CUNNABELL'S
NOVA-SCOTIA

ALMANAC

FOR THE YEAR OF OUR LORD

1844.

Being BISSEXTILE or LEAP YEAR, and the Eighth
Year of the Reign of

Her Majesty Queen Victoria.

HALIFAX, N. S.

PUBLISHED BY W. CUNNABELL,

No. 3, Marchington's Wharf.

Sold also at the Stationery Store of Messrs. A. & W.
McKINLAY, Halifax; and at the Principal Stores
throughout the Province.

ADVERTISEMENT.

In order that our numerous readers may not impeach us with **changeableness**, we offer as a reason for deviating in our last number from our usual form, that it was in accordance with the suggestion of a number of our friends, and partly under the impression that the alteration would be generally approved of. The experiment having been made and found to be inconvenient in several instances, we feel warranted in resuming our **original** form, which we consider better adapted to the space occupied by the Tables, &c. usually inserted in an Almanac; and more agreeably to the wishes of our readers in general.

We have in this devoted a much larger space to **reading** than has been occupied by any previous number, which will be found to contain matter highly valuable, both as regards usefulness and entertainment. In making this addition, we have necessarily abridged some portions of the statistical department. With regard to the improvements in the Calendar Pages and Astronomical Calculations, we leave the Editor of that department to speak for himself.

Our readers will perceive that we have made a new arrangement of our Calendar Pages. A few words in explanation of the Astronomical part may not be amiss. The Rising and setting of the Sun is given in Apparent Time. If Halifax had a horizon open to the east and west, we should have thought it necessary to have given the correct mean time of rising and setting. The length of Day is formed by doubling the time of Sun Setting, and on the contrary, the length of Night is obtained by doubling the time of his rising. Hence the increase or the decrease of the length of daylight may at any time easily be found. The Equation of Time to Greenwich Noon for each day is next given. The *approximate* mean time of the Moon's rising and setting is given only, for the same reason as applies to the Sun's rising and setting. But the true mean time of her Meridian passage or Southing, is given for Halifax. The Tides on the opposite page are those following the Moon's Meridian passage. The intermediate tide may be found sufficiently accurate by taking half the difference of any two tides. As the Lunar day exceeds the Solar day in length, there will be one day in the month in which she will not pass the Meridian, and consequently where the word "morn" occurs, there will be only one tide in the course of that twenty-four hours.

For the Nova-Scotia Almanac.

Suggestions for the New Year, 1844.

THERE is no season more appropriate for reflection, and perhaps no time better adapted to school our thoughts and feelings, than the NEW YEAR. Connected as it is, with the period above all best calculated to awaken our most generous impulses, the mind is admirably prepared to abandon every uncharitable sentiment, and bury those disagreeable prejudices, which at best only tend to sever the ties of friendship and social intercourse. In the hope, therefore, that an appeal to the public feeling may not be in vain, allow me, Mr. Cunnabell, to offer, through your useful publication, a few suggestions relative to our present situation. As all have, more or less, felt the pressure of the times, it is the duty, and for the interest of every one of us, to use what influence we may possess, in order to establish a better state of things; and, therefore, if any ill feelings have rankled in our breasts towards each other, let them die with the old year, if not before; for nothing contributes more powerfully to banish the intruder, HARD TIMES, from our happy land, than *union* among ourselves.

Much may be effected towards ameliorating our condition, by promptness and punctuality in the fulfilment of our engagements towards each other. Let then the duties of the desk and counting room be completed; accounts posted, bills made out and collected, and ledgers balanced. See that all debts are promptly and fully paid, and every thing connected with business matters of the old year so thoroughly performed, that each may have what are honestly his dues, without the inconvenience and vexation of nearly another year's delay, in addition to the consequent loss of money and time expended in their collection. The energies of business men being thus freed from the operations of the past, would be directed with redoubled strength to the concerns of the future; and knowing by the most unerring demonstrations that their confidence were not misplaced, could venture to a prudent extension of business, thereby affording employment to the industrious, credit to the punctual, and success to the enterprising.

And whilst we are individually prosecuting our own course through life, let not the interests of the rising generation be neglected. Education is a duty we owe our children, justice to our country demands it, and therefore it should be regarded as a theme of the highest importance. Ascertain then if your children at school are under the tuition of judicious preceptors, send those to school who are of a suitable age to begin. See that they are supplied with appropriate books, forward them in their efforts to improve by judicious marks of approbation, and use with prudence every influence in your power, to stimulate those who appear indifferent or backward. Let each family subscribe for at least one well conducted newspaper,—and pay for it in advance. For that patriotism is most substantial, which is founded on education and intelligence.

When these matters are properly arranged, and business is prosecuted with prudence and integrity, the general prosperity of the province will soon be perceptible. This object ought to be the aim of every individual; to facilitate which, let us make no unnecessary debts, and endorse and sign as little as possible. By this prudence there will be more *bona fide* business transacted, and less of a *fictitious* nature. It would also promote our general prosperity to shorten the usual terms of credit; for the more frequent the opportunities of receiving money, the oftener will be the chances for profitable investments: and therefore, if trade that is *now* done on a year's running account, and which requires the principle part of another year to settle up, was conducted on the plan of three or six months credit, and *all parties* were to adhere religiously to these terms, business in almost every branch would be more than doubled. No argument need be adduced to establish this assertion, for every man of business must know by his own experience, that such a change would be for the better: at all events it is an experiment which could be made without sacrifice.

In conclusion I would observe, that my reasons for selecting the Nova-Scotia Almanac, as a means through which to offer these suggestions, are chiefly owing to the impossibility of the attention of the *whole* public being directed to the subject through the medium of any *one* newspaper; the necessity of a *more general* circulation; and the means of *preserving* for occasional reference, in the hope that eventually some *public* demonstrations will be manifested, on a subject with which every individual in the province is more or less interested.

HOMESPUN.

ASTRONOMICAL.

Eclipses.

In the year 1844 there will be Three Eclipses of the Sun and Two of the Moon, viz:—

1st. A Total Eclipse of the Moon on Friday May 31st. and partially visible in Nova-Scotia, as follows:—

Moon rises partially eclipsed,	7h 46'	} Mean Time evening at Halifax.
Last contact with dark shadow,	8h 17'	
Last contact with Penumbra,	9h 12'	

2nd. A Partial Eclipse of the Sun on June 15th, visible in the South Pacific and Great Southern Ocean.

3rd. A Partial Eclipse of the Sun on November 9th, visible only in a small portion of the Great Southern Ocean.

4th. A Total Eclipse of the Moon on Sunday November 24th, and visible as follows:—

First contact with Penumbra,	4h 22'	} Mean Time in the evening at Halifax.
Moon rises,	4 26	
First contact with shadow,	5 35	
First total immersion	6 44	
Middle of Eclipse,	7 30	
Last total immersion in shadow,	8 17	
Last contact with shadow,	9 25	}
Last contact with Penumbra,	10 38	

5th. A Partial Eclipse of the Sun on December 9th, visible in the North Pacific Ocean, and the Western part of North America. The Eclipse commences a few minutes after Sunset in Nova-Scotia.

The Planets.

Venus ♀ will be an Evening Star from the commencement of the year till July; she will then come in inferior conjunction with the Sun, and become a Morning Star from August to the end of the year.

Mars ♂ will be an Evening Star from January to May, and coming in conjunction with the Sun will be a Morning Star from September to the end of the year.

Jupiter ♃ will be in conjunction with the Sun till April, then a Morning Star till September, then an Evening Star for the rest of the year.

Saturn ♄ will be in conjunction with the Sun till February, and a Morning Star till July, and then an Evening Star to the end of the year.

AGRICULTURAL, &c.

Men of every occupation meet with repeated opportunities and suggestions, which, if taken advantage of, would improve their knowledge, and otherwise add to their experience; and perhaps there is no class of men for whose interest the patriotic intelligent evince a greater regard than the farmer. It is certain, that no men in the same line of business exercise such a degree of liberality as they do, in helping and advising each other; and owing to this friendly disposition, doubtless, so great an amount of what is valuable in the way of agricultural improvements, is repeatedly added to the general mass of intelligence contained in the publications of the day. It is to be regretted, however, that much that is important is merely read, and doomed to remain

untested. This ought not to be the case, for if every suggestion were to receive a fair trial, and but one out of ten prove correct, the benefits derived from that one would far outbalance the disappointments occasioned by the failure of the other nine; besides, the experiments might be made on the smallest possible scale. Indeed we have often thought that a great deal of good would result to our farmers, were each to devote a small portion of his farm to experimenting; and in the hope of inducing some of our agricultural friends to make a beginning, we here devote a few pages of our Almanac to some valuable hints, copied and condensed from a variety of popular agricultural publications.—EDITOR.

Agricultural Improvements.—If the farmers [because they are practical farmers] think that their experience is all-sufficient, if they think they have nothing to learn, if they think they can safely neglect the opportunities of acquiring knowledge connected with their proper business, let me tell them that they labour under a great and dangerous delusion. If you are satisfied with the limited experience that your own farm affords, if you really believe that

the farming in your particular parish admits of no improvement, let me remind you that these were the impressions entertained 50 years since, and 100 years since, by practical farmers who then thought, I have no doubt, that there was nothing to be learnt, and that there could be no advantage in attempting to benefit by the experience and experiments of others. Now, with respect to works on agriculture, let me ask any reasonable man, whatever might be his practical experience, whether he does not think it highly probable, that advantages might be derived by having access to such information.
 —SIR R. PEEL.

Salting Pork.—Nearly all the Western pork is salted in bulk, that is, piled up in one corner of the room like a pile of bricks, and sprinkled with dry salt. Pork done up in this way, particularly bacon, is said to be good. It is well to overhaul it once, to see that the salt touches all parts.

Hens.—A neighbor of ours, states that hog's lard is the best thing he can find to mix with the dough he gives to his hens. He says one cut of this fat

as large as a walnut, will set a hen to laying immediately after she has been broken up from setting; and thus his hens lay through the whole winter.

Public Spirit.—He is a public benefactor who, by the prudent and skilful outlay of his time and money, shall make a single field yield permanently a double crop; and he who does this over a square mile, virtually adds a square mile to the national territory, nay, he does more; he doubles to his extent the territorial resources of the country, without giving the state any larger territory to defend. All hail, then, to the improvers of the soil. Health and long life be their fortune; may their hearts be light, and their purses heavy; may their dreams be few and pleasant, and their sleep the sweet repose of the weary; may they see the fruits of their own labor, and may their sows reap still heavier harvests.—BLACKWOOD'S MAGAZINE.

Change of Crops.—Do our agricultural friends generally consider the subject of a change of food to the soil; or, in other words, a rotation of crops? This is a highly important consideration, and would reasonably warrant the expectation of beneficial results, were the experiment made, from the fact that an animal would soon sicken and die, if confined exclusively to any one particular food.

Comfort for Farmers.—The Magazine of Natural History says: 'Every Crow requires at least one pound of food a week, and nine-tenths of their food consists of worms and insects; one hundred crows, then, in one season, destroy 4,780 pounds of worms, insects and larvæ; from this fact, some slight idea may be formed of the usefulness of the much persecuted bird to the farmer.'

Root Crop Compared with Hay and Corn.—An acre yields one ton and a half of vegetable food. An acre of carrots, or Swedish turnips, will yield from ten to twenty tons; say fifteen tons, which is by no means, an exaggerated estimate. It has been ascertained by experiment, that fifteen working horses, fifteen and a half hands high, eat at the rate of two hundred and twenty four pounds of hay per week, or about five and a half tons per year, besides twelve gallons of oats each per week. An unworked horse, consumed at the rate of four tons and one quarter per year. The produce, therefore, of nearly six

acres of land is necessary to support a working horse by the year, but half an acre of carrots, at six hundred bushels to the acre, with the addition of chopped straw, while the season of their use lasts, will do as well, if not better. These things do not admit of doubt. They have been subjects of exact trial. It is believed that the value of a bushel of Indian corn, in straw and meal, will keep a healthy horse in good condition, for a week. An acre of Indian corn which yields sixty bushels, will be ample for the support of a horse a year. Let the farmer, then, consider whether it be better to maintain his horse upon the produce of half an acre of carrots, which can be cultivated at an expense not greatly exceeding the expense of half an acre of potatoes, or upon the grain produce of an acre of Indian corn, or on the other hand, upon the produce of six acres of his best land in hay, and grain; for six acres will hardly do more than to yield six tons of hay, and twenty eight bushels of corn.

Plants.—Experienced agriculturists state, that plants, whether in garden, field or forest, if in rows, should be placed in the direction of north and south, in order to admit the sun's rays, every day, on both sides of the row.

Early Cucumbers.—Take a herring or raisin box, cut a piece of turf the size of the box, then lengthways and crossways, to make eight pieces. Put it into the box inverted; put in rich soil half an inch deep, plant seed enough for a hill on each turf, cover them with rich soil half an inch deep, place the box by a stove, sprinkle water on as occasion requires, set the box out the south side of the house in pleasant weather, carrying it in at nights; and at a proper time remove them to the garden. The benefits of this mode are, the little trouble and expense attending it, and the ease with which they are transplanted. By removing each piece of turf separately, they seem not to be stunted at all in growth.

Mangel Wurzel.—Every farmer ought to keep on hand, a good supply of Mangel Wurzel. As a food for cattle, it cannot be too highly appreciated. During the process of cultivation, as soon as the outside leaves begin to drop, strip them off, taking only a few at a time off each plant: they will give you a quantity of feeding for pigs, cows, and sheep, and will give you plenty in

your farm yard from September to November; and by keeping your pigs, cows, and sheep in house at night, and giving them plenty of straw and sand, you will make quantities of dung. In November cut off the heads, and then draw the crops, pulling the roots only in dry weather, and pit them as you do potatoes; protect them carefully from rain or frost, as either destroys them when they are pulled. The leaves will feed your pigs, cows, and sheep for three months; they are as good, if not better, for pigs than raw potatoes, the roots raw and split will feed your cows from November to May, in a manner they never were fed before; and boiled or steamed they are good for pigs or horses; independent of the value they are to the farmer, by supporting his cattle in the best way, they are worth sowing for the immense quantity of manure they make, by feeding all his stock in the house, for the greater part of eight months.

Potatoes.—A novel mode of growing potatoes has been tried in Germany with beneficial effects. A corner of a cellar was covered with a bed of 2-3 river sand, and 1-3 common mould, into which was placed in April, 32 potatoes, without covering them with mould or sand; these produced in November about one peck, the 10th part of which were as big as an apple, the rest were smaller. The peel was very thin, the pulp white and mealy, and the taste unusually pleasant. No culture was used, and yet they grew without the influence of the sun or heat of the day. This experiment is worth a trial in warm frost-proof cellars, for early potatoes.

Raising Potatoes in Poor Soils.—A successful experiment has been made, in planting potatoes in poor clayey soils; it is by covering them with a layer

of tanners' spent bark, before turning a furrow over them. By this means a loose spongy bed is provided for the young tubes; weeds are prevented from springing up, and a sufficient moisture is preserved during the most protracted draught, as the spent bark, covered by the surface soil will retain water, for a long period, after a rain.

Carrots.—Spirits of Tar has been used with great success as a manure for Carrots. Procure a quantity of fine sand, which saturate with the spirit until it is completely mixed; before digging, scatter it upon the ground, at the rate of one gallon to every 60 or 70 square yards.

Lime-water to Kill Worms.—To six quarts of water, add half a pound of caustic lime, and after letting it stand a few moments, commence watering the ground infested by worms, and they will soon be seen rising to the sur-

see, writhing about, and will die in a few moments, especially if a little more of the lime water is then sprinkled on them.

Black Rust on Plum Trees.—Shave the excrescence close to the wood, being particular to scrape out every particle of the watery substance, and cover the wound with wax, and it will soon heal over. In this manner, the limbs can all be saved, and the health of the tree preserved.

Manure.—It is perhaps not generally known, that manure raised in summer is greatly superior to that produced in the stalls during winter. The strength and consequent value of all cattle dung, will of course, depend upon the nature of their food; if soiled during summer upon clover, tares, sainfoin, &c. &c., there can be no doubt, that the manure will have a proportionately greater effect upon the land, than if the beasts be kept in the straw yard; and

if stall-fed either still better. On the help of any the stalls, just into it; the manure is completely decomposed in the compost manure, and many other articles in contact with it before as the detritus putrescent, marfect this compo

if stall-fed either in winter or summer, for the purpose of fattng, it will be still better. Compost heaps may be raised from urine, frequently without the help of any dung from the cattle, by erecting a receptacle at the back of the stalls, just outside the building, low enough to allow the urine to pass into it; the most foul or weedy moulds may be thrown in, and when the mass is completely saturated, and the earthy matters covered with the urine, the compost may be thrown out, and the proceeding again renewed. The action of the urine if not reduced by water, is so powerful, that were worms and many other destructive insects, and all vegetables, weeds, &c., when in contact with it for a time, are deprived of their living functions, and therefore as the deteriorating influences of the rain, sun, and arid winds, are all putrescent, manures or compost are so serious, it would be necessary to protect this compost from their influences by a suitable covering.

Pasture Lands.—It is said by an old agriculturalist, that grass will flourish better with the same manure, in an orchard, than an open field. The deposit of the leaves is an annual manure, and the roots open the ground and

prevent the grass from matting. If the doctrine is true, farmers will of course find it to their advantage to plant fruit trees in all their pasture lands.

Management of Stiff Land.—A strong retentive yellow clayey soil, may be made in a few years to produce abundant crops, by adopting the following course:—Take out a trench 2 feet wide, and 18 inches deep; turn up about 18 inches of the clay, leave it in the bottom of the trench, in large spits as loose as possible. Then lay on the clay a good coat of long rank dung, the top spit of the next trench must now be laid on the dung, and another coat of dung laid on that—the remainder of the soil brought on the surface, and so on till the whole is finished. This method of trenching will answer every purpose of ordinary draining, which would be much more expensive

Scarecrow.—I have lately seen a domesticated rook having so remarkable an antipathy to a white kitten, as to fly away on its approach, and shun it as something to be dreaded or avoided. On the other hand it is incessantly teasing to dark cats. Though I am altogether inimical to the destruction of the rook, if a scarecrow were to be used, I may venture to affix the query—would not the object to be attained be better accomplished by using a mock scarecrow, decorated with plumage, such as the feathers of a chicken?—*Gardiner's Chronicle.*

To heal wounds in Trees.—Take of dry pounded chalk three measures, and of common vegetable tar, one measure, mix and boil them till it becomes hard like beeswax. Lay this compound hot (with a hot trowel) about the thickness of a half crown, over the wounded place, after carefully paring away the rough edge.

Birds.—Farmer! take care of the birds and they will take care of you. A little attention to their habits and regard for their safety will improve your income, and also render them agreeable companions.

Dead Animals.—By covering dead animals with five or six times their bulk of fresh soil, mixed with one part lime, and suffering them to remain, their decomposition would impregnate the earth with soluble matter, so as to render it a most valuable manure, which might be applied in the same way as other manure to crops.

Vermin on vines.—Charcoal is beneficial to plants in several ways—it improves the soil by attracting nitrous substances, and it raises the temperature,

about the plants around which it is placed, since the rays of the sun are not reflected back as they are from light colored substances. Charcoal dust is also offensive to insects and grubs, and though it may not kill them, it will drive them away. A little sifted over the plants every day or two, will prove to be as good an article as any that has been recommended for garden plants.

Early cucumbers.—Take a herring or raisin box, cut a piece of turf the size of the box, then lengthways and crossways, to make eight pieces. Put it into the box inverted; put in rich soil half an inch deep, plant seeds enough on a hill for each turf, cover them with soil half an inch deep, place the box by a stove, sprinkle water on as occasion requires, set the box out the south side of the house in pleasant weather, carrying it in at nights; and at a proper time remove it to the garden. The benefits of this mode are, the little trouble and expense attending it and the ease with which they are transplanted. By removing each piece of turf separately, they seem not to be stunted at all in growth.

Squash bugs.—The black and yellow striped squash bugs age very easily destroyed by placing shingles, under the vines towards evening, the bugs will crawl under them to lodge during the night, start the first thing in the morning, turn the shingles, and you find the bugs there instead of on the vines—and you may easily kill them.

Important discovery.—A new process has been discovered in England for salting and curing animal substances, which is protected by letters patent. It is on the Hydraulic principle. The meat to be cured is placed in an iron vessel of considerable strength, connected by a pipe and stop-cock with the brine tube, also with an exhausting pump. The cover having been screwed down on the vessel, the air is extracted and a vacuum established, whereupon, the stop-cock being properly turned the brine rushes in and takes the place of the

air, filling the stance. The important, and tion. Hides c ing much less ing process.

Birch.—It has as underwood, ed from it.

air, filling the pores of the meat, and penetrating through the animal substance. The advantages secured by the new process over the old are highly important, and in every respect calculated to facilitate its general introduction. Hides can also be prepared for packing with great advantage, occupying much less space, thoroughly preserved, and rendered better for the tanning process.

Birch.—It has been ascertained that the common birch will bear pruning, as underwood, and thus secure a profit independent of other advantages derived from it.

Rust in Wheat.—A correspondent is of opinion "that rust is occasioned by a rapid flow of the sap, brought about by a warm rain on fresh manure, that affects the flow of sap,—which makes it to flow so profusely, that it bursts the outer bark, and allows the sap to ooze out, and dries on the leaf, which makes the rust; consequently the sap oozing out in every direction, the kernel is not supplied, and shrinking is the consequence."

He has come to this conclusion from observing the progress of two fields of wheat, the one manured heavily, the other lightly. He adds—"You will generally see wheat rust the most where it has the most rapid growth; you will see it in thick sandy land, around stumps on new land, and on fire beds, where the timber has been burned (if it is in the field at all.) It is frequently a foot taller than that which is not more than a foot from it. If it was anything in the rain adhering to it, why should not the whole field be rusty, or even within one foot? Again, you will seldom see wheat rust in a cold, dry summer, and small growth, when the bark does not burst before this time, when it is in the milk. I would not give a decided opinion, but it is probable that the sap is not as limpid while in milk as before, consequently there would be more obstruction in the circulation which would cause it to burst—

that the straw near the head begins to dry, and will not allow so rapid and abundant flow of sap. I would not advocate that land must be very poor to raise wheat. I would have it in good heart, and not sown to wheat under one or two years after a fresh coat of manure is put on."

Calves.—Potatoe starch is cheaper than sago, it is Irish produce—Irish manufacture. I have at this moment four beautiful calves being educated by its means; they get each a pound of starch, and four, five, or six quarts of milk per diem; as they grow older their allowance will increase to a pound and a half of starch and six quarts of milk. I have three calves, reared last year, one sucked a nurse, the other two were fed on starch; the latter are larger and more comely than that which sucked. The best veal which comes to Derry market is fed on milk thickened by infusing the inside matter with roasted potatoes, which is carefully scooped out, bruised and mixed

with the milk, to the amount of 4 pounds a day, given in three or four feeds
 The roasted skins, with buttermilk, is excellent for porkers.—*Irish Paper.*

Bone Dust.—This species of manure, it seems, was first made use of in Germany, from whence myriads of tons have been exported to various parts of Europe, particularly to England, where some of the poorest lands have been brought to its use into the highest state of cultivation. There is consequently a proverb "that one ton of German bone dust saves the importation of ten tons of German corn." It has been proved by experiments, that bone dust acts in the cultivation of ground, as compared with the best stable manure—1. In respect to the quality of corn as seven to five. 2. In respect to the quantity as five to four. 3. In respect to the durability of the energy of the soils as three to two. It produces several collateral advantages;—1.

It destroys weeds
 fallow. 3. This c

It destroys weeds. 2. It diminishes the necessity of suffering the land to lie fallow. 3. This concentrated manure, or substitute for manure, is more easy of conveyance, less laborious to spread and can with facility be applied to the steepest vineyards or other high lands, either in mountainous countries or in wet meadow land. 4. It renders agriculture practicable without cattle breeding, grazing, &c. A bone mill has been in successful operation for the last five or six years in Roxbury, Massachusetts; from which several of the neighboring states, the Canadas &c. have been supplied. Those of our farmers who feel disposed to give this kind of manure trial, may now have an opportunity of doing so by applying to Mr. J. D. Nash, of Halifax. We recommend it to their attention and have no doubt they will find by their experience, that the Proverb may be parodied thus—"one ton of Yankee bone dust saves the importation of ten tons of Yankee corn."

Important Discovery—New Potatoes grown in the open air!—A peasant named Patrick Divy, agreeably surprised us with a present of a dish of new

potatoes of the kind called Pinkeys, grown in the open air, in a Haggard. It appears that before Christmas, Divy dug a trench to the depth of two feet, when he came to the subsoil, or "the warm limestone bottom," as he expressed it. Upon this he laid a row of good full-sized potatoes, and covered them up, without manure of any kind, and threw a little straw over the surface.—About a fortnight ago the buds began to make their appearance over ground, and on Monday, on examining the roots, a crop of tubers of a large size was discovered, to the astonishment of all who saw them. The seed, Divy informed us, was not decayed, but appeared perfectly sound. The new potatoes are not only as large as the average size of full grown cups, but of an excellent quality, being dry and farinaceous. There can be no doubt but

this is an important discovery, and may lead to the greatest improvement in the culture of that valuable root—the potatoe.—*Kilkenny Journal.*

To Preserve Eggs.—Take a tub, pail, box, or jar of the required size; lay fine salt to the thickness of two inches evenly on the bottom of it, and place the eggs with the small end downwards on the salt, so as not to touch each other. Then strew more salt so as to cover the eggs; and thus add a layer of salt and a layer of eggs, till the vessel is full. Place in a cellar, and the eggs will keep good throughout the ensuing winter.—*Gardener's Chronicle.*

Coffee, from sweet potatoes, is warmly recommended. The potatoes are pared, sliced, toasted, ground, steeped, like the coffee berry. It is said to be very palatable, has the flavor of cocoa, and requires little sugar.

PROVINCE OF NOVA-SCOTIA.

GOVERNOR. His Excellency LUCIUS BENTINCK, VISCOUNT FALKLAND, Knight Grand Cross of the Guelphic Order, and Member of Her Majesty's Most Honorable Privy Council, Lieutenant Governor and Commander in Chief, in and over Her Majesty's Province of Nova-Scotia, and its Dependencies, &c. &c. &c.

Secretary, The Count DeBarruele.

Executive Council.

Barristers and Attornies.—Same as last number, page 41.

Commissioners for taking Special Bail.—same as last No. page 43.

[The publisher, in order to make the present number of the Nova-Scotia Almanac as serviceable to his numerous readers as possible, and by the way of combining amusement with instruction, has had the following Chronological Table compiled, which will be found to contain all the most remarkable events in the history of Nova Scotia, from the discovery by Cabot, until the year 1825. Want of space would not allow him to extend it to the present year; but this he purposes to do in the next No.]

CHRONOLOGICAL TABLE.

1497. North America, including Nova Scotia, discovered by John Cabot five years after Columbus made his first voyage to the more southern part of the Continent.
1513. Baron de Lare, a Frenchman, attempted to form a settlement at Couseau, but was unsuccessful.
1525. Varazzand, a Frenchman, and Gomez, a Spaniard, coast the shore from Newfoundland to Florida, and touched on Nova Scotia, but made no attempt to settle the country.
1534. Jacques Cartier landed at Bay Chaleur, and took possession of the country, in the name of the King of France,—being the first actual possession taken in the name of any of the European Sovereigns.
1598. It was not until this late time that La Roche made a second attempt to settle the country in behalf of France; leaving some unfortunate convicts to perish on the Isle of Sable, was all he effected.
1604. Monsieur De Monts forms the first permanent settlement on the shores of this Province, at Annapolis, which he called Port Royal, and gives the country the name of Acadia. The French at this early period had the good fortune to conciliate the Indians, and continued to live in amity with them during the whole time they held the country.
1607. The French writers record that in January the climate was so warm as to admit of their visiting their "corn fields," a distance of two miles in an open boat, and dining in the open air. In the spring of this year two hog-heads of fish were sent to France, being the first fish exported from the country. At this time the two Gilberts formed the first English settlement on the West side of the Bay of Fundy, which settlement, together with the discovery by Cabot, is the foundation of the title of the Crown of England to the country.
1608. Two Catholic Priests arrive at Port Royal from France, being the first clerical men sent into the country. A difference shortly arises between them and the Governor.
1613. The Priests are removed to LaHave, and form a settlement there, which they call St. Saviour; this settlement was, however, scarcely formed, when they were discovered by Capt. Argall, of an English 14 gun brig, who burnt the house and brought the inhabitants prisoners to New England. Capt. Argill also destroyed the settlement at Port Royal.
1621. The whole country, including New Brunswick, was granted by James the First to Sir William Alexander, under the name of Nova Scotia.
1625. Sir William Alexander's grant confirmed by Charles the First, who instituted the order of Knights Baronets of Nova Scotia.
1627. Sir William dislodges the straggling French settlers, and forms the first permanent English settlement in the country. The French fit out a strong fleet to recover Port Royal and other places in North America; but it is destroyed or captured by the ships of Sir Wm. Alexander.
1628. Claude de la Tour, a French Protestant, who was in one of their ships, became an English subject, and married one of the Queen's Maids of Honour. After which he warmly espoused the English interest, and helped them to colonize the country.
1629. Sir David Kirk fortifies Port Royal and Cape Breton, after which he sails up the St. Lawrence, and on 19th July reduces Quebec.
1630. Sir Wm. Alexander conveys his title to Nova Scotia, with the exception of Port Royal, to Le Tour.
1632. The whole of the country ceded to France, by the treaty of St. Germain's; and Razillia, a French Governor, sent out to take possession of it. At this time the River Kenebeck was considered the south boundary.
1634. Razillia dies, and the government passes into the hands of Charnise by a royal commission. Charles E. La Tour (son of the former La Tour) holds forcible possession of part of the country, and open warfare exists between him and Charnise. Le Tour was finally subdued, and, after the death of his heroic wife, forced into banishment.
1651. La Tour returned at the death of Charnise, whose widow he married, and thereby regained possession of the whole country.
1656. Major Sedgewick, with a strong force, by order of Oliver Cromwell, destroys all the French settlements, and the country again passes into the hands of the English. Le Tour, however, having put himself under the protection of the English, in company with Mr. Temple and William Crowe (a native of Nova Scotia, and a dramatic writer of note in England,) obtained a grant of the whole Province from Oliver Cromwell.

1667. The country was again ceded to France under the name of Acadia, and the French remained in quiet possession for twenty-two years.

1690. War having again broke out, an armed force, from Massachusetts, under the command of the celebrated Sir William Phips, destroyed the fortifications at Port Royal, and conquers the country in behalf of England. Shortly after, Villabou arrived from France, and retook Port Royal. He did not, however, retain it long, but had to return to France. Nova Scotia was then appended to and formed part of the Government of Massachusetts.

1691. Villabou returned and took the Deputy Governor, Mr. Nelson, and sent him prisoner to France. Villabou was shortly after taken in his turn, as he was making a voyage to St. John in a frigate, and sent prisoner to Boston; whereupon the English regained possession.

1697. By the treaty of Ryswick, the French were again put in possession of the country, and the boundary fixed at the River St. Croix.

1701. Brulion, the French Governor, then residing at Lahave, encroaches on the English settlements at Kenebeck, and interrupts their trade by piracy. A large force from Massachusetts, under Colonel Church, retaliates, and lays waste many of the French settlements.

1707. The English make an unsuccessful attack on Port Royal.

1710. General Nicholson, with a large force, reduces Port Royal, and transports the Governor home to France.

1713. The French waved their claims, and for the first time ceded the country to the English, by the treaty of Utrecht: since which it has remained exclusively in the hands of the English.

1714. General Nicholson was commissioned Governor of the Province by Queen Anne, and resided at Port Royal, the name of which was now changed to "Annapolis Royal," in honour of the Queen. The French settlers very generally decline taking the oath of allegiance.

1720. Colonel Philips is appointed Governor, and nominates a Council of twelve. The Acadians are again summoned to take the oath of allegiance, and out of 4,000 not more than 1,000 comply.

1724. Since the termination of the French power, the Indians having maintained a cruel and harrassing war, under the secret guidance of the French officers, were this year defeated, and many of their principal villages destroyed, which induced them to sue for peace; after which no remarkable event for twenty years.

1744. War again broke out between the English and French, and the Indians made an unexpected attack, and destroyed many of the settlements throughout the country: assistance, however, shortly arrived from England, and they were repulsed, and, in consequence of the cruelties practised by them, the Governor of Nova Scotia offered a reward for their scalps.

1745. Louisburgh taken the first time, principally by forces from New England, aided by Novascotians.

1746. A number of French ships-of-war sank by their crews in Bedford Basin, to prevent their being taken by the English fleet.

1747. A number of men killed at Windsor and other places, by a French force sent from Canada to retake the country. A large armament sent out from France to reduce Nova Scotia, was defeated by Admirals Anson and Warren, who took a number of ships and 400 prisoners. After which the French troops from Canada retired from the Province.

1748. Peace again restored to the country, by the treaty of Aix la Chapelle, by which Louisburg was given up to France.

1749. Governor Cornwallis and near 4,000 persons sent out, under the patronage of the Marquis of Halifax, at the expense of the home government; and they lay the foundation of the Town of Halifax. They are much impeded by the hostility of the Indians, who kill a number of the workmen. The Governor requires an unconditional oath of allegiance from the Acadian French, which they delay (some say decline) to take.

1750. At a time of profound peace between France and England in Europe, La Corne, from Canada, with a body of 600 men and 2 ships of war, menace Halifax and keeps the country in a state of warfare.

1752. Governor Cornwallis returns to England, and is succeeded by Governor Hobson.

1758. Lunenburgh settled by the Germans.

1754. Governor Lawrence, in the absence of Hobson, grants Lawrence Town—east of Halifax—to 20 proprietors.

1754. The Supreme Court first established in Halifax, and Jonathan Belcher appointed Chief Judge.

1755. In consequence of the aggression of the French; Colonels Monkton and Winslow, with a body of Provincial and regular troops, destroy all their fortification in the Province, and send all those they find in arms to Louisburg. The Acadian settlers, they allowed to remain, under a promise of peaceable behaviour in future. Shortly after, the whole of the Acadians, consisting of near 18,000 souls, were expelled the country. This action, which we would fain draw a veil over, was ordered by the Governor in Council, and executed by Colonel Winslow. From the settlement of Halifax up to the present year, the British Government granted towards defraying the expense of settling the Town, and other charges connected with the same, the large sum of £115,584 14s. 11d. sterling.

1759. An armament, fitted out at Halifax, reduces Louisburg; 5,673 prisoners, 339 cannon, and 9 ships of war are taken with it. The first House of Representatives were called together this year, and chose Robert Sanderson Speaker. One of their first measures was passing a bill disqualifying all salaried officers from holding a seat in either the House of the Council. The Council, however, reject it.

1759. Governor Lawrence issues his celebrated proclamation, which induces many persons to migrate to the Province, and settle on the lands vacated by the removal of the French.

1760. Governor Lawrence dies, and is succeeded by Jonathan Belcher as President; and afterwards as Lieut. Governor.

The Assembly being dissolved by the death of George 2d, the Governor and Council alter the scale of Representation. The second General Assembly convened, and appointed William Nisbet, Speaker.

1762. The whole country now ceded to the English, by the treaty of Paris, which confirmed to them all the French possession, in this part of America.

1763. Montagu Wilmot assumes the Government. Londonderry and Horton were both settled this year.

Imports into the Province this year, amounted to £4,312; Exports to £16,309; the whole population to 13,000 persons.

1764. Settlement of Shelburne commenced. The Acadians are allowed to hold land in the Province, by order from the Home Government.

1765. The Stamp Act submitted to by Nova-Scotia; most of the other colonies reject it.

The Scale of Representation was again altered by the Governor and Council.

Note. It is probable that the third General Assembly was convened in 1763, but the Compiler can find no record.

The fourth General Assembly convened at Halifax the 23th May, and again chose William Nisbet, Speaker.

Cape Breton was this year annexed to the Government of Nova-Scotia, by the name of the County of Breton. It is allowed two Representatives.

1766. Governor Wilmot dies, and Mr. Green administers the Government as Senior Counsellor. In November Lord-William Campbell arrives, and is sworn in as Governor.

1767. Township of Yarmouth Granted.

1768. A *Province Gardener* included in the Civil List, at an annual salary of £32 10 0.

A Circular was this year received from the Common Wealth of Massachusetts requesting the Co-operation of our House of Assembly, in removing Colonial grievances. It was treated with inattention by the Assembly.

Two Regiments of troops are sent from Halifax to Boston, in consequence of the growing disaffection in New England.

Lord Hillsboro, the Colonial Secretary, admits that a Provincial Agent may be sent to reside in London,—but stipulates that he shall be appointed by the whole Legislature.

1769. Two Methodist Ministers arrive in Halifax, being the first that have visited Nova Scotia.

The fifth House of Assembly was called; but writs were not issued for Members, for the Island of Cape Breton, in consequence of their being so few Freeholders in it. The Island was thenceforward considered part of Halifax.

14th April. The Governor and Council resolved that Town Meetings, for the purpose of discussing questions of Law or Government was illegal; and, if persisted in, the parties should be proceeded against by the Attorney-Gen'l

1770. The new House of Assembly meets in June, and continues to Legislature in the usual manner for fourteen years, and had seventeen Sessions.

1772. The Township of Argyle Granted.

Population at this time, 17,000, exclusive of 13,00 Acadians.

Francis Legge is appointed Governor, in place of Lord William Campbell, who is promoted to South Carolina.

1773. In consequence of the illness of the Speaker, of the House of Assembly, Henry D. Denson is chosen Speaker pro. tem.

1774. Lord Dartmouth the Colonial Secretary, orders Governor Legge not to pass a Grant of land to any Roman Catholic, without the special permission of His Majesty.

William Nisbet having recovered his health, is again chosen Speaker of the House of Assembly.

1775. The Governor, by the advice of his counsel, recommends to the Assembly, that their number should be increased, by adding two new Members for the Town, and two for the County of Halifax. This the Assembly, with much moderation, but with much firmness reject.

17th August. All ordinance, small arms, and gunpowder in Halifax, removed on board a receiving ship in the harbor, as a place of safety.

All the male adult inhabitants of the Province, ordered to take the oath of allegiance. A draft of Militia from Lunenburg, King's County, and Acadian's from Clare and Yarmouth, ordered to march to Halifax for its protection.

1776. A sloop-of-war stationed in the Bay of Fundy, to prevent the Vessels of the revolted Colonies from plundering Annapolis, St. John, Cumberland, &c. Troops were sent to Cumberland, to quiet a disturbance there.

The office of Inspector-General of Accounts abolished, in consequence of a request from the House of Assembly to the Governor for that purpose.

Troops sent to Liverpool and Yarmouth, to protect these places from American Privateers.

About the same time, 100 troops are sent to Onslow, Truro, and Londonderry, in consequence of the inhabitants having refused to take the oath of allegiance.

1777. A large Scotch Merchantship was cut out of the harbor of Pictou, by two American armed whale boats.

The Members from Onslow and Truro, not allowed to take their seats at the Session of the House, in consequence of their constitutants refusing to take the oath of allegiance.

1778. Barns, out-houses, and taverns, in the North suburbs of Halifax, allotted for the quarters of a Battalion of Huzzars.

1779. The Indians assemble in great force at the river St. John, and threaten the invasion of the Province; But are pacified by presents. This is the last threat of an Indian war.

1780. The Militia are ordered from the interior, to work on the fortifications in Halifax.

The Assembly grants £1500, for the erection of a School House in Halifax and £100 annually for a Teacher.

1781. Windsor, and the adjoining settlements erected into a County, to be called Hant's County.

A scarcity of flour in Halifax; and sixty tons are ordered from Windsor, Horton and Cornwallis.

1782 The House of Assembly pass a Resolution, that Judges are eligible to seats in the House, as Representatives of the people.

Between the 11th February, and 14th July this year, three Colonial Secretaries are severally appointed, and each one as he is appointed notifies the Governor thereof.

Governor Parr was sworn in and assumes the Government in October.

The Provincial Secretary, the Treasurer, and the Surveyor-General appointed ex officia Trustees of Public Property.

Peace restored to the Province, by the conclusion of the American War.

1783. All persons in the Province guilty of treason, or treasonable correspondence with the Americans, during the war, are pardoned by an Act of the Legislature.

Nearly 20,000 Emigrants, principally American Loyalists, arrive and settle in the Province this year. Shelburne erected into a County.

The Colonial Secretary sends word to the Governor, that as the Province has grown into importance, a regular line of packets shall be established between Falmouth and Halifax. The Assembly grant £500 annually towards the support of Governor Parr's table.

They vote also £100 per annum, as a retiring allowance to their late Speaker, Nisbet.

1784. New Brunswick and Cape Breton set off as two separate and distinct Governments.

Thomas Cochran, chosen Speaker of the House of Assembly, in place of Nisbet who retired.

The Townships of Preston, Clements, and Aylesford, settled this year.

A number of families emigrate from Nantucket, and settle in Dartmouth, for the purpose of establishing the whale fishery.

1785. Sampson Salter Blowers appointed Attorney-General.

A duty of £18 per ton laid on oil imported into the Province, from the United States by the home Government.

A turn-pike gate which was erected at Sackville, was in September this year broke down: a reward of £50 was offered for the perpetrators; but it does not appear that they were apprehended.

The sixth General Assembly convened in December. S. S. Blowers chosen Speaker; C. Hooper of Cumberland, was not allowed to take his seat, on the score of his being an alien.

There were ninety saw-mills in the Province at this period.

1786. The Colonial Secretary informs Governor Parr, that he disapproves of the encouragement given to the Nantucket whalers, to settle in Dartmouth. This may be the cause why they left the Province shortly after.

1787. Nova-Scotia erected into a separate See, and the Rev. Charles Inglis appointed first Bishop.

Prince William Henry, [His late Majesty William 4th] then a midshipman in the Navy, was invited to a public entertainment by a vote of the Council and Assembly. The next morning the Governor informs both Houses by message, that his Royal Highness approves of the manner in which the entertainment was conducted.

1788. The Assembly, by Resolution, complain of the Judges; which the Council meets by a Resolution, exculpating them from all blame.

1789. £444 8 10 1-2, annually appropriated by a vote of the Assembly, for the support of Windsor College, which they make perpetual.

The seventh General Assembly convenes, and Mr. Uniacke chosen Speaker in place of S. S. Blowers.

A motion was made in the Assembly, to request the Governor, by an address to remove his Councillors on account of the ill advice they gave him, respecting the Judges; but the motion was lost.

1790. The House of Assembly formally impeach the Judges, of the Supreme Court; and, by the advice of the Council. His Excellency suspends them until His Majesty's pleasure is known. The Population of Halifax at this time, 4,897.

1791. Governor Parr dies, and R. Buckley administers the Government as Senior Counsellor.—1792 The Pictou Road opened.

Governor Wentworth arrives, and is sworn in as Governor.

Judge Strange is appointed to a seat in the Council.

1793. The eighth General Assembly convened at Halifax, and appointed Thomas Barkley their Speaker.

1794. The French War was now at its height, and press warrants were frequently granted at Halifax.

1795. The Rev. Mr. Lloyd is frozen to death, on his way from Windsor to Chester.

Two French men-of-war taken by the Thetis and Huzzar, and brought into Halifax.

1796. The Maroons arrive in Halifax from Jamaica, and are located at Preston.

The Assembly resolve that a building shall be erected, for the meeting of the Legislature and other public purposes. This is the first step towards the erection of our present Provincial building and Government House. The Legislature then occupied a hired private building.

1797. S. S. Blowers appointed Chief Judge, in place of Judge Strange, who was promoted to a Judgeship in the East Indies.

La Tribune lost off Halifax harbor, and out of 257 souls on board, all were lost but 12, and these were saved by the courage and exertions of a Herring Cove fishing boy thirteen years of age.

1798. The Assembly vote 500 guineas, to purchase a star for the Duke of Kent, then about leaving Halifax.

A heavy gale of wind in September, done immense damage throughout the country.

As much as £10,000 was raised by voluntary contribution throughout the Province, to aid the Home Government in their war with France.

1799. His Royal Highness the Duke of Kent appointed Commander in Chief of all the British forces in North America.

R. J. Uniacke Esq. chosen Speaker of the Assembly, in place of Berkley.

The Duke of Kent returns to Halifax in September.

1800. The Colonial Secretary informs Governor Wentworth, that such of our Colonial Act as do not receive the Royal assent within three years after their enactment, are to be considered as disallowed.

The eighth General Assembly convened in February, and chose R. J. Uniacke again for their Speaker.

The Colonial Secretary orders, that in future all marriage licences in the Parish of Halifax, shall be directed to the Rector, Vicar, or Curate, of St. Paul's, and to none other.

The foundation of the Mason Hall laid by the Duke of Kent in June, and in July his Royal Highness leaves the Province for England.

1801. The Governor received orders from the Colonial Secretary, to encourage the growth of Hemp, in the Province; and a public meeting held in Halifax, to consider the subject, Resolves, that the climate and soil is suitable Esq. for its growth.

The Hon. L. Hartsborne resigns his seat in the Council.

Halifax was illuminated 19th November, in consequence of the peace with France.

1802. A Royal Charter was this year granted to the College, at Windsor. The Princess Emilia, having on board all the Duke of Kent's furniture, was lost on the Isle of Sables; and out of 200 persons on board, not one was saved.

1803. The establishment for the relief of shipwrecked seamen at the Isle of Sable, founded,—and the Legislature grant £400 annually for its support.

His Lordship Bishop Englis publishes a pastoral letter to the Clergy of his Diocese, which draws a letter in answer from Dr. Burk, of the Catholic Churches; this gives rise to the celebrated controversy between him and Dr. McCulloch.

Michael Wallace, Esq., called to the Council. The University, at Windsor College opened.

1804. The Road from Annapolis to Liverpool opened. The appropriation bill lost, in consequence of a difference between the Assembly and Council. Governor Wentworth however, informs the Assembly, that he will pay the public officers on his own responsibility, which he accordingly did.

1805. A French prisoner of war executed at Halifax, for the murder of a fellow prisoner. His fellow prisoners were his Jurors.

Halifax illuminated, and great rejoicing, in consequence of Lord Nelson's action off Trafalgar.

1806. Two frigates on the Halifax station disallowed entering the American ports, in consequence of difference growing out of the right of search. Revenue of the Province amounts to 20,577.

The tenth General Assembly convened, and chose Cotman Toug, Speaker. This choice was disallowed by Governor Wentworth; and the House then chose L. M. Wilkins for that office.

The House requests the Governor to issue writs for a Member each, for the Townships of Chester and Wilmot, which his Excellency did not accede to. An alarm given, and the alarm guns fired at Halifax, in consequence of some strange ships-of-war having been seen off the coast; and the readiness with which the Militia in the neighborhood of Halifax attended, at their several places of rendezvous on the occasion, was such as to give the Government much satisfaction.

1807. The frigate Leopard, of the Halifax station, fires into the American frigate Chesapeake, and forcibly takes out of her several English deserters. This is the most material cause which occasioned the war which followed.

The Hon. Law. Hartsborne recalled to the Council.

Provisions not allowed to be exported, in expectation of an American war.

The Militia from the interior called into Halifax, to do garrison duty. The first class Militia of Halifax, amounted to 900 effective men.

1808. Sir George Provost assumes the Government, in place of Sir John Wentworth, who goes to England.

The House of Assembly vote £500 per annum, as a retiring allowance for Governor Wentworth. Samuel H. George appointed Provincial Secretary, Clerk of the Council, and Register of deeds. Governor Provost goes on an

expedition against Martinique, and Judge Crook administers the Government in his absence. The revenue this year amounted to £25,541.

1809. Judge Crook refuses his assent to the appropriation bill, in consequence of its including money for a Provincial Agent; and that it was too large Governor Provost returns in May, after having reduced Martinique.

Bishop Inglis raised to the Council.

The Assembly present Sir G. Provost, with a sword, valued at 200 guineas as a mark of respect for his services at Martinique.

Captain Stairs narrowly escapes being murdered, by Jordan the pirate. Jordan is shortly after taken, and after being convicted at a trial, was hung and gibbeted on Maugher's beach, off Halifax harbor.

1810. Sir John and Lady Wentworth receive complimentary addresses, on their return to reside in the Province. The Governor is permitted by the Home Secretary, to appropriate the money intended to procure arms for the Militia, to the maintenance of the Church of England, in the Province. Inter-course with the United States much impeded by embargos and other restrictions.

1811. The House of Assembly pass several resolutions, condemning the practice of the Admiralty Court; and desire their agent in London to bring the subject before the General Government. In compliance with an Act past last year, Foster Hutchinson, a member of the House, having been appointed an assistant Judge, was compelled to vacate his seat in the House. The Assembly, by address, request his Majesty to surrender the quitrents. The Little Belt, one of the Ships on the Halifax station, was fired into by the American frigate, President, by which 16 men were killed, and 21 wounded. The Colonial Secretary directs the Governor to propose to the Assembly, that in their future appropriation bills, they shall include £100 each for those Missionaries of the Church of England, who have done clerical duty in the Province two years. His Excellency lays the corner stone of the Province building, which costs the Province nearly £100,000, and takes ten years in building. Mr. Jeffery appointed to the Council. Sir George Provost goes to Canada as Governor General, and Judge Crook again administers the Government. A heavy gale in September destroys much shipping in the harbor of Halifax, and on the coast. Sir John Coap Sherbrooke arrives, and assumes the Government. The port of Halifax opened to all neutral vessels. The Assembly inform the Governor, that they decline making provision for the clergy; and again request that the quitrent claims shall be withdrawn.

1812. A frigate is chased off the harbor by an American squadron, 1st July, being the first intimation received at Halifax, of the declaration of war by the Americans. The first class Militia ordered to hold themselves in readiness, to march at a moment's warning. Orders arrive in July from England, that in future the senior Military officer shall administer the Government, in case of the death or absence of the Governor, in place of the senior Councillor as heretofore. An American privateer driven out of Digby harbor, and the captain and first lieutenant taken prisoners, by the Militia of that place. Flour in Halifax costs £6 per barrel. The tenth General Assembly convened, and again chose L. M. Wilkins Speaker. Anthony Holland establishes the Acadian Recorder. The Governor informs the House, that his Majesty will suspend the collection of the quitrents, if they will make a suitable provision for the Clergy; which they decline. The Provincial Secretary reports that £3,5000 is annually due for quitrents; out of which but £560 has been received the last year; and that the arrears now due, amount to near or quite £40,000. The American Minister sends word to Governor Sherbrooke, that their ships-of-war and privateers were ordered not to molest vessels, going to or returning from the Isle of Sables.

1813. License granted to the American ships, to trade into the ports of the Province, although the Governments were at war. The National School-house at Halifax, opened. King's College at Windsor receives a grant of 20,000 acres of land, by Mandamus from Home. The American frigate Chasepeake brought into Halifax harbor, prize to the Shannon. A dreadful gale of wind in November, by which near fifty ships in the harbor were driven on shore, and many lives were lost.

1814. The Colonial Secretary manifests his want of historical or local knowledge respecting the Province, by sending an order to the Governor, to have the American prisoners sent from Halifax to Louisbourg, as a place of great safety. The Assembly grants £1,500 toward completing the Admiral's house at Halifax. £2,500 granted for the relief of the sufferers, by the war in

Canada. The whole of the American ports blockaded by the ships on the station. Sir R. D. George sworn in as Secretary Clerk of the Council and Register of deeds, throughout the Province. Castine, and as much as 100 miles of the American sea coast taken, by the forces under the command of Sir John Sherbrooke, without the loss of a man. The Expedition sailed from Halifax in April. Major-General Durroch administers the Government during Sir John's absence. The body of General Ross, who fell at Baltimore, brought to Halifax and interred. The Revenue this year amounted to £114,533.

1815. The Police Court and Bridewell were both established in Halifax. A malignant Small Pox rages throughout the Province, and particularly in and about Halifax. Near 2,000 Blacks, liberated from Slavery during the late war, arrive at Halifax, and are located on land at Preston and Hammond's Plains. The Assembly vote £1000 to purchase a sword, as a present to Sir J. Sherbrooke, which His Excellency declines accepting, until he has His Majesty's permission. 630 chaldron of Coal were this year exported from Pictou by licence, obtained from home, for that purpose. Being the first coal exported from that place. Commissioner Woodhouse of the Dockyard appointed to the Council. Halifax illuminated, and great rejoicing throughout the Country, in consequence of the victory at Waterloo. The season so backward this year, that planting had not commenced in many parts of the Province before the first of June.

1816. Trustees of Pictou Academy Incorporated. Stage Coach commences to run between Halifax and Windsor. Captain Wesmacot is mortally wounded by two soldiers, having on them stolen goods, while he was going his night rounds. Bishop Inglis having died, the Rev. R. Stanser is appointed Bishop, agreeably to an application from the House of Assembly, in his favor. Sir J. Sherbrooke promoted to Canada; and Major-General Smith administers the Government. The Earl of Dalhousie arrives, and assumes the Government in October. The team or horse boat, commences running on the Dartmouth ferry. Commitments to bridewell this year, 159. A

destructive fire occurs in Halifax, by which property in water street, to the amount of £40,000 was destroyed; being the second fire in Halifax this year.

1819. S. B. Robie elected Speaker of the Assembly in place of Wilkins, who is raised to the Bench. A shock of an earthquake was felt at Annapolis, Granville, Lunenburg, and other places the 22d May. C. Uniacke appointed Judge of the Court of Vice Admiralty. A majority of two in the Council decide, that the rank of Judge of the Court of Vice Admiralty, does not entitle the incumbent to a seat in that body. A gloom is thrown over the Province, by the death of the Princess Charlotte. By a census taken, by order of His Excellency the Gov. the population was found to be 82,053, which was an increase since the year 1790 of 52,053. Governor Dalhousie appropriates by order from Home, £9,750, towards the building of the College in Halifax, then contemplated; out of the prize money arising from the conquest of Castine. £1,000 out of the same fund is granted, in aid of the Military Library in Halifax.

1818. Halifax made a free port by an order from the Colonial office. The harbor of Halifax frozen over in February. The Township of St. Mary's laid out. The Hon. Mr. Wallace administers the Government during the absence of the Earl of Dalhousie, on a visit to Bermuda. The Rev. Dr. Burk installed Catholic Bishop of Novascotia. The north end of the Old Parade ground in the town of Halifax, laid off for the seat of a College, to be established with a view of giving the children of dissenters, an opportunity of obtaining Collegiate education. The House of Assembly vote £190 16 11, to defray the expense of removing a number of emigrants from Wales, which had arrived at Halifax in great distress, to Shelburne, and locating them on lands in that Country. Mr. N. Atchison is appointed Provincial Agent for Novascotia, to reside at London.

1819. The letters of John Young, Esq., under the signature of *Agricola*, were this year published in the Acadian Recorder. The twelfth General Assembly convenes, and again chose Mr. Robie for their Speaker. A lottery bill past for the purpose of raising £9,000, for the erection of the Avon bridge. The Assembly vote £2,000 toward building Dalhousie College. An Agricultural Society is formed in Halifax, under the patronage of the Earl of Dalhousie. The Naval Hospital in Halifax destroyed by fire: since which it has not been built. In consequence of the death of the Duke of Richmond, the Earl of Dalhousie is promoted to the rank of Governor General.

Scotia, app

star, to present to the Earl of Dalhousie. On receiving official notice of the death of His Majesty George the Third, D. S. Clark is appointed Herald, and George the Fourth is proclaimed in Halifax in due form. Lord Dalhousie goes to Canada, and Sir James Kemp assumes the Government. The Island of Cape Breton is reannexed to Nova-Scotia, and allowed to send two Members to our Assembly. The laws and ordinances of Nova-Scotia are extended to the Island of Cape Breton. Dr. Burk the Catholic Bishop of Nova-Scotia died this year. The thirteenth General Assembly convenes in December, and reappoint Mr. Robie Speaker. Sir James Kempt draws from the contingent fund, £300, for the relief of the sufferers by a destructive fire, which occurred on the borders between Annapolis and Shelburne Counties. Liberal subscriptions are made for the same purpose, throughout Nova-Scotia and New Brunswick. The Assembly vote another £1,000 for Dalhousie College, then in progress of building.

1821. The harbor of Halifax was this year frozen over, nearly to the Light-house. A very destructive fire in Halifax consumes 23 houses in Sackville street. £168 remitted from Halifax, being the amount of subscriptions in Nova-Scotia, for erecting a Monument in London, to the Memory of His Royal Highness the Duke of Kent, Her Majesty Queen Victoria's father. The Northern District of Cape Breton divided into three Townships, viz.: Sydney, St. Andrews, and St. Patrick.

1822. The crew of a French frigate which had been wrecked, on the Isle of Sables, brought into Halifax, by the superintendent of the Island, where they were hospitably treated; which hospitality is suitably acknowledged by the king of France, who sends out an order of knighthood to His Excellency, and presents to those who were active in rescuing them. The Hon. Enos Collins appointed to the Council.

1823. Agreeable to the request of the House of Assembly, Mr. Kavannah is allowed to take his seat in the Assembly, without taking the oft repudiated test oath. He is the first Catholic to whom that indulgence has been extended. The Halifax Library established by subscription. The Assembly, by a majority of one, pass the Judge bill, which divides the Province into three districts, and encumbers the civil list with the salary of three additional Judges; after near twenty years trial, these courts are found to be worse than useless and abolished. The inhabitants very generally request his Excellency by Memorial, to withhold his assent to the Judge bill; but without effect. The harbor of Halifax was frozen over, from George's Island to the head of the Bason, and continued so for several weeks. John G. Marshall, Esq., is appointed Chief Justice of the County of Cape Breton. His Excellency appropriates a room in the Province Building, for the use of the Halifax Library.

1824. Three Members of the House raised to Judgeship, to fill the places created by the Judge bill. The Township of Kempt founded. The House vote 500 guineas to purchase a sword for Sir James Kempt, which His Excellency declines accepting; very justly observing, "That they were too prodigal with the people's money." The Shubenacadie Canal Company incorporated, by an Act of the Legislature. Mr. Robie made Master of the Roads, and appointed to a seat in the Council. Sir James Kempt visits England, and Mr. Wallace administers the Government. Sugar and coffee, the produce of South America, allowed to be warehoused in Halifax for exportation. The Colonial Secretary, by an order to the Governor, directs that the principal public officers shall wear a uniform. This order however, has not been complied with; at least in Nova-Scotia. There were this year 128 commitments to bridewell.

1825. The Liverpool Trading Company established at Halifax. An extensive forgery of Province Notes, by John Puttun, an American, discovered. The Annapolis Iron Company established. The great fire at Miramichi occurred this year, and occasioned damage to the amount £230,000. Bishop Stanser having died in England, the Rev. John Inglis is appointed in his place. S. G. W. Archibald is chosen Speaker of the Assembly, in place of Mr. Robie. A Shark, 32 feet long, and 18 feet in circumference, is taken, entangled in a fishing net, and brought into Halifax. Sir James Kempt returns from England. The Mines of Nova-Scotia granted to the Duke of York, and by him conveyed by lease, over to Rundle and Bridge; a Company of Merchants in London. The old Halifax Bank established. The Lord Bishop of Nova-Scotia, appointed to a seat in the Council. Lord Bathurst, the Colonial Se-

cretary, in a despatch, informs the Governor, that His Majesty in Council, has ordered that the British sterling money shall be the circulating medium of all the Colonies. Our House of Assembly did not second His Majesty's good intentions.

1826. There were built in Nova-Scotia this year. 131 vessels; the united tonnage of which was 15,553 tons. The principal officers and clerks of the Customs at Halifax, take the oath prescribed by the Act of Parliament. to take no fees or payments while in the discharge of their duty. The Colonial Secretary informs His Excellency, that the Home Government will pay £400 annually toward the support of the Isle of Sables, as long as the Province contributes a like sum. The Assembly vote £1,000 for the relief of the sufferers by the Miramichi fire. Private contribution in the Province for the same purpose, amounts to £4,500. The first Regatta was held in Halifax this year.

1827. The fourteenth General Assembly is elected this year, and chose S. G. W. Archibald for their speaker. The Colonial Minister, in behalf of his Majesty, remits all arrears of quitrent due previous to the 1st January last; and requires that they shall be collected in future as they become due; and applied to some purposes of internal improvement, such as his Majesty may approve of. The amount of salaries received by the officers of His Majesty's Customs in Halifax, found to be collectively over £8,000, exclusive of fees. The whole of the Assembly wait on his Excellency with a view of having them reduced. The Assembly, by an unanimous vote, request His Majesty by an address, to dispense with the declaration against Popery, heretofore imposed upon Members of the Assembly. Baptist Church in Halifax established, and their Chapel in Granville street built. The Catholics present Rev. Mr Carral with a Gold Chalice and Cup. The steam engine first introduced into the Province, and used at the coal mines at Pictou. The vote of the Assembly, granting the annual sum of 400*l*. to the Pictou Academy, was this year rejected by the Council, and consequently lost to the institution.

1828. The House, by address, request His Majesty to suspend the collection, or relinquish the quitrents. Pictou and Sydney made free ports. 300*l*. per annum for five years granted for the encouragement of a line of stage coaches, to run between Annapolis and Halifax; which commences running in June. The Assembly vote 150*l*. to encourage a steam boat to run between Annapolis and St. John. Sir James Kempt appointed Governor General, and goes to Canada. Mr. Wallace administers the Government until the arrival of his predecessor, Sir P. Maitland. The population of the Province, exclusive of Cape Breton, is found by the census to be 123,848, being an increase 41,795 in ten years. Lighthouse on Maugher's Beach first put in operation this year. The number of enrolled Militia throughout the Province, including Cape Breton, is this year 22,783. The highest tides ever known in the Bay of Fundy occurred this year, by which the dykes on many of the rivers emptying into it, are broken up, and much damage thereby incurred.

NOTE.—The object which the Publisher had in view, in compiling the preceding Chronological Table, was merely to supply this year's Almanac with a few pages of interesting readable matter; and he intended to carry it down to the present day: but facts and information, highly interesting and worthy of being recorded, has accumulated on his hands during the progress of the work, far beyond his expectations, insomuch that he has been compelled, for want of space, to break off abruptly at the year 1828. The Publisher, however, purposes to take the thing up, on a more enlarged plan, next year; and with the help of his patrons in and about Halifax, as well as those in the more distant parts of the Province, he may be enabled to make it not only an interesting appendage to his Almanac, but of much historical importance.

There are many interesting facts connected with the early settlement of Halifax, and indeed in every township in the Province, that have never been put in print, and which remain as traditions, known only to some of the older inhabitants. These, in the common course of nature, must be shortly removed from among us; and unless some plan of col-

lecting the

lecting the valuable information which they could now unfold is adopted, in the course of a very few years, much that is highly important, and as highly interesting, will be totally lost. To prevent this, is the principal object which the Publisher has in view, and he therefore requests the Patrons of his Almanac, either in town or country, who may be acquainted with any facts, such as would be useful in an historical point of view, or interesting for others to know, either from their own personal knowledge, or from trust worthy tradition, to commit the same to paper, and to address it to him by the first of June next.

The Publisher trusts this appeal will not be made in vain: and if it is at all generally complied with, a large body of valuable information will be elicited, such as will be of the highest importance, not only to us of the present day, but to future generations; and it will, at the same time, enable him to make his next year's number much more deserving of patronage than those publications have heretofore been.

PROVINCIAL OFFICERS, &c.

Provincial Secretary and Registrar of Deeds—Hon. Sir Rupert D. George, Baronet.

Provincial Treasurer and Auditor of Public Accounts—Charles Wentworth Wallace, Esquire.

Since the Almanac went to Press, a Proclamation has been issued by His Excellency the Lieut Governor, dissolving the Legislature; and the writs not being returnable till the 11th of January, we deemed it too long to wait, for so trivial a matter as the names of the new Members, when the newspapers almost daily furnish them. The list of the Members, at present in the Almanac, contains the names of those who were M. P. P's. previous to the dissolution.

ADVERTISEMENTS:

Life, Fire and Marine Assurance!

LIFE INSURANCE.

National Loan Fund Life Assurance Society,

Of London. Capital, £500,000, Sterling.

Local Board and Officers,

OF THE HALIFAX BRANCH N. L. F. L. A. SOCIETY.

LOCAL DIRECTORS, G P Lawson, Esq, T R Grassie, Esq, J E Starr, Esq, Hon J L Starr, Manager and Agent. Hon Attorney General, Standing Counsel, J C Haliburton, Esq, Solicitor; W J Almon, M D and A B, Physician and Medical Examiner.

New York Life Insurance and Trust Company!

Capital, One Million of Dollars.

WILLIAM BARD, Esquire, President.

Continue to effect Insurance on Lives, Joint Lives, survivorships, &c. &c. (approved of by the local Board, at Halifax.) of persons residing in Nova-Scotia, New Brunswick, Prince Edward Island, and Newfoundland. Terms as moderate as those of any other respectable Company in London, or New York, and every facility and information will be afforded to those who are desirous to avail themselves of this wise and beneficent Institution, which both provides for the wants of the Assured *while living*, and secures at his *death*, a comfortable independence to the bereaved wife and family, and thus mitigates the misery and desolation which too often follow that awful, but sure event which must "happen to all." Apply to the Managing Director and Agent, at Halifax, or to either of the sub-Agents, from whom every information may be obtained.

Blanks of all kinds furnished gratis. Two-thirds of all Premiums paid on Life Policies loaned to the Policy holder when required.

Leave to travel, including sea risk, extensive and liberal.

A person may effect Insurance on the life of a party indebted to him; or he may insure the life of A. & B. payable at the death of *either*.

Females, insured at the rate applying to *one year less* than their actual age.

J. LEANDER STARR, Managing Director and Agent.

Prospectus, Reports, Tables and other interesting information supplied to all Inquiries, by the Agent, or either of the sub-Agents.

Mutual Life Assurance!

Scottish Amicable Life Assurance Society!!!

Head Office, 141, Buchanan-street, Glasgow:

THE Constitution and Regulations of this Society insure to its Members, the full benefits which can be derived from such sums as they are willing to devote to the important duty of *Life Insurance*. The whole profits are secured to the Policy Holders by the Mutual System on which the Society is established, and their allocation to the Members, is made on fair, simple, and popular principles.

It is provided by the Rules, that the whole Directors, Ordinary and Extraordinary, shall be members of the Society, by holding Policies of Insurance for Life with it, of more than three years' standing. This rule secures to the public that those Noblemen and Gentlemen, who appear as Directors of the Society, have practically approved of the principles.

Agents, for Nova Scotia J. H. Liddell & Co.
Medical Adviser, Rufus S. Black, Esq.

November, 1843.

The Popular Remedy!!

AS the Medical Properties of Parr's Life Pills differ in many respects very essentially from the Pills that have hitherto been brought before the public—the Proprietors have thought it advisable to make the public acquainted with the general proprieties they possess. Parr's Life Pills, as a Purgative are found to act very gently, indeed when they do purge freely it is owing less to their purgative qualities than the very bad condition of the system they are acting upon. The vegetable ingredients of which they are strictly composed, will in all instances chemically decompose the deleterious matter that is generated by various causes, and impedes the vital and organic operations of nature in the human frame. Their action is principally by decomposition, invigorating the crassamentum of the blood, strengthening all the organs effectually, without any of that stimulating effect so injurious in purgatives generally.

They are certain in the cure of bilious, and all disorders arising from a deranged condition of the digestive organs, Dyspepsia, Foul Breath, Debility, Chronic or recent Colds or Coughs, Liver Complaints, Pains in the breast or side, Head-ache, Costiveness, Wind, Spasms, Dysentery, Low Spirits, Want of Appetite, Palpitation of the Heart, particularly from Colds, Asthma, Rheumatism, Scrofula, and all diseases arising from impurities of the blood. They are extensively used in England and all parts of France and Germany as a family Medicine, being entirely free from all mineral preparations, very mild in action, and soothing to the system. Elderly persons will find great benefit from taking this medicine—it is a most valuable medicine for the numerous diseases prevalent in the fall of the year.

The above Medicine is sold wholesale for the Proprietor in Halifax, at MORTON'S "Medical Warehouse" near the Province Building, and may also be had genuine at the following places,—

Truro,	at the store of Mr. T. B. Dewolf,
Newport	“ “ R. Wescot,
