WOMEN'S INSTITUTES

How Organized and Conducted in
This Province.

Over 900 Branches With 30,000
Members — Three Annual Con-
ventions — Some Outstanding
Varieties of Field Crops—Fresh
Fruit For the Farm.

(National Crop Improvement Service.)
Agriculture, Toronto.)

In Ontario there are 916 branch
Institutes, with a membership of
approximately 30,000. The province
is divided into three divisions, east-
ern, central and western Ontario.
Eastern Ontario contains three, cen-
tral Ontario eleven, and western
Ontario three subdivisions.

The delegates to the annual con-
vention in each division name a
representative from their respective
subdivision to form a Board of
Directors for the Provincial Federa-
tion. These directors, from among
themselves, elect officers on the exe-
cutive, and also name representa-
tives to the Dominion Federation.

The principle and designation of
the standing committees and the
system of holding and financing their
meetings is provided for in the con-
stitution of the provincial organiza-
tion and the following committees
have been named: Health, Education
and Better Schools; Immigration,
Agriculture, Legislation, Home Eco-
nomics and Publicity.

Annual conventions are held at
Ottawa, London and Toronto; plans
for the same being made in co-
operation with representatives of the
provincial committee and local com-
mittees chosen at the time of the
conventions.

The Institutes are entirely inde-
pendent of the Department, so far as
their local meetings are concerned.
The provincial organization is also
quite independent of the depart-
ment, but it is utilized in an advi-
sory capacity. The superintendent
of Institutes suggests lines of work
for the Institutes from time to time,
and places before them reports of
what the Institutes are doing in var-
ious sections of the province, as well
as other sections of the Dominion.
The Department furnishes lecturers
for single meetings, and instructors
for short courses as outlined in cir-
cular No. 18.

The membership fee of twenty-five
cents per member is wholly used for
local purposes. The Government
grant is \$3 to each branch having a
membership of fifteen and adding
at least six meetings a year and fur-
nishing the reports asked for by the
Department, including a list of
members, financial statement and
brief reports of meetings. A grant
of \$10 is also given to the district
organization, with an addition of \$3
on account of each branch in the
district which makes a satisfactory
report.—Geo. A. Putnam, Superinten-
dent, Farmers' Institutes, Toronto.

A Confederation Poem.

Charles G. D. Roberts, the Cana-
dian poet, wrote "An Ode for the
Canadian Confederacy," the first line
being: "Awake, my country, the hour
is great with change."

The Eskimo Dog.

With the going good, an Eskimo
dog will draw an average of 300
pounds weight thirty-five miles in
one day.

For Sale

About 4 acres of cabbage, caul-
iflower, turnips and beets, mostly
stock feed, some waste, examine
and make me an offer. F. W. Van
Loven, Inksetter farm.

A Square Piano in good condi-
tion, \$50, and 1 Hotblast Stove,
coal or wood, also a quantity of
stove pipe at half price. Mrs. A.
L. Henry, Mill street.

Base Ball as Played In Cleveland

A game of ball played in Cleveland
as reported by Elgin Featherston, a
former star pitcher of the Waterdown
Juniors.

The Grandstand at Asylum Park
was filled, all the Nuts were were out
and became Bugs when the umpire
called "play ball." Cigar was in
the box and had plenty of Smoke.
Smallpox was catching, Horn was
playing first base and Fiddle second.
Molasses was sticking at third. Long
was playing short, and Spider, Cora
and Grass were in the field. Apple
started to umpire but was rotten.
Ax came to bat and chopped out a
single to second, Song made a hit,
Knife was put out for cutting first
base, Sawdust walked and filled the
bags, Balloon went into pitch but
went up in the air. Cake walked and
Cabbage had a good head. John
Drew a pass. Boiler went in to
pitch and had the steam. Hornet
stung the ball but Spider caught the
fly. Sun came up, and Organ refused
to play when Crook stole home.
Cora was earned, Right now playing
left. Wind came up and blew.
Hammer began to knock, Tee kept
cool until he was cracked with a
pitched ball and then Tee creamed.
Grass was covering a lot. Meat bit
a sizzling triple but was out on the
plate. Everyone kicked when Light
was put out. Bread went in to um-
pire and was kneaded. Peanut was
roasted through the whole game.
Measles broke into the game in the
ninth, and the game was called when
Trees began to leave. Door said if
he had pitched the game he would
have shut them out. There was some
betting on the game but Soap made
a clean up. Egg said you can't beat
it. And we believe Egg is right.

ing at 8 o'clock.

Locals

Mrs. F. Waters is lying very ill
at her home on Victoria street.

Mr. Roy Slater of New Westmin-
ster, B. C., is visiting his father, Mr.
Wm. Slater.

Mr. James Colling of Fostoria,
Mich., is the guest of his sister-in-
law, Mrs. M. Prudham.

Mr. Ferdinand Slater and family
have moved to Hamilton and will
reside at 23 Grant Ave.

Miss Carrie Robinson of Hamilton
was the guest of Miss Gertrude
Everitt over the week end.

Mr. Knight of Toronto is visiting
his brother-in-law, Mr. Wm. Slater,
and other friends around here.

Mrs. Wheller of Brussels is visit-
ing Mr. and Mrs. H. A. Drummond
and other friends in the village.

"Dad" Alton has made some very
extensive improvements in the cigar
department at his barber shop.

Mr. and Mrs. Fred Thomas and
Mr. and Mrs. E. T. Savell spent the
week end with friends at Riverdale.

Mr. and Mrs. E. Blagden and Mr.
and Mrs. A. Newell visited over the
week end with relatives in Brantford.

Mr. B. Batchelor has leased W. H.
Park's house on Main street and will
move his family here from Brantford.

Mr. John Everitt of Boston, Mass
visited with his brother, Charles, and
his sister, Mrs. Jas. Attridge, this
week.

Mr. Joseph Ireland and wife of
Winnipeg, former residents of this
village, are the guests of H. A. and
Mrs. Drummond.

Grading for the new highway
through the village was started last
Monday, and Dundas street now
presents quite a different appearance.

The W. M. S. of the Methodist
church will meet at the Parsonage,
Wednesday afternoon, Oct. 12th at
2:30. All ladies of the church are
welcome.

Yesterday was a big day at Mill-
grove, and a large number from here
took in the event. The Waterdown
ball team cleaned up all comers and
arrived home with extremely pleasant
features.

Gordon & Son have had a large
addition erected in the rear of their
tailoring establishment, which will
be used for cleaning purposes ex-
clusively. The work was done by
the Copp Construction Co. of this
village.

The annual concert of the King's
Daughters last Tuesday evening was
not the financial success it should
have been. The postponing of the
Fall Fair, which in the past was on
the same day, being somewhat re-
sponsible for the reduced attendance.
The Galt Maple Leaf Quartette fur-
nished the program, which was first
class and very much appreciated.

The Waterdown Agricultural Soci-
ety will hold their annual Fall Fair
this year in the Drill Hall at the old
school grounds on Tuesday and Wed-
nesday, October 18th and 19th.
There will be no live stock, excepting
poultry, exhibited. All the other
classes will be the same as in former
years. On Wednesday evening
the Society will hold a concert
in the Rink, good talent is now be-
ing secured.

ACTED AS A SPY.

Man Arrested Recently Who Caused Trouble in the Army.

James Valmorten, alias James Morton, alias James W. Burri, was arrested by London detectives recently as a German spy and is wanted by the Cleveland police as an alleged bigamist and embezzler. The definite declaration of the British vice-consulate at Cleveland that Valmorten was paid by the German Imperial Government to come to London from Pittsburg, to enlist in the 33rd Battalion has caused a shock in Canada and by many the revelation is accepted as an explanation of the riotous disorders which occurred from time to time while the battalion was in training in London.

For some unknown cause the discipline of the battalion was steadily undermined while the corps was being prepared for overseas service and at length clashes with the civil police and disobedience of commands of camp officers became a nightly matter. Two or three men usually appeared as the ring leaders in fomenting trouble that at length led to rioting in the down-town business district. Police were stoned, store windows were smashed and at length the police station was stormed by a mob. Stern measures were taken by district military headquarters to restore order and the regiment was removed to Quebec. There fresh troubles developed during which a cafe proprietor was shot dead by a man who was subsequently sentenced for manslaughter.

"We never found any evidence that German spies were in the 33rd, but it was never possible to discover the source of the trouble in the battalion," said Lt.-Col. W. A. McCrimmon, who was one of the senior officers on the headquarters' staff during the war.

Breeding Reindeer.

A reindeer experiment station is to be started next summer at Unalakleet, Alaska, for the scientific breeding of this valuable animal. It is expected that by this means the stock can be markedly improved; and one project in contemplation is the crossing of the domesticated reindeer with the wild variety native to Arctic America.

A cross with the caribou is doubtless practicable, and should increase the size of the reindeer. Thus the animal would produce more meat—a matter of no small importance, inasmuch as the north country will in the near future furnish great supplies of reindeer meat for consumption in Canada and the United States. The first domesticated reindeer brought to Alaska were imported in 1892. In all, 1280 were brought across from Siberia. There are now in Alaska 200,000 of the animals, 70 per cent. of them being owned by Eskimo, for whose benefit—to provide them with food, clothing and other necessities—the enterprise was originally undertaken.

Reindeer require no shelter and procure their own food, most of the latter being furnished by mosses.

The buck reindeer is polygamous. Hence it is necessary to preserve only a minor percentage of the males, and 100,000 have been killed in Alaska during the last few years for food and skins. No female is ever intentionally killed. The herds double numerically every three years, and, at the present rate of increase, there should be 10,000,000 reindeer in North America twenty years from now.

Old Documents.

The early records bearing on Canadian history are being searched at the British Record Office by counsel for Newfoundland and the Province of Quebec in connection with the Labrador boundary dispute, which is to be heard by the Privy Council. Documents dating back to the seventeenth century are being consulted to determine the historical rights to that rock-bound land. An interesting discovery, which goes another hundred years further back in history, is that Labrador is really not Labrador at all, but Greenland. Research made in London, Paris, and Spain by Harry Biggar, Dominion Archivist in Europe, has disclosed the fact that until the middle of the sixteenth century the name Labrador meant Greenland and commemorated the wide awakens of John Fernandez Labrador, or land owner, who as a member of John Cabot's crew, was the first to sight this island. The country now the subject of the dispute was in those days known as "Corte Reall Land," but lost its name through the carelessness of map makers.

Why Not Start a Family Budget?

"Keeping accounts," says a Wisconsin woman, "keeps me from buying bargains I do not need and thus saves me money."

"Just that one lecture at the bank the other day on the household budget," remarked a Duluth woman, "has helped me in a lot of ways."

VETERINARY SPECIMENS

Submitting for Bacteriological Examination.

How to Prepare for Testing When Animals Die Suspected of Such Dangerous Disease as Rabies, Anthrax, Blackleg, Contagious Abortion, Etc.

(Contributed by Ontario Department of Agriculture, Toronto.)

The amount of care and judgment necessary in selecting and forwarding specimens for bacteriological examination is not generally realized, and as a result a good deal of material received is either in a state of putrefaction, or taken from an unsuitable part of the animal and is consequently useless. Take, for example, blackleg. In this disease the bacteria producing the condition are localized in the black, gassy swellings, and are not found generally throughout the body. If a blood sample, or portion of muscle other than the blackened part, is sent to the laboratory the bacilli are not found in the specimen, whereas if a small piece of the black muscle had been sent they would have been present.

It is necessary to collect the specimens in a careful manner, using instruments that have been sterilized by boiling; and placing the material in a container that has been similarly sterilized. If this is not done, the harmless bacteria which are present everywhere, will gain entrance to the tissue, and will multiply very rapidly and completely overgrow the disease producing ones, which do not as a rule multiply as readily under the same conditions, and on examination at the laboratory nothing may be found but these harmless organisms.

A complete report should always accompany any material to be examined. The absence of definite information about the case causes delay, and makes it difficult to give reliable information, because there are a great many different kinds of disease producing bacteria, the isolation of which requires different technique, whereas specific information may assist the search for the probable causative agents.

Material intended for examination must not be placed in preservative fluids, which would destroy the bacteria. Large specimens, such as an entire organ, should be removed with sterile instruments, at once wrapped in several layers of cheesecloth moistened with a 10 per cent. formalde-

hyde solution, then in oiled or wax paper and packed in ice and sawdust. It is often inconvenient to use ice, in which case the organ may be liberally sprinkled with borax or boric acid, wrapped in several folds of dry cheesecloth and packed in shavings in a wooden box. If borax is not available wrap in the formaldehyde moistened cheesecloth and pack in shavings. Material should never be placed in unsterilized packing material unless protected from contamination by one of these methods. Small specimens should be placed in wide-mouthed bottles or fruit jars that have been boiled and cooled before using and no preservative of any kind should be used as it would penetrate small specimens and kill the bacteria.

Pus.—Pus for examination may be forwarded in a small bottle, previously sterilized by boiling. Care should be taken to avoid getting it on the outside of the bottle or stopper, as this is at least unpleasant, and may be dangerous, to handle.

Rabies.—The head of a dog suspected of rabies should be wrapped in a protective covering of cheesecloth or oiled paper, (packed in crushed ice and sawdust during hot weather), and sent as quickly as possible to the nearest laboratory doing this work—in Ontario the Provincial Board of Health Laboratories, at 5 Queen's Park, Toronto, or its branches at Fort William, Sault Ste. Marie, North Bay, Kingston and London. Never kill a dog suspected of rabies, as in the early stages it may not be possible to find the Negri bodies in the brain cells; but restrain the animal and properly look after it for ten days, before which time if rabid it will have died.

Hemorrhagic Septicemia.—The pneumonic lung, or liver or other organs showing lesions, should be forwarded, packed in one of the ways already described. It is well to include the heart, the vessels having been tied before removal with string soaked in a disinfecting solution. Wrap each organ separately before placing in the box.

Anthrax.—If Anthrax is suspected never open the carcass, as this permits the anthrax bacilli to form spores in the presence of the air, in which condition they will live for years, and form a centre of infection. Remove an ear and send to the laboratory in a sterile container, or wrapped in disinfectant moistened cheesecloth, and packed as already described.

Blackleg.—In a case of suspected blackleg send a small bit of the blackened and gas-filled muscle in a sterile wide-mouthed bottle.

Contagious Abortion.—The most convenient method is to send a blood sample from the cow for the agglutination and complement fixation tests. The blood is collected from the jugular vein by means of a sterile hypodermic needle, and a small sterile bottle is filled up to the cork. As soon as the blood clots it should be mailed to the laboratory, where the serum is separated and the tests carried out.

Where the owner of animals wishes to send specimens for examination he will find it to his advantage to consult his veterinarian, as he is in a position to advise as to what material should be submitted and how best to send it.—Dr. Ronald Gwatkin, Ontario Veterinary College, Toronto.

Pastures Pay in Pork Production.

"One of the best means of cutting the cost of producing pork," says E. F. Ferrin, who is in charge of the hog section at Minnesota University Farm, "is to use good pasture and forage crops. This practice is advisable whether grain be high in price or cheap; there is a decided saving in either case. Pigs getting green feed are more thrifty than those raised in dry lots, consequently gain faster and make pork at a lower cost.

Results obtained at the farm prove beyond question that it is a shortsighted policy to neglect to grow good forage crops when pigs are being raised. Blue grass and similar pastures furnish good feed in the spring, but during summer are little better than an exercising ground. Some one crop, or more than one, should be grown to give fresh succulent green feed in summer and early fall. Dwarf Essex rape, alfalfa and red clover are the outstanding top notch forage crops in the corn belt. Of these rape is by far the most suitable for Minnesota conditions. The cost of seeding is low—about five pounds of seed per acre is an average quantity—and in favorable season the crop is ready to be pastured six weeks from sowing. If grain is fed in reasonable amounts an acre of rape will carry from twenty to thirty growing pigs through the season.

"White hogs, and sometimes black and red ones, blister when running in rape. There is nothing peculiar about this crop which causes blistering; the trouble results simply from the combination of moisture, transferred from the rape to the hog, and a hot sun. By keeping pigs out of the rape patch until the dew or rain has evaporated from the leaves of the plants, blistering can be prevented.

"Rape can be sown as early in the spring as the ground can be worked. Even a small patch in a feed lot will save grain in raising pigs."

Tomatoes are ripening, and it is necessary to apply small quantities of nitrate of soda around each plant to hasten them.

Spanish Women Organize.

The Spanish Women's Crusade is the name of an organization formed to conduct an active campaign in Alfonso's kingdom to obtain legal equality for women.

To the Farmer:

The purchase of a Piano or Victrola is only purchased invariably once in a lifetime. Therefore it behoves the purchaser to get the best and make sure you have the best.

I have had 25 years experience in tuning and repairing musical instruments, therefore feel quite confident I can choose the best instruments on the market.

I shall be pleased to place any instrument in your home beside any other in fair competition and let you yourself be the judge, without you feeling under any obligations absolutely. I can also save the purchaser quite a few dollars on account of my expenses being so low. I will always give you my best personal service and devote the whole of my time to supplying the country people. A postcard or telephone call will oblige.

Yours truly,

HOW AUTHORS WORK.

Find Inspiration Under Many Different Conditions.

Various are the adventitious aids to inspiration of which the novelist or poet avails himself. Not the least of them, perhaps, is tobacco. Tennyson and Charles Kingsley were prolific smokers, and Sir J. M. Barrie has confessed that when at work on a novel he smokes seven ounces during the course of a week.

Maeterlinck, too, always works with a pipe in his mouth, though he has long since given up the use of tobacco. According to his biographer, M. Gerard Harry, "in lieu of ordinary tobacco, he fills his bowl with a denticotized preparation, tasteless indeed, but harmless. His pipe is still always alight when the pen is busy, but it is hardly more now than an innocent subterfuge intended to cheat and so satisfy an irresistible mechanical craving."

D'Annunzio is a night worker, and piles his pen when the rest of mankind are asleep. He works throughout the night, generally retiring to bed at about nine in the morning.

Disraeli always worked in evening dress—a habit that was not, perhaps, without influence on his elaborate and highly-artificial style. That industrious scribe, the late Dean Farrar, used to write his books standing. Maurice Jokal always used violet ink, and when unable to obtain it he found the flow of thoughts considerably impeded.

Upon the writing-table of Henrik Ibsen there was a small tray containing a number of grotesque figures, among which were a diminutive devil, some cats, and some rabbits. "I never write a single line of any of my dramas," admitted Ibsen, "without having that tray and its occupants before me on my table. I could not write without them."

Of James Thomson, the poet of "The Seasons," it was said that "he would often be heard walking in his library till near morning, humming over in his way what he was to correct and write out next day." Thomson was in the habit of seeking inspiration in long walks in the open air, during which his thoughts would arrange themselves in ordered sequence.

Browning, too, did much of his work in the open air, and it was while walking in Dulwich Wood that the thought occurred to him which was afterwards to find artistic expression in "Pippa Passes." The title of Thackeray's great novel, "Vanity Fair," on the other hand, suddenly flashed into its author's mind one night when he was lying in bed at the Old Ship at Brighton.

If the Sun Went Out.

Wonderful things are constantly happening in the universe; but what if the sun were suddenly extinguished?

The earth and every living thing upon it would be doomed in a very short time.

Why, at the end of the first week the frost would have destroyed all but the hardiest of the vegetation.

Our lakes and rivers would freeze solid. Even our oceans would be soon turned to ice. And the ice, by its greater bulk compared with water, would encroach upon and overwhelm the land, until only the tops of the highest mountains would show above the glacial sea. These mountain summits would themselves be covered with deep snow, or ice crystals, which had fallen because of the water vapor in the atmosphere having frozen.

Mankind would be destroyed to the uttermost ends of the globe. Neither would the very lowest forms of organized creatures escape the icy death.

The stars would be always looking down upon our derelict earth, for it would be one long night. No bright-shining moon would ever rise, for our satellite borrows its splendor from the sun.

The earth would not stop turning round on its axis, nor would it cease to revolve about the dead sun.

There are believed to be many dead suns in the universe, all travelling through space at a great speed.

Would our dead sun be doomed to an eternal night? Perhaps not. Perhaps, in the course of its wanderings—at a speed of about twelve miles a second—it might meet with another celestial derelict.

If so, then appalling would be the impact. Its light and heat would be revived. The sun, in brief, would be born again.

And what of that icy tomb, the earth? It would melt as a flake of snow in the fire.

Vessel Made of Corrugated Plates.

Using ships' bulkheads to build an entire vessel seems an extraordinary proceeding, says Popular Mechanics Magazine; yet it has just been successfully accomplished in England, where a 6,000-ton tanker was so constructed with nearly 400 tons less material than would ordinarily be used. The secret lies in the curious form of the newly-invented bulkhead plates, which are made with vertical corrugations, so strengthening them that the usual horizontal and vertical stiffening brackets are dispensed with. The oil ship built in this manner, with its straight lines and corrugated sides, naturally offers a most peculiar appearance. It is to be used as a floating reservoir at Las Palmas, Canary Islands, for supplying oil-burning ships with fuel, and is equipped with pumps that have a capacity of 200 tons an hour.

EAGER'S WATERDOWN

Dry Goods

Pure Linen Red Check Tea Toweling nice fins quality.

45c a yard

A few more new Skirt lengths just received. The new checks or stripes and up to date colors.

\$4.50 the length

Navy Blue Wool Serge. Good weight cloth, quality and dye, 56 in. wide. A splendid skirt length.

\$1.50 a yard

Navy Blue Cheviot Finished Serge, all wool, very fine quality for dresses or skirts. 59 in. wide.

\$3 a yard

Bleached Table Damask, 50 in. wide

75c a yard

Bleached Damask, nice floral designs

\$1 a yard

New Drapery Cloths, new floral design 1½ yd. wide. A splendid overcurtain material.

\$1

Peggy Black Play Suits for the small children. Size 3 to 6, nicely trimmed. A splendid play outfit made of black sateen.

\$1.89

Men's Furnishings

Men's Blue Stripe or Black bibb Overalls. Good roomy style.

\$1.75 each

Just opened a new shipment of Men's Caps. New shapes and patterns.

\$1.50 to \$2.25

Men's Merino Shirts and Drawers. A good fall weight and wearing quality.

\$1.25 each, or \$2.25 a suit

Men's All Wool Cashmere Sox, Plain black or red heel and toe.

65c a pair
