Hhya, 81, , Seven councils of state, who have each a distinct department of the fovernment to proa dise over, 4th, (iovernors (Nuzir) appointed to side over. Sh, 13y the imperial Matti-Scheriff-lit. 'the illustrious writing-of Jan. 12, 18.11, mud a finnan of the sultan of Jume 1, of the sume year, the govemment of Egypt was made hereditary in the gomily of Mehemet Ali, sulijeet to an anmal
the tilute of 80,000 purses, or 400,0000 , to the Thrk idh govemment. Under the new form of government, the conntry is divided into three great proriuces, rik, Sutd, or Upper Eigypt; Vostan, or Midule Eipypt ; and Bahuri, or Lower ligypt. These provinces again are divided into 7 intendencies, and sublivided, after the French system, into departments and arrondissements. In other rewipets, the suecessors of Mehemet Ali have tried ti initate the forms of goverument of Imperial France. The civil and criminal laws are adininistered by a cadi, or chicl judge, and his deputy, or wibl llut most of these ofilees being tilled by lurks, who speak their own language, an oflicial interpreter is necessary. The court of the cadi has also its bash roosol (chief sergeant of arrests, which are executed by his inferior officers) ; its bush kutib, or chief secretary ; and shàhids, or recorilers, who prepare the business of the court, anul relieve it of such details as would unnecessarily take up the time of the cadi. Petty eases are at onee decided by a zabit or magistrate. The police is numerons and effective, and consists of the military and the magistrates, or zabit police. Thungh still very defective, the administration of justice in Egypt has been vastly improved under the government of the successors of Mehemet Ali. Except in rare cases convicts are usually punished by being compelled to labour at the public works.
The pacha is, with some few exceptions, propietur of all the land of Egypt ; and he is, in fact, the only considerable agriculturist, manufaeturer, and trader in the country. The pacha is the sole manufactirer, printer, and bleacher of cotton paods ; the sole maker of sail-cloth and Fez eaps; the sole glass-blower, paper-manufacturer, ironfounder, gun-maker, gnmpowder manufneturer, de.; he has the monopoly of opium, indigo, saltpetre, and linseed oils; he is the only tanner in his dominions; he is the owner of all the mills and manufactories, and of more than half the camels, horses, buffaloes, and cattle in the country; and of half its boats. Ile specifies the employments in which the bulk of the pop. shall engage; the erops or produce they are to raise or furnish, and the prices at which, when produced, they are to deliver them to his agents. This system of administrative intefference, described in detail by Marshal Marmont, is carried out in the following manner. The head cultivator (chef de culture), in conjunction with the head civil authority (cheyk-el-beled) of ach village, makes every year a division of the lands to be cultivated by the inhabitants: this dirision having been made, the kind of enlture to which each portion is to be applied is determined, $-\infty$ much being devoted to dhourrah ; so much to Wheat, barley, pulse, and trefoil ; so much to sugar, fice, cotton, and indigo. The quantity of ihourrah to be cultivated is regulated accorling to the quantity presumed to be necessary for the support of the cultivator's family ; and the produce is given p wholly to him for their support. The other moducts are divided into two classes. The different kinds of wheat, barley, pulse, and trefoil beung to the cultivator, after the quantity of each demarded by the pacha has been deducted: this pautity varies every year, but is most commonly ne-half of the produce. The remainder, includugrice, cotton, sugar, indigo, opium, and woad,
are reserved exclusively for the pacha. The cultivatur is prohihited, undar the heavient penaltien, from retaining the smallest prortion of niy one of these artieles: they are deposited in the public magazines established thromphont the comatr: and placed to the neconit of the filluhs at a pirice tlxed by the pucha, which never exceeds two-thirds of the market price.
'Ihe fellah has to pay to the pacha the miry, which may be regarded either as a land-tax, or the rent of the land. This impost is regulated accorting to the quality of the land; the maximum is 28 pataks ( 1 bs.), the minimum 17 pataks ( $\mathrm{Ks}, \mathrm{IIl}$.) the fedlan, The average may be atonat 98 , or 10 s , an aere. The fellah pays, moreover, a persomal tax, which varies, nceorifint to the presumed circumstances of the individual, from 15 piastres to 5 cents. His cattle is also taxed; oxen and rows at 30 piastres, and at 70 piastres when they are sold to the butcher; on the animal being killed, the skin belongs to government. An account is opened by the village tax-gatherers with cach inhabitant: the fellah is credited with the valne of the produce which he has deposited; and dehited with the miry, and the other imnosts, as well as the prices of the artieles with which he has theיll furnished, which always exceed their value. The accomints are balanced every four years.

A cultivator, included in that portion of a disstrict on whiels the corn required by the pacha is ordered to be grown, if he wish to commute for the delivery of that artiele hy a money payment is charged at the rate of thirty-six piastres the ardep, nud he will generally rather pay this sum than double the sum at lis credit with government; such eredit being of no service to him, since it is never paid; while, by selling his corn, even with the dities and the thitty-six piastres which he pays, he receives at least, in money, a fourth or lifth part of its value.

It must be admitted, notwithstanding the grinding oppressiveness of this system, that it has materially improved the agriculture of the conntry; and that some new and important branches of culture have been introduced, as that of cotton, now a staple product. Marshal Marmont states, und the fact can scarcely be donbted, that these innprovements never could, under any system, have been effected by the fellahs, who are iguorant, attached to old habits, and easily satisfied. 13it the vice of the present system is, that the fellahs reap no advantage whatever from this increased production. On the contrary, it has stripped them of not a few of their limited enjoyments, and rendered them more impoverished aind depressed thin they ever were at any former period of their history ; their increased labonr, instead of bringring with it an increase of comfort, brings only an increase of privations. IIcnce, were anything to occur that should overthrow the government of the successors of Mehemet Ali, the whole fabrie would fall to pieces. It is forced, factitions, and unnatural ; and is certainly not based on or associated with the interests or aflections of the people.

The gross yearly revenue of Egypt and its dependencies is unknown, and varions estimates have been framed of its amount. It probally amounts to $\mathbf{7 9 0}, 000$ purses, or about $3,950,000 \%$. The expenditure, for a number of vears, has been larger than the revenue. The deticit has created a floating debt which, in the beginning of 1860 , amounted to $5,000,000$. In Auginst of this year the govermment contracted a loan of 28 millions of francs, or $1,220,000 l$. in Paris; and a seeond loan of 40 millions of francs, or $1,600,000 l$., was contracted in March, 1862. The necessities of the

Army and Nuvy.-Tho repeneration of the army was one of Mehemet $\dot{c} l$ l's first projects on attaining to the pachalle of Eyypt. To accomplish this, to consolidnte his govermment, and to pave the way for hls other reforms, the reconstruction, or, if that was imponsilble, the dentruction of the Mameluke force that had so long ruled in Euyjt, was indispensable; and thls Mehemet nocomplished, partly by furce mid partly by treachery. This superb cavalry being destroyed, with the exception of a small jarty who enrolled themselves under the banners of the pachin, the latter commenced his work of military reform with equal vigour and success. He had long been sensible of the vast superiority of Euromean theties and diseipline over the brave but tumulturry unsets of Asiatic troons, and he was determined at all hazards to introtuce the Eivropenn syatem into lise dominions. With this view ho had his troops drilled and disciplined in the European fashion, chictly through the instrumentality of some Italinn oflceers. But the uatives were naturally disinelined to the change; mul the injudicious severity with which it was attempted to be introluced and carried into effect, gave rise to a dangerous mutiny, that threatened to put an end to the projects nad power of the pacha. Mehemet having sueceeded in sujpressing this formidable insurrection, saw his error, and resolved to proceed with greater caution. With this view he formed a tepot of fellahs in Upper Egypt, and had them trained in the European manner by a Freneh ofticer, Colonel Selves, who changed his name and title into Solyman Pacha. This ollicer, who had served with distinction under Napoleon, undertook the ardnous task of new-modelling the army of the pacha, and of organising and disciplining it accorling to the most approved models; and by a rare combination of tirmness, bravery, and good sense, he succeeted in grining the confldence both of the preha and the troops. The army organised in this manner is raised by conscription, which, in consequence of the limited pop. of the country, is very severe. The number of troops, in 1838, including veternns and invalids, amounted to 127,286 , besides from 10,000 to 12,000 irregular Turkish troops, and the Bedouin Arabs, who can furnish 30,000 men. But the successors of Mehemet Ali, especinlly his grondson, Ismail Pasha, who sueceeded to the government in 1863, greatly reduced this large army. From a semi-official statement of Sept. 1864, it appears that at that time the regular army numbered but 14,000 men, namely, 8,000 infantry, 3,000 cavalry, artillery, and engineers, and 3,000 black troops.

The ligyptian navy, also a creation of the founder of the present dyuasty, comprised, in 1863 , seven ships of the line, six frigates, nine corvettes, seven brigs, and cighteen gunboats and smaller vessels, besides twenty-seven transports. Muny of these ships, constructed by native builders, are beautifully modelled; and though the crews have not attained to the proticiency of Einglish or American snilors, they have, regard being had to the eircumstances under which they have been placed, made the most extraordinary advances.

Literature and Fducation.-The literatıre of the Arals is very enmprehensive. The works on religion and jurisjrudence comprehend alrout onefonrth of the entire number of Arabic books. Others on grammar, rhetoric, philology, history, and geography, are also numerous; as are nlso their poetical compositions. There are many large
libraries in Cairo, most of which are attinhel to the mosques. A system of publle finstration has been organised by the late Mehemet. Ili, whind descrves high praise. The pupils are first seat the 'primary nehools, of which there are tfyy thronghont the comatry. 'J'lie yonth having wi. quired the rudimpats of education at these, the nre advanced to the 'preparntory' nelomils, The next step is to the 'special' selools, which are ten in mumber, ench devoted to partleular stutios: ummely, medleine, milwifery, veterinary nurgis languages, musie, and agriculture, the other that beling military schools, to fit the acholars for the cavalry, artillery, or infantry service. At Alyare snbel in Cairo, the pacha established a militan hospital and in melical college. The surceess that attended this estabishment has been quite extrat ordinnry; and notwithatmuding their ohd prime dices, many of the Arab pupils have become expert anatomists nd elever surgeons.

It is impossibue to appreciate too highly the benetlcial intluence of these establishanents: ther have alrearly eflected, and will, no doubt, continue to eflect, a very great revolntion in the pultic mind in the East; and will pave the way f reforms and changes of which, at present, no ond ean form any distinct idea. Almost every mompe or public fumbtain has a school attaclied to it mostly entowed by benevolent persons. It the schools, getting the Koran by leart funus the chief employment; but reading und writimg at also taught: those who nspire to the highe branches of learning become students of the lio versity of El-Aghas at Cairo, the principal seald learning in the liast. In this bailding are certaia riucuks, or colleges, set apart for the nutives of af $^{2}$ ticular provinces. The regular sulyjects of stuly are grammar, rhetoric, Mohammetan thedery and the traditions of the Prophet; law, religind civil, and criminnl: algebra, and arithmetic. The sciences are but imperfectly understood in Egyt though great improvements have been made in medical science, in consetpuence of the introductias of European practitioners, and natives being sem to Europe to study. legyptian geography ite scribes the cartlo ns a flat surface; and astronom beyond merely compating the calendar, is stathe for the purposes of astrology. Music affink: favourite study for pastime, but the theoretial system is complicated, as each tone has three in tervals or gradations of sound instead of tre Their melodies are mostly of a plaintive kind; but a kind of recitative, in which they chant theie romances, has some bold measures. (Lanc, i, \%is et seq.; Waghorn's Egypt in 1838, Appendis; Egypt, a Popular Description, 182-190.)

Productive Industry.-No soil can be bette adapted for agriculture than that brought durn by the Nile, and deposited on its banks, The earliest authentic recorils of the human racen present Egypt as the granary of the eld world, bio which less fortunate nations resorted in times d scarcity; while she received from them, in exchange for the necessarics of life, all the luxuries and riches which enabled her propleto make such early progress in the arts, and to latif behind them monuments surpassing even the te mains of the classic world in costliness, estrot and grandeur. The supplies of slime anuully brought down by the river considerably abrit the labours of the husbandman, and have enable the country, with but little of his asisistane, bear for the last 3,000 years three, and sometimis four annual crops, without the least impurenis ment.  thilkinson's Topograpliy of 'Thebas.)
The efliorts of the present government have ren principally directed to the culture of eotton, wthat the crops of wheat have greatly fallen fif and Alexandria has ceased to be a port for the slipment of this species of graiv. The cotton Egypt is long-stapled, of good quality, and the nil is well suited to its growth. liy far the arbest amount of this prodnce is exported to the fited Kinglom. These exports more than inalsed in quantity and more than quintupled a value in the five years 1859 to 18183. The xports of raw cotton to the United Kinglom, binh were $336,313 \mathrm{cwts}$., valued $1,241,577 l$, in $x^{3} 3^{\prime}$, hal risen to 835,289 cwts., of the value of ${ }^{\prime}$ $141,35 \%$. in 1803. The shipments, however, defrened in 1864, and still more in 1865, owing to ie restoration of peace in the cotton growing stricts of the grent American republic.
As the prominctiveness of Egypt depends wholly In the extent of the inuindation nud the comhand of water, it would be of vast importance w the country if means could be found of reguting the inundation, and preserving the waste $f$ water, which is here the one thing needful. hhese important considerntions, which engrossed large share of the care and attention of the nient rulers of Egypt, who excavated the lake atis with this view, lave not been overlooked $y$ the present rulers, who have projected and, some extent, carried out great works for the yulation of the inundation. It is believed that is by no means impracticable so to regulate le How of the river that it might alwnys be pully diffised over a much larger extent of nuntry than at present, and that an inexYus. II.
banatible supply might lo secured for irrigation itt the clry whans. Fully realineal, muels works conlil not fuit to donble or treble the prometive cupncities of the comintry; mul with them unl private enterprive anil inhlistry, the wenlth and pombation of ligypt in mosern times might be us great as ander the l'haraohs.

Commerre.- Nin conntry ean be letter situnted for commerce than ligypt. She forms the link that connects the binstern and Western worlits; and it in to her admirnble situation in this respert, and to the emmmerce of which she lin comsequene: arly lecume the centre, tiat her ancient wealith and civilisation are muni'y to be ascrihed. It lus been customary to trac; tha ruin of commerce in lifypt, in modern timen, to the dixcovery of the route to India lyy the Cape of (ioonl Hope; but more stress has been laid on this event thinn it rually seems to deserve. No doubt it nost probality would, under any circimatances, have diverted a portion of the trade with the extreme Western atates of burone, and in the bulkior articles, into a new clannel; but liad the sunn facilities for couducting the commerce with the bast existed in ligypt in the 15 th and 1 lith centuries that exlated in antiquity, the trale between India and the countries on the Mediterranem, and in the lighter and more valuable products, would, there is every reasom to think, have contimued to a grent extent in the olil chamel. The trith seems to be, that the extinction of the trade thromgh ligypt, at the epoch referrel to, was mainly owing to its latving become sulyected to the lawless nud arkitrary dominion of the Mamelakes, who lomided a 11 articles passing through the conntry with oppressiv nexact.ons, and treated all foreiguers, especinlly Christians, with insolence and contempt. lhut a new ara has beginn ; nud the intercourse with the binst has already in part reverted to its old chanmels. The establishment of a steam communiention between Earope and India by way of Alexnmeria and Sue\%, with n railway throngh Egyit, is one of the most striking and important events in recent times. It las shortened the journey to India, from six months to $a$ inonth, and has thus immensely contribnted to strengthen the hold of Great liritain over her vast possessions in the East. At the beginning of 1865 , Engyt had no less than 360 miles of railway, the most important of the lines being that of the 'Overland Route' from Alexandria to Suez, 223 m . in length. This line, constructed chietly by linglisk, engincers and with linglish capital, hins proved of the grentest bencfit to the commerce and trate of Egyput.

It was one of the grund projects of the late Mehemet Ali to reconstruct the fomous canal that furmerly connected the Rel Sen and the Nile. According to Herodotus, this cmal was commenced by Necho, king of Egypt, and finished by Darius. (Lib. ii. § 158, iv. 39.) Under the 1'tolemies, by whom, accoriling to some nuthorities it was completed, this canal became an important chamel of communication. It joined the E. or Pelusiac branch of the Nile at lubastis, the ruins of which still remain; it thence proceeded 1. to the bitter or nutron lakes of Temrall and Cheik-Ancled, whence it followed a nearly $S$. direction to its junction with the Red Sen at Arsinoe, either at or near whore Suez now stands. It is said by Strabe (lib. xvii. p. 805), to have been 1,1100 stadia ( $1: 22 \mathrm{~m}$.) in length; but if we measure it on the best modern majs it couldharily lave exceeded from 85 to 95 m . Herodotus says that it was wide enough to admit two triremes sniling nbreast. This grent work having fallen into decay after the downfall of the l'tolemaic dynasty, li
wns renoratel either by Trnjan or Alrian; and it was flually renewed hy Anirm, the general of the caliph Omar, the cimqueror of ELeypt, amm Bish. (llérodute, par larcher, ill. 4ini.) The Freneh enginears trased the remains of thily great work for a comstderable distance; and diuring Mehemet Ali's lifetime groat elliurts weru mate to furm a new 'lathomus of Surz C'anal.' In the end, III enterprixing eugheer, M. F. de Lemseps, succeeded in forming a company to earry out this object, and in the spring of $18 i 5$ the works wero no far advanced that a party of delegates, reprementing the chief states of Europe and Amerien, netunlly passel from the Mediterranean to the lied Sea ly the new camal. The delegates performed the juuruey from the Nile to Ismaila by the freshwnter cenmal, nud from Ismaila to l'ort said by the maritime (saltwater) camal. 'I'he buats were towed hy camels mid horsen, and for a distance ilso on the maritime canal hy steamers. After inspecting the works in progress at l'ort Said the idelegates returned again somth, sailing lack to Ismuiln with a fresh northerly wind. The maritime eanal, in the spring of 1865 , was not navigable for lwonts beyond Inmaila; the remainder of the Journey thereffure to the led Sea hail to be perforned by the freshwater canal. This latter camil taken its sonree at the Nile, close to the town of Zaprair, and rums nearly due east thrught the once fertile land of Goshen until it reaches Ismaila; at ahout 2 m . from the $\operatorname{lnt}$ ter town it branches off to the monthwari, leaving Lake Timsah and the Bitter Lakes on the east, nud joins the Red Sea at sucz.
Ismaila is a flourishing and pieturesque little town of 3,000 inhabitimis, situated in the centre of the inthmus, 75 kilometres from lort Snicl, midway between the two sens at the north end of Lnke Timsah, and owes its existence to the works of the cannl. The width of the maritime emal varies at present, accorling to localities, from about 16 to 58 metres, exeept in the immediate vicinity of Port Snid, where it attains 84 metres. Its average depth at present is not more than from 2 to 3 ft . The depth of the freshwater cannl is much the same at present as that of the maritime cmal, but, of course, it is depper dluring high Nile; its wilth varies from about 16 to abount 25 metres. The company of M. F. de lesseps, it is statel, have contractel with varions French tirms for the completion of the whole of the works from the Meliterranens to the Red Sea by the 1st of July, 186i8, at which date the company expect that the canal will be openel to nuvigation, at a cost to the shareholelers not exceeding the subscribed capital of $8,000,0001$, sterling. (Malta Times, May 4, 186i5.)
The whole foreign traile of lgypt centres in Alexandria; and we beg to refer the reader to the article on that city for an account of the imports and exports of the comntry; and of the mole in which the trade is at preyr at carried on.

Momey.-Accounts are kept in Egypt in current piastres, each equal to something mider $3 d$., there being 100 of them to the pound sterling. There are, besides, coins to represent the thinstre (noos ckirsh) and 1-40th fuddaih or paräh ) and 5 and 10 fuldáh pieces. The saadeeyeh is a small gold esin, of the value of four piastres; and the kheyreigeh is equal to nine piastres, or 21 d. and 3-5ths. These are the only ligyptian coins. There is, lowever, the nominal kees or purse, which stands for 500 piastres, and the kazneh, or treasury of 1,000 purses, or 5,0001 . sterling. The coins of Constantinople are current in Ligypt, but scarce. Emropean and American dollars are pretty generally exchanged for 20 piastres. The English
novereign is called gin yeh, for grinea, and freely taken.

Antiquitien uf Saypt.-A contemplation of the remmins of antignity menttered thirumghout Pima carries us back to a perion of whleh hintory fay ninher no ather recoriln than those derived hat the monnments themselves. 'The temples, the pahnees, and pyramides of the couniry, mak the apot where idehtutry hegan-where civilinationean nenced its eareer; white the anmals of thlier me tions prove that thin land of gigantle findrien hat attained to a highs degree of civil and mecinh ofing and nrchitectural proticiency, when the rest of the worlil was involved in harbarism. The ma of objects juresented to the archicologint mar b chassifled thus: :-1. I'y ramids: 2. Temples; Colossl and Sphinxes; 4. Senfotures and him giyphies; b. 'fumbs and painthigs.

1. 'The l'yrumide, which, for vastoress and dun tlom, stand it the head, not only of nil the matr mente of Jirypt, but of the ancient wortit, placed at irregular intervals alonge the li, fint the libyan hills, at some distnuce from the fi: bank of the Nile. They commence at Ghizh nenrly opposite to Cairo, in about $31^{\circ} \mathrm{lat}$, w extend S . to ulout $29^{\circ}$. The pyramids of fitiont three in number, are the bent known, the larke anil most celelirated. They stand on a platean rock, elevated about 150 l 't, alove the devert, alom 7 m , W. by s. from Chiro. 'The pyrmaidal fire seems to have been alopited in order to elaw stability. T'heir plan is that of a perfect spuare and their sides contract hy regular kralationsin they termimate in a point, but sol that the with of the base niways excecils the perpentioules height. They are not solid; at least chambm and palleries have been explored in some of the principal pyramicis. The greatest of the pramid of Glizeh, and indeed of ligypt-that of (heow the building of which is described by llerubthas is a gigantic structure. The sides of its lase which are in the line of the four eardinal print measure, at the foundation, $763 \cdot 4 \mathrm{ft}$., so that occupies a space of more than 13 acres. Itrpa. pendicular height is about 460 ft ., being iku 100 ft . higher than the summit of St. Padi 'This huge finbric consists of succeasive tiers of na bloeks of ealcareous stone, risilip ahove ench othe in the form of steps. The thickness of the stime which is identical with the height of the stex decreases as the altitude of the pyramid increath the greatest height being $4^{*} 628 \mathrm{ft}^{\circ}$, and the leas $1 \cdot 686 \mathrm{ft}$. The mean brealth of the steps is alime 1 ft .9 in . The best muthorities agree in eti mating the number of steps or tien of stone of 203. Aecorling to the iuformation eommuniate to Herodotns by the priests, 100,000 men wen employed for twenty yenrs in the construction this prodigions edifice; and ten ycars were en ployed in constructing a canseway by whidu convey the stones to the place, and in their ue veyance. (Lib. ii. § 124.)

The other pyramils are of inferior dimensime but they are mostly all, notwithstanding, of ns magnitule-instar montium educte; they are a all of stone, some of them being of brick.

Many learned dissertations have been writm and many fanciful and a few ingenious comjecture have been framed to account for the origial oif and ohject of these imperishuble structures. Bu the difficulty of the subject is such, that hither no satisfactory conclusion has been arnied \& Even in the remotest antiquity their origin na matter of doubt, and nothing certain was kom with respect to them or their founders, (fit Hist. Nat., lib. 36, § 12.) Oı the whele, howeria it would seem to be most probable that they

It has long been enstomary to regard the pryamids as monnments merely of the jower mind fotly of the monurelis by whotu they were rainel, ani of the lxindage of their sulbjects, T'has, however, vens to be a very mupertleial projudiced view of the matter. The varylug magnitule of the pyramids, the finct of thelr befing neattored over a spmee exteming lengthwhe about 70) m., and their exrandinary number, appear to show pretty concluively that they mist have been constructed from senie of utility or duty ; and not out of caprice, of fom a vain desire to perpetuate the nanes or blie eelebrify of the fommiers, If wo had a sulthbeat knowledge of antiguity, it wonh probubly efound that the motives wheli led to the conunction of the pyramidn were, at hottom, nearly dentieal with thone which leal to the constriction fist, l'eter's and St. I'mil's; and that they are monuments of the rellgion and piety, as well as ( hie pwere, of the Plaminols.
If is imponswible for any one to look at these suppodous pilen without a deep sense of their huliuity. Their provigious magnitude, the innrnetrable mystery that hangs over their originy ad the purpones to which they were applied, nud he cunviction that they will endure long after the foulest existing momments of human greatness we been levelled with the dust, nwaken feelings at cannot be excited by any other display of he power and industry of man, The pyramlds, Do, are associated with some of the most linterestogevents in the history of the linman race. They ere probably gazed upon by Moses, and certainly ete regarded with wonder and admirntion by lumer and Iterodotus, Pythagoras and Plato: lexander the Great and Napoleon marshalled beir hosts under their shadow; and they are no pubt destined to receive the homage of poets, sturians, and philosophers, and to witness the ploirs of warriors, through the all but endless ries of future ages. (For further details as to el lyramids, besides the authorities aiready remal to, see the Description de l'Egypte, tom. ix.; orlem 'Traveller, 'Egypt,' vol. i. ; Clarke's 'Trads, yol. v. 8vo ed, ; Greaves's Works, i. 1-164, 1737; Ancient Universal Ilistory, i. 425-445; krodote, par Larcher, lib. ii., with the notes; d a host of other works.)
2. Temples.-The remains of buildings devoted religious worship form, next to the pyramids, e most considerable reliques of antiquity in sypt. Reared nfter one uniform design, gigantic size, massive in detail, and calculated to strike re to the heart of the worshipper, they show w large a share religion occupied in the policy the rulers, and in the social condition of the aple. Lgyptian architecture has-unlike that tireece-found few imitators; for the vastness dsolidity it demands, the enormous proportions exhibits, require an amount of labous and maalal only to have been furnished in the land of pyramids. Hence the unvarying uniformity ich sll the specimens of it present, unmixed as y are with the additions of modern taste, unched by the hand of improvement, renders the lidecture of Egypt, above that of all other ions, the most characteristic and unique. The $n$ and uppurtenances of an Egyptian temple sist, first, of the approach to it, or dromos; a red avenue, lined ou each side with sphinxes,
and in mome luafancen a mile long. This condueta tu the entrance, or propylon, a prineipal feature in the bullinge, comaintlug of pyramidal moles, with a rectangilar base und mites, inelining lens to one atother than in the perfeet pyrnmid, upon which the most elalnirate neulpture were eut. Jetween them in the door ; luit before the dour nometimen two obelinka rise landide two colosnd, an ith the temple of laxor (Thehes). The monler of theme propyla unit iromi in indelinite; oceasionally threa most be pmaned hefore arriving at the proinow, or portico of the temple itaelf, which hus it mannive finçade, supported by pillarn. A doorwny lends to the sekom, or cell, which is always divided into severil apmrtments. A necond dowir gemornlly leads to an hypostolite hall, having a that roof, supprerted by liuge pillars. (De:n DENAit.) Some of theme) halls are of immense size. Ohier chumbers succeed, until the holy recess presents itself; an oblong room, with an altar and severnl lools senlptured in stone. To almont every apmatment there are stnircasn aling to the terriced roofs, many of which arvol such dimensions that at present Arab villuges are bullt upan them. Athomph miny of the temples ure more than a mile in length, their interlors are uniformly covered Jn every part with the most elabonte nenljtures. The strnetures will be fonnd more minntely deseribed under De:nimenait, Einfor, and Thenke. (Strabo, Eilt. de Casaubon, 805 ; Egypitian Antiquities, i, t9-77.)
3. Colossi, Nphinxer, fe.-Although these have been lnvarinhly found as uppendages to the temples, yet the important place thoy ocempy in the nutiguitles of luypt demands a separnte notice. Immensity of size, so main nat element in producing grandeur of elfeet, was the chief end of the ligyptian artist; and that this might take a stronger hold upon the imagimation of the spectator, the largest colossi have mostly placed nerr them a amull tigure for contrast and mensure of magnitude. 'Those representing men are always the figures of some deity, and were placed In pairs opposite the propyhen. They are naked, exeept a hend-dress and cloth bound round the walst. Some are sculptured of one entire stone (hence called monolithes), and were cut out of the quarries and transported to the temples at an enormous expense of time and labour. On the plain of Thebes, about half way between the W. desert and the Nile, are two colossal tigures, about 50 ft . in height, neated each on a pedestal 18 ft . long, 14 ft . bromd, and 6 ft . high. One of these, supposed to be the 'Memnon,' the most celebrated by far of the Egyptian statues, is said to have emitted sounds at sunrise or soon after, and when the sun's rays fell on its lips. Strabo snw the statue, and heard the mysterious sound; and Tacitus tells us that Gemmmicns visited the ' Memnonis Saxea effigies, ubi radiis solis icta est, vocalem sonum reddens.' (Annal., lib. ii. § 61.) A portion of a similar statue, but of smaller dimensions, may be scen in the British Museum (No. 4, ligyptian Saloun), which was brought by Belzoni from the Memnonium, llesides these gigantic representations of deified human beings, those of other gods are met with throughont the country. The strangest are those ideal figures called sphinxes, some having a man's head, and hion's limbs and body (andro-sphinxes) ; others, the most numerous, with a female head; others again displaying a ram's head.

Sphinxes were usually placed in those double rows which formed the avenues, or dromi, of the temples, and vary very much in size. The largest is that placed E. of the second pyramid of Ghizeh. It is an andro-sphinx, much of it buried in sand, but the head and a portion of the body

4. Newpiturea amel IIieroylyphicu.-T'lie preceding ehnptram only give an account of those sperimones of ligyptinn architecture and neulpture whasa linmensity, and, when compared with the classic eleganeo of firecian molels, whose uneouth forms might be decomed the linst rude, though glegaritie eflorts of the ligyptinn artista; but a clone exanio nution of the ornuments with which the nucient buildings are profusely entiched, sloww the great protheieney to which they lind attained in the more relhed branches of art. The obelisks, the walls, and all the apartmenten of the editleen dencribed alowe, are covered in almost every part with sculptures executed with the most minute thaish and exquisite akill. The ruined temples and obelisks of ligypt are, in faet, so many historical recorils. The wars and triumphe of the Egyptian sovereigns were, for the most part, the theme of the seulptur. The immense propyliea and walls of Laxor and Karuac, for example, give a vivid picture of the forms of pursuit, the attitniles of the victom, the wombled, and the dying,-the aea fights, the religions ancriflces ami processions.

The hieroglyphics or tipures, symbolical devices, and eharacters with which the Rgyptian obellaks and other monmments are covered, are highly interesting, from the insight which they allord into the steps by which men were led to the use of a written languare. The most obvious expedient fur communieating substantive inleas woull be by drawing ilgures of the objects: thus, a battle might be represented by the tigures of armed men contendiug with each other. But this is a very clumsy mul inconvenient mode of conveying information. and cannot be applied to represent mental feelings or abstract ideas. Hence pictorial are very soon nuperseded by or mixed up with symbolical or allegorical representations, which depiet facts, qualities, or circumstances, by conventional or arbitrary marks ; anil these sirts of characters being, in the course of time, still further simpliftel, lose a great portion of their original pictorial charncter, mind degenerate into what may be called a common, elemutic, or enchorial writing. The Chinese is the most perfect example of this sort of conventional writing; and Duhalde has given an interesting necount of the steps by which it was derived from pictorial writing. (Duhalile, I)eseription (iéngraphique, \&c., ii. 272, ed. 1736.) The present Chineso characters are, in truth, nothing but a refined and inproved species of hieroglyplics, each charaeter presenting to the eye a distinet object or quality. At this point the Chinese have stopped; and it seems never to have occurred to them to attempt
to mark the different anilidia of the voice hy de ructers or lettups, and lyy combining these ti fon a written languige. Now, it was loug mapow that, like the Chinwe, the charnitern on the Figyithan momomenter were wholly hiormalyphia anid much learning and ingeinitiy have loen of pembed in elforta to diecipher them. It was latere however, conjectured by Zowega (be Orighicet lí ()lellmeorim, $p_{0} \cdot(54)$, thint soline of the chammen on the momimente might he neither pietorial on nymbolicul, lout phonetic (from twom, rar); thatia that they might reyresent mulinla, and nut thiog anif be cither ajphalsetic or ayilabise, or lwith. Wis burten lad already whown loow the retion min bolle writing migit pasa into the phonetie, mithe erromeonusly coneluded that the mommentin ationber no specimens of the latter. (Hivine ing. iii, (ifi, 'I'he murmise, for it wan little better, of Duegha since, however, been extablished by ibr, fium Chanypallion, anil othens. Ihit in doing thin then lum fucilities unknown to Warhorton, Rusqua an previous inquirens. The lirench, when in litr diseorared at lionetta a stone, now in the Brith Musenm, on which three inseript ions are wall tured; and it ajpaears from the last and most perted of thone, which is in (ireek, that the inseriptio are cither untlrely or molostantially inlentical nita eush other, heing the sume roynl ilecrue whichi mayn, was ordered to le cont in sncreal charaten hierondyphies, in enchorial characters (that in molitled or conventional hieroglyphiss), and : Greek. 'The inseriptions are a gook ileal mutianes purt leularly the hieroglyphical ; but they are sullheiently illstinct to allow the hierondyhin anil enchorial to be compared with ench other a with the Greek. The sthily of this trilingulate enabled Dr. Young to determine, or rather purhy conjecture with considernble probability, whide the enchorial nad hieroglyphical signs were har netic, and to tlx their value. M. Champollions others have since zenlously followed up the pal thus openel, but with no great or markids sume If, inleed, the Eqyptian writing were either wholl tigurative or wholly phonetic, a key to its my:ten might le discovered, nul its lonfr lididen treate be again brought to light. Buit the mont probatie conclusion seems to be, that it is partly the and partly the other; or that the charactessari a ntate of transition from the former to the have This, also, is the matured opinion of Champulis who lays it down distinetly, in the secomil elitity of his I'recis du Systeme II'ieroglyphique, that' hieroglyphic move of writing is is complex sym -n system fiymrative, symbolical, nul phonetina the sume text, in the snine plirase, I would almas say in the sume worl.' An examination of hieroglyphic writings must go far to watisfy eng one that this is a tolerably correct statere Many of the characters are purely pietorial: whe others are mere arbitrary symbols, aud marl and most probably in some instances are, phondt or, which is the same thing, alphabetic or sythel In fact, no certain conclusions cam le, or, at events, have been drawn with respect to it. . dombt it was sutliciently lintelligible to theme were instructed in its mysteries, but to thase b titute of such instruction its interpretation mat be a work of all bint insuperable diffienly; s, there seems but little probubility thai the "T which covered Isis in antiquity slould ered wholly removel. (Besides the authorities alns referred to, the reader may consmit the art, 'llig rlyphics' in the Encyc. lifitnmicn, one uf the able and elaborate treatises on the subject that ever appeared.

L'asturare in searee, inidentile few: they connlat of axmed, seme mulea, und a few stunted honsen, oxen, and cown. The mimber of piga, sheep, and gonts is noore comabiternble: bint the breeds are very lifferior. The nen aromind Ellba swarms with fimh, incluching tumbies, anchovien, soles, the conzellimu (Iabrux julix, L, linn.) nind mullet (Mullus burbutus), Of thess the tunily anil mullet. are taken lit large quantites, and from $\delta, 000$ to 6,040 tons of the former are anmully exported, besides a considerable nilpply of the latter.
The ehief wealth of lilba is lin its mines of iron and salt, which have been wrompht from a very remote epoch. The principal mine near the little town of tito, on the E. shle of the lalani, consints of an entire mountain about 530 ft . in height, which, to lise the words of Pliny, is fotus ex ed materiti. It aupplies Jron ores in every known variety ; some ylelding from 0.75 to 0.85 of excellent aron, from which in very good steel is obtained. The anclents made many deep exeavations and winding galleries in this mine; and piekaxes, nails, lamps, and varioum other intigue articles have been from time to time discovered in it. The average produce of iron ore from Ellin has of late years been nearly 18,000 tons a year, worth about 21s, a ton; the whole of which is taken to the opposite coast of Italy to be smeltel. The miners work eight or nine liours a day, and are prid 40 lire (about 25 s.) a month, 5 per cent. of which is deposited for a pension from the government, for themselves or their wilows. Marine salt is manufactured by evaporation in four basins, near Porto Ferrajo. About $4,000,000$ lbs, are prodaced annually, nod nearly 1110 persons employed in the manufacture. The other branches of industry are principally domestic.

Commeree is chielly limited to the importation from Leghorn and Marseilles of grain, che ac: cattle, and other articles of prime uecessity, wa?

## ELBERELELD

the exportaion of tamin, aalt, iron ore, Vermont und Aleatico wines, vingrar, and granite. There "re two towns-l'orto Ferrajo on the N., and Iorto lungone on the lis const. The former, which is the enp., is luilt on a peninsuln, hetween which and the main land is a spucions and good harhour. Pop. abont 3,000 . It is fortitled; its streets, which are wide, elean, and well paved, ure mostly terruces cut out in the rock; houses small, badly divided, built of brick, and generally two stories high. It is the residence of the governor of the island aud of a military eommandant, the sent of a civil and criminal court, and contains two clurches, with a prison, lazaretto, hospital, nud some suliterranean corn magazines. l'orto Limgrone, with 1,500 inhali, has a toleruble harbour, and is well fortified and dificult of access. The ordinary foed of the pop. consists of dried pulse, cheese, bucon, smoked provisions, coarse bread, fresh fish, aml a few vegetables; fresh meat mul white wine are used only on holydays. Their lomses nud furniture are equally simple anil solid. lowls, nine-pins, queits, temis, and tiring at a mark, are the chief sports of the men ; there is not mueh gaiety exlibited in the amusements of the islaud generally. liobbery is rare, murder still more so ; the mumber of paupers incomsiderable.

The Etruscans, Jhocians, Cartlagiulans, and Romans successively possessed Filba; ill the midille ages it was subject to the Saracens, l'isans, Genoese, Lachese, the comnts of Piombine and Orsini, In the 16 th century it was ravaged by larbarossa, and soon afterwards fell to the crown of Naples. linder the French empire it formed part of the kiugdom of Btruria. Its chief historical interest is derived from its loaviug heen the residence and empire of Napoleon from the 31 of May, 1814, to the e2fth of Feb. 1815. During this short period a road was opened between the two principal towns, trade revived, and a new ara seemed to have opened for lilba.

ELBE (an. Albis, flumen inclytum et notum olim. Tacit. Germ., § 41.), a large and important river of Jiorope, throurh the central jurt of which it llows, fencrally in a NW. direction from lbohemia to the German Ocean. Its total length is abont 202 m ., duriug which course it passes through Austria, Saxony, I'russia, Anlıalt-Dessan, Manover, MeckIenburg, Denmark, and lamburg. Its priucipal athuents are-on the left, the Moldau. Eiger, Muhda, Saale, Ohre, Ietze, Pimenan, and Oste; and on the right, the Iser, Seliwarz lilster, and llavel, with the Spree. Dresden, Meissen, 'Jorgm, Magrleburg, Leutzen, Lauenburg, Harbirg, and IIamburg, are situated upon its banks. It origimates in several streans on the $S$. side of the Sicbucekoppe (Snow-cap), one of the lieseugelirge chatin in the circ. of Ibidschow in Hohemia, about 4,400 ft . above the level of the sea. At tirst its direction is E., next S. : at Pardubitz it turns W., and at Kolin NW., from which direction it does not alterward greatly vary. After leaving Torgan it runs for the most part through a flat commtry. Near K̈̈niggratz, about 40 m . from its source, its elevation above the sea is only $6 \overline{5} 8 \mathrm{ft}$, at Melnik 454 ft ., at Schandan $\mathbf{3 4 1} \mathbf{f t}$, at l)resilen $2 \bar{a}!$ ft., ut Magdeburg 236 ft , and at Arneburg (Brandenburg) $17(i f t$, only. Above Melnik it is navigable for only small craft, but vessels of 1,500 centners burilen may eome up to that town. Its volume receives a considerable angmentation ly the union of the Moldan; and when it enters Saxony the lilbe is mpards of 350 ft . in wilth. Between llamburg and larburg it is divided into several arms, enclosing some large islands; bat these soon afterwards reunite, mut the river proceeds in an mulivided stream to its mouth. lits estuary, op-
posite Cuxhaven, 12 m . wide, is eneumbervi with annd lmaks, which reuder its muvigution difitult but ships drawing 14 ft . water come $1 \boldsymbol{y}$ to llam: burg at all times, and those drawing 18 ft . cone up safely at spring tirles.
The bridges across the Elbe are numerous alonte Inmburg; but below that town communication between the oprosite bunks trkes place by mean of ferries only. It is commected by the Finow and Firederick William canuls, within the l'rusing dom., with the Odor and the Vistula, and by that of Steknitz with the Truve near lulseek; white the short ruilway from ludweis to Linz conlects its atlluent, the Moldan, with the Danule.

In a commercial point of view, the libe is a river of much importance, being the channel th which the connt ries of NW. aud Central (iernang from IIamburg to the E. parts of Ilohemia, expung some of therr heavy products. Ily the treaty d 1815 it was provided that its navigation shoulite free througlunt its whole course. lhit the governments through whose dominions the river llows have contrived to evade this provision, and a srivy of vexatious tolls and heavy dities ure inposed in foretgn merchandise. Prussia obliges the trauter at Mingdeburg of many gools passing downwardto her own vessels, and the government of Alecken-burg-Schwerin levies heavy taxes at boitzenhars Above llamburg, the river has lost much of its former importance by the establishment of muilwars
bhablifleLD, a town of Rhenish l'masiz circ. Lilberfeld, distr. Disseldorf: 15 m . F. br S Itisseldorf, and 23 m . NNLi. Cologne, on the ailway from 1 Berlin to Dusseldorf. Popl. 56,30 in 18ti. The town stands on both sides of the nin Whipper, and is Irregularly built, but contaisa some grood houses, most of which have gankens attached to them. It is the seat of the enumed for the circle, of the judicial and police entrta, commercial tribumal, and a board of taxationa ani has two l'rotestant chmrelies, a R. Cath. churd gymunsium, citizens' and commercial schowls, school of industry, nomerous clementary selmed a town-hall, exchange, theatre, gencrill hospian, two orphan asylums, two workhouses, and savings' bank. 'There are several casinos, or elta honses, and a promemade. In the winter the: are frequent balls and eoncerts. Its priajoia manufactures are silk, which employ aboit fi, wh looms; with cotton nud linen fabrics, linen and cotton thread, velvet, lace, ribamds, with establib ments for ealico printing. In the cotton farturis mumy stean engines are employed, and thare an numerous water-milis and establishments firt th bleaching of linen. But the most celebratel the liblerfeld factories are those appropriatel the dyeing of Turkey red. In this art, wheth it be owing to the air or the water, or to some culiar process or mystery, the dyers of Billwefle have attained to unrivalled excellence. Consider able fuantities of yarn were formerly expur from Glasgow and other places in the l'nith Kinglom to be dyed at Eilherfeld, and again in ported to be wrourlit up. Filberfeld is the seat the Rhenish Foreign Irade Compnny, the fee man-American Mining Union, the Khenishl'riva Suciety, a lBible und a scientitic society, mul many benevolent institutions.

Adjoining lilherfeld, and forming, in fact. kind of suburb of it, is Barmen, a long staydia place, made up by the union of several villity It has four churches, one of which, erected 1830 for the use of the R. Cath. poph, was life rally contributed to by the l'rotestants; a hid school, a deaf and dumb asylum, exchaure, tio discombt banks, a police conrt, and acommertia tribunal. Its manufactures are the samac as the

and forming, in fact. Burmen, a loug strayghas mion of severul villery ne of which, crected is R. Cath. pop., was lile he l'rotestants; a hish asyhum, exchauge, thio court, mid a commern res are the saune as thex
of E.therfell, with the adilition of ateel and plated artides, hariware, chomical produchs, and earthenware. Along the bamks of tho river are sume extelsive meadow eroumde, used for benching linen, which branch of industry contributed freatly the the nise of lestli towns. Nimmeroms kiteleen gardetis surround Barmeln, the cultivntion of which netulies many lindividuals. The road through the valley of the Whpper, for a distemee of perhaphe 6 m . uljacent to liblitid, is lined on either sile with mills, finetories, and habitntions; this luing the abost populous ns well as the most industrins district of the l'russian momarehy. It foestimated that altogether nearly 16,000 hands we cumblayed in namuhictures in and near Eiberfril and laimen, mid that the value of the manufactured goods anmually anounts to $12,000,000$ or H, (1004, 000 thaters, or from $1,8001,0001$. to $2,100,1004 \%$. Whares, owing to the increasing demmad for labour, are high at Filberfeld, and the working elasses are comparatively well ofl.
ELAH:UF, a town of France, dep. Seine Infiriente, cap. culut., on the Seine, a trilnitary of which interects it, 11 m . S. by W, Romen, on the railwny from lonen to Paris. $\mathrm{l}^{2}$ (op. $20, \mathrm{t} 92$ in 1861 . The town is generully ill built, but possesses a tukrably good square, nud some handsome buildimsso It hins no public editices worthy of notice except two clurches, one of which has some stnined hhas, presented by the cloth manulicturers of the town in 1466 , exhibiting a curious emblemation device indicative of their profession. Elbent has beru long celebrated for its woollen manufactures, nud is at the present moment the principal seat of that branch of indusiry in France. In 1787, lillwaf produced about 18,000 pieces of cloth yearly : in tolt, the quantity had increased to from 20,000 to 25,000 pieces: and nt present the produce is extimated nt about 100,000 jieces, valued at Bi,(100,000 frnnes, or $3,000,0000$. It is stated that. ahout 20,000 men, women, and children are emploged in the different departments of the business: but of these many belong to the surronndiner districts, and return from town at night to their lingings in the comintry. 'The working clnsses of Elbenf,' sajs nu oticini repurt, by the mine of the torn, ' eujoy, in general, easy circumstances ; they have alwags lived hapmily, for two very powerfil nasons: the first, bechuse the monufacturers are cunstantly in their worr-shops, work themselves with their workmen, know their wnots, and identify themselves with all that happens to them for ghat or evil; the second, because the priee of wearing varies little, the proportion bet ween times of prosperity and times of distress being 20 per cent. at most on the amount of wages, nud that wily in certain departments. The work-peophe are divided into three chasses; the adults, the day laburers, nud the weavers.' There are in Elbenf a gratuitous school of mutual instruction for boys, agratuitous institution for girls, nu infant school, and a gratuitous Sunday sehool for the adult workmen; and, independently of these public institutions, there are a number of private schools. M. Villermé (Etat lhysique et Moral des Ouvriers) states that, compared with the work-people of lionen, those of Elbeuf are inuch the more correct in their morals and habits. They are, he says, fur the most part industrious and economical ; nud many of then are supposed to have saved a certnin prtion of their camings, especially those who live vat ul town.
Litheuf is said to have existed in the 9th century, but its origin is uncertain. During the administration of Cothert, its mannfactures were in a comparatively thourishing state; but they suffered setesly by the revocation of the ediet of Nantes.

At the beginning of the 18 th sentury, its mannfacturers had begun to cestablish commercial relattions with Spain und Italy; and it mow has it direct trade bot mily with those conntries, but with Amerien, (iemmay, and the bevant.

DLLIIN(i, $n$ town of L'russia, prov. I'russin, capo circ. on the lilblug. about 5 m . from where it flows into the SW, angre of the Firische $11 n f, 31 \mathrm{~m}$. SLE. by E. Dantzig, and 88 m . SIV. Kibnigslerg, on the railway from Dantaig to Kibuigsherr. $1^{\prime}(0)$. 25, isto in $1861^{2}$. The town is divided into the old town, new town, aud suburbs, part of which are enclosed, tugether with the old and new town, within a line of fortithentions. 'The ramparts and walls are lofty, flnuked with towers; and surronuded with ditelies, but they have not been in a state of eflleient defunce since $17 \overline{2} 2$. Tho town is entered by 7 gates. The new town is well built, but it is quite otherwise with the ohl town. lilliug is well lighted: it has a Catholio and 9 I'rotestant churches, n syuagogne, $n$ gymnasium with a library, 6 hospitals, an orphan mul other nsylums, a convent for old women, $n$ honse of industry, established by an Eugtishman named Cowle, in which 400 ehildren are educated, and numerous schools for both sexes and all chases, education among the poor having made grent progress in this town. It is also the seat of a conneil, a judicial court for the cirele, and a municipnl tribumal. It has a garrison, a bauk, exelingge, fire assurance oflice, mumerons warehouses, princimally in one of its suburhs, nud many sugar retineries, with penrl-ash, vitriol, tobaeco, linen, sail-cloth, oil, starch, soap, elicory, and other factories, in some of which lnrge stean engines are employed. The trade of litbing is extensive: its exports consist chielly of corn, timber and staves, hemp and flax, the protuce of its own manufactures, feathers, horse-hair, wool, fruit, butter, and pmekthread. The Kralithl cinal connects Fibing with the Nogat. The lisische Hath is too shallow to be mavigated by vessels of any considerable burden, so that the irade of the town by sea has, to be carried on, by menns of small vessels or lighters, through I'illnu at the month of the Frische llath: About 25 ships, besides river crnft, belong to merchants of the town. lilling was founded about 1237, and hecnme afterwards one of the Hanse 'lowns. It was united to the l'rissian dom, in 1772.

ELCIIE (all. Ilici), a town of Spain, prov. Valencin, near the left bank of the Eha, jn a plain almost entirely covered with palm trees, 15 m . W'SW, Alicunte, and 8 m . W. from the Mediterrinean. Iop. 10,353 in 1857. The town is surtonuded by walls, has some good streets and sipunres, aud ${ }^{\text {a }}$ public fomatains, but of these one only has potable water; 3 par, charehes, the principal of which is a fine building, with a majestic dome; $\mathbf{3}$ convents; a magniticent oid castle, belonging to the buke of Areos, on whose estate the town is built; $n$ barrack for cavalry; 3 primary seliools, and a grammar-school. it has manulactures of conrse linens and cottons; 10 flour-mills; with distitleries and tanneries.

Wlehe might, with propriety, be called the 'city of dates, being everywhere surroumded by phantations of pulms. llesides its large produce of dates, the eountry round abounds in burilla, that exported from Alicante being chietly raised in the vicinity of Elche. A great proportion of the dates imported into linglasd as the produce of Barbary, are from this city. The wages of tield labour here are 3 or 4 renls, and every thing is propertionably cheap. Elche is the mative comtry of Don George Jum, a distiuguished mathematician and natural philesopher, the companion

## ELEPHANTINÉ

of Ulloa, in the commission sent to I'eru, towards the midalle of last century, by the French ard Spunish qovernments, for the mensurement of a degrec of the earth's surface. Elche was recovered from the Moors in 1363.
liLCHINGEN, a small village of Bavaria, on the N. bank of the Danube, about 7 m . NW. Ulm. I(o) $5.57($ in 1861. This villago was the seene of an obstinate engagement between the Freneh, muder Marshal Ney, and the Austrians, on the 14tlı Oct., 1805 : the former at length succeeded in carrying the bridge and position of Elelingen, und by this success contributed materially to the eapture of Ulm, which, tliree days after, surrendered to Napoleon. Ncy was rewarded for his calluntry en this occasion with the title of Duke of Elelingen.

ELJIPlHANTA, a small island on the W, const of Jindostan, presid, Bombay, prov. Aurungabad, on the E. side ol the harbotir of Bombay. It is about 6 m . in circumference, and consists of two long hills and a narrow valley between them. It is named Gorapori by the Hindoos: the Portuguese gave it the name of Jlephanta, from a colossal elephant, about thrce times the natural size, liewn out of the solid rock, and standing abont 4 m . from the landing-place, but which has now almost entirely fallen to decay. A gentleman who visited the island in 1836 reports, that only three legs and a part of the fourth were then remuining. This island is celchrated for some remarkable cave-temples, so many of which exist oll the W. side of India. In the face of a hill, nbout $\frac{1}{2} \mathrm{~m}$. from the landing-place, is the first cave; little of which, however, appears to have been completed. Ahout $\frac{3}{4} \mathrm{~m}$. farther is the great cave, an excavation $130 \frac{\mathrm{ft} \text {. from } \mathrm{N} \text {. to } \mathrm{S} ., \text { by }}{\text { a }}$ 133 ft . from E. to W.; its ceiling flat, varying from 15 to $17 \frac{\mathrm{ft} \text {. in height, and supported by }}{}$ 26 pillars and 16 pilasters. It has three en-trances-on the N., $E$., and $W$.; the front of each consisting of 2 pillars and 2 pilasters; but the $N$. front is the principal, and directly faces the remarkable triad or three-headed figure-the principal object within the temple. This is a frigantic bust, 15 ft . high, composed of three colossal heads; the front face having a placid and agrecable physiognomy; that on the left leing to all appearance a female, and also mild looking ; but that on the right, according to most travellers, having a repulsive aspect. The latter, as well as the front face, has the third eye in the forchead, so characteristic of Siva. Indeed, in the opinion of the best authorities (sce Erskine, in 'I'rans. of the Bombay Lit. Soc., i.; Sykes, in Journ. of the Asiat. Soc., v. 81-90, \&c), the whole three-headed figure relates to Siva only, and not to a trinity of Bralima, Vishnn, and Siva, as has sometimes been imagined. Similar busts abound in the Brahminical caves at Ellora (which sce) appropriated to the worship of Siva. This figure has originally had 6 arms, each of the hands of which held some olject; but all are now greatly mutilated. The niches on cither side the triad are of considerable size, and erowded with figures, anoong which, as well as in the other compartments around the temple, Bralima, Vishnu, Paravati, Kartik, Ganesa, and other Hindoo divinities, may be recognised, but always in a condition inferior to Siva. On either side of the principal figure is a small dark elamber, probably anciently devoted to the use of the Brahmins; and there are three separate sanctuaries within the temple, cach containing a figure of the lingam. The columns and other portions of this cave are ornamented in a most elaborate manner, and, altogether, the tenple within presents an imposing
appearance. From some cause, however, it is not much frequented by pilgrims: several of its pillan have been thrown down; it is in part mouklering away with damp, and becoming cloked with earth; and, unless some effectual mpans the speedily taken for its preservation, it will in afew vears be in a state of irreparable decay. (Einkine, in Bombay Trans.; Sykes, Asiat. Res, ; Gaind lay's Views.)

EISI'HANTINE', the last of the larger lasand, at the extremity of the cataracts of the Nile, immediately opposite to Assonan, near the S. buthe dary of Egypt ; lat. $20^{\circ} 5^{\prime} 2^{\prime \prime}$ N., long. $32^{\circ}{ }^{\circ \prime} \psi^{\prime}$ $49^{\prime \prime}$ E. Placed at the threshold of the kiagdom, Elephantine has been justly ealled the key of ligypt, and claims some importance as a military post. Under I'sammetichus it contained an Egyptian parrison, to protect the country from the inroads of the Fthiopians. Herodotus (liutene, § 30) found it occupied with Persian troop; and in Strabo's time, the liomans had three cohorns there, to gunrl, what Tacitus has expressively called the Cluustra Romani imperii. (Strabo, lio, 17 ; Tacit. Annal., lib. 2, §61.)

The base or kemel of the island is a granite rock, covered with the rich alluvial soil brought down by the river; and to prevent this from bein" again washed away, it has been protected by quays, which have been repaired from time to time, so that it is impossible to fix the epoch of theit first construction. The richness of its soil almits of the island being cultivated in every part ; asd thongh it be less than 1 m . in length, and not $\ddagger \mathrm{m}$. broad, it presents a verdure and fertility equal to the finest spots of Egypt, and forms a refreshing contrast to the sterility to which, for many miles round, beyond the banks of the Nile, the counrry is doomed. Hence, the Arab name for lilephantine is Djeziret el-Chaf, 'the islet of Howers.' The S. extremity of the island only is rocky and elevated, and the bare rock comes down to the elte of the river; but the rest of it is covered with shrubs, groups of palms, mulberry garilens, seacis; dates, and sycamores interspersed amongst human habitations, mills, canals, and the ruins of temples. (Ritter's Africa, 3rd division, § 26; Richardsen's I'ravels.)

The wreck of the ancient town forms a sort if plateau, and gives to the island its greatest eleration. Herc, till recently, were the remains of two temples, one dedicated to Cnouphis by the Pharail, Amenophis III.; and one dedicated to a triad consisting of Cnouphis, Sate, and Anouke, the latter being of the age of Alexander, son of Alexander the Great. But we regret to say that these interesting ruins no longer exist, having been batbaronsly demolished in order to employ the stuas in building barracks and warchouses at Assounh. In the quay Champollion found fragments of edifices that had been constructed by the lharaohs Mocris, Mandonei, and Khanses the Great, or S'sostris. (Lettres de l'Egypte, p. 172.)

The most interesting part of Elephantine is its quarries. These furnished, in the reign of Amasis: one of the greatest marvels Herodotus (Eutere, § 175) saw at Sais-a single block of granite, out of which was cut an entire temple. No fewer than 2,000 men are said to have been occupied duning three years in transporting this huge monolithic edifice down the Nile to its destination. The quarry affords ample proofs of the mechanical skill and patient labour of the ancients. Immene columns have been evidently cut ont of the sidil rock in one mass. The marks of the workman's chisel and wedge are as fresh as if they had been imprinted yesterday, and the tracks of camage wheels are equally distinet. Some sculptures are

beslies the remains of Epyptian architecture, others have been foumd which would appear to lelong to the Romans, partlcularly a large wall to the S. Another, from 40 to 45 ft . ligh, and 1009 th. lung, of a convex construction, had a Nilometer fixed in it, which, there can be little doulat, was the une mentioned by Strabo (lib. xvii.). Champullion, however, says nothing of the Nilometer: and it may; perhaps, have been destroyed as well as the remains of the temples. Over the ruins of the ancient town are strewed many fragments of fultery, ameng which other memorials of the liomans have been fonnd, consisting of tokens or culins of red earthenware, having the name $A n$ tomius inscrabed on them in a Greek running hand. (kitter; Jowett's Christian Researches, p. 40; Conder's Egypt, ii. 191-193.)

Elephantine is inhabited by Nubians, who are said to be kind and hospitable to strangers. The women are described by Dr. Rishardson as pesressing much personal bemty, somewhat too freely displaved. (Light's 'Travels, pp. ōl-53; Richardon's 'fravels.)
ELGIN. a royal bor, and market town of Scothand, co, Eigin or Moray, on the Lossie, 5 m . from its influx into the sea at Lossiemouth, 120 m . N. Fidinhurgh, and 59 NW. Aberdeen, on the railway from Aberdeen to Inverness. Pop. 7,043 in 1861. The situation of the town is very agreeable, having the Laly IIIll, a beautiful verdant mount on the $\mathbb{I f}_{\text {, }}$ and the Quarrywood Hill on the E., clothed with wookl to the summit. The town consists of onestreet, alwit a mile in length, with a few small streets intersecting it at varions distances. The principal street is handsome, well paved, and so wide that a new chureh stands in the millile of it, on the site of an old chmreh, called St. Giles. Tlis new chrrch, which has a richly ornamented cupola 112 feet high, and a spacious Doric portico, is one of the best of the numerous public buildings which Elgin contains. (Grey's hospital (fommded in 181:) fir the reception of the sick poor of the town and county of Elgin), a building of two stories, of lirecian architecture, with a projecting pertico of four Doric columns, and the centre crowned with a tome, stands on a rising gromed at the W . end of the town, and forms a beantiful termination of the High Street. At the opposite end of the town stands the Elgin Institution, a quadrangular builling of Grecian architecture, founded by the late General Anderson, for the education of youth, and the support of old age. This institution, which cost 12,0001 . (its founder having bequenthed To,000l. altogether for the charity), is calculated to contain 10 aged and indigent persons, and 60 chilidren, and to afford gratuiteus education for about 230 chilatren belonging to the town and parish. The other public buildings are the acalemy, assembly roems, Trinity Lodge rooms, jail and court-hoise, and chapels belonging respectively to the Episcopalians, the United Asmiciate Synod (two), the Independents, and the liman Catholics. But Elgin, which was the seat of the bishops of Moray, is principally celebrated for the ruins of its cathedral, one of the most magnificent in the kingrlom. It was built in 1224, the cathedral establishment having been transplanted at that time from Spynie to Elgin. The original structure (with other sacred buildings, aad no small portion of the town) was burued in 1390 by the Earl of Buchan, youngest son of Rolert II, known by the name of the 'Wolf of barenoch.' It was rebuilt by the bishops of Moray, in the form of a I'assion or Jerusalem cross, having

5 towers, one at each end, and one in the centre. The length of the building was 264 fret; the brealth of the traverse 114: while the height of the centre tower was 198. The catheiral was unroofed in 1568, hy order of the liegent Morton, for the sake of its lead; and this venerable specimen of arclitecture and senlpture has since been allowed to fall iuto decuy. The great centre tower fell in 1711. L3ut the chapter-house, the turrets and walls of the east choir, and the towers on the west, are still remaining. Of the walls of the nave and traverse ouly a few fragments remain. Stepshave been taken by the barons of excliequer in Scotland to prevent any further dilupidation. A collefro was attuched to the cathedral, and contained not only the church and grave-yard, but also the bishop's honse and those of 22 cmons. The eastern gatewny and part of the wall are still standing. The ruins of a convent of Greyfriars, settled here by Alexander II. in 1934, are still to be traced S. of the town. Of the convent of tho Olservatines, established here in 1479 , no remains can now be seen, A Mason Dieu, or religious hospitul, once stood on the site now ocenpied by the Elgin Institution. (Keith's Scot. 13ishops, by Russell, Edin. 182.4, pp. 138, 141, 142, 444, 453.)

In addition to the two charitable institutions already mentioned (Grey's and Anderson's), there are eight other charitable endowments of n sulsordinute order, most of them old. One of them is Grey's charity (the founder of the hospital), for the support of reputed olil maids of the town of bitgin, with funds amounting to $\mathbf{3 , 0 0 0 l}$. The seren incorporated trades, and the guildry, are each, in one respect, of the nature of provident institutions. The academy, which is partly endowed, and partly supported from the town's funds, contnins three separate schools, and has long been a distinguislied seminary. There are no fewer than ten schools in the town. There is a subscription and other libraries, as also a reading-room, with numerous benevolent and religious societies. There are no manufactures, except a tannery and a brewery. The town has ten lairs yearly for live stock, and a weekly market for grain and other agricultural produce.

Elgin can bonst of great antiquity. In the $12 t h$ century it was a considerable town with a royal castle situated on the Lady Hill. The earliest charter of guildry was granted in 1234. It unites with Cullen, Banff, Peterhend, Kintore, and luverary, in sending a meraber to the H. of C., ard, in 1864, had 314 registered voters.

EL JEM. See Tysimus.
ELOLA, or ELLORA ( Eluru), a village of Hindostan, dom. of the Nizam, prov. Aurungabad, in abont lat. $19^{\circ} 58^{\prime}$ N., and long. $75^{\circ} 23^{\prime}$ E. ; celebrated for some remarkable cave temples, excavated in the solid rock, ubout 1 m . to the E ., which in magnitude and perfection of execution, surpass all other structures of the kind in India. The site of these curions monuments of art is a crescentshaped hill, of moderate elevation, the concavity of which faces W. or NW. Its constitnent rocks are chiefly bavalt, a lard vesicular rock, and a rock of a loose, gritty, absorbent, and crumbling nature, interspersed with veins of yuartz, silicions stone, and blood-stone. The caves are cut in the W. slope or concavity of the hill above mentioned, extending, with intervals of various length between them, for about 1 m . from one extremity to the other. They may be divided into three groups: the N., which appear to have belonged to the Jain sect, since the purely Buddhic scnlptures and emblems in them are intermixed with many Brahminical ones; the central, which are by far the most nul-

## ELSINEUR

merons, and aro molely litulminical; and the S., whitll aro as decidevily limlilhie. Ilegimuing at the N. extremity, $a$ few humbred yards up the hiill, cut in a mural rock of black banalt, is what is eallent the 1'arisnauth, a colossal thgure of Budalli, 10 ft . high, apparcintly lin a trimpuphal car, and sented on the folds of a large suake, whose seven hemids form his canopy. Six attenlant thgures surromind this statio, over which a handsome stone jorch was erceted ubont a century since. This widel is still liel!! in much reverence by the Jains, many of whom make an anmun pilgrimuge thither. About 200 yards below this idol is what is culled the Indra Subbuh, or 'Court of Indra,' a temple consisting of three caves, opening one into anotlier, and situated behind un aren cut out of the rock, in which stand an elaborntely sculptured pagorla, $n$ linulsome obelisk, and the figure of an elephant. The front of this temple is in many parts covered with senptures in relief; and at the extremities of the veranduli before it are two digures, a male and a female, the former seated on a couchant elephant, num the litter on a lion. Theso flgures have been genernlly called Indra and Inderanee; but Col. Sykes contends that they represent the prince and his consort who founded this temple. (Journ. of the Asint. Soc. of Iengal, vi. (1837), 1038.) The cuves consist of two stories each; but the lower storics are greatly injured by damp, and partially choked up with earth. The three chambers on the story above vary from about 60 to 70 ft . in length, by nearly as much in brealth, and from 13 to 15 ft . in heipht, and their cesilings are supported by numerous pillars and pilnsters. Each contains a colossal figure of lhiddli, similar to that already described; and in the first and second chambers there are tigures of other personages. The compartments round the walls of each of these rooms contnin figures of Buddh, in various attitudes, 'sone standing and some sitting ; the attentants are riding on elephants, tigers, and bulls.' (Sykes.) None ol these caves have any cells opening from it, which appendages ure almost universully found in temples strictly Buddhic. About 40 or 50 paces farther to the E. there is a fourth cave, and still liarther on, another; but both are much choked up with earth.

The tirst of the series of Brahminical temples, proceeding from the W., is abont 200 yards distant from the latter, and entitled Doomar Leyma, 'the Nuptial I'alace.' This is the most extensive chamler of all : under one roof it is 185 ft . in length, by 150 ft . broad; its ceiling ayerages 19 ft . in lieight, and is supported by 28 pillars and 20 pilasters. The entrance to this excavation is through a passage cut in the solid rock, 100 ft . long by 8 ft . brual. On the left-hand side of the W, entrance is an eight-armed figure of a revengeful character, representing Siva in one of his forms ; on the right are Siva and Parvati together in a heaven, which Iinwun (the Hincioo Briareus), a figure with numerous heads and arms, is endeavouring to shake. At the end of the central colomade is a square simetuary, entered by fumr doors, each guarded by two gigrantic figures, 14 ft .8 in in height, and containing the lingam, which emblem is found in nearly all the second group of caves at lillora. There are numerous small caves, all of which are considered to have been devoted to the worship of Siva: in the front of each there is a bust of the celcurated triad, a mutilated specimen of which exists at Elephanta. (See Elepilanta.) Over the loor of one cave is the image of Luximee, attended by elepliants; and another, a noble hall, 90 it. long, $26 \frac{1}{2}$ tt. wide, 15 ft . in lieight, and adorned by highly-finislied pillars, has numerous compartments full of tigures, amongst which is a group
supposed to represent the marriage of Siva and l'arrinti.
lhut the most sulenilid templo at l:llora is that called Kylux, or 'Porrutise,' a pagota uf' a sumatlouf torm, 100 ft . in height, surroumileal by five chupels, nearly similar in form; the whole, tigether with the area in whleh they are situnted, beine excavated in the solid rock, and coverem with sculptires from top to bottom, both within asil without. The extreme depth of the excavation in 401 ft . ; the area itself is 823 ft . in depth, ly lnj ft . in its greatest brealth (in the E. side). im the N., S., and N. it is surrounded by coloniado, varying in leugth from 185 to 115 ft ., and harim from 15 to 18 square pillars each: the walls whith these colonnades surround are covered with smalptures, and in the front of the wall by which the area is enclosed on the W. side are niches fillen lio gigantic tigures. Kylas contains the represems. tions of nearly all the Ilindoo I'antheon; lom, as Col. Sykes observes, notices of its ligures alme would fill a volume, and the temple must be sero to be dilly appreciated. (Those who wish fit farther information may resort to Captain Sechis work, and to the accounts of the Fillora Caves, hy Col. Sykes, in the Trans. of the Lit. Soc. of Isumbar, iii. 281, dec. Sir C. Malet, in the Asiatic lit searches, vi. 382-424.)

The southern group of caves is very interesting, There are four principal ones: the tirst has thine stories; the sccond, 2; the thirl, 80 ft . lomg ly $42 \frac{1}{2}$ broad, and $35 \frac{1}{2}$ in height, is in benuty inferint to none, and has an arched roof, supported by fils of wood similar to that of Carlee, or the great eave at Kennery; the fourth is accompanied by severd smaller ones, and all are very highty linithow. Each temple of this group contains a large figure of Buddh, and other charncteristics of Buhlub temples. (For some specenlations as to the erat these caves, see Journ. of the $\mathbf{A s i a t}$. Soc, of Hempal vi. (1837), 1038-41.)

ELSINEUR, or ELSINORE (Dan. Helsinger a marit, town of Denmark, on the E. shore of tha isl, of Zealand, at the narrowest part of the Sourl, or principal channel leading from the N. Seata the Baltic, 7 m . W. Helsingborg in Sweden, a 232 m . N. by E. Copenhagen ; Int. $56^{\circ} 2^{\prime} 17^{\prime \prime}{ }^{\prime}$ long. $12^{\circ} 36^{\prime} 49^{\prime \prime}$ E. 1'op, 8,442 in 1861. Th town stretehes irregularly over sloping groum towards the shore. It is well built, aud has sald good edifices. There are two churches, one of which, though externally very plain, contains many interesting objects of anliquity, and a lify altar gorgeously ornamented. The priblic cemeter: of Eilsineur is a large and handsome enclosme. Immediately adjacent to the town, on the NL.. is the castle of Cronborg. This elitice, built by fire derick II. in the boldest style of Gothic arditteture, is said to be one of the finest structures of is kiud in Europe. 'Though of great extent, yet s elegant are its proportions, that it seems as light and graceful as a building raised more for onsment than for use. So far, however, from beigy mere thing of show, it is a strong and substanial fortress, strengthened by all the advautages that military science can give to a position which though very low, is still extrensly inportant, from its sweeping the Sound most completely, leth up and down. The appronch, therelore, is garnished with lunes and demi-lumes, searps, ditchis stockades-in short, all the imposing externals id a fortress kept in the highest order.' (Bremnet, 253.) From the summit of the lighthouse of th fortress the scene is one of surpassing beaty Cronborg is now chiefly used as a prison; it ws the phace of continement for some years of the unfortunate Queen Matilda, sister of George III.N

Fingland. Before the abolition of the Sound durs -bumht off, in 185it, hy the payment of $3,32-1,63: 32$, onfe-third of which was contributed by Grent IIri-tain-all merchant ships pussing to and from the Jathe were obliged, under certain reservations depending on the wenther, to salute Cromborg Castle hy lowering their topsails when nhreast of the same; and no ship, undess belonging to Siveden, was allowed to pass the sound withont clenring mit at Elsineur and paying toll. The Sonnd dutles haltheir origin in an agreement between the King of lenmark on tho one jart, and the Ilamse I'lowns in the other, by which the former imilertook to monstruct light-houses, land-:marks, \&e, along the fategat, and the latter to pay cluty for the same. The datien waried at dilderent periods; and the weaterpart of the inhal, of Elsineur were, in some way or other, connceted with their management uf cullection. Now that the Sombl dues are abolished, the place is yery quiet, though not in a state of deeay. The principal communication between bowark and Sweden takes place here, and retular bonts sail three times a day to and from Illsinborg.
filsineur is well known from its being the scene of Shakspeare's noble tragedy of 'I Iamlet.' 'The principal incidents of the play are fonnded on fiact, but so deep'y buried in remote mitiquity, as fo make it difficult to diseriminate truth from Fible. Saxo-Grammaticus, who thourished in the I:th century, is the carliest historian of Deumark who relates the adventures of Hanlet. His necount is extracted, and much altered, by llellefurest, a French author; an English translation of whose romance was published umder the title of 'The Ilistorye of Hamlet ; nud from this trunslation Shakspare furmed the groundwork of his play, though with many alterations and additions:' (Coxe's 'Iravels in the N. of Europe, r. 90.$)$

BLVAS, a fortified city of Portugal, on the fromiers of Spain, prov. Alemtejo, 120 nm . E. Lisison, 12 m . W. Hadnjoz, on the railway from liskm to lBadajoz and Madrid. Pop. 18,510 in 185. The town is picturesquely situated, on a lill covered with olive trees and orehards, between two other hills which command it, and on which are the fortresses of Santa lucia and La Lippe. These and the other defences of the town, reekmed the chef-a'curre of the Comnt de La Lippe Shomberg, nad a model of their kind, render it so strong, that no impression could be made upon it, except by $n$ large army and a regular siege. The primeipal street, Ihan de Codea, has an antique, vencrable appearance, from the remains of Moorish honses nud towers. The calea, or pisom, stands at one end, and opposite to it is the hospital for the townspeople, which is well cunductel, and divided into wards, as in England, with separate apartments for infections diseases. On the whole, however, the town is ill built, and the streets mostly unrrow and dirty. The prineipal editices are-the cathedral, arsenal, bombphof barracks for 6,000 or $7,000 \mathrm{men}$, and theatre. It has several churehes and convents, with a mollege and a seminary. There are manufnctures of arms and jewellery; but the prineipal dependence of the inhabitnnts is on the contraband taile carried on across the Spunish frontier. The llaga, or great square, is remarkable for a singnlurly fonned tower in front of the cathedral, and the houses exhibit specimens of domestie arehitecture from the days of Moorish splendour and cleganee down to moderin times. Several of the grutesque earvings are exeented with great richness and delicacy. The rooms in the modern houses are large, lofty, and paved with bricks
arranged in various tignures, the windows not being glazed, bat merely elosed with latiowed blinds. The decorations of some of the chapels in the cathedial nre extrencly elegrait, the walls and ceilings being covered with a profusion of gilded carving, but the pictures are execrable. The grond altar is supported hy Corinthian pillirs of grey marble, surmomited by a camoly if crimson and golld silk, benenth which is a Ingepe picture of the hirth of Christ: the altar itself is covered with crimson and gold sllk, num is crowiled with silver camblesticks. 'Iheere is no room in the town for public gurtens, lat the eovered way from the lorta d'Esquina to the Olivenca gate is planted with trees, and ench place d'armes has a fountafin, and is tastefully laid out. The walk round the ramparts is extremely fine, commanding a view of the eonutry for many miles in all directions. The town is furnished with water, bromglit from an eminetice: about 3 m . W. from it ly an nqueduct constructel by the Moors, which supplies mumerons fountains, one of which is of very large dimensions. In crossing the valley 18 m . in width, this aqueduct has four tiers of arehes, each ubove the other, making together 250 ft . In height, It is simpported by strong lmotresses; and, to ndd to its strength, it is built in a zig-zag direction. The enviruns are fertile in grain, wine, oil, and frnit. Annufactures, arms and huriware.

Blyas was a post of great importance daring the I'eninsular war. Murshal dinot took pussession of it in Mareh, 1808 , and held it thll it was given up, under the convention of Cintra, in August following. It has bomb-proot barracks for 6,000 or 8,000 men, and furnished the artillery and stores for the siege of Bainjoz. The Duke of Wellington had a powerfill telescope placed in the tower of La Lippe cluring the oporations, by whiel the interior of the castle of Badajoz cond be plainly looked into, and all the operations discovered. (Nnpier's Peninsular War, i. 144, 1ti0, 202 ; ii. 126 ; iii. 510 ; iv. 185, 401.)

ELI, a city of Enirland, co. Cambridge, in the district called the Isle of Ely, on an eminence near the Onse, 16 m . NNE. C'ambridge and $72+$ N. London by Great Eatatern railway. Pop. 7,tex in 1861. The city includes the prrishes of Ely, Trinity, and St. Mary's; the extrn-parochinal district of Ely college, and the chapelry of Chetishาm, comprising, in all, an area of 17.480 ncres, of which abont 5,000 may belong to the eity properly so called. The latter consists principally of onc long street, with a market-place in the centre; several of the houses are built of stone, and have au antique vencrable appearance; and the place seems to have been but little atlected by those changes that have so materially modified the nppearance of most other towns. It cowes its entire distinction to its being a seat of a bishopric, estrblished here in 1107. Its enthedral is whe of the most celebrated in Eusinnd. Being partly of the reigns of William Rufus and Henry I., and partly of smbequent periods, it displays a singular admixture of the Saxon, Norman, and English styles of arehitecture; but notwithstanding the dissimilarity of its parts, it must, when considered as a whole, be regarded as a truly mangificent edifice. Its extreme length from lis to W . is $53 \overline{\mathrm{f}} \mathrm{ft}$. ; the length of the transept is 190 ft . ; the lieight of the lantern on the smmmit of the dome over the celehrated oetagon tower, is 170 ft ; the extreme height of the W. tower, ono of the finest in the kingdom, is 270 ft ; the height of the E. front to the top of the cross is 112 fc . It has many interesting monuments. St. Mary's chapel, contigious to the cathedra, now

## EMDEN

Trinity church, was commencel in the reign of Jidward II., and is one of the most perfeet ntructirres of the age: it is 200 ft . In length inside, by 46 ft . in breadth; the height of the vaultel roof leing 60 ft .1 It has nelther pillars nor side aisles, but is supported by strong luttresses. The cloisters and other bullings, which helonged to n monastery founded here at a very early date, have been long sline demolished, with the exception of the refectory, that hus been converted Into a deanery. The eplscopal palace, near the W. end of the cathedral, retains few traces of its ancient architecture. The bishops of lily formerly possessed powers within the isle sinilar to those enjoyed by the bishop of Durham, nppointing their own chief justice and magistrates; but these were taken away ly the act 6 and 7 William IV. eap. $8 \bar{i}$. The assizes are held here in the new shire hall, erected in 1821. Ely has a grammar-school, founded by Henry VIII.; a free echool endowed by a lady of the name of Needham; and n national seliool supported by voluntury contributions, A considerable lauded property left for the benefit of the city poor is vested It a lody of incorporated trustees. There is an curthenware and tobaceo-pipe manufactory within the city ; but the inhabitants are principally employed in gardening, which is extensively carricd oll in the vleinity. Ely sent two members to the 11. of C . in the 28 rd of Edward I., but lins not subsequently been represented. The Isle of Ely is included within the great level of the Fens, nuld is extremely fertile.
EMDEN, or EMBDEN, a sea-port town of Hanover, being the second in that kinglom in respeet of size and importance; prov. Aurich, eap. cant., on the N. bank of the restuary of the Lims, or rather of the bay called the Dollart, 15 m . SW. Aurieh, and 46 m . WNW. Oldenburg, ou the terminns of the railway from Hanover to the bay of Dollart. Pop. 13,170 in 1861. The town is surrounded by walls and wet ditches, and divided into the old town and the Faldern; the latter being the best built. Emden has 6 churches one of which is a fine edifice, a council-house, judicial tribunal, custom-house, exehange, commercial weighing-house, naval assurance office, selool of navigation, house of correction, orphan asylum, lying-in-charity, gymnasium, and society of natural history. A navigable canal connects it with Aurich, and various others intersect the adjacent country and the town, communicating with the port. The latter, which consists of two inner harbours opening into an outer harbour, is large, but shallow; so that vessels drawing more than 11 ft . can enter it only at high water, unless lightened of a portion of their cargo. But the ruadstead, which is well protected, has water sutficient to float vessels of any size, and the holding ground is good. Emden has manufactures of linen and linen yarn, stockings, tobacco, brandy, leather, hats, soap, and starch; its herring fishery was formerly of considerable importanee, and employed 1,300 hands, who took about 13,000 tons of fish annually; but this branch of industry has greatly declined, and from 60 ships formerly engaged in it, the number is now reduced to 15. The general trade of the town has also declined. In the 16th century it had 600 sea-going vessels; and, in 1784, 273 of the aggregate burden of 19,289 lasts. In 1863, the shipping had declined to 105 sea and river vessels, chicfly coasters, of a total burthen of 4,790 lasts. By far the greater number of the vessels that now frequent the port, are inland craft, but there are also regular steamers to Hamburg, Hull, and London.
Though Emilen is a free port, the advantage it

## ENGLAND AND WALES

thence derives is very insigniffeant. It has lithe communication with the interior of Germans exgept with E. Friesland and the co, of Muatel, of which it continues to be the empurium. The import trade it formerly cerried on in columial prodice lins been nimosit entirely trmaferevit Amsterilam, IIamburg, nud liremen, whictice it in supplied at second batul. Its chief impurts, are henp, potanh, nad timber, lirom the lhatic and Norway. The imports of timber are very efop siderable, the vicinity of Emden beling singulatit deticient in wood. It also imports consiliterall? quantities of French wine. Its chilef expurts pit oata, wheat, beans, rapeseed, rye, barley, heri., lutter, cheese, gin, tallow, honey, wax, wool, aul hides.
Emden belonged, in the Mldile Agrs, to the counts of Enst Friesland. It subsequently le. came n linase town; but fell, in 1806, to litul. land; in 1809, to Frauce ; and in 1814, to Prumia The latter power eeded it, in 1815, to llanower.
ENGLAND AND WALES. This popmeres wealthy, and important portion of the U. King: dom of Great Britain and Ireland, comprises bie most southerly, largest, nad most fertile part in the island of Great lritain. It lies W. frum and opposite to France, Belgium, Holland, and the S. parts of Denmark, letween $49^{\circ} 57^{\prime} 30^{\prime \prime}$, anid $55^{\circ} 47^{\prime} \mathrm{N}$. Int., and $1^{\circ} 46^{\prime} \mathrm{E}$. and $5^{\circ} 41^{\prime} \mathrm{W}$. ling being bounded by the German Ocean on the XE and E.; by the British Channel on the S.; by it. George's Chnmel and the Irish Sica on the if: and on the NW. and N. by Seotland, from whid it is separated by a waving line extending in a NE. direction from the mouth of the Surk, in lie NE. corner of the Solway Frith, by Peel and Carter Fells, and the Cheviots, to Carham, and thence along the Tweed to lerwick. Its SL, extremlty, at Dover, appronches to within si m. the opposite const of France. (See Butisn EinPIRE.) Its shape approachos nearest to that of a triangle, of which Berwick may be consideted tite apex, and a line from the Land's End to the $X$ Foreland ( 342 m. ) the base; a line from the fomen along the W . side ( 426 m .), and from the litele along the E. side ( 334 m .) complete the figure The sen-coast, if mensured from one heaillanit io another, is about $1,200 \mathrm{~m}$. in extent ; but if is principal indentations are followed, it will be found to be fully $2,000 \mathrm{~m}$. The bays and harbours on the S. and W. shores are numerous, and some if them rank among the finest in the world; but oas the E. side there are few that can be calied sate or easily accessible; the ports of London ani Harwieh being the only really good ones betreaa the S. Foreland and the Tweed. The area amounts to $58,320 \mathrm{sq} . \mathrm{m}$., or to $37,324,883$ statute actes, The area of England alone is $32,590,397$, and that of Wales $4,734,486$ statute acres. (Census of England and Wales, 1861, vel iii., General Report 1863.)

Aspect of the Country. - England combines within itself all that is most desirable in seener! with all that is most necessary for the subsistence and comfort of man. 'Although its features are moulded on a comparatively minute scale, ther are marked with all the agrecable interchange which constitutes picturesque beauty. In smine parts plains clothed in the richest yerdure, watered by copious streams, and pasturing imume rable cattle, extend as far as the cye can readh; in others, gently rising hills and bending vales, fatile in corn, waving with woods, and interspereed with flowery meadows, offer the most delightitue landscapes of rural opulence and bcauty. sime traets furnisl prospects of the more romantic and impressive kind; lofty mountains, craggy rock,

The dintinguixaing peendarity ill the anjeet of Finland is however, the exulsernsee of ite verefition, anil the rich loxiriant appenrmuee of ita lower and fire mont extensive portioli. It owes ghidistinctlon partly to nature and partly to art. The bumidity and midhenes of the elimmie mulutain the fiedde in a comstunt mate of verdiure: ill wineer they nie meliforn covered with mow, or Whated by long-continued fromes, and in minmomer they are rarely withered and procied lyy dronglits. Ia this renpeet binginul in an naperior to the thenest connaries of contfuentai Europe-to Italy noll sicily, for example - as she for anerior to them and to every other comatry in the amonint of falmur that ham been oxpreuled in beantifying, imjowions, uad fertilising lier mirfince. It in no ex-
 of nilllins have been lalil out lin making lingland what ahe now is. lin no other nation lins the combination of beanty with utility been so monch pagarled. Though withoit uny extenaive forests, fimphal is extremely well wowled. The councry iv purtioned ont into innumerable thelde: and these lwing all, or nenrly all, surromided with liedges and fuws of treew, it has, even in the best cultivateldistricts, $\boldsymbol{n}$ wosиly appenrance, nud sometimes almust rewembles a vant forest. Shise the miditle of last century, a great cleal has been effected in this way. Mont of the extensive, bure, and u-arly wurthloss commona, that were then everywhere met with, linve been in the interval sublivided, endosed, mud bronght under tilluge; making a vast addition to the prodnctive capmelties of the kingdom, ansi materinsly improving its appearance. Another peenliar fenture in the phymiognomy of Fingand in the number and magnifleence of the rats of the nobility and gentry. Theme nuperls mansions, many of which are venerable from their antiguity, and all of which are snirrounded with fine wools and grounds, give to the comintry an apparanee of are, security, and wealth, that we should in vain lowk for any where clse. The farmluuses and cottages have montly also a substantial, comfortable look; and evince that taste for frat beanty, neatness, and cleanliness, that emiantly distmguish their oceupiers.
The number, and the prodigions size and zplenduur of many of the cities and towns of Eugland, jusly excite the melmiration and ustonishment of fireigners, and even of natives. They are the chosen sents of opulence, art, seience, and civilisatim. All the gratifleations that wealth can command, or the euprices of taste or fushiom require, bay there be had in the utmost profinion; at the same time that art and industry are carrled in them to the highent perfection to which they have attained, and are nitled by every inventlon and divevery, how remote the country or distant the wa of their origin.
Description of the Country,-Though the mountains of England no where attain an alpine elevation, they form one of its most interesting, as well as most prominent features. The principal chains, Which are found in its N. and W. portions, have Pecived the names of the l'emnine, Cumbrian, Cambrian, and Devonian ranges. The first of thase ranges extends from the Scottish border, Whem it is comnected with the Cheviots, S., to near Derby : it occupies the $W$. portion of the cos, of Nurthumherland, Durham, and York, and the E. portion of Cumberlaud, Westmorland,

Ialicaster, Cheater, and the milille part of In.rbyahire. Its higheat sunninita nee (rown Fiell, ill

 I'en-rolinit ( $2,270 \mathrm{ft}$ ), III Forkshirvi nt vithor end, however, the range declines comalilernhly, si) thet at the purt traverved by the ohd Romms wall, anil the munlern ruiliwny betweil Newinstlo anil Carlisle, j (s halght denen mot exceed $140 \mathrm{ft}, \mathrm{s}$ mai un the S. shle, where the liderpasi ntil liedis C'amel in conderted acrons it, the elevation is not

 nttminjug at Cantlotom and (irent Axchill, $1,7 \bar{\prime} /$ ft . 1 and at the Wraver llill, near Ambonime (the S. extreme), 1,151 fi. The bremile of the paiges between Shefleld and Muedeveled is ubout $2 \cdot 2 \mathrm{~m}$, anll it eomprisen, in thin prortion, wome vary pleturesque acenery : but such is very firt from befing the chinmeter of thes N. jurtion of this numitain nymem, which may le generilly dencrilied an with rombled summite, of gradial incent from vithor side, having " minnty peat woll, covered mustly with ling, and moduinting in ilreary macomsini; tho patehoe of greell wandid being fow und far lotweel, and the aspeet of the whole churerless and mumotomous. With the exieption of the 'Ihumes and Sovern, most of the grent rivers of Ehaghal bave their mances in this chaln: buing muels nenrer the W. than the V. Mhle of the ishand, tho rivers that rise in its li. acelivities linve genornlly the longent course, and are the Inrgent ind mast important. Of the litter, the 'T'yne, 'rom, the afluents of the Onme, the Aire, Jion, mal I'ront are the principal; the biten, Ribble, mid Merney are the principal rivers flowing W. from the l'ennine clanin. Tha beantifnl vale of the lislen, which sepmrates the lemuine Irom the Cumbrian range, grminully expands intu the Combrimu plain, whieh extemls N, to the Solway Frith, and cecupies the whole tract from IBrampton, ('rorlin, and henwiek, at the base of the lemnine chanin
 acres. On the E. side of the I'emine clinin, from its N. extreme to the Corquet, the distriet, thongh hilly, has tolerully foorl panture, and comprises a fow breadtis of well-culivated land; $s$. of that stream, a large moorland tract extemals through Northmmberland, the middle of Durlum and Yorkshire, to the Ilolm Moss in Cheshire, varying in brealth from 10 to 30 m ., and in clevation from 500 to $1,000 \mathrm{ft}$.: its N . is its most sterile portion ; but the whole tract consista of $n$ series of monotonons wastes, furrowed, in the two N. cons., by a few narrow grens only : townrils the S., these widen and become more frequent, but withont much affecting the genernl aspect, which Is preserved, for the most part, through the whole extent of the listrict. Betwixt it and the sen are the vales of the Tyne and Tees, nul the grent Yorkshire plain; the latter extending $N$. nud $S$. between 60 and 70 m ., with an average brenthi of between 14 nad 20 m . : it witens towards the S., and everywhere presents a gently undulating surface of fertile nad well-cultivated lamd. The 1:. moorlands and wolds, bounding the York plain om that side, have, at their $N$. limit, the fertite vale of Piekering, extending nbont 35 m . E. and W., and 10 m . in the opposite direction. It presents the appearance of a Irained lake, enclosed between the 11 ambleton hills and the Yorkshire wolls. The last-uamed traet, together with the Lincoln wolds, S. of the Hunber, occupy about half the space between the German Ocenn on the E. and the rivers Derwent and Trent on the W. generally speaking, they form good pasture lands,

'lhis phain is remarkabila for its verdure, and is ome of the prineipul grazing distriat $x_{\text {, }}$ lehing largely appropriated to the dairy hushandry: Of a similar character are the valen of severn, Viveshan, and Gloucester. 'Ihe tirst of thene extendes nout 70 m , on eithier side the Severn, with a brealth varyinif from of to 12 m ., and is aliko fertile and benntiful. The district $S$. of these last has probinbly the most liroken und irregnlar murface of any pintt of the kingidom; it is, however, for the most purt fertile and well cultivated, 1ke-
 bown hills, and the fertile and benutifinl vales of Tumbon nud lixe.

The basins of tho Trent and Thamen ocenpy the remainder of the centrul rogion: tha former, in a general point of view, may be consldered as forming an extensive plnin, with gmilual mwells and broud intermealiate vales, but with very few remarkable elesutions, The vale of Belvoir is one of its most lertile jurtions. In tho district forming the basin of the Thames, and Irained by that great river and its varions tribotaries, the surface is, for the most part, gently undulating, forming wite vales, often extending into phains: the principal clevations are near the valley of the 'Ilommes, but mone of their summits reach the height of $1,000 \mathrm{ft}$. The grological character of the tract is greatly diversilled, which eanses a corresponding variety in the suils. These however, oll the whole, are of a light chalky mature, and moderately fertilo, with but few absolute wastes of nuy extent ; the higher constitute the least fertile portions, most of which are obviously indebted to skilful cultivation and the

## ENGLAND AND WALES

humidity of the climate for a great proportion of their prodnctiveness. The most fertile tract is the vale of Ayleshury, which has a fine loamy soil, not surpassel in fertility by any in the kingdom. The chalk hills, which (with sume interruptions) range from the $S$. side of the Wash to the Thames, between Goring and Henley, to which part the name of the Chlltern Ilills applies, form the SE. limits of the basin, sloping gradually in this direction to the Thames, but with many abrupt escarpments on the other; whence extensive views are commanded of the comentry between the basins of the Trent and Thames, through whicl: the Ouse, Nen, and Welland fiow NE. to the Fens, Itruining Beeifordshire, Hants, Northampton, and linthun, in their course through n district possessing very few striking inequalities of surface.

The courses of these rivers to their outfalls in the inlet of the German Ocean, called the Wash, are by channels and embankments, artificinlly formel, through the whole of the extensive flat and marshy district known as the Fens. (See Bedfond hevet.) Deposits of mul and sand are constantly and rapidly accumulating on this portion of the E. coast, so that it is not without considerable difficulty that the outfalls of the rivers are kept open, and the harbours accessible. Additions are always being mate to the surface of the district, hy eneroachments on the sea. Within the 25 years from 1840 to 1865 , no less than 170,000 acres of fertile land, extending senwaril between the ports of Boston, Wisbeach, and Lymn Regis, were reslaimed in this manner.

The great plain SE. of the Fens, comprising Norfolk, Suffolk, and 巨issex, has an undulating surface throughout; but the inequalities are greater towards the N . extreme, where, in some places, an eleration of 200 ft . alove the sea is attnincl. In this quartor it is not very fertile, but it has been womierfinlly improved; and many parts of Norfolk and Suftilk that half a century ago were mere sandy wastes, have, by ditht of marling and the introduction of the turnip culture, become among the best and most productive larley lands in the kinglom. The soil of Essex is mostly a strong clayey loam, ranking in the tirst chass if wheat amd bean lands. That portion of England extending from Bagshot Ilenth to Salisbury l'lain, and comprising both, muy be considered ns a sort of elevated table-land, no part of which, probably, is less than 300 ft . above the sea : Thomey Hill is 610 ft , and Westbury Down 775 ft . Buth these eminences are on Salisbury Plain, the highest portion of the tract. This celebrated plain extends about 22 m . from E. to W., and $15{ }^{\circ} \mathrm{m}$. in the oppositedrection; it is traversed by manr considerable depressions, mid has $n$ light seanty soi, ill-adapted to cultivation, but afforiling good sheep-walks. The part of the country of this tract retwecn Chichester and Southampton Water has a iair proportion of tolerably fertile and well-cultivated land; but further W., the Hants nul Dorset downs occupy the surface nearly to Dorchester, and form a continuous henthy; dreary, and sterile tract, with but a scanty proportion even of sheep presture.

To the E. of the Anton river are the chalk ranges of the N. and S. Downs, which extend round the weald district of Sussex, Kent, and Surrey; Beachy Hend forming the E. extreme of S. Downs, and the build chalk cliffs of the Dover Straits that of the N. Downs. The Alton Hills extend between and conuect the two. The first are clothed with fine pasture, and form excellent sheep-walks: at their base extends the fertile plain of Chichester. The tract of which the N.

Downe forms the W. portion is, for the most pan, well cultivated, and here and there attaines (omb siderable fertility, though, generally speaking, the soil is meagre and arid. The weald district, the closed ly the last ramges, has in some parts an undulating unepual surface; and there are a few detached hills that attain' considerable clevalion taken as a whole, however, it may be considery as forming an extenslve plain of alout 1,0 ato w m. in extent, the more level portions of which are from 100 to 200 ft . above the sen. The sili principally clay; in parts very stift and adhecive, ill others mixed with sand in various proppurtions, The whole is under cultivation, and includes many bremuthes of luxurinut pasture. At the E extreme is Romney Marsh, an ulluvinl tract of about 50,000 acres, which has been reclumed from the sea, and is clefended from its encroant ments lyy embankments. This marsh is, fur the most part, remarkably tertile.

Geology. $-\Lambda$ hrief sketeh of the geolegienalstrueture of Englaud will be lest necomplishled hy commencing with the mountain rangen on its if side, and thence following the general direction of the succeessive rock struta : of these, the primary and tramsition, or (as they are now mure correctly designatell) Platomic andil metamorplic furnations constitute the mass in the Cumbrian anl Cambrimn groups, und thut of the SW. peninsula, ail of which have a geueral resemblance in theil mincral composition, thomgh preseating sme puints of lowal and minor litterence: thus, granite, which is only traced to a very limited extent in one or two purts of the Cumbrian system, and scarcely at al! in. Wales, is extensively develymal in the SW. peninsula, where it uccupies a considerable part of the most elevatel purtion of the range, in large interruptel masses, from bartmwr to the Lanul's End; lievond which the Longtip Rocks and the Scilly Islands cuntinue the for mation in the same general direction, amd are sipp posed (with mucha probalisity) to have once formet contimious portons of the range. The veins of tin ore also appear to be limited to this last liotriet. Neither gueiss nor mica slate (sur abundiant ia the (irumpinus) occur, to my extent, in cither of the ranges under comsideration; clay and gras: wacke schists, of very various composition and texture, forming the prevailing rocks in ail it them. The whole of these strata are travesedly heds and veins of porplyyry, hornblende, and trap, and are for the most part comsideralby inclined and contorted, everywhere presenting indications powerful disturbing canses, and of having leen upheaved, but there are no traces of voleaní action. In the Caruarvonshire ranges eleated leaches occur at the height of 1.000 ft . and upwards above the sea-level, which are fonmed if gravel and fragments of recent sledls, precisels similar to the present marine beaches. Siailar lieaches also occur on the N. const of Comirail anul S. coast of Devon, from 20 to 30 ft abore the present reach of the tides.
The veins of tin and copper which intersect the strata in Devon and Connwall make the sill: fe ninsula one of the most important mining distait in the kingdom. These veins, or lodes, have all a general E. and W. direction, and are intenefeled by others in an opposite (hence called enme courses), which, by heaving or distarfing the regular course of the lodes, are often the cinsed great perplexity and expense in mining opess tions. $\Lambda$ large dyke of this kind traverses Comwall, from one coast to the other, through it chief mining district, intersecting and disturtivg the course of every one of its lodes. Besilles the itcles of tin and copper, which furnish the chit

mineral riches of this range, lead ore occurs in sme of the cross-courses, and has been extendively worked at Beer Alston on the 'Tamar, and oue or two other localities: iron is also fund in similar dikes near Lostwithiel in Conwall, and at the Berryhead on the const of Devon ; from each of whiteh places many thousand tons are annually shipped for the suppily of the Welsh furuaces.
Plumhage and manganese occur on the E. side of lartuoor, both which are worked to some extent, and shipped at Exeter for the manufarturing districts. I'orcelain, plpe, and common putters' clay, are also prodlections oceurring in this tract, and are largely shipped for the Stafforlshire and other potteries: granite and roolhing slate are also quarried in a few localities. This last forms the most important production in the correspondlige rock formations of Wales, the quarnies of l'enriyn and Llanberris, in Carnarvonshire, weing the largest, and furmisling the tinest slates in the kiuglom. Some eopper veins also occur in ranions parts of this gronp, though of very minor importance compnred with those of Cornwall: in the Parys monntain, however, on the N, side of Aaglesea, a very extensive deposit of that oro was discovered in the course of last century, and formed for a considerable period the most productive mine in the kinglom; it is still worked, though at present the prolnce is very limited. (Fiee Anglesen.) On the W. side of the same wand, Mona marble, or verl antique, is quarried for vanous omamental purposes, at the temination of a large porphyry dike which traverses the district.
In the Cumbrian group, the most remarkable minetal production is the famons graplite, or plumbago, which oceurs in an irregular pipe-vein at llotaller in Borrowilale. A few lend veins also oceur, and are worked to a limited extent, on the NE. side of the range. At Coniston, copper veins are wrought on a small scale; and, near Ulverston, hematetic ore, which produces iron of a very dhetile quality, which is used in the mamlacture of cardiag-wire; a few quarries of rooting slate are also worked in the same neighbourhood. Iheyond the linuits of the three main groups we have been deseribing, similar rock formations occur in a fer isoiated rilges, of which the most prominent ate the Malvern Hills, that traverse the cos. of Worcester and Hereford; the Liekie Hill, NE. of the last; the Charnwood runge in Leicestershire; and a few intermediate rocks along the N. side of Narwickshire. Basaltic rocks nlso occur in the Hrekin and Caradoc hills, and along the limits of the mountain line, both in Derby and Durham : a lange hasaltic dike also traverses ${ }^{\circ}$ Yorkshire, from Widuleton to the sea-const S. of Whitby.
The mountain lime and coal formations are the next in order, being limited on the W. by those last described; and on the 1 . by the lias, which formation may be traced, by a waving lut contimous line, through the king(lom, from the Nl:. coast (between the month of the Tees and Whitby), by Chamwood Forest, Lvesham, (iloucester, Bath, and Axminster, th the SW. const at Lyme Regis. All the mineral riches of the kingrom, as well as the greater part of its manufacturing establishmeats, are situated on the W. side of this line, ly which the three lower of what are usually termed secondary formations are limited. In the mountain line of the Pennine range are the chicf lead mines of the kingclom : in that part of it which extends through Alleudale and Mlston Moor, on the E. side of Cross Fell, the ore oceurs in E. and $\mathrm{II}_{1}$ veins, that are heaved and disturbed by N . and S. conrses, as those in Cornwall. In the Derly portion of the range many lead mines also
occur, that have been wrought from a very remote era; anil others in the same formation in Flintshire, near the estuary of the llee. The conl glelis to which England, and, indeed, the empire, is mainly indolted for lier manufacturing sureriority may be this briefly enumerated :-'Those of Northumberland and Inorham extend from the Tweed to the Tees, between the monntain line and the sea-const : the most northerly has only been partially explored, and is worked, on a limited seale, chielly for local purposes. The coal tield of S. Northumberland and Durham extends about $50 \mathrm{~m} . \mathrm{N}$. and S ., with an average breadth of from 12 to 55 m . The senms or beds dip Sli, und crop out snccessively in an opposite direction, so that nome of the beds extend throngh the entire limits of the distriet. The two thickest and best (high and low main) are 6 ft . thiek, and are separated by strata of shale, sandstone, and smaller senms of coal, of the aggregute average thickness of 360 ft . The mines in this district furuish ammally a vast quantity of coal, amountiug to nearly onethird the produce of the United Kingrlom. In the year 1864 , there were raised from the mines of IJurham and Northumberland not less than 23,2:18,367 tons of coal. (Ilunt, Robert, Anmual lieport on the Minernl Statistics of the United Kingdom.) Varions and very discordant estimates have been framed of the period that will probably be required to exhaust this vast deposit of fuel. But the distriet has not been sufliciently explored to admit of such estimates being framed on any thing like solid gromeds; and, nos doubt, were any deficiency in the supply of conl apprehended, methods would be foumd for materially diminishing the immense quantities now left in the mines, as well as for relucing the waste.

The Whitehaven is a small but valuable ficld, between the Cumbrian mountains and the Irish Sea, nuder which the adits of several of its mines are driven: the coal is exported in considerable quantities to Ireland and elsewhere. The Yorkshire and Derby tichls extend $N$. and S. abont 70 m . from Leeds onwarl; their brealth, between Halifax and Aberlord, being about 25 m ., but it diminishes considerably through the Derbyshire part, to its S. extreme, near Nottimgham.

Most of the coal raised in Yorkshire is consumed in its extensive woollen, iron, and hardware mannfactories, and in the domestic economy of its mumerous popmlation. The Derby field supplies, through the medium of camals, many of the milland cos. The Lameashire field is parted by a ramge of hills from that of Yorkshire, and extends along their base from Macclestield to Oldham, thence N. to Roebdale and Colne, and W. to I'rescott near Liverpool, having Manchester on its $S$. border. Coal is excavited in various parts of this extensive field, which allords all but inexhanstible supplies for the various uses of the most important manufneturing district in the kingdom. The produce of the Lancashire clistrict, in 1864, amounted to $11,530,000$ tons. S. of the above, oceur some smaller tields in Leicestershire and Warwickshire, in the vicinity of Ashby-de-laZouch, Tumworth, Athersione, and Coventry. The Staffordshire fiek extends N. and S. about 10 m ., with a breadth varying from 5 to 7 m . Numerous beds of coal are worked in various parts of this field, which also furnishes potters' clay, and is the site of the potteries. The Wolverhampton and Dudley ficld, in the same co., extends about 14 m . N. and S., with an average breadth of 4 m ., and is the most valuable of any in the central part of the kingdom. Two beds of ironstone, each of considerable thickness, also traverse the field, and supply the innumerable fur-
maees of the district. The whole rests on transition lime, abonuling in benutifnily preservel fossils. The total produce of coal of the districts of Staffordshire and Worcestershire amomedt to $11,459,850$ tons in 186.4 . A lew small thelise nliso cecur in Shropshire and llercforlwhire, of whieh the chief is that of Colebrook Date, 6 m . long by 2 m . in breadth. This formation is als, traversed by iromstone, and many furnaces and foundrics are established in the loeatity, though of late years it has not maintuined its former importance. The forest of Dean luchudes a valuuble conl basin, which (geologically considerent) is the most perfect of any; the dillerent beds of coal and samistone being regularly arrauged in a romaded concurity, and resting ons millstone grit aud mountain lime: its extent is about 10 ly 6 m . The most S. of the Einglish fields extends abont 25 m . with a breadth of 5 or 6 m ., through the cos. of Gloucester and Sumerset, on cither side the Avon; but it is overlaid in many parts by more recent formutions, and the coal seams are thin, and of int ferior quality. The last of those valuable deposits now left to notice, and probably ndso the most extensive and importmat, is the great eonl fied of S . Wales, extencling about 100 m . from the Usk, in Mommontlishire, throngh the coss of Ghmorgan, Carmarthen, and Iembroke, to St. Bride's Bay, and comprising an area of about $1,200 \mathrm{sq}$. mi . There are 23 asailable senms, of the nggregate a verage thickness of 95 ft ., arrangen in a prolonged concavity, and dipping both from the N. unil S . townerds a central axis; the deepest part of the tield being near Neath, where conl oceurs zoo futhoms below the highest purtions of the seams. The quality of the yieh varies considerathy; that on the W. side heing mositly what is termed dry conl, and the other lifuminous coking coml, atapted to the smeltiug of irom ure. The total produce of coal in the Sonth Wales and Monmonthshire district, in the vear 1864, nmonated to $10,976,500$ tons. Extensive bels of iron also occur in this district, which is now the seat of the greatest iron-works in the empire.
The new red sand occupies nearly all the remaining protion of the surface on to the lias; it eomsists of heds of clay, marl, gravel, sand, de., of various texture-the débris of ohder rock strata. Extensive deposits of gypsum, aud vast and all but inexhanstible berls of rock salt occur in this formation, wheh will be elsewhere moticed. The upler secondary strata occupy the surthec from the W. limits of the lins, previonsly described, to those of the chalk formation on the E.; which last has the same gencral direction, thougl forming a much greater curve, which terminates nt either extreme of the lins. The strata inchuded within these limits are of very varions character, and abound in fossil remains: in some parts they furnish tine freestone for builting purposes; in others, lime, finlers' earth, and pipe clay. Their agrgegate thickness has been estimated at between 2,000 and $3,100 \mathrm{ft}$., all formed by deposition in an oceanic basin, as the character and abmulance of the fossil remains elearly indicate. The green sand formation rests on those of the oolite, nanl is succeeded by that of chalk, both alomating in marine testaceous remins; the average thickness of the latter, when fully developed, being about $1,000 \mathrm{ft}$. It occupies the S. coast. from the Reculver Cliffs to Folkestonc, and from Beachy Head to Brighton, streteling inhand from the former round the weald district, and from the latter inland towarls Salisbury, and thence over the Hampshire aul Dorset downs nearly to Dorchester. The Inkpen, in Hants ( 1,011 ft.), is the highest summit of the chalk. The general dip of
all the strata, from the lias to the chalk inclusive, is SE. and very gradumi: a line from the N. os, earpment of the chalk in llerkshire to the Malven Hills would intersect the llasset elges of the entire series. The deposits above these are chively limiteel to the SE. cos., and have little of varicty or well-marked character to distinguish them: the elief are those of the London and platic clave, occupying the basin of the Thames. Fon. mations of similar charactor extend alomg the sea-const, from Brightem to Somethampton, and oecupy a portion of the lale of Wight. The sandr struta that oecur in several of the S. cors, and known ly the geueral name of Bagshot sambl the mixture of ferruginous sand and clay with chank fragments (erag) that secupy the E. pants of Norfolk und Sulfilk; aud the still more recent alluvial deposits of Hollerness, the Fens, and Romuey Marsh; all obviously constituted of the debloris of older rock formations, and the latter re sulting from ntmospheric, oceanic, and other neesently existing influcnces now in active opkeation There nre other interesting grological phenunens; such ass the boulders aud fragments of rocks from the Cumbrian mud Welsh mountains, that are strewed over some of the milland cos.; the lyels of chalk, tlint, and gravel, that osecur at great distancers from the main formations, and ure foud capping sumnits of others, wholly different ; and the remuins of mammiferous aninals in the lime caverns of York and Devon ; such us thuse of the extinct species of the elephant, hyema, hear, de, which mast once luse ranged ower the districts in whieh these relies are deposited.
The only medicinal springs of importane ane those of the eos. Derly, Gloncester, and Somerent, which will be found fully described under the heads of their resperetive localitices.

Climate.-The British sky is truly said by Tacitus to be cevebris imbribus ae mebuhs fectum, but ulso to be without the asperitas frigormn. (Tith Agric., § 12.) The climate of Einglame is chiely characterised by the absence of extremes in temiperature, by himidity, and by ulmust incessant varimions within a limited range, peculiatites ascribable to the geographical position of the country, in contiguity with an cacousive continent on the one hand, and a vast veem on the other: the latter with nearly the same tempe:ature throught out the yenr, and exerting an copualising inluene over the contiguons ntmasphere; the other with a varying temperature, above that of the ocean in summer, and lower cluring the winter months, Hence the origin and direction of the prevailing winds at different periods of the year, accorling to which ever of those great surfaces exert mast rarefying power: those blowing from the contineat being comparatively dry, whilst those frun the ucean, being charged with its exhalations, bring the chice part of the rain that descends, 2 -3ds of the whole of it falling on the W. side of the king. lom. Rains are more prevalent during the summer and antumnal months, when the higher relative temperature of the continent, and greated rurefaction of the atmosphere ins contact with it, cause neirial currents from the ocean to set in that direction, in order to supply the comparative vacumm; whilst the E. and NE. winds, that fro quently prevail in winter and spring, are atrihutable to the higher temperature of the sea at those periods. Aecording to a series of obscrations made muder the direetion of the Royal Sowiter, the SW. is the most frequent wind in every month of the year, but is more prevalent in July nad August than in any other; the NLE. prevails mast in Jam., and from March to Jme, inelusive; whils the NW. is most frepuent from Nov. to Jarth,

- truly said by Tacinebrilis ficelum, but itas frigurum. (Vit, $f$ Eingrand is chiely of extremes in temly almost incessant range, peculiaritics cal position of the cariusive continent an on the other: the mpeature throwht equalising indunce ere; the other with that of the ocean in the winter months. on of the prevailiag the year, necording surfaces exert must g from the continut ilst those frum the exhalations, bring t descends, 2-3ds of W. side of the king yalent during the 1s, when the higher at inent, and greatet in contact with in, ocenn to set in that the comparatire (E. winds, that fin (d spring, are attinwature of the sea at Series of observations the Royal Socicty, wind in every mouth valent in July and e NL. precails mast e, inclusive; whilt om Nov, to Jlarch,
and least so in Sept. and Oct. It also nypears, fon the same olservations, that rain is less prevalent in March than in Nov., in the proportion of $i$ to 12; th April than Oet., in the ratio of 1 to J ; and in May than Sept., in the ratio of 3 to 4 ; hence the summer, autımn, and earlier part of winter, are the most humid portions of the year. The minor differences of climate that exist within the kingdom itself are wholly in accordance with the above views and observations. In Conwall, the anmual average quantity of raiu falling is 45 in., and in the W. part of the kingdom, tenerally, it is found to vary from 30 to 51 in . in the SE. connties, and also in the metropolis and its vicinity, the prantity is only from 20 to $\$ 3 \mathrm{in}$. ; whilst Norfolk has, in all probability, the lenat humid climate in the kingdom. As yet, hwwever, suillcient data do not exist to make other than an approximate calculation of the average that falls in any of the districts, and of conrse the general average of the whole can only be stated in the same qualitied way. The eatimate male by Dr. Inalton appears to be, on the whole, the most precise and satisfactory on this point ; and he makes the whole ammal quanttty falling on the surface of England and Wales, 81 in. ; to which he adds $n$ depth of 5 in . supplied from the atmoghere in the form of dew, and calenlates that 23 in . of the whole are carried off by evaporation, and the remaining 13 in . through the medium of the rations rivers to the ocean. There lias heen previonsly noticed the limited range of the thermometer, which at the collest perionl (Jan.) seldun falls much below the frecoing point, and at the warmest (July and Aug.) as raroly rises higher than 80 Fahr., though ocensional instances of greater variation may be cited. In the N. cos., from their contiruity to the sea on eithor side, the range is still more limited, rardy exceeding ifio or falling more than $3^{c}$ or $4^{\circ}$ below zcro; so that their mean annual tempernture in within $2^{\circ}$ or 30 of those on the S , conast. In a general view, lowever, the intluence of the ocenn in teropering the atmosphere (as well as in the humidity it imparts) is greatest on the W. side of the kingrhom, and most so within the limits of the SW peninsuia; the temperature of the ocenn on that sile being, daring the coldest season, rarely so low as $50^{\circ}$, whilst that of the German Oceni, on the other, except in the heirht of summer, seldon exceeds 45 Fahr. On the whole, the most obvious dificrence that oceurs in the local climates of the X. and s . parts of the kinglom is the lateness of spring in the former as compared with the latter; at an average about a forthight between the cos. X. of the Mersey and Hinmber, and those of the s. aud SW. The local effect of the W. mometain ranges is considerable, and tends to increase, in a greater ratio than would otherwise be the case, the quantity of rain falling in their vicinity ; but as a whole, the elevation of the surface is no where a) considerable as to have any romarkable intuence on the general character of the climate. The fens on the E. coast, and the wolids of Kent and Sussex, are the only tracts of my extent where the supethous moisture would, hat fir artiticial means, be retained long enough to generate miasma. In almenst every other part of the country the surface has sutlicient elevation and inequality to facilitate the free percolation of water, and to conduct the superfluity by natural means to the mumerous streams that intersect it 59 that no where can its physical structure be sid to exert an injurions influence on the climate,

The more feneral enclosure and cultivation of the surface within the last cemtury must also have graaly angmented these facilities, and improved
the salnbrity of the climate, which, however, a regards its clief characteristies, meems to be much the same as when Cimar and Trueitus deseribed it. There apprears hut little foundation for the notion once provalent that the climate has deteriorated and become colder; an inference from the fact of vineyards having once heen cultivated to somo extent in various parts of the comintry. The same aceounts also prove that verjuice formed no ineonsiderable part, and in some summers constituted the only produce of these vineyaris. It is probable that a better result than this might be obtained in the present day, were favouruble spots selected, and any probable advantage to be derived from the culture of the vine. The mean daily range of the thermoneter on an average of the whole year has been estimated at $1^{\circ}{ }^{\circ}$ for the metropolis, $14^{\circ}$ for the midland connties generally, and 80 for Cornwall; but the extent of the daily range of course varies with the ditlerent seasons, being greatest when the sum has most influence, and the processes of eviporation and radiation are in most netive operation. The mean ditference between the coldest and the warmest months of the year has been stated at, for Loudion $26^{\circ}$, Cornwall $181^{\circ}$, and lingland generally $942^{\circ}$; but these, and similar calculations, can only be consitered as probable approximations to the truth, cleduced from such series of diservations as exist ; whiel, however, are far too few and limited to make further details or generalisations of any pructical utility.

The great drawbacks upon the climate are tho prevalence of coll, biting NV., winds in April, May, and dime, which frequently render them the most disagrecable season of the year; and the oceasional oceurrence of wet summers and harvesta. The crops in England are very rarely injured hy droughts ; but they not matrequently sufler from excess of humidity. In Cornwall, where the climate is most equal, and the winters the mildest, the moisture and coolness of the stmmers are such that the fruit is iuferior in flavour to that raised in the more E . and midland combties at the same time that it arrives later at maturity.

Vegetable Produrtions.-The Florn of the kingdom comprises between 1,400 and $1, \overline{0} 0$ intigenows suecies of phaneogamons phants, of which upwards of 100 belong to the grass family: these, together with the firze (Ulex enropates and manus), the three common licaths (tetralix, cincrea, and velgaris), and the different kinds of rushes and sedgee, accupy a very large surface, and perhaps chat racterise better than moy other the naturo and caprabilities of the tracts they oceupy. The oak ( (buercus robur) is the king of native British trees, and supphies the timber of whieh our tinest ships are built. Hence the oak is intimately associated with the maritime glories of Eingland. Take it for all in all, it is probably the best timber of which we have any certain knowledge. Some is harder, some more ditlicult to rend, and some less eapable of being broken across; but nome contains all the three qualities in such great and equal proportions; and thus, for at once supporting a weight, resisting a strain, and not splintering by i cannon-shot, it is superior to every other timber. In fivonrable soils it will tlourish at an elevation of 700 ft . The ash, alder, aml hawthorn thrive, nubler similar cireumstances, at 800 ft .; the lir ( $P$. sydvestris-the only indigenons suceigs) at $1,000 \mathrm{ft}$. ; the mountain ash, and some of the sonaller and prostrate varicties of the willow tribe, ascend nearly to the highest summits; whilst the hombeam, lime, maple, poplar, and elm thourish only in locatitios much less elevated than any on
the preceding. The becelt and syeamore reneh 750 und sut) ft . ruspeetively; but these, though loug perfectly unturalised, are foreign introluctions, as are also the larches, pines, chentmit, horse-chestnut, anil many others that flourish and attain to considerable size in the extensive parks and plantations of the kiugdom. Of indigenous fruits, the list is very scanty ; the pear, crab, medlar, wild eherry, bullace, raspierry, blackberry, mooseberry, currant, atrawherry, and cranberry, being nearly, if not quite, all that can be so called ; and the grenter purt of these, In their natural state, can searcely claim to rank as such in the more eommon acceptation of the word.

Every one is ready to almit that England is indebted to commerce, or to her intercourso with other nations, for a very large proportion of her superior wealth and comforts. lhat it will bo found on examination that her obligations in this respect are really much grenter than is generally supposed. Fingland is not only indebted to foreign comitries for mere luxuries and superthities, but for the greater part of those plants and vegetables that supply the largest. jortion of the food of her inhubitants. England has received from abrond bread coms, potatoes, garden stnflis and fruits, with hops, turnijus, and a vast variety of useful and ornamental vegetable products. Ilist it is the good fortune of Engiand that most of these are so admirably suited to the soid, that, unless the contrary were known, they might bo supposed to be indigenous. Those species of fruits that require a powerlul sun to bring them to maturity do not, indeed, answer in our climate, except artificial means be employed in ripening them. Int the moro useful kinds attain to perfection. 'Solom prater oleam vitemque, et ceterat caldioribus terris oriri sueta, patiens frugum, fecundum; tardè mitescunt cito proveniunt ; eudemque utriusque rai causit, multus humor terrarumque colique.' 'Tacit. Apric. § 12.)

Of the smaller herbaceons plants it remains only to notice a few most characteristie of the features of an English landseape, or which are othervise distinguished for their beanty and rarity. Of these, the various grasses that may almost be said to be in a state of constant growth, and to eover so large a purtion of the surface, in a literal sense, with jerpetual verlu.e, claim precedence : of llowers, the daisy, primrose, cowslij, violet, and lesser celandine, are the most common and most universal favourites; next which, perhaps, the wootbine, eglantine, lyyucinth, harebell, and goldcups, contribute more largely to the adomment of the seenery. Of the less common kinds, the tamarisk, musk, gentian, and a few others, are limited to the SW. jeninsula; the hop, briony, and pheasant eye, to the midland cos. ; the juniper, parnassia, and a few others, to the more elevated regions of Wales and the N. cos. ; and the water lily can only be considered in its native locality when expanding its tine flowers on the surface of the Cumbrian lakes. The foxglove, henbane, hemlock, nightshade (Aitropa), and the Cieuta virosa of the Cambridge fins, are almost the only species that possess active medicinal qualities. The woad, madder, teazel, hop, tlax, buckwheat, elovers, tares, and melilots; together with the carrot, parsnip, cabbage, sea kale, and asparagas, comprise the ehief indigenous species available for economical purposes; whilst the milletoe and ivy claim a passing notice from traditional associations, Of cryptogamous plants there exist about 300 distinct species of moss, and upwards of 500 of Alga, that is, lichens and sea wede: two or three of the lichens are identicnl with those extensively used as dyes, but they scateely occur anywhere in! suf-
fleient alnumdance to be worth collecting. Varions species of sea weed are thrown aboudantly on mane purts of the sea-const, and collected as a manure, but are seldom converted into kelp or barilla

Zoodogy,-Without recurring to an older geolngical beriod, when the animals, whose bones are found in the limestone caves of Yorkshire nad Devon, occupied the country, we find that, within a comparatively recent period, it was in a great legree oversjread with vast forests, the ubekles of many wild animals, which, as well as their covers, have now wholly disajpeared. The bear may be traced as an inhainitant of these down to A.b, lifit, and may have existed later: the beaver to llak, when its habits were noticed and described ly fiiraliun Combrensls, as withessed by him on the T'eiti: many notlees of wolves oceur so recemity as the reign of Eilw. I., notwithatandiner the war of extipation waged against them by bilyar. The New Furest in Ilampshire was the latest resort of the wild boar, which must have been extipnated daring the period of the last civil war: the wilh cat has disappeared from its latest hamos-Cumberland and Westmorlani-withinliving memary, but is still fomed in Scotland. The widdox (Crus) has only escaped a similar fate, hy having leen preserved as a curiosity in Chillingworth l'ark near Berwick, and in one or two other localities, where this tierce and slistinct breed (with ereancoloured hide, hack muzale, and downward-hent horus) may still be seen. The stag, fallow dex, and roc have also been saved by similar interfurence and protection. The indigenous quadrupeds now existent in a wild state are-the fix halger, polecat, beeeh and pine martens, otter, weasel, stoat, liedgehog, mole, land and water shrews, Nr, nirrel, hare, rabbit, dormonse, field and water lemmings, black rat, common field and harvest mice, and six species of the lat tribe. If ectaceons mammalia, the razor-back and porprive are the only species that oecur with any fre quency, though such lists as comprise stragghers notice thirteen or fourten others, as of uceasimal occurrence on the coasts. The Norway rat is an ascertained immigrant, which has warrel with the indigenous species, and made it by far the searest of the two. The domesticated aumals and prultry will be noticed under another head. The great binstard appears to be almost the only species of bird that has been bunished from the kinglum by the extension of enclosires and cultivation although the bittern and two or three others hare become scarcer, and have wholly deserted many of their ancient hannts, yet they may still be met with, whilst the former has wholly disappeared from its latest locality, the Wiltshire douns Pennant, in 1777, notices bustards as oceurint in Hocks of fifty or more, on most of the open tracts of the S. and 1. commies, from the Donet downs to the Yerkshire wolds. Of those species which are either indigenons or habitual visitus 20 are birds of prey ; of gallimaceous birds (groue, pigeons, \&e.) there are 80 species ; of insessores, ot the tooth-billed tribe (shrikes, ouzels, \& 8 .), 83 ; 6 the conical-billed tribe (finches, \&e.), 34 ; the climbers (woodjeckers, \&e.) inchude 9 speries the fissirostres (swallows, \&c.), 7 ; the waling tribe, 60 ; and the swimming water-fowl, 78 spe cies. In all, 274 species have been enumerated the numbers of land and water-birds being neady equal-a singular circumstance, attributable to the insular position and exteusive coast-line of Ent land. Puffins' eggs on some parts of the Welsh coast, and in a few other localities, are oljects w some traffic. The different species of fish frequent ing the seas, lakes, and rivers of Eingland, have becn estimated at abont $1 \mathbf{1 7}$; a large portion of
these, as well in.purtant in There are bet of which the whilk, limpet kiuls The crawtish, prav limited to th Lipurants of 1 hy Mr. Steph ever ineluslo comprise abon man ws, de.) e, mul lepidropte 1,400, None meveral of the nillprable bea comprise the diated anima

these, as well as of hirils, are migratory. The more inprtaat species will be subsequenily speelled. There are between 4501 and 506 species of testacent of which the oyster, scallop, coekle, periwinkle, shilk, limpet, and muscle, are the principal edibhe kink The crustacea inchule the crab, lobster, crawtish, prawn, and shrimp; lint the former are limitel to the more rocky portions of the coast jiwartis of $\mathbf{1 0 , 0 0 0}$ inseets have heen ennmerated if Mr. Stephens, whose catalogne does not huwerert include the whole. Of theso diplera (tilies) cumprise about 1,700 species, hymempitera (bees, rasive (se.) 2,(1000, coleoptert (heetles) above 3,000 , anid lepidoplera (butterflies, moths, \&c.) abont 1,900 . Xone of the latter is of any grent size; but eeveral of the Iritish hutterliies can hoast of condiderable heauty ant varicty of huc. Anuclides cumprise the medicinal and horse-luech, dic. diated aumals and zonyhytes are abundant.
In the order of reptiles Bingrand is fortunately very teticicut. The hawkshill turtle has aecasinually beell fombl wandering near our northern cmats, and two instances of the coriaucons turtle having been eaught on the western shores are recorided by lhorlave. Of the more clegiunt fiamily of lizartis, oue species only, the Lacerta cuyilis, is admittel by some authors; others, like liay, conwider that inder this mune are inchuded bour or firedistinct species (nee Limu. 'Traus., vol, v. p. 49), a supposition much more probable than the tirst. The efts are eommon ; two splecies luhalit our dear pinds, where they may be seen swimming abuut in summer, while the cither is strictly terrestrial, and is met with at the roots of thick rank weels, growing on the side of walls, or among rublisht. The only serjents are-1. the common suake ; 2. the viper: and 3. the hlind-worm. The fint is harmless, and never exceeds 4 ft . in length. Aldiough habitually inhabiting the fand, it is yet knuwn to enter the water, nud to swim with facility. Considering its fecundity (it lays from 10 to 20 egges), it is surprising that the sunke is not more frefuent; lhut it has a deadly enemy in the helgechog, which feeds upon this reptile; thus exablishing the fact that as the hedgrehog, in its own tribe, represents the real hog in the order of Cngulda, so there slowd be some striking print of agreement between them. The viper is the only reptile in England whose bite is poisonoms. There are three or four prominent varieties, which some have considered different species; but must moulern naturalists regard them but as one. Lasth. the Auguis fruyifis, or blindworm, is also of rare occurrence, and probably derives its name from the smalluess of its eyes: the body is greyish, widh two dark brown stripes upon the back; the belly also is brown; nud the usial length of the animal is foot. Of the hatrachim reptiles, or true amphibia, the list is equally scanty, comprising ouly the frog, toad, and mitteriack: all these are perfectly harmless, useful in the econemy of mature, and serviceable even to man.
Population and Civil Divisions.-Since the days oi the great Alfred, Emgland has neen divited into connties or shires, and these again generally into hundreds, and always into parishes. Sometimes, however, instead of being divided into humdreds, a eo, is livided into wards, as is the case in the N . counties: sometimes it is divided into ridings (a curruption of trithings), as is the case with Yorkshire; and sometimes into lathes and sok 3s, as in Kent and Linedin. The subjoined table shows, in alphabetical urder, the whole of the counties of Eugland and Wales, their area in statite acres, the number of inhabited honses, and the papulatim (exclusive of army and nary) according to the census taken on Ajril 8, 1801:-

All information with respect to the number of people in Enghand antesedent to 1801, when the first census was taken, is extremely vague and unsatisfactory. Aecording to 'Jomesday llook, Enghand, exelnsive of Whles and the four N. connties of Northumberland, Cumberland, Durham, and Laneaster, coutained immediately after the Comquest, $300,7 \times 5$ families, which, at an average of tive persons to each family, will give about 1, iN0,000 individuals. Alding to this number 6itt,010 for the popl. of Wiales and the exchuled English counties, nut other omissions, the entire popp. of the kinglors, at that epoch, will he $2,150,000$. From the jull-tax returus in 1377, it alpears that $1,367,20^{2} 9$ persons paid the assessment levied upon every hiy person, whether male or female, of 1.4 years of age, mendieants only excepted. But Wales, Chester, and Durham are not
inchuted in these returns ；and there are doulbless many omissions in the returns that were given in． Little dependence can，therefore，be placed on them；but Mr．Chalmers has thence concluded that the pup，at the perioul in fuesthon unomented to $2,350,000$ ，l＇erhaps，however，this estimate is rather under the murk；for，in 1377，the comutry conld hardly have recovered from the dlasatromis inthence of the great pestilence of liat！；and it is highly probable that the children and persoms nader age then exceeded a third purt of the pop． it which they are estinated by Mr．Chalmers． IIarrison and Sir Walter Rinleigh net down the number of tighting men in the kiuggom in 1575 and 158：3 at $1,122,000$ ．Hut this was probahly litto better than a rongh guess；and unless it in－ clouled all the able－lontied individuals between certuin specitied ages，it wonkd afliorl but elender menus lyy which to extimate the popl．I＇erhaps， however，we may conclude，that it wis then some－ where abont 4f or 5 millions．There is nom reasont to suppose that the pop，was materialiy aflected by the civil war unter Clarles 1 ．；and the perioid from the Restumation to the Revolution was one of considerable prowperity．Previonsly to the levor－ lution，a hearth tax hind heen imposed；and the celebrated Gregory King，fonndinis on returns ob－ tained under this act，estimated the pop．of Eng－ land and Wales，in 1 tini，at $\overline{0}, 500,000$ ；which pro－ bathly was not firr from the mark．$\Lambda$ great deal of discussion took place in the colurse of last century with respect to the progress of pop．，Dr．Price and others eontending，on the one hand，that it was progressively diminishing；while Mr．Howlett， Mr．Wales，and others，contended，on the other， that there were renlly no gromady for this conclu－ sion，and that，instead of diminishing，the popp． was stealily increasing．＇The census of $1 \times 01$ put an end to these disputes，and showed that，sup－ posing Gregory King＇s estimate to have been nearly correct，the country had grined an acees－ sion of ahout $3,373,000$ inhal，in the conrse of the 18th century．The suljoined table slows the result of the seven oflicial enumerations held in the present century，giving the date of eneh cen－ sus，the number of the purulation（inchusive of army nad nayy）and the incrense between each decennial periorl ：－

Until the year 18：37，when a new system of re－ gistration was establidhed moder the direction of the registrar general，there were no means by whieh to form a correct estimate of the numbers of births and deaths．In 1538 ，the clergy were re－ quired to keppregisters of these，as well as of mar－ riages，in their respective parishes；and in 1603 the injunction was renewed；lut the rite of baptism in the parish chureh being objected to by nume－ rous sects of Dissenters．the registration of hirths has been at all periods very defeclive．The same was the case，though in a less degree，with respect
to the registers of deatha，varions clasmes of biso senters luaving their own cemeteries，In whieh their own forms of burinl were mblopted；and it happened that in many place a reference to the parish registers merely supplied the meats if making an approxhate extimate of the momed of reaths．Tha statute of the 2bith Gen．If， which made registration hodispensulile to the vali． dity of it inarrimge，having come linto operation in 10．t，the registers of marriuges have been sine nourly correct．The following table，compilag from the othelin returns，cmibraces the fullosi has fiomation it has been passible to brlup；tugether with respeet to the propurtion of the two mexes in every your from the beginning of the ceatury， The numbers nre culeulaterl，from the registration returis，for the midille of the year：－

To complete this view of the proportions of tho two sexes living at home, their ages must be taken into account. There is an excess of hoys overgirls liviug under the age, of 15 ; and an excess of men is provided all throngh the midhle period of life; but that surplus is overdrawn by emigration, so that the women exceed the men in number to a considerable extent in the carly, and middle, and still more in the advanced ages, when their lougevity comes into play. The excess of the emigration of males over females accounts for the present difference in the proportions of the exes. (Census of England and Wales, 1861, vol. iii.: General Leport, 1863.)

Agriwilture.-Tenures aud Estutes,-The tenures mader which land is held have varied very much al differeut periods, At present, they may be dirided into frechold, copyhold, and leaselold. Isy the first, an estate is held uneonditionally, under the coastitutional laws of the kinglom, liable to meither tine nor forfciture. Ily the second mode, etates are held of corporate bodies, or of indiriduals, as portions of some manor or other possessien, nud subject to certain claims and customs. Laseholds are either long, as for 1,000 years; life leaveholds, contingent on one or more lives, or subject to certain fines or conditions, but at all times giving a power of alienation or transfer to the lessor. Such leases as to not eonvey this prwer do not strictly eome under the designation of tenures; they form, however, $t$ large and impitant class of holdings, usually varying from tem:3 of 7 to 14 years, and the conditions and stipulations in them have a powerful influence wer agriculture and the value of property, in the districts in which they prevail. Lanils held merely from year to year. at the option of either party, ate said to be helil at will, ambl form a large proporthon of the lauds of the country. The size of estates raries exccedingly; but, clespite the great number of rety large estates, it is still true that landed pmpety in Eugland is very much divided, by far the largest portion ot the kingelom being portioned out into estates under 1,0000 . 1 year. Dr. Beeke, on 1801, estinated the number of proprietors in

Fingland and Wales at 200,000; and supposing this extimate to ho nearly ncenrate, and that the total groms rental of the kiugdomi amounts to $40,000,000 l$, a year, it will give 2001 , as the average annual value of each estate. But as a grent number of estates are much above this average, it follown that the majority mist be proportionally below it.

Accoriling to the census of 1861, the total number of furmers und graxiers, in-floor furm errvunts, shepherds, and ugricultural labouters, was 1,3•10,916. There was a consideruble decline in tho ten years, $18: 1-1861$, for the census of $18: 1$ showed the number to he $1,447,187$. 'I'he total jopulation conneeted with agriculture-ealled in the census reports the 'agrienttural oriler'-was much larger than that above enumerated, embracing not only farmers and their nssistunts and depentents, lint persons engaged in Iforiculture and hortleulture, as well as lund surveyors and makers of agricultural implements. 'line subjoined table shows the total number of persons enguged in these various hrmehes of the "Aprlcultural Orier,' according to the returns of the registrar genernl, on the 31st of March, 1851, und on the 8th of Aprll, 1861 :-

The deeline which took place in many branches of the agrienltural order, notubly in that of in-door farm servants, in the tell years 1851-61, is not a little striking as well as suggestive.
Arthur oung, in $17 \% 0$, estimated the capital employed in agriculture at 4/, per acre: at present it may, perlsins, be taken at about 62 .; which, on $31,001,000$ arres, will give $186,000,000$ a $^{\text {a }}$ The rental of the Innd in England and Wales may be estimated at about one-fourth part of the valie of the tutal produce. It amounted, in 1815. to $34,330,4621$. ; and it appears from the subsequent returus, that the present rental exceeds $60,000,1 \mathrm{~m} / \mathrm{L}$. a year; the fall that hats taken place in the interval
in prices linving been everywhere partinlly, null in mont parts amore than filly eonntervalled hy the apread of improvemsent, and the orening of now aud better markets for all morts of prodicta. Uuiler the property thx net the protite of the farmers are mupponed to amonint to half the rent; and thomgh this rate be freguently mont unjust in ita appliention to imdividunds, it may not, at an average, lse very wide of the mark ; and muposing this to be the case, the argregate proilts of the firmers would exceed $10,(0, n, t 00)$, a year. Farmers holding lunds let under 200, a year, are exempted from the tax. Farms in Finghand are of a medinm size, their averuge beling probably about 1 ino or 160 neres. Whent, barley and oata, lint especinlly the time, which may be empinateally and to be the breadcorn of Einglant, are the principal erops. 'The best whent, as well as the greatent quantity, is rnisel in Kent, Eissex, Suffiolk, Ruthail, Derts, ISerks, Hants, and Hercford, Fromi $2 d$ to $\mathbf{3}$ Winch. lowhels per acre are refuired for seed, and the average produce in the aloove ear, miy vary from 26 to 40 bush. per acre. Harley is growin principally in the eastern nud some of the mldand cos., and chielly for malting ; onts are principally in demand for horses; and the increase of the latter han occasioned a proportional increase in the enlture of onts. They are grown more enpecially in the N, and NE. cons; in the midland con. their enlture is less extensive, but it is prevalent throughout most parts of Wales. Bye is searcely at all raised for brend, except in Durham and Northumberisul; where, however, it is usually mixed with wheat, and forms what is called maslin, a brembeorn in considerable use in the $N$. l'eas and beans are important crops, and ln some parts are pretty larrely raised. The potatoc has, unluckily, become pretty general throughout the kingilom, but is most extensively raised in Lancashire and Cheshire, where it also comes to the grentest perfection. The introduction and general extension of the turnip husbandry has effected a revolution in the agricinlture of England, second only to that which the inventions of Arkwright have effected in manufactures. They have now all but superseded fillows on the lighter lnnds. liut the giving a valuable erop to the farmer, where there was none, without in any degree diminishing the facilities for clearing the land, is but a part of the advantages resulting from the turnip culture: for, while it cuables the farmer to keep and fatten a much larger stock, it also enablen him to accomnlate a vastly sreater supply of manure-of that invigorating power which alds to the prodactiveness of the best lands, and without which the middling and inferior would hardly repay the husbandman's toil. It is not easy to estimate the proligious additions that have been, in this way, made to the productive capacities of the soil ; and the recent introduction of gunus, and the application of bone manure to turnip husbandry, have already had a wonderfil intlucuee, and, no donbt, will contime to become still more and more important. Rape is grown for its oil, or as foerl for sheep, in all parts except the cos. N. of Yorkshire; and cabbages and carrots are chictly produced in the E. Flax and hemp are at present but little raised, being found lese protitable crops than most of the foregoing. Ilops are for the most part confined to Kent, to the vicinity of Farnham in Surrey, and to llerefordshire: their crop is the most uncertain of any, varying in the same localities, in different. years, from 1 to 20 cwt. an acre. The apple orehards of Devon, Somerset, Gloncester, and a few other neighbouring cos., are important, on acconnt of the cider they furnish. l'erry is made chictly in Worecstersh. Kent is
famons for its cherrice and fllberta. The totain менаment on renl property, for the jirnjupty and
 ill the year emillug Apr. 6,18122 , mul to $4,195,4,4$ in the yeur ending Apr. $5,181 \mathrm{i}$,

The best farmed conntiea are on the fic cuat; and Northumborlund, lincoln, and Norfiok map benr a compmrison with iserwickshire or b:, lathian, Such, however, in wot the cane in very many lio tricts; mad we lelieve it miny he anfoly nifinume that the avallable produce of the klugilum night los dombled, wero it generally culitiated wa the principle, and aceording to the protice, followel III the best furmed districts. Winter wheat mel. ing unumlly takes place from Sopt, to Nov, I drillina is more in use for barley than whent, whish in mostly sown brondenst. I'he grain harvest in amm monly at its helght in Aug, mid Seppt. Irutathen tre tuken up mid atored for winter use in Oet, and Nov., which are also the chicf eliler mouths.

The furm implements in common use in Eingiand are decidedly superior to those of mowt othrip countries, though a good deal remains to be done in the why of their improvement. Perhaps few ciasens ol' people maintuin their prefudices with such obstinacy as agriculturlsts, anil especinlly agriculum labourens; mud to this must be muinly attrintitel the continited use of the old-fashioned clumar pluughis which are to be seen in some distries; nud, what is far leas excusable, the emplayment of $3,4,5,6$, and nometimes even 7 lorses, to do what mifht be as well or better done ly 2 ? The use of lourses in farm labour is nuiverana, excent in Susnex, and motne of the W. counties; and machinet for thrnshing, dec, have become common.

Jrituin las been celebrated from the ern of Can for the extent and excellence of her pastures, and the abumlance of her cattle. A full half or mote of tho aruble land of Engriand is applied to grazing lusbandry. 'I'he best grazing lands are in the vale of Aylesbury, the Feus, Romney Marsh in Kenh and some of the midlami and $W$. counties, Hay is made from natural grassen, and from clover, rye grass, and In the S. comuties sainfoin and luem; the natural sward yielang from 1 to $1 \frac{1}{2}$ tona an acre, and the artificial crops from I to 3 toms. The hay-lurvest throughout the country takes place pretty generally in June and July.

There are several breeds of horses, the agimgate stock of which, at the present time, probaly reaches $1,000,000$ head, worth, perhaps, alwut $10,000,000 \mathrm{l}$. sterling. Of this number it maybe estimuted that two-thirils are employed in apricultural labour. The old English roat-horse is now nearly extinet: the large dray-horse, so admiadly adapted for traught, which is believed to hari been oriscinally imported from the Low Counties is bred in considerable numbers in some of the midllnd counties. Yorkshire is celebrated for its carringe horses, especinlly the Cleveland hays; and the farm breed of Suffilk is nlso excellent. The English race-horse, derived from the Arub, Panian, and I Barb, is superior to every other lreed in speth, and inferior to none in bottom and hemuty. Yules and asses are very little used in liugland; the former are almost unknown, and the latter belong, chiefly to the poor.

The stock of cattle may be estimated at litte short of $4,500,000$, about a forrth part of which are ammally slanfhtered. They are divided into lone-horned, short-horned, and polled: the fint division comprising the Lancashire; the seond, the Hokleruess, Northumberlaud, Durham, Devon, Herefori, and Sussex ; and the last, the Suffolk dims, \&e. Butter and cheese are mat important products: Epping Furest, in liwes. Cambridgeshire, and Dorset are the districts mo:

The merino breed, introduced from Spain towarits the end of the last century, has heen chietly useful in crosstug and improving the Heece of other breth. In some parts of Fingland sheep are kept on fallows, for the benetit of thoir manure. (irent numbers are fed on the opren chalk downs of tho Scumbies. The total anmul produce of wool in Fagland is estimuted at about 170,000 jracks of Sifl lbs, each. $1 l o g e s$ are finttened on most farmos, and are also kept with advantage hy millerts, dairymea, brewers, distillers, dic., whose refuse they cusume. The Jlants, Ikorks, Glenicesterslı anid Henfindislo, are the bent of the large breedo, and that of Suflolk is elistingrished amonge the simallor ones lorksho and Westmorelatid are famoun for their hans: Ilants, Wilts, aud llerks for their hacon. P'onltry are reared on most farms, and in the mujority of agricultural eottagers. Large fincks of geese are kept in the Llincoln fens, and placked onee a year for their quills, and four or five times for their feathers. Fowls are largely rared at Oakingham in llerks, and Dorking in Surev has acguired a name for a the and largn giechared variety. Ducks are plentiful in Sueks, and pireons in almost every co. Since the foumdstion ol our W. Indin colonies, and the importathin of sugars, the demand for honey has decined; this, however, has not nffected wax, so that bees till keep their ground as appenduges to ulmost erery farm, and to many cothare gardens. Goats are not reared except in the few monntainous parts of England, and deer are now mere articles of luxury, kepit in the purks of noblemen and gentlemen. There arestill some extensive rabibit-warreus in Xurfolk and Cambridgendire, biot they have gratly decreased. About 122,620 neres of land atcocupied by the roynal forests, $\mathbf{6 2 , 6 2 0}$ of which are enclosed for the growth of timber. As already diverved, Enreland is very woll wooded, esprecially the S, and W.cos. Oak, the most valuable species, grows in the grentest perfection in the weald of Kent, Sussex, and Surrey. The oak-Lark harvest takes place in May.
Arriculture received its first great inpulse in Enghad during the reign of llenry VlI. Irom the pulicy of that monareli; and torether with all hiuds of commercial euterprise throughout liurope, it denived a stimnlus from the great discoveries of the period. But the breeding of sleep, was the brach of rural industry the lirst to extend, ind throughout this and the succeeding reigus for a leugthened period wool was extensively exported. The tirst English treatise on agriculture was written ia the reign of IIenry VIII., and the hop, as woll as several of the common garden vegetnbles, are introductions of the same period. Sir W. Raleigh has the credit of introducing the potato, which, in the early part of last century, appears to have been a tolerably frequent erop in Lancashire, from which its culture extended to other parts of the hingdum. T'urnips seem to have been first culti-
vated on a large meale in Norfolk, also, in the early jart of the name exitury. J'uje wieaks of ' Als Townmemd's turnips.' 'Thie old duties and restrie-tions on the exportation of eors wern abolished at. the lievolution, anil a bounty was then also when on its expurt. Durligg the latter years of the war with France prices were compuratively high in Finplain: lint on the renewal of the intercanima with the Continent, in 1814 , vast quantities of eoris loing imported, pirices amdenty pave way. This fall occamofied a gool iloal of agricoltural distrens, which, however, was lint of temporary dirntion. In no long time improvements bugan to la prowecuted with greater vigour than ever; and from 1832 to 18:17, a mutlicient suphly of corn wis prown for home consimpition. The sibsequent recurreures of bad seasons and the finilire of the justuto, led ti) the moditication and fimal repeal of the corn laws in the yenr 18.46. The repenl took etfort on thos Ist of Felimary, 18.19, from which dite only in nominul daty of one shilling per quarter was levied. on corn.

Fisheries,-Theae are not commensirate, cither In extent or importance, with the extent of cemst, and have never been a jrincipal sonree of national wealth. The herring ilshary is tho principal; lint: until the middle of last centiury most of the thal. takell on the li. coast (ita chief seat) were captured by Duteh smackn. Yarmonth bay is the prineipual resort of the herring, and about 100 smmeks, of froms 40 to 50 tons each, belong to the town of Yamonth, where the lish, smoked for sale, havo obtained some celebrity umler the nume of ' Yiarmonth bloaters.' At Simderland, Whitby, Scurborongh, and IIarwich, there are alwo extensive herrhir fisheries. The cod fishery, including that of laddock, whiting, llig, and linke, ranks next in importance. The pilchard thatery is exclusively confined to tho consta of leven and Cornwall. A portion of the flall canght are used fresh or sulted in those connties; and the reat, to the amomnt of about 17,000 hihds. a year, are salted and exported chiefly for the Italian markets. The pilchard tishery; by means of seans, employs about 1,500 hands, mid that by drift nets employs from vot to 1,000 men, and edt boats, exclisive of the women assisting on shore in curing the tish. The total number of tishermen in England and Wales wiss stated in the census report of 1861 to he 17,227 . Mackerel are very abundant, and extensively consumed during the season; sprats, which arrive in immense shonls on the E. and Sle. consts, are taken in greut numbers for manure. Oysters, which meet with so rapid and extensive a sale in the markets of the metropolis and other large towns, are found on many parts of the coast; and are largely bred near Milton on the Kentish shore ol the estuary of the Thnmes, at W'hitstable and llerne Bay, and in the tideways of the creeks on the Eissex shore, particularly in those between the Colne and Blackwater rivers, and in the neighbourhood of Mersea island, famous, from the time of the Romans, for this prodice. Some very line oyster-beds also exist at limsworth, in Hurnoshire; others of a larger kind cone from l'oole and Jersey.

Mining Inclustry,-Coal stands at the head of the mineral produets of lingland; and the eountry is probably more indelted to its inexhaustible supplies of this valuable mineral than to any thing else, for the extraorlinary progress it lias mule ia munufacturing industry. The coal-mines are all in the N. and W. parts of the kingdom; nad these, consequently, are the great seats of English manulictures.

The following table shows the quantity of coal raised in the varions mining districts of Eugland and Wales in the year 186.1:-

| Coal minctect | Tone, |
| :---: | :---: |
| Durhamand Northumberland | 9:1,21N,3147 |
| Lameahire . . . . . | 11, mine, (1/1) |
| Stafforlahire and Worcenternhire | 11.408, M. 51 |
| Kunth Wales and Muntuenth . - | 10, 8714,561 |
| Yorkuhire - | 8, 8080,600 |
| Total . . . . | 166,021,317 |

Irom ranks next in impurtance to coal. It wan known to exist at a very early periosl ; and the Ifomann, and jeriapes, alw, the liritons, had Ironworkn in the Forent of Dean, and elnewhere lin the kingdom. Iron ore in very generally diffised ; at present, loowever, all the great iron-works are situated lif the coal dintricts, an abundant supply of eonl being indispensable to the extensive prominction of iron. Ilut In the lifancy of the iron trate, when timber was the only fiel employed in smeltfing the orem, Kent and Susmex belige the best wooded conntlen, were also those In which mont iron was made. In 17.10, the total quintity of jig iron made in England and Walen dint not exceed the trifling quantity of about 17,000 tons, and we were then, and for a eonsliderable thme afterwaris, mainly dependent on foreign supplies. liat about thin perlor conal began to be auccessfilly anlostituted for tlmber in the preparation of iron, and its production was, in consequence, materially angmented. In 1760 , the quastity prodinced did not, however, amount to 20,000 tons ; lut in 1788 it had increased to 68,000 toms, and in 1796, to 125,000 tons. The progress of the trade hus since been rapld beyomil all jrecedent. In 180d, a project was entertained for laying a tax on pig iron; and it was then arcertained that the prolucion nmounted to about 250,000 tons a year. In 1820 the prodnce had increased to about 400,000 tons ; and in 1830, it was estimated at alont ( 41,000 tons. But owing to the great demand for iron for railways and other public works, the increase of production continued on an enormous scale, and in the year 186.1 amounted to-

## In Fingland , Wales

## Total

Of this immense quantity of pig iron producel in 1819, ouly $46 \dot{x}^{2} 951$ tons were exported ; all the rest was converted into merchant iron. This was efferted at 127 iron-works, where 6,262 pudilling furnaces were in activity, and 718 rolling mills performing their herculean labours of prodlueing hars and rails, (lieport of Mr. Robert Hunt, keeper of Mining Records at the Maseum of 1'ractical Geology.)

It may be mentloned as evineing the extraordinary progress of the iron trade, that it could hardly be suid to exist in S. Wales previously to 1760. So much, indeed, was this the ense, that in 1755, the land and minerals for several miles ronnd Merthyr Tydvil-then an inconsideralile villuge, but now the seat of the greatest iron works in the kingdom-were let for 99 years for a rent of 2001. a year.
Next to coal and iron, the most important minerals of Fingland are copper, tin, and lead. the latter containing quantities of silver. There were obtained, in 1864, from 192 mines in Sonth Western England, 214,604 tons of copper ore, producing 13,302 tons of metallic copper.

The production of tin is conlined to Cornwall and Devonshire: these are also the great copper cos. ; Int copper is likewise produced, though in smaller quantities, in N. Wales, and some other parts. The tin obtnimed from the rinines of Corn-
wall and thevonshire in I86I was in exeem of that ever lefore promenred, althomgh the thin milies am si reain works of this disirict have been dillagmily workeal for more than 2,100 yenra. 15,211 tins if tin ore were rained by the minerm, the largme quantity from very derp mines. Thin pronlumen of metallis: tin $10, \mathrm{l}, \mathrm{x}$ tons, The prive of tim churiug 1 Bit was lower that it han buen dunne may year alnce 18is. , mul more than 111 , a tmi helow the price of $\mathbf{1 8 5 0 \%}$. The nystem of miming which prevailn remers it impreatlie of the managers of mines to use every efliore to sulbore tho sharcholdera hy the regular payoment of dir! denis, or, it ill events, to prevent a repurecimetion in the value of the slures by a voliling 'calla,' I obtaln this elld tion ore has beens rained, 'ifresed, and mold ta an alrealy ghatled market at whaterif price the mmelter cobilif offer. Hewer the vaine
 upwarls of 38,0061 less than the money value of the lilock tin sold lis 18018.

Lead mines liave been wrouglit in linglan from a very remote epoch. At present the mon pronluctive are in the N. cos. Lead, when thetes tracted from itm ore, nlways contalns a cernain propurtion of sllver, varying from a few maina to 45 oz or more it the ton. When the ejlver mixed up with the lead is sufflecient to repar the expeuse, it la usunl to neparnte it, which is effectan ly the prosens terned refining. The lead of sme of the Eingilsh mines, equecinlly those of Comwall, ant also of the Isle of Man, contrinus ren considernhle quantitien of silver. In the year lefit, no less than [0,4,433 tons of levid ore, primeipally talena, were slressed, suld, and sinelted. 'This poin duced 91,283 tons of lead, and gave 64, ins (2ad sllvar.
Of zine ores, nearly all heing the sulphide of ziue (commonly enllod black jack), 15,014 tons were mined in 18 1.1 , producing $4,0 \cdot 10$ tons of metal.
Of iron pyrites-ores used for the sulphur thes comtain in sulphuric acid and soola works-llife
 tlon, there were raised small quantities of manasnese and wolfram, together with arsenic, odires barytes, porcelain and pottery elays, ani salt.

Salt, one of the most important of the liritid minerals, is procured In immense quanities fo m hoth fossil beds atal brine springs, ill Cheslife and Worcestershire. Irevionsly to the discovery an the fossil beds, during the ibth ceutury, and suld. sequently, a good deal of sult continued to le made by the evaporation of sea-water in salt pans at lymington, near l'ortamouth, and at other places ; but the works at these places are now wholly abandoned, while the article in quetion has become greatly improved in quality; and instead of bein- imported, as formerly, is ver: Inricely exported. The consumption of Great liritain only, exclusive of Ireland, amonats to ubout 200,000 tons per annum, while the exponts are of three times the amonnt. In 185:9, the exports of salt were $565,6 \cdot 14$ tons; in 18til, ther were 703,132 tons, and 624,785 tons in lentio Before 1823, an oppressive tax of liss, a bushel, or about thirty times the original cost price of the article, was impesed on salt; bat in that vear this enormous tax was totally rejealed. Alum, fullers' earth, chalk, and lime are amongst the remaining useful minerals; clay for bricks, tilk and carthenware, is also a prodict of consideralite importance. Freestone is very abondantly diffused; but most linglish buildings being cuastructed of brick, its use is limited, except fis pavements. Bath or Portland ntone is that which has hitherto been mostly used for bnildiug. There

 factusies; but Iradliond in Wilts is the priucipal sume of the superthe cloth trade. I'ie cloths of Simeret are of inferlor quality. Serges, or loan ells, are made in nlmont every town mal village in the co, of Devon, nind also to a considernble extant at Wellington, la the co, of Somornet, Carpets are prineipally made at Axmluster, Kiddenminater, Ashiton. ind Wilton. Sulishury is noted for its thannels, and Withey in Oxforddise for its blankets; though mont of what are called Wituey blankets are in reality made in Wales, Norwich was long the principal nent of the worsted manufacture; but the commmon of cala, and the grenter fineilities for carrying on the business enjoved in Bradford, and ot lier places in the West hidilug of Yorkshire, have given them n devidel superiority. The manalfactare of woollen and worseds stockings is prineipally curried on in Leikestershire, about 14,0n0 stocking-frames being supposed to be at work in that cominty. Conrese nuolkens and druggets are made in Cumberland, haizes in Bessex and Suifolk, and a few articles are made in North lIants and Surrey; but the woollen manafacures of the S. cos, are comparatively unimpurtant. The total value of the exports of mwellen goods and worsted goods aml yarn in 186.1 anounted (fir the United Kingdom), to no less than $18,566,0781$. Tho produce had more than donlled in the course of 15 vears, amonuting to $8,58,6901$ in 18.00 ; to $9,500,4281$, in $J 850$; and to $15,489,5641$. in 1863. There are no separate returns of the exports of Enghand and Wales. Accorling to the census reports of 1861 , the woollen manufieture at that time employed 130,031 persuns, and the worsted manufacture 79,242 .
Bure important atill than the woollen manufneture is that of cotton. Vast as this manufacture now is, it may be said to have almost entirely trown up since the necession of George 11I, in 16i0. The first grand stimulus was given to it in li67, by the invention of the spimniog-jenny ; and the subsequent and almost miraculous inventions of Askwright, Watt, Cartwrighst, Crompton, and others, have carried it to the extraorlinary state of improvement to which jt has now arrived.

Cottongomels of areat heanty anil exielleut qualiy have beell mon mich rediced in price, an to be whithin the eommand of all hat the merest heguars. | Total . | 2.715 | 28,351,925 | 407,598 |

The above figures are probably incomplete, the number of operatives being fiven at nearly 50,000 less than in the census returns-the latter necessarile under the mark, owing to the vast subdivision of latour and the complexity of trades more or less connected witli cotton manufactures. Altogether it seems most likely that there are at least half a million individuals directly engaged in the cotton trade.
The linen manufacture is seated chicfly in Yorkshire, Cancashire, Salop, Cumberland, WestmoreInnd, Darham, Dorset, aud Somerset. In 18.11; the linen factories employed $19,8 \cdot 40$ hauls, aud

the ecnsus returns of 1861 state the number of individuals engaged in the manufacture at 22,050 . The silk mannfacture is more important. The metropolitan district of Spitalfielis, Manchester, and Macclesfleld are the chief places in which broad silks and handkerchiefs are made. Coventry is celebrated for its riband factories. Crapes are made mostly in the E. cos.; but this branch of manufacture is declining. A great revolution was effected in the silk manufacture in $\mathbf{1 8 2 5}$. 1'reviously to that epoch the legislative enactments with respect to it were the most contralictory and impolitic that can well be imagined. The importation of foreign silks was prohibited under tha? severest penalties; but the edvantage that thi; prohibition was believed, thoupli most erronconsly, (1) confer on the manufncturer, wouli, muler any circumstances, have been meru than neutralised ly the imposition of oppressive duties on the raw material. This vicions system was proluctive of a twofold misehief; for, by tenching the manafacturers to dejend on custom-house regulations lor protection against foreign compstition, it made thein indifferent about new discov ries and inventions, while, owing to the exorbitant claties on the ruw material, and the wunt of improvement, the price of silks was maintained at such a price ns to restrict the demand for them within comparatively narrow limits. In 1825, however, a new and more remsonable order of things was introduced. 'The duties on the raw materiml were grently lowered; at the same time that loreign silk goods were allowed to be imported on payment of a duty of S) per cent. ad valoren. This new system was rehemently opposed at its outset, and it was confulently predicted that it would occasion the ruin *IV the manufacture; but the result has shown the soundness of the principles on which it was bottomed. The manufneturers were now, for the first time, compelled to call all the resources of science and ingennity to their aid; and the result has been that the manufacture has been more improved fluring the last dozen years than it had been in the whole previous century ; and that it has continued progressively to increase. In 1846 the duty was firther reduced to 15 per cent. ad valorem.

The total quantity of raw silk imported into the U. K. in 1864 amounted to $5,655,401 \mathrm{lbs}$., being a decrease over imports of the preceding years, which, in 1862 , amounted to $10,372,123 \mathrm{lbs}$, and, in 1863, to $9,221,145$ lbs. The total number of persons eugnged in the silk manufacture in IIngland and Wales was stated to be 101,678 , in the census returns of 1861 .

The harduare manufacture is one of the most important carried on in England; it comprises all kinds of articles, from the anchor of a man-of-war down to the delicate furniture of a lady's workbox. The more ponderous are wrought in Stalfordshire, Colebrook Dale, and elsewhere; cutlery, and the finer kinds of articles, are made chictly in Birmingham and Sheflield. In Birmingham steam engines of the largest size are also produced, and the whole tract to the NW. for a considerable distance is one immense field of smithies and forges, and the goods made in it and its immedinte neighbourhood are estimated to be worth more than $3,500,000 l$. annually. Firearms, needles, \&c., are made in great quantities in London. Watch and clock works are made especially in Lancashire. The total number of hands employed in this grent branch of industry is probably upwards of 350,000 , and the total value of the goods produced amoints perhaps to $17,000,000$. a year. The eensus returns of 1861 report that there are 125,771 persons engaged in England and Wales in the iron manufacture, as moulders, founders
and similar workers, hesides whith 108,165 ind. viduals are registered as blacksmitha, tio,kitid as engine and machiue makrers, $2(6,130$ as engapey in the sail manufaeture, and 20,757 as cluck and watchmakers. The value of the hardware ex. ported in 186.4 nmounted to $13,214,29 \cdot 11$. The manufacture of leather is nearly equal in impor tance to that of hardware. Worcester and leavij are the principal seats of the glove factories, and furnish tugether upwards of 800,000 puirs of leather gloves annually. Many more are manfactured in Woodstoek, Lonlon, Nottingham, and Ludlow. Shoes, harness, and sadlery are male in most large towns, and especially in the metropolis. Boots and shoes ure also made in phat mumbers in Northamptonshire and Staffordhire, The leather manufneture is estimated to emplup, in all, nearly 234,000 hands, and to producesudeds to the value of $13.000,0001$, a year, or upwarls.

The NW. part of Staffirdshire indevoted almant wholly to petturies. Irritish earthenware, so hightr improved by the intelligence and ingemaity of Mr. Wealgwood in the last century, now ngals the best produced on the Centinent in elegance and excellence, and is much superior in pint of cheapness. Hence the earthenware and china of Fngland are very widely dilfused; and are the only varieties to be seen in most parts of the Continent and of America. Chima ware is made at Derby, Woncester, \&c. The total value of the articles manufactured in both brnnches of the trade is estimated at about $2,500,000)$. The number of persons engaged in the earthenware mannfacture in England and Wales, is civen at $3 \times, 5$ ? in the census returns of $\mathbf{1 8 6 1}$. The ghas mannfacture has grown up since the end of the lith century, but has especially increased within the lust 50 years. Bottle and crown glass are male chiefly at Neweastle and S. Shields; phate-ghay exclusively at the former town, and at havenleal in Lancashire. Thero are numerous glass-woths in the W. and NW. cos.; and the total proluce of glass artieles is valued at $2,300,0001$, a year, their manufacture employing 50,000 hauds. The census of 1861 , however, only distinguished 15,146 as engaged in giass manufacture. This branch of industry has been materially injured by opyrenive duties. 13ut these, after being reduced in lxin, were finally repealed in 1845 . Paper is made in Herts, Kent, Laneashire, Surrey, and Yorkshire, It is estimated that there are in all ahout 312 mills at work in England, employing about 25 , (100) individuals, and protucing goods to the value of about: $5,000,0001$., a year. Paper, like glass, has beta suljected to oppressive duties; but these were nduced in 1836, and entirely repealed in lsil, Hats to the value of between $2,500,0001$ and $3,000,0001$.; bricks anl tiles to an enormonsestent; senp, candles, gunpowder, starch, ringar, dyes, conches, furniture, and straw plait, are amongst the remaining principal articles prodaced by the manufacturing industry of Einghand. Estensive sugar-refineries are established in Lonioa, Liverpool, Bristol, and other towns.

The constersion of grain into fermented liquar: gives rise to three very important and extensire Granches of manufacture and trade, those of malting, brewing, and distilling. The brewerie
 barrels of beer of all sorts ; nad from 1,800,0010 to $2,200,000$ barrels are supposed to be ammally sup plied by the parter breweries of London, which are the largest and finest est blishments of the kind in the empire, nud, indeed, ia the worth There is also a very large consumption of spint particularly gin, in England. But, notwithstand ing the numereus allegations to the coutran:
which 108,165 indiacksmiths, fil), xfe as 2ti, 130 as engryw io 20,757 as clock and f the hartware exto $13,214,204$. The errly equal in impor. Worcester and Yempil glove factories, and of 800,000 pairs of lany more are manuton, Nottingham. and cin! sadlery are male recially in the metro. also made in urat cire and Staffurdshire, estimated to emplar, , and to produre pinds a year, or upwanls. slire is devoted almust carthenware, so highly cee and ingenuity of t century, now rivals Centinent in clerance hs saperior in paint of thenware and china diffised ; and are the in most parts of the China ware is male The total value of the both branches of the $2,500,0001$. The numthe earthenware manuales, is given at $3 x, y$ ? 861. The ghas mana e the end of the lith y increased within the crown glass are male S. Shields ; plate-chlass own, and at haventeal numerous glas-wukh and the total jroture at $2,300,0001$. a y yat, ing 50,000 hands, The hly distinguished li, 146 facture. This brath of Hly injured lyy oppressire being reduced in 1 xit, 845. Paper is made in Surrey, and Yorkslite, re in all nhout 312 mills pying abont 25, (100) indiods to the value of alout er, like glass, has leen ties; but these were ${ }^{2}$ rely repeated in $\left.\mid x_{2}\right)_{1}$ etween $2,500,0001$. and es to an emormonses. owiler, starch, vinesan and straw phait, are neipal articles produced estry of Euglaul. Exestablished in Lonlon er towns.
into fermented liquats portant and extensire ind trade, those of matt ling. The brewnes upwards of 5 . 0001 , 1 He and from $1,800,000$ to sed to be anmually sup ries of London, whica est ablishments of the indeed, in the wofle consumption of spint d. But, notwithstand tions to the contran?

there can be nodoulst, comparing the consumption rith the population, that it is decidedly less at pment than It was in the retgn of (irorge II., and at more recent perionls, This is established levoul all questlo: by the statements made in fartianment iil the debntes on the Gin Act in 17.12, and by the details fiven in the tract of the celeGratel lienry Fielding on the Incrense of loobberies (London, $175:$ ), nud other nuthentie documents. No doulht there is still, in this respect, ample rowm for improvement. Nothing, however, an be more unfounded than the complaints ao often put forth of the lincrease of drunkenness: that the lower classes nre bot so tempronte as could be wished for, is most true; but they have impowed, and are now less given to intoxication than at any former period of our history.
The subjobed stntement shows the total quanititus uf ppirits, both bome-male and foreign, eonsumed in England and Wales in 1831 and in 1861, ar rell ins the quantities consmmed at the same periods in the United Kingrdom.

It will be seen at $\boldsymbol{n}$ ginnce that the increase in the cunsumption of spirits has been less than the increase of population.
Internal Comsmanication.-The turnpike roads of England sre at present, perhaps, the best in the Forld. They are placed inder the direction of tusts, and kent in repair by tolls levied on pnssengen and cnrriages, and rates, which the surreyurs of roads are empowered to levy by the act 5 and 6 Will. IV. c. 50. Many of these acts, however, have recently been repealed, and in particular all the turnpikes near the metropolis have been abolished, the maintenance of the roads being left to the parishes, to be delrayed liy locnl assessment. The construction of caunls in lingland origiunted during the latter half of the lnst century. Most of them are in the NW. or manufacturing districts. The principal are the Lancaster canal, from Kendal to Wigan; the Liverpool and Leeds; Burnley and Skipton; Aire and Calder Navigntion; Duke of Bridgewatcr's cannl, from the head of the Mersey astuary to Manchester; those connecting Bolton and Bury with the latter town; the Rochilnle from Manchester; Hudderslield, from Manchester by Ashton-under-Line; Peakforest: Trent nud Mersey; Ellesmere; Hereford nnd Gloucester; 'Thames and Severn; Berks nnd Wilts; Arundel; Grnnd Junction from the Thames at l3rentforl to Northampton; and the Paddington and Regent connl, on the N. side of the metropolis. The total length of the canals traversing England exeeeds 2,200 m. All have been constructed by private companies of individuals, and several exhibit splendid triumphs of engineering art; as, for instance, the Ellesmere, which in one place is carried over the Dee at an elevation of 125 ft . above that river, by means of a course of cast-iron plates supported on 19 pairs of stone piers. The Grand Junction has a tumnel, $3,080 \mathrm{yds}$. long, and the I unke of 1 ridgeWater's canal is excavated subterraneously for a total distance of several m . But the extension of
canals has been nenrly suapended aince railways enme linto use. These originated naso in the latter half of the lnat century in the N. mining district, The construction of railways, followinf upon that of cauals, has originated in new ern ln the industrinl aud social life of Fiugland. 'The woolen rails nt tirst used gave way to others of iron. The Stockton and Darlington railwny, opened in 1825, was the tirst intenileal for publice une; but it was not till 1830, when the Liverpool and Mmehester rulway was opened, that the vast importance leeame manifest. The formation of rnilwnys wonld, however, have been of comparatively littlo value, but for the inventlon of loeomotive englnes, which being sucecesnfilly introduced on the liverpool and Mnnchester railway, made its opening a memorable ura in the history of internal commmuicution. lly meaus of these engines long trnins of carriages, londed with pnasengers and goods, are now intelled nlong ruilways nt a speed virying from 25 mm . to ti 0 m . or upwards an hour. 1fence it is that time and spuce are nearly numililated in as fur as railway travelling is concerned. 'lhis extroordinary speed has also been attained with ngrent increase of comfort and security; the accidents by railwoys being very decidedly fewer, as compared with the number of passengers, than those arising out of travelling by common conches. The Intter, in fact, are almost wholly supeneded on all the great lines of roml.
The total length of railways open In England and Wales, together with the total pid-up cupital, in ench of the years 185.1 to 1863 , was as follows:-

| Years | L.ength nf L.ines open at the End of each Year | Total Capltal pald up Niaresp lomina ec.) at the Bul |
| :---: | :---: | :---: |
| 18.54 | Miles | 240,245,025 |
| 18.55 | 6,210 | 249,815,306 |
| 185.5 | 6,447 | 257,489,431 |
| 1857 | 6,773 | 264,198,206 |
| 1858 | 7,001 | 270,871,6.t3 |
| 1859 | 7,3119 | 277,665,518 |
| 1860 | 7,183 | 288,691,611 |
| 1861 | 7,8\%2 | 299,446,18.2 |
| 1862 | 8,176 | 318,2:17,038 |
| 1863 | 8,568 | 333,514,818 |

The number of passengers, ineluding the holiders of yearly or season tickets, who were conveyed by railway in England and Wales, nnd the total traffic receipts in each of the years $1804-63$, were as follows:-

| Years | Total Number of Pasaengers conveyed (Incluilng Season- | Total or Traflio Recelpts |
| :---: | :---: | :---: |
| 1854 | ${ }_{\mathbf{3 2}, 346,149}^{\text {Nos. }}$ | $\stackrel{\text { el }}{17,342,925}$ |
| 1855 | 99,175,913 | 18,363,369 |
| 1856 | 108,1768,901 | 19,728,309 |
| 1857 | 115,858,806 | 20,527,748 |
| 1858 | 115,956,957 | 20,244,095 |
| 1859 | 124,881,202 | 21,723,926 |
| 1860 | 136,089,404 | 23,472,940 |
| 1861 | 145,831,425 | 24,021,928 |
| 1862 | 152,437,927 | $24,529,062$ |
| 1863 | 173,648,476 | 26,212,822 |

The enormous increase of passengers, far more than that of mileage, within the ten years 1854-63, is very striking, and allows fair conclusions as to the increasing importance of this comparatively new mode of locomotion.

In close connection with railways, and scarcely less important, are the thonsands of miles of telegraph wires which have spread over lingland like

## fivgland AND WALIES

a network in the courac of little more than a generution. Withont trachug the growth of thimgrent auxiliary of monlern loeomotion, it may auflee to give the lengith lin miles of telegraph wires in Fingland and Wales, in the three years 1861-63.

The number of telegraph stations ofen to the publie in 1863 was 1,707 , while the number of messages sent in the same yenr amonited to nearly three millions.

Constitution and Government.-The legislntive power, by the constitution of Grent Ifritain, is vested in the great conncil of pariament, consisting of the King and the three extates; that is, the Lurds Spiritual, Lords Temporal, and Commons.

The early listory of the pariament of Engiand is enveloped in great ohscurity. I'his much, however, is certaln, that previonsly to the Norman invasion it was usual to consider and debate matters of public importance in the Wittenngemote, or great conncil of the nation. After the Norman invision, and the establishment of the fendal system, the king, as lord paramount, was assisted hy a great conncil composed of the princisal feudal superiors, or tenants in cupite, whose cor currence was necessary in matiters of general or uational importance. In Magna Charta, signed by King John on the 15 th of June, 1215 , it is stipulatel that 'no sentage or aid shall be imposed on the kingdom, leyond the ordinary liabilities of the feudnl tenure, minless by the common council of the kinglom.' This shows that even at this early period the principle was recognisel, that the nation should not be taxed except by its own consent. The great number of tenants in capite, or of those who, as they held direetly from the crown, were entitled to $n$ geat in the great comncil or parliament, and the disinclination and inability of many of them to attend, gave rise to the practice of summoning, by name, a few only of the most distinguished, or of those called the greater barons, whence originated baronies by writ; while the others, who were not summoned, adopted, in no very long time, the practice of sending representatives. The Intter consisted of two knights for ench sliire, and of one or more burgesses for the three horoughs, or of those holding of the crown. Different opinions are entertained as to the period when these important innovations took place; but, at all events, there is undonbted evidence to prove that burgesses attended the parliament summoned by Simon do Montfort, earl of Leicester, in 1265. At this time, also, the clergy were summoned to attend by their procurators (proctors); but they struggled successfully to rid themslves of this burden (as it was then considered), and obtained the privilege of meeting in convocation for cach of the two provinces, the bishops and mitred abbots only continuing to attend parliament.

Cnder the relgn of Filwari I., kuights and hiris. gesses ware regularly summoned; und in that of Dilwaril II, parliament appears to have been divided into two lomses; that is, linto the llone of Lords, comsistloge of the great frulal lophes who directly uttended; and thos llowne of Cumo mons, consisting of tha representatives of the smaller tenmits and birgesses. It the same reiga parliament neems for the tirst time to have axercised, in a regubur manner, the fimetinim of leginlature. In the reign of llenty 1V. we firm thid the right of the Commons to orighate all Nupplien noticed as an existing instituting lirom this priod, the history of parliament is closely interwoven with that of the nation. The number of burgesses wus gradually lincrensent by the enfrunchisement of fresh boroughs; and the popular intuence in the beprislature progreasively fuined strength with the increasing wirnlh and intelligence of the natlon. Jhit for a longethenen period the naturs of the govermment was not well dellned, and the rival powers of the frima and of parliament were frequently coming into contact. Iburing the reigns of Ilanry Vill. and Elizaheth, the regal power attainel to a maximinn. Jit the growth of commerce nule the latter, combined with the powerfill induche ot the Heformation, and other causes, not unly gave a great accession of strength to the bath if the people, but mule them better aequainem with their rights, and less disposed to sulamit to their invasion. The princes of the IIonse of Shan wanted sagacity to nppreciate the changes that hal thus taken place in their position with respert to the public. 'Their muxims of govermment wees urbitrary as those of the 'Iudors, but they lad nol. ther their ability nor their power. 'I'heir attempte to govern without a parlimenent, and in dethace of principles that had been wanctioned from the earliest periods of the monarehy, prollucel, is the end, a civil war, that happily terminated is favour of the popular party. llit it was not till the Revolution of 1685 , when the Stuarts win tinally expelled from the throne which they hat showin themselves untlt and inworthy to fill, that the prineiples of the constitution were elearly establisherl. The celebrated statute, called the IBill of Rights (I Will. \& Mary, sesw. 2, (lequ) declared that the suspension of laws, or theis execution ly regral authority, without the cossent of parliament, was illegal; that parliament had the exclusive right to levy money from the sulbects; that the debates or proceelings in par. liament were not to be questioned in any eourt " place out of parliament; that it was the right of subjects to petition the king; that jurors wet to be duly panelled and returned; nal that parliaments should be held frequeutly. By the Triennial Act (1704) the duration of parlianents was limited to three years. In 1715 it was es. tended to seven, at which period it has comtimed fixed. The union with Scotland (1707) and tro land (1800) increased the number of memben to 658. We have elsewhere alverted to the circumstances that occasioned the passing of the Reform Act of 1832. (See Vol. I. p. 560.) This important statute made some material changes by enfranchising some of the greater and divfranchising some of the smaller boroughs; and by modifying the electoral franclise, nul crating a new right of voting in all occupiers of premied of the value of 10l. a year in boroughs througto out the three kingdoms.

Irish connties, 2 emelh: boronghs of Dublin, Cork, Bellant, Limerick, Ginlway, Waterford, 2 ; the remninder, 1. The right of voting fur comby members, in England, is in all treeholders possessing land of the value of 41 s, per amm., if of inheritance, or in actaal wectumain!, and not nequired by purehnse; the later comditiens being intronluced to ghard agninst the creafion of fietitions votes. An estate for life of $10 \%$. per ammon is sutlicieni under nuy cireomstanees. Cophohlery to a certain numount, and leaseholiters to a certain amomit mul duration, are now also in the possession of the fromelise ; as are all tenmits, whether with or withurt leases, who pay a homi fide rent of 501. a year. In Scotland, besides certain votes on account of ancient rights of a pectuliar description, termed smperiorities, freeholders of 10\%, per munum have the rigit of voting, and tenants nearly as in England. 'The right of voting for comities in Ireland is also tixed at 10\%. per anmun, for frecholders; leaseholders and copyhollers nearly as in England.
In Einglish boroughsa milorm franchise, created by the Reform Aec of 1832, is possessed by the ocectpiers of a house of ather lenilding, or buiflding with land, of the valer $\because$ iol, per ammm. In cities that are comuties. anselves, freeliolders vote as in comities. he com these, there are in nll the boroughs, except onch as were enfranchised by the Refirm Aet, certain ancient rights, reserved to those why were in the possession of tho framelise nt the passing of that aet. These vary accorling to the usage of particular boroughs. Siwh are the ancient innmelises of put-vallopers, or pot-loilers, payers of sent imil lot, frecholders, burgage temants, and freemen almittel to tho frechom of corprations. But in all these cases provision is made for the gradtal extinction of the ancient franclises, no new clamunts being registered unless they have aupuired the right in certain excepted ways. In Scotlaud and Ireland, also, the ocellpiers of houses of the valne of 102 , per manam in toroughs possess the franchise, with reservation of sertuin ancient rights in the latter comery. Voters for the universities are sucle as have attained the degree of master of arts, and have kept their names on the books.

When a new parlinment is montumed, forty days bunat chase betweren the date uif the writ anf the return to it . (On vaemeies one curring durimg the wession, the writ is issuled to the chark of the crown in chancery, on warmit from the
 varnury ocemring during the peeces. The writente ielivered to the sheritla of conmites met returning oflicers of borougha, who are bomint to give the proper motiees. If the member or members be mot eleated by whow of hatides on the momination ding, a poll is demmuded, nud takes place on the next diny but twa in comities, and laves two days; on the hext day in luromghas, last ink mo day ouly: Votes are publicly piven mid revorded. 'flıe mate of every electur who is athitted to pull must (since the lieform Aet) "ppenr on the register of votern, which is constracted in a dilferent mancr, and loy difterent oflicers, in the three comatrions. Where votes are equal, it is usual fir the returulug oflicer to make n domble return. The validity of $n$ return may be questiomed by petition to the House of Commons, not only oin the gromind of irregularity in making it out, lut also of riot, of treating or bribery loy the member elected, and of the mbinission of ungualiled votes or rejection of groml ones. 'The trial is leliore a committee of the House of Commons, regulated in its appointsonent and proceedings by in viriety of statutes.

The IIonse of Commons clams the privilege of electing its surenker ; and also that most important one, which is a findmmentul principle of the constitution, the right to originute all bills imposing any tax or levy on the silyject, technienlly called money bilts, ar bills of stipply. Shonld the loris, in aniending bills sent up from the commons, introduce chanses containing such impositions, they are invarinbly rejeeted by the latter, as infringing on their undoubted priviloge.

By the Septemial Act ( 1 George 1, 1715), a new parliament must he summoned every seven years; but as the crown las the prerogative of arlitrary dissohtion, and as there is a dissolntion also on the demise of the crowis, the length of a parliament has rarely apprenclied that limit. The sessions of parlinment are anmal. It floes not appear that there is uny statutable necessity for its being summoned oftener than once in three years; but as the supplies are aumally voted, it is impos; sible to dispense with a yearly summons, The ordinary session of parlinment lasts nbout sis monthe, from January, or February, to Augnst: but it has of late years been often of loager dura-
tions. Irarlhument is arljourneif from day to tar, or over it ahort recess (iis itt lioneter), liy the aif

Parliament, and esprecinlly the Honse of Commun, exereisen un extensive control ovep the collduct of the execotive, not morvly ly Jogislation, but by varions entablished mathonis of expressiof matisfaction or ilismatisfaction. Surlo are motions made by individual members, cither limonded on pritions (which it is n peenliar purt of the business of both Ilomsen to recolive unil inmider), or othersive; on which resulutions may he alopited by the House, addrasven to the erown moveal, rommitteren annumted to exminine and report. and wo forth. The right of parliantent to exercise this species of supreintendence is onyuestionable.
Should the frime minister lior the time being hapent to be a peer, as invery frequently the ense, ande member of the eabinet, usinally the home secretary or chancellor of the exchepour, aets an 'iender' of the ministerial bosly, and pirineipal representative of the govermment in the llouse of Commons, in which the conlllet of purtien in ehiefly fought. So convenient in this specien of leadershly, found, that any eonsiderable borly in oposition usually find it advisable to select a similar hend. A certain majority in the Commons, on ordinary nceasions, however amull, is absolutely necessury for carrying out the govermment, which may he mill to be strong or weak according to the mignitude of this najority. The truth is, whatever may be said in theory of the balmee of jower in the different branches of the legishatiore, that the House of Commons has been, simee the Revohitlon of 1 bise, and still more emphatienlly sinee the lieform Aet of 1832 , the paramount power int the state. Supposing the majority of the IL . of Commons to be decisive and ilmi to its purpose, it may compel cither the Crown or the II. of Lorls to give way; for, by resorting to the extreme mensure of stopping the anplies, it might, were its demands not acceded th, stop the whole machine of government.
dets of parlinment are either public or private. There is no distinetion between those two chasses as to the binding character of their anthority; the only difference being that julicial tribumals are bunuld to take cognisance of all ats dechared 'public,' lut not of othors, unless specially exhibited and provod before them.
The Exrcutive--The whole excentive and aiministrative functions of government, as well foreign as domestic, are performed in the name of the sovereign. The suvercign has the sole power of making war and peace; and, as incident to that power, the command and dinposal of the army, navy, and other forees of the kingrlom. The sovereign is conservator of the public peace, in which character all eriminal prosecentions are carried on in his or her name. The sovereign is the head of

Sulastantially and in finct, however, the power of the erown is eompuratively limiteil. It is a constitutional principle that "the king rum (h) mo uromet' hut, thongh be he mot, his mininters are lede to be rexponsible for all illegral or meronstithtiomal mets cemmitted lin his namo. It is firrther indingunsable thint his ministers shamild lese able to command a mijority in ordinary rases in the II, of E. Unless they rimin thin, the eoont-

 dixmine them to make ronn for other minintara, which, thongh lews acereptahle to himedf, are more ngreenlile to the majority of the Itomese. The later has thersfore, in efferet, a veto on tho choice of tho king. 11 e nppints ministers: bit it belonges to the representatives of the people to condirm these appointments, to inquire into tho titnens of mhinsters for their vitmations, and to sletermine whether they whall conthme in ollee or be dixplaced to make romm for others.
l'ractically, too, the power of the crown to elect ministers is it quod lenl nurrowed by the neeessity of chomsing thone individuals ouly for the moras prominent sitantions who are numbers of the llonse of Larils, or ean procire their retirn to the Ilonse of Commons. However well qumlitied an individual might be to till the ollice of necretary of state, lor example, he cumbl not be nponinted unlows lie were a pere, or combl recommend himsulf to nome eomatitneney ; mid the chanedlur of the excheguer, the attorney-genernl, boril mivoente, and other elicf oflicers, minat mecensmrily be members of the II. of C. l'revionsly to the passing of the Relorm Aet this was a lems serions control over the free chaice of the movereign than it has slace become, a much greater number of nomination borongha being then at the dimposal ol the crown. Now, howerer, it frequently happens that lews competent individuals linve to be nppointed in preference to others, merely liecmase they are able to command seats in the 11 , of C . 'To obviate this inconvenience it has benen proposed to five ministers $\boldsymbol{p} x$ officios sents in the 11 , ul C ., whiels should entitle them to spenk but not to vote; and probubly, on the whole, this would be antimprovement.
liyery peer of the realm of limpland is, according to the theory of the constitntion, an herealitary combsellor of the sovereign, and may be called to give his nlvice, whether parlimment he sitting or not; but this principle lins no practical consequences.

Priyy Council,-To understand the manner in which this boly was formed out of the grent conneil of the mation or parliament, it must be remembered that one of the original oljgeets of that institution was the summary redress of grievances which the ordinary legal forms alid not avail to meet. 'Ihe privy conncil was thins, in its origin, a species of committee of the great council, but nominated by the king, to which such plaints were

## ENGHAND AND WAIBS

preferred! and lis the conme of time ita nitting bevamo permanemt, to alfiord relief when parlinment wats but asemilsels. From the reges of Hiehard If, to that of Charles I, we thei the pirthy commeil (comanatiog unanilly of nomes of the chlef oflle ers of atate, nind somis inferior members permemally nominatel by the king), oxereinloge, in varions whys, a very extennive jurimedietion, emperially In matere, whether civil or criminal, in whish the state was, howeser remotely, comeernemi. Vhiler thes 'Tublors numl tirat Stuarts, the privy comeril was In the luilit of gromiting warrming for tho arrest, Impriwamment, athl even turture of the subject. 'The eomert of Star Chamber, mid wher tribumits of the same deveription, were oftinets of the privy comicil. Its puitical fine nive, thongh not ndmitting mo casily of defintiom,
 corpus was grantel to persmins artested huder warrante from the jrivy emmeils mill lim jower in thin reeppect was than phaced on a leved will that of orilinary magistrates. Tho jouliein! limeliones of the emineil were thas effectmally munilled; nor have they lawn revivel, exerpit as at eonart of nyment from the divil law boirts, mind from the lasent tribumals sulowinting bil our coloniem and frreign de[nendeneies, The momber of privy cominellars, origimilly ineomsidernble, wan in the cemmen of time greatly extemded: limitted ly Charles 11. to thirty,
 palitlent finetioms of the privy comeil aro now viplually amblibated, and the title of privy comimellor is anly one of distinetion. 'The uppellite jurisdiction intrealy alloded to is exerenemt by a bodly sollected from the mass, termed the judicinl comimittee of the privy comeneil.
The enbinet comectit is a lumly whilh, though withont miy recugnised loggh existenter, lifecte, in effiet, the govermment of the cemintry. It emmists of a certuin mumber of prisy counsellons, usually consistime of the principul nininters of the crowis for the thoge heing, summoned to attend at ench meeting. The nane is sail to be deriven from the cabluct of tueen Heurietta, in which the mivisers of Charles 1. were acenstomed to meet. The mumber is usually from 12 to 15 . The flrst lorif of the trenurry', the chanellor, the clannellor of the excherpuer, the president of the comacil, the three secrearies of state (home, foreign, anil colonial), are mlways, in practice, members of the eabinet: some oiher ofllees are usually, but not invariahly, accompanjed ly a sent in it.

The influence which the sovereign exerchses over the deliberations of the eabinet, and the degree of execintive power that centres in him or ler personally, necesmarily diflior very grently at diflerent perionds, innsmuch as they must materially depeni on his claracter and cajacity, mul on the state and character of partien. At different periouln slace the hevolution, larliument has compelled the crown to dismiss one set of ministers and choose another in oppusition to its own predilections; but such ministries huve raroly enfoyed mach real power or been very lasting. Whichever party in the state wins known to have the comutenance and to enjoy the conthence of the crown, has generally contriyed, in mo very lomg perion, to secure a majority in jurliament. Hence it is that from the levolution down to the accession of (ieorge III., the Whigs, with the exception of a few short intervals, were constantly in power; and that the Tories held, with similar exceptions, the reins of government from the accession of George 1II. down to the introduction of the Reform Biill. Lhit it is doubt linl whether sulel will be the case in fiture It was compuratively easy for the crown to deal with the proprietors or pairons of nomination bo-

6. The post-ofice is under the control of an oflleer aigleyt the postmantor-genernl.
7. Dixecutive oflieery of the erown, employed in the administration of justice. Of the lord clinnrellar and the julgen more will be smil muder the hemel 'Comrts of' Laws.' In entel cominty the sherifif is the jrinejpul excentive oflicer. He is numally "pjuinted hy certain allicers of the crown. Ilis prineipal dinty is to enory into effert the process of the law within his lowil jurisilletion. He is also julige of the cominty court; deciles the elections of Knlights of the shire anil coroners; and performas varions oh her dities. Thore appears to be no st riet lequl qualillention for the oflice of slecrin; bit, in pract lee, it is usinal to проoint men possessed of' considerable landed property; and, as the exceptions and legitimate excuses nre numerous, and the expenses are sometimes hary, the npointment is folt an a burilen by those on whom it falls. The legal duties of the sheriff are executed in practice by his ubder sheritf, usually a solicitor, appointed ly him.

The enstos rotulorim lins the custorly of the rolls and records of the sessions in each connty. This ollice in usually joined with the military dignity of lord lientenant. His deputy is the clerk of the peace, who performs the ministerial business of the court of quarter sessions in lis behalf.

The coroner is chosen by the frechollers in the county court: the oflice is sometimes illled by an attoriey, mal sometimes lyy a medical practitioner, surgeon, of physician. llis chicf duty consists in loblting inquisitions in eases of sudilen death, where the hasly is fomal; for which purpose he summens a jury of four, the, or six pursons.
The justices of the peace are commissioners, appointed under the great seal. Their general dinty is to keep the peace, and any two or more of then to inguire of and determise felonies and mistlemeanors. New commissions are always made out on the demise of the crown, and on other oceasions when deemed nilvisable. The only legal qualification scems to be property to the amonnt of 1001 . per annum; but, in practice, the principal gentry of the cominties, and respectable inhabitants of the towns, discharge these important and gratuitons functions. The powers of justices of the peace are extendel and dethed ly in great variety of statutes. They have summary jurisdiction, either singly or in their petty or district sesslons, over various minor ollences, and in some civil disputes, as between masters anul servants respecting wages. They holh, finur times a year (in some counties more frequently), courts of geueral sessions, for the trial of felonies and misdemeanors, and other business. They levy rates, and direct the application of the funds thus raised to purposes of county expenditure.
In towns liaving municipal corporations, the municipal officers were formerly ex officio magistrates; but since the act of 1835, the crown issues cummissions of the peace in such boroughs. I'olice magistrates (stipendiary) are appointed in the metropolis under varions nets of parliament, and may be appointed, on petition, in any borough.

Constables are either high, apponted by the justices of the peace for the several humireds; or petty, inferior officers chargel to keep the peace in ench town or parish. They ure chosen by the jury at the court leet; or, in default of sucit court, appointed ly two justices of the peace. The police force established in Londom and the principnl Saglish towns was created by Sir Rulvert Peel, in 18\%9. It is under the superintendence of commissioners of police, and acts under the direction of the magistrates.
Churchwardens, and overseers of the poor, are oflicers appointel by the irhabitants of every parish, meeting in vestry, under the authority of various statutes; the first to superintend the preservation of the chureh, the latter the affairs of the foor. Their duties are much curtailed by - cent changes in the poor laws, under which a number of parishes are united, so as to form a district; and every union lus its guardians of the poor, partly magistrates-who act ex officio-partly chosen by the vestry for every parish.
13. Minicipal corporations are budies established for the purposes of mumicipal government in borough towns. The linits of boroughs, to which their jurisdiction extends, are fixed by act of parliament, or by prescription. Municipal franchises legan to be grantel at an carly period of our history, and generally to the whole lody of townsmen in every place which obtained them. But, in the course of centuries, their charters became more narrowly interpreted, or were renewed, with different and more oligarchical provisions. Hence, in most towns in the kingdom, exclusive governing bodies were formed, to which the right of admission (freedom of the borough) was vested in the municipality itself. But of these bodies the mayor and aldermen, or other governing magistrates, were elosen according to the usage of each particular place.

The business of these corporations consisted in sulperintending the administrative govemment, nud preserving the prace of the town; manaing the corporate finds, which were often comsidemille; and exercising (ly properly appuinted otficerom) judicial functions, in courts both of crimimal and fin some instances) civil jurisdiction. The Municipal Relorm Aet of $18: 3$ effiected a most extravire change, by aholishing the exclusive fovernment of the Einglish? bormghes, and extending the muuleipal franchise to occupiers in general. The common council, or deliberative looly, the aldermen, and the mayor, are now chosen by open election; the recorder, who exceutes the juldicial functions of the corporation, and the magsistraces are uppinted by the crown.
Courts of' Justice,-The sovercign, as head of the executive, is also the fountain of jnstice. He or she is, by a fletion of law, supposed to be present in courts of justice br the persons of the juiges. No court of justic: caln be cruated, ex. cept by the commission of the sovereign. This, however, chanot be issued without the authonty of parliament.
lu eurly times it was customary for the enere. reigus to hear and decide cases in person; but this function has been long delegated to judges, whoe jurisdiction is regulated hy certain establisided rules, which camnot be altered except by statute In England, previously to the Revolution, jullay held their situations durante beue placitu, and might be removed by the sovereign; but witan this is the case, as it still is in many countries, il would be too much to expect that the julges should manifest much indepentence in cases in which the crown is concerned. Subsequently to the Revolution it was enacted, in oriler to provide in as far as possible for tire independence of the iulges, by the stat. 13 Willium 1II. cap. 2, that the commissions of the judges should be made quasediu se bene gesserint ; thut their kalanie sluouth be ascertained and established; and that they should not be removible except by an alltros from both houses of parliament. Their collmisimns, however, continued to be vacated ly the demise of the sovereign till the accession of Geome III., when it was enacted that the demise of the crown should no longer vacate the julges' commissions.
But the great security for English liberties, and for the fuir and impartial alministration of justion, depends not su much on the laudable precautions taken to secure the independence of the judge, and to prevent their being biassed in favout of the crown, as on the iustitution of juries. In the common law and criminal courts, juries are the only julges of the facts of any case, and they may also decide as to the law. So long, therefor, as the grand institution of jury trial is preservel, and as jurics are fairly and impartially selected there is little to fear from the weakness of curruption of julges. It is the proud distinction of the English people, that they are self-julged as well as self-goverued.

Courts of justice are either general or lead, The first of these are-1. The courts of common law; 2. The courts of equity; 3. The court of bankruptey; 4. The ecelesiastical courts; $\overline{0}$. The court of divorce; 6. The courts maritime. Ta these may be added the courts of assize and if quarter and general sessions, and county eurrts which, although each. strictly speaking, is limited to its own locality, are parts of the generalsystem, and subject to the same general priaciples of law.

Courts of Common Law.-1. The superior Courts
of comion law are three,-the king's or queeds mill; and

ee,-the king's or queen's

Wench, common plens, and exeliequer. Wath congists of a chied justico and tive iuferior or prisue julges-in the last court termed ehief and puisne fanms. 'They must be barristers of' the derreo ol serjeant. I'licir appointment is nombanly in the cruwn, but substantially, like ull other appointments, in the minister lor the time being. C'rmalnol juristiction, and a gearral power of superintondence over iuferior courts, corporations, amd mapiotraten, throushont tho kingdom, are reservad an the court of king's or quecu's benelo. 'That of anmon phas lans the exchasive jurivatietion in nal uetions, now (through the eflects of various statutes) becoming obsolete. Suits in matters rehatiug to the king's revenue are mostly determined in the exchequer. With these excepthons, no difirence now exists between the anthority of the throe courts, in either of which ordinnry civil arims mny be earried on indiseriminutely.
From the decision of any one ol the three courts, an appeal (by way of writ of error) lies to what is termed the court of exchequer chamber,a court on appeal, formed by the julges of the two other courts; this, decisions of the K. B. are reriewed by the C. $\mathrm{I}^{2}$. and exchequer, mad so forth. This court derives its mame lrom the apartment in which it commonly sits, min apendage of the court of exchequer. From the exchequer chamber, u writ of error lies to the honse of lords, the highest appellate anthority of the comintry.
Of the inferior courts of common law, of ireneral juristiction, those principully deserving of notice are the courts et sessions, held by the magistrates of the several eonnties, vested, by various statutes, with a civil jurisdiction in certain matters of public interest (such its questions of the settlement of paupers between parishess), and with a erimimal jurisliction, assisted by juries. 'The nature of the ourts of assize and griol delivery will be best exphaned when deseribing the eourse of the ndministration of justice.
2. The conrts of equity, origimally establistıed, as the nomo implies, to render substantial, justice in cases where nn injury would be intlicted by abiliug by the strict rules of law, are now divided into two: 1. The court of chancery, consisting of two suborliuate courts-one presided over by the vice-clantecllor, the other by the master of the rolls; nud one superior, presided over by the lord chancellor, which in part aljulicates on matters bronght before it on appeal from the other two divisions, aud has in part an origimal jurisdiction. The chnncellor is also judge of appeal in the last resort from the court of bankruptey. 2. What is tennel the equity side of the court of exchequer, i. e. a court presided over by a single baron of the exchequer, and sulyject likewise to appeal to the lonl eluncellor. From a deeree of the chancellor, appeal lies only to the honse of lorils.
3. 'The court of bankruptey, as reorganised un-der the act of Aug. $1 ; 1861$ ( 2.1 \& 25 Vict. e. 184), enitited 'An Aet to amend the Sanw relating to hamkruptey and Insolvency in Fugland,' consists - I. Of six commissioners, who etrry an the ortinary legal proceelings consequent on the state of lankruptey in a trader in the metropolis; 2. Of a wat of review, which reviews their julgments, nith further appeal to the chancellor. The eourt sits in judgment on all bankrupts and insolvent delturs, whether traders or non-traders. P'revions to the act of 1817, there existed besides an "insolrent court,' consisting of three commissioners, who eat in Louden, and also held cirenits in the comurfy, fir the diseharge of prisoners detained in execution for debt, on delivery of their property to creditors under certain statutes. This court ceased its functious in 186:.
4. The ecelesiastical courts have jurisdletion in some civil eanses ; some that are termed mixed, of which suits for tithes ure the principal ; mad some termed purely spiritual, viz, in the correction of certain oflinees, bath of the elerary and laity. Justice is mombistered in them necoriling to the civil and cimun liaw. The principal ecelesiastical courts are - I. 'The provinuial eorirts of the two archbishoprics, of which the eourt of arches, in that of Chatterlury, is the supreme court of appat ; 2. The diocesin or consistorial courts of eath diocese; 3. The comets of the urelidencons; f. J'ecoliars (which indeed are lanal courts), of a small exelasive jurisdiction, which are very muncrous.
5. 'The divoree court, the functions of which are implied in its mame, was lustituted by the Divorce Aet of 1857 ( 20 \& 21 Viet. cap. 8i) ). Sul)sequent statutes (21 do Viet. cup, 108 and 22 \& 23 Viet, cap, 61) delined the jurimdiction of this comrt.
b. The court of admiralty is leld before the lord high memian or his deputy : it consizts of the instance econrt, which takes cognisunce of contracts, mud injuries on the high sens; and the prize court, which aljudicates on prizes taken in wnr.

Local Courts, both of criminal and civil jurisdiction, used to be extremely momerous, and were quverned by a variety ol usages. At present, most of the inlerior and local courts have been superseded by the

County Courts, established under 9 \& 10 Vict. c. 95, and subsequent statutes. Under their yrovisions Eugrand and Wales are divided into 491 districts, which are elassed into bio circuits. To each of the latter a julge is appointed, who must hold a sitting in each of his courts, at least once a month, for the trial of canses without the intervention of a jury: The jurisaliction of these courts extends to aill utions for debt and damage not involving more t!an $\mathbf{5 0 t}$; and netions of more importanee may bo tried in these by consent of the litigants. Appends may be made to the superior conrts of common law on points of law, and as to the validity of evidence in actions for more than 20\%. ; but an action is not removable by certiorari, except by lenve of the judge of the county court, and then the claim mu: exceed 5l. By the Bankruptey Act of August 6, 1861, before cited, the connty court julken exercise in the country all the powers of the former district commissioners of the court of insolvency.

The machinery of conrts in general will perhaps be best understood by the following sketch of the mode in which justiee is alministered by their means; which, for the sạke of brevity, must be contined to the superior courts.

1. If a party have a complaint of civil injury against another, either in a matter of contract, or tort, i.e. civil wrong, such as trespass and the like, (unless for a debt below a certain amount, for which, ly various stafutes and customs, the plantift may sue, if he please, before varions local and inferior tribunals-ar for certain small trespasses cognisable ly magistrates, ) he commences a suit in one of the superior courts of common law. The first step in the action is techinically termed a writ of summons. If the suit were for a sum certain, the plaintiff had formerly the right to arrest or hohd to bail the defendant ; but this right is now extingnished, and the ordinary (or 'non-bailable') process substituted lior it, except in certain peculiar cases. The writ of summons is followed by a statement of the cause of action, termed a cleclaration; which the defemilant answers liy one or more pleas; and these reciprocal nllegations are continued (being drawn.

## ENGLAND AND WALES

up in a technical form, and slown by the one party to the other) until a direct contradietion (technically int issue) is arrived at, either in point of liww of of fact. If the former, the case is argued before the court in which the action ls commenced, and juilpment given; If the latter, the cause is sent to be tricd before a jury.

The three courts of common law hold four terms in the year (ench of abont three wecks' rineution), during which the judges of ench sit together. In these sittings they lechle on issues of law ; hear mplications in causes alrealy decided by juries, to lave them sent down agnin for what is termed n new trial; set aside, or maintain, the verilicts of juries out gronnds of law a and perform other hasiness, which it is ingossible here to barticularise. The court of K. 13. also exercises at this time its njpellate jurisdiction over inforior eonurts.

T'o try issules of' fact, juries are summoned1. In Iondon anl Midalesex, four times a year, lefore cacli of the threc courts, for $\boldsymbol{n}$ certain nimber of days dhering and after ench term. A single jusige (usually the chief) of the eourt in which the action is commenced, proshles at its trinl ly the jury. 2. The remainler of England and Wales is divided into seven circuits: two of these (the Welsh) are travelled by a single judge ench, who meet in the connty of Chester. In the remaining five, two travel togrether. 'I'sese cirenits are helid twice a yenr-spring aud summer-riecupving from seven to fonr weoks. In the conirse of them, the jubles visit every county town. The selection of circhits is left to the choice of the julges aceording to seniority. They hold severnl eommissions, of which the principal are those techmically termed of assize, nisi prius, oyer and terminer, mud general gnol delivery. The first of these is now nearly otsolete. lly virtue of the two seeond (throngh varions fictions originating in ancient usages), they hold courts at which juries are summoned to try causes, in the manner before explained, in each county. It is evident, from the foregoing sketels, that the issues of fact in an netion are not neecssarily tried before a judge of the conrt in which the action was commenced ; but if it be songht to set aside that verdict, or obtain a new trial, application must be made to that eourt.
Persons are qualitied to serve on juries by the possession of certain species of property; chiefly frecholders of $10 l$. per nnnnm, nud honschohlers of a certnin value. There are numerous causes of exemption, which practically extend to all the higher classes of society. Jurors are summoned by the sheriff, on $n$ system intended to take all qualified persons in the cominty as nearly as possible in rotation ; and twelve are selectel by ballot from the list of those in attendance for the trial of oach cause,-challenges being allowed under certain legnl restrictions, but to such an extent as to exclude all individuals who can be fairly supposed to be biassed in favour of either party, or in a situation to linder them from bringing in a conscientious verdict. Plaintiffis or defendants may, if so inclined, pray for a special jury ; persons qualified to serve on which belong to a higher class of society. Witnesses are examined vivâ voce, in open conrt. On verdiet given, the eonrt pronomees julgment, with damages and costs, necording to the principles of law applienble to each case.

Such is the course of an action at common law ; but if the question arising between the parties touch on matters of equitable jurisdiction (which, in teeluical langunge, is said to extend to trusts, charities, matters of account, fraud, accident, aul mistake, in some cases the preferable, in others the exclusive, mode of olstaining justice, is by application to a court of equity. That applica-
tion is by a suit eommenced hy bill on informotion: questions arising in the jrogress of the suit aro determined on petition or metiom. Nut only the pleadings, as in courts of common lnw, but the examination of winnesses, are conchectel in writiug. The judgment of the court is stylent decree. When a doubtful question of fiet arion the jurke will sometimes send the question to be tried by way of issue before a jury in a common lnw coirt; but he is not bound by its verdict in mnkiug hls slestee.

It is a genernl prineiple in conts of law and equity, thut all the proceedings in a cause (with some very tritling exceptions) may be carried on hy plaintiff or defenclant in person ; but this is viry rarely alone, from obvious canses. If not in person, the party can only earry them on by the muthorised ollicers of the court-vi\%. l. Attonery, or solicitors, who are employed itt enrrying onadid or most of the prelimhluary proceedings; 2. Das. risters, or conmsel retnined by the former to ondust the proceeliugs in eourt. Withont entering into teclanical distinctions, it is sumlicient to state that barristals (beghming with the lowest order) are classed as-I. Utter, or within the bar, ranking by seniority ; 2. Serjoants, a borly fomerly possessing the exclusive right to practise in the court of common pleas-now confounded in practive with the next, or third elnss; 3 . Comusel within the bar,-to which rumk they are manitted lop patent cither as king's or quen's connsel or if precedency, enabling thens to take rauk acourding to the dite of their patent. The attorney and solicitor general rank nt. the head of the bat. These oflicers are the counsel employed by the crown in varions contingencies, and consitered as forming part of the administration-going out of ollice along with it. 'Iltere are also other claves of pructitioners, not necessarily barristers, riz, pleaders, employed in trawing pleadings at common law ; and conveymeers, whose business cunsists in Irnwing deeds rehtiug to property.

In the ecelesiastical and admiralty courts, the pleadiugs are accoriling to forms derived from the evil law : evidence is documentary. The tutien of the attorney are execited by officens styld proctors; and the comnsel are doctors of civil lav, graduates of the universities.

Criminal Process.-Crimes are livided by the ancient customary law of England into treason, felonies, and misilemennors: the latter being generally otlences of inferior importance (such as breaches of the peace, riots, and attempts to commit certain other offences), are punishnble by tine or imprisonment only. Parties suspected of criminal acts may be apprehended on the warraut ofs justice, granted only on the sworn testimony of one witness at least, directed to the constable of other peace officer of the district ; but any one mar lawfully arrest one who has committed felouy, of breach of the peace, in his presence. The offenda is then carried before a justice of the pence. I'nless the case be one of those minor offences for which the justice has power to pumish on summary conviction, without the nill of a jury, he party elarged is committed to graol, or ndmittel to bail, according to the mature of the offence. Ile is committed to take his trinl. in most cases at the next ensuing sessions of the peace (cither in boronghs or comuties), or at the next gnol deliver! by the judges at the assizes, whichever may happen first; but eapital, mad in genernl the mod serions, elass of offences are tried at the assizes only. In Middlesex and certain nuljoining parts, offences are now tried by the Central Criminal Court, which sits twelve times a year at least, and is usually attended by two or more judges of the

The offemter ce of the peace. ['ase minor offences for r to pumish on sumto aid of a jury, the to gaol, or admitted ire of the offence. Ile 1. in most casss at the the peace (eithet in he next gnol deliver? izes, whichever may ad in general the mast e tried at the assize ertain aljoining parts, the Centrul Criminal es a year at least, and or more judges of the
muprior courts, and the judieinl anthorities of the city of London. The prosecutlon is then earried on, in the name of the king, by indietment. before the grand jury. This lunly, consisting of from 12 to $\%$ persons (at the assizes, persons of rank in the connty; at the sessions, persons of somewhat infrior station), receives all indictments, and hears the cridenee on the part of the prosecution. If the indietment be dismissed, it is returned to the court with the endorsement ' no bill,' and the accused is free. If the evidence appenr to them primi farie sntisfactory, the bill is snid to be fonud, nud the prisoner or defendant is put on his trinl, The egrand jury is also summoned to thad bills against parties not in custody or on bnil for offulues fur which there is no previous arrest, such as perjury; and these are tried at the ensuing frol deliverv. There is also, in certain offences, ehietly of a public nature, a mode of proceeding by informatim, which supersedes the necessity of min indistment.
The aceused, when brought into court under this preliminary process, is arraignad hefore a petty fury, summoned in the smine manner as the jury ta ciril camses just described. If he plend guilty on arraigument, his plea is recorded, and julgment given. If ho plend not guilty, the trial proceeds. There are also certain plens in bar, or defences to the prosecution of a techmical mature, rarely resurtel to, as the accused by pleadiug them waves the trial by jury. The witnesses are then heard; and if the jury tind the prisoner 'not guilty,' he is relensed; if 'guilty,' he is convicted, and julkment passes. A judgment may be reversed for error of law by the superior conrt; and pardon may be granted, either by act of parlinment or by letters patent of the sovereign, under the great seal. Pardon, and remission of part of the sentence, is, iu puint of fact, obtained through the agency of the llome Office. The sherift is the oflieer to whom the execntion of the sentence of the law is entrusted.
The criminal law of England might formerly, perhaps, have been justly characterised ns sanguinary; but in this respect a great change has been effected within these few years, and capital punishments are now never inflicted except for murder. Among the secondary punishments, transportation long occupied a prominent place. But a notion haul latterly been gaining ground unfavourable to its efficiency, and it has now been relinquished. It was, incleerl, no longer possible to maintain it by sending criminals to Australia; for that, instead of being a punishment, was a favour to the wrong iloers.

Subjoined is a table which shows the total number of criminal offenders committed for trial, convicted and acquittel, in the fifteen years, 1849 to 1863, in Englaid and Wales.

| Years | Committed | Convicted | Acquited, exeluslve of Persons found as lusane |
| :---: | :---: | :---: | :---: |
| 1849 | 27,816 | 21,001 | 6,786 |
| 1850 | 26,813 | 20,537 | 6,238 |
| 1851 | 27,960 | 21,579 | 6,359 |
| 1854 | 27,510 | 21,304 | 6,176 |
| 1853 | 27,057 | 20,756 | 6,265 |
| 1834 | 29,359 | 23,047 | 6,274 |
| 18:5 | 25,972 | 19,971 | 8,967 |
| 1856 | 19,437 | 14,734 | 4,972 |
| $18: 7$ | 20,269 | 15,307 | 4,927 |
| 1858 | 17,855 | 13,246 | 4,576 |
| 1859 | 16,674 | 12,470 | 4,175 |
| 1860 | 15,999 | 12,068 | 3,907 |
| 1861 | 18,326 | 13,879 | 4,4 4 |
| 1882 | 20,001 | 15,312 | 4,651 |
| 1863 | 20,818 | 15,790 | 4,986 |

The number of women committed for trial is, on the average, aboint one-fourth that of men. Among the 20,818 individuals committed for trind in $1 \times 63$, were 16,461 males null 4,1677 females.

Church of England.-The sovereign is hend and supreme governor of the national Chureh of EingInnd; has the right to nssemble, prorogue, nnd dissolve all synods and convocations of the clergy; is the ultimate julfre of nupeal in ecelesiastical camses (an nuthority exercised by the lord chancellor); and has the nomimation to hishopries and some other ceclesinstical preferments.

The clergy of the Chureh of lingland nre divided into three degrees or orders-bishops, prients, and deacons. There are two archbishops and 24 bishops within the realm of Enghoml. They are nominaled to their respective dinerses by the crown; the election belng ly a writ of ronge de'lire, or lieence to eleat, ndllessed to the dean and chnpter of the diocese, accompanied by a letter from the sovereign, lirecting them to elect a certain specilled individual. IFy the canous of the church, every candidute for holy orilers must be examined nid approved by n bishop. The fishop has episeopnal jurisaliction in his eonirt in ecelesinstical matters, and the reneral superintendence over the elergy. An archbishop is the chief of the elergy in his province; has the inspection of the bishops and inferior elergy; and excreises an appellate jurisidiction from the episeopal courts.

The archbishop of Canterhury is the primato of all England. He has within lis province tho hishoprics of Canterbury, Rochester, Loudon, Winchester, Norwich, Lincoln, Lly, Chichester, Salishury, Dxeter, Bath and Wells, Worcester, Lichtichl, IIereforil, Llandatf, St. David's, Imngor, St. Asnph, Gloucester and Iristol, Peterboro', nud Oxford. He las the privilege of crowning the kings of Eugland. Ile is the usual chamel of commonication with the crosvn or the ministers on constitutional questions affecting the interests of the chnrch. The archbishop of York's province consists of the six northern counties, with Cheshire and Nottinghamshire; and iucludes the lishopries of York, Chester, Durham, Carlisle, lipon, Manchester, and the Isle of Man. Ho has the privilege to erown the queen consort, and to be her perpetual chaplain. The arehbishops are the clicfs of the clergy in their provinces, and have within them the inspection of the bishops, as well as of the iuferior clergy, for which purpese they make their visitations, which are now, however, practically episeopal, not archicpiscopal, and male only as hishops within their own dioceses. They have, assisted by at least two other bishops, the confirmation and consecration of the bishops. They have also each his own particular diocese, wherein they exercise episcopal, as in their provinces they exercise archiepiscopal, juristliction. As superior ecelesiastical judges, all appeals from inferior jurisdictions within their provinces lie to them. They have also each a court of original jurisdiction. They have power, by stat. 25 Hen . VIII, c. 21, but now only exercise it upon acenstomed occasions, of granting dispensations, This power is the foundation for the grant of special licences to marry, to sanction the holding of two livings, now restrieted to the Archbishop of Canterbury. The bishop is the clief of the clergy in his diocese. He has the power of ordaining priests and deacons, of consecrating chureles, of contirming the laptized, of granting licences to marry, and of visiting and inspecting the manners of his elergy and people. 'The bishop is also an ecelesinstical juilge; but he appoints a chancellor to hold his court for him, and assist him in matters of ecclesiastical law. In case of complaint against
a elerk in loly orilers, he is empowerel by the Chureh Diseipline Aet ( 11 \& 4 Viet, c. 86) to hold it court in his own person, assisted by three assessors. After the archbishopos, the bishops of Lomion, Durhan, and Winchester have respectively brecedence; and then the bishops of both provinces, accoriliug to their seniority of eonseeration, or translation to an English see from that of Sorlor and Man, which ranks lowent. Colonial bishops of the establinhed chureh huve been appointed by the crown in fort $y$-two of the prineipal liritish colonien, liy ntat. 59 George III. c. 60, the archbishops of Canterhury and York and the bishop of Lomblon are permitted to ordain persons specially to reside and ofticiate in the British colonies. The diserepmey that prevailed in ancient times in the size of bishopries, though somewhat diminished by the erection of new sees at the Reformation, luis continned down to the present tine, and the finconveniences thence resulting have been greatly augmented by the wonderful increase that has taken phace since 1760 in the population of eertalu districts compared with others. To remely this evil to some extent, purlinment appointed a committee in $18: 4$, which recommended that two new bisloprics-those of Munchester and lipon-should be firmed in the principal manufacturing districts, ehletly out of territories included in the dioceses of York and Chester. The commissioners also recommended that, saving the rights of the (then) existing iucumbents, the bishoprics of Gloucester and Bristol should be united, and the bishopric of Sodor and Man suppressed. 'They recommended further that, necording as opportunity offered, sundry deductions should be made from the revenues of the sees of Canterbury, York, London, Durham, and Winchester; and that the surplus revenue so arising shonld be formed into a fund for the endowment of the two new bishopries, and for raising the income of the poorer elass of sees to from $4,000 l$. to $5,000 l$. a year. These recommendations were contirmed and earried ont in most particulars by the net 6 \& 7 Will. IV.c. 77, and by the orders in council issued under its anthority. The income of the bishop of Durlam was reduced in 1836 ; and, in the course of the same year, Ripon was formed into a bishopric. The sees of Gloucester and l3ristol have also been united. The bishopric of Manchester was formed in 1847.

Every diocese lias a clatater, consisting of a dean and a certain number of canons and prebenlaries. The chapter is often styled the council of the bishop; but it exercises, in point of fact, no sort of interference with the ecelesiastical jurisdiction, or with the general superintending authority of the bishop. The chief daty of its members consists in maintaining the constnnt celebration of divine service in the cathedral church. Deaneries are in the gift of the crown; some by the form of election by the chapter (as in the case of bishops), others by the king's letters patent. The canons are variously appointed,-by the crown, by the bishop, or by election among themselves. Iesides the chnpters in cathedral churches, there are also chapters in a few others, which are styled collegriate churches.

Archdeacons are church officers, appointed (in most cases) by the bishops for their assistance in various matters connected with the superintendence of the diocese.

For the management of ecclesiastical affairs, the provinces have eneli a council, or convocation, consisting of the bishops, archeleacons, and deans, in person, and of a certain number of proctors, as the representatives of the inferior clergy; earin chapter, in both provinces, sending one; and the
parochina clergy of each dlucese in the prowince of Canterhiry, and of each nrelideaconry in the proviuce of York, sendiug two. 'These counchis are summoned by the resiective archibishopw, in pursunnce of tho queen's minidate. When ansem. bled they must also luve the green's licenee lelore they can deliberate, ns well as the suiction of the crown to their resolations, befure they are binding on the clergy. In the province of Conterbury the convocation forins two lumases; the urchbishop and bishojs sitting tugether in the upier homse, and the inferior clergy in the lower. In the province of York all sit tegethet in she.

I'ursons are the incumbents of parish churchss They munt be priests; and derive their title by presentation, induction, mad iustitution. Thry are termed rectors or vienrs; the lormer being such us are entitled to the whole tithes of the patish: the hatter only to a certnin portion. Tho number of parochial henetices an linghind and Whats amoinits to aboit 12,000, besides which there are 200 extra-parochial places. The orlvowson, or right of presentation, to nbout one-half the benefices is in the hands of private owners; the remainder belong to the crown (of which the patronage is exercised, as respects livings of inferior value, by the chnncellor), tos archbishops and bishops, ecelesiastical corporations, and mivenities. The residence of ineumbents in their benetices, and the restriction of the right to hokd more than one benetice, have been the objects of a variety of regulations both in canous and statutes, Incumbents may be deprived either by sentenee in the eecleniastienl courts for particulir oflenees or in pursunte of certnin penal statutes. Curatas are likewise priests, licensed by the bishop of the diucese, and nominated to serve eares. Stipendiary curates are such as are appointed by recturs, either to supply their place in case of non-residence, or to assist them; whose salary is regulated by statute, or episcopal anthority. Prpetual curates are appointed to chnrehes in which there is neither reetor nor vicar; or to chapels of ease, parochial chapels, and free chupels, that is, district churches in lurge parishes.

The order of deacon, in the constitution of the English church, serves merely as a necessary proliminary to that of priest. By the canons of the church no bishop can admit any one to holy orders, ' who is not of his own diocese, exeept lie be of either of the universitics of this realm, ot except he bring letters dismissory from the bishop of whose diocese he is.'

The canons of the Chureh of England were made by the archbishop and clergy of the pitsvince of Canterbury convened in convocation in 1603, and ratified by James $\mathrm{J}^{\text {. }}$ They have not been established by act of parliament, aud consequently are linding on the elergy only.

The revennes of the church are derived partly from land, and partly from tithes. The latter formed the original endowment of every parochial church. Ibut a very large proportion of them fell gradually into the hands of ecelesiastical corporations; and a part of these again, at the (lissolution of monasteries, into the hands of private individuals. Out of the 10,500 benefices, mure than 3,000 have had their 'great' tithes, or thow of corn, wool, de.s, appropriated or impropriated: in most of these instances, however, the 'small tithes,' as they are termed, or these of fruit, mill, pigs, and such like articles, are reserved for the maintenance of the chureh. Nearly a third part of the land of England and Wales is wholly tithefree, owing to exemptions enjoyed in former times by religious houses. Tithe is now, by an at

Althomblh the Church of lingland be still recognivel as the national establishment, the oxclusive minivilges formorly enfoyed by its members, ant, mided, all legal distlictions hetween different chases of subjects on account of rellgions opinion, hase, by a serles of changes, been nearly abolished. The chief remaining rights, privileges, und liatilities, while comect the church with the state, are nearly as follows:-

1. 'the headship of the king: as a necessary ansentuence of which the sovereign himselt must he a memberr of the mational church. This beadstip, all persons takiut certain oflices are required to recognise, by tho onths of abjuration and supremacy, for which a declaration is mubstituted int the case of Roman Catholics. Lomme ('atholics are also specitically exchuled from the othee of chancellor, and a few other ligh dignitues.
2. The form of public prayer and alministration of the rites of the church, its articles of helief, and rarions points in its diacipline, originally settled by convocation, are established by the authority of parliament.
3. The archilishops and bishops sit and vote in the llouse of Lords.
4. Although the free enjoyment of their lifferent forms of worship is now guaranteed to all Chistian ilissenters, and that of others (as Jews) tacily tolerated, there are still some legislative pinvisions respeeting them, by which the supegurity of the established church is recognised. Thus, Roman Catholic archbishops and bishops are forbidden to assume the titnlar dignities of their respective dioceses; and public functiouaries are forbididen to attend liesenting places of worship, with the insignia of their otlice.
5. The elergy of the Chureh of Engrand have long acted as oilleers of the eivil power, in the character of registrars of births, marriages, and deaths; but the late act, by entahlishing a new system of ngistration, has materiully alterel their position in this respect, and their exclusive authority is now taken away.
A great deal of discussion has taken place at differeut periods with respect to the right of parliament to interfere with the property and reveaues enjoyed by the church. It is now generally almitted, that parliament is entitled to alter the distribution of the ehurch revenne; but it is conteaded by many that it has no right to take away any portion of such revenue. But a pretension of this sort is totally inadmissible. Whether it rould be wise and proper to make any such diversind is a matter dependent on circumstances, and tobe jadged of at the time ; but there is no principte or right of any kind to hinder parliament, should it be so disposed, froin dealing with chureh property as it would deal with anything else. An established church is neither part nor jarcel of religion: it is a mere human institution, with functionaries appointed and paid by the state; and should parliament be honestly impressed with the coaviction that the great interests of religion and merality will be better promoted by diverting a prtion of the church property to other purposes, it isnot entitled merely, but it is its bounden duty, soto divert it. The rights of existing incumbents ought, of course, to be protected; but provided this be done, parliament is quite as much entitled to remodel the chureh, and dispose of its property, as it is to remodel tho army or the navy, or todisband a regiment, or pay off a line of battleto diss
thip.

Dissenters from the Clurch of bingland are now, after more than a century of strughles, placed entirely on an equal fonting with its members in respect of prolitionl rights and privileges. The dissenters conslas prineipully of,-

1. The Loman Catholics, who have inereased, chielly through the immigration of Irish lalvourens, from 60,000 to about $2,000,000$ since the accession of Ceorge III, 2. The members of what are comnomly calleal the three denominations-l'reshyterimas, Iudejendents, liaptists: of these, the first, since the period of the evvil wars, when for a short time they lund political power and tho revennes of the ehureh in their lunds, have rupidly dininished. Many of their charches have become Unitarian. The Jndependents or Congregationalists are so termed from assertligg, as their fundamental prinelple, the independence of eacli separate congregation. I'hey are numerous, and have, for the inowt part, retained the fandamental doctrines, professel by the great majority of Chiristians. The Inptists are illvidel into general (or Arminiant) and particular (or Calvinistic).' 3. Of the Methodists, there are likewise two prineijal divisions. The Weslogans, the most powerfinl und important, whose origin was about a century ago, now number about a million and a half of members. 'l'heir dissent from the chureh is less complete than that of other sects. The Calvinistic Metholists are chietly established in Wales. 4. The Quakers are more remarkable for the singularity of their tenets and observances (althought their strictiness in the latter appears to be on the decline), than for their numbers. 5 . Jews are not numerons in England; but are supposed to have augmented considerably of late years.

Noinformation refarding the number of persons belonging to the episeopal church and those anllering to other religions creeds in England is given in the last oflicial census. It appears, lowever, from the returns of the registrar genernl that, in the year 1861, out of a total number of 163,706 narriages, 130,697 were solemnised acconling to the rites of the established church. Of the latter number 102,955 were after publication of banns; 20,090 by lleence; 4,048 by superintendent registrar's eertiticate; and 16 by special licence. But this statement does not represent the real numbers with perfect accuracy, as 3,588 marriages were not distinguished in the registers in respect to these particulars. The number of marriages performed otherwise than agrecably to the forms of the established ehurch was 33,009. Roman Catholic marriages were, 7,782 ; those in the registered chapels of other religious denominations, 13,182 ; those of Jews, 262 ; of Quakers, 58 ; while marriages contracted in superintendent registrars' offices were 11,720. In 185l the marriages in the established church were about 131,000 , and in 1861 they were nearly the same number. In 1851 those not performed in the established church were about 23,000 ; in 1861 they were 33,000 . It appears from these figures that an increase of 9,000 , which the total marriages in 1861 exhibited, as compared with those in 1851, was appropriated by persons who married according to other rites than those of the established church.

In 1861 there were in England and Wales 4,564 buildings belonging to Roman Catholies and dissenting denominations, and registered for the solemnisation of marriages. A third part of that number belongel to Independents, 1,000 to Baptists, 895 to Wesleyan Methodists, 551 to Roman Catholics, 193 to Calvinistie Methodists, 152 to Unitarians, 137 to Scottish Presbyterians, and 141 to various other bodies who have not yet aequired numerical importance.

The number of Ioman Catholiea in Eugland has grently increased within the last 30 yenrs. The late Cardlual Wiseman stated at the Congress of Malines, Aug. 25, Ikiis, that, in tho yeur 1s:10, there were, In England nud Wales, 4ill priests; and that in 18183 there were 1,242 . In 1830 the churehes wero $410 ; i \operatorname{lit} 1863$ they were 872 . There were ifs convents in 1830, the number has arisen in 18663 to 162. In 1830 there were no houses for ruilgions men, but in 1850 there were eleven. In 1 sitis the number amounted to 53 . Another report -in the 'Catholic 1)ireetory;' Loma, 1804-gives the following statisties regrorling the number of Loman Catholic priests, churches, and communities in Great Britain:-

|  | 1854 | 180.3 | Increase |

The present Roman Cathelic population of Great Britain is estimated at $2,000,000$.

Public Education.-In England no system of public instruction has been established by authority of the legislature. Sehools have, however, been estaltished in most parishes, and very large sums have been left by private individuals for the purpose of supplying gratuitous instruction. Almost all the grammar schools in the kingdom owe their origin to this souree; and there is, perhaps, no comntry in which so great an amount of property has been appropriated for the eclucation of youth. Many of these bequests have not been snbjected to any controlling authority, so that they have not unfrequently been embezzled and divertel to other purposes than those for which they were originally destined. Still, however, the amount of property applicable to educational purposes in England is very large. It is believed that, at this moment, the incomes of the estates and other property left for edncational purposes would amount, if properly managed, to about 400,0001 . a year. hut it is well known that the management of such property is far from etticient; and the utility of the funds that are realised is greatly impaired by the conditions and restrictions under which they are applied.
The grammar and endowed schools appear to have been principalty intended for the use of the upper and middle classes, especially the latter; and it was not till a comparatively recent period that any vigoroua effort was made to supply the lower elasses with education, or to bring this most important instrument of civilisation and advancement witbin the cemmand of the children of the poor. But during the present century a great many schools have been founded, having. this olject in view. These consist principally of what are called National, British, and Foreign,
nul Sunday schools. The first, uxider the contme of the National Society, are comblactel on the system recommendell hy Dr. Jlell of' Malra, ne and uso thu catechismo of the Church of Liughum, and which they are closely comected. She sellownd of the lifitish and Fureign society are notem. nectel with any religious sect, but are opren to and bupils of whatever creed. Sumblay Sechenkes ealleel from their levelut "pen only on Sunilay belong to all denominations of dllssenters, as wey as to the Church of Eingland.
Subljoined is a talile civing an account of the primary sehowls in bugland nad Wales, shawing the number visited by the poverument inglecurs, the necommodation for the children, nuld the number of eliililren present at insprection, in the tell years 18 in-133:-

It is sometimes sold that, speaking generalls, edueation in Emgland is of an inflerior desseriptind; and that, in point of quality, it is below the stundard of Prussia, Hollanil, and some other countries. It is doubtfinl whether this be the fact; tlough at the same time it cumnot le deniced that it is to the freedom of pulitical institutions, and the scope given to talent nad enterprise to elevate their possessor in the seale of wenth and distiuction, nind not to elucatioad systems, that the progress made by Euglishmen, and the triumphs they have achieved in all departments of industry, science, and literature, are to be ascribed.
The superior grammar schools, and the tro great universities of Oxford and Cambrilge, are especially appropriated to the education of the higher classes. An account of them will be found under the articles Cammindele, litos, Oxfond, Sc. The London University is, strietly spenking, only a board anthorised to examine individuals educated at certain places, and to grant degrees to qualified persons.
Poor Laws.-A compulsory provision for the support of the poor has long existed in Ewyland It grew out of the impotent attempts made in the reigns of Henry VIlI., Edward VI., and the earties part of that of Elizabeth, to suppress mendieaney, and at the same time to provile for the pour fin voluntary contributions. At length, the earlier statutes on the suljeet were consolidated, and the prineiple of compulsory provision camied to the fullest extent hy the famous statute of the 43 Eliz. e. 2, which enacted, that all maimed and impotent persons should be provided for at the expense of their respective parishes, and that employment should be found for the unemploved able-bolied poor. From this remote periol, ile law of Enginud has regarded every parish in the light of a family, the rieher members of which were bound to provide for those who, through inability, misfortune, or want of work, could nd provide for themselves. This, also, is the principle emberlied in the law of scotland with r speet to the poor; and provided the meus fir carrying it into elfect be so contrived that ind-

y provision for the existed in Eagland ttempts made in the d Vl., ind the carlien uppress mendicancy, visle for the poor ly length, the earlice ce consolidated, and provision carned to nous statute of the , that all maimed be providel for at ve parishes, and that for the unemployed remote perial, the every parish in the members of which those who, throngh t of work, could not s, also, is the prinf Scotland with reided the means bot contrived that indi-
pence and nuffering may lie relieved, without at the sane time encournging Indolence and vice, the system woulil seem to be quite unexceptionthe l'ractically, however, this has been found to be a problem of excceelingly diffenlt solution, and not $n$ few have comeluded that, however administered, all systemintic attempts to relieve the miniseren, necensarlly, in the end, productive of uncensed want and misery.
The poor, no doubt, are maturally anxions that the compuisory provision for their anpport should be raised to the highest limit, and thit their neceswics shonld not only le relieved, but that they whould be able, without molestatlon, to eat the breal of illeness. Int wherever the assessmeat and administration of the provision for thir support is left to the cure of those on whom the burien of its payment really fulls, this cembucy to nbuse is not long in being efliectually provided mgainst, and the sustaining and beneficial intlucuce of the system alone remains. The cunplicated code of laws resperting settlements, anil the establishnent of workhouses, owes its orinin to this principle - to the wish of the lefisature to relieve the poor, and, at the same line, to prevent the alnise of the rates; and there is umquestionable evidence to show, that, fon the entablishment of the system in 1603 down to about 1780, the devices in question were effectual fur their olject; and that white puerty was relieved, no encouragement was piven to sloth, or to carly and improvident uniums.
But som after this period various innovations were made on the old law, which broke down most of the securities against the abuse of the rates; and, in 1795, the principle was adopted, of mixing together wages and poor-rates, and of ehing out what whs suphosed to be a defleiency in the former ly payments from the latter. In consequence of this subversion of the principle on which the poor rates had been previansly alministered, they began rapidly to increase, and theatened to swallow up the whole, or, at hast, a very large part of the surplus produce of the land. Varions devices were resorted to, widl the view of checking the evil; but not one of them had for its object to revert to those pracliess and mode of administering the law, which the expericnce of more than 250 years had shown wate fully effectunl for the prevention of abuse. At leagth the P'oor Law Ameudment Aet was pased in 1834, which introduced a totally new sstem for the administration of the poor laws. Cinder this act the country has been divided into unions of parishes, aecording to circumstances, the alministration of all matters relating to the poor in these unions being entrusted to a board of guardians elected by the rate-payers. These guardians are themselves controlled by, and, in fict, are merely the executive officers of $a$ central board of three commissioners established in London, who Lave power to issuc rules and regulations as to the manarement of the poor, which all guardians, and other inferior officers, are bound to obey, The central board is assisted by deputy commissioners, whoattend at meetings of guardians, explain the lan, and adjudicate or report upon extriordinary cases, and see that the rules laid down by the central board are complied with.
To the Poor Law Amendment Act of 1834, some additions, having for principle the enlargemant of the respective unions, and the more egral spread of the burthen of taxation, were made in lett.
Subjoined is a table of the sums expended for the relief und maintenance of the poor of lingland
and Whles at elifferent periods since 17.18 , with an estimate of the popi at these perionds:-

The year $18: 19$ is the tirst year for which tho netunl number of persons recciving relicf on a given day can be returned.

Public Amusements.-There are few things, probably, in which national character and habits are displayed more truthfully than in popular sports and amnsements; and though none of these be in any way associated anongst us with civil or religious polity, as in ancient Greece and Fome, and some modern Catholic mations, they are still of suthicient importanee to justify and require a short notice. Fichl sports comprised almost the whole pastimes indulged in during the enrly periol of our history: they were materially moolified by the game laws introduced at the Norman period, and which have descended down to our own times. Many generations have passed sinee the chase was mimicry of war; but so far as clanger and excitement ure concerised, fox-hanting and steeple chases may be considered as nubstitutes for the clase of the wolf and the boar. Arehery ranked amongst the most popular and important of the old linglish sports, and constituted the peculiar boast of the ancient ycomanry, as is shown by the ballads, that form so jeculiar and valuable a portion of our carlier literature, and which give by firr the most faithful and striking illustrations of this and other matters connected with the halits and manners of the commonalty. By their means the fame of the ontlaw, Kobin Hood, has already outlived that of many a legitimate hero, and bids

## BNGL.IND AND WALIES

fair to nutlise that of many nore. 'I'lu wild hone was an object of the shase down to the stomers, and deur may, in a limitul sumse, be still comsidered as surfl. The fins, hare, and otter are at prosent tho only wild numuls that enn in a general sense be anill to perpetnate the chase. Puxlunsting may, in fact, be sulil to be in an eapecial manner the out-doser sport of the comentry fentlemen of Vinghand at the present day, Comrsing and falconry were sports rostricted to thoses of sentle bloosl; the latter has long beren whalete, in any popular sense, thomgh, like archery, it is inrluged in by a few individuals. l'artrifge and grouse slooting are univerwally jopular amomgat the comntry gentlemen; aul lishing is also extensively practised. Amongst the lower classes wrestling la one of the most popular of the odtdenorsprits: it is followed principally in the northern nul western cos., but the molesinre essentinlly distinct, that of the former more nenrly resemlwing the fashion of the ancient athlets. Quarter stafif and loxing nust also be considered as peenliarly English in their character; but prize-lighting appears to have got somewhat int of fashiom, and the same may be sain of bull-baiting and cock-fighting, once so general, with other sjurts of a like brutalixing character. Horse races are of comparatively modern origin, nul have attnined to the aeme of popularity With nll classes, from the highest to the lowest. The races nt lipsom, Doneaster, Asent, (Goodsood, und other plnees, attract vast crowds of visitors; and nowhere is there to be seen such a dispiny of magnifieence, numbers, good humonr, and love of enjoyment, ns may be witnessed nt these meetings. Cricket grounds and bowling areens maintain their popmlarity nmongst the more respectable classen, ns thone for akittle playing do amongst the lower. Bont-racing may be noticed as a popular amosement that seems to be grining ground; and the regattas, or boat-matches, that are now nunually got up in several sea-port towns, are very well attended. The holyalay fair or wake comprises most of the varlous nmisements in vogue, nud is usmally annual : some of the more ancient of these appear to have lind a religious orifin, others had business, wholly or partly, in view: as popular festivals, they are all fast degenerating, and bia fair to disnppear nltogether, at no very distant period. In-rloors, billiarils have replaced the oncient sluflle-honril, and cards, though still pretty genernl, are rapidly giving way to music nud conversation: many minor customs, once universal favourites, miglit be numed, that have wholly disappenred, and thongh the holly and the mistletoe are still seen in the majority of houses at Christmas, few other of the oller enstoms or sports can be said to survive, in any stato of vigour: cyen blinlman's buff and hunt the slipper are now but rarely practised, and never in renteel society. Dancing keeps its ground, changing its charneter according to the clamges of fashim. The matations that linve occurred in dramatic representations from the time when they were nswocintel with the festivals of religion, and ehiefly limited to scriptural subjeets, down to the allegorical masques of 13. Jotism, which Milton's 'Comus' shows lingered $0 \mathbf{n}_{4}$ ' 9 a later period, form a wide field for investigntion. The Christmas mumming (that mny still, perhnps, be witnessed in some remote corners, improving the stories of St, George anil the Dragon, or Fair Rosamond) seems $n$ lineal descendint of the old mysteries; the mountebank and his merry Andrew, and Punch and Joan, appear to have made their tinal exit from the scene. It would require fir more spnce than can be afforded, to mark the various changes in
what has been called the legitimnte irama, whome manter-pleces worn produced in the carler inet of its eurreer during the roigns of Elizalseth and James I. 'I'he druma lins, at the present time, luat the greater part of its predomlinating lithamep, fue which two camen may be assigned, - He theatres luve ceased, owing to the greater Inteness of the clinner hone, to be the resort of fashion, whome in. thenee in liogland is all bint ommpotent: and they are monupolies which, in the long run, alwan, have $n$ deteriurating inthence over literature as well as industry.

In so fur as the metropolis may be consildeme an lindex to the community ut large, musie would seem to be rapilly advaneing ln jepmolar fanour: nor can it esenje notice, that the momas taken to popmlarise senlpture and painting are fast umentil. saing the propensities which Inturally rexulion from want of perception and sympatly with worn of art. The results of all this are sulliciently obs. vious, in the more tranguil and rellued tone that pervades most places of public resort, mull in the greater taste for country excursions, readiug, and quiet amusements.
Iatugurufe. - The English Language ix priucipmlrs of Anglu-Sixom origin. The Guthie ur limpic oecupnits of the lowar and more fertile parta of the country, at the equels of the Roman invavion, and the sitixons by whom the country was oserntin subsequently to the withirawal of the lomans were congeneroms races; so that the langasye of the latter easily became that of the peopile gene rally. After the ennģnest of the kingrium bo Wlliam duke of Normandy, the Numan ina guage becane that of the conrt, the nolility, and the courts of law ; but the inflix of Xorman settlers was too ineomsiterable to have aiy material Inthence over the langrunge of the lulk if the people, which contimued to be essentaliy Saxon. In the course of time, the proyudices if the linglish monarchs of the Nomman lite in favour of their continental dominionsand soljeects, lost mmeh of their influence, nud being bret in England, they began to become familiar with, ant use the langunge of, their binglish sulyeets, In 1216, I Lenry III, issmed a writ in the Anglo-Sasm tongue. Not long after, English was aubstituted instead of Freneli, in viva voce proccediugs in the courts of law ; and though written proceedings in conrts were carried on for a considerable perime longer in a barbarous jargon, half French anil hal Euglish, the latter was ordered by statute, in the reign of liolward III., to be thenceforth exelusively used in the courts. It is curions, however, that, notwithstanling this enactment, the statutes contimed to he promnlgated in French duwn to the reign of Kichard III.

During all this period the Anglo-Saxom wa gralually nequiring the distinctive chnarters of the limglish language. A great many Frend (and eonsequently latin) words, through our ling eontinued connection with France, successively fonnd their way into the langrage; and it als was enriched by worls derived from the Greekand other tongnes. Wyeliffe and Geoffrey Chancer who flourished in the 14 th century, may be n garded the one as the father of English prose, and the other of English poetry, During the bith century, the language advanced but little; but previously to the cluse of the 16 th century, it had in a grent mensure, attnined to the form and standard which it now exhibits. During the reigms of Mary and Elizabeth, many additional French num some Itnlinn and Spanish worls were intoduced. Still, however, of about 38,000 wonl which, excluding the preterites and participles a verbs, the English language is supposed to com-

It in forcign to our sulijeet to enter into nny details as to the works that have been written in Engliah. Suttle it to say, that there is no department of literature, philosopliy, or selence, in which Einglish writers hiave not atenined to high, gad, in not a few insfancen, to unrivalled excellence. For a lengthened perionl, our phillosophiliend and politieal literutures has had much more of a pratical than of $n$ theoretieal or njeculative chnerater; and the tasto for metuphysical inquiry hins almost entirely clisnjpurared. W'ithin the last few vears the great object lias been to difinse litemture, and to secure the sulfragen of $n$ while, ruther than of a select circle of rembers. The inthence of this change on the elarueter of our literature, num the tante of the pmblic, cammot yet be fnirly apprecinusl; perhajos the former will gain in clentness and lose in depth; and it. is not inpossible that a hwerstambard may be formed of philosophical and ituray eminence.
Chilition of the People,-Some remarks linve alrady been male illiserntive of the improvent cundition of the great bulk of the people in the precent timen, as compared with their comdition at mure remoto perlods. Speaklig generally, all dases are now incomparnbly better fed, better buiged, mid betfer elothed, than at miny former equeh in our history; The incrense in the comsumption of butchers' meat whee 1770 has beell mare than double as comparell with the inurense of the population; and the inerease in the consumption of ten, sugar, coffee, de., sinte the same priond, has heen quite unprecelenten. In fiet, tho ponrest indlividunls nre now in the duily enjoyment of many descriptions of lixuries that were, ao further back than the 17 th century, unattalisable even by the richest lords. Ten ninl sugar are nuw become necessaries of life; every cottare is well furnished with glass windows, and maids of all work are now quite ns well aud neatly ilressed as the dachesses that flgured at the court of Queen Aune. It is not, lowever, to be denial, that, notwithstanding this signal increase of prosperity, consilerable distress exists among certnin classesespecially among the agricultural labourers. The depressed condition of this important class of the pupulation nppears to be owing to a variety of canses, which, however, may all, or nearly all, be traced to the one great evil of want of educntion. However, this is an evil remedied from year to rear, and, without indulging in too sanguine andicipations, it may be said that, provided tranquility, good oriler, and that perfect security essential to all grent undertakings, be maintnined at hume, the fair presumption is, that the prosperity of the country will go on increasing for a very long period, and that Jingiand will indefinitely maintain the prond distinction of being the richest, most industrious, and luppy of European nations.
llistonical Sketchi-After all the disenssiens which lave taken place respecting the history and charneter of those native tribes which weupied Britain at the period when the Romnns tirst reached its shores, thus much only appenrs to have been determined with any degree of probability, that they belonged partly to that grent family of the limman ruce called the Celtic, and partly to another great family called the Gothic. To the fomner belonged the Cymry, or inhabitants of Wales, and of the Western, and, perhaps, also, the Northern counties: to the latter, or Gotlis, helonged the Helgre, who, having emigrated from the Continent, ocenpied the enstern, lower, and most fertile portion of the country.

The vixit of Julins Capant io Itritnin ocemrred 65 years before Chirist. Frobs that time it remained inmoleated by the liommins for nearly 90 yours. In A. 1. 4i3, Anhas Ilantins, (lempiteheit liy the emproror Clandins, hegan its emonuest, which, lis the spince of ahont it years, was completed, with the exception of the northern part of seothand, lito which the liomana marcely penetrated.

The Romans introluced, to a great extent, their arts and civilisution into this remote prosvince, Thirty-three large towns, aul many milltary atationa, were comiected together by misniffeent roals, constructed hy the labone of the lommen soldieps nut provincinds. It is probable that, letween these aeveral contres of civilismian, much of the comintry remained in that state of forest in which the fomans liad found it. Still the population of lioman lritain must have heren large, inut its progress in rethement comsinemble, for two centurles after the sanquest. After that tine, the declining jower of liome yielded to tho therce attacks of the northern tribes of the inhond, and IBrinin beenme, to a certnin extent, imbependent of the empire, but only to suffer the uora frum these there assnilauts.

Of the history of the long period which elapsed between the retirement of the lioman urmion from our island and ita conquest by the sinxoms, we possess 110 memorials suthoiently nuthentic to form a comeefed marrative. It appents probabile thant the hereditary chlefs of the amcient lititish tribes, who had lost their anthority during the perial of colonial government, resimed it to $n$ certain exfent; that in the larger towns, the elerical order, together with a eommeil of mmgistrates and citizens, exercised almont repuhlicinn anthority. 'The exnet ern of' separation from the empire of Rome cnnmot be fixed; it seems to have been elfeeted $A . D .409$, when the letters of the emperor lonorlus cominanded the cition of Britnin to 'provide for their own defence.' Abont forty yenrs later, we find no distinet trace of mumicipal goverument left ; and the country inder the government of n number of petty chieftains or kings, and overrm even to the extreme sonth by the incursioms of the Caledoninn tribes. At this period (A. 11. 449), Henglst and LIorsa, Snxon lealers, manging the const of the Ilitish, Channel whth three of their pirntleal vessels, were invited hy Gwrtheyrn (Vortigern), a British prince of Kent, to serve grainst these northern invaders. live thousand anxiliaries soon arrived; quarrels arose betwern the lbritons and their guests ; nul ( $\mathrm{A}, \mathrm{D}, 457$ ) the latter conquered Kent for themselves. Such are the outlines of the ancient story recorded ing Gilias. In our critienl times some have contended, that the names of the lenders (both signifying a horse) prove that those personages are themselves as fabulous as the well-known tale with which they are comneeted, of the marriage amil dowry of the benutiful Rowena, the defeat of the Saxoms, their return, and the trencherous neizure of Vort $i$ gern; all of which are mentioned only by later IIritish writers.
The conquest of the grenter part of Britain lin the Saxons, Jutes, and Augles, oceupied a spmice of about 130 years, from the landing of Hengist. Five British states, Strath-Clyale, Cumbrin, North and Sonth Wales, nud Cornwall, mantained their existence for $n$ somewhat louger time. Three: Snxon kingloms (Sussex, Wessex, Essex), ome Jutish (Kent), four Anglian (Bernicia, Deira, East Anglia, Mercia), were formed in this perionl.
The Anglo-Saxoms were a people divided into varions castes. The kings, or enldermen, reigneil by a sort of herelitary right, without any strict adherenee to the laws of suecession, but all clamed
deatent from the origimal race of Gllits. The thobillity, 'enrla,' 'earlewinlmens,' of 'thanelorn,' were A elawn пиигt, like thowe of conthuental nobles at the present day. 'The thiril clans was that of the 'ceorla, or jgnolile: placerl in a wate of depeaitenen on the nobility, yet freemen awsoriling to the law. 'Thair rank, an compureal whili that of the noblere, was ewthated hy the dillicrent valuo of thelf compurgatory ontha, ili giving evidenee, and of their liven and jersons, aceoriling (1) tho 'weregild,' or legal sompensation for blowal ; mamely, onte-sixth. Fivery freeann was presumpilvely at
 A clans of thene 'sirls,' possensed of limiled pros werly, yet nut 'lorik,' weelus to have oredpifed, like the equites of the ltomans, a mort of intermodinte rank between the patrielams and plebelanm,
 thanes, de. They meem to have had the priviloge, dened to the ceorl, of choosing their owis lorils. 'The courls, ont the other hami, were 'bonile,' attashed to the ghobe; and mighe be the andijects of gift or beguent alomg with it, hot as alaves, but as apmintemant to the proprerty, 'lhey took mo jurt in the prititieal gevernment of thes realm. Lasily, the theowes, or serfis, were slaves in the fill iniport of the worl.

The territorlal division of limgland, under the Anglo-isaxome, into comintion, hinuireds, anil tythluge, is of very great antiguity, and formed the basis of their eivil fustitutions. The enarl, the liamilreder, mad the tything-man, presided respectively over thene dlyishome. Jinela of thene oflecers held a court of justice, whilel was attended by the landed projrietors: mud by the well-known enstom of 'frank-jledge,' the muluerior or noble was rendered respousilile for the nets of hls inferior or man; and the vichage, enllectively, for those of its members. The witenagemote, or assembly of the wise men, seems to have been, in its origimal miture, rather a hifh court of justice, for the reuress of complaints by or agninst the rreat men of the realm, than $n$ legislative assembly. The earls, aldermen, and hipher prelates attended it; ans it is probable, though uncertain, that the lurghs sent deputies to it. Topether with the king; it constituted the sovereign power of the empire; the Sinxon kings usmily promulgated their lawn, ns enncted by themselven, with the ndvied of their 'witnin;' and the succession to the crown was dixed by their determinntion. The conversion of the Anglo-Saxoms to Claristianity was commenced by Augustine and his compantons, missionaries despatehed by firegory VIS. in the begiming of the seventh century, and proceeded with great rapidity to eompletions. Although the religion of Clirist hat been introndued for tive centuries at least into the conntry nomone the liritons, it had sumk so eompletely into tlecay in the revolution which followed the fall at the Reman empire, that, from the reconversion of the island under its Sinxon masters, we date our episeopal suecession, and the foundation of our religious entablishments.

The tirst appearance of stpremary nomong the numerous chichtains of the Angho-suxons oceurd in the instance of Ella, king of sussex, who having, in consequence of a great victory, obthined a temporary anthority over the Ibitons, assumed the title of Bretwalda (ruler of the Jiritons), about. A.I. 491. During the loug period of the sinxon conguest, severnl indepuchent states were foundech, of which the principal and berit known uro Wessex, Sussex, Kent, Dissex, Deira, linat Anglia, Northumberlmad; and henee has arisen the well-known term of heptarelyy; which, however, is substantially erroneous, inasmuch as
at mis partlenlar point of time dill these mem atntes exint linlepronlevity of ench othor. Sevent princes, who liy cominectlon of compuest odsained a niprerlor juiver tu the reat, nasumed lill maceesaming the title of Itret walilis, whieh eventurilly (A.t, ©itin) was hell by lighert, klug of Weswex, commonaly regariled as the tirnt klug of binglimul.
'Thu necemsions of' bighert to thin illguity was eur temparary with the ilrat lisuashim of the batiog Fiof a centary and a lialf from that tham, there liromila were contionaslly rejeaterl. All midmano tial progreas in civilimationi was eflicetually atrested lyy this torrible cail.  clvil wars; and the wenker party habithally collion upon this jwwerfni forejgn enemy for suppurt. The relpg of the prent Alfred, the mont brilliant in the Snxon ammaly, took place townarils the midele
 (Ahelstill and lithmum) the Saxom sway was extemberl, lsith by the repalse of the Dates, and by the malyugatlon of tha liritons af Cumbrian nad Devonshirc. Hue the Danes agrain surcereded in werrumbing nlonowt the whole uf linuphul; and lnexme, In fhet, not only the chloflulam, but the progeritors of a largo propertlon of the papmation of the comatry N. of the flumber, and of the enat betaven that river and the Whall (tho anchut Danelnge). At length, mider siweyne and Canute (A. 1), 1017), the Danes becomo maxters of the kingiorm, whieh, however, they only held fit $2 \cdot$ yearn, or till 10.11, when the erown devolvel on an Auglo-Saxom prince, balward, surnamed the Confessor. Slx powerful earls, Danes and Eime. Jlshamen, dlvided the eountry between them, uader hifs authority, which, during the greatet part of lis relint, was little more than nominal At his denth, Jlarold, one of these chidtains, disregariling both the claims of Eilwaril's natural successors, mad those of William, luke of Sire mandy, his kinsman, to whom he had bequenthed the crown, neized it by force. Willam, having determined to vindiente his prefensions by force of arms, involed liupland with a powerfill army; and having defented and killed Haruld in the decisive battle of Hastings, on the 14th October, 10tit, succealed to the throne.
I'he Norman Conquest is the great refa to which reference is ordinarily mude as the beginuing of n new order of things in luglish hastory. The immedinte change, however, consisted chitely in the division of the lands of the kingiden into 60,000 knights' fees or estaten, nmong the followess of the Conqueror, ns feudal loris. Feudality existed nmoug the Saxons as well as the Normans, Bht the tie whieh comnected the inferior with the superior was more one of persomal servief, and less strictly ferritorinl in its nature; nor were the pecuhar incidente ot military tenure, as anderstomed in France nad Germany, known among the AnghoSaxims. Sinon after the Conquest, the preater part of the territory of jingland became in fatt, as well iss by the gift of the sovereirn, tho pore perty of the Normmn kniphts. But it seems certain that a large proportion still remained in the hands of Saxon nad Danish thaces, who either keep posmession of the lamals in deliance of evasion of the royal grants, or by comprasion with the Normans to whom they had been assigned. The class immediately wider the mobles - lhe frecmen or ceorls of the Anglo-Sason perionl-it the villoni, bordarii, and cotarii of Domesalay lbook be rightly considered ns repesenting that class-appears to have comprised

From the Norman Conquent to the accesmion of hilwanl I. (1066 to 1272), the principul circumgances which flx the attention of the reader of brisish history are-the dinputes between the Simanand liantagenet kings and their burome, agether with the development of the fendal nysstem; the guarred betweens the noverelgns and the charch; and the foreign relations of linginnal, anisigg out of the French provincen helil by lts lings as feudal lords. As, according to the prithciples of the feulal law, overy muperior loril hand a muth, consisting of all those who held land immediately of him, so the king's tenants in chief frumed the highest court of eommen council of the mam. It consinted, consequently, not only of the grater barons, but of wich inferior ones as were maler no smerlor lord, but held directly of the king. that the former maturally acpuired a preporderating share in it. Backed by the people, ithey contended with their sovereign for the rights which were thally established by Magna Charta, in 2216 . The greater part of this celebrated intrument is difected ngainst the nhuses of the king's prower as feudat lord; but it established the two great principles, that no one should undergo the consequenees of a criminal act, unless by the fudment of his peers, fromn whieh, through a ranity of changes, adapted to the necessities of paticular times, we derive our modern trinl by jury; and that no 'scutage' (origimally a peeuniary contribution assessed in lieu of military ser(ice) should be levied, except hy consent of the grat council of the realm. This provision, frnmed eq lehalf of the king's tenants in clief only, has beome the basis of the popular right of taxation by representatives, Continued disputes respeeting the extent of these privileges, and the pride of the mobility, led to the lonrons' war it the reign of lleary III., in which Simon de Montfort, enrl of leiester, for a time governed the kinglom, and sulvened the first meeting of the great eouncil, or 'parliament,' to which representatives of the rimmons distinetly appear to have been summonel. This was in 1265-six centuries ago.
The two great points on which the clergy and the crown were at issue, from the reign of William Rufus to that of Henry 11I., were those of envestitures, and of the jurisdietion over ecelefinstics. The first, in point of fact, involved the
guestlon, whether tho tempornlition annexed to the highier ellleen of the church, mueh an biahuprien and ablinge, whomit be lit the gift of the erown or the jonje; the meeonil, whether elerpynen, in erlminal proceellinga, shonhth be milject to the royal courth or their awn. Stepheis coniceded the point of liventitare: but Ifeury II. strongly reninted the clematids of the chinreli, and, by the Constlenthois of (:Inremion ( 11 H ), nliropated many privilegen which it had provioninly enjoyal, inder pretence of rontoring ancient law. Ihit the opjomNithit und martyrilom of ISecket turisent the seale agninast the royil authority. Heary wan furced to recede from him domands. The quartel of inventlturen was agnin renewed lin the roign of Jolin! nul that prfice, prewned by the dittleultien of his position, bot mily yielded the print, bint owned the fendal muperioflty of the nee of liome. llat the power of that chureh neemed mulilenly to devay, nfter uttaining the full recognition of her righte: lit the long reign of Itemry III, thet jurlediction of the royni courts wan milently extomied over ceelesiastien, and the jrize of no proI racted a struggle was partinlly yleded with little reninthine.

Willian I, and his immelinte succennors jonмеsmed uo eouitinental dominions except Nornumaly, for which they owed faliy to the crown of Praise. Hit the honse of Plantagenet, to Which Henry II. belonged, were masteps of the provineps of Anjon, Tournine, and Siaine; to whlelithat king alded Gulenne and Poicton by murringe, null flrittany by conquent; so that above a thiri part of france was under the immediate Jurisulictlon and sovereignty of the kings of England. Henry was mecceated by his eldent aon, Rlelinri, surmamed, for his bravery, Cabur ele Lion, After greatly distinguinhing himself, nud udilng to the ghory of the Euglish arms by his exploits In l'nlentine, the was arrested and imprisoned at Vieuna, on his way home, und did not recoser his freedom till he had agreed to pay all ehormons ransom. Ite soon after died from the ettects of a wound he received in an attaek on a castle near Limuges.

Hicharl, linving no issue, was succeeded, in 119!, by his brother John, surnamed Lackland, whose reign is one of the most inglorious in the Duglinh annals. During its continuance, lhilip Augustus, king of lirunce, un able and politio prince, re-united to the French erown aimost all those possessions in France that hud been under the fendal sovereignty of the klogs of Enprinnd. Ihut this loss was in some measure countervailed by the conquest of Ireland, commenced in 1172 , by the Norman chieftains of Henry II. The subjugntion of that isiand was not, however, completely accomplished till about four centaries after.

But the reign of John was chiefly remarkable for the concession of the Gireat Charter (Magna Charta), signed at Runnymede in 1215. In the following reign, under Henry III., the commons, as alrendy stated, wero expressly summoned as constituent members of parlinment. The foundations of the constitution were thus laid; and meabs prepared fur that gradunl reluction of the realm uider a more regular form of govermment, which was in great measure effected during the long reign of Elward I. ( 1272 to 1307), one of the ablest and most successful princes who ever sat on the throne of England. Under him, the grent. comseil of the realm assumed a form resembling that of the modern parliament, by the separation of the greater barons, from whom the modern peerage is derived, from the great body of the tenants in chief; the former being personally

## ENOLAND AND WALLA

oummoned to parliament, the latter ceaxing to be mommoned at all, and being preaent only through their reprementatives. 'Theme, however, comilimed for a lengethened jerionl to yielil a reluctant attendanee, and molhom interfored In publio affairs, exeepit to vote up runce the aupplion demaniled by the moverelign. The eommoma null buris apyear to linve mat in weparate loxiliow, at leant encomiomally, an early an thim relonn. The power of the great lmanonn, at the expmene of the lewner, wan materially Ineroaned in eonseguence of the atatite termul 'de chomia,' which tenided to create prepuetiliten in feuilal eaintea: while, on the other hamil, the atatute 'quin empiorea,' preventell the owners from Inerensing the numiner uf their vansala by mubliofeudation. The rombined operation of the two temded to throw the land mope extemaively linto lagge demeanea, aus to diminish the numinor of tho amall feulal chlefalna, retainets of the higher noblea. With the chnreh Vilward wan generully at peace, though in lidm relign eommidernhlos ateps were made towaria the repromsion of lia temporal nanipatioma, by the anhorilination of the eccleminatienl to the royal tribmala, null ly laws of mortmain. In Itm forcign relatlona, the rejgu of Eilwaril was eminently glorious, injuntiliable an many of his nets mumt lee extcemed. Ile anlshued Whlen ; Interfered with dignity in the nfliairs of the eontinent; and, taklug part in the ollapmiten respecting the surceasion to the throne of SentInnil, nearly anlyugated that country, on the loorders of which the died, while engnged in the active prosecutlon of hoatlitlem nygainat it.

Illa aon Eilvari II, loat, in a few unfortumate eampaigns, the footing which life fither had gnined in Scotland; the erown of which wan trinmphantly worn by Ikobert Irince, the conqueror of Imanockburi ( 1812 ). The reat of Edward's relpu wis oceupied by $n$ lengethened strugute in supjort of his fivouriten agnlust the barome and him queen. In the enis, he was dethroned, In 1827, liy the prelntes and nobles, whon assumed the power of $n$ parliament, and perinhed miserably in lerkeley Castle, alourtly nfter him mon Edlward Ill. had been raised to the throne, at the age of fourteen.

The reign of this grent prince is chletly celebrated on aceonut of his wars in France, which he conclueted with mueh valonr and brilliant, thongh only temporary, success, 'The right which he asserted to the crown of France wan derived through hils mother Isalella, who stoxil nenrest in the line of succession, but was herself exchuled by the Salie law from its inheritance. It was malntained in favour of the claim of Eilward, that a title derived through a female, though herself ineapable of reigning, is valing. The nation, as in the wars of Edward I, against Scotland, was carried away by the excitement of foreign conquest, and for a long time aided its sovereigo with snbsidies, tallages, and lonns, prodigally lavished in snpport of hls pretensions, These wars lasted, with few interruptions, from 1837 to 1374 ; but, notwithstnnding the great victories of Cressy (1846) and Poictiers (1364), the capture of a king of France, and the desolation of the greater part of that kingdom, Edward retained at their termination only Bordeaux, Bayonne, Calais, and an insignlficant district of Gascony.
It was during these wars, and in the court of Edward, that the spirit of chivalry attained its highest point of exaliation. Although this characteristic of that brilliant era was but of a temporary nature in itself (for the knights of Edward's court left no successors), yet it had very important results in modelling and refining the taste and character of the higher orders. Meanwhile the mass of the people was undergoing a still more

Important eliange, under the influenea of diffement calusea. The warw with France, for the firm time ainee the battle of Hantinks, thoroughly awaken the apirit of Finglish nationality. The diatingtion Inetween Nomian and Saxon wan thenefomit merged in the character of Fingliahman. The hano gunge rome eotemjaraneoninly with the nation fin thongh the change of apeceh from Naxon to ling. limb was a very nlow prusem-extendinge, at lowh, from the relgen of Ilenry 11, to that of Filwani ili, -the written ilinleet may lie nalil to have pawid nt oncer from harbarisin to a high wegtoe of pep. fect ion in the farms of Chancer, whome career ingan In this relign; a puint from whichit recedel, rathep than mivnnced, fir n ecstury afterwarle, The royal propogative declined diring the latter pans of thin rolgul, owling ehiefly tu the necemalifes of the king, whowe great expesilitiure remulaged him the prindent on him parliamenta, which, fur the fine ilme, were now iliructed liy atntute to bo amo moned minually. The lowent clame, on the other hani, greatly rone in importance.

The great pewtilence that raged in Englandia 13.19, in muppowed to liave cut off a half, ot mon, of the Inhablanit. 'I'hla in probably exnugenatem; however, whet her one-half, or a quarter, or a tenth of the linhabitanta jeriahed, it acema certain that as the servies of thowe that nurvived lyvame nore valunble, they demninded and receival lighet wagem. This rime win, however, roganien ma grievone harimhip; and the king, with the mirie of 'his prelntes, nohlen, and learnol men,' imund ats ediet, loy which all lalmurera were, molet neven peualtien, brdered to work at their olld orecupation for tho. name wagea that they recelved befure the [watilence. Ifut 'the aurvants, having no mpand to the sald orilinnnce, lont to their ense nud singulue covetize', refuned to serve unless for highet wagn than it allowed. In econsequence of thin rusiviame, the finmous atntute of the 21st bilward Ill.e. 1 , connmonly enlled the statite of lalxarera, wh pussed. It enacted, that every able-bodiced pawia muler 60 years of age, not having mutllecient tolite oin, being requilred, slanll be boind to revve him that doth require him, or else shall be commitued to grool till ho thals anrety to serve. If a meramt or workman depart from aervice before the lime agrced on, he shall be imprisoned; and if any artitleer take more wages that were wont to ke paid, he alinll be committed to gnol. luat the iserense of wages having originated in natural eaume comld not be checked by such enactments. Their inetbleacy did not, however, leail to the adoption of $n$ policy more conslastent with justice or commen sense. On the contrary, fresh effiorts were male te give effect to the statute of labouress; and to prevent lts being defeated by the peasantry taking refuge in towns, or emigrating to $n$ distant part of tha conntry, it was enacted by the 3th Eiwand III., that if any lnbourer or servant flee to any town, the chief officer shall deliver him up; andif they depart for another country, they shall be burned in the forchead with the letter $F$. The injuatice done to the labonrers by these opprasirg statutes was the more plaring, as Eidward, to obtsin funds to prosecute his sehemes of conquest is France, had recourse to the disgraceful expedient of enfeebling the standard of the coin. Not onlr, therefore, disi the regulntions as to wages, so far it least as they were effectual, deprive the common people of that increased payment to which they were entitled from the diminution of their numbers, but they also hindered them from being compensated for the frand practised on the coin, is was attempted, indeed, to obviate the effects of the diminution of the latter by fixing the prices d most articles; but this was only to bolster up one

'The partlanas of' the bonse of Lancaster nasainined the red ruse fur their symbal; thowe of York, the white. The parties attached to the rival fuetions were pretty equally balanced, and for nearly furty yearn, with the exception of a few short Jutervaln, one-linif the nation may be anill to have turued its amus maginat the other. Rleliarl, dake of York, fell in the Iteld, leaving lile claime to Edwurd IV., who, aftor varions changes of fortune, lethroned Henry VI, in 1461. Hin son, lidwaril V., a minor, is telieved to have been murdered ln the 'lower, ufter a relgn of 13 thys, by hif uncle, the Duke of (iloncenter, afterwhriln Ilicharal III, This able but manginary prinee lost his epown nud his life in the deelsive hattle of lhosworth Field, gained in 1485, by Henry Tudor, earl of IBichmond. This event put a periol to the civil wara, the victor uniting in his person the title of Lancoster through his mother, Margaret lleaufort, and that of York acquired through his marringe with Elizabeth, dnughter of Eisari IV.

The reign of Ilenry VII. is one of the most important in the hintery of the country. This politic and able prince completely destroyed the power and intluence of the feuilal arintocracy. From a very remote perfoil, the grent lords had been aecustomed to maintain vast numbers of servants and retainers, partly for the purpose of displaying theit grauleur, and partly as the menns of necurity allil of attack. The retainers kenerally lived on the estates of their masters, who suphlied them with bndges and liveries, and with provisions while in service. These persons were not only reaily upon all oceasions, when enlled upon, to support the cause of their lords, to execute their orrlers, and to give evidence for them in courts of law, but, trusting to their influence to screen them from justice, they scrupled not, whenever an opportunity offered, to attack those they considered as their master's enemtes, The predatory habits nequired in such a mode of life could not be easily laid aside ; and when dismissed from service, or not employed by their masters, they generally supported themselves by theft and robbery. Many stat.ites had been passed

## ENGLAND AND WALES

for repressing so enormous an abuse, but without any perceptitile effect; and during the civil wars the evil attained to a frightful excesa. No provision being made for disbanded soldiers or retainers, it was not unusual to expose liveries for sale, and the competition for them amongst idle and tlisorderly persons was such that they occasionally brought considerable sums. Henry VII. determined to alonte this nuisance ; and his sagacity and firminess, and the circumstances under which he was placed, enabled him to succeed. Many of the principal nobles had perished in the struggles teminated by the battle of Bosworth; and their power had been impaired by repented contiscations, and by the extinordinary expenses they had had to sustain. They were, therefore, but ill-fltted to defend their privileges against 80 able and powerful a prinee us Henry, who percelved and made use of his advantage. The laws against giving baiges and liveries, and employing retuiners, were zenewed and enforced with a rigour that none could expect to elude. At the same time, too, that the barons were compelled to lay aside their feulal pomp, and to dismiss their vassals, the improved and more luxurious habits that began to be diffused throughout the nation disposed them to recelve money payments, instead of personal services, frum their tenants and dependants ; and the lower ranks of people being thus, as it were, abandoned by their feudal superiors, were obliged, instead of trusting to them for support and protection, to resort to some species of induatry, and to respect those laws they could no longer trample upon with impunity. The change that was thus effected was of the greatest importance, und had the most decisive and beneficial influence on all ranks and orders. Had the practice of maintaining erowds of retainers continued, order and tranquillity could never have been establlshed.

The power of the great lords was undermined by another law, which, though less felt at the time, has been hardly less important, perhaps, in its consequer tes than any other passed in the reign of Henry VII. This was the legitimation of the practice, introduced in the reign of Edward IV., of breaking eutails by a flue and recovery. 'By means of this law,' says Hume, 'joined to the beginning luxury and refinement of the age, the great fortunes of the burons were gradually dissipated, and the property of the commons increased in England. It is probable thai Hens. foresaw and intended this consequence; because the constant scheme of his policy consisted in depreasing the great, and exalting the churchmen, lawyers, and men of mean families, who were more dependent on himself.' But, however this may be, the depression of the higher classer having taken place before the increasing influence of the commons formed a sufficient counterpoise to the power of the crown, Henry VII. was long previously to his death the most powerful of the English monarchs; and left to his son, IFenry VIII., a regal influence which was but feelly, if at all, controlled by the popular branch of the legislature.

The great event for which the reign of Henry VIII, is memorable was the Reformation. The event was, to some extent, accelerated by his passions. Unable to procure from the see of Rome a consent to his divorce from his wife, Catherine of Aragon, Henry involved the kinglom in a rupture with the pope, and assumed the title of "Head of the Church. During a century of occasional persecution, the Lollards, or sectaries of Wyeliffe, had continued to exist, probably in considerable numbers. Thus the Reformation, when first it broke out in Germany, found in England ready adherents
among the lower classes; while the more leamed part of the clergy, connected by various tien with the continental reformers, readily embracel it; and, finally, the quarrel of the king with home drew over the timid and gulsservient, while the powerful were gratified with the plunder of ailheys aud other ecclesiastical establisloments. Not that Ilenry himself embraced the peculiar doctrines of the Reformation; on the contrary, during grat part of his reign, belief in them was constanils punished as a crime; but, by asauming the headship of the elurch, and rejecting all spinitual domination, he made ready the way for the transition of the nation from Popery to Prutestantism. At the commencement of his reign Henry was pipular; but his passions were violent, and being unrestrained in their indulgence, he came to be the most sanguinary tyrant that ever ruled Eughand.

His only son, Edward VI., sncceeded in lyti, at the age of nine years. Being eclucated in the care of divines strongly attached to Protestantism, the Reformation, in his reign, tended towards the extreme side; and liad it been prolongel, it is probable that the Chureh of England would lave approximnted much more, both in loctrine and discipline, to that established at a later periol bp Calvin and his disciples, than it eventually diuh He died, however, in 1553; and after an unsuecessful attempt to place Lady Jane Grey, hvires to the house of Suffolk, on the throne, the Prineted Mary, eldest daughter of IIenry VIII., and a bigoted catholic, was proclaimed without oppaition. She immediately restored the Roman Cutholic religion, and her reign was distinguished by a fierce persecution of Protestants, of whom more than 200 suffered at the stake. She married Philip II. king of Spain, hut happily died without jssue in 1558. During her respu, in 1547, (c lais, the last possession of the English in France, was taken by the Duke of Guise.
On the death of Mary, her half sister, tle Pincess Elizabeth, daughter of IIenry VIlI, by the unfortunate Anne Boleyn, succeeded to the thmoe Attached, originally, to the doctrines of Protes tantism, this able princess was, nevertheless, disinclined towards the more viulent reformers, rim had possessed so mueh influence in the reign her brother Edward; and, resuming the headship of the church, she succeeded in creating an eitablishment, dependent rather on the state for support than exercising a control over it. The Roman Catholics, on their part, did not find it necessery to secede from the national church until slowt 1570 ; from which period they formed a sect spart The early part of Elizabeth's reign was prosperus notwithstanding some discontent on the part of the lower classes. In fact, besides the contest ocessioned by the religious changes, the government of that century had social difficulties of a serious nature to struggle with. The suppression of mosasteries deprived a number of mendicants, and d the poorest classes, of their ordimary dependence The decay of the feudal system rendered the gras landlords less desirous than heretoti re of muliply ing their tenantry, and more anxious to eunich themselves; and from this, among other csus inclosures multiplied, and much arable land was thrown into pasturage, producing complaints d poverty and depopulation. But by far the mae important source of change, though at the tim the least observed, was the extraordinary dimint tion of the value of money, oceasioned by the divcovery of the mines of America. This was follomm by a rapid rise of prices; and though wages ult mately rose, their rise was comparatively slow, an? much distress accompanied the transition. Th great crisis preduced numerous enactments for in

The disputes between Eilizabeth and the court R Rome grew now more inveterate, and led to tro important events in Luglish history-the war with Spain and defent of the Spunish curmala in 1588 , and the execitlon of Mary queen of Contand, next in succession to the throne. Being (Gatholic, the canse of Mary, who hnving sought on asylum in England had been imprisoned by Elizabieth, was embraced by most of the Romnin Catholics of the country, and produced various ansuccessful plots and conspiracies which ended is the execution of Mary. During this reign, England was joined in allinnce, first with the l'rotestants of France, afterwards, nnd more closely, with those of the Low Countries; and when llenfy IV. ascended the throne of the former country, the combination ngrainst the power of Spain and lome had been completely and succesfully organised. Ireland was, also, reduced to a state of greater submission than at any previous period. The taste for naval enterprise was fully arakened, and the commerce and navnl power of the country grew rapidly into importance. The hast years of the long reign of this illustrious pincess were darkened by the intrigues of the cout, the rebellion of her favourite Essex, and ber unavailing sorrow for his denth.
James VI. of Scotland, the son of the unfortunate Mary, being next in succession to the crown, ascended the linglish throne on the deceace of Elizabeth, without opposition, his peacefill but inglorious reign of twenty-four years appeass to have been a period of considerable national prosperity ; and in it were lnid the foundations of that colonial empire in the new world that subsequently attained to so vast a magnitude. But throngh this whole reign, the struggle was preparing between the rising power of par-liament-which in the latter years of Elizabeth had slready begun to assume some degree of inde-peadenee-and that of the crown, The Puritans rere the most zealous and steady supporters, at this period, of the authority of parlinment. 'I'his seet, or rather class (firr dissent was not yet recognised by law), originated in the reign of lilizabeth; being composed, in great measure, of the disciples of the more zealous divines of Edward Vl's reign, and approximating in opinion to the Protestants of Holland and Switzerland. Episcopal govermment, and the ceremonies of the church, reere particularly opposed by them. They continued to increase thronghout the reign of James, eppecially in the larger towns; and in some parts, as the eastern counties, they also became numerous among the country population.
Charles I., who succeeded his father in Mareh, 1655 , ascended the throne under the complicated disadvantages of $n$ union with a Roman Catholic princess; the dominion of an unpopular favourite, the Duke of Buckingham; and an exchequer much disonlered by the prodigalities of his predecessor. To these adverse circumstances were added a want of siucerity and directness of purpose. But his great defect, and the chicf source of the disasters he entailed on himself and the country, conaisted in his srbitrary principles of government. He culd not brook the growing power and infinence of parliament ; and was infatuated enough to suppose that a nation so rich, populous and enlightened as England now was, snd which had long possesod a representative assembly, would submit tobe governed in the same way as in the reigns of Henry VIll, and Elizabeth. An ill-conducted rar with France added to his difficulties. Three parliaments were summoned and dissolved during
the first four years of his reign ; after which he governed for eleven years (1630 to 1040) without a parliament. During this lengthened periorl, the diseontent of the popular party was coutinually increasing ; especinlly in consequence of the efforts of the higher clergy, under Arehbishop Land, to suppress the prenching of l'uritan ministers, nud tho sprend of their opinions. Devotion to the views of this party involved the king, lis 1638 , in a war with his Scotch subjects, on whom he hal endeavoured to impose episeopacy. The difficultles that grew ont of this quarrel compelled Charles, in 16.0 , to summon that prilinment, afterwaris so famons in Englishl history by the name of the Long Parlinment. The Presbyterinns, having gained an ascendancy in this boly, forced Clinrles to retruct the unconstitutional acts of his former government; expelled the bishops from the house of lords ; and impenched and procured the execution of the Earl of Strafford, his ablest minister. At length the breach became irreconcilable, and both parties preparel for war. This eventfill struggle commencel in 1642. It was waged for some time with doubtful advantage on either side, till Cromwell and Fairfax, lenders of the Independent party, obtained the command. With the nssistance of the Scotch, they defeated the roynl armies at Marston Moor (1044) and Nnseby (1645). Charles soon nfterwards fell into the hands of the army, and after a variety of intrigues and negotintions between that body, the parlinment, and the king, he was condemned and executed by warrant of judges nominated by the parliament, on the 30th Jan. 1649. A republican government was next formed, styled the Commonwealth of England, which ended in the protectorate of Oliver Cromwell (1651). That able and successful general and statesman died in 16:58; and a short period of turbulence and intrigues was elosed by the restoration of Charles II., son of the executed monarch, in May, 1660.

The restoration was effected amidst the seeming joy of the people; and the first movements of national feeling set strongly in favour of monnrchy and the church. Several of the regieides were punished with death; and the ministers of the Presbyterian persuasion who refused to comply with the Act of Uniformity, were universally ejected from their benetices. The test and corporation acts, long considered as the bulwarks of the chureh, were also enacted in this reign. But after a few years had elapsed, it was evident that the sudden impulse of loyalty which had accompanied the restoration was not congenial with the habitual feelings of the country. Since the accession of Charles I. every thing had been changed: those fundamental notions of rights and duties, both on the prit of the sovereign and the people, which now constitute what are termed the principles of the constitution, grew and ripened in this reign into a consistent code, which was ratified at the Revolution, The private life of the king, his vices, and, still more, his follies, and his mean and mercenary dependence on France, were among the causes of his unpopularity. Sanguinary wars with the Dutch served only to exercise the warlike and naval spirit of England, without producing any direct benefit or acquisition. It was about the year 1673, that the houses of Lords and Commons came for the first time in English history, into a state of permanent collision and opposition; the first containing a majority attached to the court, the latter being governed by its opponents. In 1679 for the first time, the names of Whig and Tory were used to designate the two great parties which then divided the kingdom, and whiel have ever since found successors in name, if not in

## ENGLAND AND WALES

spirit. The violent conduct of the Commons, in the matter of the Popish Plot, and their interference with the succession, by entertnining measures for the exclusion of tie Duke of York, the king's brother, on account of his religion, produced at last a re-actlon in favour of the crown. Lord Russell and Algernon Sydney were the victims of this re-netion, being executed for participation in a supposed plot; and ethe king, by procecling against the eorporatlon of the city of London for the nileged nbuse of its franchise, brougitt all bolies similarly circuntstanced throughout the kinglom to a state of submission. The charters were surrendered, and new ones granted on a more oligarchical model. Charles II. died during these temporary successes, in 1685.

He was succeeded hy his brother, James II., an avowed lPapist, and strongly attached to his religion, to which it was his continual endeavour to obtain proselytes. This circumstance, even more than his steps towards the assumption of absolute power, roused against him a spirit of almost universal discontent. An unsuccessful rebellion, headed by the Duke of Monmonth, a natural son of the late king (who perished on the seaffold), served for a while to strengthen his authority ; but the extreme severity with which those who hal engaged in it were punished, greatly increased his unpopularity. Having dissolved, in the first year of his reign, that parliament which had proved so favourable to the views of his predecessor, he obtained from the judges an acknowledgment of his right to dispense with nets of parliament, which, in effect, amounted to a recognition of arbitrary power. But the servile, time-serving opinions of the judges were heartily repudiated by the nation at large. The other proceedings of the king were of a still more violent and despoticnl charncter, till at last he succeeded in disgusting and alienating all his Protestant subjects. Some of the principal persons in the country retired to Holland, where they found a secure asylum through the protection of William, prince of Orange, son-in-law of James. Had King James succeeded in establishing arbltrary power in England, his subserviency to Louis XIV., then in the zenith of his power, would have been of the most serious consequence to Holland; and to avert this danger, and strengthen the Protestant party, William resolved on the invasion of England. No project was ever more completely successful. James, deserted by his subjects, and by the army on which he had mainly depended, fled to France. The Convention Parliament-so called from its assembling, of necessity, withont the royal summons-declared that James had abdicated the crown, and raised William of Orange and his consort Mary to the throne.

A solemn seal was set on the proceedings of the Revolution by the Bill of Rights, which recited and ratified the constitutional liberties of the country, and by the Act of Settlement, which excluded James and the greater part of his family from the succession, and fixed it, eventunlly, in the Protestant line of Hanover. Such was the end of that fifty years' struggle which commenced with the meeting of the Long Parliament in 1640. The great liberal party which conducted the striggle throughout, in the end successfully vindicated the supremacy of the nation, and the sacred right of resistance to unconstitutional power. Their example has had a powerful influence in all civilised countries, and the form of polity which they established has been introduced into the United States, and, more or less, in the countries of the west of Europe. Its influence in England has been beneficial beyond all that could have been
anticipated; and the country is mainly indelted for by far the larger part of its comfort nind wealth, and for the distinguished place it occupies among, the antions of the earth, to the triumplis of thres free principles of government that were convili. dated by the Revolution. From this perion, English domestic history assumes n now aspent: the contlict of parties succeeds to that of prineples. It is true that, for some time after the lievolution, speculative opinions respecting the royal prenugative continued to vary; and the allierence of considerable body to the cause of the exiled family, although gencrally passive, placed the state in constant danger; but the fundamental doetrines of the inviolability of the sovereign, the respmasibility of ministers, und the supremney of parliament, were never nfterwards practically contestel, Force was abnndoned; and goverıment, maintained in ordinary times by inflnence, was con. trolled in crises of importance by public opinion,

In the reign of William Ifi., Englame was involved, in a more serions manner than before, ia the politics of the Continent, hy becoming a party to the gencral conlition provoked by the ambition of Louis XIV.; and the feelings of the Englislı people, excited by that prince's persecution of his Protestant sulyjects, evinciled with the continental interests of the king, and made the war be vigorously proseciteal. Lania, on the other hand, grave support and countenance to the exiled family. The peace of lysawick (1697) put a stop for a short period to these hostilities.

In order to provide for his military expenditure, William III. was forced to have recourse to the system of loans; and by so doing he engaged, to a great extent, the mercantile interest of the country in the support of the revolutionary estallishment. That interest, though long influential in England, may be said to have now come prominently forward, for the first time, as a distinat and powerful clement in the state. Its increate during the 17th century, relatively to that of the other classes, may be partly judged of by the fact, that London, which in all probability possessed about 250,000 inhabitants at the end of the reign of Elizabeth, had more than half a million in that of William; while there is reasun to believe that the number of inhabitants of the whole country-almost five millions and a half in the latter reign-hal undergone but a slight aug mentation. The Bank of England was founded in 1694.

Hostilities recommenced shortly after the acess sion of Anne, the surviving daughter of James li in 1702, and continued until 1713 , with someacession of 'glory,' but little else to the British arms directed by the Duke of Marlborough. 'The prace of Utrecht ended these hostilities. England (btained by it little except some extension of teritory in North America, and Minorea and Gibralta in Europe. The union with Scotland (1706) 뾰 the great domestic event of the reign.

The accession of George I., elector of Hntorer, to the throne, necording to the limitations contained in the Act of Settlement (1715), agai threw power into the hands of the party of the Fevolution; and the suppression of a Scotch $\mathrm{re}^{-}$ bellion strengthened his authority. The Septennial Act, passed in the same year, extended the duration of parliament to seven years, at which term it has since remained fixed. Their pore being confirmed by this enactment, the Wigs maintained the ascendancy to the end of the reign; and the tranquillity of the country was un disturbed, except by the excitement produced by the famous South Sea scheme (1721), and the

intermpted
it.
In that year George I. died, and his son', George II., ascended the throne. This event made no change in the politics of the government, the new king belng equally with his father attached to Sir Robert Walpole, one of the most powerful ministers the country has ever known. For twelve yeary longer he continued to maintain peace; but public clamour, excited by his political enemies, dove him, in 1789, into hostilities with Spalı, This war was wholly of a commercial character, and had its origin in the desire of the British merchants to partlcipate in the trade with those rast American provinces, which the policy of Spaia kept closed against foreign commercinl enterprise. It proved the ruin of Walpole, who was diviven from power, in 1742, by a combination of seceding Whigs, Tories, and Jacobites. About the same time the interests of the sovercign, as elector of Hanover, involved the nation in war vith France as well as Spain. In 1745, Charles Edward, grandson of the expelled James II., landed in scotland, and was immediately joined by the greater number of the Highlard clans. At the outset he met with some extracrinary succeses, and advanced at the liead of a body of Highhanders as far south as Derby. But being joined by but few Englishmen, and having received no rupport from France, he was obliged to retreat to Scotland, where the battle of Culloden terminated his ill-starred enterprise, and the last civil war that has taken place in Great Iritain. The menares that were adopted, in consequence of this outbreak, for abolishing clanship in the Highlands, and putting an end to lereditary jurisdictions in Scotland, were of great advantaye to that part of the kingdom.
In 1748, this desultory war was closed by the peace of Aix la Chapelle. The combinations in which England had engaged on the Continent had been in general unsuccessful; nor were the terms of the peace particularly favourable to her interets, But she may be said to have attained in it, thbt ahe has never siuce lost, a decided maritime spremacy over all the other powers of Europe. Sle entered it as a competitor, and closed it as mistress of the sea. Thenceforward England has fought to preserve, rather than extend, her naval dominion.
At this period France was peculiarly anxious to recover her lost maritime power, in consequence of that desire for extended colonial conquest which then swayed her councils, and seems, indeed, to bare been the most active principle of European politics towards the middle of last century. Disputes in the E. Indies and in N. America, together with the continental quarrels of Prussia and Austria, brought about the great contest which commenced in 1756 , commonly called the Seven Years' War. Fortunately for England, the management of her affairs soon afterwards fell into the hands of one of those extraondiaary men whose influence over their age, from their power of inspiring and directing enthusiasm, is far greater than the highest talents, aided by the most powerful connections, but destithe of this peculiar faculty, have ever acquired. linder the guidance of Pitt (Lord Chatham), her ams triumphed in every quarter of the globe. Grorge II. died in the middle of this war (1760),
und was succeeded by George III. This prince, Ill-educated, obstinate, an! strongly imbued with anti-popular prejulices, withdrew his contidence from the ministry of his grandfather. Pitt, unable any longer to carry his measures, retired from the cabinet. A new ministry succeeded; and a glorious war was terminated by an inglorious peace, which, however, secured to England the possession of Canada and some other inferior acquisitions.

The forelgn dominions for which the seven years' war had been undertnken had now acquired an enormous extension, and were increasing rapidly in population and importance. Founded partly by commercial adventurers, partly by religious and political refugees, the colonies of Fingland on the mainland of America, exclusive of Canada, part of Louisiana, and Nova Scotia, acquired from the French, were divided into thirteen provinces or states, and had $2 \frac{1}{2}$ millions of inhabs. In the West Indies, England possessed Jamaica, then the most. fertile and best cultivated of the West Indian islands, and a number of amaller colonics. In Hindostan, Lord Clive had laid the foundation of our empire, by the acquisition of the important prov. of Rengal in 1757. Such was the extent of the realms, to the government of which George III. succeeded.

The internal history of England, during the reigns of George I. and II., evinces a gradual and ateady increase of nationnl prosperity, without rapid change. Little of the violent political and social emotions which had agianted the preceding age, and were again to agitate the next, was then felt by the community. The Jacolite party wore gradually out, and was, in fact, nearly extinet in England before the Scottish outbreak of 1745. The laws agrainst dissenters, which still remained on the statute-book, were so modified by usage, that little political distinction remained in protice between them and members of the chnrch. This period has been regarded by some writers, though probably on no sufficient grounds, as heing, on the whole, the most favourable on record as respects the cconomical condition of the lower classes. Its bencficial inthence, in this respect, was probably owing in part to the extraurdinary circumstance of a long and steady continuance of productive years. In fifty years, from 1715 to 1765; only tive deficient harvests are said to have occurred; and the price of wheat was generally little more than half what it had leen in the middle of the 17 th century. The population of the country during this period increased only at a moderate rate, or from $5,300,000$ in 1720 , to $6,400,000$ in 1760 ; and the labouring classes consequently reaped the full benefit of this prosperity in the shape of high wages. The poor-laws, as managed at that time, certainly contributed to prevent a more rapid augmentation. Moral and orderly habits, on the whole, characterised the period: the violence of earlier times had disappeared; and the peculiar vices attending on great wealth and manufacturing industry had scarcely, as yet, begun to prevail.

A novel order of things began with the accession of George III. New moral and social impulses, arising at the same time with an extraordinary spread of wealth and industry, materially altered, in a few years, the character of the community. The disputes respecting the expulsion of the demagogue Wilkes from parliament, though unimportant in themselves, were the precursors of great events: they, for the first time (at least since the commonwealth), brought into action a democratic party in the state, hostile to the old aristocratic legislature. This party spread

## ENGLAND AND WALES

most wildely and rapilly in the trans-Atlantic dominions of Great lbritain. Exnspernted by attempts, on the part of the mother country, to impose on them a system of taxation, and incited by the sympathy of a considernble party in England, the thirteen provinces of $\mathrm{N}_{\mathrm{l}}$ America revolted in 1776, and openly proclaimed their independence. Notwithatnuding a gnltant resistance, they might, perhaps, linve been sutblued, lind not France, Spain, and IIoltand, eqjoused their quarrel. England was agnin involved in war with the chlef continental nations, and mnintained, even against that formidable combination, her maritime supremacy. But she was forcel to relinquish her dominion over her revolted colonies, which the peace of 1783 raised to the dignity of nn independent federal republic. On the other hand, in India, the arms of Great llitnin continued to make a sure and gradual progress.

The close of the American war was followed by ministerial changes of unusual importance. A coalition was furmed between Lord North, the unpopular minister, who hud conducted the war, and Charles Jnmes Fox, who had been its most violent opponent, which embraced most of those grent family interests that had, for $n$ series of years, predominnted in parliament. The king disliked, however, the conlition ministry; and an attempt to invade his prergative, by a bill which threatened to transfer the government of Iudia, in some measure, to parliament, affiorded a pretext for its dismissal. William Pitt, younger son of the Earl of Chathnm, was then called to the direction of affairs, at the early age of twentyfour. He had to contend at the outset with a hostile majority in the H. of C., but the country, in which the coalition was exceedingly unpopulnr, was decidedly in his favour; and this and the declared support of the court enabled him to dissolve parliament, and to secure a grent mnjority in the new H. of $\mathbf{C}$. Pitt now became the most powerful minister who had swayed the cabinct since Walpole. He called to his assistance new interests, and a new school of politicians; the members of the old oligarchy either came gradually into his views, or continued in permanent opposition. The country continued in the enjoyment of peace, and in a state of great prosperity, during the first ten years of his administration. But, in 1793, it was involved in war with France, then in the crisis of a tremendous revolution.
Between 1750 and 1770, the great system of canals, which now intersects the whole of England, was commenced, and carried a considerable way towards completion. In 1767, the first great atep was made in the manufacture of cotton by the invention of Hargreave's spimuing jenny. Watt's first patent for improvements in the steamengine was taken out in 1769; which is also the date of Arkwright's patent. These grent industrial inventions, taking place about the same time, may be regarded at once as causes and effects of the sudden spread of commercial activity. At the accession of George III., the exports of England amounted to abcut $15,000,0001$; at the breaking out of the revolutionary war, to $25,000,0001$. During the same period, the national debt had more than doubled, chiefly in conaequence of the heavy expense of the Ainerican war.

The events of the three and twenty years, between the commencement of the revolutionary war and its final conclusion in 1815, are far 'too varied and manifold to be more than alluded to in this brief summary. At first the British navy obtained the undisputed sovereignty of the seas; and most of the remaining cotonies of France and

Holland were conquered. But military operation on the continent, and the combiontions whith England formed, in conjunction with the gman Europenn powera, in opposition to the Freneh were almost uniformiy unfortunnte. Pitt, suffering from the ill success of his mensures, and do. terniusel not to make overtures to France, relind from oflice; his place was smpplied by a minitetry which was broken up by the renewna of hastin). ties in 1803, and he returned once more to pewer. The lnst grent act of his first ministry was the union with Ireland, a measure long contemplatel, but hnstened by the unfortunnte insurrection that broke ont in that country in 1798. The unting abolished the separnte legislature of 1relani, and introduced 100 new members for Ireland into the Imperina II, of C., and the representative peers a Ireland into the H . of Lords.

The renewed war was but little anceessful at the outset, except that the ficets of Smin and France were totally destroyed by Nelson, at Tn. falgar. Pitt died in 1806, after the last of the great continental confederncies had been dissolrel by the bnttle of Austerlitz. But, shortly after. wards, affairs took a favourable turn. Napolem, whose nmbition was ns boundless as his genis was transcendant, having prevniled on the Ilourbon pringes of Spnin to abdicate the ermona, resolved to place his brother Joseph on the Spanish throne. But in doing this he propokel a recistance that could hardly hnve been antici. pated. Though the abdicated princess were the merest imbeciles, and their goverument a tisue of nbuses, the Spaninrds took arms in defence of their rights, and of the independence of the nation thus wantomly violated. The English fanned th flame that had thus been excited, and threws sipplies of moncy and nmmunition and posefful nrmies into Spain. At first these had but little success; but no sooner had their commnud lead entrusted to General Wellesley, subsequently duke of Wellington, than the whole aspert d affairs was changed. Possessing in an almost 10 precedented degree all those qualities that goto form a consummate commander, the English pe. neral successively baffed and defented all the French troops that were opposed to him; and finally expelled them from the Peninsula.

Mcanwhile the colossal power of Napplem which had so long trinmphed over cevery combi. nation formed for its overthrow, was irretrierdy broken by the frosts and snows of Russia. The invasion of France by the allies in 1814, was fot lowed by Napoleon's ablication; and his shore reign after his return from Elba was terminate by the battle of Waterloo, which rnised the glors of the English arms and of the English generali the highest pinnacle.

The treaty of Vienna restored, in ns far as the altered circumstances of the world would permit Europe to its state previously to the brenking ent of the French Revolution. Except the inporan advantage of being secured against the danger attack by a too formidable neighbour, Englang gained little by the war. She restored Java, ant most of the foreign colonial possessions that hod fallen into her hands during its pregress, retain ing only Malta, the protectorate of the Inina Islands, the Cape of Good Hope, Demerara, Tnix dad, and some other places in the West Indiac In India the conquest of Mysore in 1799 , and sac cessful wars with the Maharattas, left her mitress of the whole peninsula of Hindostan, eithy in direct sovercignty, or as protector of the nair princes.

The reign of ( $e$ eorge III., the longest in English annals, ended in 1820. For several yeurs before his death, the king had laboured under mental alienation, the royal authority being exercised by his son, with the title of prince regent. During the tea years of the reign of George IV., one of the most seltish and sensual of English monarchs, the peace of Europe, in as far as Great I3ritain was concerned, was interrupted only by the short hostilities of 1827 against the Turks, in behalf of the insurgent Greeks. At home the country was agitated by the unsuccessful effort male by the king to procure a divorce from his wife, Caroline of Brunswick, and by a continued struggle between the two great Whig and Tory parties, taking the terms in their widest acceptation. I3ut the propress of the country-the vast increase of manufacturea and commerce, and consequently of the town population, since the commencement of the French war, in 1793-had grently strengthened the Whig, or popular party. Civil disabilities of history.
all kinds wero lourlly oljected to; the ahuses inchlent to the nomination, or, as it was enlled, rotten borough system, were denounced; and $n$ demand for a remodelling of the elective system aud of the II. of C. was rnised, which, being supported by the great bulk of the town pop, and being, also, in itself just and reasonable, could not be long resinted. In 1828, the Test Act, which, though obsolete in fact, still imposed nominnl disabilities on l'rotestant dissenters, was reperaled; and, in 1829, the harriers which hnd so long excluded lioman Catholics from the legislnture were removed. These changes, by increasing the popular influence, paved the way for the ruform of the constitution of the IIonse of Commons, the most important act of the reigu of Willinu IV. 'The emancipation of slaves throughout the British clominions, and the introduction of the new system for the alministration of the poor-laws, were the only other measures of importance in this reign, which terminated on the 20th of June, $18: 37$; when the I'rincess Victoria, daughter of the Duke of Kent, and grand-daughter of George III., succeeded to the crown. Queen Victorin was married on the 10th of Feb., 1840, to Prince Albert of Saxe-Coburg-(iothn, who died Dec. 14, 1861. Her reign belongs to contemperary

ENKHUYSEN
ENKIUUSESN, or ENKHUIZEN, a mea-port town of Holinud, prov. N. Ilolland, cap, cant., on a small peninsula in the Kuyder-Zee, 27 m . NL., Amsterlam. Pop, $\overline{\text { B }}$, 900 in 18ith. The town is fortified on the land side, and has a hariour formerly much frequented by trading vessels, but which in now nearly uselese, from having been filled up with sand. It contalne soveral churches, a fine town-hall, and a large cannon foundry; and, by means of a cannl, it still commands a considerable trade, partlculnrly in salt fish. During the 16th and 17 th centuries, the herring fisheries employed many of the inlubititanta, whose number at that time nmounted to 12,000 . Enkhuysen was founded in 1200 ; in 1514 it was all but destroyed by an inundation.
leNNIS, an inland town and parl, bor, of Ireland, co. Clare, of which it is the enp.; prov. Mumater, on the Fergus, which ls here crossed by three brilges; 20 m . NW. Limeriek, on the railway from Limerick to Gnlwny. Pop. 7,71: in 1381, and 7,175 in 1861. The town is meanly and irregularly built, and most part of the honses in the suburbs are mere enlings. The public buildings are the parish church, na extensive R. Cath. chapel, used as the cathedral for the dioceso of Killnioe, 2 convents, mecting-houses fir Indepentents and Metholists, $n$ achool on the foumdation of Dirasmus Smith, a Catholic college, a national school, the county court-honse, gaol, infirmary, fever hospital. a house of industry, and $n$ barrack. The unitu workhouse, opened in 1841, has accommodation for 1,200 inmates. The conatabulary and the revenue police have stations liere. linecs are held annually in the neighbourhood. Under the charter of James I. of 1612, the corporation consisted of a provost and 12 free burgesses. This body returned 2 mems. for the bor. to the Irish H. of C. down to the Union ; und it subsequently returned 1 mem . to the 1 mp . H. of C . till the Reform Act, when the limits of the bor. were enlargel, and the 101 . freeholders ndmitted to the franchise. The corporation has now become extinct, and its functions are exercised by commissioners. Registered elcetors 191 in 1865, all 8l. rated occupiers. The assizes for the co. aro held here: as are general sessions in Jan., April, and Oct., petty aessions on Fridays, and a manor court in the suburb of Clonrond uccasionally for pleas to the amount of 100 . The co. prison, built on the radiating plan, contains 73 cells and 12 other prison rooms. There are no manufactures, but there is a considerable trade in agricultural produce, part of which is conveyed down the river by lighters to Clare, 2 m . distant, where the river becomes navigable, and is thence shipped for England and other parts. Markets ure held on Tuesdays and Saturdaye, and fairs on 9th April, 9th May, 1st Aug., Brd Sept., 14th Oct., and 3rd Dec.
ENNISCORTIIY, a town of Treland, co. Wexford, prov. Leinster, on the Slanev, 13 m. NNW. Wexford, on the railwny from Dublin to Wexford. 1'op. 5,955 in 1831, and 5,396 in 1861. The town is romantically situated on the declivities of steep hills on each side the river, here crossed by a lridge ; it is navigable by large barges, to facilitate the loading and unlonding of which extensive quays have been constructed. The public buildings nre the parish church, R. Cath. chapel, convent, meeting-houses for Quakers and Methodiats, a large school, almshouses, a fever hospital and dispensary, a market-house, and a court-house: the ancient castle is still standing. The corporation, under a charter of James l., in 1611, consists of a portreeve, 12 burgesses, and a commonalty: it sent 2 mems. to the lrish H. of C. till the

Union, when it was disfrauchiaed. sensions are held at Finater and Michan General petty sessiona on Thursiays. The town tand constabulary station. There in here an earthen ware manufactory, tan-yarik, brewerien, a rmpe walk, tlour-mills, and a dlastllery. A brisk trade is kept up with Wexford by tho river. Markes on Thurdaya and Saturiays; fairs on 20th Jan 21st Fel., 2last Marcl, 25th April, 10th May, ith June, Bth July, 26th Aug., 19th Sept., 10th' Okt, 15 th Nov., and 21st Dec.
Einniscorthy owea its origin to the castle, atill in good preservation, bullt here by Raymond le Gros, who married a sister of Stronghow, In 1640 It was taken by Cromwell. On the 28ih of May, 1798, it fell, after a sangulnary conflict, into the hands of the rebels. The latter after. wards established their heal-quarters on VInegar Hill, which commands the town. Here they were nttncked, and driven from their position with great loss by the royal forces under Lorl Lake, on the 21st of June, 1798.

ENNISKILLEN, an inland town and parl bor. of Ireland, co. Fermanayh, of which it is the cap., prov. Ulater, beautifully situated on an island in the river or strait conneeting the two principal diviglons of Lough Erne; 85 .m NNW. Dublin, on the railway from Dublin to Londonderry. Pop. 6,116 in 1831, and 5,820 in 1861. The town has suburbs on its E. and W, sides on the mainland, with which it commuicates by two handsome bridgea : it consists prinelpally of a main street, and is pretty well built, Uniler a charter of Jamea I., In 1613, the earpuration consisted of a provost, 14 burgesses, nand a commonalty; but it is now extinet, and the town property is vested in commissioners. The bor, sent 2 mems, to the Irish 11. of C., and since the Union has sent 1 mcm . to the Imperial II. of C. Kegistered electors 280 in 1865, all 81 . ratel oceupiers. A bor. court is held on Thursday fot the recovery of small sums. The co. assizes are held here, as are the general and petty sessions. The public buildings are the parish church, a h. Cath. chapel, meeting-houses for Presbytcians and Methodists, an infirmary, with a dispensan; a linen-hall, barracks, and the co. court-hone and prison. The prison, on the radiating plan, has 36 single cells, and 10 other rooms for prisoners. The Union workhouse, opened in I 8 fj , has accommodation for 1270 inmates. Lcalhet is manufactured to a omall extent, and there are 2 distilleries and a brewery. The trade consita in timber, coal, and slate, brought partly by nilway, and partly by water from lieleek. Narketa are held on Tuesdays and Thursdays, fairs on the 10th of every month, except March, May, and August.
Mr. Inglis speaks in the most favourable terms of the beauty of the country round Enniskilien, and of the town itself. 'I found it oue of the most reapectable towna I had seen in Ireland; and its population by far the most respectablelooking that 1 had anywhere yet seen. It abounds in respectable shops ; and I never saw shops better filled than they were on the market-dav. understand that many of the tradespeople are wealthy, and that the retail trade is brisk and profitable. The town standa almost wholly on the estate of Lord Eniniokillen.' (Inglis's Ircland, ii. 152.) The ceremai n revenue, derived principally from tolls, nincints to about 6001, a year.
From its position, the possession of Enniskillea has always been of irnportance in Irish contexta, It distinguished itself during the war of 1689 , by its attachment to the liberal side, and by its $\mathrm{re}^{-}$ sisting and defeating a superior force sent to ne

Lauriucum, where a persecution of the Christians took place under Galerius in 301. Many Roman antiquities have been found in ita vicinity.
EXOS (nin. Cnos), a marit. town of Turkey in Eirrope, samjian of Cinllipuli, at the extrenity of a long, low, narrow tongue of lanil forning the 8 boundingy of the Guif of Enios, 36 m . NW. Galllipoli; lat. $4100^{\circ} 41^{\prime} 58^{\prime \prime}$ N., 1ongr. $25^{\circ} 58^{\prime} 44^{\prime \prime}$ E. Exim. ppop. 8,000. Being situate: near the mouth of the Maritza, it is, to some extent, the sea-port didrrianople, and is very alvantageously situntel fir coumerce. However, a sand-bank, which increases every ycar, hns been allowed to form at the entrance to the port. The consequence is, that the tuwn stands in pools and swamps of water, which not only produee pestilential fevers that extend to Alrianople, but are the greatest impediments to tralle. Formerly, large vessels wed to enter the port; lutt now cven the small manf from Smyrna are obliged to unlond outside the bank. The Maritza is navigalle up to Adriaaple in winter and spring for vessels of consiltertide burlien, but in summer the sea craft only avend as fir as Demotica. (Amilinoille.)
EPERIES, or PRLESSOVA, a fortified town of ipper Hungary, co. Saros, of which it is the cap., on the Tarean, an affluent of the Theiss, and near the Carpattians, 140 m . NE. Pesth ; lat. $48^{\circ} 58^{\prime}$ $45^{\prime}$ N, long. $21^{\circ} 15^{\prime} 49^{\prime \prime}$ E. Pop., with its subwro, 9,610 in 1858. It is one of the best built towns in this part of Hungary, and contains four Cathotic churches, a Lutheran clurch, chapterbouse, synagogue, co. and town linlls; a Catholic gmasium and high-school, Lutheran college, eqiesopal librury, and a place of resort for the miligious terned ' Calvary.' It is the residence d a bishop of the United Greek church, and the sat of the board of government for Hungary on tisis side the Theiss. Its inhab. manufacture linen fibies, for which this town is noted, woollen and hempen cloths, earthenware, and beer; and have $a$ considerable trade in wine, corn, and cattle. Eperices is surrounded with gardens, and a grent deal of flax is raised in its vicinity. The town is ill supplied with water for drinking; near it are sme warm chalybeate springs used as baths; mid at no great distance is the royal salt mine of Sovíar.
kpernay (an. Aqua Perennes), a town of Frane, dép. Marne, cap. arrond., near the Marne, which is here crossed ly a handsome stone bridge of ereen arches, 20 m . WNW. Chalons, on the nilway from Paris to Chalons. Pop. 10,621 in 186i. The town was formerly a place of some strength, but its walls are now fallen into a state of decsy. Though irregulnr, it is neat and well brill, In one of its open spaces is a handsome new church, of the Doric order. Epernay has a theatre, a communal college, and a public library, antaining 10,000 vols.; anal is the seat of a subprefecture and of tribunals of primary jurisdiction
and commerce. Thut the grand distinction of Epernay cunsists in lits heing the prineipal entrepot for the winen of Champagne, the best of which are producel in its immedliate vieinity. Its ceiebrated wine vaulte are excuvnted in the chalk rock on which the town is built. They are ailmirably flited for tho stowage and improvement of the wine, are of vast extent, and as solldd as if they were sulpurteal ly arclies. The wines nre classeii par treilles, utherwise par crua, or growths. Few travellers, stop at Epermay without visiting theso vaults. This, however, is not nlwnys free from danger, especially with newly bottled wine, in the mointhx of June and August, when the vine is in blossom, and when the graple begins to ripen. At such perinds the botlee frequenilly explode with great violence ; and fatal accilents have in consequence happpened to workmen and visiturs, whou have neglected to nise the precaution of covering thenselves with iron masks providel fur the ригрине.
Lperriny has sustainell several sleges, ospecially that in which it was taken by IIenry IV. In 1592. I'reviously to that perimel it had been burnt by Frumcis l., to prevent its falling into the hamis of Clinrles $\mathbf{y}$.
EI'IILSUS, an ancient and now ruinel eity of Asia Minor, called by limy the light of Asia Inmen Asie (IIist. Nat., lib. v. § 29), and fampurs alike in sacred and protme history, on the S. sido of the Cayster, near its embouchure on the W. const of Youia, and near the molern village of Aisaluck, 38 m . SSE. Smyrna. The epoch of its foundation is very remote, being aycrithed ty nome to the Amazons ; but it sulsequently received a colony of Ionian Greeks under Androelus, the son of Cixirus ; and thenceforth oecupied a distinguished place among the twelve confelerated Ionian cities of Asia Minor. From the remotest perionl, Ephesus was celebrated for a temple of Diana, henco called the Ephesian goddess, in its immediate vieinity; and on being besieged ly Cresus, the inhab. made an offering of their eity to Diana, uniting it to hee, tomplo by a rope seven stadia ( 7 -8ths m.) in length. (Herol., ibi. i. § ${ }^{26 .}$.) Subsequently to this periud the original city was gradually abandoned, and a new one grew up round the temple ; but its situation was again changed, especially by the iaterference of Lysimactus, who is said to have compelled a portion of the inhab. to resort to a new town he had built on higher ground. Ephesus, Miletus, anid the other Ionian eities, were early distinguished by their commerce, and became among the greatest emporiums of the ancient world. The wealth they hall thus accumulated enabled the Ionians to erect, at their joint expense (factum $\boldsymbol{a}$ totâ Asiá, Plin., lib. xxxvi. § 21), a noble temple in honour of Diana, in which was placed her image in ivory, said to have been sent down from heaven by Jupiter, but which was really the work of an artist namell Canitia. (Plin., lib. vix. \& 4.) This sacred elificice, accounted one of the finest structures of its time, cscaped that destruction in which all the other Greek temples of Asia Minor were involved through the impotent fury of Xerxes, after his expulsion from Greece. But it soon after fell a sacritice to the insance rage for notoriety of an obscure individual of the name of Herostratus, who, to perpetuate his memory, set fire to the temple. (Val. Max., lib. viii. \& 14.) The Grand Council of lonia endeavoured to disappoint the incendiary, by passing a decree that his name should not be mentioned. (Aul. Gell. Noct. Attic., lib. ii. § 6 .) But it was divulged by the historian Theopompus. (Val. Max., ubi suprà.) This event is said to have occurred on the night in which

Alexamiler the Great was lorri. (Cicero de Nnt. Deornm, lili. 3i. \& 27.) At a sulsequent perish, Alexander olfered to rehnilh the temple, provitied he were allowed to inseribe his name on the front; Int this was lleclined by the E, bhemians, who, principally at their own cost, but partly, almo, by the voluntary centrilntions of others, raised in new temple to the guldess far tranacemiing its predecessor, and such as entitlen it to be ranked amung the neven womders of th.e world. To lessen the risk of injury from eartlıunkes, it was built on the margin of a mansh, its lomadations costing an immense expense. It was 425 f . in length, 220 d du. in lirealth, and adurned ly 127 columns of the lonic orier, each titi) ft. in height. (l'lin, Hist. Nat., lib, xxxvi. \& 14.) The altar was the work of I'rnxiteles; the famous sculptor Scepas also contributed to the emblellishment of the fane, which, among other chefsci'ourres of art, could boast of a noble pieture of Alexamiler the Great, by Apelles, a native of the city. An extensive manctuary was attached to the temple; but this privilege was amulled by Tiberius, on arcount of the aboses to which it led.

The worship, of Diaun was entrusted to the care of a mumber of priests (Listintores and Exseaes), and a select band of virgin priestesses; and to prevent the chance of any breach of that chastity нo) dene to the gindiess, the lermer were emasculntel. (Strabo, lib. xiv. p. 641.) A great festivul in honour of Diana was ammunlly celebrated nt Epheans, under the presidency of Asiarehs, or deputies sent by the dillerent Ionian cities, which was resorted to not only by crowds of visitors from all parts of Ionia, but nlso from all parts of Grece and Magna Grecia, or S. Italy. Games were then celelirated with extraordinary magnifleence; and the city was crowded with the votaries of pleasure and traftic, ns well as of religion.

Owing to the gradunl filling up of the hariour hy the deposits brought down by the river, the cummerce of the city was laid under considerable liffleulties ; but every one knows that, though it had undergone many vicissitudes, it lind lost nothing of its ancient fame and celebrity when it was visited by St. Paul. Although the cry then was, 'Great is Diana of the Ephesians!' (Acts xix. 28,84 ,) her worship was doomed speedily to decline. St. Paul resided here for three yents, and founded a church that became, as it were, the metropolis of Asia. (Acts xx. 31.) Among his other enormities, Nero is said to have despoiled the temple of Diana of several of its sacred offerings, and of a large amount of treasure. But it recovered, in some degree, from this attack; and continued to attract some portion of its ancient veneration, till it was finally burned by the Goths in the reign of Gallienus. Jesides Apelles, his great rival Parrhasius, Heraclitus the philosopher, Hipponax the poet, and Artemidorns the geographer, were natives of Ephesus; but its inhab. were distinguished more by their voluptnousness, retinement, and traffic, than by their taste for learning or philosophy. They are also said to have been addicted to sorcery, and such like arts. What were called the Ephesian letters, appear to have been magical symbols inscribed on the crown, girdle, and feet of the statue of Diana, in the great temple; and it was believed that whoever pronounced them, had forthwith all that he desired $i$ (Gibbon, cap. 10 ; Dictionnaire de Trevoux, art. Ephése.)
The walls, which may be still traced, embrace, ncecrding to Pococke, a circuit of about 4 m . Besides its temple, Ephesus had many noble buildings, among which may yet be seen the ruins of a circus, a theatre, and gymnasium. But the
ravages of enrtliquakes and other convulsiona of nature have completed the ruin of this offen famons eity; and her anclent magnillecuer in in o diented ly the extent, rather than the preme. vathon, of her remains. The ancient aquervent. of which a purtlon atill exints, is aseribeit tu the Gruek emperuns. Her 'caullestick has lwen remover ont of hile place.' (liev. Ii, b.) lut lifit when Liphesus was visited by Dr. Chandler, ' iftat pupulntion comslsted of a few lireek peranants, living in extreme wretcheduess, dejeniduce, and insensiblity ; the representatives of an illowtrinus people, and inhabiting the wreck of their gratness ; sume the sulbstructure of the glorions enlificers which they raisell; some beneath the valita of the statiam, once the crowded scene of their diversions; and some la the abrupt preelpiae, in the sepulchres which receivel their ashen. Buhesus was a ruinous place when the Emperent Justinian tilleal Constantinople whit its sintues, and raisell the chureh of st. Suphia on its en lumus. Since then it has been almont quite ex. hansted. Itsatrcets are obseured mal orergromin, $A$ herd of goats was driven to it for shelter fram the sun nt noon; and a noisy tlight of crows from the quarries seemed to Insult its silence. We heard the partrilge eall in the area of the theatre aml of the stalium. The glorions pomp of the heatheu worship is no longer remembered; and Christianity, which was there nursed hy aposthe, and fostered by general comencila, until it increawd to fulness of stature, barely lingers on in an existence hardly visible.' (Tour in Asia Minur, p , 150, 4to, etl.; see also the Autiquities of Ionin ly the Dilettnute Society, where plates and mensurements are given of the principal extant ruins: Tournefort, ti. 518-523; Ancient Universal lifis: tory, vii. 416, 8vo. ed.; Cramer's Asia Minur, i. $3 \mathrm{it3}$, (\&e.)

EIPINAL, a town of France, dép. Vogges, of which it is the cap., on both banks of the aloselle; 36 m . SSE. Nancy, 65 m . NNE. Besancon, and 293 m. FiSE. Paris, on the rnilw y from Nancy th Belfort and Besancon. Pop. 11,957 in 1861. The town was formerly fortified with ramparts, and de femiled by a castle; but of thesc, only the minsonf the latter now remain. It is tolerably well builh and, though ill paved, is clean: it has quays sud fine promenades along the river. The principal public buildings are the barracks, hotel of the prefecture, 2 hospitals, the church, thentre, public library with 17,000 vols., and a musenm of paintings and antiquities. Epinal is the seat of a tribunal of primary jurisdiction, a chamber of manifactures, and a communal college. It has a society of emulation, schools of linear design and masi, and a gratuitous course of midwifery; manufac tures of embroidery and lace, linens, stockings, pottery, paper, and oil; and some trade in com, cattle, iron, deals, and other timber. It is said to have been founded in the 10th century; in 1466, it came into the possession of John, duke of Lorraine, who grantel it many privileges; in 16:0 it was taken by the French.

## nee, dép. Vosgez, of

 anks of the Moselle: INE. Beeancon, and Iw y from Namey to 11,957 in 1861. The th ramparts, and deese, only the mins of tolerably well built, 1: it has quars and ver. The principal cks, hotel of the prereh, theatre, pullie a muxeum of paintis the seat of a tria chamber of mnnuene. It lins a society or desigin and muxic, nidwifery; manufac e, linens, stockings, some trule in com imber. It is said 10 th century; in 1466 , Jolm, duke of larrivileges ; in 1670in a nearly isolatel inion, prov. Saxony and now the cap, of e, on the Gera, a trinit midway betreen nilway from Leipipig Mayne. Pop. 3 T,04? 4,464. The town is t, and has no street except the marketerected in honour of yence, and the Gma-
drpplats, leading to the cathedral. This buikling, rriginally a fine Gothic atrueture, has berin sertonimy ingired by the lostile attueke to which the furn has lieen exposed; thit comatderable nimes hare recently been expromed on its repair. In its twer is a bell 10 g in, thick, 10 ft . high, about 12 th. in circumference, and weighing 2 is ewt. There we 14 other chinrehen ; and and Uranlline convent, to which a girl's relocol is attuched. 'I'he Augustine winvent, In which Luther, pmaneil neveral yeurs of his life, ia now converted linto ant orphan anylum; but the apartment of the keformer in jremerved as nearly as powitite in itn original condition, and contins his lible, portralt, and other relien, The tawa has another orplinn anylum, with finctitutions for the blind; the cleaf and dimb; a mehool for pror chilitren, and a house of correction. Its unipersity, founded in 1892, and muppresned in 18!ts, has lieen replaced ly gyminasiums for Cathollon aud l'rotentante ; it linn, lieniden, a tenchers' meminary, an acadeny of aclences, with a library; und a lintanic gariken with a librnry of 40,0100 vols, which furmerty belonged to the univerwity, There are also schools for ilrawing, mathenaties, architecture, commerce, and midwifery; neveral acientific and literury asmociations, mad colhinets of untural history, meinals, and other objects of art, Vrfurt is a fort ress of the mecond clans, midimportant from its position on the ligh road hetween Frankfort and heipzic. In addition to its outer rampurts aad ditches, it is defended by the fort of l'etersberg, built on a lill in its interior, and that of (Y̧riaksbery without its walls, on a helirlit about kion fi. in elevatlon. In the time of Charlemagne, Exfurt was one of the chief commerelin citien of tiemany, and so late as the end of tho 16th century, it is said to have hall an many as 68,0 to 0 intab. The husiness of shoemaking is extensively carried on, and it has mannfactures of woollen null cutton cloths, silk rlbands and other fabrics, vermidedll, pearl-barley, liqueurs, vinegar, and lenther. It is the sent of a local governmeat for its reg. and circle, a board of taxation council and tribumal for the town and circle, but not of a judicial court for jta distr. or reg. It first formed jart of the l'russian dom. in 1803 ; from 1807 to 1813 it was oceupiel by the French, and in 1808 a memorable inlerview took place in it between Nupoleon and Alexander, emperor of Russia. It was restored to Prussia in 1814.
EMLE (LAKE), one of the five freat lakes of S. America, between Canala and the U. States, included in the midille portion of the basin of the St. Lawrence. It lies between lat. $41^{\circ} 22^{\prime}$ and $42^{\circ} 52^{\prime} \mathrm{N} .$, and long. $79^{\circ}$ and $85^{\circ} \mathrm{W}$., having N , the fertile peninsula of Upiper Canadn, and S. and E. the states of Ohio, l'ennsylvania, and New York, Its shape is elliptical ; length SW. to NE. about $265 \mathrm{~m} . ;$ breadth varying from 10 m . to about 63 m , in its centre. Its area is estimated in the 'American Cyclopuedia' at 12,000, but by larby at only 8,030 sq. $m$. It receives near its II. extrensity the superabindant waters of the lakes St. Clair, Huron, and the upper lakes by the betroit river, its own surplus waters being conveyed to Lake Ontario by means of the Ningara, celebrated for its stupendous waterfall. lts mean hight above the level of the ocean is estimated at $56 \mathrm{~s}_{\mathrm{j}} \mathrm{ft}$, being about 52 ft . below that of Lakes Michigan and Huron, and 322 ft . above that of Ontrio. Its depth, which is less than that of any of the other great lakes of the St. Lawrence basin, is no where more than 270 ft . and in most parts is considerably inder 200 ft . It is also said to be pradually becoming shallower; and in proof of this it is stated in a late luffinlo jourmal, that Long l'oint had in three years gained 5 m . on the water,
and that the land is aino raphily gaining along its S. ahore. Ita loottom apprars to be conimened of an alluvial dejomit of swni ani mul, restlime on mecondary selintone mandetone. (I)arliy.) Ita N. whore In rocky and dingerons; the oppowite ono line alwo long llinew of rock; and, except at either extremity, none of ids whore-hartmom aflomi a mate and mendy entrance of 7 ft. whter. (Darby.) In adiltion to other fingudimpinte to navigation, a eurrent, not pureeptilio in the other groat Inkes of the St. Lawrence nyntem, meta comentmily $W$, and NW. or SW, wlads contimnily prevail; bewiden which, in eonergnenee of ite nla lolownow, a part of Lake lirie in frozen over every winter, und trulle on it in alowtructed by lee for mome weoks in the apring after the navigntion of the other lakew in ofen nud unimpeded. 'I'owirde the W. extremity, there are neveral groups of small islmuln, and wius - Cumingham Inlinil, helonging t" the U. States - hus an excellent harlour called lint-in-Itiny, with 12 ft , water. On the N. mhore, neverni promontorion atreteh into the lake, the prineipmi of which tre the $N$, and S. Forelande, nud lohnt lamilginurl. bixerjet the betroit, Iake birle recoives few rivers of any consegnence, null nll, withont exception, have fars at their momilis. The Ounes or Wallund, which unites with its li., extrumity, is its principal nthuent, nind has heen taken alvintage of for the comstruction of the Welland eanni, of whieh it forms a part, commecting the Lakes Virie and Onturio, and avoiting the Falls of Niafara. (See Canada.) The lirie emma, 3 bis m, in length, runs from the town of Ifalingo to the Iludnon river; the Ohio camal, $33 \cdot \mathrm{~m}$, in length, extends from Cleveland at the month of the Cinvoliogn to the Seinto, a little S, of Columbus. The former of these canals pilnces Lake lirie in communication with the Atlantic; the latter comects it with the Gulf of Florida. (For further particulars respecting these important canals, see Clevelanis, United States, Nisw Yohk, and Olmo.) lhiffalo, Duskirk, Ashtabula, Lirie, Clevelani, Snndusky, Pertland, and Detroit are the principal towns on Lake Erie, within the territories of the U. States, anil Port Talbot, Dover, and Sherbrooke in those belonging to (irent Britain.
liRIVAN, or IRIVAN, a town of Asiatic Russin, being the eap. of Russian Armenia, on the Zongoti, an ntlluent of the Araxes, 8.4 m . NNE. Monnt Arnrnt, and $106 \mathrm{~m} . \mathrm{S}$. liy W. T'etlis. Pop. 9,510 in 1858. The town contains about 2,000 honses, Interspersed with numerous garilens, and ruins of various dates, the whole fortitled, and protected by a citadel placed on a steep ruck, more than 600 ft . in heght, overhanging the river. This fortress, which is about 2,000 yds. in circuit, is encompassed by a double rampart of earth flanked with towers ; it contains the ancient palace of the khans, now the renidence of the governor; a flue mosque, a casmon foundry, and barracks. The honses in the town are mostly mean, and irreguInrly built. Erivan has, however, a large und handsome caravanserai, with 780 shops , besides 4 Armenian churches, one Russo-Greek ditto; an Armenian convent, 3 mosques, mome aqueducts of a curiont construction, and a good stone bridge of several arches, across the river. 'The town lias some manufactures of cotton stuffs, leather, and earthenware. It is a station for caravans from Tillis and Erzeroum, ami has a considerable trade with Russin and Turkey. The epoch of the fomatation of Erivan is unknown. It was taken by the Persians from the Turks in 1635 . The latter retook it in 1724 ; but it was again taken by the lersians, under Nadir Shah, in 1748. The Russinns were repulsed in an attempt to take it in 1808; but they succeeded in 1827, and were con-

firmed in its posmencion by the trenty with Peruin of the fillowing year.

Fililan(ilin, a town of Davaria, elre. Central Frunconia, of the liegritz, $2: \mathrm{m}$. A. Itamberg, wis the railway from llambers to Nuremberg. 1'opo. $10,1228 \mathrm{in}$ isil. It is walled and divisted into the dil and new townsi the latter, which is one of the best-built towis of (iermany, was founded liy Chrintian Emeat, margrave of fayrenth, in IBAS. It conining the celelrated l'rotentant univernity, the only one in the kingilom, entahilimes 174is, nuil uminlly attended by norut 280 atmienta. This inutitution oceupien the ancient paince of the margraven of Mayreuth, nul has connected with It schoouls of theolory, moral philosuphy, miliwifery, medinise, and the tine artw, a polytechnie mehool, a gymianium, general and lying-in howpitalm, cabinets of naturat hintory, a botanio garden, nud a library of 100,000 volm. The palace giritens are very lianisomely laidout, and murned with atatues. Woollen goodm, atockinge, hatn, leather anil leathern articlea, are male in the fown; which ham alwa a large plate-glans manisfinetory, and a brewery, besides some traito in pattle. Mont of the jopp. are l'rotentaint. Many French refugees nettled in Erlangen afier the revocution of the edict of Nantes, aud in Lifib, the tlant learned society in Germany was estaWinhed here.

KRL,AU (IIung. Fger, Slav, ,Jager), $n$ fortitied town of Hungury, co. Heven, of which it in the enibe on both niles the Eirlan, an afluent of the Theins, $65 \mathrm{~m}, \mathrm{NE}$. I'enth. I'op. 10,815 in 1858. The town has 2 nuburbs; is euteren by 6 gaten aud contains a enthedrul and 6 other churches, an archbinhop's palace, lyceum, with a library and ubservatory, an archiepiscopal meminary, gymnaninm, Catholie high mehool, conventual hosjpital, asylum fir linimm clergymen, and various other public institutions. The neighbourhood of litlan in very fertile and highly cultivated; it produces from 180,000 to 200,000 cimers of the red wines anmually, and the bent tohacco in Hungary. The culture of thene articles, together with manufactures of woollen and linen fabrics, leather and leathern goods, employ most of the inhab.

ERNE (LOUGII), a celebrated lake of Ircland, co. Fermanagh, which it divides into two nearly e!jual portions. It consists of two principal lakes, the Upper and Lower, connected by a broad winding channel. It contains in all an area of about 40,000 acres; and ntretches NW. and SE. 30 or 85 m . The lower lake is the largest ; and both It and the upper lake are full of islands, some of them large and thickly inhabited, many of them well wooled, and the whole so disposed and accompanied by such a diversity of coast, as to form a vast number of rich and interesting prospects. Enuniskillen stands on an island in the channel letween the upper and lower lakes; and on another island is the magniticent seat of the Marquis of Ely. The lake is elevated about 140 ft , above the level of the sea, It receives the Erne and several other rivers; and discharges itself at its NW. extremity by a rapid current of about 9 m ., which after falling over many ledges of obstructing rocks, precipitates itself down a grand cataract into the sea at lallyshannon. It has been proposed to open a navigable channel from the sea to the lake by means of a canal, which would certainly be of material service.

EKZEROUM or ERZ-RUM (Arab. Arzen-elRoum), an important city of Turkish Armenia, cap. of an extensive pachalic of the same name, and residence of a seraskter pacha; in a plain at the foot of the Telseldir mountains, near the sources of the N. arm of the Euphrates, from

0,000 to $7,000 \mathrm{f}$. abowe the level of the matiat
 and 156 m . WNW. N. Ararnt ; lat. $1900^{\prime} 9^{\prime}$ an
 ounly entimated at differont jerionfas but on viounly to the ravages of the plague in lwel, it amounted to near $100,(00)$, and at the thme of the Ilusnian invanion in I820, it la suppomed to have been about 70,000 of $80,0 \mathrm{NW}$ ). Ihit liaving leen ahage domed by most Armenian familien, previomuly to ita being ngain ieliverei up tos the turkw, it hat not, in INBS, aceomiling to Dr, Ifrnnt, alave is, fan
 ever, thin enflmate wan below the mark, and the pop, han mince increamed.

(Minalonary liewarathen in Armenia, pp, Bi8, 0.l.) Aceortling to Mr, Kinneir (An!a hlinor, p. infi), the citnlel in 8 or $\ddagger$ m . in circ. Cajit. Williraham entered it by a atronig and maselve patewny, tlankeil by two mat tilnted though atill lenutiful minareto. Now it the Turkinh luhals, realide within the eitmide. The atreets of the city, whileh may be rugaried as a suburb attached to the citadel, are narrow, crookem, fllhy, and infented with tronjs of hingery duga The honses are mosily constructed of mull, wound or sun-itrled brieks, being, in gemeral, only one story high. A grees zwaril has grown over the terraces of ilirt. tw vhich, instead of rmofn, thes are all covered, and givea them, whon siewnd from an eminence above, almost as much the as pect of a mealow as of a city. The anvinus an aingularly destitute of trees, the dried fucce of the eattle being the only fuel. Watar is uow and abundant, but wine, nccorling to Toumefort, is execrable. (Lettres du Levant, 1 j .259 , 4theih) Erzeroum has two Armenian churches, a firect clי口reli, and about 40 mosques, the largest of which will accommolate 8,000 people. It has an excensive custom-house and B6 hhans or iuns, manr of which are large and solidly constructed lis bazaars are poor and amall, though its markets appear to be well supplied with provisions; and great many oxen are killed weekly. The city is well situatel for trade, on the high road between Asia Minor, Georgia, and N. I'ersia; nnd it was once the thorouglifare for most part of the overland commerce between Europe and the Enst, which survived the discovery of the passage round the Cape of Good Hope. Kecently its commene has been sliminished from a variety of causes; but mainly from the emigration of its Christian inhab., who were its mechanies and tradesmen, to the adjacent possessions of Kussia. The mannfacture of copper utensils, which once formed the principal branch of industry, is now almost abandoned; but it still continues to have some trade in furs, galls, dc. The amount of goods that passes through Erzeroum, in transitu, is very considerable; and Capt. Willoraham, who visited the city in 1837, says that it had materially increased since the establishment of steam-boats on the Hack Sea. From the E., the shawls of Cashmere and Persia, silk, cotton, tobacco, rice, indigo, madder, rhubarb, and a varicty of drugs, are brought to Frzeroum ; and, from the W., broadcloths, chintzes, shawls, and cutlery. Little, however, is seen of any of these goods, except at tho.custom-house
and in the k : meunling to wailt of a fev ment that the nefirin, $p, 202$ of the bazaan neall irale.

This city in a principal halting-ntation firr caranams of pilsrima from 'retiran ami elwewhere, to Yeven of ita $8(0,0) 0$ linhat. pirevilously to 1820 , it was eatimnted that 23,1000 were Armenians, and the reat principally Turky, wills atmut 250 (ireekn. The city lind ma dewish imlanl), Of the Armeniana, dinut 4,000 belonged to the Rom. Cinth., and 13,000 to the Arneninn church. The dioceme of the Amenian bilmhop Includes the whole paetinlie do Sizeroum, which, since the late wnr, han been much exteuled, and now comprises the former ashalic of Kara. Thers was in $1 \mathbf{2} 29$ an Armeninit grammar school in the city, with 8 or 7 tenchers, and from 500 to 000 neholarn, besides a neminary for the inatruction of the Armeninin clergy; amil acomparatively Inrge propurtion of the prop. rere then reported to poesess the rulliments of diluention.
Owing to the elevation of the pince, the winters are long and severe. In the nelghbourhool, howevel, eattle, nheep, loumen, dc., of nuperior kinds, are reared in great numbers; anil in the alljacent plain, com of a very excellent quality is grown, which fums one of the principal articles of export. Eizeroum wan foumlen, absut 415, by a byzantine gencral of Thechloslua 11 ., after whom it was named Theodosimpolis. It derives Its present unme fnm the an. Arze or Ardzen, a populous clty which stood net fir to the E., but which, having been dentroyed by the Seljúkinne, the aurviving inhboh, transferred their renldence and the commere sull name of their city to the prewent site. (Miswlunary Researches In Armenia, 63.) This was anciently the strongest of the Armenian posexsuns of the Lower Empire; and it is at prenent considered the bulwark of those belonging to Turkev.
ESCUKIAL, or ESCORIAL, a celebrated palace, convent, church, and mansoleum of the wurerelgns of Spnin, Old Castile, prov. Segovia, ${ }_{2} \mathrm{~m}$ m XW. Madrid, on the railway from Madrid to lurgoe. The name of the place, according to Cavin, is of Arabic origin, signifying a place full of rocks; though others derive it from a Spanish word implying the acoriae, or scum of melted metai, some fron mines having been formerly rrought in the locality. Its sifuation certainly bears out the former etymology. It has a most gloomy site, surroundell by the bnre crags of the Siern Guaderama. The view from it, though extensive, is not pleasing; and the facility of prouring atone for its construction would seem to have been the only inducement to the chovice of its site. It was commenced in 1563 by Philip 11 , and finished in 22 years, under the superinteadence of two architects. It is one of the lrgest and most magnificent edifices in Europe, though far from being externally the most clegast. It is dedicated to St. Lawrence; ' and as this saint is said to have been broiled alive on a gidiron, in the 3rd century, the founder chose to lare the building on the plan of that culinary inarnument, the bars of which form several courts; rhile the handle contains the royal apartments' (Twis, p. 99.) The handle is about 460 Spanish fret in length; the principal front of the main portion of the building is 657 ft . ( 740 Span.) Groad; the sides 494 ft . ( 580 Span. ) in depth; and the general height of the edifice is about 60 fti; s square tower, about 200 ft . in licight, ilank-
ingench angle. It in in' "y built of a groy atome,
 though not mo hart. 'Lur Gerie oriler prevally in Ita arehitecture. 'I'he me-t atrikiong part of the Enecurial in the church in 'a celtotre. It built with a cupola and two tuwers, afler the mi ner of
 inglia, who vinited it in 1xilio, obmerven that ita interior exceeded in richnens nall magnitieence any thing that he hal previnualy imagined. 'It in quite limpusilile,' he maya, 'to enter Into minute deseriptions of all that composen thin magnittceuce: the richen of Spain and her ancient collonies are exhainuted in the materiala; marbien, perphisyries, jnypers, of intinite variety anill of the mont extrnisidinary benity, - guld, silver, anil precious stonen ; and the splendhl effiret of the whole in not lessened on a nearer innpection; thero in 110 decyption, no plitter-all in real. The whole of the altar-piece in the Chpilla Mayor, uplwarids of 00 ft, high nail 50 bromil, in one maxn of jaylver, porpliyry, marble, and bronze, gilded; the 18 pllinar that ndorn it, ench 18 f . high, are of deep red nul areen Jnsper, nud the inttervals are of porphyry and marble of the mont exquisite prilinh, and the grentest variety of eulour.' (Inglia, 1, 2015.) The celebrated crucitix of Henvenuto Cellini, formerly in the posmennion of the Medici family, in, or wan, in this church. The ceiling is covered with the almicable frescoes of Lh Giordano, comprising a conmecutive hintory of the Chrintian religion and other mulbjects, and which are considered to be excelled only by the works of M. Angelo, The saeristy, for its decorations, equals in benuty nny part of the Escurial; and conitalns some of the choicent works of the most illuatrioum painters. Of the 42 pictures that allorn the sncrinty, it may be nald, what can rarely be aald of any collectiom, that ' there is not one that is not a chef-dfouvre: There are 3 of Raphael, including the celebrated La Perla, and the Mrudonna della Pesee, 2 of Leonardo da Vinci, 6 of Titian, and many of Tintoretto, Guido, Paul Veronene, de. The rellquary of the convent contains, of course, an abundance of relics, The library of printel books contains alvout 24,000 vols., many of which are very scarce. The manuseript litirary, more valunble than the former, comprises about 4,000 MSS., in Arahic, Latin, Greek, Hebrew, \&c., ineluding severnl of the 9 th and 10 th centuries. This library sufferel greatly from a fire in 1661. The royal mausoleum beneaih the church is a most magnificent sepulchre. It is of a circular form ; the walls of jasper and black marble; and in rows, one over another, are ranged the cothins of the sovereigns of Spain. Here are the urns of 8 kings and 8 queens, on opposito sides of the mausoleum ; the former incluiling the emperor Charles $V$, and his son Philip 11.: numerous other royal personages are buried in a chapel in the Escurial, called the Pantheon of the Infantas. The palace adjoining the monastery would any where else be considered a splendid ediftice, but here it is comparatively little worthy of notice, from its inferiority to the rest of the Escurial. The total expense of raising this immense pile of building is said to have amounted to $6,000,000$ piastres. The French carried away a great quantity of gold, silver, gems, and other valualles from the Escurial; but, on the whole, they treated the edifice with greater forbearance than might have been anticipated. When Mr. Inglis visited it in 1830 there were about 100 resident monks of St. Jerome living, not as ascetics, but in a state of luxurious indulgence. The revenues of the monastery formerly amounted to 12,000l. a ycar. A straggling village of 2,000

DiNSN:II (the linfopalia of the (ireekn), n town of the 'Thebaid ar Upper figyit, ons the W, hank uf the Nile: 28 m . N. 'lhelien; lat. $25^{\circ}{ }^{\circ} 17^{\prime}: 3 \mathrm{~s}^{\prime \prime}$ N. lomg. $82^{\circ} 240^{\prime}$ b1" 1is. The valley of the Nile in hero alonit I m . in willh; it in, however, too moch elevated to be covered ly the inumintion: anid the eanala by which it hand been irrigated having lean allowed to tll np, It had leceone in a great degrue lurrel. Ihat Meliemet Ali has mueceeted in reopening thene cmunln, wo that the ancient fertility of the diastret has been in part recovered, and it has become the neat of extenmive cotton plantatlons, The town, seated on a mound of debris, 30 ft. in helght, is the prineipal combmercinl place in Upuer lipypt. It is the entrepôt for the sennar curavan, while the Almbitie canel lireedern of the dowert bring their comels, and the Ilerbers from Nubia their commondities, to nell in its murkets. It his alno some manufacturew, purtlcularly of malayeh or cotton shawls, mineli worn in the country, anil pottery, It in the nent of a Coptio hishop, anif numbers among its inhub., from 300 10) 400 Cliristian fumilien, who have two churchen, and a third firther up the country. There in a Cuptic monustery to the S, of the town. (Ritter's NI'rica, JiL . \$ 211 ; Jowitt's Christian Rewearehes.)
In the centre of the town is a fimoun temple, luilt of sandstone, and of colosnal magnitude. llaving been mule a magazine for the warchousling of the cotton of the surrounding dintrict, it has fortunately esenped the destruction that has lutely overwliclmed some of the tlnest ligyptian monuments. 'The walle of this temple are covered (irripi) with the mul of the Nile; and it is no sencumbered with mul walle, saml, Illeh and cottom, that it is difficult to form a correct idea of its form and vast size. It has a zodine somowhat renembling that at Denderah; and from the mode of interpreting the figures on it, this temple was long supposed to be the most ancient in Egyjt; liut so far from this being the case, it is, necording to Champollion, 'le plus moderne de ceux qui caistent encore en Figypte; car les bas-relicfs quile dicorent, et les hieroglyphes aurtout, sont d'un atyle tellement grosaier et tourmenté, qu'on y aperçit, au premier coup d'ail, le point extrême de la dicadence de l'art.' (Lettres, 109.) This conclusion is estabisled by the hieroglyphic inscriptions, which show that the olflest part of the temple, a small portion of the pronaos or portico, was built by Ptolemy Epiphanes; but that the portico was principally constructed by the Emperor Claudius; and that the other parts of the structure lelong to a still later aera, or to that of various Koman emperors, from Claudius to Septimius Severus and Geta. It upuears, however, notwithstaniling the comparative lateness of the temple, that lisich had been a place of much importance under the

Pharaoha, frugments of ellifeea having been dis coverenl buaringe hieroglyplifeat iluweriptions that refer to their ura.  The tuwn in situated in a plensunt valley, surrominded ly hilln clothed with vines mil oliven, amd prolucing wheat, harley, onts, maize, and other grmin. Streets ill-paved and ilirty. It has 8 churches, 7 convents, nid $n$ hompital. In former timun it liall a castle that was leemed impregnable, and wis the hend-quintors of the military foree of the kling of Navarre. There were formerly 4 bridges over the rlver; liut one of them was swept awny in 1801. In lts centre is a handsome promenade, plantel with clms, limen, and joplars. It has manufactures of woulen eloths anil cassimeren, with oll presses and branly distilleries. A finir is held here from the 11th to the 30th of November. At a short distance from the town is the miversity of Larche, which has the same privileges as those of Salamanen and Vallalollil.
lis'LEPA (an. Astapu), n town of Spuin, prov. Seville, cap, of a depho, on a hill murrounded by plains, planted with olive trees, 16 m . W. Onima, and 50 m . W. elty of Seville. l'op, 8,183 in 1857. The town is regularly built, and the honses are in tolerable comilition. It has 2 churches, 3 convents, a hospital, a public granary, and a palace of the marquises of the same name. Astajut was a place of iniportance in the time of the liomans, anil was burnt by its inhab. when besieged by Sclpis's genernls.

IESTLEPONA, a sea-port Lown of Spain, prov. Granalin, in the Mediterranean, 24 m . NE. (iiluraltar. Pop, 9,316 dil 1857. The town is tolerably well built; has a church, a hospital, a publie granary, and a castle. The chicf support of the place is its coasting trade: it exports raisins, figs, sweet potatoes, ornuges, lemons, and wine; for which it recelves wheat and other grain. In this ways it employs about 100 vessels. It has also a productive fishery of sardines.
-

## ESTERHATY

ESTERHAZY (Hung. Esterhaz), a village of Lower Hungary, co. Oedenburg, near the SE. extremity of the Neusiedl lake, 14 m . SE. Oedenburg, and 88 m. S. by W. Presburg. Pop. 405 in 1858. The village is celebrated for a magnificent palace, belonging to Prince Eoterhazy, built in 1700, in the florid Italian style. It comprises 102 different apartments, antl is surrounded by a gallery adorned with numerous vasen, statues, \&c. It formerly containsd fine collections of paintings, engravings, Chinese porcelain, and a llbrary ; but most of thicee have been removed. It has attached to it an observatory, riding achool, stabling for 100 horses, and an opera-house, in which the incilent occurred which opened to the composer Haydn his subsequent career of celebrity. The palace is aurrounded by a noble park, and has an orangery, mumerous fountains, fish-ponds, and a pheasantry; but the gardens are overgrown with weeds; and the numberless pleasure-houses with which the grounds are crowiled are fast falling into decay, the family having, for the most part, abandoned this noble seat for that of Eisenstalt. This, which also aljoins the lake, is, like Esterhazy, in the Italian style, of large dimensions, and well fitted for a princely residence. It was rebuilt in 1805, and is situated 24 m. NW. Esterhazy. The grand ball-room is a noble apartment. Its park and gardens are much admired; and the botanical collections in the large hot-houses of the latter are surpassed by few in Europe; they comprise no less than 70,000 exotics, and are particularly rich in Australian apecies. The Lcopoldine temple in the park has a statue of the Princess of Lichtenstein, by Canova.

The estates of Prince Esterhazy are sald to equal the kingdom of Wurtemberg in size; and contain 180 villages, 40 towns, and 84 castles. But the annual revenue from these vast possessions is said not to exceed 200,0001 , per annum, though it is capable of considerable increase. The family of Esterhazy professes to trace its descent from Attila.
ESTHONLA, or REVEL, a marit. gov. of Russia in Europe, in the NW. part of which it is situated, forming one of the Baltic provs. It lies between lat. $58^{\circ} \quad 20^{\prime}$ and $59^{\circ} 30^{\prime} \mathrm{N}$., and long. $23^{\circ} 20^{\prime}$ and $28^{\circ} 20^{\prime}$ E., having E. the gov. of Petersburg, S. the lake Peipus and the gov, of Riga, W. the Baltic, and N. the gulf of Finland. Area, inclusive of the islands belonging to it, about $6,870 \mathrm{sq} . \mathrm{m}$. Pop. $310,400 \mathrm{in} 1846$, and 303,478 in 1858. Surface generally flat, but diversitied in parts with undulating hills; it contains many small lakes and streams, but has no navigable river: its shores are bold and rocky, climate rigorous, the winters are long, and fogs and violent winds aro common throughout the year. Soil in great part sandy, and rather infertile: the cultivable lands are supposed to be to the unproductive, forests, sc., as 1 to 3. Agriculture is the chief employment of the pop., and more corn is produced than is sufficient for home consumption: it is principally rye, barley, ard oats; but wheat and buck-wheat, besides flax, hemp, hops, and tobacco, are also raised. Most part of the corn not required for fooll is set aside for the purpose of distillation. Different species of pulse are extensively cultivated, and form a large proportion of the nourishment of the peasantry. Fruit trees are neglected; but certain wild fruits are very abundant. The pine and fir are the most common forest trees; but the oak, elm, and beech are met with. A good many head of live stock are reared, and some are driven into this prov. from distant ones, to be fattened for the Petersburg markets. The oxen and horses
of Esthonia are very iniifferent, as well as the rheep, and goath, though active endeavoun have been made to improve the breed of the laver, Poultry is abundinnt. The bear, wolf, badger, and fox inhabit the forests, and there are a few elke, The lakes do not contain many flsh; but the fisherics on the coast are of importance to the inhabs. $\Lambda$ few mineral producta are obtained, but they are of no great consequence. Nearly all the manufaotures are domestic, the peasantry wean their own coarse woollens, and some very tolerable limen atuffis. In the lslands, the building of bwate is a principal employment; distilleries are cummon in every part of the country, the free use of atills being one of the most important of their ancient privileges that the Listhonians preserte The chuef exports are corn, ppirits, salt-fish, end hides; amongst the chief imports nre hering and salt. Revel (which see) is the centre of the trade of the government. The provi is urder thy political superintendenco of the govemor-genena of Riga; but has its own proviucinl council an judicial court. Nearly all the inhab, are La therans; only about 1 in 148 of the pop, are edon cated. The upper classes, both in the towns min the country, are mostly of German or Danikd descent. The Esthonians are of the Finuidh stock and liaving been in a state of slavery till a reenen period, have, it is alleged, contracted most of the vices incilent to such a state. This country we gold by the Danes to the Teutonio knights in 1347, conquered by Sweden in 10661, and finally annexed to Russia by Peter the Great in 1710,

ESTRLEMADURA, an extensive prov. of Spain lying, between $37^{\circ} 54^{\prime}$ and $40^{\circ} 38^{\prime} \mathrm{N}$. latt, nind $4^{\circ} 50^{\prime}$ and $7^{\circ} 24^{\prime} \mathrm{W}$. long. It has Solamana, and part of Avila, on the N.; Toledo, La Msncha and part of Corlova, on the E.; Seville, on the S.; and Alentejo and Beira, in Portugal, on ib W. Its length, from N. to $S$., is $188 \mathrm{~m} . ;$ and mean brendth, from W. to E., about 80 m . Ara 14,329 sq. m. ; pop. 707,115 in 1857. Estremalus is divided at present into the two provinces a Badajoz and Cacercs, the former with a pop of 404,981 , and the latter with 303,134 , according to the census of 1857. It consists of immense plain, terminated on the IN. by the Sierras de Greday de Bejar, and de Gata; and, on the S., by thes of Constantina, a continuation of the Sierra Morena Another branch of the latter chain runs along the boundary N. from the conflnes of Seville and Cor dova to the river Guadiana, from vhich a branch of the mountains of Guadalupe again extends far as the Tagus. These two rivers, each of which is here joined by several affuents, cross the pros from E.' to W., and an extension of the Castilim or Toledo muuntains, under the names of the Sierras de Guadalupe, San Benito, and San Petme lying in the same direction, divides it into tho nearly equal parts, the N. (Estremadura Alta) being in the basin of the Tagus, and the S. (Eser madura Baja) in that of the Guadianh The sum mers are hot; there is then but little min; thy nights, however, are cool, and the dev, whichi abundant, is sufficient to moisten the ground Although the high mountains are covered wila snow at the end of November, the winter is na severe. In summer, the heat often briugs ${ }^{6}$ epidemic fevers, particularly with strnngers. The soil is very fertile, and might be renderal highto productive by a proper use of the water of many rivers that intersect it ; but a combination of causes, at the head of which are to be bad government, have extinguished all indusy Agriculture is wholly neglected; and the nolly plains, that might yield abundance of all sortas products, are devoted to pasturage only. lit

Estremadura the two provinces of former with a pop, of h 303,134 , according to sists of immense plaing the Sierras de Gredon nd, on the $S$., by thos on of the Sierra Jorena. er chain runs along the ines of Seville and Cor$a$, from which a branch alupe again extendsa wo rivers, each of which ffluents, eross the pror. ension of the Castilian der the names of the Benito, and San Pedro, on, divides it into tro N. (Estremadura Ala) lagns, and the $S$. (Estre ne Guadiana. The sum en but little rain; the and the dew, which - moisten the ground tains are covered with mber, the winter is nol hent often briugs on ly with strangers. The ght be rendered highly ise of the water of the it ; but a combination which are to be placed tinguished all industry. gleeted; and the nob bundance of all sortsd pasturage only. lt
wed that about 4 millions of merino sheep come nery year from other parts to winter in the aline, according to the nncient Institution of the yoda (see SPain), besides those that belong to the conntry, and immense herds of swine. The poduce of com, wine, oil, hemp, and flax is inpuficient for the consumption; lint there is an abnalance of clestnuts, from which the popuItion of this naturnlly fine conntry derives a condiderable part of its scanty subsistence. The plains of Placentin, the vicinities of Coria and $L_{a}$ Serena, and the territory between IBadajoz and Ulerena, sre the best peopled and most profluctive, and show what the rest might be uniler any thing like a good system of husbandry. Immense plains arefound sill over the prov, covered with varions mecies of buckthorn, myrtle, marjornm, and other melicinal and odoriferous plants, which are good for nothing unless it be to feed great numbers of bess Here and there wools of nohle evergreen alks are met with, whose acorns feed the herils of swine whose flesh is so highly estecmed throughout Spain. It has mines of lead, copper, silver and iron, but they are all, or mostly all, neglected. The manufnetures of Estremadura nre harilly wirth notice. Hats are maile at Badnjoz and Zafrs, and there are a gooll many tanneries in the later place snd at EI Casar de Cnceres. Commere is also very small; the chief article of export is the flesh of its loges, its trade in cattle ind shecp with Madrid and Andalusin being of dight consideration. The state of the ronds and the wsint of internnl navigation would, in fact, be sll but insuperable obstacles to traffic.
The prov, is govemed by a captain-genernl, nith varions subnltern military governors; its eclesiastical jurisdiction is divided into three bidhoprics, those of Badajoz, Placentia, and Coria The people are among the most taciturn and grave of the iahnbitants in Spain, uneducated, and sunk in indolence. But it is said that, when excited by hope, or any other stimulns, they are persevering and indefatigable. They are robust and vigorous, frak, honourable, and honest; slow to receive an impression, but firm in following it up.
Cortes, the conqueror of Mexico, the two Pizamos, the Almagros, and other allventurers, were uatires of Estremadura. It anciently formed part of the kingdom of Leon.
Estremanura, a prov, of Portugal, which ,
ESTREMEZ, a town of Portugal, prov. Alentejo, partly in a plain, and partly on the slope of a hill, and in a well cultivated country, 22 m . W. Elvas, 26 m. NE. Evora. Pop. 6,920 in 1858. The town is ill-built, but has a large open square in the centre, and is strongly fortitied with an ancient castle on a commanding eminence, an asenal, and quarters for a regiment of cavalry. There are also four parish churches, five conreats, a hospital witl a church attached, and a hoose of charity. It has manufactures of DelftWare, especially of water coolers, and has some trade in hardware.
ETIENNE (ST.), a celebrated manufacturing town of France, dép. Loire, cap. arrond., on the torent of the Furens, an affiuent of the Loire, 20 m. SE. Montbrison, and 31 m . SW. Lyons, on the raiksy from Lyons to Le Puy. Pop. 92,250 in 1861. The population has more than doubled in the conrse of thirty years, having amounted to net 41,534 in 1831. The town is, on the whole, rell-built; streets wide and straight; houses good, though blackened with the smoke of its numerous soal fires. It has no public edifice worthy much motice; it contains nine churches, one of which iates from the 6th century; a town-hall, court of
justice, theatre, public library, cabinet of natural history, and several benevolent institutions, $A$ handsome fountain in the form of an obelisk ornaments the prinelpal square. The railrond 364 m . In length, from Lyons to St. Etienne, was the first rnilroad constructed in France, and it was followed by nnother 54 m . in length, from St. Frienne to Andrezieux and lRonnne. The manufactures are various; they include those of arms (in a goverminent manufnctory originally established in 1585, besides some private catablishments), hardware, cutlery, nulls, tlles, and other tools, and numerous kinds of steel articles. These manufnctures, if they do not owe their origin, are, no doubt, mainly indebted for their rnpid extension to the supplies of conl and iron-stone found in the vicinity. The wnters of the Furens, which are said to be particularly well alnpted for the tempering of steel, supply a grent mnny factories. Exclusive of hardware, silk fabrics nre largely mnnufactured; and lace, embroidered muslins, tulles, cotton yam, enit-le-Cologne, and lamp black are produced. There are, besides, some bleaching and dyeing estnblishments, with tanneries, and flnss and paper factories. The silk, and expecinlly the silk ribaud manufacturers who comprise a lnge proportion of the whole, have, of late years, for the most inart, removed from the town of St. Etienne into the aljacent country, where their fubries are uninjured by the smoky atmosphere, and the weavers live chenper nnd better, by nvoiding the aetrois, or town duties. Nearly one-half the inhnbitants are connected with the riband or silk haherilashery trade. The quantity of silk consumed annually in the riband manufacture is estimnted at abont $500,000 \mathrm{kilogr}$., principally of the superior qualities. Moro than three-fourths of the produce are exported. The price of lnbour nt St. Etienne is in general less than at Lyons, and snid to be abont equal to three-fourths of that at Cuventry; but it is very difficult to institute any comparison between them, except by comparing the eost of the work performed in each. The wages of the riband weaver vary from 1 s . to $3 \mathrm{~s}, 8 \mathrm{~d}$. a day; but the nverage may be about 1 s .8 d . This nverage is less than that earned in most of the other trades at St. Etienne; the reason assigned being that the riband weavers, not residing in the town itself, mostly divide their time between the manulacture and agriculture. The proprictors of 18,000 single land-looms in the mountrinous distr. round St. Etienne and St. Chamond are, in reality, little farmers. Few cottages are without one or more looms, at which the inmates work when not employed in the business of the sinnll farm. Entirely different from this class are the passementiers, or small master weavers, who possess from two to five, and sometimes ten or twelve looma each, and devote themselves wholly to the manuiacture. There is, at St. Etienne, an establishment enlled a Condition, in which silks are submitted to a temp. of from $72^{\circ}$ to $77^{\circ}$ Fahr, to test their quality, and bring them into a certnin state of dryness. The average quantity of silk sent to this establishment annually is estimated at 3,970 bales, or $595,000 \mathrm{lbs}$; that sold without passing through the Condition amounts to about 1,780 bales, or $267,000 \mathrm{lbs}$. per annnm. The latter consist chiefiy of foreign silks, which supply the factories of St. Etienne in the proportion of nearly one to two of French silk.

Some authors have supposed that this town occupies the site of the ancient Furanum, built by the Romans anno 65 b.c.; but this is very doubtful, and no annals of St. Etienne go farther back than the 10th century. In 1441, the town

## ETNA

consisted of only 200 indlfferent houses, which Charles VII., a few years afterwards, suffered the inhabitants to surround with a wall to protect them against the incursions of the English. A few vestiges of this wall still exist; but it did not prevent St. Ditienne from suffering greatly in the religious wars of the 16 th century. The plague destroyed 7,000 of Its inhab. in 1585, and 8,000 in 1628-29. Since the peace of 1815 , it has increased rapidly beth in pop, and wealth.

ETNA (Lat. PEtna, Ital. Mongibello), a mountain and volcano of Sicily, by far the most celobrated in both respects, either in ancient or modern times, rising from the F. shoro of the island, prov. Catania, between the river Alcantara on the N. and the Giaretta on the S., the crater being in lat. $87^{\circ} 40^{\prime} 31^{\prime \prime} \mathrm{N}$., long. $15^{\circ} \mathrm{E}$. It is entirely distinct from, and independent of, any other mountain range. Its base is about 87 m . in circ., but its lavas have extended over a much larger space. It consists of a congeries of mountains rising one above another. Not only is it the highest mountain of Sicily, but it is also one of the highest in Europe, leing, according to Sir J. F. Herschel, with which Captain Smyth's measurement almost exaetly coincides, $10,872 h \mathrm{ft}$. above the level of the sea. Its largest diameter runs from E. to W. The ascent is various on its different sides; that from Catania being about 24 m ., from Linguagrossa 18, and from Kandazzo scarcely 12. The extent of the base gives so easy an inclination to the sides, in most places, as greatly to facilitate the ascent; but at the same time it diminishes the grandeur of its aspect at first siglit, and its commanding elevation is scarcely perceived, until the traveller has got nearly half way up, and begins to look down on the rest of Sicily, while the summit still seems as far from him as at first; then, indeed, the mountain assumes an appearance so noble, majestic, and imposing, that; associated with the considerations of its cause and effects, it excites the most intense interest, mixed with a degree of awe that elevates the mind, and inspires sublime feelings. (Smyth's Memoir, p. 146.)
The multitude of minor cones distributed over its flanks, and which are most abundant in the woolly region, is, according to Mr. Lyell, 'a grand and original feature in the physiognomy of Etna. These, although they appear but triting irregularities, when viewed from a distance as subordinate parts of so imposing and colossal a mountain, would, nevertheless, be deemed hills of considerable altitude in almost any other region. There are about eighty of these secondary volcanoes, of considerable dimensions; 52 on the $W$. and $N$., and 27 on the $E$. side of Etna. One of the largest, called Monte Minardo, near Bronte, is upwards of 700 ft . in height ; and a double hill near Nicolosi, called Monti Rossi, formed in 1669 , is 450 high , and the base 2 m . in circ.; yet it ranks only as a cone of the second magnitude amongst those produced by the lateral eruptions of Etna. On looking down from the lower borders of the desert region, these volcanoes present us with one of the most beautiful and characteristic scenes in Europe. They afford every variety of height and size, and are arranged in beautiful and picturesque groups. Huwever uniform they may appear when seen from the sea or the plains below, nothing can be more diversified than their shape when we look from above into their craters, one side of which is generally broken down. There are, indeed, few objects in nature more picturesque than a wooded volcanic crater. "he cones situated in the higher parts of the forest zone are chiefly clothed with lofty pines; while those at a lower elevation are
adorned with chestnuts, eak, beech, and holm, (Principles of Geology, ii. 112, 3rd ed.)

The mountain is, in general, of a symmetrical form, but is broken on its $E$. side by a deep and extraordinary valley, called the Val del Bore, which, commencing near the summit of the mountain, descends into the woody region, and is theace continued by other and smaller valleys to the confines of the fertile repion. The Val del Bore is 4 or 5 m . across, and is surrounded by nearly vertical precipices from 1,000 to $5,000 \mathrm{ft}$. in height This gigantic chasm has been repeatedly traversed by torrents of lava; and in 1755 it was swept by a tremendous inundation caused by the melting of the snows near the summit of the mountain, It has a singularly dreary and blasted appearance,

The structure of Etna is chiefly of the tertiary period antecelent to the present epoch; it consists partly of volcanic, partly of sedimentary rocks; but to what extent is not known, they being so much covered by modern lavas, interstratified with layers of tufa and breccia: afound its base is a line of hills formed of luish mail, and clays enclosing marine sliells and yellowish sand, from 800 to $1,000 \mathrm{ft}$. above the level of the sea: about Paterno, and elsewhere, these are capped with basalt, tufa, and volcanic conglomerates.

The mineral products of Etna are chrysolite, zeolite, selenite, eopper, mercury, alım, nitse, vitriol, specular iron, amianth, pozzolann, and fine potter's earth: there are many hot, chalybeate, and sulphurous mineral springs; but io rivers, except what are subterranean, descend from this region, owing to the rapid absorption of the soil. (isee Stcily.)

The mountain is naturally divided into thet regions or zones, viz. the Fertile (La Regione culta or Piemontana), the Woody (Nemorosa or Syltoua), and the Desert (La Regione Deserta or Scoperta); to which might be added the Fiery region ( $R_{t}$, gione di Fuoco), consisting of the central cone and crater. These regions differ widely from each other in their products and general charater. The lower, or fertile, zone varies greatly in width, being 11 m . broad above Catania, but no more than $1 \frac{1}{2} \mathrm{~m}$. on the N . side. It is composed almost entirely of lava, which, in the course of ages, has been decomposed and converted into a very fertile soil. It is comparatively well cnltivsted and peopled. All travellers speak in the highest terms of the beauty and fertility of this region. 'Yo language,' says Mr. Hughes, 'can do justice totho scenery and luxuriant fertility of this tract; whose bosom, heated by subterrancan fires, and situated in the most favourable climate, teems with every flower, and plant, and tree, that can delight the eye, and every species of fruit that can gratify the palate; fields covered with golden grain, of the purple vine, villages, and convents embosomed in groves of chestnuts, and oriental plains, mossy fointains, and transparent streams; exhausell craters covered with a canopy of foliage, and nimberless other beauties, invite the tourist to thow charming scenes. Here, also, the sportsman will meet with every species of game that he cus desire; and the botanist or mineralogist fiad in exhaustible sources of amusement:' (Trsvels, , 113, 8vo. ed.) But here, as in most parts of Italy and Sicily, there is a painful contrast between the richness and beauty of the country and the a? pearance and condition of the inlab. The latag are squalid, slovenly, and dirty : a consequence, fis appears, of the ashes and dust that pervade th air, soil their persons, and injure their eyes; an? of the want of water, which is absorbed, as soon it falls, by the porous soil.

The woorly nerbes to abo megins and ter the trees are $p$ midule they them attaining part the oaks nith pines ( $\boldsymbol{P i}$ win the oaks punted, and a re eater on th ant of the woc plants and fern orn fields, but nd very rich focks of sheep In this ref melebrated ches colli, so called of sheltering consists of fiv all united in wuffice. The wooly region is 6 or 7 m . in width, and maches to about $\mathbf{6}, 400 \mathrm{ft}$. perpendicular height; it meques and terminates abruptly : In the lower parts the trees are principally oak and chestnut; in the midule they are almost entirely onks, some of them attaining to an immense size; In the upper mat the oaks decrense in size, and are intermixed nith pines ( Pinus tada); as we ascend the mounan the oaks nearly disappear, the firs become sunted, and at length all vegetation ceases, and reenter on the desert. The ground in the greater wat of the woody region is covered with aromatic dants and ferm. Tillage soon ceases; there are no on fields, but here and there a few vineyards, and very rich pasture land on whlch numerous flocks of sheep are fed.
In this region, nenr Carpinetto, stands the melebrated chestnut tree, Castagno di cento caadli, so called from its being supposed capable of sheltering 100 horses under its bouglis. It manists of five great arms, which, however, are all united in a single stem a littlo below the arface. The estimntes of the size of this anomous tree vary considerably, probably from beir not being taken in the same way. Swinborne mahes it 196 ft ., and Smyth 163 ft . in circ. dhe above ground. A house of ample dimensious for the accommodation of travellers has been anstructed in the interior of the tree. Several aher large chestnut trees grow in the vicinity, the principal of which is 57 ff . round. The products of the woody zone are chiefly tar, honey, cantharides. and charconl ; and its inhabitants are herdsmen and charcoal burners.
The minor volcanic cones abound principally in this region. Caverns are munerous; and one of them, the Grotto dei Capri, or grotto of the goats, from its affording slielter to these animnls, was formerly resorted to by travellers, as a restingplace in their ascent. In the vicinity are sleep meervoiss of snow, whence Catanin and other cities derive their supplics of that urticle, which is there rally a necessary of life : being packed in straw, it is carried to a grent distance on mules and axes. (Hughes, i. 117.) Wild boars, wolves, ladgets, wild goats, deer, martens, and all kinds of game, engles, vultures, and falcons, belong to this region.
The desert region, or zone, is a dismal traet, full of glomy and rocky hollows and in nense chasms, formed of black lava, scoria, ashe:, and volcanic sand; covered, for the grenter part of the year, nith snow and ice, which are alwnys to be found in the hollows. 'In this lofty region the air is chill and plercing; every sign of life and vegetntion ceases; not an insect crawls over the cold surface of the ground, not a lichen adheres to the hrey masses of the lnva; not even the cagle's wing boars so high, to distarb the awful solitude of nature: herc only the thunder and the tempest, of the atill more tremendous explosions of the rolcano, are heard.' (Hughes, 1. 113.) In the midst of this gloomy region the principal cone, forming the summit of the mountain, rises to the height of about $1,100 \mathrm{ft} .1$ it is very precipitous, and as it consists of loose scorine and nshes, which frequently yield under foot, the ascent is extremely laborious. At the foot of the cone is a house, with rooms and stabling, erected in 1811, at the expense of the British officers then in Sicily, for the accommodation of travellers, to whom it is a very great convenience. The cone at its base is from 7 to 8 m . in circumference; but at its summit its circ. is reluced to about 4 m . It consists of a horizontal plain, with a vast central crater, or barathron, $2 \frac{1}{3} \mathrm{~m}$. round, agreeing in this respect with the dimensions assigned to it by Pliny:
'Crater ejus patet ambitu stadia $x x$. (Nat. Hist., lih, iii. §8.)

The view from the summit of Fina is superb beyond deseription. Sicily is spread out like a carpet at the npectator's feet, who traces every river through all its winlings from its source to the sea. The st rait that separates Italy and Sicily, the Calabrian slores, and the Liparl Islands, aro distinguishing features in this magnificent panorama, which, it is said, sometimes extends to Vesuvius on the one hand, and Malta on tho other. The wonderful extent of view, and the unegualled sublimity of the scene, is owing partly to the great altitude of the mountain, partly to the highly interesting nature of the objects, but moro than all to Etna being 'alone in its glory, and having no other monntain in its vicinity to detract from its grnndeur, or to interrupt the immensity of the prospect.

The enjoyment of the spectacle of sunrise is the grand object of travellers who ascend to the summit of the momitalin. Brydone has reseribed it in terms not unworthy of the glorious scene, thongh doubts have been entertained whether he really saw what he depicted, or trusted to the reports of others. It is probably one of the grandest, if not the grandest, of all the views of natural scenery that it is possible to behold in Europe. Not the least interesting portion of the extraordinary prospect from the summit of Etna is the distinct image of the mountain itself, seen at the extremity of the slindow that it projects across the islnud. (lirydone, Letter x. ; Hughes, i. 120.)

The crater, when Captain Smyth visited the mountain, was of an oval form, directed from NE. to SW., its conjugate diameter being nbout .493 yards; but its size and form are perpetually varying from the accumulation and falling in of volcanic matter. Its interior is encrusted with extensive efflorescences of ammonia, sulphur, and vitriolic salts, to the tlepth of 100 yards on the E., but less on tho W. side: those of an orange colour are the most common. Its bottom is Hat, and tolerably hard; near its centre are two mounds of scoriee and ashes, surrounded by several fissures, 'whence,' says Captain Smyth, 'at intervals issue volumes of thick smoke, with a rumbling noise, and hissing sound. There is also a light thin vapour ocensionally oozing from the bottom and sides of the huge amphitheatre in every direction. ' I endearoured,' he adds,' to look into the principal chasm; lut the rupid ejection of the cinders, and the strong sulphureous vapours that exuderl, preventel me from attaining my object.' (Memoir, p. 151.)

Mr. Hughes, however, has supplied a more minute account of the principal spiraculım or funnel. It has three stages of descent; the first, which extended only a few hundred yards, terminated in a shelf or ridge of cinders; the second, more precipitous than the first, extended to a similar shelf; the third being the perpendiculnr and unfathomable abyss. Between the two principal spiracula are several smaller conical mounds, constantly smoking. The ground here is so hot round the crater that visitors are obliged constantly to shift their places, and yet even here, in the interior of the crater, snow is seen in immense ridges, ' disputing, as it were, the preeminence of firc, in the very centre of its dominions.'

Before eruptions local earthquakes are felt, hollow intonations henrd, irregular clouds of smoke burst fortl, and ferilli, or volcanic lightnings, are seen darting from the top of the mountain: the agitntions increase, till at length, either from the great crater, or from some other part of the mountain, $\%$
terrific discharge of red-hot stones, flakes of fire, ashes, sand, or other substances, aceompnnied with vast volumes of smoke, suddenly takes place with tremendous violence.
$\qquad$ forrificls juxta tonat Tetna ruinis,
Interdumque atram prornmpit ad aethera nubem, Turbine fumantem pleco, et candente favilia: Attollitque globos flammarum, ot sidera laubit: Interdnm scopulos avulsanue viecera montix' Erigit eructans, IIfucfactaque saxa sub auras Cuin gemitu glomerat, fundoque exastunt tuso.'

Tineld 1il. line 571.
Some of the matters thrown up during an uruption are ocensionally projected to an immense distance. They not unfrequently rise to the leight of $5,000 \mathrm{or} 6,000 \mathrm{ft}$. above the summit; stones of 13 oz . weight have fallen 15 m . from the crater ; and in the great eruption of 1669 a stone 50 cubie ft . in size was ejected with such prodigious force that lt fell a mile from the crater. Ashes are suid to have sometimes fallen in Malta, about 130 m . distant. The ernptions are generally followed or accompanied by the outbrenk of a torrent of lava. If this current of liquid tire be stopped by inequalites of ground, a portion cools, and the rest topiles over it; sometimes it overwhelms whole eities, villages, and tracts of country: the torrent of lava that partly destroyed Catania in 1669, was stopped by the city walls, 60 ft . in height; but the burning flood accumulated till it rose to the top of the rampart, and then fell over it in a tiery casende. This mass was so enormous that, according to the reports-the truth of which, however, seems somewhat doubtful-it was eight years in cooling.
Generally, however, it soon congeals, and when mixed with scorix, cracks, decomposes, and forms an extremely fertile soil. Sometimes inundations of boiling water oceur, through the melting of the snow in the upper regions by contact with the lavn; and the strange phenomenon has also occurred of a body of snow and ice being covered with a layer of ashes, and then with a torrent of burning lava, and so preserved for an indetinite period. (Lyell, ii. 123.) About one cruption in three takes place from the principal crater, and these are generally the least dangerous, the lava being mostly retained in the immense hollows of the upper rexion.

Though Homer has made Sicily the scene of some of the most interesting adventures in the travels of Ulysses, and lias described the island and the strait of Scylla and Chatyodis, he does not so much as allude to Etna. It has thence been inferred that the mountain had not then been an active volcano; for it can hardly be supposed, had it been such, that so careful an observer would have failed to notice it, and to avail himself of the means which it afforded of embellishing his verses by a topic so well suited to the dignity of epic poetry. No doubt it is very difficult to reconcile the silence of Homer, with the fact of the mountain being at the time eruptive, though it would be rash thence to conclucle positively that it was not; it had then, perhaps, been long quiescent, and its cruptions forgotten. Pindar is the oldest extant author (about 500 yenrs n.c.) who takes any notice of the eruptions of Etna; and his account is peculiarly interesting, inasmuch as it appears from his representing its summit as supporting the heavens, and being covered with perpetual snows and frost, that it must then have been about as high as at present. Aecording to the ancient poets, Jupiter, after the overthrow of the giants, buried the hundred-headed Typhous under this mountain; and its earthquakes and eruptions were said to be occasioned by the struggles of the monster. The passage in whiclr Pindar

## alludes to Etna has been rendered by West as

 follows $1-$' Now under sinlph'rous Cumn's sea-bound const, And vart Siclita lies his shaggy breast; By snow $v$ Etna, nurse of endleas frost,
The pillar'd prop of heav'n, for ever preas'd Forth from whoso nitroun eaverns fising rise Pura liquifi fountalns of tompestuous fire, And veil in ruddy miats the noon-dny skien,

While wrapt in smoko the eddying flames aspire: Or, gleaming through the night with hideons roas, Far o'er the redd'ning main huge rocky fragment pour.'

First Pythian Ode, decud. 5 .
Thueydides mentions three eruptions of Mount Etna, but le leaves the date of the first uncertain; the second occurred four or five years previousty to the period when Pindar wrote the above ale. Since then there have been a great many enip. tions, both in antiquity and in modern times, One of the most tremendous occurred in 1669, when the hill of Monti Rossi was furmed; but the moet extraorlinary phenomenon in this eruption, was the opening of a fissure about 6 ft . wide, and of unkuown depth, which stretchell from the plain of S. Lio to within a mile of the summit of the mountain, a distance of 12 m. : it emitted an intensely vivid light. Five other parnlleltissures also opened and gave out tremendous noises. The lavn that burst forth on this oceasion overwhelmed 14 torns and villages, tllled up the port of Ulysses, and as already stated, partly destroyed Catania. Alsuil 27,000 persons are supposed to have lost their lives in this convulsion. The last great cruption occurred in 1832, when the town of 13ronte naroum escaped being overwhelmed by a current of lava An eruption in 1852, though most violent, caumed little dnmage. (Besides the authorities nirealy referred to, numerous works have been written oi Etna; one of the best is Ferrara, Storia Gellerale dell' Etna, 8vo. Catania, 1793.)

ETON, a town and par, of England, co. Bucks hund. Stoke, on the N. bank of the Thames, immediately opposite to Windsor, with which it is connected by a neat iron bridge; 23 m . SSE. Aylesbury, 21 m . W. London by road, and 25 l by London and South-Western rnilway. Pop. of toxin 2,840 , and of par. 3,122 iu 1861. The town consists principally of a single street, well pared and lighted, and which of late has been much improvelt many of the houses having been rebuilt. The establishment to which Eton owes all its importance is its college, founded by Henry VI. in 1410. Thas monareh, by whom it was liberally endowed, int tended it prineipally for the education of 'por and indigent boys,' destined for the charch. By his second charter, dnted Oct. 21, 1441, the fondation consisted of a provost, 10 priests or fellows, 4 clerks, 6 choristers, a master, 25 scholars, and !3 alms or beads-men; but about 1443, the date of the college statutes, he lncreased the number of scholars from 25 to 70, added an usher, clerk, and two choristers, and reducel the number of bealsmen to 13. Various changes were made in the succeeding reigns, and the estahlishment suffered considerable spoliation, especially from Edwan IV.; but it was particularly excepted in the act of Parliament for the dissolution of colleges and chantries in the reign of Henry VIII. The foundation at present consists of a provost, appointed by the crown; 7 fellows, one of whom acts as riceprovost; 2 chaplains, called conducts; 2 lay-cleths, 10 choristers, 2 masters (each of whom has 4 as sistant masters), and 70 scholars, who since the reign of George III. have been called 'King's scholars.' Besides the latter, the different masters have a number of stipendiary papils, not on the foundation, but who receive instruction in the ool-
lere. That liberally enduwed, ine education of 'poor 1 for the church. lif ct. 21, 1441, the foum, 10 priests or fellows, er, 25 scholnrs, and ${ }^{2}$ but 1443 , the date of reased the number d 1 an usher, clerk, and the number of besdses were made in the stablishinent suffere! ccially from Edratu excepted in the act ution of colleges and nry VIII. The founa provost, appointed of whom acts as viceonducts; 2 lay-clerks ch of whom has 4 as holars, who since the been called 'king's , the different masten ry pupils, not on the instruction in the col
lege. These are called oppidans, and generally consist of members of families, superior in rank or weslth to thase of the king's schulars. Their number is variable, but at an average may be estimated at about 350. Under a recent head master, the number of boys at Eton, of both classes, at one time exceeded 600. The buililings of the college saround two quadrangles : the outer quadrangle, of school-yard, is enclosed by the chapel, schools, dormitories of the scholars, and masters' chambers; and has in its centre a bronze statue of the royal founder of the college. The inner or lesser quadrangle is bounded by the cloisters, containing the residences of the fellows, the llirary, hall, and various offices. Jletween the two is the provost's ladee, appertaining to which is an ancient tower and s gateway in the centre, connecting the two courts. The chapel, on tho S. slde of the outer court, is a handsome Gothic edifice, 175 ft . in length, including the ante-chapel, and in its style and ornaments grently resembles the chapel of King's College, Cambridge. The par. churoh of Eton having fallen to decay, the inhabitants attend public worship in the college chapel, the provost having nrehidiaconal jurisdiction in the par.; but there fas also a chapel of case in the town, at which one of the conducts officiates. The college library contains a large and valuable collection of books, eugravings, drawings from the antique and medals; it is a fine apartment, and fitted up in a superior style. The dining hall for the scholars on the foundation is spacious, but little ornamented; it cuntains, however, two large ancient pieces of $t$ thpestry. The upper school, on the $W$. side cf the outer conrt, was designed by Sir C. Wren, and is supported ly an arcade with double columns of the Doric order. The school-room is spacious and of fine proportions, but fitted up in a plain manner. The school-room of the lower school is of considerable length, but not of a proportional height, with a tange of ancient oak arches on either side, and the seats of the scholars behind them. It is beneath a part of the princlpal dormitory, called the ling chamber. To the E. of the cloisters are the college gardens; to the N. the playing ficlds, and aljacent to the latter the shooting fields, in which cricket matches and other games are played.
The scholars on the foundation are lodged and boarded by the establishment. They are cligible from the ages of eight to fifteen, and aro elected separately by the individuals of a body composed of the provosts of Eton and King's College, Cambridge, the vice-provost and master of Eton, and two posers (M.A.'s) of King's College. This body meets on the last Monday in July of every year, when usually twenty-four boys are nominated to fill up vacancies as they may occur in Eton Lower School, and twelve of the head boys in the same establishment are nominated in a similar manner to King's College, Cambridge, according to the statutes of the founder. Those who go to King's sre, after three years, entitled to fellowships, Eton College also sends two scholars to Merton College, Oxtord, where they are called Portiomista, or, by corruption, postmasters. Failing an appointment to either university, Eton collegians are superannuated at eighteen or nineteen, and for scholars so superannuated there are $n$ few exhibitions, and some other means of slightly sugmenting their income, in the gift of the college. By statute, the education of King's scholars should be gratuitous; but some innovation has taken place on this head, and the average annual expense to the parents is estimated at $60 \%$.
The oppidans board either in the houses of the lower msster or assistants, or, at a somewhat lesser charge, in the boarding houses attached to the
achool; some few, chiefly of noble birth, in private lodgings, under the care of private tutors. The total expenser of a boy educated as an oppidan may perhaps average from $150 l$, to 200l, a year. Without the boundaries of the college, the oppidans are comparatively little under the control ot the college functionaries; but withln ite walle they are in no respect distinguished from the King's scholars, and mix with them in the same classes. The entire school is divided into Upper and Lower. The latter comprises, together with the junior classes, the third and fourth forms, ench consisting of three sublivisions or removes, Each of these is under the control of a separate assistant master and as boys of various ages come to liton, they are placed at the bottom of whatever remove in the lower school they may seem fit for by their previous aquirements and age, passing into the superior ones accordling to their proticiency. The uper school consists of the fifth and sixth forms and is under the immediate control of the head master. The number of boys in the sixth form is limited to twenty-two; and of these the ten highest are styled monitors, and act in some measure as assistants to the masters. The head of the whole school, who arrives at his post by seniority, is called the 'captain.'

The course of instruction at Eton is ulmost wholly classical. The only entire works read are those of Homer, Virgil, and Horace, but extracts from those of numerous others are occasionally made use of. The well-known Eton Latin and Greek Grammars, committed to memory, form the basis of grammatical instruction. In the Upper School the boys are engaged in writing Latin and Greek themes and verses, for the best of which rewarils are given; and a play of some Greck author is usually in the course of reading. Mathematics form a part, but a very small one, of the school discipline; and though there are masters in French, writing, arithmetic, \&c., such studics are wholly uncomnected with the general business of the school, and only attended at extra hours. All the boys attend chapel twice on Sundays, and once on saints' days and holidays; and, in addition, the collegers attend prayers every evening, after which they are contined to their several dormitories. The system of jagging, by which the boys of the Lower School are fags, or servants, to those of the Upper, out of school hours, prevails; but its supposed severity and degrndation have been much exaggorated.

Eton College has in its gift nearly forty ecclesiastical preferments, besides several presentations. The provost, though as rector he derives no emolument from the par., has very extensive powers within it; for, by an act passed in 25 Henry VI., no inhabitant is allowed to take a lodger without his permission, under penalty of $10 l$., which fine may also be levied upon the individual engaging lodgings without such permission. In 1452 a charter was granted to Eton for a market on Wednesdays, with considerable privileges, but this has been long discontinued. There were formerly also two fairs, but only one is now kept up-that on Ash Wednesday for horses and cattle.

EU, an inland town of France, dép. Seine Inférieure, cap. cant., on the Bresle, about 2 m . from its mouth in the British Channel, 16 m. NE. Dieppe, and 43 m . NNE. Rouen. Pop. 4,416 in 1861. The town is generally well built, and has a fine square; it has several churches, one of which, $a$ fine Gothic edifice, is remarkable for a subterranean chapel, a college, and a hospital. In its neighbourhood, in a noble park surrounded by large gardens, is the magnificent Chateau d'Eu, containing a fine collection of historical portraits.

## EUPHRATES

There are several loman remains in and about Ein. The town is the seat of a trilhmal of commerce; has manufactures of lace, serges, liuseed oil, and soap ; is an entrepot for the corn of the Sonime, ant has some trule in hemp, flux, timber, and linens, exported at 'rreport, at the month of the river. A large forest, which thkes its name from the town, extends to the li. and S. Ein was burnt hy Lous XI. in [445, to prevent its falling into the hands of the English, who meditated a descent into Nermandy: it is said never to have recovered its origina? prosperity.

EU'S'IORIA, or ROSLOFF, a sea-port town of liussin in Europe, W. coast of the Crimea, lat. $45^{\circ} 9^{\prime}$ N., lomg. $83^{\circ} 9^{\prime} 20^{\prime \prime}$ E. 1'op. 6,530 in 1858. The town hus a considerable trule ; exporting salt, wheat, barley, hides, und lanbskius 'I'le houses, with the exception of a very small number louilt in the European style, ure altogether of Asiatic architecture. The roalstead is a samly circulur bay, and affords no shelter with the winds at $\mathrm{S}_{\text {, and }} \mathrm{E}$.

EUL'EN, $n$ town of Rhenish Prussia, immediately within its W. border, cap. circle of sume name; on the Weege or Vestler, a tributary of the Meuse, $7 \mathrm{~m} . \mathrm{S}_{4}$ by W. Aix-la-Chapelle, on the rallway to Verviers. l'op. 13,190 itl 1861 . The town is principally inhabited liy the descendants of French I'rotestanty who took refuge here subsequently to the revocation of the edict of Nantes; and is one of the principal manafacturing towns in the Theninh provinces of Prussia, haviug some very extensive broad cloth and kerseymere factories, with others of nitric acid, chicory, ire. It is the seat of a councll for the circle, and of a court of primary jurisdiction; and lias a superior citizens' school.

EUPHLATES and TIGRIS, two famous rivers of Turkey in Asin, which, rising in Armenia, flow generally parallel to each other in a SE. direction, and finally unite in lat. $31^{\circ} 0^{\prime} 28^{\prime \prime} \mathrm{N}$. and long. $47^{\circ} 40^{\prime} \mathrm{E}$. ., in the Shat-ul-Arab, or ' River of Arabia,' which discharges itself into the bottom of the Persian Gulf.
The Euphrates (Gr. Eviфpaíns), so called from ev่фpaive, to exhilarate or make glad, because its waters, like those of the Nile, fortilise the aljacent lands, is the most considerable river of W. Asia, and its basin, exclusive of that of the Tigris, is supposed to comprise about $109,000 \mathrm{sq}$. grog. m . After watering on either side the territories belonging to Turkey as far S. as near lat. $36^{\circ}$, it forms, from that point to about lat. $83^{\circ} 30^{\prime}$, the boundary between them and the newly acquired Asiatic dominions of the pacha of Egypt ; it next divides Turkey from Arabia; and lastly, from its union with the Tigris to its month in the Persinn Gulf, abont lat. $30^{\circ}$ and long. $48^{\circ} 30^{\prime}$, it separates Arabia and Persia.
The ancients seem to have hal no correct information respecting the sources cither of the Enphrates or the Tigris; and there is the greatest olscurity and liscrepancy in the statements they have put forth respecting them. The popular opinion seems to have been that their sources were identical. (Lucan, lib. iii. v. 257); and though this notion was rejected by Strabo, Mela, and Pliny, none of them appear to have had nny precise information on the subject. (See Cellarii Notit. Orbis Antiqui, ii. 378.)

Both rivers liave their sources in the table-land of Armenia. The Eiphrates rises in the pachalic of Erzeronm, and is formed by the junction of two great arms-the Frat and the Morad. The former, which is also the most N., has its principnl sources abont 20 m . NE. from Erzeroum, in the Teheldir mountains, near the sources of the Araxes.

The Morad has its sources on the N. deelivity of the Arghi-dlagh monutains, $45 \mathrm{~m}_{\text {. NE }}$ N from the nearest polint of Lake Van. Hoth these riven pursue a W. course, inclining to the $S_{y}$, till thry unite near Keblown, in about the 3ith deg. of hai, aund $39^{\circ} 25^{5}$ J. long. 'The united atreana thence tlows SW, to Samisat (Samosuta) in lat. $37^{\circ} 35^{\prime}$, long. $38^{\circ}{ }^{\circ} 83^{\prime}$, having reccived on the right the Kura-su, and forcel a passape for itself through the main range of Tuurus, and fortucel a double cutaract 16 m , above simbisat. Jirun the latter point the river purnues a nearly $\mathbf{S .}_{\text {. course to lajik, }}$ about 50 m . F. from Aleppo, its course being, thence almont uniformaly Sl. At its source the Firat, or $\mathrm{N}_{\mathrm{c}}$ arm of the Euplirater, is only 90 m . from the Black Sea, lut a very monitaimus conntry intervones lietween them. I)uring its S . course the Juphrates approaches within 122 m of the Mediterranean, and as the interjacent country is for the most part level or nudulating, it would, perhaps, present no very serious wbstacles to the formation of canals or carriage roads. From lliilah (Bubylom) to its month it flows through a perfectly level ceuntry, which was anciently intersected by numerous canals. At I31r, $107 \mathrm{~m}, \mathrm{Sk}$. Autioch, the Euplirates is 628 ft . abuve the level of the Mediteranean (Ainsworth, p. 109), the rate of inclination from which being estimated to average only about $6 \frac{1}{2}$ inches a mile. The total length of the river, measured from the aources of the Morad, is estimated at about $1,800 \mathrm{~m}$. (Geog. Journal, iii. 243.) Its brendth at Malatia is live yds., ant at l3ir 130 yds. At Ul D)er (an. Thepsueus) (Kinneir's Memoir out the l'ersian Empire, 1. 9) the Enphrates is 800 yds . witle; at liillah its bed is contracted to about 200 jods. ; but below the latter it frequently spreads ont to a cousiderable breadth, and the Shat-ul-Arab ranks amoust the noblest rivers of the Asiatic coutinent. The liuphrates is uavigable to the caturact above samisat; at Hillah it has seldem lees than 18 ft . water, even in the lowest scason, and a vessed drawing 15 ft . water may ascend to Korna, where it is joined by the Tigris. The principal tributary of the Euphrates is the Tigris, which, indeel, is but little inferior to itself; Its next greatest tributaries are the Kara-su, Khabur (an. Chaboras), and Kerah, which joins the Shat-ul-Arab.
The banks of the Euphrates were in antiquity the seat of many noble cities. I'he small mean town of Hillah occupies a minute portion of the site of the once mighty Babylon, 'the glory of kingdoms, the beauty of the Chaldees' excelleney;' Hit (an. Is or Acopolis), Anna (an. Anetho), Kerkisiya (Cercusium), and Jir are amongst the other towns on its banks ; but Innssorah or lhasta, on the Shat-ul-Arab, is at present the only harge city on the Euphrates.
The Tigris is throughout its whole course comprised within the Turkish dom. It rises in the paclualic of Diarbekr, from numerous sources on the S. side of the Taurus chain, by which it is separated from the Moratl, in about lat. $38^{\circ} 40^{\prime} \mathrm{N}_{\text {., }}$, and at an elevation of abont $5,050 \mathrm{ft}$. above the level of the sen. (Ainsworth, p, 110.) Its course, to its junction with the Euphrates, is, with very little deviation, SE. It rans at first tlirough a mountainous country, with great rapility; at Mosul it is no more than 353 1t. above the level of the Persian Gulf; from Bugdad it flows, with a moderate current, through a nearly level plain, Its distance from the Euphrates varies from 18 to $9 \overline{\mathrm{~m}} \mathrm{~m}$. : the two rivers enclose the proviuce in antiguity called, from that circumstance, Mesopotamia. The entire length of the 'ligris is estimated at $1,146 \mathrm{~m}$. At Mosnl it is 100 yds , wile; between Bagdad and Korna its average breadth

4200 yards. It brings down great quantities of mud, which it deposits in sheals and islanda in the lower part of its counse; and between Moanl and Bagdal it passes over several ledges of rock, which form rapids of more or less difliculty. It is peither so deep nor so suitable for navigation as peritheuplrates. It is, however, navigable for pesels, drawing $4 \mathrm{ft}^{\text {. water as far as the ruins of }}$ (pis near the 1nouth of the Allhaym (Lynch in (ieugr. Joum.) ; and, in Dec. 1836, it was aseendel conderally above Bapilad by Col. Chesney's neamer 'Euphrates,' Its principal afluents are the Kisboor, the lireat and Little Zab (an. Zabatis and Zabus Minor), the Adliaym (an. Physcus y), the Diala (an. Delos or Arbu). In antiquity its banks were studded with cities of the lirst rank, as Nineveh, Seleucia, Ctesiphon, Opis, dic. lagiad may be consilered as the modern rejrerentative of Seleucia and Ctesiphon, as Mosnl is that of Nineveh, opposite the site of which it is placed. Diarbekr is the only other important lown on its banks.
The Jigris derives its name from the rapidlity of its course, the term Tigris signifying 'an arow,' in the language of the Medes aud Armenians. So late as the age of Alexnuder the Great, the Thgrir did not unite with the Euphirates, and pach nver preserved a separate courso to the sea. But they not long after became united, and have ance fuand their way to the sen in a collective tremm. The ground in the lower part of their curse being soft and alluvial, and their waters being also diverted into new chnunels by means of canals, the courses of both rivers must necessarily have differed materially atelifferent periods. (Reinell's Geog. of Herodotus, i. 265.)
The Euphrates and Tigris run through chalky formations of a very friable nature, casily disintegrated by the action of the elemenis. Both rivers have their regular inundntions, rising twice a year-first in Dec., in consequence of the autumnal inins; and next, from March till June, owing to the malting of the mountain snows. (Rich, p. $54_{4}$ ) They bring down immense quantities of alluvium ; and the extent of land covered by their deposits is supposed to exceed $32,000 \mathrm{sq}$. m . The ancient miters have not failed to notice this resemblance between the Euphrates and the Nile. Cicero says, 'Mesopotaniam fertilem efficit Euphrates, in quam quotannis qrasi novos ayros invehit.' (De Nat. beorum, lib. ii.) And Lucan-

> - sparsus in agros

## Fertllis Euphrates, Pharis vico fungitur under.'

 Lib. iii. v. 259.Mr, Ainsworth found the maximum of sediment mechanically suspended in the waters of the Luphrates, in Dec. and Jan. 1836 (in which months most mud is brought down), to be equal to $1-80$ th part of the bulk of the fluid. A goold deal of this mud is depositell in the marshes of Lemlum (an. Paludes Babylonias), a swampy tract about 40 m . long by as many broad, eommencing 50 m . SW. of Babylon, and which has existed from the remotest period to the present day. The quantity of mud brought down by the Tigris was found, in Jsn. 1837, to be equivalent to 1-103th part of the suspending fluid; but as it is not dispersed in marshes, more is carried down by this than by the Euphrates to the mouth of the Shat-ul-Arab. The rapidity of the Upper Tigris frequently causes it to break down its banks ; Mr. Rich says, that when st its height it has a current of near seven mots an hour. In the alluvial plain, however, it ayerages only $1 \frac{1}{2} \mathrm{~m}$. an hour tluroughout, and in mauy places it is less than 1 m . The Euplirates abore Snmisat is, perhaps, as rapid as the Tigris ; and at Hillah, where its bed is narrowed, its rate
is from 3 to 4 m . an hour $;$ but, in the low plain, this rate is diminlshed to aboutt 1 or 1 f m .
Lower Mesopotnnia, or Habylonin, wan, as alrealy stated, anciently interseeted by canala in every lirection, for the purposes both of navigration and irrigation. Many connected the Tigrls with the Euphrates; those whleh still exist nre espeeially numerous near lhugdal, where the rivers appronel within 25 m . of each other; and some, as the Nahr Mulohn, might be ensily repairel. (Rich's Inabylon, p. 57.) In fact, the Euphirates stenmer passed from the biphrates to the Tipris by the la canal, which leaves the former a few miles nbove Feluga, and enters the latter a short way below Jagilai. The Shat-el-llie, which counects the two rivers, is also unvigable in spring by large boats. The most celebrnted ol' the ancient canals, that of Pallacopas, cut by the earliest Assyrlan monarcbs, partly through solit rock, extended for a very considerable distanee parallel to the Euphrates on its SW. side. Niebuhr supposed it had commenced at Ilit. It may still be traced, almost continuously, from a little below Inabylon to its probable mouth in the l'enimin Gulf (Khore Abdallah). Remains of aqueducts aud towns, and varions other ruins, abound in this region; and the ancient Median wall which rain from Macepracta on the Enphrates, to near the site of Opis on the $\mathrm{Ti}_{\boldsymbol{z}}$ ris, is still clearly traceable. (Sce Messrs. Ross and Lynch, in Geog. Journal, vol. ix.)

The steam navigation of the Euphrates is of considerable importance; it may be navipated, as high as lisir, by steamers drawing 4 ft . water. To establish a new connection between Europe and India by means of the Euphrates route lias long been a favourite scheme of merchants and statesmen. The proposed line has recently gained in politieal importance ly the opening (1865) of the electric telegrapl,, which skirts the Tigris and Euphrates from Bagdad to the Persian Gulf.
EURE, a dép. of France, in the N. part of tho kingdom, being one of the flye comprised in the ancient prov. of Normandy ; between lat. $48^{\circ} 39^{\circ}$ and $49^{\circ} 29^{\prime} \mathrm{N}$., and long. $0^{\circ} 15^{\prime}$ and $1^{\circ} 45^{\prime} \mathrm{F}$. .; having N . the estuary of the Scinc and the dep. Seine luffrieure, E. the déps. Oise and Scinc-etOise, S. und SW. Eure-ct-Luire and Orne, and W. Calvados. Length E. to W. 65 m., breadth varying from 26 to 52 m . Aren 595, iti5 hectares. Pop. 398,661 in 1861. Surface nearly flat. There are a few ranges of low hills, prineipilly in the N., none of them reaching an elevation of more than 330 ft . These ranges divide the dep. into several distinct plateaux, presenting a great variety of aspect. It is well waterel; the Seine flows through its E. portion, and along its NE. border. The Eure, whence it derives its name, rises in Orne, and after running at first E. and then N. fulls into the Scine 6 m. N. Louvicrs. The Iton, Rille, and Charentonne are the other principal streams. Climate mild, but damp and varinble : W. winds are the most prevalent. Soil chiefly calcareous or marly; but on the banks of the Scine it is sandy, and rather sterile. Iron ore is abundant, and there are numerous mines. According to official tables, the arable lands comprise about two-thirds of the department. Property is less subdivided in this than in most other deps. ; still, however, of 181,517 properties, subject to the contribution foncicire, nearly one-half are assessed at less than 5 fr . l'reviously to the revolution the estates were much larger, but noost of them have since been repeatedly subdivided by the operation of the law of equal suceession. (See France.) Farms vary in size lrom 20 to 150 hectares. Agriculture, though more improved

## EUROPE

than in many other parts of Franco, in still very backward. The farm-buildings and cottages of the peavantry are in many instancea of the very worst description, being frequently ill situated, built of wood, thatched with stubble, and surrounded lyy dunghills and flith. The fonces are not well kept ; but, notwithutanding these drawbacks, the country has, on the whole, a considerable resemblance to England. Wheat, oata, maslin, and rye are the princlpal kinds of grain cultivated. In some parts fiax is grown; in others, hemp, pulse, and woad. Little wine is made, but apples and penrs are very plentiful, and cider and perry are the ordinary drink of the pop. The tock of sheep is estimated at about 435,000 head, producing annually about $420,000 \mathrm{kilog} \mathrm{g}_{\text {, }}$ of wool.
The mining and manufacturing establishments of this dep, rank amongst the moat extensive and important in France. The various works for omelting and working fron, copper, and other metals, employ about 50,000 hands; the copper and zinc works ai lomilly are very extensive. The cotton and wooilen mestufactures are also important. The broad cloths of Iouviers are celebrated in foreign comntries as well as in France, and, in addition to them, cottons, flannela, druggots, baize, velvete, glass, paper, and leathor are largely manufactured. This is one of the very few deps. of which the pop, has been decreasing, in the ten years 1851-1801, having amounted, at the former period, to 415,777. It is divided into five arronds., 36 cantons, and 794 communes, Chief towns, Evreux the cap., Louviers and Bernay. The women of this dep., as in other parts of Normandy, are good-looking and tidy; they wear dresses of remarkably bright colours, and lofty pyramidal caps, called bonnets cauchoises, ornamented with a great quantlity of lace. Eure containa some Celtic and many Roman antiquities; but those of the middle ages were mo uly destroyed during the Revolution.

EURE-ET-LOIRE, a dép. of France, in the N. part of the country, between lat. $47^{\circ} 57^{\prime}$ and $48^{\circ}$ $57^{\prime} \mathrm{N}$. and long. $1^{\circ} 44^{\prime}$ and $1^{\circ} 59^{\prime}$ E., having N . the dep. Eure, E. those of Seine-et-Oise and Loiret, S. the last named and Loire-et-Cher, and W. Sarthe and Orne. Length N. to S. 60 m., greateat breadth about 55 m .; area 587,430 hectares ; pop. 290,455 in 1861. There are only a few scattered lieights in this dep., nearly the whole of which consists of an undulating plain. Principal rivers, the Eure towards the $N_{4}$, and the Loire in the S. Small lakes are numerous. Climate temperate and healthy. As much as 810,000 hectares of the surface consists of rich alluvial soil, and this dep. contains a greater extent of cultivable and less waste land than any other department of France. Of 140,901 properties subject to the contribution foncière, about onc-third are assessed at less than 5 fr . ; the number of considerable estates is, however, above the average of the deps. This is especially a corn-growing dep., producing principally wheat and oats. Good flax and hemp, pulse, turnips, onions, melons, and woad are grown, but few potatoes. In some cantons the vine is cultivated, and in ordinary years about 200,000 hectolitrea of inferior wine are made, as well as about the same quantity of cider. In 1861 , about one-tenth of the surface consisted of pasture land, and the dep. contained 86,000 oxen and 700,000 sheep; the latter furnishing about $1,000,000$ kilog, a year of wool. There are some iron mines but they are little wrought. Manufactures of no great importance; the chief are those of ironware, earthenware, paper, cotton and woollen fabrics, beet-root sugar, and leather. This dep, is divided into 4 arrond., 24 cantons, and 437 communes.

Dreux, and Nogent-le-Rotreau.
EUKOPE, the most populous, but, with the ex. ception of Australasis, the smallent of the divisions of the globe, being about a fifth part of the alze of Asia or America, and a third part of the of Arrica. However, though inferior in point of size, Europe is vastly auperior to the other coutinents in the enterprise, intelligence, and civiliantion of her inhabitante, nnd perhap, and in her phyoical advantagen. 'Altrice victoris om nium, gentium popull, longigue terrarum pulcher-
 mostly situated within the temperate zone, and no part of her surface appruaches within many degrees of the intertropical regions, The elimate is therefore, rather inclined to cold, but it is comparatively temperate, and is neither mo cold in winter nor so hot in summer as the countries in the correaponding latitudes of Asia and America so that while comfortable lorging and wam clothing are indispensable, the exertions of the inhabitants are not impeded by the too great intensity of cold on the one hand, or of hat on the other. Tho surface, ton, of the country is hair nitely varied and picturesque; and it has the advantage of being more intersected than any other continent by great arms of the sea, sujpiying facilities to internal and foreign commerce, the are all but wholly denied to Asia, Africa, and Australasia, anil not enjoved in an equal degres even by America. The soil of Europe seems also to be of the quality best sulted to stimulate and reward the efforts of the husbandman ; for though it be nowhere so fertile as to produce crope without lasorious diligence, and, consequently, does not foster indolence or a want of attention, it never faila liberally to reward the efforts of the induatriou and skilful cultivator. Hence it is that this continent has everything that seems beat fitted to call forth and develope human genins and resources But the advanced civilisation and superior influence of Europe in the affairs of the world seems, after all, to be owing in no mall degree to the superior capacity of her inhabitants, as evinced in their enterprise, invention, perseverance, and power of combination. In all these respects they seem to be decidedly in advance of the most improved Asiatic nations; while the difference between them and the most civilised native nations of Africa, America, and Australia, appears almost as great as the differerce between man snd the least advanced of the lower animals. Europe is the only part of the world in which civilisstion and the arts have, generally speaking, been uniformly progressive. Important discoveries bave been made, at remote periods, in China, India, and other Asiatic countries, but these would seem to have been the result of accident only, and, at all events, have had comparatively little influence: it is here only that they have been appreciated, improved, and perfected, and made instrumental in the production of further discoveries. It is characteristic of the European that he is never satis fled with what he has achieved; he is always pressing forward with unabated ardour in the career of industry and invention; and is as anxious to advance himself at this moment as his semi-barbarous ancestors 3,000 or 4,000 years ago How much of this distinctive character and superiority of the European is to be ascribed to different and favourable circumstances, and how much to difference of race, is an inquiry not easily solved Most probably a good deal is ascribable to both causes; but, at all events, his superiority is alike great and obvious. It would seem, too, that heis deatined to extend his doninion over every othes vithout labojes not foster never fails - incluatrious hat this confitted to call nd resources, auperior in: world seems legree to the as evinced in erance, and respects the the most imlifference beative nation pears almost nan and the - Lurope is civilisation ig , been unioveries have na, India, and ould seem to $y$, and, at all influence: it preciated, imtrumental in s. It is chanever satis he is always dour in the ; and is as coment as his 00 years ago. ter and supebed to differnd how much easily solved oable to both ority is alike 00 , that he is every other

At the first glance， $3 t$ may appear that nature hand marked the limits of Burvipe $t r o$ strongly towaris the N ．to aitmit of any doubtr regariling thein；but Ieelinad having been diseovered num culonisel long before the voyage of Columbur， wan consldered an belongling to Earrope；though， as it lies much nenter to the $\Lambda$ merican const，ur rather to that mass of hand beghuning with Green－ land，which apprinas to te divited from the $A$ meri－ can main by lanllin＇s layy and Marrow＇s Strait，it is properly an Americaii inland．On the other haud，Spitizbergen has been sometimen considered as belonging to $A$ merica，though lying on tho meridian（the 20th），which passes through the very henrt of Lurrope：and Nova \％embla has been，in like manner，included in Asta，notwith－ atanding the comparntively wille sea of Kara flowa between it and that continent，while it is partell from Eurone merely by a stralt，which is moreover broken wan indinad（Vaigntz）of sume nize．Accurding to the principle，then，which con－ siders as belonging to a continent those islands which lie nearest to it，Xova \％embla and Spitzier－ gen slould be inclutcel in Earope，and Iceland in America；and the sane arrangement，perliaps， requires that the Azores，though very distant，

## EUROPE

should also be included in Eurone. According to the counties of Devon and Cornwah in Pnging. this distribution, Furppe and its islands extend from the rock of Cufonisn, $s$. of Crete, in lat. $34^{\circ} 49^{\prime} \mathrm{N}$. , to Little Table Iflnnd, the most N . of the Spitzbergen group, in $80^{\circ} 48^{\prime} 21^{\prime \prime} \mathrm{N}$.; and from Flores, the most $W$. of the Azeres. In long. $31^{\circ} \mathrm{W}$., to Jelnia Noss or Cape Desire, the most F. point of Nova Zembla, in $77^{\circ} \mathrm{E}$. The continental portion lies tri much narrower limits, its extremes in lat. being the Tarifa Rock, W, of Gibraltar, in $36^{\circ} \mathrm{N}$., and Nordkun in Finmurk, $71^{\circ} \mathrm{N}$. In long. the Earopean continent extends from Capo Da Rocea, near Llshon, $90800^{\prime} \mathrm{W}$., to the mouth of the Kara river, $66^{\circ} \mathrm{E}$. (Admirnlty Charts; Great Russian Map, 1800; Parry's Fourth Voyage, p. 42 ; Arrowsmith's Atlan, pl. 3, \&e.) Its extrene length, ENE. to WSW., from the Ouralian Mountains, near Orak in Russin, to Cape St. Vincent in Portugal, is nearly $\mathbf{3 , 4 0 0} \mathrm{m}$; its greatest brealth $\mathbf{N}$. to S., from the North Cape to Cape Matapan in Greece, $2,450 \mathrm{~m}$. Its area, pop., suldivisions, de., will be statel hereafter.
Physical Geography.-General Aspect.-Europe, ns already stated, is distinguished from all the other continents of the globe by the great irregularities of its shnpe nud surfnce, and by the great number of its inland seas, gulfs, harbmurs, peninsulas, promontories, and headlands. This circumstance tends not only to influence very materially the climate and natural products of this continent, but to promote commerce and navigation.

The great indentations in the boundaries of Europe, esplecially on its NW. and S. sides, being its most importint natural feature, the seas, on which these indentations depend, deserve to be first noticed. These seas are not very extensive. The Mediterranean, the noblest of all inland seas, is sometimes reckoned among the strictly European seas; but it would be quite as correct to describe it as belonging to Africa or Asia as to Europe. It is common to them all; and cannot justly be said to belong to one more than another. This algo is nearly the case with the Black Sea and the Caspian; though, as they are mostly surrounded by countries belonging to Asia, they must be considered as belonging rather to that continent than to Enrope. The great arm of the Mediterrancan called the Adriatic, and the Sea of Azoph, being almost wholly encircled by European countries, are most properly said to be European seas. The Baltic, however, is the real Mediterranean of Europe; and has, including its gulfs and baya, an immense extent of coast. The Zuydersee and the White Sea are also nearly landlocked by European countries, and consequently add to the number of European seas.
The chicf of the bays of Europe are the Gulf or Sea of Kara in N. Russia, the Bays of Archangel nnd Onega, belonging to the White Sea; the Gulfs of Bothnia, Finland, and Riga, belonging to the Baltic; the Bay of Biscay, forming a part of the Atlantic; the Gulf of Lyons, in the S. of France; those of Genon, Naples, Taranto, Venice (head of the Adriatic), and Trieste, in Italy; of Arta, Lepanto, Egina, Volo, and Saloniki, in Greece.

Having so irregular an ontline, Europe necessarily presents numerous peninsulas and headlandis. In the S. the principal peninsulas are, Spain, with Portugal ; Italy, with its sub-peninsulas of Calabria and Otranto; Turkey, with Greeec, which includes the sub-peninsulas of the Morea and Salonica, and the Crimea. In the N. of Europe, the grent Scandinavian peninsula, and those of Lapland and Jutland are the principal ; and in the W. are the much less considerable ones of Brittany and Cotentin in France, and that including

The princlpal capes or hendlands, proceeding fomm N. to S., are-Cape Gelania, in Nova Zembla: the North Cape anil the Naze, in Nerway ; Cape Sksgen, in Deumark ; Cape Wrath, in Scotland; the Lanul's End, in England ; Cape Clear, in Ireland; Capea La llogne and Finisterre, in France; liona St. Vincent, and the rock of Giliraitar, in Spain and Portugal: Spartivento and Leelica, in ltaly; Passaro, in Slicily; and Matapan and Culening, in Greece. (Malte-Brun, l'Europe, pp. 44t-ili; Balbl, Abrégé de Géogr., pp. 81-84.)

The principal lslands forming part of Eurrope (Iceland heing excluded) are-Great Britain and Ireland, with their dependent groups in the dtlantic and North Sea; Sicily, Sardinia, Corima Candin, the Cyclndes nnd Sporades, the lonian 1slands, Dalmatian Arehipelngo, Malta, Elha, Majincea, Minoren, Ivica, the Lipari Isles, \&c., in the Mediterranean and its cognate seas; Zealand, Fnnen, Laland, Bornholm, Oland, Gottland, Oezel Dage, and the Alanil Archipeliggo, in the Baltic: the Loffoden anil other islands, on the coast of Norway; Spitzbergen and Nova Zemhla, in the Aretic Ocenn: Jersey, Guernsey, Alderney, nnd Sark, in the British Channel ; Ushant, Belleile. and a few others, on the W. const of France; and perhaps the Azores in the Atlantic, and Lampedusa, Linosa, \& c., in the Mediterranean.
Mountains.-The European mountains nre divided by Bruguiere, in his Orographic de l'Eureph into seven distinet syatems-the Hesperic, Alpine: Sardo-Corsicnn, Taurle, Sarmatian, llritish and Hibernian, and Scandinavian. The Ouralian and Caucasian chains are omitted in this enumeration, being bounding ridges betweer Europe and Asia, and consequently belonging as much to the inter as to the former. We have already, howeret, briefly noticed Caucasus (see antè, pp. 20-24); and both it and the Oural are fully described in sepsrate articles. The Alps compose the great ceatral table-land of Europe, over a sixth part of which their ramifieations are estimated to extend. (Malte-Brun. Europe, p. 454.) The summits of the Alpine system vield in elevation only to thuse of the Caucasus; Mont Blane, in Savoy, the culminating point is 15,732 ft. in height.' (Bruguiire.) The Alps divilo into nine principal bramehe, which sprend over Switzerland, France, Germany, the Austrian empire, Turkey, Greece, and Italy: the Apennines, Carpathians, nnd Balkhnn, itl belong to, or are intimately connectel with, this system. The next in order is the Hesperic or 1 P. renenn system, which extends throughout Spain, Portugai, and a part of France. Its ranges, for the most part, run E. to W., through the Iberian peninsula : its culminating point is the Cerro de Mulhacen in the Sierra Nevada, 11,660 ft. high (Bruguière; Malte-Brun.) The Sardo-Corsian system is confined, as its name implies, to the islands of Sardinia and Corsica : its highest sum. mit appears to be that of Monte Retondo, in Corsica, $9,068 \mathrm{ft}$. nbove the level of the sea. The Tauric system is comprised within the Crimea; its greatest elevation is $5,052 \mathrm{ft}$. The British and Irish system has but few summits of nny considerable height : the principal are-in England in Wales, Snowdon, 3,555 ft., and Caler-Idis $3,550 \mathrm{ft}$; in Scotlani, Ben Nevis (Invernesshire, $4,370 \mathrm{ft}$., and Ben Macdhu and Caimtoed (Aberdeenshire), 4,327 and 4,245 ; and in Irelanh Carran Tual (co. Kerry), $3,410 \mathrm{ft}$. in height. The Seandinavian aystem is spread over Norway, $\mathrm{Sr}_{\mathrm{s} \text { e- }}$ den, Lapland, and Finland: its principal chnins mun mostly $\mathbf{N}$. and S. : its highest point, the Sneehaetta, is $8,120 \mathrm{ft}$. in clevation. The Sro matian system consists of a few scattered bill

The ad over Norway, Sre: its principal chains is highest point, the elevation. The Sar a few scattered bill
chains in Russia, Poland, and the NE, part of Prasia: ita greatest elevation in the platean of Faldai does not, however, reach more than 1,118 fo above the level of the sea. (Bruguiere, l'Orographic de I'Europe.)
Plains and Valleys.-The whole of Lower Eu-mpe,-by which may be understool the entire extent of country from the Ouralian mountains and Astrakhan W. to the longitudes of I'aris and Lomlon, including the greater part of Russia in Eurupe and I'oland, Prussia l'roper, the N. of Genuany, IIollund, Relgium, the N. of France, and the E. part of England, consists of an immense plain, interspersed only here and there with a few detached hill ranges of no grent magnitude. This plain is very littlo elevated above the level of the sea; and we have elsewhere shown (see Baltic), that it may be certainly concluded that at a eor.s, eatively recent period in the history of our finict, $1: \pm$ rmed part of the bed of a vast ocean, of wusch the Baltle is now the only considerable remaining portion. The innumerable shallow lakes in the N. of Germany, and between the Ilaltic anil the White Sea, are smaller remnants of this great ocean; and independeatly of this, the morasses, abounding in marine plants, nud the sauds of N. Germany and lrussia, are incontestable evidences of the former submersion of the land. The more inland and easterly parts of this plain, which seem to have fint emerged from the sea, particularly in the Hinsian governments of Kiev, Poltawa, Kliarkov, Keursk, Orel, Kalouga, Toula, Tambof, and Voroaeje, are covered with a rich vegetable soil, varying from 3 to 5 ft . in depth. 'This highly fertlle region, whose vast capabilities are as yet but little known, has been estimated to comprise an extent of surface equal to that of France and Austria united. Next to this great plain, rank those watcred by the Lower Danube (Wallachia and Bulgaria), the Middle Danube (the Greater and Less llungarian pisins), and the Upper Danube (the plain of Bavaria) ; the plain watered by the Lower Hline, that of Lombardy, and the Bohemian basin. The valleys of Europe generally are but insignificant, compared with those of Asia; but those of the Rhiuc, Upper Rhone, and Drave, deserve aotice, as well for their extent as their picturesque beauty. Those of Norway and Scotland are commonly long and narrow, and their bottoms are often occupied by lakes, having the appearance of rivers.
Europe has no desert at all similar to those of the other great divisions of the globe. There are, however, some very extensive heaths or wastes. The principal are the steppes of Ryn, between the Welga and Oural, and of the Wolga, between that niver and the Don; the puztas of Hungary, the wilds of Sweden, Norway and Lapland, the stcrile districts of Stade, Hanover, Luncburg, and Zcll, in the kinglom of Hanover ; and of Pomernnia aad Brandenburg in Prussia. The greater portion of the déps. Landes and Gironde, in France, are covered with unproductive heaths, as is also a considerable part of the Terra di lari in Italy.
Rivers.-The great watershed of Eurone, or the nidge dividing the waters which flow into the Mediterranean, or Black Sca, from those which flow into the Baltic and North Sea, runs through the continent in the general direction of NLi, and SW. The courses of the principnl rivers are, therefore, for the most part SE. or NW.; of the six largest, the Wolga, Danube, Dniepr, Don, Rhine, and Irina, the four first flow in the former, and the IWo last in the latter direction. The chief rivers of Europe may be classed according to the scas inte which they discharge themselves. Tle Wolga
(with the Kamn) and the Oural, fall into the Caspian ; the Doll, Dniepr, Dnlestr, aul Danube, into the Hlack Sea, and Sea of Azoff; the I'etchora and IWwina into the Arctic Ocean und White Sea; the Neva, Duna, Niemen, Vistula, and Oder (Russia, l'olund, and Prussia), into the linltic and its gulfs ; the Eilbe, Weser, Rhine, Meuse, Scheldt (N. Germany), into the North Sea; the Loire, Garome, Douro, Tagus, and Guadalquiver, into the Atinntic; and the Ebro, Rhoue, and Po, into the Mediterrancan and its gulfs. Nearly all the great rivers are in the l: and NE. parts of the continent. Western Liurope has but few rivers that have a course of more than 500 or 600 m . Still, however, this part of the continent is extremely well watered; aml some of the shortest rivers, as the Thames and Slamnon, afford the greatest facilities to internal navigation and commerce. If the length of the Danibe be represented by 100 parts, the length of the other primcipal rivers will be, Wolga 130, Dniepr 7\&, Don 69, Jhine 49, Rilbe 42, Vistula 41, Lorre 37, 'lagus 32, Khoue 38,1 'o 21 , 'liber 10, and 'l'hames 9 , of these parts.

Lakes.-l'le Inkes of Europe are situnted chiefly in Itussin, Finland, Sweden, Switzerlnnd, Italy, Hungary, Austria, Prussia, Scotland, Ireland, and Grece. Among tho principal are the fullowing :-

| Lakes | Sq. Milcs | Lake, | Sq. Mllee |
| :---: | :---: | :---: | :---: |
| Ladoga (1tussia) | 6,380 | Geneva (Swit- ) | 240 |
| Onega (do.) | 3,280 | zerland) | 240 |
| Wencr (Sweden) | 2,135 | Constance (io.) | 200 |
| Wetter (do.) | 840 | Garda (1taly) . | 180 |
| Mcelarn (do.) | 760 1,600 | Maggtore (do.) | 150 |
| Enara (Lapland) | 1,685 | Bataton (Hun- gary) | 150 |

Lagunes are numerous along the S. coasts of the Baltic, and some parts of the Mediterranean and Adriatic shores; and IIolland is full of dykes and pools. The coasts of Norway and a part of Sweden abound with inlets of the sea, which often stretch a long distance inland; these, however, do not consist of staguant waters. There are some extensive swamps in Europe, as that occupying nenrly all the basin of the Priepec in Poland, thoso along the courses of the Danube and the Theiss in Hungary, and at the mouths of the Danube, Po, and other rivers. Many of minor extent are to be found in the great plain of the continent, in the E. part of England, Tournine in France, Italy (in particular the Pontinc Marshes), Sicily, Western Grecce, and on the shores of the Black Sea. (Malte-Brun, Balbi.)

Climate.-The whole of Europe, with the exception of parts of Lapland, Sweden, Norway, and N. Russia, being situated within the temperate zone, it suffers but little from the extremes either of cold or heat. Its average temperature is higher thain that of those purts of Asia or America, situated within the same latitudes. This circumstance is probably owing to various causes-as the fact of its general elevation being less than that of Central Asia; its being surrounded by seas, the waters of which are warmer than those of the oceans which surround the other continents; the agency of the gulf-stream in the Atlantic, which not only brings towards Lurope a continual warm current from the torrid zone, but prevents the ice of the Arctic Ocean reaching its shores; and the powerful influence of civilisation and culture exhibited in the drainage of marshes. But within the limits of Europe, there are vast differences of climate, and independent of the changes consequent on difference of latitude, the temperature diminishes so much in proportion as we proceed castward, that

## EUROPE

the inhabltants of Turkey，in lat． $42^{\circ}$ ，often expe－ rience a degree of cold unknown in the N．of Fing－ land in lat． $54^{\circ}$ ．The hottest part of Europe is its SW．extremity：in Portugal the heat is often very oppressive．The S．of Europe，shut off from the cold N．and E ．winds by tho great Alpine ranges， has gencrally a warm climate，and occasionally suffers from the influence of the sirocco．Hu－ midity is the ehief elinneteristic of the atmosphere in the $W$ ．of Europe，as frigidity is of that in the E．With respect to the duration of the different seasons of the year，Europe may be divided into three zones．Southward of lat． $45^{\circ}$ the winter is mostly conflned to rainy weather from Oct．or Nov． to Jan．or Feb．；snow rarely falls，and vegetation is scarcely impeded：the spring lasts from the latter months till April or May；and the summer， during which the temperature often rises to $107^{\circ}$ （Falır．），and autumn，the remainder of the year． Between lat． $45^{\circ}$ and $55^{\circ}$ the winter is the longest season，lasting generally from Nov．to March or April：the spring continues from the latter month till June；the summer，the heats of which fre－ quently rise to $92^{\circ}$ Falir．，lasts till Sept．；the autumn is the shortest season of all．North of lat． $55^{\circ}$ the seasons are for the most part confined to two－winter and summer．In the more north－ ern parts of this zone，the snow lies on the ground， and the rivers are frozen for more than six months of the year．Beyond the arctic circle，mercury freezes in the thermometer in Sept．；and the deso－ lation of winter is broken only by two or three months of intense heat，during which the sun is perpetually above the horizon．The absence of this luminary for the rest of the year is compen－ sated for by the magnificent phenomenon of the aurora borealis，which shines in thrae regions with the utmost brilliancy．（See Malte－Brun，Géogr． de l＇Europe，pp．45ī－461；Balbi，Abrégé，p．94．）

The following table is taken from Humboldt （Annals of Plilos．，xl，188）：the first division shows the temperature of the year，and of the va－ rious seasons in places having the same latitude； the second shows the different distribution of heat through the various seasons in places having the same mean annual temperature．

Geology．－According to the map in Lyell＇s lrin－ ciples of Geology（i．209），the following parts of Europe consist chiefly of primitive or transition formations：the Ouralian mountains；Lapland； nearly all Sweden，Finland，and Norway；moat part of Scotland；the W．part of Wales；about the half of Ireland；the NW．cos．，and those of Devon and Cornwall in England；Brittany，the W．of Normandy，and a great portion of the centre and NE．parts of France；the high ranges of the Alps；Corsica；most of Sardinia；the western shore of Central Italy，the former grandduchy of Tuscany，Calnbria Ultra，and the NE．parts of Sicily；Bohemia；Carinthia；Styria；parts of

IIungary and Transylvania；the E．half of Turkey and（ire－ ；and the central chain of the Caucasus， Those parts principally occupied by secondary fur－ mations are，the lowlands of Scotland；the central half of Ireland；the NE．，central，and most of the S．cos，of England；most part of France，and W． Germany；the loftiest summits of the Pyrenees； the country on either side of the central chain of the Alps ；central and S．Italy；the N．of Sicily； Istria；Dalmntia；the W．half of Turkey and Greece；Galicia，and the E．parts of Transvlvania； some considerable tracts on the Wolga nnil Kami； and the N．declivity of the Caucasus．The rest of Europe，comprising nearly the whole of Russia， Yoland，and the Prussinn dominions：a lnrge ex－ tent of country on both sides of the（iulf of Br thia； all Denmark，NW．Germany，and Hollanel；figreat part of Belgium ；the E．and many of the W．cos， of England；the basins of Paris，and of the lione， Loire，and Garonne in France；the N．prit of Switzerland ；the plains of Lombarily，Hungary； Wallachia，and Bulgaria；most of Xpulia；and the S．and W．parts of Sicily，is composed chiefly of tertiary，alluvial or diluvinl formations；and has been obviously submerged at no very remote geological period．（Lyell，pp．209－214．）Among the clief primary rocks of the great table－lanil of Europe are granite，gneiss，and sienite．In the alpine ranges W．of St．Gothard，calcareous meks abound，often intermixed with elay－slate and mica－ slate；E．of St．Gothard the central chain is ac－ companied by lofty calcareous ranges，fill of caverns．Granite is abundant in most European countries，where primary formations are met with； gneiss is the rock in which the Saxon，Boheminn， and Austrian metallic mines are principally sitn－ ated．Transition limestone，which furnishes some of the best ornamental mirbles，occurs in the $X$ ． and W．of England，S．of France，the Harz moun－ tains，Alps and Pyrenees；grauucacki，in which numerous metallic ores reaide，abounds in Ger－ many，Transylvania，and the NW．parts of ltaly， Coal exists extensively in the British Islands， Sweden，France，Belgium，Germany，and Bohemia， Chalk is a formation almost peculiar to Europe， extending throughout a great part of Englnnd，the N．of France，and purts of Poland，Inssia，Sweden， Ireland，and Spain．Tertiary beds，containing a great number of fossils，have been discovered in various parts of Europe；the most noted of these are the London and Paris basins．The volcanic region of Eurcpe（Iceland being excepted）appears to be principally included within the limits of Italy and its islnnds．There are three active vol－ canoes，Etna，Vesuvius，and Stromboli；but of these，only one，Vesuvius，is situated on the con－ tinent．There are，however，obvious traces of former voleanic activity al France，Greece，Ger－ many，and some other countries；and a consider－ able part of central ltaly is geologically composed chiefly of volcanic products．Mineral springs in great variety abound in Europe．

Natural Products．－Minerals．－If nature has denied to Europe the precious metals in any very great quantity，their absence has been fully cour－ tervailed by the presence of iron，coal，salt，copper， tin，lead，and mercury，in greater abundance， perhaps，than in any other region of similar extent， Iron and salt are pretty universally diffused；coal， the most important of all the minerals，is most plentiful in W．Europe，and especially in Great Britain．Copper abounds ehiefly in the N．and W．；in Sweden，and the extreme $W$ ．counties of England；and the tin mines of Cornwall are not only the most productive，but probably slso the most ancient in the world，since it is nearly cer－ tain that they were wrought in the time of the

Phenicians. Lead is most plentiful in Spain and Eagland: the quicksilver mines of Idria in the Austrian empire, and of Almaden in Spain, are extremely rich. Gold, silver, and platina are found, the first chiefly in Transylvania, llungnry, and Russia; the second in various parts of Central and W. Europe; and the last has been recently discovered in the Caucasian and Ouralian mountains. Zinc, cobalt, arsenic, and nearly all other metals are found within the limits of Europe, with almost every raricty of precious stones, North Italy yields the fluest statuary marble, and the south part of the aame country and Sicily supply immense quantities of sulphur, vitriol, sal-ammoniac. and various other volcanic prolucts. Nitre is found in great quantities in Hungary. Hesiles these products, Europe furnishes the tinest granite and building stone of various kinds, serpentine, siate, porcelain clay, rock crystal, alabaster, amianthus, and most of the minerals that are in the highest degrec useful to man. (Balbi; Tableau ylinéralogique in Abrégé de Géogr., p. 95.)
Fegetable Products. - The Flora of the extreme southern parts of Europe have a great analogy with that of the contiguous parts of Africa. In Sicily, the date, palm, sugar-cane, and cotton-plant (Gosappium herbaceurn), several euphorbias, rare in this continent, the prickly pear, American aloe (Agave americuna), and castor oil plant (Ricinus africanus), Hourisb. The same plants are met with in the S. parts of Spain and Portugal, in which peninsula many common to the Azores, and others, originally natives of America, grow freely without culture. In Greece, Turkey, and the S. of Russia, a large intermixture of Asiatic plants is found. The otange and lemon grow to perfection in the sheltered valleya of W. Europe, as far N. as $43^{\circ} 30^{\prime}$; theolive ceases at about $44^{\circ}$; but the vine affords excellent wine in the W. as high as $48^{\circ}$, and its fruit comes to tolerable perfection in the open air for several degrees beyond that point in France and England. Where the vine, however, censes to come to perfection, apple and pear trees begin to flourish, and cider occupics an important place as a bevcrage in the region in which wine has ceased, and beer is not in general use. The mulberry, pistachio, pomegranates, and melons, abound in the $\mathrm{S}, ;$ peaches preserve their full flavour in the open sir to lat. $50^{\circ}$, and the fig grows a little further N . Rice is cultivated to about $47^{\circ}$, but it requires a peculiar soil and climate; maize has nearly the same range. The limits of the culture ofthe common cerealia, or bread corns, are not very well defined, as the necessities of man oblige him to raise com under the most unfavourable circumstances. Generally, however, the parallel of $57^{\circ}$ of $58^{\circ}$ may be regarded as the N . limit of the cultivation of wheat in Europe; though in some faroured spots of Finland it is raised as far N, as 600 or $61^{\circ}$. The hardier grains, as rye, oats, and barley, are cultivated in some sheltered situations on the coast of Norway as high as the lnt. of $69^{\circ}$ 30'; but farther E. in Russia their cultivation has not been found practicable beyond $67^{\circ}$ or $68^{\circ}$. The introduction of potatocs, which are now widely diffused over almost all parts of Europe, promised until recently, when they degenerated by the attack of a peculiar disease, of great sdrantage to the N . regions. In ancient times, aearly the whole surface of Europe was covered xith dease forests; these, however, have in a great measure disappeared in the better cultivated and more populous countries. Germany, Poland, Russia, Sweden, Norway, and some parts of the Austrian empire, are at present almost the only parts of Europe which contain forests of any considerable extent. The natural orders of Amentacea
and Conifera, comprise the greatent number of the noblest trees in the woods of Northern and Central Eurupe. In these regions, the oak (Quercus pedunculata an! sessifhora) is the lord of the forest, and often attains to an cnormous size. It lisappears about lat. $60^{\circ}$; the ash does the same at. $62^{\circ}$; the beech and lime are seldom found farther N. than $63^{\circ}$, or tirs and pines beyond $70^{\circ}$. The tree that grows in the highest lat. is the dwarf birch (Betula $a l b a)$ : and the last plant met with towards the pole in Europe is considered to be the 'red snow' (Palmella nivalis), a eryptogamic species. The vegetable producta of the N. of Europe are, however, by no means confined exclusively to that region. On the Alps, the Pyrences, and other elevated mountain ranges in Central and S. Europe, similar products are met with at the different degrees of elevation, the temperature of which corresponds with that which the various plants require; and on the declivity of Etna, at different heights, the Flora of the torrid zone, and that of the Aretic circle, are both met with. Jut a marked clifference from that of the rest of Europe takes place in the vegetation S. of about lat. $44^{\circ}$ The mountains there are covered with chestnut woods; evergreens take the place of onks, and the maritime and stone pines of other conifera: the plane trec, flowering ash, carob, laurels, lentisks, oleanders, cistus, and n host of dycing, medleinal and aromatio plants, abound, and the surfuce of the earth is nlmost continually covered with a carpet of brillinint and odorous flowers. (Balbi ; Malte-Brun ; Dict. Géogr.)

The superficial extent of Europe may be estimated at ahont $3,650,000 \mathrm{sq} . \mathrm{m}$. If we draw a curved line from a point in the Ouralian mountains, about the lat. of $60^{\circ}$ or $61^{\circ}$, to the W. coast of Norway, in the lat. of $69^{\circ}$, passing through the lake Onega, and a little to the $N$. of the Gulf of Bothnia, this line will mark the extreme limits of cultivation, and will cut off a space equal to about $550,000 \mathrm{sq} . \mathrm{m}$., or about $1-7$ th part of the entire surface of Europe. The culture of rye, onts, and barley is continell to the region S. of this line, and includes more than 5-6ths of Europe; but in the N. parts of this zone only a very emall proportion of the land will bear corn. The region adnpted to the cultivation of wheat comprises about $4-7$ ths of Europe, and includes all the densely peopled parts. The region of the vine extends over 3-7ths of Eırope. (Encyc. Brit., art. ' Europe.')

Aninuals.-The numbers of the higher classes of animated beings are less numerous and varicd in Europe than in either Asia or Africa. Some of those species known to the ancients as inhabiting this continent, as the urus and auroch, or bison, have become extinct, or nearly so; and the great increase of population and cultivation, and the clearing of forests, which have been going on from an early period, have greatly checked the increase and diminished the numbers of those which at present exist. According to Cuvier, the total number of the species of mammalia inhabiting this portion of the earth is only 150, and of this number only 58 are peculiar to Europe. The most formidable wild animals are the white bear, confined to the Arctic circle; the brown bear, which was once common in England (though long since extirpated), and is so still in the Alps, Pyrences, and other remote mountainous and wooded regions; the wolf, still inhabiting many parts of Europe, and the wild boar. The largest animals, exclusive of whales, which inhabit the northern scas, are the elk and rein-deer, the latter of which is of the most essential service to the inhabitants of the north : these kinds of deer give place, in Central Europe, to the red-deer and roebuck; and
the latter again, in the Alpine regions, to the chamois and ibex. The other principal wild animals are, the lynx, met with chietly in the S.; the wild cat, fox, martin, otter, beaver, prlecat, glutton, porcupine, helgehog, varlous kinds of weasels, squirrels, hares, rabbita, rats, and mice.
The domestle animals deserve more notice. The black enttle of Europe have attained to the lightest perfection : their size is in general depentent on the goodness of the pasture. The sheep, no universally diffiused, is believed by some to have originutel from the mouflou, or musmon, a wild animal now confined to the monntainous districts of Sarlinin, and a few other Mediterrancan islands. According to other writers, it was originally introduced from Asia by way of Africa; but certaln ancient euthoritics bear testimony to the existence at one period of an incligenous breed of sheep in Great Britain. The chief races of sheep at present existing are the Spanish merino, Cretan, Wullachian, and English. The merinus are the most celebrated for their wool; but, taken altogether, the various English breeds are the most valualle, since the $w$ hole of the products they furnish bear a high character for excellence. The domestic goat was believed by Cuvier to have been derived from the Capra agagros, a wild species inhabiting the Alps and Illyria: the domestic hug is evidently the descendant of the European wild boar. The Europeun horse has been supposed by some naturalisty to be of 'lartar origin ; but-31o satisfactory reasons have been assigned for this opinion, which ls, most probably, entirely unfounded. The English heavy horses are unrivalled for slranght, and the race-horses for speed and bottom: the latter, and the hunters, have been crossed with Arab horses, the first of which was imported so late as the reign of James I. The ass degenerates in the colder parts of Europe, but in the S. it is a fine animal, and greatly valued for the breeding of mules, the sure-footedness and hardiness of which render them lighly valuable. Dogs are more numcrous in Europe than anywhere else; and, by frequent crossings, very numerous varieties have been produced. The domestic cat appears to be the lineal descendant of the wild species. The birds are much more various than the quadrupeds of Europe; as many as 400 different species have been enumerated; more of them, however, are birds of passage than in other continents. Four species of vultures inhabit the Alpine ranges, but are seldom seen in higher latitudes; in the rocky and mountainous parts of the N., their places are supplied by enormous eagles, falcons, large owls, and other birds of prey. Most of the birds in the Aretic regions are aquatic; in the S. there is a great intermixture of the birds of Africa and Asia, as the Balearic crane, pelican, flamingo, \&c. The common sorts of game are generally diffused throughout Europe; but the red grouse is confined to Scotland, and is said to be the only species peculiar to Great Britain. Bustards abound in some parts of Turkey and Greece. In general, the European birds cannot boast of very brilliant plumage, but they excel all others in melody. Reptiles are not numerous, and few are either large or venomous. In the Mediterranean a very delicate species of turtle (Testudo caretta) is found; and in some of the Austrinn lakes, the Proteus anguinus, a singular link between reptiles and fishes. Of the latter-named class of animals, the principal are the horring, cod, whiting, mackerel, haddock, mullet, anchovy, and tunny, in the occan and seas; and the salmon, pike, trout, carp, and perch, in fresh waters. The anchovy and tunny are almost confined to the Mediterranenn, where their capture forms a valuable branch of industry,

Crustucea are particularly numerous in the $\mathrm{N}_{\text {, and }}$ Mollusca in thie S. ; the latter are especially abman. dant and various in the Gulf of Taranto, ancienty so famons for the murex, affordlng the Tyrian dfe In the same part of Europe, scorpions and taran. tulas are sometimes troublesome; musquitues infest the $\mathrm{S}_{0}$; and Europe generally is considerel by naturalists as the grand region of butterliies, The European Annelides include the medicinal leech, $\mathrm{so}_{0}$ plentifiul in the pools of Germany and Polam, Madiuted animala, Zoophytes, dec., are prirticularly almudant on the S. coasts, where some of them, as Actinias, are used for food, and where the coral ilsheries employ many handa. (Murray's Encyel, of Geography ; Malte-Brun; Balbi, $98-100$; Dich Gécugraphique.)
Ruces of Men.-To trace and define the onginal races of mankind, and to describe their generic and speeific characters as we do those of the lower anmals, is everywhere most difilicult in consequence of the nice slades of distinction which prevail among some of those that approach nearest each other. But thls ditticulty is, perhaps, greatest of all in Europe, where, from the superior enterprise of the people, internixture of blood, through conquest and emigration, has taken place to a greater extent than in auy other part of the world. The great mass of the people of Europe belongs to the race which Blumenbach, and after him Cuvier, have enlled the Caurasim, under the iden not only that its type is best exhibited in the inhabitants of the Cancasinn range, but that this was its original seat, and that the race thence spread itself throughout Europe. But this last supposition appears to be wholly without foundation. The inhabitments of the Caucasus have been, in all ages, unenterprising semi-barbarians, who have never emigrated beyond their own bounds; nor, through the medium of language, can a trace of them be discovered in any part of Europe. Even language, the best guide elsewhere, often fails wholly in this part of the world. Thus, through the grenter part of the southern portion of Europe, the foundntion of all the modern languages is Latin, originally the language of an inconsiderable nation of Central Italy; but spread by conquest, and the destruction, or absorption of the local idioms, to its preseat wide extent. In the same manner the German language has spread from the northern confines of France and Italy, through the central part of Europe, comprising its whole north-west portion as far as the North Cape, and including Iceland and the greater portion of the British islands, to say nothing of the modern diffusion of the same language in America, and elsewhere.

The farther we go back in history, the greater number of distinct families of the European race will be discovered, and consequently the greater number of languages will be found to exist. la Italy and its islands, where but one language is now spoken, there were in ancient times, but after the people had mude considerable advances in civilisation, six distinct native tongues, which had each a written character and a biterature, besides foreign dialects; and Strabo enumerstes, in all, not less than forty Italian nations, each of which, in all probability, had its own peculiar language, or at least dialect. In Frunce, where there are now but two spoken languages, Casar describes three as existing in the indepeadeat part, exclusive of one, at least, in the Romsa province, while Strabo enumerates no fewer than 70 different nations as inhabiting it. Within the Alps the same author gives the names of at least 30 tribes; and in the Spanish penimsula, where there are now but two languages, he enumerates

In Frunce, where ken langunges, Casar ; in the independent ist, in the Reman proates no fewer than 70 ting it. Within the the names of nt least hish peniusula, where suages, he enumerates

22 nations, In perusing mueli statements, we rather faney onrselves readinif of Ameriean, Malay, or llindoo mations, nul tribes, than of the peoplo of Liurope. The anclents were incurlous both in regard to lnnguage and plysical form, exeefit their own; but comparing the few fincts known to 14s, with the present condition of nations in a rude state of society, the probnhility is that, 2,000 years ugo, the inliabitants of Eurupe, llke the people now referred to, had n great diversity of lauguages, null might be distinguished by much difference of physien form, which in the intermixture of fumilies can he no longer satisfuctorily tracel. Went in the enrly period alluled to, and, indeed, in a fnr earlier one, the intermixture f fanilies and langunges must have nlrendy male eonsiderable progress. The Greeks had settled in ltaly nul its islands. The inhabitants of Gaul had colonised a considerable portion of nurthens Italy. The Itnlians, in their turn, had settled and colonised in the south of lirance; num the Germms, by whole tribes, had formed settlements in (inul and Brituin.
It does not seem likely, however, not withstanding the extinction of some langmages and the sulstitution of others, that any conquered liuroman nation was ever exterminnted; mud it seems prolable, that the greatest change that took place through conquest was in those cases in which the conquerors being more numerous than the conquered, a mixed race was the result, bearing a nearer resemblance to the first than to the lust. Of this the Saxon conquest of England, or, at all events, the German conquest of a prortion of it, whieh preceded the arrival of the Romans, affords the most striking example. In the great revolutions now referred to, the near approach in physical forms of the European families, and their approximation, moreover, in nıanners and customs, would make amalgnmation a matter of little difficulty,rery different, in short, from what would have been the case had there existel a wide discrepancy, as we see in the case of the Turks and Greeks, and still more strikingly in the ense of the Afrienn and European races in the New World.
The European race is distinguished from the Afriean, Mongolian, Semitic, Tartar, IIindoo, Indo-Chinese, Chinese, Malaynn, and American, br traits so obvious and distinct as not to be mistaken. The skin is white, and the colouring matter of the rete mucosum so small in amount, that in the cheeks, and some cther parts of the body where the skin is thinnest, it con be seen through, and hence blushing, or, rather, visible blashing, is peenliar to the European. The hair varies in colour in different individuals, and, for the most part, is of a soft texture and undulating; the eyes nlso vary in colour from a light blue, or light grey, up to a dark blue or dark brown. These three characters of the skin, the hair and the eyes, are peculiar to the European, midnever to be found in any other race of mnnkind. Varicty, nt least in complexion, if not in fentures also, is the peculiar physical characteristic of the European race, as distinguished from the other inhabitants of the globe considered by classes. The intellectual powers, as they have heen developed in this race in all periods of their history, from their first emanation from the woods down to the highest point of the civilisntion of Greece and Rome, or of modern Europe, exhilit a singula: superiority over the other races. They display a higher degree of energy, intrepidity, enterprise, and invention, than any other. They are the only race that has as yet exhibited, in the highest degree, the peculiar prerogative of mankind, that of always continuing to accumulate Yo1., II.
knowlelge, ani who, notwithatandine many ose cillations in their history, still continue to advance. Other ruces have contimed statlonary, or retrograded; lut, as prevlously stnted, it is a distinctive tralt of the Europenin ruce to have constantly moved onwards, and gained in civilisation in periods when it appenred to be retrograding: for even in the dark ages: when the the arts, and science, and polite literature were nearly lont, the foundations were belug laid of a far better constitution of society ami of government. The very mixture of races conduced to intellectual advancement, and, most probubly, contributed, as it is known to do with the lower animnls, to physical improvement. It is in vnin, therefore, that unturalists elask the Semitic, Tartar, and Hindoo races along with Europeans, merely because the form of their sknils, and tho shape of their faces, do not materinlly diller. There are other, and quite ns important characteristics, that show them to be essentially different.
In attempting the following chassification, it is taken for granted, that emigration and conquest hive not so completely altored the physicul form of the different fnmilies of men now inhubiting Europe, but that they are still, ill some considerabile degree, to be distingnished by the form which belonged to ench in its original locality :

1. Jexinuing from the south-west. the first family which oceurs is the Spmish or lherian, including the whole inhmbitnuts of the Peninsula, the Jortuguese and Basulues, as well as the true Spmiards. Notwithstanding the double admixture in this caso of Semitic blood, and of Italinn and Gothic, this family is sutliciently distinguished by colour, fentures, and intellectual character, from its meighbours across the Pyrences, and those farther up the Mediterrnnean. They hinve displayed the peculiar characteristics of the European rnce in their resistance to and tinal conquest of the Arabs, in their conquest and settlement of South America, in their progress in the fine arts, and in the production of such a genius as Cervantes.
2. The next ruce is the Italinn: its nncient type has been well preserved, notwithstanding much admixture of Greek and German blood: this is to be found in the numerons, and obviously faithfal representations of its men and women of the clascical ages, which exist in the statues of the Vntican and Capitol; and which to not appear to differ in niy material respect from the wellformed and handsome peasantry of Italy in the present day. We may refer, as examples of the highest order of the Italian form, to the statues of Angustus and of Napoleon, which, by the way, so much resemble each other, that the likeness can hardly escape the most inattentive observer. Of the distinguished men produced by this family it is almost needless to speak: suffice it to mention the names of Casar and Cicero, of. Dante, Raphael, Columbus, and Napoleon.
3. Proceeding enstward, we come to the Greek family. This comprises the inlonbitants of the Grecian continent and islands, including the Illyrians, Albanians, Thessalians, \&e. Tbe Ideal type of these is to be found in the Apollo, the Venus de Mediei, and other fine remains of antiquity ; and the renlity in the statues of great men in the mnseums of Italy, and in the modern Greeks. Notwithstandiug a subjugation of nearly 4 centuries, the Greeks have mixed very little with their conquerors; and have preserved their language and physical form wonderfully distinct, and are now, as of oht, remarkable for personal beauty. It would be idle to speak of the genius of the fanily which produced Homer and Demosthenes, Themistocles and Epaminondas; which
routed and expelled from Europe the hordes of Asia, carried its conquest to the Indus, diffusen arts and civilination over Western Europe, and is the parent of all rational literature and sound science.
4. The next farnily, proceeding eastward, is the Turkish or Tartar, the only oriental rawe that ever succeerled in forming by conquest a great permanent establishment in Europe. Though with a considerable mixture of Sensitic and European blood they still closely resemble their brethren who inhabit Transoxiann. Invariably dark eyes, and dark hair of a coarse texture, with a squatter form and an intellectual listlessness, distinguished them from all the genuine Eurepean families.
b. Turning again to the W., we find N. of Spain, and NW. of the Mediterranean, the Celtic family, inhabiting France, llelginm, a small part of Western Switzerland, and a part of the Ibritish islands. Physically and intellectually, the general character of this people (allowance being made for the influence of civilisation) is probably, in most essential particulars, the same us that of the Gauls of Casar, and of the Caledonians and Silures of Tacitus. They are distinguished from the German race by darker complexions, a far greater prevalence of brown hair aind dark eyes; and intellectually by superior vivacity, as exemplified in the French and Irish; but at the same time, perhaps, bv lees constancy and assiduity. The statues of Voltnire, and the portraits of Francis I. and Sully, may be taken as examples of this family in modern times; while the dying Gladintor, now commonly considered a Gaul, may be held as representing it in antiquity. Language aflords no test in regard to this family; for we know nothing of the ancient dialects of France, while the modern language is formed on that of the Roman conquerors, with the exception of ahont two millious of people inhabiting Brittany, who atill speak a tongue which is, in reality, the same as the Welsh. The Welsh, agnin, is as remote from the Erse of Scotland or the Irish of Ireland, as the langunges of any two American, Ocennic, or Indian tribes, a hundred miles apart from each other; w' ile the Celtic dialects of Scotland and Ireland are, in fact, nearly identical. It must, indeen, be admitted, that there are great, if not insuperable, difficulties, even in a physical point of view, in classing all the nations now enumerated under one head; the Welsh and Scoteh Highlanders being short in stature, and the French not tall, while the Irish are remarkable for their stature.
5. We come next to the German family, at present the most powerful and possessing the greatest influence of any in Europe, though two thousand years ago it was almost unknown. This family is charncterised by the great prevalence of blue eyes, yellow or flaxen hair, and a very fair skin. It embraces the Swedes, Norwegians, Danes, Dutch, all the inhabitants of Germany, with the exception of a few Bohemians, and the great bulk of the Scotch and English. Along the banks of the Rhine, and in Britain, there has been much admixture of Celtic and probably, also, of Italian blood; and it is only in the northern parts of Europe, as in Sweden, Denmark, and along the coast of the North Sea, that the peculiar characteristics of the German race are still found pure and unmixed. Generally speaking, however, the German family, in its native seat, is less intermixed with foreign blood than any other European family: Its own country has never been conquered; while the Germans have been the most extensive and permanent of all conquerors, as is shown by their conquests of France, England,

Italy, and Spain, and by the atill more extensire conquents they are now achieving acrosa the At. lantic, and in Australania. The German family has probably exhibited greater euterprise, pema verance, and genius for invention, than any other family, as evinced by its discoveries in arts and sciencen, its military enterprises, and lits political institutions. For the last two thousand years and probabiy even before it was known to the rest of the world, it has gone on ntearlily advancing in civilisation, and in the accumulation of knowledge. The portraits of Luther, Milton, Newton, and Goethe are favourable representations of thin family, and thoso of Gustavus Adolphus and Charles XII. exhibit ita ruler ind more vulgar form.

We may here observe that there are realiy no grounds whatever for the common and favourte hypothesis of the German or Gothle family having emigrated at some remote period from Asia. This is a purely gratuitous and, apparently, "nst unfounded supposition. There is not, in utce, so much as the shadow of any kind of evidence to prove that the Germans deseribed by Tacitus were not the oripinal occupants of the country they then occupied; and the fair presumption is, that such was really the case. At all events, If they ever inhabited any part of Asia, their emigrativn must have been of the most effectual description, as not a trace of any cognate people is now to be found in that continent.
7. The next great family is the Slavonic, embracing the Russians, Poles, Lithuaniaus, and a portion of the IBohemians, the Wends, Dalmatians Croatians, Slavonians, Bosnians, Servians, and Bulgarians. Swarthy complexions, as compared with the German family, dark brown hair, with a light reddish beard, a round face, ligh cheek bones, and eyes somewhat Mongelian, characterise this family, which, as yet, though greatly superiut in energy, enterprise, and power of ecmbination, to any Asiatic people, has made no very remarkablo progress in civilisation. Peter the fireat is, perhaps, the most remarkable man that this family has produced, and his portrait is a favourable apecimen of it.
8. The Finnish is another family, comprising chiefly the Finns and Laplanders, with somg smaller nations, the whole extending from the Gulf of Finland to the Ouralian mountsias, This family is short in stature, of a strong and rubust make, with a flat face, high cheek boner, light brown hair, and a thin beard. It is said to be of oriental origin, but apparently with no good fonddation. The Finns have made little progress in civilisation, and many of them are to this day in the nomadic state. The whole number of this family is not estimated at above three millions.
9. Hungary, Transylvania, Wallachia, Moddavia, and Bessarabia are inhabited by a variety of races not very easily classified. The ancient inhalitants were the Pannonians and Dacians, whoee robust and manly forms are well represented in the statues of their kings and warriors, many of which are still to be found among the ancient remains which exist in Rome and other cities of Italy. The genuine Hungarians of the preseat day are tall and handsome, with dark complexions and brown or black hair. They are sad to be descended from the Magyars, who are themseives represented as emigrants from Central Asia; but if the ancestors of the Hungarians really emigrated from any country E. of the Wolgn, it is certain that there is now nothing oriental in their de scendants either in mind or body.

Europe is inhabited by a race, either in a $\mathrm{Do}^{-}$-
malic or other rude atate, sueh an the Samoyedea, the Solyanes, I'ermiens, Wujula, Wotyaks, Kinlmuks, and Kirghlses. The Jews, a portion of the Femitic family, are found dispersed throughont all Europe, but are most numerous in some of the rudest parts of It, as I'oland and Russia. It is probabie, indeed, that their numbers at present far exceed what they ever announted to before their conquest and dispersion, and when they were an milependent nation. The dark complexion, black pyes, sind black hair, with uquiline nose, Hhow geucrally to what extent the purity of the original race has been preserved. Still, as we thid not unfrequently among them, especially when living among the German family, fair linir and hluo mes, which no Asiatic ever possessed, it admits of little question that a considerable intermixture of blood has taken place. Some linve gone no far as io assert that the fuir Germanie type is the original one of the Jewish race.
I'quiation.-The progreas of population in Enmope in modern times has heen vastly greater than in any other quarter of the worll, except those parts of America and Austrulasia that are occupied by Eurpeans. This increase has been at once a ponsequence and a canse of the progress of industry; aud it luss, necorilingly, heen greatest in those countries in which industry has been most developed,-in Great Britain, Germany, Jisssia, and France; and ucarly stationary where industry has been stationary, as in the l'eninsula nud Turkey. In some eountries, however, there has leen a considerable increase of populution without aty corresponding incrense of industry. However, it does not appenr that the increase of population has been any where accompanied by a deterioration In the condition of the inhabitants. On the contrary, it has been in most countries signally improved. In Great Britain, France, Germany, Rusia, and, in fact, nearly all other Europeen countries, the great bulk of the inhahitants are now better fed, better clothed, and better lodged than at any former period. The rate of mortality has been also very materially diminislied; so that there has been almost everywhere not only a grent increaso of comfort and enjoyment, but also of health and longevity. It may be further observed that the extensive intercourse that now prevails among different countries has almost wholly nulbitied the influence of those deficient harvests in paricular countries that used now and then to sweep off a large proportion of their inhabitants. Sareities are never general ; and it is always found that when the crops are deficient in one quarter they are unusually productive in quarters hasing a different soil and climate. And commerce, by setting the surplus of one country ggainst the deficiency of another, produces, ns it were, perpetual plenty; and exempts civilised nations from those vicissitudes in respect to the supply of food that are so destructive in rude societies.
Government. - Various forms of govermment may be found in Europe; but, spenking generally, they may all le distributed into the three great clases of alsolute and limited monarchies, and repubics. It is necessary, however, to observe, that the term of absolute monarchy is not meant to express a form of government where the sovereign is really absolute, or mny act as his judgment or caprice may dictate. There is no euch government in any part of Europe, not even in Turkey. all that is meant by an absolute monarchy is a government where the legislative and executive functions are administered by the sovereign, without his being sulject to the control of any legally constituted or recognised public body. But every
country in Furope hna laws and institutions which the soverelgn must respect, and public opinion han everywhere vait influence. The most absolute of the liaroiean monarcha are aware of its power, allil all of them would hesitate in adopting any line of conduct that they suppose would be likely to be disapproved by any considerable proportion of their suljecta. The checka on the power of the sovereign in the different limited monarchien to be found in Euroje, are different both in kind and tlegree. They mostly, however, consint of organised berlies thiat share, to a greater or less extent, in the legislative authority. In anme comitries, as in the United Klufdom, one ot the lonlies that shares in the legislitive authority is elected for a specified period by a pretty widely diffused system of suffrage, and has, consequeatly, very great influence. The distribution of power in republics in, as well known to be, quite as complete as in monarchices.
'The suljoined table furnishes a condensed view of the pulhic expenaliture of the various governments of the European states in the year 1864-65, the list being arranged in the order of expendi-ture:-

Europe is divided into 42 independent states, specified in the preceding table. At the head of
these ataten are (ireat Mritnin, Jiuaria, France, Austria, and I'rusia, called, par excellence, the tive great powern. The ntatea of the mecomil rank are Italy, Spaill, Sweden, and Turkey 1 those of the thimi, the Netherlanuls, Ihulgium, Portugal, Ihavaria, Derunark, Saxmy, Wurtemberg, Ifanover, and the Swinn Comfenleration ; and those of the fourth comprine the remainder.
Langwayen,-'The principal languages at present apoken in Europe may loe elassed ns follows :-

1. Gheco-Latin Family:
a. Moxlern (irvek.
b. Italian, Spauliah, Portuguese, French, Moldavian and Wallachian.
2. Celitio Family
a. (inelic of Scuthmil, Firse or Irish (inelic.
3. Welsh, Armorican (lirittany). Curulsh (nlLied to the two litter dlaleetis) extinet.
4. Trutunic Famis:
a. High (ierman, Iow German (Dutch), Swelish, Danish and Norwegina, Icelandice.
b. English and Lowinul Sentelh, very mixel, enpuelally the former, hint fomended ont the old Anglo-Saxon or other Tentomic dialects.
5. Slayonic Fiamity:

Russian, Polish, lloheminn, Servhun, Surab or Wendish, two dinlecta spoken in E. Saxony, Croatian, lhsuian, nul lingarian.
6. Oubalian Familiy:
a. Fiumlshl, Lappish, Liathonian, Carelian.
b. Mayyar or Ithugarian.
c. Turkinht.
6. irgcuidail Lanouagies:
a. Hasque, spoken in I'yrenean districta of Spain and France-quite unlike any other European tolligue.
b. Albnuian, helonging to neither the Slavonian nor Greek family but intermixel with both.
c. Lithuanian, Lettish, Livomian, Samogitian, quite peculiar, though containing many slavonic words.
Density of Population-The sulhjoined talle furnishes a comprehensive view of the relative density of population of the chice European states. The statisties of pop, are nearly all of 1861, when a census of the inhabitants wis taken in the United Kingdom, Germany, France, 1'russin, the Netherlands and most other European countries.

| States | Population | Area in Eing. Si, MHes | Population per St. Milo |
| :---: | :---: | :---: | :---: |
| Belgham | 4,520,560 | 11,313 | 401 |
| Netherlands | 3,372,052 | 10,905 | 309 |
| $\left.\begin{array}{c}\text { Great Mritain } \\ \text { and Ireland }\end{array}\right\}$ | 29,070,082 | 110,924 | 242 |
| Italy . . | 21,777,884 | 98,784 | 221 |
| Oerman States | 18,071,281 | 94, 347 | 189 |
| France | 37,382,225 | 211,852 | 176 |
| Swltzerland | 2,534,242 | 16,23: | 167 |
| Pruasia | 18,447,458 | 107,300 | 156 |
| Austria | 35,010, 158 | 233,311 | 148 |
| Denmark | 1,600, 5051 | 14,403 | 130 |
| Portngal | 3,584, 1877 | 36,510 | 98 |
| Spaln . | 16,301,850 | 182,758 | 90 |
| Turkey In Europe | 15,5010,000 | 203,628 | 76 |
| Grecee ${ }^{\text {a }}$ | 1,329,236 | 10,140 | 68 |
| Ruswia In Furope | 65,845,344 | 2,043,390 | 32 |
| Sweden \& Norway | 5,351,073 | 291,903 | 18 |
| Total | 280,000,000 | 3,701,222 | 78 |

It will be seen that the density of population varies enormously over the European continent, its north-eastern portion, comprising Russia, Sweden and Norway, or one-fourth of the surface, having only one-third of the average populons-ness- 25 to 75 : It may be interesting, for the sake of comparison, to show the density of popa-
lation of the five dlvisions of the globe, which is as follows:-

| Divisions of the Cllotse | Population | Iren of Torm Firma In Kig. Ny. Mlvis | Population per Bq. Mite |
| :---: | :---: | :---: | :---: |
| Eirroze | $2 \mathrm{NO} 0,010,000$ | 3,701,2\%4 | 75 |
| Arln . - | 781, 1111,0100 | 17,406,148 | 44 |
| Airlon - | H11, 000,100 | 11,475,000 | 1 |
| Amerlen. | 70,000,000 | 15, 4110,010 | 8 |
| Auatralaita. | 1,010,000 | 2,582,070 | 1 |
| Total | 1,221,000,000 | 61,408,4418 | 22 |

The alove statinties of the area and jop. of the five divisions of the globe nre, except an far an liuroje is concerned, only estimater, which however are on the brent authoritios.

Civilimution.-Tlumph the leant civilised state of Lurope in, on the whole, more alvanced hall that respects mental cultivation and improvement in the artn, than the mont improved nutlve metate fommed in any other part of the worhl, there in a while difference in the degreen of elvillsation that olitaln anong the difficrent linropean communitiew, The Italian republles were the Ilrst to emetge through the barluriam that livolved Eiurope aftef the Joman empire had fallen a prey to the attacks of the Germans and other Northern invaders. It wan in them thint commerce, arts, and literature again roнe to such excellence an to rival or excel their state in the most brilliant periakls in the annals of Greece and Rome. The inventima of printing in the 15 th century gave to the molens a power of diffuxing, increasing, and perpetuating information of which the ancients wero wholly destitute, and which has contributed incomparably more than any thing else to accelerate the progress of civilisation. It is, perhnps, nat going two far to say, that we are indebted to the invention of jrlating for the Reformation-that areat event which restored to mankind the right of thinking and judging for themaelves on matters of religions helief; and broke to pleces the shackles which churchmen and bigots had forged to enchain and weigh down the energies of the luman mind. But thongh the inventionn of printing and the Keformation have everywhere had a powerful influence, it has been much greater in some countries than in others. Only a very short time clapsed nfter books legan to be multiplied, till governments, beginning to be sensible of the importance of this new power, endeavoured to make it subservient to their views, by cuacting laws for its regulation, and preventing any work frmm being published without a licence, or till it had been revised by a censor: and it was not till Holland had emancipated herself from the blind and hrutal despotism of old Spain, and the Stuart had been expelled from England, that the press began to be really free; and that periodical literatire, and especially newspnpers, began to acquile some portion of the vast importance io which they havesince attained. But the jealouy of the doctrines broached by the early Reformers was still greater than that of the freedom of the press. They attacked principles that had beea long regarded as sacred, and which, in fact, had been looked upon by most persous as part and parcel of the Christian faith. In nddition to this religious fecling, most princes believed that the government derived a strong support from the church; and that, were its foundatious unsettleh the whole frame-work of society would, mat likely, be shaken to pieces, and their power and authority might fall to the grouml. We need not, therefore, be surprised that almest all the

area and pop, of the re, excepit an fiur as imates, which how. es.
east eivillsed state of ailvnineed lu all that and improvernent in proved native wate the world, there ina n of eivillination that urojean communitiox thie firnt to emprpe involved Eumpie after $\mathrm{n} \boldsymbol{n}$ prey to the attacks orthern invailes. It , nrts, nud literature ens to rival or exed Allinnt periorls in the e. The invention of $y$ gave to the molens ing, and perpetuating nucients were whally ontributed incomparaelse to acceletate the is, perhaps, not going indelsted to the insen-formation-that kreat mankind the right of theniselves on mattess re to pleces the shackles oots had forged to enenergies of the human rention of printing and ywhere had a powerful 1 greater in some counhly $n$ very short time to be multiplied, till be sensible of the im, endeavoured to make ss, by enacting laws for nting any work from licence, or till it hul : and it was not till herself from the blind Spain, and the Stuarts ingland, that the press and that periodiral newsprapers, began to the vast importanec io ined. But the jealousy by the carly Reformers of the freedom of the inciples that had beea and which, in fact, bad st persons as part and 1.. In nallition to this finces believed that the rong support from the foundations unsetled f socicty would, mot 3, and their power and the ground. We peed d that almost all the
grat novereigno of Jurope, as the kingn of France and Spmin, the Kinler of tiemminy; de., were detennimed enemion of the Reformation. In Bugland, the licentiousmese of Ileury Vili, effected a evarution frim the church of Rame, which otherwise it might hitve leen itumomilile, or, at all pents, very diflecult to bring alwout: and in frame, the extimetion of the life of Valois by the death of Ilenry III. In 1680, and the elevation of Ilenry IV. to the throne, necured to the conntry the alvantagea of a toleration that conld mot be diliterated, even loy the revoention of the ediet of Nantes Ilit in tho Jeninsila, Ausiria, anil Italy, the efliorts of the enemies of the lieformntion prevailed. Jhilip II., though he fuiled in hia atempt to extirpnie the princlples of elvil and rellgiotes librerty in the Iow Countrion, completely suceceded in Sjuin and I'ortugn!; whero he nut enly comsigned every ndherent of the new durtrinen to the atake, nind eatalilished the formldable tribual of tha Inquisition, but almo suppreswed the free lonetititions that had previously existed in Arugun nud other Spmish klugdoms. The remilt has been sinch as might liave been anticipnted: Spain, deprived of thone means of instruction and improvement that sho once possewed, and which have been enjoyed by other countrien, has not merely been outentripped loy har nivals in the cureer of wealth and improvement, hut has monitively retrograded; and is intinitely less industrious nud civilised it this moment than in the reign of Charlea V. She has been, in fuct, a prey to every mecies of misgovernment; and aflorda a atriking nud impressive exnmple of the jucatculable injury that an enfechling and degrading superstition and an irresponsible goverument may entail upon a people. In no other conintry has the freelom of the press and of religions opinion been so completely rooted out as in Spain; and none, cunsequently, has fallen into such a deplorable state of weaknesn and decrepitimle. In aceral, it may be allirmed of the different countries of Europe, that their civilisation is proportioned to the amount of freorlom they have practically enjoyed. Other things have, no doubt, had a material influence in nilvancing and retarling their jrogress; but it has, notivithstanding, mainly deprended on the freedom of the press and of public opinion.
Of the secomdary enuses that have influenced the progress and diffusion of civilisation, commerce has undoubtedly been by far the most powerful. An extensive commerce is only another name for an extensive intercourse with forcigners; and it is impossible that this should take place without purtially, nt least, obliterating loenl and untional prejudices, and expanding the mind. Commerce is nlso a jowerful aueans of promoting industry und invention, An agriculturnl people having little communieation with their neighbours, may beeither stationary of but slowly progressive; but such cannot be the case with a commercial people. 'I'hey necessarily beeume acquainted with all the arts and inventuns of those with whom they carry on trade, and with the endless varicty of their peculiar prolucts nad modes of enjoyment. The motives which cxcite, and the means of rewarding superior industry and ingenuity, are thos prodigiously augmented. The home producers exert themselycs to increase their supplies of disposable articles, that they may exchange them for those of other countries and climates. And the merchant, tinding a ready demand for such articles, is stimulated to import a grenter varicty, to lind out cheaper markets, and thus constantly to smply new incentives to the vanity and ambition,
ani consequently to the induatry, of hin eustomern. Every jower of the mind and fosly in thus ealled into aecion! and the janaion for foreign commo-dities-a pansion which sume mhallow mornllats have friorantly cenmired-abecomen one of tha mont efllelent causen of industry, wealfh, and civilination.
Commeree, and tho manufneturen to which it gives rlise, and by which again it in indelinitely oxtended, aro niwnys most ailvantapeounly entrioul on in great tuwns; which, consequently, are unlformly mont numerons in commercial eonntrien. These great towns are the grand aourees of elvilination. The competition thant takes place in them, the excitement that in eonstnitly kept up, tho collinion of so many minda hronght into immedinto contact, and all ondeavourfing to mutatrip each other in their rempective deparfmente, develops all the remorees of the himmin minil, and remiers a grent city a perpetually radinting foens of lintelligence mid linvention.
At no furmer jerion in the history of the world has commerce been nearly ${ }^{\circ}$. tensive as at prehent; and it is all lut certnin that it will continue to licrease, with the increane of intelligence, jniputlathon, nal wealth, all over the worlil. lint the tendency of an extensive commercial intercoursa among different nations is to diffiase the mivantugen of civilisation equally nmonget them all; and the fair presimption seems to lne, that the differences that now exist in the social condition of the people of the various liarojean atates, except, in so fur as they may depend on differences of soil or climate, or other matural cansen, will gradunlly decrease, and finally unite them linto one Luropean fumily.
l:US'I'ATIUS (S'l.), one of the Caribbee or W. Indin islands in the groups called the Leeward Islands, bolonging to the I Iuteli, in lat. $1 \circ^{\circ} 30^{\prime} \mathrm{N}$., long. $67^{\circ} 40^{\prime}$ W., between St. Christopher's and Salm, nbout 9 m . NW. the former, and 15 m . SE . the latter island. Area, $189 \mathrm{aq} . \mathrm{m}$, l'op. $3,270 \mathrm{in}$ 1861. The island is evidently an extinct volcano: It rises out of the occan in a pyramidal form, and has a depreswion in its centre, apparently its ancient crater, which now furnishes a plentifiul cover for numerous wild mimals. The coast is almost wholly innccessible, excrpt on the SW., where the town of St. Eustntins has been built. Climnto generally henlthy, but territle lourricanes and earthquakes are frequent. 'I'he island suffers also the great drawhack of a deficieney of spring water. Soil very fertile, and the industry of the Dutch has bronght nlmost every portion of it into culture. Tobaceo, which is the principal product, is raised $m$ the sides of the pyramil to its very summit. Sugar, cotton, indigo, coffee, maize, ynms, potntoes, de., are also grown; and hogs, klds, rablits, and all kinds of poultry, being reared in much greater numbers than required for the use of the pople, the island furninhes them to others. But we have no accurate information respecting the amount or value of the annual prisluce, or of the export or import tracle. Formerly it used to be the seat of an extensive contrabind traffic with the aljacent islunds and the continent of S . America. This island was taken possession of hy the Dutch, enrly in the 17 th century; it has, since then, several times changed hands between them, the French, and the linglish; it was timally glven up to Holland in 1814.
liUXINE. (See Black Sea.)
EVESHAM, a parl, bor, and market town of England, co. Worcenter, hund. Blakenhorst, in the fertile vale of liveslam, on the Avon, 13 m . SE. Woreester, and 1166 m . NW. London by Grent Western and West Midland railway. Pop. 4,680

## EXETER

in 1801. The hor, extenim over three parinhea, comprining in all an aren of $2,1 / 50$ neren. The lnar. is nituaterl on looth milen the river, the communlcation between ita two diviaiona belng kept up by a fine atone brilige. livenlanm in very anclent, $n$ monantery having been fonnilel here anma 709. It wan a mitred abbey, and at the dinwelution fia ravenuen amentited to I, Inill, a year. Fow ventigen of the buililing uow remmin, with the exergtion of a magnlficent tower, now used an a belfry, built not loug before the dissolutlon. 'I'his tower in a mquare, 22 ft . by 22 , and 117 f . in lielght: it in reckoned the finent extmint niecimen of the pointerl eceleniastical atyle of the lith century. 'The tuwn commina principally of a main atruet in thit llue of the brigge, and of another nearly at right angles to it. It is paved anil lighted inder the provisions of a loeal act, which alao providea for the wateling of the town mul the care of the brlife. 'There are three churchem, wlib chanpla for finpisis, Wenleyana, Unitarians, and (̧unkern, lt has a well endowed free grammar melowl, Archdeacon I lencle's charity school, with unthonal, Infinat, nul Similay sehooln, an noprentice funil, and numitry benefactions to the poor. 'The stocking mannfacture in carried on to sume extent 1 parchment is almo made; but garilening in the prinilipul bisinese of the inhabe. livesham claima to be a lor, by preacriptlon; it sent 2 mems, to the parl. holiden in the 21at of Wilwaril J., but It was not again reprosentell till the early part of the relgo of Jomen 1 , whoguve a charter to the bor. Shace then it hins continued to sent 2 mems, to the 11 , of C. l'revlously to the Reform Aet, the slght of voting was in the mayor, aldermen, enpitni nud other burgensen, mpinbers of the corporntion. liegintered electors 338 in 1865 , of whom 63 fremen. (iross annual value of real jroperty assensed to income tax 21,7881. in 1857, and 20,2991. in 1862 . The corporation revenue, amounting to $480 \%$. in 1862, is montly derivel from bor. raten, tolls, and dues. The mayor and fuur aenior alilermen of the old corporation were justices of the peace, aul hat power to hold aesslons of oyer and terminer, and to try and punish all crimes other than high treason. So late as 1740 , a woman was burned bere for petty treason.
Near Evenham was fought, on the 4th of August, 1265, the battle letween Eilwari, prince of Wales, afterwaris Edwaril I., nud tho confederated barons under Simon de Montfort, earl of Leicester: the latter were totally defeated, and their leader and his eldest son killed.

EVREUX (nn. Mediolanum, nnd subsequently Fburovices), a town of France, lép. Fure, of which it is the enp., on the Iton, an aflluent of the Scine, 24 m . S. Ronen, and 51 m . WNW. Paris, on the aiiway from Paris to Cherhourg. Pop. 12,265 in 1861. The town is generally well built; but the streets are rather narrow, and its houses have an astiquated appearance; it is surrounded by fine promenales, and is well supplied with water. The chief public building is the cathetral, one of the most ancient and curious in France; it is in the figure of a cross, its centre summonnted by an octagonal dome and pyrnmid, the summit of which is $255 \frac{3}{3} \mathrm{ft}$, above the grouml; 16 pillars on eiller side separate the nave and choir from the lntern] part of the building; the left entrance, which is flanked by two octagonal towers, is greatly ailmired. The other principal structures aro the church of St. Saurin, probably as ancient as the cathedral; the great clock-tower, built in 1417; the town-hall, hôtel de prefecture, episcopnl palnce, prison, theatre, and public library, with 10,000 vols. Evreux is the sent of a court of assize, of tribunals of primary jurisdiction and commerce,
of a blshopric, which liail lte origin na early as the Bril century, a chamber of maninfocturem, a ilepats. mental enlloge, and a primary normal melosol. is han a the latusic garden, nouletlen of agrintiture, selence, and arta, anil of medielne: and varinus conimes of lecturem. Its astunthon on one of the prineipal roadm in France kreatly fucilitates if truile, and afforin reaily ontlets for its manafac. tures of wosillen nud cottoni clothin, leathers, thek. lnges, antlnetten, tre, Divrenx lins nifferod many vicinaitindes, It was frequently in tomamention of the Einglish; and lite been repieatedly marked hy thens mind liy the Fremeh. It was amigued liy Ihithelien tur the Jue de Ihoillon in exchange fir the prinelpility of sedun.

There is a free graminar-wehool, founded in 168is, with a reveline of alxuit so0f, a vear, and six exhilhitions of $36 / l_{\text {, each, one of }}$ gill, three of 251 , and wix of El . a yeur each to alher univurnity ; a blue-eont mehoni, founded in phel, for 38 broy and I cirle, and k0 day melolars: St Mary Archem nelinol, founded In 11386, anil eluendug 52 buyw on Ifell's plan, of wlum 80 are partly clothed the epineopual chnrity sehoul, extablished 1714, nud elothing and instructing 180 bys and 180 girlm the lailien' achesol, for 41 girla; the national or IEell'a scluool, for Sti2 longs and itio) gith ; an infant sehool; a tissenting charity sedomi, fie bo children; nud many furge Smalay nehools. The Devon and Exeter acientile and literary inatitution has a valuable library and muxeum : thre in alno an athenseum ; |niblie anberplption annus for bally und concerts ; pilalie baths ; a gomal thentre, unmally opren in winter, and durlug the comuty asoizes ; and ant anclent guildhall, nen: the centre of the High Street. Amual racen take place lin August, on IIaldon Ilill, 6 m . SW. of the eitr. On the site of the nncient Nurman castla fof which the remitiss of the gateway are atill preserved) is a monlern comoty nenslonn-house, where the assizes are liehl; mid in the large area before it, the election of melnbera for S. Devou, aud other publie meetings, take place. It ls aurmunded amphitheatrewise by the old rampurts, the slopes of which are planted with treen. N. of the rampurts is a lino public avenue, near which are the county gaol and bridewoll, and also those of the city : all of them are well-built moxern nuetures i near the former are large cuvalry barracks, and on the S . sille of the city atill more extensive ones for artillery, The principal market is on Friday for corn, enttle, woollen goods, and general provisions : a smaller one on l'uesday for the last named, of which there is also a considerable daily supply, expecially on Saturday; a great cattle market on the second Friday in each month; and annual fairs the third Weduesday in Fobruary, May, and July, and the second Wednexday in December, chiefly for cattle. At Alphington, about 1 m . from the city, a large horse fair is held yearly in October, Woollen goods formed the ancient staple of Exeter, and during last century it exported large quantities to the Peninsula, and various parts of the Mediterrancan; but this trade has wholly ceased. The cotton and alawl manufacture, introduced more recently, has also been given up; and though the weekly meetinfs of the woollen manufacturers of Devon are sill held at Excter, the work executed there is limited to serges. There are several large breweries and iron-foundries in the city ; and tan-yaris and paper-mills, employing many hunds in the immediate neighbourhood. Its chief business originates in its being the provincial capital, where the public business of the co. is transacted, as well as the daily concerns of the populous and fartile districts immediately round it. It is alse a great thoroughtare; and has derived much advantage from the opening of the several lines of railway, which place it in direct communication with Loudon, Bristol, Plymouth, and the chief towns
of Finglanil. The custom-house, quayy, bonding and other warehonwew conneeted with the ahipping trinle, are at the SW. enil of the elty : where the river, contlied by a weir, furma a flonting haven commerted with a shif canal exenvated in 1671 , anil originally 3 m . lomgs thin has loeen deeprened and extembed 2 m . lower, no that veancla of 100 (binn now ancenil to the eity i a large thonting Imain lian almo lseen formed, in adilition to the liaven, and is the ferminus of the Irimtol and Exeter railway. Theme impruvementa, effected not many years ago, have cont the clity comporation uliwarils of finf,000). The nea enitrance to the hartunir han a shifting bar, and in narrow and intricate, but it is well binyed, and within the narrow lieek of land, between it and the Engelish Channel, in a nymeloun and nafe anchurage called the IBight. There lelonged to the part on the lat of Jant., 18154,35 millig vewaels under 80, and 110 over 60 tomis, of a tuitill burtien of 17,2N2 tolla: there was, hexiden, 1 meamer of 117 tons, (iroms amount of euntoms dity recelval $102,10 \cdot 1 /$, in 1869; 95,7131. in 1861; and $118,0 \mathrm{~N} .1 \mathrm{I}$. in 18633.

## F

FAllilidno, a eity of Central Italy, prov. Ancoma, at the li. finot of the Apeminines, 30 m . WSW, Ancomn. Pop, 17,788 hit 1861. The town has a eathectrni and numerous convents. Felt cloth of good quality, fior printers, diastiliers, and pajeer makers, is produced hure; and it ls celebrated fur itn puper and pmrchment. It has been supposed that this was one of tho lirst places at which paper from linen rags was manufacturest. Gine and nome other artleles are also produced. It has three nmmal filirs, and markets twice a week.
FAENZA (mi. Furentia), a town of Central Italy, prov. Kavemm, on the Emilian Way, at the junction of the camil ot Zanelli with the Lamone; 9 m . NW. Forli, and 30 m. SE. Bologna, on the railway frem Bologna to Ancema. 1'op. $35,592 \mathrm{hn}$ 186iI. The town is surrounded with walls, anil defended by a citndel. It has fomr well built streets, leading to a square in its centre, in which are the cathedral, town-hall, new theatre, nad many hamdsome private rexidences, with a line marble fountain in the middle. The rest of the town consists of miserable courts and lanes. There are twenty-six churches, tifteen convents, two schoois of painting, a lyceum, hospital, and two orphan asylums. The mamlacture of a kind of poreelnin whilh has derivedi its name (fayence) from this town, still continnes to be carried on, but to a much less extent than formerly. There are some factories for silk fabrics, and twist and puper mills. Its trade, which is tolerably active, is facilitated by the camul, which leads to the I'o-di-Primaro. Faciza was sacked by the Gothe in the sixth eentury; nearly ruined by the emperor Frederick II.; and annexed to the popedom by Julius II. in 1501. It was the residence of 'lurricelli, the inventor of the barometer.

FALAISE, a town of France, dép. Calvados,
eaj. arromil, on the Ante, 21 m . SSE. Cren, on a whort branch of the raiiwny from Cuen to Mans, l'op, 8,5til in 1811. The town is buiit on the do. elivity of a hill, the nummit of which in erownem by lis enstle, now in part a ruin, but andentily the respldence of the duken of Normandy, mand the birthplaco of Wliiiam the Comerneror. The town was formerly pretty well fortitied, and is atili muro rounded with walls. It is clean and well huilt; has 3 loug streets, 4 squares aiorised with modern fountains, 3 churches, 2 houpitais, a themtre, anda public library with 4,000 vols. Finlaine has a tribunal of original jurisdiction, and a communal ent lege. Its manuffictures comsist of lace, tulle, and cotton fubries. Ita suburb of Guibray is ceiel保el for a large fair hell in it each year, from the lohh to the 25 th Augnst. The value of the eosnmalities disposed of at this fair has been estimated at $15,000,000 \mathrm{fr}$., or 600,0001 .

FALKIBK, a market town, parl. hor., ani par. of Scotiand, co. Stirling, on an eminence, 3 m . SSW. Frith of Forth, at Grangemonth, at the sil', extremity of the fertile tract of land ealled 'the Carse of Falkirk,' 22 m. W. by N. Edinhburgh, and 10 m. S. by E. Stirling, on the railway from tidinburgh to Stirling. P'op, of bor. $5,0 \bar{a}$, and of diso triet 20,576 in 1861. The district ineludes dirdrie, Hnmilton, Lanark, and Linlithgow, as weli as two villages within less than a mile each of the town, namely, Camelon on the W., and Lauristen on the E. I'he Carron Iron Works (see Carras) are withm 2 m . of the town. Grungemouth, situated at the junction of the Forth nal Clyde canal with the river Carron, about $\frac{1}{2} \mathrm{~m}$, from the Furth, forms the port of Falkirk. The canal in quessina runs past the N. extremity of Bainsliod villute, and is joined by the Union canul from Elinturgh, at Lock 16, within less thau a m. of Falkirk. (se Grangemouth.) The Edinburgh and Giasgur different winter.

There are nlso saw-mills, neveral thour-mills, anti amill ahip-bulliting yard. Comelon is pronelpally occupied by nailerw, their number varying
 undatitel by the workmen belonging to the Carron Wirkn and (1) the Falkirk Fonniry.
Falkirk in celebrated chictly for ita trysts, which an the greatest lalrs or markets for enttle of any la seutlanl. There are three trysts niminily, befinuing renpectively oll the 2d 'Juemlay of Ang., Pejte, and Oct.: the last being by far the Inrgest. They continne at leant two days each time, mul manetimes for nearly a week. The cattle are chictly from the Ilighlands, and sold fur feedling inthe S. of Scotland, or in England. The entire value of the atock numally dinposed of at theme trysts cannot be much, if at all, under $1,000,100{ }^{\text {a }}$. These trysts were extablished upwards of 200) years ${ }^{2}{ }^{4} 0_{0}$
The town is of considerable antiquity. The uld chareh, in the slte of which the new one was built in 1811, was founded by Maleolnn C'nenmore in 1057. In the valley between Falkirk and the Carmon, a battle was fought by the scotch, under sir William Wallace, against the English, under Kiward I., in which tho lntter provailed, and Sir John Graham and Sir John Stewart fell. The tomb of Graham, whieh the gratitude of his conntrymen has thrice renowed, is to be seen in the churchyard of Falkirk. On a moor, within im . of the town on the SW., Charles Stuart the 1'reteader, in 1746, guined a victory over the royal aray, under Gencral Hawley. Camelon was once a liomun station: and near this the finmous Ioman wall began, commonly called 'Graham's Iyke,' which was erected anno 140 , in the reign of the emperor Antonimus Pius, and which extended across the island from the Carron to the Clyde. Yalkirk was a burgh of barony till the yenr 1833 , when it obtained a constitution from parliament; and it is now governed by a provost, three bailies, a treasurer, anil seven counsellors. It returns a mem, to the 11 . of C., in uniom with the burghs of Linlithgow, Lamark, IInmilton, and Airdric, and in $1865^{\circ}$ hind 1,510 registered voters.

NE. Tierra del Finego, and about $7,000 \mathrm{~m}$. diatnut from London. Only two of these inlamis are of any conshlernble wize,-the E. and W. Falklnuds. The grentest length of the former, NE. to NW., is nearly $130 \mathrm{~m} . ;$ greatest brealth, alsont 80 m, The latter is about 100 m . in length, hy 50 m . in ite greatest brealth, in the anme directions. Their united area is entimated at $18,000 \mathrm{sq}, \mathrm{m}$. Hetween the two main islands is Falkland Sound, whence the whole archijelngo has derivel its name: this clinunel is from 7 to 12 m . in brealth, nul navigable for ships of any elass; many of the smaller inlamin are sitnated in it. Next to E. nand W . Faiklani, the principal islanils are, the Great Swan island on the W., Snmaders, Keppel, nul I'ebble imlands on the N., mul the Jasom lisles at the NW. extremity of the group. A small Einglish garrison is stationed at Port lamis, at ilie head of llerkley Somind, towards the NL, extremity of E. Fulkland; and the ishands are further occupled by a few Buenus Ayrean gatelios, Indimms brought from the S. Amerienn continent, and Furopenns; and frepuented by numerons American, English, and French whalers and aenlers; but most of them are uninhabited, nul the pop, of the others is variable and uncertain.
The shores of these islands are for the most part low, except on the $W$. side of the group, where there are many high precipitous eliflis and rilges of rocky lills abont $1,000 \mathrm{ft}$ in elevation. The average height of the $W$. is greater than that of the L. island; though the highest hills seem to be

## FALKIRK

in the latter, where they rise to about $1,700 \mathrm{ft}$. alove the sea. All the Fulklands are of a very irregular shape, and much inulentell with bays and inlets. Fixceileut harbourn, easy of aceess, affordfing good shelter, with the very best hohling gromml, abound among them, sud, with due care, offir ample protection from the freguent gales. (Fitaroy, p. 246.) The wea around the Falklands in mostly deep, bat in general much deeper near the $\mathrm{N}^{\text {. and W. shores thil on those of the N. The }}$ climate is variable, but not so much so as that of Eugland, and it is nalil to be quite as healthy. The thermometer at port Lonis rarely rises in nimmer above $70^{\circ}$ linli., or sinks in winter below 800: snow seliom remains on the ground more thmin 48 hours, except on the monintain tops, and it never freezes so hard as to prosluce ice capable of sustalning any weight. Excess of wind is the principal evil : a region more sulpect to its violenee, foth in summer and winter, it would be clitlleult to mention. 'The wiuds generally freshen as the sun rises, and die away with sunset; the nights are in genernl calm, nud as benutifully clear and starlight as in tropical countries. The previlent winds are westerly; E. winds are not frequent; gnles and squills come principally from the S . Rain fulls more frequently than in England; but the showers are lighter, and the evaporation is quicker. Thunder-storms are unusuai. Falhland is the island that has been the most explored. Its most elevated parts are composed of a compract quartz rock. In the lower conntry, clay-slate and sandstone are intermixed, and are often covered by excellent clay tit for making bricks and carthenware. In many places very solid peat in layers, varying in depth from 2 to 10 feet, has been discoverel; and this valuable product appears to be plentitinl throughout the whole of the archipelage, where it may for ages supply the deficiency of timber. The soil consists prineipally of a black monld, from 6 in, to 2 ft , in depth; in muny places, and especially near the foot of the hill ringes, there are extensive bogs. Fresh water is good mind plentiful: there are plenty of ponds and small lakes, but no rivulets worthy of note. Copper and iron have been discovered.

The aspect of these islands is unprepossessing ; but it is said that the barrenness is only apparent; that most of the lund is abunduntly fertile, and covered with a coarse, long, and brown, but sweet grass; while, in the interior, there are numerous sheltered valleys, feeding large herds of wild cnttle, In various parts along the sea-shore, a tall sedgy grass called tussoch, growing to $\mathbf{i}$, or sometimes nearly 10 ft . in height, is plentiful; of this the cattle are very fond, and it is also well adapted for thatehing buildings, and for the manufacture of mats and baskets. Timber of all kinds is wanting ; and though the contrary has been affirmed, we believe that there is but little chance of its sueceeding were the attempt made to plant it. Generally, both the soil and elimate are unsuitable for corn, though it has been raised in some sheltered spots near l'ort Louis, where potatoes, ouions, turnips, carrots, and other vegetables have also been raised.

Should these islands ever become the sent of a cousiderable colony, its wealth will probably be derived chiefly from breeding and rearing live stock. Fer this the country is well adapted. The French, and afterwards the Spanish, colonists turned loose upon the E. Falkland a number of black cattle, horses, pigs, and rabbits, and geats and pigs have been landed upon the smaller islands at different periods. These animals have multiplied exceedingly; and theugh they have been killed indiscriminately by the crews of

## Falmouth

vessels, as well as by, settlen (who sometimes kill a wild eow merely to get the tomgne), there are still muny thonsand hend of all kinils. The will bmils and horves are very fierce, and apt to attark individuals, who are never secure unlens they ape wall urmed, or protected by well-trained doga all the will cattle are very large and fat. The horma are lightly built, and average about 14 hands 2 in, in height. The only furmidable wild land animal is tho warrah, or wolf-fox. This ls as large as an Finglish mastlff, nad very flerce; accordiag to Captain Fitaroy, however, it appears to be only a variety of the I'atagonian fox. Sea-elephanta and seals (both fur and hair seals) abound on the shores in great numbers, and whales are frequent around the coasts. Blrds and fish are amannghy numerous.
Amerigo Vespueci has been commonly reputel the discoverer of these islands, but it is most probable that ho never saw them. They were in reality discovered by Davis in 1592 ; Hawkins sailed along their N, shores in 1594 ; and Strong, in 1tigo, anchorel between the two large islonds in the channel, which he called Fulkland Sound In 1600, the Jason or Sebald Islands were diseovered by the Ditch. The Falklands were visted during the first hulf of the 18 th century by many French vessels; and in 1763 they were taken posaession of by France, who ostablished a colony at l'ort Louis on the E. island, from which, howevet, they were, in 1765-67, expelled by the Spanianls, About the same period the English settled at Port Egmont, Sannlers' Island, though in 1770 they also were obliged to evacuate the Falklands ly the Spaniards, A war with the latter was nearly the consequence of this proceeding; but in $17 i \hat{i}$ Spain gave up, the sovereiguty of the islmuls to Great Brituin. Not having been actually colonisel by us, the republic of Buenos Ayres assumed in 1820 a right to the Falklands, and a coloay from that country settled at l'ort Louis, which increased rapidly, until, owing to a dispute with the Americans, the settlement was destroyed by the latter in 1831. In 1833 the British tlay was again hoisted both at l'ort Louls and Port Lyrmout, and a British governor has since been continually resident at the former station, which, however, comprises, only a ruined fort, state house, and a few houses. Total pop., 624 in 1862.
The possession of the Falkland Islands offers some advantages. They are situated in a pnit of the world where there is no other colony iutermediate between England and Australia and Xew Zealand; the harbours are good and easy of approach, and they go far to command the passage round Cape IIorn. They are capable of affording a plentifil supply of live stock and good water to ships touching at them. The value of imports amounted to 11,300 . in 1856 , and to 25,5341 . in 1862. The value of exports was $11,800 l$, in 1856 , and 15,5561 . in 1862.

FALMOU'IH, a parl, bor. and sen-port town of England, eo. Cornwall, SW. division, hund. Kerrier, on the W. side of Falmouth harbour, about 2 m . from Penryn, and 15 m . NNE. the Lizan Point, and 310 m . WSIV. London by Great Westem railway. Pop. of municipal bor. $\overline{0}, 709$, and of parl. ber., incl. l'enryn, 14,480 in 1861. The towa is on the whole, well built. There are several churches, the principal one being dedicated to Charles the Martyr, with chapels belonging to the Baptists, Wesleyans, liryanites, Friends, Unitarians, and Rom. Cath.; a Jews syuagogup, a market-honse, town-hall, a gaol, built in l $8 \times 31$, good pnblic: rooms, a fine hall, belonging to the Comwall Polytechnic Society, a eustom-house, a good quay, and numerous schools and charitable

matitutions, It is lighled with gas, and has with its environs a cheerfil anl pletnresque nppearance. The inlet of the sea, called Falmonth Harbour, is one of the thest asylums for shipping in Jinghund. tos entrance, letween Nit. Anthony's Hean on the final l'cudennis Castle on the $\mathbf{W}$., is abont 1 mm . in width, and it thence stretches inland abont ob m. Palmouth is situnted on a creek on its W. and St. Nawes on Its E. side, inmediately within St Aathony's llead. It has deep water, and excelleat anchorage ground for the largest ships; they may also muchor withont the harbour, having in in thelr power to retreat into it should the wimi eume to blow from the s., which gives a great facility to ships gettling to sea. Ships of large burien anduad at the quay nt Fulmouth. Near the midalle of the entrance to the harbonr is a layg rock eoverel nt high water; but a bencon has been erected upon it to point it out: the usmal entrance is between this rock and St. Anthony's Head, on which is a lighthouse. The harbour is defended by l'endennis Castle on its W., and that of st. Mawes on its E. side. The former is constructed on a rock more than 300 ft . above the seat They were built by Henry Vlll.; but have sinee been much improved and strengthened. The mail-packets for the Mediterrancan, Spain, the W. Indies, and S. America, were despatched from Ealmouth for about a century and a half; but of late yars they have been, for the most part, despntched finm Sonthampton, which has now, in fact, beenne as it were an out-port of the metropolis. The exports from Falmouth include copper, tin, till-plates, woollen goods, pilchards, and other fish; a considerable coasting trade is carried on between Falmouth and London, I'lymouth, Jersy, bristol, and other ports. Tho shipping belouging to Fahmonth consisted, on Jan. 1, 1864, of 46 saling vessels under 50 , and of 94 sailing vessels aluve 50 tons: there were also 4 small steamers, of in total burthen of 13t) tons. The customs revente was 9,569 . in $1859 ; 6,2501$. in 1861 ; and 6,302 in 1863. In 1850, Finmouth had 115 registered vessels of the aggregate burden of 7,393 toms. Market-day, 'Thursday, for provisions generally.
I'reviously to the late Mmicipal Reform Aet, the bor. was limited to the old town, which comiprises only about half the modern town; but its limits were then extended so as to embrace the wholo town und some adjacent territory, with l'endeonis Castle. For parliamentary purposes, the Reform Aet alled Falmouth to the bor, of l'eury. The united bor. sends two members to the II. of C.: registered electors, 793 in $186 \overline{5}$.
It is governed by a mayor, four aldermen, and twelve councillors. Corporation revenne, about dow, a year. In the carly part of the seventeenth century Falmouth consisted only of a few fisherdien's huts : it owes its subsequent rise to the patronage of the Killigrew family, and the estnblishment of the packets; which last was a conlsequence of the excellence of its harbour, and its situation so near the land's lind.
FALS'TER, one of the Danish islands in the Baltic, separated by narrow straits from Zealand on the N., Moen on the NE., and Laland on the II. Length, N. to S., 27 m . ; breadth very variable, Area 180 sq . m. Pop, 26,215 in 1860 . The surface is almost entirely flat, lout it is considerably elevated above the sca, and is comparatively bealthy. It is well watered, though it has no stram deserving notice. Its S. portion, a projecting tongue of land, is mostly occunied by the lagoon of Bottöe. It is the pleasantest of all the Hanish islands; is richly woodel, tertile, and well cultivnted, and prodnces so much fruit that it is ealled the 'orchard of Denmark.' More corn is
grown than is required for home consmontion; and tlax, hemp, and hops are cultivatel. Cattle, hogs, and poultry are plentifil; bee-hives are mumerons, honey and wax being importnit articles of produce. Turf, chalk, and buililiug stome are found. Some vessels are built, bint the few nanufactures of the ishand are wholly domestic. Nykiobing, on lts W. side, is the principal town: it has a cathedral, an mucient castle, and 1,400 intlabitants.

FAMACUSTA, a sea-port town of Cyprus, in what is now a bleak and barren district on the li: shore of the islanil, a little S. from the month of the Pedrea, and 40 m . 1:. Nicosia; lat, $35^{\circ} 7^{\prime} 40^{\prime \prime}$ N., long. $33^{\circ} 59^{\prime} \mathrm{J}$. . It was furmerly well fortitied; aud its works, which are now dismantlesl, cover a circ, of about $2 \mathbf{1 m}$., and consist of a rampart and bastions, defended on the land side by a broad diteh hewn out of the rock. 'The entrance to the harbour, which appears not to be more than from 80 to 100 yurde across, is detended on one side by a bastion, and on the other by a ruined tower. This port once admitted vessels of a considerable draught of water; but slnce its conguest by the Turks, saud and rubbish lave been sutfered to accumulate to such an extent that none but small craft now enter it in safety. 'I'he town, which is poor and in ruins, has numerous deserted and choked-up strects nuil decayed churches; indeed, for the number of the latter, Kinneir says it might be compared to Ohd Goa, thongh not on so superb a scale. In its centre are the remains of the Venetian palace, near the cathedral of Sit. Sophia, a respectable (Gothic building, in ruins, and in part converted into a mosque. Only a few 'lurkisll families are fonnd in Famagusta, most of its inhabitants being Greeks. During the Venctian regine, it was one of the most populous, commercin, and richest towns in the Levant. Its ruin was completed by un earthqumke in 1730 . About $5 \mathrm{~m} . \mathrm{N}^{2}$, aro the ruins of Comstantia, ocenpying the site of the ancient Salamis, now called Tiski, or Old Famagusta. These ruins consist of the foundation of the ancient walls, about 3 or 4 m . in circuit; with cisterns, broken columis, the foundations of buildings, \&e., which lie scattered along the sea-shore, and near the mouth of the l'ediea.

Guy of Lusignan was here crowned king of Cyprus, by order of Richard I., in 1191. It remained in the possession of his family till 1460 , and then successively belouged to the house of Savoy and the Venctians. Sclim II. took it after a long and memorable siege, in 1571, when its gallant governor, Bregadino, met with treacherous aul inhmman treatment.

FANO (an. Funum Fortunce, from a temple dedicated to the gorldess Fortune), a sea-port town of Central Italy, prov. Urbino, on the Alrintic, at the moutl of the Metauro, and on the Emilian Way, 7 m . SE. J'esaro, and 29 m , NW. by W. Ancona, on the railway from Bolugna to Ancona. Pon. 19,622 in 1861. The town presents a lofty bastioned wall towards the sea; and has a large square ormamented with a fountain and a bronze tigure emblematic of the town; a catbedral in an enriched style of architecture, which, like some of its other churches, contains paintings by Domeniehino; many convents, a college of Jesuits. public school, public library, and a theatre, said to be one of the most elegant in Italy. On the rond to Fossombrone is a triumphal arch, crected in honour of the limperor Augustus, besides some other renains of antiquity. Fano has some fabries of silk stulls and twist, and some trate in corn anil oil; buti its harbour almits only small vessels. It reccived

## FAREHAM

## FAROE

a colony uniter Augustus; in its vicinity the Romans gained an important victory over Asdruhal, anno 207 3. (4. It had some extensive suburlss destroyed by the Turks in 1487.

FAREIIAM, a market town and par. of England, co. IIants, on a creek at the NW. extremity of I'ortsmouth harbour ; 4 m . NNW. Gosport, and 64 m . SE. London by roarl, and 844 m . by London and South Western railway. Pop. of town 4,011 in 1861, and of par. 6,197. Area of par. 6,670 acres. The town consists principally of one broad street; and has a church and severnl dlissenting chapels. Durling the snmmer months, it is resorted to for sen-bathing, and has every accommodation for the convenience of visitors. It has manufactures of sacking, and ropes for shipping, which are sent to Portsmouth, and vessels of large burilen are built. Market, Wednesday. The government is vested in a bailiff, 2 constables, and 2 ale-conners.

FARINGDON (GREAT), a town and par. of England, co. Berks, partly in hund. Faringdon, partly in that of Shrivenham, at the base of Faringdon Hill, in the vale of the White Horse ; about 2 m . from the 1 sis, and $6 \overline{7} \mathrm{~m}$. W. by N. London, by Great Westeru railway. Yop, of town 2,943, and of par. 3,702 in 1861. Area of par. 6,910 acres. It is a very neat town, paved, lighted, and amply sup)plied with water from the noted spring of Portwell. The church is an interesting structure; its E. end is of great antiquity; the remainder is in the Gothic style of different periods: its spire was destroyed during the last civil war. There is also a chapel of ease at Coxwell, in the par., and a dissenting chapel in the town; a national school for 200 children, and an infant school. Market, Tuesday, a large one for corn; fairs, February 13, WhitTuesclay, October 29, for horses, fat cattle, and pigs. Statute fairs are also held the Tuesday before and after Old Michaelmas-day. The chicf trade of the town is in bacon, several thousand pigs being annually killed by its butehers. Its position at the junction of 2 main lines of road also occasions a good deal of business and activity. The line of the Great Western railway passes within 3 m..of the town.
FARNHAM, a town and par. of England, co. Surrey, hund. Farnham; 38 m . SWV. London by road, and $40 \notin \mathrm{~m}$. by London and South Western railway. Pop. of town, 3,926 , and of par. 9,278 in 1861. Area of par., 10,510 acres. The town, situated near the Wey; on the main line of rond from London to Southampton, consists of two principal streets, with a market-place at their intersection, and some smaller streets, It is paved, lighted, and well supplied with water, from springs in the neighbouring hills, conveyed by pipes to a large reservoir in the town. The church, a spacious building in the later Gothic style, was formerly a chapel belonging to Waverley Abbey, in the vicinity. There are also several dissenting chapels; almshouses for eight poor people, founded in 1619, and endowed witl lands producing 80l. a year; a free grammar-school, with an endowment producing 30l. a year, and a national school supported by subscription. Market, Thursday; it was Sormerly one of the largest corn markets in the kingdom, and is still a considerable oat market. Fairs, Holy Thursday, June 24, and November 13 , for horses, cattle, shecp, and pigs. The town was anciently noted for its cloth munufacture, but this is quite extinct. It is now celebrated principally for its hops, those produced in the vicinity being of a very superior quality. On the Wey are several large flour mills, whose produce is mostly sent to the metropolis by the Basingstoke canal, which passes within 4 m . of the town.

Furnham, which was a bor. by prescription, te. turned two mens. to the II. of C., from 4 Edward II. to 38 IIeury VI., subsequent to whieh the pinvilege has not been excreised. It recelvel two charters from the bishop of Winchester, bat virtually lost the distinction of being a lor. from about 1790, or earlier. I'etty nessions for the dir, are held in Farnham, and there is also a court fir recovery of debts uniler 40 s , which sits every third week. Farmham Castle, on a hill N. of the town, is a residence of the bishops of Winchester, and contains a good library and some valuable paintings: it is surrounded by an extensive park, in which is an avenue, nearly 1 m . in length, eummanding a beautiful prospect, and much resurtel to as a public promenade. It stands on the site of a castle built during the reign of king Stephen, ly his brother Henry of Blois, and was built subse. quently to the liestoration. Some interesting remuins also exist in the vicinity of the abbey of Wavericy, founded in 1128, for Cistercian moiks, and subsisting till the general dissolution under Henry VIII, when its annual revenue was estimated at $174 l .8 \mathrm{~s} .3 \mathrm{~d}$. There is a handsome modern mansion contiguous to the site, amidst fine park scenery.

FARO, a sea-port city of Portugal, on the $s$. const of the prov, of Algarve, cap. comarca of same name, on the Valfermosa, near its mouth; 45 m , ESE. Lagos, and 20 m. WSW. Tavira; , lat, alij $59^{\prime} 24^{\prime \prime}$ N., long. $12^{\circ} 31^{\prime} 18^{\prime \prime} \mathrm{E} . \quad$ Yop. $9,150 \mathrm{in} \mathrm{i} \times 5$. The town is surronnded with walls, said to have been constructed by the Moors, and is well built, the streets being wide, and the houses good, and, to appearance, mostly new. It has a cathedral, four convents, a house of charity, seminary, military hospital, custom-house, and arsenal. It is the seat of a corregidor for the comarca, a militar: governor, of a bishopric, transferred thither from Silves in 1580; and of town and district judieial courts. The harbour is shallow and inconvenient; but it has a good roadstead, formed by three islands, opposite the mouth of the river. It expmits figs, raisins, slmonds, dates, and other dried fruits, oranges, lemons, wines, cork (the produce of its territory), sumach, baskets, and anchovies. Mauy of the inhab. are fishermen. This town rcceived its first pop. from the city of Osonova, which stood not far distant, destroyed by the Moors on theis entrance into the country. It was raised to the rank of a city by John III. in the 16 th century.

FAROE, FEROE, or FEROE ISLANDS, a group of 22 islands belonging to Denmark, in the Northern Ocean ; between lat. $61^{\circ} 15^{\prime}$ and $6 \% 0^{\circ} 21^{\prime}$ N., and long. $6^{\circ}$ and $8^{\circ} \mathrm{W} . ;$ about $185 \mathrm{~m} . \mathrm{NW}$. the Zetland Isles, and 320 m . SE. Iceland. The principal island, Stromoe, in the centre, is 27 m . long by about 7 broad ; the other chief islandsare Osteroe, Vangoe, Bordoe, Sancloe, and Sudetoe. Total area, $495 \mathrm{sq} . \mathrm{m}$. Pop. 8,812 in 1860 . Onty 17 islands of the group are inhabited. The shots are everywhere bold and precipitous; and though there are numerous harbours, most of them are beset with rocks, or exposed to the violence of the winds and waves, so that they afford safe anchorage only in the summer. The whole surfuce of the land is a succession of hills, the highest of which, Skolling in Stromoe, is $2,240 \mathrm{ft}$. in elerition. (Landt.) There are no valleys of any extent, neither are there any streans but such as are gencrally fordable throughout the year; small fresh-water lakes exist in several of the islauds, the largest of which, in Vaagoe, is about 2 m iut circ. Climate very variable; but, notwithstanding the height of the lat., it is said to be mildet and more equable throughout the year than in the S. provs. of Denmark, the snow seldom lyiug for
more than ane rery pre from the riol cipal rocks, baxalt in co abundant, a othep metals, are found.

EROE ISLANDS, g to Denmark, in the t. $61^{\circ} 15^{\prime}$ and $622^{\circ} 21^{\prime}$ ; about 185 m . NW. m. SE. Iceland. The the centre, is 27 m . other chief islands are andoe, aud suderoe. 8,812 in 1860 . Only hlabited. The shores cipitous; and though ry, most of them ate to the violence of the ey afford safe anchur. The whole surface of hills, the highest of , is $2,240 \mathrm{ft}$. ill elerano valleys of any esstreams but suchas chout the year; smail several of the islank, goc, is about 2 n. ill ; but, notwithstandit is said to be milder $t$ the year than in the how seldom lying for
mere than eight days at a time. Rain and fogs are very prevalent, and the ishunds suffer greatly from the vidence of the winds and storms. l'rineipal meks, granitic trap, felspar, and clay-slate ; basalt in columns is frequent, peat and coal are abunlant, and traces of iron, copper, and some other metals, besiles opal, ehalcedony, and zeolite, are found. Soll very thin, being no more than $\left\{\mathrm{H}_{\mathrm{h}}\right.$ in depth even at the bottoms of the vallevs, and, to render it proluctive, it must generally be manured pretty lilghly; the proportion of cultivated to unenltivatell land is only alrout Ito 60. Some barley is grown, but neither oats nor rye will come to much perfection ; and what am is grown has to be dried under cover by means of tlres. Most of the supply of corn is therefure brought from Deumark. T'urnips and putatoes succeed pretty well, and are importmit articies of fuod. As might be expected, agriculture is very backwaril, and is principally earried an by the spacle. Hay is one of the clief vegetable products; there is no timber of any description. The ehief wealth of the inhab, is in their hucks of sheep, of which a peasant often possesses from 200 to 300 head ; next to their flesh, they are chiefly valuable for their wool and fat; the ewes are never milked. The wool, which is coarse, is prineipally used in the domestic manufacture of hose and cloth. The cows are small, and no care is taken to improve the breed; every peasant is the owner of at least one. The horses are small, and ased only for burdens, the steepness of the couniny not admitting of their being employed for draught. Hogs are rarely kept. As great numbers of sea-fowl, valuable alike for their flesh and their feathers, build round the coast, fowling is an important pursuit. It is also an extremely hazanlous one, and requires great nerve and dexterity. The rocks are in many parts so precipitous that the fowlers have to he let down from the summit by a rope 100 or 200 fathoms in length. In the most inaccessible places the fowls are frequently so tame that they may be taken by the hand; but elsewhere they are taken by a net throwa over them by the fowler. Sealing, whaling, and fishing also employ a good many hands in the seasous. Manufactures almost wholly domestic ; the chief are those of coarse woollen fabries, woven by a loom of the mulest kind, and knit woollen stockings. Hats,' combs, furniture, and other articles of prime neeessity are made, and good boats built in many places; dyeing, fulling, and tansing, are also conducted in the country. Princijal exports,-hose, tallow, fish, train oil, feathers, shins, and butter : imports,-corn, pulse, bread, malt, spirits, colonial proluce, iron, lead, frunpowder, lime, bricks, timber, tar, glass, linen eloth, shoes, and books. About 100,000 pairs of hose are exported annually. Barley bread, dried meat, fish, soup of oatmeal, fat, and water, milk, and turnips, compose the chiof articles of food. The people are of Seandiuavian origin, and speak a dialect similar to old Danish.
These islands have a civil governor, called amtmann, a julge or landvoght, mud a provost with superior antloority in religious matters. The country is divided into 7 parishes and 39 congregations. The only town is Thorshavn, at the SE. end of Stromoe, which is defended by a fort, and has about 1,600 inlarb. The land partly belongs to the inluab., and partly to the crown; the publie revenue, derived from the royal domains, quit rents, taxes on flocks and fislieries, is paid mostly in kind. There are no schools, except one in Thorshavn; but most of the popl. possess the rudiments of education. The Faroe isles are supposed to have been diseovered by the Norwegians
in the 0th century; sinee the union of Norway with Denmark, in the 14th century, they have belonged to the latter country.

FARS, or FARSIN'AN, a prov, of Persia, which, by the change of the $s$ into $p$, lias, in European languages, given its name to the whole country in the $s$. juart of which it is situated; between lat. $2^{-\circ} 40^{\circ}$ and $32^{\circ} \mathrm{N}$., and long. $49^{\circ} 30^{\prime}$ and $55^{\circ} \mathrm{E}$., having N. the prov. Iruk, E. that of Kerman, S. Laristan and the I'ersian Gulf, and W. the latter sea and Khazistan: length, N. to S., nearly 300 m .; breadth 200 m . Aren, perhups about 65,000 su. $m$. l'op, uncertain. A mountain chain, which is a continuation of Mount Zagros, extends from NW. to Sil., through this prov., dividing it into thie hot and cold regions (Germaseer and Sirhnal); the former of which, the smaller division, extends with a variable breadth inland along the whole coast; while the latter comprises most of the N. . E., aud momintainous parts of the prov. The mountain ranges in some places rise from 2,500 to 3,000 lit. alsove the sea; they are interspersed with numerous plalns from 15 to 100 m . in length, though seldom more thin from 8 to 10 m . in brealth. These plains are in general fertile, sufficiently well watered, and afford abundance of pasturage and wood; some of them are tolerably well cultivated, but they are, for the most part, and particularly to the N . nnd W., destitute of inhabitants. In the E. part of the jrov. the plains are of greater extent, the soil is more sandy, and water is less plentiling. The central mountain chain divides the rivers into those which flow into the Persian Gulf, and those diseharging themselves into Lake llakteghnn. The principal of the former is the Tab (an. Arosis), and of the latter the Bendermeer, or rather Bund-emeer (an. the Cyrus or Araxes).

Besides the Lake Bakteghan, which is 70 m . in circ., there are several other lakes, the chicf of which is in the neighbourhood of shiraz. These, as well as some of the rivers, are salt, the soil of liars being strofgly impregninted with that mineral; and the bed of the lake Bakteghan niforils in summer, when it is nearly dry, great quantities of fine salt. The climate of the hot region is unhealthy; fevers, oplithalmia, and other diseases are prevalent; famine for want of rain is not uncommon, and the people are poor, and live wretchelly in mul huts. In the cold region, on the contrary, the climate is temperate and healthy, and agriculture is not in se bad a stnte as in some other provs. of Persia. The E., though less highly favoured than some other parts of Fars, is that best cultivated; and great quantities of the finest tobacco are raised there. A great deal of corr, and especially rice, dates, raisius, and varions other fine fruits ; opinm, saffron, hemp, cotton, sc., are among the chief agricultural prodncts; silk is produced; the cactus feeling the cochineal is plentiful ; and great numbers of roses are cultivated for the manufacture of attar. The wine is of a rather superior quality, and that of Shiraz has nttained, perhaps, more celebrity than it deserves. Many cattle and sheep are reared; the horses, asses, and camels are good; fish, game, and other wild animals, are abundant. There are said to be mines of lead and iron, and quarries of marble and alabaster; borax is olitained, and there are some very productive springs of naphtha. The inhab. are, generally speaking, among the most eivilised and industrious in Persia. They manufacture fine woollen, silk, and cotton stufts, enmel skins \&c., for exportation. The trade is principally with Hindostan. Chief towns, Shiraz, the cap., Bushire, Firozabad, Dureb-jerd, Kazeroun, Bender-rigk, \&c. In this prov. are also the

## FAYOUM

ruins of Persepolis, Pasarga, and Shakpoor. Fars was the ancient patrimony and kingdom of Cyrus the Great, previously to his foundation of the Persian enipire.
faversiliam (formerly Feversham), a bor., par., and sea-port town of England, co. Kent, latie of Seray, hund. Faversham ; $45 \mathrm{~m} . \mathrm{SE}$. by S. London by roal, and 48 m . by London, Chatham and Dover railway. Pop. ef bor. 5,858 , and of par. 6,383 in 1861. Aren of par., 2,270 acres. The town, situated near a branch of the Swale, and within $\frac{\mathrm{g}}{\mathrm{m}}$. of the old rond from London to Duver, consists chlefly of two irregular streets, crossing at right angles, with a market-place and town-lall at the point of intersection. A suburb called 11 rent 'Town consists of eottages huilt withln a recent period; and Ospringe Street, on the above line of rond, is another suburb. The village of l'reston is also quite contiguous. Faversham is paved and lighted. The church, a spacious structure, with a fline tower and spire, was rebuilt in 1755, on the site of a structure of the reign of Edward II. There are also several dissenting chapels; a free grammar school, founded by Elizabeth, for 8 hoys; and 2 other free sehools, one for 12 boys, the other for a like number of girls; almshouses for 12 poor people; a theatre, and nssembly rooms. Market, Weduestay and Saturlay; fairs, Feb. 25., Aug. 12. There are gunpowiler mills in the vicinity belonging to private imulividuals, but the government milly have been discontinued. At jresent the oyster fishery furms the most important staple of the place, and is conducted by a privileged company, admission to which is obtained by birth, or apprenticeship to a member; hut the claimant must be a married man. There belonged to the port on the 1st of Jan. 1864, 208 sailing vessels of unter 50 , and 183 sailing vessels of above 50 tons, besides two small steamers of 22 tons. The bor., since the Municipal Reform Act, is governed by 4 aldermen and 12 counsellors. Average anmual corporation revenue, 1,0001 . The limits of the old borough (which did not comprise the entire town) have been exteniled so ns to iaclude that and the whole of Ospringe Street. There is $a$ court of requests for debts under 40s., and a union workhouse.

FAYAL, one of the Azores, which see.
FAYOUM, a famous valley and prov. of Central Egypt, anciently the nome of Arsinoe. At about 15 m . WSW. Benisonef: there is a depression in the Libyan or most westerly of the two chains, which accompany the Nile out of Nubia. From this gorge-about 6 m . in length-the liills diverge, making a circular bend to the W. and N., and enclose the valley of Failoum ; which is of an oval figure, and forms a low table-land, gradually sloping towards the N. and S.; the N. depression oceupied by the Birket-el-Kerün (the lake Meris of the ancients), and the S. depression by lake Garah. Thus, unlike other basius, the valley of Faioum has its greatest depressions, not in the middle, but at the sides; its central pertion forming a low, slightly convex plateau, extending towards the $\mathbf{W}$. Upon this culminating line runs na arm of the great canal of Egypt, the Bahr Iusef (given out at the narrow pass mentioned above), which at a short distance from Medinet-el-Faioum, the capital of the province, spreads out into various small branches, and gives a fertility to the valley which, though comparatively great, has leen much overrated by some travellers. Faïoum is about 40 m . in length from E. to W., and 30 m . in breadth from N . to S .
Touns, Villages, and Canals.-At the entrance of the ravine, which affords the only communication between this isolated province and the Nile, stand
the village of Illahoun, on the NE. Lank of the canal, and the town of Hawarah-el-Kebyr, on ith SW. Dank, comnected by a bridge of three arches and provided with a number of reservoirs to reego. late the massea of water during the lnundation, Near Illahoun is a dilapidated pyramld 60 n. livgh, with a base of 197 ft . square, consisting of calcat. reous stone, that supports a plle of unbaked hricaAt the other extremity of the gorge, where the valley fairly opens, is Mararah-el. Sagoir, near to which two ancient branches of the Bahr luwf diverge in opposite tirections. The waters of the main enual are turned into theye branches by mana of lringe-lykes, built upon foundations abore the ordinary level of the stream, so that at ligho water the current of the Nile continues its eanrse through the arches; but these cmals are so encumblered with mul that their waters never rench tho lake except during the inunilation. Iletween El Sugair and IIedinet-el-Faïoum are strewell the remnins of the celebratel Labyrinth, consisting of, tirst, a bridk pyrumil, 122 yds. square and 197 ft . ligh; undes which the Frencli discovered a subterranean pasp sage, a sareoplaggus, and a salt spriug; secondly, the remnins of a temple to the $E$. of the pyramit presenting the fragments of huge colimms il granite, with several sepulehral excavations. i large mass of ruins are buried in earth aum rubltith, and have never been explored; the whole forming an oblong parallelogrum 984 ft . in length, with nearly as great a brealth. Among annthier senies of ruins, to the $N$. of Medinet, and occupying as aren of about $2 \frac{1}{2} \mathrm{~m}$., Belzoni found two immence stone pedestals, to which the name of 'Pharadh's feet'. have heell given; various granite statues some wrought iron, and a quantity of half meted glass. At some listance from these stands a syenite obelisk with a circular top, and though 43 ft . high, is covered with a profusion of sculptures. $\boldsymbol{A}$ portion of these remains are believed to have belonged to the Labyrinth, but most of them to the ancient city of Arsinöe, now replaced by Medinet-el-Fatoum. This capital is dividel by branch of the Bahr-el-Wady into two parts, cas. nected by five bridges, and much of it is built of the remains of the ancient city. In 1824 Medinet contained 5,000 inhal., partly Copts and partly Moslems. It is the residence of the proviscial governor. Some ruins at a short distance from the E. point of lirket-el-Kerûn accord very nearly with the ancient Bacchis or Banchis. 18 m . WNIf, of the village of Nazleh, and 3 m . from the lake, stands a temple, known as Kasr-Kerinn, 94 ft. long, and 63 ft . ligh, with 14 elambers, having on either side a long passage whose enil wall is divided inte three narrow cells. (Wilkinson's Topog. of Thebes, pp. 352, 353.) Jomaril penetrated one of these avenues, and, finding it skilfully nulapted for the conveyance of the voice, inferred that it was designel for the utterance of oracles. This temple is manifestly of homnn origin, as is a smallec one 130 paces to the SE. of it. We pass over the less noticeable villages of Faïoum, of which there are altagether not quite 70. (Encyel. Britamica, art. ' Egypt ;' Ritter's Africa, vol. iii. p. ${ }^{35}-50$, French edition ; Letronne's Nouv. Annnles des Vorages vi. pp. 133-154; Belzoni's Researches, der, ii 145 , \&e.)

Lake Maris.-According to the statement of Herodotus, confirmed by that of other historians, this lake occupied in his time a large proportion of the valley, having a circumference of 450 m . (3,600 stadia), and a maximum depth of 150 fit The basin was filled by the waters of the Sile conducted to it by cauals, for it had no spring. The statement as to the size of the lake in antiquity is not ineonsistent with its present can-

to the statement of t of other historians, ne a large proportion umference of 450 m. num depth of 150 ft , e waters of the Xile or it had no springs. ze of the lake ianarvith its present con-
tracted dimensions: the supply of water has heen gradually lessened lyy the raising of the bed of the Sile, and by the filling up of the lakes and canals, wo that very little reaches it at present, evel during the inundation; not enough to countervail the coplons evaporation which in this hot dimate is continually going on. IIence, last century, the lake was 50 m . long and 10 m . broad (Pooceke's Travels, i. 62), whereas it is now nnly 30 m . long and 6 m . broad in the midille or widest part. Ilerodotus states that the Lake Mirris was artificially excavated by orler of the king whose name it bears; but by this he no doubt referred to the excaration of the canals by which the lake was filled, and perhaps also to some excavations made in tho lake itself. He says that for six months the waters flowell from the Nile to the lake, and that during the other six monthis they dowed from the lake to the river; but the level of the lake must always have been too low for the waters to have returned to the Nile; while that of the canala does so to this day. (Herod., lib, ii. § 149 ; Eseyc, Brit., art. 'Egypt;' Wilkinson's 'Topog., 'Thebes,' p. 351.)
The Lalyrinth,-This extrnordinnry structure is said by llerodotus, by whom it was visited, to have surpassed all the works of the Greeks, including the temples of Ephesus and of Samos, and to have been superior eveli to the pyramids. (Lib. ii. § 148.) It was divided into 12 courts, eurresponding to the 12 nomes or provinces into which Egypt was then listributed, and is snid to have containel 3,000 apartments, 1,500 above, and as many below ground. IIerodotus visited those above ground, and speaks of them from his ownobservation, bit he was refused admittance to the others, and informed that they were used as sepulchres for the sacred crocodiles, and the kings who had constructed the edifice. (Ubi supra.) The different chambers were connected by an iafinite number of winding passages, so artfully contrived as to give the structure its name. The ceilings, walls, and pillars were of the whitest marble, sll adorned with sculpture. In fact, one's belief is almost staggered by the accounts of this extraodinary edifice; and nothing less than the suthority of the venerable father of history conld have made us believe in the existence of such $n$ structure. (For farther information as to this extraorliary plan, see the notes to Larcher's Herodotus, tom. ii. 494-505, 2d ed.) There can be little question that the ruins strewed about near Dledinet, and between it and El Sogair, are those of the Labyrinth, though the position of Kasr Kerûn was assigned to it by early European travellers.
Faioum is chiefly inhabited by two branches of the Sammaton tribe of Arabs from the W. states of Barbary, who were able at the end of the last century to supply 2,970 soldiers. (Girard, 'sur les Habits de Faïoum,' Desc. de l'Egypte, tome iii. p. 350 .) Near the capital large quantities of roses are cultivated, which are converted into rose water of a highly estemed quality. The land capable of cultivation in Faioum has been estimated st 450 sq . m., of which scarcely the half is at present tilled.
FECAMP, a sea-port town of France, dép. Seine laférieure, cap, cant., between two ranges of bills, at the mouth of a small river of the same ame, 48 m . NW. Rouen, on a short branch line of the Rouen-Havre railway. Pop. 12,241 in 1861. The town consists of little more than a main street, not well built, but upwards of 2 m . in length from the church to the port. The church, a handsome edifice, is the sole remaining part of a celebrated abbey, founded by Richard I.,
duke of Normandy, in 988 , and deatroyed during the revolution. Fecamp has an exchange, hospital, chamber of eommerce, and a gratuitous school of navigation. Its port, though small, is one of the best on the Channel; and it has been very greatly improved by the construction of an Inner port, with a the quay, and n magniffeent lighthomse. It has two rondatends: the Great Rivad, lylng opposite to Cricquebouf, about 2 m . off shore, with thirteen fathoms, and a good clay bottom, mixed with sand; the Little Road lies off the W. side of the harbour, and has from ten to seven fathoms. It manufuctures cotton yarn, linen fubrics, seamen's shoes, hariwure, rape-seed oil, caulles, and sola; and has sughr relineries, tanneries, and buililing docks. It also fits out vessels for the cod, mackerel, and herring fisheries, and is an entrepôt for colonial prodnce, salt, and brandy. The air of this town is celebrnted for its purity, its men for their healthy appearance, and its women for their beauty.

FEL, $\mathrm{C}=\mathrm{y} 11 \mathrm{AZA}$, a town of Inngary, between the Danube and I'liciss, cap, clistr. of Little Cumanin, on the road between Yesth and 'Temeswar, 65 mI . SE. the former. Pup. 19,420 in 1857. The town has a Roman Catholie church and gymisasium ; and a conrt of justice, in which the archives of the distr, are preservel. Some Loman antiquities have been discovered in its neighbourhood. 'I'he country round produces corn, wine, fruit, \&c., and large enttle markets are held in the town.

FELIIPE-SAN, formerly JATIVA, or XATIVA (an. Satabis), a town of Spain, Valencia, cap. prov. of same name, on the declivity of a hill, near the conflnence of the Montesa and Alhaviln, 44 m. S. by W. Valencia, and 195 mi . SE. Mailrit, on the railway from Valentia to Aliennte. Pop. 15,747 in 1857. The town is well built, and suppplied with public fountains. It has a cnthedral, 3 par. ehurches, 10 couvents, a lospital, and an asylum for widows. The anclent city stood en the suinmit of the hill, near the foot of which the modern town is built. It had a strong fortress; mal having been a Roman station, contained some Roman edifices, as well as others erected by the Moors, all of which are now in ruins. luglis, speaking of the latter, says, 'The magnificence and extent of the Moorish remains struck me with astonishment, even after having seen the Alhambra. These crown the hill that rises immediately behind the city; this hill is twiec the height of that upon which the Alhambra stands, and the remains at San Felipe are also greatly more extensive. They are not, indeed, like the Alhambra, in preservation, nor do they present the terraces, and arches, and columns, that at once point out its Moorish origin; but they are seen covering the summit of a mountain ridge, 1,000 or $1,200 \mathrm{ft}$. high, and presenting in fine relief, against the sky, an irregular line of not less than two miles in extent of massive and imposing ruins.' (Spain in 1830, ii. 243.) In 1706, during the war of the succession, Xativa, after it hal held out a long time against the French, was taken and burned; it was rebuilt on its present site by Philip V., who gave it his own name. The Moorish style, however, which prevailed in the former city, seems to characterise the edifices and manners of the present one. 'Passing along the streets, I observed many signs of Moorish dlays, more than either in Seville or Granada: in a court-yard which I entered, mistaking it for that of the posnda, I noticed that the walls were arabesque; and looking in at the doors of the shops and houses, I scarcely saw a single person seated upon a chnir, or even upon a stool; every one was squatted upon a mat.'

## FERNANDO-PO

(Juglia, wbi suprà.) San Felipe las no manufuctures; all ita inlumbitants are said to lind employment and subsistence from its contlynons huertu, or irrifnted valles.

FliLIIP (SAS), a town of the repuli, of Venezuela, Colombin, dep. Venezuela, on the Yrupui, not far from the Giulf of Triste, nud $18 t \mathrm{~m}$. W, hy S. Caracas. I'op. estin. nt 6,000. The town is regularly hind out with whele and strulghit streets, mill has $n$ good parish church. Cocoa, cotton, indigo, collee, \&e., grow alumalantly in its neighbonirhomi, and are the chief articles of exjort. Its climato is, however, oppressive, damp, and unhealthy.

FWI'Tll: (nn. Feltria). a town of Anstrian Italy, prov. bellumo, on a liel at the foot of the Alps, nud near the juuction of the Colmeda with the l'iave, 16 m . SW. Jlellıus. l'op, $5,450 \mathrm{ill} 1857$. The town is partially fortlited, and is tolerably well huilt; streets bromd und woll paved. It his a handsome market-place, u cathedral, many other churehes, an episeropal gymmolum, n weminary of theology and philosoplyy a hospital, mad an orphan asylum, It has silk twist and some waxblearling finctories; mud trades in silk, wine, and oil, the produce of the alfacent territory.

FEMMANA(ill, an inhand eo. of Ireland, prov. Unster, having S. Cavan, L. and N. Momaghan, Tyrone, and Donofal, and W. Leitrim. Area, $471, i 48$ acres. Extent of arable land, in sq. m., $45^{2}$ in 1841 ; 526 in 1851 ; and $540 \mathrm{in} \mathrm{1861}$. the total area, above 100,000 acres are imimproved bog and mountuin, and 18,797 water, principally consisting of Lough lirne. This, which properly consists of two lukes, joined by a deep and winding chamel, is a noble sheet of water. It stretches the whole length of the ee., which it divides into two nearly equal portions. See Erne (Lovgit). Surface varied, und in general better wooded than most Irish cos. Firms of all sizes; but the great majority very small. In the N. part of this eo., agriculture is in a forward state; but, elsewhere, it is very back ward: a grool many cattle are bred on the high grounds. Oats, barley, wheat, flax, and potatoes are the principal crops. Iron ore is fonnd in different places. Mannfactures inimportant. Fermanagh contains 8 baronies and 18 purishes, and sends 3 mems, to the imperial parlianient, viz. 2 for the co., and 1 for the bor. of Enniskillen, which is the principal. Reg. electors for co. 4,672 in 1862. The pop, amounted to 156,852 in 1841 ; to 116,441 in 1851 ; and to 105,768 in 1861. The clecrease of pop. was $\mathbf{2 5 7 6}$ per cent. between 1841 and 1851 , and $9 \cdot 17$ between 1851 and 1861 .
FERMO (an. Firmum Piсеииm), a city of Central Italy, prov. Ascoli, on a hill nbout 3 m . from the Adriatic, and 32 m . SSE. Ancona. 1'op. 18,99(; in 1861. The town is surrounded by a wall, of little importance as a means of defence; and has a cathedral, 10 other churches, 15 convents, a palace, built by Jerome Bonaparte, a university founded in 850, and 2 fine collections of statuary and paintings. The harbour on the Adriatic, called Porto di Fermo, is small, and frequented only by a few trading vessels. The exports consist chiefly of corn, silk, and woollen cloth: it has an amual fair, lasting from August 18 to Sept. 5. Ferino is the seat of an archbishopric, and of $n$ court of primary jurisdiction, with appeal to a superior tribunal at Macerata. It was founded by the Snbines, before Rome existed; and colonised by the Romans towards the beginning of the first lunic war, and has been plundered by Alaric, Attila, and other barbarian chiefs; it, however, continued during a blocknde of 11 years to hold out against Alboin, and was only obliged, through famine, to yield to his successor, Antharis. Since
the 8th century it lias, with few intermixsions, he. longed to the nee of liome, till It came to form pant of the new kingilom of Italy in 186io. Lactautios and Galeazao Sforan were both native of Formos
Fl:NMOY, an, inland town of Ireland, co, Cork, prov. Munster, on the Blackwater, $118 \mathrm{~m}, \mathrm{sif}$. Diblin, on a branch of the Grent Southem and Western rallway. Sop. 6,976 in 1831, and 8,710 in 18tit, the Cath. being to the l'rotest. in the proportlon of abont 8 to 1. The town whileh, till 1791, was but a station for carriers, consists of a square, and several well-built streets on each side the rlyer, which is hare crowsed by a fine bridge: its rapid improvement is owing to its haviag han made a military dipot cluring the last war with Franee. It has a par. chureh and a If. Catholice clapel, both spaclous and elegunt huildinge, a convent, a Methedist meeting-honse, sevaral larke sehools, and a court-house; a workhonse, whin was formerly turned into barrucks for $\mathbf{3 , 0 0 0}$ men, Races are held annmally in the neiphtourhumbl, There are cxtensive tlour-mills; and a considerable trade in flour and agricultural produce, mantly sent to Youghal, whence conl and other proluce is received in return. There are also two paphrmills and a brewery ; duty is paid, on the average, in 22,000 bushels of malt, and the town is the eratre of a considerable retail trade. Markets on Saturdays ; fuirs on 21st June, 20th August, and ith Novemher. General sessions are held in January; petty sessions every Monday.
FBRNANIEKZ. See Juax Febnandez.
FERNANDO-DE-APURE (SAN), a town of the repub. Venerucla, Colombia, dép. Orinoé, on the Apure, nenr its junction with the Portuguess, 164 m. D. by N. Varinas. listimat. pop. 3,000 .
FERNANDO-1'O, an island in the Bight of Biafra, 20 m . from the African coast, about 40 m . in length by 20 m . in breadth, now ahandoned, hut formerly occupied by Great Jritain, it having been selected as a military and naval station from its supposed sahubrity and from the facilities of. forded by its situation for the suppression of the illicit slave tracle. ' It is abont 120 m . in eirc., and, like the adjacent part of the mainland, is exccedingly monutainous; Clarence l'eak, the most elevated point, attnining the height of several thousand feet ( $10,700 \mathrm{ft}$.). The S . extremity is also intersected by several steep mountains, varying from 1,000 to $3,000 \mathrm{ft}$., which, with the intervening valleys, are covered with dense forests of large and valunble timber, and watered by numerous rivulets. The wet season commenees at the latter end of May, and continues till the cad of November : the annual quantity of rain and the temperature are much the same as at the other stations on the coast. The sea breeze is regala, but the land brceze generally deficient, heing intereepted by the high range of mountains on the mainland.
'Clarence Town, the principal settlement (on the N , side of the island), lies in lat. $3^{c} 53^{\prime} \mathrm{X}_{\mathrm{n}}$ long. $7^{\circ} 40^{\prime} \mathrm{E}$. , and is built close to the sea unon an elevated plain from 100 to 200 ft . in height, embracing two small peninsulas, Point William and Point Arlelaide, with a semicircular space extemsing ahout a mile in length, and forming a cove well adapted for shipping. All the grouad in the immediate vicinity is covered with furest trees and jungle, except to the extent of ahout 6 sq. m., which was partially cleared on the formation of the settlement. The soil, which is generally argillaceous, resting on a bed of frectone, gives proofs of abundant fertility when cultivated. The water, both of spring and brook, is of the best quality, and there are no marshes in the vicinity, the hilly nature of the ground not ad-

FEHALI, a village of France, díp. Ain, 6 m , seE. Gex, and 5 m . NW Genera. lop, $1,166 \mathrm{in}$ fatil, Farney is hulebted not merely for its celebrity, but even existence, to its having been fir a leugthemeal period the resitence of one of the grentent writers of mudern times. Voltaire purdiasel this estate in $175 \times$. 'The seigniory ciljuyed an exemption from nll public taxes mud fuidens; but it womlil seum that Voltnire wished (1) establish himself in this retrent, not so much fom its enjoying the privilege now mentionent, and its agreenble sitnation, as from the faellity which its vicinity to Geneva antorded of placing bimulf in a safe asylum in the event of my mesures being taken to interfere with his freedon, lidtaire conferred the greatest advantuges on Ferney. Out of a paltry village, comsisting of a few miserable cottages, he constructed a neat little tom, in which he established a colony of indinstrious artizans, principally consisting of wateltnakers, from Geneva; he also rebuitt the chureln; drained and planted the atjoining gromods ; defended his vassals in their conteste with the remue oflicers and the church, and did all that arich, ealightzied, an! really beaevolent handlord could do 10 promote the comiort and huppiness of thwe around him. The chiteun, to which a neat linte theatre was attached, was fitted up in in sate of elegant simplicity; and his hospitalities were on the most liberal scale. Voltaire resided bere with little interruption for more thinn 20 reas, During the whole of this period, Ferney was to the literary and retined whit Meeca is to the Mohammedin world; and the most distinpaished personages of the time eagerly resorted to fency from all parts of Lurope, to pay their rapects to its illustrions master. . Voltaire quitted Femey for the last time on the 6th of February, līx. His châtern is, or was not long since, preserved nearly in the state in which he left it. He expired at Paris on the 30th Mav, 17i8. (Condireet, Vie de Voltaire, 203.)
FERRARA, a famous city of Central Italy, cap. pos, of same name, formerly an independent duchy, in a low marshy plain, on the left bunk of the folano, 5 m . S. from the $\mathrm{I}^{\prime}$, to which it is united by a canal, and 26 m . NNE. Ihologna, in the railway from J lologna to Padua. Pop. tī, i93 in 1801 . The eity is well fortified and defended un its W. side by a strong pentagonal citadel. While it was underits native princes of the honse of Kisé, Ferrara was the seat of one of the most polished and refined of the Italian courts, and is sid to have had from 90,000 to 100,000 inhab. Bat it has long been in a state of deeny, and numbers of its splendid palaces arc uninhabited. In the principal siquare, or Piazza Nuovia, ure thonze statues of two of the dukes of Ferrinr. The dwomo, or cathedral, was consecrated in 1135 : it is a rast but tasteless editice. The city has an immense number of other churches, mostly in a state
Vol. II,
of decay : but several of them, ns well as of the palaces, have guol pictures, Its mulversity, or ruther college, lominled lin 1890 , and revived by pope Leo Nil., has two facultion of law and mediches, lint it is not well uttended. The puhlie: library, fommed sus recently as 17.10 , lins 80,006 volmues and a muselun of antiquities; but fis most valuable trensures are the manaseripte of the works of Ariosto and 'Tinsso, with other rolies of' the former. There is here, niso, a botanieal garden, an matomienl theatre, severnl chmeritulbe emtablishincints, and one of the thest theatres in Italy. The munafactures and trule of the town are luconsiderable.
The celelrity of Ferrarn is almost wholly derived from its heing intimately nt lenst, if not. honourably, assochited with the history of some of the grentest numes in the liternture of Italy, or luded of birope, Arionto, thongh born at linggio, in Monlona, resided for a lengthened period in Ferrurn: here, in 1sitis, appeared the fint ealition of the 'Orlanlo;' null liure, ull the ith of Jume, 1:5RI, the poet brentherl his last. The louse in which he lived is atill kept ul. Je wus buriad in the clureh of the Jenedietines; mind it is a enrions fact, that the bust on his tomb, being struck lig lightining townrils the minhlle of last century, the irminimeds that wrenthed the brows of the punt were melted. Saril liyron lias nllated to thas eircumstance as follows:-

The lightning rent from Ariosto's bust
The fron erown of hurel's minle'd lenves ;
Nor was the ominoms clement unjust,
For the true lumrel wreuth which glory weaves
Is of the tree no boit of thmider cleaves,
And the false kemblunce hint discraced his brow;
Yot stilt, if fondly superstition grieves,
K:ow that the lightning sunctiter wolew
Whate'er it strikes;-yon heml ls doubly snered now.' Childe Larold, Iv, s. 41 ,

In 1801, the remains and tomb of Ariosto were conveyed with grent pomp to the pmblic library ; mul here, also, are his manuscripts, imm-ehair, nind inkstmul.
Tasso is anotler of the glories, but he is also the shame, of Ferrara. A cell in the lmmatic lompital of Stu. Amu, nbout 9 phees by 5 or 6 , mul 7 ft. high, lighted hy a grated wimlow, is shown as that in which the nuthor of the 'Gerinalemme Liherata' was immured frum Mareh, 1575 , to I ecember, 1580 , when he was removed to a contiguons and larger apartment. In 1684 his prisont was again enlarged; but it was not till 1586 that he was set at Jiberty, at the intercession of the Duke of Mantua. It is dithenlt to ascertain the real cause of this ifnominious treatment of, perlinps, the greatest of the Italian poets. The apologists of the house of Fistei, or rather of the duko Alphonso, by whom, though the pretemed patron of 'lasso, he was imprisoned, have stated that it was occasioned ly his extrivogances, and that in shutting him up Aphonso really consulted the safety and homoar of the prisomer. (Tiraboschi, vii. 1267, Moolena, 1792.) Ihit, thongh the subject be not quite free from ditlienly, there can be very little doubt that the imprisomment of 'rasso is ascribable to the vindictive malignity of the duke, who took this methorl of avenging some unguarded expressions of the poet, provoked by the ungencrons treatment he had received. (See Serassi, Vita di Tasso, p. 282; and the Fixtracts from 'Tnsso's Letters, p. 283.; see also the leurned essay on the imprisonment of Tasso in Sir J. IJohhouse's lllustrations of Childe Harold, pp. 5-3:.)

Guarini, author of the Pastor Fido, the cardinal Bentivorlio, and several other distinguished gersons, were also uatives of l'errara.

Uimler the lirench rigine It was the ciap, of the dép, of Jhasis P'o.

FiEKROL, $n$ watport town of Spnin, on the NW. eomant of tinlicif, prov, lletanzos, enp, of a jurisiliction of same name, aull of one of the a haval departments of the kiugdom, of the N . nrm of the llay of lletamaon, or Corunum, 11 m . Nif. the Intter, and $25 \mathrm{~m}_{3}$ SW. Саре Ortepnl: lat. $410^{2} 23^{\prime} 30^{\prime \prime} \mathrm{N}$. , long. $\mathrm{NO}^{\circ} 15^{\prime} \mathrm{W}$. Pop, 17,404 in 18.57. The harbour of Ferrol ts one of the beat in Farope in point of depoth, capacity mad nafety. It is npproached by a struit about 2 m . in Jengtlo, and in its narrowest part not quite a guarter of a mile brond; this chaniel, which has from $\delta$ to 11 finthoms water, will only admit one whip at a tlame, and is commanded by stromg forts on elther wide, 'The tides in it rum so strong that it is indvisable to enter or leave the harbour an hour liefore high or low water. The town in protected on the land side by strong fortitlentions; it is well laid out, the streets mostly lintersecting each other at riglit angles; but in some parts they are less regular, the ground enclosed ly the fortifientions being very uneven, It has 2 hospitnls, \$ large churches, in monastery, consistory, n goond prison, acudemies of navigntion and mathematies for pilots, and a sehool for the naval educatlon of seamen; and contnins the residences of the captain and anditor-general, intendant, and superior fimancial ofllcer of the departunent, and of the military commandant, who is also the superintendent of police in the jurislietion, which comprises the adjacent town of La Giraña. On the li. side of the town are the roynl ansenal and dockyard; the former is the first and largest in Spain, and used to be furnished with all necessary stores for the construction of the navy; the doeks rank amongst the flnest in Europe. The basin, in which the slips are laid up, is of great extent and solid workmanship, ande every ship has its separate storehonse. The naval barracks oceupy a large and handsome building, and nfford accommodation for 6,000 men. Six hundred galley-slaves are (or were) employed in the most laborious works of the harbour. 'This port being intended solely for the royal navy, general commerce and all foreign merchant ships are excluded. There are, however, some manufnetures of hats, paper, leather, maval stores, and hardware; and corn, wine, brandy, vinegar, pilchards, and herrings, the prorluce of its own fisheries, are exported; while salted meat, French, English, Irish, Dutch, woollen, linen, and other fabrics are imported; besides indiunas from Catalonia, and silks from Valencia. But the trade of the town is principally limited to the supply of the inliab., the navy, and the government officers. Prior to 1702, Ferrol was only a fishing liamlet, frequented by coasting vessels; but, owing to the ndvantages of its situation, it has since been made the chief naval station of Spain. A railwny from Lago to Ferrol, branching off from the line from Madrid to Corimna, was sanctioned by the Cortes in 1865.
FEVERSHAM. See Faversinam.
FEZ (pr nerly Fas), a city of Moroceo, and, next to $M$.occo and Mequinez, the principal in that erwe, cap, of the prov., as it formerly was of the independent kingdom, of the same name, and residence of a kaid or governor. It is singularly and beautifully situnted in a funnel-shaped valley, open only to the N, and NE., the sloping

 More recent entimates athte lie jespmiation at mive © 0 , in) 1 . F'ez consists of two seburato towns, ulid mud Now liez; the latter stamillug on a height, and iverlosking the firmur. 'They are surtomeled lyy derenyed walln, which inelale a harge spare: and at luth its F . and W . extremitios are casmes, In one of which tho governor at present resines The Wul-el-whor (kiver of l'warls), an atlluent of the Selon, whide through the valley, irrigatime a large pertion of its surtince, and turuing a great mumber of mills, and, alter entering Fez, divinss Into two arins, which furnish water lin abumbane to the houmes nud mosques. The Old City is buit on sloping promml; its streets nre narrow and dark, unpaved, and in wet weather excessively dirty. The homes are lofty, flint-roofed, ami hoidt uromind eourt-yards ; their dilferent stories ate surrominded with gallories suppurted on colmames Their cracked, leming, and bulging walls ane propped up by others which streteh at different intervals acrows the streets, These cross-wally are berforated by arehed passngen, not over wide; and these being closed at night, the city becones livided into different quarters, all commumication between which is effectunlly cut ofl: The New City, called also Merlinat-al-beida, or 'the White City, founded In the thirteenth century; is somewhat better laid out and built than the old, and is surrounded by the fardens: it contains several palaces, among which is thut of the emperor, some public baths, and several tolerable modern housex, The imperial palace covers a considerable cextent of ground: it has a great number of cunt-yads sone of which are anly half tinished, while othen are half dilapidated. Its interior does not exhibit much splenclour. Ali lley, early in the preseat century, reports that the cabinet in which the sultan used to receive visitors was but a pootly furnished room, 15 ft . square; while the office of the minister was a misernble, low, damp apartment, at the bottom of a small staircnse, atont 5 ft . long by 8 ft . wide, and without any othet furniture than an old carpet! The Jews are conflned to the New Clty, where they have a synagogue, and are obligel to keep within their orn quarter at night. According to Leo Africanus, Fez is said in the sixteenth century to have centainel as many as 700 mosques; but this would appear to bo a gross exaggeration: at present the city contains only about 100. All aris built on a miform model: they consist of a courtyard sutromuted with arcades, and on the S. side a coverel nquare, in the middle of we wall boundiag whith there is a niche, where the inam places himelf to direct the prayers, and on the left-hand side of the latter a pulpit. The chief mosque, called $E$ Carubin, was erected soon after the fonndation of the city. It has a greater number of arches than the large mosque of Tangier, many gates, and upwards of 300 pillars, and in its court there ant two haudsome fountains. This mosque can bost of the singularity of having a covered place fit women who may choose to participate in the pablie prayers-a circumstance unique in Mohammedan places of worship. Some travellers descrite El Carubin as one of the most remarkable edifices of its kind in Africa; but Ali Bey says that it is upon the whole a heavy and mean structure, and

fir inferior to the great mongue of Cordovn. Its minaret contains aome clocks, glolees, anil antronomieal instruments, brought from linrone neariy a reatury and a half ago,-and a library; bont, from having been abmulonerd to dust nuil damp, mont of the instrumente and lxosk linve lecome uselesm. The most frequented mosque is thint of Muley Whis, the fonnder of Fez: it contalun the sepulchre of that prince, and the aanctity with which if w therely invested is so great that it afforis perfect security to a criminal guilty of even high trason. Its minaret in the thest and highest in the city ; it contains many Einrupean articles of mechanism. Publie baths are mumerms in Fea, and some of them are very giool. There are also ame tolerally convenient inus, thengh their outwand appearance is not preposseasing. 'The mumbef of mops, viewed extermally, would almont warant the belief that Fer containan four timen itwactual popt.; bit most of them are meti 'stalls with juat room enough for a sedentary Mowr, who aper moves; and for the packets that are heaped annud him, to which he jrints as passelugers arrive.' (Chenier, i. $7 \overline{7}$.$) Vinch struet is devinted$ toasparate trade; and it is selitom that more than one zpectes of goovis is sold in a ningle shop. The markets are plentifully supplied; and providims are both goom and cinenp. The ellmate is aprexsively hot in summer: in the winter the thermometer often fulls to d 100 Fiah., and the averue height of the larometer is 27 in . The atmowhere is almost always damp and minty ; mul the situation in considered mohenlthy (Clienier): the Lew (ity is, however, much less no than the Old. During the strugere with the Moors in Spain, and equecially on their expulsion from that kingtom, miny Mohammedans sought an asylum at Fez, taking with them new manners, arts, and knuwledge. They Intro. 'iced the spanish methos of dressing and dyeing gout and sheep skius red and yellow (forming the leather then called Cordovin, but how Moroceo), as well as the mannfacture of milled woollen fubrics. These articles are still manufactured at Fez, and, in addition, puzes, silks, sashes, gold and silver stuffis, jewelhen; slipuers, girdles, sadillery, woollen haiks, fine capets, cuarse linen fabries, arms, copper gools, and carthenware. The trade with the adjacent comatry is brisk; and twice a year caravans go from this city across the desert to Timbuctoo.
Fez has been always considered one of the pinelpal seats of Mohammedan learning. There are schools attached to many of the mosques: of these, seven are considered superior to the rest ; mil in these a mixed jargon of religion, morality, legislation, phymics, metaphysies, geometry, astrologr, alchemy, and medicine is tanght, principally out of the Koran, and the works of Euclid, Ptolemy, and Aristotle. There are several hospittalk, the largest of which is appropriated to lunatics. The military government of the city is in the hands of the kaid; the civil and judicial wuthority is exercised by a cadi ; and a minister, entitled al motassen, fixes the price of provisions, and decides all points that arise on this branch of the publit service.
Od Fez was founded in 793 by Eiris II., a descendant of Mohammed, and continued the cap. of an independent kingdom till 1548, when it ras, together with its territory, conquered, and manexd to Morocco. After a period of cleeline, it again rose to prosperity on the ruins of the Joorish kingdom of Cordova; and its pop. became afterwards still further augmented, by reawa of the edicts of Philip II. agninst the Mohammedans. It has been always helil so sacred br the Arabs and others, that when the pilgrinuges
to Meen were interrupted in tho 10 th century, the westerm Monlems journeye? to liez, as thiu enstern difl to derisalemin mil even now none hit the falthful cun enter Fe\% without exprems leave frum the emparor. ( 1 iraberg of Ilemmo: Sipeechio
 roces, vol. L. ; Morl. Tras., vol, xxi. dee.)

Fl:ZildiN (mi. Phomenint liegio, and the conntry of the (inrmmentes), a comitry of Central Africin, immediately S. of 'Tripoli, to which paelingie it is
 to $11^{\circ}$ N. lit., anil from alsitit the 12th to the leth deg. Vi. long. Ifit Its lomindarien are ill dethed, nud lim area and pop. are alike mucertnin. The latter, however, ham lieen entimated by llorne-
 zilli is, as fur as we kuow, the largent ceais, or caltivable tract, in the Great African Desert, hy which it is murronnded on all whles: having W. tho comintry of the 'luaricks, and S. and Fi., that of the Tiblonis. A portion of it conslate of mextensive villey bounded by an irrepular circle of monntuins on all sides except the W., where it opens into the desert ; but a great part. of the mountainous region to the E., as well as of the deacrt to the W. mid S., are nominally ineluded in its territory. The (iib-cl-Aswond, or llank Hurntech, monntalus (inn. Mons Ater), the White IInratseh, and other ranges, interseet the comutry generally in the direction of $N W$. to Sl:. None of these ranges, however, is of any remarkuble height ; the first named, in the N . of leazan, is no more than abont 1,200 or $1,500 \mathrm{ft}$. in elevatlon, and the hills elsewhere for the must part appar to be only from 100 to 600 ft . high. Their summits ure in genernl tabular; a few only have conical penks. llamalt is one of their principal constitnents, and esprecially in the Hack Moninitus, where, however, the lower strutum of all the hills is invariably limestone. mixed with a reddish clay. Calcareous formations, containing many shells, are generally predominant; the other chief geological roeks are porphyritic clay slate, nluminous achist, and anadstone, freguently jutermixed with beds of elay. A large portion of tho sarlace is covered with annd, beneath which, in some places, voleanic substances have been foumd. Walt and nitre frepuently efloresce on the soil, and impreguate many of the small lakes. There is no river or rivulet throughout the country; fresh water is procured by digging to variable depths, but at most to about 8 or 10 ft . under ground, when n plentiful supply is obtained. Rain is sery rare, and descends only in small quantities. The heat in summer is oppressive in the highest degree, not only to foreigners but to the matives, rising sometinies to $133^{\circ}$ Falir.; the coll in winter is also sharper than might be expected from the latitude, the thermometer descending occasiomally to below $610^{\circ}$, and accompanied with piercing blasts from the N.; malded to which, furious tempests fiequently ocenr, overwhelmiug caravans of travellers with the samals of the desert. The elimate of Mourzouk and various other places is decidedly unhealthy. Only a small portion of the surface is under eulture, and that only in the valleys, where sufliciently watered. Whent is raised; but muize and barley are the grains on which the inbobitants chicfly depend for subsistence, and these are not ground in suflicient quantities for their supply. l'ot herbs and garden vegetables are plentiful, particularly earrots, cucumbers, onions, and garlic; these, however, as well as most of the corn, are raised only in gardens near the towns, which are watered with great labour from brackish wells. Dates are the staple product, and the tax on the date trees is an important souree of the public reveme. Figs, pomegranates, and jujubes are also
krown. The rearing of dimentice animale in litte nttemled fo: grata are the mont mumerous; and fin the s. there are floeks of huiry bromi-tniled shecp, of a light browis culonr. Ilorneel enttle aro to loe fonmil lis the mont fertile dixtrlets, mind there only fin minil numbers: beef is rarely enten, exerpot liy the rich. Ilornew are liew, tho most labarious kinds of work beflup chlifly jorformed by nмме".
 of geomala; lat theme minanla are denr, ami only kepit ly large merclunite, or other wealdhy inilividuals, Thues form the principal foul of all ilomostic animula, They also compoe the chicf monrishoment uf the pryo, the luxurien of life, evers in the culb, being very limitedt mul, in finet, the necemsariew of life, genernl'y meeaklig, nre so wants, thant, to designate a rich mian, the common expresmon is, "ho eate bremi and ment every day:' This state of things in malily owing to the numthy uf the inliab., many of whom do sot, for monthas tugether, tuste corn: when ohtained, they make it into n paste called aseche, liremd is buily made, and luked in ovens of ciay, jhinted in fooles in the enrth, and hented by burniag embern. Fowla, geese, nind dheks nre neurce, in comseguence of tho noverelgn luvilug approprinted all he cenilid luy him hasadis on for his wwin use. Jhiter is brought in pouts' aklus from 'Tripoli, and in very denc. 'Tofincon, mixed with trome, is very genernlly chewed by the women, us well na by the men: smakine is rather contined to the opnient, mild tobaceo and pipen iving dear; loit ail the men, thongh proo fiesedly Mohanmednas drisk largely of hitoxientiug liguors, obtulaed froms dates, The prinelpal wild animuls met with in the country are the lion, panther, hyena, jackul, therer cut, immense herils of hullintues, \&ec.; nul among birils, vultures, falconn, nuil other rumacions moeciek, ont riches, and bistaris. From the prolucts of the animal kingolom, whileh aupply its commoree, are derived a sreat purt of what wealth Feazan possesses. There are a few manufinctures of agricultural implerients, coarse woollen fubrica, earpets, and Moroceo leather ; lut Horneman conld not tini thronghout Mourzonk a single artilieer skilful in any trade or work. 'The Amith fashions withont distinetion every metal into every form: the same man who forges shoes for the sultan's horses, makes riugs for hin princessen.' Capt. Lyon, however, remarks that some work in rold and milver ls exccuted with much skill, eonsidering the balness of their tools; and every man is eapable of aeting as a carpenter or mason. The wood being that of the date tree, and the houses being built of mud, little taste or skill are displayed. Much deference is paid to the artists in lenther or metals, who are called pert excellence, stu, or master, as, iron-master, leather-master, \&c. The shuttle is unknown, and woollen cloths are maile by the women with the hand only. The chicf oecupation of the people is commerce and the conveyance of gools. Fezzinn derives its chicf importance from its situation, which reulers it a grand depôt for the commerce earried on between N, and Central Africa. The communication of Egypt as well as larbary with the vast countries to the $\mathrm{F}_{2}$. and S. of the Niger, centres alnost entirely in Nourzouk, Thither an annual caravan sets out (or did ill the time of Horneman) from Cairo, renching its destination in about 40 days. From Tripoli to Mourzouk the journey usually occupies about 25 or 27 days. Of the caravans to the $S$. , the principal are those to Bormon, with which country Fezzan maintains a regular and extensive communication, and the cap. of which travellers reach in about 50 dnys. Other caravans go to Cnssina, which journey oceupies 60 days; and a fuw proceed still further $\$$., crossing the mountains
to Anhantec. "The arrival of the great earavans forms a aort of Jubilee lin the cithen of Feranio and ont reaching Nhourzonk, they Hind the moverdint

 and the noljacent S, conisitien, golid disat from the linuks of the Niger, enpper, menna from dgalez civer, tiger-skins, dyeil leather, aul мине kiulan cot tou manufineturen are the chicef inugurta from the incerlor of Afrian; whleli, tugether with loory and oustrich fealorra, are forwariled to larhary and Finypt to lin exchangeil fur provishous, anim the mbinithetiren of Jourope and the Jinst. Many of the Intter are roeexpriced to the S ., inchuilogh hivo arus, gu!powder, mabrow, kulven, цlase, paper, leank

 The articlen of clothing finperted frum the S , ane prinelpally muslina (jurtly from Inilia), stripent, blue, and white culiones, woollen cloth, mil wispel enpm, Salt and dintes ure, however, the prinedal arileles exported to the $\mathrm{S}_{\mathrm{o}}$; the quantity of the former beling extimated at isob or 100 cumel hates

The leopde are of a mixed race; in the N. many are Arabs, ith the S. they are chiptly Neproes, Thie Fearaneors, who compone the mass of the pup, apgear litennediate between the two, though mive inclining to tho intter type. Iheir colour is black: they are, aceorilinge to most anthoritios, talepally well firmed; but neither nex has humbone fintums, They have a very peculims cant of commenane, which dlatiuguinhes them from other linacks; thejs check-bones are hlyher and more prominent, fayy Intter, noses less depremsed, and more peaked at the tip than in the negro; cyes generally small; llpw protulicrant, and somewhat thick; teeth gand; linir ficlined to be woolly, but not completely frizaled. 'I'sey are sald to be cheerful, and fond of duncing and music, and not prone to suidea anger, nor revengelinl; but nre at the ame time selflem, rlevoid of hospitulity, insincere, and wholr lentitnte of either physicinl or nental energy if enterprise. I'lie Arabs, it person and dispowifion, are much the same as elsewhere; and are greatr superior to the Fezzaneers in activity and cleandiness. In Mourzonk there are some white familios, lescended from the Mamelikes, whose designation they are very proud of preserving. The court and ilpper classen of Fezzan dreas miostly in the custume of T'ripoli ; the lower orlers wear a large shint of white or blie cotton, with long loose siceves trousers of the same, and sandals of camel's hide: and on Fridays they perhaps add a turban, and appear in yellow slippers. The women plait their hair, often mixing it with black wool ; they ne great quantitics of oil and perfumes; and thoue who cain afford it, load themselves profusely with armlets, anklets, and other ponderous ornaments of gold, silver, copper, iron, ivory, glass, and hom, together with cornelinns, agates, beads, and coral, Both sexen have a singularcustom of stufting their nostrils with a twisted leaf of onious or cloret. The habits of all classes are said to bo debauchel and profligate in the extreme.

The Government is in the hands of a chief who excrcises unlimited power within his own terntory, where he lins the title of sultan, though in aldresting his superior, the pachan of Tripoli, he assumes only that of sheik. His revenues are derived from taxes on slaves, merchandise, date plantations, gardens, and other cultivated lands; from fines and requisitions, duties on foreign trade, and the crown domains, salt pools, and batron lakes. foit every slave, great or small, he receives, on theit entering his dominious, 2 Spanish dollars; and in some years the nimber of slaves amounts to $4,0 \mathrm{NH}$, On the sale of every slave, one-furth of the pur-

If a man die childlens, the oultan inherits a great part of his jorijerty. There ane varimis other ways in which he extorts money. The rudi, and other wate oflicen, ineluding the ministens of religion, are supprorted by lamis mat spart for the purpose. All the mervailts of the sultan are maintaned by the public; and he has nu muney to pay, except to the pasha of Tripuli. The tribute was formerly to the amount of abont Lisu0 dollams a year, till a quarrel hetween the two soverelgns broke out some years ago ; sinco whien it has been much less. It is paid in gold, renna, and slaves, and an embasky is annually nent firt it by the pactia. The armed force of Fezzan may usually amonit to 5,000 men; lut in time of wai, all who are able to bear arms are called out, and in this way a tumultury furce of from 15,000 w 01,0 ,00 men has sometimes beell raisad.
The cities and tourns of Fezzan are said to exceed 100; but the largest has not more, perhaph, than 3,100 inhal. The principal are Monrzouk the eap., Ackna, Selbha, Hoon, and Wadan, Mourzonk stands in lat. $25^{\circ} 0 \mathrm{t}^{\prime} \mathrm{N}$., long. $15^{\circ} 52^{\prime} \mathrm{F}$. . It is surnumbed with well-built mail walls, at least 20 ft . hish, with round buttresses, lowpholes for musketry, and gates wide enomgh to admilt a limen camel, D'op, about 2,500 . The street of entrance is alout 300 yards long, by 100 broad, and leads to the sultan's castle, an immense, but irregular elifice, built of mud, in the midale of the city. In Sourzouk there are said to be 16 mosques; but must of them are small. Sockna is sithated in a phain, on the rond between the cap, and I'ripuli. It is walled, anal may eontain 3,000 inhah. Germa has been considered, but without suflicient evilence, to be the an. Garama. No antiquities have then discovered in it ; thongh, in various parts of the rountry, remains belonging to the Roman and subsequent periods are frequently met with.
The country of the Garnmantes was conquered by the Romans under Cornelius Balbus, soon after the C'hristiaia era. In the 7 th century it fell unter the domiaion of the Arabs; but in 1300) a portion of thas tributary to the Sondan ntate of Kanem. Son afterwarils a family of the Sherifs (descenulants of Mohammed) took possession of it, and held it till 181I, when the bey Mukni usurued the throne. (Denham and Clapperton, Trav, in Africa; (udner, Lyon, Ritchie, Ilorneman, de.)

Denne liggs are very frequent; heavy ruins take place lis aitunim, mil jus May nud June the thaws "uarly put a stop to all travelling. In the N. the sun in absent during Dec, asd Jan, ; but during the ahort nummer, whlle that luminary in alouont perpetinally nbove the horizon, the beat is olten very great ; and near Uleaborg, in about the 65th deg. lit., the corn las sown nald renped within six or seven weeks. Crops, in nll pirts of the ducliy, are exposed to the donble danger of heing deatroyed by sudilen frosts, anil hy the ravires of a variety of caterpillar called turifa by the mativen. The principal geologienl fimmations are granite, which very ensily dimintegrates, lurd limestone, and slate. Soil for the most part stony and jour.
Agrirultural and other Produre. - Findand is more promective than the opposite purt of the Semblinavinu geuinsula, and when it belonged to the Swedlah crown, it furuished a grood deni more corn than was necessary for its own ennsumption, and was termed the granary of Sweden. liyo and barley are the kiade of arnin chictly eultivated, the rye of Vusa being celehrated for its excellence; wheat is but little grown, but onts are raised in considerable quantities. 'The pettsunts are olnliged, from the hamidity of the atmosphere, to kiln-ilry all the grnin, fifter which it will keep fior tifteen or eighteen years. Pulse, hopos, hemp, $\operatorname{tax}$, and a little tobaceo are raised, lotatoes were intronliced abont 1762, and ure now in general use. Only a small jropurtion of the surface is under culture. The lanil requires a large quantity of manure, and that in common use is wood ashes, procured liy setting flre to the forests and underwood, after which operation heavy erops are sometimes obtained. The natural poverty of the soil is such that, excepting in the S. prov, of Tavastehus, where it is deprived of a continued supply of artiticial stimulus, the ersps rapilly fall oiff, nul the cleared land is soon abandened for asother portion of soil, the woul on

Which is purposely destroyed. This phan of ma-
muring the lami, thongh well enongh mapted to brimg tens covered with lonshwood into cultivation, is highly injurions to the forests, and consequently to one of the chicf romrees of nutional wealth. The foreste, which are very extensive, and stretel to the $\mathbf{N}$. limits of the duclyy, eonsist primeipally of pine and tir; but, contrin also beech, clim, poplar, oak, ash and birch. Timber, deals, potash, piteh, tur, and rosin are amongst the most important prolucts of Finland. Cherries und apples ripen at Vasa, and a species of erahmple grows wild in the W.; but other Irnits, exepit a few kind of berries, are rare. Next to ayricolture, eattle-breeding and tishing are the chnef occupmions of the people. 'Itse mendows and pastures, thongh but little attention is paid to them, are, in general, very good; and furnish, with teaves mid strav, min abmalant supply of fowd for nearly (ont, wot head of cattle, $x: 55,000 t$ sheep, with considerable numbers of hogs and gronts. Jorses, of which there are abont $2: 35,(000$, ure small, strong, and harly. In the N. the peasuints possess large herds of rein-deer. Bears, wolves, elks, deer, foxes, beavers, poleents, and varions kinds of game nbound. Sen and herring Ilsheries are established on many purts of the coast; and the salmon and strembling (Chupca horengus) are canght in great quantities in the lakes, supplying the inhabitants with an imjortant part of their iood. Iron mines were formerly wrought, but at present only bog-iren is procured. Lead, sulphur, arsenic, nitre, tin, und copper are met with; the last two, but especially copper, being prodneed in considerable quantities; salt is very scarce, and is one of the chief articles of import. Mannfactures, except the products of a few cotton factories (the result of the prohilitive system;, iron forges, flass works, saileloth, and hose ficitories, are entirely domestic. The peasant prepares his own tar, potash, and clancoal; construets his own boat furniture and woorlen utensils; and weaves at home the course woollen and other labries he uses. He often lives 100 miles from any town, and is, therefore, thrown for the most part up. I his own resourees and infremity for the supply of his wants. In some districts the inhab, never repair to a town but to obtainsalt. 'I'he exports, of the valne of about $: 3,000,000$ silver roubles a year, consist of timber, butchers' ment, bitter, skins, potash, tar, and tish, to Russin and Sweden, with which comntries the principal interconrse is maintained. In lsios the export trale employed 467 vessels of $107,0 t 00$ tons, and the coasting trade nbout 900 vessels of 50,000 tons. There are a few good roads, made hy the Swedes while thy were in possession of the country; but they do mot extend far into the interior. P'ost horses are furnished, as in Sweden, by the aljacent farmers. In commercial dealings, the liussian is the curreney established by law ; but swedish paper monry is also in circulation.

Guvernment-Since 1831, Finland has been divided into 8 lians, or governments of very unequal magnitude, the most northerly, Ileaborg, beimer abont as large as all the others; but this is a consequence of the wilhness and sterility of the country, the absolute amsint of its population and its density, especially the latter, being far below the average of the more sontherly governments. 'The lüus are sublivided into fogderier or districts, and in herudes or circles. Clidel towns, 1lelsinfors, the present cap.; Abo, the furmer cap.; Tavastehus, Vasa, Vleaborf, and Tornen, A hussian military fovernor resides at Melsinfors. Finland has a diet composed of the orders of the mobility, clergy, citizens, and peasantry, and a
code of laws and judieial system similar to that of Sweden. For more than lialf a century this liet was inharive, until it was arain compokerl, in sept, 1sibis, hy the ' (irand-duke limperor.' The reventie of Jinland, which is kept quite distinet from that
 roubles, or 129,3241 ., and the expenditure, during the name year, to $2,831,178$ roubles, or $10,1,19 \%$. Anong the privileges of the people is that matie lout a native Finlander can hold any othee of trast in the conntry. 'Ihe Finnishs tronju, amanting in time of peace to abont 3,0100 nem, are wit intermised with the ordinury Rassiam trmong The finnish theet, by far the best mammed purtion of the linssinu naval lirce, forms a distinet squadron wiler the mutional thag. Swealorg, on some small islands in the (inif of Finlam, at a lithe distance from lielshuglors, is a principal station of the linssian tleet, and is very strongly furtiinol. Almost all the ponp. as before stated are lutherans. under the bishops of Abo and Borgo; except in the govermment of Wyborg, where they belong to the Russian elureh. J'ublic education is very backward. There is, however, a miversity at Helsiugfors, with 5 academies, and 12 suptrint sehools. A society for the encouragement of the Finnish language and liternture has beea wanuly patronised by the linssian govermment.

People,-On the W. const, and in the Aland Archipelago (which is included in Finland), the inhab, are mostly of Swedish, and in the Sli, of Russian descent; but the great majority of the pop. are limss, The latter have, by many groHraphers, been identified with the Feni of Tacitus, and the Phinni of l'tolemy. There are, however, circumstantes which give rise to considerable doubt respecting such identity. The Fimps call themselves Sonomalatsello, or 'inhabitants of the marshes.' They have no analogy with the Slavonian or 'Teutonic races. They are of' middle height, rolmst, flat-faced, with prominent checkbones, light, redlish, or yellowish brown hair, grey eyes, little beard, and a dull sallow conplexion. They are courageous, hospitable, and homest ; but obstinate in the extreme, iudident. dirty, and it is said revengeful. They are grave and rather unsocial. Almost every one is a part or masicinn. But they have no taste for doming. or indeed knowledge of the art, or of crames if chance, except in the towns, where they have been introduced by the Swedes, Their amusements consist principally in feats of bodily strenyh and netivity. The enstoms and halits of the Finns have been lamaded down time immemonal, at:l their costume forcibly brought their sumpowd E. origin to the mind of Mr. lilliot, who ohserves in his letters from the $N$. of EArrope, '1 could fancy myself' in Isin. 'Jhe peasants wear ling loose rolies of a conrse woollen manulazture, securel by a silken ceinture like the kummerbund of the Mussulmans. Their dress, except the Eurapen hat, resembles that of the lleoparries of Calmano In Russian or Old Finland, the peasants wear a cloak or caftan, sometimes callet a khakut, resembling in form, as well as in name, the L , drew. ( 1 p, 251-259) The Finns make frepuent use of hot vapour bathy, and Malte-bran supposes that they communicated the custom to their hasiall contuerors.
$1 /$ istory.-The Finns were pagans, living under their own indenendent kings till the 12th whtury ; abont the middle of whieh Finland was conguered by the swedes, who introduced Christianity. The proyince of Whorg was conqueted and annexed to hissia by Peter the Great, iu 1721 ; the remainder of the comntry became ${ }^{\text {art }}$ of the Jussian dominions (also by eonguest) ia

IIORLNZOLA, a town of Central Italy, prov. phacena, on the lardi, 15 m. Ski. lincenza. l'op. fis: in 1801. The town was the native place of Garlimal Alberoni. Abont 8 in . S., on the right bank of the Mira, stood the ancient city of Veleia, buried in the lourth century liy the fall of the momanan at the foot of which it was sitnated, mid nut tiseovered till 1äbl. 'Ihe remains of antiquity that have been dus out of its ruins are more numerons and perfeet than in my other ancient city of ltaly, with the exception of llerculaneam and Pompeeti.
Fllalb, a sea-port town of Austria, situated ou the Ciulf of Qumbero, at the Nif. extremity of the Almatic Sea; lat. $45^{\circ} 19^{\prime} 39^{\prime \prime}$ N., lomg, $11^{\circ}$ $26^{\prime \prime} 45^{\prime \prime} \mathrm{F}$, l'op. 15,319 in 1857. Finme is the chicf town and seat of government of the distr. called the Itungarian 'Litorale,' and, with the minor adjacent harbours of Bucenri, l'orto IRe, and Marinsehizza, is the point of contact for the rich and powerlul kingrton of Hungary with the Mediterrmean. The importance of Fiume was reconnised at an early period by the emperor Charles $\mathrm{VI}_{2}$, who constructed a magniticent rond about 75 m . in length, leading to this port from Carlstalt in Crontia, the spot where the inland navigation by means ef the rivers Save and Culpa terminates. 'I'his road was ealled, after its founder, the 'Carolina;' but the diffienlt task of traversing the Julian Alps was fonnd to be but imperleetly aceomplished by its means, and the emperor Joseph II. laid down another line of road to the ecast, letween Carlstadt and Zeng, in the military frontier, which was named the 'Josephima.' In 1809, a third line of road, one of the tinest undertakings of the kind in Enrope, was opened at the expense of a joint-stock company, the sharetodilers in which were chiefly magnates of Ilungary, 'This road was named the 'Lonisn,' alter the empress Maria Lomisa; and, on accomt of its comparatively fentle declivity, is the most frequented. Notwithstanding these exertions, and the outlay of a considerable sum of money in an endeavour to render the Culpa navigable above Carlstalt, the trade carried on here is not very considerable, exceptiag in years when there is a large exportation of grain to Great Britain, France, and other comstries.
The branch of the Lomisa road which leads to Buccari is chiefly used for the transport of timber and staves, The oak timber of Carniola, and the Litturale, is of the best quality; and the ships built at Tricste, Fiume, and other ports, being strung, handsome, and well fitted ont, and their erews expert and temperate, are much songht after and bring liggh freights. There are some mannfactures at Finme of linen, coarse eloths, leather, and rosoglio; also a wax-bleaching establishment, and a sugar relinery. 'The limbour is small, being only the entrance to a mountan-stream of a few miles in length, which it is very dillienlt to keep clear. Large vessels lie in the roadstend, at a few hudred paces off shore, where the water is deep nough, and where the high land of the coast shedters them tolerably well from the effects of the bura, or SE. wind.
FiADIBOROUGH HEAD, a bold promontory of linglend on the Yorkshire coast, projecting a cunsiderable distance into the sea; lat. $54^{\circ} 7^{\prime} \mathrm{N}$., humg. $1^{\circ} 5^{\prime} \mathrm{W}$. This is at onoe the most straking and most celebrated headland on the E , coast of

FIINT
845
the kingdom. Its high, white, perqendicnlar, limestone elitls render it a most conspinions object. Many of the rocks of which it is eomposed are insulated, of a pramidal form, and soar to a great helght. Most of them have solidhnes, hat oifores are prereed through and arched. On the N. side: are vast caverns, leading into the borly of tha head, the retreat of immense numbers of sen-fowl and wild pigeons, A light-honse, witha revolving light, having the lantern elevated ell it. ntowe the level of the sea, was erected on this head in 1806.

FLANDERS, the name of a fertile and wellenltivated distriet of Brbyium, divided ints the provinces of E. and W. Fituders. Sce Betomum.
lLLCLIE (LA), a town of France, dép, Sarthe, cap, arroud., on the loire, $2 / \mathrm{m}$, SW. Le Mans, on the railway from L'aris to Nantes. I'op, 7,077 in 1861. The town is generally well bnilt; streets broad, clenn, and ornamented with fomitains supplied by an aquednct upwarils of $\frac{1}{2} \mathrm{~m}$. in leugth. Its chiet public buiding is a royal military college, formerly a celebrated Jesnits' collegr, fonmed, in 1603, by lienry IV. It is very extensive, and well laid out; contains an elegnit chureh, a public library with 14,000 vols., a picturegallery; and has attached to it a tine park, and gardens. The chureh of St. Thomas, town-hall, hatl of jostice, and hospital, are the other principal editices. La Fliche, though advantageonsly placed on a navigable river, is remarkably deticient in manufactures and trade. It is the sent of a subprefecture, and court of original juristiction. Its environs are exceedingly agrecable. I'revionsly to the 10th century, it was ealled Fissu; it ow's its present name to the spire (fleche), placed in the l2th century on the tower of St. 'Thoman's church. One of the greatest of Scoteh plilosophers, David Hume, resided at La Fleche in 173\% and 1736, and here composed the greater portion of his earliest work, the 'The Treatise of lluman Nature.' La Fieche was the birthplace of Descartes.

FLLiNSBURG, a sea-port town of Germany, on the 1. coast of Schleswir-IIolstein, at the bottom of a deep fiord or bay, 19 m . NNW. Schleswig, on the railway from Kiel to Friedericia. Hop. 19,(i82 in 1860. The town is ancient, well built, clean, and thriving. 'The harbour has water sul'ficient to float the largest slips. There are sigarhonses and distilleries, with manufactures of cloth, cotton, paper, soap, and tobaceo; but it is chictly celcbrated for the tiles made in its immediate vicinity, of which large quantities are exported. Abont 250 vessels belong to, and several are built at, the port.

FLIN'T, a marit. co. of N. Wales, consisting of two separate portions, the largest and most important of which is bounded on the N. ly the Irish Sca, on the $E$. by the aestuary of the Dee and the Dee itself, and on the S. and W. by Denbighsiare; the other and smalter portion lies along the S. bank of the Dec, between Cheshire and Salop. Area 289 sq . m., or 18 1,905 aeres, being the smallest of the Welsh comies. 'The surfice is considerably diversitied. The N. part is mostly Hat, and consists in great part of a portion of the vale of Clwyd. The vale of Mold is also that and highly productive, as is the detached portion to the S . of the Dee, A ridge of hills rums through the whole extent of the comity, mostly paraliel to the bee and its restuary, which, thongh externally barren, are valuable from their mines of lead and other mincrals; but, on the whole, thore is a larger proportion of good land in this than in any other Welsh county. Besides the Dee and the Clwyd, the county is watereal by the Alyn and
other sireams, Agriculture, though still rather inckwird, hus been materially improved, and muny purts aro well enltivated. There has also, within the present century, been a great improvement in the farm builhings and cottuges, nud in the huplements and stock. Manufactures luve been introlnced into Jilintshire, expechally that of cotton, which is enrried on to some extent at Moll. lhat the principal branch of industry earried on in this co., next to agriculture, is that of mining: its lead mines are at present the most extensive of muy in the empire; those of copper are also of considerable value: and beds of coal exist all along the shore of the Dee, large quantities of which are used in smelting works, in addition to those that are exported. The smelting works in the vicinity of Ilolywell are very extensive, and employ from 600 to 700 hands. Flint returns 2 mems. to the II. of C., viz. 1 for the co. and 1 for the town of Flint and its contributory bors. Registered electors for the co., 2,895 in 1862 , Flintshire is divided into 5 hundreds and 28 parishes; and in 1861 hud a pop. of 69,737 , living in 15, 113 houses. (iross ammal value of renl property, 255.5691. in 1857, and 331,8071. in 1862.

Flint, a par, bor. and sea-port town of N. Wales, co. Flint, hund. Coleshill, on the restuary of the Dee, 11 m. NW. Chester, and 185 m . NW. London by London and Nortl Western railway, viá Chester. l'op. 3,428 in 1861. The borough ineludes the parish of Flint and the township of Coleshill-Fawr. It is situated within a large quadrangulas space, surrounded, on the principle of a Loman encampment, by ramparts, und a deep entrenchment, laving at the NE. extremity its ancient castle. 'Two main streets cross at right angles, and are similarly intersected by smaller strects, the frequent gaps and broken walls in which give the town a dilapidated, deserted aspect, It has a new chmeh, dedicated to St. Mary, and five dissenting chapels; a mational sehool for 140 children, several Sumday schools, and a gnildhall. The assizes, formerly held here, have been lonir since removed to Mold, to which the county grol has nlso been more recently transferred. The coal works and lead mines in the vicinity employ the chief part of the pop. Of late years, in consequence of obstructions in the chamel of the Dee, Flint has becone, to a considerable extent, the port of Chester; and here the larger vessels (es.pecially those with timber) discharge into lighters, or ralts are formed and floated up to that city. 'The wharfs, which have been mueh improved, and extended of late years, are accessible to vessels of 300 tons, at any time of tide. Railways lead from the wharfs to the mines. The exports consist chiefly of conls to Ireland and coastwise; and lead, in pigs, shects, de., from the works in the vicinity. During the summer season Flint is n place of some resort for sea-bathing: there are also hot baths for the accommodation of visitors. The castle, now in a state of rapid decay, is a square building, with romel towers at three of the angles, and at the fourth is a much larger tower at a little distance from the castle, but originally joined to it by a drawbridge. Formerly the Dee tlowed bencaili the walls, and rings were fastened in them, to which ships were moored; but it has mow receled to some distance. I'he foundation of this eastle is ascribed to Henry II. Fhint reccived its first charter in 1283. Since the 27th Henry V11I. it returned 1 mem . to the II. of C., along with the contributory bors, of Rhydlan, Overion, Caervis, and Caergwle: to these the Reform Aet added St. Asaph, Holywell, and Mold: the right of voting previously to the Reform Act was vested in the inhab. paying poor and chureh rates. lie-
gistered voters for Flint and its contrihutory lime
 The municipal bor, is restricted to a small space romid the town, and is governed by 4 aldermen and 12 counsellors. The numerous rolies in the vicinity make it probable that Flint was a Roman station; and the remains of smelting-places and washes on the ancient phan, prove that the lead mines hat been worked at a remote priod.
FLODDEEN, a village of Englamb, co. Northumberland, 5 m . Sli, Coldstream, memorable as the scene of one of the most destructive conticts recorled in IIritish history. James IV., king of scotland, having invaded England with a latge force, was encountered here, on the ${ }^{\text {on }}$ of sept, 1513, by an Einglish army under the Earl of Surnev, James, who was destitute of every quality of a genoral, except bravery, was killed, aul his army totally defeated. The loss on the part of the Scoteh wos extremely great. Hesides the king, no fewer than 12 carls, 13 lords, and is eldest sums of peers, with a vast number of gentlemen and persons of distinction, and prombly about 10, ,N(1) common soldiers, were left on the field. The luss on the part of the English was comparatively inconsiderable. This is by far the most calamitous defent in the Scottish annals, and as there was hardly a family of distinction in the kinglon whon did not lose one or more members in it, the whole nation was involved in mourning and despair. (See 'l'ytler, l'inkerton, I listories of Scothan, Sit Wniter Scott has given a vivid and generally gutreet account of this great battle in his 'Manuinu.')

FLORENCE (Ital. Firenze, an. Florentia Tuscorrm), a famoas city of Central Italy, and, siace 1865, capital of the kingrom of Itnly, on both sides the Arno, 63 m . S. by W. Iholugna, 68 m , ENE. Leghorn, and 187 m . NW. Rume, on the railway from Rome to Milan. Pop. 112,236 iu 1862, and estimated at $150,000 \mathrm{in} \mathrm{Sc} \mathrm{c} \mathrm{t}$. 1865, after the transfer of the government and court of the king of Italy to the city. Florence stands in a richly wooded, well cultivated, and beantiful valler, cincircled by the Apemines, and is well buitt and agrecable. Its shape is nearly a square, the sides of which almost correspond with the carliaal points: the Armo intersects it from Sli. to $\because: 1 .$, , of the guarters into which it is divided veing situated on the right, and the fourth on the left lasing of the river. It is enclused by an old wall about 5 m . in circuit, thanked with towers and piereel by 7 gates, which, hesides being mseless as a means of defence, is injurious, by preventing the free ingress and egress of the citizens, and ehocking the circulation of the nir. The commmication between the opposite sides of the river is muintainel by menns of 7 bridges. Florence contains a grat number of magniticent editices and squares, generally adorned with statnes, columms, or foumtains: there are no fewer thum 170 churches, 89 convents, 2 royal, and many other palaces, 12 hospitals, and 8 great and small theatres. Altogether Florente bears the aspect of $n$ city tilled with nobles and their domestics-a city of bridges, churches, and palaces. Every building has a superb and arehirectural form. bach ingle of a street presents an arelitectural view, tit to be drawn for a scene in a theatre. Many of the houses are palaces; and a palace in Florence is a magnificent pile, vencrable from its antiquity, of a square and bully form, with a plain front. extending from two to three hundred feet, built of huge dark grey stones, in a massive, floony, and impressive style. 'lhe rout is flat, with a deep comice, and bold projected soffits, which gives a grand, square, and magniticent appearance to the edtitice. The chimmets are gronped into stacks, the tops of which, increas

The rout and bold projected square, and maguitce. The chimue!s lis of which, increa-
ing in bulk as they rise in heirgt, resemble a counn. Many of these palaces are fitted up with meat magnificence, mad some of them contain rahable galleries of pictures, that are mostly open to the public. The streets, though in puris nurow, winding, and angular, are mostly wide und straight: and they are admirnhly paved, alter the mamer of the olil IRoman roails, with mognlar blacks of trnp, or sumdstone. The lionses generally are substantial, more so, upparently, than those of hume, The P'uaza reale is the largest square ; it has a fine marble fountuin, mut an equestrim tatue in bronze of Conino I. by John of Bologime; the Piazza dell' Ansumziata is surromuled by arcades, and has two thine bronze fommtains, and an equestrim stathe of Ferdinand 1. The Piuzza del Mercuto Vecchio, exactly in the midale of the city, has a marble colnmm from which it is a mile to cach extremity. The Arno is decidedly sulenur to the Tiber at Rome. The bridge, s. Trinita, huilt of marble in 1057 by Ammanati, is designed in a style of elegance and simplicity umrivalled by the must successtul efforts of modern urtists. The Poute Vecchio, built in 1345, has the houses of the street continned over it, so thint it is not till they arrive at an open areade in the centre that passengers become awne of their situation. The bridges and the handsome though not spacions guays by whieh it is bordered, afforil fine views of the river, Flisence being in this respeet much superior to the 'Etermal City:' 'The cathedral, or Juomo, a vast edifice, coated with marble, abont 500 ft . in length, and 38.1 ft . in height to the tup of the cross, stands in a spacious square. It was berun by Armulfo di Lapo in $\mathbf{1 2 4 6}$, and fibished by Irmellecdi in 1426 : its cupola is sad to have sugrested to Niehael Angele the first idea of that of st. P'eiers. It is built of briek, and venecred, as it were, with various-coloured marble slabs, arramged in narrow strijs or panels. 'There is something,' says a recent traveller, 'imposing in the narzs of a marble editice, but not so in the reality : polished marble is worse than rough marble, which, again, is inlerior to sandstone or granite; but coloured marble (parti-celoured especially) is worse than all. The Dhomo of Flurence, built in detiance of all the urlers of architecture, is neither Grecian ner Gothic, although of the age of the latter style; and its dimensions alone give it greatness. The interior is very striking, but spoiled by a circular sereen of firecian columns romind the altar:' Another traveller says, that this cathedral is to St . l'eter's what harlequin is to a Roman senator. The Cempanile, or beltry, adjoining the Dwomo, but detaded from it, is a tine tower 288 ft . in height. Charles V. was so well pheased with it, that he weel to say it should be kept in aglass case. With the exception of the Dromo, the other churehes have little worth notice in their architecture, and many of them are untinished and poor. That of Santa Croce, however, called the l'antheon of Florence, is interesting from its containing the remains and tumbs of four of the greatest men of modern Italy, or indeed of modern times - Miehael Angelo, Galileo, Machiavelli, and Alfieni. The church of San Lorenzo contains the masoleum of the Medici family, said by Lord Byron to be a 'tawdry, gharing, and untinished chapel,' and admitted by less severe crities to be ostentatious and in bad taste. In a cloister attached to this chureh is the Lamrentian library, containing a peculiarly valuable eollection of above $\mathrm{i}, 000$ manuscripts and 120,000 vols.

Among the palaces are the Palazzo Vecchio, or oh palace, inhabited by the Medici, when citizens of Florme. It was hegrun in 1298 , and finished in 1550. It is in a massive, severe, and gluomy
style, and has n noble tower 268 ft . in hejpht, which commands a the view of the surrombling: comentry. 'lhis palace is uow occupied with the principal public ollh'es. The P'aluzz, I'itti, crected in $14+0$, the ordinary resideme of the kinir of Italy, is a vast mull hems structure; it is furbished in the most costly manner, and is enrichard with a greut mamber of timestatuen, buste, unil pis:tures, and an excellent librury. Attuched tu the litti palnce are the boboli gardens, luif ont by Cosmo I. in Iosin, in the pure classical style; thit is, in rectangralar walks, thanked with eut treres fashioned into a wall or arched over head, and firnished with a due quantity of stone steph, stone: walls, and stone statues. Comnected with these gardens is the botancal garden, a muselm, of naturul history, a splendid nuatomical colleretion modelled in wax by the Abbé Fontam, ocropying 15 apartments, and a tine library. Another tine palace, the kiecardi, was bailt in 1440, after a design by Michelozzo, It has a noble gallery, with a ceiling painted by Luca Giordnuo, and a seledt library with 40,000 vols., open to the public. It is now occupied hy the Accudemia della Crusize and some public departments. But the fory of Fhorence is its grand gallery : it occupies the upper Iloor of the Ufizi, a building erected alter a design of Vasari by Cosmo I., consjsting of two paralled eorridors or galleries, each ifs ft. in lengoth, and $7: \frac{\mathrm{ft}}{} \mathrm{a}$ art, united at one cond by a thirl corridor, the choiecst and mast valuable specimens of art being preserved in saloons oponing from the corridors on each side. This galiery contains some chefs-al'cuere of statuary, at the hend of which, ler miversal consent, is placed the Verus ole Merlici, the goddess who 'lives and loves in stone.' 'The matchless stntue was discoverent in the fith contury, in the Villa Hadriana, near 'livoli; and lering acquired by the Medici fanily, was placed in their palace in Rome, whence it wis eolivered to florence by order of Cosimo 111 . The whole of the left arm, and a part of the right, ure motern, having been restored by bandinelli. An inseription on the buse intimates that it is the work 01 an Athenian artist, called Cleomenes : this, however, is generally diseredited. But, whover may be the sculptor, it is certainly worthy to rank with the famous statue of Venus sold by l'rasiteles to the Cuidims, respecting which some rather curinus particulars may be seen in lliny. (Ilist. Nat., lib. xxxvi. §̈.) The attitude of the Venus ale Mealici corresponls with the verses of Ovid, who perhaps had this very statue in his eye:-
' Ipsa Venus pubem, quoties velamina ponit, I'rotegitur lava semi-reducta mann.'

De Arte Amand., ii. V. 61t.
Addison says of this famous statue, that 'the softness of the flesh, the delicacy of the shape, air and bosture, and the correctness of the desinn, ure inexpressible.' ('Travels, art. 'Florence.') And, according to liyron,

## the godhess loves in stone, and fills

The air arome with beauty.
Among the other chefs-l'ceurre, the hest perhaps are, the Knife-grinder, the liwn, the Wrestlers, and Niobe and her Chideren. The collection wi paintings comprises superb specimens of all the hest schools, and is said to surpass even that of the Yatican Speaking of this gallery, an linglish traveller observes:- Persons like myself, with no pretensions to comoisseurship, will feel how poor and vulgar the pietures of the trumonterne artists are when placed besite the works of the great Italian masters in this gallerg. Among those who admire the Dutch and Flemish painters for their corrcet and faithful epresentation of individual

## FLORIDA

nature, and their skill in chiaroseuro, there are few, I venture to think, whose taste, after some weoks spent in perambulating the picture galleries of liome or lilorence, will not mindergo a mota-morphosis-few who will not feel a strong pretercince for what is called the "ident" or "gram st yle" - lor the suints, prophets, Malonmas, holy fanilies, sybils, und grohlesses of the Romm, Fhorentine, und Lombard artists, which are in tsinth infersonations of the nollest attributes of hamanity, -matermal love, heroic fortitule, intellectnal energy, sublime benevolence, and rapt devotion. The same probation will probalily also ereate a predilection in seulpture for the maked ligure, and induce a belief that the artist's labour la thrown away upon togns and tunics, however gracefilly folled,-that it is the kromel, wot the hask, -the man, not his itrapery, which is the well-spring of beanty and the recipient of character. Such at lenst was my own experience. The study of the works of the great Italinn masters has this fine mornl effect, that it emobles our conceptions of the capabilities and destiny of man. It puts the loctrine of immortality on canyas, and presents it to the eye. I was delighted with Guido's female heads, which seemed to me radinnt with grace and sweetness, purity and beauty, even beyond those of haphael. The Italian schools are less rich in Iamdscape, yet in this department who can surpass Salvator? I had no adequate idea of this great artist's genius till I saw nearly a dozen of his large pieces in the Pitti and Corsini palaces in Florence. They seemed to have all the splendour of Clande's, with the addition of that lofty, bold, mountain scenery, which a Scotsman is apt to consider as essentinl to the highest class of landseape.' The great gallery communicates by a covered passage not only with the Palazzo Vecchio, separated from it by a street, but also with the Pitti palace, though on the other side of the river, being carried over the latter by the Ponte Vecchio, or old bridge.

Besides the Riceardi and Laurentian libraries, the Magliabecchi hibrary, containing a rare, extensive, and valuable collection of books, is open to the public: it is placed below the grand gallery.

Florence is subject to fogs in the winter; but in spring and autumn it is a delightful residence, well provided with everything that can gratify the man of taste and science, or the voluptuary. It has manufactures of silks, straw hats, articles of alabaster, scagliola and pietre dure, perfimery, jewellery, artificial flowers, porcelain, engravings, and otlar oljects of the the arts. The literary and educational institutions are numerons and important. At the head of these is the academy Della Crusca, established in $1 \dot{b} \delta 2$, to which has been united the anciont university of Florence. The name Crasca (chaff, or lusk of corn) has been assumed by this academy, in allusions to the grand object of its institution, the sifting or purifying of the Italian language. This aculemy, pubished in 1612, in 1 vol. folio, the first edition of the celebrated lexicon, entitled Vocabolario della Crusen, the fourth and last edition of which appeared in 6 vols in 1729-38; a work which, though jerhaps not quite perfect, has been penerally admitted to be the standard of the Italian language. (Tiraboschi, Storia della Litteratura Italiana, viii. 511, edit. 1793.) An edition of the Focabolario delle Crusea, including numerons words selected from the authors quoted ly the acatemy, but omitted by them, was pulbished at Naples in 1746 , in 6 vols folio. This is preferred by some to the genuine Vocabolario. (Tirabosehi, ubi suprì.) Besides this famous academy, there are in F'torence
a Semolu di Belle Arti, or school of the fine arts, a medico-ehíurgical sehool, an athenemon, and a mumber ol other literary societies. A school was opened in 1820 for the instruction of the poarer classes, on the principle of mutual finstruction; and nuother institution was fonmed in $1 \times 2: 3$, for the instruction of girls from 7 to 12 years of age: they are educated with great eare, nud are sid to be instructed in all that has a tendence to make then active and provident mothers. Thare are a great number of other sehools and institutions for the instruction of students in the hisher branches of education. The churitable institutions are mumerons, extensive, and well couductel. Among others is the Monte di Pieti, fomberl in 1495; a foundling hosprital; a workhonse, on a targe scale. The F'rateruatia dellu Misericordia is an institution in which the higher classes unlettake various duties in relation to the poor. Plie Pahazzo del Podenfia, the mucient governamenthouse, is now converted into a prisun.

The common people of Florence are well elothel, and have a comfortable-like appearatee: and there are, as compared with most other Italian towns, few befgars, priests, and monks. The citizens are friendiy, cheerful, and hospitable. The encouragement given under the inte us well as the present govermment, to artistic and scimtific studies, has conferred advantages on Filorence manown in most other parts of Italy All sorts of foreign pullications are met with here; and the facilities it affords for gratifying a taste for the tine arts, the benuty and secirity of the town and environs, and its salubrity and cheal:ness, make it, on the whole, a more desirable residence than liome.
The origin of Florence is not clearly aseeptained; but it owed its first distinction to Sulta, who planted in it a Roman colony. In the reiga of Tiberius it was one of the principal cities of Italy, and was distinguished by its writers and orntors. In 541 it was almost wholly destroyed by Totiln king of the Goths. Aboat 250 years afterwards it was restored by Chariemagne. It then became the chief city of a famous repalilic; and was for a lengthened period in Italy what Athens had been in Greece in the days of Xemophon nnd Thucydides. At length, in 1537, the Medici, from being the first of the eitizens, became the sovereigns of Florence. The city remained the capital of Tuscony till 1860, when it was amexed to the new kingdom of Italy, On the 2nd of June, 1861, Florence was the scene of a 'first Italian national festival,' in commemoration of the national unity, liberty, and independence. In the spring of 1865 , the seat of govennment of the kingdom was transferred from l'urin to Florence.

Florence has produced more celebrated men than any other town of Italy, or perlans of liurope: anomg others may he specitied, Dante (a tine statue of whom was unveiled at the 'Wante Festival' of 1865), Petrarch, Boccaccio, Villaui, Cosmo and Lorenzo de Mediei; Galileo, M. Angela, Leonardo da Vinci, Benvenuto Cellini, Alberti. Lapo Brunelleschi, Giotto, Andrei-delSarto, Macehiavelli ; Popes Leo X. and XI., Clement. VIl., VIII., and XII.

The (inlf Sitream, which sets from the Gulf of Dexico romud the S , and SL. consts, has in the cmise of ages worn away the land, and formed the low sandy islamals generally known by the name of the "Florisla Keys, or Martyrs, sepratated from the main land liy a navigable chanuel which, however, is both diflieult and dangerons. There are a few gool harbonrs, the best of which are those of I'ensacola and 'Tampa on the W., and of St. Augustine and St. Mary's on the E., const. Florida is naturally divided into two different zunes, about the 28 deg. of lat. 'The surface of' the portion N. of this parallel is more elevaterl, broken, and wooded, than that on its N . sidre, which is generally level and marsliy, and may be temed the true palin-tree section of the U. States. The centre rises into hills of no great elevation, which slope gradually towards the cinif of Nexico and the Atlantie, and NW. towards the lunly of the Continent; but as we proceed towarls the S., the whole surface beeomes a dead, flat, and, in grent part, indurated plain, terminating at the extreme point of the peninsula in hatiss of sharp rocks, purtially covered with shrubby pines.

The ehief rivers are the St. John's, Appalachicula, Suwarec, St. Mark's, and Conecuh. The is. Joln's partakes more of the character of an inlet or sonnd than of a river, from the number of lakes formed by its enlargements. Its chicf lrauch, the Ockliwaha, appears to rise near the centre of the peninsula, aml flows in a NW. direction for abont 80 m ., when it unites with the St, John's proper, which rises within a few miles of the ocean, and the mited water, after a tortnons course of 130 m ., falls into the Athantic, near the XLi, extremity of the terricory. It is a curious faet. that though a fresh water-stream at its month, it is often rendered brackish townrds its head from the waters of the Gulf of Mexico being triven by the winds into the lagoons and marshes among which it has its sources. Both braaches of this river are navigable for some distance above their jumetion, but have little commercial value. The Appalachicola has its estuary in that portion of the territory W. of the peninsula. It has a course of about 100 m . N. to S . within the territory, but does not possess a depth of water proportionate to its magnitude. This river is considered to form the boundary between E. and W. Floridn. There are several lakes, of whieh the Maeao, near the centre of S . Floridh, and Lake St. George, an enlargement of the St. dohn's river, are the principal.
The whole peninsula appears to rest upon a base of shell-limestone of comparatively recent formation and different degrees of hardness. The wil on the banks of the rivers is often very fertile; but the proportion of grood land is, notwithstandliag, betieved to be but small. In the N. part of $F_{\text {. }}$ and in W. Florida there are many dinely ranegated and fertile tracts, and the conntry is often richly wooded. The most valnable district of the territory is a tract of abont 150 m . in length by 30 m , in breadth in W. F'lorida, nearly in the centre of which is Tallahassee, the capital. There are some very extensive swamps and savamahs, particularly the swamp of Oketonoco, half in Florida and half in Georgia; and there are also some very extensive marshes. The dimate of the N. parts, though hot, has been represented as good, and the air as being always clastic and pure. The winters are so mild that it is never necessary to house cattle. In the s. suow never fills, and frost, althourdi it sometimes tember, the hent is very oppressive, mad fevers are prevalent.

The chief agricultural products are-rice, Indian eorn, tobaces, indigo, cottom, and hemp; the olive, vine, llme, shadiock, and other tropical frnits, are snecessfully cultivated, and insome of the oechpied maritime districts the sugar-enne and collce. Large lerds of cattle are reared. Much the timber, besides pitch, tar, and turpentine, are obtained from the forests; the consts amil rivers prowluce a great variety of thah and testucer.

The state is divided into 4 (listricts and 20 comaties. Thulahassee is the capital. Pensacola, St. Augustine, amil Jacksonville ure the other ehief towns: all of these are in the N. From the Nit. Mary's river, which divitles Florida at its Nis. angle from fieorgia, a canal, $20 \check{0} 0 \mathrm{~m}$. in length, extends NE. to SW., aeross the peninsula to Appalachicola IBay, A railroml, 12 m . in length, lietween Lake Whmico and St. Joseph's, eompleted in 1836 ; and another from Jacksonville to St. Mark's, 160 m , in length, were the tirst ruilways constructed in the state.

Florida is entitled to send one member to the Home of Representatives of the United Sitates, and two to the Senate. The popalation, at the census of 1 itio, ineluded $61,745^{\circ}$ slaves, boing nearly a moiety of the inhalitants. The value of roal estate and jersomal property (including slaves) amomited to $22,862,270$ dollars in 18000 , and to $73,161,500$ dollars in 1860.

Florida derives its name from Pasqua Floridn, or I'ulm Sunday, the day on which it was discovered by Jum lonce de Leon, in 1isl2, Its name was for sume longth of time applied by the Spaniards and Italians to the whole W. coast of N, America. It remined a Spmish possession mitil 1763, when it was ceded to the British, soom after which it was divided into E. and W. Floritat. In 1783 the whole territory was restored to Spain. In 1819 negotiations were opened for the transfer of Florida to the United States; and in 1821 a treaty was ratilied, by which it became a part of the mion as a 'territory' under the central gom ver:'nent. It was admitted into the Union as an inderendent state March 3, I84i. An Act of Sccessiun from the United States was passed by a convention Jan. 10, 1861 ; but having been reconfuered by the armies of the North, Florida was arain incorporated into the Union in $986 \overline{5}$.

FLOUR (ST.), a town of France, dép. Cantal, cap. arrome, on a hasaltic platean, 42 m . ViNit, Aurillac. I'op. 5,283 in 1861. The town is illlmilt; strects narrow and gloomy. Its public edifices are, however, generally handsome. Amoner these are a cathedral, episcopal palace, diowesan seminary, Jacobin convent, Jesuit college, hospital, and suh-prefecture. It is well furnished with water. It is the seat of the departmental court of assize, and of tribunals of original jurisdiction and commeree.
FLUSHIN゙: (Dut. Vliessingen), a fortified seaport town of IIolland, prov. Zealand, on the W. Sehedt, near the $s$, extremity of the isl. Waleheren, 4 m . SSW. Middleburgh: lat. $51^{\circ} 26^{\prime} 4 y^{\prime \prime}$ N., long. $3^{\circ} 24^{\prime} 55^{-1 \prime} \mathrm{E}$. I'up. 10,790 in I861. The town is strongly fortified; besides its own ranparts, it is definded, together with its tine harbour, by several adjacent forts, and provided with sluices, by means of which the surrounding country may be inmolated. The town is well lmilt, but presents little worthy of notice, most of its best public buildings having been destroyed during the bombardment by the English in 1809. Its port is extensive, safe, and has deep water. Two canals, communicating with it, enable the largest
merchant-vessels to penetrate into the town, and monload on the quays close to the warehouses. A atrong wall of manomry protects the town against the sell; the side fucing the schelitt is embmined with great eare, and kept in repuir nt an enormons exjense. Floshing has a doekyard, mid a navil arsennl; and is the sent of an mimirulty board. It han an extensive trale with both the E. num W. In lies, mad contimmal communication, by means of pueket-boats, with the other sen-port towns of 1lolland; it hins also a considernble trade with binglund. Few towns have sullered so severely from wir mid inumdations. It holsted the stmidurd of revolt against the Sipaniards, ummediately after the enpture of the Briel in $1 \mathbf{1 5 \%} 2$. Together with sume other towns, it was given to Engrinnd ly the Prince of Ormge in 158í, and remained in British possession till 1616 . From 1809 to 1814 it belonged to tho French. Since 1809 its fortitications have been grently improved, und, in emojunntion with the Fort of Lammekens to the E. and those of lireskens on the opposite side of the river, it now completely commands the nouth of the W. Scheldt, or Moni. Flushing was the birthplace of the cetebruted Duteh admirnl, De liuyter.

FOC1LABERS, a vilhago of Scothand, co. Moray, and par. of lhalle, on a rising ground on the Spey, of m . from its emboucloure in the Moray Frith, $\delta \mathrm{m}$. E. Eighn, and tio m . NW. Aberdeen. I'op. 1,145 in $18 i 1$. The village consists of two wide streets, crossing each other at right angles, and huving a square in the middle. The par. chureli and a fiom. Cath, chatpel are the chief public buildings. An elegant bridge which spans the Siey was partly swept away by the great floods of lese, but has since beei rebuilt. The whole district through which the river flows sulfered severely from these inmodations. The bridge in question, which was erectel in 1801 at a cost of 15,000', has four arehes, of which the two smallest have ench a spmo of 75 ft ., and the two in the middle a span each of 95 ft . Gordon Castle, the splendid residence of the ancient house of Gordon, nud now the property of the Duke of Richmond, is in the immediate vicinity of Fochabers ; a circumstance to which the village owes its origin and any importance that may attach to it. Fiechabers is a burgh of barmy, goverued by a baronbailie nominated by the noble proprietor of Gordon Cantle.
FOGGLA (so-called from its com magazines, fosse), a eity of Southern Italy, cupp of province of same name, in the centre of the great Apulinn plain, 46 m. E. by S. Campobasso, $21 \frac{1}{2} \mathrm{~m} . \mathrm{SW}$. Manfredonia, and 80 m . NE. Iy E. Naples on the railway from Ancoma to Truii and the Gulf of Taranto. Pop. 25,107 in 1861. The town is well louit and paved; the streets are wide and clean; the shops large and well supplied; and the whole has an air of opulence and prosperity. It has a handsome intendenza, or palace, where the governor of the province resides; many excellent private louses, a Gothic cathedral, and about twenty other churches; a grood custom-homse and theatre; and the remains of a palace which, tergether with a large well, was constructed by the Emperor Frederiek 11. The corn magazines, for which Foggia is noted, are very extensive; they streteh under all the large streets and open squares, consisting of vanlts lined with masomry, and their oritices closed u! with boards and chrth. Being situated in a fruitfin comery, and traversed by roads lending to Naples, Bovine, Brindisi, Manfredonia, and Pescart, Foggia has a considerable trade, principally in corn, wool, cheese. enttle, wine, oil, capers, and other agricultural produce. Its consequence always has been, and still is,
owing to its being a ataple market for corn and wool. The dogana, or register-ofllee, at Fogkia has the ilistribition of a flxed nseessment uppan the mumurous flocks of sheep) that deseend in autumun from the monutains of Alruzzo into the pluins of P'uglia, where they winter, and in May return to the high comintry. (Nee Ankezzo.) This duty origimated with the ancient limanas, when they obtained powsession of the comntry. It continued uninterruptedly to be colleeted till the IAth century, after whicli, for alout two centuries, the passage apperars to have been olpen without fee to all sheppherds who chose to bring inwan their flocks. Uniler Alphonso I., however, the crown resumed its rights; and having purchased a considerable extent of pisture lama, formed the turoliere. (Sce A1'una.) The Abruzai shepherls, whe came down with their liocks into the huvoliere. paid a fixed rute per bead lor their sheep; but had not the power to dingiso of their woul, lnathe, cheese, or any other commodity prowheed during their winter resldence, in my fair but that of Fogrin, where they were to he deposited in the roynl marazines, and not tonebed without a permit. The thir of Fogrin, holden from the sth to the 20th of May, is an important mart, and attenuled by a grent number of eommervinl and other visitors. Foggia is the seat of the superim criminul court for the prov., and of the tribunal of commerce for Apulia.
This city appururs to have heen founded in the 9th century, and peopled from Arpi or Argyripm, an macient city 4 m, distant, said to have heent Founded by Diomed, which surremdered to llaunihal after the battle of Canne, nond of which sone fuint vestiges ure still extant. Fuggia was grealy euriched by the Suabian princes of Naples, It was sacked in 12188 by Charles of Anjou, who diet there in 1288. It was nearly destroyed by the cartliquake of 1731 .
FOLDVAR (as, Lassuniam), a town of Hungary, co. Tolna, on the summit and declivity of a bill, on the right bank of the Danuhe, 49 m . s Buda. Pop, 8,890 in 1857. The town has a liom. Cath. high selood and a prison ; it belongs, temether with its lordship. to the university of Pesth.

FOLl(GNO (an. F'ulyimium), a town of Central Italy, proy. P'erugin, in the Val Spoletano, andion the Flaminian Way, 20 m. SE. Perugia, and it $\mathrm{m} . \mathrm{N}$. by W . Spolete, on the railway from Rume to Aucona. P'op. 12,930 in 1858. The town is walled, thit its ramparts and bastions now serye for public promenades. Its streets generally intersect eaeh other at right angles. 'There are few public buildings worthy of notice. The cathedral, commuenced in the last century, is still untinished: there are 8 other churehes, 20 convents, a townhall, and a cabinct of antiquities. There are numerous paper-mills turned by the Topino; and the town has mamafactures of woollen eleth, silk, parchment, and hleachel wax, and a considerable trade in enttle. The vicinity abounds with vineyards, and olive and mulberry plantations. This city nppears to have been anciently of some inportance ; it was considerably augmented on the destruction of the adjacent town of Form Filuminii, by the Lombards, in 740. It was given to the see of Rome in 1439.

FOLKESTONE. a bor., sea-port town, and par: of England, eo. Kent, lathe Shepway, hund. Foblestone ; on the straits of Dover, $6 \dot{2} \mathrm{~m}, \mathrm{SE} . \mathrm{by}$ F. London, and 7 m . Market, Thirsiny, in n ommonions matket-lonse, built withln a recent prind hy the Farl of laduor. The chief employment of the inhabitants is flshing, and occupation in connection with the gooris and the passenger trathe of the Sonth Bustern rnilway. The pierharlou, formed at ant expuense of upwards of jupull, was orlghally built by a local company, but subsequently purchased by the railway. It is very safe, but only aecessible at high water, so that the steamers going to and coming from Bonloge have to vary ti:eir hours of departure and arival, and run in commection with 'tilal trains.' The journey from London to I'aris, by this route, oceupies litile more than ten honrs. There is a stoing modern battery on the heights, and the line of const is defended by three Martello towers. Folkestone has been a member of the cintue port of Dover from a perion previons to the reign of Heme I. Average anmul corporation revenne :HH. IGis, Under the Municipal Reform Act it is povemed by four aldermell and twelve eonncellus; and its limits, which extended along the mast $2 f \mathrm{~m}$. on the E. side of the town, and to Sandeate on the other, being at the same time considerably contracted in those directions and axtended inland, so as to include the Hamlet of Fonk, on the line of road to Canterbury, and abont $\ddagger \mathrm{m}$. from Folkestone. The Reform Act issociated folkestone with the lor, of Hythe in the pririlege of returning one mem. to the II. of C. The turn has sutfiered much at different periosls from encrachmenta of the sea. William Harvey, the discoverer of the circhlation of the blood, was $\pi$ native of Folkestone, having been born here on the Ist of April, 1578 : the cliarity school, endowed by his nephew, was built from a bequest left by bim for the purpose.
FONDI (an. Fiundi), a town of Sonthern Italy, prov. Cascrta, on the ligh road letween Naples and Rome, and on the Appian Way, 11 m . Nli. Terracina, and the sume NW. Gaeta. I'op. 6,212 in 1861. All travellers agree in speaking in dispraise of Fondi. It is a miserable town, near a pestiferous Inke (the an. Laens Funfanus), which roders the air unwholesome; and its inhab. Lenerally are in a wretched condition, though the afighourhood is abundantly fertile in every kind of prodnce. This, in fact, is the Caenbus ager, anciently so famous for its wine--
'Crecubam et prelo domitam Caleno
Tu bibes uvam.'
Tu bibes uvam.' Hor. i. Od. 20.
(See also ii. Od. 14 ; and Martial, xiii. Ep. 15.) But, like the town, the wine has sadly degenerated, and is now quite mororthy the encomiums larisheel on its ancient growths.
Foali is surroundel by the remains of walls of a Cyelopean structure, particularly described by Srinburne (i. 507,508 ). It has il Gothic cathetral, a college, and two houses of charity. It ebtancal the privileges of $a$ Roman cilv, A. U. c. \$17. In 1222 , it was burnt by the aulherents of the emperor Fred. II. It has several times suftered from invasions by the Turks, aspecially in $1 \overline{0} 34$, when they made an unsuccessfu: attempt to carry off Julia Gonzaga, countess of $\mathrm{r}^{2}$ ondi.

Foxtainelbleau, a town ol France, dép. Seine-et-Marne, cap. arrond., near the Seine, in the furest of the same name, and on the railway letween Paris and Lyons, 32 m . SSE. the former
 ENit. The town is well linilt ; streets wile, straight, wall I nved and clean : lmat, exeapting the principal ones, they are dull. It has neveral pood churchas and other pulhic Imildings, two excellent cavalry barrneks, a luspital founderl by Anme of Austrin, atl asylinn for girls estublinheit by Mad. de Mon-
 mbilic buths, a large remervoir: ani at its S. extremity an oleliak erected in 178ti, on ocrasion of the marriage of Lomis XVI. and Marie Antainette. The town las mamifactures of poreciain and other earthenware; but it owes all its celebrity, and ludeed origin, to the palace or chiteat of loutnineblean, a favonrite residence of the former kings of France. 'Ilie precise date of the fumbintion of the palace is micertain. It wonld appear that liobert-lc-l'ieux crected a small honse of retirement on the sjot towards tho emi of tha 10th century ; which elithee, haviug fallen to decay, was rebuilt in the $12 t h$ century by idenis VII. Philip Augustus, Lonis IX., nit other sovereigns, added to it, and it was in particnlar conlarged and embellished by Francis I. It grew rapidly unier the hands of his successors: Henry IV. expender 2,440,850 liv. on it; Louns Xili., XIV.. and XV. abled to and improved it: Napoleon I. is suid to have slent $6,242,000 \mathrm{fr}$. on it between 1804 and 1813. It is a vast pile, with little harmony anong its parts, loing, in fact, rather a collection of palaces of di!lerent epochs; and in different styles of architecture, than a single edifiee. Saracenic, Tuscan, and Greek orders are intermixed and interspersed with the most bizarre and dissimilar ormments; yet, upon tha whole, the building has a striking air of grambenr and majesty. Six palaces are mited by galleries, and enclose six jrincipal courts :-the Cours ath Cheval-blune ; des Fontaines; Ovale, or du Joutjon; de l'Orangerie; des Princes; and des Cuisines. The largest is the Cour du Cheral-blams, which forms also the principal entrance from the W., and derives its mame from an equestrianstatus: in plaster, erectel by Cathorine de Medici, hut uo longer existing. At its upper end there is a remarkably tine flight of stone steps, under which it passage leads to a chapel remarkable for the elegrnec of its architecture and decorations. It wns in this court that Napoleon I. bade adien to his giarl previonsly to his departure for Elba in 1814. The Cour des Iontaines has on one side the suite of apartments ocenpied by Charles V. in 1533. The huildings surrounding the Cone Oevale are the most ancient of all ; they comprise the laill-rown, adomed with paintings by Irimaticeio, Nicolo, \&ec, the library, the king's and queen's apmartments, the throne, and coumeil-halls. In one of these rooms the small round tuble is still shown on which Napoleon I. signed his act of abdication in 1814. The Cour de l'Orangerie is also called the Cour de Diane, from a fine bromze statue of Diana in its centre; in the Galerie des Cerfis, one of the buidings surromnding it, Monaldeschi was assassinated by order of Christima of Sweden. The Cour des Princes, the smallest of all, is surrounded by the apartments occupied by Queen Christina. The Cour des Cusines is larse, regnlar, and enclosed with buidings erected by Henri IV. 'T'ho palace contains a rreat number of ancient and modern paintings ; it is surrommed, especinly on the $\mathrm{S}_{\text {. }}$ side, by tine gandens, ormamented with fountains and fish-ponds, and traversed by a canal nearly 3-4ths of a mile in length. The forest of Fontaineblean comprises 32,875 arpents, or about 34,200 acres, a part being on the opposite side of the Seine. Its surface is very varied, and in parts very picturesure. It suplies I'aris with a smatl
portion of its wood-fied, anal witl a considerable jurt of its parcing stone.
The chatean of Fimitainelilen! has lieen the merne of mmur hintorical eventen I lillip IV., Hen. 1II., and Louin XIII, were horn in it: and the flest momnrel dider there. It was visited by leeter the Girvit ; lanis XV. esponsed the dmughtere of the king of l'oland in this palnee; Pope l'ins VII. was ctutherd within ite wulls for 18 monthes and it is latimutely comnected will the history of Napulem. It was comparatively neglected for lomis XVIH, and Clarles X. ; but King Lonis Shilippe restored it to somewhit of its anclent gromalemor. In $18: 15^{7}$ the muptials of the Duke of Orlenns were celebrated here with great jwmpl. Under Ninpolewn III., the pmiace was still mure enlarged num cmbellished, hepming the seene of hanimions antumal fietes, rivalling those of Lentis XIV.

FONTALABLA (properly F'uenterrabia), a fortifled fromtier and sen-port town of Spain, Biseny, prov. Guipuzeon, on a small peninsula on the left hank of the Bidasson, at Its month, 20) m. W, by
 to be reckoned one of the keys of spain; but its walls were levelled by the british troops in 181:3. On the sile of the sea it is, however, defended by Fort st, Dilme, and on the land side covered ly a lofty hill. It has a royal pulace, now oceupied by the military governor mad the civil sulperintendent, a tuwn-hall, hospital, comvent, nuid a tine pur. church dating from the 15th century. On fle Nli. side of the town is the harbmer, which is shallow, anal admits only barks of 40 or 50 tons hurden. The principal occupntion of the inhab. is tishing. Fontarabla has sustained mumerous sieges: : its firtifleations were greatly aurnimentel by the emperor Charles V.: inder I'hilip IV. it received the romk and title of a city. The nuxiliary Itritish legion under Gencral Evans had nome severe fighting with the Carlint forees in the vienity of this town, which they took in 18:17.
FONTENAY, a town of France, dep. Vendée, eap. arroal., on the Venile, at the point where it liecones navigable 42 m . SE. Nopolem-Vendée. l'op. 7,971 in 1861. With the expeption of some monlern honses, the town is very ill-built; streets narrow, ill-pmeded, and dirty. The chureh, with a Npire $: 11 \mathrm{ft}$. in height, is ihe olject most worthy of notice. The town was originally fortified, nud hat a castle belonging to the counts of l'oitiers, nume ruins of which may still be seen. Fontenay is the seat of a sub-prefecture, a court of original juristliction, and a commual college : it has linen ind cotton cloth factories, tanneries and Ireweries and sume trale in timber, charcoal, lordeanx and other wines. A regular communication is kept up by steaners between Fontenay nul La Rochelle.

FONTENOY, a village of Helgium, prov. Haimailt, 4 m . SE. Tomrnay. Here, on the 30 th of April, 1745 , a battle was fought between the allied Surfishl, Hanoverian, and Dutch forees, under the Duke of Cumberlaad, and the French, under Marshal Snxe, Louis XY. and the Dauphin being also with the army. The contest was obstinate mad severe. At one time victory seemed to have declared in favour of the allies; and if the English liad heen properly supported by the Dutch, such would probably liave been the case. In the end, however, the French vere victorions. 'Les Anglais,' says Voltaire, 'se rallierent, mais ils ciderent; ils quitterent le champ rele bataille saus tumalte, sans canfusion, "t furent vaincus avec honsenr,' (Siecle de Louis XV, chap. 15.) The allies lost nbout 7,000 men killed and wounded, and 2,000 prisoners, in this occasion. The loss of the French amounted to nearly ti, 0 mm men killed and wounded.

FORFAR, or ANGUS, a marit. co, on the F., eonst of Seothan, having 1:, the German Oeean, S. the Frith of Thy and the co. I'erth, W. the Interer, N, Aberlecen, anil NE. Klacurtine. It is of a qualrnugular nhape, anil compirlses an aren of kxy
 into finur districts, whereof the first mul monteretenslve, called the 'lirnes of Aupus,' comprives all the S. slope of the Grampians, from the summit of the ritge till it lowes itself in the valley of simullonure: The momenains in this livisioti are mesty rounded med thme, hat in parts they exlibilt midi, territic precipices. The serome divislen convisto of that portion of the valley of strathmore that lies in this co. hetween the lient of the Grampinas and the Sillhw hills (ILow of Augus), mind is for the most part $n$ linely diversitled, well cultivatel commtry. The thirit division comsists of a partiont of the range called the Sidlaw hills, paralle to the
 $1, d 00 \mathrm{ft}$. Sume of them are conical, detachethand coverel with heath, while others are wholly cultivated. 'Dmasluman Ilill' is fomme in this group. The fourth and last division consists of the rich, low-lying, level land between the Sidlaw hills and the sea mad the Frith of Tay. Principal rivers $\mathrm{S}_{\text {. }}$, and S. Esks and Isla. No where, perhaps, in (ireat Iritain lus arriculture and the appearance of the country been more rapilly improved than in this co. The progress male in this respect dhing the last sixty years has been quite extraorlinury, At the hegiuning of the century the appraaname of the country was bare and bleak, and the climate cold and damp, owing to the qumatity of water on the land. Most of the houses were at that time of the rulest and meanest kind, built of unhewn stone, and covered with thatch; scarcely one of mason work, or covered with slates. Dome the farms are all laid ont and enclosed, draining is carried to great perfection, and farm-houseg and oflices are noutly built nud covered. Thriving woods and belts of plantations are risiug ap, and giving a rich and clothed appearance to the co, Along with all this it is gratifying to observe that the habits of the people are improving. Ther isa greater neatness and cleanliness in their dwelliws: and a greater slare of the comforts of life amongst them ; and thongh last, not lenst, there is evidently nu incrensing devire of information, and, generally: spenking, a higher nud better tone of moral feeling: The vieions practice of holding land in run-rig (seo AngYae), that formerly prevailed in all the hill districts of this co., is now comparatively rare; and improvements are beginning to be made erea in the cottages among the Grampians. There are some grent estates, but property is, notwithstauling, a good denl subelivided. Exceptiug limestone, minerals are of no importance. This en las recently becomo the principal seat of the manuficture of coarse linens, which is carried on to agreat extent at l lundec, Arbroath, l'orfar, Montrose and other towns. l'orfar contains $\bar{y}$ royal bors, and if

Ponfar, a parl, and mynl loor, and par, of Scotlani, cap, of the alove co., In the How of Angma, a valley of Strathmore, 14 m, N. Dinilee, ofl the foottish Midlanil Janctlon railway, I'op, 9,258 in 186 l . The town consists prinelpally of one hong atreet, and of a shorter one at righit anglea to is. Forfar is a lor, of considerable antiquity, and in the centre of" a well-cultivatel county, linving excellent communientions on all slides. A great privertion of Its laliab. are engaged in weaving, chetly ill connection with other towns. The chief trade is the weaving of Osmaburgs and coarse linens. The town has long been famous for the manufacture of a particular kind of shoes called 'lorygen,' sulapted for the use of a Highland district. The streets are well built, and many now hunses are in progress; the tendency of the maniafacturer who works at home being to convert his canings, as soon as possible, into a now feu, or the pruperty of a piece of land. There are valuable quaries here, the products of which are all sent to agrat distance. The means of elucation are extensive and goorl; the town having an acndemy fue langumges, a parish school, a meehanics' iustitute, Sumbay schuols, and a large infant school: here also is a subscription news-room, a sulseriptivalibrary, and a mechanics' reading room. Forfar is govenied by a provost, 2 bailies, and 16 coutnsellurs, Corporation revenue $2,361 \%$. in $18 t 53-1$. Fuffar unites with Montrose, Arbroath, Irechin, and liervie, in sending 1 m , to the 11 . of (C. liegisterel parl, electors, 301 in 1865. Anmmal value of ral proprerty, $14,0.55$ in $1 \times(64-5$.
FOKLA, or FORIC, a sen-port town of Southern Italy, on the W. shore of the island of Inchia, cap. distr, of same name. l'op, $13,70-1$ lin 18til. Streets rery narrow, but the houses are solitly built, and there are 3 good churches, all very much decorated. It has a gosol harbour, aum some trade with Naples, Leghorn, and Genon. In its vicinity there are hot mineml spriugs, used na batiss.
YONLI (an. Forwm Livi'), a town of Central Italy, eap, of province of same uame, in a fertile phain between the Montone and lionen, on the limilian Way, 18 m . SE. Ihologrn, nan 15 m . SW, hivenns, on the ruilway from Bologna to Aneom. lop, 36,566 in 1861 . The town is surrougded by od walls; is generully welt built ; has 4 spacious situets; a square, in which there are several fine laildings; a cathedral; 9 other churches; and numerous convents. Many of the private residences are built of marble, and the streets are tammented with arcades. The ceiling in the enucil-chamber of the town-hall was painted by Raphael. Forli is the seat of a provincial governur, and a court of primary jurisdiction dependent on a superior court at Bologna. It has manufactures of plain silk riband anit silk twist, and of oilclath, woollen fabrics, wax, nitre, and refined siphur. It also trades in corn, wines, oil, hemp, and aniseed, which, as well as its manufactures, is considerally facilitated by the railway, as well as a eanal from Acquaviva. There is a college, a puilie library, and some learned societies. Forli mas founded anno 205 B.c. It was annexed to the see of Rome by Pope Julius II. In 1797, the Freneh made it the eap, of the dep, of the Rulieon. It was rennited to the Koman dom. in 1815, but fell to the kingdom of Italy iu 1860 .
YoL. II.

FORLINTOPOLI (nn. Finvm Pepilit), a town of Contral Italy, prov, Forli, $\delta \mathrm{mm}$, SLi, Forlt, on the
 The town lian man ancient enstle, a cutherimb, two parish churehes, and meveral convouta. Jhis mal the other formus in ilitherent parts of Italy are mipposed to have been all romerntl, or anslas towns; but the proximity of those on the limilimi Way, barticularly of Forli and Forllupupoli, seems to contrndict that opinlon.

F(ollmOSA (Chin. Theacon, of 'Terrace Ilay,') an island in the Chinese Sea, lielonging partly to Chinn; between lat. $22^{\circ}$ and $25^{\circ} 30^{\circ} \mathrm{N}_{1}$, and ling. $120^{\circ} 30^{\prime}$ and $122^{\circ} \mathrm{F}$. ; alont 80 mu , from the Chi$n^{*}$ coast, from which it is reparatell hy the channe: oi Fo-kien, and 170 m . N. Iduzom, the clied of the Philippine lslanis. Iengeth, N. to N., alsuit 250 mi ; ; brendth, in its centro, alont 80 m . The area is estimated at $14,0(0) \mathrm{sq}, \mathrm{m}$., and tho pop. is jubuably between $2,000,000$ and $8,000,000$.

A chain of monntains ruas through the island in its entire length, forming, in peneral, the harrier between the Chiness on the W . and the independent natlves of the unexplored conntry on tho F.. side. On many of lte summits snow remalins diuring most part of the simmer, and Itimbolilt has shpfosed that a portion of it reaches an absolute elevation uf upwaris of $12,000 \mathrm{ft}$. It exhibits distinet evitence of former voleanic actlon in some extinet craters; in other parts flumes. mephitic gases, de. burst out of the earili ; ant sulphur, nuphith, usal other voleanie preslucts aro abinidant. Somo parts of the eonast present bold heallands, lut ull the W. shore is thit, unil surrumiled with rocks and quicksamels. Its harbours, wheh were formerly very gool, have becomo nearly uneless, except to junks of very small tonmage, from the rapid increase of the land on the sea; so that, it present, Furmosa hins but one good port, that of Ke-lung, at its N. extremity.
'Thut portion of Fornnosa which is possessed by the Chinese well deserves its mame; the nir is wholesome, and the soil very fruit linl, 'The mumerous rivalets from the monatains fertilise tho extensive phins which sprend below; but thruughont the island the water is unwholesome, mid, to moacelimated strangers, it is often very injurims. All the large plain of the $S$. resemibles a vast well-cnltivited harden. Almost all grains anal fruits may be probluced on one purt of the islamet or another; but riee, shgar, eamphor, tobneco, \&\& are the clicef productions. Formosa lous fomi Iseet familiarly known as the framary of the Chines: maritime provinces. If wars intervene, or violent. storms prevent the shipment of rice to the conat, a senteity immediately ensums, nul extensive alistress, with another sure result-multiplied piracies by the destitute Chinese. 'The quantity ol' rice exported from Formosn to Fuls-keen and Chekeang is very considerable, mal employs more than 300 junks. Of sugar there nmmally arrivo ut the single port of 'Teen-tsin (in Chinas) njwards of 70 laden junks. The expertation of camphor is likewise bo means small. Nuch of the camphor in the Canton market is supplied from liormosn.' (Chinese liepository, ii. 419, 420.) Besides the foregoing produets, wheat, maize, millet, kitehen vegetables of many kinds, truflies, de.; colocasia, a kini of arum, the root of which is a chief article of food in the interior; oranges, bananas, cocor and areca nuts, peaches, figs, melons, and numerous other European and Asiatic fruits are cultivated. Chestnut woods are plentiful; and in the N. especially, a good deal of timber for ship-building is obtained. Pepper, aloes, eoffee, a kind of green tea, but different from the Chinese, cotton, hemp, and silk, are other important articles

of culture. The ox null bulfato are used for tillage
 are almindant. 'The leopart, tiger, welf, Rer, inlinblt the inland, bint in mot infere its cillivated jurtion: phensaits, hares, minl other khinde of gnme
 In tho li. part of Purmosa, an it in meen in the bande of the hinabitmints t lut the chief himerals are wilt und silpliur, of which latter a goom demi han leren ment to Chimanance 1819 , for the nutionfirture of anupowiler.
'I'lie Chimese colonista of the ixland are moutly from the opposite prov, of lio-kiett, hitid have emigrented primeipally from poverty. 'I'hey nre a laImorions anil linduntrions race, well dimposed towarils foreipners, bint very turbinlent in respeet to the home authorities, who mulutnin only a very prem earions awny over them,-the Formonans havilug frepuently risen in onen rehellon ngainst their mother conntry. The greater jurt if them nre cultivators of the moil; hut many of the Amoy mens (from whiels district a great momber of the emigrants havo come) are mefelinits, flshermen, und mallurs. The trule with China is very extrinslve: the chiof expurte to that comintry have been montioned; the principal imports thence nre ten, silk, and woollen, and other kinde of mamufaetured foocls. The trade in montly in the hands of Fokien merchants, who have dimo mlvancel the chief part of the cajital necessary for the cultivation of the soil. An many an 160 junks a month hre estimated to leave lookien fur the W. coast of Formosa; whers, however, they are obliged to lie at a great distance from the shore, while carts with wheels destifite of spokes, ifrawn by buthluces, nee used to earry t ie cargoes to them thromerli the water. Thele are no junks strletly lelonging to the inand; all the shipping is the promerty of the Amoy merehants or of forcigners, chiefly linglish. The inpurt and export trade is not very large; the prinejpal article of import is opinm, of which $22_{2}$ chests arrived in $18 t i 2$, and 612 chents in 1Ni:3. (lieport of Vice-Consul Swinhoe, dated Fohmary 1, 181.1.$)$
'I'he native inhahitants of the E. of Formosa bear no resemblance to the Chinese; hat they have apparently a: alliance with the Malay or 1'ulynesian trihes. "I'hey are of a slender shape, olive complexion, wear lomg huir, are elad with a piece of eloth from the waist to the knees, blacken the teeth, and wear ear-rings and collars. In the s., those who are not civilised live in cottages of lamboo and straw, raised on a kind of terrace 3 or 4 fi. hifli, built like an inverted funnel: and from 15 to 40 ft . in cliameter. In these they have neither chinir, table, bed, nor any movealle. They tattoo their skin. In the N. they clothe themkelves with deer-skins. $\qquad$ - They have no hooks, or written languare; neither have they any king or common head, lint petty chiefs and combcils of elders, and distinguished men, mach like the N. American Indians. It clues not appear whether they have any separate rriesthoorl, but it is prolable that there is mone beyond the conjurors num enchanters of all savage labes, nor any ancient and fixed ceremonies of divine worship, or system of superstition. Phey are represented hy the Chimese as free from theft and deception among themselves, and just towarils each other, but excessively revengefn] when ontraged.' (Chinese lippository, ii. 419.) The Chinese territory in Formona having, for a lengethened period, leen gradually extending, the really independent tribes have receded towarils the li. const ; anme of the others have hecome parially civilised, settled in villages, and intermixal with che linreler Chinese.

in 1861. The inhahitants are chiefly employed in the manufacture of silk, suid to be the thest in Italy. The town has an old fortress; a the catheatral, containing many good paintings and interesting inseriptions; three otherchurches, six eonvents, a linulsome one-arched bridge, and the ruins of an anment thenire. Near the town was frught, anno $19.1 \mathrm{n} . \mathrm{c}$., the great battle between the Carthagimbus muder Avelrulanl, the brother of I lamibnl, and the Romanas, in which the fommer were totally defeated, and their general killed. Tranlition has preserved the memory of the erent in the name of a hill in the vicinity, called Mowte de Aswlrubale. This vietory determined the fite of the long-eontested strurgle between the Romans and Carthaginians in fivour of the former. Fiossombrone was destroved by the Goths, aud again be the Jombards. but rehuilt by the Malatesti. Ihnt lamily sold it in 1410 to the lake of Urhine, with whose territories it was afterwards transferred to the see of liome.

FOUAII, a town in the Delta of Firypt, on the F. bank of the liosetta branch of the Nile, prov. Gharbieh. 'Though still a considerable village, it lost its importance in the sixternth century, when the trade of which it was the seat was transferred to liosetta. Foum is most arrecably situated amidst a great number of thonrisling villages and produetive fields. The river flows past it through one of the widest and most pieturesque portions of its chnnnels and banks.

FOLGBElilis, a town of France, dép. Ille-etVilaine, cap, arrond., on a hill mear the Nancon, 27 m . NE. Rennes. 1'op. $9,34 \cdot \mathrm{ill} 1861$. It is well built, has a dine promenade, and is altogether a very agreeable town. A chalybeate spring attracts to it ummerons visitors. Fougeres was a strong town in the fifteentl century, and was considered one of the keys of Brittriny till that prov. was anited to the French crown. Duriug the last century it suffered from four destructive fires, on which accomnt few of its ancient buildings exist, excepting the ruins of a Gothic enstle, which form a very pieturesque olject. There are large manufactures of snilcloth and hemp falries, known in trate as St. George eloth. flamnels of excellent quality, hats, leather, and dye-honses. It is the seat of a sub-prefecture, a court of primary jurisdiction, and a communnl college.

FILAMLINGILAM, a town am! par. of England, co. Suffolk, hund. Loes, on an eminence, near one of the sources of the Alile, 14 m . NE. Ipsurieh, and $90 \frac{1}{4} \mathrm{~m}$. NE. Loncion, by Great Eastern railway. Pop. 2,252 in 18til. Here is an olil church. with a tower 96 ft . high; a free school, and several sets of almshouses. Here, also, are the ruins of a magniticent castle, which was a place of importnuce in the Saxon times, and to which the Princess Mary repaired cluring the attempt made hy the partisans of Lady Jane Grey to place the Jitter on the thronc.

FLANCAVILLA, a town of Southern laly, prov. Otranto, eap. distr., on a hill, in th tertile but malcalthy territory, $23 \frac{1}{2} \mathrm{~m}$. WSW. Brimlisi, and $17 \mathrm{~m} . \mathrm{liNE}$. Taranto. Pop. $15,9.13$ in 1861. The town is large and regularly luilt: the streets wite and straight; the honsesshowy, thongh in a heavy style of arelitecture. Sinee the year 1734, when a consiterable part of the town was thrown down ly an earthquake, the dwellings have not been rised more than one atory above the gromul floor. The avenues to the gates are well planted, and afford a pleasant shade. The collego is a large edifice, with many handsume halls and galleries. The principal par. clurch is gay and well lighted; but su stuccoel, festomed, and flowery, that the whole decoration is a mere chaos. There are two
hospitals, a charltable asylnm, and several convents ; with numufactures of woollen stuflis, cotton storkings, earthenware, and a kind of suluf similar to that made in Spain. Franemvilla was foumded in the fomrtenth eentury, and owes its name to an exemption from taxation for tell years, grauted to all pernons who set tled in it.

FliANCE (EMI'lliE OF'), one of the ridhest, most inportnist, and powerfinl of the states of Europe, in the W. part of which it is advantage-
 and long. $4^{\circ} 50^{\prime} \mathrm{W}$. and $80200^{\prime} \mathrm{E}$. ; having NW. and N. the English Channel (Laz Namehe), the Straits of Dover (I'us de Culuis), and the North Sea; Nl:. Belgimm, Dntch Inxamburg, and the Rhenish proves of Prussia and Bavariat Fo, the territories of Baden, Switzerland, abd laly: S. the Mediterramean and Spain ; and W. the liay of Biscay and the Atlantic. Exerpt on its XE. frontier, its actual are identieal with its matural bomblaries; leing on the bi. the Whine from the influx of the lamer to lbasle, the Jumamonatins, and the $A$ lps to the Mediterranean; the latter and the l'yrences on the S.; imd NW. and W. the English Chamel and the ocean. The slape of Frame is somewhat hexagomal. Its greatest length NW. to SF. (from the extrenity of the dép. Finisterre to Nice, on the Meliterranean) is alout bib4 m.; its greatest brealth (a line crossing the former nearly at right angles) is nbont $1: 20 \mathrm{~m}$. Length, N. to S., Dunkirk to P'erpignan, nearly 600 m ; greatest brealth E. to W. (a line passing from near Lauterhurg to Brest, through Paris) about the same; least brealth le, to W. ahont its centre 335 m . Inelusive of Corsica and the three departments cerled to France since the taking of the last census, the total area is estimated, in the oflicial tables published by the Freneh government, at $51,223,897$ liectares, or 211,452 English sq. m. The pop., which in 1801 was $27,34!, 000$, hat increased in 1821 to $30,461,875$; in 1831 to 22,569,223; in 1836 to $33,5 \mathrm{H}, 910$; in 18.16 to $35,400,486$; in 1851 to $35,783,059$; and in 1861 to $36,713,166$. The subseçuent addition of the provinces ceded ly Italy bronght the popmlation to $37,382,22$ a. (Block, Statistique de la France; and ollicial reports in the Moniteur Universel).

Physiral Groaraphy, Position, Mroutiers, Consts, and Islouds.-France is indelited not only to her large population, and the active spirit of her people, but in a great measure to lier almirnile geographical posation, for her commanting inthence in Euronean attiairs. Unlike any of the other states of Central Europe, she has the command of three seas, incluling those which wash both the $X$. and the S. shores of that continent. The NW. const presents the two considerable peninsulas of Brittany and Cotentin, the bay of St. Malo between them, the astuaries of the Scine, and the harbmes of Morlaix, Cherhourg, Invre, Bonlogne, Calais, anul Dunkirk. From Dunkirk to Calais the shore is loorilered by samdy downs. From the latter point to the mouth of the Seine, the const is chiofly characterised by chalk and marl cliffs; farther W. granitic cliffis alternate with low shelvingr shores. There is selilom decp water near the shore on this coast; the bay of Cumeale near Arranches, for instance, is in a great measure left dry at ebb-tide, and passengers at. such times qu from the mainland to Nont St. Michel, across the sands, in carriages. The W. part of this eoast is beset with rocks; these are especially mumpous lutween the months of the Seine and the Vire. Good harbours are few, and mavigution is rendered dangerons hy violent tides, the force of which is attested by inmerons salt marshes alome the shore, produced liy irruptions of the sea. The W. coast,

F. Weller, inel Sailp
formed in part hy the peninsula of Brittany, is at first elevated, bold and roeky, but as it proceeds S. it gradmully declines; and from the month of the dironde to the fiot of the l'yrences, it presents an mblroken line of samly downs interspersed with marsiens. llesides tha Giromde, the Lavire disemIngrues on this const which is lirther indented by mumerons bays. 'The S. const, exerpt in its b., purt, is cenernlly low, suady, and boridered, where it surmunds the Gulf of Corons, by numeroms lagonas; and its burlomes are in general nether well sheftered nor casy of aceess, though this is hy nos means the case with Tonlon mad one or two more, Exelusive of those nt the month of the Rhone, the ishanda ronnd limace, and belonging to har, are of comparatively little importanco: they lie nowstly along the W. const: Oleron, Re, Yen, Noimontiers, Belle-ile, mad Onessant (Ushant) being the chief. Those in the Mediterrnuean are the inses of Hières, liatonean, l'omêgre, se., near Marseilles; and the only ones in the Chamel are Briliat, and a few roeky groups in the bay of St. Male, of which that of Chansey is the prineipal. Guerasey, Jersey, Aldemey, dec. belong to Enghand, and are the only remains of the extensive dominions the English sovereigns onee possessed in lirnuce. (IIngn, France Pittoresque; Diet. Géogr.; Apercul Statistipue.)
Mountains.-Aceording to Bruguière (Orographic de l' Burope), these belong wholly to the Alpine and lyrenean systems, the line of separation between which is the valley traversed by the canal of Languedoc. The ramitications of the Alpine system in France are therefore far more extensive than those of the P'yrenean; they comprise the mountain ranges throughout the country, except in the SW. The principal mountain chain, or great watershed of France, intersects the country under the uanes of the Fuucilles, platean of Langres, Côte d'Or, Cevennes, dec., in a general direction NE. to SW.; lat rumbing much nearer to the SE. than the NW. extremity of the kingdom, which is thereby divided into two very nuequal parts. On the $N$. and W. sides of this chain seyeral considerable brunches are given oft; as the Vorges, Moselle, and Argonne rauges, the platcau d'Orléans, and Morvan mountains, which stretch to the extremities of Normandy and lifitany, dec. These ranges separate the principal river batins, those of the Rhine, Moselle, Mense, Scine and Loire, from each other; the basin of the thone is on the SLi, side of the Cevemnes, enclosel between them anil the Alps. Connected by ramilications with the Cevemes, there is a gronip of mountains of voleanic origin seattered over Puy de Dôme, Cantal, and some aljacent deps. in the eentre anal S. of trance. This group, whieh balbi und other geographers regard as a separate system, under the title of Gallo-Francique, separates the basin of the Loire from that of the Garome. The highest points of this group batve a somewhat grenter elevation than those of the Fineilles and Cevennes chain. The L'ie-de-Sancy (M. Dore) is estimated to be $6,223 \mathrm{ft}$. in height, and the llomb-de-Cantal, $6,095 \mathrm{ft}$; while Mezene, the lotient of the Cevennes, is only $5,918 \mathrm{ft}$. high; Le Reculet (Jura), 5, ,i:33 its and the Ballon de Sulz (Vosges), 4,0888 ft . The l'yrenees send off numerons lateral brancles through the SE. déps.; their loftiest summit within the French territory is M. 1'erdn, $10,894 \mathrm{ft}$. in height. But the culminating point helongs to the $\boldsymbol{N}$ pss, and is the ' monarch of momtuins,' Mont Mhue; the next greatest in height is M. Olm, 4,214 mitres, or $13,825 \mathrm{ft}$, high; next to which is the l'ic-des-Eerins, $13,468 \mathrm{ft}$. in elevation.

Rivers,-Leaving out of view the Rhine, which
can searely the ealled a French rloer, since merely russ for about 100 m . along a purtion of its E. frontier, France possesses nu river to rank with the Wolgh or the Damule. The principal are the Loire, Shone, Garonne, Scine, Mense, und Moselle. Exeept the Rlanie, which has for tho most part a motherly comese, all the ninve-maned run in a N. or W. direction. The Lavere, whold is the largest, and truverses the centre of the kingdom, rises in the mometuins of the Vivarals (Ardecha), near Mezene, it rmas gencrully NIV. as firr as Orleans, and thence nostly WSW., with a somewhat torthons conrse to its month in the Athintic. The length of its entire course is alomt 6 20 m ., of which about 510 m . ure mavigathle. It receives from the N . the Arroms, the Minine (firmed by the Mayenne and Sirthe), and the Enilre; null from the s. the Allier, Cher, Intre, Vieme, Sevre-Numtaise, \&e. Névers, Orlems, Blois, Tours, Sammur, aud Nantes are situatell npon its banks. 'The Rhome rises in Switzerlanl, beyond the Simplom, milafter traversing the lakes of Geneva, aud forcing for itself' a passage throngh the $\Lambda 1 p s$, not firr from Chambery, enters France S. of the Jurn range, forming the entire S. nud almost all the W. bomdary of the dep. of Ais. From Lyons, where it receives the Saone, the direction al the Rhone is nearly stue S. tu Arlew, where its delta commences; and it falls into the Mediterranean by a donble set of mouths, nfeer a course of 530 m . within the Freneh dom., more than 310 of which are navigable. Its principnl atluent is the Saône, which rums through birancheComté and llurgundy, with un entire course of abont 213 m , of which about 165 are navigable. Besides the Saine, the hhone receives from the N. the Sin; it is joined from the B. by the fsere, Drôme, and Durimee, fanous for its rupidity; and from the W. it receives the Erieus, Ardeche, Gardon, \&c. Lyons, Valenee, Montelimart, Avignon, Thrascom, and Arles are the chicf eities rual towns on the hhome: upon the Snône (which river is augmented by the Douiss), Gray, Clalons-sur-Saône, and Macon are situated. The Garome rises in the Spamish Pyrenees, near M. Maladettn, and rums at tirst NE. as far as Toulonse, but thence onward its course is generally NW, to its month (or rather the month of its astuary, which bears the name of the Gironde, in the lhay of Biscay, about $5 \overline{5} \mathrm{~m}$. NNW. Bordeanx, mul 120 m. SSits the mouth of the Loire. The entire length of its course, including the Gironde, is estimated at alwnt 350 m ., nearly 29.1 of which are natvignble. It receives some considerable tributaries; as the Taru, which is navigable for a distance of 90 m. ; the Lut, navigable for 190 m .; and the Dordogne, navigable for 120 m . from the E., amt from the S . in the earlier part of its course; the Snve, Gimone, Gers, Baise, \&ec. Tonlonse, Agen, and Bordeaux are situated on the Caronac. The Scine rises in lurgumly, about 18 m . NW. Dijom; its general course is NW., but it is exceedingly torcuons; and though in a direct line its course is no more tham abont 250 m ., from its mouth in the British Chamel, the windings of the river make its total length as much as 800 m . It enters the Chamel by a wide and capacious mouth, on the N. side of which is the town of laver ; its restuary, and the lower part of its course, is sulyject to the phenomenon of the bore, which sometimes oceasions considerable damage. (See Amazon, Solway Fhrif, de.) The principal atthent of the Selne is the Marne: besides which, it receives from the E. the Aube and Dise; and from the $S$. and W. the Yome, Juine, Eure, Hille, dic. P'aris, Chatillon, 'Troyes, Melun, St. Denis, St. Germains, Audely, Elibeuf, lionen, Honlleur, and llavre are
situated mon its banks, The Mame, which rims chistly thromgh Champagne, has a mavignble conrse of elt5 m.: it receives the Ilais, Ormain, and Ourey; Chalons-sur-Marme, Fipurna!y, Chà-temin-Thiorry, mal Monx are seated on it. Bith the Mense mind the Mosedle rum N, to join the Shane heyom the Promeld dom, the former has a mavignhle conres of tite m., mil the batter cme of alonit ie m. within lirnues. These rivers, how-
 Sombre, mul othery, belomg more properly to lielghom than to Frames. The Charente, the hasin of which lies between thase of the laire mid the Dordogne, las a mavighbe lengit of about 120 m.; thil the Adomer, which traserses the dijps, of the l'yreneres noml Lamdes, lass a great montwe of tributarles, inchuting the Midonere, I'mu, Olorom, de... and a comres generally W., which is mavigalie lier 76 m . The other rivers wortlay of any notice, nu the Somme, brae, Aivne, Meurthi, Lames, Viluhe, Arioge, Itrants. Var, de, are? refremed to muller hae dipw, to which ther give their name, or in which their emmes is chicity sitanted. (Hugo; Aprem statistique.)

Lathes rend Murshes.-Of the furmer there are remarknlly few, mul those quite insignidimat in pint of size. The largest is that of Cirmad Diem,
 across. There are a liew small lakes nmongst the Jura ranges, mud others oeconpy extinct eraters in the wolemie district. In Ain mall Laire-et-Cher mathles are mumens. The extensive lagmes on the S. and sil: reasts and elsewhere have heren alrealy alladed to; ther are too shallow to be used otherwise tham for thang and salt-woms.
Geolog!, Sail, whe Minerals.-Tiewhygically, the whole of France may be considered as ame extensive hasin, the ciremmerence and centre of which consist of primitive formations, the intermediate space heing litled with these of a seendary and tertiary kind. Primitive rocks alomm! most in the A pas, the l'yrences, the peninsula of britany, and the momutains of the so-ealled Gallo-Prancique srstem in the centre of France. Ther are, however, met with in n part of Maine and Normandy, in Vendie, in Ardemes, where they are conterminons with a chain of primitive rocks which extem into NIV. Germany, in the Vosges. in Danphiny (Isere), and om thie s. coast Li. of Marseilles. The nowt widely dithised primary roeks are granite, gneiss, mienceons and arpillaceons selists, and primitive limestone. In Vendee, to the foreguing may le added a great mumber of others, ineluding porphyry, diorite, eelogite, and serpentines; and in the Damphiny $\mathrm{Alps}^{\text {p }}$ and the l'yrences the rocks are said to present a still greater diversity. In the latter momutains calcarems rocks are very abmodant; and some of a transition kind contain a great mumber of orgraic remains, even at an eleration of 1 , lime tevises, or $10,230 \mathrm{ft}$. (Diet. Céngr.) Argillaeeous sehist, also containing numerons organic remains, is prevalent throughout a part of lirittany; granitic rocks predominate at the extremity of that peninsula, Porplyyy of varions kinds, some of Which exhibit great heaty, is the prevailing rock in the Vosges momtains. In the central group of Limonsin and Auvergne, gneiss, granites, and micaceons selists are abmulant, but differ greatly in their characters from those of the surromuling mountain chains. The l'uy de ioome and some other aljacent momenains have a base of trachite, and in the Vivarais (Ardeche), especially, gronns of rigantie hasaltic colmons are frequently met with in some phaces alternating with calcarems strath comtaining fresh water sholls. These rocks, together with the traces of extinct craters, the
existence of lava stremms, and other volenic promets, clearly paint to a time of volemile netivily in this region, which has prolably lina plate nt men very remete perind in the hintury of our planet. It imay lare lae mentioned that triveres al valenice ation have also heren met with on the hanks of the Liline, in the Vosiges, and ha the dep. Vir.
The interval between the primitive firmatinns "il' the centre and circomferemee of Pranese is andand entirely oeempied hy secombary limatimes. These are hearly averywhere coleareins or marly, gelle rally romplate, and oftell contain a vavt nutioTher of shinds, madrepores, and other orgamie remains. Thy compase many lopg hill-ranges, of no great height, hot frempently step and hare, or envered mily hy a thin vegetalde soil. All larraine, and a great part of Framelhe-Comite and lhatmily, consist of these formations. It is ont this kimil of hand hat the growthas yiviling the thest Burgmely wines are raised in the dite d'Or. The secmadary formations extend thromgh bunphing, mid oni the lefit mak of the likme as fiar as the Mediterramean, thrment languedoe with the Cownes quite to the l'yremere; mind survinading the Iaris lasin, they reach the sea both on the N. mill W. const.

The tertiary deposits of France are highly interesting: they are mostly calcarems, enclising grent quantities of shells nind the remains of finssi mummaila of large size. The most remarkable of the tertiary formations is what is called the - I'aris Insin,' wheh oceugiey a sumewhat cirrular area nearly bommed by a line passiug through Mhois, Orlems, Montargis, Prowins, lipermay, Lam, Beansis, P'mbuise, and Chartres. A still harger tertiary district is fimbl at the foot of the L'yreneen, ineluding almost all the valleys of the Aitorand Garome, the déps. Landes mad dirmale. There are others in the vallegs of the laire, Hhine and Allier, 'The most extensive alluvial district is that aromul the month of the liane.
The soil of' lrance is, speaking generally, very simperior. No donbt she has large trate of momtainoms, heathy, ind miprohtuctive land; but her prohenclive soil hears, motwithstanding, a harger prophertion to the entire extent. of the commery than in most other linropean states. Exelusive of the recently amexed depmrtments of Salvy and Yice, from which as yet no retirns have lecen raceived, the soil of limine is divided as follows:-

The greatest extent of monntainons surface is fonnd in the déps. of the $\mathrm{Al}_{\mathrm{p}} \mathrm{s}$ and I'yrences, and those of Ariege, Côto d'Or, Drôme, Dombs, Jlatre Luire, and llante Marne; lleath lund prevails most in Hasses Alpes, Jamles, Gironde, limisterre, and Hérault; calearcous chictly in Oise, Hasses Alpes, Dordogne, Marne mal Vienne; asandy soils in Chor, Ilante Loire, loiret, mad luy de bome; and rich lands in (iers, Aisne, Eure-et-Loire, Diare, Marme, Norl, 'Tarn, and Yonne. Frame has considerable mineral wealth. The metal most abmrant is iron: in $18: 17$ it was obtainel in 64 of the sif déns. Those in which it is most plentifilly produced are Haute Marıe, Hante Suône, Nievre,
other volemuic of voleanke seprobolily lam the history of orrad tinat tricers met with on the , and in the dej.

 looth in large quantiliers, arsenise, bismuth, colalt, chrome, dec, are mot with; nud mangent the varer metals molybremum and thmigntell, titaniam in Hante Viemur, mad uraninm mear Antun. Coal is very widely dillisesd. 'I'le prineijual cond-fleld is in the doper lin Nord, where it forms part of a emal district in lengues in length by 2 brand, extemiing linto lihenish l'russia, Others exist in the depow on the Uprer laire, in Areyron, dee; conl mines are partionlarly mimeroms aromd si, bitiallos. 'The malt beds, disoovered alout 20 years since in lormine, are supposed to extend beheath a surface of 30 mpare loguss, and will finlly supply France for ages. 'lurf' in the N., aspinttion in the li, milelsewhere, matitia mad sulphar in the S., viriol, nlum, nitre, plastar of l'aris, porrelain and uther claye, graphite, asbestos, jet, and bume ferms, lithographic, mill, and building stome, cseellent marble, slate, qranite, due, are muonest the valumbe mineral products. Mining iudustry will be treated of hereafter.
There are 100 fewor than 700 mincral springs of a medicianl elaracter. thomen ouly about ten of these are frequmbed by visitors, The principal are the warmsulphoroms springs of Thareges, Camterets, lagnerestle-Bigurre, and de latchon, in the J'yrences ; the saline surines of dix, the ehalybeates of Bomrhon I'Archandmalt (Vosures), aind I'lombieres, and the cold spriags of baghien.

The dimute at Frame is not excelled by that of any other part of burble. The air is fonerally pure, anel the wintors mild; though the titherendes of latitude, elevation, mil, and exposure occasion, in this resped, very materind dilferences. Generally, lirmee may lie divided into a rerions. The It, or most $S$. - the region of the olive-is bounded N. aud W, by a line passing diagomally from Bagr-neres- de-lathon in the I'veneres to Die in Irome. 'The 2 el, or region through which the cultivation of maze extemis, satrotehes na fiar $N$. as a line drawn from the month of the firmale to the N . extremity of Alsuee 'The int rerion, which terminates torether with theculture of the vine, has, for its $N$. limit, a line exteming from the month of the loite to Mezieres in Ardennes. The Uth, or N. zone, comprises the rest of the country: The mean anmal temperature of different parts of France las been estimated as follows, by llimb-

 and at Imakirk inte. More rain appears to finll during the yenr on the SE. than on the NW. side of the great watersheal, the average being, in Isere :32 inches, in Jlant lihin from is to 32 in., at Lyons 29 in., and at Montpelier 28 in ; while at laris the fall is only 19 in ., in Orne 20 in., and in llle-et-Vilaine 21 in. lint notwithstaming this result, the sky is generally bright, and the ntmosphere clear in the sib., and there are at least one third fewer rany days than in the NW., where the atmosphere is almost constantly charged with moisture brourht by the W, winds which commonly prevail, und the wenther is more or less colit for half the vear. The centre of the comentry chjoys a happy medium of temperature and cli-
mite; in the S. the ammorers are longe, iry, and loot. The departments aromad the tinlf of Jyons are sulyject. to a violent $\mathbf{N}$. wind valled, in I'roverncal, the bise, the rircias of amelent writers. At:eording to Mr. luglis, 'thle wiad is the cirse of all theso proves, nul it is marrerly prosible, in travellimg through this commery, to meet whth a greater misfortume thin a bise wind, enpréally if the word "meet" be interpreted literally..... Its cificet unum the frome is singularly ilisagrecable: it parches the month and thront, creater a feeling of sullocathon, and seemes to ilry inf the whole juiees of the benly.' (Inglis's switarlame, de., pre l08; Aprerustatiatigue.)

The tegrtable prouluets of l'rameo are said hy

 noms, mad many new bunts have been introbued within the last two centuries. The mast richly wooted parts are the momitaimons ilistricts, pmirticularly the Vonges, the platean of lamgres and Orlemas, the Cevemurs, mal the momintins of Anverghe and limonsin. 'The $\mathrm{Al}_{\text {pos }}$ mind l'yremers, Provenec, the S. part of Jamgnedoc, amal the W' of frame are but indillemently woolen, The primeipat forent trees are tho bak, chm, bereh, maple, ash, walunt, chestant, birelh, pophar, larch, pine, tir, los, cormel, de. In the Vorges and Juria momatalis, Brittans, mad the Landes, there are extensive Gorests of thr; the chesthut wools are very tine in Ilante Loire. The olive, orange, lemon, pistachio, and carob grow wild in the S. but there only; and the fruits of all are inferior ter those of wamer elimates. I'he caper (Capparis spinowa), dillined over I'rovence, furmishes a wellkhown article of expurt. Cherries, aphles, amil sevoral other fruits grow will! ; "ples and pears are largely coltivated in the X. departinenta, and pumes in the centre of France, The enlture of these nad other fruits will be adverted to lin a subsepuent section.

Mr. Inglis, whot ravellod through many comntries of Europe on fiot, has the following remarks on the secmery of Firince:- All pangryic upun the loveliness and hanghing fertility of Frabee is rhodomontale. 'There is more of the beautiful and the pieturespue in many a ningle comaty of liglamb, or even of soothad, than in all the seat tered bemities of framee, were they eomentrated within a ring-fonce; exerpting always the I'yences, which I emmot help looking poon as it kind of separnte torritory-the mere bommary between Frunce and Spain; but at all evonts the lyrenes must be exapted. 1 liave travelled thromgh almost erory piart of france; and truly, I have fumd its $1: \therefore$ sties thinly sown. If the banks of some of ' B : ass be excepted-tho Seine, the Lovire, the $\mathrm{f}: \mathrm{e}$, and the daronne-some parts of Nombaml: and the departments of the l'yreneen, limnce is an momantic, manteresting, inlovely land. Aud even in these favonred parts, such as the vanited Orhinnois, where shall we final the green meadows that lie along the banks of our 'Thames, or Avon, or Severn ; or upon which of them shall we panse to admire those romantic views-that chaming variety of rock, wood, and momatain-that charncterise the banks of the Tamar, the Wye, the Derwent, the Swale, the Wharif, or the Dove? These are nowhere to bo foumd. . . . . I pity the man who crosses Frame in any direction. 'Thonsands know how emunant is the journey from Calnis to Paris, but they who never travel finther, suppose that lovely france, panegrised by so many, lies beyond. No such thing. Let them continie their journey by whichever rond they please, mul they will find but little improvement. . . . Claateaux alse we have in
these provincen (those of the S.), lut, oh, how different from the chateanx of which we rend in the rommence writers, and whids hever exinted bint in thoir limghintions. The chitemix are for the mont purt bores upou a large sente; staring housos with wings, and a parnuet wall in front, covered with rases of thowars. lit short, we thind the whole a delaskon; andour ininde revert to the green neclivities of our own hills, our onk forests, our lakew and rivers, and the beanty und fert llity thint, along with the pieturengue, mhigle in an linglish landsinpe,' But if the indisurinhating bingegyrists of France have gone ten fire oll the one limid, Mr. Inglis certuinly line as nuch overshot the murk on the other, Mr. Macluren, thin whom there can he no leeter anthority, says that from Chalons-sur-Marme to Avignon the khone dows through one of the mont heantint, pieturespue, and alelightful regions in the world. Alded there are many other distriets in Franee the scenery of which will bear a comparison with that of any other country in Elurope.

Animuls.-The bear, wolf, and will boar are the only formidable wild animals now inhabiting France, and the numbers of thene linve been greatly thinned by the herease of pop, and of civillsnthon, 'I'be hinck bear (Trsus I'yremions) is contined to the higher muges of the Alps aud l'yrences, where the isnrd, chamois, and with goats are also fimmol. Notwinhatmoling an active war of extermination earried on hyainst the wolves, those mimals are still very mumerous in sume departments, as in Morhilian Sarlle, Vemtíe, Jandes, and the cent ral monntninous departments. In the Cevannes, the lyins is sometimen fonmul, though rarely. the wild bomr, rocbuck, und fow abombl in all well-wooded parts. The red and fallow deer, formerly so plentifinl he the royal parks, have hecome rare; hares and rablite are extremely abundant. Neveral kinis of encuirrels, the polecat, weasel, otter, marten, helgehog, and the other small wild mimals common throughout Farone, are as monermis in France as elsewhere; in adilition to which, the desman (Mus mosthiferns), an apnatic qualrupel, inhmbits the noighfourhome of 'larles, as some benvers ilo the islands at the mouth of the lihone. Suals, dolphims, mid sometimes whales, are met with en the conats.
llirts are very numerons, 'I'hev include two kimbs of eugles and a surecies of vulture. Several lieds not elsewhere met with, are fombl on the shores of the Mediterramon, as the flamingo, roller, wry; enter, beceatica, ortolan, de. Jhastards, large and manll, inhabit the oleps, of the NW. and centre. The coek-of-the-worl and red and grey partridges are the principal winged game. Water-fowl are particularly mumerons in Veadée and Charente-Infirieure; in cold winters the will swan visits the eomitry.

R'eptiles are few; there are but two venomous serpents. A kind of gecko ininabits the $S$. shores; the salamander, large green lizard, mui-tortoise, and Buto obstetricaus, are the other must remarkable animals of this class. In some déps. frogs are rearel in large numbers as articles of fool. The fisheries of turbot, sole, ray, mackerel, herrint. pilchard, mullet, de. in the $N$, and W. seas, and of the tunny and anchovy in the Mediterranean, furnish employment to numerous families. Oysters are very abundant on the N, and W. coasts, as well as mussels and lobsters. Leeches are exported in large quantities. There are two species of scorpion. Cantharides and the cochineal inseet are met with in the S. (Hugo, France I'ittoresque; Aperçu Statistique; Dict. (ieog.)

The department of the Scine comprises, lesides Paris, only a tew villages inhabited eliotly by persons from the capital, and has scarcely any rural population. The number of birtlis in the city of Paris during the year 18152 was 52,312 , of which 26,505 were boys, and 25,507 girls. Of the whole number $1.1,501$ were illegitimate, and 37,721 born in wedlock. Of the illegitimate chiliren, 6,711 were recognised and allowed to bear their father's name.
France is divided into 89 departments- 86 previons to the annexation of Savoy anl Nice-with 373 arrondissements, 2,938 cantons, and 37,510 commines. According to the census of 1861slightly differing from the civil register returns given above-the population of the 89 departments amounted to $37,382,225$ souls, inelusive of a mamber of troops stationed in Syria ant at liome, and counted in tive recrimental lists. The following table shows the distribution of the popmlation as well as the increase in the ten years lyor-ik.

Distribution of Landed l'roperty.-Agricultare. -In France, previonsly to the revolition, the property of persons dying intestate was subject, in different parts of the kiugdom, to didicrent regulations; but every where estates could be disposel of by will, and settled by entail. At the revohtion a nearly total change was made in these respects; the same regulations for the distribution of property wero establishel in all parts of the kingdom; and the power of disposing of property by will was contlied within the narrowest limits. Thus it was enacted, 1. That the property of persons dying intestate shall be equally divided among their children, without respect to sex or seniority; and, 2. That when a person possessed of property wishes to make a will, he shall be permitted, provided he have only one elind, to caspose of a moiety of his property, the cliill inheriting the other moiety as matter of right; if the testator have two children, he is allowel to dispose of a third part of his property; and if four chilitren, of a fourth; and so on, the rest being equally divided amoug the children,

This law was intended to subvert the foundations of that old feudal aristocracy, whose usurpatious and oppressive privileges had entailed much misery on the cuuntry; and there ean be no donbt that it was well litted to aecomplish this object. That the condition of the agriculturists of France has been materinlly improvel since the revolution, is true. But it lins not been quite proved that this improvement has been in any respect owing to the law of equal inheritance. Some argue that it has taken place, not in consequence, but in despite, of that law. The abolition of the game laws and feudal privileges of the nobility and elergy, and of the gabelle, corvées, and other oppressive and partial burdens, and imposts, was of the greatest service to proprictors and farmers; and, in addition to these alvantages, a large extent of common lands was divited, and a great part of the vast possessions belonging to the elureh and to the emigrants came into their hands at extremely low prices, so that while small properties were generally augmented, farmers were, at the same time, in very many instances, changed
into lamellorits，No womder，therefore，that fremb

410 per cent. of the entire surfnee; at the same time that the dithes laid on wine amount to nearly pue-third part of the land tax, and to one-tenth part of the entire pulilic revomine. In 1 sti.t the allcinl value of the wine exported from Firance was nbove $375,000,000$ of frumes, or $15,000,0001$. The export of lordenax wine in cask inerensed frum $1,156,000$ hectolitres in 1862, to $1,214,000$ in Is(ial, and to $1,419,0) 00$ in 186-4. The other F'renell wines exported rose from $1,15 \mathrm{fi},(100)$ hectulitres in the vear 1802, to $1,21 /, 000$ in 180:a, and to $1,419,0(0)$ in $\$ \times(i .1$. Irandy distilled from wine rose frum 162,000 hectolitres in $1815^{2}$, to 190,000 in $1 \times 6 \%$, and to $22!9,400$ in 1864. (O!!cial Reports in Mmiteur Universel.)
The dejes. in which the greatest extent of lamed isocenpiad by vineyards are the (iironde, ClarenteInfiripure, Inérailt, Charente, Dordogne, Gers, (iard, Lot-et-Gnromu', and Var; lint the afoss of Marne and Anlie, forming the macient prove of Champagne, amd those of Côte d'Or and Shone-et-Laire, comprised in Jurgualy, thongh yickdins a less quantity of wine than many others, are highly distinguished for the supsrior quality of their products. (iironde furnishes the wines known in linglund by the name of claret. A fifth part of the bordelais wines is usod lor the elistillation of lorandy, exported chietly to the U. States, Engrand, linssia, Swerlen, and Jenmark; but they are infrrior for this purpose to those of the Charente, which supply the famons Cognae brandy. For more minute details respecting the growth of the French wines, we refer to the arts, devoted to the several déps.

Tobucco,-'The cultivation of tobacco is of great importance. In former days, muder the old monarchy, the state had reserved to itself the exclusive right of buying, selling; and manufacturing tobacco, and this monopoly was farmed ont to a company which paid the amonnt of $52,000,000$ frames to the revenne for the privilege. The revolution of 1789 abolished the monopoly, and tohaeco remmined free $י p$ to the year 1798 , when a duty on its importation and manuficture was imposed. The import duty was 44 and 66 frances per 100 kilogrammes, according as the tobaceo was imported in French or forcign bettomes; the duty on the manufacture was 20 francs per 100 kilogrammes) on tolateco for smoking, and 40 francs on suull. In 1802 the duty on the manufacture was raised to 40 franes for all kinds of tobaceo without distinction. In 1804 the custom-lionse duties were raised l'rom $4+1$ and 66 franes to 88 and 110 francs. In 1806 the duty on mauufacture was donbled, the eastom-honse duties were raised to $1: 18$ and 220 franes, and a duty of 20 franes per f(0) kilogrammes was laid on the sale ol the article; and lastly, in $\mathbf{~ 8 1 0 , ~ t h e ~ d u t y ~ o n ~ t h e ~ s a l e ~ w a s ~}$ rilisel to 180 francs, and the custom-hotise duties to 396 and 440 franes.

Notwithstanding these great and rapid elevations of the duty, the revenue derived from tobacco hardly reached half the amount yielided under the old system. Smuggling was caried on on a large srale, and great complaints were made liy the public of the bal quality of the marchandise. The old system was consequently re-establisbed, amd, by a decree of becember 29, j810, the tobaceo monopoly was restored to the state. It was, in 1816, confirmed for a period of live years by the law of April 28, 1816 , and was afterwarils prolonged by suceessive laws in the years $1819,1824,1829,1835$, 1810, and 1852. The last prolonged its existence for a period of ten years, and in 1862 it was extended for another ten years. The tobaceo munopoly, therefore, althongh it has heen in existence for more than half a ceutury, is not, like the
salt and powier monopolies, as yet a permanent insultution in France, It only exists at present on sufferance, inasameh as the chambers only voto it for a stated periocl.

In the report which served as a base for the - l'rojet de Lai' of 1862, the grovermment expressed the hope that it would soon be able to proclaim the existence of the tolnteo monopolyonee for all; lut the minister of thance contented himself, for the time, with asking for a further prolongation of the monopoly for a period of ten years, and, after a short dehate, this was voted liy the corps legisla.uf on the $2^{2}$ nd June, 1862, almost unanimuasly. It would have heen impossible to do otherwise. A sucritle of such an important source of ineome eonld not be contemplated in the face of all the pressing demands on the treasury; nor would it have been ensy to find a substitute for the revenue derivel from tolaceo. During the last few years tohaces has become one of the most lierative sources of revenue for tho French government, in conseguence of the great inerease in lis consumption. An article on this sulgieet in the 'Journal des Deliats' by M. Horn, recently published, gives an interesting account of the progress of the consumption of tobaces, in Fance, ol' which the followinf is a summary:-

During the tirst five years after the re-establishmest of the tobacco monopoly ( 1811 to 1815), the sale of tohaceo averaged 14,300,000 of kilogrammes. During the nest twenty vears, France, now redued to her ancient limits, consumed but from $10,000,000$ to $13,000,000$ of kilogrammes annually; and the thgure of $13,000,000$ was not exceeded before the year 1836. From this date the consamption steadily progressed, and in ten years was increasel by 5,000,000. In 18.45 it was more than $18,000,000$ of kilogrammes. From $18: 16$ to 1850 it remaned nearly stationary, but in the ten next years, $1851-60$, it made an alvance quite $\quad$ mprecedented. The quantities sold at the government establishment, or the 'Régie,' during these ten years, amounted to-

| Year | Quantitles in NHIITons of Kllogrammes |
| :---: | :---: |
| 18.51 | 197 |
| 18.2 | $20 \cdot 3$ |
| 1858 | 21.3 |
| 18.74 | $22 \cdot 6$ |
| 188.) | $23 \cdot 7$ |
| 18:59 | 25.4 |
| 18:77 | $27 \cdot 2$ |
| 1858 | $27 \cdot 9$ |
| 1859 | $28 \cdot 3$ |
| 1860 | $29 \cdot 3$ |

The ensumption of tobacco since 1860 has been stealily increasing, in the proportion exhibited in the ahove table. (Kipport ly Mr. Grey, Her Majesty's Secretary of Embassy, in 'Reports on Foreign Manufactures and Commeree, presented to J'irliament, 1813.)
Fruits.-France is abundantly supplied with fruit. Where the culture of the vine ceases, that of apples and pears becomes of considerable importanue; in the N. orehards replace vineyards, and cider and perry are the orlinary heverages of the inhab. The cider of the déps. In Manche and Calvados is the best, and some of it is drunk even in the wine déps. Tho Pays de Caux (Seine Inferieure) is noted for its numerous and excellent apple-orchanls; and the dép. Eure, in which almost all the roads are bordered by a double or treble range of apple trees, exports large quantities of appies to England and elsewhere. Cider is sometimes used in the distillation of brandy. Several
of the central and $S$ ，deps，are famons for their dried peurs；Aveyron，the Hasses Apes，nud hulre－ et－Loire for their promes：and the limagne（An－ vergne）mul the valley of Montmoremey lor their cherries．In the Visges a small cherry abounds， which is extensively nsed in the mamineture of kirschurasser．Chestiuts nre very abmant in some of the ceutral anul S ．deps．，where a pertion of the rual pep，live almost entirely on them for luald the year．The chestmint erops in Arlieche form a hatge part of its agricultural wealth．In Hunte Vienne chestnat wouls orenpy more than me－fimurtenth part of the whole surfice．The olive was firmerly more conltivated than at present；the hard winter of liss destroyed many of the trees，nud the cli－ mate even of the most favourably sitnated parts of France scems not altoget her suitinble for the plant． The oil of the mighbomenom of Aix，and if the deip，Bhenches－du－lithone，is the thest．The eulture of the mulberry tre is chietly carried on in the s．
P＇asturayes inad Cuttli－－＇The mominainons dis－ triets of France，esperially the Vospes，the monn－ tains of Arlemnes，Argome，the Cote der，and the central momanin system，have extensive ma－ tural pastures；the deps．Ardeche and torrios，and the entire prov，of Linumsin，form turether one contimums proirie，sululivided hy momatain rauges， and interspersed，often sparingly，with fields of buckwheat and rye．Some of the best matural pasture gromuls fire in the maritime districts of Nomandy mul Flanders，and in the isle of Ca－ margue，at the month of the Rhone．It has been alrealy remarkel that artiticial pastures have in－ creased of late yers：the plants sown are chietly lneerne，sainfuin，trefoil，and vetelies．
At no very listant priml France possessel va－ rious superior breeds of lorses；hat，from want of attention，many of them have deteriorated．Go－ vermment，however，has latterly been making active effirts to olviate this defeet，by the establishment of haras，or stuls，for the improvement of the hreeds， in diflerent parts of the comutry．Normandy fur－ nishes the lest carriage and cavalry horses and hunters．The horses of lirittany are the next in order：the Breton is not so handsome as the Nor－ man lowse，but it is stromger and hardier．The Thip，du Nord furnishes a good lireed for farm labour． and other heasy work：those of Anjon，Maine，and ＇Tomraine are also especially sumable for tramght． I＇roceedings sumbard，the breeds liminishin value， till we come to Linomsin，which prov，wilh hase of Ausergne，P＇ériguri，Ginieme，and Navarre，pro－ duces the hest saddle horses．The purity of their bhow and their excellonee inerease，the nearer we approach the Spanish fromier．Alsice，and some of the other L ．prows．have a large hreed of horses， analogous to those of the N ．In horraine and Champagne there is a small lireed，cipmble of re－ sisting fatigne for a lengthened perioul，if woll taken eare of．Asses and miles are rearell chictly in the dejse of the centre，the W．and S．Those of Deus Sevres and Vieme are the hest，and many are ex－ purted to spain．The males neal in Frame are bred chiefly in Auvergue and Irowence．
Throughont great part of Framee，and especially in the muntainous regimes of the commery，the ox is preferred to the horse for farm Jabour；cund as it furmishes bexilles the principal supply of mimal foom，the rearing of hormel catte is everywhere pretty general．Many cows are kept along the hanks of the Marne，Yonne，and Scine；in the mountains of Franche Comte（where they yield a a great deal of milk，from which eheese similar to that of（Gruyere is made）；in the Fore\％momanios； and in Dampling，where also the cheese is much esteemed．Flanidre，Normandy，Irittany，Alsace， Linousin，Auvergne，and the SW．prove，are
those in whieh the greatest number of black eatile are reared：maty are sent out of Artois mal l＇ieardy，to be faittened in the two first－maned proves．The oxen of Ginseony are the largest； their weight varies from bion to 900 liss．：the city of Dorlemax mal the maty nre entirely provisionel from this species．Paris is ingreat measere smp－ plied frum Anjon．The hest hitter is male in the N．of France，ind from lisitany，Normanly，and the vichnity of Boulogne，eonsiderable quantities， both freshi and sultel，are exported：the brat cheese is made in the S ．
Accorling to othicial returns，the number of eall kind of livesstock in limuce，in the years I85l and ［xili，was as follows：－

The consumption of butchers＇meat in France generally loes not，compazel to the population， amomit to nearly a third part of its consumptim in Eughand．
Next to corn，wine，and silk，wool is the most important article of rural probluce．The annust produre in the ten years $18.1-6.4$ amomed to 60，000，0000 kilogs．It has become of greater value since the native breels have hech crussed with the merino sund others；but this inuprovement has hisherto proceeded to ouly a simall extent，so much so，that it has been alleged that not murr， perhaps，than 1－foth part of the entire stock of sheep has expericuced its effects．The extreme subdivision of the suil is but little less hostile to sheep，than it is to corn and cattle farming．The imprits of wool in 186 l were of the value of $179,170,60) 4$ frimes，or $7,167,0421$ ．Most of the Frenel wool is coarse and inferior ：lor the finer sorts the mamufacturers are obliged to have re－ course to Germany，sjain，and other combtries．
Gioats are most abundant in the Pyrencan and Alpine deps．In a small district near Lyons a great number are kept in troops of perhap is sisly each，and fed in winter on vine lenves plucked after the vintage，and preserved moist for the pur－ pose．An attempt has luen made to acelimate the Thibet gont（Capra AT：gagrus），for the sake of its wool，so valuahle in the shawl manufacture； but it is not possible，owing to the greater mois－ ture of the French climate，that the experiment can succect．Hogs are largely reared in the $N$ ． and L．：；in Sisne they furnish almost the onty animal food used ly the rural pop．They are nu－

Nost of the ior : lor the finer fred to have reher commaries. he lyrenemand et near Jyons: a of perhapssixty : lenves phucked noist tor the purule to acelimate ), for the sake of Yl manufacture ; lie grenter moisthe experiment reared in the N. almost the only They are nu-
merous in most parts of lirance, and in the bi. dins, a considerable trate is carriei on in them.

Poultry of all kinds is also plentiful, especially in Maine, Normandy, (inicune, and Languedoc. Gieese are snlted like pork: in the dep. 'Tarn there is a very large ambline speries. Thurkeys are also almost everywhere plentifnl ; and the alindes anur truffes are important artieles of commerce in many towas of Dordogne and lot. I Hueks and liowls are very common: the valie of the eges exported to furcign combries in 1864 amomated to $16,212,55^{\circ}$ franes, or $\{(8,60) 2 /$. The utright of French efrgs exported in INti.l nmounted to the enormons quantity of $1 l f e r n$ million kilogs., or thirty-three millions of pommis.
Thes are renred, especially in the díns. of Calvados, Bhases Alpes, Aule, some of those on the Luire, Sarthe, ami Jurn. In the depos. on the Loire it is a common practice to move the lives from one district to another, which is supposed both to nugment the quantity and improve the quality of the prowhets: this process is eflected in the night, and in vehicles built for the purpose. The distame travelled over at a time is often upwarls of 30 m. , ' aml it is not umsual to see in theautumn an many as 3, ,0mil strmpe bee-hives collected in a lifle villare, where they remain for perhaps two months.' (Apercu, 69.) 'The best honey is that of Narhome ; lut in several deps., as those of Jhra, biasses Alpes, anil Calvados, the honey is but little infirior.

Fisherias.-From Dunkirk to St. Valery, the imbals, of the coast tlerive a eonsiderable part of their subsistence from the disheries for sole, ray, turhot, mackerel, lerring, \&e. 'The sole and riy tishory lasts from about the begiming of January to that of May; the maekerel fishery then eommenees, ami contimues till alont the end of July ; the herring tishery, the beal-tumeters of which are at Dieppe, begins early in Oet. ami emis towards the 'goth of Jece. The pilelard fishery of Brittany employs, raring its contimumer, a latre mumber of tisliermen, hesides a mumber of hamds in emringe and harrellimer the tish. About 8.000 barrels of salted pilchards, the produce of this lishery, are sent into the market ammally, and the inhals, on the coast live in great part on frosh pilelamels during the season. The pilehatd fishery is also a brameli of industry of some consequence aloner the cunst of Churente-Jufóricure and La Vemdic, as that of the anchovy is on the Mediteranem coast, esperially in the dep. du Var. fireat mumbers of oysters are sent to Paris from Cinomle lay and the mouth of the Seine. Execpt those alrealy named, the fisheries on the French eosast are of comparadirely trifling importance, and have only a local interest. The French coll tishery, in 1 and, emphoved 528 vessels, of an nergregate burthen of 72,37 I tons; while in the whale fishery there were 5 vescels, of 285 tons burthen. Whth fisheries are oin the deoline since 1859 , when they employed ( 013 vessels of an aggregate burthen of 83,571 tons. (Official Tables.)
Miues and Nlincral Products.-These are in Frmer of very considerable value aml importance, though inferior to those of the U. Kingrom. 'The principal products are coal, iron, and salt, with alum, eopper. lead, and manganese. Nining industry is placed, in a great ilegree, unter the confrol of the govermment. The commtry is divided into six ilepartments, each mader an inspectorgemeral, which six inspectors, together with the minister of public works, compose the commeilgeneral of mines. There is a school of mines in l'aris, and a practical miners' selool at Sant Vitienne. The instruction in the latter is wholly sratuitons,

Coal in France is obtained from between 60 and 70 diflerent coal-flelds: but of these the preater momber are extromely inimportmat, and those in the dips, int Nord and Laire are the only ones of any considerable muruitude, or, nt all events, they are the only ones that are wrompht to any considerable extent. The production of conl his incrensel very materially of late years. From the report of the committee composed of the owners of French coal mines it mppears that in the yoar 1 sisis the Fremels conl mines jrodnced
 In the year $I \times 6 ; 3$ the prolnce rose to $10,0(100,000$ tons, of the value of $117,500,0)(10$ franes, which is only a listle more than one-elighth of the prodnce of the ingrisla coal mines. Lixerept in the principal towns, coal is rarely used as fine in France. The prasantry and ocenpiers of land, amd tho inhab, of the smaller, with many also of those of the larger towns, use little save wool or turf for firing.

The sulyoined table exhilits the production of coal in the seven years J8isk-6.t-

| Years | Quantiles | Value |

Iron works are carried on in varions parts of France. Formerly irom was almost wholly male by means of wood ; but of late vears coal has been extensively substituted for the former, and nt present three-fourths of the iron proluced in the conntry is smelted by its arency. But, despite this improvement and the increasi of the manufacture, the irom of Framee is still comparatively high-priced, and insnilicient for the home smpliy. The prodhetion, in the seven years 1858 to 186.1 , amomed to -

| Years | Quantica | Value |
| :---: | :---: | :---: |
| 18:5 | Quht. Mìt. <br>  |  |
| 18.9 | :8, Alitis.501 | 13,601,271 |
| 1890 | 3s, 3 (1:, 0, 2 | 1.1.0.4, 4.414 |
| 1851 | 46,181,41:3 | 16,405, 3 \% 7 |
| 1512\% | 41,96,4\% ${ }^{\text {a }}$ | 16,47: |
| 181:3 | 89,3:31,916 | 14.190, 409 |
| 1stit | $35,342,731$ | 12,116,302 |

In all, ahout 20,000 hands are supposed to he emploved in the lifferent works comected with the problaction of iron in lirance. The other metallic products raised in Franee, consisting of silyer, lear, eopper, manganese, are of inconsiderable value anil importance. The proture of salt exceeds $4,000,000 \mathrm{~m}$. q. or alowe $39 \mathrm{x}, 000 \mathrm{tons}$.

Mumffactures.-As respects the extent and value of hur products, france ranks as a mamfacturiner comery next to (irat. Britain. liut her matoral and acquired capabilities for carrying on mantfactures are very inferior to those mpoyed by this commtry. There is a great want of eapital in Framed, so that most establishments are condacted on a comparatively small seale. Coal is found in many parts of France, but, as seen above, the supply is insumieient for the wants of the comtry, and is comparatively dear : and iron, a cheap and abmulant supply of which is so indispensable to mannfacturing eminence, is much higher priced than in lingland.
Arms are principally made at 'Tulle, St. Eticme,
and Kilingenthal. IBronzes of a very superior quality oro prinelpally male in l'aris. The trade in cutlery, while employs a great many lintuls, la princijally curried on in I'nris, Iangres, Nogent-le-Roi, Chatelhérailt, 'Thiers, \&e. French cutlery is, speaking fenerally, very inferior to that of England. The ormamental jewollery trade contres chietly in I'aris; and there, and in other parts of the count ry, about 50,000 hands are employed in watchmaking.

The silks of France are untivalled among those of bincope, and are, in many respects, superior to those prodnced in any other part of the world. At the close of last century, it was ascertained by n series of aceurato experiments, that French orHanzined silk was 25 per cent. superior in elasticity to the best l'iedmontese, and its tenacity as $2 f$ to 21 or 20. (Bowring's Scennd Report, j. 4.) 1hut besides this the French silks are distinguished by *uperior taste and cleganec, and their excellence is sufliciently proved by the finct that $4-5$ the of them are exported. Accordingr to atlicinl returns, the quantity of silk, in cocoons, prolluced in France, has of late been on the decrease. The five yenrs, 1860-1, slowed the following result :-

| Years | Quanitica | Value |
| :---: | :---: | :---: |
| 1860 | $\underset{\substack{\text { Kllogramme } \\ 26,1000,0(1)}}{\text { a }}$ | Franc: ,000,000 |
| 1861 | 21,500,000 | 09,975,006 |
| 1862 | 19,800,000 | 99, 0100,000 |
| 1863 | 7.500,000 | 67,000,000 |
| 186.4 | 7,500,000 | 57,000,000 |

Lyons, Nimes, Avignon, Tours, Snint Jenn-duGarl, Alais, Le Vigan, Saint Eticune, and Paris ure the principal seats of this impurtant manufacture, which will be foumd more particularly alluded to under those separute heads. The silk manofactures of l'aris have increased very considerably of late years.

The woollen manufacture of France is also of great value and importance, and is one of those that seems well alapted to the country. The total value of the woollen fabrices anmually produeed in France has been estimated ly Firench writers at $420,000,000 \mathrm{fr}$., or $16,800,000 \mathrm{l}_{\text {., whicli, }}$ however, is probably over the mark. The chief scats of the woollen manufacture are Sedan, Louviers, Elbenf, Ronen, Bermay, Cundebec, I arnetal, Clermont l'llérault, Lodève, Carcassonne, and Châteauroux ; for carpets, P'aris, Aubusson, Abbeville, and Amiens.

The progress of the cotton manufacture in France since 1815 has been great. Duriug the later years of the war, the dithenlties in the way of importing raw cotton into France were such that its price in Havre was usually twice or three times as great as its price in Liverpool. When, therefore, the return of peace enabled the French manufacturers to obtain supplies of cotton at the same rate that was pail for it by others, the manufacture could not fail rapidly to alvance; and foreign cotton goods heing excluded, it necessarily went on increasing till the lome demand was pretty well supplied. But beyond this limit it has not been, and, it is most probable, it will not be, materially advancel. The French exeel in the brightness and durability of their dyes; but, with this single exception, they are behind us in all that is indispensable to success in this department. Their machinery is at once more expensive and less improved, as coal, which may be said to be the nerves and sinews of the business, costs double in lionen what it costs in Manchester or Glasgow. Previously to the revolution little
cotton yarn was spun by machinery ; bit since that epoch, or rather since the pence of 1815, machinery has been imported from Euglam, and cotton spinning has become a prineljal brauch of industry ; and, excepting some of the highest numbers for the muslin factories of Tarare and St. (Quentin, and the lace manufactures of Calais, and Douni, the eountry now supplies sufficiont yarn for its own demand. The total aumal value of the cotton manufactures of all kinds has hreit estimated hy some French writers at no less thinn $600,000,000$ fr., or $20,400,0001$. The exports if cotton goods of all kinds from Franco anumuted to $122,800,000 \mathrm{fr}$. in 1856 ; rose to the enormoms simm of $328,200,000 \mathrm{fr}$. in 18.57 ; but sank ngaiut to $111,000,000 \mathrm{fr}$ in 1858 . In the six years 18.59 to 1 W64, the exports thetunted between 122 and 160 millions of francs. After England. Framee is the greatest consimmer of cotton. Of the 160 millions sterling which represent the average annmal produce of the cotton mamifacture, in the ten yenrs ending 1864, the share of France amounts to 32 millions sterling, or $800,1000.01010$ francs, According to an ofllcini report of Jan. 1865, there are $5,983,765$ spindles, with rather more than half a million of hands employed in the cotton manufacture.

Jinens are manufactured principally in the $N$. provinces, and in Brittany, Maine, Dauphiny, and Auvergne. The best cambrics and muslins aro made, the former at St. Quentin, Valenciemus, Combrai, and Solesmes; and the latter at Lyons and Alençor. St. Quentin, Lille, Calais, Tarure, and Douai are particularly noted for their tulles and broderic ; but this latter liranch of industry has been long in a very depressed state. Villenciennes, Lille, Dieppe, Alencon, St. Lî, and Avranches are noted for their lace; and Conen, lhayen, Bayeux, Chantilly, and Le I'uy for their hondes. Kid qloves are male prinejpally at l'aris, Grenoble, Clammont, Blois, and Vendome. Other leathern articles, as shows and saddlery, are, of conrse, made in large quantities, Tlie French sadillery exported is worth about $4,000,000 \mathrm{fr}$, a vear. The china of Sevres, and other tine kinds of French porcelain, are much and justly estecmel. There are, in all, twelve mannfactories of tine porcelnin, at I'aris, Sevres, Limoges, and 'Toulonse, producing grods to the value of from $8,000,000$ to $11,000,000$ fr. a year. The valie of the exports of tine porcelain, in the year 1865, amounted to $\cdot 1,921,813$ francs, representing $2,050,755$ kilogrammes in weight, while of common porcelain the exports, in the same year, amounted to $4,390,215$ franes, representing $\mathbf{3 , 6 \pm 8 , 5 1 4}$ kilogrammes in weight. The total exports of porcelain and earthenware rose from $8,410,000$ franes in 1861 , to $10,723,000$ francs in 1863 , and to $11,043,000$ francs in 1865. Glass to the value of above $20,000,400$ fr., with bricks, tiles, furniture, mineral acids, and other chemical products, glue, sail-cloth, cordage, soap, musical instruments, liqueurs, paper, paparr- $^{\text {res }}$ hangings, and hats, are other important articles of manufacture.
Cominerce.-Thecommercinl intercourse of France with other nations has enormously increased since the adoption of the principle of free trale. It was first put into practice in the commercial treaty with Great llritain, signed Jan. 23, 1860 , due chicfly to the wise and energetic lnbours of the late Kichard Coblen. This treaty was followed by others, of a similar nature, with the chief condinental states. The following table, compiled from the oflicial returns of the French customs, shows the state of commercial relations between France and Great Britain, both before and after the treaty:-
inery : lunt since cace of 1815 , naain Bugland, and principal braach ne of the higherst des of 'l'arare and factures of Calais, supplies suflieicont total ammal valne 11 kinds has beeti rs at no less than The exports of France amomutel to the enormons but sank aguia to slx years 18.59 to etween 122 and myland, France is 311. Fixiohts miom Funce to Cheat Burain.

Tahing the thre years' averace on each side, it will be seen that the imports increased by 15, 1000,000 franes, or 48 per cent., and the exports by $(10,000,000$, or 19 per cent.

The tolnl value of the promace and manufactures of the United Kinglome exported to France in the
 isibe, $8,8,5,58881$, in $1861,5,2 \cdot 19,9801$, in 18600 , and
 in Isti3 was thus nearly domble the corresponalings lotal for 1859. If we carry the comparison back for ten years and compare 1819 with $18(33$, we shall see that the French demand for British products has more than quadrupled in the last 14 vears. Thus in 18is the value of our exports to l'rance was $4,863,1312$. in $18: 37,15,213,3581$. ; in

 in $18.11,2,028,1631$; in $1850,2,401,45121 . ;$ and in 1810, $1,951,2691$. The chief article of export from Great Britain to France is woollen goods, which were in 1863 delivered to the extent of $1,418,9 x_{i} /$. In 3 bis! the corresponding total was only $\mathbf{2} 43,286 \%$. Of coal, cinders, and calm the value of our exports to limate in 18103 was $513, \overline{7} 381$. , ngainst $615,2321$. in 18ial ; of wrought and unwromght copper, s. $06,3 \times 81$., agninst 493,0831 . in 1859; of cotton

 a90, IRAK. in $18 \overline{0} 9$; of steam engines and machinery, $3604, x: 52 l$. arninst $199,402 l$. in $181 ; 2$; of sheep and lambs' wonl, 348,7732 ., ngainst $428,9 \cdot 12 l$. in $186 \%$; and of woollen and worsted yarn, 369,1297 , agninst 18ti.118l. in $181 i^{2}$.

The foreign trade of France is divided, in the oflcial returns, into the two great divisions of 'seneral commerce,' including the aggregrate of all commereinl trimsactions, and 'special commerec, mombracing only such imports as are consumed in Frauce and such exports as have been manufactured within the country. The transactions are moreover classified according to 'real valnes' and 'ollicial' values. Official valne is fixed necording to a basis determined in 1826 , which represents the average values with a view to redues all the merchandise to a common unity, nu nrangement which allows of totalising and comparing, on a iniform and invariable seale, the results obtained at ditierent periods. The real value is, on the contrary, essentially variable, changing ith the rise and fall of prices. It is Vul. II.
flxed by a permanent conimission in the Department of Sgricultare, Commerec, and P'ablie Works, aided by the Chambers of Commerce; and its object is to delermine, as accurately as possible, the average price of each kind of merchandise for the time beligg.

The ollicial reports of 'general commerce' during the your 1801 show that the exports exceed the imports by more than $40,000,0100 f$., the imports belug estimated at $2,(80,200,0$ onof., and the exports at $2,0: 34,010,01001$. The imports and exports both show ut grulual inerease as compared with the imports and exports of the three preceding yenrs, 186i, 18( $6^{2}$, and 18133. The importntion of horses, hurned cattle, mad sheep has incrensed from $5 \cdot 12,0100$ in 1862 to 638,000 in $1 \times 163$, and 775,000 in 1869. The importation of lides nearly donblor since 1862 , being almost $: 10,010,0001$ kilogrammes in place of $15,5016,(100)$. Tho importation of wool increasel from $18,1000,000$ to $\mathbf{t a}, 1000,(1010$. Cotton, of which the importation fell to $: 18,000,000$ kilogrammes in 1862 , rose in 186.1 to $6,000,000$. lndia and legypt supplied the greater part. Sugar from the Freach colonies, of which there wre $10.1,000,000$ kilogrammes imported it 18152 , and $125,000,(001)$ in $181, i n$, fell in $181 ; 4$ to $80,000,0100$. white foreign sugur rose frum $10 x, 000,000$ in $1 \times 12$ to $112,000,006$ in $181: 3$, and to $138,000,1 m 0$ in 1864. The importation of eollee rose from $37,000,000$ to 40,000,000 kilogranmes.
'The exports slow that silk goods maintain themselves mider the most adverse circumstances. Dismase has killed the silkworm, the importation of raw silk has not increased, and still the valne of the silks expurted las risen from $3: 32,060,0100 \mathrm{f}$. in 1861, to $381,0100,000 \mathrm{f}$. in 186.1 , and to $3399,000,00611^{\circ}$. in 18iso. This miny be acemuted for by the increased value of the article. 'The prosperity of the woollen mannfacurers is more clearly shown. The value of the woollen goods exported increased from $1 \times 7,000,001$ f. in 1861 to $355,000,00015$ in 186.1 , and to $37 \mathrm{~B}, 0000,000 \mathrm{~F}$, in 18tin. The export of hordeanx wine in eask has increased gradually from $500,0(0)$ hectolitres in the vear 1862 , to 6:35, 000 in 186:3, mul to $18.1,000$ in 1864. The other lirench wines expurted rose from $1,150,000$ hectolitres in 18102 to $1,214,000$ in 18133 , and to $1,41!, 000$ in $1 \times 6 \%$. Ihrandy distilled from wine exported rose from 162,010 hectolitres in 1862 to
 distilled from molasses and rice rose from 200,000) hectolitres in 1862 to 260,000 in 186:, and fell to 204,000 in 186. The total value of all lirench wines exported to forcign countries amounted to $195.923,000 \mathrm{f}$. in 1861 , to $210,1000,000 \mathrm{f}$, in 1862, to $229,738,000 \mathrm{f}$, in $186: 3$, to $234,589,000 \mathrm{f}$. in 1864 , and to $2 \times 0,601,000 f$ in $1 \times 65$.

The relative importance of the trade of France with the varions foreign conntries is shown in the subjoined tables, which give the value of the imports and exports, in millions of lranes, for the year 186.1:-

| Imports from | $\begin{gathered} \text { General } \\ \text { Commerce } \end{gathered}$ | $\begin{gathered} \text { Special } \\ \text { Commeree } \end{gathered}$ |

It will be seen that, both in respeet to imports and exports, the eommercinl intereonrse with fireat lritain is liy far the most inportant for firance. In this respect the position of ? lnoth conntries is radically difterent. For while to Framea lititish intereourse is, at the least, thrice us valuable as that of any other conutry, Fironch commerce is to Great liritain of inferior inportance, no less than five other comitries, India, tho United Sthes, (iermany, Australia, and Turkey, taking precedence. (See "Table of" the Cliact Markets of (ireat Britain in their order of importance,' moder Great lirituin.)

Metrical System, Weights aud Mresures.-1ly a law of the French National Assembly in 17!in, a miliform system of weights and measuren was introlncel, all measures being derived by the deeimat multiplication or division of the metre, which is equal to the 10 -millionth part of the distance hetweon the equator and the pole. Aecording to this data, the measurn's of length are:-

Tho Millimitro $=0.039$ Inch. Engl.

1)ecametre $=32 \mathrm{ft}$.9.7 m .

Hectemetre $=10,9$ yds. 1 ft .1 m .
Kilomitre $=1093 \mathrm{sfan} \mathrm{yds}$.
Myriametre $=10930: 130$ yils.
In like manaer the acre ( 100 ) sq. metres, or about $1 \cdot$ Oth part of an Eng, more) is multiplied into the lectare 2-id1 acres), de.: the litre (n eubric decimetre and $0 \cdot 2(6)$ of a gallom, or a little more than a quart Fing.) into the hectolitre (2-8:3 bushels), \&e.; and the gramme ( 0 obif: of an $0 \%$. avoirl.) into the kilugramme ( $2 \times 206$ 1bs. avoird.), absl other weights.
lut, besides the foreroing, the ancient French measures are still to some extent in use : as the inch (equal to $1 \cdot 066 \mathrm{ling}$. in.) ; the foot ( $1 \mathrm{ft} .01 \cdot \mathrm{z} 8 \mathrm{~s})$ in. Eng.) ; ame $1: 3$ Eng. yils.); toise ( $6 \mathrm{ft} .1 \cdot \pi 3$. in. Eng.) ; the league of 2,000 toises ( 2 miles 713 yils.); the lengue of 25 to the degree ( $2 \mathrm{~m} .1 .3-10$ $y$ als.), \&c. The arpent is equivalent to $1 \cdot 043$ ling. acres.

The French pound is equal to $1 \cdot 080 \mathrm{lhs}$ avoird.; the muid $=1 \cdot 124$ hhles.: the hoisseau $=0 \cdot 369$ bushels; and the setier $=4 \cdot 430$ bushels.

Moncy.-Accounts are kept in francs, a silver coin wortl $9 \cdot 6!9 d$. Eng., which is divided into 10 décimes and 100 centimes. The par of exchange with England is very near 25 francs per jound sterling.

Roarls. - The aggregate length of roads throughout France is about $55,000 \mathrm{~m}$. The roads are divided into national, departmental, and communal ; their expenses being repectively defrayed by the government, and the deips. or commmes to which they belong. The national roads have a united extent of abont $22,000 \mathrm{~m}$., of which about one-eleventh part is pared, and the rest macadamised, or constrneted in the ordinary manner. They are commonly well made, and very direct; their construction and repair, as well as those of
the departmental ronds, leing under the superintebdebre ot' the central lmard of bridges umil public ways, which has a hend engineer established in ench dep. The commimal romis, which are sub)ject to no such control, are mostly in a ilcpiloralile state, and are ofton impracticoble for carriages.

Ruilucays.-The Ifst milways in France were conl llaes in the valley of the foire. The earliest 'eomicession,' or primiswion on the purt of the goverminent to consamet a line, was given, mader
 that ralways came to be used for pasemurers as well as merchandise, livell now there was very little progress in building new lines; yet the wiliject lusing attrncted pulbie atomion, there was
 the chamiers mid the press, as to whether railways ompht to be eonstructed thy private rinterprise, an in Eughtind, or by the state, as in limeminn. The disenssion ended in a compromise, cmandied ity the law of Jme 11 , IXIS. This law, in principle, gave the eonstruction of railways to private companies but under a fovermuneni puarinter, nud a combition that the lines thas luilt shomht becone the property of the state alter a eertain term of years. l'his term was origimily fixed at bit years; but subserpently, by a law, pased un 1six., anlarged to 99 yenrs. Vnder the law of 18-12, concessions were grmited to a mumher of eompanies-fron l'arss to Stranbourg. 'Tours to Namtes, lordeaux to Cette, Paris to Cherhoorg, Paris to lyons, and others. Some of these dunpanies wro umble to fullil their engurements, and had to demand nssistance from the state. 'lin prevent this as much as pussible, the govermment tried to bring abont an amakamation of existing eompanies, and the plan sniceveded completely. Of $5!$ eompmoies which had hern successively created, there were, at the end of 1851 , minly 27 in existenee, which divided mongr themeclves lines of the length of 3,918 kilometres, or 1 tis kilomètres per eomprany. I'le movencut of amblgamation still contilning, on the alse lee. Ixik, 6 great companies divided amonir them a eonceded length of $1(i, 3) 0$ kilometres of lines, or an nverage of 2,717 kilomitres per compuny. In 1 sti;i, a new arrangement was come to between the govermment and the varions railway eompanies, ly which all the lines were elassed umber two entegories, called distinct categories, umder the designation at the wh and the new resean. 'I'le following table shows how this division was established:-

| Namo or Company | Olu mereau | New Itherau | Tutal |
| :---: | :---: | :---: | :---: |
| Orleans | Klomères 1,7ij | Kilomatre 2,112 | $\begin{gathered} \text { Kllumètra } \\ 3,0,16 \end{gathered}$ |
| Lyons nud Medi- terranean - | 1,83-4 | 2,496 | 4,8:30 |
| $\left.\begin{array}{l}\text { Grent Northern } \\ \text { (Nord) }\end{array}\right\}$ | 967 | 618 | 1,583 |
| Fastera (Est) - | 985 | 1,365 | 2.359 |
| Western (Ouest) | 1,102 | 1,112 | 2,304 |
| Sonthern (Midi) | 798 | 825 | 1,623 |
| Other Compunies . | 234 | .. | 431 |
| Tetal | 7,77.1 | 8,578 | 16,352 |

The old résean, which is entirely constructel and open for tratlic, hasits own separate accomits, and provides for its expendituro and the interest of its capital from its own resources. On the other hand, the new réseau, of which only a minor portion is completed, is anthorised to place the interest of its capital under the head of 'exprenses of construction' mutil the whole riscan is tinished. Once completed, the government gumantees to the comparies a minimim of $4 \cdot 65$ per cent, on the capital of, in round numbers, about $3,000,000,000$
mimer the smperin-- bridges and palilic neer establialued in ln, which aro suht tly in a deplurable le for carriages. as in Frame were ovire. The carliest t the part. of the , was givert, maler was not till isily 1 for passelgers as ow there was very lises; yet the sulittention, there was er twelve vars, in es to wheller raillyy private elltertate, as in lemsinm. ipronises, cmberlied Tlijs law, in prinrailways to private rament muarthtee, - thas bifilt shmald ate after a eertain origimally fixal at y a law, passed in Vader the law of cal to a mamher of rasboarg. 'lobars to aris to Cherbomat, onve of these contitheir engngenemts, from the viate. 'Th le, the goverminent amation of existing ereded complitrly. heen successivaly of $|x .| |$, muly 27 in ug thenselves lines retres, or $1.15 \mathrm{kimo-}$ novernent of amalthe alst lier. Isis. nir them at eomeded lines, or an average "y. In IX6:3, a nur cen the goverument muies, ly which all vo eategories, called designation ot the allowing table shows hed:-

entirely constracted 11 separate acconats, are and the interest resources. On the which only a minor orised to place the ae lead of 'expenses ble risean is tinished. ment grarantees to $4 \cdot 65$ per cent. on the about $3,000,000,000$
fraued, or $120,000,0001$., whlela it ls estimated the construction of the 8,578 kilomitres of the new risean will cost. 'The ohd résaba, when ita proilta exceeded a cortnin umomat flated helorehand tor anch eonapasy, is boand to matributo towards covering the jossible defleit in the revennes of the new risena, and the expenses of the goverament on aecomat of its gamantee of interest, will le so much reduced. In return for the state grarantee, tho conapaices have ambertaken to complete the great resean, or 'net-work' of railways, cmbracing a total lengtla of 2,729 kilomet res of line, of which 1,920 kilometres are thally decided upon; the rest being eontingent. The lines which are finally decided tuon are to be constructed within the term of 8 vears from 1865 ; but the state is bonad to contribute to them, not oaly by $n$ gramanteo of jaterent, but by direct sabiventions of considerable amonat; in round numbers about $236,000,000$ fraucs. The followingr table shows how the concessions und subventions are divideal anong the five great empanales:-

| Name of Company | Length of Conerssions in Kitometres |  |  | Subrentiona |
| :---: | :---: | :---: | :---: | :---: |
|  | D) flint tive | ContinHent | Total |  |
| Paris, lyons, and Meditermaneal | 609 | 331 | 940 | $\begin{gathered} \text { Franes } \\ \times 5,7(10,000) \end{gathered}$ |
| Viustern (list) . | 672 | 62 | 721 | 622,800, 000 |
| Southerth (Mldi) | 2711 | 268 | $8: 38$ | 20,000,610) |
| Orleuns. . | 246 | 97 | 323 | 46,000,006 |
| Western (Orest) | 143 | 61 | 204 | 21,300,000 |

The Great Northern of France is not included in this list, having been mo party to the new arrangements come to in $181 ; 3$, which make ti.e railways more dependent upon the govermment. 'This line holds a rather iudenement position, the grater mamber of the slares of the company being held by the loonse of liothschild.

The following table shows the progress as well as the income of lirench railways claring the ten years $18 \mathbf{y y} \mathbf{2}-61:-$

| Years | Length of lifnea Open | Heceipts per kllomètre |
| :---: | :---: | :---: |
|  | Kllometres | Fraues |
| 1852 | 3, 3 : 1.4 | 43, 112 |
| 18.8is | 3,978 | 41,713 |
| 1850 | 4,348 | 45,663) |
| 18.05 | 4,8100 | 81,317 |
| 18519 | 6,392 | 4N,1+18 |
| $18: 17$ | 6,811 | 45, , 259 |
| 18.8 | 8,100 | 41,3330 |
| 18.i) | 8,85, | 413,908 |
| $1816)$ | 9.271 | 4:1,9\%.1 |
| 1866 | 9,603 | 47,943 |

Whilst the receipts per kilomètre have increased within the ten years, the workiug expeases have diminished, especially on the lines of the old reseun. 'Ilhas, on the Great Northern, the expenses absorbed daring 1 sisl bat $37 \cdot 4$ per cent. of the receipts, agaiast 188.1 per eent. ill 1860 ; on the Orleass line, $29 \cdot 7$ per cent, against $30 \cdot 6$ per cent.; on the Soathern liac. $39 \cdot 6$ per cent. agniast $42 \cdot 3$ per cent. ; on the Western liae, 41.5 per ceat. against $43 \cdot 3$ per cent. ; on the Eastern line, $39 \cdot 1$ per cent. agaust 40.8 per cent.; on the Mediterramean line, $37 \cdot(\%$ per cent. against $39 \cdot 1$ per cent. The six great companies here mentioned include 95 per cent. of the whole lirench network, or 'risenu' of rilibays; and in consequence ol' the dimiantion of the working expenses, and the increase of the receipts per kilomètre, these companies have been eambled to give their shareholders high returas, as will be seen by the
following tahalar statement of the dividends given during tlve years:-

| Name of Company | 1857 | 1858 | 1850 | 18100 | 1861 |
| :---: | :---: | :---: | :---: | :---: | :---: |

The railway shares being bou frates (except the Grat Nurthera railway shares, which wora insued at dun frames), the dividemils piven in lent represent for the original shareholiders a rate of incerest varying betweed a miniman of x per cent. and a maximan of 20 per cent. in the case al the Orlénas line. (liepmit of Mr, Giryy, Her Majenty's Sceretary of limbassy, in leports presentel to Parliament, 186.I.)

The total receipts on the six prineipal railways
 amomated to $20,519,1211$, and for the same period in 18633 , to $19,160,0!881$., showing an increase ol

 of Thishoxh; on the l'mis and Orhans the receipts were $3,1 \times 1,3,3131 .$, ngainst $3,290,5-10)$., showing ant increase af $198,7!33 /$. On the bastern the receipts amonated to $2,317,7911$. against $2,967,3655$. in 181i3, slowing min increase of $3: 0,4 \geqslant 6 /$. On the Northern the reecipts were $2,929,735 \%$, ugniast $6,77,961 /$. in $18 t i b$, showing an incrense of 154, $\bar{\sigma} \cdot 11$. On the Western the receipts amomated to 2,48:3,537., aqainst $2,2 \cdot 18,8151$, showing an increase of $2: 3, \bar{z} 2 \cdot 2$; and on the sumbliern to $1,427,1201$, mgaiast $1,353,7$, 0 . in 1863 , showing an increase of 73,33510 .

Canals.-The catire lengtli of the commanientions by motas of maviguble rivers and canaly Was, in 1864, ixtimated at $7,866 \mathrm{~m}$., of which exteat nearly five-sovaths were contributed ly tho former. There were then 74 mavigable camals complete; 16 more were in process of construction ; and 14 others were projeeted. Ihe prinejpal existing are as follows:- the Canal du Midi, or the Lamgaedve Camal, which rams from Cette to Toulonse, where it joins the Garome, and thas conneets the Mediterranean with the Atlantic; the Camal of Charollais, or diu Centre, conneets the Loire with the Saone; the Camal of the lilime and lhone (dhe Monsieur) forms a commanication between those rivers by consecting the Snôe with the Joubs, and the latter with the Ille, a tributary of the Rhine; the Camal of Burgundy connects the same with the Yonne, ami consequently the Seine with the Rhore and linine; tho Camal of Briare, and lhat ot Orlians, mate the Loire with the loung, a tributary of the seine; that of St. Quentin conmeets the bseant with tho Oise ; that of linttany, the longest of all, beiar upwarls of 230 m . in lengih, rans between Nantes and Brest. Those of Berri, Ardennes, the Inle et Rance, Niveraais between the Loire and Yonne, d'Ouref, which suplies l'aris witl water, and Somme, are the others most worthy of notice. (Ollicial 'lubles; Encre. des (iens du Monde.)

Government.-l'reviously to the revolution of February, 1848, the government of lirance, as tixel by the clarter of 1880 , was a limited monarchy, hereditary in the male line only with a representative assembly of 459 members, chosen by the electural elass, anil a house of peers. The constitution of 18.18 voted by the republican National Assembly, vested the legislative, and part of the executive power in a parliament of 750
members, elected by miversal suffruge, This charter hat to give way to amother, which was deereed 'in sirtine of the powere delegated by the French people to domia Napule

Therex, - l'he nyatems of thxation that existed in France previonsly to the revolintion of lis!l, hail evory powalile alofeet, It colimiated in grent part of direct tnxas lail on property, from which, however, thut of the sohility muil chargy, or of the plolient elases, was excmited. Tho indireet laxpa
 and the contribitions of forced Inbour, or corrmion fell almast wholly on the pmannatry, The cold lection of tho thxes by farmers was abos excernd ingly inpopular: anif, in finct, the whole syentela was ane of partinlity, injusilee, and oppreswion,
 astablivhed the prinelphe comboblied la the chartor and the new constitution, thin svery citianonandit eonitribite, willonit distinction, tor the wanta of the state lit proportion to his menns. 'f'o rarry out this primciple, it was tirst inttempted tor ratise the greater part of the julbice roverme ly dired tasa tion ; bint the proctical dithoultion were finmed to be sug great that this lum to loe given "p, mud indirect tisation was ngill reworted to, though oll ma entirely new lamis. At the present monnont, by fir the greatont part of lise atate income is derived from indirect thxes, one of whinh, the exciont firmbues twieg ans mush as ail the direre taxer tugether. The most impur-
 fonciires, ansessed oll all lathls and homser in jrupurtion to their nett rent. The next impartant imponition, the romtribution prownelle et wobilitre, is a mised inx. The lirst part being a sort of poll tas, rated at the value of two ditys habour, and ehatged on men of 18 vents and upwarle: the mobiliare is a lax on the ocerupiops ul honses of a certain class, clargen necording to the rent. 'I'se droits des putentex, or licence dinties, are charged on all persomas following a trade, profession. or bisiness. They are assensed purtly woeoraling to the rent of the honse ocempied by the patentee, and partly necording to the pope of the town in which he cirries on hasinewn. In every department of France there is an oflice for thas
 expenses of the establishment, which is highly
 The other pmblic taxes are nearly the same in France as in linglanul.

Besides the public taxes, ortrois or duties are levided on all articles entering towne of nuy considerable magnitule, the rate of the dudies rarying with the popro of the towns. These duties are great ciostractions to trmde and iminstry; but as their produce is employed to dutray indespensabie lecal charges, inchuling the expronsen of hospitals and asylims, it has mot leen possible to repeal them, alohongh attenyts to this eflect have been made at various times.

The suljoined tabular statement given a suecinct aceonit of the uature and ammant of taxes levicel in the empire of France lor the year 1862.

The Mexiem！war，it will be noticel，in not included in this enleulation．The cost of the Mexican exatition，ul to the end of $1860^{\circ}$ ，
amounted to $270,000,000$ franes, or $10,800,009 \%$. This limigs the tofal cont of reenent French wars to 2,296 millions of franes, or abont 92 millions sterliug.

The public revenue of liranee has immensely increand nimee the time of the lievolation; lat the expeniture hats kept more than pace with it. The income halget of 1791 amonited to $5 \times 2$ millions of franes; that of $180-1$ to x (tot millions; that of 18.31 to !osi millions; and that of Istin, as above given, to 1,719 millions. Consequenty, the state income usore than trebled in the course of abont two generations.
Lanyueqe and Literafure.-It has loeen estimatedi
 or various pathos, laving different degrees of analogy with that languge; that $1,600,0000$ nse (icrman dialeets, $1,250,1100$ the [3retom, and 150,1000 the Buspue tompue. It is chictly with reforence to these langugges that lhallii his divided the iuhalo. al lirume into four great fanilies-the firecoLatin or (inllie, Germanic, Celtic, and Basque; besides the Semitic, itmeloding the Jews, and some few individuals of Sirneenic origin in thes. déps.; and the Jlindou fanily inclading the gikanos, or gipsios. The Greco-latin fanily, which comprises the arent balk of the poph., siraking dialects derived from the Iatin, are probnbly for the most part descended from the ancient Ceific pop. by whons the comitry was principally inhathited at the poriod of the lionan comefuest; and who, darins the subsequent atres of Roman dominion, eradanly adopted the Latin tongue, which forms the hasis of the moleris F'rench. The Romans, no donbt, intermixed with the mative joplo, and the latter, in the S.. may still have some ialiasion of Greek lhood derived from the firecks, who fonmed Marsedles, and ohber polonies on the: Mediterrancan const ; the Fibath are also in part the offispring of the Visigoths, Burgumblitus, Almi, and Frunks, whosuceessively hemmemasters of (ianl in the midelle ages. But notwithastandingr that the modern French are thas descended more or less from all these ances, there can be little dund that the ancient tiallie or teltic howad predominates, especially in the Contral and sid. proves. The intermixare of limanand (ireck blond cond not have Jeen very great: the Visigoths, Burgindians, Alani, and ofher harbarons tribes, swept over the comitry us comquerors, but maintamed thenselves $\mathrm{jan}^{\text {in }}$ too short a time to have any material influcnee on the native popp; ; mill the Franks, thourh, like the Normans in Eugland, ther establishod a martial supremater, hate little to France but its name, and were in ton small numbers to impress their own character on the mation, except [urfiaps in the NE., where the jepmation is less lirench than elsewhere.

The Frenelı have ntained to hight excellence in almost every branch of literatare. Their writers are particularly distinguished by extrome perspienity, ford seuse, an attachment to chassical mordels, and perhans, also, by $n$ deficiency of sentiment. hatterly, however, the public taste has apparently moderfone some considerable modifientions; and the literature and philosoplay of their fierman meighbours appear to he materially inthencing their tastes and pursuits. Abont 20,000 new books, inchoding pan!phlets and new emitions, are publishedammally in France, more than two-fhirils of them in liaris, 'There were, at the end of 1861,318 pelitical and tià non-political newspapers, reviews, and magazines publishod thromghat the eantry.

History.- Before the time of Casur, the whole of France was known to the Romans hy the mane of' 'I'ransalpine (iand; but after its concquest, it
was divided into the four provines of Prorincin Momataram (Provenre), abl (ialliz Aynitmion, Cr/bice, nud Brlyira. In the btle realury it was sulblivided into 17 provinees, inelusive of all the territory un the E. Gank of tho litine. At the latter cjurela the Germanic nations hegen to prome ill all irresisfible torrent over (inul. I'le Vixipothes established thomselves in the W. und s. frome the I.0ire the lhe I'remeses, where they entalilished a kingelom that linsted till alenit stio. The llargmelians, in a similar mamer, settled in the li., from the lake of fienevn to the lihine, ann afterwards stretehed aloug the lihone to the Dediterranean; the indepondent, sovereinnty they erected lasted till ubont bibl. The Franks, whose domiaion swallowed up those of hoth the firregoing tribes, had been long settled in the N.; anil Pharamond, their chace in dett, is considereel the finumber of the Freneh monareliy, an he was of the tirst or Merovingian race of Frankislo kiurs. In 485 Clovis deloated Syugrius, the loman gearal, at Soissons, and thally extinginshed the homan power in the W.; and in 5017, hy his vietory wer the Visigoths, he remblered himself master of all the comitry between the Loire and the finomue. On the deatly of Clovis, in 611, his dominions were divided into furr kingdoms-those of laris, Metz, Suissons, nud Orledilas-each governed by one of his four soms: these, however, ware rinuited in 558. In 732 Churles Martel deleated the saracens, who lind efliected the eompuest of a great part of the S . of liance, in a great bathe; and ultinately succeceled in expellime them liron the kingolom. ln $\overline{\text { an }}$ l the Carlovingian dyuasty commented in the person of lepin le liraf, sont if Charlos Martel, and was earried to the summit of its power by Charlemagne, the son of 1'epin.

Under the first race of kings the comentry was a prey to bloodshed, spolintion, and autarely: industry and commerce were almost unknown, or extended only to the production and hater uf a liew indispensable articles. Nor was this condition much ameliorated during the rule of the sucereding race. Charlemagne, inded, enconraged trale mand mannlatures in the fowns, whirln hefore his reign were chiedly continei to the choister, or practised by isolated individuals; but after his denth things returned to their original state of confusion. Under his immediate suctes-
"rance was again livided into four parts, and the Normans began to ravage its N. provinces; the powne of the nobility also rapislly increased: and the last sovercign of the Carlovingian dunasty, Louis V., in 98ti-7, possessed only the town of Lam. His suceressor, llugh Cajet, count of l'aris and Orleans, the fimmer of the third race of kiugs, governed only the lle-deFrance, I'icarly', and the Urleamais. 'The daken of Normauly, Ilrittans: Ayuitaine. Gaseony, Lorraine, and Burgundy; the comits of Flanders, Champagne, Vermandois, Toulonse; and several mituor seigneurs shared nmong them the rest of the modern kingdom. liy dogrees, however, all the great liefs fell in various waps to the crown. Vermandois was united to it hy jhilip) Angustes; Toulouse and l'erche by Iouis IX.; Champague in 127.t: the Lyomais, Danhiny, and Languedoc, in the 14th ecntury; IBerri, Normandy, Gaseony, Burgumbly, Atyon, Maine, and I'rovence in the Ithi ; the lhorbomais, Auvergne, brittany, lorraine, and considernble territories in the silv., in the 1 fith; and Flanders, Artuis, Franehe-Comen and Alsace, in the 1 oth century. The names of the sovereign powers of France, beginuing with Hugh Capet, and the dates of their aceession, are as follows:-

While the monarely gained in comsistency and estent the regal power was making eonstant ailvances. The politienl rights nulprivileges which the nobles exereised under the feudial system were the objects of continued attacks on the part ol the erown, which, though sometimes defented, were, in most instances, successfinl. At lengith, muder the ndministration of lichelien, the nobles were stripped of all power; and there being 10 other body in the state, with the exception of the parlinments, which land degenerated intolittle else than courts of law, that enjoyed any constitutional privileges, the power of the crown was raised above control. linder the vigorons, and, for a lengilenell period, prosperons geverument of touis XIV.. the royal prerogative arrived at a maximum, lat the close of this reign was eminently unprosperms: mul the wars in which Lonis hat been lomgengured, the burdens they obliged him to impose on his sulpeets, and the vast debts he had contractent, produced not ouly great sulfering and misery, bint also great diseontent. During the re-geney nad the subsequent part of the reign of houis XV., abnses of all sorts multiplied on all hands, and were no longer conceated by the dazaling splendour and magniticence of the preceting perioul: the most worthless parasites obtained a predimminating intluence at comrt; the command of fleets and armies was entrusted to the merest imheciles; the ilmances were havolved in the grentest disonder ; and France and Enrope were scandalisel and disgusted by the gross sensinality and valgar prolligacy of the king and his intimate ansociater. Lomis XVI ., who ascented the thrme in $[i-1$, was actuated by the best latentions, but he wauted the tirmness of purpose and capacity required in so desperate a crisis. The abuses that infeeted the whole frame of society, though destructive of the pablic interests, were either really adrantageous, ur betieved to be so, to a vast number of persons. inthuling the nobility and elergy : and it wonld have required a miud of a very different order from that of Lonis to have frustrated the solicitations, intrigues, and caloghs of such powerful parties, and to have safely carried through the referms that had become indispensable. At length, after a variety of futile expedients had been in vaiu resurted to, it was resolved, in $17 \times 9$, to hold a meeting of the States-General, which had not bren convened since 1614, for effecting the neerssary changes, and averting a public bnkkruptey. This was the eommencement of that trememlous revohution which cost Louis XVI. the erown and his life, and destroyed every vestige of the goverment and institutions that existed when it lroke ont.

The atrocities comected with the lievolution were the wihh, but not minatural, excesses of an uniustructenl populace, that had suddenly been emancipatel from a state of extrome derratation, and which hat inmumerable pricvances to suppress, and wrongs to avenge. It minfortumately happened, that when the nobles were stripped of all pwitienl power, and renderen incapable of opposbug my elfectual resistance to the sovereign, they were, at the same time, left in full posseession of their fendal privileges as landhorits. Therse romprised an exemption from those direct taxes that fell with their full severity on every one elve; the dispensation of justice in manorial conrts; mul a host of vexations privileges connected with tho game laws, and the laws resprecting mills. The rental of very many estates consisted, previously to the Revolition, of little else than services anil feualnl temures, by the balefinl influence of which the industry, of tho ocempiers was ahmost exterminated. 'The country population was everywhere, in fuet, in a sithation of predial slavery ; and while the nobility and clercy threw the burden of the teillecomvers, and other oppressive imposts, wholly on the tiers itat, they engrossed to themselves every situation of power mal cmolument ; so that down to the Revolution, no individunl, how meritorions soever, muless he olitained a patent of molility, cond be made an ritiecer of the army, or be promoted to almost any public: employment. Government deprived the nobility and landed aristocracy of all that could have renidered them ussful, at the same time that it lelt them all that eowhld remier them little tyrants, and a euse to the comutry in whith they lived. If we ald to these grievances the fact, that the peasantry receivel no elicient protection from the government, and that the administraion of justice in the king's eourts was, spraking generally, partial, venal, and infamons, we shatl be at no luss to maderstand why the aristocracy was so universally detested in lirance, anal why the Revolutioni, which was indispensable, was so sweeping, bloonly: and destructive.
The proseriptions and anarely by which the Revolution was accompanied contimued till Napolem attained to the supreme direction of aftairs. The talents of this extraordinary man were surpassed only by his ambition, which, hy overstepping all bewnis, precipitated him imo enterprives that ultimately lel to his overtbrow. In 181.1 the fimily of Bourbon was replaced on the throne; hut the elder brameh had protited as little as the Stuarts in Enghand, umer similar circunstances, by the lessons of adversity, nand in 1830 they were re-expelled from the kingitom. The crown was then offered, under certain conditions, to Lomis I'hilippe, drake of Orleans, by whom it was accepted. He has the merit of having contributed, under very dithenlt circumstances, to maintain, for a lengthened period, the peace of France and of Europe. But he alienated the pmblic ly his plans for advancing and euriching his chilliten; and by the eorruption which pervaded every department of his rovernment. This led to the revolution of Felb. 2.1, 18.18, and the establishment of the republic, presided over by a l'rovisiomal Goverument. A new constitution having been voted by a 'Constitnent Assembly' of' 100 menbers, ]rince Lunis Napolem was elected head of the republie, for four years, by $0,5 i t 2.8 ; 34$ votes, on the 10 th of December, 1848. The 'Prince-1'resident' dissolved the National Assembly hy a coup,d'etat, Wee. 2, 185l, and having remodelled the constitution, appealed to miversal suffrage, which decreed him president for 10 years, by $7,439,211 ;$ votes, on the 21st of December, 18öl. Appeaked
to a third time, Prinee Napoleon wat ehosen em-
 votes, on the 22d Xoveminer, 18:2. The elect of the people acerpent the imperial hignity, mud assumed the title, "Supulem III., Dimpuror of the

FRANKFORT, or FRANKFULT-ON-THEMAYN, ocelebrated eommercial town and 'Free City' of W. Germmy, seat of the diet of the Germanic comederation, on the N. bank of the Mnya, 18 m . Nb: by lis. from its conthene with the Rhine at Myyence, 4! m. Ni:. Cobltenz, Nis m. SisW. Cassel, and $17 \mathrm{~m}, \mathrm{~N}$. by W. Darmstadt, on the man line of railway from Hamburg to Basel.
 the city $x$ finde in Istil. Frank fort is oval-shaped, and communicates with Snchsemhansen, on the Opposite bank of the river, by a stome britge, of 1 It arches, being about tand fit. Jomg liy 11 bromel. lis fortitientions were demolished hy the Freneh, and their site is now owemped ly puthic walks mad gardens. The eity is, however, still entered hy 9 priacipal gateways, 2 of which are in the suburb of Suchsenhansen; and some of them are: remarknble for their clegrant and classie style of arelitecture.
lirankfort presents many varicties of aspect. The old town, with its narrow streets and puaint wooden buiddiugs, with gables overhangiug their basement stories, has an unprepossessing nppearance, and the dews' guarter is tilthy. Sa the new town, however, the \%eil, the new Mayence Street, Allece, and expecially the bine guay which st retelies along the May nemrly the whole length of the city; are heminfful streets mod promenales, and not a few of the houses in them are literally papates. The streets are generilly well puved, and lighted with, gas, There are sime good sppures, several, us the Loss-marlit (Hurse-market), being ornameuted with fumbtinas and avennes of trees. Prambifort possesses several intcresting public buildings. Tlue liömer, er comucit-honse, is of nuwertain origin, but was most probably built by the Frankish emperors. 1t possesses mio arehiteretural beanty, but is deserving of notiee, as being the place where the emperors of Germany were elected. The clection clumber, on the gromad lloor. now serves for the sittings of the selate of Frankfort. Above this nurtment is the Kivisersual, or 'Hall of the Emperors,' a large elamber, with a vanled roof, mee the secoue of the splendid proment of the clection banguet, at which the enperor was waited on at talle ly the high dignibaries ,if the empire. Its walls are surromuled hy niehes, in which are placed the port raits of the ferman emperors in the order of their succession, from Conrad 1. to Francis II.; the latter, with whom the line of the cmperurs of dermany cemes), filling up the last vacant space. In this building is preserved the famons ' Colden Bull,' the deed by which Charles $1 \mathbb{N}$. , in 1s3ifi, settleal the monle of election of the (ierman emperors, tised the mumber of electurs at seven, and determmed their rights of vatilug. The present dict of the tierman coutederation assembles in the former palare of the prince of 'Tours and Taxis, now the rendence of the Austrian ambansadur; a structure of the last century, containing lifo different apartments, ind richly firmished. The cathedral, or chareh of 'st. Bariholomew, is an elitice of Gothic architecure, in the form of a eross, 246 German ft. Jong. hy 216 broad. It is said to have been begion in the time of the Carlovingian princes: the greater purt of it is, however, the work of the 1 ath and $1 \cdot 1 h_{1}$ centuries: the tower, which is whof. in height, is still mutinishlect. This murch has not much beauty; but it contains sume curions monuments,
especially that of the emperor Guather of Schwarslurg, killed by his rival, Charles IV.; a flue paintints of the Assmuption by linberos, anne a llying Mardalen by Bremblet a dud the ehapel in whim the Cierman emperors were erowned. There are 21) other phaces of worship, ineluling 8 hatherant, 1 Calvinist, 1 l'remeh-l'rotestant, unal 1 IS. Camb, churches, besides 38 suatrguce, one of which in a Yery lamusome louiding. In the chureh of sit Catherine, there is at tine primtimg, of 'sextas oll the Ammet of Oliven,' by bloses. The clurrdh of si. Leomard, near the river, ocempies the site of a balace built by Charlemagne. but of which no traces exist. The saulloy'; a building of the liat eentury, also near the Many, is erected on the site of moilur palace, bult by hanis the som of charlomuguc, and which alterwards became the residntice of the Carlovingian emprrors of Germany. The modern colitice inchudes within it the chapiel of the origimal one, which is probably the mowt antient strueture in Prmut firt. The nucient palace of the Kinights of the Tentonic Orier, in Suchembansen, is in a state of decay, nud mow orreves an a barract fir Anstrime truops, who, in conjunction withl'russians, garrison lirankfort. The Ilmes zum Drannfels, or exchange, ixa small neat quadrangle, surromuded ly a range of warelonses nud shops, thronged during the fair with merelamts of all nations. The Stadel Musemm mud Acabtomy of laintiug (so mamedafierits lommer, a riel banker mad citizen, who, in 1816 , hequeathed a milliwn of Ilorins, together with a resperetuble colle:tion of pichures and engravings fir its fommation) orevpies a handsome new building in Maymee Strect. The rallery, without being tirst-rate, pussesses severil pook specimens of art, chiefly of the Filemish and buteh masters. I'rivate collectionts of pictures are very mumerons; and there inscarely "tmerchant or lanker in Fraukfort, of moderate atluenee, whu lins not his little gallery, whidh, with his music, his caleelor, and hisplipe, torms his favorite recreation from the fatigne of business. The princepal work in the tine arts at Frumbiurt is Damueker's celebrated statue of " Ariadne seated onn a'Tiger,' in the parden of Mr. Bethuanm, " hauker. Most travellers rauk this piere of suil) ture among the most distinguinhed prochections us modern art ; but it mufortmatrly happens that the marble in which it is excented is covered with blue velus and spots. Dmancker had this work in hund for lis years, hut only receivel for it $15,0,14$ thrinks, or 1,2 and. ©he of the most interesting public momments is without the liriedlerg-gatt"; it is a colossal mass of kramite rocks grouped together, on one of which are inserited the names of the I'rince of Hesse I'litipsthat and the Hessians, whe fell on the spot deffuling lirakifirt, the whole surmonted by a military device cant from camuen taken from the liretich, and surromuded by weping willows. This memorial was erested by the king of Prossia. The Senkenberg Musemn of Natimal History, and Me elical Lustitute, ocengy an imposing lmiding of the Whatertury; the muscom contans many rare specimes brolght by the traveller Ribingll from NL. Afriwh. The public libray, with 80,000 vols, ; 5 hospitals, the orphan asylmin, hantie asyhm, theatre, wih an illuminatel clock over the stage, the cusins, or principal reading clab, mad the new ecmetery near the eity, eontaining several works by Thurwaldsen, are the remaining objects most worthe of notice. The hotels in Framkiort are atompst its most magniticent elitices, anul rank amonir he tirst in tiermany for elegance and comfort. Many of these are situated in the Keil.
The chied manufactures are earpets, tahle-cowers, wil cloth, woollen, cotton, and silk stutli, woollen

## FRANEFORT-ON-TIE-MAYN

yarn, coloured paper, fohaceo, playius-cards, fold iud silver artiches, and printers' black. There are ahout twenty printing ofleres, hesides severn] stereot you and lithographice estahlishments. Bhat the principal monrees of wealth to the merchants of Framkiort are commercial tamsactions, banking, and neweulations in the fimms. The inhal, of Saflsenhasen are mosily peasantry of siaxon desemt, mud distinguished from the rest of their fillow-titizens in manmers, customs, dress, abl laturnare, as well as ocenpations. Thery are gemerally employed in sarden cultivation, lishing, \&e., or as porters. Frankfort is one of the great emporlmos lor the supply of Germany with all kinds ol merchandise, and dugos therifore a comsiderable proportion of tranit and commission business, T'wo large and edebrated lairs, at biaster and Nichachas, are mumally heht in this eity, These sulferend materially during the oecomation of the eometry by the licueli, and since the pence they have been atioeted by the improved commuinemtions established in all parts of the conntry, the greater dittision of slopps mad magazines in all the principal towns, and, in whort, by the condurrence of all those cames that temb, ats civilisafiom mances, to lessen the inportane of laits. However, a hare amonnt of busimess is atill transarted at the Franklort fitis. (Colton twist and sullis, and entlery, are the British emmondities in greatest demand. 'The city is inchuded in the lierman castoms leaghe. (Fior an andonat of the territory of the eity see below - Fasinkont, Helvoitic of.)

The town und comotry civil and criminal trihumals, comrt of apmeal, lward of taxation, and most of the alministrative establishments of the republic, are held in the city. 'there are a great many educational institutions, inchuling a symmasium; the medieal institute, with a hotanic gavdell: normal, dewish, drawing, deaf and dumb, and trimes schools, and humerous private seminaries: many learned and benevolent associations, as the $\begin{gathered}\text { onhenberg sodety, the society for the en- }\end{gathered}$ couragemont of useful arts, and philosophical, lible, and missionary societies. Jew towns ahomal so largely with pmblic clarities. The Jews are musinally mumerons in the city, and weropy some of the diuest mansions here and in the cinvirons. They were formerly mineh opprossed - eompelled, for celturies, to live in a dark unwholesome guarter ralled the dudenfrase, or dews ' Lame-bit, from being loelots, they have now risen to be almost the masters of the cits.

Frankfort is one of the most ancient eities in Germany, Charlemarne held a comel in it in 794 , and it was fortified ly Lonis-le-Jobornaire in 838.1118 .43 it berame the eap, of the kingfom of Austrusia, and not bong afterwards, muder lonis the tierman, its great fairs originated, and Frankfort beame the commercial eap. of Germany. From this prion the increase of its prosuerity was rapid, and in $115-1$ it was made an inilependent free city. It aequired considerable privileres during the next two eenturies; and in laso had obtained nearly its present extent of territory. Firom 1806 to 1810 it was the calp, of a prime-primacy, and from the latter year till the downfill of Napoleon it was the cap. of the gramd duchy of Frankfort, which comprised a territory of nearly $2,000 \mathrm{sq} . \mathrm{m}$. It was the native place of lioethe, horn here in $\mathbf{t} \cdot 19$, as well as of Amsehel Rothselidd, ancestor of the great banking family of the hame, bow spread over all Emrope. Amsehel Rothschild was born in a wretehed dwelling in the Jews' Lane, in $17 \% 2$, the son of very poor parents, and died in 1812, worth above

FRANEFORT (REPUBLIC OF) AS1
a millons sterling, (Steries of lianks and llankers, ly 1. R. Martin, land. INtis.)

FIANKFOR'T (IEPUHLIC OF), a mominally indegrendent state of W. Germany, and the smallest in Einrope, comsisting of the city of Frankliort-mi-the-lhyn, and the conntry immediately around it, together with wome detached portions of torritory, the whole having an aren of
 Ixbl. The state inchules, hesides the eity, eloht
 largest portion of territory belonging to l'rankfort lies om both sides the Maym, havinis NW, and N, the dom, of Nassan and Hesse Cassel; and Stio and $S$. those of Hesse Imarmstadt. it is quite level, and very productive and well cultivated, yichling eorn, potatues, pulse, fruit, and wine, and freding many eattle. Much of it is, however, laid out in sardens; the environs of the eity of Frankfort being completely atmdded with the rountry houses of mereliants and others, I'revionsly to the insurreetion of l8l8-which in Frankliort was of a very sangninary nature-the institutions of the republic were oligarehical; but they wore subsequently changed to otheres of a more democratic nature. The present constitution of lirankfort-on-the-Mayo was prochamed by the constitnent assembly of the free eity, on Deeme hor 22, 18.51, and necepted by a gemeral vote of
 this charter, the govenment of the commonwealth is exereised by two representative bodies-the semate, consisting of twenty-one life-members, and the legishative assembly, composed of eightyeight depoties, of whish tifty-seven are electod ly the burgesses, twenty by the common eommeil of the city, and eleven liy the inhabitants of the rural ilistricts. Vacmeies in the senate are filled by a ballot-committee of twelve members, six of whom are appointed by the legistative assembly, and six by the semate. A president and vice-president-ailled elder burgomaster and vomorer burgomaster-elected ammally, represent the exeentive amthority vested in the senate. The right of making and altering laws, and that of improsing and distri!nting tinancial burdens, belongs solely to the legishative assembly. The budget is voted ammally.

The budget for the year 1862 comprised an
 expenditure of $2,2=21,147$ florins, or $1 \times 5,3 \operatorname{li} /$. Abont one-thirl of the ineome is derived from customs duties, and another third from the excise. There is a state-lottery; whieh proluces, on the average, 130,000 florins, or $10.8: 382$, per ammm. The cost of goverument, incholing army and police, furms more than three-fourths of the whole expenditure; and for ellucational and ecelesiastiend alliairs, 118,492 florins, or $9,87-1 /$, are set aside. The public delat at the commencement of $18 t^{2}$ amounted to $16,3,3 ; 3,000$ jlorins, or $1,362,750 l$. Very nearly one-half of this deht-exactly 7,868.060 florinswas incurred for the establishment of railways. One million of llorins of the capital pays no interest, it having been alvanced, under this condition, by the bank of Franklort, against a permission to issue notes.

The contribution of Frankfort to the German confederate army amomes to 1,119 men, nearly nll infantry. The whole of this force is raised ly enlistment, for periots of four years and two months-formerly six years and two monthsunder the other of a lonnty of 300 florins, or 2 gil. The men receive 19 krenzer, or about 63 d . por dien, with increase of pay at the end of ten pears service. It is owing to the position of the Free City, as the sent of the Germanic Diet, that it lus
pets, talile-covers, dik stulli, woollen

## FRANKEORT-ON-THE-ODER

to keep a nuch larger armed force, in eomparison with its popnlation, than any other state of the conferlerntion. The city luas also a gumed uf burgenses, the daties of which, however, aro of a striedly eivil nature. Frankfort maintains repreacontatives in most of the prineipna meighburing states of lieminuy, a minister at l'uris, und eomsuls in Lomblon and some of tho American eapitals. It has one vote in the full commeil of the Cierman confederation: and diviles one in the lesser comeil. and the lith place in the diet, with the other Ilamse 'Tuwns.

FRANKHORT-ON-THE-ODER, a town of the I'russian dominions, prov. Bramlenburg, eap. movermment of same mane, cire. lablos; ont the Gder, about 116 ft . above the level of the lhiltie, 50 m . Fi، hy S. Barlin, on the railwoy from Iherlin
 of : 2,30 . Thongh mo louger a lortress of any strength, the town is surromuled by walls, with towers and a diteh. It is well hoilt; the strects are straight and broad; the homses generally food ; and many of the public entines handsome. The town communicates with one of its three suburbs by a wooden bridies across the Oder. It has a good market-phace, six l'rotestant churches, a Roman Catholic chapel, symgegue, govermment honse, council-house, new post-homse, gymmasian, high school, school of midwifery, school fur nersected chiliten, and various other schools; mit orphan asybum, two hospitals, in wurkhouse, with a honse of eorrection, and a theatre. A university established in it, in limi, was, in 1810, removed to Breslan. It is the seat of the authorities for its goverument amd circle, of a superior judicial tribamal lor the former, and inferior comrts for the latter and the town, a circle comneil, council of nobility (Ritterschafts-Dirceion), and hotrds of taxation, agriculture, and camals. lbeing situated on the high road from Iherlin to Silesia, and on a maviable river commmicating, by camals, with the Vistula and the lilbe, it his a considurable trade; thongh, in commercial aetivity, it is far inferior to its mamesake on the MayH, It has mannfactures of woollen and silk fabries, stockings, gloves, leather, earthenware, was, and sherar; with brandy distilleries and mustard-works, for which article it is celebrated. A good deal of wine is grown in its vicinity. Three large fairs are held here ammally, in Feb., July, and Nov. They are attendel by great ummbers of merchants and dealers from foreign countries, as well as from (iermany. Hesides the woollens, tinens, carthenware, silks, ami other articles furnisheal by the town and its vieinity, and the various raw and manufactured products of the I'russian and other German states, very large quantities of 13ritish, French, Swiss, and other foreign goods, are disposed of at these fairs, partly for the supply of the surrounding country, but principally, perhaps, for exportation to l'oland, Gahicia, Russia, and Bohemia.

Many of the inhabitants are emploved in navigating the Oter and the communieating streams and canals to Dantzic, Wirsaw, Magileburg, and llamburg. The villare of Kuncrstorf, in the vicinity of this town, has been the suene of one of the most samguinary contests in modern times. On the 12 th of Augnst, 1759, Frederick the Great attacked the entrenchments of the Austrians and Russims at that place; but after partially sueceeding, and exhausting all the rosources of skill and valour, lie was compelled to retreat with immense loss; the appronch of night having alone saved his army from being completely destroyed. (See Thomas Carlyle's History of Frederick 1I., called Frederick the Great,

Kinerstlurf
Filankfont, a town of the IV. States of Amerisa, Kuntucky, ul' whieh it is the enp., eo. Franklin, on both sides of the Kenturky, which is hore crossma ly a bridge; tis m. WSW. Cincinuati. Pop. b, ition iit 1861 . The town is buried amung steep hills, and the banks of the river are bere precipliteses, and from dot to $50 t \mathrm{ft}$. in lieight. Frmaklort is well Imilt, ehiotly of stome, but many of the private as well as pullishuidings are of the white nurble. The principal publice editlees are the state-lonse, with a lhe lonie portieo; the penitentiary, hasing, generally abont 100) inmates; three churehes, an acndeny, connty conrt-homse, and several mannlineturing establishments. It is a pilace of some trule: steam ressels mavigate the Kinituckr river as fir as this town, and at certain seasons three or four are kept in refular employ.

PliASCA'll (an. Tusenlum), a town of Central Italy, comarea di lioma, II m. SE. Rome. J'op. Issually about 4,3000 , but iluring summer this momber is considerably ineronsed by the intlux of visitors. It is beantifully sitmoted on thedeclivity of a hill commameling in extensive view of the surromiling. connary; but except the pinzzn in which the cathelrul is sitmentel, the town is dirty and ineonveniont. Its ruins, and thesurronnding vilhas, constitute its chicf attraction; but the latter are now lalling into neglect, the present lashion of the lemant mobility being to pass the summer at Alhano. 'The principnl vilhas are those of' C'onmss Aldobrandini, Braceiano, Faleonieri, and lindlinelli, on the gromms of whinh last are the ruins of the anciont 'Tusenhme. 'The splembid mansion of the Horghese family, Monte Dragone, is now noglected and in a state of decny. l'rascati has a publie seminary, and numerous convents, chmreles, mil public fonntains. Its bishop is always one of the tive members of the lighest episeopal commeil. The ruins of 'lusenhom (municipiam charissimum, Ciecro pro Fonteio, § I4.) comprise an amphitheatre, a theatre, an inmense hall, supposeal to have been attached to baths, fountains, dic. This was one of the most meient rities of Italy, its fommation leing aseribed to 'Telegonus the son of Circe. It Was strong, as well by its position as by the walls by which it was surrounded, portions of which still exist. It was, also, one of the most filthfil of the allies of lione; and successfully resisted an nttack ly Ifamibul. 'The top of the hill on which Tusculun was built, 2,079 Preneh lt. above the level of the sea, was surmounted by a citalel, now wholly lestroyed. Like Fraseati, in modern times, 'Tuseulum was erowiled with the villas of' distingnished Roman citizens, among which may be meutioned those of Lucullus and Matenas. Ihat the fame of all the other villas has been wholly echiped by that of Cicero, so often menttioned in his works, and from which his beantiful ethical distuisitions, entitled the Disputatimes Tusculanar, have received their name. The attempts that have been made to identify the site of this fimons villa have hat but little sucens. (Gell's Rome, i. 4033, and ii. 283; Cramer's Ancient Italy, ii. 4.J.)

FRASLRBUURGII, a town and sea-port, Scotland, co. Aberdeen, on its NE. coast, on a slight eminence S. side of Kinnaird Head, a bold promontory, on whieh are an old castle and lighthouse, 120 ft . above the level of the sea at high water; $18 \frac{1}{2} \mathrm{~m}$. E. 1 Banff, and $37 \mathrm{~m} . \mathrm{N}$. by E:. Aberleen, eu the Nortlo of Scotland railway. I'op, 3,101 in 1861. The town is nearly square. Must of the streets cross each other at right angles. A considerable number of new houses lave beell built within these few years. The chief public

FREDERICKSIIALL,
FREIBULC
383
buidings are tho parish chureh, the episcopal chapel, and the jail. 'The cross, which is of' a hexagonal form, is reekoned a tine strueture: the area of its lase is foll fi, 'There are no fewor than 10 sclowis in the parislo, of which only one is endownd. 'the harboir has been much enlarged and improval, purtly at the exprinse of goverimatit. It embincer un area of upwards ol' 6 sicoteh areme menrly a half of which hats been excavated along the piors and jettien. It is of eatsy necess: and is it affords exeedlent anchorage for mhips of every size, it has been fonmal to be of great importance to the shipping interest in genernl on this eonst. Iried and piekleal eod ure exported to the "xtint of about 2,0001 sterling ; grain of varions

'The town and harbour existed above two centuries ngo, the former having beel crected into a burgh of rugality in 16ids, called Fraserburgh, in honomer of sir Alexunder liruser of lhilorth, who obtained the chartor. The sume Sir Alesauder Fraser obtained a rharter from the erown, in libis, for the crecthon and endownent of a miversity; and at he west emb of the town thore is an old qualragghlar tower of three stories, which lirmed part of a buidding originally intemed for this seminury. In 1509 , Mr. Charles Ferme, of the Dnivarsity of Ealinburgh, was elected principal of this intended collure; but from canses not explained, probably lrom want of fimsls, the phan was abandoned.

FREDERLCKSILALLa marit. fown of Nomay, grov. Augerhus, at the inthix of a small river into the lite-fiord, near the NL. ungle of the Skagerrnek;
 Frederickshall is an open town, bat immediately above it , on a jerpendienlar rock, 100 ft . in height, overhamging the sea, is the strong fortress of Frederickstein, at the sicure of which Charles XII., king of Swealen, wis killed, on the Both of Nov., 1718. It was donbted for a while whether the king mot lis death by a lall from the fortress, or hat been assassinated; but there seems to lee no grood aromads for supposing that trearemery had anything to do with the matter. Frederickshall spremels irremolarly romen the roek on which the castle is built; 'it is a strame-looking little town, in which honses, rocks, and water are curionsly mingled. One street is terminated by a perpendicular rock; another by a deep ereek; und, as there are only three or four little streets in the town, it las at least the praise of being simgnarly pieturesque.' (Inglis's Nomay, p. exs!.) The strects, though few, are wide anil rerular, presenting many handsome honses, gencrally two stories high; all of which appear to have been built since the condlagration, in 1759 , by which nearly the whole place was laid in ashes. A considerable trade in timber is carried on, and there are af few manufactures of linens, tobacco, de.
'The castle of Frederickstein is one of the most inaccessible fortresses in burope. The place suffored ifrently by the fire alluded to abore. und is now in a state of great negleet. An obelisk lias becol erected on the place where Charles XII. fell.

FhisIBERG, a town of the k. of Saxony, and eqp, of its mining district, cire. Jresilen, near the 1., arm of the Milde; 16 m . SW. Ibresilen, and 50 m. She. leipzie, on the railway from Dresten to Chemnitz, Pop. 17,510 in 1861. Freiberg is an ancient inaperial city, and is still surrounded by old walls and a ditch; but the sreater part of its fortitications are laid out in girdens and public walks. It is well built, paved, and lighted. It lass a cathedral, a hamdsome dothic editice, with a rich!y ornamented portal, in the Byzantine style, called the Goldes Gate; some curiously carved
stone pulpits; the tomb of Werner the geologist; a chapel in whleh the l'rotentant prinees of Saxomy, from liwl tu lidel, were buried; und a remarkulile momment with un alahater statue of the Fileetor Manrice, who died of the wounds he recelved at the buttle of Sieverslansen, on the ?th of July, lasis, when he completely tlefented the army of the Margrave of Itrandenburg. There ure 7 other churches, one of which hats a spire mpwards of 210 ft. high; and an orphan asylum, Withont the town is the ohd castle of Fremenstein, now ased as a corn magazine. The rise and fall of Freiberg lats beell determhed by the probluctiveness of its silver mines, to the diseovery of which it owed its origin in the twelfth eentury. In the height of its prosperity, before the 130 years' war, it is suid to have had te, (0)0 luhats. Itspope, tugether with the produce of lts mines, has of hate fallen off; owing to the richest veins being exhansted, or to the whafts having been Iriven so deep that it is next to impossible to drain oll the water. Still, however, thore are in the vicinity numerons mines of silver, copper, lend, and cobalt, employing altogether abont 1,500 miners. 'The principal silver mine is culled the Himmelsfïrst, that is 'I'riuce of Ilemven,' and is said to be the first in litrope, as well for the quantity of ore it furnishes, us for the excellenee of its works. It has been wronght upwards of 400 yenrs, and for 200 yielded silver to the anmul anomit of : 9,000 crowns.

The ore is smeled at the village of llabsbrucke, nbout 3 m . from Freiberg, where there are mumerous furmaces, forges, de., innl where the proeess of amabramation is conducted on scientific principles. Freibery has munufactures of gold and silver lace, employing 700 hamin; a woollem eloth and eassimere factory, in whidh, besitees steanchatimes, 110 hamis are employed ; mannfactures of lace, cotton liabries, and thread, white lend, litharge, vitriol, leather, copper ware, \&c, ; some extensive breweries; and a shot fommily, the only one in the kingdom. It is the seat of the hiph boaril of mines(Oberbergant), and that of fombdries (Oberhïtsemamt), with supreme jurisdiction over all such establishments throughont the kinglom. It has a gymansimm with a good library; but its most eelebrated establishment is its mining academy, fommed in 1765. It owes its principal eclebrity to Werner, appointed professor of mineralogy in it in 1775: his eloquence and the charm of his mamer inspired the greatest enthasiasm into his pupils, and besides raising the seluol of Freiberg to the highest eminened, and attractingr to it stulents from the most distant commtries, gave a great stimulns to the seience. 'There are now about 10 professors in the school of Freiberg, who give instruction in the working of mines and of metals, and in chemistry, mid all the nceessory sciences. A specitied number of Saxon pupils receive gratuitons instruction in this sehool, some of whom work as miners lor a certain time each day, receiving higher wages than the ordinary miners. There is also a preparatory school to qualify pupils for the academy: Attached to the latter are many scientitie collections, and among others the celebrated eollection of precions stones amassed by Werner, and bequeathed by him to the aendemy.

Freiberg was long the resilence of the Saxon prinees, who bestowed on it many immunities and privileges. It sulfered greatly during both the thirty years' and the seven vears' war.

FRLEBURBC, or FRIBOUHC, a canton of Switzerland, the nintl in rank in the confederation, in the W. part of which it is situated, between lat. $46^{\circ} 2 \overline{7}^{\prime}$ and $17^{\circ} \mathrm{N}$. and long. $6^{\circ} 45^{\prime}$ and $7^{\circ} \varphi 2^{\prime} \mathrm{E}$.; latving for the most part N. and E. the Bernese territory, and S. and W. that of Vand. A detached
protion to the W. has for ita NW. bomadary the Lake of Neufehatel, and is everywhere else entclosed by the cant. Vimil. Its grentest lengeth N . and S . is about 10 m., and its hrendfo varies from
 Lexing 187 to the spuare mile. The northern part of the canton is almost a level phath, or at most ouly hilly; hut proweding $S$. the surface heremes more meven, mind the s , half of the comen is covered with monntalis, apmertaining partly to the Jura system nuil purtly to the llernese Alps, but none of their summits reach the limit of propetual sinew. The primeipal are the Dent de Brenteyre,
 Moleson, $6,555_{2} \mathrm{ft}$. high. Nearly the whole cantom is ineloded in the hasin of the Aar, its centre heing traversed be the Same, or Sarime, an alllunt of that river. The lirove in the other principmistream. The chicf lake is that of Morat (M/urtensee) in the N.. throurh which the last-named river flows: it is 6 in. long ty 2 m. broad, and very abmilant in fish. particularly tine cels. Climate mild in the S., but rigormes in winter in the s. The highest mountains are compered principaliy of a coarsegrained limestone, contahing muny thints; those of inferiur height of samistome. A considerable proportion of the land is fertile: it has about
 E(0,000 do. of pasture land, zuO do. vineyards; and the forests are sllpmeneel to comprise 3 i, 500 arres. Apriculture is the ehief pursuit of the inhats, in the S., and catte-remring in the S. districts. Buough of corn is grown for home consumption. but the dairy luskundry is the mont ingurtant brameh of indinstry, and i in a more alvancen state than in aly other swise canton. The mmal promuce of rlicese is estimated at $\cdot \mathbf{1 0 , 0 0 0}$ c-wt, worth $1,200,0,140$ fr, The fanous Ciruyire cheese, producel in the district of that nume, in the valley of the Sarime, stands decidedly at the lenad of the Swiss cheese, and is highly prized in this mat other comutries. The nverage probluce is athot ge, bow ewt. a year. The breeds of horses and back cattle are comsidered the best in the confeleratiom, mad lurge markits fur the sale of hothare hed at liomont, Hulle, and Freiburg. Gardens, orchards, vinevards, fere are must numerous in the N . Tobaco, oleaginoms phants, hemp, thax, dee are grown, hit in mi great yunatities. The prohlace of timber is important. 'lurl' is procurel in mang places, coal omly in the s., and to an inconsiderable ammunt. There is a glass factory at semsales, employing lifo workmen. The other prineipal munnfictures are those of straw hats, leather, and paper, but they are quite insigniticant. The chief article of cexprert besides chesese is timber to France, from which alwout 22,000 or 23,000 ewt. of salt are imported yearly. The people generally are in comfortuble ifrcumstances. The puldie roads, which were formerly very baid, hav l leen of lite years greatly improved, and the great line of railway from Berne to Geneva is rumuing right through the canton. Freiturg is divided into 33 circles or distr. Chief towns, Freihurg, the cap., Morat, Gruyires, Listavayer, Bullo, and Romont; but, except the tirst, none has 1,500 inhab. Seven-eighthe of the pop. are Rom. Cath; the Protextgnts, about 8,410, reside chiefly in the district of Morat. German is spoken in the NE.., and a dialect of Romansche or Italian in the S.; but French is the language most universally employed in the canton, and has been adopted as that of all state proceedings. Since 1830, the government has been wholly democratic. It emsists of a great and petty comecil ; the former, which has the sole legislative power, comsists of 86 memhers, or about one for every thousand of the inhab. : all males above 25 years of age, not
servants or sulyfect to fireign powers, have the rught to vote fin the appointument of the elfertors of the centrul laxly. The petty or executive comucil is composed of is members chosen ly the legishative borly, who also apmoint for life the $1: 3$ jullys of the sipireme court of appeal. The grent combil is presided ower by an Aroyer, who holds othice fir two years only; while the comein itself exists fur nine years. Fach cirele has its own local commil, a governor called an Oberramtmam, anl a eourt if justice with appeal to that in the cap. Dersonal frectom, the privilere of petitloning, mal the alur lition of fombal rights, have beenguarmentech; as alses the liberty of the press, Education in this cont. was formerly, mul to a great extont is still in a lower state thiny in many others. The pares fing sulperior instruction are chictly in the town of liruiburg (which see), and the l'rotestant collage it Mornt.
Freihurg furnishes a contiugent of 1,210 men to the ariny of the siwiss comfiederution; and conutrihutes 1 xition fruncs ammally to its expenditure. Hesides the above contingelit, and an choully nutmerms corpss de reserce, there is a militill of all the male pop. between 16 or 20 and 40 or 60 , Thw
 frames, and the expenditure, in the snme year, to 1,1 (is, is! franes. The cantm, at the same perixh, had a delte of $3,381,400$ frames. Mefore the Ith century this territory formed a part of the kinghum of Burgunly, but afterwards lielouged to the dukes of Zachring gin, mild other fendal nobles. Its history, after the listh century, is for the most part that of its eal.
Fhineuma, or Frmoung, a town of Switzerland, cap, of the above cantom, on lowh sides the Narine, $1: 5 \mathrm{~m}$. SW. Bern, and $: 12 \mathrm{~m}$. NL: Lansmme, on the railway from Bern to Lansume and Geneva. Pop, 10,45 in 1860. Vew towns in Earofe are as singularly situnted as Freithurg. It is maturally divided into the Upper and Lower town: the former built on the summits of a succession of rocky hills, and the latter in the narrow valley of the Sarine, which is here crossed by two bridges of woul, mal one of stone. The upper town is the principal. Many of its honses stand on the very edtere of the precipice overhanging the river; and their quaint architecture, the long line of embatted walls streteling up hill and down dale, varied hy the chain of frulal watel-towers and gatewnss of the ancient furtitications, which still exist in in perfint state, together with the singular and romautie features of the gorge of the Sarine, give the distant view of the town an aspect different from that of any other in Europe, which is at once impusiug and highly picturespue. The great plory of the town in its iron suspension bridge, ome of the longest and finest in Europe. It is erected across the ravae through which the river flows, mad is 905 ft . in length, 28 ft . in lreadth, and 17.1 ft . in elevation; being more than one-third longer, and nearly as mueh higher, then the Nenai Hritue between Anglesea and Carnarvonshire. The materials of which it is composed are almost exclusively Swiss. It was completed in three years, at an expense of about 25,000 ., umiler 3 . Chaley, an engineer of Lyons; and was thrown open to the public in 183.4. Freiburg has 9 convents, and t chureles, becites mumerons chapils. The principal chicmite ti.at of St. Nieholas, is a rather hamsome w thic editice, with a spire clevated 376 ft ., beiog the highest in Swityerlamb, It has some curions bus-reliefs and paintings: and an organ with 7,800 pipes, reckoned one of the finest on the continent. The Jesuits have a monastery at Freiburg, founded in 1584. It was suppressed previously to 1818, when it was re-
stored

 latuiliess. 'I'so colloge was sippressed In 1847, ufior the Sonderhnind wor, and notwithatanding many elliotes to thot effeet, has bot sinee berot re-mpened. The extemsive bilaliugs belonging to the eallege orenpy the highest site of the town, and tower over all other honses. 'Itae remaining ohjects most worthy of notlee are the town-hall, oin the site of min incient constle of the dukes of Firhrlugen, the hompital, orphan asylum, workhomse, liniso of correction, some piblie bathes, neveral public librarlew, nul severn learned secieties, lireiburg is the sent of govermment, and of the eourt of appeal for the emuton, and the rexidence of the li . Cath. hislapp of Lansmine unt Geneva. It lans a lew munitisetories of straw hats, purcelain, tobaceo, chicory, puper, hats, and musicul instruments, and dyeing heuses, tmmeries, and breweries. Most of its pol. are Cntholices: and it is a sibingar cireumstance that the inhab, of the יpper town spenk French, while those of the lower speak fiermin; mul many understund only one of those lamganges. 'I'lie upher town was fomuded, in $117 \%$, by Jnke Herchtold of Zaldringen; the lower tusu had existed previonsly. In 1:37 lireiburg lell into the possession of Rodolph of llapshorg ; but in 1 fis it becane a free elity of the enpire. 'Ihe Duke of Suvoy sann afterwarils constituted himsell its protector; lat the lireinargers laving distingnished themselves in the contest against Charles the Bold of Burpmily, thecity and its territory were receised into the Swiss Confederation in i 481 . In 1.176 , a celdented Swiss diet sat within the walls of Fruiburg, und in 1803 muther, the latter being that at which the Frenel Aet of Mediatien was merepted.
 Wep. Var, cap, cant., in a Notwious plain, I m. from the Mediterramem, and 10 m . SLE. Dragnignan, on the railway from Marseilles to Nice. 1'(1). 2,887 in 1861. The town offers contraste painlully with its amicnt condition. Formerly it was a leagne in circ., was surrounded hy strong walls jlamked with towers, and had 40,000 inlhab. Its anpliitheratre, the outer cire. of which is $218 \frac{1}{8}$ ft, still exista in a ruined state. Its port, which was under its walls, and commmuicated with the sea liy menns of a canal 1 it m . in length, was bordered by tine quays, the traces of which still exist; ins well us purt of a tighthouse, and a harge triumphal arch, which formed the entrume frum the prort into the town. The sites of the port mal cannl are now oecopied by garibus. The town and port were formerly supplied with water from the river Siagne, by menns of a tine aqueduct, $1 \times 2 \mathrm{~m}$. in length: this noble work is in great part destroyed. Frejus has a church and episcopat palace, both of which are of cothic arehinecture, lut in part constructed of the matu rials of Roman editices. The chnpel of the buptistory is an oetagonal building, ornamented with ciflit ancient Corinthinus columns. Numerous wher remains of antiquity may be seen in the ueighbourhone. It has a seminary and a hospita], both modern and handsome buildings. Frejus is the seat of a bishopric, and of a chamber of commeree; it lins some bottle-cerk factories, and water-works for sawing timber; bit its trade is now next to nothing, and its ancient Heets have dwintled down to a few boats.

I'lis town was a place of importanca in the time of Julius Ciesar, who gave it his own name.

Vul. It.

Angusins aent Hithor tho gon grilleys taken from Antony at the lattle of Actimm, males formen Julii in naval station uf inportance, and planted In it a colonty of soldiers of the Xth legions. Agripia further devoled hils enteavours to increase the prosperity of the town. Its strong fortithentions pratseted it for a considerable period ugninst the marlurinus; lut about tho your 010 it was destroyed liy the sinruedin, nor has it slued recoverel so much as the shatow of its formor prosperity. AtSt. Raphael, a little flahing village urout $1 \frac{1}{2} \mathrm{~m}$, from lirelus, Napileon disemburked on his returu from Eigypt, in 1799, anl agruia embarked for lilha in Ixiti.

The limits of the parl. bor, vomprise a nearly square space, extending about I m. ench way. liegistored ulectors 3199 in 1862. . The ncighbourhood is fertile and picturesigue, moil monthins many old family mansions. Frome has lomg bers celderated for itn rexcellent ale. I'wo court-lect are helli, owe hy the Marpuis of thath, the ather by the Jarl of Cork, Jords of the mame. Petty mensions for the division are also held in the town.

FliosinONl: (nn. Frusinu), a town of Southeris Italy, prove of same mane, at the foot of a ligh hill near the Cona, ame on the upper mal belwern Liome nuld Naples; litg m. EVil: the former eity. Pop, $\quad$, xito in isek, The town is very ill-hnilt, but has many elanrehes and ronvelies: is the sent of a bishojpris, and the residence of a caric. deleguto. It han an ammal fair, which begins at Whitsmatide, mad lasts twenty dars. lieing near the confines of the former Neapolitan territury, its meighbumphood is infumons for trigamlage; to repress which a crimimal trimmal, established in it, oflers a rewarl for the heads of brigancls.

FLULITE (EL), an inland city of Mexico, state of Somorn, of which it is the caple; on a river of the same name, 350 m . NW. by W. Durango, and 770 m . NW. Mexico. I'ol. eatim. at 4, it10 in 186\%. The town was originally a military statim, eatablished hy the spaniards in their progress toworls the $N$, It is now a commercial depot fur goods passing to and froen the port ol Guaymas and the seat of the governor, ami supreme tribumal of justice. Its importance is wholly due to there circumstances, its loenl position being fire from fivourable. It stands on the N. ridge of a vast sundy plais, testinte of verctation, except in the miny season, or in mpots where the vicinity of the mombtains, or the eonfluence of two large stremms. ensure a siplilly of water; alded to which the heat in summer is almost insupportable.

FUL,DA, a town of W. Germany, cap, pros. Fuhla, (i, D. Hesme-Cassel, on the river of same name, which is here crossed by a handsome stome bridge, 62 m . SSE. Cassel, and 56 m . NE. Frank-fort-on-the-Mnya, on the railway from liramkfort

## FUNCHAT,

FURTH
387
to Finamell, I'opr, 10,112 in 18ibl, it is a pretly thwn lin a vory akreanble stantion: lins some
 that low which the cathedrni stames in the prinejpal, and is ormamented with two uheliske upwards of 40 ft , high. The satherimi is an elogant eall-

 high, the litter ruised upoil lif lomite colimmes a bigh allar and 16 othores, 2 orpans, the largest of which is one of the fluont In liormany, and the tomb of Si. Ihonifice. There are lhree other lionn. C'ath, chureles, $n$ latherm chareh, mul some ather phoees of worshig, a halapis palace nud Garden, $n$ Frinclacen monastory, I lenedietine embvent, Rom, Cath, seminury, public library, kymmasimin, lyceum, melool of industry, mul minny other sehools; several hompilals, mil orphan nsylam, varions benmodent institations, all arsemal, honse of eorreetion, and workhonse. Finda is the residence of a 1h. Cath. hislop, with majureme ecclesiastionl jurisdletion thremghont llessp-t'assel: and is the sent of the suberior juticial eomert of the prov. It luns finctories of wtorekiurs, limen and woollen faliries, tohnow, and lenther; dyohomes, and wax bleaching amd withetre works. Alout a lengios S, ol the town is Adolphsek, or the ' 1 'lomaniley;' a eonntry neat. liomerly belomging to the prince-bishoges of Fulda.

FUNCHAL, a town of Madeira, whidh see.
FUNEN, or FY'liN, an island of the lamish ardipesure, the mext in size alter Zealuml, lyint between it and eontmental Demmark; neparatend from the former by the (ireat, and lrom the latier by the little Ihelt. It extemin between lat $0.5^{\circ} \underline{y y}^{\prime}$
 deugth, NLi, to SW., 50 m . Area, $1,187 \mathrm{sq}, \mathrm{m}$, 1'op. IOR, 811 in 18ix. 'I'he surbine is generally undulating; there are a fow hills in the fo., but they rise to wo considerable height. The whres are very much indonted; und in the NE: the Odensec-limed extende inhand lor neveral miles. 'The chict' river is that of Odensec, which rins thromgh the centre of the island; rivalets, lakes, and marshes momerons. Climute humid and variable: soil very probluctive. ' Finten presents a less apreeable prospect than Zealmid, owing not to its more samty fertility. but to the greater pancity ul' trees. The crops semem equally abmidant, mint the tockn equally mmerons; and, inded, Funen is more an exporting comitry than Zealand, in both corn and cattle.' (Inglis, Norway, 32i-328.) Barley, oats, buekwhent, rye, and veretables are grown in quantitios much bevond thase reguired for home eonsumption; Hax and hemp are largely coltivated, and orehards are numerons, The honey is very superior, ame an article of considerable export. 'Turf, elay, and chalk are the mly mineral products of value. There are $n$ few manulactures of woollen and linenf fabries, and many domestic mes of stockings, and other articles, Besides corn, eattle, horses, and honey, the chief exports are fruit, lard, butter, leather, snlted ment, and some manifactured gools; the trade is brisk, and chiefly with Norway and Sweden. Funen, together with the ishands of Langeland, Tansing, \&e., forms a pow, of Denmark. Chief towns, Odensee, the cap. Svendborg, and Nyeborg.

FUNFKIRCHEN (Ilump. Rees), one of the most an. towns of llungary, co. Anmaya, of which it is the cap., on the declivity of a hill in a rich pomintry, 404 m . SSW. 1suda, and 40 m . NW. by N. Esseck, 1'op. 17,447 in 1857. The town, besides the cathedral, which is the oldest religions edifice in Ilmgrary, and ncenpies the site of at lioman fortress, lias six churches, and severnl
convents. There nre alno mimerons remains of
 kirchell having leven in the passesaion of the Tharks from lifli to lisit, 'Ihlx fown is the rewidence of' a liom, Cath, bishop, mut has a meminury for tho 18. Cinth, clergy, a ky'musinm, mormal mind military melomils, n'library, and a cabinet of coins. It

 ripully in wine, tobneso, mid sull-mite, the pronloco of the indjacent conntry. 'The town isnoted lior warn mbueral butlox, mill nbout 7 m , distant from it in a remarknhle stalartite envern.
F'UlililCRXllill, a ilintr, of Ilindostan, prove Agra, presid. Hongal, almost wholly inchaded ín

 dence), ill inhand city of llindostan, prow, Agrn, (m), of the alove district, nemr the s, bank of tha

 The city is considered the chide eommercial elnporium of the cederl and confured provinees, and is satid to be the eommon resort of needy mad dissolate characters from the rost of llimiastan. It is surromided lis a whal, kept in tolerable repair ; ntrests in purts vide, and muny of the oren spots and buildings slmaled liy trees; lont, excepthig in the prineipal thoromphliares, most of the honses are of mid. Here, in 18(15, Lord Lake surprised and ohtained a decisive victory over llolkar's eavalry.

FUK'TH, a town of Ihavin, circ, Midlle-jrmaconia, on the Segnitz, 20 m. NS. Anspmel, on the railway from Nimbert to Whrzhurg. l'op. 1!1, 125 in Istil. The town is irregularly built, but eomtains many good honses; is the sent ol a townand district judicial tribumal, mal has two Jatheran churehes, a liom. Cath. ehureh, severnl syma gognes, latin and mumerous other schouls, besides sehools of indistry, arts and trades. The Jews, who are interilicted from settling in Nurembers, enjoy in Furth privileges denied them elsewhere on the Continent; they have here a separate cont ol justice, a llebrew college, and two printint presses, exclusively devoterd to Hebrew publient tions. It is principally owing to their exertions that firth has become, next to Nuremberg, the principal manmfacturing town in the lavarian fominion. It has nimerons factories of mirrors, ehundeliers, lacquered ware, spectacles, lead peneils, tebaces, rold and silver wire, gohd leaf, turned brase, wood, horn, and bone wares, stockings and other woollen and cotton finbrics, leather, ligueurs colonred paper, buttons, toys, trinkets, and pijes. These articles are exported principally to N . and S. America, the Levant, Ilolland, Spain, Italy, N. Germany, Demmark, and Sweden. Besides tho foregoing, there is a consideral)le trade in other kimb of prombee; and a large fair is annomally held here. The first railroad for steam carriages in Germany was completed in 18:50-86, between this town and Nuremberr, a distance of $4 \frac{1}{2} \mathrm{~m}$. Ahout hall way between the twe towns, the canal which connect: the Dambe with the Rline, is earried over the rnilway. Furth is first mentioned early in the 10th century. Gustavis Adolphus was defeated in 1632 , in an attempt to carry the entrenchments. of Wiallenstein, in the neighbonrhood of this city. It was not till 1818 that Furth obtained its municipal rights.

FITTTEGBLIS: (Fataghur, the fort of victory), nu inl, town of llimiontan, prov. Xpra, on the if: bauk of the Ganges, 3 mi. E.. Fiurruckabad; lat.
 tary stations, and the revildeme of the rivil muthorlteres of the Furruchatmil cellectornte, as well as of meveral bimpopean morchants. Most of the houses are buili with mold walls, mid a mund fort has heren erveted fire the proteretion of the ansumal.

 town wis the favomite revilenee of the cmperwer Achar, whe built a stone wall of areat extemt, wifh lanthements anil towers rumbll if, the area willifin which nppours never to have heroll ill hed uly. The town, which is bint sumall, is mimite of stmite, is containes the spmelones and tulerably entitere remains of Achur's gmilate, the tomion of several of his family, nuid of some Molammedane mituts nind stat 1 mineren.

 formerly the enpo, on the $S$. lank of the river Kaleep ; bio m. E:، latcknow. It is still large mad lwimloms ; it cominains the remaine of of fortrese, and of the palace of shinju ul Dowlat.

GABTA (an. Chisha), a fortidied sea-gort town of Sumtheril Italy, prow. Cassertu, cuph distr. and cant., it the extremity of a meninsula, on the $W$, shore of Italy, firminig the NW. homilary of the gulf to whieh it given mame ; 1 m . ssill. Mtolu-li-

 of the keys of soulleron lanly, lexing strong from its pusition, and deffended by walls thanked with
 sitmated own $n$ rock. Its suburiss are moulh more externive bain the town itsulf:
Gaith is irregularly hinilt ; ita atreets are marrow and stees; thowe in the eity are, however. grently inferior to those in the suburhs. It has an anthedral with a tine lower, the remstruction of which is attributed to the ermpenor Frederick Iharimerossa; nine other charelles, several convents, a publite seminary, a bespital, moll a fomdlling asylhm. On the isthmes comaereting the citalel with the mainhanis stands the Tirre d'Orhumb, originally the tumb of Plancus; and neme the subarh of Castellome is the Tower of C"icero. It prort, which hons 7 fith. water, thomifh not the largest, is ome of the safest mad hest in ltaly. This city is the seat of a hishopric, mater the immediate superintembence of the popee. It is the centre of a comsiderable trade. Its neighmurhonel is extremely bemitiful, and covered with villas and conntry homeses.
Cabletn is very aneient. Virgil says it derived its name from the mirse of Nomas lmrien in it:-

- Ta quoque Iftorlbis mostris, Fncła nutrix,
diternan moriens fanmon, Cideta, deetist1:'
dneld vil. 1.
It treame the residence of many opment patrician families of lione; nuld Cieciro was pat to death, by order of Antony, in its immediate ricinity. After the fall of the Western empire, it had is republiem form of goverument, at the head of which, however, was placel a duke, neknowledging the temporal supremacy of the pope. It coined its own money tiil 1191 ; in 148, it was tuken by Aphonso V. of Aragon; mad since then has lelonged to the crown of Naples. In mondion times it has been repentedly besieged; the last sioge of any great note was in 18016, when it fell inte the hands of the Frimell. It, however, held out ngainst the Austrians for nome time, both in

Suil.-The mast penerally fertile portion of the province is the hilly comitry which oecungies its centre; the comintry risen towards the S., the simmits of the monntains presernting litte pont heak maken! rocks. Towaris the N., the fierrility of the suil likewiee diminishes as the hills sulnevide into the sandy maraly phati. The valleys which linlurneet the hills are usually tilled with swump, of which such as are arainel (anal these are now the grenter purt) have a very firtile soil ; but the richest purtion of the province in that purt of the valley of the Duisest, whinh once firmed a part of l'ondolin, incluting the circles of Stamishawow, Gzortkas, Koloman, amil part of hazamy, some vary liertile tracha are likewise foumd along the baliks of the Snln.

Products,-The agricultural produetions are the mont importmit in pint of value, althugh eomthed to the common grains mul protatuese Maize is mily collivated in ho linkowina. The forests wre chiefly of dir ; tha and hemp are grown in great mbindanes. Of minerols, iram is foumd all through the rauge of the Curpmhinus, alihengh but litto mining is carried on: gold and lowd. with silver, in stanll qumutites, copper nunt lisiporita in the linkenvina, zine and sulphur: but neme of these minerals cecur in a punatity propurtioned to the riches of the of her provinces of the empire. Sult alone is fomb in extelosive, and almost inexhumstible beds, which stretel ill a anng the range of the Carpmthims. Conls are fonme in mouy places; marble and nlabnster of middling qualities, and quart: in great nhmodance, which is wised for the manuliacture of flans; roek reystal, arate, jasper, mad infierior qualities of opal, we ur in the mamiains. Dlut as the grenter part of the secondary formations are covered by the immense bed of sand which forms the l'olisti plain, it is tut ensy to aserertain their exact nature, and what minerals they contnin.

The impurts into (inlician comsist chiclly of eatale from Moldavin, and Turkish wares for inland consmontion amd for the transit trade from Odensa, lius, hare-skins, wax, and honey are imported
from the Russinu provinces; the exports consist of corn, timber, linen, hemp and thax, salt, lime, and other articles. Wht the trade with the other provinces of the empire is of more impurtance than the foreign trade, an it inchudes the colonial wares, wine, metuls, and manufactured articles comsumed by the inhabitnuts

Goerrnuent.-The govermment of Galicia is similur to that of the other provinees of the Austrian empire. It is represented in the reicharath. or comeil of the empire, by isd deputies, mal has, besides, its own provincial diet, dected ly the tax-paying inhabthats. (Sce Austma.) The agricaltural pepuintion is known to be very devoted to the grvermment, since the intronhetion of the constitution of Istit, which, indeed, raised them from "sate of serfilom to indepentent citizenship. In respect to the administration of justice (inlicia is plated on a similar footing to the German provinees and Bolemin. 'The seat of the highest authorities is at Lemberg l'olish ( $L$ arofu), where the conte of justice, hoth civil and criminal, of last resort are stationed. Criminul courts are held at Lemberg, Wismeiz, Smbor, Staninlawów, lizezow, and Czernowitz. In his full title the Emperor of Austrin styles himself King of Galicin.
Gaidera, a prove of Spnin, situatel at the NW. extremity of that peniusula, lying between lat. $41^{\circ}$ :2 $2^{\prime}$ and $12047^{\prime}$ N., and beiween long. $7^{\circ} \quad 17^{\prime}$ and $9^{\circ} 14^{\prime} \mathrm{W}$. It is bounded N . and W. hy the Ablatic, S. ly l'ortugal, and l., by the spmainh pross. of lecon and Asturius. Aren, $15,897 \mathrm{sel} . \mathrm{m}$, 1 ?op. $1,171,982$ aecording to the census of $185 \overline{7}$. The combtry is in armeral very monatainoms, being intersiected ly the branches of the Asturimu momatains, which sepmate at the Sierra de P'ominmarella. and form three ranges roming WSW. and SSW. throngh the prov. In this prov, there are numerons depressions or valleys in every direction, of which those inelinine $W$. and sw, are extensive and fertile, especiallyt hase of the Miuho, Sil, and Ulla. The riyers, which follow the course of these valleys, and generally give them their names, are : beither long mor important, exeppt the Minho, which rises in the Sierra de Mondonedo, in the NE: part of the pros., and dowing S., with mumerms atlluents hy lago, reecives the sil from the momitains of Astorga, and then passing ly Orense, Ribadavia, and Tuy, enters the Athatic in lat. $41^{\circ} 52^{\prime} \mathrm{N}$., after a course of 1 lit m . The next in importance are the Tambro, ruming E. into the Bay of Noya, the Ulla romaing lised. into the lhay of Arosa, and the lima, which emters 1'ortugal near Lindoso. The const of (anticia, eypecially on the W . side, is abrupt and much indented, forming mumeroms capes and bays. Of the former, C. Ortecral and finisterre are best known; of the latter the lays of Ferrol, Betanzos, Coruma, l'onteredra, and V igo, are the most extensive. The temperature varies greatly; in the N . and among the monntuins, cold, damp, and rainy; warm and moist on the coast; but warm, dry, and genial in the SW. part of the prov. Although fog and moisture prevail more here than in most other parts of Syuin, the climate is not unhealthy, and the people are robust, and capable of heavy and continuons labomr. The high lamels prodnce abundanee of good forest tinber, adapted for shipbuilding There is good pasturage for cnttle, sheep, and horses, which are kept in small quantities by even the lowest classes of the rural population, and sold at monthly fairs for removal to other parts of S pain. The proluce of the valleys consists of wine, maize, whent, barley, flax, and potatoes, a part of which are shipped off to Alicante, Mnlagn, and Barcelona. The sweet chest-
|nut grows abundantly, and may be justly called the brend of the Ginlicians, as it constitutes the ir common and favourite food. The mineral produetions consist of copper, leal, antimony, and tint; white murble and jasper are found in the mountains of the N. purt. There are several mineral springs: one is at Onense. Along the const are anchovy thineries, chictly conducted hy Catalonians.
The pop. is principally agriculturnl, and luaded property is ustully divided into small posserssions, so that there are few rich proprietors, but many ocelphers tilling their own land nad rearing their small stocks of catile. Mannfietures are hat hittle followed, coarse woollens, linens, and sailcloth being the only articles proluced. The Gialicinns, or Gurlegos, are a quiet, simple, hospitable, and induntrions people, grave, wober, and trustwortly: the men are hardy, and patient mader fatigue or privation; the women are lark, but handsome, cheerful, and fond of siuging their national airs. like the Swiss, they leave their comitry in great numbers, sometimes 10,000 in a yenr, to seek employment in other parts of Spain and Portagal, where labour is better rewarded. The best servants in Madrid and other priacipal towns come from (ialicia, mad they are preferred for fidelity and obectience; and the porters and water-carriers of Madrid, Lishon, and seville are nswally natives of this prov. Indeed, so much more ellective are Galienns in getting in the harvest and vintuges than the Chatilima mad Portuguese peasunts, that a failure is comsidered as a neecssury comseduence of their ahsence from the work. They make also the hest soldiers in the Spunish arma, The lamguage spoken in this grov. is the old Custilim (which much resembles Portugnese) mixed with low Latin.

Gnlicia is divided into the fomr provincess of Cormuna, with 435,670; Lugo, with $83 \overline{3}, 272$, ; Orense, with 31!,03x; aud P'ontevedra, with
 of 185̈. I'riucipal towns, St. Ingo, the cap., Cormma, and Oremse. The churel discipline is conducted by an archlishop and four bishops.

The Callaici, the auciont inhab. of this listriet, were first conquered by Decimus Junins lirutus, and wholly sulbjugated by Angustus, who ineluder the comutry in the pros. of Tarracomensis. The Visigoths inok the comatry from the lomans, and were in their turn driven from it by the Mours, The princes of Asturias retook it from the M. ans, and amexed it to their kingrom, which was united with Castile in 1039.
GALL (SI'), a cantom of Switzerland, in the E. part of which it is situnted, ocrupying the 14th place in the swiss confederation. It has E. a portion of the Austrian dom. (the Vorarlberg and lichtensteint), from which it is separatel by the Rhine; SE. mul S. the drisons; W. the cantoms Gilarus, Schwytz, and Zarich, with its lake; and N. Thurgm, imil the Lake of Constance. Lengrit. N. to S., about 40 m ; brealth virying from 11 to nearly 35 m . Area, 74 sq . m. P'op. $1 \times 1,191$ in 1860. The surfice is greatly diversitied: in the N. there is an incomsiderable portion of phain comintr, but the central and S. purts are almust. wholly covered with Alpine ranges, the summits of some of which rise above the limit of perpetunl snow. Monnt Scheibe, at the SW. extremity, is estimated to be $10,18 \mathrm{ff}$. above the level of the sen, and Kamecklerg 7,614 ft.; the Speer, a mormtain, near the centre of the canton, is 6,305 ft . in elevation. There are, hewever, several extensive and fertile vulleys, as that of 'Toggenburg, watered by the Thur, 36 m . in length, those of the Rhine, and others noted for their wild and

 with $107,2 \pi 2$; itevedra, with to the census aro, the eap., h liscipline is ar bishopis. of this district, Jiminss IIrutas, s, who inchuted comensis, The te Romans, and loy the Mones. foin the Mars, m, which was zerland, in the pying the l4ilt It has R. a Vorarlberg and parated by the W. the emintons I its lake; mul tanec. Tangth. arying from 11 $1^{\prime}(\emptyset 18181$, $11!4$ diversitiod: in oortion of plain arts are almost es, the smminits nit of perpetual V. extremity, is he level of the ; the Speer, a canton, is 6,305 ver, several pxof 'Toggenbura ength, those of their wild andpicturespue eharacter. Next to the Ihine, the chief rivers are the 'lhur, Sitter, Serz, and 'I'amina; all, excopt the last, lave genorully a NW. ilirection. 'Ine principal lake is that of Wallenstadt, mostly eamprisel within this cant. The plains annl valleys are in many parts well cultivated; but the corn produced is insufficient for home consumption. l'otatoes are extensively prown. Fruit is largely eultivated, expecially in the N. Cider is the ordinary drink of the people ; and in the monntainous parts of the conintry a froml deal of Kirsehenurasser, or cherry-brandy, is mande. There are vineyaris in many of the districts, in which a red wine is made; and the wine of bonchlorg, in the valley of the lithine, is ustement the loest of German! Switzerhand. Ihat the primoipul brunch of rural industry is the reariurg of eattle. Artitlcial mendows are well kept in the mountainous parts, but not femernlly so in the lower purts of the conntry. The number of hornend enttle is very great; and in the S. there are many shicep, foats, anl hogs, Every spring cousideruble thocks of shoep) are bought in the (irisons, kept during the summer in St. (iall, and sold in the untumn. Dairy husbamby is not so well uttenuled to in this as in many other cantons; but thongh the chese be of an inferior quality, the butter is superior. The forests in the s. are extemsive, comsisting principally of pine and tir, with some lreech trees, and a lew oaks. But, at presplin, the forests are ahmost inseless: since. from the want of roads, aum the monntainous nature of the conntry, it is in most phaces very dillienlt to briug the timber to market. There are some iron mines wenr Sargans, and coal anl thrf are mot with elsewhere. Mineral springs are numerous; amongst them are the celebrited baths of the l'fethers in the S. (See l'fisprens.) St. (iall is one of the principal Swiss manntacturing cantons: as muny as 60,000 of its inluab, being supphed to be employed in its mannfactures. These are elicelly of cotton fitbrics and threid, especially mastins and linen cloth, which was formerly the prineipal. Muslins of extreme tineness are woven in large quantities in the town of st. Gall, and are embroidered by the women in most of the districts. Cotton thread is spun mostly in the S., but also in the valley of 'logrenburg, where many contom lumdkerehiefis and other filbries are made. There are some gool cloth beaching establishments at st, (iall and Rorschach, and a few rlass and wax-bleaching factories; but the manufactures of the canton have gencrally diminished situce the peace. Extemal commerce is chictly rontined to the import of corn and other provisions, and of raw materials for the manufactures; and to the export of manufactured roods, raw hides, and eattlo. Tlue transit trade is inconsiderable, except on the Wallenstadt lake and Linth canal, which lorm part of the main channel of cummuination between Zarich and ltaly. St. Gall is divided into eight districts, and has no town, St. (iall, the cap., excepted, with 2,000 inhal). The government is one of the most democratic in Switzerlame. It is composed of a grand and a petty council: the first consists of 100 members ( $8: 1$ Rom. Cath. and 66 I'rotestants), chosen in the different circles and communes ly the suffrage of those citizens above 21 years of age who are neither bankrupt, receiving aid from public elaritics, nor against whom a criminal judgment has been pronounced; and who pay laxes on property to the amonnt of 200 franes, Members of the grand council must be above 30 years of nge; they are elected for three years, but are always re-eligible. The petty council which has the executivepower, consists of nine members,
chosen from among the grand council, each of Whom must pay taxes on property to the amount of $\mathrm{f}, 100 \mathrm{fr}$. Tho grand conncil passes or rejects laws proposed to it by the petty comeil; has the supprintendence of all the state accounts; appoints all public funclinnuries, and tlxes their salaries; exercises the right of grantilig pardons: and nominutes the president of the petty comenci, as well as its own, who ure called hundumaus, one being a Catholic and the other a I'rotestant. and who alternately preside in cither assembly for a year. The people at large have, however, the privilege of a reto on any law passed ly the conncils, if that privilegro be exerted within 45 days from the time of its possing. Vach commane has a council, composed of from 4 to 12 members, and a symdic, to which the local administration is contided. Members must he 25 vears of age, aud pay taxes ou propurty of 50 fr , value. 'There are communal and district judicial courts, and apjeal from the latter to a supreme court in the cap., consisting of $1: 1$ judges, whose qualitications are similar to those of members of the petty eomacil. The total pop, consists of about two-thirds Chitolies and one-third l'rotestunts; the latter reside clicelly in the cap, and the valleys of Toggenburg and the linine. They exhihit more activity anil inteligence than the Catholies; but the greatest harmony exists letween the two persuasions, and in the varions public selools teachers belouging to either are indiarriminately employed. Education was till lately very backward, hut primary and secondary schools are now establishied in every district. 'l'here are some high schools in the eap. German is the languare of the cant. St. (iall furnishes a contingent of $2,6: 50$ men to the army, and $39,450 \mathrm{fr}$. to the trensury of the Siwiss confederation. The pmblic revenue in the year $18(62$ amominted to $1,5 \cdot 2,057$ franes, and the expenditure to $1,632,112$ frumes. The canton, at the same time, had a debt of $6,700,000$ francs. This canton was tirst formed in $179 x$, by the union of the territories of the city and abbey of St. Gall with those of other districts, priviously subject to the Swiss confederation, and administered by bailiftis.
Gall (Sr.), $\Omega$ town of Switzerlind, cap. of the alove cant., on the Steinach, in a narrow and elevated valley, $6 \frac{1}{2} \mathrm{~m} . \mathrm{SW}$, the Lake of Constance, and 39 m . E. by N. Zurich, on the railway from Zurich to Angsiburg. Pop. 14,532 in 1860. The town is surromaded by old walls and a dry diteh, now converted into gurdens; and has three suburbs. It is well built, and has broad streets, the remains of a celebrated abley, 6 ehmrehes, an arsenal, hospital, orplan asylım, a Catholic gymnasium with 11 professors, a lrotestant college with 14 ; many learned and benevolent societies, public and private libraries, collections of matural history, and a rusino or jublic reating-room. A magnificent abloy was erected over the tomb of a mon'r, called Gallus, said to have belonged at one time to Jona, under the anspices of I'epin l'IIeristal. This abbey was one of the ollest ecclesiastical establishments in Germany. It became the asylom of learning during the dark ages, and was one of the most celebrated schools in Enrope between the 8th and 10tli centuries. Here the works of the authors of Rome and Greece were not only read but copied, and we owe to the labour of these obscure monks some of the most valuable classical authors; Quintilian, Petronius Arbiter, Silius Italicus, and Valerins Flaccus liaving been printed from MSS. foumd here in 1413. Several of its most valuable MSS. having been lent to the dignitaries attending the Comeil of Constance, were not returned; but it still contains a collection of letters, in 13 volumes folio, by the most distinguished German and Swiss reform-
ers. The library, whelinnw belongs to the town, occupies a tho apartment; and, besides its literury treasures, has some busts, bortraits, and a cabinet of minoralogy. 'Ihe abbey chureh is now the cathedral of the diocese of St. (inll and Appenzell; the ancient palace of the abbots (alie Pfiala) int present serves tor the public ollices ut the cmitomal govermment; and the other buildings of the monastery lave been appropriated to the Catholic arymusium. The abbey was secularisel after the French revolution, and in 1805 its revenues were sequestrated.

St. Gall is one of the chief manufncturing towns of Switzerland. It lins extensive manufnctures of muslin; is the centre of the Swiss trude in that article, and of embroidery in gold and silver; and a general depot for the merchnndise of the emntons of St. Gall, Appenzell, and 'Thurgan. Other cotton fabries and yarn are also produced, the spianing of the lntter employing severnl factories. In the suburbs there are a great many bleaching establishments. Some pretty extensive bunking operations are transacted in the town. A market is held every Saturday, and two fairs of eight days each take place twite a yenr. 'The inhab, are generally active and prosperous; about seven-eighths of them are Protestauts. About 2 m . SW. St. Gall is the tine bridge over the Sitter, ealled the Kritzerenbriacke, 590 ft . long, and 85 ft , above the surface of the river.
'The abbots of St. Gall abont the 10 th century begnn to assume a military character, and surrounded the convent with walls and ditches. From the 13th century they enlarged their dominions at the expense of their neighbours, till they bevame the most considerable territorial sovereigns in $N$. Switzerland, and were rnised to the rank of princes of the empirc. Eurly in the loth century, however, Appenzell threw ofl their yoke, and at the Reformation the town of St. Gall emancipated itself from their control, and aequired a territory of its own. The town was tirst incorporated in the 10th century: in 1454 it allied itselt with the free Swiss cantons, and sent a deputy to the diet : ond at the end of the 17 th century its civil and political independence was secured.

GALLII'OLI (an. Cullipolis), a sea-port town of Southern Italy, prov. lecee, cap. distr. and cant., on a rocky islet on the E. coast of the Gulf of 'ruranto, 49 m. SE. Taranto, und 28 m . WSW. Otranto, at the terminus of the railwny from Ancona. Pop. 9,208 in 1861. The tuwn is united by a bridge with the mainland, on which is its suburb Lizza. Gallipoli is fortitied, and has a castle, bombarded by the linglish in 181\%. It is well built, and has a grod cathedral, several churches and convents, a seminary, and some other public schools. About 1 m . W. from the town is the island of Andrea, on which is a lighthouse; and between it and Gallipoli there are from 9 to 10 and 12 fathoms waier; but vessels of considerable burden must not come within gunshot of the city. Gallipoli displays an air of great industry, if not of afluence. It is the most frequented of all the sea-ports on the SE. coast of Naples, and the great mart for the oil of Apulia, most of which is shipped here, it being peculiarly well adapted to serve as a depot for oil. The ruck (limestone) on which the town is built is easily excavated; and in caverns thus constructed oil clarities sooner, and keeps without rancidity much longer than in any other place. Hence nomerous oil-houses are established at Gallipoli, and a very considerable portion of the rock is cut into cisterns. A Gallipolitan oil-warehouse generally occupies the ground-floor of a dwellinghouse, and has a low arched roof. Some are more extensive; but, on an average, they are about 30
ft. square. In the atone llowr you see 4, 6 , or more holes, which are circular, about $\mathbf{2} \mathrm{ft}$. in diameter, and like the mouths of wells. Each of these holes gives access to $n$ sepurate cistem benenth your fuet; ant when the oil is poured into them, cure is taken not to mix different qualities, or oils at different stages, in the same reservoir. When the oil is to be shipped, it is drawn off the cistern into uteri or skins, und no carried on men's shomblers down to the sen-mhore. (inllipoli has also momifactures of muslit, cotton stockings, athl wowllen goods ; considerable trmele in corn, wine, froit, mad a proluetive tunny-flshery. It is said to have been origimally founded liy colonists from Lasedamon. It suthered grently at the hands of Charles II. of Naples, the Fenetims, anil the 'lurks; but the emperor Charles V. improved its fortitientions, and restored to it a considerable share of prosperity.

Gabisfoli (an, Callijolis), a sen-port town if Turkey in Buropr, prov, Roumelia, cul. winjiack and distr., on a hendlanel called tho Braccio of Gallipoli, at the point where the II llespont nuites with the sea of Marmora, $90 \mathrm{~m} . \mathrm{S}$. Adrimople, mad 128 m . W. ly S. Comstantinople ; lat. $411^{\circ} 24^{\prime} 30^{\prime \prime}$ N., long. $26^{\circ} 39^{\prime} 45^{\prime \prime}$ L. Jistimat. 1"p. $^{\mu} 11.000$. The town was once fortified, lout is now destitute of walls; its only defence being, in the worls of Tournefort, 'a sorry square cantle, with an ohl tower, aloubtless that of Bajazet.' 'The town consists of miserable houses and dirty streets, intermixed with garlens. The bazaars, however, are extensive and well-furnished. There are two prors, a N. and S., which frequently harbour the imperial theets, (iallipoli being the chief station of the ea-pitan-pasha. It is also the see of a Greek hishop; and has manufactures of cottons, silk, earthenware, and the best Morocco leather made in Turkey: A few remains of antiquity are in good preservation, and fragments of sculpture and architecture ure seen in every part of the town. The great number of Turkish tombs in its vicinity prove it to have been a lavourite place of residence with the Tarks. A little corn is grown in its neighbourhond, bat not enough for one-fourth part of the pop. (inllipoli was the tirst Europenn town which fell into the hanels of the Turks. They took it in 1357, on which oecusion the emperor John Paleolugnes observed, that he had only lost a jar of wine, nud a sty for hogs, alluding to the mugazines and cellars built by Justinian. lajazet l., however, knowing its importance for passing from l'rusa to Adrianople, had it repaired and strengthened, and its port improved.

GALLOWAY, a distr. in the S. of Seotlame, comprising the cos. of Wigtown and Kirkemibright. Its dimensions were at one time much more extensive; but for a lengthened period it has been restricted as above.
GALLOWAY (MULL OF), a promontory of Scotland, co. Wigtown. comprising the S. portion of the distr. called the Khynus. It stretches in a SSE. direction from Portpatrick to the l'uint of the Mull, about 17 m . : its brealth varies from about 2 to about 5 m . The Point of the Mall, the furthest $S$. limit of Scotland, in lat. $54^{\circ} 38^{\prime}$ N., lomg. $4^{\circ} 52^{\prime}$ W., rises about 255 ft . above the level of the sen, and is bold, bleak, and striking. A lighthouse of the first class, with an intermittent light, having the lantern elevated 325 ft . above the level of the sen, has been erected on this headland. The view from the baleony of the lighthouse is very extensive, commanding the whole Isle of Man, the coast of Cumberland, and the Cumberland mountains; a grent part of the coast with the mountains of Dumfriesshire and Galloway, the P'aps of Jura, and the coast of Ireland, from Fairhead to the Mourne mountains.

4, 6, or more ill diamueter, of these lioles bereath your to them, care іен, or oils at r. (G.ILI.OWAY (NEIW), a royal and parl, hor. of sootlami, on an acelivity, on the W. bunk of the Ken, nearly in the centre of the S. of Kirkcoulbright, oll the road from Kirkendloright to Arrwhire loy Dalry mal Dalmullington, 17 im. NKIV. Kirkemolloright. Jop. 4tiz in Ixill. Though finely and romantienlly situated, it is a poor, mema place, withont trade or importance of any kind. Kemmure Castle, the residence of the viscomits Kémmure, within a +m . of the bor. stands on a conical monnd at the hend of Loeh Ken, thromerh which the river of the same bane flows. The sonn 'Kemmure's on and awa,' refers to the visconit Kenmure who was beheated for rebellion in 1715. In the bor, or noighhourhoon were born Thomas Gorion, author of 'Cinto's Letters,' the 'Indepemdent Whig,' Sec, and translator of Sallust nud 'hacitus; Jom Lowe, author of 'Mary's Dramin' and liohert Merm, author of' a 'llistory of 'southand,' in 6 vols., and varions other works.

New Galloway was erected into a royal lorgh in laisi. It mites with Stranraer, Wigtown, and Whithorn in sending one mem. to the 11. of $(\dot{j}$. liegistered voters 18 in leli.t.

ISAIWAI, a mar. co. oll the W. coast of Ireland, prov. Commaght, having S. Galway Ihay and the cos. Clare mad Tuperary; Fi. King's Connty and Ifoscommon; N. the latter and Mayos and W. the Athatio Ocenn. Area,
 and hog, and 77.922 water, principally consisting of Longhs Corrils and Mask. lixtent of arable land, in sif. m., 1,161 in $1811 ; 1,358$ in $1 \times 51$; and 1,027 in 186il. (Census of Ircland for IK61, part v.) 'The const of the co, is deeply intented in its W. and SW. portions by momerons bays and arms of the sea, aflorling tine but negrlected asylums for shipping, and gool, bint also neglected, tishing stations. Climate mila, but homid. The co. presents every variety of surface and soil: the comntry lying to the W. of Loughs Corrib and Mask, including the districts ul Connemara, Jarcommaght, and Joyec's Country, being one of the most rughed and wildest portions of Irelami. The other purtion of the co., or that lying to the la of Galwny town and of the abovementioned lakes, is comparatively that and lertile. After the shamon, which bomiles the co. on the SLi., the most considerable rivers are the Suck and the IBhek liver. A! rienlfure is rery backwarl. A great extension on tillage has taken phace of late years; but it is cloubtful whether this be any improvement, and whether it be mot whotly ascribable to the improvident breaking up of old pasture land. Principal crops, oats and potatoes; bat a grool denl of wheat is now also raised. Estates mostly very large. Tillage farms mostly very small, and very generally let on the village or partnership system, which is destructive alike of agriculture and of the interests of the oceupiers. A good deal of work is performed by the loy or spade. Excellent long-nomed cattie are met with in this co., which, indecd, is much better fitted for grazing than for tillage. The furm-honses and cottages are, genorally speaking, wreteled in the extreme; and the cottiers are quite as bally off as in most other parts of Irelatul. Manufactures can hardly be said to exist; and, with the exception of limestone and marbles, the minerals are of no importance. In many distriets the Irish language is in all but universal use. Galway is the only considerable town. The co. is divided into 16 baronies and 116 parishes, and returns four mems. to the H. of C., viz. two for the eo., and two for the bor. of Galway. legistered electors for the co., 5,082 in $180^{\circ 2}$. Pop. $403,0.18$ in 18.11 ; 298,239 in 1851 ; and 251,511 in
1861. The decrense, It will be seen, amomited to $24 \cdot 51$ per cent. between $1 \times 41$ and 1851 , and to $14 \cdot$ (ifi per cent. hetween 1851 and 1860 .
(ialway, a town, sea-port, anul parl. bor. of Irelnul, on its W. coast, prov. Conmanght ; it is a co. of itself, bint is locally situated in the nhove eo., on bisth sides the river tlowing from loonerli Corrib to the sen, at its month, and at the NV:. extremity of (inlway lhay; $113 \mathrm{~m} . W$. Dublin, on the terminus of the Midiand Grumt Western railway. I'ol. 88,120 ln 1831, and 26,161 in 1861 . Ginlway, from a remote perion, has licen a place of considerable importance, both as a military station and a commercial mart. It underwent virions vicissitudes during the civil war of 1641 , when it was taken by the parliamentary army, and in that of 16 ks , when it surrmdered to tho fores of King William. The town is situated principally on the lis. side of the river: that portion of it which was inchuled within the old walls is built chietly in the Spmish fashion, the houses being of stone, in a qualrangular form, with an open area in the centre, to which the entrunces from the street aro through arehed gatewnys. In this part the streets are narrow, ill paved, and slirty. The river is crossed by two bridges, one built in $13 \cdot 12$, and still in excellent condition, the other of modern construction. The walls were taken down in the beginning of last eentury, with the exception of the $N$. bestion, which has been preserved in its original state. The New Town, E., from the Old Town, limilt according to the modern finshiom, cor.tains a square and several wide strecte. The extensive suburh of Claldagh, iuhabited exclusively by fishermen, lies on the W. side of the river. The town, with the surromding distriet, comprising the parish of St. Nicholas and seven others in the vicinity, constitutes the wardenship of dahway, a seprarate ecelesiastical juristietion exempted from that of the bishop, and subject only to the archbishop's triemmin visitation. Aecording to the 12. Cath. arrangements, the town is the head of the newly erected see of Galway, comprising 12 purishes. The parish church of St. Nicholas is a large and venerable eruciform structure ine the pointed Gothic style, of consilerable antiquity, having been founded in 1820. The R. Cath. chapel of the same parish, which is also the bishop's rathedral, is a spacious motern edifice. The Franciscans, Dominicans, and Angustines, have monasteries here, to each of which $a$ chapel is attached, as is one to the munery of the order of the Iresentation. The Preslyyterians lave also a meeting-house. The educational establishments comprise one of the new (Queen's Colleges opened in 18.19; a classical school, on the endowment of Lirasmus Smith; a large parochial school for boys and another for girls, inder the care of the nuns of the l'zesentation, and several private schools. The charitable establishments are the house of industry, with a dispensary, the Protestant poorhonse, the wilows' and orphans' asylum, and the Magdalen asylum.
The town is governed by the high-sheriff, recorder, local magistrates, and a board of twentyone commissioners, elected trienuially. Town revenue above 2,0001 . a year. A court of record for pleas to any amount is held on Mondays and Fridays. The assizes, both for the co. and the town, are held here, as are the general sessions of the peace for the co., in April and October, and those for the town lour times a year. The bor. sent two members to the Irish H. of C., and one to the imperial IJ. of C., down to the passing of the Reform bill, which gave it arain two members. The parl. bor. includes the entire co. of the town, and had 1,284 regis, voters in 1865.

## GANOFS

The court-hnonses for the co, anil for the fown are elegrant buildings of nodern construetlon. The workhonse, upmed in 1812, has room lior 1,300 inmates, which is not more than reguired.

Ginlwy is not a manufneluring town. The linen inanufincture was attemphial, lint failed. Its trade at present consists almost exelusively in the export of apricultural proluce, tishl, kelp, and marble, beautilul slabs of large size being sent to linglaml and the U. States. It is sawn and polished in mills in the town. It has several thour-mills, two fommalies, two breweries, a papur-mill, and two distilleries. The salmon fishery is valualle ; the inkiery of cod, hake, and hadilock is less valuahle than it might be, in eonsequence of the powerty of those engaged in it, and their pertimacious adherence to rules devisad by themselves for the exclusion of strungers from the business. The progress of Ginlway was long checked by the insuflicieney of its himbour, whieh dries at low water, so that vessels of any considerable hurden were obliged to anchor hetween the town and Matton Island, where they are exposed to the siW. gales. To obvinte these defects, an extensive dock has heen constrocted, which almits vessels drawing 14 ft . watur. A lighthouse lias also been erected on Minton Island; and the bay north of the ishand now forms an excellent roadstead, used for a time ly the large mail stamers which, by eontract with the govermment, ran from Galway to Ameice. The steamers censed to ran in 186.4.

The shipping belonging to the port of Galway consinted, on the Ist Jan. 1864 , of 12 sailing vessels muler 50 , and 6 above 50 tons; besides 1 steamer of 36 , ard another of 67 tons. The grozs amonint of cuntoms duties received at the port was
 18ti3. The total exports of home prohnce amoninted
 1861 ; 393l. in 1862; and $7,5 \times 7 l$. in 1863 - altogether a most extraurdinary variation, such as is visible at no other maritime town in the U. K.

Entil of late years, Galway liad but little ecnnection, owing to the wust of roads, with the extensive conntry $W$. from it. This defect is now, however, in a grati measure ohviated by the carrying of roads into Commomara, Joye 2 's Conntry, and other wild districts, athording an easy transit for their profluce to Galway.

The inhabs, of the Claddagh sulmri constitute n separate community ; their number is from 5,000 to 6,000 , and they are so exclusively tishermen that their cottages have searcely even a potato garden attached to them. The community is governed by a mayor, elected by themselves, whose nuthority is oo lighlly respected that appeals from his decisions to the constituted authorities are nlmost unknown. Their dress is comfortable and substantial, but of a peeuliar make. When at home, the men are wholly unemployed. They leave the chtire superintendence of their peciniary affairs to the women, who receive the carfoes of fish on the arrival of the boats, dispose of the produce, and supply the male part of their families with clothing, food, and spirits. The men indulge in whisky; but riots or tumults originating in excess are notwithstanding infreguent, and when they go to sea, which they do in a body, commanded by a leader to regulate their movements, they strictly prohibit any whisky being brought aloard their boats. Their strong religious feeling is evinced by the erection of a large chapel ont of their cariings, and by the liberality of their contributions to the support of its officiating clergymen; as also from the enstom, undeviatingly athered to, of having a
prayer offered up by ut elergyman, accoriing to a specitied lorm, previonsly to the sailing of their theet of tishing craft.

GANDIA, a town of Spain, Valencin, distr. Denia, on the Mediterranean, 14 m . SSE. Valencia. Pop. 6,473 in 1857. (iandia is an ngreeable town, and is noted for the inhastry of its imhabitants. it has a line collegiate chureh, convent, collerg", and eavalry barracks. I'here is a small harbour, and an netive llshery is carried on; besides whind, there are some linen manfactures. Cimulia is in the centre of one of the hest cultivatel districts of Spali, where much hemp and flax is grown, and the culture of the silk worm is carried on extensively.

GANGlis, the prineipal river, or, as it has been expressively termod, the Nile, of Hindostan, through the N. and lic. parts of which it thows, watering its most furtile region, and extemingr through 13 degrees of long. and nemrly 10 ilegrews of lat. I'rom the central chain of the Llimalaya to the liay of Bengal. Its course is almost wholly comprised within the liritish presidencies of 1hengral and Agra. It rises by two principal heals, the Bhagrintlii and Aleananda, nhont lat. $31^{\circ} \mathrm{N}$., and between long. $7!0^{\circ}$ and $80^{\circ} \mathrm{E}$. The Bhagirathi, or W. branch, thongh neither the longest nor largest, is cousidered by the Mindoos as the 'true Gimgres.' It issues abont 12 m . above (iangoutri, and 200 m . NNW. Welhi, from umler a low arch ealled the 'Cow's Menth,' at the base of a mass of frozen suow, abont $13, \mathcal{H} 00 \mathrm{ft}$. above the level of the sea; with a mean breadth of at ft., and a methium depth of 12 inches. It forms a jumetion with the Alcananda at I eoprang, about $!\mathrm{m} . \mathrm{SW}$. Serinagur ; lat. $31^{\circ} 9^{\prime} \mathrm{N}$. , lougg. $\mathrm{Z}^{\circ} 8^{\circ} 33^{\prime}$ D. . The resultiug stream, with a width of about 80 yards, assumes the name of the Gingres; nud at Hurlwar enters the gicat plain of Ilindostan at an elevation of only $1,0 \pm 4 \mathrm{ft}$. above the leval of the sen. It flows thence, with a smooth mavigable strum, to the ocem, a distance of nbont 1,350 m., cliflusing abumdance on all sides by its waters, its products, and the facilities it affords for internal transit. As far as Ilurlwar its eonrse is mostly S. or SW.; thence to its consluence with the Jumnn, in lat. $25^{\circ} 25^{\prime}$, long. $81^{\circ} 10^{\prime}$, it runs generally SL: ; from Allababod to Rajemahal its course is mostly F. ; and it then furus Slis., and lastly s., till it enters the lany of Jengal, hy mumerons months, between lat. $23^{\circ}$ and $21^{\circ} 30^{\circ}$ N., and long. $8 \mathrm{KO}^{\circ}$ and $90^{\circ} 40^{\prime} \mathrm{E}$. . Its entire course may be about $1,500 \mathrm{~m}$. The chief tributaries of the (ianges are the Jumna, Ramgnmga, Gommpty, Goggra, Sone, Gunduck, Cosi, Malanmmada, mid Teesta. They vary in length from 300 to 600 m ; and except the Sone, flow towards the (ianges from the N .

About 200 m . from the sea, the delta of the Ganges (which is twice as large as that of the Nite) begins to be formed. Of its two primeipal arms, which form the outernost of the whule scries, the E. is the larger, and preserves the original direction of the main stream, together with the name of the Ganges; but the W. arm, or Cossimbazar branch, called afterwards the Hooghly, is considered by the natives the true Bhapirathi, and invested by them with the greatest portion of sanctity. The whole of the delta between the two prineipal arms is a vast alluvial flat, nearly 200 m . in breadth, intersected by anmerons rivers interlacing each other in all directions, and which enter the sea ly from 12 to 20 months. The region round the months of the (ianges, termed the Sunderbunds, is a pestiferons tract, covered with jumgle, and swarming with tigers and other beasts of prey.
lietween Ifurdwar mid Allahmian the comrse of the himges is twlerably straight, the bremith of its leed fenerally being from 1 to $1+\mathrm{m}$. Thenceforward it winte more; and having receivel the Goggra, some, anul (iundinck, attains its greatest maguitule. For the last 600 m . of its course its beil varies from $\frac{1}{2} \mathrm{~m}$. to 3 m . in wilth, and at the lowest sensmen the menn breadth of its channel is alont I-thes of a m. Alowe its contluence with the Jumm it is sometimes fordable; below that combluenere it is generally of considerable depth, for theadiditional streams liring a greater accession" of depth than wilth. At 500 m . from the sen the Ganges is : 10 ft. deep, and it continues of that depth, at the least, till it approaches very near its month. The rate of iescent from Ilurdwar to the sea averages abont! 9 inches a m., but nearly 2-lirls of the entire fall takes place hefore reaching Cawnpore. Tho mean rato of the current in the try months is less than 3 m . an hour, but in the wet reason it is often from 5 to $1 ; \mathrm{m}$, and in particelar situations from 7 to 8 m . The lanks of the Gauges are commonly precipitons on the side In which the current impinges, and shelving on the sther side. The force of the strean, when the river is at its height, sometimes breuks down the banks, which are composed of a loose mud yielding suil, with such rapidity that an acre of houd has here seen to disappear in less than hnlf an hour. From the great guantity of mud brought down by the river in the hatter seasom, and other censes, its mouthis are encmubered with bars and shouls. The Itooghly is less so than the E. arm, but no ship drawing more than 15 ft . water can navirate the latter with safety : and the E. I. C.'s ships, that were usially from i, 000 to $1, \underline{2}(0)$ toms burden, and drew above 22 ft, water, loader and muloadel at Singor 1sland. (Crowfurl's Miss, to Siam, i. 3.) The Cossimbazar branch, alme, is almost dry from Oct. to May; and the Chumdun, which cuters the sea he the Hooringottah month, is the only branch that is at all times mavigalle.
The amual inundation of the Ganges is owing chictly to the trupical ruins. 'These prevail successively throughout all the countries through which the Chuyes flows; and in this respeet its inmudation diflers frum that of the Nile, whose waters are mugmented by rains falling along the upher part of its couse only. The (ianges, and other rivers in bengal, begin to rise in consequence of the rains in the monntains at the end of $A$ pril, their rate of increase fir the tirst fortnight being about an inch a diay; this gradually augments to 2 or 3 inches a day, and the total rise momonts, by the end of dune, to between 15 and 16 ft . or hall the entire lueight it attains, before any quantity of rain falls in Bengal. Bint from the latter perion, when the rains there become general, the medium incrase of the water is about 5 inches a day; mul by the end of July all the lower parts of Bengal, courtiguons to the Ganges and Brahmaputra, are muder water. The progress of the inundation, in consequence of the flathess of the country, is very slow, beving no more than half a mile an hour. Owing to this and other physical causes, the difference in the height of the waters aljacent to, and at a distauce from, the sen, is very considerable, but increases in proportion to the distance. In the lowerpart of the Sunderbunds, the influence of the inumbition is at ordinary times little or not at all fell; at Lachipeor, about 10 m . inland, it is when highest about of ft . in elevation; at Dacea 14 ft .; at Custee 31 ft, , anl at Jellingley, near the apex of the delta, 32 ft . The total inerease at the latter phace may however, in modium yours, be set down It 31 ft . The rise of the immutaion continues till nearly the middle of dug. For a few days pre-
ceding the lith of that month, its height Is nearly stationary; but it then beghiss to decrease, notwilhstinding that great quantition of rain continno to fall for the moxt whe or seven weekn. Durlut the latter half of Aly., anil the whole of Sept., the decrense is from 3 to 4 inchess a day; from segot. till the cud of Nov. it gradually lessens from 3 in. to $1 \frac{1}{2}$ in. The decrense of the immiation, however. does not nuiformly kerp pace with that of the river, by reason of the height of the banks: but alter the begiuning of Oct., when the rains have nearly ceased, the remainler of it gows off quickly by evaporation, leaving the Inumborsichly manured. The fianges decrenses at the averagis rate of half an incli a day from the enal of November to the latter enid of $A$ pril, when it is lowest in lengal, though the rans in the momintains have alronly begent to aument it in the upler purt of its course. Major liemuell estimated the quintity of water dischinged by the Gamgers per secolid in the dry season at sol,010) cubic ft., and in the rainy season at 40 ;, 100 cubic $f t$; $;$ leing for the average of the year $1 \times(0,0), 016$ cubic ft. per second. Ihat, aecording to some olservations made at Giluzipore, above Caleuta, by Mr. Everest in 18:11, it would appear that in the finur monthe of the Howl season (.June to Splt.) about ato, 000 culsic ft. per second are discharged: while the average for the remainuler of the year is only 100,1000 eulsic ft. per secomb. The quantity of earth brught down by the river is very great. Aceording to Mr. Everest, the solid mattor sus. pended in the water during the rains weighs about $1-\frac{2}{2} \times \mathrm{t}$ li part of the water, and ocelpies nlout l-bistith part of its bulk; giving a discharge of alout 587 cubic ft . of mul per second,
 122 days of rain. The total ammal diselarge of mul is extimatel at $1 \mathbf{1}, 36 \mathrm{x}, 0 \mathrm{i} \overline{\mathrm{a}}, 4.40$ enlic ft ; the weight of which, necording to Mr. Lyell, wonld exceed sixty times that of the great pirramid of Esypt. (Jinmal of the Asiatic Society, No. 6, p. 2tisf; Lyell's Gcolugy, i. $361-364$. )

A very striking effect of the inmention of the Ganges is the change prodnced by it, year after year, in the bed of the stream. This limpens in numerons parts of its course through the lower portion of the sreat plain of llindostan; lut particularly in Bengal, where the soil is the most loose and yielding. The diflerent branches of the river constantly shifting their places, a number of extensive jheels or marshes are contimually being producel; and the geuraplical lace of the comtry, the condition and extent of private properties, de., change in the same proportion. In consequente also of the looseness of the soil through which it thows, the river is ulternately forming and lestroying ishomels in its bell, some of which are 4 or 5 m . in extent, yet formed or removed in the space of a few years, Certain tracts are preserved from the inmataion ly being surrounderd by dykes, the collective length of which was estinated in hemuell's time at upwards of $1,1100 \mathrm{~nm}$. The poliey of their erection has been considered very doubtfinl, for the land has to be irrigated at certain periods, when the dykes must be cut ; besides which, they do not always answer their purpose, owing to the want of tenacity in their materinls; and they are muintained at a great expense. The comiry has, however, been bronght by them into so artificinl a state, that there is now no altemative but to persist in keeping them up.
The Ganges, like the Brahmaputra, the Amazon, several Eurobean rivers, the Ciulf of Cambay, on the opposite sille of llindostan, is sulject to the phenomenon of the lore, or a rapid rush of the tide it a perpendicular face, up the river to a con-
siderable dintance. It in enperiolly nerong at spriag tides. This reverrs in all the momilis of the dimgen, ami partleularly in the boughly, thromgh which lrumeh it ameenils as far as Cinhin, or eveli Nudien, 200 m . from the sell. 'I'se columm of water is somethimes a dozen feet in lieight near the mouth of the river, mul often 5 ft, hlyh opmesite Calemita. Its appearmee is that of a monstrons hillow in a storm, or the dash of a fonming surf: ita sonind resembles that of a stemmbart, hut is infinitely lomer. Solmetimen it takes one side of the river, annmetimes the other: it never extemis over the whole hasin. "The time of its upproneh being well known, humireds of bonts may then be seen rowing, an for life, towards the middle of the river, the crews urging on anch other with will shouts ur slirieks, thongh nt the moment no danger npperars: but soon afterwarils the spectator is made sensible how necessary was the precantion, as the bore fonms by with tremendous noise and velocity: (Helser, in Mod. 'Irav., is, 10x.)

Jhat, in the words of Mr. Crawfinrl,--With all the difleulties and dinugers of the Gamgen, the Jinglish, if their lodinn eonquests be of my advantage to them, owe almost as much gratitule to the (ianges as the llindous themselves, for minuestionably to it they are indebted for their Indian empire. It is the grent military highwny which enabled us to eonquer the richent provinces of llimbostan,-the acquisition of which emabled us eventually to conquer ind maintain the rest of our possessions, (limhansy to Niam, Kc., i. 7.) Its value to the nutives of Jlindostan is immense It is, and always has been, the grand ronte of communiention and tralic in that country, throughont which the roads mapted for the convegance of fouls are very few. Nut only the maili stream, Gut all its tributaries from the $N$, are navigable for large or small loats, to the very foot of the monutnins, for more than hall the year; thas forming a most extensive system of inlame navigation. Sixty years ago, Mijor Remnell estimated the number of loatmen mplinyed on the (ianges, in Bengal, Ace, at 30,000 , nuil the value of the commercial exports and imports conveyed by its means at $2,000,0001$ a year. Hut ten times the above number of hoatmen wonld npparently te nearer the mark in such a region of rivers, where almost every cultivator and tisherman is anso occasiomally a mavigator. And at present the gross nmount of the imports and exports emborked ouls waters varies between $12,060,1000$, and $10,000,000 \%$. momally, insependent of the inlami trade, which has, doibtless, not a little inerensed with the increase of the pop., and the greater ilegree of security afforded to commeree under the Euglish rule.
lerhaps no river in the worlal bas on its banks so many populons cities. On different branches of the delta are placed Calcutta, Moorshedabad, and Dacen, the three great cities of Bengal, with a united pop. of little short of a million ; besides Chinsurah, Chandernagore, Hooghly, Cutwa, Burhampoot, Cossimbazar, Kishenagur, and Jessorc. Procceding up its course, we tinl on its banks Rajemahal, Monghir, Patna, Ghazipoor, Menares, Allahabad, Cawnpore, and Furruckabad; with myriads of villages, temples, and bungalows.

The native eraft used in the Gingres vary greatly in lifferent parts of its conrse. The flat clinkerbuilt vessels of the W. districts give way about Patna to lofty, deep, and beavy boats, which navigate the river thence to Calcutta. In the Sunslerbunds, again, the shallowness of the etreams requires that the vessels should be without keels; and the banks there being impracticable for the tracking-rope, rowing is the ehief methoil of pro-
pulsion, The boats on the main nrm of the Ganges, nut others lu the lid part al the delta, are better than those on the Iloughly, thongh all are of a very rude and elomp kind. Within the last en venirs, the river lins been extensively nowigated by ntenmors, some of them, in the ipper parts. living su constructed as to drnw bint a lew feet of water, in order to nafoly mavigute the shallown.
The fiangen, from limugiotrl to Simpor Inlumb, is eomshlermb huly by Ilimionos of nll cantis, thomgh in mome places mich mure wo than in others.
 sworn upoh the water of the inngeen, an the ('loristians and Mussulnuman are upon their macrid towks. Tha Ginugen water in holieved by the Ilinduas to purify from all sins; many nhbutions and nuicides Acourlingly take phen in it ; and the lent of the dying, when they are sutliciently near residents, are ii mont instances immersed in It. (Hemulell's Ma-
 ton'm llindontmi nul E. I. liň. ; littor's Viritknude von $A$ sien, iv. part 2, pr. 1100-1918: Asint. Ilemenrehen; Colebroke; Heber; l'rinsep, passim.)

1:ANJAM, a distr, of Hritish Hindostam, (L'ce Chicals, Nontinehs.)
(iANion, a town of Ilindustan, cap. of the above distr., near the conast of the lhay of lhengal,
 formerly had a considerable jeplo, as well ns numerous nind excellent private honses belonging to British civil oflicers, a fort. mul emintomments; lhit it has now, in grent pinrt, been deserted amb fallen into decoly.
(iANVAT, a town of France, dép. Allier, cap. arrund., on the Andelot, 33 m . S. Moulins, on the rnilway from Moulins to Clermont, I'op, 5,it! in 18til. The town is ill hilt. It was furmerly fortitied, amb the remnins of its ancient cantle stifl serve us a prison. It lias a lospital, nud a triIumal of primary jurisdiction.
( All ' (inn. 'riquincum), a town of France, dép. Jlautes Alpes, of which it is the enp., in 14 wide valley, uenrly 2.500 ft . above thesea, surromuled by the lower Alpine rampes, nim on the roal from l'aris to Marseilles by way of Grenoble, 44 m . SE. (ircuable. I'ol. 8,219 in 18611 . It is a very ill-huilt nam generally disagreenble to wn. Its prineipnl public editices are, the cothedral, prefecture, cown-hall, bishop's palace, hall of justice, and barrneks, some of which are grom buildings. The eathedral is in the Gothie style, nud richly ormamented; it emthins the tomb and alligy of the celebrated constuble de Lestliguieres. The tomb is a sarcophagus of black marble, surrounded with bas-reliefs in nlabaster, representing the principal netions ai' that warrior. It has severnl other churdies, a communal colloge, in society of emulation, a museum of natural history, collections of paintings sen!pture, nutiquities, and plysical ohjects; and a small theatre.
(iap is the seat of tribunals of primary jurisdiction and commerce; it has manufactirres of woollen cloth, linen fabries, silks, chnmois and other kinds of leather, and cotton yarn. Its inmedinte vicinity is very fertile; there are in it marble quarries known to the ancient liomans, and many mincral springs. The town is of very great antiquity; it was the cup. of the Tricorii, mider the name of Vap. It became the seat ul' a bishopric in the 4th century, amb belonged for a lengthened periol to its own prince or connt hishops. It suffered grently in the middle ages, from the devastations of the Lombaris and Saracens, and from repeated sicges, fires, the plagne. and religious wars, hut, more than all, fron the revocation of the ediet of Nimtes. Ire- an, ure hetter nll are of $n$ the lant :l ly havigatel י"perer parta, n lew feet ut slablown. nugor Inlanul, anter, thomgh II in others. of jumice are an the f'hria nucreil books. viondy to 1630 , Ging is said to liave had 16,000 inlouk.
Gi.ilid, a defp. of France, in the S. part of the kimidom, furmerly comprised in the prov, of Lan-

 Lakire und Ardeche; Fo. the Rhone, sepmatimis it from Vinchese and Ihoneloselin-Rlone: W. Arayron; ands. Héranlt, the Mealiterranemi, and

 owupied hy rannittations of the Ceverames, the general slope of the dep, being from NW. to SE., in which latter purt of its surface there is $n$ collniderable extent of level comitry, whil mamerons and extensive jools and marshes. Most of tho rivers have a Sl : direction; the principal are the Gardor (iurdon (whence the dep. derives its name), the Cien, and the Vilomrle. The Garl, which rises in the Cevennes from several mources, runs throngh the centre of the dep., and falls into the Rhone not fir from lleancine, nfter a conme of about 60 m . It at Irst passes throughansuccession of decp monntain gorgen; anil when the nuows in the Cevennes begin to melt, it sulhjects the lower parts of the eonality thromph whileh it passes to extrinse mid often very destrmetive immalations. Its ..ed sometimes increnses in width to nearly a mile; und its waters not unfrequently rise fromis to 20 fi, ill a lew hours 'Ihe llérault has its source in this alep. Climate varinble, but for the most pirt hot and dry. The N. wind, or bise. hows sometimes with great impethosity, and the sciroceo is by no means rare. The arable lauds comprise abont $15 \mathrm{a}, 500$ hectares; vineyards aboit
 $15 x, 1000$ da. Though the arable land is in genernl pretty fertile, the produce of corll, uwing to the extremely buckward state of ngriculeure, is estimated at only $650,0,00$ hectulit res, being about half the quantity required for home consmuption. It is principably wheat, onts, and barley. A gowad many potatnes are also grown, and in the monntain region chestuuts go fiar to mupply the phace of corn; the Cevemes being covered witl ehesthut wouls. The plough deseribed by Virgil, drawn by two nules, is in common use. 'The anman produce of wine is estimuted at $1,120,000$ liectolitres, a third part of which is comsumed in the dep.; the wines of St. Gilles and Javel are those most. estemed. The date, jujobe. pistachio, and brimegramate flourish in the open air; oranges mul lemons are frown, bit a grood deal of enre is required in their colture. Olive trees are grown on low hills with a S. asject; but they suffer severely from eold winters, and their umber has decreased of late. Gard is the principal dep. in France for the culture of the mulbery; the quantity of cocoms collected amount to about $3,000,000$ kilogrammes per anlullin.

More than $\$ 00,000$ sheep belong to this dep... vielding abont 900,000 kilogy of wool. Many of the thocks are sent to feed on the Alps in the summer. The freater part of the dep. is parcelled out into very small estates, and the mumber of considerable properties is greatly below the average of the kingrom. Gard is rich in minerals; and mining, thongli ill-emilucted, constitutes one of the ehief sonrces of its wealth. Iron, argentiferons leal, nutimony, sine, and manganese are found in the mountains; anil gold is met with in the sands of sume of the rivers. Iron and coal are abundant; the forges of the arrond. of Alais alone employ from 1,000 ) to 1,200 lands. Great quantities of salt are oltained from the salt marshes on the coast, which iltogether occupy a surface of 86 hee-
tares. In the anlt pans of I'ecoais, during dune aul July, as many as 2,000 hinnds are employed to wasli the prodice. Ahont 1,200 workmen are employed in the sypsum, mill-stone, and other quarrides. (iard stands at the head of the dijos. in the S. of Frmure for manufaturlug industry: it is espercinlly distinguished for its manufnetiores of silk. The brincipal sent of these is Nimes, where they entploy about 13,160 haide. The other manufictures are those of eoston and woollen fabrics, hates, pape:, pasteboard, bramily, lenther, glass, and earthenware; there are hesides minny tawing and dyeing establishments. In the neighbourhood of the coast canals are numerons, nud inclule those of leaneaire, Sylverénl, and (irand Joubine. There ls, however, bittone sea-port, Algoes Morten, and this is 4 m . from the Mediterranenn, with which It commmiantes by the last-named canal. 102 frim are anmually holden in the def.; amonis them is the celelirated one of Jemenire (which see). (iard is divided loto four arrondissements, 38 cantons, and dis8 communes. The ehief towns are Nimen, the cajn, Alais, Lzes, and Le Vigran.

The antiquities in the dép, belong prineipally to the lioman prioul. The principal is the amphithentre (nee Nimes), and the Pout de Grard. The latter is an aqueduct, and one of the most splendid relies of the lioman power, built over the finton, about $10 \mathrm{~m} . \mathrm{NL}$. Nimes. Mr. Inglis thins deseribes it (Swit\%erland. (se., eh. xxii.): "The nqueduct is formed upon three bridges, one above muther; the total lieight, from the level of the river to the top of the aqueduet, being 156 ft . The mimilermost of the bridges consists of six arches, through the largest of which the river piosses. The middle bridge has eleven arches; and the uppermost has thirty-five arehes (but these are much smaller than those of both the other tiers). Above this is the aquednct, whieh is $4 \frac{\mathrm{ft}}{} \mathrm{high}$, and 4 ft . wide. The arches both of the lower and midille bridfe are megual; which. if it does not incrense the arehitectural heanty of the structure, certainly adds to its picturesgue effect. The two lower stories of the bridge are furmed of hewn stones, placed together without the aill of aty cement; but the masonwork untderneath the aqueduct is of rough stones cemented, by which all tiltration was of comse prevented.' After the decline of the Roman power, the Vandals, Visigoths, Saracens, and Franks successively possessed this dép.
(iAlid) (LAKE: OF'), an. Lacus Benacus, a famous lake of Austrian Italy, bounded by the provs. ol Mantua, lBrescia, and Yeronn, and the circ. of Roveredo in the Tyrol. From Peschiern, at its SE. extremity ( 1 i m . W. Verona), it stretehes NNE. to liva, a distance of abont 3 m m . Its lower or $S$. portion is about 12 m . across where broadest; lout its upper or N . pertion is not more than from 8 to 4 m . acrows. It is everywhere enclosed by ramifications of the Alps, except on the S., where the luxuriant plain presents a striking contrast to the magniticent mountain scenery that closes romul its upper waters.

On the $S$. slowe of the lake, between Peschiera and Kivoltella, the narrow peninsula of Sirmione projects aoont 4 m , into the lake. It is joined to the mainland by a low slender neek, but behind this it rises into' a hill covered with olives, at the extremity of which are some ruins, said to be those of the villa of Catullus. But whether this be so or not, it is, at all events, certain that the poet had a combry-house in this singularly beantiful situntion; and he has expressed his admiration of ind attachment to it in some fine renses:-

## G.ARLIESTOWN

 Marlyue vinto fert intergbe Nepthbus: Quan te libenter, "Hamyue latus livimol' Cutull, I2.
'The soll of this peniusula,' says b'ustace, 'is fortile, and its surface varled; somitimes shelving in a gentle deelivity, at other times bruaking in crogry magnilloreme: and thus finmishing evory roguinite for delightinl walke mud lixarious batles; while the views vary it evory step, prespinting rich comsta or larrell momintains, sometimes conflume to the enltivated acones of the mefghomoring shorre, and it othor thomes bewildered mal lont in the windinges of the lake and the recerses of the

The surfure of this lake is elevated abont is20 ft . alowe the Mediterranemin ; it is gemerally deep; $i t$ a waters are remarknlily pure and limplit; and it is woll stocked with thali, ln the hegilining of sumbmor the level of its surlace is raised 4 or 5 ft. ly the melting of the show on the $\mathrm{Al}_{\boldsymbol{j}}$. It recoives the waters of the Siaro at its N. ex'emity nenr Jiva; but none of its other lieders are of such intportance as to mertt any mpecial motiec. Ita surphas waters are carried of by the Mincio, which iswies from it at. l'welicra. A great number of towns and villages are built upour its banks, of which the principal, besides l'eselicra, are llesplazano, Silu, (iargumo, Liva, (inrla, whence the lake has jts monlern name, de. The greater mumlore of these towns have safe and commonlions larbours, and a grond cleal of trade is earried on "pmin the lake. Like all Apine lakes, it is sulyject (o) violent storms and ginsts of wind, a jeenliarity to which Virgil han alladed-

infiatohouse by vessols of 1 til toms limiten. I was created a lour, of lurimy in 1790 ; and is govermad by a provost, 2 liniflow, and 4 commellors.
 lug 5 , is held onco a forthight. Market-day, :aturday, hud a rural fair 1 thomen y yar.
t'allyhomer, the manhillentent of the Murray familo, lies monit $1 \mathrm{~m}, \mathrm{~S}$, from the town. It is wholly of gromito, thely polished; it was eonarricted after a deslgo by dilame.
1bilthisllbidls, n parl, bor., town, mud par, ol'
 S. hank of the river 'Tyme, which divides it from

 stantiilly a sulburb of Vewemstle, with wheh it is comeretril ly two bridgres, one of them known is Stephensoris High level Iridge. The latter is Lin ft, nowe the river, and arries the railway, with roads benenth for velideles and foot passengirs, The town consiste primeipally of one good and wide atreet, and which is the high roan to the N. Suvernl harrow streets and lanes which compase the remainder of the town branch ofl' on cach wide of the primejpal street, and the pop, on the dillerent sides is not very mergmal. J'here is not may apprarane of wealih or houser belonging to the richer celnsses; the town is alensely pupulated with the families of the manufneturers und pitment the mastor manufacturers or preprietora of the coal pits reside in Newenstle, or in the neighhourhual if the two Folls, where they enu rimoy a better nomonphere than in the town. The liest arect rums in a curve loy the charch to the river, saving the steep descent of the High Sired. Thes par. charch is a spacioun ernciform ntructure, regularly built, having a hamdsme anil lolty tower; the interior was wholly repnired at great expense, in lsiss. The rectory, which was until lntely cluse to the chureh, is situated in the suburls. Iin tiateshemd-fell, which was male a sepmate par, in in(0), is a well-hilt chureh, opened in lx:5. There are several other churches, hesides eight chapels, belongiog to varions demominations of Dissentern, of whom the Weslevan Methotists are the prevailine body: St. V.dmund's hospital, fombed in 12 lx , was in early times a considerable monastery; it was re-establislied by dames 1 . in lifl, and now consists of $n$ master, chaphain, and ten brethren, who divile the Simals, nbout 4501 . anmally. The rector for the time being is the master, who appoints the brethren. There are also almahousen for old women.
Gateshead is a place of considerable importance, not only from its proximity to, and commercinl comuction with, Neweastle, Imt more particularly from the muncrons glass mannactories and ironiworks within the town, and from the coal pits in its immediate neighbourhool. The old thor, of Giatesheal is suphosed to have been incorpornted in very early times; but there is no charier extant. It was origimally governed by a bailiff appointed by the Bishop of Durham, and subsequently by two stewards, who managed the boroagh property, subject to the boromgh-holders' and freemen's control; but, under the Nunicipal Reform Act, it is divided into three wards, and is governed by six aldermen and eighteen eonnsellors. The Reform Aet eonferred on this bor., for the first time, the priviluge of sending one mem, to the 11. of C. liegistered electors, 949 in 1865 . The bor. rev., inchaling rates, amountel, in 18 ti2, to $4,9 \cdot 15 /$. The oross ammal value of renl property ansessed to in-come-tux was 7 i., 7491 in 1857, and 83,4111 . in 1862 .
fidTr TON, a bor, and par, of England, co. Surrey, humd, of Rejgato, 17 m . S. Lomaton. Aren of par., 1,140 neres : pop. of do. 191 in 1861 . 'The bor. is
thast forfuct sueplin, and wan formerly one of the most perfect nperlmene in limghand of a memination or rotten hor, It sent 2 mems, fo the 11 , of C. from 140 l down to the pansiag of the lieform det, ly whieli it was disfranchised, 'The right of voting was mominally in the lulutb, paying scot and hot, but really in the lord of the manor.
(:ADI)E:NS (S'I'), a town of l'rnuce, hep, Ilante (inromie, cajp, nromilo, on a hill wear the fiaronur, Is m. SW. Toulonser. Jop. $6,18: 1$ in $18 / i 1$. The town consiats prineipally of one spacions wall-built, and well-kept street. It lias several churches, olme of which is monorg the ollest in France, neveral comvents, tribomals of primary jorisdiction and commeres, a comminal college, und a society of agriculture. It has manufuctures of coarse sergo mul tape, water-mills for sawhag, mal a brisk trade in the natural produce of its neighbourhool.
(BAWLiLillULi, a fort ress of llindostan, in the N. part of the Nizam's dom., enp, of a distr, of the sume manc, on a liggh mul rocky hill, 11 m . NW. Villichpoor. It is very elaborntely fortilled, mad Was formerly eonsidered very siroig; but it was takrin liy storm in Isobl, by the forces under Genernl Wedlesley (duke of Wellington) and Colomel Stevenson, ufter a sigge of only two dhys.
( $\mathrm{BA}^{\prime} \mathrm{A}, \mathrm{a}$ town or city of Hritish Ilindostan, presid, Hengal, prov, mud listr. Huhar, of which last it is the modern eape, oll the llmign, a tributary of the (ianres, dij m. SW. Iahar, and 56 m . SW. by S. l'atha. It is estinated to contain nenrly 7,010$)$ honses, mont of which are densely inhabited; but the 100 , is very varimble and uncertain, tiayn being trognented by qrent mambers of pilgrims and devotees, often amoming to several thonsamis. It consiants of two parts, the ohl town of ciava, and the modern one of Sahelognuge. T'he former, whied is the residence of mumerons lirabinins and others. mal eomsidered by the matives as a place of grat sumetity, stands on a rocky emineme; the latter, chietly laid out by the liritisls, and the weat of trade as well is of the binropen residents, is situnted in a phain hetween the former and the rivor. "The ofd town of tinya is a strunge booking phee, but its buildings are mich better thon those of the Guarter momed Sinheloginge, the greater part of the honses heing of brick and stone, und many of them two ur three stories high. 'The arehitucture is very singular, with comers, turrets, and galleries, projecting with every possible irregnlarity. The streets are narrow, ilirty, crooked, uneven, and encombered with large bloeks of stone, or protruling angles of rock.

Gayn is meommonly hot, and in spring obscored by perpetual elonds of dust. 'The streets in Suhebgumpe are wide, perfectly straight, and kopt in good order, though not paved, with a double row of trees, lenving in the iniddle an excellent carriage road, with a footprath on each side.

In the immedinte vicinity are the ruins of Bud-dha-Gaya, traditionally smposed to have heen the place of the residence and apotheosis of Budilh (the Gautama of the [udo-Chinese nations). T'hese ruins consist mostly of irregular aud shmpeless heaps of brick and stone. The number of vaulted caverns ent out of immense masses of solid granite is incredible, an is the number of images scattered aronnd to the distance of 15 or 90 m . Among the latter is a gigantic figure of luodih, in the usual sitting posture. There are now, however, no lhud thists at Gaya, the worship of the IBrahminieal deities-many groups of which are sculptured on the rocks-hiving entirely supersedel that of the rival divinity. The present town of Gaya contains no incicut monuments whatever, and appears to have derived all its smetity from its contignity to the site of the ancient city.

CiliNil: (CANTOS OF'), the simalleat emitun of Switzerlamb, at the SW. extremity of which, and of the lake which liears its mame, it is situated:

 It is the demant poyblated of any of the Swise cantome, there behge fu2 inhabitants to the sup. mo, ur uhont twenty-flirce times as many an int the firinoms, which lias lut in pop, of : 0 peran. m. The canfon, whleh ranks gend in the confederncs, is composed of the territury of the anclant repribilie if ticuevn, togrether with some communes formerly helonging to simoy and France, annexal to it in 1815. It surfuce in that, or lint whightly wheven, It is dicloned let ween the lurn monintains on the NW., and some Apine ronges in the opponito direction. The lhane and Arve are the pritucigal rivers. The climate is mill, hat the land is not very productive. 'The cultivable noil comprines aboit 6 it, 650 acres; of which the lamis in crap) make about a liulf, grass lands somewhat lews thati one-fifili, anil words alout one-tenth. In average yenrs from 29,005 tw 32,000 imperinl quartors of corn may be produced; lut, nis neither this nor any oh her speria's of agricultural proshee is grown to inn extent sulticiont for home cousumpation, contsiderable quantitien nre imported.

Geneva is essemtially a manufacturing canton; hut its mannfactures nind trate belong to the tuwn. The govermment is representative. The legislative power is exercised by a hody of 278 members, elected by all citizens alove $20^{\circ}$ years of age. Fonr symulies preside over this boly, and are mems, of the expcutive eouncil, or conncil of atate, which is romposed of $2 x$ mems., elected from umong the commeil of representatives, usually for life, but subject to a vote of censure, und removable nt pleasure. The ungistrates of the dillerent judirial courts are appointed for a certain mumber of yenrs by the former council. The canton is divided into three districts, in each of which there is a court of andience; bewides these, there are in the cap. a court of appeal from the foregoing, a tribumal of commerce, and a supreme comrt of justice, composed of nine judges. All trinds are public. The French code of laws is generally operative.

The press is frce. Education is in a flourishing etase. The canton furnishes a contingent of 880 men to the urmy of the Swiss confederation, and a contribution of 22,000 Swiss fr. a year to its treasury. The public revenne of the canton, in the year 1862 , amomed to $2,742,000 \mathrm{fr}$., and the expenditure to $2,466,000 \mathrm{ir}$. The canton liad, at the name time, $n$ delt of $16,000,000 \mathrm{fr}$. Execept the city of Genera, the canton contains no town
of ilmportance ug article.)
IIViNEIVA (liemm, (ienf), the mont popminum city of Swit zorland, colj, of tho nlose enntom, nituated in a picturempue conintry, alobinding lis the move
 extreminy of the lake of tirneva, \&I m, NW. Thene,

 dividea licueva lito three jaria; then city unt the right tank, tho quarter of At , tiepsain on the left, mid the island hei weren them, enclosel by twin ams af' than river. 'The city, or uphor town, ta the largene portion, and is in part thili om an eminence, rixing

 The lower tuwn, or quartor of At. tiervain, in the chinf sent of commercial netivity. It lian unrrow estrots and lofty homen, Some of the later are fruruinhed with it sled or pent-honere, eallod a domer, whinh projects from the rowf over the street, nulpported hy wosien proqu reaching from the pave. ment. The istand is upiwards of a fiurlong in lengith. hy ulxat 241 ft . brond, and connected will the other guarters liy nevernl hridgros. I'he aspuect of Gruevn from the lake is very beautiful. Of late veare, an entirely mew quarter lias sprong up ein the right bank of the Rhone, anlled the Quartiens des Jergues, displaying n humbome front of tall housen, amonig which is the Hotel des Berowes, lined with a hrond and the quay, towards tho lake. 'The inmightly houmes that formerly llasel the margin of the lake in tho lower town liave lxell repmireel and heantitied; and a lirond belt of land has heen gainel from the wnter to form a quay. This is connected with the Quatides Berguea, on the ofjowite lonik, ly a handsome auspension brilke, and another brislge commanloating with a sinall inlanil, situated at the print where the Rhone lenven the lake, is omamented with a lironze atatue of Romssenu. Genevi is surrounded on the land-side by ramparts and bast ions, const rueted nbout the middle of last confury: theae are of little use as fortitiontions, the city helng commaniled ly mome aljarent loights; but they serve as public jromenades, nal three iron sumprinsion liridges linve heen thrown over them to facilitate the intercourse between the city and the surrominding comitry. The gates of Geneva are closed from midnight to day-break; and after sunset a tull is levied on all horsen or carringes.

Geneva has but few fine puhlic buildings. The principal is the cathedral or elurch of St. Peter: it is in a compicuous aituation, han three steeples, nad is an interesting speciment of the Gothic nylyle of the 11 th century ; hit a Corinthian portico, in imitation of that of the J'antheon at Rome, lias heen inconsistently enomgh added to it. This church contains the tombs of Agrippa d'Aubigny; the friend of llenri JV., mul of the Count ile Kohan, a leader of the Freneh I'rotestants in the reign of Louis XIII. There are, besiles, three Calvinist and two Lutheran churches, a Catholio: church, and n synagogue. The town-hall nul general hospital are almont the only other editices worth motice. The last is an extensive and apmeious milding: in the chapel belonging to it the sorvice of the linglish Church is purformed on Sundays. The Musie Rath, so named aftor its foumder, is a neat building, containing a collection of paintings by native and other artiats. The museum of natural history eontains the geologrical collections of Saussure, Hrongniart, and Decandolle, the collections of M. Necker, a enbinet of antiquities, and a reading room well supplied with the besi

'Ihere nre various puhlic walks within as well as withont the walls, which eommanil noble views of the Alps and the lake; amengst them are the Terruce de la Trrille, the squares of St. Antoine nind Mnirice, and the the bithnic garelen. laid ont in $18 / 6$, Geneva is a favourite place of rewort of the Emplish.
The main somree of the prospurity of this city comsists in its minufnetures; the prineipal of then are watches, jewellery, misical boxes, and objects of tate in the the arts, The mmber of working watchmakers and jewellers is estimuted at nenrly 6,010. 'The number of watches anmully made is estimated at ujwaris of 70,000 , and of these ut least botion) are of gold. In watchmaking and jewellery, it is entimatell that hetween a 0, tho 0 mad (80,, 100 a\%, of foll. and ahont $50,000 \mathrm{ez}$, of silver, are used annually. The gems (most of which ary peurls) used in jewellery and the embellisliment of' wateles may be worli perhapн $20,0(1) \%$ a year. The Watchmaking business is divided intotwo branches; that of hute horlogerie, comprising elironometers, stop-watches, and other articles in which the perfection of the machinery is the highest kind; and that of horlogerie du commeree, in which the beanty of the work is its chief recommendation. The articles of the latter clane are liy far the most mumerus. "The great alvantago which the Swiss pussens in competition with the watehmakers in England,' says a consular report, 'is the low price at which they can produce the flat cylinder watches, which are at present much in request. The watches of Euglish manufncture do not come into competition with those of Swiss production, which are used for ditherent purposes, anil by a different class of persons, Notwithetanding all the risks and charges, the anle of Swiss watches is large, and it has not really injured the linglish watchmaking trade. The English watches are far more solid in construction, fltter for service, and especially in conntries where no grod watchmakers are to be found, as the Swiss witches repuire delicate trcatment. linglish watches, therefore, are sold to the purchaser who emis pay

 tion lin Switaerlani; and printing wond turm a very injurtant and very prowhative branch of induntry, were it not for the impollmente thrown in the way of exportalom to nefighburiag counirles. Thaning is carried on to but ammallextent, thongh the very enpertor quility of the leather alwnye insures it a preference in furejgu markets, particularly in Jtaly. At the beginning of the seventrenth century the (ienevere nime corried en an extensive trale in silk stuflis mind lace; and before the French revolntion there were many extensive establinliments for the manufature of printeal eottons, besiden finctories of various other kimls. These no lomger exint, most of them luving beet ernalied by the syatem of prohilitions and high dution emtablishat by the continental powern diring the ensuing perioxl. The watehes mid jewellery mannfictured at (Geneva are mulsjemedel to a merict system of supervision, to prevent a fulling off in the reputntion of this impurtant brunch of trate of the repmblic. A committee of master-workmen, with a symilic at their heal, eallant the commission de surreillancr, are appointed by the govermment to inspect every worknhop, nind the articles made in it , to ghard against frand in the substitution of metals not of the legal standurd. Sy a law of 1815 , the munnfacture of any gold work of a lowor standarl than -athe is forlididen; und the legral standarils for silver aro fixal at ron, row, and 900. Geneva is the seat of the conncil of state; the supreme court of justio for the cans.; a conrt of apenl from the distriet courts; and a chamber of commerce. 'The last has a very extensive jurisdietion; every commerciul trinsaction, of whatever descripion, may be bronglit before it; and a private individual, who may have bought more of aus article than he requires, and sells the surphas, becones responsible to it.

Geseva is very ancient. 'Extremum oppidum Alubrogum est, proximumque Mehretiorum finibus, Geneve, are the words of Ciesar in speaking of this city. (De lello Gallico, i. § 6.) Many Roman antignities have been discovered in and near it and in the island traces may still be tiscovered of a lioman atructure, supposed to be the fommations of one of the towers erected by Casar to prevent the Ifelvetians erussing the river. In 426 Geneva was taken by the Burgundians, and became their cap.; it afterwards belonged successively to the Ostrogoths anil the Franks, and formed a part. of the kingitom of Arles, and the second kingdom of lharginily. On the finll of the latter it fell under the sole dominion of ita bishops, betwren whom and the counts of the Genevois, in Savoy, there existed incessant contests for its prossession. At the reformation the bishop) was expelled, and the town, with its territory, became a republic: Calvin, having sought refige in Geneva in 1536, was so-
licited to settle there, and was momi afterwaride ruisell to the hifherst rank ins the stnte, which he in a great menanre governed for sa yean, with a weserity ment stricthess that himpresesed derp, notil

The new mole, on the W. or opposite sile of the part, adjoins the S. extremity of the suburh of s. l'ietro d'Arema, mad projects from the whore lisil. about 910 fithoms. The mule hents hear from ench other NE: by Vi, anm SW. by W., the distame between them, forming the entrone to the harhour, lexing ahout 350 fathoms. A ronpichous lighthomse is crected withont the jort ons its W. side, on a high rock at the extremity of a biont of land contiguons to the bothom of the new mole. There is no dibliculty hentering the harhour ; the gromind es clean, and there is plenty of water, partlenlarly on the side next the new mole ; eare, however, must be taken, in conning from the W., to give the light-house point a gond othing. Moderate sized merchantmen commonly anchor inside the old mule, contignoms to the portofromeo, or bonded warehouses. Men-of-war, and the largest elass of merchantmen, may mehor inside the new mole. bit they mast not eome too near the shore. Ships sumetimes anchor withont the larlanar, in from 10 to 25 fathons, the lighthonse bearing $\mathrm{N}_{\mathrm{i}} \frac{1}{2} \mathrm{~W}_{\mathrm{y}}$ distant 2 or 3 m . Tho

SW. winds oceasion a heavy swell, but the bottom is clay, and holds well. Finblic fomintans are few In Genon, but the city is well supplied with water brought by an aquefuet from the litule river lsisagno immediately F., of the onter walls. The ntumphere is pure; and the climate of the eity and its neightourhood is henlthy, and appenrs to lo particularly favomble for the rearing of silkworms.
Genon is the entroput of a large extent of comeory ; and her commeree, though inferiur to what it once was, is very considerable, an! lins latterly been increasing. She is a free port ; thint is, a port where goonds may he wareloused, and exported, free of duty. The exports eonsist partly of the raw prodicts of the niljucent country, such as olive oil (an article of great valie anid importunce), rice, fruits, cheese, rags, steel, and nrgol ; partly of the prodacts of her manafincturing industry, such as silks, llamasks, and velvets (for the prodiction of which she lans long been fanons); thrown silk, puper, sonj, works in marble, ulabaster, and coral ; the printed cottons of Switzerlaud, and the other probucts of that cometry, and the W. parts of Lombardy, intended for the s. of Europe, and the Levant ; and partly of varions foreign products brought by sea, und placed in porto-frenco. The imports principally consist of cotton and woollen stulls; cotton wool, mostly from Egypt ; corn from the Blaek Sen, Licily, anit lharbary: sugar, salted tish, spices, colfee, cochineal, indigo, hides, iron, and naval stores from the 13altic ; lardware and tin plates from England ; wool, tobaceo, lead (principnlly from Spain), and wax. Corn, barilla, (inllipoli oil, cotton, vallonea, sponge, gulls, and other products of the countries adjoining the Bluck Sen, Sicily, the Levant, de., may in general be had here, though not in so great nbundance as at Leghorn. The varions duties and custom-honse fees formerly charged on the traisit of goods through Genoa and the Italian territories have recently been abolished.

The bank of St. Grorge, in Genoa, was the oldest bank of circulation in liurope, having been foumded in 1407. It was conducted by a company of shareholders; aud having gralually advanced inmense sums to the govenment, a large proportion of the public revenne was assigned to it in payment of the interest. On the invasion of Gienon by the Austrians, in 1746, a part of the treasure of the bank was carried off. Finally, on the union of Gener with Franee, the bank was suppressed; the goverument of France becoming responsible for an amnal dividend of $3,400,000$ Genoese livers payable to its creditors.

Genoa is the residence of a general-commandant and an archbishop, and the seat of the superior julicial court for the prov., an almirnlty-comecil, nul a tribumal and chamber of commerce. It has a roval college; a naval school, the first established in litaly; an excellent deaf and dumb establishment; a public library, with 50,000 vols. and 1.000 MSS.; several learned societies, and various schools.

Genoa is of great antiguity. After a varicty of vicissitudes she became, in the 11 th century, the cap, of an independent republican state; and was early distinguished by the extent of her commerce, and by her settlements and dependencies in various parts of the Mediterranean and of the Black Sca. Their contlicting pretensions and interests involved the Genoese in long-continued contests with the rival republics of 1 isa and Venice. The struggle with the latter, from 1376 to 1382 , is one of the most memorable in the Italian ammals of the middle uges. The (ienoese laving defeated the Venctians at I'ola, penetrated to the lagoons which
anrrounded Venke, and took Chiozza. Inal they immediately followed up this suceess, the prubability is that they would have taken Venice; hit lanving procrastinated, the Venetimes recovered Irom the eonsternation into which they had heen thrown, and the Genoese were ultimately compelled to retire. The asecenlancy of Venice dates from this epoeh. (Koch, Tableui des lévolutions, 1. :313.)

The goverument of Gemon was long the nost turbulent that enn be imagned; mul the city was aritnted by continuml contests between the mobility nod the eitizens, and between ditferent sections of the nobllity. The mischiefs arising from these struggles were such, that to escupe from them, the citizens not unfrequently called in the aid of foreigners; and placed themselves, at dilferent perioxls, under the protection of Framee, the Marguis of Monternt, and the dukes of Milan. Indeed, from 1464 down to 1528 , (ienoa wns regarled as a dependeney of the latter. In the latter year, huwever, it recoverel its inlependence; and was, at the sume time, subjected to a more aristocratical government. Hit the republie coutimued to be aritated by intermal dissensions down to 1576 . At that perion further modifications were made in the constitution, after which it cujoyed a lengthened period of franquillity. (A very fill acconnt of the revolutions of (ienon is given in the Modern Universal History, xxviii. 30il-5iB; see also Sismondi, Républiģues Itulienues, рияssi\#.)

The conquest of Constantinople, and of the countries round the Black Sea ly the Thrks, and the discovery of the passage to India by the Cape of Good Hope, proved dentructive of a great part of the trade of ( jenoa. Sthe was, also, successively stripped of all her foreign possessions. Corsica, the last of her dependencies, revoltel in 1730, and was ceded to Framee in 17ti8. In 1797, Genoa was taken by the French. After the downfal of Napoleon, the congress of Vienna, in 1815, assigned Genoa and the adjacent territory to the king of Sardinia, of whose dominions they formed n part, till incorporated, with the rest, in the new kingdum of laty.
(iliORGIA (Pers. Gurijistan, Russ, Grusia, an. Iberia), a country of W. Asia, and formerly the centre of a monareliy of some extent, but now a government of the liussinn empire. It ocelpies a considernble portion of the isthmis, between the Black Sen and Caspian; extending from lat. $41^{\circ}$ to $42^{\circ} 30^{\prime}$ N., and long. $43^{\circ} 20^{\prime}$ to $46^{\circ} 50^{\prime} \mathrm{li.}$. : separated on the $N$. by the central chain of the Cancasus from Cireassia; E. by the Alazan und Kurak, two tributaries of the Kur, from Skehin and Gulistan ; S. and SW. by the Kapan mountains from Armenia; and W. from Imeritia, by a transverse Cnucasian range. Thus surroundel on three sides by monntain ranges, Georgia is in a great measure shat ont from commanication with the neighbouring countries, there being but one pass either across the Cancasus into Cireassia, or across the W. range into Imeritia. (Sec Cavcasus, p. 20.) The length of Georgia NW. to SE., measured on the best maps, is about 175 m ; its average breadth from 100 to 110 m . The area has been estimatel at about $18,000 \mathrm{sq} . \mathrm{m}$., and the pop. at between 300,000 and 400,000 .

The surface is mostly mountainous, consisting of table lands and terraces, forming a portion of the S . and more gradunl slope of the Canensus. The country, however, slopes from the $S_{\text {. }}$ and $W$., as well as the N., to the centre and SLi., which are occupied by the valley of the Kur, an uuhulating plain of considernble extent and great fertility. Between the mountain ranges there are

3z7n. Ilad they ceess, the probaken Veuice ; lat etians recovered h they had beeti riltimately eomof Venice dates des liévolutions,

ainous, consisting ming $n$ portion of of the Canensus. on the $S_{\text {. and }} W$., e and Sk., which he Kur, an unduent and great ferranges there are
also unmerous fertite valleys covered with Hine foresta, dense underwookl, and rich pasturages watered hy an abmalance of rivilets. All the rivers have more or less an li, eomese. The principul is the Kur, or Mthwari (nin. Cyrns). This river rises in the range of Ararat, a little NW. of Kars. It munat tirst N., and alterwaride NE. to alout lat. $42^{\circ} \mathrm{N} .$, and long. $41^{\circ} \mathrm{E} . \mathrm{j}$; from which point its comese is generally sk to its month, on the Wh. shore of the Caspinn. It is in many places of consideruble breadth, and sometimes several fathous deep; but its great rapidity prevents its being of much, if my, service for navgeration; mud ouly rafts are used nipou it. Its principal athuents are the Aragwi from the $\mathrm{N}_{\text {, }}$, which nnites with it at Mtskechi, the anclent capital of (ieorgia, and nudoubtedly the 'Aрно弓iкa of' Strabo, about 10 m . NW. Tiflis; and the Aras (an. Arares) from the S., which joins it not $\because \cdot \cdots$ aloove its month, where its course deflects so thiva, i, Tiflis, the cup. of Georgia, is situated on i.e isurt.

The elimate of ( Georgin of conse varies grently, accorling to elevation; it is, however, generally healthy and temperate, being much warmer than that of Circassia, or the other conntries on the $\Sigma$. slope of the Cuncrsas. The winter, which commences in Dec., usually ends with lan. The temperature at Tillis, during that senson, is sand not to descend lower than about $41^{\circ}$ Falir.; and in the summer the air is excessively sultry, the average temperature at the end of Jify, 1830, having been, at 3 р.м., 790 , and at 10 p.m., $7.1^{\circ}$ Fiahr. (Miss, Resenrches, p. 1:4.) The soil is very fertile; and agriculture and the rearing of cattle are the chicf employments of the inhab. Wheat, rice, barley, oats, maize, millet, the holeus sorghua and $h$. bicolor, lentils, madder, hemp, and thax are the most generally cultivated articles; cotton is found in a wild state, and is also cultirated.
Cieorgia is noted for the excellenceof itsmelons and pomegranates; and many other kinds of fine fruits grow wild. Vineyards are very widely diffused, and the production of wine is one of the principal sonrees of employment. It is strong and fill-bodied, with more bouquet than $1^{2}$ ort or Madeira; but from having generally little care bestowed ont its manufucture, it keeps badly; nul easks and bottles being for the most part unknown, it is kept in buffino-skins, smeared inside witls maphtha, whieh not only gives it a disagrecable taste, bit disposes it to acility. But notwithstanding these drawbacks, and its extensive consumption in the country, considerable quantities are imported. Mr. Wilbraham says, thut 'the Georgians have the reputation of being the greatest drinkers in the world: the daily allowance, withont which the labourer will not work, is four bottles; and the ligher classes generally exceed this quantity; on grand occasions the consumprtion is incredible.' ('Travels in the C'ancasns, Georgia, p. 192.) According to Smith aml I)wight, 'the ordinary ration of an inhal, of Titlis, from the mechanic to the prince, is said to be atonk, measuring between tive and six bottles of Bordeaux. The best wine costs but ubout four cents the bottle, while the common is less than a cent.' The multiplied oppressions to which the inhab. have been long subjected, and the fertility of the soil, have grone far to extinguish all indastry. The pensant thinks ouly of growing corn enough for the support of hinself and family, and a smad surplus to exchange at ife nearest town for other articles of prine necessity. The plongh in use is so heary as to regaire six or cight buftalues for its draught, and often double the number are used: the harrow is nothing more than a felled tree; and
a great quantity of the proluce is wasted owing to the corn lecing trodiden out by bullialnes. Domestic minimals of nill kibls are reared: the horses and horned cattle equal the hest Entropena breeds in size and beanty; and the long-tailed sheep afford excellent wool, Game, inchading the stag, antelope, whid hoar, hares, wihl goats, phensaus, partridge, de., is very abmalant; bears, foxes, hadgens, jackals, lynxes, aud it is said leoparils, "re common. The lorests eomsist of oak, beceh, elm, asli, linden, horubean, chesthist, walnut, and muy or her trees common in biarope; lint they are of little or no nse. The mineral products of the comutry, thomgh wearly unexplored, are believed to be varions; iron is plentifil on the tlank of tho Cancusis, and cond, maphthe, de., are met with. The lonses of the pensantry, even in the most, civilised parts, are nothing more than slight Woorlen frames, with walls made of bundles of osiers covered over with a misture of clay und cowdung, mud a roof of rush. ' $A$ room 30 ft . longs and 20 broad, where the light comes in at the door; a flowr upon which they dry madder and cotton; a little hole in the middile of the apartment, where the tire is placed, above which is a eopper couldron attached to a ehmin, and enveloped with a thick smoke, which escapes either by the ceiling or the door, is a pieture of the interior of these dwellings. (Malte-Brina.) lin the honses even of the mobility, the walls are sometimes built only of trunks of trees cemented with mortar, and the furnituro consists of a very few articles. The roads, exeept that neross the Canensis to Tiflis, which has been improved lyy the liussians, are in a wretehed state. The velicles in use ure of the rulest kind, mul all commodities, execpt straw or timber, are transported upon homes, mules, asses, or camels. 'Itue inhab, never ride, except on horseback. Conrse woollen, cotton, anm silk fibics, leather, shagreen, and a few other articles, are mannfactured; the arms male at 'Jillis have some reputation; but most of the other goods are very inlerior, and only enter into home consumption.
( j eorgin composes one of the five Trans-Cancasian goverumeuts of hissin. Their government is wholly military; and how little soever it may squnre with our notions of what a government should be, it is not ill-tited for the circumstances of the country; and there connot be a question that its establishment has been most advantageons to the population.

The Georrian lndies have usually oval faces, fair complexions, and black hair; and thongh not generally reckoned handsome by Europeans, they have long enjoyed the highest repitation for beanty in the East: the men are also, on the whole, well formed nul handsome. This superiority in the physical form of the Georgians, and other contirumis Cancasian tribes, and the low state of civilisation that has always prevailed anongst them, explains the apmrently manccomntable fact, that these countries have been, from the remotest antiquity down to our times, the seat of an extensive slave-trade. Latterly the harems of rich Massidmans of lurkey and lersia have been wholly or primeipally sipplied by femnle slaves bronght from Georgia, Circassin, and the adjoining provinees; and they also furmished male slaves to supply the Mameluke corps of Egypt and varions other hodies with reernits. In modern times the dicorgians have been divided, with the exception of n few free commoners, into the two grent classes of the nobles and their vasals or slaves. I'revionsly to the Rassian eonquest, the latter were the absolnte property of their loris, who, besides employing them in all mamer of manual and laborious occupations, de-
rived $n$ eonsliderable part of their revenue from the sale of their soms and damghters. Indeed, the dangliters of the mobles not mifrequently shared the same fate, being sacribled to the necessities or ambition of their manaturnl parents. ('lomonefort. ii. 3013: Missionary liesenrehes. p. 151.)

The Ressiums have put nu end to this tratlic; and they lave also deprived the mobles of the power capitally to punish their vassals, and set limits to their demands upon them for labour and other services. There camot therefore be, and there is not, a dombt with any individual acquainted with the ciremustances, that the Russian conquest has been of sigmal advantage to the bulk of the (ieoryian people. We believe, however, that the liussims are quite as mueh disliked by the wobles of lieorgia as by those of Cireassia; and those travellers who live with them, and credit their stories, will be amply suppled with tales of Russian barbarity and atrocity.

With a settled state of uffairs, Tiflis mirht again become, as itl tho days of Justimian, $n$ thormighfare for the overlamal commerce between Asia and Enrope. The Georgians belong to the (ireek church, and since becoming subjeet to linsuin, have been subordinate in ecelesiastical matters to a linssian archlishop at Titlis, who has three suflimgans $S$. of the C'musasis. The clergy are generally very ignorant. A high school in the eap. has beeni recently erected into a gymmasime and, in addition to it, there are a few small schools, in whieh, however. very little is taught. No serf is, or at least used to be, intstructed in reading, but all the mobility are more or less educated: the females of this class temeh cach other, and are commonly better informed than the males. The fieorgian language is peculiar, differiug widely from the langunges spoken by the surrounding nations.
Georgia was annexed to the lioman empire by fompey the Great, anno 65 n. c, During the lith mud 7 th centuries it was long a theatre of eontest hetween the E. empire and the lersimis. In the 8th century a prince of the Jewish family of the IBagratisles established the last (ieorgian munarchy, which continned in his line down to the commeneement of the present century. The last prince, George XI., before his leath in 179!, placed Georgia muler the proteetion of linssia; and, in 1802, it was incorporated with the Russian enpire. (Tuurnefort; Klaprotli Wilbrahan; Letters from the ('ancasus; Smith and Dwight; Missionary Researehes.)

GEORGIA, she of the U. States of N. America, mus, with the exception of Florila, the most $s$. territory in the Union; between lat. $30^{\circ} 22^{\prime}$ and $35^{\circ}$ N., and lomg. $81^{\circ}$ and $85^{\circ} 30^{\prime} \mathrm{W} . ;$ having N. Tennessee and a small portion of N. Carolina: NE. and E. S. Carolina and the Athantic; S. Florida; and W. Alabama. Iength N. to S., $300 \mathrm{m}$. : brealth variable. Area $58,000 \mathrm{sq} . \mathrm{m}$. 1'op. $1,0: 7.286$ in 1860, of which mumber there were 591,550 whites, 3,500 frec-coloured people, 38 Indians. and 462,198 slaves. Along the const of Georgia lies a range of low, that, sandy islands. The mainland for about 50 m . towards the interior is perfectly level; and, for several miles from the shore, eonsists of a salt mar il of recent alluvion ; the whole of the flat country is intersected by swamps, which are estimnted to constitute 1-10th part of the whole state. Beyond the swamps which line the coast accurs an extensive range of pine barrens, similar to those of S. Carolinu, The Okefinoke swamp, 50 m . long by 30 brond, lies at some distance inland, unon the borders of, and partly within, liorida. This swamp is regularly imulated during the rainy season. At the
extremity of the low comntry there is a barren sumbly tract of rather greater clevation, which extrinds N. as fiar an the river falls, mad is gemerally regariled - I dividimg the upper from the lower comitry. rarther $N$. the surlace bevomes gradmally more hilly and lomen, and the N. extremity of the state comprives some of the most
 which here vise to about $1, \sigma$ oh for above the level of the Athontic. There are only three hatbous on the const emable of receiving vessels excealing lill tons burden, vi\% those firmed by the monthes of the rivers Savnumat, Atulamalai, anot St. Mary's. The first of these is mutigatile ly large ships as far as the city of Savamali, 17 mi . from its month. Three of the principal rivens form the Iommdaries between Georgia mad the adjuining states. The Sinvamah rises in the s. declivity of the Appalachian momitains, amb ruming along the NE. border of the state, separates it from S . Carolina. The Chattalowelne has its source near that of the savamala, rums chiedy S., and forms for a considerable distance the bommlary between Georgin nad Nahama, At the SW. angle of the state it mites with the Flint, and, on its entrance into Florida, is called the Appalachicola. On the S. the Sit. Mary", with a tortuons course of 110 m ., forms the boundary of the state for abont 80 m . The Atalamaha, formed by the jumetion of several streams which traverse the centre of the state, falls into the Atlantic, after a course of about 280 m.
Soil, for the most part, very productive. In the low comutry and the ishands, it consists of a light grey sand, grablually becoming darker and more gravelly towards the interior, Farther N. it is a black linam mixel with roll earth, called the mulat to soil; this is sneceorled in the more remote districts by a rich black mould of grent fertility. As the clevation of the N. part of the state is estimated at from 1,200 to $1,500 \mathrm{ft}$. above the level of the islands on the coast, a diffireme of more than 7 degrees is estimated to exist between the mean temp. of the two axtreme points. The N. purts are very hoalthy, the winters mild; frost nod snow freguently oecur, but are not severe or of long enottimamee. In the low comntry the usual tropical disenses are prevalent. Hurrieanes and thmoler storms frequently acear in the antumn, at whids season the enltivators with their limilies gencrally remove either to the ishands, or the most N. districts of the state. In the low region the themometer usially ranges duriug the simmer from itio to $90^{\circ}$ (Fahr.) ; bit it has been known to stand as high as 11020 (Falir.).
Principal agricoltural prodnets, cotton, wheat, and other luromenn grains, raize, tolmeen, the sugar-cane, indizo, and rice. The const islands were formerly covered with extensive pine barrens: but they now yield large quantities of sea-island cottom, which is not ouly farsuperior to that grown on the mainlam, but is, in fact, superior to, and fetches a higher price than, any other description of cotton to lie found in the market. (Sre Canothina, S.) Wheat and other corn are grown chielly in the central parts along the bottoms of the rivers, and on the slopes of the hills nearly to their summits. The proportion of prowhetive land is nueh greater in the hilly conntry than in the plains. The tops of the lifls are mostly crowned with forests, composed chietly of the pine, palmetto, onk, ash, eypress, hickory, black walnut, mulleerry, ami cedar trees. liears inwl deer inliabit the forests; alligators infest the swamps and mouths of the rivers; loney bees are very mmerous in the S.
Gold has been found in considerable quantities
gere is a barren levation, which ls, nuil is grale. יIpere from the surline beromes and the N. exme of the must nomutain elanin, nlowe the level - thiree harhours vessels exceedformed by the Atahmmahi, and is mavigahle ly Aavanuilh, 17 m. primeipal rivers jeorgia and the rises in the s. monntailts, and the state, seliae Chattahoorlice Savamaili, runs iderable distance - and Nabama, mites with the liorida, is ralled the St. Murys, 0 ml , forms the int 80 m. in the $N$. part of the state; iron and copper exist in dilferent parts; and there are several valuable mineral springs ; grood millstone is met with in the econtral districts.

Coton is the great staple; and it and tobaeco, indign, eanes, timher, deer skins, and maize form we chicf exports; the sugur-cune hits hitherto been cultivated inostly for home consmupt lon only. lirom the dintame between the N. part of Georgia and its ports, and the ditlicolty of commonication by water, the eorn and other prodnce of the interior hive a very limited outlet.
The imports consist. chiefly of manulactured gouls, li.. India prodnce, wines from the S. of Europe; butter, cheese, and tish from the N. states, The value of the real estute and persomal jromerty, ineloting slaves, was $133^{5}, 425,71 \cdot 1$ dollars it 1830, and 645, 895,283 dollurs in 1860, being all increase of 92 per cent. within the tell yoars. Subsenently, however, there mist have been an cipally large decrease, an immense destruction of properiy laving taken place in the civil war |xtib-bio. The state is divided into 7t comnties: Milledgeville, near the centre, is the cab.: Savamah, Augosta, Washington, and St. Mary's are the other chief towns.

The University of Georgia, called Franklin's College, at Athens, was fombled in I788-8!). It was intended to embrace the whole system of public colucation in the state, ineluding the extablishment of an academy in ench cononty; but this project has never been accomplished. It was reorganised in 1802, and possesses two editices, a philosophical and chemical apparatus, a cabinct of minerals, a good library, and a botanic garden. There is a medical college at Augusta. The state has a school find, and there are mmerous and thourishing acalemies in Savamath, Augusta, and the other chici towns. Several manoal-labour shools have been successfully established in different parts. A canal 16 m . in length, from siavamuah to the Ogeechee river, was completed in 1 k 24 ; another, 12 m . in length, between Brunswick mul the Atalamaha, is in active progress. The legislature consists of a senate of aid members, and a house of representatives of 207 members, chosen by all the citizens and inhab. of the state of fill age who have resided in it' for the year preceding the election, and paid taxes. The governor is elected by the people, and holds othice for two years; the senators and representatives are chosen ammally. For the armmintration of justice the state is divided into ten cirenits, each of which has a superior conrt, and a judge clected by the legislature. There is an interior court in each county, presided over by tive justices, chosen ly the people every four years; the justices have no salary. There are courts of oyer and terminer at Sivamuala and at. Aurusta.

Georgia was the last settled of the present U.S. foumed by the British. It was tirst colonised by them in 1733 , in which year the city of Savamah was cummenced by deneral Oglethorpe. it suffered much during the early period of its settlement from the incursions of the savages, and it was not until 1835 that the Cherokees, the last rommant of the lndian pop, had entirely disappeared. In 1776, it united in the struggle for indrpendence, but continned in the ocenpation of the l3ritish until 1783. Georgia joined the insurrection grainst the govermment of the United Siates oll the 19th of Jamary, 1861, when an Aet of Secession was passed by a convention called for the purpose. Ilaving been overmu ly the armies of the North, the state was compelled to join the Juion ugain in 1865.

GiEliA, a town of Central Germany, principality
of Renss (younger braneh), eap. of the loriship of the same name, on the Vister, 22 m . NV. Sohleit\%, und it m. SW. hy S. Leiprin, with which it is comnected by ruilwuy. l'op, $13,9 \mathrm{x} 2$ in $1 \times 1 \mathrm{I}_{1}$. The town is well built, is surrombled with walls, and has several suburbs. It possesses six public aguares, a fine town-linll, two churehes, two hospitals, au orplan asylum, a honse of correction, a richly-endowed grmasiam, with a library and eabinet of natural objects, a teachers' seminary, some good citizens' schools, evening and Sumblay sehools, de. It has been long noted for its commereial netivity; and has manufactures of woollen mul cotton fabrics, hats, leather, tobaceo, sonp, oilcloth, porcelain, and other carthenware, cuaches, and other velicles: and many eotton-printing and lycing establislments, breweries, and brick-kilus. lis its immediate neighoorhood there are some greatly frer,uented baths. In $17 \times 0$ (iera was ahmost whully destroyed by tire; but it las since been laid ont and rebuilt in a much better mamer than previously.

GBRALCL; (an. Lacri), an inland town of Sonthern Italy, prov. Regrion, eap. distr. and cant.; on a hull within 4 m . of the Ionian Nea, l6id m . SSW. Cutanzaro, and 29 m . NNE, Cape Sjartivento, Pop, 1,130 in 18611 . Though rebuilt since the enrthquake of 178:3, its streets are marrow, mean, and filthy. It lats the remains of a castle, a cathedral, nine par. churches, a hospital, and a fomudling asylum: its public editices were greatly injured hy the earthquake alluded to. The ruins of its castle, demolished at an anterior periond, show it to lave been a fortress of great size and strengtl. It is snid to lave been built by the saracens, and to have been capacions enough to contain a garrison of 18,000 men. The cathedral was formerly a handsome Gothie editice, but it is now so dilapidated that only a portion of its erypt remains nvailahle for publie worship. Its ruins contain many tine marble columns, which originally belonged to the ancient eity. (ierace is yenerally suppused to stand cither upon or near the site of Locri Epizephyrii, so called from its fombders lecing Locrians, and its situation aljaeent to Cape Zephyrinm. This was one of the oldest, largest, and imost prosperous of the Greek cities in S. Italy or Mequa Graccia. It was mainly indebted for its prosperity and fame to its great legishator Zelencus, one of the most illustrious of the Grecian political philosophers. Some ruins still remain to attest its former grandeur, among which are those of an aqueduct, of a celcbrated Greek temple of l'roserpine (sacked by Pyrrlus), and of a temple of Castor and lollux.

Locri never recovered from the injuries inflicted on her by l'yrrhus. In the second limic war she sided with the Carthaginians; and having been conqueral by the Romans she continued progressively to deeline. The present town is supposed to have been founded in the 8 th or 9 th century.
(iERMAIN-EN-LAYE (ST.), a town of France, dep. Seine-et-Oise, cap. cant.; on a hill aljoining the Seine, 6 m . N. Versailles, and 9 m . W. by N. I'aris, on the railway from P'aris to Ronen. I'op. 17,708 in 1861. Though laid out without any fixed rule, it is well built, and its streets are wide and well paved. It has several large hotels, a public library with 3,200 vols., a theatre, a new corn-market; with manufactures of horse-hair goosls and leather; and an active retail trade. It is, however, ehielly noted for its royal residence, origimally built by Charles V. in 1370; reconstructed by Francis I. ; and embellished by many succeeding sovereigns, especially Louis XIV., who added to it tive extensive pavilions,
and constructed the fine terree which extends from it with a breadth of nearly 96 ft . for a distance of $1 \frac{1}{\mathrm{~d}} \mathrm{~m}$. between the forest of $\mathrm{St}_{\mathrm{t}}$. (jermain and the Seine. That sovereign expende! in all upon St. Gerninin's the sum of $6,455,061$ livres; luit it is sail that he afterwards becnme disgusted with, and abandoned, the palace, because he could see St. Denis, the burial-place of the kings of France, from its windows. Charles IX. and Henri II., as well as Louls XIV., were born in this palace ; it was the residence of Madame de la Vnlleère; and James II. of England, with mont of his family, passed their exile, and died in it. It is now used as barracks and a military prison. Henri IV. constructed a palace, call the Chateruu Nerf; about $\ddagger \mathrm{m}$. distant from the alove: of this there now exist only the ruins, A castle, built here in the llth century by King Robert, was destroyed by the English in 1346.
The Forest of St. Germain, one of the finest of its kind in France, extends N. of the town, enclosed W., N., and E. by the Seine. It is 9 m . in length by 3 m . in breadth; covers an extent of 8,865 English acres; and is traversed by roads, the nggregate length of which is not less than $1,180 \mathrm{~m}$.

GERMAN'S (ST.), a bor., market town, and par. of England, co. Cornwall, huuld. East, on the Tidi, near Lynher creek, 19 m . ESE. Bodimin, and 196 W . by S. London. Area of par., 10,050 neres (being the largest par. in Cornwall). Pop. of par. 2,842 in 1861. The town is built on a slope, and consists chiefly of one street. The par. elhurel, formerly conventual, and now containing an episcopal choir and prebendal stalls, is a tine old specimen of Saxon architecture, consisting of two aisles and a nave: the W. front has two towers, between which is an ancient arched doorway, the entrance to the church. The living is in the gift of the dean and canons of Windsor. A free grammar achool and a parochial library have been founded and entowed by the Eliot family, whose seat, Port Eliot, near the chureh, occupies the site of the ancient priory, and is surrounded by delightful grounds watered by the Tidi. The inhab. ehiefly gain their livelihood by fishing and agriculture. Previously to the Reform Act, by which it was disfrnuclised, this bor. sent two mems. to the II. of C.; the right of election was vested in the proprietors of burgage tenements; but of these there were very few, so that the inems. were, in fuct, nominated hy Lord St. Germans. Narkets on Friday : fairs, Niay 28th and August 1st, for cattle.

GERMANY (Germ. Deutschland or Teutsehland; Fr. Allemagne; It. Germania, Slavonia). The word Germany is as uncertain in its derivation, as it is often vague and indefinite in Its application. The Germans call themselves Deutsche, or Tentsche, and their country Deutschland. The first syllable of this name is derived by those who use this orthography from the verb deuten, siguifying to interpret or explain; so that Deutsche means the people who were intelligible to one another, in contradistinction to the Walsche (Welsh), or Celtic nations, whose language they did not understand. Those who write Teutsehlaud derive the name of the country from the God Tuisco or Teut, mentioned by Tacitus. The Latin denomination of the country, which Eng-lish-speaking people have adopted, is supposed to be derived from the Roman manner of pronouncing the word Wehrmann, which signifies soldier-the character in which the Germans were mostly known to the Romans.
The extent of country comprised under the term Germany has varied in every century since it first
became known to the Romans. At present Giermany comprises the chief countries of Central Europe, and is bouncled N. by Denmark and the Baltic ; E. by I'russinu P'olnud, Galicia, and IIungary; S. by the 'Tyrol aud Switzerland; and W. by France, lelgium, Holland, and the German Ocean.
Physical Aspect,-The surface of Germany is much diversilled; its mountain tracts lio chictly in the SE. and E., while W. and N. the lanid sprends in spacions sandy plains, intersected by the rivers which run in the sume directon froin the higher lands towards the sea. Tho mountrius, which may be consldered as a N. brauch of the grent Alpine system of Europe, bear no comparison with the Alps in point of height, for the loftiest summits are only $5,000 \mathrm{ft}$ high; but they occuly a great spuce, and diverge in so many various directions through the country that it is dillicult to trace them without the nid of a map. The Fichetelgebirge, however, in the N. part of Bavaria, may be considered as the centre and nuelens of the mountainsin Central (iermany ; and from it branch, in four lirections, the ranges composing tho watershed that divides the rivers of the Black Sea from those of the l3altic and German Ocean. 1. The Erz-gelirge, diverging NE., forms the boudary between Saxony and Bohemia, and has its scarpell side S. towards the Eger. Its E. continuations, ealled tho Sudeten-gebirge, join the Carpathinn ridge nenr the sources of the Oder and Vistula. 2. The Bohemian Forest range separates Boliemia from Bavaria. It runs SE. about 150 m ., nud then turning NE. joins the Sudeten-gebirge, uear the sources of the March, in long. $16^{\circ} 40^{\prime} \mathrm{E}$. These ranges, by their reunion, enclose an elevated plain, constituting the kinglom of Bohemin, asal drained by the Elbe and its branches, the Eger and Moldau. 3. The Suabian Alps are a low range, branching off SW. from the central point, aul furming the watershed between the affluents of the Rhine and those of the Danube. S. they join the Black Forest range, the connection of which with the Alps is effected by a low ehain skirting the Lake of Constance, and joining the main rilge at Mount Septimer. 4. The Thuringian range runs NW. from the Fichtel-gebirge, and after a course of 00 m. divides into two clains, one running N.into Hanover, and forming the Hartz clinin which divides the waters of the Weser from those of the Elbe; the other running W. under various names, nearly as far us the Rhine, and separating its waters from those of the Weser and its attluents. The hills W. of the Rhine are continuations of the Vosges system. (See Finance.)
The rivers of Germany are numerous and important. The largest of these is the Danube ( $1,800 \mathrm{~m}$. long), which rises in the Black Forest, and is navignble from Pesth to its mouth in the Black Sea. The chief tributaries of the Upper Danube are the Altmuhl, the Naab, and the Mareh on its N. bank, rising on the S. slopes of the German mountaius; and the Iller, the Lach, the Isar, and the Iun on its S. bank, all rising in the Tyrolese Alps. The Khine, which rises on Mont St. Gothard, flows through the Lake of Constance, and thence W. to Bâsle : navigable from this place, it turns N., in which general direction it runs as far as Bingen, whence it pursues a course NNE. iuto the German Ocean. Its chief afluents, with the exception of the Moselle and the Maas, are on the E. bauk: of these the Neckar and the Main rise in the Suabian Alps; the Lahn, the Ruhr, and the Lippe in the hills of W. Germany. The Weser is formed hy the junction, at Munden, of the Werra and Hulda, which rise in the Rhön-gebirge; its course is N. by W. till the junction of the Allar, at which
 es of Central mark and the cia, and IIumund ; and W. the German

point it tums NE., and falls in the Cerman Ocean about 40 m . below Bremen. The libe rises on the N . nide of the platenu of Bohemia, which, after receiving the Moldau and the Eger, it lenvea at Seliandsu, and entern the great NW. plain of (iermany, which it traversea to the (ierman Ocean: its largest afluentn from the S . are the Muida and Sanle from the lirzgelirge, and its chief N. tributary ts the liavel. The Oder rises on the N. side of the Carpathian range, near its W. termination, and after a general NNW. course, and receiving many afluenta, falls through the Great Laffe into the Baltic Sea. Ihesides these rivern, which of themselven constitute a most oxtensive watersystem, there are numerous lakes connected with the rivers: such are the lakes of S. Bavaria and Austria, and the many sheets of water lying on the low plain of N. Germany, between the Oder and the Elibe
Climate,-The climate of Germany is far lean variable than the nature of its momintain system, and the range of latitudes in which it lies, wonld lead us to suppose. If the small strip of Illyria whlch borders on the Adriatio Sea, near Trieste, be excepted, scarcely any diminution of warmth is observaibe between the southern and northern parts. There are only two degrees difference between the mean temperature of Vienna and that of Hamburg. Tho vegetation of Germany resembles, in its general charneter, that of the $\mathbf{N}$. of Fruice. In the S. river valleys the vine flourishen, and wilnuts, chestnuts, and plums grow abundantly; but the severity of the winter injures the growth of garden shribs and flowering plants. Only hollies and some of the hardier species of junipers thrive, as even the rivers in the warmest parts freeze, and the Khine, near Maunheim, as well as the Danube, near Vienna, are usually covered with a coat of ice, notwithstanding their great breadth and the rapidity of their currents. The extreme cold of the winter, although it only lasts in all its violence, in common wintera, for a few days, is rendered often very destructive from the continuance of a less, but still considerable cold, which often lasts uninterruptedly for months. The thermometer usually falls once or twice in the course of the winter as low as - $5^{\circ}$ Falir., but seldom continues at that figure during twentyfour hours succeasively. A few degrees below the freezing point is the temperature which frequently lasts for months together in the winter season.
The fall of rain is stated by Berghaus to be, in the four principal regions of Germany, as follows:In the region of the Rhine . . 25 in . $2^{1 \prime \prime}$ Paris meas.

The quantity of rain which falls in summer is more than double the fall of the winter, throughout Germany. The number of rainy days averages 150 , that of thunder-storms averages 19 for all Germany; but the latter are very unequally divided. The greatest number of thunder-storms is said to take place in Silesia, where the average amounts to 28 in the year. The smallest number is found in Lower Austria, where their annual number does not exceed 8. The prevailing winds are the W. and NW.
Geographicaland Political Divisions.-The first Carlovingian sovereigns of Germany were hereditary monarchs ; but, so early as 887, the states, or great vassals of the crown, deposed their emperor, Charles le Gros, and elected another sovereign in his stead. And from that remote period the emperors of Germany continued to be elected, down to the beginning of the present century. Several of the great vassals of the empire had thus early
attained to all but unlimited power; and it eonnisted of a vast aggregntion of ataten of every different grade, from large princlpalitien down to free citien and the entaten of earis or coments. The federal tie by which these different ataten were helid together was exceedingly feeble. Their intereats and pretensions were often contlicting and contradictory, and they were frequentiy nt war with each other and with the emperor. There wan, in comsequence, a great wunt of security; and the wish to reuress the numberlens dinonders incident tu smeh a state of thlags led, at an early perion, to the formation of leagnes among the amuller staten, and the institution of secret tribumals. The privilege of votimy in the election of emperor was restrictel to a few of the most powerful vansaly, being confined, by the Golien lsull issuel by Charien IV., in 1368, to the arebbishopis of Mayence, Treves, and Cologne, the duke of Saxony, the count palatine of the llinine, the margrave of Brandenburg, and the king of Bohemia. The sovereigus of lavarin, Hanover, and Ifense did not aequire a right to vote till a much later period. Most of the great offices in the empiro wore hereclitary ; and the nuhlic allairs were transacted in diets or nssembl. ... the great fendatories and of the representatives of the free citien. But an the diet had 10 independent or peculiar force to carry Its decisions intu eflect, they were very frequently disregarded. At length, in the reign of Maximilian I., an attempt was made to introdice a more regular system of administration and better police into the empire.
As the politienl divisiou of Germany at this period was independent of the territorial subulivisions which the changes in families produced, it lasted as long as the empire itself preserved it unity as a political booly; and even after the assumption of indelendence by the king of l'russia, that part of the kingdom of Prussia which prevlously formed a part of the empire was still includedi, nominally at least, in the circles to which it belonged. By their refusal to join in this arrangement of internal police, and to become nmenable to the decrees of the Aulic Chamber (Reichas Kammergericht), the Swiss cantons tinally severel the last tio which united them to the empire. The influence of the kings of Poland cnused a similar separation between the empire and the lands belonging to the Teutonic order, on the right bank of the Vistula.
At the periox of the outbreak of the French revolution, in 1789, the ten cireles of Germany were subdivided into the following territories :-
I. The circle of Austria, belonging entirely to the house of Austria, contained,-

1. The duchy of Lower Austria.
2. Inner Atistria, or the duclites of Styria, Ca rinthla, and Carniola, with Friaul and tho district of Trieste.
3. Upper Austria, or the county of Tyrol, with the blshoprics of Trent and Brixen.
4. Fore-Austria, containing the Austrinn Brelsgan, the margraviate of Burgan, the landgraviate of Nottenburg, the elty of Constance the manors of Aitort and Ravensburg, the towns of Riellingen, Mengen, and the lordships of Vorarlberg.
II. The cirele of Burgundy, belonging to Austria :-
5. The duchies of Brabant, Limburg, Luxemburg, and G theldres.
6. The Countles of Flanders, Halnault, and Namür.
III. The circle of Westphalia, divided between clerical and lay princes :-
7. The blshoprics of Munster, Paderborn, Llègo and Osnabruck.
8. The abbeya of Corvey, Ntablo, and Matmoily, Werlen, Rt. Cornuliw-allunter, Himell, Thorn, amill Iterfonl.
9. That inchites of Cleven (l'runalan), Jullormanil lierg (to the clectur palatine), Oldenbe rg (to the hishep of l, theeek).
10. The primeipulitim of Mluten (Prumala), Werdinn (elector of linnover), Namant (eonitiem of Dlez, Biagen, Hillenhurg, and Jimponar, iniomphige to the atimitholifer of (loilami),

11. The cuintlen of Mark, Ilavenalkerg, T'woklenhworg, ant Lingen (i'ruwian); schaumhury (Itewno-Clunet nill Lpppe) I Henthelm, Ktolinfurt, Hoya, and Dhephola (lianover and Conawel): Llewberg (1rlineo Kanita); l'yrmont
 splegellarg, (I ronmfuld, Iteok heim, Holanjfel, Biankenhoim and (ierohimalnin, Korjen, lembmerwinm, Sehlehten, Hatherminnt.
12. The lonimhljew of Auhnit, Witten, Winneberg and Iletisteln, Cuhmen, Cimborn and Netiatalt, Wheksimi, Mylenirek, Jetehenatelin.
13. The freu janperlit eltles Cologne, Alx-la-Cliajelle, anil Dortmini.
IV. The clrele of the Palatinate, divheal between une lay nul three charical jrluses:-
I. The viectornte of Mnyence, the arehiminhop of whileh ranked an the firat vector and prio ninte of the (lerminn emplire. The electorate conimetel of the archblabioprie of Mayence, the eity of Erfurt, tho ilintriet of Eleliafeld, nmid of the town asid distrlet of Fritaine.
14. The electorate nul arehbindupric of Treven.
15. The archbinhoprie of Cologine and the haehy of Wertphalla, which eonstituted the electorate of Cologne.
16. The palatinato of the Lower Jhine
17. 'the primetimalities of A reminerg.
B. The ballwlek of Cohtenz (Teutonic order).
18. The lurimlip of lediateln,
19. The burgravinte of Jeineck.
20. The county of Lower Imenburg.
V. The eircle of the Upper Rlaine, divided amongst a number of territorinl luris, the most 10 werful of whom was the landgrave of Hesme-Cassel :-
21. The Uishopitios of Worms, Spires, Strasburg, lunde, and Fulda.
22. The nibiey of Welssenburg.
23. The prinelpuity of Heltursheim.
24. The abbeyn of Prum nal Odenhelm.
B. The principulitles of Bimmern, Lantern, Veldenz, amil Douxponts.
25. Lnmigraviate of Hesse, in two lines, Cassel anil Darmatadt.
26. The princlpallty of Hersfell (Hesse-Caseel).
27. The county of Sponhelm (l'alatinute nad Bislenlimen), Snluanil Naskau; Walieck. JananMihazenberg, Solma, Künigsteln (elector of Mainz and Count Stolberg); Upier Isenburg; the possessions of the count of the Rhine and the Wilgrave, viz. the county of salm, the lorisilip of Grumbaeli, \&c.; the countles of Leiningen, Witgenwtein, Falkenstein (belonging to tho espperor, $H$ leipoltskirchen, Krlechingen, Wartenberg.
28. The loriships of Mnnan-Lichtenberg, Bretzenheim, Daehatnhl, and Ollbrtek.
29. The frce inperinl cities Worms, Spires, Frank-fort-on-the-Main, Friedberg, and Wetziar.
VI. The Suabian circle. Amongst the many princes of this cirele, the duke of Wirtemberg and the margrave of Baden were the most powerful :-
30. The bishops of Constance and Augsburg.
31. The abbeys of Ellwanger, Kompten, Lindau, and Buchnu.
32. The duchy of Wirtemberg
33. The margravlate of Baiden
34. The principalities of Hohenzollern (Hechingell and Slgmaringen).
35. The county of Thengen, the countles of Helligenstadt and Baar (prince of Flarstenberg), lurdships of the princes and counts of Otting,
the laniggraviate of Kletgan (Prince Sehwar. zenberg), mid the prinelpmitity of Lichion. ntelil.
36. The dimaine of 17 abluota and 4 ablewnea
A. The lominhige of is coninta alli liaroni.
37. Thirty-olle freo imperial eitien, via. Angaburg, Ulm, Kinullugen, Hellellagent, Nimilim. geth, Scliwilbimeh Inal, Ueberilngem, Itorth.

 Kemptell, Kanflimiten, Wedt, Wankell, ixhy Lentkimeh, Wimpfen: (Ilengen, Ifulhumerf Buchhorn, Aaien, liopithgen, liwehan, Ohfen: burk, Gengeubach, will Zoilum Jlatmert. lnaeh.
VII. Tho circle of Innarin, in which the elector of lisvarin and the binhope of Salahurg took the lenil:-
38. The arclibinhop of Ralzburg.
39. Thu bishoprien of Freislug, Ratisbon, and Mlluleh.
40. The abtery of IIrehtiapiulen, and
41. Meder anil Oher-Milinmter.
B. The thehy of Juvaria, with the Upper Pulat. nato.
42. Thu prinelpmilty of Neulerg and Sulahuch.
43. Tha lindgraviaten of Lanelitenlerg and sturn. ntein.
A. The countien of Jlang and Ortenburg.
44. The lordshiljos of Elirenifuln, Enlaburg, Pymbanm, llohenwaldeek, and Ireiteneek.
45. The frie iupperial eity of Matisbon (lhegens. burg).
VIII. 'The circle of Franconin Inchudeal:-
46. The bishopriea of Hamberg, Wuraburg, and Elelistait.
47. The master of the Teutonic orler'a territories at Morgenthelm (Dentselineister).
48. The prinelpalitles of Malreuth and Ansparh,
49. The countien of Heaniberg mid Schwarzullerg.
50. The princlpality of Inhentohe.
51. The countles of Castell, Wertheim, Mienerk, and Erbueh.
52. The lorimhips Simhurg, Selnaheim, Relchulsberg, Whewentheh1, Welahelin, amillousth.
53. Tho froo eities Nuremberg, lothemburs.en the-Tauber, Whdsheim, schweinfurt, and Weissenburg.
1X. The eirele of Lower Snxony :-
54. Duchy of Magieburg (Prusala).
55. Duchy of IIremen, princlpalitien of Lilnehurg. Grubenhagen, and Kalenberg (elector of Hanover.
56. Duchy of Wolfenblittel, prinelpnilty of Blankenburg.
57. Prineipality of Jinlberstalt (Prussia)
58. Dueliy of Mecklenburg-Seliwerin and Strelitz.
59. Dueliy of Holsteln, with the comnty of Itamzan, and the lordship of l'innoberg (kiag of Denmirk).
60. The blahopric of Hilileshejm.
61. The dnchy of Snxe-Lanenburg (Brunswiek).
62. The blishoprle of Llibeck.
63. The principality of Schwerin (duke of Meck. lenburk-sehwerin)
64. The princlpallty of liatzeburg (duke of Meck-lenburg-Strelitz).
65. The free imperini elticen Lubeek, liamburg, Bremen, Goslar, Muhlhausen, Nordhnusen.

## X. The circle of Upper Snxony :-

1. Tbe duchy of lomernnin (of which that part beyond the lrenno belonged to Sweden, the remainder to l'rusein).
2. The mark of Brandenburg (belonging to the king of Prusala).
8, The principality of Anhalt, dividel among four princes:-Dessau, Bernburg, Zerbst, and Kibthen.
3. The electorato of Saxony (Saxon Albertine IIne).
4. Principalities of Welmar, Eisenbach, CoburgGothn, Altenburg (dukes of Saxony, of the Ernestino lino).
5. The abbey of Quedinburg.
6. The county of Schwarzburg (Sondershnusen and Rudoldstait), Mannsteh (Prussia and Hesse), Stolberg aud Wernigerode.

Such were the territorind livisions of the Gepmun empire at the periond of the outlireak of the Prourh revolutlon, meoorling to Ilerghans, from whim the following atatementa are likewine taken:-

Eviry circle had its diet, in which the elerical anil mecular prinees, the prelates, the conints and larom, and the free imperial citien, formed flve benches ur collegren.

Alfirs of gelacral importance to the empire at laree were treated by the inpuerlal diet, which the emperor had the power of mimmoning wherever lin pileased; but which, since libis, has lieen constantly nasemblicel at liatishun. In 1789, the members of the died were as follows:-

1. The college of electors: Mayonce, Trives, Cologne, the l'alntinate, Bramidenlurg, Snxony, Buvaria (sinco 1023), and Brunawlek Llinelkerg (Nnee 13in2).
2. The college of the clerlent and secular prinera, blinop, margraves, counth, see ; the numbers of the elerienl members belag int, and of the recnlar lorda, nis, 3. The colleges of tho free Imperinal citles, then of in nimber.

In 1701 began the memoralile contest with revalutionary Frunee, whieh ended in the overturn of the oll Germanic comstitution. The treaty of Cimpo Formio, the first that history records in which the lthine was neknowledged as the frontier of France, decreed an indemnillention to those pineen who lost by the cession ; and this indemnifieation could only be obtnined by the moliation of some others whose rights were equally indefeasible, in the heart of the empire itself; On the 2.th of Jnnuary, 1803, a alecinion was come to by the plenipotentiaries assembled for the arrangement of this matter, the import of which was as follows:-
The IIoly Romnn Empire, ns that of Germany was styled, remained as it was divided into circles, lut which, with the total loss of the circle of llurguady, and of the lamis on the left bank of the Whine, were reduced to nine, whose boundarien it was proposed to regulate anew. This regulation was, however, prevented by the wars which so quickly snceeeded ench other. The right to sit and vote in the diet remained, as formerly, nttached to territories lield directly as fiefs of the cmpire; and the place of the convocation of the diet remained at Ratisbon. The collegres remained also three in number; the first being the College of lilectors, who were ten in number; one eleri-(al,-the elector archelancellor; and nine secu-las,-Dohenia, llavaria, Saxony, Mrandenhurg, Drunswick - Linclurg, Salzburg, W'irtenberg,

Itmen, and Ilemac-Cansel. The elcetorate of Mayemee hinil marged into that of the arehohanceilor, and the I'alintinate lito the clectorate of thavarin; T'riven and Collong tue had ilinappeared, and four new alectorntem hal lee li erenterl.
I'he second Colloge-af P'rincen-countel 1at votum.
'I'lug College of Towna was compmed of nix with vokey 1 linmburg, lilleck, IBremon, Frankfort-oill-the-Maine, Augalurg, anil Nuremberg. Tho other trrritorien, enumernted above an not lxicigg inelinled withla the cirelen, rumainest $n$ e they were, bur did nuy change take place in the extent or prosition of this Sila rimie conntries.

Napolewit whin, wince 1719, haif ilirectent the forelgul griliey of the Fromeh, not matintiend with this reduction of the juwer of tho empire, now

 lowed the bittle of Austerlitz, guve hlin the meanes of crurrying this pryject into elliet, by forming a eonferlerntion of (ineriman prineow, conlfed the Conferleratinat of the Rhine, who, huiting intor a por-
 protectornte of the empefor of the French, The wars which followed, witli I'russin in $1 \times 0$, and with Austria lin INitM, gave Nupoleon the power of alteriag thaterriturinl diest ribulion of (iermany at plensiare. Ha mecordingly cromed for his luother derome the new klughlons of Wiontphalia, and for lim lirother-in-law Juachiut Mirnt, the grand diselyy of llerg, and rained those members of the Comfederation of the litine who nupported his canne to new dlgnities null un openly rocognined indeponience an soverelpus. Diuler theno circumstmucen, the enıperor, Frincis II., by a wolemunat, renonncel the style mal title of limperor of Germany, on Aug, $\mathrm{B}, 1809$, In the following yeur, Nopoleon Ineorporated the conats of the German Ocean with the French empire, and divided them into departments; thins separnting from liermany a district peopled by more thian $1,100,000$ inhalitants.

The termination of the war with Russia, or as called in fermany, 'the war of liberation,' reetored Germany to itn geographical nad politien! position in Einrope, but not as an empire neknowledgity one supreme heal. A confederution of 35 independent novercigns and 4 tree cition roplaced the electivo momarchy, that fell under its own decrepitude. In the choice of the smaller princes, who were to become milern, us well as of those who were obliged to descend to the rank of muljects, more nitention was paid to fumily and political connesion than to the whl territorint divisions muler the empire. The elerical llefs, nud the greater part of the free imperial clties, were incorporated into the kintes of the more powerfil princes, upon the dlasolution of the empire, nud were not re-established. Only four cities remained in the enjoyment of their politienl rights.

The sugning and ratitications of the Act of Conferleration took place, after long discrasion, on 8th June, 1815. The following are the principal stipulations of the treaty :-
' 1 . The sovercigns and free cities of Germany, inchiding their majesties the emperor of Austria, and the kings of l'russin. Demmark, and the Netherlands: the emperor nad king of 1'russia for the whole of their territories, formerly belonging to the German empire; the kiog of Demmark, for Itolstein; and the king of the Netherlands, for Laxemburg, arree to unite to form an internal longue, to be denominated the German Confederation (der. 7)entsche Bumal).
' 2 . The olject of this confederation is the maintennuce of the security of Germany, internally and
extemnily, and the anoers ion of independelire annd Integrity of the rempective diermanice atatep.
13. All memisern of the confelerationi linve, an much, equal rights, Jhey all bind themnelven equally to onmerve inviwintily the aet nf union.
-4. The affinirm of the confecteration are managed by the diet, in which every mumber in repremented, either by a separate or ly a jolut vote, in the orier of the amexed list, hut without projudice to the rank of the movereignn. In the eommmittee the members are repreaented by 17 plentpotentiariea

- $\delta$. Auatria enjeva the right ef preaiding in the dift. Every member of the tlet han the right of making propumitions, and of bringing forward menmuren fir dincumbion! and the president is bound to sulbinit them to comulderation within a certain term, to be liersafter tixed.
' H. Proponitionn relating to the adoption or interation of the funciamental Inws of the confederation, or which concern lta orgnuiation, or the alloption of entablishments caleulated in any way to be generally advantageous to the members, munt the submitted to a full anaembly of the diet, In which every initividual member has one or more votes accorling to the size of ench atate.

17. The commintee decides liy a majority of votes in how far a anlyject is adapted for the consderation of the fuli nanembly.
-The propkwisions to le anhjected to the decision of the fill dipt must be prepured nuil brought to maturity in the committee. The decinion in both ansemblies is by a majority of voten, but in the plenum, the majority must amount to two-thirds of the votes.
'When the votea are equally divided in the committee, the prewident has the canting voice.

- Hot where the alloption or alteration of fundimental laws is concerned, or the rights of indifisilual members, or in relighous matters, no remolution enn be adopted by the committee alone, nor can the full assembly decide by a mero majority ol votes.
- The committee of the diet in constantly asremblell, but may ailjourn its aittings when the nffiairs that have been submitted to its conslderatıon are disposed of.
-8. Respecting the order in which the votes of the members are collected, no discusaion shall take place during the organiantion of tho confederation, nor shall any aceldental order which may ariso diuring this perion be prejullicial to the rights of the members, or be consitered as establishing a precedent.
- When the organisation of the league in coneluded, the diet will take up the question of precelence for definitive arrangement, and will then adhere ns closely as pusaible to the usage of the former diet of the empire, but enpecially to that fixed by the decree of the imperial deputation (of 1803). But this order of voting is to have no influence in fixing the rank of the individual members, nor upon their order of precedence on other occasion than that of voting in the diet.
'9. The place of assembly for the diet is Frank-fort-on-the-Maine.

110. The first guhject which shall take up the attention of the diet upon its opening must be the drawing up of the fundamental laws of the confederation, and its organisation in respect to its relations with foreign powers, its milltary and internal arrangements.
'11. All the members bind themselves for the protection of Germany against the attacks of any foreign power, as well as for the security of each individunl state; and gunrantee to each other
mutunlly the ponaeatiuma of each ntate which are eomprelienderd within the confederation.
-When war hus leen declaresl by the confeden. tion, mo meinker of the comfedipration can enter intor meparate negotintiona with the vieny i bur can ap parate trucen or treaties of prence be concluileni by inclividual inembern.
"'The membern of the leapne renerve to themaelvea the rightit of making alliancen of every kind, buit bind themselves not to enter into any whileh coulld be projulicial to the security of the confederathin, or of any of its memikern.
-12. The membera further bind themeelven under no pretence to declare war against one another, mir to pursue their mutual differences ly foree of anus, but engage to aulmit them to the diet.

- The diot is in auch cases competent to attennpt a recoucilintion, by the appointment of a seleret consmittee; and ahould this not prove nuceevsfuil, to procure a deelnsion from a well-organimed conrt of arbitration, whone sentence in implicitly binding upon the dilpputing partief.

13. In all the staten of the confeleration, a conatitution bosed in representation by eatatea shall be introluced (Dandoflundiache Verfrianung).
A further and more detailed declaration of the oljecta of the leazue, as well as of the mode of coniducting the affira of the coufederation, wan fulhlishen! on the 15th May, 1820). Thin decument, with the original act, us given above, and the repolutions of the dilet, primeipnlly relating to affairs of luternal police, publinhed in 18:12, may be regnrled as the fundamental laws of the conifederation.
To give the diet n more reprementative form, a plan has been laill befire the comndiltee of confederation for creating a lower houne of parliament at the aide of the now exiating upper ehumber. According to this plan, Austria shall send thirty deputice, divided among the assemblies of her German provinces; I'rusina thirty, and Davaria ten, to he chosen among the members of their chambers ; Saxony, Hanover, and Wirtenherg, ench six; Balen, five; Electoral Hesse nuid Gruml-1)nenl Hense, each four; Holntein, l.uxemburg, Brunswick, Meckleulourg, Nasmnu, ani Welmar, each two; Meiningen, Coburg-Giothn, Altenburg, Oldenhurg, the two Anhalts, the two Schwartzburga, Waldeck, Lippe, Lichtenatein, Frnukfort, Bremen, and Hamburg, each one-iir all 128 popular delegatea.
As nettled ly the treaty of Vienna, Germany was diviled into thirty-nine sovereign statex, of portions of states; but the number is now reducei to thirty-four. The five missing members are1et, The Saxon princedom of Gothn, which hecame extinct in 1826, by the decense of the lnat Herzog, whose territories were divided ly compact among his collnteral relatives, the princen of Coburg nud Meiningen ; 2nd, the duchy of Anhalt-CDethen, which, in 1847, became annexed to Anhalt-Dessan; Brd and 4th, the principalities of Holenzollen!Hechingen and Iohenzollern-Sigmaringen, both which states were united to Prussia In 1849, in consequence of the simultaneous abdication of the two reigning princes in favour of their kinsman the King of Prussia, head of the house of Hohenzollern ; and, 5th, the duchy of Anhalt-Bernburg, the relgning house of which became extinct with Duke Alexander, who died Aug. 19, 1863, leaving the succession to the last remaining pricces of Anhalt, formerly called of Anhalt-D)cssau.

The following are the members of the confederation as now constituted, with their votes in the general assembly, their votes in committee of confederation, and their place or rank in the diet :-

| Total-Thirty four Statom |  | 68 | 17 |  |

The committee of eonferleration, consisting of the ambnssndors of the thifty-four ntates, is sitting in permanence at Frankfirt-on-the-Mnine; but of late has exercined very little political influence. An attempt to reconstitite the confederation on a more liberal basis, made by the Emperor of Anstria, and laid before a congress of German soverelgna which met at Frankfort in August, 1868, led to no result, owing chictly to the opposition of I'ruasia.
German Zollverein, or Chastoms' League.-Unti a recent period, ench of the states into which Giermany is divided had its own custom-hounes, and its own tariff and revenue laws; which frequently differed very widely indeed from those of its neighbours. The internal trade of the country was, in consequence, sulyjected to all those vexatious and ruinons restrictions that are usually laid on the intercourse between distant nnd independent states. Wach state endeavoured cither to procure a revenue for itself, or to advance its own industry, by taxing or prohibiting the productions of those by which it was surrounled; nud customs' officers and lines of custom-houses were sprearl all over the country. Instend of being reciprocal and dependent, everything was separate, independent, and hostile; the commodities admitted into Hesse were prohibited in Baden, and those prohibited in Wurtemberg were admitted into Bavaria. The disadvantages of the old system had long been seen and deplored by
well-luformed man; lut an many Interewta had krown up under itn protection, and mo many ileep-
 Ita overtlinow acemel to lon hopolem, or, at all eventa, exceperlingly dimant. The adilrenm and remolution of the I'rumian government, however, trimmphed over every ohatacle. The fint treaties in firthurance of this whjeet were negotintell ly I'rumia with tha princlinalition of Seliwaraluipk Sumdermhanem amil Seliwnratourg liulolataili, in ISIS anil INID, on the principie that there alioulal be a jerfect frecilun of eummeree between thewn countries and l'rusmia! that the dutien on impurtation, exportation, and tranait, in I'romala and the prinefinalitien, whonlal be inlentical; llint theme shonld be charged along the fromtier of the dominlonn of the comtructling partien, and that each whonld participate in the pronduce of nurb dution in proynortion to lin populathin, All the treatien molmequintly enterend into liave liecin founded ons thin falr anil equitable princigile; the only exceppthom to the perfect fremiom of trade in all the cimbtrien comprined within the leagen or tarifi alliance lelogg conflined, Int, to articlem comatituting atate monopollen, an anlt and enrim, in I'rumila! 2nd, to articlen of antive purduce, burilened with a differest rate of duty on comaumption in one atate from what they pry in another ; nul itril, to arideles producell under jatenta, conforring on the patenteen certain privilegea in the dominimas of the atatem granthig the putentn. With thene exceptionn, which are not very important, annl are daily decrenaing, the most perfect frectoun of commerce exinth ainong the allionl staten.

Slince $1 \mathbf{H I}$, when the fommintions of the alliance were laid, it progrewivaly extendel. Jucal lleaso folned the allhuse in 1828, and electoral Hesse in 1831; the kingrloms of llavaria, Snxony, and Wirtemlierg Joined It afterwariln. The amceensive formation of the Zollverein took place in the following order:-

1828, Fob. 14 - Union of Prusalia with ILemoDarmatalt.

Dec. 10
1833, Jnn. 25 1841, Oct. Oct. 10 1847, Aprll 1851, Sept. 7 : Innomer,Otdenburg, and Schaum-burg-Lippe.
The treaties which bind all these ataten into the Zollverein are not of a permanent nature, but open to dissolution at atatenl terms. The treaties now In foree will expire with the end of the yenr 1877.
The Zollverelı Includes, nt present, the whole of the states of the confederntion except Austria, the two duchies of Mecklenburg, Holstein, Lichtenstein, and the free cities of IInmburg, Lubeck, and Bremen. The whole of Prussin forms part of the Zollverein, incluting that portion not belonging to the Confeleration.
An assembly of representatives from the allied states meets annually, to hear complaints, auljust difficulties, and make such new enactments as may seem to be required. The duties are received into a common treasury, and nre apportioned according to the population of each of the allied states.
Population.-The last general census of the
states of the confereration took place Dee. 3, 1861. In two states, lowever, Ilolstein-Lauenburg and Meekleubury-Strelita, the most recent enumerathon in of the year 1860, The following table contains tho aren, in limplish square miles, and mumber of inhobitants of the thirty-four stater, atcorling to these lant otlicial returns, compared with the census of 1853 :-

The great majority of the inhabitants of the confederation belong to the Tentonic race. Only in two states-Anstria and Prussia-are natives of other races, nearly all Shavonians. They number fi, 8 ij0,000 in the Austrim provinces of the confederation, for the greater part in Bohemia; and 825,000 in l'russia, the whole of them in the comnty of Poser, a former integral part of the kingriom of P'oland.
Of the furty-five million inhabitants of Germany, about twenty-six millions are Roman Catholics, and the rest l'rotestants, with 47 (i, 000 Jews. In Austria, there are only 360,000 Protestants, and in leararia but one-thirl of the inlabitants belong to the Reformed Chureh. On the other hand there is not a single Roman Catholic in the little prineipality of Schaumburg-Lippe, anil but thirty memhers of the same confession in the grand duchy of Meeklenburg-Strelitz. As a rule, the Protestants are more numerons in the northern states of the confederation, and the Roman Catholics in those of the south.

Army.-In the act of the congress of Vienna of Jime, 1815, the contribution of the various states to the army of the Germanic Confeleration was fixed at one per cent. of the population, that is, the population possessed at that particular period,

GRIRONA
withont taking into account in firther inerease or decrense of numbers. One-seventh of this army wus to consist of cavalry ; and ten pieces of artillery, with a propmortionate number of men, were to bo furnisheil with every 1,100 soldiers. On this basin, the army of the emifederation comsisted of 301,0:17 ment, rank anal file. Varions changes wre intruluced into this military organisation nulsequently; and by a vote of the diet of March 10, 18.53, the total strength of the army was increaseel mesesixth per cent. The actual strengils of the nrmy of the confederation now consinsta of : 141, , $8: 4$ infantry, $\mathbf{t 0} 0,758$ envalry, and 50,680 artillery, divided into ten corps drurmie, and a mumber of troops of remerve-in total, 503,072 men. The distribution is as follows anong the thirty-funr states:-

Under the sole command of the diet, and garrisoned by federal troops, are five German fur tresses, namely, Mayence, Luxemburg, Landan, Raviadt, and Ulm. The strongest and most inportant of these fortresses, Mayence, is garrisoned by Austrians and Prussians, in equal moicties; Luxemburg, by Prussians chiefly; Landan, by Bnvariun troops: liastadt, by troops of limlen, Anstria and Irussia ; and Ulm, by troops of Wurtemberg, Ihavaria and Austria.

## of Troop

on the Trer, 50 m . NiE, Barcelona. Jop, 12,805 in 18:\%. The plan of the city is nearly triangular. At the commencemput of the Peninsular War, during which it sullierel greatly, (ierona was an important fortress ; being surromiled with ohd walls in pood repuir, and further defended by the citadel of Monjuiz, a nguare fort 720 ft . in length on each side, with bastions, outworks, Rec., placed on un eminence abont 80 fathons distant, commanding the eity ; lesides which thore were fonr furts, with redoubts upon the ligh ground above it. It is still partly surromuled by walls; but Monjuiz is its only ontwork remaining. It is uww chiedly noted for the mumber of its religionss edifices; there ure no fewer thm 1: churches, besides the cathedral, and 11 convents. The principal bullelings are the anthedral and the collegiate ehurch of San Felice. The former, built on the rilge of tho momentnin, diphlays a majestic fromt at the top of three grand terruces ormamented with granite bahastrades. The ascent to it is by a superbs thight of 81 steps, of a brealth the whole extent of the churel. The fromt is decorated in bad taste with three orilers wh architecture-Doric, Corinthinn, and Composite, and thanked with two hexagon towers. The interior is large and handsome; it has only a nave in the Gothic style. It contalus the monnments of laymond lierenger, count of lharcelona, and his consort. The treasury of this elureh atlorded a rich spoil to the French, on their guining possession of Gerona. The collegiate church is of Gothic architecture, consisting of a nave and two aisles divided by pillars: connected with it there is a very lofty and ancient tower. In the Capnehin convent there is an Arabinu bath of elegant construction. The streets of Geromn are narrow and gloony, but clean und well paved ; and the houses are tolerably well built. There are three squares, one of which is of considerable size; two hospitals, a seminary, college, with a gooil public library (formerly belonging to the university founded 1521 by Philip II., and abolished 1715 by lhilip V.), a Begune seminary for poor girls, and several other schools, The place wears, however, a dull and melancholy look. 'The inhabs. have no theatre, no public amusements, no common rendezvous, Every one seems to live alone. One-fourth of the pop. are priests, monks, mins, tund students. They carry on very little trade. The only manufactories are a few looms for weaving coarse woollen and eotton stuffs and stockings, which have been established in the asylum within the last tweuty years.' (Mol. 'Trav., xviii. 57.)
Geroma is the sent of a bishopric, which is richer thon that of Barcelona; of an ecclesiastical tribunal ; a sub-deleg. of police ; and a military governor. It is of great antiquity, and formerly gave the title of prince to the son of the king of drragon. It has sustnined numerous sieges, and been famous for the brave defence it has always mate; but especially for that it sustained muter Mariano Alvarez, in 1809, for upwards of seven mouths, agninst the French.
GERS, a dep. of France, reg. SW., between lat. $43^{\circ} 17^{\prime}$ and $4.4^{\circ} 4^{\prime}$ N., and long. $0^{\circ} 18^{\prime}$ W. and $1^{\circ} 11^{\prime}$ E.: having N. the dép. Lot-et-Garonne, E. those of Tarn-et-Garonne and Haute Garome, S . the latter and the Hautes and Basses Pyrénées, fand IW. Landes. Length, li. to W., 74 m. , by ilbont 54 m . in brendth. Area, 628,031 hectares. Pop. 298,931 in 1861. The last ramitications of the Pyrenees cover most of this dep., the slope of Which is mostly from S. to N. Rivers numerous : all of them have more or less a N. direction, and are atluents of the Garome or Adour. There are many ponds and small lakes. Gers, like the neighbouring deps, is subject to violent storms ; its
YoL. II.
soil is, lowever, in general fertile. It has 333,600 heet. of anble lmil, 60,80 ) hect. mealows, and 87,800 hect. vineyarils. Agriculture is very backward, but it has been mach improved of late years. Only abont $\mathbf{3}$-4ths of the corn required for home consumptlon is rused in the dep, it is chletly wheat, maize, and oats. (iarlic, onions. varlous other vegetables, hemp, and flax, are plentifully cultivated. Fruit is good. Alsont 900,000 hectol. of wine are produced in ordinary yeurs, but it is mostly of medioore quality : about a half is consumed at home, und the other half converted into brandy, which ranks next after that of Cognac, Thero were estimuted to he ubout 388,0100 sheep, and 141.350 oxen, in the tep. ; considerable atteution has been paid to the inurovement of the breed of the former, which yield annumlly about 340,0010 kitos. wool. I'oultry are plentiful; mud, ns well as hogs, fattened, or killed and sulterl, they form an innortant article of trade, Manufictures unimportant; there a few fiblories of ghass and eartheuware, leathor, stareh, linen, woollen, and cotton eloth, and thread. The trade is, lowever, chietly in the products of the soil, with which this dep. supplies the neighbouring ones and Spain. liers is divided into 6 arronds, 29 cantons, and 684 communes. Chief towns, Auch, the cap., Condon, Lonlez, and Mirnnte. The number of large properties is much below the average of the deps. of Frunce.
(HAZIPOOR, or GIIAZEEPORE, a dist, of British Hindostan, presid. Bengal, prov. Allahabad ; between lut. $25^{\circ} 10^{\prime} \mathrm{mud} 26^{\circ} 20^{\circ} \mathrm{N}$. and long. $82^{\circ} 40^{\prime}$ and $84^{\circ} 30^{\prime}$ E. ; having NW. and N. the dist. Azinghur and Gorruckpore, NE: Sarm, SE. Shalabiul, and W. I lenares and Juanpore. Area $2,850 \mathrm{sq} . \mathrm{m}$. Fstimated pop. 1,600,000. The Gingres runs through its $S$. jurt; the Goggra bounds it on the N. It is one of the most fertile divisions of Hudostan, and the sugar-cane, corn, and fruit trees are extensively cultivated. It lias long been celebrated for the excellence of its rosewater and attar. "The roses of Ghazeepore are planted in large fields, oceupying many hundred acres of the adjacent country. They bloom sparingly, upon a low shrul, which is kept to a dwarfista size by the gardener's knite, and the full-blown flowers are carefully gathered every morming. 'The first process which the roses undergo is that of distillation. They are put into the alembic with nearly double their weight of water. The rosewater thus obtained is poured into large shallow vessels, which are exposed, uncovered, to the open air cluring the night. The jurs are skimmed oceasionally; the essential oil floating on the surface being the attar. It takes 200,000 flowers to produce the weight of a rupee in attur. This small quantity, when pure and unadulterated with san(lul oil, sells upon the spot at 100 rupees ( 101 .) ; an enormous price, which, it is said, does not yield very large protits. A civilian, having made the experiment, found that the rent of land producing the above-named quantity of attar, and the purchase of utensils ulone, came to 5l.; to this sum the hire of labourers remained still to be added, to say nothing of the risk of an mproductive season. The oil produced by the above-mentioned process is not always of the same colour, being sometimes green, sometimes bright amber, and frequently of a reddish line. When skimmed, the produce is carefully bottled, each vessel being hermetically sealed with wax; and the bottles are then exposed to the strongest heat of the sun during several days. Rose-water, also, when bottled, is exposed to the sun for a fortnight at least.' (Roberts's Scenes of Hindostan, ii. 113115.) Rose-water which has been skimmed is
reckoned inferlor to that which retains its essential oll, and is sold at Ghazeppore at a lower price; though, accorting to many, there is scarcely, if any, perceptible dilference in the quality. A seer (a full quart) of the best may be obtained for 8 amnas, or abont ls. It enters into almost every jart of the domestic economy of the nutives of India, leing used for ablutions, in medicine and cookery, as presents, \&c. The chief towns in this district are Ghazipoor, the cup., Azimpoor, and Doorighant. (Hamilton's Fi. J. (iaz.; Roberts's Hindostan ; I'mrl. Rep, on E. I. Alfairs, ©ec.)

Ghaziponi, a large town or city of IIndestan, prov. Allahabad, eap. of the above diat., on the $N$. bank of the Ganges, 40 m . ENE. Jenares, and 100 m . W. Patna; lat. $25^{\circ} 35^{\prime}$ N., long, $83^{\circ} 33^{\prime} \mathrm{L}$. From the river it lias a very striking appearance, though, like other Indian cities, its noblest buiklings turn out, on approach, to be ruins. 'The native city is better built and better kept than many places of more importance. The bazaars are neat, well supplied, and fumous for their tailors, whose excellent workmanship is celebrated in the aljacent districts. $\boldsymbol{A}$ very considernble number of the inhab. are Mussulmans, though the neighbouring pop. is chictly llindoo; their mosques are numerous and lindsome, and the former grandeur of Ghazipoor is evinced by a superb palace, built by the Nawab Cossim Ali Ḱlıan, which occupies a considerable extent of ground overlooking the Ganges. This noble buitaing is now in a melancholy state of clilapidation, neglected by the government, who lave turned it into a custom lonse, and have converted many of its suites of apartments into warehouses, and the residences of police peons belonging to the gurd. Though thus rendered uselul, it is not thought wortly of repair ; its splendid hanqueting-hall and cool verandahs, replete with architectural beauty, abutting into the river, are deserted, and left to the swift devastations of the climate. In a very short period the whole of this marnificent fabric will become a heap of ruins.' (Roberts's Seenes, \&c. ii. 134.) At the other extremity of the town are the honses of the civil servants of the company. These are spacious and well built, and surromiled by gardens. The military eantemments adjacent are, however, low, ugly bungalows, with sloping roofs of red tile, but deriving some advantage from being intermingled with trees; 'very elifferent from the stately but naked barrncks of Dinajoor.' On the parale gromad, a little NE. the eity, is the mausolenm of the Marquis Cornwallis, who died at Ghazipoor. 'This edifice consists of a dome supported upon pillars; and is entirely constructed of large blocks of Chumar freestone. It cost a lack of rupees, and tifteen years were spent upon its erection; but its style and execution have been found much lault with; and it is insignitieant when eompared with the native sepulchral editices of Hinlostm. The gaol of Ghazipoor is large, strong, airy, and commodious, and usually crowded with delinquents of all castes and denominations; this district being noted for the turbulence of its inhabitants, and their insubordination to the laws. The E. I. Company havo a breeding stud of horses near the city. Ghazipoor is garrisoned by two or three companies of a native regiment; it is famous for its salubrity, and is well supplied with European and native products. Its envirous are planted with fine forest trees, the haunts of inmumerable monkeys and lirds. (Roberts's Scenes in Hindostan, vol. ii.; Heber ; Hamilton's E. I. Gaz. \&e.)

GHEN'T' (Germ. Gent, Fr. Gand), a celebrated city of Belgium, eap. E. Flanders, at the confluence of the Scheldt and Lys, 30 m . NW. Brussels,

30 m . WSW. Antwerp, and 23 m . SE. by E. liruges, on the railivay from Mrussels to Ostemi. lop. 120,134 in 1860 . The city is the seat of a bishoprie, of a conrt of appeal, a tribmal of trst resort, and a chamber of commeree; is a fortress of the second chass, and the residence of a high military commandant for the prove of li. and W. Flanders. The pop, is not characterised by the decaved und listless nppearanco of its neighbour Brugus. Under Charles V. this elty probahly covered more ground than any other in W. Europe, Whence the boast of the emperor, 'that he conld put l'aris in his glove (gant).' At present the circ, of its walls is between 7 and 8 m . ; lont much of the enclosed space is occupied by tields, gardens, and orchards. The shape of the city is somewhat triangular ; it is entered ly seven gates. The Scheldt and Lys, together with the Lieve and Mocre, after having supplied the ditehes surrounding the fortitleations, enter the eity, and, in conjunction with some artiticial canals, divide it into twenty-six islands, most of which are bordered ly magnifieent quays. Of the bribges eonnecting these islands, seventy are of considerable size, and of these forty-two are of stone, and twenty-cight of wood. In general, the streets are wide, though a few of the most I'requentel are so narrow that two carriages cannot pass each other. There are numerons the public edifices; and many of the private houses are well built and handsome. 'Their antigne appearance, and the fantastic varicty of the stair-like gable ends, ornamented with scrolls and carving, arrest the stranger's eye at every turn. There are thirten publie squares. The principal is the Marché an Vendredi, or Frinay Market, so called from its weekly linen market held on that day. In its centre was formerly a column, erected in 1600 in honour of the emperor Charles V. The greatest curiosity in the liriday Market is an enormous iron ring, upon which are exposed the pieces of linen which, having been found defective on being brought to market, are confiscated by the authorities, and given to the hospitals. The square of St. Peter is one of the largest in Belgiom; it serves as a parade ground for the garrison. In the I'lace St. l'harailde is an old turretel gateway, a relic of the castle of the counts of Flanders, built in 8 lis , and clonbtless one of the oldest existing remains in Belgium. This castle was, in $18: 88-39$, the residence of the family of lidward IlI., whose son, John of Gannt or Chent, duke of Lancaster, was born in it. Its existing remains form part of a cotton factory. The corn market and the Place de Recollets are the other elief squares.

The finest promenades in Ghent are, one along the Coupure, a canal cut in 1758, uniting the Lys with the Bruges canal; and the Kauter, or Place d'Armes. The boulevards, anciently the ramparts surromaling the city, and some of the quays, are also agrecable promenailes. Ghent contains many churches worthy of notice, not only for their architecture, but for the chef-d'ouvres of the Flemish sehool which they contain. The cathedral, or charch of St. Bavon, near the centre of the city, was originally founded in 941 , and the erypt, or eglise souterraine, of the original building still exists. The motern edifice was commenced in 1228 , and completed carly in the sixteenth ceatury, Its style is simple Gothic: it las no very striking beauty externally, if we except its tower, remarkable for its elegance and height-about 289 ft . From its summit, which is ascended by 446 steps, the surrounding country may be seen in clear weather for n distance little short of 40 m . 'Ihe interior of this churel is of almost umrivalled magnilicence. It is entirely lined with black
marble, wi Italian mar the catheira tower, fonlli a prison; it copper drag lruges in from Consta church of $S$ 'Crucitixion the 'Amme in Belgium church in ( (in, St. Jame the Augusti and are well five clurche church and a large numne rouvential II. This est nage, founcte alinost a litt and gates, st iulabited by nut bomid by world whene their boast t the order aft attend the ulswhere.

: are, one along miting the Lys cuter, or llace ly the ramparts the quays, are contaitas many for their archiof the Flemish cathedral, or tre of the city, the erypt, in building still commenced in sixteenth cenit has no very ceept its tower, height-alont is ascended by - may be seen e short of 40 m . most unrivalled ed with black
marble, with which the pillars of $p^{\text {ure }}$ white Italimm marble form a strong contrast. Aeljoining the enthedral is the beffroi, or belfry, a lolty square tower, founded in $118 i 3$. Its lower jart is used for a prison; its simmmit is ormmented with a gilt copper dragon, carried off ly the Gantois from liruges in 14.15 , to which city it hud been tuken from Constantinople during the first crisade. The church of St. Michael, contnining the celebrated 'Crucitlxion' by Vandyek (now mnch injured), the 'Ammmeiation' by Lens, and the finest organ in lelgium ; that of Sit. Nicholas, the oldest church in Ghent, and those of St. Peter, St. Martin, St. James, St. Sanvenr, the Dominicans, nud the Angnstines, all contain excellent paintings, and are well worth motice. There are in all tiftyfive chnrehes, including su Linglish Protestant church nud a syuagoguc. (ihent coutains the only large monnery that survived the dissolntion of conventual institutions by the emperor Joseph II. This estnblishment, called the Grand legrainage, founded in 123.1, is of grent extent, forming almost a little town of itself, with strects, squares, and gites, surromided by a wall and mont. It is inhabited by about 600 muns. The Bégnines are not bound by any vow; they may return into the world whenever they please; but it is snid to be their boast that no sister has been known to quit the order after having once entered it. The sisters attend the sick as nurses in the hospitals and elsewhere.
The tinest public building in Chent is the palace of the miversity, fombled by Willinm I., king of Ilolhand, in 1816, and attended by ahont 350 stildents. In front it has a fine portice raised upon cight Corintlinan columns. It has a noble entrancehall under a vanlted roof 91 ft . in height, a grand staircase, an amphitheatre capable of neconmodating 1,700 persons, in which neademic prizes are distributed; a court of elasses, or square, surrounled by lecture rooms; and cabinets of natural history, comparative anatomy, mineralogy, and naturul philosophy. The library, containing 60,000 vols. besities many vuluable MSS., the royal college, and the botanic garden, ocenpy the ancient nbbey of Bandeloo and its groumds. Besides these institutions, Ghent has a musenm and ruyal academy of drawing, the expenses of which are defrayed by voluntary contributions; societies of rhetoric, the tine arts and literatnre, masic, botany and horticnilture, agriculture and commerce, and varions clubs for gymuastic and other pursuits. The museum contains a good many paintings, though none are of tirst-rate excellence; but there are several private collections of great merit the principal being that of M. Van schamp, containing a fine 'Anmmeintion,' by Correggio; several paintings by Rinbens, including portraits of himself and tamily; and others by liembrandt, Vandyck, Teniers, and other distingnished masters.

The town-hnll is a large and, at first sight, an imposing building. It has a double front; one in the Moorish-Gothic, and the other in the classic, style. The nrehitecture of the latter is incongruous: its 3 principal stories being orfamented suceessively with Doric, Ionic, and Corinthian columiss. This front has npwards of 70 wintlows, exelusive of those in the roof. In the interior is the throne-room, in which the treaty called the Pacification of Ghent was signed in 1576 . This large and tine npartment is now used for the distibution of prizes given by the town to those who attain excellence in the arts, \&e. There are 22 public hospitals. The principal, the Byloke (enclosure), founded 1225 , is cupable of containing 600 sick persons, and has attached to it asylums
for nged imlividunls of both sexes. There are some hospituls for aliens, 2 lumatic neylums, 2 deaf nud dumb institutions, and many other charities. The great prison, rumarkable for its size and admirable arrangenent, has served as a model for severnl others in London, l'russia, and the U. States. It was begun unter Marin Theresa in 1774, and finished in 18.2. ; it stamels on the Conpure. Its form is that of a perfect octagon, in the infldle of which is a large conrt-yard, communicating with the different parts of the prison. Dach division has a yard, mad in the centre of that appropriated to the women is a basin for washing linen. Each prisomer sleeps nlone in a small room, looking into an extensive und well-lighted gullery. These apartments are kept very mently, and are ventilated when the privomers go to work. One linlf of the produce of the prisomers' labour is reserved by the government for the expenses of tho establishment, imd the remander is divided into 2 portions, one of which is given to the prisoners for pocket-money, while the othor accumnlates, and is given to them on leaving the prison. The ruins of the citadel, constructed by Charles V., are still to be seen nenr the Antwerp gate. The modern eitndel, built between 1822 and 1830 , the cavalry barrncks, Hôtcl de l'Octroi, workhonse, mont-llepieti, fish-market, slaughter-house aud shambles, thentre, and the celerated piece of cannon-the largest in Europe- 18 ft . long. 10 d in circumference, its bore $2 \frac{3}{3} \mathrm{ft}$. in tliameter, nnd weighing $3 \cdot 1,000 \mathrm{lbs} .$, are the remaining objects most worthy of remark in (ihent. The elimate of the city is healtliy nul temperate; the average heat of winter is $210^{\circ}$, of summer abont $70^{\circ}$ luhhr.

Manufictares and Commarce.-At the commencement of the 15 th century, Ghent is said to liave contained 40,000 wenvers; but this, like most statements of the sort, is most probably much exaggerated. At the commencenient of the present century, the mamfacture of cotton yarn was introdnced, and furnished employment for a time to more than 30,000 workmen. In 1804 , while united to France, Chent was ranked by Ninpoleon as the chief mannfacturing town in his dominions atter Lyons and Rouen. In 1819 , the importation of spinning-jemies and high-pressure steamengines from Lingland allorded an ndditional stimnlus to the cotton mannfacture. The separation of Belgiom from the Netherlands gave the tirst check to this flourishing industry, most of the enpital engrged in it being with the Dutch. Thns the manufacture gradually declined, and has continued declining to the present day, entailing immense suffering upon the working classes. l'reviously to the French lievolasion, lace was the staple manufacture of Ghent, grent quantities of it being sent to Holland, England, France, Spain, and the colonies. Lace-making has now greatly diminished; but it still ranks, together with the manufacture of silk, linen, and woollen fabries, amongst the principal branches of indnstry, after that of cotton. The sugar-retineries employ annually from $10,000,000$ to $12,000,000 \mathrm{lbs}$ of the raw material. There are numerous gin-distilleries, soap-manninctories, breweries, tammeries, and saltworks. Sail-cloth, oil-cloth, gold and silver stuffs, masks, gloves, pins, bronze articles, mincral acids, white lead, I'russian blue, and other colours, buttons, cards, pajer, tobacco and tobacco-pipes, glne, surgicnl instruments, machinery, cutlery, articles of various kinds, in wood, stone, ivory, de., are made in Ghent, and there are some good building docks. The city is admirably situated for eommerce. Besides being one of the centres of the Belgian railwny system, it is connected by a ship-canal with Bruges; and by another, which

## GIAVENO

passes by Sas Van Ghent, with the Seheldt at Ternense. The latter gives the eity all the advantages of a sea-port; vessels drawing 18 ft . water may muload in the hasin unler its wulls. The comitry in the vicintity produces a great deal of corn, thax, tolmeeo, and inadder; and besides its manufactured produce, Ghout has a large trade in these articles, especially the first, and a very extensive trausit trale.
The origin of (iheat is involved in uneertainty; but it is tolerally well aseertained that it becane a place of considerable importance early in our arat Jn 879-80, the Dimes under llastiugs, repulsed from Eingland, phondered (Ghent, and obtained an immense lrooty. (ihent belonged sinceessively to the comats of Flanders aud the dukes of Burgumly ; but the ultegiance of its citizens appenrs to linge been little more than nominal, sinee, whenever the seigneurs attempted to impose an unpopular thas, the great bell somaded the alarm, the citizens flew to arms, mid killed or expelled the oflicers of the sovereign. The city became subsequently the cap, of Austrian Flaniters; but having, in i:39, unwarily rebelled against the anthority of its sovereign, the emperor Charles V., and even oflered to transfer its allogiame to his rival, Francis I., king of France, it brouglit un itself a punishment, from the effects of which it never fillly recovered. In 1678 , it was taken by Louis XIV..; in 1706, by Marlhorough. In 1798. it was again taken by the French, aud was, till 1814 , the eap. of the dep. of the scheldt. Ghent has given birth to many distinguished individuals, nt the heal of whom inast be placed the emperor Charles V., born here on the $2 / 4$ th Peliruary, 1500; among the others may be mentioned John of Gamit, son of Edwarl 1 II.; the pepmar leader, Jaques Yan Artavelilt, the 'brewer of Ghent,' and his son Philip; Heinsius the eritic ; and the senlptor Delvaix.
(illlLAN, a prov, of Persin, in its NW. part; between lat. $36^{\circ} 25^{\prime}$ and $37^{\circ} 45^{\prime}$ N., and loug. $48^{\circ}$
 of Talish, SW. the Eibourk momentains, sepmrating it from Azerbijian and Irak, SE. Mazunderan, and NE, the Caspiain. Length NW. to SE., about 120 m ; area probably about $5,000 \mathrm{sq} . \mathrm{m}$. I'op, estimated at from 400,000 to 6001,000 . It is one of the most beautiful portions of the Persian empire. Climate mild and henthy, except in certain distriets in summer. It is well watered, and abomuls with forests of oak, pine, boxwood, de.; aloug the Caspian, there are extensive morasses. The soil is very rich, and yielles hemp, hops, many kinds of iruit, corn, rice, \&c. in great quantitics. The vine grows with the greatest luxuriance; but the chief product of the prov. is silk of excellent quality, the culture and manufacture of whieh employs most of the popp. The only town of any consequence is lieshul, on the Caspian, which has n considerable trade in silk with Astrakhan.
GHIZNI, or GHUZNEE, a fortified town or city of Afghanistan, and formerly the cap, of an empire reaching from the Tigris to the Ganges, and from the Jaxartes to the P'ersian Gulf: though now containing only about 1,500 houses, exclusive of suburls without the walls, it is still considered throughout Central Asia as a fortress of the highest importance. It stands on a slight elevation, in a plain nearly $7,000 \mathrm{ft}$. above the level of the sea, at the foot of a narrow range of hills, 54 m . SW. by S. Cnubul, and 156 m , NE. Caulahar. From its great height its climate is very coll, for a great part of the year the inhab. sellem quit their houses, and the snew has been known to lie deep on the ;romed long after the vernal equinox. It is surjunded by stone walls, tlanked with numerous
towers, mul entered by three grat oulkide which it is encompussed ly it finsse braye, and wet ditch. On the W. vide the wails are elevated to a hecight of 280 ft . alwve the level of the plain; mad the ruek on which they are lyilt mlght bo searpelf so ans to render It thoroughly haccessille on that side. (Vigue.) 'The (ihizuii river, a pretty large stream, rums alonge its W. face; and previonsly to its eapture by the British, a new mutwork had been construeted cemmanding its bed. Ghizni has three bazarss, of no great brealth, with high houses on each side; a covered chumrsus, and several dark and narrow streets. A citaclel, enclosing a palace, is the ouly elitilee worth mutice. Ahout \& m. N. of the city stamls a minaret, and about 400 yarls farther, another of the same kind, erected by Sultan Malmomil of (hisizi. Itath are of lrickwork, ele\&untly ormamented, and covered in many parts with Cutie inssriptions. Adjuining thens is the site of Ohd Ghiznh, a city which, in the 10th century, was, aecurding to Ferishta, adorned beyom any other in the E. The aljacent plain is coveren with ruins. About 3 m . from the modern town, in the midst of a village, is the tomb of Mahomoud, a spacions lout not a magnilicent buildiugs. coverel with a cupola. lhe of all the antiquities of Cilizui, the most uselinl is an embankment across a stream which was built by Mahmoun, nud which, though damaged by the insane fury of the Ghoree kings, still supplies water to the timels and gurdens round the town. (Elphinstone, Caubul, i. 141, 142.)
The empire of which Ghizni was the capr, was founded by sebuctaghii in !izo, and lasted voler 13 suceessive sovervigns till 1171, when the city was comquered by Maliomed Ghoree, and burned. hecently it has acquired some celebrity from having been taken by storm by the 1British, 23rd July, 1839, after a siege of less than 48 homers; the town being garrisoned by about 3,500 Afghans, under the command of a son of Dost Mahomed Lhan. Our loss on that occasion anounted to 17 men killed, and 182 wounded. Of the enemy, alout 600 were killed, many womadel, and 1,600 taken prisoners, including the governor and his staff.
(IANT"S CAUSEWAY, a basaltic promontory of Ireland, N. const of the co. Antrim, between Bengore llead on the E., and the embouchure of the Bush river on the W. This extraorlinary promontory consists of a vast mole or quay, formed of polygonal basaltic columns, progecting from the base of a steep promontory to a great distance into the sea. It is divided into three distinet jertions: the tirst, which is seen at low water, is about 1,000 ft . in length, and the others not quite so muel. The pillars are from 40 to 55 ft . in length, and have from three to eight sides; but those having six sides are ly far the most common. The surfice formed by the summits of the pillars is so smooth, and the jobints so close, that the blade of a knife can hardly be introduced into them. The pillars are divided into segments, admirably fitted to eneh other, varying from 6 in . to a foot in thiekness. At Fair Head and llengore Head, in the immediate vicinity, the columns are higher; but the augles are not so sharp, aud they are altogether of a eoarser texture than those of the Ginat's Cimsoway. The same sort of basaltic columns, though of a less perfect form, extend along the ceast fur several miles, and, being sometimes detached from the shore, have, at a distance, the most grotesque appearance. Hachlen lstand contains similar colunns, and they extend a good way inland.
GLAVENO, a town of Northern Italy, prov. Susin, cap. mand., on the Sangone, 16 mm . W. bys. Turin. 1opp. 9,931 in 1861. The town is encircled by an old wall, and has manufactures of silk and linen, with tameries and iron furges, some transit
trade, and a tenided.

GHBRALTAR, a town and very strong fortress belonging to Great britain, in the S. part of Spain, adjoining the narrowest part of the strait joining the Sthatic and Mediterranean, to which it gives name: 61 m. Sl:. Cudiz, 9 m m. S. hy li. Seville, and $312 \mathrm{~m} . \mathrm{SSW}, \mathrm{Madrid}$; lat. $36^{\circ} 6^{\prime} 30^{\prime \prime}$ N., long. $5^{\circ} 2 l^{\prime} 1 \mathbf{2}^{\prime \prime} \mathrm{W}$. I'op., exclusive of the military, 12,182 in 18.01 , and $15,4 i_{2}$ in $1 \times 1 i_{1}$. Area, 13 sit. m . The fortress stands on the W . side of a momtainous promontory or rock (the Mons Calpe of the ancients), brojecting into the sea S . abont 3 m. , being from to $\frac{3}{2} \mathrm{in}$, ill breadth. The S. extremity of the rock, 111 m. N. Centa, in Nfrica, is called Juropa Point. Its N. side, fronting the low narrow isthmus which comects it with the mainlund, is perpendicular, and wholly inaccessihe; the li. and S. wiles aro steep and rugged, and extremely dillicult of access, so as to remiler any nttack 11001 them, even if they were not fortilied, next to impossible ; so that it is only on the W. side, fronting the bay, where the rock deelines to the sca, and the town is built, that it can be attacked with the faintest prospect of success. llers, however, the strength of the fortitientions is such that the fortress seems impregmable, even though attacked by an enemy having the command of the sea. The town, which lies on a bed of red sand, at the foot of the mok, on its NW. side, hus a principal strect, nearly a mile long, well built, paved and lighted; and of late years many of the narrow streets have been widened, the alleys removed, and the general ventilation improved. Still, however, 'the honses are constructed for the latitucle of lingland, not of Africa; for, instead of patios, fommains, and open galleries, admitting a free circulation of nir, elosed doors, narrow passiges, wooden floors, small rooms, and air-exchuding windows, keep ont the fresl, and keep in the foul air.' (Inglis, ii. 121.) 'These circumstances seem, in part at least, to aceomnt for the contagions fevers by which the town is sometimes sconrged. The principal buildings are the governor's honse and garilen, the alniralty, the naval hospital, the vietualling-olliee, and the harracks. There is nn excellent public library, founcled in 1793, and a small theatre. A steam corn-mill has been erected. The l'rotestant churel, situated on the Line-wall, will contan 1, ohl 8 persons, ant the governor's chapel at the eonvent, 300 more; the liom. Cath. chureh, when full, contains about 1,500. The Wesleyan Methodists and other dissenters linve places of worship, and there is a Jews synagogue. The fortifications are of exi raorlinary extent and strength. The prineipal batteries are all casemated. and traverses are constracted to prevent the miselief that might ensue trom the explosion of shells. Vast galleries have been excavated in the solid rock, and monnted with heavy cunfon; and eommmmentions have been established between the diflerent batteries by passages ent in the roek, to protect the troops from the enemv's tire. In fact, the whole rock is lined with the most formidable batteries, from the waters to the summit, and from the Land-gate to Enropa Point; so that, if properly victualled and garrisomed, Gibraltar may be said to be impregnabie.
The bay of Gibraltar, formed by the headand of Cabrita and Earopa Point, 4 ml . itistant from each otler, is spacions and well adapted for shipping being protected from all the more dangerous winds: the extreme depth within the hay is 110 fathoms. To inerease the security of the harbour, two moles have been coustructed, which respectively exteni 1, 100 and 700 ft . into the bay. The Spanish town and port of Algesiras lic on the W. side of the bay. Is a commercial station, Gibraltar is of consider-
ahle consequence. Being mate a free port in 171).1, subject to 11 dinies and restrictions, it is a convenient entrepot for the linglish and other foreirn goods destined to supply the neighbouring provinces of Spaln and Africa. Tibmitar, however, Is fallen and falling as a place of eommorec: ant there is no prospect of its resival. 'Ihis decoly is owiug to a variety of canses, partly and priatio pally to the protectionist poliey of the spmina Eovermment, The exports fromi (iibraltar to the

 (69,130), in 1863. The imports from the Chitert Kiugdom are considerably larger; they amonnted to $1,24+1,2631$. in 181,$0 ; 1,169,1490^{\circ}$ in 1861 $1,141,6981$ in $186_{2}$; and 1,471, libll, in 1863. Thes
 The advantige which the possession of Gibraltar eonfers on Great Britain, thongh wholly of a political character, is most important. It is, as it were the key of the Meditermuman; and while its orenpation gives the means of eflectarlly amoving enemics in war, it athords equal facilities for tho protection of lbritish eommeree and shipping.
(iibraltar, the Culje of the (ireeks, formed with Abyla on the Africnn coast 'the pilhars of llarenles.' Its name was changed to Gibel-Tarif; or monntain of Parti, it the begiming of tho 8th century, when Tarif Ebn Zarca landed with a large army to conguer Spain, and erected : strong fortress on the monntain side. Jaring the Moorish oecupation of Spain it increased in imporiance, bit was at length taken by Ferdimand, king of Castile, in the lith century. It was soon recaptured, and did not beeone the apt panage of Spain till $146 \pm$. Its farther history till its conquest by the English in 170.4 is unimportant. During the war of the Simaish succession the Finglish and Dutelı fleets, moder Sir George liooke and the I'rince of Ilesse-Darmstait, attacked the fortress, which surrendered aftel some hours' resistimee. 'The spmiards, durima the nine following years, vainly tried to recover it; and in 1713 its pussession was secured to tho English by the peace of Utrecht. In $17: 27$ the Spaniarts blockaded it, for several months, without success. The most memorable, however, of the sieges of Gibraltar is the last, begun in $175!$ and terminated in 1783. The batteries on the rock were known to be most formidable; and yet the bold, not to say extravagant, project was entertained of attempting to silence them by the fire of ten enormons thoating batteries ingenionsly constructed by the Chevalier d'Argon. A powerful combined French and Spanish flect and army was collected to co-operate in the attack, which excited an extromolinary interest in all parts of Larofe. The grand effort was made on the 13th of Sept. $17 \mathrm{~K}^{2}$; and the only thing to be wonclered at is, that the floating latteries shoukd have ©o long resisted, as they actually did, the tremendons fire of red-hot shot to which they were exposed. At length, however, two of them took tire, and their territic explosion terminated the confliet. 'the garrison, and their gallant coramander, Sir Gilbert Elliot, afterwarls Lord Ileathlield, were not more distinguished by their brave defence than by their generous efforts to rescue their encmies from the flames and the waves. No firther attempt has been, nor is it likely will be, made to deprive us of this fortress.

Gilen, a town of France, dép. Soiret, cap. arrond. ; on the lotire, and on the high road be tween Orleans and Nevers, 37 m . SE. the former Pop. 6,528 in 1861. The town is irregnlarly built on a hill, on the summit of which is it church, and an ancient castle now serving for
the aub-prefecture, the realidence of the mayor, and the seat of a tribmal of origimal jurisilletlon. The Loire ls here crossed by a haminome atolne bridge, mud the town has a spacions quay, and a food bath estahlishment. Here nine are manilfuctures of earthemware, serge, and lenther. It has aome trale in ngricultural produce.
Gilisilins, 4 town of W. (Germaiy, HesecDurmstadt, cup. prov. Upper llesne; on the Ialin, which is here crossed by $n$ stone bridge, $4^{-} \mathrm{m}$. N. by E: Dhrmstalt, anil 49 m . ENLi. Coblent\%, on the ruilwny from Cussel to Firankfort-on-theMaine. I'op, it, 210 in |86|. The town was forneerly fortitied; but its ramparts lime heen levellenl, and their site is now lnid out in public walks. It is irregularly built; but has some good edifices, inchuding the castle, now the seat of the provincial government, the miversity, arsenal, town-hall, und a new church. (iiessen is chicdly noted for its educational establishanents, which constitute me of ita prinejpal resourees. Its milversity, fommed in 1607 , is now usually attended by between 300 and 400 students; a fow veurs ago the ortinary number was upwards of 500 . 'The town lims, besides, a teachors' seminary, several other seminarips of a smperior kinul, sehools of forest economy und midwifery; in lying-in hospital, philological institute, two public libraries, $n$ cahinet of mitural history, nud a botanie garilen. It is the residence of the govemor of Upper Hesse, the seat of a superior judicial court for the prove; a conncil of mines, board of taxation and cominittec of public instruetion. It has a few manufactures of tobaceo and woollen goods.

GILOLO, one of the Molucen islands, which see.
(iIOVENAZZO (an. Natiolum), a sea-port town of Southern Italy, prov. Bari, erp. cant., ont a high rock which advanees sufficiently into the Adrintic to alford sholter on its N. side to a comsilerable mumber of lishing boats; $9 \frac{1}{3} \mathrm{~m}$. NW. 13ari, and 4 h m. Sli. Molfetta. Pop. 9,075 in 1sity. The town is surrounded by strong turreted walls, and further defended by a enstle. Its strects are unrrow, dark, mul dirty, and crossed by frequent deep archways, which render them still inore glomy. liovenazzo is the seat of nu archlishlapric, united to that of J'erlizzi: it lans a eatheiral, three other elmirehes, several convents, two hospitals, and an asylum for foundlings. Withent the town, nu avenue of immense eypress nod pine trees, nearly a mile in length, leads to a very lavge, but dilapidated palace, formerly belonging to the Cellamare lamily.

GIKGEN'TI, a town of Sicily adjacent to the ruins of the ancient 'Axpáyas, or Aprigentum, cap. intend., in the Val di Mazzarn, 58 m . SSE: l'alermo, and 95 m . W. by N. Syracuse, lat. $37^{\circ} 19^{\prime}$ $25^{\prime \prime}$ N., long. $13^{\circ} 27^{\prime}$ 1:. P'op. 16, 412 in 1861. The moren eity stands on the slope of one of the highest hills of S . Nicily, called Monte Canisco, about $1,200 \mathrm{ft}$. ahove the sea, and nearly 4 m . from the port at the month of the small river which divides the present city from the ruins. The mole of building Girgenti, with its streets rising in terraces, and the eathedral crowning the whole, gives it an imposing aspect from the sea; but the interior is irregular and dirty most of' the strects are ill-paved, nud dithenlt of necess. Ihesides the cathedrm, there are forty-tive churches and fifteen convents, a fact which fully explains the extrnordinary number of ecelesitsties met with here, and the consequent poverty of the people. 'The cathedral, a large, licavy buidling of the 13 th century, is in the Norman style, barbaronsly mixed with a modern innitution of the Greek orders: its chief curiosity
is ant echo, or parta roce, by which a whisper is condncted from the entrance to the eombere over the high nitar ( 280 ft .). It lins a beantiful font of curved stone, nul mome piotures, one of which is n Mindonin by Ginido. Bishop Lacelesi, a great henefmetor to Eiagentl, amonig other aets of 'inIlghtened polley, foumded a semionary for the clergy, and a good publle library, to which he bequenthed a valuable collection of antique vases, roins, mind medals. The country round is delightful, producing corn, wine, and oil lin great ahnuilance, with a great varicty of fruits, as orauges, lemons, pomerramites, nimonis, \&e. The port of tiirgenti has a mule built by Charlen III. in 175it: a lighthonse hus been crected ont the mole-head, and anotior on ant niljacent clifi, bint they are so badly constructed and lighted as to be nearly useless. 'I'here are lere very extensive ctoricutori, or magazines, dur in the rock, for the warehousing of corn, consialernble quantities of which are slipped from this port, and which, umder an intelligent government, amble of calling forth the productive onergles of the comntry, might he vastly lncreased: it is, ulso, a principal port fur the shipment of sulplinr. In ordinary yenrs abont seveuty British ships clear out from Girgenti, mostly loaded with brimstone.

The macient Agrigentum was not only one of the largest nud most famons cities of Sicily, but of the nieient world. Aceording to lolybins, it surpassed most other cities in its alvantageons situation, its strength, and the bemity and grandeur of jts buidiligs. Its ruins, so interesting to the historical student for the reminiscences they suggest, and to the antiquary nud artist for their instructive lessons on nneicut architecturs, stamd between the Rupe Athenca, n high rock l: of (iirgenti, and the two branehes of the river anciently ealled Agragas, in the midst of orcharls, gardens, and groses of the most luxuriant foliage. the $S$. wall stood on a rock, having aljoiniug to it $n$ triaugular plain, in which may still be seen the tomb of 'Theron, one of the most illustrious of all the princes, or סuváarat, who ruled oven Agrifentum. (See Dionl. Sie., lib. xi.) It is abent 28 ft . high, and 15 ft . square at the base, consisting of a square pilaster on a triple plinth, with a comice, mid Hated lonic columas in the Attic story; luit Mr. Smyth descrihes it as ' neither magnifienut nor elegrant, a strange mixture of arehitectural peenliarities.' At the b. mugle of the S. wall, on a bold rock, stands the temple of Jumo, or rather the Doric columns that formed a part of it. Their sitnation on a gently swelling eminence, and surrounded by fruit trees, is highly picturesque. On the W. front a grand dightit of steps leails 11 , to the vestilule, which was sulpported by six flated Doric colnmas: at the sides are thirteen others not flited. W'ithin this temple were preserved some of the most valunble pictures of antiquity, among which was one by Zeuxis of the godidess herself. W. of thene ruins is the temple of Concord, which presents the most jerfeet specimen extunt of the carlicst epoch of Greek architecture. It is composed of a parallelogran, like the last, six columins lroad in front. and thirteen colnnins at the sides. It is peripterul, that is, has a colonnale nll romme the building. In each of the side walls of the celln are six arehed openings without any mpearnuse ol ilows, and on ench side of the transverse will of the pronaos a flight of steps leads to the summit of the architrave; the whole temple, with the exception of part of the entablature and roof, is :o nearly perfect, as to be a favourable specimen of the benuty of uninterrupted lines in architecture. Its dimensions are:-

The last king of Naples repalred the most damaged parts of this structure, and it is now used as a c'lirlstian church. Ills mome and work reporded on the front entablature in large bromzo characters, of a glariag white gromad, ill agree with the softnens and chastity of the odd bmilting. W, of the temple of Concord, and near the reaent 3, stome the temple of Herenlen; luit the fombflatuns mal one single dilapidated column are all thrt remain. Cicero (in his fourthoration ngininst. Verres) speake in rapturons terms of a atatue of the god, the thee of which had been worn by the kiswing of devotecs. Nearly oppowite the rums of the last temple, are the gigantic relanins of the tomple of the Olympinn Jhpiter, now known an il Tempio di (ijenti, which, althomgh nevor completed, was the largest religions editice of Sicily. biodorus says that it was itio ft. lonf, (it) ft. brond, and 20 (h, hight to the commencemant of the rowf hit it appenry prolmble, from at enmpurisom with other templew and their proportions, that lati wan meant insteal of tio, for the lirealth, an error that might easily have crept into the enrly mantseripts (Smyth's Sieily, p. 211) ; and an examination of the ruin Justities the supposition. Emormons bloeks of stone testify its former grandeur. One of the colnmms measured hy Russell in the uperer part of its length land flatings, the girth of wheh was 23 in ., a circomastance which foes far to confirm the statement of Diodorms, 'that a man might easily place limself in one of them.' 'The lower half of a limman face, apparently part of a statue that ormamented the pediment, measured a foot from the chin to the middle of the month, and 2 ft. serosa from check to cheek, dimensioms much larger than thone of the ligyptian Memmon in the British Maseum. (Smyth, p, 212.) The Sieilinn govermment, about the commencoment of the last centary, when the mole of the harbour was built, gave orders that the stomes of this noble ruin shonhl be removed and ased in its constraction; and this circumatance, to ngreater extent than any other, accomats for the parcity of the present remains. The dimernions of the temple, as computed by Mr. Cockerill, who devoted great labour to ascertain the facts, are as follows:-

Near these ruins are those of the temple of Vulcan, and that of Castor and I'ollux; the latter is simgular, as being the only one of the lonic order. 'lise celchrated spring of petroleum, and the tishpond excavated by the Carthaginian prisoners, after the disnsters of llimera, B.c. 480, still exist: this pond was more than 40 ft . deep (I)iodorus snys 120 ), and nhout $4,500 \mathrm{ft}$. in eircumference, and is sintel to lave amply supplied the tables of the rich and lixurious Agrigentines, of whom Plato wittily said, that ' they built as if they were going to live for ever, and ate as if directly abont to alic,

xii. 20.) The pond is now iry and used an a garden, an it was also in the time of Hontorom, who, therefore, must greatly have mistakeit its ilmennions. Ilenides the ruins thos deneribed in iletail, there are frugments dispersed over the entire alto of the cily, respectind whieh empecture lans beon busy, but which neal mo particular mentions. It is curlons, however, that in the whole spuce withha the city walls there are no mins that eans be presumad to have belonged to placen of pmblice entertninmaint. (Swinburne, ii. 2!)l.) On the whale Agrigentum may be trily said to be surpassedt by few eltien, rither in renpect to the beantilna and magniticent (irecian temples and other mitiquo momments still existlig, or the wild and romsmes suenery with which it is surrommed. (Kinssell, po 100.)

Vast as the politic revenue of $\mathbf{n}$ city mast havo been eapuble of erecting nuel splenalif structures, the wealth of its private citzens appenrs to have been atill greater than conld have been anticipated from the national magositiernce. The recounts of the riches of' (lellias, Antisthemes, and other citizens of $A$ grigentum, are such an almont tontagger belici. The former, who lived in more than regal splendour, is reported to have hal 300 wine cisterns, excavated in the rock on which the city is lmilt, kept constantly fall of the choicest wines; mal nt the marriage of the inughter of the latter, upwards of son enrriages were in the moptial processiont. The roturn of lixumaths, a victor in the chariotrace of the !2nd Olympind, was celehnated with a splembor of whicl! we com lorm no aloquate idea; in prows of which it is enough to mention, that, annug myriads more, no lewer than 300 carringes in the trinuphal procession were drawn by white horses. (Nitford's (irecee, v, 337, 8vo, ed.)

It is muel: to be regretted thint we have no authentic information as to the means by whicha such vast wealth was acipuired. No doulit, however, it mast mainly have been the result of extensive commerciai and manuliteturiag industry; for, notwithstanding its grent fertility, the territory belouring to the city was far too limited, and probably, also, too much subtivided, to allow of the accumaintion of such gigamie private fortures. It is rlenr, too, that a eity possessed of such extrnorlinary riches must have had wisely contrived institutions, and been, on the whole, well governed.

This grent city was founded, anno 580 n.c., by a colony from Giela, mother Sicilian city, which had itsell been founded by a colony of C:stans and Rhodians. (llerod. vii. i:33; Thue. vi. 4, Most probably its govermment was at tirst republicat; but it enrly beenme subject to tyrants, or princes, of which Plaharis is one of the most ancient, and also the most celelornted. The accounts of him are, however, too much mixed up with fable to be relied on After his death the republican form of govermment appears to have been restored, and maintained for a considerable period, till Theron, an able and politic citizen, ntabined to the supreme direction of athirs. This priace, having carried off the prize in the chariot race at the Olympic games, has henn the thente of the glowing eulogy of I'iudar :-
'Theron, hospttable, just, and great,
Famed Agrigentimis honour'd king,
'The prop and bulwark of her towering statel'
West's Pindar, Ode II.
And he obtained and deserved the respect and esteen of the nation by his justice and moderation, and his success in defenting, with the aid of his son-in-law Gelom, the Carthaginians in a great battle. The construction of the piscina, and of other great works at Agrigentum, has, as already
atated, been ascribed to the eaptives taken on this oceasion.

After the death of Theron, who was anceceded by his son Thrasylueus, $\boldsymbol{a}$ foulish and licentions prince, the Agrigentines once more asacrted thetr intepentence, and established a repmblican goverument. During the invasion of sicily by the Athenians, Agrigentum remained seuter, nor does history again mention it till n.t. 408, when, if we take Modorns's aceonnt, it seems to have been most flouriahing, the population being 380,000 ; Iut this, mont probably, is muen beyond the mark. At this tlme it was nttacked, and blockaded by 120,000 Cartharisians, hoaded by Hamilear, who clesired to separate Agrigentum from the cause of Syrarmse. After eight montlis' miege the inhabitants were fored by hunger to evacuate the place during the night, and made for (iela, which they renched in safety. Inmilear and his troops made Agrigentum their winter quarters, niad in the fullowing spritug, everything valuable was either taken to Carthage or sold. Timoleon, mecording to Plutureh (rnther a doubtful authority in these matters), rebuilt the city n.c. 3.10, nulf, about, 30 years aiter, the Agrigentines attempted to regain their aneient power in Sicily, but were defented by the Syracusans. Its history during the Jimic wars is very imperfeetly asertained. In the flrst, it was the ally of Carthage; and dhring the struggle which made Siclly the seat of whr, it was alternately in the hands of the llomans and Curthaginians. Its later history must be learnt by a jerusal of C'iecro's orations aguinst Verres, particularly the fourth of these eloquent invectives, Little more is known of the history of Agrlgentum.

GlRONDE, a marit. dep. of France, and the largest in the kisgrdom, in the SWV. part of which it is situated; between lat. $44^{\circ} 12^{\prime}$ and $45^{\circ} 35^{\prime} \mathrm{N}$., and long. $0^{\circ} 18^{\prime}$ and $1016^{\prime} \mathrm{W}$; having N. the restuary of the Gironde, and the dép. Charente Inférieure; E. Dordogne, and Lot-et-tiaronne; S . Landes; and W. the Athantic (Bay of Biscay). Length, N. to S. about 100 m. ; average breadth, between 50 and 60 m . Area, 974,032 hectares; pep. 667,193 in 1861. There are a few hills in the i.; but the surfice generally is level, and all its W. portion is a vast sandy flat, termed the 'Laniles,' bounded towards the sea in its whole extent, by a range of sandy downs or duues, adjacent to which extends a line of extensive lagoons and marshes. The coast has geuernlly a remarkably strnight outline, but near the $S$. extremity of the dép. it presents a considerable inlet, the Bassin d'Arcarhon, wh' 1 communicates with some of the lagoons before-mentioned, and contains numerous islands. The port of La Teste sle Buch is situated on its S. side. Chief rivers, Garonne, Dorlogne, and the Isle and Dionne, nthuents of the latter. The river or astuary of the (iironde, whence the dep. derives its name, is formed by the buion of the Garonne and Dordogne, near lBourg. It has a NNW, direction to its embouchure in the ocenn, 45 m . distant. Its breadth varies from 2 to 6 m . : at its month, however, it is only 3 m . wide. It is navignble throughout, though at some points its hed is encumbured with sandbanks. It is stated that $\mathbf{3 2 6}, 440$ heotires, or about $1-3 \mathrm{rd}$ of the dep., consists of lieaths and wastes; $2 \cdot 28,3$,3is hect, of arable lands, 138,823 hect. of vinevards, and 106,709 hect of woods. Only about hali the corn necessary for home co: umption is grown; it is eliefly wheat. The cul are of the vine is by fir the most important lanch of indastry carried on in this dép. The annoal prolnee of the wines of Gironde, the leed growths of winch are knows in Britnin liy the
reneral name of claref, amounts to about $2,500,000$ frectolltres, or about $85,0010,000 \mathrm{imp}$. gallons. 'Tha vineyarls are the proverty of alront 12, 100 fimilies, and the expenses of shelr cultivation are estimateid to amonent to 15 or 46 millions ol frmes a year. The best growthas are from the eonilnes of the ' Laisles,' behlod liorileanx; the secondary growthas are chlefly the produce of the country between the Guronne and Dordogne, und the galus, a distriot of a stronk and rich soil bordering the banks of those rivers.

The first growths of the red wines are denominated Lufitte, Latour, Châtean Minganx, ansl Hunt Brom. The first three are the produce al the distriet of Jlaul Medoe, NW. of IBordenax, and the last of the distriet ealled den Gruere, These wines are all of tho highest excellener: their proluce ts very limited, and in favourable yeurs sells at from 3,014 to 3,510 fr, the tun, which contains 210 imp gallons; hut when they have been kept in the cellar for six years the price is clonbled, so that even in Inorilemux a bottle of the best wine eamot he had for less than $6 \mathrm{fr}^{2}$. The Lafitte is the most ehoice and delicats. and is characterised by its sllky softness on the palate, and its clanming perfiune, which partaker of the nature of the vioket and the raspiderys. The Latomr han a fulter body, and, at the sanin time, a consideruble aroma, but wants the sultness of the Lafitte. The Chitean Maryaur, om the other hand, is ligliter, and possesses all the delicate quatitien of the Intitte except that it has not quite mo high a flavoirr. The llunt Briun, again, lus more spirit and body than any of the preceding, but is rough when new, and rejpures to be kept tion 7 years in the wood; while the others become fit for bottling in much less time.

Among the secondury red wines those of Rozau, Gorce, Lroville and Lorose, Brau-Mouton, PichonLongucrille, and Calon are reckoned the best. The third-rate wines comprise those called Pauilluc, Marguux, St. Jullien, St. Estèphe, and St. Fimilion. It is but seldom that any of these growths are exported in a state of purity. The inste of the English, for example, has been so much moditled by the long-eontinued use of port, that the lighter wines of the Gironde would seem to want body. Ilence it is usual for the merehants of Bordeaux to mix and prepare wines according to the markets to which they are to be sent. 'I'his the strong rough growths of the Palus and other distriets are frequently bonght up for the purpose of strengthening the ordinary wines of Medoc; and there is even a purticular mannfacture, called travail ì l'Anglaise, which consists in adding to ench hogshead of Bordeanx wine three or four gallons of Aticant or Beuicarlo, half a galton stum wine, a bottle of alcohol, and sometimes a small quantity of Hermitage. This mixture undergoes a slight degree of fermentation; and when the whole is sutheiently fretted in, it is exportel under the name of claret. This mixture elictly consists of sceondary vines, the first-rate growtlis falling far short of the decanal for them. (Henderson on Wines, p. 18.4 ; Jullien, Topographie des Vignobles, p. 2013.) Inat even the first-class wines are frequently intermixed with the best secondary growths; and it is eustomary to empley the wines of n superior to mix with and bring up those of an inferior vintuge.

The white wines of the Gironde are of two kinds: those called Graves, which have a dry. fliuty tuste, and an aroma sonewhat resemblinis cloves: of these, the principal are, Sauterne, Barsac, Preigmue, and Laxgon. These are said by Jullien to be très moellenar, on, pour mienx clire. semi-lignoreu.r, et assez spirifuen. The white wines

Some excellent fruit and fool hemp are srown in this dig. 'The forests furnishin great deal of' timber for deals and masts, together with resiln, pitch, and turpentine. The number of eomablerable properties is about the averare of the clepos. Thure are 110 mines, bint severnl furmaces and forges of considerable size, for the reluetion and manufneture of metallic prohluets. There are some atone guarries; a creat deal of goonl turf is found, hemides sami anci clay suitable for the manufacture of eurthenware; walt is obtained in the marshee of Nedos. The wetal ammal value of the minernl products is alleially estimated at abont $4, \boldsymbol{j}(11,0)+1$ ir. Manufinctures varions; they include woollen and cotton falbies, cordage, ironi, med, soppor, gold, and silver articles, ghass, pottiry ware, mul liquenes, Sugar relhers and dyenge establishments are momerons; and many merchant ahipsare bult at Bordemax and elsewhere, (For firther letails respecting the trade, which is extensive, see llonmiaux.) The dép is divided into aix arrond, dy contons, and 580 eomnumes, Chiof towns, lordeans, the cap., Jihouruc, and lhzas. This cléf. contains neveral fine Romant antiquities. It was raviured by the Saracens in the Kth, and the Sormans in the 0 th rentury: it belonged to the English from the time of Henry ll.'s marriage with Eleanor of Giniense, till it was annexed to the French crown by Charler VII.
GlliVAN, ת sen-port, market town, and par, of Scotland, eo. Ayr, on the $\mathbb{S}$. bank of the river of the same name, near its inllux into the sen, 17 if m. S. Ayr, with which it is connected by railway, and 25 m . N. Straurner. Pop. 5,121 in $180^{\circ} 1$. The town commands a beantiful view of the men, the N. coast of Irelmal, the roek of Ailsa, the Mull of Cantyre, and the various islands lying in the lirith of Clyole. 'Though large, it is meanlowking, consisting mostly of houses of one story. The inhab. are mainly employed in weaving cotton for the Paisley and Ginasow manufacturers. The people are generally poor and ill lodged, so many as two or three families being, in some instances, crowded together in one end of a house, while the other is filled with the looms oll which they work. No fewer than two-thirds of the inhab. are Jrish or of Irish extraction, attracted by the facility of learning the business of hand-loom weaving, and the misernble remuneration which it affords. It is not uncommon, while the father is working on the loom, for the mother and children to set out as beggars. While weaving is the staple business, both salmon and white fishing aflords employment to not a few, and is being prosecnted with great energy. 'J'he hinflour has been improved by the crection of a new quay; and both grain and coal are exported ton considerable extent. There are tive schools in the par., exclusive of the parochial sechool, in Whic' ten boys and ten girls are edncated grnthitously, on an endowment left by Mrs. Crawford of Aromillan. There are also two subscription and two circulating libraries, and twelve friendly societies. Girvan was erected into a bor, of barony in Jitis; but, owing to its rlimimutive size, the charter lity dormant till 1780.
(illildano (S.LN), a town of Sicily, Vnl-iliTrapani, orempluy the alte of the anchat lirys, on the sumbit of the monntaln of the same nome, 5 m. NE: hy Fi, 'Trapail, and 10 m. W'. by s. Pulermo. Jop, II,fix In |Xil|, The town has
 ali pieta. Jromita clevated situntion it commanils a the prompeet, and has a pire ntmonpliere: the inhab. empy excellent health, the women being remarkable for their bemity and elenrnesis of complexion; a ciremmatance whinh remileral it an appropriate situntion lior the temple of Vems. which existed here in antiquity. Ifons Eryx, on which the temple was lmili, rises $2,175 \mathrm{ft}$. abova the luvel of the sen, and was sulid by lolybins to be the largent momitain la sicily, bitma ex cepted; and he addes that the temple far oxcellod all the other temples in the inhmil, in milendoner,
 aferonts of the origin of this famons temple nre olasenre and comtradiafory. Aecording (1) Virgil It was fommed by dineas (ilinehi, lib, v, lin. 7t(0) ; and at all events it was extrumely anclent, as Dudalos is said to have luilt the Cyelopean walls that surromal part of the momenin, nul to hase enriched its trensury with mane cextraordinary works of art. 'I'lie voturles of the godiless, themes froquently called Vrous Firycina, incluting perwons of the highest distincton, rexintem thither in erowals, wint only from all parts of Sicily, but alses from Italy and Grecce. It was, in finct, one of the most celebrated sents of superstition, pleasire, and dissipation in the nucient worla. Aceording to Dionloris Siculas, 17 citios contribited to the support of the timple. The priestesses of thes ginhless were maves, lint some of thean becane rich enongh to purchase their freedom. Thas temple was plomilered by Hamilear, a Carthitginian general, who, being afterwards token hy the Syracisans, expinted liss ancrilege by the most cruel torments. But this seat of superstition and debauchery having lost its nttractions, Wis in Strabo's thme bearly deserted. It wns, in some measure, restored by Tiberins; but it never recovered its firmer splendour, and was in no very lengthened preriod wholly abandoned. (See the article on this temple in the learned Démuire sur Vennes, hy Larcher, pl. 188-19.4, and the authoritien referred to in it.)

- Firyx in at present an abrupt and sterile monntain, with but few vestiges of its former magniticence; those still existing are principally a lew franite pillars, and some remains of a Cyelopean wall: there is also a kibel of cistern, now try and tlled with weeds and brambles, in the castle court, called the well of Venus; and cains, vases, amphora and patera, are lrequently found, as are also many lenden bullets fur slings inseribed with imprecations.' (Sinyth, Sicily, p, 2\&:.) Will pireons atill resort to the mountan in great numbers, as in ancient times.
GIURGlivO, a town of Watlachia, on the N. lank of the Danube, opposite Rustehuk, aud 38 m . SSW. lucharest. Fistimat. poje. 10,000 . It is it misernble plaee, composed of dirty, marrow streets, and bonses built of mul, with liere and there one a little more pretending in its appearance, ormamented by a wooken verandal, It was formerly firtitied, but its rampurts were levelled by the Russians in 18:9. The coflec-honses are mumerons, and npparently adherd more comfort than the private residences, Giurgevo carries on a considerable trade with some of the Anstrian towns; and a great part of the commerce of Bueharest, at which it may be regarded as the port, Hows through it.
(ilVET, a town of France, dóp. Ardennes, cal.

Eifurntion.-The university wha fommed by
 und its privilegen lave lreen sinlsergurntly eonilmad nind extemded by roynl charters and purliamentary ntathten, the diaciphlies of the mitiversity in mhmhintered hy the conrt of the rectur (or vide-rector), allil by assemsors nomimated by him, who bave lior mony vara been the primeial und profensorn, 'The pisblie athairs of the miverwity no under the manngement of the memate, wheh in componed of the rector, denn of fachlites, the primejpal, mal all the prolenwors, the inter being :1 fin momer. The business of the college as it subortinute eorporntion, is condueted by the primeinil mul 13 profesmars, eviled the Fnenlty, who, with the rector and devir, dispense the college puiponge, The rector, who in generally an eninent literary or politieal character, who noldom rentles, or even mporiss, except at his hangurntion, is chosen numatly by the matriculated stmtents. The ofllee, which is mow one of alistinction only, hus been tilled by tharke, Alam Simith, Francis Jeflrey, Sir lioheri I'eel, ond other distimpuished men. J'here is also n sinecure oflleer, moned chancellor, nominated for life hy the semate, who is gencrally 14 noblemm of distlietion. The elancellor appoints a vice-chancellor, but neither has my rights or priviloges either in thedinejpline of the institution or in the exercine of ita patronage. In addition to the 21 grofessors, there is a lecturer ont the strmeture, functions, nud diseases af the eye. trovermment alno instituted, in 1840 , u profensorship of mechanies and eivil engineering, and culowed it with a salury of esol, a year. The principal presides as chairman at meetinge of the semite, and gonerally over the institution, and is lomorary prolessor of theology, bit teaches no class. The crown is patron of the prineipality, and of it professorshijis, including that newly instituted; the faculty, rector, and dean being patrons of the remaning 8 professorships. The professors derive their incomes purtly from the fees paid by the stulents (which vary from 2 to 5 gnineas), nnd partly from funds belonging to the college. In addition to these somrees of income, govormment ammally gives a grant, varying ia amomint, to angment the ineome of several of the chairs. It is required by law, that all the pro-
fessors be members of the established ehureh : the law, however, is not strictly enforced, except in the case of the jrincipal mul theological professors. Rellgious distinetions are of 100 conserfuence in the case of students; those ouly who belong to the untional elureh and whose parents do not live in town, are required to attend public worship in the college chupel. 'I'he curriculum, or course of study, is allivided into the four facalties of Arts, Divinity, Medicine, and Jaw ; which lust is emolned to a siugle professorship. There is only one session in the year, begiming loth Oct., ind terminating 1st May. There ar: 30 bursaries, the benelita of which are extended to (6is students. Their avernge anmunl income is $1,1 \mathrm{t} 5 \mathrm{~J}, 10 \mathrm{~s}$. 4te.; the highest is 501 . ; the lowest $4 l . \quad 10 \mathrm{~s}$. Mr. Sucll, of Warwickshire, abont a century ngo, left a lauded estate in that connty for the propose of fomading ten exhibitions in Balliol College, Oxford, in furour of students of the episcopal chureh, who have attended at least twe sessions at the University of Glargow, or one session thele and two at some other Seotch university. Anong the distingnished persons who have been educated on Suell's foundation, nay be mentioned Dr. Douglas, bishop of Salisbury, Adam Simith, und Dr. Mitthew Baillie. Each exhibition is of the yearly value of $120 /$., and lasts for ten years. As in the other Seoteh universities, there are 10 apartments for the residence of the students within the college. The number of students varies from 1,000 to 1,200 . The university library, which was lounded in the 1oth century, contanis about 70,000 volnmes, and is open to ill the students. The botanic garden attuebed to the chair of intany in the university is in the Great W. Rond, ahont 2 m . W. from the city. It ocenpies an olevated situation in the viciaity of the new coservitory. Some of the most illustrious names in the literature of Scotland have been professors in the University of Glasgow : amongst others may be specified Hutcheson, Adam Smith, Nimson, Millar, and Reid.

Auderson's University, or Andersonian Institu-
 of Nat iral Plalosophy in the University of Glasgow, who died in 17!0, leaving his etfects, including his museum and ; hilosophical apparatus, to the institution. It is under the management of $n$ large body of trustees, elected periodically. It possesses a the buikling in George Street, embracing suitable class rooms, a large hall, chemical rooms, and a museum. It consists of three distinct apartments:-1. (iencral lranches for youth, consisting of mathematies, logic and ethes, haturai philosophy, ehemistry, French,German, geography, drawing, and painting. 2. A medical school, embracing all the branches for the various colleges of surgeons, and public boards. 3. Mechanies' classes; comprising 50 lectures on mechamics and chemistry in alternate winters, and drawing. Exceptinig those in the mechanics' clusses, the leeturers pay rents for their rooms. The stafl of professors numbered 14 in 1862. There is a good library, to which the students have access. The classes for mechanics in this institution were the first established in the empire.
'The Glasgow mechanics' institution was founded, in 1823, chietly by some members of the mechanics' clas in Anderson's University, who lelt dissatislied with the management. A ticket, price 5 s., admits to the classes of nutural philosophy and chemistry, on cach of which there are courses of lectures. Mathematics and other branches are also taught. A scientificand literary reading-room is attached to the institution. The Athenieum in Ingram Street was established in 1847. Its olject is to place within reach of the public the most
recent information on all subjects of genetal interest, whether commercial, literary, or scientilie. It luss to good library, and its large liall is supplied with newspmers and other periondiend publicntions.

All immense mumber of public and private selools and aculemies, some supported in whale or in part by subseriptions, and others depending entirely on fees-are senttered over all prats of the city. But the means of elementary instruction are, nevertheless, said to be still ruther deticient
The liuplı School of Clasgow was formerly an exclusively classical seminary, with the exteption of a writing class, having 5 teachers for Latin and Greek, with 1 for writing; the time devoted to classical literature being from 5 to 6 lours daily. But in 1834 it was resolved to modify the course of instruction in the school, so as to make it more suitable to the wants of agrent manufactaring and commercial city. In consequence, the elnssicul department was limited to 2 teachers, and the time to 2 hours; and tenchers of linglisis literature, geogrnply, mathematies, modern langruages, and drawing were introduced. In 1836 n ehemical class was established; and soon afterwards this department was made to embrace natural philosopily and unturnl history.

A normal school, or a school for instructing teachers in the art of tuition, was founded by the Glasgow Educational Committee in 183if, and was the tirst seminary of the kind in Scotland. Its directors must, according to its constitution, belong to the national church; but there is no such exclusion in regard to those who are instructed in it. The fec is 31.3 s . for the course of training, which may extend over a whole year. The Free Church has, also, a well attented and efficient normal school.

Notwithstanding their devotion to commercial pursuits, the merelants of Glasgow have always been distinguished by their attention to and patronage of literature and science. The Literary and Commercial Society was established nearly a century ago, and can exhibit in the list of its members, at different times, the names of Dr. l'rancis Hutcheson, Adam Smith, Ir. Joseph Black, Mr. Millar, professor of law, and other distinguished individunls. It has, since its origin, been attended by the leading citizens of Glasgow, buth literary and commercial. In the range of its disenssions, it inchudes every subject except theolugy and party politics. T'he Glasgow Philusophical Society, instituted in 1802, is also an important associntion. The Maitland Club, instituted in Clasgow in 182s, is similar to the Bannatyne Club of Edinburgh and the Roxhuryhe Club of London, printing for the use of its members Ms's. and rare works illustrative of the early history, manmers, and literature of Scotland. It was originally limited to 50 members, but has been extended io 100. Glasgow has also two statistical societies, a geological society, and several others. In addition to those belonging to the university, to Anderson's institution, the Atheneum, and the mechanics' institute, there are numerous sabscription and circulating libraries.

Letterpress printing was not introduced into Glasgow till 1638 , mpwards of 100 years after it had heen established in Edinburgh; nor did it flourish for nearly a century after its introduction. But about the middle of last century the Messrs. Foulis raised the Glasgow press to the highest eminence, and their editions of some of the principal Greek and Latin classics are valuable alike for the benuty of their typography and theit accuracy. Glasgow is not, however, a literary mart ; and its authors usually make arrangements

Charitable and Meformatory Institutions.-The: charituble institutions of the city are too mumerons to be minutely specilied. 'Ihey comprise, amongst others, two lying-in hospitals and dispensaries, a cow-pux institution, Magdalen asylum, leaf and dumb institution, blind asylum, eye intirmary, lunatic asylam, house of refinge, humane society, \&c. In addition to Muteheson's hospital for the maintenance of decayed burgesses and their widows, and the edneation of boys, sons of burgesses, there are nimerons free schools for the poor, and similar institutions.
A regular jolice establishment was first organised in Glasgow, by act of parliament, in 1800. This was followed by a separate act for Gorbals, anuther lor Calton, is forith for Anderston, and a fifth for the river and harbour, all Included within the present parliamentary limits. These the separate and independent establishments were not found to work uniformly or satistactorily-frequent jarrings ocenrring amongst the various otheers-till the mugistrates und town comacil, in 1846, fomad it necessary to apply to parliament for a bill to abolish these sepurato jurisdietions, and unite the whole into one municipality, with ene set of magistrates and police officers: whieh bill, after comsiderable upposition, passed both honses of parliament in the summer of 1846 ; and after the election of commeillors and magistrates, in November of that year, came into operation.
The city is divided, lor police purposes, into tive districts or divisions. To ench division an assistant superintendent is attached, who is responsible to the chief superintendent for the men under his charge, and for the quict and order ol the district. In each district a police court is held every morning for the trial of effenders; one magistrate presiding in the central police court, while another magistrate holds a court in each of three other districts, at dillerent hours. A court is also heli fur the trial of offenders against the river and harbour regulations.
The prison of Glasgow consists of two branches, the north, formerly denominated the eity and conaty bridewell, situated in Duke Street,-and the sonth, in comnection with the comrt lonse, fronting the Green, or publie park. The Glasgow bridewell is said to be one of the most perfect establishments of the kind in the empire, and, aecording to the ofticial report of the inspector of prisons, it lenves, in respeet of cleanliness and economy, nothingt to desire, and is a pattern for buroue.
Harbont and Shipping. - Glasgow owes its present greatness to its ailvartageous situation on a tine river, in one of the richest coal and mineral districts in the empire. Originally, however, the Clyde was much encumbered by fords and shallows, and for a lengthened period it served rather to exciteand disappoint expectation, thata to confer any real commerisal alvantage on the city. In $166^{\circ}-$, alter several other sehenes had lailed, the magistrates of Glasgow purchased the gronnd on which Purt Glasgow ( 16 miles lower down the river). now stands, where they formed a harbour and a graving doek, the tirst work of its kiad in Scotland. For a considerable period the interconrse between Glasgow and its newly acquired port was prineipally carried on by land carriage; bat from 1665 attempts were every now and then made to deepen the river. In 1688 a guay was formed at the Broomiclaw; but even so late as 1775 no vessel drawing 6 ft . water conld reaels (ilasgow, except at spring tides. At length, however, a plan proposed in 1769 by Mr. Golburn, enginecr of

Cliester, for deepening the river to 7 ft , at neap tides, was mbpted. He proceeded to acromplish his task, partly by the employment of dredfing machines, and partly loy construsting dams and jottios, so as to conllie and strengthen the comrse of the river. These measures have since been eontinnously and energetically fillowed up, partienlarly of late years; and with such suecess that there aro now usmally 15 or 16 ft , water in the river at high water neaps. The total cost of this undertaking has been above two millions, and the work of deepening and straightening the river is atill vigoronsly prosecuted. The river, for 7 m . below the city, is very much contracted, and forms nearly a straight line; the sloping hanks, formed of whinstone, being constructed in imitation of ashlar. The accommonation for shlpping at the Broomielaw, or harbour, is now, nlso, very greatly extendel. It comprises about 55 neres of water. The quays, on both sides the river, are nearly 3 m . in length, and are amply furnished with sheds for gonds, erunes, fre., fand have the important adrantage of being directly commected, by means of the General 'Terminus line, with the varions railways that centre in the city. The revemue of the Clyde trust, in 186: , was 111,4931.

The influence of these improvements on the shipping and trade of (ilaskow has been most striking. 1)r. Clelaud says that, 'less than 50 years ago, a few grabbaris, and these only 30 or 40 tons burden, came up to Glaserow: mid I recollect the time when, for weeks together, not :i ressel of any descrijtion was to be fomme in the port of Glasgrow,' (Former and l'resent State of Glasgow, 30.) Now, however, a greater number of sailing vessels and of steamers belong to Glasgow than to any other scoteh port; and the harbour is constantly crowded with ships from foreign parts, coasting vessels, and steamers. The stean-puckets helonging to tho Clyde that ply to Liverpool, Dublin, and l3elfast, are amongst the finest vessels of their class in the empire. In all there belonged to Glasgow, on the lat January, $1810-1$, 167 sailing vessels mider b0 and 373 sniling vessels alsose 50 tons.-the former of a total burden of $5,81 i 1$, ami the latter of 191,932 tons. Of steamers there were, at the same date, 37 under 50 , and 164 above 50 tous-the former of a total burien of 1.15ti, and the latter of 63,469 tons. In the course of the year 1863 , there cleared at the port 184 British vessels, of a total burden of $65,0,933$ tous, and 4 foreign vessels, of $a$ burden of 1,634 tons. The foreign slipping, it will be seen, is but sinall.

The gross amount of enstoms duties received at varions periods exlibits the growth of the commeree of ( l angow in a striking mamer. These customs duties amounted to hat $3,121 /$. in 1812; they had risen to $16.1 \cdot 171$. in 1822; to 68,7411 . in 1832 ; to 526,101l. in 1842; to 640, 148 , in 1850; to 880, 6211 . in 1860; and to 979,9501 . in 1863. In respect to the value of exported lome produce, Glasgow ranks as the fourth port of the United Kingrdom. I'he value of such exports was $5,776,0031$. in 1862 , and 6,770,3681, in 1863.

Camals and Raihoods.-In addition to river navigation, the city enjoys the advantage of several canals and railroads. Of the former, the Forth and Clyde, generally called the Grent Canal, begim in 17tis, bat not completed till 1798, is by far the most important. It unites the two seas on the E. and W. of Scotland, extending from Grangemouth on the Frith of Forth, to Bowling lay on the Clyde, a distance of 3 s m ., with a collateral ent of $2 \frac{3}{3} \mathrm{~m}$. to l'ort Dandas, at the N. extremity of the city of Glasgow. Its medium width at the
surface is 56 ft , at the bottom 27 , and the depth of water 10 ft .; thus serving for the transit of vessels of npwaris of 100 tons burrien. The Uuion C'anal from Edinhurgh joins this canal 4 m . E. Grangemonth. The other canals are, the Monkhamd, leugth 12 m., which comects Glasgow with the coal and iron mines in the pars. of Old and New Monkland; and the Glasgow, P'aisley, nod folmastone Cmal. The depth of these eanals is fift. With regurd to railways, (ilaggow is amply furnished, and is, indect, a principal centre of railway commanication. The clty is, in fact, either the sonree or is intimately comected with all the principal Scottish lines; at the same time that she is supplied by mumurous sinaller lines with the products of the aljncent mineral and other districts. Among the prinecipal lines may be sperified the Caledonian, uniting Glaspow with Carlisle, mad consequently, with Manchester, liverpoot, and London; the lines to Edinburgh, Groenoek, and Ayr; the Scottish Central leading to Stirling, lertli, Dundee, and Aberteen. There are tive termini for diflerent railways. The Caledonian has a joint terminus with the Garukirk railway, on the north side of the city, as well as a terminius on the south side, near that of the Glasgow and South Western line.
Comımerce and Manufiactures.-l'rior to 1300, Glasgow was a fishing village, that part of it lying on the river, now the lriggate, heing ealled the Fisher Low. The business was long on a small seale, and limited to the home market; but, in 14J0, the trade of fishing and curiug salmon and lierrings for the French market was introduced; a truthe that was followed with varied suceess for uhout two centuries. Jadeed, this seems to lave been the only important brauch of business carried on here till 1638 , when a person of the name of Fileyming, and parthers, proposed to erect a weaping factory, provided the mumicipal authorities would grait them encouragement. On consideriug this offer, the town-council gave them a lease of suitable premises, for 17 years, free of rent ; an act of liberality that ran great risk of being defeated by the epposition of the freemen weavers, who protested against the grant, on the gromud that the factory would be injurious to their interests. In the end the company, to get rid of the opposition, agreed not to employ any weavers other than freemen. This was the origin of weaving hetories in Glagow. But nearly a century clapsed before the mannfacture of lawus, cambries, and sucl like fabries, was introluced. 'These, however, were extensively prodnced from about 1740 , thll the business was superseded by the introduction of the cotton manufacture.
The situation of Glasgow as to trade, in 1651, may be accurately learned from the statement of 'Tucker, who had been commissioned by Cromwell's goverument to draw up a report on the revenue of customs and excise in Scotland. 'With,' says le, speaking of (Glasgow, 'the exception of the colleginors, all the inhabitants are traders; some to Ireland, with small smidhly coals, in open boats, from four to ten tons, from whenee they bring hoopis, rungs, barrel staves, meal, onts, and butter; some to France, with phaiding, coals, and herring, from which the return is salt, pepper, raisins, and prunes; some to Norway for timber. There hath likewise been rome who ventured as far as barladoes, but the loss which they sustained by being obliged to come home late in the year, has mate then discontinue going thithor any more. The mercantile genius of the people is strong, if they were not cheeked and kept under by the shallowness of their river every day more and more increas-
ing and filliug up, so that uo vessel of any burien can come up nearer the town than 14 m ., where they mast minde, and send up their timber on rafts, and all other commonlities by 3 or 4 tons of goocls at a time, in small cobbles, or boats of 3 , 4, or 5 , and none above 6 ton a boat. There is in this phace a collector, a cheque, and four waiters, There are 12 vessels belonging to tho merchatats of this port, viz. 3 of 150 tons cach, 1 of 140,2 of $1 \mathbf{1 0} 0,1$ of 50,3 of 30,1 of 15 , and 1 of 12 , nutie of which come up to the town. 'Total 957 tons.'
A company for carrying on the whale tishery and making sonp was formed in 167.1. They employed tive ships, and had extensive premixes at Greenock for boiling blubber and curiug fish, The whale tisliery hins long been given up, but the soap manufacture has ever since been extensively carried on. This is evincel by the fact, that the quantity of soap made in Glasgow in 1818 amounted to $9,2-18,1-10 \mathrm{lbs}$. of hard, $4,2 \cdot 16,922$ llss. of soft, and $593,110 \mathrm{lbs}$. silicated soap, being nbout 2-3rls of the whole quantity of sonp mate during the same year in Scotland. The manufacture of ropes was commenced in 1696 ; and two years afterwards an act of parliament was obtained in favour of this business, imposing a duty on all roples imported from the Sound or E. seas; and, in return, the company were to advance a canital of 40,0001 . Scots, and to lring in foreigners to the work. The manufacture of ropes and cordage is now also an extensive branch of industry, in which large capitals are invested. The taining of leather and the brewiug business were introduced previously to the Únion (1707), and have ever since, particularly tho latter, formed important branclies of manufacture. Almost the whole of the Scotch ale imported into our colonies is produced at Glasgow.
But it was not till after the Union, in 1507, when the trade to the American and West Iulian colonies was, for the first time, upened to the enterprise and activity of the Scoteh, that the commercial energies of Glasgow began to be fully developal. Her merchants immediately embarked in the trade to the W. Indies and America, especially in that to Marveno nud Virgiuia; and such was the success that attended their efforts in this new department, what in a few years 'Glasgow became the grand entrepot through which the firmers general of France prineipally received their supplies of tobaceo. But for a considerable time they carried on their colonial trade in vessels chartered from Euglish perts; and it was not till 1718, that a ship, built in the Clyde, the property of Glasgow merchants, crossed the Atlantic. 'to such an extent was this liranch of commerce carried on, that. for several years prior to 1770 , the ammul import of tobaceo into the Clyde ranged from 35,000 to 45,000 hogslicads. In 1771, the quantity was 49,016 hogsheads; and in 1735, 57,143. The American war put an end to a tratfic from which Glas fow had reaped great advantages. Dhut no somer had this business been ent off than the merchants directed their energies to other channels; and found in the extension of the W. Indian trade, and still more in the introduction of the cotton manufacture, new and far more productive sources of employment and wealth. The wonderful inventions and discoveries of llargreaves, Arkwright. and Watt, powerfully attracted the attention of the more enterprising and intelligent citizens of Glasgow; nald in a few years the cotton manufacture was introluced and established. The manufacture of linens, lawns, cambrics, \&ec., having been already extensively carrimb on, the work people had little dilliculty in apply-
ing themelv time that 11 trale, and iron ore, g prosecutins for a leugth only to Mat industry. 1 seale, lier mi tion, and in fabrics slie i table, comipil Statistirs of lows the at in these vari $1863:-$

Henco it is that for a lengthened period Glasgow has been second only to Manchester in this great department of indilistry. Her cotton mills are on the largest weale, her muchinery is of the most perfect description, and in the theness of her muslins and other fabirics she is, perhaps, unrivalled. The following table, compiled from ollicial returus (Miscellaneous Statistics of the United Kingdom, Part V. 1864), slows the average wages earued by the workers in these varions branclies of industry, in the year 1863:-

miles seattered up and down in rome distant localities. There are, on the average, 25,000 persons employed in the cotton factories of Glasgow. Glusgow has likewise hecone the centre of a most extensive iron trade. The pronhetion of iron in the neighbourhood of the city exceeds that of the wholo of s . Wales. The banks of the river and the suburbs are marked by many large ship-building yards, print and dye works, cotton factories, chemical works, and by about 130 blast furnaces and iron factories; among which the most conspicuous are Napier's ship-yards, Dixon's jronworks, Napier's Vulean Fuundry, and lligginbotham's cotton factory.

The chemical works at St. Rollox, for the manufacture of sulphuric acid, chloride of lime, soda and soap, are considered the most extensive in Europe. They extend over 14 aeres of gromml, and contain upwards of 100 furnaces, retorts, or tireplaces. Distillation, the manufacture of earthenware, sugar-rething, and many minor branches of industry, are successfully prosecuted. The relutive importance of the various manufactures earried on in Glasgow may be judged, to some extent, from the export tables, which show, for the year 1863, the total value of home produce t" have been $6,763,806 \%$., in which sum cotton piece grools fignred to the amount of $2,530,7691$., hosiery and smull wares $111,989 /$., linen piece groots 18i, 607 $I$, and haberdashery and millinery $148,005 \%$. The importance of the cotton mannficture may be further seen from the fact that the exports of Glaspow represent very nearly the whole of Scothat, the exports from the kinglom, in 1863 , having been to the amomet of $2,658,405 /$. , and those of Glasgow alune $2,530,760 \%$.
Ship-building, except in respect to iron steamboats, can scarecly be said to exist in Glasgow, being ehietly confined to Patrick, Govan, Dumbarton, Bowlinin biay, Port Glasgow, antl Greenows. Sht Glasgow and the Clyde gencrally are more celebrated for the manufacture of steam machinery mad the buidding of iron steaners than perhaps any other place in the empire. They have, ansa, supplied madinery to some of the largest and finest ressels belonging to foreign powers, as well as to the navy of Grcat litain.

Progress of Population and Pauperism.-According to the hest attainable infurnation, the jop. of (ilasgow, at dillerent periods down to 1861, ha: been as follows :-

| Yearı | Inhabltanta | Years | Inhall ${ }^{\text {ants }}$ |
| :---: | :---: | :---: | :---: |
| 1560 | 4,500 | 1801 | 77.88.7 |
| 1610 | 7,644 | 18t1 | 100, ${ }^{\text {a }}$ (\% |
| 1660 | 14,1678 | 1821 | 147,043 |
| 1708 | 12,766 | 1831 | 202,426 |
| 1741 | 17.1384 | 1841 | 2S2,1:44 |
| 1768 | 2s,300 | 18.51 | 329,1197 |
| 1780 | 42,832 | 1861 | 304,864 |

It will he seen from the preceding table that during the interval between 1801 and 1861, the increase of the pop. of Chasgow has been no less than 365 per cent.-a progress wholly unexampled in any old settled country.

The increase of pops has, of course, been mainly occasioned by the still more rapid increase of wealth and employment. It has not, however, depended wholly on this; and there can be no doubt that the increase of pop. has in somedegree exceded the increased demand for labour, vast as that increase has been. This has been principally a consegmence of the prodigions intlux of labourer's from Ireland. There are, probably, but tew in-

Glasgow is not only a grand centre of the cotton mabufaeture, but if a circle with a radius of 15 m . Vol. II.

## GLASTONBURY

stunces in which the lrish have heen improved by the ehange: but they have had, partly by thic effiret of their comprtition in reducing wiges, nurl partly and prineipally hy their labituating the Stotch, throngh their example, to lecome comrented with a lower standard of comfort, the most permicionts inthene over the eondition of the Sieotel purt of the labouriag poplo. At the same time, tos, that. Irish labourers have been pouring into the rity, the wemvers, who form a large portion of the pepo, linve limi to lear in agalist the comuetition of the powr-loom. In fact, Int for the reduetion of wares weasioned by the Irish immigration, it is probable: that the race of hamilom weavers in Alasgow would have heen hearly extinct. And considering the fluetuations to which this business is exposed, the facility with which it is learmed, and the comparatively low wares which those engugerl in it have atways enrned, uns one could regret its annihilation. Wit the moment a seotel family has withirnwn from the business, its place has been supplied low an lrish one; and the extension of power-looms hats been checked by the extrome lowness of the wages paid to the lunul-loom weavers, a cleur pieture of which is given in a preceding table, drawn 11 , from oflicial documents.

In eonsequence of this depressed stato of the weaver pop., of the thactuations incident to manafacturing employment, and of the crowded, tilthy, and miscrable lodgiags oecupied by the pauper portion of the pon., dilasgow is frequently visited by the most ilestructive fevers, and the rate of mortality has of late years been very high. It is usual to aseribe moch of the want and sultering of the poor of Cilasgow, as of other great towns, to the prevalene of Irunkenness; bint it ean be shown from ollicial returus that drinking. instend of increasing, has considerably diminished.

Parliamentary Representation amd Municipal Gorernment.-l'revionsly to the Reform Aet, the representation of Glasgow was in the wrorst possible state. This great city hal bot even a representative of its own, lint was mited with the insignificant bors. of lintherglen, Renfrew, and Dumbarton, in sending a mem. to the II, of $C \therefore ;$ the vote of each of these hors, having equal weight with that of Glasgow. The Reorm Aet made an cond of this proposterons arrangement, and conferred on Glasgow the privilege of sending 2 mems, to the 11. of C. The parl. bor. includes Gorbals, Calton, Bridgeton, Alderston, Camanhic,
 tered electors in 18ijo. The corporation sevenne mnomited to $15,0.511$, in 1863-f. The gross anmull value of real property assessed to income-
 18tis. The goverument of the city is vested in a prowost num 50 comeillors.
With regard to the history of Glasgow. little need be adided to what has already been incidentally said. So insignificant nt first was this great city, that it was inchaleel in the privileged bounduries of Rutherglen, which was made a royal bor. in 1202. Nor was it till lifll that a similar privilege was conferred on (ilasgow, tiongh it had lomg enjoyed the rank and importance of $a$ bor. of hurons, originally hestowed on it by bishop Joceline about the year 117 . The see was mate arehiepisecopal towards the end of the 15 th eentury. From the time of Achains, the restorer of the hishopric, till the Reformation, Clasgow was governed by 26 bishops and 4 archbishops: and between the lieformation and the final establishment. of 1'reshytery', in 1790, ly 14 Protestant archbishops. The town was, in former times, frequently visited by the plague. Leprosy atso pre-
niled: there was a leper hospital in the fiorlats The famons (iencral Assembly of the Kirk of Senthanl, which, in 1838, dispilaced Episeupaes, deposed and excommonicated the bishops, and (istablished I'renlytury, wis hold in (ilnsgow. On the occasion of the Union, in 1707, the citizens manifested grent discontent, and comblat with diflirulty be rest rained fom ontrage ; but that event. by opening new sourcen of trule, eventually proved of the most sigmal advantage to their city, They raised 2 battulious of biol ment in lefence of tio vernment, in $1 \overline{4}+5$, lint the city was, notwitl, stamling, taken by the I'reteuter, und liad to molsmit to heary exictions. At the commentement of the American war, in 176, the citizens of tilamgow raised, at iheir own expense, a regitmem of $\mathrm{T}, 000$ men: and during the revolationary war with limaee, they kept on foot neveral regiments of volunterers.
lu more necent times the contests between masters and their workmen, resulting, on the part of the lattor, in strikes aid combinations for an alsance of wages, have been pretty fregurnt. In some instames, these strikes have bern supported with great olwtinacy; and, on one necision, they were productive of fatal results, and were fonnid to involve principles of the mosi the. structive tendeney. Among recent incidents in the listory of filasgow may be montionem tha visit of Gueen Victoria to the city on the 1 Ith of August, 18.19.
Gilasgow (Pont), See Pont Ghascow
(ALAS'TONHURY, a bor., town, and pur, of Einglamid, eo. Somerset, linud. (ilaston-twelve hides, on the lluc, 22 m . SW. Hath, and 112 m . W. by S. Lomdon, on the Dorset central railwn: P'op. of par. 3,593 , and of munic. bor. $3,496 \mathrm{~m}$ 18iti. The town is situnted in the valley which sepharates the l'oldew and Momdip Hills, and stands chiclly on a low peninsula (once the Isle of A volon) formed by the turnings of the river; it consists of two streets, the chief of which rums from E. to W'., the other from N. to S., forming the road to Bridgewater and bxeter; tund in both of these streets the fronts and other parts of many honses are composed of stome from the ruins of the alboy. Of these the most remarkable are the (icorge lnu, a eurious buildiug probably of the 13th entury. given by Ablot Solwool in 1190 to tho chamberlian of the abbey; the Tribumal, having a tine oriel window atorned with the arms of abbuts and other benefactors; the abbey-house, built in 1714 from the materials of the abbots' longings; and the great (iate-house, now one of the inns of the town. The hospital of St. John, on the Jridgewater Romi, was fommed in 1240 . The cross, now a mere ruin, stands at the intersection of the ehiof strects. Of the two parish churehes, which are both oli, that of Sit. John the lapist is remarkable for a fine lofty tower, which forms the most omamental feature of the place. The abley leslonged to the lenedictines, situated on the S. side of High Strect, was surrounded with a high wall containing about 60 acres, which, however, is now searcely traceable. The great church joined the W. froint, and was 530 ft . long; and in other parts were various lodgings for the abhot, prior, ant other inmates of the abbey: the grent hall was 111 ft . long hy 50 ft . broad. The ruins of the ehurch are extensive, and serve to grive an iden of its size. The nbbots' kitchen, which is in hetter preservation than any other part. is octagomal. and in the roof rises an octangular turret cromed with a lantern. This abbey, founded by Augustiue of Canterbury in 805 , was re-modelled and chiclly lailt during the 12 th century the hall and chapter-house being added in the 1 tith century,

'II, and pirr, of (ilaston-twelveth, and $11: \mathrm{m}$, central railway. c. lor, 3,496 in le valley which Hills, and stands e Isle of Avolon) er: it consists of from E. to ${ }^{1}$., ing the road to 11 both of these of mavy houses nis of the abibey. the (ieorge Inn. e 13th century, to the chamber, laving a tine os of abbots and se, built in 171. s' lodgings; ant the inns of the on the liridgeThe eross, now tion of the chief ches, which are ptist is remarkforms the most The ablere loon the s. side fith a ligh wall however, is naw urch joined the d in other part: loot, prior, and great hall was te ruins of thr give an idea of ieli is in better t, is octagomal. turret erownel led by Augus-e-morlelled and ry, the hall and 14th century

At the rlissuhtion of the monasteries in 15B9, the last abhot bring umbilling to surrember his nblesy. was hanged withont triah, and thenitewne gronted be bilward VI. to the Duke of Somerset. At this fime the revemes were valued at bailit. On a hill a little NE: of the town, is a euriens tower, ralled the 'Tor of St. Michanel, whlel, from its celevation and pecoliar slape, serves an a landmark in mavignting the liristol Chammel. On the W. side is a ligure of Michaed the Arehaugel.

The town has lut little trade, thomgh it lias, hesides the railway, a canal to the month of the river lime, near llighbridere, the puint where the lifuc rums inte the l'arron; it in for veswels of 70 tul(0) tons. 'limber, slate, tiles, mul coal are the principal artiches at present conveyed uon it. The hor, is sovermed ly a mayor, 1 aldermen, and 12 comeilors. The mayor wan formeriy a masistrate within the hor, and presided at quarter sessions: but, in consoquence of the remoral of the police business to Wells, the commission of prace has leen taken from (ilastombury, The local net of ol lied. Ill. is that by which the paving and lomprovement of the town is regulated. 'I'se rates heved mader this act amount to alonat efthe per amum. The poor-rates averace 1, (xiol, a yemr, find the contribution to connty rate about $2 \cdot 10 \%$. Market on Thesday, Fairs Sept. It and Uet. 11, the former being for horses and eattle.
The history of the town is intimately commeeted with that of the ablere, on which itsprosererity has mainly depended. It was burnt down in the 12th cenfury, with part of the abhey ; and, after having hen relmilt ly Inomy III, was mone more destroyed by (as is said) tus earthquake, alter which it was uradually restored, chiefly by the help of the ablerg. The abbots of filastombury lived in great splendour, and possesseal preat pulitical power: they were always parliamontary baroms. and, till 11 ad, had prowernere of all other mitrel ablots in England. Shargham I'ark, in the vicinage of this town, was formerly a manor-honse bolinging to the aboots of Gifintombury. Before the liclimmation, filastonbury was a parl. bor., and sent 2 mems. to the 11 . of C.
liLATY (Slav. K/artsko), a fortified to.,.1t of Jrossim Silesia, gov. Jreshan, cap. cire, of same mame, on the Neisse, noar the Nustrim frontior, it m. SSW. Jreslan, with which it is commeded ly railway. Jope 11.415 in 18ibl, exclusive of a gatrison of 2,162. The town is stromgly walled, and leving situated hetween two adjacent heights is farther defindeal by an ohe castle planed on one and a new and regular fort ress on the obler, li has fumr R. Catholic, aul two Lutherim churelies, a luspital, Catholic gymmasium, royal citalel, arsemal, harge barracks, and other buitings for military service. It is the residface of a military rommandant, and the reat of the conncil anil rourts of jusi ice for the cire. and town, ansl commissions for the superintendence of pubbie works and movigation. lt has manufactures of woulten doth, damasks, plush, ribands, muslius, leather, and tobaceo, and some linen-printing establishnuents. Glatz surrendered to Frederick the Gireat in !ate; it was retaken by the Anstrians in 175! Int restored to Prussia at the peace of ' 1763 .
GLOGAU (GliliA't'), a strongly fortiibed town of the Prussian dominions, prov. Silesia, gov, Liggnitz, cap. eire. of same name; on the Oder, $: 3 \mathrm{~m}$. N. Liegnito, and 83 m . SE. Frankfort-m-the-Oder, on a branch of the railway from lirankfort to lireslan. I'op. 17, 53.3 in 1861 , exclusive of garrison of 4,180 . The town is comected by a wasen bridge with the [hominsel (Cathedralisland) in the Oler, which is also fortified, lesides the cathedral it has several other J. Cath.
and I'rotestant elurehes, nud a synagegnti. It has a royal citadel mid a larere garrison, $1 ;$ lognin is the seat of the suporior jumelal rourt for lawer Silesin, of tribmans for the circle and town, a bomal of taxation, elrele council, hoard of agriculture, dee; it lats a f'utholie and a l'rotestant Fromansilm, and a sehool of midwifery. lixdeplt a large heot-roat angar establishoment, it has few mmblactories; its inhab.. among whom there aro a very large momber of dews, derive their principal resontees from the suplly of the ghrrisen, qeueral trale, and the mavigation of the Diler, Cilogan has a large corn-market. It came ints the possession of Prussin in 17.11 .
(ilol'Clisilili, a marit, eo. of kuglanal, on both sides the Sieverm, having s. the chammel of that river, the ea. Nomorset, from which it is primejpally separated by the Avon and Wilts; 1: n point of Berks and Oxford; N. Warwick and Worecster: and W. Iloreford and Momonoth
 nhout 700,0000 are arable, memong, and pasture It is naturally divided into the Viale, Cotswold, and Forest districts, The vale, whieh comprises the low lands from Siratforil-on-Avon to liristol is commonly divided into the vales of Glonerater livesham, and lierkeley: the ('otswold distriet comprises the hilly eomitry pmandel to the severn from Chipping (amblen fo Bath, dividiner the somrces of the lsis, W'inroslı, Coln, C'lurn, ame other remote feelers of the 'Thames from the Stroud and other streams flowing W. 'I'be forest distriat inchales the equater portion of the lamd on the W. side the Severn, and was formerly for the most part includel within the forest of Dean, whence its name. 'The Vale of filourester, takiner the ferm in its widest sense, is ome of the most lertile districts in the kingdom; the suil consins in pirt of a sandy loime and in part of on ra dilish elay; and the rlimate is remarkahle for its milhmess. The suil of the other two districts in, for the most part, light and eomparatively joor. Agrinulture is not 11 and alvanerel state; there is a great waste of habomr in phombing, and a reat want of an elfetive system of Aranare. 'Flore are, however, sume exceodingly probluctive meadows, especially along the bimhs of the severn below Gilonecster.
'l'his comity has been lomg fimoms for its daries, and for the permliar deseription of ehered that bears its name. The average yield of a cow in the dairies is extimaterl at from 36 to $1 \frac{1}{2}$ cwt. of eheese a year. The sheep of the Cotswohl Cils are large, and yield long combing wob: the tutal stoek of sheep in the eo, is estimated at from 5 5il,(0)01 to 600, to0 head. This is one af the principal cider cos. Estates amb firms of all sizes. Ciloncester is mot only a groma adricultural but also a great mamifacturing eo. It is erpecially famons for its manaficture of lime hamal rlotls. The princijal clothing districts are Strond. Wootom, and Inrsley. Iron ore is abmo dant int the Forest of Dean; but mot withstanding it is alsn well supplied with cona, the ironworks cancol not in it are of compaitively litfo importance. l'rincipal river the severn, whed intersects the cro: the Wye divides it from Monmonth, and the mper Avom skirts it on the N. and the lower Arom on thes. : the Isis, as alrealy stated, hats its surres in the Cotswold llills. (For an acomit of the (foncester camal and railway see following article.) Prineipal cities and towns, liristol, Kath, (iloncesl(r, Cheltenham, and Stronil G Gucestesshire is divided into 28 humds. and :3as pirs. : it roluris 1.5 moms. to the 11 . of $\mathrm{C} ., \mathrm{vi}$ fome for the ch, two rich for the eilies or Bristo and Cloncester, and the bors. of Cirencester,

Gicomessrish, a eity, wo, parl. bor., and riverport of Enghand, on the bi. lank of the Severn, locally situated in the aluve co., humbl, of Dudstome and King's Bhaton, id m. N. ly l.. Bristol, muld $98 \mathrm{~m} . \mathrm{W}$. by N. Lombon by rond, and 114 le (irent Westerin rallway. Pop, 16 ,isid in 18 sti 1. The city is situated on a high eminence, gently falling to the N. and S., mid towards the river: it ennsists of fomr principal streets, crossing each other at right angles. It pussesses some good streets, and has a general uppearame of wealth and business: The river, which is here divided into two chamels by Aluey lalanil, is crossel, at the NW. end of the eity, by two llne lrialges, one over each chamel. There are several hamalsome puldic bildings, anomg which, bevides the eathedral, the shire-hall, the tulsey or town-hall, the co, paol, and murket-house, deserve notice. The shire-hall, in which the nssizes noll comuty sessions are heli, has a fine front of sonic arehitecture, and is well ennstructed for the purposes of business. The comity gasl, built in 179, at an expense of $35,0011$. , on the side of the old enstle, covers about three acres: it was comstruetell on a plan suggested by Howari. lhut though it has heen mneh enlarged of late years, and large sums have been expended mon it, it is still objected to as being extremely deticient in the means of accommodating and elassifying prisoners. The market-honse, which is commodions and of plain exterior, cost 10,0001 . A spa having been discovered in 1814, a highly ornamental pump-room and other editices have been bnilt near it. Several of the churehes are ohl and handsome structures. The cathedral or abbey clareh, a magnificent fabrie. oceluping one side of the collegegreen, is 427 ft . in length, by 15 t in breadth. On its site was formerly a monastery of lenedictines: the present building was partly erected about 1088; hut not completer till the close of the 15th eentryy. Heace it exhibits the varions graditions of style during the great era of church architecture, frum the Normain conquest downwarls. The crypt, the nave, and north aisle being the oldest parts, are in the Anglo-Nornan style, with romil-arched wind ows; the wimbows of the south aisle, built two centurics later, are of the obtuse lancet shape; the W. front, and the contimation of the nave, erected in the 14 th enntury, exhilit a yet later and more elaborate style than the other purts. Under the tower (which is square, tlanked with four hifhly ornamented pinnacles, nud 224 ft . in height), at the l.. end of the nave, is the approach to the ehoir: and from this point is one of the best views of the interior, the highly tinishel choir, with its euriously wrought roof, forming a remarkable contrust with the simpler architecture of the have and transepts. The arching of the choir, nave, and transepts is so contrivel that, while the eye beholls the massive pillars as they braneh upwards, the whele strncture has an extranrdinary lightness and beauty. The high altar is ormmented with angels phaying on musical instruments, and tehind it is the great S. window, said to be the largest in England, and containing $2,8(1)$ spmare ft . of glass. It was set up, in the reign of Eidw. IH., and is now much mutilated. The floor in front of the altar is of
euriously paintel tiles, representing the arong of the l'hantigebets, and of the earls of Ebomester. A momument of Edward II., vear the altar, is weli carved, and in good proservation. The whuir is I. 10 ft. lomg, anil has :11 stalls oll either site, of exquisitely wrought tabernucle work. The latly: chapel, adided to the choir in 1228 , and rehuilt in 1.1118, is a peculiarly elegrant structurs, and most lugenionsly mited to the elmureh. The eloisters are remarkable for thelr rich workmanship and hemelfinl windows; they were begmul hithi, num thindiell about 1390. (See Dallawny's Anecol. Areh., pis. 38-55.)

Aloncester was made a blshop's see by Henry V1II. in 10.ll. In consequence of receit ecellisinstical changes, it is united with Bristol. The charches of St. Mary de Crypt, St. Michact, st, John, and the comparatively new one of C'liritchureh, are alt edifices ornamental to the town, There are nltogether twelve churehes, ineluding two district churches in the suburbs, one at harton Terrace, mud the other at Iligh Orehart, near the decks. The Weslegans, Jutepentents, Mhuptists, R. Catholics nod others, have also places of worship, nul there is a Jews' synagogne. Here are three fommation selools:-1. the collyge scheol, foumded by Henry VIII., held in the X. transept of the eatheiral; 2. the crypt seloonl, foumled hy Dame Cook, nad sending two exhit bitioners to l'embroke Coll., Oxforl; 3. the hluecont selond, fomiled in 16tib. Desides these, there are National, Hritish, nud other schools, which fiuruixh instruetion to great numbers of ehildren. It deserves to be mentioned, that Sumday seloos.s originated in the city in 1781. They were first suggested and set on foot liy Mr. laikes, a printer, a benerolent and intelligent individual, who rendered by this act an essentinl service to humanity. Here are fiur hospitals, of ancient monastic fouindation, used as almshouses; besides which, there is an intirmary and a lunatio asylum.
Gloncester is situated in a fertile and populous district, and enjoys an extensive command of internal mavigation. Latterly, also, its importnnee as a port has heen much increased, owing to the grater facilities given to it by the excavation of the (ilowester and Berkeley eanal, by which the intricate and, sometimes, dangerous navigation of the sievern is avoiden. This canal, openell in 1826 , is 18 m . long; it commences at sharpmesse Point, about $2 \frac{1}{2} \mathrm{~m}$. from Berkeley, and ends in a commolious basin, a little S. of Ciloncester ; it is tio ft . wide, mad being 18 ft . leep is capable of floating vessels of above 500 tons lourdeu. The sharchohlers, tinding their subseribed eapital insulficient, aplijed to government for a lonn, with the interest of which they are still burdenul. Gloucester, siace the opening of this camal, has had considerable trade with the West Indies and baltic. On the 1st of Jamary, 1864 , there brlonged to the port 270 sailing yessels under oft, and 71 above 50 tons, besides 5 steaners under and 2 albove 50 tons. The gross amunt of clistoms duties received was 79,9601 . in 1859 ; 71 , (6ry! in 1861; and 69,0331, in 1863. Gloncester is well supplied with railway accommodation, heing mited on the N. with Cheltenham, Worcester: Blirmingham, de., and on the S. with liristol and Lxeter. It is mited with the Great Western railway, and consecpuently with the metropolis, 少, cross line lending by Stroud to Swindon, tilie manufactures ot Gloucester are but inconsiderable.
(iloncester has returned two men. to the II, of C. since the $23 / \mathrm{d}$ of Edward I. I'reviously: to the passing of the Reform Act, the framelise was vested in the freemen of the bor., who became so

 The custom of borongli-linglish, whereby estates ducend wo the goumgent son, prevails here. Markets, which are well supplied, are held on Wednevday and Suturday. Finirs for eheese, enttle, horses, \&ce, are helil on April 5, July 5, Nept, 28, and Nov. 28.
The history of Gloncester carries baek to the tine of the liomans. It is mentioned in Autonine's linerary as Colowiat G/evam, and was founded by C'luadius, A.b. 44, to rejel the wild Celts of S. Wales. Joman coins and antiguities are constantly ding up near the supposed site of the ohd encampment. In Auplo-Naxon times it. surrendered to the king of Wessex in 677, being then called Gleau-cester. In the war between Rohert and William, the sons of the Normun conqueror, it was nearly destroyed, and was rebuilt, when the present cathedral was commenced. In the wars between Clonrles I. Bul his parliament the inhab. sided zenlonsly with che latter; nud hence, at the liestoration, the eity fortilientions wore urdered to be destroved. The gates comtimed to stand for many years sulseguently ; but even of these only the name remains.
(ildUCKS'SAD'T, a towis of the duchy of llonstein, Germany, in a marshy truct on the left bunk of the lilbe, about 30 m . from its month, und $26 \frac{1}{2}$ m. NW. Ilamburg, on a bramelh of the ralwny from Ilamburg to Kiel. 1'on, 5,752 in 1860 . ( $\mathrm{illitek}-$ stadt was formerly a fort ress of some strength; but, since 181-1, its works have been nearly demolished. It is regularly built and has a poos liarbour. It is traversed by several canals, hat has a very dotieient supply of good drinkable water, on which account the rain las to 're carefully preserved in cisterns. It is the seat of the comeil, and of the superior julicial conrts of the prov.; and has a sehool of navigation, and varions ofher schools. Since 1830, Glilekstalt lins been a free port, Its iuhab, are principally engaged in trude, navigation, and the Greenhand whale fishery.
tiOA, a city of Jindostan, and the cap. of the bortupuese chominions in the binst, jrov. Bejnuoor, on an isl. of the same name, at the month of the Mandona, 250 m . SSE. Bombay ; lat. $15^{\circ} 30^{\prime} \mathrm{N}$. , long. $74^{\circ} 2^{\prime} \mathrm{E}, \mathrm{P}$ (op), redueal to alont 4,000 , it having been nearly superseded hy New bos or l'anjim, built on the sea-shore about 5 m. distant, which has a pop, of' about 20,000 . 'The old city, now nlmost deserted except by priests, is ' $n$ city of charches; and the wealth of prosinces scems to lave been expented in their erection.' 'The ancient speecimens of architocture at this place far excel any thing that las been attempted in modern times in any other part of the East, both in frameur and taste. 'the chapel of the palice is built after the plan of St. I'eter's, at Rome, of which it is said to be an aceurate copy. The churel of St. Dominick is deeorated with paintings of lalian masters ; and that of the Jesuits contains the tomb of St. Francis Xavier, a semblelire of black marble, richly sculptured in his-
relief, representing varlous passages of his Ufe. Tho enthedral is worthy of one of the primelpm! cities of linnule; and the Augnstine elarich mul coment is nisi a moble pile of bulliliug. Nost of the churches are, however, going ruphlly to rula, and the ancient palace of the viecroys lans been long umocenpied; the lnibding formerly aceupied by the laquixition, thongh entire, hus beet shat ij) for many vears. (Ihechaman's Christian lieseanches, j. :2 ©

New (ion, founded early in the 18 th century, mul mow the residence of the vieeroy mind the jrineipul Portugueve inlonb, is a well-built town, the honses lecing of stome, and rouled with tikes, a ciremnstanee minsual in Hindostan. 'Ihin lavers of oyster wicll generally supply the place of ghows in the windows. A the cunscivay, 3 m . in lerigth, eonnects the town with saln ledro (the present residence of the archhishop of (ion), aud serves to shat out the sen froman extensive tract, partly in cultivation, and partly oeenjied by nalt-puts.

New Goa has a liarbour, reckoned one of tho best in India, but, daring the rainy neason, so much mut is bronchit into it by the river, that ships of large burden lind it dinllenlt to enter. Like another harbour on the S. side of Goaishand, it is defended by several liorts and batteries; both the towns are also fortillerl, lout not st rongly.
'The inlanls, of (ion are principnlly the mixed descomanis of the l'orthgnese mal the mativen, and Atrican slaves; there are some Jews; native Portupnese are few. The wholesale trade is in the limulds of tho Christian pop, the retail in those of the Jews and Ilimoo natives. Thonth formerly the eentre of enstern comunerce, Gon hiss now only un incomsiderable trude with the mother conintry and the l'ortugnese settlements in China and on the coast ol Africa. Its imports are chictly picce-goors, raw silk, ivory, sugar, woollens, shass, and a few other buroperan articles. lis exports are very tritling, und are chiefly hemp, betel nut, cowries, aul toys, beads, dec., for Alrica.

The territories possessed by Portupal in Ilindostan, exclusive of Damana and lina, are contined to the district aromal (iosi, d 10 m . in lengeth by 20 in brealth, below the $\mathrm{WF}^{\prime}$. (ilnuts, havinur N. the dom, of Sutarah, E. and S. the lbritish territories, and W. the occan ; with a total polp. of abont $4 \frac{1}{7}, 000$ inlub. (ion was taken from the IImdoo sovereifins of lijamagur by a Mohammelan prince of the bahmenee dymasty in 14ti! ; and in lislo was besieged and taken by Albuquerque, who made it the cul), of the l'ortugneno possessions in India. During the fitla century, the Portuguese were masters of a mumber of phaces on the sen-eonsts of India, lout their territories at no period extended fir inland. In 180r, tion fell into the lauds of the Engrlish, who leld it till 1815. During the late civil war in Pormgal, this colony deetared itself in fitwour of Jomas Marial.
(iGDALIMNG, it bor., town, and par, of Engrland, en. Surrey, hund. of the sime name, on the river Wey, 4 m .5 SW . truildforl, 31 m . SW. Lamdon ly roal, and 43 m . by Lomdon and soutb Western railway. l'oph of mun. bor. te, 321, anl of par. 5,75x in 1861. The town, siluated in a valley, is nearly surrommed hy high und steep ground. It consists pribcipally of one street, which extends abont $\frac{3}{4} \mathrm{~m}$. along the high road from London to Portsmouth, hat it is marrow, bally paved, and insuthiciently lighted. The village of Crownpits stamls about $\ddagger \mathrm{m}$. SE., and that of Ferncomb abont the same dhstance NE: of the town: and both are nearly united to it by houses. The chureh is spmeious, with alofty stemple eontaining eight bells: the living a viearage in the patromare of the Dem of Silisbury. There are
places of worship for Wewleyun Molloshists, Itanlists, Imiependents mill (quakers, On the common, nhont 1 m . from the town, is an almahone for ten ohl men, fommed th lie:s. The britge, which is of brick nud stome, was upenoil in lixis. Attached to tho chareh in a groed charity sehono, and there ure: xeveral Sumday sehools in the town.
( iodalming, anciently a clothing town of some mote, at present possesses very little limportanee byound being a place of considerable thoromghtiare. There are four or tive mills on the river for the mandineture of paper, parchment, and lenther: and the manufactory of eotton ntwekingy gives employment to a few persolas. Timber, binck, allil lopis are experted. The river Wey is made navi-
 and emals are brohght witere in considernble quantities.
'The ohl eorporation of this town comsivted of at warient and rifht assistants, and was chietly govermed hy a charter granted in the INth of Charles 11. The preselt gavermment is vested in fomr nldormen (one beige waten) and twonty-one conneillors. The lowal aet, regnlating the paving, sibe, of the town, is the bith of lieorge IV.; nal the rates levied ander it avernere abont : $: 116$, a Year. Markets on Saturiay: fairs for horses abl firming stuek, lich. 13 mid July 10.
(iobavblif, atemsideruble river of llimiostan, throngh the central part of which it thows, extending throngh nenrly 10 of lomg. Its comerse lies hetweren those af the Norbmida mad Nabiamully on the N., and the Krithmon the S., chietly thromph the dominions of the rajah of lerar. it rises by bumeroms streams in the W. Ghamts, about lat. $21^{\circ}$ N. and lour. $71^{\circ}$ bi, and runs in a direction \&encrally E.., but with a slight inclination sonthwarl, to near long. $80^{\circ}$ İ. From thim promt, it lows mastly NLi. for abont 60 m., bomatins the pow. Hyderabad NE.., und separaten near limahmandy (N. Circars) into two arms, which fall into the ' Bay of Bengal, between lat. $16^{\circ} 20^{\prime}$ and $1 t^{\circ} \cdot 10^{\prime}$, enclosing a fertile delta, with ant area if' about otto ng. in. 'The entire length of' the Gonlavery is estimated at abont 800 m ., and during the riny season it is in many parts is m. wide. Its elinif allhents are the Wynegmugn, with its muncrons tributarios, from the N., and the Mangera lirom the $S$. Its banks abomed with timber, but no vary inportant towas are situated on them.
(iOLCOND)A, it town and fortress of IIBdostan, prov. Il yderabal, on a hill abont 3 m . W. of the city of that name, and formerly the cap, of an extensive llindow kiugrlom, It is chiefly noterl as a depoit for dianomuls, which are bronght to it to be polished and prepared fire sale from ofher marts, mostly in the lbahoghat districes. Its immedinte vicinity coutains no diamond mines.
(iolinliblig, a town of l'russian Silesia, gov. Jiegnit\%, eap. cire. of (ioldberg-Hanan ; on the Katzhneh, a tributary of the Oiler, at the foot of the Rissengebirge, $\mathbf{j} 3 \mathrm{~m}$. SW. by W. Liegnitz. Pop. 6,tise in 1861. The town is the seat of the conncil and julicial courts for the circle and town, aud has a light sehool (bürger selule) at which Whallenstein was edncated. The inhabitants are chietly ocenpied in weaving woolten cloth, lut lave inso manufactures of thamels, woollen stockings, gloves, and considernble dye-works. The town derived its name from a neighbouring goldmine, now abandoned, but formerly very produetive. The lamet of Wahlstadt, abont 6 m . E. of this town, is memorable in Prussian history for the decisive and important victory gained on the elth of August, 1813, by Marsinai Bhecher and the lamblwehr under his command over the French under Macdunald. The latter lost $\mathbf{1 5 , 0 0 0}$
ment, killed and wommed, and 102 piseen of cutinom fell linto the hamds of the eongueroms.
cioliNl'Th, a market town of Himgary. en, Ziрs, ?:2 The town is the sent of " mining eonncil and trilumal, mul has considerable mines of front ami enpler, Iron firgen, and entlery mal iron-wire fine torios, Its inhabitants are partly Lom. Catholles and purtly of the lisfurmen Chureh.

 of l'epsin, prov. K'roman, but at present belongriar to the lmim of Mnseat, on the I'ersian Siuli, nearly opposite the ishme of Ormixa, sund liatm, S. Kerman. I'gj, from d,000 to $\delta, 01010$, chictly l'ersinus, Arabs, and Kuris, with a few Armenlenis and Itedonins. 'Ithe town stands out a sloger npproneling the noa, in a barren abal desolate combtry: it is nhout three-fourthe of a mile in rive., aid surromadod by a mai wall. The houses are fiew and wretelually comstricted, and the pepple
 have beed a town of very little improthane lurfore lise2, when shath Ahas, asslated hy the liuplish, Arove the I'ortuguese from the ishint of thom, nud trmasforral the commerce to this port. Instend of being earried hy vea ip to linpornh and the $N$. parts of the gulf, many of the imports from limia mad Afrien were now lamded at (iombroon, and transported by caravain to the interior, sa that it became for a inne the poporium of l'ersia. The
 had large factories here; but towards the close of the seventernth eantury, the ronte to the interion having become interrapted ly wars and eommotimes, the factories were left to deeay or destruction. and the Einropenn merehants remoned to Ihashire, now the centre of the trade. Some remanins of the Puglish fuetory still exist, but the Dutel is the only one in a tolerable state of preservation: it is
 ( iombrion nyprars to present more natural ulvantages for a commereinl town than Bushire, the ronte from it leading liy natural pasese into the heart of Persia; and when, some years aro, linshire remuined in a disturbed state, comuncre spuedily foumd its way again into this chamul. liven now its trade is considerable, mind is said to be inerensing. Jersian carpets, tobaceo, and dried fruits form its exports; its impurts are chictly piere goods, Indian clotlis, mul Chima ware, Thie Imán collects a revelue of from 8,1010 to $10,0(4)$ clolls, a year from the town. Immediately without the walls are the cemeteries of the former Eurawem inhabitants, and in their neighbourhomed are some very extensive tanks exeavated ly the lortuguese, the lemgth of the largest of which has been estimated at $\$ \mathrm{~m}$. (Whitelock; Kempthorne in (ieor. Jomrmal, v. and viii.)

GOSI.Alt, in town of the $k$. of Illinver, dintr. Ililiasheins, on the (iose, a tributary of the Guher, nt the Nli, font of the llara, 41 th , Sher Ilunower, near the rallway from IInnover to Itaralurg. Pop. 7,118 in 18isl. Goslar is ono of the mont theipht towne of Gormany, and whe, till 18thl, a froe town of the empire; often the residence of the emperor, and formerly the sent of the allet. It is walled, unil han a very antigue appearance, Like mont old towns its futerion is gloomy i nall the streets marrow, erooked, mul dirty. lif grentest curiosity, a eathedral linished in lobit, was almont wholl: julled down in 1820 ; litle now remuining of it except a snall ehapel, contalning an aucient Naxom altar, and some other euriositlen. l'art of a palace, luilt In the 9th or 10th ceutury, is now used ins an corn-warehouse, Gonlar is tho sent of the mining council for tho liars, and of the corn magnaines for the same district. It lins revernl churchen, an hospital, fymmasium, several brewries, the heer of which enjoys great celebrity; manutinetures of vitriol, sheet lead, shot, copper, nal iron wares. Most of the inhali, are latherans, and cimployed in the mines of the Rammelsberg, about 1 m . from the town.
(iOSI'ORT, a sea-port and market town of Fuglaul, co. IIants, hund. Tichtleld, par. Alverstoke, opposite to and separated from lortamonth by the montli of lortsmonth harbour, 14 m . SL. Southanpton, anil 89 m . SW. Lobilon ly Lomion and Suath Western railway. 1'op. 7,780 in 1861. The town is auroumiter by fortflentions, which appear to be a segment of those of I'ortsmonth. 'These fortitications inelude, not only the town of (iosjort, bat the govermment establishment of Weovil, separated from the former by enclosed fields. Gosport and Weovil together vecupy the F. extremity of a poiat of land between two inlets of Portsmonth harbour; the northern of which is called Forton Lake, and the southern, Haslar or Alverstoke Lake. The town consists chietly of one broad street, containing many hood housen, running $W$. from the shore throngh its whole extent; one or two other streets runining parallel with the former; and several more crossing them mostly at right angles. It is in general pretty well built and paved, clean, well lighted with gas, nud well supplied with water. Towards its $\mathbf{N}$. side, it has a tolerably good square, termed Cold Harbour: it has few public buildings worthy of rema.k. The chureh, a neat and spacious edifice, is a curacy of Alverstoke: there are Independent, Rom. Catholic, Baptist, and Methodist chapels, an neademy for ministers of the first-mentioned sect, several charity sehools, some almshouses for poor widows, an extensive bridewell. and an assemblyroom at the principal hotel. A large building was, in 1811, crected lyy shares, in a conspienous situntion on the shore, for a market-honse; hut it proved a losing speculation, and is no longer tevoted to that purpose. Its lower part has long been shat up; its upper part is at present used for the meetings of the Ferry Committee and the

Phifomophinal Soelely, The town is quite open on the side of the hurbour? there is a flonthing liridgere proprelled hy ateam, nimi of large llmeukions, fir the conseg'une of foris and passengers to l'urtsmonth.

lued very eapricions, the fish altemately swarming on, or altogether deserting the const. Since 1812 they have entirely tixapıeared; so that (iottenburg, instend of exporting, at present im[wrts considerable supp, ies of herrings.

There belonged to the port, in 1860 , exclasive of river cratt, 145 ships, measuring 41,200 toms (Consular P(jwirt). The opening of the (ibtha emal, by which Gottenlumrer commumicates with a large part of the interior of sweden by means of un extensive system of inland navigation (respecting which, see Sivinen), has exereisel a material and bencticial influence upon its commercial destinies, Still more important has been the censtruction of a railivay to Stockhelm, undertuken at the cost of the government, and opened in 186\%. The trude with Enghand is extensive, und Euglish is genernlly understood in liottenburg. Steamers riul once a week between (iottenhurg and Hull for eight months of the yeur ; but in winter intercourse takes place only by the tedions route of Labeck and Hamburg. (foods may be bonled for any length of time in the warchouses of the city, on payment of $\frac{t}{2}$ per cent. ad valorem.

Gottenburg is the sec of a bishop, the residence of a military goverior, mul the seat of virious courts of justice, and a clumber of manufactures. It has an acalemy of sciences and literature, incorporated 1775. It was built on its present site ly Ginstaphus Allol chus, in 1611.

GOI"INGEN, a town of W. (iermany, $k$. Hanover, caj, prine, of same name, distr, Hildesheim, on the railway from LIanover to Cassel; 5 sm . S. Hanover, and 24 m . NE. Cassel. Pop. 10,516 in $181 ; 1$. The town is pleasantly situated on the banks of the Leine, in a benutiful and fortile valley, 512 ft . above the sea, at the foot of the momitain of Hainberg. It is divisled into three parts, the old und new town, und Masch is walled round, and has four gates. The ramparts are planted with trees, and form a pleasant walk for the inhab. Streets broall and well paved; but the honses, though old, appear neither venerable nor picturesque. There uro three squares, the largest being the market-place, with a handsome enplanale and fomitain in the centre, three Lutheran ehurches, a lieformed chureh, and a Rom. Cath, chapel, The eliurch of St. John's has two steeples, each 200 ft . high; and St. James's is 300 ft . high. The University church was opened in 1822. The other chief buililings ure, the university-hall, tinished in 1837; the court of justice; the lying-in hospital; the observatory, in the Sb. suburb of the town ; and the theatre of anatomy: of these, the first and last two are chaste and elegrant strnctures. A sehool of industry was founded in 178 . F . The trade of the place, independently of the university, is quite insignilicant; the sale of books, and the manufacture of tobaceo-pipes, are the only thriving branches.

The university, founded by George II. in 1734, nnd chartered in 1736, as the Acudemia Georgia Augusta, with an endowment ont of the revenues of some secularised monastic property, was, down to 1881, fully entitled to its apjellation, 'the queen of German universities, both on account of the celebrity of its professors, and the number of students flocking thither from all parts of Etrope. It is chietly indebted for its early prosperity to the fostering care of its first curator, Baron Munchausen, the king's home minister; and its subsequent success has been owing to the julicious liberality of its sovereigns, who, while cantionsly watching its progressive efliciency, huve not changed the direction of their bounty, or
doled ont its supplies with a niggard hand. The first course of lectures was begum by (iehnuer the civilinn, in 1ailt; and in the century since elnpsed no less than 230 jrofensors have given instruction, most of them in every lirmich, possensing is himher degree of talent than those attuched to any uther university in the comitry: among these were Ilcunann, Mishcim, Schlemster, Michnelis, Bichhorn anal Ewald, in theolegy; (iehauer, Spangenherg, Wahl, Hugo, ant llergmann, in law; (iesuer, Huyne, Schlikzer, Nuller, tirimm, and Heeren, in philology and history; Ilnller, 1Humenbach, Langenbeek, Sehrioder, lindinger, Conrudi, and Osiander, in medical seience; (imelin and Stromeyer, in chemistry; Zenm, Hofinnun, and Selirader, in botany. The entire nomber of mintriculated students duriug the lirst century of the mivernity's existence was $8!, 7 i l l$; the greatest attendance being between 1822 mid 1826 , when the average was $1,48 \mathrm{~L}$ ammully. Since $18 ; 31$, however, in consequence of the politienl disturbances at (ibttingen, in which the professors mud students were implicated, the university lus fillent into disrepute, and the number of students has greatly declined. The oppressive measures of King Ernest in 18:17, which drove (irinm, bwal, Dahlmann, and other professors, to other mivernities, still further injured it. The gross anumal expenditure of the university is abont 160,000 thakers (about 50,000l.), nearly half of which goes to enrich the library and musenm, the rest being divided among about :32 ordinary professors, whose salaries vary from 80l, to $350 l$ a year. The prolessors altogether, including private tutors (privatim docentes), are reckoned at ninety. The students in Göttiugen are not compelled to resite within college, nor tied to stated hours of diselipline, nor forced to oaths of orthodoxy ; each student may live in any part of the town he likes, take lis meals how, when, and where he pleases. and even pursue his own course in the choice of his academical studies. Their age at entrance varies from seventeen to twenty, and they usnally continue here for fonr years, the periods of study occupying ten months in each year; the winter semester lasts from Oct. to March, that in the summer from April till the end of Ang. There is a preliminary examination for the llanoverian students, called Muturitäts-präfing, which all must pass who wish to serve the state in the leamed professions. This probation, however, is not required of foreigners. The matriculation fee is one louis-1l'or, or 17 s ., and this admits to the use of the library and to attend lectures. Of the lectures, some are public, and may be attended without any alditional fee; but the greater number are private, the fice being a louis-d'or for each semestral course of daily lectures. The medical fees are higher. Many of these lectures are delivered in public anditories, especially those of the medical faculty; some professors have private class-rooms. The medical and public lectures are very mumerously attended : the attemance of the rest varies from fifty to twelve. Not less than 140 courses are delivered by the whole body of teachers during each semester, and several have two or three courses on dillerant snbjects proceeding contemporaneously. The expeuses of students greatly depend on their habits. Saalfeld, in his edition of 'l'itter's History of the University, mentions 360 thalers a year as sutficient for respectable maintenance; but this is too low a calculation, 400 or 430 thalers (about 901 .) being, it is alleged, the lowest sum that can be spent consistently with comfort aud couvenience for study: For the poorer scholars there are 204 F'reitischstellen, or sizarships (sums paid for board), and a

number of scholarships (Stipendien). With reference to degrees, tho university is composed of fuar haculties-divinity, law, metheine, and philosuphy, each of which confers its own degrees, The finulty of divinity conters the degree of ticentiate in theology und doctor of divinity; that of haw, the degree of doctor of haws; hat of mudicine ereatess doetors of medicine; while the philosophical faculty confers the dergree of doetor of plialoscopliy and master of arts. All these degrees ure consequent on dispmontions nud examimations approved by the deans of the respective fienultes. These degrees, however, though generally pro-requisites, confer of themselves not right of practising the learned protiesstons in Ilanover. This is gained by a subsernent government examination. The members of these faculties consist ultogether of twenty professors, from whom ten are chosen to form the Sinaths Aeademichs. 'The judicial govermment of the university, which arknewledges no comtrol beyond that of the kiug of llanover, its rector magnificemtissimes, and his two curntors, who appuint the sularied professors, is conducted by the pro-rector, or prineijnal, an oflicer clected pach semester by the professors from anomg themselves, who is assisted in his duties hy two juilyes, a secretary and recorler, all of whom, likewise, are protessurs.
The chief academic establishments of (fïttingen are, -1 . The library, consisting of 320,000 printed breks and 5,000 insis., admirably selected and arrangel, to whieh the stadents have finl aceess, with the additional privilege of taking the bowks home; 2. The academical museum (fonided in 17.3, and removed to its present depository in 1793), consisting of fourteen rooms, filled with sereral thonsand specimens of zoology, mineralogy, und geology, besides others explamatory of the mamers and costoms of diflerent nations, and a curions enllection of models; 3. The observatory, first erected in 1751, and removed to its present site in 1816, containing an apparatus of excellent modern instruments, fand every aceommodation for astronomical observers; 4. The botanic garden, tirst laid out wuder Inaller's superintendence in 1739, but now more than quadrupled in extent, and provided siluce its removal with beautiful green-houses, adapted to plants of all tumperatures, and ponds for aquatic plants; 5 . The chemical laboratory, constructed by Gimelin, and perfected by Stromeyer, who provided it with an appuratuis for experimental students; 6 . 'the seheol of auatomy, first established by Hatler in 1738, and since 1829 held in a tine building containing a spacious theatre and dissectingroums; 7. Two intirmaries for medical and surgical eases, and a lying-in hospital, accommodating about 120 pregant women a year; 8. The spruch-Kollegium, or ceurt of equity, composed of a president and severnl subordinate members appointed by government, which serves the double purpase of a court of judicial advisers in legal questions sent from all parts of Germany, and of a school for the legal students; 9. The Ilomiletic seminary, for the instruction of divinity students in preaching and pastoral duties; 10. The plitologieal seminary, founded by Gesner in 1737, and under the direction of three professers, which gives minute philological instruetion to cleven stipendiary stulents (paid fifty thaters each every year), and as many more as the director pleases to admit, after the requisite examination. The last three establishments have been eminently successful in raising up useful and able men in the professions to which their instruction leads. Nearly comnected with the university is the Royni Society of Sciences, established by George
11. in 1751, on a plan suggested by Haller, ant well known to the sacans of kuronic. Its transaetions are published in latin, and may be considered a repertory of all the original views in literature mid science started in (iiittingen by the professors of the medical and phiterephical fatmlies. An anmal prize of tifty ducats (2:41) is 'pen to persons of every country fir the best essay on mathematles, physics, and history altermately. This society is the patron and supreintenlent of the Gïttingen Literary lieview (Giottingisehe gelehrte Anzeigen), which, having risen to eminence under the editurship of Haller, has since been conducted by Heyne, Riehhorn, and Heeren. Two large 8vo, vols, are published yearly, and the work has throughout leen distinguished not only for exulted talent, but for a tome of moderatioit and strict medheremee to truth. These gualities alone have emabled it to outhive the various and important political changes of tho comerry.

GOT'ILAND, an islamd of the daltic. belonging to Sweden, in the lime of the same name. lying between, lat. $56^{\circ} 5 z^{\prime}$ mad $25^{\circ} \quad 5 t^{\prime} N$. , and between $15^{\circ} 0^{\prime}$ mal $1 y^{\circ} 8^{\prime} \mathrm{F} .$. , dist, 60 mm . from the continent of Sweden. (ireatest length 75 m .; ditto breadth, 26 m . Area, $1,194 \mathrm{sk} . \mathrm{m}$. I'ol. of the Lha, sometimes called Wisby LiAn, which includes the small surroming ishands, $4!, 575 \mathrm{in}$ Letio. This island presents the apparmace of a large platean, vurying from 150 ft , to 200 ft . above the sea. Its sides, which in some places gently slope towaris the sea, are so steep and precipitoms in others, as to look like artiticial walls. The coasts are imdentel by several bays, the largest of which are Kapellamen on the X. and Slitehamn on the E. The high lamas, except the barren summits of Thorsburg and llohurg. are generally well wooded. There are several small lakes. The rivers are few and ineonsiderable. In some , parts swampsoceur, but of no preat extent. The genlogical featires of the island, though gencrally ealeareons, vary extremely, esplecially in the $\$$., where aecur large masses of hard grey sandstone containing mica, and suseeptible of a ligh polish. The soil is either calcarecons or sandy, and would be very productive it better cultivated. The chief products are wheat, barley, oats, turnijus, potatues, and hops, which are grown only for home consumption. The forest trees are large and handsome, and they furnish timber for exportution. The only other exports ure marble, sandstone, and lime, which are sent to Stuckiolm. The rearing of cattle oecupics a considerable share of the people's attention. Horses, goats, and sheen are reared in large mumbers; and the breed of sleep has been improved by the introluction of Merinos. Game is very plentiful. There are no manufactures on the island. The Liin, of whieh Gottland forms a part, is divided into 20 distriets; and the sea-port town of Wisby, on the W. side of the island, is the capital.
The epoch of the feundation of Wisby is uncertain; but during the 14th and 15 th centuries it was a principal factory of the Hanseatic League, and attained to considerable wealth and importance. It is famens in the history of maritime jurisprudence, for the Cude of Sea Laws whieh bears its name. The date of this compilation is uncertain, and some of the northern jurists centend that the Laws of Wisly are older than the Kules of Oleron; but it has been repeatedly shown that there is no foumdation for this statement. Grotius has spoken of the Laws of Wisby in the most landatory manner. 'Que de maritimis negotiis,' says he, 'insnla Gothlandiac habitatoribus
placuermat, tantum in se hubunt, tum equitativ, tum prulentiar, ut omues oceuni accolde co, non tampam proprio, sed velut gertium jure atantur.' (l'rolegomena ad l'rocophan, j. 64.) The text of these baws, with a translation and an elaborate introdontion and notes, is glven in the excellent Collection des Loix Maritimes of M. l'ardessus (i. pp. (205-502).

In 1A151, Vladimir Ill., king of Denmark, took Giottland from the Swedes. lly the treaty of 1tilt, it agrain hecane their property; and shace then has contimed in thelr prossession, with the exception of a short period in 1807, when it was occupind by the Russians.
GOUDA, or'TERGOUW, a town of S. IIolland, calp. cant., on the Yssel, at the intlux of the Gouw, 103 m . NE. Liotterdam, oll the railwny from liotterdam to Utrecht. Pop. 15,205 in 1sili. Gouda is a neat town, with beantifully wooded cuvirons. It is known only in Jinglanid by its ehecses and tobaceo pipes; but in Jlulland it is famed for its painted windows, chietly the work of the two brothers Krabeth, and reckoned the finest specimens of their kind in burope. They are the windows of the old chnreh of St. John, a large gotlice strueture, kept in excellent repair, and particularly cleau. The windows are 31 in mumber, each ineasuriug about 30 ft. in lefight, with the exception of those of the trannepts, which are unarly double that altitude, and all illuminated with pietorial representations, in colours of the most brillimut lues. 'The subjects are either seriptural or allegorical, and are fill of figures, whose robes in blue, purple, and red, sline with extroordinary lustre. The faces are the best part of the execntion, the remainder of the tigures being painted in a stiff und fonnal style, thongh nevertheless interesting from their antiquity. Besides the large windows, there are several of a smaller size, chietly blazomed with the coats of arms of the old Netherlandish nobility. These paintings were mostly exccuted in the 15 th and J6th centuries; and amongst others ure introbliced portraits of Philip II. and the l)uke of Alva. Besides St. Johis's (the eathedral) there are 4 other churches in Goula; and it has, also, a handsome town-hall, an hospital for men, an orphan asylum, and a foundling hospital. A Latin school, and a library containing several curions MSS., belong to the town. There are upswards of 120 tobaceo manufnctorics in Gouda, some employing 30 workmen; and mumerous brick kilns in its neighbourhood. It has manufiactures of woollen cloth, saileloth, and corilage, and large markets for checse, thax, hemp, corn, timber, and other produce.

GOUR (probably the Ganga Regia of Ptolemy), a ruined eity of Hindostan, and the ancient cap. of Bengal, distr. Dinagepoor, on the E. side of the Ganges, about 50 m . N. by W. Moorshedabad; lat. $24^{\circ} \mathrm{E} 3^{\prime}$ N., long. $88^{\circ} 14^{\prime} \mathrm{E}$. . Its ruins extend in a direction NNW. to SSE., coincident with the ancient bed of the Ganges, the main stream of which formerly washed its ramparts; at present, however, from a change in the course of the river upwards of 200 years ago, no part of the ruins is less than 4 m. , while other parts are as much as 12 m . froni the Ganges. The city appears, from the extent of the old embankments, which enclosed it on every side, to have been 10 m . long, and from 1 to $1 \frac{1}{2} \mathrm{~m}$. broal. Lheyond those boundaries, however, a smaller embankment has been carricd forward for 7 m . further $S$., in which space are found mosques, tanks, and the remains of habitations; and the same indications ore evident for 2 m . to the N . The city and its suburbs thus extended in length about 19 m .,
with an average breadtl of about is in.; and, aceoriling to the estimates of both Major liemell and Mr. Creighton, would appear to lave anciently oceupied an area of 180 sq . in.! The cinbumkments surrommding the city, some of which are facel with bricks, were sumleient to ghard it from floods during the inumdation, and a groml defence against liostile attacks: they ure momuls of carth from 30 to 10 ft . hisht, and 1310 to 200 ft . in brealth at their base, with broad ilitehes on their ontside. Adidional embankments wore male on the E. sile, probably for greater sceurity ngainst a large lake in that quarter, which in stormy weather dashes with great violence against them. 'Iwo high brick gateways, in an imposing style of architecture, ut the $N$. and $S$. ends of the city, and several others, are still ntanding, and the remains of some that have been destroyed are still traceable. T'wo grand ronds, vaised with earth, and paved with brick, led through the city in its whole length, crossing in their course various canals and drains, by means of bridges of brick, the ruins of several of which remain in some degree of perfection. The whole area of the city is furnished with a multitude of tanks, of various sizes, and intersected with drains and ditches in every direction. On the earth thrown up in forming these, which raised the rround consiterably above its previous level, the honses, \&c. were built as in the cities and vilhages of Erypt ; the excavations supplying good water, sufficient for every purpose. Gue of these reservoirs is a mile in leugth by half a mile brond, and there are several others of consillerable size. All of them are, however, overgrown with reeds and swarm with alligators and other reptiles. Towards the centre of the city is the fort, an inclosure rather less than a mile in length by nbont $\frac{1}{2}$ a nu. in breadth, surromded with nu earth rampart, 40 lt. high, with bastions, and a deep diteh encireling it. The handsome gate, flanked by two towers, forming its N. entrance, is still standing. Within this euclosure is part of a brick wall, 42 ft . ligh, which surroumded n space 700 yards lomg by 300 wide, supposed to have been ocetpied by the palace. Few other remains of that edifice exist, and the whole site is so coverel with trees and brambles, as to renter it not only diffieult but dangerous to explore, from the number of tigers and other wild beasts that infest it.

I'licre are scarcely any antiquities of a remote date extant at Gour ; most of the buildings that remain are of Mohammedan origin, erected, indeed, with the materials of the ancient IIindoo edifices. 'Toiling through bush and long grass, now crossing a field that some ryot has farmed, now wading through pools of water, or ferrying across them, you make your way from point to point, and find only the ruins of seven or eight mosques, the halfbroken down walls of a large Moorish fortress, and two strikingly grand and lofty gates of a citadel evidently built by Mohammedans.' (Sketches of India, p. 145.) Of the religious edifices, the finest and largest is the 'Great Golden Mosque.' This buiding, situated N. of the fort, is 170 ft . long, by 76 ft . broad, and 20 ft . high, exclusive of the domes, of which there are 44, rising 10 ft . above the roof. (Creighton, Pl. V.) Its walls are 8 ft . thick; it is built of briek, and has been wholly cased with hornblende, little of which is now remaining. Eleven painted arches open into am arena divided by another similar row of arches, and 20 stone pillars arranged in 2 rows, into 4 aisles, each surmounted by 11 domes. This beautiful edifice is now going rapidly to decay, not only from the effects of wanton dilapidations, but also from banian and other trees insinuating their roots be-

(Sketches of difices, the finest Mosque.' This is 170 ft . long, exclusive of the sing 10 ft . abore s walls are 8 ft . as been wholly thich is now res open into an W of arches, and ws, into 4 aisles This beautiful y, not only from os, but also from g their roots be-
tweren the bricks of which It is composed. The small 'Golden Mosque' is built and eased in a sunewhit similar style, lut has only 5 arehes in front, and 3 aisles insteal of 4. Many of the inferior mostiles are in higher preservation than the finst mentioned; their domes are still jerfeet, and lined within ly tiles painted of the most vivid colours, and highly ghted; and one of the smallest has a tessellated jubement of great heanty. The Tulti Musjurd, or 'l'ninted Mosque,' is an elegant pelidee, having its walls cused buth inside and ont with glazed bricks about 3 or 4 in . spuare, of diffrent colours, wrought in different jatterins. lts interior is a handsome apartment, ahout 36 ft . square, the four walls closing ubove, and furming a majestic dome from 40 to 50 ft . above the gromind, and unsupported hy pillar, heam, or rufter. Within the fort is the tomb, of Ilussain Shah, one of the kiugs of Giour in the 1 fith century, a fine mansoleum, now much dilapidated; and at a short distance withont the citadel is the obelisk or tower erecteil hy Firoze Shath at the latter end of the 15 th century. This structure is 21 ft . in cliameter at its base, and as much as 17 ft . at the floor of its furtlo story, 7 I f. high. Its entire original heipht was probubly ahout 100 ft . : it was surmounted by a eupola, of which Mr. Creighton gives a representation, but since his time the dome has completely disappeared.
This city, called Lakshmanarati (by the Mohammelans, Iucknowety), from its last Ilindoo sovereign Laknhman, was first taken by the Mohammedaus in 1204. In I 575 it was repuired and hemutified by the emperor Aclanr, by whom it was called Jenumtabad (the nborle of paradise) ; but in 156t, the seat of fuvermment of liengal was removed to Tanda, a little higher up the river, owing to which event, and the devertion of it by the Ganges, Gour sueedily declined. It, however, appears to have suffered less from the hand of time than from active demolition. For centuries the materiuls of its structures were extensively removed to construct other towns; Moorshelabad, Maldah, Kajamahal, Dacea, \&e., are in a great part built of them; and many portions of its tine buildings have been taken away to erect the enthedral of Cinlentin, and to supply tombstones and momoments for the cemeteries of that city. A few straggling villuges are seattered here and there wer the site of ( four ; but it is now for the most part only an uninhulited waste, which strongly reminds the spectator of the desolation of Iabylon. (Sce Creighton's Ruius of Gour; Hennell's Memoir; Morl. 'Trav., ix.)
GOZZO, a small island of the Mediterranean, contiguous to and dependent on Mnlta (which sec). GRAMMONT' (Flemish Gerrardshergen), a town of Ilelginm, prov. E. Flanders, arronl. Audenacrile, tap. cant., on the Dender, which divides it into the upper and lower town, $21 \frac{1}{2} \mathrm{~m}$. SSE. (ihent, on the railwny from Ghent to Tournas. I'op. 8,795 in 1806. The town is walled, and has two chnrches, suveral chupels, a town-hall, convent, prison, hospital, orphan asylum, college, severnl schools, and manufactures of cotton yarn, lace, linen and woollen fabrics, paper, tobaceo, some bleaching, dyeing, and tanuing establishments, with distilleries, brewaries, and mills for various purposes. It was founded and fortified by Count laldwin de Mons in 1068.
 chain forming the line of demnreation between the Lowlands and Highlands of Scotland. Its limits tre not very well defined; but it may be regarded
commencing on the E. site of Lach Jitive in Argyleshire, and as stretching across the island, till it terminates between Stonchaven and the mouth of the Dee on the E, coast. It forms, as
it were, a natural rimpart, lombling the entire fronther of the Highlandm, Its S. anedivity rives From the grent valley of Strathmore. Then simmit of the ridge marks the line that separates the waters that How into the Forth, the Giny, and its unumerons tributaries, and the South Esk, from those that flow into the Spean, the Spey, and the Dee. With the exreption of then Nevis, the higheat monntains of Scothand are comprised in the Grampian range. 'The principal summits, berinning ut the W. and proceeding lí. are Cruachan lhen, int the hend of hoeh Awe, $3,340 \mathrm{ft}$. alove the level of the sea; Hen lomonl, on the li. side of Loch Lomond, 3,145 , litto; 13יn More, at the head of Glen Luchart, 3,870 (13) ditto; lhen Lawers, on the N, vide of Loch Tay, $3,9 \mathrm{P}$ is ditto: Schiehallion, at the E: end of Lowh Emanoch, 1,050 ditto. Ilat the most elevated part of the (irmonian chain lies at the head of the Dee, hetween lhen Glue, in l'ertheshire, and Cairugurm, on the contines of Aherdeenshire and Inverness-shire. Hen Mnerlha, tho most elevated of the mountains in this vicinity, is $4,327 \mathrm{ft}$. high. being on! 43 ft , lower that Shen Sevis; and the adjoining monntains of Cinimgorm, Caintonl, and ben Avon, are respectively 1,005 , 4,245 , and $3,967 \mathrm{ft}$. high. F'rom this centril point, the prineipal branch of the Grampians rums aloner the S. side of the Dee, grablually deelining int height till it reaches Gaerloch Hill, near Stonehaven; $1,500 \mathrm{ft}$. high. The coast trum Stomehaven to the bee is high and precipitots, and may bet considered as the extreme limit of the Grampians on the E . The branch of the (irampians to the N . of the Dee is of comparatively small extent, termimating at the lhek, abova Glenbucket, on the N., and near Tarland, on the S.

The Grampians are, in general, remarkable for their sterility, and the desolate aspeet which they present. Their sides are in some pluces axtremelypreeipitous, exhibiting vast perpendicular ledges of rock. 'Their summits are freguently rounded, sometimes nearly that, entirely covered by disintegrating blocks and stone, together with grit and sand, except where the pranite rocks present the singular appearince of large tabular protrudiner pinmeles, having their blocks seemingly arranged in regular strata.

Of the Girumpian passes, the principal are those of Aberfoyle, leni, Glenshie, mul Killiecrankie. The latter, which is the most celebnted, is nonit 10 m . from Dunkeld. It is about latif a m . in length. The road is cut out of the side of one of the contiguous momitains; and below it, at the fiot of a high precipice, in the bottom of the ravine, the river Garry lashes along over rugged rocks, but so sladed with trees as harilly to be scen. At the N. extremity of this pass, the revolutionary nrmy, under Mackay, was defented in 1 (is!) by the troops of James ll., under the famous (iroham of Claverhouse, Viscount Dundee, who fell in the moment of victory.

GliAMl'OUNi), a bor, and market town of England, co. Cornwall, W. div, hund. of I'owder, par. of Creed, on the Fal, 12 m . NE. Fnlmonth. I'op. 76 L in 1881, and 573 in 1861. This inconsiderable place sent 2 mems. to the II. of C. from the reign of Einward VI. down to 1821 , when it was disfranchised for gross bribery and corruption.

GliAN (Ilungar. Esztergom, ane. Strigonium), a city of Ilungary, cap. co, same name, on the Danulue, nearly opposite the mouth of the river tiran, 80 m . ESE. Presburg, and 26 m . NE. by N . lesth, on the railway from l'esth to Viema. l'op. 11,215 in 1857. (iran consists of the royal free town, the archicpiscopal town occupying the site of the former citadel, the aljacent market-towns of' St. George aud St. Thomas, and several suburbs.
firm was oner the finest clty in llungnry, and the residence of its kings. some of whose tombs are still to be sectl. It is now the seat of the Princeprimnte of Ilumgary, who ranks next to the palatine, and hat formorly the privilege of crowning the king and of granting letters of nobility. The superin new cathedral, the palace of the archioshop, and the homses of the chapiter, oeenpy a commandjng josition, overlowking the town and river, on the summit of a high nimd precipitous rock, on whill mu old fortress once stond. The cathedral, the most splendid mokern lmilding in llungary, was commenced, in $182 l$, by the late archhishop Liuluny at his own exprense; but, by his denth, was left unflished. It is in the Italian style, surmonnted by a dome, and having a handsome portico of 38 pillars. The interior is lined with polished red marble, and smpiorted by bollumas. The dome is 82 ft . in thinmeter. The altar-piece, ly Iless, a llungarian artist, represents the haptism of St. Stephen, the first Cliristian king of Hungry a native of tiran, who fommed the archbinhopric in 1001. Under the chureh is the primate's birinl vault. The see of firan is perhaps the richest in Eirone: its netual revenue is unknown, but common rumour generally estimates it at $100,000 \%$. per anmum; though some reduce it to $\$ 0,000 \%$ or even 60,000 . The 1 ambe is here of great breadth, but is crossed by a flying bridge, which communicates with the opposite market-town of l'arkany. lhesiles the eathedral it has 2 liom. Cath. churches, a Greek ehureh, and 4 chapels, town-hatl. homse of assembly, hospital for poor citizens, a Bom. Catholie gymnasimm, fomale selool, and a good print inge establisliment. It is the seat of the assembly and judicinl courts of the comity. Its inhath, are purtly Magyars and partly Germans. Their chief resonirees are drrived froin trading in wine; but they also manufacture and dye woollen stulls. At the bottom of the roek on which the eathedral stauds are some wamn mincral baths.
tiran was severnl times taken by the Turks, who destroyed most of its ancient ediiices. It was for a long perion the advanced posts of their armies in Europe; but was finally taken from them, in 1683, by Solieski and Prinec Churles of Lorraine.
GRANADA, a prov, and part of an aneient mar. kingrom of Spain, consisting of the Sli. part of Andalusia, between lat. $36^{\circ} 17^{\prime}$ nud $38^{\circ} 22^{\prime} N$. and between long. $1^{\circ} 51^{\prime}$ and $80^{\circ} 53^{\prime} \mathrm{W}$. ; and lommded E. by Murcia; N. and W. by Neville, Corolova, and Jaen; and S. by the Meliterrmean. lts cencral shape is that of in achte-angled triande, whose base fatees the 1:. Its length is abont 210 m, , and its breadth varying from 25 to 80 m . Area $0,622 \mathrm{sq} . \mathrm{m}$; pop. 950,155 in 18.16 , and $1,208,987^{\circ}$ in 1857. Gramada is at present divided into three sub-provinces, namely, Almeria, with a jw1p. of 315 , $6 i 5 \cdot 1$; Malagn, with 451,406 , and (iritmada, with 4H,917, necording to the census of 1857. The prov. consists chiefly of high hand; lut three chains may be distinguished-one forming the N . bomdary of the prov., and comecting itself eastward with the Sierra Morena; a second and principal one, traversing the centre of the prov. (called the Sierra Nevada in the highest part, and the Sierras de Loxa, de Antegnera, and fle Cazorla, E. and W. of the entminating point) ; mind a third, nearer the shore. called the Alpuiarras. 'I'se line of perpetunl snow here is at $9,915 \mathrm{ft}$., and in the principal chain are several summits rising above it, the highest of which are the Cerro de Mulahuçen, 11 ,tifi ft., and the Pienrdo de Valete, $11,397 \mathrm{ft}$. ; from the last the Sierra Morena, distant 57 m ., and the const of Africa, diastant 112 m ., may be discerned in clear weather. The slope in the principal chatin is more gradual northwards,

While on the Alpinaras the N. side is semrpei amit the gentle glescent is towarde the sen. The sirera de Galor, in the lattor rlanin, is fi. 570 ft. huph. From the N. side of the prineipal chain How the Xeuil, mensuring 120 mot to its juncture with the (imadalquivir; and farther l:. are the smallar atreams, the Guadix and the Harinata, both afluent. of the same river. 'I'he rivers on the s., whith the exception of the (inadaljore and Almeria, are little better than torrents. In this monntainous district are severnl valleys of considerable extent, the largest of which is the Verg of timmula, a plan 30 m . long. and 16 m . brond, elevated abont 2,0100 ft. above the wan, surromiled ly mombinins, and watered ly mumerous aflluonts of the Xenil whieh traverses it in its whole length, and essontially contributes to its extraordinary fertility: lis the lis of the prov. is another valley-the liova de lhaza-which, though smaller, is extensive, woll watered, and fertile. There are others of nare conlined extent. The temperature, on accomut of the varying altitude of the comitry, is murhiliversilied, but the climate is generally healthe, exeept oceasiomally on tho coast, where ilie simoom produces fever nmong the inhabitnats. 'Tho reology of the Grmatian momatais is imperfectly known: the Sierra Nevada is of mien slate, gumis and elay slate, the whole overlaid on the S. sile by black transition limestone containing sulphurat of lead, which here, as well as elsewhere in the prove, is worked to advantage. The mountains generally are rieh in jasper and marhles, especially ahout the rity of franida. where they erlipse munt comitries in the beanty, transpareney, and pulish of the slahs. I'recions stones are often fonnd in the quarries. The chief mineral springs of the prov. are at Alhama aud Almeria. T'le suil on the hills is calenreous, that on the plains light and easily tilled, while that on the coast is sandy. The forests produce oaks, cork-trees, chestmits, ambl firs; and the plains bear the vine, the tig-tree, the strawherry-tree, the olive aid mulberry trees, and others. T'illage, where possible, is pmrsinet accorit ing to the Moorish plan of irrigntion, and oecupies great attention. 'The frnits of the S. of Euron'oranges, eitrons, pomegranates, melons-grow here in great abundance, mingled with the productions of the $N$. Wheat, barley, maize, rice, hemp, thas, and the sweet potatoc. are rnised in large crojis: and on the coast of the Mediterranean indign. cotton, coffee, and the sugar-cane are cultivatel. Mr. Inglis, on the authority of General O'Lowler (manager of a large estate in the Vega of Gramath enlted Soto de Roma, given to the Duke of Wellington by the Cortes in 1813), speaks as follows of the usial rotation of erops in the Vega (ii. p. 188) :- After the land has been fully numured. hemp is put in : and two, or sometimes thren, erops of wheat, aceording to the nature of the hand. are taken in the same year: a erop of flax, and a crop of Indian com, follow the next year, and beans and Indian corn are taken the thirl yenr. For this last crop the land is lialf manured, and then it is fully mamred for the hemp, to ligen the next rotation. The hemp is considered neressary to prepare the land for wheat, which otherwise would come up too strong after the manue. This is the rotation on land snlijected to the process of irrigation.' As to the value of lamd, he says:- 'T'en years ago, land in the Vega of Granata was worth from 50 to 100 dollars per nere: at present, it does not average above 14 . Wheat solil, ten years ago, at three slollars the fancou: now it does not average. year by year, more than one dollar and a half. lients are, of course, fallen in proportion; and, low as rents are, they are difficult to be recovered. Upon the lands not ca-
palile of precarion it is next lami. lands are of the ero ject to irr fourth of of tiranmal consideral cent. prenter th jomgiuge to part of thi and nll tl rrace's est his rents a proportí universall duke hins: rery sinal whale rent of the poss truante up may now ths maluy of tl compusitio Duke of 1 momitain is less und Spain. 'Tl thuse of have very must other are very wools near fisheries g the sen-sho lixeept duce of thi local cons clathes, silk made in sr dustry is $t$ and Almer fruits, wax harlware a liance, and Gramada and on the it beame Alhamar, is of the Mor senson of it.  sen. 'The siomm s $6,57 \mathrm{ft}$. huth. al chain flows the: Luneture with t!e are the smather atn, both aflhemes the S., with the Nomeria, are lithe mothlthinotis dise sidernble extemi. sa of Ciraumela, is 1, elevatod aluoit ed by inomintans, lits of the Xertil, ength, mud imary fertility, In alley-the llay is extensise, well a others of more re, on accombt of ntry, is much dienerally healthr, cast, where the inhabitants The lins is imperfertly: mien slnte, मucin' iil on the 5 side itaining sulphurot elsewhere in the The mountains naribles, esprecially: they eelijpe mast rency, mal pulish re oiften fund in al springes of the rin. The suil on e plains light ant ast is sandy: The s, chestmuts, amil e, the fig-tree, the millerry trees, and is purshed accomption, and ocroples hes. of liurop-relons-grow here h1 the productions , rice, hemj, thax, d in large crops: terrmenin indige, he are cultivated. General ()'Lowler Yegn of Gramadia he Duke of Wdspeaks as follows the Vera (ii. p . in fully manured. sometimes then, pature of the had. rop of flax, aud a next year, and in the third year. alf manured, and e hemp, to begin considered nereseat, which otherafter the manure. jected to the proalue of land, he lie Vega of Ciraclollars per acre: bove 16, What -llars the faneff: - year, more thin , of course, fallen s are, they are the lands not ca-palie of beling irrigated, the erogs are extremely is pmotleularly fine : n handsome stone bridge, precarions ; athl where a money rent is repuired, it is next to luposs/ble to dind a cultivator for the hand. As a remely for this, proprietors of high lands are contented to ruceive a certain proportion of the crop, generally a fiftl; nud upon lanid subject to irrigation, a temant is willing to pry onefinthth of the prodice. Land gronerally, in the Vera of tirumada, returis 4 per cent., taxes maid; liut u considerable quantity returis as much as $t$ per rent. The return from land under tillage is grenter than from mendow land. The entates belonging to the Dake of Wellington lie in the lower part of the Vegia, aboit two lengnes from Gramala, and all the lame is eapmble of irrigations. Ilis grace's estates return about 15,000 dollars a year; his rente are paid in grain; a dixed quantity, not a proportion of the crop, a plan heginning to be miversally followed by other lamiliolders. The duke has 300 temutes; from which it appears that rery small farms are held in the Vegn f for if the whole rental be divided by 300 , the nverage rent of the possessions will be but 50 dollars mach. The temants unon the duke's estate are thriving; they pay uo taxes; nud these extates are excmpt lrom miny of the heavy burdens thrown upon land. A composition of 6 per cent. is acecpted from the Dnke of Wellington in fien of all demands.' The monatain regions afford gool pasture; lint grazing is less understood here than in most other parts of ${ }^{\prime}$ Sigin. The horses of Granada are inferior to those on Cordova; and sheep, though plentilil, have very coarse wool. The asses are superior to most others, both in height and strength. (ionts are very mimerons, ant thrive well. Pigs of a black lireed are renred in vist numbers in the woods near Alhama. The nichory and the tumy fisheries give full employment to the inhabs. of the sen-shore.

Except in the articles of wine and oil, the produce of this once fertile prov, does not equal the lueal consumption. Conrse linen and wonllen cloths, silks, paper, leather, and gunpowiler are made in small quantities; but no branch of industry is thriving. Its exports, through Malaga and Almerin, chictly consist of wines, oil, Iried fruits, wax, anchovies, and lead; its imports, of hardware and cutlery from lingland, lace from France, and eloths from lingland and Holland.
Gramada formed a part of the ancient Boetica; nad on the alestruction of the Ibero-Arienn empire, it became a new state, fontuded by Mohammed Ahamar, in 12:38. It remained in the possession of the Moors for 250 yoars, which comprise the senson of its prosperity. In 1492, it surrenalered to Ferdinand the Catholic, being the last province that opposed his arms. The Moors were, by the treaty of pence, to enjoy freedom of religious worslip; but this condition was soon broken, and ultimately they were expelled the prow.
Gimnada (in. Illiberis), a famons city of Spain, eap, of the above prov. and kinglom, on the $N$. side of the Sierra Nevadn, and at the juncture of the rivers Darro and Xenil, in a momatainons region, not less than $2,240 \mathrm{ft}$. above the sea, 11 i in. E. by S. Seville, with which it is comnected ly railway, nud $217 \mathrm{~m} . \mathrm{S}$. by W. Madrid. Pop. 61,993 in 1857. The city stands on the edge of a fertile and extensive rega or plain, which these rivers traverse, on two hills, one of which, between the rivers, is crowned by the palace of the Alhambra and the 'lorres lermejas; the other, N . of the Darro, by the Alhaycin and the Aleazaba. It still covers in considerable extent of ground, thongh certainly far less than it must liave oceupied when swarming with half a million Mohamnedans. The appronch to it on the Malaga side
built by the lirench during the war of independence, spans the Xenil. and inmodiately bevond rise erenated waths, and terraed gardeis, domes, minarets, tand shlning stefples; reaching to the hase of the rock which Wears the Alhmmbra. Livery thing within the precincts of the city bears the marks of Moslem lands: the marrow, crooked, and bally-paved streats, and fishligi fonnthins, the lofty that-roofed honses amd heavy projecting balconles, are all quite Oriental; whilst lere and thare the entrance af some old mospue or rained bath hears in its horso-shoe arch the pecoliar stanp) of the inoriseo. The eity contains n catheIrnl, $n$ chapnel of the Catholic kingn, and twentythree parish pharches, of which those of San Gieronimo and San Junit de Dios are hest worth secing. In all of them are to be seell spuedmens of variegated marble, not equalled elsewhere. perhaps, execpt in Italy. The cathedral is a clumsylooking luillius, 425 ft . long, mid 250 ft . bronil the interior is heavy, excessively gandy, and thted up in the worst possible taste. 'I'se high altar, Hanked by its gilded pillars, is insulated alter tho lioman fashion, under a dome 17 th ft . high, and the area romul its base is conspicuous by reasom of its light iron railing, and marhle pavement. In this church is an exquisite Iloly Family by Murillo. The chapel of the kings, which nijovins the entherral, is a' Giothic arehitecture, is moted for n flat arch of remarkable boldness, which supports its roof. Ferdinand amd Isabolla, nud their site:cessors llhilip nud Jomma, are haried in front of the altar, and their tomis are superbly senpturech. (Swinhurnc's Spuin, i. B131; Scott, i. 2(il.) The Conthmsian convent, abont $n$ inile from town, which had till lately great wealth and immense revenues, has it line marble altar, aud some excellent patintings by Murillo and Cano. The palace of the Alhambra (al-hamara, the red) is, however, the building by wheh the travellers' attention is chiefly arresteci. 'This irregular mass of honses and towers, perdied on a very high hill, which projects into the plain, and overlooks the city, is saill to have lreducrected about 122.1. The walls of the fortress follow the varions sinnosities of the elifls, which bound the platean on which it stands. 'The chief cutrance, which is apmroached through a long avenue of elms and nuyrles, in one of the towers on the $S$. front, is called the Gate of Judgment; and over it is embossed a kis, the armorial ensign of the Andalnsian Moors. The first object seen on entering. in the centre of the plateat, is the palace of the emperor Charles V., built by Verregnete, it is a complete nquare of 185 If ., having two orders of pilasters, Doric and Ionic, upon a rustle base, the whole mensuring 62 ft . from the higher entabinture to the base. An oblong vestibule leals into the cireular court. forming the centre of the palace : a colomiale of two stories, each supported by thirty-two colimms, runs round its circumference. 'Jhis billing, remarkable for magniticence, elegrance, and moity of design, was never completed; the pillars are much damaged, and the whole will soon fall to the grombl. N. of this hulding, and strongly contrasted in appearance, stands the palace of the Moorish kings, externally a huge heap of as ngly buildings as can well be seen. A plain muormamented door admits to the interior. The first place entered is an obloug square. having a deep, reservoir for water in the middle, and baths at the sides also, with parterres and rows of orange-trees ranged aromal; the ceilings and walls being ornamented with intricate stuceo and frotwork painted, gilt, and lettered, as in other parts of the building, in the most delicate manner. Beyo:nd this is the

Court of Lions, an oblonif emelosure, 100 ft . by 80 ft., onere pread with white marhle, but now consvarted into a garden, mid surronnded by a colon. made of mbont litt sleuder white narble pilbars, irreqularly placed, nud supporting horse-shue arches that rin romid the plase. In the centre is "f funtain, supported by thirteen lions, or rather punthers, who disgorge water lito 1 Dinsin of black marble. 'I'has arabengue work here is most cluborate. N. of the lant-mentomed eonrt is vie tower of the two sisters, arange of nomathents laving a heantifal reiling staceod in stalaetiten, and lowatifinlly gilded, and a large window יyming to the conniry; ani on the opponite side is the Ilnll of the Abencarruges, where the chielis of that nohle race are mid to have been mannatered. The Jall of Amhasmalora, however, may be truly called the pride of the Allambra: it is a sefuare of 3 ift ., and is fi$) \mathrm{ft}$. light to the lop of the cupola. having a ceiling vanited in a siuGularly grneofil manner, mud inlaid with monaie of' mother of pienrl; its walle, also, behing adorned with gromps of llowers, mul fishes intermingled with arabescues of eurions workmanship. Highly thinshed inside, it has also the mbantage of exteysive views over the city, the dark valley of the larro, and nome otlur parts of the palaces. The gardens, which abound with orampe and lemon trees, jomagramatew, mul myrthen, lend by a low postern gate to the sammer palace of the generalifr, situnted on the stedp declivity of the appovite hill. In the binilding itself there is mothug particularly worthy of observition ; but the myrtle proves mil terraces are ngreeable, and from the latter there is a chmming view over the Alhambra and its gardens. Above the pulace, near the summit of the rock, is a seat cut in the roek, which the Doorish kiugs are said to lure used as a point of ulservation clarime the siege of I irmada. In the *ity ure several hospitals, the largest being that ul'sum Jum de thos, The university, foumded in 13:31, has, oll the average from 900 to 1,000 stodents. There are six colleges and two acalemies; one for mathematies, the other for design. The walks about the city are most heantifnl; especially two alamelas, bine on the Xenil, aloove which rise orange grovos, eypress alleys, and chasters of houses gromped together ; the other on the larro, llowing throngh is deep romantic ravine, whose semery equals that of Swit\%erland.
firanada, many years ago, had extensive factories for velvets, silks, and ribands, employing 2.006 hands, and working up the produce of the neighbourhood (not lass than 2, 600,000 lbs of silk), with large pupremills, and a flourishing oil trade. lont at present its industry is in a very low state. This deeline in the mannfactures and trate of Giranada lias been ascribed to the emamejpation of S. America; and this, prohably, may have had some effect. Itat they had long previonsly heen in $n$ state of paralysis and decay, neensioned by the vicions regnlations and the oppressive and injurions imposts to which they were subject. The principal existing lusiness is carricd on in the market-place, surrounded with small houses inhabited by the poorer orders, and in a narrow erooked street ealled Fil Tacrtin, the little market, which in better times was the great silk mart. 'Towards the centre of the sity is a bazaar in the liastern fashion, ench stall being boarded off from the rest ; but in none of these is there much apparont aetivity.
The Granadians (ealled the Gascons of Spain) are proud of their city, and bonst not a little of its antiguities and faded grandenr, reckoning themselves at the same time most constitutional citizens. The women are handsome and elegrant,
like the rest of the Amlalinsians, but are nomilel hy adoptlige liremel contimes. like the rest of their commerwomen, they nere fomil of thentres, nuaked balls, and tho lndisuensable turtulin. liranada in the see of atn archhishop, who formerly
 the rewlinence of a coptain-renernl, and is pusernel by a eorregidor and two nlealdes. The Allumbra has ifs mparate goverior.

The barly history of Gramada is hidden in ohsenrity, Juder the Komans, Illiberis was it place of wome importance, belag made by them n manicipal colony entitlod Municipinm Fhorentinum Ilinreitronm. The forlis changed the lommin name lato biliberi, nud allowed the place to linll into decay. 'Ihe prosent eity was fomuded by the Moors in the 1toth eentury, and hecame a part of the kiugdom of Cordors. In I2:16 it was streugthened and mugmented, in eonsefuenee of being selected by Mohmmond Alhamar as the copital of his new kingdon. The throne eontinued in the family of that prinee till 1192, when, affor a yorr's simge, it surremered to Ferlinand the Catholic. Many Moorish families continued to reside leres for a century and a linlf after its eompuest, anil eontributed to its prosuerity and importanec. Visrions attempts to comvert them to Christianity were male subsequently to the eonquest of (inimada; but these laving proved, as is allowed, totully unsuccessfin, the mbecile, priest-rinthen goscrument of lhilip IH. resoned, at the instifation uf a few higoted eneleslasticas, to expel the Doors from nll parts of Smin, This insane resolution, ly which the kiugdom was deprival of a large mimber of Its most fulastrions and valualle cilizens, was carried into efleet in 1609 and 1610 , molor circomastances of tho grentest burbarity: This act may be said to lave comsmmanted the denradation of Spain; and her vicions institutions have prevented her riodering, down even to the present hour, from the wommls intlieted by the bigotry and stupidity ol her ruldrs.

(GRANARD, an inland tuwn of Irelamd, co. Lougtord, prov. Leinster, 13 m . W. by N. LongFord. lop. 2,06 in $^{2} 18: 51$, and 1,671 in 1861 . The town eonsists of one street, and lias in it the par. chureh, a liom. Cath, chapel, a market-honse, mul clispensary. Adjoining the town is a remarkalibe rath or monnt, ealled the Moat of Giramard, whidt commands extensive views of the surromaling comutry. Markets, well supplied with agricultural produce, are helif on Momdays, and fairs on May 3 and Oct. 1. l'etty nessions on 'Ihurstays. It is a constabulary station.
GliANGEMOUUTH, a ven-port town of Scotland. co. Stirling, par. Finkirk, at the E. extremity of the Forth and Clyde Canal, at a point where this line of eommmication unites with the small river Carron, $\frac{1}{4} \mathrm{~m}$. from the Frith of Forth, 11 m . Sl:; Stirliug, and 18 W. by N. Edinhurgh, on the Scottish Central railway. Pop. 1,759 in 1861. The town is substantially built: public buililings, the constom-honse, and a large Presbyterian church, in connection with the Kirk of Seotland. Grangemouth has spacious warehouses, eommodious quays for slipping, and a dry dock. The Carron Iron Company, distant 2 m , inland, has a wharf here for its vessels, varying from 15 to 20 in nomber. The place may, indeed, be regarded as the emparinm of the trade, not only of Carron, lalkirk. and other places in its vicinity, but of Stirlingshire, as it possesses the best harbour in the comme, though no vessels drawing above 12 ft . water can with ease or safety apronch it. The chief exports are iron goods, grain, and wool; but the mandacturers of Stirling and St. Ninians,

Lomdon by road, and $105\} \mathrm{m}$. by Cirent Norlisern ruilway. ['川1) of munic. bor. 4,9it nat of purl. lour. 11,121 in INGil. The town, consisting ehielfy of four strects, is weat. clenu, and well lighted, but mot remarkable for its builings, and is whobly situated on the W. bauk of the river. An inerene al hilitings has taken place and is still going on, principally in the Spittegate emf of the town. The charel, a the specimen of the Gothice style of the lath eemtury, lins an chegant spire 270 ft . high, and in the interior an elahorntely carved font, and sume splendid monuments: in the vestry is a publie library, left by I)r. Neweombe, master of St. John's Coll., Cambridge. The living, a viearige, is divided, and is in the gift of two prebends of Salishory Cathedral. The guildhall was rebuilt in 1isx7, with tho addition of a spacious assembly-room. The erammar-school, at which Nir lame Newton was partly edncated, was fomiled amol endowed by Henry VIlI. and his son Eilward V1., ont of the spoils of a monastery of grey frinrs in the town. Grantham is unt a manufacturing town; but it is said to be flourishing, and its trale to he increasing. The principal trado is that of malting, which is carried on to agreat extent. There is a camal, uniting the town with the Trent, by means of which an extensive export of corn amblother agricultural prodnce takes place, and an import, principally of coal, with which the neiphbouring towns to a considerable distance are supplied.
The bor., which yas formerly ruled by 2 ndermen, 13 com . burgesses, and 12 second burgesses. according to a charter granted in the 7 th of Charles I. is now under 4 aldermen and 12 burgesses. Grantham hins returned 2 mem . to the $I \mathrm{I}$. of C. since the 7th of Edward IV. Previonsly to the Reform Act, the parl, bor, was identical with the old bor.; the right of voting was vested in freemen not recciving alms, and the average numher of electors for 30 years before 1831, was 86-1. The Honndary Aet extended the limits of the parl. bore, so an to make it include the whole par. Registered electors, 739 in 1865, of whom 175 frecmen. Markets on Saturdny, and fairs for sheep and enttle, 5th Monday in Lent, Ascension Dny, July 10, Oct. 26, and Dec. 17.
Grantham is sitmated on the old lioman road called Ermine Street, and was a strong lioman station. At the time of the Norman survey it was a royal demesne. It was first incorporated by Edward IV. in 1463, and reccived, in addition, 12 charters of later date.

 is, next to V'iemma, Drague, alld T'riente, the largent, mont pepmlons, mind most important city of the German porthon of the Xustrian empire. It stanis in the N. purt of nut ohlong platio, nul comsists of the city jorner on the Li, bank of the Mar; and tomer extensive suburbs, the Marstadt bin the W. lank of the river, comnerted with the opponite aide by two bridges, nul three others. The nnejent fortitientions were thally levelled by the liremeh in Isu!. A great blafl lump of rock, which rises to the height of som ft. at the N. extremity of, or rather within, the city itself, and whereon onee stood the ciadel, servion uew only us an mecasiomal promemade for the inlabitants, thence to survey the singular beanty of the surromading seenery.
 more picturespue sitmation than any other city in the Austrian domiaions. All aromod its plain, throngh which the Mar, a large and raphe river, tlows muidst tields of corn and rural hamicts, risess an maphitheatre of liils, none very high, but tinely diversitied in form, green, and woodent and beyond these again are beheld, towards the N. mad W... the lofty monntain masses of Upper Styrin and Curiuthia, rising in rugred grandener, and for the greater portion of the yenr covered with suow.

Griftc, with its suburbs, is about it Germann, or nearly 7 linglish m . in cire.; but the city itself forms but a very small part of the whole, being only $\mathbf{0} 20$ fathonis in length by 120 in brealth, mad ronitaining abont 30 strects and open spaces, with little more than 400 honses. 'The iuterior is like that of most ancient towns. 'The streets are gencrnlly narrow and dark, opening oceasionally into Jurge irregular ' l'laees.' 'The shops are tolerable; the honses of the higher classes, all of stone, wre spacions and gloomy; and such is the character also of the charches, many of which are highly elecorntel within. The inmer city, like that of Vienna, is surrounded by high ramparts, now of no use as fortitications, and is entered by six grates. The ramparts, together with the glacis or esplanale hevond them, form the favourite walks of the inlabitants. The esplamade is planted with chestnut trees, and is well kept. The city and its suburbs gencrally are tolerably well built, and contain many good private, as well as some fine public, editices; but the thoronghifares, expecially ill the inner town, are mostly ill-paved and illIrained.
Gritz has twenty-three chnrehes and ehapels, lesides seven monasteries. The cathedral, or chureh of St. Aggili, a Gotliic edifice built in 1454 , contains many handsome marble monnments. Near it is a chapel in the ltalian style,
contaluing the mansulenm of Fephlinani II., a nathe of Ciritz. Opposite thls melition is the Convicte, the largeat bililing in liellit, formerly a Jenitis' college, now a jublie achomi belonging to the inlversity: I'ine lnter finstitution, finmeled by Charles l'runcin, duke of styrin, in lisati, was clasal lyy donepll II. and reopricel lyy the empurar Firnucis in $18: 3$. l'opuhtiont-Continental (irecee is naturally divided into two primcipul porions: the marthern, or llellas, comprising what has been enlled Fi. mad W. Girecese: and the sonthern, comprising the Morea, an, Propomersme. The politienl divinion in-Circece is divided finto ten provinces, or nomar-chies-sulalivided into epardices-with the following jopmintion, nevording to the census of 1851 minl thit of 18ijl:-

| Nomarclites | Propulation |  |
| :---: | :---: | :---: |
|  | 1801 | 1861 |
| Attica and Bocotia | 87,23:1 | 116,12: |
| Julona. - . | (6), 2.17 | \%2,3138 |
| Plithlotis . - ${ }^{\text {c }}$ | 81,1490 | 112, 24:1 |
| Acarmania and Ditolla | (19, 1449 | 104,5112 |
| Argolls and Corintle. | 103, 24.5 | 1118.249 |
| Aclonia and Bilis . . | 116, 10.11 | 118.719 |
| Arcarlia . . . | [211,872 | 9118.541 |
| Messenia . . . . | 98,805 | 117.181 |
| Incontr . . . | 87,8171 | 112,910 |
| Cyolades . . . . | 108,621 | 118,150 |
| Total . | 098,122 | 1,096,810 |

The decenuial tucrease of population in some of the provinces, and the decrease in others, point to a continual migration of the inhabituats, cunsed chiefly by the unsettled state of landed property. Thus the monotainons province of Arcalia is gridually getting depopulated, by emigration seawaril into Laconia and Argolis. The same movement is taking place in many districts of the lonian Jslunds. Of the $1,096,810$ inhabitants of continental Grecec, registered at the census of 1801 , there were $\mathbf{5 6 7 , 5 3 4}$ males and 520,476 femmles. It

(Leake, Cal., 'Iravels in N. (ireece and the Morea; Hollinamis Lurupa und seine Ilewohner.)

Geology and Minerals.-The central chain of lindus is composed in great part of primitive roeks, as serpentine, coverel with a yellowishgreen steatite, granite, gneiss, mica, and other schists. Rocks of this kiud are nlso met with in E. Hellas; and they are plentiful in the higher momentain ranges of the Moren and the islatads, particularly Myeone nad Delos. Slate occurs in the ridge of CEta and several of the mountainmasses of Messenia and Arendia. By fur the greater portion of the country, however, consists of secondary formations. Greece, generally speak-
lige, is a rogion of compace grey llineatouc. Thits material aweelde to a colosiderable height alave the level of the aea, anil the chain of (Eita, as well
 Ifrely eomponed of it. The caleareons firmathins are mimilar in npuearance to thown of the N . of Ireland; and contain in many phacen great guast titien of nilex. 'The mhores if the Moren aro bordenel ly tortinry formutions, containing mis ahmulance of limsif shells. Voleanie aetion is clearly traecable, purticalarly in monne of tho islunim. 'The whole of fireedalunule with enverns
 tic vilwire arise, which were taken mivnitages of in antiguite, at Delphi aul elnewherr, for prace ciniug rellghoses decepitions. Thero aro mumerons lont and eohl mineral apromes, both anline and sil phorenos; hat few linve yet been minlyed. fil nothejparts the soil is himpregnated whth cilire; this is empecinlly the cuse near Corinth nud lialnsrita Martile of varionin colours, reol mal green in the Morea, and white at leatellons In Aitlon, porphyry, slate, fy!wim, zine, lead, fron, gole, and ailver, in manll qumition, cobalt, copprer, manga-
 the primedpl inineral grahnets; but the ginatities of any of them at present blatalied nre quite insignifleant. It is the opinion of the thont eomphe trint anthorities that the golit, silver, coprer, and lend mines of Attion and the islamis of Sighomes and seriphon are far from being exhmonted. Iron abomins in Seyron, at 'Tumarum, mid in Eulnea, whore, also, as well as in Eilis, there are abundant senms of comi.

The climute is temprerate, and for the most part healthy, exeept in the low and marshy t raets round the whores and lakes, nome of which are very innlonithy, The memin tempernture, in a country the surthee of which is no moveli, must, of conurse, vary considerably: but the medinm temperature of the verir in the plaine of N . Grecee mar be about $60^{\circ}$, mal in those of the S . abont $6.1^{\circ} 0^{\prime}$ Fialir. At Athens the thermmoter not unfrequently rises in July above $100^{\circ}$ Falir. Snow falls in the monntains by the midille of Oct., and even in the plains it is occasionally six inuches clecp; lut it never lies long in the lifter. 'Ihe winters at Athens are conilined to the two first months of the vear. Iloth spring and antuma are rainy seasome ; und in Dee. the rains are generally so heave that mony parts of the comintry are laid inder water; bit throughout the whole summer, which may be anal to comprise bulf the sear, a slower, we a cloud in the aky, is rare in several parts of the eonntry: The luavest usmally takes place in June, but it is nearly a month earlier in Attica than in other parts of Greece. Ihe latter province enjoys the driest atmospliere of any, to whieh eiremmstance the better preservation of its spleneld specimens of ancient art is maiuly owing. Its climate is much more ugreeable in every respect than that of some of the uther provs., as Baotia, Arcalia, \&e. Violent tempests often oceur in antumin, and storms of thomber and lightning in spring: earthquakes ara not meommon. Internittent fevers, elephantiasis, and lepra, are amongst the most prevalent diseases; Grece has been occasionally visited by the plague (Ieytier in Journ, de Travaux; Leake, Hughes, Lori Byron, Coclirane.)

The vegetable products are for the most part similar to those of S. Italy. The eountry may, in this respect, be considered as divided into four distinct zones or regions, aceording to its elevation. The first zone, reaching to 1,500 ft. above the level of the sea, is adupted to the culture of the ditferent kinds of grain, vines, tigs, olives, dates, oranges, citrons, melons, pomegranates, and othe: fruits,
cotton, Indigo, tobneeo, and abounds besides in evergreens, as the cypress, hay, myrtle, arbutus, oleanders, lentisks, with the oriental plane, manna, ash, several kiuls of oaks and pines, and a multitude of aromatio lierbs. The second zone is the region of onk and chesnut; it extends from 1,500 to 3,500 fcet perpendienlar, and prodices, besides the trees above nnmed, the white fir, severul kinds of pine, and the manna-aslt. The third zone is the region of beech aud pine: it reaches to the height of $5,500 \mathrm{ft}$, und contains numerous woods consisting of those trees, intersuersed with a few cornfields. The fourth zone, inchuding all the surfuce above $5, b 00 \mathrm{ft}$. in lielght, is the sub-alpine region, and yields only e few wild plants. Among the extracts from Dr. Silbthorp's papers, glven in Mr. Walpole's Memoirs, is a very complete list of Grecian plants, with an account of their medicinal and economic uses. A great deal of the surface abounts with aromatic plants peculiarly adapted for the honey-bec; and the pirnari (the pirnos of the ancient (irceks), which feeds the cochineal insect, is found of every size, from a low slirib to a large forest tree, botli in the plains and on the mountains. Acarnanin, Elis, Messenia, and the W. parts of Grecee generally, are the most richly wooded; the islauds are mostly destitute of wood. (Heffinaun, Europa und seine Bewolmer, iii. 61 ; leake, N. Grecec and Morea.)

Animals,- The wolf, jackal, lynx, badger, fox. wild boar, wild goat, red deer, rocbuck, moutlon (') de., inhabit the wilder and more inaccessible and densely wooded parts of Greece; and bears are sometimes met with on the N. frontier, and in the lofty regions of Arcadia and Maina. Hares are very numerous, and their skius are n considerable article of export from the Moren. The otter inhabits the rivers and marshes of Bootia; and phoce and porpoises are seen around the coasts, and sometimes in the Corinthian (iulf. The large vulture frequents the eliffs of Delphi, und the woods and precipices of Purnassus. There are several species of the falcon tribe. The little owl (Strix masseriaa), anciently the bird of Minerva, is still as common round $\Lambda$ thens as in antiquity. The red-legged partridge, quails, woodcocks, snipes, wood-pigeons, \&c., are plentiful; pleasants are to be found in the W. and N.; and large flocks of bustards are often seen in Buotin, The coasts and lakes abound with wild fowl; storks and many other birds of passage sojourn in Greece. Sturgeons, salmon, mullet, tunny, mackerel, anchovies, and abundance of shell-ish, are caught around the coasts. Large and delicate white cels (often weighing 1.2 lis.) are still found, as anciently, in the lake Copais. They are snlted, and sent in large quantities to Constantinople, and into the murts of Grecce. The coast-fisheries afford employment and subsistence to no inconsiderable number of the population; but their produce is notwithstanding insufficient to supply the demand during the long fasts prescribed by the Greek chureh, and a good deal of salted fish is imported. Poisonous vipers, and other serpents, infest certain localities; leeches are very plentiful in some of the brooks, which are therefore farmed out by the government as a means of revenue. The insect tribes of Greece include several Asiatic and African as well as European species; especially of the order Orthoptera. Wild bees are abundant; clouds of locusts occasionally do great damage to the crops. (Pouqueville; Hughes; Leake; Cochrane.)

Scenery.-Travellers in Grecce generally speak in high terms of its scenery. It has everywhere the finest views, and is interesting not less from its natural beauties, than its classical associations,
and the ruins of ancient art and splendour scattered over it.

Yet are thy aktes as blue, thy erags as wild: Sweet are thy groves, and verdant are thy fieds, Ttilne ollive ripe as when Minerva amiled, Aud still him honded wealth Hymettins yields: There tho biltho bee his fragrant fortress tuilids, The freeborn wanderer of thy mountala nir; Apollo stlil thy long, long summer cilds, Still in his leam Mendelf'n marbles clare; Art, (flory, Freedom fail, but Nature still is fair.
'Where'er we tread, 'tis hauntel, holy ground; No earth of thine is lost in vulgar mondd, But one vast reulin of wotuler spreads around, And all the Muse's tales seem truly told,
Till the melnse aches with gazing to belold
Tho scenes our carllest dreams have dwelt upon: Jaeh hill and date, each deepening glen and woli, Defies the power whieh erush'l thy temples gone: Age shakes Athena's tower, but spares gray Maration.' Childo Harold, canto li.
The richly wooted and well-watered provinces of Acarnania and Etolia are succeeded towards the E. by the lofty, rugged, ant forest-clad chains of l'uriassus anil (Eta, alteruating with the fe:tile valleys of the Cephissus and Mcllada. Ibeotia, consisting of two clevated basins, has beest uniformly celebrated for its fertility, and was considered the granary of ancient Greece. Athens has been said to surpass all the other capitals of Europe; not only in ancient celebrity, but also in the benuty and variety of the surrounding country, It is much to be regretted that the fine forests which ouce clothed the hills of Greece have been so extensively ravaged, partly by the wanton rapacity of the inhab., partly by the'turkish troops, who carried fire and sword into the remote fastnesses of the mountains. Still, liowever, on Parnassus, Ilelicon, Jaygetus, in Megaris and Areadia, oak-forests and pines are found of great extent. ('l'liersch's Atheus and Attica.)
Distribution of Laml and Agriculture-Mr, Urquhart ('l'urkey aud its Resources, 1835) estimated IIcllas (E. and W.) to contain 3,548,200 stremmatn of arable land, 199,710 str. vineyards, 4,430 str. garden gromal, and 854,000 olive trees. Aboat 2! stremmata are equal to an Englishacre. This estimate, often quoted, was, however, probably under the mark. Accorling to an official statement of the year 1862-given by Mr. Rumbolle, l3ritish secretary of legation, in a report duted Athens, July 10, 1863 (lieports, no. viii.)the total area of the kingilom is re•koned at $46,429,000$ stremmata, or 45,429 square kilometres. No genernl cadastral survey of the country has as yet been attempted. The vineyards, olive gromnds, currant plantations, \&c., have alone, to some extent, been measured ont nnd valued. 'It is thus impossible,' says Mr. Rumbold, 'to knor with any precision the cultivated area of Grecee The clumsy machinery of the dime tax, or tax of the tenth of the agricultural produce levied in kind, alone nffords some means of arriving at a conclusion on the subject. Nothing can be more vague than the delimitation of property in Greece. Landed proprietors themselves are often at a loss to determine the limits or even the site of their property. A case recently came under my notice where the owner of a piece of waste land could not with any certainty ascertain its position. All he knew was that he was the owner of some ground situated between the Pnyx and the hill of Philopappens; and an offer of purchase made to him by a friend of archreological tastes who wished to make excavations, fell to the ground in consequence of the inability of the proprietor to point out the exact spot. Abont one-third of the country consists of mountains and rocks. Onc-ifth is covered with forests, in which great havoc is
vearly made ruthlessly ac more pasture half of the e fir cultivatic turned to ace richness of $t$ to thrive, wh hopeless con its present st alter the sy roads. As o ellect of the mentioned is many parts $r$ of inprortatic purposes.'

yarly made by the wandering shepherds, who rutblessly set ilre to the woods in order to obtain more pasture-land for their flocks. I'robnlily ouehatf of the entire superticies of the soil is available fur eultivation, and of this barely half has been tarned to accomit. Iet with the ellmate and the richuess of the soil the agriculture of (irecec omght to thrive, whilst at present it is in the rudest, most hopeless condition. In oriler to reclaim it from its present state it will, above all, be necessary to alter the system of ta:ation, and to construct roads. As oue of the many instances of the bat cllect of the want of commanieations, it mav be mentioned here, that though the country is in many parts rich in forests, one of the chiel articles of importaticn is timber for ship-buiding and other purposes.'
There is no regular succession of erops; and two years' fallows are eommon. Ilellas is a better corn country than the Moren; mul corn is extensively grown in Acarnania, Etolia, and beootia : in the last-mamed prov, there is nlways a good erop, the soil being continunly moist, even though drought prevail throughout the rest of Grece. As many as six diflerent species of wheat are grown; returuing, it is said, after a dry spring, from 3 to 5 , or in a very favournhle season, no many as from 10 to 13 for 1. 'The wheat of' the Morea has long been highly prizel in the adjacent islands; the lands ons either side the Ginlf of Corinth, and in a part of Attica, are favournbe to the growth of barley, as well as celebrated for their olives. The enlture of oats and rye is mimportant. Maize is grown in Bootia, and the Morca. Lice is cuhivated in the phains of Marathon, Argos, and other marshy tracts along the coasts; aud the rice oi Argolis is snid to be estecmed next after that of lamietta in the markets of Constantimople, to which it is exported from Nanplia. Marathon, thongh forgotten in almost every other resplect, is still celebrated, as before the reri of its glory, for being the granary of Athens. The demand for the currant-grape in Great Britain and other N. countries of Europe, has brought it iuto extensive culture in the Moren; and the S. shore of the Corinthian Gulf from Corinth to Phtras is in areat part covered with currant-vinevaris. The lills of Greece are admirnbly adapted for the vine (Vitis vimifera); yet few vines are grown. exeept in low situntions. The wines of Mistra and Corinth, Elis and Arcatin, the valley of Ilelicon, the islumls ol Naxus, Sanorin, \&e., have a rich and delicate Havour; but they have comparntively little body, and are almost universally ruined (for other European palates), by the addition of resin or turpentine, a practice handed down from the ancients. Most part of the wine used in eontitiental Grecee is brought from the islands of the Archipelaro, which are rich also in fruts of various kinds. The olive-oil of Greece would be good if well-prepared; the best is said to be furnished by Attica, Egina and Maina. Cotton of good quality is grown in Messenia, Laconia, and other parts of the Morea, but especially in the plain of Argos. Madder and tobacco in Bocotia, llax and hemp, figs in Attica (so famous in antiquity), and elsewhere, pomegranates, oranges, lemons, peaches, almonds, and a great variety of shell-fruit, haricots and other pulses; tomatas, cucumbers, artichokes, potatoes, ald the pot-herbs common in the rest of Europe, are among the remaining articles of culture. The collecting of gall-uuts amd valonea Lark, which formerly received a cousiderable share of attention has been latterly much neglected; and but little pains are bestowed on mulberry plantations, though the annual export of silk be estimated at 60,000 okes, Large quantities of wax are exported
from Nauplin. Honey is a hiphly Important proluct; that of Attica, and expecially of Monnt Hymettus, is now, as of old, the best in burope. It is trausparent, and has a dolicious perfume.

The fertilliy of the woil of Greece appears to be us great now as it was in anciont lunes. Mr. Rumbohl. British secretary of Lagaton, in his report betore guoted (of duly 10, $18(3 i 3)$ sings in this respect :-'Notwithatanding the exuessive dryness of the elimate and the torrid heat of smmer, the soil, when turned up nul only superlicially raked as liy the rude plongh of the time ol Mesionl, tor this day used by the (ireck lusbamiman, is generally found to be most fertile. A proprictor in Liulvea bought some land whieh had been mader caltivation, but had been left fillow for some time previous tu his purchase. Although contiguous to his former property, and the suil heing to all appearatee similar, the crops on his new mopuisition wree nuch heavice and vichled supcrior grain. When the canses of this diflerence were infuired into, it was lomed that the former owner had enltivated madiler or 'garance,' a pant largely uned for the dye of the nether habiliments uf the farfinmed 'finntassin' of Frimee, nud which requires a fiar more searching investigation of the soil than the supericial seratches which constitute the furrows of Greck husbandry. As in Eubcea, so in other parts of Grecec. Liven bencath the desolate stour wastes of Attica in many places lics all the wealth of a virgin soil. Remove lat the haril sun-dried surface, and a rich brown lonm will turn up, at sight of which the hearts of our Euglish farners would be gladdened. But nothing is done; no water is bronght from the neighbouring ranges of Parnes and I'entelieus to refresh it; no hand is raised to weed out the stomes and cut down the rank owergrowth of evergreens and brusliwood; and all the year romal the cold blasts from the north sweep over the dreary plain, and the pitiless sun pours down its soorching riys on a parched stony desert. The old myth of Deucnio is forrotten indecd.

Mamyfuctures.-Manufactures are almost wholly domestic, every peasant's family producing, with few exceptions, ${ }^{1} . e$ articles refuired for their consumption. A few silk, cotton, and woollen stulls, household pottery, some eut lery, leather, and soap are made in the larger towns, carpets in the Isle of Andros, and sail-cloth and straw hats in that of Siphuos. Guat skins are prepared for holdinge wine, oil, and honey; brandy, liqueurs, vinegar, mecrschaum pipes, and arms may also be mentioned. Saddlery und horse-furniture have deteriorated sinec the departure of the Tharks; and these, as well as most articles of lixury, are now imported from other parts of Earope. The art of dyeing in bright colours, for which the ancient Grecks were so celebrated, has, however, been perpetuatrol to the present day; and the Greek women excel in embroidery. Salt sufficient for the consumption of the country is produced in the lagoons near Missolonghi and elsewhere. Shipbuilding is extensively carried on in many places.

Commerce.-The Greeks have particularly distinguished themselves by the suirit and success with which they have engrged in naval and mercantile enterprises. Their commerce, next to their freedom, was the grand source of the prosperity of Athens, Corinth, nul other Greek cities of nntiquity. And in this respect the modern Grecks lave been no unsuceesslial imitators of their illustrious progenitors. The great artieles of export from Greece consist of currants, silk, figs, wool, olive-oil, valonea, wine, sponge, wax, and tobacco; the principal imports being manufactured cotton and woollen goods, corn, with a great varicty of
suborinate articles, principally from England, but partly also from France and Germany. The exports and imports of Greece amounted in the eischt years from 1851 to 1858 to $12,574,8541$., or $1,571,857 l$. per annım, being about 30s. per heat. The following tables represent the value of the imports and exports for the years 1858, 1859, and 18 tio :-

The Greek mercantile marine, in 18058 , consisted of 3,920 vessels, measuring 268,600 tons, and manned by 23,128 seamen. Of these, two were small steamers of 336 tons ; 2,660 vessels of the first class, of only 26,567 tons: and 1,258 of the second class, measuring 241,697 tons (this class includes all vessels above 60 tons). In 1857, the tomage was $32 \overline{5}, 000$, with 25,000 sailors; but 96 vessels, measuring 19,000 tons, were sold to foreigners. The number and tonnage of vessels in 1860 are shown in the following table :-

| Deneription | 1800 |
| :---: | :---: |
|  | $\begin{array}{r}2,857 \\ 29,193 \\ \hline 18\end{array}$ |

Government.-Since the establishment of its independence, in 1828 , Greece has undergone many vicissitudes of government. The rule of King Otho which lasted a whole generation, from 1832 to 1863 , was, in theory, meant to be strictly constitutional, and was, perlaps, so in renlity fur a few yeurs, but ended as a sort of feelble despotiom. One of the lirst acts of Otho's successor, King George, was to get a new charter frnmed, in substitution of the old one which had worked so ill. Accordingly a constituent assembly, elected in December, 1863, was occupied, during the whole of the year 1864, in elaborating a new constitntion for the kingtom, on the basis of universal sulfrnge. The assembly decided, on Scptember 19, 186-1-by 211 votes against 62 -that the whole legisIntive power of the realm should be vested in a single chamber of deputies, to the exclusion of a senate or upper house. The constituent nssembly of Greece consisted, in October 1864, of 28.2 members, inchuding 84 deputies from the Ionian Islands, elected, by universal suffrage, in June, 1864.

The executive of the kinglom is in seven de-partments-those of the roynd honsehold and foreign alfairs, the interior, religion, and public instruction, justice, finance, war, and maritime affairs. The comncil of state appointed to assist the king in lis duties, consists of 3 vice-presidents, 17 ordinary, and 14 extra-ordinary councillors. The synod of the clergy, elected anmally, consists of a president and 5 members, with 2 secretaries, the government being represented by n state officer called the Procurator. There are 33 bishops of the Greek church in the kingdom; and they elect from themselves 6 syudics, composing the above synod. The 4 Rom. Catholic bishops of Naxos, Tinos, Syra, and Santorin have no political existence. The towns of Greece, from the enrliest periods, have enjoyed municipal rights and privileges under different moditications; nor did their foreign rulers interfore much with the patriarchal system by which their society is governed. Lven during the 'lurhish rule, the heads of families in every town, village, and commone, throughout the Morea, chose a demogeront or mayor, who took cognisance of all civil judicial matters. No tax call be levied withont the concurrence of these demogeronts; and they were sometimes called in to rissist in council with the primate; and the voivode appointed by the pacha, who jointly superintended the province. Mnina was at the same period ruled by its own eapitani, the chief of whom had the title of Bey. N. Greece was governed, with little difference, in the same mode as the Moren, till Ali Pacha destroyed its liberties. In the islands the demogeronts were entitled archontes, and were criminal as well as civil judges. Count Capo d'Istrias suspended altogether the municipal rights of the towns, and
placed ove ment; but pelled, ant resumed t the crown demos or 1 ly one or cipal coun unally frot in ench es ench town towns of $t$ more are demorerot vincial eom ment of ell named an whose ant over a mot

o is in seven deousehold and fo, and public inand maritime pointed to assist of 3 vice-presi--ordinary counlected annualty, hembers, with'2 represented by ator. There are in the kingdom; 6 syntics, com: Rom. Catholic d Santorin have ; of Grecce, from municipal rights oditications; nor much with the ir society is go1 rule, the heads , and commone, demogeront or 11 civil judicial rithout the coaand they were council with the od by the pacha rovince. Maiaa ts own capitani, Bey. N. Greece ice, in the same ha lestroyed its mogeronts were ainal as well as suspended altothe towns, and
placed over each epareliy a creature of his government; but on his fall, those individuals were expelled, and the towns and commumes everywhere resumed their privileges, which were contirmed by the crown in 1834. The administration of ench demos or borougla is consequently still exereised by one or more demogeronts, assisted ber a mumicipal council. The demogeronts are elected anmally from umongst the heals of families, -one in eadi commume or rural district, and three in each town. They next assemble in the chiel towns of their several eparchies, when three or more are elected to form, in conjunction with the demogerosts of that town, the eparehing or proviacial conneil for the ensuing year. The government of each eparely is administered lyy an othicer named an eparch, suborilinate to the monarch, whose anthority, in the sume manner, extends over a monarchy.
The mayors, aided by the communal tribumals, composed of respectalite inhal, of the commume, have authority in cases of petty misdemeanors, and arbitrate, without appeal, in civil transactions to the amomit of 20 drachmas. There are eparchial courts presided over by a judge, appointed by the government; and a court of original jurisdiction is established in the chicf town of each monarchy; as before the subdivision of the kinglom into 30 govermments, an event which appears to have bat but little practical intluence as to internal arrangements. Formerly there were 3 courts of' appeal-at Nauplia, Missolonghi, and Chaleis; bit since 1834 their number has been reduced to ${ }^{2}$-those of Athens, for Hellas and Euboea, and Tripolizaa fur the Morea, drc. The decisions of these are subordinate to the authority of the Conrt of Cassation and criminal court, established in the cap., composed of judges, a state-attorney and a registrar. Besides these, there are 10 primary tribinals, and 3 commercial courts. There is no regularly organised court of laws, but the decisions of the judges are mostly guised by the Code Napoleon and established customs. Trial by jury has been introluced, and is said to be generally inderstood, and to work well.
Religion and Educution.-The great mass of the pop. belong to the (ireek chareh; but, since 1833, (irecee has been independent of the authority of the Patriarch of Constantinople. The kiug is titular head of the church, the affairs of which are condueted by a synod. The Greek priesthond are, speaking gencrally, poor and illiterate. Their habits are, however, said to be simple and exemplary. Monasteries are by no means so mit merons as formerly. The national congress, held at Argos in 1829, wisely nbolished 320 , which contained, at an average, nearly 5 monks ench; there are now 82 in all, with a total of 1,500 or 2,000 inmates, besides abont 30 convents. There are about $15,000 \mathrm{Rom}$. Catholics in Greece; some Protestants, and about $4,000 \mathrm{Jews}$. Full religious toleration is guaranteed by the constitution.
An edict was issued in the carly part of King Otho's reign for the establishment of elementary schools in each commune, to which the inhab. should be obliged to send their children from 5 to 12 years of age. This edict lias not been fully carried into eflect; nevertheless, education has made great progress within the last thirty years. According to a report of Mr Lytton, British seeretary ol' Legation (dated Athens, Janc. 20, 186ī), there were at that time 'three principal public schools or gymnasiums in the Norea; one at latras, one it Nanplia, and one at Tripolizza, in which were taught Greek, Latin, mathematics, geography, natural history, plysies, and French. Each school had a head master and five assistants.

There were also two similar seliools at Athens, one at Syria and one at Lania, the whole maintained at an expense to the state of 200,000 druchmas per annum. In adilition to these, there were in the several towns in (irecte seventy-nine minor schools for boys, laving 5,312 seholars, in which were taught ancient Greek, Latin, eatechism, the scriptures, geograply, and history, first principles of physies, naturnl history; and drawing. Each sehool had a heal master and two assistants, and the whole cost the goverument 297,512 druchmas, or $10,62 \%$, annually. There were also in Greece 431 communal seloools for the education of boys, maintained at an expense to the state of 115,292 drachmas, and to the commines of 324,329 druchmus. There were also forty private schools, thirty-one publie selnols for girls, having 4,380 scholurs, where nearly the same lessons were taught as to the boys. In uddition to which there were 300 sehools where only reading was tanght, laving about 11,000 scholars, besides seventeen private schools. There were also two schools for liorming schoolmasters and mistresses for the primary schools, as well as an ecclesiastical school. und several schools for. orphans, founded by private indivichals; also an agrieultural sehooi at Tyrens, in Argolis.' At present, Mr. lytton says, 'the chief impediment to the dillusion of knowledge in (ireece exists rather in the poverty of the commanes than in the apathy of parents, who, however illiterate they may be themselves, vahe and desire instruclim for their offispring.' 'This, too, is asserted by Mr. Aubrey de Vere, who gives the following aecount of a school at Athens which he visited in 1849 :-
' I visited, with equal surprise and satisfaction, an Athenian school which contains 700 pupils, taken from every class of society. The poorer classes were gratuitously instructed in reading, writing, and arithmetic, and the girls in needlework likewise. The progress whieh the children had made was very remarkable; but what particularly pleased me whs, that air of bright alertness and good-humoured energy which belonged to them, and which made every task appear a pleasure, not a toil. The greatest pimishment which can be intlicted on an Athenian child is exclusion from school, though but for a day. About 70 of the children belonged to the higher classes, and were instructed in music, drawing, the modern languages, the ancient Greek, and geography. Nost of them were at the moment reading Herodotus and Homer, I have never seen ehilidren approaching themin beanty; and was much struck by their oriental cast of countenance, their clark complexions, their thashing eyes, and that expression at once apprehensive and meditative, which is so much nore renarkable in children than in those of a more mature age.'

Armerl Force.-Previously to 1838 the army amounted to nearly 10,000 men ; but by the neiv law of conseription the regular army consists of 8,000 men, levied by a conseription of 2,000 in each year. The duration of service is fixed at four years, and all individuals are liable to serve, from the age of 18 to 30 , unless those claiming exemption as married men, miversity students, ecclesiasties, civil servants of the state, only sons, or the guardians of minors. Service by substitute is allowed. The troops consist of 3 liattalions of infintry of the line, 2 of light iufantry, 4 squadrons of cavalry, a corps of artillery, and annther of pioneers. They are chietly garrisoned at Athens, Argos, Corinth, and Nauplia: at the lastmentioned place is a military school.

The prefecture of the Marine at Paros has 10
members. There being the fleet, about 2,400 otlleers, sailors, and murines. The fovernment dock-yards are at P'aros and Nanplia. At the commencement of 1862 , the navy consisted of one frignte, of 50 guns ; two corvettes, of 22 and 26 frums ; one paddle steamer, of 120 horse-power, with 6 guns; six nerew steamers, of 36 horsepower ench, with $n$ total of 10 ghas ; and 22 minaller vessels, of varions sizes, ineluding gunboats.

Revenue and Expenditure. - The finances of Grece are and lave long been in the greatest disorder. The revenie may be estimated at abont $2.5,000,000$, and the expenditure (including interest of (debt) at $28,000,000$ itrachmis. The revenne is principally derived from direct taxes, includiag the rent of the public lands. I'reviously to the revolution these belomged to the 'Iurkisli inhab., und on their expulsion, they became the property of' the public; aud, notwithstanding their continued illegnl appropriation, they are still sup)posed to amount to 2 -3rds of the cultivated, and to 4-óthes of the uncultivated lands. This immense untional property, were it well administered, would furulsi a large amount of reveme; but it is a prey to all sorts of abuse. The rent of the public lands is rated at from 10 to 15 per cent, of the gross produce; but owing to the vennlity and corruption of the othcers, it is frequently reduced to a mere nominal sum; and dees not, perhaps, on the whole, amount to 1-4th part of what it slould clo. The other items of revenue consist of customs' duties, a tax on cattle, a tax on salt, stamp duties, \&e. The following was, according to ofticial statements, the amount of the several branches of revenue and expenditure of Grepee in the years 1861 and 1862 :-

| Branches of Aevenue | 1862 |
| :---: | :---: |
| Dtrect Taxes | $\begin{aligned} & \text { Draehmax } \\ & 9,473,250 \end{aligned}$ |

The public deltt of Grecee amounted, in July, 1864 , to $6,892,361$ l., chiefly due to Eng. crediters.
Manners and Custous.-The following statements embody the valuable testimony of 'Thiersch ns to the habits and state of the people when he visited Grecce in 1831-32: 'There is a pretty marked distinction ameng the inhabs. of the three great divisions of Greece - Grecec N. of the Isthmus, the Peloponnesus, and the Islands. The inhabitants of $N$. Grecce have retained a chivalrous and warlike spirit, with a simplicity of manners and mode of life, which strongly remind us of the pictures of the heroic age. The soil here is generally cultivated by Bulgarians, Albanians, and Wallachians. In E. Greece, Parnassus, with its natural bulwarks, is the only place where the

Ifellenic race has maintained itself; in the mountainous parts of W. Greece there ure also some reminants of Hellenic stock. In these parts the language is spoken with more purity than else. where. The pop. of the I'eloponnesus consints nearly of the name races as that of N. Grecec, but the l'eloponentans are more ignorant and less honest than the inhabitants of Hellas. The Albanians oceupy Argolis and a part of the ancient Triphylia. Among the rest of the inhab., who all speak (ireek, there are considerable sucial diflerences. The pop, of the town is of a mixed character, as in N. (irecee; where there is alt active and intelligent body of proprietors, merclants, and artisans in the towis, and among them some of Greek stock. The Mainotes form a separate class of the pop.: they are generally called Muinotes from the name of one of their districts: but their true nume, which they have never lont, is Spartans. They occupy the lofty and sterile mountains between the Gulfs of Laconia and Messenia, the representatives of a race driven from the sumby valley of the Eurotas to the bleak and inhospitable tracts of Taygetos, though the plains which are spread out below them are no longer held hy a conqueror, and the fertile lands lie uncultivated for want of labourers. In the islands there is a singular mixture of Albanians and Greeks. The Albanians of llydra and Spezaia have long been known as active traders and excellent mariners. 'The Hydriotes made great sacritices for the canse of independence in the late war; the Spezziotes, more prudent and calculating, inereased their wealth and their merehant navy. The island of Syra, which has loug been the centre of an active commerce, now contrins the remnant of the pop. of Ipsara and Chios. The Ipsariots are an active and handsome race, and skilful seamen; the Chiots, following the habits of their ancestors, are fond of staying at home and attending to their shops and mercantile speculations: they amass wealth, but they employ it in founding establishments of public utility, and in the education of their children. In Tinos, the peasants, who are also the proprieton, cultivate the vine and the tig even amidst the most barren rocks: in Syria, Santorin, and at Naxos, they are the tenants of a miserable race of nobility, whose origin is traced to the time of the crusades, and who still retain the Latin creed of their ancestors. Besides these, there are varions bodies of Suliotes, of people from the heights of Olympus, Candiotes, many Greck families from Asia Minor, Fanariotes, and others, who have emigrated, or been driven by circumstances within the linits of the new kingdom. The Ipsariots are those who are supposed to have the least intermixture of foreign blood. They have the fine and characteristic Greek playsiognomy, as preserved in the marbles of Phidias and other ancient sculptors; they are 'ingenions, loquacious, lively to excess, active, enterprising, vapouring, and disputatious.' The modern Greeks are generally rather above the middle height, and well shaped: they have the face oval, features regular and expressive, eyes large, dark and animated, eyebrows arched, hair long and dark, and complexions olive-coloured.

The islanders are commonly darker, and of a stronger make than the rest; but the Greeks are all active, hardy, brave, and capable of enduring long privations. Gencrally speaking, the women of the islands and of LIellas are much handsomer than these of the Morea. The character of the Greeks, while under the Turks, was thus summed up by Mr. Hope. (Annstasius, i. 78-80.) 'The complexion of the modern Greek may receive a

Now that craft nud sultlety, adulation and intrigne, ure the only patlis to greatness, the same Greeks are - what you see them!'
The Allanians are of a much more serions and pensive disposition than the firecks; nad it has been remarked that they may be considered to bear the same relation to the later that the Doric did to the fonic popmation in ancient times. The language of the modern (ireeks (for the Albnnian is of Illyrian origite) is ealled Romatic. It has a greater similarity to the ancient (ireek than the Italinn to the Latin; but many of the alterations from the ancient tongues which distingnish both the modern bugrages are analogous. Many of the popular custous of the Grecks bear the inpress of antiunity; various superstitions observmuces are kept up, and even the ordinary amasements of the people are the same which were popular in ancient times. The far-fimed Romaica, for instance, the theme of so many travellers, is olovionsly the same as the Cretan or Dadalian dnuce; and anotier modern dance, the Allonatico, is supposed to resemble the l'yrrhic dance of the ancients.

History,-The Greek nation boasts of the highest antiquity, and in the mythic periol of their history it is often impossible to separate fable from fact. We infer, however, that the Hellenes were not the earliest inhabs, of Hellas, which was previously the abuale of the Pelasgi, who migrated not only into Grecee, but Italy, and the islands of S. Europe, and there practised tillage and other simple arts of early inclustry: the remains of Cyclopean walls, scattered indiflerent parts, denote them to have had some knowledge even of architecture. Over these people the IIellenes gradually gained the superiority, and drove them from the eontinent to the islands, while they peopled it with their own nation, divided into the 4 tribes, of Nolians, Achamans, Jonians, and Dorians, and sprealing in different directions over the country, were joined soon afterwaris by colonists from lgypt and Phomicia. The first constitution of (ireek cities is beyond the reach of exaet history; but it scems that monarely was the earliest form, nad Sicyon is said to have been founded b.c. \$000, Argos, 'Thebes, Athens, Sjarta, and C'orinth, claming an origin not moch later. The expedition of Cadmus to Colehis, the siege of Thebes, and the Trojan war (b.c. 1200), are the principal events of the mythic or heroic period. The cunfusion arising from the last event deprived many kiugrloms of their prinees, and encouraged the ambition of the Dorian Heruclide to get possession of the Peloponnesis, and expel its inlabs. A fresh impulse was thus given to emigration: large bodies of the people crussed the Agean, and colonised the shores of Asia Minor; govermments changed with their rulers, and the states now partook mere of that republican form which was afterwards their characteristic feature.

The civil policy of Sparta and Athens, whose growing power now began to lessen the intlance of the other states, was most successful in calling forth the public energies, and in making small means produce great results. The progress of ailitary knowledge and of the more refined arts
was contemperaneous witlo that of politics; most departmente of science and of the line arts, pursued with impatient zeal by the highly srnsitive (ireekn, were carried by them to a higlier piteli of perfection than elsewhere in ancient, and in some respects even than in modern times; and their commeree, conducted by means of their colonios on the llack Sen mud on the coasts of I taly, Sicily, and timal, was extensive and important. Their pride, activlty, and enterprise, and, above all, their love of liherty, hore them trimmphant throngh all the ditllentices of the leersian war (elosed in. c.469) ; and the same features of character, ditlerently devoloped, involved them in intestine feuds. The lelopmomesian war, which lasted nearly thirty years (n.e. 131-4ni), by dextroying their mion, and exlinnsting their strength, paved the why for their sulyjugntion by lhilig of Macedon, whe won the decisive battle of Cheromera, H.c. 838 . The brilliant conguests of Alexamber eugaged them for a few yenrs; bit their comare was now enervated, nud their love of liberty all but extingulshed. The Achuan leagne proved a vain defence against the power of Nacedon, and, when this kingdom fell, Cirecee was wholly umble to cope with the arms of Rome. The contest was bricif, and ended with the eapture of Corinth, anno 146 b.c., from whels time, rluring 1850 venrs, it continned to be either really or nominally a portion of the Roman empire. Liturature and the arts, long on the deeline, were at last destroyed by dustinian, who closed the schools of Athens. Alarie the Goth invaied the country in the year 400 , followed by Geuseric and Zaber-khan in the 6th and 7th, and by the Normans in the llth century. After the latin conquest of Constantinople, in 120-I, Grecee was parted into fendal principalities, and governed by a varicty of Norman, Venetian, and lramkish nobles; but in [26], with the exception of Athens and Namplin, it was re-united to the Greek empire by Michael Paleologns, In 1438 it was invaded by the 'Turks, who tinally conquered it in 1481. The Venctians, however, were not disposed to allow its new masters quiet possession, and the conntry during the 16th and 17 th centuries was the theatre of obstinate wars, which continued till the treaty of l'assarovitz, in 1718, contirmed the Turks in their conquest. With the exception of Maina, the whole comntry remained moder their despotic sway till 1821: when the Greeks once more awoke from their protracted lethargy, and asserted their clam to a mational existence, and to the dominion of the land jossessed and ennobled by their ancestors. The heads of the nobler families and others interested in the regeneration of their conntry, formed an hetairia for concerting patriotic mensures; and, in 1821, Ypsilanti proclaimed that Grecee had thrown off the yoke of Turkey. The revolution broke out simultaneously in Greece and Wallachia; and war contimed with various suceess and much bloodshed till the great European powers interfered, and the battle of Navarine (Oct. 20, 1827) insured the independence of Greece, which was reluctantly acknowledged by the Porte in the treaty of Ailrianople, in 1829. The provisional government, whieh had been set on foot diring the revolutionary struggle, was agitated by discontents and jealousies, and the president, Coment Capo d'Istrias, was assassinated in 1831. The allied powers having previously determined on ereeting Greece into a monarchy, offered the crown to Prince Leopold of SaxeCoburg, who declined it ; finally, it was conferred on Otho, a younger son of the king of Bavaria, who was proclaimed at Nauplia, Aug. 30, 1832. The long and inglorious reign of King Otho lasted till the commencement of 1863 , when a revolu-
thonary movement, which broke out while he was eugaged in a tour through the indands, foreel him to lenve the country. He was soleniuly deposed by deeree of the (ireck National Assemilly, of Feb, I, Isiti3, nud, after protraeted negotiations, a sucressor for him was found in the pierson of lininee (icorge, born 1815, second son of King Christian 1N. of Lemmark. Ile landed in Greeee Nov. 2, 1863, and numimaliy assumed the reins of gavernment, haviug been declared of age by a resolution of the Nat jouna Assembly of May 15, 18ibis.
(GRLENLAND), an extensive territory forming part of N. America, and partly oceupied by Danisfi colonies, extending N. from Cnpe Furewell, in int. $5,9049^{\prime}$ N., between lomg. $21^{\circ}$ and $75^{\circ} \mathrm{W}$., having W. Batlln's lhay and Davis' Stralts, S. nal E. the N. Atlantic Ocean, and N. the unexplored Aretic regions. l'op, estimated at only $\mathbf{6 , 0 0 0}$ or $\mathbf{7 , 0 0 0}$, all Eaquimanx, exeppt nbeat 150 Europeans. Greenland was long sujpused to be united on the NW. to the continent of Amerien; lat the diseoveries of reeent mavigators render it more probable that it is an island. Shape, somewhat triangular with the afiex towards the S. It is ligh nud roeky, its surfice presenting $\boldsymbol{n}$ elanotic assemblage of sterile momituins, bare or eavered with ice, which also occupies a grent portion of the intervening valleys. The centre is said to he traversed by a range of lofty momintains, ly whieh the country is divided into E. nud $W$. Greenland. Of the former, from lat. $65^{\circ}$ to $69^{\circ}$, little or nothing is known, the shore heing constantly beset by vast accumulations of ice. All this coast appears to be colder, more barren and miserable than the W. eonst. It may be said to consist of one uniuterrupted glacier, exhibiting only a few patelies of vegetation, generully on the banks of the rivers; and often adwaneing far into the sea and forming promontories of ice, large masses of which frequently fall in nvalanches. The W. shore is high, ruggel and barren, and rises close to the water's edge into precipitous cliffs and mountains, seen from the sea at n distunce of 60 m . The whole coast is indented with a series of bnys or fiords, interspersel with a number of islinads of various form and size. The prineipal of these is the island of Diseo, in the bay of the same name, on the W. coast, between lat. $69^{\circ}$ and $70^{\circ}$. Only the coasts and islands are yet ascertained to be inlabited, no other part linving been explored by Europeans. 'The air is pure, light, and henlthy ; bit the cold during the long winter is often very intense. More snow falls, nul the climate is more severe on the E ., than the W . const. In S. (ireenland the cold seldom exceeds $16^{\circ}$ or $18^{\circ}$ lénumur, but in the N . the thermometer sometimes stands at $30^{\circ}$ Réaum. The sum has considerable power during the summer, but tine weather is never of long continuance. lightning sometimes occurs, and hail, but the latter seldum. Violent storms are frequent in autumn. The rare occurrence of rain. and the intense degree of cold produced by the NE. wind, has given reason to believe that the most E. parts of Greenland form a great archipelago, encumbered with perpetual iee. The aurora berealis has nt some seasons a light equal to that of the full moon. The rocks are principally franite, gneiss, clay-slate, porphyry, potstone, dc. arranged in vertical bets. They have bcen found to contain n rich copper ore, black lead marble, asbestos, serpentine, garnets, erystals, and same other valuable stones. There are no volen. noes; but three hot springs have been found in an island on the $W$. coast. Coal is found in the islaud of Disco. Vegetation, even in the S., is limited to a few stunted birch, elder, and willow
trees, moss, lichens, grasees, fungi, de. Proceeding N. the surfice becomes more sterile, and at last nothlug is met with except lare roeks. Neveral kluds of wild berries attnin tolerable prefeetion, mid the soil on the W. const towarils the S. hias been fomul fit for the cultivation of variesus culiuary vegetables: the growth of the potato has latterly been inttempted with some success. Among the nuimals are the reindeer in the S., the polar bear in the N., white hares, foxes of varlous colours, and dogs ; seals abomed in the S., where the walrus also is met with; whales of varions kinds inhabit the sens, cliefly towards the N.; nad the sen, tiords, and rivers abound in fish, especinlly turbot, herrings, salmon-trout, halihuts, rnys, de., with a grent variety of shell-lish. Fishing and seal-hunting are the principal oceupations of the uative inliab.
In 1837 there were in W. Greenland 13 colonics, 15 minor commercial, nul 10 missionary, estal), lishments. The most N. station is Uppermavic, in lat $72^{\circ} 30^{\prime}$. Good Hlope, the most ancient of the settlements, in lit. $64^{\circ} 10^{\prime}$, has an excellent harbour. The irade gives employment to about tive or six vessels. The exports consist elietly of whale-ciil, seal, hear, nud reindeer skius, cider down, de. The Gireenlanders are believed to be of the sume race ns the inhab, of the consts of Hudson's liay, Labrador, the NW. consts, Kamtehatskn, de., from whom they differ little in person, manner, and language. On the W. enast they to not mneh exceed 5 ft in height. They have long blaek hair, small eyes, and a yellow or brown skin. The inhal. of the E. const differ frum the former in being taller, fairer, and mure active nud robust; hut they do not exceed a few hundreds in number. There is no European colony on the E. const, and little or no intercourse is maintained between it and the W. const. The iuhab. display considerable skill in the structure of their tishing loats nud hunting implencuts, which are made of the drift wood brought in vast quantities to the consts. Many have embraced a species of Cliristianity; and their superstitions belief in soreery, de., is now riving way to a rude kind of civilisation. Their kajaks or fishing boats are from 12 to 14 ft . long, and only about $1 \frac{1}{\mathrm{f}} \mathrm{f}$. broad, sharp at both ends, and covered with skins, except a small round opening in the middle, where the Greenlander, having a single oar, takes his seat. Their houses are from 6 to 8 ft . high, und vary in size necording to the number of fannilies they are intended to aecommodate, which sometimes amount to sevell or eight. The interior is divided by skins into different compartments ; the walls are lined with broom and hing with skins, and the floor paved with flat stones. Their domestic arrungements are simple, and more remarkable for a waint of cleanliness than any thing else. The food of the natives is prineipally the dried flesh of the seal, with a little game nnd fish; coflee, tobaceo, snuff, and brandy are esteemed the greatest luxuries.
Greenland is said to have been discovered by an Icelander, near the commencement of the j0th century ; and the first colonisation of the country according to the old chronicles, dates from the year 923 , when it was settled by the Norwegian Icelanders. It has long been a sulject of diseussien, whether colonies were established on both coasts; but from the accounts of recent adventurers it is pretty certain that no European colony was evet founded to the E. of Cape Farewell ; at all events, $n 0$ ruins indicative of any ancient settlements have been discovered on that coast, though numerous traces of them remain on the W. const. Under the Norwegian colonists, the country was
moverned 1 binhops. A Norway and lith or the the trade wi subsequrent the colonies veral exped andertaken but withon settlenients uaspices of Norwegla work on (irc Esede's wor Ilintory of laud, 1837 ;

GilkiNOCK, a parl, bor. mid sea-port town of Scotland, co, Renfrew, on the S. bank of the Frith of Clyole, 18 m . WNW. Glasgow, with which it is cunnected by railway, l'op. $42,09 x$ in 1861 . The situation of Greencick is interesting num picturespue. Immediately hehind it the land rises ritpidly to a height ol 800 ft : and thongh the town is biilt mainly on a strip of level ground streteling upwarils of 2 m , along the shore, it aseends at one place aboit $\mathbf{5 0 0}$ yards up the ridge. In its frunt the Clyole is about 4 m . in width; and its magnilleent iestnary, which seems land-locked on every side, with the picturespue monintain scenery of Argyle and Dumbarton on the opposite coant, farm a nobue view. Crawfurdsalyke, or Cartadyke, on the li., onee a rival bor., is now incorpornted with Greenock. The progress of top, luts been very rapid, it linving nearly donbled in the lorty years 18:2 to 1861 .
The town is upwards of $\mathbf{2} \mathrm{m}$, in length. The width is inconsiderable, execpt near its centre, where, as already stated, it stretches up the hill. It is pretty regnlarly built, particularly in the more modern parts. The leading streets rin $\mathrm{l}:$. and W. The houses are of stone, covered with slate. The streets, which are enasewayed, lave foot pavements of conveniont brealth on both sides. The town is rapidly strotehing towards the W., where the best streets lave been ereetel. A mumber of elegrant villas are scattered in this direction, and along the heights behind the town. (ineenock, however, is not romarkable for clemliness. From its sitnation on the W, const, and its vicinity to the mountains, the climate is moist, the avernge fall of rain being nuont $35 \cdot 34$ inches annually. It is lighted with gas.

Of the public buildings, the most distingnished is the eustom-honse, erected in 1818 at a cost of 30,000 . It is advantugeously situated in the centre of the quay, about 40 yarils from its edge, and being unconnected with nny other building, is seen in all directions. It is in the Grecian style, and its portico fronting the quay is particilarly hardsome. The other more prominent public buildings are, the town-hall, erected in 1766; the gaol, built in 1810; the intirmary, erected at a cost of nearly 5,000 l. with necommodation for 150 putients; the Tontine hotel, built in 1801 , at an expense of $10,000 l$.; the exchange buildings and assembly rooms; the sheriff-conrt-hall; the Watt monnment; the meehnuies' institute; the Highlanders' Acrdeny; and the workhouse. The mansion-house of Greenock, once the residence of the ancient family of Shaw, the superiors of the place, is situated on an cminence overhanging the town. Part of the building is whl, but additions at different times have been mate to it. It is now used as chambers for conthacting the business of the superior and baronbaillic: Greeneek contains three parishes; the Ohit
or Weat parish, originally taken from the neimhbouring parlsh of Inverkip, and the Middle and bast parishes, both taken from the Winat, and erected into parishes quasal sacera liy the ('onrt of T'eimis. Of the parlsh ehmeliea, two are not without architectural pretensions; the Didille charch, built in 1741, anil the new West church, which cost ahont $!$,000), Ilesides seven churches and a diadic chapel belongintig to the establishment, there are twenty-one other places of worship, ineluiling lepiseopalian, V'ree Chmreh, United l'resbyterim, licformed I'reshyterian, Comgrematiomal, Weslevan, Ilnotist, Livangelionl Ĺnion, Koman Catholic, and Catholie Apostolic elapiels.
I'here are thirty-flve common seliosis in Gireenock; two of them, the grammar selool and the mathematical school, nader the management of the tovin eonnell; and one, the Highlanders' Academy, umber the management of an edicational society. The others are eithor congregatiomal ur alventure schools. 'There are also two charity suhools and a ragked sehool. The whole number' of pupils at school in (ireenock is not supposed to exceed one-tenth of the popmiation. 'There aro three libruries lin the town: the Cartsilyke mechmies' library, with abost 2,100 vols, ; the library of the mechanics institution, with mearly 4,010 vols.; and the (ireenock library, fumiled in II8:1, and the property of n bouly of shareholders. 'Thi; last contains about 10,000 vols. of misedhmeons literature, besides a foreign library, nul a scientill: library (one of the best in the kingolom), composed of the collection of Spence, the celebrated mathematician, who bequenthed his books to his native town, nud of more recent works furchased with fumbls left for the purpose by Jmmes Watt. The Greenoek library oeenpies the principal apartment in the Watt monment, a beantifnl edificos dedicated to the memory of the most distinguished native of (ireenock. Ilesides the library, this building contnins a marble statne of Watt by Chantrey; a nusenm, and a lecture-room. Though the inhabitants are eminently distinguished for edncation, intelligence, anil commercial enterprise. literature, in the strict sense of the term, is not much cherished by them, and the town ean bonst of few grent names besiden those of Wint and Spence. In 1767, when Wilsm, the anthor of Clyde, a poem, was appointed master in the grammar-school of (ireenock, the maristrates stipulated that he should renome what they called ' the profane and nuprotitable art of poenimaking.'

An extraordinary work has heen constructed in the vicinity of Greenock, by which not only the town is abundantly supplied with water, but maebinery to a grent extent may be impelled. To accomplish this an artificinl lake, covering 2943. imp. acres, has been excavated in the hosom of the ueighbouring alpine district, behind the town. by turning the conrses of several strenms and collecting the rain into a basin prepared for their reception. From this, as from a common sonrce, an aquednct or canal is conducted along the mountain range for several miles, at an clevation of 520 ft . above the level of the Clyde; and when within less than a mile of the town, it pours down a torrent in successive falls, the whole length of the aqueduct being $6 \frac{1}{2} \mathrm{~m}$. Ja addition to the princijal basin, there is a compensation reservoir ocenpyin, 46 acres, besides several of smaller climensions, to seenre a plentiful supply of water in sensons of the greatest drought. $A$ series of self-actung sluices has been constructed in a most ingenious manner, by which all risk of overtlow is obviated, at the same time that every drop of rain, even durins the greatest floodn, is preserved. This magnificent
puhlice work was planmed by the late Mr. liohert Thom, of liotheway, and executed at the coat of the Shaw's Water Company. It hins more than realisel the expectations of the projectors, thongh the const from tirat to last has nut fillen short of $\mathbf{N}(0,000)$. 'Thare are two lines of falls, each witli it fencent of $\$ 12 \mathrm{ft}$. The witer sent down amomints to 1,200 cubie ft. per minute, boing equal to $1,8.83$ horme power.

The doeks of Gruenock were flrst projected in 1690, and the fint part, forming $n$ small hariour, was flnished in 17l0, at an expense of b,ifioh, Gireenock leing, in the same yenr, male a customhome port, mul a branch of the nelghlomring and then more flomrishing bur, of P'ort tilnarow. A new diock was lnilt in 1780 at a cost of $1,0000_{\text {, In }}$ In 1821 , two spacions wet doeks were ndtled, which cont 119,000): ; and in 18,00 a new tidal harhour was constructed, with $1 / \mathrm{ft}$. water ut low elbl in ordinary spriug thles. The latter cost aloont $160,001 \%$. The fommiation of another chock, ealled the Albert llarbunr, was lail in August, INtie. The lurbour is manged by truntees, inchating the provost, magistrates, and town comncil.

The Clyde is unvignlule to tireenack for vessels of any lmirilen, at any time of the tide: latt a submarine bunk extends from a spot opmosite tireenuck $9 \mathrm{~m}, \mathrm{up}$ the river to Dimbarton; mul the channel for navigation, though deep, is only 30 ft . wide. 'The system, often pursued, of towing by stemmbonts, obvintes, in great mensure, this inconvenience tiovernment has recently completed a survey of the river.
The trade of Greenock lias kept pace with the improvements male on its larbour. The mion of the kingeloms ( 1707 ) oprened the colonies to the chiterprising inhabitants of this town, mul generally of the W . of Seotland; but it was not till $171^{\circ}$ that the first vessel, belonging to (ireenoek, crossed the Atlantic. The tobnees trade with Virgillia and Marylamd was prosecuted with grent vigour and success for fully half a century after this date; but it was to a comsiderable extent earried on upon aceonnt of, and in connection with, Glasgow merchants. The war with the American calonies depressed, for a lengthened perionl, the trade of Greenoek, but other sources of commerce were gradually taken meduntage of; and, at present, shijps from thís town may be found in almost every e'onsiderable port to which British enterprise has extended. The first application to government to open the Enst India trade went from (ireenack; nud its merchants were also nmong the first to take advantage of the opening. The trade of Greenock is at present chiefly with Newfonmiland, North America, and the West and Vast Indies, The gradual increase of trade may be seen from the following account of the gross receipt of enstoms' duties at the port of Greenock in varions years:-

| Yeare | Duty | Years | Duty |
| :---: | :---: | :---: | :---: |
|  | $\boldsymbol{x}$ |  | 18 |
| 1728 | 15,231 | 1833 | 450,425 |
| 1770 | $57,3: 31$ | 1848 | 407,083 |
| 18112 | 211,087 | 1859 | 808,454 |
| 1822 | 263,464 | 1863 | $1,231,124$ |

There belonged to Greenock, on the 1st of Jnnuary, 1864,174 sailing vessels under 50 , and 201 above 50 tons; there were also 18 steamers under 50 , and 9 above 50 tons, the latter of a total burthen of 1,548 tons.

The herring fishery, the trule in which the inliab. of the town first engaged, is still prosecuted to a considerable extent. The Greenland whale-
fshery was begun in 1752, limt has been long since diseotitinumed.

The primeipal trade of tireenock is sugne refining. which is carried on more extensively here than in any part of the kiughom ont of limdon. Slijp. lmilhing is nls, extensively pursued. There ure slx building ynads, of which two, those of Johin Scott nind Soins, and liobert Stecle nind Cos, are anomg the largent in the empire. At the former, the iliat iron stemm frignte, firmeloek, wis linilt; it the latter miny of tho Cinnal stemmers, whilit bly between l.lverpool and Now York, were eonNtructed. Among the other branches of binsinesw may be mentioned fonindies for the mannfacture of ateam angines, clain-enbles, melors, anl other Iron work ; several extensive roperies and snil-cloth factorien, breweries, son!) and eanille-works; the manufincture of hats of felt, silk, nul striw: puttery, bont-binililing, block-making, lirass-fommiinge, eork-cutting, copprework, and musy others common to the other large towns thronghont the comintry.

Grecinoek originally consisted of a few thintehed homses atretchlog along the bay; and Cartalyke. now incorporated with it, was loug a place of grenter ronsideration. It was createrl a bor. if lmrony in 1635, and fartalye In 16ibi, Sir Joln Slanw, the feuial superior, gave power by charter to the fenarn, sulifeunra, nud burgensen to be afterwards admitted, to meet yearly fir the purpose at choosing nine manngers of the public finuls of the town, viz. two hailies, a treasurer, mal six combsellors. The mited hor. is now governed muder the Seoteh minicipal reform net, loy a prowost. four bailies, mus sixtcen comeillors, of whom oue fills the allice of treasurer. The grons revenme of the corquration amomited to 47,2501 . in the year 1sti3-4. The anmunl value of real property in 186:1-4 was $163,070 \%$. The Reform Aet ruised Greenock to the dignity of a parl. bor., by comferring on it, for the tirst tlme, the privilege of sending 1 mem. to the II. of C. lisgistered voters, 1,7tia in 1865 . Greenock and the three aljoining parishes of Inverkjp, Port (ilasgow, and Kilmacolm, were in 1815 constituted the Lower Whrl of lienfrewshire, and placed under the juristiction of a sheriff-snbstitute, who resides and holds courts in the town.

GiliEliNW1CII, a parl. bor., town, and par. of England, on the S. bank of the Thames, co. Keat, lathe Sutton-nt-hone, hund. Bnekheath, $4 \frac{1}{\mathrm{~m}}$. ESEE. London by Sunth Lastern railway. Pop, of par. 40,0012 , nnd of parl. lor. 139,436 in 1861. Greenwich. which, in fact, is now a mero sulmurb of the metropolis, is a thriving town, but without any particular trade or manufacture; the business of the place being derived from its public establishments, from families of fortune residing in or near it, and from the shipping and craft on the river. The streets are in some places narrow and irregilar; but within the last few years many handsome honses have been erected, and the town has been grently improved. It is lighted with gas, mul supplied with water from the Kent water-works at Deptford. The par. church is a handsome stone fabric, with a noble portico, and an interior richly ormamented in the Corinthian order. It appears from Willis's Notitia Parl. (vol. iii. p. 85) that the bor. of Greenwieh sent two burgesses to parl. in the reign of Philip and Mary; but neither the extent of the bor., nor the nature of the franchise, nor the reason why it ceased to be excreised, has been specitied. The Keform Aet again conferred on Greenwich the right to send 2 mems. to the H. of C. ; but the parishes of Deptford and Woolwich, and about two-thirds of that of Charlton:

fireenwich llompital, the molent eatnhlishment of its kinal in linfore, oreupies the site of a palace, erected ly Homphry, duke of Gloncenter, ia lain, and whe long a finvourite residente of the 'Tudor family. The prement buildiug, originally intended for a palace, was commencod by Charles II., who erected one winf; it int expense of $36,40 \%$. In the reign of Willimill 11], the eass of the ilisnbled semmen of the navy ellgrged the attention of the king and queen, and, in consequence, this pulace was granted as an anylum for their rellief. Commisminures were apponited to carry unt the roynl intentions; Sir Cliristopher Wren undertiosk to superintend the completion of the buikling without charge, mal voluntary contributions were requested in aid of the public grant, which last amoninted to $[6 x, 209 \%$. 111715 , the contisented estaten of the Vinrl of Derweutwater, mmomiting to 6,0006 . a year, were given to it ly parl, and their vulue has immensely inrrensed within the lont half century. The huspital was parily also wipported ly the forcell contribution (by net pnssed 7 and 8 William III.) of 6 , a montli from the wages of all meamen in the king's and merchants' service. lint since
 this contribution, in lien of which the sum of 20,0001 , a year is alvineed from the connolidated fund to the hospital. The entire building collsists of four maguificent detached gualrnagular piles, of I'orthand stone, enlled Khig Chartes's, Guecu Aune's, King William's, mud (queen Mary's: the intersal between the two former is the grand square, 273 ft. wide, in the cintre of which is a satue of tieorge 11. ly Hyslorach: the space between the two latter is flled up by two colomandes sipported by 300 double columins and pilusters. The principnl front, on the N. side towards the river, comprises the sides of King Charles's nud Uneen Anne's buildings ; nud before it, extembing x(i) ft , in length, is in mpocions terrace, with u double tlight of steps in the middle, commaniling a line view of the building, und forming a handsume lauding place to the hospital. King Charles's linilding, in the NW. angle, was erected after lnigo Jones's designs: in it are the combil-chamlers and rexilences for the governor and licutennutमovernor. Queen Ame's buidingr contains 2.1 wards for the pensioners, aud some ollicers' npartments. King William's building, designed and directed by Sir C. Wren, contains the great hall, with its vestibule surmounted by a tine cupola and 11 wards. The hall is 106 ft . long he 5 f broad, and 50 high: the roof and walls were painted by Sir James Thornhill, at a cost of 6,685\%. Several pietures of great naval actions, with portraits and Hatues of distinguished officers, give interest to this noble apartment. Opposite the hall in Qucen Mary's building is the chnpel, with a vestiluule nud cupuin corresponding with those of the hall. The mof and inside having been destroved loy fire, were ably restored by 'Athenian Sthart,' in 1780. A tight of fourteen steps leads to the interior, which is 111 ft . lowg by 52 broad, and necommodntes 1,000 persons. 'The carving of the pulpit and wher parts is exquisitely finished. The altarpiece, by West, represents the Shijwreck of St. laul. 'This hospital supports abont 1,700 old or disabled seamen in tho house at an average cost of $2 \pi$. per annum, and gives pensions varying in anount, but whiel average about $\bar{I} l$. a year, to a much more numerous body of out-pensioners. The murses are all seamen's widows. The revenues of the hospital being roquired for the simport of the in-pensioners, the expense of the out-punsioners is
defrayed by nit annual parlimmentary qrant. Conneeted with the hompital, In a buildinge eontignons to the jark, part of which was intended for a panger's lonlue, is the Ninval Aavlum, for the educiltion of X(n) brye, soms of eommismioned and wirruit oflecers, private weamen ami marines. The management of the hospital revinues is vested in Incorporated commixaioners; and the lnterlor ragitInt lonis are uniler the anprefintendence of in \&overnor. lisutemant-gowernor, chaplain, mid numerous other billewrs.

Greenwidh lark, which was attnehed to the ohd palace, and hn now in the linnde of the crown, contalins nearly g(0) acres: it is well stereked with timber mud deer, and firmishees from Its higher purt magnilicent vews of the metropolim and its vicinlty. On an emineme ltiof. almove the river nisint $\& \mathrm{~m}$, from the jurk-gaten, Is the roynl ohemer vatury, procted ly Charles II, fur the celehirnted Flamstead, and titied up, with telescopies and other antromomicul lontrumenta, whlel have been suceannivaly improved and inevosed by (irnham, Ifralley, Howke, Hersehell, Dollond, and others. The uyper part of the buildiug comsists of rooms well adapted for ohervations: the lower part. heing und as the residence of the astroncomer roynl. This important mal homourable situntion huis been held by some hikhly distinguishad ant ronomirs, an Flamstemi, Halley, Hrmilley, Hiss, Mankelyne, I'ond, mill Airey, who at present ( 1 stifi) enjoys that homour. The lougitudes of al Englinh chares and majes are reckoned from this observatory; and the captains of whips take their time as given here at I 1 י.m, daily. It is " $2020^{\prime}\left(i^{\prime \prime}\right.$ W. from J'aris, and $\left.18^{\circ} 1^{\prime} \mathcal{A}^{\prime \prime}\right)^{\prime \prime}$., from Ferro or Hierro, the most W. of the Chary Islamin.
fireenwich has for many years feen a favourite resort of holydny-seekers from the metropolis, and the means of access have been grently fincilitated by steam-boats, and liy a branch of the SoutliEinstern ruilway terminating at Clinring Cross.
(ireenwleh markets, on Wednesday and saturday, are well supplied. The fuirs, held at binster and Whitsuntale, are well known, for the varions amusements furnished to the crowds that resort thither from all parts of London and its neighbourhood.

Gililibitwal.D, a town of the $k$ of I'russin, prov. l'omerania, cap, circ. of anme name, on the liyek, about 3 m . from the llaltic, and 18 m . SE: Stralsund, on the ruilway frum IBerlin to Stralsund. 1'op, 15,714 in $186 \mathrm{~b} \mid$. The town is the sent of a superior court of appeal, the high judicinl tribunal for the territory, formerly Swedish Pomerumin (Neu-Vor-Pommern), others for the circle and town, a circle-comucil, a hiph board of customs, consistory, orphan-tribnunh, nad bonrd of agriculture. It has n harbour at the month of the liyck, which is muvgalule for small vessels ; manufactures of salt and tobacco, oil-mills, ilistilleries, and a brisk trade both by land and sea. A university was founded liere in 1456 , nad some new luildings were erected for it in 1700 , but the number of students is inconsiderable. Greifswald was taken by the Elector of 13rantenburg m 1768.

GREJZ, a town of Centrul Germany, calo, prine. of Reuss (elder branch), on the White-lilister, 4!) m. S. Leipzig, on the railwny from Leipzif to Niurnberg. 1'op). 10,509 in 1861 . Greiz is a walled town, and is tolerably well built. It is the residence of the sovereign prince, who has a summer palace here, built on an eminence, and surrounded with fine gardens. The church is the only other public building. There are Latin and normal scluools; and it has manufictures of coarse woollen cloths and leather, with distilleries. It is the seat of the government, and of n judicial consistory.

Gremadn, like most other W. Imlinu inlands, has its governor, comucil, and assemlily, ly whom It is governed. Ita eap., st. George, om a apmeinus bay on the S. side of the islamb, is a well-lmilt town, and has one of the anfers nod most commonlions harbours in the Hritish W. Inslies, The sum awarded be govermuent, in leshs, fior the manumisslon of shaves in (iremala amominted to (ilti, 4 thl. 17 s, , being alout 2hil, ds, per head. 'This islanil was diseovered by Cohnmbins in $14!18$, nul colonised hy the French ithat 16ific, at that as a private speculation, but ander liail it belonged to the Freneh erown, till taken by the llitishl in 1762. In 1iag It was retaken by the fireneh, but restored to (ireat Iritain at the pience of 1783.
(iRENOHLL (un. Giratiamopolis), a fortifled city of Franer, def', Isise, of which it is the enp. : in both sides the Isire, 58 m . SE. Lenons, nind 290 m . SE. D'aris, on a limela of the Paris-Mediterranema railway. Pop. $34, \hat{i} 26$ in 186t. The portion on the left bank of the river (the city, properly so callet) is the larger and more ameient: it is surromated by bastioned rumpurte, and has a citalel, but these defences are at present very much ont of repair. The portion on the right bank, originally built by the emperor (iratian, called the Faubourg St . Laurent, is contined between the river and the foot of an abrupt mombtain, and consizs of little more than one spacious strect. It is. however. comparatively the mare populons division, and the chief seat of commercial aetivity. St. Laurent is enclosed by only an indifierent wail, but is defended by the new fortress of Hastille ont the mount above it. The two parts of the city are conneted by two bridges; one of wool, the other of stome. (iremolle is ill lail out, and ill paved; but is generally well built and clean: many improvements have taken place in it of late years. It contains numerous squares and haudsome public fountains; and near its centre is a spacious garden laid out in public walks, planted with trees, and having a quay on the river. Many other agreeable promenades surronmi the city. The chief public buildings are the entheiral, the episcopal palace, hotel of the prefecture, formerly the residence of the celebrited Constable de Lesiliguieres, the general hospital, hall of justice, royal college, thentre, and a public library with 60,000 printed vols. and 600 MSS. Here are 4 par, churches, a Protestant church, several convents and seminaries, a foundling and another hospital, a university aendemy, schools of
medicine, drawing, se., entinets of natural hixary and antigulties, num a ilne collection of paiminge In the l'iace St. Aniled in a colowsal brinze xtatum of the Chevalier Mayari, the knight 'mona puap at noms repros/ler' whio is imeersed In a combignmes churech. (irimaby in a lmorough of considerable antleuity, and wan formeriy a port of nuch impurtance that In the relgn of Bidwaril Ill. It sent $I I$ shijew to the simge of Calais. Owling, however, to the gradial tilling up of lta harbour, it latterly sunk linto comparative linignitionnce. In 1802 a harlour wat constructed; but lering nevemsilile only nt high water, it was not productive of all the advantages that were expecteil. Inat, in 18.16 , a new harinour, on a large acale, necemsible at all timen of the tide, was commenced; and lin antiejpatlon of lta beligg fininherl, frlmaby was male the terminus of two important railways.
'The old dock or flonting linaln, comstructed in 1812, measures abrut 17 acrea; lint being placed at the high water margin of a flat shore, nind being consequently acosalible only towarils ligh witer, it is of very limited utility. 'lo selure a proper depth of water at the entrince of the new works was all oblject of the Itrat importance; aud to attoin it they were projected $\frac{7}{}$ of a mile into the nenthary in advance of the old doek, reclaiming at the same time anil enclosing 183 neren of land. The new worka comprime a wet dock of upwarde of 25 acres in extent, with two entranee locks, laving In front a tidal hasin of 15 acres. The latter, fornued ly two timber plers, which are together abolit 2,000 fi, in lengeth, is provided with landlige slips. It lias a dejth of 9 ft . at low water sprimps, and of 12 f . at low water nenjes; the rise of tifle at the firmer being about 18, and at the latter about 12 f. 'The fncility of ingress and egresse affionied by this basin is erpecinlly useffil to steanurs, which, as thev usually convey pasmengers or light merchambise, do not require to enter a tock. Here Hey lie aflont alongsite the piers at all tlmes of the tide.

The new doek, opened in May, 1852, is entered from the basin by two loeks, furuished with double sels of gates for ebls ant Howd tides, the lupger of which, ematructed (hy apecial agreement with the government) to almit the largest class of war steamers, is of the following elimensions, viz. longth between the gates 300 ft ; breailh from wall to wall 70 ft ; depth of water on cill, at low water spring tide, 7 ft ; depth of water on cill, nt luw water neap tides, $10 \mathrm{f} \mathrm{ft}_{\mathrm{i}}$; depth of water on rill, at high water mprisgr tide, $25 \frac{1}{\mathrm{ft}}$; depth of water on cill, at high water neap tides, $22 \frac{1}{\mathrm{f}}$. At lanf tide the average depth of water on the cill if this lock is 16 to 17 ft ., ums at three-quarters tide 20 to 22 ft. The lioynt Docks, opened in $18: 43$, occupy 140 acres, neur the railway terminus, unt, incluiling the wet dock, afforil ample necommodation for more than 1,200 mil. There is also a graving dock, 400 ft . long ; the wharfs anil quags extend 1,200 yards. $A$ towir, 300 ft . high, serves as a lighthouse, and also as a hydrmalie press for opening the floodgates.
There belonged to the port on the 1st of Jan., 1864,151 suiling vessels under 50 , and 28 nbove 50 tons, besides 4 stemmers umder nud 6 stemners above 50 tons. The gross amonit of eustoms dutics received was $47,800 \%$ in 1854 ; 20,039\%. in 1861; nud 38,817, in 1863. The principal foreign trale is with the Baltic. 'Ibere aro mills for grinding bones and tanneries. Connected with the harbour are large warehouses and timberyards, and on the shore E. of the harbour is ant extensive rupery. The other mannfactures are loeal and minimportans.

130 miles from the lactic and 275 miles WNW. Mexico; lat. $21^{\circ} 9^{\prime}$ N., long $103^{\circ} 2^{\prime} 15^{\prime \prime}$ W. A superticial enumeration of the year 1864 showed the number of inhabitants to he 62,350 , no that it is, in point of pop., the second city in the republic. It covers a grent extent of gromul, and at a disthace has a very picturesque appearance. Its interior is also haudsome; its streets are airy and well laid out, and many of the houses extremely geokl, though mostly of only one story. There are 14 squares, the principal of which, the Plaza de Armas, has in it the goverument-honse, in which the congress asscmbles; the cathedral, a thee editice, though much injured by the earthquake of 1818; mul the Portales de Comercio, ronsisting of piazzas or arendes huilt around three large square blocks of honses. 'Within the town the lortales are the principal rendezvous, as, hesides a number of handsome slops, well provided with Europenn and Chinese manufactures, they contain a variety of stulls covered with domestic productions, fruits of all kinds, earthenware from Tonala, shoes in quantities, mangras, saldlery, birls in cages, "alulces" of Calabazate, and a thousand other tritles, for which there seems to be an incessunt demand. As each of these stalls pays a small gromal rent, the convents to which the l'ortales belong derive from them a considerable revenue. They are the counterpart of the Parim in Mexico, but infinitely more ornamental, being built with equal solidity and good taste.' (Warl's Mexico, ii. 36i2.) lesides this public promenade there is the Paseo, an extensive avenue shaded by double rows of fine trees, having a stream flowing through it, and leading to the Alumedu, a public walk 'very psettily laill out, for the trees, instead of being drawn up in battle array, in lines, intersecting each other at right angles, like the streets, are mate to cover a large tract of ground in irregular alleys, while in summer the intervening spnces ar: filled with flowers, particularly roses, which give both life and viriety to the scene. There is a fountain too in the centre, and a stream of water all round.' (Ward, ii. 361, 362.) Many of the public places are adornel with fountains. Besides the cathedral there are several churches, with numerous monasteries and convents, a college maintained at the public expense on the most liberal footing, and for which a magnificent building has been erected, two ecclesinstical establishments for the education of young women, three fur young men, tive boys' schools, a public hospital, bishop's palace, mint (a fine building), and a neat theatre. A large pile of building, erected during the Spanish rule, for a workhomse, now serves ns n harrack for about 500 men . The coffee-houses are tolerable, and the shops and market place are well supplied with provisions, but the last, which is large, is very ill kept. The city is supplied with water from the Cerro de Col, three leagues distant ; it is lighted at night, except at the time of the full moon, and watched by a patrol. Many of the streets look melancholy and deserted, 'most of the lower orders being occupied in their own honses, where they exercise various trades in a small way, as in San Luis. They are good llacksmiths, earjenters, silversmiths, and hatters, and are famous for their skill in working leather, as well as in manufacturing $a$ sort of porons earthenware, with which they supply not only all Mexico, but the neighbouring states upon the Pacific. Shawls of striped calico, much used by the lower orlers, are made in considerable quantities, ns were formerly blankets; but this branch of trale, ufter suffering much in 1812, when the port of San Blas was opened by (ieneral Cruz, has been destroyed entirely by importations from the United

States.' (Ward, ii. 357.) There is at present little or no furelgn trale, San Blas having been nearly abaudoned for the ports of Mazathin and Guaymas; and foreign goods are brought overland, chiefly from San Luis or Mexico. The city was founded in 1551, and in 1570 was erectel Into a bishopric. Under the Spaniarts it was the cap. of an intendency of the sume name, and the seat of a royal audiencia, as well as of some tlourlshing maunfactures.

Guadilaxara, a town of Spain, and cap. pros. of same name, on the E. bank of the Ileuares, $35^{5}$ m . SW. Madrid, on the ruilway from Madrid to Seville. l'op, 6,033 in 1857. The town was once walled, and fragments of its walls still remain. It is wretchedly built; the only buildings of any consideration being the palace of the Duke diel lnfantado, a large ediitlee, constructed with very little taste; and the church of the Franciscans, which contuins a superb mausoleum of the duke's fimily, said to be second only in splendour to that of the Escurial. Here is a brilge over the Itenares, originally built by the Romans, and restored in 1758. A woollen cloth factory, established here hy lhilip $V$., is said to have employed, in $1786,4,06 i \mathrm{in}$ hands, besides giving employment in spiming to no fewer than 40,000 in the adjacent villages. But the whole trule is now nearly extinct. The town is the sent of a corregidor, and is governed by an alcalde of the first elass.
(iUADALQUIVIL, a river of Spain, having its sources in Murcia and La Mancha, and thowing SW. through Andalusia. The source called the Guadalquivir is in the Sierra de Cazorla, lat. $37^{\circ}$ $51^{\prime} \mathrm{N}$., and long. $2^{\circ} 58^{\prime} \mathrm{W}_{.}$; but the true source, and that most distant from the month, the Guadarmena, rises in the Sierra de Alcaraz, not far from the town so called; lat. $38^{\circ} 48^{\prime}$ N., long. 20 $30^{\prime} \mathrm{W}$. The length of the river from this point is 240 m . direct distance, and 320 m , along the chamuel. The general direction is SW. by W. as far as seville, where it takes a turn neirly S., aun, after forming two islands, Isla Mayor and Isha Atenor, Hows through a marshy and most unlicalthy flat into the Atlantic, at San Lucar. It is navigable for vessels of 100 tons as far as Seville, and for hoats as high as Cordova, 774 ft . above the sem The chiel afluents are, the Jaudula, Guadiate, Bembezar, and Biar, on the r. bank; and the Giadalimar, Guadiana Menor, and Xenil, on the l. of these the Xenil, flowing through Granada, is the longest, being 120 m . long. The ancient name was Betis: the present appellation is Arabic, Wady-al-kebir, the great river.

GUADELOUPE, one of the Windward Islands, in the W. Indies, and one of the most valuable colonies belouging to France, lying (inclusive of Grande-Terre) between lat. $15^{\circ} 58^{\prime}$ and $16^{\circ} 13^{\prime} \mathrm{N}$., and long. $61^{\circ} 15^{\prime}$ and $61^{\circ} 55^{\prime}$ W., 40 m . SE. Antigua, and 30 m . N. Dominica. The area of Guadeloupe, together with its dependencies, the adjacent islunds of Marie-Galnote, La Désirade, and Les Saintes, and two-thirls of the island of S . Martin (Leeward Islands), is 635 Eng. sq. m., and the population amounted, in 1861 , to 139,080 , incluting 93,000 negroes. Ginadeloupe is divided into two unequal parts by the Rivière-salée, or Salt River, an arm of the sen about 5 m . in length, and varying in width from 30 to 120 yards. The division SW. of this inlet is Guadeloupe I'roper ; that on the NE. is called Grande-Terre: the iermer is of an oblong shape; length, N. to S., about 25 m ; nverage breadth, about half as much; area, $82,2,29)$ hectares. A chain of voleanic mountains, covered with woods, runs throngh the centre of the islawh nearly in its cutire length. The medium height of its summits is somewhat more than $3,000 \mathrm{it}$.

but, near its S. extremity, the Soufrière, a voleano still exhiliting a smonldering aetivity, rises to $5,108 \mathrm{ft}$. alove the level of the oceun. A multitude of rivulets, by which every part of the island is well whtered, run down the flanks of this nomituin ehain; two of them, the Goynve and Lezarde, are navigable for small ernft, and highly usefne for the convegance, upwards, of sen-mual, to mamire the lands, und downwarls, of the probince of the lind. Guatelonje contains many minernl springs.
'The island ol Grande-'Terre is of a triangular whape, and has an area of abont 65,923 hectares. It is little raised above the level of the sen, nud diflers remarkably in its features from Ginadeloupe. It is almost a level plain, with only a few senttered hills. It is lestitute ol' woods, and its rivers are insignilhennt; in comseruence of which the rain, which is much less frequent thun in (inutelonpe, is obliged to be carefully preserved in cisteris. Maric-Galante, a circular-shapel island abont 12 m , to the SL.., is traversed, E. to W., ly a chain of hills, which, like those of Guadeloupe, nbound in timber.
The mean temperature of the year at BasseT'erre is abont $81^{\circ}$ Fali. ; its anmial ronge is letween $70^{\circ}$ and $99^{\circ}$. In the sun, the thermometer sometines rises to $130^{\circ}$ Fah.; the heat is, however, tempered by land or sea-breezes. The ntmosphere is remarkuble for humidity. Abont 80 inches of rain fall annnally, on an average, chiefly between the middle of July and the middle oi October. Like the other Antilles, (iuatelonpe is very sulject to hurricanes, and shocks of earthquakes nre frequent. The soil is light and easy of tillage, but its productiveness is owing more to the lient of the elimate and the abondance of water than to its richness. The soil of Grande-Terre is, on the other liand, very rich. Almost every part of that island is capable of cultivation, and, notwithstanding the deticieney of water, it is very prodnctive. The erreater part of the island is laid out in sugar plantations, mostly belonging to great proprietors. It appears, however, from official retums (given in 'Stntistical Tables relating to Foreign Countries,' Part IX. p. 252, Lond. 1864), that the extent of land under this cultivation is on the deerease. The sugar plantations of the island of Ginadeloupe embraced 18,081 hectares in 1889; 17,892 heetares in 1860 ; and 17,868 in 1861. The produce of 1861 consisted of $31,219,226$ kilogs. of sugar ; 1,724,717 litres of syrup and molasses; 3,664,809 litres of rum, or tafia. Next to sugar, coftee is the most important produce, there being devoted to it 2,009 hectares of land in 1859 ; 1,591 hectares in 1860; and 1,676 hectares in 1861. The produce, in 1861 , consisted of 992,932 kilogs. of cuffee. The sugar-cane, at present grown, is of the Otaheitian variet $y$, and was introluced in 1790 , after the other kinds were found to have degenerated. Most of the kitchen vegetables of Europe are raised in the gardens at Basse-Terre; but they degenerate rapidly; tropical fruits, and others of the S . of Europe, attain considerable perfection. Agriculture has been much improved of late years by the introduction of the plough and the use of manure, including lime, salt, and phosplates. The sugar manufacture has been also greatly improved by the introduction of steam-mills. The live stock cuasists principally of black cattle, sheep, and mules. Guinea grass is the only forage grown.
The manufacturing establishments are limited to a few tanneries, potteries, and limekilns. The various trades and handicrafts in the colony are exercised chiefly by whites. There is no fishery on any extended scale; but about 30,000 kilogs. of tish are annually taken.
Nearly all the exported articles are sent to

France, whence $9-10$ ths of the imports are ilorived. The imports are chicily salted meat anil tish, wheat llour, maize, pease aud heans, olive wil, cotton, linen, and silk fabrics, wine, timbor, candles, porfumery, hats, and wrunght metals. The totnl imports into Ginuldonire were of tho value of $2(6,920,(63)$ francs, or $1,076,525 \%$, in 18161 , and the total exports in the wame yatar amomend to $18,409,097$ franes, or $7: 36,3!!9 \%$. The trude is carried on almost entirely ly lirench shipping. The principal roadsteads mad ports are those of Basse-'Terre, and Mnhanlt, in Guadelonje; l'ointe-dे-Pitre, and Monle, lin Grande-'Perre; the romastend of Saintes, and a few others.
Gindeloupe and its dependencies are divided into 3 arromblissements, 6 cantons, and 24 communes. The legislature consists of a governor and a colonial comeil of 30 members, elected fir 5 years, by natives of Prance resident in the ishand, above e5 years of age, paying taxes of 300 I 'r. a year, or liuving a enpital of the value of $30,000 \mathrm{fr}$. Tós be aligible fora member of comeil, an individual mast be 30 years of age, and pay taxis to the amomit of 800 fr., or possess property of the value of $60,000 \mathrm{fr}$. There is a royal court at lanse-Terre; the other tribunals are 2 courts of assize, 3 of original juristiction, and 6 tribmals of justices of the prence. The colony has a military commandant, and nin armed force of $2,13 \mathrm{~s}$ men, including 100 otheers. There are ubout 30 ecelesiasties, upwaris of 50 public schools and hospitals in the chief tuwns. A bishopric of Gundeloupe was formed in 1850 . Slavery was abolished throughont the eolony by deeree of the Republican government of Frase in the year 1848. The town of Basse-'Terre, the cap. of' Guadelonpe, and the seat of government, on its SW. shore, is clean, well built, and contnins $\overline{5,500}$ inhab. It has two parish churehes, a government honse, hall of justice, a large hospital, an arsenal, some good public fomitains and promenales, and a tine colonial garden. It is defended by several batteries on the side of the sea. Grpesterre, on the E . side of the island, is its othor chief town. Point-a-Pitre, n town of 12,000 inhnb., is situated at the W. end of Grande-Terre. It owes its prosperity to its excellent port. It is regularly built, has a handsome church, and many good private edifices. Several furts protect its liarhour. The other towns are insignificant; but three of them, besides the foregoing, have their own municipal councils.

These islands were discovered by Columbus in 1493: the French took possession of them in 1635. Guadeloupe has, on several occasions, been taken by the English, and was oceupied by British troops from 1810 to 1815 , when it was restored to France.

GUADIANA (an. Anas. Arab. Wady-Ana), a river of Spain, rising in the mountains of La Mancha, about là m. NW. of Villahermosa, lat. $38^{\circ} 55^{\prime} \mathrm{N}$., long. $2^{\circ} 48^{\prime} \mathrm{W}$., and Howing through New Castile, Estremadura, and a part of Portugal. It has several sources, which form small connected lakes, called the Lagunas de linidern. Its direction at first is NNW. for about 30 m , it then disappears among the marshes, and is not traceable for 14 m . It rises again NE. of Daymiel, at a place called Los Ojos de Guadiann, with a general E. direction past Merida, as far as Badajoz, where it turns S., and after a very tortuous course of 424 m ., enters the Atlantic by two mouths. It is navigable about 45 m , as far as Mertola, to the falls called El Salto del Cobo. The chief affluents are the Giguela, the Guadarranque, and the Oeiras, on the $\mathrm{r}_{\text {., }}$ and the $\mathrm{J} \mathrm{a}_{-}$ balon, the Guadalema, the Arlilla, and the

## GUANAXUATO

Chanza, on the 1 . bnuk. With the exception of the (iiguela, the afluents on the 1 . bank are by far the largest.

G:UADIX (an. Acci), a town of Spain, prov. (irmanda, on the river of same name, $i 2 \mathrm{~m}$. W. by s. (iranala, unil 216 m . S. Mutric. l'op. 11, miti in 18iz7. Gundix is an old walled town, with stedp, narrow, and hadly-paval streets. it has a enthedrul, huilt in the Corinthinn and Composito orders, with a handsomo portico, 5 par. churches, 7 convents, and a hosjital. 'The appronels to the town is throngh a the avenue of trees, mul the surrounding land is rich, and sul)jeeted to irrigations. The chicf branch of industryis the mannfieture of large clasp knives.

GUAMAN(iA, or IIUAMAN(iA, enlled also Sian Juen de le Virtoria, or de la Fronteri, a cily of l'eru, cap. prov., wh the river of same name, in nis extensive and beantiful plain, 210 m . ESSl:. Lima, and 18̄̄ m. WNW. Cuzeo. Estim. pop. 2k,000. The town is well built, has good signares and streets, and the houses, which are of stone, luave gardens and orcharils attached to them. It has a cathedral, with several other chnrehes and convents; and a miversity with fuenltios of philosopliy, divinity, and law. Gunmanga is the seat of anl intenlaut, and the see of a bishop. It was foumled by I'izarro, on the site of an Indinn village of the same name, for the convenience of the trade between Cuzeo and Lima.
(iUANARE, a town of the repub. Venezuela, dep. Orinoco, prov. Varinas, on a river of the same name, 45 m . SE. Truxillo, and 65 m . NNE. Varinas. 1'op. estim. at 13,000. The town has wide and straght streets, and neatly built houses. A hundsume chareh, the interior of which is splendidly mitorned, contains a shrine of our Lady of Conomorato, much resorted to by pilgrims. The chief wealth of the inhab. is clerived from their trade in cattle, of whiels they possess large herds; and which, together with mules, they export by way of Coro and l'uerta Cabello.
GUANAXUATO, or GUANAJUATO, an inland und mining eity of Mexico, cup. of the state of same name, in the Sierra de Santa Rosn, 6,836 ft. above the level of the sen, and in the very econtre of the riehest mining district in the whole country, 156 m . NW. Mexico; lat. $21^{\circ} 0^{\prime} 15^{\prime \prime} \mathrm{N}$., long. $79^{\circ} 23^{\prime} 53^{\prime \prime}$ W. Pop., incluiling its suburbs, aecording to Humboldt, in 1803, 70,600 , which number had, however, diminished to 35,000 in 1860. The town is very irregularly built; the streets are full of ascents and descents, many of which are so steep as to render the use of four mules in the carriages of the more wealthy inhabitants alnost universal. The open spaces cannot be called squares, for they are of irregular forms: the whole city, in short, is distributed here and there, wherever vacancies at all adapted for building lave been left by the momntains. One part is so hidden from another, that, viewed from the strects, it appears to be a small town. 'It is only by ascending the heights on the opposite side that a view is gained of the whole valley, bruken into ravines, along the sides of which the town is built. Surveyed from this point, the novelty of its situation strikes the stranger with astunishment. In some places it is seen spreading out into the form of an amphitheatre; in others, stretching along a narrow ridge; while the ranges of the habitations, accommodated to the broken ground, present the most fantastic gronps.' (Mod. Trav., xxvi. 2.) The houses also have a singular appearance: they are large and well built of hewn stone, but disfigured by their fronts being painted of the gayest colours. Some of the residences belonging to the principal families
are, bowever, really magnificent, as are the ehurches, and the Alloondign, or pulbic granary. That the civil war, nud the decay of the mines, hus inflieted grent and, perhaps, irreparalile injury on the eity. The town and its suburbs have: mumerons imalgumation works, ono of which sometimes owcopies a wholo ravine, tho spures nhove, one either side, licing crowiled with miness' hils. Gimmaxiato sublem two serions inconveniannes; one $\mathrm{i}_{\mathrm{N}}$, a sarcity of water, there bring within the city only a few cisterns belonging to wealthy indivilhulis; so that most part of this important necesary lias to be brought a distumee of 2 m . !pon the backs of asses: the ofloer is, that chring a purtion of the year it is liable to inundation from the torreuts which descend from the mountains, mal, though works to prevent this linve been comstrueted at a great expense, frw years pass withont some aceidents ocenrring: Some of the pablic highways lave been strangely neglected. On approaching (Gumaxnato from the S., there is, indeed, a raised path for foot-pussengers, but conches and mimals of all kinds lave to proceed up the bed of a river, which during the rainy seasun rushes along with dangerous imspetuosity.

The town has been entirely created ly the mines which surround it. In the vicinity of some of them, little pueblos, as Valencima, layas, and Screna, have been formed, which may be considered as its suburbs. 'I'he first mine-that of St. Barmabe - was opened in 1548 ; but it is only within the last 70 or 80 years that the mines of Guanuxuato have lecome so famons. In is years, viz. from 1766 to 1803 , they prodnced geld and silver of the value of $165,000,000$ piastres, or $12,720,060 \mathrm{lbs} . \operatorname{tr}$; the anmual average profluce being 556,000 marcs of silver, or $364,911 \mathrm{lls}$ : tr., and from 1,500 to 1,600 mares of gold. The V etuMadre, or $⺊$ reat 'mother-vein,' is composed of several parallel veins ramning NW. and Sli. fur rather more than 5 lengues, within which distance there have been upwards of 100 shalts opened. According to Himboldt, the mother-vein has vielled more than a fourth purt of the silver of Mexico, and a sixth part of the produce of all America. The prineipal mines situnted on this vein are those of Valenciana, San Juan de Rayas, Mellado, Secho, Cata, Ieneyac, and Seret:a. When Itumboldt visited these works in $1800^{\circ}$, they employed 5,000 workmen, 1,896 grinding mills, and 14,618 mules ; and befure the revolution of 1810 , they yielded, in all, 10,000 mule-loads of ore, of 11 arrobos ( 275 lbs.) each, weckly; making 62,562 parcels of 32 quintals of ore yearly, worth $7,727,500$ dollars. Of this quantity, the mine of Valenciama alone produced from 5,000 to 6,000 loads, Rayas $1, \overline{5} 00$, and the other mines the remainder. 'The mine of Valenciana,' says Humbollt, ' is the sole example of a mine which, for forty years, has never yielded less to its proprietors than from $2,000,000$ to $3,000,000 \mathrm{fr}$. $80,0001$. to 100,0001 .) annnal profit.' ('Polit. Dissay, iii. 193.) It is at the NW. extremity of the mothervein. After having been abandoned for a long period as unpromising, it began again to be wrought about 1762 , by M. Obregon, a young Spaniard without eapital, but with good credit and great perseverance. In 1768 considerable quantities of silver began to be extracted from it; and from 1771 till 1804 , it constantly yielded an annual produce of $600,000 l$., the net prolit to the proprietors being in some years as much as 250,0001 . At that period, 1,800 men were employed in the interior of the mine, besides 300 men, women, and children employed withont in different ways; and Valenciana (a town which

Lessay, iii. $y$ of the motheroned for a long $n$ again to be regron, a yomur ith gool crechit 68 consideralle tracted from it; antly yielded an net profit to the is as much as men were emne, besides 300 pyed withont in (a town which
afterwards contained 22,000 inhab.) at an early part of these proceetings sprang up, and had hetween 7,000 and 8,000 inhal, on the very spot where grats had been browsing 10 years before. The machinery of this celebrated mine was nuch injural by Hidalgo in 1810 , and destroyed by Mima after his masmecessful nthock on Gimamjuato in IKIX. When the Anglo-Mexienn Mining Assuriation umlertook to drain und work the mine, it was nearly $\quad$ l-4ths tilled whith water, and the town of Valencima had become a ruined phee, with only abont 4,000$)$ inlab. ; and notwithstunding the expendit uro of vast sums by the association it lus not hitherto recovered its former productiveness.
Much of the landed property in this and the nejrhbouring states belongs to the great mining families resident in Guanajunto. The vicinity of this eity abounds with tilluge-land, yielling rich crops of whent, as well as splendid gradens. Agrieulture, however, has been much tepressed through the injury done to the mines, and the suspension of mining laboars, Ghanaxuato was founded in 1545 , constituted a town in 1619, and a city in 1711.

GUATEMALA, one of the repiblics of Central Americn, formerly a part of the Nexican Confederation, but crected into a separate state in 1847 . Guatemala extends between lat. $14^{\circ}$ and $17^{\circ} \mathrm{N}$. and long. $89^{\circ}$ and $94^{\circ}$ W., having N. Yucatan and Mexico; E. Houduras and San Salvador, and S. the Pacilic Ocean. Area 40,777 sq. m.; pops. 850,000 , according to a superlicial entumeration of the year 1855. The physical features of the conntry are mountainous thronghont, and although no very distinct mountain chain traverses Gatemala, an elevated platean occupies the centrul parts of the country, forming a kind of chail of eommunication between the Cordilleras of S. America and the momitain chains of Mexico. This platenu rises much more precipitonsly from the side of the Pacific than the Atlantic, the general slope of the country being to the NE, The table-land averages perhaps $5,000 \mathrm{ft}$. in height above the ocenn: the loftiest summits, which are either netive or extinct volcanues, being in that part of the confederation. The Water Volcano, near Guatemala, so called from its frequently emitting torrents of hot water and stones, but never fire, is $\mathbf{1 2 , 6 2 0} \mathrm{ft}$. ubove the Pacific. There are two large plains-those of Nicaragua and Comayagua, besides muy of less size on the banks of the larger rivers nid along the shores: these principally consist of extensive savannahs with nich pasturage interspersed with clumps of trees. All the larger rivers tlow NE. or E., the proximity of the high mountain range to the Pacitic permitting but a short course to those flowing W. The Nontagua is of considerable size, and useful for the conveyance of European and other gools into the interior of Guatemala. The principal lakes are the Golfo-Dolee, and those of Leon or Managua, Peten, Atitan, and Amatitan. The Gilfo-Dolce, 24 m . long by 10 brond, receives several rivers, and discharges itself by the Rio Dolce into the Bay of Honduras.
The coast plains are subject to violent tropical heats, and are very unhealthy, especially those of the east coast, on the Caribbean Sea, where fevers incessantly prevail. These are chiefly inhabited by the Indiun pop., whose constitutions are better able to resist the pestiferons nature of the atmosphere thmin those of Europenns. The climate of the table-land varies according to its elevation, but an equable, moderate, and agrecable temperature may be obtained there all the year rouml, with a perfectly liealthy climate. The dry
season lasts from October to the end of May, chring whleh N. whinds prevait; and lo the tahleland, in November and Deromber, water exposed to the opern air at night is sometimes, thongli rarely, eovered with a thin jelliche of lec. 'The: rest of the year is enitiel the wet season; lint the rains, hough heavy, last omly durlug the night, mul the days are linir and clondless. Earthquakes nro very frequent.
'I'he foresta y ield many valuable kinds of timber, including mathogany, erelar, palo di muria, a species
 the log wood tree (hamatorylon Camprachinumm, Linu.) is by far the most valumble of the products of the forests. It is fimmi here and in the udjoining peninsula of linentan in the grentest perfection, and is a most important article ol export; a species of lazazil wood is also exported. Among the other vegetable prodicts nay be enumerated the drugon's blowd, mastic, pulmi Christi, and other balsanic, uromatic, and medicimal plauts; with the sugur-cane, cocoa, indigo. coffee, tobaceo, and cotton, which ure extensively cultivated. The erops vary according to the clevation of the surface. Below the level of $3,000 \mathrm{ft}$. indigo, cotton, sugrar, and cocon are the principal. The last is chiefly grown aleng the shores of the Pacilic. The district is alse distinguished for the growth of indigo, to which the agriculturists devote their attention so exclusively, as almust wholly to neglect the cultivation of articles of prime necessity. The culture of iuligro is, huwever, very general throughont Central America, and aceorling to Humboldt, it was formerly produced to the value of 12 millions of livres a year. 1 se tween the heights of 3,000 and $5,000 \mathrm{ft}$., the Nopal or cochineal plant, is a favourite object of cultivation, partienlarly in the neighburhood of (iuatemala. Maize is generally grown, lut wheat only in the high tnble-land in the N. Flax and hemp, though they grow luxuriantly, receive little nttention, owing to the superior facilities for growing and manufacturing cotton : and vanilla is suffered to run to waste for want of hands to gather and prepare it. Among the remaining kinds of produce are tamarinds, cassia, lons pepper, ginger, and othors, which, though highly useful, are little known in commerce. The subjoined table exhibits the principal articles of home produce, exported from the repnblic in each of the years 1850 and $1860:-$

| Principal Articles | 1859 | 1800 |
| :---: | :---: | :---: |

Agriculture, and cattle and sheep breeding, are the chief oceupations of the people; but the manufactures are not quite unimportant. While it be'onged to Spain, Ginatemaln produced most ol' the cotton and woollen fabrics reguired for its own consumption: at present the former are chiefly imported from Grent lbritnin, but cuarse woollens are still mnnufactured, together wath some cotton cloths, caps, and hats. A good many liande are also employed in making earthenware, furniture wooden articles in cabinet work, \&c., and an inland trade is carried on in mats, woven of diflerent colours by the Indinns, and used at Guatemala as carpets.

The commerce of Guatemala, comprising, in re-
gard to exports, the produce alrealy enumerated, nad in imports the ordinary manufactured articles is chiefly with Grent liritain and the United States. The subjoined two tnbles exhibit the value of the imperts as well as the exports in each of the flve years 1856 to I8tio, distinguishing hetween the total imports and exports and those from mod to Great Brituin.:-

It will be seen that while the experts of the Republic are taken almost wholly by Great Irituin, the imports are furnished to not the same extent. The latter come in part from the United States,
The government of Guatemala is in the hands of a president elected for life; a council of state, composed of 12 members, and of housc of representatives of 54 members, elected for six yenrs. Five ministers of state, appointed by the president, superintend the departments of foreign and home affairs, finance, justice, and war. In Guatemala the Spanish laws have been entircly abolished, and the code compiled by Mr. Livingstene, of the U. States, substituted in their stead.

The Roman Catholic is the established religion, but complete religions toleration exists. The monastic orders have been wholly suppressel ; and the few numneries that exist are not permitted to enforce the residence of their inmates against their will. Each of these estnblishments has attached to it a free school for the education of the poor in reading, writing arithmetic, and religious principles. Slavery is entirely abolished.
The Indians of Guatemala preserve to a great degree their aboriginal languages and customs. The chief occupation of the settled tribes is agriculture; some are engaged as workmen in varions manufacturcs. They live in great harmony with the whites, but entertain a dissike to the ladinos. The latter are a mixed breed between the whites and Indian tribes; their complexions are much faircr than those of the W. Indian mulattoes, and many are little distinguishable in appearance from the whites. The latter are mestly of Spanish descent.

History.-The NE. const of this region was discovered by Columbus in 1502. Most part of it was conquered by the Spaniards about 1524 , and erected into a captain-generalship by the emperor Charles V., in 1527. The policy adopted by Spain towards Guatemala was attended with unintentional benefits to the latter. Being only a captain-generalship, the scale of its public expenditure was kept down in deference to the higher pretensions of the Spanish viceroyalties, and as its financial wants were few, taxation pressed lightly on the people. It was not, how-
ever, lermitted to export more of its native products than were sufficient top pay fur the articles which the merchants of Cadiz thought neeessary to send for its consumption. Guatemala, toHether with the other states of Central Americn, Trecume independent in 1821, und was sulsequently ineormorated with Mexieo. The Mexicam Confederation was agaln broken up in 1 xal?, and the Coutral Anerican states formed a league by themselves in 1s.12. From this minion Guatemaln seceded Marell 21, 18.17, and has since continued a separate state.
( GUATLMALA (SANTLAGO DE), or NEW CUATLMALA, a city of Central America, pap. repubs. of anme name, int the spacions plain of hat $V$ iryen, in the valley of Mexica, 1, ,Now ft . above the level of the sen, 106 m . WNW. Sime Snlvador, and tif 5 m . Este. Mexico: lat. $14^{\circ} 33^{\prime}$ N., long.
 enumeration of the year $18 . \overline{\mathrm{j}}$. Fiewed nt a dlistance from the surrounding mountains, few cities present a more luautifhl aypect. $1 t$ lies in the midst of sloping meadow lands and rich phautations; its walls, domes, and steeples lowing covered with a white and glittering cement. It forms a square divided into 4 quarters, each of which is agnin divided into two burrios, or wards, sulperintended by their own alcaldes. The strects, which are 12 yards brond, are mostly paved, and in their centre is usually a streamlet of wuter. 'l'o obviate the danger of earthquakes, the houses are only one story high; but they ocenpy a comsiderabile spnce, lieing built in squares, ropind one or more open courts. The roofs are flat. The Pluza, or Great Square, is a rectangle, 150 yards ench way, surrounded on three sides with collonnades, and having in it the cathedral, with the archlishop's palace, the College de Infantes, the old royal palace, and various government oftices, including the supreme centt of justice, treasury and mint ; the town-hall, prisons, markets, puilicic granary, and eustom-house. In the middle is a large stone fountain, of very superior workmanship, sulpplied with water bruught by pipes from the mountains upwards of 2 leagues distant; the same soure supplying 12 public reservoirs, in different parts of the city, besides many belonging to convents and private houses. Besides the cathedral, there are a great number of highly ornamented churches. There is a university, but it is on a limited scale. Girls' sehools are attached to the nunneries, and there are some endowel schools for boys. On the NLE, adjoining the city, is an extensive suburb, divided into two quarters and four burrios. Guatemala has manufactures of fine mustins, gauzes, calicoes, and common cotton goods, earthenware, and china of very good quality: Among the females are excellent embroideress, dress-makers, and florists; many also are employed in the manufacture of cigars, and spianing cotton yarn of all degrees of finencss. The iuhab. possess an aptness for the arts, and are particularly noted as workers in silver, sculptors, and musicians. Their chief entertainments are picnic parties to the surrounding comntry ; bull lights, a circus for which stands about half' a mile from the city; and the thentre, an edifice partially open to the sky, the performances in which take place during daytime. Religious festivals have nlways becn celebrated in this city with great magnificence. On Sundays, from sunrise till 11 w'elock, the churches are devoted to public worship, and filled with successive congregations; but at the latter hour a new scene commences. The church doors are shut; the plaza, which till then lad been filled with crowds hurrying to and from their devotions, is suddenly converted into a fair : stslls

and looths are crected in all parts of it, and the remniuler of the day is devoted to business or pleasire.
(iuntemala is the seat of the government of the requb, of the same nume, nuld alsus the see of the primite. It was fumbed in 172is, after the destruction by an earthquake of wh! Guatemaln, ${ }_{25} \mathrm{~m}$. W. by s. from the new eity. But the latter has leen afain rehilt, nul is a favemrite place of resort, having sellom fewer than from 12,000 to 18,0001 inhath.
(;UAYAQUIL, a elty, and the ehief sea-port of the republice of Eeundior, South America, on the
 $43 \mathrm{~m} . \mathrm{N}$. hy E . the isl. l'um, in the diuk of
 pop. estimntel at 25,000 . It is built principally on the N . bank of the river, and is divided into the ohl and new town, the former being ocenpied by the porrer classes. 'The eity is tolerally well hail out ; and as its homses nre of woosd, und it has frequeutly sufferel from fires, much of it is comparatively motern, and has a gool apprarance. Its private residences are mostly tiled and furnished with arcades. It contains several good elilices, inchuling the custom-honse, three convents, a college, nuil huspital; but from being situnted on a heand level, and intersected by many creeks, the Iruinage is bul, mad the streets are so swampy as to be sometimes impassable. Nany of the inliah. live on the river, on balzas, or flonting rafts, from 50 to 80 ft . long. The river opposite the eity is abuut 2 m . wide, and has on its S. bank a dry dinck, where several ships of a superior construetion have been built. The eity is unhealthy, and is ill suppliel with water, which has to be brought from a consideruble distnine on balzas, which, indeed, are used for the convevance of all kinds of groods. The port of Guaynguil is one of the best on the Pacific, ships of large size coming up close to the town. It is defended by three forts, one being on the opposite sile of the river. Ships bound for Guaynguil usually call at l'una for pilots. The principal articles of export are cocoa, timber, hides, cattle, tobacco, ceibo wool, and the other proluce of the country.

Aceording to an official statement of Mr . Mocntta, British viec-consul at Guayaguil (Consular Reports, No. IX., Loni. 1862), the imports and exports of Guayaquil, in the five years 1856 to 1860, were as follows :-

| Years | Imports | Exporta |
| :---: | :---: | :---: |
|  | $£$ | $£$ |
| 1856 | 395,739 | 389,484 |
| 1857 | 681,000 | 741,162 |
| 1858 | 506,456 | 474,524 |
| 1859 | 286,918 | 462,403 |
| 1860 | 428,877 | 632,528 |

The exports of 1860 were shipped in the following manner:-

| Nationality | Verrets | Tons | Value or Gargors |
| :---: | :---: | :---: | :---: |
| British | 44 | 45,323 | £199,400 |
| Equatorian. | 35 | 1,406 | 4,000 |
| Peruvian . | 123 | 6,1442 | 57,620 |
| Chllian . | 8 | 1,411 | 8,000 |
| Spanlah . | 13 | 4,683 | 317,308 |
| French . | 2 | 873 | 12,000 |
| United States . | 6 | 2,661 | 14,200 |
| Sardinima | 1 | 311 | 1,000 |
| Danish. | 1 | 245 | 1,000 |
| Prussian | 1 | 522 | 10,000 |
| Dutch | 2 | 336 | 8,000 |
| Total | 236 | 63,813 | £632,528 |

The merchandise imported during the year 18150 consisted of the following urticles:-

Total - . © $3 \mathbf{3 2 , 6 2 0}$
It may be noticed that this total is not the sume as that given in the preceding table-a fact not otherwise accomed for in the report of the British vice-consul as that of the later being estimated value.

GUAYMAS, a sen-port town of Mexico, state Sonora, at the month of $n$ considerable river, on the 1:. shore of the Gulf of Californin, 230 m . WNW. El Fuerte. Lat. $2 i^{\circ} 50^{\prime}$ S., long, 112 W . I'op, estimat. at 5,000 . 'The town has grown up' since the revolution, and owes its origin and rise to its mngnificent larbour, the beat in Mexico. This inlet is cupable of accommodating 200 vessels, and is sheltered from all winds ly the lofty hills which surround it, and the island of Paxnros, which forms a natural breakwater before its entrance. Close to tho pier there are 5 futhoms water, and deeper soundings, with good nnchorage, are found a short distance further off shore. The more modern honses are large and well built : the rest are chietly of mud, and Hat-roofed. The climate is healthy, though hot. Water, with provisions, have to be conveyed to the town from in distance of about 3 m ., the immedinte neighbourhood being arid and sterile. But the great commercinl advantages of the place countervail these drawbacks, and will probably render it the principal commercial depôt on the W. const of Mexico: it being much superior as a port to either Mazatlan or San Blas, and casier of acceas than Aeapulco to vessels from China to Calcutta, which from the prevalence of particular winds in the Pacific, sellom make the Mexican coast S. of Guaymas. At this port and Mazatlan, indeen, all the trade between Mexico and E. Asia is now transactel.

GUAYRA (LA), the principal sea-port town of the repul.Venezuela, South America, gov. Curaccas, on the Caribbean Sea, 11 m. NNW. Caraccas; lat. $10^{\circ} 36^{\prime} 19^{\prime \prime}$ N., long. $67^{\circ} 6^{\prime} 45^{\prime \prime} \mathrm{W}$. Yop. estimat. at 8,000. Humboldt observes:-'The situation of La Guayra is very singular, and can only be compared to that of Santa Cruz, in Teneriffe. 'I'he chain of mountains that separates the port from the high valley of Caraccas, descends almost directly into the sea; and the houses of the town are backed by a wall of steep rocks. There scarcely remains 100 or 140 fathoms' breadth of that ground between this wall and the ocean. The town is commanded by the battery of Cerro Colorado, and its fortitications along the sca-side are well dis-
posed and kept in repair. The aspect of this place has something solitary and glowny. . . The heat is stitling dhring the day, and most frequently charing the night.' (leers, Narrnt. 'Trans, vol, iil. An:3, dis.t.) In 1812 the town was nearly dentroyend by an earthonake, Irom the chleets ol' which it hus not yet wholly recovered. Jis port is a mere romedstemil, "pent to tha N. mal E.., mull slighty shelterent to the W. by Cape Blanco. Vessels mulmor in frum 6 mul 7 to 20 and 30 fathoms, nevorting to their distance oft shore; but though the unchornge be onen, and there is a consilerable surf, the hadding-rioume is goosl, uad vessels properiy found in nuchors mul caltes are seldom driven from their moorings. The trade of la (inayra is extensive. The principal articles of export are collive, eocoa, indigs, and hides. The imports consist prineipally of manufnetureal goosis from lingland, mal provixions from the Umted States. Actording to arepurt of Mr. Mathisom, British vice-comsul (Repurt ilated Mareh 22 , IEti4, in 'Commercial Reportsreceivelnt the Poreign Onlice,' p. 542), the trude of La (Gunyrn for the year 1863 comprised exports to the value of 62,0251, and imports of $91, \underline{2} 1 \mathrm{i}$. The town is mhealthy in summer, especinlly to straugers; and it is extremely hot, the mean temp. of the town being nearly $83^{\circ}$ Fulh. La Guayra was founded by Osorio in $15 \times 8$.

GUliEN, a town of the Prussian dom., prov. Braudenburg, fov. Frankfort, cap. circ. of same name on the Neisse, 27 m . SSE. Frankfort-on-theOder, on the railway from Frankfort to llreslau. l'op. 15,929 in 1861 . The town is the seat of the courts of justice for the circ., town, and district, a bourd of forest ceonomy, and a gymnasium. It is one of the most pupulous and Hourishing towns in the gov. ; and, besides producing woollen and linen stuff, yarn, and stockings, has tanneries, watermills, and a coppler foumdry, with buiding docks, and a considerable trade in cattle, wool, and agricultural produce : it has also a brisk transit trade.
GUERNSEY, an island in the English Channel, belenging to Great lbitain, 75 m . S. the Isle of I'ortland, 32 m . E. the coast of Normandy in France, 22 m . SW. Alderney, and 15 m . WNW. Jersey. Shape triangular; greatest length, $9 \mathrm{~m} . ;$ breadth, 3 m .; area, 16,000 acres. l'op. 29,806 in 1851 , amd 29,846 in 1861. The surface of its $\mathbf{N}$. part is level with a low irregular line of coast; but the S. part is more lofty, varied with deep gullies: the coast is bold and precipitous, presenting fine marine scenery. The geological formation is almost entirely granitic, and quarries of gneiss and granite, at Cirande Rocque, are extensively worked; on the W. side of the island, trap-rocks and micaceous sehist occur. There are no metals of any kind. The climate, though inconstant and occasionally very moist, is not unhealthy. The winters are mild, snow seldom lying on the ground more than two or three days, and the summer heats are less oppressive than on the neighbouring coast of France, or even in the SW. of England. 'The thermometer ranges from about $80^{\circ}$ to $37^{\circ}$ : prevailing winds are E. in spring, and W. the rest of the yeur. The water is excellent, and the lands are well watered by streams rumning in every direction towards the sea. Guernsey, iu point of fertility, does not equal Jersey, neither is it so well covered with timber; and it contains, especially in the N ., considerable portions of waste, or imperfectly reclaimed land. There is a great division of properties, which vary from 5 to 12 acres, 30 acres being considered a large farm. This division is owing to the law, or custom, which gives to each son an equal share of his father's landed property. The annual growth of wheat is estimated at 4,000 quarters: the growth
of barley amounts to 3, ,00) quarters. There quintifies supply only almut a fourth part of the home consmuptin, the defteiency bejng made up hy impurtations from Framee mud the Paltie. Barley is chitefly employed in matting. Ontes amd rye ary littlo grown; limt pursuipen, hret-ruat, and pitatoes are extensively grown. The principal manure i: vrair, a kind of sen-weed, patherem by the proplo twice a yentr. With the exception of druinuin marsh-lands, several humired meres of whilh have been bromght into cultivation, the art of tillage is to agrent extent stationary; Ginrilen probluwe farms a main part of the cotthger's subsistence. Atelnins, th , , lenchex, aml even oramges are ahmadant. 'The breeding of cattle is the most prottable branch of farmage: the price of Gucrusey cuws varies from 101. to 16l, aceorling to their excellence, mal they yleld abutht 7 liss. of butter weekly. The cowt, which are milkell three times a day, are unis r. sally tethered; about $1 \frac{3}{4}$ acres being reckoned sumb cient for the support of ench. The law forbistling the importation of foreign breeds is strictly enforced; and thas the purity of the native race is muintained. Hygs are numerous, and of great size; sometimes attrining from 50 to 80 stone weifhlt.
The trade of Guernsey in very iuferior to thit of Jersey, mull has grently deereasel sinee the French war. lietiore the int roduetion of the lombling system, Guernsey was used by merchants an a dcpint fir foreign wines and other gouls: besides which it hall a most extensive smugrling trate, which, however, has nuw wholly ceased. The shipping is at present chiefly employed in exclannging the wines of Spain and the Afeliterrancan for the sugar, coftice, spices, \&e. of S. America, which they take to Hamburg or Rotterdam, and agniu exchange for corn. The exports consist clietly of cider, apples, potatoes, building-stone, and wine; the imports are wheat and tlour, British manufactures, wines, sugar, and coffice. (For particulars, see Jensex.) There nre some manufactures in (inernsey of cement, bricks, cordage, paןer, and soap; but all on $\Omega$ small scale.

The military rovernment of the island is wested in a licutenant-governor, who represents the suvereign in the assembly of the states. The legislntive boyly, called the states, is composed of the bailiff, the proeureur or attorney of the royal comrt, 12 jurats, the rectors and constables of parishes, total 82 ; and of these the first two are appointen by the crown, and the recturs by the governor; while the jurats and constables are chosen by the islanders. The states vote money for orilinary public expenses; but new taxes must be sanctioned by the crown: indeed all new laws and constitutional changes can be effected only by application to the privy conncil. The 'royal court,' the supreme tribunal, consists of a bailiff appointed by the crown, and 12 jurats elected by the peophis. The language spoken in court is French. Juries are not known; and the powers of the conrt are extensive, undefined, and sometimes oppressively used. Guernsey is a deanery, in the diocese of Winchester, and comprises cight livings; but ar the great tithes belong to the government, the clergy are wretchedly paid, and have little personal intluence.

The nati .e: of Guernsey, like those of Jerscy (both of whotr, in the lower ranks, speak a Normain patois), are thrifty, parsimonious, clean rnd neat in persun and dress, simple in their manners, and generally honest. They are credulous, many still believing in witchcraft. The estab. of schools, however, in every parish has greatly raisel the moral feelings of the lower orders: these schools have been repaired, and are partly supportel by public money. Queen Elizabeth's college, foundel
in 1568, an рение of 16 firnishes a tiom to abut 121. a ywur hishmunint $i$ of the ishat natives, an land.

The improvement of this estahishment is comblacing materlally to the prosperity of the islanal, butlo by its direct inthence on the matives, and by bringing new rexidents from linglaum.

The only eonsiderable town of Guernaey in Peter-le-purt, its eap, situated on the F. sido of the islanl. Ibeing bult on the slope of a bill, it looks wall from the sen; hat the streets, except in limiteville, the modern and hest built quarter, are mirrow, stepp. and crooked, linedi with old and very lofty houses. The chid buildings are, the guvermment-homse, Queen Elizabeth's college, the court-house, the town hospital, and a hanisome fish market. 'The par. church was built in l3is. The larbour, formed by two piers, is considered suificient for the trale of the place, and there is guod anchorage in the roadsteal. Fort (ieorge, a sirung furtress, stands of m. S. of the town.
therusey, as well as the other Channel Islanils, was includel in the duchy of Normanly, whleh once belonged to Great l3ritain. The French have maile severnl inttempts to capiture it, but without success. The lant was in 1780.

GUIANA, GUYANA, or GUAYANA, an extensive regitur of S . America, embracing, in its widest acceptation, all the territory between the Amazon and Orinoco, and extenilinir between lat. $4^{\circ} \mathrm{N}$. and $8^{\circ} 40^{\circ} \mathrm{N}$, and loug. $50^{\circ}$ and $68^{\circ} \mathrm{W}$. Ily far the greater portion of this region (formerly cailed Sjanish anil Portupuese Guayana) belongs to the Veneanclan and IBrazilian territories; and the term (iuiana is now generally nulerstood to refer only to the conntry between lat. $0^{\circ} 40^{\prime}$ and $8^{\circ} 40^{\prime} \mathrm{N}$., and lomg. $57^{\circ} 30^{\prime}$ and $160^{\circ} \mathrm{W}$., divided among the English. Duteh, and French.
GULANA (BliIPISII) is the most westerly portion of the aiove territory, and the largent, if we include within its limits the entiro territory claimed by the lbritish. The latter oxtends between lat. $0^{\circ} 40^{\prime}$ and $88^{\circ} 40^{\prime} \mathrm{N}$., and between the 5ath and 61st deg. of W. long., having E. Dited Guiana, from which it is sepurated by the Corentyn; S. Irazil ; W. Venezucla; and N. and NF. the Atlantic. Area, $\mathbf{7 6 , 1 0 0} \mathrm{sq} . \mathrm{m}$. ; pop. $12 \overline{7}, 69 \dot{5}$ in 1851, and 148,026 in 1861. The latter census stated a considerable preponlerance of males, of which there were 79,644 , against 68,382 females.

Physical Gengrajhy.-An alluvial Hat extends from the const inland, with a breadth varying from about 10 to 40 m ., terminating at the foot of a rauge of sand hills, from 30 to 120 ft . high. Parallel with this range run several detached proups of hills, seldom more than 200 ft . high, which cross the Essequibo in lat. $6^{\circ} 15^{\prime}$, being continuous with the Sierra Imataca in Venezuela. Abont lat. $5^{\circ}$ a mountain chain, composed of granite, gneiss, and other primitive rocks, an offset of the Orinoco mountains, rins W. to E ., through Guiana, forming large cataracts where it is crossed by the bed of the rivers, and rising frequently to the height of $1,000 \mathrm{ft}$. above the occan. About a legree farther $S$, are the l'acaraima mountains, which in a similar manner run W. and E. and are of primitive formation. This clain forms many rapids and cataracts in the larger rivers, and contains the sources of several rivers, of secondary importance, including the Berbice and Massaroony. Its lighest point, M. Roraima, lat. $5^{\circ} 9^{\prime} 30^{\prime \prime}$ N., long. $60^{\circ} 47^{\prime}$ W., near the W. cxtremity of the territory claimed by the 13ritish, is $7,500 \mathrm{ft}$. high. The Conocou or Canucu chain, running Sli., connects the Pacarnima with the Sierra Acarai. The
latter is a densely wooded chain of mountains, forming the S. hominary of (iniama, and the waterahad between the basius of the Amazon abd binerequilu. Mr. Schomburgk extimateil the clevation of the highest summits of this chaill at 1, (Hiti) $f$. 'The lissenuibo and dorentyn rise in it.
"'lioe wholesurline of the coast limels of Ihritish Guian is on a level with the ligin water of the sen. When these lamals are dratheil, Innked. anid culifated, they consolidate, and liceome libly a foost helow it. The original eost of damming und culivatimg is fully paid by the ilrst crop, end the charation of tha crops is from 30 to 60 years; so that. thomph great cupital is reguired for tho tirst ontlay, the comnparative experme of caltivation is a mere trith? cornpared with that of the (W. Indin) islamda. notwithstamling that the expense of works, lailaings, anll machinery may he treble or quadruplo, beling built on an adequate suale for hulf $n$ reutiry ot certaln probluction.' (Hilhouse on the Warow Land, (eog. Journ., iv. 323.)
letween the first and second chains of hills are some extensive navannalis, which "ppronch the sea-shore lis. of the river lierbice. S. of the l'acaraima chain and the Linpunomy are others aill more extensive, but not wo well waterel. In the Intter region are sitnated the small lake of Ainnen and the frontior settlement of l'irarn. With the exception of these savannals, and the swamps on the lierbice, the interior is mostly covered with liill-ranges and dense forests.

The greatest slope of the comitry is towaris the N., in which direction run the principal rivers. The chief of these is the lissequilu, which rises in the Sierra Acarai, about 40 m. N. the equator, and diseharges itself into the ocean by an extuary nearly $2 i=\mathrm{m}$. wide, after a course of at lenst (i2i) m . Its car rance is much impeded by shoals, mud it is navigaile for sailing vessels for only abont it) m. from its month. According to the volume of water, its current is more or less strong, but it is seldom more than 4 knots an hour, even during the rainy season. The Corentyn rises about lat. $1^{c} 30^{\prime}$, und long. $57^{\circ}$, and discharges itself also by an estuary 20 m . wide. Between these two rivers run the Berbice and the Demerara; the former may he ascendel for 165 m . by vessels irawing 7 ft . water ; the latter is navigable for 85 m . above Georgetown, which is sitnated near its mouth. The Mazaruni, Cuynni, \&c., aftluents of the Eissequibo, are the other principal streams, All tha large rivers bring down great quantities of detritus, which being deposited around their mouths and estuaries renders the whole const shioal. For 12 or 15 m . seaward the mud bottom is coverel by only 3 or 4 ft . water.

Geology and Minerals.-These deposits around the coast rest upon deep strata of strong clay of different kinds, alternating with others of sand, and beds of smull shells; and these again upon a granitic formation, which begins to appear on the surface in the second chain of mountains. The granite rocks in the interior often assume the most imposing and singular forms; mural precipices, with cascades 1,400 or $1,500 \mathrm{ft}$. high descenting over them; granite boulders of huge size, spread over extensive tracts, dec.; and in lat. $2^{\circ}$ $55^{\prime}$ is a natural pyramid, called the Ataraipn, wooded to the height of 350 ft ., and rising from that limit in naked grandeur to an elevation of about 900 ft . Mr. Schomburgk gives a sketeh of this pyramid in the 'Geog. Journ.,' x. 163. 'I'ho other chief rocks are perphyry, and varions kimels
of trap, gneiss, claynlate, sandatone, coloured wehren, de. : there in a total absence of limestome and ita moxiticullons. Traces of iron are frequent, but nene of the precions metula lins beerit disenverent. Next to pronite, exceilent pipe and other clays are the most vilunble minerni prodicts.

Climate,-'The menin tumperature of the year at (ieorgetown is $81^{\circ} 2 \prime$ Falir., the maximum $300^{\circ}$ the mlinimun $8.1^{\circ}$ on the comst. Two wet nud two dry monnons constitute the changes of the year. The grent iry sumson begrins towards the eind of Angint, and continues to the end of Nova, after which showers of rain follow to the enid of Jnin: the short iry season then eommences, terminating about the midalle of April, when the rnins bogin (o) descend in torrents, and the rivers to inmodato their bunk. The winds during the rulins are genernlly westerly; in the dry wenson they blow mostly firom the oeenn, partienlarly in the daytime. Ilnricanes are unknown, gales mifrequent : thimder-ntorms oceur at the changes of the sensons, but, like a lew nceaslomin whoeks of earthquakes, are mot attended with dimger, 'l'he low and swampy const-Inuds are unhenlthy, but the interior is quite otherwise; and the insalubrity of (ieorgetown, and other sen-port towns, has been grently ageravated by the quantity of refuse suffered to colleet and decompose on the shore.

Vegetable 1'roducts,-The liorests abound with trees of immense size, including the mora exrulsa, sipari or green-heert, and many others, yideling the mont valuable timber, and an abundance of medicinal plants, lye-woods, and others of excellent quality for cabinet-making. Arnotto, so extensively used in the colouring of cheese, grows wild in profusion on the banks of the Upper Corentyn. That magnificent specimen of the American Flora, the Victoria regia, was discovered by Mr. Schomburgk, on the banks of the Berbice. (Geog. Journ.) Another indigenous plant deserving of mention, is the hai-arry, n papilionaceous vine, the root of which contains a powerfil narcotic, and is commonly used by the Indians in poisoning waters to take the fish. 'I he Indians bent the roots with heavy sticks, till it is in shireds, like coarse hemp; they then infuse it, and throw the infusion wer the area of the river or pool selected. In about 20 minutes, every fish within its influence rises to the surface, and is either taken by the haud or shot with arrows. A solid cubic foot of the root will poison an acre of wnter, and the fish are not thereby deteriorated. (See llilhouse, in Geog. Journ., iv.)

Wild Animuls,-'l'he jaguar, puma, peccari, and wild hog, tapir, and many kinds of deer, abound in Guiana: the sea-cow is met with in the larger rivers, which are also inhabited by the cayman, alligator, and guana. There are several kinds of formidable serpents, but they are fortunately of a sluggish and inactive nature. The birds have the most magnificent plumage. Turtles are plentiful. The rivers teem with tish; the low-low, a species of silurus, often weighs from 200 to 300 lbs , The insect tribes are not excessively annoying.
Trade and Commerce.- The staples of the colony are at present sugar, coffee, and cotton; the two latter were formerly almost exclusively grown, but their culture is now in a great measure superseded by that of the sugar-cane. The coast regions are the only parts cultivated for sugar; but many tracts in the interior seem to be equally well fitted for that purpose; eoffee, also, is grown only on the coast, but, according to Mr. Schomburgk, no tract appears better suited for it than the central ridge of the mountains. The Indians have generally some indigenous cotton growing round their huts, and among the Macusis (on the

Ruptunnii) it in raised to a considierable extent It comes to prerfection in mont parts of the colony; but is enltivated by the colonista chintly on the const. There are numerous other products, which an yet neither form artieles of export, hor af internal consimption, for which looth the moil anm clinnte are suitable, and which mlght be raioend with advantage, wero it bot for the want of halwor, Among these are rice, make, lmbinn millet, Victoria whent, eocon, vanilla (a mative of (iniana), tobaceo, and cinnamon. Jetween the Werlice and the linsequiles there is a tract of many thonsan! acren, jomaensing the memin of constant irrigation, on a small portion of which three crops 11 year have been repentedly raised; lint at present it is nearly all a complete wildermess, mill will sin contimue till libour beeomes more abumlant nul eheaper. 'the const regioll, which is eovered by a deepl layer of vegetable monli, forming what is called a pegass soil, is wor extremely firtilo that 6,000 nal even 8,000 lls, of sugar, und from 20,000 to $30,000 \mathrm{lbs}$ of plantains, are sometimes proluced on an nere; but in order to cultivate this soil, dame and embninkmenter as before stated are necessary, and agrienlture is comblucted at a great ontlay, and on large estates.

Large herils of horses and cattle wander wild on the wide but ill-watered savannahs bevomil the l'uearnimn ; and, with little exception, have hitherto afforded food only for bensts of jres: The savamahs between the lerbice and the Diemerara oceupy up: ards of $3,000 \mathrm{si}, \mathrm{m}$.; they are clothed with nutritions grasses, plentifully irrigated, and interspersed with sholly woods. Were these stocked with eattle from the interior, berf might be obtained as cheaply as in the U. Statew. From 1,800 to 2,000 individuals, $7-10$ thes Indians, are employed in eutting timber, which is in grent demand within the coleny, though its export has hitherto been very trit'ong,

Since 1837, there has been a rapid decrease in the quantities of the staples grown and exported. Different cirenmstances have probably conspired to liring about this result; but there can be no manner of doubt that it is mainly ascribable to the nature of the climate, and the aversion of the emancipated negroes to severe labour. The total value of the exports which, in 1836, amomuted to $2,185,3791$., lad sunk in 1860 to $1,518,452 l$.; in 1861 , to $1,583,6491$; and in 1862 , to $1,365,2951$. The imports amounted to $1,145,9591$. in $18 t i 0$, to $1,339,7131$, in 1861, and to $1,107,1811$, in 1862. Very nearly the whole of the exports are sent to. Great Britain or to British America and the W. Indies, There are about 250 m . of public roads. Dutch and linglish measures, and Spanish, Dutch, and English money are in use.

Government,-'The government is vested in a governor, and a court of policy, consisting, besidey the governor, of the chief justice, attorney-general, collector of the customs, and government secretary, and an equal number of unofticial persuns elected from the colonists by the college of eles:tors. This college is a body of seven members, appointed by the inhab. for life, whose quaiification is the payment of taxes to the amonnt of $5 /$ sterling a year. The unotficial members of the court of policy serve for three years, and go out by rotation. There is a college of financial representatives of six members, with the same qualifications as the members of the college of electors chosen by the inhab. for two years. The court of policy decides on all financial regulations; but when they have prepared an estimate of the expenses for the year, and the mode of taxation, and the different items have been discussed and alceded to by a majority, the estimates are handed

'The governor nut only has a easting vote, as president of the conurt of policy, but ans alwolute veto on all laws passed by a majority, The supreme civil court consiates of a chlef juige, (wo puisite judges, a necretary, regintrar, aind nccountint. It in a court of apieal from the rolls court in each co., in which one of the julges of the sopreme court presides. 'I'he suprente criminnl comrt is composed of three civil julges num three namessors, ehosen by ballot. It Juigmente are decilled upoli by a majority of votes, and are delivered in open court. Inforior criminal courts are holiten by the sheriffs of ench county, with whom three magistrates are assuciated. Specinl magisirates, appointed from Eingland, decide between the misters and Inbourers in the diflerent districts; three superintendents of rivers, and six post-holders are appointed for the protection of the Indians in the Interior. The criminnl law is the same as that of Great 13ritain, but civil cases are ruled by the Koman- Duteh law, in so far as it has uot been modified by orders in councll and loeal ordinances. The military force consists of one regiment of the line, and a detneliment of another, The colonial militia has been disbanded.
The publie revenue is derived from taxes on produce; on fiseomes of 500 dollars and npwarils; on imports not of the origin or manufacture of Great Britaln; and from ansessed taxes on loorses, earriages, wine and spirit licences. The total revenue amounted to $261,265 \%$, in 1868 , and the expenditure, ill the snme year, to $251,185 /$. The portion of the 20 millions sterling falling to this colony, as compensation for the freedom of slaves, amoninted to $4,268,809 /$.

The only towns worthy of mention are Georgetown and New Amstcrilnm. Georgetown, fonmerly Stulimek, the enp. and sent of govemment, is nin the I:. bnik of the Demerira, near its month; lnt. $\mathbb{f}^{\circ} 49^{\prime} 20^{\prime \prime} \mathrm{N}$., long $58^{\circ} 11^{\prime} 30^{\prime \prime} \mathrm{W}$. Except Water Street, which is butilt close to the river, the streets are wide and traversed by canals; the houses are of wood, seldom nbove two stories high, shaded by projecting roofs, having verandalis and porticoes, anil surrounded by gardeus sepnratel by trenches. An enlitice facing the river, built of lriek and stuceoed, which cost the colony upwards of 5,10001 ., comprises all the government oflices: near it are the seoteh church, market-house, and town guarilhoose. Within a mile of the town, near the month of the river, is Fort William Frederick, a small mal fort. A handsome Gothie chureh, whieh cost 13,0001., has been erected at (ieorgetown; another episcopnl church stands on the parade ground, besides which it has a Roman Catholie cathedrnl, Wesleyan chapel, 3 public, an infinat, muld 8 privnte schools, $\mathfrak{a}$ colonial hospitnl, an excellent seamnn's hospital, a snvings' banks, two commercial banks, and an amatenr theatre. Shops mud stores are mumerous, and Europenn goods of all kinds plentiful; no duty being laid on Eurlish merehandise. The markets are good, and n new market-honse is being crected. New Amsterdam, on the Berbice, in lat. $6^{\circ} 15^{\prime}$ N., loug. $57^{\circ} 27^{\prime}$ W., extending about $1 \frac{1}{2} \mathrm{~m}$. along the river, is intersecied by canals, and has nbor:t $\mathbf{3 , 1 0 0}$ inhabitants. It has English, Seoteh, and Duteh churches, Rom. Catholic and Wesleyan chapels, a free school, conrt-liouse, barracks, fort, many commodic us wharfs and ware-
honsen, and two commercin! banks, It in leam unhealthy than (ieorgetown.

Ilistory,-Accorilige to some, Columbus diseoverend (fubina in 1498 I others gave that honour to Viase Numez in 18nd. The Jutch, who were Ita Ilrat liuripuin mettlorn, estabiliahed mome net tlements near the lonnroon and elsewhere in its neighisurhool, in 15xi), and soveral fintior to the F:a few vents afterwarils. The Finglish begun to form setilements alsout 1630. Nost of tinianis. however, remained in the hamis of the linteli till 179t, wises Demerara and lianeginilas surrendereal to the English. I'hey were rentored to the liatavian republic in 1802 ; and re-taken by tho Ibritish in Intois. The terrltory enillad liritish Giniana hans helongeal to ne ever nince that perlonl: that ealleal Juteh iininan wa given up to llollanil at the conchasion of the late war.
( $\mathrm{H} D \mathrm{I} A N A$ (1)U'T'Ll). 'lhis territory is intermedinte, both in nize and posithon, between liritish and French (iuinna. It extemis hetween the 2nil and 6th deg, of N. lat., and the biril nuid $\overline{\text { Bith deg. }}$ W. loug, having li. Frenelı tinhum, from which it is separnted hy the Marony, S. Jrazall, W. the Corentyn, which dlvides it from IIritish Guinnon, mid N. the Atlintis, lemgth, N. to S. 250 m, ; average breaith, alout $155^{\circ} \mathrm{m}$. Area alrout $1 \mathrm{~A}, 501$ sq, in. 1'op., exclasive of Indinus anil Maroons, estimated at 65,000 , of whom 6,000 are whites or free coloured people, chiefly Duteh, French, and Jewa, and the reminimer negro slaves. The maroons of the interior are the descemilmits of rumaway negroes, and were very troublemome during the past century; they have now, however, adopted much more settled habits than formerly, mul receive annual presents of wenpons and arms fron the Duteh, the territory they oceupy formhig it klnd of military frontier to the colony. Thes physical geogriphy, ellinate, and prodictions of Diteh Giliana are pretty much the sanie as those of British tiniana. All the rivers have a N. direcethon; the chief is the Surinam, which rums through the centre of the conntry, anil falls into the Atlantic, after a course of nearly 300 m . It gives its name to the N. portion of the territory, and is navigable for large mips for about 4 leagues from the eonas. Jarnmaribs is situnted near its month. About oto slips are employed in the transport of the produce of the colony to liurope. Nugar is the chief staple, and about $25,000,000$ llos, are produced anmanlly; the export of cotlee may he estimated at nbout $4,000,000$ lbs. a yenr; cocon, cutton, rice, cassava, and yams are nlso grown in considernble quantities ; and plentiful supplies of various descriptions of timber, and of wools for cabinet work, with grums, lalsams, and other drugs, are procured from the interior. I'rovivions, arms, and manufinctured groeds are imported from Ilolland; provisions are also imported from the U. States, to which the exports are symip and rum; there is some commeree with the W. Indies, and a smuggling trale is earried on with Colombia. The government is vested in a governor-general and a high council. 'The cap. and seat of government is P'aramaribo, a town of 20,000 inhabitants. three-fourths of' whom are blacks, or of mixed descent. It is nently laid out in the Juteh style, and has 1. Catholic, English, and Luthermin chnrehes, a German, and a Jortnguese Jewish synagorue, and mu exchange, nul is the centre of the trude of the colony. The fort of Zeelandin, a little N. of the town, is the residence of the governor, and the seat of most of the grovermment establishments.

The conat platn (busasen terres) is an alluvial tract of extreme firtility, intermeraed with in fow imolated hills, aplarently of volemule origin, and миmue rangen of low hillos.ks. 'The uplaning (terreas humies) are nlao very fortile, their mull beligk generally argillaceous, nowe or lewa fintermixaid with granite, kinil, and tufin, anill In mome pmrts highly ferruglnums. The monntain chalios rumb. anil $W$.; they ure almost wholly granite, lut no where reneh any ureat elevatloif ; in the centre of the colony they rise from $1,6(0)$ to $2,(0) \mathrm{ft}) \mathrm{ft}$, above the level of the nea. Few eonutries are more uhmolantly watered. There nen ulwards of 20 rivern of fillerable size, all of whileh hinve $n \mathrm{~N}$. consme. 'I'heir montlis are obstructel liy mandlunks, nuil do not nelmit of the entrance of vewsela drawing more than 12 or 15 ft . whter; they cane to be nayjgalile, excepit for eniomes, at a diastance ul' from 45 to fio ill . laland. Ith the rainy meanon they inumate the low connery to $n$ great extont, hint are then linavignhle from their rupirlity. The consta are low, mul, except at the rlver monthe, whijw canuot nppronch the whore. There is only one romintead, that of Cayenine, where vessels cuis ride lin menurity, Several mmall roeky or wooded islames lie all'the const, among whicli in Cayenne, at the month of the Oanpih, olt which the enp. Is built. The climnte is similar to that of Ilritish Gininun; luit the coant lande nppear to be leas unhenitiv. Alout 50) or 60 mm . from the conat the rinutry logins to be covered with vast forests. 'l'he lowlande are in a grent part macleared, and covered with underwonml. Tho nettled nud oeenjiod lands were dispersed in I $\mathrm{B}: 31 \mathrm{i}$ over a surfice al 230 mp. leagues, or nimut 1 -80th part only of the whole surlince of the colony, the rest of whith is temmed by will beasts and roving ladimus. The eultivated lauda are chietly given up to the सrowth of sugar eane, coffee, cocon, and zuiecs, The sngar plantations, in 1861 , covered 5.52 lieetaren, and promluced $509,061 \mathrm{kilogso}$ of shigar; eolfe was grown, in the same ycar, on 498 liectures, aud produced $74,700 \mathrm{kiloggs}$; and cloves, weighing $3.1,341$ kiloges, came from 250 heetnres of land. (Sintistical l'ahles relnting to Foreign Countries, 1'nrt ix. p, 252.)

The sugar-cane was fntroduced by the earlieat colonists, and its culture has been greatly extemled since 1824 ; it is grown only on the low lames. Cuffee is very inferior to that of tho W. Iudies, and ita culture has rather diminished of late yours. Cotton, coeon, aruatto, and vanilla are iniligenous. The clove succeeds pretty well, e:jecially on the uplands; other npices have met vith only doubtful success. Cocon is unlit for the lirench imarkets, and most of what is grown is exported to the U. States: indigo and tobaceo are of very inferior quality. Manioe, rice, maize, and hanamas are grown, but the quantities prodnced thectuate greatly, nul are often insulicient for heme consumption. Nenrly the whole of the exjorts, except cocoa and a small quantity of sugar, are sent to France. Of sugar, the total exports in 18161 were of the value of $168,719 \mathrm{fr}$., of which the amonnt of $155,(i 533 \mathrm{fr}$, went to France. The cutire exports of French Guiana, in 1861 , was of the value of $1,299,415$ fr., or $51,97(i)$., while the inports in the same yoar amounted to $6,471,960 \mathrm{fr}$., ur $25!5,(1001)$.
l'rench diniana is divided into two districts, those of Cayenne mol Simamary ; mad fonrteen commumes, composing six electoral arromtisse-
menta, aid sending alxtecil ileputles to the eolo nin] counell. Cayenne, tho seat of givernment (whichs see), is the only town worth notlee. The gevernment is vested in a governor, ampinted ly a privy comiell of nevan of the hapheat oflloinal finnethonaries; and the colonial conmeil, eominewal if aixteen members, elected for Ilve years, by lilinh, of Fronch dewcont, tweisty-llve vents of nge, biri, or havinp resiled in tiulaba for two yeurn, anil paying direet taxes to tho momint of 200 fr, a year, of the possenmons of property to the value of

The elty was once celebrated for len printing; but at present this lornuch of induatry in not more netive than In an binglish country town. It has still, however, a typefommilry, chhetly for tireck and Hebres characters, from which the Jews prinelpally supply themselves with the latter.

The neighbourhood rumed Haarlem is enrefully: laid out in plantations nuil publle walks, nud fór aeverul miles on the road to layden the country is sprinkled with numeroun neat villas. Inmediately on the S . of the clty in a woond of conniderable extent, lit whieh is a lirge and elcgant munsion in the tirecian style. called the I'avilion. It formerly belonged to Mr. Ilope, the banker, who sold it for 500,000 guiliters (aboit 42,0001.) to Napoleon for hin brother lomin. At the peace it was nequestrated by the government.

The epoch at which llatalem was foundel in unecrtain. In 1572 it was besieged ly a Spaniah furce under Toledo, a worthy nom of the luke of Alva. The elty helil out for seven months, when it being known that the garrison intomled to make a denperate aortie as a forlom hope, temms of capitulation were offerel and aecepted; but nosooner had the Spaniards ohtained possession of the town, than they commenced a massacre of the inhab, and upwarile of 1,000 individunle were elther put to the swori, or tied in pairs and thrown into the lake. In 1577 the town was retaken by the Duteh. Haarlem was the lirthplace of Ostaile, Wouvermans, ISerghem, Van ier Helst, and Schrevelins.

HACKNEY, a town and par. of England, co. Middlesex, hund. Ossulstone, forming a suburb of the metropolis. Area of par, including the hamlets of Clapton, Homerton, Dalston, Shneklewell, and Kingsland, 3,227 acres. 1'op. of par., 76,687 in 1861. Hackney consists chiefly of two wide strcets, running nearly at right angles to each other, from which other atreets diverge. There nre many large and substantial residences, both detached and commected with the llne of atreet; but the houses getserally are of inferior size. The

1 I

## HAGUE (THE)

par. has 7 churches, including the mother-church, St. John's, and 3 chnpels of ease. All are commodious; but none are remarkable for architectural elegance. The dissentera have several places of worship, among which is one rendered illustrious by the ministerial labours of Bates, Matthew Ifenry, Priestley, and Price. At Ilomerton is an ncademy for Independent ministers. There are 3 charity schools, educnting in the whole about 500 children ; a school of industry for 60 children; and 3 hospitals or almshouses for aged people. At Clapton is the London Orphan Asylum, where 800 children, the orphans of respectable parents, are boarded, clother, and educated; and at Hackneywick is an establishment supported by the Society for the Suppression of Juvenile Vagrancy. The land about Hackney is chiefly occupled by nurscrymen and market-gardeners; the rest is employed in cow-pustures and brick-fields. The pars, of Ilackney and Stoka Newiugton form a union under the Poor-Law Ainend. Act. (Sce London.) HADDINGTON (CO. OF), sce Lotimans.
HADDINGTON, a parl, and royal bor. and market town of Scotland, cap. co. Haddington, 16 m. E. by N. Edinhurgh, nnd $10 \frac{1}{2}$ W. ly S. Dunbar on a branch of the Edinburgh-Herwick railway. Pop. 3,897 in 1861. The town lies at the foot of the Garleton hills, bounded by the Tyne on the E., which stream divides it from the suburb of Nungate, to which it is joined by a bridge of 4 arches. It consists principally of two parallel strects, ruming E. and W., and a long cross atrect which bounds one of these, and intersects the other nearly at right angles. The main parallel street, which is a continuation of the road from Edinburgh, is spacious; the general character of the town, as to buildings and appearance, is superior to that of most others of its size. The strects are paved, and lighted with gas. The principal buildings are the town-hall, with a lofty spire 150 ft . in height; the county buildings, which contain accommodation for the sheriff's court, the meetings of the county, and apartments for the preservation of the public records; and a Gothic parish church, supposed to have been erected in the 13 th or 14 th century. It is 210 ft . in length; the choir and transept are in a somewhat dilapidated state; it has square towers, and is 90 ft . high. The western part of the cross is used as the parish church. Fordun styles it lucerna Laudouia, the lamp of Lothian. The parish church of IIaddington is one of the few churches in Scotland, not in Edinburgh, that are collegiate. There are chapels belonging to the Scottish Episcopalians, to the United Associate Synod, to the Old Light Burghers, the Independents, and Methodists. Haddington can boast of one of the enrliest schools established in Scotinnd, and it possesses an excellent classical seminary under the direction of the magistrates, and 6 other schools. A mechanies' institution was established here in 1823 . The number of benevolent, friendly, and religious societies is great. There are no manufactures in the town, but there is a considerable trade in wool, in tanning, and currying leather, in preparing bones and rape-cake for manure, and various minor branches of industry. Haddington is celebrated for its weekly grain market, which is the second in point of importance in Scotland, Dalkeith being the first. The agricultural and horticultural societica of the county hold their meetings in the town.

Haddington is very ancient. A castle on its W. boundaries was used ns a royal residence in the 12 th and 13th centuries, and here Alexander II. was born in 1198. A convent of Cistercian, or Bernardine, nuns was founded here in 1178 ;
and a monastery of Franciacan, or Grey Friarn, in the subsequent century. (Keith's Cnt. of Scet. llishops, 449 and 462.) The suburb of the Nungate obtnins its name from the former of these institutions. It was in this numuery that the Scottish l'arliament was convened (1548), when its assent was given to the marriage of Qucen Mary with the Danphin of France, ninl to her education at the French court. Haddington has often suffered aeverely from the overflowing of the Tyne. The last inundation was in 1775 , when the river rose 17 ft . above its usual level, and flooded more than half the town. In 124, the town, then composed of wooden buildings, wra totally consumed by tire. It was again nearly consumed from the same cause in 1508. Haddington unites with N. Berwick, Dunbar, Lauler, and Jedburgh, in sending a member to the H. of $C^{\prime}$. In 1865 , its registered voters were 225 . Thic municipal income was 994l. in 1863-4.

Various eminent men have been connected with Haddington. John Knox, the fnmous refurmer, is generally believed to hars been born in the suburb of Giffordgate in 1505 , and receivel his educntion at the burgh school; but some writers regard the village of Gifford, five miles distant, as lis birthplace. The Maitlands of Lethington, a place within a mile of the town, are known both in literary and general history. Sir Richard Maitland, lord privy seal of Scotland, and a lord of session, was himself a poet, and a collector of ancient Scottish peetry. Ilis eldest son William is well known in history as aecretary of state during the reign of Queen Mary: his second son John was lord high chancellor of Scotland; and Thomas, his youngest son, is celebrated both for his Latin poems (Delicie Poet. Scot.), and for being one of the interlocutors in Buchanan's dialague De jure regni apud Scutos. The Duke of Lauderdale, the capricious and tyrannical secretary of atate for Scotland in the time of Charles II., was a deacendant of Sir Richard; also John, earl of Lauderdale, author of 'the Works of Virgil translated into English Verse.' The only eminent man of more modern timea connected with Haddington was the Kev, John Brown, anthor of the 'Self-Interpreting Bible,' and other theological works, who died in $178{ }^{7}$.
HADLEIGH, a market town and par. of England, co. Suffolk, hund. Cosford, on the Bret, a tributary of the Stour, 8 m . W. Ipswich, and 58 m . NE. London by rond, and 694 by Great Eastern railway. Pop. of town 2,779, and of par. 3,606 in 1861. Area of par. 3,440 acres. It is an ancient-looking town, exhibiting, both in brick and wood, many curions specimens of old house architecture. The church, a handsome structure with a fine atecple, forms the principal ornament of the town. There are also 12 almshouses, and a curious brick gate-house, with hexagonal turrets, erected at the end of the 15 th century. This town had formerly a fiourishing clothing trade; but the chief manufncture nt present carried on is the spinning of yarn for the Norwich weavers. Hadleigh was formerly a corporate town, but lost its character by a que warranto in the reign of Jnmes II. Markets on Monday ; fairs on Whit-Monday, and Oct. 4.

HA(iUE (THE), (Dutch, Gravenhaag, 'the count's meadow;' Fr. ILa Haye), a town of the Netherlands, of which it is the cap. and usual residence of the king and court, prov. S. Holland, on a branch of the canal and on the railway between Leyden and Rotterilam, 10 m . SW. the former, and 13 m . NW. the latter city. Pop. 82,620 in 1861. The Hague is an open town, being surrounded only by a moat crossed by
drawbridyes. town; its hou severnl of its and planted pearance, hov commercial ci town is the f Vuverberg, a lake and wo and adjacent t edifices. The Museum, oceu Maurice, an el Its extensive noble staircas confined to wo department th The grand ob Bull, a picture end of one of t that of a youn cow reclininy or three sheep, a fence-all as a distant land group appears briskness in its also is the mit to make every the creature tel closest inspect art was carried and hung in th j. 22.) The IS bying the lowe principally of Chinese and $J$ is devoted to o Mutch history, srticles, the nrn The king's pnla little that is rem it is an edifice ir two wings formi is in it a good 8 king gives aud subjects indiser Prince of Orang contains, howes paintings, and $t$ lrawings by the jerty of Sir The the Vyverberg is of buildings of ome (iothic hal the ancient pala is occupied by the chambers in states of Hollan for the prison latter of whom w There are 14 ch gogues, an orpha correction, 5 po and superior priv 100,000 vols., a $n$ \&c., many priv learued and bene for Dutch, Gerı favourite promen road, lined with ruws of trees, fur leads from the Bosch. The lntt linging to the kis adjacent to the brounds, which
drawbridges. It has the usual fentures of $a$ Dutch town; its houses and pavements are of brick, and several of its atrects are intersected with canals, and planted with rows of trees; its general upppearance, however, is mich superior to that of the commercial cities of Itollnind. The N. end of the town is the fashionable quarter, and in it is the Vyverberg, a tine open space, ornumented with a lake and wooded island in its centre. Around snd adjacent to this square are all the chief pubic culifices. The first of these is the National Nuseum, occupying the former palace of Prince Maurice, an elegant builling of the 17 th century. Its extenslve picture gullery is reached by a noble staircase ; the paintings here are mostly confined to works of the Dutch school, but in that department the collection is almost unrivalled. The grand object of attraction is Paul Potter's Bull, a picture which occupies nearly the whole end of one of the rooms. The representation is that of a young bull with brown and white spots, a cow reclining on the green sward before it, two or three sheep, and an aged cowherd leaning over a fence-all as large as life; the background being a distant landscape. The chief animal in the group appears to stand out in bold relief, with a lriskness in its air that is perfectly startling; such also is the minuteness of the touching, in order to make every hair on the hide and forehead of the creature tell, that the picture will endure the closest inspection. This highly-prized work of art was carried off to Paris by order of Napoleon, and hung in the Louvre.' (Chambers, Holland, p. 22.) The Lioyal Museum of curiosities, occubying the lower part of the building, consists principally of a large and unique collection of Chinese and Japanese articles. One apartment is devoted to objects of interest connected with Dutch history, containing, among other similar articles, the nemour and weapons of De liuyter. The king's palace, in an adjacent street, presents little that is remarkable either without or within: it is an edifice in the Grecian style, its centre and two wings forming three sides of a square. There is in it a good suite of state rooms, in which the king gives audience, every Wednesday, to his subjects indiscriminately. The palace of the Prince of Orange is a large but plain editice; it contains, however, a good collection of Dutch psintings, and the valuable assemblage of chalk drawings by the old masters, formerly the property of Sir Thomus Lawrence. On one side of the Vyverberg is the Binuenhof, an irregular pile of buildings of various dates, comprising a handsome (iothic hall, the only existing remnant of the ancient palace of the counts of Holland. It is occupied by various government offices, and the chambers in which the states-general and states of Holland meet. The Binnenhof servel for the prison of Grotius and Barneveldt; the latter of whom was executed in front of it in 1618. There are 14 churches, several chapels, 2 synagogues, an orphan asylum, state prison, house of correction, 5 poor schools, several intermediate and superior private schools, a roynl library with 100,000 vols., a museum of medals, gems, cameos, dc., many private galleries of paintings, and learned and benevolent associations, and a thentre for Dutch, German, and French plays. The farourite promenade is the Voorhout, a fine wide ruad, lined with elegant mansions, planted with lows of trees, furnished with benches, \&c., which leads from the N. quarter of the town to the Bosch. The latter is a finely woorled park, belinging to the king of Holland, and immediately aljacent to the Hagne. In the centre of the grounds, which are embellished with artificinl
shects of water, and winding walks amongst tho trees, stands the Muys in den Boach (house in the wood), the summer palace of the royal family. It is nu editlee of an unpretending charncter exterunlly, but within are many excellent pietures, mud it has a ceiling partly painted by Rubens. Abont 3 m . W. of the Hague is Scheveningen, a fashiouable but dreary IHutch watering-place; and about $1 \frac{\mathrm{f}}{\mathrm{m}}$. SB, the town is the castle of Ryswick, which gave its name to the treaty of 1697.

The Hague has never been a place of mich commercial lmportance. The inhab. derive their resources chietly from supplylng or heing employed by the court and government establishments; and they suffered very considerably from the transfer of the seat of government to Amsterdam on the erection of Holland into a kingdom by Naj olcon. The manufacture of porcelain, and the printing of books, especially those in the Frer rin language, are almost the only branches of industry. There is, however, a cannon foundry, established in 1668.

The Harue became the residence of the feulal lords of Holland in 1250, from which period it continued the seat of government till 180f; it again assumed the rank of a capital on the restoration of the Orange family. It was the native place of the astronomer Huygens, the naturalist Ruysch, and Willinm III. king of England.
HAGUENAU, a town of France, dép. Bas-Rhin, cap. cant., on the Moder, 15 m . N. Strasburg, on the railway from Strasburg to Mannheim. 1'op. 9,439 in 1861. The Moder here divides into two arms, one of which intersects the town, while the other encircles it on the S. Haguenau is surrounded by old and ill-constructel walls, and a wide ditch: it was originally fortified by the emperor Frederick Barbarossa in the 12th century. A tine Gothic church erected about the same period, and ornamented with some elegant sculptures, is its chief public edifice; it has several other churches, a synagoguc, civil and milltary hospital, some good cavalry barracks, many oil, madler, and other mills, and manufactures of cotton fabrics and yarn, woollens, soap, \&c. The forcst of Haguenau is one of the largest in France; it extends over an area of 17,000 hectares.

HAINAN, or HAI-LAM (Chinese, 'South of the Sea'), a large island of the Chinese Sea, between lat. $18^{\circ}$ and $20^{\circ} \mathrm{S}$., and long. $108^{\circ} 20^{\prime}$ and $109^{\circ}$ E., belonging to the Clinese empire, and forming a dep. of the prov. of Canton, but separated from the continent by a strait from 15 to 20 m . wide, probably identical with what was culled ' the Gates of China,' by the Mohammedan authors of the 8 th and 9 th centuries. (Chinese Repository, i. 37.) The island is ci a somewhat oval shape; greatest length, NE. to SW., about 180 m ; average breadth, nearly 70 m . Area, perhaps about $12,000 \mathrm{sq}$. m. I'op. estimated in 1823 as little short of a million, independent of unconquered tribes in the interior. A monntnin chaln runs through Hainan in the direction of its length, and near its centre rises above the limit of perpetual snow. In this part of the island the principal rivers take their origin, some of which are of considerable size. The E. coast is bold and rocky ; the W. low; the S. has some good harbours; but Hainan generally, like Formosa, is surrounded with many rocks and shoals dangerous to shipping. The climate is very hot : the heat is, however, tempered by sen-breczes, frequent fogs, and abundant dews. The soil is mostly sandy; the W. side of the island is more productive than the E., but the conntry is, upon the whole, barren : and, except timber, rice, and sugar (the latter principally sent to the N. of China), its articles of export are very few. Its chicf wealth consists in

## halifax

its timber: the forests whieh cover the mountains abonnd with sandal, cocon, rose, and other cabinet woods, brnziletto, ebony, \&c. Tobacco, cotton, and indigo are raised, but in no qreat quantities. Various fruits are grown, and the sweet protato forms an important article of culture and food. lees are very plentiful, and wax is a valuable ltem of produce. Pearl oysters and cornl abound uround the shores, on many parts of which extensive salt works are established. Small quantities of gold and silver are obtained in the interior. The untives carry on some trade with Anam, Siam, and Singnpore. On their voyages to Siam, they cut timber along the coasts of Tsiampa and Cambojn, with which they build junks at Bankok. These junks are then laden with cargoes saleable at Canton or Hainan, and botl! eargoes and junks being sold, the profits are divided among the buiders. Most part of the pop, are Chinese, who are similar to the inhnlis. of the opposite coast; but the interior is inhabited by a different race, supposed to be aboriginal, some of whom have submitted to the Chinese government, while others still hold a savage independence. The island is subdivided into 13 districts. The cap., Kiongtehou, a populous city, and the residence of the Chinese governor, is on the N. coast. Several uther towns have a pop, of some thonsand inhabs, Hainan appears to have been discovered by the Chinese about anno 108 B.c., and conquered by them soon afterwards. It was annexed to the prov., of which it now forms a part, in 1381. (Ritter, Asien Erdkunde, iii. 881-893; Purefoy, in Asiat. Researches, vol, xx.)

HAINAULT, a prov. of Belgium, which see.
HALBERSTAID'T, a town of Prussia, prov. Saxony, gov. Magdeburg, cap. circ. and principality of same name, on the Holzemme, a tributary of the Bode, 32 m . SW. Magdeburg, with which it is connected by railway. Pop. 22,810 in 186I, exclusive of garrison of 1,136 . The town is very ancient; is built ehiefly in the Gothic atyle, and is surrounded with walls, outside which are three suburbs. It has a cathedral, an edifice of the 15th century, remarkable for its paintings and stained glass windows, ten other Protestant, and two Rom. Catholic churches, a synagogue, a handsome mansion house (formerly a royal palace), gymnasium, superior town and girls' schools, a teachers' seminary, two large public libraries, a school of midwifery, an orphan asylum, house of correction, theatre, and several fine private collections of paintings, medals, and antiques. It is the sent of the superior courts of the gov., of town and distr. courts, and a board of tolls and taxation, and has mumerons finctories for woollen stuffs of secondary quality, carpets, linen fabrics, leather gloves, straw hats, starch, tobacco, and soap, with extensive oil refineries, numerous breweries, lithographic printing establishments, and a considerable trace in corn and wool. Its commercial importance appears to have increased of late years. The epoch of its foundation is uncertain. It was made a lishop's see in 804. A great part of it was destroyed in 1179, by Henry the Lion. It was ceded to L'russia, together with its principality, at the peace of Westphalia, and has ever since belonged to that power, except during the existence of the short-lived kingdom of Westphalia, of which it formed a part.

HALES-OWEN, a par. and market-town of England, partly in an insulated portion of co. Sulop, hund. Brimstrey, and partly in co. Worcester, lower div. hund. IIalfiliire, 104 m . NW. London, 7 m . WSW. Birmingham, and 24 m . NE. Worcester. Pop. of town 2,911, and of par. 29,293 in 1861. Area of par., 11,290 acres. The town,
which consists of a handsome main street, crossed by aeveral others of inferior chanacter, stnuds on the Stour, in a beautiful and well-wooded valley, and bears the appearnuce of a busy and thriving place. The church is of Norman architecture midhas n light spire curiously supported on four arehes. St. Kenelm's chapel, situnted outside the town, was origiunlly erected in the time of the Sixons, and a part yet remains apparently of that early date. The far larger part, however, was built in the reign of Ilenry III., and the tower, with its ornamental pimacles, is an elegant specimen of the Gothic style. Fow buildings so small present such striking architectural contrasts. There are three places of worship for dissenters. A free grammar-school was established here during the Commonwealth by a chancery comınission, which provided it with an endowment, the present yearly value of which is alout 130\%. Shenstone, thie poet, who was nlso the proprietor of the leasowes,' a beautiful villa in the neighbourhoor, was educated at this school: his monument is in the church. The mannfacture of nails and the coarser kinds of hariware and tools constitutes the clief employment of the working classes. Steel is extensively made in the hamlet of Congreaves; and coal mines are worked within the parlish.
Hales-owen is under the jurisdiction of the co, magistrates, who hold petty sessions here. i high bailiff, hendborough, and constable nre anmually elected at the court leet of the lord of the manor, and these officers govern the intemal economy of the town. A court of requests is held every third week for the recovery of delts under 51., the power of which extends to five other pars, Markets on Monday; fairs on Easter and WhitMonday for horses, cattle, and cheese.

An abbey of Premonstratensian monks was founded here in the reign of King John out of funds provided by that monarch. Its revenues, at the dissolution of the religious heuses, amounted. according to Speed, to 3881 . The ruins are cxtensive, and have partially been converted into firming premises. A few very fine lancet windows at the gable end of the clinpter-house indicate the style of building to have been early English.
HALIFAX, a market-town, par., and parl. bor. of England, co. York, W. Riding, wap. Morley, on the IIebble, a branch of the Caller, 36 m . Wisw. York, 13 m . WSW. Leeds, 170 m . NNW. London by road, and 202 h . by Great Northern railway. Pop. of bor. 87,014 , and of par. 147,988 in 1861 . The entire parish is one of the most extensive in the kingdom, and nearly equals in size the county of Kutland. It includes 23 townships, and 75,740 acres. For rating, it is divided into three parts: the parish distriet of Halifax, the chapelry of Heptonstall, and the chapelty of Elland. The parl. bor. includes the township of Halifux, with small coutiguous portions of the townships of $N$. and S. Owram, lying along the E. side of the Hebble brook. The town is built on a gentle slope, in a valley surrounded by lills. In many parts the streets are narrow and irregular; lut some, as Broad Strect and Waterhouse Street, are handsome and spacious. It is well paved, and lighted with gas. The houses are alnost exelusively built of stone from the quarries of N . and S . Owram; but a few still rensin, built in the reign of Henry VIII., of plaster, with carved oak framework. Within the entire parish there are nbove 20 episcopal, and 80 dissenting places of worship; but some of these are in the rural districts. Within the town are seven churches, the largest of which, St. John's, the parish clurch, built in the fifteenth century, is of pointed (iothic arehitecture. It has a lebby, nave, side aisles, and chancel; and 2
side ehapels There is a hut the Marybold tower, which peal of ten be other clurche Souls, built a spire 236 ft . monumental native of tha in 1798, is a surmomed by St. James's, o structure, wit lesides the ep chupels for In Mtethodist Ne l'rimitive Met of Friends, an Independents, and good taste chapels are ma S. Within rgest of which, in the fiftecnth hitecture. It hancel; and 2side chapels were adied in the sixteenth century. There is a lanndsome puinted window, similar to the Marygold window In York eathedral. The tower, which is highly ornamented, contains a peal of ten hells, and lis 117 ft . high, Among the other churches is the new Gothic editlce of All Souls, huilt at the cost of Mr. E. Akroyd, with a spire 236 ft . high. In Nowerby Church is a monumental statue of Archhishop Tillotson, a uative of that township. Trinity Church, buslt in 1798, is a Grecian edifice, with Ionie pilasters, surmounted by a tower and cupola at the W. end. St. James's, opened in 1832, is a pseudo-Gothic structure, with square turrets at the W. end. llesides the episcopal places of worshij, there are chapels for Independents, Wesleyan Methodists, Methodist New Connection, Roman Cutholics, Primitive Methodists, Unitnrinns, and the Society of Friends, among which one, belonging to the Independents, is remarkable for elassical elegance and good taste. Connected with the churches nud chapels are many Sunday schools; and the Halifax S. S. Union comprises numerous schools, atteniled Ly upwards of 5,000 children. The National school, built in 1815, near Tr:ity Church, is sttended ly abont 300 boys; and the Laucastrian sehool, opened in 1818, hins more than 300 of hoth sexes. The parish has 7 free or endowed schools; but of these only one, Smith's eharity school, fonnded in $\mathbf{1 7 2 6}$, is situated in the town. Queen Elizabeth's grammar school, in the township of Skireoat, was chartered in 1585, and is under the direction of 12 governors, chosen from among the inhab. The rental of the schooi property is considerable. The school is free to the sons of all parishioners; but the number of seholars was reeently only about 40. The grammar schools at Hipperholme, N. Owram, and Heptonstall are attended not only by the free boys, but others, who pay for their sehooling. Wheelwright's school at Rishworth is a noble establishment, supported at an expense of more than $2,000 \mathrm{l}$. a year, and providing a liberal education for 30 boys, with 2 exlibitions of $150 l$, a year at the universities: it is superintended by 2 masters and a matron. There are numerous charities for the relief of the poor and aged, nov of which need any particular mention, except Waterhouse's almshonse and bluecoat school, established in 1627 for 12 aged persons, and 20 orphan ehildren. The largest public building is the Piece Hall, a very extensive quadrangular stone structure, oceupying more than 2 acres of ground: it lias a rustic basement story, above which are two other stories fronted by colomades having walks within them leading to the various storerooms, of which there are 315. In these rooms the manufacturers keep their cloths for sale. This building, erected in 1779 , cost 12,000 l. The infirmary, built in very elegant style, furnishes excellent accommodation for the many sick who resort thither. The baths on the Huddersfield road are well adapted for their purpose, and lave a bowling-green attached. The building in Harrison Lane, called the Publie Rooms, has elegant assembly rooms, and other accommodations, both for pleasure and business, There are two subseription libraries, one of which has apartments in the Public Rooms. The town possesses, among other public establishments, a Literary and Philosophical Society, established in 1830, and a Mechanics' Institution, opened in 1856. 'The Odd Fellows' Hall, in St. James's Road, erected in 1839, has a large room adapted for leetures. The theatre, though small, is quite large enoughs for a pop. which seems to feel little interest in such amusements. Outside the town, on the W., is Gibbet Hill, where formerly, in eonsequence of a
local law designed prineipally for the protection of the elothiens, felons convicted of depredating ufon their priperty were executed by a machine like the Freneh guillotine. The gas works are in S. Owram, and in Ovenden are the springs and reservoirs which supply the town with excellent water. A jublic eemetery has been lainlout, with a park of 15 neres; to which buthes are uttached. The park is the gift of Mr. Frank C'rossley, owner of a carpet factory employing 3,000 to 4,000 persons.
'The mugistrutes of llalifinx are nlaso comaty magistrates. l'etty sessions are held every Snturday, and there is a court for the recovery of debts under 151 . ; a comenty court is establislied in the town. During the Commonwealth, Halitas sent 2 mems, to the H. of C.; but the fraschise was withdrawn at the Restorntion ; nud, notwithstanding its growing and universally acknowledged importance, it had no voice in the legislature till the Reform Act agaia conferred on it the privilege of seating 2 representatives to the $H$. of C . The parl. bor. includes small portions of $N$. and $S$. Owram, as well as the township of llalifax: registered electors, 1,699 in 18 isi. Market on Saturday. Fairs, June 24, and the tirst Suturday in Nov, for cattle aud horses.

For the administration of the poor lawa, the par. is formed into 2 unions, Halifax Union comprisingr 20 townships, and the Tormorden Union, including the IIeptonstall district and the chapelry of 'Todmorden.
The rise of Halifax is attributable wholly to its manufacturing industry, which is itself mainly n consequence of its unlimited command of coal and of the means of intemal navigation. The elothweavers first settled here in the begimning of the 15th century, since which time it slowly, but gradually, increased till the American and French wars, when extraordinary activity prevailed, and the pop. was proportionally enlarged. The introduction of steam-engines and power-looms has also, of late years, contributed in no little degree to increase its importance as a place of trade. The town is united by a canal with the Rochdale camal and the Calder and IIebble navigation; and has, consequently, a mavigable communieation with Hull on the one hand, and Liverpool on the other. The establishment of railways has much contributed to the rise of Malifax, situated as it is in the very centre of this new network of roads. Its constant increase of wealth is shown in its incometax returns, which show an enormous rise in the annual value of real property. It amounted to $129,780 l$. in 1857, and to $160,900 l$. in 1862 .

The staple manufactures of the town and neighbourhood are shalloons, tammies, and draw-boys, best known under the title of tigured lastings and amens, superfine quilled everlastings, double russets and serges, all which are made of combing wool. They are brought in an unfinished state to the Piece-hall, where the merchants attend every Saturday to make their purchases. There is, besides, a very considerable manufactory of kerseys and half-thicks, also of bockings and baize, clictly carried on in the vale of Ripponden, whence cumes a large portion of the cloth used for elothing the llritish navy. Large quantities are also sent to Holland and all parts of America. The most promising branch of manufacture, however, is that of cloth and coatings, which was also introduced at the end of the last century by persons of enterprise, who, at vast expense, ereeted mills on the Calder and its tributaries. The snceess of these factories was such as to excite the jealousy of the Leeds merchants, who had been previously used to buy the same articles from the lower manufacturers at their cloth-hall, and parliament was
petitioned, in 1794 and 1806, to prevent nuy merclunt from becoming a mamufacturer. The legislature very properly refinsed to cramp the energies of Haliliax, to serve private interests in l, eenls. Ibonbazins also and crapes, to, ictler with other falries of silk and worsted mis sid, are manufuctured here; and the manufacture of cottons is leesoming a rapidly inereasiug nad most important brauch of indistry. A great niamber of hands are empleyed in makiug machinery.

Ilaimax, $\mathrm{a}_{\text {marit. city of British } \mathrm{N} \text {. Americh, }}$ on a smanl peninsula on the SL:. const of Nova Scotin, of which it is the enp. Pop. 21,980 in 1860). The town stands on the declivity of a hill nhent 250 ft . in height, risiug from the W . side of one of the finest harhours in the Americm contivent. The streets are genernlly brond; the principal, which runs next the harbour, is well paved, and most of the others are macadamised.

The front of the town is lined by wharfs. Warehouses rise over the wharfs, as well as in lifferent parts of the town; aud dwelling-houses and public buildings rear their heads over each other as they stretch along and up the sides of the hill, Among the public edifices is Province Building, a haudsome stone editice 140 ft . long, by 70 ft . bronil, and orinamented with a colonnade of the Ionic order. It comprises chambers for the council and legislative assembly, the supreme court, various government offices, and the IIalifax public library. In the $S$. part of the town is the Government House, a sombre, but solid-looking building, near which is the residence of the military commandant. On the N. side of the town is the admiral's residence, a plain stone building. The dockyard, at the end of a stragghng suburb, covers 14 acres, and forms the chief depot of naval stores in the British N. Amcrican colonics. It is peculiarly fitted for the shelter, repair, and outfit of the fleets cruising on the American coast and in the W. Indies. The N. and S. barracks may accommodate three regiments; and attached to them is a good library. The other government buildings are the ordnance and commissariat steres, and the military hospital, erected by the Jais Duke of Kent. Dalhousie College is a handsome edifice of tisestone, but not yet efficient ns a seat of education. There are 3 churches, a large R. Catholic chapel, 2 Presbyterian, and 4 other chapels belonging to different sects, a poorhouse, house of correction, an exchange, some assembly rooms, and a small thentre. The markets are well supplied with provisions, but the inns and boarding-houses are reported to be very indifferent.
The harbour opposite the town, where ships usually anchor, and where, at medium tides, there are 12 fathoms water, is rather more than a mile wide. After narrowing to $\frac{1}{\mathrm{~m}} \mathrm{~m}$, about 1 m . above the upper end of the town, it expands into Bedford Basin. This sheet of water, which is completely landlocked, occupies a surface of $10 \mathrm{sq} . \mathrm{m}$., and is capable of containing the whole British navy. Halifax harbour is accessible at all seasons, and its navigation is scarcely ever interrupted by ice. The best mark in sailing for it is Sambro lighthouse, on a small Island off Sambru Head, abont 13 m . S. by E. Halifax, with a fixed light 210 ft . high. Another lighthouse stands on Magher's Beach, a spit extending from M'Nab's Island, a wooled and cultivated island, at the very entrance of the port. When the latter light is seen, ships may run in without fear. The passage on the W . side of M'Nab's Island is for large ships, the other on the E. has only water for schooners. There are several other small islands further in, on one of which, nearly opposite the town, some strong
batteries are mounted. Some other forts defent the liarbour. North West Arm, which bounly Halifax peninsula on the $W_{\text {., }}$ is 4 m . long, nenrly $\frac{\mathrm{m}}{\mathrm{m}}$. wide, and has from 10 to $20^{\circ}$ futhous depth of watere, with safe nnclourage. Near ita lowit lies Melville Island, some buildings on which were formerly used for the detention of prisumers of war. A juint-stock company's canal, in aill of which the legislature contributed 15,01001 . comnects the harbour of Halifax with Cobequil Bny und the Bay of Fundy.

Since its first settlement, in 1749, Innifax has contimed to be the seat of a profitable fishery num trade. The latter, especinlly, is in as prosperons a condltion as that of any town in Britisl America; and this city mny be said to engross the whole forelgn trade of Nova Scotia. The chief trade is with the W . Indies, and other British colonies, the U. States, and Great Britain. The vessels belonging to this and the other ports of Nova Scotia are principally engaged in the fisheries and in the timber and lumber trale.
In 1817, Halifax was deciared a free port to n certnin extent, and has since acquired the privilege of warehousing. Some ships of large size are employed in the South Sea fishery; but, generally speaking, the inhab. are less enterprising and successful fishers than the New Englanders. Halifax has some mquafactures, but they are of no great importance, and confined to articles of immediate consumptiou; as mon, condles, leather, papier. snuff, rum, rin, whisky, porter, ale, and refinel sugar. l'ackets snil between Halifax and Yalmouth, and others regularly to Liverpool, Ihston, New York, and the W. Indies; steam ferry-boats also ply constantly to and from Dartmouth, en the opposite side of the harbour.
HALL, a town of Wurtemberg, circ. Jaxt, on both sides the Kocher, which is here crossed by a stone bridge, 34 m . NE. Stuttgart, on the railway: from Stutigart to Anspach and Nuremberg. Pop. 6,862 in 1861. Hall-sometimes called 'Suabinu Hall,' to distinguish it from other towns of the name-is ancient, and was formerly a frec imperial city. It has seven churches, a fine town-liall, a richly endowed gymnasium, an ancient mint, a hospital, and public librarics. Next to Ulm, it has the grentest number of sugar refinerics in the kingdom; it has also some soap and other factories, and a large trade in oxen and hogs; but its chief article of commerce is salt, procured from the saline springs in its vicinity.
HALLE, a town of Prussian Saxony; distr. Merseburg, cap. circ. same name, on the Sanle, $13 ;$ m . SSW. Berlin, 65 m . NE. Gotha, and $18 \mathrm{~m} . \mathrm{NW}$. Leipzic, on the railway from Leipzic to Maycteburg. Pop. 42,976 in 1861, exclusive of a garrisoln of 1,469 . The shape of the town is an irregular parallelogram, and contains three quarters, viz. Halle, Glaucha, and Neumarkt, each of which has its own magistrates. It has few remarkable edifices. The Gothic church of St. Mary wus built in the sixteenth century, and that of St. Mnurice as early as the twelfth. In the market place is a singular structure, 250 ft . high, called the Red Tower. The other principal buildings are Franke's Institute, the university hall, and the hospitals, Outside the walls, $\mathbf{E}$. of the town, is an elegant monument in honour of the Germans who fell in the battle of Leipzic. The old castle of Noritzberg, where the archbishops of Magdeburg nsed formerly to reside, was mostly destroyed in the thirty years' war: the solitary remaining wing is used as a Calvinistic church. Halle is not remarkable as a place of trade ; but hardware and starchmaking are more followed than any other branch of industry. In a valley near the river are two
large salt sprin proluctive; at about 16,000 q

The university was founded ly Frederick I. in 1694, and coon after its cstablishment became known as the seat of the great Pietist divines of (iermany, who have exercisel in subsequent times a most powerful and beneticial intluence over the morals of the people; and since thes time it has always been known as a great theological university, though the sentiments of its professors have verged more and more towards Rutionalism. At the beginning of the present century, the university of llalle hail reached the height of its prosperity; but Napoleon's victory at Jena led to its diseolution, nor can it be said to have regnined a positive existence till after his overthrow in 1815 , when it was united with that of Wittemberg, and called the IVnited Frederick-University of HalleWittemberg. In 1829 there were 1,400 students, 944 of whom helonged to the theological faculty. Subsequently to this period, however, the university of Berlin attracted many of its students, whose numbers have fallen to about 800. Fruncke, Wolff, Vater, Scmler, Wegscheider, Gesenius, l'faff, and 'Tholuck are a few among its theologians; lesiles whom, Meckel and other medical professors have contributed to raise its character as a school of medicine. The library contains about 50,000 volumes; and there are, besides, museums of vanous kinds, an anatomical theatre, chemical laboratory, botanical garden and observatory. Three hospitals connected with the medical school furnish the students with ample opportunities of seeing practice. Besides the university, there are several institutions for education, the chief among which is the institute founded by Francke in 1698. It cunsists-1, of an orphan school, educating about 150 children, three-fourths of whom are boys; 2 , of a royal plidagogium, for ellucating children of the upper classes, and which has trained since its establishment upwards of 3,000 children ; 3, of a Latin school, intended chiefly to impart sound grammatical instruction to the sons of the citizens; 4 , of a lible press, which has sent forth some millions of copies of the Scriptures at a cheap rate, and at which also certain classical works are printed for the use of the students. The profits are continually applied to increase the uscfulness of the establishment. The building has been recently enriched with an excellent bronze statue of the founder, by Rauch. Its cost was defrayed by a subscription, headel by the King of Prussia. Halle has a socicty of natural history and an Oriantal society.

HALSTEAD, a market town and par. of England, co. Essex, hund. Hinek ford, on rising ground, near the Colne, 43 m . NE. London, and 23 m . W. by S. Ipswich, on the Great Eastern railway. Pop. of town 5,707 , and of par. 6,917 in 1861 . Area ol par. 6,230 acres. The town has wide and clean streets, and a good market place in its centre. The church is a fine old building, in the Gothic style, having a tower and wooden steeple. Besides the church, there are three places of worship for dissenters, A grammar school was founded here in 1594, for the education of forty poor children within this or the adjoining parishes, the governors of Christ's Hospital, in London, being the trustees. The town has six other schools. A baize manufacture, formerly flourishing, has almost wholly decayed; but there are many hand looms employed on figured and plain silk velvets. Wiading silk employs numerous females: many of the poor people are engaged in straw plaiting. Hops are abundantly raised in the neighbourhood. Halstead, under the Poor Law Amendment Act,
is the chief town of a union comprising sixteen parishes. Markets on Friday, chietly for corn ; fairs on May 6 and Oct. 29, for eatrle, de.

HAM, a town of France, dejp. Somme, eap. eant., in a marslyy plain nent the sonme, and on the ennal d'Augoulême, 35 m . ESE. Amiens. l'ep. 2,873 in 1861. Ham is celebrated for its enstle, n strong fortress used as a stute prison, in which I'rince Poliguac and other ministers of Charles X. were contlued for six years. Subsequently, Ham became the prison of I'rince Lonis Napoleon, from Oct. 10, 18.10, to May 24, 18.16 ; and the prince laving becone ruler of France, he himself sent there, after the comp d'etcet of Dec. 2, 1851 , some of his political adversaries. The castle of Ham is visible from a grent distance; it hus a large round tower, built in $1470,108 \mathrm{ft}$. in height, and as many in diameter, with walls of extruordinary thickness. The lordship of Ham was united to the possessions of the crown by llenri IV.; Louis XIV. demolishel the fortitlcations of the town, but preserved the enstle.
HAMADAN (an. Ecbatanc), a town of Persia, prov. lrak, and cap. beglerbeglik same name, 190 m. WSW. Teheran, and 260 m . NW. Ispahan; lat. $34^{\mathrm{C}} 53^{\prime} \mathrm{N}$., long. $48^{\circ} \mathrm{E}$. It stands on a slope near the small river Ilamadan-tchai, and at the foot of Mount Elwund (the Orontes of antiquity). Its pop. is variously stated at from 25,000 to 40,000 , the smaller number being perhaps nearest the mark. It is meanly built, and occupies a considerable space, the houses being profusely interspersed with trees. The ruins of walls and honses show that it must formerly have been an immense city, filled with splendi. edifices; but it now contains only a single good strect, the rest being inferior to those scen in other easteru towas. The largest public building is the Mesjid-Jumuh, in a large square, used as a market place: there are also several other mosqucs, an Armenian church, a Jews' synagogue, some public baths, bazaars and caravanserais, all of which indicate, by their ruinous state, the fallen prosperity of the place. Near the great mosque, in a Jews' grave-yard filled with tombs, stands a building which claims, by its Hebrew inscription, to be the sepulchre of Esther and Mordecai; but Morier is of opinion that the structure is Mohammedan ; and it was, perhaps, raised or rebuilt after the sack of Hamadan by Timour. Within the town also are the tombs of the celcbrated physician Avicenna, of the Persian poet Attar, and of the Arabic poet AbulHasif; and on this account it is much resorted to by pilgrims from all parts of Turkey and Persia. On a height commanding a complete view of the town are the ruins of a castle destroyed by $\Lambda$ ga Mahomed Khan; and a little below are some remains, considered by Morier to have belonged to the ancient palace of the kings of Media. The same writer observes, that 'Hamadan presents more objects of resenrch to the antiquary than any other city that he had visited in Persia.' The modern town is famed for its manufacture of leather, in which it has a large trade, and carpet and silk weaving is also pursued to some extent; but its chief wealth is derived from its situation on the great commercial road between Bagdad, Teheran, and Ispahan. The environs are highly productive; but the absence of forest timber deprives the scenery of a picturesque character, and causes wood to be so expensive that dried cow-dung is usually substituted for it as fuel.

There is every reason to believe that Hamadan stands on or near the site of ancient Eebatana, Agbatana, or Apobatana: though Sir W. Jones fixed it at Tabriz, and Dr. Williams, of Edinburgh, at Ispahan. No position, however, except Hama-

dan, will suit the descrpations of Ishlore Carax and Dlodorus Sleulus, ns has been clearly proved by the reviewer of 'Williams's Geog. of Asia Ninor,' in the 'Journnl of Eilucntion.' (il. p. 805.) Ecbntana of Media was founiled, or rather enlarged, by Dejoces, circa anno $\mathbf{6 8 0}$ H.c. The Meales, snys Iferonlotus, ${ }^{\text {' obedient to the command of their king, }}$ erected that grent and strong city now known under the name of Agbatana, where the wally are thiilt circle within eircle, and nre so constructed, thint ench inner circle overtops its onter neiphbour by the heiglit of the battlements alone. This wns effected partly by the nature of the groumb, a comical hill, nul partly by the building itself. The number of the circles was seven, nud within the inmermost were built the palace nind the treasury. Tle circ, of the outermost whll was almost equal to that of Athens. 'Ihe Median nation were ordered to constrict their houses in $n$ eircle round the outer wall.' (Iterol. i. 95-130.) We are told in the Apocrypha, that in the reign of Arphaxad (I'lurnortes) it was besieged and taken by Nebuchaduezzar, who 'spoiled the streets thereof, and turned the benuty thereof into shame.' (Julith, i. 14.) From the days of Darius to those of Jenghis Klan it was, on account of the coolness of its climate, the favourite residence of the kings of lersia during those months of summer in which the leeat of Susa and Ispahan is almost insupportable. It was reduced by the caliph Othman, nearly destroyed by Jeughis Khan, and again taken and ravaged by Timour at the end of the 14th century. It was rebuilt, however, and appears to have been a city of considerable importance under the Sophi dynasty. In 1722 it suffered greatly during the wars that took place after the dethronement of Shah-Hussein, and more recently from the pillage of the Turks under Ahmed, pacha of Bagdad. It remained subject to the Turks till Nadir Shah drove them beyond the Tigris, and again aunexed it to the kingdom of Persia. Its present ruinous appearance is attributable to the fact of its having been 80 often the theatre of war, and the object of plunder. This, the great Median Eebatana, must not be confounded with the Atropatenian Ecbatana, the site of which has been fixed by Major Rawlinson at Takhti-Sulciman, 180 m. SSE. Tabriz. (Geog. Journal, x.; Kinneir's Persia; Ker Porter'a Travels, ii.; Morier'a Travels, ii.)
HAMAH (an. Epiphania), a city of Syria, and cap. of a sanjiack, on the Orontes, 76 m . NE. Tripoli, and 81 m. S. Aleppo ; lat. $34^{\circ} 55^{\prime}$ N., long. $37^{\circ} 6^{\prime} 15^{\prime \prime}$ E. Pop. estimated at 45,000 . The city is pleasantly situated on both banks of the Orontes, or Aaszy, which is here crossed by four bridges. It is walled and otherwise well defended, and some agreeable suburbs give it externally a prepossessing appearance. But the streets, as in most cities of Syria, are narrow, irregular, and dirty ; and the honses, though handsome inside, present to the atreet only unattractive mud brick walls. The principal buildings are the palace of the Mutzellim and the mosques, one of which is remarkable for a fine old minaret. There are several bazaars, three public baths, and some handsome residences with spacious gardens. Some curious hydraulie works for supplying the town with water have been constructed on the river, one of the wheels of which is 70 ft . in diameter. The industry of the town comprises silk and cotton fabrics: it trades largely with Aleppo in Europeas and coloniai merchandise, and being on a great caravan route has considerable commerce with the interior of Asia and Africa. The place suffered much from an earthquake in 1157, in common with other Syrian towns; and hence there are few antiquities, a
aquare mounil of earth in the mildle of the eity Ineing the only vestige of the older buidings. There is no donbt, however, that IInmnh stunds on the site of the Inmatl mentioned in Siripuru, and reputed to have been fosumded ly llumath soll of Canaan. It was known in the time of Moses; and nt a later perionl it was relleved from the oppression of a neighbouring prince by the victorious I)avid, to whom, in testimony of hiss gratitude, 'the king sent Jurum, his son, to salute hinn and to blews him.' (2 Sam, vili. !1, 10.) The prophet Amos (vi. 2) ntylen it 'Inamntl' the Grent.' Its nime was chnuged liy the Macedinnians, in homoner of Antiochas Fijiphomes; nud during the expectition of Pompey lito Apmata nud Cole-Syria, it beeume subject to the Romuns, anno $\mathbf{i 3} \mathbf{~ n . c . ~}$

HAMBURG (REIUBLIC OF), an dudep, state of NW. Germany, the territuries of which comprise the city of linmburg and the country lmmedintely surrounding it ; the town of Bergilorf, with the district called the Vierlander (the sovereignty ower which is, however, sharel with Labeck) litzebuttel, Cuxhaven, and the island of Neuwerk, nt the mouth of the Flbe, some islands in that river opposite the eap., and severnl small detached territuries, chietly situated $N$. of the rest and enclosed by the duchy of Holstein. Total area, $148 \mathrm{sq} . \mathrm{m} . ;$ pop. 210,073 in 1858 , and 229,941 in 1861 . Nearly the whole of the inlab. are Luthernns, except some 2,000 Calvinists, 4,000 Romnn Catholics, and above 7,000 Jews. The little state is bounded on all sides by the duchy of Holstein except on the S. and SW., where the Elbe separates it from Hanover. Besides the Elbe, it is watered by the Alster and Bille. It is generally a level plain; not particularly fertile, excepting the Vierliander, to the SE. The islands in the Elbe called the marsh-lands are very productive. A good denl of land is devoted to fruit, flower, and vegetable gardens; and the entire country round Hamburg is dotted over with flourishing villages and plantations. The rural pop. is in a good comfortable condition.

The government of the republic was, until the year 1848, of an oligarchicnl character, but owing to civil commotions then breaking out, it had to be changed in a democratic sense. Several draughts of charters having been discusser., the present constitution of the state was published on the 28th September, 1860, and came in force on the 1st of Jnnuary, 1861. Aecording to the terms of this fundamental law, the government-Stantsgewalt -is intrusted, in common, to two chambers of representatives, the senate, and the Burgerschift, or house of burgesses. The senate, which exercises chiefly, but not entirely, the executive power, is composed of 18 members, one-half of which number must have studied jurispridence, while seven out of the remaining nine must belong to the class of merchants. The members of the senate sre elected for life by the house of burgesses; buts senator is at liberty to retire at the end of six years. A first and second burgomaster, chosen snnually in secret ballot, preside over the meetings of the senate. No burgomaster ean be in office longer than two years; and no member of the senate is allowed to hold any public office whatever. The house of burgesses consists of 192 members, 84 of which are elected in secret ballot by the votes of all tax-paying citizens. Of the remaining 108 members, 48 are chosen, also by ballot, by the owners of house property in the city valued st 3,000 marks, or $187 l$., over and above the amount for which they are taxed; while the other 60 members are deputed by various guilds, corporations, and courts of justice. All the members of

The hounse of burgeesess is represented, in permanence, by a bitrger-auseluus, or cummittee of the house, consisting of 20 deputies, of whieh no more than dive are alluwell to tee members of the legnl profesgion. It is the special thuty of the committee to watch the proceedings of the senate, and the general exeention of the articles of the cunstltution inelluling the laws votel by the honse of burgeseses. In inl watters of legislation, except taxation, thes enate luas a veto; and, lin cene of a comstitutional enutict, recourse is lad to an assembly of arbitratore, chowen in equal parts from the senate and the hunse of burgesses. There are in the culp. ant uyper court of justice, which takes cognisaniee of all suits atuve 2,000 marks; appeals from which call, however, be mande the the sulperior court of the Hanse 'lowns at Lulleck: a lower eourt of juntice, which tries eriminal cnses, and deciles in eivil causes under 2,000 murks; and a commercial tribunal, a tinal appeal from the decisimen of whichl dies to the ulyper court of justice. The inffriur twwns have thectr own magistracy, anul police courts suborlinate to 2 directors of potice in 1 Inmburg. The armed furce consists of about 2,(100 regillar troops, enrolled by enlistment, after the English hashinn, anil rathicr well paid, amil, besilles, of a burgher militia, not salariel, inclulling all the citi$z$ ens between the ages of 18 and 45 . The cuntingent furnishell to the army of the Gierinan Confelemition is 1,298 men. The pimblic revenue for the year $186^{2} 2$ amounted to $10,250,287$ marks, or 615,41081 , and the expeniliture to the same sam. There was a public debt, on thy 1 st of Jun. 1862, of $59,136,366$ marks, or $\mathbf{3 , 5 4 8 , 1 8 1 \text { . Hamburg has as many as }}$ 60 consuls in different parts of the world: it enjoys a separate vote in the full German Diet, and together with Lubleek, Bremen, and Frankfort, has one in the Lesser Council of the Confelteration.
HanBura, the principal ecmmercial city and seaport of Ciermany, cap. of the above repulic, and one of the three existing Hanse Towns, and liur free imperial cltices, of Germany ; on the N . lank of the Eilbe, at the point where it receives the Alster, 60 m . SE. from its mouth, $60 \mathrm{~m} . \mathrm{NE}$. Bremen, and 36 m . SWV. Lubbeck, on the railway from Berlin to Kiel. Pop. 178,841 in 1861 . The city is oval shaped ; is nbout 4 m. in circ., and was furmerly fortitied; but having suffered severcly during its occupation by the French in the last rar, its ramparts have been levelled since the pase, ant couverted into public walks. The pincipal ornament of Hamburg is the Alster. This river rises in Holstein, some miles above the city, and spreads out into a wide luke, which hlows through deep broad ditchee, some of which encircle the ramparts, and communicate with the Elle by slices, while others intersect the city in all directions, forming numerous canals nuvigable for barges of censiderable sizc. This lake is called the Outer Alster. The Inner Alster is a large syuare sheet of water connected with the former by a narrow channel, spanned by a single arch. On three sides of the Inner Alster there are broad ralks, with rows of trees, the favourite resort of the Hamburgers of all classes and all ages. The best houses in the city are to be found in its immediate neighbourbood. The Jungfernstieg occupies ite S . and W . sides.
The whole of the city has been very nearly rebuilt since May, 1842, when it was visited by a tremendous fire, which raged for three lays, detroyed the buildings on two sides of the Alster hasin, the Rathaus Bank, and other public edifices, ond 1,749 private houses. This visitation elicited the
deepest sympathy in all Europenn countries; and as much as 400,0001. was subseribed ly foreigners (nbout 41,0001 . in England), and remitted to llamburg in alleviation of the distresses of the sullerers.
Hut, however severe at the time, this contlagration, like the great tire of London, proved in the end for the advantages of the city. The system of mutual insurnace having been gencrally adopted, the proprietors of houses and other property were subjeetel to a tax to defray the interest of a lonit of $32,0010,00 \mathrm{C}$ marks banco, raised to indemnify the sulferens, ami to emable them to rebuill their hooses. The work thus vigorously eommenced hussince been suceessfully earrled on. The gromad thut had teen eleured by the thmes has heen luid out on an improved plaii, with wher and straighter streets, and other essentiul nmeliorations. The thest of the new buildings are near the Alster. Many of them are of vast extent, and have been cousiructel it an enormons cost. The fomulntions are mostly of grimite, the supentructure of brick and stuceo. The arconlo opening out of the Jungfernsticg descrves attention for its extent and beaity. Other improvements consist in conducting the drains to the Eilbe withont allowing them to enter the canals, and in the conversion into a new quarter of the town of a low marshy truet on the rlght bunk of the Eilbe. Its surface was raised 4 ft . by covering it with the rubbish of the tire.
The city proper is divided inte tive parishes, those of Suints l'eter, Nicholas, Catherine, James, and Michnel, the churches of which are annongat the principal ediflces. The church of St. Peter, originally built in the 12th century, was hurnt down in the great flre, but it has since been rebuilt, and is a fine lofty editice. St. Nicholns, aiso, was burnt down; but was re-crected, in the Gothicstylc, and far more magniticent and on a grander scale than before. T'he ehurch of St. Miehael is the most interesting in the city. It is 245 ft . long, by 180 ft . brosil ; and has a tower 456 it. in height, sscended by a stair of nearly 600 ateps. Its interior is capable of accommodating 6,000 persons'; it has a fine altar-picce, an organ with 5,600 pipes, and a large crypt supported ly 69 granite columns. There are about twenty other places of worship, including the chapets of the German, French, and English Cnlvinists, an! the Einglish Episenpal, Calvinist, and Romun Catholic churches. The new exchange opened in 1841, escaped the ravages of the fire. It contains a maguiticent hall for the assemblage of the merchants; a hall for the meetings of the merchant company; rooms for the use of the commercium, or board of trade, and for the extensive commercial library belonging to the latter institution. Hamburg has a great many charitable institutions, some of which are on a splendid scale. The general infirmary, erected in 1823 in the suburb of St. George, on the Lubeck road, cost absut 85,000 . Its yearly expenditure is about 16,500 ?, the greater part of which is supplied from the city funds. It contains 140 sick wards, the majority about 40 ft . long, 25 ft . broad, and 13 ft . high, and various apartments for different offices, with apartments for officers. It may accommodate from 4,0010 to 5,000 patients: invalids of the midule ranks are attended to in it on their paying a proportionate subscription. In the new orphau asylum, 600 orphans are received into the establishmenr, and 500 more are provided for elsewhere. There are, also, asylums for aged persons, deaf and dumb, the blind, sailors and their widows; and a private hospital, in which, besides medical attendance, a superior education is also given to deformed children and cripples, of whom Hamburg contains a large number. The old Rathaus, or
senate-house, was burned down in 1812 ; but a now Ruthrus, on an improved plan, was erected niljacent to the exchange. The bank, alao, was destroyed in 1842, but fis trensure, which was in its vailts, enenjed uutruchecl. The bank was founied in 1610: it is a bank of drpenit only, and is extremely well-managel. The limbeck-house, workhouse, prison, tuwn-hall, arwenal, and two theatren, are amongat the remaining chief buildinga. The new thentre is one of the largest in Germany, and the performances and musio are generally goos. A commorions new building, the Schulgelouilde, opened in 18.10, contains the Cymmnaxium, or college for inatruction in philoaopily, philology, history, pliysies, and natural history; the Johunnenm, or high echool, an excellent and well-directed institution, founded in 1520 ; and the city library, coutaluing 180,000 vols., open to every buicher and literary man. Hamburg has also an obscivatory and a botanle garden, neademies of design, commerce, navigation, anatomy; muscuma of physical olyects and works oí art, and several lentued societies, eapecially one for the promotion of the fine and useful arts.
In 1813, while the town was occupied by the French, a series of wooden bridges, and a chaussee connected by ferries with the $N$, and $\mathrm{S}_{\text {. shores, }}$ were thrown across the swamps and islands of the Elbe, separating Hamburg from Hanover. IIaving been fitted only for temporary purposes, they were removed in 1816, and the communication is now malitalned by steam'soats. The arm of the lilbe opposite the city is not very wide, but it ls deep enough for vessels of considerable burden. The maintenance of floating lights, buoys, \& $c$, for the safe navigation of the river, er.ts the city a large sum every year. The city harbour presents an animated scene: a forest of ships of all nations, and from every quarter of the globe, while the face of the stream is covered with boats sporting about in every direction. The tide risee at the quays from 5 to 12 ft ., and flows about 20 English miles above the city. Between Hamburg and Altona, an adjoining town belonging to Holstein, is the suburb of St. Paul, a narrow strip of about $t \mathrm{~m}$. called Hamburgersberg, which is in fact a kind of 'Wapping.' The environs of Hamburg abound with the villas of merchauts, public cemeteries, pleasantly laid out, hotels, tea-gardens, and places of public entertainment.
The manufactures of the town are in some respects not so flourishing as formerly. Sugar refining is the chief branch of industry, but is not carried on to such an extent as in the ilrst quarter of the present century. Hesides sugar refineries, there are breweries, distilleries, calico printing, dyeing, lime-kilns, rope-walks, anchor and other iron forges. Glue, cork, saileloth, leather, whalcbone, feathers, hats, tobacco, soap, cotton-yarn, woollen, linen, cotton, and silk fabrics, tin ware, gold, silver, and copper articles, needles, waxlights, surgical and musical instruments, dies, \&c., are amongst the remaining articles of manufacture. The shipping belonging to Hamburg is small as compared with its trade. The English shipowners engross most part of the direct trade with England. The Hamburg ships are almost entircly employed in transatlantic commerce, and in the coasting trade with continental Europe.

Commerce.-Hamburg is thegreatest commercial city of Germany, and perhnps of the continent. She owes this distinction princlpally to her situation. The Elbe, which may be navigated by lighters as far as Melrick in 13ohemia, renders her the entrepôt of a vast extent of country. Advantage, too, has be en taken of natural facilities, that extend still further her internal navigation; a water
communication having been established, by meass of the Npree, and of artificial cuts and sluices, heme tween the lilbe and the Oder, and hetween the Intter and the Vistula; so that a considernble part of the prodice of silesia destined for furelgu mart ket, and some even of that of Polanil, is conveyed to llamburg. There is, niso, a conmminleationi by mean of a canal with the Trave, and consequently with Idubeck and the Haltic, by which the Heceseity of resortlog to the dificitt and dangerons navigutlon of the Sound in olvviated. Vemels drawing 14 ft . water may affely come up to the town at all times, and vessels drawling is ft. may come nafely up with the spring thlen. There are no docks nor quaya at Hanburg; and it is singure, considering the great trade of the port, that jume have been constructed. Vessels ineor in the river outalde of piles driven into the ground in shomt distance from shore; and in this situation they are not exposed to any danger unleas the piles give way, which, though rurely, sombimes haypeus. Hamburg is joined by railways with the prineipal towns of the Continent. There is a sort of an inmer harbour formed by an arm of the bilto which rutis into the city, where small craft lie and discharge their cargoes. The largest vessels sometimes load and unload by means of lighters at Cishaven. The trade of Ilumburg embraces every article that Germany either sells to, or buys from. foreignen. The exports prinelpally consist of linens, graln of all sorts, wool and woollen cloths, leather, thax, glass, irun, copper, smalts, rags, staven, wooden clocks and toys, Khenish wines, spelter, dc. Most sorts of lialtic articles, such as grain, tiax, irou, pitch and tar, wax, dc., may generally be bought as cheap at Hamburg, allowing for difference of freight, as in the ports whence thay were originally brouglit. The imports consist priucipally of sugar; cotice, which is the favourite artiele for speculative purposes; raw cotton; woollen and cotton stuffs and yarn ; tobacco, hides, indigo, wine, brandy, rum, dye-woods, tea, pepper, \&c. The following table (from Keport of Mr. Ward, British Consul-General) shows the imports into Hamburt from Great Britain and Ireland in 1862 :-

| Arileles | Welght | Value |

The British flag has long participated much more largely than any other in the shipping and navigation of this great commercial mart. The average of the five years 1858 to 1862 inclusive was, ships arrived, average of the whole, 4,849 ; ditto of British ships, 1,776; their burthen in comalercisl lasts, average of the whole, 408,021; ditto of British slips, 204,904. The number of the ships' crews was upon an average of the four years 1859 to 1862 , total men, 49,560 ; men in British ships, 23,605.
The mumber of sea-going ships belonging to the port of Hamburg amounted, at the close of the year 1862 , to 506 , and their total burthen to 69,374 commercial lasts: comprising 417 square-rigged ships, barques, and brigs, 69 schooners, sloops, galliots, \& c ., and 20 steamers. In the same year the number of sea-going ships repistered at Altona was 48 , and their burthen 7,875 old lasts, equal to 6,250 commercial lasts.
The tiourishing state of the conmerce of Hamburg is owing, to a great extent, to the absence of almost all fiscal impositions on the liberty of intercourse. The only tax existing is an import duty of one-half per cent. ad valorem. Exports, as well asotransit goods, are totally exempted from duty. The liberty of transit is limited to the term of three months from the time of receiving the transit ticket; but, upon application being made expiration of the firat thiree montlis, it in arnuted on pnyment of $\&$ jer cent, on the vaiue of the goodn; but under ins circumatances in the term extended heyond mix montha. If the goome he not then exported, they become linble to the ordinary duties, No wnrehonwing system has been intridinced at Itamburg; nor, from the smallnesa of the dutien, is it neecesary.

Accounts are kejt in marks diviled into 16 schillings, and thene into 12 preanilugn ench; or elso lin pounds, shillinge, mul pence. The money in circilation in from 28 to 25 per cent. under this value of bank money (banco). Thero in no eoint repreacuting the latter in circulation, all pmyments made in it belug effected by trannfers in tho bookn of the bank. The llumburg fort $=11 \cdot 2$ Engliwh inches.

Hambury is well aupplied with provisions, and the traveller is little irconvenienced by those vexatlous custom-house regulations so common throughout most parts of the Continent. The actlvity that constantly prevails, and the galety and cheerfulness of the inhab. render this city an agrecable residence to a visitor. Mr. Horlgskin snys, 'it resem'sles Paris on a Sunday; and on week days, when the quays, the streets, and the 'cliange, are crowted with people of ail countries, it reaembles London.' ('lour in the N. of Germany, i. 198.) Certain customs prevall that arrest the attention of most visitors. Among others, funerals nre attended by bodies of hired mourners, some of whom nre attired in a black Spanish habit, a large wig, a ruff about their meck, and a sword hy their side. These individuals also attend wedilings and other festive meetings. 'The Vierland flower girls, who we ar a peculiar costume, market women, and female servants, all carry in the streets an oblong wicker basket, covered with a printed cotton shawl of the brightest colours. The public baths, and the dancing saloons, are among the principal features of the city; especially the intter, which are fitted up in most elegant style, and are the most popular places of public resort. Some of them are of questionable reputation; but others are frequented by the familiea of highly respectable citizens.

The climate of Hamburg is rather damp, but otherwise healthy. The drainage of the city was formerly as bad as possible; but extensive improvements bave, in these respects, been recently commenced. The police is good, and beggars are not suffered to infest the streets. The city gates are shut at dusk, but are opened afterwards on pnyment of a toll, which increases in amount with the lateness of the hour. The water gate is, however, alvalutely closed at dark.
This city was founded by Charlemagne towards the cluse of the 8 th century. After the extinction of his dynnsty, it became successively subject to the dukes of Saxony and the counts of Holsteia. Early in the 18th century it joined with Lubeck in the formation of the Hanseatic league; in 1258 it obtained a portion of territory; and acquired the right to legislate for itself in 1269 . In 1528 it adopted Lutheranism. It was long aubject to attacks from the Danes, but in 1768 it purchased a resignation of all claims upon it from Denmark, and a security against future attacks. In 1806 it was occupied by the French, and in 1810 made
the enp. of the idrp. Ilonchen de l'Elle. It miffered eommilernbly from the exactions uf the F'rench Iroopy mimer Marmhal Inavoust; lait at the penee it wan partially indemmifoed for lits lowsew, and has nince gradually retrieved itn former flourinhing condition.

IIAM1ld'ON, a parl. bor., market, mud mamifneturing town of Sentlaml, co. Damark, being the enp. of the Midile Winrd, on the Clyde, on $n$ rising ground gently sloping towards the bi., 10 m. SV. Xilangow, and 12 m . NW. Lamark, on tho Culedoninur ruilway. d'on. 10,068 in 1861. The town stamels abont 1 m . $W$. of the conllux of the Avon with the Clyde, is intonected by the Caitgow burn, and is nbont 80 ft . nbove the level of the highwnter mark at Gilnagrow. The tuwn is not regularly but substnutially built, and has an nppenrance of respectability, wealth, and comfort. It is paved and liphted with gas. The most imfortant of Its public bulldings are the two parish churches, both elegant structures, particularay the older, in an elevated sltnation near the centre of the town; and the trades hall and gaol. I'his last edifice, which stmuds on hlyh ground W. of the town, and was built in 1830, has in conncetion with it sultable npartments for all the public offices, municipal and civil. 'The court-room, common to the sherifi of the district and magist rates of the burgh, is 87 ft . long by 82 broad. In the vicinity nre extensive cavnlry bnrracks.

But the great ohject of attraction connected with this place is Hamilton lalace, the mugnflcent seat of the Dukes of Hamilton, separated from the town on the E. by a wnll and plantation. The pleasure-grounds round the mansion, lying between the town and the Clyde, comprise 1,460 acres, and are the most extensive in Scotland. The oldest portion of the palace was erected about 1591, but the greater part of the building is comparatively modern, some very extensivo additions having recently been made to it. 'The front, which faces the $\mathrm{N}_{\text {., }}$ is 264 ft .8 in . in length, adorned by a noble portico, consisting of a double row of Corinthian pillars, each of a single stone 25 ft . high, surmounted by a lofty pediment. The interior decorations are not less splendid than the exterior ; and altogether it forms one of the largest and most superb structures of its kind in Britain. The collection of paintings, in particular, has long been considered as unrivalled in Scotland. It contains above 2,000 pieces. There is, also, a vast number of antique vases, antique cabinets, slabs of porphyry, and other similar relies. Within a mile of the town are Chatelherault, a venerable building, and atill an occasional residence of the Dukes of Hamilton, and the ruins of Cadzow Castle, the original seat of this noble family, on the summit of a precipitous rock 200 ft . in height, the base of which is washed by the Avon.

Besides the par. churches, there are several meeting-houses belonging to the Relief, to the Associated Synod, and to the Inclependents. The Cameronians and lRom. Catholics have each places
of pulilic worwhip, The old par, church was un. collegiated in lsisis; and a now elmind buile for One of the minintern. About two-fhin]' of the pepp are simmentern.

Ilamilton has been the prinefpai seat of initation cambric wenving whee the lintroluction of the eotton truite lito Scotluni. Thes reeds rim froun 1,2000 to 3,000 , whikel are the theent artla that cottom hins been wronght into, Ifint the tralo hav firg yeams beed on the decdine. The average wase of a himul-lexinn weaver are never nowe las tiv. pre day; ont of which must be deducted ls, per werk for expenses, and (0)d, ber annum for hom-reut, A honse with a roem anil kitchen, nuil a four lemin, shop, lets at from 56 , to 61 . The females are ennployed in winding weft, and in thonbouriug, suluethases in weaving. The work is exeented for the Ginsgow manufincturers. The lace mumifnetory was introduced here many years ago, lut it had become almust extimet, when a mmufactury of tho mame klind was untroliced, which has continuel to prowper. Abont iwenty humen are now engaged in this brancle of trade; and it employs upwuris of 8,000 females lu this and the neighbuuring parishes, Vnst quantitles of blnck silk veils of pecullar patterns are also manufactured liere. 'A weaver's wife makes higher wages in these trades than her busband. Many thonsand check shirts have of late been mainufnctured, chiefly for the Australian murket. The other branches of trade are of minor importance.

In the park attached to Cadzow Castle are still preserved renulne upecimens of the old Ncotel breed of will enttlo: they are milk white, with black muzalen, loorus, and hoofs, aud are ferocious and untameable. They are not taken and killed like other eattle, but shot in the fielil. Similar cattle are to be found in Chillingham l'ark aud in Chartley l'ark.
Cadzow was a royal residence for at least two centuries previously to the bnttle of IBannoekbunn in 1314 ; immediately nfter which it was conferrel on the chief of the Hamilton family, in whose possession it has since continued. Ih 1414, Jnmes, first lord Mamilton, married the Princess Mary, eldent daughter of Jumes IJ.; by which coilnexion his descendunts came to be declared in parliament, on the demise of James V., in the event of the denth of his only child Mary, next heirs to the crown. In consequence of the marriage of Anne, duchess of Hanilton, to Lord W. Douglas, eldest son of the Marquis of Duuglas, the Hamilton family now represent the male line of the Douglases. On the death of the last Duke of Douglas, in 1761, the house of Hamilton, as male representatives of the Douglases, laid claim to the estates, under the plen that Mr. Donglas, the alleged son and heir of the only sister of the Duke of Donglas, was a supposititiou: child, taken at Paris frum the renl parents. A long lawsuit, well known by the name of the 'Douglas cause,' was the result. It was decidel in Paris, and in the court of session in scotland, in favour of the Hamiltons; but, on nu appena to the Ilouse of Lords, it was ultimately dectuded in lavour of Mr. Douglas, afterwards created Lord Douglas. Cadzow Castle has been made the scene
of one of Scott's At summination of the of lothwellhangh.

Area, $\mathrm{B}, 280$ mp. milles, L'opp, 3241,073 in 18561 ). The cooant in indentel hy small inletes, but has only one harloutr of value, that of I'ortammenth. It in akirted by a narrow munily phain, whieh, nt no grent dintance inland, rimes rapilily lito a hilly country. In the interior, the atate in eovermil with monintaing of granitio formation. The White Mountaina, towaris the N ., which attain a helght of mure than 7,1001 ft., are the highont in thn Appalachian sywtem, anil, emlnequently, in the U. S. Hut hetween the momntaina nre muy grevil and sheltered valleys, and the state conitulins a comsiderable propportion of fertile land, wh well as a great deal of beautiful and pieturemiue ncenery. Several of the princlpal rivers of Now Empland rise in this atate; ninoug which are the Commeeticut, Merrimac, l'isentaqua, Androscogglo, and Saco, which linve a generul S. ilivection. The Comecticut forms the W. boundary if the state. There are neveral consideralile laken, the largent of which, the Wimipisniugoe, 23 m . In lengeth, is aituated near the centre of the state. With the exception uf the alluvial lanis Ixardering the rivers, the soil is, perhajw, mure alapted for pasture than cultivition. The comutry was originally dennely wormed, and such is atill the character of the interior. Climate very healthy, but cold. The lakes aul rivers are generally frozen fur four months lin the year, anil winter Inats from November to April. Whent, rye, maize, barley, oats, pulse, and flax nre prowis; cnttlehirceding is pursued to a comedilerable extent. Manufactures bave greatly augmented of late years: they inelude certom and woollen fubrics, bails nuct other hardware, paper, class, ife. The exports consist principally of eattle, pork, thax seet, linen, timber, fixh, beef, granite, and manufactured Hoods. The foreign trade is inconsideralle.

New Ilampshire is divided into eight cumnties 1 Concord, on Merrimas, being its political cap. Portsmouth is the largest town, ana the only senport. Dover, Exeter, Hanover, New Ipuwleh, Keene, and Haverhill are increasing places, already of some size. Dartmouth College, at Hanover, establishel in 1770, ranks third ainong the liternry institutions of New England, It has attached to it a medical seluol, library, and philosophical nuparatus; and hall, in 1862, upwarls of 500 stulents. There is a theological seminary at Now Hampden, besides upwards of 30 incorporatel acallemies. The state has a literary fund, the income arising from which, with thie produce of a tax on banks, is devoted to the suppport of free schools. These are establlshed on the same system as in the other Atlantic ntates, A lunatle asylum is at l'ortsmouth. Several enuals have been constructed connected with the Merrimae, which, by its communieation with the Middlesex Canal, afforils a navignble route between many parts of the state and Boston.
The legislature consists of a senate of 12 mems. and a house of representatives which had 333 members in the session of 1862-63. The latter, as well as the governor, are chosen annually by the electors of each distrlet, consisting of every white male citizen above the age of 21 years who pays taxes and has resided in the state for three months. Together, they are styled the General Court of New Hampshire, and assemble annually on the 1st Wednesday of June, at Concord. The

Itampatead lien un the briw and S. nlope of an Irregularly formel hill, oul the summitt of which 460 h , alive hight water mark) Is an extenxive heath, eovering about $2 \times 10$ nerea, which commanala tine viewa of the matripoolis, Kent, and Surrey southward, and of the hiphly cultivated lands of Bucks anil Ilertn en the NiV. The atreeta are mostly erooked and irregular, lined with housen of overy size and quality, from the ppacioun mausion to the mere cottage: and the sulwordhate kireets, conneetling lligh Street with the wher parta, nre nartuw, inenillvenient, and in sone places even dangerous. The ehureh, which has been parmelial wince 1598( when Ilampstonal was sefarited from Hendon), was reluilt by gulweription in 1747; it in a phain brick building, having at ita E. end a low tower and spire. The living is n vienrage, and there is a lectureship founded for the benetit of the curnten. A chapel of ease, ill Well Walk, oceupies what wis a century bnek the most fashionable assemblyroom in the town, and a favourite place of rexirt for all who enmo to drink the clanlybeate watert, There are places of worship for Independents, Wenlevan Methodists, Unitariuns, and liommu Catholies. Bresides churches and chapels, there are no public buildings; but numerous large private mansions, in lifferent parts within and round tho town, attent its importance as a fashionable suburban retrent. A large square honse, on un eninence to the left of the London road, with a row of elms in front, once belonged to Sir llarry Vane, ane of the regicides, who, at the Resturation, was here geizel, and soon after executed: it was subsequently ocenpied by lishop Iluter. In the upper part of the town, near the Terrace, is Branch-hiil Lodge, once the residence of the barl of Macclenfielil and Lord Loughborough; but its flue collectlon of painted glass windown, prueured from various convents at the period of the Freuch revolntion, has been removed by Sir Thumas Neaves, to his house at Dagenham, in Essex. The Upper Flask lim, in High Street, formerly tho resort of the celebrated Kit-cat Club, and subsequently inhabited by G. Steevens, the editor of Shakspeare, is now a private residence. The inns receive hundrels of visitors on Sundays and holidays during summer.
The manor of Hamestead was given by King Ethelred to the Abbey church of Westminster, by

The palace was hegun by Carilnal Wolney, who, in 1520, presented it to Henry VIII. The origimal difice consisted of five quadrangles, of which two naly remain. The W. qualrangle, little altered since Wolsey's time, presents a gool apecimen of Tudor architecture: the midile or clock-court is of mixed style, Sir C. Wren's Ionic colonnade trangely contrasting with the masive conatruction of the old building : the third quailrangle wa rected by William III, The king's entrance in the clock-court leads to the grand staircase and sate apartments. The ceiling and walls of the furmer were painted by Verrio, in his usual glaring style: the ruoms, which open from each other, ind are partially furuished, consist of the guardchamber, presence and nudience chambers, public dining-ruom, state drawing-room and bed-rooms, Sutwithstanding the removal of some of the best specimens to Windsor, there is still at Ilampton Court an extensive and excellent collection of pictures. It comprises many by the principal Italian snd Flemish masters; and an extensive collection of portraits connected with English history by Holbein, Lely, Kncller, and West. The great blory of Hampton Court, the Cartoons or drawings executed by Laphael, by order of P'ope Leo X., for patterns for tapestry intended to decorate the faticsn, were carried away in the spring of 1865 , and are now in the Kensington Muscum. It is
pronimed, however, that they miall be rotumed in Ilampton Court I'alace, They are calied eartonnum frosis being palintel on wheats of larke papure, enrfome. Thesen milote itrawingen of whilith tliere were uriginally 25, belug Ieft neglected at IInimaden, the greater inmiser of them appear to have hevel lone or dentroyed. Firthinately, however, acoen wern purchamel hy Anlselin for Charien I. ; Int even alnce their arrival in thin comutry they hava leell expmed to numeroun vicisultulen, anid woulil neem to owe their jureservalion man meth tu archilent as to anything plae. The gallery in which they were firr many yearn placel at IIampton Coniri, was liult fur their recoption by Willinin 111.i luit Gleorge 1ll, removed them lirut tol Ituckinghani Bnane and thence to Windinor, whenee they were at length brought to llampton Comrt, which, indeed, nyjseam to the the mint titiong place fir thewe aplenilid works of art. 'They ruprosest mome of tho mont atriking incidente recoried lin the New Temtament, and are unrivalied for mublimity of concejption unil purity of demign, They have tween well engraved by llolloway

Among the parts of the palaee not naually shown to the piliblic are the chapel niml hall, the finmer of which wan retifed after the ravages of tho famathes during the Commonwealth, and handsomely pewed with nak ly Q. Anne. T'he latter, built by Wolney, and still retainligg his name, is a thely projortloned room 160 ft , longe, and 10 ft . bromd, haviug two large gatiled winlown, and an elnhorately carved wouden rowif, nimilar to that of Wewt minnter Ilall and that of Chriat Church IIail, Oxforl. This room was thoroughly rentured on the old model in 1801 . Clase to the Hall in the Honari of Gireen Cloth, a amall, though very benistiful Gothic elamber, which furninhed Sir Wiater scrutt with the gatteris for one of the thent romms at Ablootmfird. 'The garilen front of the palace, though dinflgured by monlern withown, is still very magnifteent. The gardens compriwe about 4.4 acren: the pleanure-gromides were laid ont hy William III., in the Dutels taste: the terrace in th m. long, and the first view of it is very atrikiug. The home-park, immediately adjoining the gardens, is 5 m . In circuit, and íts suil produces very tine herbage. The canal, which is $\$ \mathrm{~m}$. long, anil 40 yds , broad, is lined with an avenue of lime trees, and other avemes intersect the park in every direction, thrungh one of which in a guod view if the tower of Kingaton church.' (Jeare's (ileaningrs, 3rd. ner.) The green-houses contain, among many valuabile exoties, a vine sald to be the largent anil most productive in Europe; and a mazo or labyrinth furusiacs much amusement to young visiturs. 'the palace, in which Wolsey maintained a more than regal state, wan afterwards the fayourite renidence of Heury VIII, and his children, and of James I. and his asm Charles I., who escaped from his imprisonment here in' 1617. Ihe Protectur Cromwell resided here duriug the Commonwealth; and it afterwards becamo the usual abode of W'illiam III, and his queen, and of the princess, afterwards (Queen Anne. (icurge II. was the last monarch by whom it was inhabited. Of late years it has been mostly diviled into private dwellings given to court-pensioners, and the state rooms have been fully opened to the public. All individuals are now freely admitted to view the public apartments and grounds, without any demand being males upon them; and without, as formerly, being hurried from one apartment to another, at the caprice of some mercenary cicerone. In conscquence, llampton Court is resorted to in summer by crowds of visitors, and is deservedly one of the principal points of attraction in the vicinity of tho metropolis. Near Hampton Court palace is Bushy

HANAU
l'ark, comprising I, 100 acres, with a central avenue 1 m . long. "The numerous ehestnut-trees, though of great age, are atill healthy and vigoreus; and, when they are in blossom, they appear at a short distance as if covered with snow.' (Jesse.) The house on the right of the grand avenue was during many years the favourite retreat of William IV. whel duke of Clarence, and is still at times inhabited by members of the royal family. (Lyaon's Environs of Lomdon ; Jesse's Gleanings.)

HANAU, a town of W. Germany, electorate of LIesse, cap. prov. of same name, and seat of its superior courts, on the Kinzig, near its junction with the Main, 11 m. E. Ly N. Frenkfort, and 82 m. SSW. Cassel, on the railway from Frankfort to Nuremberg. Pop. 17,108 in 1861. Hamau is no longer fortified; and its ancient castle is now used for the purposes of the Wetteravian Society in' Natural History. It is divided into the old and new towns; the fiormer is ill-built, bat the latter has broad and regular strects, modern-built houses, and, near its centre, a good market place. There are four Calvinistic parish clurches, a Rom. Cath. church, a large hospital, handsome theatre, gymunsium, free school, drawing academy, many scientific and benevolent nssociations, and a sehool of trades. Hanait is the most industrinus town, and the place of the greatest commercial activity, in the electorate. Its manufactures are numerous and extensive, incluling silk atuffs, camlets, leather, ploves, stockings, hats, excellent carpets, cotton fabrice, tobacen, playing-carls, gold and silver wares, brass masicnl instruments, and carringes. It has a large trade in timber, barrels, and wine. Many of its inhab. are leseendants of 1)utch and Flemish emigrants, who fled thither frum the persecutions in the low countries, under Philip II., early in the 16th century. Very near it are the minernl springs of Wilhelmstadt. Here, on the 30th October, 1813, Napoleon, on his retrent from Leipsic, gained a decisive victory over a very superior foree of llavarians, and other ullied troops, under Marshal Wrede. The comhined army lost about 10,000 , while the loss of the French did not exceed 3,000 or 4,000 men; lout the opening of the route to France wns the most important advantage gained by the latter. The principality of which Hanau was the cap. was, after the extinetion of its princes in 1736, divided between Hesse-Cnssel and Hesse-Darmstadt.
HANG-TCHEOU, one of the largest and richest cities of China, cap. prov. Tche-kiang: on the Tsien-tang-kiang, 20 m . from its mouth in the leastern Sea, and 140 m . SE. Nankin; lat. $30^{\circ} 20^{\prime} 20^{\prime \prime} \mathrm{N}$., long. $119^{\circ} 48^{\prime}$ E. Its pop. was estimated by Du Halde at upwards of a million, without, apparently, including the pop. of the suburls; ; but this estimate is most probably much beyond the mark, especinlly ns the houses are but one story high, und there are gardens of large size interspersel among them. The city is surrounded with high and thick walls, said to be as much as four leagues in circnit. The W. part of this enclosure is taken up by a fort or citadel, in which the officers of the goverument reside, nind a garrison of $10,500 \mathrm{men}$ is maintained. The Grand Canal has its S. terminus here, in a large commodious basin. This city has, in consequence, a direct commmicntion with Pekin, and a vast command of internal navigntion, which it has turned to gooll necount. On its W. side is a lake highly celebrated for its natural and artificial beauties. Barrow, by whom this city was visited, says, 'the city of Hang-tcheou-foo being particulurly famed for its silk trade, we were not surprised to meet with extensive shops and warehouses: in point of size, and the stock contained

## HANOVER

within them, they might be sald to vie with the best in London, In aome of these were not fewer than ten or twelve persona serving behind the counter ; but in passing throngh the whole city not a single woman was visible, either withiadoors or without. The erowd of reeple, composel of the other sex, appearel to be little inferior to that in the great streeta of Pekin.' (Travels, p. 527 .) The streets are not so wide as Cranboum Alley, but as well paved. They are ornamented in many places with triumphal arches, and monuments to eminent individuala, and are kept remarkably neat and clean. Barrow snys: 'In every shop were exposed to view silks of ilifferent manufactures, dyed cottons and nankins, a great varicty of English broad-clotha, chiefly however blue nad scarlet, used for winter cloaks, for clair covers, and for carpets; and also a quantity of peliry, intencled for tho nurthern markets. The rest of the houses, in the public streets through which we passed, consistell of butchers' and bakers' shops, fishmongers, dealers in rice and other grain, ivory cutters, dealers in lacquered ware, tea-houses, cook-shops, and coffin-makers; the last of which is a traice of no small note in Chins. The number of inhab. in the suburbs, with those that constantly resided upon the water, were, perhaps, nearly equal to those within the wats. (Inrrow ; Du Halde, vol. i.; Dict. Giéographique.)
HANLEY, a town and munic. bor, of Lugland, belonging to the par. of Stoke-upon-Trent, co, Staftiord, hund. Pirelill-north; $2 \ddagger \mathrm{~m}$. S1, Stoke-upon-Trent, 16 m . N. Scafford, and $150 \frac{1}{2} \mathrm{~m}$. SNW. London, by London and North Westeru railway. Pop. of town 14,578, and of' munic. bor. 31,053 ii 1861. The town consists of one main street, intersecteil by various others; and many gooll houses have recently been built, though the pop, is chiefly ronfined to the working classes. The church is handsome, and has a fine tower 100 ft . high. Goud schools are connected both with the churelh and the three dissenting places of worship. The inhab. are chiefly employed in the potteries, which alone have raisel this district to its present importance. (For further particulars, see Stoke-upon-Tnent and Potteries.)

IIANOVER, a kinglom of NW. Germany, situated between lat. $61^{\circ} 18^{\prime}$ and $53^{\circ} 52^{\prime} \mathrm{N}$., and long. $6^{\circ} 43^{\prime}$ and $11^{\circ} 45^{\prime}$ E., bounded N. by the German Ocean and the Elbe, E. by Prussia and 13runswick, S. by Prussia and Hesse-Cassel, and W. by Holland. Its bounding line is very irregular, and a portion on the W. is nlmost divided from the rest of the kinglom by the grand duehy of Oldenburg. Length, from the mouth of the Elibe S., 172 m. ; brealth, E. and W., 180 m .
Hanover is divided into seven lauddrosteien, or arlministrative divisions superintended ly a Landdrost, or high-bailiff. The seventh of these districts, however, the mining district of the Harz, is not under a landlrost, but a berghauptmam, or captain of the montain. The area of the pmovinces and popnlation, according to the census of 1852 and of Dec. 1861, is as follows:-

| Landdrostelen | $\begin{aligned} & \text { Area in } \\ & \text { Fug. sq. } \mathrm{m} . \end{aligned}$ | Population |  |

ulation

Of the population in 1861, the last censis, 943,581 were males and 944,489 females, living in 395,851 haushaltungen, or families, and 275,3162 separate dwellings. In twenty-one towns-the lantest, llanover, with 71,170 inhabitants; the smallest, Minden, with 4,432-there lived 507,156 persons, while the country was inhabited by $1,603,124$. Through emlgration, particularly to the United States, the comutry loses, on the arerage, between four and five thousand souls per sunum. The number of emigrants amounted to 4,562 in 1859 , to 4,927 in 1860 , and to 4,286 in 1861 .
Surface.-Hanover, physically considered, is an inclined plain, gently sloping from SE. to NW., and nowhere. e...int on a few of its emineneen, more elevate! then $\mathrm{yn}^{\mathrm{y}} \mathrm{ft}$. above the sea. The districts of Stace, Lilneburg. Hanover, and part of (anaburg beiong to the N . plain of (iermany, which stretehes from the North Sea E. into Russia. So hill in the central provinces reaches $1,400 \mathrm{ft}$. in the S. part of IIildesheim are the Ilarz mountuins, the highest summit of which, Künigsberg, is $3,300 \mathrm{ft}$. high. The well-known Brocken (3,660 ft.) is within the Prussian dominions. This mountnin mass forms the watershed between the Elbe and the Weser. Its geological formntion is chiefly granite overlaid by grauwacke, granwacke slate, and elay slate; and in these latter formations the mineral riches, herenfter described, are mostly found. Above these strata lie the flotz and tertiary formations. The great plain of the N., with the exception of a few limestone hills in Luneburg and Stale, is of diluvial formation, and consists either of extensive tracts of sand covered with furze, or of vast moors and marsh-lands. The heath of Ltunehurg, in its whole extent, comprises about 1-Cth of the kinglom: granite boulders are foand in different parts of it, some of very extruonlinary size. Of the peat-moors the largest are the Boirtanger moor, on the Ems, and the Hoch moor, in E. Friesland. The lowlands on the seawast are below the sea-level, and hence are kept dry by means of dykes similar to those of Itolland wid the Bedford Level, the maintenance of which oceasions an expenditure of several thousand dollas yearly. These lands, however, are by far the mont productive of the kingdom.
Riters and Lakes. - Hanover is traversed by tree large rivers, all of which fall into the German Ocean:-1, the Elbe, which, rising in the platenu of Bohemia, enters the kingdom at Schunlenburg, and forms, with a slight exception, its triole N. boundary, as far as its mouth; its chicf afluents within Ilanover are the Jetze, Ilmenau, Ete, and Oste, all on the S. bank: 2, the Weser, formed by the junction of the Werra and Fulda at Milnden, flowing NW. as far as the juncture of the Aller, and its tributary the Leine, and thence X. past Bremen into the German Occan: 3, the Ems, rising in Westphalia, and flowing N. through the moorlands of Mappen, and E. Friesland to Fimden, at its mouth. Throughout the flats of N. Germany there are mumerous lakes and stagoant paols, in which the water subsides after the floods, which extensively eover the country in winter and sring: the ehief of these in Hanover are the Seinhuder-meer, 5 m . long by $2 \frac{1}{2}$ broall, the Binmer-see, and the Seeburger-see. In E. Friesland the subterranean lake Jorian is so trickly coated with regetation, that waggons can pasever it. The mountain lake Oderteich, in the liar, is $2,200 \mathrm{ft}$. above the sea.
Soil and Climate.-The nature of the soil of Hanover will be best understood from the distrilution of the land, as stated by Marcard, which, though a number of years ago, is still quite cornet, owing to the stationary character of the poVin. II.
pulation. The Hanoverian morgen is equal to ot English acre.

The waste lands, which form so large a proportion of the whole country, consist principnlly of vast sandy tracts wholly unavailable for tillage. They extend in a brond belt across the kiugdom, of which they ocenpy about 1-bith part. This band of' sand is aptly teraned 'the Arabia of Germany.' The sandy districts are eovered with heath, on which a very small and harly breal of sheep, known by the name of Haidselinucken, flad in scanty subsistence. They yield wool of the coarsest description, but their thesh is well-tlavoured.
The proportion of land under cultivation to tho whole extent in each province, except the mining district, is as follows :-

The richest land of tha kinglom is the alluvial soil and weald-clay of the Hadeln-land at the mouth of the Eliee, and of E. Frieslandat the multh of the Weser. It is taxed as belonging to the highest elass. The soils of the secondary elasses are found in the limestone distriets of IIIdesheim, Gibttingen and Grubenhagen, Bremen and Werden. Tho least productive of all, belouging to the lowent class, is that of the duchy of Aremberg-Meppen. Much of this land, however, is laid out in meadow, especially the rich soil of E. Friesland, as the following table, giving the proportion of mendow to the whole cultivable soil, will show :-

In E. Friesland 4.6 ewt. of hay are reckonel as the proluce of a morgen of mealow lnud, and $2 \cdot 95$ morgen of summer pasture are reckoned in that province to one cow. In Hildesheim, the morgen yields half a cwt. of hay, and $\mathbf{i} \cdot 10$ morgen are deemed enough to pasture one cow.

The climate is dump and unwholesome in the low eountry about the const; but the winters are not so severe as in the interior, where, especially near the Harz, they begin in September and last till May. The spring is the most floomy and disagrecable part of the year, owing to the long prevalence of NE. and E. winds. SW. winds prevail in the summer months. The temperature of the kingdom is thus stated by Von Reden, in lis 'Statistical Description of Hanover,' i. 24 :-

| Place | Mean Teinpernture ( ${ }^{\text {(eaum.) }}$ |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Year | Spring | Summer | Autumn | Winler |
| Cuxhnven . | $6^{-9}{ }^{\circ}$ | $5 \cdot 9{ }^{\circ}$ | $13 \cdot 4^{\circ}$ | $77^{\circ}$ | $0 \cdot 4^{\circ}$ |
| Luneburg | $7 \cdot 2$ | $7 \cdot 04$ | $13 \cdot 8$ | $7 \cdot 4$ | 0.7 |
| Göttlngen : . | $6 \cdot 6$ | $5 \cdot 4$ | 14.6 | $7 \cdot 4$ | 0.7 |
| Harz Distriet | $4 \cdot 9$ |  |  |  |  |
| $\left.\begin{array}{c} \text { Average of } \\ \text { Kingdom } \end{array}\right\}$ | $7 \cdot 4$ | 6.8 | 14.5 | $7 \cdot 7$ | 0.8 |

The fall of rain during the year averages $23 \cdot 5$ in.; but it is very unequal in different parts of the kingdom. Fors prevail in the dyke-lands; and in the winter violent storms frequently occur, causing great damage to the embankments and drainage.

K K

Agriculture and Grazing.-The soil, on accuunt uf its general mediocre quality, requires effective cultivation to make it protitable to tha proprictor: this is seldom to be met with, owing to the sinallness of the estates into which the land is divided.

The following table exhibits an estimate of the proprietorship of the soil of Hanover:-

| Proprlelors | Arable and Meadow | Drained Land | Foresw | Prop. to Total |
| :---: | :---: | :---: | :---: | :---: |

| $\left.\begin{array}{c} \text { Total of Land } \\ \text { (except'Turf- } \\ \text { moors) } \end{array}\right\}$ | 5,832,606 | 2,864 | 2,242,576 | 100* |

The number of small proprietors in 1861 amounted to about 266,000 , and it appears, therefore, that three-difths of the land is in the hands of owners the average property of whom is only 20 morren, or 12 acres. These small landowners, called Bauern, are a race of hard-working men, and reported to be, on the whole, very happy and comfortable, poverty being unknown amongst them.
The best cultivated aunds belong to the crown and the nobility, and on these estates as much attention is given to improved systens of tillage as in Pomerania and Irussia. In the land held by small proprietors, the lest farms are in the marsh-lands, and they both yield abundant crops and support numerons cattle. The freeholds in the principalities of Hildesheim, Göttingen, Grnbenhagen, part of Kalemberg, und uenr the large towns, are next in order as respects tillage. Among these the system prevails, called Koppel-schlagwirthschaft, which consists in parcelling the land out into a number of fieldg for a rotation of crops proportloned to the numbers of the owner's cattle, and his consequent power of keeping the land properly dressed. The small proprietors in the sandy districts, and the Meier (stewards), who farm small parts of the crown lands and of the uobles' estates, abide by the old fashion of three courses-fallow. winter corn (chielly rye), and summer corn (barley or oats), with clover on the fallow, where the land will bear it. Potatoes are universally grown, and constitute the chief food of the poor. Rye is generally grown for bread, the raising of wheat being confined to the rich weald soils, and the quantity is insufficient for the demand. Barley and oats are largely cultivated, and, when in demand, are exported to England in considernble quantities. Clover and lucern are mach grown on good farms, and even by the peasants, on dry soils. Turnips are a favourite artucle of production, and flax, hemp, tobncco, and hops are more or less cultivated in different parts. The cranberries, abounding on the heath-lands, are gathered for exportation. The forest-land, which amounts to $2,242,576$ morgen (equal to about $1,400,000$ acres), yields about $51,878,000$ cubic ft . of timber yearly, not including inferior wood. The timber in the Harz distriet consists of fir: large beech and oak forests are found in Kalenberg, the duchy of Bremen, and the Upper Weser. These forests are under special control, and even when forming a part of private property, are conficled to foresters scientitically educated and licensed for the purpose.

The breeding of horses is a very important occupation, large numbers being annually sold to
the French and Italinn armies. The following table gives a return of the total number of stifllions used for breeding purposes in the kinglom of Hanover in the year 1862, as compared with the four preceding years, specifying the number of ihose belonging to the government breeding stults, and of those belonging to private imilividuals, mad likewise the number of live foals bred:-

| Yeara | Number of Stalllona be. longling to the Goverument ktuils let out for Hreedllug Purpioas: | Number or Stallions be longlug to private Owners melected for Breeillug Purposes | Total Namber of stallloms uned for Breedion Purpones | Number of live Foals bred |
| :---: | :---: | :---: | :---: | :---: |
| 1862 | 214 | 270 | 484 | 19,100 |
| 1861 | 216 | 272 | 488 | 18,2294 |
| 1860 | 219 | 273 | 492 | 17,610 |
| 1859 | 212 | 258 | 471 | 10,951 |
| 1858 | 217 | 258 | 475 | 21,600 |

The number of foals bred in the kinglom of Hanover in 1862, viz. 19,100, was slightly below the average of the last ten years, but aboit 1,000 more than were bred in 1861 and 1860. The alove tnble is from an official report of Mr. Petre, lritish secretary of Legation, dated Hanover, January 1864. (Reports of Her Majesty's Secretaries if Legation, No. VII. p. 219.)
The rearing of centle and sheep, though not of the same importance as horse-breeding, is attended to extensively. Bees are a favourite aldition to a farm throughout the kingdom, and thrive well, on account of the quantity of flowering heath and buck-whent in the sandy districts. The annual proluce of honey is valued at 40,0001 . Larye flocks of geese are kept in moist situations: theit flesh is salted for domestic use, and the feathers nre preserved. Leeches, wnich formerly abounded in the marsh-lands, have become nearly extinet, from being too eagerly fished. Fish are caught in all the ponds and rivers, and contribute to the support of no small number of the poorer orders The herring and cod fisheries at Einden used to employ about 1,500 hands, taking 13,000 tons ant nually; but the produce at present is not one thirl part of the former amount.
Mining.-This is the most extensive branch o Hanoverian industry. Mr. Petre, British secretary of Legation, in a report dated Hanover, Janunry 1862 (Reports, No. V. p. 233), gives an interesting account of the state of this industry. He says: 'The mineral wenlth of this country, whici considerable, lies, with the exception of coal. for the mest part in the mountninous districts, thickly clothed with'r rests, which constitute the Hano verian portion of the Harz, and in that part what is called the Lower Harz which is held joint proprietorship by Hanover and Brunswich The mines, foundries, and salt-works, \&c. in thes districts, with the exception of a few proprictary claims vested in individuals, are the property the state, and are exclusively worked under it immediate direction, represented by the ministry of finance. The revenue derived by the state frof these sources, as it figured in the builget, amounte for the year 1859-60 to $2,889,593$ dollars.
'The entire population of the Harz, about 32,000 is connected, directly or indirectly, with the minim industry, and depends wholly upon govemmen employment for even bare subsistence. Com supplied to the population from the governmen magnzines established for that purpose, and sold somewhat on the principle of the "Caisses de Boulangers" at Paris, at a moderate and uuiform price. Until the year 1848, the inbabitants the Harz were exempted from contributing an share of the public burdens, either in the shape
taxes or military quent liability to to the public trens good the loss to the paid by the state.

, about 32,000 ith the mining n governnent ence. Com i e government lose, and solld "Caisses def e and uniform inhabitants trributing an in the shape
tases or military service, and even their subseunent liability to taxation has been no real gnin to the public treasury, as it was necessary to make gool the loss to them by increase of wages-wages paid by the state.
'This anomalous condition of a large labouring pupuation engaged in the most important branch of Hanot erian industry has long since given rise to stricares upon the policy of the government, whllh perpetuates a system no longer suited to the timess, a systen intrinsically wrong on economical grounds, and one whicli, in a country so ridilly endowed with mineral wealth, stitles all inentive to individual enterprise.
'The opponents of the present system argue, apart from the general objections which exist to it puverument entangling itsel' in industrinl undertakings, that the departure in the present instunce from sound economical laws involves an evilent bas to the general wealth of the country, inasmueh as there is little doubt bint that the mines, foundries, and forests of the Harz would be ininitely more productive if, instead of being worked as they are now by the state, they were leased to companies or indlividuals. Stish a course, moreover, would develope private enterprise, by which the state must eventually profit. On the other hand, the advocates of the present tutelary astem say in its defence, that the stute has inhented a large mining population, living under anomalous conditions, and that an application of the ordinary economical laws would in this inHance be both unwise and cruel.
'The Harz possesses no agriculture, and produces no food for its inhabitants; they are dependent, and have been for centuries, on their fabour in the mine, the foundry, and the forest, for their bare sustenance. Any disturbance, therefore, in the regular and constant demand for labour which is secured to them by the state woukd result in misery and starvation. They must either find constant work, starve, or emigrate. Whilst many of the mines are worked at a large profit, others ried but little or none, and some are even worked it a loss. Were the mining industry of the Harz to be given over to private speculation, the two latter classes of mines would he closed altogether, and all the hands connected with them thrown permanently out of employ, whereas the profitable mines would be workel at a rate which in the curse of a few vears might leave them exhausted und valueless. Whenever that contingency should arive, the whole population of the Harz would bethrown for subsistence upon the state. Whatefer may be reasonably urged against the policy of the usurpation by the state of what legitimately lelongs to private enterprise, it must be allowed that nay change to a better system than the one which has been so long interwoven with the social and economical condition of the Harz, ought to be a gradual one. Looking at the question from a francial point of view, it is very doubtful whether the revenue which tigures in the bulget as derived from the mines, de. of the harz is any but a nommal one. The salaries of mining officials, and bll the miscellaneous ontlay comected with the mining administration, added to the value of the fuel consumed in the smelting houses and foundries, which is supplied by the government furests, must be subtracted from the nominal gain.'
Trade and Manufactures.- Hunover, though fumished, by its mineral wealth and navigable nivers, with means for carrying on a considerable emmerce, holds a very low station among the trading countries of Europe. Its inhab. have little enterprise or ardour for business, and even that which they might exert is effectually checked by
restrictions. The mannfacture of linen is, perhaps, more extensive than any other. Splming and weaving furn the great in-toor employment of the rurul pop, and large quantities both of yarm and thread are the work of private hauds. In Gromenburg, for instance, where large crops of thax are raisen, nu less than $1,378,000$ skeins ( $(196,750 \mathrm{Hb}$. ) nre spoun annually by the farmers' mel peasants' fiumilies. The number of professionul weavers is nenrly 5,000 , using 7,200 looms, and the linen clothis produced by them are known in the markets by the name of Osnaburgs und white rolls, there being different qualities of each. The hempen cloths are known as Tecklenburgs, hempen hagging, and Ilesshans. They are commonly made u1) in pieces of 100 donble ells ( 128 yils.). These cloths, when bleached and ready for sale, are tuken to the various Lage-Anstalten, or cloth-marts of llanover (chietly in the district of Osnabritek), where, after being mensured, stamped, anil valued, they are bought, chiefly ly bremen mad Hamburg merchants, who export them to Eughund, Spinin, and Portugal, N. America, and the W. Indies, Prior to her comnection with the Zollverein, lianover was destitute of any manufncturing industry but that here enumerated. However, since 1851 with the Zollverein for a home market, and under the influence of its protective tarifif, a manufucturing industry has sprung up and prospers. Some new iron works, engine and machine manufactories, cotton-spinning factories, chemical works, india-rubber, gutta percha, and cigar manufactories, testify to the rising industry and trade of the country; whilst the large sums of money which have been expended by Government at Harburg and upon the new port of Geesteminde, at the mouth of the Weser, show the importance attached to their development. The subjoined table gives the number and tomnage (in lasts) of vessels entered at and cleared from ports in Hanover, from various countries, distinguishing tomage with cargoes, in the year 1862 :-

Condition of the People.-Although the soil and climate of Hanover is unfavourable to agriculture, the condition of the peasantry in the hereditary provs. of the house of Brunswiek has, until very lately, been such as to contine them almost exclusively to the cultivntion of the soil: indleed, the trading resources offered by the rivers of the kingdom are only beginuing to be appreciated by the people. In the sandy distriets the pop, is necessarily scanty and indigent; in the better soils of Hildesheim, Göttingen, and Grubenhagen, the peasants are in a comfortable condition. The most prosperous districts are E. Friesland, and the rich lands along the Elbe, where good agriculture, united with activity and enterprise in trade, serves to enrich the pop. The people are everywhere industrious and temperate, labouring, without illfeeling, for the smallest possible remuneration. They are mostly descendants of the ancient Saxons, and, as such, speak the Low German dialect, excepting the inhab. of the Harz, who came from Upper Germany. The nobility possess large privileges as regarls the right of holding property and civil and eriminal jurisdiction. Hanover was one of the last staten of Germany-the last, except Mecklenburg-in which serfdom and legal torture were abolished. The jurisdiction of the nobility on their own estates was done away with, to a great extent, in 1831 and 1848, but remnants of it still exist. The feudal service of the agricultural population was abrogated in 1831, on the condition that the value of such service be paid to the owner of the land at the rate of 25 years' income. It being impossible, in many cases, for the labouring people to raise the necessary capital, the redemption has not been accomplished to more than onehalf in the course of thirty years. According to an official return, 22,363 allotments of land were redeemed from 1849 to 1860 , at a price of $11,178,909$ thalers, or $1,676,8361$.

Government.-Before Prussia ceded Hanover to Franee, in 1804, the form of government was monarelical, and the various territories were subject to feudal lords. The peasants of the marsh-lands had more freedom, and in E. Friesland the constitution of the country was almost republican. In the territories of the princes of the empire, the representation of the people by estates, composed of the nobles, prelates, and deputies from the towns, served to cheek the power of the sovereign, as in other parts of Germany. In 1808, when Napoleon
crented the kinglom of Westphalin, the territories of Hanover, with the districta of Ilildesheim ani Osnabrilek, formell a part of it, and the Cowle Napoléon took the place of the ancient laws, and n slinm representative government was establishet On the return of the legitimate sovereign to Hanover, in 1813, the French institutions werg summarily abolished, and the old forms re-entablished; and in 1818 the estates, summoned upmin the ancient footing, drew up the form of a new constitution, modelled on that of England and Frauce, and sulbstituting a uniform system of representation for the varlous representative forms which prevailed under the empire. The chicf ehange that excited disapprobation arose from the arbitrary decision of the soverelgn (George IV.), advised by Count Munster, that there should he two chambers instead of one, contrary to the propusal of the estates, and the universal custom if Germany. The respective rights of the sovereign and of the country to the crown land revenues were not clearly defined by this fundamental law; but the interests of the people were supposed to be sufficiently consulted by the institution of a national treasury, the commissioners of which, named for life, were ex afficio members either of the upper or of the lower chamber.
This constitution, however, contained no properly definell statements respecting either the rights of the people, or the prerogatives of the crown; and as the new system of representation was not sulticiently consolidated to resist the encroachments of a monarch supported by powerful foreign influence the necessity of a more definite fundamental law; in which the rights of the citizens should at least be deelared, was felt on all sides. This feeling lel to the drawing up of the constitution of 1833 which differed in but few, though most essential, polits from that of 1819. The principal points of difference were a fuller acknowledgment of the right of the chambers to control the buiget, and to call the ministers to aceount for their conduct ${ }_{\text {; }}$ the restriction of the king's expenditure, by a regulated civil list ; and the reservation, for the use of the nation, of the surplus revenue of the crown demesnes. These modifications rendered the treasury, whose functions thus devolved upon the chambers, wholly unnecessary, and it was dissolved. The new fundamental law, after being discussed by both chambers, received the assent of William IV. in 1833, who, however, by the same act, moditied 14 articles of the bill. New elections followed, and the new chambers were exhilitiny their activity in reforming abuses, and introducing economy into the state disbursements, when the death of William IV. interrupted their proceedings. As the Salic law, excluding females from the succession to the throne, prevails in Hanover, William IV. was succeeded by his eldest surviving brother, Ernest, duke of Cumberland, in Englsni. Immediately on taking the government, the new king declared the chambers dissolved; and, previously to their re-assembling, he abolished, by proclamation, the fundamental law which had been adopted under the reign of his predecessor, and in the most arbitrary manner, insulting alike his brother's memory and the whole country, declared the fundamental law of 1819 to be alone valid. Under the last-named law, he summoned a fresh parliament ; but he found the spirit of the nation aroused and indignant; for not only the courts of law, but the highest legal authority in Germany, and several faculties of universities, deelared his proceedings illegal; many towns refused to sem representatives to the parliament, and those which met signed a memorable protest, declaring theit opinion that the fundamental law of 1833 was still
the law of the be convened, fi clared dissolvel. The present modieel lin the 'I 31, 1840, with n Sept. The present Constitution of Manover is embodied in the 'Landesverfassung's (iesetz' of July 31, 1840, with molitientions introduced April 10, Sept. 5, and Oet. 26, 1848 ; Aug. 1, 1855 ; Sept. 7, 1855; and March 24, 1857. According to these fundamental laws, the crown is hereditary in the male line of the house of Brunswick-Lilneburg, the sovereign coming of aye at eighteen. The whole legislative and executive power is vested in the king, and the representatives of the people can only give advice to the crown, or afford co-uncration-' Mitwirkung.' These consultative and cooperative functions are vested in two bodles, an l'pper nnd a Lower Chamber. The former consists of the princes of the royal house; the, hends of five families of the upper nobility of the kingdom; the hereditary court marshal; four members numinated by the king; thirty-three deputies of the lnrgest landed proprietors; ten deputies of cbapters and colleges; ten deputies of commercial bodies, and four deputies of inns of court. Onchalf of the elected members of the Upper House quit their seats every three years, to be replaced by deputies nominated in new elections. The Lower House consists of two members nominated by the king, whe must be ministers ; of thirty-eight deputies of towns, and of forty-four of country disticts. The members are elected only for the term of one session, which, however, by prorogation, may extend over several years. Consultative funcHions rre assigned, besides, to seven provincial diets representing-1, the principality of Kalenberg and Göttingen ; 2, the principality of Luneburg; 3, the counties of Hoya and Diepholz; 4, the duchy of Bremen and Verden; 5, the principality of Osnabrick; 6, the principality of Hildesheim; and 7, the principality of East Friesland. These prorincial diets meet every three years, nnd in them the ultra-conservative element is very largely represented.
Theexecutive power is entirely and unreservedly in the hands of the aovereign, acting through irresponsible ministers. For facilities of administratisn, the ministry is divided into six departments, the limits between which, however, are not kept up with strictness. The supreme court of juatice is at Celle, and under it are nine chanceries or district courts, besides the magistracies of the towns, and the manorial and minor royal courts, ${ }_{2 s}$ primary tribunals.
Religious matters are directed by Calvinist consistories at Hanover, Stade, Aurich, and Nordhorn, with the suberdinate consistories of Hadeln and Seustadt ; the Lutheran consistery at Osnnbruck, and the Roman Catholic consistory of the same see, which is alternately filled by a Roman Catholic and by a secularised Protestant bishop; lastly, the bishop and consistory of Hildesheim, for the Roman Catholic inhab. of that district. Education has been much attended to in Hanover. Public education is placed under the direction of a superior council for 'Unterricht's Angelegenbeiten.' In the year 1861 there were 4,781 primary schools, besides numerous secondary, elementary, and industrial schools. The highest seat of learning is the university of Göttingen, established in lïut by King George II., and re-chartered in 1836 as the 'Academia Georgia Augusta.'
Finances.-The budget period embraces a term of two years, In the revenue account beginning July 1, 1862, and ending June 30, 1864, the public income amounted to $39,783,000$ thalers, or $5.517,450 l$., and the expenditure to $40,023,000$ thalers, or $5,553,4501$. leaving a deficit of 240,000
thalers, or about $36,000 l$. The expenditure for the thannelal year 1864-65 was caleulated at $21,004,9.10$ thalers, or $3,150,9961$., nud the expenditure for the year 1865-66 nt 20,745,190 thalers, or 3,111,7581, riving a total for the two years of $41,752,130$ thalers, or $6,262,7741$., or an incrense of nearly a million sterling over the preceding tinancial perionl.

The revenue and expenditure for the thuneinl yenr 1869-64 were made up of the following items:-

Incomr fon the Year 1803-64.

Expenditure for the Year 1863-64.
Thalers
Ministry of State

The changes of the government of Hanover have necessarily, and in the most important degree, affected its tinances. The re-establishment of the ancient order of things, in 1813, brought upon the country the whole mass of abuses belonging to in past age, which had been nbelished by the French. Amongst the most obnoxious was the claim of the nebles to exemption from the land-tax; and this, as well as many other points, had to be arranged by the estates assembled under the constitution of 1819. Between 1821-26, a measurement and valuation of the country and its soil was made; and the amount of annual produce, after deducting expenses, being tnxed at $10 \cdot 2$ per cent., was calculated to yield 1,310,000 dolls.; but in this loose estimate, the values undoubtedly fell much below the reality. An indemnity was, at the same time, granted to the nobles, in lieu of exemption, to the amount of 1 per cent. on the revenue taxed. This charge appeared in the budget of 1826-27, and amounted to $\mathbf{6 5 , 0 0 0}$ dolls. The revenues claiming exemption amounted, consequently, to $6,500,000$ dolls., nearly equalling the amount of taxable property belonging to peasants and burghers, and which, in 1816, was found (exclusive of E. Friesland) to amount to $6,689,717$ dolls. Thus, half the nation was obliged to purclinse justice from the other half, after the re-establishment of the so-called constitution of 1819 had been granted. The other direct taxes are the house-tax, which is 4 per cent. on the appraised rent; the personal tnx, rated in 6 classes; an income-tax, which likewise includes all salaries, and the rate of which is $\frac{1}{2}$ per cent. below 500 dolls., rising to 2 per cent. above 2,000 dolls. annual income; and lastly, the in-dustry-tax, which is paid by all tradesmen, in 7

## HaNOVER

classen, the lowest paying if doll., the highest 80 dolls. Tho indirect taxes inchude the customs, the tax on spirits, beer, de.. the monopoly of the sale of salt, the stamp and legacy diuties, beviles duthes levied on the grinding of corn, and unslanghtered beasts.

The published budget does not include the civil lint of the king; nor are the other expenses of the court and royal family neconuted for to the chamlers. Tho whole of this expenditure is drawn from vast domains clamed to be the private property of the royal honse, but not admitted to be such liy the decisions of former parliaments. Numeroms debates of the national representatives at 18.18 and at subsecjuent periods, havo not been able to set tle the so-called question of 'Ausscheidung des Kronguts.'
The public debt of llanover has heen increasing for many years, chletly through the establishiment of a network of state railways. On January l, 1862, the debt amounted to-

| Old Debt . | 15,721,760 thalers, or $\mathbf{\$ 2 , 8 5 8 , 2 6 4}$ |
| :---: | :---: |
| Itailway Debt | 80,623,075 $\quad 1$ or 4,583,460 |
| Total | 46,344,835 thaiers, or $\mathbf{4 6 , 0 5 1 , 7 2 4}$ |

The gross proderce of the railways in the financial period 1860-1il amounted to $6,115,592$ thalers, and the expenses to $3,1 \cdot 11,868$ thalers, leaving a net income of $1,973,724$ thalers, erfuivalent to $\tilde{5}^{2} 36$ per cent. This, however, as will be seen, varies considerably from the figures of the otlleial bullget above given, in which the gross income, includiug state telegraphs, is set down at a considerably lesser sum. The expenditure connected with the railway truffic is enumerated under the depurtment of the minister of the interior. The telegraph lines of the state, erected at a cost of 225,803 thalers, according to a return made July 1, 1862 , give a net income of $6 \cdot 78$ per cent. exclusive of the free despatches of the government authorities and other public bodies.

Previous to the separation of the crowns of Great Britain and IIanover, one-half of the public income was derived from the state domains, and tha contributions of the tax-payers amounted to scarcely one-fifli of the present sum. The following was the budget for the year 183.t, three years before the accession of the Duke of Cumberland to the throne of Hanover:-

Comparing the income from the domains in the period 1861-2, with the produce of 1834 , the sums drawn at present for the civil list and similar expenses niay be closely estimated. Exclusive of these sums, the preblic expenditure is seen to have risen from six and a half million thalers to very nearly twenty millions, or from 986,5301 , to 2,978,753l.

The question of the income of the kings of IInnover has never been satisfactorily settled. Since the death of King William IV. of Great Britain, and the accession of Ernest Augustus, duke of Cumberland, to the throne of Hanover, the states and the sovereign have been in conflict on this subject. The constitution of 1833 settled a civil list of 500,000 thalers, or $75,000 l$.; upon the king ; but Eirnest Augustus declared this sum to be wholly insufficient, and his demands for the possession of the state domains not being acceded to, he overthrew the constitution, chiefly on this account. From 1841 to 1848 the royal family
enjoyed the whole produce of the crown property; buit in the last-named year the king was compeiled to give up this source of income, and to accept the grant of the civil list of $\overline{b t h}, 0(0) t$ thalens as mile income. In 1855, however, the constitution was once more overthrown, and ly a royal decree part of the state property was assigned to the kingis use; hesides the interest of a sum of 600,000). invented by the llanoverian govermmeut in EnsIlsis stocks, in the years 1784 and 1790 , and that of a so-enlled 'Schatullenkajital' of $2,4 \% 0,000$ thulers, formed of the accumulited excess of state income over expenditure diring a period of 10 yeurs. At present the income of the sovereigus of llanover, as far as it is known, amonnts to about $8.31,000$ thalers, or 105,0001 .
Armed Force.-The army of the kingiom is formed parily by conseription and partly by elllistment, the former supplying any insufficieney of the latter mole of raising soldiers. All eitizens above 20 are linble to be Irawn for maneription; but, as a rule, only a very small pe.....tage are called up for active service in the infantry; a great portion of these troops, and nearly the whole of the cavalry and artillery, being formed of volunteers. The cavalry, especially, is a branch of service mich sought after by the sons of peasants and small farmers, on account of the alvantages connected therewith. The privates in these regiments, as soon as the short term of drill and firnt practice is passed, are sent home on furlough, being allowed to take their uniforms and their horses. They must keep their horses partly at their own expense; but they may use them in agricultural arde other labour, taking due care uf the health of the animals under their charge. The term of service is seven years in the infantry, and ten years in the cavalry ; but about three-furths of this period may be spent on furlough, iuterrupted only by a short anmual practice of arms.
On July 1, 1862, the army consisted of :-
Men Tmapa of
8 Regiments of Infnntry, numbering 17,904 with 2,640 3 Brtgades of Cavairy 3 Battalfons of Artillery 2 Companies of Engineers Stafi

There are 10 garrison towns, a cannon foundry at Hanover, and a manufactory for sinall arms at Herzleerg.

History.-The kingdom of Hanover is formed out of the duchies formerly possessed by several families of the junior branch of the house of Hrusswick. The reigning family derives is origin from the union of the Marquis d'Este, in the eleventh century, with a wealthy priacess of Bavaria, the issue of which received the sumame Guelph, from his maternal anceators, and inherited the dukedom of Bavaria. Henry the Proud, third in desecnt from him last mentioned, married Gertrude, the ruling princess of Brunswick : their son. well known in the history of the crusades as Henry the Lion (born 1129), was the first Guelph duke of Brunswick. He married a daughter of Henry II., king of England; and from this marringe both the houses of Brunswick and Luneburg are descended. The history of Hanover for the two centuries preceling the Lutheran reformati,n presents little interest, except in the comuction of its princes with the wars of the Guelphs and Ghibellines, in the latter end of the fourtenth century : little or nothing is known of its intenal history. The Reformation numbered the princes of lrmiswick among its most zenlous supporters, and their subjects, during the thirty years' war,

warmly soconded their anti-papal efforts. Eiment "Hell, the reigning dukn, was one of the most elexuent defenders of Luther at the diet of Worms. lilis endeavours to improve the people by establithing clerical and general schook, when learning was estcemed only by the few, show him to have beea a man of enlightened vlewa. His grandsma, Eirnest Augustus, married Sophia, a granddaughter of James I. of Eingiand (by his daugiter Bizabeth, the wife of the eleetor-palatine) ; and on this marriage was founded the claim of the eilder branch of the house of lizunswick to the Engilsh crown, acknowiedged by pariament in 1i01. George Lonis was the issue of this marriace, and became king of England in 1714 ; from which time till 1837, year of the death of Willinm IV., England and Hanover had the snme suvereigns. The Salic law in 1837 conferred the Hanoverian crown on Eruest, duke of Cumberland, difth, but eldest surviving son of Georgo III. During the reigns of George I. and II. the territury of the electors of Manover was increased by the conquest and purchase of many adjoining districts; Bremerverden and Wildeshausen in 171! and the llauleln-land in 1731. Gcorge III, added fiohenstein andi the bishoprie of Osnabrick, which, by the treaty of Westphalia, was held by his house an a secularised bishopric alternately with a Rom. Catholic prelate. In 1804 Prussia took possession of finnover, but cedied it tu the same year to the French, who constituted it a part of the kingdom of Westphalia, established in 1808. At the pence of 1813 the king of Great liritain reclained his dominions, which were mueh cularged by the stipulations of the treaty of Vienna, and formed into a kingdom. On the definitive settiement of the kingdom, the district of Lauenburg was ceded by Hanover, which obtained in return the bishopric of Ilildeshcim, the principality of East Friesland, the districts of Lingen anid Harlingen. In consequence of a family treaty dating back to the seventeenth century, ratified by the German diet, and renewed between the houses of Hinnover and Brunswick on March 3, 1863, it is settled that the crown of Hanover, in the event of the extinction of the male line, shall fall to the ducal house of Brunswick, and vice versa. The present Duke of Brunswick having no male heirs, it is probable that this treaty will have to be exccuted beforo long in favour of the royal family of Hisnover.
Hanover, a city of W. Germany, cap. of the sbove kingdom, on the Leine, a branch of the Weser, 84 m . S. Hamburg, 62 m . SL. Bremen, 35 m. W. Brunswick, on the railway from lirunswick to Bremen. Pop. 71,170 in 1861. The city is built in an extensive sandy plain, and is divided by the river (over which are several bridges) into an old and new town, each of which is governed by a separate magistrate. The old town, on the nght bank, has crooked and narrow streets, and is ill-bnilt and dirty : the streets of the new town are more regular, and are lined with handsome houses, particularly George Street and Frederick Street, opening on a fine esplanade; the latter is alomed with the handsome monumental rotunda of Leibnitz, and the column, 156 ft . high, sacred to the memory of the Hanoverians who fell in the battle of Waterloo. The chief public buildings are the royal palace, of good exterior architecture, sad splendidly fitted up within, especially the Ritter-saal, or knights' hall; the epera-house attached to the palace; the viceroy's pulace; the house of assembly of the states (Landständehaus); the mint ; the arsenal; the Gewerb-schule (trade sehool) ; the royal stables, where the well known breed of black and cream-coloured Hanoverian

ILARBOROUGH (MARKFT)
603
horsen is kepit ; and the towif-lall and record-oflice, containing a library of 80,0100 printed books, besides about $\mathbf{2 , 0 0 0}$ valuable MSS., chiefly given by Leibnitz, who was a great benefnctor to this town. Hesilen this, there are sevell other publie libruries, attached to varionn national eatubliahmenta. There nre 7 churchen, 4 Lutherun, ${ }^{2}$ Culviniat, and 1 Romnn Catholle: of these the handsomest are the court and city church in the new town, and the Schloss-Airche, which contains the remaina of the electress Sophia and her son George I., king of Eingland. Outside the cown aro two suburbs, Linden and Gartengemeinic, in the iatter of which are upwards of 500 houses with gardens. About $\frac{1}{\mathrm{~m}} \mathrm{~m}$. distant is Mount Hrillant, the King's comntry reaidence, and formeriy the seat of Cimnt Walmsden, who enriched it with a gallery of tine pictures. About 1 m . distant is the old pidace of Hermhatusell. once the favourite residence of George I. and Georgo II, : it is lieavy and tanteless, und appears to be going to deeny, The gardens, which are laid out in the old French style, formerly contained a fine collection of rare plants; but they were tispersed during the late war. Hamover has several establishments tor education, among which aro the Georgiannm, founded in 1776, for educating 40 sons of the nobility free of expense, the lyceum, the normal school (the earllest of its kind, fonmded in 175.4), several elementary schools, and a giris' school of industry. Among the charitable institutions are a large almashouse, an orphan asylum, and several hospitale, one of which has been only lately erected. There are also a Bible Society, founded in 1806, a Socicty of Natiral History, an llist. Society, an Art Unien, which annvaliy exhibits specimens of Hanoverian artists, and a zacuit. union. The manufactures are of tritting importance. The transit trade with liremen and the interior of Germany is very considerable : there is an exchange, a chamber of commerce, nud a Berghandburg, or market for mining produce. Commercial activity, however, prevails more among the Dutch and foreign German merchants settled in the town, than amongst the IIanoverinns. Some of the bankens are considerabla capitalists. The town is not considered healthy: N. and E. winds are prevalent, and much rain falls. Longevity is said to be rare.

The fonmdation of Hanover, though attributed to the eleventh century, is most probably of still earlier date. In 1303 it is mentioned as having some trade in cloth, skins, and salt. Little more of it is recorded till 1566, when its inhabitants ristinguished themselves by their zeal for the Reformation. It escaped the devastations of the thirty years' war, and even refused admission to the victorious troops of Tilly in 1625 . The old royal palace was built early in the 17th century, and in 1641 it became the residence of Dıkc Cliristian Louis, since which it has always been the capital of the electorate and kingdom, and has made grent advances in size and splendour. The ramparts being found useless as a means of defence, were in 1780 converted into a handsome esplanade, and planted with trees.

HARBOROUGH (MARKET), a market town and chapelry of Eingland, par. Gt. Bowden, co. Leicester, hund. Gart'ee, on the N. bank of the Welland, which divides it from Northamptonshire 14 m . SE. Leicester, and $81 \frac{1}{4} \mathrm{~m}$. N. London by Midland railway. Pop. 2,302 in 1861. The towil consists of a well-built street, crossed by several others of inferior character; and near the middle is a handsome town-hall, with shops below, and a justice-room above, in which the county magistrates transact their business. The church is fine and
mpacious, and itn octangular apire in one of the mont clegnot in Eingland. The dimmenters have 8 julaces of womhip, attached to which, as well as to the chutch, are Sundny achoola, giving inatruction altogether to about 800 chilidren. Comiderable trude takea place on the market-ilays and at the Getober fairs; which, not lemenow than in the time of Camilen, are fimous for the nhow of lieauta. Silk and shallown weaving and the manufacture of earpets are curried on here, hut not extensively. Market-Ilarhorongh is one of the polling-places for the s. divislon of the co., and in the chief town of $n$ poor law imion, eomprising 41 parm, or townmhipw. Markets on I'uemlay; fulrs Jan. fi, Foh. 11i, April 29, nod July 31, Oet. 19 nad 8 following days, for eattle, leather, eliewe, de. Other finirs are lield on the Thesilaya after March 2, after Nhllent Sunday, and before Nov. 22 nul Dec. 8.

IlAlRIIURG, a town of Germany, kingiom of llanover, lanifr, nud 23 m . NW. Lllueburg, on the Wille, at the intinx of the Seete, and on the Inisover nad Hrunswlek railiway, $46 \mathrm{~m} . \mathrm{S}$. Hamburg. I'op, 14, 109 in 18ti. The town has a citalel with drawbrilges, and a custom-house, gimpowier nills, sugne refinery, manufactures of wostlens, linens, hosipry, and a flourishing transit trade.

IIARLINGEN, a Ben-port town of Holland, prov. Friesland, on the Vliestrome, or entrance to the Zuyder Zee, oppowite the 'Iexel, and at the mouth of the cannl of Leewarden, 15 m . W. by s. that town, at the terminus of the Northern railway of Holland. Pop, 9,772 in 1861. The town is fortiflel, and is strong by its position, the surrounding country being readily laid under water. Nitreets regular, well built, clean, and internected with canuls bordered with treen. Chief editices, the Aimiralty, a large par. church, and the townhall. It has a good harlour ; but the entrance to it la blocked up with sand-banks, so as not to admit large vessels. It has manufactures of sailcloth, salt, hollanils, paper, bricks, and lime, with luilding docks, and a brisk trade in com, butter, cheese, flax, hemp, glue, pitch, and tar. It is the seat of the naval office for the prov.; and suffered heverely from a violent storm in 1825.

HARROW-ON-THE-HILL, a village and par. of England, co. Middlesex, hund. Gore, 10 m. NW. by W. London by road, and $11 \frac{1}{2} \mathrm{~m}$. by London nud North Western railway. Pop. of par. 5,025 in 1861. Area of par., 9,870 acres. The hill on which the $y$ '"age stands rises singly out of an extensive and fertile vale; it is considerably depressed in the centre, but has two very conspicuous eminences at the extremes. On the mote $N$. of these stands the church, with its tower and lofty steeple, a prominent feature throughout Midilesex, and some of the adjoining counties. Part of this building is Norman, belonging to the 11 th century; lut the main fabric, with the tower, belongs to the 14th century. Immediately below the church lies the village, chiefly consisting of one street running down the slope of the hill. The best houses are occupied either by assistant-masters, or other teachers, who accommodate the scholars attending the free school, to which Harrow is wholly indelted for its celebrity. This school was founded, in 1571, by Mr. Jolin Lyon, a weaithy yeoman of the neighbouring hamiet of Preston, and received a royal charter, by the terms of which the management of the property and the appointment of the master were committed to six trustees as a body corporate. The school-buildings are of brick, and have no claim to particular mention. The head master's house has a Gothic porch, and is a fine old mansion. The primary object of this establishment was the gratuitous instruction of the poor children of Harrow, without limitation of

## HARROW-ON-THE-HILL

number; lint the fomuler expremily direetn 'that the manter may receive, over and above the youth leelomging to the par., an many forcigners an can lin well thught and accommoninted, for much stipwols and whges an he can get, no that he take juins with all indifirrently, as well of the par. an fireignens, as well of poor an of rich.' Thif lilsurality of the fonnder, und the juilicious choice by thie trusteen of able and learned men as its masters, have chiefly conduced to its prosent very hlgh reputation as a school for the English arintioerucy; hit, at the aame thane, there can be no douht that tho founder's intentions, as respecta the pour of the par. Itself, liave been wholly frustratel. A clawieal edisentlon is quite unsuitable to the popo of a village, and hence the school has been little used of late years by the pariahionems. A jetition of the linter to the Court of Chancery, in $1 \times 10$, for the reformntion of thene alunses, was unancecesfinl. (Hee Vesey's Chancery Iteporta, xvii. 498.) The revennes strictly applicable to the nehool amonut to nearly 900 , a yent, in the hanils of trusteses, usunlly nohlemen or gentlemen living in or near the par. The education furnished was exclusively clamsienl till within the lant 30 yeara, when Drs. Jutler and Longley ventured to íntroduco a little modern history and arithmetic, nelther of which, however, is considered at all important: loyomid these trithing attempts at reform no deviation has been made from the beaten path of the old gram-mar-sehools. The routine of grammars, clasmes, and achool hours, very much resembles that pursued at Jton, owing, no doubt, to the nppointment of several head-mnaters from that selimal: the Eton granmar is nsed; verse-making nupersedes the more useful study of prose composition; learning-by-heart is a favourito emplovment; and the private-tuition system, the chiefolject of which seems to be to save the master's labour, and till the tutor's pocket, prevails at IIarrow no less than at Eton and Westminster. The masters originally were two only, the master and the usher or under-master, both of whom were permitted to take 'foreigners' as boarders; but as the school incrensed, further asslatance became from time to time necessary, and there are now six assistant masters, paid either by the high or lower master, according to the school in which they teach: and besides these there is a mathematical teacher. All the masters receive boarders; but the heal-master does not furnish tuition, and hence arises the difference in the terms; for at a tutor's house they amount to 1301 , whereas at the head-master's they are little more than 100l. All, however, are compelled to procure tuition, which is a part of the system. At least 60l, a year must be added to complete the necessary annual expenses of boys educated at this school. The govenors have given prizes for verses, and the late Sir R. I'eel estnblished a prize for Latin prose composition. The specel-days, on which thess papers are read or recited, are the first Wednesdays in June and July. The University scholarships attachea to Harrow-school are four, establishied by tho founder, of 50 guineas each, either to Oxforil or Cambridge, and two of the same value, founded by the late Mr. Sayer, to Caius College, Cam-bridge-all tenable for four years: they are gained by an impartial examination. The number of boys attending the school fluctuates at present between 350 and 450. Among the many public characters educnted in this school may be nentioned Sir William Jones, Spencer Percival, Dr. Parr, Lord Byron, Marquis of Hastings, and Sir Robert Peel. Harrow had formerly a weekly market, which is now decayed; but a pleasure fair is still held on the first Monday in Aug. Bentloy

I'riory, a fine neat belonging to the Marquin of Abercorn, is within this jar, it oceuples the site of a monnatery, elimolved at the lefiormation.

IlAillBOWUATE, a town of Vingland, celebrated for itn minerai waters, co, York, W. riding, wap. Clare, furming with iliiton a chapelry of the par, of Kinareaborough, 178 m . N. London, 14 m , S. Leeds, anui 20 m . W. by S. York, on the Midjand railway. Pop. 4,737 in 18th. The town in divided into Iligh and Low llarrowgate. Iligh Harrowgate is built on an elevated plaln, which 100 years ago was properly described by Smoliett as " $n$ wild common, hare and bleak, withont tree or ahrub, or the least signa of cultivation.' At the clome of last century, however, Lord Loughburourh made large plantations; housen lave since been built in difierent directions; and the sluation in now extremely jpleasant, commanding a most extensive view of the distant comintry, lluely varied by towus, villages, tlelds, and woods. The cathedral of York la distinetly acen at the distance of 20 m ., and the vlew W . is terminated by the mountaliss of Craven, aud li. by the Inmilton litils and Yorkshire wolds. The air ls pure and brneing, and the climate dry and salubrions. dow Harrowgate is situated in a valley, and has many handsome stone buildinge, erected either for hutely or private lorlging-honses for visitors, An nimont continuous serien of these houses milten the upier and lower parts of the town. The charch of lligh IInrrowgate is a well-built structure, erected in 1749 by subscription: thint in the lower villuge was built in 1824. There are besides two chapela for Independents, and one for Wenleyan Methodists. A bnth hospital was erected in 18:26, which has been subsequently enlarged: it necommodates about 40 patients, who have the beneft of the waters free of charge.
The springs of Harrowgate are both chalybeate and sulplourcous. The chalybente spriugs rise in both villages, the sulphar springs only in Low Jlarrowgate. The chalybeate waters are principally tonle and alterative, the sulphureous waters strongly purgative. The latter are also used extemally in rheumatism and scorbutic cases. The wells are covered with elegant cupolas, and surrounded by promenades, for the aecommodation of those who come to drink the waters. Haces are liekd in summer on the high ground to the W., where also is a high tower or observatory, from the top of which is a very extensive prospect of the surrounding country.
lIAR'TFORD, a town of the U. S., Connecticut, of which it, is joint eap. with Newhaven, co. Hartford, on the W. bank of the Connecticut river, 50 m . from its mouth, and 32 m . NNE., Newhaven ; lat. $41^{\circ} 46^{\prime}$ N., long. $72^{\circ} 50^{\prime}$ W. Pop. $\% 9,150$ in 1860 . The town is advantageously situated, the river being navigable for sloops up th this point. It is generally well built, particularly the main street, and is connected with E. Hartford, on the other side of the river, by a bridge of six arches, 974 ft . long. It has a handsome state-house, three banks, including a branch of the U. S. bank, an arsenal, academy, museum, college, nine places of worship, and an asylum for deaf and dumb. The last named, the first institution of the kind established in America, was founded in 1817, and in 1819 was presented with a grant of 23,000 acres of land by congress; besides which it is possessed of other donations and sources of revenue. It is open to pntients from the whole union, at a charge of only 115 dollars a year, and many are provided for and educated gratuitously. It occupies a large and commodious lrick building, on an eminence about $\frac{3}{4} \mathrm{~m}$. W. of the city; is surrounded by grounds between seven
and eight acren in extent, and has ntfached to it ame worknhum, in which the male pupila aru taught mechanical trales. $\boldsymbol{A}$ ilttie N . of the town is an ayyinm for the insane, a ajucions atone edithee, with extenalve ground, Whahington E.jiseopai College, extabliwhed 18:11, is another of the public inatitutions, at Hartforl. It han a jrrewident, cight profexmorn, generaliy from 80 to 1010 aturienta, and a library of 6,216 voln. Hartford is the sent of the atate namembiy for Conmecticut, nlternately with Newhaven. It has manufucturen of lenther, aluea, wobllen nod cotton goonds, saddlery, brasa-work, and eurriagen; many printing housen, a large inland trale, and daily communication with New York by atenm-bonis mini atageconchen. A railroad connects liartford and Newlavell.

IIAIBTHAND, a market town and par. of Jinge land, co. Devon, hund. snime name, 44 m . WNW. Jixeter, and 190 m . W. Limion. Area of jinr, 11,010 ncres; pup. of do. 1,916 in 1861. The towi is sltunted in a bleak district close to the lxurders af Cornwall, nui $2 \mathbf{1 m}$. from the Itristol Channel, witl which it is connected 1. - ateep rond that lends down to $n$ quay lying honove the eliflis, and much frepuented by fisliermen. The eliurch, which stands on the cliffe, about a mile from the town, is n lurge buidining, and serves an a Inuluint to minriners. The inhabs, nre employed in tishong nut ugriculture; the herring thshery on the conat is of some consequence, and the market is well at tendexl. The town lecame a sea-port by an aet made in the reign of Elizabeth, and is governed ly n poirtreeve. In a lhe valley near it is Hartlanil Abbey, formerly a monastery of Illack Canons, but now converted into a moxlern mansion. NW. of tho town is Hartland Point, a very high cliff, forming the W. boundnry of ISideford llay; and near It is a ridge of rocks, on which the sea breaks very heavily. Markets on Sat.; fairs, Easter Wed. and Sept. 25, for r itle.

HAl'I'LEI'OOi., a munic, bor., pnr, and sen-port of England, co. Durham, wnrd Stockton, near the mouth of the Tees, 17 m . SE. Durham, $16 \mathrm{~m} . \mathrm{s}$. by E. Sunderland, and $250 \frac{3}{4} \mathrm{~m} . \mathrm{N}$. Louton ly Great Northern rallwny, Pop, of the bor, of Hartlepool 12,245 in 1861, and of West Hartlepool 12,603. The town stands on a peninsuln, connected with the mainland by a narrow neck at the $\mathrm{N}_{\text {. end, }}$ which at ligh water assumes $n$ crescent shape, stretching S. and SW., furming a natural harbour, secure from the E. wind. The eliffs towards the sea N. are bold and nbrupt, and their summits command a magnifleent view of the sea, and the coasts both of Durham and Yorkshire. The town, which occupies the SW. portion of the peninsula, has latterly been very much enlarged and improved. It has, in fact, incrensed with extraordinary rapidity, for the pop. in 1831 was only 1,250 . This has been partly and principally a consequence of the facility afforled by the situation of Ifartlepool for the formation of a harbour, and partly of ita having been made a terninus of railways connecting it with Durlanm and the adjacent coal fields. A wet dock, aboat 20 acres in extent, has been formed within the harbour, and another wet dock has been constructed by a rival company about $\frac{1}{2} \mathrm{~m}$. SW. of the old dock on the W. side of the bay. In consequence of the accommodation thus afforded, Hartlepool has become a leading port for the shipment of coal. The total value of the exports amonnted to $4,018,5211$. in 1859 ; to $4,365,5861$. in 1861 ; and to $1,543,715 l$. in 1868. There belonged to the port, on the 1st of Jan., 1864, six sailing vessels under 50, and 130 above 50 tons. To the port of West Hartlepool there belonged, besides nine sail-

## HASLEMERE

ing vesueln uniler 80, and 63 alove 60 toma, in ndilition to 17 stenmem, the latter of a total bunlen of $\mathbf{3 , 0 4 0}$ tons. Hartlepool wan firmerly fortitled, an the oid Dinfiam gate and the milis of walla abundantly testify. The elureh stands on a rlalige ground at the E. end of Southgate, and appears to have been built at different perforin. A free nehool was foundel lyy John Crooken, In 1842, fur the eluention of 10 poor chilidren. The scloool-house wan bullt in 1790 . At no great rlistance from the town are two strongly fortifiel hatterien, S. of whlch in a chalybente apring. Finhing was formerly the chief ocenpation of the people, who wero deacribed as free, lionent, indinstrinis, and much attached to their town. Ilartlepool was governed loy a mayor, alilemnen, and commons conucil, under two chartern, granted by King Jolin in 1200, anil by Queen Elizabeth in 1693; but the gower of the corporntion was destroyed by the Municipal leform Act lis I83.4. The lucal net by which the town in regulated in 6 B theo. 111., e. 35. Markets on Sat, 1 falr, May 14, Aug. 21, Oct. 1, and Nov. 27.

Hartlepool is a very old town, and, during the 13th nud 14 th centuries, was a place of conslilernlle importance. In the reign of Eilward III. It firmished five ship to the royal uavy, and was the mecond tuwn of the county palatine of Durham.

HARWICII, $n$ market town, parl. bor., and sen-port of England, co, Essex, hund. 'Tenilring, on a point of lant at the Sli. extremity of the entuary of the Stour, 66 m . ENE. Iondon, $9 \% \mathrm{~m}$. Sl. I pswich, on the Gircat Eantern railway. Pop. 6,070 in 1861. The bor, luclucles the parishes of St. Nicholas nnd Dover Court. Aren, 2,060 acres. There are thiree priselpal streets, and neveral smaller; the hounes are of brick, and the town is well paved, and lighted with gas. The church, a large brick structure, with stone buttresses and steeple, was crected in 18921, on the slte of nn older building. The grammar-school was founded in 1730 for 32 boys. Tlie principal public builsings nre the town-hall, gaol, and custom-house. Tho old gates and fortifications were demolished during the civil war, nnd there are very few traces of them. The harbour of Harwleh is the hest on the E. coast of Eagland; the access to it i , however, a good deal eneumbered with rocks, but ships properly nnvigated need apprehend no danger; there is water to float the largest men-ofwar, and the harbour is at once capheious, sufe, nud commodions. It is said that 100 ships of war, and above 800 colliers, have been anchored liere at the same moment. The excellenee of the harbour, and its convenient situation, made Harwich be selected as the station for the old sailing packets carrying the mails for Hamburg and Helvoetsluys, The town is defended by a bnttery and by Landguard Fort, on the opposite side of the estuary. The entrance to the harbour is indicated by two lighthouses with fixed lights, and is well buoyed. The sea has made great encroachments on the peninsula on which Harwich is built; and the battery, which, when constructed about half a century ago, had a considerable space of ground between it and the sea, is now partially undermined.

On the 1st of January, 1864, there belonged to the port of Harwich 67 vessels under 50, and 54 above 50 tons. There were no steamers belonging to the port at this date; but steam communication between Harwich and Rotterdam has since been established by the Great Eastern railway company, and greatly contributed to the commercial prosperity of the town.

Under the Municipal Reform Act the bor, is go-
verned by a mayor, four aldermen, and twelve counclliors. Jarwich returned two metna, to the 11. of C . Itt the reign of Filwand IIf. i hitt the privilege wan very monn withilrawn and not rentored till the 12th of Jnines I. The franchive was veated in the realient members of the consomition, and It was, in fact, a nomination bor., in the patronage of the exinting geverminent. Uuder ina lleform Act it still returns two mumn., and ita limitn continue unaltered. Jegiatered electurn 3its in 18035. The bountaries of the muntipai nnd parl. bor, are co-extensive, and include the parivh.

The town la nald to be of ISoman orlgin, and in the tlue of the Haxona was usel as a fortrew, The enrla of Norfolk were the lonly of the manor, and thriugh thelr agency It chilef mun. and pari privileges were origitally oltalnex.
IIARY, (Silva Ifercymia, 'Tnc.), a mountain-chain of (iermany, on the SW. frontier of Hanover, cont neeted by low hilla with the Thurbiger-wali, a W. offet from the Feahtelgebrige, the great centre of the Gierman mountain- Hy ytem. (Nee (ienmany.) It extenda farther $N$, than any other chain, nud immediately at Ita foot commeuces tho grent plain which stretchen N. to the llaltic ann! from the N . Sea to the Wolga. It is a mana of mominain-land rather than a succeswion of rilkes, null has no sumnits so ligh as Snowdon in $N$ Wales; its length In nbout 60 m , and averago breadth $24 \mathrm{~m}, 1$ area, $8,160 \mathrm{arg} . \mathrm{m}$. Maisfeld and Secent are considered an the limits of the llars; and it ia divided into two nectlons by the watershed of the Wower and Elbe, which takes a directhon from SSW. to NNE., and cuts the ranme at the Brocken ( $8,489 \mathrm{ft}$.$) . The higher summits are$ NW. of the lrocken, nud this section is, therefore, called the Upper Marz. It contalua the chie mineral wealth of the rnnge, and its forests comslat of pines and other resinous trees. Its chief summits are the Hehurichshohe, $\mathbf{3 , 4 0 0} \mathrm{ft}$., aud the K8niguberg, $3,307 \mathrm{ft}$. The Lower Hark, which lies I.. of the Brocken, is much leas elevnted, ant its sides, covered with oaks, beeches, and other cleciduous trees, nre remarkablo for lenutiful scenery. The hills flankling its runge, and beyont its strict limits, are called the Vor-harz. The geological composition of the Harz in granitic, overlnid by graliwncke and elayslate, in which the mineral wealth is wholly found. The Vor-harz is composed of the flotz, or old red-sandstone formation. The mineral produets of the IIarz are considerable. (See Hanovia, pp. 408-9.)

HASLEM ERE, a bor., market town, and par. of England, par. Chiddingfold, in the SW. angle of co. Surrey, hund. Godalming, $40 \mathrm{~m} . \mathrm{SW}$. Lumdon, and 17 m . N. Chichester, on the London and South Western railway. Pop. of par. 952 in 1861. The town, only partly paved, stands on the sile of a steep hill, and consists of a wide main streel, crossed by two others, at the intersection of which is an ancient-looking town-hall. The honses are generally old and ill built, interspersed here and there with handsome residences. The church is sncient, with a low square tower: the Indepelldents have a chapel; snd there is a good national school. This place once possessed rather extensive manufactures of silk and crape; but these have disappeared: but it has still some large paper-mills about 1 m . distant. Its importance has greatly diminished since the alteration of the London and Portsmouth road, which withdrew from it the traffic incidental to a great thoroughfare. Markets (ill provided and thinly attendel) on Tuesdays ; fairs for cattle, May 13 and Sept. 26. This small and unimportant town sent two mems. to the H. of C. from the 27th of Elizabeth
down to the p it wan liufrus gare-hollers ; nation loor, propirletor.

HASIIN(IJKN, $n$ market town and clapeiry of Eingland, par, Whalley, co. Lameanter, himil. HaekGurn, 160 m . NN VV, London, and $7 \mathrm{~m}, \mathrm{SK}$, Blackburn, on the liant laneamilie railway, lopno $11,920 \mathrm{in}$ 181I. 'I'he town is pleasantly altuated on the slope and at the foot of a hill. Mont part of the honses are of stone; and it han the appeurance of induntry anil promperity. The chureh in monern, with an old tower. The disnenters have nevernl places of worship, and in the Sindiay sehoold are taught about 1,700 chililren. A free nelowi, liuvhing a wennty endowment for ten chilidren, liurnishes instruction to about tifty. Tho increase of the town (which in 18:C huil doubled itnelf alnce (m01) is attribuinable to the introluction of the cotton manufneture, which now empleys the bulk of the wurklug chases nimont to the exelusion of the woollen namufncture, which formerly wan the atapie of the town. Haslingilen is the chief town of a poor law union, comprisligg eleven gurimlice. The surrounding country aboumda lo goonl builating stome, and slate is quarried about $1 \mathrm{~m} . \mathrm{S}$, of the town.
HASSLLLT, n town of Helgium, prov. Limburg. cap, arrond., on tho Demer, 1.1t m. W NW. Maestricht, on the railway from Maentricht to Antwerp. 1'op. $10,212 \mathrm{in}$ I863. The town is well built, anil was surronnded with wulls in 1282. It Is the residence of the chilef courts and civil anthoritien for the llelgian div. of the provi, and has several churches and hospitaln, a cillege, prison, numerons distilleries, a large salt rethery, with other manufncturing establishmente, and a considerable trade in spirits, tobacco, and madder, and two weekly markets.

IIASTINGS, a einque port, parl, bor., and town of Eingland, co. Sussex, rape wame name, 54 m . SSE. London, anil 32 m . Li. IBrghton, on the South Fastern railway. 1'op, of minic. bor, 22,833 , and of parl. bor, 22,910 in 1861. Hastings is pleasantly situated in a vale, surrounded on every side, excent towards the sea, by hills and clitfs, the latter of which abut E. of the town, close on the shore, those on the W. sloping more towards the interior; and it owes chietly to its mild elimate, consequent on this sheltered position, its high rank among the watering-places of the $\mathbf{S}$. const of England. Less than a century ago it conslsted of two chief streets, lined with ancientlooking houses; but within the present century many handsome streets and squares have been built, for the accommodation of visitors, and the appearance of the beach has been much improved by the removal of somo old tenements which obstructed the sea-view. The two par. churches are ancient structures; but there are three modern churches, among them an edifice in Pelham Crescent, erected at the expense of the Earl of Chichester. There are also places of worship for Wesleyan Methodists, Independents, and other dissenters. There is a handsome town-hall, A grammar-school, founded in 1619, is attended by upwards of 100 boys; nud there is a free school for 70 boys and 30 girls, with an endowment for apprenticing them. The chicf public buiblings are the town-hall and custom-house: there are also extensive baths, well-assorted libraries, a handsome assembly-room, a theatre, a literary institution, and a savings' bank. Races were established in 1827. The suburbs are very beautiful fumishing delightfuldrives and walks. Connected with Hastings in one continuous row of houses,
and forming itn wenten muluris, in the village of Nt. l, comari's, built accorilhig to the piatim of Mr. I). liurton, and comprining a thue church, a large market-place, and many hamisome hotoses anil vilias, weonplesl during the menaon by peopien of property and fombion. Jantings is a place of high antiquity, havin's alrendy, in the time of Athelatan, attalied such importance an to be made the resinlence of a mint manter. On the edfe of the W. cliff are the walls of an ancient castle, apparently of great strength, and the traces of walls ludicate the town to hare been fortilled. On a hill E. are banks and trenches supposed to have been constructed by Willimen the Norman during his contest with Ilarolil 11 . which terminated the Sixon lynasty. Its nulsequent history is closely connected with that of the cinque ports, among which it ranked first. The cinque ports, or trading towns, which weru selected from their proximity to France, and early superiority in navigation, to assist in protectinj the realm against invasion, were vested with chartered privilegea from a very early nerioul The ports are, Ilastings, Itomney, IIythe, Dover Sandwich, Winchelsea, and Ryc. Deal was afterwards incorporated, and male suliject in some particulars to Sandwich. In carly times they furnished among them all the navy required by the state, and even after the formation of a ma tional navy, were compelled to assist it with their vessels. In return for these services, which havo long ceasel to be rendered, these corporate towns, together with twenty-two others suborlinate to them, enjoyed the privilege of exemption fron servico on county juries and in the militia, and the power of criminal and clvil jurisdiction, even in cap:tal cases, in courts pecnliar, held under the authority of the lord warlen. These exclusive privileges were suffered to continue, much to the injury of the community at large, and even of tho towns themselves, till the Parl. and Min. Reform Acts rednced them, with the reservation of tho sessions-court and the exemption from serving on county juries, to the level of other towns.

HATFIELD, a town and par, of England, co Hertford, hund. Broadwater, near the Lea, 18 m . NNW. Jondon, and 7 m, E. St. Albans, on the Great Northern railway. Pop, of par, 3,871 in 1861. This place was granted in the 10 th cent

 city anil mulmurlion anomited in 1701 tu $44,8: 17$, In INjo to 106,304 , and in 1827 to 04,023 , of whom 41,(i2) were whiten, and 23,062 free mulattoen anil blackn, the realilue being maven, Aeconifing to a rouph enumeration of the year 1861, the pope. of the city, including all its suburbe, amounted to 201,500.

From ita powltion, which commands both inlets to the (iulf of Mexico, its great atrength and excellent harbour, the Ilavannah in, in a politienl jwint of view, by far the most important marit. ntations in the W. Indies. For a long period it engrossed almost the whole foreign trade of Ciulon; but slnce the relaxation of the old colonial nystem, varions jorts (such, for instance, as that of Matanzan), that were harilly known 80 years ako, huve become places of great commercial importance. 'live rapid extension of the commeree of the Havannah is, therefore, entirely to he aseribel to the freedom it now enjoyn, and to the great increane of wealth and pop. in the city, nud generally throughout the inland. Il a port of Ilavannah is the fluest in the $\mathbf{W}$. Indies, and one of the best anywhere to be met with. The entrance is narrow, but the water is deep, without lur or olsatruction of any mort, and wlihin, it expands into a magnificent bay, capable of acconnmodnting 1,000 large ships; vessels of the greatest draught of water coming close to the gunys. The city lies along the entrance to and on the W. side of the bay; the suburb Regla is on the opposite side. The Morro and Puita castles, the former on the Fi, and the latter on the W. side of the entrance of the harbour, are strongly fortifled, as is the entirecity; the citadel is also a fortress of great atrength ; and fortifications have been erected on such of the neighbouring heiglits as command the city of port. The city-proper, which stands upon level ground, is about 2,100 yds, in length by 1,200 broanl, and contains but a small portion of the totnl pop. it is separated on the W. by a ditch and placis from its suburbs of Salud, Guadalupe, JesusMaria, Cerro, and Horcon. Within the walls, the streets are narrow, crooked, and mostly unpaved; but in the suburbs, particularly Salud, they are wider and better laid out. The IIavannah was formerly very much exposed, in the antumn, to the ravages of the yellow fever, owing partly to
the Blth of tho eity, the want of eommon newers and the conilguity of mamlion; but of linte yeam the cleanlinean anill pullice of all jurtu of the luwit have laen very matcerinlly lingiroven, and faver in murh tron pravalent anil fatal, The hormen, Whilio tho walls, nre all of atone; withour, thoy nre of various materialn. The publle ealitieen, nury an the cathealral, gaverument home, mimiralty, arwenal, pensernl junt-oillice, anil royal tobmariofnetory, are hem remarkable for freanty than mollility of countruction. IBenliten the cai hevlrai, whloh contnins thon minen of Colimome, remoniad thither from Nt. Donningo in 17Mi, there are is par, cluiruhom, 11 otherm consected with hompitals unid military onlern, if chapela or hermitagow, II conventa, a univernity, 2 colleges, a Inotmical ganden, anatomieal muserm and lecture-rumas, an academy of painting, a selicoil of navigntion, and alove 70 ordinury selacils for lath mexim, The clanritable funtithitonn commiat of the Crome Heal de Beneftireneia, a penitentiary or magilnlen
 of whilet conprinew a linatic anylum. The Cuse Heal slao has within its walla two other lunatic anylums, with alcent I80 pationte, an honpital for the aged anil lustron, and boya' and girls' methomis. The revenuen of thin institution, derivel from Ianded and household property, donations, nul)acripilona, govemmont grants, taxen on the thour inymirtel at the Ilavamah and Matanzan, on public billiani-tablen, danding-piacea, a pull tax, and varlonn other sourcen, anwint to from 85,010, to 60,000$)$ dollans a year, the whole of which sum is annually expended on objects of the chanty, There are 8 theatres, an aniphitheatre for bulillehte, and several haninome publie promeunden. The arsenal and tockyard are at the s. extremity of the city. In the latter, shipw of the line, frigates, and war brign and sehooners have been built. The naw-mills there are turned ly water from an aqueduct, which alao supplies the shipping in the port.
At the village of Casa Binnca, on the opposite side of the harbour, there are almo mome wharfa and ahipynrils, at which vesseln of all classen may be laid up, fltted out, or repmired. This village is notorious as the resort of the slavers frequentinis the Havannah, at which port a connidernble number of the mlaves bromght into Cubn are landed. (For accounts of the articles of import and export at the Havannah, the duties levied on Spanish and foreign trnilhig veasels, \&e., sce Cuna.)
The Mavannah is an episcopal see, the sent of the provincial government, and the residenee of all the colonlal authorities, except the julges of the supreme court of justice, which sits at I'uerto I'rincije, The principal nations of Europe suld America have consuls resident at this city, It has an extensive manufacture of cigars, for which it is widely celebratel; ; its other manufnetures, of coarse woollens, straw hats, de., are comparntively unimportant. This city was foumled in 1511, by Diego Velasquez; it. was taken by a French pirate in 1563 ; afterwarde by the liuglinh, French, and buccancers; and again by the Euglish in 1762, by whom it was restored to Spain at the peace of 1763 .

HAVERFORD-WEST (called by the Welsh Hulfordd, a parl. bor,, market town, river-port, and co, of itself in S . Wales, locally in the co. Havre has 2 roadateady; the great, or onter, in ahout a league from the jort, anil the little, of innor roadsteat, nlwoit half n lenune. 'I'hey aro meparatiod by the saml bank ealled I EEchat, between which and the bank enlled Lex Mauts de la Rude, is the W . passage to the port. In the kreat road there are from 6 to 76 finthoms water at ehb; and in the little, from 3 to 34 . Large ships always lio in the former. The rise of the tile is from 21 to 27 feet, and by taking mivantage of it the largent clans of merchantmen enter the port. The water in the harbour does not legin perceptibly to subside till about 8 hours after high water-a peenlinrity ascribed to the current down the Seine, nerwen the entrance to the harbour, being suflliently powerful to dam up for a while the water in the latter. Large fleets, taking advantage of this circumstance, are able to leave the port in a single tide, and get to sea, even though the wind should be unfavourable. IIavre being the men-port of l'aris, most of the colonial and other foreign products destined for its consmmption are imported thither. The chief imports are cotton, sugar, coffec, rice, inilign, tohneco, bides, dyewools, spices, ilrugs, timlere, iron, tin, dried fish, grah, and tlour. The chief exports are silk, woollen and cotton atuffi, lace, gloves, trinkets, perfumery, Hurgundy, Champagne, and other wines, brandy, glass, furniture, books, and articles de I'aris, IJavre receives seven-tenths of the cotton imported into France, mere than half the tobacco, and wood for cabinet work, half the potash and indigo, more than twofifths of the rice and dyo-woods, and more tlan a third part of the sugar and coffee. As respects cotton, Ilavre is to France what Liverpool is to Eugland.

Most of the goods imported at Ilavre are deatined for the internal consumption of France. The

## HAYTI

coasting trade has increased very largely of late years, as is proved lyy the great increase of French wines, sonps, and other produce imported at P'nris from Ilarre, instend of being sent to the enp. liy land. The coasting vessels in many cases itunsfer their cargoes to large barges, ealled chulauly, which are towed by steam as fir as IKouen, and by horses for the rest of the way to l'aris.

The number of liritish vessels that arrived in the port in 1863 with cargoes, including 212 passenger steamers from London and Southampton, amounted to 1,111 , against 1,026 in the year 1862. Of this mmber, 437 were laden with coal, agrainst 400 similarly laden in 1862 . Of vessels hearing the French flag, 4,326 (including the constlng trade) arrived in the port in 1863 , against $4,0.41$ in the year 1862 . Of vessels bearing the flag of other nutions, 254 arrived in 1863, against 316 in 1862.

Havre has manufactures of chemical prodncts, furniture for the colonies, earthenware, starch, oil, and tobaceo, besides good building docks, ropewalks, breweries, \&c.; and many females are oceupied with making lace.

On a height immediately N. of Havre is its well built aud plensant suburb of Ingouville. In that village is the Hospice d'Havre, founded by Henry 11. 1554, and removed to Ingouville in 1669, at which establislıment it is estimated that about 120 sick persons, and upwards of 500 aged, orphan, or infirm, are annually provided for.

HAWICK, a bor. of barony, and eminent manufacturing town of Scotlaid, co. Roxburg, on level gronnd, on the banks of the Teviot, 45 m . Sli. Edinburgh, and 43 m . N. by E. Carlisle, on the Edinburgh-Carlisle railway. Pop. 8,191 in 1861. A smnll mountain strenm, called the Slitterig, falls into the Teviot, towards the extremity of the town. The country round is mountainous and pastoral, except the narrow valley through which the two rivers flow. The town was originally contined to the bank of the Teviot, and to the parish of its own name, but its boundaries now extend to the opposite side of the river, in the parish of Wilton.

Ilawick consists chiefiy of a single street, $\frac{1}{2} \mathrm{~m}$. in length, which forms the line of the public road; but there are several suburban streets, of which the largest and the most elegant is the Crescent, huilt on the right bank of the river. The town, the houses of which nre of stone and slated, has a substantial thriving appearance; and the transparent waters of the Teviot and Slitterig flowing over a pebbly bed, with the mountains which so closely environ it, give it a high degree of picturesque beauty. The streets are paved, and lighted with gas. Being a border town, and consequently of old exposed to attacks from the Englishl, the houses were anciently built with stone walls and vaulted below, without any door to the street, but laving an archway, giving access to a court-yard behind, from which alone entrance to the house wis obtained. Of these structures a few specimens yet remain. There are two bridges over the Teviot, and two over the Slitterig, one of the latter being supposed to be of Roman origin. The only public buildings are the subscription rooms, the town-house, the parish chureh, with a small square spire, and several dissenting meeting. houses.

Hawick has establishments for the manufacture of thongs, gloves, candles, machincry for tanning of leather, and other branches; but the woollen manufacture is that for which the town is chiefly distinguished, a department of industry which owes its origin to the command of water-power which the Teviot and Slitterig afford, and to the
wool-growing distriet in the middle of which IIawiek is situated. The minufneture of carpets was established in 1752: the inkle (a species of tape) munufneture in 1783, and that of cleth in $17 \times 5$. Int these have very genernlly given way to the mannfneture of stockings and nnder-clothing, introduced in 177 I . I But comparatively tritling progresw was made in the manufacture till the introbluction of machuery, which took place abont the beginning of this century, since which the business lus been steadily advancing.
IIawick has been a bor. of barony from an eurly date. But its present clarter was granted by William Douglas, of Drumlanrig, in 1537, and coutirmed by (queen Mary, in 1545. The fendal superiority of the bor. descended to the lisions of lhuceleugh till 1747, when, all hereditary jurisdictions being abolished ly act of parlinment, the Duke of Buccleugh received 400l, in eompensation for the regality. From its situation near the Einglish borler, Hawick was exposed to that continual hostility and commotion which for centiries distinguished that portion of the empire. It was burnt down in 1418. It suffered severely in 1544, when the whole district of Teriotcale was laid waste by the English. To prevent its oceupation by the troops of the Earl of Surrey, in 1570 , the inhabitants themselves tore off the thinteh from the roofs of the houses, and set fire to it on the streets, by which, with the exception of the Black Tower, the whole town was completely consumed. The inhnbs, of Hawick mustered strong in the battle of llodden, and were there nearly extirpated; but the survivors smeceeded in resening their standard, which is still entefully preserved.
There is an artificial mound of earth situated at the W. extremity' of the town, called 'the Mute, used, in ancient times, for meetings both judicial and deliberative. Branxholm Castle, the nucient seat of the Scots of Buccleuch, and celebrated in The Lay of the Last Minstrel, is situated within 2 m . of the town. Several eminent persons have been born in or connected with Ilawick. Gawin Douglas, afterwards bishop of Dunkeld, and the translator of Virgil's Aneid, was rector of Hawick in 1496 ; Dr. Thomas Somerville, minister of Jedburgh, and author of a History of Qucen Anne, and other works, was born in the burgh; the lier. Mr. Young, author of Essays on Government, was a dissenting elergyman here; and Mr. Robert Wilson, author of the IIistory of Hawick, a native of the burgh, died here in 1837.

HAYE (LA), a small town of France, dép. Indre-et-Loire, cap. cant., on the Creuse, 30 m . S. Tours. Pop. 1,620 in 1861. The town is worthy of notice as the native place of Descartes, born here on the 31st March, 1596. The house in which he first saw the light has been carefully preserved, and is the snbject of nn almest religious care and veneration. To distinguish it from other small places of the name, in the departments of Vosges and Eure, this town is often called La Haye Descartes.

IIAYTI, or IIAITI (Carib. the mountainous country), the original and now revived name of one of the W. India jslands, being, next to Cuba, the largest of the Grenter Antilles. Columbus gave it the name of Mispaniola, and it was frequently also called St. Domingo, from the city of that name on its SE. coast. The French bestowed on it the deserved epithet of la Reine des Antilles. It lies between lat. $17^{\circ} 40^{\prime}$ and $19^{\circ} 58^{\prime}$ N., and long. $68^{\circ} 24^{\prime}$ and $74^{\circ} 35^{\prime}$ W. ; having N. the Atlantic, E. the Mona Passage, separating it from Porto Kico, from which it is 76 m . distant, S. the Caribbean Sea, and W. the Windward Pass-

Greatest length, W. to E., about 400 m . ; its breadth varies from 40 m ., near its E. extremity, to 155 m ., about its centre. The islaud is divided inte two states, the first, the republic of llaytl, having an area of 558 geographical sq. m ., with an estim. pep, of 700,000 ; and the latter, kaown as San Domingo, and, since 1861, a dependency of Spain, with an area of 810 geogr. sq . $\mathrm{m}_{4}$, and an estim. pop. of 200,000 .

Plysical Geography.-The surface of Hayti is, as its name implies, generally mountainous; but there are some extensive plains, especially in the E. The mountain system is complicated, and it is difficult to give a clear iden of it without the aid of a map, A great mountain knot, the Cibao, occupies the centre of the country, from which two parallel chains, running E. and W., extend through the island in its entire length. The loftiest summits of the Cibao are considerably more than $6,000 \mathrm{ft}$. in height. In the SW. is an additional mountain chain, which stretches $W$. to the extremity of the long and narrow peninsula terminating in Cape Tiburon. Between this peninsula and the NW. promontory of the island is the spacious bay of Gonaive, including the island of the same name, and having at its head Port Republicain (or Port-au-Prince). Tortuga is opposite the NW. promontory. The sloores of Hayti are in general bold, except on the E., where low and swampy lands prevail. They are almost every where surrounded by small uninhabited islands aad dangerous reefs, but they liave, not withstanding, many excellent harbours, especially along the N. and W. coasts. The largest plain, called by the Spaniards Los Llenos, in the SE., extends along the coast for 80 m ., with a breadth varying from 20 to 25 m . It is snid to be well adapted to the culture of most tropical products, but has always consisted chiefly of wide savannahs, used for pasture lands. N. of it, enclosed between two mountain ranges, is the more productive plain of Vera Reale, little inferior in size to the foregoing. ln the W. half of the island are the large plains of Artibonite and the Cul-de-Sac. The Jast named, E. of Port-au-Prince, is from 30 to 40 m . long, by about 9 broad, and was formerly one entire sugargarden, though now almost wholly waste. There are several plains of less extent. Hayti is in most parts profusely watered; it has numerous rivers, the largest being the Yaque, Yuna, Nieve, and Artibonite, which disembogue on the N., E., S., and W. ceasts. These are navigable for a great part of their course; they are generally deep, and two or three of them are, near their mouths, as wide as the Thames at Vauxhall. Three lakes of considerable size exist at no great distance from the S . coast of Henriquillo; the largest is about 50 m . in circuit, and has salt water, while the adjacent lake of Azney is fresh.

The climate of the low lands is very unhealthy to Europeans; and Mackenzie says that 'the yellow.fever would effectunlly secure the island, in case of external attack, if the policy of abandening the coasts and destroying the towns were acted oa.' (Notes on Haïti, vol. ii.) The excessive heats of the plains are, however, tempered by fresh sea breezes at night. The temperature, of course, decreases with the elevation, and in the mountains the cold is often piercing. The ycar, as elsewhere between the tropics, is divided between the wet and dry seasons. The change of
the aeasons is accompanied by stormy weather: but hurricanes are not so frequent as in most of the other Antilles, nor are enrthquakes common, though in 1770 n convulsion of that kind destroyed l'ort-an-Prince.

Little is known of the geology; a limestone somewhat analogous to that of Cuba, containing vestiges of marine shells, is a prevalent formation. The soil is almost miversally a deep vegetable mould, the fertility of which is scarcely equalled. The mountains, even to their summits, are, accorling to Mackenzle, cupable of cultivation. The greater part of the island is covered with dense forests oî mahogany, iron-wood, logwood, cedars, and other large and useful trees, or an impenetrable underwood. The plantain, potato, vanilla, manioc, \&c. are indigenotis; as is the palmetto, or cabharetree. The latter is 'truly the prop of the li. Haytian, who eats the upper portion of it, builds and covers his house with its various parts, and fashions his furniture out of its trunk.' Of severnl kluds of quadrupeds found by the first European settlers, the agouti is the only one remaining. Parrots, and other birds of brilliant plumage, and waterfowl, are very abundant; the alligntor, cayman, iguana, turtles, \&c. abound in the larger rivers; several kinds of serpents are met with; and the crustacea and testacea afford a plentiful supply of food to the inhabitants of the consts. Hnyti produces gold, silver, copper, tin, iron of good quality, and rock-salt. The principal copper-mine yielils an ore containing a consilerable admixture of gold, and the sands of many of the rivers contnin a good clenl of goll-dust, small quantities of which are collected: the working of gold mines has, however, entircly ceased. The mines of Cibao, which have long been unproductive, are saill by Robertson to lave yielded for many years a revemue of 460,000 pesos (neurly $100,(0001$. ) annually; but it deserves to be remarked, that not withstanding the excessive destruction of the original inhabitants in the working of these and other mines, the Spaniards derived so little advantage from them, that when Sir Francis Drake made a descent on the island in 1558 , the inhabitants were so wretchedly poor as to be compelled to use pieces of leather ns a substitute for money. (Edwards, i. 110, ed. 1819.)

History and Resources.-The island was discovered by Columbus, on the 5th of Dec. 1495, at which time it is suid to have been diviled into tive states. Having taken posscssion of it in the name of Spain, Columbus founded the town of La Isabella on the N. coast, and established in it, under his brother Diego, the first colony planted by Europeans in the new world. The city of St. Domingo, which subsequently gave its name to the entire island, was founded in 1498 . The island is believed to have contained, at the epoch of its discovery by the Spaniards, above $1,000,000$ inhabitants of the Carrib tribe of Indians. But in consequence of their wholesale butchery by the Spaniards, and of the severe drudgery they were compelled to undergo in the mines, the natives were reduced to ahout 60,000 in the short space of fifteen years. (Robertson's America, i. 185, ed. 1777.) The aboriginal inhabitants were soon, in fact, wholly destroyed; and their place was at first very inadequately supplied by Indians forcibly carried off from the Bahama islands, and adventurers from Spain and other European countries, and in the following century by the importation of vast numbers of negroes from Africa. The Spaniards retained possession of the whole island till 1665, when the Fronch obtsined a footing on its W, coasts, and laid the foundations of that colony that afterwards became so flourishing. In

## HAYTI

1691, Spain celel to France half the island; and in 1776 the possessions of the latter were still farther augmented. It was not, however, till 1722, when the monopoly of trading compnities wns put an end to, that the French part of thie island begno rapldly to advanco in pop, aud wealth. From 1766 to 1789 the colony had attained the acmo of its prosperity; and lits produce and commerce were then equal or superior to those of all the other W. India islands. Unhappily, howover, this prosperity wns as brief as it was signal; and the ruin that has overwhelmed the colony may be said to be complete.
To attempt to givo any intelligible sketch, how slight soever, of the events by which this destruction wns lrought about, and by which the blacks of Llayti liave emancipated themselves from the dominion of the whites, and founded an independent state, would far exceed our limits. At the epoch of the French revolution, the negroes in the French part of St. Domingo were estimated nt from 480,000 to 500,000 . That a good deal of dissatisfaction existed amongst them is certain; but there was no disposition to revolt, and the rash and injudicions proceedings of the mother country, the debates and proceelings of the colonial assembly, and the deep-rooted animosities of the whites and mulnttoes, were the prominent causes of the revolution. The proscriptions, ruin, bloodshed, and ntrocities by which it wns accompanied and brought about, are, perhaps, hardly to be paralleled. In 1800, Hnyti wns proclaimed independent; and its independence was consolidated by the final expulsion of the French in 1803. This was effected by Dessalines, who erected the French or W. part of the island into an empire of which ho became emperor, with the title of James I. His despotism and cruelty having rendered him universally detested, Dessalines was slain in an insurrection in 1806, and Hayti was divided among several chieftains, the principal of whom were Christopho in the NW. and Petion in the SW. In 1811, the former made hinself be proclnimed king, under the title of Henry I.: Petion continued to act as president of a republic till his decease in 1818, when he was succeeded by lhoyer. The latter, after the suicide of Christophe, in 1820, took possession of his dominions, and the Spanish portion of the island having, in 1821, voluntarily placed itself under his government, he became master of the whole of Hayti.
The whole extent of land under cultivation in the three provinces was 763,923 carreaux, equal to 2,289,480 English acres, about two-thirds of which were situated in the mountains. The French, who justly considered this their most valuable colony, cultivated its territory with the greatest care Every plantation was laid out with the utmost neatness, and so arranged as to bring every portion of the soil into use in its proper order of succession. Artificial irrigation was effected on a large scale, and the remains of the aquedıcts in the plain of Cayes are really magnificent. The growth of singar engaged the largest share of attention; the immense fertility of the soil making the average produce about $2,712 \mathrm{lbs}$. an acre, or nearly two-thirds more than the general yield of the land in canes in Jamaica. (Edwards, p. 135.) The coffec plantations were also exceedingly productive, and those of cotton, indigo, and cocoa had begun to be prolific sources of wealth to individunls, and of revenue to the state. Besides these staples, large quantities of Indian corn, rice, pulse, and almost every description of vegetables required for the consumption of the inhabitants were grown. The live stock in the French colony consisted of about 40,000 horses, 50,000 mules, and 250,000
cattle and sheep. The Spaniards never paid much attention to the culture of their portion of the island. The example of the French, indeed, stimulated them to grow tobaceo, sugar, cocoa, nul some of the other staple proclucts of the Antilles; but their chicf smurce of wealth consisted in the herds of cattle they reared on their extensive savannahs. With these they supplied their French neighbours, whose demanils were large; besides which, they exportell a good many to Jamaien and Cuba. Hides were also one of their chief articles of export, and, according to Edwards, many eattle were slanghterod for their hides ouly: The occasional cutting of maloggnny, celar, aid other kinds of timber, made up nearly all the rest of their resources. It is stated that the French purchased annually upwards of 25,000 hend of horned cattle, and about 2,500 mules and horses: and that the Spaniards also transmittel upwarls of half a million of dollars in specie, cluring the year, for the purchase of goods, agricultural implements, and negroes. Large shipments of mahogany and dye-woods found their way to Spain and different parts of Europe, the U. Stntes, null Jamnica, und a considerable intercourse was kent up with Porto Rico and the Spanish main. Nust of the trade of the Spanish colonists was, lowever, illicit, the facilities for smuggling being quito ns great as the alvantages derived from evading the heavy duties imposed on commerce.
The following is an estimnte of the average exports from the French part of St. Domingo during each of the three years ending 1789:-

One of the first effects of the revolution which abolished the slavery of the blacks was an enormous decrease in tho amount of agricultural produce. From 1794, the year in which the slaves were declared free by the National Convention of France, to 1796, the value of the exported produce had sunk to $8,606,720$ livres, being only about 5 per cent. of what it had been in 1789; and seven years afterwards, the country had become almost n desert, not only from the waste of civil war, but nlso from the indolence of the black pop. The famous 'Toussaint l'Ouverture adopted coercive mensures to restore agriculture; nnd it is, we belicve, idle to suppose that any other will everle effectual in such a country to impel the negro to labour. By an edict issued in 1800, Toussaint obliged every Haytinn not a proprietor of laud (with a few exceptions) to hire himself as an agricultural labourer to some proprietor, without the power subsequently to withdraw himself from lis service. The labouring elasses were thus ngniu rendered slaves in fact, though not in appearame. The use of the whip was abolished; but, on the other hand, the salre, musket, and bayonet, in the hands of a military police, wore employed to keen the peasantry at work. This object was enforeed with the most rigid severity; the hours of labour were to continue from sunrise to sunset, with a few intervals; and both thic cultivator and pro-
prietor were visi the furmer if he he did not oblli menns, with a !?0,000, accordi the most prodin of Toussaint amount:-
Bugar • 83,400 Coffee . 34,370 Cotton. 4,050
This compulso Dessnlines, who the exports to 5 what it was in 1 though a brutal on the contrary and, in consequi island had the a vation, the SW. sional spots of few yenrs of his his predecessor, a of the entire islan than $5,793,758 \mathrm{~d}$ of agriculture at t pery branch req fallen into decay come almost anni formerly an imme four plantations was mate, the jui domestic purpose vourite liquor of part of the islan and in some smal in the former loca was raised was lo the produce; all small quantities o com grown, was imported from the next generation, goverument, Hay it never recovered reign of Tonssaint was rleposed in Domingo separate into a separate rep president in $18 \$ 4$. of an empire, Pre title of Emperor ablicate in 1859 , public; while the up to Spain in 1 efforts to re-unite possessions of Spai

prietor were visitell with heavy paing anil penalties; the former if he refused to work, and the latter if he did not oblige the former to do so. By such means, with a labouring pop. not exceellhg 290), 1000 , according to Humboldt, the exports in the must productive year luring the slourt sway of Tonssaint were raised to the following amount:-

| Sugar | 88,400,000 lbs. | Cocos | 234,600 |
| :---: | :---: | :---: | :---: |
| Coffee | 34,370,000 | Indigo | 37,1001 |
| Cotto | 4,050,000 | Molass | ,128 |

This compulsory system was followed both by Dessalines, who at one periond raised the value of the exports to $59,181,800$ livres, or to a thirl part what It was in 1789; and by Christophe, an able, though a brutal and salguiuary tyrant. l'etion, on the contrary, abamoned the coercive plan; and, in consequence, while the NW. part of the island had the appearance of industry and cultivation, the SW. displayed little more than oecasional spots of culture. lloyer, during the lirst few years of his rule, continied the lax system of bis prelecessor, anil the total vilue of the exports of the entire island amountel, in 1825, to no more than $5,793,758$ dollars (ts. 2d. each). The state of agriculture at that periol was most deplorable: every branch requiring systematic incustry had fallen into decay; the sugar plantations had become almost annihilated; the plain of Cul-rle-Suc, formerly an immense sugar-garden, had on it only four plantations of any extent; little or no sugar was made, the juice being either used as syrup for domestic purposes, or tistilled into tatia, the favourite liquor of the natives; colfee, in the W . part of the island, was grown unly around Cayes, and in some small putches in the mountains; ami in the former locality at. lenst two thirds of what was raised was lost for want of hands to gather the produce; all other products were obtained in small quantities only; mnize, the only speeies of coll grown, was frequently scarce, and sometimes imported from the U. States. In the course of the next generntion, and vider manifuhl changes of goverument, Hayti marle some progress, thongh it never recovered tho industrial activity of the reign of Tonssaint L'Ouverture. President Boyer was deposed in 1843, when the state of San Domingo separated from Ilayti, and formed itself into a separate republic, electing (jeneral Santana president in 1844. The next change was into that of an empire, President Soulouque assuming the title of Emperor Faustin I. in 1849. Forced to ablicate in 1859, Hayti becnme once more a republic; while the state of San Domingo gave itself up to Spain in 1861. There are not wanting efforts to re-unite the whole island to the coloninl possessions of Spain.
Commerce.-The forcign trade is entirely in the hands of Europenn or American merchants, towards whom, however, the most restrictive policy is adopted. The coasting trade, on the other hand, wholly helongs to Haytian citizens. The interior is supplied with imjorted goods by means of hucksters (usually females), the ngents of the foreign merchnuts, with whom they balance necomits weekly. Beasts of burilen are commonly used for the eonveyance of goods, the ronds, except in the NW., being generally bad, ami carriages few. The principal foreign trade is with the lnited States, Great Britain, France, Holland, and Germany; besides which there is a considerable smuggling trade between Cayes and Caba, and Jamaica. The chief British inports are printed cottons, muslius, ginghams, eoffec bagging, woollens, cutlery, tin, and hardware, earthen and glass wares, cordage, army necontrements, and nmmumition, France supplies wincs, liqueurs, silks,
shawls, gloves, branily, porcelain, perfunery, and other manufuctured goorls. The small imports from Iholland and Germany ineludo linen fubries, bagging, luferior woollens, 1 Rhenish wines, Sus and Selzer waters. The U. States supply lumber, provisions, hides, and coloninl profluce. The totul value of the imports into the repullic of Hayti amounted, in the year 1862, to $38,138!, 096$ frances, or $1,547,5981$. Very nearly one-half of theve in-ports-19,204,217 franes in value-chme from the United States. The total exports, in the samo
 The exports to the United Kingilom amonnted to 123,067\%. in 1860; to 137,4711. in 1861; and to 151,719l, in 1862.

The government of the republic of Hayti ls vested in a president, senate, and chamber of representatives. The president, who must be 35 yeurs of age at the time of his election, holds his otliee for life; is eharged with all the excentive duties; commands the army and navy ; mukes war, peace, and trenties, sulyject to the subction of the seunte ; appoints all public functionaries; proposes to the cotnmons all laws except those connected with taxatlon; and directs the receipt and isane of taxes: but in case of malversation, may be denomucel liy the senate, nnd tried by the Iligh Court of Justice. The ministry consists of a seeretary-general, and a tinaucinl and a judicial secretury. The semate consists of 36 mems. nbove 30 yenrs of age, each chosen by the chamber of representatives, from lists furnished by the president. The senate sits 9 years; nud its previous mems. are re-eligible after a lapse of threc yenrs. 'The chamber of representatives consists of :0) mems. chosen every five years by the electoral colleges of the respeetive communes. Its mems must be 25 years of age, and cach receives 200 dollars a month, besides a dollar a league for travelling expenses. The session of the chambers is limited to three months annually.

The High Court of Justice, composed of 15 judges, has juristiction in all charges preferrel by the legislative bodies against their own mems., or against the high state finnetionaries. 'lhere is no appeal from its deeision, but the aecused has the privilege of rejecting two thirds of his judges. There are 8 provincial, civil, and criminal conrtsat Cape Ilaytien, Cayes, St. Domingo, Gonaives, Jeremie, Jacqmel, P'ort-au-I'rince, and St. Jagn, composed of a president, 8 juliges, anil a government commissary, appeal from which lies to a court of cassation in the capital. Ordinary legal cases are decided by justices of the penee, who decide without appenl. The legal eode is a moditication of the old colonial laws of France.

The Roman Catholic is the establishol religion; but ull other seets are tolerated. The ehurch is under the archbishop of St. Domingo, fomr vicars genernl, and 31 parish priests. The govermment has appropriated to its own use all the property formerly belonging to the chureh; the monnsteries have been suppressed; the chapter of St. Domingo has now only six ennons; and the clergy, who are said to be in the last dogree ignornint nuld corrupt, rely for support on voluntary contributions and fees, two thirds of which they must pay into the treasiry.

The armed force consists of abont 28,000 men, exclusive of stafi oflicers. There is, besides, the national guarl, composed, with few exceptions, of all the males from 15 to 60 years of nge. 'Ihese forin a body of perhaps $40,000 \mathrm{men}$, the superior officers of which are chosen by the president or emperor, and the inferior ones by the privates. The nary, in 18t2, consisted of 3 stenmers and 3 sailing brige.
L..

## HAZEBROUCK

The public reveaue is derived from import and export duties, territorial imposts, wharfage dues, taxes on demennes farmed ont, tho land-tax, stamps, patents, registry taxes, sale of demesnes, and varloms other somrces. It amomited, in 1862, to 291,5361 ; while the expenditure, in the same yenr, was 289,9802.

Ilayti is divided into 6 departments and 33 arrondissements. Next to Cape Haytion aml ['ort-an-Prince, which have been alternately the capitnls, the chief towns are St. Domingo aid Cayes.

St. Domingo, a sen-port, on the SLi. const of the ishand, at the mouth of the Ozimn, which forms its harbour, lat $18^{\circ} 28^{\prime} 40^{\prime \prime}$ N., long. $69^{\circ} 69^{\prime} 37^{\prime \prime}$ W., was the tirst permanent settlemeut made by liuropenus in America, ama, thongh greatly iliminished in importanco, has still above 12,000 iulsabitaute. It is surrounded by old ramparts strengthened by bastions and outworks. Its interior is regularly laid ont; the streets, which intersect each other at right ungles, are spacious, lat not all paved. The honses are in the Spanish style, aud many of them are fine substantial hinildings. lkesides the cathedral, a (iothic edilice, thuished in 1540, and reported to have formerly contaned the remains of Columbus, there are 9 other churches, 2 convents, 2 hospitals, some large burrucks, an arsenal, liglithouse, and old and new nutional palace. 'The liandsome Jesuits' college has been eonverted into a military storchouse. No monks are to be seen, but in other respects the town has very much the air and eharacter of a Spanislı city. The whites and coloured inhabs. fir outhumber the blacks. The climate is arreeable, the air being continually cooled by sea breezes. The harbour is hoth capacions and secure; it has from 10 to 12 ft . of water; but, owing to a liar at the month of the Ozama, large ships are obliged to anchor in the roalstead outside, exposed to the S. winds. St. Domingo has a considerable trade with the interior, but its external commerce is now very limited. Cayes, one of the most flourishing towns in the island, is built close to its SW. slore, lat. $18^{\circ} 11^{\prime} 10^{\prime \prime}$ N., long. $73^{\circ} 50^{\prime} 10^{\prime \prime}$ W. Its harbour admits ships drawing 13 ft. water; those of larger size lie in the roadstead of Chantaudin, half a league W. Several British houses are established at this port.

11AZEBAOUCK, n town of France, dép. du Nord, caן. arrond., in a fertile tract, 23 m . WNW. lille, on the Northern of Firnee railway. Pop. 8,273 in 1861. The greater part of the town is not well laid ont; but there are several handsome piblic buildings, including the par. chureh, with alofty and elegant spire, the town-hall, finished in 1820, a fine sjecimen of classic style, the subprefeeture, and Augustine convent now oceupied by a college, primary school, house of charity, and depôt of tobaceo. It has manufactures of linen fibrics, thread, stareh, soap, leather, salt, heer, oil, and lime, and a large market for these and other kinds of goods.

LEIBRIDES (THE), or WESTERN ISLES OF SCOTLANI) (the Hebudes or Ebudes of the ancients), a series of islands and islets lying along the W. coast of Scotland, partly and prineipally in the Atlantic Ocean, lut partly also in the Frith of Clyde, between $55^{\circ} 35^{\prime}$ and 58051 N. Iat., and hetween $5^{\circ}$ and $7^{\circ} 52^{\prime} \mathrm{W}$. long. The islands (seven) in the Frith of Clyde constitute a comnty (linteshire), the others belong respectively to the commies of Argyle, Imvemess, and lioss. The Hebrides consist of abont 200 islands, great and small, and are usually divided into the Inner and Outer Ilebrides; the former embracing all those ishands which lio nearest to the mainhaud, inchading those in the Frith of Forth; the latter con-

## HEBLRIDES (TIF:

slatiug of a long continuous range of inlands stretchiug NNE, und SSW. from linrra llead, int lat. $56^{\circ} \cdot 11!^{\prime}$ N., to the lintt of the Lewis, in lat, $88^{\circ}$ $51^{\prime} \mathrm{N}$. The strait whleh divides the Oiter Hicbrides from the Inner, and from the maluland of Scotland, is called the Minsh, and is, where narrowest, from 15 to 16 m . ncross. The Outer Helrides are commonly culled the lang Island and appear, in fuct, as if they had originally consisted of one lengtliened islanid, divided at a rennote ara into its present portions by somo convulsion of mature. Lewis and llarris (which are more extensive than all the rest put together), though considered as separate, form, in fitet, only one ishand; and the sounds, or arms of the sea, which Intervene between the lurger islamis of the gronp, are so interspersed with inlets, that the range is still neurly continuous. The following table contuins a list of the principal islands of which the Imer and Outer Hobrides are respectively composed, with their estimated extent in sfo. in, :-

Of the total extent of the llebrides, estimated, as above stated, at about $2,750 \mathrm{sq}$. m . or $1,760,000$ acres, $6.1,000$ ure lakes. The island groun is divided into 30 parishes, of which 5 are in the islands in the lirith of Clyde, 17 in the Inner Hebrides, and 8 in the Onter Hebrides.

In the census of Scotland for 1861, there is no distinct classifieation made between the Hebridea, spread as they are over several counties, and the other islands belonging to the kiugtom. The total population of all the islands, 186 in number, was found at the census to be 164,245 , exclusive of the slipping, and $164,99 t$ inclnsive of the dwellers on board vessels. Buteshire, in 18ti, had a population of 16,331, agninst 11,791 in 1801, and 14,151 in 1861. The total pop. hisk considerably increased since the cousus of 1 sill. Of the 200 islands of which the IEebrides consist, more than half are so small, or so sterile, as not to be inhabited. In 1861, only 79 were regularly inhabited during the whole year; while 8 were tenanted during the simmer, and abiadoned on the approach of winter. The greater portion of the people reside within $n$ mile of the sea-shore; in fact, execpt in the islands of Bute and Islay,
scarcely an inh vards from the level of the sen.
From the thin expected that. sel be casily accessil, but each par, ha: Ciaelle or Celti out the wholo e some of the mo islands, it is sti known. Gaelle or Celtic is the lauguage spoken throughout the whole extent of the 1 lelsinges; and in some of the more remote or thinly inhulited islamis, it is stall the mily langunge used or kuown. Llut both Euglisls and Gaclic are now tayght in nlmost every one of the schools, and the former is becoming common, and, in some instances, has almost supersealed the use of the tiaelic. A few families, chietly farmers from the luwlands of scotland, linve, oif lute yenrs, settled in different parts of the Itelrides; aid this, comhined with the incrensed facilities of commonication with the low conntry and with bingland which steam navigntion aifords, has had the affect of diffisiug $n$ more generad knowledge of the Euglish tongue thun would otherwise have leen the case. In the more pupulons portions if the Hebrides, there are few persons, if any, under 30 years of are, who do not inderstanid binglish, though, with slight exceptions, Gaelic continues the langnage of common conversation. Gaelic was not, till abont the beginning of last century, a written langunge; but the Bible, nud a great variety of religions us well as miscellancons books, Inve since been translated into it ; and Caelic grammars mid dict:onaries have also been published. 'These things have heen done, mot with the view of propethating the knowledge of a rude language, but of dilfising information nanong the inhabitants.
The 30 parishes of which the Hebrides consist have each a parish elurch, and a resident clergyman. There are besides, 14 quoud sucra chajels belonging to the established clurch, 6 clapels belonging to the R. Catholies, 3 to I'resbyterian dissenters, 2 to the Episeropalians, and ito Independents; the total number of places of worship being 5 ti. In some of the islands, particularly Barrn, Eig, aml S. Uist, Cntholicism abonnds, to the entire exdlusion of almost every other creed. The Catholie priests so not contiue their labours (1) the islands in which they have their head quarters, but periodically visit all those in their neighbonrhood where a single member of their church is to be found. Missionaries, belonging lnth to the establisised church and to the disseluters, are common throughout the Hebrides.
Though a poor law has existed in Scotland since 1579 , is is practically unknown in the Hebrides. Limited as are the means of the inhabs., the poor are supported exclusively by the collections made at the church doors on Sunday, by other voluntary contributions, and by sessionul funds; a legal assessment for their lehool having never been adopted. It appears, from othicinl returns, that the poor recelving relief are only as 1 to $\bar{j}$ of the inhab.; that the average unnual amount given to each individual is 11 s .4 d . ; and that the cost averages rather less than $2 \frac{3}{4}$ d. to each head of pop. This insignilicant degree of assistance is searcely appreciable, and shows how extremely destitute the people are, and how low their estimate of physical comfort.
The climate of the Hebrides is more humid, variable, and inhospitable, than that of any other part of the British dominions. 'The temperature of the atmosphere is variable, the elimate very rainy, nud the air extremely moist; insomuch that when a person walks by the sea-side, in a
hazy atmospliere and under a clondy aky, the saline particles rests like dew on the pile of his cont. The dampuess of the oir is such, that in rooms whereln fires are not constantly kept, the wnlla emit a houry down of a brinish taste, resembling punuled saltpetre, whrin hrushed off. The elimato is an enemy to polished iron nud to lmoks. Frequent and henvy rains fall at ull seasons, especially afler the lammmas term, wherehy the hopes of the hinsbandman are olten blasted, and the fruit of his toll and indontry in ugreat mensure lost.' (New Stut. Arculint of Scotland, No. 12, p. 118. ) In the (hiter Ilebrides winter lasts for six months, from the end of oct. to the emi of Mareh: spring, summer, and nutumin occupy the other half of the yenr. '1 Huring the ppring, J.. winds prevail, at tirst interrupted by blasts ami gales from other quarters, accompuised by rain or sleet, but ultimately becoming more nteady, and acconpmied witl a compmrative dryunss of the ntmosphere, occasioning the drifting of the amals to ngrent extent. Summer is sometimes line, lant as frequently wet and boisterons, with S. nid W. wials. Freguently the wet wenther continues, with intervals, until sept., from whieh perion to the middle of Oet. there is fenerally a contimmance of dry weather. Alter this W. gales commence, becoming more boisterons an the seasom advinces. Dremifial tempersts sometimes hapien through the winter, which often unroof the huts of the matives, destroy their boats, and cover the shores with immense heaps of sen-weeds, shells, and drift timber.' (Macgillivray's Acc. of the Outer Hebrides; Eilinburgh Qunrterly Journ. of Apric., No. 11, p. 27.4.) These remarks are applicable, with very slight modillentions, to the whole range of the Hebrides, the islands in the Frith of C'lyde excepted; in whicls Intter, the climste, thomgh damp and variable, is comparatively genial and mild.

In addition to the unfavourable climate, the Hebrides are remarkable for their rugged and sterile soil, more than six sevenths of their superticial extent consisting of irreclaimable monntnins, mornsses, \&e.; while the extent of arable and modow land under grass, hay, com. and potatoes, is little more than in ninth part. Assuming the whole extent of the islands to be equal to $1,592,001)$ Scotch acres, or ahout $2,000,000$ English (an entimate somewhat different from that given in this article), Mr. M'Donald, in his Agrienltural Survey of the Hebrides, suppeses it may be distributed as follows:-
Mountains, morasses, and undrained lakes, searcely yielding any specified rent to the propritiors

Aeres 600,000
IIII pasture, appropriated to particular farms, and sometimes enclosed, or at least limited by acknowlelged marches, as lakes, rivulets, sic., and paying rent
Arable and mendow land, nuder grass, hay, corn, and potatocs

700,000

Kelp shores, dry at ebb-tide, regnlarty dividei among the tenantry, and prodncing $5,(100$ tous of kelp, hesides manure, annually
Gronnd ocenpied by villages. farm-houses, gardens, genttemen's parks, \&c. .
Ground ocenpiedlyy peat-mosses nnnually; and by roads, ferry-houses, and bonts
Barren sands, tossed about by tho winds, and pernicions to their vicinity
Grotind occupled as glebes, or, in lieu of glebes by establisited elergymen, manses, churches, and churehyards
Ground occupied by \&choolmasters
Ground under natural woods, coppices, and new plantations, clicfly in Bute, Islay, Mult, and skyo

## ILEHRIDES (TIIE)

Jhit while the arable mud meadow land is so initerl, it is, nt the wame time, light, wamly, null perar, with some expepitions, in Inlay anil a few wher islands, unil ninsuserptlbla of mueh intprovement. I'lo orilinary promber is black onts,
 trihuter the arable land us follown:-

Not only are the soil and elimate unpropitions, but the tenure on which lamis are helit ks, with some exceptions, as objectiomable as possible. $A$ very groat majority of the furmers are temuls at will or from your to yeur; in other words, having no lense, they ure linhle to be turned ont at the eme of any year. This wretehed system prevails almost univarally in the Onter llebrides. In the islandes in the Frith of Clyde, it was laid aside in |81if, and anperseded liv leases; lomt in the remaining Imor Dehrides it still loohls nbomt three finirlis of the land uniler its fettern, nul nine tenthe of the farmurs. Hexides, where leases are given, lise qunernlly range from 5 to 7 yams, shlibolt extenting to !) or 12. Wherever this system extends, there is of necessity a total ijmilly to agrientenrnl improvement.

Hence, with the exception of the islnads in the Firth of Clyile, amil of Isloy, Collonsay, nud some purtions of Skye and Mill, in all whieh large farms and other improvements have been more or lese introduced, agrienlture is in as hackward a slate an din be imagined. (ienorally there is nothing like a rotation of erops. The grains usually cultivated are bear or bigg, and the old Scoteh urey out. In the outficll, which means that porfimi of a farm nearest the hills, and farthest from the farm-house and oflices, one misernble crop follows another, till the gromad be thoroughly exhanstad. It is then nllowed to rest, yielding for several years mothing but, weeds; and as soom as these berin to disappear, he the return of grass and heath, it is again broken np, to undergo the same exhmusting process. In the cultivntion of the infiehl, the system pursned is nearly as injulicious. No refular rotation is followed; but the general rule $\mathrm{is},-1$. oats; 2 . oats; 3. potatoes and peas; 1. Barley or higg, with manure; 5. pease; ti. onts; 7. two years of pasture clsoked with weels, unnited by sown arnsses, and therefore deticient luth in quality nud quantity. In a few places amly has draning bern practised; and withone a very extensive system of drainage, no material ulteration can be made for the better. In places not drained or levelled, the implements of hoshamdry are of the same rule and harharoms aleseription that they were nearly a century ago. In the Oiter IIebrites, 'small tenants and cotters generally till the ground with the Chinese plomph, of one stilt or hundle, and the cassehrom, a clumsy

After sanimg ilie neerl, "tharrow, with a heuthor brioki at the tail of it, is naml, which mell mul womern dithe aftur
 whonlilorn. The women are mixornble waves: they alo the work of britew, enrry the manimere in arevidy on thoir theks from the byro to the dlolet, and use their lingers an a tive-pronged gripes, to till them. In hurvest, when the crop is ripe, no sicklo is usal fur the barley among the small temunts. The
 anguently the moil is injured. When the shansers are ilry, and conveyod to the hari-yarl, the wirkle is then usad to cint off the heads or curs. After this operntion, all the hemis are formeil into a little ntmek coverod with the roots of the sheuf, which had been ent ofl:' (New Stat. Ace., §lewis, pp. 1:n-1:1.
l'ommatis neconint of the inhabse of lalay, though no longer appliouble to them, Inlay having hern most materinlly improved in the interval, is still atrictly mplirable to those of mont of the other islands. :A set of prople worn down hy poverty, their hahitations ncenes of misury, mule of homes Ntones, withont chimnien, without doors, exceptian the fingrot opposed to the wind at one or othor of the apertures, promitting the amoke to eseapo throngh the other, in oriler to prevent the pains of suffication. 'Tho furniture perfectly correspumis: a pot-houk hangs from the midalle oif the rouf, with a pot promant over a grateless tire, tilled witli fare thint may ralier be ealled a permissiom to exist, than a support of vigoroms life: the inmates, as may be expected, lean, withered, dusky, and smoke-lried.' ('T'unr in'Scolland, ii. 2ti3.)

Those who eompnre this striking jmragraph with the deseription given in the Ney Stntistionl Acromint of Seotland of the houses in the Lewis and other islands, will find that it is, if nny thins, really too fivourable. Thore the Iwellings of the people are, speaking generally, wretehed hats, that affiril shelter not only to the cotters and their fimmilies, but also to their enttle and piges:-

Ignenuиe, laremque,
Et peens, et dombios coniminni clanderet umbra.'
These huts, which are ouly half thatched, and withont wimlowe or chimmies, are indeseribalily filthy, and are, in fact, inforior even to the wift wams of the American Indians. The ding and whar filth collected in and round the lint, is only removed onee a year, when it is carried to the potato or larley tield; and where nlso it is mit mansunl to strip the thateh ofl the hut, and to aply it to the same purpose. (New Statistiond docount, urt. " Ross anil Cromarty, pp. 12!!, $1 \cdot 17$, (ic.)
It is right, however, to state, that these miserable huts huve nearly ilisappeared frum the estates of Mr. Campliell of İslay, of Lord Maedonald in the Isle of Slive, of the Duke of Ilamilton in Arran, dec; and the probability is, that they

whleh it atill belongs, The remains of these vurlous establishments, which still eover several acres of gromud, eomsist of the eathedral, st. Ornu's chapel, the chapel of the munury, five amaller chnpuls, and other depunilent buidings. The enthedral is erucifirm, with a tower 70 ft . high: the length from 1., to W. Is tit) fit, the bremdth 21 ft .; the lengeth of the transejpt 70 ft . Within the prechets if the mathedral are two crosses, the one culled St. Martin's, the other Sit. Jolun's. A large spme aromil there buildings was used as a cemetery, in which were linterred the remulus not only of their religions inmintes, and of several llighlund chisftumas and families of distimetion, but (it is pald, thomgh the statement is probably much exagrerated) of 48 Seottinh mul 16 Norwegian kinge, dud I Firneh and 4 Irish novereigns. Of attion mative crossen erected on the island, wily 4 remain. (Keith's Cut, of Scot. Blishous, eil. 1824, 11. 414, dis; I'ennumt's Seotlani, ii, 285.) There were live other momaterien in the Heblides, viz., in Ormsuy, Collonnay, Crusay, lewis, and Harris; bint of their history nuthing is known, und fiew remains can be traced of their existence. (Keith, plpe a85-393.)
Iona was visited by 1r. Johnsem in his tour to the Western Islands. Ite has described hiv senwatlons on visiting it in the following passage:-- We were now treniling that illastrimus island which was once the luninary of the Caledonian reglons, whence savage chans and roving barmarians derived the benefit of knowlolge, and the blessings of religion. 'To abstract the mind from all local knowledge would be impossible if it were endeavoured, and would be foolish if it were possible. Whatever withdraws us from the power of our senses; whatever makes the past, the listant, or the future, predominnte over the present, alvances us in the dignity of thinking beings. Far from me, aml from my friends, be such frigid philosoplyy as may condict us indifferent or unmoved over any ground which has been dignitled by wisdom, bravery, ar virtue. That man is little to be envied whose putrotism would not gain foree upon the plains of Marathon, or whose piety, would not grow warmer among the ruins of Iona.'
Of the early history of the ILebrides nothing certain is known. They recognised for $a$ lengthented perion the sovereignty of the Norwegian kings, but were, in 1264, annexed to the erown of scotland. Owing, however, to their remote and inaccessible situntion, their chici...ins were for centuries afterwards lawless aud curbulent, and assumed and exercised nlmost regal authority. lndeed, it was not till the abolition of hereditary jurisdictions, in 1748, that a tinal blow was given to the influenee of the independent chieftains of the Western Islands. The Hebrideans, in $171 \mathrm{~m}^{\circ}$ and 1745, were almost to a man in fnvour of the exiled fanily of Stuart. Charles landed on the small island of Grisen, to the S. of'S. Uist; and alter the battle of Culloden, he took refuge, first in the Outer Hebrides, and afterwards in Skye, previonsly to his escape to lirnce.

HECLA, or HEKLA (MOUNT), a famous volemo of Ieelamel, near the SW. coast of the island. Its height was estimated by S:r G. Mackenzie at about $4,000 \mathrm{ft}$., or probally less; but, aceording to later authorities, it has an actual elevation o $5,210 \mathrm{ft}$. 'On approacling,' snys Sir G. Ma kenzie, 'Heela from the W., it does not nppasic remarkable; and has nothing to distinguish it among the surrounding mountains, some of which are much higher, and more pictureaque. It has 3 distinet summits, but tiey are not much elevated above the body of the mountain.' The
erater, of which the highest (our N .) peak furmin n
 hottom is lilleml by a large mans of nuow, ill whinlt varions caverus have been formed hy jta partial medting. The midille num lower peakn form the siden of shmilar hollows, and om the asecent ure numeroun ither eratirn, whence tlame and wher matter lave at diffrent times bern vijecterl. lleeln, like the sunftll Jukul, nenr the W. exstremity of the lislanil, terminates lin a long gromp of comparatively low hills. These, anil inthers surrominding, are alnowt wholly composerd of tufa, clowely resumbling that of Italy and sieily; but the miomutnin itself comsints chielly of edhumar lasale amal hava, whilh linter forius n rugged mul vitrifled wall armual its Imse. All the upper purt of the monnain is eovered with a liyer of homes volcanie mitter, mlag-mant, and nshes, which inerenses grently fo lepth townols the sumunit. In thils part, indeed, few traces of miy uther sultstmuces are to be seen, Mackenzic snys, 'Hic conld not distlinguish more than four stremms of lava, three of which have descemded on the S ., and one on the N. side; but there may be soms streams on the E. side, which we didil but ser. (Travels, 1). 24!.) The view from the summit is one extenided seene of frightfil desolation. 'Towarils the N . the country ls low, except where a joknl here und there towers into the regions of perpetual suow. Severnl large lakes appear in different phaces, nal among them the Piske Vatn is the mont complicuons. In this lireetion the prospect renches nearly two-thirdy nernss the ishanil. The Blafell and the Lamge Jokula atretel themselves in the listance to a great exteut, presenting the appearance of enormous musses if sumw heaperl up on the phains. The Skaptar Jin kul, whence the great eruption in 178 Bi l lrokn furth, bumds the view towarla the NE.. : this is a Inrge, extensive, and lofty mountain, nul appantscovered with snow to its very base. The Trime, Tinilalla, and Eyuthalla Jokuls limit the view to the E. To the $\mathbf{S}$. is an extensive plain toverell with luva, rugged with sharp stones nud other vuleanic substances, imbedded in the soil, and brounded by the sen.
There is, perhaps, no ceuntry where voleanie eruptions have been spread over so large a continuous surface as in leelnud, no part of the ishand heing wholly free from the marks of their ayence. But the distribution of the volemic energy over so wide a space is doulatless the renson that the eruptions of Hecla are far behind those of E:tua nud Vesuvius, both in frequency anil mugnitude. Since 1004, only 22 eruptions from Hecla have been recorded, but some of these lasted for a comsiderable length of time; 8 or 9 eruptions lave nlso taken place within the snme perind from the Kattlaginu, Eyatialla, and Sknptar Jokuls in the immediate vicinity of Hecea; and it is a eurions fret, that out of 42 eruptions mer.tioned by uative muthors as having occurred in dillerent purts of Iceland since the year 900, 5 were simultaneons, or nearly so, with cruptions of Vesuvius, 4 with those of Etna, and 1 (in 1766) with eruptions of both Etna and Vesuvins. (Sir (i. Mackenzie's Travels in Iceland, pp. 236-254; Hemlerson's Encyc. des Gens du Monde; Lyell's Principtes of Geology.)
HEDON, or HEYDON, a bor., market-town, and par. of' England, co. York, E. riding, midlle div. of wap. Holderness, on the Breamish, 6 m . E. Hull. Area of par., with which the bor. is atextensive, 1,440 acres ; pop. 1,080 in 1831, aull 975 in 1861. The town is small and mean-looking, with little busiuess or trade. It was formerly of greater importance, and its decay is owing to the
rhoking up of inutages elijuy llull. A chiur milusel are lex in silerable place $r$ from the lint of Aet, by whieh if way venterl in $t$ dexicut, пррген umally mold to $t$

 turempuly situated nt the ello:men uf tho benmtiful whinting valley of thes Neokar, and overlanked by well-woorled hills at the back, whiles neh vheyarion cover the rising gromind as far an the Heiligenbery on the ajponte ainle af the river. The town lien closes to the bank, and the primetpal street (llacyitxtrusue), into which most of the others rinn, is nearly a mille long. 'Tho streete ure narruw uni gloomy, and the public buililings have no pretemsions to krandenr. The church of the Huly (iloost, a large structure with a very luity seepjle, is divited no as to firmish nceommolation both for l'rotentunt and Rom. Citholic worship. st. l'eter's church is the oldent ln the town, nuid on its dowers Jerome of l'rague nailed his eclubrated theses expmonding the doctrine of the lieformers. 'Thero are two wher churches and a , lews' synagugne. The University-house is a plain buildng, in a mmall mquare near the centre of the tuwn, nill contiguons to it is the library. In the same square is the Mnseum Clib, where the members of the University line, mud meet for varions purposes, The Anntomieal inh Zoological Museum, in the suburbs, was formerly a lominiean eomvent. Connceted with the medienl school are 3 hospitals, small and ill-ventilnted, and not aecommoslating, in the while, more than abont 60 patiento. 'The river, only navigable here for harges and ratts, is crossed by a stone brilure of 9 arches, itio) ft. long, and 34 ft. broal; and at its foot, within the town, is a heavy-looking builting with tuwers, lormerly used as a prison for riotuns students. The sehloss, or clectornl palace, stands on the side of the Giesberg, S . of the town, from which its ruins have a most imporing aspect. 'I'his castle was sacked and partly burnt by the Fremeh in 1693; and nfterwards struck by lightning in 176.4; since which time it has been wholly uninhabited: it is now roofless, and presents a mass if rel-sandstone walls perforated with windows. The stytes of arehitecture partake of all the successive varicties belonging to the $14(\mathrm{~h}, 15 \mathrm{th}$, and loth centuries. The most ancient part is the E . front, part of which was bnitt in thd 14th century by the Elector Otto Heury: it is a solid square hulding, with towers at ench end, one low and round, the other higher and of outhonal shape. A nore modern part, less iinjured than the rest, is remarkable for its tall gables, cmbions pinmacles, and richly ormmented windows, showing it to belong to the jith eentury. The front twwarils the (fies'o ry is a mere mass of monlilering buttresses and crumbling walls. Within the ruined hall it has long been the custom to hold a sacred concert once in three years: it is got up in the most splendid style, and is attended by all the people of the surrounding country. The ecllars of the castle are very extensive, and are even suid to cumminicate with the town below : in one of them is the finmons Ileidelberg tun, now empty, but snid

'I'lue ubiversity, called Ruperto-carolint, in, except I'rakice, the alolest in liarmmens. It was
 atter the ravagen of the thirty yars' war, mal that of the l'alatinute, was restorend hy the aldetor, Charles lomin, muler whon it reekonerl simishein, lireinshemius, nuil l'ultembor' monong its profesaros. In 1802, when Helilellemg was cerlent to the granil dake of Hulen, he acoupted tho ofllee of rector; through his monitleones the miversity funds were prently incrensed, mal n frowli apur was given to the cexprtionon of ith profensors.
 tharims (abont 1,0 onel.), whidh, tugethor with the income arising from lees, de., is applied to the payment of profensors nalaries, and the enlargement of the library. 'Incre are fimur liendifes (divinity, law, medicinc, mul philowophy); mul to these are attached forty ordinary and extinordinary professors, and twenty-inte private tuturn. The fueultien of law and medicine are those most attended. The fees commomly paid fior daily leetures during one semester are from twelvo ta twenty Horins ; and the neceswary expenses of a stmlent duting a milversity session may bo estimated at about 45\%. Mniny of the Germina, lowsever, live at a still lowar rate. The library, which in the unhappy period of Ilcidelberg's history, was pillaged of its most valuable treasmres to enrich the papal library, a part only of whicl were returnell hy l'ins VII. in 1815, now contuins 120,000 vols., besides a large number of rare and very viluable Msis. Comneeted with the ulliversity is an homiletic seminury, a philologieal seminary, and a spruch-collegium, or practical sebool for law atulents. There is a gowl gymmasinm for junior students, and seventen ileinentary schools are supported by the government.

The date of the foundation of IIeidellerg is not known; but it ranked only as a small town in 1225. The count-palating, lobert, enlarged it in 1362 , and the period reaehing thence to the thirty years' war appears to have been the eru of its prosperity ; for it then displayed, in its hamelsome buildings, all the splendenr arising from a tlourishing trade, and the residence of the conrt of the clectors pulatine of the Rhine. In $1622^{2}$, aluring the thirty years' war, the town was taken hy connt Tilly, after a month's siege, and given up to be sacked for three days; the libriry was sent. to the dluke of llavaria, and the imperial iroops retained possession of the plaee during eleven years, at the end of which it was retaken by the Sweles under Gustavus Adolphus, and kept by them till the perice of Westphalia, in 16.18. lis 1674 , in conserfuence of disarreements between Louis XIV, and the elector, Charles Louis, French army under 'lurenne invaded the lalutinate, sacking and setting fire to its towns and villages, The suflerings of' Heidelherg at this time, however, bore no comparison to the severe treatment which it met with in 1689 and 1693 , when Mehae and Chamilly ravaged and burnt the phace. (See

Vistaire, Sicicle de lamis XiV, eh, IR.) These renented enlamitien, and the removal of the elvetur's residence and eourt to Manheim, in Litlo,
 towna of diermany: nind it has never sinee recoverent either lite irnde or penp. In InOL2, at the fwate of Amicun, Hefilellserg was attached to the grand-dacliv of Bailen.

Heranlt is rich in minernl jrioducts ; irun, copper, and coal mines, and quarries of marble, alabaster, gypaim, and granite are wronght. The prineipal mannfnetures are those of woollen cloths, silk and cottun fabries, of whit! Montpellier is the elidef seat: there are others ol piner, ehemleal prowhets, perfumery; and lipueurs many distilleries and dye ing extabilishmentes, and a firol deal of salt is made in the murshes. Heranlt is, however, much more an agricultural and commereinl, than a manufacturing dép. Montpellier, Cette, and Agole have extensive trade, and their intercumse with the interiur is promoted hiv several navigable ennals, of whicli the Cumal idu Midi is the chief. Herante is divided into if nrrontso, 36 eantons, and 32 Z commines; cblef towns. Montpellier, IReziers, Lonteve, and St. I'ons. 'This dep. anciently formed a part of Narbounese Ganl, and contains many Celtic and Ronaman antiquities.

IFERCULANEUM, or IEERCULANUM (Ciir. all Att. vii. 3), an ane, and now buried city of Campanin, in ltaly, close to the lay of Najles, nad 8 m . SLi. that city. The date of its fommation is unknown, and its early history fabulous; but there is little doubt that it was lied by Osei, l'elaspi, anil Samnites, before it came into the ponsession of the liomins. Velleias l'aterenlus tells ns that its inhab, took an active purt in the social and
elvil wars, and that the eity suffered considerably In consequence. Little more is known about it except its destruction with I'ompeii and Stabie, ly an eruption of Mount Vesuvins, The volenno had for some conturies been inactive, mad even eovered witlo verdure: but in the ilrst vear of the reign of 'Jitus, A.s. 79, it burst forth with grent violence, ani cansed those terrible disasters so well deneribed liy the romprer l'ling, in two entire epistles (vi, 1ti, mid 20), and more brietly ly 'lin-citus:-'Luctum attulit atrox et comtinens tremor terra, quem secuta est horrenla Vrsuvii montis conflugrutuo. 1'ulcherrinu Campaniae ara miserè fiechata: ohrutac que urbes Merculanium et I'ompeii: vastu hominum strages, quos inter periêre Agripaa ejuspue muter Drusilla. At stwhorm" famit mors ©: P'linii fuit insignitior.' 'App, ('hron.) Martial alludes aliso to the fate of Herculamemin:-

- Hic locus Herculeo nomine cinrus erat :

Cuncta jacent flammic et tristl mersal favilia.
Kuligr, iv. 43.
The eity appears to have been completely buried under showers of ashes, over which a strenm of lava tlowed, and afterwards hurdened. The llgure of the const itself was nitered by the burning torrent; and thus, when the local features were so wholly chmoged, all knowledge of the city, beyond its name, was soom lost. Alter a conceniment of more than sixteen centuries, necident led to the discovery of its ruins. In 1713 the l'rinee d'l:1bocuf, a French nobleman, who was builuling a paiace at Portici, having need of materials for stucco, procured large quantilies of marble and torra cotta from the sinking of a well on his estate. As the sinking proceeded, the workmen, when nbont 76 ft . below the surfnce, came to fragments ol statues; and the prince then ordered excayations to be made, with the view of ascertaining the extent of the remains. A vault, a marble door-way, and several statues of vestals, were disclosed with little labour; but the works were soon afterwards stopped by the jealousy of the court of Naples. Twenty-five years after, on the accession of Don Carlos, the Infanta of Spain, to the throne of Naples, the works were resumed on a graniler scale, and a theatre, chalcidicum, two temples, and a villa, were successively discovered and exenyated. Owing, however, to the clumsy manner in which the mining was conducted, disereditable alike to the engineer and the government employing lim, the statues and columns were needlessly injured and demolished, and, strange to say, the earth, instead of being brought to the surface, was used to tlll up one part as another was searehed. In consequence of this procedure, a small portion of the theatre is all that is now accessible; and the works, together with the interest excited by them among the Nenpolitans, have long been discontinued. The whole extent of the ground explored was about 600 yards from NW. to SE., by 300 yards in breadth. The largest street was the NE. limit, beyond which it was supposed the mining could not be carried without endangering the town of Resina. R'arallel with it was another street, and three others eut them at right angles. These streets appear to have been paved with lava, like those of modern Naples, a fact which proves that there must have been an eruption of Vesuvins prior to that which overwhelmed the city. 'The theatre was situated at the N . end of the town, which is supposed by Winkelmann to have extended nearly 2 m , along the shore, but without any great breadth. The theatre appears, from an inscription on its architraves, to heve been built by Memmius, and its dimensions are os follow:External circumference, 290 ft .; internal ditto as
far as stage, 230 ft ; internal diameter, 150 ft ; wilth of stage, $\mathbf{7 0} \mathrm{ft}$; heiglit, not known.
Thore were 18 rows of benches, beshless 3 alowe the portico; and the antrance to them was live vomitorin or passages leading from the three tiris of arched corridors which ran rombl the building. and communicutel by steps with the exterior. Its walls were cased with polished marble; both i:1. slde und outside beautiful statues and highly. wrought colimas were fomil. 'The thour was coniposed of thick st pares of vollow marhle, many of whielo still remained when Winkelmann examineml tho place. 'I'le thatre is suppused to have heron enpable of accommodating 3,000 sprectaturs, und was therefore very mon smaller than many ot tore, the ruins of which are still extant. In the chicl street, which is 36 ft . wide, having a ruised fintway on either side, with portions of columans showing the existence of no old colonnude, are the remains of a lormm, or chatcisfiewn, and of two temples. The formm is an oblong building, 228 it. long and 132 ft . broad, with a colommate of 42 pist Jars rominir romm its exterior; and it had 5 (nntrances, 3 in frome, furmed by 4 great pilastors decornted with equestrim statues, and 2 smaller entrances at the sides. The buildings are all cased with marble except under the colomade, where the walls are covered with frescoes. One of the equestrian statues formerly nt the front entrance has been restored, and is reckoned quite a chef-ar'enrre of ancient art. The two temples are muited moder ${ }^{n}$ single roof, and the entire length of hoth is 192 $\mathrm{f}^{\prime}$., and the breadth 60 ft . 'They are very unequal in size; but are highly onnamented internally with columns, frescoes, and inscriptions. Amoing the private buildings excavated, all of which were small, with only one story, was a suburbm villa most profusely decorated with statues aus freseo paintings. It seems to have been extensive, hatimg rooms extending along the side of the garlen; bat they are all on the same story. Here were fommd the celebrated papyri, upwards of 580 in number, the murolling of which has given so much trouble to the learned, aud which would appear to be little better than thrown away, if the value of the 100 already unrolled and partly publisled may be taken as any criterion of the value of the others. The subjects are various; but the works mal their anthors are alike uninteresting. (l'hil. Transac. for 1750; Sir H. Davy's Report in the Jomrnal of the Royal Institution for April, 1819.) Close to this vilis a large tunk, or piscina, was liscovered, 250 ft . long and 27 ft . broad, with semi-circular ends, and enclosed by a balustrade on which were ranged many exquisitely wrought bronze ligures, how in the museum of the royal palace at Naples. The ornamental beds and arrangements of the garlen were still discoverable, and at its extremity towards the sea was a pavilion floored with African marble and jaune antique. The precious relies of antifuity, so far as they were capable of removal, were taken to Naples, and are now deposited, with the other relics from lompeii, in a large maseun in a wing of the king's palace. The collection is most extensive, and comprises not only fresenes, stutues, and works of art, but also articles of household turniture, such as tripods, chandeliers, lamps, basins, paterie, mirrors, articles of the toilet, masical and surgical instruments, and even cooking utensils. Engravings und deseriptions of them will be found in David and Marechal's Antiquiti's d'Herculanum, 12 vols, 4to., and also in that instructive little work, Pompeii, in the Library of Entert. Knowledge. The puintings which have been cut from the walls on which they were originally exechted have, since their restoration to the light, lost somewhat of their brightuess; but

Wings, wis it. we of tiv pilit ladid 5 encat pilastiors al 2 smaller are all cased male, where One of the entrance has chef-d'curre minted sumder $f$ hoth is 192 very unetpled terinally with Amoing the which were uburban villa es nud fresen asive, hasing e garden ; hut re were fonul 30 in number, mueh trouble ar to lie little le of the 4110 may be taken others. The ks and their 1. Trumsac: for ournal of the Close to this scoverel, 450 circular elitb l were rangel figures, now se at Naples ments of the its extremity 1 with Afrieur cious relics of e of removal, eposited, with arge museum e colleetion is only freseues, ieles of houseleliers, lamps, be toilet, nuleven coukiug is of them will 's Antiquites so in that inthe Library of s which have they were unirestoration to ightuess; but
the colours are atill womblurfully fresh. Their merlt of comme varies extrenely, anil many are incorrect in irawiug; but the vigour of the tomehes by which some of the figures are expressed, and the gracefini elognuce of the attitules selected by the pminter are truly astouishing. The most benitifin of these were taken from the walls of the thentre at Hereulancum, and the sublects may be understool at a glance, by those aequainted with Grecian history and mythology. Amomg the statues, the palmis generally givein to a Merenry and a drunken Fam: lut there are many, of bronze as well as marble, of most exquisite benuty: both the statnes and busts are very numerous, In the collection of melals, a gold medallion of Sicily, struck in the 15th year of the reign of Augustus, is considered by virtuosi to be the most rare and curions. On the whole, the remains of Ilerenlaneum, so varied and perfect, throw a light on the arts and domestic enstoms of the Romans, which no mere deseription ly a classic nuthor could give. Antiquity here seems to revive, and we are carried back to the days when Rome was the mistress of the worlh. (Bíucye. Metrop. art. Herculaneum, by Rev. G. C. Renounrl; Winkelmann's Letters on Herculaneum, pmssion; (Gell's Pompeii; Morre's Itnly, ii.)
HERLFORLD, an inland eo. of Englund, on the borders of Wales, having N. the eo. Snlop, E. Worrester, and Gloncester, s. the latter and Monmouth, and W. Breeknock and Radnor. Area, $8: 36 \pm 1$. mo, or 534,823 aeres, of which alout 500,000 ure arable, mealow, and pasture. The aspect of this co. is every where rich mad benutiful; the surface is fincly diversitied with gentle eminences and valleys, magniticent woods, oreharls, mad meadows, enclosed with helges and rows of trees. It is usually represented as being every where rmarkable for fertility ; but it has probahly been in this respect overrated, and though the soil in many districts be not surpassel by any in the kingilom, it has, notwithstanding, a consillerable extent of inferior land. It produces excellent crops of whent and barley, and is one of the prinepal ryder cos. Its wool is also esteemed equal, it not sifperior, to any prodnced elsewhere in linglaml. The Hereford breed of eattle are deservedly held in high estimation: they are of a dark red colomr, with white fuces, throats, and bellies, and fatten easily; are excellent workers, and are remarkably quiet and ducile; but ns respeets the dairy, they are gool for nothing. Nearly half the field laboir of the co. is performed by the cattle. The wool of the Ryland sheep, formerly so celebrated for its filueness, has been injured by crossing by the Leiecsters; but the carcass of the nnimal has been, in consequence, materially improved, and the weight of the flecee inerensed. Agriculture is in a pretty alvanced state in this co, but there is a great want of druinge. Turnips are pretty extensively cultivated; and a vast improvement has leen effected in many districts by menns of irrigntoon. IIops are largely grown, particularly on the lurilers of Worcestershire, from 12,000 to 12,500 acres being under this crop. Property is varionsly divided: there are a few large estates, with many of 11 metium, and some of a small size. The tenures of gavelkind and bor. Fagrish exist in some districts, but are usually nullified by will. The farms, which are mostly large, are usually held from yeur to year. All the more modern farin huilings are of brick and slated, those of older dial being principally thatehed. Oak bark is an impurtant produet. Iron ore has been diseovered, but it is not wrought; and the other minerals seem to be of no importance. If we except eyder, which is produced to a greater extent here thinn in any other county, manufactures are inconsiderable;
gloves, however, are made at Hereford and leominster, and some course woolleus in a few places. Priucipal rivers, Wye, Lug, and Munhow. The Wye is naviguble to Herefuril for barges earry'ing from 18 to 20 tons, but the nuvigation is diflieult, nul lout little to be depended on. IIereforil is diviled into 11 hunds. num 219 purs. ; it sends 7 mems. to the II, of C, viz., 3 for the e0, and 8 each for the bors. of llereford and Leominster. Registered electors for the co. 7,525 in 1865. The censas of 1861 showed a polp, of 12:3,712, living in 25,314 houses. The grows anmual value of renl property assensel to income-tax was 731,4461 , in 185̄7, and 811,6591, in $186^{6} 2$.

Hehefond, a city and parl, bor, of England, co. same name, of which it is the cap., hund. Cirimsworth, on the N . bank of the $\mathrm{W}_{\mathrm{ye}}, 11 \mathrm{~mm}$. WNW. London, and $6 \mathbf{m}$. SW. Hirmingham, on the Great Western railway. Pop. 15,585 in 1861. Tho eity stands on a gravelly soil, in a valley, near the centre of the co. The pirl. bor, which is co-extensive with the old mun, bor., comprises the entire pars. of All Saints, St. Peter's, St. Owen's, St. Nielolus, with parts of St. Murtin's, nud St. Jobn the Baptist, exclusive of out-townships; amil extends about $3+\mathrm{m}$. from N . to S ., and uearly 4 m . from lis to W., enclosing an area of about $2,2: 20$ aeres. The new municipal borrongh excludes about 2-bths (chiefly rural tracts) of the nhove distriet. The streets are wide, straight, macadamisel, flagged, and well lightel with gns. The private dwellings, almost entirely of brick, are generally old-fashioned, some few ouly being of modern construction. Among the many public elilices the largest is the cathedral, founded in $8: 5$, rebuilt in 1072, and thuroughly 'restored' in 1869-3. It is a cruciform structure of the Saxim and early Norman style, and at the points of intersection rises a fine square tower 160 ft . high. The fall of the tower and a part of the nave in 1786 led to the erection of a very plain W. end. The extreme length of the eathedral is 350 ft ., leugth of the great tramsept 100 ft ., breadth of have and side aisles 74 ft ., height of nave 63 feet, height of entiro building 91 ft . The nave is divided from the aisles by two rows of mussive columns, sustaining semicircular arches, over which are rows of areades with pointed arches. At the E. end are the Latyo Chapel, an octangular chapter honse, nul a wellstockel and valuable library. The N. porch is generally almired as a specinen of the ormamental (iothic style. Within the church are many fine monuments, among which that of Bishop Cantelupe (who died in 1287) is benutifully omamented with the most delicate seulpture. Ailjoining the cathelral are the college and bishop's palace, in the former of whicha are apartments for the viears and other ollicers of the entablishment. The cloisters comecting the palace with the chureh are consilered curious and handsome. A trieminal musical festival takes place within the cathedral, the prolits of which are given to charitable institutions within the coment. A side chapel is used as the parish charch of st. Jolm Baptist, the living of which is held under the dean nud chapter. of the other parish chureles, that of All saints, which is mited with St. Martin's, has a tall and wellproportioned steeple, but is otherwise uninteresting. St. Peter's, which is mitel with St. Owen's, is a phin building with a spire. The chureh of St. Nieholas is oll-fashioned and minteresting; the rectury is in the gilt of the crown. The dissenting places of worship belong to Wesleyan Methodists, Independents. Quakers, and Rumam Catholics. Num-roms day and Sunday schools are comneeted buth with the elurches and chapels; and there is a good charity school for elothing and edheating

## HERMANSTADT

50 boys anil 80 girls. The free granmar school, Jocally known as the College school, was either founded or enlarged by Queen Jiizabeth: but it uppears to have fallen into disrepute, and to be now almost useless, notwithstaniling the 20 exhihitions which it offers to the miversities of Oxford and Cambridge: commected with this sehool is Dean Langford's charity, which clothes and educates four children, and sends them to Brazennose College, Oxford, with scholarships of 351. per annmm for four years. Among the numerous and richly endowed charities of llerefori, the prineipal are :-1. St. Ethelbert's Jlospital for 10 ared persoms, having an income of 1 tiol. yearly. 2. Coningshy's IIospital, fomded in $1625^{\circ}$, on the site of an ancient monastery, and providling lorlging, rlothing, ant 13l. a year each to 14 old soldiers, and a salary of 201. for a chaplain. 3. Lazarus's Ilospital, once used for lepers and others afllicted with contagious riseases, but now an almhonse for six poor women, who divide 19. yenrly. 4. St. Giles's IIospital, established in 1290 , as a monastery of Grey Friars, and given by kichurd 11. to the corporation, by whieh it was formed into an almshouse for tive poor men, who are clothed, und share 8ol. yearly. 5. W'illiam's Ilospital, proviling six lecayed tradesmen with good lodgrmgs, and $3 l$. $10 s$ s. each per month, and a chaplain, it a salary of 20 ., who also ofliciates in the lastmentioned hospital. 6. I'rice's Hosprital, for 12 men, who are lodget and paid 21. a month each. 7. Trinity Hospital, a handsome briek lmildiug, in which 16 poor people are loulged, clothed, and feusioned, at ös. ench per week. The last five of these charities are in the patronage of the corporation, who, aceording to the statement of the mumicipal commissioners, formerly used their inthence for the most corrupt purposes. Many wher minor endowments belong bath to the corporation and the parishes; indeed few cities in Ehyland possess so many charitable trusts as Ildreford. (Charity Comm., Bind liep.) A large intirmary, supported by sulberiptions and benefactions, and containing accommodntion for 70 patients, stands Sli. of the city, near the Castle (ireen. The mion workhouse completed in 1838 , stands on the Ni, side, outside the city. The chief public buildings not yet moticed are the Shire-hall, designed by Sir R. Smirke, having a tine Doric portico. The ancient town-hall, mu old-finshioned wood and plaster building, supported on pillars forming an areme, was palled down in 1861. Of other public edifices there are the guildliall, built of brick; the theatre; the co. gaol, a well-arranged prison, in which the silent system and hard labour are rigormisly enforced; mid the town gaol, which is very small. Though the principal streets contain many good dwellinghouses and shops, there are no evidences of any very active or thriving establishments. The Wye is navigable by harges 11 to the city, except in dry summers or during heavy tloods.

Herelord reccived its dirst clarter of ineorporation in 1189 , from Lichard I., but the governing charter, previonsly to the Manicijal Reform Aet, was granted by William JIt., in 1697. 'The corparation now comprises a mayor, six aldermen, and eighteen eomencillors; the city is dividen into three wards. Hereforl has sent two mems. to the II. of C. since the 2 e3rd lidward I., the franchise, previonsiy to the lieform Act, being vested in freemen, resident or non-resident, who became so by birth. marriage, apprenticeship, gift, or purchase. lies. electors, 959 in 1 sici2. (iross ammal value of real property hasessed to ineome tax,
 and petty sessions, and a mayos 's court, for the
recovery of dehts, are leld within the city. The loeal acts are 14 Geo. 11I. c. 38, and 56 (ieo. III c. 23. Market-lays on Wed. and Sat., the Weit, after St. Andrew's day being the 'great market.' Fairs, first 'Tuesday after Feb. 2, and Oct, 2 for cattle, checse, and firming prodnce, being among the largest in Jinglamel. Cattle fairs are nlso hefi on Well, in Enster week, and July 1. 'The May fair, called the bishop's fuir, lasts nime duys.

During the disputes between Henry Itl. and his barons, and in the wars of York and Lancaster, Ilereford was repeatelly the seat of hostilities; and its fine castle and strong walls, aceording to Lelani, were so much injurel, that in the time of IIenry VIII, they were golng fast to ruine During the parliamelitary wars it was garrisoned by Charles 1, and twice besieged: in 16.4 it surrendered to the parl. troops maler sir W. Waller, and being retaken hy the royalists, was nearly the last that opened its gates to the parlimment. The ancient fortifleations and castle are wholly sostroyot, and their site is now ocenpied by a public pronicuarle, maintained by sulsecription and forming the favourite resort of the inhalitmits.

IHERFORD or IFERVORDIEN, a town of the Prussiar donı., prov. Westphalia, gov. Minden, cap. circ, of the same name, on the Werra, $\mathrm{l}^{\circ} \mathrm{i}$ II, SIV. Minten, on the railway from Minden to lohssaldorf. l'op, 10,714 in $186 i 1$. The town has courts of justice for the circle ami district. a large prison, a gymusimm, and liom. Cath. high sehool, aud manufactures of cotton cloth and yarn, leather, tobnees, and linen gools. The centril musenn of arts, antiquitios, and manufactures for Westphalia is established at llerforl.

I1ERISAU, n town of Switzerland, cant. Appenzell, div. Onter Jholes, 5 m . WNW. Apriszell. Pop, 9,518 in 18ito. Ilerinan is cap, of the canton, jointly with 'lrojen, these towns being altermately the seat of the legislature. It stanifs on a height, at the junction of two snall streams, whieh turn the machinery of numerous factories, The priucipul manulactures are those of cottoms and silks, the last of recent introdnction. It has an anciont church, in which the archives of the Outer Chodes are kept, a pretty lara public library, orphan asylnm, court of justice, $t$ ad arsenil. Near it is the Heimrichsbad, one cit the most frepuented waterng-places in E. Switzerlanil.

HLEMANSTADT (llung. Nacy-Szeben), a town of Transylvania, eup. of the Saxon land, in an exteusive and fertile plain, on the Tibin, a branch of the Aluta, 71 m . SSE. Clausenburg, and 70 m. W. Cronstadt. Pop. 18,588 in 1857. The town partly stands on an eminence, and is thence divided into an upper and a lower town. It is pretty well built, mostly in the Gothic style, and has a square ornamented with a statue and fountain; but still it has a dull and stagnant appearance. It has three suburhs, and is surromaded by a domble wall, having a foss and tive gates. The most remarkable public buidinges are the palace of Baron Bruckenthat, the favourite minister of the Empress Maria Theresa, containing an extensive library and fine museum ; the churches, eleven in all (imong them five Lutheran, two Calvinist, three liom, Cath., and one (Greek) ; the baracks, the military hospital, and the orphan asylam. The lintherans have a gymnnsium, in which the study of divinity, law, aud philosophy is pursmed. and a free school; besides which, there is a lium. Cath. gymuasium, and a normal sehool. llermanstailt is the licad quarters of the commander-in-chief of the troops in 'ramsylvania, and several departments of the government, as the rustoms and post-supermendence, are located here, It is
a place of consi kets in the yea and woollen el overiand trale The Ilemmant arigin. There - dialects among lieen derived fro from which the

The town, wh the Saxoll chie said to have be enrly possessed vileges unuler greater part of the 16 th centu 'trunsylvania, a ing condition.

173,280 inhab. liv
a place of consluernble trude, having three narkets in the year, and it has manufactures of linen and woollen cloths, and hats. There is a brisk werland trade throngh Walnehin into Turkev. The llermanstalters are said to be of Flemash urigin. Jhere are not less than seven distinct dialects among these Saxons, supposed to have heell derived from the dilferent purts of Germany from which they origimally came.
The town, which takes its name from IIermann, the Saxola chief who conquered Transylvania, is said to have been fommed in 1160 , and to have early possessed nanyy valuable rights and privileges under the Itugarian goverument; the preater part of the town, however, wis built in the 16 th century. It was once the capital of 'Truspylrania, and was then in its most flourishing commition.

If Elit'Folid, an inland co. of England, having S. Middlesex, E. Lissex, N. Camhifidge, and W. lhuekingham and liedford. It has a very irrefular outline, und a detnehed portion at Coleshill is wholly surrounded by buckingham. Area, 611 si. m., or $891,1+1$ acres, of which about 350,000 are arable, meadow, and pasture, $A$ ridge of chalk hills, from 800 to 900 ft . high, ruins along the N . froutier of the co., and the rest of its surface is benutifully diversilied with uphands and valleys: it has many thriving plontations, and a more than urdinary proportion of tine seats, amomig which Ashrilige and llat liekl occupy the first rank. The anl-suil is generally clialk. It has every variety of soil, and may, on tho whole, be said to be of about an avernge degree of fertility. liy far the greater portion of the land is in tillage; and the wheat and barley of this co. are reckoned equal to those of any other district in England. Agriculture is not, howewer, in a very advanced state. Two white crops not unfrefuently follow each other; and the land is mostly ploughed very shalbuw. Drill husbandry is but litule introduced. Mcadow land is in genernl much better managed than the arable, the quantity of hay produced being large, and the guality superior. Few eattle are raised or fed in this county ; but the stock of sheep is considerable. Few large estates. Farms of varions sizes. but not gencrally large. lenses, where granted, are usually for seven or fourteen years. With the exception of ehalk, the minerals are of no importance. Manufactures not very innportant. Puper, however, is made on a large seale, of the best quality, and by the most improved machinery, near Watford and Lickmansworth. Malting is extensively carried on at Ware, Hitchin, and other towns; and a good denl of straw plait is made in different parts of the comnty ; silk and atton are also spma, and ribands made, at Tring, Watford, and St. Albans. In 1861, the numbers of persons engaged in the leading manufactures and oceupations were as follows:-Puper, $6=2 ;$ straw plat, 8,703 ; matting, 437 ; sik, 968 ; farmers, 1,839 ; shepherds, 393. Principal rivers, Len, Hib, Beane, Cohe, Gad, \&c. The Grand dunetion Canal passes throngh its W. parts, mal it is also traversed by the Lomdon and North Western and Great Eastern railways. There are castle ruins at Berkhanıstead and llertford; and a tine abbey chureh at St. Alloans, the Coman Verulamium, from whieh batom took both his titles. IIertordshire was in Flavia C'asuricosis, and on the borders of the Moreian and the E. suxon kiugdoms. Ilertfordshire has 8 humbs. and 133 pars.; it sends 7 mems. to the 11. of C., viz. 3 for the co., and 2 each for the bors., of 11 ertford and St. Albans. Registered co. electors, 5,749 in 186.5. The census of 1861 showed a pol, of 173,280 inhab. living in 34,893 houses. The gross
unnual value of reul property ansessed to inconse tax was 856,2781 . in 1857 , and $974,6001 /$. in $1862_{2}$.
Hightforis, a parl. bor, and market-town of Fingland, cap. of the above co., hund. Hertford, on the Lea, 19 m . N. Lonton by road, and 26 m . by Grent Einstern railway. lop. 6,769 in 1861 . The parl. bor. includes, hesides the old bor, and liberties, portions of the parishes of Brickembon and bengeo. The town, which stands in a valley, though irregularly laid out, is respectable in appearance, well paved and flagged, abmidantly supplied with water, and lighted with gas. There are 2 churches, which serve for all the parishes, the others liaving been demolished. All Saints, the corp, cliurch, is a spacions cruciform structuro in the later Einglish style, with a bquare tower and spire; and St. Andrew's, at the S. end of the town, thongh smaller in extent, is handsome, and has a low embattled tower and spire, and a large gullery within, for the aceommotation of the children lelomging to Christ's 1 lospital. There are 5 chapels; the ludependents, the Wesleyan Methodists, and the Society of Friends, have commodious places of worship. Among the public charities in Hertforl, the chief are,-1. A well condowed frec gram-mar-school, fomded in the reign of James l., having seven scholarships at leter-house, Cambridge. 2. The Green-coat school, founded and endowed in 1760, in which abont 50 bovs are edncated. 3. The branch sehool of Christ's Hospital, oceupying a large brick building with wings, and neconimodating 000 of the younger pupils of that great establishment. 4. A girl's charity sehool, attended by ubout 50 chifilret. 5. An infint sehool. 6. An almshouse for aged people, built mind condowed with 501. a year. T'le principal puhlic buildings are-the castle, originally built in 903!, nfterwards enlarced, and now the property of the Marquis of Salisbury; the shire-hall, erected in 177, Iuder which is the corn-market; the sessions-honse, in Which the assizes are lield; and the gaol, on the lis. side of the town.

Ileatford is a busy town, and there are sever. 1 mills on the Lea, the principal trade beins mealing und malting, the produce of which it exchanges with London for coals and other commodities. There are also some large breweries, and an extensive distillery. The markets, held on Naturday, are among the largest in the S. of Einglang for corn: fairs for cattle ure held on the Saturlay fortnight before Baster, and (m May 12 , July 5 , ind Nov. 8. This bor. received its carliest corporate privileges from William the Conqueror: its markets were grauted by lilward lII. The corporation now consists of a mayor, 3 other aldermen, and 12 conncillors, and loolds a commission of the petce : corp. rev., $1,468 \mathrm{l}$. in 1862 . Hertford sent 2 inems. to the H. of C. from the reign of Eilward I. to the 50th of Edward III., when it was relieved from the burden, on the plea of povert: and dit not regain the privilege till the $2 \boldsymbol{2} d$ of James l., since which time it has exereised the framehise. Down to the passing of the Keform Act, the electors were the lontseliolders and frecmen resident, when they received their freedom. liegistered electors 590 in 1862 . (iross ammal value of real property assessed to income-tax $27.132 l$. in $1 \times 37$, aml $2 \overline{7} .5611$. in 1862.

The date of the timmlation of llertford is mucertain. At the time of the Doomsilay surver, the town and lands were divided between the Conqueror and eight of his followers. In the wars between John and his revolted baroms, the castle, originally built hy Edward the Elder, was taken from the king, after a monlis siege. It was restored in the fullowing reish. and in $13 \cdot \mathrm{~F}$ whs granted, with the carhlom of 1 leriford, to John of
(inunt, who made it his usual residence. The castle was afterwards inhablted by the queens of llenry IV., V., and VI. ; and here, also, 150 years later, Queen Elizabeth occaslonally resided nud held her courts.

IIESSE-CASSEL, or ELDCTORAL HESSE (Germ. Kurhessen), a state of W. Germany, consisting of a central territory (having NW. Irussian Wentphatia and Waldeck, NE. Hanover and I'rusnian Saxouy, E. Weimar, Sk, and S. lavaria, and W. Frankfort, Nassan, and llesse-Darnstadt), and several small detactied portions, the chief of which are the co. of Schammerg to the N., and the lordship of Sehmalkalden to the E. The whole territory lies letween lat. $50^{\circ} 5^{\prime}$ and $52^{\circ} 25^{\prime} \mathrm{N}$., and long. $8^{\circ} 30^{\prime}$ and $10^{\circ} 40^{\prime} 30^{\prime \prime} \mathrm{E}$.

The electorate of Hesse-Cassel is divided, for administrative purposes, into four provinces, ol'the following area and population, according to the census of 1858 and of 1861 :-

| Provincet | Area In Fing. Sq. Mille: | Population |  |
| :---: | :---: | :---: | :---: |
|  |  | 1858 | 1861 |
| Lower Hesse | 2,0185 | 360,648 | 358,806 |
| Upper Hesse | 875 | 118.15011 | 139,493 |
| Fulila. . | 887 | 132,506 | 186,1572 |
| Hanau. | 58:3 | 121,582 | 123,588 |
| Total . . | 4,430 | 726,686 | 738,454 |

The population of the country was 560,866 in the year 1818, and kept on slowly increasing till 1849, when came a period of decline. The census of 1819 showed a population of 759,751 , which had sunk, in 1852 , to 755,3000 . The next census of 1855' showed a further diminution to 736,392 , or a loss of 18,958 souls. The census of 1858 , fiven above, registered the disappearance of another 10,000 inhabitants. Thus, in nine years, the country lost nearly 5 per cent. of its population, mostly by emigration to North America.

The greater part of llesse-Cassel belongs to the table-land of central Germany, of which it forms the N. extremity, sometimes called the 'Hessian terrace,' Its N. part is traversed by the Werra momntains; its central portion is oce ;ied by the platean of Fulda; and its territory towards the SE. and S. covered by the Khön, Spessart, and other mountain ranges, which enter lIesse from Bavaria. No summit, however, rises higher than the Meissner, belonging to the Werra range, which is $2,327 \mathrm{ft}$. above the level of the sea. The detached district of Schmalkalden, between the I'russian, Saxe-Mciningen, and Saxe-Gotha territories, is covered by the Thuringian forest moumtains, and Schammberg, between Hanover, Lippe Detmold, and Prussia, by ramilications of the Harz. Electoral-Hesse belongs principally to the basin of the Weser, which bounds it on the N., and receives the Fulda, Werra, Eder, Schwaln, Diemel, and Lahm; the Main bounds it on the S., and receives the Kinzig and Nidda. There are many large ponds, especially in the N., though mone is large enough to be called a lake. The climate is healthy, but in winter the cold is severe, except in the prov. IIanau, S. of the elevated phateau of Fulda, and in the vale of the Werra, where some wine of an inferior sort is grown. The medium temp. of the year throughout the Flectorate is about $50^{\circ}$ Falre. The soil is stony, sandy, and no where particularly fertile: except in llanan. It is there very proluctive, and rye is reported to vield 16 or 20 fold, aud wheat. iud barley in good situations as much as 94 fold, but such statemputs are uniformly ahmost greatly exaggerated. The whole country,
however. is capable of being rendered much more productive than at present ; only the narrow valleys and the lower portions of the hill slopes are cultivated, and the valleys, whilh, from their confined extent are exposed to excessive moistur-, are very imperfectly drained. A degree of indolence pervades the people in the rural districts; the villages have more of the Bavarian than the Saxon character, being often composed of mere ruinous wooden hovels: and the hohab, are commonly dirty, squalid, and slovenly. Agriculture is their chief occupation; it is in the most. forwand state in the valleys of the larger rivers. More corn is grown than is required for home consumption; it is principally rye, barley, minl oats. These are every where cultivated; whent is grown chiefly in Lower IIesse: the yearly produce of these four spiscies of grain is estimaterl at $4,000,000$ scheffo. Buckwheat is grown only in Schammherg, anil some parts of Fulda; and maize is confined to llanau. About 350,000 scheffel of pulse of varius kinds are ammully grown, and from 700,010 to 810,000 sch. of putatoes; these proflucts compose the chief articles of fond in the higher districts, besides which, potatoes are used to some extent in distilleries. Tobaceo, esteemed the best in Germany, is grown in Hanat, and on the banks of the Werra in Schmnlkalden : its annual produce averages from 17,000 to 20,000 cwt. Flax, also, of good quality, is largely cultivated in the 3 . provs, and about 150,000 stein are obtained yearly. Wine, which is almost exclusively promduced in Hannu, does not amount to above 1,(10)0 eimers a-year. Orchards are every where numerous; heinp, hops, chicory, poppy-seed, and culinary vegetables, are the remaining artieles of culture. Hesse-Cassel is one of the most richlywooded countries of burope; nearly $1-3 d$ of íts surface, particularly in Fulda, Hanan, and Schmalkulden, is covered with forests. In the 'lhuringime forest, and in Hanan, tirs are the prineipal trees; in the more level conntry oak, elm, mal beech, predominate: the oaks are in some paris very tine. Juniper berries form an article of e"insiderable export from Lower Hessc. The past?res are good, but cattle are not numerous. There were, in 1861, 31,167 oxen, 123,463 cows, mul 500,217 sheep. llogs and poultry are plentiful; not so bees. Game is not very abundant, and tisheries contribute but little to the support of the inhab. The peasuntry, like their neighbours throughout Westphalia, are principally hereditary teunts; and there are men nmong them who boast of being able to prove that they still cultivate the same farms on which their ancestors lived before Charlemagne conquered the descendants of Herrman (Arminius), or, for any thing they know, before Herrman himself, drawing his hordes from these very valleys, amihilated the legrions of Yarus.

Mining is pursued, more or less, in all the pross. Abont 56,000 ewt. of iron, $5,140 \mathrm{ewt}$, of cobalt, anil 1,000 cwt. of copper are obtained annually. There were formerly some tolerably productive silvar mines near Frankenberg, in Upper IIesse, but they had long ceased to be wrought: a small quantic. of silver still, however, is obtained near lbieber, in Hania. About $23 \overline{0}, 000 \mathrm{cwt}$. of rock-salt. $\mathbf{8} 00,000$ cwt. of coal, 400,000 ewt. of bovey coal, and turf in large quantities are annually produced. Coad of a good guality is abundant throughont the conntry. Mannfactures have not reached any high degree of importance, but they are rapidly increasing. Linen weaving and spinning are the most widely dithised, and form throughout the country the common auxiliary employments of the small farmers and their families. The faloriss are of every quality, from the coarsest houschold

elnths to the finest damask. The town and prov. of Fulda are the chlef seats of this bramel of industry, and it is estimated that from them alone 2im,to0) pieces of linen are exported, a large propartion of which are soll under the denomination of (Sinahurge. Schmalkalden is, however, the onty distriet in which there is any approadi to mannfacturing estahlishments on a large seale; it is the seat of extensive iron works, anil manulactures of fire-arms, cutlery, hardware, de. Iron and steel wares are also made in the valley of the Weser. Coarse woollens, stockings, camlets, carpets in llanan: leather, tobuces, glass, crucibles, purcelain and earthenware, paper, liats, gınpowder, tar, wooden wares, and musical instruments are among the other ehief artieles of mannfacture. There are many bleaching and dyeing establishments, breweries, and Ilstilleries. Cinsel and llanan are the principnl manufneturing as well as commercina towis.

The great article of export is linen cloth, sent hy way of Bremen and Frankfurt, ehietly to llolland, Demmark, and Ameriea. The other principal exports are linen yarn, woollen eloths, liats, jewelhery, bldes, sheep-skins, puper, iron and steel wares of all kinds, erucibles, timber, corn, dried fruits, and spirits. The chief imports are colonial goods, ilrugs, wine, flax ant liemp seed, silk, fine wool, and wuollen fubries, mirrors and uther glass wares, herrings, stock lish, horses, enttle, tin, gold, silver, and tobacco. The imports and exports nearly balance each other; but the most protitnble branch of commeree to the Electorate is the transit of trale; the grand rontes of commonication beween Frankfurt and Hambirg, herlin and Dresden, passing through the territories of Hesse Cassel. The dollar current is that of Prussia $=3 \mathrm{~s}$. The Hessian ell $\mathrm{is}=\mathbf{0} \mathbf{2 3}$ Finglish yurds, the foot $=\cdot 943$ linglish. The viertel of corn $=$ 55 linglish qr.; the ewt. is nearly equivalent to the English.

The Government is a limited monarehy, hereditary in the male line only. The different orders in the state are represented in one parliamentary chamber, composel of 52 members, consisting of the heads of the collateral branches of the electors: family, the mediatised nobles, the family of Riedesel (hereditary lords-marshal) and the seenlarised convents of Kanfumgen and Wetter, six deputies from the nobles and knights of Hanan, Filda, and llersfeld; 16 from the towns, and 16 deputies sent by the peasantry. The present constitution was proclaimed Jan. 5, 1831; it was alrogated for some time, a new and less demoeratic charter being substituted by the Elector in 1852, but in consequence of general dissatisfaction, threntening insurrection, the government was forced, in 1862, to re-establish the fundamental law of 1831. The inlab. of Electoral Hesse in the last century sufferel much from the epjression and rapacity of their rulers, who were necustomed, amongst other acts of tyranny, to traffic largely in the blood of their suljeets, by hiring ont their troops in the service of other Europenn powers. The supply of Hessian troops to lingland during the American war brought to the electoral treasury the sum of $21,276,780$ crowns between 1776 and 1784. The conquest of the country by the Frouch put an end to this slave trade. Though popular at first, the obstinate attachment of the late elector to aboses, and the growing demand of the people for reforms, produced a revolt in 1830, which bronglit in its train at least the promise of better government-promise, however, but inadequately fulfilled. The constitution of 1831 guarantees equality moder the laws, the free exereise of religion, free right of appeal, and eligibility to every

Vol. II.
oflice under government. For civil and eriminal justice there is a high court of appent lin (ansil), and a superior provincial court of the eato of emols of the provinces. With eneh of these a firest eourt is commecterl, and subordimate to them are the district julicial and rural pullee courts. The town police is under a sejarate commission; and meh of the provincial eaps. has a liead pulice comrt, as well as medienl, manutheturing, nud commercial tribmals, subordinate to hemi tribmals of the same kind in the cap. About four-fiftis of the pop. are I'rotestants, one-sixth part liom. Catholies, and the remalnder chictly dews. Expept the Intter, and between 1,000 and 2,010 iniliviluals, the lesecmants of emigrants from France, ut the revocution of the elicts of Nantes, all the polo. are of the German stoek. The reigning fumily is Lattherm, but three-fomrths of the I'rotustant inliab. are Calvinists. Since 1818, looth Calvinists mud Latheraus have been united for ecelesiantical govermment muder 3 consistories, at Cassel, Marhurg, and Hanan; the Rom. Cintholies are imiler the bishep of Fulda. The prinejpul establishment for education is the miversity of Marburg, fommed in 1527, which has 57 professors, mud is usually nttended by from 350) to 400 stidents. 'There are lyceums, or colleges of arts, at Cassel and Fildu, teachers' seminaries in Cassel, Marburg, anll Hanau; gymmasia, or high grammar sehools, in I lie 5 prineipal towns; several schools of itrawing, forest economy, and momerons primary seliools. Educntion was formerly more backwarl in the Electorate than in any other state in Cermany, but such is no longer the ease. The armed force is raised by conseription, and every male under oo years of age capable of hearing arms is liable to be called on to serve. T'le contingent furnished to the army of the Germ. Confederation is 9,406 men, of which 7,455 infantry.

Financial System.--'The budget period embraces a term of three years. Divided into minnal periods, the bulget for the years 1861 to 1863 was made up of the following items:-

Incume for the Year.

The lunget granted by the clamber for the whole of the three years 1815 to 1863 , amounted to $15,352,020$ thalers, or $2,302,8031$., revenue, and to $15,403,092$ thalers, or $2,310,4641$., expentiture. Aecording to the convention of 1831, half the revenues of the electoral property belongs to the public treasury; the other half is at the free disposal of the elector; but fresh disiputes have since

M M
arisen between the electoral house and the nation, respereting the claim to the property of the lanigrave of Hesse liotenburg.

Hintory.-'The honse of Ilesse-Cassel was finmiled by Willinm the Sare, in 16t37. The lanigrave was raised to the difnity of elector by the trenty of laneville, in 1801 , whith title he retamel when restored to his dominlons in 1815, thongh there was no lomger an emperor to elect. Fromi 180 ti to 1813 Hesse-Cassel formed a part of the kingiom of Westphalia, of which Cassel was the enp. The electorate holiss the 8th rank in the German eonfeleration, having three votes in the full enneil, and one in the committe.

IIESSE-1)ALIMS'TADT, or the GRAND DUCHY OF HBSSE: a state of W. Germmey, consisting of two prineipual and not very unequal tracts of comntry, sepuratel from each other by the territories of Ilesse-Cussel, and Frankfurt 01 the Mnin, and of some smaller detnched portions chielly inclosed within the territory of Whlileck, the whole lying between lat. $49^{\circ} 12^{\prime}$ and $51^{\circ} 19^{\prime}$, and loug. $7^{\circ} 52^{\prime}$ nad $9040^{\circ} \mathrm{l} \therefore$. Upper Hesse, the most N. of the two principal tracts, is bounded $W$. by I'russian Westphnlin and Nassnu, and encireled on all other sides by Hesse, Cassel; the other jrincipal tract has $\dot{N}$. Nassan, Frankfort, and Ilesse Cassel ; L. Ihavaria; S. Ihalen ; and W. Rhenish Bavaria and Prussia; and isseparated by the Hhine into the provs, of Starkenberg and lihenish Hesse.
The grand ducly is ilivided into three provinces; the area and population, according to the eensis of 1868 and of December 3, 1861, are as follows:-

| Provinees | Aren In Eng. Sy. Nlles | Population |  |
| :---: | :---: | :---: | :---: |
|  |  | 1838 | 1s61 |
| Upper Hesse | 1,570 | 8001,261 |  |
| Starkenberg | 1,145 | 318,422 | 322,903 |
| Hhenish Hesse |  | 226,888 | 234,643 |
| Total | 3,240 | 8.15,471 | 852,250 |

For the three years previous to 1855 , the population decreased to the number of 17,010 ; since then there lias been a gradual increase.

The surface is very diversilied. Rhenish Hesse and the W. part of Starkenberg consist mostly of $n$ level phain of great fertility; the E. part of Starkenterg is oceupied by the richly wouled Odenwald, a lilly tract, along the foot of which rums the pieturesque mil celebrated Bergstrasse, a very ancient line of road, extending in uearly a strught direction from Frankfurt to Meidelberg. Upper Hesse is hilly or uneven thromghout, heing intersected by the 'Taunus, Westerwald, Vogelsgelirge, and other momntain ranges, the last named of which separates the basin of the Weser from that of the Rhine. The loftiest summits of the Vogelsgebirge are about $2,500 \mathrm{ft}$. in elevation, Next to the Rhine, the chief rivers are its tributaries, the Main, Weschnitz, Selz, aml Nahe, in Starkenberg and Lhenish Hesse; and in Upier Hesse the Wetteran, Nida, Lahn, Eder, Fulda, \&ic. There are many large ponks, bint nome worthy of the name of a lake. The climate is generally healthy, but varies very much in different parts. The mean temp. of the year in the plain of the Rline is about $55^{\circ}$ Fah, $\vdots$ in Upper Hesse it is little more than $51^{\circ}$ and snow lies on the Vogelsgebirge for 8 or 9 months of the year.
llesse-Darmstalt is especially an arricultural conntry. The plains of lhenish Hesse and Starkenberg, with the aljacent parts of Baden and Nassan, are amongst the best cultivatel, as

Well as most fertile tracts of Germany ; a circumstance which neconnts, for their supporting a puly. nemrly as dense as that of Ireland in comparative comfort, without manufnetures, and with lout little traic. Whenish Ilesse, in particular, is coverel with comi llehis, vinevarils, orchards, nuid villuges; and besiden snpplyling the demand for home consumptlon, expurts corn in cousiderable quantities. Whent is the principal prumee of the low lands, buckwhent of the Olenwald, and rye of Upper Hesse; but in the higher parts of the latter province little else than barley and oats are grown. In Rhenislı LIesse the rotations of crops are varions, and stulied with cumstant reference both to the moil and seasons, and the land is never falluw. Poplyy sced, rape, tubnero of good fuality, and fruit are extensively cultivated in this province; and its vineyards vind some of the finest growths on the Jhime, The total produce of wine in Hesse Jarmstailt, is entimnted at $180,000 \mathrm{ohm}(6,3 \cdot 1 \cdot 2,500)$ imp. fulls.), two thirils of which are exported Flnx, hemp, hops, and garden vegetables are the other chief objects of cilture. Cattle-breeding is proctised most extensively in Upper Hesse, where there is an active trale in live stock, incluting wheep, and hogs; bit many cattle, de., are also fattened in the Olenwndi, chiefly for the sumply of Frankfirt. The jrineipal forest trees are beceh, onk, hornheam, pinc, and fir; and in the Vogelsgelirge, maple, elm, and lareh. Large quantities of timber and woolen wares are sent from Upper Hesse and Starkenberg, down the Main and the Neckar. In Rhenish Hesse, however, timber is excecilingly scarce and dear, owing to the great destruetion of the wools during the Freneh tominion; and nearly al.' the muterial required for fuel has to be brought from the Black Forest or Spesmart momintains. The forests are mostly either connmual or grami dical property; they belong 10 the communes, especinlly in Hhenish Hesse, where, from their scurcity, they are highly valued. In the latter province, and in Starkenberg, property is very much sub-livided.
The condition of the lower classes of agriculturists, who are here, as all over Germany, a kind of copyhuld pussessors of the land, has been very much improvel since the year 1815 . l'ersomal services of all kinds have been redeemed, on casy terms, by the interference of the government, which began by giving up those due for erown linds at a moderate valuation. The tithes on new enclosures were volnutarily resigned both by the crown and by land-owners, and the existing tithes were converted into tixed raleemable rent-charges, for the purchase of whieh the state alvances capital at the rate: of $\mathbf{3}$ per cent. interest to the land-owner. A clarge to cover this outlay appears amually in the budget.
Nlilling is the occupation next in importance Salt mines are wrought at Wimpfen, in a detached portion of territory to the S., enelosed between. Baten and Wirtemhurg, where this mineral is found in great abundance; and for the supply of lhenish Messe, two mines near Kreutznach on the Nahe have been rented from Prussin. Berghaus estimates the proluce of solt at 180,000 cwt. anmually. Copper is obtained at Thaditter in Upper llesse, where a vein is profitably wronght, thongh the ore yiellds only from $1 \cdot 6$ to 2 per cent. of metal. At Biedenkopif, and on the estates of Prince Solms, in the mountainous parts of Uppet Hesse, nud in the Oulenwalil, extensive iron mines are wronght. Coal of inferior quality is abundant in Upper Hesse, and in scattered beds through the other provs.; but the total yearly produce is not more than $280,000 \mathrm{cw}$. Thif, building stone,
slaten, marlile, $g$ other chief mint of leand anil mer

Blatea, marble, gypsum, and potter's clay; are the other chicf mineral products, mid there are truces of lead and mercury.

Manufinctures on any extemiled sealo cannot be said to exlast lin the grinul duchy. Spliming and weaving linen and hemp are, as above mentioned, an anxiliary occupation of the arriculturn classes, particularly in the N. and NW, parts of Upyer Ilesse, at Lanterbach, Schlitz, and llerbstelin. Among thene are damasks and other the fabries; but the linens of IIesse Darmstadt camot sompete with these of Westphalin or Silespa, Sone silk-weaving is carried on at Olfenbach, and stuckiugs are woven there and at lhaben Hausen. Coarse woollens are manufactured in several places, princijully in the $N$. Tobacco is prepared for use at Othenbach, the principal mamefacturlig town in the grmul duchy. Few metallic articles are made, except needles and pins. l'aper, flazed pasteboarl for export to Russia, liranily; vingar, dyes, lenther (not cnough for home consumption), earthenware, and chemical problucts, comprise most of the remaining manninctures. The chief articles of import are colonial goods, horses, cattle, lides, leather, leaf-tobaceo, anil wine. Int the translt trade is the most considershle trale of comntercial industry. It was very profitable to Mayence as long as obstacles existed to the free mavigation of the Rhine, and all wares were forsed to be shifted into boats owned in that city. This barbarous privitege has been given up of late years, but a toll is still raisel upon bonts passing up and dewn the river. Maycuce is the emporium of the fruitful distrits of the Upper Khine, as well as of these on the Maine and Neckar. Hesse-Darmstacti was a ment. of the German Custons' Unien for many years before it was joined by Frankfurt; and a suecessful attempt was made, while that city heh out against the proposals of the Unien, to establish a rival fair at Ottenbach. The govermment of the Grand Duchy raised the tolls on the Maine, and the mart of Offenbach was making a considerable progress towards prosperity, when the adhesion of frankfirt to the Union occasioned the abandonment of the experiment.

The florin in circulation, equivalent to 1 s .8 d , is divided into 60 kreutzers. The ehief weights and mensures are the pound $=1 \cdot 1 \mathrm{lb}$. ling., the ohm $=3.202$ galls., the malter $=14$ Eng. gra., the fout $=882 \mathrm{ft}$. Eng., and the morgen $={ }^{\circ} 62$ Eng, acre.
The Government is a limited monarchy, hereditary in the male line, The states, according to the constitution of Dec. 17, 18:30, slightly modilied in $18: 18$ and in 1856 , consist of twe chambers. The first is composed of members of the (irand Dueal house, the medintised nobility, the R, Cntholic bishop, the head Protestant ceclesiastic, the chancellor of the miversity of Giessen, and ten ritizens nominated for life by the grand duke. The second chamber consists of six deputies from the knights or inferior nobility, who pay direct taxes tre the amount of 300 thorins aumually, ten depaties from the towns, and thirty-four l'rom the frechold land-owners, contributing eaehdirect taxes of 100 florins a year. The deputies are elected evory six years, and the chambers meet at least one in three years, No chmures in the laws can take place without their sanction, but they never assume the initiative in legislation; they have only the right of petitioning for new laws, which are then submitted to them by the minister. $13 y$ the constitution of 1820 , every sulpect enjeys fredem of person and property, and the free exercise of religios; all tre equml under the law ; and all, except the members of the mediatived noble houses, are liable to military service from

20 to 25 years of nge. This service may, however, be performed ly smbstitite, and there is a government ofliee, through the ugency of which puhstithtes are obtained on moblerate terms, 'The contimpent furnlasel to the army of the confederation is 10,825 men, male up of $\dot{8}, 0 \overline{1} 1$ infuntry, 1,291 envalry, and !tis artillary, Mayence, the most important fortress in (iormany, is farrisoned by eghal mimbere of Anstrian mid I'russian tromps, The press is free, and the abuse of fis froedom is comalable only by the civil law. The executive powers are in the hands of a prime ministar mal three ohhers. Justice is almhluntered in municipal and cantonal tribunals; high comrts in the cmpitals of the provinces; a military tribman at Mayence, and a superior conrt and conrt of appeal in Durmstait. In lhenish Hesse the courts of justice are modelled unom the fremeln system, mid trial by jury is in force, on which privilege a high value is placed.

Alont tlve-seventis of the pop, are I'rotestants, one-fourth R. Catholies, and 23,000 Jews. benides Whom there are a lew Mennonites mul other sects. The Catholies reside primipally in the S., und are suborimate to the hishop of Mayence. The twe Protestant confessions have becin organised into one, and have assmmed the rituas and diseipline of the I'rissimn evangelical chureh. 'The reigning family is l'rotestant. I'nblic instruction has alvanced rapidly within the last tifty years, especially in lhenisli Ilesse, where formerly the inhabitants generally were grossly ignormat.

In Mayence, which was the sent of a miversity, there was, in 1815 , not a single bokseller, mid mass-beoks mul catechisms were the only works printed. The institutions for education are now excellent. One elementary school at least exists in every parish, besides which there are four citizens' schools, seven gymmain, three seminaries for schoohmaters, four colleges, a military neademy, a miversity at Giessen, attended isunlly by from 300 to 400 students, and many special academies for the arts nud sciences. The commumes elect their own headboronghs, and the usnal restrictions with respect to marriage and settlement are enforced, us in the neighbonring (ierman states, Commissions for the sujpurt of the peor are appomed in the towns, mad, in Mayence especially, the charitable establishments are very well ortanised, $\boldsymbol{A}$ honse of correction fur secondury punisliment has been established on an impreved principle at Marienselloss, in which 3:00 convicts are contined, who both contribute by their labour to the support of the eatablishment, and earn a sum which is paid to them on their atiseharge.

The pullic debt amounted, at the commencement of 1862, to $15,245,000$ fiurines, or $1,28(0,00111$., the greater part of which was incurred for thes estahilishment of a network of state railwnys.

The grand duke is descended from Plififi, the Magnanimons, between whose finur mons the dominions of llesse beenme нeparnted towaris the enul of the sixteenth century. The grand duchy of Ilesse Darmstadt holds the ninth rank in the German Comfenleration, having three votes in the full diet, and one in the eommittere.

HESSE: - HOMBUHG (LANDGRAVIATE Ol'), a state of W. (iermany, and one of the smallest in the Conferleratlon, eonsisting of two detarched portions, Homburg and Meisenheim, abount 45 m , apmert ; the former enelosed between Hesse-Darmstadt and Nassmin, and the Inter sur-' romaded by the territuries of l'rassin, Oldenharg, and Rhenish Bavaria. United nrea, $106 \mathrm{sq} . \mathrm{m}$. 1'ole 2ti, NL 7 in 18 Eth . The Homburg division is ont the S. deelivity of the Tamme momenturs, the highest print of which, the Feklloerg, is within its limits. The soll is not in general rich, bat it has been rendered sudhiciently prodactive by the industry of the inhabitants to furnish more corn than is requireal for home consumption, besides fruit, garden vegetables, flax, and timber. There are manufinctures of woollen stuffs, linen falbrich, nud stockings, which, after supplying the home demund, find a ready sale at Frankfurt. Meisenhein, W. of the Rhane, is partially covered with ranges from the Humsiriliek momintains. Its $\mathbf{N}$. part is ligh, and its elimate coll; but the surface of its S. portion is much less elevated, Its temperature mild, and it yields a good denl of wine. Corn and eattle are plentiful, as are timber, coal, iron, and building stone. $\boldsymbol{A}$ little linen cloth, some linen and woollen yarn, and glass, are made; and there are a fow iron-forges. There is a superior court of justice in Ilomburg, with appeal to the high court of appenls in Darmstalt. The pop. is mostly Calvinist; there are, however, abont bi,t00 Lutherans, 3,000 Rom. Catholics, and 1,000 Jews. The public revenue in 1862 amomed to 639,507 tlorins, or 44,9591, and the expenditure to 519,687 florins, or 43,3071 . The contingent furnished to the army of the Confederation is 333 men. Hesse-Homburg is united, in the slender tie of 'persomal union,' to llesse-Darmstadt, the grand lake of the latter country being also landgrave. The last independent landgrave died early in 1866, without leaving any direet heirs; and by a treaty made previous to hiis death between him and his collateral heirs, the rulers of Hesse-Darmstadt, it was settled that the lanigraviate should remain a separate state for 25 years longer, or till 1891.

IIFTTON-LE-HIOLE, a village and township of England, par. Houghton-le-Spring, co. Durham, NE. div. of lasingtom ward, 6 m . NE. Durham. Aren of township, 1,590 aeres. Pop. 6,419 in 18G1, having incrensel from 919 in 1821. This astonishing increase is wholly attributable to the establishment of a large collicry, comneted by a railway with the port of Sunderland. This populous village, elicity inhebited ly pitmen, consists, like most other pit-villages in Durham, of numerons cottages fronted by little gardens, and interspersed here and there with houses of a better character. $\boldsymbol{\Lambda}$ church, dependent on that of 11 oughton-le-Spring, several places of worship for dissenters, and some good and well-nttended schools, have been established since the place has risen to its present importance. (See Hougntun-le-Sphivg.)
ILEXILAM, a market town and par. of Ergland, co. Northumberland, S. div., Tyndale ward,

20 m. W. Newenstle, and 34 m. F. Carlinle, on the Neweastle-Carlisle railwuy. I',np of town d, isin,
 acres. The town stanils on a hilgh baiks S. of the: Tyne, a little below the contluence of its N. and S. Irmehes, and in the midat of a rlch and well cultivated comentry. A handsome stome bridge of nine arches comnects it with the N. bank of the river. The atreets, thongh narrow and irregular, contain several goosl honses; and the markut plinee, with the conduit in the centre, is a hamisome quadrangle, on the $S$. side of which is nin old market-house, supported by pillars, and haneath it are stalls for butchers and comintry dealers; on the Li. side, surmounted by a stonie tower, formerly used as the cown gail, is the ancient town-hall, where the manor court antil petty sessloms are held; and on the W , side is the Abbey clurech, partly in ruish, anil now coulslatiug oily of a transept and choir of mixall Norman mid Gothic architecture, with a suare tower, 90 ft . high, rising from the centre of the building. The ltwing is peenliar to the prove of York, and the great tithes are appropriated to one of one of the stalls in York enthedral. The li. Cotholics have a handsome chapel, besides whieh there are places of worship for Wesloynn Methudists, Indeyendents, and chhers. A free grammar school, fomiled by queen Eilizabeth in 1598, was subsequently endowed with property for the ellucation of the youth of this and of the adjoining towns and parishes. The foumlation boys, whese number is not limited, pay a stipend of 7s. Gid.a quarter, and about forty niore are edncated with them, the instruction not being exchasively chassical. A mechanies' institute, a savings' buik, aul a dispensary have been established of late years.
Hexham has long been famons for a jeeculiar description of gloves, called 'tan-gloves:' they were formerly much worn, but of late yenrs havo fallen into comparative disuse. Hats and coarse worsted goods are also made in considerable quantities; and about half the pop. nre employed in these branches of industry. Markets on Thesday and Saturday, but chietly on the former; and cattle murkets on every alternate Tuesday. Fais, Ang. 5, and Nov. 8, for live stock anil woollen goods. The ammul sales in the Hexhmm market average $4,000 \mathrm{qrss}$ of wheat, 2,000 qrss of oats, and 1,500 qrs. of rye.
The site of the town close to Hadrinn's wall, and the discovery of many Roman inscriptions, altars, and other monaments, have led to the supposition that it occupies the site of the Roman station Axelodunum. St. Wilfrid, archlisishop of York, introduced into Hexham the arts of Frave and Italy. This prefate made it a bishop's sec and a co. palatine; but in 883 it was united with Lindisfarne, and timally, in 1112, was annexed to one of the prebends in York eathedral. David, king of Scotland, shortly before the battle of Neville's Cross, halted here for three days. The church, which had been ruined, was rebuilt by Thomns, Archbishop of York, who also foumded a priory of Augustine canons, the aunual revelucs of which amomnted, at the dissolution of the momasteries, to $138 l$.
HIERES, or IIYERES, a town of France, dép. Var. eap. cant. on the S. deelivity of a conical hill, 3 m . from the Mediterrancan, and $34 \mathrm{~m} . \mathrm{SW}$. Dragnignan. Pop. 10,360 in 1861. The tewn commands beantifin and extensive views, but its internal appearance is far from corresponding with its situation, its streets being steep, narrow crooked, dark, and very badly paved. Its higheot point is crowned by the ruins of an ancient firtress, from which descend on either side the tracts

of a line of thiek walls, that formerly surrounded the whole town. Int the l'hece Ruynele, a large hut glominy-lisikling square, in a columin, surmemutenl with a the marble lonst of the most illustrions of Ita citizenn, Mansillom, burn here on the elthe of June, libis. 'The suburb at the foot of the hill ta much pleasanter, anil more fregnented ly vasitorm, than the town itself! it has nollie excellent hotels. It is satd that llieres wis furmerly a men-port; at present, a plain of great fertility intervenes hetween it and the sen, covered with orange plantatioms, tho best in France, vineyaris, and olive grommils. The town has mannfacturen of orange-flower water at other perfumes; branly, oil, and silk twist; and trules in these articles, olives and other frulte, nind whe. Under the name of Arcue, this was one of the colonies anciently estabilished hy tho tirceks on the shores of the Mediterranemis the Rumans colled it Hieros, but the momuments with which they embellished the city have entirely disuppeared.
Iliniess, Isless of (an, Strechates), a group of fumr smanll islands in tho Mediterrmenn, almout 10 m . SE. Hyïres, and 14 m . ESE. T'oulon. 1'orquerolles, the lurgest, is 5 m . Long by 2 m . brond: it in furtifled, and has about 100 inhab. JortCroz has also a garrisom, and about b0 inhab. The other islauds are surrounded by several rocky islets. None of them is fertile.
HICillAM-FERRERS, a bor, market town aud par. of Empland, co. Northampton, hund. of sume name, near the Nen, 14 m .1 NL . Northamptim, and 83 m . N. Lomdon by London and North Wentern railway. l'op, of par. 1,152 in 1861 ; area of par. 1, sil neres. The town stands on a rocky height, commanding a fine view over tho valley of the Nen. The church has a tinely ormamented W . front, and $n$ tower and spire $16 \mathrm{t}^{\mathrm{ft}} \mathrm{ft}$ high. A monastic college foumded here in 1422 was surrendered in 1543, and a portion of its revenues was devoted to the endowment of the present free selool, recently rebuilt in a handsome style. Hig-han-ferrers, which, many yenrs ngu, hail a respectable lace-trade, is now quite insignificant as a place of industry. The place, which in a bor. by prescription, sent two mems. to the II. of C., from the reign of lhilip and Mary down to the passing of the Reform Act, by which it was disfranclised. The franchise, though nominally vestel in the freemen, was really exercised by earl Fitzwilliam, the proprictor of the greater purt of the borough.
HICHGATE, a village and chapelry of England, partly in Hornsey, and partly in St. 1'micras par., co. Middlesex, hund. Ossulston, $3 \mathrm{~m} . \mathrm{N}$. Lamidon. Pop. of eccles, distr, 4,547 in 1861. The village stands on the top and sides of a hill about 450 ft . high; and many of the houses are well built, being occupied by opulent merchants and others belonging to London. On the top of the hill, on the road towards Barnet, is the Gatehoise, formerly a toll-gate at the boundary of the bishop of London's estates. For many years a tavern existed here, in which strangers were 'sworn at llighgate; that is, in which an old custom was kept up of swearing them not to drink small beer when they can get strong 'unless they like it better.' The old chapel, built in 1565 as a chapel-of-ense to Hornsey, was replaced in 1832 by a chureh in the pointed style, contiguous to which is a spacious cemetery. The dissenters have three places of worship, to all of which are attaehed large Sunday schools. The grammar school, tounded in 1562, was for many years almost useless; but, in consequence of the representntions of the charity commissioners, a reform was
effected in its manugement, and it has lately hecome an efllicient well-attembed chassiend meloon. Many gocel bourding-seluols fir loyss mad girls are extablishied in and nlwotht the vilhage. Thero are ahmehomes fir twelve puor persons, and two well-supparted charity selowis. 1., of llighgate runs the olly great north turnpike-romel lin an excavated bollow, about tio ft. deep at one mat, where it in crossed by a bridge or areliwny, formIng the thoronghfare to llurnsey. Clone to the opening of the archway-road ls ihe mereern' hospltul, a handsome Elizailethann strneture, with two whigs, and a chapel in the centre. Cand-when, the benutiful seat of the earl of Mansllell, lies between Highynte and IIampusteal.

HIGHILANIS, Dee Sothanl.
HILDESHIEIM, a town of Hanover, eap. of princ. and lundidrostri, on the limerste, a trihitary of the Lelne, 19 m . Ssit: Hanover, and 41 m . N. (ibitingen, on a branch of the railway from Hanover to Goittingen. Pop. 17, 1id 4 in Exil. Hildeshecim is an old town, surrounded with rumparts, now used as public promenales, Irregulaty bullt, and having extremely marrow atreets. Among its churelies, the rathedral, crected by Lonis the I'ions, in slas, is remarkable for lis fine bronze gates of the 11th century, its pmintings on glaw, and for a hollow pillar of grecinish atone, anpposed to have been a saxin ldol, and now nurmounted by an innge of the Virgin Mary. This, and three other churehes, belong to the Roman C'nths., who luve also a consistory and a divinity college, nttended by furty-two stulents. The other elucational establishiments are n Lutheran gymmasinm with a good hilurary, nine schools, mind a large and ndmirably regulated pour-selool eennectel with a house of industry. Among puldie buildings and institutlons are the episeopal pulace, comncil-hall, treasiry, hunatic asylnm, thrce orphan houses, and an establinjlument for the deal and dumb. The trade of llidesheim is inconslderable, except in coarse linen cloths and yarn; its oilher products are lenther, soap, starch. sumtr; blenched wax, and earthenware; but cattle-fiairs are held here said to be the largest in the kingdom.
Hillath. Se babyion.
MIMALAYA MOUNTAINS (THE), (Sm. Himatilaya, alode of snow; an. Imeus or Limodus,) an extensive mountain rango of Axia, and the loftiest of which we have any knowledge, bounding the low and level plain of Ilindostan on the $N$., and separating it from the table-land of Thibet, which stands $10,000 \mathrm{ft}$. above the sea. This chain is continuous westward with the Ilin-doo-koosh and Belur-tagh, and E. with the tableland of Yun-nan; but the term Himalaya is usually restricted by geographers to that portion of the range lying between the passages of the Indus and Bralimapootrn, or Sanpoo; the former being in lat. $35^{\circ} \mathrm{N}$., and long. $75^{\circ} \mathrm{E}$., and the latter in lat. $28^{\circ} 15^{\prime} \mathrm{N}$., and long. $95^{\circ} \mathrm{E}$. '1hie direction of the range, as thus defined, is SE. Irom the Indus to the Gmaluk, and theuce E. to its termination. Its entire length is $1,900 \mathrm{~m}$., its average breadth 90 m ., and the surface which it covers is estimated at $160,000 \mathrm{sj}$. m. The NW. extremity of the chain, called the Gosscic mumbtains, extends in a SL. direction along the sources of all the P'unjal rivers, exeept the Sutledje, nad separates the hilly part of Lalore from little Thibet. E. of the Sutlenje, which ents a passage through the momatains, in lat. $31^{\wedge} 30^{\prime} \mathrm{N}$. , nad long. $70^{\circ} 40^{\prime} \mathrm{E}$., the range, still runniug sti., crosses the hends of the Jumna and Gauges; it then, in its course E.., gives rise successively to the Gogra, Gunduk, Cosi, Muhuuunda, and Teetsn, and is bounded on both sides at its $\mathbf{E}$. extremity
by the circuitous channel of the San-poo, to which, however, it eoutrilmites few afluenta of fiuportance. 'The averago lielght of the Ilimalaya chalin has beelt estimated at $15,700 \mathrm{ft}$. but linmerous peaks far exceed in altitude the Chimborazo of the Alides, so loug nupposed to be the highest polint on the ghobe. The principal of theae are nus follows, with their situntion aud lieight from thos sea.

The passes over the maill ridge, as far as we know at present, amoint to about twenty, a few only of which are practicuble for horses, wheep heing chietly used as beasts of hurden over the stecper paswes. 'Their height above the sen varies from 10,000 to 18,000 ft.; the 1 rincipnal are, the Kindriball pass, lietween Cablimere and Ladak ; the Paralaha ( $16,500 \mathrm{ft}$. high); leading from the Upper Chenali valley to Ladak; the Shatool, lloorendo, and l'iming pusses, all mueh frequented, on the rond $N$. up the valley of the Sutledje; the Ghang-tang-ghaut ( $10,150 \mathrm{ft}$.), practicable for horses, and leading up the bed of the Hhagirnthi to Chnprung, a Chinese post on the Upper Sutledje; the Netee-ghaut ( $16,814 \mathrm{ft}$.), used by the «reat caravans passing between Thibet and N. Ilindostan; the Dooraghant ( $17,790 \mathrm{ft}$.), also a much frequented route, comuecting the valley of the Kalee witl Dumpo, in Thibet; nul the Mastang puss, near the source of the Gunduk: the passes to the E. of this river are little known. The glens, through which these mountain-trneks run, are usually at right angles with the main range, and the NW. face is invariably rugged, and inclined at an angle of $50^{\circ}$, whlle the $\$ E$. slope is more smooth, and has an inclination of only $23^{\circ}$ or $80^{\circ}$. (Lloyd and Gerarl, 1i. 29, 6t.) The limits of perpetual congelation in the Himalaya chain, which, according to Lestie's theory, would be $11,400 \mathrm{ft}$. above the sea, have bcen ascertained, by the observations of Webb, Gerard, \&ce., to be generally higher; and they have likewise proved that, while the snow-line on the $S$. slope is at an elevation of $12,400 \mathrm{ft}$., the mountains on the side of 'Thibet are free from snow in summer as ligh as $16,600 \mathrm{ft}$. This unexpected circumstance is attributed by some to the difference between the serene climate of Thibet and the fogry ntmoaphere of Himdostan; but by Lyell and others, with more probability, to the intluence of the hent radiated by a grent continent in moderating the cold. (Lyell's Geol., i. 181.)

Geology,-The only rock sufficiently extensive to characierise the geological formation of the great chaia is gneiss, which constitutes the substance of the highest rilges and crests. Granite veins oceur on the surface only in some directions, intersecting the gneiss; but Captain Johnson and other travellers are of opinion, that granite forms the base of the mountains, and that gneiss is superimposed on the general bed. On leaving the centre of the range, schistus and clay-slate, primitive and secondary limestone, and red sandstone are successively met with on either side. Wven in the centre of the chain, however, masses of Himestone and sandstone have been found at an elevation of 16,000 and $18,000 \mathrm{ft}$., locked here and
there in uprained eryatalinie rooks, a phenomenon olservable alma lit the Alps and l'yreneen
 in the Illonalaya monstrins comsist of bomen of many different specien of riminating anlomels (nome of which were found by Cuptain Wehh at mi clevation of $\mathbf{1 6 , 0 0 1} \mathrm{ft}_{\mathrm{o}}$ ), of ammonitea, belen!nites, mid varions kinds of land dind fresh-watyr whells. The chief minerals hitherto fand are mild pluir, alum, ruck-malt, grold dust, popl" r, lead, iron, antimuny, and manganese; and the mine of No pail are reported by Ilachanan Itamilton to produee large quantlice of lemi, copper and sulphur (Hamilton's Nepmu), introd.) Ihere are no direet traces of volcancien la the allstricta explired by the linglish; but the mumerons thermal springs (that of Simmotri having a temperature of $1, y^{\circ}$ Filir.), and many shocks of earthouaken felt by travellen in ilifferent purth of the range, limicate it to be the focus of mubterranceus movements and derangements of the earth's crust. Among the physicnl blienomena observed on this great chain may he mentioncithe falls of the l'abur, the highest known and exteeding $1,500 \mathrm{ft}$., and the Iripping rock of Snusdarrali, neur Deyra Ibmhl, in Gurhwal, re sembling, though on a larger seale, those of Knareaborough in Yorkshire, and looslyn, neat Bilinhurgh. This rock, situated in a glen surrounded by mountaina rising almost perpendicilarly to the helght of $5,000 \mathrm{ft}$, and clothed to the very top with the most benutiful wood, overhangsa small basin of water like the roof of an open plaza, extendlug about 50 yarils in length; and above it la a amall atream, which being nisarbed by the marshy nnture of the soil, is filtered through it, and falls into the basin In a continual shower. The roof of the rock, and also of a neighbouring enve, are covered with stalactitic incrustations, which it some cases have descendel to the floor, having the appearance of sparkling pillars. (Cupt. Johnson, in Geog. Journ. iv. 43. ; and Hamilton's Ga\%.)

Vegetation.-The height at which plants and trees flourlsh on the Himalayn range varies on the N. and S. slopes, nearly proportionally to the difference in the altitude of the snow-llne. On the S. slope grain cultivation is not attempted higher than $10,000 \mathrm{ft}$; the highest habitation is at an elevation of $9,500 \mathrm{ft}$ : pines (whlch form by fat the largest preportion of forest in every place) show their best growth at a height of $10,300 \mathrm{ft}$; but beyoud $11,000 \mathrm{ft}$. they grow in amaller quastities, nad are of less girth and growtli. 'The rhododendron frows up to $12,000 \mathrm{ft}$., and lirches are found as high as 13,000 fit. above the sea. (Gierand and Llovd, i. 343., il. 9.) On the N. side, villates are found hetween 11,000 and $13,000 \mathrm{ft}$. high, and grain cultivation advancea to a height of 13,501 ft . ; birch-trees rise to 14.000 ft .; and vegetation is found up to an elevation of $17,500 \mathrm{ft}$., that is, upwards of $3,000 \mathrm{ft}$, higher than on the S . slupe. The grains found on these heights are wheat aud barley, bhatoo (Amaranthus anardhana), cheenalı (Panicum miliaceum), khoda (Paspalum scrobiculntum), oon (Hordeum coleste), and phapur (I'anieum tartaricum). Strawberries and currauts thrive on the S. side at a height of $11,600 \mathrm{ft}$., and 1.000 ft . higher on the opposite side.

Zoology. - The mammalia of the Ilimalaya range are chiefly confined to ruminating animals, a few varietles only of the horse and cat tribe heing found in these regions. The wild horse is seen on the N. side of the mountains: but the principal tenants of the hilly pastures are the yak (Bos prophagus), much used as a beast of hurden ly the Tartars, the ghurl (Caper agagrus), of which the Cashmere and Thibet goats are varie-
phenomenon d l'yreneen. mains follul! of brines of ing animaly ait Wubl at mites, beletu1 freah-watur enund are nul. ri, leal, irm mithes of N nitton (o) phe $^{\text {ne }}$ and mulphur are no diree inlored by the springes (that - $100^{\circ}$ Finhr.) by traveller te it to be the and derauspe the physicul chain may he Ighest known, pping rock of Gurliwal, re. ale, thone of lioslyn, near a glen surit perpenticulothed to the d, overhaugs a n open piaza, and ahove orhed by the ad through it inual shower nelghbourim: Incrustations 1 to the floor pillars. HINCKLLI', n market town and par, of lingland, co. Leicester, lumd. Sparkeuhoe, 12 m . SW. Leicester, and 102 m. NWN. London, by Lomilon and North Western railway. Pop, 6,341 in $1 \mathrm{k}(\mathrm{il}$. The town stands on a commanding aminence close to Warwickshire, from which it is divided by the old lioman Watling Sireet: it is well built, though old, and near the centre stand an ancient town-hall and sehool-honse. The ehureh is a tine old Gothic builling, with a tower and steeple $1: 1) \mathrm{ft}$. high. The dissenters liave several places of worship, connected with which and the dhureh are Suminy schools. There nrealsomational and infant schools. The staple manufacture of the place is hosiery, introdnced about 1640 , nud now employing in the town and neighbonrhood mpwarls of 2,000 hanids. Coarse substantial stockings are suid to be made here in larger quantities than in any other part of lingland. Narkets (well attended) on Monday : finirs 1 st, 2nd, and 3rd Monday after Lipiphany ; Easter Mondny, Mondny before Whit-Sunday, and Whit-Monday, for horses and live stock; Ang. 26., and Monday after Oct. 28.
Near the Ashlby-de-la-Zonch canal, which passes close to the town, are the remains of a Roman fortiliention, and the remains of a wall and ditch, tracentle all romm, indicate Ilinckley to have been formerly a place of some importance.
hINDOSTAN, or INBA on this she the Ganges or Bibamafutia. Neme and Limits.The ancient inhabitants of India had no common name for themselves or their comutry ; but their Persian neighbours called the people Hindoos, and the country, as fin as they knew it, Ilindostan ; words which, in old English, would have been accurately as well as literally rendered, 'Negro,' and ' Negrolamd.' 'The comprehensive sense in which the term llindostan is now employed, as distinctive of the entire territory $\$$. of the Himalaya mountains over which the institution of eastes prevails, is of European origin ; the people of the country confining the term to the territory lying N. of the Nerbuddali, and calling all to the $S$. of that river the Decean, a worl derived from the Sanscrit, and meaning ' the right hand,' and also 'the south.' In the Furopean sense, Hindostan comprises the whole of that vast triangular country extending from the borlers of Little Thibet, in about the 35th deg. of N. lat., to Cape Comorin, in abnut the 8th deg. It is bounded on the N. by the highest range of mountains in the world, the llimalaya; and by the two great rivers, the Brahmaputra and Indis, on the NE. and NW.; and in every other direction by the ocean. It comprises in all an aren of between $1,200,000$ and $1,300,000 \mathrm{sq}$. m., or abont a third part of the estimated area of Europe; but from the absence of gulfs, inland seas, and lakes, the proportion of solid land is greater.

Surface and Geology.-The surface of Hindostan, taking this word in its widest acceptntion, is of a very marked character. On the $N$., constituting the base of the triangle, we have three great ranges of mountains, with elevated valleys between. These chains rise, the one higher than the other as we preceed northward, the last
constituting the highest momintains hitherto diseoverad. For 1,0 (it) m., from Chima to C'ashmere, a plain might be extended, reating on penks 21,000 ft . high, while some are even $6,10 \mathrm{ff} \mathrm{ft}$. alove this elevation, The valleys themselves are from 2, (1) to $f, 000$ ft, above the level of the win. I'rimitivo rocks alone compose the higher ranges. dinciss predominates; but with it is fommi gramite, mica slate, horublende schist, chlorite slate, crystallino limsstone, and marble. On these repose clay shato mad tlinty slate. In the lowest or sonthern range, sumdatone composes that portion which terminates in the plain of the fimges. Crossing this phan, and proceeding sonthwarl, we come to mothor chain of monntains, the Vindhyan range, rinnning nearly E. . nad $W$. across the centre of Ilindostan, in mbout the 23 d deg. of lat. This is the basis of a trimple of momatain ranges which supports the vast table-land al' C'entral Iudia. 'the formation here is primitive, consisting chiefly of guciss; but where it terminates in the plain of the fianges, and forms the s. thorrier of the latter. the formation is smadstone, as on the N . side of the same plain. The grent $W$. range of mountains commonly called finants, commenees on the NW.: where the Vindlyan range terminates, and runs in a direction nearly $N$. and s., to betwren the 10th and 11 th deg. of latitude, intil at Coimbatore they meet the li. range, or Ghauts. The formation of this chain is primitive; but to the N. there is a great extent of overlying trap, columnar, prismatic, talular, and globular. To the S., arain, the overlying rock to 11 great extent is laterite, or clay iron-ore. 'The W . is much more clevated and contimuous than the l.. Ghants, and some of its lighest granitic peaks rise to the lieight of from 6,4010 to 8,700 it. It is remarkable for the obsence of valleys of demulntion, and of rivers running W., but is covered with exten sive forests. In fact, the sea, in some sithations, comes up to the very foot of the mominins, mid nowhere leaves anything more than a narrow belt of low lanc, much broken by deep and narrow inlets. This is the coast of Malahar, expused to all the violence of the SW. monsoon, blowing withont interruption for six months from the consts of Africa and Arabia. Where the E. and W. Ghants meet, commences the remarkable valley or gap of Coimbatore, which leaves a clear breach in the mountain chains, extending from the E. to the W. sea. A wingle chain of the same formation as the E. Ghants then rums all the way to Cape Cemorin, leaving the plain of Travancore to the W., and the nore extensive plain of Madura and Timevelly to the E. The E., chain, or Glauts, may be suid to commence at the Neilgherry hills, which are among the highest mountains of S. India. lirom this point they diverge in an E. direction, and soon break into a suscession of parallel ranges less elevated and more broken than the W. (iliauts. In their further progress to the N., the J. Ghants break into subordinate ranges and valless, which give passuge to the great rivers that drain nearly all the waters of the peniusula into the Bay of" Bengal. This range terminates nearly in the same parallel of latitude to the W. Granitic rocks, especially sienite, form the basis not only of the E. chain, but of the range which runs from the gap) of Coimbatore to Cape Comorin. The sienite discovers itself at all the accessible summits, from Cape Comorin to Hydrabad, from the 8th up to the 17 th deg. of latitude. Resting on the granite, gneiss, and talc-slate, that form the sides and bases of the E . chain, are sometimes seen clay, hornblenrle, flinty and chloride slate, with primitive marble of varieus colours. At the Pennar river,

In the lith and listh deg, of latitude, clay, ironore, or laterite, expmuds over a large surfinee, and samintone begias to appent. At Visagapatam, (iamjnm, and Cottack the sanac formationa continnes, and the laterite extends throngh Midha-
 smalstome. A cellalar carlsmate of time, called kankur, feculine to the geolugy of Smlin, is funnd over all the district now maned, ns well an in many other parts of Himestan. The ereat conlflehl runs for $16 \mathrm{~m}_{\mathrm{i}} \mathrm{m}$. in kength, and is in breadth, on both siles the river Dumoda. It is supposed to cross the (inuges, and to extemil ull the way to Syllict and Cuchar, from which phaces abomlant specimens of surfine conl have been bronght. The rock formation lore consists of samistone, clayslate, and slable, the lutter, as usual, lying imanedintely over the coal. Mr, Jones, an English miner, opened the first colliery in India, in the year 1815, at this place. The pite are to the ileptlo of 90 ft ; seven semns of the mineral have lecen met with, one of them of the thickness of If fis: conl in how largely consmmed in Calenta, clastly for forges and stemn mavigation. From the Damola river to liemares granitic rocks jurevil. On appronching the river Some, however, sandstone hecomes the surfice rock, and, one interval excepted, extends to the N. of Agra, as fior as the 2 ath deg. of latitude. The exception ocenrs in the lower portion of the province of Bundlecunt, where granite again prevails, while the upper consists of sanistonc. The great surface formations of the table-lanul itself are granitic, including always gneiss and sienite, with stamistone and the overlying rocks. Basaltie trap extends over the provinces of Malwa and Sagur, procecis by Nagpore, sweeps the W. portion of the Ilydrabint territory down to the loth elog, of lat,, where it bemds to the NW, and ruming all the way to the const of Malabar, forms the shores of the Conemn. In all, it seems to eover an area of abont $201,000 \mathrm{sq}$, m . We may observe here that the feological formation of India is extremely simple, compared with that of Europenn countrics, consisting only of four elasses of rocks, viz. the granitic, the sambstone and clay-slate, the trap, and the allovial. Of the latter an example on a great scale is in the plains of the Gunges and Indus, which meet between the 28th and 31st deg. N. lat., and the 76 th mad 7 7th dog. E. $\cdot$ long.; as well as in the plain lying between the li. Ghants and Bengal from Cape Comorin to Cuttack.
'The natural geographical divisions of llindostan are as follows:-1. The ranges of the IImalaya with their valleys. 2. The Gangetic plain, comprising only the tract of inundation, and which rises very little above the level of the sea. 3. The upper plain of the Ganges, from the province of Bahur inclusive, up to the foot of the first range of' the Ilimalayas, where the Ganges and Jumna issue from the hills to the N., bomiled to tho S. by the Vinthyan range, and to the W. by the great desert. I'lie hejght of the E. portion of this clivision may be about 500 ft . above the level of the sen, and the land rises gradually as we proceed N., 1util, where the great rivers emerge into the plain, it has an elevation of $1,000 \mathrm{ft}$. 4. The N. portion of the great central table-land, as far S. as the valley of the Nerbudda, which generally intersects the table-land in question from $E$. to W . The lieight of this portion of the table-tand ranges from 1,700 to $2,000 \mathrm{ft}$., as at the towns of Oojien, Indore, and Mhow, 5. The portion of the tableland which lies S. of the valley of the Nerbinda, down to the junction of the E. and W. Ghants, and the valley of Coimbatore. The height of the table-land ranges here from $2,000 \mathrm{ft}$ to 2,400 and

IJ,000, as at l'oonah, Seringapatam, nid Haugnlore, 13. From the gap of Cobluhatore inclusi, e to Cape Comorin. 7. The nurrow strip of low hand lying between the W. Ghants and the son, ur const of Malabar, including the W. acelivitien of the monatalis themselves. 8 . The allivinl plain, of unequal brealth, whicla lies between the I:, filanits und the Jhy of 'hengal, genernlly ealled the larnatic, rising gradianlly from the shore to the fore of the mountains: at the town of Areot, ti$) \mathrm{m}$. inland, it is 490 l't. above the level of the sea;and D. The penfonsula of Gujrat, with the indjneent conntry, containing much monatain-land hal a few phins. Alt these differ so materinlly in their physient aspect, climate, geological formation, mimil and vegetable prombetions, as well is in the elmatuter of the nations anil tribes which inhabit them, as lially to warrant this ilistributlon.

Rivers.-'The rivers of India have their somrees either in the Ilimalnya monatains, or within the great central table-land. The first class are by far the largest and most important. Ieginning from the lo., the first great river which occurs is the Bralimaputra. The souree of this strean is nut exactly nsecrtaned; but its conrse has been estimated at about 8150 m ., and it is believed to disclaarge a larger volime of water than even the Ganges. Its course in the plain of Bengal, frum Goyalpara to the bottom of the bay of brognt, where it debonches, is but 350 m .; and having a rupid current, and passing generaliy through a wild and inhospitable conntry, it is of eomparatively little service to commeree or mavigation, The Ganges, called Groma by all the Indimis, has its origin in two principul brmaches, abont 310 N . lat., and between $70^{\circ}$ and $80^{\circ} \mathrm{Fi}$. long. Its whole course is reckoned at about $1,350 \mathrm{~m}$; but from its entrance into the plain at Iluriwar, its conrse to the sea, into which it falls within a few m . of the Brahmaputra, is about $1,200 \mathrm{~m}$. Within the phain all its branelies are navignble for boats, and the Bhagherettee, its most W. branch, usually callew] by Europeans the Hooghly, is mavigable for ships of 400 tons burien, as far as Calcutta, 100 m . from the sea. According to Major Rennel, the principal branch discharges 80,000 cuhic ft . of water per sccomd. 'The greatest of the afthents of the Ganges is the Jumna. It also has its origin in two branches within the highest masses of the Ilimalaya, to the W. of the sources of the Ganges. Its course within the mountuins is about 120 m : it issues into the plain abont 30 m . W. of the Gianges, and here its bed is about $1,200 \mathrm{ft}$. abseve the level of the sea. In the comrse of n few miles, however, passing over some falls, it takes a lower level, After a course of 450 m , passing by the Mohammedan capitals of Delhi and Agrn, and being navigable for a great part of its course, it joins the Ganges at Allahabad. The other prineipal afluents of the Ganges which take their source from the Himalayn, are the Ram Gangh, which joins the Ganges above Canoge; the Goomtee, which passes by Lucknow, and after a wimding coursc, whence it derives its name, joins the Ganges between Benares and Glazeepoor; the Gogra, with a course of 600 m ., and the largest of the aftuents of the Ganges on this side the limitlaya, after passing through Fyzabad and Oude, joins the Ganses above the town of Chupra; the Gunduck, which has a course of 450 m . ; the lharmutty, which passes close to Cat-manloo, the capital of Nepanl; and the Coosy, originating in the table land of 'Tibet, and which enters the Ganges at Boglipoor. The great delta of the Ganges may be said to commence at Sicligully. The first bifurcation of the Ganges itself coanmences at Sooty, 20 m . below Rajamahal, at

The fanges receives, ater thls, from the llimalaya, the Muhamada and J'esstn, which have their someres in the monntains of Nepanl and lootan, witl courses of from $2: 30$ to 3160 mm . After the junction of these, the Ganges commmateates with the IBrahmaputra by a variety of brasches. The rivers which finl into the Ginges, or its ullnent the Jumm, from the N. aeclivity of the central table-land, are the Sisue, the Betwali, und the Chumbul; the latter lias a course of 400 m. Hoth It and the leewal fill into the Jumma. The Some ts an atluent of the Ganges, and falls lito that river a little abovo I'atna. (See (innaes.)

Lakes,-Inlia is remarkully deficient in lakes, and in fact contains no large collections of water, fresh or sult, such as the lakes of N. Americin, N. Asia, Switzerland, or even Scothant. In the N. parts of lengal there are a few freshwater hakes of some extent, but the greater momber of this descripition fonnd throughout the comutry are supposed to le mothing more than the old chamels of rivers which have taken a new course. (If the sume chnructer, in some respects, are the Chilka lake in Cottack, and the Colair lake in the Circars; the first of which communicates with the Mahitmuldy, and the last with the tiodavery and Kistua. The Chilka lake is 35 m . long and 8 brond, and contains severnl islands, and ubommes in tish: it is sepurated froul the sen by a sand-bank not alove $\& \mathrm{~m}$. bronl. 'I'se Colair lake is 2.1 m . hy 12 in the dry season, but during the periondicol rains, expanis from 40 to 50 m . in length. Buring the latter period, the whole thomed country, including the islands of the iake, are fertilised by the deposit of mid brought down loy the two rivers; and hence Major lennel, with some propriety, compares the neighbouring country to the delta of the Nile. In the samily desert to the W . of the plain of the Ganges several salt lakes occur, the lurgest of which, however, does not exceed 20 m , in length. Collections of salt water, more or less connected with the sen, are of more frequent occurrence. Several considerable ones of this nature are to be found on the lower li. coast of the centinent ; but the greatest nud most remarkable is the Rumn, lying between the Ginlf of Cuteh and the mouths of the lindus, whiel is believed to ocenpy a space of $0,000 \mathrm{st}$. miles.

Coust Outline.-The outline of the coast of IIndostan is comparatively little broken by any consideruble inlet of the sen. From the months of the ludus to those of the Ganges there are but three great grulfs, those of Cutch, Cambay, and liengal ; if the latter, indeed, which, though it breaks the coast of Asia, does sot break the coast of Hindostan, can be reckoned in this class. Harbours are even less frequent. Along the W. cuast, over $14^{\circ}$ of lat., there is but a single good one, Bombay; and from Cape Comorin to the W. mouths of the Ganges, a distance of $1,500 \mathrm{~m}$., there is not one. In this unfavourable feature of its geography India resembles more the $W$. coast of Annerica, or the E. and W. coast of Africa, than the E. coast of America, or the shores of the N . countries of Europe. The Indian coasts are also in a great measure destitute of islands. Unless Ceylon be admitted as belouging to Hindostan, which can hardly be dime, there is not one on the F. coast; and on the W. there are very fow, and these of inconsiderable size. In this respect, Hindustan is remarkably distinguished from the two great corresponding Asiatic promontories of Malacea and Cambodia, the coasts of which are thickly stidded with islands, many of them of considerable magnitude.

Chimute, -In a country whieh embraces $27^{\circ}$ of Intitule, which contains extensive platenas, clevated from $\mathbf{2 , 0 0 0}$ to 8,000 ft, ahove the level of the sea-some of the mont extensive plains in the world, almost on it level with, or bit a fiw linit ared ft. above, the sen-the hifhest runge of monntalus in the world-truets of lare rock-deserts of more sand, mud deep primeval forests,-it is needless to say that there must exist a very great diversity of climmte. Iht liesides the diversity arising from these canses, the distribution of rain is another source. 'The whole continent of India, up to the 35 th deg. of lat., is sulbjeet to the influence of the monsoons, which blow from the Ni., durimg the sereme tomperate months of winter, und from the SW. during the tempestuons and lust or rainy months of summer and antunin. This is the general rule; but in India, as in other comintres of $A$ sia muter the influence of the monsoons, und where there are ranges of momintains rmaning $N_{\text {. }}$ and $S_{\text {. of sufleient elevation to inter- }}$ eept the clomis, the time of the jeriodical fall of rams is reversel. To the W . of the great elmin of the W. ('hauts, on the one hand, over $11^{\circ}$ of lat., the periodical fall of ruine corresponis with that of other parts of India, or takes place during the IV, monsoon. Li, of the Ghants, on the other hami, over 80 of lat., the fall of ralu takes place during the E . monsoon; while tho table-land which lies beyond the two rugges partakes, to a moderate degree, in both falls. As a general rule, the year is dividel in India into three woll-delined seasoms: a hot, corresponding with [art of spring and summer; a wet, correspondingr with bart of smomer und autuma ; and a cold, corresponding fenerally with our winter momilis. Witle respect to temprature, mith of India beibr within the tropics, and the remaining portion within 120 of the tropic, the whole is entitled to the desigmtion of a hot country. On the low plains within the tropie, and up to about the 18th des, of lat., winter is scarcely perceptible, and the year may be said to be divided into wet and dry. From that parallel N., winter becomes more and nore distinet, and beyond the 27 th deg. lasts for six months, during which the climate is not inferior in point of agreeableness or sulubrity to that of Italy. This is, however, counterbalanced ly the severity of the hot and dry season, which lasts for three months, and is so intense as nearly to destroy all appearance of vegetation. On the elevated central platean, the temperature is generally from $6^{\circ}$ to $10^{\circ}$ Fahr. lower than in the sume latitudes on the low lands, and the fall of rain being more equally distributed, the necessary effect is a climate in general temperate and agrecable, though not always salubrious. In the valleys between the two great chains of the Himalaya, the same order of seasons generally prevails as in the plains, and here the thermometer is rarely less than $18^{\circ}$ or $20^{\circ}$ lower than in the plains under the saue parallels. A few examples may be given of temjerature, as indicated by the thermometer. The mean temperature of lkombay is $82^{\circ}$ Falir., and in the table-lant in the sarae latitude, at an elevition of $1,700 \mathrm{ft}$., it is $77^{\circ}$. At Madras the mean annual temperature is $84^{\circ}$, and at Darwar on the table-land it is $75^{\circ}$. At Utakamund, in the Neilgherry monntains, $7,000 \mathrm{ft}$. above the level of the sea, the mean temperature is $56^{\circ}$, or $28^{\circ}$ lower than that of Madras. Here the thermometer sometimes rises as high as $\mathbf{6 9}$, and rarely falls as low as $20^{\circ}$. In the peninsula of Gujrat, and on the level of the sen, the thermometer oecasionally rises to $100^{\circ}$ in summer, and falls to $45^{\circ}$ in winter. The mean annal temperature of Caleuta is $79^{\circ}$ Fuhr. In May, the hottest month, it is $86^{\circ}$, and
in Jan., the coldest, Gro. In summer, however, the thermometer frequently rises above 101$)^{\circ}$, and in winter finls so near the freezing point that, with a trilling assistance from evaporation, ice is cusity ubtaincil. Within the niper portion of the plain of the Gimges, both the hatitude and efevation eontribute to reduce the temperature. l'rom the middle of Dee. to the niddlie of lieb. the thermometer sinks every day below the freceing point, and smatl pools of water are covered witli ice, and the average temperature of Jan, is $87^{\circ}$. From April till the maldlle of June, whell the rain fulls, the thermoneter aradually rises to !no and even to $111^{\circ}$; and nt Delhi, Agra, und other placeson the W. bank of the Juman, in the whole period from March to June, scorching SW. winds, proceeding from the alesert, prevail. It is in these same comutries that, during the whole period from the legiming of Nov, to that of March, the climate equals that of S. Italy.

Nations and Tribes,-I Lesides foreigners, who, as jencefill emigrants, or conquerors, lave settled in India daring the last twelve centuries, but chintiy cluring the lant cight, the number of aborigimal races distimguished by dilferences of language, manners, states of society, and great variatlon, if not difference of religions bellef, is still very great; and undoubtedly was much greater before the ilending which must have been inore or less the result of the extensive conquests of the $N$. invaders. These have been in active opleration for nearly seven centuries, and, in all tikejiliool, have been materinlly promoted hy the conquests of the more powerfil Hindoo states over the smaller. There are at present spoken in India, by the most civilised races, not less than 25 distinct langunges or dialects, indicating the existence of as many distinet mations; but, inelnding tribes more or less savage or burbarous, at least हit lanHuages, indicating the presence of at least as many distinet tribes. Of the more civilised nations, cight may be sadd to be distinkuished from the rest by some superiority of civilisation, as implied in the possession of a untional literature, a national ulphabet, superior population, superior industry, a greater progress in the useful arts, with the richer and more extensive territory which they are fomme to occupy. These are the Bengalee, Ooriyn, Mahratta, Gujratec, Telinga, Tamul, Karuata, and llindi or llimostanee nations. The IBengalee nation oceupies above $80,000 \mathrm{sq} . \mathrm{m}$. of fertile land, chiefly within the delta of the Ganges, and umounts in number to nbove $25,000,000$. The T'amul nation occupies $56,000 \mathrm{sq}$. m. at the S . extremity of the peninsinla, and numbers between $6,000,000$ and $7,000,000$ people. The Telinga nation occupies $100,000 \mathrm{sq} . \mathrm{m}$. of the NE. portion of the peninsula, and numbers probably between $7,000,000$ and $8,000,000$ people; and the Ooriya nation occupies at least $17,000 \mathrm{sq}$. m . of the low Iand which connects the delta of the Ganges with the S. peninsula, and numbers abont $4,000,000$. The Mniratta nation extends jrobably over 200,000 sq. m. of territory, laying between the 22nd and 23 rd degrees of N. lat., and its numbers may be roughly computed at $12,000,000$. The Karnata or Conara nation, nccupying a central portion of the table-land S. of the 18 th degree of lat., may occupy nbout $75,000 \mathrm{sq}$. m . of territory, and their numbers may be taken at abont $5,000,000$. The nation speaking the Hindostance or Hindee langunge occupies at lenst $100,000 \mathrm{sq}$. m . of the upper portion of the valley of the Ganges, and cannot amount to less than 20,000,000, physically and intellectually the mest vigorous of all the Indian races. The most enterprising of these nations, it is to be observed, have occasionally passed, cither
as conquerors or colonista, into the territories of cach other or of their nelghtmurs. Thus we that colonies of the 'Jamuls seltled in Malayalis: of T'clingas in Karmata and the 'Tamul conatry; of Malrattus in the 'Tamnl, Telinga, nul Karman conntries; of Karmates colonised in the conntries below the li; diants; and colonles from the upler plain of the (ianges settled as far as (injrat, flongal, Nepanl, and even Malalinr. These colonies, of whitever nation, not mifrequently preserve thelr nationat language, their orlglinal mamers, and even the purity of their deseent, in their miopted conntries. The liarbarons and savage tribes uf India are unlvernally to be fomed in tha reesesey of monntainous and hilly regions, never within the fertile platins or extensive table-fands; nud there is searcely any considerabie range throughont India in which some of them are not to be fonmil, They are, however, most mumerous on the fi. frontier of Hemgal, in the fantnesses of the momitains and sterile region of Giundwana, and generally in the runges of hills which lie between the linngetic phain and the great central phutem. These barharous tribes have been suphosed hy some observers to be the aborgimal natives of the country driven from the plains to the hills liy strangers and invaders; but this liypothesis seems little better than a gratuitons assmmption; tho monntaineers are no doulta aboriginal, in common with the inhabs, of the plains, and their barbarons condition seems naturally enongh acconatel for by the unfavourahle circumstances of their siturtion, and their remaining in that condition to the hostility of the powerful occupants of the lower and more fertile lamis.

Foreign Settlers.- Besides the original and peculiar inhab. of IIndostan, a erowd pí foreigna colonists or settlers of difterent mations, cither scattered indiscriminately over the conatry or confined to particular spots, from the aceldent of their arrival or other chance, forms a considerable proportion of the present population of the comintry. These, following generally the order of their nrrival, or supposed arrival, are as follows :-Jcws, Syrian Christians, Arabs, Armenians, Persees, l'ersians, Afghans, Tartars, Turks, Abysinians, Portugnese, English, Dutch, French, Danes, and Chinese.

Hindoo Religion.-The forms of religions worship which prevail are the Brahminienl, Buldhist, Jain, Seik, Mohammedan, Jewish, and Christiam. These, and expecially the most prevalent of them, are agnin divided into many sects. But besides national, colonial, and religions distinetions, there are other nearly innumerable divirions of the great mass of the people. Many are distinguished by the profession which they have immemorially followed; many by their condition as slaves; and many as ontcasts, withont being slaves: some are in the hunter, and a few in the pastoral state: some are freebooters, others pirates; and there are Whole tribes who have, time immemorial, been illustrious as thieves, robbers, highwaymen, and professional assassins. These distinctions into tribes and families are all hereditary ; each section and even subsection is isolated by nearly impassable limits from the rest of the society. In the prov. of Malabar, for example, which contnins hat $6,000 \mathrm{sq} . \mathrm{m}$. and about 900,000 inhab., there are about 300 different tribes, few of which are founded on distinctions strictly religious or national. In Canara, with an area of $7,200 \mathrm{sq}$. m . and 657,000 inhab., there are, exclusive of strangers, and foreign settlers, 104 native castes; and in the rural district of Burdwan, in Bengal, it was found that in 26 villages, containing a pop. of about 40,000 , there existed, independent of strictly religions
distinction criminater fisilowed, e encls beving tically-i ling, or int with the this alam often trivi ret the pir less real. 'Tolingrana, 110 interco profession, liollow the crent divis prevails th which is m be of $n$ rel ranfes itse jusite ; an peace are il which eone
Under It are compri inlluity of nlunest imp rate. This pervades tl inixes itsel private, anc born, die, et ordinary or economy, menning ce detnils of co culture, are is part and! speak more every act of moro or les: and instruct believe in $t$ filture state belief in the more genern reckoned to ciples are de in their wors the Itindoo and small, ss for mischicf, contemptible lirahmin. distinctions, no fewer thnn 44 enstes, chiefly discriminated ly the trules or jrofessinns which they followed, each caste belng knowa by alintinet name, ench being hereditary, umil each-at henst theore-tically-incmpable of enting, drinklig, intermarrying, or in any other manmer intimately aswociating with the others. The circumstances on which this almost buthite distinetion is fommed are iften trivint, and sometimes even limisrons; und vet the practical separation is not therefore the less real. Fur examplet one tribe of silmakers in Telinguna, who use two oxen in the mill, will boht us linterconrse with nuother following the same jrufession, but who use one only; they will neither follow the same gods nor the same lealers. The great dlvision of the right and left hame, which prevails thronghout the $s_{\text {. }}$ parts of India, but which is not known in the N., does not appear to the of n religious charater. One of thene tribes ranges itself on one side, and another win the opjusite; and serions disturbances of the pulille puace are not unfroquently the rewilt of quarrels which concern meither rellgion nor politics.

Under the genernl name of the Hindoo religion are comprised many dilfierent doctrines, and an inthity of sects and casten, whili it would he almost impossible to deseribe, or even to ennmerate. This religion, perhaps beyond any other, pervales the entire frame of civil society, and inixes itself up with every concern of life, public, private, and domestic. A llindoo can meither be horn, ilie, ent, Arlak, or perform any of the most ordinary or even vulgar finetions of the animal eonomy, unembarrassed by its trivial and untmeaning ceremonies: military enterprises, the details of commeree, and the operations of agriculture, are more or less under its fuidance; it is part and parcel of the code of laws, or, to spenk more correctly, it is itself the law. Almost every net of a llindus may, in fact, be sain to be more or less a religious act. The most civilised and instructed of the Itiudoos, but these only, believe in the immortality of the sonl, and ln $n$ future state of rewards and jenishments. The belief in the transmigration of sunls is ,omewhat more general, but far from universal. 'Thero nre reckoned to be four orthodox sects, whase principles are determined by the preference they give in their worship to some one of the greater gods of the Hindoo pmitheon; for there are gods, grent nul small, some almost omnipotent, particularly for mischicf, and others so feeble as to be all buit contemptible, and no match even for an orlinary Jirnhmin. According to the best anthorities, the 11 iutoo pantheon is peopled by preeisely $333,000,000$ deities; but as no one has attempted to mame them, it can only be concluded that the Hindoo deities are in renlity innumerable. They eonsist of three prineipal gods, who are supposed to represent (but their powers and functions are frequently interchangeable at the caprice of their votaries) the powers of creation, destruction, and preservation or regeneration; and of the families of these, with leifications of the elements and powers of nature, of heroes, and especially of saints awl abstract idens. Among the lower orilers of the people, and especially among the ruder tribes, $\Omega$ sort of fetieism prevails; and trees, rocks, and ruile masses of stone are worshipped or abmiloned, accoriling to the fears, hones, or caprices of their votaries. The present race of Llindoos are tolerunt in all matters of religion, or, to speak more correctly, they are indifforent: in fact, they go even beyond indifference, and in cases of emergency are ready to invoke any strange god, or strange saint, by whose aid they may hope to profit. The Mahratta chiefs are in the frequent practice of invoking Mohammedau
anints; and Mndajee Scimin, the chief of the Mahrata atate, a slirewil and politic prince and a great conqueror, was in the habit of making froquent offerimge at the tomb of a celebrated saint in Ajmeer, the sume to whone whrine Nkhar, the mont illinstrious of the Mognl emperors, wilkul $2: 30 \mathrm{~m}$, harefosted. The Mohammedams of tho lower orilers, who in some parts of the anoltry are indeed little better than llimbons, return the comil pliment, and in their need propitiate the gons of the Itindons; and each wint join in the rulighons festivals and processions of the other. In thes of India the Iliminos, in their distress, will mot unfrequently propitiate even the Catholic' Cliristinn waints, and the Christian Ilindoos redprownte. It is mot, as alremly nated, to matters of doctrine or moralty, that the Ilindoos attach lmportanec. In the sane tribe, or aven family, will lie found neetarians of the Destroylug l'ower, of his ronsort, of the l'romerver in several of his lmeamations (tho Crentor among the IIIudoes has no worshippers), all intermarrying with ench otler, anl the wifi arlopting the opinions of the husbumal without any difficulty. Sume of the Christians of S. Imila int termarry with the llindoos of their own tribe, whithoit any forfeiture of enste on either side, proviled extermal observances be attemed to. Porsecution in recent times is the exception; but the sectaries of Nanak or the Scikn, lave been consjderable persecutors in their way: they have destroved most of the mosques within their territory, and will seldom allow Mohammedans te nswenble in the few that remain: they forbid them from cating beef or praying aloud, aceording to law. What, however, the Ilindoos really attach importance to are not doetrinal matters, but distinetions of caste, ceremonies conmected with marringe and funernl rites, and the whimsical oliservances respecting supposed purity and impurity in regard to food and other matters connected with orilinary clomestic life. The distinetions of caste are the most remarknble of these, and form indeed the charncterlstic mark of Hindoo society. livery one has heard that the Hindoos are divided into four grent clanses or castes, fommed upon the great distinctions which prevail amongst all people in their first advance towards civilisntion; that is, into priests, soldiers, tralers, and labourers. As such a distinction into tribes is natural, and indeed known to have existed among other people, it is highly probathe that it prevailed with the tirst rude tribe or mation with which the lirahminical form of worship originated, and that it eonstituted the foundation of the present superstructure of the castes.

The first in rank among the four great classes, of conrse, is the lirahmin or ., irst; and next to him eomes, very naturally, bilier: at a great distance follows the industriou italist or trader and far removed from all is th. inbourer. These divisions are hereditary, impassable nal indefensible. Such is the theory of the distinetions of Hindoo society; but the practical and real distinctions are very different indeed. The attributes of the different classes, as they are described in tho ancient books of the Hindoos, we may be sure never conld have been practically in operation. These books, it must be recollecterl, were written by liralimins who elnimed an exclinsive right to expound them, and all but the monopoly of read ing them; and it was their interest to dwell on the immeasurable superiority of their own order ; but it is hardly credible that any society should be able to hold together for a moment, in which laws such as we find in the Hindoo sacred books were bouâ fide enforced. For example, it is enaeted among myriads of the same sort, that if a labour-

## IINDOATAN

fig man ait upon the carnet of a priest, he shinll las puninherd, cither by having a hot irom thrint into his buttork, or by being brandenl, or banished the kligedom, or having the oflimilige bittock cut oft. Many, lin linct, of the llindon haw appear to linve Ineri framed liy the Brahnian more firr the jurpowe of deterring, through the terrors of superstition amil punishment, the other elasses from interfering with their privileges, than for any other oljeet, Whatever may have leven the original attribates nuil privilegen of the great clannem, at their ifent institntion, it is certnin that these cinssen themselves cun lardly be said at present princtically to exims. In the alvance of sochety, the literense of popmiatian, the extension of commerce and eonversion, nind the ogeration of the bimman pasplons, they have givell way to a diflerent order of things. Ia the mont anciont Ilhulou work extant, the Iastifutes of Meam, whleh has been compuited to be abont 2,700 yenes ohl, there ulready exinted nearly it lamired eastes; and it must he muphomed that the emmerntion was confined to that purt of the conntry in which the work was written. The momber of the castes not coming within the pale of the fiour great divistons, nuggented the motion of the mixed enstes, snjposed tos orlginate from un Illpgillmato interconrse between the four great orilern, with the cronses which menin sprung from these. This was clearly an afterthought-a new theory made for the occasion, aid wholly inulequate to explain the actual state of socioty as we tind it. This may be made suthleiently plain by a few examples. Among the $25,006,0100$ of people who sjeak the langunge of lengal, there are none who even pretem to be of the second or third oriler, that is, of the military or mercantile classes : ill who are of these two oriders are comparatively recent immigronts from the north, and inlentitied as such. In so far as the four great orders are concerned, the native inhabitants of llengal coneist, in fact, of lirnlimins, and those who are not lirahmins. The Brahmins themselves consist here of two classes; viz. those who can trace their pedigree to the N. of India, and who are held in the highest repute, and of those who cannot-finr less exteemed. The Brahmins of Bengal, ineluding all of both these classes, consist of no less than 168 subclivisions, claiming yarious elegrees of purity, and not one of which will eat, drink, or intermarry with another. The next most important enste in llengal is denominated Chysta, and is chiefly engnged in mercantile pursuits: this is the tribe whose name has been supposed by many to have fimment the linglish langange with the word criste; but this is a mistake, for the term is simply the Spanish and Portuguese word casta, meaning race or lineage. They are reekoned pure Sudras, or persons of the original servile elass, and amount to 83 sublivisions, equally unsocial among themselves with the Bralimins. Among the people speaking the Orissa language, the military order is ultogether wanting, and there are but a few families generally reputed of the third class. In Malabar and Canara the second and third orders are wanting, the first of these being supplied by the military aristocracy of the Nairs, who are considered to be pure Suilras, or of the servile class, that is, of the class represented by the Hindoos as being in the last degree of degradation: they are, notwithstanding, the lords of the soil, and, before very recent conquest, the real sovereigns of the conntry. The celebratel liajpoots, the most distinguished military order among the Hindoos, have, according to the Sanserit writings, a vulgar origin, they are sprung from the mercantile classes on the paternal side, and from one of the mixed classes on the maternal. All the warlike and con-
fuering mation of the Malirattan, who are not Ilratiminas, are deemed to be of the fuarth, or servile oriler. lit every purt of Jintin thare in a considerabie partion of the indats, who are utter ont cante, or, it least, beyond the pule of Ha Irable miniond religion, conlemmed to this exchawion hy their survilo comilition, their poverty, or tho meanness of the emplayment in which they are engagert.

II the diatrict of Dinagepore, in lhengal, ont of

Livent a grent proportion of ile free and inilantrions channes munt not approach, owing tor their alloged impurity, the peran of a yoir nearer than a pereweribed inmorer of pacen, this Nair himmelf heimes. as alrendy montioned, the lowest of the originimi clansen ; "bring, neworling to the ancient llinions writings, expremsly ereated for the purpnae of jwrfurming servite ofllees to the lirahmins and oflar superior clases. What is still more remarkablo, and the same thing obtains with respect to many other fimpure classes in the $S$. of Indin, the Iratimins reline to allorl them instruetion or miritual comfort: In fact, they are not of the Irahminical religion ut all; never enter the Irahmlnical tomples, or ofler worshif to the gosls of the Brahanins; but have their own prectiar deities, prienta of their own coste, and, contrary to the creed of the Itrabmins, inmally have no knowlenge of a fiture state. The IIralimins, althongh they are to the fomil thronghont India, and have a vast inlluence everywhere, ure divided into more mumerous families and varictles than any of the other classes; and while each is revered by its own imonedlate followers among the laity, they almost all holl each other in contempt as pretenders. They go the length of reckonlug no less than 2,000 wejnrate listinct families of their order. The orler of the IIrahmins composes the very essence of Ilindowism: the IBrahmin who lives by ehurity, or the voluntary contributious of the laity, and who jurforms no part of the common ritual of the Hibdoo worship, is helle in the highest repute. Next to him eomes the Brahmin who lives by his industry and temporal employments, provided they be sueh as becomes the dignity of the order; but which commonly exchate holding the plongh, and performing any of the manual employments of agriculture. The Lowest rank of all is assigned to those Brahmins who perform the common ritual of the Hindoo worship; Ind among these last, the meanest oflice of all is that of performing the service of the forls in the temples. To exercise even the otlice of ast rologer or village priest, is far more respectable. The serviec of the temples, indeed, has fallen into such lisrepute, that the Bralimins in some cases have abamioned it to the inferior classes. Fastidiumsness in respect to food is a charneteristic mark of purity of caste, and no people ever carried this matter to so absurd and extravagant $a$ length as the llindoos. On this point the most essential thing of all is to abstain from eating the flesh of the cow. He who eats beef is no Hindoo, hut an utter outeast. He who kills an ox by accident ought to be excommunicated; and he who kills one designedly ought to suffer death. This is perhups the only religious precept which is of universal acceptance among all Ilinioos; pretty much in the same way as an abstinence from the flesh of the hog is imperative upon all Jews and Nohammedans. The higher classes commonly nbstain from eating the flesh of all domestic animals except that of the goat or sheep. Hindoos gencrally par-

'Ilin impuro chases and ounteasen, a mumerons lanty of the peopio in many parta nif limin, harilly reject any kimi of nttaimble aliment, and devonr, withont sermple, such urtiches us carrion, pats, anit river tortoisen, that feed most impuraly: the higher canten commonly eat lint onee a dluy, and a few of the mont fiestlilinga billy when the nun is ont; win that In elonuly arnther they are owasionally pat to very irying inconvenieners. 'To alotain from spirituons nud fermented ligunes, mul intoxionting drugs is a generni preapit of the Himboo relgginin; mad the degree in which ubstineneof from them is observed marks the purity or impurity of the clases. Itralmilus mili juranolis of the meresntile order generally uhatain altoget her from the use of mirituons liguors, while the ingure chasees anil outcante partake of them very freels:
 ments, thongh not alwnys rutionnl, is generully mueh more sit than any others. The most homonrable cuployment is that of the priesthood, proviled the individual exereising it live ous elermosyunry gifis, conthe himself to giving instruction, and thint thint instruction be not given to any person of un impure caste, that is, to those whis canmot nttord to pay hamisamely for it, whiels wonld be vary diserreditable. The militury profersion, and the wholenale mercuntile profension, are nlmost equally honournhle. Agrienlaral emphoyment. is credituble momost everywhere; its respectalility bemin, however, somowhat impaired where slaves are momerons, mid principuliy employed in the labours of the tieh. All the more ordinary trimes, immemorially exercised by the Ilhions, are respectable in thicir way; such as potters, brazlers, golisiniths, weavers, and barbers. All trades or employments implying the death or destrnction of animals, or of which the material is an animal sulntance, nre eithor low or very impure; such as thshermen, washermen, huters, sunke-catehers, lime-shell burners, curriers, shoenakers, and butehers, I'ulin-wine druwers and distillers are impure, from the impurity of the objeets they pronlnce. Sweepers, washers, burners or haryers of tho dean, and public exceutioners are nitterly abominable, and mindeed sheer outensts. There are, of course, endless anomalies in this, as in everything else contnected with the llindoo religion. Hankers in Hengal, for example, rank below barbers. All professions which inply poverty in the parties cxercising them are mean employments, Basketmaking is a mean employment, and the preearions search for drugs anil homey in the forests is also mean. Almost every employment above a handicraft trade is open to Ilrahmins, and of course to all that are below Ilrahmins,
It must not be supposel from what has now been said, that the tribes or fannilies exercising each profession or trade are always the same; on the contrary, they differ in every province of Indin: even in the same province, two or three tribes, or a dozen tritues, may exereise the same prolession or craft. In each family, trades and jrofessions are generally hereditary, as a matter of eonvenience, as happens in all rude societies, hut there is no impassahle barrier between one profession and another, there is nothing that shonld prevent the son of a potter from becomiag a golilsmith, or the son of a goldsmith from turising his hand to the loom, except that in particular situations the parties might forfeit some hereditary perquisite annex to their employment by the change. Reckoning the entire natise arny in India, as it existed before the mutiny, and still in part exists, there is hardly a easte, or
reat, or religion, not to the found in lis ranknefrom the purest to the mont impure anil mowt. abnininahle-from the most orthonlox to the mome
 manded by Nimitast mad men of pure castos may be melli in the ranks, with men of in chate fir their olliceres. The ilrahmins under these elpcumstancen are an exemplary for thoir sulwordination as any othor clase: a sutisfactury refintation, "pou a large seale, of tho fallacy and vanity of the pretensions net 111 for themi fin the anciont Writinge of the Hindons, and maintained by somes
 lustitution of the contes is universal throughont Himiontan.

Dinsutimy Forms of Religion,-I'hese aro the Jnin, Ihuidhist, Scik or Simph, the Mohmumedan, and Chriathat. The proviod or the place in whindi the ilrat of thene had its origin in muneremtnined: at present, it prevalls elinelly in the great province of Einjrat anil in Thalnwa, on the wextern shoro of ledla, bint it is to lo fonimi more or lens somitered throngh every purt of the eomintry, 'I'loe Indilhist worship originnted in llahar, within the grent phain of the Cianges, and, according to statements which have a considernhle air of probubility, in the sixth eentury before Clirist, or alsont 200 yeurs before tho expelition of Alexmuler. This form of worship, no prevalent. In Ceyton, and in all the comatries to the li., antl N. of Hindontan, is nearly extinct in that conntry itself. Nanak, the finniler of the Seik heresy, contued to the conntries lying neme to or nombingt the tlve grent tributary rivers which eventuntly constitute the Indus, wis born in IJIU; so that thin religion is of little more than fonr centuries' stanling. The Mohammedan religion hegno to make some impression in India about the begimning of the Il the century, and the descendants of forcignt settlers, or the converted mations of this persinsion, are int present smponel, for all India, to amomit to about a serenth part of the entire popitlation. It is remarkable that they are not most mmeroms in thone parta of the comitry which were the sents of Mohammedal power, luit rather at the extremities, such as the remote burider provinces of Jlengal, in which more pliant matemala for prowrlytiom were fombl, the Clisistians abomid most in the S. parts of Indin; the freater lumber are Nentorians, who are supposed to have embraced Ciarist innity, through the lanours of Greek missionaries, from Syria, nas early us tho second mul third centuries of the Cliristian ern. Most of the remainier are Catholies, the dencendants of lortuguese, or persons converted by P'ortugnese missionaries.

Population,-Of the whole territory of Ilindostan, supposed to contain abont $1,300,000 \mathrm{sq}$. m., the popniation may be extimated at about $150,000,000$, or more than half the population of Earope. The ratio of pop. to the sq. $m$. is therefore 115 to 1 , whereas that of burope is lust 75 to 1. This pop. is very unequally distributed. The well-watered alluvial plains and valleys are everywhere thickly, anal the momiainoms or hilly regions nlways thinly, inluabited. From the extreme S. point at Cape Comorin, in to the 10th derg, of lat., the pop. is in some purts as low as 7.4 inhabitnnts to the sq. m. ; at Madurn, watered by the river Vay, it rives to 160 ; at 'I'minjore, whered by the Cavery, it rises to 225 , being the densest prop. of the whole of the $S$. portion of Inda. In the Carnatic, or plain lying between the lis. Ghants and the sen, it is abont 96 . On the tableland between the Ghants, and up to abont 16 deg. of latitude, where the land is high and dry, with little other than artificial irrigation, the rate drops

Mistory.--The LIimions, it ls generally atmitted, lave no history; they ilo not even pussens any rational, commeetel, nam authentic narrative of their own athirs fur a single century. The oddest inscription fonnd in lliadostan, nad it is of donbtful anthenticity, dates but 23 years before Christ : one of the mont anthentic erns dates but 57 years before that of Clorist; and another of extesmive currency alates 78 years nfter Clirist, the origin of both being buried in fuble. Tho thest of thene dates is but three centuries after the invasion of Alexander, and abont tive centuries more recent than the commencement of anthentie history in Europe. The temple of Juggernaut is but 6ai), nud a ruin comected with it 1,142 , years old, the latter being, however, a date which rests on tradition only. In so far, then, as history is concerned, had it not been for the companfons and successors of Alexamber, who describe the Hindoos as in many respects resembling what they are at the present day, we might, for all that their own history teaches, be led to believe that they were not an ancient, but a comparatively recent jeople, Indepeudent of history, however, there remains abuadant evidence to show that the Ilindoos hat been very early civilised. The most remarkable, perhaps, is the existence anongst them of the literature of at least three laugrages, which have long ceased to be spoken by nny living people.

Xlihumg the incursion of Alexmater ( $1,6,225$ ) mate India known to the biarupean worlil, ite cillicet upon the jeopple of India was searcely grenter than that of any one of the thirteen experlitions of Minhmond of Glizace. It is highly probable, however, that the inthaence of the kingiom which his sureeresors established in Bactria, aud whid! lasted for 130 years, was much greater. The fireok jriacen of Bactria appear to have conguered neveral of the NW. provinces of Indin; and from this souree, in all likelihood, the llindoos lerived their knowledge of astronomy. The real history of India conamences with the first Mohammedan luvasion, in the year 1,000 , between thirteen and four, cen centuries after the livasion of Alexander. The hero of these invasions, for there were thirteen of them, was Malimoud, sovereggo of Ghiznee, in Affighanistan, the son of a man who hat heen a Turkish slave, but who had raised himself to soverugn power. Mahmoud pusked his conquests, or rather mearsions, as far as Canope, Bamdlecund, and (bujrat. Iudia was at this time divided amongst many sovercigns, most of them petty ones; nad the renistance made to the conqueror was harily more formidable than that which the Americans oftered to the Spaniards. I'owards the close of the twelfth century, the Affghans made their first appearance on the theatre of Indian history. A chief of this mation, of the district of Gaur, raised

 imbinlintely on the death of his son mal suceessor, in 1712. The Mohmmmolan jower nequired its grentent extent under Aurungiolse; bint even undor him was much inferhor, not only in resonrees but in extent, the empire now held by Isritnin in the anme country. The panauge liy the Cipe of (ionol llope onened the way to a new and mase formiabible race of compuerors. The I'ortignese, by whon it was effected, never acquired more than a petty territory on the W. conat ; and the continental aequisitions of the Dutch were limited to a few commercial factories. The French, at one time, seemed to be on the high road to the establishment of a great Indian sovercignty ; but, in the end, they were completely worsted by the greater resources and superior maritime strength of the linglislt, and by the extrmordinnry talents, conruge, and enterprise of Clive. The lirst territorial neyuisition of Grent Britnin consisted of a patch of 5 sq. Thi, of land on the Corommalel coast, where Madras now stands. The real folmilations of the British Indian empire were laid in the interval between 1750 and 1765, when Clive defented the lieutenants of the Mogul and the Mogal himself; and neyuired llengal, the richent of all the Indian provinces, the most easily defended, and that which has afforded, throughout, those resources which have emabled (ireat liritain to concuer and to preserve all our subsequeut acquisitions.

Smuguages,-It has been stated, that there are no fewer than 2is native languges apoken thrmighout Ilindoman, indepumbent of the dinleeta of tribes in a very ruile stato ol' socicty. The llindenin of the $N$, portion of Ilindonsmin are meponimited with three dead Inngugen, viz. the Sunserit, the Surinwatty, or l'racrit, nad the l'nli. Of these three the Samscrit contains intermal evilence of being the oldent. It was the lamguage of a people who, according to a very probable llindoo tradition alrody referred to, occupied the right bank of the Jumma, a little way to the NW. of the elty of 1)ellii, and with it probably origimated the Brahminical religion, and the tirst dawn of Hindoo civilisation. The Saraswatty or l'racrit was the langrage that succeeded it in the same country, and it seems to bear the sume sort of relation to it that the Italian does to Satin. The l'ali is a language which sprung up, in the province of linlinr. Of this, also, the Smascrit forms the groundwork, and the relation between them may be supposed to bear a similar relation to that which subsists between the Spanish, or Freneh, and the Latin tongue. With the people speaking the l'all langunge sprong up the religion of liudili; nul I'nli is, to the present day, the sacred lamguage of all the Asintic nations who have lludihisn for their national worship. The existence of these three

## HINDOSTAN

languages, that have successively censed to be speoken, allorils, as before obsetverl, satisfactory rividence of the groat antiguity of Hinloo civiliantion. One or other of the languages in question is more or loss mixed up, mot omly with every langunge of limdostm, but also with the languages of most of the neighbouring countries. To the N. they form the grommdwork of these languages, as latin does of Italian; to the S., on the contrary, they are engrafted on the language in something like the manser in which the French is engrafted on our own Suxon tonguc. The literary Hindoos reckin that there are ten eultivated languages, having a written character and a literntare, viz. tive to the N., ealled the five Guary, and live to the S., called the five Druvirs. The enumeration, lowever, is not very clear and distinet, at least as applicable to present times. The Guurs are the Saraswatty, Canui, (inusa or llengalce, Maithila or Tirutiya, and the Oorissa. The first of these is the dead language already mentioned. The Maithila is conthed to a small portion of the district of 'lirhoot, the Gauva is the language of the numerous people of Bengal, already mentioned, and the Oorissa or Urya, of the people of Cattack. The Canoj, as such, is an extinct language, but is considered, on pool grounds, to be the parent of the morlera Hiadee, the most cultivated and generally spoken of all the uative languages of Tlludostan. Upon the language of Canoj has been grufted the Persian, the court and literary language of the Mohammedan conquerors of India. This language, in fact, is found to exist in the llindoo, very much as the French is found in our own Saxon tongue, its introluction laving been effectell exactly in the same manner. Besices the local language of each district, the Hindee is commonly spoken by all persons of education throughout all parts of India, and almost universally by all persons of the Mohammedan persiasion. Its prevalence, it may be observed, is probably owing as mnch to the parent language having been, previously to the conquest, the language of a numerous and powerful nation, as to the subsequent intluence of the conquerors. Without this supposition, it is difficult to belicve that in the comparatively short period which elapsed from the tirst permanent conquest of the Affglans, at the end of the 12 th century, until it acquired its existing iorm, it shonld have aequired so wide an extension as it is fomml to possess.

The five Dravirs are the Tamul, called by Europeans, very improperly, the Malabar; the Malurnshtra or Mahratta; the Karmata or Carara; the Telinga or Talugu, improperly called by Europeass, the Gentoo; and the Gujrati. The groundwork of all these languages is peenliar; but upon all of them is engrafted more or less of the Sanserit langu:.0c, or its derivative, the Pracrit; the amount of woris decreasing, as we proceed $S$., until, in the ameient Tamul, it disappears altogether. The Tamul, the Telinga, and the Canara are divided into two dialects, an ancient and a modern; the first coutaining the national liternture, and being nearly unintelligible to the people at large.

13esides these more cultivated tongues, there are at least 20 languages spoken by nations tolerably civilised, and of comsiderable numbers, as the Assami, spoken in Assam; the Nepali, Rosali, and Dogari, three languages spoken in Nepaul; the Caslimeri, spoken in the celebrated valley of Caslimere: the Punjabi, spoken in the conntry of the five afluents of the Iulus; the Mnltani, the dialect of the prov. of Multan; the Sindlii, spoken by the Sinulhians, at the mouth of the Indus; the Bikaneri; the Marwari; the Jaya-
puri; the Olepuri; four languages pooken in linjpostana; the lluruti; and the liraja, spoks'n in the ligher portions of the vallevs of the fianges and Jumna, und derivntives of tho Saraswatty or 1'racrit; the Magalli, npoken in the S. purtion of the prov. of liahur; the Malwa, spoketh lin the prov. of the same name; and the lhuilela, spoken in the prov. of lbumdlecunt. Many of these langunges are in course of gradual extinction ajil alsorption by the llimbe, as the Celtie dialects of onr own country are in progress of extinction liy the Dinglish; the Armorican by the Frenel, ani! the llasque by the Spanish. Io the S. we have the Konkani, the language of the Conean; tho Tulawn, or langunge of the eountry which buropeans call Canara; and the Malayalim, spok (rus liy the inlial., of the N. portion of coast lying below the W. Ghauts, as far as Cape Comorin.

Of the languages of rude or savage tribes, such as the Garrows, Coolies, Catties, Gonds, and Colew, not less than 30 may he enmmerated. Hesidris the three rlead languages, one of them, the sanserit, as muelı studied as Latin is in Europe, thore are in India eight laupuages, ench spoken'. numerous pop, ; 20 spoken by people less nume. rous, but still civllised; and at lenst 30 spoken ly rude tribes; making in all 58 living langrages. This simple fact goes far to prove the gencrally admitted fact that all lodla never was sulyect to one government, or never even thoroughly united in largo masses. To the uative languages now enumerated must be added the Persim, still as much studien, and much more generally writtom, than Latin is in Europe; the Arubic, often studici, from religious motives, althongh not spoken; the Portuguese is a good deal spoken on som: parts of the maritime coast, especially by the converts to Cliristianity; and the English, which has begun to make considerable progress.
Literature, - The best and largest portion of Hindoo literature is contained in the dead Sanserit; that which is contained in the seven living languages alrcady enumeratel being for the most part little else than translations, or ruther paraplirases, from it. To Hindoo literature in any language, prose composition is hardly known. Every thing is in verse, from works of imaginstion to history, to treatises on theology, astrinomy, medicine. grammars, and even dictionaries. These facts are at once evidence of sntiquity and of rudeness, while they show that, for 2,000 or or 3,000 years at least, native literature has made little progress. The Hindoos have been suid to he, at the present moment, in the condition, in reference to literature, of the Europeans of the middle ages; who had no books but such as they inherited from the Greeks and Romans. Butitisobvious that they are in a much worse conlition, inasmuch as their motels are incompazalily inferior. Tise two most celebrated works of Ilindoo literature are the Mahabarat and the Ramayana; the one giving an account. of the wars of the sons of lhat rat. and the other the adventores of liama, king of Ayndhya or Onde, a supposed incarnation of Vishnu, the 'I'reserver of the Hindoo Triad.' The scene of both is laid in the uppei portion of the valley of the Ganges. Mr. Mill's deseription of these poems, some of the hest specinens of which have been translated into English, is not unjustly deprecintory:- 'These fietions,' savs he, 'are more extravagant, and more umuatural, not only less correspondent with the physical and moral laws of this globe, but, in reality, less ingenious, more monstrous, with less of anything that engage the affection, awaken sympathy, or excite admiration, reverenee, or terror, than the poems of any otlier, even the rulest, people with whom our

Science-The sriences in which the Hindoos have made some progress are arithmetie, algebra, geometry, and astronomy, 'The first and socond are prolahly the only ones in which, perhaps, they nre entitled to lay any clain to originality. They are probably the inventors of the system of notation, which the Arahs borrowed from them, and we from the Arabs. It is not necessary, however, to add that the llindoos are elumsy aritinmeticinns; and that, as in the case of gimpowiler: certaluly invented in China, it is in Europe only that the art has been perfected.
In geography, medicine, botany, and the physicnl seienees generally, the Hindoos, like other Asiatic nations, may be considered as profomilly ignorant. In metaphysieal and ethical speculafions, more consomant to the genins of such a people, they have indulged to a much greater degree; and their speenlations in grammar especially if not distinguished for utility, are remarkable for ingenuity. The Sanscrit langnage, distinguished for the complexity and variety of its structure, has aftiorded an ample field for suth discussions. It may be remarked that it is the only one of their languiges that is subjected to rules, and that they have never composed a grammar of any of the living langnages. Geometry is another science, the invention of which is aseribed to the llindoos; but their earliest treatises are of the seventh century, 1,000 years after they hail heen in contact with the Grecks of Bactria, and at least 15 centuries after the first knowlelge of the sejence in Greece itself. In astronomy, the llindows make large claims to antiquity, reckoning their tables from the commencement of the Caliyuga, or iron age of the Hindoo mythology, 3,102 years before Clurist. Of such an antiquity, lowever, there are great doubts; and the more general opinion seems now to be, that the astronomy of the Hindoos was either slerived from the laetrian Greeks, or intermediately from the A rabs of the midhle ages. The evincilime between it and the Greek astronmmy, is at all events, both remarkable and suspicions. This, the days of the week are seven in number, and named after the seren plancts; while they follow in the same order as they do in the Greck. The ecliptic is divided, us umong the Greeks, into 12 signs, with the same names, emblems, and arrangement; and the signs are also divided into 30 degrees. As these matters are purely arbitrary, they cannot but have hal the same source. Two things seem to be agreed upon ly all parties; viz., that the lindso astronony is empirical, and not fonnded on general primeples; and that, among the Hindoos, astromomy bas only been used as an anxiliary to astrology, and never applied to any usetul practical purpose; with the exception, and this in a very rude mamer, of reckoning time.
Arts.-The arts in which the lindoos have made the greatest progress are, agriculture, weaving, dyeing, and architecture. The ox, buffalo, lorse, ass, elephant, hog, dog, sheep, and foat have been domesticated, and used by the llindoos from the earliest antiquity. The camel, probably, has been equally long known in Upper IIindostan. The common poultry is also of great antiquity among the llindoos; and is supposed, and most likely with good reason, to have apread from them to the W. world. The bulfato and ox Vol. II.
only are used for agrieultural purposes; the home generally for war or pleusure, now and then for hurthen; the clephant for pleasure or burthen; the camel and ass, with few exceptions, for horthen only. With the exception of the horm, comel, sheep, and goat, every one of the animals above enumernted are still fiomal in many purta of India in the wild state, The agricultural inmpements used by the IIindooss are simple and rude, such as might naturally be expected amonir powr vecupants, cultivating ench a small patch of lamil upon an uncertain tenure; and the process is equally rude. But neither the one nor the other are so much inferior to those of the S. part of liurole as a mutive of this comntry, accustomed to the more perfect implements und processess of English husbaudry, would expect to that then. The greatest exercise of the skill and hobor of the Hindoos in agrieulture is displayed in works of irrigation; and the reader will not he surperised at this, when he understands that through means of irrgation the produce of the land is, nccording to circumstances, always multiplied never less than the fold, and often as muel as ten. The works for this purpose consist of inmense embunkments, reservoirs or tanks, and wells. 'The delta of the tianges, and the celobrated monnid of the Cavery in s . Indin afford examples of the first description of works: reservoirs or tanks are sometimes of vast extent, and capabie of converting 4,060 or 5,000 acres of what is often a dreary desert of sand into productive corn-tields; these are most frequent in S. India. Wells, which are often sumk to the depth of between 200 and 300 ft .. atiorl the principal means of irrigation in the upper portion of the valley of the fianges. In a few enses there exist cenals for irrigation resembling those of Lombardy, bitt these are of Mohammedinn, not Hindoo, origin.

The articles cultivated by the llindoos from very early times, are whent, barley, rice, millet, severai pulses, the sugar-cane, sesame, mustari, the coroa, areen, and other [mins; cardamoms, finger, black pepper, cotton, the mulberry, indigo, madider, the mango, and the banana. lirom the Mohammedans they received the vine, the tig, the aple, prach, mid pear: the pomegramate, limes, anit uranges; the arrot, onion, and melon, with the opium joppy. From Europeans they hive received maize, oats, common putatoes, the batata or sweet potato, the gromed pulse or hachis, the eapsiel'm, guava, nid pine-njple, by way of Americt; the shalock, from lava; the liehi, from Chinia; and most of the common pot-herbs, dirert from burope. The sugar-cane is most probably a native of Hindostan, and the art of manufteturing coarse sugur from it is tracel by the etymology of the word gour, to Bengal. 'The art of Grambating sugar, and separating it from the molasses, was probably intronneed into India from China, as the nume of the commodity Chini, would seem to imply. The art of candying or erystallising sugar, the only mode of refining practised in the liast, was taingtit the llimbos by the Mohammedmes, who themselves appear to bave first practised the art in Erypt, as the name of the article Misri (that is, liryptian), would seem to import.

The Hindoos had made a liar greater progress in the art of weaving, than in any other. It was contined to materials which their comntry either produced in great abundance, or of great excellence; or of which, in fact, in ancient times, they may be considered to liave possessed nearly a monopoly, viz., cotton, silk, and the hair of the Tibetian goat. With the exception of silk, which they latd in common with China, Jnclia may be considered as the native country both of
the material and mannfacture of the others. The cotton plant is grown almost every where, from the $S$ extremity of ludin up to the valleys of the most $N$. range of the llimalaya, and it may le truced from India to every warm comitry by its original Sumserit mane. The quality mul nature of the fubric varies every where with the qumlity of the plant; and hence a vast variety of filorics, known by the names of the dlastricts prokncing the raw matorinl: thas the tine textures known in linrope as bacen muslins, were prothced only in that district in which is cultivated, within marrow limits, $n$ variety of the plant, with a staple remurkable for theness and beanty, not found any where else.

Silk wenving, like that of cotton, is an art which has been practised from remote antiquity in Indin. In the Sanserit lumgume there is a peeuline mame for the elass of persons exclusively emploved in the feeding of silk worms. The variety of the latter bred in India diflers from that of China and liurope; and the species of mulberry grown for the food of the worm is a distinet one from that used cither in Euroje or China. But as the llindoos are much inferior in skill and iugennity to the Chinese, the silk fabrics of Ilindostan have never equalled those of Cliun; nor is the raw material, even now, equal to that of the Chinese, though inder the superior care and skill of buropeans. The Cashmerians, the manufacturers of the well-known shawls which bear their names, are descended from genuine Ilindons; nnd though the shawl goat be not a mative of their comutry, they were the nearest civilised people to the ruds nomadic tribes, to whom it helonged. They maturally, therefore, beenme the manufincturers; and the invention of the shawl manufacture may, therefore, be fairly ascribed to the Hindoos. From these statements, it will appear thant the discoverics now described, and the progress in manufacturing industry which they imply, are rather owing to the uccident of position than to any superiority of skill and ingennity. This is at once apparent, by the little skill which the Hindoos evince in arts, Where they possess no superiority in the raw materinl, as in woollen textures, iron fabries, and earthenware, in respect to which there are few nations ruder and more unsuccessfnl. Orme, who is followed by Mill, ascribes the superiority of the IIindows in the manufacture of cotton fabries to the peculiar softhess and deliency of the Hindoo hand; but this is a fancy for which there seems to be no fround whatever. The Hindoos, comparing them with other nations in the same stnte of society, nad to Europenns until comparatively recent periods, had attained considerable skill in the art of dyeing, producing colours that are hoth fast and brilliant. Here also, however, they had several advantages of the same nature as those already described, such as the possession of indigo, lac, and madder, three of the finest and most charable of all known colouring materinls. Inferior dyes, such as the carthamus, morinda, turneric, and sappan, are also natives of the country. Their lyeing processes, however, have always been, and are, tedions, operose, and empirical.
Nearly the whole architecture of the Hindons which deserves notice is dedicated to religion. The people have always lived in huts, and even their chiefs and princes were sntisfied with very mean accommodation; and the only palaces have been those of the gods. But even their temples are more distinguished for magnitude, the substantinl mature of the materials, and the elaborate character of the omaments, than for beauty, grandeur, or propriety. Many of the most remarkable consist of caves, or subterrancan
grottocs; and the rest have, for the mont part, a prramidal form. One class of rellgious inomitments which makes so conspicuons a thare ln the arelitecture of Cliristinus nud Mohammedans, is wholly wanting among the llindos, - those cerceted in honour of the dead; a circtomstance no doulot arising from the universal practice of burning the corpse, and the belief in the doctrine of the metempsychosis.

Of a far highor order is the arehitecture intro-* dnced into India by the Mohammedans, parti larly since the time of the Turkish Jynasty, the descendants of 'Timour. These consist of mosques and mansoleums, in the style of architecture introluced by the Arabs into Spuin; and ure so remarknible for beanty and chasteness of design, grace of proportion, and excellence of material and workmaniship, as to lie entitled to be compared with the finest remains of Grecian or limonn art. In these Mohamnedan builinges, white anil colonred marbles nre largely employed, a material never seen in any Hindoo building, though vory nbundant in many parts of the country. The most remarkable of the Nohnmmedan moniments, well known to Europeans by the mume of the Thjemuhal, is situated nenr the city of Agra, on the right bank of the Jumna. It is a munsolemn ocenpying, with its qurdens, a quadrumgle of forty neres; the principnl buidling, with its domes mid minarets, being almost wholly of white marble. This was built by the limperor Shah-dehan, about two centuries ago. Even the pnlaces of the Mohammedan princes, and the honses of the omrahs were built in a very superior style fo those of the llindoos of the same rank. In finct, the Mohammedan architecture exhibits umquestionsable evidence of superior science, taste and civilisation.

In usefill architecture, such as the construction of roals, bridges, and public accommonation for travellers, the Hindoos have made very little progress, as may be seen by an examinition of the more S. portion of India, which Mohammedan intluence hardly reached. The ancient llimioos were umacquainted with the arch, and hardly ever built a bridge of any sort. Down to the present Any the prineipal rivers of the Decean are crossed on wooden flonts, or in baskets covered with leather. Now nud then a few miles of good road lead to some celebrnted place of pilgrimage, and on the wnys leading to such places ims for the accommodation of truvellers, called choultries, are not unfrequently met with. These consist of bare walls and a roof, without food, furuiture or attendance. Both these roads and inns hove been constructed from religious motives only. In this department of architecture, nlso, the Mohnmmetlans lave made considerable improvements: the only bridges existing in India are of their construction; and the same thing may be said of public roads.

Effects of British Rule.-The great borly of the Indian people had, for six centuries before the commencement of British goverument, been under the dominion of foreigners; but of foreigners more energetic than themselves, und a food deal more civilised. Upon a fair retrospect of what they have lost and gained by the Mohnmmedan dominion, they must. upon the whole, be considered as having been considerable gainers. The conquerors being Asiaties, and approaching to the native inhabitants in complexion, manners, customs, and state of civilisntion, assimilated with the latter, and, to a certain extent, adopted their language and customs. Even in matters of religion, where the diflerence was widest, a considerable share of toleration was established; and Ilindoos, converts to Moham-

'I'his eommition of things was superseded by the British rule, which may now be considered as having heen practically constitnted for a period of nonot in centurs. The Iritish government, as established in India, and as it is buw in operation, may le considered an enlightened dexpotism, a good denl controlled by the pibtic opinion of Englishmen on the mot, and to a smaller extent hy parlimment and puhbic opinion in linglamd, and possessing some advantages over, hut nlso many disadvantages which did not belong to, the Mohammedan govermment, which it superseded. It may be divided into fontr perions. Tbe lirst was that which intervened betwen the victory of Plassy in 1757 , and the effectual interference of parliament in 178.8 , bitt not practically enforced till 1793, in intervil of 36 years. Ihis was a perion of pretty general auarchy, accompanied by constant, or at least frequent, wars. The government was earried on upen the priuciples of the Mohammedan system, and did not pretend to be based npon any other. The taxes were levied with more than Mohammedan rapacity; and the alministration of justice followed the Mohammedan law with less than Molammenan intelligence. The only motification in any of these partienlars depended wholly on the moral and intellectual charncter of a few public functionaries. At the same time the industry of the country was sulyjected to a commercial monopoly, exercised by the fovernment itself, and the uim of which, as of all similar institutions, was to obtain possession of as mach as possible of the produce of the country at less than it eost, mul to sell it for more than it was worth. It camnot be supposed that the liritish government during the period in question eould possibly lie productive of beneficial results to the native inhab, of the country ; and it certainly produced none to the parent commtry, whose resourses were wasted, and whose commerce was not augmented by the possession of India.
'lhe next period of British alministration embraces the twenty years from 1793 to 1813. During this time the land tax, the greatest burden of the Indian people, was established in perpetuity throughout the greater jart of the Inilian territory. Regular courts of justice were instituted, and the judicinl and tiscal administrations were carefully and completely sepuratel, after the example of European nations. The commercial monopoly continued as in the previous perion, but it was excreised with greater leniency and forbearance, except in so far as concerned the settlement and resort of British subjects to India, the laws against which were more rigorously earried into effect than ever. Parlimert never effectuatly interfered in the affairs of Indiaduriug this perionf; every thing was presmmed to be going on prosperansly. The wars that were carried on in ludia in the meantime nearly chonbled the extent of the liritish dominions, and raised the territorial debt to $30,000,0000$. sterling. Bhit insteal of reaping any direct alvantage from these acquisitions, parliament was obliged, on the lapse of the charter, to exomerate the li. I. Company from a long arrear of a tribute of about half a million sterling a year, which it was wholly mable to pay. The entire advantage conferred upon the people of India, cluring this period resolves itself into the permancney of the lind-tax, with some ameliorations in the administration ol justice, and freedom from foreign aggression and invatsion, The Emelish mation derived no benefit whatever from India; the commerce with it, which was
but of tritling importance, continued stationary ; (ireat Britain puil a monopoly price for every Indian commodity and oven was obliged in forge the whole of the paltry tribute bargalned fur.

The third period commenced in 181.1 , and eontimued for 14 years, till 18 sis . In 1814 the lindinn trade was, in a great measure, thrown open; mod in 183.1 the last vestige of monopoly, and even the compmay's commercial character, was timally put nu end to, -a mensura which, with some drawbucks, had heren productive of much adsantage both to the people of India and of Eingland, thongh in a greater degree to the lattor. The exports of India to this comintry more than doubled; and the peopile of Indin and ol lingland respectively receivel ench other's productlons for nbont from a lialf to $u$ third part of what they eost them miler the monopoly. The inthex of Enropeans into Intia was followed by a great liflux of liritish eapital; and something like a puthie and independent opinion aprung nu at the principal sents of commerce, to control the desputism of a virtually absolute government. A system of effectunl mative education may also he said to have berim in 181.1: and the mitive inhat, of the prinelpal towns, who before considered all education to be comprised in the study of the l'ersian, a foreign langunge, or of the Sanscrit, a dead one, betook themselves with great ardour to the study of the language of the comsnerors. Finally, the forrth period, following in the wake of a great military mutiny, scarcely, if at all, shared in by the bulk of the population, rlrew India closer to (ireat Britain than ever it had been before. The commencement of the fourth period dates from the Aet 21 and 22 Vict. cap. 10t, called 'An Aet 'or the better Government of India,' sanctioned Aug. 2, 145x. By the terms of this Aet, which cannot be but the herald of a happier future and real 'better govermment' of the immense British empire in the 1inst, nll the territories hitherto under the rule of the East India Company were vested in the sovereign of the United Kingiom. (See Inıli, Burisu.)

From the thiril period of history, here sketched, may be dated the abandomment, on the part of many of the most wealthy and enlightened inhab. of the towns, of the gross superstitions of their forefathers, and the adopotion of rational opinions in matters of religion; and it may be rematrked as extraordinary, that this species of eonversion hats been most frequent with the IBraliminical oriler. Commerce, the great engine by which civilisation, as well as improved morals, have been produced in Eurone, has begun to do its work in llindostan atso. The value of knowledge and of character has berinn to be felt, and alrealy there may the counted among the merchants of Culcitta, Bombay, and other places where commerce is carried on upon a large scale, llimbo, Mohammedan, and P'arsee merchants, as faithful to their engagements, and of is strict probity, as any community cain boast of.

The disadrantages of Great IBritain for earrying on the alministration of ludia are sutliciently ohvious. The British, in the tirst place, is not in national government, nor is it as yet a government enrriel on by conquerors who have mide the slightest progress towards maturalisation or amalgamation with the people governed. The rulers are aliens in blood, in manners, in language, and in religion, carrying on the administration of $100,000,000$ of people, and exercising in control over $50,000,000$ more. at a distance of $12,000 \mathrm{~m}$. The local govermment is purely vicarial, and the essential administration rests with men residing at a vast distance, who never saw
the comentry, and who have no accurate kuowleolge of its manners and institutions, These moll themselves are perpetually ehanging, and lewk "ן"u Indinu affairs an matters of yery secomalary impurtunce to domentias null Eurijemin politices. The lowal gevermments, instead of loring reyponsille to the prople whose administrution they cumbluct, atre only amenuble for their auts to the ir politient friends in Euroje, while the athairs of loudia nre too complex, too extensive, and tow remote, to be understond by, or, for the moit part, to excite anv interest in, the puople anl parbiament of Eingluuct. In luitin, generilly, the nets of the loeal goverument are seeretly prepareal withont eonsulting or ntempting to conciliate the subjerts fior whom the laws ure made.

One of the grent alisndvantages of the British foverument in ludia is the vust expense at which it is condueterl, and the eonsequent weight of taxuthon to whieh the people are necessarily subjected. In Indin there are six local governmente, anil in England another centrnl administration, all paill for mit of the ludian revelitue, on a sente of expense of which the rest of the worlil ntiords 110 example. Thus the anhary of the goveruorgeneral is equil to tive times that of the tirst loril of the trensury, while an Indinu secretary is more highly pain than an lenglish secretary of state. There are alout 1,0 ote eivil ollifers engngeal in the jurlicial, maristerial, and fiseal ndminitutration of Indin, every one of whom costs the Indian people, incluling his peusion on retirement, more than a juisue julge of the Cuurt of King's Bench costs The peoplo of England. As liritish rule is still mnintnined, bot through the atfections and goolwill of the people, but partly through their docility, and purtly hy the sworl, a vast army lecomes necessary. dit important part of it mist he earried over the Allatic and lutian ocenn, anil, mortality inchoned, is maintainel at double the expense of the sume force in Europe. The officers of the whole lulian army amount to about 5 , (inti), and these, retiring pensiuns included, cost nhout liree times what the same number would cost in Jurope.
It is not, however, to be supposed, that the large salaries allowed to those engeged in the administration of the Indian government originate in extravagance merely. It may, in fact, be doubterl whether it be possible, on aily reasonuble ground, to make any sensible diminution in their anomit; and whether the excess that might be dediwted from some departiments should not gu to binance a detieieney in others. The salaries of Eiurpleans in ludin must be lhigh ; first, because of the expensive style of living in the conntry, nul the immense mumber of servants and retainers that a persull in kuy prominent situation must keep; nul, second, hecenuse of the many expenses attending the training and fitting out of $n$ yomeng man for the Indian service. Till one or both of these soures of expenditure be diminished, of which there is lont little pruspret, it is idle to talk of materially relueing the cont of Lurepean timelimaries ill India.
The grentest revenue which a coleninl empire cver yielded, and, in fact, the largest public revenue in the world, that of liritain and France excepted, is unequal to meet so enormous an expenditure; and one of the worst forms in which barl goverument can present itself, oppressive and grinding taxation, is the necessary consequence. Nor is it, perhaps, in the power of the best disposel administration much to ameliorate this state of things, so long as government is eundueted on the principles hitlerto pressevered in. The Indian reveme approache : to $46,000,0001$., nad con-
silering the poverty of the people, as indiented by the low rate of wares, and the comparatively small amount of capital and indiatry in the comiltry, this is anial to he equivalent to nil ammal puilic revenue in England of twice the amomin, Norcover, the Imilinu revenne never diminolifs, bint, on the contrary, may be considered a per: pretual war taxation, from which there is no religf. or ulatement.

Tue indvantage the people of India certainly: derive from liritish rule, which they never enjoyei, at least to the sume extent, before-frecdom from civil war, and from foreign aggression and invasion. liat it must, nt the same time, be neknowledged that these bencfits have heen purchased at un inconsiderable price-the suppression of all eompluctition and emulation lietween different piarts. of the comutry; and the entire sacritice of natienal lidelenclence, necompanied with an itter hopelose. urss of those successtinl insurrmetions by whing other Asiatic people rid themselves of tyranny. and procure, at least, a momentary meliorntion if th.cir condition. What prolability, it may lus ankrit, is there of the stability nal permancuce of Hritish domision? This is a question more easily: put than answered. No people undur the same eircmmstances ever possessed such an empire before, or anything resombling it ; and there exists, therefore, no precerlent to give a reply. However, it may be fairly said that Indin nppents to be uaassuilable, except by n nation that has the connmand of the son. Iler land frontier is fenced by impassmble mountains, und by deserts and river that conld not be truversed by nu invadion army withont preat ditheolty and leiss. Nu douht, however, if British troops cross the matural barriora that protect Indin, and mulvonec into Central Asin, they may meet linssian troops on ground congenini to them. lhat so long as Grent liritain conlines herself within the proper limits of India, there is little to fear from foreign argression. An attuck by Asiatic powers is ont of the question: ant the danger of French aufl linssian invasion is fur more chimerical than real.

Bohlily and intrllechual endouments.-The Hindoos, as nlready stated, constitute sixth-screnths of the popmlation of Ilindostan; but the remnining inlinhitants, though the stocks were in many cases originally difterent, are now so much assimilated with theon throngh a mixture of bloold and the naloption of Indian manmers and customs; that for our present purpose the whole population may be considered moder one head. In point ol raci, the Hindoes have been regarded br naturalists as belongring to what they call the Cancasian. an. 1 even to the same family of that race as the white man of Europe, But this is a funtastical notion, for which there is harily even so much as the sharlow of a foumlation. The only three points in which any analogy has been discovered between the llindoo and European are the oval form of the face, the shape of the head, and traces of a certain community of lauguage. In every other respect the points of contrast are incomparably more deeisive than those of resenblance. The European is white, the Ilindou dark. The linrepean (and his is the only race that is so distinguished) has an intinite variety in the colour of the hair, from flaxen to black, and great variety in the colour of the eye, from light blue or grey up to dark brown: with the llindon the colour of the hair is ever black, and the colour of the eye ever dark brown. The binropean is taller than the Hindoo, more robust, nud more persevering. Even in the rudest states ol' civilisation, the Enropean has exhibited a firmness, perseverance, and interprise which strikingly sontrast with the ferble, slow, and ir-
rewilute chor aure of or where there rixnll, the 1 that of thre melt will he seaman, ant in ниу саке, of Europea cqual infieric trial of stre phalanx. iteular emp Buropean is tools, which inse, the dixu sicul force at unquestionn below the A Chincse.

rewhinte character of the llindoo. In the jerformance of orimary libomr in those employments where there are means for druwing a just compinrisuli, the labour of one linglishmman is equal to that of three ordinary Intimns. 'Three Indian senmen will hardly perfurm the work of one linglind Neaman, and thiree battalions of sepuys would not, in miy case, supply the place of a single battalion of Europeais. There ly little douht but that ant equal inferiority would have been the result of a orial of strength with a Roman fegion or a Greols phalanx. When the skill required in any partieular employment rises in anonnt, and the Luropean is elubled to avail himself' of improved tools, which the IIinioo either cannot or will not use, the dispurity becomen still grenter. In phywical force and continnity of labour the llinden is unquestiomaly not only below the Europeran, but below the Arab, the Persian, and, above nll, the C'hinese.
In one physical quality there is a striking distinction between the Hindoo and Enropean. The European is born with an intlexlble nud comparatively risid fibre; the Hindoo with a filre more pliant and soft than that of Europem women, This distinction, however, is a mere matter of climate, for the quality supposed in this instance to be peculiar to the Hindoo frmme is common to that of natives of every warm elimate; even Creole Europeans, in the very tirst generation, are distinguished by it. 'Ihis tlexilility in the animal fibre has been supposed by some observers to be accompanied with great spisibility and acuteness in the organs of sense, conferring upon the Ilindoo a remarkable advantage in sume of the nicest of the manual arts. Lat there seems no truth in this hypothesis any more than there wouk be in imagining, contrary to all experience, that the deliente and moreplimit fingers of a woman cunter men her in advantage in skilled labour over man. In the finer processes of mechanic art, habit soon gives to the rigil hand of the Europenn artisan a nicety of tonch and a dexterity of execution which no Ilindoo has ever yet attnined; in general, the Ilindoos possess more agility than the Europeans, and their nimbleness is assisted by the lightuess of their jersons. They are, to a remarkable degree, the best rumers, the best wrestlers, and the best climbers of Asia. In these respects the Persinns, Arabs, and Chinese, are not to be compared with then, Hence it fullows that, as ordinary scamen, they are far more dexterous and useful than any of these nations, yet a certain want of fimnness and presence of mind incupacitate then for ufficers, or even for steersmen, and, in this latter capacity, the natives of the Philippine Islands are so preferable to them, that, whenever they can be obtained, they are always employed, to the total exclusion of the llindoos. A Hindeo cannot be urged to any personal exertion for a great length of time without producing fuilure or exhanstion. Even in their own country and elimate the sepoys have been beaten by European troops, in a long succession of forced marehes.
Among the Hindoo nations, though the common features of their physical and intellectunl character are generally well preserved, much varicty exists-more, probably, than among the nations of Europe. This variety has been ascribed to difference of latitude and climate, and to diversity of aliment; it has been nffirmed that the inhabitants of the south, whose chief aliment is rice, are smaller and feebler than those of the morth, whose chief bread corn is wheat and millet. Experience shows tlat this opinion is without any foundation. The smallest and the feeblest
family of Hindoos are the natives of Hengral whose locality fs betweon the elan amil 2bth derg. N. lat.; those living a dozen dogrees farther sonth, and uphin the sume vegetnlile nliment, ari taller, more ruhust, energetic, minl harily. 'The matives of the table-hamb, whose vegetnble alimont is neither rice nor whent, are equal but not supurior to the inhabitants of the Carmatie, or of the low damp eonst of Malabur. Tho tullest and nost robnst, but not the most netive or agile, are the inhalis. of the "pler portion of the valley of the (ianges, where a few of those in casy circumstances live mily onf wheat; the majority of the perphle on barluy or millet.
It is the quantity and not the quality of the vegetahle nliment whifh has the most material intluence in Inifin; it may be said, that in llindostan generally there is a wider distinction in playsienl development. between the classes in casy circumstances mind the poor, than in may other eountry. Sle Hindons of the upper nid more distingulshed classes, ure almost invarinbly larger, stouter, and humbomer than the pore und degruled classes. The most linattentive obscrver cannot fail to notice the superiority ol the military, mercantile, and above all the sacerdotal classes wer the common labouring jop. The sepnys of the army of liengal, whone a selection trons the momerous yeomanry of the morthern mid central provinces, though very inferior in stremgth mad energy, are equal, if not superior, in stature and personal appearance to the common rim of Enropean troops; and even in the streets of C'nlentin, a stranger cunnot fuil to be struck with the dispurity in the appearance of the well-fed merolinnt, or broker, and the squalid half-starved lubourer or artisan. The mountaincers, and generally all the vemi-barbarions tribes, are short, emaciated, and ill-looking, particularly those who guin their livelihoul by the chase, or by collenting the natural oljects of the forests, such as honey, wax, and drugs. Where slaves are few in munber, and this is the case in all the populons parts of the country, they are in personnl appenrance nearly on a level with the rest of the peasantry, and not to be distinguished from them. Where, however, they are numerous, and whole tribes are in a servile state, they may be ensily distinguished from the rest of the community by their ngliness, sunall stature, and feeble frmme. As a general rule it may he laid down, whatever be the clinmte, and whitever the general aliment, that wherever the price of labour is low, and the people consequently compelled by necessity to live upon the lowest description of food, or upon the smallest possible quantity of a better description that will sapport life, the great mass of the inhals, are the nost degraded in body, as well as in mind.

It is a popnlar but erroneuns notion that the llindoos live alnost entirely on a voretable diet: such a fact would be inconsistent with the physical nature of man, who, in reality, is omnivorous. The most fastidious of the Jlimdons in point of diet are great eaters of milk and butter; fish is also extensively used near all the senconsts, and on the shores of the principnl rivers; and none of the people of India hold this description of food as abominable, except the inlabl. of the remote interior, who have no means of procuring it. Even flesh, however capricious in the selection, is occasionally eaten by the prenter portion of the Ilindoo people, and it is the want of means, rather than religious scriples, that makes them refrain from it. In cases of urgent necessity, even religion authorises any kind ot food, and in the event of famine, a Brahmin may eat the limb of a dog.

Upon the intellecfual anol mornl quallites of the Ifindons, a very lew words will sullice. 'I'he more eduented classor, and it is from n eonsiderition of the charnetor ol these only that any finir concelasion can be irnwa, nuy be promomed withont hesitation to be a slarewil, wary, and acote jnople. Sind) thety, porhups, more than sitroneth, is the prominent charmetor af their listelled. Ginol imitaturs. they have lithorto iliseovered unorigimal powern of invention, They have little inmpinution, fir the jower ilstempered drames of their theology and litcrature are not entitled to this mame. lif partheal grodi sense they are decidedly below the Chinese. In vigonr nal manliness of mind, they are Lolow the Aralos, the lormians, and those Mohammedim nations of 'lartary who sent forth the men that invalded and eonquered then. No conuparison with buropenin mathons ean be male, beenase the conirust is too great to admit of any parullel. The Il'jurtments of indistry, in which their intellectual fomities uppent tos most advantuge, mud for which they serm best litterl, are the melninisuration of justiec and finances, and sueh bramehes of trale as (lo) sut imply the possession of comprehensive knowledge and bold enterprise.

The moral charneter of the llindoos is the growth of probalily many thousanil years of anoreliy and oppression. Such a connlition of society produces no deninnil for candour, integrity, or ingenmonsness; and among the limions these ghalities enn harily be said to exist. Rapneity, violemed, framl. nud injustice charucterised the untive rulers; and the insial weapous of defence, viz., falsehood, artifice, chicane, and decuit, luse, consequently, spring up in abundance muong the people. In renlity, for generutions, integrity may be sail to have been at a diseount in India, and dissimulation at a high prensinn. Probity and candour are virtues which, in finct, conld not be practised with any regard to persmul freedom, life, or property; in sueh a state of things, such it simpleton as an honest man would have become the inevitable prey of a host of knuves, and would have been laurlied at und despised. Genernlly it may be snid that the llindoos seldom speak the whole truth without sume mental reservation. Julicinl perjury is practised in Hindostan perlonps on a wider senle than in any other comntry in the worlh. I'he llritish courts of justice have been blamel for eneournging the erime, and probably, to a certain extent, they doso; but, unon the whole, they can only he looked upon simply as an arena for the exlibition of this vice upon a great scale. Falsehood and equivocation ure inseparable from such $a$ condition of society as that of limilostan, and have characterised the manners of the Hindoos from the ara when Europeans tirst acquired any authentic information respecting them. The description which llernier, one of the most accurate of travellers, has given of the Hindoos nnder Aurungzebe, is strietly niplicable to the present times. Sir William Jones, often their indiscriminate eulogist, declarell from the bench his conviction, that aflidavits of every imaginable fact might as easily be proeured in the streets and markets of Calcutta as any other article of trulhe; ndling, on the subject of onths, that even if a form the nost binding on the consciences of men were established, there would be found few Himuloo consciences to be bound by it.

Among the better qualities of the Hindoos may be reekoned frugality, patience, docility, and even industry. Hut the first of these virtues makes, in many enses, too near an approneh to avarice. This is a quality of the Ilindoo chnracter which it is not very easy to explain. The usual effect of bad government, by renlering property inseeure, is to make the people prodigal, and if not inclifferent to

 a considemble emporimu for the linen manimetures al thut prove, cap. cire, oll the buher, mear the Jieseugebirgre, 25 m. inW. Jieguitz. I'и., K, $11 / 11$ in 1861. The town stands in in very high situsIfon, 1,010 ft, ahove the level of the sea, It is furtilfed aud well built; has 4 suburhs, 5 charrches, one of which is I'rotestant; a gymmasiun, deat and dumb and orphan asylums; und le the seat of the eonneil, and superior courts for the circle. Fine lnwn is woven in the neighbourhom, in which there aro niso many sugar retineries, bleachinir establishments, and pajer-mills. Its mamfartures, however, have fillen oll very mueh sine the midille of last century. Wirmbrimu, the mont celebrated watering-place of Silesia, is nt no great clistanee from this town.
IIRSCIIFEL, 1 , or IIERSFL:LD, a town of Hesse-Cassel, prov. Fulda, cap. distr, and principality of the same nane, on the Fulla, which is here crossed by a stone bridge, 32 m . Sisle. ('ussel. 1'op. 7,410 in 1861. 'Ihe town is walled, anil hiss 2 elmrehes, an hospital, an orphan asylum, mumrous other charities, nul the best-conducted Cutvinist college in the electorate. It has also some woollen cloth factories and tanneries.
IIITCIIIN, a market town and par. of Enghaul, co. Hertford, hund. Hitehin and ['irton, on the Great Northem railway, $31 \mathrm{~m} . \mathrm{N}$. by W. Iondon, and $13 \frac{2}{2}$. NW. Hertford. Area of pars., $1,15 i n$ acres; pollo of do. 7,1777 , and of town, 6,330 in 1861 . The town stands at the foot of a steep lill belosering to the Chiltern range, and consists of several streets, irregularly laid out, and lised with old but well-built houses. The chureh, in the ornamental Gothic style, has a low embattled tower, surmounted by a spire, and a S. porch, a tine specimen of Tudor architecture: the interior, which is richly ornamented, contains a curious font, and many splendid monuments. There are several places of worship for dissenters, 2 endowed schools, 2 Lanieastrian schools, an infant sehool, and some almshouses. The trade of llitehin, which is the 1.th, $15 t h$, and 16 th centories, was a large wool-staple, is now ehiefiy contined to menling and maltiur, its markets being well attended und nbundantly supplied with gruiu. Straw-plaiting employs many hands; and there is a silk-mill. The town is divided into 3 wards, each governed by 2 constabless and 2 lieadboronghs, appointed by the lord of the mnnor. Petty sessions are held by the county magistratesevery'Tuesday, the market day. Fairs, Enster and Whit Tuesday, for sheep nnd pedlary.

The pure Dhteh, or Neblerlambers, mamberinis abont $2 \frac{1}{2}$ millinas, inhahit the prosimes of North anal Sunth llallan!, Keahuml, litrecht, and Gimel derlami: the Friesians, spakin${ }^{5}$ " dinlect of the batel lamgugre, are alispumal, wo the mumber of latle a million, themagh (Jveryssel, Irenthe, (ironimgen, und Friesland: whíle North Brabunt is almost entirely inhabited by a Flemish pepulatiolt.

Physical Geoyraphy.-With the exception of some insignilieant hill-rauges in (inchlerland and Utrecht, and a few seatlered lacighas in OverVssel, the whole $k$ of Ilolland is a continamon flat, partly lomned ly the deposits brought dowa by the rivers intersecting it, and purtly conquared liy haman labour from the sea, which is above the level of a considerable portion of the conntry. Itolland is consequently at all times liable to daigerous inundations. 'The W. coast, however, from the Helder to the Howk of Hollami, is partinlly protected by a bataral larrier composed of a contiatuous ratge ol' samd-banks, or chues, thrown up by the sen, of great breadti, and frequently fo or 50 ft , in height. As the samel, which is very time, is ensily blown about by the winds, the danes are carefnlly pilanted with the Arumbo arenaria, or brent, which binds them tirmly tugether, obviating the injury that would otherwise be caused by their spreading over the comatry, and remdering them an eflectual barrier arninst the encroachments of the sea. But, in other parts of tho country, particularly in the pross of \%ealand, Friesland, and (iuchderland, the sea is shat ont by enormous artilicial monnds or dykes, any fiilure in which woulh expose extensive districts to the risk of being submerged. It mothing, indeed, is the industry and perseverance of the people no conspienons as in the construction and maintenance of these dykes. It being necessary to shut ont not only the sea. but the rivers, the channels of which are in parts elevated considerably above the level of the lami, the extent of dykes is immense, alid the expense and labour refuired to keep them in repair is very great. They are constructed principally of earth and clay, sloping very grahually from the sea or the river, and usnally protected in the more exposed parts by a facing of wicherwork formed of interlaced willows: sometimes their bases are fiaced with masonry ; and they are in parts defended by a breastwork of piles, intended to break the force of the waves. 'The most stiapendons of these dykes are those of W. Capelle, in the island of Walcheren, and that of the IIelder;
thit theres are many othens of hardly finferior llimenisions.
The rivera of Holland have mostly a W, or N. ilirretion, 'The prinelpal is the khine, which, for the mont part, meparates $N$. Hrubant from Gineliderland and N. Ilollmol, and atter recelving thes Mense, dividen lito two prinelpal arms, cullof the Maese and Hollands-Wlep, Hefore renching Nimeguen, it hus given ofl a branch to the N ., which, thomgh of hess size, preserves the nane of the lililne, listend of the maln stremm, mill itaelf gives ulf the lisel: these two branches diselingre themmelves finto the Zayder Zove. The main strenm from the ubove polist, near Nimegnen, takes the mame of the Wanl, unid nfter fis junction with the Mense is ealled the Merwe. Lakes ure extremely minerous, especiully in the N. prove; ; and there ure sume exte e marshes, as the Bourtany oin the NL: $f . \quad$ ar, the Peel in N. Brabnit and Limburg, do.
anhumls may be clased in two groups: the S. aroup, composing a great part of the prov. Zealmal nud a portion of S. Ilalland, is formed at the monthes of the principal rivers, and comprises Cudvaind, N. and S. Ileveland. Whlelieren, Schomwen, 'Tholen, Over-Flakkee, Voorn, Heyerlund, Yssermond, dec. the N. Eroup follows the line of eonst stretehing from the Helder to near the month of the Lims, and includes the 'Texel, Vlieland, T'er Scholling, Amellnud, \&c. There nre severnl amall islands in the Zuyder Zee. (lialbi, Abrige, ll 352, 1his ; INict. Géog. ; De Cloet, Deser. Géog., des Pays Bas.)

Climate.-Ilolland is colder than any part of Fingland in the same lat., and all passage for ships on the great caunl between Amsteriam and the Helder is anmually stopped by ice for three monthas. The menn tempernture of the year thrunghome the conntry is stated in the 'Journal de 'Iravanx' of the French Statistical Society to be $47^{\circ}$ Fahr. The elimate genernlly is variable, and the atmosplicre much loaded with moisture, especially in the W. provs., where intermittent fevers, Iropsies, plenrisies, rhemuatisms, and senrvy are frequent diseases. Gincllerland is the healthiest prov., but all the E. parts of the country are warmer anil more salubrious than the others. Holland is continually suliject to strong winds, without which, indead, to remove the exlialations from the stapnant marshes and numerous camals, the comintry would be very unhealthy. This circumstance is also taken advantage of for turning innumerable windmills, by the lielp of which the drainage of the land is chiefly effected. In winter the winds sometimes rise to violent tempests, and in spring are often very high. They are particularly liable to eause inundations by raising the tides on the cuast higher than usual, when they blow strongly from the W. or NW. In winter N. or NE. wiids are the most common; snow falls abundantly, and even the Zuyder Zee is sometimes fruzen over. In summer cold nights often sueceed to days of intense heat. (De Cloet, p. 35 ; Lettres sur la IIcllande, i. 87, dre.)

Nutural Products.-The soit $:^{3}$ almost every where alluvial clay and sand. Holland possesses little, if any, mineral wealth. It has no mines of any deseription. Some bog-iron is met with, but 110 other metal. No coal deposits are found, but, extensive beds of marine peat, of a most execllent quality, abound, especially in Friesland and Hol-
lani. I'otters' clay, fullern' earth, nud momie culcareons pirodictis, are met with, bint neareely any atone is fomm from one end of the kingiom to tho other. Jlathost, however, is alomiantly minolied witlo granite and limentone, conveyed irmin lin. burg hy the Mense; but the grenter part of the lime nead in the marit. ןurove. Is oltuimed by hurnbig mea whells. 'The conntry cominins very litilg. worl. There is some timber lis the li, piruve, wind nt the Ilague, Utredit, mid Ilarlim, there nre worale of onk, elm, sud beseh, but, ejenklige gebue rnlly, most of the trees have bern planted. Tho primicipul cumals, esperinly in and nour the towns. are llieed with rows of willows and frylurs ; und hin varions phates along the sminly whore firs nre piroduced. In of hor resperes the vergetation is wery similar to that of Eingland. 'the lriuged buckاкени (. Kenymuthes nymphaoides), lowever, whilh is rure in the lntter comontry, here llonts in the freatest profinslon on the surlace of the cmals, anil the more raro Neneciopahiolosus in not mifrequently: met with. I'he zoology, also, is in most rusperels like that of the sontherii anderent ral parts of tireat Brituin. The larger kinds of will animuls are not. met witl. Ilares and rablits ure plentiful, but nut winged game. The preservation of gume is un ohjeet of grent linterent to mont proprictors; and nofices to that efleet are fixed mi, mal great vigilanco expreised to prevent the trespmssing of sportanen mid others. In olry wemsons, ill mone districts, tield mice miltiply to such an inmonlorate aligree as to produce nerions loses to the firmors, by lestroying the roots of the grass in the mendows, where they burrow by millons. 'The parils and marshy grounds nbomill with frogs and other reptiles, which are a favourite foon of atorks. These birds are particularly numerous in Hulland, where they remain from the midille of February to the middle of August. They nre grent favourites, anil severe penalties are enforcel npon their wilfil destroyers. In the towns they build their nests on the housen: and in those parts of the conntry that are destitute of trees, buildings, or other means of protection, an ohd curt-wheel is very often raised lipon a ligh jole, to allord then facilities for the same purpose. Water-fowl are very ubuudant. The principal fish that frequent the Diteh coasts are col, turbot, whes, and other tlat tish. The herring fishery is a most inpurtant sonree of wealth.

Public Works, Dykes, and Canals,-There is perhaps no country for which nature has done so little, and man so muels, as the Netherlnulm. The first and greatest of the works of art are the stupendons dykes. The construction and repair of these prodigions bulwarks is placed under the comtrol of a purticular department of the goverument (Waterstuat), and a corps of engineers especinlly appointed for this important service. The expeliditure of this department amounts to a large sim annually. The cost of each dyke is defrayed by a a tax laid on the surrounding lanis, assessed nccording to long-established usage, and levied by commissioners ajpointed for the purpose. The expenditure in lubour, though great, is generally much exceeded by that in willows and thmber. The former are raised in extensive plantations near the places where they are wantel.
If there be any danger of an inundation, the inhub., on a signnl being given, repair en masse to the spot. There is never any backwardness on these occasions, every one being fully aware, not only that the public interests are at stake, but that his own existence perhaps, and that of his family and friends, would be involved in extreme hazard should the waters break through the dykes, Hence, the most strenuous efforts are made to

 hashat lons in the comerse of the listhe evilurys. 'The so-enlled Inmelem Meer or Iake, which in reerent samrs lans heen urtithelally driad, und, therchore, Crased to be a lake, owed its origin to an inumdation lin the lith century, which proved lintal to freat numbers of the inhmb, mul many inumhations huve taken ploce within a comparativaly monlera periond. Owing, however, to the tmpiruser eonstruction of the dyken, and the grenter skill in enfineering, these rilnmitles are now neither so froquent nor eo destrintive ns formerly.
some of the inturior parts of tho country traversed by the great rivers are even more expmed to the dangers of inundation than those conthinoms to the shore; mind when the dibade, or brenking IIp of the ier, thakes phace in the upner part of the river, betore it has begenn nenrer the sen, as is somptimes the case, the risk of innmdation is extreme. On such nemsions every aflurt is mulr, wot exerpting even the emphoyment of artillery, to break the ice nud lincititate the exit of the water, lint sumedimes without the desired chlect. The following is an instance of this sort of calamity. ' One of the richest tracts of country, in the vicinity of Arnheim, hats beell often exposed to tremendons inumdations. These are frequently lelt at the breaking up of a long frost; but in mo instnuce so calamitously as in the winter 1808-9. $\boldsymbol{A}$ violent tempest from the NW. had ruised the waters of the \%uyder \%ee nome feet above the highest mark of the spring tides, and the waves bent with unusuml violence against the dykes constructed to break their firy. The thaw on the Cpper Rhine had inerrased the quantity, nud the foree of its waters, which bronght down masses of ice 1.1 ff . in height, and more than lialf a mile in langth; to which the embankments, soltened by the thaw, and somewhat injured, presented an insutheient barrier. A breach made da one part sonon extended itself, mal the torrent quickly rovered the comitry, bearing before it by its foree the villures, the inhab., and the entle. The lieight of the Znydor Zee prevented the water from tinding an outlet; and it consequently remained on the gronnd for a long period, in spite of the exertions of the surviving inhanb. lisy this event, more than 70 homses were tutally destroyed, a far greater number irretrievably damaged; and of 900 families, more than 500 were rendered utterly destitute: more than 400 dead bodies were left on the borders of the current; and at the city of Arnhein 500 persons, mostly women and children, with many hundred head if enttle, were rescued from a watery grave, by the hazardous heroism of the inhab., who ventured in boats to their reseue.' (Jneol's View of the Agric. of Jlullamı, 1p. 57,58.)

The general aspect of Holland is different from that of any other country in Europe. Its surfince presents one immense network of canals, which are there as numeruus as roads in lingland, the pirposes of which, indeed, they for the most part answer. The greater number are appropriated to the drainage of the land; many, however, are nuvigable by large vessels. The principal is the Granil Ship Canal of N. Holland, between Amsterdum and Niewdiep, near the Helder. This noble
work, the grentent of its kiul in Pinrujer, is alnoit

 Itois-lo--Lue to Maestricht, avallable for veswels of 800 tomas: mal that betweron the lims and llarlingen, itl Frienland. As they run through nur rintlroly level comitry, lochs are gelurally mummessary, except at their montha. Ono of the thesest momments of selentitle skill in Ilolhmin, in a suceession of locks or alulece of enormons siza anil strengeli, conntruted in 180), at the nousth of that brmad of the Rhine onf which J. vilen la sltanted. T'hia month was for a long peric di chokerid IIf with samel, but it is nuw kept quise clour, the loeks being closed with the flow and thrown "n-1] by the ebb of the tide. The latgar cimals are: commonly nhont tioft. liromed, ly six deep; and thongh often below the level of the sen, mot onls their surface, bat their botom, is frequently higher than the abjoining country. Ithe smaller canals, by which the conntry is ilruined, traverse and surround sections of land protected from innadntions by means of dykes.
Such wectlons are termed polders. A tract of land on being resened from the sen or a river is in the state of a moriss or marsh; and the mext process is to alry it, so as to render it suituble for tilhge or pasture. To effeet this, the marsh is intersected by water-rourses, and windmills are employed, as in the Fers in Eughand, to lift II, the water. These mills are erected on the dyke: or rampart, exdinding the sen or river, and raiso the water to a diteh or eanal on the other side. l'umps are seldom employed for this purpose, wheels being by fur the most genernily usel. Sometimes the marsh is too extensive to be irmineal simultaneonsly, in which case it is divided into eompartments by suborilinate ramparts and watercourses; and mills being erected on them, each portion is separately divested of water. In many cases, however, the aleptli of the marsh below thie level of the sea or river is too grent to allow of the drainuge being effected by one series of ramparts and ditches; and in these cases, two or more series of ramparts, ditehes, and mills are eonstructed at lifferent elevations, the water being lilted up snccessively from one to another, till it be timally brought to the desired level and conveyed awny, The labour and patience required in an milertaking of this kind is shown by the fict that the surface of some of these pollers is as much as 24 ft . below high-water mark, and 30 ft . below the level of the highest tides. The soil of the polders is of various sorts. Where it is elnyey, and the drainage perfect, they are extremely fertile, amd are not unfrequently cultivated; but Where the soil is mossy, or the drainage incomplete, they are employed as meadows.

In sailing along the arms of the sea, the rivers or canals of this singular comintry are seen at a considerable elevation above the stirrounding fields, reminding the traveller of Goldsmith's verses:-

- To men of other minila my fancy filea,

Jimbamum'd In the desp where Ifollmad lles:

 when lemis XiV, invaded liolland. It is said that in |x:0 - is: every thing was prepared lor ant linmatifins, had the threateneal inrond of the Frouch taheris plase.

The runds and private estates are commonly fenced ly camals or ditches alone; hedges are rare, The highways in the central prove, are anomg the hest in liurone. They rmon for miles in a atraight line alongr the sammits of the dykes, and are thius at once dry and elernied, so as to command extensive views. Jetween the large dities they are bromi, nud usuatly paved with $n$ khad of minall hard bricks called elinkers, mostly made of numl mixed with the clayey mud obtained lit cleming the camals. 'They are ifted mo exactly to emeh other, when lah down, that searcely a crevice is to bo seen; atsl being well covered with sen manl, they sustain little finjury from carriages. Filsewhere, the roads are mude of sea-shells and the common soil, well comjoundel together; which mixture though soft, is not much ent by the wheeds. Where water conveyance is so abundant, it may be easily suprposed that few carriages will travel on rouls burdened with tolls so high as to amount to nearly ns much expense as the pust-hormes. In fact, the transport of the granter part of firm-prodace and other bulky gooks is carried on hy means of water; and jeraons travelling, unless they use the railways, which intersect the commery ant nearly so mueh is eanals, commonly make use of the cannl barges, or treckachuits, towed by horses, I'his is expecially the case in the NL, prove.

Jistribution of Kand-Of nbout $7,800,000$ acres, which the total surface of Holland comprises, there are estimated to be, $5,310,010$ neres of cultivated land; $2,000,000$ ditto incultivated 220,000 ditto oceupied by canals, and pomils ; and the ressilne by roads, bunlalings, and public walks. The richest hames are in the s., and central prove.; the poorest, for the most part, ill the NE: ; in Over-Ysoel and Jrenthe, enpuindly, healh und waste lands prevail to a great extent. A good deal of waste lame, origimally of a very unpromisinf quality, has, of late years, been bronght into cultivation by the panper popmation settled upon it. For the purposes of the land-tax, a cadasiral valuation of landed property has been imade, and continued from time to time according to the changes which have taken place by bringing waste lands into cultivation, and by the increase of buidinge. Newly reclaimed lands, however, and new buildings have the benclit of an exemption from the tax for ten years. The amount of the valuation in 1859 of all ineome from land sulject to the tax in the Netherlands was

The alove table is from a report by Mr. Ward, Iritish seeretary of Jegntion, datel 'lhe IIngoce, Jime 20, 186.. (liejurts of Scoretaries, N. V'. 186\%.)

In S. Idolland the proportion of pasture to armble land is about ez to 1 . 'Tho averige size ol' farme ts from 10 to boll hunders (ble same ns the French heoture, mearly 2 a acres each) ; large firms run from 70 to Itto bunders. 'The prineipmi proprietors asmally let their land on lanse to the misaniry ; the propictor paving the promerty-fins, and the dues on dykes, politers, and water-mills; and the farmer a persomal tax and the tax windrvants. In some instunces the landlords firmiah or piny for seed and manure, and go halves in the crops with the tennuls on the metnyer principle; but even when thin is not the case, the rent is always jaid in klad. The leases are commonly for 6 years. In N. Holland, farme avorage nos more than 20 binders, or 50 neres, each; int which from 1 ti to 18 cows, 4 calves, a horse, and 15 or 21 wheen, besides a few hogs, may to kept if the soil be gomal. The rent of pasture land varies from about 18 to 50 Horins, of arnble lame from 15 to int florins the bunder: garden groninds near tho towns let somewhat higher. In Friesland, the quantisy of' pusture is mare than 8 times greater than that of arable land. The common size of a farm is from 75 to 100 neres; but some are nearly wico as large. 'Ihey are gencrally let on leases of 6 or 7 years, the proprictor paying the land-bin, and the enltivator the other assessments ; though in some parts the proprietor contributes lis quotn to the maintenance of dykes and dams. Few proprictors eultivate their own land. The beat clay pasture in that province fetcles a rent of from 36 . to 41 . the bunder; but a considerable propertion of the soil is sanly and inferior, and lets for only from 30 s, to 00 s , the bunder: there are also abont 300 bunders marshy and unproductive, some yielding a rent of no more than $10 d$. a bunder. In Guelderland there is some good land, but a great deal more is very indifferent; and in the SW. vast trucks have been planted with Scoteh tirs, and Weymouth jines; many hundred acres have also been sown with ncorns, without any hope of the oaks ever reach-

In S. llollmail wheat is the grain most. enltivated, the gunatity of it raised hefing double that of bnrley, whleh comes next to it in limportance. Wheat is said to prombe fromi 12 to 15 fold, and other grains in proportion; lut such statements are seliom worthy of much confldence. The rotation in this jrow is usially as follows:rapeseed, winter barley, or rye, succeeded by rapeseed, barley, or wheat; ilax, buans, or onts, succeeded by summer grains; and these by potatocs; rye, onts, hains, nud clover; inal the linet year the remanaler of the clover-nfter whish the gromad is fallowed. In N. Itolland, rije and mosturil needs, burley, onts, peas, mul horse aul pigeon beans are generally grown in the rotation, though no tixed rule in olserved. There are no fablows in this prow. In Frieslanh, the better sorts of lami are njpruprinted to wheat, barley, rye, ami rapeseed, and the inferior to summer grains, as luckwherat and onts. lianesued, after fillows, is suececded next year by whent or larley; on wheat lande the ulternate cropis are linrley or beans, thax or potatues; on rye lands, buekwhent and onts. Near the W. border of (inelderland, the land when clenrel is manured and sown with buckwheat after that, a secomil Iressing of clung is alministered; and after a single ploughing, rye is sown. The rye is usially harvested in July, when turnips are mown after a single ploughing. Thore are thus regularly 8 crops in every 2 yenrs. The avernge produce of buckwheat is from 20 to 22 bushaels per aere, and rye 2 busheln more. Irobably 7 or 8 enrt-loads of manure are applied to an acre of lamd before buekwhent or rye. Further li. the lame inproves consideralily. Near Jreshurg the usual rutation is-tirst beans; then whent, in whieh clover is sown; and after the clover, onts. Some of these lands are of $n$ stifl texture, nud on these it is usual te make n year's clean fnllow; after which the same rotation is pursued. Madder is very extensively grown in S. Ilolland, and usually pro. duces 4,000 los, to the acre, but it tends to exhaust
the most fertile mails. It is fropucully fullowed ly

 pal necesariea. It may In: mated, an illowratice of the fummer exterit of the trule of Iloll.init, that, III libur, when it hat at aismil on a mavinum, sir Williamt l'utty eathated the whole mipping of

 liveed, that this extimate was rather within then beyomil tha mark.
The teelline of commeroe ill Itolland was actiat abomed partly and primelpully by the natural grow th of spale mid naviguthon in other conntries,
 lyy the mimeroms enntests in which the repulitie
 by the fremeh, tirst as a depwileut mate, anil subserpuenty as an litegrol part of the fremeli empixe, her furelgn trule wan almost entlrely deniroyed. Her colonien were succossivily comiquered by Engiand; and, in addition to the loss of her trisle, she was burlened with fresh taxes. Iht such was the vast aceumulated wealth of the Dutch, their prindence and energy, that the intluence of these miverse circumstances wis far less hifurimus than could have been imaghem; and, menwithatanding all the lossex alo hat sustained, and the long fintarrantion of her commerriml purasita, Hollani wasatill, at hor emancipution from the yoke of the Freneli, in 181.1, the rieliest comitry in linfope. Java, the Mohecos, anul most if her ather colonies, wire then restured, und she entered again unom a large foreign trailo.

The comuection of Ilollan'I with IBelgimm, Nett lerl at the Compress of Vienua, was, however, an ulifirtunate one fir both commrice. The union was not agremble to eibher party, and was injorimus to the former. Thelginum wat in agricultural nilit manufneturing eomatry ; and was inellowl, in imitation of the French, fo lay reatrictimen ons the improration of most aorts of raw and manulactured praluce. 'This protectioniat policy was directly "plosed to the interesta and the uncient practice of the Duteh. Dhat though their depitien prevented the restrictive system from hellit carried to the extent proposed liy the lielgians, they were unable to prevent it trom being cartiol to an extent that materially atfiected the trade of Ilollani. On the whole, there can be little sombt that the separation between the two divisions of the kingelom of the Netherlands will eventunlly redomed to the advautage of IJo'lamb.

The lmports prineipally consist of sugar, coffer, spices, tubaces, cot ton, ton, enchineal, iniligo, wine anil bramly, wool, grain of all sorts, timber, piteh and tar, hemp and llas, iron, hides, linen, cotton and woollen stufls, lardware, rock salt, tin plates, conl, and dried tish. The exports consist partly of the produce of Holland, partly if the proiluce of har pussessions in the fiast and Weat Indies, and other tropical conntries, amb parly of commodities brought to her ports, as to convenient eutrepofs, from different parts of binrope. Ot the first class, are cheese anil butter, madder, clover, rape, hemy, nul linserd, rape mul linseed oils, and linen. (icheva is primeipally exported from sehicdmm and lotterilam: oak hark principally l'rom the latter. Of the sccond cinss are spices, Macha

Gomernment.- Previonsfy to its occupation ly the French in 1795 , anil its sulseguent erectinin intu a kingiden by Ninuleon, llolland was a repullic, cuserned by the states-general, will the executive nower louged in the hands of a stadthulder. There ean be no question that the grent commeree of the Duteh in the $16 t h, 17 \mathrm{th}$, and $\mid$ xill centuries, their wealth anl industry, were materially promuted by their free institutions numb the nature of thisir goverument. At a time when Englamb, France, and most other bimpopeanstares, were a prey to civil wass, cansed by religions and politienl lifferences, the butels had the wislom to
establish and maintain a system of universal toleration, and to make thelr cometry an asylum for all persecuted and oppressed st rumgers, Though complex and not very popmlar, in practice the constitution gave free scopo to all deserving bindividuals to uttain to the highest dignities, at the same time that it ellectmally seemred them agrinst violence and oppression. 'Jhe utinost latitude was given to every one to dispose of property ly will us he thonght best; justice was speedily and impurtially administered; and thongh taxation was hunvy, the revenne was fulthfully and economically expended. Hence the political conspired witit the physical circumstances inuler which the Holhaders were phaced to call forth their talents mud minerprise, and to render them indistrious and ceonomis: That. the ditlicnlties inchent to their situation, the duris uryens in rebus eyestus, huve done mich to make them what they liave leed and what they are, cannot be disputed; but it. is easy to see that they are, at the same time, largely indebted to the frealom of their civil and religions institutions. Hy teeree of the Congress of Vienna, uluted May 31, 1815, the ancient form of government of the Netherlands was changed into a constitutional monarchy, and the royal tignity was made hereditary in the fanily of the I'rinces of Orange. The king is also grimd dake uf laxemburg, in which capacity he belongs to the (ierman confederation. Ilis person is inviolable, his ministers alone leing responsible; he nominates to all civil and military otheres, proposes and promulgates the laws, dechares war or makes peace. The states-general consist of 2 chamhers: the lirst is composed of 39 members, nominuted by the proviucial iliets from anong the most highly assessed inhabitants of the virious provinces. The second chamber of the stsitesgenerul numbers 72 members, elected oy ballot. All citizens, natives of the Netherlands, paying taxes to the amount of 120 guilders, or 102 ., are voturs. Clergymen, military ollicers in active service, and juilges, are tlebarred from being elected. The members of the sec ind chamber receive an annual nllowance of 2,000 guilders, or 1661., besides travelling expenses. Every two years one-half of the :nembers of the second chamher, and every threc years one-third of the nembers of the upper lionse retire by rotation. T'ne sovereign lias the right to dissolve cither of the chambers separately, or both together, at any time. The constititional alvisers of the king, having a seat in the cabinet, must attend at the meetings of be:th houses, and liave a deliberative voice; but. unles' they are also members, camot take an active past in the debate. All timancial measures must originate in the second chamber; the assent of hoth the sovereign and the upper honse is reguired before any bill which has passed the louse of representatives becomes law. The royal veto is seldom, if ever, bronglit into practice.
The exucutive authority is in the hands of the sovereign, and exercised by him through a responsible council of ministers. There are seven departments in the ministerial council. Each of the ministers has a salary of 12,000 guilders, or 1,000 . per annum. Whenever the sovereign presides over the deliberations of the ministry, the mecting is called a 'Cabinet Conncil', and the privilege to be present at it is given to all princes of the royal family who are of age. There is also it privy conneil of 14 members, all nominated by the government, which the sovereign may consult.
'The different provs. have their own local magistracy and haws established by their bwn states; the julges are nominated by the kiag for life, on the recommendation of the jruvincial states, or the
states-general. The provs, are divided into arronilissements, cantons, and communes, sinilar to those of the French dejps., and superintempled in like manner. The lueal courts are also simllar to those of France ; in each canton there is a ey uf justices of the peace, and in each arromil. imfe of originul jurisilietion: there are trihumes of commerce in the princijal eommercial illatricts. The supreme judicial court, and high board of taxation (cour eles finaness), slt at the Marue, which is also the usual residense of the court. The police is under the control of a central director, a sul)director in each prov, and commissuries in the arrondissements. No medicants or disorderly persons are suffered to ollend the publie eye, and edneation is carcfinlly alministered to juvenile ollenders. There is no imprisonment for delt.

Chureh Arministration.--According to the terms of the constitution, entire liberty of conscience and complete social equality is granted to the nembers of all religions confessions. The royal family, mud a majority of the imhubitants, belong to the Reformed Chinrch; but the Roman Catholies are mot far inferior in numbers. In the census of 1849-more recent enumerations to not show the rellgious creed-the number of Calvinists, or members of the Reformed Choreh, is given as 1,906, 618 ; of Lutliermens, 66,170; of Roman Car tholies, $1,220,087$; of (ireck Catholics, 41; of divers other Christian tenominations, 11,151 ; nud of Jews, 64,070. The goverument of the Reformel Clmureh is Presbyterian; while the Ruman Catholics are under an archbishop, of Utrecht, und four bishops, of Ilarlem, Breala, Roermond, and llerzogenbush. The salaries of several ISritish Presbyterian ministers, settled in the Netherlunds, and whose churches are incorporated with the Dutch Keformed Church, are paid out of the public funds. The ministers of the Dutch Reformed Church are allotted to certain districts in propurtion to the pop; ; there being 1 pastor generally to about every 2,000 or 3,000 people. Their maximum salary is 200t.; their miмінии 50/.

The Military Foree amounted, in 1863, to 57,520 men, under 1,435 othicers, exel. of colonial troups. 'Jhe army is formed partly by conseription aud partly by enlistment, in such a manner that the voluntears form the stock, as well as the majority of the troops. The men drawn by conscription it the age of twenty have to serve, nominully, tive years; but practically, all that is required of them is to drill for a few months, and, returning home on furlough, meet for a fortnight annually for practice, during a period of four years. Besides the regular army, there exists a militia-' schutters '-divided into two classes. To the first, the ' active militia,' belong all men from the twentyfifth to the thirty-tifth year of age; and to the second, the 'resting (rustende) militia,' all persons from thirty-five to fifty-five. The principal fortresses, next to Luxemburg, are Mnestricht, Breda, Bergen-op-Zoom, Buis-le-1)uc, Flushing, and the Helfer. Luxemburg is garrisoned by P'russian troops.

The Nary consisted, at the commencement of 1864 , of 58 steamships, with a total of 785 guns, and 81 sailing men-of-war with 936 guns. The navy was manned, it the same perioxi, by $6,13 i$ stilors, recruited by voluntary enlistment.

The Public Revenue is derived from a land-tax, or contribution foucière, from numerous personal and nssessed tixes, excise duties, which, among other articles, are imposed on turf, conl, dec., and from taxes on stamps, registrations, tolls, harbour dues, customs, the post-office, lutteries, de. Of this surplus, the sum of $5,250,040$ guilders, or $437,500 \%$, was to he adkel to the sinking find for the extinction of the national delet.

According to a statement of the Minister of Finance, made when liying the buiget of 1810.4 before the Sitates-General, the reiluction of the national debt, from 18.18 to 1864 , amonited to $185,000,0100$ gnilders, or $15,416,6671$.

Provision for the Poor.-'lhough pauperism is diseouraged, and menilicancy punished, the Duteh are very eharitable and liberal in their support of lhe poir. The institutions for the relief of the indigent consist of hospices for the aged and inlirm, orphan-bouses, workhouses for towns anil dintricts, the poor colonies, and private charitable institutions. 'I'he funds for their support nro mostly derived from endowments and voluntary contributions. Boxes, inviting the donations of by-passers for their relief, are stationed in many public ways; the establishment of any new public work excites a fresh call on behalf of the poor; und a tax of abont a penny in a shilling, to the same end, is levied on tickets to all places of mblic amusement. The hospitals, asylums, and other charitable foundations, are very numerous in the towns.

An institution worthy of particular mention is the 'Society for the l'romotion of the J'ublic (inonl,' an association which originated in 1784 with a few benevolent individuals, but which has now 300 branches throughout IIollaml, and is supported by 20,000 members, each of whom pays a small sum (about 10s.) yearly. Under the direction of this society, savings' banks, libruries, weliools of various kinds, incluling those for the higher branches of knowledge, are establishel ; prizes mul rewards are given for superior essays, works of art, or acts of humanity; and in the winter season, public lectures on literary, scientitic, or moral subjects are dehverel. The establishments of this society formerly extended into lelgium; but since the revolution of 1830 , they have mostly ceasel to exist in that conntry.

Among the classes able to labour, a sfate of even temporary dependence is considered disgraceful, and great exertions are made by the libouring popmlation to avoid it. No sense of degradution attaches to orphan establishments. There are 3 great workhouses for the whole of Hlulland-one at Amsterilam, another at Mithlleburg, nnd a thirl at Nienve-Pekel-A, in Groningen. In these the inmates work at looms, de.; the sexes are kept strictly separated; the food is very inferior and somewhat scanty, the clothing coarse; and the inmates are not snffered to go abroad. All beg|gars are apprehended by the police; if aged or
nirm, they are sent to the workhonses-if able to work, to the peisal colonien. In the latter establisliments, ?t he punpers inbour with the spade, in brick-making, or in manufuctures. Guarils on lorseback, who patrol the boundiries of the colony; rewards given to those who bring back any colonist that has attempted to escape; and a uniform dress, are the means alopited to prevent lesertion from these settlements.

Public EJducution,-I Iolland has been much and deservedly celebrated fur its system of public education. There is seareely a child 10 years old, of sound intellect, who eannot both read and write: almost every one recelves instruction the some period, the expense of which is for the most part, and in some instances entirely, defrayed by the state, without the inculention of any particular religious creed; the interference of the grovernment being exerted only to exclude improper and incompetent teachers, and to regulate the mode of instruction ly a system of insjection.

The department of education is unter the superintendence of the minister of the interior, assisted liy the inspector-general of instruction, from whom ail changes and new regulations emanate. The inspection of schools is devolved chicfly upon local inspectors, of whom there are 70, or one for ench school district into which the kinglom is alivided. These inspectors are assisted by lical boaris: and each inspector is responsible to the provincial board for the efficiency of the schools within his district; the provincial board being itself reaponsible for its proceedings to the minister of the interior and the inspector-general. In Holland, no person can open a public school, or even receive private pupils, without tirst having received a certificate of his ability to tench, granted after inquiry and examination by a boaril of examiners consisting of district surveyors, who meet for this important purpose. This buard grants four sorts of certificates; but one only is granted at a time; and to obtain the highest certiticate, fur successive examinations must be undergone at different intervals. Having obtained his certificate, the candidate must next apply for leave to open a school to the school committee of the town or district in which he proposes to establish it, who do not grant his request unless when they think such additional school is really reguired. Very grave doubts have been and may be entertained as to the policy of this last regulation, but there can be none as to the policy of subjecting all persons intending to open schools to the necessity of undergoing ant examination as to their fitness. The district inspectors assemble three times a year in the clief town of their respective provs., where they hold a conference, each inspector making a report, in the presence of the provincial governor, on the state of education in his district. Sometimes the goverrment assembles $n$ council at the Hague, consisting of deputies from cach provincial board of education, when everything pertaining to the system is discussed and reviewed in presence of the minister of the interior and the inspectorgeneral. In 1861, there were in the kingiom 2,595 primary schools, attended by 330,000 pupils of both sexes. Besides these, there were 950 higher educational establishments, with 41,982 male, and 40,652 female pupils. A fuller education than these imparted 63 additional 'Latin schools,' with 1,802 pupils. Above them are the three universities of Leyden, Groningen and Utrecht, with 1,327 students in 1861. The ecelesiastical training schools comprise six Roman Catholic and two l'utestant seminaries. There are also three military, one naval, and one veterinary school. The proportion of attendance in the public schools is onc in eight of the entire population. There are
two normal seliouls for the cilucation of teneliers In Holland; one at Groningell for the N. prove., and the other at Iaarlem for the centre and S. of Hollund. The primary schools are divided into Armen, or poor, and Tussehen, or intermediate, sehools. In both much the same kind of instruction is afforded, inchadling reading, writing, arithmetie, geograjuy, the history of Ilolland, and voinl musie; but the latter are attended by the chidiren of parents alove the condition of the poor, and the fee, though still very tritling, is somewhat highour. In the poor-schools, as in all the rent, a small simm is genernlly paid, and in many instances daily, hy the parents of the children educated. This circumstance does not retard the progress of ecluentlon amongst the poor, but has perheps rather a contrary effect, innsmind as it removes that sense of degradation which frequently associates itself with the notion of receiving eleemosynary instruction. No law, as in Prussia, exists in IIollumd directly compelling parents to send their children to school; but the poor are not allowed relielf from the pulbic funds unless they comply with this regulation. There is, however, little need of such a proviso. since a just sense of the grent value of education is found to exist amongst all classes. In the superior private schools, German, lirench, Finglish, and other modern languages are taught, in addition to the orlinary elementary branches of knowledge. In the Latin sehools, which are analogous to the gymnasia of Germany and the collegres of France, pupils are instructeil in Latin and Greek, the moderı languages, mathematien, physies, geography, history, and the other higher branches of edueation, fur the most part as preparatory to their studies at the athencums or universities.

In these seminaries, people of all religions persuasions are received indiscriminately, and at stated times attend their respective elergymen for religious instruction. The monitorial system of teaching is searcely at all introduced. The pul)lic sehools, like the public charities, make little or no outward ilisplay, nad are condincted on the most rigil system of economy. The efficiency of the elementary instruction supplied by the schools in Holland is universally adinitted; but, with all its excellence, the course of education comprises only the more elementary divisions of mental culture; the study of philosopiny, of the priaciples. of polities and political ceonomy, of the ligher branches of literature-of all those pursuits, in short, that tend to expand and elevate the mind, is comparatively neglected.

The Dutch school of painting has attnined to great celebrity. Its masters excel chictly in thlineations of common life, and nnimated ohjects : in necurney and excellence of colouring, and the management of light and shade, they are surpossed by nonc. But the subjects of their pictures are, not unfrequently, so very coarse, vulgar, and low, as to be, in many respects, the antitheses of those of the Italian sehool. The Dinteh sclionl can hoast of Rembrandt, Teniers, Jan Steen, Ostade, Gerard Dow, Mieris, de.: besides whom, Wouvermans, Paul Potter, Berghem, and linysdael excel in landscapes and cattle; Vandervelde and lanckhnysen in sea-views; and Weenix, llondekoeter, Vandenheyden, Heemskirk, Breghel, \&cc., in other departments. Many of the best works belonging to this sehool are to be found in Hollnond, and especially in the galleries of the Hague, Amsterdam, and other chiet towns.

Manners and Customs.-In stature, the Ditch are much the same as the English : the women are comparatively taller than the men; they are decidedly handsome, and, when young, have na-

turally gool eomplexions, which they might preserve to a later period, did they take more exercise in the open air, and abandon some injurions customs, such as the incessant nse of the chauffepied, a box of burning peat, which accompanies them everywhere. 'Nothing,' says Mr. Nicholls, 'can exceed the cleanliness, the personal propriety, and the apparent comfort of the people of Holland. 1 did not see a house or fence out of repair, or a frarden that was not carefully cultivated. We met no ragged or dirty persons, nor any drunken man; neither did I see any indication that drunkenness is the vice of any portion of the people. I was unsured that bastardy was almost unknowin; and ulthough we were, during all hours of the day, much in the public thoroughfares, we saw enly two beggars, and they in manuers and appearauce scarcely came within the designation. The Dutch people appear to be atrongly attnched to their government, and few countries possess a population to which the domestic and social duties are discharged with such constancy. A scrupulous economy, and cautious foresight, scem to be the characteristic virtues of every class. To spend their full annual income is accounted a species of crime. The same systematle prudence pervales every part of the community, agricultural and commercial; and thus the Dutch people are enabled to bear up against the most formidable physicul difficulties, and to sceure a larger amount of individual comfort than prebably exists in any other comntry:' (Report on the Poor of Holland, in 1858.)

The women are very domestic in their habits, and carry cleanliness in their houses to the greatest possible extent; though personal cleanliness dues not always receive the same attention. The ancient national costume, the wide hreeches, full petticoats, and broad hat, are now mostly contined to the fishers and peasantry; in the towns, the people dress like the French and Englinh. The most remarkable element of costume in use is the headdress of the Friesland women. The latter, who ure the desceadnants of the ancient Frisii, so often referred to by Tacitus, and whose bluc eyes, flaxen hair, and fresh ruddy complexions decture them to be of the Gothic race in perhups its greatest purity, wear on both sides of the head large plates of gold or silver, connected together by a band of the same metal passing behind, and ornamented with two singular nppendages, of a ram's horn shape, to which are attached pendants of various kinds. The whole is covered by a rich cap of lace: it not unfrequently costs 161 . or 201 .. and often composes the whole dowry of a Friesland girl. The Dutch, though in general frugal, live well and substantially. Cuffee, tea, beer, and native giu, but especially the first, are the favourite drinks: the tubacco-pipe is in universal use amengst all classes. The houses in the towns do not aim at any exterual grandeur, and are in genernl plainly furnished; but those who can athord it are extremely fond of collecting china and other kinds of curiosities. 'The luists, or pleasure honses forming the residences of retired merchants, are mostly built on the same plan. These edifices are usually of brick, plastered and painted to look as trim and tidy as if just taken sut of a box ; and, with their close-shaven bit of lawn in front, their narrow wet ditch separating the domain from the public thoroughfare, their little bridge, dashing wooden gateway, clusters of dahlias, and fresh painted summer-house, form the beau-idedl of a Dutchman's wishes. On the gateway there is invariably some motto, indicative of the taste or temper of the owner.

The Dutch are very regular in their habits; Vol. II.
precision, deconum, nud a naxed rontine govern every thing. Intoxication is, generally speaking, rare; hut in September an annual festival takes place, which lasts for ten days, during which great excenses are committed. So som, however, as this festival terminates, the people return at once to their former habits of sobricty till the next yearly occaston. Their amusements are not very intellectual, nor do they include many sports oit of doors. They are mostly similar to the entertainments afforled by the ten-gariens and secondary theatrical establishments in Eingland.

Mistory.-In the time of the Romans, Holland was inhahited chiefly by the Butavi and Frisii. the former of whom, after the conquest of lelgium by Julins Cessar, coneluded an alliance with the liomans. 'This was afterwards sileutly changed into sulbjection to Kome, and it is suid that Claudius Drisus, a Roman goverior, about the begiming of the Christian era, erected the tirst dyke to warl off the encronchments of the sea. In the reign of Vitellius, the Batavians endenvoured unsuccessfinly to throw off the Roman yoke; in the second cenitury their country was overrun by the Saxons; in the eighth it was conquered by Charles Martel; and it sulbsequently formed a part of the dominious of Charlemagne. From the tenth to the fourteenth century, the Netherlands were divided into many petty sovereignties, under the dukes of Brabant, the counts of Holland and Flanders, \&ec. In 1383, however, by marringes and otherwise, the whole passed into the hands of the dukes of Burgundy; theuce to the house of Austria: und lantly, in 15.1 x , under the rule of the emperor Charles V . The union with Spain was a most unfortumate event for Holhand. The Duteh had long been in the enjorment of many poltical rights and privileges; they had extensive fisheries and trade, and they had for the must part embraced the doctrines of the early reformers. P'litip II., who regarded the privileges enjoyed by the Dutch as usurpations on his own prerogative, and who detested the reformed faith, resolvel to recover the former, and to suppress or extirpate the latter. To aceomplish this purpose, he sent, in 1567, Ferdinand de 'Toledo. duke of Alva, with a powerful army into the Low Countries. lut the proscriptions and massacres with which this sanguinary though able soldier filled the comntry, failed of their object. The Dutch, instead of being subdued, were at length driven into open rebellion. The malcontents enptured the Iriel in 1572; and after a struggle unequalled for duration, for the sacrifices it imposed on the weaker party, and for the importance of its results, the independence of the republic was acknewledged by Spain in 1609. Except that it was occasionally darkened by internal fends, the half century that succeeded this event is the brightest in the Dutch annals. The commerce of Holland attained to an unrivalled magnitude; and while she extended her colonies and conquests over some of the most valuable provinces in the E . and W . Indies, she successfully resisted the attacks of Louis XIV., contended with England for the enpire of the sea, and was justly regnrded as one of the bulwarks of the Protestant faith.
From the death of Louis XIV. down to the French revolution, the influence of Holland gradually declined, not so much from any decay of her own resources as from the growth of commerce and manufactures in other states, especially in England. The policy of Holland liad long been peaccful; but that could not protect her from being overrun by revolutionary France. In 1806, she was erected inte a kingdom for Louis, a brother of Napoleon; and, on the downfal of the latter, she was united with Belgium, and formed into a she was united with Belgium, und forme
kingdom under the family of Orange, the founders of her liberties. But this union was never cordlal. The Dutch and Belgians are, in fact, totally dissimilar in their religion, character, and pursuits ; and the connection between them was diasolved by the revolt of the lielgians soon after the French revolutlon of 1830 . Ilolland, therefore, has now nearly the samo limits as before her occupation by the French in 1795.
holdani) (NEW). See Auatralida.
HOLSTEIN, a duchy at the NW. extremity of Germany, forming part of the German confederation, bounded W. by the N. Sea, S. by the Eibe, E. by the Baltie, and N. by Schleswig. It is of a compact form, comprising an area of $3,255 \mathrm{sq}$. m ., with a pop, of 544,419 in 1860 . Surfaco and soil considerably diversified; the E. part is somewhat hilly, and, besides fertile plains, has woods, lakes, and pieturesque scenery; the middle part is comparatively barren, and is in many parts covered with heath; the W. district, along the Elbe and the German Ocean, consists principally of flat, low-lying, rich marsh land, secured by dykes and sluices agninst the overflowings of the sea. Principal rivers, Elbe and Stor; the only lake worth notice is that of Plcen. The canal of Kiel separates Holstein from Schleswig, and is of great importance, as well for inland as for forcign navigation. (See Kızl.) The lat. of Holstein being the same as that of the N. of England, its productions are also similar, consisting of wheat, barloy, and oats; potatoes, hemp and flax, with hops and fruit; but it is chicfly colebrated for its excellent cattle and horses, raised in large numbers in the luxuriant pastures of the marsh-land, and which are an important article of export. The half-dried beef, so abundant in Hamburg, and which is decidedly superior to anything of the sort met with in England, is principally derived from Holsteln. Agriculture has been much improved; and the country being in many parts enclosed and well cultivated, is little inferior in appearance to the best distriets of England. Minerals not very important. Jime is, however, met with ; and there is a brine spring at Odersloe. Fishing is prosecuted to some extent along the coasts. The duchy has two very good sea-ports, namely, Kiel and Altona, near Hamburg. Gluckstait, a much smaller seaport, situated lower down the Elbe, is the enp. of the duchy. The other principnl towns are Rendsburg and Itzehoc. Exclusive of cattle and horses, wheat, onts, and barley, with butter and cheese, are exported. Ilaving been wrested from the crown of Denmark in the war of 1863-4, the duchy was placed under the protection of Austria by thio convention of Gastein, concluded Aug. 20, 1865, between the king of Prussia and the emperor of Austria. By the terms of this convention, Rendsburg was made a federal fortress, and Kiel a federal port, the latter under the command of Irussia.
HOLYHEAD (in Welsh Caer-Gybi, 'the eastle of ( $\mathrm{y}^{\mathrm{bbi}}{ }^{\prime}$ ), a sea-port, parl. bor., market town, and par. of N. Wales, on a peninsula at the W. extremity of the islo and co. Anglesey, 22 m . W. Bangor, 67 m . W. Liverpool, 224 m . NW. London, and 264 m . by North Western railway. Pop. of parl. bor. 6,193 in 1861. The peninsula, on the N. side of which the town stands, and which is insulated at high water, ends, towards the sea, in an immense precipice of serpentine rock, hollowed out here and there into most magnificent caves, the haunts of innumerable sea-fowl. The town is clean and well paved, comprising two main and several cross streets; it has a fine open marketplace, public baths, and government establishments, and contains many superior residences.

## HOLY ISLAND

The ehurch, formerly collegiate, and now in the patronage of Jesus College, Oxfurd, is an embattled cruciform structure, in the decorated English style, with a square tower and low steeple; and the churchyard is enclosed by a low wall, said to have formed part of a Roman fortification. There are also four plnces of worship for dissenters, a free school, establishied in 1745 , and several othor day and Sunday sehools, furnishing instructin to a great many children. Holyhead has no particular branch of commeree or manufncture: its lmportance principally depends upon its being one of the must important stations in the great mail route between Eugland and Ireland. The erection of the Menai Brigge, the improvement of the Holyhend road, and the establishment of steam-packets to Dublin, caused a great increase of the intercourse by Holyhead, in the years 1836-38, but it was net until the opening of the great tubular brilge across the Menai Stralts, in March, 1850, which carried the railway trains direct to the steamers, that the importance of Holyhend as one of the main stations on the rond from London to Dublin became established. Formerly, the harbour, which forms a basin in the shape of a horseshoe used to dry at low water; but great efforts have been made to improve it, and a pier has been projected about 200 fathoms into the sea, having 12 ft . water at its hend at low springs. This pier, formed on the rocky island of St. Gybi, is joined to the town by a britge, and at its other extremity is a lighthouse. The peniusula of Holyhead is terminated by a ling racky promontory called the S. Stack, surmounted by a lighthouse with a revolving light, 211 ft . above low-water mark. The Skerries, a small island 7 m . N. of Holyhead, is also marked by a lighthouso. The town of Holyhead, with a small surrounding suburb, is a parl. Wor. contributory to Beaumaris, which returns I mem. to the II. of C. Markets on Saturday.
HOLY ISLAND (an. Lindisfarne), a peninsuln, wholly insulated at high water, on the NE. const of England, co. Duriam, ward Islandshire, 11 m . SLE. Berwick-on-Tweed. Area, 3,320 acres; pop. 935 in 1861. The form of the peninsula is that of an irregular four-sided figure, more than half of it towards tho $\mathbf{N}$. being covered with sand, and abounding with rabbit-burrows: the remninder, however, has been very productive since its enclosure in 1798. Tho prospect from the island is extremely beautiful, commanding views, northwarl, of Berwick, and of Bamborough Castle, at nearly the same distance, southward. At the sil. angle of the island is a small tishing village, formerly more extensive, near which are in small harbour and an old castle, situated on a high conical rock, of primitive formation. The inhabs, are chiefly engaged during winter in catchiug lobsters for the London market, and at other times in getting cod, ling, and haddock. Limestone, coal, and iron ore are abmidant; but the infux of the tide makes the working of them exceedingly laborions. The great glory of the island, highly esteemed by Anglo-Saxon scholars, is the abbey (with its connected church), formerly the residence of many literary monks. It was founded by St. Aedan in 635, under the patronage of Oswald, king of Northumbria, who erected Liudisfarne into a bishopric. The monastery was all but demolished by the Danes, in 867, and was then removed (with the bishop's see) to Durham, a few mouks only remaining at the establishment after the partial rebuilding of the church and nbboy. The ruins of the abley, which had been constructed of red freestone, and aptly termed by Sir W. Scott, 'a solemn, large, and dark red pile,' show that it

was bullt at different periods. It cannot le better deseribed than in the words of the great minatrel in the 2nd ennto of Marmion:

In Naxon atrength that nbbey frown'd, With masaive arehes broml and round, That rose alternate, row and row,
On ponderotis plllars sliort and low, Hullt ero the art was known.
By pointerd aisle and shaftel stalk,
The arcades of an alley'd walk
To oninlate in stono
Not but that portions of the pilo,
Rebuilded in a later style,
Slow'd where the apotler's linnd had been.'
Various fragments of the monastery are extant, and traces of walls are scattered over a space of nearly 4 acres. The main walls on the N . and S . sides of the church still remain, the measurement of the building being 138 ft . in length, and 86 ft . in breadth. S. of Holy Islund are 17 amall islands, called the Firne lalnuils, on the largest of which is a lighthouse. (Ilutchinson's and Surtees's Durlinin; Views of Coast and Harbours of England.)
HOLYWELLL, n market town, parl. bor., and par. of N. Wales, co. Flint, hund. Mold, $14 \frac{1}{2} \mathrm{~m}$. W. hy N. Chester, 56 m. NNW. Shrewsbury, and 178 m . NW. London, on the Chester and Holyliead railwny. P'op. of parl. lor. 5,335 in $18 i i^{2}$. The town is plensantly situated on the slope of a monntain extending townals the restuary of the Dee, and is large, well paved, and lighted with gas. The strects are irregular; but there are many good and substantial honses. The chureh, a plain structure, with a strong embattled tower, stanuls quite at the bottom of the hill: there are also 2 Roman Catholic chapels, and several places uf worship for dissenters. A benutiful Gothic chapel, dedicated to the legendary saint, Winifred, who lived in the 7th century, and now used as a schoolhouse, is erected over a well, from which water insues so copiously as to turi a large portion of the mill machinery in the town. The lower part of the building is open, and the sanatory virtues of its holy water are even at the present alay not wholly discredited by the inlanb. The town, which was inconsiderable till the commencement of the present century, is now the largest in the co., and remarkable for its activity in mining and manufactures. Lead, zinc, copper, aud conal are extensively worked in severnl very productive mines elose to the town. These mines and the smelting-houses, foundries, \&e., in the vicinity of the town, employ from 600 to 700 hands. The chief metallie products are copper wire nul copper bolts, nails, and sheathing, which are sent to liverpool, and shipped in large quantities for the W. Indies and S. Americn. There are also several extensive cotton mills. A small trade is earried on in the manuineture of galoons and donbles. $A$ short distance from the town is the Mark, a kind of quay, on the Dee, unapproachable by ships at low water, and at all times inconvenient. Ilolywell was made ly the Keform Act a parl. bor.: contributory to Flint, whieh sends 1 mem. to the 11. of C., and its boundaries comprise parts of the towuships of Holywell and Grecifielil.

HONDURAS (BRITISH), a colony belonging to Great Britain, on the E. coast of Central America, chiefly between lat. $16^{\circ}$ and $18^{\circ} \mathrm{N} .$, and long. $88^{\circ}$ and $90^{\circ} \mathrm{W}$., having N. Yucatan, W. and S. Guatemala, and E. the Hay of Honduras. It is very extensive, but the pop., by the census of April 7, 1861, amounted to bit 25,635 . The const is tint, and surrounded with an abundance of reefs and low verdnut islauds, called keys. The approach to the shore is very dangerons, especially during
and the different keys rescmble each N. winda, and the different keys resemble each
other ao much aa to make the uavigation of the chnmuels between them extremely diticult, except to experlenced pilots. I'roceeding inland, the surface risen gradually from the const into an elevated region, covered with primeval foreats, interspersed with marshes. Livers numerons, and some of them large; the principal, the linlize, ia navignble for 200 m . The climate is moist, but is reprorted to he more healthy than that of the West India Islauds, eapecially in the wet season. The heat during most part of the year is moderated hy sen breezes; the average annual temp. is about $80^{\circ} \mathrm{F}$. The rains are so heary that the Sibun river fometimes rises 50 ft . In n few hours: they are frequently accompanied with violent. thunderstorms. Voleanic problucts, and marble or ot her limestone formations, are found in varions parts; the shores and banks of the rivers are eovered with a deep and rich alluvinl soil, capnble of growing most European as well as tropical products. The foresta abound with some of the finest timber trees, including mahogany, logwool, and many other valumble trees. The two now specitied are the staple prolluct of the settlenent. and their cutting forms the chicf occupation of the settlers. The mahogrny (Sucietena mahoryani) is one of the most majestic of trees, and is probably 200 years in arriving at maturity. It is seldom fonnd in clusters or grouns, but single, aud often much dispersed; so that whut is termed a mahogamy arork extends over several sq, miles. There are two seasons in which the trees nre ent dowir ; one heginning shortly after Christmas, or at the end of the wet senson, and the other about the midulle of the yeur. At such periods all is activity, the pop. being mostly enıpoyed in felling or removing the trees. The gangs of negroes employed in the work consist of from 10 to 50 each, at the lieal of whom is the huitsman, whose chief occupation is to search the woods, and find latoour for the whole. An expert negro of this description was formerly often valued at 500 .
'About the beginning of August the huitsman is despatched on his crrand. He cuts lis way through the thickest of the wools to the highest spots, and climbs the highest tree he finds, from which he minutely surveys the surronnding conntry. At this season the leaves of the malioguny tree are invarinbly of a yellow-reddish hue; and an eye necustomed to this kind of exercise can discover, at a great distance, the places where the wood is most nhnodant. He now desceuds, and to such places his steps are now directed; and withont compass or other guide than what observation has imprinted on his recollection, he never fails to reach the exact point to which he aims.' 'The mahogany tree is commonly eut about 12 ft . from the gromud. 'The body of the tree, from the dimensions of the wool it firmishes, is deemed the most valuable; but for purposes of all omamental kind, the branches or limbs are gonerully preferred, the grain of these being much closer, and the veins more rich and variegated, l'art of the wood is rough-squared on the spot ; but this work is gencrally postponed till the logs are rafted to the entrance of the different rivers. 'The rafts oftell consist of more than 200 logs, and are floated as many miles. 'When the tloorls are unusually rapid it sometimes happens that the labour of a season, or perlups of many, is at ouce destroyed by the breoking asunder of a raft, the whole of the maligany being hirried precipitately to the sea.' (Henderson.) The logwood and mahoguny do not grow adjacent to each other ; the former inhabits a swampy soil, while the latter
flourishes most in high and exposed situations. Every settlement at Honduras has its plantain walk, and many of these comprise an extent of at least 100 acres. Cansava, yams, arrow root, and muize are grown, but only for home consumption; the sugar-cane, colfee, and cotton succeed well, but aro little cultivatel; cocon, and an inferior kint of indigo, are intigenous. Furopean cattle, mid other domestic animals, thrive greatly. The American tiger, the tapir, armadillo, racoon, grey fox, deer of various kinds, and a vast number of nonkeys, Inhabit the settlement; birls and fish ure in great varicty, and testacea particularly plentiful. Many turtles are taken by the inhab. Iiviug upon the keys, or islands of the const, a few of which find their way to London.
The value of the expurts of Ilouduras was 292,576 in 1861; 356,389 in 186i2, and 391),643 in 1863. The imports amounted to $231, \mathbf{4} 44 \mathrm{l}$. in 1861; 211,3571. in 1862, anil to 2605,751 in 1863.

Honduras is governed by a Lieutemant-Goveruor, nominated by the crown, and a legislatlve ussembly of 18 elected and 8 nominated members. Trial by jury is in force. From decisions of the central court, an appeal lies to the sovereign in council. Total public rev. 35,5491 . in 1863, total expenditure 28,6411 . Amount of compensation received by the proprietors of slaves at their emancipation, 101,959 . The average value of a slave, from 1822 to 1830 , was $120 l .4 \mathrm{~s} .7 \mathrm{~d}$., being a larger sum than in asty other colony.
The only town in the settlement is Belize, at the mouth of the river of the same name, in lat. about $15^{\circ} 29^{\prime}$ N., and long. $8808^{\prime} \mathrm{W}$. It consists of about 700 houses, chietly of wood; the strecta are regular, and the whole town is shaded by groves of cocon-nut and tamarind trees. Its chief editices are the governnent honse, a church, and several chapels.
This coast was discovered by Columbus, in 1502 ; the date of its tirst settlement by linropeans is uncertain. It was trunsferred from Spuin to Eagennd by treaty, in 1670, but its occupation was contested at different times by the Spaniards, down to 1798 , since which it has remained quietly in the possession of Great Britain. Honduras, formerly a settlement, was crected into a colony on the 12th Mny, 1862.

HONFLEUK, u sea-port town of France, dép. Calvados, cap, cant. ; on the estuary of the Seine, nearly opposite llavre, from which it is 6 m . SE., and 30 m . NK. Caen, on a branch line of the rnilway from Paris to Cherbourg. Pop. 9,553 in 1861. The town is ill-built, its streets mostly narrow, crooked, and ill-ventilnted, and its public edifices more remarkable for antiquity and oddity than elegance. Its port, enclosed between two jetties, is lifficult of entrance, and encumbered with mud, so as to be inaccessible, except at ligh water. It has two basins connected with it, which serve as harbours for numerous fishing boats and consting vessels, Many of tie inhab, are engaged in the herring; mackerel, and whiting fishories, and numorous vessels sail annually from Honfleur for the cod, whale, and seal fisheries. It is more a commercial than a manufacturing town; it has, however, some builiting docks, rope walks, and manufactures of copperas, nails, ship biscuit, and lace. Its export and import trade is considerable; butter, fruit, and eggs, in large quantities, are sent to England from Honfleur. A good deal of com, and mclons of very fine quality, are grown in its vicinity. Hontleur was taken from the English by Charles VII. in 1440.

HONITON, a parl. bor., market town, and par. of England, co. Devon, hund. Axminster, near the Otter, 142 m. W. by S. London, and

16 m . LiNE. Exeter, on the Linden and SouthWestern railway. Pop. 8,301 in 18til, against $3,89 \mathrm{i}$ in 1841 . Area of par. and parl. bor., which are co-cxtensive, 2,880 acres. I he town, which stands In an extensive valo celelrated for fertility and beanty, consists chictly of a single wellpaved and lighted street, benrly a mile tong, lined with nent and respectable houses, huilt in the iniddle of the last century, after a destructive flre which laid nearly the whote place in fuins, The inhab, are supplied with water from a brook that runs along the whole length of the strect. The churel, a quarter of a milo distant, is a small but neat structure, enlarged $\mathbf{f 1} 1482$, and remarkable for a curiously carved sareen separating the nave and chnucel. All-hallows Chapel, built of tinit in $1 \mathbf{7 6 o}$, is a compact bulhling with us square embattled tower. There are 4 chapela for dissenters, a free grammar-school, scantily endowed, a boys' mational school, anil a girls' working school, and a hospital.

The lndustry of Honiton consists of sergeweaving aind lace-making; but both branches are on the decline. Some years ago, more serge was woven here than in any other town of Devon, and at the beginning of the present century the lace manufacture had arrived at that perfection, was so tasteful in the design, and so deliente and beautiful in the workmanship, as not to be excelled even by the best specimens of Brussels lace. At the beginning of the century, veils of Honiton lace were sold in London at from 20 to 100 guineas, whereas they may now be obtained for 8 or 10 gulneas. The competition of the bolbinlace machinery, which becamo actlve in 1820 , greatly impaired the trade of Honiton, though not to the extent that it impnired the lace trade of Bedfordshire and Buckinglamshire. Shoemaking nul coarse pottery employ several hands, and there is a large trade in butter, the chief portion of which is sent to the London market. Markets on Theaday, Thursduy, and Siaturiluy; the Inrgest on the latter day : an annunl fair, the first Welleesday after July 19th, for cattle.

Honiton was granted by Ifenry I. to Richard de Rivers, from whom it descended to the Courtenays, carls of Devon, who for many years have been the patrons and lords of the manor. It is a bor. by prescription. A portrecve and bailiff are annually elected at the manor court, the eivil jurisdiction, however, is vested in the connty magistrates. This bor. first sent mems. to the H. of C. in the 28th of Edward I.; but it was only twice represented prior to the reign of Charles I., since which time it has continned to send 2 mems. Previously to the passing of the Reform Act, the franchise was vested in the inhabitant housekecpers. The Boundary Act extended the limits of the parl. bor., so as to make it include the whole par. of Honiton. Registered electors 270 in 1860 .

HOOBLI, a town of the Deccan, Hindostan, prov. Bejapoor, presid. Bombay, $13 \mathrm{~m} . \mathrm{S}$. Darwar: lat. $15^{\circ} 20^{\prime}$ N., long. $75^{\circ} 15^{\prime}$ E. Pop. estimated at 15,000 . It has long been a place of great trade, its merchants and bankers frequently transacting business at Surat, Hyderabad, and Seringapatam. It has two forts, but neither is very strong, and there are no public buildings worthy of notice. It was taken by Sevajee in 1673, and by a son of Aurungzebe in 1685.

HOOGHEY, a distr. of Hindo:s, st, presid, and prov. Bengal, between lat. $22^{\circ} \cdot \mathrm{t}^{\prime}$ arad $23^{\circ} 10^{\prime}$ N., and long. $87^{\circ} 30^{\prime}$ and $88^{\circ} 45^{\prime}{ }^{\prime} \dot{E}$. ; having $N$. the districts Burdwan and the jungle Mehals, E. Nuddea, Calcutta, and the 24 pergunnahs, W. Midnapore, and S. the Bay of Bengal. Area

$2,260 \mathrm{mq} . \mathrm{m}$. Pop, $1,520,8 \cdot 10$ in 1861. The district is a low, level tract of great fertility, but much of it is waste; and the sea-coast, which is very unlienithy, is densely covered with jungle. Besides the Hoophly river, a great many other branches and tributariea of the Ganges intersect it ; it has therefore an extensive inland navigation. On the banks of the rivera, near the sea, a gool deal of salt of excellent guality is mnde. About 3-4ths of the pop. are Ilindons, and 1-4th Mohammeilans. Eilucation is more extended in this than in most districts in Beagal.

Hooanty, a consideruble town of Ilimiostan, presid, and prov, Bengal, eap, of nbove distr., on the river of the same name, 23 m . N. by W. Calcutta. It occupies nu elevatel nud commanding site, and is picturesuue in its broken and irregular disposition; the buildings being in one place clustered together in thick gronps, in other places wide and straggling, and divided by trees and patches of bamboo. A handsome Christian clurch rises with bold and imposing effect, conspichous above the templea of the Ilindoes and the ghats upon the bank, to the style and architecture of which it furms a striking contrast.' (13acom, i. 2.11.) The town was once of much greater inportance, having been, under the Mogruls, the station for collecting the costom nand river chuties; it is still large, prosperons, well inhabited, mad a government civil station. It has a madressa or college, in which English, Persian, and Arabic, are taught. The Intch established a factory here in lidei, whit the Eaglish founded another in 1640; the l'ortugnese and Danes had also settlements at IIooghly. It was at Hooghly that the first serious quarrel occurred between the Moguls and Europenns, in 1632, when a large Portugnese flect was destroyed liy the Mohammedans; it was here also that the first engagement took place between the British and the Mognls, in 1686; on which occasion the Eaglish fleet cannonaded the towi, and burned 500 houses.

HOOOHLY RIVER, (See Ganges.)
HOORN, a sea-port town of N. Hollnmi, cap. distr., on the Zuyder-Zce, 20 m. N. by Li. Ansterdam, on the railway from Utrecht to Kampen. Pop, 9,252 in 1861. The town is surromuled with old ramparts, is tolernhly well built, and has 10 churehes, mid varions other public buildings. Its port is the best along the const on which it is situated, and large quantities of butter and cheese, cattle, herrings, nad other kinds of provisions are exported from it. Hoorn has manufactures of woollen cloths and carpets, nnd ship building is carried on in it to a considerable extent. It was the birtliplace both of the navigator Schouten, who in 1616 discovered Cape Horn, and of Tasman, the discoverer of Van Diemen's Land and New Zealand.
HORNCASTLE, a market town nul par, of England, co. lincoln, soke same name, parts of Lindsey, on the navignble river 1 hinin, 18 m . I. Lincolir, 126 m . N. London by roal, num $130 \frac{2}{4}$ by Great Northern railway. Pop. of town 4,841 , and of par. 4,944 in 1861 ; area of par. 2,510 acres. The town, which stands in a valley, and is almost surrounded by streams connceted with the Witham navigation, comprises a well-built principal street, crossed by others of inferior character, and has a church, three places of worship for (issenters, a grammar school, founded in 1571, two charity schocls, a large dispensary, and a union workhonsr. Tanning is extensively carried on, and the Horncastle navigation gives rise to a considerable traffic with the surrounding districts. Petty seasions are held here, and it is one of the polling places for the N. division of the co. Homeastle is
the chlef town of a poor-law union eomprising 68 parlshes. Markets on Saturiay : large horse-fairs, June 22, Anc. 21, and Oct. 20

HORNSEY, a par, nill village of Eingland, co. Mildlesex, liund. Ossnlatone, 5 m . N. Liondon, on the (ireat Northern Railway. Pop, of par, 11.082 in 186:. The par. comprisen the hamleta of Mns-well-hill, Cronch-eall, the ehief part of Highgate. and a part of Finehley. The village is lomg and stragraling, contnining many bnudmone und picturesque residences, inhabited chiefly hy residents from London: and the New River, which meanders through it, adids greatly to the beasty of tho scenery. The church, a buililing of the lithe century, and 'rewtored,' comprises n unve, S. alsle, and chancel, with a handsome 'Ivy-mantled' tower at. the W. end. The living is in rectury, in the gift of the bishop of London, and several beepents liave been made nt aliflerent thmes for the relief of the chureli poor. A gool charity school is at tached to the church. Dissenters linve severni places of worwhip within the village.

IIORSIIAM, a town, parl. lwor., and par. of Vingland, co. Sussex, rupe limmber, humb. Singlecross, on the Adar, $n$ tributary of the Arun, in the ceputre of $n$ fertle anil richly-womed trnet, $18 \frac{1}{2} \mathrm{~m}$. NW. Jrighton, 311 m . SiSW. Londom by rond, mud 37 m . hy Lomion and Sonth Coast railway. 1'op. $6, \pi / 47$ lutil. The town ennsists of two strects, crossing each other at right anglos, with an open space on the S., in which stands the eonrt hoase, and a green on the $N$. The mixtare of trees among the homses gives it a more sylvan nspect than most other comitry towns have. I'he houses are generally timber-lnilt, bit new faced with brick, and in the street leading to the ehurels rows of trees affiord to the dwellings nu agreathle shade. The town is well pavel with stone. chtained from the excellent quarries in the mighbunrhood, and is ns well supplied with water. The par. church, at the S. extremity of the town, is a spacious and venerable structure, of carly Euglish arehiterture, with a tower surmonnted by a lofty spire: it contnins some interestinp monmments. The town-hall nud court-house, a castellated luilding, with a ston: fromt, was enlarged and improvel by the Duse of Norfolk, in 1806, but since that perim has hell greatly neglectel. The connty gaol, nenr the li. extrenity of the town, is a commodions prison, built partly with brick, and partly with stone from the neighbourhood, comprising Ẽ6 waris, besides dayrooms, and has neconmodation for nlunt 180 misoners. It is under the jurisiliction of the light sheriff of the co., who appoints the governor. Adjacent to the gaol were formerly some barracks, anil a magazine, but these have been long removed. Horsham has chapels belonging to the tieneral and Purticular Baptists, Indepenilents. W'esleyans, Friends, and Kom. Catholics; mad many charituble endowments for the poor, the: chidf of which is Collier's school, founded in 1532 , for 60 scholars. There are also n Lancistrinu and some other free schools, an infant school, and several superior private seminaries. Horsham was formerly the sent of the spring assizes for the co., and the midsummer quarter sessions for the W. div. of Sussex are still hohlen in it. Until the passing of the Man. Corp. Act the town was governed by a steward and two bailiffs, choscit annually at the court-leet of the lord of the manor. Horsham is a bor. by prescription, and sent 2 mems, to the H, of C. from the time of Eilward I. till the passing of the Keform Act, which deprived it of onc mem. Previously to that act the right of voting was vested in the hollers of burgage tenures; but it whs, in fact, a mere nomina-
tion bor, at the dinposal of the Duke of Nurfolk. The limita of the parl. loor, are now maile lilenticul with those of the par. liegistered electurs, a398 in 1865. Horwham is a polling-place for the W. div, of the eo. The towi has nelther manufictures nor wholesale trade of any consequence; the lihab, deriving their chief support from the retail of goods to the surrounding district. 'I'here are two tolerably large weekly markets; one on Siturday for cern, and on Monday for poultry, a good many of which are reared for the Lendon market.

HOUNSI.OW, a market town of Englani, nitnated partly in Heston and jartly in lsleworth par., co. Midillesex, humi. Isleworth, 11 m . WSW. dundon by road, and $13 \%$ by I.ondon and South Western ruilway. I'op. $\overline{6}, 760$ in 1861. The town stanils on the W. edge of an extensive heath, bearing the same name, but now to a great extent enclosed: it consints of usingle etreet, in which are mumorous inns mul posting-houses, once busy and prosperous, but comparatively deserted since the opening of the rallway. The church is a modern erection at the W. end of the town, built on the site of an old priory and connected with it is a charity school attended by 200 ehildren of both nexes. There are neveral places of worship for dissenters. On the henth are cavalry barracks erected in 1793, for the accommodition of 600 men ; and in another part of the heath are two extensive powder-mills. Market-day, 'Thursday.

HOWIDEN, a market town and par. of Englami, a dependenay of the co. of Durlum, but situated in the E. rid. co. York, wan, and lib, same name ; 17 m . SSE:. York, $155 \mathrm{~m} . \mathbb{N}$. London by road, and 183 by Great Northern railwny via Milford junction. l'op, of par. 5,209 in 1861. The entire par., which contains 14 townships, lins an area of 14,510 acres: the townshlp of Howden contains 2,820 acres, and had 2,507 inhabitants in 1861 . The town stands in a low hut richly cultivated plain, about a mile N. of the Ouse, where there is a small harbour for boats, and a ferry. Strects narrow, badly paved, and only partially lighted: houses mean, and the supply of water insufficient. The church, formerly collegiate, is a spacious cruciform structure, in the decorated linglish style, with nn elegnnt square embatiled tower, 235 ft ligh, rising from the centre upon pointed arches, supported by clastered pillars. The chapter-house, built in the middle of the 14th century, is of octagonal shape, resembling the chapter-house at York, but of much less extent. The delicacy, richness, and aymmetry of its architecture are equalled by few specimens of the kind in the country, except Melrose Abbey, in Scotland. (Hutchinson's IHist. of Durham, fii. 466.) On the S. side of the church are the remains of an ancient palace, formerly used as a summer residence by the bishops of Durham, especially the celebrated Hugh de Pudsey, who died here in 1195. The ruins consist of a centre, front, and W. wing, with some detached parts, used as granaries. The site of this palace is held on lease from the see of Durham, and the venerable ruins, patched up with modern building, are now converted into a farmhouse. liesides the church there are several places of worship for dissenters. There is an endowed grammar-school, and a national school supported by subscription. Numerous other charities and bencfactions exist for the relief of the poor of the par, and township. Market on Saturclay. A great horse-fair, the largest in the E. riding, is held here on Sept. 25 , and six following days : besides this, there are fairs on every alternate Tuesday for hosses and cattle. Howden is
one of the polling phees appointed in the lieform Aet for the election of members for the F., rilling. IUUDDEIUSFIELID, an important manufacturing town, parl, bor., and par, of England, W. riling, eo, York, wap. Aglorigg, on the Colne, a tributary of the Caliler, 102 m . N. by W. London, and 15 m . SW. I.eedn, on the (ireat Northem rallway, ${ }^{1} \mathrm{l}$ op, of par, 52,254 , and of parl. bor., $8.4,877$ lin 18ti. The par., which lies chietly in the rivervalley, extends nearly $12 \mathrm{~m} . \mathrm{N}$. of the town, and includes 7 townships, with an area of 15,080 actew; while the townahip of Iluderstield, which is coextensive with the parl, bor., extenia over 3,950 acres. The present town has Jltto appearance of antiquity, and appears to be wholly the result of manufncturing indinstry. It in nituated on the slope and wammit of an eminence rising from the Colne, and is surrounded by other hills of greater height: the atrcets are regular, well paved, and lighted with gas; and the best houses, which are numerous, built of a light-coloured stone. The murket-place is spacions, and surrounded by handsome buildings. The town is well supplied with water from reservoirs nbont 4 m . W., in the township of (iolear. The chief edlitices of Huddersfleld are its churches, cloth-hall, and other public luildings. The par. chorch, built in the reign of Henry VIII., was taken down in 1834, and rehuilt by public sibseription, at the cost of $8,952 /$. 'I'rinity Church, built and enduwed at private expense, and opened in 1819, is in the pointed (duthic style, nud las an embattied tower at the W. end; it holds conveniently 1,500 . Its situation, on au eminence, NW. of the town, renders it $n$ striking ohject from any point overlooking Iludderstield. St. Paul's Church, erected in 1831, and fitted to accommodate 1,250 persons, is a gool molern imitation of the early English style: it may be distinguished by its tower surmounted by a light spire. This, and another church at the Paddock, have been built by funds provided by the parl. commissioners. There are 10 places of wonship fur dissenters; the most capacious is one belongine to the Wesleyan Methodists: it will hold 5, , (ni persons. Sunday-schools are attached to all tho chnrehes and chapels. Among the secular huildings the chief is the clotlo-hall, erected in 1765 by Sir John Ramsden, and enlarged by his son in 1780. It is a circular editice 2 stories high, bisected, as respects its lower story, by an arcale, on one side of which are separate compariments or warehouses, let out to the larger manufacturers; on the other, an open space taken up by stalls held by the country weavers, and subdivided by passages letween the rows of stalls. The attendance on a market-rlay ('Tuesday) averages 600 traders, and the rules of the market make all the business be completed half an hour after noon. The removal of rools is allowed after 3 P.M. The light of the building is wholly admitted from within, a contrivance intended to secure it the better both from fire and depredation. Among the other public buildings may be mentioned the I'hilosoplicich Hall, a Grecian structure, erected in 1837 by a thriving mechanics' institute founded in 1825 . The Huddersficld and Agbrigg infirmary is an clegant stone editice with wings, having a portico supported by 4 Huted Doric columns. A dispensary assists the infirmary in giving medical relief to the poor of the town. About $\frac{1}{2} \mathrm{~m}$. from the town, on the Sheffield road, is a sulphureous spa, over which have been built spacious and beautiful rooms titted up with every convenience for bathers. Amung the educational and religions institutions of Huddersfield are a church-collegiate school, intended to supply the want of a regular grammar-school; a proprietary college furmishing a good general

IIndiderallelil is one of the principal seats of the woollen manufacture, It owes ita importance in thin reapeet partly to nature anal partly to art. It atande in the midat of a rleh cool-flold, and there is an ample mupply of water for mills from the neighlwuring rivers. The menns of cheap and convenient transit for its product, and the raw materials of its ludustry; have also been provided.

Sir J, Ifimsien, on whose estate the town is built, olotnined, in 177.1, an act for making a cunal to connect this town with the Calier. It commences at King's Mill, elose to Iluddersileld, and
 at Cowner'n loridge, from which point there is a communication whit the Ilamier entuary. The conmection whith the towis and poris of Lancashire is effected by memis of the Huddersteld cunal, completed in 1800 : it takes a SW. direction pmaxt Slaithwaite to Maraden, where, at a summit level of 6 6t; fin above the nea (the hiphest camal level in linghand), it enters a tunnel $\delta, 100$ yaris long, ent thruagh Standedge Hill, and thence runs down the vale of Diggle, in Saldleworth, and past Sitaley bridge to ita jumetion with the Axhton and Ohlham canal. Its elltire leugth is 193 m ., and it cost 300,0001 .
This facility of intercourse has since been vastly incrensed hy the completion of railways between the town, Munchester, and laeds, and which, conseguently, connect it with all parts of the kingdom. The goods manufactured in the pur, are nurrow, and broad cloths of supertine and inferior qualities, kerseymeres, thushings, and corded cloths of all deseriptions. Cloths of wool and cotton mixed, especially fancy articles, are an inereasing ohject of industry, and large quantities are now nent to the foreign markets. Valencins and twills for waistcoats, of stuff and silk, are also much made, and highly prized for superior texture and elegance of pattern. In recent years shawl-making and merino-weaving from lbritish wool huve been introdnced with advantage.
The Reform Act conferred on Hudilersfiedi, for the first time, the privilege of aending 1 mem, to the H. of C. Repistered voters, 1,941 in 1865. I'etty sessions are held here every week; and there are two courts, for the recovery of dibts under 15l., one for the honour of Pontefract, and the other by a recent local act for the parish, along with certain acljoining parishes. Gross annual value of real property assessed to income tax, 129,807l. in 1857, and 149,714l. in 1802. The cloth-inarket is held on Tuesday, which is always a day of great bustle. liairs for cattle, March 31, May 4, Oct. 1.
Hudderafield is said by Dr. Whitaker (Hist. of Leeds, p. 347), to be identical with the Oderfelt of Domesday Book, and to have been at that time 'a mere waste.' The parish, according to the same authority, was, like Halifax, 'separated from Dewsbury, and erected into an independent purish, by the influence of one of the earlier Lacys, to whose piety and muniticence this neighbourhood has been greatly indehted, as the foumlers of its parish churches.' 'The mnnor of Hudderstield, which originally belonged to the carls of Malifax, came into the possession of the Burton family, who sold it in the 16 th of Liliz. to Sir Gilbert Gerard. How soon the Ramsiden family, its present possessors, acquired it, is uncercuin; but one of them applied, as lord of the manor, during the reign of Charles II., for the privilege of holding a market in the amall town of Huddersfield: from this time forward it has been a market town. It is indeed indebted to the laamsden family for many privileges, which
have greatly contributed to raise it to its preaent importance.

IUSISON, town and port of entry of the U. States, New York, co. Collumhia, of which it in the eap., built chietly on a rocky promontory ont the Ilnilaon river, $90 \mathrm{~m} . \mathrm{N}$. by F.. New York. I'op. 7,1660 in 1860. The town is regularly laid out; the streets are npacioun, and cronn each other at right angles: Warren Street, the principal, in upwards of a mile ln lengeth. Opposite the river Is a handoome promenade, anil on efther shide the promontory forming the site of the towit is a spaclons bay, with depth enough for vessels of any burken, and on which some quays and doeks have been constructed. Ilere is a new and handsome conrt-honse, comprising also a gaol nul other ofllees. Hudnon has noveral placen for juisIlc wonship, Lancastrian and other mecools, a private lnmatic asylum, many fool hoteln, several printing establlatimenta, and stores of varions kluds. It in a place of considerable trude, bat la a port of delivery only, dependent yon the port of New York, Sany of the vessels belonging to the port are engaged in the whale thshery. There are maminctures of cotton and woollen fabries, with establishments for calico printing and blenchlig. I'lie town was fonnded in 178.1 , and incorporated under a mayor, recorder, mid aldernen, in the nuccceding year.

IUUDSON'S IASY, a large bay or inlani sea ol N. America, extending between $51^{\circ}$ mad $6.1^{\circ} \mathrm{N}$. lat., und $78^{\circ}$ and $95^{\circ} \mathrm{W}$. long., and surroninded on all sides by the purtially explored British territorien N. of Camula. Its length, N. to S., IA alout 800 m. ; greatest brealth, estimated at $\mathbf{6 0 0}$ m. ; area, probaf iy near 300,000 sig. m. Its S. extremity is ealled James's Bay. It communicates with the Atlantic by Hudsom's Straita, a sea abosit 500 m. in length, and generally upwards of 100 m. in breadth. IIudson's Bay is navigable for only a few months in the year, heing at other times frozen over or obstructed by trift ice. It is full of aand-banks, reefs, and islands, and inhabited by few fish. Its shores are rocky and barren. On its W. const are several settlements of the IIudson's Bay Company, which monopolises nearly all the fur trade of IBritish N. America. T'his compuny was incorporated by a charter from Charles II., in 1669.

HUDSON RIVER, the principal river of the atate of New York, U. States, througlı the E. part of which it flows, generully in a N. direction, from near lat. $44^{\circ} \mathrm{N}$. to its mouth in the Atlantic, below New York city, about lat. $40^{\circ} 40^{\prime}$ N. Throughont the greater part of its courne (that is, from where it passes over a ledge of primitive ruck, and forms what are called Glenn's Falls, in lat, about $43^{\circ} 15^{\prime}$ ) it runs through a very remarkable depression or valley. This valley extends from the Atlantic to the St. Lawrence, having in its N. part the Lake Champlain with its outlet the Kichelieu river, and, though enclosed by lofty mountain ranges on cither side, the higlsest level of its surface is only 147 ft . above the level of the tides in the Hudson. The total length of Hudson River is about 280 m ., 120 of which, or up to 5 m . beyond the town of Hudson, are navigable for the largest ships. Sluops pass as far up as Troy, 150 m . from the sea, to which distance the influence of the tide is felt, and thence through a lock to Waterford, a few miles further. Near the head of tbe tide the mean breadth of the Hudson does not reach a mile; but in the lower part of its course it is much wider, and below New York it expands into a apacious basin 4 m . broad, which forms the harbour of that city. Its only tributary worthy
of notice in the Mohawk, whirls juins it from the W. Owing to ltw smail rate of deseent, the current of the fluinon lielow thle in mow ; and, except in the menson of Ahsila, it appearm raiber like an intand liag. At Albany, alositit the milille of ita conme, its navigation is at an average closed by frowt for alout (10) (laya ammally.

The banks of this river are almont everywhere abrupt and lofty. The chief towns on it aro New York, Allmeny, Newbury, Hudson, and Catskill. It is comnered with the liamin of the St. Lawrence by the Champlain and the Eirle canalw.
IIUR:', or IIUB:'FO, the enp. city of the empire of dman, on the river of numo name, about 10 m . from the Chlnere Sen; lnt. $11^{\circ} 19^{\prime} \mathbf{N}$. , lung. $11^{\circ} 0^{\circ}$ $12 \mathbf{'}^{\prime}$ li. ['op, extimited at frim 80,000 to low, 0001 . This remarkable elty, which has probubly no parallel lit the linet. wan fortided early lit the prement century, in the Vinrupean style, and, It is said, lloul the matel of Straslourg, 'the work wus undertaken by the king of Cochln China, and was carried on under the liastructions of some Freneh oflleers previously in his service. "The new city is eompletcly insulated, having the river on two wides of lt , and a mpelons cmal of from 30 to 10 yarils broul on the other two. The circumference of the walls is upwarils of 5 m . 'I'he form of the fortitieation is nemrly an equilateral ginalrangle, each face monanring $1,1 \times 0$ tolses. 'lie foriress has a rogular nui beautiful gracin, extemding from the river or emint to the diteh, a covert way all round, and a diteh which is 30 yarils broail, with from it to $n$ feet water lat it all throngh. The rampart is linitt of haril earth, ensed on the ontside with bricks. Each angle is thanked lyy anstlons, intendel to monat ins ginus apiece. To ench face there are also 4 arehed gatewhys of solid masomry, to which the npproad across the diteli la liy handaome arched stone bringes. The area inside is laid out linto regular and sjacious streets, at right angles to each orlior A handsome and broal enmal forms a somminicatlon between the river and the fortress, mind within is distributed by various branches, so, as to commanicate with the palace, arsemal, granaries, and other public edillces. Il: this channel the tuxes and tributesare brought from the provinces, and conducted at once to the very loors of the palace or magazines. In the whole of this extensive fortillention there is scarcely auything slovenly, burbarous, or incomplete in design. The banks of the river and cemal, forming the base of the glacis, are not only regularly shoped down everywhere, but whereser the work is completed, they are cased from the foundation with a face of solid masonry. The camal within the walls is executed in the same perfect manner; and the bridges which are thrown over it have not only neat stone balustrades, but are pived all over with anarble brought from T'onquin.' (Crawfuril's Embassy to Nimm, i. 384-386.) The palace is sithated within a strong inner citadel, consisting of two distinct walls or ramparts. The barracks surround the whole of the outer part of the citadel. The arsenal contains a vast number of cannon, shot and shells, de., all mannfinctured in the country. The public granaries are aiso of enormous extent, and kept full of corn. The fortress of Huc, from its immense size, which is its grentest fault, would require at least 50,000 troops to garrison it, in case of an attack from Europeans: against Asiatic enemies it is impregnable. There are some building-docks on the river, and a large fleet of galleys is usuully stationed at Hue. The river is not above 400 yarls wide at its entrance, but within is little inferior in breadth to the rivers ol Sargon or Bankok: owing to n bar at its
month, however, it in itted $o$. Iy for shigw of amall Iranglit. Ita entrance is eompletely commanuled hy n wtome quadrangular fort, limilt in the liuropean style. Ita hanks are well raised, and lis sume placen extremely pleturesque. That neighbourhonal of the eap. in everywhere in a high nlate of culilvation, with rice, mulberty trees, and eotton, and thickly liternpersel with villages, llise in the only city in India, in the vielnity if which there are mumepons good runda, bridges, anil eanals, dtront 10 leagnes $\mathrm{N}_{\mathrm{c}}$ is the royal mumslenm, surtunndend by maprildeent prommis, laid out by a late king of Cochin Chitua. (truw. furl's Fimhanay, I, ditik-100; White's Vuyume: Flalaywon; 16itter, Aslen Firdknule, lii, I00t;1012.)

HULESCA (ant. Oara), a town of Sphin, prov. Aragon, cup. partlon same natur, and n hivluyis see, 35 m . NL:. Narugowen, null $13 \mathrm{~s}^{\mathrm{m}} \mathrm{m} . \mathrm{W}$. by N. Ilarceloma, oll a branch lise of the railway from Saragosa to the l'ymuces. I'np. 10,06t9 in INST. The town stande oni a slopie cluse to the Imucla, a tributary of the Cincas, is sarrummed by wall: now fullius into decay, mind consains many respectable humer. Tho ehief publle buildings are a cathedral, 4 jur. churches, $1 \mathbf{b}$ conventa, a finmolling honjital, eavalry barracka, 2 schools, anal a university. The latter, entithed Sertorianm, comprisligg 4 collegen, was finmiel, ln liai.l, by l'eter IV. of Aragon, and further endowed loy snisequent monarchas; but the endowment, as in mont Spanish universities, is small, anil the educution is of a very infieriar deseription. The indinstry of the town is comthed to taming and the weaving
 in grain, winc, and other frults, and larue flocks of sheep graze on the surrommiling lifls. An annual fair is helif there, nul mach in wimented. The town was origimally fomaied by Quiatus Sertorius, numo 77 n.c., and was hnown in the time of Augustus as wrise virtrix Osich. it sulmequently fell litu the hands of the Moors, from whom it was taken by l'eter I. of Aragon, after the battle of Aleoraz, in 100 mb .

HULI. (KIN(INTON ON), a large and important commercial town, river-port, mun. nind parl. bor. of linglimed, and co. of itself, locally situated in co. Fonl:, i.. riding, IIarthill wap., oin the N . bunk of th. Liumber estuary, 22 m , frim the Spurn-head, 3: m . Sli. York, 155 m . X. Lomdon by road, and 173 by (ireat Nortieris railway. Pop. of parl, bor. 97, , 601 in 1861. The part. bor. includes, besides the town pars., those of Seculcoates and Drypool, and a portion of the par. of Sutton. The tionn, which stanila elose to the enntluence of the navigable river Hull with the IIumber, has been greatly enlarged and improved cluring the last half centiry. It is well paved and lighted with gas; the principal streets extend more than $2 \mathbf{m}$. nlong the 1 fumber, and nbout the same distance along the W. bank of the IIull; and from these others branch off, crossing each other in different direntions, and eovering an entensive area. Almost the whole town is built with brick: the oller streets are inconveniently narrow ; but many recently laid out are wide and regolar, containing handsome residences. The public buillings are numerons, but, generally apeaking, not remarkable for benuty: the principal, besides the churehes, are the Mansion-honse (iin which is the court-house and court of requests), the guildhall, exchange, corn-exchange, custum and excise offices, the Trinity-house, the gaol, the theatre, and the citadel, a regularly-garrisonet fort on the F. side of the river Hull, which is here crossed by a stono drawluridge of 3 arches. There is a good market-house, and in the market-

Withill the parl. lon, are 12 churchen, anomig which that of the Ilioly I'risity, in the marketplace, begun in the lith century, in remarkable as ene of the beat specimens in Fingland of the (iothice atyle, at ilfferent periomis, It is a eruciform enthedral-like bulliling, frum the eentre of which sisew a hophly oruamented embattled tower with pinnacien, 141) ft , in height. The interior is 280 ft . long, and 72 ff . iroad. St. Mary's, in lowgate, was originally built at nearly the mame time an that lant mentioned; but having been purtly dentroyed by Ilenry VIII., it was afterwards restored at different periseln, and with little taste in the architecture. There are also 20 places of worship for dixnenters, a Jews aymagogne, and a floating chapel for the use of dismenters; to all of these large Sunday sehools are attached, whleh furnixh instruction to upwaris of 7,000 ehilidren, The prineipal uehools are, the (irammar Sehool, founded by 11 ishop Aleock, in 1486, aud chartered by Queen Elizabeth, in which the instruction fs general as well as chasslenl, the Viear's Schosi, established in 1 İ3 fur 60 boyn; Cogan's charity nehool, endowed with $100 \%$ a year for the mailitenance and lustruction of $\mathbf{4 0}$ girla; the nantical melool for 30 boyn, attached to the 'Trinity llonse; with Nat lonal, Lannenstrian, nud other sehools, attended by a great many chililren. The means of procuring a sound education have been greatly increased of lute years, liy the establishment of soveral proprictary eolleges, which furnish inatruction in classies, history, and natural seience, on a plan similar to that pursued at the University and King's Colleges, London. Amang the numerous endowed charities of tha town, the oldest is the Trinity Ilonse, fonuled in 13ti9, fior the support of decayed seamen and thair widows, and chartered by Ilenry VIII. 'I'le building, erected in 1753, consists of 4 nides enclosing a square; the E. frout is an elevation of the 'lusean order, and the interior comprises 2 large and well-piropurthoned council-chambers, besides oflices num apartments for $3:$ pensioners. A sehool within the buikling gives a useful nautienl edueation to the sons of seamen intended for the merchant service. The Charterhouse hospital (originally endowed in 1380 for poor monks) was re-established in 1640, and devoted to the maintenance of poor penstoners. Six other endowed hospitals or almahouses glve relief to about 70 persons. The charity-hall is a kind of poor-honse, estallished by an aet obtnined in 9 and 10 Willinm III.: it was built by subseription, and is now maintuined by the poor-rates raised within the bor. The infirmary, a brick luildling ornamented with stone, was ereetel in 1782; it accommondates 70 in-patlents, and furnishes advice and mealicine to an unlimited number of ont-patients: the expenses are defrayed by voluntary subscription.

The port of Hull, which ranks fourth amongst those of the British empire as regards tonnage, and third as regards value of exports-the order being, in 1863, as regards tonnage, 1 . London, 2. Liverpool, 3. Newcastle, and 4. Hull; and, as regards value of exports of British produce, 1. Liverpuol, 2. London, and 8. Hull-has extensive accommodations fur shlpping, which have been greatly enlarged during the present century. The old dock formed in 1775 oceupies the place of the old wall and ramparts: it is $1,700 \mathrm{ft}$. long, 250 ft . brond, and 24 ft . deep. Its wharfs and quays occupy an area of 13 aeres, and the entrance is on the E. side from the Hull, about 300 yards above its mouth. In

1807, the aceomminiation wefl thep inereaned by the construction of a dook ifose lug directly intis
 350 in brealth, and $\mathbf{3 0} \mathrm{ft}$. in gli, lio wharfs, do., covering ans area of 0 ansems $\boldsymbol{A}$ thiat dock connecting thomalove mentioner wan eomplat In 1829, at ans expenme of $\mid 811,(041) /$ its whi surface excerda 0 ncres, and nfordn aceomia dailon for alant io muare-rigged vemmin. Ilendidoa theme there arn the flumber forek, 1015 f. lonk: the Jumetion Dock, 6.65 ft . long, and 2 bamina, anil the Victoria Dock. All thene, however, are formid to be lusullicient to accommalate the ever-growimg commeree of the town, and new dockn and businx are frijerifel. There is anchorage in the Itumber in 4 to 8 fathoma.
'The comburce of Ilull, which la very large, dependa prineipally on her advantagumis sithations. The town is the chief emparium of the extensive nul fertile countrien situated on the Humber entuary, and thowe travened by the numerous and limportant rivers that have their embouchure in it, including the 'Tront, Jon, and Ouse. 'The natural fucilitien for intormal communiention thus enforyed by Ilull, have been greatly extemided by artilleinl menns. Ilull is now united by rivers, comaln, aul rullways, with Shefliehi, Leeds, Manchester, and Jiverpool; so that it has become not merely the princlpal port for the W. Kiding of Yorkshire, but also for a conwiderable jurtions of the trade enrried on between lancashire and the N. parts of the Continent. 'The great articles of export are cotton stulls and twist, woullen gorels, hardware, auil earthenware. Of imports, the leadiup artieles are woil, bones, timber, liemp and thax, corn and secds, mindeler, bark, turjentine and skins. 'I'ho value of the exports of Hall nmosuted to $12,080,5 \times 7 l$. in 18.59 ; to $13,989,1231$, in $\mid$ (xt $\mid$; and to $13,565,25 \cdot 11$., in 18133 . 'Ithe gross amount of custom duties received was 297,397 . in 1859; 239,3081. in 1861; and 240,1311 . in 1803. In the year 1863, there cleared at the port 287 Ifritisli sailing vessels, of $50,9.47$ tous, and 708 forelgn sniling vessels, of 141,076 tons. Of steamers, there clearel, in the same year, 804 Iritish vessels, of 314,839 tonk, and 259 forcign veasels, of 84,439 tons. On the lst of January; 1864, there belonged to Hull 372 sailing vessels under bo, and 133 sailing vessels above 50, tons; there were, besides, 15 stemners under 50 , and 64 stenmers alove b0 tons, the latter of a total burthen of 25,366 tons.

Ihe minn. bor., which received its first charter in the 2ith of Edward I., was enlarged by the Mun. Reform Act, no an to be co-extensive with the parl. bor., and was dividel into seven wards, the government being vested in 14 aldermen (one of whom is mayor) and 42 councillors. Curp. revenue, $29,8: 04$ in 1861 . Quarter and petty sessions are huld under a recorder. Hull has sent 2 mems. to the H. of C. since the 33 rd of Edward I., and the franchise, previously to the passing of the Keform Act, was vested in freemen, by birth, servitude, purchase, or gift. The limits of the present parl. bor. include (besiles the old bor.) the entire pars. of Sculcontes and Irypool, $n$ small portion of the par. of Sutton, and the extrn parochial district called Garrisonside. Reg. eleetors, 5,610 in 1865, including 1,589 freemen. 'The gross aonual value of real property assessed to income tax was 343,1531 . in 1857 , and $323,022 /$. in 1862. The name of Kingston-on-Hull was was given to the town by Edward I., who, seeing its eligibility for becoming an important statiou, erected a fortress, and constituted it a churteral town and port. When Edward 11I. invaded

Fravice, in 1350, IInll contributed 18 ahijoe and 471 marisern. The fortificationn, commenced early in the 14th century, were completed by Nir Michael de la l'ole, a ereant benefartur to thim town eluring the rify of Rlehard II. The plapue maile $\mu$ reat ravagen here during the 10 th, $10 t h$, and lifl centurlew.

In the relgu of Charien J., Hull was the firat to clome lin gaters agrainat the kitug, who ahortly after beaieged f , and would linve taken it by atratagem, If the treachery of Nir John Jlutham, Its guvernor, had not been dincoverol in time to grevent Ita surrender to the ruyalintn, The town was afterwarda bemieged by the Marpula of Newcantle and nuceenfully defended by loond Finirfix. The furtitications wero greatly fimproved by Charlen II., and the citmiel wan ocenpied by a large bexly of tronges in order to keepin awe the inionto., who were comaldereal to be dixalfected (1) the Staart dynasty. At the clome of the relpu of Jamen It., the town, fort, and gnrrinon being lis the linaim of the Jacobitus jurty, the phace wim nurprined, mil the l'rince of Orange procluimed king the anniveranry of which event in atlll kejt an a holiday.

IIULME, a chmpelry and townalijs of Eighland, co. Lanenstor, jant, nind $1 \neq \mathrm{mb}$. SW . Manchewter, at the termination of the Iuke of IBridiewater's canal. J'op. of townmhip 68,483 in 1861, The fincrenan of pup. has been extraordinary; the census of 1801 , showed but 1,1677 , anl thut of 18:31, but 9,024 inhabitants. Ilume in within the bounniarien of the jurl. bor, of Manchenter, with the exception of a small plece of land near the village of Cornbrook, where the Cornbrook after pasalng the Hridgewater canal, runs on to the river Irwell. The Manchester Botanic Cinrden, opened in June, 1831, is hero, and occuplea 17 acres, benutifully laid out. There are also cavalry barracks. The township is divided into aven ecclesinstical dintricts, the largest, St. (ieorge, with a jop. of 27,795 II 1861. (Fur [mblic buildings, manufacturen, and other particulars, bee Mancheatear.)

Inlme Hall, on a bank above the Irwell, is an ancient half-timbered bouse, with an inner court. It was the seat of the l'restwiches, baroneta, and of the ancient famlly of Prentwich, in the time of the Conqueror. This family, by embarking in the royal cause, during the civil wars of Charles I., lost most of their property ; and the last bnrunct, Sir John Preatwich, a profound antiquary, dled In absolute poverty about the year 1830. Hulme Hall, after pasaing from the original proprietors, came into the hands of the Duke of Bridgewater, whose heirs still possess the estate.

HUMISER, a great river, or rather astuary, on the E. slde of Fngland, between Yorkahire and Lincolnehire. It extends from Goole E. to Hull ; and thence SE. to its embonchure between the Spurn Point on the N. and the opposite coast of Lincoln on the $S$. This restuary receives the waters of some of the most inportant of the English rivers, At its W . extremity it is joined by the Ouse (after the latter has been augmented by the Derwent, the Aire, \&c.), and by the Don; and a little lower down it is joined by the Trent, and atill lower down by the Hull river. Hull is the principal port of the Humber, and next to it aro Goole and Great Grimsby. At Hull apring tides rise about 22, and neaps about 13 ft ; and as there is at all times a considerable depth of water in the fair-way of the channel, Hull is accessible by very large vensels. Goole, which is about 22 m . more inland, may be reached by vessels drawing 15 and 17 ft . water, provided they take advantage of the tide. The basin of the Humber, or the conntry drained by the Onse, Trent and
other fivern faliling luto thin areat matuary, em bracew als extent of mhout 10,000 mo. $\mathrm{m}_{\mathrm{c}}$, compirla. ing nome of the mont pophleun and fertile dintrlitu In the klngilom.

HUN(iAlKY (lfung, Nagyar Orazag, Germ. (Vmpern), a kingdomi of Central op NE: Finfupe which, taken in ita wident acceptation, includon, hewidien Ilnugary J'rojere, Croatia, Slavonia, the military fromiter provineen, and Tranaylvanín. in a more limited menne, it denoten Ilungary I'romer. with Croatia and Slavenia, to the exclunion of thi other prova. liungiry, thus commiderend, is witu atel letwren $44^{\circ} 5^{\prime} E^{\prime \prime}$ allil $40^{\circ} 80^{\prime}$ N. Int., mint betwreen $14^{\circ} 29^{\prime}$ and $26^{\circ} 35^{\prime}$ V. lonk. 'The chain of the Carpathians furma the lounilary of Ilinngary out the NW., N., and NB. They etreteli from the Damine, near Prowintrg, in the furm of a circle, towardis Moravia, (ialicla, anel'I'ranaylvania, matil they meet the Dmube a veconil time at thi ravine ealled the Iron (inten. On the S., the In. mube and the Save meparate the klugdom from the T'urkinls prove, of Servia and Ihomin, to the jume thon of the latter river with the Uuna: which thence contibuen to mark the Inomiary. Hungary may be considered generally as a lirge plaln mlopilup to the S., and marrounded on every witu by helghita of different elevation, but most consider. able in the N. neetionin of the kingilom.

Mownfaina, - The lirst gronp of hills which nums N. from the Danube, nenr Prexturg, is named the IIttle Carpothans, and is of shall extent and inconmiderable ejevation. (irmite und цneian, overlali by graiswacke, form a large partion of thin gromp. The adfoiding gronp, Hamed the Navorina, In almo cominowed of grouwneke. A thirid group called the Jablunka runge, terminatea whit the J'ans of Jablinka, through which the hlyli rond from the valley of the Wang panser into Sllemin. The formations in the lant-named gromp are granwacké on primitive limestone, which renchen a hejpht of $1,1,00$ to $2,000 \mathrm{ft}$. On the li: vide of the Jablunka l'uen a chain of mountains commences, which atrotches F.. to the bnaks of the Innajec. The formations of this chain are, as far as Neumarkt, the name with the Jablianka; the summit being all of limentune, with granwack superlmposed. At Neumnikt the groat sandstone formation commencea, anil, for an extent of more than 400 m. constitutes the leading fenture of the j.. Carpathians. Hetween the Dunajee nid the l'oprail, a branch of the Migurn ehnin, sitnatel altogether in (ialicin, streteles to the SW., and connects with the chain now described nil jrolnted group of lofty mountnins, the naked summits of which rise, like so many gigantic nugar-lonven, from the vale of the Wang and the plain of Zipso. This is the Tatra group, in which some of the highest summits of the Carpathians are found. The summits of the Tatra are of granite und gneiss, bare of vegetation, and varyling mmunlly: in elevation, from the effects of thunderstorms and the melting of the snow which covers them for a great portion of the year. 'I he large mountain group, of which the Kralowa Hora forms the highest summit, covers a large portion of NW Hungary. In some parts, the hills sink low upon the plain, allowing easy pnssage to the railroud from the capitnl of Hungary to Debreczin and the frontler of Kussia. On the E., the Tatra chanill is bounded by the valley of the Gran, on the W. by the Waag. The principal portion of the Matrin group is likewise formed of trachyte, mingled occasionally with granite.
Branching from the N. Carpathians, in the becinning only as a succession of heights, travershig the level country of Zips, another trachyte mountain chain of considerable elevation runs $S$. be-

On the S. wide of the Danube, near Preaburg, are the Leitha mountains, which form the boumdary towarils Anstrit, nund are officets from the Alpa, an they aubwite from Styrin tuwarian the Danube. Graiite and gneines appoar in the higheat nummits, on which sandstone and limentone formutions lie superimposed. The Bakony Forest hills atretch from the Danube towarls the S., dividing the lenser from the grent plain of Lower Hungary: Nenr the mouth of the Drave, thin chain dividing that river from the Save, sinbsidea to the plain, but rikes soon after on the right bank of the Danube, which turns E., an moon as it reaches these heights. The summits of the greater part of these offrets from the Alps are limentone, overiald by tertiary formationa, except on the banka of the Danube, where serpentlue and schint rise in boll manses above the secondary rocks. This chain of heights, called the Fraska Gora terninates at Szankamien, opposite the mouth of the Theins.

The Julian Alps and their offets cover Croatia and the Hungarian coant districts, the Capella and Villebich being the laut branches of this range towards the S .

Valen.-In the N. of Hungary, the valleys are very numerous, nud highly picturesque. The glens in the Tatra mountains are wildly romantic, offering every variety of rocky scenery, and being interspersed with numerous lakes and waterfalis. The valley of the Waag in most extensive, being more than 200 m . long. The rocks of Sulyo, where the Wang crosses the rilige of the Tatra, are amongst the most pieturesque in Furope The valley of Kohlbach, that of the Jnblunka Pass, and of the five lakes in the high Carpathian krouns, the vale of the Czerna, in the hills of the Bamat. near the baths of Mehadia, are all highly benutiful, and, in mountain chains of less extent, would be decmed grand. The valleys of the Save (the Syrmia) and the Drave contain some of the finest land and scenery of Europe. The climate
the mit in unparallelect.

Pholna, The plaine of Hungary are very pemarkable, the greater part of the kingilom comninting of two extenaive levela. Thi plain of Unper ilungary, by firr the mmalier of the two, in boumbled N. by the l.eanar Capiathinna and the monntainous difintriets of the SIW, countien i W. liy the ladilin mountainm, and the offinets of the styrian Alpm, which, an well an the Crontian flilla, ecnifine it almo on the N .1 the Hakony Fiupent forming ita $\mathrm{K}_{\mathrm{i}}$. bomminry on the Fis un far an the Danubs. Thin plain in travemed by the Dabule from W, to Fios ninl is watored luenilean by the 13nall, Wang, alli Neitra. The lake of Neu-mienllep-Sen, at the foot of the l.eitha hillin, insuen from great mamhew lying lietween it nind the Danube. The auil of this plain is more fertite on the N. than on the S. shle of tho Dunube, bit it everywhere produces good and abundant erons of corf.

Near lluda, the Danule, breaking through the mountains of the linkony Forents ami the Matrm chain, enters the large plain of Hungary, whleh it traverses N. to Sy from Waltaen to Dalya, whemes its eonime in F.. The great jlain is lxpuriced W. by the lakony lioreat billini N. by tho Itogyalla, nim offisets of the Corpanthans; the frontier hilin of Transylvania bonnd It E. ; and the high lande of Servir and slaronia on the S . The extent of thim plain is entimated at $1,700 \mathrm{mq}$. (ierman milew, or 36,000 ay. Binglial milea, nul is consequently about $4,000 \mathrm{~m} . \mathrm{m}$. lapger than Irelami. In the whole plain acarcely a aingle point is more than 100 tit. ahove the level of the Danube, which, in this part of its course, in 300 ft . above the Itinck Sen. 'l'lis plain is watered by the Danule andite tributarien, the Drave and Save, the Thelns, with its atlluent the Szamon, Maros, KBris, \&c. The full is everywhere very tritling, and the grenter part of these streams linve a whillig course, throngh a comitry thosided by the slightent increase of their witers. Many, such as the Kurber and 'I'heisn, furm a succession of swampe, and the whole marshy land of the plain in estimuted to cover $a$ surfuce of 2,420 Aq. m., which is wholly reclaimable. I'he Ilalaton Lake lies at the SW, extromity, at the fall of the Hakony Forent hills. With the exeeption of some extensive nandy tracts near Debreczin, and in the eco of Pest, the whole of this plain contains some of the richent soil of Eurupe.

Rlivera,-'the numerous rivers which water IIungary fall, with one aole exception, into the Danube, which traverses the kingiom in a general SE. direction. The distance along the atrenm, from Preshurg, where it enters, to Orsova, where It leaves, Hungary, is 580 m . Its direetlon from Presburg to Waltzen is L.; but here it makes a sudden turu S., and runa $\mathrm{S}_{\text {. }}$ to the juncture of the Irave, from which point its general course to Or sova is E . by S . Ot the $\mathbf{3 0}$ navigable rivers whiel are its tributaries, several of the largest belong to thin country. The largest and most important is the Theiss, 420 m . long, riwing in Transylvania and flowing NW, to Int. $48^{\circ} 30^{\circ} \mathrm{N}$., and long. $22^{\circ}$ $10^{\circ}$ E., whence it runs S . by W.. in a very irreguia: channel, which, for about $180 \mathrm{~m}_{\text {., }}$ is parallel to that of tho Danube. Its chief tributary is the Maros. (See Theiss.) Tho other affuents on the N. side are the Wang and Neutra, the Grail and the Eapel. Of the S. affluents, the most important is the Drave, which rises in the Pusztherthal of the Tyrol, and has an E. conrse of 880 m . through a plain country; it is navigable from Villach, in Carinthia. (See Drave.) The second in size is the Save, which rises in the Julian Alps, and runs E. by S., joining the main stream near

Belgrade. Length about 340 m . The Raab is of considerable size; but the rest arc unimportant. Since 1851, regular lines of ateamers are running on all the navigable rivers which fall into the Danube. (For further particulars, see Danube.)
The only river which rises in IIungary and duen not belong to the region of the Danube, is the Pupral, the source of which is in the Krivan, very near that of the White Waag. The P'eprail traverses the level country of Zips, p? ? 9 es through the mountains near Muszyna, into Galicia, nud unites with the Dunajec, which falls inte the Vistula. At Lublo, in Zips, the I'oprad is navigable for rafts.
Canals,-No country is hetter adapted for, or more needs, canals than Hungary. The greater number of those litherto mille liave been cut to regulate the courses of winding rivers. Such are the Leitha canal, in the co. of Wieselburg; the Albert-Karasicza canal, in the co, of Larany, and the cuts for the regulation of the Kbriss, in Heves co., and of the Bersava, in the Banat. Other cuts, on a large scale, regulate the course of the latorcza in the co. of Theregh, nud of the Surviz, in the cof. of Wesprim, Sthulweissenburg, Tolnn, and Szumegh. The most remarkable canal in Hungury, however, is the Fruncis or Bacs canal, between the Thciss and the Danule. It is nearly 70 m . long, nud at the level of the water is 8 ft . deep and 60 ft . broal. The difference between the levels of the Danube nnd the Theiss is 27 ft .. which is carried off by locks. The entire cost of this undertaking was $300,000 \mathrm{l}$. A similar canul between the Theiss, near Szegedin, and the Danube, near Pest, is projected.
The Bega canal, between the Temes, near Temeswar, and the Theiss, near 'Tittel, is on a smaller scale, but a most useful uudertaking, and a source of great prosperity to the Banat.

Lakes.-IIungary possesses two of the largest lakes of Europe; the Nensieller-See (Hung. $r^{\prime}$ ertö-Tava), in Upper Hungary, lying S. of the Danube, in the cos. of Oedenburg and Eisenburg, is 25 m . long, 12 m . broad, and from 9 to 13 ff . deep. Its waters rise and fall without apparent cnusc, often receding from the banks, and then again filling and overfiowing them. Lake Balaton, situated in the great plain, at no great distance from the Neusielder-see, is nearly 50 ..long by 10 m . broad, and receives the river Syala on the W. side. The water is very slightly tainted with salt. Besides large lakes, Huagary possesses an almost inconceivable number of stagnant sheets of water. Some in the Carpathian mountains, though small, are especially worthy of notice; these are the White, the Green, and the Red lakes. The Green Lake is $\mathbf{4 , 7 6 4}$, the White Lake $5,224 \mathrm{ft}$. above the sea, and both are enclosed by high and precipitous granite recks. There are many mineral springs in Hungary, the principal of which are at Mehadia, in the Banat, at Trentchin on the Waag, and at Bartfeld, in the N. chain of the Carpathians.
Climate.-The climate of Hungary may be divided into three kinds, or degrees, varying according to the surface of the country. The climate of the Carpathians, including the high lands of NW. Hungary, is coldest, and that of the great plain is the warmest; the climate of the high lands S. of the Danube being a mean between both. The mean temperature of Buda, which represents the mean climate of hungary, is stated to be $10^{\circ}$ Keaumur, or $54^{\circ} 30^{\prime}$ Fahr., corresponding nenrly with the mean temp. of Nantes. At Nantes, however, the difference between the winter and summer averages $15^{\circ}$ Reaum., and the range is $17^{\circ}$; whereas, at Buda, the average difference is $21^{\circ}$,
and the range ${ }^{230}$. In the great plain the mean temp, is $12^{\circ} 48^{\prime}$ Renum., or the same as at Milan. (Berghaus.) The mean fall of raln at Buda is 16 inches, the number of rainy lays belng about 112; the average of all Germany being 100 days. In the high Carpathians, the yearly average is doubtless very much greater; whereas the summer anil autumn, in the low lands, are usually seasons of drought, unfavourable alike to agriculture and river navigation.
Vegetable Productions.-The products of IIungary embrace all the plants indigenous to Europe, from the Iceland moss, gathered on the Carputhians, to the rice and cotton plant, so successfinlly cultivated in the Jlanat, and the olive, which thrives in the coast district. In the hills, eqpecially in the Carpathian distriet, fir forests abound; buit along the plains and valleys of the Save and the Drave, extensive oak and beech forests are fouml. The oak forests yield large quantities of gall apples, and large herls of swine are fattened on the acorns and beech mast. The increase of poln. everywhere introdaces improved fruit plantations, and the S. slope of every elevation is found covered with vines and orchards. The well-known liqueur Shivouita (Shiva plum) is made from the plums grown in the S. parts. The grupes are of various kiuls, and one species, the formint grape, of which the Tokay wine is made, is peculiar to Ilungary: The extent of the wine country, inclualing the fali of the hills, to the two plains and the valleys if the Save and Drave, is more than 2,000 Engrisis miles long, measured in a straight line. Nany districts, such as the Fraska Gora hills in Slavouia, and the hills near Buda, yicld a heary red wine, which, with eare, might ensily be fitted for exportation. The water melon in the grent plain has obtained $a$ kind of national celelrity ; it often attains a weight of 30 lbs , and npwards. Tobace is particularly fine. lye-plauts of all kinds, madder, woad, nud saffiower, succecel wherever they are cultivated; but what is of far more consequence, the soil is particularly adapted to the cultivation of whent, which is largely exportel. Ot other cereal plants, little more is grown than is required for local consumption, excepting maize much of which is sent to Italy. Rapesced and hemp, also the produce of the marshes, are objects of trade ; and poppies, for eil, are much cultivated. The laurel, the laurus linus, arbutus, cedar, ani other evergreens, are too tender to bear the winter cold.

Animals.-Among the animals, the bear of the Carpathians is the most remarkable; and in antumn he often visits the oak and beech forests of the low conntries: wolves are more numerous. The small lynx, wild cat, and wild boars are foumd in all parts. There are many varieties of the dog; one of the finest is the wolf-dog, found in every shepherd's cottage. The chamois and marmot are inhab. of the Carpathians; and stags, roebucks, foxes, and hares are commen, theugh seldum preserved for game. Among birds, the gollen eagle, as a stray visitor. and the stone eagle, more frequently, various kinds of kites, hawks, bustards, and woolcocks, partridges, and black game; and all kinds of domestic lowls thrive remarkably in the S. parts, and have beautiful plumage. Herons' plumes are taken as rent in some parts of Transylvania. Fish abound in the rivers of Hungary, especially in the Theiss, which is said to be the richest fish-river in Europe; amongst these, the sturgeon and the fogasch of Lake Bulaton (Percia lucioperca) are much esteemed. The entomology of Hungary is richer than in any other part of Eit rope, owing to the extensive forests and large swampy tracts of the warmer districts. In the
forests alon

firests along the Save, cantharides are gathered. Wasps and homets build enormons nests in the sandy plains, which are not exterminated without ditificulty and danger. Swarms of gnats of pecillar kinds occur in the -lianat. One kind, which is harmless, is peculiar to the river Theiss, and increases so rapilly at the lireeding time, as to cover the stream like a thick coat of moss, and even to impede the navigation. In this state, the masses of insects are collected by the peasantry, and given as food to the cattle. Another more formidable insect, the Columbacz ginat, issines from the caverns of limestone rocks on the banks of the Danube, and spreads in swarms over the adjacent plains, to the great annoyance of the cattle. Lucusta are often met with; and the destruction of their eggs, which they lay deep in the earth, is a work of great labour. The leechen of S. II ungary, especially those from the Neusiedler-See, form a considerable article of trade. (Paget's Ifung., $i$. :30.)
Minerals.-The minerals are very important. Nearly all the metals are met with in the kingdom. They are mostly found in the central trashiyte gronps of NW. Ilungary, Gold is found at Sichemnitz, in a whitish compact limestone, alternating with syenite and porphyry. At Königgherg, Telke Banya, and in the still richer mines of Nagy Banya, on the frontier of Transylvania, the ore is found in small conglomerations, or thin veins, in soft sandlike masses of decayed pmmicestone, lying on and in excavations of the trachyte, or on the porphyry, exactly under the same circumstances as the ores described by Humboldt, in the Mexican mines of Villalpando. Silver, copjer, and lead are found mingled with gold at Kumnitz, Schemnitz, Nagy Banya, Telke Bamya, in the trachite group of the Ilegyalla, near Tokny, and in the Banat. A solution of copper, locnily known as cement-water, is found in many parts; nud from this copper is easily obtainet. Sulphur mind arsenic are fomd at all the above-named places; the former in masses at Radoboii, in Croatia. Another mineral peculiar to the trachyte and porphyry rocks is the alum-stone, found in the hreccias of Beregh, near Tokay, and Parall, in the N. part of the Matra mountains, under simitar ciraumstances of position and quality with the alumstone of the Apemines. Cobalt is a valuable mineral, which occurs in many parts, but especially at Dobschau, in the N. of llamgary. In the extensive sandstone hill stretching lirom the Inmajec to the Transylvanian frontier, coal-beds uceur, containing large quantities of the carbonate of iron, some of which yield 31 per cent, of metal. Minoral salt is found extensively in the same sandstone in the N. of Hungary and Croatia. The richest mines are those of the comnty of Marmaros. Indeed, the remarkable fertility of the great plain of Hungary is by some attributed to the abundance of the various salts, muriates, and others, that mingle with the soil, and which serve to explain the appearance of the numerons ponds which yield soda, and from their colour are termed white lakes. These soda-lakes are scattered over the great plain, from the county of Suathmar to that of liacs; and on the W. side of the Dambe, in the counties of Stuhlweissenburg and Oetenberg. Nitre is found in these countics in sufficient quantities to supply the whole empire. The last mineral production to be mentioned is opal, found in clumps of a siliceous stone, met with in pearl-stone rocks, (Beudant.) The pearl stone presents itself in connection with trachyte and porphyry, in several parts of Hungary, over a range of 600 sq . m ; and rising 900 , and even $1,200 \mathrm{ft}$, above the aljacent plains. The clumps above mentioned
are hollow, the inside surface coloured, and consisting of delicute siliceons substances-sometimes chalcedony, sometimes the stone called half-opal. The opal is found within it, lying in the hollows, like a kemel in a nutshell, exactly as Humbolit, in similar geological strata, found the fire opal, at Zimapan, in Mexico. The hyalle partakes both of the nature of the opal and of the chalcedony; and, as well as the garnet, is found in the clefts of the pearl-stone rocks. The greatest extent of pearl-stone rocks occurs in the Tegyalla, or Tokay group, where the celebrated opal mines of Czernewitza are situated, not far from Eperies, which annually field a considerable quantity; but, belng farmed ly a private speculator, nothing is suffered to transpire respecting their product. The most beautiful are the Iris opals, which are seldom found larger than a franc piece, and whose beauty scems to depend on the water with which they are saturated, an they lose their brilliancy on being heated, but regain it when laid in water. The largent opal of which we have any account (weight 17 oz.) is preserved in the mineralogical cabinet of Vienna. The fire opal is next in price; then come the halfopals, the jasper opal, and wood opals, which are very abundant, and which, as was before observed are found in many other spots; not being, like the Iris opal, contined to the hills of Czernewitza.
Area and Population. - The ofticial population retırus of Ifungrary, as given by the Austrian goverument, are founted on a survey of the country mude in the reign of Joseph II., to which atditionis have been annually made. The area of llungary is estimated to comprise $\mathbf{7 8 , 8 2 2}$ Eng. sy. m , According to the first enumerntion, made in 1787 , the country hal a population of $7,120,394$, which was fonnd to have increased in 1805, to $7,1061,414$, or 12 per cent. in 18 years. A rough ennmeration or rather estimate of the year 1820, gave a pop. of $8,904,717$, which was stated to have increased, in 1837, to $10,275,830$. Rut the censins of the Austrian empire, of Oet. 31. 1857, only found n popuIntion, exclusive of military, of $9,900,785$, showing that either the mumer of inhabitants had decreased, or, what seems more probable, that the previous estimates had been too high. Hangary contains several large cities. Pest, at the census of 1857 , had a pop., exel. military, of 136,046 Buda, on the bank of the Danube, immediately opposite, 55,210 ; and Debreczin, 37.480 . Severnl towns connt between 20,000 and 30,000 inhals. and even many villages are equally populous. In winter, the riral pop. is usmally collected in the villages; but iu summer they are scattered according to their occupatious and possessions, liviner either in small houses on the Pusztas, where the cattle graze, or in detached farming extablishments, which are often at a considerable distance from the villages. During the grazing season, the peasants, in large uumbers, spend their time with the flocks and herds intrusted to them, in the extensive pastures. The increasing sublivision of property has a tendency to diminish this nomadic system. The herdsmen are distinguished by different names, such as the horse-herd, the cow-heri, and the swine-berd.

The people of Hungary consist of six distinct races, namely, the Magyars, the Germans, the Slowacks, or Slavonians, the Croats, the Wallachians, and the Rusniaks. It is impossible to give the exnct numbers of each, as there is a great blending of races through all parts of the country, particularly in the west, where the German and Magyar elements fuse into each other. It is commonly asserted that one-half the inhabitants aro true Magyars.

Condition of the People.-In the provs. on this
side the Theiss, the Magyars come into contact, with the Kusniaks; in the prov. beyond the Theise, with the Wallachians and Illyrian or Servian Slavonians; in the prov. on this side the Danube, with the Croatians, and in that beyond the Danube with the Slowacks, or Slavonlans. The Magyars thus occupy the heart of a country bounded on every side by other nations, which, separately taken, are inferior to them in point of numbers, and arc, besides, disunited by religious differences. Of the $4,000,000$ or $5,000,000$ of Ma gyars, more than one-half are Protestants, the Calvinistic confession being that most spread amongst them. They are a manly and active race, possesslng frankness of character, and many other estimable qualities. Their general manner is serious; but in the hours of gaiety and feasting they indrige in tumultuous joy. The advantage posnessed by the Magyar over his neighbours of other ruces is altogether one of character, for, in learning, the peasantry, as well as the middle classes, are behind the Germans. The hussar jacket, with light pantaloons, and the czicsmen, or light boots, and a huge brimmed hat, form the costume of the lower orders. The Hungarian costume, as worn in full dress by the higher classes is well known, and has been adopted in part for the uniforin of hussar regiments in almost every country. The attila, or frock, and the mente, or long surcoat, trimmed with fur, are often substltuted for the dollman, or short hussar jacket. The kalpak, or fur cap, with the costly heron's feather, forms the national hendrear; and, on official occasions, the sabure is an indispensable addition to a gentleman's attire.
The Slowack, or Slavonian inhabitant of the NW. parta of Hungary, belongs to the same family with the Moravians, whom he resembles in appearance, and whose customs and language he preserves. The Croatian peasant is not so fortunate in the tenture of his land as the Slowack, and feels more acutely the pressure both of his temporal and spiritual lords. Still the Wallachs in E. Hungary, and the Rusniak Slavonians of the N., are far behind both the Slowacks and Croatinus in point of education, and have a language that has no literature. The Wallachians ulmost universally profess the Schismatic, and the Russniaks the United Greek, confession. The Illyrians, or Sorvian emigrants of the Banat, use a slavonian dinlect, similiar to that of the Croatians, and the majority of the books printed in Servia are writton in this province. In fact the written characters constitute the only difference, the Sorvians using the Russian, while the Croatians adhere to the Koman character. The exterual appearance of the Wallachians at once declares them to be strangers amongst the Slavonian and llungarian inlabitants. Their light active figures, dark complexion, and the resemblance to Italian in their dialect, proclaims their Romanic descent. They name themselves Romouni, are poor, lightliearted, but mostly ignorant peasants, fond of brillinnt colours in their dress, when their means nllow of it, and submissive under oppression.

The nobles and landed proprietors, with the exception of the few foreigners who have purchased property in Hungary, are of Magyar origin in the Hungarian provinces, and mostly Slavonians in Croatia and Slavonia. Their privileges are nowre extensive than those enjoyed by the nobles of the continent generally, and the rank is held by great numbers, whose property does not exceed that of a peasant. Their numbers can only be learned approximatively, as they refuse to submit to uny continued registration. Of late ycars, the ligher classes have been laudably active in cudeavouring to ameliorate the condition of the lower
orders by the foundation of schools and the distribution of useful works, and their private beneficence has been effectually aided by the legislative measure of 1836 , which so much extended the civil rights of the peasants. By the act of the diet of that year, called the 'Urbarium,' the nobles gave up in principle two of the most obnoxious privileges of their order-freedom from taxation, and the right of being judges in their own causes in manorial courts; and agreed that diaputes between peasants and their lords should be referred to a court formed of indifferent proprietors of magisterial rank, headed by the Vice-shuhbrichter, or deputy-lieutenant of the county. The former heavy penalties for slight offences were modified. and appeals were admitted from these to the higher courts of the kingdom. The excmption from taxation was waived, not by a voluntary acceptance of burdens, which would have occasioned a vast revolution in property, and endangered one of the most valuable advantages of the Hungarian constitution, but by the enactment, that if a noble purchased a peasant's holding liable to taxation, the noble should continue to pay the impost. In some respects the lords were placed in a disadvantageous position by the new law, as the peasants may leave, sell, or transfer their holdings at will, whereas the lord has no power over them, except that of execution for rent. The amount of rent payable for peasants' holdings was then, also, fixed by the custom of each county. The extent of a session, or full peasant's holding, varies in different parts; 16 jochs of arable land, with 6 jochs of pasture (together 30 acres), being the smallest, and the largest (in the county of Arva) being 40 jochs. The right of drawing woor from the seignorial forests, of fattening pigs on the acorms, and other privileges, still remain to attest the patrimonial tie which once existed between the lord and his dependents. The peasant gives for his holding one day's labour in the week, with a waggon and two horses, or two days' hand lubour in all counties exceptlug the Banat and Slavonia. These last-named districts have neculiar customs respecting tenures. A small sum of money and a part ( $1-7$ th to $1-9 \mathrm{th}$ ) of the produce are likewise paid to the lord, which may be redeemed, or converted into a rent-charge. T'he small tithe and the tithe of reclaimed land were abandoned by the landlords. To this decrec of the diet, which, ns a voluntary net of self-renunciation by the nobles, has no parallel in the annals of any other nation, other measures have since lieen added of scarcely less importance. A decree of the diet of 1839 secures to the pensant the right of disposing by will of all kinils of property. In 1840 the diet passed a bill, declaring Cntlolics and Protestants to stand upon an equal footing in contracts of marriage, neither confession being suffered to impose restraints upon the other, and admitting Jews to equal rights with other commoners throughout the kingdom. It cannot be matter of wonder, if the Hungarian nation set a ligh value upon a constitution which has procured them so many advantacres, without exposing the country to the trials and disturbances to which atates under a strictly monarchial government are constantly sulject. To the Mngyars as a nation, rather than to the Slavonians, is the merit due of firmly upholding their national institutions.
I'he Germans, as settlers, are most numerous in the county of $/ \mathrm{ips}$, in the Banat, and in the mining districts; they are chiefly found in the towns, where the greater part of the trading population is German. In the country parts the innkecpers are mostly Germans.

## numerous

 nd in the nd in the ling poputs the inn-vania, gives the following description of the variuus customs of the peasantry :- 'The cottage of the Hungarian peasant (Magyar), for the most part a long one-storied bullding, presenting to the street only a gable end, which is generally pierced with two small windows,-or rather peep-holes, for they are very rarely more than a foot square, -below which is a rustic seat, overshadowed by a tree. The yard is separated from the street, sometimes by a handsome double gateway and stately wall; nometimes by a neat fence formed of reeds, or of the straw of maize; and sometimes by a broken hedge, presenting that dilapidated state of half freedom, half restraint, in which pigs and children so much delight, where they can at once enjoy liberty and set at nought control. Passing through the gateway of one of these cottages, we entered the first door which led into the kitchen, on either side of which was a good-sized dwelling-room. The kitchen, whitewashed like the rest of the house, was itself small, and almost entirely occupied by a hearth 4 ft . high, on which was blazing a wood fire, with preparations for the evening meal. The room to the left, with the two little peep-holes to the street, was evidently the best, for it was chat into which they were most anxious to show us. In one corner was a wonden seat, fixed to the wall, and before it an onken table, so solid that it seemed fixed there too; 011 the opposite side stool the large carthenware stove; while a third corner was occupied by a curious phenomenon-a low bedstead, heaped up to the ceiling with feather-beds. The use of this picce of furniture completely puzzled us-to sleep on it was impossible; and we were obliged to refer to the count for an explanation, who assured us it was an article of luxury, on which the Hungarian peasnnt prided himself highly. For sleeping he prefers to lay his hard mattrass on the wooden bench, or even on the floor, but, like othe: people whe think themselves wiser, an exhibition of profuse expentliture in articles of luxuryfeather beds are his fancy-flatters his vanity. These beds are generally a part of his wifc's dowry. In the favourite corner we commonly obscrved-for the peasants of Zinkendorf are Catholics-a gilded crucifix, or a rudely coloured Mater dolorosa, the Penutes of the fnmily, while ull round hung a goodly neray of pots and pans, a modest mirror, perhnps even a painted rat of coffee cups, and sometimes a drinking cup of so ordinary dimensions. A Protestant peasant supplies the place of saints and virgins with heads of Kuiser Franzel and Prince Schwartzenberg, and not unfrequently Napoleon and Wellington look terrible things at each other across the room.
'The corresponding apartment on the other side of the kitchen was furnished with more ordinary benches and tables, and served for the common cating and sleepis:g room of the family. Beyond this, but still under the same roof, was a storeroom and dairy, and below it a cellar. The storeroom well deserved its name; for such quantities of turo (kind of cheese), lard, fruits, dry lierbs, nnd pickles laid up for winter use, I never saw ; and in some houses the cellar was not less plentifully supplied, and that too with very tolcrable wine. The cow-house was rarely without one or two tenants: the stable boasted a pair, or sometimes four horses; the pigsties, it is truc, were empty, but only because the pigs had not yet returned from the stubble-fields; and to these most of the houses added sheepfolds and poultry-pens-presenting altogether perhaps as good a picture of a rich and prosperous peasantry as one could find in any part of the world.' (i. 287.)
'It would be easy,' adds the same writer, 'to
find a contrast to thia:-Take ( $f$, $n$ amall village of the $N$. of Hungary, difficult of access from the bad roads in the neighbourhood, and not favoured by nature with the richest of soils. The peasants love the brandy-bottle and hate their landlord. The Baroa B- lives in Vienna, and lets his village to a greedy Jew, who grinds out of the people every particle of possible profit, no matter how injurious ultimately such conduct may prove to them or to their master. The dingy cottages are built of unhewn tirs, carelessly put together, and plastered with mud on the inside; they rarely consist of two, and generally only of one chamber, where the whole family must live. Attached to the house is a shed for the oxen and pigs; horses and sheep they have none. I confess I cannot speak so minitely of the interior of the cottages here as at Z-; for in going towards them I stepped up to the knees in a mass of putrefying hemp; which, with the filthy appearance of the children crowding the threshold, effectually cooled my curiosity. Such are the varieties to be found among the Hungarian peasantry; nor have 1 in $Z-$ or $\mathcal{G}-$ chosen exaggerated instances of either class.' (i. 291.)

Of the Slowack peasantry Mr. Paget does not give so favourable a picture. "The peasant's ho:ce is almest always built of the unhewn stems of the pine, covered with straw thatch, carelessly and ill made ; its interior is not over clean, and the pig, oxen, and goats are on far too familiar terms with the rest of the family. It is rare amongst them to see those neatly fenced farmyards, large barns and stables, and well-made corn stacks, which are so often met with aniong the Magyars. How far this may depend on the poverty of the soil, it is difficult to say; that it does not depend on any grenter severity of the landlord in one case than in the other, as I have heard insinunted, my own observations convinced me. The men are in general about the middle sizc, strongly formed, of a light complexion, with broad and conrse features half-shaded by their long finxen hair; in some particular districts, however, there are found among them singularly fine and handsome men-as a military friend of mine obscrved, ready-mide grenadiers. The peasant women when young sometimes are pretty, but hard labour and exposure to the sun soon deprive them of all pretensions to comeliness.' (i. 86 .)

The Wallachinns, according to the same nuthority, stand still lower in the scale of civilisntion. 'The Magyar peasant holds the Wallacks in the most sovercign contempt. He calls then a people who let their shirts hang out, from the manner in which they wenr that article of clothing over the lower part of their dress; and classes them with the Jews and Gipsies. Even when living in the same villnge, the Magyar never intermarrics with the Wallack.
'That the Wallack is idle and drunken, it would be very difficult to deny. Even in the midst of harvest, you will see him lying in the sun, sleeping all the morc comfortably because he knows he ought to be working. His corn is nlways the last cut, and it is very often left to shell on the ground for want of timely gathering, yet scarcely a winter passes that he is not starving with hunger. If lie have a waggon to drive, he is generally lound aslcep at the bottom of it; if he have a message to carry, ten to one but he gets drunk on the way, and sleeps over the time in which it should be executed. But if it be difficult to deny these fnults, it is easy to find a palliation for them. The half-forced laboir with which the Hungarinn peasants pny their rent, has a natural tendency to
produce, not only a disposition, but a determination, to do as little as possible in any given time. Ald to this, that at least a third part of the year is occupied by feasts and fasts, when, by their religion, labour is forbidilen tiem; that the double tithes of the church and landlord check improvement; that the iujustice with which they have been treated has destroved all confidence in justice, and every sentiment of security ; and it will not then be difficult to guess why they are idle. The weakness of body induced by lial nourlshment, and still more by the fants of the Greek Church, which are maintained with an austerity of which Catholicism has no idea, and which often reducea them to the last degree of debllity, and sometimes cven causes death, is another very efficient cause. Like the Turks, the Wallacks ormament their burial-places by planting a tree at the head, and nusther at the foot of every grave; but instead of the fineral cypress, they plant the Suetschen, or plum. from which they make their brandy,-a very literal illustration of seeking consolation from the tomb. lior the leath of near relations they mourn by going bareheaded for a certain time, u severe test of sincerity in a country where the excesses of heat and cold are so great as here. (ii, 215.)

The dress of the Wallachian women consists of a long white linen shirt, embroidered with red or blue wool at the collar and cuffis; two aprons, bound before and liehind, serving in place of petticoat and gown ; and these aprons are not unfrequently formed of coloured laces, hanging down like a fringe to the ankles. The colours are sometimes very brilliant, and the stripes run both horizontally and perpenilicularly, forming the pattern of a Scoteh plaid. The Wallachians of Transylvinia ilress more showily than those of Hungary; and their costume is often oronmental, and even rich. A small sheep-skin jacket, trimmed and richly embroiderel, at times, is occasionally worn lo the women in botly countrics.
Of late yeurs, the excrions of writers in the Magyar lunguage have furnished elementary works fitted for schools, as well as newspapers and other periodicals. The fomadation of the National Cussnino at Pesth, which origineten with Count Stephnn Szechenyi, furnisled the inhab. and vivitors of the cripital for the first time with a place ot meeting; and the example has been imitatel liy neariy every fown in the kinglom. The national prints, with (ierman and French newspapers and reviews, are now to he fonnd in these clubs. in remote comers of the comotry; and small provincial thentres are, perhaps, more nunerous in Hungary than in any other conntry. Seientific socicties have also sprung up of late years; that for the Magyar language and literature was endowed by Count Szechenyi with the smm of $60,000 \mathrm{fl}$; and this noble example was followed, on a smaller scale, by other marnates.

Agriculture.-Agriculture, owing to the richness of the suil, is the most important branch of national industry; and there can be no doubt, that if a market cond be found for the pronnce, the resources of the land would be fully developent, which is not the cnse at present, one-fourth purt of the limst land lying wholly meultivated. The soil, inteed, constitutes a source of wealth in Hungrary, which bad laws alone prevent from being adequately worked. In the NW. counties, among the hills, the Moravian systems of farming are met with,-a natural consequence of the Slowack's fencral resemblance to the Moravian in customs Hud language. This part of Hungary does not produce corn enough, in ordinary years, to supply it a own consumption, and imports corn, \&e. from the adjoining level districts. The lesser plain of

Upper Hungary contains many fertile tracta, especlally N. of the Danube, as well as the islands 'Gross and Kleine Schlitt.'
The following is an estimatc of the distribution of the soil of Hungary :-

| Arable Land | 4,887.220 jochs. |
| :---: | :---: |
| Tardens. | 639000 |
| Vineyards | 911,200 |
| Mealows and Pasture | 7,715,230 |
| fonds | 850,000 |
| Fon ${ }^{\text {gts }}$ | 8,043,000 |

The rich soil of Lower Hungary is productive and geverally well tilled. The black vegetable mould of the Banat, or the district between the Maros, Theiss, and the Danube, extending also over the connties of Bacs, Arad, Bekes, nnd Czongrad, is peculiarly well adapted to the growth of whent, which consequently is grown as often as possible, that is, according to the present sy stem, once in three years; a crop of summer corn follows, after which the land either lies fallow or is gown with maize. The immense tracts sown with grain in the great plain present a singular spectacle at harvest, owing to the great number of hands requisite to get in the crop. A square piece of ground is usually well beaten at one end of the field; and if horses and oxen can be got to trend out the corn immediately, it is carried thither at once, and trodden out by thicir unshorl hoofs. This practice of trealing out the grain is, however, most wasteful: not only is the work badly done, but, being performed in the open field, it exposes the crop to the chance of plunder, and to all the viclssitules of the wenther. Sudden thunder-atorma often destroy the greater part of a crop.

Notwithstanding the abundance of the crops in many parts of the plain, and the difficulty of tinding a market for produce, but little money is invested in farm buildings to preserve the grain. Holes dug in the earth, and slaped something like a buttle, with a narrow entrance or neek, are ciried by burning straw in then, and after being lined with fresh straw, are filled up with wheat dried in the sun. These rude granaries are common in the plain N. of the Theiss, but have given way in the Banat to regular granaries, as the foreign trade in that fertile district has grainally become regular.
The average of a mumber of years well ascertained gives a produce of 16 metzen per joch, which, vulued at 1 florin in silver (about $11 \mathrm{~s}, 4 \mathrm{~d}$. per quirter) would leave 4 H . per joch (or about 6 s . per acre) prolit to the landholder. Small tracts of land, let on short terms to peasants in the bestcultivated parts and in the neighbourhood of towns, are sometimea paid for at the rate of 4 , and even 6 or 7 f. per joch; but large estates are farmed out by the government at 1 fl . per joch, or ubout 1s, $6 d$. per acre. From the end of June the ground lics idle till the following April, sheep being tumed into the stubble after the September rains. The grazing of the second year is more valuable, and may be let at about 2 fl . per acre. where woolgrowing does not form a regular part of the farming system.
The great drawback on the landowner's profit in these productive countries is the difficulty rud expense of forwarding the produce to market. The soil of the great plain is so singularly free from stones, that rond-making is exiremely difficult, and demands a large out lay. The navignble rivers and canals are by no means in a state to allow of their being used at all seasons; and these difficulties, added to the wasteful manner of gettiug in the corn crops, make it wonderful that as much as sixteen-foll can be returned from the ground. Manure is in these parts scarcely used, as it makes the plant too rank, and forces it up into straw.

Vol. II.

In the greater part of the great plain eattle-diung is cut into bricks like turf, and used for firlug. Wheat-straw is likewise used for fuel, as wood is ncarce.

Tobacco is successfully cultivated, especially in the connties of Heves, Suegenin, and Czongrad, and it has a high character in Germany. The anmual produce is reckoned at 250,000 centucrs, of which only 60,000 are kept for home consumption. On being exported, it is subjected to beary imposts, levied by goverament. The annual proflace of the Himgarian vineyards is anid to be $24,000,000$ eimers, or $\mathbf{9 6 , 0 0 0 , 0 0 0}$ gallons. These wines, which are strong and tlery, requiring to be kept before they rench perfection, are of two sorts; the sweet wines (Ausbruch), and the red and white table wines. Of the former, the Tokny (grown about Tokay, on the Theiss) is unequalled for delicacy and flavour. It is a sweet, rich, but not cloving winc, strong, full-bodied, but mill, bright, and clear, seldom to be procured of the tinest quality, and then ouly at the private tables of the nolility. There are three distinct kinds of Tokay. The anmul produce of tho Tokny vinevaris is 250,000 eimers, of which only $1-5$ th part is of the best quality. Good old Tokay costs, even in II ungary, from 5s. to 8s. a bottle. Next to Tokay comes the Ménes wine and the linsat, Carlowity, and St. Georg. Of the red wines, that of Buda (Offner-Wein) is considered equal to the best Burgundy; and next to it are the Posjug, Soxd, Mirkolez, Neustadt, and other wines. The beat white wines are those of Somlys and Nesmély, which, it is alleged, equal any of the white wines of France, except clampugne. The cultivation of the mulberry-tree for silkworms was introdnced by the Empress Maria Theresa; and in the military fronticr a large quantity of silk is produced; but neither this article, nor the cultivation of dyeplants, such as woad. madder, and safiron, is well attended to. The farmers, discouraged by the various difficulties in the way of a sale for their crops, have of late years devoted themselves to sheep-grazing, aud the breed has been grently improved by the introdnction of the Merinos. The number of sheep grazed in Hungary is said by Czaplovics to be $20,000,000$; aud the quantity of wool exported averages 200,000 centners of 123 libs., which, at the ordinary medium price of 100 florins the centner, would amount to $2,000,000 l$. The horned cattled bred on the IInggarian plains are among the largest and handsomest in Europe; they are a race peculiar to the country, grey-white in colour, with wide-spreading homs. The horses generally are small and weak, and of an inferior breed; but in some parts considerable attention is given to breeding, especially in the county of Czanad, where nearly 10,000 horses are kept, and stallions of all the best breeds in Europe. Hundreds of thousands of swine are bred in the forests, and on the great heath of Debreczin there are some millions of geese. Poultry and game of every kind abound throughout Hungary.

Manufactures and Trades.- Hungary has, except mining industry, but few manufactures of any importance, and there is but little prospect of her importance in this respect being speedily increased. A small amount of linen manufacture is carried on in the N. and monntainous districts; but it little more than supplies the home consumption of the district. Wool is every where manufactured into coarse cloth, for country consumption. Tobaceo, leather, paper, soda, alum, and saltpetre manufactories, with numerous ironworks, are the principal other branches of manufacturing industry.
Mines.-Mining industry ranks next to agriculture. The greater number of the old mines are Vol. II.
worked by the govemment, but in recent years many new mines have come to be exploited by private owners. In 1862 there were 19,850 individuals employed on goveri:ment account in the mines of IIangary. The chief produce of the mines are coal and iron, the former averaging 15,000 tons, and the latter 400,000 cwt. annually. Next to coal and iron in importance is copper, producing about 50,000 ewt. ammully. Leud nud alum are also produced to the amount of 16,000 ewt. a year ; besides which zinc, autimony, cobalt, and varions other mincrals are fomad. Auriferons and argentiferous ores are met with in considerable quantities, and were formerly much worked, the yied of both amounting in value to abont 80,000 marcs annually. llut the vast intlux of pold from Australit and Colifornia has led to a just negleet of the auriferons netals of Hungary, in favour of the infinitely more valuable subterrinean stores of conl and iron. 'The mines nre divided, from their position, into four districts: the Schemnitzer, Sclmmolluitzer, Nagy-Ihm-yaer, and Banater, of whieh the first is by far the most considerable; and hence Schemnitz is cousidered as the mining eapital of Juugary. This town possesses an excellent school for miners. Each of the districts has its grovornment and separate establishment of smelting-houses; but all send their produce to be assayed to Kremnitz, in the Schemnit\% district.
River Communicutioms,-The trade by way of the Illack Sca was not commenced till the establisliment of the steam navigation of the Danube. The Hungarian peasant, with corn, wool, and flax about him in nbundance, lives in poverty, for want of a market. The articles imported from Wallachia and Moldavia are wax, honey, wool, bristles, and some metals. The agricultural produce of the great plain along the Save is conveyed to Srissek, in Croatia, whence the more expensive articles are forwarded along the river to Agram, and thence, by land carringe, to Laibach and Trieste; those more bulky are sent up the Culpa to Carlstadt, and thence conveyed to Fiume by the Louisa Rond. (See Fiume.)

The navigation on the rivers is as well managed at present as the peculiar circumstances of the country will allow. The barges are of great size, usually from 100 to 150 ft . long, by 17 to 24 ft . broal, and drawing 5 to $6 \frac{1}{2} \mathrm{ft}$. They are built of Croatian oak, either at Szissek, on the Save, or at Szegin, on the Theiss, und cost between 600l. and 700l. They have a high pointed roof, like a honse, and serve the purpose of granaries in the interior of the country. The peasants bring their corn forsale to the river's bank, and it is at once laden in sacks into the barge, and sorted into various partitions. These barges loal from 1,500 to $2,000 \mathrm{qrs}$. of wheat. They are drawn up the Danube or the Save by 20 to 25 sniall horses, nnd are often months on their way from the month of the Theiss to Raab, or Wiesellurg, or Szissek, when the water is low; but, under favourable circumstances, the trip from the Theiss to Sxissek may be made in 14 or 15 days; and the freight is commonly 15 kreutzers, or $6 d$. per cwt. All uavigation $n p$ the stream is, of course, interrupted during floods or linrd frosts, and thus there are many months in the year when no navigation is possible. The improvement of the beds of the Save and the Culpa, the use of stenm tow-boats instead of horses, and the adoption of smaller craft, has of late much increased the traffic along the rivers of Hungary.

Trade.- A considerable trade is carried on along the course of the Danube, the grand highway of Hungary. Commerce reccived a considerable im-

## P1 <br> P1

retur from the employment of steamers on the Danube and tributaries, and a still greater frum tho establishliment of railways in many parts of the country. The main line of railway, which croses the whole of Hungary from nurth-west to south-east, following the course of the Danube, enters the country near Pressburg, and runs, by way of l'eeth and Szegelin, linto Servia, tonching the lower Danube neur ibelgrade. The chief brumell of this great Hungarian railway rums northwarl frum Czegied, near Pesth, to Debreezin, Tokay, and the Russian fruntier, while another branch goes sonthwarli; from Buda to Stuhlweissenburg and lake Balaton, falling into the great railway from Vlenna to Trieste. The construction of these important iron high roadis has been of vast advantage to Hungary; still, however, the central situation of the country, and its great distance from the ports accessille to foreign shlips, lay its commeree under many disadvantages. The expurts consist almost wholly of raw produce, inc. corri, wool, wine, tobaceo, eattle and sheep. The imports comprise mont species of manufactured goods, with colonial products, dye-stuffis, spices, and harlware. The principal trade is carriei on with the Austrian dominions, ine. Gulicia. Fiume, the uearest port on the Alriatic to llumgary, is an open roadsteanl, in which slips cammot lie when either the Bora or Scirveco winds are violent.
Hulugary has no commercinl town to compare with Cracow or Vienna for bill and banking business; but the transmission of money, 8 cc . is much facilitated by branches of the National llank of Viemma established at Pesth and other places.
Coins, Weights, and Measures.-The Hungarians use the same standards as the Austrians, in most respects. The florin of 60 kreutzers is equal to 2s. English. The gold ducat of Kremnitz, consisting of 4h florins, is worth 6s, $6 d$. Einglish. The ort contains 12 kreutzers, and the polturock $1 \frac{1}{2}$ kr. The Hungarian yari, used in measuring cloth, is 4 -5ths of the Austrian yard, or about 34 langl. incles. The joch, or Austrian acre, contains $1,600 \mathrm{sq}$. klaften, and is equal to $1 \cdot 46$ Engl. acre. The metz of Presburg, cummonly used for measuring dry substances, is 1.75 imp . bushcl. The eimer (for liquids) varies; for the wine eimer is equal to 191 Engl. gallons, while that used in Lower Hungary is equivalent only to 15 gallons. The antal, used in the Tokay district, is equal to 13:3 Engl. gallons.

Constitution and Form of Government.-The ancient constitution of Hungary, which, though abrogated by the decree of the ' King-Emperor' in 1860 and 1861, is still held by the leading men of the Magyar race the valid fundamental charter of the kingdom, is strictly monarchical. The prerogatives of the monareh, however, are greatly limited by the power of the aristocracy. All that concerns the security of the country against foreign attacks, in cther words, the defence of the nation, is monarchical in principle. The armed force is consequently altogether dependent upon the king. The internal government of the nation is a mixed monarchy and nristocracy. Laws can only be enacted by the joint consent of the king and the diet: and, although the executive power he said to lie with the king, yet the sovereign has only the nomination of loris lieutenant (Obcrgespanne) of counties, and alministrators ; since every other public officer is either elected by the county itself, or numed by its lord-lieutenant -a nomination, however, which is often successfully disputed. Justice is administered on the principle, rex est fons et origo jurisdictionia, in the name of the king, who has, however, no further
influence than the power of appointing the president and councillors of the curin regin, that is, of the septemviral and royal courrts; lut to theene courts the crown dijpitariea likewise depute their representativea. The king nominates the presidents and councillors of the distriet courts, watches over the courre of Justice in all courts, and enjoys in civil suits the exercise of certah prerogatives, and the power of issuing mandintes foumded upon them; such are the power of uriering a auit to be recommencell (mundatum novi cum gratií), and of issming moratoria: in criminal cases the king las the priwer of parioning.
The royal dignity is hereditiry in the house of Austria since the year 1526, and confirmed in the female as well as the male line. Since 1723, the succession to the throne of Hungary is placect upon the same footing with that of the other herelitary states of the emplre. The chlef preroynatives of the crown are,-1st. The power of making laws, nfter consulting the estates assemblel in the diet, and in common with them. The king assembles the diet, and dissolves it at pleasure. 2nd. The highest executive authority 11 every thing which is in accordance with the laws, or which involves no violation of them. 3rel. The righte of patronage, or the nomination to all bishoprics and other clerical dignitaries, 4th1, The highest judiciary nuthority, which the erown, hawever, only mediately exercises through its othicers. Sth. Tho fill power of declaring peace anll war. Gth. The right of levying troous, of erecting fortresses, and of demauling warlike nullsidies. Tth. The right of calling out the genernl insurrection of the country for lits defence, in the prescribed legal manner. 8th. The right of parloning. 9th. The right of coining money. 10th. The right of granting patents. Ilth. Thie right of nominating to all offices, except those of pilatine of llungary, of the two guarlians of the crown, and of the county offices above mentioned. 12th. of legitimising bastarls. 13th. The jua prafectionis, or the power of transferring the right of suceession to a danghter, on the extinction of male heirs in a family. 14th. The jus successionis, or the inheritance of all noblemen's estates when there are no mule heirs. 15th. The right of abrogating decrees of infancy pronounced by the courts of justice. 16 th. Of granting letters of prosecution. 17th. The supreme guardianship of orphans. 18th. The post. 19th. The right of sending special commissions to inquire into the faulty administration of the counties.
The prelates, magnates, nobles, and free cities are comprised uuder the name of estates. The free cities are regarled as nobles in their municipal capacity. Under the kings of the reigning house of Hapsburg a great portion of Hungary and of the annexed distriets was conquered from the Turks, by great exertion on the part of the other imperial states; and many important alterations, in the relations of the king and the estates, took place at different times. What are called the cardinal privileges of the nobles and of the clergy, who are looked upon as equal to the nobility, have been preserved to the present day to an extent unparaileled in any other country in Europe.
uy the decrees of the king-emperor Francis Joseph 1., published the 20th Oct., 1860, and the 26th Fel., 1861, and which established one cunstitution for the whole empire, the ancient constitution of Hungary was virtualy overthruwn. The people refised to acquiesce in this change, anu the steadfast opposition which ensued lad the consequence that by another decree, issued on the 20 th Sept., 1865, the constitution of the whole
empire conilug Religi its relig classea. to whie The Iro number church

Keligiom.--The pop., considered in relation to its religious belief, is divided into four grand classes. The religlon of the state is Rom. Cath, tow which fuith 6-10ths of the pop, are nttached. The l'rotestants, accoriling to the census of 1857, number 2,916,822; the adherents of tlie Greek church about 2,000,000; and the Jews about 2i53,000. By the decree of Joseph 11., who dissolved 600 monasteries, and endowed with their funds various universities and sehools, religious toleration, if not absolute equality, was granted to the prifessors of all Christian creels; and this liberal poliey has been maintalned by his successors. The Rom. Catholliss are spiritually governed hy 3 arehlishops and 14 bishops, who are all members of the diet: these are well provided for; lut the inferior elergy are poor, and are said to be not remarkable for their liberality of feeling, or exemplary morals. (l'aget 1.111.) The archcishop of Gran, whe has a very large revenue, is primate of all Hungary. The United Greeks have 4 bishops, and the Orthodox-Gireek churehmen, 1 archlishop (abp. of Carlowitz) and 6 bishops, all of whom have had seats in the dlict since 1792. The Protestants are not under episcopal jurisdiction, but have 8 superintendents or presidents of symols. They are diviled into two classes; the Lutherans, who adhere to the confession of Augsturg, and the leformed, who follow the doctrines of Calvin. The former are principally found in the N., and among the Slowacks; the latter are almost entirely Magyars, and chiefly inhabit the towns and villages of the Puszta. There are upwarls of 200 Jewish synagogues in Hungary. By the law of 1840 , they are admitted to all civil rights and privileges.

Education, Crime, and Courts of Law.-So minute a survey ennnot be given of the cducational institutions of Hungary as of those in other provinces of the empire, owing to the more local charneter of the Jungarian municipal and parish jurisdictions. The University of I'esth is one of the most richly endowed of Europe, but its services are by no means in proportion to the magnitude of its revennes. The family of Maricbany has the credit of founding 100 hursarslips for poor students. There are Rom. Catholic lyceums or colleges at Agram, Kaschau, Grosswardein, Presburg, Raab, and Lirlau; and l'rotestant colleges at Presburg, Oellenburg, Kaesmark, Eperies, Raab, Debreczin, Sarcs Patak, and Papa; they have faculties of law and arts. The largest of these is at Debreczin, founded in 1792 . The colleges of Szegedin and Stein am Auger have faculties of arts only. At Sehemnitz is a mining college, similar to that at Presburg, supported by government, with 7 professors and 54 scholarships. The Ludovici academy at Waitzen, and 67 Catholic and 13 Protestant gymnasia or grammar-schools, complete the list of higher schools. The academy at Carlowitz, intended to educate the pricsts of the Greek Schismatic confession, belongs strictly to the military frontier. There are, moreover, 2 schools for sons of nobles, 1 at Agram and 1 at Kaschau; 24 Catholic and Greek united clerical seminaries; 14 regimental schools; a numnery for education at Pesth; and an excellently conducted school for the deaf and dumb at Waitzen. Besides this, every village has its elementary school, or Trivial-schule, and the larger villages more than one, where instruction is given in the language of the inhabitants. In Pesth and other places subscription infant schools have been established.

All catimates of the state of crime in Ilungary are extremely loose, owing to the want of proper returns. The poverty and ignorance of the lower orders are great inducements to offences ngainst property. Cattlo-stealing is a comruan offence, and the insecurity of garlens and field-crops is much complained of by the imlustrious peasant. Murder, however, is of rare occurrence extept in cases of prpular tumult.
The prisons, formerly wretehel, have of late years attracted attention in Hungary, not less than in other comitries. The landowners of the country raised the sum of 30,000 tlerins by subseription, for the ereetion of a penitentlary on the American system. A society of ladles likewise raisel the sum of $16,000 \mathrm{tl}$., to ereet a workhouse for mendicants. At Gyarmet, Arad, Szexard, Miskolex, and Jeszbeny, the old system of inprisonment has been clianged, at the expense of the nobles, into the better one of prison labour. This laudable spirit is spreading rapidly in ali parts of the kingclom.
The court of lowest jurisdiction for the peasant is the manorial court of his lord; but in disputes between the peasant and the manor, a special court is formed from members of neighburing manorial courts, with the 'Vicestuhlrichter,' or police magistrate of the distriet, and from their decision an appeal lies to the 'Stullrichter's' court. This court is the tribuial of tirst instance for the nobles; but causes involving more than $3,000 \mathrm{fl}$, come before the court of the 'Vice-gespann,' or sheriff of the county, whence an appenl lies, as well as from the 'Stuhlrichter' to the 'selles judiciaria,' or 'selria,' the proper county court of session, and thence to the royal table, or court of king's bench. The 'Septemwiraltafel' is so called from its having formerly consisted of 7 judges; it is 210 w composed of 4 prelates, $10 \mathrm{mag}-$ nates, and 4 nobles, or their representatives, of whom 11 must be present to form a court. This is the lighest tribunal of the kinglom.

Local Governmeut.- The local taxation is very slight in most of the towns of llungary. Many of them, such as Pesth, Debreczin, and Szegedin, luve extensive town-lands; which, if properly managed, ought to produce large revenues, but which, under defective municipal systems, do nut defray the cliarges of lighting and paving. The town-lands of Szegedin execed 10 German sq. m. in extent, and yet 4 strong horscs are scarcely able to pull a carriage through the streets of the town, so much are they neglected. The excise and octroi, or consumption dues, levied on the larger Austrian towns, are either unknown in Hungary, or are raised hy the municipalities as town-dues, for local purposes. Salt and playingcards are noyal monopolies. Tobnceo is free. Even the tithe of all minerals claimed by the crown in the other states of the empire is disputed by the owners of iron and coal mines. A peculiar feature of Hungarian financial ceonomy is the pride which the notility feel in not being compelled to pay road and bridge tells. The principal of this absurd exemption has, however, been abandoned in the new chain-bridge between Pesth and Buda, where all classes are to puy toll indiscriminately.
The county meetings, which are the nursery of patriotism in Hungary, are of two kinds, restorations and congregations. In the former, the county officers are elected; in the latter, accounts are passed, and the county business discussed. The number of nobles or electors is between 200,000 and 300,000 ; and as their qualifications are limited neither to property nor instruction, the tumultuous scenes which present themselves
nt elections, and on other occasions, hear a gioxl deal of resemblance to the ncenrreucew in Englaul at sueli meetings which took place in a hygune age. The mugistrates have an ingenions why of manufneturlug votes for their friends. On the caudlidate's demanid to vote, the clalin,' if opposed on the groumd of non-qualitication, is reforred to the comanty court as a disputed point, where the magistrates generally linve intluence enough to settle the matter as they wish. In this way the number of the nobles is annually increased. Whoever purchases laul of the crown becimes, by so doing, a noble. At the county congregntiona a large amount of business consists in the making out of inatructions for their representativea durlug the sessioul of the diet : these are, in fact, delrgates withunt any will of their own, belng bonnid to adhere to that of their constituents, to whom they apply for directions on all doultiful and diffleuit questions. The county meeting may also recnll a rufractory member, and send ansther in his stend. The rights of the nolbes are based on the - Auren Bulla,' grantel to the armed larons ly King Audrens, in 1222, in a manner similar to the Magua Chartu of Eingland.

The internal management of the cities is wholly deprendent on the goverument, which has power 10 appoint and remove their oflicers: they are on this necount a constant olject of jealonsy to the nobles, who consider this depemulenee as opposel to the princeple of constitutional lilerty. They repronch the citizens for their financial economy, atid for allowing the majority of the inhal, to be excluded from a yoice in all public busiuess. The distribution of Ilungary into counties is attriluted to King Stephen, about the year 1000. The Fo Ispan, or lori-lieutenant, is the only officer mamed by the crown. The Al Ispan, or deputylientenant, of whom there are usially two, is, however, the common president of the county meetings : he holds the supreme direction of the county police, and presides as chict judge in the cownty courts; being, in fact, $n$ kind of slecriff. The small salary attached to all county oflices seems rather intended to defray extra expenses, than as a remuneration.
The most important national institution, next to the connty meetings, is the diet, at which the prelates and magnates formerly assembled with the deputies from the counties nad towns. Since 1562, the chambers have been divided. The chamber of magnates is composed of the prelates, with the archlishop of Gran, as primate, at their hend; the 'bnrones et comites regni,' or peers of the realm, in two classes; the grent officers of the crown, with the lords-lieutenant of the flfy-two counties; and the barons, summoned by royal letters, including every prime count anil baron of twenty-five years of age. The palatine is the president of the chamber of magnates. Magnates who are absent depute representatives, as do also the widows of magnates; but these deputies sit in the second chamber, where they can spenk, but have no vote. Tho business transactel in the lower chamber is previously discussed in a kind of committee of the whole house, called a 'circular session,' in which strict forms are not observed, and each member speaks as often as he can get a hearing. The speecles in both chanbers are usually mado in Hurgarian. Among the magnates some few speak Latin; but this language has almost entirely frdlen into disuse. The 'personal,' or president of the lower chamber, who is at the sume time chief judge of the 'royal table,' is appointed ly the crown. When the diet assembles, the propositions of the crown are first presented to it for consideration, and these form the great busi-
neas of each session ; but proposals also originate in the lower chamber, which, when agreed to liy the maguates, are also mont to the king, who, if he approve them, communicates his assent hy a ruyal' resolution.' Mnuy propusitiona rojected by the crown are voted anew in every diet, under the titie of Gruvamina; and their number has acenmulated to such an extent an to mako it expelient to make a selection of the most pressing, which are denominatell preferentialia.
The Hungarinus attach grent importance to thelr conntry's belng recognised an fudependent kinglom. The sovereign is atyled 'king' in all pultlic acts, and the reggalia of the crown are gunriled by a special corps appolntext for the purpuse iil the palace at Bula, whence they are only removel, nud that with great cereniony, for the govereigu's use on stute occanions. Whe grmul oflicers of the court and homseholid aro mimerons, and are termed 'nule ministerinlen.' These are the grand justiciary (index eurice), the han of Croatia, the nrelh-treasurer (fuvernicorum regulium mayister), the great cup-benrer ( $\boldsymbol{p}$ incernurum ref. maif.), tho grnull carver (rlapiferorum reg. mag.), the master of the household (mgazonum reg. mag.), the lord chamberlain (cubiculariorum rej. muy.), the grand porter ( janitarum reg, meg.), the master of the ceremonies (curice reg. mag.), nand the culptain of tho body-guard (cupitaneus nobilis turme pratoriana). The king is represented by his vier-roy the palatine, who resides at Budi, but the prand chancery of the kingdom has its seat at Fiema, where the government business is transanted. The exchequer is managed by the 'llorkammer,' which has its sent at lluda, and under which are the collectors of taxes, the mining boards, nad the directions of the crown slomains.
Histary:-The oldest inhanhitants of Humgary, mentior 4 in history, were known to the Greeks and Romans by the name of lommoninns. Of its history during the time of the Western and Eastern empires, nud the various wars and lnvasions which are said to have taken place between the thirl and tenth centuries, there is no certain information. Ilungary, however, had nssumed the form of ant independent kingdom in the eleventh century, the sovereign power belng vested in the honse of Arpad, n chief of the Magyar race. 'This family having become extinct in 1301, the Hungarinas, through the influence of Pope Boniface Vlll., clected Clinrles of Anjou, brother of Louis IX. of France. One of his sons became king of l'oland in 1370, and thus his dominions extended from the laltic to the Adriatic. A few reigns sulse-quently, under Matthins I., Hungary counprised about $256,000 \mathrm{sq}$. m ., the extent of the present Austrian empire. The Turks, soon after their estallishment in Europe, began to assnil Hungary. They were, for a lengthened period, vigoronsly resisted, particularly by the famous John llumiades. In 1526, however, Louis 1I, king of llungary, was totally lefeated and slain by the Turks, in the battle of Mohacz, and a large part of his dominions fell into their hands. On lis death, Ferdinand I. of Austria, his brother-in-law, succeeded to the throne, and was crowned king of Hungary in 1527, since which time the monurell has always been emperor of Austria: but the Turks continued for many years to hold the greater part of the kingiom. The despotic conduct of the Austrian princes was most distasteful to the Hungarian nobles; and so great was their antipnthy to the Austrinn yoke, that, in 16883, they rose, with Tekeli at their head, and called upon the Turks to relieve them from servitude. Austria, however, succeeded, by the help of Tohn Sobieski and l'rines Eugene, in expelling lie

IUUNTINODON

Turks from these countries, and they ware flinily necured to it by the treatles of Carlowiza and l'asanawitz, in 1718. Hungary remalned luyal to the houne of Austria until the year 18.AN, when the longontanding efliort of assimilating all the territoriog of the empire into one homogeneous mase brought about a crisis. An insurrection bruke ont at l'esth in July, 1818, and, on the 28th Sept. following, the linngarian diet prochamed a provisional government, under thathyani and Kossuth. Austrian troops therenpon marehed linto the comintry, and the llangarians were defentel in several encounters, Dec. 28 and 29 . The tide of vietory turned at the beginming of the followhing year, when the insurgenter galned the battlo of (iran, April 17, 1810, This led the Austrian govermment to eall in the aid of Russia, and the latter jower having aent a large army into the field, the linugarian commander-in-chief was forced to surrenter his forces on the 1ith of Ang., 1849. The last stronghold of the insurfection, the fortress of Komorn, opened its gates on the 28th of August, and Kossuth huviug fled Into I'urkey, and latthyani been led to the acnflobl, Oetober ©th, the distrian goverument found itself absolute master of the kingolom. 'line attempt to unite all the territories of the empire into a uniform atate was now again undertaken, and ended in the constitution of 1860-61. lint onee more the limgarian nation protested-llot in arms, however, but by quiet steadfist opposition, and constant refusal to send deputies to the central parliament, or reicharath, at Vlenna. The remult, as already mentioned, was that the king-emperor, on the 20 th Sept., 1865, suspended tho constitution of Austria, with the sole object of conceliating Hungary.

HUNGERFORD, a market town and par, of Encland, purtly in co. ISerks, humd. Kintlury Engle, and partly in co. Wilts, limm. Kinwardstone, on the Kiemet, 31 m . E. Whth, nud 64 m . W. London by Great Western railway. Pop. of town 2,081, and of par. 3,001 in 186í. Area of par. 6,940 acres. The town consists chicily of one long street, in the centre of which is the market house, open below, aud having a room above for the trananction of the town business. The church, which stands at the end of a slindy avenue on the W. side of the town, is a hanilsome stricture, erected in 1816, and near it is thu grammar sehool. There are nlso places of worship for Wesleyan Methodists and Independents. ILungerfort has no manufactures; but there are some extensive breweries, and a considerable tratlic arises from the Grent Western railway and the Kennet and Avon canal which passes close to the town. It is a bor. by prescription, and is governed by a constablo elected amually by the inhabitants, who are called together by a brass horn, known as the - Ilungerfori LIorn,' and given by Johm of Gannt with the charter. Hungerford lark, at the E. end of the town, is a finely wooled domain, with a mansion in the Jtalian style, erected on the site of a house built by Queen Eilizabeth or the Earl of Essex. Markets on Welnesday ; fairs, last Wednesday in April, Aug. 10, and Monday before Michaelmas.
HUN'INGDON, an inland co. of England, partly included within the great level of the Fens; being surrounded by the cos. of Northampton, Cambridgo, and Bedford; the latter bounding it only on the SW. Area 229,554 acres, of which 70,000 belong to the Bedford Level fens. Surface in tlie W. and S. parts gently varied, but the N. and NE. portion, included in the fens, is quite flat. This latter portion of the co. is mostly in grass, the other parts being about equally divided be-
tween tillace and mantirape. Chicf eropa, whent, oata, ani lemon. Agriculture, thongh much improved, in not very ndvanced. The land in plotaghed in immense rifkes, by which a grent deal in lost ; and it is frequently amon fond anil cuit of order: furnijos little enlifated. A gome deal of the cheene nind butter is made. The mherp, the atock of which in entimated at about 500,1000 head pronluce long combing woul. Eistates generalis extensive: there are many large farma; bat amali ones predominate. l'igeon housea aro extromely ahundant. There are neither minerals nor manifactures of any importance. I'rincipul rivers, Onso and Nene. I'here are in the fens two shanlow lakea, Whittlenea stere, and Hinnsey Mere; the former contnining above 1, bibl neren, aind the later nbout half as mucls: secasiren, bowever, nre now in jrogrems fior imainisg the former. Ilunthigdoniwhite lian four humireis and 103 pars. : it semds fuirr members to the 11 . of C., two for the ro. and two for the lour. of Itunthugdon, the primelpal town in the co. Regintered electors for the eco. 1,12 il in 1865. In 1861, 1funtimglen had 13,70.4 inhubitend houses, and a joy, of 01,250 . 'line poy, in 1 Not was 64,18i). Annual value of real property, 375,1871 . in 1857, and $107,8 \cdot 101$. in $186^{\circ} 2$.
liuntinghon, a parl, and min. bor, nnl market town of Jingland, co. Slantingdon, of which it is the cap., lund. llurstingstone, on the Guse, 57 m N. London, and 17 ml . NW. Cambridge, on tho (irent Northern railway, Pop, of manic. bor. 3,816, and of parl. hor. 6,251, in 1861. Area of parl. bor., which includen the old bor. and the adJolning par, of Gionlmanchester, $6,8: 2$ acres. The town, which stands on a gentle slope N . of the Ouse, crossed here by a causeway and brilfge of six arches, consists principally of a long range of brick lonuses, rumuing from $N$. to $\mathrm{S}_{\text {., }}$ which commence inmediately from the bridge, and line each side of the $\mathbf{N}$. rond from London, $\mathbf{\Lambda}$ few streets and lanes branch off on enels side; but these aro mostly composed of inferior houses. Of fifteen churches onco standing, only two remain, to which a new ono has been adiled in recent years, The principal church is All Saints, built in the perpendicular atyle, and containing nome interesting memorials of tho ancestors of Oliver Cromweil, who as is well known, was born at Huntingdon on the 24th of April, 1599. Duntingron, besides its three churches, has several places of worship for diasenters, an old grammar school, with two exhibitions at Cambridge, attended hy 80 boys; a greencont school, for 30 boys and 12 girls; a national school, with 160 childres; and 3 sunday schools. The town-hall, behind which are the shambles, is a stuecued building, comprising two court roons and an assembly room ; and close to it is the county gaol, a very large building. There is also a small theatre and a race-course.
Godmanchenter, on the opposite side of the river, which seems to have been once an important bor., is now a mere suburb of Ituntingdon, chietly inhabited by farmers and farm labourers. 'Huntingdon, as it were, laoks over into the fens: (iodmanchester, just across the river, already stands on the black bog.' (Carlyle, Th., 'Cromwell's Letters and Speeches, i. 34.) Both Muntingdon and Godmanchester wera chartered in tho reign of Jolin: the present oflicers in each are four alilermen mil twelve conncillors; but neither of the bors., as now constituted, has a commission of the pence. The county magistrates hold petty and quarter sessions in the town-hall, the chief local net of the town being that of $2 \overline{5}$ George III. Huntingdon has sent two members to the H. of C. since the reign of Edward l. the franchise, till the passing of the Reform Act, being vested in frecmen

by birth, grant, or purchane. The boundaries of the prenest parl, losir. inclute the entire parinh of fiorlmanchenter, an well $n$ s the olit borough. liegintered electorn, 112 in IRis. Markets at llinstingulon on Satimilay $:$ (iolmanchenter cattle-fair on linster 'I'uewiny.

IIUN'IIS, a bor, of lanony, market town, aul par, of Scotlani, co. Abemleen, on the peninsuin formed by the confluence of the Deveron and Ihegie, 15 m . NW. Aherleen, on the (ireat North of Seotland railwas: J'op, 314 d in 18131. The town is nently built, eonsiating of two princlpal af reeta erosming eneh other at right anglen, having n handmome spuare or market-place in the midille. The leveron in cromed by an ancient bridge of a single arch. On ocershinis of the grent floosis of 1829, when the waters of the river rose 22 ft . above their usual level, only if ft . of the arch remalned innoceupied! but it received no injury, and stnuils apparenitly as flrm an ever. $\mathbf{A}$ nouleris lirilge of three arches mpatis the Ibogie. In adilition to the par, church, the Eiplsermalianm, Catholicn, and Intepencenta have each ehnocla. In the limmedinte vicinity of the town are lluntly Lotige nud II untly Custle; the former a neut of the hate dake of (Gordon: the latter, which in in ruins, in ancient aeat of the (iurilon family: both are now the property of the duke of Richmoni, feulal superlor of the town. Iluntly was once celebrited for its manufacture of linen; but it has nearly alisnppearel. There is a thriving bleach-fleld on the banks of the Ilogie. The business of brewing nul distillation is carrleit on to $\boldsymbol{n}$ eonsideruble extent in the town and neighbourhond.

IUURDWAK, ILARI-1)WAR, or GANGADWARA ('the gate of the (ingges'), $n$ town of lliniostan, presiil. llengal, prov. Delhi, in lat. $29^{\circ} 57^{\prime}$ N., and long. $78^{\circ} 2^{\prime}$ E..; 105 m . NL. Delhi. and famous from its belng one of the principal places of llinioo pilgrimnge, and the sent of the grentest fair in India. The town. which is but inconsiterable, is situated on the Ganges, at the point where that sucred stream issues from the mountains. The pilgrimage and the fair are heht together, at the vernal equinex ; and kuropenns, nowine addicted to exaggeration, who have been repentedly present on these occasions, estimate that from 200,000 to 300,000 strangers are then assembled in the town and its vicinity. But every twelfth year is reckoned peculiarly holy ; anil then it is supposed that from $1,000,000$ to $1,500,000$, and even $2,000,000$ pilgrims and dealers are congregated together from all parts of Inlia and the countries to the N. In 1819, which happened to be a twelfth year, when the auspicious moment for bathing in the Ganges was announced to the impatient devotees, the rush was so tremendous that no fewer than four hundred and thirty perpersons were either trampled to death under foot, or drowned in the river.

The foreigners resorting to Hurdwar fnir, for commercial purposes only, consist principally of the natives of Nepaul, the Punjab, and Peshwaur, with Affghans, Usbeck Tartars, de. They import vast numbers of horses, cattle, and camels, Persian dried fruits, shawls, and drugs: tho returns are mide in cotton, piece goods, indigo, sugar, spices, and other tropical productions. The merchants never mention the price of their goods, but conduct the bargain by touching the different joints of their fingers, io hinder the bystanders gaining any information. During the Mahratta sway, a kind of poll-tax and duties on cattle were levied; but all is now free, without impost or molestation of any sort. Owing to the precautions adopted by the British government, the most perfect order is preserved. Antecedent to the British occupa-
tlon,
alhel. IIti
IIU18ON (LAKE), one of the five great lakes of N. Amerien, ledongring to the bavin of the St. lawrence, necimal in mike only to Lake Nuprior, nud intermediate in wonitlon letween that hake and Michigan, on the NW, athl W., and laken Firio and Ontario, on the S. and NE. It is of a somewhat triangular ahape, exteniling het ween lat. 4il
 romindenl, W. aull SW., hy the Michigan territory. anil on all other milen liy the territory of IJper Canala; and divided into two unequal parta by a long pentumala and the Manitoulin chanin of ialanils: the parts to the N . and lis. of which are eniled Nurth Chanael nami (ieorgian llay. The total length of Take Muron, N, to S., in rather more thnil 200 m ., and its greatent lirealth about the mame, Area estimated at $10,(0) 0 \mathrm{mg}$. m . Vilevation ahove the surface of the ovenin bivift, or lesm by th' than that of Iake Nuperior, and by 4 than thint of Jake Michigun. (rentest deptli towards its W. whore at least 1,000 ft., amilits mean depelis In extimnted at 900 ft., or aloont 300 ft. below tho level of tho Atlautie, In various parte it almomels with imlands, their total number heing said to exceed 32,(140, the largent, the (irent Mnaitonilin (livil Spirit) inland, is nenty 90 m . lomg, anl in one part almont 30 m , wille. I ake Iluron rewiven the auperahuminut waten of Lake Superlor, by the river Nt. Mnry, at its NW. angle, nut those of Nichignn at Michilimachinac; and discharges its own towaris lake Erie, by the St. Clair, ut itns. extremity. Jakes Nipiswing mal Simere communiente with it lay the Frrancis nnd Severn rivers, except which, however, Lake lluron receiven no river worthy of mention. The lmaks of this lake, tre mostly low, ef, ecially along its $\mathbf{S}$. and $\mathbf{W}$. sides. Few towns of eonsequence exist on its shores, and its navigntion is renderel dangeroms by sudilen and violent tempests.
HYDERABAD, a town and fortress of Hindostan, prov. Sinde, of which it is the enp., though not the largent city. It stands upon n rocky procipice upon an istand formed by the Indus and the Fullalec, one of its tributaries, 48 m . NF. 'I'attu. Pop. estimated nt 40,000 in 1864. Hyderabat has a station on the Sindo railway, nnil this, and a well-organised system of atenm navigation on the lulus, extending over a length of 570 m ., gives considerable importnnce to the town, and has led to a grent incrense of inhahitants. IIyderabnd is famous for its fortress, which has an imposing nppearnnce, and is considerel very strong by tho Sindians; but it could not oppose any effectunl resistance to Europenn troops. Its shape is an irregular pentagon; its walls, which are of brick, aro about 25 ft . high, very thick at the bottom, but tnpering to the top, and flanked with round towers from 300 to 400 paces apart. On one side it is enclosed by a ditch about 10 ft . wide and 8 deep. In its centre is a massy tower unconnected with the works, in which a grent portion of the treasures of Sinde aro deposited. Formerly, there were 70 pieces of cannon mounted on the ramparts, and 2,500 houses and several hnndsome mosques within the citadel; at present the fortress is a mere shell, and its walls are going rapidly to decay. N. of it is the pettall or unfortified town, in which most of the inhabs, reside in mud huts: there are, however, some well supplied shops. Hyderabad has manufactories of arms of different kinds, employing many of its inhabs. ; and others of embroidered cloths and leather.

It was taken and jllumered in lisk7, by the troops of Aurungzelse.

The territory of which Ityderabail once was the capo, known as the Nizanix dom., extends between the 16 hin and 21at degno of N. lit. mid the 75 th nind 8.and degs, of lis long. 1 embrucing, tugether with the prova, IIyderabid and lieeder, part of leynpoor, Aurungabad, and llerar: laving an aren of 108,000 s(1. m., with a pup, of at leaxt $H_{1} 0000,(191)$, lly all accomits, this territory was very bailly governed by itw natlve princes, anil lusurrections were frequent. Jint, accoriling to a trenty mule in 1800, ft was provided that the military power of Great liritnin should be employed not only in the suppreswlon of rebellion, but alan itt the enllection of the revenne. Sinee then, the conntry has been virtunlly Britlsh territory.

Il MDRA, an island of the Grecinn Archipelago, off the const of Argolis, from which it is $\mathbf{6} \mathbf{m}$, distnit; lat. $87020^{\circ} \mathrm{N}$, , long. $233^{\circ} 30^{\prime} \mathrm{li}$. . Area, 59 aq. 11. P'op. 26,260 in 1861. Hyira is a mere posk, so nttorly barren an to contribute nothing whatever to the maintenanee of its inhabitants, nor, in all probabitity, would it ever lanve been peopled, untess its insular situation and the excellenco of its harbour hail pointed it out as a safo phice of refuge frum the oppressions of the Turks, and a furourable situation for commercial pursuits. The town of Mydra, which, with the exceptlon of two neljacent villages on the const. is the only inhnbited part of the island, is situated on the NW. side, nad rises in sucecssive tiers, like an amphitheatre, over the harhour, presentligg from the sea an extremely beautiful prospect. The streets are precipitous and ninoven; but the houses are mont subsiantially built of stone, with spheious mul wellfurmished interiors, and are extremely neat and clean. The liarbour, Iefended by a battery, is crescent-shaped, and, though smill, is deep and snfe; it is lined, through its entire sweep, with storehonses and shops, most of which, however, are now empty, only showing, by their number, the former consequence of the port. Several Greck churches (two of which huve the marble steeples) and a hall of commerce are the ehief public builiings; and the educationnl establishments, instituted in the days of Mydra's prosperity, comprise a well-regulated college, for instruction in the classical Greek and the modern languages, several elementary schools, and a mathematical seminary. The commerce of Hydra before the war of independence was very considerable, employing, in 1816, according to Pouqueville, 120 vessels, and more at a later period, trading in wheat with Spain and Portugal, and in oil, wine, and other goods, with different ports of the Mediterrancan; but it has now greatly fallen off, and in all probability
wili never recover its firmar prospretity, having
 ously nituated prota of Ninuplia aud the I'inene. The Ifydricto, inont of whoms are Albininus anil not true tireekn, werr, durligig their promperity, which commencel Its the Ingimuing of tho Fronch whr, the lsoldext neames of alf (irevece, and aeppirmi lirpe mimas by privateering. IIYME'TTUS (MOUN'T), a monntaln of Greece, pov. Attien, if m. Fisk. Athenw. Ileight. 2,680) feet. The hones collocted hero ham beom lin high rapute in ancletit as wall as monlern times.

IIY'IIIF, is clinque port, pirl. lar., market town, and par, of linglainl, eo. Kent, Inthe Sheprway, lumi, anmo name, 16 m . Fi. Canterbury, ani 50 m . Sk, Lombon, near the smoth-Wasterin rallway. I'up, of munie, hor, 1,001, atil of purl. Inor. $21, i 67$ in 1861. The parl, Inor, Includes Samignte, Fulkentone, and four other amall parishes. 'The town ntaniln near the N.. extremity of liomney Marsh, and conaints chiefly of one longe nireet, parailel to the sen-const, which is about 4 m . distant, the beach lylug between being considembly higher than the town. The chineh, a eruciform structure, built lis the early limplimla style, aud laving two towers, is remnrkable for its elegant arehitecture. There are aloo placen of worship for Wesleynu Methodista nad Imdependenta, and untionnl sehools supported by subseription. 'Tho clief buildinge are the court-house, gaol, aud thentre, Hythe prospered during the great war with France, in conserguence of the large military force quirtered in the nelghbourhool, and of the expeniliture in the formation of the mllitary canal, nind of the forts and martello towers with which this part of the coast is studded; but its pronnerity lins deelined since it has ceased to te a military station. It has no manufactures ; and the bench being open ausl exposed, tho colliors, which are the only vessels truding to the town, are obliged to lanil their cargoes during the summer months, Finhing employs a few of the lnluabs. The corporntion, which received its constitution from the generni charters granted to the Cinquo l'orts, enjecially that in 20th Charles Il. Lias consinted, since the passing of the Municipal Iteform Act, of 4 aldernen, one of whom is mivor, and 12 comncillors. Corporntion revenue 61 ib. 11 1862. The bor, sent 2 menm, to the II, of C. from the 42 nd of Edward III, down to the pansing of the lieform $A c t$, which deprived it of 1 mem.: previonsly to that act the franchise wis vested in the freemen, maile so by hirth, mairiage, or gift. The Boundary Aet enlarged tho limits of the parl. bor., by adding to it the liberties of Folkestone, and the parishes of West Hythe, Saltwool, Cheriton, anil Newington. Registeral electors 1,176 in 1865. Markets on Saturilay ; fairs July 30 and Dec. I.

Hythe was formerly, and up to the reign of IIenry VIII., one of the principal ports ont the English Channel. The quota furnished by it towards the general armament of the Cinque l'orts was tive ships, with twenty-one men and a boy to ench. Leland speaks of Hythe as ' $\Omega$ very great towne, two good miles in length all nlong the shore.' The name, in Saxon, signifies a port or haven.

Imhallid. See Hashinow.
ICLLANS, a large inhand under the dominlon of Benmark, in the N. Athutio Ocean, on the conihnes of the polar circle, penerally considered as lelomghig to Emrope, but which should, jerliajow,
 bifio $40^{\prime}$ N., and long. $10^{\circ}$ and $2: 1^{\circ} \mathrm{W}$. It in of a very irregular triangular mhape, and is entimated to cemtain about 30,100) nq. miler. 1'op, (14,603 in 18tio. The population is spread over alomet twothitrifs of the ishanil, the centrat pertion being totally muinhabited, and imperfectly explorect. leelaud appears to owe ita exintence to submarine voleanic agency, and to have been upheaved at futervals from the bottom of the sen. It in traversed In every lirection ly vast ranges of mountains ; the proncipal ridges ruin ehlefly E. and W., anil, from these, inferlor momitaina branch off towarla the coaste, often terminating in roeky and bolit henilumiks, All the consts, but more especially the $N$. nud W., are deeply indented with fiords, similnr to those of Norway. The most extensive tract of level country is in the SE. It is estimatel that alout a thiril part of the surface is covered with veretation of some kind, while the other twothirds are oceupied by snowy momutains or fledds of lava. The general aspect of the comntry is the most desolate and dreary imaginable. The helght of very few of the mountuins lans been correetly ascertained, and those said to attain an elevation of 7,000 feet are not the most lofty. The Voknls, or cuormous ice-mountains, are among the greatest elevations ; the most extensive of these in the Klufn Yokut in the lis; it lies helind the heighta which line the SLi. const, and forms, with little or no interruption, a vast chain of ice and snow mountains covering a surface of perhaps 3,000 act. m . The W. quarter contains, among other lofy heights, the Suafel Yokul, $4,580 \mathrm{f}$. high. In the N , the mountains are not very high ; but in the 1.. the Oreefa Yokul, $6,280 \mathrm{ft}$. in elevation, is the most lofty of which any aceurnto measurement lias been obtainel. The eelelirated voleano Hecla is in the SW. quarter, and about 30 m . inland. It Is more remarkable for the frequency and violence of its eruptions than for its elevation, which is only about $5,200 \mathrm{ft}$. (See Hecla.)
The bays and harbours along the coast are numerons and secure, but littlo known or frequented; the most so are those of Eyafiords on the N., Eyrarbacka on the S., and Reikiavik on the W. coast. The rivers, which are numerous aul comparatively large, have mostly a N . or S .
courne. Although miflleiently wide, they are generally olstructed liy rocks and mailows, ami mre tin) rapid to admit of mavigation. There are keveral large lakes, of whieh Mlvatu lake, In the NFi., in the mout consideruble: it in extimateol at nlanit 110 m . ln cifer, anil has misuriln of 30 inlaulis composed of lava. In no comintry havin volcunio eroptions beens mos munnerous as In leoso land, ur npreal over a larger nurfice. Ileniden more than 30 volenie momitnins, there exista an liminense mumbier of small cones anil craters, frum whieh atreams of imelted nillatancees liave heen poired furth over the surromuling reghonsi 9 vilennoes were aetive during the last comsury, in in the N ., mal the rent lying nearly in a dirved line along the S. coast. Twenty-lliree eruptions if Ilecta are recordeal ninee thio oesenpation of the inhand by Eurapenus: the lirst of chene wecurremb in 1004. The most extensive and devastating eruption over experienced in the island haprenem in 1783; It proweeded from the Sknptar Yokul, a volenno (or ruther volennio tract linving neveral cones) near the eentre of the comitry. This eruptlon dive not entirely cense for almat two yemes. It dentruyed no fewer than 20 villages anal 9,000 human beings, or mure than one-lffh part of the then prep, of the Islmad! On the S, and W. consta numerous lslands have leen from time to time thrown up; some uf which stIII remain, while others have receled beneath the surfice of the ocean, forming dangerous rocks mid shoals. Thi Vestmanun Islands, which lie alout 15 m , frum the li, const, are a group comsisting almont elltirely of barren vitrifled rocks : only one of them is inhinlited.
Tracts of lava traverse the falmul In almost every direction. This nubstanee chictly oceurs in isolated strenms, having apparently flowed from the mountains, but lin sone parts there are comthmous tracts, and along the S. const, for 100 m . inland, the lavas that spread over the country have been ejected from sinall cones rising immedlately from the surfice. The ground in this part is frequently broken by fiwsures and clasms, some of which are moro than 3 m . in length, and upwarda of 100 ft , in width. Beyiles the common lavas, Icelaul aloonuls in other mineenl masses indicative of an ignems origill ; of theme the must prevalent are tufn and sulmarine lava, obsidllm, and sulphur. Whole mountains of tafin exist in, every part. Sir G. Mackenzle observes, that the instance of tufa excepted, he saw no marks of stratiflcation in any rock in the island, all the substances apprearing to have been suljected to a degree of heat sutlicient to reduce them to fusion; and that some, if not all, the Icelandic mussen, which are not the produce of exterual eruptions, are really submarine lavas. The rocks not beuring external marks of heat are mostly of trap, and contain all the varieties of zeolite, chalcedony, greenstone, porphyry, slate, de.: the celobrated double refracting calcareons spar is found cliietly on the E. coast. Basalicic columns oecur in many parts, especially on the W. const, where they form several grotos; and that of Stappen bears a great resemblance to the cave of Fingal, in the island of Staffa.

Vast qunntities of aurturbraud, or fossil woml, nre frequently found buried at a great depth benenth the mirface.

Of the will animals, foxes are the most numerons. Welmeer, which were intronluced from Norway in 1780, with the intention of being tomesticatesl, have inerensed very rapilly: bit they are entirely wilil, and are very ditllentt to kill. Bears are frequently brought down from the aretle regions in masses of floating ice; they sometimes commit grent devnstations, but are generally destroyed nlmost immeliately nfter making the land. Nearly all kinds of seafowl inhabit the coasts and islands; and plovers, curlews, snipes, and a variety of game, are fonml in the interior. The eider duck is very plentiful; and the lown taken from the nest is an important article of export. The birls are so familiar as to bild their nests all round the roofs, and even inside the huts. A severe penalty is intlicted on those who kill them. The peanantry entertain a superstitious reverence, mingled with aversion, for the seal. The coasts, rivers, and lakes pro-

No grain is now eultivntepl, thongh tracan exist of its having lieen furmerly ralsed. Agrleulturs is limiteal to the renring if varlous grases fir entile, nul haymaklig is conseguenily the most Important brninch of rural lallinetry. I'otatons have been introdiceal with somn siecens; nul soveral kinds of enlinary vegretables are raised, but, will the exception of ride eablinge, fow nttuln perfection. The prosses nru of the sorts common in other N. cllmaten, and keep borses and other cattlo la gool condition during thas summer. Mnny of the low monntuina are covered with a coanse grase, which yielils pretty gool summer pasturage; nnil the mealows and valleys thromph which the rivens llow prothce grass in tolerable abundmisee, which, when the wenther allown of its leing harvested, is male into liny. Scawed nul moss are engerly dovoured by this cattle in winter, when other food fails, which is often the case, It is estimnted that there aro abont 500,000 ) henil of sheep; from 36,000 to 40,000 heul of black cattle; and from 50,000 to 60,000 luorses in Iceland: gouts are kept only In the N. The number of sheep appens to be increasing; they have remarkably fine Jleeces, which are not shorn, but chat off entirely in the spring. The horses are hardy and small, seldom stunting moro than 14 hands high. There being no carriages of any descriptlon, they are prineipully used for carrying burilens; and the poorest peasant has genernlly 4 or 5 of these animmls. Rents are paill mostly in produce; on the coasts in fish, in the interior in butter, sheep, and other agricultural produce. Tenants who are in easy circumstances genernlly employ one or more labourers, who, besides hoard and lodging, have from 10 to 12 specic tollars a year as wages. The whole pop. is employed cither in fishing or feeding cattle, or both; those who breed cattle being, as compared with those who live by tishing, nearly as 3 to 1.

No manufnctures, of any kind, are carried on for the purpose of trade. Every branch of in-
dustry is domestic, and confined chiefly to articles of clothing, such as coarse cloth, gloves, mittens, and stockings. The peasantry supply themselves with auch firniture as thelr cottages require, and some manufacture silver trinkets and snutf boxes, and forge inplements of iron. Every man can shoe his own horse; nnd, in this land of primitive simpliclty, even the bishop and chief justice are sometlmes employed in this necessary occupation. The greater part of the trade is carried on by means of barter; the quantity of money in circulation is very small, few of the peasants possessing any. The merchants receive the articles for exportation at regulated prices, according to the staie of the market, and pay for them in such foreign commodities as the inhab. may require. The peasantry of the neighbourhood assemble annually at Reikiavik and the other principal settlements, and bring down with them wool, woollen manufactured goods, butter, skins, tallow, Icelnnd moss (Lichen Islandicus), and sometimes a fow cattle. In return for these they take back coffee, sugar, tobacco, snuff, a little brandy, rye, rye bread, wheaten flour, salt, and soap. The better class purchaso lisens and cotton groods, which have latterly come more into use. Those who live near the consts bring to market dried cod and stock fish, dried salmon, whale, shark, and seal oils, and seal skins. The domestic produce has, of late years, been considerable, and the export of wool amounts to from $\mathbf{3 , 0 0 0}$ to $\mathbf{4 , 0 0 0}$ skippunds annually.

The Icelanders are of Norwegian origin; they are tall, have a frank open countenance, a florid complexion, and flaxen hair. They seldom attain to an advanced age, but the femules generally live longer than the men. They are hospitable; devotedly attached to their native land; remarkably grave and serious; and, indeed, apparently phlegmatic, but extremely animated on subjects which interest them. They have retained, with few innovations, the ancient modes of life and the costume of their race. Their principal articles of food are fish, fresh and dried, bread, made of imported corn, great quantities of rancid butter, game, and, in some parts, a porricge made of the lcelandic moss. They sometimes use the flesh of the shark or sea-fish, when it has become tencter from putrescence. Their huts, though larger, are not unlike those of the Irish: their dampness, with the darkness, filth, and stench of the tish, render them uninhabitable by strangers. The Icclandic, or original Scandinavian tongue, has heen here preserved in all its ancient purity. The Icelanders are extremely attentive to their religious and domestic duties, and display in their dealings a scrupulous integrity. Perhaps there is no country in which the lower orders are so well informed. Domestic education is universal; and there are very few among them who cannot read and write, and many among the better class would be distinguished by their taste and learning in the most cultivated society of Europe. Even many of the peasantry nre well versed in the classics; and it is reperted that the traveller is not unfrequently attended by guides who converse with him in Latin. In winter nights it is customary for a whole family to take their places in the principal apartment, where they proceed to their respective tasks, while one, selected for the purpose, reads aloud some of their sagas (ancient tales), or such other historical narrative as can be found. Their stock of books is not large, but they lend to each other, and frequently copy what they borrow.
The island was formerly divided into four $a \mathrm{mts}$, or provinces, answering to the four cardinal points.

Tho N. and E. are now merged into one, and the W. is presided over by the governor in person. This ofllcer has the title of stiftamtman; he is sometlmes a native, but more frequently a lune. Under him are the amtmen, or provincial governors, who pussess a similar jurisdiction over their quarters. Each province is divided into syssels or shires, presided over by sysselmen, with antho-. rity similar to that of sherifis; these collect taxes, hold petty courts, and regulate assessments. Under the sysselmen are wepstiores, who are overseers of the poor, and constables. The tatsroed, or chiet justice, hollds, with two assistants, a criminal court at Reikiavlk, but very few cases are tricd in the island, and all capital punishments are inticted at Copenhagen. Crimes are rare, petty theft and drunkenness nre the most common; the later lias been introduced chletly by the crews of the Danish vessels that visit the consts.

The island constitutes one bishopric; the bishop's salary does not exceed 500l. per annum. There nre about 194 pars. : but the clergy amonnt to upwards of 300 : their incomes are very small, and they are frequently among the poorest of the community. The only charitable institutions ars four hospitals, for the reception of those atlicted with leprosy, which, in the form of elephantlasis, was formerly very prevalent. Small-pox was formerly also very destructive. There nre no workhouses, the sick and poor being almost universally supported by their own families. The principal school at liessesiladt, near the W. coast, las three masters, who teach classics, theology, and the Dunish language; and severul young mon, after attending this school, go to Copenhagen to finish their studics. Reikiavik, the cap., on the SW. coast, has little more than 500 resident inhab., chiefly Danes. Most of the villages are situated on the coasts, at convenient spots for the receipt and transport of merchandise.
The early and successful application of the Tcelanders to the cultivation of literature is an anomaly in the history of learning. When most parts of continental Europe were in a state of rude ignorance, the inhab. of this remote islani were well acquainted with poetry and history. The most flourishing period of Icelandic literature appears to have been from the 12 th to the end of the 14th century. During the last three centuries, however, Iceland has produced many learned men, some of whom have risen to great eminence. The literature of the island in the present day may perhaps be said rather to have changed its character tlian declined from its ancient fame; the inhab. now attend more to solid branches of learning than to the poetical and historical romances of the ancient Icelandic sagas. Domestic education is carefully attended to; there is no want of modern books in Icelandic; and a printing press is actively employed in the island of Vidoe.
The discovery of Iceland by Enropeans is attributed to a Norwegian pirate, about the year 860 ; but the earliest permanent settlement was effected by the Norwegians in 874 . In little more than half a century, all the coasts were occupied by settlers; and about the year 928 the inhab. formed thenselves into a republic, and established the Althing, or General Assembly of the Nation, which was held annually at Thingvalla, in the SW., and not abolished till 1800. The Icelanders maintained their independence for nearly 400 years; but during the 13 th century became subject to Norway, and on the annexation of that kingdom were transferred with it to Denmark.

Pop. 4,300 in 1857. The inhabs, are principally engaged in mining ; the quicksitver mines of Idria belonging to the Austrian government being, after those of Almaden in Spain, the richest and most celebrated in Europe. They yield annually from 8,200 to $8,500 \mathrm{ewt}$. of metal, about a sixth part of which is converted on the spot into vermilion, corrosive sublimate, and other preparations of mercury. The mine is rather more than $1,000 \mathrm{ft}$. in depth. The formation in which it is situated is transition limestone, alternating with clay-slate, in which latter rock the quicksilver is found. It exists partly pure, in globules among the slate; but it is mostly found in combination with sulphur, forming veins of cinnabar, which vary greatly in thickness. The cinnabar ore is considered too poor to be $w_{4}$ nught when it contains only from 15 to $18 p_{1}$ cos: es $w^{\prime \prime}$ quicksilver, and is then usually abandu- $a$.ai search of a better vein. The richest ore vields from 50 to 70 per cent. of metal. From 600 to 700 workmen are employed, of whom about 500 are miners. These are enrolled in a corps, and have a regular unilorm. They are divided into three sections, which relieve each other, each working below for 8 hours in the 24 , the work incessantly going on. Within his 8 hours, the labourer is required to perform a certain measurement of work, for which he receives 17 kreutzers (nearly 7d.). If he perform less or more than his measured extent, his pay is proportionally reduced or increased; but the number of those who gain less than the tixed sum is greater than of those who gain more. Besides their money pay, the miners get an allowance of corn sufficient for themselves and their families; and in illness, gratuitous medica! aid. No lodging is found them; but they may purchase at a government store a number of articles of prime necessity, at fixed charges, generally below the ordinary market prices. The miners usually enter the service at 15 years of age. After 40 years' service, or carlier, if ill health overtake them, they are allowed to retire on full pay, and enjoy various privileges. The widows and orphans of miners are entitled to a pension, and about 35,000 florins are thus expended annually. The process of mining is very unhealthy; the heat of the mine, varying from $80^{\circ} \mathrm{up}$ to $86^{\circ}$ Fah., impregnates the atmosphere with volatilised mercury, which soon exerts all its characteristic effects on the constitutions of the miners. In some parts, the heat is so great, and the atmosphere so vitiated, that the workmen are obliged to relieve each other every two hours. The mine is very clean, and in its lower parts remarkably dry. In 1803, a violent conflagration broke out in the mine, destroying the whole of the works, with scveral of the workmen.

Of the mercury produced at Idria a small part goes to Trieste, whence it is exported chicfly to America; but by far the largest portion is sent to Vienna, partly for the plating of mirrors, but principally for the use of the gold and silver mines of Hungary and Transylvania.

At the beginning of the present century, Idria was a place of banishment for state prisoners and criminals, who were condemned to work in the mines. It is so no longer; no coercion is used, and no convicts are sent thither: the supply of labourers petitioning to be admitted is considerably greater than can be received into the service. The town and district of Idria is a mining intendency, with its own government, consisting of a directorgeneral, an imperial comptroller of accounts, a secretary-general, and four councillors, who superintend all the departments of the public serviee, under the council of mines in Vienna. Idria has some

German, primary, and other achools, and a mall theatre. It had a school for instruction in mining, but it was abolished on the restoration of the Illyrian provs. to Austria. The aspect of the place is thus described by a traveller who visited it not many years ago. "We perceived the white church with its little steeple, perched on a small green knoll, and not far from it another insulated height, crowned with an antique-looking castle, crected by the Venetians during the time that they possessed Illyria, and whlch now serves as a residence for the llergrath, or director of the mines, and for tho government offices connected therewith. Hetween these two heights, tho town straggles along on very unequal ground, with a streum rushing through it, a secoltd church in a sort ot open market place, some large buildings conneeted with the public administration, but scarcely any good shops or private houses.' The mine wis discovered by accident in 1497; it was afterwards wrought by a company of Venetian merchants, and purchased by the house of Austria, who necorded the miners considerable privileges in 1575 , since which the prosperity of Idria has been generally on the increase.

IGUALADA (an. Aque late), a town of Spain, prov. Barcelona, 37 m. NW. Barcelona, and $2 \times 1 \mathrm{i}$ m . ENE. Madrid. Pop. 13,839 in 1857 . The town stands on the Noya, a trib, of the Joui, in a rich plain, abounding with corn-fields and olivegrounds. It has some well-built strects, and a handsome suburb, the chief buildings being a par. church, two convents, a elerical college, hospital, and cavalry barracks. The inhah. are among the wealthiest and most industrious in Spain; and their manufactures, by which they are almost wholly supported, comprise cotton and woollen yarns and cloths, hats, and fire-arms, the last o. which are highly esteemed. In the neighbourhoot are several considcrable paper-mills. Fairs, well attended, for manufietured produce, are held here in the beginning of January and at the end of August.

ILCHESTER, a bor., market town, and par, ot England, co. Somerset, hund. Tintinhull, on the Yeo or lvil (whence its name is derived), 18 m . 1. Taunton, and 116 m. WSW. London. Pop, of par. 781 in 1861 , against 1,095 in 1831 . The town comprises 4 indifferently built streets, and has but few public builuings. The chureh is remarkable for its octangular tower. A national school and almshouses for 16 women are the only public charities. The co. court-house is handsome, and conveniently arranged. The gaol, built on Howard's plan, is large and well regulated, and capable of accommodating upwards of 200 prisoners, and was often quite full, when employed, as formerly, for a state prison and house of correction: it is now chictly used for untried prisoners and debtors. The town, which has no manufactures and little trade, derives its chief importance from the fact that a large portion of the county business is transacted here, the assizes being held at Hehester alternately with 'Taunton, Wells, and Bridgewater. It is altogether, however, in a low, declining state. Ilchester is a bor, by prescription, and sent 2 mems. to the H . of C. from the 26 th of Edw. I. down to the passing of the Reform Act, when it was disfranchised: it was a mere nomination bor., in the patronage of the Duke of Cleveland.

Distinct traces of a Roman station, and the diseovery of numerous Roman coins and antiquities, have led to the belief that this town otcupies the site of the Ischalis of Ptolemy, the principal military station of the Romans in the West of England. It had 108 burgesses at the
time of the Norman Conquest. Still later, it was a place of considerable consequence, and was made, by patent of Edw. III., the asaize town of Somerset.

ILDEFONSO (ST.), or LA GRANJA, n celebrated palace of the soverelgna of Spain, Old Castile, prov. Segovia, 42 m . NNW. Madrid, and 5 m . SE. Segovia, on the N. declivity of the Sierra Gualarrama, built by Philip V. as a pluco of retirement during the hottest months of summer. It is placed in a spot where the mountoins full back, leaving a recess sheltered from the hot air of the S. and from much of its sun, but exposed to whatever lorecze may be wafted from the N. ; the immediate acclivity towards the S. being occupied by the garden, which, though somewhat formal, is full of shade and coolness. The palace, which is of brick, plastered and painted, ocenpies three sides of a square, in the centre of which is the royal clapel. The principal front, looking towaris the garden is 530 ft . long, having is stories, with 12 rooms in a suite; the great entry, with its iron palisade, very much resembling that of Versailles. The interior is, in every thing, regal: the ceilings of the apartments are painted in fresco, the walls decernted with noble mirrors, and the floors chequered with black and white marble, while the furniture, though somewhat antiquated, is highly enriched with jasper, verdantique, and rare marbles. The upper rooms are adomed with the works of the first masters, chiefly of the Italian school, the lower apartments being used as a repository for sculpture. Many, however, of the best specimens once belonging to this palace, both in painting and sculpture, have been removed to the royal gallery of Madrid. The gardens are laid out in the French style, with formal hedges and walks; and the trees, notwithstanding the labour with which the formation of these grounds was attenrled, are poor and starved; the clicf feature, indeed, in these gardens is the quantity of fine water, disposed in a variety of ways, and especially in the formation of fountains and works. The expense of constructing the garden alone, a large part of which was made by blasting out of the solid rock, must have been very great; and the entire expenditure on the palace gardens and water-worka is stated to have exceeded $6,000,000$. In the town of St. Ildefonso (pop. 1,815 in 1857), which lies a little distance below the palace, is a manufactory of mirrors, supported by the government.

ILFRACOMBE, a sca-port, market town, and par. of England, co. Devon, hund. Brainton, on the Bristol Chanuel, 9 m . N. Barnstaple, 41 m . NW. Exeter, and 172 m . W. by S. London. Pop. of town 3,03.1, and of par. 3,851 in 1861. Area of par. 3,620 acres. The town, consisting of one long street and a noble terrace facing the sea, extends W. from the harbour along the shore. The chureh, which stands at its upper end, is a large plain building containing some fine monuments. There are plnces of worship for Independents and Wesleyan Methodists, a large untional school, and a girls' school of industry. The harbour is a natural basin formed by the curve of a very rocky shore, and a bold mass of rocks stretching nearly lialf way across the entrance of the recess shelters it from the northern storms, $\Lambda$ battery and lighthouse stand on the top of this rocky mass, and the harbour is further defended by a pier 850 ft . in length, which is kept in excellent repair. There is safe anchorage for vessels of 230 tons, and ships can easily enter here when they cannot get up the Taw to Barnstaple; the consequence of which is, that Ilfracombe has taken away a grent part of its coasting trade. The trade with Bristol,

## ILLINOIS

Swansen, and other ports in the Bristol Channel is constderable, and many 'essels are employed in the herring fishery. T.. i town, however, depenila, in a great measure, for its aupport on the numerous wealthy fumilies that resort thither in summer, siner it has attained celebrity as a water-ing-place. The bathing is excellent, and the neighbourhood abounds with romantic scenery. Steam-packets run daily to and from Swansen, Tenby, and Milford. The town ts governed by a portreeve appointed by the lord of the manor. Markets, well-supplied with fish, on Saturilays: fairs April 14, and the first Saturday after Aug. 22.
ILLE-ETS-VIIAINE, a marit. dep. of France, in the NW. part of the kinglom, formerly included in the prov. of Brittany ; linving W. Côtes-du-Nord and Morbihan, 8. Loire Inférieure, J:. Mayenne, and N. La Manche and the English Channel. Length, N. to S., about 70 m . Area, 672,583 hectares. Pop. 584,930 in 1861. The Menez mountains run through this dep. from $E$. to W.; but they rise to no great height, and the surface elsewhere is not hilly. The chief river is the Vilaine, which has mostly a SW. course, and falls into the Atlantic in the dép. Morbihan: the lle is one of its afluents. The Rance, which has its mouth in this dep., is connected with the Jlle by a canal, extending from Diunn to Rennes, 52 m . in length, and wide and deep enough for vessels of 70 tons. Climate temperate, but very damp; fogs are frequent, and from 36 to 38 in , min fall annually. Soil thin, and not generally fertile. About 307,490 hectares of land are arable, and $7 \therefore, 349$ in pasture; forests, heaths, and waste lands occupying 146,078. Agriculture is in a backward state. Throughont the greater part of the dep. the land is parcelled out into small farms, one of in hectares being considered large. Principal crops, rye, oats, and barley : the tep. is not so suitable for wheat; and but little maize is grown: the annual quantity of grain produced is about $3,436,000$ hectolitres, which is scarcely sufficient for home consumption; and the peasantry add to their com chesnut flour, potatoes not being in general use : 13,200 hectares are in gardens and orehards ; fruit is plentiful, and some very good cider is made: but the sgricultural products of the grentest importance are flax and hemp, and the linen thread of the dep. is very highly valued. Both cattle and horses are of good breeds; many oxen from this dep. are fattened in Normandy for the Paris market. Dairy husbandry occupies a good deal of attention, and the beurre de Prevalaye, made in the neighbourhood of Rennes, is highly esteemed throughout France. The sheep are of an inferior kind. The sole, cod, mackerel, and other fisheries on the coast are extensive; and Cnncale llay is celebrated for its oysters with which Paris is in great part sumplied. From 50 to 60 boats go annually from this dep. to the cod fishery of Newfoundland. Some copper, iron, argentiferous lead, and conl mines, and quarries of marble, granite, slate, and limestone are wrought, but not to any great extent. The manufactures consist chiefly of hemp and linen thread, packing and sail-eloth, cordnge, flannels at Fougères, and leather. In the arrond. of Fougeres there is a large government glass factory, some of the products of which are equal to any made in Lyons. The dep. is divided into six arronds.; chief towns, Rennes, the eap., St. Malo, Fongères, Redon, Montfort, and Vitré. This part of Brittany has produced many celebrated men, including M. do la Bourdonnaye, Maupertuis, Savary, Vauban, Chatenubriand, and Broussais.

tween lat. $37^{\circ}$ and $42^{\circ} 80^{\prime}$ N., and long. $87^{\circ} 80^{\prime}$ and $91^{\circ} 80^{\prime}$ W., having $N$. the Wisconsin territory, E., Lake Michigan and Indiana, S. Kentucky, from which it is separated by the Onio river, and W. Missouri and the Sioux territory, the Mississippi forming the whole of its boundary on that side. Length, N. to S., 880 m . ; average breailth about 155 m . Area $55,409 \mathrm{sq}$. m., 60,000 of which are supposed to be sutsceptible of cultivation. Pop. $1,711,95 \mathrm{~L}$ in 1860 . In the N., its surface is uneven and broken, and in parts of the S. also it is hilly; but, on the whole, nesit to Louisiana and Delavare, Illinois is the most level state in the Union. It consists mostly of vast undulating prairies, or rich plains, called by the settlers 'barrens,' producing stınted oak, hickory, pine, and other trees. Many tracts in the $S$ are densely wooded, especinlly those lying along the rivers; and the prairies are sometimes interspersed with copses, though much more frequently studded with isolated trees at short distances. The state is well watered; next to the Mississippl and Ohio, the chief rivers are the Illinois, its tributary, the Sangamon, the Kaskaskia, Great Wubash, and Rock River. The Illinois rises in the NE. part of the state, and intersecting it in a SIV. direction, falls into the Mississippi 25 m . above lts junction with the Missouri, after a coarse of 450 m ., most part of which is navigable for steam-boats. The Sangamon has a course of about 180 m ., with a boat navigation of 120 or 130 m . The Kaskaskia rises in the centre of the state; runs with a SW. course for nearly 300 m ., nnd falls into tho Mississippi 100 m . below Vandalia, to which city it is navigable. The Great Wabash belongs more properly to Indiana, but it forms the lower 2-bths of the E . boundary of Illinois, and falls at its SE. angle into the Ohio. The Rock liver runs through the NW. portion of the state. It has a SW. course, like the Illinois, Kaskaskia, and other tributaries of the Mississippi, which river it enters about lat. $41^{\circ} 30^{\prime}$, after a course of nearly 400 m ., for about 200 of which it is navigable. The total length of the navigable rivers is estimated at $4,000 \mathrm{~m}$. Small lakes are numerous, and in the N. is Winnebago Swamp, a considerable extent of marsh-land.

In the W., and probably throughout most of the centrai and N. parts, the geological strata succeed each other in the following order:- a vegetable mould from 8 to $30 \mathrm{in}$. in depth, clay, limestone, shale, bituminous coal, generally from 4 to 5 ft . thick, soapstone, and sandstone. Limestone appears to be a universal formation; and coal and sandstone are found almost everywhere. In the NW. a mineral district, very rich in lead, \&c., extends for 100 m . N. and S., by a breadth of half that distance, communicating with a tract of a similar character across the Mississippi. The smelting of lead ore on the banks of the Rock liver began only in 1822; but it rapidly increased, and the produce of that metal is at present estimated at $20,000,000 \mathrm{llbs}$ a year. After lead, iron, copper, coal, salt, and lime are the chief mineral products. Copper and iron are found in various parts. The salt springs near Shawneetown yield 60 lbs . of table salt from 160 galls. of water. Other salt springs, and sulphureous and chalybeate mineral waters, are found in many places. The climate is healthy, except in the marshy tracts along the rivers or elsewhere. The winter is, in most parts, short and mild; and the summer heat not oppressive. Probably no portion of the territory has a mean annual temperature of more than $64^{\circ}$ Fahr.; and the mean of the state at large is not above $51^{\circ}$.

This state is supposed to possess a larger pro-
portion of first-rate cultivable land than any other in the Union. All the grains, fruits, and roots of temperate regions grow luxuriantly; and in none of the W. states is corn raised with greater facility and in more abundance. Wheat yields a grood and sure crop, especiaily on the banks of the Illinois and in the $\mathbf{N}$. It weighs upwards of 60 lbs, a bushel, and is preferred in the marketa of New Orleans to the wheat of Ohio and Kentucky. Indian corn is a grent staple, and hundreds of farmers grow nothing else. Its average yield is 50 bushols an acre, and sometlmes the produce amounts to 75 or even 100 bushels. Oats, barler, buckwheat, common and sweet potatoes, turuips, rye for horsefeed and distilleries, tobacco, cotton, hemp, flax, the castor bean, and all other erops common in the middle states are raised. Hemp is indigenous in the S., and succeeds well everywhere. Tobaceo is good; and cotton is grown both for exportation and home use. Fruits of varlous kinds are very abundant, and the climate of the $S$. is favourable to the growth of the vine. Great numbers of eattle are reared in the prairies, and hogs in the woods. Sheep generally thrive well; but little lias been done to improve the breed by crossing. Poultry are abiundant, as are also bees, and the silkworm succeeds well. Deer roam the pralries in large herds. In the Nilitary Bounty tract, in the NW., large tracts of land of the best quality may be had at the government price of 14 dollar an acre. This tract was, at a former period, moatly appropriated, by the general gov., in grants to the soldiers who served in the war against Great Iritain; but n great part of it has again come into the possession of the gov. haviug been resumed for arrears of taxes, or disposed of by those to whom it had been grantel. All lands in this state purchased of the generul gov. are exempted from taxation for live years after purcliase.

Many large and flourishing settlements havo been formed in its W. part since the introluction of steam navigation on the Mississippi; these, however, are almost exclusively agricultural. Mauufactures are not very numerous, and principally domestic. In every town and county artisans in all the trades of prime necessity are to be met with; and boat-building is carried on to some extent on the Mississippi. Grain, cattle, butter, cheese, and other agricultural prodncts form tho chief articles of export; and sugar, tea, coffee, wines, woollen cloths, and other manufactured goods are the chief imports. The external trade is carried on principally through New Orleans, to which emporimm the articles of export are forwarled by the Mississippi, the imports being also received by the same channel. Illinois presents great facilities for a most extensive system of inland navigation, and much has already been accomplished to forward this object. In 1828, the legislature granted 300,000 acres of land for the coustruction of a canal to unite Lake Michigan with the head of the steam navigation on the Illinois. This canal, which was begun in 1830, runs from Chicago to the town of Peru, a distance of 95 m . Several sums of money have been also nppropriated by the government for the improvement of the river navigation. The state is crossed, in all directions, by lines of railway, the total length of which is nearly $2,000 \mathrm{~m}$.

Illinois is divided into 70 cos., in 60 of which courts are held. Vandalia, on the Kaskaskia, was the cap. till, in 1837, the seat of government was removed to Springfield, near the centre of the state -birthplace of the great President Abraham Lincoln. Jacksonville, Chicago, Kaskaskia, and A1bion are the other chief towns. The legislative
part of the government ia vested in a aenate, composed, in 18155, of 25 mems, chosen for 4 years; and a house of representatives, having in the same yenr 85 mems . All white male inhnlos, nonve the age of 21 , having resided in the state for 6 months, are privileged to become electors. Flections for representativea and the sessions of the legislature are held bienuially. The executive dutles are diseharged by a governor and a lientenant-governor, chesen by universal suffrage every 4 years. The high judicial functions are exercised by a supreme court composed of a chief justice and three inferior judges. The governor nul judges of the supreme court constitute a council of revision, to which all bills that have passed the assembly must be sulbmitted. If oljected to by the council of revlsion, the same may, notwithstanding, become law by the vote of the majority of all the members elected to both houses. Slavery does not exist, haviug been prohibited by the constitution of 1818. A 36th part of every township of land, and $n \operatorname{tax}$ on some reserved lands belonging to the U.S. government, have been approprinted for public instruction, the funds of which amounted, in 1865, to $4,973,842$ dollars. A college, fomnded at Jacksonville, oceupies two extengive buildings, and many other lyceums and seminaries are established in different parts of the state.
1)uring most part of the 18 th century the name of Illinois was applied to all the country N. and W. of the Ohio. The territory comprised in the present state was discovered in 1670 by a party of French colonists, who inado their tirst permanent settlements nt Kinskaskia and Cahobia in 1673. This tract of country was ceded by the French to the English nt the same time with Canadn, in 1763, and by Virginin to the U. States in 1787. It was admittel, as a state into the Union, on the 3rd of Decomber, 1818; and sends 14 members to congress, under the census of 1860 .

ILLYLIA (KINGDOM OF), a territory forming part of the Alstrian empire, comprising the provs. of Carinthia, Carniola, and 1strin, the islands of the Gulf of Quarnero, and the Illyrian Littorale. It lies between lat. $44^{\circ} 25^{\prime}$ and $47^{\circ} 7^{\prime} \mathrm{N}$., and long. $13^{\circ} 14^{\prime}$ and $16^{\circ}$ E., having N. Anstria and Styria; 1.. the latter prov. and Croatia; W. the Tyrol and Italy; and S. the Adriatic Sen. It is divided into the govts. of Laybach and Trieste.
The northern part of Illyria is covered by the central chain of the Alps, and likewise by various offsets, constituting the southern limestone girdle of the Alpine system. The S. portion of the kingdom, comprising the gov. of Trieste, ocenpies the S. slope of this mountain-range towards the Adriatic. The main chain at the Gross Glockner ( $14,000 \mathrm{ft}$ high) takes the name of the Noric Alps, stretehing its lofty peaks, here called Tauern, as far as the Ankogel, $10,131 \mathrm{ft}$. high. All this region contains extensive ice fields and glaciers. At the Ankogel the Noric Alps, taking a NE, course, enter Styria; but a branch bounds the vale of the Drave on the N., and that of the Lavant on the E., separating their waters from those of the Mur. The Carnic Alps form the S. boundary of the valley of the Drave, dividing it from that of the Save. Various summits in this chain are from 6,600 to $8,000 \mathrm{ft}$. high; and over one of them, the Loibel, the emperor Charles VI. constructed the road connecting the Drave and the Save valleys : its summit-level is $5,477 \mathrm{ft}$. above the sen. At Mount Terglou, the Julian Alps break off, running SE. towards the Adriatic and Dalmatia; E. of Idria they decline in height, forming an elevated plateau, remarkable for drought and sterility,owing to the porous nature of its constituent limestone. Besides the pass over the Loibel, various others
cennect the fruitful valleys of this romantle comntry; the most remarkable being the Katacher, 5,230 ft. high, between the Drave and the Lungnu; the Wurzen, $3,100 \mathrm{ft}$, and the I'ass of Tarvis, $2,800 \mathrm{ft}$., leading from the valley of the Drave to that. of the Tagliameuto. The valleys of the Gnil (an. Vallis Julia), the Lavant, and Jaun (Vallis Junonis), in Carinthia, and of the Save and Wochein in Carniola, offer all the varieties of Alpine beauty, while in the S . those of the Isouzo and Wippach, expecially the former, present $n$ picture o. the richest Itallin cultivation. The only level tracts of any considerable extent lie S. of the Julian Alps towards the Adriatic, and in the lstrian peniusila.

The Carnic and Julian Alps are perforated by very numerous sulterranenn cavities, which, by draining the surface of wnter, condemn whole districts to a melancholy sterility. Several of these caverns ave celebrated for their grent size and curious natrral phenomena, as the cave of Adelsberg in Carniola and the neighbouring Magdulen Cavert, in which the 'Proteus Anguinus' is found. Through several of these the mountain torrents flnd subterranean channels, to the great detriment of agricultural prosperity. (See Adelsвени.)
The N. portion of Illyrin is well watered. The Dran or Drave, rising in Tyrol, traverses Carinthia in all its length, and receives tributaries from both the $N$. and S. mountain barriers of that province. It is navigable from near Klageufurt to its mouth in the Danube. The river second in importance is the Sun, or Snve, which travers Carnioln with an I. course parallel to that of the Drave. The banks of the Upper Save are mostly level; but the monntains close in on the river near Reichenberg. It is navigable from near Lnybach; and receives varions affluents, both in Carnioln and Croatia. The rivers falling on the S. side of the Alps to the Adrinti, are the Isonzo, Ausa, and Timavo. The lsonzo, traversing the beautiful vale of Friaul, and taking near its month the name of Silola, falls into the sea near Monfalcone. The Ausa falls into the sea near Buso; and the Timavo (Timarus), with a course of scarcely more than 1,500 yards, is navigable up to its source. Istria is very seantily watered : the Quieto, its principal stream, falls into the sea near Cittanuova, and, as well as the Arsa, on the Fi. side ot the peninsula, is navigable for some miles of its course.

There are several lakes in the N., but none of nny great extent. The lake of Klngenfurth, 11 m . long, is united with the neighbouring city by a canal. At a short distance from it is the Ossiach lake, 7 m . long, and connected with the Drave by the Laybnch. Further NW. lies the Muhlstadt lake, 10 m . in length, and 1 m . broad, with very picturesque banks. The Weissensee, the Feldesersee (an. Lacus Auracius), and, lastly, the remurkable Zirknitzer-see, are of smnller extent. The lake of Zirknitz has 2 islands, and receives its waters through subterranean ehannels. During the spring and the autumn rains, it presents a sheet of water 4 m . long, and 1 m , broad; but in summer the waters recede, and leave a dry fertile surface, either used for hay, mendows, or raising summer corn. The openings by which the water rises and retires are then visible, and various names have been given them by the peasantry; sueh as Kottur (the kettle), Betschek (the cask), Reitie (the com sieve), Rescheto (the great sicve), Sittazza (the hair sieve), de. When the lake is full it has an abundance of fish, which disappear and return with the water. In Istria there is only one lake, that of Zeppitsch, near Chersano. The climate of Carinthia is most inelement. The mean

The ecives its During resents a ry fertile r raising he water 1 various asantry; he ensk), at sieve), e lake is lisapncar 10. The the meantemp. of the year at Klagenfurth is estimated by Hllumenbach at $7^{\circ}$ Rénum. ; whille, at Obervillach, the mean is $6^{\circ}$. The snow lies in the lower parts of the valley of the Drave till the middle or end of April; bit in the valley of the Save the climate is muth milder. At Laybach the temperature of the year is 8.7 Rénum. The temperature of the goverument of Tricste presents a great contrast to that of the mountain districts. In the valley of the Isonzo, as well as in Istria, the olive, vines, und other productlons of a southern climate, are largely cultivated.

Occupations of the People,-Agriculture.-Illyria has two distinet agricultural systems; that of the N. government, which is Alpine, and that of the S. districts, which are cultivated in the Italian faslion. The mountainous districts of Carinthia, situnted in a cold and dump elimate, and having a short summer, are tilled with difticnlty. Rye and summer corn are the most usual crops; and the three-course system, according to which 1-3rd part of the land is in fallow, is generally prevalent. The corn, in order to dry thoroughly, requires to be hung up on poles or ruilings, of a peentiar construction; and these erections (called Harfen, (ierm., nad Stog or Kusew, Slav.) are often covered with a roof like that of a house. Tho most productive eorn region is the valley of the Levant, and the district of Krappfeld. In the higher parts of the valley of the Drave, near Gottseliee, the climate is so severe as not to allow of winter crops. Carniola, on the other hand, expecially the valley of the Save, and the circle of Idrin, has a warm climate, and is highly cultivated. Excellent whent and maize, especinlly the 'conquantino, are grown to a great extent; and there is a julicious rotation of erops.
Good flax is grown in all the valleys, and hemp chietly in Frianl. Fruits of all kinds, especially chesnuts (marmi) and figs, are abundant in the coast district. The best wines are those of Monfalcone and I'rosecco, grown near 'Trieste; but very little wine is exported. The oil of lstria is considered equal to that of Provence. The stones and refuse of the olive are used for fuel, and are even exportel to Ancona. The olive is also extensively cultivated in the Quarnero islands, especially Veglia and Cherso.

The chief wild animals of the northern districts are the chamois, red deer, and roebuck, and less frequently the wolf, bear, anil small lynx. In the S. provs. the ortolan and the common partridge, quails, water-fowls, anl birds of passage are common. The fishery in the Gulf of Quarnero, and in the chaunels between the islands, furnishes an abmadance of fish peculiar to those waters.

Mines.-The ehief wealth of Illyria consists in the rich metallic veins found in its mountains. The N. mountain chain separating Carinthia from Styria consists of transition formations, overlying mica slate, which composes the great spine of the Noric Alps, and contains vast quantities of a very superior iron ore. This chain opens S. iuts several villas, sending tributaries to the Drave; and in these secluded districts the various mining operations are carried on, favoured by the waterpower afforded by the mountain torrents. In the valleys in the Lieser, Gurk, Olsa, Mettnitz, and Lavant, iron is the chief product. The mountains near Huttenberg are rivalled in proluctiveness only by the most prolific of the Swedish veins. The ore is chiefly the carbonate of iron. The average ammal produce of iron amounts to 500,000 cht., and of coal to $100,000 \mathrm{cwt}$. Lead is found to the extent of $70,000 \mathrm{ewt}$. per annum. But the quantity of metals and minerals annually produced corresponds neither with the wealth of the
mines nor with the wants of the empire. There are rich mines of lead at Bleiberg, and of quicksilver at Idrin. The latter are situnted in the 1 : portion of the Julian Alps, on the right bank of the Isonzo. The ore is found in a schistose roek, breaking throngh the predominant limestone of that chain; and as the veins get deeper they are said to become richer. Blasting ls the usual method employed for obtaining the ere; and the workmen, on aecount of the depth and consequent heat of the mines, work by relays of eight hours each gang. The lowest point in the mine is 300 ft . below the bed of the adjacent Idritza.
Trude.-Istria abmuls with ports, many large enough to shelter whole tleets, the principal of which are Capo d' Istria, l'irano (l'orto Rose), Quieto, l'ola, Purenzo, and Rovigno, lut these are only frequeuted by the barks conveying salt, wine, oil, gall nuts, charcoal, bark, and other proluctions of the peniusula to Trieste and Venice. There are likewise some tolerable harbours in the Quarnero Islants, among which the port of Lussin l'iceolo is, perhaps, the most capacious.
The roads of Illyria are as grod ns in most parts of the Austrian empire. The valleys of the Drave and Save are used for communications between Tyrol and Snlsburg, and Carinthia and Carniola. Two mata lines of conmon road lead from the enpiral to Trieste, one by Klagenfurth and Goritz, the other by Lavbach, From Goritz the furmer has a branch to Venice and other parts of Italy, while the latter is connected by ronds following the vales of the Save and Drave, with Hungary and the military frontier provs. Hhit the most important menns of intercommunication is the great line of railway from Vienna to Trieste, which runs right through the heart of Illyria, and branches of which extend to Agram, in Croatia, on the one side, and to Venice on the other. The ascent of the main line over the Alps is effected by an unusually steep granite, and powerful locomotives of extraorlinary size. The Vienna-Trieste railway is the chief outlet of the exports of Illyria. The internal navigation is limited to rafts on the Save and Drave, by means of which rivers and their tributaries, much timber is floated down from the forests to the Dauube.
Population.-The pop. of Illyria, in the course of 20 years, has increased in Carinthia and Carniola at the rate of $17 \cdot 4$ per cent., and in the Litorale at 30.3 per cent.
The inhab. (with the exception of the German settlers and of the Italians whe have immigrated into the southern circles) are of Slavonian origin, and the veruacular language of Carniola, which is used as a written dialect, is one of the purest of the Slavonic idioms. Carniola is divided into Upper and Lower, the seats of the Gorenzi Krainzi and the Dolenzi Krainzi; the former of which are the mountaineers of the Julian Alps, the latter the inhab. of the valley of the Save. The Viparzi, in the valley of the Wippach; the Kraschovzi, on the Karst; the Piuzchene, in the Poik valley; and the Zoitzhe, are perhaps only local names. The general denomination for the Illyrian Slavonians is ' Windi or Wenden' ( F'enedi). The inhab. of Friaul call themselves 'Furlani:' the peninsula is occupied by the 'Istriani,' and the Quarnero Islands by 'Liburnzi.' Nearly one million of the inhab. are Slavonians.
The condition of the lllyrian pop., though eertainly improving, is by no means prosperous. Like so many of the Slavonian inhal., of the empire, they speak a language which has not for centuries been the vehicle of intellectual improvement, and from an early period they were governed by tyrants, who availed themselves of their feudal rights, to

## 692

ILMINSTER
the Injury of the people, without conferring on them any of the advantages incidental to that system. In fact the Illyrians bid no national existenco till the time of Napoleon. The ophomeral kingilom of Illyria which he established infused a spirit into ail classes, which awakened them from the lethargy of ages, Much still remains to be done towards amoliorating the conclition of the peusunt, yet the change in his condition for the better within the present century is very great. The mountaineers of Carinthis ant Upper Camiola are the poorest and worst fed of the inhab. Amongst them 'eretins,' or idiots are of frequent occurrence, and are recommented to their nelghbours' charity by the superstitious notion that their presence in a family indicates good fortune. Goitre is common amongst the mountaineers, and the mortality is so great as scarcely to admit of any inerease in the pop. The inhab. of the valleys, especially those living near the Nave, are in a better condition, and in the district of Goritz enjoy a considerable degree of prosperity. Istria, with all its natural advantages, is worse cultivated, and less civilised, than the rest of Illyria. The dress of the mountaineers resembles that of the peasant of Tyrol and Salzbirg. Tho women wear peaked, brond-brimmed hats; and in Carnthia, instead of stays, they wear a red girlle, sewn to the linen tunic or shlft, which is seen between the upper part and skirts of the gown worn over it. Formerly the men of the Gail valley wore a gay dress of motley colours, from which the costume of Harlequin in the Italian comedy is said to be derived; inteed, many of the ifgures in pantomimes are believed to have been originally caricatures of the Illyrian peasantry.

ILMINSTERR, a market town and par. of lingland, co. Somerset, hund. Abdick and lBulstone, on the Ivel, 10 m . SE. Taunton, $4 \mathrm{~m} . \mathrm{S}$. by W. Hath, and 127 m. W. by S. London, on the Great Western railway. Pop. of town 2,194, and of par. 3,241 in 1861. Area of par. 4,390 acres. The town comprises two streets, intersecting each other at right angles, or of whieh is nearly a mile long; tho houses are irregularly built, some being of stone or brick, and the greater part merely thatelied. The church, formerly conventual, is cruciform, in the decorated Gothic style, and has a square embattled and pinnacled tower. There are also places of worship for Weslevan Methodists and Independents, to which, as well as to the church, are attached well-frequented Sunday schools. A free grammar-school was founded in 1550, and endowed with considerable estates; there is also a hospital for the maintenanco of elergymen's widows. Ilminster was formerly an important woollen clothing town; but its industry is now confined to the weaving of narrow cloths, and is of little importance. Lace-net mills have been recently established, and give employment to several hands, Petty sessions are held in the market-house. Markets on Saturday ; fairs for horses, live-stock, and cheese, the last Wednesday in August.

IMOLA (an. Forum Cornelii), a town of North Italy, prov. Bulogna; on the Santerno and the Emilian Way, 18 m. NW. Forli, and 20 m. SE. Bologna, on the railway from Bologna to Ancona. Pop. 25,919 in 1862. It is a town of some consideration, being a bishop's see, surrounded by ancient walls and ditches, and further defended by an old castle. It is tolerably well built, and has a cathedral and 15 other churches, numerous convents, a hospital, theatre, college, and a literary academy, of some celcbrity, termed de' Industriosi, which has included among its members several distinguished individuals. It has manufnetures
of cream of tartar, callel tartaro de Bologna, and some traie in agricultural produce.

INDIA (BIRITISII), a very extenaive empire, situated in S. Asia, comprising the province under tha Governor-General of Indla, Bengal, Oude, the Central l'rovinces, liritish Burmah, ihe NarthWentern I'rovinces, Madras, Llomhay, anil the I'unjanb, besides a number of native stutes as well as of forcign states under IBritish protection. These vast dominions lie between lat. $6^{\circ}$ 20' anil $35^{\circ} 15^{\prime}$ N., and long. $65^{\circ} 45^{\prime}$ and $140^{\circ} \mathrm{E}$. ; their principal boundaries being, NW. the Indian Desert; N. the llimalayu, which, in the upper provs, of Agra and ill Assam, separates them from tho Chinese empire, Nepanl, and Ibootmn; N. the IBiman empire and Simm, and S. and W. the Indian Ocean, the I Bay of Ilengal, and the Arabinn Sea. The area and pop, of the prineipal political divisions of Iritish India are stated is follows, in oflleial returns of the year 1864 .

| Pollical Ditatont | Areas Sq. Mlles | Population |
| :---: | :---: | :---: |
| UnderGovernor-Ceneral | 46,870 | 5,302,128 |

| Native States | 601,050 | 47,849,199 |
| Forelgn Stntes | 1,254 | 617,149 |

To the foregoing territories, under the immediato rule of tho Ifritish, thero may be added the tributary states of Berar, Oude, Mysore, Travancore, Cochin, Sattarah, tho dom. of the Nizam, and of the Rajpoot and Bundlecund chiefs, which are substnintially alministered by llitish rulers, and are either entirely or in part surrounded by British territories.
The physical geography, produets, inhabs., industry, \&c., of the several divisions, provinces, and districts of British India, will be found trented of under the head lindostan, and in separate articles appropriated to earh. The present articie will, therefure, be princlpally oceupied with topics, such as the general government, tho revenue system, army, and commerce of British India, that could not be conveniently introluced under any other head.

Government.-Previously to 1773 , the government of that part of India which then belonged to the British was vested in the E. Indin Company. Tho body of proprietors of E. India stock, assembled in general court, elected 24 lirectors, to whom the executive power was entrusted, the body of proprictors reserving exclusively to themselves all legislative anthority. A vote in the court of proprietors was acquired by the holders of 5002. of the company's stock; but, to be a director, it was necessary to hold $2,000 l$. stock. The directors, with their chairman and deputy chairman, were chosen annually, and subsequently subdivided themselves, for despateh of business, into ten separate committees. As carly as 1707, the three prineipal presidencies into which British I adia was long divided-those of Bombay, Madras, and Bengal, were in existence. Each was governed by a president or governor, and a council of frorr 9 to 12 members, appointed by commission of the company. All power was lotged in the president and council jointly, every guestion chat camo before them being decited by a majority of votes.

In 1726, a company w court at em mayor anil in pivil ens from their $j$ cil. The la of hollinge $c$ cise of pen those of hig quests, for of' peeuniary Ailded to thi were grante and to them time, comma stationed wi tho company their own cat the establish held all the functions, bo hands.

Mr. I'itt's bill ( 3 \& 4 Willian company held, ly of control, the pi of 13ritish Inil vested in the go Vor. II.

In 1726, a charter was granted, by which the company wero permitted to establish a mayor's court at each of the presidencies, conititing of a mayor and nine aldermell, empowered to decide in clvil easen of all deycriptions, with an appeal from their jurimlietion to the president and council. The latter were also vested with the power of holling courth of quarter sensions, for the exercine of penal judieature, in all cases excepting those of high treason, as well as a court of roquesta, for the leceision, by summary procedure, of peecuninry questions of incousidicrable amount. Added to this, the powers of justices of the peace were granten to the members of the commeil, nud to them only, the president lieing, at the same thme, commander-ill-chief of all the military furce stationed within his presidency. The oflicers of tho company were thus recognised as juilges in their own cause in all cases; aud, notwithstandiug the establishment of the mayors' courts, they still held all the judicinl as well as the executive functions, both civil and military, in their own hands.
III 1773, the great increase in the territorial possessions of the company attracted the attention of the government at home; while the fnancial embarrassments of the compuny, and the abuses which had crept into the government of India, furnishel ample grounds for interference. In consequence, the ministry introduced two bills into parlinment, distinetly asserting the cluim of the crown to the territorial acquisitions of the company, raising the qualifleation to vote in the court of proprietors from the possession of 5001 , to that of 1,0002 , stock; giving to every proprietor possessell of 3,0001 . 2 votes, of $6,0001,3$ votes, nul of 10,0001. 4 votes; limiting the annual clection of the whole 24 directors to that of 6 only; vesting the government of Bengal, Bahar, and Orissa, in a governor-general, with a salary of 25,0001 , a year, nud 4 councillors, of 8,0001 . each; reutering the other presidencies sulordinate to that of Bengal; mad establishing at Calcutta a supreme court of judicature, consisting of a chief justice, with 8,0001. ${ }^{4}$ year, and three puisne juiges, with 6,0001 a year caeh, appointed ly the crown. As subsidiary articles it was proposed, that the first governorgeneral and councillors should be nominated by parliament in the aet, and hold their othice for five years, after which the patronage of these great oflices should revert to the directors, but still subject to the approbation of the erown; that every thing in the company's correspondence from India which related to civil or military affairs, to the government of the country, or the alministration of the revenues, should be laid before ministers; that no person in the service either of the kiug or of the company should be allowed to receive presents; and that the governor-general, councillors, and judges should be excluded from all commercial speculations and pursuits.
Mr. Pitt's India bill of 1784 estahlished the board of control, consisting of six members of the privy conncil, appointed by the king, two of the jrincipal secretaries of state being always members. The president of the board was, in fact, secretary of state for India, and is the officer responsilice for its goverument, and for the proceediugs of the board. The superintendence of the latter extended over the whole civil and military transactions carried on in India.
Mr. Pitt's bill was followed by the act of 1833 ( $3 \& 4$ William IV. cap. 85), under which the company held, by the superintendence of the board of control, the political government and patronage of l3ritish India. The supreme nuthority was vested in the governor-general. He was nominated
Vol. II.
hy the court of directorn, the nomination being nuibject to the approval of the sovereign, and was assistel by a council of five menters, three of whom were appointed by the court of directors, from amongst persons who were or had been servanta of the compniny; the fourth was nho chosen in a similar manuer, but from amongst persons unconnected with the company; and the filli was the commander-in-chief, taking rank anul precedence immediately after the governor-genernl. The other presidencies had also their governors and councils, subordinate to the governor and comucil of the liengal presidency; the presidency of Agra, however, comprising the upper provinces of liengal, was administered hy a licut.-governor only. The governor-general in council was competent to make laws for the whole of IIritish India, which were binding upon all the courts of justice, umless annulled by higher authority. Parliament reserven to itself the right to supersede or suspend all proceelings and acts of the governor-general; and the court of directors had also power to disullow them.
This constitution remained in force till the year 1858, when the present form of government of the Indian empire was establighed by the Act 21 and 22 Vietoria, cap. 106, ealled 'An Aet for the better government of India,' sanctioned August 2, 1858. ly the terms of this nct, all the territories heretofore under the goverument of the East Iudia Company are vested in her majesty, end all its powers are excrcised in her name; all territorial aud other revenues and all tributes and other payments are likewise received in hur name, and list posed of for the purposes of the govenument of India alone, sulject to the provisions of this act. One of her majesty's principal secretaries of state, called the secretary of state for India, is invested with all the powers hitherto exercisel by the company or by the board of control, and all warrants and cuders under her majesty's sign-mamal must be countersigned by the same. The executive authority in India is vested in a governor-general or viceroy, appointed by the crown, and acting under the orders of the secretary of state for India.
The administration of the Indian empire is entrusted by the charter of Angust 2, 1858, to n council of state for India. The council consists of fifteen menibers, of whom seven are elected by the court of directors from their own body, and eight are nominated by the crown. Vacnucies in the coumcil, if anong those nominated, are filled up hy the government, and if among the elected, hy an election by the other members of the council; but the major part of the comecil must be of persmes who have served or resided ten years in India, and not have left Indin more than ten years previous to the date of their appointment; and no person not so qualified can be elected or appointect, unless nine of the continuing members be so qualitied. The office is held during good behaviour: but n member may be removed apon an address from both houses of Parlinment. No member is to sit or vote in Parliament. The salary of each is tixed at $1,200 \mathrm{l}$. n-year, payable, together with that of the secretary of state, out of the revenues of India.
The duties of the council of state are, under tho direction of the secretary of state, to conduet tho business transacted in the United Kinglom in relation to the government of and the correspondence with India; but every order sent to India must be signed by the secretary, and all despatehes frem governments and presidencies in India must be addressed to the seeretary. The secretary has to divide the council into committees, to direct what
tepartments ahall be under each committee reenectively, and to regulate the tranaaction of bisiness. The secretary acts as presililent of the council, and has to appoint from time to time a vice-preaident. The meetings of the council are held at times fixed by order of the secretnry; but at least one meeting must be held every week, at which not less than five members must be present.
The government in India is exercised by a 'supreme council', sitting at Calcutta, and consisting of five ordinary and from six to ten extraordinary members, presided over by the governorgeneral. The ministry, divided in the departments of foreign affairs, finances, the interior, military administration, and publie works, forms part of the supreme council. The appointment of the ministers, the members of the council, and the executive governors and lieutenant-governors of the various territories and provinces of the empire rests with the govemor-general.
Revenue Syatem.-The land tax constitutes the principal source of the revenue of British India, as It has always done of all eastern states. The gor vernments of such countries may, in fact, be sald to be the real proprictors of the land; but in India as elaewhere, the cultivators have a perpetual, hereditary, and transferable right of occupancy, so long as they continue to pay the share of the produce of the land demanded by the government. The value of this right of occupancy to the rura pop. depends on the degree of resistance which they have been able to oppose to the exactions of arbitrary governments. In Bengal and the adjacent provs. of India, from the peculiatly timid character of the inhabo., and the open and exposed nature of the country, this resistance has been tritling indeed, and, consequently, the value of the right of occupancy in the peasant, or ryot (an Arabic word, meaning subject), has been proportionally reduced. Thls, also, may be considered, though with some modifications, as being nearly the condition, in this respect, of the inhabs. of every part of the great plain of the Gauges, comprising more than half the pop. of Hindostan. But where the country is naturally difficult, the people have been able more effectunlly to resist the encroachments of the head landlord, or state, and to retain a valunble shaus in the property of the soil. This lias been particularly the case nlong the ghauts, as in Bednore, Canara, Malabar, sec.; the inhabs, of which territories not only lny claim to a right of private property in the soil, but have been generally ready to support their claim by force of arms. There can be no question, indeed, that the same modified right of property formerly existed every where; and it is indeed impossible that otherwise the land should ever have been reclaimed from the wilderness. But, in those parts of India which could be rendily overrun by a military force, the right of property in the soil has long been little else than the right to cultivate one's paternal acres for behoof of others, the cultivators reserving only a bare subsistence for themselves.

Under the Mogul emperors, the practice in Bengal was to divide the gross produce of the soil, on the metayer principle, into equal shares, whereof one was retained by the cultivator, the other going to government as rent or tax. The officers employed to collect this revenue were called zemindars; and in the course of time their office seems to have become hereditary. It may be remarked that, in Persian, zemindar and landholder are synonymous; and this etymology, coupled with the hereditary nature of their office, which brought them exclusively into contact with the ryot, or
occupler, as well as with the government, led many to believe that the zemindars were in reality the owners of the lund, and that the ryots were their tenants. This, however, It is now admitted on all hands, wos an incorrect opinion. The ze-s miulars in reality were tax-gatherers, and were, in fact, obliged to pay to the government nine tentha of the produce collected from the ryoth, retaining ouly one-tenth as a compensation for their trouble; and, no long an the ryots paid their fixed contribution, they could not be ousted from thelr prasessiona, nor be in anywlee interfered with.

Hut notwithstanding what has now been statel, the perpetual or zemindary settlement, established by Lord Cornwallis in IBengal, in 1798, was made on the assumption that the zemindars were the proprictors of the soil. His lordahip, inuleed, was far from being personally satistled that such was really the case ; but he was anxious to create a class of large proprletors, and to give them an interest in the improvement and prosperity of the country. It is clear, however, that this wish conld not be realised without destroying the permanent rights of the ryots, fir, unless this were accomplished, the zemininrs could not interfere in the management of their estutes. The interest of the zemindars, and the rights of the ryots, were plainly irreconcilahle; and it was obvious that the former would endeavour to reduce the latter to the condition of tenants at will. But this necessary consequence was either overlooked or ineffectually provided against. The zemiudars became, unler condition of their pnying the assessment, or quitrent, due to government, proprietors or owners of the land. The amoint of the assessment was tlxed at the average of what it had been for a few yenrs previously, and it was declared to be perpetual and invariable at that amount. When $n$ zemindar fell into arrear with government, his estate might be either sold or resumed.

That the assessment was at the outsed too high cannot well be doubted; and it must ever be matter of regret that the settlement was not male with the ryots, or cultivators, rather than with the zemindars; but, notwithstanding these aul other defects, the measure was, on the whole, a great boon to India. Uutil the introduction of the perpetual system into Bengal, the revenue was raised by a variable as well as a most oppressive land-tax. In France, Itnly, and other parts of Lurope, where the metayer system is introduced, the landlord seldom or never gets half the produce, unless he also furnish the stock and farming capital, and, in most cases, the seed. But in India, neither the government nor the zemindars do any thing of the sort: they merely supply the land, which is usually divided into very small portions, mostly about 6 , and rarely amounting to 24 acres, A demand on the occupiers of such patches for half the produce is quite extravagant, and hence the excessive poverty $\mathrm{c}^{\prime}$ the people, which is such as to stagger belief. Still, however, the perpetual system was vastly preferable in principle, and also in its practical influence, to any other revenue system hitherto eatablished in India. It set limits to fiscal rapacity, and established, as it were, a rampart beyond which no tax-gatherer dared to intrude. The ellormous amount of the assessment and the rigour with which payment was at first enforced, ruined an immense number of zemindars. But their lands having come into new and more efficient hands, a better system of management was introduced, and the limitation of the government demand gave a stimulus to improvement in Hindostan.

The land revenue in most parts of British India is assessed under the system now described; but oppressive er parts of introduced, he prodace, rming capiit in India, lars do ally y the land, all portions, to 24 acres patches for and hence hich is sucl he perpetual le, and also her revenue It set limits it werc, a er dared to assessment was at first zemindars. w and more hanagement the governovement in

In some parta of the Ilengal provincen, in the ceeded distriets on the Nerhinilia, and in the greater number of the native atates, a difierent pian in mlopted, which han recelved the name of the vilhuge nystem. This system, though defective in many reajecto, in miperior to the ryetwar ayntem, anit, in some pointa, is even preferable to the perjetual syntem. It in a settlenent made between the gevernment anil the cultivators, through the menlium of the native village oflicers, who npportion the asmesament withont any direct literference on the part of the government finctionaries. It is diffeult to state the proportions of the produce of a village paid to guvernment. The authorities know little of the precise property of any of the proprietors: it is not the interest or the wish of the village that they ahonld; and if any member of the community fail to pay hla whare, that is a matter for the village at large to mettle, and they usually come forward and pay It for him. These, however, are private arrnigements; and the moculdim, or hendman, through whom the government settlea with the cultivators, has no power from government to enfurce the assessment on the particular defaulter. The tax to be paid by each villager is settled by the villagers amongst themselves; the total assesmment belng enlculated after illquiry into the property of the villnge-what it lins paid and what it can pay-regnlar surveys of the village boundarien, and of its lands, having been previously male by government. The mocuddim or potail (heallunn) is elected by the villigers; nnd, if the latter beconie dissatisflel with him, they turn him out of oflice. This system may have, and doubtless has, its disadvantages: the potalls may, from various motives, unequally assess thie villagers; and the tendency to cnltivate waste lands will not le so streng as under the perpetual settlement; but the latter effect is much more likely to be brought nbout under this than under the ryotwar system; nor does the village system involve the same inquisiturial acta on the part of govermment.

Besides the lands subject to the foregoing systems of assessment, a considerable extent of land in India is held rent-free. '1 hroughout Hindestan, and indeed throughout Asia, China perhaps excepted, a considerable portion of the land-tax is assigned to a great varicty of partics, and for varieus purposes. Lands have been given to public officers as the reward of their servicea; to men of learning; to the favourites of sovercigns; for the maintenance of civil and military public establishments ; and for the endowment of charitable, educational, and rellgious institutions. The grants, especially these for the use of temples, mosques, and shrines, were in perpetuity; and others became so through the usage of India. Inscriptions on stone and brass, found in most parts of India, attest the antiquity of these grants. One of them is supposed to be nearly coeval with the invasion of Britain by Julius Ciesar, and hundreds are of dates antecedent to the Norman invasion. (Asiat. Researches, i.; Trmss, of the Ruyal Asiat. Soc., passim.) The extent of these free tenure lands throughout India is very great. In the ceded territory under the Madras presidency, they are estimated to amount to one-fifth part of the entire surface. In the N.W. provs, of the Bengal presidency, the free tenure lands were ascertained by the British commissioncrs to amount to $44,951,770$ begahs, the land-tax of which, if asacssed in the usunl manner, would have amounted to $1,236,0001$. From an inquiry made in 1777 , it appeared that the rent-free lands, in Bengal Proper, amounted to $8,575,942$ begalis, or $2,164,554$ acres, which would have yielled a tax of $1,256,390$ l a
year. It in deserving of notice, that the rent-free lanis uniler the Agra prewideney were at the very threshuid, as it were, of the Moliammetan jower; and the serritory in which they are incluled wan in the pussesslion of the Mohammelfans fior mix centuries. Blint, notwithatanding their blgotry and deapotism, they renpectell tho free tenuren, 'They alan, much to their honour, renpected them in in slagular degree in. Ilengul, where must of them hat origimaly consistel of tracts of wanto ur wild lamb, reclinimed by the labour and cajital of the granteen, or their heirs and successom. Loml Cornwallis, amil the Imdian council of his diny, conbirmed the possession of the rent-free lamin to their holijern, on the same perpetual temure as the taxed lands; and it was enacted that those that held under a free temure prior to 1765 should remain untaxel 'for ever.'
The following talle gives the total reeeipts of the government of Intia from the Inai-tax, includtug suyer and moturpher ie first compriwing varinhle limposts, such as unis and town dutien, and the latter taxes on houses and shops-in the variens territories in each of the years 18150, 1811, and 186í2. The last colnmn gives the entire net receipts, from all sources, luring the same threo years :-

The total land revenue of Iritish India, exclusive of sayer and moturpha, amounted to 18,757,4001. in 1860; to 18,508,991l. in 1861; and to $19,684,6681$. in 1862 . It will be seen that, in cach of these three yenrs, the land-tax prodnced more than one-lalf of the total net receipts. Next to the land-tax, the most important sources of revenue of the Indian govermment are the opium and salt monopelies. The net reccipts from opium were $5,169,7781$. in $1860 ; 5,758,292$, in 1861 ; and $4,909,8051$. in 1862 ; and those from salt amounted to $2,313,2181$. in 1860 ; to $3,064,982 l$. in 1861 ; and to $3,916,1511$. in 1862 . The net reccipts from customs, the last of the netable sources of Indian revenue, ameunted to $3,701,210 l$. in 1860 ; to $3,999,4351$. in 1861 ; and to $2,632,591 l$. in 1862 .

According to the Aet of 1858, the revenue and expenditure of the Indian empire are subject to the
control of the secretary in council, nnid no grant or appropriation of any part of anch revenue can lee maile without the concurrence of a majority of the counell.

Such parts of the revenuea of Imilia na may lie remitted to lingland, and moneys arining in (irent Britain, munt be pald into the llank of Fugland; and paill out on irnifth or orders njguel by three mentrern of the counell, and comitersigned by the secretary or one of his under-secrelurics. According to returns published in April, 1862, the whole Indian army numbered nearly 200,000 , of which number 3,962 were European otticers, and 70,489 European non-commissiened officers and men; the native officers and men amounting to 108,382, exclusive of 11,652 men in the l'unjaub local lorce. The distribation of these troops was as follows: 88,000 , in round numbers, in Bengal, the North-west Provinces, and the Punjaub; 42,000 in the Bombay Presideney, and 54,000 in Madras.

The interest on the registered delot of Indin amounted to $3,134,8971$. on April 30, 1863. A return issued by the secretary of state for India, in Sept. 1864, stated the debt of India at 116,721,122ll.; but this included $2,031,9701$, eapital of railway companies remaining in the home treasury. On the other hand, it dir! not include the charge for the dividend on the $6,000,0001$. capital stock of the East India Company, which is subject to redemption by parliament under the act of 1833.

Roads and Ruilways.-Throughout the whole of the immense basin of the Ganges there is an
extensive inland navigation; and thin, alno, in the enve in the valleys of the larger rivers in the 8.1 bint elsewhere the inland trade, where rallwaya linve mot been extablisisied, in grently imperlen by the want of ronds, and the imperfect ineans ot conveyance. With the exception of various milltary ronily, but very few it for carringes have been constructed in any part of the country. The internal commeree of ladia, however, has been greatly developed of late years by the conatruction of neveral great lines of railwayn, made under thin guarmitee of the goverument. On June, 30, 186is, The system of gnaranteed rallways comprised a length of $4,017 \mathrm{~m}$., of whiteh 3,186 were open for tralll. The net profits lin the year ending June 3i1, 18663, on $2,161 \mathrm{~m}$. of rallway, amounted to (190, 83441 ; and to $015,077 \mathrm{l}$. In the year endlug June 10, 1814, on $2,489 \mathrm{~m}$. The number of punnengens convey yell in the latter year was 11,781 ,, is 3 B, compnreal with $9,242,8 \cdot 10$ in the former. The total expenditure of enpital on the lines which wrere opren, or in course of construetiom, amounted on May 1 , 18055 , to $04,042,12 \pm 91$. The expenditure lit 1815 ameninted to rather murs than $6,000,0001,-$ abont $1,800,0100$. expended in Eingland, and 3,350, 0001 , in India. The total amomnt estimnted to be requirel for the undertakings will reach 77,500, 0001 . The mumber of ahareholders at tho end of the year 1814 was 29,303 in Eingland, and 777 in Indin; the latter number consisting of $3 \times 1$ Europenus and 393 natives. There were nlmo 6,453 debenture holders. Up to the enil of $1 \times 1: 1$, the government had advaneed 13,160,5331, to tho raitway companies for guarauteed interest, limt absut 3, 300,0001. had been paid back out of the earnings of the railways, leaving uearly $10,000,000 \%$. sill due to the government. The charge upsin the government was $2,567,7431$. It the yenr 18iA; but the receipts from trathic which went in diminution of thls charge amountell to alseut $1,000,000 \mathrm{l}$, and in $1810^{5}$ reached $1,300,10001$.
Trade and Commerce.-Com, cotton, oleaginous plants, and sugur are the most important objects of inland commerce. The chief trade in rice takes place within the truct of the inumilation of the Gangen, N. of lat. $25^{\circ}$, it is superseded by that of wheat and barley. Cotton 18 grown in every latitude in Indin. It is, speaking generally, eoarse, dirty, and short in the staple; and inferior to most other kinds brought to the markets of Europe. But this is not owing so much to any natural inenpacity on the part of India to proluee gooll cotton, as to the want of care in selecting the seed, and the culture of the plant. In these respects, too, some very material improvements have been effected of late years; and a goold deal of the vast amount of cotton brought from India during the American civil war, wan greatly superior to the old produce. But it is still susceptible of much improvement.

Next to cotton, the most important articles of export are spices, opium, rice, ilyes, and sceds. Sugar is a principal article of internal culture and trade, but is not exported in large quantity. It is principally raised in tho great plain of the Ganges. The average annual consumption of sugar in llindostan has been estimuted at between 11 lbs , and 12 lbs , a head. Thea nverage consumption of salt is estimated at 15 liss. per head. The other staples of the inland trade are indigo, opium, silk, tobaceo, nitre, oil-skins, drugs, lides, lime, and timber. The commercial progress of British India within recent times is shown in the subjoined two tables, which give the quantities nind values of the principal articles importel, as well as of those exported in each of the two years 1851 and 1863.

The above figuree tell, more eloguently than worily, the material results of Jirilsh rule in India.

INDIA-IEYOND-TIIE-GANGDS, mometime. called Inım-Cimana, an extennive region of $A$ aia, forming the eastern of its three grent peniusulas, extending between the 7 th and 2bith degs, of N . lat., and the 92nd and 109th of F. long., comprising Birmah, Siam, and Auam, the Mnlay peulnsula, laon, the Tenasserim prove., Arachit, Cathay, Cachar, Assam, and the liengal districts of Sylhet, 'Tipperah, and Chittngong.
INDIANA, one of the United States of Ame rlca, in the NW. part of the Union, lanving N. the lake and state of Mlehigan, E. Ohio, W. Illinois, and S. Kentncky, from which it is separated hy the Ohio. Length, N. to S., 270 in.; average
 in insio. Surface generally level or indulating: there are, however, some extensive hllly tructs in different parts. The chief elevatobsin the state are the bluffs which skirt the Ohlo; and these, and tho country immediately $N$. of them, are densely wooded. The central and N. parte conaint chiefiy of level prairies, internersed with small lakes and swamps. Next to the Ohio, the principal river is the Wabash. It rises in the NE: and, flowing first $W$, and afterwarls $S$., in the lower part of its course divides this state from Illineis, and falls into the Ohio after a course of 480 m . the greater part of which is navigntile. It has several tribotaries, incluling the White and the E. Fork, which nlan are navigable for a considerable distance. The other princibal rivers are the St. Joweph, which fills intu Iake Michigan, and the Kankance, an aflinent of the Illinois. The elimate difters littla from that of Ohio mid Illinois; but Indiana is somewhat less suljeet to the extremes of heat and cold than the laiter state. The winters neldom last longer thun six weeks; tho Wabash, however, is at that senson frozen over so as to be crossed with safety. In the valleys of the Ohio and Wabash, billous fevers, agues, \&cc. are very prevalent during summer.

Soil in most parts very fertile. The ngrienltural products are the same as in the adjoining states on the E. and W. Little is known of the netrilic resourees of the state. Large quantities of sulphate of magnesin are met with in the S. along tha banks of the Ohio. The state possenses an extensive system of internal navigation, including the Wabnsh and Erie Canal, extending from the W. end of Lake Erie to La Fayette, on the Wabash, a distance of 187 m ., with a prolongation down the Wabash to Evansville. The railway
nyaten is alan, very complete. The Atlantios and İreat Wientern railway, with ita prohonigatiom, the Ohio and Minaianlypi line, ruin through the southern part of the state, while the lorith and centre are intermectedl by neven different lluea, centering at Indianapolia.

Indiana is diviled linto 0.1 com , Indianapoila, on White Hiver, near the centre of the atate, in the c:ajh anil seat of goverument: the other chide towns are New Allinny, Malimon, and Vincersen. The guvernment consint of the governor, lientenantcovernor, seeretary of atate, treasimer, anditor, attornoy-general, and muperintendent of publie inatructon, the whole of whom are chusen liy the people at the general electiona helli on tho seconil Tuealay lit Oetculer, They hold their oflleen for two yeans. Neuators, 80 in number, nill reprementativen, 98 in number, in the year 1808 , confatitute the legialature, the atyle of which is the general nmembly of Indlana. The legislature in reguired to hold a regular menaion bienmially, com1 reneing in January in the old yeam, wuch as 1808 and 1805. The general asmembly meota nt Indianapolis. Juikges are elected for a torm of reven years. Ily an act of March 1, 1859, the state was illvided liy evounties into 21 dintristas, in anch of which, in October, 1800, a Jadge and a pronecuting attor, wy wore elected. The juigen are elected for four years, and the aalary of each in 1,000 dollars. 'linee terms of ench court of common pleas are helsl each year, beginning on the tirat Monday in Jannary, and on the first Monday of every fourth month thereafter, tuless the circuit court be in semmion, and then on the Monday succeeding the term of the circult court. The governor is chosen for three years, and is only twice eligible.

The carliest permanent occupation of Indlana was made by the French, nbout 1702, when Vincennes and several other small settlements were established by them along the Wabash. Proviously to 1800 , it was included in the NW. territory, and from that year until 1809 was governed with Illinols, under the title of the Indiana territory. It was admittell into the Union on the 11 th of December, 1816. The state sends cleven representatives to congress.

INDIANAPOLIS, a city of the United States, and cap. of the state of Inliana. J'op. 2,692 in 1840 , and 18,600 in 1860. The town atanils on the E. side of White river, and is the centre of the most important roads and railways of the state. It is regularly lail out, more than a mile square, within a circular aroa, with the governor'a house in the centre.

INDIES (WEST). Under this term were formerly included not only the Caribbee and other islands in the Atlantic near the coast of America, but also all the countries included uniler the name of the Spanish Main. But at present the term is restricted но as to signify only the islands between lat. $10^{\circ}$ and $27^{\circ} \mathrm{N}$., and long. $60^{\circ}$ and $85^{\circ} \mathrm{W}$., comprising the larger and mmaller Antilles; the former consiuting of Cuba, Iayti, Jumaica, and Porto Rico; and the latter of tho Virgin, Leeward and Windwarl groups, with the Bahamas, Triniclad, Tobago, and a few other islands. Of these, Hayti alone is independent. Cuba and I'orto Rico belong to Spain; Jamaica, the Bahamas, Trinidad, Barbalues, Antigua, Dominicn, Grenada, St. Lucia, \&c., to Great Britain; Guadaloupe, Martinique, Marie Galante, \&c. to France; St. Eustatius, Saba, and Ouraçoa, to the Dutch; St. Croix, St. Thomas, and St. John, to the Danes ; and St. Bartholomew to the Swedes. For further details, see the several islands above named.
INDORE: a city of Ilindostan, prov. Malwah, former cap. of Holikar's dom., a little N. of the

Vimillyan munntaina, anil 30 m . 8, hy Fi. Onfolit
 at 16,000 . Indors In a place of amall importance. It atanis at nearly $2,000 \mathrm{f}$. above tha level of the sea, in a well woorlem, pleamant, and healthy tract, and has been wholly bilit within the greenent century. Sume of lita atreeth are toleralily apacionn. paved with granite alaha, anil its housea often if two ntorien, anul conntruetel partly of brick; but, mpeaking senerally, it in mean and III built, ain! contaliun no public ellifice worthy of remark, except the palace, a manive qualrangular granite builifing, with decorationa of carved womi.

INDIRF, an luland delj, of Erance, reg, centre, fommerly lineluled la the prov. Iferri, between Int. $41^{\circ} 22^{\prime} 30^{\prime \prime}$ and $47^{\circ} 15^{\prime}$ N., and longe. $0^{\circ} 81^{\prime}$ and $2^{\circ} 13^{\prime}$ K. : havlug N. Loirg-et-Cher, F. Cher, $N$. Creume, and W. Vienne and Imilre-et-loire, Average length and brealth, 10 m . each. Area 679,5851 hectaren. l'up. 270,054 In 18011. Its aurface in generally level, with a slope towarde the NW., in which directlon nearly all its rivem run to joln the Loire or the Cher. I'he Crense bounde Ita W.; the other chief river is the Indro, whence it ileriven its name. The inter riaen in the defp. Crenes, and has a course of about 04 m . throught tl e centro of this and the anccceding defp, to lts monch in the I.olre, below Tours. Chateauroux and lochen stand on its banks; but, like the other streams of this clép, it in innavigable. A tract of pools and marshes, called the Brenne, extends throughout tho centre and W. part of the dépo, occupylifg about one-tenth part of the wholo surface, and a more exteusive tract towards the F . end, called the Paya de Champagne, la quite bare of wood, and infertile; but the remninder is montly either under culturo, or covered with forests. The arnble land comprises 401,261 hectares, mendows $85,303 h_{\text {, }}$ and forests and heaths $182,382 \mathrm{~h}$. Agriculture is very liack warl; but more corn is grown thall is required for home consumption, a result owing to the thinneas of the jop. The produce of winc amounts to about 450,000 heetol, a vear, which also is more than is consumed by the inhabitauts, Frults are good, and excellent hemp is raised. There are about 950,000 sheep in the dep., large flocks being fed on the Pays de Champagne. A good many oxen are fattencd for the aupply of Parls, and loogs for the markets of Auvergue and Limousin. Gcese and other poultry are reared in large numbers, particularly in the Pays de Brenue. Fish are abundant; and leeches form an article of trade. Iron of good quality is found, and forges are numerous. (lood gun-fints are olitained at Chateauroux. Next to iron gooda and woollen cleths, the principal manufaitures are thome of cottons, woollen yarn, leather, tiles, earthenware, hats, paper, and parchment. The dep. exports com, wine, cattle, wool, woollen cloths, and iron and iron goods, to double the value of its imports. The number of considerable properties is somewhat below the average of the deps. The peasantry are strongly attached to routine practices, and therefore hittle likely to better their condition. Ellucation is little diffused. Indre is divided into four arronds. ; chief towns Chateauroux, the cap., Lo Blane, Issoudun, and La Chatre.

INDRE-ET-LOIRE, a dép. of France, reg. of the W., formerly included in the prov. Touraine, comprising a tract on both sides the Loire, between lat. $46^{\circ} 46^{\prime}$ and $47^{\circ} 43^{\prime}$ N., and long. $0^{\circ} 2^{\prime}$ and $1^{\circ} 21^{\prime}$ E., having N. Sarthe and Loire-et-Cher, E. the Intter dep. and Indre, $S$. Indre and Vienne, and W. Maine-et-Loire. Area 611,679 hectares; pol, 323,572 in 1861. Surface almost an entire plain, with a slope from both the N. and S. to the: Loire, which rums through it, near its centre, from

Fi, to W. This part of then dejp watered hy the laire in an produetive antil herutiful that it han been termed the gariten of Yrancel but the moll elmewhere is generally dry, thin, muil poor, anid in the NW. there are molne extennive pooln and maralion, Heathe and wasten oscoupy nearly onewixth part of the aurfece, and foresta mure than one-tenth. There aro $13: 1,010$ hectaren arabic, 3:3,463 panture land, 35,004 t vineyand, and 23,1731 otherwino cultivatel. Agriculture is toleralily well conducted, having been much improved of inte years. The curn now produced in more than arlequate to the supply of the itep. Ilenna, pense, Re, are of excollent quality. Wine in ammully maie of the value of 0 or 10 milliona of francm, or alrout double what is required for home consumption! hut it is generally inferior. Alsout $1 / 10,000$ quintala of hemp, worth $5,100,000$ fro, are ralsed yearly and liquorice, aniseed, coriander, angelica, and truffies are cultivated. The culture of the mul-therry-tree in incrensing rupitly. The ehlof exports of the dip. are Its ngricultural products: eattie are not reared in any grent number, and mont klinis of live atock aro Juferior. Manufncturing industry is in a pother netive state. The woollen, leather, and sllk manufactures of Tours have materinlly inerened within the last ten years. There in a large tile and rasp factory at Amboise. The manufacturen of rod lead and fron goods are important; and near Monthnzon is the gumpowder factory and saltpetre rethery of lipmult, at which $800,(000$ kilug. of gunpowter are made annually. Indre-et-Loire ia nivided Into three arromis., the chief towns of which are Tours, the cap., Chinon, and Loches. This in the native country of Desearter, who was born at La llaye on the 81st of March. 1500. Indre-et-Loire lins also proluced Rabelais and Balzac, Agnes Sorel, Gabrielle d'Listrées, and the Duchens de la Vallière.

INIDUS (Sindhu, Sanse,; Aub Sind, Pers.), a large river of S. Asia, forming during grent part of ita courne the proper NW. boundary of Hinilostan, and lying letween the 23 ml and 35th parallels of N. Int., and betwoen the 67th and 8ist degrees of $\mathbf{E}$. long. The source of the river is on the N. declivity of the Cailas branch of the limalaya range, near the Chinese frontier town of Goroo, and not far from the Inke Mansuroura, and the sourcos of the Sutledje. The stream, called by the Chinese Singhe-tschn, takes a general WNW. course past Ladak, and receives the larger river Shyook, NW. of Ladak, whence the united streame run through the country of Little Thibet, and after cutting a passage through the great lilmalaya range, in lat. $85^{\circ} 30^{\prime} \mathrm{N}$., and long. $74^{\circ} 20^{\circ}$ E., are joined, about 120 m . S. of the mountains, by the Aboo Seen, and lower down at Attock, where it is 260 yards wide, and both deep and rapid, by the river of Caubul. The river ta crossed here by a bridge of boats, constructed like that used by Alexander, and described by Arrian (lib. v. cap. 7). The bridge is only nllowed to remain between November and April, whon the river is low; and the construction of it is completed in the course of six days. S. of Attock the Indus enters a plain, but soon afterwards winds amongst a group of mountains as far as IIarrabah, whence it pursues a southward course to the sea, uninterrupted by hills, and expanding over the plain into various channels, which meet and separate again, but are rarely united into one loody.
The breadth of the river at Kaharee Ghat, in lat. $31^{\circ} 28^{\prime}$ N., was found to be about 1,000 yards, the deep part of the chamel being only 100 yards across, and 12 ft . deep. The banks in this vicinity are very low, and in summer are so
mush overiowed that the atruam expmonda in mony phacen to a brealth of 15 m . (Elpilimintinie, vol. 1 .
 loujaio rivers, and rolls puat Mittum wili a width of 2,000 yardu, anil a depth near the left bank of 4 finthoma.  Ahout $17 \mathrm{~m} . \mathrm{N}$, of Bukkur, in int, $27^{\circ} 19^{\circ}$, the Indun nende off a brameh to the W. enlled the Larkhaun river, which, nfter making a cirenit, and expmuding in one place into a Inrge lake 1: m . broad, rejolus the main ntream 80 m . below the point of neparation. The insulated territory, calted Chandokee, in one of the mont fertile in that Sindo dominions. About 160 m , lnelow Ihakkur in Sehurun, in lat. $26^{\circ} 2 \cdot 22^{\prime}$; and between thene pointh the river thown in a zip-zay course nearly SW., the Intervening cmuntry being richly watered and divided by ita ramilientions into numerous inleta of the finest jasture. The dintance bet weent Selmurun and Ityderubad is 105 m : the banks sehiom exceed 8 ft . in heipht, and the neighbouring groundm aro covered with inmariske. Tho river thrown off no hranehes in thin part of its course, except the Finliatee (generully an urimportant stream), which leaves the Indun 12 m above Hyderabad, nud crossing the W. extremity of the Rumn of Cutch, enters the Indian Oernit by the Khoree munth. The main river opposites 1 yderalind in 830 yards broal, and 5 fathons deep; but the chamel becomes narrower anul decper as it mpronches Tatta, 65 m . below Hylerabad. Shifting sandbanks almo oceur in many parts between these towns, to such an extent as to perplex the navigntor.
The course of the strenin from Ilyderabad is SW, by S., with one decided turn below Jurruk, where it throws off the Pinyaree leading to Mughribee, and entering the sea by the Seer mouth. The country N. of 'Tatta, which might be rendered one of the richest and most productive in the world, is dovoted to sterility, presenting to the eyo only dense thickets of tamarisk, snline shrubs, and other underwond. About 5 m . S. below Tatta is the commencement of the Delta of the Indus. The river here divides into two branches, that to the right being called Buggnur, while that to the left is known as the Sata. The latter is by far the larger of the two, and a little below the polnt of division has a brendth of 1,000 yards: 'it divides and subdivides itself into many channels, and precipitates its water into the sea by 7 mouths, within the space of 35 m ; yet suelt is the violence of the stream, that it throws up sanilbanks or bars ; and only one mouth of this many-mouthed arm is ever entered by vessels of 50 tons.' (Ilurnes' Bokhara, vol. i. p. 207.) The Buggaur, on the other hand, flows in one strenm as far as Darajee, within 6 m . of the sea, at which point it bifurcates, forming two arms, which ffll into the ocean about 25 m . apart. A sandbank, however, which crosses its upper part, close to the apex of the Delta, renders it untit for navigation. The land embraced by the Buggaur and Stata extends at the junction of these rivers with the sen to nbout 70 m . ; and so much, correetly sjeaking, is the existing Delta; but the river covers
with its waters a much wider space, and has two other mouths still farther E., viz, the Seer and Khoree, from which, however, the waters have been diverted by the rulers of Sinde into canals for the purposes of irrigation. If, therefore, these forsaken branches bo included, the base of the Delta, measured in a straight lime from the W . to the F. embouchure, extends 110 m . In a SSE. direction. Arrinn estlmates its extent at the time of Alexander's expedition at 1,800 stadlin, or nearly double that now assigned to it; but it seems doubtful whether we are to attribute this clificreuce to any great changes in the bed of the river, or to the miscalculation of the Macedonian aulmiral, Nearchus.

The inconstancy of the stream through the Delta makes the navigatlon both difficult and dangerous. The water is cast with such impetuosity from one bank to the other, that the soil is constantly falling in upon the river, and huge masses of clay hourly tumble into the stream, often with a tremendous erash. In some places the water, when resisted by a firm bank, furms ellilies and gulphs of great depth, in which the current is really terrific; and, in a high wind, the waves dash as in the ocean. It appears, indeed, from the Report of the State and Navigation of the Indus, ly Licuts. Carless, Wood, and lottinger, that banks and bars offer such great obstructions, as effectually to prevent the river from ever becoming extensively available for the parposes of commerce. Vessels drawing 8 ft , water tind themselves agronnd at the very entrance of the Secta mouth : the employment of ships is out of the question, and the navigation of the doondees, or small native boats, is so tedious, that no communication of any importanec can be kept up between Hyderabad and the sea, except by steamers. The introduction of steamers has aecordingly been attempted and with great success. By Act of Parliament 20 and 21 Vic. cap. 160 (25th August, 1857) n merenntile association, called the Indus steam 1lotilla company, was authorized to run steamers on the Iudus for a length of 570 miles. The steamers are flat-bottomed, and perform the service exceedingly well. The extension of commerce in recent years has also led to plans of railways along the Indus, and in the suminer of 1865 a survey was completed of an 'Indus Valley railway, which is to connect the Sinde and the Punjab lines, by a line running along the left bank of the Indus.
The tides rise in the months of the Indus about 9 ft . at full moon, and both flow and ebb with great violence, particularly near the sea, where they flood and abandon the banks with equal and ineredible velocity. This phenomenon was an olject of great surprise to Alexander's fleet, and Arrian remarks (lib. vi. cap. 19) that 'the ebbing and flowing of the waters was as in the great ocean, inasmuch that the ships were left upon the dry ground, but what still more astonished Alexander and his friends was, that the tide, soon after returning, began to leave the ships, so that some were swept away by the fury of the tide and dashed to pieces, while others were driven on the banks and totally wrecked.'

The tides are not perceptible more than 75 m . from the sea, or about 25 m . below Tatta. The quantity of water discharged by the Indus is stated to amount to 80,000 cubic ft. per second, nearly as much as is discharged by the Mississippi, and four times as much as is discharged by the Ganges, the other great river of Hindostan, This discharge must be attributed chiefly to the greater length of its course in ligh and snowy regions, to its numerous and large tributaries,
and to the barren arid nature of the soll through which it passes; while the Ganges, on the other hanil, expends its waters in irrigation, and blesses the inhabitants of its banks with rich and exuberant erops.

The Indus has numerous affuents, none of which, however, deserve any particular mention except the Sutlelje, and the other rivers of tho Punjab. Of these rivers, the Sintledje (tho Zarailrus of Ptolemy), which is the most easterly of all, takes its rise near Garoo, on the great plain N. of the Himalaya mountains, enters the chain at Slipkee (where it is $10,484 \mathrm{ft}$. above the sea), runs in a narrow mountain valley for upwarils of 100 m ., and enters the S. plain at Ropur, whence its course is south-westward to its junction with the Indus. The other rivers of the Punjab, besides the Beas (the Myphasis of Arrian), which is an affluent of the Sutlellje, are, proceeling westward, tlie lavee (the Mydraotes of Arrian), the Clıenâb (Acesines), and the Jylum or Hydaspes. The last three, ull of which rise on the S. slope of the great mountain range of N. India, join their waters with those of the Sutledje in lat. $29^{\circ} 10^{\prime}$ N., and long. $71^{\circ} 12^{\prime} \mathrm{E}$. The rivers of the Punjab are in gencral navigable up to the place where they issue from the mountaing.

INGOLSTADT, a town of Bavaria, circ. Ratisbon, on the Danube, 33t ni. SW. Ratisbon, on the railway from Augsburg to latisbon. Pop. 15,712 in 1861. The town has recently been restored to the condition of a fortress, by the construction of very strong works on an improved plan. Its old fortifications had withstood sieges from the troops of the League of Schmalkald, from Gustavus Adolphus, and lluke Bernard of Saxe Weimar, and resisted Morcan for three months; but he, succeeding at length, caused them to be demolished. Ingolstadt losi its university, at which the celebrated Dr. Fuustus studied in 1800 : it is now transferred to Munich. It still possesses, however, a royal residence, nine churehes, in one of which the Javariau general, Tilly, was buried, and several hospitals aml charitable institutions. It had formerly a considerable manufacture of woollen cloths; but this and its other branches of industry and trade has fallen into decay.

INNSBRUCK (Fr. Inspruck), a city of the Tyrol, of which it is the cap, on the Iun, 80 m . N. by E. Trent, and 240 m . W. by S. Vienna, on the railway from Munich over the Brenner to Verona. Pop. 14,224 in 1858. The situation of the town is highly pieturesque. It stands in the middle of a valley, the sides of which are formed by mountains from 6,000 to $8,000 \mathrm{ft}$. high, and the Inn is crossed by a bridge (whence the name of the city) from which a magnificent prospect is obtained. On and round this bridge one of the severest aetions took place during the war of the Tyrolese, under IIofer, against the French. Innsbruck is divided into the old and new towns, and has five suburbs. The latter are larger and better built than the city itself, though badly paved. The houses of Innsbruck are mostly four or five stories high, built in the ltalian style, with flat roofs, and are frequently ornamented with frescoes. Many have arcades below, occupied with shops. The object most attractive to strangers is the Franciscan, or Court ehurch, an editice containing numerous fine works of art. Amongr others, is the tomb dedicated to the emperor Maximilian. It is ornamented with 24 bas-reliefs, representing the principal actions of his life, and is surrounded by 24 colossal bronze statues of persons celebrated in history, including Clovis, Theodoric, Arthur, Charles the Bold, Duke of

## INVERARY

INVERNESS

Burgundy, Godfrey of Houillon, Rodolph of llapsburg, end many of the emperors of Austria, lis descendants. Here, also, is the mausoleum of the arehduke Ferdinand of the Tyrol and his wife, also adorned with bas-reliefs; aml the grave of Ilofer and his statue lin white marble. There are unmerous other churelies, several of which are worth notice. The palace, an extensive building, has gardens extending along the Inn, which form a public promenade. In front of the Old l'alace, the former residence of the archdukes of the Tyrol, and of some of the German emperors, is the ' Golden Reorf,' a kind of oriel window, covered with a roof of gilt copper, and one of the curiosities of the place; this editice is now used for the chancery-chamber (Kanzleigebäule). Innsbruck has a university of the 2nd order, in which instruction is entirely gratuitous, It occupies an extensive and the etilice, and has 25 professors, and exhibitions to the amount of 12,000 fls. yearly: It has attached to it a valuable library, botanic gariens, and normal selool. The Ferdinumdeum, founded in 1823 upon the model of the Johamneum of Griltz, is a museum devoted to the prorluetions of the Tyrol in both art and natural history, and contuins some interesting collections, particularly in the dep. of mineralogg: The seminary for noble ladies, founded by Maria Theresa in 1771, the gymnasinm, ancient Jesuits' college, and varions convents, provincial honse of correction, comecil clamber, town-hall, thentre, and a handsome ball-room, are the other chiel public buildings; a statne of Joseph II., and a triumphal areh raised by Maria Theresa, are among the most conspicuons ornaments of the city. limsbruck is the seat of the state assembly, high judicial court, and other superior departments of the public service for the Tyrol and Vorarlberg. It has manufactures of silk, woollen and cotton fabries, leather, glass, and steel goods, and seal-ing-wax : and is the seat of a considerable trade between Italy and the countries N. of the Alps.
IN VERAKY, a royal and parl. bor, nud sea-port of Scutland, co. Argyle, of which it is the cap. on a bay on the W. shore, and near the bottom of the arm of the sea called Loch Fyne, 40 m . NW. Glasgow. Pop. 1,075 in 1861, and 1, 263 in 1841 . Inverary consists principally of two rows of houses, one of them fronting the bay, the other at right angles with it, rumning inward, and having a northern exposure. The honses, built on a uniform plan, nre large and commorious; and the town is one of the neatest and cleanest, and its situation the most pieturesque in Scotland. The public buildings are the par. church, and a handsomo edilice by the water side, containing the court-house and other offices. In the immediate vieinity of the town, on the N., is Inverary castle, the chief residence of the ducal family of Argyle. It was built after a design by Alams in 1749; but it is hardly worthy of the situntion. It is an embattled structure, of two stories and a sunk floor, flauked with round overtopping towers, and surmonnted with a square-winged pavilion. There is in the saloon a curious collection of old Ilighland arms, including some of those used by the Campbells in the battle of Culloden.
The staple commodity of Inverary is herrings, those of Loch Fyne being eelebrated for cheir superior excellence; but the fishing in the Loch has latterly declined, and with it the population of the town.
Inverary was erected into a bor, of barony in 1648. In a garden beside the church is a small obelisk, commemorative of the exccution in this place, in 1685, of several gentlemen of the name of Campbell, on account of their adherence to

Presbyterianism. This bor, unites with Camplerton, Olan, and Irvine, ins sending a mem. to the II. of $\mathrm{C}_{.}$; and in 1864 lad 36 reg. voters. E:dmuml Stone, it self-tanght mathematicinn, editor of 'Euclid's Elements,' and anthor of a 'treatise on Fhxions,' and other works, was a native of Inverury.

INVERKEITIIIN(i, a royal and parl. bor., par., and sea-port of Scotland, co. Fife, heantifulty situated on rising ground on a bay on the N. bank of the Frith of Forth, 10 m . WNW. Edinhurgh, on the railway from Elinburgh to St. Andrew's. Pop. 1,817 in 1861, and 1,827 in 18:11. The town consists of a main street, and a smaller one branching off it, beshles severul wynds or lanes. Many of the houses are extremely ohl, and an air of antiquity generally marks the pluce. The only public buildings are the par. chureh, a dissenting chapel, the borough sehotl, and the town-house. About 10 in every 100 of the inhab, are, at an average, at school; a larger proportion than generally obtains elsewhere. There ure three libraries in the bor. The par. abounds with eonl, most of which is exported from St. David's, on Inverkeithing llay. A number of English and foreirin vessels resort to Inverkeithing for conl, hringug in exchange bark, timber, nud boues fur manure. There are, in the imnediate vicinity of the town, a distillery, tan-work, slip-building yard, a magnesin manufactory, and a brick work.
Inverkeithing was created a royal borough ly William the Lion in the 12th century. Its privileges inehnded right of enstoms over a considerable district of country lying on the Frith of Forth ; but these have fallen into desuctule, with the exception of the duties at the markets held it Kinross and Tulliebole, and the customs at North Queensferry. Even Edinlurgh, at one time, paid an acknowledgment of superiority for some parts of the Calton 1Iill, hut it was boughit up, or relinquished. In the ridings of the Scotish parliament, the provost of Inverkeithing was entitled to precedence next to the provost of Edinburgh. Before the convention of royal burrghs was appointed to be held at lidinburgh, liverkeithing was the place of its meeting. This lor. unites with S. Queensferry, Dunfermiline, Culross, and Stirling, in sending a mem, to the H. of C., and in 1864 had 57 registered voters.
IN VERLLETTHEN, a par, and village of Seotland famous for its mineral well, co. Pecbles, $2:$ m. S. by E. Edinburgh, and ö m. E. by S. l'echles, on the Edinburgh and Hawick railway. ${ }^{1}$ 'ip). 1,130 in 1861. The village is situated in a romantic pastoral country, within $\frac{4}{4}$. of the N . bank of the Tweed, and on both sides the Leithen, a tributary of that river. It has long been kuownt as a 'watering place,' and its eclebrity was greatly enlanneed by the pmblication (in 1824) of Scott's novel, enlitled ' St. Ronan's Well,' of which it was supposed to be the prototype. A yearly festival has been since instituted at Inverleithen, for the celebration of 'the St. Roman's Border Games;' and the name of almost every strect, or separate editice, in the village, such as 'Ablutsforl Place,' 'Waverley Row,' 'Marmion Hotel,' \&e., refers to the illustrious novelist. 'Trmquar-house, the sent of the noble family of that unme, is in the immediate vicinity of Inverleithen. The first earl of Traquair, lord treasurer of Scotland in the time of Charles I., was one of the most eminent statesmen of his clay. Dr. Russell, author of the ' History of Modern and Ancient Europe,' was born near the village, and was educated in it. Tle woollen manufacture has been introduced into Inverleithen.
INVERNESS, a marit. co. of Scotland, nuld the most extensive in that part of the U. Kingdom :
it stretehes quite aeross the island from the E. to the W. sea, having N. the Moray Frith and Rossshire, W. the Atlautic Ocenn, S. Argyle and Perth, and E. Aberdeen, Banff, Moray, and Nairne. But it includes, exelusive of the mainland, the largo island of Skye, with the smaller islands of Harris, N. and S. Uist, Benbeculn, de. Area, $4,256 \mathrm{sq}$. m., or $2,728,501$ acres, of which $1,943,920$ belong to the mainland, and 773,760 to the islands; the former having 84,480, and the latter 37,760 aeres of water. Inverness-shire is, speaking generally, wild, mountainous, and rugged. It is supposed that there is not more than $2 \frac{1}{2}$ per cent. of its surface not naturally covered with heath. Ben Nevis, which, next to lien Mnedhus, is the highest mountain in Great Britain, being 4.370 ft above the level of the sea, is situated near Fort William, in this ce. Mealfourvony, on the N. side of Loch Ness, is $2,730 \mathrm{ft}$ above the sea. The arable land, which is of very limited extent, is principally comprised in the low districts contiguous to the town of Inverness, in Strathspey (the low country on both sides the Spey), and in narrow glens along the other rivers and lakes. Climate various; but generally it may be said to be wet and stormy on the $W$. coast, severo in the interior, und comparatively mild and dry on the shore of the Moray Frith. Principal rivers, Spey, Ness, und Beauly; all which, but espeeially the first, luve valuable salmon fisheries. The arable land of this co. was formerly divided into small patehes, laving usually a greater or less extent of hill pasture attached to them, and oceupied by tenants at will. The latter lived in miserable huts; nnd were at once excessively poor, idle, and disorderly. But the abolition of hereditary jurislictions and elanship in 1748, and the carrying of good military and other roads into districts that were formerly quite impervious, by enabling the law to be everywhere brought into full operation, have completely repressed the feucls and disorders that formerly disgraced this and other Highland cos. The small holdings have also been very generally consolidated into sheep-farms, some of which are very extensive, and which are mostly stocked with cheviots. Arable farming has, also, been very much improved; and, in consequence, there has been a very great increase in the quantity of disposable produce, and in the rent and value of the land. Good wheat is raised round the Moray Frith; but oats is the principal erop. The stock of black cattle is very large; and cattle, sheep, and wool constitute the principal articles of export. In some districts there are extensive forests. There are no manufactures of any importance, nor auy considerable town, except Inverness. Illicit distillation, that was once very prevalent, is now nll but suppressed. Limestone, slate, and marble abound in most places; but the want of coal renders the limestone of little value. Grelic is the common language; and in the $W$. parts of the co., and some of the islands, it is the only one that is generally understood. Owing to the thinness of the pop., the co. is but ill supplied with schools, though in this respect, as in others, it is very much improved.
This co. is divided into two nearly equal portions, by a remarkable glen or valley, stretehing NE. and SW. from the town of Inverness to Loeh Linnhe, opposite the island of Mull, on the W. const. This glen, which is very narrow, consists principally of a chain of lakes, comprising Loch Ness, Loch Oich, and Loch Lochy. Its surface being nowhere more than 94 ft . above the level of the sea, advantage was taken of this eircumstance, and of the continuous chain of lakes, to open a navigable communication between the E. and W.
seas, avoiding, consequently, the lengthened and dangerous navigation by the Pentland Frith. The entire length of this navigation, or of the Caletonian Canal, inelusive of the lakes, is rnther more than 60 m . ; but the excavated part is little more than 23 m . It cost about $1,000,0001$, aad is on a larger scale than any work of a similar class in any other part of the empire.
Inverness co. has 85 parishes: it sends 1 mem. to the H. of C. for the eo.; and the lor. of Inverness joins with Fortrose, Nairne, and Forres in sending a mem. Registered electors for the co., 879 in 1865 . Inverness-shire hall, in 1861, a pop. of 88,888 , living in 16,615 houses. The old valued rent was 6,099l.; the new valuation, for 1864-5, was 237,8481 .
Inveniness, the eap, of the above co., and of the Northern Highlands, a royal and parl. bor. and sea-port of Scotland, on both sides the Ness, within a mile of its influx into the Moray Frith, and at the NE. extremity of the Great Glen of Scotlaul, forming the line of the Caledonian Cannl, 112 m . NW. by N. Edinburgh, and 81 m. N. by W. Aberdeen, on the Great North of Scotlaid railway. Pop. 12,509 in 1861, and 11,508 in 18.41. The situation of Inverness is peculiarly striking and pieturesque, in the middle of a beautiful plain, of unequal extent in different directions, with the Moray Frith on one side, and the back ground, consisting of variously shaped hills, some of which are richly woorled, while others are bleak and rugged. The Ness, on whose bunks the borough stands, is the shortest river in Scotland, flowing between Loch Ness and the Moray Frith, a distance of only 8 m . The most important portion of the town is on the right bank of the Ness. A handsome stone bridge of seven arehes was ereeted across the river in 1685 ; there is also a wooden bridge, built in 1808. The principal streets lie E. or N., and consist generally of substantial buildings. The streets, which are lighted with gas, are causewayed and flagged. The public buildings are the exchange and town-house, near the centre of the town ; the gnol, surmounted by a tower 130 ft . high; the assembly-rooms of the Northern Meeting; infirmary, academy, the united charity institutions; which last edifice occupies an elevated situation in the vicinity of the town. With regard to ecelesiastical buildings, the High Church is the most conspicuous; the square tower attaehed to it was built by Oliver Cromwell, and the bell brought from the cathedral of Fortrose, on the N. banks of the Moray. Frith. There are three churches, in one of which Gaelic alone is used, and two chapels of ease. There are, also, free churebes, dissenting chapels, belonging respectively to Episcopalinns, the United Associate Synod, the Independents, Baptists, Methodists, and Kom. Catholics.
Gaelic was formerly the only language spoken in Inverness and its neighbourhood; and it is still to some extent the speech of the lower orders, all of whom, however, understand and can speak English. It is admitted that the English language is spoken in greater purity by the middle and upper ranks in Inverness than in any other place in Scotland; a distinction which is snid, whether correctly or net, to have originated in the circumstance of Cromwell having stationed and long maintained an English garrison in the town. 'The soldiers seem to have incorporated afterwards with the inhab., and to have peopled the place with an English race; for the language of the town has been long considered as peculiarly elegant.' (Johnson's Tour to the Hebrides.) The Highland eharaeter, however, still predoninates in the borough. In addition to the Gaelic
language, the speech of the commen people, their dress is more or less of Celtie fashion, and of heme manufacture, such as the short coat, blue bonnet, plald rig and fur stockings, all of the coarsest materials. The married women usually walk the streets and go to church without a bonnet; the matilens without either exp or bonnet; while the other parts of their dress are of the mest simple and homely description.
Inverness has some manufactures of linen, plaldings, and woollen stuffe, and a small hemp manufactory, on the site of Cromwell fort. Shipbuilding is carried on to some extent. There are breweries, distilleries, and tan-works. The shipping is considerable. There belonged to the port, on the 1st of January, 1864, 146 sailing vessels under 50, and 93 above 50 tons, besides one steamer of 20 tons. The gross amount of customs' revenue was 8,0081 . in $1859 ; 6,572$ in 1861; and 5,744l. in 1863. The town has regular traders, both steamers and sailing smacks, to Aberdeen, Leith, and London, on the E. coast; she has a similar communication, by means of the Caledonian Canal, with Glasgow, and Liverpeol, on the W. coast; and also with Ireland. The canal passes within less than a mile of the bor.; and Clachnaharry, where it joins the Moray Frith, is not more than a mile distant. There are three harbours, one of them for small craft, near the town, the others at the mouth of the river; while the canal wharfs at Clachnaharry are also used for the loading and unloading of goods. Grain used to be imported to Inverness; but oats are now largely exported. Coal, almost the only kind of fuel used, is imported both from England nnd the Frith of Forth. Inverness has several lairs; but the wool fair, in the month of July, attended by all the principal Highland sheep farmers, as well as by wool staplers and sgents from England and the S. Oi: Scotland, is the most eminent. Fully 100,000 stones of wool are annually sold at this market; while above the same number of sheep are also disposed of. The prices paid at this fair generally regulate these of all the other markets in the country.

Inverness is very ancient. In the 6 th century it was the capital of the Pietish kingdom, when St. Columbs of Iona went thither, ad ostium Nesse, with the view of converting the Pictish king to Christianity. An ancient castle stood on a rising ground E . of the town; but it was destroyed in the 11th century by Malcolm III., who built another on a commanding eminence near the
river, which continued to be a royal fortress, till blown up, in 1740, by the troops of the Pretender. Inverness was erected into a royal lor, hy David I.; and various royal charters, contirming or extending its privileges, were subsequently conferred on it. The town was often an object of plunder to the lords of the isles and other Highland chiefs. A monastery, belonging to the Black Friars, existed in this place; but all traces of it have long sinee disappeared. The citadel referred to above, as constructed by Cromwell, was built in 1652-57, N. of the town, near the mouth of the river. Part of its ruins are still standing. Culloden Moor, the scene of the battle that decided the fate of the Pretender, Charles Stuart, is within 3 m . of the town. Since 1745, great improvements have been effectel here. Previously to 1755, the post from Edinburgh to Inverness was conveyed by a man on foot. In 1740, the magistrates advertised for a saddler to settle in the bor.; and in 1778 a cart, purchased by subscription, was first seen in the bor. No plan of regularly cleaning the streets was adopted till alout thic beginning of the present century. Inverness is now, however, superior perhaps to any town of its size in Scotland as to all the necessaries, comforts, and luxuries of life. Corp. revenue, 2,269l. in 1863-4. This bor, unites with Forres, Fortrose, and Nairne in sending a mem. to the H. of C. Registered voters, 567 in 1864.

INVERURY, a royal and parl. bor. and par. of Scotland, co. Aberdeen, in the angle formed hy the confluence of the Don and Ury, 14 m . NW. Aberdeen on the Great North of Scotlanil railway. Pop. 2,520 in 1861, and 1,679 in 1841. The inhab. are chiefly agriculturists. The Aberdecushire canal, begun in 1796 , and completed in 1807 , commences in the tide-way of the harbour of Aberdeen, and terminates at Port Elphinstone near Inverury. The entire length is $18 \frac{\mathrm{~m}}{\mathrm{~m}}$; the surface width is 23 ft .; the depth 37 ft . ; it has 17 locks; and its highest level is 168 ft . above low water-mark. Keith Hall, the seat of the Earl of Kintore, whe also holds the title of Lord Inverury, is in the immediate vicinity of the bor. Arthur Johnston, editor of the 'Delicis Poetarum Scotorum,' and who holds the next place to Buchanan among the Latin poets of Scotland, was born in the neighbourhood of Inverury in 1587. This bor. unites with Elgin, Banff, Cullen, Kintore and Peterhead, in sending a mem. to the IH. of C. Registered voters 138 in 1865
