 troops. Dover has retur C. from the 18011 E firm let, the right the right of freedon mariage (cluriug vesing of a frecho Iy gift and purcha in 1at65. Gross m sasesed to income 118,5021 in 18162.
Duser was a stati was called Dubris ; the Continent than was long regariled a and as bring, in fact Awngfieht, near the preceptory of the K1 dohn surremered his frum the P'upe's legnt iority. In 1216 , tl Yoin II.
ing a lomb-proof magazine; the curinin of the laner conrt is tlankel, at irregnlar intervals, by tenf towers of varions construetion-the olitest built by liarl Goodwin, the others at different times furing the Norman dymasty: with these, sulitertanean pasnages commumiente from the sulish: there are almo four or tlve ancient wolls, exatated to the depth of 370 ft . The molern Works consist of hatteries with heavy artillery, morkmates, covered ways, a large vault, excavated in the chalk, and harracks capable of lodgring 2000 tromps. The lord warden of the Cingne ports is always constable of the castle. The brights on the F . side the valley were also sfmigly fortitled during the last war, and the firtifications have been greally strengthened in funtatityears, annual grants of parliament being allowel for the purpose. The grant for the financial year $1864-5$ amounted to $231,3312$. These fortiticatlons are garrisoned by 2,500 troops, under the command of a brigndier-general. Thare is a military hospital on the $s$. side of the town. Dover has a busy, thriving appearance, its chief traflic being derived from the intlux of passengers to and frum the Continent: of late rears, also, its popularity, as a fashionable senhathing place, has considerably increased. There are large paper mills in the vicinity, and in the tuwn a brewery and private docks, where slipbuilding is carried on to some extent, and rope, sail, and other establishments connected with the supply of shipping. The intercourse with Calais anlother French ports, and also with London, is almost wholly carried on by steamers. The consting trade consists cliefly of corn exported to Londoun, and conls imported from the northern comilies. The port comprises the creek of Folkesione, and the stations of Ilythe and Komney. Alsout nincty-flve vessels, of the aggregate burden of 5,1160 tons, belong to the port.
Dover, muler the Municipal Leform Act, is divided into three wards, with six ndermen and eithteen conncillors, and the parl. and municipal linits coincide. I'revionsly to the aet, the goveming boly consisted of a mayor, twelve jurats, and thirty-six common conncilmen, who, like the magistrates of the other Cinque lorts, enjoyed sercral peoulinr privileges in the trial of crimes, dr.; but these are now cither wholly done away with, or greatly abridged. The constable of the castle has still, however, the jurisdiction of a slaiff within the Cinque Port limits; writs from the superior courts are directell to lim, and his marrant is executed by an oflicer called Bodur; the deltors' prison being in the eastle: a court of Ludewomage is also still held for licensing and regulating pilots.
Dover has returned two members to the II. of C. from the 18th Edw. I. l'reviously to the Reflom Aet, the right of voting was in the freemen; the right of freedom heing acquired by birth, by marringe (during the wife's life), ly the posressinn of a frechold within the town nul port, ly gift and purchase. Registered electors, 2,207 in $1 \times 65$. Gross ammial value of real property awowd to iucone-tax 121,015\%. in 1857, and 113,5121 , in $18 t 22$.
Duver was a station of the Romans, by whom it was called Dubris; and heing sitmated nearer to the Continent than any other town in Eugland, it mas loug regarded as of the highest importance, anal as being, in fuct, the key of the kingrlom. At Sumgiell, near the town, are the remains of a wrecentory of the Knights T'emplars, where King dodn suremdered his crown, and received it hack Than the P'ope's legnte, in acknowledgment of supedinity. In 1216, the castle was successfully deViv. II.
fencled nurainst the Dauphin of France, hy IIngla de Ihurgh, earl of Kent. In the civil war it was taken by stratagem, in 16.2, by the Repul)licmus.

Dover cliffs lie both on the F. and W. sides of the town. The noble deseription in Nhakspenre is applicable to the latter; but the cliff to whinh the poet alluded having been undermined and thrown down, those that remain do not quite come up to the descrintion.
DOWLE'TABAl) (The Formunte Tity; llind. Deoghir), an inland town nul fortress of llindistan, prov. Aurungabad, nud its original cape, dom. of the Nizam, 7 m . NW. Aırumgabal ; lat. $19^{\circ} 57^{\prime} \mathrm{N} .$, long. $75^{\circ} 25^{\prime}$ li.. 'The fortress stamis upon an isolated conicul granite rock, the smmmit of which is abont 500) ft. above the phain bolow, and which has been searped for one-third nearly of its height, so as to present all romud the appearance of a perpendicular clitf. All onter wall of no strength surromals the fort; but three other lines of walls and gates must he passed before arriving at the diteh, the canseway across whicla will admit of aaly two persous abrenst, and which is defended by a building with battlements on tho opposite side. The mode of necess to this simgninr hill fortress is thus deseribed by the linrl of Manster:- "The governor led the way throdgh an exenvation into the heart of the rock, so low that I was obliged to stoop aearly donble. 13it after a few paces, a number of torcies showed me I was in a high vanlt, and we heran to ascend on a winding passage, ent through the interior of the body of the hill. . . . This passare was mbont 12 ft. hight, and the same broad, and the rise recular. At certnin distances from this dismal gralery are trap-doors with Hights of small st e'ple steps leading to the diteh below, only wide emongh to admit a man to pass, also cut through the solid rock, to the water's edge, and nuexposed to the fire of the assailants, muless they ware on the very crest of the glacis. We might have been inall ten minutes mounting by torchlight, and came ont in in sort of hollow in the rock about 20 ft . square. On whe side, lenning against the cliff, was a large iron plate, nearly of the same size as the botom of the holiow, with an immense iron joker. On tho besiegers linving gained the subterranean passage, this iron is intended to be laid down over the oulet, and a tire placed upon it.' Near it is a perfornted loole in the rock, intended to net his a bellows to the fire. The rond hence to the summit. is very steep; in some places it is covered will brashwood, in others wilh small houses, towers, ant gates: it passes through the governor's residence, a good building, surromaled by a verandah with 12 arches. On the peak the Nizmm's thar flies, and a large lorass $2 . f$-pomder is mounted; but, excepting this, in the whole fortress there aro but a few 2 and 3 poinders. The jrettali presems the remains of many buildings of $n$ rough darkcoioured stone, but is now in great measure deserted: the interior of the lower fort is a similar collection of ruins, and contains a colmmo of ereat dinmeter and perhnps 160) ft. high, deformed, however, by a linge gallery, which encompneses it nt abont a forrth part of its elevation from the grouml. From its natural strengtli, and the lnbour that has been bestowed upon it, this fortress is looked noon as impregnable; and as there is plenty of water (one tank cut ont of the rock is only abont 160 yards from the summit), if properly defended, it cond only be reduced by famine. Notwithstanding these advantages, it was one of the tirst fortresses that fell into the lands of the Mohammedans, wlus took it hy surprise, and plundered it of immense riches, A.D.

## DOWNTON

1203. Early in the 14th century, Molammed Ill., who made it his residence, nenrly rulned Delhi by the nbsurd project of making its inhabitnnts re-move to hla new cupitul. It was afterwaris successively possossed by the dynasties of Ahmed Nizam Shnh, Malik Amber, Slinh Jehnn, and the French : nince 1758 it has belonged to the Nizam's dom. The pagodas of Ellora (which see) are in the vicinity of Duwletabud.

DOWN, n marit. co, of Ireland, prov. Ulster, on its W. const, having S. and li. the Irish Sen, and the N. Chmunel, N. Ilelinst, Lough, nud Antrim, and W. Armagh and Lantli, Aren, 611,404 imp. neres, of which 108,069 are inimproved monntain and loge. The extent of arable land, in square mules, wos $80: 3$ in 18.11 ; 818 in 1851 ; and 821 in 1861 (census of Ireland lor 1861). The monntains of Mourne, in the s. purt of the co, are amongst the highest in Ireland; but, with this and a lew other exceptions, the surtace is abundantly level. Soil of $n$ medium degree of fertility. There are some large estutes; but there is ulso a fnir proportion of those of medium size. Farins very small: those occupied by the better elass if fiarmers run from 20 to 00 , and $n$ few to 100 , aeres; but the inlerior holdings, which are the freat mins, do not, perhnjs, average 5 mires. The ocenpiers of tho latter formerly depended, in a grent derrec, on the linen trade; but since its decline, or rather sinee the mmoliacture begnn to be principally curried on in factories, they have hat nothing lout the lnuid to depend on, and the competition for the smallest patches is extreme. In this, as in most wher parts of Ireland, a new tennent must, mot only pay the stipulated rent to the landlow, lent he mist alse pare 11 sum to the previons owenpier, whatever may have heen the canse of his lobving the farm, to ensure his quiet pussession. 'This latser sum is called the temant's right: and in lownit frefuently umounts to 101. :in acre! (Bian's Miseries and Beanties of Irelant, i. Sin, \&e.) Still, lowever, a gool many inprovements hove lneen introduced of hate years, though. where the hohdings are so small, it would be nbsurd to suppore that agriculture can be far alvanced. Fontatoen. onta, and fax are the prinejpal crops; turnips rare; potatoes mostly planted in 'lazy lueds. though drilling is now protey common. Averare rent of land, lis. an acre. Cothiges very benerally whitewashed and neat. The combition of the cottiers or peasantry is much sumerior to whint it is in most other lrish cos.; and wouhl linve been much more so lint for that chstom, the hane and curse of Irelant, of dividing and subdividing tarms, which is nowhere more prevalent than here. Irincipal rivers, Bann, Lagan, and Newry. Jrincipal towns, Newry, Ballynacarret, and Downpatrick. Down is divided into eight baronies and sixty parishes, and sends four memlers to the IJ. of C., two for the co., and one each for Newry and Downintrick. Registered electors, 11,36if in 1865. Pop. 861.487 in 1841; 320,924 in 1851 ; and 299,302 in 1861. Gross ammal value of real property assessel to income tax, 611,3111 . in 1857, and 604, 8711 . in 18tiz.

DOWXHAM (MARKli'T), a town and par. of Lugland, co. Norfolk, himi. Clackelose, 78 m . N. by E. London hy rond, and $87 \frac{1}{2} \mathrm{~m}$. by Great Eastern railway. Pop, of town 2,4i88, mil of par. 3,133 in 181;1. Area of par., 2,880 acres. The town, on an acelivity nent the E. bank of the Onse, which is here crossed by a bridge, has three streets of well-built honses, and is paved and umply supplied with water. The church, on the summit of the acclivity, is an nntique Gothic structure, with a low tower and spire, approached on the S. by a noble avenue, and on the Vi. ly a

Hight of stejos. There are also several dissenting chnjels, a Lancastrinn school for 65 boys, and nationil school for 70 giris. Market, Sat., notw for the supply of tish and wild fowl from the feas Fairs, March 8 for horses (one of the largest in the kingdom), May 8, enttle, and Nov. 13. There is an extensive bell foundry in the town, and in the immediate vicinity is a Inrge mustard manafactory. It is chletly a duiry pirish, nad has heo long celebrated for its supuly of butter; but itu fnmoris butter mnrket, held on Mondry, has heen removed to Sivaffham. Petty sessions are hith weekly, and a court baron and leet quarterly, ty the lord of the manor.

DOWNPATRICK, a mnrit. town and pari, be of Ireland, co. Down, of which it is the capo., pror, Ulster, nenr the (zuoyle, a short distnnce fromita embouchure, in the SW. nimple of Lough Swang: ford, 21 m. S. by E. Belfust, with which it is on nected by rnilway. Pop. 4,866 in 18.11 , nad 3,46 in 1861. The town consists of four main streta meeting in $n$ confined valley, and extending of the declivitics of the surrouniling steep hills. Didit other northern towns, it is divided into the Englid, Scoteh, and Irish quarters. There is a quay alows 1 m . from the town, on the river, accessible in vessels of 100 tons, and a new quay, nhout 1 m nenrer the lough, is accessible to vessels of murd larger burden. The town was formerly the seat of the bishopric of Down, bat since the uniond the see with that of Comor, the ecelesiastiod husiness is tramatied nt Lisburn. The runs d the ancient cathedral, and those of a neighboung pillar tower, still remnin. The new cathedralis huilt in the nucient style; besides which, there is " par. church, Hons. Cith. chinpel, and mecting houses for I'reshyterians und for Mothoolists. The diocesan sehool for Down and Dromore dioceses is lueld laere, as ulso n subseription school, the a infirmary; fever hospital, disponsury, an almshous with schools amexed, endowed by the Southrel family, un asylum for elergymen's widows, a men dicity instituion, and large barrucks. A comots bulary force is stationed here. In the immediat vicinity is a remarkable rath, or urtiticial mound 60 lit . ligh, mid surrounded by three ramparts, b outermost of which is nearly 1 m . in circ. Abym 2 m . distmut, at the foot of the hill of Sleibli-ns griddle, are the Struel wells, much frequented at midsummer by Rom. Cnth. pilgrims for devotions purposes, and for the suppossed miraculous efficary of their waters. The corporation, which consizet of a mayor, bailiffs, and commonalty, no longe exists, its powers being vested in commissinnts The bor, returned two members to the Irish li. C. till the Union, since which it has sent ant member to the imperial H. of C. The parl, bot extends over a spuce of 1,486 stat. acres. Remb tered electors, 208 in 1862. Manor courts, witl jurisdiction to the nmount of 101 ., are held ever third Tuesday; courts leet in spring nud at yi chaelmas. The co, assizes are held here in the court-house, a modern building; as are also gene. ral sessions in March and October, and petty sesions on Thursdays. The co, grol, a sjnches building, contains 210 cells, and 16 other nums for prisoners. The linen manufucture is carried on in the neighbourhood. Markets on Siturdays fairs on the second Thursilny in Jim., March li, Nay 19, Jme 2: Oct. 29 , and Nov. 19. Thisi a very old town, being formerly the residence a the kings of Cllagh or Ulster.

At its SE. end is a conical mount, on which stood an anclent eastle, whose entrenchments are still visible. Stand'ineh of Trafulgar Hoase, a national gift to the heirs of Lurd Nelson, is within 2 m . of Downton.
DRAGUIGNAN, nn inl. town of France, dép. Yar, of which it is the cap., in a fertile valley, on an attluent of the Artesly, 40 m . NE. T'oulon, and 410 m . SE. Paris, on a branel, line of the railway frum Tunlon to Nice. Pop. 10,062 in 1861 . Its climate is temperate and salubriotis, and beingr situated in a basin, surronnded by vine and olive clal hills, it ofters a delightful place of residence. Though without any particular beauty, the town is sufficiently well built, and has numerous public funtains. Chief public buildings-the lall of justice, prison, eloek-tower, und hospital. Dramigman has a publie library with 15,000 vols., an fxcellent botanic garden, cabinets of natural histury, and a society of agriculture and commerce; with tribunals of primary juristliction and commerce, a chamber of manufnetures, and a eomnuual college. There are fubries of bruad-cloţh, thrown silks, stockings, and soap, and distilleries.
DRAMMLIN, a sea-port town of Norway, distr. Ihskenid, on both sides of the river of the same name, near its month in the Christiana-fiord, and $20 \mathrm{~m} . \mathrm{SW}$. Christiana. 1'op. 10,122 in 1860 . 'It is long straggling place. Though to us it seemed In have little of the bustle of trade, it is said to expurt more timber, ehiefly in logs, than any lown in Norway. Its women are reckoned among he greatest leanties of the North; and we snw "me who fully support its reputation in this respeet. Must travellers, however, will reeollect it better as foe place in which is carried on the principal manufacture of the delightful little carriole.' (liremuer's Excursions, p. 86.)
DRAVE (Germ. Draui, a river of Europe, and me of the principal trilutaries of the Danube. It ies wholly within the Austrian empire, extending petween lat. $46^{\circ} 50^{\prime}$ and $45^{\circ} 30^{\prime}$ N., and long. $0^{\circ} 20^{\prime}$ and $19^{\circ} \mathrm{E}$. It rises on the Toblack-heath, wat the E. extremity of the Tyrol, in what is alled the Puster-thal, about 17 m . ESE. Brunchen, and runs at tirst IENl:. to Lienz, where it is uymented by the Isl. From this point its course enerally is ESE. to its mouth in the Danube, fear the castle of Eiribdy, $12 \frac{1}{2}$ m. E. Essegg. It ravenes Carinthia and Styria, and afterwards finns the boundary between Croatia and Slavonia nt the $S_{\text {., and }}$ Hungary Proper on the N. It reאives the Möhl, Gurk, Lavant, and Mur (its chief thluent) on the left; and the Gail, Dran, Bedyna nod some other rivers of minor importance on its Gght side. Lienz, Greifenburg, Spital, Villach, bilkennarkt, Marhurg, I'ettau, Warasilin, and ivegg, are the chief towns situnted on its banks. in mins through a mountainous country and narrow alleys, as far as Warasdin, but thence onward its murse is through a plain country. Its entire ength is estimated at 370 mm . In its upper part he Drave is extremely rapid; its navigation in mayy parts is greatly impeded by the number of rees torn down by its videnee, which afterwards
lock up the curreut. At prescut this river is
male but little use of for commercial purposes ; lint in cuse of an extensive steum-navigation of the Danule, its value as a means of transit would be greatly enhanced. It is said that the Austrian govenment has in contemplation to form a communication between the Adriatic and one of the great tributaries of the Danube; and if so, this would probably be the one chosen, the country between the Upper Drave and tte sea apurently presenting the fewest obstacles to such an undertaking. ('Turnbull's Austrin, ii. 376, 377.) 'Ihe anthor of 'Germany and the (iermans,' vol. ii., gives a spirited sketeh and deseription of llungrorian peasants descending the Drive on ralts of empty harrels, after having disposed of their wine in the mountains of Curinthia.

DRESDEN, a city of Germany, cap. of the kingrlom of Saxony, on both sides the Eibe; 61 m . ESE. Leipzig, 233 m . FNE. Frankfort on the Mayne, $2: 0 \mathrm{~m}$. NNE. Mmich, 10t) m. S. by 1E. Berlin, and 230 m . NW. Vienna, on the main lise of railway from leerlin to Prague and Vieman. 1'op. 61,2:7 in 1811, and 128,152 in 18151. The city is more than 400 feet above the level of the sea, and is delightfully situated in the midst of the Saxon wine district, occupying the most benutiful and richly-enltivated portion of the valley of the Elbe. The banks of the river have, however, in very diffierent appearance. The right is nbrupt, rocky, and woody, and, having a S . aspeet, is in great part covered with vineyards. The left is more flat, presenting a suecession of meadows, groves, garilens, and orchards, studded with numerous villages: the whole landscape gradually rising till it becomes united with the distant lirzeGebirge mountains. The city itself hus been termed the 'German Florence,' ind is certainly, on the whole, very handsome.

Dresden is diviled into the Old and New Towns, -the first on the right or S. bank of the rivor, and the latter on the N. bank; and has seven suburbs, extending all round the Old Town, of which that called Friederickstadt, lying to the W. of the small river Weiseritz, near its contluence with the Elbe, is the best built and most important. Immediately aljoining the town, are the Neue Anlagen, consisting of public walks and gardens. The Old and New Towns are connected by two bridges. The tirst, a noble stone bridge of sixteen arehes, $1,420 \mathrm{ft}$. in length, and 36 ft . in wilth, is considered the longest anil finest structure of the kind in Germany. It has a foot pnvement and an iron bulustrade on eaclı side, with a bronze crucitix on its centre pier, and un inscription commemorative of the destruction of part of the bridge by Marshal Davoust, to facilitate his retreat in 1813, and its restoration in the same year by the Emperor Alexander of Russia. The other bridge, forming a portion of the railway lealing from Leipsic, through Dresden to Irague, was opened in 1850, and is also a fine structure. The old Town was formerly provided with fortitications; but these were demolished by the French in 1810 , and the place they oceupied is now laid ont in public walks. That portion of these walks facing the Elbe, is called the Bruhl Terrace, and is mppronched from the foot of the bridge by a grand flight of broad steps. From its own beauty, and the grandeur and variety of the scenery it eommands, it is at all times a favourite resort of the inhabitants. As in most other fortitied towns, the streets in the Old Town are narrow, the honses lofty and gloomy looking, and the squares irregular. In the eonstruction of the buildings, generally, which are ehietly of sandstone, strength luts been more studied than elegniee: the principal of the jublic editices are, however, in this part of
1)reslen. The Schlows (eastle), or royal palace, "pposito the lridge, is a large antique and ungainly: leriking louiding, having the appearance of a furtress rather than of a royal residence; lunt, intterumlly, it is in every respect worthy of its destimation. It has halls of audience, ceremony, and varions other state rooms, a roynl library, the hall in which the Saxon legishature is opened, and a Catholic chapel with a tower 378 ft . high. It comthins the celebrated state treasury, or (ireen Vault (Grune Geuriblbe), which ocespipies a suite of vaulted npartments on the ground thoor. They contain an immense collection of precions stones, curiosities, mul oljects of virtu, and are reputed to be worth ut lenst a million sterling. Aljoining the roynl palaee is the chamber of archives, and near it the puluee of princes, containing a haudsome chapel, gallery of portraits, and library. On the Olposite side of the roynl palnee, and also communicuting with it, is the far-finmed gallery of mintings, the granil attraction of Dresden, being not only the thest collection in Germany, but the tinest, taking it ns a whole, to be found N . of the Alps. Amongst its vuluable specinens of art, not one of which can be pronomeed bad, few mediocre, numbers goosl, and several incomparable, are the celebratel Madomus di San Sisto of liaphael ; the Notte, and 1we other works, by Correggio, in his best style; the St. Cecilia of Carlo Dolei ; the Clisisto della Moneta. nud a Vemer, by Titian; other paintings, by P'anl Veronese, Amibal Caracel, Guido, de.; altogether 3ä́c, by Italian nrtists. In the works of the later German and Flemish masters, this gallery is also extremely rich: it contains magniticent spreeimens of Rembrandt, Lhbens, Vanlyke, Teniers, Hans Molbein the younger, Ruysidael, Wouvermans, \&e. Of the French school, there are several paintings by Clande, Nic. Poussin, \&e.; and beneath the gallery there is a fine collection of plaster casts of the most fumons statues, made under the superintendence of Raphael Mengs. This gallery, fommed by the Elector Augustns II., has remained untouched and unhnrmed amid the innumernble revolutions that hnve, in the interval, couvulsed Germany. When Frederiek the Great bombarled Dresden, battered down its churches, and lnid its streets in ruins, he ordered the artillery to keep clear of the picture gallery; and Napoleon treated Saxony with so much consideration, that not one of her pictures male the joumey to l'aris.
The Zwinger, erected in 1711, and originnlly designed as merely the vestibule to a new palnee, intended to be built by Augustus II., is a fine group of buildings, surrounding an enclosure planted with orange trees, and forming a favourite jromenade. It contains the armoury (second only to the Ambras collection at Vienun), enbinets of untural history, mineralogy, and mathematical and philosophical nppnratus, and $\cdot \boldsymbol{n}$ gallery of engravings, which pussesses at lenst 200,000 specimens of that art. Immedintely contignous to one of the wings of the Zwinger, is the grand opern-house, $n$ buildiug capable of necommorlating x, (000) spectators. It communicates, by a covered way, with the palnee of the prinees, bat is now only used for court festivities: thentrical performances take place in a smaller theatre, near the Catholic eluureh; the latter, oceupying a very prominent situation between the royal pabace and the loridge, is n large strncture in the lanian style. Externally it is profisely decorated, and generally considered deficient in taste; but intermally it is chnste, elegront, and imposing. It contanis an altarpiece by Riphael Menge, mad a tine orgme by Silberman: the music in this charch is celebrutel throughout Germany. As a whole,
howe ver, it is inferior in elecgance to the $F_{m a}$ enkirche (church of Our Lady, ur St. Mary) in the new market, a beantiful stone building, alimed with a cuprola, constructed on the morlel of the of St. Peter's at Rome, 3 Kx German ft. high. The other churehes do not demmud particular nutize The remaining principal ediflces lin the Oin Them are, the Brilhl pulace, with a collettion of in landseajes by Canaletto; the mint, aneml, medico-chirurgical schose, homse of asemply, royal guari-honse-a benutiful specimen of tio' cian architecture, new post-ofllee, trales' hall, and hall for the amual exhilition and sale of the works of Saxon artists. The town hall is the chief ornament of the old market, and the oult regular square in the Oll Town. The New Tumin is altogether mueh better laid ont, anll cuntrins fine squares, spaciens strects, and elepant fan. bourgs. In this quarter stands the dapawe palnee, now called the Augusterm, in honum ( its fouthder, Augustus II. This maguifient pulaee, nppropriated wholly to pullic purtwoex is beautifully situated on the banks of the :ille, anid pleasure groumds, which form a most agter able promenade for the citizens. It conteins the museum of untiquitics and modern staturn: which occuples 10 saloons, and is enriched ly sme of the tinest antique statues in Germany: cabinet of coins; a public library with 2ili, (w) volumes, 4,000 MSS., 100,000 pamphlete, and 20,000 maps; anil the celebratel purechan cabinct. The last is a collection of more than fi0,000 picees of China, including the fine Mcissen, Clinese, Japanese, Italinn, and Sitho ware, and specimens of the manufncture of even country, altogether filling 18 apmrtments. Hen are to be senn the three splendid China vases tian Augustus II. purchased of the Eilector of Braniten burg, at the price of a regiment of dragoens fuly equipped!

Through the centre of the New Town nina broad linndsome street, planted with liuden tmax near the upper end of which are some extensin infantry and cavalry barracks. The other chid public buildings are, the commandant's residenere several military neademies, the town hall, and te claureh of the Trinity. The market place is em bellished with an equestrian stntue of Auqus II., in ancient Roman costume. The Frelerid. stadt contains the Murcolini palace and te Roman Catholic cemetery, but this quarter is mostly inhalited by the working elasses, The Pirna suburb boasts of Prince Anton's hailswex villa and extensive gardens; and the Wilvirt sulurb has the palace, gardens, and olservaidy of Prince Maximilian. Iresden havn greatuaz ber of liternry and scientitic institutions, and ex tablishments devoted to educntion. Anongs the are an neademy of arts, two colleges, a Intasi garden : schools of medieine, surgery, and vetamary medicine; a high school, 2 normal sthad mumerous free elementary schools, with schme for the reformation of depraved children, man the deaf and dumb, and blind; it has also mu! charitable institutions, iucluding orplan asplam of vurious kinds, $n$ fonucling hospital, and 5 atide hospitals. Amongst other convenicness, the dity possesses excellent public baths of all kinds, the prices of admission to which being low, the pantai persion is able to indulge in the use of what istum to contribute materially to the pullic heallh.
Dresdeu lins no very considerable exter trale. It has muncroms painters, desigma senptors, engravers, and other workers in th tine arts: and some mannfactures of woollen na silk, leather, gold nud silver articles, carpets, $x_{2}^{3}$ ing wax, maccuroni, white lead, straw lats, ari

firial fiowers, musical, mathematical, and philowhaiml instrumente, with a lomis and camon finuiry, and a large sugar relluery. What is rallal Dresten china is not male in this city, but
 at its external commerce has hitherto consisted in its imnsit trade by railwny and hy the river Wilne: its general trude la, however, increasing. Since 1 enti, a wool market has been establialied.
few buroueau capitals have such pleasaut encirons as Dresten. Nearly all the romis leadinge out of it, and especially from the New Town and l'riwlerickstadt, are planted with rows ol' trees. The lille to the NW. of the eity is lined inn ither side with the avemines for a considernble disturer. SLi, of the l'irmatsorls in the Cirosse fourten, a large park tilled with line trees, near which is the small village of Inlleknitz, and the munment erected to Morean out the spot where lue received his death wound, 27 th Ang. 1818. thi the right hank of the Eilte is the Limkbal, a butd surtomuled by some beantifin] garicins, eonaining a thentre, de., abont 1 mm , from the New Town ; and 2 m . beyond this is Findlater's Vineyard, a villa and gromuls laid out with much tisite In a deceased Scoteh mohlemnin. To these differcit places people of all ronks delight to resort, which they do capecially on Sunday afternoons, to trke refreshments and dance, or listen to the exellent bands of musie with which all the pullic plaees are providled.
Dresten and its environs have been the scene fome of the most important conflicts in modern warfare, particularly on the 26th and 27 th August. 1813, when Napolcon defeated the allies under to walls. This city has been the fivsourite midence of many distinguished literary men; in its immediate neighbourhood, Körner lived, Schiller wrote grent part of his 'Don Carlos,' anil Weler composed his highly celebrated opera ' Der Freisehiltz.' Its iuhabitants generally are great lovess of the fine arts, and devoted to music.
1)REUX, a town of lirance, dép. Eure-ct-Lolre, map, arrond., on the Blaise, a tributary of the Eure, which partly encircles it, 20 m . NNW. Chartres, on a branch line of the railway from I'aris to chartres. Pop, 6,940 in 1861. The town stands at the foot of a hill, on which are the ruins of an aseient castle, which belonged to the counts of blreux : it is well built, and las a fine promenade along the river's bank, a hospital, public baths, a theatre, town-hall, and church. Louis Philippe, when Duke of Orlcans, built in the castle a chapel, which he intended for lis family burial-place. It is the seat of tribunals of primary jurisdiction and commerce, and of a communal college. Near it, in 1562 , was fought the celebrated battle in which the Prince of Conde, then at the head of the Protestants, was taken prisoner. Dreux was the native place of Jean de Rotrou, the tragic froet, and of l'hilidor, the famous chess-player.
DRIFFIELD (GREAT), a market-town and township of England, E. Riding, co. York, near anc of the seurecs of the Hull; $27 \mathrm{~m}, \mathrm{E}$, by N. liork, on the Great Northern railway. Area of townslip, 4,910 acres. Pop. of alo., 4,734 in 1861 . The town, at the foot of the Wolds, consists cliefly of oue long street, parallel to which flows the brok above noticerl, which, at the S. extremity of the town, is enlarged into a navigable canal that joins the Hull below Frodingham Bridge. All Snints' cluurch is an ancient structure in the tiothic style. The Independents, Wesleyan, and Primitive Methodists, and Baptists, have places of worship. There is a national school for 100 children, and a dispensary. The chief officer is a constable appointed annually: a court for the
recovery of small debts is helit here. The towis is a stathon for recelviur votes in elections of members for the E. Rlding. Market-day, Thurs., and well attemded cattle markets every fortnight.

DlidGillibi, a marl. bor, and rea-jort towil of Ireland, lecing a co. in itself, but locally in the ecos. ol Meath and Lonth, prov. I.elinster, on the lhoyne. 4 in . ulowe its mbunchure in the Irish Sen, and $2_{5}^{5} \mathrm{~m} . \mathrm{N}^{2}$. Inblin, on the ruibay from Inablin to Imminalk mud lelfast. I Pop. I 14, $\bar{i} \cdot(t)$ in $1 \times 1)_{1}$. From the time the limelish retilend in Irclaml, this town, formorly enlled 'Trodagh, was considered of great importance. l'arlianemis hava heen freguently hehd in it, and it was male tha Nite of a minorrsity, but the privilege was not acted upon. In ltil9 it was stormed lyy Cromwell, who put its inhabitants to the sworl, with the exereption of a few that were transported to the Amerienn settlements.

The Boyne divides the town into two unequal portions, the larger of which, on the N. lamk of the river, is connected with the lesser liy a bridge of three arches; part of the ancient walls, mad the gate of St. Lawrence, still remain, but the builiings now extend considerably heyond them. 'Tha chureles within the town are $\mathrm{S}_{\mathrm{t}}$. leter's in the N . div., St. Mary's in the S., mid a chapel of ense. The 1:. Cnth. clapel of St. l'eter, considered the cathedral of the archliocese of Armagh, is a large aud elegant buidting, as is also that of St. Mary. There are friaries of the Augustine, Dominican, and Franciscan orders. and convents of the Doninicans and the l'resentation. The Presbyterians and Wesleyan Methodists have places of vorship. There are here a elassicnl school on the fonmatation of Erasmus Smith, and other public schools which give instruction to nearly a thonsand pupils. It has also an infirmary, a workhonse for the accomruodation of 940 inmates, a linen hall, a buidding for the widows of l'rotestant elergymen, and an almshouse. There is an infantry barrack in the town, aud another in the vicinity of Richmond Fort. It is in general pretty well built: the streets are paved, liglited, and cleaned, by a committec of the corporation ; but its appearance is unfinvourable, and the streets swarm with beggars.

Drogheda originnlly consisted of two distinct corporations, one on the side of Menth, the other on that of Louth. These were united under llenry IV., who granted the newly formed bor. n charter, under which it is still regulated. Its jurisdiction extends over 5,780 acres. The corporation consists of 6 aldermen and 18 commoncouncilmen, elected by the three warls into which the town is divided. The assizes are held twice a year, and general sessions of the peace by the mnyor and recorder in Jamary, April, June, and October. l'etty sessions are hell every fortniglit. The gaol is a well arranged building. It has 6 wards and 16 cells, for an average number of 26 ; prisoners. The bor, sent two mems, to the Irish H. of C.; and since the Union it has sent one mem. to the lmperial IH. of C. Registered electors 639 in 1865. (Gross annual value of real property nssessed to income tax, $25,880 l$, in 1857, and 22,7481 , in 1862.

An extensive manufacture of coarse linens was formerly carried on here, which gave way to that of cottons; but the latter is nearly extinct, while the former has revived. Flax spinning is at present the principal branch of industry carried on in the town. It has, also, an extensive foundry, where steam engines and other articles are made; with uuncrous corn-mills, salt-works, brewerics, tanncries, and soap-works. Drogheda ale is in much demand both in England and in the foreign market.

## DROITWICH

## DROME:

The chlef trade, whieh consista in the export of agricultural prodice and of linens, is carried on with Great llitain ly stenmers, which ply regularly leetween the port nad liverpool. The crosschunuel trade and eoasting trade employ niso muny suiting-vessels. The grentest part of the foreign trade is with the British colonies in N. Amerien t timber is the principal article of import. The harhour and river have undergone several improvements, by meuns of which vessels of 301 toins may uow dlecharge at the bridge, nod burges of " $\mathbf{1 0}$ ) tons may proceed inhand as far as Navan lyy menns of the lhayne mavigation. 'The enstonis' duties received at the port nmounted to $12,110 \cdot 11$. in 18509; to $!1,7961$. in 1861; and to $4,40 \cdot 11$. h11 1863. The railway from Drogheda to Dublin was upened lit 18.14. Falss are held on Mareh 10 ; Aıril 11, May 10, June 22, Aug. 2fi, Oct. 29, Nov. 21 , und Dec. 19. Horses nud wool are the elief articles for sale. The shipping belonging to the purt on the lat of Jumury, INi.: consisted of 3 sailing vessels under 50 , 36 sailing vessels above 50 tons. There were, besides, $\sigma$ steamers, of a total burden of 1,579 tons.

IHOI'TWICH, a parl. nad munic, bor, of Fingland, finmous for its snlt springs, co. Worcester, 7 m. NE. by N. Worcester, 118 m . NW. London by road, and 12.53 m. by Great Western and West Midland railway. I'op. of munic. bor, 3,124 , and of parl. bor. $7,08 i t$ in 1861. Though locally in the upper division of the hmmi. of IIalfanire, it has exclusive jurisdiction, und is plensantly situated on the side of a narrow valley, at the bottom of which runs the Snlwarp, on the rond from Birminghnm to Worcester. It has three parishes and three churches, of whiel! St. Andrew, rebuilt after being destroyed ly fire, in 1293, is the most ancient and interesting. The town was originally tneorporated by charter from John, conlirmed by IIenry III. and some of his successons, previously to the charter of Inspeximus, grantel by James I. It is governed by a mayor, four aldermen, and twelve camucillors : bor. income, 5671. in 1862. Gross anmual value of renl property assessed to income tax, 56,4161 . in 1857 , and $64,23 \times 1$. in 1862 . The bor, returned two mems. to the H. of C. under Edward I., and to the parlinments held in the 2nd and 4th Edward II., from whieh period the privilege censed until 1554 , sinee which time it regularly returned two mems. until the passing of the Reform Act, which deprived it of one of its members. Its boundaries were at the same time considerably extended. Registered electors, 380 in $186 \overline{0}$; the bailiffs are the returning officers. The election of members for the E. division of the co. is held here. There are three chapels : a chapel of ense, one for Independents, and one for Wesleyans : a hospital for thirty-eight aged men and women, foundell by Henry Coventry, in 1686 ; and a charity school for forty boys and forty girls, who are educated and clothed, and on leaving school apprenticed. The salt trade is the main support of the place ; malting and tanning are also carried on, and there are some mills for grinding corn.
Droitwich has been celcbrated from a very remote period for its brine springs, or wiches, a name of Saxon origin, though its meaning be not well known. (Campbell's Political Survey, i. 76.) Reference is made to these springs in Domesday book, and it is certain that they were known, and that salt was obtained from them, long before its compilation, as is evineed by, the grants by different Snxon kings to the church of Worcester. in all which the wiches are specially mentioned. (Camden's Britannica, Gibson's ed. i. 160.) Most probably indeed they had been known to, and

Wrought by, the homans. The apringa are in ite mididle of the town, and the salt is cibtainelle builing and evaporating the brine. About acen tury ngo the usual ilepth of the brine-pits min ahout 30 ft., but now they are generally sunk a mueh preater depth, nuid a fir more cypina snoply of lorine is olitulned. An omnee of lonneis suid to contain 141) grilus muriate of melat, gruins sulphante of lime, 25 grains sulphate of what and a truce of muriute of magnesian. $A$ caval face the Severn to Droitwich is used la the emweryang of the salt for shipment, and of the comals nade ax of in the works.

HHOME: a dep. of France, in the SE: part the kingilons, formerly a part of the prows of hop phiny, liaving $\mathbf{N}$. and E. Isère, E. The Ihatesman Hasses Alpes, S. Vancluse, and W. Arliedle, fono which last It is separated by the Rhonc. Lenamit N. to S., aloout 8.5 m. ; greatest brealth, $\mathrm{Sin}_{\mathrm{m}}$ Aren, 652,155 hectares. P(op. 326,681 in $\left|x x_{1}\right|$ This dep. is naturally divided into two portimes nu consterly or mountainous, and n wexterly plain region. The formor inclucles about twiane hectares, or nearly two-thirds of the total sufane and is intersected by ramifications of the tha with a mean elevation varying from 4,000 toja, (m) ft. Tlie lofticst summits attain to nbout $b$, ifint The ehief rivers, after the thone, are the line and 1 rôme, but the latter is not navigutile. Thim are a number of streains, which, though usalty small, become during the melting of the munnain snows devastating torrents. In the elevatel lans it is almost always cold, while nlong the hanked the Rhone the summer heats are very overpowning: the elimate is, however, generally headtr. In the lower parts of the dep. there are alise 100,000 hectares of rich land, the rext being gene rally of inferior fertility. The cultivable hand comprise aluout 259,100 hectares; vineyanlo,33,30 do. ; and forests, heaths, and wastes, 308, fion wh Wheat, maize, and oats are the clief kindsoffrin cultivated; but the corn grown is insufficient fe home consumption. The other articles of culure are very various, including pulse of different king hemp, walnut, olives, chestnuts, alnoonds, malle and other dyeing plants and fruits. The vine al ture is the most important branch of rural industr. and alout 150,000 liectolitres of wine of the ke quality are exportel ammally. The fleest growit are the red wines of Hermitage, Crozes, Mercund and Gervant, and the white wincs of Mereemu and Chanoscarsom, and the Clairette de Die. Tw genuine hermitage bears a comparison with to: finest growths of the Bordelais and Upper Bu: gundy. The hills, ealled Mas, which produce it have a S. aspect, and are mostly covered midh thin calcareous soil : they are so steep, that dx mould has to be sustained by rows of low ralk The wine of the Mas of Besas, which dififesi several respects from the others, is principaty bought up by the Bordeaux merchants to giveldef and flavour to the secondary elarets. The rarim of silkworms is carried on to a great exteut, wal there is a greater number of mulberry treesi Drôme than in any other deps, of France, Gax alone excepted. A grent many bees arc kept, am the honey is of very good quality: The midde: mountain region is covered with woods of ath beech, fir, \&e., supplying excellent timber; alore these there are extensive pasture-lands, feedingi summer numerous flocks of sheep and grats, miay of which come from Provence. Mincs of iroa, leed and coal, and quarries of marble, granite, ndl crystal, and limestone, are wrought. Manuix tures not yery important ; the clinef are those woollen cloths, sergen, silks and silk-twist, , wonred linens, stuckings and gloves at Valenu

DCBHIOS, or DUBHOL, an inl. town of IHindustan, prow, fiujerat, lome of the Cilieowar, cup of a pergnanah containing 84 villages, 38 m , NE: Barruach: lat. $22^{\circ} 9^{\prime}$ N., long. $73^{\circ} 25^{\prime}$ E. 'Towari the eal of the last century it contained 40,1600 inhab.e a few of whom were Molinmmedans, ant nuthe larmes. It is nemely an exnet mpure, and hissheen elaburately fortitleil, thongh only a portion of its works remains in alty degree of preservatiols The ancient walls have been huilt entirely of harge muare stones: the city gates are all strong and leautiful, enrecially the li. portal, called the " Ginte of Dianomds;' which, tugrether with the temple conuected with it. present a most complete und diggant specimen of Illimho taste. 'In proportion of architecture, and elegance of seulpture,' snys Mt, Forhes (Mod. 'I'rav., x. 162), "it firr exceerls, any of their ancient structures 1 have met with, and the gromps of warriors on horseback, on foot, and on lifhting elephants, approach nearne to the classical bas-reliefs of Greece than any, performances in the excavations of Elephanta.' Within the walls there was a magnificent tunk, 4 m , in circuit, lined with hewn stone, and with a flight of steps all romd, und partly supplied with water hy means of a stone aqueduct from receptacles withwat the wails. In the district aronnd Dubhoy the soil is generully rich and luamy, producing fine crops of rice, jowaree, bujree, \&c.; varions legumes, cotton, sesamum, palına Christi, sugnr-cane, hemp, flax. gidger, and plants for dyeing.
DEBLIN, the metropolitnin co: of Ireland, on the E.coast of the island, having E. the Irish, Sea, ut St. George's Channel; S. Wieklow; W. Meath and Kildare; and N. Meath. Area, 2.18, biBi nores, of which about 9,000 are unimproved, mountain, and bog. The extent of urable laml, in square uiles, was 306 in 18.11 ; $304 \mathrm{in} \mathrm{1851;} \mathrm{and} 305$ in 1861. (C'ensus of Ireland of 1861.) l'rineipal river, the Liffey, by which Dublin is intersected. Surface mostly flat or undulating; soil shallow, and naturally poor, the subsoil being a retentive clay dgricultare is by 10 means in an improved state; there is a want of a proper rotation and drainage and white crops still not mifrequently follow each uther. A good deal of land in the vicinity of Dublin is appropriated to garden culture. Average rent of land, exchusive of that portion called the co. of the city of Dublin, and of conntry honses, Uss, an acre, being as high an average rent as is paid by any co. in Ireland. Property a good deal subdivided. Farms near the eity small, but larger at a distance. In 1841 the co. of Dublin-excl. of thecity-had a pop. of 142,695 ; in 1851 , of 149,219 ; and in 1861 , of 155,444 . The census at the latter period showed 73,152 males and 82,292 females. The increase of jop. amounted to $4: 57$ between 18.11 and 1851 ; and to 4.17 between 1851 and 1861.

DUBLIN, a city, the seat of a liniversity, and sea-port of Irelain, of which it is the cap., co. Dublin, on the E. const of the island, at the mouth of the Litficy, by which it is intersected; 292 m . WXW. Lonton ; 138 m . W. Liverpool ; $65 \mathrm{~m} . \mathrm{W}$. Holyhead. The movernent of the population of Dublin, unlike that of other towns of lreland, has gone on increasing for uearly two centuries. An enumeration of the year 1682 showed $6,4,483$ inhabitants, while in 1753 there were 125,750 , and
in 1708 there were 182,870 hahnitituls. Thue pojn,

 the next ten yours thepo was a dechine, and the censur of lseli only showed $20-l, 818$ inhabitants. Of this tumber thiere were $118,28: 3$ males, mai 1Hi, 02 is females. The inurease of pop. iretween [8.1] and $\langle 801$ amounted to 10.95 per cent.: lint the decmuse letwren Is:il mad 1 stil wis 2 dia jer cent., lemving a net incroane in the twenty venrs of * 83 por cent. The city is nuponed tu be the fiblum of Polemy, and was called by the wative Irish Bullyath-iliath, 'the town on the ford of' huralles: and by the lanes Diveliu or Dulihlia. 'the binck pool,' irnom its visinity to tho muldy swampes at the month ol the river. At the perioni of the binglish invaxion under Stronghow, i.1s, 1169, the dity was of very limited extont; its buildings heing contined to the summit and rleclivitioe of a hill on the S. side of the Lillity, und emelosed ly a wall little more than 1 m . in cire. For many yeurs aftervards its incrome in cextent und popnintion was extroncly hlow. At the commmenement of the 17 the century its sulumbs extended bit a very short distance beyond its anciont walls. la the wars of Itilt, the additional works thrown II) for the defence of the place lay hetwern the castla and the college, which was then eronsidered as ontslde the eity. After the Revolution, the progress of improvement was comparntively rapiil : new lines of strects were opened, partionlarly to the N. and lio; muny of the eontined ohl avennes wore enlarged; several nginures were lalil ont, und the buililiugs, both publie und privute, wore constructed with greater regurd to architectimal elegunce as well as internal convenience. At arenne, called the Circular Roml, which mearly surroumis the city, encloses an area of 1,264 acres; of which, $7 \times 5$ are on the S., und 478 on the $N$. side of the lifiey. The river is lorilareal on each side by toroad and well-constricted guays.
'Ile ligure of the city is alliptieal, its longer axis extrinling along the line of the river, from W. to E., $2 \frac{1}{2}$ II., its shorter, from N. to S., nearly 2 n. Snekville Sireet, on the N. side, is remarkable for its great width mal for its limilingens: St. Steplien's Green, the largest of the spures, has in its centro un equestrian stathe of (icorge 11. ; College Green, mirregular intid contined area near the centre of the city, where most of the main avennes meet, contains some of the tinest public buiblings. and has in its centre the equestrian statue of
 The other public monaments of note are, Nelson's Hillar, in Suckville Street; the Wellington Memorina, a lofty obelisk in the Phonix l'ark; in equestinn statue of George l., and pedestrian statues of George III. and IV., Dr. Lucas, and Messrs. (irattan and Drummond.

To a traveller frequenting only the priucipal streets, Dublin appears to be one of the handsomest cities in burope. The pablic buikings are all on a graml seale, and the principni streets and squares are capucions, handsome, and well laid out. Ihat there is notwithstanding, especinlly in the ohler parts of the town, a vast mamber of crowzed, dirfy thorunghiaren, with menn, wretched houses, destitute of all the elements of comfort and cleanliness. Wealth und poverty, comfort and misery, are brought into immediate and puinful contrast; and Dublin may, in this respect, be taken as a fair representation of the island of which it is the enpital.

Dublin Custle stunds on the E. verge of the hill upon which the city was primarily lhilt. It was originally a sfuare fortress, with towers at the angles ; it now consists of a quadrangle, 280 ft .
by 130, anrrounded with buildtogn eontaining the sinte ajurtmente of the lord-lientematit, and aecommoriations for the meetloge of the privy conscil and other poiblic functionnrien. Attuelied to it is the vierergal chajel, a amall hint eleginit sericetise of Fiorid (iothis architeoture. Ollices for the orlluance nid quartermaster-general's depart-

Thes hemi-yburters of the military establinhment for Jreland are nt the lioyal Ilanjital, Kilmainlinm, originully u priory of tle Knights 'l'emplars, which, niter the silpiression of thit oriler, was granted to the Kinights of St. John of derusilem: man, lonving lerome the property of the crown on the dismolitions of the momasterien, was eomverted ly Charlos 11, into no hospital for mupermaninted aind disabled soldiers. I'se butdiug is a large square, three sides of whide contain the lookgigge of the veterman, mid the fimerth a chmpel, a dining hall, mad a suite of apartments for the commander of the foreos.

The primelpul barracks are on the N. side of the city, near the l'lachix l'ark. They comsist of several large qualramglen, contaluing necommodations for in general otleer and lis staff; and for 2,000 men, envalry nod infantry. There are also barracks at J'ortoliello, for cavalry ; at litielimond Jridge, the recruiting depôt, nid (it. (ieorge's Street, for infintry; and at the Plgeon-hone Fort mul Island Ifridge for artillery; having in all accommonation for $n, 500$ men. The military inlirmary in the lhonix l'ark, near its W. entrance, can receive 200 , putients. The suprame courts of justice are held in a magnilicent edillee on the N. Quay, eminsting of a central cireular limll, opening into the comits of Chancery, Rolls, (kuecs's Hench, lixcliequer, Common Pleas, Nisi l'rius, and Admiralty; and wings, in which are record repusitories, and oflices for the despateh of legal husiness. 'The King's Inns, or inns of eourt, which are at the N. extremity of the eity, contain halls for mectings and dining; the eourts, oflices, and recorl repositories of the Prerogative and the Consistorial courts of the see of Dublin, and the Registry of Iecde: nenr the main buiding is the library, containing a large collection of books. The privilege granted it under the Copyright Aet of receiving a eopy of every work puiblished in the United Kingiom has been commated for an annuml grant, applicable to the purchase of books, at the discretiou of the benehers. The number of harristers on the rolls of the courts is about 800 , and of solicitors and attomeys, 1,600 ; but many
; those whose names are entered never praetised, and many others have withdrawn from the active duties of their rexpective professions.

The municijul boundary of the city differs considerably from that of the police and electoral franchise. On the E. side it extends to the village of Blackrock, 5 m . from the econtre of the eity: while on the N., W., and S., several parts of parishes, in close contignity with the rest of the city, are beyond it. The extent of the franehise, which was accurately laid down at a very remote
poriod, is afill ancertained ly meana of a triennid perambinathon by the civio anithorities, The limit olt the men nide in cletermineed ly the place whan a javelin, thrown liy tho lurd juagor stanting at low-water inark, falls lnto the whter.

The exjxuliture for publie buildinges, zombe, salaries of uthers, and pulitic charities, formerly under the absidute control of the krand jury, is now vested in the corporation, to whom the finctions of the puving and lighting commissloners have also beeat trausferred.
Within or adjoining the civic bounds are five bical jurisdietions montly independent of the autherity of the corporation. Thuy are, 1. the maner of Sh. Sepulelire; 2. the liberty or manor of Thomas Court and Donore; 3, the liberty of the dennery of St. l'atriek; 4, the manor of 'irangepurman, which includes the liberty of Chrint clurch; and, 5 , the manor of Kilminham. The lhree flrst aro popularly called the Liberties. 'The manur of St. sepmichre lies to the SE. of the city, and enjoys extensive powers, granted and confinued to it by a succession of charters from the reign of John. It holds courts-leet and baron, an $/ a \operatorname{conrt}$ of record. Its eriminal jurisdiction extends to capital cases, but the right, as fur as respects these, has failen into desuetule. A small court-house and debtors' prison is attached to it . 'he archbishop of' Dublin is lord of tho manor. The liberty of Thomas Court and Ionore lies SW. of the city ; Thomas Court being within the county of the city, and Donore in the county at large, of which it forms one of the baronies. Its separate nights are secured by a series of eliarters, and it bulds a court-leet, a court of civil bill, aud a court of recurd for personal plens to any amount. It has a court-house and small prison : the Earl of Meath is lord of the manor. Tho lileerty of St. Patriek iv a small district of about $5 \frac{1}{2}$ acres surrounding the cathedral of the same name. It holds its pririleges by prescription, and had courts-leet, and a court for the recovery of small debts, both of which lave fullen into lesuetude ; hence it has become a kind of sanctuary for debtors of small sums from the adjacent parishes. Attempts to abolish an exclusive jurisdiction, which interferes with the chins of the just creditor, have been successfully nsisted by the corporation of the dean and chapter, which is lord of the manor. A seneschal appointed by it reccives a tritling salary, but has
un ilutien to perform. The pop, in amalt, and very

 sits in the county court-house at Kilmainham.
The poliee is vested, by an act powed in jnish, in 2 emmamiswioners, under whom ure 7 sumprintendents, 24 inspretors, 100 wergeants, 1,010 conistables, and 20 supermunueraries. Ihe city, with the llberty, is divided into the Castle, Collerio, lontumda, Barrack, Donnybrook, mad Kingstown districts, in ench of which there is an oflier, where min alderman unil a barrister, both "pusinted hy the lord lieutenant, alt daily. 'fle police jurindiction extends over a district of 8 m . round luhliu, in every direction. The expenses of the estaWishment are defrayed by a parlimmentary grant, by atax on the inhabitants, amonnting, as before enumerated, to 25,5001 . in $1860{ }^{\circ}$; by lines, und by carringe licenses.

The linen, woollen, silk, and cotton trades, which had been earried on to some extent in the city and its vicinity, have all declined. I'he salen of linen wero chictly effected in a large suite of buildings erected in 1728 by government, In the N. division, and rented to the fretors: attached to it is a yarn-hall. The number of factors has decreased so much, in consequence of the dectine of the trade, that most of the offlees and stures are approprinted to other purposes. A pedestrinit stathe of George IV. was erected in one of the halls, in commemoration of his visit to the establishment in 1821. The woollen trade was longs carried on to a considerable extent in the SW. libertics: a large building was erceted there in 1814 by the late 'lhomas Pleasants, esq., for tentering the eloth, a process previously carried on in the open air, and therefore sulject to interruption from changes of wenther; but since the repeal of the protecting duties, the manuficture has been nearly extinguished. The silk trade was introduced by emigrants from France, who settled in Dublin in the beginning of Inst century. 'The favourite manufacture was a fabric of silken warp and woollen weft, called tabbinet or Irish poplin, which is still in demand. The other branches of the silk trade have been for several years in a very depressed or extinct state. The same may be sail of the cotton trade. Beer is extensively produced; and large quantities of purter and stout are exported to Great liritain and foreign countries: there are also several distilleries, A lew ironfoundries are employed chiefly in executing orders demanding immediate attention. Cabinet-making is largely earricd on, as are the various trades riquired to meet the demands of a large and concentrated population.

## DEILISIN

Nmithfiehl market，which in within the civie jurimdictlon，in held on Mondays and＇flinmolays fir colle，and on Themdays and Sntiritay for hay and atraw．A now eattle mimaket，quened in Noveni－ Iner，INGist，has been creeted by the eorporation int tho North Circuiar IRomi，where anple acommona－ tion las provided，at a cont of alomit 15,1000 ．Spital－ liodis and Kevin Street markets are lin the minor of St．Sepolidiro：the principat eommoritien molid In looth are lmeon，butter，mill pootatien；and in the lattor hay and straw，A wholesale lish－market is helif In loot l．ane；one for potatoen，fowly，and ergen，and another fur fruit in the nelghtoonthond． ＇I＇ho corn－murket，formerly helit in Thomas Street， is now enrried on by a joint atork company，in a lomililing erected for the purpone on Hurgh Quay， where the grain in sold by sample．The retail unarketn are nll private property，but their inan－ ngement is under the eontrol of the eflicers of the jurimalietion in which they are held；those in the city beinge under the lord manyor．
＇The ininud truie of Dublin has been greatiy pronoted by the Grand and Royal canalm，botio of which terminate in the city，and eommonicate with the men through the Lifleg．Still more con－ ducive to the increnee of trade has been the enta－ blishment of a network of railways ecntering in Inblin and sprending all over Irelind．There are Heve railway termini in the city，which it is intended to connect by a girile rulifomi．

Banking hasiness is Imnsacted by the Bank of Irelnad，established in I788；the Híbernlan Joint Stoek Company，1824；and by the l＇rovinclal，the National，the Royna，and London and Dablin Joint Stock llanks ；and branches of the Ulster Jank，the Union liank of Ireland，the Intter opened In 1865．There are，losides，tive private banking－ louses and 2 anvings＇banks．The ntliairs of the Bank of Ireland are managed by a govermor，who must hold $4,000 l$ ．stock ；a leputy governor，with il，0（0）2，；and 16 directors with 2,000 ，each．It is the place of deposit for all govermment monies． The buildings，formerly the Irish parliament house， form a quadrumgle，standing on an area of if acre， presenting three fronts；that to the S．of the Corinthinn order，and those to the S．and W．of the Ionic．There is a very ingenious system of steam mnehinery for printing the bank notes，so as to render frauils extremely dillleult．A statue of George III．useuples the spot on which the throne stood in the former llouse of Lords，now the directors＇board－room．
An exchange was erected in 1767，in the centre of the city，partly by a parliamentary grant，and purtly by sibscription．The merchants held their meetings in it until 1796，when the greater facili－ ties afforded by the Commercial Buildings in Col－ lege（ireen induced them to transfer their dealings thither；and the exchange has been since nearly uscless，The building presents a fine specimen of（irecian architecture，and contains pedestrian statnes of George III．，Grattan，and Dr．Lucas．

The mercantile society of the Owzel Galley，for deciding disputes relative to shipping and mer－ cantile dealings by arbitration，was formed in 1705，and took its name from that of the vessel on which the first decision was pronounced．A chamber of commerce was established in 1820.

The river and port were vested in the corpora－ tion in 1220 ，by a charter of Henry III．Admi－ ralty jurisdiction between Arklow，S．，and the Namy Water，N．，was granted by Elizabeth．In 1707， it was empowered to erect a ballast－office，the annual expenses of which were 4，400t．at an average of thirteen years，from 1753 to 1780 ．In 1783 ，the management of the office was committed to a new board，with control over the ballastage，
（monuse，wherries，quayage，and pilotage of the ［nort，inchodiug the harbuniss of Chindeary（anm Kingatown）nall balkey．

The commerio of the jort of Diblitin had in creamed so imich townila the clone of the law century，that the aceommodation allorded in the river tor mhijpilig was found Inatullicient，and P g linment，conmequenily，mranted $46,(\mathrm{k}) \mathrm{h}$, ，fir furm ing diocks on both mides of it．The dock ecomme illeatinge with the Girund Cmina，on the somith whe were opened In 1796，and St．（ieorge＇n，the laten of the Custom Jionse Dockn，in I821．Theae hatee cover an aren of 8 neres，have 11 feet depth witer，and 1，200 yarim of q⿴囗十⺝age，and are capalin of accomnomathig 40，000 tons of whiphing．The docks on the sontle side affiond comomomions hhart age for merchaminen and coliters，exclowive that supplied by the river－quaym．＇Tlie reevipe of the Dublin Imaliast Corporation for fonmage and guny－wnll dues levied on vessels entering the pan ill IMis，wan ： $15,871 /$ ．

The principal lighthonese of the port is at Pool． beg，on the extremity of the solith Wall，ab opposite to the great Northern Wall or breab． water，between which is the entrance crossing the bar to the harbour and quays；it is a bright light of 26 burners， 63 ft ．in height．＇The other harlwup lights are a lloating light on the Kish llank of Dalkey Island，the Bailey of Howth lighlinume and a light on the extreinity of the North equy： Wall．At the entrance to Kingstown llarbuir there are lighthouses on each pler；that on the $k$ ． pier is a revolving light，every half minute，the can be seen 9 miles in clear weather．＇flie mal packets to Holyhead start from Kingstown llar－ bour，which is $6 \frac{h}{}$ miles from the city．

There were in 1863 registered at the port if Dublin 513 sailing vessels，with a tentage if 88，167 tons，and 61 steamers，burden $11,986^{\circ}$ tons Most of those vessels were employed in the cuast－ ling or cross－channel trade，there having been but 6 or 8 in that of the West Indies，the same num－ ber in that of France and the Spanish peninsula and 20 or 30 in the North Amerienn timber trado．

The brewing of porter is carried on extensirely， and the number of barrels exported in Istil wi $170,38 \cdot$ ；1862，156，077；1803，174，941，nearly goe－ half was shipped by the eminent irm of Guinnes

The shipments of grain，\＆c．，from Dublin，if 1863，were as follows：－

## Wheat

Indtan Corn
Oats
Barley ．
Flour
Oatmeal

81，729 quarters 7,745 50，5：25 sack＂
3，931
30，546＂
08，424＂
The exports of provisions for the same periw were：－Butter，182，443 tirklns；beef， 392 hog－ heads， 1,901 ticrees and casks；bacon， 6,672 bales 501 hoxes；hams， 980 hogsheads， 403 tierces and casks；pork，4，503 barrels；larc，6，231 barth $1,222^{2}$ firkins and kegs ；and of live stock， 102,2 ， 4 head of cattle， 145,825 sheep， 1,124 ealves， $90,9 \mathrm{M}$ pigs．Of wool， 16,204 bags were shipped．

The cross－channel trade is now carried on chiets by stenmers，which sail to Liverpool，Hoiyhead and Bristol，London，Glasgow，Cork，and Belfast Ceals pay a duty of $4 d$ ．per ton，imposed to come pensate the coal－meters，whose services have beta rendered nearly unnecessary by the regulation at－ lowing coal to be sold cither by weight or measure ＇The amount of the customs＇duties receivel a the port was $1,053,5111$ ．in $1859 ; 1,004,2 \%$ ，in 1861 ；1，025，092l．in 1862 ；and 974,0911 ．in $1860^{3}$.

The subjoined table shows the comparatirt amount of duties received at the port of Dublin in each of the years 1862 and 1868 ：－

lhblin is the sent of an archbishop's see, and of die second of the archicpiscopal provinces into which Ireland is now divided. The provincial juriwilition is nearly coextensive with the two civil provinces of Lelinster and Munnter. The see, includiug the bishoprie of (itandolough, which was incorporated with it in 1214, includen the comuties of Ihillin, and Wicklow, and Kildare. The landed poperty contalns 30,040 acres, of which 28,921 are poritable. There are two cathedrals: Christ. Church, luilt near the summit of the hill on whieh the city stands, is the more ancient and superior. The bililing is plain, with no exterior architeclural embellishments; it contains several remarkable monuments; among which is that of Stronghuw, earl of ''embroke. St. Patrick's Cathedral, in the valley, S. of Chrlst Church, also contains mome remarkable monuments. The chapters and instaliations of the Knights of St. Patriek are held in it. The city contains 20 parishes or parts of parishes.
Accurding to the Roman Catholic eccleniastical araugements, these 20 parishes are consolidated iuto 9 unions, each having a place of worship; lesides which, there are sumdry chapels attached to friaries or nunneries. There are nearly 100 places of worship. St. George's Church in the XE. part of the city is a splendid structure, in the Grecian style. It is the only place of worship, cxcept the cathedrals, which has a peal of bells. The Roman Catholic church of the Conception, in Marlborough Street, considered the archbishop's cathetral, is of very large dimensions, and highly embellishal internally, but not yet complete as to fits exterior. The Roman Catholic chnpel of St. Prancis Xavier is also an elegant building of the lanic order.
Dublin had, by the censis of 1861 , a pop. confisting of more than two-thiris of Roman Catholics. There were 23,807 males, and 25,444
femalem lrelonging to the eatablished charch:

It connive eil arigimally of a provost, 3 bellows, and il weholirs; but at present it consists of a privost, 7 menior, an nindeflned mumber of Junior fellows (at jrement $2 \bar{\circ}{ }^{\circ}$. and 70 acholam. It has, alan, 27 profensors, with levenrues and ansiatanta, all endowed. A mehool of
 in anill to furninh a very eomplete comise of theoretical anit proctical instriction. The inivenity is prexided over by a chmecellor and vire-elinncellur, one of whom holis occasional visatitions. und by a hoard, commisting of the provost anid senlor follows, which sits weekly. Tho pariont of undergralunte instruction is four years; the number of stinderite nbove 1,800 . The eonime uf ntulien for candidates for a fellowship is logic; mathenmities, maturn! philosophy, ethlen, history; Jatin, Greek, and Jebrew. I'ho examinations, which are publie, are curricil on in Jatin. Vix clusive of the fees of students, the university terives a large income, said to exceed 15,0001 , it year, from linden; and it has, also, the patronage of 32 benellces. It enjoys the right of returning two members to the II. of C., whin are elected liy the fellown, scholan, and all those who at any time have been fellows or scholnrs, and have kept their names on the books. The builitings, which present an extended front to Collogo Green, are large and elegnit: the princijnl nre a library, contnining upwards of 120 ,016 volumew, and entitled to a cony of every work pulblishod in the empire; a chapel, an examination hall, it museum, a dining-hali, a theatre of nuatomy, nud a printing-otice; It also maintains a small but well kept botanical gariten in the SE. suburl. The Cullege of 1'hysicians is connectel with the uliversity; somo of the courses of lectures aro given in that institution, others in Sir Patrick Dun's Hlospital. The College of Surgeons, St. Stephen's Green, was founded in 1784. The Incorporated Company of Apothecarics has entablished courses of lectures in pharmacy and other branches of medical neience, at their hatl in Henry Street. There are also several private medieal anil surgical schools, much frequented by stulents.

The charterel scientific and literary societics are -the Royal Dublin Society, for the promotion of the useful arts, having professorships in botany, chemistry, and experimental philosophy; drawing schools, a library, a museum, and a large botanic garden: the Royal Irish Aendemy, founded in 1786, for the encouragement of abstract science, polite literature, and antiquities, with n small but incrensing library; containing a good collection of Irish MSS., and a musenm: it has published nearly 20 vols, of Transnetions. The Royal Iltbernian Academy, foumled in 1823, for the encouragement of the polite arts, meets in a building erected for its use, at an expense of 13,0001 ., and presented to it by the late Francis Johnston, architect. There is likewise a blie-tont sohool, where many boya are edncated, and a schoul of industry. The Unitarians have a sehool for pirls, and thero ure Sunday schusols attached to the several places of worship. 'There are several book societien, and a well-snyportel salaseription library:
Dudley is a princlinil sent of the iron traile; its vicinity firmishing inexhanstible supplies of eonl and lron ore, while the canals with which it is commected afford the means of readily conveying its prombets to all the grent markets of tho empire. The inhabitanss are prlnelpally engoged in mailmaking, which is the staple trule of the town, mining, the smelting of iron ore, and the mannfineture of tlint ghass, lixelasive of mils, a gront variety ol iron implements are made here. In
 und metal works,
'The workmen eomprise engincers, able mechankes of almost every description, such tus puttern makers, earpenters, first-rate masons, fobmilers, men of great selence for working the irmostone, conl, und many others. lhoys are emplinged in the pits amd mines to attenil the tires, aind varlous lighit work about the furnaces, to till the laxes, barrows, dec, for the men. The price of conl in this distriet varies from 4 s, th k s. and 10 s , , ton: the men engaged in nost of the works nte supplied with the coal at prime cont. 'The custom mostly is, to pay the men by the ton: some masters, howevar, pay then liv the day. It takes a long time to make a man n eollier. Ile is tirst apprenttieed to a persom, himsell a eallier, cibler his father os tellow workman. The labour is severe, and the workmen generally live upon good food,

## IULWICII

Carl Dudley, the chief landowner, is the largest ironmaster in the kingdom.

A mayor and other offlcers are amnually appoiuted by the lord of the manor, but the town is within the jurisuliction of the connty magistrates, who hold petty sessions every Monday. $\boldsymbol{A}$ county court is established here. In the 23 Eifward 1 . Indley sent 2 members to the H, of C.; but the privilege was afterwards withilrawn, and the town remained unrepresented till the passing of the Reform Act, when the right to send 1 member to the II. of $C$. was conferred on it. legistered electors 1,127 in 1865, all 101. householders. The returning oflicer is appointed by the sheriff of the collity.

I'o a stranger, for the first time approaching the town at night, the appearance presented by the numerous fires rising from the furnaces, forges, and collieries, is particularly imposing, their lurid flare illmminating the country for a considerable distauce roumd. There are, in many places, subterranean flres, which generally continue until the fuel which supplies them is nearly exhausted. 'This phenomenon has been observerl, more or less, in the nelghbourhood, for upwards of a century. At liussell 11nll, a stratum of from 25 to 30 ft . of argillaceous substances, lying between the upper siratum of coal and the surface of the earth, has been transminted into a species of stone by the heat arising from these subterranean fires.

In the Saxom times a strong castle was built here, which has since undergone many vicissitudes. In 1644, it withatood a siege; and the occurrence of a fire, in 1750, completed its destruction. Its ruins, which are very extensive, stand on an elevated situation, and command very fine and extensive views.

Ore of the most striking objects at Dudley consists of the remarkable development of the mountain limestone in the hills under and immedintely aljoining the castle. The peculiar stratification incident to a force acting powerfilly from beneath, which has elevated a portion of the previously deposited beds of limestone, leaving them to dip on both sides from a central ridge, is developed with great distinetness. The stratitication of this locality is still farther exhibited by the very extensive excavations in the limestone itself: some of these are open, and consequently very readily inspected, but the more extensive consist of long, horizontal galleries, whose extent nul brilliancy can only be uiserved with the aid of toreles, but which well repay the labour reyuired in gaining a view of their dark and secret recesses. These workings extend $1 \frac{1}{3} \mathrm{~m}$. under the lill, and a canal, for the conveyance of the produce of the mine, extends the greater part of this distinnce. 'The organic remains of former races of animals are very numerous. Several species of trilobites (Dudley locust) and crinoidea are met with not unfrequently, and corals and madrepores are in great profnsion. Perhnps it may be said, that few localities in the kingdom present so many curious and interesting suljects of observation to the geologist as this. Seldom have the operations of nature and of art united in bringing so much of the sccret economy of the interior of the globe under the observation of the inhab, of its slirfice. Many noble seats, and spacious residences, lie within a circnit of a few miles of the town. At Ladywaod, within the par.. and abont 2 m . from the town, is a valuable spri, possessing similar qualities to the Cheltenham and Leamington waters, and equally eflicacious for cutancons diseases: here are also commodious hot and cold baths open to the public. There are also several chalybeate sjurings in the neighbourliood. The
celebrated nonconformist divine, Richard Baxea, was for some time master of one of the schootsin the par. Dudley conferred the title of earl upon Lorl Warl int 1860.
I)UICLGNO (Turk, Olgun), a maritime toma of 'lurkey in Europe (the ancient Olcinium), pter, Albania, on the Adriatie; 19 m . SW. Scutari, and 40 m. SSE. The tomat possesses a citadel and a harbour, has some lithe trade, and is the residence of a ll. Cath, bishon. lts inlubitants are the only natives of Albania who have a taste for a sea-firing life, or tather, perhaps, for piratical excursions by sen, When Sir J. Hobhouse visited this town in 1809 , they were accustomed to enter into the navil servire if the Barbary powers, or to issue, 'as the lllyrias did of old, from the same port of Olcinian, to plunder the merchant ships of all nations.' (Jues nev through Albania, p. 163.)

DULWICII, a hamlet of Englanul, co. Suree, par. of Camberwell, humd. Brixton, 5 m . S. Londin by road, and $5 \frac{1}{4}$. by the London, Chatham, and Lover railway. l'op. of ham. 1,723 in 1861 , it is a quict rural place, mostly consisting of grapge of respectable mansions seattered round a laree open area planted with avenues of trees. Here in the celebrated Dulwich College, extablishel it 1619, by Edward Allen or Alleyne, a eontemporary of Jonson and Shakspeare, nud the most celelorated tragic actor of his ding. He endowed it with the manor of Dolwich, and certain lands and tenements in the prrislics of Dulwich, Lambeth, and St. Botolph, Bishojrggate; the ann. rev, being at the time 800 l , bit at present it is very mad larger. The college was originally built ly the founder in the Elizabethan style, from a design of Inigo Jones; it has of late years been renovated and augmented, and forms three sides of a quasirangle, with offices, a picture-gnllery, aud a lagy garden. It was founded for a master, warlen, $t$ fellows, 6 poor brethren, $;$ sisters, 12 scholan, 6 assistnnts, and 30 out-members. Accorling to the statutes, the master and warden must each be d the blood and surname of Alleyne, or, in defiuut of relatives, of the same surname: they must le 21 years of age, and unmarried. The 2 senid fellows are required to be of the degree of M.. and unmarried; and the 2 junior fellows gradate in holy orders. The brethren and sisters must ha 60 years old, and single, when admitted. On the death of the master, the warden succeels, and ? new warden is chosen hy lot from amongst cand dates qualitied as above. The fellows are ako chosen by lot, when vacancies occur. The pmi brethren and sisters nre chosen in the same mute from the 30 out-members, who must be parishionen of St. Saviour's, Southwark, St. Botolph, Bishejw gate, or St. Gıles's, Cripplegute ( 10 from enchpar) and are lodged in almshonses appropriated to the purpose: the churchwardens of the above parsare ex officio assistants in the goverument of the oullege. The Archbishop of Canterbury is visithe A library was bequeathed to it by lidward Cars wright, a comic actor, who died about the end the 17 th century, which contained a large, curims and unique collection of old plays, subsequealty (and with very questionable propriety) asigned to Garrick in exchange for some modem wots A respectable collection of pictures was also left the institution by the founder, aud by Cartwniph; and to this a most valuable and splemelid addition was made in 1810 by a lecquest of Sir france Bourgeois, R.A., who also left $\mathbf{2 , 0 0 0 0}$. to builla gallery for their reception, and to defray the expense of their preservation, \&c. and Sundays) to the public, almission tickets leing and sinable by any respectable person, on applicatimn in London. It consists of about 300 pletures, mostly of the cahinet size, and was formed by M. Desenfans, an eminent collector, who bequeathed Desm, on liis decease, to Sir Francis; and he, in turn, to the widow of his friend, for life, with reversion to the college : a mausoleum in the college rhapel contains the remains of Sir Francis and Thesenfans. Public service is regularly performed here, and it serves ns a chapel of ease to the limmlet. There is a free school in Dulwich, founded in litl, by James Alleyne, then master of the cullege, for 60 boys and 60 girls : the present revenue amounts to 200l. a yenr. There are many degant villas in the vicinity; and in summer the rilla is much resorted to by temporary visitors.
DUMBARTON, or DUNBARTON, a marit. co. of seotland, consisting of two detnched portions, of which the principal, or most westerly, lies letween Joch Lomond on the NE., Loch Long on the W. aad NW., the Clyde on the S., and the Milngavie hurn on the E. : the other and much smaller portion lies on both sides the Forth and Clyde canal, from Cumbernauld to Kirkintillocl. Total aren, 297 sq . mon or 189, 844 neres, of which nearly 20,000 are water, being prinelpally part of Loch Lomond. It consists mostly of lofty, rugged mountains incapable of cultivation; the arable lands being prinfipally in the S. part of the co., between Loch Jomond and the Clyde, and along the Forth and Clyde canal. The low ground is very fertile, and is pretty well cultivated. Estates mostly large; Int arable farms are rather small, and cren stock farms are not so large as in most highland cos. lats and potatoes principal crops, but very good wheat is also raised. Cattle in the upper parts thiefly of the Highland breed; but in the low rrounds, where dnirying is extensively carried on, Arshire cows are almost exclusively met with. fieep partly black-faced, and partly Cheviots. there are mines of coal and iron, and freestone nd limestone quarries. There are large cotton fuills at Duntouher in this co.; and paper-making, ic are carried on to a considerable extent; there re extensive print-fields on the Leven, the only iver of any importance. The co. returns 1 mem. n the H. of C. Registered electors, 1,597 in 1865. The town of Dumbarton unites with Renfrew, lutherglen, Kilmarnock, and Port Glasgow, in cridiog a mem, to the H. of C. Dumbarton is irided into 12 parishes; and had, in 1861, a pop. $55_{2}, 034$, living in 5,893 houses. The old valued ent was 2,7771 ; the new valuation for 1863-4 as 242,5861 .
Dimbaiton, or Dunbaleton, a roynl and parl. mr . and sea-port of Scotland, cap. of the above on on the W. bank of the Leven, within 100 ards of its junction with the Clyde, 13 m . NW. Glagov, on the railway from Glargow to Helensnorgh. Pop. 8,253 in 1861. The town consists fone well-built, crescent-shaped street, and of nme smaller ones. The houses are crowded Insely tugether, so that many of them are illired. There is a subiorb $\mathbf{E}$. of the Leven, conreted with the burgh by a bridge of five arches. thief public building par. church, a modern strucure, with a spire nud clock. There are also two hapels, belonging respectively to the United Asmiate Synod and the Rom. Cath. At hirll water, in Leven is navigable for large vessels to the nay at Dumbarton; but not so at low tides. hisis owing partly to a bar across the month of ic fiver, and partly to sandbanks between the ntance mul the guay. The hurgh hats long been tlelrated for its excellent schools. Among the stinguished individunls to whom they hate fur-
nished instruction may to specified Sir John Smollet, of Bonhill, one of the commissioners fur framing the articles of union between England and Scotland; his grandson, Smullet, the celebrated novelist; Dr. Colquhom, author of a Treatise on the Police of Landon, and other works. Shipbuilding and rope-making are carried oll to a considerable extent. Bleaching, the printing of cottons, and other branches of lidustry are carried on, along the line of the Leven from Loch Lomond, whence it flows, to the Clyde, a distance of 7 m . Dumbarton was made a royal burgh by Alex. II., in 1222; but on or near its site there bal been a still more ancient town, called Alcluid, the cap. of the Strathelyde 13ritons. The most important object connected with the town is the castle, on a steep, isolated, basaltic rock, at the mouth of the river, once surrounded by water. It has two summits, the highest being 206 ft . above the sea, and is a conspicuous and interesting objeet from the Frith of Clyde and the opposite coast. The date of the erection of the castle is not known, but it has existed from a very remote perlol. It is intimately connected with tho history of Scotland; and was successively in the possession of Elward 1., Bruce, Queen Mary, Charles I., and Cromwell. It is one of the forts which it wis stipulated in the treaty of Union should be kept in repair. The Dumbartonshire railway, from Baloch on the S. of Loclı Lomond to Bowling on the Clyde, passes the town: it is intended to extend the line to Glasgow. Dumbarton mites with Port Ghasgow, Kenfrew, Rutherglen, ant Kilmarnock, in sending a mem. to the H. of C.; and had 288 regist. voters in $181 \mathrm{~B}_{5}$.
I)UMBLANE, or DUNBLANE, a market town and formerly a bishop's see, Scotland, co. l'erth, on the Allan, a tributary of the Forth, 4 in . N. Stirling, and $22 \mathrm{~m}_{\mathrm{i}}$ SW. Perth on the railwny from P'erth to Stirling. Pop. 1,709 in 186i. Though once a city, having been the seat of a bishop, it is now only a small villnge, destitute of importance, and consisting of a single street, with a few lanes. But little business is carried on, except what results from a weekly market and liour annual cattle fairs. A few strangens are nttracted to it in summer, owing to an excellent mineral well in its vicinity. It is chiefly celebrated for the remains of its cathedral and other episcopal edilices. The former is pretty entire, but no portion of it is converted to use except the choir, which serves for the parish church. 'Ihe dean's house is now used as the minister's manse or parsonage-house. Robert Leighton, afterwards archbishop of Glasgow, held the see of Dumblane from 1662 to 1670 . This celebrated scholar bequenthed his library, consisting of 1,400 volumes, to the eathedral and diocese of Dumblanc. It is still extant, and has received great accessions by subsequent bequests. It is open not only to tho clergymen of the presbytery, but, on easy terms, to the public. The battle of Sheriffmuir, on the 13th of November, 1715 , between the constitutional forces, under the Duke of Argyle, and those of the Pretender, under the Earl of Mar, was fourfit nenr this town. Though indecisive, the result of the conflict was eminently favourable to the revolittionary establislıment.
1)UMIDUM, a military village and extensive cantonmest in Hindostan, prov. Bengal, 6 m . ENE. Calcuttn. It is the head-qumrters of the Bengal artillery, and consists chiefly of several long low ranges of buildings of one story, orn:1mented with verandahs, the ludgriugs of the troons, and some simall but convenient officers' quarters; the whole adjoining a large plain, used as a practiec ground. A battalion of liuropem artillerv is
usually statiened here: it has a church and a free school.

DUMFLIES, a marit. co, in the S. of Scotland, having S. the Solway Frith, F. Cumberland, $\mathrm{N}^{\text {. }}$ Joxhorgh, Selkirk, I Sepblen, and Lanark, and W. Ayrshire and Kirkeudbright. Area, 1,129 sif. m., or 722,813 acres, of which only about $1-4 t h$ or 1-5th part is supposed to be arable. With the exception of Annandale and Nithsiale, that is of the low groinds traversed by the rivers Annan aud Nith, the principal in the co., it is for the most purt mountainous; the meuntains, however, are not generally rugged or heathy, but are montly of an easy ascent, and afford gool sheep pasture. This, like most other Sicoteli cos., has been wonderfully improved in recent years, prineipally throngh the facilities afforided by stenm navigation for the conveyance of fat wheep, cattle, and other firm proluce to Liverpool, and the consequent extenwion of the turnip culture, the introduction of bone manure, nud furrow draining. Joads, fences, and firm buildings have been astonishingly improved, and are now, speaking genernlly, as good as any in the kingrlom. Cattle are mostly of the Gallowhy breed; ant Cheviots have been, for some yeirs past, a common breed of sheep among the hills, where at $n o$ remote period the principnl flocks were black faced. But such has been the progress of improvement, that it is now found not only practicable hut more protltable to introduce extensively half-bred sheep, or a cross between the Leicester ram and Cheviot ewe. This has, latterly, been the fayourite stock, and its numbers are increasing rapidly. There are other crosses between the same rams and blackfaced ewes, a harily breed, which thrive well on the coarser grasses, and are in grent request in certain districts of England and Wales for their feeding qualities. The formation of the Caledonian railway has been of very great alvantage to the store-masters of Annandale. linglish lime, formerly brought 25 m . and upwards by cart, is now conveyed by ruilway in trucks, and deposited at stations within trifling distances of the homesteads along the line; a saving and convenience the good effects of which are olvious in the increased use of the mineral, and the improved appearance of a great extent of hill pasture land. Hogs extensively raised (see next article). Property, mostly in very large estates; that of the Duke of Bucclengh, in this co., is one of the finest in Scotland. Farms in the lower districts vary from 100 to 500 acres; in the hill district they vary from 500 to 10,000 acres. There are valuable coal and lead mines in the par. of Sanguhar ; and freestone is abumdant, particularly in the vieinity of Dumfries. Manufactures mimportant. The co. is divided into forty-three purislies, and sends 1 mem. to the $H$. of C . Registered electors, 2,097 in 1865. The bors. of Dimmfries, Annan, Sanquhar, and Lochmaben (which are the principal towns), unite with Kirkcuallaright in sending a mem, to the 11 . of C. In $18 t 1$ Dumfriesshire had n pop. of 75,878 , living in 13,192 houses. The old valued rent was $18,219 /$, the new valuation, for 1864-5, was 375,1441 , exclusive of railways.

Dumpries, $\pi$ sen-port and parl, bor, of Scotland, co. Iumtries, of which it is the cap., on the $E$. bank of the Nith, abont 9 m . from its intlux into the Solway Frith, 64 m . S. by W. Edinhurgh, and 32 m . W. by N. Carlisle, on the Glasuow, Dim-
 The town is well and hamisomely, though irregularly, luilt; the lligh Street, which stretehes neirly 1 m . in length, does not rmin in $n$ straight line, and is freatly obstructed at one point hy a steeple, or building, in which the town council
holds its meetings, placed in its very centre, ine other streets lie either at right angles to the lifut Street, or parallel to it. The houses are genenili built of red freestone, which the nelghbouring country produces in unlimited abundance; and such of the buidinges as are of old date are groe rally whitewashed; while many in the mumpen part of the town are painted in imitation of P on land stone. Altogether, the town is clean, nea and substantially built, with comparntively fen marks of poverty or destitution; and is reganken as the provincial capital of the $S$. of Scotland There has been no material increase in the strett or lnildings of the town for years past, but then has been a considerable increase in the number d villas in the vicinity. The suburb of Maxwell ton is connected with it by two bridges, one luil in the 13 th century, and consisting originally thirteen arches, of which only geven are mat visible; the other, a very elegant structure, erectel in 1790. The pullic buildings are numerroy There are two parish churches; St. Michael's, m built in 1745 , and the New Churell, erectel 1727. The former is elicefly remarkable for in extensive and crowded burial-ground, and the ra number and variety of its monuments. It ha been estimated that, exclusive of ruinons an dilapidated monuments, the cost of erecting thes in preservation conld not have been less the $100,000 l$. In this cemetery was erected, by pallifi subscription, in 1815, at un expense of jowh mausoleum in memory of Burns, who spent th last years of his life in Dumfries, and whase i mains are deposited in a vault below. An emblematic piece of marble seulpture, executed by 'Jur nerelli, in the interior of the structure, represent the genius of Scotland finding the poet at th plongh, and throwing her mantle over him. Th house in which the poet lived and died, with sam adjoining properties, was purchased on the of July, 1850, for Lieut.-Colonel Burns, the seven son of the bard. Near the churchyard gate at deposited the remains of Andrew Crosbie, em advocate, once the ornament of the Scotch te who exemplitied in real life the character of Come sellor Pleydell, as portrayed by Sir Walter Sent A thirl church was erected in 1840 ; and there att sundry dissenting chapels, sonse of them favenable sjecimens of architecture. The steeple int High Street, already mentioned, is a handime structure, the work of Inigo Jones. In (niene bury Square, off this street, is a handsome laris colimn, erected in 1780 , in honour of Chath drke of Queensberry. The other public building are the trndes' hall, court-house, county gaol mas tnininer a bridewell, infirmary, dispensary, academ assembly-rooms, theatre, and lunatic asylum. Th latter, called 'The Crichton Roval Iustitutum was fomuled in 1838, by Mrs. Crichton. An adid tional building was crected in 18.19, capable accommorlating 200 pauper patients. The tot: exprise exceeds considerably 100,000 . The in timary, which was opersed in 1776 , is the ond institution of the kiud in the $S$. of Sentand There is a workhonse, fommed and endowed b two brothers of the name of Muirheal, in hit which aceommorlates, at an averuse, thirty and twenty young paupers, besides dispeniong charity to about forty widows, who live out of th building. There are three parochinl schools it the parish, and four endowed seminaries und the patronage of the town-comeil, united unix the name of the lumfries Academy.

carried wha are those y checked cottons wis ruch las disaypaant remain are enplore
through the medium of agents, by Carlisle or Glasdow manufacturers. The trade of tanning has declined; but the quantity of leather prepared by pit and bark processes is still considerable, and is espented for its durable qualities. There are several breweries, and the largeat basket-making patablislament in Scotland. The manufncture of clogs, or strong shoes, with thick wooden soles, the use of which is almost entirely contlned to the inhat, of the S. of Scotland, is with one or two shight exceptions peculiar to Dumfries; but it dues not employ many hands, the use of the aracle leing on the decline. Shoemaking is here a tharishing branch of industry.
lumfrios has long been celebrated for its weekly eatle-mnrkuts, and its four great annual fairs, for the sale of cattle and horses, which, with the markets, srelield on the Sands, an open space between the town and the river. Nost part of the cattle raised in the co. of Inmfries, and a considernble part of the peculiarly tine breed of cattle raised in (ialloway (cos. Kirkculbright and Wigtown), are disposed of in the Dinmiries markets. At an average, 25,000 head of cuttle are annually sent up frum Dumfries and Galloway to England, princinally to Norfolk, where they are fittened for the Luadon markets. From 400 to 600 horses are amually sold at each of the two great horse-fairs. Dumfries is also the prineipal pork-market in Seothand. The pigs come prineipally from Galloway, hut they are produced to a greater or less extent in all parts of the district. The principal fureign trade is with America and the lialtic for timber, of which the annual value imported varies from s,, 000. to $10,000 l_{\text {. }}$; the remninder is coasting trade. The imports are coal, slate, iron, tallow, hemp, bunes, timber, wine, and colonial produce; the exports, wool, freestone, hosiery, shoes, pork, fit cattle and sheep, grain, woold, nursery plunts, and grass seeds. There belonged to the port on the Int Jaunary, 1864, 52 sailing vessels under and 65 alove 00 tons burden; there were no steamers. The customs' revenue amounted to $8,464 l$. in 1859 ; 107,5931 . in 1861 ; and to $\mathbf{6 , 4 5 1}$ l. in 1863 . Vessels of above 60 tons burden can approach the town, the river having been much deepened : there is falso a guay about 700 ydls . distant; one for vessels of greater burden about a mile and a half farther dowa; and a fourth near the mouth of the river fir foreign vessels, and such as draw too much rater to approach nearer to the town. Durnfries in govemed lyy a provost, three bailies, and twentyfive eouncillors. Corporation revenue, 1,515l, in is63 4. Annual value of real property, 33,0431 . in 1863-4. Dumfries unites wish Anuan, Kirkrudbright, Sanquhar, and Loehmaben, in sending mem. to the H. of C. Registered electors, 677 [n $186{ }^{\circ} \mathrm{O}$.
Damfries is a place of great antiquity, though it ras nut made a royal bor. till the 12 th century. In less than a century afterwards, Devorgilla, langhter of Alan, last lord of Galloway, and mother ff Juhn laaliol, erected a monastery here for Franiican friars; and, for the sake of this religions anse, she built the old bridge, the toll on which ormed part of the endowment of the institution. ( was here that John Comyn, the heir and reprecontative of Lady Devorgilla, and one of the comectiturs for the throne, was assassinated, under freumstances of great provocation, in 13000 , by is nival, the illustrious Robert Bruce. The castle elonging to the Comyns was situated on a spot A the immediate vicinity of the town, which still peas the name of Castledykes. A strong castle nee stood on the site now occupied by the new harch. lleing in some respects a border town, pumfries frequently fell into the hands of the Yols 11.

Finglish. It was for some time in the poseession of Edward I. It was burnt hy the Einglish previously to 1440, and agnlu in i536. In 1570, the castle was taken and sucked, together with the town, ly the Farl of lissex and Lord Seropre. Gueen Mary and her privy eonncil, in 1563, rititled, at Dumities, a pence with linglnud. Jumes VI., In passing through the town, in 1617, ot his return to lingland, presented the trales with a small silver gun, to be awarded, from tiane to time. to tho best marksman; but this dangerous pustime has been discontinued. The inhuh., in 170t, displayed their opposition to the union of the two kingdoms, by burning the articles mul the names of the commissioners at the market-cross. They evinced great loyalty towards the reigning family in 1715, and so foritled their town, that a harge boxly of insurgents, who had determined to attack is,found it expedient to change their resolution. lhat, in 1745, it sulfered severcly from the relsel army, which was stationed here a few days on its return from lingland.

IUNNDAR, a roynl and parl. bor. and sea-port of Scothand, co. lladdington, on a slight, eminence on the German Ocean, 27 m . E. by N. Edinburgh, and 28 m . NW. Iferwick, on the Edinburgh and Herwiek railway. I'op. 3,796 in 1861. The borough consists of a long and well-built street running 1 :. and W., with inferior streets, towards the sea, and one on the $S$. introdneing the rond from Edinburgh. Its public buildings are n new parish ehureh of Gothie architecture, with a twwer 107 2 ft. high; Dunbar Honse, the ordinary residence of the family of Landerdale; the town-hall; and burgh schools. It has a subscription and mechanics' library; an English and Latin school under one master; a mathematical school; und several private seminsicies; a sailors' society for the benetit of superamnuated semmen and their widows; three dissenting chapels, two helonging to the United Associate Synod, and one to the Wesleyan Methodists. Duinbar is govemed by a provost and 12 councillons; corporation revenue 1,226l. in 1863-4. The harbour has 9 ft . water at neap, and 14 at spring tides, but owing to rugged rocks the entrance is dangerous. Coal is imported to the extent of abont $\mathbf{2 0 , 0 0 0}$ tons a year: foreign grain to a considerable extent. Corn of various kinds, including beans and peas, exported to the amount of about 25,000 qrs. White tish of all kinds are caught off the coast. The cod is pickled, and sent to London; the haddocks are smoked, and sent chietly to Elinburgh and Glasgow ; the lobsters are preserved in pits, cut in the rock within sea-mark, and sent to London. The herring fishery is, also, considerably productive. Dunbar was created a royal bor. by David II., but existed as a burgh long betore that date. It evidently grew up under the protection of the castle of luinbar, a fortress which stood on a lofty rock within seamark; but the date of its building is unknown. The castle and lands of Dunbar were conferred, in 1072, by Malcolm Caenmore, on the Earl of Northumberland, whose descendants, created earls of Dunbar and March, retained possession of them till their forfeiture in 1434. This fortress rendered Dunbar the theatre of many warlike exploits. It was taken by Eilward I. in 1296 . Edward II took refuge in it after his defeut at Bannockburn. It was often besiegel, and seems alternately to have Lalonged, for longer or shorter periods, to the English and Scotch. Four times it received within its walls Queen Mary. In 1567 parliament ordered it to be demolished, and scarcely a vestige of it now remains. The 6th earl of Dunbar, in 1218 , founded in the neighbourhood a monastery of Red Friars, of which some traces yet remain; and the

Tth earl founded a monastery of White Friara, hut of it no vestige can now be seen. The title of earl of Dinhar was revived, in 160 s , by James VI., in the person of Gieorge Ilome, of Manderston, lord high treanirer of Scotlami, at whoso denth, ns he left no heirs male, it became extinct. A splenilid marble monument was erected to his memory in the old, and is now preserved in the new, church of Dunbar. Dunbar unites with N. Berwick, IInddington, Lauder, and dedlourgh, in semaling a mem. to the 11. of C., and in 1865 had 148 registered voters.

IUNDDALK, a sea-port town and parl. bor. of Ireland, co. Louth, prov. Leinster, $45 \mathrm{~m} . \mathrm{N}$. Iublin, at the extreme Fi. point of Dundalk llay, near the month of Custletown river, on the railway from Dublin to Ilelfast. 1'op. 10,782 in 1841, and 10,428 in 1861. The town consists of two main streets, each 1 m , in length, intersecting ench other near the centre, with several transverse thoroughfares. They are paved, lighted, and kept in order by commissioners under the watching and lighting act. A bridge crosses the Castletown river on the N. There is an assembly-room, a liternry society, and two news-rooms. A hunting club holids its meetings here, and races take place occasionally in the neighbourhool. Near the seaside is a large covalry barrack. The parish church is a spacions building: there is also $n$ large l . Cntlo, chapel, and meeting-houses for l'reshyterinns, Indepentents, and Methodists. It has an endowed classical school, to which the sons of freemen are almissible nt a low quarterly fee, $n$ school called the Dundalk Institution, under the Incorporated Society; one on the foumilation of Eirusmus Smith; and some others supported by the contributions of individuals: these educate in all about 600 pupils. It has also a co. infirmary, a mendicity association, a savings' bank, and several minor charitable institutions.

Though incorporated by charter of Richard II., the bor. is governed unier a charter of Charles II. The ruling body consists of a bailiff, 16 burgesses, and an unlimited number of freemen chosen by the burgesses. Dundalk returned 2 mem. to the lrish H. of C., and now returns 1 to the imperial II. of C. The parl. bor, comprises 445 neres. Registered electurs, 304 in 1862 . The assizes and general sessions of the peace for the co. are held here twice a year, and petty sessions every Thurstay. 1 guildiall contains apartments for municipal purposes, an assembly-room, and othices for several branches of public business, The co, court-house, an elegnnt modern structure, is built on tho model of the temple of Theseus at Athens. There are several distilleries, tanneries, salthouses, a malthouse, and a foundry. The trade consists principally in the export of a large portion of the agricultural produce of Louth, Cavan, and Monaghan; comprising whent and wheat-thour, oats oand oatmenl, barley and malt, with cattle, sheep, and pigs. The introduction of steam navigation has occasioned a grent incrense in the export of eggs and ponltry. The harbour, which is safe though shallow, has been much improved. A lighthouse has been erected on the bar at the month of the river. The anchorage ground has from 4 to 8 fathoms water. There belonged to the port, on the 1st of January, 1864, five sailing vessels mader, and 23 over, 20 tons burthen; besides 4 steamers of a total burthen of 1,703 tons. The customs revenue amounted to 30,5751 , in 1859; to 51,7971 . in 1861; and to 39,3131 . in 1863. Markets on Mondays; fairs on the Monday next but one before Ash-Wednesilny, May 17, first Monday in July, last Monday in August, second Monday in October, and second Monday in November.

I undalk was one of the fortreases erected by the linglish shortly after their settlement, for the leo
fence of the northem pale; but its defences hare since been sulfered to fill into decay, and fern femains of them are now in existence.

DUNDELi, a flourishing royal and parl. borand sea-port of Scotland, co. Forfar or Angus, an an acelivity on the N. bank of the Frith of 'Tar, (on the railway from Perth to Arbroath: 371 m . N. liv i Edinburgh, 57 m . SW. Aberdeen, and $9 \mathrm{~m} . \mathrm{Wi}$. the lighthomes on Ihitonness I'oint at the mauth of the lirith. l'op. 90,417 in 1861. The pan has increased consitlerally since 1841, when it amounted to $62,79$. . The town stretches upwarts of a mile along the Thy, and inland nbout ladt a mile up the acelivity which terminates in Dundee Law, an insulated conleal hill, $\mathrm{j}_{3} \mathrm{~s}$ th above the level of the river. In the centre of the town is a spacinis parallelogram, 360 ft . long br 100 broad, called the High Street, aud seven if the principal streets diverge from it, the Xethe. gate and Overgate to the W., the Murraygateand Seagate to the E., Castle Street fand Crieltus Street to the S., and lieform Strect to the $\mathrm{S}^{\text {. }}$ There is generally great irregularity in the streete except in the modern portions of the town; and there are many narrow and mean lanes which contrast strikingly with the new streets, The suburbs along the Tay are marked by many elegant villas. Of public buildings the most imposing is St. Mary's Church with its tower 156 ft . high, a splendid editice built in the 12 th century. The only part of the original building, however, which p. mains is the tower, the other parts having beenctaiu in the last and present centurics. It is in the furmon a cathedral, the tower at the west end, next thit the nave, then the transept, nud at the east ond the choir. After the leformation it was dividel by partition walls, into different Preslyterian churches, of which at one time there werefur. In 1841, three of these were hurned down by an axidental tire. They have been rebuilt conformatiy to the original style of the structure, but narif has only three places of worship, the transelat containing only one instead of two, into which it ws previously divided. There being a large una space in front of the builling, it has a fiate ofpearance, and is well seen by strangers pasing through the town on their way to or from l'erth There are two other churches belonging to the Establishment, and numerous chapels belonging to Dissenters, but none of them are remarkahi for their architecture. The town honse is a flue building, on the S. side of the High Street, ereted about the year 1738 . The custom house mas erected in 1841 after a design by Mr. Jannes Leslie, the engineer of the harbour, the cost having bean defrayed by government. A splendid areh, in commemoration of her majesty's landing at the harbour in 1844, was constructed at a cost of abont 3,000). The public school, better known by the name of 'The Public Seminaries,' is a handsme building in the Grecian style. The exchang buildings contain a splenelid reading-room and other conveniences for the mercantile and por fessional classes. The 'Watt Institution,'s: called in honour of the illustrious James Wath is a neat building, containing a lecture-hall, librar, \&c., for the use of the working classes, for whas benefit it was erected by public subscription.

The chief of the public uorks counceted wits the town is the harbour. Previously to 1815 it was of very limited extent, and quite unsuited to the trade of the place. In that year an act parliannent was obtained for enlarging it, an placing it under the management of commin sioners elected by the various incorporated pubie

bulies of the town and county. The first plan of ealarpement contained ouly one wet dock, but now there are three, measuring together about 2ti acres, auld capalile of accommotating vessels of the largest size. llesides the wet or flonting doeks, there is a larte graving dock eapable of contalning three vesels at a time, and a graving slip on Norton's plan, on which sailing-vessels or stenm-vessels of alnust any size can be hauled up for repair. The harbour coust nearly $1,000,0001$, sterling. The cost has Inen defrayed from the dues collected on goods and resels entering and departing, except about 2thi, 0000 of borrowed money. Dundee has nmple mil way accommodation. W. there is the 'Dnnidee mind l'erth,' E. the 'Dundee and Arbroath,' N. the 'Wuadee and Newtyle,' S. the 'Edinhurgl and Dundee.' There are two gas companies in the town. Until the year 1815 Dundee was illsupplied with water: but a joint-stock company was extallished at that time, and they Prought a plentiful supply from Monikic parisli, distant letween 8 and 9 m . A large reservoir is formed there to collect the rain-water of the distinct, and a cavered conduit conducts the water to the town. There is a smaller reservoir within a mile of the town on high gromnd, from which, by means of pipes, there is a constant pressure of water, so thut it rises to the attics of the highent loases, and is very convenient for extinguishing fires, there being fire-eocks in all the streets, and leather hoses or dlexible pipes to lead the water to the house in which the fire breaks out. The whole coot of the water-works has been about 130,000 .
The staple trade of Dundee is the manufacture of linen, cliefly of the conrser deseriptious, such as are used for the clothing of the lower orlers, Inth at home and abroad. Large quantities of saching, bagging, and sail-canvas are also mannfinetured both for the home and foreign markets; and some of the manufacturers have of late turned their attention to finer fabries, such as drills, triped and cheeked linen, and fine shirting. The Dinea trale of Dundee is the most extensive in the Ct. Kinglom. Besides what is manufactured in the town, the greater part of what is made in Fortar, Kiniemuir, and the other inland villages of Forfarhire, is sent here to be dressed, packell, and sent off; so that the quantity exported from Dundee exceeds considerably that from any other port in he kiugdom. The deelared value of the exports oflome proluce from the port of Dundee amounted 0137, 7331 . in 1859; to 72,424l. in 1860; to 97,0811 . in 1861 ; to 65,5491 . in 1862 ; and to 95,9811 . in 863. The raw materials for the linen manufacwre of Dundee are received chietly from Russia nd Prussia. The gross amount of customs cluties hereved was $66,257 \mathrm{l}$. in 1859; $59,747 \mathrm{l}$. in 1860 . $88,808 \mathrm{l}$ in 1861 ; 60,4201 . in 1862 ; and 65,0491 . in xili3,
The linen trade seems to have been introluced nto Dundee early last century ; but for a lengthned time it was quite inconsiderable. In 1745 only 74 tons of Hax were imported. From that period to 1791 the progress of the manufacture was nore rapid; in the latter year, 2,444 tons flax, nad 299 tons hemp being imported, and about :000,000 yards of linen, sail-cloth, \&e., exported. Previously to this period all the yarn used in the maufacture was spun upon the common haudthel, partly in the town and partly in the adceat country. But the spinning of yarn by nachinery began soon after to be introduced, and he increased fucility of production consequent to he erection of tlax spimuing mills has been such, ist the eost of the yarn, inclurling of course the 315 material, is now less than the mere expense in material, is now less than the mere expense
ispinning ameunted to forty years ago. The re-
mit has been the total cessation of hand-spinning in all parta of Scetland, and a wonderfill incrense of the quantity of yaru produced, and of the mamufucture. In ixis, fromin $\mathbf{2 0 , 0 0 0}$ to 21,000 persoms were engaged in the manyacture. The wenving of the linen, which was formerly done on handlooms, is in course of being superseded by machines, or 'power-looms.' There are many calendering and pucking establishments, all of them of considerable extent. At these works the lineus are passed thronghis machines numed 'calenders,' for the purpose of making them smooth ind close in the texture. They are then cit down into short picces, folded into such shapes as are suitalle for the markets to which they nre to lo: sent, and packed into bales by means of hyidraulic presses, which squeeze them into very small binlk, in order that they may repuire less room lin the vessels in which they are shipped to fireign cometries.

More than hali the linens sent from Dualee are exported to foreign countries, the remninder being sent to London, Glasgow, Manchester, and other large towns for home consumption. The linens which are exported to forcign comintres are for the most part sent to Liverpool, London, and Clasgow, to be shipped there, it being found more advomtageous to send them abroad as parts of general cargoes of goods, than to send whole cargoes of them direct from Dundee. Some of the manfacturers are the exporters of their own linens; others sell to expurting merchants in Dumlec, who employ their cupital in that brnneh of trade. The linens are in general sent on consignment to agents in forcign countrics for sale, and are suld by them to retnilers on credit of six to twelve munths. The foreign countries to which Dundee linens are exported are the United States, Canala, Mexico, the West India Islands, Brazil, P'eru, Cliili; and some are also sent to Spain, P'ortugal, and the comentries on the Mediterrancan. $\Lambda$ large amount of capital is required to carry on the linen trade of Dundee, as the raw material is mostly paid for in rendy money, and the manufuctured article is sold on long credit. For that portion of the latter which is sent abrond it is in general abont two years from the time when the manufacture of it is commenced till the time when returns are received. It may, therefore, be estimated that nearly $3,000,000 l$. sterling are constantly employed in the Dundee trale, and in that of the small towns of which it is the sea-port. The gross annual value of real property, including railways, assessed to income tax, amounted to 214,9051 , in 1857, and to 281,8531 , in 1862.

The other important branches of trade carried on in Dundee, besides the retail trade common to all large towns, are the slipping trade, ship building, and machine making. The number of ships or vessels belonging to the port on the lst of Jan., 1864, was as follows:-6 sailing vessels under 50 tons, of a total burden of 195 tons; and 199 vessels above 50 , and of a total burden of 42,678 tons. There were, besides, 2 small steamers, of a totnl burden of 69 tons, and 15 larger steamers, of 4,0331 tons burden. Many of these vessels are employed in foreign trade not connected with Dundee; a considerable number is required for the importation of flax from the Baltic, some are engaged in whale fishing, and the rest in the coal and coasting trades. There are seven ship-building yards in Dundee, and there are commonly 10 or 12 vessels on the stocks.
Dundee is well supplied with schools for the children of the middle and lower classes, and a plain education can be got on very moderate terms. At the public seminaries, which are under the management of directors appointed by the town
council and those whe contribute to the cost of the building, classieal education, to $n$ certain extent, as whll as the elementary brniches, ean be olstained at a very moserate cost. There are teachers of Latin, Grook, French, Germnn, Mathematles, aud Natural l'hilosophy: The number of pupils of nll ages and rauks at the public seminaries is genernlly between 600 and 700.

The principal charitable institutions are the infirmary or hospitnl, the industrial school, and the orilum house. The intirmary lins accommoslation for about 150 pathents, and is supported entirely by donations and yearly contributions from bencvolent individuals. The industrinl, or ragged, sehool is for poor boys and girls who are leserted or not cared for by their parents, and is nlso supported by voluntnry contributions. The number of children in it average about 120. The orphan house is likewise maintained by contributions and hequests.

The municipnl government of the town is vested in a provost, 4 bailies, a dean of guild, treasurer, and 21 commeillors. The revenue of the corporation, which is derived from rent of property, and petty customs on provisions, amounted to $3,512 l$. in the financial year 1863-4. I'reviously to the pnssing of the Reform Act in 1832, Dundee was joinel with Forfar, l'erth, Cupar, and St. Andrew's in returning a member to the H. of C. But the act referred to conferred that privilege on Dundee singly. The parl. const. was 2,895 in 1865 .

The origin of Dundec is involved in obscurity. In the enrly centuries of the Christian era it had probably been a village inliabited by a few fishermen, who gained a Jivelihood by supplying the neighbouring country with fish. In the eleventh century King Malcolm crected a residence here, and lived in it occasionnlly with Margaret his queen, a daughter of one of the Saxon kings of England. The next remarkable occurrence concerning Dundee was the building of a ehureh in homour of the Virgin Mary, of which the old stecple or tower is now the only remaining original part, by David, earl of Huntinglon. Sir Willinm Wallnce was educated at the grammar school of the town, and was often in its neighbourhool with his gallant comjanions duriug the struggles which they made for the independence of Scotland. After he was overpowered by the forces of Elward I., Dundec suffered much for its allherence to the cause of Scottish independence. In the civil wars, luring the reign of the Stuarts, it whs nlso frequently the object of contention leetween the two parties; and ultimately it was almost totally destroyed by the army of General Monk, in 1651. After $1745^{\circ}$ it gradually recovered, and towerds the end of last century it hasl attained to a considerable degree of prosperity. It was formerly a walled town, hut of its walls and gates no traces remain, except the 'Cowgate Port.' Dundec was made a royal burgh in 1210 , when it received a eharter from William the Lion. The churter was renewed at different times by the sovereigus of Scotland, and the existing charter was given by Charles I. in 1641.

IUNFERMLINE, a royal and parl. bor, and eminent manufneturing town of Scotland, co. Fife, 3 m. N. Frith of Forth, 16 m . NW. Edinburgh, and t m . NW. Noith Queensferry, on the railway from Stirling to Dunlee. Pop. 13,506 in 1861. 'Ge town is aboit 300 ft . alove the level of the $:=9$, and occupies an agreeable but rather inconvenient situation, being placed on the face of an extensive eminence, diflicult of ascent from the S . The town stretches filly a mile in length from $E$. to W., and its average breadth is about $\frac{3}{4} \mathrm{~m}$. The main strect, which is handsome and sulstantially
built, is pretty regular. Almost all the oithe streets are more or less irregular; nud while stater are handsome, not a few are of an opmosite te. seriptlon. A large suburl, having riseu up on the W., and being separnted from the town liv a dep ruvine, formed by the Tower-13urn, a bidige nas thrown over the rivulet in 1770; and the furine linving been so far fllled up, buililings have been erected on both sirles. The only remnrkable puin lic building is the parish or Abliey church, winn: part of a monastery founded here by Malcolm III surnamed Caenmore, and which served ns the parish chureh till 1821 , when a new church $\mathrm{N}_{2}$ erected to the l: of the old building, and in ino. mediate comnection with it. When diggingin what wns culled the Psalter churchyard (on whid spot the choir furmerly stool), for a proper site fi the new eliftce, the tomb of the most illastrind of the Scoteh sovercigns, Ronent Invees, me diseovered in 1818. Tis skeleton, which wid pretty entire, and 6 ft. in length, was disintemul and a cast of his skull taken. It was re-intemed nmidst much state, by the barons of exchequen the bones being plnced in a new coffin, illed up with bituminous matter, calculated to presme them. The spot is below the pulpit of the ntw chureh. This building, whieh is of Gothic atciteeture, harmonises well with the old structure of which it is a continuation: and is surnounted by a high sufure tower, round the sides of whim, in open liewn work, are the words 'King luder the liruce,' in capital letters 4 ft . in height. The Abbey church of Dunfermline ts altogether one of the most imposing and magnificent structurd of the kind in Scotland. It has 2,051 sents: lot is only available, from the obstruction of pillan and otherwise, for about 1,400 lisarers. Thes are numerous other churches in the town and parlsh, some recently built, ant neat in thit: construction. The largest church of the Unith Presbyterian Synod is a huge barn-looking building, which raises 'its enormous rectilinen riclge' over all the other buildings in the twat In front of it was placed, in 1849, a statue of halid Erskine. The other public buildings are the town-house, county-court buildings, grammaras eommercial schools, gaol, poor's-house, aud fres hospital. The town-house consists of three strines and is surmounted by a steeple 100 ft . in hepith The 3rd story was formerly used as the the gaol, but being extremely ill-suited for that purpose, a now gaol, erected on the town grect, na opencd in 1844 . The county courf buildings wer originally named the guildhall, afterwards the Spire Inin, on account of the lofty spire ( 132 ft ) that distinguishes the edifice.

The means of instruction are ample: there in grammar-school, established prior to the hefumbtion, of which Robert Henryson, an ingeaik poet of the times of Jnmes II. or III., is beliend to lave been master; a commercial school unda the patronage of the guildry; the $\mathrm{M}^{\prime}$ Leaa ard various other schools. There is a mechanies ivstitute, and a scientific nssociation for popplst iectures on science and literature : the fees of a . mission to these lectures being low, they hat been well attended. There are several subscriptite hibraries and a local museum.

In addition to the Abbey church, which is mat ?giate, there are several churches of the establist ment; besides Free churcher; United Preshyteris churches, Episcopalian, Baptist, and Independent chapels. The Secession from the establita church in 1732 originated liere. Of the Dless Erskine, regarded as the futhers of the Seresio one, Mr. Kalph Erskine, was rmister of the Alde chureh of Dunfermline. Phunfermline is dlatinguished hy its profficiency in the manuffacture of tine table linen andl coloured in the mavers. The business is of considerable an-
talle-cover tiquity, having been introduced towaris the behiuning of the 18th century; but the original falicy were of a coarse deseription, namely, ticks anl checks. Damask and diaper looms were introduced early in the last century, by nn ingeniuns mechaiic of the town, of the name of Blake; but for a leugthenel period the trade increased very nlowly. In 1738 a new epoch conmenced in the manufacture, by the introductimn of the fly-shuttle; and many improvements have since lieen effeeted in the construction and working of the liom, and in other particulars. Among the most important of these whe the Jnequard loom, introduced in 1825, and now universally employed.
jirevionsly to the ond of inst century, nll the yam was xpmu by the hand-wheel; but at that time machinery was introluced, and has now entirely superseded the former clumsy nad expensive system. The manufacturers are supplied with the illuer sorts of yarn chietly from Yorkshire and Ireland, and the other sorts from the neighbwurhood, Dundee, and elsewhere. They do not spin exclusively for the loenl market, lint prepare such articles as linen threal, shoe thread, and twis, for the general market.
This tranch of manufncture has found its way toa small extent to other parts of Fife, aund to the north of Ireland.
Among other manufactories Dunfermline has lireweries, candle-works, rope-works, tan-works, irun foumdries, and flour-mills.
bunfermline unites with Stirling, Culross, Inverkeithing, and Queensferry, in returning a mem. to the II. of C. Parl. constit., 502 in 1865. Annual value of resl property nssessed to income-tax, 35,4881 in 1857 , and 26,9451 . in 1862 . The horough is govemel by a provost, 2 bailies, and 22 couneillors. There are several endowments in the bor, fir the support of decayed widows and other poor persons.
The town is connected by railways with Edinburgh, Dundee, Perth, Alloa, and all the principal tonns of Scotland. There are threc harbours in the parish, each about 3 m . from the town, viz. Charleston, Brucehaven, and Limekilns. The last does not admit vessels of more than 200 tons burden. Charleston admits vessels of 400 tons. lts hasin is capacious, and perfectly sheltered from every wind.
The parish of Dunfermline abounds in coal, lime, and ironstonc. The coal has been wrought for upwards of 500 years. The quantity worked is nearly 150,000 tons a year. Brucehaven and Charieston, two of the three harbours referred to, were originally constructed by Lord Elgin, whose collicries and limeworks are on a very extensive seale.
Dunfermline can boast of great antiquity. A tower or fort, built here by Malcolm Cacnmore in the 1th century, gave origin to the burgh. The same king also founded a spacious Benedictine monastery, which ultimately became one of the most wealthy and important institutions of the kind in Scotland; and ordainel that its precincts should form the burying-place of the Scottish kings. Ilis own remains and those of his consort, Queen Margaret, were interrell there, as also those of eight others of the roval line, including Robert

Bruce. Dunfermline contlnued to he $\boldsymbol{n}$ fnvouritn royal residence as lomg as the Secttish dymanty exlsted. Charles I, was horn here; an also hila sister Eilzabeth, afterwaris queen of Dohomin; nul Charles 1I. paidin visit to this anclent seat of roynlty in 16.50 . The scottisli parliameut was often held in it. The date of the erection of the palace is unknown; hut it is believed to have heen mueh extended and adorned ly James IV. nal James V. There now remains only the S. wall, nad a youlted apartment, which was the king's eellar, having the kitchen above. Of the tower, erected by King Malcolm, only a mouldering fragment is seen. Of the monastery, which was once of great extent, nothing remains entire except the S , and W , walls of the fratery, or refectury, in the latter of which is a the Gothie window; and the nave of the ohl nbley chureh, which, as nhove stated, forms the vestibule to the new chureh. llut ancient as tho place is, it was nut made a royal burgh till 15 ks .

DUNGANNON, an inland town and parl. lur. of Ireland, co. Tyrone, nrov. Ulster, $12 \mathrm{~m} . \mathrm{N}$ by W:。 Armagh, and 7 in . W. Lough Nengl, on the railway from Dundalk to Landonderry. P'op. $3,80 \mathrm{~L}$ in 1841, and $3,98 \cdot 1$ in 186i. The town consists of a square, with several good streets branching from it along the sldes of a hill. The par. church is $n$ large ancient building, and it has also a Rom. Cath. chapel, aud meetiur-houses for Preshyterinns, Neceders, and Metholists; a elassical seliool, finmided in the reign of Charles 1 ., well enlowed, and cnpable of accommolating 101 resident pupils; $n$ dispensary, and a mendicity institution. The eorporation, which cousisted of a portreeve, burgesses, and commons, is now extinet. The town returned 2 mems. to the Irish 11. of C. till the Union, sinco which it has returned 1 mem. to the imperinl 11 . of C. Previously to the Reform Act the franchise was vested in the portreeve and burgesses. The ancient liberties of the bor. eomprisel 836 neres, but the parl, bor, has been restricted to 230 acres. liegistrred electors, 221 in 1865. A manor-court, with iarisalietion to the amount of 202 ., is held every t. to weeks; as also general sessions twice in the year, and petty sessions every fortnight. The court-honse, with a bridewell attached, is a handsome modern building: a party of the constabulary is stationed here. The linen manufacture, though much fallen off, is still carried on pretty extensively, and there are several bleachgreens in the neighbourhood; earthenware nad pottery are also manufactured, and there are ironworks, a brewery, and a large distillery. Markets on Tuesdays and Thursdays, in a spacious and convenient market-house : fairs on the tirst Thursday of every month. It is the sent of a poor lav union. Dungannon is famous in Irish history from its being the place where the delegates of the Ulster volunteers met in 1782; and whenee they issued their resolutions declaratory of the independence of lreland.

DUNGARVAN, a marit, town and parl. bor. of Ireland, co. Waterford, prov. Munster, principally on a peninsula in the estuary of the river Conigar, 25 m. W. by S. Waterford. Pop. 8,625 in 1841 , and 5,886 in 1861. As vessels of above 150 tons camnot come up to the town, it is not a place of much trade, though some corn and other produce is slipped for England. Recently it has been much improved, principally through the exertions of the Duke of Devonshire, who has buitt, at his own expense, a handsome bridge, connecting the main body of the town with the suburb of Abbeyside, on the opposite bank of the river. It has $n$ neat appearance, and is a good deal resorted to for sea-bathing; but is not rich in proportion to its population. The public buildings are the par.

## DUNLOP

chureli, a new Iom, Cath, chanel, with three others helonging to conventes, a schomi-honse for 301 pmpils, n court-honse and bridewell, a barruck, and a lever hospital and dispensary. it returned 2 mems, to the Irish II, of C. till the Unim, nince whith it has returned 1 mem. to the imperial 11 , of $\mathbf{C}$. Prevlomsly to the leform Act, the framelise was vested in the occupiers of 51 , honses in the town, nnd the resident 40s, frechoiders of the manor. But the extent of the exisinig purl. boumiary, as fixed hy the Ibmondary Act, is only 3302 stat. acren. Reg. clectors, 200 in 1865. A manor court is held every three weeks; also general sessions In Jan., April, mind Oct., and petty sesxions on Thursdays, Markets on Wednesilnys and Suturdays; fairs, Feb, 7 , -lune 22, Aug. 27, and Nov, 8. The deejp sea tishery was formerly earried on here pretty extensively, hut has latterly much decllned.

DUNKELD, a bor, of barony and market town of Seotland, co. P'erth, on the N . bunk of the Tay, 15 m . N. by W. P'erth, mad 19 m . N, by W. Edinhurgh, on the railway from l'erth to Inverness. 1'olp 1,096 in 1841, anil 929 in 1861. Little Bnakeld is a suburb, thongh in a different parish, being divided from the loor. hy the 'ruy, which is here crossed by an elegant bridge of seven arches, built in 1809. Except a hundsome new street leading from the bridge finto the town, the louses are gencrally old and of mean appearance. But the situation of bunkeld and the surrounding seenery are most beantiful, and have lomg been oljects of atmiration to every stranger. The town is sitcated in the centre of a valley surrounded by momutains of considernlile elevation, presenting a great variety of picturesque forms, and covered to their summits with trees of every species. It is, besides, regarded as the great puss to the Highlunds on the E. : the bulk of its inhab. are of Highland origin, and speak the Gaelic language. The lanks of the mountuin stream Brann, which joins the Tay nearly opponite to Dunkeld, present nome of the most striking scenery connected with the place. Dunkeld Honse, the residence of the ducal family of Atholl, is on the verge of the town, and the style, extent, and natural and artificial benuties of the plensure gromids are not equalled ly any in Seotland. The most imposing olbject in I unkeld is its cathedral, situated on the banks of the Thy ; in edifice partly Saxon and Gothic, and the remains of which, owing to the eare of the family of Atholl, are both extensive and in good preservation. The choir of the building is ased as the parish church. Different portions of the eatheiral were erected at different times, but the oldest portion, the choir, was built in 1350. Gavin Douglan, who trunstated Virgil's ' Wineid,' and Henry Guthrie, author of ' Memoirs of Scottish Affairs from 1637 to the Death of Charles I.,' were both bishops of this see. The Culdees had a monastery here so early as 724). When Iona, the original and ehief seat of that orler, was ravaged by the Danes in the 9th century, the jrimacy resided for some time in Dinkeld, but was afterwards transierred to St. Andrews. 'But the rank of the abbots of Dunkeld,' says Pinkerton, ' one of whom was the father of a royal race in Scotland, and another, Ethelred, the son of Malcolon 11I., sufficiently marks the estimation in which that dignity was long hell.' (Early Hist. of Seotland, ii. 271, 272.) The monastery, however, was elanged by David I. into a eathedral in 1127, at or about which period the system of the Cullees was superseded throughuut Scotland by that of the Roman Catholics.

DUNKIRK (Fr. Dunquerke, the Chureh of the Dmes, or Sund Banks), a sen-port town of France, and the most northerly in that kingdom, dép. du

Noril, eap, arrond., on the Straits of Doser, 40 m NW. lille, anit 47 m. l. Dover, on a lirainh of the railway from Parin to Calais. Pop, $22, y 19$ in 1861. 'The town is well built, and hux broal and well-paved streets. The Chainp-de-Mars and lie Place Jemn bart are large and tine mpuren: the latter, which is planted with trees, has a hus d the brave milor whose name it bears, amillown a mative of Dunkirk, The grentent drawhnek upan the town is its want of goonl water, it leing in delited for this necessary wholly to the rain-wate collected in cisterns. Its defences consist of 1 rampart and Iltch, a citndel, and Furt Lemin, almutt 3-4this of a mile distant: the furtitcationas went firmerly more formidable, but having lieen do molishled, necorling to the stipulations in the I reaty of Utrecht, they have not leecon completly re-establishled. Prracínol jmblle buildings are tlie chureh of St. Eloi, with its time portico, the nawd storelouses, lurracks, town-hall, sude college. Thi Tour des Pilistes serves for a landmark, nud nu one of the positions whence Cassini, nul man recently liout and Arugo, conducted their aben: vations relating to the map of France, nud the mensurement of the enrth: it has a very tine clime of bells. Dunkirk has also a communul colloye, pilblic lilrary containing 18,000 vols, a sechoold hyilrography, a thentre, and coneert-lall.
The harthour of Dunkirk, though in a great do gree artiticin, is large and conmoclions ; but 1 sund hank, which dries nt low water, leing inter. posed between the town and the rondstend, itio rather diflicult of aceess, and is apt to till un; bot these inconveniences have been to a consideralit extent obvinted by works constructed in 10\% 1) unkirk has both an inner and an oitter noll. stend, defended from the violence of the seaty sand-bunks parnllet to the shore, and having def water and good holding gromul. leing combected by means of mumerons canals, as well ns a line ed ruilway, with a very fertile dixtrict, Dmairk is considerable emporium. The inhabitants have always be n distinguished for enterןrise. Thing the late and former wars between Enghand and France, great numbers of privateers were fitted out here. At present several vessels belonging the port are engaged in the herring-1shery; and In the cod-likhery on the Dogger Bank, aind tie hanks of Newtoundland. Dunkirk was mate I free port in 1826, since which its commeree hs materiully increased, particularly its trale in French wines destinerl for the supply of Belgiam of' which it is a depôt. It has extensive somp works, with starch-works, rope-works, tanneries and iron-foundries. It has also considerable fite neva distilleries, breweries, and sugar-refinciss It lass a general and a loundling hospitn, a military and civil prison; and is the seat of a subprefect and of tribunals of primary jurisliction and commerce. There is regular conmunication br stenmers between the port and London. Dunkif is said to have been founded by Baldwin, count of Flanders, in 960; in 1388 it was bumt by the English; and in the 16th and 17th centuries atternately belonged to them and to the Spauinrlsand French. Charles II. sold it to Louls MII. fis 200,0006 ., who, aware of its importance, had it strongly fortified at a vast expense. But, as alrendy stated, Louis was compelled, by the trat! of Utrecht, to consent to the demolition of its far: tifications, and even to the shutiag up of itspotit It was unsuccessfully besieged by the Duke f York in 1793.

DUNLOP, a par. of Scotland, celebrated foris manfncture of cheese, partly in the coo of Afre and partly in that of Renfrew, 8 m . N. Kilmar: noek. The village of Dumlop in the par., had ${ }^{\text {til }}$

ough in a great deommodious; but a water, being imte. the roadstead, itis s apt to till up; but en to a considetalle onstructed in $1 \times s$, and an nuter mallence of the sea by re, and havidg deep

Being eomueter , na well as a lined istrict, Dinkirkin e inhabitants have enterprise. Huring tween Eingland and ivatcers were fitted yessels belongiug te herring-thshery, and grger Bank, and the inkirk was made 1 hits commerce has larly its trale in supply of lelgium ans extensive samp e-works, tannenies lso consideralile Ge and sugar-retineris ling hospitnl, a a mili 5 the sent of a sub hary jurisdiction and conimunication br Loudom. Dunkith by Baldwin, cunnt it was bunit by the 17 th centuries alter to the Spauiards ani to Lous XIV. in importmice, had it expense. But, elled, by the treaty lemolition of its co attiug up of itspouth ed by the Duke of
ad, celebrated for it in the co. of Art $\mathrm{v}, 8 \mathrm{~m} . \mathrm{N}$. Kilmar in the par., had ${ }^{2}$
inhalo in 186!. Dunlop cheene has for nearly n perutury and a haif helid a high character. I'rerinumly to this date, or hetween $\mathbf{1 6 8 8}$ anil 1700, cheese here, as well as throughout Scotlani, was made of sklinmed milk, as is still the cane lil vaions diatricts, A female of the name of Ilarbara filmuur, who bad fled to Iroland during the perseputing timen of Charles I., returned at the Revolution, and, having married a farmer, was the tirat cointruluee the practice of unimis the unskimmed nilk in the making of cheese. This practice, which auccerled admirubly, was for a tinse condined to the par., but it grudually extended to nimont every part of the W, and S. of Scotlani, all the chese made in these districts wlth makimmed milk leing called Drenlop. The fact, however, is, that cheese made th the par. of Dinlop is not amperior but inferior to thint made in other districts. Hesides the cheese produced in the par., a great proportion of what is manufuctured in ather parts of Ayrshiro passes throngh it on its way to the consumer. Being a convenient entrepoit between the produelng country to the S. and W., nod Glasgow, l'ninley, dre., n eonsiderable number of permans resident in Dunlog follow the business uf cheese denlers, pureluasing it from the farmers, and supplying the victuallers in the manficturing towne mid distrlets.
DUNMANWAY, an lul. tuwn of Ireland, co. Cork, prov. Munster, near the junction of three ntrams, which form the landon, 28 m . W. by S. cirk, in the rnilway from Cork to Skibberecen. 1יp. 9,738 in 1831, nud 9,068 in 1861 . The town lias a jar, church, a Rom. Cath. chapel, a marketbume, nad a bridewell. The linen trade, nfter twing for some yents rather flourishing, has declined; but tanning and brewing, and the corn trale, are largely earried on. A manor court is held every third Saturday, and petty scssions on alternate Monilays.
DUNSE, a bor, of bnrony nnd market town of Scotland, co. Berwick, in a plain at the S. foot of lhase Law, an eminence bi 30 ft . above the level of the sea, 13 m . W. Berwick-upon-1'weed, and 36 m . Sk. Edinburgh, on a branch of the Edinhurgh and Berwick railway. 1'op, 2,556 in 1861. bunse is nent and regularly bullt, but devoid of public buildings, except the town-hall and Dunse Castle, in its vicinity, the residence of the fendal superior of the bor., of Gothle arehitecture, the greater part modern, but added to an ancient tower said to have been built by Kandolph earl of Nurray, in the time of Robert Bruce. The par. church is a plain building; as are the three dissenting chapels belonging to the Associate Synod and the Relief. The means of education are ample; a par. school, an eminent unendowed academy, six other unendowed schools, besides private seminaries for females, and several Sabbath sehools. A subseription library was commenced so fur back as 1768. There are two circulating libraries, and a reading-room. The assessment for the poor of the lor, and par. is 710l. There are two friendly ancieties, a savings' bank, and two branch banks. There is a weekly market, three fairs for black cattle and horses annually, and a quarterly fair for sheep.
Dunse was crected into a burgh of barony by James IV. in 1489; it was then situated on the XW. side of Dunse Law ; but baving been afterwards burut by the English, it was rebuilt in 1588, and its present site adopted, in order that it might be more immediately under the protection of Dunse Castle. After Berwick-upon-Tweed was reded to the English (1482), and ceased to be the co, town, Dunse enjoyed that distinction in commoa with Lauder. It was afterwards (1600) trans-
ferred ly net of parliainent to Greenlaw : but Dunse was nat altogether deprived of the priviloge till 1600. It ln , however, by fiur the largest anil inest impertant town in the co, anil more conintry businens is dome in it than in both the towns referred to. In 1639, when Charles I. lay on thi S. side of the 'Tweed with the intention of redncing the scoteh I'reshyterhas to submissions, General Jeslle tork up his station on Junse law, with a borly of 20,010 Covenumers, to defend the comintry from invanion. After the two armies hail colltinned in this position fur three weeks, a treaty of pence was eoncladed, nul both were dissolved. Junse has given birth to many distinguinhed mest, among whom may be specilided, John Dinis Scotux, the Subtle Doctor, descemied of the nacient family (not long extinct) of Duns of Dins, ur of that ilk; Boston, author of the Fourfoli State and other works; and Dr. M'Crie, the historinn of Kıux.

DUNSTABLA, a town and par. of lingland, co Iledforil, hund. Mnushead; 32 m . NW. Landon hy romd, nad 36 多 by Grent Northern railway. Pop. 4,470 in 188 ti . Tho town, situated on the S . atecllvity of the Chiltern IIIlls, nent the sonurce of the Lea, has four streets, und is pretty woll built. A celebrated priory was fonnded here by lleury l., in 1131, of which the par, church contains the nave. The Baptists and Nethonlists have also places of worship. Here is a charity school, founded in 1727, for 40 hoys and 15 girls; with le almshouses for poor widows, and 6 do, for deenyed maiden lalies. Dumstable is the primeipul neat of the Iritislı straw plait manufneture, which employs many females in the town and vicinity. Lailies' straw hats were, and still are, not unlroquently called Dunstables.

DUNIVICH, a sea-port bor. and par. of lingland, co. Suffolk, humd. Blything, on the Fi. const of the co.; 90 m . NE. Landon, and 26 mm . NE. Ipswich. Pop. 232 in 1831, und 227 in $18 t i 1$. Theugh now a poor fishing station, this was once an important sea-port, having an extensive trale, a large population, 2 ableys, and severnl churches. It has been reduced to its present state of inslignilleance by repeated inroads of the sea; and would probably have been totally abandoned, but for its having had the privilege of returning two mem. to the II, of C. The eneroachment of the sea began previously to the Conquest. In the reign of Edward III., an inundation swallowed up more than 460 substantinl houses. The last grent encroachment was in 1740 ; but the sea has conthaced progressively to encroach on the land; and at present there remains only the ruins of one of its many churches. It was disfranchised by the leform Act; and no longer attracts any attention, except from those who visit the const to study the great natural revolutions of which it has been the theatre. (Camplell's Survey, i. 277; Lyell's Geology, i. 403, 3d ed.)

DURANGO, a town of Mexico, cap. of the state of the same name, in the Sicrri Malre, $6,848 \mathrm{ft}$. above the level of the sea; 450 m . NW. Mexico, and 150 m . NW. by W. Zacatecas; lat. $24^{\circ} 25^{\prime}$ N., long. $108^{\circ} 15^{\prime}$ W. Pop. estimat. at 20,000. The town is regularly built, and çontains a cathedral and other churches, several convents, a mirt, and a thentre. It is the seat of a bishopric. Its inhabs. are industrions: they manufacture many wooden articles, woollen goods and leather, and have $n$ considerable trade in cattle. Iron mines are worked in the vicinity.

DURAZZO (an. Epidamnus and Dyrrachium), a sen-port town of Turkey in Europe, Albania, on the E. shore of the Arriatic, and on the s. side of a projecting tongue of land, 7 m . S. Cape l'nli;

 been given to its trate. "This is visible int the crowiled state of the weekly markets, the improverment of the nhopm, and other nigns of the int crensing impartance and trade of the town. An extennive carpet manufinctory and a worstel nyinulyg mill are situmted on the banke of the Wenr.

The Grat N. of Binghand railway connecte the city direetly with Newenstle-oni-Tyue, 14 mi dimtant; and the Newenate mal Carlinle raliwny oprens an pasy communication with the W. comsi. The neighlourhom of Durimm ahmondin with nituations well adapted for the entablisiunent of various mamufactures, havhug mumerous rivulets nud inexhaustible stores of stome, lime, eonl, nuid fron. The want of muans of ontlet have hitherto rendered these resources nunvuilably; bit as the railways now constructed smpply facilities of trannit, thin part of the kiugidon may, ill the course of a few yenrs, be expected to nifiord an excellente tlelid for the mivantageous employment of enpital and industry.

Durliam has aent two members to the II. of C. since 1675. Previously to the liefirm Act, the right of voting was lit the freenell who had nequired their freedom by patriminity or servitude within the eity of Durhani, the bor, of FramwellLinte, 'or the streets mad sulburbs ndjuining thereta.' IIence the limits of the parl. Iwir, were mot dellnitely thed, bint varied with the varying size of the sulnurbs: a delinite limit was, however, given to it by the llomilary Aet. Registered clectors, 1,161 in 18i5, including 500 freenen. (irows ant mul vilue of renl proprety assessed to ineme tax, 50,9771 in 1857, and 85,9751, m1862. Vinder the Munieipal Beform Aet, the city is divided into three wards, and is governed by a inayor, 6 allermen, and 18 cubucilors.
DURLACLI, a town of the grand duchy of Baden, clre. Central Rhine, 2 m , ESE, Carlvrulic, with which it communicates by a rond lined thrughout with poplars. Pop. 5, ,iit in $181 i 1$. Ilefore Carlaruhe was built this town was the residence of the margraves of Baden-Durlach, an old castle belomging to whom, now in ruins, stands upon a comtigums helyht; and has attached to it a the garden, in which several Roman antiquition have been disenvered. A palace of a later date lias been in purt converted into a cavalry barrack. The inhabitants manufncture porcelain, tobneco, and sealing-wax; and have some trade in com, wine, fruit, and other agriculturna proluce.

DUSSELLDOLF, a town of Prussia, prov. Hhine, cap. reg. and circ. same name, at the confluence of the Dussel with the Rline, on the main line of railway from Cologne to lierlin. ${ }^{\prime}$ 'np. 41,292 in 1861, exclusive of a garrison of 3,376 , Dusseldorf has quadrupled its pop. in the course of the present century; at the commencement of which, as the name implies, it was but a village. It is a well-built, lumdsome, thriving town. It staula so close upon the Rhine, that vessels sail up to its quays, and there take on board the merchandise of
which the town in the depmet. Near the river the nirceets aro marrow, aind full of symptoms of indinatry! bint beyond thene the town emmints of Innutwome white atonie housem, ilimponed in rowa an at reetn, or an opren minarem and plates with treea lat the centre, ail which are remiarknily clean and fluset. The cmatio and other fortitheatione were dextrnyed by the Fremed in 1790. The town is the seat of the provincinil states or parl. of thes
 agymuaninum or eallage, an achlemy of acienceen, all ibmervatory, a thee jubibic llibrary, $n$ thentre, nad nome remaliss of the nodsle colloction of pinintings iranaferred to Mmich. Recently the arhend of pulinting at Dusmelionf, umder Sehadow, han atbahaed io very comsiderable celobrity. There are comalderalile mamifneturen at bunweldurf; loit it
 unt the lhine, nearly opmonite to where it in johned lyy then canal lendiing to Venlon ont the Maene, und from ita being the entrepot and principul port of the contignoms flomrinhhig numufarturing distries, of which Dillherfelit in the capital. Cothons, clothen, dre are Imported frum the latter; hardware, iron. and steel, from Solingen mad Rernselheid; nul linen fron lentingen. Large qumatities of cool, hrought from the minea on the koer, are whipped here for the Nothermuin; and there is also an extennive trade in corm, oil, minil wine.
DWARACA, or JUEGU'TLI, a marit. town of 1 lindoutan, prov. (internt, the most W. point of which it ocecupien, dom, of the Ginicowar, on a smody shore !is m. NW. Joounghur; lat, $22^{\circ} \quad 15^{\prime}$ X., long. 6io $\mathbf{7}^{\prime}$ E., It in the mont snered place in this purt of Indin, and is ammally frequented ly ubout 15,010 pilgrimes from all purth of that extensive country. Jis principal pmgoda is a masnillcent carved stone building of high antiquity, dedicaterd to Rumelom, an inearmation of Krishmin, with an entrance tonvurds the sea by a very long mul moble tlight of atone atepo, nucceeded ly a masaive gate, where the whole front breaks upon the view with a striking eflect; Its great pyrumid is 140 ft . high, and much ornamented. There are numuremes suboriliante temples, laving flags with repreventations of the sun and moon. In front of the largo temple is the sacred place of allation, firmed ly a creek of the sen, which is lined for some distance hy small temples with stome steps diown to the margin of the water, on which prayers are made, numb dilols, rings, and amulets nold by the lifahmins: the town itself is mall, but surromended with walls nud towers washed by the the. The devotees here are usmally stamped by menns of a hot irom, with the insiguin of the god, and thin rito is offen practivel upon young infiants. The chnlk with which the lirahmins mark their fureheals comes from Dwaraca, whence it is carried by merchants all over India. The revenue of the temples, lerivel from pilgrims, is estimated at about one lac of rupees, and was formerly awelled by the phander of many piratical vessels, filted out in the name of the idel. Dwaracn submitted to the British forees in 1816; but in the finlowing year was transferred to the Guicowar, to whon its sanctity rendered it a highly acceptablo nequisition.
DWINA, the name of two Russinn rivers, one of which falls into the White Sen by several monthas, $3 \overline{5} \mathrm{~m}$. below Archangel, and tho other into the Gulf of liga in the Baltic, 9 m . below lifgn. The first, or Northern Dwina, is a large and important river. It is formed by the junction of the Soukhona, which rises in the farthest $W$. part of the government of Vologda, with the Joug risilg in the central s. part of the same government. From the point of confluence, nenr Ouste-
oug- Yeliki, the muited river flown in a deep an

E AGLFSSHAM, a market-town and hurgh of lmruny, Seotland, co. Renlirew, on a tributary f the White Cart, 9 m . S . Glaugow. P(op) $1, \mathrm{~F}_{6}$ ) in bial. The town, which is mondern, though on the site of an nucient village, consista of two rows ff well-built honsen, all of freestome, with a space enween varying from 100 to 250 varis, latd out a fine green thehls intersperved with trees, witha nautiful strenmlet ruming down the midille. length of the town nearly 3 furlongs. The whtun manufacture was introwluced here about he year 1825 . liesides cotton-spinning, there re alout 400 persons in the town engaged in saving. The noble fnmily of Erfintom are the frial superiors of the plince, and appoint the aron bailie.
PALLSTON (formerly Frcildone), a village in he par. of the same name, Scotland, co. Lerwick, (0) m . Sl. Edinburgh, and situated in the middle fa pastoral district, within $\& \mathrm{~m}$. of the Leader, n filutary of the 'weed. l'op, 980 in 186il. The fillage is straggling and irregularly built; but is rell known in minufactures, 'Enrlaton gingmams' beiug fumiliar to must persons in the S. Yeothand. 'Thomms the Rhymer,' whose proper ame was Thomns Learmont, who flourished in he 13 th century, and is famous both ns a poet nd an alleged prophet, belonged to this place. in necount of this celebtated person is given in if W. Scott's edition of 'Sir Tristram,' a poem wribed to the llhymer. The walls of the castle,
enlled ' Rhymer's 'lower,' in which he livel, are atill stumbing within $\ddagger$ m. of Variston.

EBOLA, or EVOLA, in eity of I'ortugal, cap. prov. Alentejg, 85 m . B. Lixhen, 42 m . SW. Blvas, on the railway from Lishom to Balajoz mad Madrid. I'op, 17,121 In 1858. The city is built on an eminence, in the centre of a ferite phain, and is venerable from the nppearance of its ancient towern, as well na striking from Its elevation. It is surrounded by rampurts, and has two forts in ruins. Streets narrow, crooked, and fllthy; but it has some gronl houses. It is the see of an archbishop, and luns a marnificent Gothie cathe(dral, with an nltar in the Italian style, decorntend with various marbles, Exclusive of the cathedral, there are four churches, several convents and hospitals, a house of charity, aud fino barracks. There is a good collection of books in the hishop's library, and the museum is one of the finest in I'ortugal. It was formerly the seat of a university, suppressed on the expulsion of the Jesuits.

The city was for a lengthened period the hendquarters of the fumons Roman general (Quintus Sertorius, by whom it was fortitled, and adorned with several tine public buildings. An ancient temple, supposed to have been dedicated to Dinun, though much dilapidated, has still to bonst of some noble columns, evidently raised during the best periol of Roman architecture, bit this tine ruin has been greatly neglected. There is also a

## EDER

magnificent aqueduct, saill to have been built by Sertorins, in the preservation, and still applied to its original purpose. The city has manufactures of hurdware, tantieries, and a fair for cattle on St. Jolur's day, which is mueh frequented. Julins Ciusar made it a municipal town, and gave it the nume of Liberalitus Julies. The Moors took it in 715. It has been the resldence of many of the I'ortuguese sovereigns.

EIBKO (an. Iberus), one of the principal rivers of Spuin, through the NE. part of which it flows, uniformly almost in a SE. direction, being the only great Peninsular river that has its embouchure in the Mediterranean. It rises at liontibre, prov. Santander, on the S. declivity of the Sierra Sejos, about Int. $43^{\circ}$ N., and long. $4^{\circ}$ W., near the sonrces of the lisuerga, an aftluent of the 1)ouro. It afterwarls separates the provs. Siuntander, Biscay, and Navarre from Old Castile, intersects Aragon in its centre, and disembogues near the S. extremity of Catnlonia, about lnt. $40^{\circ}$ $10^{\prime} \mathrm{N}$., and long. $0^{\circ} 55^{\prime} \mathrm{E}$. Its entire length is costimated at somewhat above 400 m : : its principnl tributaries are, the Nela, Aragon, Gallego, und Segre, with the Cinca on the N., and the Oca, Tiron, Nngerillo, Xilon, Guadaloupe, \&c., on the S. side. Reynosa, Miranda, Logrono, Tudela, Sinrggossn, Mequinenza, and Tortosa, are the ehief citics and towns upon its banks. It rums mostly through a succession of narrow valleys till it renches Mequinenza; after which it enters Catalouin, and Hows through a more level country. At Amposta, 13 m . W. from its mouth, it is nbout : 000 yards wide. It immedlately afterwards forms n kind of delta; a navigable eanal having been cut from the port of Alfaquez, or San Carlos, at its S. month, to Amposta. The Ebro is navignble for loats as high as Tudela, but its current is very rapil, and its bed in many parts encumbered with rocks nnd shoals. To avold these obstacles, and the numerous windings of the river, the Aragon canal has been cut along its right bank from near Tudela to Sastago. An ancient Moorish cannl, now dry, formerly connected the town of Alcmez, on the Gundaloupe, with the Ebro. The principal commercial utility of the Ebro is the trimsport of grain from Saragossa to Tortosa, together with the floating down of timber from the 1'yrenees. This river, before the second Punic war, formed the boundary of the Roman and Carthugininn territories, and, in the time of Charlemugne, between the Moorish and Christian doninions.

## felbatana. See Hamadan.

ECIJA (an. Astigi), a city of Spain, prov. Seville, finely situated on the banks of the Xirnil, which is here crossed by a fine ancient bricge, 47 m . JNE. Seville, 31 m . SW. Cordovn, on the railway from Seville to Cordova. Pop. 28,759 in 18.7 . The city is surrounded by walls, and has narrow crooked strects. Its clhurches, of which there are six, are built of brick, fitted up in the oll taste, and crowded with pillars, loaded with proportionate ornaments, and covered with gold. The most notable is the church of Nostra Senora del Rosario, in the convent of the Dominicans. lixelusive of churches there are twenty convents, four hospitals, a foundling hospital, and a public gramary. The Plaza Mayor, a fine spacious siquare, has a double row of balconies the whole way round. Along the river's side is a handsome alameda, or public promenade, plauted with elms and other ormnmental trees, provided with sents, mind decorated with statues. It has manufactures of coarse eloth, serges, camlets, friezes, and linens; and the vicinity prodnces wheat, wine, and oil. Ecija is a very ancient city, having
been called by the Romans Astigi and Augute Froma. (Plin. Ilist. Nat., jii, s. J.) It was fot 1 lengthened period a border town letween the Moors and Christians, and is famed in many romance; but it is no longer of any impurtance as a furtress, and its walls are covered with brambles.

FCKMUHL, an inconsiderable village of $\mathrm{pa}_{\mathrm{a}}$ varia, circ. Regen, on the great Laber. $18 \mathrm{~m} . \mathrm{S} . \mathrm{b}_{\mathrm{o}}$ E. latishon. Pop. 110 in 1861. Here, on the 22nd April, 1809, the great French army, unde Napoleon, gained a decisive victory over the datrians, under the Archduke Cliarles. Damhal Davoust having particularly distinguished himself on this occasion, was raisel by Napolement the dignity of Prince of Eckmulhl. The batted the 22 nd was preceded by partial actions on the $19 \mathrm{th}, 20 \mathrm{th}$, and 21 st , all of which terminated favourably for the French.

ECLOO, a town of Belgium, prov. E. Flanden cap. arrond., on the road between (ihent and Bruges, 15 m . E. the former city. I'op, 8,790 in 1856. It is generally well built, and has sevend squares and well payed streets. It has 2 churches a town-hall, an ancient convent, 8 schools, and prison. Its man ifactures are chietly of coating and other woollen stnffs, cottons, starch, soap, and ehocolate; it has also breweries, distilleries, sha refineries, and various mills. Its trade, which is very active, especially at its weekly markes which are the largest in the prov., is mostly in corn, linens, timber, and cattle.

EDDYSTONE LIGHTIIOUSE. This, whid is one of the most remarkable structures of is kind, is built on one of the points of a red ie ridge of rocks, from 600 to 700 ft . in length, ${ }^{2}$ the English Channel, about 9 m . S. by W. finm the. Ramhead, and 14 m . from Plymouth; la $50^{\circ} 10^{\prime} 56^{\prime \prime}$ N., long. $4^{\circ} 15^{\prime} 3^{\prime \prime}$ W. The Eddystore rocks are covered at high water; and being mad exposed to heayy swells from the Bay of Bisar and the Atlantic, the waves frequently break ore them with tremendous fury. In consequerice d the many fatal accidents occasioned by ships nus. ning against these rocks, a lighthouse was ereeted on one of them in 1696: after standing mang storms, it was overthrown in the dreadful tempat of the 27th Nov., 1703. A second lightheris, erected in 1708 , was burnt down in 1755 . The present edifice, built by the celebrated enginets Smenton, ant finished in 1759, is universally al mired for its solidity and the skill displayed in its construction, and bids fair to last for ages. The total height of the lighthouse is 100 ft . the lantern being elevated 72 ft . above the sea $:$ high water. The light is fixed, and is of the fis magnitude. This lighthouse has served as 1 model for that on the Bell Rock, and others d the same kind.

EDEN, a river in the NW. of England, rhide has its sources on the borders of Westmoreland and Yorkshire, near Pendragon Castle, close to the sources of the Swale, in one of the highest parts of the Pennine or central range of mountains, li pursues a NW. course through the valley betmea the Pennine and Cumbrian mountains past (lulisle, 7 m . below which it falls into the Solvar Frith. It is navigable to Carlisle; but the nangation being tedious and difficult, a canal hashea cut from Carlisle to Bowness, lower down te Frith, a distance of $11 \frac{1}{4} \mathrm{~m}$., which almits rexid of from 60 to 80 tons burden.

EDER, a town of Hindostan, prov. Gujerat, of a principality of the same name; 17 m . X y W. Ahmednuggur, and 117 m . SW. Odeypore lat. $23^{\circ} 53^{\prime}$ N., long. $72^{\circ} 3^{\prime}$ E. Estimsted $M$ 12,000. It is but a poor town, though built withe

ED) FUU' (the 'Anódacoos nóds of Strabo, ancl Apollonopelis Magna of the Jromans), a town, or mure correctly a large assemblage, of mud huts, mugregated around and amidst the superb ruins of an ancient temple on the W. bank of the Nile, in Cpper Skypt, abont 2 m . from the river, and bis m. $s$. by E. Thebes. I.at. $24^{\circ} 58^{\prime} 43^{\prime \prime} \mathrm{N}$. leng. $320{ }^{5} 4^{\prime}$ E. Pop. from 1,500 to 2,000 , consisting jrincipally of Abablie Arnbs, with a few coptic families, who manufacture blue cotton, duth and pottery, and boast of inheriting from their ancestors the nrt of making carthen vessels; and it must be ailmitted that their kilns and the funms of their vases exactly resemble those of ancient Eigyyt, as represented on the monuments 1r. Richardson says that the Inhab, are ' civil and dirty;' and the place would be unworthy notice were it not for its antiquities; but two noble temples, placed opposite to each other, though hald buried in the sand, and an ancient quay, still romain to evince the former grandeur of Apollomqpolis Magna. The great temple, on a smal cainence, commands a view of all the surrounding country, and is therefore called, in Arabic, Qula, or 'the citadel.' Its propylon, or entrance, contists of a doerway, 17 ft .4 in , wide, between two vast truncated rectangular pyramids or moles. The base of each of these pyramids is 104 ft . by 3 ft. ; their height is 114 ft . ; and the horizontal ection of each at the top 84 ft . by 20 . The door is surmounted by the often repeated sculpture of the globe with the serpent and wings, and three mows of immense figures are sculptured on the sides of the pyramids. These gigantie structures are not solid, but have chambers, to which and to the top access is provided by means of staircases. Within the doorway is an open rectangular court, now filled with huts and rubbish, 161 ft . by 140 $\mathrm{f}_{4}$ enclosed by high walls, which also confine the remple itself, and are 414 f ft . on each of the longer siles, and $1 \overline{0} 4 \frac{1}{3} \mathrm{ft}$. on the shorter. Notwithstanding these vast dimensions, the walls are claborately covered with hieroglyphies. On each side of the longer walls in the court there is a row of pillars, so disposed that a space intervenes bewreen them and the walls, which being roofed form two covered ways, leading from the propylon to the portico or pronaos of the temple. The column3, of which there are 32, present a most magnificent perspective. There is a gradual ascent in the court to the portico, the outside of which is adorned with six columns, having various capitals; and within are several apartments and corridors, supported by columns, and ornamented with sculptures. The sekos, or sanctuary, is an oblong apartment, about 33 ft . by 17 ft . The terraced roofs of the temple, from the pronaos to the extremity, are covered with mud hits, and the sanctuary and adjoining chambers are now either used as repositeries for grain or other products, or are half filled with sand, and with filth and rubbish. shot down by the Arabs through the apertures that formerly lighted the chambers. (Fgyptian Antiquities, 'Library of Entertaining Knuwledge;' Modern Traveller, vi. 176, \&c.)
The plan and arrangement of this temple is simple and symmetrical. Its largest columns are 6 ft .4 in , in diameter, 21 ft . in circ., and 42 ditte in height; the capitals are 37 ft . in circ. The palmiform capital, peculiar to Egyptian architecture, is here seen to great advantage. It represents the trunk of a palm, of which the spreading foliage forms a graceful frieze. Art has here copied Nature with great fidelity; it has preserved the same number of leaves, the exact form of
the fruit, and the seales of the trunk, and the cupitals gradually augment in size till they balance the leaves. The 32 cajltals of the peristyle, aml the 6 of the promos, exhibit in alternate colnmus the duetyliform and lotiform ligure, which last is as faithfully borrowed from Nitur as the palmiform. This is the account given by Jomard in the 'Deacription of Edfou' (p. '20), ninit copjed by litter, who praises the simplicity nuli pure antique style of the temple But a French authority, M. Champollion, is of a wholly ditherent opinion :- 'Ce monument,' says he, 'imposant par sa masse, porte cependant l'empreinte de lit décadence de lart éryptien sous les l'tolémio's, an regne desquelles il appurtient tont entier. C'a n'est plus la simplicité nuticpue; on y remaryne une recherche et une profision d'omements bien maladroites, et qui marquent la transition entre la noble gravite des monuments pharaoniques et le papillotage fatigant, et de si mauvals goût, du Temple d'Esuch, construit an temps das empereurs.' (Lettres, p. 191.) 'I his, however, is probably too unfavourable an opinion.
Notwithstanding its truly colossal elanaeter this temple is not, as was long supposed, of the Plaraonic ara, but is comparatively mollorin, being, as now stated, the work of the l'tolemies. This is proved by the date of its decorations, the most ancient of which, according to Champolliom, belong to the age of I'tolemy Philopater. It would appear from the same authority, that the meaning of the sculptures, and the object of the temple, had been completely misuuderstood by Mr. Hamilton, M. Jomard, de., who supposed that it was saered to Osiris, the beneticent deity. M. Champollion affirms that this mugniticent edifice was consecrated to a triad consisting of 1st, the gol Harhat, the personification of henvenly science and light; 2dly, the godless Hathor, the Egyptian Venus: and 3rilly, their son Harsont-Tho, the Eros of the Greeks and Romans. (Lettres d'Egypte, p. 192.)

The other and much smaller temple at Eifou is peripteral, and was supposed to be devoted to the worship of the malignant deity, Typhon, whose image was believed to be represented above the capitals of the columns, and elsewhere on the wails. But Champollion has shown that this temple is really one of those mamisi that were always erected near the grand temples devoted to the worship of a triad, and that it represents the birth-place of the third person of the triad. or of Harsent-Tho, son of Harhat and Hathor. The bas-reliefs on this temple are of the age of Ptolemy Euergetes II. and Soter II. (Lettres, 193.)

Between Edfou and El Cab, one of those transverse valleys which frequently divide the momitain ranges of the E. ibsert, opens to the E., and is called the valley of cidfou. It extends from the Nile to the Red Sea, near Berenice; and unon it have been traced the tracks of a great commercinl road, over which the traffic of the ancient sen-port of Berenice, and the produce of the celebrated emerald mountains were conveyed. It was also, formerly, a much frequented caravan route.

EDIN BURGH, or MID-LOTHIAN. See Lotilian.

EDIN BURGH, a celebrated city, the metropolis of Scotland, co. Mid-Lethian, 2 m . S. from the Frith of Forth, built principally on three parallel ridges, running E. and W., and separated by deep depressions; 357 m . NNW. London by road, and 399 m . by Great Northern railway. The central ridge of the ground on which the city stands, is terminated on the W. by a rock, nearly 400 ft . above the level of the sea, surmounted by the castle, and on the E. by the palace of IIolyrood,

## EDINBURGII

108 ft . above the same level. The circumference of the city, exclusive of leith, lts sen-port, lying between it and the Forth, is rather less than if m . When comprised within its ancient limits, the pepl. of Edinhurgh was extremely dense. It is said by Maithand (1list. of Edin., p. 7), referring to the year 1600, to have been 'so full of inhabitants that probably there is no town elsewhere of its dimensions so populeus.' At the Union, in 1707 , the pop. was esclimated at 35,100 ; in 1755, before the New Town was commeneed, and when the sonthern districts did not exceed a lifth part of their present extent, the pop. was estimated at 50,000 ; in 1775, soon after the commencement of the New Town, the pop. was 00,000 ; in 1701, about 71,000 ; but these enumerations exclude Leith, the pop. of which in 1753 (1lld. p. 500) was 7,280. The pop, of Ehlinburgh, city and suburbs, exclusive of Leith, according to the censuses since 1801, has been as follows: viz. 1801, $\mathbf{6 i 6}, 544 ; 1811$, $81,78.4 ; 1821,112,235$; 1831, 130,301, and 1841, 138,182 . By the census of 1861, Edlinburgh had 168, 121 inhabitants living in 9,760 honses. In lidinburgh a house often accommodates several families, (ach story (provincially fat) constituting, in such cuses, a separate dwelling, to which access is obtained by means of a common stair. Nay, a story is sometimes subdivided into two or more repmrnte residences, each being accessible by its own door opening to the same common stair. In the Old Town common stairs are all but universal. They are general also in the southern districts; but more rare in the New Town, separate or 'self contained houses,' as they are termed, generally prevailing in this fashionable and wealthy quarter of the city. The luftiest houses are in Mound Place, in the Old Town; they extend to 11 stories, inchuding the attics; and as each story is gencrally divided into two lodgiugs, each house is supposed to contain, at an average, about 20 familhes, or 100 individuals. With the exception of the older buildings, which range from five to six stories in different districts, the usual height is three stories, exclusive of the attics and the basement floor, which latter is geuernlly half sunk under the level of the street. This is the case, with very unimportant exceptions, throughout .the New Town. 'The word land is used in Edinburgh to signify a house or tenement from top to bottom, whether it be eccupied by one family or several. Previously to the houses being numbered, they were distinguished by such names as Todrig's land, Moodie's land, Gavenlock's land, de. Similar remarks npply to Leith.
The situation of this city is emincutly romantic. It stands, as previously stated, on three separate ridges, of which that in the middle, having the castle at its W. extremity, is at once the most striking and the best defined. The castle is peculiarly pieturesque. The rock on which it is built is on three sides, N., W., and S., high, steep, and in parts almost perpendicular. On its E. side the ground declines in a sloping ridge to Holyrood Palace ; and on it,
' Ptled deep and massy, close and high,'
stands the greater part of the Old Town. The neighbourlood is also marked by lofty hills, except towards the N., where the ground gently declines to the Frith of Forth. The Calton Hill, 347 ft . above the sea, on the E. side of the city, how surrounded with fine terraces of houses, affords the remarkable spectacle of a verdant hill, except where covered with monuments, within the precincts of a large town. Arthur's Seat ( 822 ft . above the level of the sen) and Salisbury Crags ( 547 ft .), the latter divided frum the furmer by a deep and
gleomy ravine, lie on the SE . of the city. $\mathrm{F}_{\text {ath }}$ of these hills, rises abruptly from its liase, and commands varied and very extensive views. Bladk ford Hill, the liraid Hills, the P'entlaud Iillis, and Corstorphine Itill, rise at different distanees on he he S. and W. These eminences form a mapuificeat amphitheatre, within which, on elevnted but lowa gromed, the Scottish capital is situated.

The ridge on which the Old Town is huilt was not Inaptly compared by Arnot to a turtle, , which, snys he, 'the castle is the heal, the lligh Street the ridge of the back, the u'ynds or cluwe the shelving sides, and the palace of Holyomes. honse the tail.' (Hist. of Edin., 4th ell, p. 179) It is separatel from the New Town on the X. by a deep valley, which for centuries formed a latie, called (as it is still) the North Loch; but having been drained in 1763, it is now laid out in garteas and is traversed ly the Edinturgh and Gilagor railway. On the S. the Old Town is divided from the southern districts by a similar valley, the site of the Cowgnte, now a narrow and menn, though once a fashionable strect. From the H ligh streth on the summit of the ridge, descend, on both sides In regular rows, numerous narrow lanes, whichare mostly stecp and difficult of passage, being anely more than 6 ft . in width, and in general very dint Those of the greatest width, or which admit of cart or carriage, nee termel wyds, as Mlackfian' Wynd, St. Mary's Wynd, \&c., while those whind admit foot passengers only are called closes. . few have no thoroughfare, being in the form d culs de sac.
The High Street, which (incluling the Caste Hill, Lawn Market, and Casongate) stretcles in nenrly a straight line from the castlc to the palae a distance, as already stated, of more than $1 \mathrm{~m}_{\mathrm{n}} \mathrm{id}$ a magnificent street; the houses, which vary from five to six or seven storics in height, have bea mostly rebuilt; but a few, especially on the Caith Hill, are of great antiquity. One of these lefr buildings fell in 1861 from sheer age. This street with its shelving lanes and appenllages, constiturs the whole of what is properly the cold town.' It is connected with the southern districts by the Cowgate, nad by two bridges which streteh ore the valley in which that street is built, viz, be South Bridge, opened in 1788, and George the Fourth's Bridge, opened in 1836. On the othe hand, the Old and New Towns are connected by the North Bridge, which spans the North Laxh and forms a continuntion of the line of the Sopth Bridge, and by the ' Earthen Mound.' The Nirth Bridge, which cousists of three central arches, with several smaller ones at each extremity, was openid in 1768: while the Mound, which was begua in 1784 from the accumulation of the rubbish fno the excavations of the New Town, was formed ino a thoroughfare about the beginning of ty preent century, but it has since received great additions It is supposed to contain 500,500 cubic yarks, $x$ about $1,500,000$ cartlonds of earth. W. of the Cowgate lies the Grass Market, a wide, open streth used as a market-place for the sale of horses, sheth and corn.
The New Town, which, as well as the mon modern parts of the southern districts, is built of light coloured freestone, procured in abundance in the immediate vicinity of the city, stanls on an eminence, which slopes to the water of Leith, the small river at the mouth of which Leith is built The leading streets run in straight lines from E. l W., and are crossed at the distance of about ever 250 yards, by streets running in an opposite drection; so that great regularity, clegance, and beauty characterise this quarter of the cits. the inlfe, is terminated on tho E. by St. Andrew's the nure, and on the W. by Charlotte Siquare. Girent king Street, which lies considerally down the deKing streen, nearer the Water of Leithi, lins, in like ${ }^{\text {dirfinf}}$ maner, the Royal Circus on the W., nud Drummana Pliace on the E. There are, nlso, Junes's mounere (the eldest in the New Town), and Rutland Anure. Another portion, built between 1822 anul Nutare, has Morny Place in the centre, and Randolph Crecent on the W. This is the most elegant and Grastionable part of the city. The feus, or building heases in this quarter fetch from 20s. to 40s, annually per foot of frontage. The New Town is murninatel by the steep banks of the Water of trith, and is counected with the gromnds $\mathbf{N}$. of tius trteam by the Dean Bridge, an elegant striucture, consisting of 4 arches, enech 96 ft . span, the height of the road-way above the bell of the river lexing 106 ft. One of the most celebrated streets in the New Town is Princes Street, forming a sineeies of terrace, and facing the Old Town, of which it commands a fine view, which, especinlly br monnight, is probably unequalled. Watertoo Binlue counects this street with the Calton 11ill, keing thrown over a deep ravine occupied with andient but slabbyy buildings, called the Low Caltua. The line of roand, to which this bridge leats along the E. side of the valton 1 lill, forms a grand appronch to the eity in this direction. The thenen street Garilens, a piece of ground which estends from E. to W., about of of a mile, by abont 2 mm yards in width, may be regarded as bisecting He. Sev Town. Elegant streets hnve, at different periuxl, been built W. of Princes Street and Charfinte Square, of which the most important are ditholl and Contes's Crescents.
fhe situation of the southern distriets is consilcrally more elevated than that of the New fown; but the buildings are of an inferior orler, mot las much regularity been observed in the hayprgut of the strects. The houses are high, mostly fifusturies, and commen stairs prevail, with partiin kxeptions, particularly in George's Square: this, ruich is the hamdsomest place in this quarter of he town, was built in the last century, and is of arge dimensions. It has on the W. the public raik leading to the Meadows; nad on the S . it is peparated from then by Buceleuch Place. The triciepal line of buildings is Nieolson Street, which trateles from the South Bridge, already menpmed, to the courtry on the S., nud now forms lie main approach to the city in this direction. The former approneches on this side were parallel ONicolson Street, being an old street, called the lleasume, on the E., and the Causeway Side on He W. While the Mendows bound the southern istricts on the W., a valley or ravine, fronting alistury Crags, forms their iermination on the E. ive a fev of the public buildings, including tine niresity, are in this district.
The original royatty, or 'borough roods,' emmed only the Oll Town, excluding even the amoggate, which intervenes between it and the alace, But the 'extended royalty,' ns it is callech, Utaiued from Parliament in 1767, while it exlute the Canongate, embrnces the whole of the ley Town, with the exception of a few streets thich have stretched beyond its limits. The klurts of Edinburgh may be briefly enumerated: pe Canongate, including the Calton, a contiguous anlet at the base of the hill of that name, the perionity of which is vested in the city of Edinughi. The town council of the city hins a veto n the election of two resident bailies for the anongate: that body, besides, appoints one of its mu nembers as baron-bailie. Wester and Easter pursburgh, the former lying $\mathbf{W}$. of the Grass

Market, and the latter, now called the Potter lRow, SE. These two places, which ure of eonsidernile antlquity, and which took their names from ports or guteways in the Old Town Wall, are ulso subject to the city of Ealinburgh, being governed in a way similar to the Canongate. Leith was fomnerly in the same predicament; but it has of late years been rendered entirely free nud independent. Broughton, a burgh of regality under the same jurisiliction, nud lying on the site of the streets in the New Town, which now bears its nume, has been nearly obliterated, and will soon entirely disappear. Its separate jurishliction was destroyed whelt the act for extending the royalty was obtained.

Bdinburgh was tirst walled in 1450 . But the wall was confined to the town as it then existed; that is, it did not embrnce the Canongnte, nor did it extend so far $S$, as the site now ocenpied by the Cowgate. But after the battle of Flodiden, in 1513 , n new wall was built, comprising not merely the Cowgate. but the neclivity S. of thant street, and rumning parallel to it throughout its whole length. Some remains of this wall, which enclosell the ground now oecupied by the workhouse, the university, intirmary, Old High School, \&c.. are yet standing. A number of ports, or gntes, gave inecess to the eity in different directions, the last of which was removed in 178.5 . The Netherbow port, between the High Street and the Canongate, removed in 1764, was ornamented with a spirc.
Public Buildiugs,-Of these the castle deserves the tirst notice. The clate of its fomedation is unknown. It was originally called Castrum Puellarum, becanse the daughters of the I'ictish kings were educated and kept in it till their marringea necessary precaution in these barbarons times. Queen Margaret, witow of Malcolm Caenmore, died in this fortress in 1093. James VI. of Scotland, and afterwards I. of England, was born here in 15066 . The fortress, which eorresponds with none of the rules of art, being built according to the irregular form of the precipice on which it stands, is anything but impregnulule. It has been successively taken and retaken by contemdind parties, and was often in the hands of the English. It is, in short, of little or no strength, and is interesting only from its romantic situation on the top of a rugged basaltic rock, perpendicular on all sides except on that next the Old Town, the splendid view which it commands, and the inany historienl associations connected with it. It was ocensionally used as a royal residence. In an apartment called the crown room were deposited the Scottish regalia at the Union in 1707: these relics, which consisted of the crown, sceptre, sword of state, and the lord treasurer's rod of office, were long supposed to have been removed or lost, but they were discovered, in 1818, in a large onken chest in the crown room, by royal commissioners appointed to condnet the search. They are now open to the gratuitous inspection of the public. Queen Margaret's chapel, in the Norman style of the 11th century. was restored in 18 5. 9.

The Palace of Holyrood, which stands at the E. extremity of the city, next claims attention. It is a fine castellated editice, of a quadrangular form, with an open area in the centre, 94 it. square. The most ancient parts of the present palace were built by James V. in 10528. It was partially burnt by the English during the minority of Queen Mary, and again by the soldiers of Oliver Cromwell; but after the Restoration it was repaired and altered by Charles II., and underwent again considerable repairs in 1850. The mean and unsightly buildings by which it is hemmed in on the S . and on the side next the city, should be removed. The Pretender took up his residence here in 174 ).

## EDINBURGH

(icorge IV., on his visit to Seotland in 1822, though he resided at Dalkeith I'alace, held levees and drawhy-rooms in this ancient abode of his ancestors. Meetings of privy eonncil were also held here. The Connt d'Artoís, afterwards Charles X. of Franee, and other royal and noble French refugees, obtainei a refuge hre in 1793 ; and in 1831 the same apartments served a secont time as an asylum for nearly the same individunds. It has a peenliar interest, from the clrcumstance of the apartments oceupied liy Queen Mary having been carefully preserved in the state in which she leit them. II er bed is an coject of interest to strangers; and many relics of her. Majesty's needlework exist in the rooms The spot where Darnley and his accompllees murdered her favourite, David Kizzio, and other interesting localities, are carefully marked. The eloset in which Mary was at supper, with the Countess of Argyle, Rizzio, and others, when this tragieal scene was acted, is only 12 ft . squure. In what is called the picture gallery, a hall 150 ft . in length, and $27 \frac{1}{2}$ in breadth, are hung the portraits (most of them fanciful) of 111 Scottish monarchs, painted towards the end of the 17 th century by De Witt, an artist of the Flemish school, by order of James II. of England, when luke of York. In this hall the election of the sixteen Scottish representative peers took place.

In immediate conncetion with the palnee on the N., are the ruins of the Abbey of Holyrood, founded by Havid I. in 1128. The king conferred a large endowment and other privileges on the monks (of the order of St. Augustine) whom he established here; among these, the privilege of erecting a burgh between the abbey and the town of Edinburgh. Hence the origin of the Canonfate, the superiority of which at the Reformation passed from the hands of the monks to the Earl of Roxburgh, from whom it was purchased in 1636 by the eity of Edinburgh, which still retains it. At the Reformation, the buildings conneeted with this abbey suffered much; and it is now in a state of ruin, the roof having fillen in so long ago as 1773. The area of the royal chapel, which formed the nave of the Abbey ehurel, has long been used as a burial-place by several of the Scotch nobility. In the SE. eorner of the chapel is the royal vault, in which are deposited the remains of several of the Seoteh sovereigns, and branches of their famhics. The precinets of the Abbey of Holyrood, inchuding Arthur's Seat and Salisbury Crags, constitute a sametuary for insolvent debtors.

The buildings of the Royal Institution, an edifice in a pure classical style, situated at the N. termination of the Earthen Mound, and fronting Princes Street, have a range of Doric pillars on eaeh side, and another range surmounted with a pediment in front. The Royal Society of Edinburgh, the Royal Society of Arts, and the Buard of Trustees, which last was instituted in 1727, for encouragement of trade and manufnctures in Scotland, have also apartments under the roof of this institution. The Board of Trustees, besides the primary oljeect for which it was founded, pays 500l. a year to the Hoyal Academy for the encouragement of the fine arts. The Royal Scottish Academy of Painting, Sculpture, and Arehitecture has hitherto had annual exhibitions in the Royal Institution. On the Mound, a ridge 800 ft . long, stands the National Giallery, a modern building, in the Grecinn style. The Assembly, or Victorin Hall, is a handsome Gothic building, 141 ft . long, with a spire 242 ft . high: it was built in 1842, and is used for the meetings of the General Assembly.

The Calton Hill is the site of several interesting monuments: that of Nelson, thongh by no means in the best taste, is the nost prominent; it stands
on the edge of a precipice, and consists of a lif clrcular hollow tower, haviug a stair insile, and Lattlements at the top. Here, also, is the Nather Monument, in commemoration of the naval and military glories of the late French war, The foundation stone of the latter was latd in lxem when George IV, was in Scotland. It is mant be a facuimile of the l'arthenon in the acropwas of Athens, except that it is of sandstone, whim its great prototype is of marble. (In the same $\hat{i}$ are monnments to Dugnld Stewart, the celeliate metaphyslcian, and I'rofessor Playfuir ; the fumen singularly chnste and beautiful, being a reprover tion, with some varintlons, of the choragie mome. ment of Lysicrates at Athens. On the s, of the hill, on a detached eminence overlooking the Canongate, is a monument to Kobert lbums, te longing to the Corinthian order. The Calton filiti is also the site of the Observatory and of the llimat Sehool. On the SW. corner of the hill, along the right of the road leading from l'rinces Street u the country on the E., stand bridewell and the craol, two heavy and plain but well arratysto buildings.

There are various other monuments in differen parts of the town: that to the late Lord Merille in St. Andrew's Square, consists of a column, surmounted by a statue, total height 153 ft ., nfter the model of 'Trajan's pillar at Kome; but the shatt instead of being ornamented with sculpture, asis the case with its archetype, is fluted. Bronz statues of George IV. and William I'itt, by Chantrey, are placed on granite pedestals in Geone Street, at the erossings, respectively, of llanowe Street and Frederick Strect; and a bronze state: of the late Earl of Hopetoun, by the same artist, is placed within a vacant space, opposite to is office of the Royal Bank, in St. Andrew's Squar Another bronze statue, by Camplell, of the hat Duke of York, has been erected on the Castle linin between the High Street and the castle. A statu of the Duke of Wellington, erected in $18: 22$, stand near the register house. The monument to हiv Walter Scott, on the vacant ground south d l'rinces Street, at the foot of St. David's Sinte though not, perhaps, in the best situation tiut might have beell scleeted, is one of the most strit. ing and magnificent of this elass of buildiuss. is open Gothic, 200 ft . in height, nud, includits the statue, cost $15,650 l$. An equestrian statup the Duke of Wellington is placed in front of th register office. The monument of David llume the historian, within the old Calton Hill burving ground, is a conspicuous and interesting object.

The Register Office, a building erected to 1 serve the public records of Scotland, was cu strueted after a plan designed by Mr. Rob, Adam and though begun in 1774 was not completed ii 1822. It is situated at the E . end of Prince Street, and fronts the North Bridge. The buik ing, which is of two stories, exclusive of the lase ment floor, consists of a square of 200 ft ., with quadrangular court in the centre, covcred br dome of 50 ft . diameter. It has great architect ral beauty. Its front is ornamented with Coris thiun pilasters, supporting a pediment, withii which are the royal arms of Great Britain, with fine entablature of the same order. It is dispese in nearly 100 small arched apartments enteris from long corridors on both stories; and, thome heated by flues, is, from the total absence of timber proof against fire.

Churches and Chapels.-Edinburgh originaik eonsisted of one parish, and John Knox was, fut time, the only minister of the eity, that is, of th ancient royalty, independent of the suburbs 1 single place of worship at that time was St. Giles

It has great architectiis ornamented with Coritr rting a pediment, within ms of Great Britain, with1 same order. It is dispoed rched apartments entening both stories; and, thoust the total absence of timker
els.-Edinburgh originaly and John Knox was, fir of the city, that is, of the ndent of the suburbs It at that time was St. Gile:
ot the ligh Chireli. In 1625, the royalty was dirided intu four pars. $;$ in 16.41, Into 6 ; in 1841, into 9 ; and subseyuently into iffeen parishes. This is exclusive of the Canongate, whose church is cullegiate, of the par. of St. ('uthbert, of South Leith, and three others.
The most important ecclesiastical edifice is St. Giles, so called after the thtelary saint of Eilinbungh. It stands in the High Street, and forms the N . aide of the Parliament Nquare. It is mit anciput (Gothic building, the date of its ereetion being unknown ; and ts built in the form of a enss. Its leagth is 206 ft ., its greatest breadth i29. It is adorned with a lofty square tower, the top of which is enclreled with open thgured stonework, whilst from eacl) corner of the tower springs an arch, which, meetiag together in the centre, furm a magnilleent imperial crown. A pointed spire, elevated 161 ft . from the ground, terinimates this stately tower. Shortly after the Reformation, st, Giles was dividel into separate places of worship. In 18:2-23 it was thoroughly repaired, with the exception of the tower, renovated, and grently improvel in appearance by an entire casing of new freestone walls, its ancient character being at the sume time carefully preserved. It now contains only three churches. The Iligh Church, or Eater St. Giles, lias an ornamented seat for the orereign, with a canopy supported by fonr handsome columns. It has, also, the oflecinl seats of the magistrates of the city, and of the julges of the court of session.
The next church, in respect of antiquity, was Trinity College church, founded in 1462, by Mary of ticelires, widow of James II. The buihling, whisls was Gothic, and in the cathedrnl form, njpcars never to have consisted of more thinh thie shait or E. part, and the transept or cross, the W. gan having been begun but not tinished. But this pateresting relic of a bygone nge has been removed lomake room for the terminis of the North British ailway.
The Tron church, which stands at the point of intereetion of the South Bridge and High Street, s of Gothic architecture, blended with Roman maments and details. The present spire of this thurch, 160 ft . in height, replaces a former spire of rood, burnt downin 1824. Among the other and more moidern churches are St. Andrew's, erected In the extended royalty, in 1781 , with a spire 168 f. high; St. George's, opened in 1814 ; St. Mary's, In 1821 ; St. Stephen's, in 1828 ; Greyfriars, built (612, and rebuilt 1846; and Greenside, in 1839. H. George's, on the W. side of Charlotte Square, y a large, heavy, tasteless square fabric. From he centre rises a tower surmounted with a dome 50 ft. in height, in imitation of St. Paul's: the wuilding cost 33,000 . The church for the Tolwoth parish is situated on the castle hill, has ommodious apartments, ine. Victoria hall, already ventioned, for the use of the General Assembly, nd is the most conspicuous object in the city. The town conncil of Edinburgh are the patrons of he fifteen eity pars.
The churches and chapels, nine in number, beonging to the Scotch episcopal ehurch, are geneilly handsome structures. Of these, the principal ${ }^{\mathrm{ra}}$. St. John's, the seat of the dean, at the W. nd of Princes Street, in the florid Gothic style, ith a square tower, 120 ft . ligh ; St. Pnul's, the kat of the bishop of Edinburgh, in York I'lace, Gothic architecture; and Trinity elinpel, at the extremity of Dean Bridge, also in the Gothic tyle.
The Rom. Cath, have three places of worship, sides a convent of nums, called St. Margaret's, the head of Bruntsfield Links, attached to YoL. II.
which is an establishment at Milton Honse, in the Cnnougate.

The chapels of the various dissent ligg denominations (including the Free Kirk) are all respectable, and many of them spacions, elegant, and costly. The following is the mumber of jlaces of worship in the city and suburbs (exchusive of leith), with the denominations to which they severally belong :-

The eity parochial clergy are supported chiefly ly an assessment (called annuity tux) of 6 per celit. levied on all houses and shops within the anclent and extended royalty, with the exception of the dwelling houses of the members of the College of Justice, that is, of the legal practitioners before the court of session. The annuity being a very unpopular impost, its payment is often evaleil, even at the risk of imprisomment or distruining of grools, so that great delalcations are experienced in its collection. The clergy drew, till 1838 , certrin shore dues at Leith, and other tritling improsts ; but, by an net of parlinment passed in that yenr (Edinburgh and Lcith Agreement 13ill, cal. $55)$, the sum of $2,000 l$. was secured to them, in lien of all such claims. Their average income of late yeurs has exceeded 5001.
Ediucation.-University.-Edinburgh is not more celebrated for anything than for her literary and educational institutions : of these, the university deserves the tirst notice. The building of this seminary, the only foundation of the kiud established in Scotland since the Reformation, began in 1080 , after many ussuccessful efforts had been made by the citizens of Edinburgh to obtain for their city the advantages of such nn institution. It received a charter from Jomes VI. in I 582 ; and in 1583 the college was opened for the reception of students, the number of whom was forty-eight. (Crawfurl's Listory of the Cuiversity of Edillburgh, p. 31.) On the first institution of the college there was but one professor or regent; a second was soon afterwards added, then a third, and so on, till there were six; a principal. who was also professor of divinity; four regents of philosophy ; and a regent of humanity. Each of the regents of philosophy conducted his class for four successive years, including, in his course of study, almost every department of science and literature-the classics, lugic, metaphysies, ethies, mathematics, and physics. A division of labour in teaching was gradually introduced, as new professorships were founded; but it was not till 1708 that the old system was entirely superseded. In the year just mentioned, the number of professors, including the principal (from whose duties the office of regent of theology had been withdrawn in 1620), was fifteen; but such has since been the increase, that, in the year 1864 , there were thirty-four.

Tle medical school of Edinhurgh, of late years so famous, had its origin so recently as the end of the 17 th century, there being no professor of medicine previously to the year 1685. The magistrates, whose predecessors may be regarded as the founders of the university, and who have been at
all times its munitleent grardians, are ita general putrons, mind have juwer to linstitute new professurnhijs, and to alter or modily the academicul dixejpline. Ont of the 32 nppointments, they possens the exchavive right of presentation to the oflleses of principul and of 1.4 protiessors ; they unite with other jurties in the right of election to 7 other chnirs ; the crown enjoys the patronnge of 8 ; while the principul und profewsors are invented with the patronage of I, viz. musle, instituted lit 16il). The chair of elinicul medleine is tanght in rotation by eertain of the medleal prolessors, necoriing to an armurement among thenselyes. The crown is the putron of these chnirs only instituted by itself. No party except the crown (und even that was at whe time disputed) has a right to fomel a professorship without the sanetion of the mugistrates. The ineomes of the professors alepend chiefly (some of them entiroly) on the fees pull by the students. The crown cholowed mont of the chairs which it has fommed ; while such of the ethers as have sularies attached derive them either from the patrons of the university, their respective founders, or the liequests of private Individunls. The chair of music, founded and endowed by General Reid, las attuched to it the comparatively large salary ol' 3001.

The nhove suns include, in the case of the older chairs, allowances for homse rent, as the professors and also the stalents origianly lived withlin the walls of the college ; lint such is no longer the case. Joth partles uow live wherever they clooose; and no diseipline is exercised over a student, except when within the walis of the college. The professorships are divided into the four faculties of philosoplay, law, medicine, and divinity. The students wear no particular acndenical dress, 'I'sere is no such oflicer us a chancellor or rector except that the functions of the latter are said to be ofticinlly vested in the lord provost of Edinburgh. A standing body, ealled the college committee, nppointed by the town council out of their own mumber, has charge of the seminury. There is but one session anmially, from the frst of November till the enf of April.

The exhibitions, or bursaries, attached to the university are 34 , their benctits being extended to 80 students ; their nergregnte amonint is $1,172 l$. $n$ year. T'liree are of the amuml value of 1001 ., six of $30 l$., ten of $20 l$. , four between 20l. and $15 l$. , one of 151 ., five between 151. and 101., furty-two between $10 \%$ and 51 ., and three under 51 . The fees paid by the atudents are-lior each class in the finculty of ilivinity, 21. 2s. ; in that of arts, 31. 3s.; in those of law mind medicine, 41.4 s . There is, also, 1l. paid annually on matriculation.

The number of stulents increased pretty regularly from the institution of tho university till 1823 , when it was at its maximum. There were in that year 2,344 students on the looks. In 1830, the number had declined to 2,023; and in 1850 to $1,56 \%$. The averuge number of students in recent years has been 1,000 .

The great diminution of students is genernlly allowed to be owing, not to any inefficiency that nttaches to the university of Edinburgh, but to a combination of circumstances, particularly to the institution of the Free Church College, and of several colleges in England, to an increased emigration to the liritish colonies, and to the country laving become more commercinl, and supplying more advantageous channels of employment than those afforded by the learned professious.

The mivarsity library consists of about 100,000 vols. It is open on payment of the matriculation fece, referred to nhove, to all students, who may borrow from it and carry to their lodgings as many
looks as they please, on defositing a sum equaly their value, whlel is returued to them wheato looks are repluced. The library is suppurted by the matriculation fee, by bi, puld by caelh protiowe on lils election, and by a jortion of the fewd graduates both in medicine nud in nits. It ma formerly ohe of the institutions that were entith to a copy of every book enterel in Strtionero
 by government. I'le library hall is 198 ft, is length by 50 in wilth, and is certainly one of ibe largest aind finest halls in the klugdom. Then are variuns other subsidiary apartuents. ? theologleal faculty lins a library, consixting of nhont ti,000 vols. approprinted to the use of itsum ntudents. The collcge musenun, which oceupin two large anil elegant rooms, besides minor apano mests, is particularly rich in objects of natund listory.

The present miversity buillings, whieh aren a very magnitleent scale, were hegron in $1 i \times 9$, the expense being defruved purtly by pultice mor scriptions, but eliefly by repeated geants fun government. The structure is quadrangular, 3 ft. by 255 , enclosing a court. A handsome pro tico, supported by massive Doric culunas, finas the chict entrance. Ilois is to be sumametelty a dome, the only thing that is now wanted io complete the bitiling.

Free Clurch College.-In nddition to the old Ediuburgh lias now a new college int tonnetion with the Free Church. The Intter, situaiel the S. end of the Monnd, is a handsome and anmodions building. Though complete int itself, the present structure forms only one of three gust rangles, enbraced in the origimal plan. The. front has a cluurel at the E. chel, and in the centr two large towers rise on each side of the portivit entrance. 'The buildings around the area of the quadrangle consist of the liall of the sulate neademicus, the library, musenm, divinity ladt and several class rooms. The $S_{1}$ part of the gromud, which is unoecupied, extends to the lige Street. It was founded in 1843, and though prab cipally intended for the education of students io longing to the Free Church, it is not contined th any denomination; and the classes of moral phis losoplay, logic, and nutural seicnee, as well as theme of theology, are open to all who chouse lears themselves of them. Besides the priuch, al mitwi prolessors of theology, there are professons of divinity and ecelesinsticnl history, II getical theology, moral philosopliy, logic, untuad science, and a classical tutor. The namber id pupils at the college amounts to nearly 50 on on tex average. The professors have 4001, a year of alar, and thore are several seholarships. The necenstr funcls for the maintenance of the college ared rived from contributions and collections throngh out the chureh and the fees of students. The library excceds 10,000 vols., and the museumput sesses several valuable specimens in the deparment of natural history.

The celebrity of Edinburgh as a medieal schew has depended materially (but formerly mure then during the last fifty years) on the s.hools of number of private lecturers of eminence in thet separate departments, particularly in melicima They are generally members of the hoyal Codleg of Surgeons, and attendance on their couried lectures is allowed by that body to qualify fores amination. I'his college grauts dijlomas in sur gery, hut not in medicine; so that a person mas obtain the rank of surgeon in Edinburgh withow attending a single class in the university. The Iligh Schowl is at onco the oldest and most eldinatel of all the lidinhurgh sehools; and is ruplessed by few classienl semhlaries in the empire. It was lustituted in 1519, lout haviug finlen into Inar, wis re-erected lil 1677. It eonsists of a petur, and four other (ireek and Lathomasters, mon of whom begins an elementury class yearly, finl at the ond of four years hames it over to the motur, under whom, rencrally during two medifinal years, the curriculum of study is completed. The present building, one of the orimaments of the itr, is situated on the $\mathrm{S}_{\text {. slope of the Calton llill: }}$ Was upened in 1829, is composed of a central mly and two wiugs, and cost $34,000 \mathrm{l}$. The nummif of scholars hats been (1820) as high as 4688 ; at, for sone years past, the mumber has been otween 400 mud 500 . Thls decline is not, howrut, ascribable forany fulling off in the reputation the schurl, but to the institution, in 1824, of a we aristocratien establishment of the sume jiml, called the Edinhurgh Acnilemy, eouductesl a conmittee of subseribers. A Naval mud iliary Academy, inatitnted in 1825, embraces Ithe classes necessary for the two profersions mow which its title is derived, as well as all the maches implied in a liberal education. The her mere eminent schools are the Normal chumls in connection with the Church of Scothand wid the Free Chureh, the latter being held in the muse that once belonged to the Jiegent Murray ; esuthern Academy, sltuated in George Square, milaciug not merely classical literature, but ull b braches requisite in a commercial or general luration ; the Hill Street lnstitution in the New writ of which a similar charucter may be given; te Circus Place Sehool, n seminary for English trature ; the Ladies' Institution for the Southern istricts; the Scottishl Iustitution for the education young ladies; Dr. Ikell's Schools; Lancastrian thoul; the Sessional School, supported by the Kirk wions of Edimburgh; and School of Arts, or Meanis' Institute. There are, nlso, raggel and instrial schools. Literary and scientitic nsmociations e common in Edinburgh, such us the Royal Soty, the Astronomical Institution, the observatory tached to which on the Calton Hill is in the rest classical taste, the Socicty of Antífuaries, emerian Society, Royal I'lysical, Royal MediC'urierian, Illinian, Speeulative, \&c. There are 0 varions subseription libraries, some of them of eat extent and value.
Charitable institutions are very numerous in linburgh. The most important is George not's llospital, from the name of its founler goidsmith and jeweller of James VI. This le structure, which is of a quadrangular form, th a court in the centre, and of Gothic arehiture, from a plan of the celebrated Inigo Jones, leroted to 'the maintenance and education of of fatherless boys, freemen's sons of the town of inburgh.' It was opened for the reception of sin 1659 , when thirty were admitted. It now tains 180 ; but, by a recent act of parliament, governers of the hospital are empowered to ct schools from the surpluses of income, aughout the town, for the gratuitous education marily of freemen's sons; but if circumstances mit, to be open to the children of poor pa-
rents generally. There are ten much mehools, including three lifant selools; aggregute nterndanco abmit 1,500 , The management of the charity is vested in the cighteen dity elergymen, ninf in the members of the town commeil. The revime of the luspital is upwariss of 17,0001 , a yeur. 'The other charitable institutions are (ieorge Wataon's Ilospitaf, fonnded in 17.11, containing eighty boya; John Watson's llospital, fonmied in 1ares, and contuinhig 120 ehiliren, mule and female; the Merchant Maiden and the 'l'raies' Maiden Ilospitals; the Orphan Ilospital; (iillespie's Ilospital, for the reception of ohl decoyed men and women, having attuched to it a free sehool, attended by alont 160 poor children; Trinity Hospital, fanmided by the widow of James II. in i-til, for the beneilit of 'burgesses, their wives, or chilalren not married, nor nuler the nre of iffy yearn;' Canvin's Hompital, for the maintenance aind edncution of the sons of poor teachers, and of poor bit honest farmers; the listitution for the Deaf and Dunb; Asylum for the Blind; Magdalone Asylum; lannatic Asylum; Honse of liefuge; Joyal Infirmary, fonnded in 17 ati ; Society for the lieliet of the Destitute Nick; Lying-in Hospitals; Dispensnries. In adilition to these, anil nther less important charitien, some large bequests huve recently been mide for benevalent purposes. James Donnldson, printer, Edinlurgh, who died in 1830 bequeathed 210,00011 . for the endownent and erection of $a$ hompltal for the maintenanee of por boys and geirls, of whom a certain number are to be deaf and chmb. The building for this hospital opened in I850, is quairangular, in the Eliznbethan style, and is one of the thest of all the atrnctures belonging to Balinburgh. Sir William Fattes, who died in 18:1ti, left the greater part ol' his large fortune to form an endowment for the maintenance, educution, and onttit of yonng people whore parents have fallen into adverse circumstances. George Chalmors, plamber, who died in 18:3i, bequenthed $\mathbf{3 0 , 0 0 0 \%}$. for the erection und sipport of a hospital 'for the sick and hurt.' There is, finally, a hospital for the mantenance dind education of poor boys, from a fund which nmomes to $90,0000_{1}$, bequenthed by Mr. Damiel Stewart.

Courts of Law,-Whinlurgh is the sent of the supreme courts of Scotland, or College of Justice, foumled by James V. in 1532. Of these, the principal is the Court of Session, or supreme civil conrt, which possesses in itself all those peculiar powers exereised in England by the Courts of Clunucery, Queen's Bench, Common Pleas, Admiralty, nind others, beng a court both of law and equity. The constitution of the court has undergone various molitications in its different departments dluring the last 300 years. At present it consists of thirteen judges, called lorls, and separated into the first and second divisions: in the former there are six lords, in tho latter seven. The two divisions form distinct courts, but they may, and on important questions do, sit in judgment together. From the first division are detached two jurges, called Lords Ordinary, and from the second there are taken three. Before one or other of these ordinaries, all cases must be brought in the tirst instance; but an appeal lies from their judgment to that division before whose ordinary the ease was primarily tried. Cases may be appealed from the Court of Session to the House of Lords, the decision of the latter being tinal. 'The court has a winter term of four months, nnd a summer term of two months. Trial by jury in civil cases was introluced into Scotland, under a separnte court, in 1816 ; but in 1830 this tribunal merged in the court of session. In the sume

## EDINBURGII

supreme court has been vested the Jurisalietion of the Teind or 'lithe Court (the preuline duty of which was to, rygulate the ntipende of the elergy of the establiskied church of Scotand), of the Comminsury or Comsintorial Conrt, nud the Court of Exchequer. The Iligh Court of Justiciary, or supreme crininal court, was inntitited la lifze. It is compowed of in president called the lard duntice Clerk, null of other llve Joulges, who must, at the sume time, he loris of session, but the crown may nimmint miy of the other lords to net shombld such 0 step be thought expredient. (Saee Scortani.)
'The ellifice which, sillse the Union, lins been the phace of merting of the College of Justice, was the purlinment house of scothad, from 1 ti:20, the dute of its erection, down to 1707, when the Union extinguished the wepmrate legisjature of stothand. The building is situnted lit the centre of the Ohf 'Gown, beink sepurated from the Iligh Sireet ly the eathedral of St. Giles. A small spase eniled the P'urlinment Square intervenes between it and that church. Nenrly half the buildings which formed this square were burnt down in 182.4; but both St. Giles and the Parliament Homese excaped. $i$ new front, though but little in larmony with the surrounding builhings, has been given to the latter, nud great changes have been efliected in its interior in the course of the prement century. There in in the court oecupied loy the second dlvision an almirable statue by Roulillinc, of Duncun Forbes, of Culloden, president of the conrt of nession; and in the court necupied by the first divlsion is a atatue of I'resident Ithir ; and in the hall, where the lorils ordinary sit, is a statue of Henry Inudus, Lord Melville; the last two are by Chantrey, but they are poor and spiritless, rompiared with the masterly production of Lionbilline.

The faculty of alvocates is an association of harristers (but not incorporated), entitled to plead hefire the supreme or any other courts of record. The society of writers to the signet is an incorporated body, qualified to conduct cases, as agents, before the same comrts, and enjoying the exclusive right of preparing such pmpers or warrants as are to receive the roynal sent or signet, whence Their designation, The solichors before the supreme courts firm a body of attorneys incorgorated in 1797, but of inferior grade and dignity to the writers to the signet. Advocates' tirst clerks may practise before the supreme courts on underguing the usual examination, and paying certain fees.
'The legal practitioners, all ranks included, may he regurdel as the most important class in Edinburgh. l'ublie opinion is, to a considerable extent, atfiected by their influence: they form a very muncrons body; but while they lave greatly inreased in numbers during the last 40 years, the business of the court of sessiom, before which almost all of them exclusively practise, has underfone a remarkable diminution. It appears from otlicial returns, that while the number of cases annually emrolled in the court of session is at present only about 2 -3rds of what it was in 1798, the number of advocates has almost doubled, and that of agents of all kinds has nearly trebled. As , however, the capital and pop. of the country have more than doubled withn the time specilied, $i$ it is probable that conveyancing and such departments of bisiness have grently inereased, though not nearly to the same extent as the number of lawyers.

In immediate connection with the parliament house are numerous apartments, some of them spacious and highly omamented, fitted up for the li'raries belonging to the faculty of advocates,
nuil the writers to the signet. The jilirary of te furmer ludy was comblulininhed in lise. Thisedles thon, which exceedry 150,000 volnmes, is hy fat on mumt extensive anil valuable in scotland, and in in finet, a very noble natlonal librury. It reaiten a ceply gratin of all works enterell in Stationts Itall. The librury of the writers to the sigignel i also inrge and very valuable.

I'laces of Ambesment.-Anong thrise mar 1 specilied the theatre, which is tolerably wall tended, and the assembly rooms. The firme situnted at tho N. end of North Bridge Street, io plain building externally, but is humdomely on conveniently illted up. The asemblly foniob George Street are large mull elegunt. Ciolf $b$ finvourite grune; and curliug nuld skating ane rem fivonrite amusements in winter, when the lerhis
 over. Cricket is naw nlso begrininum to be pha tised, and various cricket clubs lave recentry he furned.

Manufactures.-D Ediulourgh can searecty les: gurded asa mmuffectarlige town. The lirevina, ale luas for upwards of two centuries been els blished in Edinlourgh, and there are many coucd making establishments. Figured whawl, in in thtion of hose of Canlamere, were Alsts succespary made in Edinburgh. This took place ulvout IN and the homour of it belongs tor a Miss lowie, whe with her fither, had been for a munder of yom ergnged in the gold lace manufucture. The in vention of the Jacquari loon gave for a timet superiority in shawl-muking to our Freuch nete. bours. bint a knowletge of the invention hares reached this comerry, prowluced a renction infare of the Scotch manufacture; and while this bes ness was being cultivated with grenter of bo success in France, it extnblished itself in Xumian and in l'aisley and Glingrow. Edinbardh, fro the commencement of this munuffucture, liax ham the lead in most of the improvements cominto with it, always producing the best growls of of kind; but from the circumstance of thbure of rious kinds being lower in Puinley nuld Gian the manufacture las mostly been transernd these places.
Literature has long been not only the prind glory of Edinburgh, Dut has also ultioded ape cipal source of employment to the ppylation The publication of the Eidinhmrgh Revier, wive commenced in 1802, mude the celelority of EA burgh as a literary mart, which wus mot lomat still farther extended by the appearance of enrlier productioms of Sir Walter Scont, sineeb a vast number of works of the lighest eminea in almost every department of literature, pibit suphy, and science, inve appeared in Edtiluturg There are in Edinburgh about 60 printing tili employing from 1, ,t,00 to 1,200 workmen, exd sive of masters. The business of buoklinitio gives employment to about 500 persons, exdus of masters.
The linen manufacture, both as respectit coarser and finer fabrics, long thourished in E burgh. ' 'The number of looms,' says Annot, ployed in Elinhurgh in the linen trade is extran thectuating'; the largest number that has le known is about 1,500 ; at present ( 1789 ) itis. posed there are upwards of 800. This city long been famous for making the finest dims table linen, and linen in the Duteh manuer, eq to any that cumes frum Holland.' for a leugthened periol, Edinburgh was very nififlerenty" supplied with water. 'There are no frings of my inportnice within the city, the rater required for its comsumption being eanveyed in pines from a comsiderable clistance. The firnt ffliese pipes was laill In 1681 ; noll adilitions were hale to it in 172., 1787, and 1790. Still, howrep, the supyly, owing to the linerease of jopulainn, was very ilofective, and it became necensary atake more efllelent meaxures fur increasing its nanity. With this view a jolnt-stock comphay ras establlished by act of parliament in 18141 , thich conveyed into the town the wnter of the 'muley and (lencorse springs, about 7 m . SW. thm the rity, and afterwards, in 1849, the 13nveaw and Harlaw springs, 7 m . directly W. of the iil. The works constructel to effect this oljeet re on a senle of great magnithence, and the cost mountel to upwards of 300,000 . lidinburgh is fell lighted with gas; and the pavement of the treets and lanes lins long been celebrated for its xellenee. The best material for paving is found the neighbourhrod.
The Seatch merropolis had long the unenviable puation of being one of the dirtiest towns in Gurpe; and though vast improvementa have rea effected in this respect, the reproach is not fet completely obvinted. The dirtiness of the od Town seems to have been mainly attributable o the crowded state and height of the buildings, nd to the want of water. These circumstances findered the formation of water-closets, and of comfon sewers; and down to the commencement of he American war, there was probably not a dezen the former, and certainly not one of the latter, the city. Both are now universal in the New forn, but they are still wanting in very many arts of the Old Town ; and notwithstanding the zulations laid down and enforced as to the costgg of tilth on the streets, they can never, umiler pe circumstances, be perfectly clean. In very any, too, of the storics (flats) or bouses, espeally those in the narrow closes or wyuds on each He the Iligh Street, there is no supply of water, re what is obtained from the public pumps in ie vieinity ; and this circumstance, combined ith the want of ventilation, and with the poverty Th usually crowiled state of the inmates, render pen the abole of misery and disense, to an exint that wonld not easily be believed.
Sone but burgesses were till lately entitled to ury on any trade or manufacture within the
royalty, llut there doen not now exixt nuy much prohibithon or exclasion, None, however, but. lurgesade or their chilliden have a claim on the charlty of the Jrinity Ilompital, and mone lint then monn of limpgesmen are elltitled to admisalon to Herinit'm llonpitul.
Represeuthtion.- Ilefore the pawslug of the Refirm Ibill, In Ikils, the town cousell of lidlinhurgh, whleh conslated of thirty-threo mombers, may ha anhl to have leem arlf-elected. With the encepithon of slx , who were returned by eertnin licorpornted trales, the councll for the time bring lami the exclusive right of nominating their successors, then puhilic havlug no volee or right to interfere in tha matter. The town conncil thus elected posnesnerl the exclinglve right of chooslug a representative lis parliament for the city. Owing to the unjopinlarity that neceanarily attached to thin wolfodected
 Ilill was nowhere mure at reminonsly insiated unon, or recelved, when frumed into a lnw, with mors mincere rejoichng, than in Edinlurgh. Hy this law two representatives were given to the city. In $181: 1$ the registered voters were 9,752 . Ninler the Mandeipal Keform Aet, lidinlurgh in ilvialed linto flve wards, and is govamed by a lord prowost, four bailies or aldermen, atul forty-ome comincllors. The corporation revanie amonited in 18bit-1 to 43,9.12l. exelasive of police revenise. The anman value of real property was $971,889 /$, in the tianancial year 186.1-5.

Mistory.-The origin of Edinburgh is involved in obscurlty. Se parly as the lagkiming of tho neventh century it had olitalned the mame of bilwinesburgh, derived, it is supposed, from Elwfir, it prince of Northumberlund, who overran a great, part of the S. of Scothand. In the year 1128 , it, is calted by Davill 1. his buryh of Jidlinhurgh; whence we infer that it was then a ruyul lmorgh. It was not a walled town, as previonsly wated, till the midille of the flftemeth century. James IV. encouraged the erection of its first printing press, in the beginning of the sixteenth eentury; but it wiss not till the succeeding reign that it was recognised as the undoubted capital of Scothmi. From this time its history mergen in that of the kingdom. It was converted to the I'rotestnnt faith at an early period of the Reformation; and the great bulk of its inhabitants, in sucessive ages, mul under varions forms of persecution, adopted the Calvinistic creed, and alhered rigitly to the I'resbyterian form of worship. John knox was, for sone time, minister of Elinburgh ; and the house which he inhabited (at the Netherbow, near the E. extremity of the High Street) is still standing, and is regariled with no ordinary degree of reverence. The union of the kingilons excited great tumults in Edinburgh with the view of intimidating those members of the Scoteh parlinment who were favourable to the obnoxious measure. The aet, however, was eventunlly passed (Ist Mny, 1707) without bloodsised. In the rebellion of $171 \%$, an unsuccessful attempt was made by the Jacobites to surprise the castle. In the subsequent rising of 1745, the rebels fot possession of the city, a party of the Highlanders having secured the Netherbow Port; and they remained nusters of the town from the 15 th Sept. to the 31st Oct. But finding it impossible to reduce the castle, they abanloned the city, and proceeded on their march to England.
In 1736, a remarkable occurrence took place in Elinburgh, known by the name of the l'orteons mob. On the 14th of April, at the execntion of a smuggler of the name of Wilsen, a disturbanco arose, and the executioner and city fund were assailed by the populace. Porteous, the captnin of the guard, having ordered his inen to fire on

the crowi, six people wers killed and eleven wonnsfel. Having frenn tried fir the ollenee beliope the high eonitt of justieinry, I'orteons wan enindemmed to denth, bitt wis reprieved by the arown. Resolved, lowever, that he mhonlil mot thin encure the finte which they thought he merited, the mols, on the uvenling of the day previonsly to that ons whleh he was to have bevo "xecilied, loroke linto the gral in whileh log wam conifined, and having irmggad hisn out, leid him to the uninal place of exsention, and there hanged him by toreh-light on a dyern jule. It behigg supponed that the minicipal authorition boul neg. leeted their daty on this ocension, the city was orderad to pay a the of 2,0 , $101 /$. nterlinger to the whlow of l'orteonis ; ninl, whit is remurkable, thomgha a rewurl wus ollereal for the dimenvery of the perpuetrutorn, they never were discoverel, and thuir mames continne to be maknown.

Fow evente worth notive have since ocenred in thin ammals of Vidinimitgh. On the 2nd of Fub. 1770, duriug the purlinmentary liselusmions on the subject of the Cntholic clnims, an infurintend mob hurnt one Catholic elmuel, plunderel another, and threatened to demolishi the house of I'rincijal Kobertson. K(x)n after the brenking out of the French lievolution, a mumber of the inhabitnots of' Edinburgh, synjuthining with the primeiples which then provinied in France, formed themrelves into societies for obtnining parlimenentary reform, and sinnilar political olygete. The proceedlings of these associntions, the memhers of which styled themselves 'the friends of the people,' were, on the whole, neither wine nor conntitutional. After sloing mueh minehlef; they at length attracted the notice of goverim ant ; nal the servility of the juigen, winl the wretehed state of jury trind in seatland at the time, aflomed a reuly menus of intlicting on them the utmont penilty of the litw. One of the prosecuted men, named Watt, was hehended fur sedition; and Mluir, Skirving, and others were transjorted, Among the other events comected with bilinburgh which may, perlmps, be worth notice, muy be epicciffed the visits of George IV., in IN:2.2, being the flrst sovereign who had entered the city since the year 16in0, and of Queen Victorin and lier consurt, in 1842 .
Fidil: (Boh. Cheb), a town of Ihohemin, ranking third in that kingdom, near its W. frontier, cire. Eiltogen, on a rook on the Eger, 94 m . W. Prague, on the railway from I'ilsen to Huf. Fop. 11,172 in 18.3 . The place was formerly an important fortress; hut its walls ure now almost testroyed, nud its ditelies grailually thling up. It contuins some haudsone buildings, inclusive of a tine pur, church and town-hall. In the centre of the town is a large market-place, at the E. eud of which in the Bugomaster's house; in a bed-room of which, Wallenstein was assassimoted in 1683. In an angle of the fortificutions overhanging the river, stand the ruins of the imperial castle, containing an attcient square tower built of Hlack lava, supposed by some to have been constructed in the time of the Romans, a singular double chapel, and the hall in which the principal friends of Wallenstein were trencherously jut to death at the same time with their master. Eger has a gymnasium, 2 convents, a high school, a school for the children of soldiers, 2 hospituls, an orphan asylum, 3 worklouses, a fumblation for 12 old men, and manufactures of chintz and cotton fabries, wool, hats, mud sonp.

Bhmmaries and Extent,-There have leen very diveradnut atatementa nas to thu boundaries of thif ammen eomintry. There canmot of conrse be any doubt is to lis N. Himit, which is firmed by thie Jimiterranman ; and it seems to liave been generally nureed from a very remote periond, that lin S. limit monlif be Ilxed at Syene, or rather it l'hilue, in lat. $21^{\circ} 3^{\prime} 45^{\prime \prime} N_{0}$. Ihit the diflleult print in to determine lts breadth. From l'hilie to near Cairo, the Nile lit mont purts flows through a narrow valley, bounded on etther side by a ringe of hills, of inferior momotains; at Chiro these ridgee llirepige, thint on the L., to Siues, and that on the W. in a SW. direction to the Mediterrmenn. Some authon identify Egypt with the tract lying between the munintuli chanins now referred to ; while others, regarling the Nile as the sonrce of life and verretution in Lirypt, rewtriet its territory withln the limits covered! by the inundation of the river. (struls, lib, xvii. p. 544.) But from the age of He i'tolemics down to the present day, the desert cunatry lying between the valley of the Nile and the Red Sea has been miformly inchuled in ligypt. (hit the W , side the motintain ridge alrenily noticed evems to be its only natural bomulary. Still, huwever, it has leen usual to reckon the onses that lie within L00, or even 200 m . of this limit, as bebuging to Bify ypt.
From Cape lleurlos, on the coast, Int. $31^{\circ} 30^{\prime} \mathrm{N}$., to l'hile, the distance $N$. aud S. in $7^{\circ} 3 y^{\prime} 15^{\prime \prime \prime}$, about $45^{2}$ geographical, or 520 Engrish m. But the distance by water and the extent of the allasial territory are considernbly greater than would appuear from this, becanse of the many and considerable bends of the river. The breadth of the Egyptian coast is 160 mu ; but in ascemding to (airo ( 104 m . from Cape Bourlos), the cultivated ract tapers off to a point, and the rest of the vuntry is chiefly comprised in the narrow valley of the Nile; which, however, at Ibeni-souf, 83 (by rater) m . higher, sprends to the W. to form the rale of Faioum, a circular valley of great fertility nd beauty, measuring about 40 m . from E. to W. and 30 m . from N . to S . Thence to Syene, the falley of the Nile is mostly contined within very narow limits. The whole cultivable territory of igypt, including its laternl valleys, has been estinated at about $16,000 \mathrm{sq}$, m., or about half the rea of Ireland. (Malte-Brun. iv. 21, 23; Modern Traw., art. 'Egypt;' 1. 6; Heeren's Resenrches, i. 210, lingl. trans.)

The Nile, so important among the grent rivers The world, is also the most striking object in the general aspert of a country which not only is tholly comprised within the sphere of its influence, put is entirely indebted to it for existence. As
alrualy atated, the Nile entern Finypt at the imbut of I'hlher and from it tio Aswounii (Syene), in iliwthere of uboint if m., it lins ent a panange fior itsell; throngh is rifge al' grumite rocks with which its

 an the attrition of the water for mo long a purionl conlil not fall materially to deepen mut moobli its hedt it alt evonts, however, it la now rathor it rupht than a entaract. deeording to Nir F . Hlouniker, it in not really more fiormiduble than thon fill In the 'I'hamen at low water at Oli! domulin! IIridee, previonisly to its demolition. (p. 147.) Ilit. It is elear that itn lielght mud rapility munt ilppenit materinlly on the state of the river. Whan tha Imandation is at lis helght the fall is harilly pereeptllile, but at low water it varien from $x$ to 10 ft. Alter leaving Ansohall, the river rins on in a plachit quiet atrenin, till, a little below Cuiro, nt Intn-el-Ilakurn, it divides luto two grent armen, the mont li, of which fulla inte the ment it Ibimiatha, nind the mont W, at liowetta; but it has other, though very mubordlinate, ontlets. for the intmenne dintanee of 1,200111, -that $\mathrm{in}_{\text {, }}$ from lat. $17^{\circ}$ 15', nul nhout $3.4^{\circ} 5^{\prime}$ of F : ' long., where it is joined by the Xtbara, or 'Thenaze,-the Nile rolle on to its montlis in the Meliterranenn in solitury grmidenr, withont receiving a minglo ntlluent: an intexampled instance in the hydrographic hintory of the globe. The periodicul inimanions, which water the country and eover it with mud, have given occaslon, in all agen, for much discussion, nud modern dixeovery has conflmed the conjectures of the ancients (llerodotus, linterpo, Strabo, xvi, $5 / 3$ ), that these overtlowing result from rains fulling near the monntaine nmongst which the Nile has its source, or carly comme. IBrace hav expluined this phenomenon ais follows: - The air is so much raritled by the sum during the time he remains ahmost stationmer over the tropie of Capricorn, that the winds, londed with vaponis, rush in upon the land (to renture the equilibriun) from the Athntic Ocenn on the W., the Indian Ocenn on the Ei., and the cold S. Ocem beyond the Cnpe. Thus a great gunitity of vipour is gatherel, as it were, into a focus; nud as the same causes continue to operate during tho progress of the sini N., a vast truin of clouds proceed from S. to N. In April all the rivers in the S. of Abyssinia begrin to swell; in the berinaniug of June they are all finl, and continue so while the sun remains stationary in the tropic of Cancer.' When the sun approaches the tropie of Concer, the litesinn winds along the coast of Egypt begrin to blow from the $N$., and convey vast quantities of nqueous vapours to the mountuins, which are thero precipitated in torrents along with the vapours terived from the ocenns already specitied. The Dtesian winds also contribute to increase the inundntion, by determining the waters of the Mediterrancan to the const of Eigypt, and obstructing the exit of those of the river. On the sun agnin turning to the S , the rains begin to abate, and on his passing the equator they cease in the N, and commence in the S . hemisphere. 'The torrents, tetaching in their rapid course the soil from the upper country, bring down supplies of alluvium, so thint the valley of the Nile is constantly gaining in elevation. Nor is the delta of Eigypt exempted from this peculinrity; though, from there being a wider space for the deposits to spread over, the in-
croane of anill in not nearly an great ! indeed, the necsuminton decraases, even in Upper ligypt, in proparition as the river appronehex the mea. Were it not that the hed of the river rises las the wane propurtion as ita lanks, the monntry woald cease to be inumilated, -ans "ppreheusioni which IIII lately was atrongly entortained. It in limpossible to ilmi anywhere anoong terrestrinl objects a more atriking inatance of the atnhility of the laws of Siture than the perlodienl rise anid finll of this mighty river. We know by the textimony of nuriquity that the bumanthins of the Nile have bean the mane, with respect to their menson and durathon, for 3,000 yearn. They are no recular thint the valne and nanual certininty of this eift regulites the publle revenne; lior whin, by means of Nilometers, it is ascertnimed that the waters promise an unusually prosporoux season, the tuxen ara proportiomally increaned. (Russoli's ligypt, 10. 46.) Simetimen, however, when the river exceeds its ardlonary height, it becomes $n$ calamity: ocensioning the lowe of life and property, In Neptember, $18!8$, Belzoni witnessed a scene of this mort $;$ the river having risen $3 f$ ft. alove the highest murk left by the furmer imundations, it ascended with uncommon raphlity; and carried off neveral villuges, mid some hundreds of inhahitantw. The mwelliugs of the Nile in Upier bigypt are from 30 to 3 fi ft ; at Coniro, $22 \mathrm{ft} . ;$ in the N. part of the Delth, owing to the lirealth of the inundation nud artitheind clannols, only 4 ft . Pliny mays of the Inumintion:-' Jnstum incrementum est culitormm 1f. Minures uyue non omnias rigant; ampliores detinent tardius recedendo. Ho serendi tempora alsumunt molo madente; ille non dant sitiente. Ulirumine reputat propinciae. In dhoulecim cubitis famem sentiaut. in tredecim ediamuum esurit: guıtuordecim cibita lilarifutem, afferant, quindecim securilatem, sexilecim delicias,' (llist. Nnt., lib. v. §9.) The depth and rapility of the river vary at different times in dillipent places. It in melliom that any vessel exceeding 60 tons hurden ean ancent ins high an the Caturacts. The mouth of Damietta is between 7 and 8 ft . deep when the waters nre low, that of Rosetta doew not execed 4 or 5 ft. ; but when the wators are high, earavels of 24 gums may suil up to Cairo. (Mod, 'I'rav., i. $\mathbf{2} 2$. ) As a bevernge the water of the Nile is considered delicious: Maillet declares that it is among waters what champaign is among wines. The mud of the river gives on analysis one-half of argillaceovs earth, one-fourth carbonnte of lime, the remainder being woter, oxide of iron, and carbonate of magnesia. (See Nile.)
'The Momntain syatem of Egypt is very peenliar, Two rauges, already noticed, pressing closely on each bank of the river, extend from Syene to Caire, and form the valley of the Nile, protecting it from the ravages of the deserts on either side. 'Thnt to the E. gives out an urm at Kenmeh (lat. $26^{\circ} 12^{\prime}$ ), and bisects the desert to the Red Sea at Cosseir in nearly the same latitule; while the Lilyan or W. range branches off from $A$ ssonan to the Great Onsis. (Ritter, ii. 397.) Near Cairo the monntains diverge on both sides; one ridge
running in a NW. direotion to the Meyliteranam, the other dise Who to Suea, (Mnlte-lifum, iv, wow,

(in the W. xide of the Ihdtanat the leant remarkable ohject presented by thin wonderful country is the Sevete, or valley of Satm Laken, homided on one mide by a lolty ridge of seeondary rocks, which, jerhapm, proves the means of concentrating the anlue rleposit which givesing name to the place. The banks and waters of thes lakes, six in uminher, are covered with crystallist tlons, consist fug of aen-salt and natron, or carlowate of soin, sometimes unlted ; at ot hern, foumil sep. rately lin different parts of the same lake. (Rusethis lypyt, p. 48.)

The most conalilerable of the Eigyptian lakn are thome of Memzaleh, llomplos, Etka, ami Jar cottis, lying along the shore of the Delta, liat though entlod lakes, they are more properfy h.
 that akirt the ahoren of l'russin. Some of the lin goons, especially that of Menzaloh, Lio, of Damietia are of lapge dimensions. They are all shallow: are separated from the sea, with whlch they atmmunicate, by a narrow bank or ridge of mani; and are in the course of being gradunlly, though slamly, tilled up. In mntiquity, the Nile la said to har discmbugucd itself by neven chammels-Sippen. gemini ostia Nili; but of these some were ceraialy artifleial; and then, na now, there were two prib: cipal mouthn-the Pelnsiac, or Eastern, amit the Canepic, or Western. 'The Syhennitic mouth, in the centre of the Delta, was also of consilemilh importance. But considoring the nature of the woil, and the effirts that linve heen maie frum the remotest times to divert a portion of the rivertr canals and otherwise into new courses, we neel not be surprised that very great clianges shall have taken place in the channels by which it ponrs Its waters into the Meliterranean.

Jixclasive of the lagoons in the Delta, there ib a considerable lake occupyling the NW, parts d the valley of Faioum. The principal canal d Erypt, the Jahr Jousef, communicates with this Inke. It branches out from the Nile at Deimat-el-Sherif, S. of Minzeh, traversing the valler of the Nile at the foot of the Libyan chain, till it reaches the waters of Faïoum at Habum, and thene continues still parallel to the Nile, the huseta imanch of which It finally joins at Alknm, lumer the name of Souhadj the same caual is continud to Furhout in Upper Egypt. The whole of the Delta is intersected with canals in every directime in which the overflowings of the Nile are preserved after the inundations, to afford communication

(llidi, pr dili.) This district, from its compmradively how situntion, amil from the nhesence of thone mumitains whiels enclose the Vislley of the Nile and centine its watern, apuly dexigmated by llrowne 'the walls of Ligypl,' lis more intluenced by the bundutimes than the upger lands; nad when the fiver in at its greatest height, it presents the aspect of an extensive marsh. The river begitus ton swell in dune, aml continues to increase till Sept.; at whild periosl the liedds of the Delta nre come Wetely submergel, ite villages, towns (whieh are wail on natural or artilicinl monnils), and treen, mly appearing above the water. After remaining wainuary fir 1 few days, the waters begin to sub)ahle, and by the end of Nov. leave the land altoperther, having deposited a rich nilluvium. An Geptian sprring, earrespomiling to our winter, Gives to the Deltn its most smiliug and verdant appearance. The rice flelds, having been gown Infiure the water has entirely receded, are coveren with a vivid green, trees puit forth their blossoms, and the whole cometry bears at this senoon the avpet of a fruitful garilen.
The question as to the origin of the Egyptian Dela, has engagel the nttention of the nblest tnquirers from the remotent jeriod. The mont problable as well as most aneient theory is, that which represents it as wholly formed of the depaxits brought down by the Nile, and ns conthantly, though slowly, gaining on the sen. (llerodotus, ii. §5.) Originally the sen is snill to have thowed as far S . as the Pyramids; but in the course of ages, through the gradual necumulation of the mull of the river, nssisted in some depree by the comstruction of canals and dykes, the land rose above the level of the sen, and censed to be submerget, except during the period of the imandation. (Savary's Letters on Egypt, Letter 1.) This upinion has, however, been stoutly denied; and though it be almitted on all hands that the hand of ligypt and the bed of the river are both
niowly rining, it in rontentent that the limita of the

 (ieng. of Herodutho.) Hort few tracem are luw to be found of the miny fimmom citten wifh whifus this part of ligypt was formerly atmidied; and that, except Alexisultin, the only placess of contserfinence in the belta, at llie prewent day, are Rometta and Damietta, nitunted at the two monilis of the Sille. At the former the river in $1,8 t i 1) \mathrm{ft}$. wide, but at Damietta inly 800. The villagen are numerous, nul genernily harge ; lint the homses andom exceed from 10 to 12 ft , spluare. Thuy are buitt of sun-fried brieks, and nre everend with flat roofe of struw and Nilo meul. (Dr, Biehurisun's Travels, i. 40; Clarke's Travels, iii. $1: 1$ Moilern 'Trnveller, i. 180-2is2, (4e.)
2. The Vallyy of the Nile of Cestral and U/piper Fyynt, - Aveeniling the river from its fork, the ciltivivile land int the apex of the Delta and for anme distance is founal tu decrense; for here the banks are much more elevated, nul aro sellomn quite eovered with water, even during the highent
 the alinvinms do not remels the interlor at this point. The ES, or Arabian mosentuin clain tennimates abruptly at Monnt Mokntem, near Cairu, and divergen towardu Suez; while the opposite or Libyan range emis at Faloum, having turned off to the W. to enelose that valley. Thronghout the entire district the Li, ehain has generally more transverse breaks and ravines, la more lofty and ruggel, and comes closer to the river, than the hills on the opposite side. Between Finlomm anil the Nile the libynan ridge has nearly a level summit, overlnoking the country below; and this tulile-land was chowen for the site of the l'yramidn. The space loft between both ridges selilom exceeds 10 m . in Central Egypt, while in the upper country they press even mowe elosely upon the sides of the river; thom that part of the Valley of the Nite which belongs to ligyt has but a contracted brealth, anl even that is not all available ior the labours of the husidaniman, a great portion of it being, from the height of the banks, out of the rench of the overlowings nad their heneficent deposits; hence a strip of desert mostly rums along at the foot of the hills. Where, however, the land is laill uniler water nt high Nile, eommmication is kept up between one village and nnother by means of elevated ronds or dykes, which cominence on a level with the banks of the river; and, as they extend to the interior, riso to so great a height above the fields as to lenve room for the construction of arches for the passage of the water. As the river
enters the Eryptian territory from Nubia, the gramitic hills liear the apprearance of having been rent by the stream. Ilence, between the Isle of l'hilie and Assouan the enrrent is interrupted by innumerable islands. Others, of a less rocky cluaracter-some of them extensive, considering the brealth of the Nile-spring up out of its bed at various intervals during its progress to the Mediterrmean. The Isle of Elephantiné, opposite to Assoum, wears so beautifil an aspeet that it is called by the latives the 'Isle of Howers' (Djeyiret-el-Suhir); anil most European travellers dencribe it as a sort of terrestrial paradise. The ligypuian valley is strewel with those stupendous munuments of human labour, those beautiful remains of ancient art, which have excited the wonder and almiration of ages; and which seem the more marvellous, the more elosely they are examined.
3. The desert E. of the Nile is broken by rugged momitains, and intersected by mumerous wadys or ravines, sometimes thickly, but more frequently scantily, elothed with verdure. It has, however, the mivantage of numerous springs; beside which are traced aucient caravan tracks, that are still traversed in exactly the same manuer as when the 'company of merchants' found Josephin in the pit. The leading characteristic of this desert, particularly in the $\mathbf{N}$. part, is its gradual ascent from the Nile to a certain distcuce E., where commences a plain nearly level, and of some extent, from which all the valleys or torrents rumning in a W. direction empty themselves into the Nile, and those to the E. into the Red Sea. Of wuch a character are the Ataka hills, mentioned before as bramehing E. from the Mokattem momitains, near Cairo. These are joined at a right augle by a series of eminences which skirt the shores of the Red Sea into the Nubinn country, uniler the names of the Zarafima, Dothi, and Jallatine rauges; and form the E. culges of the plateaux rased by the transverse hills, a chain of which appears again in lat. $29^{\circ}$ between Benisouef and that part of the Suez gulf called Birket Farân. These are entirely of limestoue, and present a gradual ascent from the Nile to a distance E. of 30 m .: the high plain which succeeds is about 16 m . broad, and the descent down to the Red Sea occupies a space of about 50 m . At the S . declension of the N . Kelalla mountains is a copper-mine, which appears from the ruined huts, furunces, scorise, \&c., found by Wilkinson to have been extensively worked. (Geog. Journ., ii. 32.) The Wady Arabah intervenes its desert of sand to the S. Kolallu or Kolaim mountains, at the foot of which are situated the two celebrated convents of St. Anthony ( 17 m . from the sea) and St . Paul, placed about 14 m . apart. Between these convents and the gulf at Wady Girfi are the remains of houses and catacombs, which appear to helong to the Greek preiol. In lat. $28^{\circ} 26^{\prime}$, the limestone formation, which continues with little interruption throughout the N. hills of this desert, is joined by primitive rocks, which present more irregular surfaces, but rise from the bauks of the Nile with a gentler declivity than the series already deseribed, and abut with proportionate abruptness upon the shores of the Red Sea. Monnt Grárib ( $28^{\circ} 15^{\prime}$ ), olle of these rugged eminences, is the highest of the hills in this desert, being $6,000 \mathrm{ft}$. above the sea. Four hours $S$. of Grárib are two copper mines, with the same appearances of having been worked as those before mentioned. In lat. $28^{\circ}$ the character of the levels again changes, being higher and more 1 miform from the Nile to where they make a descent to the sea, which is gradual
till they reach Mount Azzeit, which gives them an abrupt termination. Near Monut Dusham (lat. $27^{\circ} 25^{\prime}$ ) are the ruins of a town, and wat quarries of red porphyry, streveel with the ma. terials of a small temple, which seems to have never been completed. At Cosselir, whase bay indenta the lied Sea, at about lat. $26^{\circ} 66^{\prime}$, end the primitive hilhs that intersect the desert in a direetion parallel to the Nile and the Ifed Sea, and join a trausverse range, upon which exteads the caravan route from Kenuch on the Nile to Cossir, where pilgrims embark to pay their devotions at the shrine of Mecea. (See Cussein.) The valley of Cosseir extends down to about $250^{\circ}$, where another transverse range occurs, which eontrings near the sea, some lead mines. Monut Zabmab, celebrated by anclent writers for its emerald, rises a little further inland. Attempts lare been made to re-open the sourees of wealth which these mines are said to have affirded, but without suceess. (Calliaul's Travels, fol. Paris, $1 \times 2,2$, p. 60.) Nearly on a line with Assouan (lat, 230 bt') are the ruins of Berenice. The whole of the desert of Ligypt is the resort of distinet tribes of Arabs, who contine themselves to particular lis ealities; they consist of the Maazy, occuyying the cometry to the E. of Benisouef, Atouni, anid lienihasel, S. of the Manzy and the Abablie Arabs, who are seatterel over the N. part of the desert, and breel camels for the market of Esneh,
4. The desert W. of Eqypt presents a scenle on formidable to travellers, that fow have visitel the ouses by which it is here and there interspenelt The most $N$. of these is Sivah, or Ammon; ste from which, and nearer to the Nile, is the Dittle Onsis, or Wah-el-Bahryeh; the chief villare of which lies in lat. $28^{\circ} 10^{\prime} \mathbf{N}$., and long. $28^{\circ}{ }^{\circ} \mathrm{j}^{\prime} \mathrm{E}$ E, S. and W. are the small oases of El Hayz, Famfreh, and Zerzoora; and still further s . is the Dakhleh oasis, whose first European visitant wis Sir A. Edmonstone, in 1819 . Its chief viliane stands in about lat. $25^{\circ} 35^{\prime} \mathbf{N}$., and loug. $28^{\circ}{ }^{\circ}{ }^{2 \prime}$ E. Three days' journey to the E. brings the triveller to the Great Oasis, or Whh-el-Khargeh, extending in length from $24^{\circ} 30^{\prime}$ to near $26^{\circ} \mathrm{N}$. Lat, Instead of islands of the blest (Maкápoy rigau) springing up amidst the surrounding and desslate ocean of sand, as the uncients describe them, the oases are valleys or depressions of the lofty ilain which forms the extensive table-laud of E. Afriza On descending to them, they are found to bear, in many respects, a similarity to a purtion of the Valley of Egypt, being surrounded by steep elifit of limestone, at some distance from the cultivated land, which vary in height in the different oase, those rising from the $\mathbf{S}$. oases being the highest Neither do they present a continuation of cultivable soil, all of them being intersected lyy pateles of desert. 'They, no doubt, owe their origin to the springs with which they abound, the decas of the vegetation thence arising having produced the sil by which they are now covered. Their fertility has been deservedly celebrated; but the glowint culogiums of travellers on their surpassing beauty are probably, in a great mensure, to be ascribed to the striking contrast they present to the sarrounding deserts of arid, burning sand. It may appear contradictory, considering the high opinion the ancients eutertained of the fertility and beauty of the onses, that they should have selected them fir places of banishment; but that such was the caie at least under the Romans, is certain. A lav of the Digest (lib. 48, tit. 22) refers to this practire: and it has been supposed that the poet Jurenal was one of those who suffered a temporary banishment (relegutio) to the oases, though the evidente of this is by no means clear. They were selected, not serenuse of their being naturally noxions or disagreeable, but because of their being, as it were, oul of the world, and from the extreme dilliculty of essaping from them. The larger onses have ofme fine remuants of antiquity, the most celebrited of which is the temple of Jupiter Ammon, at Siwah. (Edmonstone's Visit to tho Oases, prssim; (ieog. Journul, ix. 410, 441, \&c.)
The climate of Eyypt is extremely hot: this is a consequence, no doubt, of the lowness of its elevation, of its being surrounded on all sides execpt the N . by vast tracts of buruing sand, and of the scrutiness of the rain. Accorling to Volney, the (etzis wo mly ure distinguishable, spring aind sun. $\%$, $\mathfrak{c}$, ther, the cool and the hot season. The latter continues from Febriary or March to Oevober; and during the greater part of this period the air is intlamed, the sky sparkling, and the heat appressive to those unaccustomed to it: during this season the average height of the thermometer is about $90^{\circ}$ Fahr. But the heat of the atmosphere is so much tempered by the inundations of the Xile, by the vapours brought by the Eitesian wiuds from the N ., and by the dews in the nights, that the natives and even Europeans occasionally cumplain of cold. During the remainder of the year, the averago leight of the thernometer is about $60^{\circ}$ Falr. It is necessary at all times to aroil expusure to the night air.
It might be inagined that Egypt, being for about three months of the year cither wholly or partially inundated, and being subjected, at the same time, to the action of a powerful sun, producing an excessive evaporation, would be extremely mhealthy. But sueh is by no means the casic. Tho exhalations from stagnant wnters, so futal in Cyprus and at Iskenderoon, and most other parts of the Levant, are here comparatively innoxious. They are not, however, entirely dirested of their bad qualities. On the retiring of the waters, in November, which is the Egyptimn mel-time, W. winds and figgs are prevalent, which prowhee ophthnhmia, fever, cliarrhera, and entarrh. Firom December to March the winds blow mostly from the li.; the nights are cold, but the temperature during the day is that of June in France: the various productions of the earth are then vigorensly on the increase; its surface is covered with the tinest yerdure; and all nuture, reanimated by the ferilising influcuce of the river, and the moderate temperature, seems to grow young again. In Upper Egypt, the exhalations being comparatively fere, the climate is proportionally healthy.
This general salubrity of the elimate, notwithstanding the powerful deleterious influences to which it is exposel, is ascribuble to the natural dryness of the air; the prosimity of the African and Arabian deserts, which incessinntly absorb the humidity; and the currents of wind that sweep over the country without meeting with any interruption. The aridity is such that lontche''s meat exposed, even in summer, to the N. wind does not putrefy, but dries up, and becomes hard as wood. In the desert dead carcases are found dried in this manner, so light that a man may easily lift the entire body of a camel. But near the sea the air is mueh less dry than farther up the country, and that at Alexandria and Rosetta iron exposed to the air speed! 1 y rusts.
It has been mentioned already, that on the approach of the sun to the tropic of Cancer the wiuds invariably blow from the N. or NW.; but as the sun recedes to the tropic of Capricorn the
winds become variable, blowing from the E. and W., passing to the S. about the vernal equinox, and blowing from this quarter till ubont the end of May or the begiming of June. Daring this season Egypt is at intervals visited by the pestilential hot winds of the desert, here called hhamsin, but identicul whth the simoom of the Arabs, and the sumiel of the 'Turks. They have the same effects as in Arabin and other contiguous countrien. (Sue Aluilia.) Thelr heat is sometimes excessive; the stil is parched, and broken by chasms; the trees are stripped of their foliage, and the tields of their verdure. Tho tine impalpable sand with which they are loaded obscures the sun, and gives to everything a dusty appearanco. During the simoom the streets are deserted, and are as silent during day ns during night. The rising of the Nile terminates thoso accesses of heat and drought, and again diffinses life mad gladness over the land. The beneticent river

- From his broad bosom life and verduro fings,

And broods o'er Egypt with tuls wat'ry wings."
The saline propertics of the earth, or, as Volney supposes, of the air, in conjumetion with the heat of the climate, give to vegetation an activity in lifypt unknown in cold climates. Wherever plants huve water the mpidity of their growth is prodigions. But it is a curious fact, that the soil is exceedingly unfavourable to exotics, and that the seods of those raised in the comitry require to be amnually renewed. (Volney, Voyage en Syrie et en Egypte, i. 61-66, ed. 1787.)

In consequence of the extreme dryness of the air, compuratively little rain falls in ligypt; and some seasous huve passed awuy without the occorrence of a single shower. But this is not usually the case, and occasionully the rains are pretty heavy. In this respect there is a great variety in the seasons; and, according to Marshal Marmont, falls of rain would appear latterly to lave become comparatively frequent. He says that in Lower Egypt they have now pretty generally from thirty to forty rainy duys in the year; and that the pucha has constructed inmense warehouses for the securing of products in harvest, which were lormerly exposed withoat inconvenience to the open air. (Voyage, de. iii. 177.) No doubt, however, the rains have been quite as frequent and heavy in Ligypt in past times, as at present. In proof of this we may mention, that the learned and acenrate Mr. Grenves, who visited Egypt in 1 biss and 1689, states that the rains were heavier at Alexandria in December and Janmary, than he had known in London; and that there were also, at the same time, very lieavy falls in Cairo. (I'yramidographia, 'Works,' i. 103.) llail showers oceasionally oceur in winter at Alexandria, and sometimes, thongh rarely, in Cairo. Snow is totally, and thunder and lightning nearly, unknown in Egypt. Earthquakes occur but seldom, but they are not unknown.
Diseases.-The inhab. of Egypt are subject to a variety of cliseases, some of which seem to be, at least in their extent, to a considerable degree peculiar. Of these ophthulmia is one of the most prevalent; nothing appears more extraordinary to a stranger in Cairo, than the number of persons whose sight is either lost or impaired. It is more common in Lower than in Upper ligypt. 'It generally arises from checked perspiration, but is aggravated by the dust and many other cunses. Where remedies are promptly employed, this disease is seltom alarming in its progress; but vast numbers of the natives of ligypt, not knowing how to treat it, or obstinately resigning themselves to fite, lose one or both their eves.' (hane, i. 4.) Small-pox and leprosy are also very fre-

## LHYPT

queut. Flejihnntiasis is met with among labourers in the rice fields; and, in the marshy distriets of the inturior, the legs often swell to $i$ enormous size. Syphills is exceedingly prevalent: and malignant fevers prevail in April and May. The phague oceasionnlly breaks out with great violence in Bigypt; and in 1825 it destroyed 80,000 persous in Cuiro only, and in $1835^{\circ}$ its effects were at ill more fatal. Searcely any year passes without this formidable disease making its appearance. It genernlly, though not always, breaks out during the prevalchee of the Khamsin, or het wind from the desert. But notwithstanding this formidable list of diseases, it is still true, as alrealy stated, that no part of Egypt can be justly characterised us insalubrious. The diseases to which the people are sulijeet are mostly to be ascribed to their deprossed circumstances-their tilth, miserable accommorlatlons, and the bad quality and deficiency of their foorl. Much also is owing to their apathy, their belief in the doetrine of predestination, and, cousequently, in the inntility of remedies and precantions, and the inetlicieney of the police.

Plants and Animals.-The vegetable prosluctions of ligypt are of a nature peculiarly fittel to its exigencies. The absence of rain forbids the existence of forests; aul there being no bigh mountains, alpine productions are no where found. 'Ihe native plants of Egypt are of a loose, plethoric texture; so that their proper aliment is prepared in continually distended veins, whose widelyopened months receive and retain the copious dews, and cause the leaves to perform the functions of so many roots. Hence, great transpiration is excited, and the continually moist roots enable the plants to pass from the extreme drought of summer to the liumidity of a three months' flood. These charanterissice will be found in the celebrated papyrus, the lotus, and its three varieties, Eiryptinn arum and satlower. Bulbs find a congenial soil in Egypt, and the gourd and cucumber tribe are everywhere plantel. The acasia of the Nile, and date palm, and sycamore, are scattered rather than grouped over the country. The constant use to which the soil is put in rearing valuable plants prevents the accumulation of such as are noxious and weeds; so that the country is remarknbly free from them. The number of fruit trees in Eyrpt by no means answers to the culture and fertility of the soil.

The peculiar hydrography and vegetation of Fgypt excreise a great influcnce over its zoology. The larger species of wild animals find no iorests in which to prowl-no recesses for their dens; and except those monsters of the Nile-hippopotami and crocodiles-are banished from the land. llirds also, that inhabit monntains and groves, avoid the exposed deserts and scorching fields around the Nile. The country is also unfriendly to some insects; their eggs and chrysalides being either washed away by the overtlowings of the river, or smothered in the stagnant pools formed by its overtlow.

The only primeval animals now left in Egypt are the hippopotamus and crocodile. The former, so poctically yet accurately described in the book of Job (xi. 15-24), has been known to measure $1 t \mathrm{ft}$. long, 15 ft . in circumference, and to stand 7 ft . high. The skin is sufficiently thick and tough to withstand the effect of a musket-ball. Though amphibions, the animal is not nearly so powerful on land ns in the water. Its appetite is mormous. The Nile crocodile is a lizard of enormous size, covered with a complete armour of ball-proof senles; its feet are provided with strong sharp claws; an immense month, opening as far as the ears, exhibits two rows of teeth like saws,
flting into each other when elosed. This is ain an amphihious animal; but more than one-faurth part of its existence is passed in water, atod, like the hippopotamus, it is a most voracions eate. The if linenmon is a persevering destroyer of the eggs of crocoliles anil serpents. The jerban, ot jumping monse, Nilotic fox, Egyptian and Alexandrian rat and arvicola, complete the list of wild animals. The domestic and tame animals are chietly oxen and buffaloes, which are employed in agriculture; the Egyptian goat; dogs, of which there is a peenliar breed at Alexandrin, and the true cat, a native, it is supposed, of Eigypt. Hores are much esteemed, aud the Egyptian grooms ate reckoned among the best in the world. Ases are in requlsition all over the country. Lastir, the camel and dromedary yield their important services to the inhabitants of this desert-boundel lanil. (See Anania.)

Of the feathered tribe peculiar to E.gypt, the first to claim attention is the ibis, so often mentioned by ancient writers, and identified by broe with the abonhannès,-a species of curlew, plaeed by Cuvier amongst the gralke, or wading birk, Its size is equal to that of a hen, with white plumage, except the tips of the quill feather, which are black, the largest of them having riblet reflections. Part of the heal and neck are nakel; black in the adult, but clothed with short black feathers in the young. (Cuvier's Animal King. dom, by Blyth and others, 243.)

The Fgyptian vulture and stork perform the office of scavengers in towns, by feeding upn the animal substances that would be otherwise left to cornupt the air. Pelicans are numerous along the banks of the Nile, and have a beantiful plumape. Pigeons are kept by almost every farmer in the country for the sake of their dung, and are pmvided with curious conical huts. Poultry abound in Egypt; and the artificial morte of hateling; eggs forms an important branch of Egyptian industry. Plovers, bustards, and partridges ane often met with; quails visit the land in immense flocks, from the interior of Africa; and sea swal. lows abound along the base of the Delta, and an the shores of the Red Sea. History, sacred and profane, attests the predilection of the Egyptians for fish as an article of food; ant the Nile abounds with it. Nile salmon is highly estec.ned. The fishermen of the coast form an important and turbulent community. Besides the erocodile, the reptiles of Egypt are numerons. Serpent-charming is a regular profession; and some of the Arals really perform extraordinary fents with the most venomous snakes. The horned and hooded ripet (Coluber cerastes and C. Haje) are the most dangerous. Insects abound in Erypt during a great part of the year, particularly flies and musquitoss (Lane, i. 3.) Locusts also occasionally scoape the land, visiting it in such immense flights as to obscure the sun's rays, and destroying when they alight every vestige of herbage. The breeling and keeping of bees forms an extensive branchia the rural economy of the country. The beetle peculiar to Egypt (Scarabaus sacer), so often represented on the sacred monuments, is rather larger than the common bectle, and is entirely black. The Egyptian bat is also much larger than that of other countrics. Zooplyytes abound in the Red Sea, and it is the red coral which smpplies is name. Sponges, various corallines, polypes, and madrepores, are also found on its shores. (Hascelquist's Appendix to Voyages and Travels in the Levant, \&c. ; Richardson's Travels, passim; Rassell's Egypt, 464 , \&c.; Conder's Egypt, passim.)

(Hasectges and Travels in the Travels, passim; hus nder's Egypt, passim.) ind Customs.-The pit h Egypt has beea sulvject from the earliest historieal era have-as the Penians, Greeks, Romans, Arabs, Curks, ant
other nations, gained in their turn the nacendency -introluced into the country people of all those mices. These, ndited to the Copts, dencendants from the ancient Ligyptians, slaves front the I'pler Nile countries, a small number of Jews, anil a few Europeans, make up the motley eongregation at present assembled in the hand of the Plarauhs, liat of all its comquerors, Mohammed has left the most permanent traces in Lgypt. The desceudants of the Sarucens who fought under his hamer form by far the greatest portion of the present population. In the absence of more precie data, the tatal number of inhabitants may be estimated at about $5,000,000$; of whom ArubEspotians $3,000,000$; Copts or Christian Lifyptiaus, 500,000 ; Turks, 300,000 ; Greeks and Armenians, 200,000 ; and the rest belonging to varions nibes scattered over the comintry.
The Arab-ligyptimus are divided, by Volney, into three classes. The first are the fellahs or busbandmen, the posterity, he says, of the Arubs, who emigrated from the peninsula after the conquest of Egypt by Amrou in 640. They still retaim the features of their ancestors, but are taller aud stronger. In general they reach 5 ft . $4 i \mathrm{in}$, and many 5 ft .6 or 7 ml . Their skin, tinged ly, the sum, is ulmost black. They have oval heals, prominent forcheads, large but not aquiline noses, and well-shaped months. They coustitute the bulk of the ligyptian peasantry. The second class of Arabs are Ntoghrebbins, or settlers from Mauritania. They are very mumerous in the said, where they live in villages by thenselves; they likewise are fellahs. The third class are Belouins of the desert, or wandering tribes.
The Arabs, particularly the Bedouins, wherever they are found, have a remarkable identity of appearance and character. (See Arabia.) But the fellals or husbandmen of Egypt, having been subjected for centuries to a despotical government, and deprived of that wild freedom that is now, as of old, enjoyed by their brethern of the desert, have lost several of the distinguishing traits of the Arab character. They are rigid Mussulmen, and snictly observant of the religions rites and ceremonies laid down by their sheiks, or priests. Mr. lane says:-' Very few large or handsome houses are to be seen in Egypt, excepting in the metrofulis and some other towns. The dwellings of the lwer erders, particularly those of the peasants, are of a very mean description : they are mostly built of unbaked brieks, cementel together with mul. Some of them are mere hovels. The greater uuber, however, comprise two or more apurtments; thugh very few are two stories high. In one of these apartments, in the houses of the peasunts in Lower Egypt, there is generally an oven (fiorn), at the end furthest from the entrance, and weupying the whole width of the chamber. It resembles a wide bench or seat, and is about breast ligh : it is constructed of brick and mud; the roof arched within, and fint on the top. The inhabitants of the house, who seldom have any nightcorering during the winter, sleep upon the top of the uven, having previously lighted a fire within it ; or the husband and wife only enjoy this lusury, and the children sleep upon the floor. The chambers have small apertures high up in the walls, for the admission of light and air-sometimes furnished with a grating of wool. The roofs are formed of palm brimehes and palm leaves, or of millet stalks, de., laid upon rufters of the trumk of the palm, and covered with a plaster of mud and chopped straw. The furniture consists of a mat or two to sleep upon, a few earthen vessels, and a
hand-mill to grind the com. In many villages large pigeon-honsen, of a square form, but with the walls slightly inclining inwards (like many of the ancient Egyptian buidings), or of the forn of a sugir loaf, are constructed upon the roofs of the huts, with erude brick, pottery, mid mul. Mist of the villnges of ligypt are situated mon cminences of mbish, which riso a lew feet above the reach of the inundation, and are surrounded hy palm trees, or have a few of these trees in their vicinity. The rubbish whieh they occupy chictly consists of the materials of tormer hats, mud secous to increase in abont the same degree as the level ot the alluvinl phains and the bed of the river.' (Lnme, Morlern ligypthans, 30, 31.) The dress of the pensuntry consists of coarse wonllen cloths ; and, like all Urientals, they are fond of attending collicehouses, and listening to the thles of pretemided inngicians, or the rude music of strolling musicians. They submit, withont marmaring, to every species of ill-treatment ; prineipnily, it seems, from a deep-routed conviction of its inntility, which has dercuerated into nin apathy that now forms the: main feature of their character. They are-in spite of diet both poor in quality and seminty in quantity-rohust, healthy, and capable of undergoing great severity of lubour and fatigne, being muscular withont Heshiness or corpuleney. Like Bedouins, they have a habit of half-shutting their cyes, from constant exposure to the sum. 'Ihe women are in a most degradell condition, and perform all the laborions and menial othces. The Betouins, or wandering Arabs, have a great contempt for the established peasantry of ligypt, and apply to them the name of fellahs, as one of contempt, signifying boors; distiuguishing themselves as true Arabs (bedawees). The latter, whenever they please, take the langhters of the former in marriage, but will not give their own danghters in return. Should a Bedonin be slan by a fellah, blood revenge is often perpetrated upon the oflending tribe three or four fold.

The Egyptian Christiuns, or Copts, are usually regarded as the descendants of the ancient ligyptiams; and it is believed that their written lintgunge is identical with that spoken by their ancestors. Some learned men have supposed, from certain resemblances between the Hebrew and Coptic, that the latter was a dialect of the former, or that it belonged to the Semitic limguages. But this opinion is now all but abandoned. Miehnelis snys, that 'every person competent to form an opinjon knows that the Coptic and the Hebrew have not the slightest original affinity; and that althougn some words occur in the former that resemble Semitic vocubles, they are to be attributed to the influence which the proximity and intercourse of Semitic nations have exercised over the idiom of the native Eyyptians.' (Quoted by Prichard, ii. 211.) The characteristics of the Coptic language are shortness of the words, and the simplicity of its grammatical construction; its genders and cases are expressed by prefixes and intixes, and not, as is nsual with Asiatic and European languages, by terminations. (See Quatremère, Recherehes sur la Littérature Egyptienne.) The modern Copts, however, speak Xrnbic, their original tongue being anderstood but by few persons; and though their liturgy be written in Coptic, it is expounded in Arabic. (Lane, ii. 312; Quarterly Review, lix. 170.) They are sober and steady ; are much employed ns secretaries in public othices ; and are the best accountants in the country, few respectable tralers being withont a 'Coptic clerk,' They are held in great esteem by the government, and possess certain immunities, being unmolested in their religion, and exempted
from military conscription; for whieh privilege, however, they compound by parment of $n$ tribute. Thei patriarch, thongh called the putriareh of Alexnndria, resides in Fostadt, or Old Cairo, Many contlicting opinfons have been entertuined as to the physical charncteristies of the anclent Egyptians. Their early and high civilisation, and their great works, show conchasively that they were of a very different race from most other Alfican nations. Cuvier, whostates that he lum examined the heads of more than ility mummies, deelares that not one of them had uny of the distinguishing characters of the Negro or Hottentot races; and he concludes that they belouged to the same race of men as the Europeans, Even at this day the appearance of the Copts contrasts most adyantageonsly with that of the Arabs. M. lugnet, an intelligent and discrininating physicinn, olserves, 'A l'extinieur chitif' et miservale sles Aruben, les Coptes opposent un air de majesté et de puissance; a la rudesse de leurs traits une ufiabilité sontenue; al leur abord inquiet et soucicux tue ligure tres-épanonic.'

The T'urks settled in Eigypt, thongh comparatively few in number, oceupy important social pasitions, being masters of the country. They till all the high ofkees of state, which are, however, often enongli made the objects of bargain and sale, and administered with little impartinlity. The (irecks nud Armenians are chietly devoted io mercantile business, and many of them persons of grent influence ; but the Jews, about 5,000 in number, are a despised, and therefore a distinetive elass in Egypt, and have a particular quarter of every large town set apart for their residencesgenerally the most confined and dirty portion of the place. They are usually bankers, money changers, gold and silver-smitlis, \&c., and enjoy a fair share of religious toleration. Slaves, chicfly from Nulia, Abyssinia, and Darfur, are introduced in large numbers, and are sold in publie markets belouging to every moderately sized town. (Lane, ii. 311-30̄3; I3urckhardt's Arabic Proverbs, passim; Nicbuhr's Travels.)
'lhe following statements, as to the condition of the labouring classes in Egypt, apply principally to the fellahs; they were supplied by an English gentleman long resident in the country :-

- With the labouring elasses of ligyt bread is the great article of food, and may be said to be there more properly the staff of life than in any other country. Benns and lentils are next in importance. With bread, as a sort of seasoning, they use the yam, radish, cucumber, date, onion, and at certain seasons the melon, of which there is great abundance, and occasionally also cheese, and a sort of butter or ghee, in common use for cooking. Fish, too, and particularly the dried fish of Lake Menzalch, is a favourite article of food. Rice is less used here than in most eastern comntrics, being dearer than bread; lout still their favourite dish of pillau, or rice nnd butter mixed, with the addition of a fowl or meat, if the party happen to be of the better sort, is sometimes to be seen. Butcher's ment is beyond the reach of the labouring elasses; and unless at their great festival of the Bairam, when the duties are taken off, they rarely taste it. But though thus living in a great mensure on vegetable food, they are n robust and healtly people, capable of undergoing great fatigue; and in despite of the general unprepossessing appearance of both sexes, there are often to be seen specimens of the himman form of matchless symmetry and beauty, particularly among the boatmen on the Nile. Their only luxuries are coflee and tobaceo; the latter a coarse description produced in the country, yet still such
a molaee to the poor man, that while he has it hie seldom complains, thongh nll else were wantime I'le dress of both sexes consistes of a coare bithe cotton sliert manufactured in the comitry, withenet anything else, except the red, and often lewsshany cap, which covers the head, the shawl mad hrid cloth so ambitionsly worn by the Mprer clawes being far heyond the reach of the huanble labouras. The richer classes of natives, inchuding those in othees of trust under the govermment (which is the major jart), or engaged as retailens or hatiscraftmen in such pursuits as vield a decent livelihoos, live as well and as fully, and are as well clotloed, as the same classes in any other country.
'In Eigypt, where there is no jersonal bilertywhere the government claims and enfures its right to the labour of every man, willing or not willing, on its own terms,-where among the native traders there is 110 property, or if it exist is not scen,-whore no enterpisise can be umbertakea but with consent of the govermment, or at the rish of elashing with some of its private interests, there can be no proper rate of wages as applicable to any particular trade, nor any chance of the remuneration for labour being bottomed otherwise than upon favour or eaprice. The native artismus, as cutlers, silk wenvers, sloe-makers, saddlem, eotr persmiths, de, confine their operntions to their own little booths and shops, and uswally flad in themselves and their families sufficient humds for all their work; and the same applies to fill no tailers of 3ilk and cotton roods, coffee, tolmem, sugar, and every other article of consumption, Were a capitalist, supposing him possessed of the authority of the govermment, to cmbark in anr enterprise, he would be almost sure to come in competition with the pacha, and to lie driven out of the field, commanding, as the latter does, all the labour of the country at his own price, lesides having monopolies of nearly every thing consumed in the country. Hence it will be seen that it is upon the pacha the whole labouring classes must mainly depend for support; nud it las been generally stated, that whatever be the nature of the work, the avergge rate of wayes paid by lim does not exceed a piastre per day fur a full grown man; one half usually in liread, upu which he has his profit, for he is a large buker also, and the other half in money. To womed and chiddren he pays from 10 to 20 paras per lar. A Frank cannot command the labour of the same people for less than double the mones. In the manufactories men who liave made themselses remarkable for their skill are oceasionally to be found drawing from 3 to 6 piastres per day, but these are rare exceptions. The common rate ot one piastre per day may be said just to preserve the parties in existence, and that is all.'

Government and Laus.-Egypt, whose history commences with the history of civilised man and orgunised government, which gave laws to the did world and art to the Greeks, after being, for many eenturies, subjected to foreign masters, became, at length, a prov, of the Ottoman empire. Linder the Turkish sway it was long her fate to suffit that worst kind of despotism resulting from the delegation of arbitrary power ly a careless tyannical master to a scarcely responsible serrant. The bold, innovating spirit of the first indepelident ruler of Egypt, the celebrated Mchemet ali, has, however, introduced several reforms into the administrative constitution of the goverument, which have been upon the whole beneticial. The government of Egypt, under the successors of Mehemet Ali, and as at present organised, consits of, lst, the viecroy, or pacha, whose power is unlimited and despotic. 2d, 1lis deputy, ealled $K$ -
